SCHWILL'S 1914 ANNUAL CATALOGUE

OF SEEDS, TREES, PLANTS AND POULTRY SUPPLIES

TO OUR FRIENDS AND CUSTOMERS.

Memphis, Tenn., Jan. 1, 1914.

We take this method of thanking our numerous friends and customers for their patronage. Our fast increasing trade in all departments proves that our efforts to supply the best seeds are giving the desired results. Our stocks are selected especially for this and the Southern country, and with the coming season we will be better prepared than ever to supply customers with our own brand **Bluff City Seeds** of the very highest quality.

Our prices are also right. Look through the catalogue carefully, and we know if you buy seeds, that it is not necessary to send away to Eastern or Northern houses for them, when you compare notes, and we ask a trial order; we assure you satisfaction. Thanking our many customers for past favors, and trusting to have a continuance of same, we remain, yours faithfully,

OTTO SCHWILL & CO., Seedsmen, Memphis, Tenn.
44 Years in the Seed Business.

How to Order and Terms of Business

WE PAY POSTAGE on all seeds quoted by the packet, ounce, quarter pound and pound, and upon all goods quoted in our catalogue where it says: Prepaid by Mail or Express.

NOTICE CAREFULLY THE PRICES. Be sure to know whether we or you are to pay the carrying charges, and bear in mind that we do not pay the express or freight charges on pecks or bushels, nor on any tools, bulbs, grass seeds, field seeds or fertilizers, except where we so state on the pages where the goods are priced.

THE PRICES WE QUOTE on vegetable seeds and seeds will hold good as long as stocks last. The prices on grass seed, grains and all farm seeds are those ruling January 1, 1914, and are subject to change. As far as possible we will fill in full all orders for seeds that are quoted subject to variation in price, but if market values will not permit this, we will send all that money remitted will pay for.

ALL CLAIMS must be made upon receipt of goods. Our responsibility ceases after goods are delivered to transportation company, and we can assume no liability after delivery to railroad company.

CASH WITH ORDER. Please send money with the order sufficient to cover the whole bill, and remit by express money order or registered letter. Checks covering payment of goods must include 10 cents for collecting them. You will avoid delay by remitting by express or postoffice money order. We decline sending goods "Collect on Delivery" unless remittances be made on account to guarantee acceptance. **Our terms are cash; we do not open any accounts.**

NON-WARRANTY. Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or shallow planting, etc., which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. If they are not accepted on these conditions they must be returned at once. It must, however, be plain to every one who gives the matter the slightest thought, that it is to our best interests to send out only such stock as will not only grow, but prove true to name and description.

Alfalfa—Clovers—Soja Beans—Cow Peas

and all other pod growing plants called legumes enrich the soil through the action of small bacteria growing upon their roots. These bacteria live only upon the roots of legumes and by an action of their bodies extract the free nitrogen of the air, and deposit around themselves as nitrates, thus forming little sacks or nodules on the roots of the growing plants. These sacks furnish the growing plant with all the nitrates it requires, and still leaves large amounts unused in the soil ready for future crops or other crops growing at the same time with the legumes. Quoting from bulletin issued by the Dept. of Agriculture in January, 1908, "It is worse than useless to attempt to grow any leguminous crop without being certain of the presence of bacteria which enable the plants to fix free nitrogen."

The method of transfer of soil for inoculation is both costly and dangerous—weed seed, soil and plant diseases are transferred in this way. All inoculations should be done by means of the pure culture of nitrogen-gathering bacteria which are free from contamination and contain only active bacteria of the proper kind. These standard inoculations are known as Farmogerm, and we strongly advise the use of the cultures whenever you plant legumes of any description.

The Standard Inoculation

FARMOGERM

High-Bred Nitrogen-Gathering Bacteria

What Farmogerm is.

Farmogerm is a pure culture, or growth of nitrogen-fixing bacteria that have been selected and bred up to transform large amounts of nitrogen from the air into soluble nitrates. These bacteria are grown in a jelly, or food, in which they remain active for long periods of time, and sent out in a bottle which admits the necessary supply of pure air, yet keeps out destructive contaminations. If alfalfa can be grown on hot, sandy land of South New Jersey, why can't you grow it?

