## REPORT ON THE SEVENTH CENSUS OF CANADA, 1931

*To His Excellency the Right Honourable Baron Tweedsmuir of Elsfield, G.C.M.G., C.H., Governor General and Commander-in-Chief of the Dominion of Canada:*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to lay before Your Excellency Volume I of the Report of the Seventh Census of Canada taken as of date June 1, 1931, which contains the Administrative Report and a compendium of this census and earlier censuses.

I have the honour to be,  
Your Excellency's most obedient servant,

WILLIAM D. EULER,  
*Minister of Trade and Commerce*

OTTAWA, September 18, 1936.

## PREFACE

The present opening volume of the Report on the Seventh Census of Canada, 1931, is of an analytical and summary character throughout. It consists of three parts: Part I, an administrative report on the taking of the census, which serves as general introduction; Part II, a series of chapters which summarize and interpret the results of the census against the background of all preceding censuses, and Part III, tables on which the textual matter of Part II is based. For a detailed statement of the plan according to which the results of the census as a whole are presented by volumes, the reader is referred to pages 62-64 of the Administrative Report herewith, and to the prefaces of the succeeding volumes. From the nature of its contents, Volume I has been preceded in point of time by Volumes II, III, IV, V, VI, VII, VIII, IX, X and XI, though the Administrative Report was published as a "separate" in 1934.

The textual and tabular matter of Parts II and III is arranged under twenty-four census subjects. Accompanying the text are various tabular statements; for example, a chronological table of the available data relating to the population of Canada back to 1603 constitutes a part of Chapter I (Part 2), whilst an historical table of the incorporated units of Canada is included as part of Chapter II.

The generally retrospective character of the present volume will recall Volume IV of the Census of 1871, in which the then Director of the Census, Mr. J. C. Taché, presented a compendium of historical material relating to the Canadian population, based on research from a great variety of sources. These data are repeated in the present volume and particularly in the tabular statement included in Chapter I, Part 2, above referred to, but have been considerably revised and extended as a result of further research carried out under the direction of Mr. A. J. Pelletier, Chief of the Census Branch since 1934. The general character of the volume has been designed to supply a much-felt need for data of a comprehensive nature as a basis for the study of the Canadian population problem. The arrangement of the tables in Part III may be seen in the analytical Table of Contents, but may be further briefly described as follows:—

For each subject a series of historical tables going back as far as possible is first given. This is followed by a series dealing entirely with the data of 1931. As most of the cross-analysis involves more than one subject, only the tables closely related to that subject are given in the respective divisions of Part III. In the Table of Contents, however, the tables more remotely related to each subject are indicated as pertaining thereto. For example, under the heading of "Age", six main tables are historical, two refer exclusively to 1931, but thirty-three additional tables primarily related to other subjects but containing cross-classifications by age, are also set out under the latter heading in the Table of Contents, but differentiated by type.

Finally, a detailed statement, both of the materials published in other volumes of the 1931 Census Report, and also of all published and unpublished material available from past censuses in Canada, is given in Appendices VII and VIII.

It may be added that the analyses of the different subjects in Part II are put forward not as an exhaustive treatment of these subjects, but rather as inviting attention to implications of the tabular data with a view to stimulating more exhaustive treatment of the main tables. Such explanatory matter as was deemed necessary to a proper understanding of these tables is also given in the text. As necessary in an official document, theory, unless backed by overwhelming evidence, is avoided. This is especially true of Chapter I, wherein the growth of Canada is traced, decade by decade, by counties since 1850, and for the population as a whole since the beginning of Canadian history. The reader of this chapter, however, will note that the counties, irrespective of location, declined in population after reaching a certain point of density and that the mere fact of population coming into the country did not increase the population except where conditions permitted; and that city movements and other causes combined to lower the saturation points from decade to decade, and sometimes within a single decade as the new areas brought under settlement increased in distance from the areas first settled. (See map following page 28). Emigration to the United States is shown in association with the growth of Canada in each decade.

Except for the introductory Administrative Report, the volume has been prepared under the direction of Mr. M. C. MacLean, Chief of Social Analysis, who also wrote the text of the several chapters of Part II, with the exception of Chapter XXI, written by Mr. O. A. Lemieux, Agricultural Statistician in the Census Branch, and Chapter XXIV written by Mr. A. C. Steedman, of the Internal Trade Branch. Of those assisting Mr. MacLean, special mention should be made of Miss M. H. Buckley, in connection with the preparation of numerous tables, and particularly the one on urban units; of Mr. F. R. René de Cotret, in connection with the compilation of the chronological table, and of Miss E. M. Carmichael with the revising of the text. Mr. H. G. Caldwell has read the text of Part II of the Report and made valuable suggestions.

It is impossible to conclude this prefatory note without reference to the work of Mr. E. S. Macphail, who retired on superannuation from the position of Chief of the Census Branch in 1934, but who carried out the onerous and exacting duties involved in the supervision of the field work of the present census, and of the compilation of the data up to the time of his retirement. Mr. Macphail first joined the census staff in 1901, as Chief Assistant to the late A. Blue, Chief Officer of the Census. His term of service was coincidental with a doubling of the population of the Dominion, and a more than proportional increase in the demand for census data. Towards meeting the latter he contributed by supervising the first application of mechanical tabulation to census work in Canada, with its revolutionary consequences in the form of additional analysis. He also bore the major share of the negotiations which resulted in the establishment of a national system of vital statistics for Canada, of which he remained in charge until the date of his retirement.

R. H. COATS,  
*Dominion Statistician.*

September 18, 1936.

## TABLE OF CONTENTS

	PAGE
Preface.....	7
Part I. Administrative Report on the Seventh Census of Canada, 1931.....	29
Part II. Analysis of the main subjects of the present census and of past censuses of Canada .....	97
Chapter.	
I—(1) The Growth of Population in Canada.....	99
(2) Chronological Summary of Population Growth in Canada with Sources of Information, 1605-1931.....	133
II—(1) Rural and Urban Distribution.....	154
(2) Incorporation Dates.....	163
III— Age.....	194
IV— Conjugal Condition.....	204
V— Birthplace.....	213
VI— Year of Immigration.....	221
VII— Nativity of Parents.....	227
VIII— Racial Origin.....	234
IX— Religions.....	238
X— Official Language.....	246
XI— Mother Tongue.....	249
XII— Nationality.....	253
XIII— Illiteracy.....	258
XIV— School Attendance.....	268
XV— The Canadian Born.....	273
XVI— The Immigrant Population.....	274
XVII— The Gainfully Occupied.....	276
XVIII— Unemployment.....	295
XIX— Families and Earnings.....	305
XX— Housing and Rentals.....	318
XXI— Farm Population and Farm Workers.....	331
XXII— Institutions.....	334
XXIII— The Blind and Deaf.....	337
XXIV— Census of Merchandising and Service Establishments.....	339
Part III. Tables.....	345

### I. The Growth of Population in Canada

<i>Historical Tables</i>	
Table 1—Population	Population of Canada, by counties or census divisions, 1851-1931..... 348
Table 2—Absolute Increase	Absolute increase in each ten-year period in the population of Canada, by counties or census divisions, 1851-1931..... 352
Table 3—Percentage Increase	Percentage increase in each ten-year period in the population of Canada, by counties or census divisions, 1851-1931..... 356
Table 4—Density	Land area, 1931, and density of population per square mile, Canada, by counties or census divisions, 1851-1931..... 360
Table 5—Rural and Urban	Population, rural and urban, Canada, by counties or census divisions, 1851-1931.... 364
Table 6—Rural Density	Land area, 1931, and density of rural population per square mile, Canada, by counties or census divisions, 1851-1931..... 370

## II. Rural and Urban

<i>Historical Tables</i>	
Growth	
Counties	Rural and urban population, Canada, by counties or census divisions, 1851-1931 (See Table 5)..... 364
Density	
Counties	Land area, 1931, and density of rural population per square mile, Canada, by counties or census divisions, 1851-1931 (See Table 6)..... 370
Age	
Numerical	Rural and urban population, numerical distribution, by quinquennial age groups and sex, Canada and provinces, 1931-1921 (See Table 12)..... 408
Age	
Percentage	Rural and urban population, percentage distribution, by quinquennial age groups and sex, Canada and provinces, 1931-1921 (See Table 13)..... 414
Conjugal Condition	
Nativity	Rural and urban Canadian,- British- and foreign-born population 15 years of age and over, by conjugal condition and sex, Canada and provinces, 1931-1921 (See Table 18)..... 456
Birthplace	Rural and urban Canadian-born and immigrant population, by birthplace and sex, Canada and provinces, 1931-1921 (See Tables 25 (a) and 25 (b) )..... 534
Racial Origin	Rural and urban population, by racial origin, Canada and provinces, 1871, 1881, 1901-1931 (See Table 35)..... 710
Illiteracy	
Nativity	Rural and urban Canadian,- British- and foreign-born population 10 years of age and over, by illiteracy, sex and certain age groups, Canada and provinces, 1931-1921 (See Table 65)..... 1070
Age	
Canadian Born	
Age	Rural and urban Canadian-born population, by quinquennial age groups and sex, Canada and provinces, 1931-1921 (See Table 77)..... 1192
Immigrant Population	
Age	Rural and urban immigrant population, by quinquennial age groups and sex, Canada and provinces, 1931-1921 (See Table 79)..... 1212
<i>1931 Tables</i>	
Age	
Numerical	Rural and urban population, numerical distribution, by quinquennial age groups and sex, for rural as a whole and urban by size groups, Canada, 1931 (See Table 14)..... 420
Age	
Percentage	Rural and urban population, percentage distribution, by quinquennial age groups and sex, for rural as a whole and urban by size groups, Canada, 1931 (See Table 15)..... 420
Conjugal Condition	
Birthplace	Rural and urban population 15 years of age and over, by conjugal condition, birthplace and sex, Canada and provinces, 1931 (See Table 19)..... 462
Conjugal Condition	
Illiteracy	Rural and urban population 15 years of age and over, by conjugal condition, illiteracy, certain age groups and sex, Canada and provinces, 1931 (See Table 21)..... 510
Age	
Conjugal Condition	
Heads and Non-Heads	Rural and urban population 15 years of age and over, classified as heads and non-heads of families, by conjugal condition and sex, Canada and provinces, 1931 (See Table 21a)..... 514
Year of Immigration	
Age	Rural and urban immigrant population, by year of immigration, quinquennial age groups and sex, Canada and provinces, 1931 (See Table 29)..... 624
Year of Immigration	
Racial Origin	Rural and urban immigrant population, by year of immigration, racial origin and sex, Canada and provinces, 1931 (See Table 30)..... 638
Nativity of Parents	
Age	Rural and urban population, by nativity of parents, quinquennial age groups and sex, Canada and provinces, 1931 (See Table 32)..... 660
Nativity of Parents	
Canadian, Immigrant and Mixed	Rural and urban population, according as parentage was Canadian, immigrant or mixed Canadian and immigrant, numerical and percentage distribution, by quinquennial age groups and sex, Canada and provinces, 1931 (See Tables 33 and 34)..... 680
Age	
Racial Origin	
Age	Rural and urban population, by racial origin, quinquennial age groups and sex, Canada and provinces, 1931 (See Table 38)..... 736
Racial Origin	
Birthplace	Rural and urban population, by racial origin, birthplace and sex, Canada, 1931 (See Table 39)..... 768
Racial Origin	
Under and over 10	Rural and urban population over and under 10 years of age, by racial origin and nativity of parents, Canada, 1931 (See Table 40)..... 778
Nativity of Parents	
Religions	
Age	Rural and urban population, by religious denomination, quinquennial age groups and sex, Canada and provinces, 1931 (See Table 43)..... 798

Religions	Rural and urban population, by religious denomination, birthplace and sex, Canada and provinces, 1931 (See Table 44).....	830
Birthplace		
Religions	Rural and urban population, by religious denomination, racial origin and sex, Canada and provinces, 1931 (See Table 45).....	900
Racial Origin		
Official Language	Rural and urban population, by official language, quinquennial age groups and sex, Canada and provinces, 1931 (See Table 46).....	948
Age		
Mother Tongue	Rural and urban population, by mother tongue, quinquennial age groups and sex, Canada, 1931 (See Table 49).....	986
Age		
Nationality	Rural and urban naturalized and alien population, by racial origin and sex, Canada, 1931 (See Table 55)...	1004
Racial Origin		
Illiteracy	Rural and urban population 10 years of age and over, by illiteracy, birthplace and sex, Canada, 1931 (See Table 66).....	1077
Birthplace		
School Attendance	Rural and urban population at all ages, by months at school and sex, Canada and provinces, 1931 (See Table 71).....	1135
All Ages		
School Attendance	Rural and urban Canadian-, British- and foreign-born population 5-24 years of age, by single years and months at school, Canada and provinces, 1931 (See Table 72).....	1136
5-24 years		
Single Years		
Nativity		
Months at School		
School Attendance	Rural and urban Canadian-, British- and foreign-born population 7-14 years of age, by school attendance, birthplace and sex, Canada and provinces, 1931 (See Table 73).....	1156
7-14 years		
Birthplace		
Immigrant Population	Rural and urban immigrant population, by year of immigration, birthplace and sex, Canada and provinces, 1931 (See Table 80).....	1218
Year of Immigration		
Birthplace		
Families	Rural and urban families, by age of head, showing family composition, Canada and provinces, 1931 (See Table 97).....	1336
Age of Head		
Families	Rural and urban families, by conjugal condition of head, showing family composition, Canada and provinces, 1931 (See Table 98).....	1339
Conjugal Condition of Head		
Families	Rural and urban families having immigrant male head, by nativity and year of immigration, showing family composition, Canada and provinces, 1931 (See Table 99).....	1344
Immigrant Male Head		
Nativity		
Year of Immigration		
Families	Rural and urban families, by racial origin of head and number of children, Canada, 1931 (See Table 100)...	1364
Racial Origin of Head		
Number of Children		
Canada Only		
Families	Rural and urban families with husband and wife living together, by literacy of heads, showing family composition, school attendance and illiteracy of own children, wives and children gainfully occupied, Canada and provinces, 1931 (See Table 102).....	1368
Two Married Heads		
Literacy of Heads		
School Attendance		
Illiteracy of Own Children		
Wives and Children Gainfully Occupied		
Families	Rural and urban families other than those with husband and wife living together, by conjugal condition and literacy of head, showing family composition, illiteracy and school attendance of own children, Canada and provinces, 1931 (See Table 103).....	1374
Other Heads		
Conjugal Condition		
Literacy of Head		
School Attendance		
Illiteracy of Own Children		
Families	Rural and urban families having guardianship children, by type of guardian, school attendance and illiteracy of children, Canada and provinces, 1931 (See Table 104).....	1388
Guardianship Children		
Type of Guardian		
School Attendance		
Illiteracy		
Families	Rural and urban families having guardianship children, by literacy of guardian, school attendance and illiteracy of children, Canada and provinces, 1931 (See Table 105).....	1392
Guardianship Children		
Literacy of Guardian		
School Attendance		
Illiteracy of Children		
Housing and Rentals	Rural and urban population, number of dwellings, households and rooms, with proportion of rooms to persons, to dwellings and to households, Canada and provinces, 1931 (See Table 108).....	1398
Dwellings		
Households		
Rooms		
Proportion

# ADMINISTRATIVE REPORT ON THE SEVENTH CENSUS OF CANADA, 1931<sup>4</sup>

By The Dominion Statistician

## §1. Introductory

I have the honour to submit hereunder a report on the Census of Canada taken as of date June 1, 1931, being the Seventh Decennial Census of the country as a whole to be taken since the creation of the Dominion.

As there were censuses prior to Confederation at similar ten-year intervals back to 1851 of the United Provinces of Upper and Lower Canada, as well as of the Colonies of Nova Scotia and New Brunswick, there is now available a regular decennial series of such records for the provinces originally constituting the Dominion over a period of 80 years.<sup>1</sup>

Within the decade just passed, whose progress the Seventh Census measures in some of its most important features, economic conditions within the Dominion, as elsewhere, have been marked by violent fluctuations. In the earlier years, the subsidence of the post-War "boom" caused general inactivity. This was followed by a period of almost continuously mounting prosperity, which carried the current records of production, trade and finance to levels unprecedented in the previous history of Canada. With the break, however, which occurred in November, 1929, a decline of equally unprecedented rapidity and extent set in—and this was gathering momentum on the census date. Its accentuation since 1931 into the most acute and pervasive crisis of modern times has given additional impulse to economic discussion and has imparted special interest to the results of the present Census.

It is therefore more than usually incumbent to outline the scope and methods of the Census, and in succeeding chapters of Volume I of the Census Report to summarize its broad results, leaving the detailed analyses and cross-classifications of the statistics, together with their final interpretation, for succeeding volumes. Considered merely as an administrative task, and apart from the importance of its results, the census is one of the largest activities of the Government, both in the extent of the organization required for collecting the data, and in the magnitude of the operations involved in compiling, analysing and otherwise adapting these data to the manifold public and private uses for which they are designed.<sup>2</sup>

## §2. Census Legislation in Canada

"The Census and Statistics" is mentioned in the British North America Act, 1867 (Section 91, Subsection 6), as the sixth of twenty-eight subjects "exclusively assigned" to Dominion as distinguished from Provincial legislative authority. In accordance with this provision, a Census Act was passed by the Parliament of Canada in 1870 (33 Vict., c. 21). Modelled somewhat on the earlier Census Act of the United Provinces passed in 1841 (re-enacted and amended in 1843 and 1847),<sup>3</sup> it was amended in various particulars in the years 1871 (34 Vict., c. 18) and 1879 (42 Vict., c. 21).

<sup>1</sup> There were numerous censuses in Canada prior to 1851. See §4 of the present Report (beginning p. 31), headed "Historical—Objects and Uses of the Census", and in particular the closing paragraphs (p. 36). An enumeration of all these censuses and of other population records, together with the total population shown by each, is given in Appendix VII to the present volume.

<sup>2</sup> Of the United States Census, whose relative scope and extent is not unlike that of Canada, the Advisory Committee appointed by the United States Government in 1921 remarked: "Of all the peace-time activities of the Federal Government, taking and compiling the Census is the largest."

<sup>3</sup> The Constitutional Act dividing the province of Quebec into Upper and Lower Canada was passed in 1791 and at the second session of the first Parliament of Upper Canada an Act assented to (July 9, 1793) provided for "a true and complete list of every male and female inhabitant", the census list to be presented at the general quarter session in the month of April.

A second Act was passed on July 10, 1824: "An Act to repeal part of the second clause of an Act passed in the thirty-third year of his late Majesty's reign, . . . . . and to make more effectual provision for obtaining an accurate census of the population of this province". This Act provided that a "true and complete list of every male and female inhabitant" be delivered to the Clerk of the Peace for the district who in turn was obliged to make "a general return of the population of his district on or before the first day of June in each year".

In 1834 an amendment to the 1824 Act provided for the enumeration of the blind, deaf-mutes and insane, according to age, conjugal condition, etc. A further amendment was passed in 1838 providing for the inclusion of religions in the census. Under the Act of 1824 were taken the annual Censuses of 1824 to 1841.

<sup>4</sup> Submitted to the Hon. H. H. Stevens, M. P., Minister of Trade and Commerce, June 1, 1934.

In 1905 the Act was consolidated with the General Statistics Act (R.S. Canada, 1886, c. 59) and the Criminal Statistics Act (1876, c. 13), when the Census and Statistics Office of Canada was made permanent. Again in 1918, a further and complete consolidation of statistical legislation was effected by the Act of that year "respecting the Dominion Bureau of Statistics" (8-9 George V, c. 43—short title, "The Statistics Act"), which created a central statistical organization whose duties were defined as "to collect, abstract, compile and publish statistical information relative to the commercial, industrial, social, economic and general activities and condition of the people, to collaborate with all other departments of the Government in the compilation and publication of statistical records of administration according to the regulations, and to take the Census of the Dominion".

It is under the latter instruction, and under the further sections of the Act which deal specifically with the Census of Population and Agriculture, that the Census of 1931 has been taken. The pertinent sections of the Act (Sections 3-8, 11-15, 16-19, and 36-41), are printed in Appendix I to this volume.

The first census of the Dominion was taken in 1871, and similar censuses have followed in every tenth year thereafter. In 1886, a special census of Manitoba and the Northwest Territories was taken midway between the decennial censuses, under authority of an Act passed in 1885 (48 Vict., c. 3). This "quinquennial" census was repeated for Manitoba in 1896, while in 1906 and again in 1916 and 1926 a similar census included also Saskatchewan and Alberta, which had been erected into provinces in 1905. Authority for the quinquennial censuses of Alberta and Saskatchewan was originally taken under the Alberta Act, 1905 (5 Ed. VII, c. 3), and the Saskatchewan Act, 1905 (5 Ed. VII, c. 42), respectively, which provide for censuses every fifth year from 1901, but an amendment to the Census and Statistics Act in 1905 (5 Ed. VII, c. 6) as repeated in the Statistics Act, 1918, declares that "a census of population and agriculture of the Provinces of Manitoba, Saskatchewan and Alberta shall be taken . . . on a date in the month of June in the year one thousand nine hundred and twenty-six . . . and every tenth year thereafter".<sup>1</sup>

The administration of the census was originally vested in the Ministry of Agriculture (31 Vict., 1868, c. 53, sec. 5). In 1912, however, the Census and Statistics Office, as established in 1905, was transferred to the Ministry of Trade and Commerce, to be merged subsequently in the Dominion Bureau of Statistics under the Statistics Act, 1918, under authority of which the various schedules and regulations of the Census of 1931 have proceeded.

### §3. Preliminary Reports of Census Results

While the present volume constitutes Volume I of the final Report of the Census of 1931, the more important counts and summary results have been issued to the public (following the practice adopted in 1921) as soon as they became available—and certain whole sections of the present and forthcoming volumes have also been previously released as printed "bulletins". In brief, the policy adopted during the months following the date of the census was to give out the more important population data for cities, towns, villages, etc., as soon as reasonable certainty was felt as to their accuracy. Later, as the compilations progressed, these materials were assembled by county and provincial areas, while additional bulletins summarized the results by rural and urban, conjugal condition, religions, racial origin, language, literacy, school attendance, birth-place, nationality, years of immigration, occupation, earnings, unemployment, households and dwellings. The preliminary census count for the whole of Canada became available on November

<sup>1</sup> A census of Manitoba was taken in 1870, and as it antedates all other enumerations in the Dominion, including the general Census of 1871, details concerning it are of interest. It was taken on instructions addressed on August 4, 1870, to the Lieutenant-Governor by the Secretary of State of the Dominion, which provided that the enumeration should cover the half-breed heads of families and their children residing in the said province at the time of its acquisition, the object being to facilitate the transfer to them of certain lands. Clause 13 provided also for a report on the number of Indians. On October 13, 1870, the Lieutenant-Governor reported that he had divided the province into five sections with one English and one French enumerator in each; later he forwarded a copy of the rules and regulations and of the census schedules. On December 9, he made a preliminary report of the results showing 11,945 people, including whites, half-breeds and Indians. Later the total was raised to 11,965, and still later to 12,228. The results of this census were used in dividing the province of Manitoba into the four original electoral districts.

30, 1931, compared with February 22, 1922, for the Census of 1921, although the task from the point of view of population increase alone was almost one-fifth greater in 1931 than in 1921.

A special bulletin showing population (male and female) by electoral districts, cities, towns, villages, townships and other local subdivisions was issued in 1932, with comparative figures for 1921, for the use of the Redistribution Committee of the House of Commons.

In regard to agriculture, releases given out within the four months following the census date covered the acreages sown to the principal crops for the current year in the respective provinces, these figures being of immediate importance in the estimating of 1931 crop conditions. They were followed during the autumn of 1931 by the statistics of live stock on farms as of June 1, 1931, by provinces. The figures of acreages (with yields) and live stock for 1930 followed, while later issues brought out both the 1931 and 1930 statistics by county or other local areas. Subsequent bulletins during 1932 and the early months of 1933 gave the more important figures of farm holdings, farm population, farm facilities, farm labour and its cost, numbers of occupied farms, vacant and abandoned farms, farm acreages, farm values, farm mortgage debt, farm tenure, farm expenses, and fruit and vegetable production. Altogether over 50 releases dealing with various features of the Census of Agriculture were given out within the 18 months following the census date—a degree of expedition not achieved in any previous census.

From the Census of Merchandising Establishments, which was taken by correspondence during the autumn of 1931 (as will be explained on a later page), preliminary reports dealt with retailing activities by leading cities and towns, by counties, by provinces, and for Canada as a whole, while wholesale activities were likewise summarized by provinces and leading centres. From the Census of Institutions (similarly attached in its initial stages to the Census of Population), three preliminary bulletins were issued during the early months of 1933, dealing respectively with Hospitals for the Insane, Penal Institutions, and Benevolent Institutions, to which was added a directory of General Hospitals. As the materials which these preliminary reports contained are incorporated in the present and succeeding volumes of the Census Report their more exact citation is unnecessary here.

#### §4. Historical—Objects and Uses of the Census<sup>1</sup>

Census-taking dates from the dawn of civilization. Moses numbered the Children of Israel in the fifteenth century B.C. (Exodus xxx, 11-16; Numbers i, 2-4 and 47-49; Numbers iii, 14-16; Numbers iv, 34-49). But enumerations of a similar character were known many centuries earlier: as in Babylonia (ca. 3800 B.C.); in China (ca. 3000 B.C.); and in Egypt (ca. 2200 B.C.; cf. Herodotus, Bk. II, c. cxix; Bk. III, c. lxxxix-xc). A census taken by King David in 1017 B.C. achieved an evil notoriety in history from the divine wrath which it is recorded as having provoked (II Samuel xxiv, 1-25; I Chronicles xxi, 1-27) and which was cited for many centuries in Europe in warning against the spirit of inquiry; as late as 1753 the taking of a census was condemned on religious grounds in the British House of Commons. The census was one of the institutions founded by Solon at Athens in the sixth century, B.C. The Romans were assiduous census-takers, under the Kings, the Republic and the Empire; Julius Caesar reformed the census. The Breviary of Charlemagne (A.D. 808) and the Domesday Book of William the Conqueror (A.D. 1086) are celebrated mediæval censuses. Later, for several centuries, the census disappeared from Europe.

From the census of ancient times, however, the census of today is far removed in character and purpose. Originally no more than a means of mustering the fighting men of the nation for foreign wars, or of enabling rulers to levy taxes on their subjects, or of determining political status, (the Hebrew, Greek and Roman censuses, as well as those of mediæval Europe, were at bottom of that character), the census has so far passed from this conception that its use for any such purpose is now expressly forbidden. Broad sociological inquiry—scientific interest in the general problems of population of a kind unknown until the seventeenth century—rather than specific reference to the individual, is now its essential objective; absolute secrecy as to the individual is imperatively enjoined upon the census.

<sup>1</sup> The materials in the present and next following sections are repeated with only minor alterations from the Report on the Census of 1921, Vol. I, pp. iv-vi.

In Canada the immediate, legal *raison d'être* of the census is to determine representation in the Dominion House of Commons. Under the British North America Act, the province of Quebec is given a fixed number of seats, namely, sixty-five (the number held by Lower Canada in the Canadian Legislature prior to Confederation), while the number assigned to the other provinces is *pro rata* on a population basis as determined by the census. The first rearrangement, it was provided, should be made on the completion of the Census of 1871, a similar readjustment to follow every subsequent decennial census. The Canadian Census is thus taken primarily to enable a redistribution bill to be passed through Parliament. The application of the census to this problem, and the results of the 1931 Census upon existing Parliamentary representation, are dealt with in detail in a later section of this Report. (See pages 91-95.)

But the census, as above remarked, has far wider uses than to fix electoral representation, important as that purpose is. It constitutes, in fact, under the modern system, nothing less than the periodical stock-taking of the people—their composition and condition—designed to show from the widest possible angle the stage that has been reached in the evolution of the national life. Fundamentally, the importance of the census hinges upon its enumeration and analysis of the human element—the people themselves—the primary asset of every state. Their numbers, local distribution, age, sex, conjugal condition, racial origin, nationality, language, religion, education, occupation, infirmities, housing conditions, etc., etc., are each facts in themselves of the greatest moment, especially when analysed in conjunction with one another and against the background of history and natural environment. The data on these various points form a standard by which almost all other facts relating to the country must be measured if they are to have real significance; the well-being of the state, physical, moral and economic, including such important phases as the birth and death rates, criminality, production, trade, wealth, can be apprehended and interpreted only through the medium of population statistics. Thus the census rounds out and completes the scheme of information by which the government as by a chart directs the affairs of the nation. Without the census, it would be true to say that legislation and administration must be carried on in the dark—that there would be no means of knowing whether the country was on the road to success or disaster, or what constitutes the norm or standard of its progress in almost any particular. So cogently is this felt that censuses at five-year intervals instead of ten are universally advocated and would undoubtedly be adopted but for their cost. France, Germany, New Zealand, Denmark have in fact quinquennial censuses; Canada likewise, as already explained, has had a quinquennial census for the three Prairie Provinces since their period of expansion began.

In view of the above, and before proceeding to describe the scope and methods of the Census of 1931, it is worthy of remark that the credit of being the first to take a census of population in the modern meaning of the term belongs to the colony of New France, which in 1666 conducted a "nominal" or name by name enumeration of the people, on the *de jure* principle, of a fixed date, showing age, sex, occupation and conjugal condition. A total of 3,215 persons was recorded; a supplementary inquiry a year later covered areas under cultivation and the numbers of cattle and sheep. The idea of the Census of 1666 appears to have originated with Colbert, but it was vigorously taken up by Talon, the great Intendant, who himself carried out a considerable part of the first enumeration, "visiting from door to door all the habitations of Mont Réal, Trois-Rivières, Cap-de-la-Madelaine, and all places above Quebec". (A photograph of three of the original sheets, partly in Talon's handwriting, now in the Archives of Paris, is reproduced on the following pages.) In Europe the first censuses, those of Prussia and Sweden, date only from 1719 and 1748, respectively, Denmark, Norway and Spain following in 1769, whereas in France and England the first censuses date only from 1801, while in the United States no general census was taken before 1790, when it was a "family" and not a "nominal" enumeration and when its *raison d'être* lay less in the spirit of scientific inquiry than in the practical problems of electoral representation. The primitive St. Lawrence colony may therefore claim to have instituted what is today one of the principal instruments of public administration in every civilized community.<sup>1</sup> Perhaps two-thirds of the earth's population is now brought periodically under review by the census.

<sup>1</sup> See the article by A. J. Pelletier, Assistant Chief, Census Branch, Dominion Bureau of Statistics, *Canadian Censuses of the Seventeenth Century* in the Proceedings of the Canadian Political Science Association for 1930. The development of census-taking in the nineteenth century is succinctly treated by Willcox, article *Census* in the Encyclopaedia of the Social Sciences, 1930.

Reproduction of one of the original sheets of the Census of 1667, taken personally by the Intendant Talon. (See Can. Arch. Series G. 1, Vol. 460-1 and Corr. Gen. Vol. 2 Fol. 505.)

The initial Canadian Census of 1666 was repeated no fewer than thirty-six times during the French *régime* (namely, in the following years: 1667, 1668, 1673, 1675, 1676, 1679, 1680, 1681, 1683, 1685, 1686, 1688, 1692, 1695, 1698, 1706, 1707, 1712, 1713, 1714, 1716, 1718, 1719, 1720, 1721, 1722, 1723, 1724, 1726, 1727, 1730, 1732, 1734, 1736, 1737, 1739).

In addition nine partial censuses were taken. In the later years of this period, ten similar censuses together with nine partial censuses of Peninsule Acadienne (Nova Scotia Peninsula), and ten complete and six partial censuses of Ile Royale (Cape Breton Island), twenty-one complete and four partial censuses of Newfoundland, four of St. John River (New Brunswick), and seven of St. John Island (Prince Edward Island) were taken (several of these being under British authority since Acadie and Newfoundland were finally ceded in 1713). In addition, thirty-four "statements of population" relating to New France (being for the most part estimates based on local authority) are available for the period 1608-1763, together with six for Newfoundland, twelve for Acadie, four for Ile Royale (Cape Breton), six for St. John Island and five for St. John River (New Brunswick). There were also censuses for Louisiana, Arkansas, Detroit, St. Pierre and Miquelon. With regard to Indians, an estimate for the territory now comprised in Nova Scotia, New Brunswick, the State of Maine, parts of other New England States, and the Lower St. Lawrence Valley, was made as early as 1611 (by a Jesuit missionary), while a so-called "census" of the aboriginal "warrior" population was taken in 1736 (by an officer, unnamed, of the French Government) and in 1763 (by Sir William Johnston).

From the date of the British occupation, a series of less elaborate reports by Colonial Governors supervened, though the census eventually reappeared at irregular intervals. There was a census of Canada in 1765, and others followed in 1784 and 1790. Censuses of New Brunswick, Nova Scotia, Lower Canada and Upper Canada became more or less frequent after 1817, the census of Upper Canada (now Ontario) being annual from 1824 to 1842. For Lower Canada there were censuses in 1825, 1827, 1829, 1831, 1832, 1842 and 1844. Censuses of the Assiniboine and Red River District (Manitoba) were taken in 1814, 1822, 1831, 1832, 1833, 1834, 1835, 1838, 1840, 1843, 1846, 1849 and 1856. The scope of these inquiries varied widely, but after 1827 they became fairly inclusive. Under the Canadian Census Act (that of the United Provinces) as amended in 1847, a general census was taken in the months of February and March, 1848, to be repeated in the same months in the year 1850. On August 30, 1851, Royal Assent was given to an Act to provide more effectually for taking a periodical census of the province, as follows: "Whereas it is expedient that the census of this province should be taken in the year one thousand eight hundred and fifty-two, then in the year one thousand eight hundred and sixty-one, and thereafter in every tenth year, and that better provision should be made for taking the said census." Under this Act were carried out the Censuses of 1851-52 and 1861, censuses of Nova Scotia and New Brunswick being taken in the same years, so that as stated in the opening paragraphs of this report we may regard the present decennial census as dating from 1851.

An account of these early censuses was published in Volume IV of the Report of the Census of 1871—the first census after Confederation—which was designed to start the new Dominion upon its career with a review of all the more important previous statistics relating to its domain. This account has been very considerably enlarged by researches made by the Bureau of Statistics in connection with the 1931 Census, and both the old and new materials are summarised in the present Volume I of the Census Report, the figures thus derived being extensively drawn upon and analysed in Chapter I of Volume I, which deals with the growth of the Canadian population from the earliest times, and which marshalls the totals of the Census of 1931 against the background of all previous censuses, in an endeavour to establish the principles governing the expansion shown. In Part 2 of the same chapter will be found a chronological table containing a statement of all census and other population estimates of which record has thus far been obtained (together with the total count in each case) many of these being new or revised, while in Appendix VII to this volume, a comprehensive statement is given of all discovered "sources" relating to population and other census materials in Canada.

## §5. The Census Date—De Jure Character of the Census

As in 1921, the date selected for the 1931 Census was June 1, the Statistics Act requiring (Section 16) that the Census of Canada be taken "on a date in the month of June". Previous to

1911, the Canadian Census was taken in April, the change to June being made in order to avoid the unfavourable weather and road conditions of the earlier month, which seriously retarded enumeration in the extensive thinly-populated areas which the Canadian Census must cover. The June date has the further advantage of enabling the acreages sown to the more important crops for the current year to be ascertained with a degree of finality impossible in April. The date was thrown back as early as possible in June in order to anticipate the movement of the people to summer resorts.<sup>1</sup>

**The De Jure Method.**—The census date is of a certain significance in view of an important fact, namely, that the Census of Canada is taken on the *de jure* as distinguished from the *de facto* principle, *i.e.*, each person is enumerated as belonging to the locality in which he or she is regularly domiciled, whereas under the *de facto* principle the individual is assigned to the locality where found on the census date. The *de jure* procedure is necessitated by the requirement as to parliamentary representation which has been previously described as the legal *raison d'être* of the Canadian Census; the system of provincial subsidies is also authorized on a *per capita* basis by the British North America Act and other constitutional legislation. Theoretically as well, the *de jure* is the preferable method (notwithstanding the greater simplicity of the *de facto* method and the considerable extra labour involved in earmarking non-permanent residents and conversely in tracing and assigning absentees on the census date) owing to the constantly increasing need for normal population data in the study of housing, public health, local transportation needs, municipal status and similar social problems. It may be said in general that the trend of practice is towards the *de jure* system; Great Britain while retaining *de facto* enumeration for purposes of comparison has now combined with it a record *de jure*. As a detail, non-resident students and the inmates of hospitals are in Canada excluded from the population of localities where found and assigned to the localities of home residence, but inmates of prisons and gaols are counted where found. The personnel of the Canadian navy and of fisheries protection vessels, which in 1921 was recorded separately, was in 1931 assigned to localities of home residence, the commanders of ships acting as enumerators.

<sup>1</sup> Census dates vary in different countries, being dictated to a degree by local requirements. In the United States the date of June 1 prevailed prior to 1910, when it was changed to April 1; the latter was changed to January 1, in 1920, in order to meet the difficulty involved in migration from the cities. In 1930, however, reversion to April 1 was made, owing to the difficulties of winter travel and disturbance of continuity in the census records engendered by the January date. At the British Empire Statistical Conference, 1920, the recommendation was made that the range of variation in respect of census dates should be limited to a period of two months before or after April 15. The dates of important recent censuses in the British Empire are as follows: the United Kingdom including Scotland, April 26-27, 1931; the Irish Free State, April 18, 1926; South Africa, May 5, 1931; New Zealand, April 20, 1926; India, February 26, 1931; Southern Rhodesia, May 5, 1931; Hong Kong, March 7, 1931. In Australia the 1931 Census was postponed to 1933 (July 1).

In other countries recent census dates are as follows:—

Country	Date	Country	Date
Belgium.....	December 31, 1930	Luxemburg.....	December 31, 1930
Bulgaria.....	December 31, 1926	Mexico.....	May 15, 1930

Latvia.....	February 11, 1930	Yugoslavia.....	September 29, 1926

## §6. Scope of the Canadian Census

As will be seen from a reference to the Statistics Act, 1918 (quoted in Appendix I to this volume), the Decennial Census of Canada is primarily a census of population and agriculture; to this is added a census of specified institutions, together with "such other matters as may be prescribed by the Governor in Council." Previous to this legislation, the defined scope of the Canadian Census was more inclusive, embracing a census of industrial production (mines, fisheries, forestry and manufactures), and of deaths occurring in the census year. This abandonment of the industrial and mortuary features, and consequent narrowing of the field of the census, had its explanation in a phase of statistical policy and organization to which a reference may be of interest.

It will be appreciated that for so far-flung a task as the enumeration and description unit by unit of the entire population of the country, a very large and expensive organization is required, especially in a country like Canada whose physical extent is that of half a continent and where large areas are still but sparsely settled. There is an obvious necessity, therefore, that such organization once brought into being should collect the maximum in the way of statistical materials—in other words should earn the largest possible "dividend" upon its "overhead." Reaching as it does every man, woman and child in the community, the census, it was felt, afforded an opportunity of dealing, not only with the people themselves and their personal and social characteristics, which was its immediate purpose, but with their various economic activities as well. Particularly did this apply in Canada where direct administration of many economic activities is under control of the Provincial Governments whose methods differ *inter se*. Though Dominion-wide statistics were, in process of time, established in certain fields and subjects, the census as originally conceived was given a wide range and mandate as to the materials it should collect, constituting as it did, in the early decades of the Confederation, the only means of obtaining a nation-wide purview of affairs.

But it is none the less clear that for certain inquiries of this nature the census is essentially unsuited. At bottom its form of organization is determined by the necessity of reaching each and every individual for the ascertaining of a series of fundamental, well-known facts—such as sex, age, conjugal condition, occupation, birthplace, nationality, etc. For this a very large staff must be engaged, for whom by implication the scale of remuneration must be moderate, thus excluding the employment to any general extent of specially trained or expert enumerators, or their retention for more than a comparatively short time. The census questions on population must be such as any person of fair education, after careful study of the regulations supplemented by oral instructions and a test designed to ensure his comprehension of details, can explain to the people—and this is all the Canadian Census can reasonably hope to secure.

When, therefore, the census inquiry is extended beyond population, difficulty is at once encountered. Industrial production, for example, is so many-sided and complicated in its processes, requiring for its proper description scores of highly differentiated schedules, some of them complex and technical to a degree that no body of employees appointed and instructed as are the Canadian census enumerators can be expected to deal with successfully. Again, in the case of the statistics of deaths, only a qualified physician can furnish many of the details whose authenticity must be assured. In point of fact the so-called "mortuary" census, once a recurrent feature of the Decennial Census of Canada, had from the beginning proved of little value. In general, the census is primarily a "stock-taking", *i.e.*, a record of conditions as they exist at a given moment; it cannot therefore be used beyond a point to record phenomena that require expert observation or notation over a period of time. Most economic phenomena, such as trade, finance, production, as well as social phenomena like births and deaths, migration, etc., fall in the latter category.

The centralization of the statistical work of the Government under the Dominion Bureau of Statistics in 1918, and the organization which the Bureau has since carried out in collaboration with the various Dominion and Provincial Departments interested in different aspects of the social and economic situation, has enabled this feature to be dealt with more satisfactorily than was previously the case, to the considerable simplification of the census. The statistics of industrial production once included in the decennial census have been placed on an annual basis

(decennial records in such a field are of decidedly limited value), and are now collected in co-operation with the various Departments (Dominion and Provincial) of Mines, Forestry, Fisheries and Agriculture, the work having been co-ordinated not only as between provinces in each subject but as between subject and subject, at the same time that it has been enlarged into a general economic survey by the inclusion of statistics with regard to labour, capital, power, etc., as well as production. In the case of education, annual statistics are now published on a Dominion-wide basis by the Bureau, in collaboration for the most part with the several Provincial Departments of Education, the census questions being limited to points required as background or check to the annual survey. Even more important from the standpoint of the Census of Population, the statistics of births, deaths and marriages are now compiled and published annually by the Bureau, the provinces having enacted a uniform "model" Registration Act, using uniform schedules supplied by the Bureau for the collection of the data, and furnishing to the Bureau a copy of each registration at the cost of transcription. At the same time the statistics of immigration collected by the Dominion Department of Immigration have been brought into co-ordination and harmony as to method throughout. There is thus available for Canada a comprehensive body of population data, planned as a unity, including (1) the day to day movement of the population as revealed by (a) births and deaths and (b) migration; and (2) the periodical census or stock sheet of the whole. In brief, the decennial census is now related to the general body of Canadian statistics in a complementary and supplementary way that was not previously possible.

