Department of Health

Annual Report

1913

Published by the Government Printing Office

TO THE HONOURABLE ALBERT MATTHEWS, LL.D.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fourteenth Annual Report of the Department of Health, for the year 1938.

Respectfully submitted,

HAROLD J. KIRBY,

Minister of Health.

TO THE HONOURABLE HAROLD J. KIRBY, K.C.,

Minister of Health.

SIR,—I have the honour to submit for your approval the Fourteenth Annual Report of the Department of Health, made in conformity with and under the provisions of The Public Health Act, for the year 1938.

I have the honour to be, Sir,

Your obedient servant,

B. T. MCGHIE,

Deputy Minister of Health.

ANNUAL REPORT
of the
Department of Health

For the Calendar Year Ending December 31st, 1938

Comment is justified in this preface to the annual report of departmental activities on the rather radical departure from previous practice in two specific instances, namely, the assumption by the province of the entire cost of the necessary sanatorium treatment of the medically-indigent tuberculous patient, and the adoption of legislation requiring the compulsory pasteurization of milk in all cities, towns and certain defined areas.

The first of these measures was prompted by the difficulty which presented in ensuring appropriate treatment for many of those suffering from this disease. The second was the result of an appreciation of the necessity for a more uniform protection of the public milk supply. The unanimity with which the Legislature accepted this mandatory measure is a tribute to the vision of the Assembly membership. The legislation has been extended to include all urban municipalities with a population of 1,000 or over and all those suburban areas adjacent to the larger centres of population. The adoption for the first time by any state or province of progressive legislation of this type is a further index of official concern for the public good.

The Department was relieved of the cost of arsenicals to be used in the treatment of those suffering from syphilis; these drugs being supplied by the Federal Department of Pensions and National Health. The proportion of the cost of venereal disease treatment in non-clinic centres, formerly borne by the Government, has been increased to the point where only 25 per cent. of the cost is paid for by the municipality concerned. Increased emphasis has been placed on the control of this disease.

The report of the various activities of the Department follows in some detail.

REPORT OF THE SOLICITOR

K. G. GRAY, M.D., K.C., *Solicitor to the Department.*

The legal opinions required from the Solicitor continue to increase, partly due to the enactment of new legislation administered by the Department. More than 2,500 requests of this nature were received and answered during the year.

The Solicitor acted for the Superintendent of the Ontario Hospital, London, in connection with two actions in the Supreme Court. Both actions were dismissed against the defendant Superintendent.

The Solicitor acted as guardian *ad litem* for a defendant patient in an Ontario Hospital.

It was necessary to obtain judgment in county court against four creditors for maintenance owing to this Department on account of patients in Ontario Hospitals.

Only one application for habeas corpus was brought during the year for patients in Ontario Hospitals. This application is still pending.

The Solicitor acted as a member of the Board of Examiners appointed under The Optometry Act, during the year.

The following legislation was passed by the Legislative Assembly in the 1938 Session, affecting statutes administered by this Department:

1. *An Act for the Investigation of Remedies for Cancer, 1938, c.4.*
and amendements to the following Acts:

1. *The Burial of the War Veterans Act, 1938, c.3.*
2. *The Mental Hospitals Act, 1938, c.20.*
3. *The Nurses' Registration Act, 1938, c.25.*
4. *The Private Hospitals Act, 1938, c.28.*
5. *The Private Sanitaria Act, 1938, c.29.*
6. *The Public Health Act, 1938, c.30.*
7. *The Sanatoria for Consumptives Act, 1938, c.34.*
8. *The Cemetery Act.*
The Public Hospitals Act.
The Venereal Diseases Prevention Act.

contained in The Statute Law Amendment Act, 1938, c.35.

The following regulations and amendements to regulations were approved by the Lieutenant-Governor in Council on the recommendation of the Minister of Health:

Regulations and amendements under the following Acts:

- The Cemetery Act, Order-in-Council, dated May 28th, 1938.*
The Mental Hospitals Act, October 13th, 1938.
The Nurses' Registration Act, February 14th, 1938.

- The Nurses' Registration Act*, May 28th, 1938.
The Nurses' Registration Act, November 30th, 1938.
The Pharmacy Act, January 6th, 1938.
The Pharmacy Act, October 13th, 1938.
The Private Hospitals Act, January 6th, 1938.
The Private Hospitals Act, August 18th, 1938.
The Public Health Act, May 10th, 1938.
The Public Health Act, August 18th, 1938.
The Public Health Act, December 16th, 1938.
The Public Health Act, December 28th, 1938.
The Public Hospitals Act, May 10th, 1938.
The Public Hospitals Act, November 30th, 1938.
The Sanatoria for Consumptives Act, June 22nd, 1938.
The Sanatoria for Consumptives Act, August 18th, 1938.

Two Orders-in-Council were approved on June 24th, making pasteurization of milk compulsory in certain localities in Ontario. These are reported in the report of the Division of Sanitary Engineering, in this volume.

An Order-in-Council was approved on June 24th proclaiming Saturday, October the 1st, 1938, as the day upon which sec. 8 of The Public Health Amendment Act, 1938, should come into force and effect.

An Order-in-Council was approved on December 16th proclaiming February 1st, 1939, as the date on which pasteurization of milk should be made applicable to certain areas.

An Order-in-Council was approved on June 22nd, proclaiming Friday, the 1st day of July, 1938, as the day upon which sec. 12 of the "Act to Amend The Sanatoria for Consumptives Act," should come into force and take effect.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 28th day of May, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that pursuant to the provision of Part IV of *The Cemetery Act*, the attached rules and regulations, schedule of charges and form of application for cremation, be approved.

Certified.

C. F. BULMER,
 Clerk, Executive Council.

THE TRUSTEES OF THE TORONTO GENERAL BURYING GROUNDS

RULES AND REGULATIONS, TORONTO CREMATORIUM

Open for inspection by appointment.

1. Before incineration can take place, the approved form "Application for Cremation" with Statutory Declaration and Coroner's Certificate, properly filled out, together with burial permit, must be delivered to the Crematorium Office, 200 Winchester Street, Toronto, following reservation by letter, telegram or telephone, reservation to be confirmed by Crematorium.

2. Cremated remains will be placed in a sealed temporary container, which will be furnished, without additional charge, by the Trustees, and such container may be left at the Crematorium for a period of 14 days after cremation. After that date a charge of \$1.00 per month will be made, and on failure to pay such charge the cremated remains may be disposed of in such manner as the Trustees may think fit.

3. No cremation shall take place until the charges are paid.

4. The fee for cremation includes use of Chapel, cremation, supplying of container, and delivery of cremated remains at Crematorium.

5. When cremated remains are to be sent out of town, an extra charge will be made for packing, postage and extra work involved.

6. When shipping cremated remains abroad, a Statutory Declaration is necessary for which a fee is charged.

7. No cremation will take place on Sunday, Good Friday or Christmas Day except when the Local Board of Health orders that the body shall be cremated forthwith.

8. Floral tributes will not be received in the Crematorium building, but provision will be made for their display on the adjoining grounds. After the third day, they will be destroyed.

9. Children under the age of twelve years shall not be admitted to the Crematorium Chapel, except in charge of an adult, who shall be responsible for their good conduct.

10. All the general Rules and Regulations of the Trustees of the Toronto General Burying Grounds shall apply to the Crematorium so far as the nature of the case permits.

RULES AND REGULATIONS, COLUMBARIUM AND GARDEN OF REST.

Special provision has been made for the care of incinerated remains; full particulars can be obtained on application to the Secretary, Supervisor or Superintendent at the Crematorium.

1. Niches may be rented in the Columbarium adjoining the Crematorium Chapel.

2. Niches for permanent inurnment may be purchased in the Columbarium in Mount Pleasant Mausoleum.

3. The charge for the interment of ashes in private graves or in the Garden of Rest shall be the same as those from time to time fixed for opening infants' graves.

4. Lettering on the face of Niches must be approved by the Trustees and will be done by them at prices from time to time fixed by them.

5. Urns will only be allowed in the Columbarium when they are properly sealed and when the design, material and inscription have been approved by the Trustees.

APPLICATION FOR CREMATION.

Upon the recommendation of the Honourable the Minister of Health, the Committee of Council advise that the attached regulations made pursuant to clause (zd) of Section 5 of The Public Health Act, R.S.O. 1937, Chapter 299, be approved.

Certified,

C. F. BULMER,

Clerk Executive Council.

BEDDING REGULATIONS

1. In these regulations:—

- (a) "Bolster," "cushion," "feather bed" or "Pillow" shall include any bag, case or covering made of cotton, leather or other textile material, and stuffed, filled or partly filled with excelsior, straw, hay, grass, corn husks, moss, fibre, cotton, wool, hair, jute, feathers, feather down, kapok or other soft materials to be used on a bed, hammock, chair, couch, divan, sofa, lounge, or other articles of upholstered furniture for sleeping, reclining or resting purposes.
- (b) "Comforter" shall include any cover, quilt, or quilted article made of cotton or other textile material and stuffed, filled or partly filled with fibre, cotton, wool, hair, jute, feathers, feather down, kapok, or other soft materials.
- (c) "Converted" as applied to any material shall mean any otherwise new material which has been dyed or coloured or which has been garnetted or shredded but not further manufactured than to be spun into yarn or knit or woven into fabric and subsequently cut up, torn up, broken up or ground up and shall include coarse cotton mill gunny.
- (d) "Label" shall mean a label required to be affixed to any article under the provisions of these regulations.
- (e) "Mattress" shall include any quilted pad, mattress, mattress pad, mattress protector, bunk, quilt or box spring, stuffed, filled or partly filled with excelsior, straw, hay, grass, corn-husks, moss, fibre, cotton, wool, hair, jute, kapok or other soft material, to be used on a couch or other bed for sleeping or reclining purposes.
- (f) "New" as applied to any material or articles shall mean any material or article which has not been previously manufactured or used for any purpose but shall not include converted material.
- (g) "Second-hand" as applied to any material or article shall mean any material or article which is neither new nor converted.
- (h) "Upholstered furniture" shall mean upholstered furniture that is,—
 - (i) provided with removable or semi-detached cushions or bolsters; or
 - (ii) of such a size and nature that it can be used for resting, reclining or sleeping purposes.

2. Every person who constructs, manufactures, builds, puts together, or renovates any mattress, pillow, bolster, cushion, feather bed, comforter or upholstered furniture shall affix a label thereto in accordance with these regulations.

3.—(1) No person shall at wholesale or retail or otherwise directly or indirectly sell, offer or expose for sale, deliver, rent, consign, lease or otherwise commercially dispose of or have in his possession with intent to so dispose of it, any mattress, pillow, bolster, cushion, feather bed, comforter, or upholstered furniture unless such article is labelled according to these regulations.

(2) Sub-regulation (1) shall not apply to any person who is not a manufacturer, retailer, second-hand dealer or in any way engaged in the manufacture, sale, delivery, rental or renovating of articles enumerated therein.

4.—(1) Every mattress, bolster, feather bed and every article of upholstered furniture shall be labelled with a label approved by the Department, made of muslin or linen, not less than six square inches sewn by all four sides to a conspicuous part of each article.

(2) The label shall be lettered in English and shall give the following information,—

- (a) The names and address of the manufacturer; and
- (b) (i) Where new materials are used exclusively the article shall be labelled, "contains new material only" on a white label;

- (ii) Where "converted" materials are used exclusively or with new material the article shall be labelled "contains converted material" on a blue label; and
- (iii) Where "second-hand" materials are used in part or in whole the article shall be labelled "contains second-hand material" on a yellow label.

(3) The designations, "contains new material only," "contains converted material" and "contains second-hand material" shall be printed on labels in black letters at least $\frac{1}{4}$ " in height and other lettering shall be $\frac{1}{8}$ " in height and no trade name or other printing shall appear on the label.

(4) The provisions of this regulation shall apply to pillows, cushions and comforters except that the label may be sewn by only one side to the article.

5.—(1) No person shall remove, deface or alter or attempt to remove, deface or alter any label or use any label in any manner other than in accordance with the provisions of these regulations.

(2) Sub-regulation (1) shall not apply to any person who is not a manufacturer, retailer, second-hand dealer or in any way engaged in the manufacture, sale or renovating of articles enumerated in these regulations.

6. Any officer of the Department of Health or any local medical officer of health or sanitary inspector may require any second-hand upholstered furniture to be disinfected to the satisfaction of such officer.

7. No unclean or vermin-infested material shall be used for the manufacture of any mattress, pillow, bolster, cushion, feather bed, comforter or upholstered furniture, and no person shall sell, offer or expose for sale, or have in his possession with intent to sell any such article containing unclean or vermin-infested material.

8. No mattress, pillow, bolster, cushion, feather bed or comforter from any institution caring for the sick shall be sold or renovated unless sterilized by a process approved by an officer of the Department or a medical officer of health, or treated to his satisfaction.

9. No mattress, pillow, bolster, cushion, or feather bed which has been in contact with a person suffering from any communicable disease shall be sold or renovated unless sterilized by a process approved by an officer of the Department or a medical officer of health, or treated to his satisfaction.

10.—(1) All feathers or feather products whether new or second-hand shall be thoroughly washed, rinsed, steamed and dried by methods approved by an officer of the Department or a medical officer of health, before being used in any mattress, pillow, bolster, cushion, feather bed, comforter or upholstered furniture.

(2) Any approval by a medical officer of health under this regulation shall be subject to cancellation or revision by an officer of the Department.

11. Where any officer of the Department or any medical officer of health suspects that any mattress, pillow, bolster, cushion, feather bed, comforter or article of upholstered furniture is not labelled in accordance with the provisions of these regulations he may prohibit the sale of such article by affixing a label thereto bearing the words "off sale" and no such article shall be sold or offered for sale until such label has been removed by an officer of the Department or a medical officer of health.

12. Every building or place where mattresses, pillows, bolsters, cushions, feather beds, comforters or upholstered furniture are made, remade, renovated or where such articles are sold and every conveyance upon which such articles are transported, shall be subject to inspection and any such articles in such a place or upon such a conveyance may be opened and examined and seized and held for examination by an officer of the Department or a medical officer of health, and every such officer or medical officer of health may cut or deface any article to such an extent as is necessary to examine it.

13. These regulations shall come into force on the 28th day of December, 1938, but shall not apply to any retail sale prior to March 1st, 1939.

Copy of an Order-in-Council approved by the Honourable, the Lieutenant-Governor, dated the 10th day of May, A.D., 1938.

Upon the recommendation of the Honourable, the Minister of Health, the Committee of Council advise that pursuant to the provisions of clause (v) of section 5 of *The Public Health Act* the attached regulations for dental inspection in schools be approved.

Certified,

C. F. BULMER,

Clerk Executive Council.

REGULATIONS FOR DENTAL INSPECTION IN SCHOOLS

Pursuant to clause (v) of section 5 of *The Public Health Act*.

1. In these regulations:—

“Dental inspection” shall include dental treatment;

“Department” shall mean Department of Health of Ontario;

“Director” shall mean the Director of Dental Service for Ontario.;

“Local Board” shall mean a local board of health;

“School Board” shall mean and include any board having under the authority of statute charge over a public, separate, continuation, high or vocational school.

2. Subject to these regulations the Department may pay a grant to any local board which provides by agreement under section 91 of *The Public Health Act* with a school board for the dental inspection of the pupils of the school or schools under the charge of such school board.

3. (1) The grant shall be paid only to local boards which have established dental inspection after April 1st, 1938; unless the Department is satisfied that the services included in such dental inspection have been materially increased after April 1st, 1938;

(2) The grant shall be paid for a period of not more than five years after the commencement of such inspection.

4. Any local board desirous of obtaining the grant for dental inspection shall apply to the Director in writing signed by the secretary of the local board and

(a) shall file a copy of an agreement between the local board and the school board pursuant to section 91 of *The Public Health Act*;

(b) shall set out in the application the particulars relating to the dental inspection, including the number, size and location of the schools, the names and addresses of all dentists, nurses and other persons who will be engaged, and the length of time each person will be actually employed and the amount of their remuneration, the number and location of dental clinics which will be provided, the quarters, accommodation and equipment for each clinic.

5. The local board shall provide as part of the dental inspection,—

(a) Such full-time or part-time services of dentists as the Director deems necessary;

(b) A public health nurse whose duties shall be to assist in the dental work in the clinics and to carry out the necessary follow-up work in the schools and in the homes of the pupils, unless other arrangements for such work are approved by the Director;

(c) quarters and accommodation for dental clinics satisfactory to the Director;

6. The remuneration paid by the local board to any dentist, dental nurse or other person employed in the dental inspection provided under these regulations shall be subject to the approval of the Director.

7. (1) The local board of a municipality having a population of more than 20,000 persons shall provide the equipment and supplies for the dental clinics;
- (2) The local board of a municipality having a population of less than 20,000 persons may arrange with the dentists engaged in the inspection to provide the necessary supplies and equipment for the dental clinics.
8. Every dentist employed in any dental inspection under these regulations shall prepare a report each month showing the pupils to whom any dental service is given, the nature of such service and the length of time in which the dentist is engaged therein and shall send a copy of such report to,—
 - (a) The local board which is providing the dental inspection;
 - (b) The school board which has entered into an agreement with the local board;
 - (c) The Director.
9. (1) The Director shall notify the secretary of the local board when the application for the payment of a grant from the Department has been approved and the grant shall be payable every three months thereafter, for a period not exceeding five years or until the Director has notified the secretary of the local board that such board is no longer eligible for the payment of the grant.
- (2) The grant shall be paid to the local board upon receipt by the Director of a requisition signed by the secretary of the local board showing the total cost of providing the dental inspection for the preceding three months, and in such requisition the secretary of the local board shall include in the statement of cost only any amounts actually paid by the local board to any dentist, the cost of dental supplies and the cost of equipment.
- (3) In calculating the amount shown for the cost of equipment, the secretary of the local board shall include in each three monthly statement, 1/10th of the total cost of such equipment.
- (4) The secretary of the local board shall keep in his custody records showing all receipts and disbursements of moneys made for the purpose of dental inspection, and the records shall be subject to inspection by the Director or any person authorized by the Director to audit the records.
10. The amount of the grant paid by the Department to a local board for dental inspection shall be as follows:
 - (a) To a local board having jurisdiction in a municipality with a population exceeding 5,000 persons, the grant shall be 20% of the cost of the dental inspection;
 - (b) To a local board having jurisdiction in a municipality with a population of from 1,000 to 5,000 persons, the grant shall be 30% of the cost of the dental inspection;
 - (c) To a local board having jurisdiction in any township, the grant shall be 30% of the cost of dental inspection, and in the event that more than one township may unite for the purpose of establishing dental inspection, in such cases the grant shall be 30% of the cost of dental inspection;
 - (d) To a local board having jurisdiction in a municipality with a population of less than 1,000 persons, the grant shall be 30% of the cost of dental inspection: provided that the grant to any local board shall not exceed in any year the sum of \$1,000.
11. (1) The Department may pay a grant to any school board which provides and pays for dental inspection of pupils, but only where provision for such dental inspection was inaugurated by such school board prior to the 31st day of July, 1924.
- (2) The Department will pay a grant to a school board only when the Department is satisfied that the services included in such dental inspection have been materially increased after April 1st, 1938.

(3) Regulations numbered 1 to 10 shall apply *mutatis mutandis* to any school board which applies for and receives any such grant.

Copy of an Order-in-Council, approved by The Honourable the Lieutenant-Governor, dated the 13th day of October, A.D., 1938.

Upon the recommendation of the Honourable the Minister of Health, the Committee of Council advise that pursuant to the provisions of section 5 of *The Mental Hospitals Act, R.S.O. 1937*, Chap. 392, the Regulations under the said Act be amended by adding thereto the following:

23. During the illness or absence of the superintendent of any institution, the Minister may appoint an officer of the Department or any institution to be acting superintendent of the institution, and while acting as acting superintendent such officer shall have all the powers and be subject to all the duties of a superintendent under the said Act and these regulations.

Certified,

C. F. BULMER,

Clerk, Executive Council.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 14th day of February, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the regulations with respect to Training Schools for Nurses, approved by Your Honour on the 10th day of December, 1936, be amended as follows:

Clause (c) of section 21 of the said regulations is repealed and the following substituted therefor:

(c) After July 1st, 1939, the completion of middle school standing in twelve papers as follows (as prescribed by the Department of Education),—

Six Required Papers:

English Literature,
English Composition,
One subject of Mathematics,
Physics or Agriculture No. 1,
Chemistry or Agriculture No. 2,
Canadian History.

Six Papers Optional:

Languages—not more than four papers in two subjects:
Latin—Literature, Composition,
French—Literature, Composition,
Spanish—Literature, Composition,
Greek—Literature, Composition,
German—Literature, Composition.

Household Science No. 1 and No. 11.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached regulation under *The Nurses' Registration Act*, be approved.

Certified,

C. F. BULMER,

Clerk, Executive Council.

REGULATION PURSUANT TO THE NURSES' REGISTRATION ACT.

Nurses registered by examination or as "Intermediate" nurses on the General Part of the Register of the General Nursing Council for England and Wales shall be accepted for registration by the Director of Nurses' Registration for Ontario, and, further, application for "existing" nurses shall be considered on their respective merits; provided that:

- (a) The general educational standard of the applicant can be evaluated as corresponding to the general educational standards required in Ontario;
- (b) The applicants who have not had a course in obstetrics equivalent to the undergraduate course given in Ontario will be required to take a post-graduate course in obstetrics acceptable to the Director before registration.

NOTE:—A General Hospital is defined as one which admits men, women and children, and gives instruction in the four main services—medical, surgical, gynaecological and children's diseases.

Such general training may be given in one General Hospital recognized as a complete training school, or in recognized affiliated or associated hospital which together give instruction in the above named services.

This regulation shall not come into force until a certificate is received by the Clerk of the Executive Council of Ontario certifying:

That the General Nursing Council for England and Wales agrees to accept for registration by reciprocity:

- (1) Nurses registered by the Director of Nurses' Registration for Ontario after having completed a period of not less than three years' training in a General Hospital in Ontario;
- (2) Nurses training in England and Wales in a General Hospital approved by the General Council for England and Wales and registered by the Director of Nurses' Registration for Ontario.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 30th day of November, A.D. 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the Order-in-Council approved by Your Honour on the 28th day of May, 1938, pursuant to *The Nurses' Registration Act*, shall come into force. The certificate mentioned in the said Order is attached hereto.

Certified,

C. F. BULMER,

Clerk, Executive Council.

THE GENERAL NURSING COUNCIL FOR ENGLAND AND WALES.

23 Portland Place,

London, W. I,

22nd July, 1938.

DEAR MISS MUNN:—

With reference to previous correspondence in regard to the establishment of reciprocal registration between the General Nursing Council for England and Wales and the Director of Nurses' Registration for Ontario, I have pleasure in informing you that at the meeting of Council today the following Resolution was passed:—

"That the General Nursing Council for England and Wales agrees to accept for Registration by Reciprocity:—

1. Nurses registered by the Director of Nurses' Registration for Ontario after having completed a period of not less than three years' training in a General Hospital in Ontario;
- (2) Nurses trained in England and Wales in a General Hospital approved by the General Nursing Council for England and Wales and registered by the Director of Nurses' Registration for Ontario;

on the understanding that nurses registered by Examination or as "Intermediate" Nurses on the General Part of the Register of the General Nursing Council for England and Wales will be accepted for registration by the Director of Nurses' Registration for Ontario and, further, that applications from "Existing" Nurses will be considered on their respective merits; provided that:

- (a) The general educational standard of the applicant can be evaluated as corresponding to the general educational standards required in Ontario;
- (b) That applicants who have not had a course in obstetrics equivalent to the undergraduate course given in Ontario will be required to take a post-graduate course in obstetrics acceptable to the Director before registration."

NOTE:—A General Hospital is defined as one which admits men, women and children, and gives instruction in the four main Services—Medical, Surgical Gynaecological and Children's diseases.

Such general training may be given on one general hospital recognized as a Complete Training School, or in recognized affiliated or associated hospitals which together give instruction in the above-named services.

In accordance with the usual practice, official notification of the passing of the Resolution for reciprocal registration with Ontario will be forwarded through the Ministry of Health and the Dominions Office.

The Agreement will not be put into operation in this country until ratification of the terms of the Resolution has been received from Ontario.

I enclose herewith copy of a letter in regard to training in private hospitals which has been sent to all of His Majesty's Dominions with which reciprocity has been established.

Yours faithfully,

(Signed), G. E. DAVIS,
Registrar.

Miss A. Munn, Reg. N.,
Director, Nurse Registration Branch,
Department of Health, Toronto.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 14th day of February, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the regulations with respect to Training Schools for Nurses, approved by Your Honour on the 10th day of December, 1936, be amended as follows:—

Clause (c) of section 21 of the said regulations is repealed and the following substituted therefor:

- (c) After July 1st, 1939, the completion of middle school standing in twelve papers as follows (as prescribed by the Department of Education):

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 13th day of October, A.D., 1938.

Upon the recommendation of the Honourable the Minister of Health, the Committee of Council advise that Schedule D of *The Pharmacy Act, R.S.O. 1937*, chapter 228, be amended by striking out the second paragraph of the said Schedule, which reads as follows:

Amidopyrine and barbituric acid (*malonylurea*) and derivatives or combinations of either of them with other substances whether sold separately or combined with other substances and whether sold under their proper name or under any trade name, mark or designation.

and substituting therefor the following:

Amidopyrine and barbituric acid (*malonylurea*) and derivatives or chemical combinations, except when combined with other medicinal ingredients and not exceeding one-half of one grain of amidopyrine or barbituric acid or the said derivatives or combinations and not less than the amount set by the British Pharmacopoeia as a maximum dose of one of the other medicinal ingredients in each maximum dose of the combination and when the combination contains less than one-half of one grain of amidopyrine or barbituric acid or the said derivatives or combinations in a maximum dose of the combination the minimum dose of such ingredient may be reduced in proportion to the reduction in the above drug.

Certified,

C. F. BULMER,

Clerk, Executive Council.

Copy of Order-in-Council, approved by The Honourable the Lieutenant-Governor, dated the 18th day of August, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the regulations under The *Private Hospitals Act* approved by Order-in-Council, dated July 7, 1936, and amended by Order-in-Council, dated June 6, 1938, be further amended by adding thereto the following section:

28. No person to whom a license is issued for the purpose of operating a rest home shall employ the word "hospital" in its name, letterhead, or advertising, or in any written or oral reference to the rest home.

Certified,

C. F. BULMER,

Clerk, Executive Council.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 6th day of January, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached amendments to the regulations under *The Private Hospitals Act* be approved.

Certified,

C. F. BULMER,

Clerk, Executive Council.

REST HOMES

23. The license issued to a private hospital may provide that such hospital shall be a rest home and any hospital licensed as a rest home shall be subject to the provisions of these regulations respecting rest homes.

24. Clauses, 3, 5, 9, 10, 11, 13, 14, 15, 16, 17, 18, 20, 21, and 22 of these regulations shall not apply to rest homes, but the remaining clauses of these regulations shall apply to rest homes.

25. (1) Any hospital licensed as a rest home shall not admit as a patient therein any person requiring surgical treatment or active medical care, or any maternity cases.

(2) Any patient in a rest home who requires any surgical or maternity care shall be transferred to an institution qualified to provide such care.

26. Any patient in a rest home who requires any medical care shall be under the active care of a duly qualified medical practitioner.

27. Notwithstanding the provisions of clause 6 of these regulations, the Inspector may exempt any rest home from employing graduate nurses.

Copy of an Order-in-Council, approved by The Honourable the Lieutenant-Governor, dated the 18th day of August, A.D., 1938:

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached regulations made by the Minister of Health, pursuant to Section 127 of *The Public Health Act*, respecting camps, works and premises and the employers and workmen thereof in Territorial Districts without municipal organization, be approved, and that the regulations approved by Your Honour on April 17th, 1934, pursuant to Section 119 of *The Public Health Act*, be repealed.

Certified,

C. F. BULMER,

Clerk, Executive Council.

REGULATIONS RESPECTING CAMPS, WORKS AND PREMISES AND THE
EMPLOYERS AND WORKMEN THEREOF IN TERRITORIAL DISTRICTS
WITHOUT MUNICIPAL ORGANIZATION

Pursuant to Section 127 of *The Public Health Act*.

INTERPRETATION

1. In these regulations—

“Camp” shall mean any camp, works or other premises established to house workmen employed in any lumbering, mining or other work or occupation, and shall include a standard camp;

“Contract physician” shall mean a legally qualified medical practitioner who has entered into a medical contract or a sanitation contract with an employer.;

“Employer” shall mean an employer of labour in lumbering camps, mining camps, on railway construction works and other works where labour is employed;

“Inspector” shall mean a provincial sanitary inspector appointed under *The Public Health Act*;

“Medical contract” shall mean a contract entered into under these regulations between an employer and a contract physician for the medical and surgical care and treatment of the workmen of such employer;

“Sanitation contract” shall mean a contract entered into under these regulations between an employer and a contract physician for the sanitary control over and inspection of a standard camp;

“Standard camp” shall mean a camp in which more than fifteen workmen, exclusive of one foreman and one clerk, are usually housed;

“Unorganized district” shall mean those parts of the territorial districts which are without municipal organization;

“Workmen” shall mean persons including foremen and clerks in the employ of an employer in a camp.

APPLICATION OF REGULATIONS

2. These regulations shall apply and have force in every unorganized district.

DUTY OF MANAGER, AGENT, ETC.

3. It shall be the duty of every employer and ever person acting on behalf of an employer as a superintendent, manager, agent, or in other supervisory capacity in charge of any camp to observe, perform and carry out these regulations and to cause these regulations to be observed, performed and carried out.

REGULATIONS TO BE ON FILE

4. A copy of these regulations shall be obtained from the inspector and kept on file in every standard camp and shall be open to inspection by every workman employed therein.

ORDERS AND DIRECTIONS BY INSPECTOR

5. (1) For the due observance, performance and enforcement of these regulations and to ensure that the proper sanitary conditions shall prevail in camps and that the health of workmen employed therein shall be safeguarded and to prevent nuisances arising or communicable diseases being spread in the unorganized districts, an inspector may make such orders and give such directions as may appear to him to be necessary and it shall be the duty of every person for the time being in charge of any camp, forthwith to comply with the terms of any such order or direction.

(2) The inspector shall send a copy of any such order or direction to the employer.

(3) The employer of any person for the time being in charge of any camp who fails to comply with any such order or direction, after notice has been given by the inspector to such person and the employer, shall be guilty of an offence and subject to the penalties set out in regulation 39.

(4) Where the inspector is satisfied that an employer or person for the time being in charge of a camp has failed or neglected to carry out any order or direction of the inspector after reasonable notice thereof, the inspector may, by an order directed to and served upon the person for the time being in charge of the camp, require that such camp be closed and that no further operations shall be carried out in such camp until the order or direction has been complied with to the satisfaction of the inspector.

SANITATION REGULATIONS APPLICABLE TO ALL CAMPS

6. An inspector may declare any camp which is not a standard camp (within the meaning of these regulations) to be a standard camp for the purpose of these regulations.

7. Every camp shall be located and established with due regard to sanitation and health, and no camp shall be located within 100 feet of any lake, stream or other water except with the written consent of an inspector.

8. Stables or buildings housing animals, attached to any camp, shall not be located less than 150 feet from any other camp building used to house workmen, or for the storage, preparation of consumption of food, or from any water supply, and shall be so located that there shall be no drainage therefrom to any water supply.

9. Manure, garbage, and refuse of every camp shall be kept, until disposed of, in a sanitary manner and as an inspector may approve, and shall be collected and conveyed to a suitable place and there buried or otherwise disposed of to the satisfaction of an inspector.

10. Every camp and all buildings, tents, structures and other erections therein shall be located, established, constructed, altered and maintained to the satisfaction and approval of an inspector.

SANITATION REGULATIONS APPLICABLE TO STANDARD CAMPS

NOTE:—Suggested plans showing the arrangement of camp buildings, details of construction and location of equipment which are intended to meet the requirements for the safeguarding of health, are appended.

11. Unless an inspector otherwise orders, a standard camp, in which the usual or expected period of employment of the workmen is in the case of mining operations for less than six months and in the case of other operations for less than four months, shall not be subject to regulations numbered 12 to 15.

12. Any person who establishes, re-establishes or re-opens a standard camp in an unorganized district, shall, before commencing operations at such a camp, notify an inspector in writing of the:

- (a) Location, nature and accommodation of the camp;
- (b) means of access thereto;
- (c) Nature, extent and expected duration of the operations to be conducted at or from the camp;
- (d) The layout of the camp, including a plan showing the location of the water supply and sewage disposal in relation to the buildings to be erected;
- (e) Name, occupation and address of the person to be in charge of the camp and the scope of his authority;
- (f) Medical and sanitation contracts to be entered into;
- (g) Hospital facilities available to the workmen at the camp;
- (h) The estimated number of workmen to be housed in the camp, and the number to be employed but not housed at the camp;
- (i) Name and address of employer to whom communications by an inspector or the Department shall be sent.

13. Every person in charge of a standard camp shall notify an inspector in writing of any of the particulars required under the preceding regulations forthwith after the occurrence of such change.

14. Every person in charge of a standard camp shall within thirty days of its establishment, re-establishment, re-opening or closing notify the inspector in writing of the fact.

15. Every standard camp shall comply with the following specifications:

- (a) **CONSTRUCTION MATERIAL.**—Shall be constructed of logs or lumber or other weather-proof materials.
- (b) **ROOFS AND FLOORS.**—Shall be constructed of lumber, tightly fitted, unless an inspector specially permits poles to be used. The floor shall be at least one foot above the ground, which shall be properly drained.
- (c) **WALLS.**—Where logs are used the outer walls shall be properly chinked so as to render them weatherproof. The interior surface of the logs shall be peeled. If lumber is used the walls shall be weatherproofed with suitable material. The walls shall be at least eight feet high above the floor level.
- (d) **WINDOWS.**—There shall be one square foot of window area for every twenty square feet of floor area. All windows shall be constructed so that they may be opened or closed at all times. Roof windows shall not be located over bunks.
- (e) **VENTILATION.**—Every bunkhouse in a camp shall contain at least 300 cubic feet of air space for each occupant thereof, and the number of occupants in any bunkhouse shall be deemed to be the number for whom sleeping accommodation has been provided. In addition to windows there shall be in each bunkhouse a separate ventilating system consisting of one fresh air duct not less than 10" by 6" inside measurement to each stove. (Fig. No. 5). Ventilator outlets shall be located in the roof sufficient to provide three square inches of sectional area per occupant.
- (f) **BUNKS AND BEDDING.**—Bunks shall be separate either single or double-deck and so arranged that on at least one side of each there shall be a passage not less than eighteen inches wide and on the other side a space not less than eight inches wide. Clean ticks or mattresses in good condition and clean blankets shall be supplied in sufficient quantity and maintained in a clean and sanitary condition.
- (g) **WHITE-WASHING.**—The interior of every camp or camp building shall be treated with a coat of lime-wash or other suitable material at the time of re-establishment or re-opening before it is re-occupied, or as required by an inspector.
- (h) **COOK'S QUARTERS.**—Separate quarters shall be provided for the cook and his staff. If partitioned off from the cookery a door shall be hung at the entrance to the cook's quarters.
- (i) **STORAGE.**—A room for storing perishable foodstuffs shall be provided, and a door shall be hung at its entrance. Food shall be protected from flies at all times.
- (j) **LAUNDRY AND WASHING.**—Suitable washroom, bath and laundry and drying accommodation shall be provided to the satisfaction of the inspector either in a portion of the bunkhouse partitioned off or in an adjoining or separate building. Facilities for heating water shall be provided.
- (k) **DRAINAGE.**—Drainage from all sinks, wash basins and tubs shall be conveyed to a cesspool located at least twenty feet from the nearest dwelling and located so as to avoid drainage toward any source of water supply. (Fig. No. 7.)
- (l) **PRIVIES.**—There shall be provided privies adequate for the simultaneous accommodation of ten per cent. of workmen employed. Privies shall be located so as not to contaminate the water supply. They shall not be located with fifty feet of the nearest dwelling in Winter or one hundred and fifty feet in Summer unless permitted by the inspector. Where camps are operated during the summer, privies shall be made fly-proof. The type of privy used shall meet the requirements of an inspector.
- (m) **WATER SUPPLY.**—If water supply is obtained from a lake or river the intake shall be located at least two hundred feet from the nearest building and in a direction upstream from the camp, and a container for drinking water shall be supplied with a well-fitting cover and tap, to prevent contamination.

SANITATION CONTRACTS

16. No employer shall operate or maintain a standard camp unless he has entered into a sanitation contract in respect of such camp.

17. It shall be the duty of every physician entering into a sanitation contract to ensure that the standard camps covered by the contract are at all times kept and maintained in an efficient sanitary condition and that nuisances are prevented from arising or, if they arise, are promptly abated, and to carry out, observe and perform within such camps and all buildings and premises forming any part thereof, the duties of a medical officer of health under *The Public Health Act* with respect to the prevention and abatement of nuisances.

18. A contract physician entering into a sanitation contract shall, by himself or an assistant contract physician, make a thorough sanitary and health inspection of every standard camp in actual operation or use, covered by the contract, at least once a month, and oftener if required by an inspector, and shall on the first day of every month transmit to an inspector, a report of inspections made in the preceding month and according to the form provided for such purpose by the Department.

19. The inspector may by reason of difficulty of access or other sufficient cause, waive the necessity for monthly inspections of any camp to the extent he may deem advisable.

MEDICAL, SURGICAL AND HOSPITAL CARE OF WORKMEN

20. (1) Every employer of workmen in a standard camp may enter into a medical contract with a contract physician for medical, surgical and hospital care of workmen in his employ, but whether or not any such contract is entered into, the duty of providing medical, surgical and hospital care and treatment and maintenance while under such care or treatment for every workman in the employ of such an employer shall primarily be and remain the responsibility of the employer subject to the limitations hereinafter set out.

(2) This regulation shall apply to all workmen employed in a standard camp whether or not such workmen are housed in the camp and whether or not such workmen reside in an unorganized district.

(3) Where an employer has entered into a medical contract, he shall notify every workman in his employ of the name and address of the contract physician.

21. (1) During the currency of a medical contract or an arrangement authorized by the Minister under subsection (6), an employer may deduct and retain from the pay or wages due to any workman entitled to the benefits of such contract a sum not exceeding \$1 per month commencing from his first pay and once a month thereafter during the period of employment, and all sums so deducted and retained shall, without rebate or reduction be paid monthly by the employer to the contract physician, or as the Minister may authorize in an arrangement under subsection (6).

(2) Any employer who fails to pay to the contract physician or as authorized by the Minister under subsection (6) all sums deducted from wages of workmen for medical and surgical care shall incur a penalty of not less than twice the amount retained by the employer from the sums so deducted.

(3) The employer shall keep records showing a separate accounting of all sums deducted from the wages of workmen in his employ for medical and surgical care, and showing the disbursement of such sums, and such records shall be open to inspection at any reasonable time by the contract physician or an inspector.

(4) The Department may require statements signed by the employer showing, for such period of time as the Department may deem necessary, the number of workmen employed by the employer, the number of such workmen from whose wages any deduction for medical and surgical care has been made by the employer, the sums deducted by the employer from the wages of workmen in his employ for medical and surgical care, the sums paid pursuant to a medical contract to contract physician, the sums paid pursuant to a sanitation contract to a contract physician, and the sums paid pursuant to an arrangement authorized by the Minister under subsection (6).

(5) The Department may authorize any inspector or any officer of the Department to inspect and audit the payrolls and books of any employer insofar as they are affected by these regulations.

(6) In the case of an employer who usually employs more than five hundred workmen, the Minister may authorize an arrangement whereby the employer may use the sums deducted from the wages of workmen in his employ for the establishment of an industrial medical service, including such particulars as the Minister may direct and authorize.

22. (1) Every contract physician entering into a medical contract with an employer shall supply medical and surgical care, treatment and medicine to every workman of the employer entitled thereto under the terms of the contract and in accordance with these regulations unless the contract as approved by the Department specifies otherwise.

(2) Every contract physician shall report at the end of each month to the Department on the physician's report form all cases of sickness and non-industrial accidents among employees under his care.

(3) Every contract physician who employs or engages any other physician to perform any services other than consultant services in connection with a medical contract shall notify the Department and the Department may require the employer, contract physician and other physician, or any of them, to furnish such information as may be necessary and may require further or other contracts to be entered into.

23. The contract physician shall cause a notice to be posted in a camp a reasonable time in advance of his visits to such camp so that the workmen in the camp may have an opportunity to consult him.

24. (1) Every employer shall provide facilities for the isolation of workmen suffering from a communicable disease, to the satisfaction and approval of an inspector, and the employer or contract physician shall arrange for general hospital accommodation and facilities where necessary for the treatment of workmen suffering from sickness or injury.

(2) The employer shall provide and pay for transportation of any workman when necessary for medical and surgical treatment to which he is entitled under these regulations.

25. Within a reasonable time after the admission of any workman as a patient in a public hospital, the superintendent of the hospital shall notify the employer of the workman of such admission, giving such particulars as may be ascertainable to enable the employer to identify the employee, and in the event that the superintendent neglects to notify the employer, the Department may exempt the employer from any liability imposed upon him by these regulations for the maintenance charges for maintaining the workman in the hospital.

26. The responsibility and liability of an employer under the provisions of regulations 20 to 24 shall be subject to the following limitations:

- (a) In cases where the workman has been in his employ for less than three months out of the six months immediately preceding the need for medical, surgical or hospital care arising, and the illness and consequent inability to work is the result of a chronic or degenerative disease or of an infection or defect arising prior to the commencement of employment, the employer shall be responsible only to return and pay the cost of return of the workman to the municipality in which he was last resident in Ontario within the meaning of *The Public Hospitals Act*, or, in the event of no such residence existing and the workman being without means, the employer shall be responsible for returning and paying the cost of return of the workman to the place from which he was engaged, and for providing such medical care and treatment and maintenance as the workman may need until he is returned to such municipality or other place.
- (b) In cases where any workman has been in his employ for three months or more out of the six months immediately preceding the need for medical, surgical or hospital care arising, the employer shall be responsible and liable for providing such care and for maintenance of the workman for a period not exceeding ninety days.
- (c) In cases where the workman becomes ill and by reason thereof, need for medical, surgical or hospital care and treatment arises within ninety days after the workman has ceased employment with the employer, and such illness is proved to have originated or been occasioned during the course of such employment, and such workman is an indigent person, the employer shall be responsible and liable for such medical, surgical and hospital care and for the maintenance of the workman within the period of ninety days after such workman has ceased employment and not afterwards.
- (d) The employer shall not be liable for the payment of the charges for treatment of any workman in a sanatorium under *The Sanatoria for Consumptives Act*.
- (e) In cases where the workman is suffering from an accident for which the employer is not responsible under *The Workmen's Compensation Act*, the employer shall be responsible and liable for medical and surgical care, and treatment and maintenance except maintenance in a public hospital.

27. Any dispute which may arise between any workman, employer or contract physician with respect to the responsibility or liability of an employer or the contract physician for the medical, surgical or hospital care or for the maintenance of the workman under the provisions of these regulations, may be referred to the Department by the workman, employer or contract physician and the decision of the Department therein evidenced by its certificate shall be final and binding on all persons affected thereby and shall not be open to question.

28. Nothing in these regulations shall in any way render an employer or a contract physician responsible or liable for the medical, surgical or hospital care and treatment or for the maintenance of any workman in cases where the illness or injury of such workman arises as a result of acute alcoholism, drug addiction or venereal disease.

29. Nothing in these regulations shall in any way relate to or affect matters of compensation determinable under *The Workmen's Compensation Act*, or render an employer or a contract physician responsible or liable for medical, surgical or hospital care and treatment or for the maintenance of any workman in cases to which the said Act applies.

30. Any employer of workmen who makes any deduction from the wages of such workmen for medical, surgical or hospital care shall be subject to the provisions of regulations 20 to 29 to the same extent as an employer of workmen in a standard camp.

MEDICAL AND SANITATION CONTRACTS

31. (1) The Department may prescribe the form of sanitation contract to be entered into between an employer and a contract physician pursuant to these regulations, and may permit variation from such form in any case where the Department is of opinion that the circumstances so warrant.

(2) Every employer entering into a medical contract or sanitation contract with a contract physician shall transmit by registered post to the Department or an inspector a copy of such contract signed by the parties thereto within thirty days after the same has been executed and shall notify the Department or an inspector at the same time that the contract physician is notified of cancellation or expiration of the contract.

32. (1) Every medical contract and sanitation contract entered into pursuant to the regulations shall be subject to the approval of the Department and shall be amended or determined as the Department may at any time require, provided, however, that, except as in the next subsection and in regulation 33 is provided, the Department shall specify the amendments or determination which it may require within thirty days after the copy of the contract entered into has been transmitted by registered post to the Department or an inspector.

(2) If the Department is not satisfied that any employer entering into a medical contract or a sanitation contract is in fact the employer of the workmen, the Department may refuse to approve or may revoke any such contract.

(3) In any case, approval of a medical contract shall be given only after a sanitation contract has been submitted to the Department.

33. Notwithstanding the provisions of the preceding regulation or the terms of any medical contract or sanitation contract, the Department may, by reason of neglect or inability on the part of the contract physician to observe, perform or carry out the terms of such contracts or the provisions of *The Public Health Act* and the regulations made thereunder either from the distance at which he resides or practises from the camp or for any other cause which the Department deems sufficient, require the contracts to be determined and cancelled as of date set by the Department.

COMMUNICABLE DISEASES AND NUISANCES

34. Every employer establishing or operating a camp and every contract physician shall, in addition to any other duties or responsibilities cast upon him under these regulations, have, observe, and perform the same duties, obligations and responsibilities with respect to communicable diseases and their care, prevention and abatement as lies upon a householder and attending physician respectively under the provisions of *The Public Health Act* and regulations made thereunder.

35. Every employer establishing or operating a camp shall, in addition to any other duties or responsibilities cast upon him under these regulations, have, observe, and perform the same duties, obligations and responsibilities with respect to nuisances and their prevention and abatement as lies upon the owners or occupants of premises under the provisions of *The Public Health Act* and regulations made thereunder.

36. Upon an outbreak or suspected outbreak of any communicable disease occurring in any camp, the employer who established or operates such camps shall forthwith notify the contract physician, if any, and an inspector, and every contract physician who is or is made aware of any such outbreak shall forthwith notify the inspector.

37. (1) Upon an outbreak or suspected outbreak of any communicable disease occurring in any camp, every workman shall upon the request of an inspector, forthwith furnish to the inspector evidence satisfactory to the inspector that he has been successfully vaccinated or re-vaccinated within a period of seven years immediately preceding such request and evidence satisfactory to the inspector that he has been inoculated against typhoid and para-typhoid fevers within a period of two years immediately preceding such request.

(2) If an inspector, after such request has been made by him, is not satisfied that every workman in a camp has been so vaccinated or re-vaccinated, he may quarantine such camp and every person therein until he is so satisfied, and any person not observing the quarantine placed upon the camp or upon him shall be guilty of a breach of these regulations.

OFFENCES AND PENALTIES

38. Any employer who signs any return, report or statement required by the Department, knowing or having reason to know that any such return, report or statement contains any false information or statement of fact, shall be guilty of an offence and subject to a penalty of not less than \$200 for the first offence and not less than \$500 for any subsequent offence.

39. Any employer or contract physician who contravenes any provision of these regulations for which no other penalty is provided or fails or neglects to carry out or obey any order or direction lawfully made by an inspector shall incur a penalty of not less than \$25 nor more than \$200 for each offence.

40. Any person other than an employer or contract physician who contravenes any provision of these regulations for which no other penalty is provided or fails or neglects to carry out or obey any order or direction lawfully made by an inspector shall incur a penalty of not less than \$5 nor more than \$100 for each offence.

Copy of an Order-in-Council approved by the Honourable the Lieutenant-Governor, dated the 24th day of June, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that pursuant to clause (zb) of Section 5 of *The Public Health Act*, as enacted by *The Public Health Amendment Act, 1938*, the attached regulations, entitled "Milk Pasteurization Plants" be approved.

Certified,

C. F. BULMER,

Clerk, Executive Council.

MILK PASTEURIZATION PLANTS

REGULATIONS

Made by the Minister of Health pursuant to *The Public Health Act*, and approved by the Lieutenant-Governor in Council the 24th day of June, 1938.

1. In these Regulations:

- (a) "DEPARTMENT" shall mean Department of Health.
- (b) "DISTRIBUTOR" shall mean any person who engages in and carries on the business of distributing and selling milk to the consumer, either directly or through resale by a peddler or storekeeper, and, except, as provided by these regulations shall include a peddler, storekeeper, producer-distributor and any other person who retails milk to the consumer;
- (c) "EMPLOYEE" shall mean every person employed in a pasteurization plant or milk plant;
- (d) "OPERATOR" shall mean every person who by himself or by his agents owns or operates a pasteurization plant.
- (e) "PASTEURIZATION" shall mean the process of heating every particle of milk to a temperature of not less than 143 degrees Fahrenheit, of holding it at such temperature for not less than 30 minutes, and of cooling it immediately thereafter to 50 degrees Fahrenheit or lower in a manner and with equipment and apparatus approved by Department of Health, and every term of like import shall have a corresponding meaning;
- (f) "PASTEURIZING PLANT" shall include every plant in which milk is pasteurized and every building, machine, apparatus, equipment and appurtenance employed in or necessary for the pasteurization, heating, storing, cooling, processing, packaging or in any way handling milk in such plant, and forming part of or connected with such plant, provided that where milk is pasteurized in any part of a plant the entire plant shall be deemed to be a pasteurization plant;
- (g) "PEDDLER" shall mean and include any person who for resale to the consumer, purchases milk from a distributor and distributes and sells such milk to the consumer;
- (h) "PERSON" shall include partnership, association firm and corporation;
- (i) "PRODUCER" shall mean and include any person who produces milk which is sold for human consumption;
- (j) "PRODUCER-DISTRIBUTOR" shall mean a producer who distributes and sells to the consumer, milk of which he is the producer;
- (k) "PROCESSOR" shall mean and include any person carrying on the business of pasteurizing, homogenizing, bottling or in any other way processing milk for human consumption;
- (l) "STOREKEEPER" shall mean and include any person who from or at a store or shop kept by him sells or offers for sale milk to the consumer, which milk has been purchased for resale from a licensed distributor;
- (m) "DIRECTOR" shall mean the Director of the Sanitary Engineering Division of the Department of Health, or any other person designated by the Minister to act for him.

CONDITION FOR ISSUANCE OF CERTIFICATE OF APPROVAL OF PASTEURIZATION PLANT.

2. (1) Upon proof satisfactory to the director that any pasteurization plant has complied with the requirements of these regulations, the director shall issue a certificate of approval in the prescribed form.

(2) Every certificate shall expire on the last day of the calendar year in which the certificate is issued, and may be renewed by the director if he is satisfied that the plant has complied with these regulations.

(3) The Department may suspend or revoke any certificate or renewal thereof if the Department is satisfied that the plant for which the certificate is issued does not comply with any provisions of these regulations.

FORMS

3. The form in the schedule to these regulations entitled "Approval of Pasteurization Plant" is hereby approved as the certificate of approval referred to in clause (zb) of Section 5 of *The Public Health Act*.

PASTEURIZATION, ETC., SUBJECT TO APPROVAL.

4. Every pasteurization plant, every pasteurization, and every operation connected with the handling of milk shall be subject to the inspection and approval of the Director or any officer of the Department.

USE OF WORD "PASTEURIZATION"

5. No person shall use any word or term stating or indicating, either verbally or in writing, that such milk is pasteurized unless such milk has been pasteurized and handled in a pasteurization plant in accordance with the provisions of these regulations.

ESTABLISHMENT, ETC., OF PLANT.

6. (1) No person shall establish, erect, reconstruct, alter or enlarge a pasteurization plant unless the approval of the Department has been obtained.

(2) Where an application for approval is made under subsection (1) the applicant shall furnish to the Department a copy of the plans and specifications therefor together with such other material and information as the Department may require.

BUILDINGS AND LOCATION

7. (1) The location of every pasteurization plant shall be satisfactory to the Department and shall be free from any objectionable conditions including smoke, fumes, dust, odours, flies, and other conditions of nature which might injuriously affect the quality of the milk, and there shall be ready access to and from every building.

CONSTRUCTION OF BUILDINGS

8. The buildings shall be of substantial construction, of adequate size for the operations involved, free from excessive dust, readily cleaned and well lighted.

DOORS AND WINDOWS

9. (1) All outside openings in every building forming part of a pasteurization plant shall be effectively screened, or otherwise protected against the entrance of flies during the period from May 1st to November 1st.

(2) Window and door screens shall be tight-fitting and shall be kept in good repair, and all doors shall be equipped as far as possible with self-closing devices.

(3) Openings through which cans, crates and other articles are passed in rapid succession shall be equipped with flaps, fans or similar devices to exclude flies.

(4) Such additional precautions for the control of flies as may be reasonably necessary or as the Department may require, shall be provided.

LIGHTING AND VENTILATION

10 (1) Every room in which the processing or handling of milk is conducted or in which equipment is operated shall be adequately lighted by natural or artificial light or both.

(2) Every room shall be adequately ventilated through windows, doors or ventilating ducts so as to prevent water of condensation forming on walls, ceiling and equipment.

FLOORS, WALLS AND CEILINGS

11. (1) The floors of every room in which milk is handled or stored shall be constructed of concrete, tile, brick, or other good quality, impervious material and the surface shall be smooth, readily cleaned, sloped to convenient outlets, and free from joints and depressions in which water or dirt may collect and the joints between walls and floors shall be covered.

(2) Floors shall be kept clean and free from materials and equipment not regularly used in the room.

(3) Suitably trapped drains of sufficient size and so located as to rapidly remove drainage shall be provided.

(4) The walls and ceilings of rooms in which milk is handled or stored shall have smooth surfaces of impervious and washable material, light in colour, and such surfaces shall be kept clean.

ROOMS IN PASTEURIZATION PLANTS

12. (1) Separate rooms shall be provided in every pasteurization plant for:

- (a) Pasteurization, cooling and bottling operations;
- (b) Washing and bactericidal treatment of containers and miscellaneous equipment.

(2) Cans of unpasteurized milk shall not be unloaded directly into or stored in the pasteurizing room.

(3) Self-closing doors as far as possible shall be provided on the pasteurizing room, and such doors shall not open directly into any stable, garage, or living quarters.

(4) Cleaned utensils and containers shall be stored in a room or compartment which is kept free from flies, dust, odours and other contamination.

FACILITIES FOR USE OF EMPLOYEES

13. (1) Every pasteurization plant shall, for the purposes of the employees, be equipped with:

- (a) Adequate soap and hot and cold water;
- (b) Clean towels or towels of such kind and quantity that not more than one employee shall use the same towel;
- (c) Washing facilities which shall be conveniently located and shall not be used in any way in the operation of the pasteurization plant or the handling of milk;
- (d) Such toilet rooms as may be necessary and such rooms shall be conveniently located, properly equipped, of a sanitary condition, in good repair, provided with adequate ventilation and lighting, and shall not open directly into any room in which milk, equipment or containers are used, or handled, and where privies are used they shall be separated from any other building, fly-tight and equipped with self-closing doors.

WATER SUPPLY

14. Adequate and satisfactory water and drainage facilities shall be provided.

DISPOSAL OF WASTES

15. (1) All wastes and drainage from the operation of any pasteurization plant shall be disposed of in a sanitary manner.

(2) Refuse shall not be permitted to accumulate in the building or on or near the premises except in properly covered containers or receptacles.

(3) Stables shall not be erected or maintained in such proximity to the pasteurization plant as to adversely affect the process, and all manure and garbage shall be treated with fly larvicide during the fly season.

HANDLING, PROCESSING AND STORAGE EQUIPMENT

16. The equipment and containers used in the handling, processing or storage of milk shall be so constructed and kept in repair as to facilitate cleaning and bactericidal treatment, and any surfaces of such equipment and containers with which milk comes in contact shall be of smooth, non-corroded metal or vitreous material, free from accumulation of milk solids and other foreign substances, self-draining and readily accessible for cleaning, and every joint in any such equipment or container shall be made flush with the surface or otherwise constructed so as to avoid open seams.

17. (1) Every pasteurization plant shall have equipment of sufficient capacity for the maximum output of the plant.

(2) Any equipment used for processing or storing milk shall be constructed of such material and so maintained as not to adversely affect the quality or taste of the milk.

(3) Holding vats shall be adequately insulated to prevent undesirable heat losses.

(4) Tight fitting covers shall be provided for the equipment, and shall be so arranged as to prevent the entrance of drainage or water of condensation from the outside into the milk, when in either the open or closed position.

(5) Milk receiving vats shall be so placed and protected as to prevent contamination of the milk.

VALVES AND PIPE CONNECTIONS

18. Every inlet and outlet valve and pipe connection to pasteurization holders shall meet the following requirements:

(a) Every valve and pipe line used in inlet and outlet connections on pasteurizers or holders shall be of metal not affected by milk to the extent of corroding or pitting the material, and shall not affect the flavour of milk by electrolysis or by other means;

(b) Every surface in contact with the milk shall be smooth and free from pits, crevices, cracks, open seams or threads;

(c) Passages shall be constructed to prevent pocketing;

(d) Every part shall be readily disassembled for cleaning;

(e) Every inlet valve shall be of the leak-protector type and every inlet valve and connection shall be so constructed and located as to prevent leakage or short circuiting of unpasteurized milk into the pasteurized, or into a pasteurizer or holder other than that being filled;

(f) Every groove on an inlet valve for diverting leakage shall be of ample dimensions and so arranged to permit free drainage;

(g) Every pipe line between any inlet valve and pasteurizer or holder shall be as short as possible and shall be sloped or otherwise arranged to drain freely;

(h) Every outlet valve shall be of the leak-protector type and shall have the valve seat either flush with the inner wall of the pasteurizer or so closely coupled that all milk in the valve pocket is within the influence of the agitation created by the stirring equipment;

(i) Every outlet valve shall prevent leakage past the valve seat into the milk outlet, and grooves for diverting leakage shall be of ample dimensions and so arranged to permit free drainage;

- (j) Sterilizing connections shall be provided where the construction of the outlet valve makes this necessary and they shall be non-clogging and shall not terminate in a channel through which milk is flowing;
- (k) Valves shall be provided with necessary stops and guides to insure proper operation.

MILK PIPING

19. Milk piping and connections shall meet the following requirements:
- (a) The piping and connection shall be of such size and material that they may be readily cleaned;
 - (b) The piping and connections shall be smooth, free from corrosion and all joints shall be soldered flush;
 - (c) The length of piping shall be reduced to a minimum;
 - (d) No piping, pumps, or equipment shall be used for both unpasteurized and pasteurized milk.

THERMOMETERS

20. (1) Both indicating and recording thermometers of satisfactory type shall be installed and used on each holder in which the holding time is not automatically controlled and in both inlet and outlet manifolds of vat, pocket or continuous flow installations in which the milk is brought to the final pasteurization temperature before entering the holder and in which the time is automatically controlled.
- (2) The bulbs of the indicating thermometer and the recording thermometer shall be as close together as practicable.
- (3) Indicating thermometers shall be easily read and shall be accurate within one-half of one degree Fahrenheit.
- (4) Recording thermometers shall be moisture-proof, easily read, with scale divisions of not less than one-sixteenth of one inch for each degree between 140 and 145 degrees Fahrenheit, and the smallest time-scale division shall not exceed ten minutes and every chart shall be graduated for and shall make one revolution in 12 hours.

FOAM IN PASTEURIZERS

21. The equipment used in milk processing shall be such as to preclude as far as possible the formation of foam in pasteurizers or holders and where foam collects in milk holders means shall be employed to keep the atmosphere above the milk at a temperature at least 5 degrees Fahrenheit higher than the pasteurizing temperature.

MILK FILTERS

22. Milk shall be filtered or strained before pasteurization only and no filters, other than metal screens, shall be placed on the outlet side of the pasteurizer or be used on milk after pasteurization.

MILK COOLERS

23. (1) Milk cooling equipment shall be provided of sufficient capacity and type to cool the milk from each pasteurizer or holding vat in a period not exceeding one and one-half hours.
- (2) The temperature of the pasteurized milk shall not be reduced to lower than 120 degrees Fahrenheit before passing through the cooling equipment.
- (3) The milk shall be cooled to 50 degrees Fahrenheit or lower within a period not exceeding one and one-half hours and held at or below this temperature until delivery.
- (4) Surface coolers shall be built of suitable material and so constructed as to afford ready access for cleaning and provision shall be made to prevent water of condensation coming in contact with the milk or the cooling surfaces.
- (5) Any open surface coolers shall be either located in separate well-ventilated rooms, free from flies, dust, drip, splash, manual contact and other sources of contamination, or provided with tight fitting covers or shields, and such covers or shields shall be so arranged as to afford ready access for cleaning the cooler.

(6) Regenerative heater-coolers shall be so constructed and maintained as to prevent access of the unpasteurized milk into the pasteurized milk.

(7) Solder shall not be used on the metal separating the pasteurized milk from the unpasteurized milk.

BOTTLING EQUIPMENT

24. Milk shall be bottled and capped at the plant where pasteurization takes place and in accordance with the following conditions:

- (a) Bottling shall be done in mechanical equipment which can be readily cleaned and which does not expose the milk to contamination during the operation;
- (b) The equipment and the operation shall be such that a uniform mixture of the milk is added to each bottle;
- (c) No unpasteurized milk shall be bottled or come in direct contact with bottling equipment used for pasteurized milk.

CAPPING EQUIPMENT

25. Bottles shall be capped by mechanical equipment and hand capping shall not be permitted.

COLD STORAGE FACILITIES

26. Adequate cooling facilities and cold storage shall be provided in the pasteurization plant for the pasteurized milk and that held in storage prior to processing.

CLEANSING EQUIPMENT

27. Containers and other equipment used in the processing or handling of milk shall be washed and disinfected in equipment satisfactory to the Department.

PASTEURIZATION

28. (1) The operation of the pasteurizer or holding vat shall be such that the variation in temperature between the hottest and coldest sections of the milk shall not exceed one degree Fahrenheit.

(2) The temperature of the milk in the pasteurizer at any time shall be taken as that shown on the indicating thermometer rather than the recorder.

(3) The temperature shown by the recording thermometer shall be checked daily by the operator against the indicating thermometer and shall be adjusted to read at no time higher than the indicating thermometer.

(4) The bulbs of the thermometers shall be placed as close together as practicable and at the point of lowest temperature in the pasteurizer or holder.

29. (1) No recording chart shall be used for a period which will interfere with the clarity of the record or which will permit over-lapping of graphs.

(2) The person in charge of the recorder shall sign every chart and shall see that the following information is recorded thereon:

- (a) The date of each operation of the pasteurizer or holder;
- (b) The number of the pasteurizer or holder, if more than one is in use, to which the recorder was attached;
- (c) A recording of the indicating thermometer at some time corresponding with a marked point in the holding period.

(3) Where more than one recording thermometer is in use, the chart shall be numbered in such a manner as to indicate the recording thermometer which was used for such chart.

(4) The operator shall keep every chart for a period of three months after the date thereof.

30. The cover of the pasteurizer shall be kept closed, during the holding period and until the milk is removed, except in case of emergency.

31. (1) Any milk which has been contaminated subsequent to pasteurization shall be repasteurized, but milk which has come into contact with contaminated machinery or has overflowed from routine operations shall not be used for domestic consumption.

(2) If any milk accidentally passes through equipment without proper treatment such equipment shall be sterilized before it is used again.

32. (1) Any equipment used for pasteurization and subsequent handling of the milk shall be given a bactericidal treatment by steam, hot water or other disinfectant approved by the Department when assembled, immediately prior to the day's operations.

(2) Every valve shall be thoroughly steamed or disinfected before being used.

33. (1) No piping, pumps or equipment with which pasteurized milk comes into contact shall be used in the handling of unpasteurized milk or other contaminated material, nor shall any connection be permitted between unpasteurized and pasteurized milk.

(2) Every valve and pipe connection to or from a pasteurizer or holder shall be disconnected during the holding period, and when not in actual use.

COOLING MILK BEFORE PASTEURIZATION

34. Milk which is or is likely to be held for more than two hours in the plant before pasteurization shall be cooled to 50 degrees Fahrenheit or lower upon arrival, and shall be held at such temperature until pasteurization begins.

UNPASTEURIZED AND PASTEURIZED MILK IN THE SAME PLANT

35. No unpasteurized milk shall be bottled in any pasteurization plant or placed in containers for delivery to consumers.

PRODUCTS OTHER THAN MILK

36. No products other than milk products and products of which milk is a substantial component shall be handled or processed in a pasteurization plant unless equipment entirely separate from equipment used in pasteurization is used and the handling or processing is carried on in a separate room.

CLEANING OF EQUIPMENT IN THE PLANT

37. (1) Every container and any equipment which comes into contact with or is used in the handling of milk shall be thoroughly cleaned and subjected to effective bactericidal treatment after each use, and at least once each day.

(2) All demountable apparatus including piping, pump parts, valves and pipe fittings shall be taken down daily for cleaning, and after cleaning shall be stored on racks or other places protected from contamination.

(3) Every can, tank and other container used for transporting milk to a pasteurization plant shall be thoroughly cleaned and subjected to effective bactericidal treatment before leaving the plant, and such can, tank and other container shall not be used for transporting milk or other products from the pasteurization plant.

STORAGE AND HANDLING OF CONTAINERS

38. (1) All bottles, cans, containers and equipment shall be stored, after cleaning, in such manner as to protect against drainage, dust, flies and other contamination.

(2) During storage and when in operation the interior of every container and any surface thereof exposed to milk shall be protected against manual contact and other sources of contamination.

(2) During storage and when in operation the interior of every container and any surface thereof exposed to milk shall be protected against manual contact and other sources of contamination.

STORAGE OF BOTTLES AND CAPS

39. All bottle caps and other paper or parchment which comes into contact with milk shall be purchased and stored in sanitary tubes or cartons, and shall be kept free from contamination and in a clean dry place until used.

QUALITY OF MILK REACHING THE PLANT

40. (1) Unpasteurized milk reaching a pasteurization plant for pasteurization or processing shall be clean, cool and of good quality.

(2) Any milk which is tainted, soured, unpalatable, or otherwise unsatisfactory shall be rejected at the pasteurization plant, and shall be returned to the shipper or disposed of at his direction.

41. (1) Milk which is to be, or is intended to be pasteurized shall be cooled within two hours after milking to a temperature of 50 degrees Fahrenheit or lower, and the milk reaching the pasteurization plant, unless to be pasteurized within two hours after milking, shall not have a temperature higher than 60 degrees Fahrenheit.

(2) Where there is a long interval between milking and delivery to the plant the temperature shall be kept below 50 degrees Fahrenheit.

DELIVERY OF MILK

42. All milk, except that sold in wholesale quantities, shall be delivered in glass bottles or other containers satisfactory to the Department, and every such container shall be labelled with the word "pasteurized," and the name of the operator in capital letters of eight point size or larger.

43. (1) Every vehicle used for transportation or delivery of pasteurized milk shall be so constructed and maintained as to protect the milk from excessive heat and contamination.

(2) Every such vehicle shall be kept clean and shall not be used for transporting anything likely to cause contamination of the milk or the containers.

PERSONNEL IN PASTEURIZATION PLANTS

44. Every pasteurizing and processing operation shall be under the direct supervision of a person having an adequate knowledge of such operations.

45. (1) Every person whose work brings him into contact with the pasteurizing, processing or handling of milk, or the handling of containers or equipment shall be free from, and shall not be a carrier of, any disease which may be spread through the medium of milk.

(2) Every such person shall satisfy the Medical Officer of Health of the municipality of which the milk is sold or delivered as to his freedom from such diseases, and shall submit to such examinations and tests as the Medical Officer of Health or the Department may require.

(3) When any operator believes or suspects that any employee is suffering from any such disease the operator shall forthwith notify the Medical Officer of Health of the municipality in which the milk is sold or delivered.

(4) Upon evidence satisfactory to the Department that any such person has failed to satisfy any of the requirements of this section, the Department may direct the operator of the plant in which such person is employed to see that such person is not employed in any work which may bring him into contact with the pasteurizing, processing or handling of milk or the handling of containers or equipment, and every such operator shall carry out the direction of the Department.

46. (1) Any person employed in a pasteurization plant shall be clean in habits, wear clean, washable outer garments, and keep his hands clean while engaged in work.

(2) No person shall spit, smoke or use tobacco in any form in any part of the plant in which milk is processed or handled.

Director, Sanitary Engineering Division for the
Ontario Department of Health.

Copy of an Order-in-Council approved by The Honourable, the Lieutenant-Governor, dated the 16th day of December, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached regulations being "Regulations respecting the Manufacture of Wine" made by the Minister of Health, pursuant to section 5 of *The Public Health Act, R.S.O., 1937*, chapter 299, be approved, and that the "Regulations Respecting the Manufacture of Wine," approved by Your Honour on the 17th day of December, 1930, pursuant to *The Public Health Act*, be repealed.

Certified,
C. F. BULMER,
Clerk, Executive Council.

REGULATIONS RESPECTING THE MANUFACTURE OF WINE

1. In these regulations:

- (a) "Wine Manufacturer" shall mean and include a manufacturer of wine and a manufacturer of native wine, who holds a Native Wine License from the Liquor Control Board;
- (b) "Wine" shall mean wine and native wine as defined by The Liquor Control Act (Ontario), and any blends of native wine;
- (c) "Minister" shall mean the Minister of Health of Ontario;
- (d) "Department of Health" shall mean the Department of Health of Ontario;
- (e) "Inspector" shall mean a person authorized by the Department of Health to inspect the plant, premises, equipment and products of wine manufacturers.

2. No wine manufacturer shall be permitted to continue the manufacture, processing, or storage of wine in premises in which the sanitary conditions are not satisfactory to the Minister.

3. Where deemed necessary the Minister may issue an order to a wine manufacturer requiring him or her to:

- (a) Make certain alterations to the plant or premises;
- (b) Alter, procure or dispense with any wine-making equipment or material;
- (c) Maintain satisfactory ventilation and sanitary conditions in the plant and premises;
- (d) Provide a "man-hole" near the bottom of wine storage tanks in addition to an opening of sufficient size at the top for protection of workers and to facilitate washing.

4. Where a wine manufacturer makes an alteration or makes an addition to any building used in connection with the manufacture of wine, or where a new building is to be constructed for the same purpose, the plans and specifications must first be approved by the Department of Health.

5. An inspector may at any time enter and inspect the plant and premises of any wine manufacturer, and may seize for purposes of proof or for analysis, samples of native wine, fruit or other material found therein or thereon.

6. An inspector may order a wine manufacturer to cleanse and disinfect the plant, premises and wine-making equipment.

7. The plant, premises and equipment of a wine manufacturer shall be maintained at all times in a clean and sanitary condition, satisfactory to the inspector.

8. An inspector may order a wine manufacturer to remove from the premises any fruit which he deems unfit to be used for the manufacture of wine and any marc, pomace or other material producing or likely to produce an unsanitary condition.

9. The inspector shall furnish such information and make such reports as may be from time to time required by the Minister.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 30th day of November, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached regulations made pursuant to section 4 of the *Public Hospitals Act* be approved by Your Honour.

Certified,

C. F. BULMER,

Clerk, Executive Council.

REGULATIONS

Passed by the Lieutenant-Governor in Council upon the recommendation of the Minister of Health, pursuant to *The Public Hospitals Act, 1931*.

MANAGEMENT AND OPERATION

1. (1) Every hospital shall be governed and managed by a board appointed or elected in accordance with the provisions of the authority whereby the hospital is established.

(2) The president of the medical staff of the hospital shall be ex-officio a member of the board.

(3) The Board shall have power to govern, manage and operate the hospital and shall be responsible for the due observance and enforcement of the Act, the regulations, and the by-laws.

2. (1) The superintendent of a hospital shall be responsible to the board for the due observance and enforcement of the Act, the regulations, and the by-laws, and he shall be the officer representing the hospital with whom the Minister, the inspector and the other officers of the Department shall ordinarily deal with regard to hospital matters.

(2) Subject to the by-laws and direction of the board, the superintendent shall have control over the admission, discharge and accommodation to be furnished to patients.

(3) Where, in the opinion of the medical practitioner attending a patient, the condition of such patient makes it advisable for the relatives of the patient or any other persons to be present in the hospital, the superintendent shall be responsible for the notification of such relatives or other persons of the patient's condition.

3. Every board shall pass by-laws for the purpose of carrying out the provisions of the Act and the regulations, and unless the Lieutenant-Governor in Council otherwise directs, the by-laws of every board shall provide for:

(a) The appointment of and prescribe the functions of the superintendent;

(b) The appointment of and prescribe the functions of a medical and surgical advisory board and a medical and surgical staff (referred to in these regulations as the "medical staff");

(c) The appointment of and prescribe the functions of a nursing staff;

(d) The establishment of an administrative and accounting system; and

(e) The appointment of an auditor.

INSPECTION

4. (1) The inspector shall perform the duties assigned to him by the Minister and Deputy Minister and shall have power with respect to any hospital to:

- (a) Administer and enforce the Act and the regulations;
- (b) Inspect and make inquiries regarding the premises, management and operation;
- (c) Require that returns, reports, statements and other information relating to the hospital be furnished to him or to the Minister, periodically or otherwise, by the superintendent or any other officer or member of the staff of the hospital;
- (d) Collect and compile such information and make such reports, returns and statements as the Minister may require;
- (e) Examine and audit books, accounts, records and funds, and, where necessary, remove them into the custody of the Department;
- (f) Investigate the financial condition of any person who is an indigent patient and require information with respect to the financial condition of such person to be furnished by any person in possession of such information;
- (g) Investigate any matter affecting a hospital or hospitals in general and require information with respect to any such matter to be furnished to him by any person in possession of such information.

5. Every application, report, return, statement or other written communication required to be made or furnished to the Minister, Deputy Minister, inspector or department under the Act or those regulations shall be sent to the Inspector of Hospitals, Department of Health, Parliament Buildings, Toronto.

ESTABLISHMENT—ALTERATIONS

6. (1) Every application for the approval by the Lieutenant-Governor in Council of the creation, establishment, incorporation, operation or use as a hospital of any institution, building or other premises or place shall be in writing and shall be forwarded to the inspector together with such plans, drawings, specifications, particulars and other information as the Minister may require.

(2) No hospital shall be altered by enlarging or remodelling unless the Minister has given his approval in writing, and every application therefor shall be made in writing and shall be forwarded to the inspector together with such plans, drawings, specifications, particulars and other information as the Minister may require.

(3) Every contract for the construction, remodelling, renewal, repair or demolition of a hospital shall comply with the provisions of *The Government Contracts Hours and Wages Act, 1936*.

FIRE PRECAUTIONS

7. In every hospital, there shall be a system of fire control and provision for fire extinguishment.

8. Unless exempted by the Minister, every hospital shall be equipped with an electrically or manually operated fire alarm system so installed as to effectively attract the attention of persons in every part of the hospital except those portions which the Minister may exclude from the provisions of this subsection.

9. The superintendent shall cause the nurses and employees of the hospital to be instructed as to the location and operation of fire-fighting equipment.

10. The superintendent of every hospital shall cause all nurses and employees to be regularly instructed and trained in their duties in case of a fire alarm, particularly with respect to the handling of mattresses and stretchers and the removal of patients from the hospital.

11. Such stretchers as may be required for the removal of patients from the hospital in case of fire or other emergency shall be kept in convenient locations in the hospital.

12. In every hospital there shall be at least two independent means of egress from every floor and from every separate section of a floor.

13. In every hospital all exit facilities and fire escapes shall be of a type suitable for the removal of patients in case of fire and shall be so lighted that they may be used with safety at night.

14. Nitrocellulose X-ray films shall not be used or stored in the hospital, provided that such quantity of films as may be necessary for current reference may be kept within the hospital in a fireproof container.

15. In every hospital, sheets used for tenting in steaming treatments shall be so treated that they will not burn with a flame.

16. Where possible, every hospital shall be equipped with sufficient standpipes and hose to permit of effective fire fighting in any part of the hospital, including the basement, without using hose of a greater length than seventy-five feet, and shall also be equipped with sufficient chemical or other hand-operated fire extinguishers to afford ample protection against an incipient fire in any part of the hospital.

17. The superintendent shall charge the engineer or some other qualified person with the inspection of the hospital at least once each month and such person shall submit to the superintendent on forms prescribed by the Minister, a written report on conditions pertaining to fire hazard, fire-fighting equipment and facilities and provisions for the removal of patients in case of fire or other emergency, and such reports shall be kept on file by the superintendent for a period of not less than two years.

EQUIPMENT

18. Every hospital shall be furnished and equipped in a manner and to a degree consonant with the character of and the hospitalization service carried on by the hospital.

ISOLATION

19. (1) Every hospital shall provide suitable accommodation for the temporary isolation of patients suspected of suffering from a communicable disease until a proper diagnosis can be made.

(2) When a patient is found to be suffering from a communicable disease, immediate steps shall be taken to isolate such patient to prevent the spread of the disease.

NURSING STAFF

20. Every hospital shall employ a sufficient number of registered nurses so that at least one registered nurse shall be on duty at all times.

PATIENTS' REGISTER

21. Every hospital shall keep a register of patients in the form prescribed by the Minister.

22. (1) An index number shall be issued to every patient upon his admission to the hospital, such numbers to be issued in numerical order, and all records pertaining to a patient shall be indicated by such number followed by the final two digits of the hospital year for which the number is issued.

(2) The index numbers shall commence with number one at the beginning of each hospital year, provided that a patient remaining in the hospital at the end of the hospital year shall retain the index number assigned to him upon admission.

(3) For the purposes of this regulation, a baby born in a hospital shall be deemed to be an admitted patient.

STAFF MEETING

23. (1) The members of the medical staff shall each year hold a general meeting.

(2) At such meeting the members of the medical staff shall by a majority vote:

(a) Determine a time and place at which a meeting of such staff shall be held each month;

(b) Elect a president and secretary;

(c) Determine the time and place of subsequent annual meetings at each of which a president and secretary shall be elected.

24. (1) The secretary shall present at each meeting a report of the professional work done in the hospital since the preceding meeting, and shall keep a record of the proceedings at each meeting.

(2) The regular business of the meeting shall include a discussion of the report submitted by the secretary, and there shall be no abstract discussion of a scientific or medical subject until such business has been determined.

(3) The secretary shall present in writing to the superintendent such report and recommendations as the staff by a majority vote may require to have made to the superintendent or to the board.

F E E S

25. No medical practitioner who is a member of the staff of the hospital shall give to or receive from any practitioner any part of the fees received from a patient unless the division of such fee is clearly indicated on the account rendered the patient.

26. No medical practitioner shall charge any fee for attendance upon any patient for whose treatment the hospital receives any payment from a municipality, except where a patient is admitted to a public ward as a municipal charge, and during the course of treatment it becomes known to the superintendent that such patient is not indigent, such patient may, upon his transfer to a private or semi-private ward, select the medical practitioner who shall attend him, and the medical practitioner may then charge a fee for his attendance.

D U T I E S I N C A S E O F I L L N E S S O R A B S E N C E

27. In the event that any member of the medical staff of a hospital is unable through illness, absence or other cause, to perform his hospital duties, he shall immediately notify the chief of the service in which he is engaged, or the president or secretary of the medical staff, who shall notify the superintendent, and such chief of service, president or secretary shall arrange for the appointment of a substitute to take care of public patients.

28. (1) Any medical practitioner who is in charge of the treatment of any private patient shall, in the event that he is unable to fulfil his duties with respect to such patient, arrange for a substitute practitioner and shall so advise the superintendent.

(2) In the event that the superintendent has reason to believe that a medical practitioner is unable by reason of illness, absence or other cause, to fulfil his duties with respect to a private patient, the superintendent shall inform the president or secretary of the medical staff who shall notify the patient or his relatives or his friends.

A D M I S S I O N S

29. No person shall be admitted as a patient in any hospital without the consent of the superintendent or person acting in his place.

30. Every medical practitioner who sends any person to a hospital to be admitted as a patient therein shall be responsible for giving such information to the superintendent or person acting in his place as may be necessary to assure the protection of others from any such person who, by reason of any fact, may constitute a danger to other patients.

31. Any patient for whose treatment the hospital received any payment from a municipality shall be attended by the active medical staff and shall be assigned to the appropriate service or if there is no service division such patients shall be assigned to the active medical staff in rotation.

32. Any patient for whose treatment the hospital receives no payment from a municipality and who has no attending medical practitioner shall be assigned to members of the active medical staff on service in rotation, but in the case of any patient requiring special care, assignment shall be at the discretion of the chief of service or, if there be no division into service, at the discretion of the president of the medical staff.

L A B O R A T O R Y

33. A clinical laboratory shall be provided in the hospital and special examinations which cannot be made in such laboratory shall be referred to a laboratory approved by the Minister and the reports shall become part of the patient's case record.

34. (1) Any tissues or sections of tissues removed at operation or curettage shall be immediately set aside by the surgeon operating and shall be forwarded by the superintendent with a short history of the case and a statement of the findings at the operation to a laboratory approved by the Minister for examination, provided that any tooth, tonsil, frenum, hemorrhoid, finger, toe, hand, foot, arm or leg removed or amputated shall not be so forwarded unless the surgeon desires a special examination.

(2) The pathological report received from the laboratory shall become part of the patient's case record.

ORDERS FOR TREATMENT

35. Subject to the provisions of these regulations, all orders for treatment shall be in writing either on the treatment sheet or in the book provided for this purpose and shall be signed by a medical practitioner.

36. (1) Telephone orders may be dictated to persons designated by the superintendent.

(2) Such orders shall be recorded and signed by the person receiving them, with date, time and the name of the medical practitioner giving the order.

(3) Upon the medical practitioner's next attendance at the hospital any such order shall be signed by him or any medical practitioner authorized by him.

CASE RECORDS

37. A medical history, with result of physical examination and provisional diagnosis, shall be made in writing within seventy-two hours of the patient's admission to the hospital.

38. The board of every hospital shall be responsible for the preparation of a complete medical record of every patient, including identification, complaint, present history, family history, physical examination, special reports as reports of consultations, laboratory examinations, X-ray, provisional diagnosis, medical or surgical treatment, pathological findings, progress notes, reports of operations and anaesthesia, final diagnosis, condition on discharge and follow-up records, and in the event of death, a copy of the death certificate, and the board shall require the medical staff, medical internes or clinical clerks of the hospital to prepare such records.

39. No record which is the property of any hospital shall be removed or inspected, nor shall information contained therein be disclosed to any person except under the following circumstances:

- (a) Upon the request of the superintendent of any other hospital;
- (b) To any person upon a written request signed by the patient;
- (c) In the event of the death or incapacity of the patient, upon a written request signed by the next of kin;
- (d) Upon the direction of the inspector;
- (e) For academic or teaching purposes by the medical staff of the hospital;
- (f) Upon the order of a court of competent jurisdiction.

NOTE:—In addition to these regulations, regard should be had to section 9 of the Venereal Diseases Prevention Act, which reads as follows:

9. (1) Every person who, publicly or privately, verbally or in writing, directly or indirectly, states or intimates that any other person has been notified or examined or otherwise dealt with under the provisions of this Act, whether such statement or intimation is or is not true, in addition to any other penalty or liability, shall incur a penalty of \$200, and in default of immediate payment shall be imprisoned for a period of not more than three months.

(2) Subsection 1 shall not apply to disclosures made to the Department nor to disclosures made in good faith to a medical officer of health for his information in carrying out the provisions of this Act, nor to any communication or disclosures made to a legally qualified medical practitioner or in the course of consultation for treatment for venereal disease, nor to any communication made to the superintendent of any public hospital or sanatorium, nor to any communication authorized or required to be made by this Act or the regulations.

OPERATIONS

40. No surgical operation shall be performed on any patient in a hospital without the consent in writing signed by the patient or his legally qualified representative provided, that where the patient is unable to give consent and where, in the opinion of the surgeon, delay would endanger the patient's life, such consent shall not be necessary.

41. A complete history, physical examination and written pre-operative diagnosis shall be furnished by the operating surgeon or any medical practitioner authorized by him before a patient is submitted to any anaesthetic or surgical operation, provided that where the surgeon is of opinion that the delay occasioned in obtaining such history and examination would be detrimental to the patient, he shall so state in writing and in such event the pre-operative diagnosis shall be furnished in writing and signed by the operating surgeon.

42. Every operation performed in a hospital shall be fully described in writing by the surgeon or any medical practitioner authorized by him and such written description shall form part of the patient's record.

43. Every anaesthetist shall furnish a record showing the type of anaesthetic given, amount used, length of anaesthesia and the condition of the patient following the operation.

44. Where a patient is admitted to a hospital in the condition of abortion, or threatening abortion, or where therapeutic abortion is indicated or wherever emptying of the uterus is indicated for whatever reason, two legally qualified medical practitioners shall examine the patient and shall make and sign records of their findings and recommendations before any operative interference is carried out.

45. Before any major operation is performed on any indigent patient, a member of the surgical staff shall be called into consultation and shall record his opinion in writing and such opinion shall form part of the patient's record.

BLOOD DONORS

46. Regulation numbered 47 shall not apply to friends or relatives of the patient who donate their blood free of charge.

47. In the case of every professional doner, that is, every person who receives any money for donating his blood to be transfused into any patient, the hospital shall keep a record showing:

- (a) The name and address of the professional donor;
- (b) The record of a blood Wasserman or blood Kahn test at least every six months;
- (c) A record of the test showing the blood-grouping of the donor;
- (d) The date and quantity of blood removed from such donor at each transfusion.

MATERNITY PATIENTS

48. (1) The medical practitioner attending any maternity patient shall report to the chief of the obstetrical service, or, if there be no division into service, to the superintendent of the hospital the existence or suspected existence of puerperal sepsis or puerperal fever in any such patient.

(2) It shall be the duty of the chief of the obstetrical service, or, if there be no division into service, it shall be the duty of the superintendent to take such action as will ensure effectual isolation of any such patient.

(3) Any nurse having the care or partial care of any such patient shall be excluded from nursing any other obstetrical or surgical patient.

(4) Any maternity patient who is admitted to the hospital in labour or just prior to labour and who shows evidence of being infected shall be treated both before and after delivery in a room separated from other patients, and any nurse having the care or partial care of any such patient shall be excluded from nursing any other obstetrical or surgical patient.

(5) The superintendent shall within twenty-four hours of any death occurring in the hospital as a direct or indirect result of pregnancy, forward to the Minister a report of such death on the prescribed form.

INDIGENT PATIENTS

49. A consultation shall be held by two or more members of the active staff on every indigent patient who is critically ill.

50. A consultation shall be held by two or more members of the active staff on every indigent patient remaining in the hospital for more than thirty days, and thereafter at least every three weeks during the entire stay of the patient.

POST MORTEM EXAMINATIONS

51. When a post mortem examination has been performed on the body of any patient an autopsy report signed by the medical practitioner who has performed such examination shall be filed in the patient's record by the superintendent of the hospital.

HOSPITAL EMPLOYEES

52. In regulations numbered 53 to 55 an employee shall mean any person employed by the hospital who has any contact with patients or with patients' food, including internes, nurses, dietitians, pupil nurses, maids, orderlies, technicians and masseurs.

53. (1) Every employee now, or hereafter, employed in any hospital shall receive a complete physical examination upon entering the employ of the hospital and at least once each year thereafter.

(2) Every employee now, or hereafter, employed in any hospital shall receive a tuberculin test within thirty days after entering the employ of such hospital.

(3) Every employee who is deemed to have a positive tuberculin reaction shall receive an X-ray examination of the lungs within thirty days after the result of the tuberculin test is determined, and where the employee is less than 35 years of age or where the X-ray examination shows any evidence of tuberculous disease, the employee shall receive an X-ray examination of the lungs at least every year thereafter.

(4) Every such employee who is deemed to have a negative tuberculin reaction shall receive an additional tuberculin test within one year from the date of the first test, and shall receive an additional test within one year from the date of each such test where the result of the test is negative.

(5) Every employee referred to in clause (4) who is deemed on any subsequent test to have a positive tuberculin reaction shall receive an X-ray examination of the lungs within thirty days after the result of such positive reaction is determined, and where the employee is less than 35 years of age or where the X-ray examination shows any evidence of tuberculous disease, the employee shall receive an X-ray examination of the lungs at least every year thereafter.

54. Any employee who, as a result of the foregoing examinations and tests, is shown to be suffering from any condition which is likely to be communicated to any patient shall not be permitted to work in the hospital.

RECORDS OF EMPLOYEE EXAMINATIONS

55. It shall be the duty of the superintendent or other person in charge of every hospital to keep a permanent record of all examinations and tests relating to any employee of the hospital, and the superintendent shall send a copy of any such record to the superintendent of any other hospital who makes a request therefor.

NOTE:—In sending a copy of employees' records to any person the superintendent should have regard to section 9 of the Venereal Diseases Prevention Act, which reads as follows:

9. (1) Every person who, publicly or privately, verbally or in writing, directly or indirectly, states or intimates that any other person has been notified or examined or otherwise dealt with under the provisions of this Act, whether such statement or intimation is or is not true, in addition to any other penalty or liability, shall incur a penalty of \$200, and in default of immediate payment shall be imprisoned for a period of not more than three months.

(2) Subsection 1 shall not apply to disclosures made to the Department nor to disclosures made in good faith to a medical officer of health for his information in carrying out the provisions of this Act, nor to any communication or disclosures made to a legally qualified medical practitioner or in the course of consultation for treatment for venereal disease, nor to any communication made to the superintendent of any public hospital or sanatorium, nor to any communication authorized or required to be made by this Act or the regulations.

PROVINCIAL AID

56. (1) No provincial aid shall be payable for treatment of any patient admitted to a hospital who at the time of admission:

- (a) Was not a resident of Ontario;
- (b) Was a ward of the Department of Indian Affairs (Canada);
- (c) Was a person for whose maintenance the Department of Pensions and National Health (Canada) is liable;
- (d) Was a person for whose maintenance the Workmen's Compensation Board is liable;
- (e) Was a person for whose maintenance individual liability is imposed upon employers under Schedule 2 of The Workmen's Compensation Act;
- (f) Was a person for whose maintenance an employer of labour is liable under section 127 of *The Public Health Act* and the regulations passed thereunder.

(2) No provincial aid shall be payable for a patient admitted and discharged on the same day.

57. Provincial aid payable for treatment of every patient who is a baby of an indigent person, born in a hospital, and whose parent has actually resided in unorganized territory for the period of three months within the six-month period next prior to the birth of such baby shall be at the rate of \$1 per day for every day up to fourteen days after birth that such baby is receiving treatment in the hospital.

58. Where the inspector, upon investigation, is of the opinion that any patient admitted to a hospital was a person liable to be deported under the immigration laws of Canada, and that no steps were taken by the superintendent of the hospital to inform the Department of Immigration of the admission of such patient, no provincial aid shall be payable for the treatment of such patient.

59. No provincial aid shall be payable for treatment of any patient for whose treatment the hospital makes any charge for extra services in excess of one-half the rate prevailing for private or semi-private patients in such hospital, or any charge for X-rays in excess of one-half the rate for the time being set by the Workmen's Compensation Board, except where the charges for such extra services are paid by a municipality.

CONVALESCENT HOSPITALS

60. In these regulations:

- (a) "Convalescent patient" shall mean a person recovering from any surgical procedure, from exhaustive illness, from an exacerbation of a chronic debility, or from any infection which results in weakness, emaciation or anaemia, but shall not include patients recovering from any of the acute or chronic communicable diseases, unless it has been shown that such patients are no longer carriers of communicable disease, and shall include:
 - (i) Patients requiring treatment after surgical procedures;
 - (ii) Patients suffering from orthopedic disabilities;
 - (iii) Patients suffering from disabilities as the result of cardio-vascular disease;
 - (iv) Patients requiring treatment for metabolic diseases; and
 - (v) Patients requiring treatment for chronic non-communicable respiratory diseases;
- (b) "Convalescent hospital" shall mean any institution, building, or other premises or place for the treatment of convalescent patients which is under the management and control of, or is affiliated with any institution which is an approved hospital under section 3 of *The Public Hospitals Act, 1931*.

61. Unless the Minister otherwise consents in writing, patients shall be admitted to a convalescent hospital from, and only after a period of treatment in, an approved hospital or the out-patient department of such a hospital.

62. For the purpose of these regulations, except in the matter of provincial aid and municipal liability, a convalescent hospital which is under the management and control of a public hospital shall be deemed a part of such public hospital and a convalescent hospital which is not under the management and control of a public hospital, but is affiliated with a public hospital shall be deemed a public hospital.

HOSPITALS FOR INCURABLES

63. No hospital for incurables shall admit as a patient any indigent person, or the dependent of an indigent person for the charges for whose treatment a municipality may be liable, except upon the written certificate of a legally qualified medical practitioner, according to the prescribed form, that such patient is an incurable person requiring treatment in a hospital for incurables.

64. If upon investigation of the condition of any patient admitted to a hospital for incurables, the inspector obtains the advice in writing of a duly qualified medical practitioner, that such patient no longer requires to be treated in the hospital as an incurable person, he may issue a certificate in writing to such effect, and thereupon provincial aid and municipal liability shall cease in respect of any further treatment of such patient as an incurable person, until the inspector cancels the certificate issued by him hereunder.

65. All regulations heretofore approved pursuant to *The Public Hospitals Act* are hereby revoked.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 10th day of May, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that pursuant to the provisions of *The Public Hospitals Act, R.S.O. 1937, Chapter 390*, the following regulations be approved:

56a. No. Provincial aid shall be payable for treatment of any patient for whose treatment the hospital makes any charge for extra services in excess of one-half the rate prevailing for private or semi-private patients in such hospital, or any charge for X-rays in excess of one-half the rate for the time being set by the Workmen's Compensation Board.

Certified,

C. F. BULMER,
Clerk, Executive Council.

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 18th day of August, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the regulations under *The Sanatoria for Consumptives Act* approved by Order-in-Council, dated the 22nd day of June, 1938, be amended by adding thereto the following subsection:

28. (2) The amount paid by the Department under this regulation for food, lodging and necessaries shall not exceed seven dollars (\$7.00) per patient, per week.

Certified,

C. F. BULMER,
Clerk, Executive Council.

Copy of an Order-in-Council, approved by The Honourable the Lieutenant-Governor, dated the 22nd day of June, A.D., 1938.

Under the recommendation of The Honourable the Minister of Health, the Committee of Council advise that the attached regulations made pursuant to *The Sanatoria for Consumptives Act*, be approved.

Certified,

H. A. STEWART,
Assistant Clerk, Executive Council.

June 15th, 1938.

REGULATIONS UNDER THE SANATORIA FOR CONSUMPTIVES ACT

1. In these regulations "Director" shall mean the Director of the Division of Tuberculosis Prevention of the Department of Health.

2. Every sanatorium shall be governed and managed by a board appointed or elected in accordance with the provisions of the authority whereby the sanatorium has been established, with one member appointed by the Lieutenant-Governor in Council, and the board shall have power to govern, manage and operate the sanatorium and shall be responsible for the due observance and enforcement of *The Sanatoria for Consumptives Act*, these regulations and the by-laws of the sanatorium.

3. (1) The superintendent of the sanatorium shall be responsible to the board for the due observance and enforcement of *The Sanatoria for Consumptives Act*, these regulations and the by-laws of the sanatorium, and he shall be the officer representing the sanatorium with whom the Minister, the Director, the inspectors and the other officers of the Department shall ordinarily deal with regard to sanatorium matters.

(2) Subject to the by-laws and directions of the board, the superintendent shall have control over the admission, discharge and accommodation to be furnished to patients.

4. The Director and the inspectors shall perform the duties assigned to them by the Minister or Deputy Minister and shall have power with respect to any sanatorium to:

- (a) Administer and enforce the Act and the regulations;
- (b) Inspect and make inquiries regarding the premises, management and operation;
- (c) Require that returns, reports, statements and other information relating to the sanatorium be furnished to them or to the Minister, periodically or otherwise, by the superintendent or any other officer or member of the staff of the sanatorium;
- (d) Collect and compile such information and make such reports, returns and statements as the Minister may require;
- (e) Examine and audit books, accounts, records and funds, and, where deemed necessary, remove them into the custody of the Department;
- (f) Investigate the financial condition of any person who is a patient and require information with respect to the financial condition of such person to be furnished to them by any person in possession of such information; and
- (g) Investigate any matter affecting a sanatorium or sanatoria in general and require information with respect to any such matter to be furnished to them by any person in possession of such information.

5. Every application, report, return, statement or other written communication required to be made or furnished to the Minister, Deputy Minister, inspector or Department under *The Sanatoria for Consumptives Act* or these regulations shall be addressed to the Director.

6. (1) Every sanatorium shall provide suitable accommodation for the temporary isolation of patients suspected of suffering from any communicable disease other than tuberculosis until a proper diagnosis can be made.

(2) When a patient is found to be suffering from any communicable disease other than tuberculosis, the superintendent shall take steps to isolate such patient to prevent the spread of the disease.

7. Every sanatorium shall employ such qualified medical practitioners, nurses, orderlies and other employees as are required for the treatment and care of the patients and as the Director may require.

8. The secretary of every board shall furnish to the Department, not later than the first day of November in each year, a statement of the names and addresses of the members of the board and the officers thereof, and shall give written notice to the Minister of any change therein forthwith upon its occurrence.

9. The system and forms of books, accounting and other records shall be subject to the approval of the Minister.

10. No person shall be admitted as a patient in any sanatorium without the consent of the superintendent or person acting in his place.

11. Every medical practitioner who sends any person to a sanatorium to be admitted as a patient therein shall be responsible for giving such information to the superintendent or person acting in his place as may be necessary to assure the protection of others from any such person who, by reason of any fact, may constitute a danger to other patients.

12. A clinical laboratory shall be provided in the sanatorium and special examinations which cannot be made in such laboratory shall be referred to a laboratory approved by the Minister and the reports shall become part of the patient's case record.

13. Any tissues or sections of tissues removed at operation or curettage shall be immediately set aside by the surgeon operating and shall be forwarded by the superintendent with a short history of the case and a statement of the findings at the operation to a laboratory approved by the Minister for examination, provided that any sections of nerve, bones, tooth, tonsil, frenum, hemorrhoid, finger, toe, hand, foot, arm or leg removed or amputated shall not be so forwarded unless the surgeon desires a special examination.

14. (1) Any report received from a laboratory shall become part of the patient's case record.

(2) Every report shall show the date upon which the test reported upon was performed.

15. A medical history, with result of physical examination and provisional diagnosis, shall be made in writing within fourteen days of the patient's admission to the sanatorium, shall become part of the patient's case record.

16. The board of every sanatorium shall require the medical staff, medical interne, or clinical clerks to prepare a complete medical record of every patient, including identification, complaint, present history, family history, physical examination, special reports, as reports of consultations, laboratory examinations, X-ray, provisional diagnosis, medical or surgical treatment, pathological findings, progress notes, condition and discharge and follow-up records, and in the event of death, a note as to the cause of death.

17. Within thirty days after the admission of any patient to a sanatorium the superintendent shall be responsible for sending a report of the patient's condition to the medical practitioner who referred such patient to the sanatorium.

18. No surgical operation shall be performed on any patient in a sanatorium without the consent in writing signed by the patient or his guardian, provided that where the patient is unable to give consent and where, in the opinion of the surgeon, delay would endanger the patient's life, such consent shall not be necessary.

19. A complete history, physical examination and a written pre-operative diagnosis shall be furnished by the operating surgeon or any medical practitioner authorized by him before a patient is submitted to any anaesthetic or surgical operation, provided that where the surgeon is of the opinion that the delay occasioned in obtaining such history and examination would be detrimental to the patient, he shall so state in writing and in such event the pre-operative diagnosis shall be furnished in writing and signed by the operating surgeon.

20. Every operation performed in a sanatorium shall be fully described in writing by the surgeon or any medical practitioner authorized by him and such written description shall form part of the patient's record.

21. Every anaesthetist shall furnish a record showing the type of anesthetic given, amount used, length of anaesthesia and the condition of the patient following the operation.

22. When a post-mortem examination has been performed on the body of any patient, an autopsy report signed by the medical practitioner who has performed such examination shall be filed in the patient's record by the superintendent of the sanatorium.

23. No provincial aid shall be payable for treatment of any patient admitted to a sanatorium who at the time of admission:

- (a) Was not a resident of Ontario;
- (b) Was a ward of the Department of Indian Affairs (Canada);
- (c) Was a person for whose maintenance the Department of Pensions and National Health (Canada) is liable;
- (d) Was a person for whose maintenance the Workmen's Compensation Board is liable;
- (e) Was a person for whose maintenance individual liability is imposed upon employers under Schedule 2 of *The Workmen's Compensation Act*.

24. Where a Director or an inspector upon investigation, is of the opinion that any patient admitted to a sanatorium was a person liable to be deported under the immigration laws of Canada, and that no steps were taken by the superintendent of the sanatorium to inform the Department of Immigration of the admission of such patient, no provincial aid shall be payable for the treatment of such patient.

25. The Department may pay provincial aid to a sanatorium for the treatment of every patient at the rate of \$2.07½ for each day that such patient received treatment in the sanatorium.

26. A sanatorium may charge any patient an amount not exceeding \$3.00 per day for every day such patient receives treatment in the sanatorium.

27. The Department may pay provincial aid for every baby born in a sanatorium at the rate of \$1.00 per day for every day up to three months after birth that such baby is in the sanatorium.

28. The Department may provide and pay for the treatment including food, lodging, necessaries of life, and transportation, outside a sanatorium of any patient without municipal residence who has recovered to such an extent that in the opinion of the Director or an inspector he is fit to be discharged.

29. (1) The Department may pay an amount not exceeding \$3.00 to any medical practitioner for each pneumothorax treatment authorized by the Director and performed upon a patient without municipal residence.

(2) The Department may reimburse any municipality which has paid a medical practitioner, sanatorium clinic or hospital clinic approved by the Director, for any such treatment at a rate not exceeding \$3.00 for each treatment.

(3) In the case of a hospital clinic, the physician in charge shall indicate to the appropriate officer of the municipality the manner in which remuneration is to be made to the members of his staff who are associated in the pneumothorax treatment.

(4) Each physician or clinic using hospital facilities for pneumothorax treatments, shall make all necessary arrangements with the hospital.

(6) In this regulation any fee paid for a pneumothorax treatment shall include the remuneration payable for any necessary fluoroscopic examination.

30. Upon admission to a sanatorium of any patient, the superintendent shall by registered letter notify the clerk of the local municipality in which such patient is or is represented to be a resident, of such admission, giving such particulars as may be ascertainable to enable the clerk to identify the patient.

THE LIBRARY OF THE DEPARTMENT OF HEALTH

FREDRITA HENLEY WRIGHT, *Librarian.*

The past year again has shown an increase in appreciation of the services of the Central Library. Especially is this so with regard to the staffs of the Ontario Hospitals where there has been an increase of 495 loans over the previous year.

The Central Library, in its accessions, again paid special attention to the sections on Mental Disease, Psychology and Mental Hygiene. The requests for loans received from the Ontario Hospitals amply justified this effort.

ACCESSIONS

During 1938 the following accessions were made:

Central Library

Books purchased.....	95
Journals.....	156 (vols.)
Reports.....	116
Pamphlets.....	1,411
Total.....	1,778

The subscriptions to journals for the year were 106 while the Library received 17 complimentary subscriptions, a total of 123.

Ontario Hospitals

Books purchased	
Medical.....	53
Fiction	
New.....	96
Library discards.....	1,224
Journals (sub'ns.).....	114
Periodicals	
New (sub'ns.).....	165
Unsold (copies).....	8,100
Newspapers (sub'ns.).....	166
Total.....	9,918

The system of maintaining a central catalogue of books in the Ontario Hospitals was continued. All purchases were catalogued in the Central Library and forwarded to the hospitals together with cards for the hospital catalogue.

LOAN SERVICE

There were 4,947 loans made by the Library in comparison with 2,964 for the previous year. Within the immediate department there were 3,763 for 1938 while the number for 1937 was 2,413. For the outside service, including the Ontario Hospitals, there were 1,184 for 1938 while for 1937 there were 551.

In addition to library loans the regular monthly service was continued whereby journals on tuberculosis were circulated to the clinicians in charge of the Provincial Travelling Chest Clinics at North Bay, Belleville, Ottawa, Fort William and Timmins and to the Tuberculosis Unit at the Ontario Hospital, New Toronto. The clinics at Fort William and Timmins were added during 1938 thus making the service include 6 clinics in place of 4 during 1937. Medical journals were also circulated to Branch Laboratories at North Bay, Fort William, Sault Ste. Marie, Peterboro and Ottawa while "Public Health Nursing" and "Parents" were sent to the Eastern Ontario Health Unit.

During the year a further service was extended by the Central Library by which articles on metrazol and cardiazol in the treatment of schizophrenia were circulated to seven Ontario Hospitals.

SUMMER COURSE IN HEALTH TEACHING

The Library again contributed to the special library compiled for the use of the teachers enrolled for the Summer Course in Health Teaching. This special library is of considerable help to the students and is much appreciated by them. The attendance at the 1938 session was 306 teachers from the schools of the Province.

LIBRARY BULLETIN

Publication of the Library Bulletin continued during the year. This Bulletin consists of a bibliography of articles of interest on all aspects of departmental work appearing each month in the library journals. Starting with the July-August number a "News Sheet," to appear quarterly, was added. This was introduced in order to familiarize members of the staff of the department with new work being undertaken by the various divisions; with matters of departmental policy; and with new publications issued by the department.

PATIENTS' LIBRARIES

The Central Library purchased a total of 96 new books and 1,224 library discards to be added to the patients' libraries in the Ontario Hospitals. There were also delivered, through special arrangement with a Toronto news agency, 8,100 copies of unsold periodicals and in addition the Library re-shipped 5,200 copies of newspapers which were donated to the Ontario Hospitals through the kindness of Toronto publishers.

ONTARIO HEALTH OFFICERS' CONVENTION

For the period of the convention of Ontario Health Officers, held at the Royal York Hotel, Toronto, from June 1-3, 1938, the Library presented an exhibit of books of interest to the doctors in their capacity as Medical Officers of Health. The exhibit comprised texts from the Central Library and new publications loaned by Toronto publishers for the occasion. Also included in the exhibit was a sample set of all literature distributed by the department. From this set supplies were selected by the Health Officers, which were later mailed to them. The exhibit created considerable interest.

In addition to the above activities there has been the regular library procedure of cataloguing and reference work comprising the daily routine.

DIVISION OF PREVENTABLE DISEASES

A. L. MCKAY, B.A., M.B., D.P.H., *Director.*

Of the 31 communicable diseases reported through the local Boards of Health only 9 have shown an increase in the number of cases reported, as compared with 1937. An increase was noted in Dysentery, Tuberculosis and Measles. The number of cases of Gonorrhoea reported shows a 20% increase, while in Syphilis the increase was 24%. The increased number of cases reported for these two diseases is probably accounted for by the fact that during the past year more advantage has been taken by municipalities of the increased financial assistance given by the Department.

There was an increase in the number of Whooping Cough cases reported, and the number reported was only 4% lower than the number reported during the peak year of 1936.

Infectious Jaundice reached epidemic proportions in many municipalities during the year. The greater number of cases, however, were reported during the last three months. There were no fatalities attributed to this disease but the loss of school attendance was quite marked. Epidemiological investigations were made and are still proceeding.

There were no municipal outbreaks caused from water or milk during the year and there was a reduction of 21.5% in the total number of communicable diseases reported for the year as over the corresponding year of 1937.

Typhoid Fever

Year	Cases	Morbidity Rates	Deaths Reg. Gen.	Mortality Rates
1934	547	15	45	1.2
1935	310	8.6	41	1.1
1936	251	6.7	39	1.0
1937	241	6.4	27	0.7
1938	235	6.2	34	0.9

During the past five years Typhoid Fever morbidity rates have decreased steadily in the Province of Ontario. The year ending 1938 reached an all time low of 6.2 per 100,000. During the whole year the endemic index for each month was well within the range, with only one exception, that of April, when 10 cases more than expected occurred.

These cases were located as follows: Five in Plantagenet, three at Hearst, and two at Kapuskasing. The Plantagenet cases were investigated by the Eastern County Health Unit, and the cases at Hearst and Kapuskasing on investigation were found to be due to the drinking of contaminated river water outside the town. Investigation into the cause of Typhoid Fever was carried on at Latchford, Port Arthur, and the Townships of Wainfleet, Louth, Charlotteville, South Walsingham. While no serious outbreaks had occurred during the year sporadic cases had frequently appeared in these various places in Southern Ontario. In all instances, not more than one or two cases were re-

ported at any one time. On investigation it was found that cases could be traced to a mild undiagnosed case (one instance), a carrier, unknown at the time, and drinking contaminated rural water.

Typhoid Fever has been more or less endemic in two counties in Ontario during the past five years, while no serious outbreaks have occurred as yet, it would be very advisable to make a sanitary and combined carrier survey in one of these counties during the summer of 1939.

Para-Typhoid Fever

Year	Cases	Morbidity Rate	Deaths
1934	88	2	2
1935	58	1	0
1936	59	1	3
1937	80	2	5
1938	68	1	0

The morbidity rate of Para-Typhoid during the past five years shows a median of 1. There have been no serious outbreaks of this disease in the Province during the past year, and all the cases reported were single cases with no exceptions—one outbreak of 4 cases was traced to an undiagnosed mild case, and in another of similar proportions a carrier was found.

The cases were scattered throughout the province from Fort William and Larder Lake in the north and Brockville to Windsor in the southerly part of the Province,—only one outbreak of food poisoning was reported during the past year. This small outbreak, 2 families, was caused through consuming creamed pastries, contaminated with staphylococcus organisms.

Infectious Jaundice

Year	Cases
1934	6
1935	10
1936	46
1937	89
1938	701

701 cases of Infectious Jaundice were reported during 1938. This disease reached epidemic proportions during the past year, although cases have been reported in Ontario as far back as 1930. The disease this past year was widespread throughout the province, though not as an epidemic in all cases reporting it. The disease as such, where it has occurred, had caused no fatalities in the province. It has appeared in epidemic proportions in Ottawa, London, Bidulph, Kitchener, Kingston, Teck and Brantford, while 30 other municipalities have reported 4 to 30 cases.

Three forms of infectious jaundice have been recognized—Catarrhal Jaundice, Weil's disease—(*Leptospira-icterohaemorrhagiae*) and *Letospira Cuniculi*. Dogs, of course, have been known to have become infected through rats that carry the *Leptospira Icterohaemorrhagiae*. Many of the cases were reported in the early fall and continued through to December. In some outbreaks the *Leptospira* was ruled out on examination of the blood and urine. At the present an investigation of the disease is being carried out. The disease most frequently attacks those in the 5-14 age group. Very few adults or young children 0-4 have been reported as contracting the disease, thus far.

Undulant Fever

Year	Cases	Morbidity Rate	Deaths
1934	97	2.7	3
1935	85	2.4	5
1936	127	3.1	2
1937	104	2.7	7
1938	101	2.	3

101 cases of Undulant Fever were reported during 1938. In single cases, they were distributed throughout all parts of the province, few counties or districts being exempt. They were reported during all months of the year, but with a higher frequency during a period from March to July. The morbidity rates are somewhat higher than the rates as compared with Para-Typhoid. The median for Undulant Fever during the past five years is 2.5 compared with 1 as in Pari-Typhoid.

Cerebro-Spinal Meningitis

Years	Cases	Morbidity Rate
1934	35	.9
1935	32	.8
1936	52	1.
1937	67	1.8
1938	88	2.3

There has been a marked increase in the number of cases of Cerebro-Spinal Meningitis (men) as reported in the province. This increase has not been common to this province, but has been recognized generally over the North American continent during the past few years. There was a 31.1% increase in the cases reported in 1938 as compared with 1937.

Poliomyelitis

Years	Cases	Morbidity Rate
1934	326	8
1935	108	3
1936	208	5.6
1937	2546	68.
1938	160	4.5

Poliomyelitis in 1938 remained well within the endemic index, and comparable with the number of cases 161 in 1931—following the 1929-30 epidemic years.

Smallpox

Year	Cases	Morbidity Rate
1934	1	0.02
1935	7	0.1
1936	1	0.02
1937	0	0.
1938	6	0.1

Smallpox—During the last five years the morbidity rate has been less than 1. Six cases of smallpox were reported in 1938. Many of the suspected smallpox cases were visited and a diagnosis of chickenpox was made; others had been exposed to Herpes and developed a rash very similar to smallpox.

Diphtheria

Year	Cases	Morbidity		Mortality	
		Rate	Deaths	Rate	
1934	371	10	23	.6	
1935	361	10	37	1.2	
1936	290	7	31	.8	
1937	506	13	39	1.5	
1938	234	6	12	0.3	

During the past five years the morbidity rate for Diphtheria has steadily declined and in 1938 the rate dropped to a new low of 6 per 100,000. Diphtheria was reported from all the cities in the province with the exception of seven. Cases were reported throughout the northern and southern sections of the province. Outbreaks of Diphtheria in municipalities were comparatively few. However, there is no reason to believe that they cannot occur. They are possible in municipalities where immunization has been neglected and also in municipalities where immunization has never been carried out. In one such municipality in 1937 over 36 cases and 5 deaths had occurred.

Active immunization against Diphtheria and Smallpox was carried out throughout northern Ontario in 1938 and 20,034 children received Diphtheria Toxoid and were vaccinated against Smallpox. This work was carried out in all schools, situated in municipalities without municipal organization. The arrangements were made through the co-operation of the Department of Education, the school teacher and the physicians practising in the vicinity. The latter being paid by the Department of Health. Pre-school children were also included in this campaign.

Whooping Cough

Year	Cases	Morbidity		Mortality	
		Rate	Deaths	Rate	
1934	7624	214	184	5.1	
1935	7663	213	114	3.1	
1936	7890	213	99	2.9	
1937	5040	135	106	2.8	
1938	7567	200	77	2.	

The morbidity rates for Whooping Cough have been fairly constant during the past five years—with the exception of 1937; the mean morbidity rate for this period was 180. In 1938, an increase of 48.1% is shown in the rate as compared with the previous year.

Whooping Cough was reported during the past year from all but one district and two counties but there is reason to believe it had occurred in these places. Whooping Cough was more prevalent in cities and towns but less so in rural areas. The mortality rate for 1938 was 2 per 100,000. (This is only a tentative rate for the year). The case fatality rate was 1.1%. Whooping Cough remained well within the median for the year with the exception of the last three months, when an increase occurred in the number of cases reported.

Scarlet Fever

Year	Cases	Morbidity Rate
1934	6057	168
1935	7265	201
1936	8927	247
1937	5581	154
1938	5359	144

The morbidity rate for Scarlet Fever has shown a decrease over the past five years, the rate for 1938 being 70% lower than the rate for the year 1936. The cases reported by month were all within the number of cases expected. However, in December an increase was observed, which, in all probability will be continued well into 1939.

Measles

Year	Cases	Morbidity Rate
1934	2,392	66
1935	44,958	1256
1936	26,429	716
1937	13,809	426
1938	16,595	445

Measles remained well within the median each month during the year with the exception of December—when 73.2% increase in the number of cases developed. The last epidemic of measles occurred in 1935. 1939 is regarded as an epidemic year.