What Farmogerm Will Do.

Unless the soil is very acid or wet, Farmogerm will:

1. Increase the yield and quality of legume crops, giving quicker growth and earlier maturity.
2. Increase the food value of legumes.
3. Make legumes grow in new localities where they cannot otherwise be grown successfully.

4. Supply nitrates to other crops growing with the inoculated legume crop.

5. Enrich the soil for future crops, thereby increasing the permanent value of the farm. Better crops—better soil—less fertilizer—less labor.

Prepared for the following crops:

White Clover, Red Clover, Crimson Clover, Alsike Clover, Alfalfa Clover, Burr Clover, Vetches, Melilotus, Lespediza, Soy Beans, Cow Peas, Canada Peas, Sweet Peas, Garden Beans and English Peas.

State for what crop Farmogerm is wanted when ordering.

1 Acre Size Bottle..... 2.00
5 Acre Size Bottle..... 9.00

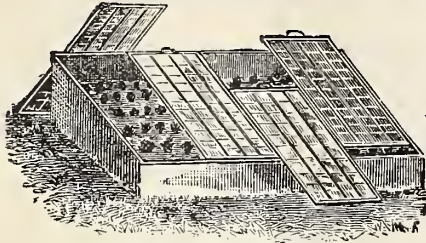

Write for circular describing more fully Farmogerm.

Frost-Proof Cabbage Plants.

Will Double Your Profits, Why?

There are a number of sea islands along the South Carolina sea coast where the soil and climatic conditions are just suited for growing tough, hardy cabbage plants during the Winter and early Spring. The seed is planted in the open field in the months of October, November, December, January and February. The plants make a slow but steady growth, until at eight to ten weeks of age they are very tough and hardy, the buds are purple and the outer leaves a reddish brown. When in this condition they can be shipped to territory further north and planted in the open ground a month to six weeks sooner than the home-grown hot bed or cold frame plants could be planted. These **FROST PROOF CABBAGE PLANTS** will stand a temperature of 8 to 10 degrees above zero without injury, the land freezing, or the plants being covered with ice, sleet or snow after they are planted will not injure them.

The top of the plant does not grow until your regular Spring weather opens up, but the roots grow from the time they are planted and just as soon as Spring weather starts, the established root growth assimilates the fertilizer in the soil, the plants grow very fast, maturing headed cabbage ten days to three weeks sooner than you can mature them from hot bed and cold frame plants. You know what the difference in profit will be if your crop is matured and marketed before the general crop from home-grown plants is matured.

TO GET THE ADVANTAGE OF THESE FROST PROOF CABBAGE PLANTS THEY MUST BE PLANTED A MONTH OR SIX WEEKS EARLIER THAN YOU WOULD PLANT HOME-GROWN PLANTS.

Our cabbage plants are grown from the best Long Island grown seed and are shipped direct from our growing station in South Carolina by mail or express. We can fill orders from December first to April fifteenth. We guarantee good order delivery.

The plants will be somewhat wilted and have a hard, stunted appearance, which will be disappointing to persons who have never used these plants before. Regardless of appearance, they will produce the crop results.

Varieties: Early Jersey Wakefield, Charleston Large Type Wakefield, Succession and Early Flat Dutch.

Prices by mail, postage paid, 35 cents per 100. By express, buyer paying express charges, which under special rates are very low. **500 for \$1.00. In lots of 1,000 to 4,000 at \$1.50 per 1,000; 5,000 to 8,000 at \$1.25 per 1,000. In lots of 10,000 or over at \$1.00 per 1,000.**

Schwill's Superb Large Flowering Sweet Peas

Sweet Peas.

Of late years Sweet Peas have been greatly improved in type, size of flowers and beauty of colors, adding very much to their popularity. The Spencer or Orchid flowering type has appeared in many new shades, outclassing some of the standard sorts of similar colors by their large, bold and wavy flowers. We have discarded many of the older varieties, to give place to the new and larger flowering sorts of similar colors, and the list offered below we can recommend with every confidence.