As an example of the "interlocking" of the census with the other records of population just mentioned, reference may be made to the well-known problem of the statistical treatment of fertility, which is sometimes dealt with by securing on the census schedule the number of children born to each married woman. It was decided to omit this question from the Canadian Census, since through the standard registration forms now in use throughout Canada, information is already obtained as to the number of children born alive to each mother, the number now living and the number that were stillborn. In addition, the Canadian birth forms contain detailed information concerning the parents, allowing classification under various rubrics, and comparison with the corresponding census figures of population; thus the forms distinguish births to married mothers from those to unmarried mothers, and give the age, birthplace and racial origin of the mother, and in the case of legitimate births, the age, birthplace, origin and occupation of the father. As the vital statistical compilations are made centrally in the Bureau of Statistics, the analysis of these results can be made as desired—and this procedure has the advantage of maintaining a continuous record. On the other hand, the census is superior in including infertile marriages and in obtaining the information from women whose fertility is completed as well as those who are still in the child-bearing stage of life; moreover, the date or duration of marriage is not contained on the birth forms of all the provinces. Upon the whole, however, it appeared that the data available from the birth forms for the study of Canadian fertility were so considerable that the inclusion in the census of questions upon the subject could not be justified in view of the urgent need of restricting the schedule as much as possible. This problem is more fully dealt with in the special study of fertility which, as explained later, will appear in one of the census volumes.

In one case what might appear an exception to the principle above mentioned of excluding production statistics from the census is made, namely, in the case of the important industry of agriculture. More than one-third of the population of Canada is directly dependent upon agriculture, and the most extensive and expensive part of the census organization is that which covers the rural districts. For agriculture, moreover, the ordinary population enumerator proves a satisfactory field agent, most agricultural processes being familiar to an enumerator chosen from an agricultural district. Hence the Decennial Census of Canada has been made, under the Act of 1918, a census of population and of agriculture—a comprehensive survey of the Canadian people and of their basic industry—the latter being covered between censuses by a system of annual agricultural statistics and crop estimates which the Bureau carries out in co-operation with the nine Provincial Departments of Agriculture.

Under Subsection (e) of Section 19 of the Statistics Act, 1918 (see Appendix I), a census of institutions, including hospitals, hospitals for the insane, penal institutions and benevolent institutions (the latter including houses of refuge, almshouses, organizations for the deaf,

dumb and blind, child welfare institutions, day nurseries, etc.) in 1931 was taken simultaneously with the Census of Population and Agriculture, while under Section (d) a census of merchandising and service establishments was similarly taken. The population and agriculture enumerators, however, were employed in both these inquiries only to the extent of collecting the names, addresses and other primary facts of such institutions and establishments, the full data being subsequently secured by correspondence on schedules forwarded from the Bureau direct.

### §7. Method of Conducting the Enumeration—Secrecy

The original entries of the census for each person are made by the census enumerator, who personally visits each household for that purpose. In Great Britain, Australia, New Zealand and South Africa the householder is held primarily responsible for filling in the desired particulars, a schedule being left in advance of the census and subsequently collected. In France, Germany, Belgium and Italy, an individual card, being a modification of the householder's schedule, is employed. The schedule or card method, either singly or in combination, has undoubted advantages in thickly populated and well organized areas. It is less practical in countries like Canada, the United States and India, where great distances have in some cases to be traversed in taking the census, where permanent supervisory organization is less available, and where personal explanations of a kind that only a specially instructed enumerator can supply have been found indispensable over considerable sections.

**Secrecy.**—The answers given by the individual to census questions are in every instance held absolutely confidential. Every employee of the census, whether in the field as commissioner or enumerator, or at Ottawa as compiler, clerk, etc., is bound by special oath and penalty against divulging any fact whatsoever that may have been learned through the census. The Bureau of Statistics is forbidden to issue any statement that would directly or indirectly reveal information pertaining to a particular person or concern—in other words it is limited to the publication of aggregates (Statistics Act, 1918, Sections 6, 15 and 36). Though the name of every one is taken down, this is not for the purpose of associating the individual with any of the facts that are recorded, but is for use merely as a check on the accuracy of the enumeration—to clear up such points as the completeness of the census in a given locality or the correctness of a particular return.<sup>1</sup> A special regulation supplements the sections of the Act above referred to and renders them still more explicit.<sup>2</sup>

<sup>1</sup> Under the Old Age Pensions Act, 1927 (R.S. Canada, 1927, c. 156) the pension authorities are given the right to ascertain the age of any pensioner free of charge:

- (a) from the registrar of vital statistics or other like officer of any province; or
- (b) subject to regulations, from any census taken more than thirty years before the date of application.

The regulations issued in this connection provide that the census shall be appealed to only in the event of failure to obtain information from

- (a) a certificate of birth;
- (b) a certificate of baptism; or
- (c) entries in a family Bible or other genealogical record or memorandum of the family of the pensioner.

Further, the request for census information by the pension authorities can be made only with the consent in writing of the person regarding whom the information is required; the specific locality of residence must be stated; and any information supplied by the Bureau must be confidential and must not be used for any other purpose than that of the administration of the Old Age Pensions Act.

<sup>2</sup> Regulation No. 31 reads as follows:—

"**SECRECY OF CENSUS INFORMATION PROVIDED FOR.**—Every officer or other person employed as census commissioner, census enumerator, or in any other capacity under the Statistics Act is required to keep inviolate the secrecy of the information gathered from the public and entered on the schedules or forms. An enumerator is not permitted to show his schedules to any other person, nor to make or keep a copy of them, nor to answer any questions respecting their contents, directly or indirectly; and the same obligation of secrecy is imposed upon commissioners and other officers or employees of the outside service, as well as upon every officer, clerk or other employee of the Dominion Bureau of Statistics at Ottawa. The custody of census and other statistical records pertains solely to the Bureau, the Act expressly stating that no individual report or return shall be published or divulged. Moreover, no officer or employee of the Bureau is permitted to make a search among the records for information relating to an individual return, except for purposes of verification under the Act. The facts and statistics of the census may not be used except for statistical compilations."

## §8. The Population Census, 1931

We may now proceed to a detailed description of the questions asked by the Census of 1931, which as previously stated comprehended the four subjects of population, agriculture, institutions and merchandising. The text of the various schedules used is reproduced in Appendix II (page 1445 and on).

It must be confessed that in Canada public interest in the census has been hitherto much less fertile of suggestions than in many other countries. In Great Britain and the United States the census offices in framing their schedules and regulations had the assistance of advisory committees nominated respectively by the Royal Statistical Society of Great Britain and by the American Statistical and Economic Associations. The general similarity of conditions in Canada has rendered the recommendations of these committees of material value to the Dominion Bureau of Statistics. The opportunity afforded by the Imperial Statistical Conference of 1920 of direct consultations between the several parts of the British Empire was not again forthcoming; but the presence in Ottawa of various statistical officers of the Dominions in connection with the Economic Conference of 1930 enabled plans to be concerted for the early exchange of the census tabulation programmes between the countries of the Empire so as to permit a degree of mutual accommodation and co-ordination.

No question is of course inserted in the census except after the most careful deliberation, and as a rule in concurrence with expert opinion, of which there is now a considerable body extant.<sup>1</sup> Certainly no question is asked for the mere gratification of curiosity, or from which no result of real importance to the country will accrue. Census-taking of course, is still in process of development, and finality or perfection cannot be claimed for any of its methods—the more so as the conditions it must meet are constantly changing. In view, however, of the extent to which the success of a census depends upon the active co-operation of all the people—its openness to misunderstanding and the embarrassment that unthinking criticism may inflict—it may be permitted to preface the following review of the census schedules by emphasizing the care devoted to the planning of their many details. It may be noted in this connection that a statement of the purpose of each census question and of the procedure to be followed by the enumerator in securing the proper reply to each, was issued prior to the Census of 1931 in a booklet of 99 pages, intended primarily for purposes of instruction to the census commissioners and enumerators, and approved by Order in Council (P.C. 25) dated January 8, 1931.

## §9. The Population Schedule

The first and basic schedule of the census is that on which the details as to each person are entered. Supplementing this and exactly reproducing its questions, a so-called "individual" form is used in the case of persons absent for the day at the time of the enumerator's visit—this form being subsequently called for by the enumerator. Again, a special schedule for the enumeration of the blind and deaf-mutes is used, its purpose being to facilitate immediate compilation on behalf of educational and other institutions. Incidentally, blindness, total deafness, and deaf-mutism are the only "infirmities" recorded on the general population schedule, in view of the difficulty of securing accurate replies on such points as feeble-mindedness, idiocy, etc., though inmates of hospitals for the insane, feeble-minded, etc., are, of course, enumerated.

**Closed House and Absentee Family Cards.**—The *de jure* system of enumeration involves special procedure in respect to houses found closed and in respect to individuals or families found in localities other than their permanent residence. In addition to the main census schedules, therefore, the enumerators are supplied with cards termed the "closed house" card and the "absentee family" card respectively (reproduced in Appendix II). An enumerator on finding a closed dwelling makes a return of the fact on the closed house card, obtaining the information from neighbours or others in a position to supply it. The details for non-residents and visitors

<sup>1</sup> Of special importance is the question, "What subjects or features in connection with population require the full enumeration of a census and what may be equally well or better treated by the sampling method?" On this point see an article on "Enumeration and Sampling in the Field of the Census" with special reference to Canada, by R. H. Coats and M. C. MacLean, Chief of Social Analysis, Dominion Bureau of Statistics, in the Journal of the American Statistical Association, September, 1931.

are similarly entered on the absentee card and forwarded to the Bureau of Statistics. The two sets of cards are first "matched" in the Bureau, and the assignment of the individuals as to locality made in so far as possible; where a closed house card is received with no corresponding absentee reported, or *vice versa*, the matter is cleared up by subsequent inquiry. The absentee card as previously stated is not used in the case of persons absent for the day only; such cases are dealt with on the "individual" form above mentioned.

### §10. Questions on the Population Schedule

The questions on the Population Schedule employed in the Census of 1931 numbered 40 in all, which may be very roughly segregated into groups as follows:—

- (1) Order of visitation, name, locality, description of dwelling;
- (2) Personal description (family, sex, conjugal condition, age);
- (3) Political status (birthplace, year of immigration, year of naturalization, nationality, origin, language);
- (4) Social condition (literacy, school attendance, religion);
- (5) Economic condition (occupation, industry, earnings, unemployment, disability).

In the case of the questions segregated under (1) and (2) above, no change was made from the practice followed in 1921, except for the addition under (1) of the question "Has this family a radio?"—the object being to measure exactly and from all significant angles the use in Canada of this important invention. In Group (4), likewise no change of moment was made. In the case of Category (3), roughly described as involving the "political status" of the individual, while no new questions were introduced, recent developments have considerably increased the demand for exact information as to Canadian nationality and have thrown a correspondingly heavier burden upon census compilations; an enlargement in the instructions to enumerators was accordingly made. Again, under Category (5), the unprecedented extent of unemployment made it necessary to assign nine rubrics to the subject instead of three as in 1921 (the additional questions being devoted to causes), and to arrange for an extensive cross-analysis with the other pertinent questions on the schedule. It will be desirable, therefore, to discuss in some detail the manner in which the Census of 1931 approached these two series of problems, and the additional contribution which it has endeavoured to make to the understanding of each.

### §11. National Status and Cognate Subjects in the Census

The national status of Canada has been in the forefront of political discussion since the Great War, more especially since the Imperial Conference of 1926, when Canada and the other Dominions were explicitly recognized as (to quote the Report of the Conference) "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." As a by-product of this discussion, the questions have been asked, "How are Canadian Nationality and concomitant phenomena to be recorded by the census?" "Who are 'Canadians'?" "How do they 'qualify' as such?" and "What is their exact number?". Some confusion has characterized certain phases of the discussion, for the subject is many-sided and the "approach" of the census is multiple as well as direct.<sup>1</sup>

**Birthplace or Nativity.**—The census begins its inquiries on political status with the subject of birthplace or nativity: each and every person is asked to state the country where he or she was born. In enumerating the Canadian born, the province of birth is also obtained, as

<sup>1</sup> On the occasion of the Census of 1921, currency was given in the press to statements that the census did not record persons of native-born Canadian parentage as "Canadians." This misunderstanding arose in part from the fact that the answer "Canadian" was not accepted in reply to the census question on racial origin, and in part from confusion as to the distinction existing between the concepts of birthplace, nationality or citizenship, and origin. As embarrassment was thereby caused to the 1921 enumeration in certain sections, the census procedure was explained in the press, and little or no difficulty on the point was encountered in 1931. The matter was the subject of a debate in the House of Commons on April 6, 1927.

throwing light on the movement of Canadians within their own boundaries—for example, the extent to which the West has been peopled from the older provinces. In the case of countries whose boundaries were altered by the War, the province or city is obtained in order to make allocation in the census reports precise; by the Treaty of Versailles, persons born in, say, Warsaw, or in any part of what was formerly Germany, Russia or Austria-Hungary that is now Poland, are now to be regarded as having been born in Poland.

Thus in tabulating the results of this question, the following broad classifications are obtained: (1) those who are Canadians by birth, with the province of birth; (2) those who are of "other British" birth (these being fellow "British subjects" unless they have renounced their British allegiance); and (3) the "foreign born" according to countries, who may or may not have become Canadian nationals and British subjects.

In two further questions under the heading of birthplace or nativity, the birthplace of the father and of the mother, respectively, of each person is obtained. These questions throw light on the duration of the family residence in Canada, and on certain phases of intermarriage. If both the father and the mother, as well as the person himself, have been born in Canada, the family is clearly of at least three generations' residence in Canada. In 1931, the number of Canadians of the third generation or more was 5,615,559, while there were 428,892 whose fathers alone were born in Canada, and 595,965 whose mothers alone were Canadian-born. Of the remainder, 3,719,234 reported both parents born outside of Canada.

**Immigrant Population.**—Following on the questions relating to birthplace, the census asks two questions that pertain exclusively to persons born outside of Canada and to expatriated Canadian born. The first of these questions asks the "year of immigration"; the second, the "year of naturalization." From the former the exact "age" of the immigrant population as Canadian residents is ascertained, *i.e.*, their length of domicile in Canada; comparing these records with the annual immigration returns, information as to the fluidity of immigrant population is obtained.

Thus we know that in 1931 the total immigrant population born outside of Canada was 2,307,525, made up of 748,648 who came to the country during the decade 1921-31, of 669,875 who came during 1911-21, of 625,174 who came during 1901-11, and of 255,379 who came before 1901. Comparisons of these figures with those of the immigration movement by years and with the figures of births and deaths are of great interest. Thus we know that approximately 1,300,000 immigrants arrived in Canada between 1921 and 1931, some 550,000 of whom clearly either emigrated or died during the decade. In addition we know that of the immigrants who came to Canada prior to 1921 (numbering over 3,200,000 between 1900 and 1921) and of whom 1,582,052 were found in the Census of 1921, some 850,000 emigrated (making allowance for deaths) during 1921-31. Simultaneously the excess of births over deaths in Canada during 1921-31 was over 1,500,000 and the numbers of repatriated Canadians at least 325,000. Apparently nearly half a million Canadian born also emigrated during the past decade. The inter-relation of facts like these are of great importance in considering past and present immigration policies.

Not all immigrants are of non-Canadian birth; a few Canadian born who subsequently obtained domicile or citizenship in another country but still later returned to Canada are now "immigrants," the Immigration Department so regarding any Canadian who has lived three years or more in another country, if and when he resumes residence in Canada. The Department of Immigration since 1924 also maintains statistics of "returned Canadians" from the United States, *i.e.*, of Canadians (apart from students and travellers) who have gone to the United States for seasonal or other employment, but have returned within a three-year period.

The "year of immigration" question in the census applies to both "British" and "foreign" immigrants. A further question on "year of naturalization" applies only to the foreigner (*i.e.*, the non-British subject), who alone requires "naturalization," or the process of admitting the

foreigner to Canadian citizenship.<sup>1</sup> The question of naturalization and the year thereof is important as showing the relative extent and rapidity with which foreign immigrants of various nationalities throw in their lot politically with the country of their adoption.

**Nationality.**—We now reach the question proper of nationality or citizenship. The terms "national," "nationality," "nationalist," "nationalism," are often used in a loose or general, though understandable, way. The census, which must be specific and clear cut, has a distinct question devoted to this subject, its root purpose being to ascertain to what country the person owes political allegiance.

Every Canadian citizen or national, *i.e.*, every person owing political allegiance to Canada, is entered in this column of the census schedule as "Canadian." The basic legal definition of Canadian nationality is to be found in the Immigration Act, which defines a Canadian citizen as: (1) any person born in Canada who has not subsequently become the citizen of a foreign state; (2) any British subject who has been domiciled for five years in Canada; (3) any subject of a foreign power who has become naturalized and has not subsequently become an alien or lost Canadian domicile. (R.S. Canada, 1927, c. 93, Section 27b.)

The part which Canada played in the negotiating of the Peace Treaty and her subsequent enrolment as a member of the League of Nations necessitated an enlargement of the terms of the Immigration Act above cited. In other words, there arose the need of an official definition of the term "Canadian citizen" as distinct from "British subject"—a definition that would be internationally recognized. An act was accordingly passed by the Parliament of Canada in 1922 entitled "An Act to define Canadian nationals and to provide for the renunciation of Canadian nationality" (R.S. Canada, 1927, c. 21). It defined a Canadian national as: (1) any British subject who is a Canadian citizen within the meaning of the Immigration Act; (2) the wife of any such person; and (3) any person born out of Canada whose father was a Canadian national at the time of that person's birth, or, with regard to persons born before the passing of the Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian national as defined in the Act. It went on to describe the procedure necessary in the renunciation of Canadian citizenship. Thus there is now a statute establishing a class of "Canadian citizen" within the wider class of "British subject." No one can be a Canadian citizen without being a British subject, but there was a time when persons admitted to naturalization in Canada might not be able to qualify as British subjects outside of Canada.

Under the section as to children above cited, a child born of Canadian parents in a foreign country retains his Canadian citizenship up to the age of 21 (providing his parents have retained theirs), or until he elects to be a citizen either of the country in which he was born or of some other country.

It will be seen from the above that Canadian nationality has several bases. The census covers each of the phases that have been mentioned, and though instances of inexact definitions being given to the enumerator may occur (in the case of Canadians who have adopted foreign allegiance and have not been formally repatriated on returning to Canada, special care was found necessary), there is no reason to believe that it does not obtain a substantially accurate measurement of this highly important phase of the national life.

<sup>1</sup> The Naturalization Act (R.S. Canada, 1927, c. 138) provides that the following persons shall be deemed to be British subjects and therefore requiring only domicile and not naturalization to become Canadian citizens:

"3. (a) Any person born within His Majesty's dominions and allegiance; and

"(b) Any person born out of His Majesty's dominions, whose father was, at the time of that person's birth a British subject, and who fulfils any of the following conditions, . . . . .

(i) . . . . . was born within His Majesty's allegiance, or

(ii) . . . . . was a person to whom a certificate of naturalization had been granted, or . . . . .

"(c) Any person born on board a British ship whether in foreign territorial waters or not:

Provided that the child of a British subject, whether that child was born before or after the twelfth day of June, one thousand nine hundred and fourteen, shall be deemed to have been born within His Majesty's allegiance if born in a place where by treaty, capitulation, grant, usage, sufferance, or other lawful means, His Majesty exercises jurisdiction over British subjects.

"13. The wife of a British subject shall be deemed to be a British subject. . . . .

"14. . . . . a woman who, having been an alien, has by or in consequence of her marriage become a British subject, shall not, by reason only of the death of her husband, or the dissolution of her marriage, cease to be a British subject."

The sum total of Canadian nationals is of course not ascertainable through the Canadian Census alone. That sum includes Canadians who have left Canada for permanent domicile elsewhere, retaining their Canadian citizenship (with such of their foreign-born children as may elect to hold Canadian nationality), the only sources of information for whom are the censuses of the countries in which they are living. We know, for example, that in 1930 there were 1,278,421 persons residing in the United States who had been born in Canada, and that of these, 368,557 had retained their Canadian citizenship. The Bureau of Statistics has secured as full a return as possible of Canadian nationals resident in other countries.

**Origin.**—The next phase of the subject covered by the census deals with the "origins" or sources from which the Canadian population has been derived. The information sought under this heading is popularly described as involving the concept of "race," but this is not always the case. In a biological and ethnological sense, the term "race" signifies a physical differentiation (as in shape of head, stature, color of skin, etc.) between groups of the human species, such as exists between the black and white races, or under the latter heading between the Nordic, Alpine and Mediterranean groups. Obviously the census cannot pursue inquiry in a field of the latter character, the more so as ethnologists themselves are by no means agreed upon the principles of race classification. Yet some valuable light is thrown by the Canadian Census upon this region. The practical procedure is as follows:—

First, all persons of the black, yellow, red or brown races are entered as Negro, Japanese, Chinese, Hindu, Indian, Malayan as the case may be (orientals being segregated by country of origin). Obviously it is obligatory, so long as the Chinese Immigration Act or the special arrangements with regard to Japanese and Hindu immigration exist, that we should know the exact situation in Canada to which these policies apply. In the case likewise of the Canadian aborigines the enumeration is on distinctly racial lines.

For the remaining elements of the population, those namely which derived originally from Europe—consisting in the main of the descendants of the English, Irish, Scottish, French, German and other European colonists—the question as to "origin" usually elicits the original place of residence and implied cultural surroundings of the family before its transfer to the North American continent. In most cases, therefore, the replies to the census question indicate the country or section of Europe from which the family originally came, as English, Scottish, Irish, Welsh, French, Dutch, German, Polish, Ukrainian, etc.—being terms relatively homogeneous from a cultural standpoint.

The term "origin" therefore, as used by the census, has a combined biological, cultural and geographical significance. It suggests whence our people come and the implied biological strain and cultural background; following popular usage, the terms, "English stock," "French stock," "Italian stock," etc., are employed to describe the sum total of the biological and cultural characteristics which distinguish such groups from others. In the case of the descendants of the original French colonists, who possess certain definite rights under the Canadian Constitution recognized since 1763, and who number nearly one-third of the present population of Canada, there is of course a further and special obligation; from a population of not over 70,000 at the time of the British conquest, the French stock has grown to a total (between Canada and the United States) little short of four and one-half millions today.

In tracing origin in the case of those of European descent the line is through the father. By applying this rule rigorously, those of mixed family origin are (by the law of large numbers) resolved with a fair degree of accuracy into their constituent elements. Family name is often an index (*Müller* is English but *Mueller* is German). For Indians, the line is through the mother, and the tribe name is likewise ascertained, as Chippewa, Blackfoot, Cree, etc. All who are found on Indian reserves as wards of the Government are counted as Indians. In the case of the black or yellow races, persons deriving through either parent are so named.

In recruiting a population from outside sources, the main problem is the assimilation of diverse elements. Such features as illiteracy, the tendency to learn and speak the national languages, types of offences, etc., vary greatly as between different stocks. Illiteracy, for example, persists among the Canadian population in evident relation to origin, notwithstanding the uniform operation of Canadian educational and other environment. Inter-marriage likewise varies as within Northern and Northwestern European stocks and those of Southeastern Europe.

Knowledge of this kind is not of theoretical interest alone but invades the field of "practical politics."

**Language.**—The language spoken by the people of a country has a distinct bearing upon its problems of nationality and assimilation. With the exception of religion, no individual right or heritage is more highly prized or more jealously guarded. In Canada, French as well as English has been an official language from the earliest times. The census therefore asks three questions of each person as to language: (1) Whether he or she can speak English; (2) Whether he or she can speak French; and (3) What language is spoken as mother tongue. By mother tongue is meant the language commonly spoken in the home; in the case of immigrants it is usually the language spoken before coming to Canada.

**Religion.**—Finally, the census requires each person to state what is the religious denomination or community to which he or she adheres or belongs, or which he or she favours. The census in many countries omits any question as to religion, because of its decidedly personal nature. In such cases the need is met by data periodically collected from the headquarters of the various churches. The latter method, though it secures a mass of valuable details regarding church membership and finance, does not include non-adherents to an organized denomination, and renders comparisons difficult. In Canada, therefore, a question on religion has always appeared in the census, where it has proved valuable in conjunction with the data on nativity, race, origin and language. It is of course not easy, in view of the wide variations in religious faiths, to secure clear-cut definitions in each and every case. In the 1931 Census, for example, special efforts and instructions were found necessary to avoid confusion as between adherents of the Greek Catholic Church and adherents of the Greek Orthodox Church, and as between Presbyterians who entered the United Church and those who remained outside of that organization.

The matters discussed in the foregoing, it will be seen, affect some of the most fundamental interests of the individual, involving at points technical or legal considerations of considerable subtlety. Yet they must be handled by the census in a simple and even colloquial way, by enumerators of ordinary education and training, collecting their information from "the man on the street" unfamiliar with the problems of census method. Particularly does this apply to the fact that a complete and final view of this subject is obtainable only by considering its several phases not only in and by themselves but in the mass and in their relation to each other.

## §12. Occupations and Industries

No change was made in 1931 from the previous census in the questions put regarding occupation, industry, class of worker and earnings (the basic factors in economic status), but a new and greatly improved dual system of classification for occupations and industries, representing detailed study of conditions in Canada and of census practice in other countries was adopted. The system was issued in two printed volumes in advance of the census for the instruction and use of the coding staff. In it about 12,000 possible occupational designations are combined under some 400 occupational classes, while the industries and services to which the occupations may be assigned number approximately 2,000, assembled under 200 classes.

The "double code," as it is sometimes called, means the classification of the gainfully occupied in respect to occupation as well as industry. The two points of view are radically different. Occupation is the kind of work a person performs, irrespective of where or for what purpose it is performed. A carpenter, for example, may belong to the building industry, if employed by a builder, or to the mining industry, if employed in a mine. Hence the classification of the gainfully occupied by occupation represents the bringing together of all persons in the same type of work irrespective of the industries in which they may be employed. On the other hand, the system of industrial classification of the working population implies the grouping together of all those who contribute their labour to the making of a particular product or the rendering of a special service regardless of the diversity of their occupations. For example, the building or mining industry employs not only persons pursuing building trades or mine-working occupations respectively but also a number in supervisory, clerical, transport, etc., occupations. Occupation determines many factors of prime importance to the individual (*e.g.* health), and it is essential that a comprehensive view of it be obtained by the census. But industrial association or the

grouping together of persons of varying occupations for specific ends has no less important economic implications; unemployment, for example, may follow industrial rather than occupational lines.

In the past the Canadian classification scheme was in the main an occupational classification on an industrial framework; a complete cross-classification of industry by occupations was not possible. The tables prepared for the volume of occupations of the 1931 Census, however, will classify the gainfully occupied not only by occupation but also by industry, and in addition industry will be cross-classified by occupation for Canada as a whole. This method of presentation will disclose for the first time the industrial distribution of the occupations of Canada.

### §13. Wage-Earners

(a) **Earnings.**—The compilation of the data on earnings will be extended as compared with previous censuses to show totals by industries as well as by occupations over the period June 1, 1930, to June 1, 1931.

(b) **Unemployment.**—The emergence of unemployment on a scale never before experienced in the Dominion led to a considerable amplification of the census questions devoted to this outstanding manifestation of the economic collapse. In 1921, when the subject first appeared in the census, three questions were devoted to unemployment. In 1931, these were expanded into nine, chiefly for the purpose of throwing additional light on the causes of unemployment. The questions were in two series, the first two questions dealing with persons found not at work on the census date, June 1, 1931, with a statement of the cause in each case. The second series dealt with the number of weeks of time lost during the preceding twelve months, the time-loss being apportioned under the six headings of "no job," "illness," "accident," "strike or lockout," "temporary lay-off" and "other cause." The inquiry as to unemployment was limited to those specified as "wage-earners" under the heading of the schedule dealing with class of worker. In framing the questions the Bureau had the assistance of the Dominion Department of Labour and of officers of leading labour organizations.

### §14. The Census of Agriculture, 1931

Four schedules were used for the collection of the Census of Agriculture. The statistics for each farm were collected on the first or principal farm schedule, while a second schedule was used in recording the number of horses, cattle, poultry, bees, etc., found within urban limits, together with their products and the products of market gardens, town orchards, etc. A third schedule was devoted to vacant and abandoned farms, while a special form was used in obtaining the values per bushel of field crops—the enumerator being required to supply on this an estimate of the average value per unit for his enumeration area, instead of obtaining such values on the individual farm schedule as in previous censuses. For census purposes a farm is defined as "all land, being over one acre in extent, directly operated or farmed by one person, either with his own labour alone or with the help of members of his family or hired employees."

The principal farm schedule was drawn up in consultation with the several branches of the Departments of Agriculture of the Dominion and of the provinces, with which the Bureau also collaborates in its monthly crop reporting system and in its annual statistics of agriculture. The staffs of agricultural colleges throughout the Dominion also contributed advice. Altogether 178 different sources were appealed to, from whom 292 concrete suggestions were received. The Bureau also profited materially by the suggestions and sample schedules prepared and distributed by The International Institute of Agriculture during 1925-28, looking to the taking of a World Census of Agriculture in 1930-31 on uniform lines. The principal schedule was enlarged from 1921 by the addition of questions on farm population and workers, the movement of population between rural and urban, farm mortgages, farm taxes and the causes of crop failure, as well as by various amplifications in detail; altogether it included 605 questions (compared with 540 in 1921), segregated under the following headings: farm operator; farm workers; farm population; farm acreage and tenure; condition of farm land; farm values; farm mortgage; farm expenses; farm facilities; acreages of 1931 crops sown; 1930 crops harvested and sold (grain,

fodder, roots, seeds); irrigated crops; farm garden; market garden; orchard fruits; small fruits; grapes; greenhouse establishments; nursery acreage and products; forest products; maple syrup and sugar; live stock and animal products in all important phases; co-operative marketing and purchasing.

During April and May, 1931, a copy of the principal farm schedule was mailed from the Bureau to each farmer, with a request that he examine it carefully and fill it in, holding it in readiness for the visit of the enumerator during June. This considerably expedited the work and was otherwise productive of good results. The names of the farmers were obtained from the Post Office Department's rural mail delivery lists; 650,000 farm schedules were sent to the farmers and 10,000 to newspapers and clergy.

### §15. The Census of Institutions, 1931

The Census of Institutions was undertaken to ascertain the number and types of institutions in Canada, their geographic distribution, the value of their lands, buildings and equipment, their administration staffs and the numbers of their inmates, with personal facts regarding the latter calculated to throw light on their condition. The governing clause of the Statistics Act (clause 19, (e)) specifies "municipal, educational, charitable, penal and other institutions," but as municipal and educational activities are now covered annually by the Bureau, the present census was limited to the following four classes: (1) Hospitals and Sanatoria, for the care of the sick, including out-patient departments and day nurseries; (2) Mental and Neurological Institutions; (3) Penal, Reformatory and Corrective Institutions; and (4) Charitable and Benevolent Institutions, for adults and children, including almshouses, homes and houses of refuge for adults, institutions for the blind, deaf and dumb, orphanages, institutions for neglected and dependent children, child-placing agencies such as Children's Aid Societies, Juvenile Immigration Societies, etc. These four classes of institutions may be regarded as reflecting respectively four prevalent types of social pathology, namely, physical, mental, moral and economic.

As the great majority of these institutions are in receipt of provincial or municipal aid, or are under the control or supervision of Government Departments, a fairly complete list was obtainable in anticipation of the census. In the first instance all inmates and officers were enumerated on the population schedule, each superintendent or chief officer being appointed as census enumerator for the institution under his charge. The returns thus obtained, after entry in the Census of Population compilations, were made the basis of a further and intensive inquiry, constituting the Census of Institutions proper, under which a series of special forms was sent to each institution, covering (a) the movement of population for each institution during 1930—admissions, readmissions, transfers, discharges, etc.; (b) administration staff; (c) financial statement—value of land, buildings, equipment, etc. In the case of mental and neurological institutions and of penal, reformatory and corrective institutions, a supplementary schedule for each inmate was secured, covering such points as psychoses, mental status, social habits, physical defects, antecedents of various kinds, etc. The co-operation of Provincial Government Departments, officials of Hospital Organizations, directors of Child Welfare Societies, as well as of the superintendents of institutions, in securing prompt and full replies to these schedules is gratefully acknowledged.

It is planned, with the present census as basis, to establish annual statistics for the first three classes of institutions above mentioned, in co-operation with the different Provincial Departments concerned, with in the case of the fourth class, a quinquennial survey. With the Census of Population providing the fundamental social record of the people, and with the progress that has now been made in education, employment, immigration, criminal and vital statistics, the present Census of Institutions will materially extend the range of social inquiry in Canada. On only one important section of the statistical field are data almost wholly lacking, namely, the operations, revenues, expenditures, etc., of social and welfare organizations.

## §16. The Census of Distribution, 1931—Merchandising and Service Establishments

On production in its various phases we have now fairly complete statistics on an annual basis in Canada. The annual Industrial Census, which was written into the Statistics Act in 1918, provides effectively for recording the products of mines, fisheries, forests, power plants and manufactures, with the subsidiary phenomena of capital, labour, fuel consumption, and other factors—the whole in collaboration with the several Dominion and Provincial Departments concerned in specific sections of the field. Agricultural production is similarly covered from year to year. Apart, however, from the grain trade, the marketing of live stock and of certain animal and other products, no data are systematically available with regard to the extended and ramifying operations which bring the multifarious products of industry into the hands of the ultimate consumer. Yet the number of persons employed in distribution is nearly half a million, while the volume of internal trade, represented by wholesale and retail merchandising and service establishments, is two and one-half times that of imports and exports. In 1921-23 a first attempt to remedy this omission was made by the Bureau of Statistics by collecting the names and addresses of merchandising concerns through the census enumerators and addressing a questionnaire to them later from the Bureau, but facilities were lacking for completing a comprehensive survey. The occasion of the 1931 Census was accordingly taken to meet the situation on broadly similar lines as follows:—

On a schedule which is reproduced in Appendix II, the enumerators of population and agriculture were instructed to collect the names, addresses and certain other elementary facts regarding each wholesale or retail merchandising or service establishment found operating in their respective enumeration areas. The returns received from the field were checked with directories, financial records, etc., and card indexed according to a classification scheme prepared in advance. A schedule was then addressed to each establishment according to the nature of business or size of operations. The schedules are reprinted in the volumes of the Census Report in which the final results are published, but as an indication of the scope and general method of the investigation they may be listed as follows:—

### RETAIL ESTABLISHMENTS:

- |                     |   |
|---------------------|---|
| Retail Schedule No. | 1.—For establishments doing business under \$10,000.  |
| “ “                 | 2.—For establishments doing business from \$10,000 to \$25,000.   |
| “ “                 | 3.—For food stores doing business over \$25,000.  |
| “ “                 | 4.—For drug stores doing business over \$25,000.  |
| “ “                 | 5.—For other stores doing business over \$25,000.   |
| “ “                 | 6.—For automobile dealers.  |
| “ “                 | 7.—For larger service establishments (theatres, laundries, cleaning and pressing, barber shops, beauty parlors, shoe repair shops, cartage and transportation, and other service, repair and amusement establishments). |
| “ “                 | 8.—For hotels.  |
| “ “                 | 9.—Capital structure and ownership form.  |
| “ “                 | 10.—For bakeries reporting also to Industrial Census.   |
| “ “                 | 11.—For farm products bought or taken in from farmers by retail merchants in places of less than 10,000 population.   |
| “ “                 | 12.—For dairies reporting also to Industrial Census.  |
| “ “                 | 13.—For butcher shops (meat animals slaughtered).   |
| “ “                 | 14.—For channels of sales distribution. Manufacturing firms.  |
| “ “                 | 15.—For co-operative organizations.   |

### WHOLESALE ESTABLISHMENTS:

- |                        |                                      |
|------------------------|--------------------------------------|
| Wholesale Schedule No. | 1.—General (large establishments).   |
| “ “                    | 2.—Food products.                    |
| “ “                    | 3.—General (smaller establishments). |

## MULTIPLE ORGANIZATIONS:

- Multiple Schedule No. 1A.—Wholesale general (all other than oil and gasoline stations).  
 “ “ 1B.—Wholesale oil and gasoline stations (bulk tank).  
 “ “ 1C.—Chain store warehouses (wholesale).  
 “ “ 5A.—Retail general.  
 “ “ 5B.—Retail oil and gasoline filling stations.

## §17. Summary of Census Questions

Summing up, the total number of questions asked through the enumerators of the Census of 1931, compared with the preceding decennial census was as follows:—

Schedule	Subject	Census of 1921	Census of 1931
1	Population.....	35	40
7	Supplemental schedule for the blind and for deaf-mutes.....	5	6
2	Agriculture.....	469	605
2a	Vacant farms and abandoned farms.....	-	17
3	Animals, animal products, etc., not on farms.....	52	52
10	Merchandising and Service Establishments.....	4	10
	Total.....	565	730

The above does not include the questionnaires sent out by the Bureau to institutions and to establishments in connection with the Census of Merchandising and Service Establishments.

## §18. Organization for Taking the Census, 1931

Up to and including the Census of 1901, each census of Canada was taken by an organization created *de novo*, and consequently lacking experience both in the planning and execution of a census—in the relating of the census questions to the general body of statistics as described in an earlier paragraph, and in the technique of the enumeration and compilation process. To remedy this defect a permanent census office was established in 1905. This now constitutes one of the branches of the Dominion Bureau of Statistics, its function being to maintain connection between census and census, thus enhancing its continuous and cumulative character; to ensure a better adaptation of the census to current needs and conditions; and to form the nucleus and directing centre of the much larger personnel which the actual work of the census involves. The latter falls under two main headings: (a) the collection of the data, for which an army of field officers and men are employed for a period of some weeks; and (b) the compilation and tabulation of the census reports, for which a special provision of the Civil Service Act permits the retention of a staff of several hundred temporary employees for a maximum of three years. The far-flung nature of both these phases—the drawing up of the schedules and of the instructions governing each item thereon; the delimitation of the exact area to be covered by each of the 14,000 enumerators; the appointing and instructing of the latter; the apportioning and forwarding of the necessary schedules in each case and the receipt back of the completed returns; together with each handling of the latter in the numerous processes to which they are subjected in the Bureau, which involves not only the checking and summation of hundreds of millions of entries, but their cross-classification and analysis from numerous points of view; all combine to emphasize the necessity of the most careful planning in advance of every step down to the final stages, if disastrous confusion and waste are not to be encountered. The time element is also important, for the work must be conducted with the utmost rapidity and *pari passu* in its several parts if the results are to have practical value. As the United States Advisory Committee on the Census remarked “few persons other than those employed on the census realize the magnitude of the undertaking or the difficulty of carrying it to completion within the period prescribed by law.”<sup>1</sup>

<sup>1</sup> Journal of the American Statistical Association, March, 1923, p. 632. When the first census of the Turkish Republic was taken in 1927 a suspension of ordinary business throughout the country was required and an immobilization of transport by land and sea for twenty-four hours.

## §19. The Field Work

For the purposes of the census, the Statistics Act requires that the country be first divided into "census districts" corresponding as nearly as possible with the federal electoral divisions or constituencies for the time being—this in view of the association of the census with parliamentary representation. Each "census district" is then to be subdivided into "census subdistricts" or units of enumeration, the latter to correspond where possible with electoral (polling) subdivisions throughout the country. For territories without established boundaries or subdivisions special census divisions and subdivisions are created. Each census district is in charge of a supervisory "census commissioner"; under the commissioner a "census enumerator" is assigned to each census subdistrict. The census enumerator is the only census official coming into direct contact with the general public; he it is who makes the house-to-house and farm-to-farm canvass and who is primarily responsible for the details collected on the census schedules. The necessity of providing that no more or no less than a suitable amount of work should be assigned to each enumerator (experience has demonstrated this to be a population of 600-800 in ordinary rural districts, and of 1,200-1,800 in urban), with similar provision in the case of census commissioners, renders departure necessary in many cases from the electoral boundaries; several of the federal constituencies are too large or too varied in physical or economic character to admit of satisfactory control by a single commissioner and are accordingly divided—and the polling subdivisions are not always convenient as census subdistricts. In all such cases, however, the division is effected in a way that permits compilation of the results in the form required for the purposes had in mind by the Act. The drawing up of the scheme of census districts and subdistricts is a task of considerable magnitude; it is put in hand about two years in advance of the census date, and is carried out not only in the light of conditions revealed in the preceding census, but in consultation with local officials, so that no inhabited area may be overlooked or left unprovided with the organization best suited. It may be added that the total number of subdistricts embraced in the 1931 organization was 15,167 compared with 11,428 in 1921.

The instructing of the field officers of the census was carried out as follows: on appointment by the Minister some four months prior to the date of the census, each census commissioner was supplied with a set of schedules, instructions, regulations and statutory provisions appertaining to the census, together with a detailed description and map of his district. After an interval he was visited by a representative of the Bureau (the chief or assistant chief of the Census Branch) who discussed the work with him until satisfied as to his thorough understanding of it. The necessary oath of office was then administered (Statistics Act Section 6) and the commissioner proceeded to the first detail of his task, that of examining and passing upon the descriptions of the subdistricts into which his district was divided. On assurance in this way that every section of the district was effectively provided for, the appointment of the enumerators was proceeded with—this being withheld until the weeks immediately preceding the census.