Venereal Disease Control

During the year the nineteen venereal disease clinics operated by the Department have continued as in the past. There has been an increase in the number of new cases who had never previously been treated in the clinics, but the total number of patients under treatment remained approximately the same. The number of treatments administered was increased by more than 5 per cent. over the previous year. There were 419 cases of primary and secondary syphilis admitted to the clinics, which was an increase of 78 over the previous year's experience. 2162 patients were discharged from the clinics as apparently cured, and it may also be noted that fewer patients were discharged from the clinics without permission, although this still remains at the disquieting figure of 1348. During the year 768 patients had to be referred to the medical Officer of Health for non-attendance and were followed up under authority of the Act. It was found necessary to prosecute only 26 patients for contravention of *The Venereal Diseases Prevention Act*, which indicates the efficiency and tact of the social service nurses in the follow up of the patients under their charge.

The treatment of patients in municipalities without clinic facilities increased considerably during the year. It was found possible to further reduce the burden on the municipalities by increasing the financial assistance given by the Division from 50 to 75 per cent. of the cost of treatment, based on a set schedule of fees. This resulted in a greater number of municipalities assuming their statutory responsibility in this regard and a consequent increase in the number of patients under treatment.

Sulphanilamide and stovarsol have now been made available for treatment in all of the clinics at the expense of the Department.

A summary of the work in the clinics follows:

Treatment for Syphilis:

Diarsenol.....	1,883
Novarsan.....	16,978
Mapharsen.....	14,805
Tryparsamide.....	1,709
Other arsenicals.....	5,244
Mercury.....	2,281
Bismuth.....	42,421
Medicines.....	8,456
Other and advice.....	4,461
Thiosulphite.....	245

Treatment for Gonorrhoea:

Irrigations.....	49,889
Douche.....	1,055
Injections.....	7,807
Prostatic Massage.....	8,702
Instrumentation.....	1,464
Deep Instillation.....	1,948
Topical Application.....	8,606
Vaccine.....	1,116
Examinations.....	4,125
Medicines.....	7,697
Total.....	190,892

Drugs for the free treatment of venereal disease were distributed as follows:

	Ampoules	Grams.
Diarsenol.....	514	659.8
Novarsan.....	44,311	36,319.03
Mapharsen.....	9,036	1,007.08
Bismuth Oxychloride.....	40,747	168,798 grs.
Mercury Salicylate.....	5,174	8,678 grs.
Sodium Hydroxide.....		152 ounces
Distilled Water.....		61,984 ounces

Correspondence has been carried out for follow-up through the medical officers of health of contacts, sources of infection and removals from one municipality to another as follows:

Total number of patients and contacts followed up.....	802
Receiving treatment or found to be negative.....	344
Lost—including no reply from M.O.H.....	166
Doubtful cases—as to whether or not under treatment.....	68

Sources of Infection:

Positive.....	22
Negative.....	22
Lost.....	23
Total.....	67

Number of contacts of neurosyphilitic patients, in Ontario Mental Hospitals;

Negative.....	66
Positive.....	9
Lost or refused examination.....	16
Total.....	91

Number carried over to 1939..... 133

Summary of Clinic Activities:

1. Number examined and found positive.....	3,510
2. Number carried over from previous year.....	6,065
3. Number of new cases (never previously treated in clinic).....	2,708
4. Number of cases readmitted.....	931
5. Number of previously treated patients.....	736
6. Number of cases treated.....	10,392
7. Number of treatments.....	155,835
8. Number of contacts and sources examined.....	910
9. Number of visits made by nurses.....	5,745

Number of cases treated (Total)..... 10,392

New cases (Never previously treated in clinic)..... 2,708

	Male	Female

DIVISION OF MATERNAL AND CHILD HYGIENE

J. T. PHAIR, M.B., D.P.H., *Director.*

Maternal Care.

Despite the fact that there is an appreciable though small decline (from 5.6 in 1936 to 5.2 in 1937) in the maternal death rate for the Province, the number of women dying each year as the direct or indirect result of pregnancy still presents a challenge to both the public and profession alike. It must be borne in mind, however, that though this aforementioned decline in the mortality rate is not as striking as might be hoped for, the increasing completeness and accuracy of certification of deaths associated with pregnancy is undoubtedly responsible for the re-allocation of deaths to this category which hitherto had been placed in other brackets. It is further encouraging to report that since the introduction of the legislation which made necessary the reporting to the Department of all deaths associated with pregnancy, municipal authorities in the larger centres have shown more concern with the local situation. This interest has been evidenced by the attempt of the staff of the local health departments to acquaint themselves with the details of each case occurring locally.

It is not possible at the moment to present in its entirety the picture of the five year period for which detailed reports of all maternal deaths have been received. However, a comprehensive study showing the relationship of age, extent of pre-natal care, place and type of delivery, etc., in these cases is in progress and will be fully reported on at a later date.

The following table presents some interesting data:

CAUSE	1933	1934	1935	1936	1937
	%	%	%	%	%

Embolism and sudden death...	12	6	12	11.2	12.2
Other Puerperal causes.....	11	9	16	7	5.6

(NOTE:—In each year there have been a number of deaths from extra-puerperal causes, such as those to whom pregnancy was an additional risk because of a pre-existing disease, also those in whom a fatal disease developed during pregnancy; those dying from these extra-puerperal causes are not included in this table.)

It is to be noted that there is no substantial change in the percentage of those dying from any of the commoner causes with the exception of puerperal toxemia. Deaths due to the toxæmias of pregnancy include those resulting from hyper-emesis gravidarum, eclampsia, fulminant toxæmia, etc. These are presumed to be due to defective functioning of such organs as the liver, kidneys, thyroid or from certain chemical changes in the foetus or placenta. The symptoms associated with these conditions are usually recognizable. Reasonable pre-natal care including regular examination should do much to reduce the toll of deaths from this cause.

While there is apparently a slight decrease in those deaths from septiciemia and septic abortion over the previous year, a more pronounced decline might have been anticipated because of the efficacy of the newer therapy in the treatment of streptococcic infections. A review of the 1938 reports, while not as

yet complete would lead one to believe that the puerpural septiciemias will be quite markedly reduced, no doubt due, in part to the more wide-spread use of chemico-therapy.

Infant Care.

While there has been a continuous decline in the infant death rate over the last ten years, the rate for 1937, though sustained did not decline from that of 1936. In the face of this figure one might feel as the result of our present programme that we had reached an irreducible minimum in infant deaths. While this may be in part true in respect to those deaths occurring in the later months of infancy, much still remains to be done to lessen the number of those dying during the first two or three months of life. Review of the available data shows that over 56% of all deaths under one year of age occurred in the first month of life and almost a third of all deaths under one year of age were attributed to prematurity. These figures would point to the necessity for more fundamental investigation into the morbid factors of maternal and placental origin. The problem must now be approached from this angle if any further reduction in infant deaths is to be obtained.

Pre-School and School.

Attention must be drawn to the high mortality in the age group from 2-15 from accidental causes. In the elementary school age group this is by far the highest cause of death and in the pre-school age group accidents rank second, following closely those deaths from diseases of the respiratory tract. The continued high incidence of accidents among those age-groups is a further manifestation of the necessity for a more effective approach to the problem of accident prevention.

In the last year this Division again co-operated with several municipalities in the medical examination of children about to enter school. The desirability of physical preparation for school is an idea which appears to be gaining in favour judging from the interest shown in this field. Assistance in the programme of immunization against diphtheria and smallpox as carried out by the Department in the unorganized parts of the Province was also supplied by the Division.

Consultative and directional service has been furnished various centres which are seeking to evolve acceptable plans to fit the health needs of the high school population.

The evident concern being exhibited by many municipalities in the health of the pupils in the secondary schools is indicative of a growing realization of the value of sustained health supervision from conception to the age of self-dependency. Adequate health service in such schools must be more than a mere extension of the elementary school programme; it must be designed to specifically meet the needs of the group it presumes to serve. It must be investigatory, directional and consultative.

The Division again gave direction to the programme of the Department of Education, whereby all students seeking admission to one or other of the teacher-training schools are required to pass a rigid medical examination. The findings of the medical examiners are as follows:

42%	had defective vision.
2.5%	had defective hearing or ear disease.
7%	had defective teeth.
12%	showed abnormalities of the tonsils.
4%	had obstruction to nasal breathing or sinus and antra infection.
8%	had abnormalities of the thyroid gland.
10%	had wide deviations from the presumed normal in weight.
7%	showed cardiac abnormalities.
7%	showed variations in blood pressure.
4%	were definitely anaemic.
7%	had untoward findings in the urine.
4%	showed manifestations of nervous disorders.
2%	had orthopedic defects.
4%	had gastro-intestinal disturbances.
.5%	had defects in speech.
.6%	had hernia.
3%	had respiratory disease other than tuberculosis.
4%	had flat feet.
4%	had enlarged cervical glands.
4%	had other abnormalities.

In addition to these findings which in themselves are indicative of the need for health supervision in the secondary schools, forty cases of active tuberculosis have been discovered in the four years this programme of medical examination of students seeking admission to the teacher-training schools has been in effect. The Division feels that the discovery of these forty potential sources of infection eliminates a health hazard to which hundreds of children would have otherwise been exposed.

The Director again acted as Principal of the Summer Course in Health Education for teachers. This course was prompted by the desire of the Departments of Health and Education to stimulate a larger measure of concern on the part of teachers in the health of their pupils and was designed to aid in the solution of the health problems presenting. This course has gained in popularity with the teaching profession to the extent that the attendance last year was over three hundred.

PUBLIC HEALTH NURSING

EDNA L. MOORE, REG. N., *Chief Public Health Nurse.*

Throughout the year the public health nursing staff of the Division of Maternal and Child Hygiene and Public Health Nursing consisted of a chief public health nurse, five supervisors and ten staff nurses.

Four supervisors give consultant and advisory service to all local official public health nursing programmes as well as to specialized school health, tuberculosis and child hygiene programmes under non-official direction. This service includes the introduction of newly appointed nurses to their work.

With 105 centres and 12 units extending from Cornwall to Windsor, Niagara Falls to Cochrane, and Ottawa to Fort Frances, it is difficult with so few supervisors to give all that the department would like in the way of supervision. Every effort is made on the occasion of the supervisor's visit to give sufficient time in each centre for the observation and discussion of all phases of community health. After these visits reports are sent to the officials sponsoring the work. The staff have recently emphasized the desirability of the local library boards having on their shelves books and journals on health subjects that would assist in the promotion of sound information with respect to individual and community health.

One supervisor and eight staff nurses constitute the public health nursing staff of the Eastern Ontario Health Unit; one nurse is attached to the Division of Health Education and another carries out a generalized public health nursing programme in the Temaskaming district.

On July 31st, Miss Bertha Johnson of the supervisory staff was seriously injured in a motor accident, as the result of which she was unable to return to duty during the balance of the year.

For ten months of the year a staff nurse from the Health Unit was on leave of absence to assist with the nursing programme of the Ontario Society for Crippled Children. A relief nurse carried on the work in the district.

During the Summer School session, a member of the supervisory staff was on duty at the Health Education Course where she was in charge of the nursing activities of the health service in the practice school; she also assisted with the health service to the teacher-students.

The London Board of Health requested that Miss Hilda Pennock of the supervisory staff be loaned for four months as the acting director of nursing in their newly amalgamated service. This was arranged for the months of June, July, August and September, and at the end of the period a director of nursing was appointed. The Board expressed much satisfaction with the organization developed by Miss Pennock.

In Ottawa the Board of Health extended the public health nursing service in 1937 by increasing the staff employed. Assistance was given the local supervisor and staff in reorganizing the programme of maternal and child hygiene, communicable disease and school nursing carried on in the separate schools of the city.

York Township completed arrangements for the amalgamation of the nursing services and the setting up of a generalized public health nursing programme. The public health nursing needs of the district were carefully considered and in conjunction with the local authorities, an attempt was made to evolve a suitable programme which would meet them.

St. Catharines continued the development of the generalized service initiated in 1937. In December a supervisor of nursing was appointed to commence her work, January, 1939.

Twenty-six new nurses were introduced to the local programme by the Department supervisory staff.

Group conferences were conducted at North Bay, Sudbury, Timmins, Kirkland Lake and Haileybury, by the chief public health nurse.

In the Temaskaming district, two new schools were built, making the total 94 with 3,107 children enrolled. Rooms were added to several schools and the attendance increased so much that the stagger class system was adopted in several centres. This district includes part of three school inspectorates. During 1938, 65 schools were visited for routine inspection; in addition several visits were made to certain schools in connection with the local programme of immunization. Parents were notified of 439 apparent physical defects other than dental, and 203 of these were corrected during the year. Children having dental defects numbered 1,234 and of these 207 had corrections. In the organized townships of the district, 408 children received protection from diphtheria, 873 were vaccinated against smallpox, 47 received whooping cough vaccine and 56 were given five doses of scarlet fever toxin. Tuberculin tests were given to 1,205 children and those showing a positive reaction to the test were X-rayed. The organization necessary for such a programme of immunization is time-consuming and represents many miles of travel.

In Teck Township and the Town of Timmins, the public health nursing staffs were increased and additional facilities provided for carrying out more efficient service.

At Copper Cliff, Levack and Creighton Mine, a public health nursing service was established by the International Nickel Company.

In the Town of Bowmanville the citizens were asked to vote on the question of re-establishing the public health nursing service which had been discontinued by council at the end of April. The result of the vote was in favour of the re-establishment of the service.

The problem of staff education is partly met by the Refresher Courses organized regularly by the University of Toronto School of Nursing and Department of Extension, and occasionally by the Public Health Institute of the University of Western Ontario, as well as group and regional conferences held in different centres.

Notes on the papers presented at Refresher Courses were prepared and mimeographed copies distributed to the public health nurses in the Province.

As in past years, an attempt has been made to bring together qualified public health nurses and agencies wishing their services.

A conference was held with the chief superintendent and the Ontario supervisors of the Victorian Order of Nurses. It is the opinion of both groups that such a meeting should be arranged at least once a year for the discussion of common problems.

An interesting co-operative arrangement was made with the Women's Institute Branch of the Department of Agriculture. It gave to our staff in the Eastern Ontario Health Unit, the benefit of several discussion periods on nutrition under the leadership of a member of the Institutes staff, while our staff members, in the course of their work, helped in the introduction of the recently appointed Home Economics Coach to the homes of the district.

The helpful advice of our honorary consultant, Miss Elizabeth L. Smellie, C.B.E., Reg.N., is a strength to the service and a source of encouragement to the chief public health nurse and members of the supervisory staff in particular.

A detailed account of the public health nursing service of the Eastern Ontario Health Unit is contained in the Annual Report of the Unit

EASTERN ONTARIO HEALTH UNIT

M. G. THOMPSON, M.B., D.P.H., *Medical Director.*

In preparing the Annual Report upon the activities of the Health Unit during the past year, one is naturally prompted by a desire to elaborate on those aspects of the programme which lend themselves to favourable comment. While there are various phases of the work which are discouraging by their necessary slowness of progression, it is gratifying indeed to report on the success of the St. Lawrence Sanatorium.

This, as noted in the report for 1937, was opened in October of that year and has for some months been filled to capacity. Already there has been a number of patients discharged with their condition arrested, and, with each case returning to their homes improved in health, there is less resistance on the part of other cases to sanatorium treatment. In the past year, 100 patients were admitted to sanatoria as compared with 63 in 1937. Admissions from Prescott and Russell Counties increased from 18 to 33. Of these, 19 went to sanatoria in Western Ontario, whereas only 7 did so in 1937. The new scheme whereby the Government relieved the municipalities of the cost of treatment has been a great help in securing many of these admissions, but there has been, since the organization of the Unit and particularly since the building of the Sanatorium, a great change throughout the whole area in the attitude of the general public towards the controlling of this disease.

Tuberculosis is still the greatest public health problem in the eastern counties. During the year, 60 deaths were reported, a rate of 68 per 100,000 population. This is more than double the rate for the Province as a whole (33.4). Table I gives the tuberculosis mortality rates by counties for the past eight years.

TABLE I
TUBERCULOSIS MORTALITY RATES—COUNTIES OF EASTERN
ONTARIO HEALTH UNIT

YEAR	GLENGARRY	STORMONT*	PRESCOTT	RUSSELL	TOTAL UNIT
1931	102	79	61	65	76
1932	90	37	80	91	74
1933	84	50	51	89	66
1934	52	37	47	41	45
1935	102	60	54	57	67
1936	66	27	85	52	60
1937	55	67	35	36	49
1938	96	60	77	41	68

*Excluding the Town of Cornwall

Chest Clinics were conducted by the Division of Tuberculosis Prevention in the following centres: Alexandria, Cornwall, Casselman, Hawkesbury, Plantagenet and Rockland; and by Dr. G. W. Cragg, Medical Superintendent of the St. Lawrence Sanatorium, at Alexandria and Finch. A considerable number of examinations were made too at clinics at the St. Lawrence Sanatorium and the Royal Ottawa Sanatorium and at the Ottawa office of the Division's clinician, Dr. D. McCallum. A total of about 1410 X-ray examinations were made, which is approximately 500 more than last year. All the clinics in the various towns were organized by the Unit's nursing staff and the nurses have spent considerable time rounding up contacts of known cases and arranging for their examination.

STATEMENT OF COMMUNICABLE DISEASES IN 1938—Continued.

TABLE II
Total Known Contacts Contacts Examined

NURSING DISTRICT	Total Known Contacts		Contacts Examined	
	25 years and under	26 years and over	25 years and under	26 years and over
Alexandria.....	180	114	97	45
Lancaster.....	179	124	78	23
Hawkesbury.....	286	172	139	68

Casselman.....	123	37	62	20
Rockland.....	112	68	47	34
Cornwall.....	167	86	82	36
Finch.....	81	33	41	12
Totals, Dec., 1938..	1338	724	650	283
Per cent. with Examinations up to date, Dec., 1938..			49%	39%
Totals, Dec., 1937..	1046	520	439	148
Per cent. with Examinations up to date, Dec., 1937..			42%	28%

Table II shows the number of contacts of tuberculosis cases and the number who have received the suggested number of examinations. Because of the increased number of patients seen at the clinics this year, the percentage of such examinations shows a considerable increase over last year. There are still, however, a large number of contacts who have never attended a clinic or who did not receive a re-examination at the time recommended by the examining clinician. The clinics held were filled to capacity and there was, of necessity, an effort made to select those cases who were in most urgent need for examination.

TABLE III
SUMMARY OF TUBERCULOSIS CASES

	1938	5	0	0	11	16
TOTALS.....	1936	83	65	84	28	260
	1937	60	97	103	22	282
	1938	77	100	130	28	335

In Table V, further information on the condition of the disease in those patients who are still residing at home is given.

From these Tables it will be noted that:

- (1) 184 new cases were found this year as compared with 109 in 1937. This is due to the more complete coverage this year by the chest clinic service.
- (2) 100 patients were admitted to sanatoria. Of these, 67 were from Glengarry and Stormont and 33 from Prescott and Russell. In 1937, admissions totalled 45 and 18 respectively. Of the 33 patients admitted to sanatoria from Prescott and Russell this year, 19 went to sanatoria in Western Ontario, whereas only 7 did so in 1937.
- (3) There are now 77 active cases of tuberculosis remaining in their homes. This is 17 more than in 1937 and is undoubtedly due to the increased number of examinations made during the past year. While there are several patients whose names are on the waiting lists of sanatoria, there are also a number scattered throughout the district who refuse all facilities for treatment.
- (4) Only 14 patients from Prescott and Russell Counties were admitted to sanatoria in eastern Ontario and Quebec. All the others who were admitted had to travel over 300 miles to the nearest hospital. Naturally, there are those who refuse to make this long trip and remain at

home in the hope that they may ultimately gain admission to the Royal Ottawa or St Lawrence Sanatoria. It is understood that some consideration is being given to a plan whereby a 50 bed wing would be constructed at the Royal Ottawa Sanatorium for patients from these two counties.

TABLE VI
CASES OF COMMUNICABLE DISEASE REPORTED

Chickenpox.....	51
Diphtheria.....	24
Gonorrhoea.....	13
German Measles.....	2
Measles.....	10
Mumps.....	135
Paratyphoid Fever.....	0
Poliomyelitis.....	1
Scarlet Fever.....	25
Syphilis.....	15
Typhoid Fever.....	8
Whooping Cough.....	52

There were no deaths from communicable diseases in the Unit area during 1938. Of the 24 cases of diphtheria reported, 19 occurred in Cumberland Township, Russell County, where very little immunization by toxoid has been carried out among children of school and pre-school ages. Since the outbreak, the school boards of two of the larger school sections have had toxoid administered to the children of their respective areas.

TABLE VII
IMMUNIZATION BY COUNTIES DURING 1938

COUNTY	DIPHTHERIA		SMALLPOX	
	5 Years and Over	Under 5 Years	5 Years and Over	Under 5 Years
Glengarry.....	280	185	282	94
Prescott.....	382	261	400	275
Russell.....	489	159	35	53
Stormont.....	78	64	442	88
Total.....	1229	669	1159	510

Table VII gives, by county, the number of children immunized during 1938. Diphtheria toxoid clinics were held in 14 municipalities during the year.

With the exception of Cumberland Township, every municipality in the Unit has had at least one toxoid campaign; of the 29 municipalities, 19 have offered free clinics to the public on two or more occasions. There are 5 municipalities that have not offered free smallpox vaccination clinics to their residents.

TABLE VIII

PERCENTAGE OF CHILDREN IMMUNIZED AGAINST DIPHTHERIA AND SMALLPOX, DECEMBER 31, 1938

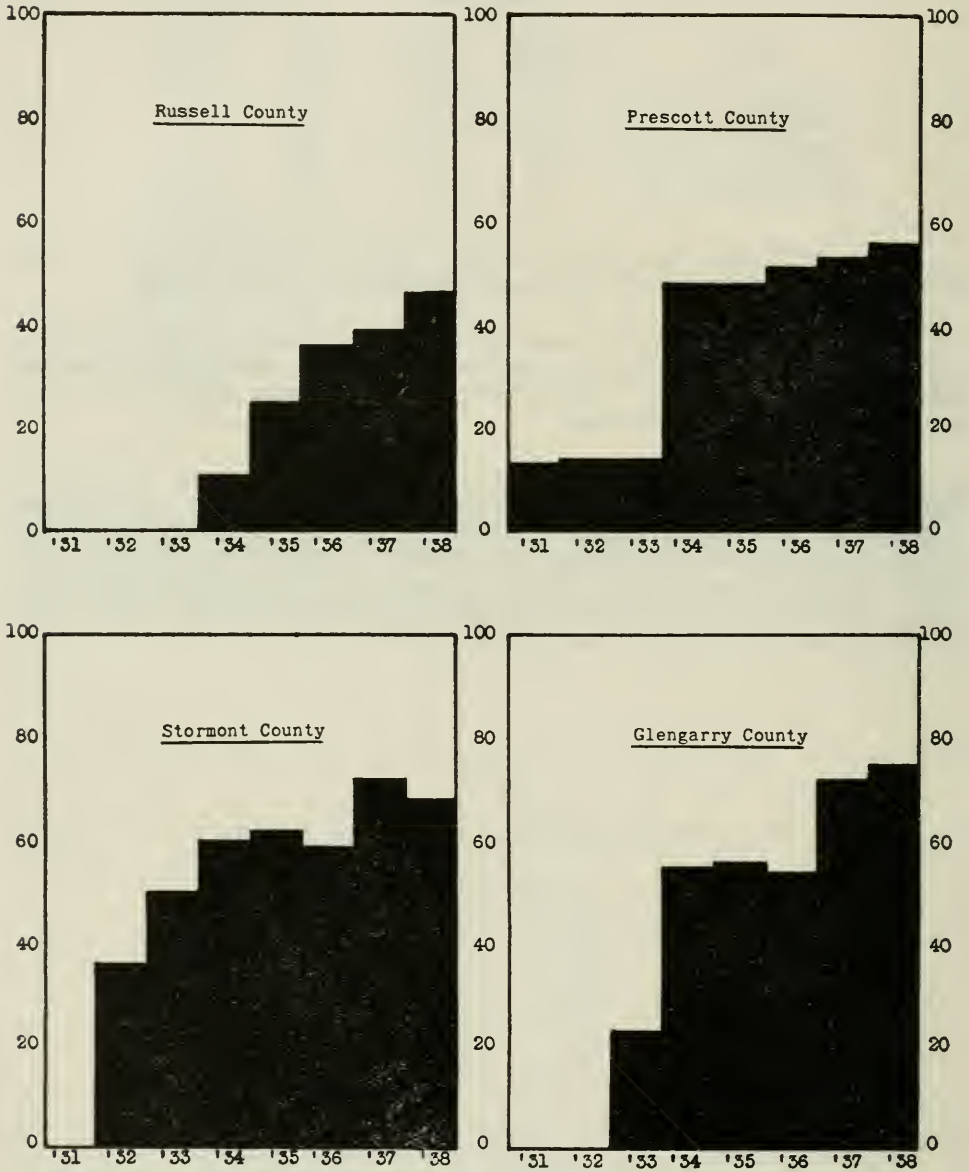

COUNTY	DIPHTHERIA		SMALLPOX	
	% School (5-14)	% Preschool (1-4)	% School (5-14)	% Preschool (1-4)
Glangarry.....	75	24	53	12
Prescott.....	56	24	53	9
Russell.....	46	17	30	15
Stormont.....	68	14	40	6
All Health Unit.....	60	20	45	10

Table VIII gives the percentage of children, by county and by age-group, immunized against diphtheria and smallpox at the end of 1938.

NOTE:—In computing the rates for the preschool section of this table, the population of this age-group was estimated from the number of births, less infant and preschool deaths. In computing the rates for the school-age children, the 1931 census returns were used.

Only those children who have received the full three doses of toxoid are considered as immunized against diphtheria. In the distinctly rural sections of the Unit, there is a considerable number of children, particularly in the preschool group, who receive only one or two doses. Some of these may go to their family physician for the third, but such cases are not always reported to the Unit. There is also a considerable number of vaccinations made each year by family physicians of which no record is received.

GRAPH I
 DIPHTHERIA TOXOID IMMUNIZATION—EASTERN ONTARIO HEALTH UNIT
 Per Cent. Immunized by Counties—School Age Group (5 thru 14 yrs.)

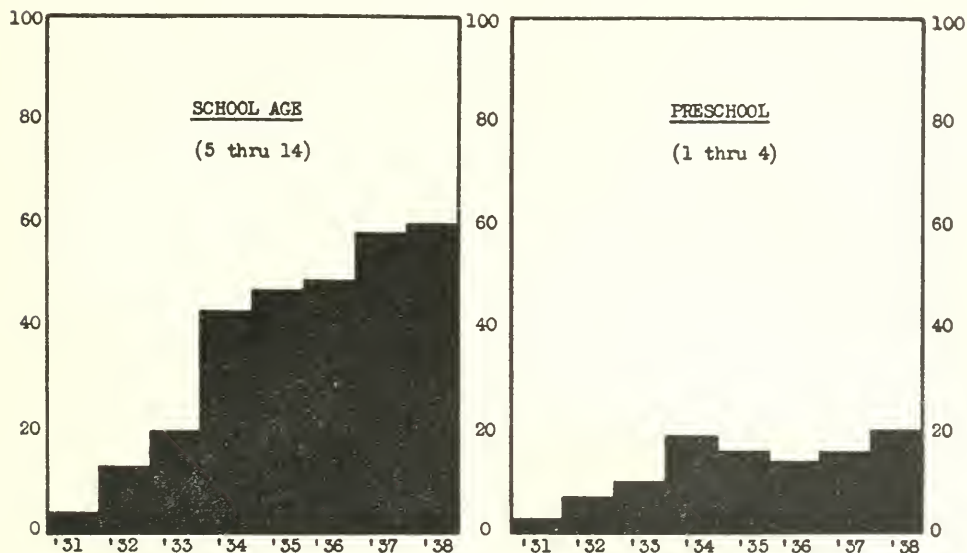

Graph I shows by county the percentage of school children protected against diphtheria each year since 1931.

GRAPH II

DIPHThERIA TOXOID IMMUNIZATION—EASTERN ONTARIO HEALTH UNIT

Percentage Immunized

In Graph II, the percentages immunized for the whole Unit by school age (5 thru 14) and by preschool age (1 thru 4) are shown, from which it will be seen that in both age-groups the percentage immunized in 1938 is the highest of any year on record.

During 1938, our efforts were directed towards the diphtheria toxoid campaign and no scarlet fever immunization was carried out. It is hoped to place additional emphasis on immunization against scarlet fever and smallpox in 1939.

Infant and Child Hygiene.

The infant mortality rate for the Unit area for the year 1938 is the lowest ever recorded, being approximately 68 per 1,000 live births. The rates for 1938 are based upon deaths reported to the end of November, and estimated deaths for December.

TABLE IX

INFANT MORTALITY RATES—EASTERN ONTARIO HEALTH UNIT

Year	Glengarry	Prescott	Russell	Stormont*	All Unit
1931	109	81	110	107	99
1932	94	97	110	83	97
1933	85	110	119	72	99

1935	46	97	79	78	80
1936	40	87	85	50	70
1937	80	118	79	41	81
1938	45	107	68	41	68

*Excluding Cornwall Town.

In Table IX the infant mortality rates for the individual county and for the Unit as a whole are given for each year, 1931 to 1938.

GRAPH III

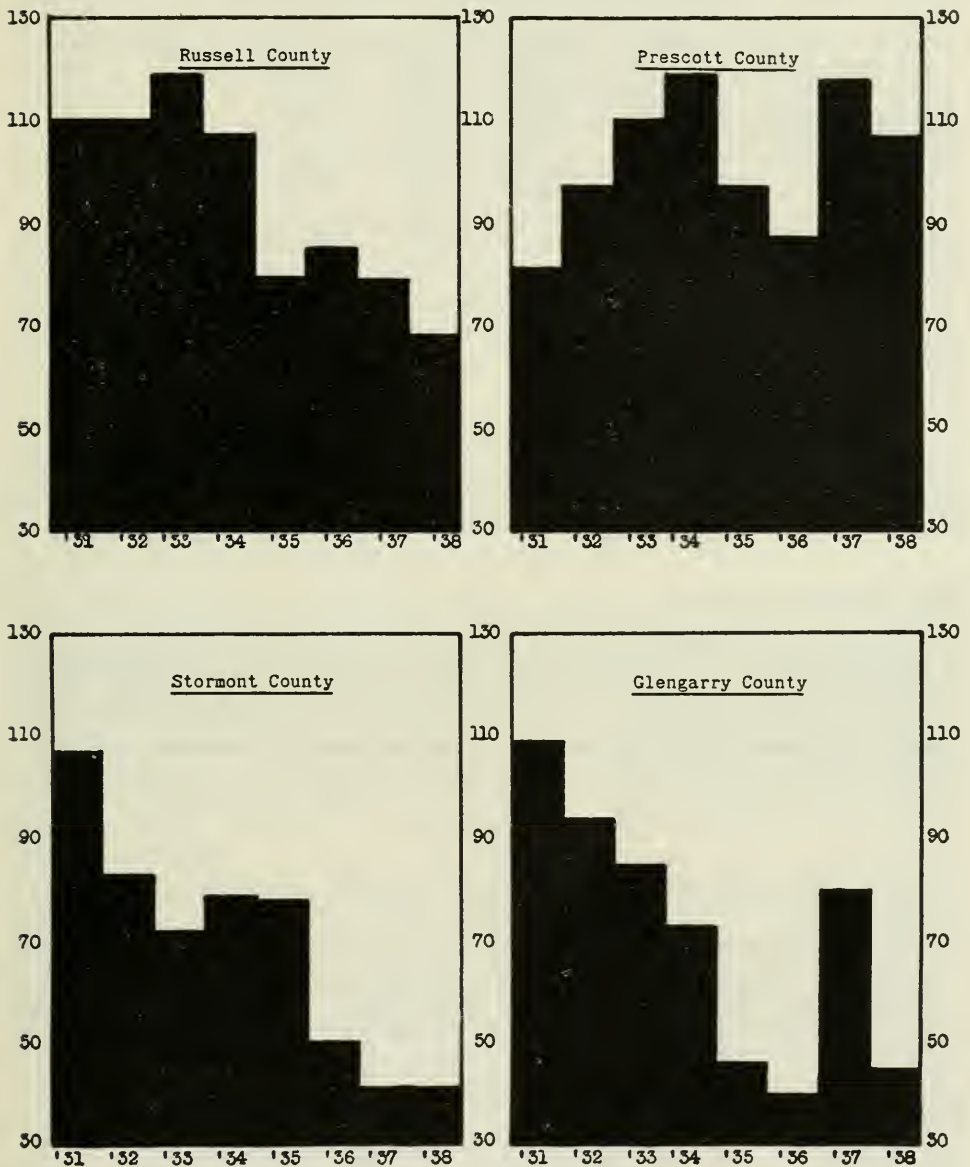

INFANT MORTALITY—EASTERN ONTARIO HEALTH UNIT

Deaths of Children under 1 year of age per 1,000 Live Births.

Graph III illustrates the trend in infant mortality rates in the Unit as whole—1931-1938

GRAPH IV
 INFANT MORTALITY—EASTERN ONTARIO HEALTH UNIT
 Deaths per 1,000 Live Births

Graph IV illustrates the trend in infant mortality rates in each county—1931-1938.

Since the inception of the Unit, apart from the year 1937, there has been a decline each year in the infant death rate. In considering the rate for 1937 (81 per 1,000 live births), it is interesting to note that the increase occurred in Glengarry and Prescott Counties and was due to respiratory and intestinal diseases. In these Counties there was an epidemic of influenza in January of that year.

TABLE X

A COMPARISON OF THE CAUSES OF INFANT DEATHS IN THE EASTERN ONTARIO HEALTH UNIT DURING THE PERIOD JANUARY-NOVEMBER OF THE YEARS 1936-1937-1938

CAUSE OF DEATH	PER CENT. OF TOTAL INFANT DEATHS			*DEATHS PER 1,000 BIRTHS		
	1936	1937	1938	1936	1937	1938
Premature birth.....	36.0	19.7	29.4	25.1	16.7	20.3
Respiratory causes.....	10.4	23.7	11.9	7.3	20.0	8.2
Intestinal diseases.....	10.4	17.8	8.7	7.3	15.0	6.0
Congenital debility.....	9.6	7.9	11.9	6.9	6.7	8.2
All Other Causes.....	33.6	30.9	38.1	23.4	26.1	26.4
All Causes.....	100.0	100.00	100.0	70.0	84.5	69.1

*Estimated from deaths reported January-November each year and calculated on a per annum basis.

Table X shows the chief cause of infant deaths in the Unit area for the years 1936, 1937 and 1938, from which it will be noted that deaths from premature birth and congenital debility accounted for over 40 per cent. of the infant deaths reported during 1938.

The toll of infant life in 1937 from respiratory infections and intestinal diseases is well illustrated in this table. In spite of the higher rate in 1937, the infant mortality rates in the Health Unit area for the period 1935-1938 are about 23 per cent. less than the rates for the period 1931-1934.

Child Health Conferences.

Child Health Conferences were held this year in six of the larger centres of the Unit district. The Conference started in Plantagenet in April was well attended. The Conference at Rockland had to be temporarily discontinued on account of staff adjustments. It was felt that the attendance at the Moose Creek Conference in 1937 did not justify its continuance. Altogether, 59 Conferences were conducted with an average attendance of 11.

TABLE XI

ANALYSIS OF CASES ATTENDING CHILD HEALTH CONFERENCES DURING 1938

VILLAGE OR TOWN	Clinics Held	Age on 1st Visit in 1938					Figures for 1937			
		1-3 mos.	4-6 mos.	7-12 mos.	Pre-School	Individ-uals.	Total Visits	Clinics Held	Individ-uals	Total Visits

Table XI gives the attendance report in detail for the Child Health Conferences held in six centres of the Unit area during 1938. Figures for the year 1937 are included for comparison.

Summer Round-up of Pre-School Children about to Enter School.

With the idea of arousing interest in sending a child to school for the first time in the best possible health, the staff of the Unit carried on two interesting efforts this year. The first was a comprehensive campaign of education of the parents by means of well-planned and effective publicity in the newspapers throughout the unit. The parents were urged to take the children who were to enter school in September to their family physician in May or June and have correction made of conditions which would handicap the child in his school work. The second was to offer an examination service in two centres during the month of June where examination was given by the Medical Director of the Unit to all children applying for the service.

Within the unit area there are no free treatment facilities for either pre-school or school-age children. Added to this is the fact that a large proportion of the families are in the lower wage-earning groups. These, among others, are reasons for the small number of corrections of defects found in both the pre-school and school-age groups.

School Health Service.

Because of the extensive area; the large population widely scattered and the small number of nurses, one visit to each school is all that can be planned during the year. In some instances, it is impossible to give even this minimum service, owing to road conditions during several months of the year. It is, therefore, difficult to secure correct data covering the extent to which defects have been corrected and health practices improved.

The yearly programme of work in the schools is as follows: In the village schools all children are weighed and measured and their vision tested; special physical inspection by the nurse is given to all beginners, those scheduled to leave school during the current school year, and those with previously noted defects. The children in other grades are seen at classroom inspections.

In the schools of four rooms or over, post-vacation inspection is given after the mid-summer, Christmas and Easter vacations, in order to discover symptoms of communicable, skin and other diseases. The children who are sent home as a result of these inspections are visited by the nurse in as many instances as possible.

In all one-room schools visited, special physical inspection is given by the nurse to all children in attendance at the time of the visit. During the year 1938 a total of 7,249 children received special physical inspection; 8,193 children received post-vacation inspection; 1,501 visits were made to homes to urge consultation with family physician and dentist regarding physical defects, and to discuss with parents the general health practices of the children.

TABLE XII

No. of class rooms inspected.....	231	
No. of pupils on register.....	6638	
No. of pupils receiving S.P.I. or C.R.I.	6031

Totals.....	2272	3320	821	205

Table XIII shows the major defects found, together with the number of corrections made and improved conditions noted.

Orthopaedic Work.

An Orthopaedic Clinic was conducted in Alexandria in November by Dr. James Murray, orthopaedic surgeon of Ottawa. Twenty cases attended this Clinic, about half of whom were children who suffered from poliomyelitis in the 1937 outbreak. Sixteen of these cases are under treatment; in two cases treatment is being arranged for; and two were found not to need treatment. The local branch of the Catholic Women's League arranged for the transportation of a number of these cases to and from the Clinic. The Alexandria Clinic was the only orthopaedic clinic held in the Unit area. Members of the nursing staff, arranged during the year for the examination and treatment of a considerable number of cases from other parts of the Unit at Ottawa, Montreal and Toronto.

Mental Health Clinics.

These Clinics have been held one day a month throughout the year in the headquarters office of the Unit in Alexandria by Dr. C. H. Gundry, Clinic Director of the Ontario Hospital staff of Brockville. Dr. Gundry also holds clinics in St. Joseph's Industrial School at Alfred, in Hawkesbury and in Cornwall monthly. This service is of inestimable value, touching as it does a great need, but education of the public is required before it will be used to the fullest extent.

Meetings.

As in past years, a considerable number of meetings of Women's Institutes, church organizations and municipal councils were addressed by the Medical Director, the Supervisor of Nursing and the Sanitary Engineer.

Nursing Service.

Two graduate students from the School of Nursing, University of Toronto, were given field experience in the Unit.

Members of the staff attended Refresher Courses held in Ottawa and Toronto.

Five staff meetings were held during the year. Miss Vera Bambridge, Nutrition Specialist of the Women's Institute Branch of the Ontario Department of Agriculture, discussed with the staff at two of these meetings, nutrition problems as they affect the area. Miss Hollinger, Field Secretary of the Junior Red Cross, attended a third meeting, and her explanation of the aims of the Junior Red Cross Clubs in schools was most helpful. It is hoped to have her visit in the schools with the staff nurses at a later date.

In September, three nurses assisted with the physical examination of Normal School students in Ottawa and Toronto. 7,053 Nursing Visits were made by the staff. These included 149 visits made, for the most part, to demonstrate bedside care of patients to members of their families. 1,194 Special Activity Visits were made; the majority of these were for the purpose of securing attendance of patients and contacts at chest clinics.

Visits to maternity cases were increased about 50 per cent. over the previous year. It is interesting to note that most of these cases were discovered by the nursing staff, either directly or indirectly, through their home visiting activities.

In two districts where intensive work was done, of forty-one expectant mothers given nursing supervision, only three were referred by physicians; one mother was in the eighth month of pregnancy and two were in the ninth. However, 29 of the 41 patients had reported to their physicians before the end of the 5th month of pregnancy. It is evident that expectant mothers are making contact with the family physicians at an earlier date than heretofore.

Classes in Home Hygiene and Care of the Sick were organized in three centres. A total of thirty-one sessions were held with an average attendance of twenty-eight.

Table XIV is a summary of the activities of the nursing staff during the past year.

SANITARY ENGINEERING ACTIVITIES

During 1938, the programme of work in this branch of public health activity in the Health Unit area was conducted along similar lines to that of preceding years. It included regular inspections instituted by the sanitary engineer in connection with water and milk supplies and special investigations conducted at the request of local boards of health and other public bodies and private individuals. The inauguration of compulsory pasteurization in many areas in the province by provincial statute necessitated the devotion of considerably more time to this branch of the work. There was also an increase in the number of individuals who requested advice in connection with private water supplies and sewage disposal problems.

Water Supplies.

At Hawkesbury, major alterations and improvements at the water purification plant were completed. An additional filter unit was built and the three existing units were overhauled and repaired. The filtering capacity of the plant based on a rate of 2 gallons per square foot per minute is now almost 2,000,000 gallons per day. A dry feed machine for applying alum was also installed to replace the solution tanks which had to be removed to make room for the new filter unit. Changes made in the pumping equipment involved the removal of the steam driven pumps and their replacement with electric pumps with auxiliary gasoline engine drives. With the replacement of the chlorination apparatus with new equipment, which is expected to be made in 1939, the town will be have a well-equipped and efficient water purification plant. While much of the expenditure will ultimately be returned as a result of savings in operating charges, much commendation is due to the local authorities who have undertaken this very necessary work at a time when the local financial situation is none too promising.

At Alfred, following a series of reports which indicated that the water supply was subject to intermittent contamination, chlorination of the supply has been adopted. A Wilson Hypochlorinator was installed on September 21st, 1938.

During the summer and early fall, the rainfall on the watershed of the Delisle River from which the Town of Alexandria secures its supply was exceptionally low. This resulted in a serious shortage and for about two weeks it was necessary to restrict operation of the pumps to about four hours per day. The supply was augmented by opening up channels to tap natural storage basins upstream and by pumping back a considerable volume of water from a natural basin about a quarter of a mile below the waterworks dam. Normally, the water is pumped from a well, the bottom of which is about six feet above the level of the bottom of the pond behind the dam. Rearrangements were made in the pump suction to facilitate direct pumping from the river. Alterations in the dam to increase the available storage are also contemplated. As a result of these precautions, this plant will be in a better position to cope with a similar emergency should it again arise.

At Plantagenet, considerable interest has been shown in the question of securing better pressure in the distribution system and protection of the watershed of the spring creek from which this supply is drawn. It is probable that definite action to remedy these conditions will be taken during the coming year. At Clarence Creek, the removal of hydrogen sulphide from the local supply has been given some attention and it is planned to effect improvements during 1939.

Four routine inspections of the chlorine dosage were made of each of the following supplies:—Alexandria, Cornwall, St. Lawrence Sanatorium, Hawkesbury and Rockland. There were no cases of water-borne diseases reported in the area attributed to the use of water from any of the community supplies.

Enquiries were made by eleven individuals with respect to the examination and protection of private wells. Improvements were effected in a number of instances. A special investigation was also made of the supply at the convent at Lefavre in Alfred Township and a report prepared.

Sewage Disposal.

Advice was given to six individuals with respect to septic tank installations for private homes. These included residents of Vankleek Hill town and the Townships of Lochiel, Lancaster, Charlottenburgh and Roxborough. In five instances construction work was completed.

Co-operation with the cheese factory inspectors employed by the provincial Department of Agriculture in endeavoring to secure more sanitary methods of disposal for cheese factory wastes was continued. Recommendations were made in connection with eight factories and an inspection was made at one factory where improvements were effected three years ago. These factories were located as follows: Lochiel Twp. 3; South Plantagenet Twp. 2; North Plantagenet Twp., Osnabruck Twp., Kenyon Twp., and Roxborough Twp., 1 each.

A total of twelve drainage problems, chiefly complaints of cesspool overflows, were investigated and recommendations were made where corrections were necessary. These investigations were distributed as follows: Alexandria, 3; Rockland, 2; and Maxville, L'Original, Casselman, Lancaster Village, North Plantagenet Township, Alfred Township and Roxborough Township, 1 each.

School Sanitation.

Major school building projects in the Unit area consisted of the erection of a new four-roomed separate school in Vankleek Hill and the enlargement and renovation of the separate school at Moose Creek. These buildings are modernly equipped and are a credit to the communities which they serve.

Nine other school inspections were carried out and recommendations made on such points as toilet accommodation, water supply, lighting, etc. Schools visited were located in the following municipalities: Charlottenburgh, 2; Roxborough, 2; Maxville, Vankleek Hill, Longueuil, Cambridge and Osnabruck, 1 each.

Milk Supplies.

By reason of the enactment of provincial legislation, the sale of pasteurized milk became compulsory after October 1st, 1938, in the following centres: Rockland, Hawkesbury, Vankleek Hill, Alexandria and the southern portion of Cornwall Township. There are now 19 pasteurizing plants located in these centres as compared with 7 in 1937. The establishment of 13 new plants (one existing plant was closed) involved many visits prior to and during construction and after processing began. A total of 64 casual visits were made and 31 inspections covering the equipment and methods of operation.

The enforcement of this legislation has, on the whole, been fairly well received and no difficulties have been encountered which were not anticipated. There are still small quantities of raw milk sold in these compulsory areas but

it is hoped that these conditions will be rectified during the coming year. Investigations of raw milk sales in Rockland and Vankleek Hill were made and reports prepared. A number of enquiries from owners of one or two cows in the affected areas were also dealt with. Casual inspections of raw milk plants in Avanomore, L'Original, Maxville and Plantagenet were made.

The system of collection of milk samples in the various towns and villages in the area was continued. A total of 272 samples were secured. In addition, 98 samples were submitted by local authorities. A total of 127 samples of pasteurized milk secured from 25 dealers located in 5 centres were examined. The logarithmic average of the standard plate counts was 13,400. This compares with a figure of 34,000 obtained in the examination of 69 samples in 1937. It is interesting to note that preliminary results being secured by the newly established plants are very good and these results are having a salutary effect where they are in competition with older established plants. A total of 243 samples of raw milk secured from 102 dealers located in 18 centres were examined. The logarithmic average of the standard plate counts was 46,000 as compared with a figure of 56,000 obtained in 1937.

Miscellaneous.

A total of 13 other problems of various natures were investigated and where necessary reports prepared and recommendations made. A public meeting was attended in Rockland to discuss the question of compulsory pasteurization. A talk was given to a short course agricultural class at Bainsville on the construction and protection of private well supplies.

Distribution of Work.

Summarizing all activities, the work was spread over 25 of the 28 municipalities in the Unit area. Work instituted by the writer in connection with water and milk supplies embraced 18 municipalities. A total of 63 special problems of various natures were investigated at the request of the following: Head Office, 2; provincial government officials, 9; private individuals, 22; and local boards of health, 30. Requests from local boards of health were received from 15 municipalities.

DIVISION OF TUBERCULOSIS PREVENTION

G. C. BRINK, M.B., *Director.*

In March, 1938, amendments to the Sanatoria for Consumptives Act were passed by the Legislature; the new Act came into force on July 1st, 1938. The changes in the Act were prompted by several factors, among which were,— the striking variation in the tuberculosis mortality rates; the sanatorium maintenance costs, and the incidence of hospitalization of tuberculous cases in counties, districts, cities and towns. (See Charts I to VII).

Under the old Sanatoria for Consumptives Act the county was the unit from which payment for maintenance of indigent patients was made to sanatoria the rate being \$10.50 per week. One-half of this amount was charged back to the local municipality, that is the township, village or town in which the patient resided. This meant that the town, village or township paid directly to the county \$5.25 per week for every one of its patients in sanatorium and indirectly through its county tax a portion of the remaining \$5.25 paid by the county. Cities and separated town in counties were required to pay the entire charge, \$10.50 per week.

Further, organized municipalities in territorial districts (unorganized territory), whether cities, towns, villages or townships, were responsible for the entire maintenance charges (\$10.50 per week) in sanatorium of their non-pay patients. These municipalities paid no tax to the district in which they were located. With the exception of the cities and a few towns in Northern Ontario very few municipalities were financially able to meet their hospitalization costs.

The Government paid its statutory per diem grant on all indigent patients up to 75c per day.

The results of the above method of payment of maintenance charges retarded hospitalization and control of the disease due to the following three factors:

(1) Those individuals who were unable to meet the expense associated with prolonged sanatorium treatment, not wishing to become public charges, either delayed their entry into sanatorium or refused such treatment altogether. As a result they remained at home, the disease frequently advanced and gross infection occurred in those in intimate contact.

The apparent difficulty of convincing the municipal officials as to the inability of certain individuals to meet the cost of prolonged hospitalization frequently led to controversy between the patient and the physician on the one hand and the local authorities on the other.

(2) The inability of some municipalities to meet the necessary expenses; and

(3) The obvious attempt of certain other municipalities to avoid assuming their statutory obligations.

This situation resulted in:—

(a) Not more than 50% of those dying of tuberculosis during the last few years had the benefit of sanatorium treatment within five years of death.

(b) Only 50% of those patients for whom sanatorium treatment was advised by the Department's Travelling Chest Clinics during 1936, had entered a sanatorium within one year of discovery and recommendations.

Frankly, failure on the part of some municipal officials to assume their statutory and implied responsibilities was one of the chief explanations for the marked difference in death rates, sanatorium costs and the number of people entering sanatorium from certain sections of the Province.

The passing of the new Legislation was an effort on the part of the Government to overcome those factors inhibiting the control of the disease. It is hoped that the new Legislation will permit of earlier sanatorium treatment following diagnosis and the earlier discharge of some patients from sanatorium which should make possible a greater number of people receiving appropriate institutional care.

The essential provision of the amendments to the Act are:—

The Government has assumed the responsibility of payment of maintenance of indigent patients in sanatoria, which was formerly borne by the municipalities. Those able to pay in part or in whole are expected to do so; payment by the patient is expected when income and assets indicate that such should be the case.

Some patients who had received maximum benefit from sanatorium care and who were not a danger to other people, were being maintained in sanatoria for an unnecessarily long period, because there was no organized method of caring for them in their own municipalities. At the same time patients urgently in need of sanatorium care were forced to remain at home because all available beds in sanatoria were filled. On occasion it was both difficult to get the patient into and difficult to get him out of sanatorium.

In view of the fact that the Government has relieved the municipalities of their former share of sanatorium costs, which with the increased bed accommodation would have amounted annually to nearly \$2,000,000.00, the municipalities have been made responsible for the after-care of ex-sanatorium patients who are unable to supply the necessary care for themselves. The after-care includes lodging, food and clothing, and the necessities of life. A comparatively small percentage of patients will require assistance after discharge and the cost to the municipalities for after-care will be a small fraction of their former sanatorium costs.

There are patients who will require pneumothorax refills from time to time following discharge. The municipality is made responsible for the transportation of such patients to centres where the facilities for this treatment are available, in the event that they are unable to provide their own travelling expenses. The local Department of Health through its Medical Officer of Health in co-operation with the family physician is made responsible for the arrangements connected with the carrying out of the refill and for the payment to the approved physician, hospital clinic, or sanatorium clinic for this work. The payment for each refill is up to \$3.00 depending on the amount the patient may be able to pay toward his own treatment.

The Government is reimbursing the municipalities for the payment of this special treatment but not for the transportation of the patients. The municipality is also responsible for transportation from sanatorium of its indigent patients.

As a result of the operation of the new Act, during the period July 1st to December 31st, 369 more patients were placed under sanatorium treatment

than in the corresponding period in 1937. Some of this increase in sanatorium population has been due to increased bed accommodation. However, from reports being received in the Department the interval between diagnosis and admission to sanatorium has been definitely decreased and a greater number of patients has been discharged.

Prior to July 1st, there was no organized or uniform method of providing after-care. Some municipalities provided adequate care for their ex-sanatorium patients unable to secure the necessary care themselves, while in others, the patients frequently were forced to engage in work totally unsuited to their condition in order to support themselves, the result being that re-activation of the disease necessitated return to sanatorium.

During the later part of the year additional accommodation was provided at the following sanatoria:—

Toronto Hospital for Consumptives, Weston.....	120 beds.
Mountain Sanatorium, Hamilton.....	106 beds
Queen Alexandra Sanatorium, London.....	88 beds
Freeport Sanatorium, Kitchener.....	24 beds
Kingston Sanatorium (associated with the Kingston General Hospital).....	12 beds
Total.....	<u>350 beds</u>

 ONTARIO - 1935 AND 1936 (AVERAGE)

CLINIC WORK AMONG THE TREATY INDIANS

Following a Conference of Representatives of each Province with the officials of the Indian Affairs Branch of the Department of Mines and Resources, Dominion Government, \$50,000.00 was allotted for diagnostic and treatment purposes among the Indians in Ontario.

The Division carried out diagnostic work among certain groups of Treaty Indians as described below. Altogether 2511 Indians were examined. 283 were found to have tuberculous disease, 98 of whom were recommended for sanatorium treatment.

(a) Tuberculosis surveys were made of 1151 children in 9 Indian Residential Schools, viz.: at Chapleau, Spanish (2), Sault Ste. Marie, Sioux Lookout, McIntosh, Kenora (2) and Fort Frances.

(b) 75 children were examined at St. Joseph's Orphanage, Fort William.

(c) A survey was made of 1056 Indians from the Rama Reserve and from the Reserves on the Eastern part of Manitoulin Island.

(d) 229 Indians were referred to our Clinics held in various centres.

For detailed information, see Table I.

That the \$50,000.00 was quite insufficient to meet the needs of sanatorium care for Treaty Indians in Ontario is apparent when it is realized that not 30% of those active cases recommended for sanatorium care were under treatment at the end of the year.

Tuberculosis control among the Indians in Ontario is very inadequate and the problem constitutes a menace to the white population. This can easily be seen by reference to charts No. 1 to 7. Manitoulin Island shows a tuberculosis mortality rate well over 130 per 100,000 people. According to the report of the Registrar-General there were sixteen deaths from tuberculosis in 1937 among residents of Manitoulin Island, fifteen of which occurred among the Indian population.

REPORT ON THE WORK DONE BY THE DEPARTMENT'S
TRAVELLING CHEST CLINICS

During 1938, Travelling Chest Clinics have operated with headquarters in Toronto, Ottawa, Belleville, Fort William, Timmins and North Bay. One hundred and twenty-six Clinics were held; 100 centres being visited. Seven centres were visited for the first time.

The Clinic, with headquarters in Toronto, conducted thirty-two clinics, visiting the following centres:—St. Thomas, Ridgetown, Leamington, Amherstburg, Aylmer, Tillsonburg, Midland, Penetang, Listowel, Palmerston, Hanover, Chapleau, Spanish, Sault Ste. Marie, Bobcaygeon, Newmarket, Cornwall, Peterborough, Brockville, Lindsay, Shelburne, Orangeville, Flesherton, Meaford, Wiarton, Southampton, Owen Sound, Kincardine, Walkerton, Lucknow, Wingham, Oshawa.

The Clinic, with headquarters in Ottawa, conducted fourteen clinics, in the following centres:—Prescott, Arnprior, Smith's Falls, Perth, Alexandria, Renfrew, Casselman, Hawkesbury, Plantagenet, Rockland, Kemptville, Carleton Place, Almonte and Ottawa.

The Clinic, with headquarters in Belleville, conducted monthly clinics in Belleville and also held seventeen clinics in Cobourg, Port Hope, Deseronto,

Napanee, Colborne, Tweed, Gananoque (2 clinics), Hastings, Campbellford, Havelock, Madoc, Bancroft, Haliburton, Stirling, Brighton and Marmora.

In addition to the regular clinic work, 11 chest aspirations were done, 457 fluoroscopic examinations were made and 439 pneumothorax refills given, approximately twice as many as in 1937 and five times as many as in 1936.

The Clinic, with headquarters in Fort William, conducted twenty-eight clinics in the following centres:—Dryden (2), Kenora (3), Sioux Lookout (3) Fort Frances (3), Rainy River (2), Emo (2), Schrieber (2), Nipigon (2), Geraldton, Nakina, Armstrong, McIntosh and Fort William (2).

The Clinic with headquarters in North Bay, conducted fifteen clinics in North Bay (monthly); Kirkland Lake, Cochrane, Kapuskasing, Sturgeon Falls, Sudbury, Gore Bay, Mindemoya, Little Current, Espanola, Blind River, Thessalon, Bruce Mines, Richard's Landing, Sault Ste. Marie.

The Clinic with headquarters in Timmins, conducted almost a permanent clinic in Timmins and in addition conducted ten clinics in the following centres—Cochrane (2), Iroquois Falls (2), Larder Lake, Kirkland Lake, Hearst, Englehart, Kapuskasing and Smooth Rock Falls.

The following tables give a summary of the work done:

Table II—General summary.

Tables III, IV and V—Give details in respect to newly discovered cases.

Tables VI and VII—Give details in regard to individuals recommended for sanatorium treatment.

Table VIII—Gives information re changes in diagnoses in repeat examinations.

Table IX—Gives details regarding the present condition of ex-sanatorium patients who were examined at the Clinics.

Moderately Advanced.....	122	17.2	25.1
Advanced.....	88	12.4	18.1
Extra Pulmonary.....	6	.8	1.3

419 or 59.2% of the total (707) gave a history of contact with tuberculous disease, and 304 or 43.0% of these attended the clinic on account of contact only and thus would only have been discovered by routine examination; in many other contacts the symptoms were so slight as not to warrant their seeking medical advice.

277 or 39.1% of the newly discovered cases were recommended for sanatorium treatment.

Remarks Regarding Table VIII:

- (a) Of 2856 showing no disease on previous examination, 42 or 1.4% developed definite disease.
- (b) Of 980 cases of inactive adult type of disease, 41 or 4.2% had become reactivated.
- (c) Of 115 suspects 14 or 1.2% developed some type of disease.
- (d) Of 213 previously classified as childhood or primary infection type, only 3 or 1% developed an adult type of disease.
- (e) Of 68 minimal active cases 38 or 55.8% had become inactive and only 13 or 2% of the minimal cases had progressed to moderately advanced or advanced.
- (f) Of 62 moderately advanced active cases, 14 or 22.5% had become inactive.

	554	37	1	9	...	10	12	127	15	241	40	62

Remarks on Table IX:

554 examinations were made on patients who had received treatment in sanatorium; in 37 or 6.7% tuberculosis was no longer considered a factor in their condition. Of the 507 with definite tuberculous disease, 67 or 13.2% were still considered to have active disease in need of further treatment while 440 or 86.8% were considered to have inactive disease.

TUBERCULIN TESTING AND X-RAYING OF STUDENTS IN NORMAL SCHOOLS, THE COLLEGE OF EDUCATION AND THE TECHNICAL TEACHERS' TRAINING COLLEGE

The Division co-operated once more with the Department of Education in tuberculin testing and x-raying of students seeking admission to the Normal Schools, College of Education, and the Technical Teachers' Training College.

All tuberculin tests, and the x-raying of the positive reactors, were carried out by the staff of this Division.

The following Table X gives a summary of the findings:

TABLE X

RESULTS OF TUBERCULIN TESTING AND X-RAYING OF STUDENTS IN NORMAL SCHOOLS, COLLEGE OF EDUCATION AND AT THE TECHNICAL TEACHERS' TRAINING COLLEGE

	Number Enrolled	Number Tested	Number Positive Reactors	Percentage Positive Reactors	Number Negative Reactors	Percentage Negative Reactors	Number X-rayed	Number Showing Evidence of Active Tuberculous Disease	Percentage of Total Enrolment

College of Education...	317	272	107	38.6	165	61.4	150	0	0
Technical Teachers' Training College.....	19	0	19	0	0

TUBERCULIN TESTING AND X-RAYING OF NURSES IN GENERAL HOSPITALS, HOMES FOR INCURABLES, AND SANATORIA

Supervision was given to the carrying out of the regulations in respect to tuberculin testing and x-ray work on the nursing staff of all general hospitals, homes for incurables, and sanatoria. (See Tables XI and XII).

All hospitals made returns and the reports were received more promptly than in former years.

The fact that 24 graduates and 18 student nurses were found to have tuberculous disease and required sanatorium treatment shows the importance of the control of the disease in this group of young women. This would point to the constant danger of infection in the hospitals and raises the question as to whether all persons admitted to general hospitals should receive chest x-ray examinations.

TABLE XI

The Division staff has assisted in tuberculosis surveys among the high-school students of Belleville, Brantford, Weston, Scarborough Township, and Agincourt.

Supervision has been given to periodic examinations among the boys and girls in the Industrial Schools, as well as those young women receiving instruction in the five Home Service Training Schools.

Practically all applicants for positions in the Department of Health have been examined and x-rayed.

Interpretation has been given to some hundreds of films sent in by general hospitals.

The Division was very unfortunate in losing the services of three physicians during the year:

Dr. A. Powers, Ottawa Unit, accepted the superintendency of the Hull Sanatorium, Quebec.

Dr. E. R. Harris, North Bay Unit, was appointed Medical Officer of Health of Kirkland Lake (Teck Township).

Dr. G. W. Cragg, Central Office, received the appointment of Superintendent of the St. Lawrence Sanatorium, Cornwall.

Dr. D. McCallum, of the staff of the Muskoka Hospital for Consumptives, Gravenhurst, and Dr. H. H. Washburn, of the Queen Alexandra Sanatorium, London, were appointed to the staff, taking charge of the Ottawa and North Bay Units, respectively. Dr. J. S. Hazen, of the Mountain Sanatorium, Hamilton, replaced Dr. Cragg in the Central Office.

There were 4538 repeat examinations—the cost for this service being.....\$ 22,509 08
 There were 50 new cases of tuberculous disease found—the average cost being 450 19
 23 of these were recommended for sanatorium treatment—The average cost being..... 988 65

With the passing of the Amendments to the Sanatorium for Consumptives Act and the Regulations thereto, effective July 1st, 1938, it seemed necessary to have attached to this Division a Sanatorium Medical Inspector. Since the Provincial Government is now contributing approximately ninety-five per cent. of the operating revenue of sanatoria it is obvious that the Department of Health should be assured that sanatorium treatment is being afforded to only those properly requiring such and that the length of stay in sanatorium is not unnecessarily prolonged.

In July, 1938, Dr. C. A. Wicks was transferred from the Hospitals Division to this Division to undertake the visiting of sanatoria as the major portion of his duties. Since his appointment, one visit has been made to nine of the thirteen sanatoria. At each visit, the following is accomplished:

(a) A review of the case records and x-rays of every patient under treatment with the physicians in charge. A card is completed in every case giving rather detailed information including types of treatment received. These cards are on file in this office.

(b) Securing answers from the Medical Superintendent to a large series of questions which serves as a survey of bed capacity, facilities for treatment, etc., as well as the management and operation of various services within the sanatorium.

(c) Interviewing those patients from unorganized territory who are without municipal residence for whom the Department of Health is responsible for after-care, where assistance is required.

(d) At a conference with the Director following each visit, problem cases are discussed and a letter sent to the Medical Superintendent regarding the cases which have presented difficulties.

(e) The information upon the individual cards is collected and tabulated following each visit. In this manner, the treatment being afforded patients at particular sanatoria is shown very clearly. As well as types of treatment, this analysis also includes age groups, occupation, duration of residence in sanatorium, etc., as well as the ratio of staff to patients, treatment facilities available and other services rendered.

At the present time a complete report is being prepared from this information which will be included in the next Annual Report of this Division.

Dr. Wicks has also undertaken the supervision and follow-up work in connection with those ex-sanatorium patients whose after-care is the responsibility of the Department of Health. Periodic medical reports are obtained upon such ex-patients to determine when after-care is no longer required.

The inauguration of the new programme placed additional responsibility in the matter of accounting on this Division. It was felt necessary to have an accountant appointed to assume the responsibility of examining the business and financial organization. In this capacity Mr. Beauchamp joined the staff of the Division in July. His chief duty is to inform the Department whether or not the existing accounting systems in sanatoria provide adequate accountability of the financial status and operations of the institutions insofar as they concern the Department. Nine institutions have been surveyed, and the findings would indicate that in many cases the business organization has not kept pace with the phenomenal growth of sanatoria in general.

The most effective means of assuring the Department of economic disposition of the grants it makes to the various sanatoria lies in its ability to make dependable comparisons of the cost of rendering similar services in different institutions. Unfortunately the existing accounting systems have not been designed around the hospital services and at the present time there is no common unit or units by which sanatoria can be justly compared. It is hoped that after completion of his survey of sanatoria, Mr. Beauchamp will be able to present for consideration a uniform accounting system which will be acceptable to both sanatoria and the Department. In this way the Department can determine the value received for the money expended.

Tables XIII and XIV show the changes in Tuberculosis Death Rates comparing the periods 1924 to 1928, and 1933 to 1937.

TABLE XIII

Age Group	MALES				FEMALES				Percent Decrease	
	1924-1928		1933-1937		1924-1928		1933-1937		Males	Females

DIVISION OF LABORATORIES

A. L. MACNABB, B.V.Sc., *Director*

The volume of work conducted by the Division of Laboratories during the year 1938 shows an increase of 64,428 examinations over the previous year.

The Central Laboratory now has a staff of 67 members. Of this number, five are employed in overtime duty. The Central Laboratory is open for the reception and examination of specimens from 6 a.m. to 12 midnight.

During the past year, two members of the Central Laboratory staff resigned, one member was superannuated on account of ill health and five transfers were effected in the Division. Dr. Jas. W. Bell was transferred to the Central Laboratory staff, Dr. A. E. Allin to the Directorship of the Fort William Branch Laboratory, Mr. A. D. McClure, B.A., was transferred to the Directorship of the North Bay Branch Laboratory, replacing Dr. W. M. Wilson, who was transferred to the Central Laboratory, and Miss Evelyn Tuft was transferred to the North Bay Branch. This latter transfer was necessitated due to the marked increase in the volume of work at the North Bay Laboratory. Dr. Stuart Penny was appointed to the staff of the Laboratory Division. Dr. Penny is now serving in the capacity of Pathologist at the Central Laboratory, replacing Dr. H. A. Ansley, who is at present on leave-of-absence.

Papers Presented.

The following presentations were made at the Ontario Health Officers' Association meeting this year:

- (1) Recent Advances in the Preparation of Typhoid Paratyphoid Vaccine
- (2) Preparation of Pertussis Vaccine.
- (3) The Opsono-cytophagocytic Diagnostic Test for Undulant Fever, Supplementing the Agglutination Test.
- (4) Recent Advances in the Serology of Syphilis.
- (5) Pneumococcus Typing by the Neufeld Method.

At the Christmas meeting of the Laboratory Section of the Canadian Public Health Association the following papers were presented:

- (1) (a) Preparation of Pertussis Vaccine.
(b) The Selection of Strains for the Preparation of Pertussis Vaccine.
- (2) The use of S. para B. Type and Group Antigen in the Routine Diagnostic Agglutination Test for the Diagnosis of Paratyphoid B. Infection.
- (3) Phosphatase Test as an Index for Determining the Efficacy of Pasteurization.

- (4) Pneumococcus Typing by the Neufeld Method and the Results of 100 Serum Treated Cases.
- (5) Concentration Methods for the Microscopic Smear Examination of Tubercle Bacilli.

In addition to these, the Director presented a paper at the American Public Health Association Meeting held in Kansas City last October, on "The Primary Isolation of Tubercle Bacilli by Cultural Methods."

Papers Published.

- (1) Frozen Section Technique for Pathological Tissue Specimens.
- (2) Pneumococcus Typing.
- (3) Bacteriological Study of Material from Eating and Drinking Utensils.

Investigational Work.

Investigational work has been conducted in connection with the following:

- (1) Leptospira.
- (2) Routine work in connection with pneumococcus typing.
Forty-five strains have been isolated which did not fall in Types One to Thirty.
Serum has been prepared from some of these strains in an effort to determine whether or not these unidentified types of pneumococcus fall into one or several types.
- (3) An extensive study in connection with the application and use of the phosphatase test was conducted. This paper is now ready for publication.
- (4) A further study has been conducted on the various methods of preliminary treatment of specimens for the primary isolation of Tubercle Bacilli. The results of this work will be published during the coming year.

Following is a brief resumé of the work conducted by the Division.

Table I outlines the number and nature of examinations conducted in the Central and each of the Branch Laboratories.

It will be noted that the Division conducted 557,143 examination during the past year. It will be also noted that 2,472 typings for pneumonia were conducted, 341 of which were conducted at the Fort William Branch Laboratory and 137 at the North Bay Branch.

Table II outlines the number of specimens examined in each of the Laboratories from the years 1934 to 1938, inclusive.

TABLE II
NUMBER OF SPECIMENS EXAMINED IN EACH OF THE LABORATORIES

Table III outlines the products prepared and distributed by the Central Laboratory for the year 1938. In addition to the preparation of these biological products, 218,029 outfits were prepared and distributed by the Central and Branch Laboratories.

TABLE III
BIOLOGICAL AND CHEMICAL PRODUCTS PREPARED AND DISTRIBUTED
FROM MAIN LABORATORY DURING YEAR 1938

T. A. B. Vaccine.....	5,541 pkgs.
Pertussis Vaccine.....	20,004 pkgs.
Rabies Vaccine.....	31 pkgs.
Polio Serum.....	257 pkgs.
Silver Nitrate.....	3,086 ozs.
Bismuth Oxychloride.....	179,110 grs.
Mercury Salicylate.....	7,150 grs.
Sodium Hydroxide in the Treatment of V. D. S.....	376 ozs.
Distilled Water in the Treatment of V.D.S.....	65,066 ozs.

Laboratory Animals.

During the year, 60% of the mice and 7.3% of the guinea pigs were raised at or in connection with the Laboratory. Breeding stock now in hand includes 225 guinea pigs, 200 mice, 1 rabbit and 4 rats. Arrangements are being made whereby it is hoped that in future all mice and guinea pigs needed may be raised at the Queen St. Hospital breeding unit.

The following table shows the number of laboratory animals raised in the Laboratory or in the unit at the Queen St. Hospital, and those purchased:

	Mice	Guinea Pigs	Rabbits	All Animals
Raised.....	1,500	100	0	1,600
Purchased.....	1,000	1,280	176 at \$0.75	2,589
Price each.....	17½c	60c	133 at \$1.00	
Cost of Animals.....	\$175.00	\$768.00	\$265.00	\$ 1,208.00
Cost of Feed.....				642.34
				\$ 1,850.34

Media and Preparation Room.

The increase in the volume of work in the Laboratories necessitated additional work in the Media Room. During the year, 926 batches of media were prepared. Forty-two thousand, nine hundred and eighty-six cultural plates were dispensed and distributed to the Laboratory. This amount, supplemented by the preparation of 142 lots of stain preparation necessitated the placing of additional help in this Section.

Diphtheria.

The following table (Table IV) outlines the routine work of the Central Laboratory in connection with the examination of 4,995 swabs submitted to determine the presence or absence of *C. diphtheriae*.

TABLE IV
DIPHTHERIA

	Number	POSITIVE		NEGATIVE

Direct Smears.....	1128
Cultures.....	4995	158	3.13	4837	96.87
Virulence Tests.....	87	15	17.24	72	82.76

Tuberculosis—Microscopic.

Twenty-three thousand, eight hundred and eighty microscopic smear preparations were prepared and examined for the presence of Tubercle Bacilli by the Division of Laboratories.

During the autumn investigations were made with a view to finding whether or not a method of treating specimens of sputum for examination for tuberculosis could be found which would be more efficient than the method hitherto in use. Four methods of concentration, namely those of T'Ang, Andrus and MacMahon, Kinyoun, and Hanks were performed on fifty sputum specimens of sanitarium patients, and the results compared with those obtained by the routine method of autoclaving and centrifugation.

The results indicated that of these methods, that of Andrus and MacMahon was the most efficient, the others having no very decided advantage over the autoclave method. Adoption of the Andrus-MacMahon technique as a routine is proposed for the coming year.

In this investigation, the hydrocarbon flotation principle, represented by the Kinyoun method, presented certain advantages. Further studies are in progress in the hope that the difficulties encountered may be overcome and that this principle may be found adaptable to the routine examination of large numbers of specimens.

Tuberculosis—Cultural.

Table V outlines the cultural results obtained in the examination of 4,841 specimens. It will be noted that 7.79% yielded positive results.

TABLE V

(October 1st, 1937 to October 1st, 1938)

TABLE OUTLINING THE RESULTS OF CULTURAL TESTS ON 4,841 SPECIMENS

TYPE OF SPECIMENS	Total Number of Specimens	Number of Positives			Number of Negatives	Percentage of Positives

395

From the foregoing table it will be noted that the finding of organisms such as pneumococcus, staphylococcus or streptococcus, on preliminary culture does not in any way exclude the possibility of tubercle bacilli being also present.

Table VII outlines a comparative study in which the culture for the primary isolation of tubercle bacilli on 2,189 specimens was controlled by animal inoculation.

Total.....	34	24

It will be noted from the foregoing table that 4 glandular specimens failed to show growth on culture media, but were found to contain tubercle bacilli by the animal inoculation.

Miscellaneous.

Twenty-two thousand, six hundred and forty-four miscellaneous bacteriological specimens were examined. Miscellaneous specimens include specimens of sputum for pneumococcus typing, joint fluids, glandular fluids, pleural fluids and specimens of sputum upon which a cultural examination is to be performed for the presence of tubercle bacilli.

Pneumococcus Typing.

(Neufeld Method)—Two thousand, four hundred and seventy-two typings for pneumococcus (Neufeld Method) were conducted by the Division of Laboratories. Type strains have been maintained by the staff of this Section. Diagnostic type serum has been prepared for each of the known types, for use both at the Central Laboratory and for distribution to our Branch Laboratories. It will be noted that at the Central Laboratory, 1,732 pneumococcus typings were conducted. In addition to this diagnostic work, the staff prepared 6,000 c.c. of diagnostic sera. The following table (Table IX) gives the incidence of the various pneumococcus types in the specimens examined from January 1st, 1938 to December 31st, 1938.

TABLE IX
INCIDENCE OF PNEUMOCOCCUS TYPES IN VARIOUS SPECIMENS
(JANUARY 1, 1938, TO DECEMBER 31, 1938)

In addition, a questionnaire form was forwarded to the physicians one month following the despatch of typing result. The following table (Table X) gives the data which were compiled from the replies received.

TABLE X
PNEUMOCOCCUS TYPING—SPUTA

Cases where pneumococci were isolated showing the number and percent. with pneumonia for each type.

Deaths from pneumonia in each type with case fatality.

Type	Total Number	Cases of Pneumonia	Percent. of Total	Deaths	Case Fatality	Type	Total Number	Cases of Pneumonia	Percent. of Total	Deaths	Case Fatality
I	125	124	99.2	13	10.5	XVIII	20	16	80.	1	9.

XVII	17	11	64.7	1	9.						

These results were obtained from questionnaires submitted to physicians for whom the typings were performed.

Bacteriological Water Examinations.

Thirty thousand, four hundred and thirty-one bacteriological water examinations were conducted by the Division of Laboratories. The technique approved by the American Public Health Association was adhered to in connection with the examination of these specimens.

Milk.

Twenty-four thousand, six hundred and seventeen milk samples were examined for bacterial content. As a routine, the total plate count is supplemented by the B. Coli count. When requested by the Medical Officer of Health, further examinations are made for the presence of hemolytic streptococci, determination of chlorides, rennet coagulation, etc.

A study was conducted as to the value of the phosphatase test as an index to determine the efficacy of pasteurization. Phosphatase is an enzyme present in various body fluids. It is present, in fairly large amounts, in milk. Under suitable conditions, it has the property of hydrolysing organic phosphoric esters to inorganic phosphates. It is almost completely destroyed by the usual pasteurization procedures. In doing the test, disodium phenyl phosphate of controlled hydrogen ion concentration is subjected to the action of the milk for a definite time at incubation temperature. Phenol is liberated in varying amounts, depending on the amount of the enzyme present. The presence and relative amount of phenol is determined by means of Folin and Ciocalteu's reagent. The presence of phenol produces a blue colour with this reagent and records are made in terms of blue units on the tintometer scale.

In our Laboratory, a number of samples of raw milk were pasteurized at various temperatures for 30 minutes. Further samples were pasteurized at 143° F. for various times. Phosphatase tests were carried out on these. A number of commercially pasteurized samples were also examined. The phosphatase test used closely follows the method of Kay and Graham.

Colon Typhoid.

The work in this sub-section of our Laboratory is gradually becoming more complicated. The Laboratory has undertaken the identification of typhoid strains isolated as suggested by Craigie. In addition to this, stock strains for the additional members of the para B. group of organisms have been obtained for which serum will be prepared. The Central Laboratory is in a position to identify any of the known members of the Salmonella group of organisms. The routine agglutination test conducted in the Central Laboratory includes each serum being tested with the following antigens:

- S. typhi H
- S. typhi O
- S. paratyphi B group
- S. paratyphi B type
- S. para A.

In addition to this routine test for members of the Salmonella group, the serum is also tested against *Brucella abortus*, *H. tularense* and *B. proteus* X19.

The value of using type and group antigens is demonstrated in the following Table.

TABLE XI

Laboratory Results	No. Positive
Type-Phase..... + } Group-Phase..... + }	59
Type-Phase..... + } Group-Phase..... - }	58
Group-Phase..... + } Type-Phase..... - }	5
Culture only..... +	5
Total.....	127

It will be noted from the above table that had care not been exercised to ensure that the bacterial suspension used in the antigen preparation was in the type phase, 58 cases of para B infection would have passed unnoticed, or, in other words, a negative laboratory report would have been despatched.

Table XII outlines the agglutination test results for the years 1933 to 1938, inclusive.

TABLE XII
ANALYSIS OF WHOLE BLOOD EXAMINATIONS MADE FROM THE YEAR
1933 TO 1938 INCLUSIVE

Year	Number Examined	B. Typhosus		Para B.		Br. Abortus	
		Number Positive	Per Cent. Positive	Number Positive	Per Cent. Positive	Number Positive	Per Cent. Positive
1933	2,227	129	5.8	60	2.7	67	3.0
1934	2,155	218	10.1	66	3.0	80	3.7
1935	2,195	360	16.4	66	3.0	84	3.8
1936	2,035	196	9.1	72	3.5	73	3.6
1937	2,629	282	10.7	110	4.2	69	2.2
1938	2,878	321	11.11	73	2.53	104	3.64

In addition to the results outlined in the above mentioned Table, 4 specimens yielded positive results in the agglutination test for *S. paratyphi A.* and 3 for *H. tularensis*.

Table XIII outlines the blood cultures examined during the year 1938.

TABLE XIII
BLOOD CULTURES EXAMINED DURING 1938

1938	Number Examined	Number Positive	Per Cent. Positive

Total Number Negative.....	1684	
Total Number Examined.....	1943	

Investigational work in connection with enrichment fluid used in the outfit distributed by the Division has been conducted. This outfit now contains two vials, one of which contains a mixture of buffer saline and glycerine 20% and the other, buffer saline. A study as to the value of tetrathionate broth is under way. The cultural plates used in connection with the bacteriological examination of stools are the eosin methylene blue and the McConkey's bile salt agar. This latter medium contains sodium chloride and has been found an excellent medium for the isolation of dysentery organisms. We have continued the use of Endo medium, as in years past. Bismuth sulfite medium is being used for the isolation of *S. typhi*.

Syphilis (Serodiagnosis).

The routine instituted in 1937 has been followed during the past year, namely, that of subjecting all specimens received to a Standard Kahn and Hinton flocculation. Where the results are in complete agreement, the report is forwarded. Should the results not be in agreement, the report is held and the specimen subjected to the Kolmer Wassermann technique. In special instances, a Presumptive Kahn and Kline slide test are also conducted.

The antigens are prepared at the Central Laboratory and distributed to the Branches. A small supply of antigen is obtained from the author of each test in order that each batch of antigen prepared at the Central Laboratory may be identical with that of the author.

Special emphasis is being placed on the desirability of quantitative tests in connection with the examination of blood serum from cases undergoing treatment. The qualitative test distinguishes between positive, doubtful and negative reactions, whilst the quantitative test in addition provides a measure of the degree of positivity.

Spinal Fluids.

In connection with the spinal fluid examinations, a Kolmer Wassermann is conducted, as well as colloidal gold and total protein determination. The Wassermann test is in our opinion more satisfactory in the testing of spinal fluid specimens. We have discontinued reporting globulin tests in view of the fact that a total protein determination is a routine procedure and is conducted on all spinal fluid specimens which are free from blood and not discolored.

Darkground Examination.

The following table outlines the number of specimens received at the Central Laboratory during the years 1937 and 1938.

TABLE XV

Number of Dark Fields	Number Where Days are Given	Average Number Days from Date of Exposure	Average Number Days from Date of Appearance of Primary Sore
215 (1937)	60 or 27.9%	40 days	13 days
178 (1938)	54 or 30.3%	34 days	10 days

Table XVI outlines the serological results obtained in connection with the examination of peripheral blood specimens submitted in the dark field outfit. The greater sensitivity of the Presumptive Kahn and Hinton flocculation tests will be noted. These tests demonstrate that they are of value when used as exclusion tests for early diagnosis.

TABLE XVI

Number of Examinations	+ Dark Field	+ Dark Field and Serology	Presumptive Kahn Positive and Doubtful	Standard Kahn Positive and Doubtful	Wassermann Positive and Doubtful	Hinton Positive and Doubtful	Kline Positive and Doubtful
178	47.71						
150		12.63					
153			26.79				
153				22.87			
121					28.09		
150						26.66	
115							26.95

I wish to express my hearty appreciation to all members of the Central Laboratory staff, the Directors and staff of the Branch Laboratories, and to thank Dr. A. J. Slack, Director of the Institute of Public Health, London, for the hearty co-operation given me. I also wish to thank Professor James Miller, Richardson Laboratory, Kingston, for the assistance he has given our Division, serving as Departmental Consultant in Pathology. In conclusion, may I extend my appreciation to Dr. W. B. McClure, Dr. A. E. Allin, their Assistants and Mr. F. J. Murphy of the Central Laboratory staff, for the efficient service rendered in connection with pneumococcus typing.

PATHOLOGY

H. A. ANSLEY, M.B., D.P.H., *Pathologist.*

History.

The pathology section of the Central Laboratory was started in 1930, under the directorship of the late Dr. Edgar Bates, to provide tissue diagnostic service to institutions and physicians requiring this service. For the past eight years the work of this section has increased at the rate of 1500 specimens annually, the increase for 1938 being 1650. From 1930 to 1937 the section was housed in the basement of the Banting Institute, but in July, 1937, was moved to the fourth floor of the East Block Parliament Buildings, where it is at present located.

Personnel.

From January to October of 1938 the section was under the directorship of Dr. H. A. Ansley, and from October to December under Dr. S. F. Penny. Dr. Ansley was assisted from October, 1937, to April, 1938, by Dr. J. Bell, Director of Branch Laboratory, Fort William, and Dr. M. R. Shaver, graduate medical practitioner. Dr. W. M. Wilson, Director of Branch Laboratory, North Bay, also received instruction two weeks before proceeding to the Autopsy service at the Banting Institute. Dr. Morley Whillans acted as assistant pathologist for the months of April, May and June, receiving instruction in surgical and autopsy diagnosis. Mr. D. Wilson, undergraduate medical student, acted as assistant from July until the third week of August. In September, Dr. Doris Howell, graduate medical practitioner became assistant, her training in diagnosis continuing until the end of the year. In October, Dr. Ansley was transferred part-time to the Division of Communicable Diseases and Dr. S. F. Penny took over the direction of the Section, assisted by Dr. Howell.

With regard to the technical staff, no changes were made in 1938 with the exception of Miss McIntyre who took technical training in the Section from December 1st, 1937, until April 1st, 1938, at which time she was replaced by Miss R. Smith.

Equipment.

Owing to the increase in surgical and autopsy material two permanent slide files were purchased, as well as an extra Rotary-Paraffin-Section machine. The frozen-section rapid diagnostic service begun in 1937 was continued and expanded in 1938, over one-third of the specimens being handled in this way.

Diagnostic Services.

The work of the section consists of preparation by paraffin and frozen-section methods, of surgical and autopsy tissue for diagnosis. In 1930 a total number of 650 specimens were examined, in 1938, the total was 8658, 8514 of this total were surgical specimens and 146 autopsies. These specimens were received from 220 communities all over the Province as well as some from Noranda, Que., and St. Johns, Newfoundland. The section provides routine surgical tissue diagnosis as an adjunct to operating services for 156 hospitals, which represents an increase of 50 hospitals for 1938. A large majority of these hospitals are not equipped for local tissue diagnosis. A twenty-four hour service is given for surgical reports. This is especially valuable in the diagnosis of cancer by biopsy. The report in these cases is often wired or telephoned. In thirty-four cases of suspected cancer the result was wired within a few hours after receipt of the specimen. In twenty-five cases, largely from the Northern section of the Province, a duplicate report was sent to the Radiological Department of a tumour clinic. Several duplicate reports were sent with patients to the Mayo Clinic; the diagnosis was confirmed in each case. Of the surgical tissues about 10% were cancerous during the year 1938. Of the total 2,326 tumours received during the year, 768, or 33%, proved to be malignant. The autopsy service, which has increased from 9 autopsies in 1930, to 146 in 1938, consists of a few autopsies done by the Director of the section and his assistants; but to a large extent, consists of the examination of autopsy tissues sent in from hospitals or by physicians, tissues often being from medico-legal cases. In a few instances, the Department of Health has authorized the staff of the section to assist coroners by travelling to outlying areas to conduct medico-legal autopsies.

With regard to the autopsy service of the Mental Hospitals, owing to lack of sufficient staff, nothing further has been accomplished in the provision of a routine autopsy service by the Pathology Section. Except in cases where an autopsy is ordered by the Coroner, the Central Staff conducts the autopsy. Sections of all tissues except brain are prepared and a diagnosis made. The brain is sent to Dr. Linell, Prof. of Neuropathology, who has been Acting Neuropathologist to the Department of Health during the past year.

Demonstrations and Papers.

During 1938 several demonstrations of methods, for section of tissues in use in the Pathology Section were given to various groups, including the Field Course of the School of Hygiene; to the Health Officers of the Province at their annual meeting; and at Christmas meeting of the Laboratory Section of the Canadian Public Health Association. Demonstrations of the Frozen Section Technique by Miss I. Stephen, senior technician, were given at the School of Hygiene.

A paper on the same subject was published in the first issue of the Technical Bulletin of the newly-formed Canadian Society of Technologists by Dr. H. A. Ansley and Miss Stephen.

Advisory Board of Pathology.

This Board, with Dr. Deadman as Chairman and Dr. Ansley as Secretary, was formed December, 1937. A preliminary list of Approved Pathologists, to which was later added the following names: — Dr. L. C. Fisher, of Kitchener, and Dr. G. T. Zumstein, of St. Catharines; was forwarded to the Deputy Minister, who then advised the Public Hospitals of the pathologists who were approved and available. As a result of the previous meeting of the pathologists sponsored by the Department of Health, The Ontario Association of Pathologists was organized in December, 1938, with Major G. Shanks as president, and Dr. H. A. Ansley as secretary-treasurer. A preliminary constitution was drawn up and 22 members paid the annual dues of one dollar (\$1.00) to join the Association. It is planned that in the future the Executive Council of this Association will take over the duties of the Advisory Board in Pathology.

We wish to express our appreciation to Dr. James Miller of Kingston, Consultant Pathologist for the Department and to Dr. W. L. Robinson, Pathologist to the General Hospital, Toronto, for their valuable assistance in a consulting capacity.

FORT WILLIAM BRANCH LABORATORY

A. E. ALLIN, M.D., D.P.H., *Director.*

I beg to submit the Annual Report of Laboratory Examinations made during the year 1938 by the Branch Laboratory of the Department in Fort William.

A total of 39,658 examinations were made, an increase of 9,645 or 32.1% over 1937. These examinations were distributed as shown in the table below.

SPECIMENS EXAMINED, FORT WILLIAM LABORATORY

1937-1938

Butter Fats and Miscellaneous Chemical.....	1193	1230	37	3
Beverage Room Utensils.....	0	324	324

The increase in the volume of work done in this laboratory was even greater than in previous years. As can be seen from the above table, it was generally distributed throughout all sections of the work. This may be attributed to the increasing population of the territory served by the laboratory, and additional physicians using the facilities offered. A few explanations are necessary to account for the large numbers of certain examinations performed.

(a) Despite the few cases of Diphtheria, the number of throat swabs submitted has rapidly increased. In the majority of instances, a Streptococcal infection is suspected, and confirmation is desired before treatment with Sulphanilamide is inaugurated.

(b) Cultural examination for the primary isolation of the tubercle bacillus was begun in December, 1937. This met with a favourable reception. Approximately 4% of the specimens examined proved to be positive.

(c) Two small outbreaks of Typhoid Fever, a few isolated cases of this disease, and a relatively large number of cases of Sonne Dysentery account for the increase in the number of Blood Cultures, Feces Examinations, and Agglutination Tests performed.

(d) This area suffered an epidemic of Type I Pneumonia during the winter of 1937-1938. The Laboratory typing service was largely used by the physicians; 341 specimens were submitted for typing. Type I serum was used with excellent results, the death rate of those treated being 12% compared with 30% in the untreated. Patients suffering with Type 3 Pneumococcus were treated with Sulphanilamide with 100% recovery.

During 1938, 24,277 outfits were prepared and 22,306 distributed, in comparison with 18,802 and 18,833, respectively, during 1937.

Only the co-operation of every member of the staff enabled the laboratory to carry out such a large volume of work. I express my thanks to them for their loyal assistance, and to Dr. A. L. MacNabb, Director of Laboratories, for his unflinching co-operation during the past year.

RICHARDSON LABORATORY, QUEEN'S UNIVERSITY,
KINGSTON.

PROFESSOR JAMES MILLER, M.D., D.Sc., F.R.C.P. (E.), F.R.C.P. (Can.),
F.R.S.C., *Director*.

Herewith, the statistics of the work carried out in the Kingston Branch Laboratory during the past year. It will be noted that the work done, as indicated by the number of reports issued, shows rather more than the usual increase, 27,943 as compared with 22,034 in 1937. Small increases are to be observed in most of the items. There is a considerable rise in the number of sputums examined for tubercle, in the number of gonorrhoea smears and in the serological tests for syphilis. On the other hand there is a diminution in the number of throat swabs for diphtheria and in the milk examinations.

A notable addition to the work of the laboratory is the typing of pneumococci in samples of sputum from cases of pneumonia. In 1937, 28 of these examinations were done, in 1938, 77. These numbers, however, do not indicate the amount of time spent by the members of the staff upon these examinations. The process is becoming more complicated and time-consuming as well as increasing in volume month by month and year by year.

During last year the examination of the water supplies of Kingston Municipality, of the Penitentiary and of the Royal Military College have been carried out in the Department of Preventive Medicine of Queen's University under the superintendence of Professor Wyllie. The co-operation between the two laboratories in this matter has been harmonious and entirely satisfactory.

The number of outfits prepared and distributed has also increased materially 14,873 in 1937, and 17,049 in 1938.

I should like to express my gratitude to you, Sir, to the Minister of Health, and to Dr. MacNabb for your co-operation and for your willingness to supply us with material of all kinds and with advice.

INSTITUTE OF PUBLIC HEALTH, LONDON.

A. J. SLACK, Ph.C., M.D., D.P.H., *Director.*

I have the honour to submit herewith the Annual Report of laboratory examinations made during the year 1938 by the Branch Laboratory of the Department located in the Institute of Public Health, London.

Laboratory examinations made during the year numbered 95,733 as compared with 87,794 for the preceding year, showing an increase of 7,939 examinations or 9.0% in routine laboratory work.

A steady growth is shown in almost all lines of work with the most marked increase occurring in the more recent types of free examinations such as the Neufeld typing of pneumococci, the B. coli count in milk and the examination of wash and rinse water and eating and drinking utensils from restaurants and beverage rooms.

For many years our routine tests for syphilis have included the Kolmer Wassermann reaction and the Standard Kahn test. During this year the Hinton and Standard Kahn tests were adopted as routine with the Wassermann Presumptive Kahn, Quantitative Khan and Kline serving as confirmatory tests, conforming with the routine carried on by the Central Laboratory.

The only significant decrease in laboratory examinations will be found in Spinal fluids and in the bacteriological examination of water from private wells. This was to be expected because the epidemic of polio-myelitis and the occurrence of flood-conditions in Western Ontario during the previous year resulted in an abnormal demand for these examinations.

During the year 51,671 outfits for the collection of specimens were distributed from this laboratory representing an increase of 12 per cent. over 1937, while 17,827 outfits were reclaimed and prepared for redistribution which is an increase of 88 per cent. This laboratory also distributed 29,805 packages of free insulin and free biological products during the year.

I wish again to express my appreciation to the Institute staff and to Dr. A. L. MacNabb, Director of Laboratories, whose hearty co-operation have made possible the completion of another highly successful year.

OTTAWA BRANCH LABORATORY

F. L. LETTS, M.B., D.P.H., *Director*

I have the honour to submit herewith a summary of the type and number of specimens examined at this Branch Laboratory during 1938, the total number being 67,945, an increase of 8,190 over 1938.

The low incidence of diphtheria and of the enteric diseases has allowed time for more detailed work on other types of specimens.

At the first of the year Mr. John Baron began routine cultures on all sputums negative for T. B. by direct smear, but pressure of other work curtailed this plan. Eight hundred and seventy-six cultures were made, using four different culture media for each. Of the 850 completed, that is, incubated for eight weeks, 58 sputums negative on direct smear were positive in culture.

Mr. Baron also cultured 50 samples of milk for the A.P.H.A. Committee on Standard Methods for the Examination of Dairy Products. This work

involved the use of three different agar media: Standard; Modified T-G-M; and AAMMC, and two incubation temperatures: 32°C and 37°C.

B. Coli counts of milk are proving to be efficient checks on the cleaning and sterilizing of dairy equipment. Line inspection of a dairy plant usually locates any faulty apparatus or technique.

Specimens of blood and spinal fluid for serological test continue to increase in number, being routine in prenatal and other clinics.

PETERBOROUGH BRANCH LABORATORY

C. B. WAITE, M.D., *Director*

I have the honour to submit my report for the Branch Laboratory, Peterborough, for the year 1938, as follows:

The total number of specimens for the year shows an increase of 249 over the previous year.

Examination of swabs for diagnosis of diphtheria continues to decrease and positive findings are rare.

Examinations for tuberculosis show an increase, probably due to the activities of the Central and Local Departments of Health endeavouring to control this disease.

There were a few sporadic cases of typhoid in the district but no epidemics, large or small, and there was a notable decrease in agglutination tests and faeces examinations. Blood cultures also showed a decrease.

There was an increase in the examination of milk specimens and water specimens. Tissue examinations also showed a small increase.

I wish to thank the Director for his co-operation and assistance during the year.

SAULT STE. MARIE BRANCH LABORATORY

N. F. W. GRAHAM, B.A., M.D., *Director*

I beg to submit the statistics of the work done in the Sault Ste. Marie Branch Laboratory for the year 1938. The volume of work done shows a considerable increase over the previous year. The specimens examined this year total 14,080 as compared to 12,225 for 1937.

The increase this year is fairly distributed over the various items submitted. A noticeable increase is seen in the number of milk samples received. This might be attributed to the greater activity of the local sanitary inspector. An increase has also been noticed in the samples received from the district since compulsory pasteurization came into effect in October. An increase is also seen in the Chemistry of the City water due to a change in the disinfection of the City water supply when Chloramine was instituted.

Throughout the year a considerable number of Streptococcus infections has been seen. There has been no diphtheria and only one case of Infantile Paralysis. I would like to record my appreciation of the excellent co-operation I have received from the Deputy Minister, Dr. McGhie, and Dr. A. L. MacNabb, Director of Laboratories.

NORTH BAY BRANCH LABORATORY

A. D. McCLURE, B.A., *Director.*

I have the honour to submit for your approval the report on the work done in the North Bay Laboratory during the year 1938.

The number of examinations shows an increase of 7,751 over the previous year. This is an increase of 28%.

An examination of the figures does not show that this increase is due to any particular branch of the work but that it is a general increase in the number of all types of specimens received.

The introduction of *B. coli* counts and the Phosphatase test as indices of pasteurization and care in the handling of milk we hope will be a valuable aid to those responsible for the inspection of pasteurization plants in this district.

In the early part of the year the Kolmer Wassermann test was discontinued and the Hinton flocculation test was substituted for it. Our general observation would be that we have a very close correlation between the Hinton and the Kahn test. The Hinton test appears to be slightly more sensitive in treated cases.

The increase in the amount of work mentioned above resulted in a very heavy burden of overtime work for the staff. The transfer of Miss Evelyn Tuft from the Central Laboratory to this Laboratory has been a very valuable change from our standpoint. Miss Tuft's wide training at the Central Laboratory has enabled her to give valuable assistance in almost all branches of the work here. With the present volume of work the staff is now able to carry on the ordinary routine without a great deal of overtime work.

I wish to express thanks for myself and on behalf of the staff to Doctor MacNabb and the staff of the Central Laboratory for their co-operation in aiding us in the examination of specimens which have been a little out of our ordinary routine, for aid in verifying our findings where results have been open to doubt, and for the general promptness with which we have received our shipments of supplies.

DIVISION OF SANITARY ENGINEERING

A. E. BERRY, M.A.Sc., C.E., Ph.D., *Director*

The report of the activities of the Division of Sanitary Engineering for the year 1938 must record some conspicuous advances. Important legislation for health protection was passed; greater expenditures have been made on municipal sanitary works; interest has increased in the operation of plants, and in efforts to further the knowledge of that sanitary science which leads to an economical and effective solution of troublesome problems, all of which make for safer and better living conditions. For the first time in many years the estimated cost of sanitary systems approved by the Department has shown an increase. This upward trend has occurred in both the water works and sewerage. The weather during the summer, a factor of some considerable importance in the work of the Division was not such as to aggravate unduly those conditions which tend to give rise to complaints. Requests for assistance have continued to be numerous, and have come chiefly from health officers and from municipalities where technical advice was needed.

Water Works Programmes.

Renewed interest in programmes of extensions of water works systems is indicated by an increased expenditure for the year. 88 certificates of approval were issued for a total value of \$583,220.23, an increase of \$297,878.91 over the previous year. A comparison with the figures for the last ten years is shown herewith.

Year	Waterworks Expenditures Approved
1929.....	\$2,986,634 99
1930.....	6,245,237 60
1931.....	5,856,781 41
1932.....	1,627,173 71
1933.....	1,041,937 77
1934.....	817,838 63
1935.....	790,800 75
1936.....	683,600 04
1937.....	285,341 32
1938.....	583,220 23

While this expenditure is as yet considerably lower than might be hoped for it is encouraging to observe a returning interest in water works services. The work involved has been spread over a number of municipalities rather than being concentrated in a few of the larger places.

New Water Works Systems.

Adverse financial conditions have delayed the initiation of new water works systems. All larger communities are now serviced with public supplies, but those with populations less than 800 have found difficulty in securing sufficient public opinion to undertake the capital costs. In Northern Ontario new townsites have developed rapidly and the need for water systems in these places has become urgent. At Geraldton a distribution system has been completed, with a water supply from a lake in that vicinity. The recently incorporated town of Larder Lake made a start on a public system, but was delayed through inclement weather. This will be completed in 1939. The Village of West Lorne in Southern Ontario has arranged to build a system, and some contracts were

let towards the end of the year. Water will be obtained from Lake Erie, and a filtration plant will be included in the system.

Water Treatment.

No new filtration plants have been constructed during the year. The duplicate plant of 100 m.g.d. capacity for the City of Toronto is nearing completion and should be in operation in 1939. Certain improvements have been made in water treatment which will aid materially in operating technique. At Port Hope a reservoir and pumping station have been added. Scarborough Township has increased the capacity of the supply works by constructing additional clear water storage. Woodstock has made a similar improvement. At North York conditions have been improved materially by putting into service an auxiliary underground water supply, treated by a water softening and iron removal zeolite plant. This is the third municipal softening plant to be operated in the province.

There are now 60 municipal filtration plants operating in the province. The details of these are listed in Table No. 1.

The sand in the filters at New Toronto has been replaced with "anthraflit," and the operating results appear to be quite favorable.

Water Chlorination,

Chlorination continues to serve a very necessary function in water treatment. Two hundred municipal or public supplies now receive this protection, and over 80% of the total water consumption is chlorinated. Liquid chlorination is the almost universal choice but some of the smaller supplies are treated by hypochlorite feeders, with equally satisfactory results. The necessity for continuous protection of the supplies by chlorination or other means must be emphasized in spite of the fact that no municipal supplies have been responsible for water borne diseases during the year.

Supervision of Water Plants.

The regular supervision of water supplies by engineers of the Department has been continued. The staff has been allotted specific districts to cover. These are as follows:

TABLE I

District No.	Engineer in Charge.	Areas (by Counties and Districts)
1	E. W. Johnston	Essex, Kent, Lambton, Middlesex, Elgin, Oxford.
2	A. T. Byram	Waterloo, Wellington, Grey, Dufferin, Simcoe, Muskoka, York (West of Yonge Street).
3	G. M. Galimbert	Peel, Halton, Wentworth, Lincoln, Welland, Haldimand, Brant, Norfolk.
4	O. V. Ball	Ontario, Victoria, Durham, Northumberland, Peterborough, Haliburton, Hastings, Prince Edward, and the City of Toronto.
5	G. A. H. Burn	Carleton, Grenville, Dundas, Russell, Prescott, Stormont, Glengarry.
6	W. R. Edmonds	Temiskaming, Sudbury, Nipissing, Parry Sound, Bruce, Huron, Perth.
7	H. G. Tyler	Leeds, Renfrew, Lanark, Frontenac, Lennox, Addington, York (East of Yonge Street).
8	L. A. Kay	Kenora, Rainy River, Patricia, Thunder Bay, Algoma, Manitoulin.

The work of supervising water treatment plants has been carried on in conjunction with other field activities, thereby combining the work as much as possible. Particular attention has been paid to ensuring the safety of water supplies. Operators are changed from time to time in these plants, and sufficient care is not always used with respect to the qualifications of those replacing men who have been on the work previously. The need for well qualified plant operators is evident for water plants as well as for sewage works, dairies and other activities in which public health protection is a factor. In all cases there is an attempt to provide a good margin of safety, but since all processes must rely to some extent on the efficiency of the operator his training and qualifications are important.

The safety of the public water supplies of the province has had an influence on the typhoid rates in recent years. These are as follows:

TABLE II
TYPHOID FEVER

Year	No. of Cases	Deaths	Death Rate per 100,000 Population
1919	492	145	5.0
1920	713	203	7.0
1921	725	213	7.2
1922	576	179	6.0
1923	1663	238	7.9
1924	833	109	3.5
1925	859	137	4.4
1926	581	77	2.4
1927	967	109	3.4
1928	715	78	2.4
1929	738	97	2.9
1930	630	71	2.1
1931	756	97	2.7
1932	451	58	1.7
1933	477	47	1.3
1934	547	45	1.2
1935	310	41	1.1
1936	251	39	1.0
1937	241	27	0.7
1938	235	34	0.9

Sewerage Systems.

The downward trend in sewerage expenditures has been halted, and the total estimated costs of projects approved by the Department, totalling \$1,083,331.57, approaches the figure for 1935. While this is very much lower than for the years 1929-34 it is interesting to note that more work is being undertaken, the result of which should be better living conditions for urban centres.

The estimated expenditures for sewerage projects approved by the Department over the last 10 years are given herewith, for comparison with the trend in water works programmes.

Year	Sewerage Expenditures Approved
1929.....	\$5,974,445 82
1930.....	9,710,773 05
1931.....	4,924,151 59
1932.....	4,698,959 47
1933.....	2,605,960 48
1934.....	1,616,808 08
1935.....	1,104,291 57
1936.....	875,868 32
1937.....	769,026 21
1938.....	1,083,331 57

These expenditures for the year 1938 have been scattered over a number of municipalities, but the total centres doing work of this kind have been relatively small.

One of the large expenditures approved was for the Township of Etobicoke, where a new sewerage system was installed. The sewage will be treated in a plant now operated jointly by New Toronto and Mimico. This tends to keep the treatment for that area confined to one large plant rather than a number of smaller ones. The City of Ottawa was second highest in expenditures. Here the sewerage system has been undergoing some major changes to prevent flooding, and to improve the efficiency in general.

Sewage Treatment.

Changes in the sewage disposal plants of the province have been few. At Kitchener provision was made for the treatment of the sewage at the Doon plant by chemicals during the low flow of the river in the summer. Fortunately the rainfall in 1938 was sufficient to not require this aid. At Scarborough Township a horizontal type vacuum filter was put into operation and has given effective service on undigested activated sludge. The Township of Tisdale has increased the settling capacity of their treatment tanks. York Township has increased its capacity for sludge filtration.

There are now in operation in Ontario 129 sewerage systems for urban communities. The total number of treatment plants is 75. These are classified in Table No. 3.

The methods of sludge disposal are given in Table No. 4.

Developments in Sewage Treatment.

Sewage disposal has been making rapid progress in recent years in the United States where Federal Aid has been made available to municipalities. This has resulted in the construction of a large number of important treatment works, and in these are to be seen noteworthy developments in the methods which have become recognized. Since the conditions and practices followed in Canada are somewhat similar to those in the United States this progress is watched with interest. Plants to be built in this country in the near future will take advantage of these newer procedures.

Trends in sewage treatment continue to point to further mechanization of the process. The activated sludge system has fortified its position where a complete process and a highly treated effluent are required. For conditions in Ontario this method has been quite effective. Low electrical power costs have added to its economy, while the relatively high chemical costs have made precipitation methods less popular here. Recent developments on trickling filters have revived interest in this method, and by materially increasing its capacity has placed it in greater competition with activated sludge for some conditions.

There is in evidence a more favorable attitude towards making use of several methods of treatment in the one plant. New devices and modifications of processes have found application in recent years. Chemicals, filters, shortened aeration and other means are combined to advantage more frequently than was the custom formerly. Economy in obtaining the desired results has been given additional recognition.

Sludge disposal continues to be one of the troublesome problems associated with sewage treatment. More effective and more permanent procedures

are indicated as offering an acceptable solution in the immediate future. Digestion of sludge is now in use in a number of plants on this continent. The early difficulties are being solved, and the method offers attractions from the standpoint of economy. Incineration has increased rapidly. It gives promise of wider application in the future. As a sanitary measure it leaves little to be desired.

Dewatering of sludge is now less troublesome. For the smaller plants covered sand drying beds are an effective measure. Mechanical dewatering has been confined chiefly to vacuum filters, with ferric chloride as the conditioner. Elutriation, as practiced at Winnipeg and in different places in the United States has been able to reduce the consumption of chemicals and to produce a dryer cake.

Removal of sludge in the wet state has found an increasing application in Ontario plants. At London it has been removed in closed tank trucks for use as a fertilizer. The costs involved have been reasonable, and possibly lower than for other methods. Since this is done by contract no capital expenditure is involved for the municipality. This has been extended to Guelph, and a somewhat similar practice is followed at Stratford where partial dewatering is carried out.

Operation of Sewage Treatment Plants.

The operation of sewage treatment plants is of increasing importance. This is particularly so in the summer when warm weather combines with low stream flows to intensify conditions. There must be due recognition of the necessity for careful operation of these works. Without trained and conscientious operators this objective will fall short. Greater emphasis must be placed on the training of personnel.

The staff of the Division has devoted a good deal of attention during the year to the supervision of sewage works, and to assisting those in charge. The critical periods occur in the summer, but by the use of various aids these have been met successfully during the year.

Grand River Conservation Scheme.

The wide variations in flow in the Grand River have intensified the problems of flood control and sewage disposal. A forward step in the regulation of this situation was taken during the year. Legislation was passed setting up a commission to proceed with a conservation project. A consulting engineer was appointed to prepare the necessary plans, and to inaugurate the work at an early date. The project will involve the construction of dams which will act both for flood control and for the storage of water which can be released in the dry periods. This additional dilution of sewage effluents from the urban centres on the river will prove a most useful aid, and will result in marked economies in sewage treatment. The construction programme should be well under way in 1939.

Milk Control.

An important step was taken during the year in milk control. Legislation was passed for the compulsory pasteurization of milk in all cities or towns, and such other areas as might be designated at any time by Order-in-Council. This is an amendment to Section 95 of the *Public Health Act*. This Act, as well as regulations made pursuant to it, came into effect on October 1st, 1938. This included 27 cities and 149 towns. At the same time the areas around most of the cities and some towns were brought under the Act.

On December 31st, 1938, a further group of 37 villages were designated for compulsory pasteurization. At the end of the year this legislation had been applied to all cities, towns, villages over 1,000 population, a number of smaller villages, and to the whole or parts of 58 townships.

When the legislation was enacted there were approximately 550 pasteurizing plants in operation in the province. At the end of the year this number had risen to well over 700.

The regulations adopted under this legislation, set up minimum standards for all pasteurizing plants. There is a requirement that each plant must have a certificate of approval from the Department. This can be granted only when the provincial standards are met. The inspection of these dairies has meant a very substantial increase in the work of the Division. Until the plants are up to the minimum requirements this extra work will continue. It has been carried on in conjunction with other field activities, and by temporarily keeping other work at a minimum the inspection has progressed at a substantial rate. The necessity for uniform standards in plants and in equipment has been made evident repeatedly. This leads not only to greater factors of safety but to a higher standard of milk for human consumption.

The areas included under the Act on October 1st are shown in Table No. 5. Those listed in the Order-in-Council for December 31st are given in Table No. 6. In addition to these all towns and cities were included in the Act itself.

A new pamphlet entitled "Safe Milk for Rural Communities" was published during the year. It is designed to give advice on pasteurization for rural dwellers.

Refuse Collection and Disposal.

In the sanitary problems which cause concern to municipalities, that of the collection and disposal of refuse ranks high among these difficulties. Complaints continue to reach the Department about odors and other objectionable features of refuse dumps. As time goes on the difficulty of securing suitable sites becomes more involved. Incineration has been in use in a relatively few centres. The cost of this is not out of proportion, and the many advantages it offers should induce a greater utilization of the process. The approval of refuse dumping sites does not come under the jurisdiction of the Department; but is a responsibility of the municipal authorities.

Recreational Sanitation.

Sanitation in the recreational areas of this province is ever important. The motor tourist traffic and the extensive use of summer areas have grown to occupy a conspicuous position, and an activity involving large expenditures. These include highway tourist camps, private lodging houses, refreshment services, summer camps of various kinds, hotels, and private cottages in the lakeland areas.

Supervision of motor tourist camps and highway refreshment services has been left to the local medical officers of health as in the previous year. Report forms are sent out upon which information is returned to the Department. A certificate form for use of the local health officer has been prepared by the Department. This will give recognition to those which meet the minimum standards adopted by the Department. Returns submitted to the Department in 1938 include 308 tourist camps and 413 refreshment booths.

The lakeland regions of the province offer a special problem in sanitation. These areas are the mecca of great crowds during the summer. They are accommodated in private cottages, boarding houses and hotels. The protection of the water supply, the proper disposal of sewage and wastes, and the supervision of food supplies are all matters of major concern. The larger places are now almost all using chlorination where surface waters are employed. Regular inspection of these places has been carried on by the Division. While the period is relatively short a good deal of attention is required to ensure proper protection for the vacationists. The services of the Department have been available to the operators of fresh air camps and summer places at all times. Since there is no legislation for licensing or otherwise controlling these services compliance with standards is purely voluntary.

Complaints.

The number of requests for assistance, with respect to complaints, continues to require a substantial amount of time of the staff. These come chiefly from health officers, municipal officials, and the public. The majority of these concern matters which require technical direction. A variety of subjects are included. These reached a total of over 175 in 1938.

Some of the more troublesome matters giving rise to complaints concern milk wastes, cannery wastes, odors, refuse, drainage, noise, and various industrial wastes. Milk wastes have proven very troublesome where they must be discharged into watercourses almost dry in the summer. The amount involved is frequently too small to merit the cost of trickling filters, chemical precipitation processes or similar devices. Use has been made of settling tanks and sub-surface field tiles. Where suitable soil is available a good measure of success has been obtained.

Canning factory wastes and those from other industrial plants have caused many difficulties. These wastes are high in organic content and putrefaction soon sets up. The cost of filtration plants for such short seasons is usually too expensive. The application of the liquids, after screening, to land has offered a good chance of success.

Eastern Ontario Health Unit.

Work in the Eastern Ontario Health Unit has continued. Mr. G. A. H. Burn has been stationed at Alexandria and has continued to do effective work in sanitation throughout the entire eastern part of the province. His report on the year's activity appears on page 95 of this Report.

Attached is a list of the water works and sewerage certificates issued during the year.

SUMMARY

Re Waterworks:	Estimated Cost
Extensions to existing systems.....	\$ 442,720 23
Purification of water supplies.....	140,500 00
New Systems.....

METHODS OF SLUDGE DISPOSAL

(a) *Municipalities Using Tank Removal or Open Drying Beds:*

Alliston, Barrie, Blind River, Bowmanville, Burlington, Capreol, Cardinal, Carleton Place, Chippewa, Cochrane, Collingwood, Coniston, Crowland Township, Crystal Beach, Dundas, Elmira, Falkenridge, Fort Erie, Galt, Guelph, Haileybury, Hanover, Iroquois Falls, Kingsville, Kirkland Lake, Kitchener (Spring Street), London (East End and South End), Napanee, New Liskeard, North York Township, Oakville, Orillia, Oshawa, Palmerston, Preston, Riverside, St. Thomas, Simcoe, Stamford Township, Stratford, Tillsonburg, Timmins, Trenton, Tweed, Waterloo, Weston, Whitby, Warton, Wingham.

Total number—51.

(b) *Municipalities Using Separate Digestion:*

Brampton, Danforth Park, Todmorden, Greenwood, Fort William, Kitchener (Spring Street and Doon), New Toronto-Mimico, North York Township, Orangeville, Port Colborne (East Side and West Side), Swansea, North Toronto, Waterloo.

Total number—14.

(c) *Municipalities Using Vacuum Filtration:*

Long Branch, Scarborough Township, York Township.

Total number—3.

(d) *Municipalities Using Glass-covered Drying Beds:*

Aurora, Danforth Park, Todmorden-Greenwood, Kitchener (Doon), New Toronto-Mimico, Orangeville, Port Colborne (East and West Sides), Swansea, North Toronto, Woodstock.

Total number—11.

TABLE No. 5

AREAS DESIGNATED FOR MILK PASTEURIZATION

Under Section 95a of The Public Health Act.

ORDER-IN-COUNCIL

Copy of an Order-in-Council approved by The Honourable the Lieutenant-Governor, dated the 24th day of June, A.D., 1938.

Upon the recommendation of The Honourable the Minister of Health, the Committee of Council advise that pursuant to Section 95a of *The Public Health Act*, as enacted by *The Public Health Amendment Act, 1938*, the said section 95a of *The Public Health Act* be made applicable to the municipalities and areas set forth in the memorandum hereto attached, and that this Order shall come into force on *October the first, 1938*.

Certified,

C. F. BULMER,

Clerk, Executive Council.