Cultural Directions—Sow in the spring as soon as the ground can be prepared in a deep, rich soil and for succession until the middle of April. Open a drill 4 to 5 inches deep, and cover the seed from 2 to 3 inches. As the vines grow up, draw the soil up against them for support. A row of brush or wire netting should be placed between them for the vines to trail on. Pick flowers closely and do not allow to go to seed.

Nitrate of Soda is the best fertilizer for sweet peas. It is a fine stimulant and plant food. Apply lightly alongside of plants, not too close.

Japan Clover (*Lespedeza*)

Japan Clover (*Lespedeza Striata*)—Grows anywhere; is tenacious in any soil; lasts always; well known in the South. Sow in spring in permanent pastures by scarifying surface with a disc harrow. It may be classed among the most valuable hay and pasture plants of the Southern States; is eaten greedily by stock. When the land is well prepared and properly seeded *Lespedeza* affords a good cutting the first year and will reseed the land, affording good crops for from two to three years, without any expense to the farmer except that of running a mower over the land once or twice during the summer to keep the weeds down. *Lespedeza* is the most easily cured of any hay that can be grown in the South, as far as we know. Cutting it after the dew is off in the morning, it can be raked into windrows the same evening. The next day it should be put in cocks and allowed to remain a day or two longer, when it is hauled to rick or barn. After two weeks it is ready for the press and market. To obtain a stand, disc harrow your land, then scatter seed on top, roll the field; this will cover them enough. Sow in March or April. Seed weighs 25 lbs. per bushel. Sow 25 lbs. per acre. **By mail, 1 lb., 40c. By freight, 12½ lbs., \$2.25; 1 bu., \$4.25; 5 bu., \$20.00.**

OTTO SCHWILL & CO.,
MEMPHIS, TENN.

Dear Sirs:

Please find enclosed a list of seed that I wish you would quote me a price on same and return the slip to me with each article marked. I will want this order shipped out by December the first, all except the Irish Potatoes and the Sweet Potato slips.

Your seeds are the best in the country, that is what I think, and I praise them very highly to anyone that wants very good seeds to plant for the home use or to truck. Your seeds are good and are true to name always. Since I have been buying seeds from you I will not buy anywhere else, for I could never get as good seeds as I have got from you and there is no danger of me buying seeds from anyone else as long as you are in business and handle seeds.

Hoping you will grant me the above favor, and wishing you the largest success for the year, I beg to remain,

Yours very truly,
W. W. STEPHENS

Helena, Ark., Nov. 14, 1913.

IMPROVED COTTON SEED

The importance of planting seed that will produce an increased production largely exceeding the increased price in the cost of seed is too apparent for comment, and in no other seed have the improvements been greater than in cotton. Our stocks come from the most reliable sources, and we commend them to our customers. The good times have come again when this, the most important crop of the South, is on a boom, and we expect it to remain so for some years to come. Plant pure seed. The standard weight of cotton seed by the bushel is 30 pounds, and the following prices are based on that weight.

Quality of Our Cotton Seeds—We buy our seed of originators, or from scientific growers of seed bought from originators, in car lots. We know our growers; we know what is genuine seed of each type. When you buy of farmers or miscellaneous shippers, you are not certain what you are getting.

Columbia Early Big Boll Staple Cotton

Columbia Early Big Boll Staple Cotton—An improved big boll staple variety obtained by crossing of Egyptian Long Staple and the Russell Big Boll. Plants tall and branching; length of staple, which is strong in texture, is $1\frac{1}{4}$ inches; large locks and will gin out 35 per cent. The seed are green and white, with an occasional black seed, caused by one of its ancestors, one of which is the Russell. Will yield easily a bale to the acre, and matures medium early, therefore well adapted to all boll weevil sections. **Bu., \$1.50; 10 bu., \$13.50; ton, \$75.00.**