The selection and appointment of the enumerators was primarily in the hands of the commissioners, under an instruction that only persons of intelligence and probity and thoroughly familiar with the topography of the subdistrict should be chosen. Even when reduced to the simplest terms the work of the census enumerator is highly responsible and far removed from routine. Organizing ability, conscientiousness and realization of the importance of the work and of the difficulties which shortcoming in any particular involves are *sine quibus non*. Local officials, therefore, particularly school-teachers, were given the preference, except in the case of assessors or others associated with taxation. After nomination, the enumerators were instructed by the commissioners in much the same way as the latter by the Bureau, *i.e.*, after being supplied with the various census documents they were assembled in groups at convenient locations, when full oral instructions were added and points in doubt cleared up. At the conclusion of such instruction a written examination was held, each nominee being required to make the proper entries on the various census schedules for a hypothetical family and farm, the description of which was supplied by the Bureau. The written entries were then forwarded to the Bureau for inspection prior to notification of appointment.

On completion of his enumeration, each census enumerator was required to deliver the schedules in person to the commissioner for examination as to their satisfactoriness prior to acceptance for dispatch to the Bureau. All payments to enumerators were made only on voucher by the commissioner.

## CENSUS OF CANADA, 1931

Altogether there were employed in the 1931 Census, 254 census commissioners in 257 census districts, and 13,886 census enumerators in 15,167 census subdistricts. The number of districts and subdistricts by provinces, with comparative figures for the Census of 1921, is shown in the following statement:—

Province	Census of 1921		Census of 1931	
	Number of census districts	Number of census sub-districts	Number of census districts	Number of census sub-districts
CANADA.....	241	11,428	257	15,167
Prince Edward Island.....	3	157	3	187
Nova Scotia.....	14	767	13	873
New Brunswick.....	11	454	12	558
Quebec.....	71	2,820	72	3,703
Ontario.....	83	4,230	83	4,890
Manitoba.....	15	633	17	909
Saskatchewan.....	16	932	21	1,767
Alberta.....	13	700	17	1,196
British Columbia.....	15	716	16	1,020
Yukon.....	-	18	1	19
Northwest Territories.....	-	2	1	38
Royal Canadian Navy.....	-	3	1	7

The number of enumeration areas and the number of enumerators employed by sex in each province is shown in the following statement:—

Province	Enumera- tion areas	Number of enumerators		
		Total	Males	Females
CANADA.....	15,167	13,886	12,639	1,247
Prince Edward Island.....	187	180	165	15
Nova Scotia.....	873	836	642	194
New Brunswick.....	558	495	447	48
Quebec.....	3,703	3,469	3,234	235
Ontario.....	4,890	4,769	4,257	512
Manitoba.....	909	869	826	43
Saskatchewan.....	1,767	1,335	1,262	73
Alberta.....	1,196	1,013	957	56
British Columbia.....	1,020	857	786	71
Yukon.....	19	15	15	-
Northwest Territories.....	38	41	41	-
Royal Canadian Navy.....	7	7	7	-

A record of the occupation of each enumerator was obtained. The most numerously represented occupations were as follows:—

Farmers 4,752; Clerks 819; Homemakers 708; Students 653; Salesmen 585; Merchants 563; Retired and No Occupation 513; Agents 432; Accountants 374; Insurance Agents 285; Labourers 274; Book-keepers 194; Carpenters 175; Teachers 171; Indian Agents 114; Stenographers 89; Royal Canadian Mounted Police 76; Painters 74; Mechanics 71; Machinists 68; Travellers 58; Fishermen 56; Contractors 51; Lawyers 49; Notaries 47; Electricians 46; Clergymen 44; Miners 43; Brokers 43; Printers 42; Grain Buyers 42; Ranchers 40; Managers 40; Tailors 36; Foremen 35; Blacksmiths 34; Shippers 34; Butchers 33; Farmers' Sons 32; Secretaries 29; Gardeners 27; Telegraph Operators 27; Scalars 26; Veterinary Surgeons 26; Barbers 25; Plumbers 25; Prospectors 25.

The payment of census commissioners and census enumerators is almost entirely on a piece basis, *i.e.*, according to the population, farms, etc., with provision for certain travelling and other expenses and for special rates in special cases. The regulations on rates and allowances are reprinted in Appendix III. In the case of the commissioners they include a series of special allowances; the statement therefore serves as listing the census districts.

It will be appreciated that for a census which must cover half a continent, only a part of which has been brought under settlement, and where wide variations of natural conditions prevail

in the remainder, the above description is by no means complete. Even in parts adjacent to settlement, many areas called for arrangements of a special character, such as the organization of expeditions by pack train, canoe, motor boat or even airplane. For the Yukon and Northwest Territories and in the remote and seldom-visited northern regions of Ontario and Quebec, the co-operation of the fur-trading companies and of different church missions was enlisted—many of whose reports recorded physical difficulties overcome and conditions among the native inhabitants far removed in character from the usual census document. In other outlying areas the Royal Canadian Mounted Police conducted the census (including Bache Peninsula and Ellesmere Island—only 750 miles from the North Pole), while the Indian Department performed a like service for the Indian population on reserves or otherwise within its jurisdiction. The Department of the Interior co-operated in the lower Mackenzie River valley as in the previous census. For the Arctic regions the schedules were dispatched a year before the census date by the *S.S. Beothic*, which during the ensuing months visited points where the native population of these regions is congregated; certain of these returns were forwarded by radio.

**Publicity.**—No statement of the preparatory organization of the census would be complete without reference to the means taken to interest the general public and enlist their co-operation in giving prompt and accurate replies and otherwise assisting in the work. On May 15, proclamation of the census was made by His Excellency the Governor General. (For text of proclamation see Appendix IV.) Concurrently, advertisements as to the purpose and function of the census were inserted during May in leading newspapers (an example is reproduced below), this being preceded or succeeded by a series of press releases dealing with specific questions in the enumeration (eleven of such releases were made), as well as by a comprehensive pamphlet entitled "The Coming Census—How it is Taken, Why it is Taken," which was made

*Copy of Census Advertisement, 1931*

**The Census of Canada, 1931**

In the opening weeks of June every family in every city and town and on every farm will be visited by a representative of the Government for the purpose of taking the Seventh Census of Canada.

The census provides the foundation on which all our economic and social information rest. It measures the human element of the country—the numbers, sex, age, nationality, occupations, religion, etc., of the people, so that a true record of national development may be obtained for use in formulating policies for the further progress of the nation.

No person can be harmed in any way by furnishing the information required. The census has nothing to do with taxation, with military service, with the compulsion of school attendance, with immigration, or the enforcement of any Dominion, Provincial, or Municipal law or regulation.

You are under legal obligation—subject to penalty—to answer all inquiries made on the census schedule, but you are assured that your answers will be treated in absolute confidence by the census enumerators and by the Bureau of Statistics.

I earnestly urge upon all persons to answer promptly, completely and accurately all inquiries addressed to them by the census enumerators or employees of the Dominion Bureau of Statistics.

Issued by

H. H. STEVENS, M.P.,

*Minister of Trade and Commerce.*

the basis in whole or in part for numerous articles in the press. The clergy of the country were circularized as to the census question bearing on religion. Through the good offices of the Moving Picture Service of the Department of Trade and Commerce a film depicting various census operations was exhibited in the cities, towns and villages throughout Canada. On the eve of the census a radio talk by the Honourable the Minister of Trade and Commerce relayed throughout Canada made an appeal for co-operation with the enumerators, while similar talks by different officers of the Bureau and by census commissioners at local stations on various phases of the census gave explanations designed to facilitate the work in the field.

**Completion of the Field Work.**—Differences in the nature and extent of the questions make exact comparison with previous censuses difficult, but it may be said that the field work in 1931 was completed with more than the usual expedition, and without untoward incident of more than minor proportions. Under the regulations, work must be begun by the enumerators promptly on June 1 and continued uninterruptedly and with all possible dispatch until its completion, no census officer who has once subscribed to the oath of office being permitted to resign or abandon his employment. The arrangement in the vast majority of cases permits of completion by the enumerator within a fortnight or three weeks' time—especially in urban areas—the whole being calculated to ensure receipt of the revised returns from the commissioners by July (though many were received earlier) except for the more remote and sparsely settled areas. From the accompanying statement it will be seen that somewhat better time was made with the enumeration than in 1921, notwithstanding that the main schedules called for a larger amount of data, 77.6 p.c. of the returns being in at the end of July, 1931, compared with 67.8 p.c. by July, 1921, while the percentages at the end of August were 94.9 and 93.8, respectively. The prevailing unemployment rendered the task of obtaining suitable enumerators much easier than in 1921, and there were few if any serious criticisms of the results of the census as announced by cities and towns during the summer and autumn months of 1931.<sup>1</sup>

<sup>1</sup> Though the results of the Census of 1931 by local areas escaped challenge to an exceptional degree, their divergence from local estimates as given out by directory companies, assessors, voters' lists, etc., is the occasion of such frequent comment as to warrant repetition of the following explanatory statements which were issued in 1921:—

**City Directory Results.**—A city directory is not an enumeration of the population. It omits entirely a large proportion, sometimes more than one-half, namely wives and children. On the other hand, it may contain duplicate entries, as of business men at their residence and at their places of business; it also contains some names of non-residents, as of business men living outside the municipality. The population figures given out by city directory publishers are not the sum of the persons entered, but are estimates arrived at by adding the number of names and multiplying the result by an arbitrary figure usually 2½ to 2¾. Such estimates cannot be compared with a census which enumerates every man, woman and child once only at the place of permanent residence. In most Canadian cities, the city directory results and the census are widely apart.

**Assessment Rolls.**—Assessment rolls similarly seldom agree with census results. They include many duplications, as in the case of non-resident property holders, and of persons owning property in different parts of the city. Occasionally also families are entered twice,—as in cases where they have moved while the assessor was going his rounds. Assessment rolls are usually from 5 p.c. up in excess of census figures, though sometimes they are lower, particularly in cases where the assessors do not make personal visits to householders annually.

**Voters' Lists.**—The voters' list is an uncertain basis on which to make an estimate of population. For municipal purposes an individual is entered on the voters' list in every section in which he holds property. A change in the number of wards in a city will accordingly change the aggregate number of voters. The basis of inclusion is also subject to change. For example, in recent years a large number of women's names have appeared as co-proprietors with their husbands; the institution of direct taxation has also added many names both of men and women. The fact that in 1921 the population of a given municipality was, say, six times that of the number on the voters' list is no indication that the same relationship exists today. The census of certain Canadian cities is only 50 p.c. in excess of the number on the voters' lists, whereas in other cases it is over 100 p.c. in excess.

**General Considerations.**—In addition it should be borne in mind that in a rapidly growing urban community, there is a natural tendency after a certain stage is reached for the central portions to remain stationary or even to decline in domiciled population, the growth in such population taking place in the suburban and outlying districts. Manhattan Island, for example, which was formerly New York City and is now the borough of Manhattan, has declined in population during the past ten years, though New York as a whole has increased rapidly, especially in the suburbs now included in Greater New York. The City of London with an area of about one square mile has a day-time population of over a million people, but has only about 14,000 at night. Of specific cases of omissions reported to the Bureau a large proportion are usually found included in the census, details having been furnished by other members of the family; in other cases different families have been enumerated at the address given (indicating a removal since the census, or an error in allocation rather than an omission); in other cases non-residents are found to be concerned. Under the Canadian system, the padding of the census is the danger on which chief vigilance must be exercised, as both commissioners and enumerators are paid according to the number of names, etc., enumerated. The Bureau during the weeks immediately following a census repeatedly requests through the press that any individual who has reason to believe that he or she was missed or was inaccurately recorded should communicate either with the local census commissioner or with the Bureau, when a full investigation of the circumstances is carried out and any addition or correction found necessary made.

**Cost of the Field Work.**—The cost of the field work of the 1931 Census compared with that of 1921 is shown in the subjoined statement. An increase from \$1,443,003.72 to \$1,671,884.37, amounting to \$228,880.65 or 15.86 p.c. is indicated. This is due to the following circumstances, namely, (a) the growth of the country and corresponding increase of the extent of the census task; the number of the population enumerated increased from 8,788,483 to 10,376,786, i.e., by 1,588,303 or 18.07 p.c., while the number of occupied farms increased from 711,090 to 728,623, i.e., by 17,533 or 2.47 p.c., and the number of trading establishments covered from 66,814 to 175,950, i.e., by 109,136 or 163.34 p.c. (the latter increase including 41,094 service establishments not enumerated in 1921). Reflecting these figures, there were sixteen additional commissioners and 2,458 additional enumerators employed. (b) The allowances paid to the enumerators and commissioners were increased. The increases to enumerators were in the following cases: trading establishments, from two cents to ten cents; farms of five acres and over, from thirty cents to thirty-five cents; in the Prairie Provinces the rural allowance for expenses was increased from six cents per name to seven cents, in British Columbia from fourteen cents to fifteen cents, in the remaining provinces from four and one-half cents to five cents. The allowances to commissioners were increased as follows: special allowances for travelling expenses while instructing enumerators, totalling \$9,394.27, and for rent of halls for instructing enumerators totalling \$5,578.08, were paid where similar charges were not met in 1921. The rate for supervising the Blind and Deaf schedule was raised from one-half cent to one cent, and trading establishments from one-half cent to one cent. The special allowances to commissioners were also increased by \$6,250. Notwithstanding the higher rates, which were justified by the nature of the work to which they were applied, the *per capita* cost of the field work of the 1931 Census was but 16.11 cents compared with 16.41 cents in 1921, a *per capita* decrease of 0.30 cents or about 2 p.c.

## §20. Compilation and Tabulation of the Census

Extended and multiform as is the organization for collecting the census, that for its summation, compilation and tabulation into a form suited to the multifarious uses it must serve presents an even larger problem. In the first place, just what analyses are to be made of the items, singly and in combination with one another?—in other words, what are the important angles from which the data are likely to be approached in their theoretical or practical application? The plan which was followed for the present census in answer to this question is set out in Appendix V as an *aperçu* of the final objectives of the census. Further, as is well known, the compilation of the census is now carried out by machinery, the several facts ascertained for each person being punched on cards (of size approximately 6 $\frac{3}{8}$  inches by 3 $\frac{1}{4}$  inches), the cards being then counted, sorted or otherwise manipulated by machines, which record the details as required. (The principal machines used by the Bureau of Statistics were designed, adapted and constructed in the Bureau itself, as will be described in a subsequent section). Thus, the manner in which the various machines operate in producing the results must be taken into account in anticipating staff requirements. Finally, the preparation of the numerous tables from the materials supplied by the machines must be arranged for. Many of these processes require large numbers of employees. At every stage the closest supervision is necessary, as an early error or omission may involve an enormous amount of labour later on.

In more detail the several stages of compilation and tabulation are as follows:—

**1. Preliminary Examination.**—As the boxes containing the enumerators' returns are received from the census commissioners (previously examined and *visé-ed* in the presence of the enumerator) they are inspected and checked to ensure completeness. The check is carried out with the aid of local maps, directories, municipal returns and previous censuses, any apparent omission or discrepancy being made subject of immediate inquiry. If found complete and satisfactory, the returns are accepted for compilation and sorted for the different compilation processes. At this stage the enumerator is paid 60 p.c. on account, the balance being held for final audit of the returns.

**2. Population.**—The population schedules are then handled as follows:—

- (a) *Counting.*—A hand count is made of the population, by sex, as a basis of the preliminary releases as to total population by cities, towns, villages, etc., and for audit of the enumerators' charges.
- (b) *Revision.*—A staff is then employed in the examination of each entry on the schedule for the detection of errors or omissions in detail—all cases of which are referred back to the commissioner or enumerator concerned.
- (c) *Coding.*—On completion of revision, the schedules pass to the coding staffs, two in number, whose duty is to code the family and personal record and the record of occupation and unemployment, respectively, which are subsequently punched on different cards. The occupation code as already described is of an elaborate character and careful preliminary training of the staff devoted to it is necessary; the organization of

this division of the work is one of the most difficult of the compilation process, though satisfactory revision work in advance reduces it greatly. "Coding," it will be understood, consists in applying a series of descriptive numbers to the entries as to occupations, industries, causes of unemployment, etc., on the census schedules, so that they may be transferred to the card.

- (d) *Punching and Verifying*.—The schedules are then sent to the card-punching staffs. Two cards are employed (see illustrations on a later page). Card No. I was punched on the "pantagraph" machine and Card No. II on a Hollerith punching machine. After punching, the cards are checked or verified as to accuracy by being passed through a verifying machine. They are then "gang-punched," *i.e.*, punched by machinery as to certain facts (*e.g.*, locality) which being the same for considerable numbers of cards can be handled in a "wholesale" way, at a saving of time and expense.
- (e) *Sorting and Tabulating*.—Compilation proper is reached when the cards pass to the sorting and tabulating machines which carry out the segregations and analyses of the data. Card No. I is handled by a combined sorter-tabulator specially built in the Bureau, while Card No. II is handled by commercial sorters and printer-tabulators. In the case of Card No. I the results by areas are photographed from the dial of the machine, while the results from Card No. II are automatically printed on result-slips.
- (f) *Preparation of Tables*.—After examination and check for inconsistencies and errors, the results of the tabulation processes are transferred to a special staff who construct from them the tables which will appear in the printed volumes of the census. For a general description of the principles which govern the compilation of these tables and their arrangement in the volumes the reader may be referred to Section 22 of this report hereunder (beginning p. 62)—also Appendix VI.

**3. Agriculture.**—The agricultural schedules are treated in much the same way as above described for population, except that a large portion of the data is compiled on adding machines to which the schedules are transferred immediately on revision. This includes the parts of the schedule relating to crops, live stock, fruits, etc. The parts referring to the occupier, tenure, acreage and values are coded and transferred to punch cards, and the results obtained by commercial sorters and printer-tabulators. Vacant and abandoned farms are separately compiled.

**4. Merchandising and Service Establishments.**—This division of the census required somewhat elaborate organization within the Bureau, which may be briefly described as follows: The lists of establishments as received from the enumerators were examined first, for the deletion of entries not within the scope of the census, and secondly for additions found by checking with financial and trade directories. Each establishment was then entered on a card index, containing the name and address, the schedule number and the type or types of schedules to be mailed. In the case of the units of chain organizations, and for co-operative organizations, a special notation was made. As the card index was completed for each locality, it was passed to the mailing clerks who dispatched the schedules and instructions, and entered the date of mailing. On return, the schedules were checked against the index and the corresponding cards removed. About fifty per cent of the census schedules were returned without further solicitation, but it was necessary to undertake a considerable amount of follow-up work both by mail and, in certain localities, by field workers to secure the remainder. Multiple returns for organizations operating a number of units were sought directly from the head offices.

The incoming retail and wholesale schedules were separated and passed to the respective editing divisions. Here they were checked, incomplete or apparently inaccurate returns being dealt with by further correspondence. As completed, the schedules were coded by a special staff for the punching machines. For the preliminary reports of the census, one 45-column tabulating card (covering employees, salaries, sales, stocks, kind of business and type of operation) was used. The cards as completed were sent to the central machine tabulating section for the preparation of the preliminary tables.

As more detailed information was required for the final reports, an 80-column card was used. In addition to the tables which were prepared from the punched cards and which covered the

salient features of merchandising and service operations, separate tabulations of commodity breakdown, seasonal employment, capital employed, and other features were made by hand and with the aid of adding machines.

**5. Institutions.**—The revision of schedules was made by small separate staffs for the different classes of institutions. The major part of the compilation was done by hand, but for mental institutions a card was punched for each inmate. Beginning with 1932, the mental hospitals are supplying a quarterly individual record of admissions, discharges, etc., the Bureau to complete a tabulation therefrom at the end of each year.

**Staff.**—The extra staff taken on for the 1931 compilation was as follows: Early in 1931, some 50 clerks and labourers were employed in preparing a "bordereau" or minute of the supplies required by each enumerator, and in subsequently assembling, labelling and parcelling the materials for dispatch; they also addressed the advance schedules sent to agriculturists. From June twenty-first, when the receipt of materials from the field began, the compiling and accounting staff was set up, the clerks being brought on in relays till some 800 were at work in August. It may be explained that in anticipation of the census the staff requirements of the Bureau had been laid before the Civil Service Commission who held a special examination throughout Canada in April and established an eligible list of 1,000 clerks. The examination was similar to that for Grade II clerks, and those who passed were made eligible for permanent positions in the Civil Service as well as for the temporary census employment. The extra help taken on by the Bureau was all of the one class, except that 15 "supervisors" were specially selected. Stenographers, messengers, etc., were recruited from the ordinary Civil Service lists. A clinic in charge of a registered nurse was established for the supervision of the health of this staff. The full staff, except for a few resignations, was retained until March, 1932, when 112 were retired, followed by the retirement of 235 in May and of 90 in June, 1932, as the completion of the work permitted. Further retirements brought this staff down to 290 by the end of the fiscal year 1932-33. On salaries for census clerks the expenditure in 1930-31 (preparatory) was \$13,114.10; in 1931-32, \$547,210.91; in 1932-33, \$339,584.77; and in 1933-34, \$257,024.48.

A daily record was kept of the work of each clerk in every department, including revision, coding, punching, verifying, adding, sorting and tabulating. A scheme of graduated salary increases to be based on these records was rendered impractical by the prevailing financial stringency.

## **§21. New Census Machines—Sorter-Tabulator and Verifier**

*(See illustrations, pages 72-73.)*

Reference has just been made to the fact that the compilation of the census is now carried out almost entirely by machinery, and that in this connection a new system was used by the Dominion Bureau of Statistics in 1931,—in particular a new sorter-tabulator of the Bureau's own invention and construction. As this machine has proved very effective, representing a marked advance upon that previously in use, a brief description will be of interest, not only to census officials and others employing equipment of the kind, but to the large and growing body of research workers in the social and economic sciences, for whom its special merit is that it supplies materials in an abundance of cross-classification and with a wealth of detailed analysis that was hitherto impossible.

The compilation of the census by means of a punch card mechanically sorted and tabulated is, of course, "an old story." The earliest machines date from the 'eighties (the United States Census employed them in 1890), since when they have been continuously improved. In 1911, a number of sorters and tabulators were built for the use of the Canadian Census on the then latest model. The operating process was briefly as follows: The cards as delivered from the punching staff and in the order in which the names occur on the census schedule—male and female, old and young, citizens and aliens—were first sorted (*e.g.*, by sex, ages or birthplaces, etc.) and were then transferred to the tabulators which cross-classified each group with five other columns on the census card. The tabulators were fed by hand, and the results had likewise to be transferred by hand from strips printed on the machine. The limitations of this method (which was used also for the Censuses of 1916, 1921 and 1926) apart from the slowness of hand operation and the danger of

*Continued on page 60*

The above are reproductions of the "general population card" and of the "family and occupation card". On the former the perforations show that on June 1, 1931, the person was living in St. George's Ward, Ottawa City, Carleton County, Province of Ontario, (137-94-C-25), was a female, single, 17 years of age, born in France, father foreign-born, mother Canadian-born, immigrated to this country in 1928, was an alien of German racial origin, could speak English and French, spoke German as mother tongue, was a member of the Lutheran Church, could read and write and had attended school 9 months during the previous school year.

The "family and occupation card" was used for the purpose of compiling statistics relating to the Canadian home and family, as per headings and sub-headings of the card, such as class of dwelling, tenure, households, private families, number of children per family, literacy, school attendance, occupation, earnings of head, of wife and of children, unemployment, etc. The information on the card will furnish the material necessary for a close analysis of the Canadian family both from a social and an economic standpoint, also will permit a comprehensive study of the Canadian home including home ownership, rentals paid, number of rooms occupied, class of home, etc.

In addition to the above, various cards were used for the compilation of statistics relating to Agriculture, Blind and Deaf-Mutes, Mental Institutions, Merchandising, Trading and Servicing Establishments, etc.

error in transcription, lay in the fact that only five columns out of twenty-odd on the census card could be cross-analysed at one time; the Bureau therefore had to exercise selection as to what cross-classifications of the items with each other could be completed within the limits of time and expenditure available. To overcome this, experiments were carried out in the Bureau for some time prior to the 1931 Census on the construction of a combined sorter and tabulator which, while completing any given sort, would automatically record *all* the items punched on the census card—at the same time enabling the results to be mechanically transcribed. These experiments met with success, and after an exacting test three sorter-tabulators were constructed in the Bureau's workshop during 1930-31 at a cost of approximately \$8,000 each. The idea of the machine was conceived and a rough model made by Mr. Fernand Belisle of the Mechanical Staff of the Bureau; the development, construction and testing was carried out under the direction of Mr. A. E. Thornton, Mechanical Superintendent of the Bureau.

The manner in which the new sorter-tabulator operates is briefly as follows: The cards for a given area are in the first instance put through the machine for a given sort—say, by ages. As this sort is being made, every fact on the card is simultaneously recorded. Thus at the end of the first sort a summation of all the individual facts collected by the census is available. The cards are then put through for the second sort—say, by birthplace, during which process each fact on the card is cross-classified automatically for each age group resulting from the first sort. At the end of a limited number of sorts, practically every fact on the census card is cross-classified with every other fact. These cross-classifications are recorded on a traverse dial from which transcription is made by photography.

The superior efficiency of this method as compared with its predecessor is indicated not merely by the number of columns handled by the new machines and the old respectively, but by the permutations of the cross-classification involved. In point of fact, the new machine represents a capacity in cross-analysis several thousands of times greater than the old—a capacity that sets no practical limit on the number of classifications that can be made and placed on permanent record within the period allotted to the census compilation. It is estimated that the three sorter-tabulators built by the Bureau for the 1931 Census have in the two years in which they have been in use produced materials over fifty times as compendious as would have been possible with the equipment of 1921, and at materially lessened labour costs.

A gang-punch invented by Mr. Fernand Belisle and constructed in the Bureau has likewise increased by many times the efficiency of the previous gang-punch operated by hand. The Bureau's mechanical branch also developed and constructed during the past decade a new verifying machine, which has greatly facilitated the detection of errors in the punching process; the cards pass through this machine at a rate of 240 a minute, several hundred types of errors being detected. A counting device on the machine also checks the completeness of the work of the punching staff.

A more detailed description of each of the above-mentioned machines used in the Bureau in compiling the census, illustrated with photographs of the machines and of the different cards on which they operate, is as follows:—

**The Pantagraph Machine.**—This machine, which is used for punching the cards, has a perforated punch plate over which an index finger swings freely, its movement, after the manner of a pantagraph, being repeated at the rear by a punch superimposed on a die. The movement of the punch is limited between guides which form the card holder, the card being retained in place by a small clip. The card of course exactly corresponds with the punch plate; both are arranged so as to record the information in the order in which it appears on the census schedule. Thus, the operator reads from left to right, working across the punch plate as each fact is transferred to the card. The pantagraph, which has been in use since 1911, has the great advantage of not requiring the entries on the punch card to be coded.

**The Gang-Punch Machine.**—The gang-punch is used to punch one or more holes common to any group of cards. The cards are fed through the machine singly, each card being made to pause for a fraction of a second when the head containing the punches (these punches are readily changed to any combination) is pressed down upon it in contact with the dies below. The head returns and the card is released and travels through a contact which counts it. The machine punches 400 cards per minute. Since its first use a second set of punches has been installed at

the opposite end of the machine to suit the commercial card, which can thus be fed in the opposite direction and punched effectively.

**The Automatic Verification Machine.**—This machine feeds the cards from a stacker singly and automatically under a head equipped with 240 spring pins, one for each possible hole in the card. The pins are electrically wired so that current may pass down one and up another and so across the entire card, thus reading the card electrically. If the circuit is completed, a magnet is operated, which in turn opens an "O.K." box to receive the card and at the same time makes record on a counter. If the circuit is not completed, the magnet is not reached, the O.K. box in consequence does not open, and the card passes into a "reject" box and is counted on another counter. These two counters are in series with two total counters, one of which is used to accumulate the day's run. The rejected cards are at once examined and checked with the schedules, and new cards made for those that are found wrongly punched. "Rejects" are for the following sample reasons: incomplete information; out of gauge in one or more holes; inconsistent information, such as resident in Canada less than 5 years and naturalized; married but not of proper age; going to school but under 5 years of age or over 20 years of age, etc.; altogether over thirty inconsistent combinations are thus controlled. The inconsistencies are detected by electric relays placed in the different circuits to control the combinations that require verifying; for example, if a card is punched male and married, but also 15 years of age, the current closes a relay for the sex and another relay for the married indication, but these two relay points make a contact which is wired only to ages of over 20 years; all cards, therefore, of males recorded as married under 20 years of age are rejected for verification.

**The Sorter-Tabulator.**—This machine, which is the outstanding one of the series, sorts and tabulates at the same time. The sorter has been improved in several respects over the original commercial sorter—notably in that a number of columns related to each other can be sorted at the one time, or a combination of facts related to each other from several different columns can be selected for sortation at the one time, any desired combination being possible in this connection. For the tabulation, the sorter carries in the head a needle for each possible perforation in the card, with a counter wired to each needle, 240 in all. The counters are mounted on a large transverse panel board with thirteen to a row, the panel being lettered opposite each counter to agree with the card. Twenty additional counters, one for each column, are for totalizing purposes. Thus the machine sorts one fact or combination of facts and simultaneously tabulates all the other facts on the card at one time, obtaining in this way, after a limited number of sorts, cross-tabulations of all the facts on the card with each other. The information is taken from the panel board by photography; the letters and numbers on the panel board and counters are printed in white, upon a black background (thus reproducing black on white), while by using a prism lens, the figures are reproduced right side up. The panel board being of the cumbersome size of 32 x 48 inches, the photograph is reduced by one-half for convenience in handling by the tabulating staff and for filing. A quick-drying process permits of immediate use of the reproduction. The special advantages of the machine may be recapitulated as follows:—

- (1) The needle structure in the sorter-head insures a perfect sort.
- (2) The machine will sort any number of columns or groups of columns—*e.g.*, the five columns occupied by birthplace on the card may be sorted into the four groups—Canadian-born, British-born, foreign-born and born at sea—in one operation; this would ordinarily require five operations, with in addition the grouping of the cards.
- (3) It permits the combination of any facts desired—*e.g.*, from a group of cards it will pick out, say, all females married, Canadian-born, alien, sorting them into one group in one operation; this on-the-ordinary machine would require several operations.
- (4) The tabulator is permanently wired, and adaptable therefore without re-wiring or adjustment for any cross-classification or run of the cards including all 240 facts and 20 totals.
- (5) The machine covers the whole card in one operation, *i.e.*, twenty columns of twelve facts each. The largest capacity of any other similar machine known to the Bureau is sixty counters, while others have a capacity of thirty-six—which involves handling the cards from four to seven times for each run instead of once, with the additional necessity of assembling and adding the results.

While the machine has already achieved notable results, it is still only in the early stages of its development in the work of the Bureau. It is to be adapted within the near future to the compilation of vital statistics, and in future censuses to the occupational and agricultural features. Further improvements may enable it to complete more complex summations and additions that will render it available for any type of compilation work. The policy of the Bureau, however, is to embark on the construction of machinery only when it is unable to obtain appliances of equal efficiency from commercial concerns. The ultimate objective is to ensure that the large and costly investigations of a statistical nature which the Government must undertake from time to time shall yield the fullest possible measure of enlightenment through analytical and interpretive data upon the social and economic problems of the nation.

In Appendix VI an analysis is given of certain records which are maintained in the Bureau, of the clerks employed on the punching, verifying and tabulating machines, and generally in the mechanical operations of census compilation. Apart from its immediate purpose and interest, these records represent an opportunity of giving quantitative measurement of the training process—an opportunity rarely presented on so large a scale.

## §22. Plan of the Census Report

The final report of the census, in so far as it is possible to arrange in advance, will be issued in fourteen volumes, the first seven to be devoted to population, Volume VIII to the Census of Agriculture, Volume IX to the Census of Institutions, Volumes X and XI to the Census of Merchandising and Service Establishments, Volumes XII and XIII to a series of special studies and monographs on various subjects dealt with by the census, while a final volume will consist of a statistical atlas and series of charts, together with an index of the whole.

The volumes dealing with the Census of Agriculture, the Census of Institutions and the Census of Trading Establishments, respectively, will be self-contained, though co-ordinated with the rest of the census, but it is desirable to explain briefly the method followed in presenting the data regarding population in Volumes I to VII, involving as it does some departure from previous practice.

**Volume I: General Report.**—Volume I, in addition to the present administrative report on the census, consists of a series of summary chapters dealing in turn with each aspect of population covered in the census. (Chapters giving a summary of the Census of Agriculture, the Census of Institutions and the Census of Merchandising and Service Establishments, respectively, are added in order to render the review complete.) The opening chapter will deal with the growth of the Canadian population from the earliest times, also a reproduction of the more salient figures for specified years chronologically arranged back to 1605, while various features of census technique, such as the calculations of inter-censal estimates of population, are relegated to appendices. An appendix is also devoted to a complete tabular statement of census materials available in Canada, published and unpublished, from an early date.

**Volume II: Population by Areas.**—Straight summations of the data with regard to each subject covered in the Census of Population (age, birthplace, citizenship, religion, etc.) are set forth down to the smallest possible geographical areas in this volume, the information being given in parallel form and without cross-classification of any kind except that all totals are shown by sex; the division by rural and urban can also be traced throughout. The rural and urban segregations are made by two methods: first, in accordance with municipal law, which differs widely in its population requirements for "urban" municipalities from province to province; secondly, for purposes of general sociological research, by classifying as "urban" only such cities, towns and villages as have a population of 1,000 or over.

**Volume III: Ages.**—In Volume III, presentation of materials in cross-classification is begun, age (which is perhaps the most fundamental aspect of population for the present purpose) being taken as the basis, and being cross-classified with every other feature on the population schedule. Owing to the number of these cross-classifications, they can be shown only by the larger geographical areas, *i.e.*, by provinces; by rural and urban; by cities of 30,000 and over; and by groups of towns and villages, (namely, (a) 1,000 to 30,000 and (b) under 1,000). Sex is differentiated throughout.

**Volume IV: Extended Analysis.**—In this volume the process of cross-classification is carried forward, the following topics of the census schedule being dealt with, namely, sex, conjugal condition, birthplace, birthplace of parents, nationality, year of immigration, racial origin, religion, language, school attendance and illiteracy. All of these subjects are inter-classified wherever a relationship exists, again only by the larger areas as in the case of Volume III.

**Volume V: Families, Dwellings and Earnings.**—This volume presents an analysis of the census materials relating to families, dwellings, housing, earnings of families and individuals, dependency and contingent subjects of a broad social character, the scheme of cross-classification being of similar scope to that of Volume IV.

**Volume VI: Unemployment.**—A preliminary return of the census materials on unemployment as for June 1, 1931, for localities of 5,000 and over, was issued in April, 1932, and further returns have been made (a) extending this to places of 1,000 and (b) covering unemployment for the year ending June 1, 1931, by occupation, industry, sex and causes, for certain cities of 30,000 and over. It is the purpose of Volume VI to complete the presentation of these data in such a way as to permit an exhaustive study to be made of the subject from any angle covered by the census.

**Volume VII: Occupations and Industries.**—This volume presents statistics of the gainfully occupied by (a) occupation and (b) industry, cross-classified by birthplace, race, age, sex, etc., for provinces and, in somewhat less detail, for cities of 15,000 and over. In addition industry has been cross-classified by occupation, age and sex for Canada.

---

It will be observed from the preceding that the method of presenting the data with regard to population in Volumes I-VII, though dictated in part by the order and manner in which the various compilations have been completed, is also intended to emphasize the fact that the population problem must be envisaged as a whole rather than as a series of topics to be studied separately. The student of the statistics of birthplace, for example, will find in the appropriate chapter of Volume I a summary of the leading facts and cross-analyses relating thereto; in Volume II he will find the crude figures of birthplace by small areas throughout Canada; in Volume III he will find the ages of the population cross-classified with birthplace; while in Volumes IV, V, VI and VII he will find birthplace interrelated with the other questions on the census schedule, similarly, with regard to the other topics covered in the census inquiry. The presentation aims at a degree of completeness of cross-classification hitherto impracticable; at the same time not only is economy of printing achieved (any attempt at exhaustive presentation topic by topic would entail impossible repetitions of tabular matter), but the integration of the various census fields is suggested with what is thought to be a necessary insistence.

The reader may again be referred to Appendix V, page 1467, which gives a synoptical outline of the cross-classifications published in the seven volumes on population. It may also be repeated that in Appendix VII he will find a tabular statement of all previous census materials, published and unpublished, which are considered of practical value in research.

**Volume VIII: Agriculture.**—The results of the Census of Agriculture will be given for each province in turn, down to township areas, the whole preceded by a general treatment for the Dominion showing provincial totals as well as Canada's position in world agriculture. The provincial sections will be issued separately for economy of distribution.

**Volume IX: Institutions.**—A separate report on each section of the Census of Institutions, namely, (1) hospitals for the sick, (2) mental and neurological institutions, (3) benevolent institutions, almshouses, orphanages, child welfare institutions, etc., and (4) prisons and reformatories, will be included in this volume, with analytical introductions in each case, and with a preceding general summary in which the statistics of institutions as a whole will be analysed in their relation to other social statistics.

**Volumes X and XI: Merchandising and Services.**—The preliminary results of this census have been issued in mimeographed form for cities of 10,000 and over, also by counties and provinces, and by the more important kinds of business and types of organization. The census volumes will bring together the final results of the census, with an analytical introduction dealing with the facts and methods of distribution employed in the various lines of

trade throughout Canada, and relating the distribution process as a whole to the general economic scheme. It will be the purpose of the volume (which will be reprinted in provincial sections) to show in detail the more important channels of internal trade in Canada, the extent of the market for leading commodities or groups of commodities and generally to bridge the gap previously existing between on one hand the Census of Production, in association with imports and exports, and on the other hand the estimated consumption of commodities in Canada.

**Volumes XII, XIII and XIV: Census Monographs and Diagrams.**—The two final volumes of the census report, with the exception of the proposed statistical atlas and index, will be devoted to a series of special studies and monographs based upon the interpretation of the statistical data of the preceding volumes of the census report as well as of previous censuses. In each case the monograph will consist of a thorough study of an outstanding Canadian problem for which the census provides the primary approach. The studies will be issued separately, as well as being brought together in volume form. The volume of diagrams will illustrate the leading facts of social and economic importance derived from the Census and other Branches of the Bureau, constituting in effect a statistical atlas of the Dominion on somewhat similar lines to that for Western Canada published in 1931.

The list of the proposed monographs with a brief description of each as planned and in part completed on the date of the present report is as given below. It may be added that though certain of the monographs are related in subject, care will be taken to prevent overlapping in treatment so that the series will constitute an essential whole, especially when taken in conjunction with Volume I; the monographs, however, have been prepared and written independently (by joint hands in certain cases) but are under single editorial planning and supervision.

### §23. Census Monographs

**1. Growth of Population in Canada.**—An investigation of recent trends in the population growth of Canada against the general background of history—particularly since 1851—including in the purview natural increase, immigration and emigration. The movement of population within Canada will also be treated, and the progress of settlement traced. The study will aim at scientific examination of the laws of population growth in Canada, with reference to special features of the growth at different periods,—the whole against a world background and with comparisons for other countries which are developing (a) under similar conditions and environment and (b) under different conditions.

**2. Age Distribution of the Canadian People.**—The age content of the population is, as already remarked, one of the most fundamentally important facts brought out by the census, accounting for many phases of mortality, conjugal condition, marriage, occupational status, crime, etc., that are frequently attributed to other origins. The study will cover past censuses for comparative purposes.

**3. Fertility of the Population.**—This study will examine the actual and potential fertility of the Canadian population by races, geographical areas, occupations, density of population, etc. It will be closely associated with the vital statistical records of the Bureau on ages of mothers, ages of the married population, order of births, the birth rate, etc. What are the factors determining the birth rate in Canada and its variation from time to time and from province to province? What will be the probable trend of the Canadian-born population of the next few decades? These and similar questions will be analysed.

**4. Racial Origins and Nativity of the Canadian People.**—A study of this subject based on the 1921 Census was issued by the Bureau some years ago. The concepts of origin, language, birthplace and nationality are closely associated and together constitute a problem of first national importance. It is possible to examine the situation more efficiently for the present census than for the last, owing to the greater wealth of analytical data available. The legalistic point of view as to nationality will receive additional emphasis, and additional examination will be made of racial demarcations in Canada.

5. **Illiteracy and School Attendance.**—The study made in 1921 will be repeated and improved in the light of the more complete analytical materials now available. The purpose is to examine all the factors contributing to the educational status of the Canadian community—local environment, age, sex, nativity, school facilities—and their progress in the elimination of illiteracy and the promotion of a higher educational level. The Education Branch of the Bureau will complete this study.

6. **The Rural and Urban Composition of the Canadian Population—since Confederation.**—This study will have for subject one of the most important of modern tendencies, namely, the rapid growth of urban as compared with rural population. The first part of the study will analyse the facts as shown by the seven censuses taken since Confederation, while a second part will be concerned with the causes of the greater urban growth.

7. **The Canadian Family—Its Composition, Size and Condition from the Earliest Times.**—The present census has made extensive provision for the treatment of this subject. From the *social* standpoint the treatment will include such features as the ages and educational status of the heads of families; the size and composition of the family; adoptions, etc. From the *economic* standpoint it will include earnings of parents and children, nature of employment, character of the household, etc. A study of the Canadian home in its larger aspects, including home-ownership, will be appended.

8. **Housing and Rentals.**—The preceding study will merge with one bearing explicitly on housing and rentals—the study including a treatment of the basic living conditions of Canadians, number of rooms occupied, home facilities and conveniences, tenancy, rentals paid, etc., from various points of view.