AREAS DESIGNATED FOR MILK PASTEURIZATION

Under Section 95a of The Public Health Act

SECTION 95 (a) OF THE PUBLIC HEALTH ACT SHALL APPLY TO THE FOLLOWING MUNICIPALITIES AND AREAS:

1. *In the Vicinity of the City of Toronto—York County:*

York Township, East York Township, North York Township, Scarborough Township, Etobicoke Township, Swansea, Forest Hill, Long Branch, Port Credit and Richmond Hill.

2. *In the Vicinity of the City of Hamilton—Wentworth County:*

That part of Barton Township between Burlington Bay and south to and including the road between concessions 4 and 5 (Mohawk Trail), and also Hamilton Beach. Saltfleet Township between the Western Boundary, Burlington Bay and Lake Ontario, East to the road between Lots 28 and 29 and South to the Niagara escarpment. East Flamboro Township between Burlington Bay and the Canadian National Railway tracks.

3. *In the Vicinity of the City of Ottawa—Carleton County:*

That part of Nepean Township between the Ottawa River and the Base Line road extended through Bell Corners and City View to the road between Concessions A and B and then south to the road between Lots 30 and 31, then east to the Rideau River; and that part of Gloucester Township bounded by the Ottawa River on the north; the Rideau River on the west; on the south by the Walkley Road (between Concessions 3 and 4) and on the east by the road between Lots 15 and 16 through Blackburn station to the Ottawa River; and the Village of Rockcliffe Park.

4. *In the Vicinity of the City of Windsor—Essex County:*

The Townships of Sandwich East and Sandwich West.

5. *In the Vicinity of the City of London—Middlesex County:*

The south-east corner of London Township bounded on the west by the road between Lots 20 and 21 and on the north by the road between Concessions 3 and 4. The north-east corner of Westminster Township bounded on the west by the road between Lots 36 and 37; and on the south by the road between Concessions 2 and 3, together with Byron Village and Springbank Park in the Township of Westminster.

6. *In the Vicinity of the City of Brantford—Brant County:*

The area in Brantford Township bounded on the north by the road between Concessions 2 and 3 extending from the Grand River to Fairchild Creek; on the west by the Grand River and the City of Brantford; on the south by the Grand River and a line parallel to and 180 feet south of the Brantford-Hamilton Highway; and on the east by Fairchild Creek.

7. *In the vicinity of the City of St. Catharines—Lincoln County:*

All of the Township of Grantham west of the New Welland Ship Canal, including Port Dalhousie.

8. *In the vicinity of the City of Fort William—District of Thunder Bay:*

The Township of Neebing.

9. *In the vicinity of the City of Kingston—Frontenac County:*

That part of the Township of Pittsburg lying south of the road between Concessions 4 and 5; and that part of the Township of Kingston lying south of the road between Concessions 3 and 4.

10. *In the vicinity of the City of Oshawa—Ontario County:*

The area in the Township of Whitby East, lying south of the road between Concessions 4 and 5.

11. *In the vicinity of the City of Sault Ste. Marie—District of Algoma:*

The Township of Korah and Tarentorus.

12. *In the vicinity of the City of Peterborough—Peterborough County:*

The area in the Township of North Monaghan bounded by the City of Peterborough, the Otonabee River, Cameron St., Western Ave., and Provincial Highway No. 28; and the area in the Township of Smith immediately north of the City of Peterborough and bounded by the following streets: Wolsely, Stewart, Bellevue, Bernardo and McLennan.

13. *In the vicinity of the City of Port Arthur—District of Thunder Bay:*

Township of McIntyre.

14. *In the vicinity of the City of Sudbury—District of Sudbury:*

The Townships of McKim, Neelon, Garson, Falconbridge, Dryden, Snider and Creighton.

15. *In the vicinity of the City of Niagara Falls—Welland County:*

The Village of Chippawa, and that part of Stamford Township east of the Montrose road extended to the northern boundary of the Township.

16. *In the vicinity of the City of Sarnia—Lambton County:*

The Village of Point Edward.

17. *In the vicinity of the City of North Bay—District of Nipissing:*

West Ferris Township and Widdifield Township.

18. *In the vicinity of the City of St. Thomas—Elgin County:*

The area described as follows: Commencing at a point on the centre line of the road south of the 6th Concession of Yarmouth where it is intersected by the centre line of the side-road between Lots 7 and 8; thence northerly along the centre line of the said side-road between Lots 7 and 8 to where it is intersected by the centre line of the road south of the 8th concession; thence easterly on the centre line of the said road to the line between Lots 8 and 9; thence northerly thereon to the centre line of the road lying south of the first Range south of the Edgeware Road; thence easterly along the said centre line to where it is intersected by the line between Lots 7 and 8 in the first Range south Edgeware Road; thence northerly to the centre line of the unopened portion of Edgeware Road; thence westerly thereon to the intersection of the Edgeware Road and the Bostwick line in the Township of Southwold; thence northwesterly along the said Bostwick line to its intersection with the line between Lots A and B; thence south-westerly along the said line between Lots A and B and its south-westerly projection to the point where it is intersected by the north-westerly projection of the centre line of the road between Lots 42 and 43; thence southeasterly along the centre line of the said road and its south-easterly projection to the centre line of Kettle Creek; thence southerly thereon following the several courses and windings thereof to where the centre line of the said creek is intersected by the centre line of the road lying south of the 6th concession of Yarmouth produced westerly; then easterly on the centre line of the said road to the place of beginning.

19. *In the vicinity of the City of Chatham—Kent County:*

The area in Chatham Township bounded by the road between Concessions 2 and 3, the road between Lots 6 and 7, the Thames River and the Township boundary; also the area in Dover East Township bounded by the road between Concessions 2 and 3, the Township boundary, the Thames River and the road between Lots 19 and 20; also the area in Harwich Township bounded by the Thames River, the road between Lots 6 and 7, the road between Concessions 4 and 5 and the City limits; also the area in Raleigh Township between the Thames River and the road between Concessions 6 and 7.

20. *In the vicinity of the City of Belleville—Hastings County:*

The south-east corner of Sidney Township bounded on the west by the road between Lots 30 and 31 and on the north by the road between Concessions 2 and 3; and the south-west corner of Thurlow Township bounded on the north by the road between Concessions 2 and 3, and on the east by the road between Lots 12 and 13.

21. *In the vicinity of the City of Galt—Waterloo County:*

The area in the Township of North Dumfries lying north of the road between Concessions 9 and 10 and east of the line between Lots 13 and 14 in Concessions 10 and 11 and the line between Lots 16 and 17 in Concession 12.

22. *In the vicinity of the City of Welland—Welland County:*

The south-west corner of Crowland Township bounded on the north by the road between Concessions 3 and 4 and on the east by the road between Lots 20 and 21.

23. *In the vicinity of the Town of Amherstburg—Essex County:*

Bob-Lo Island.

24. *In the vicinity of the Town of Burlington—Halton County:*

Burlington Beach.

25. *In the vicinity of the Town of Cobalt—District of Temiskaming:*

The Township of Coleman.

26. *In the vicinity of the Town of Cornwall—Stormont County:*

That part of Cornwall Township south of the road between Concessions 4 and 5.

27. *In the vicinity of the Town of Fort Erie—Welland County:*

Bertie Township between the Niagara River and the line between Concessions 2 and 3.

28. *In the vicinity of the Town of Fort Frances—District of Rainy River:*

The Township of McIrvine.

29. *In the vicinity of the Town of Iroquois Falls—District of Cochrane:*

The Township of Calvert.

30. *In the vicinity of the Town of Kenora—District of Kenora:*

The Township of Jaffray.

31. *In the vicinity of the Town of Orillia—Simcoe County:*

The Township of Orillia.

32. *In the vicinity of the Town of Port Colborne—Welland County:*

The Village of Humberstone.

33. *In the vicinity of the Town of Thornbury—Grey County:*

That part of Collingwood Township north of the line between Lots 27 and 28.

34. *In the vicinity of the Town of Timmins—District of Cochrane:*

The Townships of Tisdale, Mountjoy and Whitney.

And the Villages of:

- | | |

Cardinal	Havelock	New Hamburg	Tweed
Chesterville	Iroquois	Norwich	Victoria Harbour
Delhi	Kemptville	Port Credit	Waterford
			Winchester

DIVISION OF NURSE REGISTRATION

ALEXANDRA M. MUNN, Reg. N., *Director*

The Inspector of Training Schools for Nurses reports that during the past year visits of inspection were paid the fifty-four schools.

A general improvement over the previous year was noted in health programmes for students. Regulations relating to Tuberculosis prevention are being carefully observed and immunization work satisfactorily done.

Hours of duty by day and night are receiving special attention and Superintendents of Nurses are keenly alive to the need for improvement. Some progress has been made and there is reason to believe that there will be a definite and encouraging report by another year on the observance of a fifty-eight hour week.

The preliminary education of student nurses has been carefully checked. It has been encouraging to observe a definite improvement in the educational preparation of student nurses and the co-operation of Superintendents of Nurses in an attempt to raise the educational standard for entry to training is greatly appreciated.

Attention has been given to Obstetrical Departments in all hospitals and special note has been made of equipment and established routines.

Isolation technique was observed in some centres.

Conferences with head nurses and supervisors have been held in twenty-eight schools. Assistance in collecting material for these conferences has been given by the staff of the School of Nursing of the University of Toronto.

Talks to groups of student nurses on health and kindred subjects were given in ten schools.

Affiliations.

New affiliations established are as follows:

- Pediatric Nursing —General and Marine Hospital, Owen Sound,
General Hospital, Sarnia,
(3 months—Children's Hospital, Detroit, Mich.)
- Tuberculosis Nursing —General Hospital, Woodstock,
East General, Toronto,
Wellesley Hospital, Toronto,
(Elective—Toronto Hospital, Weston—3 months.)
- Psychiatric Nursing —General and Marine Hospital, Owen Sound,
General Hospital, Woodstock,
Wellesley Hospital, Toronto,
(Elective—3 months).

Mental Training Schools.

The Supervisor of Nursing in the Provincial Hospitals reports that in order to meet the need for more nurses with psychiatric training the student enrol-

ment in the Provincial Hospital Schools of Nursing has been increased. One hundred and thirty-nine students were accepted into these schools on completion of the preliminary term. With the same purpose the Ontario Hospital, London, instituted a three months' post graduate course in April comparable to the affiliate course given there. Twenty-seven nurses completed the course last year.

Eight of the first class of twelve men who entered the Ontario Hospital School of Nursing, Whitby, completed the first year and are affiliating for one year at the Toronto General Hospital. The second class of twelve men was admitted to the School in September, 1938.

Attendance at Dominion and Provincial Meetings.

The Director attended the Annual Meeting of the Registered Nurses' Association held in Kingston during Easter Week.

The Inspector of Training Schools attended the Meeting of the Canadian Nurses' Association which was held in Halifax, Nova Scotia, in July. This meeting was of special interest for the reason that the question of the establishment of a Dominion-wide registration for nurses came up for special discussion.

Discontinued Training Schools.

Training Schools for Nurses in two centres graduated their last classes in 1938, namely, those in connection with Homewood Sanitarium, Guelph, and the Public General Hospital, Smith's Falls.

Council of Nurse Education—Meetings.

During the year nine meetings of Council were held. Routine business in connection with Provincial Examinations was covered.

Negotiations which have been under way with the General Nursing Council for England and Wales for reciprocal registration were satisfactorily completed.

Applications for a similar arrangement have been received from Newfoundland and New Zealand. The Council advised that it would be necessary for the Inspector of Training Schools for Nurses to report on training conditions in Newfoundland before a decision could be reached and recommended that consideration of the application from New Zealand be deferred for a period of one year.

Following the consideration of a special report on educational requirements for entry to training schools, which was presented by the Inspector of Training Schools at the December meeting of the Council of Nurse Education, it was recommended to the Hon. the Minister of Health that the enforcement of the Regulation requiring twelve Middle School papers by July 1, 1939, be deferred until October 1, 1940.

This recommendation was approved by Lieutenant-Governor-in-Council and the Superintendents of Training Schools notified to this effect.

Amendment to the Nurse Registration Act.

An amendment to the Nurse Registration Act was passed at the last Session of Parliament which makes it unlawful for any hospital or organization to conduct a training school for nurses without authorization in writing from the Hon.

the Minister of Health. Following the passing of this amendment and arising out of certain recommendations made to the Minister by the Council of Nurse Education a Special Committee, composed of representatives of the Registered Nurses' Association of Ontario and the Council of Nurse Education, was called to consider the advisability of offering a course of training for practical nurses. One meeting of this Committee has been held to consider tentative plans.

History of Nursing Slides.

History of Nursing Slides, which were purchased in 1938 for loan to the training schools for nurses, have been kept in constant circulation over the past four months. These have been shown in six schools and the service is greatly appreciated by Hospital Superintendents and Instructors.

MARY POWER, B.A.

I. Public Health Education.

The Department's publication on the care of the child from birth to six years, "The Baby," has been in demand this year to the extent of 34,000 copies. Literature on specific subjects is prepared and distributed through the respective divisions. Information on general health topics has been requested during the year by numerous organizations and by individuals. The policy of the Department is to build up the work of the local health authorities. To this end, requests are acknowledged and then transferred to the local Medical Officer of Health, who thus has an opportunity to learn the nature and extent of the demand for help in health education as expressed in his community, whether it be by lay organizations, teachers, or individual requests. The Department supplies material in the quantity required, either direct to the inquirer or through the local health officer, according to the wishes of the latter. This policy is sound and proving satisfactory to the local health authorities.

Invitations to address meetings and groups have been accepted throughout the year, and articles for professional journals have been prepared upon request. An exhibit was displayed at the International Ploughing Match which was held this year near Barrie. Enterprises which were worked out in fifty rural schools of York Inspectorate No. 1 were assembled at the Summer Course in Health Education and later set up in the education section of the Canadian National Exhibition. These materials were illustrative of the health aspects of various activities and studies in all grades of the elementary school.

II. School Health Education.

The main item to report under this heading is the completion of "Health—A Handbook of Suggestions for Teachers in Public and Separate Schools." This was printed as a joint effort. The Department of Education met the cost of the printing, and the Department of Health supplied the stock for the inside and the cover. This arrangement made it possible to supply a copy to each classroom in the elementary schools of the Province, without charge to the local boards or the teachers, through the inspector of schools.

The Handbook was an assignment which has been in course of preparation since the need for such an aid was expressed by the teachers in the Demonstration during the school year 1931-32. The content of the Handbook is the result of seven years' experimental work and is based on actual classroom experience. The experiment was outlined in Appendix A of the Annual Report of the Department last year.

In order to provide for distribution to interested parties other than the teachers in the elementary schools of Ontario, arrangements were made with the publishers (Ryerson Press, Toronto), for a commercial edition which might be available to parents, health workers, and others in Ontario, as well as to health and educational officials outside the Province.

The content of the Handbook is designed to give to the teacher a general insight into the place of health in education; the gradation of the material to

be presented as the child progresses in his growth and development; a limited amount of technical knowledge; and an outline of statutory requirements and clinical symptoms relating to the commoner communicable diseases.

The service to teachers was confined, during the school year 1937-38, to a loan service of teachers' references; the distribution of suitable health literature as it was issued by official, voluntary or commercial agencies; and the Open House or personal consultation service on Saturday morning in the office, Room 5602, Parliament Buildings. These services were given to teachers who had attended the Summer course since its inception in 1933.

Since September, 1938, when all teachers were given a copy of the Handbook, we have prepared budgets for teachers in the elementary school and teachers in the high school. These budgets are sent to teachers who have not taken the Summer Course in Health Education but who have requested help in the teaching of health in their specific grade. To the end of the year this service amounted to a total of one hundred for high schools and fifty to elementary schools, exclusive of nine hundred budgets which have gone forward to the teachers who have taken the Summer Course.

During the year visits were made by members of the staff to a limited number of inspectors and teachers as follow-up visits connected with the course. This entailed one hundred visits.

III. Summer Course in Health Education.

The Session of the Summer Course in Health Education was held from July 3rd to August 4th, with an attendance of 303 teachers representing 101 inspectorates in the Province. Each student was offered a tuberculin test, with an X-ray of the chest following a positive reaction, by the staff of the Division of Tuberculosis Control. This service was given without charge. Provision was made for a complete physical examination by physicians who were not members of the staff, for which service a nominal fee was charged. Nursing service was provided throughout the entire course.

A new feature was added this year when a Demonstration School with instruction in grades I to VIII, was provided as a practical part of teacher-training. The teachers were not asked to give practice lessons but were provided with opportunities to observe the organization of a school so planned as to integrate health into all activities of the school day—in the classroom, on the playground, and in the cafeteria. No fees were charged the children. Through co-operation of the Board of Education and the Separate School Board of the City of Toronto applications were forwarded from the parents of children in attendance at the various schools in the neighborhood of the Northern Vocational School. The daily attendance averaged from 82 to 85 throughout the duration of the Demonstration School, July 4th to July 29th.

IV. Ontario Health Officers' Association.

The 24th Annual Conference of the Ontario Health Officers' Association was held in Toronto at the Royal York Hotel, June 1, 2, 3. The meeting was very ably handled under the presidency of Dr. W. H. Birks, Medical Officer of Health, Bowmanville.

The Conference was most successful on the score of attendance and interest in the proceedings. The registration reached 432, and included local health administrators from all parts of Ontario. The conference afforded an opportunity to the members of meeting for the first time the Honourable Harold J.

Kirby, K.C., since his assumption of office as Minister of Health for the Province. The members gave Mr. Kirby an enthusiastic reception, and in his speech at the dinner he pledged his support and declared his office was open to any medical officer of health at any time for consultation regarding problems in his community.

As an attraction of the conference a reference library was assembled containing the latest books of reference and current periodicals in the field of public health. The librarian of the departmental library attended throughout the sessions and furnished information to the medical officers of health, public health nurses, sanitary engineers and other interested workers. This service was very much appreciated.

The following committee was appointed to study Accident Prevention:

Dr. L. A. Pequegnat, Toronto, Convener; Dr. C. E. McLean, East York; Dr. B. B. Kelly, Port Hope.

A communication was received from the Mayor of the Town of Simcoe inviting the Association to meet in Simcoe in 1939. The invitation was referred to the in-coming Executive.

The committee brought in their respective reports as follows:

1. The Committee on Resolutions, composed of Dr. Martin Powers, M. O.H., Rockland, Convener; Dr. T. A. Bertram, M.O.H., Dundas; Dr. Fred Adams, M.O.H., Windsor; submitted the following resolutions:

(1) That the Ontario Health Officers assembled in Convention in Toronto, heartily endorses the legislation passed by the Government at the 1938 Session of the Legislature, dealing with compulsory pasteurization of milk in Ontario. Carried.

(2) That this Association recommend to the Ontario Government that an active programme of education be carried out among all the people of the Province covering the danger of using raw milk. This education to cover the symptoms of Bang's disease and tuberculosis among cattle, so that farmers may recognize these diseases in their herds. Carried.

(3) That this Convention ask the Minister of Health, the Honourable Harold J. Kirby, K.C., to urge the Provincial Government to restore the grant for municipal and school nurses. Carried.

(4) That a committee be appointed by the Executive to study the subject of The Tuberculosis Rebel as to effective hospitalization. Carried.

(5) That the Ontario Government be requested to make a survey of the Trachoma situation in this Province with a view to finding:

(a) The number of cases in the Province.

(b) The number of native-born Canadians affected. Carried.

(6) That this convention recommend to the Minister of Health that any Medical Officer of Health not attending the Annual Health Officers' Convention over a period of two consecutive years without reason satisfactory to the Minister, may be recommended by the Minister for discharge by his municipality, and that a copy of this resolution be sent to all Health Officers and all Secretaries of Boards of Health. Carried.

(7) In view of the need and desirability of establishing refresher courses for Medical Officers of Health, resolved that these should be held at strategic and convenient centres. Carried.

(8) That this Meeting record our feeling that some definite basis for a more equitable remuneration could and should be obtained than that found in Section 52 of the Public Health Act; while stating at the same time our appreciation of what the Department has already done in connection with our remuneration as Medical Officers of Health. Carried.

(9) That the Minister be petitioned to fix a minimum of \$40.00, plus travelling expenses, to the Medical Officer of Health, for attendance at the Annual Conference of the Ontario Health Officers' Association. Carried.

II. The report of the Nominating Committee was submitted by Dr. W. J. Cook, of Sudbury, Convener; and Dr. J. W. Fraser, of Kitchener, and Dr. Ward Woolner, of Ayr. The committee's report was adopted and resulted in the election of the following officers and Executive for the coming year:

Honourary President—The Honourable Harold J. Kirby, K.C., Minister of Health of Ontario;

President—Dr. T. H. McColl, Medical Officer of Health, Tilbury.

1st Vice-President—Dr. C. A. Warren, Medical Officer of Health, York Township.

2nd Vice-President—Dr. F. Ladouceur, Medical Officer of Health, Casselman.

Secretary—Miss M. Power, Department of Health of Ontario.

Executive Committee:

Dr. H. E. Welsh, Roslyn.

Dr. W. E. Brown, Orillia.

Dr. H. B. Kenner, Stratford.

Dr. C. H. Bird, Gananoque.

Dr. J. Edgar Davey, Hamilton.

Dr. J. W. Mackie, Lansdowne.

Dr. G. B. Stalker, Hanover.

Dr. H. M. Young, Iroquois Falls.

Dr. J. C. Gillie, Fort William.

A copy of the programme in detail is given below:

WEDNESDAY, JUNE 1st, 1938

MORNING SESSION, 9.30 A.M.—CONCERT HALL

Registration—Wednesday and Thursday only—Convention Floor.

10.00 a.m.—Meeting of Executive Committee.

10.30 a.m.—General Session: Recent Legislation affecting the Public Health in Ontario

Dr. J. T. Phair, Chief Medical Officer of Health.

Dr. K. G. Gray, Solicitor to the Department.

Dr. F. A. Kohli, Director of Dental Services.

11.45 a.m.—Appointment of Committees:

Committee on Nominations.

Committee on Resolutions.

Committee "to study the situation in regard to accident prevention," as requested at 1937 meeting.

LUNCHEON SESSION, 12.30 P.M.—CONCERT HALL

12.30 p.m.—Luncheon.

The Training of Personnel for Local Administration of Public Health as a Responsibility of the Department of Health of Ontario—Dr. B. T. McGhie, Deputy Minister of Health.

GENERAL SESSION—CONCERT HALL.

- 2.10 p.m.—Presidential Address—Dr. W. H. Birks, President.
- 2.30 p.m.—Tuberculosis: The Significance of the 1938 Legislation in the Local Tuberculosis Program—Dr. G. C. Brink, Director, Division of Tuberculosis Control, Department of Health of Ontario.
- 3.00 p.m.—Sulphanilamide:
As a Therapeutic Agent in Streptococcal and other Infections—Dr. P. H. Greey, Toronto General Hospital.
As a Therapeutic Agent in Gonorrhoeal Infection—Dr. C. A. Chisholm and Dr. W. H. Murby, St. Michael's Hospital, Toronto.
- 3.30 p.m.—Protamine Zinc Insulin:
Advantages and Limitations in the Treatment of Diabetes—Dr. N. F. W. Graham, Director of Laboratory, Sault Ste. Marie, Ontario.

THURSDAY, JUNE 2nd

MORNING SESSION, 9.30 A.M.

THE MEDICAL OFFICER OF HEALTH IN URBAN CENTRES

Convener, Dr. J. Edgar Davey

PARLOR A

- 9.30 a.m.—Milk Pasteurization—Dr. A. E. Berry, Director, Division of Sanitary Engineering, Department of Health of Ontario.
Discussion led by Dr. J. W. Fraser, M.O.H., Kitchener.
- 9.50 a.m.—Dishwashing as it Affects Public Health: Effective Procedures—Dr. A. L. MacNabb, Director, Division of Laboratories, Department of Health of Ontario.
Discussion led by Dr. A. R. B. Richmond, Director, Division of Food Control, Department of Public Health, Toronto.
- 10.05 a.m.—Trachoma as a Medical Problem—Dr. A. Wahl, Department of Indian Affairs Ottawa.
Trachoma as a Public Health Problem—Dr. Fred Adams, M.O.H., Windsor.
- 10.25 a.m.—Venereal Disease:
(a) Among Transients: Whose Responsibility?—Dr. J. H. White, M.O.H., Fort William.
(b) When May a Case of Venereal Disease be Discharged as being No Longer a Responsibility of the Department of Public Health?—Dr. A. L. McKay, Director, Division of Preventable Diseases, Department of Health of Ontario.
- 10.45 a.m.—The Tuberculosis Rebel, Patient or Contact—Dr. W. Egerton George, M.O.H., Galt.
Discussion led by Dr. G. C. Brink.
- 11.05 a.m.—Food Handlers—Dr. A. E. Ranney, M.O.H., North Bay.
Discussion led by Dr. James Roberts, M.O.H., Hamilton.
- 11.25 a.m.—Revision of Section 88 of the Public Health Act to give the Medical Officer of Health the Power to Demolish—Dr. C. A. Harris, M.O.H., London.
Discussion led by Dr. D. V. Currey, M.O.H., St. Catharines.
- 11.45 a.m.—The Automobile as a Public Health Problem: (a) Accidents, (b) Trailers—Dr. L. A. Pequegnat, Deputy Medical Officer of Health, City of Toronto.

THE MEDICAL OFFICER OF HEALTH IN THE SMALLER COMMUNITY

CRYSTAL BALLROOM

- 9.30 a.m.—The Problem of Motor Accidents—Mr. Arthur Rowan, Department of Highways, Ontario.
Discussion led by Dr. T. H. McColl, Tilbury.
- 10.00 a.m.—Tutoring in Public Health—Miss E. L. Moore, Chief Public Health Nurse.
Discussion by Dr. Ward Woolner, Ayr, and Dr. J. M. Nettleton, Penetang.

- 10.30 a.m.—Tourist Facilities and Trailer Camps—Mr. E. W. Johnston, Division of Sanitary Engineering, Department of Health of Ontario.
Discussion by Dr. W. E. Wilkins, Cobourg, and Dr. M. M. Fisher, Gravenhurst.
- 11.00 a.m.—Milk Production Control—Dr. A. E. Berry, Director, Division of Sanitary Engineering, Department of Health of Ontario.
Discussion by Dr. C. E. Hill, North York Township, and Dr. R. W. Rankin, Tillsonburg.
- 11.20 a.m.—Health Problems at Bathing Beaches—Dr. A. E. Berry.

LUNCHEON SESSION

The Thursday luncheon hour has been reserved for special groups who may wish to meet together. Arrangements for reservation of Private Dining Rooms may be made through the Secretary.

GENERAL SESSION—CRYSTAL BALLROOM

Chairman—Dr. W. H. Birks

Reception of Report of Nomination Committee.

- 2.10 p.m.—Epidemiological Findings and Suggested Administrative Procedures Based on the 1937 Epidemic of Poliomyelitis in Ontario—Dr. J. T. Phair, Chief Medical Officer of Health.
- 2.30 p.m.—Pathology: Services offered to Physicians by the Department of Health—Dr. H. A. Ansley, Pathologist, Laboratory Services, Department of Health of Ontario.
- 2.50 p.m.—Pneumonia as a Public Health Problem:
(a) The Present Problem in Pneumonia—Dr. A. H. Sellers.
(b) Epidemiology and Etiology of Pneumonia—Dr. A. L. McKay.
(c) Diagnosis of Pneumococcal Infections by Typing Method—Dr. W. B. McClure.
- 3.30 p.m.—Insulin Therapy in the Treatment of Schizophrenia—Dr. N. L. Easton, Ontario Hospital, New Toronto.

DINNER SESSION, 6.45 P.M.—CRYSTAL BALLROOM

Address—J. J. McCann, M.P., M.D., Medical Officer of Health, Renfrew, Ontario.

Address—Honourable Harold J. Kirby, K.C., Minister of Health of Ontario.

FRIDAY, JUNE 3rd.

MORNING SESSION—SECTION MEETINGS, 9.30 A.M.

SECTION A—CRYSTAL BALLROOM

Convener, Dr. A. L. McKay

EPIDEMIOLOGY:

- 1.—Discussion: Venereal Disease Program in Municipalities without Clinic Service.
2.—Demonstrations: Undulant Fever.
Scarlet Fever Immunization.
Typhoid Investigation.
Whooping Cough Immunization.
Infectious Jaundice.

TUBERCULOSIS:

- 1.—Demonstration: The Patch Test.

9.30 A.M.

SECTION B—PARLOUR B

Convener, Dr. A. E. Berry

DISCUSSIONS:

Community Sanitation.
Air Conditioning.
Pasteurization Standards.
Inspection of Dairy Farms.
Some Chemical Aspects of Municipal Water Supplies.
Soft-Drink Bottling Plants.

9.30 A.M.

SECTION C—PARLOUR A

Convener, Dr. A. L. MacNabb

DEMONSTRATIONS: Submitting Laboratory Specimens for Confirmatory Tests.
Recent Advances in Connection with the Preparation of Pertussis Vaccine.
Kellogg Test as a Means of Determining the Diphtheria Antitoxin Content of an Individual's Blood Serum.
Recent Advances in the Preparation of Typhoid-Paratyphoid Vaccine.
Recent Advances in the Diagnosis of Enteric Diseases.
Phosphatase Test.
Special Bacteriological Examinations and the Submitting of Specimens for such.
Brucella Infections.
Recent Advances and Recommendations in the Serology of Syphilis.
Display of some common toxic materials used in industry which can gain access to the body through the respiratory tract.

11.15 A.M.

GENERAL AND BUSINESS SESSION—CRYSTAL BALLROOM

Reception of Reports:

Resolutions Committee, and other Committees.

Question Box.

Summary of Proceedings:

Discussion by:

Representative of Urban Medical Officers of Health.

Representative of Rural Medical Officers of Health.

Chief Medical Officer of Health representing the Department of Health of Ontario.

DIVISION OF DENTAL SERVICES

F. A. KOHLI, D.D.S., *Director.*

There has been considerable re-organization of the Hospitals service. Except in the case of Orillia, the hospital clinics were formerly on a part time basis. The present dental staff is composed of nine full-time and four part-time dentists.

A standard clinic procedure has been developed. This provides for all patients upon admission to be given a complete dental survey, the survey to include careful, systematic oral examination and dental radiographs. The standing population of the hospitals is circulated through the clinic alphabetically, and patients unable to attend, are visited in the wards.

An oral hygiene programme, under the direction of the dental surgeon, provides for supervision of the use and care of the tooth brushes and assistance by the attendant and nursing staff to those patients unable to properly care for their own mouths.

A six-day post-graduate course was arranged at the Faculty of Dentistry for the dental surgeons on the staff, in order to standardize the method of taking impressions and to give special instruction in the interpretation of radiographs. The result of the course has been to facilitate the work of the Central Laboratory which has been working to capacity.

Consultation service and regular inspection of all clinics has been given by the Director.

The Department has, for some time, been supplying health literature and survey charts for use in school dental health campaigns. A survey of thousands of Ontario school children has revealed an almost constant presence of dental defects, ranging from small cavities to serious septic conditions. Efforts must be directed towards supplying the necessary treatment. Although this is considered a municipal responsibility, the Department has this year appropriated funds to give assistance to School Boards and local Boards of Health desirous of initiating a school dental service in elementary or secondary schools.

A number of municipalities have taken advantage of the grant, and applications are pending from as many more. A great deal of interest in this work has been evinced by the various School and Service organizations throughout the province.

The plan of emergent dental treatment for relief recipients has provided necessary extractions and repairs of dentures for approximately 22,000 patients who otherwise would not be in a position to obtain treatment.

The Dental Car is giving free dental service to school and pre-school children in unorganized territory where the care of a private dentist is not available. During the past year the Car has moved eastward from Dorion to Cartier, then travelled to Ingolf on the Ontario-Manitoba border to work eastward again. Letters of appreciation have been received from the district.

DIVISION OF INDUSTRIAL HYGIENE

J. GRANT CUNNINGHAM, B.A., M.B., D.P.H., *Director.*

Industrial Hygiene activities occupying the attention of the Division cover facilities established or to be established by industries themselves for general health supervision and the control of occupational disease hazards.

General Health Supervision.

Physicians on a part time basis with nurses are employed to bring to workers at the factory, the benefits of early diagnosis and advice for the maintenance of health rather than for the active treatment of the disease. There is no legislative requirement for this procedure but the practice is spreading from the larger to the smaller factories. Apart from material improvement in health, it can be an important factor in industrial relations if the patient-physician relationship is observed.

During the last three years the examination of certain groups of workers who are required to work in close proximity to one another has revealed an inordinate number of cases of tuberculosis, no doubt due to its spread in the factory. This year, two additional groups involving six hundred examinations presented six cases of tuberculosis and four others requiring observation for which follow-up arrangements were made locally. Such a finding represents the average experience but working closely together these persons if not discovered could be expected to infect others, as appeared to occur in those previously reported. To require that workers do not sit close together or opposite one another at work involves expensive changes in process. The alternative is regular health supervision by industry itself. Many enquiries are received from employers and physicians about to inaugurate such supervision, but it is a voluntary measure and spreads slowly.

Occupational Hazards.

At the same time, such supervision where it is in effect, is the most effective control for the hazards to health associated with the use of dangerous substances. From factory medical personnel come to the attention of the Division those hazards which they have recognized but which require special investigation for which individual factories can hardly expect to be equipped. In the absence of regular health supervision, these hazards must be recognized through hazard observation by industry itself or through factory inspectors, accident prevention inspectors, the Workmen's Compensation Board or by the Division in surveys where suspicion of hazard exists or from its contact with cases of sickness. Surveys conducted by the Division have been largely held in abeyance in favour of response to requests for assistance and the control of known hazards. About one-third of the visits made were upon request, the services of physicians, engineers or chemists being required. Correspondence and telephone enquiry for this type of assistance is a considerable item, much of it from industry; an expression of growing interest and perhaps confidence, which is the best guarantee of good working conditions. The clinical, laboratory, engineering and library facilities available, make this possible.

As previously, a great variety of substances and processes has been investigated in the industrial hygiene laboratory and in the field, with particular attention to a few, e.g., the use of benzol for vanillin extraction from wood pulp, exposure to rock wool dust, arsenic in gold ores, use of carbon tetrachloride in trichlorethylene degreasing machines, fumes in oil-fired japan ovens, sulphuryl chloride.

Some Special Enquiries.

Eighteen cases of chronic arsine poisoning in a gold refining mill were investigated and reported upon. Recommendations were made to prevent such an occurrence elsewhere.

The sulphate ratio was investigated in 68 men at benzol operations and reported on. Periodic medical examinations continue to be required for such workers.

A study of sickness experience in certain groups of workers on repetitive tasks working at a fixed pace showed a consistently higher absence record than in others in the same factories doing similar work under other conditions.

Chemical analysis of lungs from cases of silicosis coming to autopsy has continued with a view to correlation of the results with petrographic findings in material from the same source.

Apparatus for the determination of the concentration of carbon tetrachloride in air, using a combustion method has been constructed in the laboratory. The values given have been compared with those from a sensitive chemical method recently developed by Dr. H. M. Barrett at the School of Hygiene, University of Toronto. This has been used to determine the efficiency of mechanical measures for the control of these fumes produced in filling containers and in dry-cleaning.

A member of the Division represents the Department on a Sub-Committee of the Canadian Engineering Standards' Association to formulate eye-shield specifications for welders' helmets for protection of eyesight against ultra-violet light.

Some attention has been given to encouraging the development of inexpensive individual units for supplying clean air to helmets and masks worn by such workmen as sandblasters and granite-cutters.

Occupational Disease Regulations.

Supervision of reports by physicians on periodic examinations conducted, of those exposed to lead or benzol required under The Factory, Shop and Office Building Act, resulted in a few being removed from exposure and drew attention to certain processes which required correction. About seven hundred blood smears were examined in the laboratory here in addition to those by industrial physicians as part of this supervision.

The labelling of containers with lead or benzol directs inspectors to processes using these materials. The samples submitted to the laboratory for testing indicate that generally, manufacturers of these products are meeting the requirements. Although not specified in these regulations, tests show that domestic parting compounds for use in moulding operations conform to the designations used. Silica partine with its attendant hazard has almost disappeared.

Posters warning of the hazard from lead or benzol have been placed at processes using these materials in forty additional factories this year.

Control of Dust and Fumes.

Engineering services of the Division have been called upon for concrete suggestions, to include drawings, for installations to control dust and fumes at such as spray booths, chrome tanks, lead and cyanide pots, buffing wheels, aeroplane doping but especially in foundry processes. Here is emphasized the silica hazard from the sandblast, shake-out, core-knock-out and chipping operations. The response to these recommendations, sometimes involving considerable financial outlay, is relatively slow but steady. Housekeeping and sandblast operations have markedly improved. Some very extensive alterations have been made partly involving process changes. They provide an opportunity for testing directly the effect of the methods adopted. A ventilated stall for brushing bath-tubs reduced the exposure from forty million to two million particles per cubic foot of air, i.e., below the danger line—a battery of flexible-shaft grinders installed in separate booths reduced the dust exposure to two million particles per cubic foot of air—in a sand-drying operation the dust content of the air breathed by workmen was reduced from eighty million to four million particles per cubic foot. Some of these exposures require experimental tests before plant installation is started. In one of these a special hood system to remove lead dust from brush-cleaning the interior of small receptacles has proved satisfactory.

Physical Examinations.

In addition to six hundred examinations of industrial workers directed to finding cases of tuberculosis already referred to, clinical and laboratory examinations, for diagnosis of occupational disease as a lead to their source and for assistance to industrial physicians, totalled 230, a few of them from three other provinces; for the issuance of mining certificates, 123; for dust exposure surveys 140; for Government Board 270; for Workmen's Compensation Board for silicosis claims, 415 examinations in 287 cases. Of these last, forty-three per cent. were totally disabled and a third of the total were new cases. The proportion of new cases was greater among foundrymen than in miners due to an earlier accumulated experience.

The periodic examination of those exposed to silica dust other than in mines is not yet compulsory although the number of employers providing for it voluntarily, has increased. They have had considerable clinical assistance from the Division on diagnosis and advice as to the disposition of those affected, so important from the standpoint of the workman.

Dr. L. B. Leppard attended the Annual Convention of the American Foundrymen's Association for the opportunity presented to be informed of the rapid technical developments in dust control.

Dr. A. R. Riddell attended from Canada and took part in the Second International Conference on Silicosis at Geneva, Switzerland.

Dr. J. G. Cunningham attended and took part in the Symposium on Occupational Diseases presented by Northwestern Medical School, Chicago, Illinois.

Dr. F. M. R. Bulmer visited New York, New Jersey, Pennsylvania and Maryland, primarily to determine the procedure and experience there with "Bedding Laws." Since then, regulations have been drafted and passed under The Public Health Act, effective December 28, 1938. They require that mat-

tresses, pillows or upholstered furniture be labelled as containing "new," "converted" or "second-hand" material as the case may be. Disinfection and disinfection may be required by the local Medical Officer of Health or by an officer of the Department. Representatives of manufacturers, suppliers of raw material, and retailers have co-operated in inaugurating compliance with these regulations.

Fumigation Using Cyanide Compounds.

The regulations respecting cyanide compounds have caused more attention to be given to substitutes for these dangerous compounds. The number of permits for fumigators using cyanide has decreased, e.g., in Toronto from about 1600 in 1937 to 1200 in 1938. Certain Casualty Insurance companies are carrying the risk for fumigators, subject to conditions in the public interest, set down by the Superintendent of Insurance. There have been no fatalities during the year. Twenty-three persons have licenses in good standing from the Department at the end of the year. Eighteen persons have licenses restricted to commercial fumigation where insurance is not required.

Tests have been made to determine concentrations of "Proxate," a mixture of methyl bromide and carbon dioxide in rooms adjoining those sealed for using this material as a fumigant. Amounts detected were considerably below toxic levels but, of course, care is still necessary in handling it and in sealing rooms in which it is to be used. Tests have been made of the use of a warning gas other than those now approved. These tests so far have not been successful.

The close co-operation of the Factory Inspection Branch of the Department of Labour, the Workmen's Compensation Board and the Accident Prevention Associations, is appreciated especially in the control of occupational diseases.

The following articles have been prepared and delivered or published during the year:

1. Industrial Cadmium Poisoning—A Report of Fifteen Cases including two deaths, by Dr. F. M. R. Bulmer, H. E. Rothwell and E. R. Frankish. *Canadian Public Health Journal*, January, 1938, pages 19-26.
2. A Study of a Fatal Case of Uncomplicated Silicosis, by A. R. Riddell, C. M. Jephcott and Dudley A. Irwin. *The Journal of Industrial Hygiene and Toxicology*, Vol. 20, No. 9, November, 1938.
3. A Study of Crystalline Siliceous Minerals Present in Silicotic Lungs by the X-ray Diffraction Method. by C. M. Jephcott, W. M. Gray and Dudley A. Irwin. *The Canadian Medical Association Journal*, Vol. 38, pages 209-215, 1938.
4. Tuberculosis in Industry, presented by Dr. A. R. Riddell at the Wayne County Medical Society, Detroit, Michigan.
5. Silicosis and Its Relation to Other Fibrosing Lung Conditions, presented by Dr. A. R. Riddell at the Academy of Medicine, Toronto.
6. Industrial Medical Surveys by Dr. J. G. Cunningham, at the Occupational Disease Symposium, Northwestern Medical School, Department of Industrial Medicine, Chicago, Illinois.
7. Objectives of Industrial Hygiene, by Dr. F. M. R. Bulmer, *Canadian Public Health Association Journal*, July, 1938, pages 345-353.

Sanitary Inspection and Medical Care in Unorganized Territory.

The report of the Chief Sanitary Inspector is attached. The amendments to the regulations, effective August 18, 1938, are directed primarily to improved medical care of workmen under medical contract, by strengthening the position of the physician and increasing his responsibilities; to coverage for workmen employed in unorganized territory but living elsewhere; to limitation of employer liability in cases of non-industrial accidents, largely due to automobiles; and to more responsibility but greater latitude in conforming to the regulations in respect to sanitary camp construction and maintenance. Operators and contract physicians met with representatives of the Departments of Health and of Lands and Forests on separate occasions in the Thunder Bay area for consideration of the problems which the regulations are intended to cover. These meetings are to be extended to other districts. The conditions governing the development of medical services in camps with more than five hundred men have been set out.

There were no cases of smallpox. Of nine cases of typhoid fever, five occurred at one point from causes within the control of the company, while the remainder were individual cases widely separated with no secondary cases. All were due to contaminated water supply. The number of cases is small compared with earlier years but sufficient to emphasize to employers and employees the importance of sanitation.

The number of cases of dysentery is an added reason for more care. These cases are widely distributed and the subject of special enquiry at present. Most employers now recognize the value of health measures but they do not always delegate someone to be responsible for getting results.

SANITARY INSPECTION

D. MCKEE, *Chief Sanitary Inspector*

The following report is submitted for your approval covering the work carried out by your staff of six Provincial Sanitary Inspectors during the year 1938, including data relating to industrial camp hygiene.

The primary duty of the inspectors is the enforcement of the Public Health Act and regulations made thereunder, particularly respecting industrial camps, works and premises, employers and workmen thereof in territorial districts without municipal organization. These districts comprise practically three-quarters of the area of the Province of Ontario.

In 1938 it was again found necessary to make some minor changes in the judicial districts of the inspectors. This was in part due to the closing of the Sudbury office in 1937 and the opening of a new office at Geraldton the same year, combined with the increased mining and other industrial activities in the latter area. Consideration was also given to the question of accessibility and available transportation to all points in both districts.

The sanitation of industrial camps under Departmental regulations enforced by the Provincial Sanitary Inspectors is very important, due to the fact that workmen employed in remote areas are more or less compelled to live in temporary shelters under conditions which are not of their own choosing, and in some instances those who conduct the camps are apt to provide a meager outfit and to manage it in a careless manner through economic considerations, lack of knowledge, indifference to good sanitation, or short duration of the

camps. In other cases the employer or his workmen may be careless in sanitation through the apparent freedom from civilized society or city life conveniences.

After conferences with representatives of the three main industries concerned, lumber, mining and pulp and paper, the regulations respecting industrial camps were revised and approved by Order-in-Council, August 18, 1938. From reports from the inspectors, also from employers and workmen, it would seem that the revised regulations clarify a number of questions which had been raised under those previously in effect. An important change makes provision for employers, who usually employ more than 500 workmen in the same area, to establish a full time medical service at the camps, all such arrangements being subject to the approval of the Minister of Health. Under the present regulations, provision is made to exempt the employer of liability for payment for treatment in a sanatorium for tuberculosis patients. Provision is also made for the separate accounting of all sums deducted from wages of workmen for medical and surgical care of such workmen. A standard camp is now defined in the regulations as consisting of fifteen or more workmen, exclusive of one foreman and one clerk, which has increased the number of operators coming under the regulations, particularly in the Nipissing and Parry Sound districts.

The card index system of records was also revised and a more uniform system established in the district inspectors' offices, which should correspond with the central office. This will assist considerably in the keeping of records relative to industrial camps, employers of labour and the contract physicians' records, with the minimum amount of office work for the inspector.

The following summary shows the various industries in Northern Ontario throughout the year giving the average number of men employed and duration of employment. It will be noted from these figures that the actual number of workmen who found employment in industrial camps in 1938 compared favourably with 1937, when 41,332 were employed.

INDUSTRY	No. Of Operators	No. of Camps	No. of Men Employed	Average Duration
Lumber and Pulpwood.....	99	385	21,832	6 mos.
Saw Mill.....	31	34	1,884	5 mos.
Mining.....	84	84	9,537	12 mos.
Construction.....	44	64	5,747	6 mos.
Railway Extra Gang and S. S. Camps.....	4	30	1,500	5 mos.
Creosoting.....	1	1	50	2 mos.
Total.....	263	598	40,550	

Lumber and Pulpwood Operations.

During the year there were 99 operators, 385 logging camps employing 21,832 workmen. While the number of camps is approximately the same as last year, the actual number of workmen engaged in logging operations is 6,316 less.

Two new pulpwood plants were under construction during the summer months—(1) Lake Sulphite Pulp Co. plant located at Red Rock, township of Nipigon, where approximately 1,500 workmen were engaged on this work as well as a large number in the pulpwood cutting camps, which were later abandoned. (2) The Ontario Paper Co., Heron Bay, on C. P. R., carried to completion the construction of a large barking mill, also a small townsite for their employees. This work provided employment to 400 workmen during the

spring and summer months. This plant will give employment to 125 workmen at the mill camp during the summer, and between 400 to 500 in the woods camps during the winter for a number of years.

Mining Camps.

Eighty-four mining camps were operating, employing 9,537 workmen for a period of twelve months. These included camps in unorganized territory which came under the regulations of the Department. Owing to the nature of this industry and its permanent location, combined with the co-operation of the mining officials in charge with the staff of Provincial Sanitary Inspectors, these camps are usually constructed with due regard to modern sanitary conditions and the protection of the health of the workmen to be housed therein.

The question of disposal of mine tailings and slimes, etc., from the mines has been investigated by the inspectors during the year. Where the system of disposal has given grounds for complaint, a system of settling out the solids before entering the lakes or other water supplies has reduced any serious hazard and also the objectionable discolouration of the water on the shore-line.

During the early part of the year one company physician reported 18 non-fatal cases of arsenic poisoning among a group of workmen employed in one of the mills. The condition was drawn to the attention of the Department and was investigated by Dr. F. M. R. Bulmer, Divisional Research Specialist, the following day. The results of this investigation were very conclusive, and recommendations to remove the apparent cause were put into effect by the employers immediately.

Three new mining fields are now under development. The Sachigo River Gold Mine in Sachigo River area is located approximately 300 miles north of Sioux Lookout, or 110 miles directly east of God's Lake, Manitoba. Berens River Mine is under development in the Red Lake area, 119 miles north of Kenora. The latest mining field discovered during the latter part of the year is the Opipisway Lake district, 105 miles west of Sudbury. In this area approximately 300 workmen are employed by the different mining companies in prospecting, diamond drilling, and development work.

Construction Operations.

Construction operations provided employment to 5,747 workmen for an average of nine months in Highway, Hydro and other construction camps during the year. In this group, which is now carrying on operations during winter and summer months several sporadic cases of typhoid fever developed, which were traced to the source of drinking water supply.

Industrial Contract Physicians.

There is a total of 186 active medical and sanitation contracts divided among 40 physicians who employ 44 assistant physicians either on a part or full-time basis throughout the year.

It will be noted from the summary of industrial camps that 40,550 men were employed. In this group of workmen the following medical service was rendered by the contract physicians as reported to the Department in their monthly reports:

Inspection Reports Received	No. Men Treated	Immunizations	Physical Examinations
2,220	16,585	2,986	3,945

It may be noted that the statistical showing of the number of men treated does not represent the total number of treatments by the physicians. The improvement in type of medical service and the number of visits by the contract physician, particularly to the logging camps, are much appreciated by the workmen.

The revised regulations have made provision requiring that the contract physician cause a notice to be posted in a camp a reasonable time in advance of his visit. This has proved more satisfactory to the workmen giving them a better opportunity to consult the doctor for minor ailments.

Communicable Diseases.

The case record of communicable diseases as reported by the industrial contract physicians is higher than last year. This is evidently due to the fact that better records on communicable diseases are now submitted by the contract physicians.

The following is a summary of contagious diseases as reported by the contract physicians.

Measles.....	22
Chickenpox.....	4
Pneumonia.....	26
Impetigo.....	23
Tuberculosis.....	6
Syphilis.....	16
Influenza.....	507
Scarlet Fever.....	2
Dysentery.....	355
Septic Sore Throat.....	29
Gonorrhoea.....	32
Conjunctivitis.....	37
Mumps.....	2
Typhoid Fever.....	9
Ringworm.....	1
Diphtheria.....	1
Trench Mouth.....	1
Herpes Zoster.....	5
Scabies.....	9
Poliomyelitis.....	1
DEATHS:	
Septicaemia.....	1
Injury.....	1
Heart.....	3
Drowning.....	2
Killed.....	2

It will be noted that there were nine cases of typhoid fever. Five of these developed in some road construction camps in the Temagami area. Investigation revealed the company officials disconnected the chlorinated T. & N. O. safe water supply, using instead a temporary pumping system from a contaminated lake water supply in a bay in Temagami Lake. This change was made without the consent of the contract physician or inspector. Three other sporadic cases developed at different points and were traced to their source.

In view of the frequency of respiratory diseases, a definite effort has been made to eliminate as far as possible close contact with fellow-workmen in sleeping and living quarters.

During the year the inspectors were called upon to assist the family physicians in unorganized territory in the investigation and enforcement of quarantine of 233 cases of contagious disease.

Inspection of Towns and Villages, etc.

Sanitary surveys, inspections and investigations were made during the the summer months of towns, villages, schools and tourist resorts. These inspections include dairies, water supplies and all duties of the sanitary inspector under the Public Health Act.

The sanitary supervision of the towns and villages has entailed much return follow-up inspection work due to the fact that there is no local authority or health board to follow up your inspector's instructions. The consensus of opinion in this regard seems to be that consideration might be given to a provision under the Public Health Act for the appointment or election of a sanitary board which would have power to assess and collect money for local sanitary improvements, such as establishing a scavenger system, public water supplies, etc., and would work in co-operation with the Provincial Sanitary Inspectors.

It is recommended that amendments be made to the Public Health Act to make provision for the election or appointment of a local sanitary board in unorganized towns and villages with a population of 500 persons or over.

CANCER CONTROL

The Ontario Government supplies seven cancer clinics across Southern Ontario with radium and radium emanation and makes grants for stated periods to the hospitals in which they are located, now totalling \$86,000 a year. This is the first year for these grants to the clinics outside the university centres so that the details for improvements which the funds make possible, have been worked out and applied. There is provision for a supervisory committee for public relations and a medical committee for consultation on technical matters. All the clinics are well-equipped for the application of treatment measures and for accurately recording the data so necessary for statistical research later. The details of cases treated by these clinics are contained in the attached report of Dr. A. H. Sellers, Medical statistician. There have been about 2,100 new cases of cancer a year, treated at the clinics. There is an unknown number of cases of cancer which do not reach the clinics for either diagnosis or treatment.

The cancer study groups in hospitals with over one hundred beds and the educational activities of the new Society for the Control of Cancer, sponsored by the Canadian Medical Association, should result in more cases reaching the clinics and that in the early stage when best results are obtained from treatment. It is important that municipalities send indigent cases as soon as the condition is recognized.

The radium plant has been operated to capacity primarily for the clinics, the remainder of its output being supplied to specified hospitals for indigent cases or to specified physicians for private cases, the latter at a rate of one dollar per millicurie. Provision has been made this year for duplicate parts of the emanation plant to avoid delay from breakdown due to the age of the plant. Protection from stray radiation for the plant operator has been increased following additional tests. The operation of this plant is now conducted by a part-time physicist.

The full-time physicists in addition to their work on dust control have conducted measurements of X-ray output for the clinics and audited the supplies of radium. No Government radium was lost but a small amount of hospital radium was recovered in an incinerator using equipment developed in the Department. The physical problems with deep therapy X-ray and radium

treatment have demanded more time especially with the new 400 K. V. X-ray machine at the Toronto General Hospital. A good deal of this is night work. For routine control and physical research, it is very desirable that physicists should be constantly available at larger clinics.

THE THIRD ANNUAL STATISTICAL REPORT ON CANCER* CALENDAR YEAR 1938

Comprehensive statistics on patients admitted to the seven Ontario Cancer Centres have become available for the first time this year. This significant development in the Department's cancer program has been made possible by the new record scheme devised by the Division of Medical Statistics and introduced into the seven Centres in August, 1937, through the co-operation of the clinic Directors. This plan provides for the maintaining of a complete history, examination and treatment record for every patient, in a uniform prescribed form. In addition, a follow-up card containing the essential clinical data including status on admission, stage of disease, treatment and after-history, is kept for each patient. All the facts necessary for a satisfactory annual review and appraisal of the work of each clinic and of the efficacy of treatment are therefore available. Each patient is to be followed annually for a period of at least five years or until death and the follow-up cards of all patients admitted to the Centres from January 1, 1938, up to December 31st, of the year just preceding are to be submitted to the Department on or before February 15th, each year.

In February, 1939, the cards of all new patients admitted to each clinic during the year ending December 31, 1938, were submitted to the Department. This was the first occasion of this practice and all cards were reviewed so that attention could be directed to any errors in their use. From the cards submitted, an annual report for each Centre was compiled, making it unnecessary to require each Centre to prepare and submit its own report as heretofore. This centralization of tabulation places a heavy burden on the statistical office but extends the opportunities for research. A series of summary tables will be forwarded to each clinic annually based on the review conducted.

It is confidently expected that a real contribution can be made toward clinical cancer research through the work now in progress and that material assistance can be rendered in many of the administrative, clinical and educational problems in cancer control. The full success of present objectives in the Department's program require, of course, the continuance in the future of the intimate co-operation given by the Director of each Centre in the past. Naturally many difficulties have been encountered during the transition period following the introduction of the new record scheme and certain problems still remain to be solved. The co-operation of the clinic Directors in making possible the developments during the year and in particular the statistical report which follows, is acknowledged.

A conference of the clinic Directors was held in November, 1938, to discuss experience with the new record forms, and a revision of the history and examination schedules was approved, modifying the arrangement without impairing the value of the record for statistical purposes. This revision will be undertaken early in 1939. The remainder of the schedules and follow-up cards were approved in their original form.

* Prepared by the Division of Medical Statistics, Ontario Department of Health.

From the information now available to the Department through the follow-up cards, several important contributions to available knowledge are possible. Stages of disease at the beginning of treatment, nature of any previous treatment, delay in seeking treatment, etc., are facts which are important both in reference to administrative problems and in cancer research. In the statistical report appended, the principal points of interest regarding new cases admitted to the seven Centres during 1938 are presented.

Departmental Objectives—

The Department, together with the Directors of the seven cancer centres are in agreement that an accurate, complete record of each patient, including follow-up, is essential not only in the best interests of the patients, but because such data is a contribution to the advancement of our knowledge of cancer, its treatment and control. As a further extension of these interests, an effort will be made to secure records of *all* patients admitted to the Centres *whether treated or not*, in order to determine the frequency of and the reasons for non-treatment.

The securing of records for *all* patients who seek advice at the hospitals where the Centres are located, regardless of whether treated by radiotherapy or not, is desirable. This requires the maintenance of a cancer registry in the hospital housing each Centre, which would be responsible for the records of all patients applying for treatment. Such a registry would be best located in the Centre itself. If such a plan could be achieved, it would make available for study a comprehensive body of data on cancer of *all* sites.

Knowledge of the frequency of cancer is a fundamental step toward control. To this end a review of all patients treated for cancer and other tumours in public hospitals in Ontario 1937, was begun during 1938 by the Division of Medical Statistics. All patients discharged from or dying in these hospitals during that year are to be included. The data available are diagnosis, age, sex, place of residence, length of stay in hospital, type of patient (public, private), etc. When completed, this review will add materially to our knowledge of the extent of the cancer problem in Ontario. At the end of 1938 transcripts from the monthly hospital returns to the Department for the first nine months of 1937 had been completed.

Data is also needed as to the extent to which all patients with cancer are now receiving treatment. A study of all deaths of which cancer was either the cause or an important contributing factor, over a period of one year, would be of material assistance in this connection.

REPORT UPON THE WORK OF THE CANCER CENTRES DURING 1938

The following report upon the work of the cancer Centres during 1938, deals with *new patients* admitted during the year. The tabulations throughout were made in the Office of the Departmental Medical Statistician from data on the follow-up cards submitted by the seven Centres under the new record arrangement.

Table I gives a summary of the case volume during 1938.

TABLE I
NEW CASES ADMITTED BY CENTRE
CALENDAR YEAR, 1938

CENTRE	NEW CANCER CASES						Non-Cancer Cases(2)	Total New Patients Treated
	On Record			Treated (1)				
	Private	Public	Total	Private	Public	Total		
Hamilton.....	233	69	302	233	69	302	309	611
Kingston.....	137	49	186	137	49	186	218	404
London.....	80	75	155	80	66	146	103	249
Ottawa (C).....	177	104	281	166	87	253	243	496
Ottawa (G).....	63	50	113	55	42	97	45	142
Toronto.....	498	477	1,017(3)	498	477	985(4)	525	1,500
Windsor.....	109	41	150	103	33	136	137	273
Total.....	1,297	865	2,204(3)	1,272	823	2,105(4)	1,580	3,685

(1) Treated by any method or combination. Includes cases treated by surgery alone but excludes palliative surgery.

(2) Non-malignant tumours and non-neoplastic diseases.

(3) Including 42 cases not treated which are not included in "private" and "public" columns.

(4) Includes surgical cases as follows: breast (2), oral (1), rectum (1), other sites (6) which are not included in "private" and "public" totals.

A total of 2,204 new cancer patients presented themselves for treatment during the year. All but 99 of these received some form of treatment. In addition, 1,580 patients were treated for benign tumours or non-tumour conditions. The number of private cases exceeded that of public in each Centre, public cases constituting 40 per cent. of the total new cancer cases treated during the year.

A comparison of the volume of cancer cases *treated* in each Centre for the three years, 1936 to 1938, is given in table II.

TABLE II
NEW CANCER CASES TREATED BY RADIOTHERAPY *
1936, 1937 AND 1938

CENTRE	Private			Public			Total		
	1936	1937	1938	1936	1937	1938	1936	1937	1938
Hamilton.....	173	189	233	61	77	69	234	266	302
Kingston.....	131	153	135	114	45	48	245	198	183
London.....	40	72	80	45	55	64	85	127	144
Ottawa (C).....	163	148	159	90	85	81	253	233	240
Ottawa (G).....	32	30	44	36	34	40	68	64	84
Toronto.....	531	505	498	428	470	477	959	975	975
Windsor.....	101	108	99	41	28	31	142	136	130
Total.....	1,171	1,205	1,248	815	794	810	1,986	1,999	2,058

*Alone or in combination with surgery or other methods. Cases treated by surgery alone and cases not treated are excluded.

The total increase in cancer patients treated over the previous year is 3 per cent. Significant increases are noted for Hamilton (17 per cent.), London (13 per cent.) and Ottawa (General) (31 per cent.). Slight decreases are noted for Kingston and Windsor. It is somewhat surprising that there has not been a more marked increase over the past three years. Later observations have some significance in this connection.

A composite summary of new cases by site is given in table III, indicating the number alive as at December 31st, 1938.

TABLE III
NEW CANCER CASES ADMITTED BY SITE OF DISEASE
ONTARIO CANCER CENTRES—1938

SITE OF CANCER	Number of Patients			Per Cent. Total†
	Alive	Dead*	Total†	
Breast.....	364	44	414	18.8
Cervix Uteri.....	166	35	201	9.1
Body of Uterus.....	48	14	62	2.8
Lip.....	202	9	213	9.7

TOTAL CASES.....	1 873	289	2,204	100.0

*As at December 31, 1938.

†Including the Not Treated cases at Toronto Clinic.

‡Including tonsil.

**Comprising vagina, ovary, bone, other digestive tract, leukaemia, Hodgkin's disease, etc.

This table indicates that 72.1 per cent. of the cases presenting themselves for treatment had cancer of those sites particularly amenable to radiotherapeutic treatment (breast, uterus, oral cavity and skin). Based on available data on natural duration, the estimated number of patients with cancer of the breast needing treatment during 1938 would be in excess of 1,400 compared with 414 cases admitted to the clinics or 29.6 per cent. of the estimated number. Similarly, the estimated number of uterus cases probably exceeds 600 while 263 or 43.8 per cent. of this number, were admitted.

Among males, "accessible" cancers (breast, oral cavity and skin) were responsible for 8.7 per cent. of the deaths in 1937 and 66.7 per cent. of the new cases admitted. Among females "accessible" cancers (breast, uterus, oral cavity and skin) were credited with 37.4 per cent. of the cancer deaths during 1937 and 76.8 per cent. of the new cases during 1938 were in this group.

New Cases Treated by Site and Centre of Treatment—

A summary of the new cases treated during 1938 by site of disease and clinic is given in table IV.

TABLE IV
NEW CANCER CASES TREATED BY SITE
ONTARIO CANCER CENTRES—1938

SITE OF CANCER	Hamil- ton	Kings- ston	London	Ottawa (C)	Ottawa (G)	Toronto	Wind- sor	ALL CENTRES
Breast.....	60	42	18	41	18	199	23	401

Other Sites‡.....	59	23	29	58	28	167	31	395
TOTALS.....	302	186	146	253	97	985**	136	2,105**

*Includes tonsil, buccal surface of cheek, etc.

†Includes air sinuses, larynx, pharynx and nasal fossae.

‡Includes bone, vagina, other digestive tract, etc.

**Includes 10 cases treated by surgery, not included above.

Of the total new *treated* cases, the breast contributed 19 per cent., the uterus 13 per cent., the buccal cavity 16 per cent. and skin 26 per cent. or a total for these four groups of 75 per cent. Variations in this distribution are noted between the seven Centres. In 1937, cancer of the breast contributed 464 deaths or 10.2 per cent. of all cancer deaths, the uterus 356 deaths or 7.8 per cent., the oral cavity 166 deaths or 3.6 per cent. and the skin 89 deaths or 2.0 per cent.—a total of 23.6 per cent. Increases in the number of breast, uterus and oral cavity cases over the previous year is gratifying.

Stage of Disease at the Beginning of Treatment—

An important factor in a successful outcome of treatment is the stage of disease at which the patient first presents himself. This year data were collected from each Centre on stages of disease among patients treated, from the date of inauguration of each Centre to the end of 1937. These data are compared in table V with those from the follow-up cards of 1938 cases.

NOTE:—Data cover: all clinics for years 1935-1938, Toronto, Hamilton, Kingston and Ottawa Civic for 1934.

In breast cases some encouragement may be taken from the progressive increase in cases presenting themselves for treatment while the disease is still localized in the breast (stage I). For this site, the percentage of stage I cases has increased from 21.6 in 1934 to 32.3 in 1938. For cases of cancer of the cervix uteri, oral cavity and skin—no such encouraging sign is evident. In all groups the high proportion of moderately advanced or advanced cases is striking.

Only 76 or 32 per cent. of new breast cases during 1938 were recorded as stage I, while 23 per cent. were in stage III on admission. Of 184 new cases of cancer of the cervix uteri, only 27 or but 15 per cent. were stage I, while over 56 per cent. were in stages III and IV. Excluding skin cases (of which over 87 per cent. were stage I) only 31 per cent. of the patients presented themselves for treatment before local spread, extension or metastasis had occurred.

The figures presented in table V are not reassuring. In 1937, 34.3 per cent. (815 deaths) of the total cancer deaths among women in Ontario were attributed to cancer of breast and uterus. Material reduction of the female cancer death rate is to be expected if earlier treatment can be brought about. The facts presented are not new but they should serve to renew and strengthen the efforts of those concerned with active public and professional education.

Among the new cases during 1938, marked differences were found in the stage distribution of private and public cases. For instance, only 9 per cent. of the new public cases of cancer of the cervix uteri presented themselves for treatment before local spread or metastasis had occurred, compared with 25 per cent. in the private group. For cancer of the oral cavity the figures were—public 40 per cent. and private 68 per cent., and for breast cases—public 25 per cent. and private 35 per cent. The known marked differences in survival rates between early and late cases demand careful exploration and application of these findings.

Classification of New Cases Admitted During 1938—

A general summary of the new cancer cases admitted during 1938 is given in table VI. The designations used are "primary", "previous" and "recurrent." These are defined as follows:—

Primary—Cases admitted for treatment of the primary growth (which is still present at the time admitted, regardless of any treatment by radiotherapy or other means, before reaching the clinic).

Previous—Cases admitted for complementary treatment after the original growth has been removed by operation or by other procedure, elsewhere.

Recurrent—Cases admitted with a growth either at the original site or in the form of an extension or metastasis, who have received treatment previously elsewhere and been considered free from disease.

It should be noted that these data refer to *new* cases only and therefore do not indicate the frequency of recurrences among "primary" or "previous" cases treated at the clinics in earlier years.

TABLE VI
CLASSIFICATION OF NEW CASES ADMITTED DURING 1938
ONTARIO CANCER CENTRES

SITE OF CANCER	Classification				TOTAL
	Primary	Previous	Recurrent	Not Treated*

Total.....	1,582	354	159	67	2,162
Per Cent.....	73.2	16.4	7.3	3.1*	100.0

*Excluding not treated cases at Toronto Clinic.

The total number of cases admitted with recurrences was 159 (excluding 7 untreated, at Toronto Clinic). This is 7.3 per cent. of all cases. Recurrent cases were most prominent in the breast, there being 66 such cases or 16 per cent. of all breast cases admitted. At a later date and for presentation in a subsequent report, an examination will be made of the nature of previous treatment received elsewhere by patients in the "previous" and "recurrent" categories, before reaching the clinics.

Histological Confirmation of Clinical Diagnosis—

For 1,501 of 2,204 new patients, a pathological report was available. Table VII gives the frequency of histological examination by site of disease.

TABLE VII
HISTOLOGICAL EXAMINATION IN NEW CANCER CASES
ONTARIO CANCER CASES—1938

Per Cent.....	65.6	75.1	22.6	14.8	11.8	10.1	100.0	100.0

*These figures exclude not treated cases in Toronto Clinic as follows: Breast 6, Oral Group 5, Air Passages 3, Rectum and Anus 3, Other Sites 25.

In two-thirds of all private cases and in three-quarters of public cases a tissue examination was done. Histological confirmation was most frequent in cervix uteri cases (91 per cent.). For all sites the percentage was 69.4. In oral and breast cases, the percentage of cases confirmed histologically was much higher than in the data reported by the National Radium Commission (65.9 and 78.6 compared with 33.4 and 45.0). In skin cases the frequency of biopsy was lowest, being 48 per cent, in private cases (230 out of 477) and 41 per cent. in public cases (89 out of 217).

A review of the figures on histological examination in breast, uterus, oral, air passages and rectum cases only, for each Centre, indicated quite wide variations in the frequency of biopsies, from clinic to clinic. The percentage of cases in which such examination was conducted was as follows—Hamilton, 64 per cent.; Kingston, 56 per cent.; London, 81 per cent.; Ottawa (Civic), 85 per cent.; Ottawa (General), 61 per cent.; Toronto, 79 per cent., and Windsor, 83 per cent.

Method of Treatment—

Data on the follow-up cards for 1938 indicated the treatment each new patient was given *during the year*. From these data the general groupings of treatment are given in table VIIIa.

TABLE VIIIa
METHOD OF TREATMENT OF NEW CASES DURING 1938

* Excluding Toronto Cases.

Of all treated cases (recurrences excluded) 595 patients out of 1,936 were treated by radium alone. This is 30.7 per cent. a figure markedly influenced by inclusion of the skin cancers of which two-thirds were treated by radium alone. Radium alone or with X-ray, surgery or both, was used in 1,002 or 51.7 per cent. of new cases (recurrences excluded). The distribution by site can be readily ascertained from the table.

Data on methods of treatment by clinic are given in table VIIIb.

TABLE VIIIb
METHOD OF TREATMENT OF CANCER CASES BY CENTRE—1938
(Recurrences Excluded)

TREATMENT	Hamilton	Kingston	London	Ottawa(C)	Ottawa(G)	Toronto	Windsor	ALL CENTRES	
								Cases	Per Cent.

Total Treated Cases.	295	178	132	242	88	877	124	1,936	100.0

These data show marked variations from clinic to clinic in the number of patients in whom radium was used, either alone or in combination with other methods of treatment. In Hamilton, radium was used in only 59 cases or 20 per cent. of patients, at the Ottawa General in only 27 or 31 per cent. In the other Centres the proportions were 51, 57, 58, 67 and 56 per cent. respectively at Kingston, London, Ottawa (Civic), Toronto and Windsor. Differences in case distribution alone do not fully account for those variations.

Cases Not Treated—From five Centres, cards were submitted for patients who had presented themselves for treatment, but who were not treated. Of a total of 99 such patients, 11 were breast cases, 10 oral cavity, 4 upper air passages, and 10 rectum. There were no uterus cases in the group. Among the reasons recorded for non-treatment were—too advanced (60), refused treatment (17), failed to return (6), died before treatment (6) and age or complicating disease (4).

Arrangements are being made for the collection of more complete data in future years. At the moment, interest centres especially on the 60 patients who were considered too advanced for treatment. This is about 3 per cent. of all cases admitted and adds further emphasis to previous findings as to the stage of disease when patients present themselves for treatment.

Age and Sex of New Patients Admitted During 1938—

The two sexes were approximately equally represented among the new cancer cases during 1938, with slight female excess. This female excess is marked at ages under 60 years, after which males predominate. Of the male cases, 37.5 per cent. were under 60 years and of the female cases 59.0 per cent. Table IX gives the age and sex distribution of the 2,204 new patients admitted during 1938 by site.

TABLE IX
TOTAL NEW CASES ADMITTED DURING 1938—BY AGE AND SEX

Total Cancer Cases.....	87	149	95	230	203	315	287	251	236	154	77	45	42	33	1,027	1,177
Per Cent. (by sex).....	8.4	12.7	9.3	19.5	19.8	26.8	27.9	21.3	23.0	13.1	7.5	3.8	4.1	2.8	100.0	100.0
Ratio Males to Females.....	0.58		0.41		0.64		1.14		1.53		1.71		1.27		0.87	

The marked female excess in breast cancer and the similarly marked male excess in oral cancers are striking. These data should be compared with the mortality figures given in the second annual statistical report on cancer (See Thirteenth Annual Report of the Department, 1938, p. 160).

Hospitalization of Cancer Cases—

This year data on the hospitalization of cancer patients treated in the clinics were complete, except for private cases at Toronto. A summary of the new cancer patients hospitalized by site of disease is given in table X.

TABLE X.
HOSPITALIZATION OF NEW CASES DURING 1938
ONTARIO CANCER CENTRES

SITE	Private			Public			TOTAL	
	Pts.	Days	Av. Stay	Pts.	Days	Av. Stay	Pts.	Days
Breast.....	74	1,395	18.9	53	1,906	36.0	127	3,301
Cervix Uteri.....	35	416	11.9	84	3,786	45.1	119	4,202
Body of Uterus.....	14	308	22.0	15	581	38.7	29	889
Oral Cavity.....	28	291	10.4	51	1,276	25.0	79	1,567
Air Passages.....	8	77	9.6	9	556	61.8	17	633
Rectum and Anus.....	23	913	39.7	15	973	64.9	38	1,886
Other Sites.....	142	2,815	19.8	132	6,148	46.6	274	8,963
ALL SITES.....	324	6,215	19.2	359	15,226	42.4	683	21,441

There is a strikingly greater average length of stay in hospital in the public over the private group, for each site. Of the new private cases treated, 25.4 per cent. were hospitalized and of the public cases 43.5 per cent. Gross averages for each Centre were found to vary markedly but these are of course influenced by the varying proportion of cases of different sites and stages.

Collective hospital days were translated into beds per year for each Centre, assuming a 75 per cent. occupancy of such beds. Exclusive of private patients at the Toronto clinic, the total collective days stay of all *new* cancer patients during 1938 was equivalent to 78 beds per year (Hamilton 7.3, Kingston 4.5, London 10.9, Ottawa Civic 21.9, Ottawa General 10.9, Toronto [public only] 16.8 and Windsor 6.1). This takes no account of old cases readmitted for further treatment or observation and these contribute significantly to the total hospital cancer days. Present legislation provides for 20 beds at Kingston and London and 50 at Toronto.

Professional Interest in the Clinic Service—

There are some 4,200 physicians in practice in Ontario. A review of the follow-up cards was made for the seven clinics to determine the number of different physicians who had referred cases for treatment. The findings are presented in table XI.

TABLE XI
REFERRING PHYSICIANS BY CENTRE
CALENDAR YEAR, 1938

CENTRE	New Cases on Record	No of Different Referring Physicians	Different Physicians Per New Case
Hamilton.....	302	133	0.44
Kingston.....	186	97	0.52
London.....	155	78	0.50
Ottawa (C).....	281	132	0.47
Ottawa (G).....	113	43	0.38
Toronto.....	1,017	520	0.51
Windsor.....	150	68	0.45
TOTAL.....	2,204	1,071	0.49

Thus 1,071 *different* physicians or 25 per cent. of the total number practising in Ontario referred one or more cases to the clinics during the year. This is a ratio of one referring physician for every two new cases admitted and is encouraging evidence of the wide public and professional interest in and recognition of the work being done by the Ontario cancer clinics.

Geographic Distribution of Clinic Patients—

In 1938, for the first time, it has been possible to determine the distribution of the new cancer patients admitted to the seven Centres, by area of residence. An examination of these data has shown that the case load is highest among the population in and about the county where a clinic is located. Thus, the case load per 100,000 population varied from 134 in Fraontenac, 109 in Carleton, 109 in Wentworth, 80 in Essex and 66 in Middlesex to 19 in Brant, 37 in Bruce, 40 in Elgin, 40 in Glengarry, 45 in Grey, 32 in Kent, 22 in Lambton, 27 in Norfolk, 37 in Oxford, 34 in Peterborough, 37 in Prescott, 37 in Waterloo, and 31 in Welland. The case rate for the province as a whole was 58. York peculiarly enough has a case rate below that of the whole province—52 per 100,000 population. All these variations will be followed in future because of the significance which they have as an index of patients reaching the clinics from various areas. The cancer death rate also shows variations from county to county but bears no constant relation to the fluctuations in the case rate nor are they of as large an order. Despite the strategic location of the Centres, distance among other factors appear to be exerting a strong influence on the number of patients reaching the clinics for treatment. The low case load in counties lying between the clinic centres is evidence in support of this contention.

Non-Cancer Cases—

During 1938, a total of 1,580 new non-cancer cases were treated in the clinics. Of this number 722 were patients with benign tumours and 858 were patients with various non-neoplastic conditions. A summary of these cases is given in table XII.

TABLE XII
TOTAL NEW NON-CANCER CASES—1938

NON-MALIGNANT TUMOURS		NON-NEOPLASTIC DISEASES	
Diagnosis	No. of Pts.	Diagnosis	No. of Pts.
Angiomata.....	143	Asthma.....	13
Cysts (various).....	27	Actinomycosis.....	22
Fibromata.....	52	Cervicitis.....	19

		Others.....	98
Total.....	722	Total.....	858

*Including cervical adenitis, ulcers, chronic inflammation, etc.

The frequency of "precancerous" lesions such as keratosis and leukoplakia is of note, these two contributing 152 patients. An effort will be made in future to collect data on the after-history of these cases.

MEDICAL STATISTICS

A. HARDISTY SELLERS, B.A., M.D., D.P.H., *Medical Statistician*

ON THE ACTIVITIES OF THE DIVISION DURING THE YEAR.

During 1938, the activities of the Division of Medical Statistics were further extended. The major part of the time of the staff has been devoted to the three projects outlined in the 1937 report namely—a study of public hospital morbidity and costs, the development and study of cancer clinic records and routine and research analyses of Ontario Hospital statistics. In each of these three fields of interest, the programme was materially extended and the usefulness and activity of the Division substantially increased. The following statement indicates the highlights of the year's work.

I. CANCER CONTROL—(a) *Ontario Cancer Clinic Statistics.*

In August, 1937, a plan of uniform case recording and follow-up was introduced into the seven cancer centres. The Government investment for radium alone in these centres is \$400,000.00 and, in addition, annual grants amount to \$86,000.00. These centres are an important source of information on cancer and its treatment. The uniform record scheme which was designed by this Division in co-operation with the Directors of the seven centres, will go a long way toward making good use of the data which is being accumulated. The new records were submitted to a year of trial and at a special conference of Directors in November, 1938, were reviewed in detail. At this time the follow-up cards, one of which is completed for each new patient, were approved for future use. Plans were made, however, for a revision of the history and examination forms, which revision will be completed during 1939.

The Cancer Clinic Statistics presented elsewhere in this report (pages 179 to 193) were secured through the operation of the new record plan under which the follow-up cards of all patients are forwarded annually to the Department for review and analysis. The statistical investigations already made have contributed knowledge of an important administrative and clinical character. Information concerning the source of patients treated in the clinics, the duration and nature of symptoms, stage of disease at the time of admission, etc., is much needed and one year's operation of the uniform record scheme has clearly defined the effectiveness of the new plan.

In order to assist the Directors of the clinics in the various aspects of recording, at least two visits were made to each clinic during the year. In this way difficulties experienced with the new plan are reduced to a minimum. Indeed, considerable time has been devoted during the year to inspection and supervision. Preliminary steps were taken toward complete revision of the Memorandum on Cancer Recording issued in 1937. The new memorandum will be considerably extended in detail and will cover points shown by experience during 1938, to need certain clarification.

(b) *Cancer Mortality.*

During 1938, the detailed study of cancer mortality in Ontario during the last thirty years was continued and some of the essential findings have been incorporated in a recent publication. Some of these data are included in the

Third Statistical Report on Cancer elsewhere in this document. Considerable assistance in directing cancer programmes may be anticipated from such a statistical analysis of available data.

(c) *Cancer Morbidity.*

During 1938, an investigation was initiated covering all cancer patients discharged or dying of cancer in all public hospitals in Ontario during 1937. This review will by no means give a complete picture of cancer morbidity but it *will* indicate the extent to which cancer cases are hospitalized, the mortality in hospital, the areas from which patients come, the relative importance of various cancer sites among hospitalized cases, as well as the contribution which cancer makes to hospital costs. In this review non-malignant tumors have been included for purposes of comparison. Up to the end of 1938 the available data had been transcribed for some 4,000 patients and tabulation is expected to be completed during 1939.

II.—PUBLIC HOSPITALS—

The comprehensive study of general morbidity in public hospitals, which was begun in 1937, was continued throughout 1938. It was found necessary, however, to limit the scope of the study to patients discharged during the three month period ending December 31, 1936, and patients in residence on March 31st, 1937. This work consumed the greater part of the available time of the staff during the year. Both coding of data and punching of Hollerith cards were completed during the year. Thus 35,000 cases were coded and 45,000 cards were punched, completing the preparation of 65,000 cases for analysis. The items coded and punched for analysis include hospital, place of residence, date of admission, age, sex, ward accommodation, rate paid, days stay, diagnosis, outcome, and Government grant. On November 1st, sorting and tabulation of the cards was begun using a high speed sorter and an alphabetical tabulator. Mechanical tabulation will be completed sometime during February or March. The formal report on this investigation will be completed during 1939.

In addition to the study of hospital discharges, a review of available statistical information on public hospitals from 1900 to 1938, including bed accommodation, patients treated, days stay, income and expenditures, etc., was commenced. This further work was undertaken to complete the picture provided by the more laborious morbidity study. The object of this second study is to ascertain the present position in respect to hospitalization in the Province, and to determine where possible the presence of significant trends in relation to known variable factors such as extent of hospital facilities, economic and social changes, increase in population, etc.

III. MENTAL HOSPITALS—

During 1938, preparatory work was done for a revision of the annual report forms used by Ontario Hospitals, and from which this Division prepares the annual report for the Province. The monthly report schedules were revised during the year in the light of administrative needs. The revision of the annual report forms, however, is more difficult and significant since it will considerably enhance the scope of the statistical report. It is planned to introduce the new forms beginning with the year ending March 31, 1939. A review of the statistical cards used in reporting admissions, discharges, deaths, etc., has also been made and during 1939 each of the twelve cards will be revised, bringing them into line with newer practice and newer requirements in hospital recording.

On April 1, 1938, a new classification of mental disorders was introduced for use in Ontario Hospitals. The new classification is that approved by the Council of the American Psychiatric Association in 1934. This new nomenclature will be incorporated in the revised annual report schedules for the year ending March 31, 1939, and will as a result be introduced throughout Canada.

Several special studies were made during the year, dealing with patients admitted to Ontario Hospitals on a warrant of remand, accidents occurring in the institutions, etc. In this field of special study and research, plans are being made to introduce the publication of bi-monthly statistical bulletins dealing with various aspects of Ontario Hospital statistics. These publications will be prepared and issued as the ten-year study of statistical data which was begun during 1937, proceeds. The first bulletin will be issued in March, 1939.

IV. PNEUMONIA—

During 1938 a statistical study was made of pneumonia mortality in Ontario covering the fifteen-year period 1921-1936. This review dealt with the essential features of the pneumonia problem and served to emphasize the general nature and scope of it. In addition, a study was made of pneumonia cases hospitalized in the seven largest public hospitals in the province during the year ending September 30th, 1937. These seven centres treat 30 per cent. of all patients hospitalized in general hospitals during a year. The object was to inquire into the relative importance of pneumonia as a cause of sickness and hospitalization and to secure an estimate of the probable number of pneumonia cases requiring treatment annually. The total number of estimated cases was placed at about 11,000. A report upon this work was presented at the twenty-fourth annual meeting of the Ontario Health Officers Association in June, 1938, and subsequently published.

V. GENERAL PUBLIC HEALTH STATISTICS—

During the year an increasing amount of statistical work has been done in co-operation with other Divisions of the Department. This type of service is one of the fundamentally important tasks of this Office. Each year this office issues two bulletins dealing with the chief causes of death. These bulletins present a review of the essential features of the mortality picture in the Province with the object of advising the administrative officers of the Department thereon. The preparation or assistance in the preparation of mortality and morbidity data together with direction in the interpretation thereof has come to be a principal function. The compilation of statistics on regional variations in mortality for certain causes of death, the after-history of patients treated in Sanatoria, mortality from diseases transmitted by raw milk, occupational and social variations in cancer mortality, are some of the many pieces of work done in this way. Further work was also done during 1938 in the preparation of statistics on the chief problems of public health concern, particularly infant mortality.

All aspects of the programme of this Division are being developed and conducted with the object of assuring an effective approach to all phases of the Department's public health and hospital programme and responsibilities.

ON THE CHIEF CAUSES OF DEATH IN ONTARIO DURING 1937

Official data for 1937 permit a commentary upon some of the essential features of the general mortality picture for Ontario during the year.

The crude death rate for 1937 showed a slight increase to 10.37 per 100,000 population over the figures for 1935 and 1936 which were 9.89 and 10.18 respectively. This increase reflects the influence of the "ageing" of the population on the *crude* death rate and, a substantial increase in deaths attributed to influenza. Data on the twenty chief causes of death are given in table I.

TABLE I
CHIEF CAUSES OF DEATH--ALL AGES
ONTARIO, 1937

Order	CAUSE OF DEATH	Int'l List Numbers	Number of Deaths	Specific Death Rate*	Percent. of Total Deaths
1.	Diseases of the Heart	90-95	7,226	194.7	18.78
2.	Cancer (all forms).....	45-53	4,527	122.0	11.77
3.	Diseases of the Arteries.....	96-99	4,036	108.7	10.49
4.	Pneumonia and Bronchitis.....	106-109	2,680	72.2	6.97
5.	Accidents.....	176-195	2,433	65.6	6.32
6.	Nephritis.....	130-132	1,946	52.4	5.06
7.	Influenza.....	11	1,659	44.7	4.31
8.	Tuberculosis (all forms)	23-32	1,315	35.4	3.42
9.	Prematurity.....	159	1,044	28.1	2.71
10.	Cerebral Haem., Embol., Thrombosis....	82	770	20.7	2.00
11.	Idiopathis Abnorm. of Bl. Pressure.....	102	713	19.2	1.85
12.	Diarrhoea, Enteritis and Dysentery.....	13, 119, 120	601	16.2	1.56
13.	Diabetes Mellitus	59	579	15.6	1.50
14.	Congenital Malformations.....	157	490	13.2	1.27
15.	Diseases of the Prostate.....	137	479	12.9	1.24
16.	Senility.....	162	439	11.8	1.14
17.	Hernia, Intestinal Obstruction.....	122	415	11.2	1.08
18.	Appendicitis.....	121	370	10.0	0.96
19.	Suicide.....	163-171	366	9.9	0.95
20.	Puerperal State.....	140-150	319	8.6	0.83
	Total.....		32,407	8.73‡	84.23
	All Other Causes.....		6,068	1.64‡	15.77
	GRAND TOTAL.....		38,475	10.37‡	100.00

*Rates per 100,000 population. ‡Rates per 1,000 population.

Population of Ontario, 1937 (estimated), 3,711,000.

These causes contributed 84.23 per cent. of all deaths during the year. Figure 1 gives some idea of the relationship of the first twelve "causes." Degenerative diseases of the heart, arteries and kidneys continue to play a major role in mortality. These three contributed 34.33 per cent. of all deaths during the year. At the other end of the life span, prematurity, congenital malformations, and diarrhoea and enteritis, the principal toll of which as a group occurs at ages under 1 year, contributed 5.54 per cent. of all deaths. In the sections which follow, comments are made on several of the chief causes of death which appear in table 1 and figure 1.

FIGURE 1

Cancer.

The volume of deaths attributed to cancer continues to rise. During 1937, 11.8 per cent. of all deaths certified were classed to cancer. Considerably more information on this problem is being brought forth as a result of statistical research (1). English studies for example have shown that there are marked variations in cancer mortality rates by site, from community to community (2). Work recently published in the decennial supplement by the British Register Office shows that cancer mortality rates exhibit a similar progressive increase as the social scale descends, *for both males and females* (3). This tends to suggest that occupational influences on male cancer mortality are of slight importance compared with environmental and economic conditions of home life. Cancer of the skin shows a similar gradient in females as in males and hence purely occupational factors may not be the sole, nor indeed perhaps the most important ones involved. The fact that 60 per cent. of all cancer deaths in Ontario occur at ages under 70 years and that one fourth of all the deaths are attributed to cancers of accessible sites, emphasizes this disease as one of significant importance in relation to the public health.

Accidents.

Accidents continue to contribute substantially to the annual death rate (4). In 1937, 2,433 deaths or 6.32 per cent. of all deaths were classed to accidents. This is a significantly lower figure than that for 1936 due to the reduction in the number of deaths attributed to excessive heat which numbered 65 in 1937 compared with 702 in 1936. Of the deaths classed to accident during 1937, 774 were attributed to motor accidents and a further 305 to accidental drowning.

The importance of motor accidents is further emphasized by the fact that there were 12,092 persons non-fatally injured in motor accidents during the year, a ratio of 16 persons injured to each death (5). A recent study published by the Dominion Bureau of Statistics shows too that a large proportion of deaths classed to accidents occur in the home (6). Scientific research, in industrial and traffic accidents at least, suggests that many accidents can be explained by physiological and psychological defects or maladjustments in the persons involved and that increasing attention is being paid to the "human factor."

Influenza.

The death rate from influenza has markedly increased since 1935 and 1936 when 958 and 722 deaths respectively were classed to this cause. In 1937, 1,659 deaths were attributed to influenza. That this increase is not spurious is borne out by the 8-fold increase in the number of reported cases of influenza during 1937, over the two preceding years. In 1937, 13,330 cases were reported to the Department, 94 per cent. of which were reported in January, February and March, and over 50 per cent. in February alone (7). The 8-fold increase in cases compared with a 2-fold increase in deaths suggests either an unusual prevalence of mild fatality or a large number of cases wrongly reported as influenza. By its nature influenza is subject to fluctuations in incidence and mortality and such have been reflected in the death records of Ontario since 1897 (8). The influenza death rate for 1937 of 44.7 per 100,000 population is the highest recorded in the Province since 1929. While variations in diagnosis may account in part for some fluctuation, such marked increase establishes definitely the presence of an unusual prevalence of a disease of significant fatality.

Pneumonia.

The death rate from pneumonia remained practically unchanged during 1937, one death in every 14 being attributed to it. The idea that pneumonia is significant as a cause of death only in infancy and old age is untenable (9). It is a leading cause of death in every age-group and at ages 1-4 years pneumonia ranks first in importance. Fifty-five per cent. of pneumonia deaths occur at ages under 65 years and 48 per cent. of lobar pneumonia deaths occur at ages 10-64 years.

Tuberculosis.

The tuberculosis death rate registered a new low in 1937 at 35.4 per 100,000 population. The decline in mortality from this cause has been gratifying and, with the extension of facilities for treatment and diagnosis, cannot but be expected to continue. The most significant recent observation is that the death rate at ages 20-29 years, formerly the highest of any age group, has been exceeded since 1934 by that for the age group 60 years and over. This is a definite gain since it has been accomplished, not by an increase in mortality at ages 60 and over, but by a persistent decline at ages 20-29 years.

Diabetes.

The diabetes death rate continues to increase (10). This persistent increase is remarkable in that it is strikingly age-limited. There has been a steady *decline* in the proportion of diabetes deaths occurring at ages under 50 years—in 1909, 48 per cent. of diabetes deaths occurred in the age group under 50 years, while in 1937 only 13.3 per cent. occurred at these ages. Conversely, while formerly over 50 per cent. of diabetes deaths fell at ages 50 years and

over, now 85 per cent. or more occur at these ages. A decline in the specific death rate from diabetes has occurred in each age-group up to 50 years and an increase in recorded mortality is limited particularly to the age-groups 60 and over. Increasing accuracy of diagnosis, increasing certification of diabetes at older ages, postponement of death to a later age through the use of insulin and the influence of statistical rules of preference where multiple causes are stated on the death certificate, are factors contributing to this picture. Using English data, Stocks has computed the average lengthening of life among diabetics since the introduction of insulin at $3\frac{1}{2}$ years in the gross (11). This finding was based on all deaths and is undoubtedly much lower than the figure which would be obtained if treated cases only were considered. Ontario data yields similar evidence (12).

Diarrhoea, Enteritis and Dysentery.

The death rate from diarrhoea, enteritis and dysentery increased from 12.9 per 100,000 (465 deaths) in 1935, to 15.1 (588 deaths) in 1936, and again to 16.2 (601 deaths) in 1937. This is an increase of over 20 per cent. since 1935. Fluctuations are to be expected in diseases of this nature, but the fact remains that of the deaths attributed to these causes in 1937, 411 or 68.4 per cent. occurred at ages under 2 years and 61 per cent. occurred among infants under the age of one year. That is to say, more than 10 per cent. of the infant deaths which occurred during the year were attributed to diarrhoea and enteritis. Both bacteriological and clinical studies have shown that these deaths are preventable in character (13). During the last ten years there has been an almost dramatic decline in the recorded deaths from these causes, a decline which amounts to about 50 per cent. In large municipalities the reduction has been most striking. Everywhere periodic fluctuations are recorded at intervals of 1 to 3 years, fluctuations to the extent of from 50 to 100 per cent. In Toronto, Hamilton and Windsor the death rate from diarrhoea, enteritis and dysentery under the age of 2 years has, since 1935, been the lowest ever recorded.

Maternal Deaths.

The maternal death rate remained at about the same general level during 1937, 319 such deaths occurring during the year. Of these 45 or 14 per cent. were attributed to abortion, 36 or 11 per cent. to haemorrhage, 65 or 20 per cent. to puerperal sepsis and 87 or 27 per cent. to puerperal toxæmias. In addition there were 22 deaths classed to embolism and 30 to other accidents of childbirth. The maternal death rate for 1937 was 5.2 per 1,000 live births, compared with 5.7 in 1936 and 5.0 in 1935.

CAUSES OF DEATH AT CERTAIN AGES

The principal causes of death in each of the age groups of special public health interest in infancy, childhood, adolescence and the productive period of adult life during 1937 are presented in succeeding sections of Table II. Here may be found the eight chief causes of death for a specified age group, the number of deaths classed to each and the percentage of all deaths at that age which were due to each specified cause. The two columns at the right of the table indicate the number of deaths from the specified cause which occurred at all ages during the year and the per cent. of all deaths from this cause which occurred at the specified age.

Infancy.

Deaths among infants during the first year of life remained about the same as in 1936, at 55 per 1,000 live births. Mortality under one month of age also remained at the same level—31 per 1,000 live births or over 56 per cent. of all deaths under one year. Diarrhoea, enteritis and dysentery were responsible for over ten per cent. of all infant deaths during the year and 61 per cent. of the deaths classed to this group at all ages, occurred under one year of age. Almost one-third of all deaths under one year are classed to prematurity. Data on the fundamental causes of prematurity in these cases is needed. These deaths reflect morbid factors of maternal and placental origin. Lacking a preventive approach, measures directed toward the scientific care of the premature infant have been rewarded substantially. Measures which exert an influence on the fundamental causes of prematurity, however, are the only ones from which any marked reduction may be expected.

The Pre-School Age Group.

Pneumonia ranked first at ages 1-4 years. Accidental causes ranked second, causing 146 deaths of which 45 were due to motor accidents, 26 to accidental drowning and 38 to accidental burns. The six groups—pneumonia, accidents, diarrhoea and enteritis, influenza, whooping cough and tuberculosis contributed two-thirds of all deaths at these ages. Tuberculosis fell from fourth to sixth place in 1937, being displaced by influenza and whooping cough. Diarrhoea, enteritis and dysentery ranked fourth with 8.9 per cent. of the deaths. Appendicitis appears in this age group with 30 deaths. This fact and the reduction in deaths from tuberculosis are significant changes at these ages during the year.

The School Age Group.

Accidental causes again claimed three times as many deaths as any other cause among children aged 5-14 years, being responsible for one death in every four. Eighty-eight out of the 204 deaths in this category were motor fatalities and 66 were accidental drownings. Appendicitis is the second chief cause and about one-fifth of all deaths attributed to appendicitis occurred at ages 5-14 years. A significant reduction in tuberculosis deaths occurred in 1937.

The Adolescent Period.

Accidental causes with 117 deaths ranked first again at ages 15-19 years and tuberculosis returned to second position among the chief causes as in 1935. Two deaths in every nine were deaths from accidental causes. Sixty of the 117 deaths were due to motor accidents and 30 to accidental drowning. A reduction of twenty per cent. in the tuberculosis deaths, compared with 1936, occurred at these ages.

Ages 20-49 Years.

Accidental and violent causes continued to rank first as a cause of death at ages 20-49 years. Tuberculosis remained a close second and contributed 12.0 per cent. of the deaths. It is especially significant from the public health standpoint, that 55.5 per cent. of all tuberculosis deaths occurred during this age period, that more than two-thirds occurred at ages under 50 years and four-fifths under 60 years. Diseases of the heart and cancer ranked third and fourth, respectively, each contributing more than 10 per cent. of the deaths. Deaths attributed to puerperal causes ranked sixth in this table but among females alone this group ranked third, being exceeded only by tuberculosis and cancer.

Totals for 1-8	12,304	78.2	24,057	51.1

‡Excluding suicide and homicide.

Ages 50 and Over.

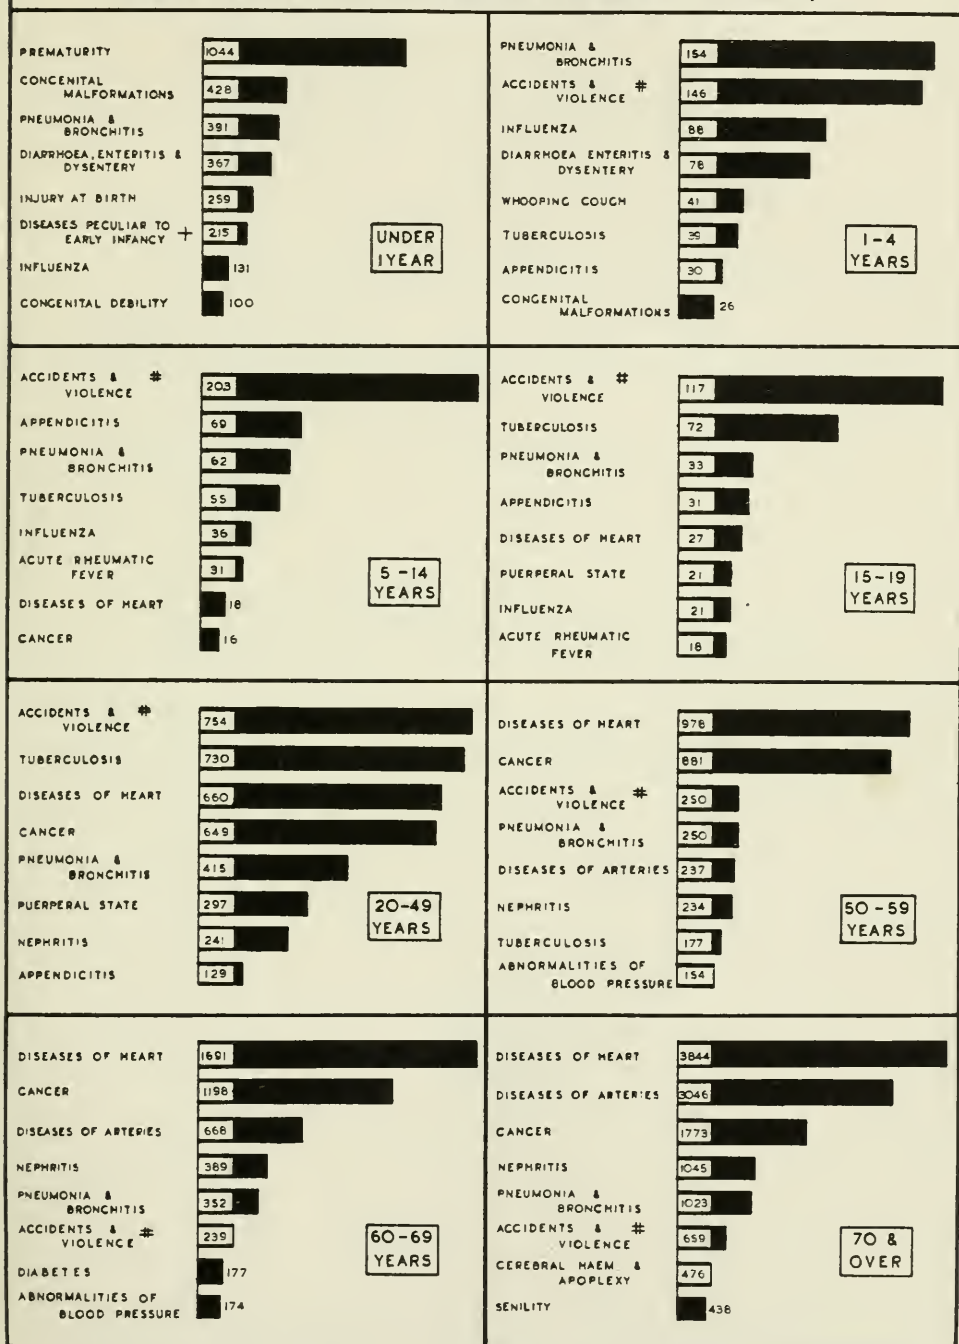

In the age groups 50 and over, diseases of the heart, arteries, kidneys, cancer and pneumonia play an increasingly important part and little change is noted over 1936. At ages 50-59 and 60-69 years cancer contributed approximately one death in ever five.

This Comment on the mortality picture in Ontario during 1937 is intended merely to touch upon the highlights in certain age groups. Further details of interest and importance can be obtained from the detailed tables (I and II), and from the official data in the Report of the Registrar General for 1937.

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Seventy-First Annual Report on the Hospitals Division, Department of Health, upon the Ontario Hospitals for the Mentally Ill, Mentally Defective, Epileptic and Habituate Patients for the year ended March 31st, 1938.

Respectfully submitted

A handwritten signature in cursive script, reading "Harold J. Kirby". The signature is written in dark ink and is positioned above the printed name "Minister".

Minister

HONOURABLE H. J. KIRBY, K.C.,
Minister, Department of Health,
Parliament Buildings, Toronto.

Dear Sir:

I have the honour to present herewith the 71st Annual Report of the Hospitals Division of the Department of Health for year ending March 31st, 1938.

During this year the anti-tuberculosis programme in Ontario Mental Hospitals was considerably extended. Since 1933 all new members of staff have been tuberculin tested and x-rayed. In May 1937 a programme was inaugurated which provides for an annual chest x-ray of all patients and of those members of staff who are tuberculin positive. (Chest x-rays have been made part of the routine medical examination of all newly admitted patients.) This programme for the detection of tuberculosis has revealed many previously unrecognized cases among both patients and staff. Detailed figures on incidence will be available shortly when the initial survey has been completed at one remaining hospital.

Special facilities have been made available at the Ontario Hospital, New Toronto, for the treatment of schizophrenic patients by means of "Insulin Shock" therapy. This has involved arrangements for the special training of physicians and nurses, the purchase of special equipment and the provision of a twenty-bed unit. The group initially selected for treatment consisted of twelve female schizophrenic patients, six of whom received insulin treatment, the other six serving as controls. Our first purpose was to determine whether insulin therapy, as such, resulted in a higher remission rate or whether improvement was due merely to the greater amount of individual attention received by patients receiving insulin. The first insulin injection was given on May 31st, 1937. The results obtained on the first forty-four patients treated in this unit showed that the remission rate was considerably higher in the insulin treated group than in the control group. While insulin may not be specific in its action, observations so far suggest that under this treatment patients become more accessible and thus more responsive to other forms of psychiatric treatment.

During the year, various officers of the Department of Health have co-operated in an advisory capacity with architects in the Department of Public Works in drawing up plans for the Ontario Hospital, St. Thomas, and the Children's Unit of the Ontario Hospital, Woodstock.

On March 31st, 1938, there were 13,574 patients in residence in the twelve Ontario Mental Hospitals. This figure represents an increase of 555 patients or 4.3% over the resident population at the beginning of the year. There were, in addition, 482 patients under supervision in approved boarding homes and 680 patients on probation. Thus, the total number of patients on the books of the Ontario Hospitals at the end of the year was 14,736. This represents an increase for the year of 449 patients or 3.1%. During the year, 2,004 patients were discharged. This represents 11.2% of all patients under supervision during the year, and is equivalent to 60.1% of the total number of patients admitted during the same period. Of the discharged patients 548 were described as "recovered" and 826 as "improved."

It is hoped that the information contained in this report will be useful, not only to those directly concerned in dealing with the mentally ill, but also to the general public whose interest and support are essential for further progress in this field of effort.

Respectfully submitted,

B. T. MCGHIE, M. D.,

Deputy Minister.

ONTARIO HOSPITAL, BROCKVILLE

C. S. TENNANT, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

It is regretted that an increase in the number of patients in hospital has to be reported again, in spite of all efforts to keep the number in residence from rising. The number of patients in Approved Homes has been increased slightly and would be greater were it not that some patients showing suspicious X-Ray findings in the Chest have had to be detained in hospital under observation.

The complete Chest Survey of patients and staff must be considered a very forward step in the general health program for the Province and our Ontario Hospitals in particular, and it is anticipated that the number of positive cases will show a decrease as the years pass.

With additions to the staff in the Occupational Therapy Department, it has been possible to give more attention to this work. A class of men was organized in the Occupational Therapy Department and considerable has been accomplished with them. Large groups of male patients were organized into classes for physical culture training and an increased effort has been made to have more patients engaged in work in the different industrial departments of the hospital.

A Librarian Interne appointed for the summer months of 1937, accomplished considerable in the institution library in the way of cataloguing the volumes and in arranging for distribution to the patients. Several new books were added, including a number in French.

Recently a Canteen was established, which besides being a great convenience to members of the staff, is greatly appreciated by the patients, many whom are permitted to make their own purchases from it. Patients relatives find it quite convenient to purchase in the Canteen, treats for their patients in hospital. It is anticipated that profits can be put to good use for the benefit of patients and staff.

STAFF, ADMINISTRATION AND BUILDINGS:

The following staff changes were made during the year:

Doctors M.W.M. Sloane and Margaret G. Rendall, new appointees in the Service, joined our staff. Doctor Margaret O. Thorpe left the Service. Doctor C. H. Gundry, formerly on the staff of this hospital, and lately returned from post-graduate work at Cleveland, Ohio, returned on September 1, 1937 to become Director of the Mental Health Clinic. Mr. John B. Boyd, Psychologist, resigned to accept a position with The Robt. Simpson Company and was replaced by Miss Ruth McConnell. Miss Rheta Farrow was appointed as Occupational Therapist to assist Miss Kathryn A. Rapsey. Mr. A. R. Summers, Chief Engineer, was promoted to the post of Chief Engineer at the Ontario Hospital, Whitby, and was replaced here by Mr. E. A. Clamp, from the Whitby staff. Miss Ellen M. Kemp, Laboratory and X-Ray Technician, replaced Miss Anna Goodfellow, who was loaned to the Department during the poliomyelitis epidemic in September, 1937, and who was later transferred to the Ontario Hospital, Hamilton.

Doctor H. C. Moorhouse was engaged for two months as Consultant in this district during the poliomyelitis epidemic, and it is felt that he is deserving of congratulations for the work which he did.

The number of papers and addresses given during the year by members of the hospital staff showed an increase. Speakers besides the Superintendent included Doctors Kells, Moorhouse and Gundry and Miss McConnell, Psychologist.

We cannot report any new building program under way at this hospital. In five Cottages, it was possible to make use of dark passages by constructing storerooms in them. This has released a few rooms for additional beds. During the past year, the plastering and painting program has been completed in all the Cottages and a start has been made in the Main Building. The tower over the main entrance to the Executive Building was torn down to the level of the main roof and a new roof was constructed at that level. Unfortunately this has resulted in the loss of a pleasing landmark in this locality.

ONTARIO HOSPITAL, COBOURG

G. C. KIDD, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

During the year 64 patients were admitted and 19 were transferred from other Ontario Hospitals, a total of 83. 84 patients were placed on probation, 48 were returned from probation, 41 patients were discharged and 7 patients died during the year. 32 patients were sent to Oxley House and Lorimer Lodge, and 21 were returned, during the fiscal year.

During the year a sound movie was installed in our auditorium, and it has proved a great source of pleasure to many of our patients.

A new recreation field was laid out in part of our old garden.

More books and magazines have been added to our Library, and the appearance of the Library has been greatly improved by painting.

We did not have any success with outside skating rink, but arrangements were made to send a group of girls to the Town rink one afternoon each week.

We are very grateful to the Salvation Army, who put on several concerts for our patients during the year.

Our Annual Sports Day was held on September 30th, and was a decided success.

Religious Services were held in our Auditorium every Sunday morning, Roman Catholic Service at 7.30 a. m. and Protestant Service at 9 a. m. One Communion Service was held for the Anglican patients.

Forty bedside lockers were placed on the wards.

STAFF, ADMINISTRATION AND BUILDINGS:

A full time Dentist was appointed.

The Annual Meeting of District No. 6, Ontario Medical Association, was held at this Hospital.

Papers were given by members of our Staff, to the Ministerial Association, Graduate Nurses' Association and Baptist Young Men's Club.

Combination fly and steel crete screens were put on all windows on Wards 3, 4, 5 and 6, with the help of three outside carpenters. New fly screens were made for the sewing room, laundry, toilets on Wards 1 and 2, operating room, special class room. The boiler house and kitchen chimneys were repaired by contract. All fire extinguishers were re-charged and the fire fighting equipment checked. A new type of grates were installed, replacing the original Files stokers.

ONTARIO HOSPITAL, FORT WILLIAM

J. N. SENN, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

A very kindly reception continues to be afforded the hospital by physicians in the district. Their co-operation in matters of patients under care and treatment in general hospitals and at home is very great and assists us considerably when the hospital becomes overcrowded.

We have endeavoured to train practically all members of staff in the care and treatment of patients including our outside staff such as farmhands. This has been very well received by the staff so much so that we have now no member of staff unless employed on the tractor or some similar machinery who does not take out and work with a group of patients. Instructions have been given to new members of the attendant staff on the ward in handling patients and in the duties expected of them.

No patients are boarded out from this hospital. This has not been commenced on account of our small patient population and the fact that practically all our patients enter hospital in rather acute condition. The patients are included in all activities about the hospital general farming and gardening work, care of stock, laundry work, mechanical department, ward work and occasionally in the staff quarters where suitable patients are available.

STAFF, ADMINISTRATION AND BUILDINGS:

During the year just past we constructed with our own help a sheep pen capable of housing fifty breeding ewes, a four car garage, a small fire hall to take care of hose reel, an auxiliary pump house and the reconstruction of a root house. These buildings have assisted materially in the general hospital administration.

ONTARIO HOSPITAL, HAMILTON

J. S. STEWART, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

Our Examination Unit has had the usual busy and interesting year. A total of two hundred and nineteen (219) patients were admitted to the Examination Unit as opposed to two hundred and eight (208) patients during the preceding fiscal year. Of the two hundred and nineteen (219) admitted, fifty-nine (59) were referred directly by family physicians and one hundred and sixty (160) were remanded from Magistrates' Courts. Of these one hundred and sixty (160) were remands sixty-nine (69) were certified as mentally ill and eighty-seven (87) were returned to Court as fit to stand trial. Four (4) of the patients remanded to the Unit died while in the Examination Unit. Of the patients admitted by physicians' certificates thirty-five (35) were certified as mentally ill and admitted to hospital and twenty-three (23) were discharged as non-psychotic or recovered from transitory mental disturbance. One patient admitted by physician's certificate died while in the Examination Unit.

The number of boarding out patients has been increased from thirty-four (34) at the close of the last fiscal year, to forty (40) at the close of the present fiscal year. Sixteen hundred and twelve (1612) calls and interviews have been made in connection with boarding out patients by the staff of the Mental Health Clinic.

A cafeteria type of meal service has been established in five wards in the Main Building during the past year. This service is, of necessity, somewhat simplified in nature but has been found to be an improvement.

The Occupational Therapy classes have been completely reorganized, following a visit of inspection by Miss Helen LeVesconte. We are deeply appreciative of Miss LeVesconte's helpful suggestions. More ward classes have been established. A class in wood work for male patients has been established in the afternoons at the Pines Cottage and the Head of the Department is in closer touch with physicians and her aides, who are engaged in ward classes, than she formerly was.

In addition to the usual hydrotherapy carried on in the wards at the hospital, a daily hydrotherapy centre has been established for both male and female patients in the Infirmary. Patients are taken to the Infirmary each day for treatment and returned to the wards following necessary rest. The results of more intensive treatment by hydrotherapy have been noticeable.

STAFF, ADMINISTRATION AND BUILDINGS:

No senior members of the staff left the Service of this hospital or were transferred to other hospitals during the past year. Dr. D. R. Easton was appointed to the staff and reported for duty on March 1, 1937. Dr. W. H. Weber was appointed to the staff and reported for duty November 6, 1937. Dr. G. A. Mellow returned from the Psychiatric Hospital, Toronto, in September 1937.

During the past summer our staff was, however, greatly depleted during the epidemic of Poliomyelitis as both Dr. Easton and Dr. Weber were seconded for duty in Public Health Work and Dr. Brillinger, the Director of the Mental Health Clinic, was also seconded for duty of Public Health Work. As this epidemic coincided also with the regular vacation period of physicians, the few physicians who remained on duty deserve recognition for their unflinching devotion to heavily increased duties.

As in the previous year, a regular meeting of the Hamilton Academy of Medicine was held at this hospital. This consisted of an afternoon meeting with ward work and a demonstration of cases of Paresis under treatment by malaria, with malarial charts and records of treatment, and demonstration of hydrotherapeutic treatments. Clinical demonstrations were held at the hospital for the senior classes of Nurses-in-training at the Brantford General Hospital, St. Catharines General Hospital, Hamilton General Hospital and St. Joseph's Hospital, Hamilton.

Dr. Brillinger, Director of the Mental Health Clinic, delivered a course of lectures to the above General Hospitals and also numerous lectures to Societies and Social Agencies.

Dr. Cummins presented a paper on Traumatic Psychosis at the meeting of the Ontario Neuro-Psychiatric Association.

No new building was done during the year. Repairs carried out consisted of re-roofing of several small buildings, all of which were badly needed.

ONTARIO HOSPITAL, KINGSTON

E. A. CLARK, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

There has been practically no change in the movement of patient population, the number of admissions, discharges, and the total population remaining about constant. The number of patients being supervised in approved homes and the number on probation has also shown but very little fluctuation.

A complete X-ray survey of all resident patients during the past year has permitted of definite isolation of cases requiring observation or active treatment for tuberculous lesions, and two complete wards have been set aside as a chest observation unit. This survey, in conjunction with a systematic X-ray examination of all new admissions, has very much improved and simplified the handling of this type of case, and represents a decided advance over the previous method of dealing with the tuberculous patient.

The program of Occupational Therapy has been further extended, and particular attention has been paid to the development of library facilities in conjunction with the Therapy Department. Through voluntary donations and through a more active campaign on the part of the hospital, a greatly increased number of magazines, etc., has very materially increased the service which this Department can render. A formerly unused cottage on the grounds has been fitted up as a library and reading-room for use for the summer months, and serves as a centre not only for parole patients but also for patients, who, during the fine weather, are able to spend the greater part of their time on the grounds, under supervision.

Treatment-rooms on each of the admission wards, which were commenced last year, have been completed, and are fully equipped for the handling of examinations and for minor surgery.

A recreation field at each division of the hospital was commenced two years ago, and of these one is now complete and the other practically so. The tennis courts have been improved, and are now available not only for the patients but for the staff as well.

STAFF, ADMINISTRATION AND BUILDINGS:

Miss Margaret Deane, seamstress; Mr. Thomas Guthrie, chef, and Mr. John C. Thomson, supervisor, were superannuated during the year, after long and faithful service. Acknowledgment was made of their services by fellow staff members. Miss Anne MacDonald, Head Therapist, resigned on September 22, 1937, and her position was filled by Miss Margaret Irvine, who was already on the staff in the same Department. Dr. H. D. Wilson was appointed to the medical staff on July 1st, 1937.

The Mental Health Clinic continues to receive an increasing demand for its services, and during the past year the Director has been appointed as a member of the teaching staff of the Medical Faculty, Queens University. A very definite increase in the number of requests for consultant advice are being received from practitioners in the district served by this clinic, and a great many cases who are definite candidates for admission are seen by the Director at the request of the family physician, before certification is proceeded with.