Rowden Early Big Boll Cotton—(Short Staple.) Early, for boll weevil lands; lint 15-16-inch. It originated in Texas. Big boll, 50 bolls making 1 pound seed cotton. Bolls are pointed. Quite storm resistant. Locks mostly five; hang together and picking with it is quite easy. Lint percentage is above medium; maturity medium; staple medium. It is one of the prime favorite varieties in the boll weevil region of Texas. In field test Alabama Experiment Station it stood fifth in yield in lint among 40 varieties. **Bu., \$2.00; 10 bu., \$15.00.**

Mississippi Silk Staple—Yield fully equal to short staple variety. For four years brought in Mississippi highest price of any cotton. Plant medium, vigorous, sugar loaf in form; bolls medium, 4 to 5 locked, opening well; seeds medium to small, covered with white fuzz; lint fine, strong, length, $1\frac{1}{2}$ in. This is one of the finest staple cottons grown; succeeds either on good uplands or rich soil. **By freight, bu., \$2.00; 10 bu., \$16.00; ton, \$90.00.**

If you have not had successful fruit crops—try spraying.

Trice's Early Big Boll Cotton

Trice's Early Big Boll Cotton—The Delta Branch Experimental Station at Stoneville, Miss., tests show Trice's cotton to stand first out of 43 varieties on their trial grounds, besides ranking first in money value. Trice's is the cotton for boll weevil sections on account of its light foliage and extreme earliness. Mr. Farmer, if you are troubled with boll weevil, don't fail to use the Trice cotton. The lint will run on good soil $1\frac{1}{8}$ inches and turn out 30% at the gin. Large bolls, plant medium to tall, short limbs up to top, 2 to 3 large limbs at the bottom. Grows trim, straight up. No surplus foliage. Medium white seed. Opens early. Storm-proof, but easily picked. The top stalk above limbs fruits heavily to the apex or plant top; a most remarkable sight when in full yield. **By freight, bu., \$1.50; 10 bu., \$14.00; per ton, \$80.00.**

King's Improved—Owing to its peculiar branching habit it is a very prolific variety. With its small seed will give more lint than any other sort; extra early and can be planted as late as June 15; will mature good crop. **Pk., 50c; bu., \$1.40; 10 bu., \$12.50; ton, \$75.00.**

Bank Account—This is a fine and deservedly popular variety of the big boll type. Plants rather low and symmetrical, usually two long limbs at bottom, short limbs upper part of stalk. Bolls large 59 per pound, five locks; easily picked, seed large white, fuzzy; per cent lint, $34\frac{1}{2}$; maturity medium. This variety is carefully selected; and is fine for uplands, especially the strong uplands. **Pk., 50c; bu., \$1.50; 10 bu., \$14.00; ton, \$80.00.**

Simpkins' Early Prolific—Short staple. Resembles the King's. The superiority of this cotton consists in its extreme earliness and heavy fruiting, has long limbs, which come out at the ground; has close joints and small seed, and yields 40 per cent. lint at the gin. **Pk., 50c; bu., \$1.50; 10 bu., \$13.50; ton, \$75.00.**

Christopher's Improved Early Big Boll Cotton

The product of 25 years' careful selecting and breeding; large and vigorous grower, having good foliage long tap root, withstanding drouths. Two to four large limbs put out at bottom of stalk, the large limbs and main stalk having short limbs and making 3 to 5 bolls to limb. Bolls are very large, 40 of them making 1 pound seed cotton, 5 to 7 locks to the cluster; seed cotton about 40 per cent lint, easily picked, yet having enough blue to prevent falling out; medium seed and white to brown. It is conceded by all who know it to be the best field crop known, having produced 4 bales to the acre; two good pickers having picked a bale a day. It produces more to the acre than any other cotton known, and you can gather it; staple very strong and about 1 1-16 inches in Georgia. Price, originator's stock, in branded 3 1/2 bushel bags from J. B. Sims, pk., \$1.00; bu., \$3.00; 3 1/2 bu. bag, \$9.00; Home grown seed, bu., \$2.00; 10 bu., \$15.00; ton, \$90.00.