9. **Dependency.**—In the census volume giving the results of the Census of Institutions, the institutional population of Canada is dealt with—this covers the population which is being directly cared for in benevolent and other institutions of various kinds. There is need, however, for a wider treatment of dependency, including such phases as the dependency of children within the family, guardianship, dependent adults at home, etc., as well as a treatment of the responsibility for dependents which attaches to the population as a whole. The treatment will envisage such aspects as old age pensions, mothers' allowances, war pensions, allowances arising out of industrial accidents, as well as the activities of children's aid societies, etc., as covered in the Census of Institutions, and will relate existing data on these subjects to the various aspects of the census bearing on age, occupations and social conditions generally. In the past two decades governmental expenditures of the classes above mentioned have greatly increased; to illustrate the human background of legislation and budgeting of this character and to throw light in a broad way on the foundation of social legislation in general, will be the objective of this monograph.

10. **The Evolution and Present-day Significance of the Canadian Occupational Structure.**—By way of introduction, brief reference will be made to the factors, such as physical environment, technical developments, social policies, etc., that have moulded the occupational structure in its present form. A quantitative description of the changes that have occurred in the occupational scene over the past half century will follow. This survey will include an examination of (a) the extent to which the division of labour has been carried, (b) the relative growth of specific occupations and occupational groups, (c) the changing sex composition and age distribution of the gainfully occupied, (d) the occupational mobility of the immigrant worker, and so on. The preceding analysis it is expected will furnish valuable knowledge upon a number of problems of present-day significance in respect to the occupational life of this country. Among these may be mentioned (a) occupational overcrowding, (b) technological displacement, (c) vocational adaptability of the immigrant, and (d) juvenile and female labour.

11. **Unemployment.**—The basic purpose of this monograph will be to study those aspects of unemployment for which the census provides the primary avenues of approach. This involves a study of unemployment by cause, occupation, earnings, industry, sex, age, race, etc., with implied examination of various interpretations of the phenomenon. The census data will be correlated with all other data available on unemployment so as to measure their applicability. The whole will be prefaced by a theoretical treatment of the subject.

**12. The Population Basis of Agriculture.**—To what extent does the composition of the Canadian population account for the trend in Canadian agriculture and for certain special forms which Canadian agriculture has assumed? What is the relation between "types" of farming and the population based thereon? The 1931 Census collected certain new materials on the farming population. While the main direction of agricultural evolution has been dictated by broad economic considerations, other forces have also been at work, and it will be the main purpose of this study to envisage these from as wide an angle as possible.

### §24. Distribution of Census Reports

The chief cost items in connection with the census are for the collection and compilation of the data rather than for the printing of the reports, the outlay upon the latter totalling at the outside less than four or five per cent of the whole. Nevertheless, the cost of printing is heavy, and a rigid supervision of distribution is obligatory, desirable as is a wide dissemination of results and materials so essential to the study of national problems. The free distribution of the census reports will accordingly be limited to the following: (1) Canadian libraries of recognized standing; (2) Dominion and Provincial Government Departments, City Clerks, on application; (3) Members of Parliament, Members of Provincial Legislatures and other public officers, on application; (4) University faculties in the social sciences; (5) Boards of Trade and Chambers of Commerce on application; (6) Foreign Census and Statistical Departments, in exchange for their similar publications; (7) large and representative foreign libraries; (8) leading newspapers for review.

### §25. Summary of Census Results

The present report is purely administrative, but it cannot as such conclude without reference however brief to the results of the census—first as to the broad facts in the national development which it indicates, and secondly in its bearing upon the immediate legal objective, namely, representation in the House of Commons. In the remainder of this report these two phases are discussed in turn. The statement of results, it will be understood, is limited to general totals.

### §26. Summary of the Results of the Census of Population, 1931

#### (a) Growth

By way of general summary, the three tables reprinted herewith show the population totals by provinces according to each decennial census since Confederation, and thus exhibit the totals of the present census in their appropriate setting. The diagram opposite will also enable the trend of population in Canada to be seen at a glance from Confederation on, while the dotted map which appears as frontispiece to the present volume illustrates the present distribution of the people throughout the Dominion.

POPULATION OF CANADA, BY PROVINCES AND TERRITORIES, IN THE CENSUS YEARS 1871 TO 1931

Province or territory	1871	1881	1891	1901	1911	1921	1931

<sup>1</sup>Corrected as a result of The Boundaries Extension Acts, 1912. <sup>2</sup>Corrected by transfer of population of Fort Smith (368) to Northwest Territories. <sup>3</sup>The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba. <sup>4</sup>Revised in accordance with the Labrador award of the Privy Council, March 1, 1927. <sup>5</sup>Members of the Royal Canadian Navy were counted in their homes in the Census of 1931.

**Grand Total of the Census of 1931.**—According to the final results of the 1931 Census, the total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 in the same area on June 1, 1921, an increase of 1,588,837 or 18.08 p.c. in the decade, as compared with 21.94 p.c. and 34.17 p.c. during the decades 1911 to 1921 and 1901 to 1911 respectively. It is interesting to compare this record with the similar figures of growth elsewhere.

**Recent Population Growth of the English-Speaking Countries and the World.**—During the decade 1911-21 the white man's countries included in the British Empire had suffered less in actual loss of life from the Great War and its consequences than the continental countries of Europe. So likewise did the United States, which was in the War for only nineteen months as against Canada's fifty-two. None of these declined in population during that period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5 p.c., as compared with an increase of 10.9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2.6 p.c., as compared with 6.5 p.c. between 1901 and 1911. Canada increased 21.94 p.c. as compared with 34.17 p.c. between 1901 and 1911, while New Zealand increased by 20.9 p.c. as compared with 30.5 p.c. On the other hand, the Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade than in the first, increased by 22.01 p.c., as compared with 18.05 p.c. between 1901 and 1911. The white population of the Union of South Africa increased by 19.06 p.c. in the second decade of the century. Finally, the population of the continental United States rose from 91,972,266 in 1910 to 105,710,620 in 1920, an increase of 14.9 p.c. in the second decade as compared with 21 p.c. in the first.

The third decade of the century might have been expected to show a larger increase of population than the second, but so far as the English-speaking countries were concerned, the facts were otherwise owing largely to a falling birth rate. Thus the increase in Canada was only 18.08 p.c. as compared with 21.94 p.c. England and Wales, it is true, grew 5.4 p.c. as compared with 5 p.c. in the preceding decade, but Scotland showed an actual decline of 0.8 p.c. in the third decade as compared with an increase of 2.6 p.c. in the second. In Ireland, where no census was taken between 1911 and 1926, and none since, Northern Ireland showed an increase of 0.5 p.c. between 1911 and 1926 as compared with an increase of 1.1 p.c. between 1901 and 1911, while the Free State Census of 1926 recorded a decline of 3.7 p.c. between 1911 and 1926, as compared with a decline of 2.6 p.c. between 1901 and 1911. The Commonwealth of Australia took no census in 1931, but the Census of 1933 showed an increase of 22 p.c. since 1921, or about the same percentage in these last twelve years as in the preceding ten. New Zealand, too, took no census in 1931, but an official estimate of the European population indicates an increase of 20.3 p.c. between 1921 and 1933 or nearly the same as between 1911 and 1921. The white population of the Union of South Africa increased 21.87 p.c. between 1921 and 1931. Finally, the mainly English-speaking continental United States increased 16.1 p.c. or from 105,710,620 to 122,775,046 between 1920 and 1930.

Considering the British Empire as a whole, the aggregate population of the territories now included in it, which is estimated at 424,133,000 in 1911 and 449,719,000 in 1921, rose to 495,456,000 (Statesman's Year-Book figure) in 1931, the chief factor in this increase of nearly 45,000,000 during the decade being the rise of some 33,895,000 in the population of India.

Estimates of the population of the world, published by the International Institute of Statistics, indicate that the population of Europe, which was 448,086,000 in 1910, rose only slightly to 450,023,000 in 1920, but increased substantially to 484,575,000 in 1930, while the world total, which was 1,698,082,000 in 1910, rose to 1,788,079,000 in 1920 and 1,988,279,000 in 1930. The comparatively small increase observed between 1910 and 1920 was due to the Malthusian checks of war and pestilence. The latest edition of the Statistical Year-Book of the League of Nations estimates the total population of the world at the end of 1934 at 2,077,000,000. Absolute comparability between the estimates of semi-civilized or barbarian communities where there is no authoritative enumeration of the people is unattainable. Differences of time at which estimates are made is also an important cause of incomparability.

**Totals by Provinces, 1921-1931.**—The largest absolute gain made by any province of Canada during the past decade was by Quebec (513,590), which compares with Ontario's gain of 498,021, but British Columbia and Alberta made higher relative gains, namely, 32.35 p.c. and 24.33 p.c., respectively, compared with Quebec's gain of 21.76 p.c., Saskatchewan's gain of 21.69 p.c., Ontario's gain of 16.98 p.c., and Manitoba's gain of 14.75 p.c. Prince Edward Island lost population for the fourth census in succession (577 or 0.65 p.c.), while Nova Scotia for the first time of any other province since Confederation also recorded a loss (10,591 or 2.10 p.c.).

As formerly in the United States, the West has been growing more rapidly than the East. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c., and for the decade 1921-31 the increase was from 2,480,664 to 3,047,792, or 22.86 p.c. From 1921 to 1931 the five eastern provinces increased from 6,294,655 to 7,315,041, an increase of 1,020,386 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 16.2 p.c. over the 1921 population. While in 1871 only 2.97 p.c. and in 1881 only 3.89 p.c. of the population of the country dwelt west of the Lake of the Woods, the percentage in 1891 was 7.23; in 1901, 12.02; in 1911, 24.08; in 1921, 28.37, and in 1931, 29.51.

On the other hand, the Maritime Provinces, which in 1871 contained 20.80 p.c. of the total population of the Dominion, had in 1881 20.13 p.c., in 1891 18.22 p.c., in 1901 16.64 p.c., in 1911 13.02 p.c., in 1921 11.38 p.c., and in 1931 only 9.72 p.c. of the population. Ontario and Quebec, the pre-Confederation Province of Canada, still remain the chief centre of population, but their relative place continues to diminish. Their proportion of the total was 60.77 p.c. in 1931, as compared with 76.23 p.c. in 1871, 75.98 p.c. in 1881, 74.54 p.c. in 1891, 71.34 p.c. in 1901, 62.90 p.c. in 1911 and 60.25 p.c. in 1921. In other words, the net result of the sixty years has been that in 1931 three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

From 1851 to 1881 the "centre" of population east and west did not change materially, remaining around the city of Valleyfield, Que. for thirty years, but in 1891 it had moved twenty-five miles west of Ottawa and in 1901 the northwest movement carried it near Pembroke, Ont. In 1911 the centre of population had moved to a spot fifty-five miles west of Sudbury, Ont. and in 1921 with the same northwest movement it had reached fifty miles northeast of Sault Ste. Marie. In 1931 the "centre" of population was located thirty miles due north of Sault Ste. Marie.

LOCATION OF CENTRE OF POPULATION FROM 1851 TO 1931 IN NUMBER OF MILES NORTH OF 42° LAT. AND WEST OF 60° LONG.

Years	Exact location in degrees		Number of miles		Movement between censuses (miles)

The movement of the Canadian born within Canada has interesting implications, which will be analysed in detail in Chapter I and in the monograph on Population Growth.

**Density of Population.**—The density of population in 1931 (*i.e.*, the number of persons per square mile of the land area as in that year), as compared with 1921 and 1911, is shown by provinces and for the country as a whole in the table herewith. Generally speaking the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5.49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

DENSITY OF POPULATION IN CANADA, BY PROVINCES AND TERRITORIES, 1911, 1921 AND 1931

**Elements of Growth.**—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, makes it difficult to determine how far the growth of population since the commencement of the twentieth century is due to natural increase and how far to immigration. The estimate in the accompanying table may, however, be of interest. It will be seen that to a potential gain of 2,834,392, during 1921-1931, the two rival factors of natural increase and immigration contributed 1,325,256 and 1,509,136, respectively, but were counterbalanced by an emigration of 1,245,555 which reduced the net gain to 1,588,837.

<sup>1</sup>Revised in accordance with the Labrador award of the Privy Council, March 1, 1927.

<sup>2</sup>This figure includes also the 60,000 Canadian lives lost at the front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

**Outline of Population Growth from the Earliest Times in Canada.**—A general account of population expansion in Canada from the earliest times, in which the latest episode is that dealt with by the present census, may be of interest at this point, though as already remarked the subject will be given exhaustive treatment in the opening chapter of the Census Report proper, to which the reader must be referred for interpretative details.

**Historical—Early Colonial Period.**—Canada, a part of the New World, came into existence in the seventeenth century as a symptom of a new and powerful influence fraught with consequences of the utmost importance to mankind, namely, a pronounced and continuously mounting increase in the numbers of the human family—in at least the portion included in western civilization. For six centuries prior to 1600, the growth of Europe had been negligible. In the seventeenth century it suddenly expanded to a rate of, say, 33½ p.c., and in the eighteenth century to one of, say, 50 p.c. In the nineteenth century the fire became a marching conflagration, and an increase of over 300 p.c. was recorded within the period of one hundred years.

Canada, as already described, took her first census in the year 1666, when the results showed some 3,215 souls. By 1685 this total had risen to over 11,000; by the end of the seventeenth century it had passed 15,000; and the latter was all but doubled in the succeeding twenty-five years. By 1740 the figure was well in advance of 40,000, whilst at the time of the British Conquest (1763), the population of New France was in the neighbourhood of 70,000—another 10,000 French (thinned to these proportions by the expulsion of the Acadians) being scattered through what is now New Brunswick, Nova Scotia and Prince Edward Island. The British population of Nova Scotia was at this time in the neighbourhood of 9,000. Meanwhile, it is interesting to note, the English colonies which constituted the beginnings of the United States grew from 80,000 in 1660 to 262,000 in 1700, to 500,000 in 1720, to 1,000,000 in 1740 and to 1,695,000 (including 310,000 slaves) in 1760.\*

British settlement on a considerable scale in the Maritime Provinces and in what subsequently became the province of Ontario dates only from the Loyalist movement which began with the outbreak of the American Revolution and increased after its close. In the year of the

Constitution Act (1791), the population of Lower Canada may be set down as 163,000, whilst that of the newly constituted province of Upper Canada was perhaps 15,000. (In the previous year, the first census of the United States gave a total of 3,929,214.) With the addition of the Maritime Provinces, the grand total in 1791 exceeded 220,000. A decade later, at the beginning of the nineteenth century, with the tide of immigration which the new Act released from the United States and Great Britain, this total had risen to at least 300,000. From then on until the union of the provinces, growth was continuous; by the early 'forties Upper and Lower Canada with the Maritime Provinces contained over a million and a half people.

**Modern Censuses, 1851-1921.**—Census-taking at regular decennial intervals dates from 1851. With regard to the pre-Confederation Censuses of 1851 and 1861 respectively, the growth recorded was from a total of 2,440,000 in the former year to one of 3,248,000 in the latter, an increase of 808,000, or 33·1 p.c., the gain being particularly marked in Ontario, where railway expansion and general settlement were very active, especially in the first half of the decade. Between 1861 and 1871 the gain dropped to 427,000, or 13 p.c.

In the years immediately following Confederation there was again a rapid rise in numbers, the increase between 1871 and 1881 being 635,553, or 17·23 p.c. In neither of the two decades next following, however, was this record equalled, either absolutely or relatively, the gains being 508,429 and 538,076, or 11·76 p.c. and 11·13 p.c. respectively. With the end of the century the population of Canada had reached approximately five and three-eighths millions. The general increase among European populations during the nineteenth century was approximately threefold; Canada equalled this rate of progress during the last sixty years alone.

It was, however, with the present century that the most spectacular expansion of the Canadian population began. The outstanding feature was of course the opening to settlement of the "last best West," which became the main attraction for the migration of Old-World peoples, under the favourable financial conditions of 1900-1912. The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific Railway in the 'eighties and 'nineties. But though western population doubled with each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that Canadian western settlement and production became a world economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, which formed the immediate basis for the move upon the West. At the back, of course, was a heavy inflow of British capital—a total of two and a half billions of dollars within a dozen years—which went to finance the large constructive undertakings (chiefly railway and municipal) which characterized the movement. Canadian immigration, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years 1900 to 1910 it totalled over 1,800,000, and though at least half this number was subsequently lost, and though the remainder were probably a cause of losses otherwise, it formed the chief factor in the gain of 34·17 p.c. (of the 125,000 who immigrated in the last five months of the decade at least 100,000 had arrived in the extended period caused by the change in the census date from April to June) all-round which the total population of Canada registered in that decade and which was larger relatively than the growth of any other country during the same period.

**The Decade 1911-1921.**—The continuation and even intensification of this movement for a period of three years, followed by a recession and then by the wholly new and unexpected development engendered by the War, was reflected in the 1921 Census. The net result was an increase of 1,581,840, which though less than the 1,835,328 increase of the preceding decade, was between two and three times greater than in any other decade in Canada's history. The relative increase of the Canadian population again headed the list for all countries in the world with the single exception of Australia (and that by a negligible margin), the rate being 21·95 p.c., compared with one of 22·01 for Australia, of 20·9 for New Zealand, of 15·99 for South Africa and of 14·9 for the United States.

The effects of the War upon the Canadian population were both direct and indirect. Nearly 60,000 Canadians died overseas, and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British residents in Canada, most of them recent immigrants, left Canada to

join the forces of Great Britain and did not return, and the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties.

### (b) Elements in the 1931 Population

The above brings us to 1931 and to the decade covered by the present census with a review of which this summary of results began. For the remainder we may turn to specific characteristics or elements in the population content of 1931 according to the census, on which notes in briefest form are given in the following.

**Sex Distribution.**—Throughout the older countries of the world there is usually found an excess of female over male population, especially as in most of these countries the census is taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine, and (5) the preponderance of males among emigrants. In the newer countries on the other hand the preponderance of males among immigrants results in a general excess of male over female population. In Canada there has been an excess of male population from the commencement, the Census of 1666 showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, especially since the French-Canadian population, after about 1680, was not reinforced by immigration from the Old World. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly settled Upper Canada, and since Confederation the same phenomenon of considerable excess of males has occurred throughout the growing West. The great immigration of the first decade of the present century resulted in raising the "masculinity" of the Canadian population (*i.e.*, the excess of males over females per 100 of population) to the highest point in recent history, *viz.*, 6.07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of the population was only 3 p.c.—515 males to 485 females per 1,000 of population. In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has recently increased in the eastern provinces and decreased in the western ones, where it was formerly greatest.

#### MASCULINITY OF THE POPULATIONS OF VARIOUS COUNTRIES IN RECENT YEARS

Note—The minus sign (–) indicates deficiency of males

<sup>1</sup> White population only.

**Conjugal Condition.**—Especially noticeable in the 1931 Census of the single, married, widowed and divorced is the larger proportion of married in recent years. In 1871, 30.78 p.c. of the male and 31.50 p.c. of the female population were married; these percentages have increased from census to census till today they are 37.83 p.c. and 38.74 p.c., respectively. This is mainly attributable to the larger percentage of adults to total population in our own time. Noteworthy also is the larger percentage of divorced and legally separated in recent censuses, though this was stationary for males and somewhat smaller for females in 1931 compared with 1921.

**The Canadian Family.**—The census includes (1) the "household," comprising a group of persons living together in the same dwelling house, and (2) the private family, composed of father, mother and children.

In 1931 there were in Canada 2,276,595 households (exclusive of the Yukon and the Northwest Territories), compared with 1,897,227 in 1921. These households occupied 1,916,228 buildings, comprising 2,228,262 dwellings. A dwelling is defined for the census as "any room or set of rooms used for habitation, having separate access either to the street or to a common landing"; thus each apartment in an apartment building or flat in a block of flats is reported as a dwelling. Of the 2,228,262 dwellings 342,844 were represented by apartments or flats; 30,460 by rows or terraces; 1,704,637 by single houses; 142,667 by semi-detached houses; 7,654 various and not specified. The material of construction of the buildings included 411,595 brick and brick veneer; 29,703 stone; 1,381,833 wood; 71,176 stucco; 12,922 concrete, and 8,999 others and not specified.

In the Census of 1931 the private families numbered 2,419,360, as against 2,001,512 in 1921. The conjugal condition of the heads of the private families was as follows: 169,172 were single, 1,960,418 married, 285,625 widowed and 4,145 divorced. Of the total number of private families, 1,669,634 reported children living at home, 161,879 reported dependents other than children, and 680,391 were without dependents or children living at home; of the latter, 270,312 were families of one person.

The 1921 Census compiled for the first time the number of families reporting 1 child, 2 children, 3 children, up to 15 children and over living at home. Comparing the 1931 results under this heading, it is interesting to note that the proportional number of families reporting 1 child and 2 children, together with the families reporting 10 children or more, show an increase, whilst the families reporting from 3 to 9 children show a decrease. In 1921, 13,394 families or 0.96 p.c. reported 10 or more children living at home while in 1931 the number had increased to 20,440 or to 1.22 p.c. It should be remembered in this connection that the decrease in the families of 3 to 9 children could cause an increase proportionately in those with 2 or less, so that the percentage increase in families having 1 and 2 children does not necessarily mean increased fertility in the recent marriages.

According to tenure, 1,370,622 families lived in their own homes, and 1,048,738 were tenants.

Of the total number of private families there were 1,857,105 families having both parents as head of family. Of that number 444,948 reported no children living at home, the remainder reported 4,299,330 children of all ages, an average of 3.04 children per family as against 3.06 in 1921. There were 1,433,488 children under 7 years of age, 1,540,451 from 7 to 14 years of age, and 1,325,391 children 15 years and over. According to literacy, 1,736,425 families reported both father and mother literate, 32,010 mother only illiterate, 49,636 father only illiterate, and 39,034 both father and mother illiterate. Both parents literate reported 2.10 p.c. of the children 7 to 14 years of age as illiterate and 95.25 p.c. at school. Where the mother only was literate 9.24 p.c. of the children 7 to 14 years of age were illiterate and 85.40 p.c. at school; where the father only was literate 9.24 p.c. of the children 7 to 14 years of age were illiterate and 88.69 p.c. at school; with both parents illiterate only 78.14 p.c. of the children 7 to 14 years of age were at school and the large number of 20.41 p.c. were illiterate. In 1921 the percentages of school attendance and literacy were 2.60 p.c., 92.70 p.c., 10.21 p.c., 80.52 p.c., 16.59 p.c., 76.96 p.c., 28.21 p.c., and 66.13 p.c. respectively, showing a pronounced improvement in 1931.

In the private families having both parents as heads there were 38,890 wives gainfully occupied and of that number 21,517 reported earnings aggregating \$11,426,350. There were also 517,573 children who were gainfully occupied, 447,339 of whom reported total earnings of

\$238,159,430. The total earnings of the male heads of families (wage-earners) having both parents as heads was \$1,218,094,500, and of other heads \$90,862,500 making a grand total of \$1,308,957,000 for all classes of heads.

**Age Distribution.**—The same causes which have rendered the sex distribution of population in Canada somewhat unusual in the past have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on, where there is land and food in abundance, and when the early disproportion of the sexes has been overcome, there is a very high rate of natural increase and an extraordinarily large proportion of children among the population. Thus in 1871, 286.91 out of every 1,000 of the population of Canada were children under 10 years of age, and over half the total population (526.76 out of every 1,000) were under 20 years of age. But with growing urbanization, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231.83 were under 10 years of age, and 423.42 under 20 years of age. In 1921, however, 239.67 per 1,000 of the population were under 10 years of age, and 434.81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212.70 per 1,000 of the population, and of persons under 20 to 416.39 per 1,000. In the age group 20-44 also there was a decline between 1921 and 1931. On the other hand, the number per 1,000 in the age group 45-69 went up from 169.38 to 189.52, and the number over 70 from 28.12 to 33.22 per 1,000.

**Racial Origins.**—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. At the same time the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups would indicate that the people of Scandinavian, German and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c., and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-War numerical strength of certain stocks in Canada with pre-War returns cannot be made with certainty.

Relatively, the British group, which advanced from 54.07 p.c. to 55.40 p.c. of the whole in the decade 1911-21, declined to 51.87 p.c. in 1931. The French group on the other hand, which showed a gradual decline between 1871 and 1901 and a more pronounced one in 1911 and 1921, has improved its relative position considerably and in 1931 is once again the foremost single racial group. Together the British and French groups now constitute 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871.

The pronounced decline after 1901 in the combined proportion of the two major racial groups, *viz.*, British and French, with a corresponding increase in ethnic stocks of minor importance, has in the main been due to the immigration of continental Europeans to Canada during the past thirty years. Altogether, the percentage of the total population of European racial origin, other than British and French, increased from 8.53 p.c. of the total in 1901, to 12.82 p.c. in 1911, to 14.19 p.c. in 1921, and to 17.59 p.c. in 1931. Oriental immigration to Canada in the past thirty years has been responsible for the relative increase of the Chinese and Japanese racial groups from 0.41 p.c. in 1901 to 0.67 p.c. in 1931. In the same period the population of Negro origin has declined from 0.32 p.c. to 0.19 p.c. of the total, and that of Indian and Eskimo origin from 2.38 p.c. to 1.24 p.c.

**Birthplaces.**—In 1871, 97.29 p.c. of the population was born under the British flag, while sixty years later the percentage had declined to 89.18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of

immigration after 1900. The 1931 Census shows declines in the proportions of British born and United States born as compared with 1921 but a substantial increase in the percentage of "other foreign born," the proportion of Canadian born remaining with little change. Worthy of note is the fairly steady increase of the United States-born population from 1.85 p.c. in 1871 to 4.25 p.c. in 1921, with a subsequent decline to 3.32 p.c. in 1931. Other foreign born increased from 0.92 p.c. in 1871 to 6.23 p.c. in 1911, declined to 5.87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7.50 p.c. by 1931.

In the Maritime Provinces, the population is shown by the census to be about 93 p.c. native-born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c. The general tendency over the past decade has been for the proportion of the native-born population to remain stationary or show a slight decrease in Eastern Canada, but in Western Canada increases are everywhere shown; thus, the percentages in 1921 were: Maritime Provinces 93, Quebec 92, Ontario 78, Manitoba 64, Saskatchewan 60, Alberta 54 and British Columbia about 50. About 44 p.c. of the total British-born population is in Ontario, but the greatest proportion of British-born population in any one province is in British Columbia, *viz.*, 27 p.c. which compares with 31 p.c. for 1921. The foreign-born element reaches its maximum percentage in the rapidly growing provinces of Saskatchewan and Alberta, where it constitutes about 24 p.c. and 27 p.c. of the respective populations as compared with 26 p.c. and 30 p.c. respectively for 1921.

**Citizenship.**—Of the total population of Canada (10,376,786), 9,712,221 were Canadian nationals, subdivided as follows: Canadian born (including repatriated), 8,052,459; other British born who have acquired domicile, 1,044,791; and naturalized foreign born, 614,971. British subjects in Canada in addition to the above who had not acquired Canadian domicile numbered 135,426, so that the total number of British subjects in Canada was 9,847,647. The total number of aliens was 529,139, of whom 16,802 were Canadian born (chiefly females by marriage to aliens); 4,613 were other British born (again chiefly females married to aliens); and 507,724 were foreign born.

**The Progress of Naturalization.**—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911 and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911 and 153,908 in 1901, or 54.78 p.c., 57.75 p.c., 45.77 p.c. and 55.27 p.c. respectively. Alien residents in Canada showed an absolute decline between 1911 and 1921 of from 408,175 to 376,098, *i.e.*, from 5.66 p.c. of the population to 4.28 p.c. Between 1921 and 1931, they increased to 507,724, or 4.89 p.c. of the 1931 population. Among the foreign-born residents of Canada the United States born exceed those born in any other country, although by continental groups the Europeans are more numerous. Between 1921 and 1931 the United States born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the United States born who are naturalized to total United States born has increased from 63.63 in 1921 to 72.44 in 1931, whereas the percentage of Europeans who are naturalized has fallen from 57.88 in 1921 to 49.13 in 1931.

**Language.**—Classifying persons under 5 years of age as speaking the language of the home, of the total population, 6,999,913 spoke English, 1,779,338 spoke French, 1,322,370 spoke both English and French, and 275,165 could not speak either English or French.

Of the population over 10 years of age in Canada in 1931, over 58 p.c. spoke English in the home, over 25 p.c. spoke French, over 3 p.c. spoke German, over 4 p.c. spoke one of the Slavic tongues, and nearly 2 p.c. spoke one or other of the Scandinavian tongues. Of 1,064,360 foreign born, 10 years of age and over, 88 p.c. could speak English. It is also interesting to observe the trends as between the use of the two official languages of the country, English and French. Of the population over 10 years of age in Canada, 84.6 p.c. can speak English, the language of the majority, and 28.6 p.c. can speak French. As to the extent to which those of British and French origin respectively in Canada speak each other's language, it is interesting to note that of the 2,158,187 of French descent in Canada above 10 years of age, 972,779 speak both English and French, 1,090,849 speak French alone, and 91,611 speak English alone. Among those of British

descent, 4,181,231 speak English alone, and only 175,409 speak English and French; there is in addition a group of 8,158 who speak French alone—mostly the descendants of early British settlers in Quebec.

**Religions.**—Throughout the sixty-year period since Confederation, something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41·30. Methodists were 16·27 p.c. of the population in 1871 but fell to 13·19 p.c. in 1921, while Presbyterians increased from 15·63 p.c. in 1871 to 16·04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, constituted that body the second largest religious body in the Dominion in 1931 with 19·44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada numbered 8·39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14·17 p.c. in 1871 to 12·69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16·02 p.c. in 1921, followed by a slight falling off to 15·76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6·87 p.c. in 1871 to 4·27 p.c. in 1931.

The immigration movement during the first three decades of the twentieth century has led to a great growth of the religious bodies whose members come from the continent of Europe. Thus the Lutherans, who were only 1·09 p.c. of the population in 1871 and 1·72 p.c. in 1901, have risen to 3·80 p.c. in 1931. The Jews again, who were only 0·03 p.c. in 1871 and 0·31 p.c. in 1901, were 1·50 p.c. in 1931. The adherents of the Greek Orthodox Church were 0·99 p.c. in 1931. Of the total population in 1931 (10,376,786), 16,042 or 0·15 p.c. did not state their religion, while 54,164 or 0·52 p.c. belonging to small sects, were classed as "various", and 21,071 or 0·20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1·50 p.c. were Jews, 24,087 or 0·23 p.c. were Confucians, 15,784 or 0·15 p.c. were Buddhists, and 5,008 or 0·05 p.c. were pagans.

**Literacy.**—Literacy in Canada has shown most encouraging progress since the opening of the twentieth century. In fact, considering that most present illiteracy is confined to the older ages, it may be asserted that it is rapidly becoming a thing of the past. In 1901, 14·38 p.c. of the population of 5 years of age and over could neither read nor write; the corresponding percentage for 1911 was 10·50; for 1921, 9·25; and for 1931 it was only 7·18. A truer test of progress is made by taking the statistics for the population of 10 years of age and over; the percentage of illiterates in this significant section of the population was 3·79 p.c. in 1931, as compared with 5·10 p.c. in 1921. Illiteracy is definitely greater among males than among females. In 1931, 4·32 p.c. of the male population and 3·21 p.c. of the female population were recorded as unable to read or write, as compared with 5·73 p.c. and 4·43 p.c. respectively for 1921. Manitoba, Saskatchewan and Alberta, alone among the provinces, show a higher percentage of female illiteracy; this condition existed also in 1921, although the corresponding percentages for both males and females were then substantially greater. In general, New Brunswick is in the most unfavourable position for illiteracy (6·91 p.c.), though there has been an improvement since 1921. The province of Quebec, which in 1921 recorded the high percentage of 6·19 as illiterate, had reduced this proportion to 4·76 by 1931.

As education is so largely a municipal activity, it is of interest to note the literacy of persons (10 years of age and over) residing in cities with populations of 30,000 and over in 1931. Toronto had, in 1921 as in 1931, a very low percentage of illiteracy—1·68 p.c. in 1921 and 1·26 p.c. in 1931—and the larger cities of Ontario, generally, made a comparatively good showing in 1921. Other large cities of Canada had in 1921 fairly high percentages of illiteracy, the figures being: Montreal, 3·60 p.c.; Winnipeg, 3·54 p.c.; Vancouver, 3·54 p.c.; Quebec, 3·27 p.c.; Ottawa, 2·69 p.c.; and Hamilton, 2·12 p.c. Marked betterment during the decade is evident throughout the list of western cities, an improvement which has put Trois-Rivières, Quebec, Montreal and Halifax in a relatively less favourable position. While Trois-Rivières among the larger cities has still the highest percentage of persons who can neither read nor write, the proportion has been reduced from 7·03 p.c. in 1921 to 3·45 p.c. in 1931. The city of Saskatoon, Sask. had the lowest percentage of illiteracy in 1931, *viz.*, 0·71, London, Ont. being next with 0·88 p.c. In the cities of Windsor, Ont. and Regina, Sask., both of which had low percentages of illiterates in 1921 (1·53 p.c. and 1·44 p.c. respectively), slight increases to 1·78 p.c. and 1·68 p.c. respectively, are shown in 1931.

**School Attendance.**—In 1931 the population of school age, 5-19 years, numbered 3,246,391 or 31.3 p.c. of the total population, as compared with 31.4 p.c. in 1921 and 30 p.c. in 1911. The proportion of the total group 5-19 years actually in attendance at school shows increase. In 1911 only 52.88 p.c. of the population of this age were in attendance at school; the proportion rose to 61.33 p.c. in 1921, and to 65.59 p.c. in 1931. The proportion of males between these ages attending school increased from 52.15 p.c. in 1911 to 60.80 p.c. in 1921 and 65.12 p.c. in 1931; that of females from 53.63 p.c. in 1911 to 61.86 p.c. in 1921 and 66.08 p.c. in 1931.

**Gainfully Occupied.**—There were 3,927,230 persons 10 years of age and over, gainfully occupied in Canada according to the 1931 Census, an increase of 23.78 p.c. over the number in 1921. The total population 10 years of age and over increased 22.30 p.c. during the same period. The males represent the larger portion of the gainfully occupied, being 83.05 p.c. of the total, whereas only 16.95 p.c. of all gainfully occupied are females. In 1931 males gainfully occupied numbered 3,261,570 a 21.56 p.c. increase over the 1921 total, while the 666,021 females represented a 35.88 p.c. increase over the 1921 figure.

**Wage-Earners.**—The total number of wage-earners in 1931 was 2,570,097 as compared with 1,972,089 in 1921, an increase of 598,008 or 30.32 p.c. in the ten-year period. The number of male wage-earners in 1931 was 2,022,260 or 78.68 p.c. of the total for both sexes, while female wage-earners numbered 547,837 or 21.32 of the total. The percentage increase by sexes from 1921 to 1931 was 30.81 for males and 28.54 for females. In 1931 wage-earners as a class represented 24.80 p.c. of the total population and in 1921 22.47 p.c.

**Earnings in the Census Year.**—The total number of wage-earners in Canada reporting earnings for the census year ended June 1, 1931, was 2,476,414 or 96.35 p.c. of all wage-earners, and the total amount of their earnings was \$2,100,552,700. Of this number 1,947,957 were males and their earnings amounted to \$1,804,942,500 or 85.93 p.c. of the total earnings. Females reporting earnings numbered 528,457, and the total amount of their earnings was \$295,610,200 or 14.07 p.c. of total earnings. The total weeks worked by wage-earners reporting earnings was 104,624,422. The number of weeks worked by the males was 80,003,048 or 76.47 p.c. of the total for both sexes, and the total for the females was 24,621,374 weeks or 23.53 p.c. of the grand total.

**Wage-Earners at Work and Not at Work on June 1, 1931.**—The number at work on June 1, 1931, was 2,100,139 or 81.71 p.c. of the total and the number not at work 469,958 or 18.29 p.c. of total wage-earners. Those not at work were classified by cause of absence from work. Wage-earners reporting "no job" as the reason for not being at work numbered 394,643 and represented 15.36 p.c. of all wage-earners. Persons having a job but not at work owing to "temporary lay-off" totalled 42,615 or 1.66 p.c. of the aggregate number of wage-earners in Canada. The number not at work on account of "strike or lockout" was 300. Those reporting such personal reasons as "illness" and "accident" were 25,684 and 4,465 respectively. Wage-earners reported "other causes" for not being at work in 2,251 cases.

When distinction of sex is made, it is at once observed that females not at work on June 1, 1931, are a much smaller percentage of the total female wage-earners than the males not at work are of the total male wage-earners. Out of 2,022,260 male wage-earners in Canada on the date of the census, 1,600,184 or 79.13 p.c. of the total were at work and 422,076 or 20.87 p.c. were not at work. On the other hand, out of a total of 547,837 female wage-earners 499,955 or 91.26 p.c. were at work and only 47,882 or 8.74 p.c. were not at work. Thus the percentage not at work among male wage-earners was considerably more than twice as large as among female wage-earners.

**Employment and Unemployment in the Twelve Months Preceding the Census.**—The number of wage-earners losing some time during the period June 1, 1930, to June 1, 1931, was 1,027,479 or 39.98 p.c. of the total number in Canada. Among male wage-earners 889,743 or 44 p.c. of the total lost time while 137,736 or 25.14 p.c. of the female wage-earners reported.

"time-loss". The aggregate number of weeks lost was 24,506,280, of which 21,607,109 weeks or 88.17 p.c. represented lost time among males, and 2,899,171 weeks or 11.83 p.c. "time-loss" among females.

Of the total number of weeks lost 19,674,606 weeks or 80.28 p.c. were due to "no job". "Temporary lay-off" accounted for 3,078,527 weeks or 12.56 p.c. of the total. Time lost owing to "strike or lockout" amounted to 11,536 weeks or 0.05 p.c. of total weeks. The number of weeks lost due to "illness" was 1,403,556 weeks or 5.73 p.c. of the total and for "accident" 227,462 weeks or 0.93 p.c. of the aggregate "time-loss". "Other causes" accounted for the remainder, 110,593 weeks, or 0.45 p.c. of total weeks lost.

**Rural and Urban Population.**—There has been a continuance in the drift citywards characteristic of population growth for several decades past in Canada (and indeed throughout the world) which occupies so large a place in present-day discussion, and on which a special monograph is under preparation in connection with the present census. Defining "urban" as including all incorporated cities, towns, and villages (a definition that involves somewhat different limitations in different provinces) the urban communities of Canada absorbed somewhat over two-thirds of the total population increase of the past decade, with the result that the urban population of Canada in 1931 for the first time exceeded the rural by 767,330. Out of every 1,000 persons in the country on June 1, 1931, 537 were residing in communities organized as urban under the various provincial municipal acts, while 463 were resident in rural communities, as compared with 495 in urban and 505 in rural communities on June 1, 1921; 454 in urban and 546 in rural communities in 1911; 375 in urban and 625 in rural communities in 1901; and 318 in urban and 682 in rural in 1891. The showing is somewhat different if urban communities are defined for statistical purposes as communities of 1,000 inhabitants and over; on this showing 49.74 p.c. of the population was urban on June 1, 1931, and 50.26 p.c. rural, whereas in 1921, 45.26 p.c. was urban and 54.74 p.c. was rural.

Montreal and Toronto, the two largest cities of Canada, now number 818,577 and 631,207 inhabitants respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark, and Hamilton, Quebec and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total (from 12.98 p.c. to 13.97 p.c.), but cities of from 100,000 to 500,000 have increased their aggregate population from 5.90 p.c. of the total to 8.46 p.c., and cities of between 5,000 and 100,000 from 17.68 p.c. to 19.29 p.c. in the decade 1921-31. The classes below 5,000 show slight proportional reductions. All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has therefore been considered advisable to calculate the total populations resident in what the United States census authorities call the "metropolitan areas" dependent upon each of the cities with 100,000 population or over. On this basis the total populations of the larger cities at the Census of 1931 were as follows: "Greater Montreal," 1,000,157; "Greater Toronto," 808,864; "Greater Vancouver," 308,340; "Greater Winnipeg," 280,202; "Greater Ottawa" (including Hull), 175,988; "Greater Quebec," 166,435; and "Greater Hamilton," 163,710.

Of the 10,362,833 people who form the population of the nine provinces of Canada, exclusive of the Territories, 3,289,507, or 31.7 p.c. live on farms. There are 728,623 farms within the nine provinces, of which 14,056 are located within the limits of incorporated cities, these so-called "urban" farms representing a population of 65,266. It must be noted that the decline in the proportions of "rural" population above noted has not involved a corresponding decline in the population actually on the farm; the rural decline has been almost entirely in occupations other than farming.

## §27. Summary of the Results of the Census of Agriculture, 1931

In five tables herewith, the main results of this census are given with the comparative figures of the Census of 1921. Briefly, while the value of farm property and of agricultural products show, as a result of low prices due to the depression, a falling off as compared with the figures of

the 1921 Census, there was an increase in the acreage devoted to crops and a consequent increase in production. There was an increase of 17,533 or 2.5 p.c. in the number of farms; an increase in occupied land of 22,226,131 acres or 15.8 p.c.; and an increase in improved land of 14,962,624 acres or 21.1 p.c. Similarly the acreage under field crops shows an increase of 8,244,565 acres, 6,196,439 acres of which are under wheat in the Prairie Provinces.

Of the main field crops, oats was the only one to show a decrease in acreage and production during the period. In live stock, horses showed a decline of 9.79 p.c., and cattle a smaller one (4.74 p.c.). Animal products showed increases ranging as follows: honey 176.8 p.c., eggs 66 p.c., milk 21 p.c., and wool 12.8 p.c.