No major program has been undertaken with respect to building changes, but a continuous and active program by the hospital maintenance staff has effected a number of improvements. New floors have been laid in portions of the Main Building, window screening is now practically complete; night lights have been installed in all the wards, and the Public Works Department has continued its program of gradual installation of an improved type of new window. By the same Department, fairly extensive roof repairs have been carried out and exterior painting practically completed on the Main Building.

ONTARIO HOSPITAL, LONDON

G. H. STEVENSON, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

Admissions decreased from 525 to 484 but discharges increased from 310 to 326. This represents a discharge rate on admission of 68%.

In October and November 1937 there was a general survey of all patients to ascertain the extent of early or suspected tuberculosis. As a result between 40 and 50 patients of each sex were recommended for isolation and special care. The two ground floor wards in the North Building were set aside for this purpose.

A 16 m. m. talking picture equipment, the gift of an anonymous benefactor, has been installed in the auditorium and the shows have been much enjoyed.

Our methods of record keeping on the wards has been much improved, every patient no matter how long in residence, having a clinical record and other records filed together for ready reference and better attention.

In the hope of improving service to our male patients, experiments were conducted with electric shavers and as a result we have installed a supply of electric shavers which we expect will be a decided improvement on former shaving methods.

A librarian interne was appointed to take charge of our patients' central and branch libraries and to assist patients in their selection of reading material.

Our ward radio facilities, which had become in need of improvement have been surveyed and arrangements made for modernizing them.

STAFF, ADMINISTRATION AND BUILDINGS:

Dr. T. J. McNally, resigned December 31, 1937. Dr. E. E. Sawyer, resigned December 31, 1937. Dr. B. H. McNeel, appointed July 1, 1937. Dr. G. H. Lugsdin, appointed July 1, 1937. Dr. H. B. Carscallen, transferred from Ontario Hospital, Whitby, Jan. 1, 1938. Dr. K. M. McGregor, transferred from Ontario Hospital, Toronto, Feb. 1, 1938. Dr. A. E.

McKercher, transferred to Ontario Hospital, New Toronto, Dec. 1, 1937. (Although not effective until April 1, 1938.) His work as Director of Mental Health Clinic taken over by Dr. G. E. Hobbs. Miss Ruth Lewis, psychologist, returned from post-graduate work in Europe, Dec. 1, 1937. and resigned, December 31, 1937. Miss Margaret Sparling, psychologist, appointed February 7, 1938.

On October 1, 1937 we accepted our first class of eleven students, for a three months' course in psychiatric nursing, from the following general hospitals:—Victoria Hospital, London, St. Joseph's Hospital, London, St. Joseph's Hospital, Chatham, Public General Hospital, Chatham, Memorial Hospital, St. Thomas, General Hospital, Stratford and Grace Hospital, Windsor. This course is being repeated quarterly.

Most of our graduate nurses live away from the hospital and for their convenience dressing rooms have been set aside in the Main Building, North Building and Examination Unit, equipped with lockers.

The heating system and power house have been improved. Ornamental grounds considerably improved, especially about Main Building. All other departments and treatment facilities have been used for the welfare of patients as efficiently as possible. Cement walks have been repaired and a new walk laid from the rink to the East Cottage and North Cottage.

ONTARIO HOSPITAL, NEW TORONTO

T. D. CUMBERLAND, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

It has been possible during the last year to get more patients out-doors. It has also been possible to get more patients engaged in some occupation around the hospital, especially outside work, not only for male patients but also for female patients. The garden has been very much increased in size which gives a lot of employment for patients.

Insulin treatment was used to some extent. The results of treatment have been fairly good. With some re-arrangement of continuous baths more patients could be treated by hydrotherapy. I expect it will be possible to make some arrangement during the coming year to increase facilities for hydrotherapeutic treatment.

STAFF, ADMINISTRATION AND BUILDINGS:

There have been some changes in the staff amongst the junior officers during the fiscal year.

A considerable amount of repair work was done during the year. A new power house is under construction and nearly completed. A considerable amount of work was done beautifying the grounds, repairing roadways and sidewalks and also additional flower beds, which add very much to the appearance of the ground.

ONTARIO HOSPITAL, ORILLIA

S. J. W. HORNE, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

The general health of the patients could be considered more than satisfactory for the Fiscal Year. In August we had two cases of anterior poliomyelitis and we were very fortunate in that no further cases developed. Adequate precaution, isolation and the non-admission of patients during the epidemic was considered to be of great value in not having a wide-spread epidemic of this disease in our overcrowded School.

During the month of February a Tuberculosis Survey was made of all patients twenty-five years of age and under, as the result of which we had to establish two Tuberculosis Units, one for female patients and a second for male patients. The survey resulted in twenty-three females and thirty males being isolated for observation for pulmonary tuberculosis. All new admissions are now tuberculin tested and those having a positive reaction have chest X-Rays; as a result of this, we hope to prevent any spread of this disease among our patients.

During the year it was necessary to add seventy-three beds to the male side and twenty-three beds to the female side to accommodate urgent admissions. This naturally has overcrowded our dormitories and has taken away day-room space.

There have been few marked changes in the academic programme during the past Fiscal year. However, three advances have been worthy of special note. (1) The teachers took over the responsibility of the library program for the wards. Reading hours were established in the Cottages and proved to be valuable in stimulating an interest in reading, particularly with the senior school children, many of whom had never before read a book. Small transportable book-cases were made and one is left in the Cottage for a definite period and then transferred to another Cottage. (2) The elementary classes in plain cooking have become a regular feature of the school programme for senior girls. Also the instruction for caring for various rooms of a house. This is in addition to their instruction in sewing. (3) Emphasis has been laid on teaching the children how to tell time. A test has been established and successful scholars have their names entered on an honour roll. Seventy-four children were admitted to the academic school during the year and fifty-seven were discharged, as having completed their academic training. The enrolment of the academic school at the end of the Fiscal Year was two hundred and twenty-one (221).

The recreational programme under the direction of the Physical Instructor, as usual, has been complete and active throughout all Seasons. Two outstanding entertainments were provided by the School during the year, the Physical Demonstration in April which took the form of a play under the direction of Mr. Cole and Mr. Avery and the Christmas Concert which was directed by all teachers. It was an operetta of the popular story of Red Riding Hood and provided an enjoyable evening both for patients and staff. A third outstanding event was the annual picnic which was participated in by patients and staff. The picnic program started with a monster parade of school children with clown bands, floats, etc., which make a parade a success. Excellent sports were participated in by both patients and staff. At the close of the day both patients and staff had their suppers on the picnic grounds. School parties, skating parties, tobogganing, sleigh-riding and hockey were the principal sports indulged in during the Winter months. The three outdoor skating rinks were operated and the covered rink provided ample skating accommodation for the children during the Winter season. Hockey teams were formed and a number of games were participated in between various teams organized in the Hospital School. Summer sports such as baseball, handball, lacrosse, track meets, swimming were indulged in as in former years.

The Summer camp was operated on our own lake front and the new dining pavilion which was built during the early Summer was of great assistance and benefit in camp life. It was not only used as a dining room, but also a recreation hall for the boys during the wet and disagreeable weather.

Approximately two hundred boys were rotated through the Summer camp and next year it is hoped that we will be able to allot time for the girls to have some experience in camp life.

The problem of occupying patients was more difficult during the year than previously owing to the fact that we had a large increase in the number of low grade patients admitted. These were all of such tender years that it will be some time before they can be trained for occupational pursuits. However, during the year our farm, garden and landscape garden provided an excellent outlet for patients of all types.

It is of interest to note that the gardener reports a class of sixty imbecile boys, whose chronological age is not over fourteen years, as the most efficient berry pickers and garden helpers that he has had since he was connected with our garden.

Our main probation outlet for girls has been through the Colony Houses at Toronto and this programme has met with more success each year. We were handicapped, however, during part of the year in not having trained girls when there were vacancies in the Colony House, owing to the fact that it was necessary for us to admit more urgent low grade cases.

We were able to place more boys on probation with farmers during the past year, all of these being under the supervision of our Social Service Department. In addition to the girls probated to the Colony House, we have a number in the vicinity of the Hospital School which also receive supervision from our Social Service Department. Follow-up visits for other Hospitals were made by our Social Service Department.

STAFF, ADMINISTRATION AND BUILDINGS:

Mr. Avery resigned from the teaching staff. Mr. John F. Powers appointed to the teaching staff to replace Mr. Avery. Dr. E. V. Metcalfe appointed to the medical staff. Miss Eleanor Evans, Laboratory Technician resigned and Miss M. H. Pierce appointed as Laboratory Technician.

The regular routine training programme for newly appointed nurses and attendants was conducted, as new appointments were made. Training School for Nurses operated with its usual success, Graduation Exercises being held in the month of April.

Clinics and Demonstrations in reference to the care and training of mental defectives were given at various times during the year. The usual visits of Medical and Psychological Students, Social Service Workers, Occupational Therapists and Auxiliary Teachers were given at intervals throughout the Fiscal Year.

During the year general repairs were made to several buildings, including the rebuilding of the tramway from the Infirmary to Cottage "L". Laundry and Boiler Room were painted. Outside steps were replaced. Water tank and farm buildings were painted. Roofs of Cottages "O", "B", "C", "M", Boiler Room and Nurses' Residence were repaired. The wall between Cottage "D" and Nurses' Residence was rebuilt. The above general repairs not only improved the appearance of the buildings, but also keep them in a better state of preservation.

A most important addition was made in the Sunroom Cottage "K" with the removal of the old verandahs which had become very dilapidated. The construction of two fire-stairs, one in Cottage "K" and the other at the east end of the Administration Building has greatly improved facilities for removing patients in the case of cases of emergency. The ventilation system in the Laundry has improved working conditions for patients and staff who are employed in this department. New stokers were installed on the boilers which resulted in a smaller coal consumption, also in making the work just a bit more satisfactory for the firemen and those employed in this department.

ONTARIO HOSPITAL, PENETANGUISHENE

C. A. McCLENAHAN, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

A complete tubercular survey of the staff and patients has been almost completed.

An Anti-typhoid vaccine was completed on the staff and patients, and all the younger patients are being vaccinated.

A new male nurse has been secured to carry out the medical orders, and treatments of the patients in the New Building. Here also new methods of recording medication, progress, etc., of the patients by the staff has been put into use.

An Occupational Therapy instructor was secured for the New Building, and so far he has been making satisfactory progress. In this Building new radios were purchased for each ward, and all wire connections concealed in conduit. Also cells have been especially wired for patients to use their own radios.

The Dental Clinic visits this Building weekly, and with the addition of the new male nurse this service is functioning better.

A library was placed in the school room in this Building which adds to the comfort of these patients, and in addition a regular supply of magazines is available.

Throughout the year patient help has been utilized under s. in the wards, garden and on the farm. There is an Occupational Class held each day in the New Building. A new instructor for this was secured for the New Building, and so far greater interest is being shown by the patients in this work.

Our new sound machine was a source of great enjoyment throughout the year.

Programme of sports for patients has been well maintained throughout the year, and greatly adds to their contentment and peace of mind. Two new ping pong tables have been constructed for ward use.

The number of boarding-out patients has been slightly increased amounting to almost 4% of our population.

STAFF, ADMINISTRATION AND BUILDINGS:

With the exception of the resignation of graduate nurses there have been no changes in the senior members of the staff.

This winter course of lectures was given to male and nurse-attendants by the head nurse and physicians, in various subjects relating to their duties.

Dr. C. E. Hanna had charge of the poliomyelitis clinic in this district for three months during the outbreak of this epidemic.

Dr. C. A. McClenahan prepared and gave a lecture on Criminally Insane for the Junior Physicians in the service at Rockwood Hospital, Kingston.

The general outside appearance of the hospital has been greatly improved by painting the whole exterior including fire escapes, water tower which were rusting badly. At the same time all necessary repairs to wood work were completed before being painted leaving about nine employees' houses still to be done. A new verandah was constructed at the Steward's home. Repairs to the roof of the kitchen, Cottage "B" and attic were also completed. One of the old ice houses was torn down and replaced. Verandah at the Nurses' home was screened in. Three of the employees' houses were completely done over. Flashings on roof of Criminal Insane Building were repaired stopping all leaks.

The boiler room underwent extensive alterations, and the old feed water heater was replaced with new equipment. One old fire hydrant was replaced by a new one. Domestic hot water heater at the Old Building, and also the two converters at the New Building were retubed. Steam pumps were moved into the adjoining room, and small coal bunker built. Automatic dampers were put on boilers 1 and 2, and a catwalk was put around boiler No. 3. The overhead piping, electrical wiring in the Engine Room was changed, greatly adding to the appearance of the boiler room. A number of new transformers with wiring were installed to give better electric service to the houses, grounds and laundry, with very satisfactory results. Our old steam generator has continued to function in reducing the peak load, and should lower our electrical cost this year. The system of lighting of tennis court and the bowling greens for night use was constructed, and in the winter time these lights are used in the skating rink. A new steam return line had to be built to the Engineer's house. Alterations were made in the old chimney so that now the new smoke stack only is in use, and with its increased height carries all smoke and coal dust well away from the wards. The cementing of the rear courtyard as far as the bakeshop was completed, and has done away with the dust nuisance.

The laundry has had installed a large new extractor, and a smaller re-conditioned one along with a new washer, and the electrical equipment is being so arranged as to do away with all overhead belting. New clothes trucks and sorting tables were constructed, but our distributing room is not being extensively used as it would require another employee. A new sock dryer was also installed.

Some progress was made in grading and levelling of grounds about the building, and work parties from here assisted with general work about the hospital throughout the year.

A new siren was erected for this Building as a warning in case of escape of patient or trouble among them in the building. A gas gun has been made available in each ward in case of emergency.

The furnishings of Ward "B", Male Cottage, were completed, with the addition of new benches and tables in the sitting room.

Sufficient round tables were purchased to furnish both male and female dining rooms.

The installation of an x-ray machine is filling a long felt want.

The re-conditioned knitting machine is now in operation, and it is hoped to be able to refoot many old socks.

All necessary painting of single rooms was carried on here throughout the year, as, and when required.

Cow stables were completely renovated with new floors, stanchions, etc. disinfected and painted throughout before the new herd (22 heifers) arrived from Whitby. This herd came in towards the end of the year, and is supplying most of our milk. Thirteen heifer calves have been raised from this herd.

Cleaning and clearing of land was continued from time to time throughout the year, and the whole area about the water tower is now being used for gardening. All crops were good during the year with 3,668 bus. of potatoes being raised from 20 acres. Sufficient vegetables were produced to supply hospital use.

ONTARIO HOSPITAL, TORONTO

J. R. HOWITT, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

During the past year the Amusement Hall, the Occupational Therapy Department and the X-Ray Department have been redecorated and generally improved.

In the Occupational Therapy Department, the library has been considerably increased and a portion of the room has been set aside as a reading room for patients.

The hospital files have been completely rearranged in accordance with Departmental instructions and generally improved.

During the past year the top floor of the Main Building has been opened as a Male Ward, providing accommodation for 70 additional patients. Dining room accommodation for the use of these patients has been provided in the basement.

There has been little change in regard to the treatment of patients in the hospital but it is hoped that treatment with Metrazol will be commenced very shortly.

STAFF, ADMINISTRATION AND BUILDINGS:

Dr. R. C. Montgomery was transferred to the Department as Director of Hospital Services. Dr. Mary E. Marshall, Graduate Medical Interne, resigned to be married. Dr. A. J. Bromley was appointed to the staff as Graduate Medical Interne. Dr. Keith McGregor was appointed to the staff as Graduate Medical Interne and was later transferred to the Ontario Hospital, London. Dr. J. J. Weber was transferred to the Tuberculosis Unit of the Ontario Hospital, New Toronto. Dr. I. Sutton has been temporarily transferred to the Insulin Unit at the Ontario Hospital, New Toronto. Miss Gertrude Aikenhead, Social Worker, was transferred to the Psychiatric Hospital. Miss Margaret Rose resigned to be married and Miss Kathleen Hogarth was appointed as Dietitian in her place.

ONTARIO HOSPITAL, WHITBY

D. R. FLETCHER, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

During the year 1937-1938 we admitted 630 patients and discharged 546. The general health of our population has been good, and the number of deaths was not above the average.

Our boarding out group has continued to be increased very gradually, and we have found this outlet of value in making a stepping stone from the hospital to complete independence. Our occupational and recreational facilities are being taken such advantage of as our staff will allow. We are always grateful that on account of our location we are able to offer such a wide variety of occupational and vocational therapy.

Owing to the interest aroused in the treatment of Schizophrenia recently I asked for a survey of the results of our own treatment. We find that in the year 1933-34 we admitted 140 cases of Schizophrenia, including second admissions. At the present time, exclusive of those boarding out or on probation 54% have been living outside the hospital for a sufficient length of time to get discharged. During the year 1935-36 we admitted 136 patients suffering from this disease. Of this number 58% have been discharged. If we take only first admissions for the period last mentioned we have discharged already almost 68%. It would appear therefore that our treatment is so far successful that over 50% are sufficiently recovered to live permanently outside of hospital.

STAFF, ADMINISTRATION AND BUILDINGS:

Mr. William Ratcliffe, a returned soldier, and an attendant of this hospital since before the war, was superannuated on November 30, 1937. Dr. Carscallen came to us for a period of training, and was later transferred to the Ontario Hospital, London. Doctors Wellman, Vail and Cruickshank joined the staff as assistant physicians. Dr. Breslin joined the staff as graduate medical interne. Dr. Sweet is at present taking post graduate work at the Toronto Psychiatric Hospital. Dr. Cardwell has returned as Senior Physician from the same course. Dr. H. D. Mitchell left our staff on November 1, 1937, to go to the Ontario Hospital, New Toronto, as assistant superintendent. Dr. W. D. Smith was appointed to our staff as Senior Physician, and is taking special instruction here.

During the year we have continued our teaching efforts with various departments. Our supper groups for the senior staff members, and our training groups for attendants have met with excellent response.

I am glad again to pay tribute to the heroism of one of our staff, Mr. Fred Ing, laboratory technician. While driving along the road in front of the hospital he noticed a patient plunge into the water. Mr. Ing ran his car up to the beach, and plunged in fully clothed, succeeding after considerable trouble in rescuing the patient. Public recognition of his bravery was made at a meeting in the hospital when he was presented with a parchment from the Royal Canadian Humane Society.

This spring we re-opened our training school, which has been closed for some two or three years. We took in a group of eighteen young ladies, all with matriculation or better, and thereafter were asked to take a group of twelve male nurses-in-training under the Youth Training Scheme. This co-educational experiment will, I am sure, be followed with interest. We appreciate the confidence the Department has placed in us in sending various new members of staff here for periods of training, and also the constant advice and assistance of various of your departmental heads. Dr. A. L. McNabb has been particularly helpful in our animal husbandry problems during the year.

We are indeed grateful for the helpful and understanding attitude of the physicians of this district, who have been inconvenienced on several occasions because we could not at once find beds for their patients. To the citizens of the town generally, who have helped us by their tolerant and friendly attitude, and especially to those who have taken convalescent patients into their homes we owe a debt of gratitude.

ONTARIO HOSPITAL, WOODSTOCK

D. O. LYNCH, M.D., Superintendent

CARE AND TREATMENT OF PATIENTS:

Our patient population continues to increase steadily, there being 587 patients in residence, as compared with a total of 543 on March 31st, 1937. Admissions totalled 161, including 31 transfers from other hospitals. Discharges amounted to 85. Of the discharges 44.7 per cent were in the recovered group (Seizures controlled for a period of one year and upwards). Transfers to other hospitals amounted to 10. Deaths accounted for 23.

Work in the occupational therapy field has been extended with the appointment of Miss Marjorie Garrett. At the present time patients in the female cottages and wards attend the occupational therapy classes and individual instruction is also given all recent admissions. Classes on the male admission ward are well organized and the results are very gratifying indeed.

Our hospital school continues to function in a satisfactory manner, classes being held daily for both male and female patients under the direction of Mr. M. Magill. Apart from the routine academic instruction, a special language class is held for French-Canadian patients desiring to acquire a knowledge of English. The average number of pupils attending the school daily is eighteen. One of our female patients was successful in passing her Entrance Examination last June.

Realizing the necessity of placing our recovered male patients in non-hazardous occupations, we have continued the experiment of farm placement wherever possible. While occasionally a patient has to be returned, yet on the whole the results are gratifying and it is hoped that a much larger group can be similarly assisted in making a satisfactory community adjustment.

Various local organizations, the bands of the Oxford Rifles, Woodstock Veterans and Salvation Army, provided entertainment for our patients during the winter months and their concerts are always keenly appreciated.

STAFF, ADMINISTRATION AND BUILDINGS:

Dr. F. S. Lawson was transferred to the Toronto Psychiatric Hospital on October 1st, 1937.

Dr. C. V. Tisdale, formerly of this staff, was transferred from the Toronto Psychiatric Hospital and assumed his duties on October 1st, 1937.

Miss Marjorie Garrett, occupational therapist, formerly of this staff, resumed her duties on September 15th, 1937 after having spent a year at the Provincial Mental Hospital, Selkirk, Manitoba.

Mr. C. H. Wilson, farm manager, was superannuated January 1st, 1938. Before leaving, a presentation was made on behalf of the staff in appreciation of his many years loyal and faithful service.

The following addresses were given during the year:

By Dr. D. O. Lynch:

"Ontario's Criminally Insane" to the Woodstock Rotary Club.

"The Problem of the Narcotic Drug Addict" to the Woodstock Lions Club.

Address at Nurses' Graduation, Ontario Hospital, London.

Twelve lectures on psychiatry to the third-year nurses at the Woodstock General Hospital.

Clinic in epilepsy — nurses of the Woodstock General Hospital.

By Dr. C. H. Pratt:

"Epilepsy" at the Ontario Hospital, Kingston, to the junior physicians of the Ontario Hospital Service.

Further therapeutic research work in epilepsy was carried on during the year.

The value in epilepsy of a comparatively new drug, Benzedrine Sulphate, was tested in a series of six cases which were subject to very frequent petit mal and occasional grand mal seizures with associated mental sluggishness but otherwise of fair to normal mentality. (There was very little response to Phenobarbital therapy in these cases.) The average dosage was one tablet of 10 mgms. in the morning and at noon. In one case the dosage was

increased to two tablets in the morning, one at noon and one in the evening. No beneficial or untoward effects were noted throughout the group over a period of one month.

A sample supply of a preparation containing bellafolline, ergotamine tartrate and Phenobarbital was obtained for experimental use. One patient, who had very frequent petit mal and occasional grand mal seizures, was put on this treatment and given three tables t.i.d., p.c. as a substitute for Phenobarbital, grs. 3 b.i.d. and Caffeine, grs. 4 q.a.m. and at noon. No improvement was noted over a period of three weeks; in fact she had more seizures than when taking the Phenobarbital and Caffeine.

The work with the intramuscular injections of a substance said to be of value in imbalance of cholesterol metabolism, as reported last year, has been continued. The results so far are inconclusive. Only one of the ten cases showed a favourable response and we are continuing the treatment with this case and one other case of a suitable type.

During the month of May, 1937, Dr. Pratt visited and made a study of the care and treatment of the epileptics of all ages at the New York State Colony for Epileptics at Sonyea, the Ohio State Hospital for Epileptics at Gallipolis, the Michigan Farm Colony at Wahjamega and the Public School for Epileptics at Detroit. Although nothing new by way of treatment in epilepsy was encountered, considerable information was amassed having to do with the care of both children and adults which has an application to our hospital at present and will be useful with the new Children's Unit in operation.

Dr. Pratt was appointed by your Department as consultant to the Medical Officers of Health for the Counties of Oxford, Brant, Waterloo and Norfolk in the poliomyelitis epidemic of last fall. His full time was spent at this work during the months of September, October and the first week in November.

Work on the new Children's Unit was started last fall, the site chosen on the farm lands east of the hospital property. Thirty additional acres of land adjoining the institutional property were purchased to provide a suitable approach, play grounds, etc. At the present time the reception building, the kitchen and dining rooms and two dormitory buildings are well under construction and will probably be completed this fall.

The following include some of the major repair items and alterations completed during the year.

The female cottages, I and II, were completely redecorated and the nurses' quarters in Cottage II, no longer in use, were allotted to patients, thereby providing additional accommodation for some twenty-two women. At the present time the few nurses and nurse-attendants living in residence are very comfortably housed on the third floor of Cottage II. Redecoration of the amusement hall, the Superintendent's residence and the farmer's residence were also completed during the fall and winter months.

Carpenter alterations to store-rooms of Cottage I and II, making and installing fly screens to windows of male and female corridors, making sixty four park-type cement and wooden benches, as well as ordinary repairs, were carried out.

Masonry and bricklaying repairs were completed on the following: — Penthouse at central kitchen, extensive work on west wall of central kitchen, repairs to parapet wall and pointing on central dining wall, also pointing on all central kitchen walls.

Engineer's repairs and alterations were completed as follows: To underground return lines and all buildings. Alterations to steam lines and manholes. Replacing combination domestic water heater and storage tank in Cottage B. Installing Booster tank and heater for increased domestic hot water in Cottage A. Overhauling two stokers a power plant. Extension of eight-inch water main from administration building to new Children's Unit located on east side of the highway (Public Works contract.)

DEPARTMENT OF NEUROPATHOLOGY AND RESEARCH DIVISION

E. A. LINELL, M.D., Professor of Neuropathology, University of Toronto.

In May 1937, Dr. J. A. Hannah, who had been in charge of this Department was granted leave of absence in connection with the work of Associated Medical Services under the Canadian Medical Association. Research work was carried on in his absence by Dr. M. S. Thompson, and Professor Linell, Consultant in Neuropathology since 1935 continued his consultant services in the routine and research work of this Department. Increased interest has been shown by physicians in the post-graduate course in neurology, anatomy, physiology and pathology of the nervous system, which is conducted one hour a week for the duration of the academic session by Professor Linell.

Actual Work Done in the Department

During the year, material from sixteen autopsies were examined and gross reports sent out on this material. On ten cases reports were typed and sent out. Reports were completed on the other six cases but not typed or sent out. Microscopical reports were sent on seven cases. Microscopical slides were given to Dr. Linell for his file from six cases, these being duplicates of slides maintained in the files of this Department.

From sixteen autopsies 3,418 paraffin sections were cut and 137 blocks by frozen section. In all the slides stained totalled 5,345. Some of these slides were filed on completion of the examination and report. Others were filed ready to examine microscopically. In addition, fifteen large blocks were dehydrated and embedded preparatory to cutting on the large microtone. Five large sections were cut and three slides stained.

Exhibits

During the week of June 21-25, 1937, at the combined meeting of the Canadian and Ontario Medical Associations at Ottawa, an exhibit was put on by Drs. Hannah and Thompson on the work being undertaken in this Department relative to both routine and research problems. A further exhibit was put on in the Banting Institute in January, 1938, at a meeting held under the auspices of the Academy of Medicine.

Research

A further study was made of the literature to aid in the technical examination of thyroid glands from psychotic and normal patients. A paper was published by Dr. Hannah "A Case of Congenital Malformations of Vessels of the Brain and Spinal Cord," in the Canadian Medical Journal, 36: 588-591, 1937. Further study was undertaken on the relation of haemorrhage into the hypothalamus in cases of sudden death. This involved the preparation of serial sections through the walls of a large number of third ventricles.

A summary of the pathological findings of the schizo-phrenic patients as present in the files of this Department was presented to Dr. Linell.

Contacts with Other Pathological Work

A copy of some of the special stains used in this Laboratory for brain and nervous tissue was forwarded to Professor James Miller at Kingston for insertion into his new Manual of Pathology. The preparation of this copy was the work of Dr. Thompson.

In addition to the foregoing work, various conferences held in the Banting Institute on pathological material were attended by the staff of this Department. This material helps to give a greater understanding of neuropathology in general.

ANNUAL REPORT OF ONTARIO HOSPITALS CHEST CLINICS

(FOR THE FISCAL YEAR ENDING MARCH 31st, 1938.)

During the past fiscal year a further definite advance has been made in the tuberculosis diagnostic or case-finding programme.

Complete chest X-ray surveys of all resident patients and all Tuberculin-Positive staff in the Ontario Hospitals were commenced in May 1937. Such surveys have been conducted at the various Ontario Hospitals in turn, and at the end of this fiscal year only two more Hospitals remain to be surveyed in this manner. It is planned to repeat these surveys at each Hospital every year, transferring to the central T.B. Unit at New Toronto, those patients with definitely active tuberculosis, and segregating for further investigation at the Hospitals those patients with suspected active tuberculosis.

Following the completion of the initial survey at each Hospital, routine chest X-rays are secured for all incoming patients as well as for all incoming staff. Such films are forwarded each week from each Ontario Hospital to the central chest clinic office at the Ontario Hospital, New Toronto, for interpretation and report.

In this manner, all the resident patients and the Tuberculin-Positive staff at all the Hospitals, will be X-rayed every year. All new patients and new staff are X-rayed routinely upon coming to the Hospitals. Tuberculin-negative staff are retested with tuberculin every 6 months.

Such a programme is the most complete tuberculosis case-finding system known to be employed in any group of hospitals for mentally ill, epileptic, or mentally deficient patients. The results and figures obtained from this work should be instructive. Following the completion of the initial surveys at all the Ontario Hospitals, it is planned to submit a report upon the findings.

Unfortunately, the accommodation for tuberculous patients from our Mental Hospitals has not kept pace with the diagnostic programme. Although diagnosis and isolation are admittedly of great help in the control of tuberculosis, we know that proper isolation of mentally ill patients with infectious diseases is exceedingly difficult in most of our Ontario Hospitals. Furthermore, a considerable number of the patients so diagnosed as having active pulmonary tuberculosis would benefit from artificial pneumothorax treatments, which treatments are not practical until the patient can be brought to a central Tuberculosis Unit or Hospital.

The following table sets forth the situation as it existed near the end of this fiscal year (with surveys at 2 more hospitals to be completed). These figures will serve to indicate the urgent need for greater accommodation devoted to the care of tuberculous mentally ill, epileptic, and mentally deficient patients in our Ontario Hospitals.

	Male	Female	Total
Number in T.B. Units at New Toronto & Concord.....	146	154	300
Number under isolation at the various Ontario Hospitals awaiting transfer to the T.B. Units	53	5	58
Number under segregation for further investigation at the various Ontario Hospitals (suspected active tuberculosis—great majority of these will require to be transferred)	300	242	542
Totals	499	401	900

During the past fiscal year, Dr. W. Mosley was returned to work in the Department, and Dr. D. G. McKerracher was transferred to the Toronto Psychiatric Hospital. Dr. J. J. Weber was transferred to the chest service, and Dr. O. V. Dent and Dr. F. T. Fralick were appointed.

The superintendents and medical staffs of the Hospitals have co-operated and given their assistance to this work. Dr. G. C. Brink has continued to take a very active interest in this service and to him and the other members of the Chest Consultant Board we express our appreciation.

ONTARIO HOSPITAL SCHOOLS OF NURSING

MISS ESTHER A. ROTHERY, Reg. N., Supervisor of Nursing

The following is a brief report of the Ontario Hospital Schools of Nursing during the year 1937—1938:

Health Supervision:

This includes necessary immunization against diphtheria, scarlet fever, typhoid fever and smallpox during the preliminary course. Physical examinations, including chest x-ray, have routinely been done on entrance, and the physical examination has been repeated twice between that time and completion of training. The routine tuberculosis programme, which includes tuberculin tests, chest x-rays and other necessary examinations, has been carried out by the Clinic which visits each hospital approximately every five months.

The revised health record recently issued should give a more complete picture of the student's health throughout training, and guarantee a careful check on the supervision given.

Hours of Duty:

These have been appreciably reduced. The weekly schedule for day duty in four schools is below fifty-eight.

Instruction and Supervision:

Indications are that the teaching programme is much better organized. Two factors in this are the admission of students in regular classes and the appointment of full-time qualified nurse instructors.

General Hospital Affiliation:

The extension of this part of the course to one full year is most gratifying. The students are now entering the affiliate general hospital school in definite classes, at such times during the year that they may receive the necessary lecture courses. In most instances this is in the summer or at the beginning of the academic year in the Autumn. It is felt that our students are definitely now getting a much better organized and better supervised affiliate course. One school is sending the students for affiliation in the second year. Psychiatric nursing and mental hygiene are emphasized in their final year at the home school. This is proving a desirable plan. The same arrangements are being made for the men students at Whitby.

Selection of Students:

There is much evidence that a more careful selection of students has been made with regard to both educational qualifications and personality. We have found that students meet the minimum requirement and a large percentage exceed this.

In the seven schools, during 1937, one hundred and twenty-six candidates were admitted to the preliminary classes and seventeen were eliminated during or at the end of the preliminary term.

The re-opening of the undergraduate school at Whitby has attracted a group of desirable applicants. Eighteen were accepted into the first class, the majority of whom have completed at least Junior Matriculation.

Course of Men Nurses:

The response of young men to the announcement of the organization of this course at Whitby last Autumn would suggest that there will be sufficient interested and desirable applicants. Twelve men entered in November, 1937. On completion of the course, which includes a carefully planned year in the Toronto General Hospital, these men should be able to help fill the long felt need for better nursing service on the men's wards.

Records:

These are on the whole satisfactory. Records of classroom instruction and clinical experience are complete. Educational certificates show more accurately the standing of students on entrance to the school.

Psychiatric Affiliation:

The course organized at the Ontario Hospital, London, commenced October first, 1937, admitting eleven students from the following general hospitals: Victoria Hospital, London 2; St. Joseph's Hospital, London 2; Public General Hospital, Chatham 1; St. Joseph's Hospital, Chatham 1; Memorial Hospital, St. Thomas 1; Stratford General Hospital 2; Grace Hospital, Windsor 2. The interest which has been demonstrated would suggest that there will be a growing demand for this affiliation.

University Post-Graduate Courses:

The three Ontario Hospital staff nurses who were selected by the Department to take the course in Teaching and Hospital Administration at the University of Toronto School of Nursing last year are making excellent contributions in the schools at Whitby, New Toronto and London.

Seven nurses are taking the course this year and we anticipate valuable contributions from each in the undergraduate, affiliate and post-graduate teaching programmes.

The policy of the Department in selecting suitable nurses and assisting them in taking this course is a most commendable one and it is expected that the results will prove that it is a worth while undertaking.

TABLE No. 4
ANNUAL INCREASE IN PATIENT POPULATION (1) 1919-1938

HOSPITAL YEAR (2)	Total on Books at End of Year	Increase or Decrease over Previous Year.	
		Number	Per Cent
1919	7,482	-----	-----
1920	7,689	207	2.7
1921	7,970	281	3.5
1922	8,368	398	4.7
1923	8,775	407	4.6
1924	9,109	334	3.7
1925	9,489	380	4.0
1926	9,656	167	1.7
1927	9,708	52	0.5
1928	9,775	67	0.7
1929	10,032	257	2.6
1930	10,390	358	3.4
1931	10,930	540	4.9
1932	11,498	568	4.9
1933	12,236	738	6.4
1934	12,883	647	5.3
1935 (5 months)	12,878	—4	-----
1936	13,870	990	7.7
1937	14,287	418	3.0
1938	14,736	449	3.1

(1) The annual increase as shown in this table indicate the increases in the number of patients *shown on the books of mental hospitals*. The figures therefore include patients in hospital, in boarding homes and on probation at the stated times.

(2) The years 1918-1934 are fiscal years ending October 31. The years 1936-1938 are fiscal years ending March 31. The period designated 1935 in this table is a five month period only, namely November 1st, 1934 and March 31st, 1935. These increases do *not* necessarily reflect increases in the prevalence of mental disorders in the community, since they are largely determined by enlargement of hospital accommodation.

TABLE No. 18

FIRST ADMISSIONS BY DIAGNOSIS APRIL 1st, 1937—MARCH 31st, 1938

PSYCHOSES	Male	Female	TOTAL
9. Traumatic psychoses	6	2	8
2. Senile psychoses	85	109	194
3. Psychoses with cerebral arteriosclerosis	93	72	165
4. General paresis	113	31	144
5. Psychoses with cerebral syphilis	2	1	3
6. Psychoses with Huntington's chorea	2	2	4
7. Psychoses with brain tumour	1	2	3
8. Psychoses with other brain or nervous diseases, total	9	2	11
(a) Cerebral embolism	1	1
(b) Paralysis agitans	1	1
(c) Meningitis, tubercular or other forms.....
(d) Multiple sclerosis	1	1
(e) Tabes dorsalis
(f) Acute chorea
(g) Other diseases	7	1	8
9. Alcoholic psychoses, total	30	6	36
(a) Delirium tremens	5	5
(b) Korsakow's psychosis	1	2	3
(c) Acute hallucinosis	19	1	20
(d) Other types, acute or chronic	5	3	8
10. Psychoses due to drugs & other exogenous toxins, (a) Opium (and derivatives), cocaine bromides, chloral, etc., alone or combined	3	5	8
(b) Metals, as lead, arsenic	2	4	6
(c) Gases
(d) Other exogenous toxins	1	1	2
11. Psychoses with pellagra
12. Psychoses with other somatic diseases, total	24	41	65
(a) Delirium with infectious diseases	2	2	4
(b) Post-infectious psychosis	4	4
(c) Exhaustion delirium	3	6	9
(d) Delirium of unknown origin	3	2	5
(e) Cardio-renal diseases	4	4	8
(f) Diseases of the ductless glands	3	3
(g) Other diseases or conditions	12	20	32
13. Manic-depressive psychoses, total	152	173	325
(a) Manic type	49	59	108
(b) Depressive type	90	82	172
(c) Other types	13	32	45
14. Involution melancholia	22	68	90
15. Dementia praecox (schizophrenia)	332	262	594
16. Paranoia and paranoid conditions	22	21	43
17. Epileptic psychoses	35	26	61
18. Psychoneuroses and neuroses, total	32	41	73
(a) Hysterical Type	2	11	13
(b) Psychasthenic type (anxiety and obsessive forms)	13	9	22
(c) Neurasthenic type	12	15	27
(d) Other types	5	6	11
19. Psychoses with psychopathic personality	3	1	4
20. Psychoses with mental deficiency	21	30	51
21. Undiagnosed	20	18	38
22. Without psychosis, total	445	271	716
(a) Epileptics not psychotic or feeble-minded....	28	20	48
(b) Epileptics who are feeble-minded	13	15	28
(c) Alcoholism without psychosis	66	6	72
(d) Drug addiction without psychosis	21	6	27
(e) Psychopathic personality without psychosis..	26	5	31
(f) Mental deficiency	201	184	385
(g) Others	90	35	125
TOTAL	1452	1184	2636

DEPARTMENT OF HEALTH

SIXTY-NINTH ANNUAL REPORT

ON THE

Public Hospitals, Private Hospitals

Hospitals for Incurables

AND

Convalescent Hospitals

OF THE

PROVINCE OF ONTARIO

FOR THE YEAR WHICH ENDED 30th SEPTEMBER

1938

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 16, 1939

ONTARIO

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty
1939

Parliament Buildings,
Toronto, April 12th, 1939.

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit to Your Honour the Sixty-ninth Annual Report on the Hospitals of the Province of Ontario, for the year which ended September 30th, 1938.

Respectfully submitted,

HAROLD J. KIRBY,
Minister of Health.

Parliament Buildings,
Toronto, April 12th, 1939.

THE HONOURABLE HAROLD J. KIRBY, K.C.,
Minister of Health.

SIR:

I have the honour to submit to you the Sixty-ninth Annual Report on the Hospitals of Ontario for the year which ended September 30th, 1938.

I have the honour to be, Sir,

Your obedient servant,
C. J. TELFER,
Inspector of Hospitals.

Hospitals

Herein is presented a detailed report on Public, Red Cross and Convalescent Hospitals, Hospitals for Incurables, Sanatoria for Consumptives and Private Hospitals, operating in the Province of Ontario, as compiled from the Financial and Statistical Statements submitted by each, for the year which ended September 30th, 1938.

There were 161 of these institutions in operation and participating in Provincial grants at the close of the year, as well as 58 Private Hospitals, classified as follows:—

117 Public Hospitals	4 Convalescent Hospitals
29 Red Cross Hospitals	3 Convalescent Summer Camps for Children
8 Hospitals for Incurables	
57 Private Hospitals	

In Public General Hospitals, exclusive of Red Cross Outposts, there was an increase in the number of patients treated of 7,327 over the previous year. The average number of patients in hospital daily was 9,589, an increase of 276 over the previous year.

Operating costs increased \$570,897.97 over the previous year, and patient revenue was also up \$219,344.25. Income from investments reached a total of \$350,344.65, or \$71,197.62 more than the previous year. Income from donations reached a total of \$715,354.27, an increase of \$104,001.36 over the previous year. Income from municipalities amounted to \$3,015,912.75, or \$8,068.63 less than the previous year, and the amount paid by the Province by way of statutory grants was increased by \$34,848.19.

The Red Cross Society opened a new Outpost Hospital during the year, at Armstrong.

Executives and officials of the several institutions reported herein are requested to make a careful study of the tables, comparing their hospital with those of similar size and capacity.

Those interested in Private Hospitals will find a table in the back of the report dealing with these institutions.

C. J. TELFER,
Inspector of Hospitals.

CONSOLIDATED STATEMENT GIVING CERTAIN STATISTICAL AND FINANCIAL INFORMATION

TO THE HONOURABLE ALBERT MATTHEWS,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Annual Report upon the Prisons and Reformatories of the Province of Ontario for the year ending 31st March, 1938.

Respectfully submitted,

H. C. NIXON,
Minister.

HONOURABLE HARRY CORWIN NIXON,
Provincial Secretary of Ontario.

SIR:

In presenting the several reports concerning the Reformatories and Prisons of Ontario for the year which ended March 31, 1938, I wish again to give first the following table showing the number of commitments and sentences from the year 1913.

Year ending September 30th	Approximate popula- tion of Ontario.	Persons Committed for Trial	Persons Sentenced to Prison
1913	2,767,000	19,250	11,897
1914	2,770,000	22,777	14,801
1915	2,788,000	20,337	12,663
1916	2,728,000	16,100	9,364
1917	2,750,000	12,445	7,867
1918	2,769,000	13,242	7,874
1919	2,821,000	13,096	7,904
1920	2,849,000	14,756	8,643
1921	2,934,000	16,800	9,790
1922	3,101,000	14,800	9,312
1923	3,035,000	13,995	8,036
1924	3,075,000	15,879	8,834
1925	3,115,000	18,023	11,306
1926	3,151,000	18,033	11,371
1927	3,176,000	20,578	13,927
1928	3,241,000	23,786	16,358
1929	3,285,000	25,980	17,626
1930	3,366,000	29,126	21,421
1931	3,432,000	26,358	18,127
1932	3,479,000	25,235	15,804
1933	3,510,000	22,484	14,538
1934	3,540,000	20,916	13,509
Year ending March 31, 1936	3,690,000	24,053	16,356
1937	3,711,000	27,592	20,618
1938	3,731,000	30,345	23,649

Note: The fiscal year was changed in 1935 to end March 31.

The important and serious fact is immediately evident that there has been a huge increase in the number of prisoners in recent years and this increase continued without abatement during the year under review. This increase is out of all proportion to the increase in the total population of Ontario. A glance at the number of commitments in the various categories of crime shows that the increase has been in crimes against *Order* and *Peace* and against *Property* and comparatively little increase in crimes against the *Person* and against *Public Morals* and *Decency*.

A careful search for the causes of crime brings the conclusion that they have not materially changed through prolonged time and consist of the undesirable characteristics and weaknesses of human nature that have caused grief, sorrow and tragedy through the ages. Yet while they have not varied in kind they vary in volume and the number of persons involved. It is obvious from a perusal of the criminal statistics compiled in this Province during the year that by far the greatest proportion of crime is still committed by those of below average intelligence, elementary education and perhaps as a result of these two preparations for life, unskilled or entirely without a trade or profession. In times of economic stress such persons, if already employed, are the first to get pushed out of work and find it almost impossible to find remunerative work again. They follow the line of

least resistance and being what they are, lacking in intelligence and moral stamina, gravitate to crime.

The present high point of crime is, therefore, easily understood in view of the present world, national, family and individual conditions and the resultant economic conditions.

But even in present economic conditions the amount of crime could be very much reduced by better training of the youth of our land. Most of current crime is committed by adolescents and young men. It is true and gratifying that much is being done by many agencies but much more could be done.

The home through time has been the place above all others where youth has been properly trained or spoiled and it is now. If the parents do not do this important work of properly training their children it probably will not be done. One sympathizes with many parents of our present day. Distracted with the effort to find the necessities of life such as proper shelter, food and clothing, for their family, it is not surprising that weary mentally and physically and discouraged they sometimes fail to properly influence their children.

Yet I believe that generally speaking the youth of our land think and act straight, are willing to work and get ahead in life by their own efforts and will likely make a better job of living than generations preceding them. If we give them a chance at useful work they will successfully make their way.

During the year there was a material increase in the per diem maintenance cost per prisoner. The disturbed conditions outside the Institutions were felt inside and to maintain order and discipline it was necessary to increase custodial staffs. Good discipline in general was maintained. If prisoners do not learn to respect law and order inside prison they are not likely to do so after discharge.

The cost at the Ontario Reformatory, Guelph, was considerably increased by two fires, one in the main stores building by lightning, and the other in the dairy barn of unknown cause. Throughout the Institutions it was found necessary to make heavy repairs to buildings.

Staffs, as well as being increased, were undoubtedly improved by further weeding and higher qualifications required in replacements and additions. Certainly the calibre of these staffs is the highest in the history of our Institutions.

These Institutions are dealing with the failures of life. These failures are not placed in our care until they have passed the years in which character is most easily developed. And yet very material reformation is accomplished. In spite of the large increase in the total number of prisoners the percentage of repeaters dropped from 48.6% to 45.3%. And the majority of these repeaters are comparatively young men.

Because of the frailties and uncertainties of human nature, it is never easy to accurately forecast the future of these persons but results of the work of the Board of Parole and the Parole Office continued very satisfactory. Parole in carefully selected cases is a valuable stepping stone to rehabilitation.

Again, Sir, I wish to commend our Officials and Officers in the Department and the Institutions for their splendid work and to express my appreciation of your constant sympathetic consideration.

C. F. NEELANDS,

Deputy Provincial Secretary.

EDUCATIONAL RESULTS AS SHOWN BY A STUDY OF REFORMATORY INMATES

BY

J. D. HEASLIP, M.D.

Superintendent, Ontario Reformatory, Guelph, Ontario.

Social maladjustment in childhood and youth evidenced in delinquent behaviour accounts for most of our reformatory admissions. It is also true that only a very small percentage of this delinquent behaviour leads to a reformatory sentence. Many boys find themselves in court and are placed on probation, or suspended sentence, and never appear again as offenders. Others may appear four or five times and may secure only a short gaol sentence. Those under sixteen years of age may be sent to a boys' training school. Others, and they are in the minority, who are over sixteen years of age, may be sentenced to the reformatory on their first appearance in court. These are termed "first offenders" by some, but this term is truly a misnomer. Investigation usually shows that these "first offenders" lives have followed a delinquent pattern for months or years and this is the first time the law has "caught up with them". Some of these boys are very resentful that they have to do a reformatory sentence on their first appearance in court, because they have known other companions or acquaintances who made several appearances. They may also have profited with these companions in the fruits of their illegal ventures.

I do not wish to register an opinion against this probation given by the courts, because I believe it is very desirable to straighten a boy away without institutionalizing him if this is at all possible.

A survey of our total population of 664 on March 31, 1938, verifies the above statements. We have 246 prisoners or 37.05% against whom there was no record of any previous convictions. There were 418 or 62.95% who had records of previous convictions.

The number of prisoners of 25 years of age and over was 154. Of these 116 or 75.32% of this group were first offenders, and 38 or 24.68% of this group were recidivists.

The greatest group in our total population were those of the age group 15 years up to and including 24 years. Ages of this particular group:

Age	15	16	17	18	19	20	21	22	23	24
Number	3	56	91	100	89	86	33	18	21	13
Total of										510

Of these 130 or only 25.49% were first convictions, while 380 or 74.51% had been previously convicted and under arrest. Of these 380, 175 had actually served time in custody under sentence either in our reformatories or county gaols, 65 had served one previous term in our reformatories; 13 had served two previous terms in our reformatories:

No. of Inmates	Serving Sentence Previously
105	Once
47	Twice
16	Three times
6	Four times
1	Five times

and all before the age of 25 years.

No listing in the above is made of those boys who had served a term in one of the boys' training schools. We had at March 31, 1938, some 82 boys we knew had been in these schools. There were probably a few more.

The problem of our reformatories and the chief expense to the public is not the boy who gets into trouble once and serves one sentence here; but the boy who starts early and becomes a recidivist here, and keeps right on serving sentences in our other reformatories at Mimico, Burwash and Langstaff, with probable terms interspersed at penitentiaries either in this country or the United States. The economic loss due to the depredations of this recidivist group, added to costs of conviction, very often totals a great deal more than their permanent upkeep would be in a government institution.

The solution seems to be PREVENTION, and I believe something can be done in our Public Schools to forward this aim if you as teachers can distinguish the type of boy early, who may be our future inmate.

Criminal causations are complex, not simple. No one factor is responsible for the main influence in causing offences against our society and laws. Almost invariably not one but many causes are operating in a given case. After interviewing many hundred inmates, talking with their parents, reviewing magistrates', judges' and parole board reports and sociological records, I am of the opinion that the following causes are the most frequently met with, and given in the order in which they occur:

- (1) Defective home conditions appear most frequent.
- (2) Mental abnormalities and peculiarities a close second.
- (3) Bad companions.
- (4) Faulty interests.
- (5) Improper sex influences.
- (6) Abnormal physical conditions.
- (7) Mental conflicts.
- (8) Defective heredity.
- (9) Defective early development conditions.

(1) and (3)—Lack of supervision and discipline is due to lack of control in the home from a variety of causes: absence of one or both parents; pampering by

the mother; or indifference on the part of the parents. Bad companions are a direct result of this lack of supervision and the failure of parents to know with whom their children are associating, and what the children are doing and talking about. Friction in families may be due to disciplining—the father may be unreasonable in his discipline. Undesirable influences environmental in type seem to have been due to poverty. No home life, changing home conditions, lack of family solidarity, mother dead, father and children keeping house—are all conditions met with, many times. Also low moral standards in the family due to ignorance on the part of parents. Too much supervision and discipline sometimes has the opposite effect to that desired, causing poor moral development because the parents make all the decisions for the child.

Bad neighborhood conditions are chiefly due to the presence of adult and juvenile lawlessness. The physical elements of the environment may cause criminality.

(2) Mental abnormalities show the following relative importance in causing criminal behaviour.

- A. Mental Defectiveness.
- B. Borderline cases.
- C. Dull normal mentality.
- D. Instability.
- E. Abnormal extroversion.
- F. Inferiority complex.
- G. Lack of ethical judgment and insight.
- H. Abnormal suggestibility.
- I. Abnormal resistance to control.
- J. Mental disease
- K. Abnormal interversion.

(4) Faulty interests in education and vocation rank first, with faulty recreational and sex interest ranking second and third respectively.

(5) Improper sex influences come most often through early introduction into autoerotic practices with early introduction into homosexual practices, early undesirable sex information and early introduction into hetero-sexual practices.

(6) Abnormal physical conditions such as paralysis, amputations, defects of speech and hearing, etc., that prevent a boy from being normal in his life.

(7) Mental conflict is based most often on sex, but parentage and theft may also serve as a basis. I might cite here as an illustration the case of a lad recently discharged, who stole a car and was carrying a concealed weapon. His mother was frightened of this boy, who was just past sixteen years of age, and stated she did not wish to ever see him again. He was extremely bright, having a 16 plus mental rating and the wish to become an archaeologist. He was remanded to the Ontario Hospital, Whitby, for a month for observation, and the psychiatrists found him

normal mentally, before he came to us. One day in an interview he told me what I believe was the whole cause of his criminal behaviour. From the time of his childhood he had no father like the other boys he played with and he had a younger sister. When he had inquired of his mother where his father was, he was always told by his mother that his father had been killed in the war. About the age of twelve he was able to figure out for himself the war had been over about four years before he was born, and he never asked his mother again. This resentment toward his mother was never cleared up between them until after our interview. The mother did not know the cause of her son's attitude to her, or to his sister, and I believe that the proper adjustment of this boy to his parentage, will enable him to overcome his difficulties, and I hope will lead him to live a normal life in future.

(8) Defective heredity, and

(9) Defective development conditions, need only be mentioned.

Every inmate on admission to this institution receives a thorough medical examination. He then goes through our school department, where he undergoes a Columbian mental test, and an educational test which rates his educational age on Ontario Public and High School work. If he is illiterate he receives the American Army Alpha Beta test for illiterates. If his mental test score is low he goes to our psychiatrist for a mental examination. A sociological report is made upon him with a psychologist's opinion, and a school report with educational rating.

A study was made of 443 consecutive admissions to the reformatory in the age group 16 to 24 years, based on mental age, educational age, age left school, and age at first delinquency.

The following table shows the average of these results :

Number in Groups	Mental Age			Educational Age		
46.....	Below	10.5	yrs.	Below	10	yrs
54.....	"	10.5-12	"	"	10	"
56.....	"	12-13	"	"	10	"
83.....	"	13-14	"	"	10.6	"
92.....	"	14-15	"	"	11.7	"
70.....	"	15-16	"	"	12.4	"
35.....	"	16-17	"	"	13.6	"
7.....	"	17 yrs. plus		"	16.3	"

443

Age Left School	Age at First Delinquency
14.5 yrs.	14.9 yrs.
14.6 "	16.7 "
14.8 "	15.5 "
15.1 "	15.8 "
15.2 "	15.5 "
15.4 "	16.3 "
15.9 "	16.3 "
17.2 "	18.1 "

In other words, in terms of mental rating :

46 are mental defectives	10.3%
54 are borderline to defective	12.2%
139 are dull normal	31.3%
197 are of normal intelligence	45.3%
7 are of superior intelligence	1.7%

This group compares very similarly to a previous survey of a group of 816 inmates of all ages in a paper published in the Ontario Journal of Neuro-Psychiatry this year. When the older inmates were included the normal intelligence and superior intelligence groups were slightly higher.

In other words, in terms of education:

100 have less than Junior	11 rating
84 have Junior	II "
75 have Junior	III "
67 have Senior	III "
40 have Junior	IV "
46 have Entrance.	
22 have Lower School.	
9 have Matriculation.	

443

Only 77 inmates or 17.3% of the total group have Entrance standing or better, while the average time of leaving school for the whole group is 15.1 years. One might speculate that these boys might have done better if their mental abilities could have been directed and held firmly in the desired path. One of the first things we notice when they come to us is their wish to try many and different lines of work about our institution and those who have found work before being sentenced may have had three or four jobs which they held for two weeks to a few months. The "stick-to-it-ivness" necessary for success in any line of work is missing from their make-up. One wonders how much their school training is responsible for this. The boy who fails his year once or twice loses interest and perhaps the frustration aids him to adjust his world to delinquencies, which in some measure makes up to him for his failure at school work. I would suppose that truancy would be more common in this type of scholar and would result in bad companions and delinquency. I am also convinced that the boy who behaves badly in school probably behaves very badly at home, and a note or a report sent home of bad conduct is of little use. I believe there should be some one sent out by the school to the home who could report intelligently on these problem scholars and their home life and their methods of spending their recreation periods, and more effort made to evaluate all this and co-relate it with school instruction. Perhaps too much time and attention is spent on the 80% who are successful each year and who go on to graduate with little difficulty. I am convinced that nearly all of those who graduate to the reformatory come from this other 20% who do not do so well.

It is an axiom of reformatory work that the boy who is arrested for delinquencies before he has reached the age of fourteen years is most likely to go on and be a recidivist to reformatories and penitentiaries. One of our churches believes that if they can have the training of a boy until he is fourteen his religion will not alter during his life.

In this group of 443, there were 117 boys who had delinquencies before the age of 14.

A study of this group shows:

Prisoners against whom there are convictions recorded, lacking full particulars:

Number of convictions	58	
Number of prisoners	21	= 17.95%

Prisoners convicted but not previously in custody, (except Industrial or Training Schools):

Number of convictions	178	
Number of times sentenced	69	
Number of prisoners	44	= 37.61%

Prisoners previously in custody:

Number of convictions	183	
Number of times sentenced	69	
Suspended or on probation	39	
Number of prisoners	52	= 44.44%

Those in custody:

County Gaols	41
O. R. Guelph	36
Other Institutions	10

The explanation of the recidivist proclivities of this early age group is that they adjust themselves too well to inmate life, form lasting friendships with other boys with delinquent aims and set out deliberately to make "an easy living without working."

Character building could be accomplished in our schools, especially for those who have not the proper family background. Perhaps too much of this is left to the church, and while I do not wish to detract from the work the church does, I find a goodly percentage of our inmates had little or no contact with the church. They practically all had contact with the school, so I would suggest that the school curriculum stress—beside teaching three R's, courtesy, thrift, work, beauty, sportsmanship, honesty, health, service, co-operation, self-reliance and above all the Golden Rule.

Character is largely a matter of training and habit. Under temptation we behave according to a habit of honesty or dishonesty, courage or cowardice, and if this could be stressed more in our schools I believe it would pay dividends by lessening our reformatory population.

Our so-called desperate criminals did not awaken one morning and suddenly decide to become gunmen, nor did any other criminal you read of in the paper. He went to a school similar to yours. He started mildly into anti-social conduct as a consequence of objectionable habits acquired through some of the causes I have mentioned; served a term or two in a reformatory or prison and gradually became the tough character that is so hard to reform. In the early formative stages of his character a few kind words of instruction, a little interest, an ideal built up for him, might have made all the difference.

. CRIME AND EDUCATION

Extracts from Victor H. Evjens, Probation Officer, Illinois, in *Education Digest*:

"What are the schools to do about the maladjusted child? Many of our schools accept them as misfits and make little or no effort to fit the school to the child. Most of our schools make the child do the fitting. These misfits are lost in our mass education processes. They are the children who cannot follow the teacher, who are driven out of the classroom, who will appear before the judge in the behaviour clinics and in the reform schools.

"The formal training of most teachers stressed courses in history of education, methods, measurements, subject matter, etc., with little or no emphasis on the application of mental hygiene principles to the educational system.

"To the psychiatrist the active, curious extrovert child who often becomes a nuisance to the overburdened teacher is not a serious problem socially.

"The teacher has to be more than a pedagogue. Ability to place subject matter within the grasp of the child is secondary. The teacher must be a child welfare worker, equipped to recognize problem situations, to trace them to their source and to fit the educational scheme to the needs of the child."

* * * * *

Lewis E. Lawes, warden of Sing Sing Prison, in an address before the American Association of School Administrators, Atlantic City:

"The records of Sing Sing Prison indicate that most of the inmates did not even complete the Sixth Grade. . . . It is a shame that the talents of many men in Sing Sing manifest themselves for the first time in prison. If these men had been given special aptitude tests in school and trained for types of work for which they showed some inclination, they would now be social assets instead of social liabilities.

"Poor eye-sight or bad hearing may cause some children to be categorized as backward through no fault of their own. Many symptoms of later sexual or mental derangements, as well as physical defects, may be detected and cured in the school child. As the youngster grows older, the chance of cure decreases.

"The problem child is simply one whose difficulties are not understood in time and properly corrected."

Mr. Lawes questioned whether anyone tries to learn why children become truants. He asks the following questions:

Did anyone ascertain whether the boy mingled with unsavory companions, who led him to believe that education was unnecessary?

Did anyone visit his home to see whether the parents were exerting an unhealthy influence?

Is the teacher the type of individual who is irritable because of a frustrated existence?

"It is a shame that all these factors are not considered before sending a boy to a truant school, which too often is no more than an incubator to crime."

Reformatories

THE ONTARIO REFORMATORY, GUELPH, CANADA

DEAR SIR :

The attached statistical report of the Ontario Reformatory, Guelph, covers the fiscal year ending March 31, 1938.

The number of commitments—912 is 17 higher than the previous year. 659 or 72.25% of the total were under the age of 25 years. 545 or 59.75% were under the age of 21 years. This is in keeping with your departmental policy of segregating the younger inmates and first offenders at this Institution.

Notwithstanding general press reports that lack of work and opportunity is sending our youth into crime, these statements are not borne out by a careful examination of our inmates. The causes are to-day the same as they were ten, twenty and thirty years ago.

The educated bright youth is not as a rule in the Reformatory. By actual educational tests, only 17% of our inmates have Entrance standing or better and only 1.7% have superior intelligence rating. I have great faith that our youth of to-day will still survive and conquer the difficult times we are passing through.

Four escapes were made and three were recaptured, leaving one still at large.

The medical department gave excellent service. Some ninety major and minor surgical operations were performed. Two deaths occurred, one from lung abscess and the other from peritonitis from intestinal obstruction. The general health of the inmate population was good. The dental clinic treated 1627 patients during the year.

Our School functioned well during the year but we were unfortunate in losing the services of our teacher, Mr. Pender, through death. He was unsparingly devoted to his work. Beside academic work, night classes were given by our officers, in laundry work and dry cleaning, machine shop practice, tailoring, shorthand, bookkeeping, motor mechanics, electrical work and barbering. We find that approximately 24% of our population are interested in bettering themselves by study and classes.

The gymnasium is being used nightly. A full programme from 6 p.m. to 8.30 of physical training and gymnastic work is carried out and every effort has been made to develop physical well-being, and to take up free time that might be wasted in idle conversation.

The library was re-catalogued and re-opened Christmas week of 1937 with five hundred books. By March 1, 1938, we had eighteen hundred and sixty-one suitable books which had been donated by public libraries and interested friends, to whom I desire to extend appreciation.

All the industrial departments of the Institution have operated steadily throughout the year. Total industrial revenue of all departments was over \$540,000.00, which is an increase over the preceding year of 67½ thousand dollars.

On the farm, crops were good and were all successfully harvested. The value of these crops was over 37½ thousand dollars.

Plenty of good healthy work was available for all of our inmates, in the excavation for the new cell block and the cement work connected therewith. Our gravel pit furnished all sand, and the quarry the necessary crushed rock. The work in excavating for swamp reclamation went on well through the winter months.

Discipline was well maintained during the year.

We are indebted to those who, during the year, provided entertainment, religious service, and spiritual advice to our inmates.

I wish to commend my staff for their conscientious and loyal service in a work that is tedious, exacting and often exasperating. The fruits of this work are sometimes never shown to the workers, when the mark of success is calculated in the non-return of the inmate.

I wish to thank the Honourable Mr. Nixon, yourself and your staff for the kindness, courtesy and understanding aid you are at all times so willing to extend to us.

Yours very truly,

(Signed) J. D. HEASLIP,

Superintendent.

MR. C. F. NEELANDS,

Deputy Provincial Secretary,

Parliament Buildings,

Toronto.

THE ONTARIO REFORMATORY, MIMICO

DEAR SIR:

I beg to submit the annual report of the Ontario Reformatory, Mimico, for the year ending March 31st, 1938.

I am pleased to report that through the fine co-operation of my staff and valued assistance received from the officers of the Department, we have enjoyed an excellent year. Discipline has been maintained to a high degree; health standards have been kept at a high level. The spiritual welfare of the inmates has been cared for by the following, to whom our grateful thanks are due: Rev. Father McGrath (Roman Catholic); Rev. M. G. B. Williams (Church of England); Mr. R. B. Hayhoe (Plymouth Brethren); and various members of the Salvation Army.

Results of the operation of our farm were most encouraging. All crops were above average. We are now able to appraise the result of the new policy of raising our own heifer calves. During the year six home-bred heifers freshened. Their milk production and butterfat tests are noticeably above the average obtained from cows purchased. Products from live stock were as follows:

Dairy Herd	—217,025 pounds of milk.
	5 heifer calves (being raised for milch cows).
	9 calves sold for vealing.
Swine	—145 hogs, 31,190 pounds live weight.
Poultry	—1,643 dozen eggs.
	1,200 pounds dressed poultry.

The result from the operation of the brick and tile plant has been quite encouraging. The floor tile industry has somewhat fallen off owing to substitution of terazzo floors. The output of brick and partition tile has been quite heavy which has kept the mill operating to capacity. We have had possibly the best year in a long time, which is rather gratifying. At this time I wish to recommend that steps be taken to formulate plans in the near future for the erection of a new building more modern and if possible largely on one floor. This is to be done in easy stages without causing too much interruption in the production of the many parts belonging to the industry. In the north entrance of the dryers steam seems to collect. The present ventilators do not appear to have sufficient volume to carry this off. Possibly the installation of a suction fan would eliminate this moisture which becomes a nuisance, especially in the winter and only served to rot the timbers.

Some of the younger officers are taking their work very seriously and have formed themselves into a sort of school of training under the direction of the night sergeant with the object of becoming more proficient. Some books were purchased and placed at their disposal and I am pleased to say good use is being made of them.

In addition to the above recommendation, I should like to suggest for your consideration the following matters which have been referred to in previous reports:

1. The appointment of a full time teacher qualified to teach technical courses, as well as elementary subjects to illiterates.

2. Some years ago psychiatrists from the Ontario Hospital, New Toronto, mentally examined inmates on admission. In due course a report was submitted, showing mental age, intelligence quotient, prognosis, etc. This information was valuable in many ways, allocating men to work, awarding punishment for infractions of the rules, etc., etc. I recommend consideration be given to the matter of again instituting intelligence tests. Apart from the value of the test while the inmate is incarcerated; statistics over a period of time doubtless would be of value in solving the problem of the growing population of our penal Institutions.

3. The replacing of our present dormitory system with a cell system, or part cell system. In addition to making for better order and discipline than the dormitory system, I am convinced that the effect of the cell system on the inmate is much better. Many of our inmates are serious minded men, who would prefer the privacy and quiet of a cell, where they could read and study. This is practically impossible in a dormitory.

4. The establishment of some system of Probation Officers or Big Brothers, to take a sympathetic interest in the men after their release.

5. That consideration be given to the matter of increasing floor space of our machine shop. This could be done with our own labor and cull bricks could be used, thereby, necessitating the purchase of such materials as lime and cement only.

In conclusion, I should like to express my personal thanks and appreciation to the officers of the Department and to the members of the staff here.

Yours sincerely,

(Signed) J. R. ELLIOTT,

Superintendent.

MR. C. F. NEELANDS,

Deputy Provincial Secretary,

Parliament Buildings,

Toronto, Ontario.

INDUSTRIAL FARM, BURWASH, ONTARIO

SIR:

I have the honour to forward the following report for the Industrial Farm, covering from April 1st, 1937, to March 31st, 1938, but would point out that I was appointed Assistant Superintendent, March 9th, 1937, and appointed Superintendent October 15, 1937, when Mr. T. M. Gourlay was transferred to the Head Office, Toronto, thus part of this report covers Mr. Gourlay's administration, and the other part covers mine, from October 15th, on.

During this period our inmate population increased and we, therefore, increased our custodial staff, accordingly, our work being scattered over a large acreage, and our inmates divided up into small gangs, requiring quite a few officers to guard them, as we have a big percentage of fairly long-termers.

The New Dormitory and Hospital Building is still under construction, and nearing completion, and it will relieve us of a lot of worry when we can occupy it, as the old frame building now in use is not very safe and is a big fire hazard, and the new up-to-date Hospital will be a great asset.

We have started to build two seven room brick veneer houses, for the staff, which will be greatly appreciated, as we are very short of houses for our married staff.

A new telephone line was built between Burwash and Sudbury, a distance of twenty-eight miles, with the assistance of the Forestry Branch, who also have two wires on the line for their own use. This greatly improves our telephone communication with outside points, particularly with our Head Office in Toronto.

A concrete foundation and basement was put under the house occupied by the Clerk of Records and considerable repairs were made to the apartment house, occupied by four families.

During this period, we were able to clear thirty-five acres of land and get it ready for cultivation. A Tailor Shop was opened, and we have eighteen inmates working there, where we make shirts for all our officers, and nearly all the clothing used by our inmates. Our lumbering industry was pursued vigorously through the winter months, and we got about 8,000 cords of firewood and 150,000 feet of logs to be cut into lumber at our own Sawmill.

During the spring of 1937, we had a thaw, and then a severe cold spell which froze all pools of water into ice, and this killed the grass, in all the low-lying meadows and our hay crop was light. Our grain crops were poor, owing to an extended dry period during the summer, but our potatoes turned out well, and we had a surplus this spring, which we shipped to another Institution. Our sun flowers, used for ensilage, were very good, but our turnips were only fair. Our horses and cattle, both dairy and beef, are in good condition, also our sheep and pigs.

As the bush around the main camp has been cut down, and used for lumber and firewood, and it is now such a long walk for the inmates going to cut wood, the Department has helped out by buying coal, which we use part time to supplement the wood, in heating and cooking.

There has been very little sickness among the staff and inmates, due to the care of Dr. W. H. Hills, Senior Medical Officer, and Dr. R. F. Ross and Nurse Edna Bunting.

Our school is conducted ably by Mr. W. Paterson, Principal and Miss Helen Sheffield, and our school children numbering 39, are doing fine.

Major and Mrs. Talbot of the Salvation Army, who reside here, conduct church services regularly for the inmates and staff (separately) and Sunday School for the children; Rev. Bruce of Coppercliff, Anglican Minister, and Father Coté, R.C., of Estaire, conduct services twice monthly; The Gideons visit occasionally and we are visited once a year by the Shantymen's Christian Association.

A course of instruction in musketry, care and handling of revolver and rifle, etc., and lectures on duties, discipline, loyalty, handling of men, first aid, etc., was started, and all ranks had to attend; all new officers must attend these classes.

I would like to take this opportunity to thank all our officials at our Head Office in Toronto, for their advice and assistance, and to say that it has been a great pleasure to work in such harmony and co-operation as has been given to me.

I have the honour to be,

Sir,

Your obedient servant,

(Signed) H. W. POWELL,

Superintendent.

MR. C. F. NEELANDS,

Deputy Provincial Secretary,

Parliament Buildings,

Toronto, Ontario.

TORONTO MUNICIPAL FARM

LANGSTAFF, ONTARIO

C. F. NEELANDS,

Deputy Provincial Secretary,

Parliament Buildings,

Toronto, Ont.

DEAR SIR:

The Annual Statistical Report for the year ending 31st March, 1938, is being submitted herewith.

In comparing this Report with that of last year it will be seen that there were 2,480 admitted during the year—an increase of 262 over the year ending 31st March, 1937. This increase is mostly made up of offences against Public Order and Peace and the offenders are, for the most part, recidivists who have received numerous short sentences. Seldom, if ever, is it considered necessary or justifiable to award sentences even approaching the maximum in these cases. The result is that some men are convicted as often as ten or twelve times during the course of a year with sentences varying from one week to one month. It would be far more beneficial to the individual were he to receive a sentence of six months, he then would be less likely to come to the notice of the police so promptly after discharge.

During the year there were 88 Drug Addicts admitted as compared with 124 of last year or a decrease of 36. This, however, is not an indication of a decrease in the drug habit in this district as it is understood that a much larger percentage of these addicts have been removed to Burwash during the past year.

In January some agitators were successful in inciting a number of the population to be dissatisfied and several imaginary complaints were formulated. No attempts at violence were shown but a definite defiance of authority was displayed in the morning of January 8th, when all but a few men failed to answer the signal for work. The majority of the men, however, had no desire to take part in this demonstration but had been forced to concur for fear of the consequences.

The men were strongly advised to go to their respective gangs and to work and that little time would be given them to do so. A number of those responsible for causing this demonstration were segregated and duly punished. The inactivity lasted for a very short period and all men were at work within half an hour.

Over a period of the past few years the attitude of inmates in general has changed from one of regard for rules and regulation to one of opposition to all restrictions. There is no doubt but that inmates now feel they have the support and encouragement of the public and that any demonstration they, the inmates, decide to carry out will receive the full support of a large percentage of the local inhabitants, including people in public office. Much of the difficulty during the

past few years has been brought about by misguided men and women in public life who, without sufficient knowledge of their subject, have sought to make vast changes which they, perhaps sincerely, believe to be necessary. Had these people made careful enquiry and study before making statements to press and public they would have been more guarded in their remarks and less inclined to foster a feeling of unrest in our public Institutions. There is no doubt that those referred to are, in many cases, quite sincere but if they would be persuaded to concentrate their efforts on some worthy movement which would undertake to seek out and to assist these men before they became law-breakers, much more worthwhile work would be accomplished. In other words we require prevention of crime rather than an over measure of misplaced sympathy with those who persist in being offenders against Society. Following are some extracts from the report of a Grand Jury on their visit to this Institution recently:—

"At noon we learned that some prisoners wished to lay complaints before us and while we listened patiently all afternoon to the individual complaints of 49 prisoners and subsequently investigated these complaints". . . . "What struck us most forcibly was the large number of "repeaters" who complained to us—those who have served time in other Institutions; who have become wantonly discriminating in their likes and dislikes and who fail to recognize these places as penal institutions for corrective purposes but rather as publicly-supported domiciles of privileges and rights.

"We realize now more than ever before that the authorities are faced with increasingly difficult problems in dealing with the "repeater". Misplaced sympathy and "spoon feeding" the criminal on the part of the public can go too far. Public opinion in making these institutions places to stay away from does not go far enough."

Discipline during the year has been maintained but is becoming increasingly difficult to enforce for reasons given above.

Inmates have, with few exceptions, shown a decided physical improvement during incarceration. In this regard at least they have benefitted and leave the Institution capable of undertaking any employment demanding physical fitness.

It is again recommended that steps be taken to provide for a suitable gratuity for certain inmates at the expiration of sentence. While both the Government and the City agree that such a gratuity should be paid neither feels called upon to provide the necessary funds. It is hoped that an agreement will be reached in the near future so that inmates of this Institution may be placed on the same basis as those similarly situated.

Farming operations were successfully carried out and satisfactory results obtained, including the harvesting of 182 tons of Ensilage, 4,800 bus. Oats, 2,965 bus. Barley, 313 tons Hay, 3,705 bus. Potatoes, 1,100 bus. Wheat, 210 bus. Soy Beans, etc. Profits were shown in hog raising, \$400.00, Truck Gardening, \$5,000.00, Dairy Herd, \$4,873.00. New pasteurizing equipment was installed during the year with the result that the bacteria count has now been reduced to the extraordinary low figure of from 100-500 per c.c.

The staff has continued its loyal support and has rendered valuable services during the year. They are worthy of the highest commendation for the manner in which they so cheerfully carry out their arduous and unpleasant duties.

We are indebted to the Originals Club, The Salvation Army and the Church Army for providing suitable entertainment during the year, also to the Salvation Army, the Church Army and the Catholic Church for religious services and social welfare.

May we again express our sincere appreciation of the wholehearted co-operation of the Department, including the Hon. Mr. Nixon, yourself and all members of your Staff with whom we come in contact. It is indeed a pleasure to feel that such a spirit of helpfulness exists at all times.

Yours sincerely,

(Signed) G. HEDLEY BASHER,

Superintendent.

MERCER REFORMATORY

1155 KING STREET WEST, TORONTO

C. F. NEELANDS, ESQ.,

Deputy Provincial Secretary,

Parliament Buildings,

Toronto, Ontario.

SIR:

I have the honour to submit to you the Annual Report of the Andrew Mercer Reformatory for Females. Examination of the statistical report appended hereto will show the number and character of our floating population.

The school is of particular benefit to the illiterate received here and great satisfaction is felt by them in learning to read and write. Unless a woman herself wishes to change, no change can be made in her character. Many that come to us are in poor health and of low grade mentally. These are mostly the types that upset the discipline of the institution. The discipline was good, however, and although there were of course infractions of rules there was no serious trouble. One woman escaped while under treatment in the Toronto General Hospital.

Much work has been done by our Dentist who visits one half day each week. Complete examinations are made of all inmates and treatment is given when requested. Complete physical examinations and laboratory tests are made on all inmates and specific treatments are given when necessary. There were no deaths during the last twelve months. Nine babies were born during the mothers' terms in this institution, and three were admitted with mothers transferred here from other Institutions. One of the babies died.

A group of women under the supervision of a Matron attends to the garden and grounds in the summer months. The garden was very profitable in the past year.

A programme of entertainment is carried on throughout the year. The girls furnish much of their own amusement, in the form of concerts during the winter months and baseball in the summer. The women are allowed out in the recreation-yard in favourable weather but not when it is cold.

I trust that all recommendations recently made by an officer of the Toronto Fire Department after he had inspected the institution will be accomplished and all fire hazards removed.

I recommend that much stricter supervision be given women on parole, and that a woman officer be appointed for this purpose and the finding of suitable employment for those paroled.

On July 31, 1937, the sudden death of Miss Elder occurred. She was a valued member of the staff for over twenty years and her loss has been keenly felt in the institution.

Many interested friends have given their services to the uplifting of those in our care. Representatives of the different denominations have visited weekly and held services for both Roman Catholics and Protestants. The Salvation Army continues its deep interest in the welfare of the inmates of the Reformatory. To all these helpers in the work I give my grateful thanks.

In conclusion I wish to express my appreciation of the efficiency, loyalty and co-operation of the staff, and the kindly help from members of the Department and to you, Sir, for your cordial support in all matters relating to the management of this institution.

Yours very truly,

(Signed) JEAN MILNE.

Superintendent.

Board of Parole

ANNUAL REPORT OF THE ONTARIO BOARD OF PAROLE

FOR THE YEAR ENDING MARCH 31ST, 1938.

The Ontario Parole Board through the year just ended has been successful in the rehabilitation of many persons sentenced to indeterminate terms in the different provincial reformatories. Much of this success can be attributed to the co-operation the Parole Office has received from the various municipal and provincial police, and many local organizations throughout the province, the members of which are interested in the welfare of those in their community who had come in conflict with the law.

Owing to the conditions which now exist it is difficult in many cases for inmates who have been granted parole to secure employment, but in the majority of cases this has been arranged, often through the efforts of the officials and organizations mentioned above.

Below is tabulated the number of meetings, paroles granted, etc., for the year. It will be noticed that there were 750 paroles granted and that 747 paroles were made effective. This was brought about by some paroles made effective in 1937-1938 being granted by the Board during the previous year.

The personnel of the Board was not changed during the year and is composed of: J. F. McKinley, L. J. Long, A. F. Hatch, R. S. Clark, W. B. Common and Mrs. D. Strachan.

	1936-37	1937-38
Number of meetings held	35.	35.
Paroles authorized	942.	750.
Paroles put into effect	824.	747.
Disappeared while on parole	26.	31.
Committed crime while on parole and re-convicted	44.	39.
Returned to Reformatory and paroles cancelled	9.	9.

The Salvation Army

A REPORT OF THE MEN'S POLICE COURT WORK IN THE CITY OF TORONTO

FOR THE YEAR ENDING SEPTEMBER 30TH, 1938

In presenting this annual report of the Police Court Work of the Salvation Army in Toronto for the year ending September 30th, 1938, we desire to state that we are highly appreciative of the many facilities provided by the Court authorities for the effective carrying on of the work. The co-operation thus afforded has been an important factor in the success that has attended our efforts on behalf of prisoners and their dependents.

Brigadier E. Owen regularly visits the Courts in the interest of men who have violated the law, and by means of interviews before or after the trial; by addressing the Court during the trial; and by offers of care for the prisoner if discharged, valuable work is done for the prisoner as well as for his family. A similar service is rendered by Captain Esther Perry and Adjutant Elizabeth Watt in connection with the Women's Courts.

THE DISCHARGED PRISONER

Magistrates frequently avail themselves of the Army's facilities for caring for those in trouble, by handing over to the care of our Officers men from the Police Courts. These are provided for in the Army's Institutions until employment is secured, or those having homes or friends are restored to them. Personal contact is maintained by visiting these persons in their homes or meeting them at the Army's Social Headquarters, and this method is a strong factor in their rehabilitation.

One of the difficulties confronting discharged prisoners in obtaining employment is the lack of suitable clothing. A shabby appearance is not helpful to obtaining a job, but we do our best to remedy any defect in this direction by supplying the men with presentable attire.

In addition to food and shelter, transportation—to a limited extent—is provided when work, or a suitable domicile has been secured. As far as possible each man is dealt with individually, and in this way many hundreds of former prisoners have been assisted to rehabilitate themselves.

By reason of the fact that the Salvation Army has centres of operation in almost all towns and cities of Ontario, the Organization is in a favorable position to help restore men to their homes and friends outside the City of Toronto, and in this work Army Officers stationed in the Province co-operate splendidly with those in the Capital.

POLICE COURT CASES

It is encouraging to note that out of the many hundreds of men who pass through our hands from the Police Court, a very small percentage relapse into crime. A number of these men have been brought to us by the police, but the only charge against them is that of being homeless. We readily receive them into our Hostels.

As this report deals only with Toronto Men's Police Court work, it does not take into account the work done at the Women's Police Court, or at Langstaff, Mimico or the Don Jail. These Institutions are dealt with in a further report.

THE SALVATION ARMY MEN'S SOCIAL DEPARTMENT REPORT OF WORK
IN THE TORONTO POLICE COURTS

YEAR ENDING 1938

Visits to Police Court	828
Interviews with men—these interviews take place before the men come up for trial, in order to see whether we can be of assistance	4,584
Number of men given to care of the Salvation Army by Police Magistrates	657
Number of letters or 'phone calls on behalf of men	1,566
Number of visits on behalf of men to relatives and prospective employers..	2,021
Visits are usually made to see what assistance can be rendered to the family, or to prospective employers, or the possibility of making reconciliation.	
Number returned to homes, friends, or found employment	736
Our first effort is to return the person to his home, or to get back his old job, if employed.	
Meals and beds provided—Temporary assistance is given until the person is rehabilitated	16,777
Number provided with clothing	157
Many men who come from the Court are not decently clothed for work. These needs are met.	

The above are the Toronto Police Court Statistics only, and do not take in the work done at Langstaff, Mimico, Don, with the exception of meals and beds.

WOMEN'S SOCIAL DEPARTMENT TORONTO POLICE COURT

YEAR ENDING SEPTEMBER 30TH, 1938

Number of visits to Courts and Prisons	695
Number of hours spent in Police Court	586
Number of interviews	2,711
Number of cases spoken for	65
Number remanded in care of the Salvation Army	71
Number handed over for outside supervision	7

Number sent to situations	29
Number sent to parents or friends	12
Number of meals to prisoners and ex-prisoners	1,369
Number of articles of clothing given	50
Number of beds to prisoners and ex-prisoners	503
Number of carfares paid	1,068

A REPORT OF THE PRISON, JAIL AND POLICE COURT WORK
IN THE PROVINCE OF ONTARIO

FOR THE YEAR ENDING SEPTEMBER 30TH, 1938

We herewith present a brief report of the work done by the Salvation Army in Prisons, Jails and Police Courts of Ontario.

Our Officers are continuously in touch with the inmates of the Langstaff, Mimico, Guelph, Burwash, Kingston, and other penal institutions, and *every man* on discharge—if he has no place of residence—may be accommodated in our Home during the period of time he is seeking work or arranging to return to relatives. In Toronto we have a special building for the accommodation of discharged prisoners, and a number of Officers are exclusively employed in looking after the interests of discharged men and their families.

It is most difficult for a man leaving prison to regain his former place in society, but many do so, and often the way is made easier for the man by arrangements made with our Officers to meet and welcome him, prior to his release.

It is generally recognized that in respect to law-breakers, the real sufferers are the wives and children. Prisons, as a rule, are often far more comfortable than many of the homes in which the families live, and prison fare is better than many working men are able to supply to their families.

PRISONERS' WELFARE WORK

It is well that even law-breakers should be spared unnecessary punishment while in prison, but it is sad that the innocent should suffer at home for the misdeeds of the wrong-doer. The Salvation Army strives to alleviate the conditions of the dependents of prisoners, and in practically every town and city our Officers are available for visiting the families of men in prison and helping the man on his discharge.

The following is an extract from a report of the Superintendent of Penitentiaries:—

“All wardens speak highly of the welfare work with discharged convicts which is carried on by the Salvation Army. It is apparent that the organization has increased its efforts, and is assisting more discharged prisoners in Canada than at any time during its history. On behalf of the wardens of Penitentiaries, and on behalf of this branch, I again desire to express our thanks and deep appreciation of this organization.”

The experience of the Salvation Army goes to prove that there is no factor making for the permanent reformation of the wrong-doer so powerful as the effects of religion, therefore it is to the spiritual nature of the prisoner that Salvationists urgently appeal by means of personal interviews and religious meetings. Thus to the thousand religious services conducted in the Ontario Prisons during the year, and the hundreds of personal interviews, plus the contacts in their own homes, and in the Social Service Office on their release, may be attributed in a great measure the change of heart and encouraging number of discharged prisoners experience.

In closing I want to put on record our gratitude and thanks to Superintendents and Officials of the various Institutions, also to Magistrates and Crown Attorneys for their real sympathy and help in cases where they feel that mercy can wisely be extended. I want to refer also to the sympathy shown by the Officials of the Parliament Buildings, Honourable H. Nixon, Mr. C. F. Neelands, also the Attorney General and others who facilitate our efforts in such works of mercy.

Visits to Jails, Prison and Police Courts including visits when services are held	4,594
Interviews with men	13,087
Religious services conducted in Prisons and Jails	2,798
Men handed to the Salvation Army, met on discharge or who have come direct to the Prison Office	3,583
Meals and Beds supplied free	22,090
Letters written, or calls made by 'phone in order to bring about reconciliation, or secure employment for discharged men	4,389
Visits to homes, also to prospective employers on behalf of prisoners.....	4,964
Employment secured, returned to former jobs, or sent back to parents or friends mostly from the Police Court	2,012
Number provided with clothing	1,175
Gifts are given to men at Christmas at all prisons and jails.

Report Of
THE MINISTER OF PUBLIC WELFARE
1937 - 1938

This, the seventh Annual Report of the Department of Public Welfare, covers the period commencing April 1st, 1937, and ending March 31st, 1938.

During the year important progress was made within the Department, particularly with respect to internal organization. In addition, a new system of administering Old Age Pensions and Mothers' Allowances was inaugurated with the reorganization of the existing Mothers' Allowances Local Boards and the establishment of Joint Local Boards throughout the Province for the purpose of assisting in the preparation of applications and in the general administration of the Acts within their districts. The five large cities and the County of York continue with independent boards. In most cases the members of these Boards serve without remuneration, and their efforts and assistance are deeply appreciated by those of us who are charged with the task of relieving distress wherever it is possible to do so within the framework of these Acts.

Another important administrative change was the enlarging of the system of investigators whose work brings them in direct contact with Old Age and Blind Pensioners and Mothers' Allowances beneficiaries. For this purpose the Province was divided into districts with one or more investigators for each district. It is the practice to visit each pensioner at least annually, to determine whether he or she continues to be eligible for assistance, and also to render such advice or aid as may appear to be warranted. However, many pension and allowance recipients require more frequent supervision and this is extended.

For the first time in the history of the Province, the granting of pensions for the blind came into effect in 1937. This further added to the responsibilities of the Department in the matter of administration. In the first seven-month period during which Blind Pensions were granted, 683 persons received this form of assistance, although this figure can be expected to increase materially as time goes on.

In the field of Old Age Pensions a decided increase over last year is noted. At March 31st, 1938, 57,530 persons were receiving Old Age Pensions, 1,580 more than a year ago. It is not expected that we will reach the peak load of pensioners for some years to come, and in the meantime, the Department is bending all efforts toward the most efficient administration of the Act which is possible.

More than 13,000 families received assistance during the year by means of Mothers' Allowances, representing a net increase over the preceding twelvemonth of 4.21 percent. Few fields of social endeavour produce such tangible rewards as does the keeping together of homes through this form of assistance.

Children's Aid Societies, although primarily private organizations, operate under supervision of the Department. An increasingly greater share of the Societies' efforts is being devoted to preventive work and it is highly significant that during the period under review it was found necessary to commit only 1,199 children as wards, under which circumstances they become direct charges upon the public purse. On March 31st, 1938, the Societies had 10,745 children under its direct care, although the greater number of these was being provided for in free, wage or adoption homes where no expense accrues to the municipality. The year also witnessed an increase in the number of completed adoptions and it is important to observe that the Department continues to exercise every precaution to safeguard the interests of such children as are placed in adoption. A cause for concern is the increase noted in the number of cases dealt with under the Unmarried Parents Act, although some satisfaction may be expressed over the fact that collections for the support of children born out of wedlock were substantially greater than during the preceding period.

Unemployment Relief continues as one of Ontario's most difficult problems, although improvement was noted in 1938 in relation to 1937, gross cost for this item being 25 percent less. Nearly 700 of the Province's 902 organized municipalities received contributions from the Provincial Government on this account, the Province's share aggregating 46 percent. of the gross sum expended on relief in Ontario. The Province co-operated with the Dominion Government in a program of Youth Training, schools for this purpose being established at various points where instruction was made available and through which many of those thus trained were placed in positions.

A feature of the activities of the Soldiers' Aid Commission was the establishment near Barrie of a Garden Settlement Scheme which involved the subdivision of a tract of land into suitable plots, and the construction on each of a cottage and other buildings necessary for such a project. Results have been extremely encouraging, particularly in improved health among the 40 children whose parents participated in this undertaking. In addition to this work, the Commission made more than 1,700 emergency grants, 377 more than during the preceding year.

The Department continued to exercise supervision over the Refuges for the Aged, with 73 of these institutions under its purview. While marked improvement has been noted in the operation of these refuges, the responsibility of the public toward the aged indigent cannot be too strongly stressed, and Boards of Management are urged to provide to the extent of their means for the comfort and security of those who come under their care.

Also under the scope of the Department come some 41 organizations having to do with the care of children. Careful supervision has been exercised over the programs of such institutions in addition to regular scrutiny of their buildings and equipment.

The valuable work being accomplished by the Ontario Society for Crippled Children has at no time been more strikingly in evidence than during the poliomyelitis epidemic of 1937. Largely through the Society's efforts, coupled with the close co-operation of health officials throughout the Province, the ravages of the disease were much lighter than might have been expected from an epidemic of such proportions. The Society has been successful in enlisting the interest and assistance of service clubs and other organizations in its most important work, with the result that a definite co-ordination of effort today exists with respect to all undertakings directed to the assistance of handicapped children.

During the year the Department was relieved of responsibility in connection with supervision over various training schools and institutions which have now been placed under jurisdiction of the Provincial Secretary's Department.

All of which is respectfully submitted.

ERIC CROSS,
Minister.

APPENDICES

Part 1

PART I.

APPENDIX A**Report Of****THE OLD AGE PENSIONS COMMISSION****April 1st, 1937—March 31st, 1938**

We herewith submit the Annual Report of the Old Age Pensions Commission, together with statistics covering the fiscal year 1937-38 which will be found in Part III. of this report.

The Old Age Pension pay-list continues its steady climb. This fiscal year has shown an increase of 1,580 pensioners, bringing the total number of pensioners to 57,530, the expenditure for the fiscal year being \$12,484,279.15, of which the Province of Ontario contributes twenty-five percent. and the Dominion Government seventy-five percent.

The Commission also administers pensions for the blind, this form of assistance being made possible by recent amendments to the Old Age Pensions Act. Pension is now being paid to blind persons forty years of age or over, who are British Subjects and who have residence in Canada in accordance with the Old Age Pension regulations. Ontario was the first province to pay pensions to the blind and an agreement was signed between the Dominion and the Province in September, 1937. From this date to the end of the fiscal year—March 31st, 1938—683 blind pensions were granted, with an expenditure of \$51,390.13. Statistics on pensions for the blind will be found on Pages 56-58 inclusive.

The recent amendment to the Old Age Pensions Act, which relieved the municipalities of their former contribution toward the cost of Old Age Pensions, necessitated a complete reorganization of administration, in order to safeguard the Treasuries of both the Dominion and Provincial Governments.

The province was divided into thirty-three districts, one investigator or more being assigned to each. In order to keep the travelling expenses of the investigation staff at a minimum, the investigators were given the responsibility of investigation work for both Old Age Pension—including pension for the blind—and Mothers' Allowance cases.

Local Boards were established in every county, city and separated town, also in the territorial districts of Northern Ontario, to assist in the work of administration. In the majority of cases, the members of the Local Boards serve without remuneration and have given splendid co-operation and assistance to the Old Age Pensions Commission in carrying on this great service to the older people of our province.

The municipal clerks have performed their duties in connection with Old Age Pension administration most willingly and efficiently. It is their responsibility to complete new applications and forward them to the Secretary of the Local Board in their district. The continued co-operation of the municipal clerks is very much appreciated by the Commission.

The work of the investigator does not cease when the first record has been made, as each pensioner must be visited annually to ascertain whether or not he or she continues to be eligible for assistance under the Old Age Pensions Act. Judging from the many favourable comments we have received, the pensioners are very grateful for the assistance and advice which is made available to them through the provincial investigators.

The new scheme of internal administration which has been put into effect has proven most successful. Deceased cases are now handled by a reorganized Estates Division and the collections from estates of deceased pensioners have shown a decided increase.

The Commission continues to have difficulty in obtaining documentary evidence which is required by the Act, particularly with respect to proof of age. It is anticipated, however that this difficulty will be eliminated to a considerable extent next year, when certificates of birth will be obtainable from the Provincial Registrar General's Department for applicants who are seventy years of age and who were born in the Province of Ontario.

Many other problems confront the Commission daily in dealing with new cases, reconsiderations, and the settlement of claims against estates of deceased pensioners. However, the Commission endeavours to give just decisions on all these matters, after giving careful consideration to the circumstances of each case.

At the Dominion-Provincial Conference held at Ottawa in November, 1937, several amendments to the Dominion Old Age Pensions Regulations were recommended and later became effective in January, 1938. As a result of these amendments, many worthy applicants who were previously ruled out, owing to technicalities, became eligible for pension.

By reason of an amendment to the residence regulation, an applicant, who had been detained outside of Canada during the twenty-year period prior to the date of application for pension through no fault of his own, became eligible to apply for pension if he had not been absent from Canada for more than four years within the twenty prior to making application.

Another amendment reduced the required period of residence in the province in which application is made from five years to seven hundred days. This is of inestimable benefit to applicants who have moved from one province to another.

Many other points were defined at the Conference and this has proved of great value in administering the Old Age Pension scheme, in which all the provinces of the Dominion participate.

Respectfully submitted,

J. A. FAULKNER, Chairman,

G. S. TATTLE, Vice-Chairman,

C. H. GREEN, Commissioner.

OLD AGE PENSIONS
 . PROVINCE OF ONTARIO .
 NUMBER OF PENSIONERS AT END OF EACH FISCAL YEAR

APPENDIX B

MOTHERS' ALLOWANCES COMMISSION ANNUAL REPORT

1937 - 1938

As will be seen by the statistical tables found on another page in this report, the number of applicants for Mothers' Allowance does not appear to diminish. During the year under review there were received 3425 new applications and 1362 renewals, making a total of 4787 applications for Mothers' Allowances. In addition, of course, there were the usual number of reviews which necessitated increases, decreases and, in some cases, cancellations. The number of cases dealt with during this period is 11,017.

In spite of the large number of applications dealt with by the Commission, the net increase for the year was as low as 481, or 4.21%. This compares very favourably with the average increases that obtained prior to the enactment of the one child family legislation in 1935, bringing the total number of families assisted during the fiscal year, to 13,644 and leaving remaining on the monthly pay list, as of March 31st, 1938, 11,901.

It is interesting to note that there are more families receiving Mothers' Allowances living outside of the cities than there are living within the city limits. For some time now it has been generally thought that people who receive Mothers' Allowance flock to the cities in order to receive the additional amount that is paid to those living within the city limits. It is quite evident, from the above figures, that this is not the case. In fact, the majority of mothers would prefer to live outside a city where they can have a small garden and cheaper rent. The great difficulty however, is that when children become old enough to leave school and are seeking employment, there is little or no employment to be found in those small country places; consequently it is natural that some of the mothers, when they have children of wage-earning age, should move in, or nearer, to the cities where the bulk of industrial work is being done.

Another interesting fact of the tables referred to is the nationality of those benefiting under the Act. For example, of the 13,644 beneficiaries, 8,712, or 63.85%, were born in Canada. The majority of these were born in the Province of Ontario. Some 3367, or 24.68%, were born outside of Canada but within the British Empire and 1565, or 11.47%, were born outside the British Empire but had become British subjects by naturalization.

The majority of the beneficiaries under this Act are widows and, although the number of beneficiaries under the Incapacitation Clause of the Act has increased somewhat, the proportion to the whole is about the same as it has been over the years in which the Act has been in operation.

The amount of constructive social work that is being accomplished each year is evidenced by letters that we receive from time to time. We can only quote a few herein. "Mrs. K. moved to a small brick cottage, four rooms, bright and attractive and a great improvement on previous living conditions. There is a good sized garden attached. Mr. K. (who is incapacitated) received a gift of 50 young pullets and 50 lbs. of feed from the Hatchery in This makes a great interest for Mr. K. as well as the garden. He is a keen type of man and anxious to be as active as his physical condition will permit. The improvement in living conditions, welfare and happiness of this whole family is most marked." A letter from Mrs. T., who had worried a great deal about her financial circumstances, states that she has secured part time work and will now be able to clear off some of the debts that had been left, and she goes on to say,—“My health has improved a great deal, I feel much stronger and it is wonderful help to know that you people have been able to help me every month and pull me through my hardships, as I do not know

what I would have done without the Mothers' Allowance cheques. My daughter is in 7th grade now. If she studies hard I believe she will be in High School soon." We have another case where the husband had been suffering from Tuberculosis and was gradually improving, and the Commission gave him permission to take a part-time job and to increase the hours of work gradually over a period of several months, until his Doctor decided that he was quite capable of carrying on without further assistance. His wife writes as follows: "This will probably be my last letter to you but I cannot close this chapter without expressing my deep appreciation for all your kindness. The Board has been just and fair and generous to us and we are very grateful. We needed that money desperately and I am not exaggerating my statement when I say that it was largely due to your help that my husband is as well as he is today."

It is remarkable the team work that we find among many of our families. Here is a typical case: A mother was left some time ago with five dependent children under 16 years of age and two children over 16. A recent report states that a paternal aunt has promised to put B. through University if he can get his Senior Matriculation. He is keen for this, and hopes to get his Junior Matriculation this summer. He has a paper route and earns \$..... a month, which helps to buy his clothes. Another boy, who took the Commerce and Finance Course at the University of Toronto in 1937, is working and two other boys are also in fairly good positions as a result of the chance that the Mothers' Allowances Commission gave this family to complete their school education. In addition to paying board, these boys help to make necessary repairs to the house and have taken it upon themselves to put aside \$1.00 each week towards a fund which will be used to retire the Second Mortgage on their mother's property.

There is no question but that the majority of our families if given the least opportunity, will, as a result of the assistance that has been given to them under this Act, become self-supporting and the children become good citizens.

The Mothers' Allowances Commission meets practically every afternoon to consider new applications and to review cases where the circumstances appear to have changed. The percentage of unsatisfactory cases that the Commission has to deal with continues to be very small. The large majority of the mothers appreciate the assistance that is being given to them by the Government to maintain homes for their children and to make it possible for the children to attend school.

The Act was intended to assist children until they complete their elementary education or until they reach their sixteenth birthday, and in order that this may be accomplished, a close check-up is made periodically, with reference to the school attendance of the children.

The Local Boards continue to render good service and are co-operating with the Commission in an endeavor to see that the administration of the Act is kept up to a high standard. Pursuant to the Amendment of the Mothers' Allowances Act providing for the close co-operation of the Old Age Pensions and Mothers' Allowances Boards, it is considered that much money has been saved the Counties. Moreover, through the re-organization of the field forces, our Investigators have been given definite areas in which they can cover the requirements of the Old Age Pensions Commission and of the Mothers' Allowances Commission as well, thus reducing costs of administration.

The Commission is also indebted to several Service Clubs and Social Service Organizations throughout the Province for their assistance and co-operation.

Respectfully submitted,

Chairman, J. A. Faulkner.

Vice-Chairman, H. Bentley,

Commissioner, Miss E. V. McKechnie.

 . BEING GRANTED TO MOTHERS WITH ONE CHILD.

APPENDIX C

**Annual Report of
THE MEDICAL OFFICER****April 1, 1937, to March 31, 1938**

The duties of the departmental medical officer are mainly advisory, and are primarily concerned with the disability cases under the Mothers' Allowances Act, and also with infirm indigents in the unorganized areas who require institutional care, applicants for admission to Home Service Training Schools, and all matters of a medical nature coming within the jurisdiction of the Department of Public Welfare.

Of course, the greatest percentage of the work is concerned with the Mothers' Allowances cases and at this point it might be well to refer to Sec. 2, Clause 1-a of the Mothers' Allowances Act, which states in part:— "Subject to the provisions of this Act and the regulations, a monthly allowance may be paid towards the support of the dependent children of a mother who is the wife of a man who is permanently unemployable by reason of mental or physical disability." In other words, for a woman whose husband is living to qualify under the Act, the husband must be permanently, wholly disabled and therefore unable to contribute to the support of his wife and family. For the purposes of the Act, a man suffering from active pulmonary tuberculosis, or a man confined in a mental hospital, may be considered permanently unemployable, provided he accepts treatment as prescribed by competent medical authority.

There is much misconception on the part of interested parties regarding cases, because it is not realized that it is not sufficient for a man to be totally disabled, but that he must be permanently so. Cases are presented almost daily where, if proper treatment were instituted, the man's condition could be improved to such an extent that his disability would be materially reduced. Such treatment very often requires hospitalization in a larger hospital, where special diagnostic and therapeutic equipment are available, or prolonged rest in bed with special diet, and possibly expensive medication. Other cases are presented where the diagnosis is obscure. It is readily realized that, without certain knowledge of the cause of the disability, it is impossible to determine the degree or permanency of such. Often diagnosis cannot be made without the services of a hospital where all modern methods of diagnosis are available.

As mentioned previously, pulmonary tuberculosis, because of the public health problem involved and the chronic and sometimes fatal nature of the disease, is considered as a permanent total disability—if the condition is active when application is first made. The payment of an allowance in these cases, where they otherwise qualify under the regulations, is considered as a definite part of the fight against this disease. There is the closest co-operation between the Mothers' Allowances Commission and the Tuberculosis Prevention Division of the Department of Public Health.

Mental cases, for the purposes of the Mothers' Allowances Act, are considered as permanently unemployable, provided the husband suffers from a definite psychosis and is an inmate of a mental hospital. Here again there is the difficulty of a definite prognosis as to the duration of the disease. The allowance is ordinarily continued during the period of probation from a mental hospital, unless the man has so recovered as to be able to return to work. Following the period of probation, if the man is discharged outright from hospital, the allowance is cancelled, unless he can be certified as incurable although safe to remain at home. Cases where the man is admitted to hospital because of mental deficiency without psychosis, or because of addiction to alcohol or drugs, are not considered eligible.

Physicians in general have given unstintingly of their time in examining and reporting on the incapacitated husbands, but they have not always understood the

Act and have not always realized that decisions, in the vast majority of cases, must be made from written reports, and that, in order for the Commission to have a proper mental picture of the case, great detail is necessary. The finest co-operation has been given by the profession in furnishing details when requested, but their extra time could have been saved if details had been given on the first report. This is not offered as a criticism but as a suggestion to save the time of busy practitioners, who, in the majority of cases, have given this service to their patients without remuneration.

In administering an Act so vitally concerned with the health and happiness of the home, it is essential that the fullest possible information be available, and this requires the close co-operation of many other organizations and branches of the Government. Thanks are due to the medical profession, hospital authorities, municipal authorities, the Department of Health of the Ontario Government, and all the voluntary organizations concerned with matters of public welfare.

G. G. CLEGG, M.B.,

Medical Officer.

APPENDIX D

**Annual Report of
SUPERVISOR OF INVESTIGATORS FOR PENSIONS AND ALLOWANCES
1937 — 1938**

Investigation for Old Age Pensions and Mothers' Allowances takes place after the application has been made to the local board, usually in the home of the applicant. It involves the gathering of information from a variety of sources, its verification and evaluation. On the basis of this collection of data, eligibility for and amount of the pension and allowance are determined by the Commissions.

Prior to June, 1937, investigations for Old Age Pensions were handled locally; for Mothers' Allowances by Provincial investigators. In all there were twenty-one investigators doing Mothers' Allowance work only.

In June, 1937, the Province was organized in districts, and the appointment made for each district of an investigator to do both Old Age Pensions and Mothers' Allowances work. There are thirty-three districts with fifty-six investigators. Four of these do special work in giving assistance to investigators in areas where the number of Old Age Pensioners and Mothers' Allowances beneficiaries are too many for one investigator.

Inauguration of Pensions for the Blind came into effect in September, 1937. Investigation for these Pensions was added to the work of the investigator.

The fact that the investigators are dealing with human beings whose backgrounds, relationships, characters, and potentialities, are so varied, requires an awareness of the individual nature of the work.

To gather this information in a humane and understanding way so that the applicant co-operates in the furnishing of documentary evidence, supplying references, giving information with respect to relatives etc. demands ability and skill that can be acquired only by an educated, understanding person, with some experience of life. The task is by no means an easy one. It requires an abundance of tact and patience; a personality free from prejudice; a loyalty to service for both applicant and administration; and above all an understanding of the human value involved in these welfare services.

While investigation for Old Age Pensions and Mothers' Allowances are similar in method, each has its definite purpose and difficulties. Some applicants for Old Age Pension suffer from loss of memory; others have frequent lapses of memory. Physical and mental illness play their part in making some investigations most difficult. In all cases, the investigator must appreciate the difficulties inherent in progressive old age.

Proof of age and residence; details regarding property transactions; income from various sources, must be accurate before the granting of a pension can be considered. This means patience, alertness, and an ability to help the applicant relive situations of the past that may be quite forgotten.

Social or health care for the pensioners is the responsibility of the municipality in which the pensioner lives. Therefore the investigator must be aware of conditions that should be brought to the attention of the municipal authorities.

A Mothers' Allowance is granted on the basis that the child's own home is the most suitable place for his training and development. The investigator tries to visit at the home as often as the family's need for assistance and supervision requires. The purpose is to see that the children are receiving the care according to the standards set by the Mothers' Allowances Act and Regulations. The investigator must have knowledge of the social resources of the community that may be used to assist beneficiaries to maintain their standard of living.

Time and distance are important factors in this work. And in order to have the work more completely done, it would seem necessary to reduce the size of the district for some investigators.

F. HELD,
Supervisor.

APPENDIX E

Report of
THE CHILDREN'S AID BRANCH
April 1st, 1937 — March 31st, 1938.

Notable efforts have been made by several of the Societies to collect additional revenue by the organization of active campaigns for private funds. This effort is commendable in view of the fact that each Children's Aid Society is a private organization dependent on private funds to finance a large part of its work.

The philanthropic work carried on by Children's Aid Societies year after year is frequently overlooked. Many children are assisted and families rehabilitated without a direct charge on a municipality. For the year under review there were 7,996 complaints of neglect registered with the various Societies. These involved 23,175 children. Since there is only a direct charge on the municipality when a child is committed as a ward, it is encouraging to note that only 1,199 of these children had to be so committed, (655 as temporary wards and 544 as permanent wards.) Such a comparatively small percentage of commitments indicates the value of the preventive services the Children's Aid Societies are rendering in their respective communities,—services financed largely from private subscriptions. These efforts on the part of the Societies are purely philanthropic, private, and not chargeable to the respective municipalities. At the same time, they operate as a direct saving to municipalities by preventing the commitment of children as wards which commitment carries with it an order for maintenance against the municipality.

Notwithstanding the efforts made by Societies to rehabilitate children in their own homes, it is necessary for their protection that some children be taken into care. The several Societies at the end of the year had 10,745 such children in direct care. The efforts of the Societies to care properly for these children at as reasonable a cost to the municipalities as possible is further shown by the fact that 6,144 of the 10,745 are being cared for in free, wage or adoption probation homes where there is no expense to the municipality. In wage homes the children are paid for their services thereby supporting themselves.

Every effort is being made by the Department and the various Societies to provide the necessary care for the children at as reasonable an expenditure as possible and it would appear from the above figures that these efforts are meeting with considerable success.

It is gratifying to note that there has been an increase in the number of legal adoptions completed. 818 children received permanent, carefully selected homes during the year.

The necessary two year probation period and the judicious supervision by the Societies during that period has adequately protected both the children and the foster parents from anything in the nature of "Adoption rackets."

Once again it is necessary to express concern over a slight increase in the number of cases the Unmarried Parents' Act brought to the attention of the Provincial Officer.

Efforts expended to obtain support for children born out of wedlock have resulted in an increase in the amount collected from \$83,521.00 for the year ending March 31st, 1937 to \$88,340.00 for the year ending March 31st, 1938.

Total expenditure for Children's Aid work from all sources, municipal, private, and provincial government, represented something over \$1,200,000.00. Since service was given to slightly over 36,000 children, the cost per child per year would be between \$30.00 and \$35.00.

The general efficiency of the work of the various Societies has shown a steady improvement, staffs have been strengthened, and several Societies reorganized.

B. W. HEISE,

Provincial Superintendent,
Children's Aid Societies.

APPENDIX F

UNEMPLOYMENT RELIEF

The cost of Unemployment Relief in the Province of Ontario during the fiscal year ended March 31st, 1938, showed a decrease under the previous fiscal year of \$7,083,448. There was a decrease in the average monthly numbers assisted of 96,406. The relative costs and percentages borne by the three contributing authorities for the fiscal years ended March 31st, 1937, and March 31st, 1938, were as follows:

	March 31, 1937		March 31, 1938		
Gross	\$28,139,889		\$21,056,441		
Provincial	10,870,312	38.63%	9,712,114	46.12%	
Federal	9,906,750	35.21%	6,030,000	28.64%	
Municipal	7,362,827	26.16%	5,314,327	25.24%	

Of 902 organized municipalities in the Province, an approximate average of 673 were assisted by the Department.

The Federal subsidy toward Direct Relief costs was on the basis of a monthly grant-in-aid. For the first month of the fiscal year this was \$600,000; in the month of July it was reduced to \$480,000. In October it was reduced to \$465,000 per month for the balance of the year. The following comparative tables for the current and past fiscal period will indicate the monthly distribution of costs and numbers.

(See Table "A")

The categories of Direct Relief consist of food, fuel and clothing, shelter, medical household remedies, school books and supplies, seeds and transportation. Of these items the Federal Government contributed to "Material Aid" only, namely food, fuel, clothing and shelter, while the Provincial and Municipal Governments shared in the costs of all the items.

In addition to contributing to the cost of Direct Relief in the various municipalities, the Province, through its inspection staff, was able to assist municipalities in improving their administration methods. This assistance was welcomed and appreciated by the municipal authorities and the Department is continuing this co-operation.

The Home Service Training Schools under the Dominion-Provincial Youth Training Program were inaugurated in the month of September. Schools were opened at Hamilton, Preston, Sarnia, Windsor, St. Thomas and Toronto. As at March 31st, the staff consisted of 21 trained instructresses. Courses of instruction are for a period of three months preliminary and three months final. The final instruction will be received under actual employment conditions. With the five schools in operation it is possible to provide classes for approximately 125 girls. Changes in ways of living have made rapid strides in the last ten years. Higher degrees of skill are required and demanded by employers of those doing household duties. It is felt that the Home Service Training Schools will provide the necessary training.

The Department extends appreciation to all branches of the Government and persons who have rendered assistance in the matter of assisting in the problem of Unemployment Relief.

E. A. HORTON,
Director, Unemployment Relief Branch

APPENDIX G

Report of
THE SOLDIERS' AID COMMISSION OF ONTARIO
April 1st, 1937, to March 31st, 1938

COMMISSION MEMBERSHIP.

During the period under review no change occurred in the membership of the Commission; all members continued to take a keen interest in the various phases of the Commission's activities and were active in attendance at meetings and furthering the services of the Commission throughout the Province.

Members are as follows: Lt. Col. E. A. Baker, O.B.E., M.C., Chairman, Toronto; Major-General V. A. S. Williams, C.M.G., Toronto; Colonel T. J. Rutherford, E.D., Owen Sound; Lt. Col. J. A. Dewart, M.C., Peterborough; Major F. R. Palmer, St. Thomas; Charles J. Brown, Esq., Toronto; Dr. Walter F. Charteris, Chatham; T. Summers Wilson, Esq., Sudbury.

COMMISSION MEETINGS.

Two general meetings and four special meetings were held during the year; in addition to the general meetings of the Commission, Committee meetings to deal with special activities of the Commission were called by the Chairman concerned.

COMMISSION STAFF.

No staff changes occurred during the period under review.

AUDIT.

In compliance with a request of the Soldiers' Aid Commission, a duly authorized representative of the Provincial Auditor's Department conducted a thorough Audit of the books and accounts of the Commission, which were found to present a correct statement of financial transactions of the Commission for the year.

WARDS.

An appended statistical statement presents a detailed record of services to wards in general.

On April 1st the number of wards under the care of the Commission was 84, but during the year, due to wards attaining the full age of 21 years or having married, this was reduced to 65.

Welfare investigations, placements, etc., for the period numbered 266, as compared to 548 for the previous year; this reduction was due to the reduced number of wards and stabilization of individual wards.

ASSISTANCE AND ADVICE.

1. Emergency grants for the year numbered 1,734, as compared with 1,357 for previous year.
2. General information and advice services rendered to ex-service men and dependents totalled 1,353, as compared to 1,781 for previous year.
3. Office interviews for this period were 5,514, as compared with 5,971 for previous year.
4. Special information and advice re pension claims procedure numbered 237 as compared to 251.

HANDBOOK OF INFORMATION FOR VETERANS.

During this period the balance of the supply of "Handbooks of Information for Veterans" were distributed.

Consideration was given to the printing of a revised edition bringing the information up-to-date, but it was decided that this should not be done for approximately one year, in view of important changes in veteran legislation and services.

KATHLEEN HAMMOND ESTATE.

The assistance from this fund to widows on pension under the Pension Act served 97 cases of emergency or special need during the past year as compared with 112 in the previous year.

The corpus of this fund was subject to a further substantial increase during the year.

CROFT ESTATE.

Through revenue derived from mortgage and interest payments in connection with lots of this Estate previously sold, and through rentals of the Yonge Street lot to a Taxi Company for parking purposes, a substantial reduction in Tax Arrears on the Yonge Street lot was made possible; also towards the end of the period under review the Yonge Street lot was rented to a used car agency with a better rental yield.

It is hoped that with improving conditions a satisfactory sale of this remaining lot may be effected.

GARDEN LAND SETTLEMENT SCHEME.

Just prior to April 1st, 1937, the Commission decided to develop a Garden Land Settlement for veterans with families, who had been unemployed and on relief, in an effort for re-establishment on a self-supporting basis.

With the approval of the Honourable the Minister, and the Department of Welfare a suitable muck soil area which had been purchased in the Barrie District, was surveyed into allotments of approximately seven acres each and plans for the rehabilitation of the farmhouse already on the property, and the erection of seven new cottages of suitable design was proceeded with.

With the assistance of responsible Veterans Organizations in various Districts; of the Soldier Settlement Board, Ontario Office; and the Department of Agriculture, the men and families were carefully selected and took up residence.

Clearing, breaking and cultivation of the land was pressed, in order to make crop planting as early in the season as possible.

Through the Ontario Agricultural College, an undergraduate with truck gardening experience was selected to assist the settlers in the selection, planting and cultivation of crops.

The crop results were most encouraging for a first year with the result that sales during the season yielded much needed and appreciated ready cash to the settlers and also provided them with winter vegetable needs.