Christopher's Improved Early Big Boll Cotton

Cook's Improved Big Boll—Early; for boll weevil lands—(short staple)—Extra big boll. Height, 3.48 inches. Bolls large, round, blunt-pointed, 5 locks, open well; seed medium size, gray or white tipped, fine upland quality. 7/8 to 1 1/8 inches lint. Season maturing early—about ten days later than King's; gins 40 to 44 per cent lint.

Cook's was originated 10 years ago in Georgia. Since that time it has created a sensation in cotton production and yields.

Cook's Big Boll has stood at the head of the list at all State Experiment Stations where tested and is now known as the standard by which other varieties are compared.

It is a big boll variety, 55 to 60 bolls making a pound, is very prolific and a heavy and consistent bearer and is very early. Length of lint 7/8 inch.

Has large, blunt-pointed, round bolls, mostly containing five locks, opens well and is very easily picked; medium-sized, gray, white tubed seed. The stalk has a splendid root system, makes a strong, well-limbed stalk, with medium short points. Bu., \$2.50; 10 bu., \$20.00.

Mebane's Early Triumph Big Boll Cotton—This cotton has a strong, thrifty, deep-rooted, medium sized, well-shaped stalk. Long, stout, short pointed limbs, thickly set on stalk. In case of severe dry weather it will continue to fruit after other cotton has shed the forms. It begins to fruit near the ground, and close to the stalk. Bolls are usually five lock, very large and solid, therefore making more cotton than other spongy large bolls. The large five-lock bolls are produced to tip of limb and top of stalk to end of the season. It is the earliest of all big boll varieties, being only a week later than King's Early. As a storm-proof cotton it beats all other cotton. A hand can pick more of it in a day than any other variety. It makes from 36 to 41 per cent of lint (thirty-six to forty-one pounds of lint to 100 pounds of seed cotton.) The average being 38 per cent, while other cotton makes from 29 to 35 per cent. Average being 32.

Mebane's Early Triumph Big Boll Cotton

The excess of lint in Mebane Cotton over other varieties will pay for the picking. A number of farmers in Arkansas have demonstrated this fact for the last few years. The large yield of cotton in Arkansas last year, under a severe drought, is due to planting Mebane Cotton Seed.

Lint of the Mebane Cotton is silky and stronger than that of any other variety. 1 1-16 to 1 3/8 inches in length. Bu., \$1.50; 10 bu., \$14.00; ton, \$80.00.

HAAGA'S EARLY BIG BOLL LONG STAPLE COTTON

HAAGA Long Staple was developed by selection from Columbia Cotton, and on the originator's farm has been constantly improved and bred by the Plant-to-Row Method, until now we have no hesitancy in saying that it is without doubt the most valuable and prolific Big Boll Staple Cotton ever developed. It grows a low, stocky, branching stalk of the Russell type. It has several long-branching, basal limbs, begins to fruit close to the ground and in fruiting shows a tendency to be a semi-cluster cotton with short joints. The leaves are medium to large; the bolls are very large, about fifty to the pound, and have mostly five locks. The bolls open very wide, and are easily picked. It is absolutely storm-proof. Our seed is from the originator, Mr. Oscar J. Haaga.

The staple is strong and wiry, $1\frac{1}{4}$ to $1\frac{3}{8}$ inches long, and has brought on the Memphis market the present season $18\frac{1}{2}$ cents. It is an early staple cotton, but requires more space than ordinary cotton. Given the proper distance in the row, and shallow cultivation it will outyield the best short staple varieties, and on fairly good land, it will easily average a bale to the acre. Fifteen hundred pounds of seed cotton will gin out a five-hundred-pound bale. Price, Plant-to-Row Method Seed, bu., \$2.50; 5 bu., \$12.00; ton, \$125.00, f. o. b. Memphis.

Cleveland's Early Big Boll Cotton

Improved Florodora Long Staple Cotton

Cleveland Early Big Boll Cotton—Plant vigorous, thrifty, with low, close-jointed basal fruit limbs; large bolls, easily picked; medium sized seed, grayish to greenish; 34 to 38 per cent lint, $1\frac{1}{8}$ to $1\frac{1}{4}$ inches long, fine and strong. Earliest and most prolific at experimental stations. Especially recommended for sections where boll weevil is present. Bu., \$1.50; 10 bu., \$14.00; ton, \$80.00.