The production of greenhouse and hothouse establishments and of vegetables generally showed such marked increase that, notwithstanding the decline in prices, there was an increase also in the total value of production amounting to 32.8 p.c. in 1930 over 1920. The quantities of orchard and small fruits and of maple syrup and sugar, however, were less in 1930 than in 1920. Fence posts and rails, among forest products, show increases, while there was a slight reduction in the production of firewood and a large decrease in the production of railway ties and pulpwood on farms.

It is of interest to note that the number of persons employed in agriculture has increased by 87,195 or 8 p.c. during the decade. The average acreage per farm increased from 198 acres in 1921 to 223.9 acres in 1931. The percentage of owned farms decreased from 86.5 p.c. of the total in 1921 to 80.5 p.c. in 1931, the number of rented and partly rented farms showing corresponding increases.

**Review by Provinces.**—Various types of farming, influenced by climate, soil and local conditions have developed in the different parts of Canada. In the Maritime Provinces, the comparatively small size of farms renders the production of cereal crops less economic, while the climate and high precipitation favour the production of potatoes, roots and fruits. In 1930, with only 11.8 p.c. of the total number of farms and 5.9 p.c. of the occupied acreage of Canada, the Maritimes produced 37.6 p.c. of the total yield of potatoes, and had over 20 p.c. of the total orchard area of the Dominion. In the provinces of Quebec and Ontario, climate and soil conditions favour a wide range of agricultural production. The prevailing types of farming are to a large extent governed by the proximity of industrial centres. Dairying and mixed farming prevail over the whole area, with vegetable growing prevalent in the neighbourhood of cities. A few sections, such as the Niagara peninsula and the area immediately north of lake Erie, produce large quantities of fruits and tobacco. The Prairie Provinces with their shorter growing seasons, smaller rainfall and comparatively inexpensive lands have made possible the large-scale production of cereals, and outside of a few sections where a certain amount of mixed farming is carried on, grain growing is the main type of farming. British Columbia, like Ontario and Quebec, has a wide range of agricultural production; fruits and vegetables of high quality are produced, dairy farming is widespread and large areas are occupied by cattle and sheep ranches.

With regard more particularly to progress by provinces during the past ten years: in the Maritime Provinces there was an increase in the production of apples, potatoes, eggs and honey; the production of cereal crops generally decreased and that of milk remained stationary; a decrease is also noticed in the numbers of horses, cattle and sheep. In Quebec and Ontario the decade was characterized by an increase in the production of milk, eggs, honey and tobacco. Cereal crops have remained stationary in both provinces. In live stock, there were decreases in the numbers of horses and sheep in Quebec, and in the numbers of horses, cattle and swine in Ontario. In Ontario, although there was a decrease in the production of apples, the province still produces well over 75 p.c. of the peaches and pears grown in Canada. In the Prairie Provinces, the most important gain was in field crops, though there were considerable increases in the production of milk, honey, eggs and wool; in live stock there were decreases in the number of horses and cattle, but increases in the other classes. Increases in the numbers of live stock, except horses, and in animal products and fruits formed the main development in British Columbia.

**Trends 1871-1931.**—As illustrating the long-time trend, it is sufficient to state that in the last sixty years the number of occupied farms in Canada has almost doubled, while the acreage of occupied farm land has increased by some 350 p.c. and the improved acreage by over 390 p.c.

The expansion in farm areas was due principally to the opening up of the Prairie Provinces in the latter part of the last century; the number of farms in the Prairie Provinces has increased by over 420 p.c. between 1901 and 1931. Improved methods of agriculture and modern machinery have also contributed greatly to increase agricultural production. To typify: the production of wheat has increased 2,000 p.c.; of oats over 500 p.c.; of barley over 700 p.c.; while animal products, fruits and vegetables have had similar advances. From 1871 to 1931, the number of people employed in agriculture increased only 135.4 p.c., while the average size of farm increased from 98 acres in 1871 to 223.9 acres in 1931.

## §28. Summary of the Results of the Census of Merchandising and Service Establishments, 1931

The 1931 Census of Merchandising and Service Establishments, being the first complete census of its kind, does not illustrate trends in the field of distribution during the past decade but measures the present structure of retail and wholesale trade in Canada. For numbers of persons engaged and numbers of establishments operated, retail merchandising is disclosed as the most important field of internal commerce. There were 125,003 retail merchandise establishments in Canada in 1930, with sales amounting to \$2,755,569,900. They engaged 166,001 full-time male and 72,682 full-time female employees who were paid \$247,370,500 during the year, and in addition 23,526 males and 13,250 females on a part-time basis, at wages aggregating \$10,485,100. Apart from hired employees, there were 125,169 proprietors or firm members actively engaged in retail stores. The value of the capital invested in retail merchandise establishments amounted to \$1,239,483,800, of which \$483,627,500 was the value of stocks on hand at the end of the year. Retail stores in cities of 30,000 population or over accounted for 54.68 p.c. of the sales, although the population of such localities forms only 29.15 p.c. of the Dominion total. When the stores are grouped by amount of business, it is found that stores with sales of less than \$10,000 per annum account for only 9.51 p.c. of the total sales, although they form 56.59 of the total number of establishments. On the other hand, it is found that 2.68 p.c. of all stores (those having sales of \$100,000 or over) did 39.35 p.c. of the business. If the stores are classified by type of operation, the results of the census show that 79.57 p.c. of the total retail merchandise trade was handled by independent stores and 20.43 p.c. by chain stores.

When the trade of retail stores is analyzed by kind of business, the sales of stores in the food group, which contains grocery and meat stores, constitute 22.33 p.c. of the total, while the general merchandise group, which embraces department and variety stores, accounts for 16.39 p.c. of the total sales. The automotive group, with 13.86 p.c., is third in importance.

The service and amusement field of trade had 42,223 establishments with receipts of \$249,455,900. Full-time salaries for 41,875 male and 13,382 female employees amounted to \$58,217,700, while 7,880 part-time male and 1,104 part-time female employees received \$3,014,200. The business of these establishments is largely confined to urban centres, as 71.24 p.c. of the receipts were reported by establishments in places of 30,000 population or over. Among the leading kinds of business in this field were motion picture houses and theatres, cleaning and dyeing establishments, laundries, barber shops and beauty parlors, automotive and other repair shops, cobbler shops, taxi, and motor transportation businesses.

The Census of Hotels showed there were 4,176 hotels in operation the entire year doing a business of \$83,732,700 with 107,674 guest rooms, 26,833 employees and payrolls amounting to \$18,821,514. There were also 782 hotels in operation part of the year, chiefly at tourist and pleasure resorts. These hotels reported receipts of \$6,786,270. Their employees numbered 8,113 and their payrolls amounted to \$1,579,149.

For the purposes of the census the wholesale field was divided into two major sections according to the nature of the functions performed by reporting establishments. The first section consists of "wholesale proper" *i.e.*, concerns carrying on a regular wholesale business, the most common type being the wholesale merchant, although importers and exporters are numerous in some lines of trade. The other section consists of the more specialized types of wholesalers, such as bulk tank stations, co-operative marketing associations, and the establishments engaged chiefly in soliciting orders, such as brokers, manufacturers' and other agents and manufacturers' sales branches. The total value of sales or orders reported by all wholesale establishments was \$3,325,210,300, of which \$1,111,319,200 were reported by "wholesalers proper" and \$2,213,891,100 by "other wholesale establishments." There were 90,564 employees in wholesale establishments of all kinds and their salaries amounted to \$146,346,600 in the year. Approximately 70 p.c. of the total wholesale trade, and almost 60 p.c. of the sales of "wholesalers proper" are transacted by establishments located in four cities. Of the sales of all wholesale establishments, Montreal has 23.06 p.c.; Toronto, 20.80 p.c.; Winnipeg, 19.12 p.c.; and Vancouver, 6.35 p.c. Of the sales of "wholesalers proper" the percentages are: Montreal, 25.84 p.c.; Toronto, 20.46 p.c.; Winnipeg, 6.56 p.c.; and Vancouver, 7.05 p.c.

## §29. Summary of the Results of the Census of Institutions, 1931

The number of social institutions by type in the several provinces is shown in the first of the accompanying tables, while the second gives the main totals for Canada as to numbers of inmates and as to receipts and expenditures. Hospitals for the sick numbered 806; mental institutions 58; charitable and benevolent institutions 456; and penal and corrective institutions 42. The available records for common gaols are collected and published annually by the Bureau in the Annual Report on Criminal Statistics.

### §30. Representation in the House of Commons of Canada, 1867-1931<sup>1</sup>

It has been pointed out that the legal *raison d'être* of the Census of Canada is to enable a redistribution measure to be passed through Parliament. The effect, therefore, of the population changes shown by the Census of 1931 upon representation in the House of Commons may be given the following explanatory and historical *résumé*.

**Constitutional.**—Under Section 37 of the British North America Act, 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of One hundred and eighty-one Members, of whom Eighty-two shall be elected for Ontario, Sixty-five for Quebec, Nineteen for Nova Scotia, and Fifteen for New Brunswick." Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial Census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time as the Parliament of Canada provided, subject and according to the following rules:—

(1) Quebec shall have the fixed Number of Sixty-five Members<sup>2</sup>:

(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained):

(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number<sup>3</sup>:

(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards:

(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament.

Again, in Section 52 of the British North America Act, it was enacted that "the Number of Members of the House of Commons may be from Time to Time increased by the Parliament of Canada, provided the proportionate Representation of the Provinces prescribed by this Act is not thereby disturbed."

Later on, by the British North America Amendment Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and the House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof." Under this section the Yukon Territory was given one representative by Chapter 37 of the Statutes of 1902.

Again in 1915 an Amendment to the British North America Act (5-6 Geo. V, c. 45), was passed by the Imperial Parliament, providing that "notwithstanding anything in this Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province."

<sup>1</sup>As representation in the Senate is not directly related to the census it is not dealt with in this survey. The growing importance of Western Canada was, however, recognized in 1915 by its erection into a fourth representation area with a representation of 24 members equal to that of each of the three original areas, Ontario, Quebec and the Maritime Provinces. For details of the changes of representation of the various provinces in the Senate since Confederation, see the Canada Year Book for 1933, pages 76 to 78.

<sup>2</sup>Note, however, that (under the Quebec Boundaries Act, 1912, c. 45) the definition of the area of Quebec for the purposes of this rule does not include the territory added to that province by the Quebec Boundaries Extension Act, 1912.

<sup>3</sup>This obviates the statistical problem which has given rise to much discussion in the United States, *viz.*, the problem of the best method of fractional representation.

**The 1931 Redistribution Problem.**—The population of Quebec, it has been shown, constitutes the basis from which the unit of representation in the other provinces is fixed, Quebec's representation of sixty-five members in the House of Commons remaining constant. The provisions of the Quebec Boundaries Extension Act, 1912 (Geo. V, c. 45), however, while they provided for an enlargement of the area of the province, stipulated that the population of the newly added areas should not be included in arriving at the unit of representation. Quebec's population in 1931, excluding the population (2,177) of the territory added to Quebec by the Boundaries Extension Act of 1912, was 2,872,078, which, divided by 65, gives a unit of representation of 44,186. The quotient obtained by dividing the population of each province as shown at the date of the census, by the unit (44,186) indicates (except where Subsection 4 of Section 51 of the British North America Act and the Amending Act of 1915 apply), the number of members to which each province is entitled. These numbers as determined by the Census of 1931 and the two preceding censuses are shown in the accompanying table.

VIII.—REPRESENTATION OF THE PROVINCES AND TERRITORIES OF CANADA IN THE HOUSE OF COMMONS, AS DETERMINED BY THE CENSUSES OF 1911, 1921 AND 1931

Province	Census 1911			Census 1921			Census 1931		
	Population	Quotient based on unit (30,819)	Representation	Population	Quotient based on unit (36,283)	Representation	Population	Quotient based on unit (44,186)	Representation
Prince Edward Island...	93,728	3-04	4	88,615	2-44	4	89,038	1-99	4
Nova Scotia.....	492,338	15-98	16	523,837	14-44	14	512,846	11-61	12

Ontario.....	2,527,292	82-00	82	2,933,662	80-86	82	3,431,683	77-66	82
Manitoba.....	461,394	14-97	15	610,118	16-82	17	700,139	15-85	17
Saskatchewan.....	492,432	15-98	16	757,510	20-88	21	921,785	20-86	21
Alberta.....	374,295	12-41	12	588,454	16-22	16	731,605	16-56	17
British Columbia.....	392,480	12-74	13	534,582	14-46	14	694,263	15-71	16
Quebec (without New Quebec).....	2,003,232	65-00	65	2,358,412	65-00	65	2,872,078	65-00	65
Totals.....	7,189,080	-	234	8,773,066	-	244	10,360,656	-	244
Quebec (New Quebec)...	2,544 <sup>1</sup>	-	-	2,787 <sup>1</sup>	-	-	2,177 <sup>1</sup>	-	-
Yukon.....	8,512	-	1	4,157	-	1	4,230	-	1
Northwest Territories..	6,507	-	-	7,988	-	-	9,723	-	-
Canada.....	7,206,643	-	235	8,788,483 <sup>2</sup>	-	245	10,376,786	-	245

<sup>1</sup>Represents the population in the area added to Quebec by the Quebec Boundaries Extension Act, 1912, the population of which by Sec. 2, ss. "A" of said Act, is to be excluded from the population of the province in ascertaining the unit of representation.

<sup>2</sup>Including Royal Canadian Navy (485) not otherwise allocated in 1921.

The application of the provision of Subsection 4 of Section 51 of the British North America Act (quoted above) to Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba (the provinces in which a decrease in the rate of growth of population as compared with the rate of Canada as a whole, has taken place), is shown in the following statement:—

Province	Proportion which population of each province bears to the total population in Canada		Decrease in proportion from 1921-1931	Ratio of decrease in proportion from 1921 to 1931	Decrease greater than, equal to or less than one-twentieth of proportion in 1931
	1921	1931			
Prince Edward Island.....	-01008426	-00848412	-00160014	-1587	greater
Nova Scotia.....	-05061197	-04942243	-01018954	-1709	greater
New Brunswick.....	-04413965	-03933963	-00480002	-1087	greater
Ontario.....	-33384627	-33070769	-00313858	-0094	less
Manitoba.....	-06943053	-06747166	-00195887	-0282	less
Yukon.....	-00047303	-00040764	-00006539	-1382	greater

The above statement shows that no reduction should take place in the representation of Ontario or Manitoba, as the proportion which the number of the population of the province bore to the number of the aggregate population of Canada at the readjustment of the number of members for the province based on the Census of 1921 is ascertained at the Census of 1931 to be diminished by less than one-twentieth part.

*Nova Scotia.*—The proportion for Nova Scotia having diminished by more than one-twentieth part, the provisions of Subsection 4 of Section 51 do not apply and the representation of Nova Scotia should be reduced in accordance with the provisions of Section 51, Subsections 2 and 3 of the Act by 2 members.

*Prince Edward Island.*—Prince Edward Island would have only 2 members on a population basis alone, but its representation remains unchanged at 4 under the Act of 1915 referred to above.

*New Brunswick.*—The representation of New Brunswick if fixed by the unit of representation (44,186) alone, would be reduced from 11 to 9; but as the amendment to the Act of 1915 provided that "a province shall always be entitled to a number of members in the House of Commons, not less than the number of senators representing such province," the representation of New Brunswick will be 10 instead of 9, corresponding with the number of Senators from that Province.

*Yukon.*—The representation of the Yukon is not determined by the B.N.A. Act, but is within the competence of Parliament to decide.

The representation, therefore, to which each province is entitled as a result of redistribution based upon the 1931 Census is as follows:—

Prince Edward Island.....	4
Nova Scotia.....	12
New Brunswick.....	10
Quebec.....	65
Ontario.....	82
Manitoba.....	17
Saskatchewan.....	21
Alberta.....	17
British Columbia.....	16
Yukon.....	1
	245

The above was confirmed by the Representation Act, 1933 (23 Geo. V, c. 54).

**Historical Review of Redistribution.**—The changes that have been effected by the various Representation Acts in the membership of the House of Commons since Confederation are illustrated in the following table, which gives the representation of each province and territory after each Dominion general election—*i.e.*, as at the commencement of each of the seventeen Parliaments from 1867 to 1930:—

REPRESENTATION IN THE HOUSE OF COMMONS BY PROVINCES AND TERRITORIES, AS AT THE COMMENCEMENT OF EACH PARLIAMENT FROM 1867 TO 1930

<sup>1</sup>The representation at the general elections of 1926 and 1930 was the same as in 1925.

The following descriptive review may be added:—

As set out in the provisions of the B.N.A. Act that have been quoted, the first Dominion House of Commons of 1867 consisted at its commencement of 181 members, made up of 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added under the Manitoba Act, 1870 (33 Vict., c. 3), 4 members to represent the newly-created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation, ratified by Imperial Order in Council of May 16, 1871, 6 members were added to represent the new province, making a total of 191 members at the end of the First Parliament.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15, Statutes of 1872), increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21 and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing the new province, bringing the membership of the House of Commons to 206.

The result of the second census, that of 1881, necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia, and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census in 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction of the members of the House from 215 to 213.

The fourth census, that of 1901, resulted in a readjustment in 1903, reducing the representatives of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, and of Prince Edward Island from 5 to 4. On the other hand the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, and of the Northwest Territories from 4 to 10—these provisions making no change in the total membership. By Chapter 37 of the Statutes of 1902, however, a member had been added for the Yukon Territory, so that the net effect of the changes was to place the membership at 214 in the early years of the present century. Thereafter the rapid growth of the Northwest Territories led to their division and admission to Confederation in 1905 as the provinces of Alberta and Saskatchewan. In the Acts admitting them—Alberta Act (4-5 Edw. VII, c. 3), and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10, and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its large but unevenly distributed increase of population led to very considerable changes in representation, enacted by the Representation Act of 1914. The representatives of Ontario were reduced in number from 86 to 82, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, and of Prince Edward Island from 4 to 3. On the other hand the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12, and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the membership to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island, which has four senators, of her fourth member of the House of Commons (see also 5 Geo. V, c. 19). The total membership, therefore, of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921 respectively) was 235.

As the result of the Census of 1921, a new Representation Act was passed in 1924 (c. 63 of the Statutes of that year). This Act reduced the representatives of Nova Scotia from 16 to 14 and increased the representatives of Manitoba from 15 to 17, of Saskatchewan from 16 to 21,

of Alberta from 12 to 16 and of British Columbia from 13 to 14, the representation of the remaining provinces and of the Yukon Territory remaining unaffected. This Act thus increased the total membership of the House of Commons to 245 and has governed the representation in the fifteenth, sixteenth and seventeenth Parliaments. The representation in the next House of Commons as determined on the basis of the Census of 1931 by the Representation Act, 1933, has been already explained.

*Unit of Representation.*—While the number of the Members of the House of Commons has been growing steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec within its boundaries prior to the 1912 extension—has also been increased after each census in consequence of the expanding population of Quebec. The units of representation as shown by the seven decennial censuses taken since Confederation, are as follows:—1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186<sup>1</sup>.

<sup>1</sup>The provisions of the B.N.A. Act establishing a fixed number of representatives for Quebec, etc., and providing for fractional representation, resolve certain problems that have proved embarrassing elsewhere (*e.g.* in the United States) as to total numbers and apportionment in legislative bodies. They do not, however, mitigate the responsibilities attaching in general to the use of a standard. In this connection it will be of value to point out, as a further plea for co-operation by the public how essential it is to achieve the maximum of accuracy in taking the census. The practical issue may be stated as follows, the formula in each case being of the most obvious kind:

(a) What would be the effect on representation of an error, either of under-statement or of over-statement, in the census of Quebec, the standard province?

Let  $s$  represent the true population of the standard province,  $p$  that of any other province or all provinces,  $e$  the population included in the supposed error, and  $r$  the number of representative units resulting from that error.

$$\text{Then } \frac{65p}{s-e} - \frac{65p}{s} = r. \text{ Or,}$$

$$e = \frac{rs^2}{65p + rs}.$$

Applying this to the actual population figures of Quebec and the total of the other provinces as at the last census, the error which, if deducted from or added to the standard province, would give one representative unit too many or too few to the other provinces will be found to be 12,178. As one-half a representative unit may mean one representative, it follows that an error of 6,089 in taking the census of Quebec would on the average, under present population conditions in Canada, result in giving a member too many or too few to the rest of Canada.

(b) As a refinement we might ask, would an error in the standard province, Quebec, be equal in its incidence upon each of the other provinces? Obviously the answer is in the negative: an error in excess (or in defect) in a province with a larger population than the standard would be of less consequence to the representation of that province than would be an error in defect (or in excess) of the same magnitude in the standard province: the reverse would hold true in the case of a province with a smaller population than the standard province. (Let  $s$  represent the true population of the standard province:  $p$ , that of any other province. Let  $e_1$  represent an error in the standard province and  $e_2$  an error in any other province

which is to have the same effect as  $e_1$  in the standard. Then  $e_1 \times \frac{p}{s-e_1} = e_2$ . It is clear that  $e_2$  is

greater than  $e_1$  if  $p$  is greater than  $s-e_1$ ; on the other hand, that  $e_2$  is less than  $e_1$  if  $p$  is less than  $s-e_1$ . It may also be noted that if the census of Quebec should contain an error in defect (which would have the result of increasing representation outside of Quebec), the increase in representation would tend to be greater in Ontario than in the smaller provinces. If, on the other hand, the census of Quebec should be in error through excess (which would decrease representation in the rest of Canada), the smaller provinces would tend to lose in point of representation less than would Ontario.

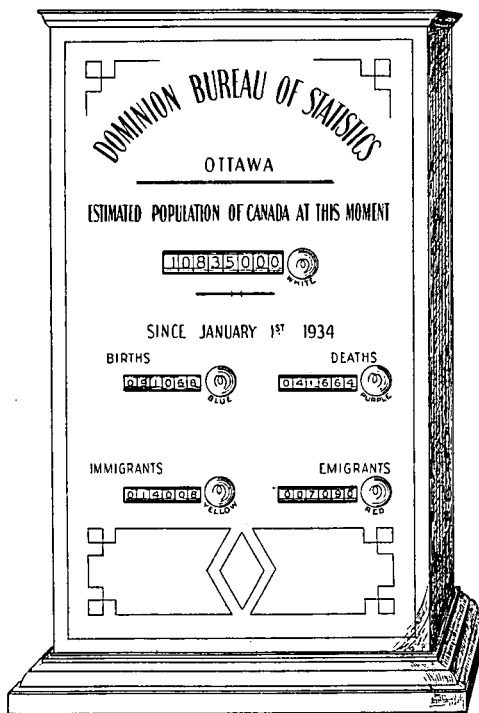

(c) The effect on representation of an error in the enumeration of another province than Quebec is, of course, the fraction that the error is of the unit of representation  $\left( \frac{65e}{s} = r, \text{ or } e = \frac{sr}{65} \right)$ . The

unit of representation by the recent census was 44,186. An error amounting to half of this or 22,093 would, on the average, affect representation by one member. Thus under present population conditions in Canada an error in the census of Quebec would be attended with nearly four times as serious consequences to representation in Parliament as a similar error elsewhere.

The fact that in 1898 an Act was passed by the Parliament of Canada (61 Vict., c. 3), with concurrent legislation by the province of Quebec (61 Vict., c. 6), declaring the northern boundary of Quebec to be the Eastmain river, etc., has led on different occasions to a discussion (for which the Bureau of Statistics was requested to supply certain data) as to what the effect on the representation of the various provinces in the House of Commons would have been had the Height of Land been accepted as the northern boundary in question. Prior to the construction of the National Transcontinental Railway the population of

### §31. Annual Estimates of Population

While the populations in different countries are actually counted at decennial or quinquennial intervals, annual estimates of population are required by modern states for many purposes, such as the calculation of birth, death and marriage rates, *per capita* figures of production, trade, finance, etc. A discussion of the method of arriving at these estimates in other countries and in Canada, together with the results for Canada for each year back to Confederation will be found in the Canada Year Book, 1932 pages 108-110.

Apparatus for automatically and continuously registering Estimated Population Growth. Each time a change takes place in any of the figures the electric circuit is completed and the corresponding bulb is lighted for a few seconds. (The figures appearing in the diagram are as of date June 1, 1934.)

(footnote continued)

Quebec north of the Height of Land was negligible, but in 1921 some 13,644 persons were found between there and the Eastmain river, while the population of New Quebec (*i.e.*, the portion north of the Eastmain river added by the Quebec Boundaries Extension Act, 1912), was 2,787, the latter total in accordance with the terms of the Act of 1912 being excluded in arriving at the unit of representation. The exclusion as well of the 13,644 persons above mentioned would have reduced the 1921 unit of representation from 36,283 to 36,073, and this in turn would have increased the representation of Nova Scotia and British Columbia from 14 to 15 members respectively, and the total membership of the House of Commons from 245 to 247, or 248 (according as to whether a member was or was not accorded to the excluded population). In 1931 the population between the Height of Land and the Eastmain river was 21,446 and the population in New Quebec 2,177, and the exclusion of both of these populations (instead of the latter alone) would have reduced the unit of representation from 44,186 to 43,856. No change, however, would in this case have been effected in the representation of any province. The discussion, though without practical bearing upon representation (on the interpretation that the Act of 1898 was a "declaration" and not an "extension" of the boundary), is of interest from a theoretical standpoint. The extension or contraction of a standard area has, of course, the effect of increasing or diminishing the unit of representation, and this in turn lowers or raises the total membership of the constituent body. Is it the case that so long as the proportion of the representatives of a province to the whole House remains the same under changes of this kind, the "weight" of the province in the whole House also remains the same? The answer is in the negative and that *representativeness* does not depend upon proportion alone but also to a degree upon the absolute number of representatives. In the present case, however, the smallness of the change makes the effect insignificant.

The apparatus illustrated herewith has been constructed in the Dominion Bureau of Statistics, whereby a continuous record is maintained of the probable population of the Dominion, the average intervals at which births, deaths, immigrant arrivals and emigrant departures according to the latest information, being recorded by parti-coloured flash-lights, while the net result on population increase is shown on the topmost indicator.

### §32. Conclusion

The large and varied nature of the census investigation has been dwelt upon in the preceding pages, and an account given of the administrative procedure involved, as well as of the salient results. In conclusion, it remains but to express the hope that these results, by the increased facilities they offer for the study of the social and economic problems of Canada may be found of a value commensurate with the labour and outlay which their collection and compilation has entailed. To the staff of the Bureau immediately concerned in the direction of the census, an expression of appreciation is due for unremitting devotion over a period of years to an exacting and responsible duty,—in particular to Mr. E. S. Macphail, Chief, and Mr. A. J. Pelletier, Assistant Chief, of the Census Branch of the Bureau; to Mr. M. C. MacLean, Chief of Social Analysis; to Mr. H. Marshall, and Mr. J. C. Brady, in charge respectively of the Census of Merchandising and Service Establishments and of the Census of Institutions; and to Mr. O. A. Lemieux and Mr. A. H. LeNeveu, in charge respectively of the compilation of the Census of Agriculture and of the Occupations and Unemployment sections of the Population Census.

I have the honour to be, Sir,

Your obedient servant,

R. H. COATS,

*Dominion Statistician.*

Dominion Bureau of Statistics, Ottawa,

June 1, 1934.

**PART II**

**ANALYSIS OF THE MAIN SUBJECTS  
OF THE PRESENT CENSUS AND OF PAST  
CENSUSES OF CANADA**

## CHAPTER I

### (1) THE GROWTH OF POPULATION IN CANADA

#### INTRODUCTION

A description of the manner of growth of a population, including the changing rates of growth, the periods of greatest and least growth, and the regional aspects of growth, should be capable of indicating the causes of growth better than any theoretical or *a priori* considerations. This is especially true when the circumstances attending the various aspects of growth are known. The following description of population growth in Canada was undertaken merely for the purpose of summarizing the more obvious facts revealed by censuses and other materials available on the numerical aspect of population from early times. Its object therefore is not to formulate a theoretical law of population growth—though the conclusion is reached that the manner of growth in Canada has been consistent with certain theories already formulated. This is especially true if we consider “law” in general terms without being under the necessity of expressing it mathematically. A succession of events may be the consequences of underlying principles or causes, and the latter may be ascertained or understood, though the succession cannot be expressed by formula through the fact that the events do not follow in equal or otherwise related intervals of time. It is true that, without this condition being fulfilled, predictions as to any definite points in the future are unsafe; nevertheless, except as regards *definite points*, what will probably happen in the future is fairly well indicated by a series of repetitions in the past.

Now the succession of events most prominent in the history of population growth in Canada is a recurrence of short periods of very high rates of growth followed by longer periods of decreasing rates. Since the later years of the eighteenth century, the periods of rapid growth have been upon a progressively diminishing scale relatively but, of course, on a higher scale in absolute figures. With our present knowledge we can not say that periods of rapid growth have recurred at regular intervals; however they were connected with certain important events in history, *e.g.*, Frontenac's term of office, the American Revolution, the Irish famine, the first building of railroads and the opening of the West.

Nevertheless it is far from certain that the aforementioned periods of rapid growth in the Canadian population have not recurred at much more regular intervals than would appear on the surface. The uncertainty springs from two obvious sources: (1) We can not even hazard a guess as to the size of the aboriginal population during the earlier rapid-growth periods. Consequently the rates of growth quoted are for whites only. If the Indian population in, say, 1781 and 1821 was 200,000 or more it is clear that the rates of increase were not necessarily as great as stated and that the highest rates did not necessarily coincide with the dates mentioned. A stationary or slightly increasing or diminishing Indian population, added to the small white population of those early dates, would tend to throw the points of largest increase forward. (2) As will be developed later on, there are obvious indications that an element of the population at the date of a census in a young country, where widely fluctuating streams of immigration and emigration are being experienced, is not a “population” as generally understood (this is especially true in large centres or focal points), but an aggregate of persons temporarily established at points of distribution who before the next census either spread throughout the country or emigrate. Their existence causes an unreal high point which more properly belongs to a later date.

## GENERAL DESCRIPTION OF THE GROWTH OF THE POPULATION OF CANADA SINCE THE BEGINNING OF THE SEVENTEENTH CENTURY

A description of the early growth of population in the area now known as Canada must necessarily deal separately with the white (including imported coloured) population on the one hand, and the aboriginal population on the other. One reason for this is the fact that we have a comparatively complete record of the white population from the beginning of the seventeenth century, thanks to the Jesuit missionaries and others during the period of early settlement (made available since 1871 from the researches of Mr. Taché, first Director of the Census of the Dominion, and of the Census Branch of the Dominion Bureau of Statistics in 1931) whereas, on the other hand, the records of the aboriginal population are scattered and of varying reliability. Moreover, the two populations remained distinct until very recent times, so that any hypothetical law or order of progress would be of doubtful applicability in the earlier periods. In the first instance, therefore, we trace the growth of the white population only, from the earliest records until the first Dominion census, that of 1871. Statement I presents these data for the area now known as Canada and continues them up to the present, as based on the seven censuses which have been taken since Confederation. For the period prior to the first Dominion census, a slight element of estimation is involved in fitting the materials into 10-year intervals.

### I. WHITE POPULATION OF CANADA, 1611-1931

[MEAN POPULATION BY DECADES OF WHICH YEARS INDICATED ARE THE MID-YEARS]

Year	Whites	Year	Whites	Year	Whites
1611.....	17	1691.....	12,040	1771.....	105,000
1621.....	79	1701.....	17,000	1781.....	150,000
1631.....	101	1711.....	22,000	1791.....	233,000
1641.....	360	1721.....	32,000	1801.....	362,000
1651.....	680	1731.....	45,000	1811.....	517,000
1661.....	2,400	1741.....	59,000	1821.....	750,000
1671.....	7,100	1751.....	71,000	1831.....	1,085,000
1681.....	10,300	1761.....	90,000	1841.....	1,654,000

[POPULATION FOR CENSUS YEARS INDICATED]

1851 <sup>1</sup> .....	2,300,000	1881.....	4,216,263	1911.....	7,101,151
1861 <sup>1</sup> .....	3,090,000	1891 <sup>1</sup> .....	4,715,000	1921.....	8,677,135
1871.....	3,580,524	1901.....	5,243,374	1931.....	10,253,875

<sup>1</sup>Estimate based on the Censuses of Upper and Lower Canada, Nova Scotia and New Brunswick.

### II. ABSOLUTE AND PERCENTAGE INCREASES IN THE WHITE POPULATION OF CANADA, 1681-1931

Year	Absolute increase from date in intervals of				Percentage increase from date in intervals of			
	10 years	20 years	30 years	40 years	10 years	20 years	30 years	40 years
	1681.....	1,740	6,700	11,700	21,700	16.9	65.0	113.6
1691.....	5,000	10,000	20,000	33,000	41.1	82.7	165.7	273.7
1701.....	5,000	15,000	28,000	42,000	29.4	88.2	164.7	247.0
1711.....	10,000	23,000	37,000	49,000	45.4	104.5	168.1	222.7
1721.....	13,000	27,000	39,000	58,000	40.6	84.3	121.8	181.2
1731.....	14,000	26,000	45,000	60,000	31.1	57.7	100.0	100.0
1741.....	12,000	31,000	46,000	91,000	20.3	52.5	77.9	154.2
1751.....	19,000	34,000	79,000	162,000	26.7	47.8	111.2	228.1
1761.....	15,000	60,000	143,000	272,000	16.6	68.6	158.8	302.2
1771.....	45,000	128,000	257,000	412,000	42.8	121.9	244.7	392.3
1781.....	83,000	212,000	367,000	600,000	55.3	141.3	244.6	400.0
1791.....	129,000	284,000	517,000	852,000	55.3	121.8	221.8	365.6
1801.....	155,000	388,000	723,000	1,292,000	42.8	107.1	199.7	356.7
1811.....	233,000	568,000	1,137,000	2,349,000	45.0	109.8	219.9	344.8
1821.....	335,000	904,000	1,550,000	2,496,000	44.6	120.5	206.6	312.0
1831.....	569,000	1,215,000	2,005,000	2,496,000	52.4	111.9	184.7	230.0
1841.....	646,000	1,436,000	1,927,000	2,563,000	39.0	86.8	116.4	154.9
1851.....	790,000	1,281,000	1,917,000	2,415,000	34.3	55.6	83.3	105.0
1861.....	491,000	1,127,000	1,625,000	2,154,000	15.8	36.3	52.5	69.6
1871.....	636,000	1,135,000	1,663,000	3,521,000	17.7	31.6	46.4	98.3
1881.....	499,000	1,027,000	2,885,000	4,461,000	11.8	24.3	68.4	105.8
1891.....	528,000	2,386,000	3,902,000	5,539,000	11.2	50.6	84.0	117.4
1901.....	1,858,000	3,434,000	5,011,000	-	35.4	65.4	95.5	-
1911.....	1,576,000	3,152,740	-	-	22.1	44.3	-	-
1921.....	1,576,740	-	-	-	18.2	-	-	-

CHART I

Chart I is based upon Statement I and will assist in giving a comprehensive view of the growth of the white population of Canada from the time of earliest settlement. It is on a semi-logarithmic scale for two reasons: (1) that by this scale it is possible to show the whole period in a single chart; (2) that it shows relative rather than absolute increase and thus emphasizes the points discussed in the text. Statement II shows the absolute and percentage increases in the white population as far back as 1681, before which the figures were so small that percentage increases had little significance. Since short-period increases (say 10-year increases) are subject to irregularities which may be more or less accidental, Statement II shows also 20-year, 30-year and 40-year increases. Chart 2 shows in graphic form the 20-year and 10-year increases, the latter for the special purpose of fixing the dates at which the high and low points occur, the former as showing more adequately the general trend.

CHART 2  
 PERCENTAGE 20-YEAR AND 10-YEAR INCREASES IN THE WHITE POPULATION  
 OF THE AREA NOW KNOWN AS CANADA, FROM EACH DECENNIUM SINCE 1681

The population of the area now known as Canada has grown from about 17 whites and an unknown number of aborigines in 1611 to 10,376,786 in 1931.

The manner of growth of the white population appears to have been decidedly cyclical. Such cyclical growth conforms to certain theories on the subject, and while it is not here expedient to describe the growth according to any theory still in the realm of speculation, it will be useful to mention its trend in general terms. Roughly the growth is related to existing density. A cycle opens with the population growing approximately geometrically, but the rate diminishes progressively from the outset. Meanwhile the absolute (arithmetic) increase increases progressively up to a point, after which it also decreases progressively until it vanishes and the population becomes stationary. If the course proceeded with mathematical precision, it would be possible to determine the limiting size of the population, *i.e.*, its size on becoming stationary.

Without being committed to mathematical measurement of the above principle, it is easy to give a non-mathematical description, remembering that one of its fundamental features is that the *rate* diminishes progressively from the beginning and that the *increment* (absolute increase) increases up to a point and then diminishes. It has been shown in preceding statements and charts that this happened to the white population of Canada.

The manner of growth is probably best shown in the 20-year increases illustrated in Chart 2. Apparently there were two major periods of 20-year increases, *viz.*, before 1781 and since. The second is divided into five minor periods: (1) 1781-1801; (2) 1801-1821; (3) 1821-1881; (4) 1881-1901; (5) 1901 to the present. Three of these periods saw increases of the type described, *viz.*, progressively diminishing rates; and two saw progressively increasing rates. The periods from 1781 are, of course, the more important, but it is interesting to survey in a general way the whole range of 250 years. Generally, the rates of increase tended upward until the 20-year period beginning in 1781, and downward since that period. Apparently in the 20 years from 1781 to 1801 the population increased 141.3 p.c. The general downward trend in rate since that date was arrested in 1821-1841 and in 1901-1921. This, of course, refers to 20-year increases; the exact points at which the rates were highest and lowest can not be determined, but the column of 10-year percentage increases indicates that the high points were: (1) somewhere between 1711 and 1721; (2) between 1781 and 1791; (3) between 1831 and 1841; (4) between 1901 and 1911. Low points were found (1) around 1701; (2) in 1761; (3) probably about 1896. It is important to observe that the trend since the 1781-91 peak has been generally downward, *i.e.*, although rises have recurred they have never reached the height of this peak; further, each successive rise has been lower than its predecessor. Thus the main peak of 1781-91 was probably over 55.3 p.c. increase in 10 years; the peak of 1831 something over 52.4 p.c., and that of 1901-11 something over 35.4 p.c. We are justified, therefore, in considering the trend as generally downward and in terming the periods since the peak minor, *i.e.*, mere breaks in a general trend.

In the 20-year column of absolute increases it will be observed that these increases reached two maximum points, one between 1841 and 1861, the other between 1901 and 1921. The 1841-61 maximum occurred 20 years later than the 20-year rate maximum of 1821-41. This absolute increase diminished progressively until 1881-1901, a method of growth conforming quite faithfully to the theory of population growth formulated by Verhulst and Pearl and Reed. The difficulty in applying precise mathematical measurements is due to the fact that the Pearl and Reed formula presupposes symmetrical growth (*i.e.*, that the occurrences just described fall at certain intervals), while it is clear that the observed growth is not symmetrical. However, the period from around 1821 to (about) 1896 is quite capable of measurement according to the Pearl and Reed formula.

It is interesting to observe that the peaks of growth coincided with important points in history, *viz.*, the American Revolution; the Irish famine, the building of railways and the opening of the West.

It is probable that the rapid increase at the time of the American Revolution was not so much due to the coming of the Loyalists as to the fact that the closing up of one channel of British emigration directed the stream to Canada. In any case, during these rapidly-growing periods the immigrants arrived at a rate that entirely ignored limitations to the capacity of the country at that time. That this was understood, at least partially, by contemporaries is evident in a report from Douglas in answer to Bathurst, 1827\*, "I am persuaded that the tide of indiscriminate emigration is flowing to our shores too rapidly for the good of the colony, or for that of the emigrants."

\*N.B. A-38-3, pp. 661-664.

## The Period of 1821-1896.

Perhaps the most interesting period of Canada's growth is the 1821-96 period, extending over 80 years. Here, as already noted, the population passed from a high rate of increase at the beginning through various stages until it fell to 11 p.c. between 1891 and 1901, a rate indicating approach to a stationary population. Even this rate was somewhat higher than normal owing to a slight restimulation of growth from a northerly movement into the newer parts of Quebec and Ontario, and also to the beginning of the westerly movement, which took place in a somewhat desultory fashion before 1901. Without these two movements there is little doubt that the population would have been all but stationary in another 20 years.

The culmination point of this period as already stated was around 1856, when the absolute increase in population reached its maximum. Thus, between 1851 and 1861, the absolute increase in Canada's population was over 790,000, a figure not subsequently reached until after the beginning of the western movement. Between 1891 and 1901, the absolute increase was only 528,000 although the population from which this increase came was more than twice as great as that of 1851. Judging from such data dealing directly or indirectly with natural increase, as were supplied by the Census of 1891, and from Statement XIX, the difference between these two absolute increases was due, not only to differential immigration and emigration, but also to differential rates of natural increase. Thus the natural increase (per decade) in 1851, was over 22 p.c., while in 1891, it was probably around 12 p.c. (Statement XIX gives 22.0 and 12.0 p.c. respectively). Between the beginning and the end of the period there was a slowing up of the two factors which make for growth, viz., natural increase and immigration, while there was a speeding up of emigration. The retardation of natural increase was a certain indication of an ageing population. Emigration and lack of immigration accelerated a process which would have brought the same results in the end, although they may have contributed to the slowing up of natural increase.

Between this period and the present, there was an interval during which the population increased at an accelerating rate. High as the rate between 1901 and 1911 (viz., 35 p.c.) appears, it gives only a slight indication of the manner in which the population grew during this period. The yearly figures of immigration, since they cover only a short period of a continuous inward movement, may be regarded as furnishing a reliable source of information on this point. In 1901 and 1902 the inflow was comparatively small (between fifty and seventy thousand) increasing from year to year until in 1913 the number of immigrants was 402,432, a figure almost equal to the total increase in population in the 10 years between 1891 and 1901. While these immigrants did not necessarily settle in Canada permanently, the fact remains that they augmented the population of that year and, added to the natural increase, formed an addition in one year as great as that which took place in each of the decades 1881-91 and 1891-1901.