Among other important sales was approximately thirteen tons to Churches and Service Clubs sending supplies to drought areas in Western Canada.

During part of the winter season, through arrangements made by the Commission, settlers were allowed cash or credit in return for additional clearing work on adjacent allotments or on the properties they occupied. This was found helpful in enabling them to purchase seed and fertilizer for the next season's operations. Through surplus supplies made available by the Department of Welfare, rubber boots, mackinaw coats and working clothes were issued to settlers and their families and were found most acceptable and serviceable to meet winter conditions.

The cottages, which were insulated, walls and ceilings, proved most comfortable during both the heat of summer and the cold of winter.

All families enjoyed good health.

Results during the year were so encouraging that the Commission and the settlers are looking forward to the new year of activity and development with high hopes.

One of the benefits to the newly established settler which has seemed most marked has been the obvious improvement in the health of the children, of whom there are some forty.

Arrangements were kindly made by the Department of Education for a School Bus to convey children to and from School in Barrie.

GENERAL.

In general the Commission has followed with keen interest all developments affecting the welfare of veterans and their dependents throughout the Province.

Members of the Commission; the Director and his staff, have visited or been in touch with many Branches of the Canadian Legion and other Veteran Organizations.

The understanding of the Commission's interests and activities continues to improve.

As in the former period, the Commission has been careful to advise, that facilities or assistance available to veterans or their dependents should be utilized whenever possible; but has undertaken to directly assist where other means could not be found or made available with sufficient promptitude to meet existing emergencies.

A settlement of seven single ex-service men located on the South-West Arm of Lake Nipissing, who were assisted to take up homesteads some six years ago, were provided with stump pulling equipment.

Reports indicate that these settlers have increased their clearings and the land area under cultivation.

The co-operation of the Honourable the Minister, Department of Welfare and staff members of the Department has been appreciated.

The Commission desires again to gratefully acknowledge the co-operation of Veteran Organizations; the Canadian Red Cross Society; the I. O. D. E.; Soldiers' Comforts; the Last Post Fund and all other Organizations and individuals who have in numerous ways been helpful during the year.

Respectfully submitted,

E. A. BAKER,
Chairman.

APPENDIX H

Report on
REFUGES HOMES FOR THE AGED AND INFIRM

On December 31st, 1937, there were 31 County, 39 City and 3 District Refuges under the supervision of the Department of Public Welfare. The average number of Residents in the County Refuges was 2,056; in the City Refuges, 3,158; and in the District Refuges, 174, or a total of 5,588. The average number of residents in a refuge is about 80.

The Refuges have been neglected for a number of years and repairs have been badly needed with the result that many repairs have been made, and the cost has increased comparatively. The average cost per diem for each resident in the County Refuges was .63c; in the City Refuges \$1.07; and in the District Refuges, .83c. The cost for maintenance in the County Refuges was \$509,990.25; in the City Refuges, \$1,016,509.62; and in the District Refuges, \$54,595.95, making a total cost for maintenance in all refuges of \$1,581,095.82.

The Department of Public Welfare is cognizant of the responsibility imposed on the Boards of Management, the Superintendents and the Matrons to operate the Refuges as economically as possible, while at the same time it takes into consideration seriously the importance of the safety, comfort and happiness of the aged or infirm residents.

There has been a marked improvement during the last few years and this Department appreciates the fine co-operation extended by all the Boards, Superintendents and Matrons.

S. L. CHARLTON,
Inspector of Refuges.

APPENDIX I

CHILDREN'S INSTITUTIONS

Varied programmes are represented in the 41 organizations under the supervision of the Department of Public Welfare listed as Children's Institutions. Several of these have no institutional building but use exclusively the method of placing children to board in private family homes.

Several Institutions which, in the past, kept children for long-time care within the institutional building, have now made arrangements to have a thorough investigation made of every case before a child is admitted. They have also arranged to have each child's case reviewed periodically in order that the child may be replaced in the community as soon as possible.

As of December 31st, 1937, there were 2,841 children in the care of these organizations. There were 1,008,366 days' care provided. Total receipts were \$792,034.26. Cost per day per inmate would be, therefore, approximately .78c. Of the \$792,034.26 total receipts, \$514,579.57 was received from paying residents, donations and receipts from endowments, the remainder being made up of payments from municipalities and provincial government.

The programme of each institution is carefully supervised in addition to the physical aspects of the building and equipment.

B. W. HEISE,
Provincial Superintendent,
Children's Aid Societies.

APPENDIX J

Report Of
ONTARIO SOCIETY FOR CRIPPLED CHILDREN
1937 - 1938

BLUE MOUNTAIN CAMP

A member of the Board of Directors, who prefers to remain anonymous, bought a suitable property near Collingwood, built a splendid camp to accommodate 16 children and presented it to the Society. During the summer 67 children from twelve to eighteen years of age enjoyed a two weeks holiday. Care was taken to select only those who needed such an outing but whose parents could not provide it.

CRIPPLED CHILDREN'S STAMP CLUB

A new undertaking, announced in March, 1938, was the Crippled Children's Stamp Club. Discovering the keen interest taken by some of the children in the collection of stamps, it was determined to make it possible for every crippled child in this Province to have a stamp collection. A voluntary committee, with representation of the Canadian Philatelic Society, was established to collect, sort, and forward suitable stamps to junior and senior members.

PUBLICATIONS

There were 6 issues of "The Horizon," dealing with all aspects of the work, mailed to a list of about 11,000 interested people.

Dr. H. J. Prueter's thesis on the "Care and Education of Crippled Children in Ontario" was published in book form under the title "Facing the Future."

Two pamphlets, "The Layman's Guide," and "Suggestions for Surveys and Clinics," were printed for the use of local committees.

POLIOMYELITIS EPIDEMIC

As soon as things began to look serious some time during August 1937, the Society offered very complete co-operation to the Provincial Department of Health. This offer was accepted. From that time forward, the Society carried out every detail of requests made by the Deputy Minister of Health, Dr. B. T. McGhie, the Chief Medical Officer, Dr. J. T. Phair, and the officers of the Department especially assigned to this work, Drs. William Mosley and Roger Myers. Some of the things accomplished were the visiting of 800 cases showing paralysis; the making of accurate records on each visit of the Society's nurses in order that the Department might have complete information; manufacturing and distribution of several hundred reading tables for bed cases; provision of transportation of cases to and from hospital for treatment and follow-up care.

On November 1st, 1937, two nurses were taken on for a period of one year, one being loaned by the town of Paris, and one by the Provincial Health Department. The task was such that on January 1st, 1938, it was decided to add four more nurses to the staff, two being loaned by the Toronto Health Department, one by the Infants' Home and one by the Hospital for Sick Children, each for a period of three months. All of these were nurses with Public Health training, Public Health experience and experience in orthopaedics.

With the exception of the City of Toronto with its net-work of Public Health Services, and the four most Easterly counties of the Province which are served by the Eastern Ontario Health Unit, our nurses have practically covered the Province, visiting and reporting to the Provincial Board of Health on all polio patients of 1937 who had any paralysis or paresis.

In each case, a visit was made to the Medical Officer of Health of the district and to the private physician asking permission to visit the patient and offering assistance in any way in which we might be of service. The co-operation of the Medical Profession, without which little could have been accomplished, was most helpful.

As the year ended, 356 poliomyelitis cases were receiving nursing supervision by the three nurses remaining on the staff.

It was apparent that this service along with the arrangements for hospitalization and appliances provided by the Government had already resulted in the recovery of many cases without any sign of deformity. In spite of the fact that there were five times as many cases as in any previous year, it is our opinion that the treatment established will actually reduce the number of cases of ultimate deformity.

CO-OPERATION

The keynote of the Society's work for the year was co-operation. This was demonstrated in the Poliomyelitis work and in the development of new services in several areas. For example, the Rotary Club of Kingston made a complete survey of Frontenac County, discovering some 20 new cases needing attention. All of the survey letters, a total of 265 were prepared for them in the Society's office.

Work was established in a number of districts in which new service clubs were organized during the year.

The development of local interest and responsibility has always been the purpose of the Society. To give some idea of the extent of the service to crippled children since it became a major work some 15 years ago, the following summary is presented:

Total of all cases cared for, to and including 1931:

	Orthopaedic Cases	Other Handicapped Cases	Total
New Cases — 1932	3522	4355	7877
1937	4600	11314	15914
Totals	8122	15669	23791

OFFICERS

The officers of the Ontario Society for Crippled Children are:

President	Major E. H. Lancaster, K.C., St. Catharines
Vice-President	Dr. Grant Bird, Oshawa
Vice-President	Mr. John Watt, London
Hon. Treasurer	Mr. John J. Gibson, Toronto
Hon. Secretary	Mr. J. C. McRuer, K.C., Toronto
Executive Secretary	Mr. R. W. Hopper, Toronto

JENKINS & HARDY**Accountants and Auditors**

1305 Metropolitan Building, Toronto, Canada

March 15th, 1938.

The President and Members,
Ontario Society of Crippled Children,
15 Queen's Park,
Toronto, Ontario.

Dear Sirs:—

We have audited the books and accounts of the Ontario Society for Crippled Children for the year ended February 28, 1938, and have prepared therefrom the attached statements:

1. Receipts and Disbursements of the Society for the year ended February 28, 1938.
2. Receipts and Disbursements of Blue Mountain Camp for the year ended February 28, 1938.
3. Statement of Assets and Liabilities as of February 28, 1938.

You will note that the receipts of the Society for the year exceeded the current disbursements by \$888.50. This has been deducted from the overdraft brought forward at the beginning of the year of \$1,285.25, leaving an overdraft at February 28, 1938, of \$396.65.

In the course of our audit we have seen vouchers for all disbursements and have confirmed the bank overdraft. The revenue from membership fees and subscriptions is shown as recorded in the books and while we believe it to be accurate, have not made any other verifications. The net revenue from the Foundation Fund has not been reconciled with the records of the Foundation Fund.

The assets and liabilities have been set up in the statement from an inventory furnished by your Executive Secretary. Depreciation on same has been calculated at following rates:

- On furniture and equipment—10% per annum.
- On buildings—5% per annum.
- On automobiles—25% per annum first year.
- On automobiles—20% per annum succeeding years.

Subject to the foregoing we hereby certify that in our opinion the attached statement correctly sets forth the receipts and disbursements of the Society and of the Blue Mountain Camp for the year ended February 28, 1938.

Yours truly,

(Sgd). JENKINS & HARDY,
Auditors.

Liquor Control Board of Ontario

454 UNIVERSITY AVENUE,
TORONTO 2, ONTARIO,
FEBRUARY 15th, 1939.

TO THE HONOURABLE MITCHELL F. HEPBURN,
Prime Minister and Provincial Treasurer of Ontario,
Parliament Buildings, Toronto 5, Ontario.

Sir:—

I have the honour to submit herewith the Twelfth Report of the Liquor Control Board of Ontario for the twelve months' fiscal period which ended the 31st of March, 1938.

FINANCIAL STATEMENT

The Balance Sheet, certified to by Messrs. Brokenshire, Scarff & Co., Chartered Accountants, shows the amount of fixed assets to be \$128,959.50. This amount represents the value of the Board's real estate consisting of the land and buildings situated at 154 Wellington St. W., Toronto, and 201 Victoria Ave., Fort William, occupied as warehouses, and, the value of all furniture, equipment and alterations in the various premises occupied by the Board, less depreciation, which, since the commencement of operations in June, 1927, has been provided out of profits to an extent of \$965,918.30.

Other assets totalled \$2,485,967.25, being comprised of the following items:—

Cash on hand and in transit from branch banks.....	\$ 161,661.06
Accounts Receivable—hospital charge sales, beer levies, duty recoverable items, freight claims, fines, etc.....	181,880.64
Inventories of liquors and supplies.....	2,124,637.66
Prepaid items	17,787.89

Liabilities amounted to \$1,735,593.00, as follows:—

Accounts Payable—for liquors and supplies, accrued charges, etc....	\$1,691,818.81
Due Provincial Treasurer—for permit sales and confiscated stock....	43,774.19

Sales of permits during the twelve months amounted to a net figure of \$556,579.49, which with the amount unpaid from the previous year of \$2,416.13, totalled \$558,995.62, of which \$525,000.00 was remitted to the Provincial Treasurer, in accordance with the requirements of the Liquor Control Act of Ontario, Section 18 (2).

The item of \$9,778.57 represents a balance due to the Provincial Treasurer for forfeited liquor which was purchased by the Board after careful examination, and in accordance with the provisions of Section 132 (2) of the Act.

Contingent liabilities amounted to \$1,188,879.73. These items comprise the value of undelivered and consignment orders and, also, the amount of customs or excise duties which will have to be paid on the goods which were in bond on our premises on March 31st, when the same are cleared. These items are not chargeable against, nor do they affect the operations of the Board for the period under review.

The Profit and Loss Account shows sales for the twelve months from Liquor Control Board stores of \$22,830,002.37.

The same account shows a gross trading profit of \$8,308,738.92 with total expenses including depreciation and items written off, of \$1,793,685.56, which resulted in a net trading profit of \$6,515,053.36. This latter sum, together with other revenue which amounted to \$3,378,533.73, resulted in a total profit of \$9,893,587.09, which is carried to the Surplus Account.

For the purpose of comparison, the percentage that the cost of stock sold, miscellaneous earnings and expenses and other revenue bear to the sales are given for the fiscal year of 1937 and the twelve months' period herewith reported upon.

The Surplus Account shows a balance at the commencement of the period of \$956,368.75, this being the amount of accumulated profits from previous years' operations which had not been transferred to the Provincial Treasurer. Added to this is a twelve months' profit of \$9,893,587.09, which, together with \$4,377.91 representing sundry adjustments, resulted in an amount of \$10,854,333.75. From this sum, \$9,975,000.00 was remitted to the Provincial Treasurer. The total payments to the Provincial Treasurer during the twelve months were, therefore:—

On Account of Profits	\$ 9,975,000.00
On Account of Permits	525,000.00
	<u>\$10,500,000.00</u>

Besides the Balance Sheet, Profit and Loss Account, and the Surplus Account, statements showing summary of sales and the expenses of administration and operation for the twelve months are also attached. Individual percentages which these expenses bear to the total sales are given for the twelve months and also for the preceding fiscal period, on the expense statement. On March 31st, 1938, the staff comprised 848 employees as against 830 employed one year previously.

In addition, all Liquor Board stores, brewers' warehouses, breweries and wineries privileged to sell alcoholic beverages in Ontario, as of March 31st, 1938, are set forth on Schedule III attached; a classification of permit and license sales appears on Schedule IV, and a summary of Authorities, Standard Hotel Licenses and Light Beer Permits issued, cancelled, suspended, surrendered and reinstated during the year, with the number operative on March 31st, is set forth on Schedule V.

SALES

The sale of spirits, beer and wine from liquor stores during the twelve months amounted to \$22,830,002.37. The net value of beer sold from breweries and brewers' warehouses, i.e., exclusive of any charge for containers, totalled \$26,289,136.05. Sales of native wines made direct to customers from licensed native wine sales offices, and, where permitted, from the winery premises, amounted to \$1,886,530.27.

During the year the Board continued to maintain the safeguards created in the past to ensure that the various brands of beverages offered for sale in Ontario conform to satisfactory standards and are uniform in quality. This is accomplished by the selection of products of reputable producers, the making of grading tests by a group of experienced officers, and extensive analytical work which is carried out in the Department of Health laboratories under the direct charge of the Chief Provincial Analyst, as well as strict supervision over all stocks in stores and warehouses.

The following comparative sales statistics are given for the fiscal year under review and also for the preceding twelve months:—

VALUE

	Twelve Months ending March 31, 1937	Twelve Months ending March 31, 1938	Increase or Decrease	Percentage
Domestic Spirits.....	\$12,266,537.33	\$13,825,094.49	\$1,558,557.16	Inc. 12.7

STORES

The number of liquor stores in operation on March 31st was one hundred and twenty-six; no change in the number having occurred during the year.

Five stores were moved to new locations, as follows:—

- No. 24—Port Colborne—from 88 Fraser Street to 216 King Street on September 9th, 1937.
 No. 46—Sarnia—from Christina and Cromwell Streets to 224 Front Street North, on May 28th, 1937.

 No. 57—Belleville—from 52 Bridge Street East to 37 Bridge Street East, on July 4th, 1937.
 No. 84—Picton—from South side of Main Street to North side of Main Street, February 7th, 1938.

BREWERIES AND BREWERS' WAREHOUSES

On March 31st, 1938, there were twenty-six Ontario and four Quebec breweries licensed to sell their products in Ontario.

The number of Ontario and Quebec licenses did not change from the previous year, but Drewry's of Winnipeg, Manitoba, discontinued the Ontario sale of their products at the conclusion of the previous year.

The gallonage of domestic strong beer sold in Ontario during the years 1934 to 1938 inclusive, as computed from the sales records of the Board and with respect to sales to destinations outside Ontario from the monthly reports of the Ontario brewers was as follows:

	1934 (12 months) Gallons	1935 (5 months) Gallons	1936 (12 months) Gallons	1937 (12 months) Gallons	1938 (12 months) Gallons
Sales from Liquor Stores' stock Beer orders taken at Liquor Stores for delivery by brew- eries and brewers' ware- houses.....	896,529	291,430	730,535	668,137	686,716
Sales from breweries and brew- ers' warehouses.....	58,162	10,564	21,035	21,408	16,025
	10,936,751	6,410,474	20,874,503	22,606,732	25,096,435
Total Ontario Sale of Domestic Beer.....	11,891,442	6,712,468	21,626,073	23,296,277	25,799,176
Sales to other Provinces.....	1,444,135	394,722	1,360,366	1,650,344	1,905,459
Export Sales.....	63,207	10,569	3,396	3,410	3,619
Total.....	1,507,342	405,291	1,363,762	1,653,754	1,909,078

The number of Brewers' Warehouses in operation at the year end totalled one hundred and two, one warehouse at Ottawa having been closed on March 31st, 1937.

From June 15th to September 15th, a warehouse was operated at Riverside.

During the year under review, seven warehouses were moved to new locations, as follows:—

- 17W. Windsor—from 1350 Ottawa Street East to 881 Erie Street East—as of April 1st, 1937.
- 43W. Smiths Falls—from Beckwith Street to 16 Victoria Street North—as of May 29th, 1937.
- 105W. Fort William—from 141 Hardisty Street to 325 Simpson Street—as of June 17th, 1937.
- 97W. Morrisburg—from 1 Main Street to the Brown Block on Locke Street—as of July 12th, 1937.
- 53W. Pembroke—from 193 Victoria Street to 186 Victoria Street—as of July 26th, 1937.
- 14W. London—from 665 Dundas Street to 594 Dundas Street—as of August 26th, 1937.
- 62W. Huntsville—from Main Street to the corner of Main and Brunel Streets—as of September 15th, 1937.

WINERIES

The Board has continued its endeavour to improve the quality of native wine. Through these efforts, the price of grapes paid by the manufacturer to the grower has been maintained at a figure which permits the grower to keep his vineyard in good condition, making possible the production of high-grade grapes, without which, good wine cannot be produced.

The encouragement given by the Board towards centralized manufacturing of native wine continued to result in the installation of improved manufacturing apparatus and facilities in the respective wineries, as well as the employment of more highly skilled technicians.

The laboratory facilities of the Provincial Health Department were again utilised for the conducting of numerous native wine analyses, as well as for the supplying of pure cultures of wine yeast to the native wineries desiring them. The number of analyses of native wines carried out during the year totalled four hundred and sixty-three, and forty-nine yeast cultures were sent to eleven wineries. All wines which failed to conform to satisfactory standards have been required to be removed from sale. Close inspection in all wineries of financial records, as well as processing, was continued.

This combination is largely responsible for the improvement which has taken place in the wines produced in Ontario during the past five years.

A comprehensive revision of the Board's Regulations with respect to native wine was being conducted at the close of the year and such revised Regulations have since become operative, and should undoubtedly facilitate more effective administration.

From April 1st, 1937, to the fiscal year end, the following Native Wine Licenses were purchased by other Licensees and surrendered to the Board. In each case the Board, in accordance with the provisions of Regulation No. 106, sanctioned the operation by the licensee who surrendered the license of a retail sales shop in an approved location:

<u>Date</u>	<u>License</u>	<u>Purchased and Surrendered by</u>	<u>Retail Sales Office Authorized at</u>
June 8th, 1937	Windsor Co. Ltd., Windsor	T. G. Bright & Co., Niagara Falls	564 Ouelette Ave., Windsor
Feb. 16th, 1938	Hamilton-Niagara Wines, Ltd., Hamilton	Turner Wine Co., Toronto	15 King William St., Hamilton

The Danforth Wine Company Limited obtained a new charter under the name of Danforth Wines Limited under date of March 18th, 1938.

The Board, during the year, authorized the following transfers of sales offices:—

<u>Licenses</u>	<u>From</u>	<u>To</u>	<u>Opening Date of New Shop</u>
Barnes Wines Limited	701 Yonge St., Toronto	703 Yonge St., Toronto	May 6th, 1937
Danforth Wines Limited	43 Market Square Stratford	1426 Yonge St., Toronto	May 15th, 1937
T. G. Bright & Co., Limited	24 King St. W., Hamilton	513 St. Clair Ave. W., Toronto	June 3rd, 1937

From the monthly reports submitted to the Board by the respective wineries, the following statistics of gallonage of Native Wine sold have been compiled:—

	1934 (12 months) Gallons	1935 (5 months) Gallons	1936 (12 months) Gallons	1937 (12 months) Gallons	1938 (12 months) Gallons
Sale at Wineries.....	390,106	219,645	557,645	737,673	861,846
Sales to the Board.....	942,064	404,102	637,521	675,551	690,635
Total Ontario Sales.....	1,332,170	623,747	1,195,166	1,413,224	1,552,481
Sales to other Provinces.....	1,443,320	546,738	1,159,010	1,014,810	1,111,769
Export Sales.....	35,041	3,807	2,483	4,520	3,581
	2,810,531	1,174,292	2,356,659	2,432,554	2,667,831

During the year, the tonnage of grapes used in the manufacture of wine, concentrates, grape juice, and brandy, was 12,161 tons for wine; 1,369 tons for concentrates; 588 tons for grape juice, and 667 tons for brandy.

Two hundred and thirty-three tons of cherries were also used for wine making.

During the preceding year, 179,898 gallons of native wine were distilled into grape spirit for wine fortification, while during the year under review, 226,418 gallons were used for such purpose.

The sale of Canadian Brandy—a product of the Ontario grape—again increased. In the year ending March 31st, 1937, 12,196 gallons were sold, while 13,791 gallons were sold during the past year.

At the close of the year there were twenty-nine winery licenses operative, compared with thirty-one at the end of the previous year, direct sale to customers being made from the premises of ten wineries and thirty-nine branch retail sales shops.

AUTHORITIES FOR THE SALE OF BEER AND WINE

Complete details by Municipalities of the number of Authorities which were issued, cancelled, suspended or surrendered during the year, together with reinstatements, are set forth on Schedule V.

On March 31st, 1938—the end of the fiscal year—there were one thousand, one hundred and forty-seven Hotel Authorities in operation, two hundred and thirty-three Club Authorities, one hundred and nineteen Military Mess Authorities and one Railway Authority.

Authorities were issued for six months to fifty-three Summer Hotels. Of these, five were extended to an annual basis after payment of the required additional fee.

The fee for Hotel and Railway Authorities was continued at six cents per gallon of beer purchased and five per cent. of the value of wine bought, payable monthly, with a minimum fee of \$300.00 per annum for full year Authorities and \$150.00 for the six months' Summer Hotel Authorities.

For Social Club Authorities, the annual fee was continued at \$100.00; for Soldier and Labour Clubs, \$50.00; for Steamship Authorities, \$50.00, and for Military Mess Authorities, \$10.00.

PAYMENTS TO MUNICIPALITIES

In accordance with the Act and the governing Order-in-Council, the Board paid to the various municipalities 20% of the fees received from their local hotel authority holders. Three hundred municipalities participated in this disbursement, which totalled \$194,524.80, same being paid during May, 1938.

HOTELS

On March 31st, 1938, one thousand three hundred and thirteen Standard Hotel Licenses were effective, of which one thousand one hundred and forty-seven possessed an Authority to sell beer and wine; forty-five were holders of Light Beer Permits and one hundred and twenty-one held only the Standard Hotel License. There was no change in fees.

Frequent inspections were made of all hotels in the Province by the Board's twenty-three inspectors, who are required to submit monthly conduct reports in respect to each premises visited.

The co-operation of the Provincial Fire Marshall and his staff in the matter of fire prevention in hotels and other authorised premises has at all times been extended to the Board and is gratefully acknowledged.

Likewise, the Board is indebted to the Provincial Department of Health, which assisted in the issuance of our revised regulations with respect to the sterilization and cleansing of beverage glasses and other utensils in use in hotels and authorised premises throughout the Province.

PERMITS

From April 1st, 1937, to March 31st, 1938, there were 50,880 Individual Annual Liquor Permits issued. The sales of Single Purchase Permits totalled 3,116,729. Individual Permits sold to non-residents, valid for a period not exceeding one month, numbered 49. In addition, 2,216 Special Permits were issued to Physicians, Druggists, Hospitals, etc.

During the year the Board continued to give full co-operation to municipal officers and departments administering relief.

In many municipalities, relief authorities keep hotels and other authorised vendors of liquor supplied direct with up-to-date lists of persons on relief, and, in keeping with the Board's policy, every endeavour is made to prevent such persons from buying intoxicants.

In accordance with the requirements of the Act, the Board, after thorough investigation, deemed it advisable during the year to issue 3,074 Prohibitory Orders, an increase of 800 over the preceding year. Such action followed either notification relative to conviction for violation of the Act, or the receipt of a request or recommendation from some interested party, such as a relative, friend, magistrate, police officer, physician, relief officer, etc. These Prohibitory Orders comprised 612 full Board Orders, which precluded the individual concerned from purchasing alcoholic beverages from any source. Included therein were 40 which resulted from Judges' Orders of Interdiction and 44 from conviction for intoxication while in charge of a motor vehicle.

The remaining 2,462 were Orders which cancelled the individual's privilege to purchase alcoholic beverages for home consumption.

With respect to the 2,462 cases referred to, 725 were the result of convictions having been registered under the Criminal Code of Canada for intoxication while in charge of an automobile. A further 953 followed the conviction of the individual for violation of the Liquor Control Act, and the premises of 567 of these were declared a "public place" within the meaning of the Act. The other Orders were issued as being in the best interest of all concerned according to the judgment of the Board from the available information at hand.

In addition, in a number of other cases, it was considered advisable to afford the individual restricted purchasing privileges only, such as allowing the purchase for home consumption, from a specified store, of a limited quantity per week or month.

During the twelve months under review, after full investigation and consideration, it was decided to revoke 204 of the Prohibitory Orders which had been made effective at some prior date.

During the year, 1,583 Special Permits were issued to Druggists. These permits constituted authority for the druggist to purchase alcohol in limited quantities for compounding and pharmaceutical purposes and also accorded him the privilege of buying rubbing alcohol for re-sale. The premises of holders of Druggists' Special Permits were subject to periodical inspection, and, in addition, Druggists were required to file monthly with the Board a report of all rubbing alcohol sales.

Continued efforts were made to prevent the use of rubbing alcohol as a beverage and during the year the names of ninety-two addicts were posted with all druggists in the larger communities of the Province.

For failure to comply with the Board's Regulations, it became necessary during the year to cancel three and to suspend five Druggists' Special Permits.

GENERAL

The various Police Departments continued their close co-operation with the Board throughout the year, with satisfactory results, and for which the Board desires to record its appreciation.

In conclusion, the Board is gratified to be able to convey, through this Report, its thanks to the personnel for their loyal endeavours during the past year.

I have the honour to be, Sir,

Your obedient servant,

E. G. ODETTE,

Chief Commissioner.

Ontario Department of Agriculture

REPORT

OF THE

Minister of Agriculture

Province of Ontario

FOR THE YEAR ENDING MARCH 31st, 1938

Printed by Order of
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 21, 1939

TORONTO

Printed and Published by T. E. Bowman, Printer to the King's Most Excellent Majesty
1938

DEPARTMENT OF AGRICULTURE

PROVINCE OF ONTARIO

TO THE HONOURABLE ALBERT MATTHEWS, L.L.D.,
Lieutenant-Governor of Ontario.

MAY IT PLEASE YOUR HONOUR:

I have the honour to submit the Report of the Department of
Agriculture for the year 1937-38.

I have the honour to be, Sir,

Your obedient servant,

P. M. DEWAN,

Minister of Agriculture.

Toronto, March 31, 1938.

PRINCIPAL OFFICERS OF THE DEPARTMENT OF AGRICULTURE

THE HONOURABLE P. M. DEWAN, Minister

W. R. REEK, Deputy Minister

MISS J. M. FRY, Secretary to the Minister

MISS M. S. MARTIN, Accountant

- G. I. CHRISTIE, B.S.A., D.Sc.President, Ontario Agricultural College, Guelph.
- C. D. McGILVRAY, M.D.V., D.V.Sc.....Principal, Ontario Veterinary College, Guelph.
- J. S. SHEARER, B.S.A.Principal, Kemptville Agricultural School.
- E. F. PALMER, B.S.A.Director, Horticultural Experimental Station,
Vineland.
- J. C. STECKLEY, B.S.A.Director, Western Ontario Experimental Farm,
Ridgetown.
- S. H. H. SYMONS, B. Comm., F.S.S.....Principal Clerk, Statistics and Publications
Branch.
- J. A. CARROLL, B.S.A.Superintendent, Agricultural and Horticultural
Societies Branch.
- L. E. O'NEILL, B.S.A.Director, Live Stock Branch.
- MISS BESS McDERMAND, B.Sc.Superintendent, Women's Institutes Branch.
- P. W. HODGETTS, B.S.A.Director, Fruit Branch.
- G. H. BARRDirector, Dairy Branch.
- R. S. DUNCAN, B.S.A.Director, Agricultural Representative Branch.
- J. D. SMITHDirector, Crops Seeds and Weeds Branch.
- L. E. O'NEILL, B.S.A.Acting Commissioner of Marketing.
- L. CAESAR, B.A., B.S.A.Provincial Entomologist.
- L. STEVENSON, B.V. Sc., M.S.Provincial Zoologist.
- L. H. HANLAN, B.S.A., M.S.A.Fieldman, Northern Ontario.
- T. A. DOUGLASFarm Manager, Hearst Demonstration Farm.
- C. D. GARDNERFarm Manager, New Liskeard Demonstration
Farm.
- J. E. HOUCK, B.Sc.Chairman, Milk Control Board of Ontario.
- J. E. HOUCK, B.Sc.Chairman, Farm Products Control Board.

ONTARIO AGRICULTURAL COLLEGE

ATTENDANCE

Teaching continues to be the most important work of the College. The product of the classroom should and does mean most for agriculture. It is perhaps for this reason that interested people everywhere are concerned about the attendance of young men and women at the College.

For the regular courses in agriculture we had an enrollment of 593. In Home Economics there was an enrollment of 233. In addition, the College conducted a large number of special and short courses. The Summer School for teachers was held for a period of five weeks. These groups, together with the regular students, brought the total for the year to 3,316.

Not only were the facilities, laboratories and classrooms overtaxed, but the faculty has been called upon to carry an extra load. Some additions must be made to the staff if we are to keep up the quality of instruction for this ever increasing group of students.

Registration in all courses is being well maintained. The Summer Courses show the highest registration since their inception.

(Figures include all students who were in attendance during the period from April 1, 1937, to March 31, 1938.)

Two Year Course in Agriculture.

Beginning with September, 1937, the Two Year Associate Course was reorganized in an attempt to make this instruction more practical and helpful to the young man who plans to return to the farm and does not carry the necessary entrance requirements or does not intend to take the degree course.

Since it is not expected that these students will proceed to the degree, it was possible to substitute for some of the science work more practical courses.

With the approval of the Department of Agriculture, the fees and the cost of board and rooms for students taking this course were materially reduced.

The enrollment of 67 for the first year is gratifying and evidence that the course is making an appeal to the young men of the farm.

Two Weeks' Short Course.

With the attendance of 533, the Two Weeks' Short Course, held December 28 to January 7, was full of interest and helpful instruction. The course makes a special appeal to those interested in the practical side of agriculture. This course seems to meet a special demand and is greatly

appreciated. Not only is there opportunity to give instruction in specific phases of agriculture but an attempt has been made to interest students in work which they might do in planning and holding programmes in their communities.

Poultry Short Course.

The Poultry Short Course, held December 29 to January 22, was attended by 31 men and women.

Dairy Short Course.

The Three Months' Dairy Course had an attendance of 74 which is the largest in our records. These young men were preparing themselves for their work in cheese factories, creameries, milk plants, ice cream factories and other lines of dairy work. It is gratifying to find this interest in the development and improvement of the dairy industry.

Youth in Training Project.

A course for training young men as gardeners was held from November 22, 1937, to March 31, 1938. Under the Dominion Provincial Youth Training scheme, fifteen young men were selected from among the unemployed with the approval of the Parks Commission in their city. In addition to their railroad fare to Guelph and return, these boys received \$10.00 per week to cover board and room and incidental expenses.

Through the Ontario Department of Agriculture arrangements were made to give a course for boys who had been placed with farmers under the Youth in Training Project. This course was held from February 14 to February 19, 1938.

In placing boys with farmers for training, it was understood that these young men should receive instruction in a short course for a period of not less than two weeks. A group of 55 boys from Western Ontario Counties were sent to Guelph for the period. Railroad fare and the cost of board and room were met from Government funds.

RESEARCH AND SERVICE

In addition to the work of instruction in the regular and short course, research and service activities are carried on throughout the year in the various departments of the College. It is the constant endeavour of the College to be of help to the farmers in the solution of their problems. Some projects of interest are here summarized.

Registered Erban Oats.

In the parts of Eastern Ontario where Crown Rust is a serious disease the Erban oat has proved itself highly desirable, producing yields of four or five times the number of bushels obtained from the standard Victory oat used there, which is quite susceptible to this disease. The Erban oat was accepted for registration by the Annual Meeting of the Canadian Seed Growers' Association held in Saskatoon in June, 1937. A fair quantity of Elite seed was grown on the experimental plots for distribution in 1938.

Attempts were also made in 1937 to combine the Crown Rust and smut resistance of the Erban oat with the Stem Rust resistance of the new Vanguard oat produced by the Central Experimental Farm. It is expected that the progeny of the crosses made between these two varieties will yield breeding material of outstanding value.

Increase of Improved Strains.

At present large stocks of seed of different grasses and clovers, often poorly adapted to Ontario conditions, are being imported. Improved strains of all the important grasses and clovers grown in Ontario have been developed, however, and these are at present being increased for distribution. These new strains are more winter hardy, perennial, rust resistant, leafy and productive of a higher quality of feed than the types now commonly used in Ontario.

Soil Surveys.

.. Surveys were made in two areas where special soil problems were under study. In the Oxford Brant area the extent and distribution of the soils best adapted to the production of tobacco were determined, and soil types and fertility were studied with reference to the so-called mineral deficiency troubles in dairy herds. In the Durham, Northumberland, and Prince Edward Counties physiological disorders in apples were the occasion for a detailed soil survey. It appears that most of the soil types on which orchards are growing are medium to low in available nutrients. This survey will be continued in 1938.

Rapid Soil Diagnosis.

In conjunction with Neubauer seedling analyses and greenhouse pot culture experiments, efforts are being made to devise rapid chemical tests for diagnosing soil deficiencies and fertilizer requirements. So far, improvements have been made in methods of testing for phosphorus.

Welland Soil Fertility Plots.

Experiments relating to soil fertility, covering three complete five year rotation periods, have revealed definite trends of much significance in long term soil management. Summer-fallow did not sustain soil fertility, there was a definite decrease in yield during each rotation period. Land not summer-fallowed, on the other hand, while showing lower maximum yields, maintained its fertility better than summer-fallowed plots.

Gas Storage of Pears.

Gas storage of pears was given a semi-commercial test for the first time this year. After removal from the gas-store in January, the fruit had a cold storage life of about two weeks; full ripeness was attained in eight days at 65 deg. F. The quality of the fruit was good in every respect.

Cloth Covered Propagation House.

The cloth covered plant propagation house, built in 1936, was doubled in size in the spring of 1937. It has been used for testing flowers and vegetables. One interesting finding was that old roses from greenhouse branches can be removed to a cloth house, cut back, and be made to produce an abundance of summer bloom.

Creelman Lilies in New Zealand.

Bulbs of the Creelman Lily, originated at the O.A.C. were sent to Government House, Auckland, New Zealand, in 1936. A report has been received from Major Purvis, on behalf of the Governor General, stating that these bulbs produced flowers superior to those of parental types blooming at the same time. It is interesting to note that these Canadian Lilies bloom in May and December in New Zealand, whereas they bloom only in July in Canada.

Capons and Cockerels.

In response to a widespread demand for information regarding the economic value of caponizing, a comparative study of capons and cockerels of three breeds was undertaken. Data on growth and feed consumption were secured, and these indicate that, contrary to popular opinion, capons at no period up to thirty-two weeks make appreciably greater growth than cockerels, but they do make slightly more economical growth. They also made economical gains during the three weeks' fattening period prior to slaughter. It appears from this test that caponizing of the heavier breed males, to be marketed at small or large roaster age weighing from four and one-half to eight pounds, may be made a profitable undertaking.

Poultry Nutrition.

A study was made of the vitamin A potency of a number of poultry feeds. Dehydrated cereal grass was found to be the most potent source; less than one-half per cent. of this feed in the ration would meet the chick's minimum requirement. Other supplements would have to be added in amounts ranging from 2 to 25 per cent. of the ration. The study also showed that a percentage greater than the minimum requirement gives somewhat better results as far as growth and variability are concerned.

Tomato Breeding.

Selections from a John Baer and Italian Pear Shaped tomato cross show promise of yielding a tomato suitable for export to the United Kingdom. If such a variety can be selected until its characters become fixed, it will be a definite asset to the canning industry. One of these selections should be of particular value for the manufacture of paste, puree and juice.

Root Rot and Blight of Canning Peas.

Once the soil has become contaminated, this is a very difficult disease to control. Many seed disinfectants have been recommended for its prevention, but in a comprehensive test conducted during the year none was found to be effective when susceptible varieties of peas were sown in contaminated soil.

Drainage Activities.

There was a very marked increase in drainage activities during 1937. The regular field men were kept busy throughout the season and several tile plants and ditching machines which had been idle for several years, were again put into operation. Some four hundred farmers were given assistance with their drainage problems.

In Southern Ontario heavy rains caused serious losses in some peach orchards. Standing surface water, combined with hot, sultry weather, "cooked" peach and cherry trees and made fruit farmers very drainage conscious. The wet condition of the soil, however, often made installations difficult. It appears that the new highway passing through this district will create a great many outlet underdrainage problems.

Potato Starch Content Tester.

A specific gravity apparatus has been designed this year which will save time and labor in the testing of potatoes for starch content for market grading purposes. A five-minute test satisfactorily takes the place of the twelve-hour drying test formerly needed.

Onion Maggot Control.

For several years efforts have been made to discover a simpler and more practical method of controlling the onion maggot than that of lubricating oil emulsion. In 1937 the infestation was fairly heavy and several experiments were conducted at different points in the Province. It was found that calomel satisfied all the requirements of an effective and economical control material.

Spray Injury Investigation.

The spraying of orchards in 1937 was attended by much more than the usual amount of burning of foliage and russeting of fruit. An investigation of several orchards where the injury had been most serious, revealed that every case of severe russeting of apples could be attributed to incorrect use of Bordeaux. In no case did any appreciable russeting occur if the Bordeaux was used only where recommended in the calendar.

Seasonal Apiary Management.

To maintain a high honey production it is necessary to replace old queens frequently and to replace winter losses through increase. This is often done by purchasing queens and packages from the Southern United States. Experiments are now being conducted with a view to developing a system of apiary management whereby the beekeeper can raise more suitable queens and nuclei from his own colonies at little expense.

Milk-fat Production and Cheese Yield.

There is evidence that the cheese-yielding capacity of Ontario milk is declining. This condition is partly the result of a nutritional deficiency. For this season a study is being made of the effect of feed mineral supplements on the butterfat tests of dairy cattle.

This project is carried out in co-operation with the Homestead Co-operative Dairy, Thamesford, Ontario, and it has proved invaluable in determining the reasons for the poor cheese yields in that area.

SCHOLARSHIPS AND GIFTS

During a visit to Muncie, Indiana, on November 10, 1937, the President of the College was presented with several medals won by the late Senator David Christie of Paris, Ontario. The presentation was made by

Mr. A. T. Christie of Muncie, Indiana. Among these medals, which are of peculiar interest and value, is one bearing the date 1867 which was presented to David Christie by Queen Victoria for his statesmanship activities in connection with the union of the Provinces of Canada under the British-North America Act. A second, dated 1851, was an award of merit to David Christie on a prize-winning bushel of wheat exhibited by him at the great London Exposition.

A third medal bears the date of 1860 and was issued to David Christie, as a distinguished citizen of Canada, on the occasion of the opening of the bridge at Montreal by the Prince of Wales, afterwards King Edward VII.

Gift of Books from the German Government.

From the German Government the College is in receipt of a number of valuable books. Particularly valuable and useful amongst these is a German cyclopedia in three sturdy volumes. The German Academy has also contributed to the gift, sending a copy of an excellent dictionary and the professional journal "German Instruction in Foreign lands" which appears monthly in Germany.

Specimen of Lake Superior Amethyst.

Miss Bessie L. Thomson, of Paris, Ontario, gave to the College a large piece of Lake Superior Amethyst which is several pounds in weight. This has been added to the collection in the museum.

Gift from the 1938 Short Course Group.

The students attending the Winter Short Course donated \$32.50 to be added to the fund which is used to secure suitable equipment for the Hospital in the Administration Building.

Gifts from Macdonald Institute Classes.

In December, 1937, the Macdonald Institute Literary Society presented a Standard Dictionary for the Residence. At the same time, the Senior Class made a gift of four books for the Residence. In January, 1938, the Students' Council presented two fireplace screens, with crests, to Macdonald Hall.

Prize of Twenty-five Dollars

Mr. W. S. Montgomery, of Toronto, has presented a prize of Twenty-five dollars to be awarded to the student in the Fourth Year who stands highest in the Chemistry Option.

IMPORTANT EVENTS OF THE YEAR

Superannuation of Professor Frank C. Hart.

After thirty years of continuous service with the Department of Agriculture, Professor F. C. Hart, Head of the Department of Agricultural Economics, was superannuated February 1, 1938, on account of illness. Professor Hart has rendered to Ontario Agriculture a distinct service. His leadership in many branches has been greatly appreciated.

Following graduation from the O.A.V. in 1906, Professor Hart took up work with the Agricultural Representative Branch. Later, he was Director of the Co-operative and Markets Branch, Ontario Department of Agriculture, and, in November, 1928, came to the O.A.C. as Professor of Agricultural Economics.

Appointment of Professor W. M. Drummond.

Professor Drummond, who succeeds Professor Hart as Head of the Department of Agricultural Economics, came to the College on September 1, 1937. A graduate of Queen's University in 1923, Professor Drummond obtained his M.A. Degree and was appointed Lecturer in Economics at the University of Alberta. Upon completion of special study at *Eccles Libres des Sciences Politiques & College de France* and the Harvard School of Graduate Studies, he was connected with the University of Toronto first as Lecturer and later as Assistant Professor of Economics. Professor Drummond owns and operates a farm and keeps in close touch with the practical side of agriculture and the needs of country life. His publications, articles in the press, and addresses before rural and urban groups have given evidence of his deep interest in and knowledge of economic and social problems.

British National Union Party.

The British National Union Party of British and Dominion farmers visited the College on September 14, 1937, under the leadership of Sir Richard Winfrey, well known leader and agricultural authority, and Lady Winfrey. The purpose of these visits is to establish contact with the Dominion and to facilitate an exchange of ideas on questions generally affecting the British Commonwealth of Nations.

The North German Lloyd Party.

The North German Lloyd party of German farmers arrived at the College Sunday evening, October 17, and remained until after luncheon on Monday. During their visit much time was devoted to the live stock, field crops, and the frozen fruit division. In the afternoon, the party visited a number of farms in Waterloo County with the Agricultural Representative of that district.

Tri-State Educational Tour.

A group of more than one hundred farmers from Maryland, Virginia and Pennsylvania visited the College on August 31, 1937. These people were members of the Tri-State Educational Tour under the leadership of R. G. East of the Pennsylvania Railroad. The party had supper at the College, inspected the various departments and remained over night. Following breakfast on the morning of September 1, the group proceeded to Toronto to visit the Canadian National Exhibition.

ONTARIO VETERINARY COLLEGE

CONVOCATION AND COMMENCEMENT EXERCISES

At the Convocation of the University of Toronto held on May 14th, 1937, the degree of Bachelor of Veterinary Science (B.V.Sc.) was conferred on thirty-four graduates by the Chancellor, The Rt. Hon. Sir William Mulock, P.C., K.C.M.G., M.A., L.L.D.

The Annual Commencement Exercises were held on November 13th, 1937, in the Assembly Hall of the College.

The prizes won by students were presented by the Hon. P. M. Dewan, Minister of Agriculture. Prof. W. J. McAndrew of University College also addressed the assembly.

Student Enrolment.

The number of students in attendance has again shown a considerable increase. A total of 243 students were enrolled this session, being an increase of 25 over the previous year. The attendance has now reached the highest level since 1915. The present building was intended to accommodate approximately 135 students. As a result of increased attendance the different classrooms and laboratories are greatly overcrowded. Laboratory classes have been divided up necessitating a duplication of class work. We were obliged this year to confine our enrolment of new students to those residing here and to refuse admittance to all outside applicants. Unless additional facilities are provided we may require to further restrict the attendance within the limit of the capacity of the building. In any event the time would appear opportune to further advance the entrance requirements and to lengthen the course from four to five years for graduation. By so doing the attendance could be regulated somewhat and at the same time improve the standard of qualification both for entrance and graduation as in the case of the other learned professions acquiring a university degree.

This recommendation is deserving of the earliest possible consideration and increased accommodation and added facilities should be provided to meet the needs.

The Teaching and Executive Staff.

The members of the staff of the different departments are as follows:

C. D. MCGILVRAY, M.D.V., D.V.Sc., Principal: Contagious Diseases, Sanitary Science.

W. J. R. FOWLER, V.S., B.V.Sc.: Anatomy and Surgery.

H. E. BATT, V.S., B.V.Sc.: Zoology, Histology, Meat Inspection.

R. A. MCINTOSH, M.D.V., B.V.Sc.: Diseases of Cattle, Obstetrics, Therapeutics.

F. W. SCHOFIELD, B.V.Sc., D.V.Sc.: Pathology, Bacteriology.

L. STEVENSON, B.V.Sc., M.S.: Physiology.

A. A. KINGSCOTE, B.V.Sc., D.V.Sc., Parasitology, Pathology.

J. S. GLOVER, B.V.Sc.: Poultry Diseases, Milk Hygiene.

V. R. BROWN, B.V.Sc.: Anatomy, Hygiene.

H. R. POTTER, B.V.Sc.: Sporadic Diseases, Hygiene.

T. L. JONES, B.V.Sc., M.Sc.: Bacteriology.

E. R. BOWNESS, B.V.Sc.: Diseases of Fur Animals.

F. J. COTE, B.V.Sc.: Canine and Feline Diseases.

R. STEWART CLARK: Jurisprudence.

A. L. SHEPHERD: Executive Clerk.

MISS E. SLEEMAN: Secretary, Librarian.

MISS M. SCOTT: Stenographer.

Courses of Study and Instruction.

Owing to the increased attendance a readjustment of the laboratory classes was necessary. All of the laboratory classes had to be divided into two sections. This entailed a duplication of class work increasing to a considerable extent the teaching load of the staff. In spite of this the general course of instruction has been maintained along desirable lines.

A consistent effort has been made to provide a good standard of instruction throughout and to further correlate class and laboratory work in keeping with the best educational practices.

The general aim has been to diversify and improve the course so as to adequately equip the graduate to render more effectively the services which live stock owners, allied interests and the general public seek to acquire. The trend and demand for veterinary service has greatly changed within the last decade in the prevention of diseases, especially those which are liable to be disseminated through the ordinary channels of live stock traffic. As a result greater efforts are being made to ensure the highest possible standards of animal health by the prevention and control of diseases which are infectious and communicable and likely to become more prevalent and widespread unless checked. Greater attention is also being given to create a greater interest in disease of animals communicable to human beings, either directly or indirectly, by animal food products, but more especially through milk borne infection and unwholesome meat food products. To meet the various exigencies of private and public service a high standard of professional qualification is necessary, hence the training of the under-graduate becomes increasingly in need of careful guidance. Adjustments are therefore necessary to meet changing conditions as they arise, and are being made from time to time in the course by developing the basic sciences and by broadening the subjects of instruction in relation to public service and private practice in their various branches. Owing to the prevailing trend towards research and investigational work every encouragement is given the undergraduate to develop a greater talent and inclination in this direction. A detailed outline of the regular course of study and instruction is contained in the college calendar which is distributed to those interested. In addition to the regular undergraduate course, special classes and laboratory work in the nature of short courses are provided for graduate practitioners. By this means the practicing graduate is given the opportunity to keep abreast of the times and be of greater usefulness to those depending on his services.

Special Courses.

During the month of June a conference was held in the interests of the fur farming industry under the joint auspices of the College and the Ontario Silver Fox Breeders' Association.

The course comprised special lectures and demonstrations on the following subjects:

- The control of infectious and contagious diseases.
- Profit producing pelts.
- Breeding and management of mink.
- Principles of infection and immunity.
- Mineral and Vitamin deficiency.
- How to improve the quality of pelts.
- Breeding and management of foxes.
- Fisher and nutria farming.
- Nutritional requirements.

During the month of July a short course for practicing veterinarians was held at London, Ontario, in co-operation with the Ontario Veterinary Association. The programme comprised the following topics:—

- How to detect common parasite eggs.
- Routine examination of seminal fluid.
- Demonstration of stomach tube technique in the horse.
- Application of anaesthetics in the horse.
- Examination of the udder for mastitis.
- Demonstration of the anatomical structure of the udder.
- Bacteriological diagnosis of mastitis.
- Measures of sanitation and control in mastitis.
- Drawing of blood for serological examination.
- Diagnosis and treatment of fractures.
- Intravenous medication.
- Operative technique and anaesthesia.

Research and Investigation.

While the College is essentially an educational institution concerned primarily with the instruction and training of students, nevertheless considerable research and investigational work is being done by the various members of the staff. The scope and extent of the work undertaken has naturally to be kept within the means at our disposal and cannot be extended beyond the available facilities. The increased student enrolment and additional amount of routine has also lessened the time that could be devoted to essential research work. However, much of the routine work is related to the laboratory examination of specimens and to the clinical diagnosis of disease and is of much value in promoting further researches which may be undertaken as opportunity permits. As in former years we have endeavoured to avoid duplication of work or the repetition of experiments except where necessary to establish pertinent facts of value. We are again indebted to many practicing veterinarians and owners of animals for their hearty co-operation and assistance from time to time. Some of the diseases receiving attention are briefly summarized herewith and detailed reports are submitted as appendices.

Actinomycosis in the Horse: This is undoubtedly an unusual disease in the horse. While very common among cattle the infection in the horse has not previously been observed at the College clinic.

Botryomycosis in the Horse: This disease in many ways resembles Actinomycosis. It is a fairly common infection in the horse and usually difficult to treat successfully. In this case it is interesting to note that satisfactory results followed the use of an autogenous bacterin.

Influenza Among Horses: Some interesting data was collected and recorded from two extensive outbreaks of influenza occurring in many horses. The outbreaks were attributed to stallions which were apparently carriers of the virus and disseminating the infection to mares at service.

Heaves or Pulmonary Emphysema in Horses: This disease which is commonly known as "broken wind" has been investigated to determine whether like Asthma of man it may be due to the influence of some foreign protein or pollen. The results obtained did not indicate that there was a similar etiology.

Tuberculosis and Jaenne's Disease in Dogs: These two diseases are unusual in dogs and are reported as interesting cases. Tuberculosis in the dog does not occur as frequently on this continent as in Europe.

Johne's Disease in Cattle: Several cases of this disease were again observed this year. A report is submitted describing the disease in detail as to its nature, occurrence and methods of diagnosis.

The Examination of Seminal Fluid: This article while of a highly technical nature is submitted as an appendix. It reviews the different methods employed in the collection and examination of seminal fluid.

Poultry Diseases: During the year a number of interesting cases were observed such as poisoning in pea fowl, ruptured livers in chicken, capillaria infestations, nutritional diseases and infectious tracheitis in chicks. A report of the latter is submitted as an appendix.

Tuberculin Test in Mink: The occurrence of tuberculosis on a mink ranch was investigated. The infection was found to be of the bovine strain. The animals were inoculated with tuberculin and positive reactions obtained to the test were verified on post mortem examination.

Foot and Tail Rot in Mink: Many losses were reported as occurring on mink ranches. Several animals affected with this condition were obtained. It was considered that this condition was of dietary origin. In these particular cases recovery was rapid when the nutritional balance was obtained.

Big Head in Foxes: Animals affected with this condition were examined and it was concluded that the disease was not primarily of an infectious nature but was due to faulty methods of housing, lack of sunshine and vitamin D deficiency.

Hysteria in Foxes: This condition has become very common in fox ranches where the custom has been to remove foxes from sheds and small enclosures to a large enclosure or run for the last few months before pelting. From a few hours to ten days after placing these animals in the runs a variable percentage develop convulsions and are killed by their mates. In the past a number of explanations have been offered, the most common one being that these animals eat poisonous plants that abound in these runs. Post mortem findings, and filtrates made from stomach contents of these animals and injected into laboratory animals, failed to substantiate this theory.

It seems that over-exertion and nervousness are the main causes. These animals are raised in small pens in sheds, their exercise is curtailed by the smallness of the pens, they are not allowed on the ground nor out in the open. When moved to a large run of several acres in extent, in company with other animals, they become panicky and run themselves into a state of physical and nervous exhaustion. Convulsions result and the others attack and kill them.

If animals must be placed in large runs then it is wise to move them to the breeding pens for a week before giving them this greater freedom. Sedatives, such as phenobarbital in doses prescribed for dogs and administered by the use of stomach tube, or subcutaneous injection, are the recommended methods of treatment for affected cases.

Differentiation of Streptococci from Various Sources: Streptococci have been isolated from different conditions occurring in a variety of animal species. These include Joint-Ill in the foal, Strangles in the horse, Bovine Mastitis, Pneumonia in the fox and Septicaemia and Empyema in dogs. As time has permitted, a number of tests have been made on these cultures to determine what differential features may exist among organisms isolated from different sources. These records may provide interesting data when an adequate number of cultures have been tested for conclusions to be drawn from them.

Anaemia in Young Pigs: It is a serious matter that there is no apparent decrease in the number of fatalities among winter litters from this disease. The prevention of anaemia is such a simple procedure that there is no excuse for this loss to continue. Our most recent experiments have been directed towards establishing a method of prevention which requires the minimum of work for the swine husbandman. It was found that week old pigs given 0.3 grams of iron maintained the level of haemoglobin above the danger zone. Thus, one dose of iron was sufficient to prevent anaemia from occurring.

Germ Infections in Swine: From these cases brought to this laboratory for diagnosis we find that fatalities in weaned pigs occur most frequently within two weeks after weaning. Pneumonia is the commonest lesion; gastritis and enteritis are often present. From the majority of carcasses which are received in a fresh state, *Pasteurella suisseptica* is isolated. A few cases of acute gastro-enteritis have been observed without any respiratory lesions. When cultured aerobically, no significant organisms were obtained. An anaerobic organism has been isolated but attempts have not been made to reproduce the condition with such a culture.

EXTENSION SERVICE

This service has been promoted to furnish specialized clinical and laboratory assistance in the diagnosis, prevention and operative treatment of diseases in all classes of animals. It has been developed along such lines of usefulness as seemed to be most effective and desirable to those requiring specialized services and to furnish clinical and laboratory material for teaching and demonstration purposes in class work. It thus serves a twofold purpose and has also been made more or less self sustaining by making a nominal charge to cover any expense incurred where the service rendered is of an individual commercial nature. The nature and extent of the service rendered is briefly summarized as follows:

Animal Clinics: These clinics are held regularly each afternoon throughout the College session. All animals admitted are carefully examined after which medical treatment is prescribed and surgical operations performed as may appear desirable. The value and importance of the service rendered is manifested by the large number of animals presented regularly for clinical observation and operative treatment. The cases presented were quite varied in character and all species of animals are included, comprising over 200 horses, 150 cattle, 100 swine, 75 sheep, and 100 dogs and cats. Details of the service rendered are contained in a separate report of the clinical department which is submitted as an appendix. In this report attention is drawn to the need of additional help and for an addition to the building to provide space for post mortem purposes.

Examination of Parasites: Numerous specimens received have been examined and identified. Such material has included various species of flukes, tapeworms, roundworms, insects and protozoans from a variety of animals. Recommendations regarding the biological control and treatment of the infested animals has been made. Parasitic diseases diagnosed during the year include mange, and strongyloidosis in horses; mange, and coccidiosis in cattle; trichostrongylosis and nodular disease in sheep; mange, ascariasis, lungworm infestation and sarcosporidiosis in swine; and in the small animals most of the forms of parasitism to which they are commonly susceptible. Nearly two thousand specimens collected by students were examined. Data is still being collected on the geographical distribution of the flesh fly, "*Wohlfahrtia vigil*". This parasite has caused havoc in several new areas in southern parts of the province and has been recorded from new centres of the West, but not beyond the Rocky Mountains. All case reports during the past year have concerned mink and young carnivorous animals. Mink ranchers have installed several hundred of the fly proof nest boxes described in our annual report of 1935, and have thus avoided a repetition of the heavy losses encountered in 1934. Articles describing the construction of these fly proof dens have appeared also in German and other foreign journals.

Specimens of a parasite hitherto unrecorded in these latitudes of North America were received on two occasions for identification. They were identified as oviduct flukes (*Prosthogonimus pellucidus*). In Europe and other parts of America they are considered to be the most pathogenic flukes of poultry resulting in acute inflammation of the oviduct, the formation of soft shelled or broken eggs and peritonitis which may prove fatal. The flukes are large, nearly half an inch in length and a quarter of an inch in width, and reddish-yellow in colour.

Fecal Examinations: Samples of faecal material from various domestic animals have been subjected to routine examination. The majority of these tests were made to confirm or eliminate the presence of internal parasites by the discovery or absence of their eggs and larvae.

Examination of Blood: Blood samples received have been examined for the number and type of cells, for evidence of anaemia, reduced haemoglobin and animal parasites.

Examination of Skin Scrapings: Skin scrapings have been examined for evidence of the causative organisms of mange and ringworm. In the former case outbreaks of mange, coming under the Animal Contagious Diseases Act, have been reported to the Health of Animals Branch. In other cases control and treatment has been recommended directly to those concerned.

Examination of Seminal Fluid: Samples of seminal fluid from horses, cattle and dogs have been examined by routine methods, for evidence of sterility or genital infections. The owners of such animals have been given advice as each individual case merited.

Examination of Meat: Carcasses of various food animals have been inspected, and opinions given regarding their fitness for human consumption. Carcasses have been condemned when tubercular lesions, cancerous growths, pyaemia and sarcosporidia were present.

Examination of Butter: Several samples of butter were examined during the year. These samples contained numerous fly maggots, which had made a considerable quantity of butter unsuitable for marketing. The maggots were identified and methods of preventing an occurrence of the troubles were recommended.

BIOLOGICAL LABORATORY SERVICE

Preparation of Biological Products: One hundred and eighteen thousand, seven hundred test doses of "*S. pullorum*" antigen, and positive and negative control sera were prepared and supplied to registered veterinarians for the agglutination test for "*S. pullorum*" infection. Eleven thousand, six hundred and thirty test doses of "*Br. abortus*" antigen were distributed to qualified veterinarians for the agglutination test for Infectious abortion of cattle (Bang's disease).

Serological Tests: These are commonly known as blood tests and are widely used for the diagnosis of Infectious abortion in cattle (Bang's disease). During the year 21185 blood samples were submitted to the agglutination test for Bang's disease. Included in this number were 2863 blood samples from cattle intended for export or for exhibition purposes.

The results of these tests are as indicated in the following table:

BLOOD SERUM TESTS FOR BANG'S DISEASE

Animal	Disease	Number of Samples Tested	Number Positive	Number Doubtful	Number Negative	Unfit for Testing
Cattle	Bang's Disease	21,185	2655	801	17,557	172

POULTRY LABORATORY SERVICE

Routine Examination of Specimens: This laboratory service is increasing enormously and has been largely responsible for the increased amount of routine work. During the year specimens were received for laboratory examination as indicated in the following tables:—

Poultry Diseases	No. of Cases
Adult pullorum infection	113
Ascites	16
Avian Diphtheria	10
Coccidiosis	207
Colds and Roup	15
Enterohepatitis (turkeys)	19
Enterohepatitis (chicken)	14
Fowl Cholera	60
Laryngo-tracheitis	23
Leucosis	54
Pullorum Disease of Chicks	493
Tuberculosis	36
Cloacitis	1
Other Infections	34
Volvulus and Impaction	3
Egg Bound	3
Internal Laying	8
Enteritis	28
Ruptured Oviduct	3
Impaction of Gizzard	1
Injuries	9
Nutritional Disorders	357

Nature of Case	Butter, etc. Water tests												Other Animals from Zoo	Total	
		Cattle	Sheep	Horses	Swine	Dogs	Cats	Rabbits	Birds	Fox	Goats	Mink			
Tissue from Operations	—	4	—	6	—	—	—	—	—	—	—	—	—	—	10

Total	148	96	29	73	50	83	7	4	14	114	7	133	28	786	

Publications: During the year the following bulletins have been published relating to diseases deserving of special consideration at the present time:—

Swine Diseases and Their Prevention.

Navel-ill in Foals.

Mastitis or Garget in Cows.

Bang's Disease (Infectious Abortion).

Disease of Poultry.

KEMPTVILLE AGRICULTURAL SCHOOL

Enrolment.

The enrolment in the various courses offered at the Kemptville Agricultural School for April 1st, 1937, to March 31st, 1938, was as follows,—

AGRICULTURE

Senior Year (two-year Course)	39	
Junior Year (two-year Course)	34	
Short Course—Livestock	43	
Short Course—Field Crops	43	
Public and Separate School Teachers' Summer Course	387	
		546
Short Course Agriculture Farm Trainees)		31

HOME ECONOMICS:

Homemakers (One Year)	20	
Home Economics (Two Year)	9	
		29

EASTERN DAIRY SCHOOL:

Cheese and Buttermakers' Winter Course	20	
		20
Grand Total		626

The following table gives the enrolment since the year 1927-28,—

	1928	1929	1930	1931	1932	1933	1934	1935	1936	1937	1938
	1929	1930	1931	1932	1933	1934	1935	1936	1937	1938	
Senior Year Agriculture	19	11	29	37	27	25	17	24	34	39	
Junior Year Agriculture	15	40	42	51	46	29	33	46	46	34	
Two Year Home Economics	—	—	—	—	—	—	—	—	8	-9	
Home Makers' Home Economics	13	9	6	—	—	—	35	22	20	20	
Elementary Agriculture Summer Course	46	54	52	80	77	56	47	156	330	387

Domestic Sc. Senior Year	—	—	—	6	7	Discontinued					
Docestic Sc. Short Course	—	—	12	11	Discontinued						
Short Course Livestock—(first week of March 1938)									Poultry L.S. 30	43	
Short Course Field Crops—(second week of March 1938)									Farm. Mech. F.C. 35	43	
Cheese & Butter- Makers' Winter Course									31	20	
Totals:	118	139	161	218	190	165	187	260	534	626	

The Kemptville Agricultural School is becoming the focal point of Eastern Ontario in Agricultural activity. Not only is the enrolment the greatest in the history of the institution, but more farm organizations and their members used the facilities of the school than ever before.

Foreword:

The Demonstrational farm also fulfilled its objective by producing Registered No. 1 Seed Grain, high quality Yorkshire Gilts and Boars. Shropshire ewe and ram lambs, Ayrshire and Holstein bulls from R.O.P. dams, hatching eggs from the trap-nested Barred Rocks, and these were sold at reasonable prices to farmers of Eastern Ontario. In addition, the farm was available to the students in Agriculture for instruction and demonstration in,—

- (a) Stabling and Equipment
- (b) Feeding Practices
- (c) Livestock and Crop Management
- (d) Care of Milk and Cream
- (e) Care of Farm Machinery
- (f) Sanitation and Prevention of Diseases

Another important phase of the work is the Extension Service. Members of the staff are available on call from any farmer or rural organization. Assistance has been given as follows,—

- (a) Radio Program over C.F.L.C. Prescott, each Friday, from May 1st. to October 31st, 1937, at 12.45 to 1 p.m.
- (b) Speakers, demonstrators and Judges at Farm Meetings, Field Days, Fairs, etc.
- (c) News letters to Farm Press.
- (d) Fieldman in Drainage work in Eastern Ontario.
- (e) Fieldman in Soils & Fertilizers in Eastern Ontario.
- (f) Fieldman in Pasture Improvement Work in Eastern Ontario.

Resignations:—Employees of Permanent Classification.

J. E. E. Nephew, B.S.A., Instructor in Animal and Field Husbandry and Dean of Men

Appointments:—To Permanent Classification.

A. D. Runions, B.S.A., Instructor in Animal and Field Husbandry and Extension Specialist

Student Royal Show:

This outstanding function was held on March 15th, 1937. Over 60 head of livestock was exhibited before the judges.—R. H. Graham, Ontario Livestock Branch, Toronto; Jas. R. Henderson, Livestock Breeder, Portsmouth.

Exhibits in Seeds, Roots, Grains, Pressed Weed Collections, Weed Seed Collections, Home Garden Plans, Insect Collections, Forging, Woodworking, Soldering, Rope Splicing, Harness Repair etc. were voted outstanding by the judges. Over 400 visitors were present.

Prize winners were:

- Livestock—Arden Baker—Grenville County
- Field Crops—Howard Henry—Carleton County
- Weeds and Weed Seeds—Eric Barkley—Grenville County
- Speed Milking Competition—Bev. Matheson—Oxford County
- Clean Milk Contest—Bev. Matheson—Oxford County
- Agricultural Engineering—Henry Taylor—Huron County

The Home Economics students held open house for their friends during the day. Visitors were taken through the Demonstration Home, School Residence, Clothing Laboratory and Class Kitchen. Afternoon tea was served to members of the Women's Institute and other guests from the surrounding district.

The staff would like to express sincere thanks for the co-operation, support and assistance of the following,—

Federal Dept. of Agriculture

- (a) Central Experimental Farm, Ottawa
- (b) Dominion Livestock Branch, Ottawa
- (c) Dominion Seed Branch, Ottawa
- (d) Federal Health of Animals Branch, Ottawa
- (e) Agricultural Economics Branch, Ottawa
- (f) Dominion Fruit Branch, Ottawa
- (g) Dairy and Cold Storage Branch, Ottawa

Locheil Junior Farmers Association (Glengarry)
Renfrew Junior Farmer Clubs (Renfrew)

REPORT OF THE DIRECTOR OF HOME ECONOMICS

The Director has superintended the School Residence, lectured to the Junior and Senior Students in Home Economics, in Foods, Nutrition, Economics of the household and Family Relations, and had charge of the practice work of the girls while they live in the Demonstration House. She has also acted on the Curriculum Committee for the Home Economics program under the Dominion and Provincial Youth Training Movement, on the Publications Committee for the Women's Institute bulletin on Canning and as a Director of the Kemptville Summer Fair Board.

Students' Residence:

The staff includes,—

Dietitian and Dean of Girls—Miss Ruth Newell
1 cook
1 laundress
2 hall maids
7 waitresses

We regret that Miss Minnie McDiarmid, who had very efficiently carried on the work in the residence, resigned after the summer school session and took up a position under the Dominion and Provincial Rural Youth Training Movement.

The program of redecorating the residence has been promoted again this past year. New hardwood floors have been laid in the boys' residence and the other floors varnished; linoleum laid in the boys' halls, radiators painted etc.

Additions to the electrical equipment have included a floor polishing machine and a food mixing machine.

Chairs were replaced in many of the rooms and new furniture added in the room occupied by the Dean of Boys.

Laboratories:

Some large pieces of equipment were purchased for the laboratories to accommodate the increasing number of students. These included an electric refrigerator (to replace an obsolete ice box;) a double-oven electric range and an electric sewing machine placed in the Clothing Laboratory.

The Demonstration House:

The Visitors' Book at the Demonstration House shows that over 600 men and women have visited it during the year. Ten Women's Institute groups, averaging about 25 members each, visited the house during the summer. They each brought along a picnic lunch, became acquainted with the Home Economics Department, and spent the afternoon discussing the decorations of the house, its efficient kitchen etc. Assistance on equipment, plans and finishes has been given to women who are planning kitchens.

In addition to the visitors from outside, the Demonstration House has served its original purpose to give the students a place to put into practice the theory they have learned in the class room. In groups of four they have taken over the duties of housekeeper, waitress, cook or hostess.

The house has been a practice place for the home furnishing classes, in such things as furniture arrangement, curtains and accessories. In the second year of its use, the Demonstration House has proven its value as a part of the Home Economics Laboratories.

Students:

This year shows the largest enrollment to date in the Home Economics classes—with 4 senior students—7 juniors and 17 homemakers. Since the junior and homemaker students are grouped as one class for their practical work, the class is as large as can be accommodated in the laboratories.

REPORT OF THE POULTRY DEPARTMENT

During the Fall term, lectures were given to the regular students as follows,—

Junior Year:

- 3 periods per week on Poultry
- 1 period per week on Civics
- 1 period per week on Feeds

Senior Year:

- 3 periods per week on Poultry
- 2 periods per week on Economics and Marketing

During the winter term the Juniors receive one period per week on Civics and four periods per week on Poultry. The Seniors receive four periods per week on Poultry. Beside the regular students, some forty-five lectures were delivered to the Summer School.

During the past year there was an increased amount of extension work as follows,—

School Fairs	-	-	-	-	6
Meetings attended	-	-	-	-	21
Short Courses	-	-	-	-	7
Culling Demonstration	-	-	-	-	37

A total of 2,712 people were addressed.

During the early Fall a number of farm visits were arranged by the Co-operation Egg Selling Agencies in Eastern Ontario, and the farmers birds culled. 107 farms were visited and a total of 19,400 birds were culled and approximately 25% were marketed.

The pressing need in Eastern Ontario at the present time, is some work on the disease problem. Some work along this line is being undertaken for the coming year.

DEPARTMENT OF FARM ENGINEERING AND DRAINAGE

The following classes were given lectures and demonstrations by this department,—

Classes in Agriculture
 Short Course Students
 Dairy School Students
 Teachers' Summer School Students

From May 1st. to Oct. 1st. this department acted as drainage supervisor for Eastern Ontario, working under the direction of the Drainage Dept., O.A.C. Guelph, Ontario. During the year 43 visits were made, of which 21 were advisory, 2 inspections and 20 were preliminary surveys, in which 37,432 feet of drains were surveyed. This included one often called an award ditch, constructed between five farmers. More of the drainage work this year was being done by ditching machines. The two jobs inspected were borrowing money under The Tile Drainage Act. A complete report of the work accomplished by this department during this period is included in the report of the Drainage Division, O.A.C. Guelph, Ontario.

Regular Course in Agriculture:

October to April

Lectures and demonstrations were given in the following subjects,—
 Drainage, Electricity, Meteorology, Hydrostatics and Mechanics, Selection, care and sharpening of tools, planning and construction of farm buildings, Concrete and its uses on the farm, Iron and Steel, Gas Engine, Tractor and Auto Mechanics, Farm Water Supply and Sewage Disposal, Selection, Care and Repair of Farm Machinery, Soldering, Harness Repair, Rope Splicing and Halter Making, Belts and Belt Lacing, Saw Filing, Forging, Oxy-Acetylene Welding and Woodworking.

In Welding, 39 welded milk stools were made. In woodworking, 165 articles were made, which consisted of book racks, electric table lamps, sets of double trees, end tables, book shelves, lawn chairs etc.

In Leather work, 40 hame straps and 40 show calf halters were made, in addition to considerable repair work being done.

The forge work and blacksmithing was given by Mr. Noah Brown, Kemptville, Ont. Each student received instruction and practice in horse-shoeing and made such articles as a cold chisel, welded links, welded grab link, gate hook and staples, meat hooks, spring links, etc.

During the year the following equipment was added to this department,—

Miscellaneous tools to make more complete the equipment for wood-working and mechanics.

Through the co-operation of the Massey-Harris Co. Ltd. a Pacemaker Twin Power Tractor on rubber was loaned to this Department for class room purposes.

The International Harvester Co. Ltd. replaced their W.30 Tractor with steel wheels and lugs with a W.30 Tractor on rubber.

Short Course for Trainees:

Jan. 31 to Feb. 12, 1938

This department gave lectures, demonstrations and practical work to this Short Course Class on the following subjects,—

Harness Repair

Soldering

Knots, Splices and Haltermaking

Caring for machinery

Odd repair jobs around the farm and house

Filing saw and sharpening tools.

Plowing Demonstration Oct. 29, 1937

Through the co-operation of Mr. J. A. Carroll, Director of Agricultural Societies, Mr. L. H. Winslow, Director of the Prov. Plowing Match conducted a very successful demonstration in plowing for match work with the junior class.

Explosives Demonstration Nov. 1, 1937

Through the co-operation of the Canadian Industries Ltd. instruction and practise was given the Senior class in the handling of explosives and their use in blowing out stumps and breaking stones.

Oxy-Acetylene Clinic Feb. 21, 1938

Through the co-operation of the Dominion Oxygen Co. two experts in welding conducted a one-day clinic at this school, which our senior students attended and received valuable instruction and training in welding.

Moving Pictures:

Moving Pictures with Talkies on the Farm Implement business were shown the students through the co-operation of the International Harvester Co. on March 1st. Through the co-operation of the Massey-Harris Co. Ltd. on March 11th, also the Massey Harris had one of their expert mechanics demonstrate their new Pacemaker Twin Power Tractor to the Senior Class.

Frost & Wood Trip, March 21, 1938

Through the co-operation of the Frost & Wood Company, Ltd. the senior class visited their plant at Smiths Falls and saw the complete operation of manufacturing farm machinery.

EASTERN DAIRY SCHOOL

The past year concluded the forty-fourth session of the Eastern Dairy School. Twenty students attended the full three months' course; three students attended for special work and sixty-one attended special weekly-lectures, making a total attendance of eighty-four. Nineteen of the full course students wrote their examinations and sixteen passed satisfactorily. Ten counties were represented in the registration, namely, Carleton, Dundas, Glengarry, Grenville, Hastings, Leeds, Prescott, Renfrew, Russell and Stormont.

The staff of the Dairy School consisted of the Superintendent and four instructors, placed at the disposal of the School by the Dairy Branch. Members of the Agricultural School assisted with the work in Dairy Mechanics, Public Speaking and Dairy Live Stock. Members of the Federal and Provincial Dairy Departments kindly gave their services in visiting the school for special lectures.

As an appreciation of the valuable work carried on by the Eastern Dairy School, and in order to encourage students in their studies, the Montreal Provision Trades Association branch of the Montreal Board of Trade has been pleased to recently offer competitive scholarships to the school, amounting to \$100.00.

During the period of the year when the school was not operating, the Superintendent was occupied with work assisting the Provincial Dairy Branch, Summer School for Rural Teachers and the Classes of the Kemptville Agricultural School.

In the early Spring a special demonstration in cheesemaking was conducted at the Cloverdale Cheese Factory in Picton County and assistance given at the two days' Short Course for Cheesemakers at Casselman.

During the summer forty-five cheese factories having trouble with second or lower grade cheese were visited or contacted through the local instructors. Nearly sixteen hundred samples of milk were microscopically examined either at the factories or in the laboratory of the school. Full reports of these examinations were sent to all the factories concerned. Wherever there was trouble with second or lower grade cheese these examinations showed considerable contamination in the milk received at the factories or the sanitary conditions of the factories were unsatisfactory.

In many countries the Methylene Blue test is now being adopted as the most satisfactory practical method of detecting contaminated milk at the factory. The Dairy School has been trying out this test during the past winter with milk delivered for cheesemaking. Our results support the recommendation of the test by leading bacteriologists. Its adoption in Ontario as a standard guide for the bacterial contamination of milk seems to be worthy of serious consideration and complete investigation.

DEPARTMENT OF CHEMISTRY, SOILS & FERTILIZERS

During the Spring and Summer of 1937, thirty demonstrational plots were laid out and supervised in the eleven Counties from Frontenac east. Each plot received various fertilizer mixtures and were tested out on Spring Grain, Meadow, Alfalfa, Potatoes and turnips. During this period 19 field and evening meetings were addressed with a total attendance of 1230. Considerable interest was developed in Soil Testing and during the year over 500 samples of soil were tested.

During the Fall and Winter, lecture and laboratory work with the regular students in Agriculture and Home Economics was given covering Inorganic, Organic and Food Chemistry and Soils and Fertilizers, Lime and Manures.

Extension work during this period is confined mainly to Short Course work and Farmers' meetings.

DEPARTMENT OF APICULTURE

A small Apiary is maintained to serve for demonstrational purposes and supply the residence with honey. No experimental work is carried out. Lectures are given to the Junior year in Agriculture and Home Economics covering the Care and Management of Bees, and Care, Uses, and Grades of Honey.

DEPARTMENT OF HORTICULTURE

Lectures were given in the several branches of Horticulture, namely:— Pomology, Vegetable Gardening and Floriculture with practical instruction as far as seasonal conditions permit. A Course of Lectures and Laboratory work were conducted in general Botany and Plant Pathology.

Lectures in Entomology and instruction in the identification of the commoner species of injurious and beneficial insects and methods of spraying and dusting were undertaken.

The Department of Horticulture had the supervision of the general up-keep and development of the school grounds, campus, green-houses, vegetable garden and orchard.

The extension work was of a general nature with assistance to Orchardists and Vegetable Gardeners in connection with pruning, spraying and other problems. In this connection and in collaboration with the Agricultural Representative, a Spray Service was maintained throughout the season, consisting of seasonal letters to orchardists.

Illustrated talks were given on a variety of Horticultural subjects to clubs and organizations requesting this assistance.

In collaboration with several School Inspectors, a number of rural schools have been selected for development, advice on planting is given, and a quantity of perennial material, annually available from the School grounds, is sent out to these schools to further this work.

Visits were made and suggestions given to many needing advice on Farm Home Beautification.

Pure Bred Livestock:

The purchase of two Jersey show cows during the year brought another Dairy Breed to the School Herd. While two animals are not sufficient to make satisfactory judging classes, the animals are used for demonstrations with the students. In a more practical way it also affords an opportunity of comparing the production of milk and butter fat of the Jersey cow with the established Dairy Breeds, viz., Ayrshire and Holstein.

The second Percheron was added to the Horse string when a yearling filly was secured direct from the Western Canada Summer Show Circuit.

Another Clydesdale mare was also added, the first prize mare at the 1937 Stratford Spring Show being purchased for the school. During the year this mare was bred to Craigie Realization (Imp.).

Three Shropshire Ewe lambs were purchased, in addition to exchanging the aged Shropshire ram for another aged ram. These were all secured from a prominent Shropshire breeder.

The remainder of the Livestock along with the above mentioned additions was maintained and handled in a practical manner. During the year surplus young breeding stock was supplied to farmers of the district at prices in keeping with the times.

Commercial Livestock:

Ninety-seven Western lambs were purchased during November and fed throughout the winter. Despite prevailing low prices, the lambs showed a profit over feed of about 50c per lamb. In addition to demonstrating to the students the proper methods of feeding and handling range lambs, they were also used for class room purposes. The students were given practice in Judging, Grading, trimming and shearing market lambs. A number of the lambs were also slaughtered and used in carcass demonstration during the regular Livestock Short Course.

Field Crops on School Farm:

The usual farm crops common to this section of the Province were grown on the School Farm during the year.

Despite the unfavourable season for all cereal grass, a fairly satisfactory yield of Registered Alaska Oats was secured. After being properly cleaned and graded in the Seed Cleaning Plant they were sold to farmers of the district as 3rd generation, Registered No. 1 Alaskan Oats at very satisfactory prices.

The hay crop was fair, while the yield of roots was slightly above the average. A sufficient acreage of corn was grown to fill three silos 12 ft. x 30 ft.; 14 ft. x 30 ft.; 16 ft. x 32 ft.

Seed Cleaning Plant:

The Seed Cleaning Plant was operated as a custom plant during the Winter months. The new equipment installed last year gave very satisfactory results. Following is a detailed account of the custom work:—

SMALL SEEDS

	Timothy	36,159 lbs.
	Sweet Clover	31,578 lbs.
	Alfalfa	15,430 lbs.
	Red Clover	4,720 lbs.
	Alfalfa & Red Clover	1,730 lbs.
Number of Farmers using Plant—248.		

GRAINS

Approximate Receipts—\$703.64	Oats	71,096 lbs. or 2,091 bus.
	Barley	29,933 lbs. or 611 bus.
	Wheat	12,230 lbs. or 204 bus.
	Beans	8,590 lbs. or 143 bus.
	Peas	1,591 lbs. or 27 bus.
	Flax	1,255 lbs. or 22 bus.
	Rye	590 lbs. or 11 bus.

HORTICULTURAL EXPERIMENT STATION, VINELAND

RESEARCH PROJECTS

Soil Analysis: The analytical work in the soils laboratory was continued during the past year. A total of 401 farmers' samples were analysed and reports made on this analysis. In connection with Project No. 271, "A STUDY OF THE EXTENT TO WHICH APPLE ORCHARD CULTIVATION MAY BE ECONOMICALLY REDUCED", 624 moisture samples and 224 Nitrate Nitrogen determinations were made. For Project No. 361, "SOIL ORGANIC MATTER STUDIES", 180 Nitrate Nitrogen determinations were made. For Project No. 291, "JORDAN GRAPE EXPERIMENT", 184 determinations for potassium were made. This completes the analysis of all soil samples taken in connection with this experiment to date.

Nutrition of Peach Trees: Pot culture work with peaches was continued in order to determine the nutrient intake of the peach. 126 trees were grown in four gallon glazed crocks containing sterile sand to which nutrient solutions of known composition were added every fourth day. In all, 21 different ratios of anions to cations were used. From this work it would appear that the peach utilizes a low ratio of nitrogen to potassium, and that phosphorus is necessary only in small amounts. During this coming season this phase of the work will be enlarged using fresh trees started from a single bud.

Root Rot in Strawberries: Root rot in strawberries continues to be a serious cause of loss to growers. Studies in methods of control by biological and chemical treatments of the soil are being continued. Also, the production of clean rooted plants by growing in steam sterilized soil is being extended. About fifteen hundred plants rooted in sterilized soil were supplied to two growers for a semi-commercial test. These will be grown under the same conditions as their ordinary run of plants and will be compared in health, vigour and productiveness.

East Malling Apple Stocks: The test of the East Malling apple rootstocks in comparison with the French Crab seedling rootstocks commonly used by Ontario nurseries has now completed its eighth year in the orchard. With the R.I. Greening variety, Malling XVI, a vigorous rootstock, seems to result in larger and more productive trees than French Crab seedling rootstocks but in the other four varieties the latter trees are more productive. Trees on Malling II rootstocks are slightly dwarfed and have been more productive than the trees on French Crab seedling rootstocks except in the Melba variety. Malling I rootstocks, which have some difficulty in getting their potassium supply, have not been very satisfactory

on our soil which is low in readily available potassium. Taking the average of all varieties, trees on Malling IX rootstocks, very dwarfing, are still slightly in the lead in yield per tree. These latter trees require a good sized post as a support to guard against breakage at or below the bud union. They are also much given to rooting from the scion and thus losing their dwarf habit. For this reason they must be planted with the union two or three inches above ground level. The per tree yields (lbs.) 1930-37, averages of all five varieties, are as follows:

French Crab Seedlings	East Malling Stocks			
	XVI	I	II	IX
85	70	88	113	118

Cherry Stocks: Some of the tests of Mazzard and Mahaleb cherry stocks on farms of the district have now completed their fourth year in the orchard. A few of the trees bore fruit in 1937 and there appeared to be no appreciable stock effect with regard to earliness of bearing. The trees on Mahaleb roots were the larger at planting time and are still in the lead but in 1937 there seemed to be some evidence that the trees on Mazzard roots are commencing to overtake the former. The spring was very wet and it appears that the Mahaleb roots are more adversely affected by these conditions than are the Mazzard roots.

Pruning Fruit Trees at Planting Time: Cutting back the branches of nursery trees at planting time results in a crowding of laterals immediately back of the cut and some of these have weak crotches subject to breakage. Furthermore many of these laterals cannot be permanent because they are too close to the main trunk where a congestion of branches cannot be permitted. Either the laterals should be left full length or cut to a one or two bud stub, the latter treatment usually preferred.

Grape Pruning and Soil Fertilization: The ninth year of the experiment at the Haines Concord vineyard at Jordan has now been completed. For a number of years several of the plots were deliberately pruned too heavily and in the last three years the other extreme was also attained. Overpruning reduced yields but, though size of bunch and berry was increased over normal pruning, the sugar content of the juice was lower. Underpruning gave small loose bunches of small berries but the sugar content of the juice was normal or above. However, when underpruning was continued for a few years the vines became weak and subject to drouth and freezing injury. During the last few days before the cutting season there was a slight increase in sugar content and a decided decrease in acid content. Undoubtedly most of the improvement in eating quality during this period is due to the decrease in total acids.

Nitrate of soda alone has given no increase in growth or fruiting. There has even been a tendency in the other direction. The increases from phosphate and potash fertilizers have been small, the combination of these two mineral fertilizers with nitrate of soda being the most effective. Soil analyses indicate that only small amounts of the mineral fertilizers have reached the root zone and therefore lack of effect from them may be due to their inaccessibility to the roots.

Additions of straw with enough nitrate to guard against nitrogen starvation of the grape vines has given marked increases in growth and fruiting. Green manure crops have also been effective and at less cost than the straw treatments. The experiment has now been modified to include additions of finely cut alfalfa hay.

Asparagus Strain Test: The yields for one season from the plots of selected strains of asparagus indicate that the plants from selected high yielding parents may outyield some of the commercial seedling plants by almost one hundred per cent.

Vegetable Variety Tests: In 1937 the variety test plots for vegetables were greatly extended to include over five hundred duplicate samples of various varieties. This project was carried out in co-operation with the Canadian Seed Growers Association and the Seed Division of the Dominion Department of Agriculture. 'Merit' samples were submitted by the Horticultural Division of the Central Experimental Farm at Ottawa. 'Purity of variety' samples were submitted by the Seed Division of the Dominion Department of Agriculture and the 'verification' samples were submitted by the Canadian Seed Growers Association. Detailed descriptions and field notes were taken on all samples. Reports covering same were sent to the various parties interested.

FRUIT BREEDING

A large part of the early work in hardy fruit breeding at this Station was of the trial and error type. This was largely because of the lack of information on the breeding value of varieties so that one guess was as good as another as to what combinations might give results of value. This work has led to some very unexpected results and while we are still very much in the dark as to which varieties give the best results, we have at least learned to avoid certain varieties.

APPLES. It is now known that the chromosome numbers of apple varieties may differ. One group has 34 chromosomes (diploids) whereas another group has 51 (triploids). From the practical breeding standpoint all of the latter group, for example, Baldwin, Blenheim, Gravenstein, and R. I. Greening, are to be avoided. Fruit from these varieties contain only a few seeds which germinate poorly and those which do grow produce very weak plants. For example, large numbers of seeds of both Blenheim and Greening have been planted, yet none of the seedlings have had sufficient vigour to get past the nursery row. Because of poor pollen these varieties also fail when used as pollen parents.

Certain other varieties have also proven very disappointing. Fameuse, a variety which was used with the hope of obtaining high quality fruit, produced seedlings giving inferior quality fruit. Furthermore, they were a long time coming into bearing. To date Delicious also has produced only seedlings bearing a most inferior quality fruit. Other varieties, such as Duchess and McIntosh, produce seedlings of a better type and although few selections have yet been made from these, the uniformly good type of seedling has been encouraging.

In a block of McIntosh seedlings from controlled crosses the pollen parent influence is very evident in tree characters. As these trees fruit the influence of pollen parent on fruit characters will be watched with great interest and will be studied in considerable detail. Should McIntosh seedlings inherit many of the good qualities of McIntosh and also take on freely those of other varieties it may prove to be a most valuable seed parent.

McIntosh x Delicious. The trees are quite upright and have the characteristic bark colour of Delicious as well as resembling that variety in leaf. Many of the seedlings are very typical Delicious.

McIntosh x Duchess. These trees growing alongside the above offer a distinct contrast. The seedlings from this cross are quite spreading with long rangy branches and very large leaves.

McIntosh x Spy. This cross gives an upright type of tree with the *Spy* growth characteristics predominating.

McIntosh x Wealthy. This cross presents another distinct growth type, somewhat spreading, but lacking the ranginess and large leaf size of the Duchess cross.

McIntosh x Cortland. These seedlings were low in vigour and none were carried beyond the nursery row.

Other Varieties. Fameuse, Jonathan and Melba have also been used in these crosses but while each seems distinctive the differences are less pronounced.

PEARS. A block of open pollinated seedlings has presented some variety observations. To date Bartlett, Clapp and Clairgeau are the only varieties which have given promising seedlings. Seckel holds promise as a pollen parent but unfortunately will not cross with Bartlett. The following brief notes on the varieties used are suggestive of their value:

Bartlett. The Bartlett type predominates and in some cases almost exact reproductions of Bartlett shape are obtained. The seedlings are vigorous and while no outstanding seedlings have been saved they have been very uniform.

Clairgeau. Clairgeau has produced pears of good size and attractiveness. The range in season of maturity was wide while the quality was generally fair, and often good. There may be a tendency towards a softness at the core in these seedlings but it may have been exaggerated somewhat by the stage of maturity of the pears when sampled.

Clapp. These seedlings are of good vigour with fruit of good appearance. One or two had quite solid flesh.

Duchess. The seedlings of Duchess were not overly robust but there is a suggestion that location might have influenced this character. Size of fruit was mostly below medium; seldom was a large pear found. When used as a pollen parent large size was more in evidence but the roughness of Duchess also predominated. From results to date it would seem to have little value for breeding.

Flemish Beauty. Lateness in season with good to large fruit size was typical of many of the seedlings, but susceptibility to scab was so pronounced in many of the seedlings that this would offer serious objection to the use of this variety for breeding.

Giffard. Earliness and small size predominated in the seedlings from this variety. Colour was generally poor. A few trees produced later ripening fruit (Sept. 10) and with these there was an increase in size of fruit, but none could compare with Bartlett which is in season about that time.

Goodale. Seedlings from this variety produced unattractive green pears in varying sizes. The trees were generally poor, lacking in vigour.

Kieffer. Kieffer type predominated and unless one wished a pear of this type this variety presents little breeding value. Size of fruit varied considerably.

Le Conte. The Oriental type of pear again predominated with the fruit varying greatly in size. None however, were large or attractive, being of a green colour. Of the two varieties Kieffer offers greater promise from a breeding standpoint.

Seckel. Seedlings of Seckel run very true to type, few being larger than the seed parent. High quality predominated and from limited results this seems to be transmitted when Seckel is used as a pollen parent.

PLUMS. Several lots of open pollinated seedlings of plums have been planted but mostly with poor results, seedlings of Reine Claude in particular being very low in vigour. The fruit from these open pollinated seedlings was very low in quality and of poor size.

One block of 237 seedlings, the result of a cross between Coe's and Grand Duke, have however proven very interesting. Coe's is a high quality green plum, freestone, and of late season. Grand Duke is of only fair quality, blue, clingstone, and late. The seedlings from this cross are nearly all late maturing, from mid-September into October. The quality has varied but in many cases has been very good, resulting in several of the seedlings being selected for further test.

As regards colour a very uniform 'break' occurred, although the clinginess factor of Grand Duke was very dominant regardless of the colour transmission as indicated in the following table:

SKIN COLOUR AND CLINGINESS IN THE SEEDLINGS OF COE'S
GOLDEN DROP X GRAND DUKE CROSS

Colour	Clingstone	Semi-cling	Freestone	No Record	Total
Blue	65	8	13	15	101
Green	76	5	11	8	100
No Fruit	0	0	0	26	36
Total	141	13	24	59	237

SWEET CHERRIES. With Sweet Cherries the parental characteristics have not been so outstanding, often owing to poor cherry soil. Some times it was not clear whether the soil or the seedlings were at fault. Two seedlings were named during 1937. Following is a brief description of the two varieties:

Vernon (160133) is a large black, maturing ahead of Windsor and about with Bing. It is a very firm cherry and cracks very little in adverse weather, the chief fault of Bing. When canned Vernon retains its solid dark red color and in bottles resembles small pickled beets. In freezing experiments carried on at the Department of Horticulture, Ontario Agricultural College, the fruit of Vernon has ranked first among the varieties tested. The tree characters are good and it bears well. This variety has also done well at Summerland, B.C.

Velvet (160119) is a large black, maturing shortly after Windsor. The trees are large and prolific, slightly susceptible to lime sulphur injury, resembling Schmidt in this particular. Velvet has created a lot of interest among cherry growers visiting the Station because of its late season and general attractiveness.

PEACHES: A Summary of the Peach Breeding Work from 1911-1937 inclusive. The following tables summarize all the peach breeding work done at this Station from its inception in 1911 up to and including 1937.

For many years the Elberta variety was the predominating peach grown throughout the Niagara Peninsula. Many other varieties were grown but the bulk of the crop was Elberta. In the peach breeding work planned and carried out one of the main considerations was to breed new varieties of the so-called Elberta type which would extend this season forward from that of Elberta itself. As a direct result of this work five varieties have been introduced to the trade varying in season from Rochester to Elberta. These varieties are Vimy, Vedette, Valiant, Viceroy, and Veteran. It is interesting to note that all of them have some Elberta blood, and that all of them have better quality than the Elberta. Vedette, Valiant and Veteran have been planted extensively and now comprise probably not less than forty percent. of the orchards six years of age and under.

Of the work done in the last few years many seedlings containing blood of the J. H. Hale are being grown in the test orchard. Some of these selections are worthy of note and may be worth naming.

RED RASPBERRIES. From the twenty crosses made last year (1936) between early varieties of the red raspberry (Lloyd George, Brighton, Count and Starlight) about 4,500 seedlings have been obtained.

According to recent work reported in Science the aphid which spreads mosaic on the red raspberry does not thrive on the Lloyd George and thus this variety presumably escapes mosaic. Therefore, it is hoped that some of the seedlings with Lloyd George as a parent may also escape mosaic.

VEGETABLE BREEDING

TOMATOES. The Italian tomato breeding experiment is being extended to include several new varieties and many hybrids will be tested carefully during the 1938 season .

The commercial demand for seed of the Harkness tomato exhausted all available supplies early in 1938. Improved strains of this variety are being grown at the Station to maintain stock seed for growers who wish to produce further seed for their own use.

Considerable interest has developed in the Mould-Resistant tomato. Many requests for seed have been received but until there is further selection of a desirable commercial type no seed will be available for distribution.

SWEET CORN. Corn breeding has been continued along similar lines to that carried on in previous years. New varieties and hybrids including several Station hybrids have been tested and in some of the latter the stock of seed has been increased. Several hybrids, made at this Station last year, were given their first trial this year and one or two seem to have promise.

A variety developed at this Station from a cross between Golden Bantam and Black Mexican is being given an extensive trial by one of our large canning companies for canning on the cob. It is a high quality tender corn and has a very narrow ear which makes it suitable for this type of canning.

By a co-operative plan with the Agricultural Representative of Lincoln County, seed of one of our new hybrids has been increased sufficiently that a semi-commercial test can be made.

A large American seed company has included again this year three of our hybrids in their variety trials. Also, a large American canning company is interested in several of our sweet corn originations.

RHUBARB. Several small quantities of the new Red Rhubarb (Vine-land No. 30) have been sent to growers who requested samples. Reports on this variety continue to be favourable.

EXTENSION

Increasing requests for examination of soils for their suitability for different fruit crops were received and growers and prospective growers were given all possible assistance. Problems of cultural operations, varieties, disease and insect control together with mouse and rabbit injury problems were discussed with growers in many parts of the fruit growing sections of the province. Assistance was given the Statistics and Publications Branch, Ontario Department of Agriculture, in obtaining information for their crop reports.

Spray Service. A total of 1134 growers in the Niagara Peninsula received the usual Spray Service letters, fifteen of these being mailed to each grower during the spraying season. This service has grown from 553 growers in 1929, when first taken over by this Station. One spraying project was carried out in co-operation with the Dominion Entomological Laboratory here. This was in connection with Codling Moth control. Five sprays were applied, including the calyx application, and as a result the deep injury by this insect was reduced to less than 6%, compared with over 60% in the same orchard in 1936.

Marketing. Growers and growers' co-operatives were assisted during the winter months in the marketing of their apples on the export market. A brief survey of retail store conditions with regard to the sale of apples was made with a view to increasing the home consumption of this fruit.

Enforcement of the Ontario Plant Diseases Act. Co-operation was again extended to the Provincial Entomologist with regard to nursery inspections, fumigation for export to Nova Scotia, inspection of municipal fruit pest inspectors accounts in accordance with the Act and inspection of canning factories to ensure proper sanitary measures being taken to prevent the spread of Oriental Fruit Moth.

Orchard Soil Fertility Survey. Field work was continued on the Orchard Soil Fertility Survey. During the past year representative orchards in Elgin, Kent and Essex were tested. While this work was spread over a large area during this past year enough orchards were sampled to give a fairly accurate picture of the mineral levels in this area.

Nursery Inspection for the Elimination of Varietal Mixtures. In 1937 thirty nurseries were inspected and a total of 715,300 fruit trees were examined. These were practically all of the Ontario-grown trees which were coming of salable age in this year. Of misnamed trees there were 4,763 (0.6%), nearly two-thirds of which were peach trees. These trees were broken down or labelled correctly. Though this service is not compulsory all nurseries have readily accepted it and given splendid co-operation towards the elimination of misnamed trees in their nursery rows.

Meetings and Attendance. During the fiscal year 1937-38, members of the staff addressed 58 meetings of fruit growers and students with an average attendance of 40 at each meeting, or a total of 2350 persons.

WESTERN ONTARIO EXPERIMENTAL FARM, RIDGETOWN

The season of 1937 was fairly satisfactory from the standpoint of the farmer in Southwestern Ontario.

While the prices of produce were below those of 1936, the returns, generally speaking, were on a par with preceding years.

Adequate rainfall during the growing season assisted materially to overcome the effects of the dry season of 1936. During the early part of April, the temperature was very variable, winds very high and quite constant with only a fair amount of rainfall. This, however, had been remedied by the end of the month.

Heavy snowfalls were recorded during the winter of 1937-38. From November 1st to March 31st, thirty-nine inches had fallen.

Rainfall April to October (inclusive)

April	5.52 inches
May	2.09 inches
June	3.81 inches
July	2.20 inches
August	3.44 inches
September	1.86 inches
October	3.44 inches

The following table gives yield and acreage of main crops on the farm :-

Wheat	713 bus.....	27 acres
Oats	1360 bus.....	18 acres
Barley	526 bus.....	10 acres
Soy Beans	175 bus.....	4 acres
White Beans	850 bus.....	27 acres
Corn	2200 bus. (ears)	20 acres
Tobacco	5050 bus.....	3 acres

All the farm crops were up to normal, with oats, beans and corn above the average. The demand for seed continues to be far in excess of the supply.

SEED CLEANING PLANT

A seed cleaning plant was installed during the late summer. Operations were commenced during the second week in September. About 5700 bushels of wheat were cleaned for seed for the farmers in this section, for which a nominal charge was made.

Up to the end of March, nearly half a million pounds of grain, beans and clover seed have been cleaned. This includes our own seed and also seed for distribution.

A seed Treater has been installed and the necessary Dust purchased for treating cereals. This should prove beneficial to the farmer in combatting the various diseases to which cereals are susceptible.

SOIL WORK

To assist the farmer to choose the fertilizer he needs for his land, a rapid soil testing kit was procured in April. During the year two hundred samples were tested. Of these seventy-four percent. showed phosphorous deficiency in varying stages while sixty-nine percent. lacked an adequate supply of potassium.

Soil Testing, April 1937 to March 31st, 1938

Total number of samples tested	200
Samples having low phosphorous content	115
Samples having medium phosphorous content	32
Samples having high phosphorous content	53
	200
Samples having low potash content	115
Samples having medium potash content	23
Samples having high potash content	62
	200

The above included all samples tested up to and including March 31st.

CORN

The farmers in the South Western Peninsula have been trying to find a type of corn that will yield more than the low varieties generally used in this section of the country.

With this point in view some forty lots of hybrids corn were secured from commercial firms and plant breeding stations in Canada and the United States and tested in comparison with the representative Canadian varieties.

The following proved to be the ten leading varieties. Only those suitable from a maturity standpoint are considered. The results are for one year only and cannot be considered conclusive.

For comparison, the types grown locally are also listed.

Variety	Source	Dry Shelled Corn per acre	Shelling Percent.
Excelsior	Vaughan Seed So. Welland	124.72	79

The following is a report of Professor D. R. Sands, of the Botany Department, Ontario Agricultural College, Guelph, of the work done in Southwestern Ontario in 1937.

"Most of the experiments were carried on at the Ridgetown Experimental Farm and in co-operation with the staff there. The crops included were celery, potatoes and beans.

CELERY

The work in celery was carried on for the purpose of comparing dust and spray as a means of controlling early and late blight.

The seed (Paris Golden) was sown in the greenhouse and the plants set out in the field about the last of June. Two sprayings using Bordeaux (3-4-40) were given the plants before they were set out in the field. After being set out in the field, spraying and dusting were done on the following dates:

July 8th	sprayed and dusted
July 16th	sprayed and dusted
July 29th	sprayed and dusted
Aug. 10th	sprayed and dusted
Aug. 16th	sprayed and dusted
Aug. 24th	sprayed and dusted
Sept. 3rd	sprayed and dusted

One plot was dusted with Copodust, one plot sprayed with Bordeaux mixture (4-5-40), one plot sprayed with Copper Hydro 40, and one plot left as a check.

Late blight developed very badly in the check plot, also a fair amount in the plot sprayed with Copper Hydro 40, a small infection in the plots sprayed with Bordeaux mixture or dusted with Copodust.

When the celery plants were dug, a comparison of the results was made by trimming a dozen plants in each plot and then weighing them.

Dust—(one dozen plants)	15 lbs. 4 ozs.
Bordeaux Spray—(one dozen plants)	12 lbs. 12 ozs.
Copper Hydro (40—(one dozen plants))	9 lbs. 2 ozs.
Check	4 lbs. 4 ozs.

Although the dusted plants weighed a little more than those sprayed with Bordeaux, the "stalks" showed a little more infection, and were not quite as clean and free of blight as the sprayed plants.

POTATOES

Four plots were planted with Dooley potatoes on June 19th. One plot for dusting, one for spraying with Bordeaux mixture, one for spraying with Copper Hydro 40 and one for a check. When the plants were about 10 to 12 inches high, spraying and dusting was started. (80 to 100 gals. of spray per acre and 25 to 45 lbs. of dust per acre)

July 19th—Dusted with Copotex.

Sprayed with Bordeaux and Copper Hydro 40 using a poison (Calcium arsenate).

Sprayed check plot with poison only.

July 29th—Dusted and sprayed the same as above.

Aug. 10th—Dusted with Copodust.

Sprayed with Bordeaux and Copper Hydro 40—no poison.

Check plot omitted.

Aug. 16th—Dusted and sprayed the same as on Aug. 10th.

When the potatoes were dug the marketable and small potatoes of each plot were weighed and the amount per acre estimated.

	Marketable	Small
Dust	243 bus.	22 bus.
Bordeaux spray	261 bus.	23 bus.
Copper Hydro 40	236 bus.	21 bus.
Check	166 bus.	33 bus.

BEANS

Three strains of Robust beans that had been grown for a number of years were again planted. The seed was from the 1936 crop, which had been rogued for mosaic and hand picked for anthracnose. The three strains of beans that were used had been obtained originally from Ithaca, Michigan and Wisconsin.

The beans were sown on June 5th—10 rows each about 60 rods long were checked for mosaic in each of the three strains. The first inspection was made on July 19th and the second on July 29th and plants showing signs of mosaic were removed.

Wisconsin plot	5 plants—slight mosaic
Ithaca plot	2 plants—slight mosaic
Michigan plot	0 plants—

Just at the time of pulling (Sept. 8th) the plots were checked for anthracnose and the percentage of pods affected were as follows:—

Wisconsin	1.25% of pods slightly affected
Ithaca	less than 1%
Michigan	less than 1%

A number of vegetable and fruit growers in Kent and Essex were visited during the summer months and plant disease problems were discussed at this time.

SWINE

For the past number of years, the main work in the Swine division has been to develop a strain of Yorkshire pigs suitable to Southwestern Ontario. This work is of such importance that it should be continued. There is a place in Southwestern Ontario for the Yorkshire pigs that will stand outside of weather conditions and considerably heavy corn feeding.

The swine here came through the winter in excellent shape. There are at present thirteen sows in the herd. With the exception of two imported sows, all the other females in the herd were raised on the Experimental Farm. Several of them are raising first litters now and these litters are among the best that are being raised this Spring. There are four boars, all of different breeding, on the farm at the present time. Two of them, however, have outlived their usefulness so will probably be disposed of very shortly.

A young boar with three generations of qualified dams has been added to the herd during the past winter.

There has been a good demand for young sows during the winter months. Several have been sold and these are being kept for breeding purposes on the farm. It looks at the present time as if a slight change should be made in the method of disposing of breeding swine and, consequently, are recommending the holding of an annual sale in order to distribute this breeding stock throughout this district.

During the winter months of 1936-37, forty-six young pigs were placed on a test to determine the feasibility of raising bacon hogs on ear corn plus a protein supplement. These pigs were placed on this, weighing from 80 to 120 lbs. and were divided into eight pens. Only ear corn was fed and the protein supplement was placed in hoppers so that it was before the pig all the time.

Summary of Experiment

Initial weight, per pig	97 lbs.
Finished weight, per pig	199 lbs.
Grain, per lb. gain	3.91 lbs.
Concentrate per lb. gain48 lbs.

66% of these pigs graded selects and only one pig of the 34% graded lower than B 1.

The quality of fleshing in every case was excellent—so bacon hogs may be fed ear corn provided protein supplement is supplied. A feasible way seems to be the hopper method.

A similar experiment is being carried out this year but is not sufficiently advanced at present to be reported.

Advanced Registry work is being continued. The pigs are being fed under the regular conditions here at the Farm so that if they qualify there is a better chance of the pig doing well on a ration such as they are fed in Southwestern Ontario. At the present time, we have four qualified sows and have five under test and will probably add a few more if the Spring litters come along satisfactorily.

Pigs under the Record Performance Test during the winter months were about a week or ten days too late in regard to maturity. This was, no doubt, due to the unsatisfactory weather conditions as it was very changeable and the pigs went back considerably during the bad weather.

POULTRY

The Poultry flock has been maintained along the lines which have been followed for a number of years. Trapnesting and rigid selections have been carried on to make this flock a suitable one for the farmers of the district to secure foundation stock of young cockerels and eggs for hatching. Hatching eggs were in good demand during the month of March and there was a fair demand for young cockerels earlier in the season.

The service is maintained for the diagnosing of health trouble and a steadily increasing number of farmers are making use of this service.

HORTICULTURE

The services of this department have been, as during the past, principally along three lines,—

(1) Extension work which has encouraged the development of home ground beautification and the planting of more fruits and vegetables. Information was given to the farmers to aid in the control of insects and plant diseases. Through soil testing, growers formerly unable to produce normal crops of vegetables and fruits have been materially assisted.

(2) Demonstration at the Experimental Farm of the culture of fruits and ornamental plants. Visitors appreciate seeing this material and make numerous inquiries and notes.

(3) Practical work by the students of the Vocational Agricultural Schools and those of the new School of Agriculture. Some seventy-five students participated in this work and learned by doing the propagation of vegetables, flowers and fruits, and the standard methods of pruning shrubs, roses, small fruits and tree fruits.

SCHOOL OF AGRICULTURE

The Agricultural School has just graduated its first class during the year.

The Judging Pavilion and Field Husband Laboratory have been finished and proved to be a considerable improvement in the school's equipment.

The work during the year was only fairly satisfactory and it would seem desirable to make some changes in the Organization for the coming year. The teaching continues to be done largely by the staff of the Vocational Agricultural School situated in Ridgetown. Three extra teachers were engaged and these, with the four men teachers of the Vocational Agricultural School and the Director of the Experimental Farm, comprise the teaching staff.

The courses seem to be fairly satisfactory but with the two classes, the first and second year of the Agricultural School, there seems to be a little too much conflict with the regular courses of the High and Vocational School. These boys are older and a different type of student and it would seem desirable that they be separated more completely from the regular High School and Vocational School students.

The following is a list of the students attending during the year,—

First Year Students

1. Harold Abray—Ridgetown, Ont., Box 127, Kent County.
2. Fred Anderson—Ridgetown, Ont., R. R. No. 2, Kent County.
3. Richard Anions—Ridgetown, Ont., R.R. No. 3, Kent County.
4. Robert Barrett—Blenheim, Ont., R.R. No. 3, Kent County.
5. Elmer Benedict—Port Lambton, Ont., R.R. No. 2, Kent County.
6. Ralph Brien—Ridgetown, Ont., R.R. No. 1, Kent County.
7. Harold Carroll—Crinan, Ont., R.R. No. 1, Elgin County.
8. Kenneth Elgie—Dresden, Ont., R.R. No. 1, Kent County.
9. Russell Farough—Maidstone, Ont., R.R. No. 1 Essex County.
10. Lewis Fox—Ridgetown, Ont., R.R. No. 2, Kent County.
11. Murray Frith—Maidstone, Ont., R.R. No. 3, Essex County.
12. Jack Henry—Turnerville, Ont., R.R. No. 2, Kent County.
13. Deward Lee—Rodney, Ont., R.R. No. 1, Elgin County.
14. Warren McIntyre—Ridgetown, R.R. No. 2, Kent County.
15. Arnold Metcalfe—Wheatley, Ont., R.R. No. 2, Kent County.
16. Andrew Neith, Rodney, Ont., R.R. No. 4, Kent County.
17. Austin Oliver, Ida, Ont., R.R. No. 2, Durham County.
18. Chas. Snobelen, Blenheim, Ont., R.R. No. 3, Kent County.
19. Walter Spence, Northwood, Ont., R.R. No. 2, Kent County.
20. Murray Stirling, Mortpeth, Ont., R.R. No. 1, Kent County.
21. Pliny Stonefish, Bothwell, Ont., R.R. No. 3, Kent County.
22. Francis Sylvestre, St. Joachim, Ont., Essex County.
23. Jos. Zimmer, Thamesville, Ont., R.R. No. 4, Kent County.
24. Eugene Towsley, Ridgetown, Ont., R.R. No. 2, Kent County.
25. Edison Dick, Thamesville, Ont., R.R. No. 4, Kent County.

Second Year Students

1. Richard Allin, Blenheim, Ont., R.R. No. 1, Kent County.
2. Morley Cameron, Thamesville, Ont., R.R. No. 6, Kent County.
3. Lloyd Clark, Northwood, Ont., R.R. No. 2, Kent County.
4. Gerald Herbert, Thamesville, Ont., R.R. No. 2, Kent County.
5. Jack Leatherdale, Ridgetown, Ont., R.R. No. 2, Kent County.
6. Max McDiarmid, Ridgetown, Ont., Box 133, Kent County.
7. Max McGuigan, Blenheim, Ont., R.R. No. 3, Kent County.

9. Bill Metler, St. Thomas, Ont., R.R. No. 5, Elgin County.
10. Gordon Purdy, Rodney, Ont., R.R. No. 1, Elgin County.
11. Jos. Rhody, Ridgetown, Ont., Box 168, Kent County.
12. Mac Simmers, Kingsville, Ont., R.R. No. 1, Essex County.
13. Ralph Stewart, Thamesville, Ont., R.R. No. 6, Kent County.
14. William Willson, LaSalette, Ont., R.R. No. 1, Norfolk County.

Scholarships—First Year Students

- (1) *English and Chemistry*—Russell Farough, Maidstone, R.R. No. 1.
- (2) *Animal Husbandry, Dairying and Veterinary Science*—Austin Oliver, Stouffville, R.R. No. 4.

(3) *Horticulture, Poultry, Zoology*—Murray Stirling, Morpeth, Ont., R.R. No. 1.

(4) *Field Husbandry, Botany, Bacteriology and Bees*—Jack Henry, Turnerville, Ont., R.R. No. 2.

(5) *Mechanics, Physics*—Warren McIntyre, Ridgetown, Ont., R.R. No. 2.

(6) *Agricultural Economics, Civics and Mathematics*—Tied—Kenneth Elgie, Dresden, Ont., R.R. No. 1, Harold Carroll, Crinan, Ont., R.R. No. 1.

Scholarships—Second Year Students

(1) *Academic Work*—Highest standing—Bill Metler, St. Thomas, Ont., R.R. No. 5.

(2) *Academic work*—2nd highest standing—Mac Simmers, Kingsville, Ont.

STATISTICS AND PUBLICATIONS BRANCH

The gross value of agricultural production in Ontario for the year 1937 amounted to \$357,201,000 as compared with \$360,329,000 in 1936. Although this was a falling off of \$3,128,000 from 1936, nevertheless, it was \$109,517,000 higher than in 1932. Gains of \$4,153,000 in the value of production of farm animals, \$7,116,000 in dairy products, and \$7,451,000 in tobacco, were more than offset by decreases of \$15,083,000 in field crops, \$4,180,000 in fruits and vegetables, and smaller declines in several other items. Agricultural production for the whole of Canada was also down in 1937, amounting to \$1,051,698,000 as compared with \$1,079,571,000 in 1936. The decline in 1937 for both Canada and Ontario, although only slight, marked a reversal in the upward trend from 1932 to 1936.

Gross Value of Agricultural Production in Ontario, by Items, 1929 to 1937
("000" omitted)

	1929	1930	1931	1932	1933	1934	1935	1936	1937

In response to public demand, the work of the Statistics and Publications Branch was again expanded during the last fiscal year. At the present time more than 9,000 schedules covering different branches of agricultural production are sent out each month to farmers, dairies, cheese factories, hatcheries, poultry farms, co-operative organization, etc., for completion and return to this Branch. In addition a census of farms is taken twice each year in June and December, with the assistance of the rural schools and approximately 60,000 Survey Cards are returned. The information compiled from these various sources is published in the following reports which are distributed, free of charge, to persons requesting same.

The Annual Statistics Report which shows by county division the acreage, production and value of field crops; the number and value of live stock on farms; a record of the number and amount of Chattel Mortgages outstanding; detailed weather information; and a valuable summary of field crop and live stock statistics for the Province since 1882.

The Monthly Crop Report which contains current information relating to field crops and live stock, including such items as acreage, condition, production, prices, and trade.

The Monthly Dairy Report contains statistics of total commercial sales of whole milk by distributors in the Province of Ontario by sales areas, production of butter and cheese by county, and other information relating to prices, stocks, and trade in dairy products. Both the Monthly Crop Report and the Monthly Dairy Report are well illustrated with charts.