Improved Florodora Long Staple Cotton—This splendid cotton is the result of several successive seasons' selection and hybridization on the part of our grower. It is early, not late, like most long staples; is easy to pick; it is productive, and the staple is the finest, especially on good land. Makes a large plant; therefore, does not admit of close planting. Florodora Cotton sold in Memphis at 20c to 21c per pound during October. Several customers reported a yield of a bale to an acre. You cannot miss it in Florodora if you want a staple variety. Price; Pk., 50c; bu., \$1.50; 10 bu., \$14.00; ton, \$80.00.

HALF AND HALF COTTON

The Most Wonderful Short Cotton Ever Developed

Earlier Than King or Simpkins

1,000 Pounds of Seed Cotton will Make a 500-Pound Bale

HALF AND HALF COTTON was developed in Georgia from COOK COTTON. It is the result of seven years of selection and careful breeding, and has created a sensation wherever it has been grown. It has ginned out as high as 53 per cent; that is, 1,000 pounds of dry seed cotton turned a 530-pound bale. This seems impossible, but it is true, and the originator has affidavits on his files to prove, not only this statement, but also that his cotton has made as high as FOUR BALES TO THE ACRE in GEORGIA. He has numerous statements from farmers who have grown his seed, and who have made from one and one-half to two bales to the acre.

The bolls are large (fifty to the pound), round like a ball, have no tip to interfere with picking, and have five locks. It grows a strong, vigorous stalk, with leaves of medium size, and is a very hardy cotton, and will stand drouth and cold far better than the average cotton.

The staple is very short, but it is earlier than the best strains of King and Simpkins' Cottons, and when the high percentage of lint is taken into consideration, there is no comparison between HALF AND HALF COTTON and its many short staple competitors. Our seed is pure, direct from Mr. Haaga, grown on his own farm by the Plant-to-Row Method.

Write us for comparison on test on HALF AND HALF COTTON against other short staples.

In a cotton picking contest in Georgia in September, six men picked in one day 3,037 pounds of seed cotton of this variety in one day, or 506 pounds of seed cotton to the man.

HALF AND HALF sold as high as 14c on the Memphis market, and we have letters from planters who have grown this COTTON to substantiate every claim and statement made in regard to it.

To those planters who prefer a short staple cotton, and to those who have the boll weevil to contend with, or who are threatened with the boll weevil, we recommend HALF AND HALF as the most valuable short cotton ever developed, and which will pay them more in dollars and cents many times over than any other variety of short cotton, and we offer these seed for sale only after its merits have been fully proven. Price: bu., \$2.50; 5 bu., \$12.00; ton, \$125.00.

FERTILIZERS

The intelligent and prosperous farmer of the present day is certain to be one who fully believes in and practices that excellent motto: "Feed the soil and the soil will feed you." Crops cannot live and thrive on air and water alone. Their roots penetrate the earth and absorb therefrom the nitrogen, phosphoric acid, potash or other elements of plant food they require. In some form these must be replaced, otherwise your year's work counts for naught.

The prices given below are net cash and f. o. b. Memphis. Special prices on car lots and larger quantities delivered at your depot will be given on application.

Schwill's Special Brands.

Schwill's Truck Grower—Made especially for vegetables and garden crops. Analysis: 10 per cent phosphoric acid, 4 per cent potash, 4 per cent nitrogen.

Price, 8 lb., 25c; 50 lb., \$1.25; 100 lb., \$2.00; per ton, \$35.00.

For Tomatoes, Melons, Squash, Cucumbers, etc.—The usual plan is to furnish each plant with a small handful at transplanting time, well mixed with the soil.

For Potatoes—Apply 400 to 600 pounds per acre of Truck Grower in the rows or hills.

For Beans, Peas and Garden Vegetables—Apply 300 to 400 pounds per acre, broadcast, and rake or harrow it before planting the seed.