It is noteworthy that, when this period of abnormal increase passed, growth was resumed at a level which was much lower than that which initiated the previous period. The question propounds itself whether our present period may not indicate a rejuvenation as it were, rather than an entirely new era of growth. Otherwise expressed, is it possible that the growth since 1781 up to the present exhibits any determinate continuity? This aspect will be further elucidated in a description of the growth of Canada by individual areas.

<sup>1</sup> The centres of population thus located are centres of gravity, i.e., the moment of population and distances. The unit of moment was the population of a county multiplied by the distance of its population centre from the fixed point (the centre of 1851). In fixing this point distances were calculated in degrees from 42° N. lat. 60° W. long.

**THE MOVEMENT AND SPREAD OF POPULATION (INCLUDING ABORIGINES) IN CANADA**

**Introductory.**—The movement and spread of the population can be measured fairly adequately by studying the behaviour of small units like counties, and later the behaviour of cities as well. These represent areas which are identical throughout the period of study as units of settlement. The questions to be answered are: Did the population first fill these units and then spread in an orderly manner to adjacent areas? Was any cohesion retained in the movement and spread of population? Was there an orderly sequence in the outward spread or in the varying degrees of density at which these areas arrived, or were the settlements originally widely scattered, spasmodic, or tentative, with or without possibilities for a later inward spread? What relationship, if any, is traceable between the growth of individual counties and that of Canada as a whole? Was the growth of Canada governed by conditions within the counties or, on the contrary, were the conditions within the counties governed by general conditions, such as economic periods, the state of world affairs, and so on? Clearly these are important questions and should be capable of solution. If the growth of Canada was conditioned mainly and more or less fortuitously by external conditions, we have nothing to measure by, but if it can be traced to internal conditions as indicated by a systematic spread or to conditions indicating that the growth has been a stage in world development, predictions as to the future are possible.

In studying the movement and spread of population in Canada thus minutely, it will be necessary to begin as late as 1851, earlier data not being available by counties. The year 1851 is a landmark in many respects. As pointed out earlier, it is very near the middle of an 80-year period during which the population of Canada grew in fairly close accordance with the law formulated by Verhulst and Pearl and Reed. It is the culmination of a period of heavy immigration and, apparently, of rates of natural increase which would be astounding at the present day. The decade following showed, undoubtedly, the greatest absolute increase in population in the history of Canada up to 1901-11, but the rate of increase was less than in previous decades. According to the Pearl and Reed theory, it was the point of inflection in a cycle of growth, *i.e.*, the point at which the absolute increase is greatest, increasing up to and decreasing after this point. In many ways it formed a parallel to the decade 1911-21, or rather what 1911-21 would probably have been without the Great War. It will be useful, therefore, to describe as minutely as possible, the situation as regards settlement in the year 1851.

**Population Density and Centres.**—Perhaps the best method of describing the situation in 1851, is to state the location of the population and the extent to which the counties were populated. The unit of measurement employed was the number of persons per square mile of land area, which will be referred to as "population density". To make the picture clearer, these densities will be arranged in 15 classes, *viz.*, under 1 per square mile, 1 and under 5, 5 and under 10 and, by class intervals of 10, to 120 and over. Statement IV shows the number of counties in each class of density from 1851 to 1931; appended to this statement is a scale of reference showing the counties of Canada and states of the United States, which, at the present day, come within each class.

**IV. COUNTIES OF EASTERN CANADA ACCORDING TO DENSITY, 1851-1931**

In 1851, the inhabited parts of Canada consisted of 142 counties which have since increased to 219, but the eastern provinces, with which we are almost entirely concerned in 1851, have increased since that date only by 16 counties, some of which have been added by actual acquisition of new territory. Out of the 142 counties, 35 had a density of more than 40 per square mile, or greater than present day Prince Edward Island or Iowa; 26 had between 20 and 40, or a greater density than that of Nova Scotia or Maine; 36 had from 10 to 20, or greater than New Brunswick or Nebraska; 23 had between 5 and 10, or greater than Ontario or Utah; 16 had from 1 to 5, or greater than Manitoba, while only 6 had a smaller density than present day Nevada.

The centre of the population of Canada was in the county of Soulanges, Que., or 15 miles southwest of Montreal. The concentration to this centre can best be described by giving the location of the most thickly settled parts, *i.e.*, counties with more than 40 per square mile. Of these 35 counties, 1 was in Prince Edward Island, 1 in New Brunswick, 20 in Quebec and 13 in Ontario. The centre of the Quebec counties was 59 miles north and 99 miles east of the Canadian centre, or in the county of Nicolet about half-way between Montreal and Quebec, the centre of the Ontario counties was 92 miles south and 249 miles west of the Canadian centre, or in the county of Ontario about 25 miles northeast of Toronto; the centre of the combined Quebec and Ontario counties was 43 miles south and 110 miles west of the Canadian centre or in the county of Frontenac, Ont., *i.e.*, about 25 miles northwest of Kingston. This confines the weight of the population to the banks of the St. Lawrence and the border of lakes Ontario and Erie and the southern parts of lake Huron. There was a remarkably even gradation of densities from these points outward and, as mentioned, there was only a small number of very thinly settled parts. In fact the population of 1851 was more normally spread as between counties than it has been since that date, the growth of thickly settled counties in Prince Edward Island and the other Maritimes somewhat disturbing this even distribution. The change up till 1881 will be seen in the following summary:—

Density	1851	1861	1871	1881
Number of counties with:				
Less than 1 per square mile.....	6	8	9	9
1 to 40 per square mile.....	101	91	91	82
40 and over.....	35	48	51	61
Total.....	142	147	151	152

It is obvious that the growth from 1851 to 1881 was from densities which are below the present density of Vermont to densities which exceed the present density of the World or Prince Edward Island, while only 3 were added to counties of lower density than that of the whole of Canada to-day, *i.e.*, the new population did not colonize new areas but settled in those already well inhabited.

The population in 1851 of the area now known as Eastern Canada was 2,375,597, including an immigrant population of about 460,000 or about 19 p.c. of the total. The present population of Eastern Canada is 7,315,041, of whom 477,431 are in counties which had no recorded inhabitants in 1851, with 6,837,610 in the areas represented in 1851. The present (1931) immigrant population of Eastern Canada is 1,125,013, or about 15 p.c. of the total Eastern Canada popula-

tion, a little less than the proportion in 1851. This is striking. Eastern Canada, as regards absorption, is in almost the same position as in 1851, the same process of heavy immigration leading thereto. It is interesting to note that emigration from Canada to the United States had already begun; the United States Census of 1850 recorded 147,711 Canadian born in the United States.

**The Decade of 1851-61.**

**Growth.**—The population in the decade of 1851-61 increased from 2,436,297 to 3,229,633 or 32.6 p.c., a rate of increase which has not since been equalled except in 1901-11. The absolute increase was also the greatest in the history of Canada up till 1901-11. The increase, as the statement which has just been given shows, did not move out to new areas, but swelled the densities of the old. The centre of population moved 7 miles south and 8 miles west, remaining in Soulanges, Que.; the southward movement being due, not only to the heavy increase in Ontario but also to a falling off in growth in Quebec. The counties which received the greatest proportional addition to their population were counties comparable in density to the present Nova Scotia and Maine. It is remarkable that the immigrant population in this decade increased by about 200,000, almost a fourth of the total increase, a proportion since exceeded only in the decade 1901-11, when the immigrant increase formed 48.4 p.c. of the total increase. The immigrant population of 1861 increased to 682,000, or to about 21 p.c. of the total population, the approximate proportion in 1931, but the immigrant increase in 1921-31 was only 4.0 p.c. of the total population of 1921, while in 1851-61 it was about 9 p.c. of the total population of 1851. In 1901-11 it was over 16 p.c. of the population of 1901. The decade of 1851-61 seemed to be the last of a series of decades of heavy immigration, as it is evident from data of arrivals that the increases in previous decades were much heavier in proportion to the population than in 1851-61. If we consider the increase in native population separately, it will be seen that in 1851-61 it was 23 p.c. of the total population of 1851, while in 1901-11, the subsequent decade of greatest increase, it increased only about 18 p.c. Clearly, then, the decade 1851-61 was one of great internal increase.

**Direction of Movement and Stage of Settlement.**—In view of the foregoing it will be interesting to note that, even in this period of heavy increase, 4 counties showed actual decreases, viz., Laprairie, St-Hyacinthe, St-Jean, and Deux-Montagnes, and that 24 others showed increases of less than 14 p.c., which meant an undoubted loss of a part of their natural increase in this decade\*. Of these, 17 were in Quebec, 5 in the Maritime Provinces and 2 in Ontario, while the 4 showing absolute decreases were all in Quebec. Thus, even at that period there had begun an exodus, but probably largely to other parts of the province or to other provinces in Canada. Of 67 counties which apparently lost at least a part of their native increase in 1851-61 the counties with a population density of more than 40 to the square mile had 24 out of a total of 35 while those with less than 40 per square mile had 43 out of a total of 107, or 68.6 and 40.2 p.c. respectively.

<sup>1</sup> i.e., apparently losing population in the decade. See also Statements VI and VII.

\*A minimum of 14 p.c. increase as an indication of no loss of native increase is used uniformly in examining each decade since 1851, this seeming to be the safest estimate of the low point of native increase up to the present. "Native increase" throughout this study is used in its literal sense i.e., increase in Canadian born and must not be confounded with the technical term "natural increase".

It is clear that the counties which began to lose population tended to be the thickly settled counties. On the other hand, out of 67 counties which gained 27 p.c. or more (which seems to be a safe upper limit to the rate of natural increase in the decade), 46 had in 1851 a density of less than 20 per square mile, while only 9 had a density of more than 40 per square mile. The population seemed to move from counties which had a density greater than that of Prince Edward Island or Iowa to-day to counties having a density of less than that of Nova Scotia or Maine to-day. Of the counties thus gaining more than the 27 p.c., 15 were in the Maritime Provinces, 25 were in Quebec and 27 in Ontario. Clearly also, the province in which the exodus started was Quebec, the movement apparently being largely in the direction of thinly settled parts of Quebec, none of the eastern parts of Ontario being represented among the large increases. The fact that the exodus was from the thickly settled parts would seem to be significant. At first sight it would appear obvious that the most thickly settled parts, having larger numbers at the ages at which people are apt to move, would show the first exodus, but if the movement were merely individualistic and not due to a fundamental cause, this would not follow, for there would be some persons at these ages in all counties, and in the slowly increasing counties greater proportions at early adult ages. The fact of the first exodus taking place in the more thickly settled parts, where facilities for social contact were greatest, is however, understandable on the assumption that these densely populated areas offered no further room for expansion, that the movement was not in quest of a higher standard of living but to avoid a lower. It is particularly suggestive that the exodus began in Quebec where both opportunities and perhaps psychology would make the social tie stronger than elsewhere. The counties showing the first actual decreases were St-Hyacinthe, Laprairie, St-Jean and Deux-Montagnes, all thickly settled, varying from 66 to 90 persons per square mile, and where the division of the farms afforded practically the same social facilities as in towns. It was clearly impossible to maintain a subdivision of land indefinitely that would enable an increasing population to live at the same level as their fathers. In the decade under consideration, the Canadian-born population of the United States increased by 102,259, *i.e.*, between 3 and 4 p.c. of the mean population of 1851-61.

Since the location of the counties which in 1851-61 undoubtedly lost population in a period of heavy internal increase seems to be very important, they are given individually in Statement VI.

The Decade of 1861-71.

Growth.—In the decade of 1861-71 the population of Canada increased from 3,229,633 to 3,689,257, i.e., by 459,624 or 14.2 p.c., as compared with 793,336 or 32.6 p.c. in the previous decade. This comparison must be carefully examined. In the first place the immigrant popu-

lation decreased absolutely by 91,074, leaving an increase of 550,698 native population as compared with about 570,687 in 1851-61, or 21.6 p.c. of the native population of 1861. The native born did not increase as much, either absolutely or relatively, as in the previous decade when the larger total population was partly due to an increase of about 220,000 in the immigrant population; the slowing up in 1861-71 was similarly due to a decrease in this increment, so that there is a strong suggestion of a connection between the rapid increase of 1851-61 and the retarded increase of 1861-71\*. In fact, if data were available by single years instead of by decades, they would almost certainly show that there was no breach of continuity in the trend of growth as between this and the previous decade on the one hand and the following decade (in which the population increased nearly 18 p.c.) on the other; *e.g.*, the native population increased 28.9 p.c. in 1851-61; 21.6 p.c. in 1861-71, and 20 p.c. in 1871-81. If we take the population as a whole over a 20-year period instead of a 10-year period, a more accurate illustration of the gradually diminishing rates of increase is provided than by considering 1861-71 as a lapse in continuity, for in 1851-71 the population increased 51.4 p.c., in 1861-1881 33.9 p.c., and in 1871-1891 31 p.c.

**Direction of Movement and Stage of Settlement.**—Under such conditions for the whole country, it will be interesting to observe the nature of the spread of the population as between counties. First, it is striking that, whereas there were 13 counties which in 1861 had a density of more than 80 per square mile, or the present density of Michigan or Indiana, there were only 9 such counties in 1871. This suggests that a part of the loss was from cities, also that these were partly points of distribution of the immigrant population from which large numbers never spread, but left the country. For the sake of uniformity over the whole period studied, we consider 14 p.c. as the lowest limit of natural increase from 1851 to 1931. Of the 147 counties of Eastern Canada, 87 increased less than this percentage, *i.e.*, lost some of their native increase, while, if we consider 25 p.c. as an upper limit to native increase, we have 33 more which probably lost some of their native increase, and 28 which undoubtedly gained more than their native increase. 34 counties showed absolute decreases, 22 of these being in Quebec and the remainder in Ontario. 23 of the counties increasing less than 14 p.c., which certainly lost some native increase, and 10 out of the 33 which probably lost some native increase were in Quebec. On the other hand, of the 28 counties which almost certainly gained over and above their native increase, 5 were in the Maritimes, 10 in Quebec and 13 in Ontario.

Following the procedure adopted in the analysis of the previous decade, it will be interesting to observe the degree of settlement reached by the decreasing as compared with the increasing counties. Of the 34 counties of Eastern Canada showing decreases in 1861, 24 had more than 40 persons and 6 less than 20 per square mile, while of the 60 counties showing increases of more than 14 p.c. only 4 had reached 40 per square mile, while 41 had a density of less than 20. The population of the West meanwhile showed an increase of 79,475, mainly native Canadians. With the exception of this western migration, it is clear that the spread of population in the decade was from the thickly settled parts to the more thinly settled parts of the provinces. There was not as yet any great movement from Quebec to Ontario. The increase shown in the native population of all Canada indicates that the rate of natural increase must have been very high, since there is strong evidence of emigration in the fact that the Canadian-born population of the United States increased by 243,494 during the decade.

The centre of population of Canada moved 1 mile south and 10 miles west to the county of Glengarry; this movement was largely due to the loss of population in the older parts of Quebec.

The situation as regards the movement of population in the decade was, that 87 counties with an 1861 population of 1,955,175, increased less than 14 p.c., *i.e.*, they increased only by 49,600 persons and thus did not even retain their native increase. Another set of counties with 322,994 population in 1861 increased only 54,067, none of them gaining more than 20 p.c. It will be remembered that the native population of Canada increased 22 p.c. and that in addition 10 p.c. or more left for the United States, so that the natural increase was at least 20 p.c. (See Statement XIX.) Even at this figure, the population of counties gaining less than 20 p.c. was 2,278,169, and increased only 103,667, while a natural increase of 20 p.c. would give them an increase of 455,634, so that there was an outward movement of at least 351,967 from these counties. The remainder of Eastern Canada and the West gained 384,172, including their own natural increase.

\*Probably most of the decrease in immigrant population in 1861-71, that was not due to deaths, came from the 220,000 increase in the previous decade.

In other words about 352,000 besides emigrants moved from counties which in 1861 had 70 p.c. of the total population of Canada to counties which had 30 p.c. and it has been pointed out that, with the exception of a gain of 80,000 in the West, these counties were the thinly but not very thinly settled counties of the East. Only 82,966 of the eastern gains were in counties with less than 10 to the square mile or with densities lower than that of present day New Brunswick. There was a city movement as shown by an increase of 26,000 on Montreal Island, but the gains were largely by counties which were fairly well settled in 1861, *i.e.*, the exodus was a spread from thickly settled to contiguous less thickly settled areas.

**Comparison with Previous Decade.**—The comparison, then, between the growth of 1861-71 and that of 1851-61 would seem to be as follows: In the earlier decade the increase in the population of the country as a whole was the result of two factors, *viz.*, heavy immigration and a high rate of natural increase. There was some outward movement from the most thickly settled parts, particularly in Quebec, to other well settled but more thinly settled areas, but on the whole, the decade was one of increase in the density of areas already settled. In the later decade (1861-71), the increase in native population was well maintained, the rate of natural increase apparently dropping very slightly, but the immigrant population actually decreased by 91,000, which was a much higher figure than could be accounted for by deaths. Meanwhile, over the twenty years, a large number of immigrant arrivals were recorded; in 1851-61 there is a record of the arrival of 203,000 intending settlers, and in 1861-71 of 179,000. Thus, there was undoubtedly a heavy emigration of immigrants in 1861-71, and it is impossible not to connect this with the immigration of the previous decade as well as of the one in which the emigration took place. The decade 1861-71, therefore, was characterized by an exodus of both immigrants and natives, the latter, however, moving largely to other parts of Canada, particularly to the less thickly settled parts contiguous to the older and more thickly settled. The West gained over 50,000, so that a part of the native exodus went long distances. The exodus was mainly from Quebec and Ontario, particularly the former, the population of the Maritime Provinces remaining practically intact up to this period. The net result to the country as a whole was that whereas, in 1851-61, the population increased 32 p.c., in 1861-71 it increased only 14 p.c., or absolutely 793,336 and 459,624 respectively, the difference being caused by greater emigration to the United States and an actual decrease instead of a gain in the immigrant population.

**Parallel Growth in the United States.**—It should be mentioned in this connection that meanwhile in the United States the population in 1850-60, increased by 8,251,000 or 36 p.c., while in 1860-70 it increased 7,115,000 or 23 p.c. Thus, over the two decades, there is a strong similarity in the behaviour of the total population of the two countries.

As for the previous decade, a statement is given herewith showing in this case the counties which gained population during 1861-71, together with a general summary of the movement (Statement VIII).

<sup>1</sup> Less than 1 person per square mile.

### The Decade of 1871-81.

**Growth.**—In the decade of 1871-81 the population of Canada increased from 3,689,257 to 4,324,810, *i.e.*, by 635,553 or 17.2 p.c., a considerably higher rate than in the previous decade. As before, these figures should be minutely examined. The immigrant population increased by 11,409, while in the previous decade it decreased by 91,074. Thus the native population increased by 624,144 as compared with 550,698 in 1861-71, or 20.1 p.c. in 1871-81, as compared with 21.6 p.c. in 1861-71. The increase in native population continued its gradual slowing up, and accordingly the high rate of increase in 1871-81 as compared with 1861-71 was entirely a matter of immigration. The recorded immigrant arrivals in this decade included 342,000 intending settlers, as compared with 179,000 in the previous one, the net result being the aforementioned increase in the immigrant population of 11,000 instead of a decrease of 91,000 as in the previous decade.

**Direction of Movement and Stage of Settlement.**—In this review of the growth of the country as a whole, we again consider the internal movement as shown by the behaviour of the counties. Of 151 counties, 15 showed absolute decreases; 63 showed an increase of less than 14 p.c., *i.e.*, they undoubtedly lost native increase; while, if we consider 20 p.c. as a reasonable native increase (see Statement XIX) 28 other counties showed increases of less than 20 p.c., and 45 had more than 20 p.c. Of the 635,553 increase in the decade, 358,050 was in the last-mentioned 45 eastern counties, and 58,690 in the West, in a population for the two which in 1871 totalled 1,154,094, while only 218,813 was in the remaining 2,535,163 of the population. If we place the

native increase at 20 p.c., these latter must have transferred about 288,000 of their native increase to other areas, a transfer lighter than in the previous decade by probably some 64,000. There was also a much lighter movement to the West.

The centre of population for Canada moved 3 miles north and 20 miles west to the county of Stormont, mainly because 11 of the 15 counties showing decreases and 24 of the 28 counties which must have lost some native increase were east of Ontario. Although the Maritime Provinces, up to 1881, showed no actual decrease, except in the solitary instance of Sunbury, N.B., the increase had slowed down to a point that indicated a considerable loss of native increase.

It is significant that the outward movement in this decade differed somewhat from that of the two previous decades, in that it had descended from the counties of greatest density to those of between 60 and 80 to the square mile, *i.e.*, there was a slight indication of the outward movement extending to lower categories. As yet, however, 73.3 p.c. of the counties decreasing contained over 40 to the square mile, as compared with 70 p.c. in 1861-71 and 100 p.c. in 1851-61.

**Comparison with Previous Decade.**—On the whole, the exodus from counties was less in 1871-81 than in 1861-71, but only slightly so. The Canadian-born population of the United States increased by 223,693 in the decade, presupposing at least as great an emigrant movement as in the previous decade. There seemed to be a *slowing up of the spread to contiguous areas, also to distant areas of Canada* which increased by 21,000 less than in the previous decade. In fact, the outward movement for counties up to 1871 had all the appearance of a healthy and natural form of growth. Meanwhile, there is evidence (in Statement XIX) of a continuous slowing up of the rate of natural increase. The spread of the native population in an orderly manner was showing symptoms of cessation by 1881.

Meanwhile it must be remembered that 203,743 "intending settlers"\* arrived from abroad in 1851-61, 178,814 in 1861-71, and 341,955 in 1871-81, amounting to 724,512 in the three decades. In the final result, the immigrant population was some 140,000 more in 1881 than in 1851, and 80,000 less in 1881 than in 1861. In 1851-61 it increased about 220,000, in 1861-71 it decreased 91,000, while in 1871-81, it increased 11,000. That these increases were temporary will be seen when examining the next decade. The retention of the 11,000 immigrants instead of the loss of 91,000 caused a greater rate of increase in Canada in 1871-81 than in the previous decade.

**Parallel Growth in the United States.**—The population of the United States increased in somewhat the same manner in the three decades, *viz.*, over 30 p.c. in 1850-60, about 23 p.c. in 1860-70 and over 30 p.c. in 1870-80, the last mentioned showing, as in the case of Canada, a higher rate than 1860-70.

Statement IX shows the counties which increased more than 14 p.c. in 1871-81. As already explained, the reason for taking 14 p.c. as the low, is to insure throughout the improbability of any county which held all its native increase being omitted. Since the counties are given individually, it will be easier to select those gaining less than the probable native increase of the decade, *viz.*, 20 p.c. per decade.

### The Decade of 1881-91.

**Growth.**—In the decade of 1881-91 the population of Canada increased from 4,324,810 to 4,833,239, *i.e.*, by 508,429 or 11.8 p.c., the lowest rate and the lowest absolute increase since 1851. The immigrant population increased 40,887, so that the increase in native population, also the lowest since 1851, was 467,542, compared with 624,144 in 1871-81 and 550,698 in 1861-71. Since the population on which this native increase was based was greater in 1881 than at the previous dates, the rate (based on the whole population) was 10.8 p.c. in 1881-91, as compared with 16.9 p.c. in 1871-81 and 17.1 p.c. in 1861-71. Or, as in former comparisons, the native population increased 21.6 p.c. in 1861-71, 20.1 p.c. in 1871-81 and 12.6 p.c. in 1881-91. The recorded immigrant arrivals of the decade were 886,177 intending settlers, as compared with the total increase in immigrant population of 40,887. Since the Canadian-born population of the United States increased by 263,781 in this decade, emigration appears to have exceeded one million.

**Direction of Movement and Stage of Settlement.**—We shall now consider the behaviour of this growth by counties. Of 152 counties in 1881, 61 showed absolute decreases; 59 showed increases of less than 14 p.c., (*i.e.*, almost certainly failed to retain all their native increase); 10 increased over 14 p.c. but less than 20 p.c. (to compare with previous decades), while only 24 eastern counties gained more than 20 p.c.; 2 of which were counties which in 1881 had no population. Of the 508,429 total increase, 329,864 was in 34 eastern counties increasing more than 14 p.c., and 181,481 in the West, leaving an absolute decrease of 2,916 in the 120 remaining eastern counties. To put it in another way, 329,864 of the increase was in eastern counties which had 931,462 population in 1881, while 181,481 was in the West which had 168,165 in 1881, and there was a net loss of 2,916 in the remaining eastern counties which had 3,225,183 population in 1881 (*i.e.*, nearly 75 p.c. of the whole population of that year).

The increase in the Canadian-born population of the United States is direct evidence that the decade 1881-91 saw a net emigration of native population from Canada amounting to not less than 263,781 (see Statement XVIII). It will be noted that there was an increase of 108 p.c. in the West, and of 35 p.c. in the 34 eastern counties increasing more than 14 p.c. After allowing for the native increase of these two sets, it would seem that of the native Canadians moving from the counties losing their native increase, rather more than half went to other parts of Canada, while less than half emigrated. This is a striking point, considering the greater difficulties of travel to distant parts of Canada than to points in the United States and that there were then no restrictions on immigration to the latter country.

The movement to the West in this decade is noteworthy, and was largely of Canadian born. Of the increase of 181,481 in Manitoba, British Columbia and the Northwest Territories, the Canadian born comprised 106,130 and the British and foreign 75,351. Since the immigrant population of all Canada increased only 40,887, it would seem that there was a large exodus of the old immigrant population from the East, some of them probably moving west with the Canadian born.

**Comparison with Previous Decades.**—In the eastern counties there was a definite departure from the trend of the previous three decades. In the first place, up to 1881 the trend of growth in the counties of the Maritimes was practically continuous, although they were developing certain symptoms of a slowing up. In contrast, in 1881-91, of the 61 eastern counties showing absolute decreases, 16 were in the Maritimes, 8 of the 18 counties of Nova Scotia showing decreases; 26 were in Quebec and 19 were in Ontario. If, however, we count as decreasing the counties failing to hold their native increase, at least 33 were in the Maritimes, 53 in Quebec and 37 in Ontario. The "exodus" had spread from Quebec first to Ontario and now to the Maritimes. Of the 29 counties into which this exodus—what remained of it in Eastern Canada—seemed to flow, 3 were in the Maritimes, 13 in Quebec and 13 in Ontario. Of an increase of 329,864 in the still-growing counties of the East (those gaining more than 14 p.c. in the decade), 200,031 were in Montreal Island, Carleton, Ont., Wentworth and York, Ont., 174,542 being in Montreal, Ottawa, Hamilton and Toronto. In fact the internal movement was almost entirely citywards, except for an increase of 29,453 to the very thinly settled counties of Nipissing, Parry Sound, Algoma, Sudbury and Rainy River. The decade saw an emptying of the eastern counties into the cities, the Northwest and outside Canada\*. The Canadian centre of population moved 12 miles north and 54 miles west to the county of Carleton, Ont., due not only to the increase in the Northwest and the new counties of northwestern Ontario, but also to the exodus from the Maritime Provinces.

**Changes in Age Distribution.**—In this decade we notice a remarkable change in the age distribution throughout Canada. In 1881 the proportion under 25 years of age was 59.96 p.c.; in 1891 it was 57.11 p.c., a decrease of 2.85 p.c.; but the age group under 5 years decreased from 13.84 p.c. to 12.65 p.c., or by 1.19 p.c. Ages over 70 increased in proportion 11 p.c. In Nova Scotia, persons under 10 years of age actually decreased by 7,502, while persons over 70 increased by 2,983, similar absolute decreases occurring in Prince Edward Island, New Brunswick and

\*As stated above, the Canadian-born population of the United States increased 263,781 in this decade. In calculating the gross outward movement, allowance should be made for the deaths in the United States of Canadians of whom these 263,781 were survivors, also of returning Canadians. The Canadian-born emigrants from Canada must have exceeded 300,000 in the decade.

Ontario. Thus it would seem that there was either a fall in the birth rate accompanying the exodus, or that a large proportion of those moving out consisted of families having young children—probably both.

While the outward movement was thus general, it can not be said that there was any breach of continuity between it and the previous decade, the difference being that the outward movement in former decades was more largely to other parts of Canada, while in this decade nearly half of it went to outside parts. Further, while heavier than formerly, it was clearly part of a trend which began in 1851 and continued at an accelerating rate. New parts of Canada were not opened up fast enough to absorb the whole of the outflow, and it is indeed remarkable that the proportion which these new parts appropriated was so large.

**Parallel Growth in the United States.**—It can not be said, however, that the movement away from Canada was in sympathy with an unusually heavy movement into the United States, which increased at a much slower rate in this decade than in the previous one, thus challenging the popular conception that the movement out of one country is preponderantly caused by special inducements in the country to which the movement is directed.

For uniformity of treatment with earlier decades a statement is given herewith showing the individual counties which gained over 14 p.c. in 1881-91 with a summary of the gains or losses of the other parts of Canada (Statement X).

<sup>1</sup> Less than 1 person per square mile.

### The Decade of 1891-1901.

**Growth.**—In the decade of 1891-1901 the population of Canada increased from 4,833,239 to 5,371,315, *i.e.*, by 538,076 or 11.1 p.c., the smallest relative increase in any decade for the area now known as Canada. The immigrant population increased by 55,629, so that the native population increased by only 482,447, compared with 467,542 in the previous decade, 624,144 in 1871-81 and 550,698 in 1861-71. This native increase in 1891-1901 was only 10.0 p.c. of the total population of 1891. In other words, the native population increased 21.6 p.c. in 1861-71, 20.1 p.c. in 1871-81, 12.6 p.c. in 1881-91 and 11.5 p.c. in 1891-1901. The total recorded immigrant arrivals of intending settlers in the decade numbered 321,302, as compared with a total increase in immigrant population of 55,629. The Canadian-born population of the United States increased by 198,984, presupposing a native emigration during the decade of not much less than 300,000.

**Direction of Movement and Stage of Settlement.**—Of 154 counties in Eastern Canada in 1891, 67 showed absolute decreases, 60 showed increases of less than 14 p.c., 9 showed increases of 14 and less than 20 (to compare with previous decades), and only 20 showed increases of more than 20 p.c., 2 of which had no population in 1891. Of the 242,205 increase in Eastern Canada, 233,962, or about 96 p.c., was in 29 counties. The West gained 295,871.

The centre of population moved 20 miles north and 61 miles west to Renfrew county, Ont.

Examining the gains and losses by their location, we find that 19 of the aforementioned 29 counties, approximating 96 p.c. of the increase, were in Quebec and the Maritimes; of the 67 counties suffering absolute decreases, 20 were in the Maritimes, 20 in Quebec and 27 in Ontario. In Quebec 15 counties which decreased in the previous decade showed recovery in 1891-1901. Indeed 1 county, St-Maurice, showed in this decade the highest rate of increase since 1851, and Montcalm, which had been decreasing since 1861, showed an appreciable increase.

In Ontario practically all the increase went to the northwestern thinly settled counties, with the one exception of Carleton county which increased by 19,274. In Quebec 83,313 of the increase went to Montreal Island, but a good proportion went to northern thinly settled centres.

**Comparison with Previous Decades.**—Despite a somewhat greater concentration of the high increases in a few areas in 1891-1901 than in the previous decade, there is a definite change in the trend of movement. In the previous decades what remained in Eastern Canada of the exodus went mainly to the cities; in 1891-1901 there was a trek to new areas, and, of course, a larger trek to the West. Thus 16 of the 29 eastern counties showing increases greater than 14 p.c. had, in 1891, densities of less than 5 per square mile, while 10 had less than 1 per square mile. The only large eastern cities that gained more than a moderate natural increase were Montreal and Ottawa. Toronto increased only 25,000 or about 14 p.c. The 6 cities, Toronto, Hamilton, Quebec, London, Halifax and Saint John gained only 46,181 or 11.5 p.c., that is, almost certainly did not hold all their native increase, while in 1881-91, the same cities gained 103,835 or 34.7 p.c.

The trend of growth in this decade (1891-1901) seems to be capable of division into two sharply defined periods. The first of these was characterized by a continuation of the movement either away from Canada or into cities as described for 1881-91, only on a still greater scale; the second was a period of recovery for Canada as a whole, including a movement into new areas and the West. This may be demonstrated in two ways. In the first place the children under 5 years of age who increased only 13,000 in 1881-91, increased 39,000 in 1891-1901 while in the Maritime Provinces, where they showed absolute decreases in the former decade, they showed increases in the latter. In the second place, of the total immigrant population of 699,500 in 1901, as many as 159,283 arrived after 1896. It will be remembered that this element of the population in the decade increased only 55,629, so that the immigrants before 1896 must have decreased 103,654, presumably in the earlier part of the decade. Looking at it from another angle, of a total increase of 538,076 in all Canada, 159,283 or more than one-fourth were immigrants arriving after 1896, and another part of the increase was manifestly either due to a greater birth rate in the last 5 years of the decade or the non-emigration of families in the same period. The rate of increase of the population of Canada must have reached almost a vanishing point sometime between 1891 and 1896.

**Parallel Growth in the United States.**—Meanwhile the United States, which from 1850 to 1890 grew along lines somewhat parallel with Canada, seemed to have settled down to a steadily diminishing rate of growth, which has been maintained to the present. The parallel between the two countries thus no longer holds. As before, a statement is given presenting the individual areas showing gains of more than 14 p.c. with a summary of the gains in other parts of Canada.

**Summary of the Period, 1851-1901.**

This brings us to the end of a survey of the latter half of the 80-year period which has been mentioned as marking a definite stage in the growth of population in Canada. As has been seen, the growth during this period for Canada as a whole followed with a high degree of precision a mathematical trend, and it is now possible to comment on the reasons for this precision. Up to 1881, the growth was one of settlement of the older areas bringing them up to a fair degree of density. There was little settlement of the newer eastern areas, and only a small overflow to the West. The centres of population moved very little. Immigration seems to have balanced any movement away from the older districts. At the same time there was a gradual slowing up of the growth. This seems to have been in small part due to the lowering of the rate of natural increase, but principally to emigration. The remarkable fact, however, is that, although the next 20 years saw a heavy outward movement from the settled areas and from Canada as a whole, the trend of growth in Canada was not changed. It was simply a continuation of the gradual ageing which could have been predicted as early as 1871, and which would have warranted in 1871 a fair estimate of the population of 1901. It was merely a matter of what means would be followed in bringing about a retardation of population growth—a high death rate, a low birth rate or emigration. As a matter of fact all three factors were in evidence. The rate of natural increase seems to have dropped rapidly from 1861 to 1901 but not rapidly enough to have fore-

stalled a moving out. The greater part of the outward movement, from the settled counties seems to have gone at first to newer parts of Canada, and the inaccessibility of these newer parts had perhaps as much to do with the increasing emigration of the period as the lack of large cities. Emigration was heavy, but considering the easiness of access to the United States, it was unexpectedly small as compared with the migration or spread within Canada.

The outward movement seems to have begun in Quebec and to have spread to Ontario, while the Maritime Provinces were affected last. The Maritimes maintained increases until the decade 1881-91, while Quebec counties showed decreases as early as 1851-61 and Ontario as early as 1861-71. With this in view it is interesting to observe that, in the heavy movement of 1881-91, the Maritimes suffered the most while Quebec showed the least, *i.e.*, the decreases began with the oldest and most thickly settled counties, spreading to the others. In the decade when this movement was at its height, 1891-1901, recovery was manifest in those which had been the first to lose population.

It is also remarkable that, although from 1851 to 1901 the recorded arrivals of immigrant intending settlers aggregated 1,931,991 in addition to about an equal number in transit to the United States, the immigrant population in this 50-year period increased less than 240,000, and only 16,851 from 1861 to 1901. Of the 699,500 immigrant population of 1901, 159,283 arrived after 1896 and 74,674 arrived between 1891 and 1895, so that of the immigrants arriving before 1891 only 465,543 survived till 1901 and 68,148 of these arrived before 1851. Of more than 1,600,000 arriving between 1851 and 1891 only 397,395 were alive in Canada in 1901. Calculating on the basis of the years of arrival and at a death rate probably higher than the actual, the deaths among these 1,600,000 should be 372,000, about half of whom probably died in Canada, so that about 1 immigrant arrival stayed in Canada for every 2 who left. Meanwhile the arrivals before 1851 were also dying or leaving with the result of a net gain of less than 240,000 in the 50 years.

#### The Decade of 1901-11.

**Growth.**—The population of Canada grew in the decade of 1901-11 from 5,371,315 to 7,206,643, an increase of 1,835,328, the greatest absolute increase in Canada's history. The increase included 887,461 from immigration.

**Direction of Movement and Stage of Settlement.**—This decade marks not so much the beginning of a new stage of growth as the preparations for this new stage. The large increase (34 p.c.) was not wholly a movement into the Prairie Provinces and British Columbia, although the centre of population moved 57 miles north and 197 miles west to Sudbury county; it was also in part, though in very small part, a recovery of the older provinces. At the same time 60 counties in Eastern Canada showed actual decreases, and 55 counties showed increases of less than 14 p.c., *i.e.*, lost natural increase. The losses were particularly heavy among counties of moderately dense population, *i.e.*, between 40 and 60 per square mile.

The counties gaining more than native increase should be particularly interesting in this decade: As many as 11 of these contained cities. This group of 11 accounted for 490,982 of the increase; 19 were counties which in 1901 had a very low degree of density (*i.e.*, were new settlements). These accounted for 173,856 of the increase. The two sets combined accounted for 664,838 of the increase in Eastern Canada. The West accounted for an increase of 1,090,103. The remaining counties of Canada, therefore, gained only 80,387 out of the total gain of 1,835,328 in Canada in the decade, *i.e.*, lost all their native increase except this number. The Canadian-born population of the United States increased 24,714 in this decade (over the 1900 population of 1,179,922). This presupposed an emigration from Canada to the United States of about 158,000 after allowing for deaths in addition to the equivalent of returning Canadians. The counties of Nova Scotia and Prince Edward Island, the older counties of New Brunswick, and the Ontario counties without cities showed heavy losses; the counties of Quebec and the newer parts of New Brunswick showed gains. Even some of the older counties of Quebec, to the number of 13, which had shown absolute decreases in the previous decade, showed symptoms of recovery in this decade, but on the whole the increases in Quebec were in cities and the newer areas. In Ontario there were no such symptoms; the outflow of the previous decade was continued at a

greater rate, and the increases in this province were practically all due to cities and new areas. The partial recovery of the counties of Quebec is particularly interesting; it should be noted that this recovery began before the previous decade, and consequently could not have been due to a general inward movement such as is usually associated with the decade 1901-11. Rather it would seem a form of reaction to the heavy drain which began before 1851 in Quebec and spread to the other provinces. It is difficult to say whether or not such reaction is a necessary phase in population growth, but the fact is noticeable: when the counties of Canada are taken individually and their growth traced from 1851 to 1931, 3 of the 4 decreasing in 1851-61, 25 of 34 decreasing in 1861-71, 12 of 21 decreasing in 1871-81, and 24 of 56 decreasing in 1881-91 made definite recoveries before 1931, while most of the remainder either made partial recoveries or showed symptoms of recovery by a steady diminution of their rates of decrease. Many of these recoveries were due to the rise of cities, but many others are not explainable on this ground. Another remarkable fact is that these recoveries did not necessarily synchronize with a large increase in the population of Canada as a whole. Thus 16 occurred in 1891-1901, the decade of the lowest rate of increase on record in the population of Canada.

On consulting Chart 2, it appears that the decade 1901-11 was a phase interjected between two trends of growth in the population of Canada and comparable to phases at previous periods, especially before 1831 and 1791. The growth in the decade was amorphous or freakish when viewed from the standpoint of the general law of growth which we have taken as a standard (*viz.*, progressively diminishing rates of increase). Thus the increase of 34 p.c. was not only abnormally high, but the year-to-year rates by which it was reached were apparently such that if kept up, would have given Canada an inconceivably large population in a few decades. Even an increase by compound interest at this rate of 34 p.c. would have multiplied the population 18.6 times in a hundred years, *i.e.*, would have brought the population of Canada to 100 million by 2000 A.D.; but the manner in which it did actually increase would have more than doubled this figure. This manner apparently continued until about 1913 when it is estimated that the population increased over 3 p.c. in a single year, equivalent to a decennial rate of about 40 p.c. Such a rate of increase clearly ignored limitations which must be reckoned with regardless of any theory of population growth. The foregoing description of the growth of counties during the decade will throw some light on this anomalous behaviour.

**Special Features of the 1901-11 Growth.**—It must be remembered that the decade just described had a parallel at different dates in the past. The period around 1851 was similar—particularly in one aspect. The large increase in 1851-61 was due to the accretion of some 220,000 immigrants, while the following decade showed a decrease of 91,000 in the immigrant population. In other words a considerable part of the increase in 1851-61 was not a permanent population, but in some respects an aggregate of persons as yet undecided whether or not they would become a population. It will be seen that the decade 1901-11 showed the same type of increase.

In the first place, it is clear that with the exception of a few cases of recovery, the growth of the decade was not due to any stimulus to the counties already settled; indeed, the draining of these counties which began in 1881-91 continued at an even greater pace. In the second place, while the rendering accessible of new areas accounted for a large part of the outward movement from the older settled parts (migration within Canada instead of emigration, so that Canada retained more of her natural increase), this did not account for all the growth which took place. The stimulus given to cities by the movement accounts for some more, but all the factors just mentioned do not explain the exceptional growth of the decade.