The Fruit and Vegetable Crop Report which is issued monthly from May to October covers the development of fruits and vegetables.

A Cold Storage Report is issued on the first business day of each month showing the quantities of butter, cheese, and eggs, in cold storage in Toronto at the commencement of business on that day.

The Annual Reports of the various Departments printed for distribution during the year were as follows:

	No. of Copies Printed
The Report of the Minister of Agriculture	1,500
Agricultural and Experimental Union	2,500
Agricultural Societies	5,000
Entomological Society	1,500
Horticultural Societies	5,000
Ontario Agricultural College and Experimental Farm	2,000
Ontario Vegetable Growers' Association	2,000
Ontario Veterinary College	1,500
Stallion Enrolment Board	2,500
Statistics Branch	6,000
Bound Volumes of the Reports of the Department of Agriculture	300

During the year the following agricultural bulletins were printed for distribution:

Serial Number	Title	No. of Copies Printed
304	Infectious Abortion of Cattle	5,000
327	Knots and Splices; the Use of Rope on the Farm	10,000
349	Grain Smuts	10,000
384	Bee Diseases	5,000
385	Cheese Mites and Their Control	2,500
386	Diseases of Vegetables	10,000
387	Swine Feeding and Swine Diseases	15,000
388	Vegetable Gardening	15,000
389	The "V" Peaches	2,000
390	Successful Potato Production in Ontario	10,000
391	The Grape in Ontario	5,000
392	Pruning the Tree Fruits	10,000
393	Insects Attacking Vegetables	25,000
394	Diseases of Poultry	25,000
Cir. 57	Navel-III in Foals	20,000
	Fertilizer Recommendations for 1938	10,000
	Horticultural Societies' Act	5,000
	Seed Grain Subsidy Act	500

Farmers desiring literature on farming may secure a list of the available free bulletins by addressing an enquiry to the Director, Statistics and Publications Branch.

AGRICULTURAL AND HORTICULTURAL SOCIETIES BRANCH

AGRICULTURAL SOCIETIES

Fall Fairs

The 1937 fall fair season for several reasons was the most unsatisfactory in recent years. Weather was bad, as indicated by payment of wet weather grants. In 1936 grants were paid only to 35 Societies, which increased to 57 Societies in 1937. Fortunately the appropriation available was increased by 50% to \$9,000 and this made possible the payment of 52% of the gate receipt losses of unfortunate Societies. If the appropriation available had been the same as in 1936, less than 35% could have been paid.

Scarcity of labour and other conditions, affecting harvest, in many parts of the Province, had an affect on entries and attendance, but by far the most detrimental factor was the health situation, in practically all districts. Fairs were cancelled by 26 Societies, but almost all, large and small, suffered severe gate receipt losses, owing to the prevalence and fear of infantile paralysis.

The drastic reduction in attendance, owing to the absence of children, indicates the importance of young people to these organizations, even in the matter of gate receipts. This may warrant more attention to educational features, and attractions for children.

The following table, based on the reports of 275 Societies, shows the extent of decreases in gate receipts and exhibits, as compared with 1936.

Gate Receipts		Exhibitors		Prizes	
No. Societies	Reporting	No. Societies	Reporting	No. Societies	Reporting
Decrease	Increase	Decrease	Increase	Paid in Full	Percent. only
175	71	170	67	194	51

Other Projects

There was a satisfactory increase in field crop competitions from 82 in 1936 to 98 in 1937. When it is realized that for most crops, registered or certified seed was required, this steady growth is very gratifying.

Several entries for competition were received from Secretaries, and later cancelled, with the report that the registered seed regulation had been responsible. In practically all such cases the purchase of seed had not been organized by the Society, but members were left to secure their own supplies; on the other hand, where the Secretary or the Field Crop Committee offered as a service to purchase seed, competitors bought same and successful competitions were conducted.

The Stratford Society had the greatest number of competitors, with 38 entries in Oats and 33 in Corn, but Renfrew reported the largest number of competitors completing the contest, with 35 in Oats and 25 in Wheat. The judges reported very favourably on these contests.

The Mosa and Ekfrid (Glencoe) Society in West Middlesex, distributed 350 bushels of registered Winter Wheat in the fall, which should do much to improve this crop in the area and reflect credit on the Society for many years.

In Simcoe County they have a habit of undertaking crop improvement co-operatively, and on a County-wide basis. This plan worked so well with Potatoes, that last fall 8 Agricultural Societies secured seed and started field crop competitions with Winter Wheat. Organized effort of this kind is to be commended.

Illustrating how Societies may serve to promote crops and other industries, which are specialties of the District, two field crop competitions in Tomatoes are reported, conducted by the Cramahe-Haldimand (Colborne) and Sophiasburg Societies. These contests were successful and if carried on for a number of years, will do much to improve production methods of this important crop.

Seed Fairs

The importance of seed fairs, held by Agricultural Societies, at a time of year when farmers are looking for supplies, cannot be over-emphasized. Twenty-nine Societies received grants in 1937 compared with twenty-two in 1936. The plan of several Societies co-operating in the holding of County Seed Fairs and Crop Institutes is commendable. Such fairs were held in the Counties of Bruce, Halton, Oxford, Parry Sound, Prescott, Renfrew and York. In York County six Societies co-operated, while in Oxford every Society in the County (seven) participated in this event, which was particularly practical and successful.

Agricultural Society classes for grain and seed, were again provided by larger fairs, with entries as indicated:—

	1936	1937
South Western Corn and Seed Exhibition, Chatham	6 Soc.	7 Soc.
Canadian National Exhibition, Toronto—grain	13 Soc.	13 Soc.
—sheaves.....	8 Soc.	6 Soc.
Ottawa Winter Fair, Ottawa	9 Soc.	6 Soc.
Guelph Winter Fair, Guelph	14 Soc.	10 Soc.

Spring Stock Fairs

The following Societies conducted fairs in spring and early summer, and did not hold fall exhibitions—Fenelon; Toronto Gore (Claireville); South Huron (Hensall); Richmond Hill; Aurora and Kemptville. This type of show may be illustrated by a report on the Toronto Gore fair held at Claireville. While classes for other kinds of stock were not heavy, there was an excellent horse show and although the Society has practically no accommodation except an open field, horse classes were well filled, with top quality animals, and judging from the number of spectators, interest was much more keen than is often the case at major exhibitions.

Societies conducting spring stock shows, in addition to fall fairs, were limited to—Arthur, Erin (Hillsburg), Forest and Seaforth.

Maintenance of Pure Bred Sires

Grants were paid to 14 Societies for the maintenance of pure bred sires, as compared with 12 Societies in 1936. There was an increase in the number of animals maintained, the total being 119, as classified.

Stallions	4
Bulls	76
Boars	26
Rams	13

Junior Clubs

In 1937 boys and girls clubs were sponsored by Agricultural Societies as follows:—

Calf Clubs	47
Foal Clubs	43
Grain Clubs	16
Potato Clubs	6
Swine Clubs	4

—
116

The success of several Societies was outstanding, not only in respect to the number of clubs and members, but in the quality of leadership given.

Ontario Association of Agricultural Societies

This organization held a successful convention in Toronto in February which was attended by more delegates than in any recent year. Owing to an increased interest in a wider variety of subjects, and encouraged by the experience of the previous year, provision was made for 7 discussion groups. This plan was successful and favourably commented upon by many delegates.

It was agreed that a determined effort should be made to eliminate certain unethical practices and to encourage more local competitions confined to bona-fide producers of live stock, farm produce and hall exhibits. Appreciation was expressed for the work done the previous year on classification of horses and it was suggested steps should be taken to provide a skeleton classification for all fair departments which might be adapted to suit local conditions.

Very successful district meetings, sponsored by the Ontario Association of Agricultural Societies were held as follows:—

District No. 1 Ottawa	District No. 8 London
District No. 2 Perth	District No. 9 Leamington
District No. 3 Belleville	District No. 10 (Mount Forest
District No. 4 Lindsay	(Desboro
District No. 5 (Barrie	District No. 11 Huntsville
(Brampton)	District No. 12 (Verner
District No. 6 Welland	(Pine Point
District No. 7 (Guelph	(Massey
(Paris)	(Manitoulin (Mindemoya)
	(Fort William)

A special feature of these local meetings was a marked increase, in the number of women attending and the separate meetings arranged for them.

As a result of previous discussion and an agreement that the Ontario Association and Societies should take some action to recognize unselfish service being rendered to agriculture, a start was made in 1937 by the awarding of Coronation Ribbons.

A distinctive rosette was provided by the Ontario Association and awarded by each Agricultural Society for a specialty in the area, or outstanding agricultural service. The Howard Society at Ridgetown, appointed a committee to visit an aged lady who had exhibited at fairs of this Society for a longer period than any other. The Colchester South Society at Harrow, with a suitable ceremony, presented the rosette to Arthur T. Munger, a past-president of this Society, who had been a member for the longest period, and had rendered distinctive service to agriculture in the community.

At the annual convention, it was decided to adopt a definite policy of making such awards, and the Ontario Association agreed to provide agricultural service diplomas to be awarded by Societies.

Federal Assistance

The following Societies received substantial financial assistance from the Department of Agriculture, Ottawa:—

"A" Class Fairs	"B" Class Fairs
Canadian National Exhibition, Toronto	Carleton County Soc.. (Richmond)
Central Canada Exhibition, Ottawa	Leamington District Society
Western Fair, London	Kingston Industrial Society
Peterboro Industrial Ex., Peterboro	Belleville Society
	Norfolk County Soc. (Simcoe)
	Woodstock Society
	Peel County Soc., (Brampton)
	Stratford Society
	Renfrew Society
	Barrie Society
	Canadian Lakehead Ex. (Fort William)
	South Victoria Soc., (Lindsay)
	South Waterloo Soc., (Galt)

HORTICULTURAL SOCIETIES

Grants were paid to 243 Societies in 1937, including 5 new ones, organized at Hearst; Southwold Tp.; Lobo Tp.; North Roxborough and Swansea. Dormant Societies numbered 15 and 9 were classed as uncertain. Four Societies dormant in 1936 were reorganized, namely,—Lambeth, Haileybury, Streetsville and Smithville.

Societies reports indicate increased interest and expenditure on public beautification. The Ontario Horticultural Association encouraged Societies to feature tree planting in Coronation year. It is interesting to note that 156 Societies had a tree planting programme. The St. Thomas Society distributed 12,000 trees for the reforestation of hillsides and other marginal or semi-marginal land. The Society at Timmins was responsible for the planting of over 2,000 trees throughout the city. The Haileybury organization planted over 200 trees on streets and 30 schools have spent in 2 years about \$700 in public planting of different kinds.

The Preston Society, which has rendered nearly 100 years of service, planted 1,000 trees. North York was responsible for the planting of over 3,000 trees in 4 years. Several Societies such as, Fonthill, established nurseries to produce trees for future planting. Victoria Harbour planted about 5,000 trees in 1937. In several Counties such as Elgin, Middlesex, Norfolk and Oxford, there were County-wide programmes to encourage the planting of trees in school grounds and home properties. In Simcoe County, boy scouts planted 70,000 Pine trees on an 82 acre plot in Essa Township, near Thornton.

Royal Oak acorns and seedlings, imported from Windsor Park, England, were planted by Horticultural Societies in all parts of the Province.

For a number of years juvenile work has received special consideration and it is interesting to note that 120 Societies made provision in 1937 to encourage juniors by Garden Competitions, Junior Shows, Essay Contests and other plans as adapted to local conditions.

Ontario Horticultural Association

The Ontario Horticultural Association gave aggressive leadership to member Societies. A large convention was held in Toronto in February, attended by delegates from the majority of member Societies.

In co-operation with the Canadian Broadcasting Corporation, a series of garden talks was initiated on April 27th, and with one talk a week, continued until September 21st. An attractive educational display was arranged in the Horticultural Buildings at the Canadian National Exhibition.

For some time the Ontario Association has recognized each year a few outstanding horticulturists and organizations promoting beautification. In 1937 the following awards were made:—

To the Tara Horticultural Society the Diploma of Merit, for achievement in public beautification.

William Miles, Ingersoll, was awarded a Diploma and Silver Medal for outstanding achievement in hybridization.

John F. Clark, Department of Agriculture, Toronto, was awarded the Diploma of Merit and Gold Medal for practical assistance and inspiration to officers and members of Horticultural Societies and to lovers of beauty in all parts of Ontario.

Miss Isabella Preston, Central Experimental Farm, Ottawa, was awarded the "Carter Medal" for her outstanding contributions to Horticulture, particularly by the origination of ornamental plants.

The Association organized and assisted in financing 10 district meetings, some of which were particularly well attended. District No. 5 meeting, held at the Ontario Agricultural College, Guelph, July 14th, afforded an opportunity for over 500 horticulturists to inspect the College gardens and discuss plans and problems.

Special meetings of Society officers proved so successful in an experimental way in 1936, that 10 meetings were held in 1937. These gatherings afforded an excellent opportunity for Society leaders to interchange ideas and co-operatively tackle some of the more pressing problems common to most Societies.

For the first time Juvenile Flower Judging Competitions were conducted. Challenge cups and miniatures were offered for teams of three young people between the ages of 14 and 18 representing Horticultural Societies. A successful competition was held at Guelph on June 30th with seven teams entered. Unfortunately owing to health conditions contests at Hamilton and London were not so successful. Plans have been made to extend this work in 1938.

Interest in horticultural beautification is increasing as evidenced by large numbers of requests by mail for information on landscaping, and the growing of flowers and other horticultural material, also for speakers on horticultural subjects.

General satisfaction has been expressed on the adoption of the White Trillium (*Trillium grandiflorum*) as the Provincial Floral Emblem, established by a special Act of the Ontario Legislature at the 1937 session. Publicity given this action added momentum to a general movement by Horticultural Societies, schools and other agencies for the greater protection of wild flowers.

ONTARIO VEGETABLE GROWERS' ASSOCIATION

The acreage planted in vegetables in 1937 was increased by about 5% over the previous year. With a few exceptions, yields were satisfactory and products of good quality. Early tomatoes in Essex County were

affected by a disease which caused shipping difficulties. Downy mildew and blight of onions caused severe losses and were largely responsible for a decreased crop and high winter prices. Where spraying was neglected, celery blight caused much loss and there was also some damage to this crop from root rot. Early potatoes provided a fairly profitable crop in 1937.

Tomatoes and cucumbers produced under glass, yielded on the average a larger crop than in 1936, and short season vegetables, such as radish, lettuce, parsley and mint were generally satisfactory.

The Ontario Association and local units received assistance through this Branch as in previous years. There was keen demand for the services of the fieldman provided by the Department. As in previous recent years, marketing continued to cause the most serious problems facing all organizations of vegetable producers.

In co-operation with the Ontario Vegetable Growers' Association, Field Crop Competitions were conducted with entries as listed:—

	District 1	District 2	District 3	Total
Cabbage	8	10	14	32
Celery	6	—	12	18
Lettuce	—	7	6	13
Melons	5	7	—	12
Onions	8	8	6	22
Tomatoes	10	11	12	33
Potatoes	7	11	6	24
Gardens (including Buildings, etc.)	5	6	8	19
	—	—	—	—
	49	60	64	173

The competition at the Canadian National Exhibition for exhibits by Branches of the Ontario Vegetable Growers' Association, resulted in 9 entries with prizes awarded as follows:—

- 1st—London
- 2nd—Toronto
- 3rd—Brantford
- 4th—Scarboro
- 5th—Credit Valley
- 6th—Peterboro
- 7th—St. Catharines
- 8th—Kingston
- 9th—Chatham

At the Royal Winter Fair a satisfactory change was made in the staging of vegetable exhibits and an excellent display was arranged in the East Annex. The Ontario Association Challenge Trophy was won for the 9th time by Brown Bros., of Humber Bay.

Convention

The annual meeting and convention of the Ontario Vegetable Growers' Association held in January, were particularly well attended, an evidence of the interest growers are taking in their industry and a desire to improve conditions by their own organized efforts.

ONTARIO PLOWMEN'S ASSOCIATION

In spite of trying economic and other conditions affecting agricultural organizations, it has been possible for this Association to report steady progress year by year for over a quarter of a century.

A new Branch was organized at Ancaster in Wentworth County. The Cavan and South Monaghan Branch was reorganized and enlarged under

the new name Durham County.

There are now 82 branches of the Association, 80 of which conducted plowing matches in 1937. Owing to unfavourable local conditions, matches planned by the Noelville and Parry Sound South-East Branches were cancelled.

Departmental judges were supplied for 73 senior matches, 12 home plowing competitions and 11 junior matches and also the International Plowing Match. Departmental demonstrators were provided for 22 organized demonstrations. For the first time one of the latter was arranged for students of the Kemptville Agricultural School.

Upon request, a school was organized for plowing judges in co-operation with the Central Experimental Farm staff and held at Ottawa on August 6th. This service was appreciated particularly by younger prospective plowing judges in Eastern Ontario.

Annual Meeting.

Additional evidence of increased interest in good plowing and other methods of cultivation was provided by the attendance at the annual meeting, held in Toronto in February, which was the largest in the history of the Association.

International Plowing Match

In spite of most unfavourable weather conditions all previous records were broken by the 1937 match held at Fergus in October. A total of 591 entries was made and on Thursday, October 11th, the largest number of spectators ever congregated at a plowing match swarmed the competition fields. On Wednesday 137 teams and 67 tractors were in action, making a total of 204 entries for one day.

The Inter-County class provided a very impressive spectacle with 60 young men competing, each a winner in an elimination contest in his home County. The highest position was won by the team from Waterloo County, including the following team members:

Perry Eby, Breslau, R.R. 1
Arnold Rife, Galt, R.R. 2
Wm. Gemmell, Ayr, R.R. 2

It is interesting to note that these boys ranked 1, 2 and 3 in the order named as individuals in the competition.

The Haldimand team composed of the following, proved worthy contenders and stood second—

Howard Fess, Selkirk, R.R. 2
Donald Ross, Port Dover, R.R. 2
Rhys Bacher, Cayuga, R.R. 3

The championship in the horse drawn plow classes, was won by John R. Hargreaves, Beachville; and Fred Timbers, Stouffville, won a similar honour in tractor classes. S. Thomson, Stouffville, won the high cut class.

With 65 companies represented, the exhibits of farm and home machinery, occupied over 3,000 feet of street frontage and provided an extensive display of modern equipment which was inspected each day by thousands of farmers and members of their families.

Educational exhibits provided by the following, were well patronized—Experimental Farms System; Provincial Department of Health; Ontario

Agricultural College; Ontario Veterinary College; Crops, Weeds and Seeds Branch, Department of Agriculture, Toronto. In addition, educational demonstrations included plow setting, horse shoeing, multiple hitches, grain cleaning, tile drainage and soil testing.

Prizes for a splendid horse show on the final day were provided by the Federal Department of Agriculture, the Ontario Horse Breeders' Association, Senator Frank P. O'Connor, T. A. Crow, Esq., and City Dairy Limited.

The first 5 of 20 prizes were won by—

- 1st.—R. J. Scott, Cromarty
- 2nd.—A. E. Taylor, Grand Valley
- 3rd.—Jas. Duncan & Son, Orton, R.R. 2
- 4th.—Wm. Brown, Galt
- 5th.—Torrance Miller, Elora, R.R. 2

Prizes totalling nearly \$5,000 were provided by the Dominion Department of Agriculture, Ontario Department of Agriculture, County of Wellington, Town of Fergus, other Municipalities, Branches of the Ontario Plowmen's Association and numerous commercial companies and public spirited citizens.

LIVE STOCK BRANCH

HORSES

Horse breeders in Ontario experienced a very satisfactory season during 1937. Prices were exceptionally good during the early part of the year, but dropped off sharply later in the season. Drought conditions in Western Canada were responsible for the disposal of many horses in that territory. It is estimated that slightly over 40,000 of these horses were shipped into Ontario. This large number dumped on our market at a season of the year when the demand for horses is not great caused a sharp decline in prices.

Exports of horses from Canada to the United States amounted to approximately 10,000 head during the year, while exports to the Old Country for that period were slightly over 400 head. This represents a considerable increase in the movement of horses to the Old Country. The shipments to Great Britain included only high class animals, some of which sold for \$500 in London and Glasgow, with the majority bringing from \$300 to \$400.

During the early part of the year when horse prices were high, tractor sales showed a large increase, but with prices of farm products declining during the later part of the year, and with horse prices at lower levels, tractor sales were greatly decreased.

HORSE SHOWS

The Live Stock Branch has been encouraging the production of good horses by making contributions to spring horse shows. These grants have been on the basis of 50% of the prize money offered, up to a maximum of \$200. The fairs have performed a useful service not only in promoting horse breeding but in advertising the good horses of the districts in which the fairs are held. In addition they have brought buyers and sellers together, thus assisting in the distribution of better horses. The following

is a list of the shows assisted in 1937, together with the grants paid by the Ontario Live Stock Branch:—

Elora	\$102.00
Brantford	200.00
Linwood	200.00
St. Clements	96.50
Clinton	200.00
Perth County	300.00
St. Catharines	200.00
Toronto Horse Show	200.00

STALLION ENROLMENT

During the season of 1937 there were 1506 stallions enrolled, an increase of more than one hundred over 1936. Since 1932 the number has increased by over five hundred. These figures give some idea of the activity in horse breeding inasmuch as there must be a demand for an increased number of stallions, otherwise they would not be maintained. Of the stallions enrolled in the Province in 1937, 155 carried "A" premium certificates, and 165 carried "B" premium certificates. Under the Federal-Provincial premium policy, \$11,440. was paid owners of 238 horses on account of their 1936 season.

ONTARIO BOYS' FOAL CLUBS

There has been a remarkable increase in the interest taken in boys' foal clubs throughout the Province ever since the inception of the policy in 1931. In that year twelve clubs, having a membership of 168 boys, were formed, while in 1937 there were 47 clubs with a total membership of 745. These clubs have stimulated interest in the younger generation in the production, care and management of horses.

Achievement days held in connection with Agricultural Societies have created a new feature at the fairs. Due to the infantile paralysis epidemic in the Province during the fall of 1937 some of the achievement days were not as well attended as anticipated.

During 1937 the Ontario Live Stock Branch contributed \$616.50 to boys' foal clubs. In addition the Branch contributed \$45 for the inter-foal-club competition held at the O.A.C., Guelph, at the completion of the club season.

The showing of foals by club boys constituted one of the largest classes at the Royal Winter Fair. To stimulate this competition the Branch paid out \$375 in the horsemanship and colt classes.

The following is a summary of the clubs organized during 1937:—

County	Name	Total Membership	Amount of Grant		Total Grant
			Federal	Prov.	
Brant	Brant County	12	\$ 9.00	\$ 9.00	\$18.00
Bruce	Arran-Tara	11	10.00	10.50	21.00
Bruce	Teeswater	23	24.00	24.00	48.00
Dufferin	Orangeville	13	12.00	12.00	24.00
Durham	Millbrook	29	30.00	30.00	60.00
Elgin	Shedden	11	7.50	7.50	15.00
Elgin	Wallacetown	11	7.50	7.50	15.00
Essex	Essex County	11	6.00	6.00	12.00
Glengarry	Cornwall	12	13.50	13.50	27.00
Grey	Kilsyth	13	12.00	12.00	24.00
Haldimand	Caledonia	12	10.50	10.50	21.00
Halton	Acton	13	15.00	15.00	30.00

Hastings	Stirling	10	4.50	4.50	9.00
Huron	Seaforth	11	6.00	6.00	12.00

Wellington	Erin	14	12.00	12.00	24.00
York	Markham	17	15.00	15.00	30.00
Totals		745	\$616.50	\$616.50	\$1233.00
Total Clubs—47.					

PROVINCIAL INTER-FOAL-CLUB COMPETITION

The Ontario and Dominion Live Stock Branches each provided one-half of the following prizes for the Inter-Foal Competition:—

1st —\$12.00	6th—\$7.00	11th—\$4.00
2nd— 11.00	7th— 6.00	12th— 4.00
3rd — 10.00	8th— 5.00	13th— 2.00
4th — 9.00	9th— 4.00	14th— 2.00
5th — 8.00	10th— 4.00	15th— 2.00

The two high boys of each club in the Province are privileged to participate in this competition. The winning pair of boys in 1937 represented the Ilderton Club in Middlesex County.

CATTLE

The Canada and United States trade agreement, effective January 1st, 1936, proved very beneficial to Canadian cattle producers during the first eight months of 1937. Cattle prices in Chicago reached the highest point in seven years in August of last year. Canadian prices followed and exports reached the high total for the year of 208,552 head. With recession in business in the United States in the fall months, consumer demand fell off accordingly and cattle prices rapidly declined. Cattle prices on American markets during the fall and early winter months were very depressing. Canadian cattle producers found this market somewhat unprofitable and began to give more consideration to the British market. It was found,

however, that trade in that direction had been so restricted in recent years that shipping companies had torn out equipment on their boats, thus leaving shipping space at a premium.

Exports for the first seven weeks of 1938 have fallen off sharply as compared with the same period in 1937. During the latter period over 35,000 head of cattle moved to the United States' markets, while in the first seven weeks of 1938 exports included 5461 head to the United States and 5066 to Great Britain.

Conditions during 1937 had a great influence on the cattle industry in Ontario. Drought in Western Canada forced the sale of many cattle. Crops were generally good in Ontario. With cattle prices high during August and September, many Ontario farmers stocked up heavily with feeder cattle. These cattle are still in the stables and at prices considerably in advance of those prevailing on the markets at the present time. Unless business conditions improve in the United States so that prices will be stimulated, or unless boat space is more adequate so that Canada can export more of her cattle to the Old Country, many Ontario farmers stand to lose money from their cattle feeding operations during the winter of 1937-38.

The market for dairy cattle was satisfactory throughout the year. Increased prices of dairy products plus a healthy export demand for dairy cows helped maintain strong prices in the Province. The export market for dairy cattle was enjoyed by pure bred breeders and cattle raisers in restricted areas where animals could be obtained that met the health requirements of the United States.

..Auction Sales of Pure Bred Stock

Recognized breeders' clubs have been given assistance in the sale and distribution of high class breeding stock under the terms of the following order-in-council:—"An allowance of \$4.00 per head is made for tested cattle, providing all cattle at the sale have successfully passed the tuberculosis test, and that an affidavit is taken by the contributors to the sale that their herds are free from contagious abortion and other infectious and contagious diseases. The maximum grant in such cases is \$150. In the sales where the cattle are not all tested for tuberculosis but are free from abortion and other infectious diseases, the grant remains at \$3. per head, with a maximum of \$100. for any one sale."

Where a sales association has bulls shown, judged, and prizes awarded on the day of the sale, a further grant of \$25. is made to the prize list, providing the sales association contributes at least a like amount.

The following assistance was granted in 1937:—

	No. Head	Grant Paid
Western Ontario Consignment Sales Co. Ltd.	21	\$ 84.00
National Holstein Sales Association	43	150.00
Waterloo & Wellington Holstein Breeders' Club	60	150.00
*North Grey County Shorthorn Breeders' Club	23	115.00
Middlesex Jersey Club	32	128.00
Ontario Breeders Co-Operative	29	116.00
Victoria County Shorthorn Association	15	60.00
Durham County Shorthorn Association	25	100.00
London District Jersey Breeders' Association	24	96.00
*Belleville District Holstein Breeders' Club	30	145.00
		\$1144.00

*Shows held in connection with these sales.

The Ontario Live Stock Branch has assisted several of the associations by having field men inspect and select the offerings. This service has helped materially in keeping up a high standard among the animals offered.

Assistance to Exhibitors at Foreign Exhibitions

A number of Ontario Cattle breeders exhibited at the Chicago International Live Stock Exposition in 1937. The Ontario Live Stock Branch has assisted these exhibitors by defraying 50% of the return freight charges on their shipments. This assistance amounted to \$448.07 in 1937. Ontario exhibitors made a very creditable showing at this Fair, winning among other notable prizes the grand championship for Aberdeen-Angus bulls. These winnings have done a great deal to advertise Ontario breeding stock in United States and it is very doubtful if some of the breeders would be able to show at that Fair were it not for the assistance offered by the Branch.

Calf Club Work

Calf club work has been promoted for the purpose of stimulating greater interest in cattle production and cattle improvement among the younger generation. Clubs are organized by the Agricultural Representatives. Officers of the Live Stock Branch assisted in the supervision of the clubs and also in the judging of the calves at the achievement days. During the year, 73 calf clubs received \$806. from the Ontario Live Stock Branch. In addition the Branch contributed \$87.98 towards the Provincial Inter-Calf-Club Competition.

Special Cattle Shows

The Ontario Live Stock Branch has encouraged herd improvement in cattle through assistance in the form of grants to special cattle shows. These special shows have done much to encourage the small breeder to improve his stock and to display it so that those in his district will be more familiar with the type of stock that he is raising. Grants were given as follows during 1937:—

Brampton Dairy Cattle Show	\$100.00
Aylmer Dairy Cattle Show	\$100.00
Wallacetown Beef Cattle Show	\$100.00
Wentworth County Dairy Cattle Show	\$100.00

RESTRICTED AREAS

Considerable educational work with reference to the establishment of restricted areas for the eradication and control of bovine tuberculosis was carried on throughout the past year. Campaigns were instituted in a large number of counties, and officers of the Live Stock Branch assisted with meetings in practically all counties where canvasses were undertaken. In addition to assisting with educational work the Ontario Live Stock Branch contributed \$17,443.55 towards transportation of veterinarians engaged in testing cattle under the restricted area plan in the Province. The following is a summary of restricted area work in the Province to date:—

Counties and Districts Tested

	Year	Cattle Tested	Reactors	Per cent of Reactors
Prince Edward County and that part of Northumberland County south of the Murray Canal	1927	24,184	510	2.1
	1928	20,644	97	0.47
	1931	22,001	262	1.2
	1933	23,178	46	0.19
Prescott	1930	37,934	1,599	4.2
	1931	40,847	185	0.45
	1937	4,364	4	Incomplete

	1934	24,319	81	0.33
Carleton (Goulbourn & Marlborough)	1935	10,158	286	2.8
Carleton (March Tp.)	1936	3,490	163	4.1
Russell	1930	37,844	3,213	8.5
	1932	35,502	516	1.5
	1933	36,606	172	0.46
Dundas	1930	38,598	8,637	22.4
	1932	38,188	300	0.8
	1933	34,402	240	0.7
Grenville	1931	26,673	1,674	6.2
	1933	24,092	140	0.58
Leeds	1931	52,657	2,024	3.8
	1932	42,030	180	0.43
Frontenac (Pittsburgh Tp.)	1933	10,600	977	9.2
	1935	9,384	163	1.7
	1937	1,301	4	Incomplete
Manitoulin Island	1930	18,132	216	1.2
	1931	19,151	41	0.21
District of Kenora	1934	3,811	79	2.08
	1936	3,805	14	0.38
Halton	1936	23,030	3,185	13.8
	1937	18,353	103	Incomplete
Peel	1936	16,328	3,019	Incomplete
	1937	10,940	121	Incomplete
Northumberland	1936	45,413	1,958	4.3
York	1936	52,258	8,297	15.9
	1937	6,367	76	Incomplete
Ontario	1936	51,561	6,361	12.3
	1937	51,851	6,391	12.3

Durham	1936	38,900	2,843	7.3
District of Timiskaming	1937	19,597	219	1.12
Peterborough	1937	710	33	Incomplete
Thunder Bay	1937	6,354	931	Incomplete

Areas signed up and waiting the test:—

Lanark County
 Peterborough County
 Victoria County
 Grey County
 Simcoe County
 Rainy River District

Areas in the process of signing up:—

Essex County
 Elgin County
 Norfolk County
 Oxford County
 Brant County
 Waterloo County
 Wentworth County
 Haldimand County
 Lincoln County
 Welland County
 Bruce County
 Hastings County
 Lennox & Addington County
 Frontenac County
 Middlesex County

From this summary it would appear that cattle producers in practically all counties in the Province of Ontario are giving serious consideration to the restricted area plan for the eradication of tuberculosis in cattle herds. It is within the realm of possibility that by the end of 1938 petitions will have been circulated among cattle owners in all but three or four counties in Old Ontario.

HOGS

The Empire trade agreements of 1932, renewed in 1937, have proved of inestimable value to Canadian hog producers. Within six months of the signing of the agreements hog prices had risen 5c per pound on Canadian markets, and prices have remained fairly steady since that time. For the most part, prices have been maintained at about 8c per pound live weight at Ontario country points. Hog production has increased and the hog marketings of 1937 reached a high point in a great many years. The grand total for the year was 3,526,310. Coincident with the increase in marketings, exports rose rapidly, reaching a grand total of approximately 192,000,000 lbs. This represents the product of approximately 1,600,000 hogs, or in other words, 42% of our total marketings.

Ontario is still the leading hog producing Province, marketing 1,713,035 hogs. These hogs graded 32% select and 48.7% bacons. The quality of Ontario hogs is considerably higher than that of any other province. Hog producers throughout Canada showed an inclination to increase their marketings on the basis of rail grading. Approximately 35% of the hogs of Ontario were marketed in this manner. Poor crop conditions during 1936 had a considerable influence on marketings during the late months

of 1937 and the early months of 1938. With the scarcity of feed on many farms, coupled with high prices for feed during the spring months of 1937, there was a marked decrease in the number of sows bred. This has resulted in decreased marketings during the early months of 1938.

Bacon Hog Fairs

Bacon Hog Fairs were held in 1937 in South-western and Eastern Ontario. Classes for breeding stock and market hogs were featured. These fairs were supported by both Federal and Provincial Live Stock Branches, with local contributions being used to supplement the prize lists. Officials of the two Branches co-operated in organizing and managing the fairs as well as assisting with the judging of the various classes. The market hogs at these fairs were sold by sealed tender to the highest bidder, on the basis of rail grade and rail weight. Following is a summary of the fairs held in 1937. The prices given are computed to live weight on the basis of 75% dress.

Place	No. Hogs	No. Selects	Price	Prevailing Price on Fair Day
Tilbury	157	70	\$9.80	\$8.75
Alvinston	161	69	9.77	8.75
Napanee	152	68	8.78	8.00
Smith's Falls	134	46	7.85	7.25

Field Days

A number of special swine field days sponsored by the Federal and Provincial Live Stock Branches were held in Eastern Ontario during June, 1937. These field days were held in the counties of Frontenac, Lanark, Dundas and Glengarry. They were well attended by swine producers in each county.

In addition to the field days mentioned, members of the Ontario Live Stock Branch were called upon to address many live stock field days, including Horse Breeders', Cattle Breeders' and Sheep Breeders' field days.

Bacon Hog Clubs

The bacon hog club policy of the Federal and Provincial Departments has been more or less inactive for the past few years. However, a few boars are still being maintained in clubs under the policy. Most of these boars are located in South-western Ontario. At the present time the Departments own 18 boars. During the year 2 boars were purchased at a cost of \$72.00, for loaning to clubs in South-western Ontario.

Boys' Swine Clubs

Six swine clubs with a total membership of 82 boys were organized in the Province under the Federal-Provincial swine club policy during the year. Officers of the Live Stock Branch assisted in the supervision of the clubs. The total grants from the Ontario Department amounted to \$56.00. In addition, \$28.50 was expended on the Inter-Swine-Club Competition.

Senior swine clubs in Durham and North Simcoe Counties were also assisted by the Branch. The members of these clubs had purchased weaning sows during 1936. The progeny of these sows were tattooed by members of the Live Stock Branch during the spring of 1937 and were scored in accordance with Advanced Registry standards by officers of the Federal Live Stock Branch, when marketed. Many of the members of these clubs now have small herds of pure bred swine and are in a position to supply farmers in their respective communities with high class breeding stock.

Breeders' Clubs

The Ontario Yorkshire Club has encouraged the formation of district breeders' clubs. At the present time there are local Yorkshire Associations in Waterloo County, Bruce County, Simcoe County, the Stratford district and the Quinte district. Many of these organizations held consignment sales during 1937. The officers of the Ontario Live Stock Branch assisted in making selections of the animals offered. Periodical inspections of the herds in these clubs were also made during the year so that high class animals could be listed and offered for sale.

Swine Testing Station

The swine testing station is an outgrowth of the Advanced Registry policy for swine. The latter is a Federal policy administered entirely by Federal officials. Once a test station was established in the Province, Provincial officials were asked to co-operate in its administration. The Director of the Ontario Live Stock Branch is chairman of the Provincial Committee in charge of test stations in Ontario. During the year 83 litters were tested in the station at New Hamburg. Of this number, 46 qualified.

SHEEP

Sheep raisers in the Province had a successful year during 1937. Lamb prices showed an increase over previous years and wool prices were high during the early part of the year. With economic conditions in United States taking an unfavourable turn toward the end of the year, wool prices declined sharply, and since our prices are governed very largely by the export markets, prices were accordingly reduced in the Province.

Ontario farmers are still showing considerable interest in the feeding of Western lambs. It is estimated that approximately 36,000 head went into feed lots during the fall months of 1937. With prices remaining at satisfactory levels most of these lambs should make a profit for the men feeding them.

Ontario breeders experienced a splendid export trade for pure bred stock. American buyers purchased a large number of rams and ewes in the Province during the year. The Suffolk breed still continues to be the most popular for this trade, followed closely by Lincolns and Cotswolds.

Sheep Field Day

The Ontario Sheep Breeders held their annual field day at the Ontario Agricultural College, Guelph, in June. Officers of the College arranged an attractive programme featuring sheep breeding activities and extension work carried on by that Institution.

Assistance to Exhibitors at Foreign Exhibitions

The Ontario Live Stock Branch contributed \$331.19 representing 50% of the freight charges to exhibitors at the Chicago International Exhibition. The following breeders represented the Province in 1937:—

- H. M. Lee, Highgate.
- Chas. J. Shore, Glanworth Sta.
- C. J. Brodie, Stouffville.
- John D. Patterson, Richmond Hill.
- John D. Larkin, Inc., Queenston.
- Welland Securities Ltd., Niagara Falls.
- H. Noel Gibson, Komoka.

These breeders were successful in winning many of the coveted prizes, including the champion carlot of market lambs. These winnings have done a great deal to maintain a high reputation for Ontario sheep.

Live Stock Protection Act

This Act is administered by the Ontario Live Stock Branch. During the year there were seven appeals, one from each of the following counties:—Lambton, Lincoln, Middlesex, Parry Sound, Prescott, Stormont and York. Municipal councils are becoming more conscious of their responsibility in connection with this Act and as a consequence the number of annual appeals is becoming fewer.

POULTRY

Local Poultry Associations

Local Poultry Associations received assistance from the Department through the supplying of judges, lecturers and grants to local Associations during the fiscal year, as follows:—

Number of Associations holding a show during the fiscal year	17
Number of poultry judges and lecturers supplied	24
Total amount of grants paid to local associations	\$953.50
Total expenditures in connection with judges, lecturers, etc.	\$315.91

Boys' Poultry Clubs

Two poultry clubs were organized in the Province during the year. The total contribution for achievement days in connection with these clubs by the Ontario Live Stock Branch was \$34.00.

BRANDING OF LIVE STOCK ACT

The Brand Act was amended in 1936 to include poultry. Since that time many poultrymen have made use of the Act and have had brands allocated to them by the Director of the Live Stock Branch in his capacity as the Recorder of Brands. Up to the end of March 1938, 2249 brands have been recorded. The recording of these brands has acted as a strong deterrent in chicken stealing.

Purchase of Live Stock

Members of the Ontario Live Stock Branch have assisted in the purchasing of live stock for institutional farms operated by other Departments of the Ontario Government. During the year a number of horses were purchased for the Ontario Reformatories at Guelph and Mimico. Boars were purchased for swine herds at the Institutional Farms at Guelph, Whitby, Orillia, Kingston and Brockville. Assistance was given in the purchase of a herd of Holstein cows for the Boys' Training School at Bowmanville.

ONTARIO PROVINCIAL WINTER FAIR

The fifty-fifth annual Winter Fair was held in the City of Guelph on November 30th and December 1st and 2nd, 1937, with more entries than the building accommodation would comfortably house. This Fair is supported substantially by an annual grant of \$8,000 from the Ontario Department of Agriculture and \$4,000 from the Federal Department of Agriculture. In addition, further special grants toward the seed section of the prize list, amounting to \$743.15, and \$500. towards the payment of judges are paid by

the Federal Department, making a total government contribution for prize money of \$13,243.15. The actual amount of money paid out in regular prize money, not including special prizes, was \$15,691.00.

The management and office expense is provided by the Ontario Department of Agriculture through the Live Stock Branch, and the Directorate consists of representatives from the following:—

Ontario Horse Breeders' Association.
Ontario Cattle Breeders' Association.
Ontario Sheep Breeders' Association.
Ontario Swine Breeders' Association.
Ontario Poultry Association.
Ontario Seed Growers' Association.
City of Guelph.
County of Wellington.
Deputy Minister of Agriculture for the Province, by virtue of his office.

WOMEN'S INSTITUTE BRANCH

PROGRESS IN ORGANIZATION

During the year covered by this report 34 institutes were organized and 23 disbanded making the present number of active institutes 1,366 with an approximate membership of 42,100. Of this number 125 are junior institutes.

District Annuals—98 districts held annual meetings, with delegates in attendance from the various institutes located within the district. Districts co-operated with the Women's Institute Branch in organizing an educational service in home economics for the homemakers of their section. For 97 of these meetings the Women's Institute Branch supplied a representative who assisted the delegates in deciding on the district programme for the year. The attendance at these meetings totalled 20,057.

Conventions—Annual area conventions were held in the fall of 1937 at 13 centres. These conventions provide an acceptable means of contact for leaders and members of Women's Institutes throughout the province. In 1937, a representative from the Women's Institute Branch and one from the Provincial Board attended each of these conventions. The attendance totalled 5,457 persons. A joint gathering with the Federated Women's Institutes of Canada at Toronto gave an attendance on one day of 1,000. The presence of Her Excellency The Lady Tweedsmuir as guest speaker was the high note of this meeting.

Distribution of Literature—The outline of the Co-operative Programme for 1938-39 was prepared in printed form and five copies were sent to each local institute. The printed leaflet "Milk" was revised, and reprints of the leaflets "Vegetables" and "Salads" were made with slight revisions. A "Guide to Food Selection" and the "Food Selection Score Card", formerly distributed as mimeographed material, were revised and made available in printed form. A table showing the composition of some common foods was compiled and printed as a single sheet to be distributed as a supplement to "Guide to Food Selection".

A leader's manual and member's pamphlet were prepared in mimeographed form for use in each of the two new junior homemaking club units, "The Milky Way" and "Cotton Accessories for the Club Girl's Bed-

room". Mimeographed and printed material was supplied to local leaders at training schools in Clothing, Foods and Nutrition, Housing and Home-crafts, and each local leader was furnished with informative material for distribution to her class members. Members carrying on home demonstrations in "Relieving Constipation" and "Gaining Weight" received directions and record sheets similar to help given in correspondence courses.

Outlines of the Curricula in the several courses offered by the Dominion-Provincial Youth Training Agreement for Rural Young Women, and subject matter pertaining to the same were supplied to the instructors in mimeographed form.

The supply of minute books for the use of institute secretaries was replenished and the reference library for the use of staff members was brought up-to-date.

Four issues of "Home and Country" the organ published through the co-operation of the Women's Institute Branch and the Provincial Board, were distributed to the institute during the past year. This sheet is available to every institute member and serves to keep them alert and well informed as to the institute activities throughout the province.

Packet Loan Collection—The Women's Institute Branch has available loan material in the form of papers, bulletins, clippings and magazine articles dealing with topics related to the work of the standing committees and institute interests generally, and suitable for use in public meetings. Folders have been sent to Nova Scotia, Alberta, Saskatchewan, Quebec and New Brunswick, as well as throughout Ontario.

In the period covered by this report 911 institutes were served through 4,136 references dealing with such subjects as the following :Education 963, Home Economics 545, Legislation 371, Peace Education 331, Canadianization 326, Agriculture 304, Canadian Industries 234.

Legislative Grants—\$5,949.50 was disbursed as grants to institutes and districts who asked for this service. Of this amount \$2,232.00 was paid to 744 institutes and \$3,717.50 to 98 districts.

Correspondence—In addition to 97 circular letters with a circulation of about 23,826, approximately 16,500 letters were sent out during the year.

Co-operation with Other Organizations and Agencies—The staff of the Ontario Agricultural College continue to give valuable assistance to Women's Institute activities. This was shown especially during the past year in their generous contribution to the Girls' Conference held at the College in May and to the staff conference of the Women's Institute Branch held in October.

The support of the Agricultural Representatives Branch is necessary to the success of the junior homemaking club programme. Their staff again gave valuable assistance with local leader training schools, achievement days and the club programmes carried on at grade "A" and grade "B" fairs.

The Agricultural and Horticultural Societies Branch supplied a lecturer for a summary day in the local leader project, "Vegetable Cookery". The Women's Institute staff took care of a half-day programme in the home section of the provincial convention of Agricultural Societies. They also gave assistance in the revision of fair prize lists.

The management of the Royal Winter Fair supplied space for an exhibit of handicraft by the Federated Women's Institutes of Canada, showing work from every province. The instructor in Home Crafts on the staff of this Branch gave assistance in setting up this exhibit.

Through the co-operation of the Community Welfare Council, the Women's Institute Branch made arrangements for instruction in drama in three counties.

This Branch has worked with the Dominion Department of Indian Affairs in supplying instructors for short courses in home economics on the reserves.

Contacts made with such organizations as the Red Cross, the Health League of Canada, the Ontario Society for Crippled Children, the Dental Hygiene Council, the Canadian National Institute for the Blind and local school trustee boards have resulted in joint action along lines of common interest.

Foreign Contacts—International interests are aroused and maintained through correspondence. Additional contacts made through this office during the past year have brought the number of institutes interchanging correspondence up to 98 as follows:

New Zealand 46; England 34; Australia 13; South Africa 4; Denmark 1. Correspondence is now pending with three English and two Scottish groups.

FEDERATED WOMEN'S INSTITUTES OF ONTARIO

Provincial Board—The Provincial Board met twice during the year, in April and again for their annual meeting in November. They examined the resolutions of the conventions and planned to present those which received their endorsement to the Provincial and Dominion Governments.

The treasurer's annual report showed receipts of \$8,071.79 and disbursements of \$4,011.71 with a balance on hand for the fiscal year of \$4,060.08.

Standing Committees—During the past year good work has been done under the committee on Agriculture and Canadian Industries by directing attention to the need for beautification of farm homes. Reports of conveners of this committee show that 14 districts have given this subject special attention. Reforestation, too, has been promoted by institutes in many districts.

Community Enterprises—Local enterprises sponsored by local institutes are many and varied and are governed by the special need in the community concerned. In many cases the work entailed has been spread over several years and has produced a structure of lasting value. Rest rooms and libraries have been established and are being supervised. Hospital wards have been furnished, grounds for parks and athletic fields purchased and cemeteries beautified. Motion picture machines for community use have been purchased and sports and other forms of wholesome recreation encouraged. Local institutions for the unfortunate are given assistance and in recent years local relief has played an important role in practically every institute's activities.

Putnam Memorial Fund—This fund, so named in recognition of the interest of the late George A. Putnam in institutes of Northern Ontario, was established to give assistance to worthy cases in outlying sections of the province, and is maintained through the co-operation of the Provincial Board and the Simcoe Area Convention. Southern institutes have contributed clothing, food, household supplies and funds for distribution in the north. The fund is administered through this office which investigates appeals and passes on requests for help. During the year 25 bales weighing 1,186 pounds and valued at \$83.75 were distributed by this means.

STAFF CONFERENCES

Three staff conferences were held during the year. In April, the home economics coaches met for three days in this office. They discussed problems in junior homemaking club work and made plans for the coming year.

In May, speakers for the district annual meetings met to discuss the presentation of the co-operative programme in home economics at these meetings.

In October, the third annual conference of the entire staff was held at Macdonald Institute, Guelph, when the instructors in the senior and junior programmes in extension education in home economics and the one-month and three-months short courses met for three days. The staff of Macdonald Institute co-operated by bringing reports of recent research in Nutrition and Clothing.

CO-OPERATIVE PROGRAMME IN HOME ECONOMICS

The Women's Institute Branch is responsible for an educational programme to help homemakers acquire sound and improved practices for greater home efficiency. If this service is to be made available throughout the province the co-operation of local and district institutes is required. Therefore this educational service is rightly called the Co-operative Programme in Home Economics.

In 1937-38, this programme was planned to meet the most urgent demands and needs of the majority of homemakers in the province. It had to recognize the possibilities and difficulties of establishing sound educational procedures by taking into account: limited funds; the diversity of social and economic conditions in the province; the varying mental and physical abilities of homemakers; the widely differing demands and limitations set up by ideals and beliefs; varying climatic conditions and occupations; and the tradition of previous programmes. Because home economics is so comprehensive it was classified into several different lines of study and work: Clothing and Textiles, Foods and Nutrition, Health Education, Housing and Homecrafts. In addition, instruction was offered in Administrative Leadership.

The services were classified thus:

1. *Service Requiring Co-operation of Branch Institute only*—This service was limited to ten different one-week short courses. Any institute might apply for one short course.
2. *Services Requiring Co-operation of District Institute and Support of the Local Institutes*—(a) *Speaker Service*—The district selected a number of centres (approximately half that of the number of institutes in the dis-

trict) where the neighbouring institutes could meet with a trained worker who would speak to the membership and encourage educational work along some definite line. Twenty-four different subjects were listed.

(b) District Training School for Local Leaders—Each institute in the district was encouraged to appoint a local leader to attend a training school in a definite study or activity and to carry this instruction back to her institute. These training schools were from two to eight days duration with both morning and afternoon sessions. Fifteen different projects were listed.

(c) Home Conferences—Through this service the trained specialist visited each institute wishing to participate in the district. The members of an institute met actual home problems and analyzed them under the guidance of the instructor. Provision was made for the group to gain further experience and make corrections. One project was announced under this plan.

3. *Service Requiring Co-operation of District Institute*—Each district had the privilege of applying to the Department for an instructor to take charge of an Officers' Rally to give training in Administrative Leadership.

Programme Planning—An effort was made to bring the responsibility of programme planning to the attention of all Women's Institute members through articles in "Home and Country" and discussions at conventions and district annual meetings. In all their contacts the staff of the Department have tried to encourage the institutes to analyze their needs and be conscious of their interests. The past year has shown some progress in establishing better methods of determining the homemaking programme.

In April, 1937, five copies of the announcement of the Co-operative Programme in Home Economics were sent to each Women's Institute in order that the membership might become thoroughly informed and be able to make a wise choice of district programme and institute short course. The institutes were urged to discuss the Co-operative Programme at a local meeting previous to the district annual and to prepare their delegates for their responsibility in planning the Co-operative Programme in the district for the coming year. The district annual meetings were organized partly as programme planning meetings.

The districts and institutes were asked to send their requests to this office by July 3 for the ensuing programme year (July 1, 1937, to July 1, 1938). Unfortunately this report is required to cover the activities and achievements of the fiscal year rather than the programme year which indubitably would present a picture of greater unity and accuracy.

Clothing and Textiles—The work done during 1937-38 followed the same procedure as in previous years with local leader training schools, short courses and speaker service. The course of instruction dealt with the selection, construction and care of clothing with the definite purpose of developing a standard in clothing selection which would contribute to the health, comfort and efficiency of the family and give a sense of ease and assurance in their social relationships.

Training schools in "Buymanship" were conducted in 18 districts with 213 leaders and 32 assistants receiving information of value to the consumer. These leaders not only have presented this information to their institutes but are setting an example to others by adopting better buying practices.

The "Kitchen Ensemble" was the choice of four districts. Three of these training schools have already been held with an attendance of 26 local leaders. The fourth district will hold its training school in May. In the past year, summary days in the work done in the Kitchen Ensemble of the previous year were held in four districts with a total attendance of 261 and with 146 dresses and 140 aprons on display. The leaders reported 136 meetings held with 234 registrants, 116 of whom had no previous experience in clothing construction.

"Care of Clothing" includes the study of laundering and mending clothing; spot and stain removal by safe and satisfactory methods; clothes closets and methods and conveniences for storage. This study was requested by eight districts.

"The Use of Commercial Patterns" was studied in five short courses with an enrolment of 80 and a total attendance of 369. Short courses in "Garment Finishes and Remodelling" numbered 23 with 413 members enrolled and a total attendance of 1,950.

Four districts applied for speaker service in Clothing and 15 meetings were held with 652 women in attendance. At nine meetings "The Becoming Costume" was the subject under discussion and the remaining six considered the problem of "Buying for Small Town Needs."

Foods and Nutrition—Increased interest in nutrition and food preparation was evidenced in the past year by a definite increase in requests for service. This service consisted of local leader training schools, short courses, speaker service and home demonstrations.

Local leader training schools were held in 28 districts. Four hundred and eight local leaders and assistants representing 233 institutes received training at these schools, 277 in "Vegetable Cookery," 99 in the "Uses of Whole Wheat" and 32 in "Meat Cookery".

The project "Vegetable Cookery" served to stimulate the growing of more vegetables and to increase the consumption of these in the home. The "Uses of Whole Wheat" emphasized a wider variety in the use of whole wheat products and the value of these in avoiding possible dietary deficiencies in districts where there is a dearth of fruits and vegetables.

The project "Meat Cookery", stressed newer methods of cookery approved by scientific investigation and the necessity of hanging beef and mutton killed and distributed locally.

Short courses in "Food Preparation" were held in 36 communities with a total attendance of 2,571.

Speaker service in "Feeding the Family for Health" was chosen by three districts while the subject for discussion in one district was "Table Setting and Home Service." The attendance at these meetings, held in 18 centres, totalled 1,037.

Home demonstrations in "Relieving Constipation", to the number of 173, and 68 in "Gaining Weight" were asked for and distributed.

At all local leader training schools and short courses food selection score cards were marked. This personal check-up served to increase the use of protective foods such as milk, vegetables and fruit.

Health Education—In the past year 12 short courses in Health Education were held with 258 women receiving instruction, with an attendance of 1,166. These courses were conducted under the direction of graduate nurses who have had special training in public health work. In addition to the short courses, seven districts asked for speaker service in Health Education and meetings were held in 33 centres with an attendance of 1,442.

Housing—Local leader training schools in "Refinishing of Furniture" were conducted in nine districts with 62 leaders in attendance. Of these, 36 leaders have reported completed classes with an enrolment of 354 members who refinished 360 pieces of furniture. One district undertaking the work in the past year has already held a Summary Day when the refinished furniture of the district was exhibited and slides of old furniture were shown. The attendance at this meeting numbered 30 and 20 pieces of refinished furniture were on display.

In addition, Summary Days have been held in the past year in ten districts whose local leaders attended training schools conducted in the previous year. The attendance totalled 639 with 234 pieces of refinished furniture exhibited. Two districts are planning for local leader training schools in "Reconditioning of Furniture" before the programme year closes in June.

"Buymanship Relating to Housing," was discussed at 24 meetings held in five districts, with an attendance of 1,051.

Home Conferences in "Rearrangement of Furniture" were held in 18 institutes in three districts with an attendance of 117. A group of women, never more than 12, met with the Department instructor in a member's home to study the best possible arrangement of furniture for that particular room, bearing in mind the number and ages of the people using the room as well as their activities. Actual work was done. Following this meeting the women worked in at least five homes.

Return visits were made to two districts where 60 women were in attendance.

Home Crafts—"Leather Glove Making" again proved to be the most popular of the Home Crafts in which instruction was given in the past year. Local leaders from 152 institutes attended 22 training schools in this craft. Because some of the training schools were held late in the year, not all of the communities have completed their work. Reports to date show that in the three projects, "Home Utilization of Wool," "Quilts and Quilting" and "Leather Glove Making," 242 local leaders have held 499 meetings with a total attendance of 4,570.

In addition to the local leader training schools in "Home Utilization of Wool", ten short courses were held with 139 women enrolled and an attendance of 771. "Block Printing" was studied in one short course with an enrolment of 16. Short courses in "Rug Making" numbered 15 with 182 women receiving instruction and 27 short courses in "Needlecraft" showed an enrolment of 434. The total attendance at the Home Craft short courses numbered 4,741.

Officers' District Rallies—Another service included in the Co-operative Programme was training in administrative leadership with the object of helping the members of Women's Institutes develop and maintain strong leadership.

In the past year, 39 officers rallies were held, with 323 institutes represented and an attendance of 1,395. "Parliamentary Procedure" was the subject chosen for speaker service by two districts, when nine meetings were held with an attendance of 581.

JUNIOR EXTENSION PROGRAMME IN HOME MAKING . .

The junior programme is planned to meet the needs and interests of girls from 12 to 26 years of age and comprises three methods of approach—winter short courses, junior institutes and the junior homemaking clubs, first organized in 1935.

One-Month Short Courses—During the winter months from December to March inclusive 28 one-month courses, five two-weeks courses and four one-week courses were conducted in co-operation with the courses in agriculture organized by the county agricultural representatives. In addition, three two-week courses were held in the north in April, 1937. The enrolment of girls and women at these courses totalled 1,435, with an average attendance of 31. Of these 26% had never attended high school, 20% had not attended for more than two years and only 5% had received special training through other sources. Of those in attendance 65% came from farm homes and their average age was 22 years.

Clothing was taught in all of the one-week and two-weeks courses and foods and nutrition in all but two of these courses. Foods and nutrition and household management were included in all of the 28 one-month courses. In addition, clothing was featured in 19 courses and health education in eight courses. Joint meetings with the classes in agriculture were held in topics of interest to both groups, including in most cases, weekly literary meetings with instruction in parliamentary procedure and public speaking.

Three-months Courses—In addition to the courses already described, three-months schools were held in nine counties with an enrolment of 324 girls. Of these 77% came from farm homes, 28% had never attended high school, 26% had not attended for more than two years and only 7% had received special training through other sources. The average age of the girls enrolled was 20, and the average attendance at the courses was 23.

The organization was similar to that of the one-month schools but the longer period of time provided for a broader programme. Instruction in foods and nutrition and in household management was given throughout the course. In addition, the students received one month's instruction in clothing, one month in health education and one month in household accessories. Joint classes of boys and girls were held for special lectures in poultry, gardening, home beautification, English, public speaking and music. In some of the courses part of this instruction was given in separate classes.

Reports show that through the clothing instruction 1,034 garments were made, including 595 dresses; 481 girls adopted practices which made for better selection of clothing; 510 followed recommendations for proper care of clothing and 354 adopted more healthful clothing. Because of the work in foods and nutrition, 276 class members adopted recommended practices for corrective feeding; 214 homes introduced better methods for care of milk and 698 practices were established to increase the consumption of milk, fruits, vegetables and whole cereals. Homes adopting recommended methods in care of the house numbered 258; 285 adopted recommended laundry practices and 95 kitchens were re-arranged for convenience.

Through the work in health education 120 girls improved their posture; 50 had a needed health examination; 120 adopted preventive measures; 80 adopted recommended nursing procedures and 431 homes had their water supplies analyzed.

Junior Homemaking Clubs—This form of extension work was organized in 1935 when 181 clubs carried on the homemaking club unit "A Simple Cotton Dress". This work is in charge of a Departmental instructor who is a trained teacher in home economics and is known as a home economics coach. Each coach serves several counties. Some of the girls reached are already members of junior or senior institutes or girls' clubs but in many cases they represent previously unorganized groups.

The organization was similar to that of the previous year, each club being organized under a local leader who might be an older woman—often a senior institute member, or a girl who has already had some training in home economics through junior extension work. The local leaders attended a county training school under the direction of the home economics coach where they received instruction in subject matter and teaching methods. Under this leadership the girls held meetings as suggested by the manual supplied to the local leaders. They completed the work required, kept a record book and attended the annual county achievement day where they exhibited the results of their efforts and exchanged ideas with other clubs. Here, too, with the assistance of the home economics coach they planned the homemaking club programme for the ensuing year.

In the spring of 1937, three counties held training schools in "Being Well Dressed and Well Groomed"; 12 in "Cottons May be Smart" ("A Simple Cotton Dress"); ten in "Summer Clothes for Girls"; 13 in "Clothes Closets Up-to-Date"; and one each in "The Supper Club", "Dressing Up Home Grown Vegetables", and "The Milky Way". As a result of these training schools and the 48 schools held during the previous fall and winter, 1,779 club members exhibited at one of the 45 county achievement days held in the summer of 1937.

Another feature of homemaking club work is the Girls' Garden and Canning Clubs, organized by the county agricultural representative in co-operation with the home economics coach, who holds training schools in the cooking of vegetables, storing them for winter use and planning a garden to meet the family needs. Garden and Canning Clubs to the number of 46 were organized in 1937, with 577 club girls enrolled. Part of the results of this work was exhibited at the regular county achievement days or at fall fairs, but 19 special achievement days were held with an attendance of 188.

In 1937, the Dominion Government again offered prizes for supervised club work at Grade "A" and Grade "B" fairs. In Ontario the girls' programme at these fairs was drafted in line with the homemaking club units carried on in the various counties. 161 club girls from 28 counties exhibited at the Canadian National Exhibition, 224 girls from 22 counties at one of the three other Grade "A" fairs, and 443 girls from 37 counties and districts at one of the 13 Grade "B" fairs held in Ontario.

The junior club programme in homemaking for the autumn and winter of 1937-38 was enlarged to include a unit known as "Cotton Accessories for the Club Girl's Bedroom" in which 12 counties held training schools resulting in 96 clubs with 431 members enrolled. In addition, two counties held training schools in "Being Well Dressed and Well Groomed", five in "Cot-

tons May be Smart", five in "The Supper Club", four in "Dressing Up Home Grown Vegetables" and ten in "The Milky Way". As a result of these schools, 2,149 girls in 350 clubs were receiving instruction in some phase of homemaking during the fall and winter just past. The results of these schools can best be evaluated by the achievement days to be held during the summer of 1938.

Junior Institutes—One hundred and twenty-five junior institutes were active during 1937-38. In order to ensure a sound educational programme each junior institute is urged to undertake at least one unit of work in the junior homemaking club programme each year.

Girls' Conference—On May 4-7 the annual conference of rural Ontario girls was held at the Ontario Agricultural College, Guelph. This conference was organized and carried on by the Women's Institute Branch co-operating with the staff of the College. Because in past years the applications for admission to the conference have overtaxed the accommodation at the College, the registration in 1937 was limited to 400 girls. These girls are chosen mainly as representatives of junior and senior Women's Institutes, homemaking clubs and winter short courses, some of them receiving the trip because of outstanding work in clubs and short courses.

At this conference they received training in leadership as well as instruction in such subjects as the conservation of health; the art of dress; the practical and aesthetic sides of food preparation and service; the responsibilities of the home; home beautification by tree planting; and the conduct of club meetings. Many of the girls who attend this annual conference are for the first time made aware of the possibilities for home-making education available to them and the results are shown in the requests for further instruction.

DOMINION-PROVINCIAL YOUTH TRAINING PROGRAMME FOR RURAL YOUNG WOMEN

In 1937, the Dominion and Provincial Governments provided funds to allow for a number of courses designed primarily to aid rural young women who require part-time employment. In Ontario, the Women's Institute Branch assumed responsibility for the planning and administration of these courses and during November and December representatives of this Branch made a survey of the demand for them. As an outcome of this survey, courses were scheduled in various parts of Ontario as follows: "Catering for Tourists," ten; "Marketing of Home Baked Foods," four; "Rug Making," two; "Simple Dress-making and Remodelling," 12. Arrangements for these courses were made through county advisory committees comprised of the agricultural representatives, public school inspectors, district presidents and secretaries of Women's Institutes and the county home economics coach or her substitute. Each of the courses with the exception of "Rug Making" was held for five days a week for four weeks with morning and afternoon sessions. The Rug Making course was completed in three weeks' time.

Reports of these courses show a total enrolment of 622 with an average attendance of 19 and an average age of 20 years. Of this enrolment 34% had never attended high school, 41% had attended for two years or less, 14% had received special training in some line and 45% had been previously employed. Farm homes supplied 60% of the enrolment, while 23% came from villages and 11% from towns.

Records of accomplishment were issued to those students who attained a certain standard of work and provision was made to keep in touch with the students and their problems after the conclusion of the courses.

As a result of the work in clothing, 12 students have definite plans to sew for others, one girl hoping to earn money to attend art school and one already having received orders for slips and simple dresses. Of the remainder, all will be able to do at least part of their own sewing and that of their families.

In "Rug Making" the members enrolled mainly with the idea of improving their own homes, but the courses have awakened interest in the possibilities of financial returns from such work.

From the foods courses three students have definite plans to sell home baked foods on a farmers' market, six to establish road-side stands and two to take in summer boarders, one of these selling home baked foods as a side-line. Six students have plans to start tea-rooms or tourist homes and eight already established in tourist homes have received definite help in ideas for improvement. Seven girls will find summer employment in tourist homes, two in summer resorts and three in domestic service; and 15 who have been previously employed have acquired knowledge and skills which should fit them for better paid positions. At least 39 others expect to use their course in some way to improve their economic situation. All students, besides receiving instruction in the fundamentals of business management, were made aware of the possibilities in the field of catering to tourists and the sale of home baked foods.

REPORTS AND RECORDS

To assist in the compilation of reports, forms are supplied to instructors of local leader training schools, one-month and three-months schools and other short courses; to speakers in the speaker service series of meetings; to Department representatives at district annual meetings; and to local leaders in both senior and junior work. Local institutes are asked to report every four months on forms supplied, giving information that is used to make a comparative study of the work of the institutes in each district.

A growing realization of the importance of reports on the part of all staff workers is showing results in more accurate and comprehensive reports; but not until the local leaders become more conscious of the importance of definiteness and promptness in returning reports of the work they have accomplished will this Branch be able to show a full and accurate picture of its year's work.

OUTLOOK

The above report gives evidence of the increased participation of Women's Institute members and women generally in the study of homemaking problems. This interest and analysis on the part of homemakers, themselves, is resulting in the paradoxical demand for both more comprehensive and highly specialized curricula for short courses and projects.

In particular, an educational service in two divisions of subject matter, previously receiving little attention, should be made available in the near future. Young parents are asking for guidance in the study of child behaviour and family life. Rural Ontario is awakening to the bareness

and ugliness of its home grounds. The Women's Institute Branch with its 1366 community organizations should be giving this educational service, otherwise the Branch is not keeping in line with its objective of developing better and more satisfying rural living. Two experienced, well and specifically trained staff members will be required to give full-time service to develop effectively these programmes. Indubitably, attention given to these two phases of work would result in better living conditions in rural Ontario.

The appreciation of practicing homemakers for a sound educational programme in home economics has been proven this past year and it clearly defines the steady upward trend of greater demand for such services. Practically every county feels the need for more service from the home economics coach.

The administration of the programme of the Women's Institute Branch involves the participation and leadership of homemakers throughout the province. It must be a genuine movement to which people will devote their best minds and energies because they are enthusiasts for the end that is sought. Although increased money income and more satisfying material comforts are often the immediate objectives, a clear insight must be kept into the real values that contribute to general welfare. Health, beauty and culture are the final end of the work. Much new knowledge should be put into use.

SUMMARY

FRUIT BRANCH

Following the short crop of all fruits during the season of 1936, production in most lines in 1937 showed a decided increase. Under more favorable weather conditions, quality on the whole was higher which made for better marketing conditions.

The figures for the commercial crop as issued by the joint Committee of Federal and Provincial officers and a comparison with the previous year is given herewith:

	Year 1936	Year 1937
Apples—barrels	703,500	745,300
Pears—bushels	196,800	185,500
Peaches—bushels	402,300	525,700
Plums—bushels	41,200	56,000
Cherries—bushels	124,800	101,900
Strawberries—quarts	6,168,000	6,880,300
Raspberries—quarts	1,800,000	4,043,200
Grapes—lbs.	21,640,000	52,000,000

Marketing conditions on the whole were not unfavorable to the growers. Some fruits for processing naturally, with heavier crops, sold under contract for lower prices than in 1936. This was particularly the case with peaches, but chaos was avoided by the Peach Scheme under the Ontario Farm Products Control Act. The local board under this Act was operating successfully by the time the canning crop was ready and certainly did much to steady prices.

Co-operative effort by the Federal and Provincial Departments of Agriculture resulted in consumer advertising for both peaches and grapes, while later in the winter, the Federal Department carried on advertising of apples with the object particularly of helping clear up a surplus of boxed apples from the West. The advertising was general however, and also helped stimulate the sales of Ontario apples which had been moving rather slowly under the competition of the citrus fruits entering Canada free of duty during the first four months of the year.

During the 1937 Session of the Legislature two control acts were passed that materially affected the work of this Branch. The Fruit Pests Act was repealed and The Plant Diseases Act covering a larger field was enacted in its stead. The Grades and Sales Act, entirely new in its field in Ontario, was rendered necessary following decisions of the Supreme Court regarding jurisdiction of the Provinces over trade matters. Some of the lines of work under these laws are given below.

The Plant Diseases Act:

(1) Nursery Inspection—60 nurseries in the Province are now registered and all stock grown by them is inspected for certain insects and diseases. the infested trees being destroyed. Certificates of such inspection are issued to nurseries, particularly those dealing in fruit trees for shipment to other provinces.

(2) Orchard Inspection by Municipal Inspectors—Certain municipalities, principally in the Niagara District, appoint one or more men under the Act, subject to the approval of the Minister of Agriculture and to Departmental supervision. This seeks to keep in control such serious insect and disease pests as Little Peach, Yellows and San Jose Scale which are difficult to identify and control. In the past the expense for these temporary men has been shared equally by the Department and the municipality, but assistance has also been given by members of the permanent staff of the De-

partment. The following municipalities appointed inspectors in 1937: Townships of Louth, North Grimsby, Saltfleet, Grantham, Niagara, Stamford, Pelham, Clinton; Towns of Grimsby and Collingwood; Villages of Fonthill and Beamsville; Cities of Oshawa and Toronto.

(3) Orchard Inspection for Apple Maggot—Under Federal regulations covering the export of apples, all fruit for shipment to the British Isles must be certified as free from this pest in the orchard. Inspection is carried out as to spraying by Provincial officers only, but in the fall, the Provincial Department co-operates with the Federal authorities to facilitate this work by furnishing a quota of men and cars.

During the year, fifteen provincial men were engaged during part of May, June and July in checking up on the spraying and cleaning up of old orchards and other sources of infection surrounding those orchards whose owners are interested in the export markets. During late August and September, and working under the supervision of the Dominion Entomological Branch, some forty men were engaged in checking over the fruit in all registered orchards for presence of the apple maggot.

Orchards under this inspection by counties are shown herewith:

Brant 33; Dundas 15; Durham 238; Elgin 58; Essex 11; Frontenac 7; Grenville 11; Grey 164; Halton 83; Hastings 30; Huron 47; Kent 16; Lambton 38; Lincoln 44; Middlesex 157; Norfolk 236; Northumberland 362; Ontario 34; Oxford 115; Peel 41; Prince Edward 363; Simcoe 36; Welland 5; Wentworth 51; York 20—Total 2216 orchards.

(4) Field Inspection for Corn Borer—This was originally started by the Federal Department as a quarantine measure, but assumed by the County and Provincial authorities co-operating in trying for commercial control. Inspectors are appointed by municipalities subject to the approval of the Minister of Agriculture, and part of the expense is assumed by the Department. During the season 23 counties and 1 city came under this inspection.

The Farm Products Grades and Sales Act:

Regulations under this Act were drafted and passed by Order-in-Council during the year to cover the marketing of fruit and vegetables grown and sold in Ontario, including the grades and grading, packing and packages, marking and inspection. Federal inspectors were appointed, without additional remuneration, by the Province to enforce both Provincial and Federal regulations within the Province, thus avoiding duplication of services. The Province, however paid the cost of maintaining an inspection station at Gravenhurst for all produce moving north, with the Federal Department paying for the services of the two inspectors stationed there. All assistance possible is given the Federal Fruit Branch in facilitating the work of their fruit inspectors in this Province.

Spraying, Pruning, Etc.:

Spray Calendars for apples and other fruits were again prepared in co-operation with the Federal and Provincial officials, and distributed together with timely letters to thousands of growers through the offices of the Agricultural Representatives, the Ontario Agricultural College, the Vineland Experiment Station and this office. Where fieldmen were available, personal visits were made to discuss orchard problems. Prospective fruit growers were advised and assisted in the selection of suitable soil and other conditions for the growing of various kinds of fruit. Lists of recom-

mended varieties of fruits for planting in different sections of the Province were prepared and distributed.

Marketing:

Assistance was given to our cold storages and co-operative associations, and other carlot shippers for the proper handling of apples and other fruits, chiefly for export. In addition, growers and shippers were assisted in the selling of fruit on the export market through their own overseas' representative. Close contact with this market is kept and such information passed on to those interested. Collective insurance has been obtained at low rates for export fruit, and assistance has also been given in co-operative buying and distribution of certain packing house supplies difficult and expensive for small units to purchase individually.

Crop Reports:

This Branch co-operated with the Statistics Branch in the preparation of their monthly crop report on fruits and vegetables.

Fairs and Exhibitions:

Assistance was given in the preparation of prize-lists, entries and arrangement of exhibits at the Canadian National Exhibition and the Royal Winter Fair.

Cold Storages:

The cold storage at Brighton originally built for experimental purposes is now operating successfully as a commercial cold storage for apples. Growers and co-operatives were assisted in arranging for storage of apples, chiefly for export, from over-crowded sections, enroute to seaboard. As a result of the severe winter of 1933-34, cold storages in certain districts have had difficulty in securing sufficient volume of fruit to give them revenue to meet their obligations, while in other sections it has been impossible to find storage space for the volume of fruit offered.

Meetings & Conventions:

Help is given in arranging meetings of fruit growers wherever requested. This includes the programme for the Annual Convention of the Fruit Growers' Association of Ontario in co-operation with the Niagara Peninsula Fruit Growers' Association, meetings of district Associations, as well as for the smaller local associations.

AGRICULTURAL REPRESENTATIVE BRANCH

The various lines of work undertaken by Agricultural Representatives during the past year have been of economic importance and fundamental to the success of Agriculture. The questions of soil requirements, the control of field crop and live stock diseases and the marketing of farm products have presented many difficult problems.

Each year more and more requests are made by the farmers for the services of the Agricultural Representatives who are ably assisted by officials from both the Provincial and Federal Departments of Agriculture and our Agricultural Institutions.

The appreciation of extension work and the opportunities for useful service are strikingly illustrated in the following extract taken from the report submitted by the Agricultural Representative from Oxford County:

"In all my twenty-four years of service in the county, this has been the most outstanding from the standpoint of interest and opportunities for use-

ful service. This is reflected in the increase in correspondence, circulars mailed, telephone calls received, an increase of over 300 in the number of callers, an increase of 100% in the number of meetings addressed and an increase of 75% in the number of meetings attended. In addition to there being 3754 callers, there was an attendance of 2262 at meetings held in the office. The highest number of callers in any one month was 565 in March, 1937."

The changes in personnel during the past year have been as follows:

Transfers—F. C. Paterson from Welland County to Peterborough County;

Jos. Wilson from Hastings County to Welland County;

A. M. Barr from Grenville County to Brant County.

New Appointments—H. G. MacLeod to Grenville County;

H. L. Fair to Hastings County.

Resignations—J. C. Steckley, from Brant County to become Superintendent of the Western Ontario Experimental Farm, Ridgetown.

A. D. Runions, from Peterborough County to the staff of the Kemptville Agricultural School, Kemptville.

Summary of office work:

	Total	Average per office
Letters Received	113,950	2,234
Letters Written	107,273	2,103
Circular Letters Mailed	482,019	9,451
Incoming Telephone Calls	90,950	1,781
Visitors	136,250	2,671
No. Meetings Addressed	3,087	60
Attendance at Meetings	151,311	2,966
Additional Meetings Attended	1,671	32
Mileage	866,024	16,981

LIVE STOCK IMPROVEMENT

During the past few years, interest in live stock improvement has been more definitely focussed upon animal diseases relating to mineral deficiencies. In practically all parts of the Province reference has been made to chronic conditions of live stock which do not seem to respond to feeding. During the winters of 1937 and 1938, numerous enquiries regarding these conditions were received and upon investigation many home grown feeds were found to be low in feeding value.

The mineral deficiency study started in 1937 in the Homestead Cheese Factory district, in Oxford County, was continued and an improvement in the herds under observation was noted. These cattle were divided into groups and given different applications of minerals. Following a soil survey, recommendations were made to apply fertilizer to correct the nutrient deficiency.

HORSES

The price of horses remained very satisfactory in comparison with other live stock prices, a condition which has developed a demand for good breeding sires, and many Agricultural Representatives assisted in organizing Breeders' Clubs and in locating stallions. Boys' Foal Clubs were conducted in many counties and instruction was given the members in horsemanship and care and management of horses. Bot Fly control was encouraged, although very few Representatives carried on county campaigns, as it was felt that after two or three years' intensive work, the farmers should know whether their horses required treatment or not, and they

were advised to get in touch with their local veterinarians. Many farmers now make a practice of treating their horses annually and find the results very satisfactory .

The Agricultural Representatives assisted the stallion inspectors when they made their annual inspections.

T. B. Eradication

Agricultural representatives gave every possible assistance in the campaign towards eradicating bovine tuberculosis in Ontario.

Warble Fly Control

This past year fewer County Live Stock Improvement Associations requested the County Councils to purchase warble fly powder for free distribution to cattle owners, the reason for this being that many of them felt that Ontario cattle were about as free as it was possible to get them.

In the counties carrying on the project, the Agricultural Representatives supervised the organization and distribution of the powder. In counties in which no definite campaign was conducted, educational meetings were held and articles were forwarded to the local press. It is estimated that approximately 297,666 cattle were treated in Ontario in 1937.

SHEEP

The price of lambs remained very satisfactory during the year. The marketing of Ontario lambs is not as seasonable as it has been in the past. Many farmers finished their lambs previous to the influx of Western shipments. The price of wool opened at a high figure and farmers selling for cash at time of clipping received very remunerative prices. Towards spring, the price had dropped back to about 15c per lb. Agricultural Representatives encouraged the shipment of wool-co-operatively.

Lamb Fairs were conducted in Algoma and Lanark Counties.

In a number of counties Representatives have had requests from farmers to give drenching demonstrations in the control of internal parasites as well as castrating and docking demonstrations.

SWINE

Swine work has been given a great deal of consideration by the Agricultural Representatives and breeders have been assisted in the purchase of Advanced Registry breeding stock and through advice regarding mineral mixtures and other problems relative to swine diseases. The organization of Field Days, pure-bred sales, Bacon Hog Fairs and special swine meetings has also contributed to the welfare of the industry.

A comment from the report of the Agricultural Representative in Lennox & Addington is typical of the trend:

LENNOX & ADDINGTON—"In every case we tried to induce the breeders to purchase Advanced Registry boars, so that now the class of stock is of a very high standard. This quality shows in the number of selects that go to market. In the last four years, the number of selects has increased from about 10% to 27%."

The Agricultural Representatives in the counties of Essex and Kent co-operated with Federal and Provincial Live Stock Departments in staging the Tilbury Bacon Hog Fair. The Fair was attended by fully 150 swine producers and the project was a definite educational factor in focusing attention on the production of bacon type hogs. All commercial hogs were sold on a rail basis.

The County of Waterloo holds the envied position of leading all counties in that the hog feeders in that county marketed over 90% in the two top grades and also the highest percentage of selects. The number of hogs graded on the rail increased from 10,874 in 1936 to 22,291 in 1937. The breeding stock in this county is excellent, many of the producers maintaining Advanced Registry Stock. An active Advanced Registry Yorkshire Breeders' Club conducted their annual consignment sale and the prices received were quite satisfactory.

The Pig Marketing Survey was continued in co-operation with the Federal Live Stock Branch, ten per cent. of the boar owners in each county reporting to the County Agricultural Representative the number of sows bred. These figures were compared with previous years and an estimate made to the British Government on the approximate number of bacon and hog products that would be exported during the period.

POULTRY

The price of eggs did not keep step with the price of feed, with the result that poultry flocks were closely culled early in the season. In the spring, enquiries were received at the local Agricultural Representative's office concerning diseases in chicks, very often requiring a post-mortem before the disease could be diagnosed.

The Agricultural Representatives, in co-operation with the Markets Branch, have induced many producers to sell their eggs under the "O'Pep" brand, which has gained a reputation for quality and has returned a slight premium over and above the general market.

There is a tendency to keep a dual-purpose hen of the breeds that produce well and kill out satisfactorily. This has been more noticeable in the districts where poultry pools are operating.

The Agricultural Representative from Leeds County comments on the marketing of poultry through pools as follows:

LEEDS—"Dressed poultry marketing took an advance step during the year. All Leeds county Poultry Pools, together with a considerable volume from other districts, centralized their pack at Brockville by using the cold storage and plant facilities of a commercial firm. While most of the poultry was graded at pool points, as formerly, it was trucked to Brockville in baskets provided and there regraded after 24 hours in the cooling racks. The poultry was then carefully packed in improved standard boxes and a much superior packed product was possible than in former years. The result was that Brockville packed poultry consistently brought 1½ to 2 cents per lb. more than poultry from other points in Eastern Ontario which did not use this method. Over 55 tons of dressed poultry were graded and packed at Brockville."

Poultry Pools not only make satisfactory returns to the farmers but act as a stabilizing influence on the prices paid by buyers of private produce firms. They are also making the farmer realize the value of good breeding, proper finishing, killing, care and handling before marketing.

The Agricultural Representative in Lanark conducted a five-year project on stamping out pullorum in a district that was rather badly infected. After five years of blood testing, this area has been practically cleaned up. Hatcheries are now contracting most of these flocks for hatching eggs, doing the blood testing and supplying R.O.P. cockerels.

SOIL AND CROP IMPROVEMENT

Through different agencies, such as County Seed Fairs, seed cleaning plants, field crop competitions, variety and fertilizer field experiments and demonstrations, a greater interest is being displayed in the sowing of better seed grain, and the more general use of commercial fertilizers.

Soil testing has also developed to the point where it is considered by the better farmers as an essential procedure in efficient farming. Agricultural Representatives in 18 counties have been supplied with Thornton soil testing kits, which have been used considerably. Besides, many soil samples have been forwarded by the Agricultural Representatives to the Ontario Agricultural College, Guelph and the Kemptville Agricultural School, Kemptville for analysis and recommendations. Many farmers visit their local office to inspect the county soil map and to discuss the proper type of fertilizer to use on their farms.

Representatives in the following counties have soil testing kits:

Algoma, Brant, Bruce, Elgin, Grey, Haldimand Halton, Lambton, Lennox & Addington, Nipissing, Norfolk, Northumberland, Oxford, Peterborough, Rainy River, North Simcoe, South Simcoe, Welland.

Fertilizer Experiments

In co-operation with the Chemistry Department of the Ontario Agricultural College, Guelph, the Agricultural Representatives selected suitable fields and co-operators with whom to conduct fertilizer experiments.

The Agricultural Representatives also distributed the fertilizer to the co-operators and assisted in laying out the experiments. During the year 1937, 80 such experiments were conducted.

Agricultural Lime

The Lime Subvention Policy was utilized to the full extent of the funds available. Purchasers of lime applied to the local offices from which their requests were forwarded to the Crops, Seeds and Weeds Branch and a rebate paid on the freight rate. Altogether 141 cars were subsidized.

Seed Cleaning Plants

The use of good seed is steadily on the increase which is demonstrated by the installation of seven new seed cleaning plants in 1938. The Agricultural Representatives assisted in the establishment of these plants.

Nematodes

Further outbreaks of nematodes in a number of counties were reported. The Agricultural Representative is continually on the lookout for any new infestation and reports immediately to the Ontario Agricultural College, which has assumed responsibility for any investigational work carried on in connection with the project.

Weed Control

Each spring a meeting of the County Weed Inspectors, the Township Road Superintendents and municipal officers is held in each county, these meetings being called by the Agricultural Representatives, at which time a discussion of the Weed Act takes place and a plan of control for the coming season is discussed. A few Agricultural Representatives arranged for the carrying on of some experiments with Cyanamid to determine its effectiveness in the control of mustard.

Rust

Very heavy losses in grain yields were experienced in Ontario during 1937. This matter has become so serious that attention has been given to finding rust resistant varieties of wheat and oats. In co-operation with the Field Husbandry Department of the O.A.C. and the Cereal Division of the Central Experimental Farm, Ottawa, variety tests were conducted in a number of counties.

Spray Service

The Agricultural Representatives sent out spray service letters, advising the fruit growers the spray material to use and suggesting the time to apply the material for best results.

Tomatoes

Considerable work on tomatoes was carried on in Northumberland and Prince Edward Counties and the first field crop competition with tomatoes was conducted by the Cramahe Agricultural Society with 20 competitors taking part. Besides this, experiments were conducted in disease control, variety testing, fertilizers, breeding and selection and marketing. The Agricultural Representative assisted the special field officer from the Ontario Agricultural College in carrying out this work.

Potatoes

The yield of potatoes in 1937 was above average, but due to early frost, much of the crop was damaged and resulted in large quantities being dumped on the market that were not fit for consumption. As a result, the consumers turned towards Maritime potatoes and large quantities of Ontario table stock remained in the growers' hands.

In the potato growing areas a series of meetings was held at which time growers were encouraged to grow early maturing varieties, to use certified seed and to give more careful attention to the control of disease. The concensus of opinion of the growers was that some sort of rigid inspection of all potatoes going to market should be inaugurated.

Grasshoppers

Rather severe outbreaks of grasshoppers occurred in Algoma, Sudbury, Muskoka and Parry Sound districts. The Agricultural Representatives in these districts ordered supplies of Arsoda which was distributed to key-men who, in turn, delivered it to the farmers. This poison was mixed with a bran or sawdust mixture and spread in the path of the grasshoppers. The district of Algoma distributed over 1000 lbs. and Sudbury over 1500 lbs. When this poison bait was properly applied, the damage by grasshoppers was greatly reduced.

Plowing Matches

The Agricultural Representatives assisted with the plowing matches held in the various counties, usually in the capacity of Secretary. Some 69 matches were held in 1937, at which there were 1,857 contestants.

Farm Tours

During the past year 16 farm tours were arranged by Agricultural Representatives. A total of 1389 farmers took part.

Marketing

The Agricultural Representatives are continually trying to bring buyer and seller together. The commodities are varied. The request may be from an individual who wishes to dispose of breeding stock or it may be from a group representing a large volume of produce. Working in co-op-

eration with the Farm Products Control Board, they arranged for meetings and generally assisted with the organization work of the various marketing schemes. During the past year they have assisted the following marketing organizations:

Ontario Cream Patrons' Association;
Ontario Cheese Patrons' Association;
Ontario Whole Milk Producers' Association;
The Asparagus Growers' Association;
The Tomato Growers' Association;
The O'Pep Co-operative Association;
County Poultry and Egg Pools.

They have also co-operated closely with educational and improvement county associations, such as the Corn Growers, Potato Growers, Seed Growers, Vegetable and Fruit Growers, Sheep Breeders, County Cattle Breeders' Clubs, Swine Producers and many others.

CONSERVATION AND REFORESTATION

The Agricultural Representatives co-operated very closely with and, in practically every case, were members of the County Conservation Committees. Organization throughout Ontario has been going ahead steadily and every county in the Province has a committee to study conservation and tree planting within its boundaries.

The province is divided into five zones, each with a Chairman, Vice-Chairman and Secretary. The zones are known as follows: Eastern Counties, Lake Ontario, Northwestern, Hamilton and Southwestern. During the month of March, zone meetings were held and members of the county committees and Agricultural Representatives attended and gave reports of the progress made during the past year. At a later date a Provincial Committee of fifteen, made up of the Chairman, Vice-Chairman and Secretary of each zone, was organized.

The following quotation was taken from the report of the Agricultural Representative in Oxford County:
OXFORD—"One of the first steps taken was to arrange for the compilation of a woodland census in each township, the information being taken by the assessors. As some of the assessors had already started their work before this plan was completed, some of these records were not completed last year and are being taken care of this season.

Out of the information so far compiled, one can size up the favourable attitude of public opinion toward reforestation work. On the basis of the work so far completed, there is evidence that between 700 and 800 property owners are ready to undertake windbreak planting. This year arrangements were made for the assessors to take along a supply of forest tree application forms, and a great many of these were sent forward.

When complete, the census will provide a very definite source of information for planning reforestation work on a larger scale."

At the present time there are 14 County Forests of 1000 or more acres, established under legislation which enables the County and Province to enter into long term co-operative agreements. These forests are situated in the following counties:

Dufferin	1	Ontario	1
Grey	1	Simcoe	4
Northumberland and Durham	2	Victoria	2
Prescott & Russell	1	York	1
Norfolk	1		<u>1</u>
			14

More than 125 municipalities have done some planting in school grounds, watersheds and demonstration plots.

In a number of counties the County School Inspectors and Agricultural Representatives prepared lessons on reforestation and tree planting, which were taught in the rural schools.

Examples of the work being done in the rural schools of Ontario are given in the following quotations from Annual Reports:

HALTON—"We arranged with the Forestry Branch to supply us with sufficient trees to distribute to our rural schools, so that each child could secure two trees for home planting. According to comments received, these trees did very well and we believe played a worthwhile part in promoting public opinion to the need of tree planting."

KENT—"To promote interest among school children, a contest was arranged which took the form of a questionnaire and short essay dealing with trees, tree planting and allied subjects. Prizes were offered to each school participating and grand prizes to the ten high ranking contestants. 77 children submitted papers, many of which reflected a lively interest and considerable discussion in the home."

OXFORD—"As one means of furthering the reforestation work the committee, with the co-operation of the Superintendent of the Forestry Station at St. Williams, distributed five small trees to each of the rural school children in the county. The idea was exceedingly well received by pupils, teachers and parents and the only objection came from those who did not have pupils at school. All told, 17,500 trees were distributed and arrangements have been made by the Agricultural Committee to repeat this experiment this year."

PERTH—"Lessons on reforestation were again forwarded to all schools, along with application forms for trees and instructions for ordering in bulk for the ratepayers of their respective sections. 78,782 trees were distributed through the schools in 1937."

In addition to municipal, school and county forest planting, the Forestry Branch received 6226 applications and forwarded 8,360,067 trees to individuals for windbreak and woodlot planting. Many of these applications were handled by the Agricultural Representatives who, in turn, forwarded them to the Forestry Branch.

DOMINION PROVINCIAL YOUTH TRAINING PROJECT

The National Employment Commission recommended to the Dominion Government that training and development projects for unemployed young people be carried out in co-operation with the various provinces, "for the alleviation of unemployment distress among young people resident within the Province and for the establishment, re-establishment and training of said unemployed young people in and for remunerative occupations."

The Province accordingly entered into an agreement with the Dominion to carry out a number of projects which were financed jointly. The Agricultural Representative Branch was charged with the responsibility of administering the "Rural Agricultural Training Project", which involv-

ed "Farm Placement and Training" and conducting "Agricultural Short Courses" for the unemployed youths who were to be placed on farms.

The original plan called for the placement of 455 unemployed young men from 18-30 years of age with farmers throughout the Province, on a basis of ten per county in Old Ontario and five in each District in Northern Ontario.

The following regulations were outlined :

1. Each trainee is to be placed for a period of about six months, from October 15, 1937 to March 31, 1938.
2. One trainee only is to be placed on a farm.
3. All unemployed young men are to be selected by the Agricultural Representative from within the County or District.
4. Each trainee so placed shall receive an allowance from the Province of \$10.00 for each completed month of training.
5. Each farmer selected by the Agricultural Representative shall undertake to give adequate training and to provide board and lodging free in return for which he shall be paid at the rate of \$10.00 for each completed month.
6. The Agricultural Representative shall be expected to maintain contact with each trainee by a follow-up service.
7. The farmer shall notify the Agricultural Representative if the trainee leaves or is discharged.
8. Trainees under this plan shall be restricted to those who express the intention of remaining in agricultural pursuits.
9. Each trainee shall be considered to be on probation and may be dismissed at the termination of two weeks' period if it is decided that he is not the right type or shows no interest in his work.

The Agricultural Representatives undertook to recruit suitable unemployed young men within their county or district for this special Farm Placement and Training Project. They were asked to exercise great care in regard to the farmers with whom the young men would be placed in order that they might be given adequate training. The Department desired that this project should not be regarded just as a farm placement scheme for the present period but should be regarded as a training project in practical farming.

The Representatives enlisted the co-operation of the Employment Service of the Ontario Department of Labour, the Reeves and Clerks of the various municipalities and Relief Officers, but unfortunately, as far as the scheme was concerned, very few unemployed young men between the ages of 18 and 30 years were available. Consequently, no placements were made until the beginning of November and some didn't commence the training period until near the end of December. No placements were made after the commencement of the Calendar Year.

All told, 114 young men were placed on farms in 25 counties in Old Ontario but in two counties only was the full complement of 10 placed. Because of conditions which prevailed, no placements were made in Northern Ontario. The training period, therefore, lasted from 3 to 5 months. Out of

the 114 boys placed, 39 left prior to the end of the training period; some remaining for a few days only. A total of 75 trainees remained for the full period from date of placement. The success of the project from a practical standpoint depended upon the number of trainees who would engage in farm work at the conclusion of the training period. Records to date reveal that 49 out of the original number of 114 secured farm jobs.

A special two weeks' course in practical agriculture was held at the Kemptville Agricultural School, Kemptville, Jan. 31st to Feb. 11th, for the trainees from Eastern Ontario and at the Ontario Agricultural College, Guelph, Feb. 14th to 25th, for the trainees in Western Ontario. A total of 33 boys attended Kemptville and 55 Guelph.

Each trainee had his transportation paid from his nearest railway station to the course and return and also his board and lodging while at the course.

JUNIOR EXTENSION

Rural School Fairs

Rural School Fairs are a joint project carried on by the Departments of Agriculture and Education. While the general supervision and management is vested in the Agricultural Representatives, the Public and Separate School Inspectors assist in drafting the prize list and co-operate in the judging of exhibits and competitions dealing primarily with school work. The great amount of detail work in organization; the distribution of seeds, prize lists and entry tags; arranging for judges; securing of halls or tents; transporting of tables, poultry coops and other paraphernalia; and the clerical work in recording the results falls to the lot of the Representative.

Over 100,000 boys and girls were given seeds in the spring of 1937 to plant on the home farm and they expected to exhibit some of the produce at a fair in the fall of the year. Unfortunately, owing to a serious outbreak of poliomyelitis in Ontario, the majority of the Rural School Fairs were cancelled by order of the Public Health officers. However, in some sections where the disease was not prevalent, School Fairs were held as usual. Of the 522 Rural School Fairs organized, only 244 School Fairs were held. At these fairs an educational programme was carried out, along similar lines to that of previous years. The Rural School Fair seems to be a "red letter day" for boys and girls in the rural districts and parents and ratepayers are apparently vitally interested.

Boys' and Girls' Club Work

The extension programme as it applies to boys and girls between the ages of 12 and 20 years continues to hold its popularity and is making splendid progress. Club work is a provincial responsibility. The organization and supervision is undertaken by the Agricultural Representatives and they are supported by grants from the Live Stock and Crops Branches of the Ontario Department of Agriculture and the Federal Government. Each local club is usually sponsored by an Agricultural Society, service club or other organization which contributes one third of the prize money.

The purpose of club work is to provide a training for the young people on the farm who have left the public schools. The aims are to improve farm live stock, crops or poultry by introducing good animals or seed to the farms through the club members. Each club member must have an animal or plot of his own before he can comply with the rules and regulations. He must also attend meetings and write an examination. The basis of awards for Calf Clubs, as outlined, gives an example of the stress placed on the educational aspect:

400 points for award on calf at the club fair or achievement day.

300 points for judging competition, answers to questions and showmanship.

- (a) 100 points for judging competition. Each competitor will be required to judge at least one class composed of four cattle and give reasons for his placing.
 - (b) 100 points for answers to ten questions based on club work and feeding and management of dairy or beef cattle, as the case may be.
 - (c) 100 points for showmanship—the condition of the animal and the manner in which the club member shows his entry in the ring.
- 300 points for Junior Stockmen's Award:
- (a) 100 points for care and feeding methods noted at time of periodic visits made during the season.
 - (b) 100 points for regularity and accuracy in forwarding monthly reports.
 - (c) 100 points for attendance and interest shown at meetings and judging classes.

The comments of some of the Agricultural Representatives regarding club work are interesting and are given below:

Carleton: "The writer is sold on the value of club work and feels it should have a place in every well balanced County Extension programme—its extent depending on the County. Some splendid young live stock men and field crop men are being developed through club activities.

Grey: "One of the outstanding results of club work in this district is that secured by Harold Atkins. Of the five calves which he had in club work, four of them at least are being retained in the herd at home. They are the best animals in the herd."

Lanark: "Last year in Calf Clubs, we had 18 Holsteins, 6 Ayrshires, 8 Shorthorns and 3 Herefords. The Calf Clubs have had a real effect in improving the live stock in the County. Our Ayrshire county herd which stood in second place at the Ottawa Winter Fair, was a direct result of Calf Club work. The number of new herds, herds on R.O.P. of good sires replacing common ones as a result of club work, is very gratifying."

In 1937, there were 267 clubs organized with 4,284 boys and girls enrolled.

	No. Clubs	Membership	Average Age of Contestants
Calf Clubs	74	1,210	15½
Swine Clubs	6	82	16¾
Foal Clubs	50	779	16½
Poultry Clubs	4	77	15
Grain Clubs	44	765	17
Potato Clubs	28	503	16½
Boys' Garden Clubs	18	252	14½
Girls' Garden and Canning Clubs	42	597	16
Tomato Club	1	19	17

ONTARIO INTER-CLUB COMPETITIONS

Previous to naming the teams to represent Ontario in the National Club Contests at the Royal Winter Fair, an elimination contest was held at the Ontario Agricultural College, Guelph, for the following projects: Dairy Calf, Beef Calf, Swine, Foal, Grain and Potato Clubs. The opportun-

ity to represent their Club in this competition is considered a distinct honour by the club members. It provides an opportunity to many boys to visit the Ontario Agricultural College and the programme is of an educational nature.

Inter-Club Competitions:

Project	No. teams competing	Winning Club Team	Team Members
Dairy Cattle	28	Brampton Calf Club	Kenneth Ella, Brampton Douglas Jefferson, Malton
Beef Cattle	13	Ilderton Calf Club	Clinton Irwin, Ilderton Newton Hall, Ilderton

National Club Contests

Ontario was represented in the National or Inter-Provincial Club Contests as sponsored by the Canadian Council on Boys' and Girls' Club Work at the Royal Winter Fair, in the following projects: Dairy Cattle, Beef Cattle, Seed Grain and Seed Potatoes. The following table shows the number of teams competing in the various projects and Ontario's standing at the Royal:

Project	No. Provinces competing	Ontario's standing
Dairy Cattle	6	Third
Beef Cattle	5	First
Grain	5	Second
Potato	4	Second

SHORT COURSES IN AGRICULTURE

Special Short Courses in Practical Agriculture have a direct appeal to farm boys who through necessity cannot be spared from farm work to attend a longer course at an agricultural college or school. These courses are planned to reach the different communities and are itinerant in the counties so that every few years a course will be available to practically every rural boy. These courses are conducted upon the request of the local people who supply the accommodation, the Department supplying the instructors.

Last year courses were held during the winter months as follows:

Old Ontario

	No. Held	No. Students Enrolled
One Month Courses in Agriculture	28	1,012
Three Month Courses in Agriculture	9	305
Special One Week Courses in Agriculture	10	710

Northern Ontario

One Month Courses in Agriculture	1	16
Two Week Courses in Agriculture	4	141
One Week Courses in Agriculture	7	363

Junior Farmer Associations

To provide an opportunity for further study and a medium of organization to retain the students of the Short Courses as a group, Junior Farmer Associations are usually formed at the conclusion of the Short Courses and continue to carry out educational and social programmes which prove ben-

eficial to the individual members and also to the community. Some of the projects conducted by such groups in 1937-38 were as follows: stock and seed judging competitions, seed fairs, plowing competitions and matches, junior departments at Fall Fairs, planting of Junior Farmer forests, experimental and demonstration work with grain, potatoes and fertilizers, weed control, debating leagues, public speaking contests, musical festivals, dramatic contests or plays, athletic contests, social activities and educational tours.

There are in Ontario 126 Junior Farmer Associations with a membership of 2,482.

Junior Farmer Plowing Competitions

Plowing competitions appeal to the Junior Farmers because they are one form of contest that requires skill and the actual practise of doing the work themselves. Home plowing competitions and junior matches, usually preceded by a demonstration given by some well-qualified plowman, provide excellent elimination contests for the selection of a team of three Juniors to represent their County at the International Plowing Match.

Twelve Home Plowing Competitions and 12 Junior Plowing Matches were held during the past year.

Twenty-one teams of three boys each entered the Inter County Plowing Contest conducted at the International Plowing Match at Fergus.

Judging Competitions

The ability to evaluate an animal or product in comparison with others is a necessary business training for successful farming and judging competitions offer an excellent medium for this training. The opportunity to try one's skill in competition with others also has an appeal to youth.

Last year, 1,718 young men took part in live stock judging competitions in 42 counties.

An attractive prize list is provided for judging competitions sponsored by Fair Boards at Class A exhibitions. The competition is supervised and judges supplied by the Ontario Department of Agriculture.

Exhibition	No. Entries
Canadian National Exhibition, Toronto	365
Central Canada Exhibition, Ottawa	281
Western Fair, London	134
Peterborough Industrial Exhibition	124

904

At the 13 Class B Fairs in the Province, a special programme was arranged for young men in judging competitions, rope and halter work and inter club calf and colt contests. The Agricultural Representatives played quite a large part in supervising the junior sections of these Fairs and much interest was aroused amongst the young men of the district.

Inter-county competitions open to teams of three young men are featured at the Royal and Ottawa Winter Fairs. At the Royal Winter Fair, Grenville County team won the Jeffrey Bull Memorial Trophy in live stock judging; while at the Ottawa Winter Fair, Carleton County won the Ottawa Winter Fair Trophy for live stock judging and Renfrew County won the Nettleton Challenge Trophy for seed judging.

Exhibition	Type of Competition	Counties Competing
Royal Winter Fair, Toronto	Live stock	37
Ottawa Winter Fair	Live stock	10
Ottawa Winter Fair	Seed	11

Chicago Trip Winners

Each year outstanding juniors or leaders in a number of counties are selected to attend the Boys' and Girls' Club Congress in Chicago. A substantial donation towards defraying the expenses of those attending is given by some local industry or group or service club. At the Congress, Ontario's young people have an opportunity of meeting similar groups from every State in the Union and in this way a friendly unity is created between the two countries. Last year seven girls and six boys attended the Club Conference.

CROPS, SEEDS, AND WEEDS BRANCH

During the fiscal year of 1937 the work of this Branch consisted of inspecting, repairing and installing new seed cleaning plants; supervising, paying prize money and expenses of the International Grain and Hay Show at Chicago; purchasing and shipping the necessary seed grain for Northern Ontario and other districts; directing the work of the lime subvention policy; assisting and paying grants to District Seed Fairs; the purchasing and inspection of feed hay for Algoma district; the carrying out of chemical experimental work on the control and eradication of noxious weeds; the inspection and registration of threshing mills; the supervising and appointing of local and district weed inspectors and a general educational programme in crop improvement.

SEED CLEANING PLANTS

The policy of assisting power seed cleaning plants was carried on during 1937. Eleven new and up-to-date plants were established at the following places:—West Lorne, Lucan, Mitchell, Drumbo, Whalen's Corners, Orangeville, Wales, New Liskeard, Ohsweken, Ridgetown and Bloomfield. Together with these new plants several older established plants were brought up-to-date with new and extra machines.

The following table will show by county where these seed cleaning plants are now operating:

BRANT COUNTY Paris Ohsweken St. George	COCHRANE DISTRICT xHearst xKapusking	ELGIN COUNTY West Lorne Shedden	GRENVILLE COUNTY Kemptville Spencerville Jasper	HALTON COUNTY Milton

x indicates plants cleaning seeds for farmers which have not been Government subsidized.

There are now 74 of these plants that have been established under Government assistance. There are also nine more privately owned plants equipped and operating in the same way.

It is estimated that from July 1937 to June 1st, 1938 these plants have cleaned 1,000,000 bushels of seed grain and 5,000,000 pounds of clover and grass seeds, and have cleaned seed for 12,000 farmers.

INTERNATIONAL GRAIN & HAY SHOW, CHICAGO

Assistance was given at this show in the form of special prizes for all exhibits from Ontario.

Exhibits were collected at Guelph and Essex and forwarded to Chicago under the supervision of an official of the Department of Agriculture at the expense of this Branch. Freight and express charges were paid on these exhibits.

From a total of 98 entries, 82 prizes were won including 2 championships, 2 reserve championships and 10 first prizes. Eleven other Ontario farmers won special cash prizes in their classes.

SEED GRAIN PURCHASED FOR NORTHERN ONTARIO

The purchasing of seed grain and seed potatoes for the following districts in Northern Ontario was carried out by this Branch—Kenora, Rainy River, Thunder Bay, Algoma, Sudbury, Nipissing, Timiskaming, Cochrane, Parry Sound, Muskoka, Manitoulin, North Renfrew and Haliburton.

The total value of this seed was \$51,642.90 and the total number of bushels of each were:—41,580 bushels of oats; 6,562 bushels of barley; 284 bushels of wheat, 266 bushels of peas and 4,449 bushels of potatoes.

All the grain purchased by the Government for this distribution was graded according to the Canada Seeds Act, and none lower than a No 1 for purity of weed seeds was bought. This seed grain and potatoes were

distributed to 3,000 farmers. Here again, as in the 1936 distribution, not one complaint was made by this large number of farmers re the quality of the seed received.

The Dominion Seed Branch of Ottawa gave every co-operation to this work. This was greatly appreciated by this Branch, and the farmers.

The distribution was in the hands of the Agricultural Representatives who are fully qualified to see that all seed was suitable. In the two years these men took charge of this work not one complaint was received.

LIME SUBVENTION POLICY

The lime subvention agreement between the Provincial and Dominion Departments of Agriculture and the Canadian National, Canadian Pacific and associated railways which was inaugurated in 1931 was continued.

Under this agreement the railways reduced the freight on car shipments of agricultural limestone approximately 25%. The Dominion and Provincial Departments jointly paid 50% of the remaining freight up to a maximum subsidy per ton.

During the year 141 cars of ground limestone were moved under this plan going to the following counties :

Algoma	2 cars	Norfolk	2 cars
Brant	1 car	Ontario	3 cars
Bruce	9 cars	Oxford	2 cars
Elgin	4 cars	Peel	2 cars
Essex	13 cars	Perth	5 cars
Grey	6 cars	Simcoe	2 cars
Halton	5 cars	Sudbury	5 cars
Huron	16 cars	Thunder Bay	2 cars
Kent	3 cars	Waterloo	1 car
Lincoln	8 cars	Welland	10 cars
Middlesex	4 cars	Wellington	5 cars
Muskoka	1 car	Wentworth	11 cars
Parry Sound	2 cars	York	17 cars

DISTRICT SEED FAIRS

Grants totalling \$900.00 were paid by this Branch to the following fairs:

Western Ontario Corn & Seed Exhibition, Chatham	\$350.00
Ottawa Valley District Seed Fair, Cornwall	200.00
Quinte District Seed Fair, Peterboro	150.00
Essex Corn & Seed Show, Essex	100.00
Lambton County Seed Fair, Petrolia	100.00

The above grants have been to a great extent the means of keeping these shows in existence during the last few years of strenuous times. Every one of them have been well and properly managed, with the result that even last year when our grains were not a good sample every one of the above seed fairs increased their number of exhibits.

These fairs held in conjunction with public meetings are proving a wonderful medium by which the farmers get together, discuss their seed problems and purchase their seed requirements.

More of such fairs held each year would, with out a doubt, improve the grain production of Ontario.

PURCHASING HAY FOR ALGOMA DISTRICT

Owing to serious dry weather during May, June and July followed by a grasshopper plague in that part of Algoma District from Blind River to Sault Ste. Marie, the Department found in order to retain the livestock, especially the dairy herds, it was necessary to give some assistance to the farmers to secure cow hay at reasonable prices. The project was turned over to this Branch. Some 5,631,285 pounds of hay were purchased in the Owen Sound and Hamilton Districts and was shipped to such points as included in the following table:—

Desbarats	53 cars.....	1,302,175 pounds.....	651 tons
Thessalon	57 cars.....	1,406,335 pounds.....	703 tons
Sault Ste. Marie	33 cars.....	849,730 pounds.....	425 tons
Bruce Mines	21 cars.....	532,150 pounds.....	266 tons
Dean Lake	15 cars.....	368,355 pounds.....	189 tons
Blind River	14 cars.....	350,335 pounds.....	175 tons
Portlock	13 cars.....	318,275 pounds.....	159 tons
Dayton	11 cars.....	276,900 pounds.....	138 tons
Bar River	6 cars.....	149,690 pounds.....	75 tons
Livingston	3 cars.....	77,340 pounds.....	39 tons
TOTALS	226 cars.....	5,631,285 pounds.....	2,821 tons

Each car of hay was inspected as loaded by an official of the Branch to make sure reasonably good material was being shipped.

The hay was shipped only to individual farmers and Farmer Clubs. The distribution at destination was supervised by J. M. MacIntosh, Agricultural Representative at Sault Ste. Marie, who made an exceedingly good job of it.

Through A. W. Walker, Superintendent of Freight Department, Canadian Pacific Railway, Toronto, the Department was able to secure a special freight rate, on this hay, which worked out practically a three way freight rate, the C.P.R. reducing their regular tariff \$2.00 per ton, which was greatly appreciated, the farmers paying \$2. and the Department paying \$2.50 per ton.

WEED CONTROL

No change was made in the Weed Control Act of 1935, therefore, the administration was carried on during 1937 similar to that of 1936.

The municipalities of the Province engaged 980 weed inspectors, and from the reports of these men, indications are that their Councils are becoming more sympathetic and interested in weed work, yet there are still too great a number of Councils who evidently are evading their responsibilities in this respect.

During the peak load of the weed work, eight District inspectors were working long hours each day to keep up with the calls of local inspectors for assistance and advice. Two of these District Inspectors were located in Northern Ontario and the other six in Old Ontario. Two of these six spent most of their time carrying on chemical work.

The Branch conducted special work on such plants as Dodder, Leafy and Cyprus Spurges, Bindweed and Perennial Sow Thistle.

During the spring seeding, samples were taken from the seed drills of 150 farmers in Essex, Kent and Haldimand counties to ascertain, if possible, if many farmers were sowing Dodder seeds in the grain and clover

seedings. All these samples were tested by the Dominion Seed Laboratories, Toronto. Out of the 150 tests very few showed trace of Dodder Seed.

Leafy and Cyprus Spurges are on the increase in the Province in spite of instructions to all Local and District Inspectors that they must not allow one patch to be left to seed. The trouble here is, that very few of the farmers or local inspectors know the spurge plants when they see them, hence, it is difficult for the Department to find them and have them destroyed.

Bindweed is increasing all over the Province, and the reason is the same as that of the Spurges. Kent County as usual is putting on a better fight to control this weed.

Perennial Sow Thistle is on the decrease, especially in Old Ontario. The main reason is that practically every farmer and weed inspector recognizes it, know its habit of growth and propagation, and work to control it.

During the year this Branch held over 50 weed meetings, 40 of them being county meetings where each Municipal Council was invited to attend together with all Weed Inspectors, Road Engineers and Supervisors.

All Inspectors were supplied with weed bulletins, notice books, etc. Press items, circular letters and every means possible were undertaken to keep before the people the importance of weed eradication and control.

The following statistics are taken from the year's reports of both the rural and urban municipal inspectors.

A total of 669 rural and 330 urban weed inspectors were engaged in 1937. The number of days put in by these inspectors were 10,060 by rural and 4,631 by urban. The city, town and other urban municipalities of Ontario report they spent \$16,492.85 for weed inspectors' salaries in 1937, while the rural municipalities report \$28,104.90 in salaries or a total of \$44,597.75. The cities, towns and villages claim they spent \$31,930.00 in cutting weeds. Rural inspectors report making 12,021 visits while the urban centres report 14,406 visits. Official notices served by rural inspectors are given as 2,596 with 15 prosecutions. The number of acres of crop cut for weeds reported were 5,445, while on pasture lands some 10,478 acres were cut, also 2,205 acres were sprayed with chemicals. Reports indicate that 1,400 miles of roads were sprayed with chemicals and that 300-000 pounds of chemicals were used in Ontario last year.

WEED CONTROL BY CHEMICALS

During 1937 experimental work was conducted with sodium chlorate and several other commercial preparations to ascertain their comparative efficiencies at varying rates of concentration. The recommendations contained in Bulletin 381, published in 1937, regarding the most suitable chemicals to use, were again verified. Several minor changes in rates of concentration of sodium chlorate will be set out in future recommendations.

Much experimental work was carried on particularly in the eradication of "Field Bindweed" (*Convolvulus Arvensis* L.) or as it is frequently called "Wild Morning Glory". An attachment to a power sprayer was an excellent improvement in the type of machine previously used for spraying this weed. More uniform work was the result. The chemical was applied in the form of a finer spray with a consequent saving of material and increased efficiency. Less man power was also necessary than was the case

when using previous types of machines. A considerable saving was also effected by the addition of a centrifugal pump which has a filling capacity of about 100 gallons per minute. Large sized supply tanks of 300 to 600 gallons can be filled in a very few minutes, thereby, eliminating much waste of time filling and refilling. The cost of spraying this weed was reduced to from twenty-three dollars to thirty dollars per acre for solid infestations. This is a marked contrast to previous figures of \$75.00 to \$100.00 per acre.

A considerable area of roadsides was chemically treated for the eradication of "Leafy" and "Cypress Spurges". It is the only method to be recommended for their eradication. Owing to the great expense incurred by this method, municipalities are advised to stamp "Spurges" out at their first appearance, thereby eliminating what may be a prohibitive cost for extensive areas. Results of spraying brush and weeds on roadsides in 1936 were observed in 1937. Satisfactory kills had been obtained at costs slightly in excess of those required for cutting and mowing. Further experiments were conducted during the year particularly with different types and designs of machines for more economical and effective spraying. An endeavour is being made to perfect a machine for the mechanical spraying of roadsides, the idea being to reduce the cost and do more thorough work.

Rough pasture experiments were also conducted in Eastern Ontario. Areas badly infested with weeds such as "King Devil", "Orange Hawkweed", "Ox-eye Daisy", "Canada Thistle", and "Blue Weed" were sprayed at a cost of \$2.30 per acre. Good results were obtained. The grass stand was not affected. It is now free from weeds.

Every effort is being put forth to reduce the cost of weed eradication by chemicals. Substantial progress has been made in this regard. More efficient machines have been perfected with which to apply the solution. Chemicals have been greatly reduced in price. There is, however, room for further reduction in cost by this method of weed eradication. It is imperative that everything be done by way of research and experimentation to secure a chemical that is cheaper and if possible, more effective and safer to use than sodium chlorate.

THRESHING MACHINE REGISTRATION AND INSPECTION

Three years ago legislation was included in the Weed Control Act which made it compulsory to register every threshing machine in the province whether it was for private or public use, and to clean all equipment before moving. The result has been a marked improvement in the condition of the machines travelling over public roads. Manufacturers are co-operating in many ways and are putting larger weed screens in their machines and more threshers each year are making inquiries as to the proper type of screens to use. One of the direct causes of our weed problem today has been the dirty threshing machine as it has been responsible for spreading weed seeds along roadsides and from farm to farm.