Price, 100 lb., \$1.50; per ton, \$26.00.

Schwill's Cotton Grower—Especially recommended for cotton, which needs plenty of potash. Analysis: 10 per cent phosphoric acid, 2 per cent potash, 1 per cent nitrogen.

Price, 100 lb., \$1.50; per ton, \$25.00.

Directions—Open up a furrow, put down 200 to 300 pounds, then cover, then plant seed. Or you can apply after thinning the plant to a stand, using a fertilizer distributor, drilling the fertilizer about 6 to 8 inches from the plants.

Never Stop or Everbearing Strawberry

New Varieties

The Never Stop

The Great Everbearing Strawberry; Outcome of 30 Years' Test of Over 5,000 Varieties Carried on in the Natural Home of the Strawberry. It has been fully tested in every variety of soil and is guaranteed to thrive anywhere in the United States. We believe that it can be grown in a barrel even in the Tropics, a little shade being given in the very heat of the day. The Never Stop planted in garden or field will bear from earliest spring till hard freezing winter sets in, defying ordinary autumn frost. Winter often catches it in full bearing, and you rake off the snow and gather the delicious ripe berries. At the South it can in ordinary seasons be fruited right on through the winter by raking a little straw on the rows in cold snaps. The fruit is bright red through and through, medium to large, very firm and uniform. **Price, each 15c; doz., \$1.00; per 100, \$6.00; per 500, \$25.00. By mail, doz., \$1.25; per 100, \$6.50.**

The Everbearing Raspberry—St. Regis

One of the greatest raspberries ever introduced. Plants of the ST. REGIS put out in the fall or early spring gave ripe berries on the 20th of June. For four weeks thereafter the yield was heavy and the canes continued to produce ripe fruit without intermission until late October. The berries were large and beautiful, firm and full flavored, to the very last. The ST. REGIS is the only raspberry, as far as known, that is practically sure to produce a crop of fruit the season planted. **Each, 15c; 10 for \$1.25; 25 for \$2.00; 100 for \$5.00. By mail, each, 20c; 10 for \$1.50; 25 for \$2.40.**

King of the Cliffs
Everbearing Raspberry

The Mammoth Blackberry

King of the Cliff Everbearing Black Raspberry—The earliest and latest. This is truly a wonderful raspberry, actually bears fruit from June till November, or till frost. The earliest of all black raspberries; ripening with the Gandy strawberries. We heartily recommend the King of the Cliffs for earliness, firmness, large size, productiveness and for either market or home consumption. It is the earliest of all black raspberries, beginning to ripen June 1st to 5th, just as the strawberry crop is decreasing or waning. It gives a crop of fruit all summer and autumn, fruiting on the old canes till July. The young canes bear profusely all fall till killed by severe frost. Recommended especially for dry, hot climates and for all the Southern States, where other black raspberries have failed. **Each, 25c; per doz., \$2.50. By mail, each, 40c; per doz., \$3.50.**

The fruit is enormously large, some specimens of berries measuring 2¼ to 2½ inches long, largest blackberry known. **Each, 20c; 12 for \$1.25; 25 for \$2.00; by express. By mail, each, 25c; 12 for \$1.60; 25 for \$2.40.**

O. K. Poultry Litter

A DEODORIZER, ABSORBENT, DISINFECTANT, ECONOMICAL AND LABOR SAVING.

O. K. Poultry Litter supplies a long felt want to the poultryman, because it is always practically in the same condition, clean, soft, sweet and pliable after being used for months. It also, to a great extent, saves the expense of disinfectants.

It absorbs all moisture from the droppings and they quickly dry up. It absorbs the ammonia and poisonous gases.

Enables you to do away with dropping boards, thus giving the fowl more light and room.

Lice will not live in it. It is the best nest material because it is soft and pliable and will not harbor lice.

By following directions you need only clean your pens once in three to six months, thus saving much time and labor.

Directions—Spread the litter over the whole floor to a depth of about 3 inches. The litter will absorb all the moisture of the droppings and the entire floor space will be available for scratching. The fowl will scratch in the litter and cover the droppings.