**Distribution Points.**—It would seem that this exceptional aspect arose from the fact that *a certain portion of the population in 1911 was located at distributing points, i.e., points of temporary residence, and that it was still uncertain whether these would be later distributed in the newer areas or pass out of the country.*

This may be illustrated in several ways. In the first place, of the immigrant population of 1911, 301,648 arrived in 1910 and in the 5 months immediately preceding June 1, 1911. It is impossible that these could have been all distributed to their real destination by the census date, June 1. The full analysis of this important point properly belongs to a chapter on immigration, but Statement XII would seem to be illuminating.

XII. POPULATION AND INCREASE 1901-1911 IN CERTAIN CITIES OF CANADA, WITH THE IMMIGRANT POPULATION OF 1911 AND OF 1921 ARRIVING BEFORE 1911, WITH EXPECTED NET IMMIGRANT POPULATION IN 1921 AND ESTIMATED NUMBER LEAVING THESE CITIES IN DECADE 1911-1921

Points of distribution	Population			Immigrant population 1911	Expected net population after deducting deaths 1921	Persons from other parts of Canada 1911	Immigrant population of 1921 arriving before 1911	Estimated number leaving points 1911-21

The above statement furnishes evidence that a large part of the increase in population between 1901 and 1911 was at the Census of 1911 still at points of distribution. In spite of the fact that a considerable number of the older immigrants who had already settled must have moved into these cities between 1911 and 1921, it is seen that 32 p.c. over and above deaths, were missing from these points in 1921, *i.e.*, they had not remained at these centres. Some of them, of course, left Canada. It was uncertain in 1911 whether they were going to settle or not; at any rate they were not going to stay at these points of distribution and consequently were not part of the permanent population at these points. It will be seen that the 17 cities which have been taken as centres of distribution accounted for 40.8 p.c. of the total increase in Canada in 1901-11. The natural increase of these cities would probably account for 125,000 of this increase, leaving about 624,000 due to the moving in either of immigrants or of persons from other parts of Canada. Now in Canada, *outside* of these points, there was an immigrant population of 1,061,755 in 1911 of whom 987,432 might be expected to be alive in 1921. *The immigrant population of 1921 arriving before 1911 outside these points was 721,055, or 266,377 less than expected, i.e., they lost 27 p.c. of the expected number of immigrants, while the cities mentioned lost 32 p.c. of the expected.* This is conclusive when it is remembered that these cities drew largely on the rest of Canada for their increase in population in the interval.

It is highly significant also that these points in 1911 contained 525,206 of the 1,586,961 immigrant population of Canada, or 33.1 p.c., and 149,406 or 26.6 p.c. of the 562,341 Canadian born residing in Canada but outside their province of birth, while they contained only 23.1 p.c. of the total population of Canada—*i.e.*, they had in 1911, 1.4 times their share of the immigrant population and more than their share of the population born in provinces other than their province of residence. These two groups might be expected to contain an element in transit, *i.e.*, residing at these points for the purpose of spying out the land for a future home. The percentages would be more striking if all the points of distribution could have been selected instead of 17 as above, but the data could not be completed for such points as Port Arthur, Prince Albert, New Westminster and other frontier cities and towns.

A reasonable explanation, therefore, is possible for the position of the decade 1901-11 in the record of population growth. At the Census of 1911 there was a large element in Canada who had not yet become a fixed population, *i.e.*, had not yet settled or given indication of settling. The result was that they made the rate of increase in 1901-11 larger, and in 1911-21 smaller, than what may be considered normal. However, the presence of a similar unabsorbed element has been characteristic of every Canadian census of the present century, though on a smaller scale than in 1911.

A statement is given, as previously, showing the counties increasing more than 14 p.c. and a summary of the other counties.

## XIII. COUNTIES INCREASING 14 P.C. OR MORE IN 1901-11

<sup>1</sup> Less than 1 person per square mile.

## The Decade of 1911-21.

**Growth.**—The population in the decade of 1911-21 increased from 7,206,643 to 8,787,949, *i.e.*, by 1,581,306 or nearly 22 p.c. This compares with an increase of 1,835,328 or 34 p.c. in the previous decade. The smaller increase of 1911-21 by 254,022 is subject to certain qualifications. The immigrant population of 1911 who arrived in 1910 and the first 5 months of 1911, and therefore had a precarious hold on the country was 301,648, while the similar population of 1921 was 145,294. This made up 156,354 of the difference in the amount of increase. The population of 1911 contained 1,029,516 immigrants who arrived between 1901 and 1911, and of these about 700,000 survived till 1921, a loss of more than 300,000 of whom not more than 100,000 could be attributed to deaths in Canada. The year 1921 had about 800,000 arrivals of the last 10 years or about 200,000 less than 1911. This shows that recent arrivals are not apt to be finally settled at the date of the census. If we discount these, there is little difference in the increases of the two decades. The increase of native population was 1,212,531 in 1911-21 as compared with 947,867 in 1901-11, the rates being 16.8 p.c. in 1911-21 and 17.6 in 1901-11 on the population as a whole. The native Canadians, however, increased 21.6 p.c. in 1911-21 as compared with 20.3 p.c. in 1901-11, some of this increase being due, of course, to births among the immigrant population.

Meanwhile the Canadian-born population of the United States *decreased* instead of increasing as heretofore.

**Direction of Movement and Stage of Settlement.**—The centre of population moved 19 miles north and 71 miles west to Algoma county, and it is interesting to see how this happened.

The western provinces did not gain as much in 1911-21 as in the previous decade (757,189 in 1911-21 and 1,090,103 in 1901-11) so that the northwesterly movement must have been due to differential gains in the north and west of the eastern provinces, or losses in the south and east, except for a slowing up in Manitoba as compared with the more westerly west. 3 counties in northern New Brunswick, 6 in northern Quebec and 5 in northwestern Ontario showed a combined gain of 118,627. Of 57 counties which in this decade showed absolute decreases, 18 were in the Maritimes, 13 in southern Quebec and 26 in Ontario, mainly south and east. It is striking in the face of the greater rate of increase in 1901-11 that there were 60 counties in Eastern Canada which showed absolute decreases in that decade, as compared with 57 in 1911-21; while 40 counties in the latter showed increases of more than 14 p.c., as compared with 43 in 1901-11. It is clear, then, that the growth in 1911-21 was much more evenly distributed than in the previous decade. Thus 96 p.c. of the increase in Eastern Canada in 1911-21 occurred in counties which had only 44 p.c. of the population, while in 1901-11, 98 p.c. took place in counties having 34 p.c. of the population, while in 1921-31, 92 p.c. took place in counties having 45 p.c. of the population. Thus 1901-11 showed the greatest, and 1921-31 the least, discrimination in the matter of movement of population.

While 1911-21 therefore made a smaller gain than the previous decade, there were very few manifestations of a slowing up in growth; the differential rates were a matter of temporary circumstances. *The decade 1911-21 was spent in distributing the inflow of the previous decade so that the increases in the two decades can not be dissociated.*

As before a statement is appended showing the counties increasing more than 14 p.c. with a general summary for Canada.

## The Decade of 1921-31.

**Growth.**—In the decade of 1921-31 the population of Canada increased from 8,787,949 to 10,376,786, *i.e.*, by 1,588,837 or 18.1 p.c., the great part of it evidently taking place in the last half of the decade. Of this increase, 943,449 took place in 39 counties of Eastern Canada which in 1921 had a population of 2,854,343; 76,452 in the remaining counties of Eastern Canada which in 1921 had a population of 3,440,797; and 568,936 in the West and North which in 1921 had a population of 2,492,809. The immigrant population increased 351,800; the native 1,237,037. The native population increased 14.1 p.c. on the population as a whole, or 18.1 p.c. on the total native population, so that the native and immigrant population increased at almost exactly the same rates. For the first time not only in the century but since 1871, the growing counties of the East showed greater rates of increase than the West. Furthermore, the West appropriated 60 p.c. of the total increase in Canada in 1901-11, 48 p.c. in 1911-21 and only 36 p.c. in 1921-31. The total population of the West increased 22.8 p.c. in this decade as compared with 43.6 in 1911-21 and 168.9 in 1901-11. All Eastern Canada in 1921-31 increased 16.2 p.c. as compared with 15.1 in 1911-21 and 15.8 in 1901-11. The counties of Eastern Canada showing decreases in 1921-31 were 55 as compared with 57 in 1911-21 and 60 in 1901-11. Thus the gain in the East was not merely a drift into the cities, but also a matter of distribution among the various counties.

**Direction of Movement and Stage of Settlement.**—The centre of population of Canada moved 8 miles north and 30 miles west, but this was almost entirely due to the greater growth of British Columbia as compared with the other western provinces, and to a decrease in Nova Scotia.

As already seen, the distribution of the increase was less discriminate, *i.e.*, it was shared more evenly by the different counties of the East in 1921-31 than in any other decade of the century. There is evidence, however, that this was not a rural in the sense of a farm distribution. The counties which showed large rural increases did not show corresponding increases in farm population as given by the Census of Agriculture. The spread when it was not into cities, towns and villages was either into small unincorporated villages or was a return to farms of persons who did not give farming as their occupation. The permanency of such a population is uncertain. The statement herewith shows the counties which increased more than 14 p.c., with a general summary for the remainder of Canada.

<sup>1</sup> Less than 1 person per square mile.

**General Summary, 1851-1931.**

In the foregoing pages there was placed under review, decade by decade, a period of 80 years covering the latter half of one stage of growth and three decades of a new. (There is no doubt that a distinction can be drawn between the period preceding and the one succeeding the middle part of the decade 1891-1901.) The year 1851 found the population of Eastern Canada spread over 142 fairly well settled counties. The following decade saw a huge increase in population, due to the combined forces of a large natural increase and heavy immigration. At the same time there were movements out of the most thickly settled parts of Quebec, not necessarily away from Canada but to the more thinly, though not very thinly settled parts. The next decade saw a much heavier outward movement, but evidently only the immigrant population moved in large numbers out of the country, the native population going to the more thinly settled parts of Canada. Again the outward movement was largely from the thickly settled parts of Quebec. The next decade saw a continuation of this outward movement, this time extending to Ontario; but again the exodus of the native population was largely to other parts of Canada, only the immigrant population moving out. Up to this time there was only a slight overflow to the West, the moving native population going to other parts of the East, *i.e.*, to 10 counties which had no recorded inhabitants in 1851, and to other less densely settled parts. It must be borne in mind that the movement was from the more densely to the more thinly settled parts, also that it began slowly and increased gradually to 1881 and was thus quite systematic. Meanwhile large numbers of immigrant arrivals were recorded each year. In the next decade (1881-91) the exodus increased and accelerated, this time sweeping the native as well as the immigrant population out of the country, and for the first time extending to the Maritimes. It should be noticed, however, that at least half the exodus of natives from the settled parts was into other parts of Canada. The West grew by 181,481 and 2 new counties of the East recorded population for the first time (in 1891) but the population of Canada as a whole showed a very rapid drop in its rate of increase. The first part of the next decade saw a continuation of the accelerating exodus so that by 1896 the rate of increase in Canada must have been close to the vanishing point. This completes the older stage of development.

The second half of the decade 1891-1901 saw a turn in the tide. Although the exodus from the thickly settled parts continued, the parts which had been the first to decline (in Quebec) showed symptoms of recovery. The exodus was once more to other parts of Canada. The West gained 295,871 in the whole decade, and 2 counties in the East recorded population for the first time. The next decade (1901-11) saw the second largest rate of increase in the 80 years under review, but this was in many respects abnormal. The eastern counties emptied practically as fast as in the two former decades, and the increase was concentrated in a few areas, particularly in the cities of the East and in the West. It is clear that a large part of the increase was still at points of distribution at the Census of 1911. The next two decades increased at what might be considered very normal rates, it being clear that the increase of each successive decade of the century was associated with the increase of the previous one. The concentration of the increase.

became continuously less, so that 1921-31 saw more even spread of the increase throughout the counties of Canada than any decade of the century. The trend of growth came back from the West to the East and not entirely to the cities. It will be shown elsewhere that some of this was due to the movement east of persons born in the West.

A striking fact in connection with the exodus described above and which continued up to the last census, is that up to 1881 the exodus was from the more thickly settled parts. Since the beginning of the century, however, this trend has changed, so that in 1921-31 the average density of decreasing counties was only about one-half of what it was in 1871-81. This is illustrated in Statements XVI and XVII.

XVI. COUNTIES OF EASTERN CANADA SHOWING A DECREASE, BY CLASS OF DENSITY, 1851-1931

The second statement will remove doubt on the point that the changes in category of the decreasing counties were due to the progressive thinning out of these counties by previous decreases. As a matter of fact it has already been shown that several of the counties previously showing decreases were showing increases in 1921-31, and could not have been represented in the above statement. The process is a real one, *viz.*, a growing tendency during the present century to move away from the more thinly settled parts in contradistinction to the tendency up to 1881 of confining the exodus to the more thickly settled areas. The foregoing statements show only the eastern counties, but it is also true that a large number of the western counties which are new and necessarily thinly settled, also showed decreases in the last decade. Thus 13 census divisions of the Prairie Provinces decreased between 1921 and 1926. Furthermore, it is significant that the very thickly settled parts, *i.e.*, the parts with large cities, show a growing tendency to absorb the increases. It has also been pointed out that especially in 1921-31 the increases seemed to be confined to urban aggregates whether or not incorporated. This would seem to indicate a growing tendency away from rural to urban settlements and that Canada's growth in the last two decades, especially in the last half of the last decade, has been largely due to urbanization, and not urbanization in the sense of large cities only. Where "rural" counties have increased in recent decades it was not through an increase in farm population.

To sum up the processes of growth in the 80-year period under review, the following points would seem to have been removed from the realm of speculation:—

1. The growth of Canada in no decade is an isolated phenomenon, but is associated with the growth in previous decades; a sudden slowing or speeding up in any decade is associated with the reverse process in some previous decade.

2. Although the growth of Canada as a whole is the summation of the growth of its parts, the observed behaviour of the whole and of the parts is quite different. Thus we have no record of a decrease in the population of Canada as a whole, although something near it must have happened for a time between 1891 and 1901. The reason is that the process works more rapidly in the parts (of course the process could be traced much more accurately if population was under yearly instead of decennial observation). In its more active process, the individual county passes through all the phases which take considerably longer for the whole Dominion. We observe in the behaviour of counties, first a rapid increase, then a slowing up, later a decrease, and finally a recovery. In Canada as a whole we observe a rapid increase, then a gradual slowing up, which does not reach the point of decrease, and then a recovery. We observe, however, that what appears at first sight to be an unprecedented increase, such as that of the present century, is really of smaller proportions than previous increases. Thus the increase from 1901-31 is on a lower level than the increase up to 1861.

3. The net result of the records of growth by counties is that 87 out of the 219 counties have passed a point of at least temporary maximum population, *i.e.*, they had a greater population at some previous census than in 1931. Of these, 2 (Laprairie and Deux-Montagnes) reached their maximum population in or before 1851; 12 in 1861; 25 in 1881; 16 in 1891; 7 in 1901; 8 in 1911; 16 between 1911 and 1921; and 1 at least in 1926. It is remarkable that 16 of these reached their maximum population in 1891, the end of the decade showing the lowest absolute increase in Canada since 1851, and only 8 in 1911.

Many of the remaining counties showed decreases in particular decades, but recovered sufficiently to avoid passing a maximum before 1931; of those which have passed the maximum many are showing increasing population at the present time, but their main tendency seems to be to recover up to a certain point and then once more decrease without having regained their previous maximum population.

It is also observed that counties reaching a maximum in early years tend to be more thickly settled than those reaching a maximum in later years. Thus the Prairie Provinces now have representatives among the counties which had a smaller population in 1931 than at some previous census. This is in line with what has already been pointed out. The newer counties and others more distantly located from the original settlements seem, temporarily at least, to be incapable of reaching the same density of population as the old. This is further emphasized by the fact that in 1921-31 the growth switched back from the West to the East in line with the urban movement.

It must be borne in mind that all counties, whether they are increasing or decreasing, are meanwhile having an excess of births over deaths. Consequently a stationary population, or even a population increasing less than a certain percentage, means losing ground, *i.e.*, an outward flow. The gross outward flow is greater than such estimates of it as can be arrived at from available data, since the movement shown between decades is only a net movement, *i.e.*, does not account for all the movement. At that, it will be interesting to examine Statement XXI which shows in summary what has already been pointed out for different decades. Thus from 1851 to 1931 we have a record of counties which showed decreases and also those showing less than 14 p.c. increase; these must certainly have lost some natural increase. Aggregating for the eight decades we have 93.5 p.c. of the increases between decades taking place in counties of Eastern Canada which had only 39.2 p.c. of the population (those increasing more than 14 p.c.) at the beginning of the decade. The remainder showed an average of only 1.5 p.c. increase per decade.

Estimating at the rates of natural increase in Statement XIX and the number of Canadians in the United States in Statement XX (after allowing for deaths of Canadians in United States and immigrant population in Canada) in the 80 years from 1851 to 1931 at least 2,500,000 Canadian born moved into growing parts of Canada from parts that were either decreasing or losing

some natural increase. At the same time 1,740,000 Canadian born left Canada for the United States, or if we allow for the Canadians who returned (*i.e.*, those who went from one part of Canada to another *via* residence in the United States) about 2,250,000. It is quite safe to say, then, that more of the migrating Canadians went to other parts of Canada than to the United States, in spite of (in many cases) the greater accessibility and superior inducements of the latter. It is interesting further to note that the increase in population in the 80 years due to immigration was 1,844,000, and that this about balances, in point of numbers, the loss of Canadians to the United States, and certainly only balances the loss of Canadians to the United States and other countries.

Canada's increase in the 80 years is traceable to three processes, *viz.*, (1) natural increase remaining in counties where born, (2) natural increase spreading from counties where born to other counties of Canada and (3) immigration; and it is a highly important point that the increase due to spread from where born to other counties was greater than that due to immigration.

However, it was during the earlier part of this period that Canada's own population reached out to other counties, while during the later part of the period these outside parts have been growing largely by immigration. The change took place after 1881, before which the immigrant population was making little headway in spite of the large number of arrivals annually. The heavy exodus of native population during the next 15 years was no doubt largely due to the inaccessibility of newer areas. This is shown by the fact that the West grew by 587,302 from 1861 to 1901 largely from native Canadians. The immigrant population of all Canada grew only 16,851 in that period, while it grew by 887,461 in the next decade.

Now an external growth as above described (*i.e.*, a growth by spreading from counties of birth to other counties), is a different phenomenon from internal growth (*i.e.*, indigenous growth). The former can continue only so long as new parts are opening up and its extent depends upon whether the new parts have the same population capacity as the old. Clearly under past conditions they have not, as is shown by the fact that the newer parts become saturated sooner than the old. This is partly due to an increasing tendency to urbanization and is consequently a matter of present day psychology rather than of inferiority of the new parts. This psychology would probably not retard growth in the country as a whole if the towns were uniformly distributed, but as a matter of fact they tend to be concentrated in the older sections. It would seem, therefore, that the capacity of the whole country for growth depends upon the capacity of these towns. It would seem also that the capacity of the newer parts for urbanization will largely determine their further growth.

### Certain Conclusions

In a study like the foregoing (of the growth of county populations, the direction of movement and the incidence of immigration), the chief value lies in the detailed presentation of the facts of development rather than in deductions therefrom, however striking, but the following four conclusions of a general nature may be of interest:—

1. After the first main period—say, since early in the nineteenth century—the population of Canada maintained its growth principally by overflowing into new areas.
2. Canadians, on the whole, preferred staying in Canada to leaving the country. But there were periods during which such choice could not be exercised owing to the inaccessibility of the outer areas of Canada or the greater accessibility of areas in the United States. The point of importance is that movement was unavoidable, the direction being governed by circumstances.
3. Immigration made no headway during periods of large outward movement in Canada, though immigrants arrived in large numbers. In other words, when parts of Canada were inaccessible to Canadians they were still more inaccessible to immigrants.
4. Immigration did make headway when new areas (including cities) became available. Coincidentally, Canadians not only in Canada but from the United States were competing for the new areas, the result being over-crowding. By spreading the huge increases of a period like 1901-1911 over, say, 30 years instead of 10, the same growth could have been achieved without over-crowding and confusion.

XVIII. CANADIAN BORN IN CANADA AND THE UNITED STATES, 1851-1931

Year	Canadian-born population in Canada	Increase from beginning of decade	Canadian-born population in U.S.A.	Increase from beginning of decade	Canadian-born population in Canada and U.S.A.	Increase from beginning of decade
1851.....	1,976,297 <sup>1</sup>	570,687	147,711	102,259	2,124,008	672,946
1861.....	2,546,984 <sup>1</sup>	550,698	249,970	243,494	2,796,054	794,192
1871.....	3,097,682	624,144	493,464	223,693	3,591,146	847,837
1881.....	3,721,826	467,542	717,157	263,781	4,438,983	731,323
1891.....	4,189,368	482,447	980,938	198,984	5,170,306	681,431
1901.....	4,671,815	947,867	1,179,922	24,715	5,851,737	972,582

1931.....	8,069,261	-	1,278,421	-	9,347,682	-

<sup>1</sup>There are probably 100,000 persons, largely Indians in Manitoba and the Northwest Territories, who are not represented in this figure.

XIX. MEAN (TOTAL) POPULATION AND INCREASE IN CANADIAN BORN IN CANADA AND THE UNITED STATES, 1851-1931

Decade	Mean <sup>1</sup> population of Canada	Increase in Canadian born in Canada and U.S.A.	Canadian-born increase as p.c. of mean population	Allowance for deaths of immigrants <sup>2</sup>	Estimated natural increase <sup>3</sup> as p.c. of mean population
1851-1861.....	2,805,000	672,946	24.0	-2.0	22.0
1861-1871.....	3,415,800	794,192	23.3	-1.9	21.0
1871-1881.....	3,994,300	847,837	21.2	-1.5	20.0
1881-1891.....	4,572,000	731,323	16.0	-1.4	15.0
1891-1901.....	5,095,000	681,431	13.4	-1.3	12.0
1901-1911.....	6,221,600	972,582	15.6	-1.7	14.0
1911-1921.....	7,958,400	1,132,819	14.2	-2.2	12.0
1921-1931.....	9,549,500	1,390,544	14.6	-2.2	12.0

<sup>1</sup>Geometric.

<sup>2</sup>The estimated deaths of immigrants are shown in Statement XX.

<sup>3</sup>The rates in the last column from the beginning of the present century, particularly the rate of 1911-21, are believed to be too low on the ground that Canadian born probably emigrated in considerable numbers to other countries as well as to the United States. It is doubtful if they did so in appreciable numbers before the beginning of the century. However that may be, the rates throughout are low rather than high. The round numbers used in the last column are intended as a more or less arbitrary correction. The yearly natural increase around 1921 was probably as high as 16 per thousand. It is improbable that the 10-year rate sank below 15 p.c. at any time in the century. If this is so, the emigration of Canadian born to countries other than the United States must have been quite large in the decade. The high death rate due to the War and the influenza epidemic was not sufficient to explain the low rate of 1911-21. The emigration to other countries than the United States would be largely explained on the ground that children born in Canada of immigrants accompanied their parents when the latter left Canada.

XX. ESTIMATED IMMIGRANT DEATHS IN CANADA, 1851-1931

Decade	Number
1851-1861.....	56,037
1861-1871.....	63,549
1871-1881.....	59,725
1881-1891.....	62,309
1891-1901.....	67,111
1901-1911.....	105,360
1911-1921.....	176,170
1921-1931.....	212,430
Total.....	802,691

## XXI. SUMMARY OF INFORMATION FOR THE COUNTIES OF CANADA, 1851-1931

Item	1851-61	1861-71	1871-81	1881-91	1891-1901	1901-11	1911-21	1921-31
Counties in Eastern Canada increasing over 20 p.c. of Population at beginning of decade.....	1,532,764	893,249	1,044,619	659,081	542,971	1,282,107	1,956,556	2,467,082

Immigrant population at beginning of decade.....	460,000 <sup>1</sup>	682,649	591,575	602,984	643,871	699,500	1,586,961	1,955,725
Increase in decade.....	220,000 <sup>1</sup>	-91,074	11,409	40,887	55,629	887,461	368,775	351,800
Arrivals in decade (intending settlers).....	203,743	178,814	341,955	886,177	321,302	1,847,651	1,728,921	1,509,136
Native population at beginning of decade.....	1,976,297 <sup>1</sup>	2,546,984	3,097,682	3,721,826	4,189,368	4,671,815	5,619,682	6,832,224
Increase in decade.....	570,687 <sup>1</sup>	650,698	624,144	467,542	482,447	947,867	1,212,531	1,237,037
Per cent native increase on total population at beginning of decade.....	23.4	17.1	16.9	10.8	10.0	17.6	16.8	14.1
Per cent increase of mean population <sup>2</sup> .....	20.1	15.9	15.6	10.2	9.5	15.1	15.2	12.9

<sup>1</sup>Estimated. The increase in Upper and Lower Canada was 192,278.

<sup>2</sup>Mainly to allow for the fact that incoming immigrants were partly responsible for the native increase in the decade.

<sup>3</sup>It will be noticed that Manitoba, British Columbia and the Northwest Territories are only partially covered in 1851 and 1861. It is probable that these areas contained 100,000 persons, including Indians, in these two decades, who are not represented in these figures.

## (2) CHRONOLOGICAL SUMMARY OF POPULATION GROWTH IN CANADA, WITH SOURCES OF INFORMATION, 1605-1931

In 1871, on the occasion of the First Census of the Dominion, a chronological statement relating to all previous censuses and estimates of population for the areas included in the Dominion was prepared under the direction of Mr. J. C. Taché, Chief Census Officer, and was published as Volume IV of the Census Report.

The statement, published in 1871, was doubtless as complete as it was possible to make it at the time, and it has proved of very great assistance for purposes of reference, to students and others. The establishment, however, of the Canadian Archives by Act of Parliament of 1871, with the consequent assembling of further documents relating to the census, resulted in the addition of some two hundred and fifty-one complete or important records of population, and also in the revision of many of the materials contained in Volume IV of the Census of 1871. It has been thought desirable accordingly to compile the present revised and extended list in the light of the more complete materials available at the present time.

It is the intention of the Dominion Bureau of Statistics, at a later date, to publish an historical volume which will contain detailed tables of all the Canadian censuses beginning with the foundation of Port Royal in 1605 and Quebec in 1608, with a critique as to the accuracy of the various statements and estimates.

In the present list references have been added to include censuses of St. Pierre et Miquelon, Detroit and the lower Mississippi during the eighteenth century. The list also includes the censuses and estimates of population of Newfoundland.

The population of New France given for the years 1608 to 1631 is a copy of tables taken from "A travers les Régistres" de l'Abbé Cyprien Tanguay, Librairie St. Joseph, 1886, and includes the number of persons who wintered in Quebec in those years. These statistics were calculated from each year's arrivals, departures, marriages, births and deaths found in the memoirs and works of Champlain, Leclercq and Sagard, and in Les Relations and the Régistres.

1605—Port Royal founded.—44 settlers surviving of the 79 persons who had wintered on Ile Sainte-Croix during the preceding winter. (Champlain, Edition Laverdière, Tome III, pages 41, 42 and 78.)

1608—Quebec founded.—28 settlers wintered, including Champlain. (Champlain, Edition Laverdière, Tome III, page 173.)

1609—New France.—Population: 8. (Of the decrease 17 were due to deaths during the winter.)

1610—New France.—Population: 18.

1611—New France.—Population: 17.

1612—New France.—Population: 16.

1613—New France.—Population: 47.

1613—St. John's, Newfoundland, founded.—62 persons wintered who had been left by Whitburn. (The British Empire in America, Vol. I, page 7.)

In the first relation of the Jésuites (Relation de 1611, Vol. 1, page 15, Edition Canadienne), will be found an estimate of the Indian population of the territories now constituting Nova Scotia, New Brunswick, the State of Maine, part of others of the New England States and the lower Saint-Lawrence, as follows:—

All the Souriquois.....	3,000 to 3,500
The Eteminquois as far as Pentagoet.....	2,500
From Pentagoet to Kinibegu' and Chouacoet.....	3,000
The Montagnets (a tribe of the Algie race inhabiting the highlands of New England).....	1,000
	<hr/>
	10,000

1614—New France.—Population: 47.

1615—New France.—Population: 51.

1616—New France.—Population: 60.

1617—New France.—Population: 64.

1618—New France.—Population: 66.

1619—New France.—Population: 77.

1620—New France.—Population: 60.

1621—New France.—Population: 79.

1622—New France.—Population: 66.

1622—Newfoundland.—32 persons wintered with Captain Wynn. (The British Empire in America, Vol. I, pages 10 and 11.)

- 1623—New France.—Population: 66.
- 1624—New France.—Population: 62.
- 1626—New France.—Population: 81.
- 1627—New France.—Population: 55.
- 1628—New France.—Population: 76.
- 1629—New France.—Before the taking of Quebec the population comprised: inhabitants 23; interpreters 11; clerks 14; missionaries 10; domestics 7; French arrived from the Huron Country 20; total 85.  
After the taking of Quebec, 116 persons wintered, 90 of these being English belonging to Kertk's Expedition.
- 1630—New France.—Population: 100. (The decrease is due to the departure of 2 French and the death of 14 English.)
- 1631—New France.—Population: 101.
- 1639—New France.—Population as follows: married men 64; married women 64; widowers 1; widows 4; single males 93; single females 48; total 274.  
Note.—Of that population 3 married women, 30 boys and 24 girls were Canadian-born. (B. Sulte, M.S.R.C., *Histoire des Canadiens Français*, Vol. II, page 92.)
- 1640—New France.—Population as follows: 64 families, 158 men; 116 women; 29 Jésuites, 53 soldats; total population 359. (B. Sulte, M.S.R.C., *Proceedings and Transactions of the Royal Society of Canada*, Vol. of 1896, page 8.)
- 1641—New France.—Sedentary population 240, at the end of the year. (Dollier, Edition 1868, page 31.—*Relation de 1642*, page 36.)  
Note.—This estimate is evidently too low.
- 1650—New France.—Estimate of population: 675. (B. Sulte, M.S.R.C., *Proceedings and Transactions of the Royal Society of Canada*, Vol. of 1905-11, page 112.)
- 1653—New France.—Population: about 2,000. (*Mère Marie de l'Incarnation.—Lettres Historiques XLVIII.*)
- 1654—Newfoundland.—Estimate of population: 350 families, approximately 1,750 persons. (*Newfoundland the Oldest British Colony*, page 428—Hatton and Harvey, 1883.)
- 1663—New France.—Population: 2,500, of whom 800 were in Quebec. The public debt was about 200,000 livres; the Customs tariff was raised to 10 p.c. *ad valorem* on all merchandise. (Leclercq, Edition 1691, Vol. II, pages 4 and 66.—Boucher, *Edition Canadienne*, page 61.)
- 1666—New France.—Census of Population: 3,215. (Can. Arch. Series G. 1 Vol. 460-1.—*Archives des Colonies. Series B. Vol. 1, pages 136-7.*—Vol. IV, Census 1871, pages 2-4.)
- 1667—New France.—Census of Population and Agriculture: 3,918. (Can. Arch. Series G. 1 Vol. 460-2.—*Archives des Colonies. Series B. Vol. 1, page 138.*—Vol. IV, Census 1871, pages 6-8.)  
Note.—This census was taken during the months of February and March by Jean Talon, Intendant, who went personally from door to door to enumerate the people. (Can. Arch. Corr. Gen. Vol. 2, Fol. 505.)
- 1668—New France.—Census of Population and Agriculture: 6,582.  
Note.—Vol. IV, Census 1871, does not include 300 soldiers who settled in Canada. (Can. Arch. Series G. 1 Vol. 460-4.—*Archives des Colonies. Series B. Vol. 1, page 139.*—Vol. IV, Census 1871, page xvi.—*Archives de Paris.*) This census was taken personally by Bouteroue. (Can. Arch. Corr. Gen. Vol. 3, Fol. 146.)
- 1671—Plaisance, Newfoundland.—French population: 73. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1671—Acadia.—Census of Population and Agriculture: 392.  
Note.—Vol. IV, Census 1871, gives a population of 441 due to a difference of 42 in Port Royal, (44 persons were enumerated twice), and 7 in Cap Neige. (Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 10.)
- 1673—New France.—Population: 6,705. (Can. Arch., *Archives des Colonies. Series B. Vol. 6.*)
- 1673—Plaisance, Newfoundland.—French population: 64. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1675—New France.—Census of Population: 7,832. (Can. Arch., *Archives des Colonies. Series B. Vol. 7.*)
- 1676—New France.—Census of Population: 8,515. (Can. Arch., *Archives des Colonies. Series B. Vol. 7, page 87.*)
- 1679—New France.—Census of Population and Agriculture: 9,400. (*Collection des Documents de la Nouvelle France*, Vol. 1, page 274.—Vol. IV, Census 1871, page 10.)  
Note.—This census was taken personally by Duchesneau, Intendant. (Can. Arch. Corr. Gen. Vol. 5, Fol. 156-157.)

- 1679—Acadia.—Population: 515. (Collection des Documents de la Nouvelle France, Vol. I, page 274.)
- 1680—New France.—Census of Population and Agriculture: white population 9,719; Indians segregated in villages, 960. (Can. Arch. Corr. Gen. Vol. 5, Fol. 156-157.)
- 1680—Newfoundland.—Population: 2,181. (Newfoundland the Oldest British Colony, page 428—Hatton and Harvey, 1883.)
- 1681—New France.—Census of Population and Agriculture: 9,677. (Can. Arch. Series G. 1 Vol. 460-3.—Vol. IV, Census 1871, pages 11-14.)  
 Note.—This census was taken personally by Duchesneau, Intendant. (Can. Arch. Corr. Gen. Fol. 270, 291.—B. Sulte, M.S.R.C., Histoire des Canadiens Français.)
- 1683—New France.—Census of Population and Agriculture: white population 10,274; settled Indians 1,512.  
 Note.—Vol. IV, Census 1871, does not include 23 soldiers. The Collection Moreau-St. Mery gives a population of 10,244. (Can. Arch. Series G. 1 Vol. 460-4.—Collection des Documents de la Nouvelle France.—Collection Moreau-St. Mery. Series F. 5A. Vol. F. 128, page 4.—Vol. IV, Census 1871, page xvi.)
- 1683—Port Royal (Acadie).—Estimate of population: 800. (Can. Arch. Collection Moreau-St. Mery. Series F. 5 A. Vol. F. 128, page 4.)
- 1685—New France.—Census of Population and Agriculture: white population, 10,977; settled Indians 1,538.  
 Note.—Vol. IV, Census 1871, does not include 179 members of the clergy and of religious institutions. There is also a difference of 73 in the male column. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, pages 16-17.)
- 1686—New France.—Census of Population and Agriculture: white population 11,130; settled Indians 1,436. (Collection des Documents de la Nouvelle France, page 389.)
- 1686—Acadia.—Census of Population and Agriculture: 894.  
 Note.—Vol. IV, Census 1871, gives 9 less population due to differences in Port Royal and Rivière St. Jean. (Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 20.—Bulletin des Recherches Historiques, nov. et déc. 1932.)
- 1687—Newfoundland.—Census of French Population and Agriculture: 663, including 488 servants and sailors. (Can. Arch. Series G. 1 Vol. 467-1.—Vol. IV, Census 1871, page 20.)
- 1688—New France.—Census of Population and Agriculture: white population 10,523; settled Indians 1,259.  
 Note.—Vol. IV, Census 1871, does not include 220 members of the clergy and of religious institutions. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, pages 21-23.)
- 1689—Acadia.—Census of Population: 813. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1691—Newfoundland.—Resident French population: 155. (Can. Arch. Series G. 1 Vol. 467-1.—Vol. IV, Census 1871, page 26.)
- 1692—Newfoundland.—English settlements: 377 men. (Vol. IV, Census 1871, page 26.) The sailors of the numerous fishing vessels and merchant ships which at this period frequented the island are not included in the statements relating to the population of Newfoundland. In 1692 there were 110 English vessels. The fact of there being a resident and a floating population explains the variations from year to year of the figures furnished by these documents.
- 1692—New France.—Census of Population and Agriculture: white population 11,075; settled Indians 1,356. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, pages 27-29.)
- 1693—Acadia.—Census of Population and Agriculture: 1,018.  
 Note.—Vol. IV, Census 1871, gives 9 less population due to differences in Les Mines, Pentagoet and Passamaquoddy. (Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 32.)
- 1693—Newfoundland.—Census of French Population: 350 including 205 domestics. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1694—Newfoundland.—Census of French Population and Agriculture: 145 not including domestics. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1695—St. John River (New Brunswick).—Census of Population and Agriculture: 49. (Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 38.)
- 1695—New France.—Census of Population and Agriculture: white population 12,786; settled Indians 853.  
 Note.—Fowls were enumerated for the first time. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, pages 33-35.)

- 1696—Newfoundland.—Census of English Population and Agriculture: 2,321. (Can. Arch. Series G. 1 Vol. 467-1.—De la Potherie, Edition 1753, Vol. I, page 53.—Vol. IV, Census 1871, page 38.)
- 1698—New France.—Census of Population and Agriculture: white population 13,821; settled Indians 1,540.  
Note.—Vol. IV, Census 1871, gives 6 less population due to a difference in the female population of l'Île d'Orléans. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, pages 39-41.)
- 1698—Plaisance and Vicinity, Newfoundland.—Census of Population and Agriculture: 199.  
Note.—Vol. IV, Census 1871, gives a population of 188. (Can. Arch. Series G. 1 Vol. 467-1.—Vol. IV, Census 1871, page 44.)
- 1698—Newfoundland.—British population, 2,640 as follows: men 284, women 176, children 286, servants, male and female, including sailors, 1,894.  
Note.—The British Empire in America, Vol. 1, page 14, gives an estimate of only 1,500. (Can. Arch. Vol. 921, Edgerton's Manuscripts.—Newfoundland the Oldest British Colony, page 429—Hatton and Harvey, 1883.—The British Empire in America, Vol. I, page 14.)
- 1698—Acadia (Port Royal, Beaubassin, Rivière St. Jean).—Census of Population and Agriculture: 814.  
Note.—Vol. IV, Census 1871, gives 25 less population. (Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 44.)
- 1699—Newfoundland.—Population: 3,171. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1699—Mont-Louis.—Census of the Seigneurie of Mont-Louis: 53. (Can. Arch. Series G. 1 Vol. 461.)
- 1700—Newfoundland.—Population: 3,773. (Newfoundland Report 1793, Appendix 6, page 429.—Edgerton's Manuscripts, Vol. 921.)
- 1700—Mont-Louis.—Census of the Seigneurie of Mont-Louis: 91. (Can. Arch. Series G. 1 Vol. 461.)
- 1700—Acadia, Port Royal.—Census of Population and Agriculture: 525. (Can. Arch. Series G. 1 Vol. 466-1, page 146.)
- 1700—Acadia, Beaubassin (Chignecto).—Census of Population and Agriculture: 197. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1700—New France.—Estimate of population: 15,000. (Bouchette—The British Dominions in North America, Vol. I, page 347.)
- 1701—Acadia (North part of the Peninsula).—Census of Population and Agriculture: 1,134. (Can. Arch. Series G. 1 Vol. 466-1, page 169.—Vol. IV, Census 1871, page 45.)
- 1701—Plaisance, Newfoundland.—Census of the French sailors engaged by the inhabitants of Plaisance: 318. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1701—Newfoundland.—British population: 3,575, including 2,698 servants, fishermen, etc. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1702—Newfoundland.—Resident French population: 466. (Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1702—Newfoundland.—British population: 2,399, including 1,491 servants, fishermen, etc. (Can. Arch. Vol. 921, Edgerton's Manuscripts.)
- 1703—Acadia (North part of the Peninsula).—Population: 1,242.  
Note.—There is also a mention of 10 to 12 families not enumerated.—Vol. IV, Census 1871, gives a population of 1,244. (Can. Arch. Series G. 1 Vol. 466-1, page 207.—Vol. IV, Census 1871, page 45.)
- 1704—Newfoundland.—Census of French Population: 502. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1705—Newfoundland.—French population: 520. (Vol. IV, Census 1871, page 45.)
- 1705—Newfoundland.—British population: 1,130 not including servants and sailors. (Can. Arch. Vol. 921, Edgerton's Manuscripts.)
- 1706—Newfoundland.—Census of French Population: 623. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1706—New France.—Census of Population and Agriculture: 16,745.  
Note.—Vol. IV, Census 1871, does not include 325 members of the clergy and of religious institutions.—There is also an error in the count of males over 15 years of age. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page 48.)
- 1707—Acadia (Cobequid, Les Mines, Chignecto, Port Royal).—Census of Population and Agriculture: 1,508. (Can. Arch. Series G. 1 Vol. 466-1, pages 216, 222 and 225.)
- 1707—New France.—Census of Population and Agriculture: 17,530.  
Note.—Vol. IV, Census 1871, does not include 345 members of the clergy and of religious institutions. There is also an error in the count of males over and under 50 years of age. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)

- 1708—Acadia (Cap Sable, Port Razoir [Port Roseway or Shelburne Harbour], Port de la Hève [Lahave]).—Census of Cap Sable, 7 families, population 51; Port Razoir, 3 families, population 15; Port de la Hève, 8 families, population 42. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1708—Acadia (East Coast).—Census of Indians: 1,301. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1710—Plaisance, Newfoundland.—Census of French Population: sedentary 260, fishermen 354, total 614. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1711—Plaisance, Newfoundland.—Census of French Population: sedentary 235, fishermen 406, total 641.  
Note.—Vol. IV, Census 1871, gives a sedentary population of 225, which is evidently small. (Can. Arch. Series G. 1 Vol. 467-1.—Vol. IV, Census 1871, page 48.)
- 1712—New France.—Census of Population and Agriculture: 19,711.  
Note.—Vol. IV, Census 1871, does not include 322 members of the clergy and of religious institutions. There is also an error of 500 in the count of females, married and widowed, together with some errors in the count of young boys and girls. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1713—Havre St. Louis (Ile Royale).—Population: 160. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1713—New France.—Census of Population and Agriculture: 18,469.  
Note.—Vol. IV, Census 1871, shows 350 less, comprising 298 members of the clergy and of religious institutions, together with an error in transcription of 52. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1714—New France.—Census of Population and Agriculture: 20,099.  
Note.—Vol. IV, Census 1871, does not include members of the clergy and of religious institutions comprising 351 persons. There are also errors in the count of the different columns. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1714—Acadia (North part of the Peninsula).—Population: 1,947. (Canada Français 1888, Vol. I, page 155.—Can. Arch. Series G. 1 Vol. 466-1.—Vol. IV, Census 1871, page 49.)  
Note.—The population of 1,773 given in Vol. IV, Census 1871, is incomplete.
- 1714—Acadia.—Estimate of population: 4,000. (Collection des Documents de la Nouvelle France, Vol. 3, page 9.)
- 1714—Newfoundland.—British population: 3,160. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1714—Ile Royale.—Census of Indians: 156. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1715—Acadia, Louisbourg.—Census of Population: 742. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1715—Acadia, Cobequid.—Census of Heads of Families: population: 136. (Canada Français 1888, Vol. I, page 155.)
- 1715—Newfoundland.—British population: 4,049. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1716—New France.—Census of Population and Agriculture: white population 20,903, settled Indians 1,935.  
Note.—Vol. IV, Census 1871, does not include 359 members of the clergy and of religious institutions. There are also differences in the married and widowed columns. (Can. Arch. Series G. 1 Vols. 460-4 and 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1716—Newfoundland.—British population: 3,295. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1716—Ile Royale.—Population: 1,472.  
Note.—It also includes a census of ships, with destination, number of sailors, etc. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1716—Quebec Parish.—Census of Population: 2,436. (Recensement de Québec, Abbé L. Beaudou, Québec, 1887.)  
Note.—The document gives a population of 2,351. The difference is due to a few omissions, such as 50 members of religious institutions.
- 1717—Louisbourg, Pointe La Baleine (Baleine), Escataire (Scatarie).—Resident population: 1,142 (Louisbourg 568, La Baleine 230, Escataire 344). (Can. Arch. Series G. 1 Vol. 467-3.)
- 1717—Ile Royale.—Census of the Acadians immigrated from Acadia: 169. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1717—Port Toulouse (South St. Peters, Cape Breton).—Census of Families: population: 124. (Can. Arch. Series G. 1 Vol. 467-3.)