One of the duties of the Weed Inspector is to see that these provisions of the Act are adhered to within his municipality. When this legislation was brought into force many threshers were against it but are beginning to realize the full value of it because fewer weeds means better crops and more revenue for the thresher.

There were 6,518 machines registered in 1937, 1,807 of which were not operated for hire.

GENERAL CROP IMPROVEMENT

Aside from the work already mentioned in this report, which is fundamentally crop improvement work, this Branch pays grants to seed fairs, supports certain crop experiments, offers prize money to Boys' and Girls' Grain and Potato Clubs, supplies speakers for short courses and farmers' meetings; distributes literature on the control of smuts and cleaning grain; gives demonstrations on setting up and operating farmers' fanning mills; co-operates with the Canadian Seed Growers' Association and other organizations, and encourages farmers to buy better and cleaner seed.

ONTARIO COMMISSIONER OF MARKETING

As well as the regular work of promoting agricultural cooperative marketing and endeavouring to solve problems as they arise in the commercial field this office is engaged in a number of special activities working toward improvement of the primary producer's position. Some of those undertaken in relatively new fields are of interest.

COOPERATIVE COMPANIES INCORPORATED

By arrangement with the Companies Branch, Provincial Secretary's Office, five cooperative companies in Ontario were incorporated during the past year. This makes a total of eleven cooperative companies incorporated by this office since this service was instituted two years ago. The cooperatives incorporating in 1937 were:

The Mount Forest District Cooperative Company,
The Ontario Peach Growers' Cooperative Company,
The St. Catharines Peach Growers' Cooperative Company,
The Temiskaming Producers' Cooperative Company,
The Grimsby Beach Growers' Cooperative Company.

The work of the office also includes considerable correspondence with officials of farmer cooperative marketing and purchasing Companies and Associations.

In view of the provisions of Part XII (Cooperative Section) of the Ontario Companies Act and the annual financial returns of each cooperative company or association suggestions are made, on request, regarding matters of policy, management and co-ordination of activities generally.

Due to the expansion which is taking place in the cooperative movement enquiries and correspondence requesting assistance with a view toward organization and incorporation at a minimum of expense are constantly increasing.

Ontario Cheese Producers' Association

The success of this organization is one of the outstanding developments of the Ontario dairy industry in the past few years. The Association's business is managed by an Executive Committee of the Directors, five in number, who represent by districts, the different counties in which cheese is commercially produced, twenty in number. County Directors

are elected by the Presidents of the cheese factories, some 700 in all while the Presidents in turn are elected by the cheese factory milk producers, some 20,000 in all. The organization of the Association can thus be seen to be as democratic as possible.

The activities of the Association have been reported on at length in past years. It remains only to summarize briefly the outstanding developments of the 1937 season.

The energies of the Association were largely devoted to maintaining its commercial representative in the British market for the general purpose of promoting a better demand at higher prices for Ontario cheese exported. The representative keeps the producers and factories advised of market conditions and assists in reducing the spread in price fluctuations. The representative also opens up when possible, alternative channels of direct cheese export from Ontario factories to the British market.

Last year was the Association's first experience in handling experimental shipments of cheese in commercial volume. Some 14,891 boxes of cheese (approx. 90 lbs. each) were purchased at top local cheese board auctions from which sales were made in England totalling \$223,585.87. A gross profit, after the cost of goods and all incidental handling charges to point of destination, was shown of \$2,394.01 from which it can be seen that producers obtained the greatest benefit from the experiment in the original price paid for the cheese.

NORTHERN ONTARIO MARKETING

The development of markets continues as the major problem facing agriculture in Northern Ontario. As reported a year ago a start was made in 1936 on a programme of adjusting production in this area to market requirements. Considerable progress may be reported in the year just ended aided by the appointment during the season of an Agricultural Markets Promoter for the Rainy River and Thunder Bay District in addition to the one serving the Temiskaming and South Cochrane District for the past two years. Some of the chief accomplishments by the two Markets Promoters in the past year are as follows:—

(1) *Temiskaming and South Cochrane Districts:*

The three important crops, hay, seed, and potatoes, failed to produce any great revenue for the farmers of this district. The first two, though high in price, lacked any volume, while the latter had volume enough to glut the local markets.

Feed oat prices were good in the autumn of 1937 and one car was loaded at that time for Timmins. Since then prices reached fairly low levels and farmers were not anxious to sell. Much of the oats is suitable for seed and farmers are catering to this market when it opens.

Hog and cattle prices improved during the winter and stocks are fairly month at a price equal to that paid at Toronto. Besides this outlet a market well cleaned up. Timmins continued to take one to two cars of hogs per month at a price equal to that paid at Toronto. Besides this outlet a market at North Bay took one to two loads per week. Cattle were mostly shipped to Toronto. Among these were the reactors to the test to make the Temiskaming District a "T.B. Restricted Area."

Some time was spent in the Matheson area organizing the blueberry association there. A plan of operation was drafted and application made for incorporation of the Association, formed the previous year, to be known as the "South Cochrane Blueberry Pickers' and Shippers' Association." This Association proposes to control the picking of berries and the semi-cultivation of the area east of Matheson. Only four refrigerator freight cars of berries were shipped out this year against seven the previous year. The equivalent of many carloads, however, was transported by trucks. The crop was better than that of 1936.

Temiskaming farmers annually have special reduced freight rates on the T. & N. O. Railway to Northern points for certain produce when their bills of lading are signed by the Markets Promoter. The Markets Promoter met the Railway Board again to present the farmers' case for 1938 and as a result these special rates remain in force for another year.

Some twenty-two farmers' meetings were attended and addressed during the year. Many articles were contributed in the local press relative to the marketing of farm produce.

Sales of farm produce arranged or completed by the Markets Promoter during the year totalled \$18,949.00.

The Temiskaming Producers' Cooperative Company, Ltd., New Liskeard, Ont., was organized by the Markets Promoter and the first meeting of the Provisional Board of Directors held on August 27, 1937.

This Cooperative Company was organized for the purpose of processing, storing and marketing local farm produce. A charter was obtained under the Ontario Companies Act with a capital of \$25,000.00, divided into 2,500 shares of \$10. each. Sale of stock was mostly confined to certain business men of the town and those farmers who actually used the facilities and for which provision was made to deduct 5% from the sale of their produce until one \$10. share was fully paid up. Each farmer must subscribe for at least one share. At the end of the year the Cooperative had 132 shareholders; of which 73 are fully paid up, 21 are partially paid up and 38 have subscribed for stock only. Membership is growing.

A seed cleaning plant was installed by the new Cooperative Company and began operating late in the year. Equipment consisted of the following machines: one Plessisville No. 150 cleaner and scourer with 35 screens, one No. 1518 Agric. type Carter Disc Separator for oats and barley. The plant is doing a steady business and several carloads of grain have been prepared for seed. At least one, or possibly two cars, will be held here for shipment to Northern points.

The new Cooperative Company also made a start in grading farmers' eggs, packing them in one dozen cartons and shipping to Timmins, Ont. A suitable candling room with space for plenty of storage has been provided.

The Markets Promoter was advised on September 1st, 1937 that he had been appointed Fruit and Vegetable Inspector Grade No. 1 for the New Liskeard district. It was felt that the Promoter should have the status of an Inspector to help enforce better grading of local produce.

Several merchants and wholesalers took advantage of this service to have produce graded and in some cases to have outside produce degraded to its proper grade before being offered for sale. The Promoter, now an

official Inspector under the Act, may pass on any lot of produce and may detain any inferior lot being offered for sale.

(2) *Rainy River and Thunder Bay District:*

The Agricultural Markets Promoter for this region was not appointed until late in the summer and during the winter this officer was on loan for agricultural short course work in Southern Ontario. As a result, only a start has been made on the marketing programme in North-western Ontario. Despite the delay and interruption to the work the accomplishments of the first year were substantial.

By bringing buyer and farmer together, direct, a definite record of over \$16,000. worth of business was transacted. This does not include indirect sales, such as assistance in the distribution of approximately 5,000 tons of hay to drought areas, giving information as to location and quotations on various farm products and putting buyers in touch with sellers.

In the fall of 1936 the prevailing price for hay in the Thunder Bay District was \$8. or \$9. per ton. In the same period, 1937, it started to move at \$10. to \$11. per ton. Farmers who baled first, were located and advised that market conditions warranted a higher price. As a result, farmers held, and the price level soon advanced to \$15. In February, 1938, average quality hay sold for \$19. per ton. On the estimate of 10,000 tons available in this territory an additional \$40,000. at least was obtained for the hay.

Another example concerned potatoes. It was pointed out to the larger growers that freight rates from Winnipeg or outside points would not warrant potatoes being brought in to this district for less than 90c per bag. As a result local growers increased their prices from 15c to 25c per bag. This kept the general price level up that much higher. The total potato production in the Thunder Bay district is estimated at 250,000 bags.

In previous years, a limited number of buyers of clover seed, visited the Rainy River and Kenora Districts. Although prices received were usually fair it was thought more competition in buying would tend to bring the price still higher. With this in mind, 141 letters were sent out to seed buyers in Canada and the United States, to advertise the District as a centre of certified seed supply. As a result, enquiries and buyers were plentiful and the prices realized were satisfactory. Approximately 500,000 lbs. were exported to the United States alone at prices higher than the previous year. As buying was keen it is expected many will again return as purchasers in future years.

An endeavour has been made to have as many farmers as possible start on the production of the Chippewa variety of potatoes. Encouragement has been given to have these stocks kept certified, so that a large quantity of Northern grown certified seed from this favourable variety will be available in future years and the general standard of the potato crop raised. To-date approximately 40 farmers in the District intend to grow this improved variety next year.

The Canadian Lakehead Exhibition, Fort William and Port Arthur, Ont., in its desire to promote agricultural development, nominated a committee of its officers to meet with the Markets Promoter to discuss ways and means of improving the production and marketing of farm crops in this district. Representatives of the Lakehead wholesalers, retailers, Chambers of Commerce, City Councils, Service Clubs, and farmers, were invited to attend a meeting in March to have the different views expressed and a

policy drafted. With this as a basis it is hoped to commence a constructive and long range programme in 1938.

First Cooperative Packers' of Ontario

This, the only farmers' cooperative abattoir, meat packing and bacon curing plant in Ontario, continued last year the substantial recovery that developed in 1935 following the drastic reorganization of the Cooperative's affairs in 1934.

At this time the Cooperative is one of the first ten companies in Ontario doing a business of over \$1,000,000. annually in this line of industry.

1937 witnessed an increase over 1936 of 22% in hog slaughterings, 30% in cattle slaughterings, 21% in lamb slaughterings, 29% in calf slaughterings and 22% in the total of all slaughterings.

Sales for the fiscal year increased 26% in value and 24% in tonnage and the proportion of export business to total tonnage was 41%.

Capping a year of splendid progress came the announcement by the Directors that the first dividend in the Cooperative's history had been declared. The dividend, which was a commodity one, amounted to 25c per each rail graded member's hog handled throughout the year. This declaration distributed some \$2,700. among the members of the Cooperative. The balance of debts to shareholders on account of holdbacks accruing during the first few months of operation in 1931 in order to raise working capital was also discharged to the amount of some \$3,000.

Ontario A-1 Cooperative Egg Producers' Association

This office continued to direct the organization and operations of the Ontario A-1 Cooperative Egg Producers' Association as reported in detail in previous years. The membership of the highest class commercial egg and poultry farm producers, now totalling approximately 200 out of some 300 eligible producers under the Dominion Department of Agriculture's A-1 licensing plan, is purely voluntary and the volume of eggs handled is increasing. The Association's efforts have been self-financing from the start and the poultry producers participating have received some \$20,000. additional money in premiums over 'spot' market prices for their eggs marketed in this way over the past four years.

Advertising, store cards, radio work, other publicity and all expenses have been paid for out of the Association's funds from the commencement of operations.

O'Pep Cooperative Association

The long continued unfavourable ratio between cost of production and prices for eggs has given farmers and poultrymen concern for some years. This office, following its special study reported last year to develop a plan of marketing so as to give a better net return to those producers who were carrying larger than average poultry flocks as a major line of farm activity, decided to put the plan in operation this year.

A special officer was appointed to the staff early in 1937 who worked out the details of the sales arrangement which was later submitted to a meeting of representative producers. The whole plan was accepted and a cooperative marketing Association was formed. The actual marketing of eggs began late in September. Membership and volume increased until the Association was handling in December in the neighbourhood of 300 cases per week. In the six and a half months from September 20th to the

end of the fiscal year the Association marketed for its members five thousand and thirty-one cases of eggs (150,930 dozen) for a gross return of \$43,752.67.

The Association maintains a grading station in the city of Toronto. It has adopted strict rules of production and marketing so as to enable it to pack and supply the highest quality product obtainable. This policy has enabled the Association to realize prices for its members which have been definitely above the average of those for ordinary eggs of corresponding grades during all seasons of the year. Membership is increasing and as a result of this first season's successful experiment in selling next year is confidently anticipated as the final testing of the scheme through handling product in commercial volume.

POTATO MARKETING

Ontario Potato Growers' Association:

The marketing of the Big "O" Brand potatoes (special quality pack of the Ontario Potato Growers' Association) commenced for the season in August, 1937. The supply of Katahdin potatoes was limited. Several lots of good Dooleys were located and together with the lesser quantity of Katahdins available over 2,000 bags were sold. These potatoes netted the farmers 20c to 25c premium over ordinary Ontario table stock prices.

The amount of damage by disease, particularly Fusarium Wilt and serious damage from field frost very adversely affected the marketing of Ontario potatoes during the past year. This matter became so serious that, on being brought to the attention of the Department, a campaign for the use of better seed for planting the 1938 potato crop was undertaken.

With the assistance of the County Agricultural Representatives in the late crop potato producing counties meetings were called for the purpose of testing samples of seed brought in by growers as to their fitness for seed purposes. So far twenty-five meetings have been called with attendance running from twenty-five to one hundred persons per meeting. Usually fifty percent. of the growers brought samples of seed with them.

The percentage of diseased potatoes so located was not so large as at first anticipated but many samples were damaged by frost in the field and in storage. As a matter of interest samples of Katahdin, Green Mountain and Irish Cobbler potatoes almost invariably proved resistant to these defects. Most of the damage was in the late maturing variety, the Dooley.

As a result of the campaign many growers arranged for a change of seed for 1938.

New Markets:

During the past year a large market developed in South America for seed from the Maritime Provinces (due to freight rates), particularly the Green Mountain and Katahdin varieties. The demand for Katahdin seed is so great as a result that New Brunswick dealers are looking for several carloads of Ontario certified seed of this variety which is commanding a premium of about 20 cents per bag for Ontario growers over table stock prices on the Toronto market. This demand from the Argentine for Katahdin seed should provide an attractive outlet for Ontario certified stock in the fall of 1938.

A shipment of Ontario certified Warba seed potatoes was made to South Africa last fall which arrived in good condition but it is too soon yet to have a report of the results obtained. If these are satisfactory there should be an outlet there for substantial quantities of the available amount of seed stock of this variety in the fall of 1938.

New Varieties:

Some new potato varieties, tried out in 1936, were further tested last year with considerable encouragement. The late crop Dooley variety most commonly grown in Southern and Central Ontario matures so late that much damage from frost occurs before the crop is harvested. Earlier maturing varieties are therefore being sought.

The Katahdin variety which matures ten days earlier than the Dooley is proving a good yielder, of good cooking quality, and in market demand at premium.

The Chippewa, which was grown in an experimental way last year, now promises to be adaptable to Ontario conditions. This variety matures three weeks earlier than the Dooley, is a heavy yielder and has excellent cooking quality. Over 200 bags of seed stock have been distributed among growers in the County of Simcoe as well as smaller lots in other sections for further testing in 1938.

The Warba variety, the earliest Ontario maturing variety, is proving a heavy yielder, a good cooker and matures and develops marketable size earlier than the Irish Cobbler. Approximately 1,500 bags of seed are planted for the 1938 crop.

Extension Work:

A progressive programme of marketing and extension activities was conducted throughout the potato producing industry last year. Some of the particular developments are described in the following paragraphs.

Several lots of seed potatoes were located for farmers by bringing buyer and seller together. Two carloads of Irish Cobbler potatoes were gathered and shipped into New Liskeard and Cochrane for relief purposes. One carload of certified Katahdin seed stock was shipped to Souris, Prince Edward Island.

During the planting and growing season approximately 2,000 potato growers were visited in the chief producing districts of Middlesex, Elgin, Wentworth, Wellington, Dufferin, Simcoe, York, Ontario and Durham Counties. County Agricultural Representatives in each case were visited at the same time and matters discussed relative to seed selection, cultivation, spraying, harvesting, grading, etc. Special meetings of growers were held at Goodwood, Uxbridge, Strathroy and Mount Brydges. Judging competitions were held at Alliston, Strathroy and Guelph and potato field days at Mount Brydges while a potato fair was conducted at London, Ont. Field crop competitions were judged at Mount Brydges, Strathroy, Emsdale, Dunchurch and Port Carling.

NEW FRUIT PRESERVATION

As in past seasons this office collaborated again this year with commercial concerns in freezing fruits and vegetables for storage and consumption in seasons of non-production. Some work was also done in the production of special strains of strawberries and peas in Northern Ontario where climate and soil conditions combine to give a hardness to produce that is not present in Southern grown crops. The results obtained justify further work which will be continued in 1938. Already frozen Ontario fruits and vegetables are available at Toronto, Montreal and other large consuming markets, particularly during the winter months, and are receiving an interested consumer attention.

THE FARM PRODUCTS CONTROL BOARD

THE FARM PRODUCTS CONTROL ACT, 1937

This Act provides legislation by which marketing practices and methods can be altered in the light of rapidly changing modern conditions.

THE TWO PRINCIPAL FEATURES OF THE ACT

1. Provision for the formation of local boards to exercise powers, under the supervision of the Farm Products Control Board, which may be delegated to them by the Farm Products Control Board, for regulating the marketing of farm products produced or owned by those who come within the control of such boards. This provision is made to enable those who produce and market farm products to constitute control machinery of their own through which they may regulate the movement, direct the sale and determine the practices that shall prevail in the marketing of such products.

2. Provision for the investigation by the Farm Products Control Board of marketing conditions and practices in connection with any designated farm product.

Under the Act all powers that may be granted by Order-in-Council for the administration of marketing schemes will be vested in the Farm Products Control Board. These in turn may be delegated to local boards and the local board will become the administrative body under the general supervision of the Farm Products Control Board. At the 1938 Session of the Legislature the Act was amended in a number of useful ways to define more clearly certain terms used and the delegation of certain powers by the Farm Products Control Board to local boards.

SCHEMES APPROVED BY THE FARM PRODUCTS CONTROL BOARD TO—MARCH 31st, 1938.

The Ontario Cheese Producers' Marketing Scheme:

The Ontario Cheese Producers' Marketing Scheme was the first marketing scheme to be established in Ontario under the Farm Products Control Act. The purpose of the scheme which was submitted and supported by a large majority of the shippers of milk to cheese factories in Ontario is:

- (1) to require all cheese to be sold in Ontario on local cheese boards under uniform rules and regulations approved by the local board;
- (2) to defray the necessary expenses of the local board by a toll or charge on the regulated product of five cents per one hundred pounds.

About 91,911,396 pounds of cheese were made in Ontario in 1937 from milk supplied by some 20,000 farmers or cheese patrons.

The extent the scheme has achieved its aim and object of stimulating competition in buying cheese is evident from the figures that for the year under review 88.21% of the cheese graded in Ontario was sold on local cheese boards whereas prior to the operation of the scheme less than 35% of the cheese graded was sold on local cheese boards.

The Peach Growers' Marketing for Processing Scheme:

The Peach Growers' Marketing for Processing Scheme was the second scheme to be established in Ontario under the Farm Products Control Act.

The purpose of this scheme is to regulate the marketing of fresh peaches to all classes of processors for canning or preserving in any form by arriving at agreed on prices and a uniform form of contract in open negotiation between a committee of equal numbers of growers and processors, with power of arbitration if the committee cannot reach agreement.

The Niagara Peninsula was particularly concerned, as this district supplies practically all the fruit of this class. Some 550 growers sold 5,735 tons of peaches having a money value of \$301,087.50.

The scheme provided that, after one year, a poll of the peach growers interested be taken to determine whether the arrangement was to be continued or not. This vote was taken as required and the result was overwhelmingly in favour of continuing the scheme in the future.

Peaches for the wholesale and retail fresh fruit trade are exempt from the scheme.

The Holland Marsh Growers' Marketing Scheme:

The Holland Marsh Growers' Marketing Scheme was the third marketing scheme to be established in Ontario under the Farm Products Control Act. The purpose of the scheme, which was requested by a large majority of the growers of all nationalities located in the highly fertile marsh garden district around Bradford, Ont., was to set up a central cooperative selling organization through which would have to be sold the chief market garden crops designated in the scheme.

Chiefly through heavy losses occasioned in a separate undertaking not part of the scheme; i.e., the central grading and packing of lettuce; and also due to other difficulties that developed, grower support to the scheme was withdrawn. As a result the Farm Products Control Board, on request, exempted all designated produce from the operation of the scheme on September 1st and conditions then reverted to their original state.

The South Essex Growers' Marketing Scheme:

The South Essex Growers' Marketing Scheme was the fourth marketing scheme to be established in Ontario under the Farm Products Control Act. Its objects were practically identical, covering designated crops in the South Essex market garden district around Leamington, Ont., to the Holland Marsh scheme.

Because of some delay, due to jurisdiction in co-ordinating the Dominion Fruit Vegetable and Honey Act and the new Ontario Grades and Sales Act which combined made possible the compulsory grading and inspection of all fruits and vegetables out of defined districts, the scheme was not put into effect.

The scheme is still on the Statutes, however, and may be invoked in 1938 if a representative number of the South Essex market garden growers concerned so desire.

The Asparagus Growers' Marketing for Processing Scheme:

The Asparagus Growers' Marketing for Processing Scheme was the fifth and last marketing scheme to be established in Ontario under the Farm Products Control Act in the fiscal year 1937. Its purpose is identical to the peach scheme discussed above; i.e., to regulate the marketing of fresh asparagus to all classes of processors for canning or preserving in any form by arriving at agreed on prices and a uniform form of contract

in open discussion between a committee of equal numbers of growers and processors with power of arbitration if the committee cannot reach agreement.

Out of an estimated total of 600 asparagus growers in Ontario 537 voted in favour of the scheme with none voting opposed to it.

Asparagus for the wholesale or retail fresh vegetable trade is exempt from the provisions of the scheme.

CONCLUSION

At the close of the fiscal year the Farm Products Control Board was also engaged in analyzing the return from the polls together with a study of other statistical data and marketing information necessary, concerning proposed tomato, strawberry and cherry, pear and plum schemes. Action will be taken on these matters in due course subject to the provisions of the Act regarding recommendation of schemes by the Farm Products Control Board.

PROVINCIAL ENTOMOLOGIST

RESEARCH

Onion Maggot. The common method of controlling this insect is by spraying with lubricating oil emulsion. This method is slow and laborious and many growers do not possess satisfactory spray outfits. Hence the writer has for several years been trying to find a simpler and more practical method. Up to this year failure of the insects to be abundant enough to cause severe damage has made it impossible to secure definite and reliable data. This year, however, the insects were much more numerous and this gave us a good opportunity to make progress. Field experiments were made at Collingwood, Vineland and St. Catharines. In each of these lubricating oil emulsion, corrosive sublimate and calomel were tested against each other.

Results showed that under 1937 weather conditions calomel was much the most satisfactory because it not only gave a high control—much higher than corrosive sublimate and on the average a little higher than oil emulsion—but also was much simpler to use, required very much less time and was as cheap as either of the other two materials. All the grower has to do is to moisten well the onion seed, then dust it thoroughly with the finely powdered calomel and sow it at once before it has time to dry. If allowed to dry it will fall off the seed and no control be obtained. We are, however, not yet justified in recommending unreservedly calomel as the best method until further tests under different weather and soil conditions have been made. Studies are being carried on to find a satisfactory sticker which will not interfere with germination and will enable the grower to dust the seed some time ahead of sowing without danger of its falling off.

Cheese Mite. Further tests with methyl bromide against cheese mites have been made this winter to determine definitely whether this material which worked so well in our tests last year against the mite will kill all stages of it when the cheeses are left in the boxes and these piled up one upon another. The work was done in a storage building containing approximately \$13,000 worth of cheese, some of which was heavily infested and much of the rest lightly. The writer's assistant, G. G. Dustan, was sent to supervise the work. Two weeks later he and another assistant, R. W. Thompson, re-visited the storage building and carefully examined

the cheese. Some of the heaviest infested parts were brought to the College and re-examined a month later. These examinations all showed that the methyl bromide had killed every stage of the mite. Moreover the dealer and others who tested the cheese could find no taint in it 48 hours after the fumigation. We therefore believe that it has been proven that methyl bromide is an effective, convenient and satisfactory fumigant for cheese mites.

Control of Rabbits. The last two years we have been studying, as far as we had time, methods of control for rabbits in orchards. Several repellents, some of which have been recommended highly, have been tested and most of them have either failed to give control or have injured the bark of young trees. A few seemed promising and worth further tests. Wrapping the trunk of young trees tightly with burlap strips is one of the most common and satisfactory control methods today. Having found, however, that baits containing strychnine were giving good control of mice, we suggested to some growers that small, tidy baits of leafy alfalfa hay dipped into a solution of strychnine sulphate and molasses should be tried. One of the growers did so and quickly destroyed all the rabbits in his orchard.

Having thus proven that strychnine could be used successfully we looked into the possible danger of dogs or cats being poisoned by eating the dead rabbits. A large dog fed upon two of these rabbits and suffered no injury. A reliable investigator informed us that his cat had eaten several mice poisoned by strychnine and showed no signs of being affected.

To make still more certain of this point the writer wrote to Dr. James Silver of the Biological Survey, U.S.D.A., who has had a great deal of experience in conducting poison campaigns against rabbits. He replied that there was very little danger of either dogs or cats being poisoned by feeding on such baits, but that great precautions must be taken to see that livestock did not get access to them. It looks, therefore, as if poison baits may be used to great advantage in fighting the rabbit menace, provided that the necessary precautions to protect livestock and humans are taken.

Pea Aphid. A satisfactory method of control for the pea aphid would mean some years the saving of many thousands of dollars to pea growers. Realizing this and believing that the solution of the problem is to be sought by canning companies or cooperatives or other large interests purchasing one of the costly outfits now on the market and treating the peas for their growers at a set price per acre, the writer is taking an active interest in having the different power outfits and insecticides tested out on a commercial scale. The Tobacco By-Products Corporation last year in July gave a demonstration with their Vapo-Fumer outfit at Brighton. The writer was present at this. Recently the representative of the Agicide Company of Milwaukee called at the Department of Entomology at Guelph to talk over with us the desirability of their putting a man and one or more machines in the province for demonstration purposes this coming season. They asked for our cooperation, which we shall gladly give to them, or to any other company desiring it. There is good reason to hope that some one or more of the insecticides and machines for applying them will prove effective and practicable and will thereby to a large extent solve the pea aphid difficulty.

Spray Experiments. As in previous years we continued our tests of different spray mixtures in apple orchards. The main object in these is to find whether any fungicide on the market is superior to the fungicides recommended at present in the spray calendar. Another object is to find a sticker that without injuring the foliage or lessening the effectiveness of the poison may be added to arsenate of lead in the first apple maggot spray about July 1st and remain on the foliage, but not on the fruit, long enough to kill the apple maggot and thus save the grower one application.

Progress has been made in both of these projects. The data obtained from the experiments with the different materials is of great value in keeping us up to date in spray matters. The testing of the fungicides is done in cooperation with Professor Howitt of the Botany Department. The testing of stickers is being done solely by the writer and his assistants.

Spray Injuries. The year 1937 was characterized by a large amount of spray injury to fruit and foliage on apples. Realizing that it was well worth trying to find the cause of this, the writer devoted almost a whole week to visiting the worst affected orchards. He found clear proof that the injury to the fruit, which took the form of russeting, had been caused by enthusiastic admirers of Bordeaux mixture using this material more frequently or at different times than recommended on the spray calendar. Where the Bordeaux was used only as recommended in the calendar there was either no russeting or practically none. In some of the Bordeaux injured orchards not only had the fruit been russeted but from one-quarter to three-quarters of the foliage had dropped before the end of August.

That the high humidity, especially during the month of August, had had much to do with both the russeting of the fruit and the burning of the leaves, was shown by the fact that in eastern Ontario where weather conditions were much drier, no reports of injury were received. Similar injuries to fruit and foliage occurred in many parts of the United States and were attributed to the same causes as we have given.

Testing the Relative Resistance of Different Varieties, Strains and Crosses of Corn to the European Corn Borer. This line of work was suggested by us to the Agronomists last winter. Dr. McRostie of the Department of Field Husbandry kindly undertook a series of experiments with various kinds of corn not only at Guelph but also at Ridgeway and on the farm of Mr. Blake Cohoe in Essex county. The writer and other members of the Department of Entomology did most of the dissecting of the corn plants in autumn to determine the degree of resistance in the different strains and crosses. Some of these were found to be considerably more resistant than others. Enough information was obtained to show that further experiments were well worth while.

ADMINISTRATION WORK

Corn Borer Act. The supervision of the inspectors in the various counties and the examination of corn fields in the fall of the year to find out the degree of infestation throughout most of the province, took all the time of one man for six weeks. In addition to this the writer met the county councils of Essex and Kent early in the winter to discuss the corn borer situation and the means of meeting it.

The corn borer in 1937 increased in almost all the counties west of Toronto, but either decreased or remained stationary in the counties east of Toronto. The explanation of this is that west of Toronto there was much more moisture in June and July than east of Toronto and plenty of mois-

ture in these two months favors the borer greatly. There is very little doubt that if the weather is favorable again this year there will be heavy losses in Essex, Kent and South Lambton. The influence of weather conditions is the greatest factor in determining the increase or decrease of the insect. Next to it is the degree of thoroughness in the clean-up of corn remnants in the spring.

Apple Maggot Supervision. The regulations under the Fruit Pests Act referring to the apple maggot were more strictly enforced in 1937 than in any previous year. East of Toronto Mr. Morley Webster of the Fruit Branch supervised the work of all the inspectors. He also helped to do this in two or three of the counties west of Toronto. Mr. Alex Goldie of Vineland looked after the supervision work in the Niagara district. The writer spent three weeks in visiting the different fruit districts in July to discuss difficulties with the inspectors and to aid the work in any other possible way. The maggot was well controlled and a large decrease made in its numbers in almost every county east of Toronto and also in the Niagara district. West of Toronto the infestation remained about the same as last year. A study of the reason for this indicates that just as in the case of the corn borer the greater humidity west of Toronto favored the apple maggot and made it more difficult to bring about a decrease. The Niagara district, though in the western part of the province, was exceptional in having very little rain and so was in the same class as counties east of Toronto.

Peach Yellows and Little Peach. Mr. G. G. Dustan acted again as supervisor of the local inspectors for these two diseases and was able to get the work done in a fairly satisfactory manner.

Nursery Inspection. This was carried on as usual and all nurseries in areas where San Jose scale exists were inspected. It was found that the nurseries were, as last year, remarkably free from San Jose scale, less than one tree in 7,000 on an average having scale on it.

Oriental Peach Moth Regulations. These regulations, which require that all peach containers used by canning factories shall be sterilized with steam at the conclusion of the season each year, and that all peach refuse shall be disposed of in such a way as to destroy any larvae present, were enforced.

EXTENSION

The spray calendar was again revised in cooperation with the other authors and distributed to all commercial growers and any others desiring it.

Most of the fruit meetings of the province were attended and addresses given on spraying and the control of orchard pests. Press letters on the corn borer and on orchard pests were prepared and sent to the agricultural papers of the province.

Special visits were made wherever possible to deal with particularly pressing problems.

The bulletin on "Insects Attacking Vegetables" was revised and will be ready for distribution on the opening of the season.

FIELDMAN FOR NORTHERN ONTARIO

There was an unusual variation in weather conditions during the growing season of 1937 among the various districts of Northern Ontario. Some of these districts, including Algoma, Manitoulin Island and a part of Sudbury suffered very severely from drought, while Rainy River suffered as seriously from too much rain, particularly during certain periods.

Considering all districts, the total grain crop would be above 1936, but still somewhat below a ten-year average. Drought and heat in some sections, too much rain accompanied by rust in others; late seeding and a fairly hard frost on the night of September 4th which affected large areas of grain on the James Bay water shed were responsible for the yield being below normal.

Over the entire North the yield per acre of hay would be about one-quarter ton below 1936 and perhaps one-half ton below a ten year average. During the later winter and early spring thousands of acres of meadow were nearly all covered with ice and this, in many cases, completely destroyed red clover and other legumes. In certain areas where the growing season was drier than normal the hay crop was doomed to partial failure.

The area saved, as well as the yield obtained, of grass, clover and alfalfa seeds was away below normal in most districts, one exception being in Rainy River district where the area of alfalfa used for seed production was larger than in any previous year, but the yield per acre was below normal. About 400,000 pounds were produced, while in 1936 the total production was over 500,000.

Fodder Corn was better than normal in sections of the North where this crop is grown.

Potatoes and other root crops in most cases did reasonably well. The quality was such that out of only a small entry from Northern Ontario at the Royal Winter Fair, first prize was won with Green Mountain, Irish Cobbler and Chippewa entries, besides several lesser prizes in these same classes. In addition to these winnings with potatoes, a sample of Navy Beans grown in Rainy River district won second place at the Royal and first prize and championship at Chicago.

Lectures were given at ten Short Courses. Nineteen Agricultural meetings were addressed. The Weed Inspectors of the districts of Nipissing, Sudbury, Algoma, Thunder Bay, Rainy River, Kenora and Cochrane were all interviewed. Nine Field Crop Competitions were judged. These were conducted at Rainy River, Dryden, Noelville, Verner, Porquis Junction, Murillo, Hymers, and Fort William.

Judging was done at the following five Fall Fairs—Murillo, Hymers, Upsula, Iron Bridge and Providence Bay.

Eight School Fairs were also judged, including RosSPORT, Schrieber, Kaminstikwia, McIntyre, Upsula, Hymers, Finmark and Oliver.

The Plowing Matches at Slate River, St. Joseph's Island, and Port Lock were judged.

HEARST DEMONSTRATION FARM

Growing Season

The Spring of 1937 was early but seeding was late due to exception-

ally wet weather. First Spring wheat was sown May 8th and not resumed until June 7th due to heavy rains. The growing season was good and all crops did remarkably well. A severe frost Sept. 4th stopped growth of practically all crops.

Crops

Wet weather caused a low average of 18 bushels to the acre in Spring wheat.

Cartier and Alaska oats were sown side by side on June 7, 9, 10 and 11th. There was very little difference in growth and both were ready to cut at the same time. Cartier yield 42 bushels to acre and Alaska 40. Both yields were lowered by Sept. 4th frost.

Barley sown June 12th was also hit heavily by frost, averaging 30 bushels to the acre.

Hay was a good average with two cuttings of Alfalfa, although acreage small. Cattle were pastured till stabling time on after grass.

Oats and peas sown June 16th for ensilage were cut Sept. 3rd into new upright silo built during summer. Although only a small percentage of oats were ripe, the ensilage kept well and made excellent feed.

Live Stock

While no R.O.P. work was done, a private milk record showed majority of cows making good average records. All calves were born strong and healthy. It appears that the Ayrshire breed is well suited to this northern climate.

Two sows purchased from the New Liskeard farm farrowed healthy litters. Young pigs were sold to settlers and remainder kept for market hogs. Thirteen pigs finished during the winter did remarkably well. A young boar purchased from New Liskeard in the fall, is a promising sire, and was used by a number of settlers to improve their stock.

Services

The seed cleaning plant operated as usual, but amount cleaned was below average. Most settlers with grain for seed are anxious to have it cleaned.

The number of enquiries regarding farm problems is ever increasing, with every assistance possible being given to settlers.

NEW LISKEARD DEMONSTRATION FARM

It is hard to draw definite comparisons between this year and last year, as the Farm is under a different Superintendent and no very definite records are available from last year.

The spring opened earlier than last year and continued open with no frosts during May, June, July and August. Lake Temiskaming froze over December 1st this year as compared with November 29th last year.

The fields dried off fairly rapidly on top as there was no rain until the 28th of June. Seeding commenced May 9th as compared with June 1st in 1936. The land worked up well and the majority of the farmers were through earlier than usual. Lack of rainfall retarded germination and growth to some extent, especially on high land but germination in general was good despite no rain until the last week in June.

Hay and root crops were materially reduced on the Farm due to continued drought in May and June. For the first time in many years the District of Temiskaming imported many carloads of hay from Southern Ontario.

Hay making conditions were good in early July and the Farm was fortunate in having hay all in before the 20th as late July was very wet. Most farmers in the District do not start haying until late July and much hay was spoiled by rain.

The weather conditions in early harvest were good. Most of the grain on the Farm was harvested without experiencing rain. September was very wet and farmers with late oats had difficulty in drying the grain.

Good weather in late September and early October resulted in much fall plowing before the rains set in. The Farm plowed 150 acres. The majority were late finishing harvest and there is a lot of plowing to be done this Spring.

Wet weather and late blight caused considerable damage throughout the District but farmers with potatoes on good potato soil harvested a good average crop if dug in good time. Heavy rains set in on October 15th and no work was done in the fields on the Farm after that date.

SEASONAL NOTES

March 10th	First crow appeared
April 20th	first wild geese
April 1st	fields clear of snow
.....	Ice went out of Wabi
.....	Ice went out of Lake Temiskaming
May 8th	first work on land
May 8th	first cereals sown
July 5th	first cutting of hay
August 2nd	first cutting of grain for insilage
August 14th	first cutting of spring grain
August 25th	seeded winter wheat
October 16th	last Fall plowing.

ANIMAL HUSBANDRY.

Animal Husbandry work is carried on with the object of raising young stock to be distributed throughout the district; doing experimental work on different types of feeding and rations and demonstrating good care and management of live stock.

Hogs. There has been a keen demand for young breeding stock—more than we could supply. Twenty-five sows and eight boars were distributed this year. More bred sows could have been sold if available.

Cattle. We are trying to increase the number of our breeding females, thus no heifers were sold, although we had many inquiries. There was a demand for more bulls than were available and eight were placed in the district during the year, including a Holstein and an Ayrshire, bought on order in Southern Ontario.

No horses were bred on the Farm last year, and no sheep were kept.

The livestock on a whole did very well. The sows averaged two litters a year with an average of ten pigs per litter. The cows have milked well during the year. The cows are not all entered in the R.C.P. as we let our bull calves nurse the cows. The bulls are usually sold at five months,

thus enabling a cow to raise two bulls a year. Matchless Rose milked 13500—Dairymaid Daisy 11584—Ducibella Marquis milked 7520 in about nine months, and Lady Conjuror averaged about 1200 per month and is not yet completed. The average test for the herd during the year was 4.3. These are deemed creditable records as the cows are not being crowded and are fed mostly on home grown feeds.

The following table indicates the livestock population on the Farm March 31, 1938.

Horses -5; Cattle -30; Hogs -57.

Two bulls imported in dam were brought up from the O.A.C. at Guelph to be used as herd sires.

POULTRY

Barred Rocks only were kept on the Farm this year. There was quite a demand for breeding stock, but the Farm supplied only male birds as a new flock was being started and all pullets were needed.

The incubator was set in March, 1938. Barred Rocks, White Leghorns and New Hampshire Red will be hatched for 1938.

Farm grains were fed with the addition of a little meat meal and some concentrate.

Poultry paid well this year and people are beginning to pay more attention to their poultry flocks.

FIELD HUSBANDRY

No plot work was carried out this year and the following tabulated results, because of the fact they are taken from acreages ranging from five to twenty, can be considered as representative of field yields where cultural methods and soil conditions are similar to those at the Farm.

Variety	Weight per bus.	Yield per acre
Cartier Oats	42	49
Alaska Oats	42	45
Victory Oats	25	30
Abundance Oats	27	32
O.A.C. 21 Barley	48	38
Spring Wheat		18

Yields of late oats and spring wheat are very poor, mostly caused by rust. The rains in late harvest further reduced the yield. Early oats missed the rust for the most part and were harvested before the rain.

Silage. Green oats are used as a silage crop with excellent results, there being no clover due to winter killing.

Fall Wheat. No fall wheat was planted in 1936, but eight acres were planted in 1937. It came through the winter in excellent condition and gives promise of a good crop.

Hay. The Hay crop was almost a failure due to excessive winter killing from ice and a very dry spring and early summer. However, fresh seeding wintered well this year and gives promise of a good stand.

Roots & Vegetables. A limited amount of work was done this year with roots and vegetables owing to a lack of help. Turnips and mangels were poor as the seed lay in the ground for a month due to dry weather. Potatoes were only fair as they suffered from wet weather in the fall

HORTICULTURE

A small amount of work was carried on with strawberries, raspberries and bush fruits, just sufficient to demonstrate the feasibility of farmers having some of these for their own use. The commercial production of strawberries and raspberries is quite possible with our range of climatic conditions and in many cases is a very satisfactory cash crop.

IMPROVEMENTS & ALTERATIONS.

The Farm buildings were all painted. A litter carrier was put in the piggery, using material discarded in the cow barn; water was piped to the piggery from the main barn; four roomy box stalls are being installed in the cow barn where previously there was a row of tie stalls.

SUMMARY

The Demonstration Farm brought out the fact this year that early maturing varieties of farm crops even though yields some years may not be equal to some of the later maturing varieties, are more adapted to the carrying out of a successful farm program. They are less susceptible to loss from disease and weather, and being harvested earlier in the fall enables the farmer to do his fall plowing. This is an important factor in the production of crops the following year.

There was a keen demand for registered grain and the Farm distributed all it could spare.

The Farm has played an important part in creating a desire for, and the distribution of better livestock throughout the District. Some work has been done with rations using as much as possible the ordinary farm grains. Crop rotation with a definite farm program is not practised as much as it should be and the Farm is endeavouring to take the lead in this respect.

MILK CONTROL BOARD OF ONTARIO

The year, 1937, the fourth year of Milk Control activities in Ontario, found the Milk Control Board with a definitely recognized place in the dairy industry of the Province. The Board's regulatory authority is being used continually by all sections of the fluid and the concentrated milk branches to the benefit of the producers, the processors and the consumers of milk throughout Ontario.

The Board was called upon to make many important decisions during the year. The usual consideration was given to applications for new distributor licenses and to numerous requests for price adjustments in many of the markets of the Province; several unsatisfactory payment situations developed during the year and the Board found it necessary to take action against some distributors who were found to be in financial difficulties; a further serious problem developed from a price controversy in the Toronto market and was, for a time, a matter of considerable concern.

Because of experience gained during previous years, it was possible to reduce some of the Board's work to routine duties, handled by members of the Board's staff. This arrangement was a fortunate one, in that, during the year the time of the Board members was not devoted entirely to Milk Control work, they having been given additional responsibilities as members of the Farm Products Control Board.

The year, as a whole, can be considered a satisfactory one, in that, this division of government service was able to make a worthwhile contribution to these very important branches of the dairy industry of the Province.

GENERAL SITUATION IN THE INDUSTRY

During 1937 conditions in the dairy industry were considerably changed from those in recent years, chiefly because of the generally higher level of commodity prices.

The Ontario Dairy Farmers' position steadily improved throughout the season as the price of butter and cheese advanced, with a consequent increase in the price of milk used for manufacturing purposes. This improved situation affected the shipper to concentrated milk plants and materially improved the position of the shipper to fluid milk plants insofar as his surplus milk was concerned. The increased return for surplus milk was due not only to higher butter and cheese prices but also to the fairly general establishment of the principle whereby surplus milk was paid for on the "formula manufacturing price" rather than on the "butter-fat price".

The increased income to producers, however, was, to some extent, offset by the comparatively low feeding value of the 1937 crop in many sections of the Province, the increasing costs of living and of farm supplies.

In some sections too, producers' costs were increased as a consequence of the more general establishment of restricted areas for tuberculosis-free cattle. Particularly in the central section of the Province and in the Port Arthur and Fort William district, the herd losses as a result of compulsory "T.B." tests were quite severe.

The position of the milk distributor did not improve materially during the year. Any increased sales and improved collections which were the result of better buying power on the part of consumer were offset by increased operating costs. Wages and dairy supplies materially increased in price. As a result of these conditions several marginal operators found it necessary during the year to cease doing business or to re-organize the financial structures of their businesses. The concentrated milk industry showed decided growth during the year. Prices to producers steadily improved and the demand for canned milk, milk powder, casein, etc. apparently continued firm.

Generally speaking, the year 1937 was reasonably satisfactory to the dairy industry of the Province. With prices for manufacturing milk established on higher levels, the fluid milk division of the business was more stable than in any year since the chaotic period of the early years of the depression, the conditions during which period were largely responsible for the establishment of Milk Control Legislation in Ontario and, to a considerable extent, throughout the world.

The continued enforcement of various regulating policies is placing additional safeguards on the quality of fluid milk provided consumers in the urban centres. The increased interest in the elimination of disease in cattle, particularly the elimination of tuberculosis over large areas of the Province, is rapidly improving the milk supply, and the establishment of minimum standards of equipment in dairy plants is going far to give assurance that the milk sold to consumers is both properly processed and carefully handled. Decided progress was made along these lines in 1937.

MEETINGS OF THE BOARD

Number of Meetings held—

(a) Formal Meetings - - - - - 96

(b) Hearings before the Board re Licenses,

Agreements, Payments, etc. - - 616

With the exception of the time spent in connection with their responsibilities as Members of the Farm Products Control Board, the Chairman and one Member of the Board devoted their entire time throughout the year to the administration of the Milk Control Act, and the third Member spent a considerable portion of his time in connection with his duties as a member of the Board.

At formal meetings, decisions were arrived at in connection with matters brought to the Board's attention. These matters were largely applications for licenses, applications for approval of milk price agreements, consideration of reports from auditors and fieldmen, arbitration of disputes, etc. In its ability to reconcile the many differences which arise between milk producers and milk distributors, the Board has provided one of its greatest services.

The hearings were meetings when individual persons or groups of persons appeared for examination or to present briefs or information in connection with the refusal of licenses, cancellation of licenses, applications for price changes, improper payments, etc. In this connection it is interesting to note that in a number of the hearings, groups or organizations, representing consumer interests, presented briefs to the Board advocating public utility and other somewhat idealistic solutions of the problems of the milk business.

GENERAL ADMINISTRATION OF THE MILK CONTROL ACT:

(1) *Licensing—*

The licensing of persons engaged in the milk industry was continued during the year, 1937, as in previous years. The following licenses were issued,—

Regular Distributors	750
Producer-Distributors	924
Milk Peddlers	87
Milk Manufacturers	32
Milk Transporters	205

The number of regular distributors is similar to that in former years, with very few licenses having been issued except in cases where there was a change in ownership of the business.

Following the formation of a joint transportation committee in the Hamilton market during 1936, licensing was completed of all persons hauling milk to that centre. Milk transporter licenses now give the Board supervision of the transport of milk to both the Hamilton and the Toronto market.

The licensing of milk distributors and the responsibility of the Board to refuse to issue a license when they consider such issuance would not be in the public interest continues to be the most effective method of regulating the industry.

(2) *Bonding of Milk Distributors—*

The bonding of milk distributors is one of the most important responsibilities of the Board and, during the year 1937, the Board had on file for the protection of producer accounts bonds in the following amounts,—

(a) Surety Bonds	\$963,150.00	
(b) Negotiable Securities	357,640.99	\$1,320,790.99

An increasing number of small distributors took advantage of the provision in the regulations, whereby they are exempt from the bonding requirement if evidence is provided that all accounts with producers are paid on a weekly basis. Very few distributors of any size, however, operate on this basis and those who do are generally located in small markets where the individual producer is closely in touch with his distributor and is able to keep a closer watch on the situation than could be possible in the larger markets.

Distributors are finding it increasingly difficult to secure bonds through bonding companies and at the end of 1937 at least one important company ceased writing this type of insurance.

It was found necessary during the year to call only a few bonds for the payment of producer accounts but it is becoming more and more evident that the bonding requirement is of extreme value in protecting producers' accounts even though the actual bond, itself, is not required for payment. There were several cases during the year where, because of the bond, the distributor concerned made a successful effort to re-finance his business when under normal circumstances, without the bonding provision, the business would have been put through bankruptcy, with great loss to the producers, as the only possible method of re-organization.

(3) *Milk Price Agreements—*(a) *Fluid Milk Marketing Agreements—*

Because of the comparative price stability attained during the previous three years' operations under the Milk Control Act, the Board was not called upon during 1937 to consider so many price agreements. However, it was found necessary to consider and approve a few changes in price structure, some of which became fairly contentious issues.

During the year the Board gave official approval to marketing agreements in eleven markets which had not been previously controlled. Approval was also given to revised price structures in thirteen other markets. A number of very small markets asked for official approval of price structures but, because of the small number of producers affected, no formal order was issued and most of these markets have found it possible to maintain their own price structures following the negotiating of a local price agreement.

Stabilized price structures are now in effect practically throughout the Province, as the following figures would indicate,—

(a) Number of Markets covered by Approved Price Agreements	54
(b) Number of Markets operating under Price Agreements not officially approved by the Board	32

During the years, 1936 and 1937, the Board was able to give official approval to revised price structures in twenty-four major markets of the Province, which revisions provided for the payment of surplus milk on a basis of "manufacturing price" rather than on a basis of "butter-fat price", with a consequent increased income to producers of approximately thirty per cent. on the value of their surplus milk.

The most contentious situation during the year was the approval of a price raise in the Toronto market. For several months, commencing in the late Summer, the producers supplying milk for Toronto instituted a strong appeal for a price increase. The time was considered inopportune but, later in the season, the Board did approve a price change to be effective November 1, 1937, which provided for an increase in price to producers of 22 cents per hundred pounds and an increase in price to consumers of 1 cent per quart on quarts only.

The Board considered the producers' appeal justified and, inasmuch as the agreement covering the revised price structure passed 22 cents of the theoretical 25 cents per hundred pounds back to the producer, the revision was approved.

This addition of a theoretical three cents per hundred pounds to the distributors' spread was more than offset by increased costs of labour and material. A study of the operations of twenty-two representative firms showed an increased cost during the preceding year of labour and supplies of \$14,685 per month or about 10 cents per hundred pounds.

Another important factor was that the official figures show an increase of 17 per cent. in retail prices of all foodstuffs, whereas the retail price of milk has remained almost stationary for three years.

An organized consumer reaction to the price revision soon made itself felt and the matter continued to be a contentious question in Toronto until the end of the year. It is, however, generally recognized that the consumers were using milk, the only food product, the price of which is officially controlled, as the brunt of their opposition to a general and increased cost of living.

During the year, there was some feeling expressed that the Board's activities insofar as milk prices are concerned should be restricted to the supervision of prices paid to producers only, but up until the present time it has not been considered possible to withdraw entirely from the supervision of consumer prices because of the chaos that would result from such a policy, a practical example of which has been seen in some of the places where Milk Control Legislation has been suddenly withdrawn.

(b) *Manufacturing Milk Marketing Agreement—*

The agreement between the Ontario Concentrated Milk Producers' Association and the Ontario Association of Milk Manufacturers, with some amendments, was continued in effect throughout the year 1937. This agreement, which covers only the price paid to producers by manufacturers, has been in effect since August, 1935, and has been of material benefit to the producers and to the industry generally. It has provided not only a sound price basis for the purchase of milk from producers but it has tended to put the manufacturing industry throughout the Province in a stabilized condition.

It is interesting to note the effect of this agreement on prices paid to producers for milk used for manufacturing purposes. The monthly prices for butter, cheese and manufacturing milk, since the inception of this basis of purchase, are as follows,—

Month	Average Cheese Quotation	Average Butter Quotation	Formula Milk Price
1935			
July	10.5	20.	.94
August	10.25	20.75	.97
September	11.50	22.25	1.05
October	12.	23.5	1.10
November	11.	25.25	1.16
December	12.	25.75	1.19
1936			
January	12.5	25.	1.17
February	12.25	23.	1.09
March	11.75	22.75	1.07
April	10.5	22.5	1.04
May	11.5	20.25	.97
June	13.25	22.	1.06
July	13.5	23.25	1.14
August	14.75	25.25	1.21
September	15.25	24.75	1.20
October	14.	23.75	1.14
November	13.75	25.	1.19
December	13.75	25.75	1.22
1937			
January	13.5	26.5	1.24
February	13.5	25.5	1.21
March	13.25	26.	1.22
April	13.25	26.75	1.25
May	14.5	23.	1.12
June	15.50	24.25	1.19
July	14.75	25.75	1.23
August	14.50	27.	1.28
September	14.50	27.	1.28
October	14.50	28.25	1.33
November	14.75	30.25	1.41
December	14.75	30.50	1.42

When the agreement was up for review before renewal in the Spring of 1937, there was a considerable amount of discussion over the difference in value for milk for different manufacturing purposes and it was finally agreed that certain amendments be made to the agreement, chief of which were as follows,—

1. Where milk is made into canned milk for consumption within Canada, the premium paid to the producers was changed to 35% rather than the 30% in the early agreement.
- (2) In order that Canadian producers of condensed milk could compete in the export market, the agreement was amended to provide that milk purchased during June and July of each year and sold to the export market could be paid for on the basis of 25% premium rather than 30%.
- (3) Where the cream from manufacturing milk is made into butter and the skimmilk used for manufacturing purposes, an arbitrary value of 20c per hundred pounds was placed on the skimmilk in the new agreement instead of the value of the one-half a pound of butter-fat agreed to in the earlier agreement.

The condensed milk industry received a considerable amount of the Board's attention during the year. Two particular problems presented themselves,—

- (1) The extensive use of condensed milk by chain stores as a loss leader.
- (2) The competition of condensed milk produced in different Provinces and from milk purchased at different prices.

No solution to the first problem was arrived at by the end of the year. The second problem was discussed quite thoroughly at the Conference of Milk Control Boards held in Toronto in November and the problem was recognized by the various Provincial authorities. It seemed impossible, however, at that time to arrive at any uniform basis of purchase of milk for manufacturing purposes in the different Provinces but it was agreed that this matter would receive further study.

It is generally recognized that the establishment of the formula price basis for the purchase of milk in Ontario for manufacturing purposes has been of decided value to producers and this basis has made possible a recognized basis for the price of this milk to change with varying market conditions.

(4) *Enforcement:*

Continuing the policy of previous years, the Board feels that because the Milk Control Act is a new type of legislation and is to some extent contentious, every effort should be made to solve the problems of the industry by persuasion rather than by force. Some situations, however, developed during the year which required very definite action and proceedings were taken in several cases against milk distributors who openly defied the Board's rulings.

These proceedings were taken in most cases because of failure to comply with the provisions of the local milk marketing agreements insofar as payments to producers and milk prices are concerned and, in one case, where the distributor refused to produce his books and records for examination.

Even the small number of proceedings taken had a salutary effect throughout the market.

The Board has been criticized for not taking proceedings in more cases than it has but, as indicated above, it has felt that up until the present time, at least, proceedings should be taken only as a last resort.

PROTECTION GIVEN TO MILK PRODUCERS:

It has always been recognized that the fundamental reason for the passing of Milk Control Legislation was to see that producers were paid a proper price for their milk and to see that they were actually paid for milk sold to distributors.

The price situation has, of course, been handled through the approval of the various milk marketing agreements and in practically all of the major markets of the Province a fairly satisfactory price structure has been established.

The second objective, that is to see that producers are paid, has been attained by means of the bonding of milk distributors and the auditing of their records.

During the year, the Board found it necessary to call the bonds of five dairies in the Province and the income from these bonds was used to pay producers for monies owing to them. The amounts paid to producers are as follows,—

Dairy No. 1—	\$1,000
Dairy No. 2—	1,000
Dairy No. 3—	4,000
Dairy No. 4—	350
Dairy No. 5—	1,200

In addition to these situations, where it was found necessary actually to use the income from the bond for the payment of producers' accounts, there were at least seventeen other situations in which the dairies were in arrears in payments to producers and the threat of calling the bond was sufficient to force the company concerned to re-organize its financial structure and to pay accounts owing to producers.

Through its auditing service, the Board has discovered a number of instances where producers had not been paid the correct amount. In many of these instances there was no evident intent to defraud and the situations were cleared when adjustments were made with the producers concerned. There is record of such adjustments during the year amounting to \$8,051.67.

In addition to the protection mentioned above, the Board's field staff and check testers are continually discovering small inaccuracies, each one probably amounting to only a few cents but, in total, amounting to a considerable amount. The local Inspector sees that these inaccuracies are corrected.

The services rendered by the Board, therefore, not only establish a proper price on which the producer shall be paid but also see to it that the producer is paid that proper price.

It is interesting to note in this connection that when the Board was given the responsibility of administering the Milk Control Act in 1934 it found many situations where payments to producers were in arrears, such situations amounting, in total, to approximately \$100,000. The policy of the Board since that time has been such, that even though approximately \$65,000,000. worth of milk has been purchased from producers, the losses from unpaid accounts have been practically negligible and, in addition, over 80 per cent. of the \$100,000. mentioned above has been paid in full.

Some criticism has been directed against the Board for its leniency in connection with a few distributors who could not secure a bond and with another few who have been a little slow in their payments to producers, but the Board has taken the attitude, that if a dairy could not secure a bond, it should be given a reasonable amount of time to straighten out its financial difficulties provided, always, that current milk receipts were paid for at least each week. This policy has allowed, during the last four years, distributors who were in financial difficulties to reorganize their finances or to transfer their business to stronger hands with, as a consequence, the results indicated above.

If, on the other hand, the Board had taken firm action in connection with these dairies, many businesses which are now on a sound financial basis would have been forced into bankruptcy and the producers concerned would have found it necessary to accept very material losses, certainly to the extent of the \$100,000. mentioned above.

MILK CHECK TESTING AT DISTRIBUTING PLANTS:

The policy established in 1937 whereby the check test Inspectors, appointed under the Dairy Products Act, would be supervised by the Milk Control Board was continued this year.

These Inspectors visit regularly all milk distributing plants in the Province that are purchasing milk from producers and their primary responsibility under the Dairy Products Act is to see that all milk purchased is paid for in accordance with the proper test of that milk. Because of this regular visiting system and because of the arrangements whereby these men are supervised by the Board, it has been possible for them to do a considerable amount of work in connection with the administration of the Milk Control Act.

Being in contact with the local markets, they have been of great value in keeping the Board informed as to local conditions. In addition to their check testing work, they inspect records, check payments to producers and investigate many of the minor local complaints. Because of their intimate knowledge of the market also, they are able to report to the Board serious situations in connection with payments, etc. and the Board often thus becomes acquainted with a situation before any definite complaint is registered.

In their regular work, as officers appointed under the Dairy Products Act, they have been able to see that the milk purchased is properly tested and properly paid for and the errors they find from month to month are immediately corrected, to the great advantage of the producers concerned.

The value of the work of these men is very seldom fully appreciated, particularly by the producers of milk, but the checking work done by them is continually worth a great deal to the dairy farmers of the Province.

SUMMARY:

Inasmuch as the work of the Milk Control Board is accumulative and cannot well be divided into yearly divisions and still give a true picture of its achievements, it is considered better to summarize the major accomplishments since the inception of the work in 1934. These major results are as follows,—

1. By means of a complete system of licensing all persons handling fluid milk in a commercial way it has been possible,—
 - (a) To halt the rapidly increasing uneconomic duplication of milk distributive services in our towns and cities.
 - (b) To prevent the irresponsible and untrained person from endangering the public health and the public interest by becoming engaged in milk distribution
2. By means of a system of bonding milk distributors, losses to milk producers from unpaid milk accounts have been reduced to a minimum and large amounts in arrears previous to the passing of the Legislation have been paid.
3. By means of the approval of fluid milk price agreements fairly satisfactory prices have been established for the milk produced by thousands of farmers throughout the Province with a minimum price burden to the urban consumer.

4. By means of the same price agreements, stability has been established in the business of distributing fluid milk where lack of stability in 1933 was a real menace to the public welfare.
5. By means of the approval of a uniform purchase basis for manufacturing milk throughout the Province, uniform price conditions have been established.
6. By means of the establishment of uniform minimum standards of plant and equipment for dairy plants, much has been done to guarantee the proper handling of fluid milk in its preparation for consumption.
7. By means of regular checks and audits, large sums have been refunded to milk producers on account of inaccurate payments.
8. By means of licensing milk transports for the major markets of Toronto and Hamilton, much duplication and many uneconomic practices have been eliminated.

These and many more minor achievements can be summarized by stating that the work of the Board has improved the financial standing of the milk producer materially, has eliminated many uneconomic and unethical practices from the business of milk distribution—all above with a minimum burden on the consumer.

Acknowledgment :

As in previous years, the Board desires to complete this report with a whole-hearted acknowledgment of the assistance rendered during the year by various persons and organizations.

Because of the field of work, it was to be expected that the Board would receive the support and advice of the milk producers and distributors of the Province. This support and advice was available at all times and for it the Board desires to thank individual milk producers and distributors and their organizations and organization officers over the entire Province.

The helpful suggestions of individual milk consumers, organizations of consumers and, more particularly, official consumer representatives have always been fully appreciated.

The Board desires to express its thanks for assistance given by other Departmental officials in the Department of Agriculture and in other Government Departments whose official interest in the milk business in various ways made their advice and co-operation valuable to the Board. This thanks is particularly due to the members of the staff of the Sanitary Engineering Division of the Ontario Department of Health, part of whose duties are to inspect the various milk distributing plants throughout the Province.

The Board's own staff are deserving of the greatest appreciation and thanks for their unswerving loyalty and constant service throughout the years.

Last, but not least, the Board's appreciation is expressed to the Members of the other Milk Control agencies throughout Canada and in other countries, who have been ready at all times to give information and advice concerning mutual problems.

To these and the countless others who have, during the past year, by means of advice or suggestion made the work of the Ontario Board more valuable to the dairy industry in Ontario, the Board extends its thanks and appreciation.

PROVINCIAL ZOOLOGIST

The work of the year was divided between teaching, extension and investigation.

Second and third year classes in the Ontario Veterinary College were given instruction by lecture, throughout the College year, on the subject Veterinary Physiology.

Lectures

Lectures were given on Animal Pest Control to Short Course students at the O.A.C. and at Short Courses at 16 different points in the Province with four hours of teaching and demonstration at each place. Four lectures in applied zoology were given at the Ontario School of Pharmacy. Lectures and demonstrations on subjects relating to animal health, such as sheep and swine diseases, parasitic diseases, nutritional troubles were given at 22 live stock meetings, breeder's meetings and farmer's meetings during the year. All lectures were well attended and were held in co-operation with other branches of the Department of Agriculture. Investigations were carried out on farms where losses of live stock were being experienced. Thirty two farms were visited for this purpose and cause of loss determined.

A card exhibit covering the three subjects, Lump Jaw in Cattle, Horse Parasites and Poultry Diseases, was placed in county Agricultural Offices where the premises were suitable for such. A street window is required for such exhibit.

Animal Pest Control

An exhibit on Animal Pest Control was prepared and set up at the International Plowing Match held at Fergus. Thousands of interested farm people examined this exhibit. An exhibit was set up at the Quinte District Seed Fair at Peterborough.

Co-operation was given the Ontario Live Stock Branch with a series of Swine Promotion meetings held in Eastern Ontario. Charts and specimens were prepared as an aid to teaching in extension work. Specimens were collected and photographs secured when possible on subjects related to the work. Charts and pictures were loaned where needed to other branches of the Department. A Radio Broadcast series of short articles on Warble Fly Control was prepared and executed through C.F.R.B. Station, Toronto, during the month of March, eight short talks were given in this way.

Warble Control Project

The Barrie Island Warble Control Project went through its sixth year. The work consisted of examining all the cattle in the township for evidence of infestation. Very few Warble larvae were found and any that were found were traced to the introduction of cattle from the outside. The total larvae found was small, giving a low average infestation per animal of .40. The interest in Warble Fly control was maintained by many of our best farmers and cattle owners. Three county councils financed county wide programs for the treating of all cattle. The importation of large numbers of grub infested Western cattle each year has interfered greatly with the control of warble flies in Ontario and threatens to seriously limit further progress.

Bot Fly

The organized treating of horses for the purpose of reducing the Bot Fly pest was largely limited to Junior Farmer organizations and veterinarians. Large numbers of horses were treated in districts where the veterinary service is of high standard.

Attention has been given to the troubles that beset the rearing of fur bearing animals under domestication. There has been considerable demand for information on the rearing of mink and other fur bearers. A start has been made in equipping a laboratory to be devoted to the study of the diseases of fur bearing animals. Many specimens are received each year for autopsy and determination of disease.

The correspondence has been quite large during the year and was given the usual careful attention. Many bulletins have been sent out as well as timely press articles.

DAIRY BRANCH REPORT

Field Staff:

	1937	1936
Chief Instructors	2	2
Cheese & Butter Instructors	2	2
Cheese Instructors	30	30
Butter Instructors	10	10
	44	44

Number of Dairy Plants:

Condenseries & Milk Powder Plants	34	34
Combined Cheese Factories and Creameries	42	42
Cheese Factories	640	636
Creameries	297	296
	1013	1008

Production of Cheese:

Eastern Ontario	74,664,411 lbs.	70,117,109 lbs.
Western Ontario	16,915,012 lbs.	17,076,374 lbs.
Northern Ontario	331,973 lbs.	101,477 lbs.
	91,911,396 lbs.	87,294,960 lbs.

Federal Grading of Ontario Cheese:

Total Boxes	PERCENTAGE				Average Score
	No. 1	No. 2	No. 3	No Grade	
West. Ontario	97.75	2.18	0.06	0.01	92,270
East. Ontario	806,766	94.90	4.95	0.12	92,276
North. Ontario	2,030	79.75	20.00	0.25	91,325
Totals and Averages	1,000,051	95.44	4.42	0.11	92,238
1936	964,133	96.70	3.20	0.08	92,492

Production of Creamery Butter:

	1937	1936
Eastern Ontario	25,747,238 lbs.	29,285,484 lbs.
Western Ontario	52,403,236 lbs.	53,226,900 lbs.
Northern Ontario	3,174,677 lbs.	3,282,447 lbs.
	81,325,151 lbs.	85,794,831 lbs.

Number of Certificates and Permits issued at April 1st:

	Cheesemakers		Buttermakers	
	1938	1937	1938	1937
First Class	412	492	290	288
Second Class	196	126	41	38
Permits	58	31	1	1
Beginners' Permits	30	32	12	15
TOTALS	696	681	344	342
Certificates of Honour for 100 per cent first grade cheese	39	64		

Checking the Grading of Cream and Butter Fat Tests at Creameries.

The creamery instructors as usual checked the butterfat tests at all creameries, and the milk tests at 34 milk condenseries and milk powder plants monthly. The grading of cream is also checked by the instructors at all creameries.

Testing Milk at Cheese Factories.

The cheese instructors tested the composite milk samples at 592 factories, with 2,577 patrons monthly. The revenue received from this work was \$10,857.50.

Many farms are visited each year by the instructors to give information on the care of milk and cream and the sanitary conditions of stables, milk cans, and utensils used on the farms.

Two Day Course

Again a two-day course for cheesemakers was held at Casselman on April 21st and 22nd with an attendance of 125 during the two days. Demonstrations were given in microscopic work, milk testing, curd tests of patrons' milk, and practical demonstrations on handling curds. This course is held for the benefit of our French speaking cheesemakers, as many of them do not understand English well enough to attend our dairy schools. At this course practically all the addresses given and the discussions which take place are translated into French by members of the Dairy Branch staff.

The superintendent of the Eastern Dairy School, Kemptville, was employed by the Dairy Branch during the summer months in making microscopic tests of milk to assist the instructors to discover the cause of so many undesirable flavours in milk and cheese.

The cheesemakers' associations in each instruction group are a fine asset to the industry in improving the quality of the milk and cheese. The cheese producers' county organizations are also making useful contributions towards the welfare of the cheese industry.

The buttermakers' clubs in each instruction group are to be commended for their active work in carrying on cream grading and butter scoring competitions at their local meetings.

Members of the Dairy Branch staff gave assistance at a number of Junior Farmers' Short Courses during the winter months by demonstrating the use of the Babcock test, the grading of cream, and the scoring of butter.

Statistics Branch

PART I — AGRICULTURAL STATISTICS

The gross value of agricultural production in both Ontario and Canada showed a decline in 1938 as compared with the previous year. For Ontario the value of production amounted to \$327,529,000 as against \$343,137,000 in 1937, a decline of approximately \$15,600,000. Low prices for field crops was the principal cause of the reduction, this item alone showing a drop of \$21,300,000, notwithstanding the fact that the season was favourable and a larger aggregate volume of field crops was harvested. The value of production in Ontario of farm animals, dairy products, fruit and vegetables, poultry and eggs, tobacco, clover and grass seeds, and honey, were all somewhat higher in 1938 than in 1937. In the case of Canada, the decline in the gross value of agricultural production was \$19,275,000, a decrease of \$27,362,000 in the value of field crops being to a large extent offset by an increase in value for practically all other items.

The co-operation of the public in filling out agricultural schedules and questionnaires during the year was excellent. The compilation of the information published in the reports listed below is based upon approximately 10,000 schedule of various types sent each month to farmers, owners of threshing machines, dairies, creameries, cheese factories, manufacturing milk plants, hatcheries, and co-operative organizations. Pupils and teachers of rural schools also extended valuable assistance in the successful carrying out of the Agricultural Survey in June and December, by distributing the Survey Cards to farmers and then collecting and forwarding them to this office.

The Annual Statistics Report which shows by county division the acreage, production and value of field crops; the number and value of live stock on farms; a record of the number and amount of Chattel Mortgages outstanding; detailed weather information; and a valuable summary of field crop and live stock statistics for the Province since 1882.

The Monthly Crop Report which contains current information relating to field crops, and live stock, including such items as acreage, condition, production, prices and trade.

The Monthly Dairy Report contains statistics of total commercial sales of whole milk by distributors in the Province of Ontario by sales areas, production of butter and cheese by county, and other information relating to prices, stocks and trade in dairy products. Both the Monthly Crop Report and the Monthly Dairy Report are well illustrated with charts.

The Fruit and Vegetable Crop Report which is issued monthly from May to October covers the development of fruits and vegetables.

A Cold Storage Report is issued on the first business day of each month showing the quantities of butter, cheese and eggs in cold storage in Toronto at the commencement of business on that day.

The acreages devoted to other crops in 1938 were as follows:—Orchards, 184,083; strawberries, 9,145; vineyards, 14,774; other small fruits, 13,832; summer fallow, 190,542; pasture (cleared), 2,793,291.

RAPE.—The estimate for 1938 was 15,527 acres of which 5,339 are in Wellington, 1,533 in Grey and 2,827 in Dufferin.

THE WEATHER

TEMPERATURE.—The following table gives the temperature of the Province for each month during the last five years, together with the mean annual temperature for the six months, April–September, practically the growing season, together with the average for the five years, 1934–1938, and fifty-seven years, 1882–1938.

Months	1938	1937	1936	1935	1934	1934– 1938	1882– 1938
	°	°	°	°	°	°	°
January.....	16.2	25.0	16.1	15.1	21.4	18.8	17.8
February.....	22.2	23.5	11.1	18.1	5.4	16.1	17.8
March.....	32.1	24.6	31.0	31.4	24.0	28.6	27.7
April.....	43.6	41.0	37.2	41.1	39.6	40.5	41.5

June.....	63.5	63.5	62.3	61.6	65.5	63.3	63.4
July.....	69.5	68.7	69.2	71.5	68.4	69.5	68.4
August.....	70.3	70.1	66.1	67.5	63.3	67.4	66.0
September.....	56.1	57.6	59.8	56.2	62.2	58.4	59.3
October.....	49.5	44.7	45.9	47.4	46.4	46.8	47.5
November.....	37.4	35.8	30.1	36.3	40.4	36.0	35.5
December.....	25.0	20.9	26.2	18.5	19.6	22.0	23.4
Annual Mean.....	44.9	44.2	42.6	42.8	42.6	43.4	43.5
Mean for six months April–September.....	59.4	59.2	58.5	57.8	59.0	58.8	58.7

The mean temperature for 1938 was 44.9 or 0.7 degree above preceding year and 1.4 degree above the normal of the fifty-seven years, 1882–1938.

The mean of the six months, April–September, was 59.4 or 0.2 degree above preceding year and 0.7 degree above the fifty-seven year normal.

Nine months were above normal and three below. February and March had the greatest departure above with 4.4 degrees and September the greatest below with 3.2 degrees.

SUNSHINE.—In the following the averages of sunshine are derived from the records of the weather stations at Woodstock, Toronto, Lindsay, Kingston and Ottawa.

Months	Sun. above horizon	1938	1937	1936	1935	1934	1934- 1938	1882- 1938

For year.....	4463.3	1982.4	1892.6	1955.0	2004.7	2003.6	1967.7	1942.9
For six months April-September.....	2614.9	1327.7	1328.5	1371.8	1381.0	1400.2	1361.8	1339.4

The year 1938 had 1,982.4 hours of sunshine, 39.5 hours more than the average for the last fifty-seven years. The six growing months, April-September, had 1,327.7 hours or 11.7 hours below average. Four months were above normal and seven below while one was normal. October had the greatest departure above with 43.8 hours and June the greatest below with 29.8 hours.

The rainfall for the six months, April-September, comprising what is regarded as the growing season for most crops, is given in the following table covering the last five years, 1934-1938, and the normal for the fifty-seven years, 1882-1938.

Months	1938	1937	1936	1935	1934	1934- 1938	1882- 1938
	in.	in.	in.	in.	in.	in.	in.
April.....	1.99	3.52	1.95	1.30	2.02	2.16	1.91
May.....	2.53	2.61	1.16	1.90	1.19	1.88	2.67
June.....	2.60	2.88	2.64	4.31	2.96	3.08	2.81
July.....	3.56	3.10	1.34	3.14	1.99	2.63	2.86
August.....	3.40	2.97	2.37	1.89	1.89	2.50	2.64
September.....	3.55	3.09	3.85	2.84	4.34	3.53	2.82
Total for six months...	17.63	18.17	13.31	15.38	14.39	15.78	15.71

The rainfall for the six months, April-September, was 17.63 or 1.54 inch below preceding year, and in comparison with the fifty-seven years 1.92 inch above. Four months were above and two below. August, with 0.76 above and June with 0.21 below, had the greatest departures during the growing season.

PRECIPITATION.—The fall of both rain and snow for the five winter months including November, 1938, and March, 1939, is given in the following table for five years, together with the average for the fifty-eight years, 1882-1939. Ten inches of snow is equivalent to one inch of rain.

Months	1939	1938	1937	1936	1935	1935- 1939	1882- 1939
	in.	in.	in.	in.	in.	in.	in.
November, 1938:							
Rain	1.31	2.12	1.15	2.59	2.88	2.01	2.00
Snow	8.8	4.4	11.0	6.1	4.0	6.9	7.6
December, 1938:							
Rain	0.68	0.27	1.75	0.41	0.37	0.69	1.17
Snow	20.1	22.9	12.4	15.5	18.2	17.8	15.5
January, 1939:							
Rain	0.42	0.70	2.82	0.28	1.06	1.06	0.94
Snow	21.3	17.0	11.3	20.5	21.5	18.3	18.6
February, 1939:							
Rain	1.01	2.18	1.27	0.37	0.53	1.07	0.73
Snow	25.0	9.4	11.9	19.6	12.7	15.7	15.4
March, 1939:							
Rain	0.69	2.07	0.15	1.82	1.06	1.16	1.12
Snow	15.5	7.2	11.0	17.9	8.1	11.9	11.1
Five Months:							
Rain	4.11	7.34	7.14	5.47	5.90	5.99	5.96
Snow	90.7	60.9	57.6	79.6	64.5	70.6	68.2

The total amount of rainfall for the five months was 4.11 inches or 1.15 below the average for the fifty-eight years, 1882-1939. The total amount of snowfall was 90.7 inches or 22.5 above normal.

TEMPERATURES, 1938

TABLE I.—Showing for each month the highest, lowest, mean daily range and mean temperature at the principal stations in Ontario for 1938; also the annual mean for each station.

*Occupations not given....	25,202	16,085,409	20,565	10,116,911	16,264	7,857,542

*A number of these may be "farmers." Nearly every clerk reports a number of instruments as unclassified as to occupation. Certain finance corporations have adopted the practice of filing chattel mortgages instead of liens on automobiles. This is very noticeable in Essex and Middlesex Counties (included in unclassified).

PART III.

Comparative Farm Statistics for
Fifty-Seven Years—1882-1938

STATISTICS OF FARM CROPS
FALL WHEAT AND SPRING WHEAT

The following table gives the area, produce and market value of fall wheat and spring wheat for the years 1882 to 1938, together with the annual averages for the various periods of ten years and the average for the fifty-seven years.

Years	Fall Wheat				Spring Wheat			
	Acres	Bushels	Per acre	Market Value	Acres	Bushels	Per acre	Market value
1938	742,052	19,805,775	26.7	11,082,514	88,001	1,592,289	18.1	923,545

THIRTY-SEVENTH ANNUAL REPORT
OF THE
Temiskaming and Northern Ontario
Railway Commission

ONTARIO GOVERNMENT RAILWAY
HON. MITCHELL F. HEPBURN—Premier

FOR THE YEAR ENDING
March 31st, 1938

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO
SESSIONAL PAPER No. 23, 1939

ONTARIO

T O R O N T O
Printed and Published by T. E. BOWMAN, Printer to the King's Most Excellent Majesty
1 9 3 9

TO THE HONOURABLE ALBERT MATTHEWS,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Thirty-Seventh Annual Report of the Temiskaming and Northern Ontario Railway Commission, for the year ending March 31st, 1938.

Respectfully submitted,

M. F. HEPBURN,

Prime Minister and President of the Council.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION

THE HONOURABLE MITCHELL F. HEPBURN.
Premier, Province of Ontario,
 Toronto, Ontario.

SIR:

In conformity with Section 36 of the Temiskaming and Northern Ontario Railway Act, Chapter 55, Revised Statutes of Ontario, 1937, I have the honour of submitting the Thirty-Seventh Annual Report of the Temiskaming and Northern Ontario Railway, and its subsidiary the Nipissing Central Railway Company, for the fiscal year ended March 31st, 1938, together with the Auditors' Report as prepared by Messrs. Black, Hanson & Company, Chartered Accountants.

RESULT OF OPERATIONS

	Year Ended March 31, 1938	Year Ended March 31, 1937
Operating Revenues	\$ 5,236,627.02	\$ 5,019,162.95
Operating Expenses	3,444,819.44	3,030,011.68
Net Operating Revenues	1,791,807.58	1,989,151.27
Operating Ratio	65.77%	60.37%
Non-operating Income	50,832.93	41,027.22
Gross Income	1,842,640.51	2,030,178.49
(a) Deductions from Gross Income	576,244.21	660,415.28
To Profit and Loss Account	1,266,396.30	1,369,763.21
(b) Adjustments—net debit	58,140.16	37,537.41
Net Profit for year	1,208,256.14	1,332,225.80
Previous surplus	1,422,130.19	89,904.39
Surplus—end of year	2,630,386.33	1,422,130.19

Note (a).—Deductions from Gross Income includes Hire of Freight Cars debit balance, Joint Facility Rents, Interest, Amortization of Discount on Funded Debt.

Note (b).—Adjustments net debit includes amounts written off account Road and Equipment Retired, doubtful accounts, etc.

OPERATING REVENUES.

Gross Operating Revenues increased over previous year by \$217,464.07, or about 4.3%. From the low point in 1933 of \$3,238,224.60, revenues have increased progressively each year to present gross revenues of \$5,236,627.02. These figures reflect the steadily increasing activity in the territory served.

During the year under review, freight revenues decreased slightly as compared with the previous year. Passenger revenues increased from \$741,472.58 to \$920,015.43 — or \$178,542.85 — about 24%. Express, Telegraph and Telephone revenues were also higher than in the preceding year.

OPERATING EXPENSES.

Operating Expenses increased by \$414,807.76, or about 13.7% as compared with the previous year.

NET PROFIT.

The Net Profit for the year, \$1,208,256.14, shows a reduction of \$123,969.66, when compared with the previous year.

There were three main contributing factors to this result, viz.,

- (1) Increased wages, due to progressive restoration of percentage deductions from payrolls, formerly in effect on all Canadian Railways:
- (2) At certain large centres throughout the country, free pick-up and delivery services were established, without any increase in rates charged shippers. The additional expense was borne by the participating Railways:
- (3) During the latter portion of the year, southbound movement of forest products, pulpwood, paper, etc., declined sharply on account of less active business conditions in the United States. Northbound freight business continued at high levels, but on account of lighter southbound business, it became impossible to load southbound trains to full capacity.

FINANCIAL.

As in former years, the Railway paid interest on outstanding Bond Issue of \$6,000,000, as well as interest on current loan. On April 1st, 1937, the current loan stood at \$5,100,000. By March 31st, 1938, this was reduced to \$4,425,000 — a reduction of \$675,000. New equipment and other capital expenditures to a total of \$396,469.17 were financed out of current revenues.

EQUIPMENT AND FACILITIES.

Two new steam locomotives, numbered 1102 and 1103, were delivered by contractors and placed in service during the year. Other improvements effected during the year include new telephone plant at Swastika; one new Tractor Power shovel; seven highway busses; and a number of smaller items.

PROSPECTIVE TRAFFIC.

The immediate outlook is for continuance of satisfactory passenger traffic, although the completion of the improvements to the highway which parallels the Railway to a large extent, will have a tendency to reduce rail traffic during the summer months. It is anticipated that northbound freight traffic will continue at a satisfactory level. Southbound freight traffic will not be available in satisfactory volume until conditions in the United States become more normal, but with the expected improvement in business conditions, forest products will again move freely to market.

GENERAL.

Business conditions generally throughout the territory served are very active, with the exception of the pulp and paper industry which continues at a low level. Mining activity continues unabated with every prospect of continued prosperity for many years to come.

Respectfully submitted,

M. LANG,
Chairman.

BLACK, HANSON & CO.

Chartered Accountants

Port Arthur, Ontario, July 19, 1938.

Malcolm Lang, Esq., Chairman,

Temiskaming and Northern Ontario Railway Commission,
North Bay, Ontario.

Dear Sir:

In accordance with our appointment, we have examined the books and records of the Temiskaming and Northern Ontario Railway and The Nipissing Central Railway for the year ended 31st March, 1938, and we now submit Balance Sheets of the two Railways as at that date.

The terms of our appointment did not make provision for a fully detailed audit and the work which we have done, therefore, consisted to a major extent of tests of various portions of the records for limited periods.

We submit the following explanatory report on the various items appearing on the Balance Sheets.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY**INVESTMENT**

The Cost of Road, \$33,876,151.50, includes all expenditures on right of way, track and roadbed, shop machinery, tools, real estate and buildings. No provision has been made for depreciation of any of the assets included in this caption. The increase in value during the year amounting to \$105,946.71 consists of:

Expenditure on Additions to Road—Stations, Machinery, Telegraph and Telephone Lines, etc.	\$189,588.64
Less Road and Machinery retired and written off	\$ 81,641.93
Payments received on account of Sale Price of James Bay Inn	2,000.00
	83,641.93
Net Increase	<u>\$105,946.71</u>

The James Bay Inn was sold in August, 1937, to R. R. Cockburn at a price of \$10,000.00, payable \$1,000.00 on the execution of the Agreement of Sale and \$1,000.00 on the first day of October in the years 1937 to 1945, inclusive, with interest at 6% per annum. The first two instalments, aggregating \$2,000.00, have been collected and credited to Cost of Road as shown in the foregoing statement. The cost of the Inn, according to the Construction Records, was \$56,000.00, and this amount, less the credit of \$2,000.00 mentioned above, is still included in the Cost of Road. The balance of \$8,000.00 owing on the Agreement of Sale has not been set up on the books and we are informed that an entry to write off the loss of \$46,000.00 on the sale of the Inn has been delayed pending collection of the balance of the Sale Price.

Railway Equipment, \$6,478,352.88, represents the cost of Rolling Stock and shows an increase of \$290,522.46 which consists of:

Expenditures on New Equipment	
Locomotives	\$269,837.65
Motor Busses	48,356.12
Passenger Car Heat Connectors	134.69
	\$318,328.46
Less Equipment Written Off	
Locomotive Sold—Selling Price \$10,500.00—Cost.....	\$ 25,979.44
Freight Cars Retired	1,826.56
	27,806.00
Net Increase	<u>\$290,522.46</u>

We understand that the account still includes some disused and obsolete equipment. With the exception of the locomotives purchased in 1937, depreciation was provided on the railway equipment during the year under review at the rate of 2% per annum and on Motor Busses at the rate of 2½% per month.

Restaurant and News Equipment is carried on the books at a value of \$13,813.92 and the provision for Depreciation of this asset amounts to \$9,958.10.

The Investment in Affiliated Companies consists of Advances made to the Nipissing Central Railway at and since the date of the purchase of the railway in 1911. The account is the same as at the end of the previous year and, with reference to its realizabilty, we refer you to the annexed Balance Sheet of the debtor company.

CURRENT ASSETS

The Cash, amounting to \$47,249.21, consisted of:

Cash on Deposit at Bank of Nova Scotia, North Bay	\$ 69,343.05
Deduct Outstanding Cheques	22,093.84
	\$ 47,249.21

We obtained certificates in confirmation of the Bank Balance at 31st March.

We have examined the Accounts Receivable and Traffic Balances and we find that they include accounts owing by The Nipissing Central Railway aggregating \$198,206.93. The Balance Sheet of The Nipissing Central Railway shows a Liquid Deficit of \$135,000.00 which indicates that a substantial loss may be expected on this account eventually unless the future earnings are sufficient to repair the Deficit. The Accounts Receivable include a number of other balances which are considered doubtful but no material losses are anticipated.

An examination of the balances due on Townsite Sales totalling \$4,360.79 indicates that collections have been slow and that, in most instances, the balances are doubtful.

The Agents' and Conductors' balances aggregating \$108,254.84 consist chiefly of accounts owing by agents of the railway for tickets, freight and telegraph and telephone charges. We examined a number of the accounts carried in the Head Office books and they appeared to be current. Periodical inspections of agents' books are made at the various stations by the Audit Department and the reports which we examined indicated that the accounts were found to be in order.

We obtained a certificate signed by the Internal Auditor and the Storekeeper stating that the Inventory of Material and Supplies had been compiled from book figures, that it was priced at laid down cost and that it included no obsolete material. The last physical inventory previous to this Balance Sheet was taken on August 31, 1937. We examined the summaries of stores prepared by the Storekeeper at 31st March, scrutinized the adjustments which had been made and ascertained that the balances of the various stock accounts kept by the Storekeeper were in agreement with those in the General Ledger, but we did not verify the quantities on hand nor the pricing of the inventory.

Ballast Pit Sidings, \$63,694.10, represents the cost of rails and ties used in the construction of sidings to gravel pits. The value of the asset is adjusted from time to time as the sidings are dismantled and the rails and ties returned to stock or transferred to other uses.

DEFERRED ASSETS

The Investments and Bank Accounts of the Pension Fund and Fire Insurance Fund are carried at the Bank of Nova Scotia in the joint custody of the Treasurer and Assistant Treasurer. We have checked the transactions in both funds, examined the securities and obtained certificates in confirmation of the Bank Balances.

The Pension Fund, as the name indicates, was established for the purpose of providing pensions for superannuated employees. Contributions to the fund have been made voluntarily by the Commission with no provision for assessments on employees. Previous to January 1, 1937, there was no established policy as to the amounts of the contributions but since that date the Commission has contributed 2% of the total payroll. The following is a statement of the fund for the year:

Pension Fund at 31st March, 1937	\$233,730.92
Add Appropriations by the Commission	48,786.41
Earnings on Investments	10,549.78
Profit on Sale of Investments	566.70
	\$293,633.81
Deduct Pensions Paid	\$ 23,696.52
Rent of Safety Deposit Box	20.00
	23,716.52
Pension Fund at 31st March, 1938	\$269,917.29

The Fund is invested as follows, the securities maturing at various dates in the years 1943 to 1970, inclusive:

	Par Value	Cost and Book Value
Temiskaming and Northern Ontario Railway	\$117,000.00	\$107,840.85
Province of Ontario	95,000.00	90,205.75
Canadian Northern Railway	33,500.00	26,600.00
Canadian National Railways	5,000.00	4,762.50
Hydro-Electric Power Commission of Ontario	8,000.00	7,877.50
Dominion of Canada	15,000.00	14,737.50
	<u>\$273,500.00</u>	<u>\$252,024.10</u>
Cash in Bank		17,893.19
		<u>\$269,917.29</u>

Fire Insurance Fund \$49,001.08. Previous to February 1, 1938, the Commission had in force a Fire Insurance Contract which stipulated that the risk of approximately \$3,250,000.00 was to be assumed in equal proportions by the Underwriters and the Insurance Fund of the Commission. Upon the expiry of the Contract on the date mentioned, the Commission assumed the entire risk.

From December 1, 1934, until the expiry of the Contract, the Commission appropriated \$1,500.00 monthly for insurance and the balance of this appropriation, after providing for the payment of premiums was transferred to the Insurance Fund. We understand that, commencing February 1, 1938, the appropriation will be increased to \$20,000.00 per year.

The balance of \$49,001.08 in the Fund at 31st March, 1938, is made up as follows:

Fire Insurance Fund at 31st March, 1937	\$ 33,825.76
Appropriations during the year	16,901.24
Earnings on Investments	1,328.73
	<u>\$ 52,055.73</u>
Deduct Cost of Insurance Premiums	\$ 2,674.16
Fire Losses	380.49
	<u>3,054.65</u>
Balance at 31st March, 1938	<u>\$ 49,001.08</u>

The Fund is invested as follows, the securities maturing at various dates from 1951 to 1970, inclusive:

	Par Value	Cost and Book Value
Temiskaming and Northern Ontario Railway	\$ 15,000.00	\$ 15,815.00
Hydro-Electric Power Commission of Ontario	7,000.00	7,052.50
Province of Ontario	19,000.00	18,938.75
	<u>\$ 41,000.00</u>	<u>\$ 41,806.25</u>
Cash in Bank		7,194.83
		<u>\$ 49,001.08</u>

It will be observed that the investments of both the Pension Fund and the Insurance Fund are carried at cost and that the annual adjustments of discounts and premiums have not been made.

UNADJUSTED DEBITS

The Accounts in Suspense shown under this heading include the expenditures to March 31, 1938, on the reconstruction of a subway at Swastika amounting to \$25,672.81. The reconstruction was undertaken for the purpose of increasing the height of the subway for highway traffic and the cost of the work is to be borne by the Department of Highways.

LIABILITIES

PROVINCE OF ONTARIO LOAN

The position of the Loan from the Province of Ontario was unchanged during the year under review. In accordance with an Order-in-Council dated April 22nd, 1936, the Loan does not bear interest.

LONG TERM DEBT

The Long Term Debt consists of a Debenture Issue of \$6,000,000.00 dated February 1, 1928, guaranteed by the Province of Ontario and bearing interest at the rate of 4% per annum. The first payment of principal, amounting to \$107,000.00, falls due on February 1, 1939, and thereafter the principal is payable annually in increasing instalments until the final date of maturity, February 1, 1968.

CURRENT LIABILITIES

We obtained written confirmation of the Demand Loan of \$4,425,000.00 payable to the Bank of Nova Scotia. The Loan bears interest at the rate of 2½% per annum which has been paid to March 31, 1938.

We examined the balances making up the other items under the heading of Current Liabilities and found them to be in agreement with the books. We also examined the Accounts Payable Register and Invoices for the month of April and found no vouchers of any consequence applicable to the period covered by the attached statements which had not been recorded.

We consider that the items under the headings of Deferred Liabilities and Unadjusted Credits are clearly indicated by their titles and do not require further explanation.

OPERATING ACCOUNT

The operation of the railway for the year resulted in a profit of \$1,266,396.30. In view of the comprehensive Operating Statements which have already been submitted to you by the Accounting Department, we do not believe that any good purpose would be served by the submission at this time of detailed statements or other particulars. We found that various items of Earnings relative to the year under review were not entered on the books until the following year. In explanation of this fact, we were informed that this was the customary procedure with these items at each year end and that the omissions from this year's earnings, which we have referred to, were offset by the inclusion of similar items carried over from the previous year.

THE NIPISSING CENTRAL RAILWAY**BALANCE SHEET**

No rolling stock is owned by The Nipissing Central Railway and the entire Capital Investment consists of Cost of Road which includes right of way, track and roadbed, real estate, buildings, etc. The increase of \$28,662.12 in the value of the Cost of Road during the year consists of:

Expenditures on extensions and improvements	\$ 30,419.52
Less Assets retired and written off	1,757.40
	<u>\$ 28,662.12</u>

The comments in our report on the Temiskaming and Northern Ontario Railway in explanation of the Current Assets and Liabilities and with regard to the verification thereof apply as well to this Railway.

The Advances from the Temiskaming and Northern Ontario Railway amounted to \$4,762,743.43 at March 31, 1938, and consisted of:

Advances made to cover purchase price of Nipissing Central Railway in 1911	\$ 235,483.81
Advances since date of purchase, less repayments	4,527,259.62
	<u>\$ 4,762,743.43</u>

The Liability for this amount on the Balance Sheet of The Nipissing Central Railway consists of:

Capital Stock (held by Temiskaming and Northern Ontario Railway Commission)	\$ 159,000.00
Temiskaming and Northern Ontario Railway—Advance	4,603,743.43
	<u>\$ 4,762,743.43</u>

Subject to the qualifications contained in the foregoing Report, in our opinion, the attached Balance Sheets set forth correctly the positions of the affairs of the Railways according to the books and the information furnished us.

Yours faithfully,

BLACK, HANSON & CO.,
Per (Sgd.) F. H. Black, F. C. A.

Thirty-Third Annual Report
OF THE
ONTARIO MUNICIPAL
BOARD

To December 31st, 1938

**PRESENTED TO THE LEGISLATIVE ASSEMBLY,
BY COMMAND**

SESSIONAL PAPER No. 24, 1939

TORONTO

**Printed and Published by T. E. Bowman, Printer to the King's Most Excellent
Majesty, 1939**

TO THE HONOURABLE ALBERT MATTHEWS,

Lieutenant-Governor of the Province of Ontario, in Council.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit herewith the Thirty-Third Report of the Ontario Municipal Board for the year ending December 31st, 1938.

Respectfully submitted,

E. W. CROSS,

Minister of Municipal Affairs.

Parliament Buildings,

Toronto, March 31st, 1939.

March 31st,
1939.

DEAR SIR: Re Thirty-Third Annual Report.

I have the honour to send you herewith the Thirty-Third Annual Report of the Ontario Municipal Board, to December 31st, 1938.

Your obedient servant,

M. B. SANDERSON,

Acting Secretary.

The Honourable Eric W. Cross, K.C., M.A.
Minister of Municipal Affairs,
Parliament Buildings,
TORONTO.

ORGANIZATION
of the
**ONTARIO MUNICIPAL BOARD OF THE
PROVINCE OF ONTARIO**

R. S. COLTER, K.C., CHAIRMAN
D. S. CHARLTON, VICE-CHAIRMAN
W. P. NEAR, B.A.Sc., COMMISSIONER
M. B. SANDERSON, ACTING-SECRETARY
J. A. McDONALD INSPECTOR of TELEPHONE SERVICE

THIRTY-THIRD ANNUAL REPORT

of the

Ontario Municipal Board

To December 31st, 1938

In pursuance of Section 108 of "The Ontario Municipal Board Act" (R.S.O., 1937, Chapter 60), the Ontario Municipal Board beg leave respectfully to submit their Thirty-Third Annual Report.

"THE ONTARIO MUNICIPAL BOARD ACT"

Since the revision of the Statutes of Ontario in 1937 "The Ontario Municipal Board Act" was amended by Statutes of Ontario, 1938, Chapter 37, Section 18.

APPLICATIONS TO THE BOARD

There were 1322 applications to the Board during 1938 (exclusive of Telephone and Public Vehicle and Public Commercial Vehicle License applications), and in regard to 205 of these Public Hearings were held. The applications included a great variety of matters falling within the jurisdiction of the Board and those granted are set out in a list contained in the "Abstract and Summary" appended to this Report, indexed under "Orders Issued by the Board". Copies of formal Decisions issued are also contained in the Abstract and Summary, indexed under "Decisions of the Board" and also under the names of the Parties.

SITTINGS OF THE BOARD

The Board held meetings for the transaction of routine business and the disposal of applications every juridical day throughout the year. Many of these applications, though dealt with informally and disposed of without the necessity of Hearings, entailed, in many instances, a considerable amount of inquiry and consideration on the part of the Board, especially those coming under the provisions of Section 70 of the Board's Act, which section requires all capital undertakings and expenditures therefor by Municipalities to be approved by the Board.

REVENUE

The Board's fees are paid in Law Stamps except fees on applications for Public Vehicle and Public Commercial Vehicle Licenses which (beginning with the year 1936) are collected by the Department of Highways and credited to the Board.

Below is shown the amount paid in 1938 and the previous three years:—

Year	Law Stamps	P.V. and P.C.V. Applications	Total Amount
1938	\$13,763.00	\$4,542.80	\$18,305.80
1937	* 15,197.00	5,255.09	20,452.09
1936	9,462.85	5,739.68	15,202.53
1935	4,934.00		4,934.00

*Includes \$4,000 in respect to City of Windsor Refunding Plan.

APPROVAL OF UNDERTAKING OF CAPITAL EXPENDITURES BY MUNICIPALITIES.

(Section 70 of "The Ontario Municipal Board Act"—R.S.O., 1937, C. 60)

On the 18th April, 1935, legislation came into effect whereby a Municipality is prohibited from exercising any of its powers to proceed with, authorize or provide any moneys for any undertaking, work, project, scheme, act, matter or thing, the cost or any portion of the cost of which it is intended or required to be provided or raised by the issue of debentures of the Municipality, until the approval of this Board is first obtained. This enactment over-rides the provisions of any general or Special Act and necessitates a great many applications to the Board. A list of these applications granted will be found in the Summary, included in the list indexed under "Orders Issued by the Board". Written decisions will be found indexed under "Capital Expenditures" and also under the names of the Applicants.

Applications in respect to proposed expenditures totalling \$10,568,955.66 were considered by the Board and approval was refused in respect to approximately \$2,000,000 thereof. It should be noted, however, that since Municipal representatives are now aware of the fact that they must obtain the Board's approval of proposed capital undertakings, a large percentage avail themselves of the opportunity of discussing their proposed borrowings with the Board and in many instances are advised that the Board would not be willing to grant approval. Accordingly formal applications in these instances are not filed and do not show in the Board's records.

It should also be noted that the existence of this legislation gives the Board an opportunity to advise and control with regard to the type and term of the debentures to be issued. In this connection the Board has pursued the policy of approving only instalment debentures as opposed to sinking fund debentures and is generally requiring the term of repayment to be shorter than formerly, believing that the saving of interest effected thereby accrues to the benefit of the Municipal ratepayers.

The following list, generally speaking, shows the maximum debenture term allowed by the Board under this restrictive policy:—

Sidewalks	10 years
Curbs and gutters	10 years
Pavements	10 years
Watermains	15 years
Sanitary Sewers	15 years
Trunk Sewers	20 years
Buildings, including Schools.....	20 years

APPROVAL OF RATEPAYERS

By section 59 (f) of "The Ontario Municipal Board Act" the Board is given power to direct that before any approval is given to the exercise of any powers by a municipality or to any by-law passed by it, the assent of the electors thereof or of those thereof who are qualified to vote on money by-laws shall first be obtained, notwithstanding such assent is not otherwise requisite. By virtue of this legislation the Board has followed a policy in the year 1938 of insisting that major capital expenditures, the cost of which would be met out of general rates, be submitted to the ratepayers for their approval, before being presented to the Board. The result in many instances has been the rejection of the proposed expenditure by the ratepayers.

ARBITRATIONS

In 1938 the Board acted as Arbitrators in connection with 7 applications, 5 of which were under section 77a (now section 79) of "The Highway Improvement Act", for the fixing of compensation to be paid to the Claimants for property expropriated or damaged in connection with the construction of the King's Highways, where the amount could not be arranged between the parties. Of the other applications one was under "The Public Works Act" and one was referred to the Board by consent of the Parties interested. The Board's decisions will be found in the Summary, indexed under "Arbitrations", "Decisions of the Board" and also under the names of the Parties.

RESTRICTED AREAS.

Under Section 406 of "The Municipal Act" (R.S.O., 1937, C. 266) the Board considered 29 applications for approval of Municipal By-laws placing restrictions on certain areas as to use of land and the erection and use of buildings thereon, also, under subsection (2b) of this section 51 applications for variation of restricted areas already established. The applications granted are shown in the Summary, in the list of "Orders issued by the Board". Copies of the Board's written decisions will also be found indexed under "Decisions of the Board" and under "Restricted Areas."

REFUNDING PLANS OF SUPERVISED MUNICIPALITIES

Pursuant to the provisions of section 32 of "The Department of Municipal Affairs Act" (R.S.O., 1937, C. 59) the Board, during 1938, considered and approved plans for funding and refunding the bonded indebtedness of the following Supervised Municipalities:—Townships of Kingsville, Leamington, Midland, Mimico, New Toronto, Pembroke (also Board of Trustees of Roman Catholic Separate Schools) and Weston and the Essex Border Utilities Commission.

The Board is pleased to report that during 1938 no application was made for an Order to place the financial affairs of a Municipality under the supervision of the Department of Municipal Affairs.

EXTENSION OF PUBLIC UTILITIES

(Section 407 (2) of "The Municipal Act")

During 1938 the Board approved of extensions to Public Utilities in an amount totalling \$413,796.28, covering 19 applications. These are shown in the Summary in the list of "Orders issued by the Board".

FLOATING INDEBTEDNESS

(Section 59 (d) of Part IV, R.S.O., 1937, C. 60)

Under this legislation the Board issued Orders in respect to 7 Municipalities, authorizing debenture issues totalling \$347,800. It should be noted that this meant a considerable saving of expense to the Municipalities concerned, as special Acts of the Legislature would otherwise have been necessary.

DIRECT RELIEF FUNDING

The policy of the Board has been to curtail, as far as possible, the funding of direct relief costs by municipalities.

In the year 1938, 5 applications for approval of the funding of a part of direct relief costs were made and permission was given in 3 instances. This represents an improvement over the preceding year during which 10 municipalities applied for and received permission to fund a portion of their direct relief costs. Furthermore, the approvals of relief funding given in 1938 contained, with one exception, the condition that the term of the debentures be shortened, the Board having in view a gradual termination of the practice of funding any relief costs, with the eventual result that the remaining 3 municipalities would shortly resume a pay-as-you-go basis for this type of expenditure.

ASSESSMENT APPEALS.

There were 33 Assessment Appeals to the Board during 1938, pursuant to the provisions of section 84 of "The Assessment Act" (R.S.O., 1937, C. 272), involving property assessed at \$6,956,284. Of this number 10 appeals were later withdrawn, 2 appeals were settled and Consent Orders issued, formal hearings were held in regard to 11 of the appeals and the remaining 10 appeals were carried over for hearing in 1939. The total amount involved in the appeals heard by the Board in 1938 was \$3,347,323.

Copies of the Board's written decisions will be found in the Summary indexed under "Assessment Appeals", "Decisions of the Board" and also under the names of the Parties.

“THE MUNICIPAL FRANCHISES ACT”

(R.S.O., 1937, C. 277)

Under section 8 of this Act the Board heard 4 applications by Gas Companies for Certificates of Public Convenience and Necessity to construct works to supply and to supply gas to residents of certain Municipalities. Copies of the Board's Certificates are contained in the Summary, indexed under “Certificates of Public Convenience and Necessity”, “Decisions of the Board” and under the names of the Applicant Companies and the Municipalities concerned.

VALIDATION OF MUNICIPAL BY-LAWS AND DEBENTURES

(Section 64 of Part IV, R.S.O., 1937, Chapter 60)

103 applications were made to the Board in 1938 for validation of Municipal By-laws and certification of the debentures authorized thereunder. The total of such debenture issues was \$3,701,344.69.

While purchasers of debentures are frequently satisfied with Orders of the Board under section 70 of the Board's Act it has been found that, particularly in regard to the larger debenture issues, a further Order of the Board validating the By-law and providing for certification of the debentures, facilitates the marketing of the issue.

PLANS OF LAND SUBDIVISIONS.

Under “The Planning and Development Act” (R.S.O., 1937, C. 270), “The Land Titles Act” (R.S.O., 1937, C. 174), Section 112, and “The Registry Act” (R.S.O., 1937, C. 170), Section 83, subsection (15), 35 plans were presented to the Board for approval and certification.

PROVINCIAL RAILWAYS

Extensions of and improvements to Provincial Railways during 1938, as reported to the Board, will be found in the Summary, arranged alphabetically under the names of the several Systems reporting.

Annual Reports, to December 31st, 1938, by Railway Companies under the Board's jurisdiction were received, of which a summarized tabulation has been prepared for publication herein. The Board has no means of auditing these reports as received and cannot therefore guarantee that the figures taken therefrom are correct or accurate.

Under “The Railway Act” there were 16 applications to the Board in 1938. Two of these were by the City of Toronto respecting the new Dundas Street Bridges and 11 by the Toronto Transportation Commission, the latter comprising 10 applications for approval of the reconstruction and rehabilitation of Street Railway tracks and one for approval of the design and operation of the new One-Man Cars.

A tabulation of Accident Reports received by the Board from Provincial Railways during the year 1938 is included in the Summary and shows that 16 persons were killed and 1160 injured during the year.

PUBLIC VEHICLE AND COMMERCIAL VEHICLE LICENSES

Pursuant to “The Public Vehicle Act” (R.S.O., 1937, C. 289) and “The Commercial Vehicle Act” (R.S.O., 1937, C. 290) no Public Vehicle or Commercial Vehicle license, respectively, may be issued by the Department of Highways without the approval of the Board being first obtained as evidenced by a Certificate of Public Necessity and Convenience of the said Board furnished to that Department, and then only in accordance with such Certificate. Upon the granting of a Certificate of the Board the Department may then in its discretion issue or refuse a license.

The Board set aside Forty-two days during the year for hearing the applications for a Certificate of Public Necessity and Convenience. From March to December, inclusive, two days bi-weekly are set apart for these hearings. The Board has also, during 1938, given appointments for similar hearings at Port Arthur and Fort William, as well as at Kirkland Lake, Timmins and Sudbury.

During the year 58 applications were made for Public Vehicle Licenses and 1111 for Commercial Vehicle Licenses. These numbers include applications for extensions to and clarification of existing licenses. These applications, according to classification, are divided as follows:—

Public Vehicle	58
Public Commercial Vehicle:	
Class "A"	59
Class "B"	10
Class "C"	196
Class "D"	60
Class "E"	150
Class "F"	598
Class "H"	23
Miscellaneous (at Port Arthur)	15
Total	1169

In supporting an application before the Board the Applicant may appear in person or be represented by his Solicitor, or, under exceptional circumstances, if unable to attend, may submit evidence in the form of letters, petition or affidavits in support of the application. The Board hears the evidence for and against and takes into consideration facilities extended by existing licensed operators and then decides whether public necessity and convenience requires the service for which application is made.

All transfers of Public Vehicle and Public Commercial Vehicle Licenses are subject to the approval of the Board and care is taken to prevent anything that might appear to be trafficking in licenses. Transfers of important licenses are usually made the subject of a Hearing and evidence is heard for and against.

The Department of Highways submits for the Board's approval School Bus permits and re-instatements of licenses that have been suspended for failure to insure or other cause.

FORMS

The Board has (for distribution to parties interested) the following forms and specifications, namely:—

1. The Board's Rules of Practice and Procedure and Practice Forms.
2. Regulations, Specifications and Forms respecting Railways.
3. Standard Specifications for Bridges, Viaducts, Trestles or other structures.
4. Memorandum of material required in support of application for approval of undertaking or capital expenditure involving debenture issue, under section 70 of "The Ontario Municipal Board Act" (R.S.O., 1937, C. 60).
5. Forms of By-laws and Notices which may be used when carrying out the provisions of sections 280 and 305 of "The Municipal Act" (R.S.O., 1937, C. 266) in respect of voting on Money By-laws.
6. Forms for Annual Reports by Railway Systems.
7. Forms for Reports as to Examination of Motormen.
8. Forms for Reports of Accidents by Railway Systems.
9. Directions for guidance of applicants under subsection (2) of section 407 of "The Municipal Act."
10. Tariff of the Board's Fees.
11. Forms under "The Planning and Development Act" with directions for guidance of applicants thereunder.
12. "The Telephone Act."

13. Form of Annual Report to be furnished to the subscribers to a Telephone System established under Part II of "The Telephone Act."
14. Instructions for preparation of Annual Report as mentioned in No. 15.
15. Pamphlet containing information regarding Provincial Telephone Systems, and including
 - (a) Form of By-law providing for the establishment of a telephone system under Part II of "The Telephone Act."
 - (b) Form of By-law providing for the issue of debentures to pay for the cost of establishing a telephone system under Part II of "The Telephone Act."
 - (c) Form of By-law to regulate the management and operation of a telephone system established under Part II of "The Telephone Act."
 - (d) Form of Account for the use by Telephone Companies using the "Discount System of Collections."
 - (e) Form of Municipal Debenture—Instalment plan.
 - (f) Form of Constitution and By-laws for a Telephone Company.
16. Form of Petition praying for the establishment or extension of a Telephone System under Part II of "The Telephone Act."
17. Form of By-laws granting to a Telephone Company the right to use the highways of a Township.
18. Form for Return by Municipality operating a Telephone System.
19. Form for Return by Company, etc., operating a Telephone System.
20. Form for Tariff of Tolls for Telephone System.
21. Form for Return by Companies required by Order of the Board to set up a reserve for depreciation.

MISCELLANEOUS MATTERS UNDER THE BOARD'S JURISDICTION

Copies of the Board's written decisions and a list of Orders issued in 1938 appear in the Summary. These relate to:

Arbitrations.

Assessment Appeals under section 84 of "The Assessment Act" (R.S.O., 1937, C. 272).

Applications for relief from rebuilding of bridges by Municipalities — Section 480, subsection (9) of "The Municipal Act" (R.S.O., 1937, C. 266).

By-laws for reconstruction of bridges—Section 307, subsection 3 (e) of "The Municipal Act."

Detachment of Farm lands from Town or Village—Section 21 of "The Municipal Act."

Deviation of County boundary lines—Section 492 of "The Municipal Act."

Extension of debenture issue period of Municipal By-laws—Section 305, subsections (11) and (12) of "The Municipal Act."

Extension of time to pass Municipal By-laws—Section 297, subsection (5) of "The Municipal Act."

Fire Halls and Fire fighting equipment—Section 407, subsection (16) of "The Municipal Act."

Floating indebtedness, authority to Municipalities to issue debentures to pay—Section 59 (d) of "The Ontario Municipal Board Act" (R.S.O., 1937, C. 60).

"The Municipal Franchises Act" (R.S.O., 1937, C. 277), Section 8—Certificates of Public Convenience and Necessity in respect to construction of works to supply and to supply gas to residents of Municipalities pursuant to franchise granted therefor.

Highways, Department of—Claims against — Applications under section 79 of "The Highway Improvement Act" (R.S.O., 1937, C. 56)—Fixing of Compensation.

Highways, deferred widening of—Section 343 of "The Municipal Act."

Highways (Narrow)—Approval of under section 502 (2) of "The Municipal Act."

Increased borrowings by Municipal Councils—Section 339 (2) of "The Municipal Act."

Incorporations of towns in unorganized territory—Section 18 of "The Municipal Act."

Interest Decrease By-laws—approval of under section 310 of "The Municipal Act."

Lanes, opening and paving of—Section 29 (3) of "The Local Improvement Act" (R.S.O., 1937, C. 269).

Legislation, Special—By-laws approved under.

License fee—approval of fixing of to residents of a Municipality owning and using a bicycle on any highway thereof, Section 420 (11) of "The Municipal Act."

Local Improvements—Approval of the undertaking of and passing of construction By-laws therefor—Section 8 of "The Local Improvement Act."

Local Improvements—abandonment of part of work—Section 18 of "The Local Improvement Act."

Local Improvements—apportionment of cost—approval of By-laws under section 29 (3) of "The Local Improvement Act."

"The Ontario Municipal Board Act" (R.S.O., 1937, C. 60).

"The Public Parks Act" (R.S.O., 1937, C. 285), Section 12—Approval of the setting aside of portion of Park for athletic purposes, etc.

Repeal of Money By-laws as to residue not required—Section 311 (2) of "The Municipal Act".

Restrictions as to use of land or buildings, etc., approval of By-laws for—Section 406, "The Municipal Act"; and repeal or amendment to restricted areas—Section 406 (2b) of "The Municipal Act."

Referee, appointment of—Section 16 of "The Public Schools Act" (R.S.O., 1937, C. 357).

Sinking Funds—Approval of investment of—Section 327 of "The Municipal Act."

Supervised Municipalities—Refunding Plans—"The Department of Municipal Affairs Act" (R.S.O., 1937, C. 59), Section 32; Leave to commence action against—Section 29.

Tax Rate—approval of further debt and levy therefor—Section 315 (2) of "The Municipal Act."

Vote of Electors—Application to dispense with — Section 69 of "The Ontario Municipal Board Act."

Wards, Division of Cities, etc., into—Section 44 of "The Municipal Act."

Weigh Scales and weighing of coal, etc. — Section 408 (11) of "The Municipal Act."

Works ordered by the Dominion Railway Board, approval of By-laws for—Section 307 (3) (f) of "The Municipal Act."

M. B. SANDERSON,

Acting Secretary.

REPORT OF THE INSPECTOR OF TELEPHONE SERVICE

For The Year 1938

The following applications under the provisions of "The Telephone Act" (R. S. O., 1937, Chapter 261) were dealt with by the Board in 1938.

Under Section 27:	For authority to pass municipal debenture by-laws to meet the cost of reconstructing, replacing or altering telephone systems	1
Under Section 31:	For approval of the purchase of an existing telephone system by a municipality, or any portion thereof	6
Under Section 56:	For the approval of by-laws of a municipal telephone system	1
Under Section 58:	For an order prescribing the date for holding the annual meeting of subscribers	3
Under Section 79:	For the approval of municipal by-laws granting the right to erect poles and wires upon the highways	4
Under Section 87:	For the approval of by-laws of a telephone company	15
Under Section 96:	For the approval of agreements providing interchange of service	86
Under Section 101:	For the approval of the sale of telephone systems	14
Under Section 103:	For the approval of charges for telephone service	23
Under Section 109:	For authority to expend a portion of the moneys set aside for depreciation, upon new construction or extensions or in the purchase of securities	9
Under Section 110:	For authority to issue stocks and bonds	1
Under Section 122:	For an enquiry into the affairs of a telephone company and an order in reference thereto	2
Total number of applications		165

The continued policy of the Board in endeavoring to secure an amicable settlement of matters in dispute between the applicant and respondent has proved successful in the majority of cases.

In addition to the applications and complaints referred to, a vast amount of correspondence relating to telephone matters has been dealt with by the Board's Telephone Department, through the medium of which much information and assistance has been given to municipalities, companies and other persons interested, and many difficulties which might otherwise have necessitated a formal application and public hearing have been satisfactorily adjusted.