If dropping boards are used, spread the litter over them to a depth of 3 to 4 inches. Rake over occasionally and change in 3 to 6 months.

Bales weigh about 175 lbs. and will cover about 80 square feet 3 inches deep.

Price, 10 lbs., 50c; per bale, \$3.25.

Poultry Mustard

For many years poultry fanciers have striven for increased egg production alone, with a consequent showing by actual tests, of a loss in degree of stamina and fertility. The use of mustard has shown an actual increase in both stamina and fertility.

A teaspoonful for every six hens, mixed with the wet or dry mash, should be fed each morning. In this way one fowl will consume one-half pound of mustard in about six months.

A Word About Disinfectants.

Carbolic acid, chloride of lime, zinc, kerosene, benzine and other crude products are used as disinfectants by some people with the mistaken idea they are cheap. Zenoleum is cheaper than these crude products and it is always dependable. One gallon of Zenoleum makes one hundred gallons of disinfectant at a cent and a half a gallon—so cheap that this solution may be used freely and generously.

Prairie State No. 0 100-Egg Incubator
to the same per cent (9 to 11 per cent) as under a hen. This insures chicks of full vitality—chicks that will live—just like the hen-hatched chicks. Complete Prairie State Catalogue free on request.

Prairie State Incubators and Brooders

The Prairie State Incubators and Brooders have been on the market 27 years. These machines have been constantly improved, until today they will hatch a greater number of livable chicks than any other. By "livable" chicks we mean chicks that will live and grow to maturity. No matter how many chicks you hatch, if they don't live, it is a dead loss.

The Prairie State Incubators copy Nature. Did you ever notice the hen that steals her nest on the ground? That is natural incubation. And she usually hatches every egg, doesn't she? A wet sand tray, covering the entire bottom of the machine in close proximity to the eggs, furnishes the proper amount of moisture and reduces the evaporation from the eggs

This hover can be picked up and carried around with ease and used anywhere. It gives equally good results in a hen house, barn, cow stall, piano or dry goods box. It is circular in shape, is made of metal throughout, and fireproof. The hover sets on floor just as a mother hen does. The lamp can be lifted out through the top and the operator does not need to kneel in the dust. There is no possibility of gases and fumes from the lamp getting into the air breathed by the chicks. The thermometer can be lifted out, looked at and dropped back without moving the hover (see illustration). Can also be used as an oat sprouter. It will do the work quickly and satisfactorily. Ask for circulars. **Price, all complete, each \$8.50.**

The Cycle Hatcher is designed to take the place of the hen and the large, clumsy incubators, and to carry out the development of the embryo chick in the egg to a living, healthy bird by a device approaching nearer to the stage of perfection in construction, operation and control of the moisture than anything on the market to date. **50-egg Cycle Incubator, each, \$6.00, f. o. b. Memphis.**

The Brooder-Hatcher

Brooder-Hatchers are designed to do double duty and meet the requirements for all classes of poultry raisers; the one raising but a few chickens annually as well as the large breeders raising thousands. They have some advantage over our regular Hatchers for hatching, as they will stand a greater variation of temperature in the room in which they are operated, as the nest is protected by the brooder.

Spraying

We cannot be too emphatic in impressing on the horticulturist to spray his fruit trees and grape vines if he desires good fruit. Follow directions carefully. Experiments frequently result disastrously. Careless spraying will result in loss of fruit, and sometimes the trees. Every fruit grower should purchase a spraying apparatus; they can now be had for a small sum. Write us for prices on spray pumps and spraying materials. We can save you money.

Acme Hand Potato Planter

Makes the holes, drops and covers at one operation; plants every hill in every row in the field,—no skips. Plants in any soil, sod-ground or new land.

Plants any size seed, whole or cut, without any adjustment.

The cheapest and most profitable method of potato planting ever invented. Produces the finest stock.

Light, strong and durable. Simple as a hoe.

Weight, 2½ pounds. Price, \$1.00 each; by express only.