During the year the following changes were made in the Board's records of Telephone systems coming within its jurisdiction:

The following systems previously operating about 86 telephones were transferred to The Southern Ontario Telephone Company, Limited:

- South Walsingham Telephone Company, Limited,
- Walsingham Centre and Port Rowan Telephone Company, Limited,
- Houghton and South Walsingham Telephone Company, Limited,
- Windham Telephone Company, Limited.

The following systems previously operating about 565 telephones were sold to The Bell Telephone Company of Canada:

Ardtree Telephone Company, Limited.
O'Connell Rathburn Telephone Company, Limited,
Glasgow Private Telephone System,
Mutual Telephone Company, Limited,
Fairview Telephone Company, Limited,
Riverside Telephone Company, Limited,
Fraser Telephone Company, Limited,
Marysburg Telephone Company.

The System of the Houghton, Bayham and Tillsonburg Telephone Company, Limited, operating about 96 telephones was sold part to The Aylmer and Malahide Telephone Company, Limited, and part to The Norfolk and Tillsonburg Telephone Company, Limited.

The number of telephone systems within the jurisdiction of Ontario of which the Board has record is 579, operating 112,216 telephones, 33,820 miles of pole lead carrying 185,658 miles of wire and representing an investment of about \$11,000,000.

There are 11 systems owned and operated by municipalities under the provisions of Part I of the Act, viz.: the Cities of Fort William and Port Arthur, the Towns of Cochrane, Dryden, Fort Frances, Kenora, Keewatin and Rainy River, and the Townships of Alberton, Caledon and Hilliard.

One hundred and twenty-one systems are now established and operating under Part II of the Act, and furnishing service in two hundred and seventy-seven towns, villages and townships.

In addition to the before-mentioned systems, the Forestry Branch of the Department of Lands and Forests is operating an extensive system in connection with its work of fire prevention. This system comprises 755 telephone stations, 1437 miles of pole lead, 1216 miles of tree line, and 4996 miles of wire, the total investment being \$310,789.71.

Detailed statistics and other information relative to these systems will be found in the appendix to this report, entitled "Telephone Systems, 1939."

JAS. A.McDONALD,
Inspector of Telephone Service.

DECISIONS OF THE BOARD

ARBITRATIONS

P.F.A. 7400

IN THE MATTER of "The Highway Improvement Act" (R.S.O. 1937, Chapter 56), and "The Public Works Act" (R.S.O. 1937, Chapter 54)

BETWEEN:

MARGARET JANE BROWN

Claimant.

—and—

HIS MAJESTY THE KING, IN THE RIGHT OF
THE PROVINCE OF ONTARIO REPRESENTED
BY THE MINISTER OF HIGHWAYS AND PUB-
LIC WORKS FOR THE PROVINCE OF ONTARIO

Respondent.

E. H. Cleaver, Esq., K.C. Counsel for the Claimant,
G. W. Mason, Esq., K.C. Counsel for the Respondent.

DECISION OF THE BOARD

This is an application pursuant to Section 79 of "The Highway Improvement Act" and was heard by the Board on the 27th, 28th and 29th days of April and the 9th and 10th days of May, at the Court House in the City of Hamilton.

The following are the facts: The Claimant was the owner of a fruit farm of 21 acres more or less, upon which was situated a house and barn, and being composed of part of Lot 27, Concession 1, of the Township of Saltfleet in the County of Wentworth. The whole of the lands were expropriated by the respondent for highway purposes, a parcel of 7.5 acres on the 18th of December, 1937, and the remaining parcel of 13.7 acres on the 22nd day of February, 1938. By letter dated the 1st of February, 1938, the respondent offered the claimant the sum of \$14,000 in full settlement, and by letter dated the 28th of February, 1938, increased its offer to \$14,500. The claimant by letter dated the 12th of March, 1938, stated that she was not willing to accept the said offer and these proceedings are the result of the said refusal.

Miss Stella Brown, the daughter of the claimant, gave evidence as to the character of the planting on the farm and evidence as to the revenue which her mother had received from that source since her father's death in 1931. She was able to give the figures for the years 1932, 1933, 1934, and 1937, the figures for 1935 and 1936 not being available. The average for the said four years was stated by counsel for the claimant in the argument to be \$771.50. She also stated that because of illness on her part that she and her mother in 1936 offered the farm for sale at a price of \$14,000, and that in 1937 by reason of the recovery of her health, they had the property withdrawn from the market and determined to carry on. No offer, the terms of which were satisfactory to the claimant, had been received by the claimant in the interim. The land consisted of 18 acres of fruit planting, 2½ acres of pasture and one-half acre of ground upon which the house, about 35 years old, and the barn, were situated. The assessment of the land was \$4,200 and of the buildings was \$1,200; a total of \$5,400.

Mrs. Daisy Clark and J. R. Church, two landowners in the area, from whom small parcels of land had been taken by the respondent, stated that the said respondent had paid compensation to them at the rate of \$900 and \$700 per acre respectively.

James Biggar, D. R. McIntyre and Percy Acres, owners who had sold land to the Federal Department of National Defence for the purpose of a rifle range, stated that

they had been paid at the rate of \$1000, \$800 and \$800 an acre respectively. On cross-examination it was brought out that the said land fronted on the lake and had a high bank at the shore of the lake and was especially suitable for the purpose of a rifle range.

C. F. Smith, a fruit farmer of Stoney Creek, valued the claimant's land in so far as the 18 acres were concerned, at \$600 and \$700 per acre unplanted and \$400 per acre additional for planting, and \$3,000 for the house. He stated that he arrived at the value of the planting by getting the amount to bring it into production, and that \$1,000 an acre should be obtained.

W. F. Utter valued the 15 3-4 acres in fruit trees at \$1,100 per acre, \$600 for the land and \$500 for the planting. The two acres in raspberries were valued at \$700, \$500 for land and \$200 for planting. The house he valued at \$4,000. No sales were submitted by him and in cross-examination, admitted that he had had no sales of fruit land in Saltfleet Township.

J. H. Lounsbury valued the property at \$21,000 made up as follows: house \$3,600, barn \$600, 21 acres of unplanted land at \$600 per acre, \$12,600, 18 acres of planting at \$600 per acre, \$5,400, and for the rockery, shrubbery, setting etc. adding to the value of the house \$500, less an arbitrary amount of \$1,100 resulting in a total sum of \$21,000. No sales were submitted by him and on cross-examination he admitted that he had made no sales in this area, and in the last six years had made no valuations of fruit land on which loans were granted. He stated that most of his work was with City property.

J. H. Gibson, Secretary of the Cemetery Board in Hamilton, stated that the City had purchased 50 acres adjacent to the City in June, 1928, for \$53,000.

The Claimant in her evidence stated that the price had always been \$20,000 and was only lowered to \$14,000 in 1936 because of her daughter's illness. Upon her daughter's health being restored in 1937, they had not since that time offered it for sale at the price of \$14,000.

J. A. MacMillan of J. J. Willoughby & Company, in Toronto, Real Estate Agents, gave evidence that he has in the neighborhood of 25 farms in the Niagara Peninsula for sale, but that they are difficult to sell and that values have depreciated 25 per cent. from 1924 to 1932, and recovered about 5 per cent. from 1932 to date. He gave the following examples of sale—a parcel known as the Wooter's property consisting of 50 acres of fruit land being part of lot Number 3 in Concessions 2 and 3 in the Township of North Grimsby, and having buildings composed of a large residence, 4 cottages and 2 green houses, sold in March, 1937, for \$30,000 including equipment and furniture; a parcel known as the Finton property being part of Lots Numbers 19 and 20 in the First Concession of the Township of Saltfleet, consisting of 26 acres of fruit land, together with a house and now assessed for \$5,100, sold in 1933 for \$6,100. He valued the claimant's property as follows: 16 acres planted at \$500 an acre, \$8,000, 3 $\frac{1}{4}$ acres at \$300 an acre, \$975, 2 acres at \$350 an acre, \$700, the house at \$2,500, and the barn at \$300, for a total of \$12,700. In cross-examination he admitted that he had no experience as fruit grower, that the Wooter's property was a large plant, and that the land and buildings on the Finton property were not as valuable as the claimants. He stated that they were two-thirds of the value of the claimants.

R. S. Zavitz, a Real Estate Agent and who was corroborated by his son C. Zavitz, stated that Mrs. Brown advised him in 1935 that the price was \$14,000. In the spring of 1937 he again was told that the price was \$14,000 and that he had shown the property to a prospective buyer. No sale was made as the prospect was not willing to pay an amount of cash satisfactory to the Claimant. The Claimant on cross-examination denied that she had given a price of \$14,000 in 1935 and that no such figure was contemplated until the time of her daughter's illness in 1936.

R. S. Johnson, a solicitor, stated that a parcel of 12 acres on Number 8 Highway, 2 sideroads east of Number 20 and 5 miles from Hamilton, had been purchased from the Huron and Erie Mortgage Corporation, and that the price was \$18,292.50 in April, 1936, and later sold for \$10,000.00. He admitted on cross-examination that that transaction was a mortgage sale and that the original mortgage had been \$24,000.

W. S. Milmine of Stoney Creek, a Real Estate Agent, gave three examples of sales of fruit land. One was known as the Reinke property consisting of 16 acres and which was sold in 1938 for \$7,000, another was known as the Faustman property

consisting of 6 acres and a house on the north side of Barton Street, one mile east of the Winona Road, which sold lately for \$5,000. Another parcel was the Williams property, one mile west of the rifle range site, consisting of 13 acres and a house and barn, which sold in 1938 for \$5,100. He stated that the value of the Claimant's land was \$12,300, made up as follows: 2 3-4 acres of vacant land at \$200 an acre, \$550, 18 acres in fruit at \$475 an acre, \$8,550, and ¼ acre including the house and barn \$3,200. He also stated that the actual market price was \$11,000. On cross-examination he admitted that the Finton property had been sold to wind up an estate and that the Williams property although worked, had been unoccupied for a year and a half.

He also stated that the cemetery property sold to the City of Hamilton consisting of 50 acres, was not comparable as fruit land.

J. J. Smith of the Department of Highways gave evidence with regard to the planting on the Claimant's farm, and admitted that prior to the time he was engaged by the Department, he had received compensation for 1½ acres of fruit land expropriated by the Department, at the rate of \$1,000 an acre. He stated that the sum was to cover in addition any damage to the remainder of his land.

T. H. Crompton, Real Estate Agent of Hamilton, gave evidence with regard to five sales in the last six years. He admitted that he had made no sales in the area in the last two years.

Witnesses were called by the Claimant in reply who gave evidence relative to the circumstances surrounding the sales cited by the respondent and evidence as to the nature of the said properties.

The responsibility of the Board in an application of this kind, is heavy, keeping in mind that there is no appeal from its decision in so far as amount of compensation is concerned, and only after a careful consideration of the evidence has a decision been arrived at.

It appears to the Board to be significant that no ordinary transfers of comparable property were submitted by the Claimant for consideration and it is necessary to come to the conclusion that there has been none in recent years that would support the Claimant's value of \$20,000. Furthermore the sales and transfers submitted by the Respondent point to a valuation below the offer of \$14,500 tendered by the Respondent and refused. The Board does not agree with the method of valuation followed by the witnesses Lounsbury and Utter, whereby bare land is given a value and a planting value added, particularly as their values were not substantiated in any way. As to the evidence of J. J. Smith, the Board agrees with counsel for the Claimant in his contention that the evidence of the said witness must necessarily lose some weight in view of his having recently received from the Respondent a settlement for certain of his lands which were expropriated. The Board is satisfied that the prices per acre received in settlement by the other owners who had part of their lands expropriated, include not only loss in acreage but also damage to the remaining land. The land purchases by the Federal Government for the purpose of establishing rifle ranges is not comparable with the property in question as it was of a nature and location which enhances its value for a particular purpose. Here neither of these elements is present. The law applicable is well settled, being the value to the owner with all its possibilities and potentialities. The Board believes that the sum of \$14,500. is a sum which represents a value substantially in excess of the present market value of the said land and is a just appraisal of the present value of the land to the claimant.

The circumstances do not warrant any additional amount for forcible taking, and there will be no order as to costs other than the Board's fees for Law Stamps which are \$75.00.

Formal Order of the Board will issue upon the application of the Claimant, in the sum of \$14,500. with interest at 5 per cent. from the date of taking to the date of payment, and upon payment by the Claimant of the said Board's fees for Law Stamps.

DATED at Toronto this 16th day of May, A.D. 1938.

(sgd.) R. S. COLTER,
Chairman.

(sgd.) D. S. CHARLTON,
Vice-chairman.

(sgd.) W. P. NEAR,
Commissioner.

—and—		
E. H. CLEAVER, Esq., K.C.,	}	Counsel for the Respondent.
G. W. MASON, Esq., K.C.,		

DECISION OF THE BOARD

THIS IS AN APPLICATION pursuant to Section 79 of the Highway Improvement Act, R.S.O. 1937, Chapter 56, and was heard by the Board at the Court House, St. Catharines, on the 24th and 25th days of February, and at the Board's Chambers, Parliament Buildings, Toronto, on the 1st and 15th day of March and on the 1st, 2nd, 22nd and 23rd days of April, 1938.

The facts are as follows: The Claimant was the owner of five acres more or less in the Township of North Grimsby in the County of Lincoln, being composed of part of Lot Number 6 in the First Concession of the said Township more particularly described as follows, that is to say: COMMENCING at a point on the Easterly limit of the allowance for road between Lots Numbers Six and Seven in the First Concession of North Grimsby, said point being distant One Thousand Three Hundred and Twenty Six Feet and Nine Inches (1326' 9") measured Southerly along the Easterly limit of said road allowance from a stone monument marking the intersection of the Southerly limit of the said road allowance, said point also marking the South West Angle of the lands of one Herbert E. Barriger; thence South Eighteen (18) Degrees West and following the Easterly limit of said road allowance a distance of One Hundred and Sixty Four Feet and Nine Inches (164' 9") to the Northerly limit of the lands of one Macklem; thence south seventy-two degrees East (S.72°E.) a distance of One Thousand Three Hundred and Twenty-Six Feet and One Inch (1326' 1") to a stake planted in a division line between Lots Numbers Five and Six in the First Concession of the said Township; thence North Eighteen Degrees and One Minute East (N.18° 1" E) and following along the aforesaid Division Line between the said Lots Numbers Five and Six, One Hundred and Sixty-Four Feet and Nine Inches (164' 9") to a stake; thence North Seventy-two Degrees West (72°W) One Thousand Three Hundred and Twenty-Six Feet and Four Inches (1326' 4") more or less to the place of beginning containing by admeasurement Five acres of land be the same more or less.

The Claimant purchased this property in the year 1915 for \$5400. There was no building on the property but it was used as a fruit farm. In that year, the Claimant erected a house and barn with attached garage. He says that the house cost him \$5,000.00 and the outbuildings about \$1,125.00. He paid off the balance of the purchase money in that year, but in the cross examination he admitted that he had only a few dollars over the \$8,000.00.

The property is situated about one-half mile from the Town of Grimsby, on an unimproved road, and is served by town water and electricity.

The claimant said that the soil was good sand soil six or seven feet deep, but in cross examination admitted that the rear portion was a heavier soil or what he called a sandy clay, through which there was a depression.

Part of this property, about three and a half acres, was first expropriated by the Department of Highways for the purpose of a new highway, and afterwards the Department expropriated the balance of the land.

The claimant offered in evidence certain records of sales of fruit and claimed by those records to have received over and above expenses about \$1,100.00 per year, and capitalized the value of his property on that basis. The Board was not impressed by these records. He also made up his valuation by placing a value on each of the trees on the property, and this method does not impress the Board.

C. M. Bonham, a witness for the claimant, although he never examined the property carefully, and went to the property out of curiosity when the Department started work, claimed the farm to be one of the best in the Niagara Peninsula, and attempted to prove its value by what he claimed were the returns on his own property. He agreed to produce his records showing his returns, but this has not been done.

M. H. Lounsbury, a Real Estate Agent and Valuator, from Hamilton, valued the property as follows: House, \$5,000.00, Outbuildings, \$1,000.00, Development, \$500.00, Land at \$1,000.00 per acre, \$5,000.00, planting at \$800.00 per acre in addition, \$4,000, a total of \$15,500.00. He did not place a value on either of the two classes of soil on the farm, nor on the different classes of trees or vines, or their condition. He had not sold land in the vicinity, nor did he know of any sales. His estimate of value was placed, as he says, by years of experience, but admitted that he had no experience in dealing with this class of soil and planting.

The Assessment on the property is for buildings \$1,600.00 and for land \$1,500.00 making a total of \$3,100.00.

For the Department, G. L. Sace valued the buildings at about \$4,000.00.

H. E. Rose, a Real Estate agent from St. Catharines, who has had many years of experience in buying and selling this class of land, valued the buildings at \$4,285.00 and the land at \$2,500.00. J. E. Stork valued the buildings at \$3,747.00 and the land as follows: 2½ acres at \$650.00, \$1,625.00, 2½ acres at \$400.00, \$1,000.00, being a total for land and buildings of \$6,497.00.

During the course of the hearing, the Board was asked by Counsel for both parties to view the property and we have the advantage of a personal examination. Although the greater part of the trees and vines had been removed, evidence was given, and not denied, that the part removed compared favourably with the part which had been left.

We also had the advantage of seeing the property to the north of the claimant's land, 5 acres purchased by the Department in 1937 for \$4,400 although the buildings on the land to the North do not compare with the claimant's buildings. We also saw the property to the south, which had planting very similar, and land very similar, but with buildings very much more valuable.

The law seems to be fairly well settled that:

"The value to be ascertained is the value to the seller of the property in its actual condition at the time of expropriation, with all its existing advantages and with all its possibilities, excluding any advantages due to the carrying out of the scheme for which the property is compulsorily acquired."

After hearing and carefully weighing the evidence adduced and after viewing the three properties mentioned, the Board finds that the value of the property of the Claimant taken by the Respondent, to the Claimant, including compensation for forcible taking, is in the sum of \$8,000.00.

There will be no Order as to costs other than the Board's fees for law stamps which is \$120.00.

Formal Order of the Board will issue upon the application of the Claimant in the sum of Eight Thousand Dollars (\$8,000.00) with interest at five per cent. (5 per cent) from date of taking to the date of payment, and upon payment by the Claimant of the said Board's fees for law stamps.

DATED at Toronto this 16th day of May, A.D. 1938.

H. J. Sims, Esq., K.C. Counsel for the Respondent

DECISION OF THE BOARD

THIS IS AN APPLICATION pursuant to Section 79 of "The Highway Improvement Act," (R.S.O. 1937, Chapter 56), and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on the 4th and 13th days of May and the 6th and 13th days of June, 1938.

The Claimant was the owner of a parcel of land on Highway Number 11, being part of Lot 16, Concession 15, in the Township of West Gwillimbury in the County of Simcoe. The said parcel situated at the south-east corner of the junction of No. 11 Highway and Highway No. 9, leading to Lake Simcoe on the east and Cookstown on the west, was composed of an area approximately 100 feet by 110 feet. Situated upon the parcel was a frame building wherein light lunches and refreshments, etc., were served, and whereat gasoline pumps were installed.

It was admitted by all parties that the respondent had expropriated a strip facing Highway Number 11, 21 feet in depth, and had deepened the roadway at this point with the result that the said refreshment booth and gasoline stand was left on the top of the bank approximately 6 feet above the new level of the road and consequently incapable of being used for its original purpose.

The Claimant gave evidence to the effect that she had acquired the property from her father in 1932, and had built thereon a frame building consisting of a lunch room and bedroom, and in addition a kitchen. The Claimant's husband and her infant son lived on the premises. In addition to the above, on the site three gas pumps were installed, and gasoline was sold. She claimed that the land in question was worth \$500, that the building, construction of drive-way, labour, miscellaneous expenses, bring the site to its state at the time of expropriation, and in the purchase of equipment, make a total of approximately \$2,000.00. The premises were kept by the claimant until the fall of 1936, when they were closed. She rented them in April of 1937 for \$200.00 and she stated that she had a later offer of \$300.00 for them. The Claimant also gave evidence that the receipts of the business exceeded disbursements annually in amounts ranging from approximately \$900.00 in 1932 to \$1,000.00 in 1936.

The claimant stated that J. E. Hendricks had asked her in 1935 if she would take \$3,000.00 for the place and that she had said "No." This was corroborated by the said J. E. Hendricks. The claimant's husband, C. H. Laycock, also gave evidence corroborating that of the claimant.

C. H. Knapton, valuator and builder, Toronto, stated that he believed the building to be worth \$800.00 apart from the value of the land.

G. M. Lister, valuator, Toronto, stated that he had known the property since 1933 and submitted photographs showing the premises before and after the completion of the highway work. He estimated the value of the premises as follows: Land, \$500.00, building \$800.00, roadway and work in connection with the pumps and moving of the signs \$269.00, total \$1,569.00, also equipment, trees, etc., \$357.50, for a final total of \$1,926.50.

The claim as filed by the claimant was \$2,000.00 for land and premises and \$1,000.00 for business loss.

On behalf of the Department of Highways, evidence was given by W. B. Coles, Township Assessor, to the effect that the land in question was assessed for \$50.00 and the buildings at \$250.00. He stated that the land was assessed at 100 per cent. and the building assessment was 50 per cent. of the value.

J. A. McMillan of Willoughby and Company, Real Estate Agents of Toronto, have his opinion that it was not a first class service station site having regard to the location, and also to the fact that there was no water or toilet facilities on the premises other than two outhouses located at the rear of the lot. He valued the land at \$100.00 and the buildings at \$500.00, for a total of \$600.00 before the taking, and stated that the expropriation of the 21-foot strip had reduced the value of the land and buildings to \$65.00, a loss of \$535.00. He gave evidence of value of certain other gas stations in the vicinity.

C. L. Syce on behalf of the Department of Highways valued the property at \$556.00. N. L. Richardson of the said Department, stated that the claimant had been offered \$800.00 on April 5th, 1938, which was refused. A later offer of \$1,200.00 had been made, but the same had been withdrawn before acceptance.

The Board after consideration of the evidence and after viewing the premises, is unable to agree with the claimant's contention. It was noted that no sales of comparable property were offered in evidence on her behalf, and the conclusion is that there were none to substantiate her claim. In the opinion of the Board there is no claim for loss of business at the time of taking, particularly since the claimant was not carrying on the business at that time. The Board is unable to agree with the claimant's contention that she should be compensated for her expenditure on equipment.

The Board is also unable to agree with the contention of the witness Lister that the value of the land apart from the building was in the sum of \$500.00, particularly since no evidence supporting this claim was offered.

The Board feels that the value of the property at the time of taking, was \$1,000.00 and since it is generally admitted that there was almost complete depreciation, it is prepared to Order that compensation be paid in the said sum of \$1,000.00, together with interest at 5 per cent. from date of taking to date of payment. In the opinion of the Board, the circumstances do not warrant the granting of 10 per cent. to the claimant for forcible taking. Each party shall pay its or her own costs.

Formal Order of the Board will issue upon application of the claimant, and upon payment of the Board's tariff fees for Law Stamps hereby set at the sum of \$25.00.

DATED at Toronto, this 29th day of September, A.D. 1938.

IN THE MATTER of "The Highway Improvement Act" (R.S.O. 1937, Chapter 56, Section 79) (formerly section 77a), and

IN THE MATTER of the Claim of Reeta Rogers for compensation against the Department of Highways of the Province of Ontario for an alleged damage to certain lands, being part of Lot 240 in the Township of Thorold in the County of Welland and compensation for loss of an exclusive right of way adjacent thereto.

J. W. McManamy, B.A. _____ Counsel for the Claimant
 H. J. Sims, K.C. _____ Counsel for the Respondent

JUDGMENT

This Application was heard by D. S. Charlton, and W. P. Near, Vice-Chairman and Commissioner of the Board respectively, at the Court House in the City of Welland, on Monday the 25th day of October, A.D. 1937.

The facts are as follows:

By instrument dated the 18th day of June, 1930, (being exhibit 2 herein), Milan A. Rogers, his wife Cora O. Rogers, joining to bar her dower and one Mary Rogers, a widow, joining to convey her interest, conveyed to Harry W. Rogers, who subsequently became the husband of the Claimant, a 45' x 150' parcel of land together with a right of way for the exclusive use of the grantee over the 35' parcel immediately adjacent to the above parcel on the west. The property in question is situated on the north side of the Thorold Road, now known as King's Highway No. 3, in the Township of Thorold, immediately outside the City limits of Welland, at a point approximately opposite the intersection of Niagara Street and the said King's Highway. The said Harry W. Rogers as Grantee, signed the conveyance.

The conveyance purports to be in pursuance of the Short Form of Conveyance Act, in fee simple, of the above 45' parcel, together with the 35' right of way. Then follows the habendum with reservations as usual to the Crown. In addition to the usual covenants are the following:—

- (4) "And the parties hereto do respectively covenant and agree with the other that they will observe the stipulations, instructions and provisions contained in the following covenants and that they will execute and have executed by the purchaser or purchasers a like covenant to the same effect in every conveyance by him, her or them respectively to any purchaser so that all persons hereinafter holding or claiming under the parties hereto shall be bound to observe the said covenant."
- (5) "The grantee covenants that the lands described shall not be used for any other purposes save the erection of a dwelling house or dwelling houses on the said lands and any proper garage or other buildings that usually go with a private dwelling house."
- (6) And the said Grantors covenant with the said grantee that they will not cut down trees on the said right of way
- (7) "And the said Grantee covenants with the said Grantors that if at any time the grantors decide to open the said right of way, together with the adjoining 31' on the west side of the right of way, as a public highway, then, on 30 days' notice and the opening of the highway, all the interest of the grantee in the right of way shall cease and terminate."
- (8) "The benefit and obligations of the covenants herein contained shall be binding upon the parties hereto, their heirs, executors, administrators and assigns."

Harry W. Rogers signed the conveyance as Grantee in the offices of Raymond, Spencer, Law & Burr, Solicitors, Welland, in the presence of the Grantors, and at that time asked the solicitors to hold the instrument. A few months later, he married the Claimant, went to the solicitor's offices and asked that the words "Reeta Rogers, wife of" be inserted above his own name in the Deed. This was done and initialled by one Jean Forres, a stenographer, who had witnessed the execution of the conveyance by Milan A. Rogers, and Cora, his wife, Mary Rogers, widow, and Harry W. Rogers on June 18th, 1930 and whose Affidavit of Execution had been sworn by Mr. Spencer on that date. Harry W. Rogers, husband of the Claimant then took the conveyance and registered it in the Registry for the Registry Division for the County of Welland on the 26th November, 1930, as No. 12444. Accordingly the registered owner of the property is Reeta Rogers.

A substantial house was built on the 45' parcel shortly after this, was lived in by the claimant and her husband until 1934, at which time it was rented to a tenant and has so continued to the date of the application.

In October, 1936, Milan A. Rogers sold to the Department of Highways a 66' strip of land composed of the 35' strip in question and an additional 31' strip immediately adjacent on the west, to be used as a Highway.

Notice, purporting to be in pursuance of the power in the conveyance was given by the Grantor, Milan A. Rogers, to the Claimant's Solicitor on the 27th April, 1936, although it is admitted that agents of the Department did enter upon the 35' right of way in September, 1936 and proceeded to cut down trees and to do other work thereon at that time. The Claimant accordingly asks compensation for:

1. Damages and depreciation to her house and land, being the 45' parcel purchased in 1930, upon which the house was later built.
2. For the loss of the said exclusive right of way over the 35' parcel.
3. For trespass by the agents of the Department over the said 35' parcel from the period of September, 1936, to May 26th, 1937, the said later date being one month after notice was first served upon the Claimant by Milan A. Rogers.

The Board has no hesitation in dismissing the Claimant's claim for damages to her own property, consisting of the original 45' parcel upon which a house was built as this parcel was untouched by the Respondent in its operations. It is no doubt true that the loss of additional grounds and trees and the shade afforded thereby, contained in the adjacent 35' right of way, makes the remaining property less attractive. The fact remains however, that the Claimant whom the Board is satisfied is the owner of the said 45' parcel by virtue of the 1930 conveyance, was given by that conveyance a "right of way—for the exclusive use of the Grantee—over and along the strip of land 35' wide"—"Nothing more, nothing less." The fact that she enjoyed for some years the privilege of the trees, shade and appearance next to her own property, by virtue of the covenant by the grantor, not to cut down trees, does not entitle her to compensation when the Grantor or an assignee of the Grantor is freed from the said covenant and ends the existence of the said privilege. The Board is furthermore of the opinion that the placing of a highway next to the claimant's land, but without any severance of same, does not in itself give rise to any claim for compensation.

The question of compensation for the loss of the right of way presents much more difficulty. It is contended by the Counsel for the Claimant that since the grantee did not sign the conveyance that she is not bound by the conveyance whereby it is stated that all interest of the Grantor shall cease on the giving of thirty days notice and that she is not bound in any event because the Grantor purports to derogate from his grant of an exclusive right of way.

The Board is unable to subscribe to this contention and believes the following statement from 3 C.E.D. 550, to be in point: "If the later clause does not destroy but only qualifies the earlier then the two are to be read together and the effect is to be given to the intention of the parties as disclosed by the deed as a whole."

The evidence of Harry W. Rogers, which he gave fairly and frankly, together with that of Milan A. Rogers, clearly established that there is no dispute as to what was in the minds of the parties at the time of the conveyance, and to allow a complete change to be made by one party substituting another for himself, after execution, and before delivery of any instrument would be in the opinion of the Board contrary to the established principles of equity. The claim for compensation for the loss of the right of way is accordingly dismissed.

The Claimant's claim for damages for loss of the use of her exclusive right of way over the period from September, 1936 to May 26th, 1937, is in the opinion of the Board to some extent justified. She was the sole person other than one by her permission, entitled to use the said right of way until her right was terminated in the manner provided in the conveyance and was entitled to the existence of trees on the said right of way until the covenant became inoperative. The giving of notice was the manner provided and it is admitted that this was not actually done until April 26th, 1937, to be effective May 26th, 1937. Accordingly the agents for the Department of Highways deprived the Claimant of an exclusive right of way to which she was entitled during the said period.

The Board is satisfied that the agents of the Department of Highways endeavored to the best of their ability and to a degree beyond that which they were obliged, to take care of the Claimant's own property in the course of the construction work. Aside from any such care that may have been taken however, the Claimant is entitled to the sum of \$100.00 as compensation for the loss of her exclusive right of way and the loss of the use of the trees during the above period.

The Board's Order will issue accordingly upon the application of the Claimant and payment of the Board's tariff fee of \$15.00 for Law Stamps.

The Claimant is entitled to payment of her solicitor's costs which are hereby fixed in the sum of \$65.00, including the fee of \$15.00 for law stamps on the Order to be issued as above stated.

P.F.A.-7186

IN THE MATTER of "The Highway Improvement Act" Section 79, Chapter 56, R.S.O. 1937

D. S. CHARLTON, ESQ.,
Vice Chairman,
W. P. NEAR, ESQ., B.A.Sc.,
Commissioner.

Saturday, the Fifth Day of
February, 1938.

BETWEEN:

LORETTA MAY MINNIE SHERIDAN,

Claimant.

—and—

HIS MAJESTY THE KING as represented by the
Honourable the Minister of Highways for the
Province of Ontario.

Defendant.

THIS matter coming on for trial the 17th day of December, 1937, before the said Board at a Sittings held at the City of Toronto in the presence of D. W. Lang, K.C., Counsel for the Claimant, and H. J. Sims, K.C., Counsel for the Defendant, upon hearing read the claim for compensation of the Claimant and hearing the evidence adduced and what was alleged by Counsel aforesaid, the Board was pleased to direct this matter to stand over for judgment and the same coming on this day for judgment.

1. THE BOARD doth order and adjudge that the Claimant be awarded the sum of Two Thousand Dollars as compensation for the lands and buildings thereon, the property of the Claimant, expropriated by the Defendant on the 18th day of July, 1936, such lands being all and singular that certain parcel or tract of land and premises, situate, lying and being in the Township of Trafalgar in the County of Halton and Province of Ontario containing by admeasurement one quarter of an acre be the same more or less being composed of part of an allowance for a road between the second and third Concessions and a part of Lot Number Thirty-one in the Third Concession south of Dundas Street in the said Township of Trafalgar and is butted and bounded as follows: Commencing at the intersection of the north-westerly limit of the road allowance between the second and third concession with the top of the north bank of the twelve mile creek; thence north thirty-eight degrees east one chain and sixty links more or less to the allowance for road between Lots Number Thirty and Thirty-one; thence south forty-five degrees east along the said allowance for road two chains and sixty-nine links; thence south thirty-eight degrees west twenty-five links to the top of the northerly bank of the twelve mile creek; thence westerly following the said top of the north bank of the twelve mile creek to the place of beginning. The amount as aforesaid is to include compensation for forcible taking.

2. AND THE BOARD doth further order and adjudge that the Defendant do pay the Claimant interest on the said sum of Two Thousand Dollars at the rate of five per cent. per annum from the 18th day of July, 1936, until payment thereof.

3. AND THE BOARD makes no Order as to costs.

(sgd.) D. S. CHARLTON,
Vice Chairman.

P.F.A.-7457

IN THE MATTER of "The Niagara Parks Act," (R.S.O. 1937, Chapter 93, Section 6).

AND IN THE MATTER of "The Public Works Act" (R.S.O. 1937, Chapter 54, Section 28).

AND IN THE MATTER of the Expropriation by the Niagara Parks Commission of part of Lot No. 17 in the Township of Niagara, in the County of Lincoln, Province of Ontario.

BETWEEN:

CLARK SHIPSTON,

Claimant,

—and—

THE NIAGARA PARKS COMMISSION

Respondent.

A. L. Reid, Esq., K.C.,

A. L. Brooks, Esq., K.C.,

G. W. Mason, Esq., K.C.,

Counsel for the Claimant.

Counsel for the Respondent.

In the year 1928, the Niagara Parks Commission expropriated part of Lot Number 17 in the Township of Niagara in the County of Lincoln and Province of Ontario, described as follows:

"COMMENCING at the point of intersection of the southerly boundary of Lot 17 with the easterly boundary of the proposed Niagara River Parkway. THENCE North 88 degrees and 52 minutes East, 106 feet to the westerly boundary of the Chain Reserve along the Niagara River. THENCE Northerly in and along said boundary of the Chain Reserve to the boundary between the lands herein being described and the lands of W. G. Moncrief. THENCE South 88 degrees and 30 minutes West in said last mentioned boundary 148 feet to the easterly boundary of the proposed Niagara River Parkway. THENCE along a curve to the left, having a radius of 758 and 38 hundredths feet. THENCE South 12 degrees and 5 minutes East in the boundary of the said Parkway, 580 and 97 hundredths feet. THENCE along a curve to the left, having a radius of 754 and 76 hundredths feet, 81 and 87 hundredths feet more or less to the point of commencement."

the part being expropriated containing about two and one-half acres and being the property of Clark Shipston, the Claimant. The fixing of the compensation to be allowed to the Claimant was referred to this Board and came up for hearing at the Court House, in the City of St. Catharines on the 29th and 30th days of June, A.D. 1937.

The Claimant purchased the whole farm containing 84 1-3 acres in the year 1920 for the sum of \$12,000, the property having been first offered for sale under his mortgage and afterwards purchased by the Claimant. The price paid is not an indication of the real value of the said farm.

The Claimant said that he had purchased the land with the idea of making it into a gentleman's estate, and that he intended to build three houses along the bank of the river, on the east side of the road, which is now taken over as a highway and belongs to the Niagara Parks Commission. The farm is beautifully situated, the main part of the farm with buildings being on the west side of the roadway, and the land expropriated on the east side of the roadway. Of this two and one-half acres, not more than one-half acre is level land on a level with the roadway, and on no part of this one-half acre is there sufficient room to build a house. The rest of the land slopes gradually to a chain reserve along the Niagara River, and from the chain reserve easterly there is a marsh filled with reeds extending out into the river. When examining the property, the Board noticed that some person had cut a way through the reeds out into the river so as to move a boat back and forth.

The Board is of the opinion that it would be impracticable for anyone to satisfactorily build a house on the slope, and if a house sufficiently high so as to get the benefit of some breeze were built, it would be of very great detriment to the value of the land owned by the Claimant on the west side of the road.

In 1922, the house on the farm situated on the west side of the road, was burned down. At the time there was a mortgage for some \$10,000 against the property. The Claimant built a new house at a cost of about \$11,000, but he built it on the west side of the road. He says that this was built for the farmer.

R. B. Irwin, a civil engineer called by the Claimant, said that it would be physically possible to build a house below the bank but he would advise heavier sills and reinforcements so as to provide against slipping. Messrs. Trapnell and Craise, both called by the Claimant, visited the property and made their valuations together, and as a result, their valuations are identical. They valued the 84½ acres at \$24,140 before the expropriation. After the expropriation they valued the balance of the land at \$19,300 leaving \$4,840 as the value of the land expropriated. They then claimed that the 11 acres along the front of the remaining land, had been depreciated \$2,000 by reason of the land across the road being taken away. We do not follow the reasoning of these witnesses in this matter, as if the value after expropriation was \$19,300, the difference would include the \$2,000. These two witnesses also claimed that the land expropriated was worth \$400 an acre and that the trees increased the value of this land by \$1800. These witnesses also said that they would not place any value on this property as building sites. They admitted that the scenic beauty which it added to the property on the west side of the road, has lost no value in being expropriated by the Commission. They also admitted that by reason of the expropriation by the Niagara Parks Commission for the purpose of a park, the owner of the property on the west has benefitted by reason of the fact that he would not have to pay taxes on this land, that the land will be kept clean and cared for at no expense to him, and that he will still have the benefit of the scenic beauty of the trees and the river beyond.

The Board had the privilege of seeing the land in question, and saw that there were no trees on the portion of the land expropriated on a level with the roadway, but that there were some fine trees on the bank, the tops of which showed from the roadway.

Mr. Rose called by the Respondent, says that he purchased the balance of the property on the east side of this highway for the Department in 1926, that he valued the land at \$200 an acre, that in some cases the properties were much more valuable than the property of the Claimant by reason of the greater width on the level with the roadway, and although he in some cases paid more than \$200 per acre, such amount was paid for the purpose of getting rid of expropriation proceedings and the cost of arbitration. Mr. Rose has had a great deal of experience in purchasing and selling lands of a similar character.

Mr. Stork who has also had a great deal of experience in this class of property, places the value at \$330 per acre because that was the average paid for lands along the east side of this road, but he said that he would not have placed this price on the lands had it not been for the prices paid for the other lands.

Mr. Richardson who has been the purchasing agent for the Department of Highways for many years, on June 23rd, 1938, made an offer of \$1150 for the property. That offer has not been withdrawn and although the Board feels that it is more than should be allowed for the property, the Claimant will be allowed the sum of \$1150 with simple interest from the date of expropriation at the rate of 5 per cent.

There will be no costs of the arbitration to either party.

Formal Order of the Board will issue upon the application of the Claimant, and upon payment by the respondent of the said Board's fees for law stamps.

DATED at Toronto this 2nd day of August, A.D. 1938.

MAINTENANCE OF BRIDGES

P.F.A.-6832

IN THE MATTER of Section 458 of "The Municipal Act," and
 IN THE MATTER of Section 5 of "The Township of East York Act,
 1937," being Chapter 88, Ontario Statutes, 1937, and
 IN THE MATTER of the Application of the Corporation of the Town-
 ship of East York for a declaration that the "East York-Leaside Via-
 duct" shall be assumed by the County of York as a County Bridge, or
 failing such declaration, for the fixing by the Board of the proportions
 of the cost of maintenance as between the Township of East York and
 the Town of Leaside.

J. Earl Lawson, K.C.	Counsel for the Township of East York
J. D. Lucas	Counsel for the County of York
H. E. McKittrick	Counsel for the Town of Leaside

 DECISION OF THE BOARD

This Application was heard by D. S. Charlton, and W. P. Near, Vice-Chairman and Commissioner of the Board respectively at the Board's Chambers on Monday the 29th day of November, 1937. Subsequently representations were made to the Board that there was a possibility of the parties hereto reaching an agreement. No such agreement has been forthcoming and the Board is accordingly issuing its Decision.

The bridge in question was built in 1927 under the provisions of "The East York-Leaside Viaduct Act" whereby the Town of Leaside, the Township of East York, the City of Toronto, the York Land Company, the Province of Ontario and the County of York agreed and were authorized to provide moneys in varying amounts for the construction of same. Whether by inadvertency or intent, no provision was made for maintenance.

In 1937 steps were taken by the Applicant to obtain legislation requiring the Town of Leaside to contribute to the cost of maintenance of the bridge. This was granted in "The Township of East York Act, 1937," Chapter 88, Section 5, the proportionate contribution to be determined by the Board.

However, by subsection 3 of section 5, it was expressly provided as follows:—

"Notwithstanding the provisions of section 458 of The Municipal Act any application by either the corporation of the town of Leaside or the corporation of the township of East York for the purpose of having the said viaduct, subway and undertaking or any part thereof declared to be a county bridge shall be made to the Ontario Municipal Board and not to a judge of the county court of the County of York, but otherwise the provisions of the said section shall apply as if the same provided for applications thereunder being made to the said Board."

Accordingly, the present application by the Township is in the alternative, firstly to have the bridge declared a county bridge under the provisions of section 458 of "The Municipal Act" 1927, as varied by section 5, subsection (3) of the said "Township of East York Act, 1937" chapter 88 and failing that for an Order pursuant to section 5, subsection (1) of the said "Township of East York Act," declaring the proportions in which the cost of maintenance shall be borne by the applicant corporation and the Town of Leaside, the only two corporations or parties recited therein.

Section 458 of "The Municipal Act" R.S.O. 1927, Chapter 233 (now R.S.O. 1937, Chapter 266, Section 469) subsections 1-5 inclusive, is as follows:

(1) A bridge of a greater length than 300 feet in a town having an equalized assessment of less than \$1,000,000 or in a township may, on the application of the council of such town or township, be declared to be a county bridge where

- (a) It is used by the inhabitants of other municipalities.
- (b) It is situate on an important highway affording means of communication to several municipalities; and
- (c) On account of its length and for the reasons mentioned in clauses (a) and (b), it is unjust that the burden of maintaining and repairing it should rest upon the corporation of the town or township.

(2) An Order declaring the bridge to be a county bridge may be made by a judge of the county court of the county in which it is situate, on the application of the council of the town or township.

(3) Notice of the application shall be served on the corporation of the county, at least thirty days before the day on which it is to be made.

(4) Each corporation shall be entitled to be represented by counsel on the hearing of the application, and the evidence may if the judge sees fit, and shall if either party so requests, be given under oath.

(5) If the judge is of the opinion that for the reasons mentioned in subsection 1, the bridge should be declared to be a county bridge, he shall by his order so declare, and in that case he shall determine whether the expense of maintaining and repairing the bridge shall be borne by the corporation of the county or partly by it and partly by the corporation of the town or township, and if he determines that it should be born partly by each, he shall fix the proportions in which the expense is to be so borne, and his declaration and the determination shall be embodied in the order.

Notice was duly served and the application came on for hearing on the date recited above. Evidence for the applicant was given by R. J. G. Jack, Commissioner of Works for the Township of East York. The original plans, estimate of costs, actual costs, with the amounts contributed by the various parties and a census of traffic, together with an estimate of maintenance costs, were filed by him.

On cross-examination by Counsel for the County he admitted that the applicant had been the originating party in the building of the bridge, but contended that it was so only in a technical sense and that the bridge had been built as the result of an agreement and that the applicant was the vehicle by which the agreement was carried out.

Evidence was given by D. E. Crawford on behalf of the Town of Leaside that he had taken a traffic count and that he had subsequently ascertained the place of registration of the vehicles in the count. This was taken on the 8th and 9th of October, 1937 and was as follows:

City of Toronto	67.90%
Township of East York	11.00%
Town of Leaside	5.59%
Township of Scarborough	1.99%
Township of York	1.80%
Township of North York	1.20%
Village of Forest Hill84%
Other parts of County of York ...	2.40%
Other parts of Ontario	8.00%
Outside Ontario48%

H. C. Rose and R. W. Phillips gave evidence on behalf of the County, including the dimensions of the bridge, approaches and circumstances surrounding the originating of the building of the bridge.

It was argued by Counsel for the applicant and by Counsel for the Town of Leaside that the requirements set out in section 458 (1) of "The Municipal Act" namely:

- (a) It is used by the inhabitants of other Municipalities;

- (b) It is situate on an important highway affording means of communication to several municipalities; and
- (c) On account of its length and for the reasons mentioned in clauses (a) and (b), it is unjust that the burden of maintaining and repairing it should rest upon the corporation of the town or township.

had been shown to exist.

Counsel for the County submitted that this was not the case and that section 51 of "The Local Improvement Act" was a bar to the relief argued under section 458 of "The Municipal Act."

The Board is unable to agree with the said submissions of Counsel for the County and agrees with the contention of Counsel for the Applicant and the Town of Leaside.

In the Board's opinion the situation described in section 458 (a), (b) and (c), of "The Municipal Act" has been established and accordingly is prepared to declare the same a County bridge and Order that the expense of maintaining and repairing the bridge shall be wholly borne by the Corporation of the County of York.

The Board having granted the application under section 458 of "The Municipal Act" as varied by section 5 (3) of "The Township of East York Act" (S.O. 1937), the alternative application under the said Act is automatically withdrawn.

Formal Order will issue upon the application of the applicant and upon payment of the Board's tariff fees for Law Stamps in the sum of \$25.00.

There will be no order as to costs herein.

IN THE MATTER of "The Municipal Act" subsection (3), Section 348,
(R.S.O. 1937, Chapter 266)

BETWEEN:

THE CORPORATION OF THE VILLAGE OF FOREST HILL

Applicant,

—and—

W. R. WORTHINGTON et al, and THE TRUSTS AND
GUARANTEE COMPANY, (TRUSTEE OF SAVOY
GARDENS LIMITED)

Respondents.

Melville Grant, Esq., K.C., Counsel for Applicant
 Egerton Lovering, Esq., K.C., Counsel for Respondents (W. R. Worthington et al)
 Grant Gordon, Esq., Counsel for Trusts and Guarantee Company
 H. G. Angar, Esq., K.C., Counsel for Lillian Lucas

This is an application to repeal by-law number 578, passed on the 23rd day of July, 1931, and is made pursuant to Section 348 (3) of "The Municipal Act" which reads as follows:

"Such by-law shall be binding upon the corporation and shall not be repealed or altered except by a vote of two-thirds of the members of the council and with leave of the Municipal Board, such leave to be granted the corporation only for exceptional reasons not apparent or existing when the by-law was passed and after hearing the owners of the lands proposed to be taken and on such terms as the Board may determine in regard to the revesting of the land taken and the payment to each owner of the damages, if any, sustained by him in consequence of the passing of the by-law or of so much of the by-law as is proposed to be altered and his costs."

The facts are as follows: The said by-law was passed on the above date, whereby certain lands were expropriated for the purpose of establishing a highway between Eglinton Avenue and Bathurst Street from a point in Eglinton Avenue due north of Vesta Drive. The Corporation, by virtue of the power authorized by Section 348 of "The Municipal Act" provided that entry thereon be deferred to the 24th of July, 1934.

The project has not been proceeded with by the Corporation and it now asks that the Board consent to repeal of the said By-law upon such terms as to compensation as the Board may direct, pursuant to "The Municipal Act," Section 348, Sub-section 3.

Counsel for the applicant admitted that the Board's power to allow repeal could be exercised only when it was able to find "exceptional reasons, not apparent or existing when the by-law was passed," for such repeal. It was contended that the subsequent and present existence of a highway from Eglinton Avenue to Bathurst Street via Mayfair Road and Shallmar Boulevard, which route was made possible by the removal of the Bridge over the Belt Line Railway, on Bathurst Street, was one factor which would bring the application within the said subsection (3). It was also put forward that the Corporation did not now wish to undertake the expense involved and were not now as able to do so financially as at the time of the passing of the by-law.

Counsel for the respondents contended that neither of the above mentioned conditions were "exceptional reasons not apparent or existing when the by-law was passed." It was also stated that arbitration proceedings were commenced between the parties and compensation would be payable by the Corporation in any event, in one case by the award of the Board of Arbitrators appointed pursuant to section 348 (12) of "The Municipal Act" and in the other case, by the Board, as provided in section 348 of the said Act.

The Board after due consideration is, however, unable to find that the submission of the applicant brings it within the section and accordingly would dismiss the application.

Formal Order of the Board will issue upon application of any one of the Respondents, and upon the payment of the Board's fee of \$15.00 for law stamps.

Costs in the said sum of \$15.00 to the Respondents.

DATED at Toronto this 4th day of May, A.D. 1938.

ASSESSMENT APPEALS

P.F.A.-7245

IN THE MATTER of Section 84 of "The Assessment Act" (R.S.O. 1937, Chapter 272)

BETWEEN:

DENTON MASSEY, et al,

Appellant,

—and—

THE CORPORATION OF THE TOWNSHIP OF EAST YORK

Respondent.

(Appeal re Crescent School Property)

H. E. Manning, K.C..... Counsel for Appellant
K. V. Stratton, K.C..... Counsel for Respondent

DECISION OF THE BOARD

This is an appeal from the Decision of His Honour, Judge Barton, wherein he reduced the assessment on the property known as Dentonia Park from \$38,100.00 on the land and \$40,000.00 on the buildings, to \$25,400.00 on the land and \$25,000.00 on the buildings. The total present assessment is accordingly \$50,400.00.

The facts are unusual, in that although the property in question is used for school purposes, and ordinarily would be exempt from taxation, it is decreed by the Township of East York Act, 1937, that the said property shall not be so exempt.

The evidence showed that the property consisted of twenty-five acres and an expensive building which was formerly used as a private house.

After duly weighing argument ably put before the Board by both Counsel, the Board is unable to find that the present assessment of \$50,400.00 is excessive and accordingly the appeal is hereby dismissed.

Chapter 272)

BETWEEN:

FORT WILLIAM COAL DOCK COMPANY, LIMITED

Appellant,

—and—

THE CORPORATION OF THE CITY OF FORT WILLIAM,

Respondent.

ASSESSMENT APPEAL

J. L. McComber, Esq. Counsel for Appellant
F. R. Morris, Esq., K.C. Counsel for Respondent

This is an Appeal by the Fort William Coal Dock Company, Limited, from the Judgment of His Honour Judge McKay, County Court Judge, confirming the Judgment of the Court of Revision, before this Board at Fort William on Wednesday, the 22nd day of June, 1938.

The Company was assessed for a block of land on the Mission River having an acreage of 12.93 acres and a frontage on the river of 600 feet, another block of land on the Mission River containing 19.63 acres, and for additional leased lands to the rear of the River Frontage containing 8.33 acres. The Company carries on a business as a forwarder of coal, and in connection with their business have coal docks, power house, power machinery, oil tanks, railway sidings and railways, and other buildings for offices, workshops, etc.

Evidence was given on behalf of the Company by Mr. S. R. Freed, the manager of the company since 1936, who explained to the Board the holdings of the company and the business carried on. In cross-examination he admitted that the original cost of the plant and buildings as of December, 1932, was \$1,269,944.50, and that on May 10th, 1933, an option was given for \$265,000.00 for the plant. The option was not exercised, and in 1937 a new dock was built at a cost of \$49,147.00. The Company has free switching to both railways. H. Kirk, the superintendent of docks for the company, explained the construction of the docks and that they were in a poor condition. Williamson, an electrician, spoke of the generators and convertor being not modern, and some of them being worn out, but none of these witnesses spoke of the value of the premises, or gave any figures as to the present day value. The only evidence offered as to value by the company, was by N. T. Owens, a real estate operator, who said that the property was not easily accessible for the workmen, and that the buildings and docks were not in good repair, that there was no market for industrial properties today, but that in his opinion by reason of the fact that many industrial properties and sites for industrial purposes, were being taken over by the different municipalities for taxes, that in his opinion the property was worth not more than \$800.00 per acre. He had nothing on which to base the value he placed on these lands. The Company did not give any evidence as to the value of the buildings so that the appeal so far as the assessment of the buildings at \$45,000.00, must be dismissed.

For the defence, G. R. Davidson, an electrical engineer and licensed realtor, residing and carrying on business in Fort William, gave evidence as to some sales of properties between 1935 and the present time, showing that the price received for industrial sites in and around Fort William, was around \$1000.00 per acre. He gave a list of sales and his evidence by reason of the fact that he referred to sales of properties in the neighborhood within a reasonable time before the appeal came on before this Board, has been given much weight by the Board. He says that the property in question is worth \$13.00 per foot frontage or \$750.00 per acre. The assessment for 32.56 acres owned by the company, and for 8.33 acres leased by the company on which they have agreed to pay the taxes, is \$28,000.00, and the Board finds that the assessment under the circumstances must be confirmed and the appeal dismissed.

There will be no costs to either party.

P.F.A.-7451

IN THE MATTER of Section 84 of "The Assessment Act," (R.S.O. 1937,
Chapter 272)

BETWEEN:

THE OSHAWA RAILWAY COMPANY,

Appellant,

—and—

THE CORPORATION OF THE CITY OF OSHAWA,

Respondent.

J. P. Pratt, Esq., K.C. Counsel for the Appellant

T. K. Creighton, Esq. Counsel for the Respondent

DECISION OF THE BOARD

AN APPEAL by the Oshawa Railway Company from the Judgment of His Honour Judge Coleman, Judge of the County Court of the County of Ontario, dated the 6th day of April, A.D. 1938. The Appeal came on for hearing before this Board on Tuesday, June 7th, 1938, at the City of Oshawa.

The Appellant's main contention was in regard to the assessment, first, of the property on Hillcroft Street which was assessed at \$79,590, made up as follows:

Land	\$ 3,375.00
Buildings	60,300.00
Business	15,915.00

and secondly the property on Simcoe Street which was assessed at \$53,130.00 made up as follows:

Land	\$ 30,700.00
Buildings	22,420.00

In 1936 the assessment of the Hillcroft property for 1937 tax year was \$38,925.00 made up as follows:

Land	\$ 2,600.00
Buildings	28,540.00
Business	7,785.00

there having been an increase on the assessment of the land in 1937 of \$775.00, and an increase in the assessment of the buildings for 1937 of \$31,760, and the resulting statutory increase on business assessment of \$8,130.00. The assessment on the Simcoe Street property in 1936 for the 1937 tax year, was for:

Land	\$ 20,420.00
Buildings	11,875.00

being an increase in 1937 over 1936 on the assessment of the land of \$10,280.00 and an increase in the assessment of the building of \$10,545.00.

The appellant contended that part of the Simcoe Street property should not have been assessed as it does not come within the exception of station, freight sheds, offices, warehouses, elevators, hotels, round houses and machine repair and other shops, and contends that the rooms now being used as a store room, crew room, sub-station, section used for storing spare equipment, the basement of the sub-station, boiler room, vault for storage purposes, and basement of the store room, are exempt. The building on Simcoe Street in which most of these rooms referred to by the appellant, are contained, is used as a station, freight shed, offices, machine shop, and some parts of it are being rented to other corporations, and the Board finds that they are not exempt from taxation.

It was contended by the appellant that as the buildings had been assessed in 1936 for 1937 taxes, no change could be made until 1941 by reason of Section 44 of

The Assessment Act, (R.S.O. 1937, Chapter 272). The reason for claiming that the five year period should start at 1936 instead of at some earlier time, was not given by the appellant. The Board is unable to agree with the contention of the appellant on this point.

The respondent claims that the appellant was not justified on its appeal in tendering evidence as to value, by reason of the fact that in its appeal from the Court of Revision to the County Judge, no evidence was offered as to value, and that the whole appeal was put in by written argument for both the appellant and respondent. With this contention the Board is unable to agree and holds that the appeal both to the County Judge and to this Board, is in the nature of a new trial, that the appellant is not limited to use of the witnesses which it tendered on any of the proceedings, and that it is allowed to tender such evidence as may be advised, on any of the appeals from the assessment.

The appellant also contends that the building situate on the Hillcroft property, is not suitable for the present operations. It was built in 1929 at a cost exceeding \$81,000. There is no doubt that during the past few years at least, some of the traffic on which the company depends has fallen off by reason of existing conditions, but the building is still used for the purposes for which it was built.

The appellant called, as his first witness, Mr. Luke, an assessment commissioner for the City of Oshawa, who in 1937 had been engaged by the City of Oshawa with others, to equalize the assessment in Oshawa. These commissioners did their work in 1937, and their report was made to the council before the assessment for 1938. In reviewing the evidence of Mr. Luke, it must be kept in mind that although he was assessment commissioner for Oshawa, he was called as a witness for the appellant, and as such witness gave his opinion as to the valuations of other properties in the vicinity of both of the appellant's properties, and the valuation of the properties in question. He said, "there has been few sales of land in the business section of Oshawa for some years," and that he arrived at the valuation of the appellant's property by a process of deduction, by capitalizing the building from the rent basis, sales of property and tracking them down, and says that the valuations finally arrived at, were made by the Board of Assessors comprised of Joseph B. House of the Citizen's Research Institute, and two other men including the Number One real estate man of Oshawa. He says that in some sections of the City of Oshawa, properties were being assessed at from 45% to 50% of what the property was selling for, and that the prosperity of Oshawa is influenced more or less by the prosperity of one or two industries. In his opinion, the value of the Hillcroft building to the company would be \$60,300. The Board was very much impressed by the manner in which he and the other assessment commissioners had fixed the valuations in the City of Oshawa, and the details given by him.

Mr. McLaughlin, called by the appellant, a real estate broker and valuator of the City of Toronto, valued the Hillcroft property as being a building which must be converted into a manufacturing building at much expense, as did Mr. R. S. Disney, who was called by the appellant.

The witnesses called by the respondent, upheld the evidence given by Mr. Luke as to valuation.

The Board finds that the appellant has not satisfied the Board that the assessment is too high, and the appeal is therefore dismissed.

P.F.A.-7270

IN THE MATTER of Section 84 of "The Assessment Act" (R.S.O. 1937, Chapter 272), and

IN THE MATTER of the Appeal of the Hon. G. N. Gordon, K.C., a rate-payer of the City of Peterborough, against the assessment of the DeLaval Company, Limited for the year 1937.

Hon. G. N. Gordon(Appellant) in person
 J. R. Corkery Counsel for the City of Peterborough
 F. D. Kerr, K.C., and
 H. J. McLaughlin Counsel for the Respondent

JUDGMENT

The grounds of the appeal are as follows:

1. That the assessment is too low,
2. That the by-law purporting to give a fixed assessment to the said company is a renewal of a fixed assessment and is contrary to the provisions of "The Assessment Act" and "The Municipal Act."

On the 15th day of November, 1912, a by-law of the City of Peterborough, numbered 1697, was passed with the assent of the ratepayers, granting to the DeLaval Dairy Supply Company, Limited, the sum of \$19,500.00, aid in purchasing land for the site for the company and granting exemption from taxation (except School taxes and Local Improvement rates) for ten years.

On the 5th day of February, 1923, a By-law of the City of Peterborough numbered 2445 was passed with the assent of the electors, granting a bonus by way of fixed assessment for the sum of \$50,000.00 to the DeLaval Company, Limited, the successor of the DeLaval Dairy Supply Company, Limited, for the term of ten years. The company agreed to erect a building 100' x 40'.

On November 3rd, 1932, just prior to the expiry of By-law No. 2445, the DeLaval Company applied to the Corporation in writing "for an extension of the present fixed taxation basis of the Company."

On the 6th day of February, 1933, By-law No. 3053 of the Corporation was passed with the assent of the electors granting to the company a fixed assessment for ten years at the sum of \$60,000.00.

It was argued before this Board that the Company would increase the number of men employed, would purchase new machinery and perform certain other matters for the benefit of the City, in consideration of the granting of this fixed assessment.

The Assessment Roll of the City for the year 1937, shows for the said Company, assessment of land \$18,000.00, assessment of buildings \$121,000.00, being a total of \$139,000.00. The total amount of real taxable property is \$60,000.00, total for schools only, \$79,000.00, business assessment \$83,400.00. The appellant appealed against the assessment of \$60,000.00 as the total amount of real taxable property. The Court of Revision dismissed his appeal and he appealed to the Judge of the County of Peterborough and his appeal was again dismissed and he then appealed to this Board.

Counsel for the City of Peterborough and Counsel for the Company, argued that there was no jurisdiction in the Court of Revision or the County Judge or this Board to hear the appeal at the present time. The Court of Revision held that the Appellant should not have appealed to the Court of Revision and part of their Judgment reads as follows:

"Counsel for the Company and for the Municipality specially bring to the Court's attention Sections 86 and 238. These should be examined. Section 86 reads as follows:

"It is hereby declared that the court of revision, the County Judge, the Railway and Municipal Board, and every court to which and every Judge to whom

an appeal lies under this Act have jurisdiction to determine not only the amount of any assessment, but also all questions as to whether any persons or things are or were assessable or are or were legally assessed or exempted from assessment."

"It would appear, keeping in mind the history of the legislation contained in Section 86, that it gives wide powers to the court of revision, but when it is read in conjunction with Section 238 which enacts that this Act shall not affect the terms or any agreement made with a municipal corporation, of any by-law heretofore or hereafter passed by a municipal council under any other Act for fixing the assessment of any property, or for commuting or otherwise relating to municipal taxation, it appears evident that it cannot be read to give to this Court any power beyond that of interpreting such a by-law and the cases submitted by the applicant, especially *Pringle vs. Stratford* (20 O.L.R. page 246), go no further than to show that the court of revision may interpret or construe such agreements or by-laws. But I can find nothing in the cases submitted to suggest that this court has power to declare a by-law or any part thereof invalid, and it would appear that the remedy of the applicant lies elsewhere than in an application to the court of revision. In view of the foregoing, I have therefore come to the conclusion that the by-law must be recognized as binding upon this court and accordingly find that the assessment must be confirmed. Taking this view it is unnecessary to deal with other matters raised in this appeal."

"By-law" referred to in Section 238 means a By-law which is within the powers of the Council. A By-law which goes beyond the jurisdiction of the Council is not a By-law within the contemplation of this section.

The County Judge in his Judgment held that there was no jurisdiction in the Court of Revision to hear the appeal and if there was no jurisdiction in the Court of Revision, he had no jurisdiction and dismissed the appeal.

R.S.O. 1937, Chapter 266, Section 405 (1) (a) reads:—

"The fixed assessment shall not be for a longer period than ten years, shall not be renewable etc. etc. . . ."

Bonuses can be given only under statutory authority and the By-law passed in 1922 as well as that passed in 1932, if they are renewals of the fixed assessment were ultra vires. I find that the by-laws were renewals, that in 1932 the company asked for a renewal of its fixed assessment and that the By-law in fact granted a renewal and is therefore ultra vires and void.

Manning in his work on Assessment, on page 208, says:—

"In Ontario, municipalities are permitted by the Bonus Limitation Act to grant exemption from taxation by way of fixed assessment only to manufacturing businesses for a period not longer than one term of ten years."

Although the company had given some extra consideration for each of the renewals, they were renewals of exemption from taxation.

It was argued by the Respondent that the Appellant should not have appealed the assessment, but should have brought an action for a declaration that the assessor should have assessed the property of the DeLaval Company at the additional amount of his valuation and that there was no power for the Court of Revision to deal with this question.

The Board is unable to agree with this contention. The Court of Revision must deal with the question when raised of appeal. The case of *Pringle vs. Stratford* (20 L.R. Page 246), in the Board's opinion, decides that the proper manner of attacking an improper assessment is not by action brought for a declaration, but by notice of Appeal as was done by the Appellant in this case.

Pringle vs. Stratford was an appeal by ratepayers on a question as to whether school taxes were exempt under an agreement, which agreement had been ratified by a Private Bill of the Legislature. An action had been brought for a declaration that the property in question should be assessed for school purposes.

Mr. Justice Osler at page 255 says:—

"Having regard to secs. 57, 62 and 65 of the Assessment Act, relating to the constitution of the Court of Revision and its duties, and the right of a municipal elector to complain of the wrongful omission of any person from the assessment

roll, and the procedure provided for the trial of complaints, I think that, if I had been trying this case alone, I should have held that the plaintiff was bound to resort to the summary method of procedure provided for by the Act: *Barracough v. Brown* (1897) A.C. 6.15, *Attorney-General v. Cameron* (1899), 26 A.R. 103; *Canadian Land and Emigration Co. v. Municipality of Dysart* (1885), 12 A.R. 80, 83; *Grand Junction Waterworks Co. v. Hampton Urban District Council* (1898) 2 Ch. 331; *Offin v. Rochford Rural District Council*, (1906) 1 Ch. 342; and similar cases. Clearly, in an action constituted as the present, the utmost relief the plaintiff could have would be a declaration of the true construction of the Act and by-law, as the council does not directly assess and levy the rate. My learned brothers, or a majority of them, are of the opinion that having regard to the discretionary power reposed in the Court as to making declaratory orders, the present is a proper case in which to make one."

and Mr. Justice Garrow in page 260, says:—

"It was contended before us that the plaintiff's proper remedy was by an appeal to the Court of Revision. Such an appeal might no doubt have been taken by him or by any other ratepayer. But that, I think, was not his only remedy. He had also, I think, a right as a ratepayer to obtain a declaration in the ordinary Courts such as he seeks in these actions of the true meaning and construction of the several documents under which the exemptions in question are claimed."

Mr. Justice Meredith at page 261 says:

"Taking this view of these cases, it becomes unnecessary to consider whether actions, such as these, lie, or, if so, the nature and extent of the relief which could be given in them: though I must say that, at present, I fail to understand what right the Courts have to overrule, or dictate to, the special tribunals created for the purpose of dealing with all matters of assessments for taxation, except upon an appeal, from such tribunals, in the manner prescribed by law; or why any of such tribunals should be bound by any "Declaratory" judgment, such as this."

Pringle vs. Stratford holds that the Court of Revision should have decided whether the property was exempt from the payment of School Taxes, and to do this it would be necessary to construe the By-law. If the Court of Revision has such power, then it necessarily has power to decide whether, in effect, the Municipal Council had jurisdiction to exempt the property from the payment of School rates. The Board finds that the Court of Revision has jurisdiction to decide whether the Council has jurisdiction to grant a Renewal of Exemption from Taxation in the face of legislation limiting the jurisdiction to grant exemption for ten years and "shall not be renewable," and that the Court of Revision and the County Judge should have found that the By-law was ultra vires.

The Board would allow the appeal and directs that the DeLaval Company, respondents herein, be assessed as follows:

Land	\$ 18,000.00
Buildings	121,000.00
Business	83,400.00
TOTAL	<u>\$222,400.00</u>

The City of Peterborough shall pay the costs of the appellant after taxation thereof, on the Supreme Court scale, by the taxing officer at Osgoode Hall, including the Board's fee of \$15.00 for Law Stamps paid by the appellant on issuance of appointment herein.

Formal Order of the Board will issue upon application of the appellant.

ASSESSMENT APPEAL

Re 152-158 Yonge Street and 11 Richmond Street West, Toronto

T. H. Wickett Counsel for Appellant
F. A. Campbell Counsel for Respondent

DECISION OF THE BOARD

This is an Appeal from the Decision of the County Court Judge upholding the assessment by the Court of Revision on the land and buildings known as 152-158 Yonge Street and 11 Richmond Street West, Toronto, which was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on the 13th day of April, 1938.

Evidence was presented by George A. Lister and Miss J. Connolly on behalf of the Appellant and by V. H. Edwards of the Sterling Trust Company and H. Nixon, Assistant Assessment Commissioner for the City of Toronto, on behalf of the Respondent.

Upon due consideration, the Board is of the opinion that the Appellant has not established as a fact that the said assessment is in excess of the actual value of the land and buildings and accordingly would dismiss the Appeal.

Formal Order of the Board will issue upon the application of the Respondent and the Appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the Appointment for Hearing, there will be no Order as to costs.

DATED at Toronto, this Eleventh day of May, 1938.

DECISION OF THE BOARD

This is an Appeal from the Decision of the County Court Judge, upholding the assessment by the Court of Revision on the land and buildings known as 717-721 Yonge Street, 723 Yonge Street and 14 Hayden Street, all in the City of Toronto, which was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on the 5th day of May, 1938.

Evidence was presented by W. Warwick and S. E. Green on behalf of the Appellant and by V. H. Edwards of the Sterling Trust Company on behalf of the Respondent.

After due consideration, the Board is of the opinion that the Appellant has not established as a fact that the said assessment is in excess of the actual value of the land and buildings and accordingly would dismiss the Appeal.

Formal Order of the Board will issue upon the application of the Respondent and the Appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the Appointment for Hearing, there will be no Order as to costs.

F. A. Campbell, K.C. Counsel for the Respondent

JUDGMENT

This is an appeal from the decision of the Court of Revision and the County Court Judge, upholding the assessment of the Assessment Commissioner of the City of Toronto on the lands and buildings known as Numbers 38-46, 48, 54 and 56-64 Bloor Street West (1205-1219 Bay Street), and was heard by the Board at its Chambers in the Parliament Buildings, Toronto, on Thursday the 10th day of March, 1938.

Evidence was presented by Mr. Frank McLaughlin of the Chartered Trust and Executor Company, showing the rentals received from the properties in question. Mr. McLaughlin also stated that in his opinion the buildings and land were assessed in excess of their actual value.

Mr. V. H. Edwards of the Sterling Trust Company and Mr. Harry Nixon, Deputy Assessment Commissioner of the City of Toronto, were heard for the City, and tendered evidence to the contrary.

After due consideration, the Board is of the opinion that the Appellant has not established as a fact that the said assessment is in excess of the actual value of the lands and buildings.

Accordingly the Board would dismiss the appeal. Formal Order of the Board will issue upon application of the Respondent.

The Appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the appointment herein, there will be no order as to costs.

DATED at Toronto this 24th day of March, A.D. 1938.

County of York

Appellant

—and—

THE CORPORATION OF THE CITY OF TORONTO

Respondent

Samuel Factor, K.C., M.P. Counsel for the Appellant
 F. A. Campbell, K.C., Counsel for the Respondent

 JUDGMENT

This is an appeal from the decisions of the Court of Revision and the County Court Judge, upholding the assessment of the Assessment Commissioner of the City of Toronto on the lands and building known as 153 Jameson Avenue in the City of Toronto, and was heard by the Board at its Chambers in the Parliament Buildings, Toronto, on Thursday the 14th day of March, 1938.

Evidence was given by Arthur Lavine, Manager of the said property, an apartment house, and by George Farquhar, real estate broker, in support of the contention of the Counsel for the appellant that the assessment on the building and land was in excess of their actual value.

Mr. Wickett, contractor and builder and Harry Nixon, Deputy Assessment Commissioner of the City of Toronto, were heard for the City and gave evidence to the contrary.

After due consideration, the Board is of the opinion that the appellant has not established as a fact that the assessment on the building is in excess of its actual value.

With regard to the Land assessment, in view of the evidence given and in view of the value of the surrounding lands as shown by the assessment placed thereon by the Assessment Commissioner, the Board is of the opinion that it should be reduced from \$165.00 per foot to \$140.00 per foot, or from \$9,185.00 to \$7,793.00.

Accordingly the Board would dismiss the appeal as to the Building and grant the appeal as to the Land as indicated. Formal Order of the Board will issue upon application of the appellant.

The appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the appointment herein and success being divided, it is proper that the respondent pay to the appellant the sum of \$7.50 for costs.

DATED at Toronto this 29th day of March, A.D. 1938.

JUDGMENT

This is an appeal from the decision of the County Court Judge, upholding the Assessment by the Court of Revision on the land and buildings known as Number 192 and Part of Lot 11, Richmond Street West, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on Wednesday, the 23rd Day of March, 1938.

Evidence was presented by A. J. Bentley on behalf of the appellant and by V. H. Edwards of the Sterling Trust Company and Harry Nixon, Assistant Assessment Commissioner of the City of Toronto, on behalf of the respondent.

After due consideration, the Board is of the opinion that the appellant has not established as a fact that the said assessment is in excess of the actual value of the land and buildings. It was strongly contended by Mr. Bentley that the assessment in addition to being in excess of the actual value, was excessive in comparison with surrounding assessments. The Board is unable to support this contention and accordingly would dismiss the appeal.

Formal Order of the Board will issue upon application of the respondent and the appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the appointment herein, there will be no Order as to costs.

DATED at Toronto, this 6th Day of April, A.D. 1938.

DECISION OF THE BOARD

This is an appeal from the decision of the County Judge wherein the assessment on the lands known as 1395 Gerrard Street East, was confirmed and the assessment on the buildings on the said lands was reduced to \$22,800.00 and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on Thursday, the 24th day of March, 1938.

Evidence was presented by Mr. Peppiatt, Assistant Manager of the Mortgage and Loan branch of the Prudential Insurance Company, on behalf of the Appellant and by V. H. Edwards, of the Sterling Trust Company on behalf of the Respondent.

After due consideration the Board is of the opinion that the Appellant has not established as a fact that the said assessment is in excess of the actual value of the land and buildings and accordingly would dismiss the Appeal.

Formal Order of the Board will issue upon the application of the Respondent and the Appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the appointment herein, there will be no Order as to costs.

DECISION OF THE BOARD

This is an appeal from the Decision of the County Judge wherein he upheld the assessment on the land known as 1384-6 King Street West, in the City of Toronto, and reduced the assessment on the buildings thereon by the sum of \$4,000.00 and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto, on Thursday, the 24th day of March, 1938.

Evidence was presented by Mr. Peppiatt, Assistant Manager of the Mortgage and Loan Branch of the Prudential Life Insurance Company, on behalf of the Appellant and by V. H. Edwards, of the Sterling Trust Company on behalf of the Respondent.

After due consideration the Board is of the opinion that the Appellant has not established as a fact that the said assessment is in excess of the actual value of the land and buildings and accordingly would dismiss the Appeal.

Formal Order of the Board will issue upon the application of the Respondent and the Appellant having paid the sum of \$15.00 for Law Stamps on the issuance of the appointment herein, there will be no Order as to costs.

BOARD'S DECISION

This is an appeal from the decision of the County Court Judge, whereby the assessment on the land and building known as 100 Adelaide Street, West, was set at \$73,539.00 and \$460,000 respectively, and was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on Wednesday, the sixth day of April, A.D. 1938.

After due consideration, the Board is unable to find that the said assessment is in excess of the actual value of the land and building, and accordingly the above assessment is hereby confirmed, and the appeal dismissed.

The Formal Order of the Board will issue upon the application of the respondent and the appellant having paid the sum of \$15.00 in law stamps on the issuance of the appointment herein, there will be no Order as to costs.

BOARD'S DECISION

This is an appeal from the decision of the County Court Judge upon the land and building known as 118-124 Yonge Street, Toronto, wherein the assessment on the land was set at \$6,000.00 per foot for the southerly 27 feet, 6 inches, and \$5,000.00 per foot for the northerly 25 feet, and the assessment on the building confirmed at \$30,000.00. The Appeal was heard by the Board at its Chambers in the Parliament Buildings in the City of Toronto on Friday, the twenty-fifth day of March, A.D. 1938.

After due consideration, the Board is unable to find that the said assessment on land and building is in excess of the actual value of the said land and building. Accordingly the said assessment is hereby confirmed and the Appeal dismissed.

The Formal Order of the Board will issue upon the application of the respondent and the appellant having paid the sum of \$15.00 in law stamps on the issuance of the appointment herein, there will be no Order as to costs.

IN THE MATTER of the Application of the Corporation of the Village of Forest Hill for the approval of the Ontario Municipal Board as required by "The Ontario Municipal Board Act" (R.S.O. 1937, Chapter 60, Section 70), of a proposed Debenture Issue in the sum of \$150,000.00 for School Purposes.

REASONS FOR DECISION

THIS IS AN APPLICATION pursuant to Section 70 of "The Ontario Municipal Board Act", by the Village of Forest Hill for the approval of a proposed school building and land in the sum of \$150,000.00.

From the material filed and upon hearing Counsel, and upon hearing representations by His Worship the Mayor and the Chairman of the School Board, it is established that the purchase of the land and erection of the building would result in the village being in a position to provide high school accommodation, which accommodation has up to the present not been provided. It is noted by the Board that while the debenture debt of the applicant is substantial, it is not unsound.

Aside however from the financial considerations, the Board has established a policy of requiring all proposed projects of municipal funds which involve a substantial capital expenditure, to be first submitted to the ratepayers before being presented to Board. In all applications received by the Board including those similar in purpose to the present application and amount of expenditure involved since the inception of above stated policy, it has been insisted that a vote be taken and the Board does not feel justified in making any exception in the present case.

The Board feels that since the ratepayers of the Municipality will be called upon to pay for the expenditure involved, it is fit and proper that the said ratepayers be given the opportunity of expressing their opinions on the matter. In the view of the Board, the most accurate expression of opinion can be obtained by submitting the proposal to the ratepayers on the same date that the annual municipal elections are held.

Accordingly the Board must refuse the application but will again take it under consideration upon receipt of the result of the vote of the ratepayers qualified to vote on money By-laws as directed.

DATED at Toronto this 25th day of August, A.D. 1938.

(sgd.) R. S. COLTER,
Chairman,

(sgd.) D. S. CHARLTON,
Vice-Chairman,

BEFORE:

R. S. COLTER, Esq., K.C., Chairman, D. S. CHARLTON, Esq., Vice-Chairman, W. P. NEAR, Esq., B.A.Sc., Commissioner.	}	IN THE MATTER of "The Local Improvement Act", (R.S.O. 1937, Chapter 269), and IN THE MATTER of "The Ontario Municipal Board Act", (R.S.O. 1937, Chapter 60).
--	---	---

THIS IS AN APPLICATION by the City of London as required by Section 70 of "The Ontario Municipal Board Act", for approval of a proposed By-law authorizing a capital expenditure of \$85,000.00 as a local improvement for the purpose of constructing a concrete facing on the earthen dykes on the north and west sides of the River Thames.

In view of the fact that the proposed expenditure was substantial and that a petition was received against the work, the Board by virtue of the powers contained in Section 68 of "The Ontario Municipal Board Act", held a public hearing in the City of London on Wednesday, the 17th day of August, 1938, notice of which had been given by publication, and at which parties in favour of or opposing the expenditure, were heard.

Evidence was given at the hearing on behalf of the Corporation of the City of London, that the By-law was passed as a result of representations made to the Council by residents of the area of West London which area was seriously affected by the disastrous floods of 1937. Engineering evidence was presented that the proposed work would strengthen the existing earthen dykes, but that it would not prevent a recurrence of the flooding, should a flood occur in the future of the magnitude of that of 1937. A number of ratepayers were present and gave evidence to the effect that while they would be glad to receive any additional protection if the same was to be paid out of the general rates, they did not feel that they should be assessed for the cost of the proposed work in view of the fact that as stated above, the work would provide very little, if any, protection against another extraordinary flood.

Bearing in mind the nature of the evidence, the nature of the objections, which the Board believes are well founded, and which were not contradicted, and the absence of any evidence to the effect that the proposed work would form a part of any greater flood control project, the Board finds that the necessity or expediency of the expenditure is not commensurate with the burden of taxation which would be placed upon the ratepayers.

The application is accordingly dismissed.

P.F.A.-7373

Monday, the 13th day of June, A.D. 1938.

IN THE MATTER of the Application of the Corporation of the Township of McKim, under Section 70 of "The Ontario Municipal Board Act", (R.S.O. 1937, Chapter 60), for approval of the undertaking of a capital expenditure of \$8,500.00 for a one-room addition etc., to the Public School building in School Section No. 6, in accordance with its proposed By-law Number 324.

DECISION OF THE BOARD

THIS APPLICATION was heard by the Board at the City of Sudbury on Friday, the 20th day of May, 1938. G. E. Buchanan and E. C. Facer appeared as Counsel for the Township and the School Trustees of the Township of McKim respectively. M. C. McEachren, School Trustee, was present in person.

The reasons for the expenditure were outlined to the Board at the hearing and certain over-expenditures from the initial estimates were explained. M. C. McEachren contended that the Board should order an independent audit of the School Section Books.

After due consideration of the evidence presented and the material filed and representations made, the Board is unable to agree with this contention and is accordingly prepared to grant the application. Formal Order will issue in due course.

IN THE MATTER of "The Ontario Municipal Board Act" (R.S.O. 1937, Chapter 60), Sections 69 and 70, and

IN THE MATTER of "The Municipal Act" (R.S.O. 1937, Chapter 266, Section 407 (2), and

IN THE MATTER of the Application of the City of Owen Sound for approval of a proposed By-law authorizing the expenditure of \$160,000.00 on an extension of its Gas Plant, without receiving the assent of the electors.

C. C. Middlebro, Counsel for the Applicant

REASONS FOR DECISION

This application was heard before D. S. Charlton, and W. P. Near, Vice-Chairman and Commissioner of the Board respectively at the City of Owen Sound on Thursday, January 27th, 1938.

Decision was reserved.

Evidence was placed before the Board that the existing plant was no longer in a satisfactory condition and that the Public Utilities Commission had requested the Ontario Research Foundation to report to them on certain proposed methods and types of reconstruction.

Mr. C. W. Tasker of the Foundation ably presented to the Board his opinion that the proposed new plant was sound technically and stated that he had personally supervised a test at the home plant of the proposed Vendor. The Board has also had the privilege of reading his report, which is most exhaustive and obviously the product of much careful labour.

Both Mr. Tasker and the members of the Commission thought certain other types of plant would not be feasible, having in mind the fact that the new plant would have to produce enough revenue to meet the unmatured debenture charges on the present plant.

The Board is satisfied the proposed new plant is technically sound, given certain conditions as to price of coal, coke and the market. The proposed plant is admittedly dependent for an integral part of its revenue on the sale of coke. Accordingly, the success of the plant would depend upon the price of coal, the price of coke, the market available for the sale of the coke and the market available for the sale of gas.

The Board is of the opinion that where such a large expenditure is proposed as here, and where the success or failure of the work is dependent upon variable factors as here, it is not justified in approving the by-law without the assent of the ratepayers, upon whom the cost would fall should the project not meet with success.

Accordingly, the application of the City of Owen Sound is hereby dismissed.

DATED at Toronto, this 22nd day of February, A.D. 1938.

(sgd.) D. S. CHARLTON,
Vice-Chairman,

IN THE MATTER of the Application of the Corporation of the City of Owen Sound for approval of the undertaking of a capital expenditure of \$75,000.00 for construction of a Civic Auditorium and Skating Rink).

DECISION OF THE BOARD

The above application was heard at the Municipal Chambers, Owen Sound, on Friday, the 3rd day of June, by R. S. Colter, K.C., Chairman, and D. S. Charlton, Vice-Chairman.

C. C. Middlebro, City Solicitor, appeared for the applicant Municipality, and W. S. Middlebro, K.C., and F. G. Mackay, appeared as Counsel for certain objecting ratepayers.

His Worship Mayor Stuart outlined the object of the application and stated that the ratepayers qualified to vote on Money By-laws had endorsed the expenditure by a vote of 1185 in favour and 654 against.

The Board of Trade, Retail Merchants' Association, Ministerial Association and certain Athletic Associations also made representations in favour of the application.

Counsel for the objecting ratepayers contended that the expenditure, however desirable, was not of a type for Municipal enterprise and that it was a proper expenditure for private capital only.

The Board has every sympathy for the contention of the respondent ratepayers, but feels that in view of the fact that the project was endorsed by a substantial majority of the ratepayers, that the financial condition of the Municipality is satisfactory and that the Ontario Legislature enacted legislation enabling the expenditure to be made by the Municipality subject to the Board's approval, it can find no justification in refusing the application in whole.

The Board feels, however, that there was not sufficient evidence presented to justify the expenditure of the sum of \$75,000.00 and is of the opinion that the sum of \$60,000.00 should be sufficient for the purchase of the necessary land, the erection of the building and the purchase of the equipment. In addition, the Board is of the opinion that the expenditure should be funded by two separate debenture issues, one for the land and building for a fifteen year term and one for equipment for a ten year term.

Accordingly, if the applicant Corporation would prepare and forward draft By-laws embodying the above recommendations, the Board is willing to give the same favourable consideration.

Accordingly, formal statutory approval is withheld pending the receipt of the said draft By-laws.

DATED this 8th day of June, A.D. 1938, at Toronto.

IN THE MATTER of "The Ontario Municipal Board Act", (R.S.O.. 1937, Chapter 60, Section 70), and

IN THE MATTER of the Application of the Town of Parkhill for approval of Debenture Issue of \$8000.00 for the purpose of the erection of a Skating Rink.

THIS IS AN APPLICATION by the Town of Parkhill for approval as required by Section 70 of "The Ontario Municipal Board Act", of a proposed By-law authorizing the issue of debentures in the sum of \$8000.00 for the purpose of erecting a skating rink in the Town of Parkhill. The By-law was submitted to the ratepayers on Thursday, the 4th day of August, and was approved by them by vote of 138 to 119.

At an informal hearing held at the City of London on Wednesday, the 17th of August, representations were made on behalf of the By-law by the Reeve and other members of the Council, and objections were voiced through counsel by certain ratepayers opposing the said approval.

It was noted by the Board at the time of the hearing, that the By-law did not recite the legislative authority under which the expenditure was being made, and counsel for the applicant subsequently contended that Section 404 (1) of "The Municipal Act", provides the necessary authority. The section reads as follows:

"By-laws may be passed by the Councils of all Municipalities:

"(1) for aiding amateur athletic or aquatic sports."

After careful consideration, the Board has come to the conclusion that it does not agree with the contention of counsel for the applicant, and that the said section does not authorize a funded capital expenditure as is proposed here. In the Board's opinion, had the intent of the Legislation been such, it would have so expressly declared as is done in Subsection 12 of the same section of "The Municipal Act", wherein authority is given for the erection of buildings for the purpose of agricultural exhibitions.

It should also be noted that in the current year, two municipalities within the province that wished to erect skating rinks, were obliged to obtain special legislation at the last session of the Ontario Legislature.

Accordingly in the opinion of the Board, the proposed By-law would be invalid and the application for approval is necessarily refused.

(sgd.) R. S. COLTER,
Chairman,

(sgd.) D. S. CHARLTON,
Vice-Chairman,

(sgd.) W. P. NEAR,
Commissioner.

P.F.A.-7775

IN THE MATTER of Section 69 and Section 70 of "The Ontario Municipal Board Act", (R.S.O. 1937, Chapter 60),

AND IN THE MATTER of the Application of the Corporation of the City of St. Thomas for an Order Dispensing with a Vote of the electors in regard to an undertaking of a Proposed Capital Expenditure of \$51,000.00 pursuant to its Proposed By-law Number 3256 intituled: "By-law No. 3256. A By-law for borrowing the sum of Fifty-one Thousand Dollars for the purpose of erecting a Nurse's Home in connection with 'The Memorial Hospital,'" and for Approval of the undertaking of such Capital Expenditure involved, and the Passing of the said proposed By-law therefor.

C. B. McClurg, Esq., K.C.
E. A. Horton, Esq., Sr.
Wm. Baldwin, Esq.,

Counsel for the City of St. Thomas,
for the Hospital Board,
in Opposition to the By-law.

REASONS FOR DECISION

This application came on for Hearing before the Chairman and Commissioner of the Ontario Municipal Board on Friday, the 2nd day of September, A.D. 1938, pursuant to appointment and notice thereof as directed. The Board has carefully considered the representations made by Mr. McClurg on behalf of the City of St. Thomas, Mr. E. A. Horton, Sr., representing the Hospital Board, the evidence adduced, and also the opposition presented by Mr. William Baldwin.

The Board finds that, in view of the fact that the nurses are being housed in three different premises at the present time, widely separated from each other, and under conditions which do not give them proper supervision, and in view of the fact that the Hospital Board has an opportunity to purchase a property most suitable for this purpose at a very advantageous price, the expenditure by the city of the sum of \$51,000.00 for the purpose of erecting a nurse's home in connection with the Memorial Hospital, is a necessary outlay and approves of By-law Number 3256 therefor, and that the vote of the electors of the City of St. Thomas may be dispensed with, and that the said application is therefore granted.

The Board's tariff fees payable upon the issuing of the Formal Order, are in the sum of \$30.00 for law stamps.

DATED at Toronto this 8th day of September, A.D. 1938.

(sgd.) R. S. COLTER,

IN THE MATTER of the Application of the Corporation of the City of Sarnia for the approval as required by "The Ontario Municipal Board Act", (R.S.O. 1937, Chapter 60, Section 70), of the Ontario Municipal Board of a proposed Debenture Issue in the sum of \$100,000.00 for School Purposes.

REASONS FOR DECISION

THIS IS AN APPLICATION pursuant to Section 70 of "The Ontario Municipal Board Act", by the City of Sarnia for approval of a proposed school building in the sum of \$100,000.00.

From the material filed, and upon hearing representations made to the Board by His Worship the Mayor, and other municipal and school board officials, it is clearly established that the structure is partly for high school purposes and partly for public school purposes, approximately one-half being for one and one-half for the other. It was stated to the Board that the city has made financial progress over the last five years, and with this statement the Board agrees. The Board does feel, however, that a further effort should be made on the part of the Corporation to reduce arrears of taxes.

However, aside from the question of tax arrears, the Board has established the policy of requiring all proposed projects which involve a substantial capital expenditure, to be first submitted to the ratepayers; before being presented to the Board, and the Board can find no justification in this application for departing from its established practice. The Board feels that since the ratepayers will be called upon to pay for the expenditure involved, it is fit and proper that the said ratepayers be given the opportunity of expressing their opinions upon the matter. In the view of the Board, the most accurate expression of opinion can be obtained by submitting the proposal to the ratepayers on the same date that the annual municipal elections are held.

Accordingly the Board must refuse the application but will again take it under consideration upon receipt of the results of a vote of the ratepayers qualified to vote on money By-laws as directed above.

DATED at Toronto this 22nd day of August, A.D. 1938.

H. G. Bristow, Esq.,

Counsel for Respondents.

DECISION OF THE BOARD

The proposed work was initiated by the City under the powers contained in Section 8 of "The Local Improvement Act", wherein it is provided that any party objecting thereto may notify the Board.

Numerous objections were received, and the Board in accordance with its usual practice, appointed Wednesday, the 7th day of September, for a hearing of all parties. Notice of the Board's appointment was duly served upon the property owners proposed to be assessed for the work, and the hearing was held on the above date at the Board's Chambers in the Parliament Buildings, at which time decision was reserved.

Evidence on behalf of the City was given by R. S. Harris, Commissioner of Works and T. D. LeMay, City Surveyor, and the history of the section and area affected was fully reviewed and the present desirability of providing an additional north and south artery east of Yonge Street to relieve the North Yonge Street traffic was stressed.

It was pointed out that it was not proposed to assess the total cost of the work against the abutting property owners as would be the case under an ordinary Local Improvement project, but only the cost of 28 feet out of a total of 46 feet, the proposed width of the pavement, as authorized by Section 3 of Chapter 73, Ontario Statutes, 1938. It was stated this would result in the cost to the abutting owners being approximately 28% or \$43,881.00 of the total cost and 72% or \$106,420.00 being charged to the general tax rate of the City.

It was stated that the Corporation felt that it would be unfair to assess the whole cost of the work against the abutting owners and legislative power had been obtained to proceed in the above manner.

The Board received numerous communications from ratepayers directly affected and also from other residents of the area, protesting against the proposed work. At the time of the hearing, representations were made by Counsel for certain residents and groups of residents, and also by individuals who were to be assessed for part of the work, against the same.

It was submitted that Lawrence Park is a residential district, that a through street of this type and width would change the character of the section and would result in a depreciation of property values, also, if the proposed work was carried out, the relief it would afford Yonge Street traffic would not be commensurate with the burden of taxation which would be imposed upon the ratepayers whom it was intended to specially assess, and the ratepayers of the City in general, also, that the 46 foot width is not necessary in view of the traffic in the area and that if a further arterial roadway is contemplated east of Yonge Street, it should be

farther east than Mount Pleasant Road, also, that many ratepayers not only in the area affected, but in the City in General are paying Municipal taxes to the extent that they are undergoing actual hardship and that the need for the work is not so great as to merit a further increase in the cost of Municipal taxation.

In the opinion of the Board, a general reduction of municipal taxation is imperative, and it is noted that a substantial portion of municipal taxes today are fixed charges levied for the purpose of meeting and retiring existing debenture debt. There is no way of reducing the said fixed charges other than by paying the levies for the existing debenture debt and refusing to incur additional indebtedness in its place, except where the assumption of such further indebtedness is absolutely necessary.

It is true that in the present application, the City is proposing to pay approximately \$100,000.00 out of a cost of approximately \$150,000.00, but the "City" is composed only of ratepayers residing or owning property therein, and the cost in any event would have to be met by them.

The Board sympathizes with the officials of the Corporation who, it is admitted by all, have a most serious traffic problem to deal with. After careful consideration and inspection of the said proposed work, the Board notes that in view of the representations made against the work, the Board is unable to approve of the application at the present time but is deferring its final decision in the matter until the year 1939 when the same may be considered with other proposed capital expenditure of the Applicant Corporation for that year.

IN THE MATTER of Section 70 of "The Ontario
Municipal Board Act", (R.S.O. 1937, Chapter 60),
andIN THE MATTER of the Application of the Cor-
poration of the Township of Windham for Appro-
val of the Undertaking of a Capital Expenditure
of \$4000.00 for the Construction of a Public School
in School Section Number Four.BOARD'S DECISION

THIS WAS AN APPLICATION for approval of Debenture By-law authorizing the issue of debentures in the sum of \$4,000 for Public School Purposes. The Board being in receipt of numerous objections thereto, held a Public Hearing at the Village of Lynnvillle on Monday, the 26th day of September, A.D. 1938. At this meeting, members of the Township Council and ratepayers of the section voiced a strong objection to the expenditure at the present time. Two members of the School Board, the Public School Inspector, and the school janitor, spoke in favour of the project.

In view of the opposition to the expenditure by the ratepayers of the section as evidenced at the said meeting, the Board finds it is unable to approve of the said application at the present time. The Board would be willing to consider a new application in the year 1939 provided that entire new proceedings on the part of the School Trustees were initiated next year, and the application again forwarded at that time.

IN THE MATTER of Section 21 of "The Municipal Act", (R.S.O. 1937, Chapter 266), and

IN THE MATTER of the Application of Henry A. Milton of the Village of Dutton in the County of Elgin for an Order detaching from the said Village certain of his farm land therein, and annexing the said lands to the Township of Dunwich in the said County of Elgin.

- W. S. McKay, Esq., Counsel for Applicant.
- E. C. Sanders, Esq., K.C., Counsel for the Village of Dutton.
- C. B. McClurg, Esq., K.C., Counsel for the Township of Dunwich.

BOARD'S DECISION

UPON THE APPLICATION of Henry A. Milton, and upon consideration of the material filed, R. S. Colter, Esq., K.C., Chairman of the Board (duly authorized under Section 16 of "The Ontario Municipal Board Act", R.S.O. 1937, Chapter 60), having pursuant to appointment and notice thereof as directed, heard all parties interested in this application on the eighth day of July, 1938, at the Council Chambers in the Village of Dutton, and the Report of the Chairman of the Board having this day been considered by the Board as the basis of its Order herein.

The applicant, Henry A. Milton, is the owner of a farm composed of one-quarter of Lot 12, Concession 5 South of "A", together with some village lots. On the farm are the farm buildings and on one of the lots is a frame cottage which he claims has been used for the purposes of a farmer who worked the farm, but which is now rented. The plan filed with the Board shows the farm to contain 72 acres. The assessment notice is for 67 acres.

For the year 1938, the assessment of the said farm is as follows:

Buildings	\$2300.00.
Land	2000.00.
Total	\$4300.00.

In 1937 the farm was assessed for \$5123.00, but this was reduced at the Court of Revision to \$3000.00. Afterwards the Village Council of Dutton appointed an assessment commission, and that commission fixed the assessment for the farm at \$4300.00 for 1938. The applicant did not appeal this assessment, but made an application to this Board to have at least part of his farm detached from the village.

The applicant bases his claim on the fact that there are 306 ratepayers in the Village, that the tax levy is \$19,436.00, and the average tax levy is \$53.84 each. The per capita tax is \$26.47, and Mr. Milton figures that his tax is \$193.50 at the rate of 45 mills. He also compared his taxation with that of one McVicker in the adjoining township, saying that the building and farm compared with his, and that in 1937 McVicker's assessment was \$6500 and that his taxes were \$96.25. Milton's taxes on an assessment of \$4300 would be \$210.90, but he has to pay about \$17.40 in the Township of Dunwich.

There are several farmers within the limits of the Village of Dutton in the same position as Milton, and they, no doubt, will immediately if the application of Milton should be granted, make application for detachment of their farms. Mr. Milton has four children, two of whom have been educated through the public and high

school of Dutton, one of whom is now attending high school and the other one public school. His home is served by street lights, he has a sidewalk to his home, and has fire and police protection. The Village of Dutton is a very nicely situated village. The Council has made every effort to make it a nice, clean, farmer's town. It has a very substantial community hall, the streets are kept in excellent condition.

The Board is of the opinion that the applicant should not compare his taxation with the taxation in the neighboring township. His assessment is much lower than that on the farm of Mr. McVicker, no doubt to give him some relief of taxation, and the fact that his taxes are higher than the taxes in the neighbouring township is by reason of benefits afforded to the residents of the Village by way of Community hall, sidewalks, street lighting, roads and other improvements that are necessary in villages today, and for which the properties within the Municipality should pay.

Under all of the circumstances, the Board finds that the applicant has not shown sufficient reason to justify an Order detaching his farm from the Village of Dutton, and the application is dismissed.

IN THE MATTER of "The Municipal Franchises Act", being Chapter 277, R.S.O. 1937, Section 8; and

IN THE MATTER of By-law Number 9 of the Municipal Corporation of the Township of North Oxford granting a franchise to The Oxford Pipe Line Company Limited to construct works to supply and to supply gas to the residents of the said Township; and
IN THE MATTER of the Application of The Oxford Pipe Line Company Limited for a Certificate of Public Convenience and Necessity therefor.

TO:

HIS HONOUR, THE LIEUTENANT-GOVERNOR
OF THE PROVINCE OF ONTARIO

CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

UPON the Application of the Oxford Pipe Line Company, Limited, a Corporation incorporated under and pursuant to Part XIII of The Companies Act (Ontario) and operating a public utility, for a Certificate of Public Convenience and Necessity, pursuant to Sub-Section 4 of Section 8 of The Municipal Franchises Act, R.S.O. 1937, Chapter 277; AND UPON reading a copy of By-law Number 1338 of the Corporation of the Township of Dereham, By-law Number 1192 of the Corporation of the County of Oxford, By-law Number 816 of the Corporation of the Township of West Oxford, and By-law Number 9 of the Township of North Oxford, and a copy of an Order-in-Council approved by the Honourable the Lieutenant-Governor dated the 30th day of November, 1938, wherein the Honourable the Minister of Municipal Affairs and Public Welfare recommended that pursuant to Clause (d) of Section 6 of The Municipal Franchises Act the Honourable the Lieutenant-Governor approve the said By-law Number Nine of North Oxford, which recommendation was concurred in by the Committee of Council, and the other material filed, and the Board having appointed Friday, the 9th Day of December, 1938, at the hour of 11 o'clock in the forenoon at the Court House in the City of Woodstock for the hearing of this application, and Notice of this Appointment having been duly given as directed by the Board, and the Board having, pursuant to such appointment, heard all parties interested and no one appearing to oppose the same; and the Board having on the aforesaid date granted this application.

THE BOARD CERTIFIES that public convenience and necessity require that approval or permission be granted to The Oxford Pipe Line Company Limited to construct works to supply and to supply Gas to those persons whose lands abut on the highway along which the pipe line of the applicant Company is proposed to be constructed, and to lay down, maintain and operate gas mains and pipes along the highways and public places of the Corporation of the Township of North Oxford for the purpose of conveying gas through the said Corporation and for supplying and distributing natural gas within the Corporation (pursuant to the authority contained in the said several By-laws and agreements attached thereto) such highways being described as follows:

- (1) Along the road allowance between Lots 14 and 15 running the full length from South to North in the Township of Dereham aforesaid and along the road allowance between the Eleventh and Twelfth Concessions of the said Township of Dereham from the West Boundary line of Lot 28 to the road allowance between Lots 14 and 15 in the said Concessions; and

- (2) Along the road allowance between the Third and Fourth Concessions of the Township of West Oxford as far East as the Easterly limit of Lot Seven; along the road allowance between Lots Ten and Eleven extending across Ten and between Lots Nine and Ten in the Township of North Oxford, thence Northerly between the First and Second Concessions of the Township of West Zorra to the northerly limit of Lot Five; along the road allowance between Lots Five and Six in the Township of West Zorra from the road allowance between the First and Second Concessions to the road allowance between the Fourth and Fifth Concessions; along the road allowance between the Fourth and Fifth Concessions of the Township of West Zorra extending from Fairview to the Northerly limit of Lot Five, thence diagonally across Lots Five, Four, Three and Two to the northeast corner of Lot One in the Fifth Concession, thence southerly along the road allowance east of said Lot One to the Town Line, thence easterly along the Town Line between West Zorra and North Oxford to the northeast corner of Lot Twenty in the First Concession of North Oxford, thence Southerly along the road allowance between Lots Twenty and Twenty-one in the First Concession of the Township of North Oxford to the limits of Beachville; and
- (3) Along the road allowance between Lots 12 and 13 from Folden Corners and continuing along the road allowance of the Corporation of the Township of Oxford West to the North Boundary of the said Corporation; and
- (4) The highways and public places of the Corporation of the Township of North Oxford;

the whole in accordance with the provisions of the said By-laws hereinbefore mentioned.

RESTRICTED AREAS

P.F.A.-7381

IN THE MATTER of the Application of the Corporation of the Township of East York under Section 406 (2b) of "The Municipal Act," for approval of its By-law Number 2810, intituled: "Township of East York By-law No. 2810 to amend By-law No. 1243 and Amendments thereto, being a by-law for the purpose of dividing the Township into Industrial, Business and Residential Areas, and restricting the user of land and buildings within the defined area."

COUNSEL:

K. V. STRATTON, Esq., K.C.,
Counsel for Applicant,

W. A. McMASTER, Esq., K.C.,
Counsel for Respondents.

DECISION OF THE BOARD

THIS APPLICATION was heard by the Board at its Chambers in the Parliament Buildings, Toronto, on Tuesday, the twelfth day of April, 1938. Counsel for the Applicant contended that the nature of the lands affected had altered since the passing of the original by-law, particularly by reason of Sammon Ave. becoming a through street. Counsel for the Respondents, a number of property owners in abutting and adjoining areas, strongly opposed the application.

THE BOARD after due consideration, is unable to grant the Application in its present form, having in mind the limitations imposed by The Municipal Act, Sec. 406 (2). The Board accordingly is prepared to dismiss the Application, the said Order to issue one month from date hereof, unless before that time an amended application is received by consent of the abutting owners, upon which the Board would be willing to again consider the application.

DATED at Toronto this twenty-fifth day of April, 1938.

(sgd.) R. S. COLTER,
Chairman.

(sgd.) D. S. CHARLTON,
Vice-Chairman.

BETWEEN:

THE CORPORATION OF THE CITY OF KITCHENER

Applicant

—and—

J. M. JOHNSON AND J. SCHUSTER AND OTHERS

Respondents.

Approval of By-law Number 2616 of the City of Kitchener amending its Zoning Ordinance By-laws Numbers 1823, 1834 and 1835.

Murray Bray Counsel for Applicant
 J. K. Sims Counsel for Respondents
 F. W. Collins For the Grand River Railway

DECISION OF THE BOARD

This application was heard at the City Hall, Kitchener, by D. S. Charlton, Vice-Chairman, (duly authorized under Section 16 of "The Ontario Municipal Board Act" R.S.O. 1937, Chapter 60), on Tuesday, the 7th day of June, 1938, who has reported the proceedings and evidence presented thereat, to the Board.

EVIDENCE WAS PRESENTED BY F. W. Collins to the effect that the Grand River Railway desired to have the restrictions amended on the area in question in order that the McColl Frontenac Company would be able to purchase a portion of the said area adjoining the railway. He also stated that the railway had employed a canvasser who had obtained the signatures of residents and owners of the district in favor of such amendment and that the By-law as desired, as a result thereof had been provisionally passed by the City Council.

Evidence was given by certain signatories to the first Petition, to the effect that at the time they signed the said Petition, they were unaware of the true purpose of same and now wished to disassociate themselves from any apparent acquiescence to the proposed By-law and further to now register their objection to the approval of same. Two Petitions against the application were filed with the Board, the first bearing fourteen signatures which were on the original Petition in favor, and the second bearing eight signatures which were not on the original Petition in favor of the application. Certain owners and residents of the area who had not signed the original Petition were present in person to register their objections.

It was admitted by all parties that the area in question was made a residential one in the general Zoning By-law passed in 1924 or 1925.

The Board's discretion in an application of this kind is defined by "The Municipal Act," Section 406 (b), which reads as follows:—

"No By-law passed under this Section shall come into force or be . . . amended without the approval of The Ontario Municipal Board; but such approval may be given, . . . if it is shown to the satisfaction of the Board that it is proper and expedient in view of,—

- (i) the purpose for which the original by-law was passed and the nature and class of occupancy and use of the land within the area or abutting on the highway at the time the by-law was passed;
- (ii) any change which may since have taken place affecting its suitability for such occupancy or use; and
- (iii) the desirability of the proposed repeal or amendment in the interests of the owners of land in the district affected and of the community as a whole."

The Board, after due consideration, is of the opinion that in view of the preceding section and in view of the opposition, it is not justified in granting the application.

Formal Order of the Board will issue upon the application of the Respondents and upon payment of the Board's tariff fee for Law Stamps in the sum of \$15.00.

There will be no Order as to costs, with the exception that the applicant will be required to pay to the Respondents their disbursements of the said Board's tariff fees.

DATED at Toronto this 8th Day of June, A.D. 1938.

A. Kelly, Esq., Counsel for the Roman Catholic Church
G. P. Campbell, Esq., Counsel for the Respondents

DECISION OF THE BOARD

THE ABOVE APPLICATION was heard at the Board's Chambers in the Parliament Buildings in the City of Toronto, on the 8th and 9th Days of December, pursuant to an appointment given by the Board dated the 15th Day of November, A.D. 1938, before the Vice-Chairman of the Board, duly authorized under Section 16 of "The Ontario Municipal Board Act." The said Vice-Chairman directed that the Application stand over and his Report on such hearing has this day been considered by the Board.

In 1936 the Town of Leaside passed By-law Number 440 which had the result among others of restricting the area in question against schools and churches and the present By-law in so far as it applies to Lots Numbered 204 to 213 inclusive, Plan 2121 of lifting the said restrictions.

For the owners of the property the Reverend Father Caulfield, parish priest, H. V. Chambers and H. E. Stacey, Realtors, gave evidence respectively to the effect that church authorities had owned the property for some years and that it was well-known in the neighborhood the church was contemplated. The evidence of Chambers and Stacey was to the effect that Real Estate values would not be depreciated in the area and also that the property in question could not be developed for private residential purposes by reason of the changing character of Millwood Road at this point.

Evidence of a substantial volume of opposition on the part of adjacent owners was presented at the hearing and evidence was given by W. T. Pinkerton, Realtor, and home owners of the vicinity that the presence of a school would lower the values of the neighbouring properties. It was strongly contended by counsel on their behalf that the owners in the area effected were entitled to the protection of the existing By-law in view of the fact that the same had been passed only in 1936 and that it was his submission that the applicant, the Corporation of the Town of Leaside, could not meet the requirements of Section 406 (2b) of "The Municipal Act."

It was established at the hearing that the objections were not to the church but rather to the school and one of the difficult features of the present application is the fact that the religious denomination in question has an internal policy of establishing a church and school as one unit.

The members of the Board have inspected the lands in question and have also inspected other similar situations where schools and churches have been built in a developed residential area and have come to the conclusion that the approval of the By-law would be in the best interests of the community as a whole. It has always been the policy of the Board to examine with care any proposal to relieve restrictions where the said restrictions have been in effect for a comparatively short time,

believing that the development of a community and consequently employment within the community is assisted where owners may safely invest knowing that by reason of the restrictions their investments will not be adversely affected by irresponsible parties. Notwithstanding this policy the Board is satisfied in the present instance that the area in question has become less suitable for development of private residences and that it would be in the interest of the community as a whole to approve the By-law. Certain objections were voiced by the respondents that by the establishment of a school and church, the congestion in the area would be aggravated by reason of the parking of automobiles. The Board believes that it would be proper to have a Clause in the formal Order when issued, directing the owners of the land affected to provide parking space upon the said lands and satisfactory evidence of said provision must be presented to the Board before its formal Order will issue.

DATED at Toronto this 22nd day of December, A.D. 1938.

(sgd.) R. S. COLTER,
Chairman.

(sgd.) W. P. NEAR,
Commissioner.

ORDERS OF THE BOARD

This company reports no extensions to track or expenditure on equipment, etc. during the year 1938.

NIAGARA PENINSULA RAILWAY

This company reports no extensions to track or expenditure on equipment, etc. during the year 1938.

PORT ARTHUR CIVIC RAILWAY

This company reports no extensions to track or expenditure on equipment, etc. during the year 1938.

SANDWICH, WINDSOR AND AMHERSTBURG RAILWAY

This Company reports a decrease in track mileage of 59.153 miles during the year 1938.

They report however, an expenditure of \$243,213.96 on the purchase of forty buses and one truck and an expenditure of \$70,828.24 on road and equipment.

SUDBURY-COPPER CLIFF SUBURBAN ELECTRIC RAILWAY

This Company reports no extensions of track during the year 1938 and also no expenditure upon additions to railway, equipment, land and buildings or other permanent property.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY

No extensions of track have been reported during the year 1938.

THURLOW RAILWAY COMPANY

The Canada Cement Company, Montreal, report that during the year 1938 no extensions were made to the track of the above railway and no expenditures made on improvements, &c.

TILLSON SPUR LINE RAILWAY

This Company reports no extensions of track of expenditure upon improvements, &c. during the year 1938.

TORONTO TRANSPORTATION COMMISSION

The Commission report that during the year 1938 they made no track extensions.

It is also reported that during the same period they expended \$4,176,451.79 upon additions to railway, equipment, land and buildings and other permanent property.

TOWNSHIP OF YORK AND WESTON RAILWAYS

The Toronto Transportation Commission which operated the above railway report no extensions to track during the year 1938, also no expenditures upon additions to railway, equipment, land and buildings and other permanent property.

NORTH YONGE RAILWAYS

The Toronto Transportation Commission operating the above railway report no extensions to track or expenditures upon railway, equipment, land and buildings and other permanent property during the year 1938.

INDEX TO RAILWAY LEGISLATION

The following Index has been made with the object of continuing in chronological order all the legislation passed by the Dominion and Provincial Governments since 1867, affecting railways situated wholly or partially within the Province of Ontario.

"List No. 2" was commenced on page 272 of our Ninth Annual Report (1914) and is continued on page 160 of our Twenty-seventh Annual Report (1932), page 146 of our Twenty-eighth Annual Report (1933), page 152 of the Twenty-ninth Annual Report (1934), page 51 of our Thirtieth Annual Report, page 56 of our Thirty-first Annual Report, and page 62 of our Thirty-second Annual Report and in the following list up to and inclusive of 1938:

RAILWAYS—Right to enter lands lying along route or line of railway for erection and maintenance of snow-fences.

(Amendment to "The Railway Act" Dominion Statute	Chapter 40	1938
Establishment of Board of Transport Commissioners for Canada with authority in respect of transport by railways, ships and aircraft. Dominion Statute	Chapter 53	1938

FORMS THAT MAY BE USED IN CONNECTION WITH THE EXAMINATION OF MOTORMEN

Name of City or Town

..... 19

NAME OF RAILWAY

This is to certify that, acting under "The Railway Act, 1927," R.S.O., Chapter 224, Section 265, I have fully examined the who is years of age and feet inches high, weighs lbs., complexion, as to his fitness as a motorman, that the said is of steady habits, and is in physical ability, intelligence and general knowledge of, and experience in, this work, qualified to act as motorman on any electric car of said Company.

I have been duly appointed an examiner under the said Act, my appointment being dated

Name.....

Examiner

FORM TO BE USED BY COMPANIES IN REPORTING ACCIDENTS

ACCIDENTS: Regulations under and in pursuance of Sections 275 and 276 of "The Railway Act, 1927," R.S.O., Chapter 224.

ACCIDENTS—Every company upon the happening of an accident shall give to the Ontario Railway and Municipal Board notice thereof in writing by delivering the same at the office of the Board in the City of Toronto or by mailing it, postage pre-paid, in a registered letter and addressed to the Board.

Such notice shall contain a statement signed by duly authorized officer of such company setting forth the information and particulars hereinafter mentioned.

Such statement shall be divided into paragraphs, each of which shall include and refer to one (or one group) only of the numbered particulars hereinafter mentioned, and the paragraph referring to each respective numbered particular shall bear the number corresponding to the number hereinafter given for each such particular.

The numbers of paragraphs and the particulars to which each shall refer as aforesaid are as follows:

1. Name or names of company or companies concerned in accident.
2. Numbers of train, engine, car or motor.
3. Date and time of accident.
4. Nature of accident.
5. Exact location.
6. Name in full, address and legal addition of each person injured or killed.
7. Age.
8. Married or single.
9. Passenger, employee or other.
10. If employee, length and nature of service with dates and periods of different occupations (if more than one).
11. If employee, character, experience, skill and fitness with respect to occupation at time of accident.
12. How engaged at time of accident and how long on duty.
13. Cause of accident, how same occurred, with full particulars and details, and diagram, if required.
14. Persons in charge, with full names, addresses and the particulars referred to in paragraphs 10, 11 and 12.
15. Result to person and particulars of injury.
16. Result to property, including amount of damage.
17. Names and addresses of all persons present at, or eye witnesses of, the accident.
18. What investigation (if any), and result of same.
19. Verdict (if any).

The Board reserves the right to require such further and other details, particulars, maps, plans, profiles, documents, models and information or illustration of any kind as to the nature of the accident and a full understanding thereof may suggest or require.

In pursuance of Section 275 and 276 of said Act, the Board declares that all such information so given in pursuance of this regulation shall be privileged.

Signature of Officer.

N.B.—Give name of officer who fills out this report.

REGULATIONS

REGULATIONS AS TO HEIGHT OF CAR STEPS

Under and in pursuance of a certain order of the Board bearing date the 2nd day of June, A.D., 1909, the Ontario Railway and Municipal Board made the following regulations:

The steps on all cars hereafter constructed and used by The Toronto Railway Company and all other street and electric railways under the jurisdiction of this Board shall have steps conforming to the following regulations.

On closed single truck cars the height of the first step above the ground shall not be less than twelve nor more than fifteen inches.

On closed double truck cars the height of the first step above the ground shall not be less than fourteen nor more than sixteen inches.

On open single truck cars the height of the first step above the ground shall not be less than twelve nor more than fifteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and nine inches respectively.

On open double truck cars, the height of the first step above the ground shall not be less than fourteen nor more than sixteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and fourteen inches respectively.

REGULATION RE DRINKING WATER ON PASSENGER CARS

Every Electric Railway in Ontario, subject to the jurisdiction of the Board, shall provide in each passenger car which runs 20 miles or more, a suitable receptacle for water with paper cups attached upon or near such receptacle, and shall keep such receptacle, while the car is in use, constantly supplied with cool drinking water for the use of passengers and the conductor and motorman in charge of such car.

This regulation shall not apply to street railways in towns or cities.

Dated at Toronto, this 10th day of April, A.D. 1928.

ELECTRIC AND STEAM RAILWAYS UNDER PROVINCIAL JURISDICTION, YEAR ENDING DECEMBER 31ST, 1933