- 1717—Port Dauphine (South gut of Ste. Anne, Cape Breton).—Population: 197, including officers and soldiers. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1717—L'Indienne (Lingan, Cape Breton).—Population: 15. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1718—New France.—Census of Population and Agriculture: 23,325.  
Note.—Vol. IV, Census 1871, does not include 342 members of the clergy and of religious institutions. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xx.—Archives de Paris.)
- 1719—New France.—Census of Population and Agriculture: 22,503.  
Note.—This Census, taken in November 1719, is more complete than the one in Vol. IV, Census 1871, which was made in the month of April, 1719. (Can. Arch. Series G. 1 Vols. 461 and 460-4.—Vol. IV, Census 1871, page 52.)
- 1719—Port Dauphine (South gut of Ste. Anne, Cape Breton).—Population: 154. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1720—St. John Island (Prince Edward).—Census of Families: 17, estimated population: 100. (Rameau—La France aux Colonies, première partie, page 79.)
- 1720—New France.—Census of Population and Agriculture: 24,594.  
Note.—Vol. IV, Census 1871, does not include 40 members of religious institutions. There is also an error of 20 in the count of females married and an error of 100 in the count of females 15 years of age and over. (Can. Arch. Series G. 1 Vols. 460-4 and 461.—Vol. IV, Census 1871, page 52.)
- 1720—Ile Royale.—Population: 1,740. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1721—New France.—Census of Population and Agriculture: 25,923.  
Note.—Vol. IV, Census 1871, does not include 441 members of the clergy and of religious institutions. There is also an error in the count of males over and under 15 years of age and in other columns. (Can. Arch. Series G. 1 Vols. 460-4 and 461.—Vol. IV, Census 1871, page 53.)
- 1721—Les Louisianes (La Mobile, Les Alibamons).—Census of Population and Agriculture: 659. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1721—Ile Dauphine.—Population: 43. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1722—New France.—Census of Population and Agriculture: 26,589.  
Note.—Vol. IV, Census 1871, does not include 453 members of the clergy and of religious institutions. There is also an error of 600 in the female column. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)
- 1722—Port Toulouse (St. Peters, Cape Breton).—Census of Acadian Families: 13, population: 76. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1722—Les Louisianes.—Population estimated at 2,495 as follows: White 1,745; Negroes 695; Indians 55. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1723—Les Arkansas.—Population: 49. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1723—New France.—Census of Population and Agriculture: 26,999.  
Note.—Vol. IV, Census 1871, does not include 420 members of the clergy and of religious institutions. There is also a difference in the number of males and females. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)
- 1723—Ile Royale.—Population: 2,670. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1724—New France.—Census of Population and Agriculture: 27,159.  
Note.—Vol. IV, Census 1871, does not include 449 members of the clergy and of religious institutions. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)
- 1724—Ile Royale.—Population: 2,243.  
Note.—The document gives a total of 2,251, but 8 widows were registered twice. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1724—Nouvelle Orléans and Village des Allemands.—Census of Population and Agriculture: white population 424; Negroes 387; Indians 17. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1725—Ile Dauphine.—Census of Population and Agriculture: white population 83; Negroes 148; Indians 35. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1725—Batiscan.—Seigneurie de Batiscan. Can. Arch. Series G. 1 Vol. 461 contains a map of the Seigneurie giving the names of the occupiers of land, also showing the boundaries of the land occupied by each "cessionnaire".
- 1726—New France.—Census of Population and Agriculture: 29,859.  
Note.—Vol. IV, Census 1871, does not include 463 members of the clergy and of religious institutions. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)

- 1726—*Ile Royale*.—Census of Families: population: 3,131. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1726—*Les Louisianes*.—Census of Population and Agriculture: White 2,230, Negroes 1,541, Indians 229, total 4,000. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1727—*New France*.—Census of Population and Agriculture: 31,184.  
 Note.—Vol. IV, Census 1871, does not include 456 members of the clergy and of religious institutions. There is also a difference of 15 in the number of males and females. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)  
 The documents in the Can. Arch. (Series G. 1 Vol. 467-3) contain, for the years 1727, 1728 and 1729, complete enumerations of the ships loaded at Quebec, giving destinations, names and number of ships, names of captains, also detailed statement of cargoes, comprising meat, flour, vegetables, wood, fish, fish oil, furs, etc.
- 1727—*Les Louisianes* (part).—Census of Population and Agriculture: White 1,467; Negroes 1,561; Indians 73; total 3,101. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1728—*St. John Island* (Prince Edward).—Population: 336.  
 Note.—Vol. IV, Census 1871, gives a total of 138 for *Havre St. Pierre*, while the Census returns account for 144. (Can. Arch. Series G. 1 Vol. 467-2.—Vol. IV, Census 1871, page 56.)
- 1730—*New France*.—Census of Population and Agriculture: 34,753.  
 Note.—Vol. IV, Census 1871, does not include 436 members of the clergy and of religious institutions. There is also a difference in the number of married men and of single males and females. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)
- 1730—*St. John Island* (Prince Edward).—Population: 325. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1731—*Acadia* (North part of the Peninsula).—Census of Families: 696. (Archives du Séminaire de Québec.)  
 Note.—Rameau—*La France aux Colonies*, page 130—estimated the population at 6,000.
- 1732—*New France*.—Census of Population and Agriculture: 35,417.  
 Note.—Vol. IV, Census 1871, does not include 353 members of the clergy and of religious institutions. There is also a difference of 100 in the females married. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page xxii.—Archives de Paris.)
- 1732—*Acadia* (North part of the Peninsula).—Census of Families: 854. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1732—*Les Louisianes, Les Illinois, etc.*—Census of Population and Agriculture: 2,093 as follows: White 1,453; Negroes 498; Indians 142. (Can. Arch. Series G. 1 Vol. 464-2.)
- 1733—*River St. John* (New Brunswick).—Population: 111. (Vol. IV, Census 1871, page 56.)
- 1734—*New France*.—Census of Population and Agriculture: 37,716. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page 57.)
- 1734—*Ile Royale*.—Population: sedentary 1,744, fishermen 1,644, total 3,388. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1734—*St. John Island* (Prince Edward).—Census of Population and Agriculture: 572. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1735—*Micmac Indians*.—Statement of male population of the *Micmac Indians* able to bear arms; *St. John Island* 131, *Acadia* 251, *New Brunswick* 229. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1735—*St. John Island* (Prince Edward).—Census of Population and Agriculture: 563. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1736—*New France*.—Census of Population and Agriculture: 39,586.  
 Note.—Vol. IV, Census 1871, does not include 435 members of the clergy and of religious institutions. There is also a difference of 2 in the males married and a difference in the single males and females. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page 60.)  
 A memoir deposited among the Archives of Paris gives a census of the Indian population in the territories now comprised in the following geographical divisions:—  
 In *British America*.—Part of the Territory drained by the river *St. John*, in *New Brunswick*; the Province of *Quebec*, from *Quebec* westward; the Province of *Ontario*; the Province of *Manitoba* and part of the *Northwest Territories*.  
 In the *United States*.—The States of *New York*, *Pennsylvania*, *Ohio*, *Indiana*, *Michigan*, *Wisconsin*, *Illinois*, *Iowa*, *Minnesota*, *Nebraska*, *Kansas*, *Missouri*, *Arkansas*, *Kentucky*, *Tennessee*, *Western Virginia*, and part of *Virginia* and *Maryland*, with the *Territory of Dakota*.

- The Indians of this vast extent of territory were estimated to number 15,875 warriors, which supposes a total population of about 79,375.
- 1737—New France.—Census of Population and Agriculture: 40,223.  
 Note.—The population given in Vol. IV, Census 1871, is 253 less. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page 60.)
- 1737—Ile Royale.—Sedentary population: 2,125; fishermen 1,913; total 4,038.  
 Note.—This census also contains an enumeration of the number of fishing vessels, amount of catch, etc. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1737—Acadia (North part of the Peninsula).—French population: 6,958. (Can. Arch. Series G. 1 Vol. 466-1.)
- 1739—New France.—Census of Population and Agriculture: 43,362. The population given in Vol. IV, Census 1871, is 42,701 while the Can. Arch. Series G. 1 Vol. 461 gives a population of 43,362. The latter appears to be the correct population. (Can. Arch. Series G. 1 Vol. 461.—Vol. IV, Census 1871, page 60.)
- 1739—Parish of Ekoupay (Rivière St. Jean).—Population: 116. (Can. Arch. Series G. 1 Vol. 466.)
- 1741—Newfoundland.—English population: 6,000. (The British Empire in America, Vol. I, page 14.)
- 1741—Montreal.—Census of Montreal Dwellings and Occupants by La Compagnie des Indes: 506 dwellings. (Proceedings and Transactions of the Royal Society of Canada, 1921, Section one, page 1. "Un recensement inédit de Montréal en 1741 par E. Z. Massicotte; M.S.R.C.")
- 1741—Louisbourg.—Census of Land Owners and Land Occupied. The land owners numbered 46. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1744—Quebec City and Suburbs.—Census of Population: city 4,748, suburbs 291. (Can. Arch. Manuscript Room.—Arch. de la Basilique de Québec.)
- 1748—Acadia.—Estimate of the French population: 12,500. (Can. Arch. Vol. 651-A.—Dr. Brown's Manuscripts.—Canada Français 1888, page 44.)
- 1749—Nova Scotia.—British Immigrants brought by Governor Cornwallis to Nova Scotia: 2,544 persons, thus divided: married—men 509; women 509; unmarried—men 660; women 3; children—boys 228; girls 216; servants—men 277; women 142. (Vol. IV, Census 1871, page xxiv.—Halifax Archives.)
- 1749—Newfoundland.—English population: 6,079. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1749—Acadia.—Estimated French population of the whole Peninsula: 13,000.  
 Acadian Mainland (New Brunswick).—Estimated French population: 1,000.  
 St. John Island (Prince Edward).—Estimated French population: 1,000. (See note under 1755.)
- 1749—Ile Royale.—Census of Population: 1,980. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1750—Newfoundland.—British population: 6,900. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1750—Detroit.—Population: 483. (Can. Arch. Series G. 1 Vol. 461.)
- 1751—Newfoundland.—British population: 4,588. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1751—St. John Island (Prince Edward).—Census of Population and Agriculture: 1,572. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1752—Nova Scotia.—British and German population: 4,203, thus divided: above 16 years—men 574; women 607; children—boys 1,899; girls 1,123. (Vol. IV, Census 1871, page xxxiv.—Halifax Archives.)
- 1752—Acadian Peninsula.—Estimated French population: 9,300.
- 1752—Acadian Mainland (New Brunswick).—Estimated French population: 2,200. (See note under 1755.)
- 1752—Acadia (Chignecto).—Census of the Acadians: population: 2,916 comprising 1,473 sedentary and 1,443 refugees. (Can. Arch. Series G. 1 Vols. 466-1 and 467-3.)
- 1752—Ile Royale (not including Louisbourg).—Census of Population and Agriculture: 1,754. (Can. Arch. Series G. 1 Vols. 466-1 and 467-2.—Arch. Report 1905, Vol. II, Fol. F. 319.)
- 1752—Louisbourg.—Population: 4,174, including 1,530 soldiers and officers. (Université Laval, Québec, Qué., Surlaville Papers.)

- 1752—St. John Island (Prince Edward).—Census of Population and Agriculture: 2,124. (Can. Arch. Series G. 1 Vols. 466-1, and 467-2.—Arch. Report 1905, Vol. II, Fol. F. 319.)
- 1753—Newfoundland.—Population estimated at 13,000. (Vol. IV, Census 1871, page xxxiv.—Halifax Archives.)
- 1753—Ile Royale (not including Louisbourg).—Census of Population and Agriculture: 1,467. (Can. Arch. Series G. 1 Vol. 467-3.)
- 1753—St. John Island (Prince Edward).—Census of Population and Agriculture: 2,641. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1754—New France.—Population: 55,009. (Vol. IV, Census 1871, page 61.—Halifax Archives.)
- 1755—Quebec City and District.—Population: 39,873. (Can. Arch. Series Q. Vol. 1, page 14.)

1755—Acadia.—Estimated French population of the Peninsula.	8,200	
Ile Royale.—Estimated French population.....	3,800	Before the
Acadian Mainland (New Brunswick).—Estimated French population.....	4,300	Proscription of
St. John Island (Prince Edward).—Estimated French population.....	3,000	September
Acadia.—Estimated French population of the Peninsula.	1,200	
Ile Royale.—Estimated French population.....	3,800	After the
Acadian Mainland (New Brunswick).—Estimated French population.....	4,800	Proscription
St. John Island (Prince Edward).—Estimated French population.....	3,500	

Note.—The above estimates were calculated from Memoires, Reports, etc., of several authors.

- 1755—Nova Scotia.—British population estimated at 5,000. (Haliburton—History of Nova Scotia, Vol. II, page 274.)
- 1755—Acadia North.—Census of Families: 868. (Can. Arch. Vol. 651-A, Dr. Brown's Manuscripts.)
- 1755—Acadians.—A Memoir by l'Abbé de l'Ile-Dieu places the population at 14,183. (Can. Arch. Series G. 1 Vol. 467-2.)
- 1756—Nova Scotia.—Census of Acadian Families: 1,105. (Can. Arch. Vol. 651-A, Dr. Brown's Manuscripts.)
- 1758—New France.—Population: 72,000 to 73,000. (Rameau—La France aux Colonies, page 127, deuxième partie.) There is also an "estimé" of 80,000 of whom 15,000 were fit to bear arms, in Consideration sur l'Etat Présent du Canada, Edition Canadienne, page 2, but this "estimé" is much too large.
- 1758—Nova Scotia Peninsula.—Estimated French population: 1,200.
- 1758—Ile Royale.—Estimated French population after the capture of Louisbourg, and shipment of settlers to France: 700.
- 1758—Acadian Mainland (New Brunswick).—Estimated French population: 2,300.
- 1758—St. John Island (Prince Edward).—Estimated French population: 6,500. (See note under 1755.)
- 1759—New France.—Population: 82,000. (Estimate by Dussieux—Le Canada sous la Domination Française, page 213. This estimate is too large.)
- 1760—New France.—Population: 70,000. Estimé by M. De Vaudreuil in a letter to the Minister. (Rameau—La France aux Colonies, deuxième partie, page 306—note 10.)
- 1760—Trois-Rivières District.—Census of Population: 5,821. (Can. Arch. Series M. Vol. 893.—Report 1918, page 158.—Bibliothèque St. Sulpice, Fond Société Historique de Montréal.)
- 1760—Montreal District.—Census of Population and Agriculture: white population 27,962; Indians 886. (Can. Arch. Series M. Vol. 375, pages 222-238.)
- 1761—Quebec District.—Census of Population and Agriculture: 30,258. (Can. Arch. Series M. Vols. 375 and 894, and Series Q. Vol. 1, page 14.—Shelburn Manuscript Vol. 64, page 50.)
- 1762—Quebec District (not complete).—Census of Population and Agriculture: 24,298.
- Note.—Quebec city and other parts are missing. (Can. Arch. Series M. Vol. 894.—Archives de Québec, Rapport 1925-6.)

1762—Trois-Rivières District.—Census of Population and Agriculture: 6,492. This census was compiled by adding the natural increase and the new arrivals to the Census of 1760 and deducting the deaths and departures.

Note.—In addition to the above there were Indian villages, Becancour, St-François and Pointe-du-Lac, with about 500 Indians. There were also 45 Acadian families comprising 200 persons. (Can. Arch. Series M. 375 and 893.—Haldimand Papers, Series B. Vol. 21-1, page 37.—Report 1918, page 158.—See also Military Government of Canada, etc. "Trois-Rivières 1760-1764".)

1762—Nova Scotia.—British population: 8,104. (Vol. IV, Census 1871, page 61.—Halifax Archives.)

1762—Roll of the inhabitants of Canada, Ile Royale and Ile St. Jean who returned to France in 1762. (Can. Arch. Series G. 1 Vol. 482.)

1762—Acadians.—List of Acadians living in France in 1762 containing 1,084 names. (Can. Arch. Series G. 1 Vol. 482.)

1763—Montreal District.—Population: 30,365. (Can. Arch. Haldimand Papers, Series B. Vol. 7, page 87.)

1763—Quebec and Montreal.—Census of Families: Quebec 4,727, Montreal 5,302, total families 10,029. (Can. Arch. Shelburn Manuscript, Vol. 64, page 176.)

1763—Trois-Rivières District.—Census of Population and Agriculture: 6,816. (Can. Arch. Haldimand Papers, Series B. Vol. 7, pages 81-85.)

1763—Nova Scotia.—British population estimated at 9,000. (Can. Arch. Series M. Vol. 460, page 80, Nova Scotia Papers.—Vol. IV, Census 1871, page 62.—Halifax Archives.)

1763—Newfoundland.—Population 13,112. (Newfoundland, 1878, page 365.—Tocque—Newfoundland As It Was and As It Is, page 375.—Anspach—Newfoundland, page 184.)

1763—Nova Scotia Peninsula.—Estimated French population: 1,200.

Cape Breton.—Estimated French population: 780.

Nova Scotia Mainland (New Brunswick).—Estimated French population: 4,000.

St. John Island (Prince Edward).—Estimated French population: 3,500. (See note under 1755.)

In the London Archives (1763) is a memorandum by Sir William Johnson containing an estimate of the number of Indian warriors frequenting the neighbourhood of both banks of the St. Lawrence from Quebec westward; of both banks of the Ottawa river and of both sides of lakes Ontario, Erie, Huron, Michigan and Superior, a portion of the Central and Western States and of the North Western Prairies, under the four following designations:—

Six Nation Confederacy.....	2,230 warriors
Indians of Canada in alliance with the Six Nations.....	630 "
Indians of Ohio.....	1,100 "
Ottawa Confederacy.....	3,220 "
Miamis or Twightwees.....	800 "
Chipeweighs, etc.....	4,000 "
(exclusive of the Sioux and Illinois). In all.....	11,980 "

which supposes a population of about 59,900 souls. A serious error of addition in the memorandum has been corrected in this statement.

1763—Port Royal.—Number of Acadian heads of families: 25, population: 92. (Can. Arch. Series G. 1 Vol. 466-1, page 299.)

1763—Detroit.—Estimated number of families: 100. (Can. Arch. Series C.O. 5 Vol. 43, page 15.)

1763—Michillimakinac.—Estimated number of families: 60. (Can. Arch. Series C.O. 5 Vol. 43, page 15.)

1763—Roll of the inhabitants of Canada, Ile Royale and Ile St. Jean who returned to France: 1,635. (Can. Arch. Series G. 1 Vol. 483.)

1764—Nova Scotia.—Estimated population: 12,998.

Note.—This statement of population contains only a portion of the Acadians. (Haliburton—History of Nova Scotia, Vol. II, page 275.—Vol. IV, Census 1871, page 62.—Halifax Archives.)

1764—Newfoundland.—British population 15,981. (Newfoundland Report 1793, Appendix 6.)

1764—Montreal.—Protestant heads of families: 56. (Can. Arch. Series Q. Vol. 2, page 335; Series M. Vol. 96, page 4.)

- 1764—Nova Scotia.—Acadian families: 405; population: 1,762. (Can. Arch. Series M. Vol. 461, pages 136-137.)  
 Note.—Louvrière—La Tragédie d'un Peuple, page 329, places the Acadian population of Nova Scotia at 2,212 divided as follows: Halifax 1,056; Fort Edward 227; Annapolis 91; Fort Cumberland 338 and Canso 150.
- 1764—Quebec City and District.—Protestant heads of families: 144. (Can. Arch. Series Q. Vol. 2, page 332.—Bulletin Recherches Historiques déc. 1932.)
- 1765—Newfoundland.—British population: 15,484. (Newfoundland Report 1793, Appendix 6.)
- 1765—Canada.—Census of Population and Agriculture: 69,810. (Vol. IV, Census 1871, pages 64-68.)
- 1765—Nova Scotia Peninsula.—Estimated French population: 2,300.  
 Cape Breton.—Estimated French population: 1,000.  
 Acadian Mainland (New Brunswick).—Estimated French population: 6,250.  
 St. John Island (Prince Edward).—Estimated French population: 800. (See note under 1755.)
- 1765—Nova Scotia.—British and German population: 9,789. (Vol. IV, Census 1871, page xxxviii.—Halifax Archives.)
- 1765—Detroit.—French population: 600. (Can. Arch. 73 H. Acts of the Privy Councils.—Col. S. Vol. 6.)
- 1765—Montreal District.—Census of Protestant Heads of Families: 136. Enumerated by the Justice of the Peace for Governor Murray. (Can. Arch. Series C.O. 42, Vol. 5 page 28; Series M. Vol. 96, page 5.)
- 1766—Quebec District.—Census of English Population: 69. (Can. Arch. Series M. Vol. 96, page 2.—Quebec Gazette, Aug. 18, 1766.)  
 Note.—Too small when compared with 1764.
- 1766—Nova Scotia.—Census of Population and Agriculture: 9,789. (Can. Arch. Series M. Vol. 466, page 249.)
- 1766—Newfoundland.—British population: 11,843. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1766—Canada.—Number of Indians in Eastern Canada: 25,070. (Can. Arch. Series C.O. 42 Vol. 17, page 165.)
- 1767—Newfoundland.—British population: 12,553. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1767—Nova Scotia.—Census of Population and Agriculture: 11,779. (Can. Arch. Series M. Vol. 468, page 168.—Vol. IV, Census 1871, pages 70-71.)
- 1767—New Brunswick.—Census of Population and Agriculture: 1,196. (Can. Arch. Series M. Vol. 468, page 168.—Vol. IV, Census 1871, page 72.)
- 1767—St. John Island (Prince Edward).—Population: 519. (Can. Arch. Series M. Vol. 468, page 168.—Vol. IV, Census 1871, page 72.)
- 1768—Newfoundland.—British population: 11,595. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1769—Newfoundland.—British population: 10,981. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1770—Newfoundland.—British population: 11,418. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1771—Newfoundland.—British population: 11,457. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1771—Nova Scotia.—Enumeration of the Acadian families: population 1,249. (Can. Arch. Vol. 651-A, Dr. Brown's Manuscripts.)
- 1771—Cape Breton.—French population: families 85, population 439. (Canada Français, 1888, page 83.)
- 1771—Acadian Mainland (New Brunswick).—French population: 4,392. (Vol. IV, Census 1871, page xxxviii.—Halifax Archives.)
- 1771—St. John Island (Prince Edward).—French population: 1,270. (Volume IV, Census 1871, page xxxviii.—Halifax Archives.)
- 1772—Nova Scotia.—Population estimated as follows: British settlers 17,000; Acadians of the Peninsula 1,300 (too low); Acadians of Cape Breton 800 (too low); Negroes 20 and Indians 865. (Can. Arch. Series M. Vol. 486, page 25, Report to the Board of Trade.—Haliburton—History of Nova Scotia, Vol. I, page 250.)

- 1772—Newfoundland.—British population: 11,906. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1772—Louisbourg and District.—Estimate of population: number of heads of English families 55; French families 71. (Can. Arch. Series M. Vol. 484, page 92.)
- 1773—Newfoundland.—British population: 11,576. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1773—Detroit.—Census of Population: 1,367 including 85 slaves. (Can. Arch. Haldimand Papers, Series B. Vol. 122, page 2.)
- 1774—Newfoundland.—British population: 10,949. (Newfoundland Report, 1793, Appendix 6, page 429.)
- 1774—Bonaventure.—Census of Population and Agriculture: 158. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 1.)
- 1775—Canada.—Population estimated at 90,000. (Bouchette—Topographical Description, page 8.)
- 1775—Baie des Chaleurs.—Population estimated at 200. (Can. Arch. Series M. Vol. 486.)
- 1776—St. Pierre et Miquelon.—Census of Population and Agriculture: 649 resident population, 129 fishermen. (Can. Arch. Series G. 1 Vol. 467-1.)
- 1777—Paspebiac.—Census of Population and Agriculture: 75. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 6.)
- 1777—Bonaventure.—Census of Population and Agriculture: 160. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 7.)
- 1777—Gaspé (within the Capes).—Census of Population and Agriculture: 154. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 8.)
- 1777—Gaspé Village.—Census of Population and Agriculture: 3 families, 30 fishermen. (Can. Arch. Haldimand Papers Series B. Vol. 202, page 9.)
- 1777—Percé et Malbaie.—Census of Population and Agriculture: 576. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 16.)
- 1777—Bonaventure Island.—Census of Population and Agriculture: 4 families, 40 servants, fishermen, etc. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 17.)
- 1777—Tracadie, New Brunswick.—Census of Population and Agriculture: 188. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 17.)
- 1778—Machiche.—Statement giving the number of Empire Loyalists: 191. (Can. Arch. Haldimand Papers, Series B. Vol. 166, page 2.)
- 1778—Île Madame.—Estimate of population: 70 families, population 650 including 300 servants, fishermen and sailors. (Can. Arch. Series M. Vol. 494-2, page 98.)
- 1778—Empire Loyalists.—Statement giving the number of Empire Loyalists population as follows: St. Jean 209, Chambly 27, Montreal 208, Pointe Claire 126, Machiche 196, Nouvelle Beauce 87, total 853. (Can. Arch. Haldimand Papers, Series B. Vol. 166, page 9.)
- 1779—Lower Canada.—Census of Loyalists at St. Jean, Chambly, Montreal, Lachine, Sorel, Machiche, Nouvelle Beauce and Quebec: 1,023. (Can. Arch. Haldimand Papers, Series B. Vol. 166, pages 32-44.)
- 1779—Detroit.—Census of Population and Agriculture: 1,684. In addition there were 137 slaves, 332 soldiers and 500 prisoners. (Can. Arch. Haldimand Papers, Series B. Vol. 122, page 318.)
- 1781—Nova Scotia.—British population diminished by counter emigration, estimated at 12,000. (Can. Arch. Vol. 651-A, Memoir of Judge Descamps, Dr. Brown's Manuscripts.)
- 1781—Montreal Island and La Seigneurie de Longueuil.—Census of Heads of Families and Dwellings. (Bibliothèque St. Sulpice, Fond St. Sulpice.)
- 1782—Detroit.—Census of Population and Agriculture: 2,191, including 179 slaves. (Can. Arch. Haldimand Papers, Series B. Vol. 123, pages 260-273.)
- 1782—Detroit District.—Census of Indians: 11,403. (Can. Arch. Series B. Vol. 123, page 352.)
- 1783—Lower Canada.—Census of the Settled Indians: 2,874. (Can. Arch. Haldimand Papers, Series B. Vol. 225-2, page 393.)
- 1783—Empire Loyalists.—Statement giving the number of Empire Loyalists: 3,204. (Can. Arch. Haldimand Papers, Series B. Vol. 166.)
- 1783—Nova Scotia.—Population: 14,000. (Can. Arch. Series M. Vol. 914, page 227, estimate of population by Bishop Inglis.)

- 1784—Nova Scotia.—The population estimated by Morse gives 28,347 English and 14,400 French, a total of 42,747. In the same volume there is another estimate which places the population at, English 27,700; French 14,000; total 41,700. (Can. Arch. Series M: Vol. 500-A-104, page 14). Another estimate of 32,000 British population including an increase of 20,000 by the arrival of United Empire Loyalists is given in Haliburton—History of Nova Scotia, Vol: II, page 275.
- 1784—Windsor and Surroundings, Nova Scotia.—Estimate of population: 800. (Can. Arch. Series M. Vol. 502, page 145.)
- 1784—Shelburne and District, Nova Scotia.—Estimate of population: 10,000. (Can. Arch. Series M. Vol. 502-A-106, page 145.)
- 1784—Halifax and District.—Estimate of population: 1,200. (Can. Arch. Series M.—Vol. 502-A-106, page 145.)
- 1784—Annapolis County, Nova Scotia.—Estimate of population: 4,000. (Can. Arch. Series M. Vol. 502, page 145.)
- 1784—Lower Canada.—Census of the Clergy and of Religious Institutions: 369. (Can. Arch. Haldimand Papers, Series B. Vol. 225-2, page 384.)
- 1784—Paspebiac.—Census of the Loyalists Settled at Paspebiac: 435. (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 207.)
- 1784—Tracadie, New Brunswick.—Census of Heads of Families giving a population of 68: (Can. Arch. Haldimand Papers, Series B. Vol. 202, page 189.)
- 1784—New Brunswick.—Estimated population: 12,000. (Can. Arch. Pamphlet 1495, page 74.)
- 1784—Lower Canada.—Census of Population and Agriculture: 113,012. (Can. Arch. Haldimand Papers, Series B. Vol. 225, pages 382-406 and Series B. Vol. 206.— Vol. IV, Census 1871, page 74.)
- 1784—Upper Canada, River St. Lawrence District.—Statement of population: 3,776. (Can. Arch. Haldimand Papers, Series B. Vol. 168, page 42.) In the Appendices of the House of Assembly of Upper Canada for 1823, it is estimated that in 1784 there were 10,000 United Empire Loyalists in Upper Canada.
- 1784—Lower Canada.—Census of the Empire Loyalists Receiving Rations, Grants, etc.: 5,576. (Can. Arch. Haldimand Papers, Series B. Vol. 222, page 107.)
- 1784—Newfoundland.—British population: 10,701.. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1784—Ile Bizard.—Census of Dwellings: 75 dwellings; 65 barns and stables. (Can. Arch. Haldimand Papers, Series B. Vol. 224-2.)

- 1785—Montreal City.—Census of the English Population: 239. (Can. Arch. Series S. Vol. 21, page 6.)
- 1785—Newfoundland.—British population: 10,244. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1785—Quebec City.—Census of the English Population: 183. (Can. Arch. Series S. Vol. 21, page 6.)
- 1786—Newfoundland.—British population: 11,774. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1787—Prince Edward Island.—Estimate of families: 500. (Can. Arch. Series M. Vol. 406-A-9, page 155.)
- 1787—Newfoundland.—British population: 18,162. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1788—Newfoundland.—British population: 18,209. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1788—British Columbia.—Estimate of the Indian population: 100,000.
- 1789—Newfoundland.—British population: 19,106. (Newfoundland Report 1793, Appendix 6, page 429.)

- 1790—Newfoundland.—British population: 16,835. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1790—Canada.—Population: 161,311. (Vol. IV, Census 1871, pages 75-80.—Archives of the Court House, Montreal.)
- 1790—Lower Canada.—Census of the Ecclesiastical State of Canada: Catholic clergy 382; Protestant clergy 11; Protestant professors 14; Catholic students 350; Protestant students 384. (Can. Arch. Series Q, Vol. 49, page 350.)
- 1790—Nova Scotia.—Population estimated at 30,000 for the Peninsula: Cape Breton, New Brunswick (1784) and the Island of St. John (1770) having been separated. (Haliburton—History of Nova Scotia, Vol. II, page 275.)
- 1790—Nova Scotia (part).—Census of Acadian Families: 781. (Can. Arch. Vol. 651-A, Dr. Brown's Manuscripts.)
- 1790—Shelburne Township.—Population estimated at 4,662. (Can. Arch. Series M. Vol. 914, page 235, estimated by Bishop Inglis.)
- 1791—Newfoundland.—British population: 16,097. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1791—Nova Scotia.—Estimate of the Negro population: 500. (Can. Arch. Report 1794, page 475.)
- 1792—Newfoundland.—British population: 17,160. (Newfoundland Report 1793, Appendix 6, page 429.)
- 1792—Quebec City and District.—Census of the Catholic and Protestant Population: Catholic population 6,153; Protestant population 1,359. (Can. Arch. Manuscript Room.—Archives de la Basilique de Québec.)
- 1793—Cape Breton.—The settled population contained 423 men fit to bear arms, showing a resident population of about 2,000. (Can. Arch. Report 1895, page 44.—Series M. Vol. 429-A-11, page 99.)
- 1793—St. Pierre et Miquelon.—Census of Population: 120 soldiers; 450 fishermen; 950 inhabitants; total 1,520. (Can. Arch. Report 1894, page 485.)
- 1795—Quebec City and Suburbs.—Census of the Catholic and Protestant Population: Catholic population 7,724; Protestant population 1,359. (Can. Arch. Manuscript Room.—Archives de la Basilique de Québec.)
- 1798—St. John Island (Prince Edward).—Census of Population: 4,372. (Campbell—History of Prince Edward Island, page 207.)
- 1798—Quebec City and Suburbs.—Census of the Catholic and Protestant Population:—Catholic population 6,803; Protestant population 1,361. (Can. Arch. Manuscript Room.—Archives de la Basilique de Québec.)
- 1800—New Brunswick.—(Islands in Passamaquoddy Bay).—Census of Population and Agriculture: 241. State of settlements on Moose, Dudley and Frederic Islands in Passamaquoddy Bay. (Can. Arch. Series M. 403 L.-A-12, page 221.)
- 1803—Newcastle District, Upper Canada.—Statement of population: 1,260. (Journal of Assembly of Upper Canada 1839-40, page 175.)
- 1804—Newfoundland.—British population: 20,380. (Newfoundland the Oldest British Colony, page 430—Hatton and Harvey, 1883.)
- 1805—Prince Edward Island.—Census of Population and Agriculture: 6,957. (Walburton—History of Prince Edward Island, 1923, page 293.)
- 1805—Quebec City and Suburbs.—Census of the Catholic and Protestant Population:—Catholic population 7,397; Protestant population 1,465. (Can. Arch. Manuscript Room.—Archives de la Basilique de Québec.)
- 1806—New Brunswick.—Population about 35,000. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1806—Prince Edward Island, so named in 1798-1800.—Population: 9,676. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1806—Upper Canada.—Population estimated at 70,718. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1806—Lower Canada.—Population estimated at 250,000. (Bouchette—The British Dominions in North America, Vol. II, page 235.)

- 1806—Newfoundland.—Population estimated at 26,505. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1806—Cape Breton.—Population estimated at 2,513. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1806—Nova Scotia.—Population estimated at 65,000. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1811—Upper Canada.—Population calculated from the assessment rolls furnished to the Provincial Legislature, 77,000. (Bouchette—The British Dominions in North America, Vol. I, page 108.)
- 1814—Lower Canada.—Population estimated at 335,000. (Bouchette—Topographical Description, page 10.)
- 1814—Assiniboine and Red River.—Population: 262. (Can. Arch. Fidler's Journal 1814-15.)
- 1814—Upper Canada.—Population estimated at 95,000. (Bouchette—Topographical Description, page 596.)
- 1815—Upper Canada, Newcastle District.—Statement of population: 3,270. (Journal of Assembly of Upper Canada 1839-40, page 175.)
- 1816—Newfoundland.—Population estimated at 52,672. (Collated for Cyclopaedia of Commerce, page 1405.)
- 1817—Upper Canada, London District.—Statement of population: 5,530. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 177.)
- 1817—Nova Scotia.—Population: 81,351. (Journal of Assembly 1828, page 345.—Vol. IV, Census 1871, page 82.)
- 1818—Lower Canada.—Census of Schools and Students: schools 37, students 1,048. (Can. Arch. Series Q. Vol. 190-2, page 416.)
- 1818—Upper Canada, London District.—Statement of population: 6,809. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 177.)
- 1819—Gaspé District.—Census of Population and Agriculture: 4,058. (Can. Arch. Series Q. Vol. 172-2, page 260a.)
- 1819—Upper Canada, London District.—Statement of population: 8,190. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 177.)
- 1820—Upper Canada, London District.—Statement of population: 12,378. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 177.)
- 1820—Upper Canada, Newcastle District.—Statement of population: 6,254. (Journal of Assembly of Upper Canada 1839-40, page 175.)
- 1822—Lower Canada.—Population: 427,465. (Journal of Assembly 1823-24, Appendix R.—Vol. IV, Census 1871, page 83.)
- 1822—Prince Edward Island.—Population estimated at 22,600. (Cyclopaedia of Commerce, page 1588.)
- 1822—Upper Canada, Rideau Canal District.—Population: 10,723. (Can. Arch. Series Q. Vol. 167a, page 16a. "Census of Persons Located in the Military Settlements, 24th Dec. 1822.")
- 1822—Assiniboine and Red River.—Census of the Swiss Settlers at Red River: 139. (Can. Arch. Series M. Vol. 150, page 172, Bulger Papers.)
- 1823—Newfoundland.—Population: 52,157. (Collated for Cyclopaedia of Commerce, page 1405.)
- 1824—Upper Canada.—Population: 150,066. (Journal of Assembly 1828, Appendix.—Vol. IV, Census 1871, page 83.)
- 1824—New Brunswick.—Population: 74,176. (Journal of Assembly 1825-30, page 36.—Vol. IV, Census 1871, page 84.)
- 1824—Upper and Lower Canada.—Census of Indians: 15,407. (Can. Arch. Series Q. Vol. 336-1, page 273.)
- 1825—Upper Canada.—Population: 157,923. (Journal of Assembly 1828, Appendix.—Vol. IV, Census 1871, page 86.)
- 1825—Lower Canada.—Population: 479,288. (Can. Arch. Room 8.—Vol. IV, Census 1871, pages 87-89.)
- 1825—Newfoundland.—Population: 55,719. (Collated for Cyclopaedia of Commerce, page 1405.)
- 1825—Montreal Island.—Census of Population: 37,279. (Can. Arch. Series Q. Vol. 192-1.—Bibliothèque St. Sulpice, Fond Société Historique de Montréal.)

- 1825—Montreal Island.—General Census of the City of Montreal and District. (Can. Arch. Room 8.—Bibliothèque St. Sulpice, Fond Société Historique de Montréal.)
- 1825—New Brunswick.—Statement of population: 72,932. (Bouchette—The British Dominions in North America, Vol. II.)
- 1825—Nova Scotia.—Statement of population: 104,000. (Bouchette—The British Dominions in North America, Vol. II.)
- 1825—Cape Breton.—Statement of population: 16,000. (Bouchette—The British Dominions in North America, Vol. II.)
- 1825—Prince Edward Island.—Statement of population: 28,657. (Bouchette—The British Dominions in North America, Vol. II.)
- 1825—Upper and Lower Canada.—Census of Indians: 17,042. (Can. Arch. Series Q. Vol. 172-2, page 444.)
- 1826—Upper Canada.—Census of Population and Agriculture: 166,379. (Journal of Assembly 1828, Appendix.—Vol. IV, Census 1871, page 92.)
- 1827—Upper Canada.—Census of Population and Agriculture: 177,174. (Journal of Assembly 1828, Appendix.—Vol. IV, Census 1871, page 93.)
- 1827—Nova Scotia (not including Cape Breton).—Census of Population and Agriculture: 123,630. (Journal of Assembly 1828, page 344.—Vol. IV, Census 1871, page 94.)
- 1827—Lower Canada.—Census of Population and Agriculture: 471,875.  
 Note.—The population of 471,875 is supplemented by a statement showing an estimate of 1,600 additional persons in King's posts, Indian Trade, etc. (Can. Arch. Series Q. Vol. 186A, page 172.—Journal of Assembly 1849, Appendix B.—Statistical Tables.—Bouchette—Vol. IV, Census 1871, pages 95-98.)
- 1828—Upper Canada.—Number of schools and students: schools 291; students 7,731. (Journal of Assembly of Upper Canada 1829, Appendix 4.)
- 1828—Upper Canada.—Census of Population and Agriculture: 186,488. (Journal of Assembly of Upper Canada, 1829, Appendix.—Vol. IV, Census 1871, page 100.)
- 1828—Newfoundland.—Population: 60,088. (Collated for Cyclopedia of Commerce, page 1405.)
- 1829—Upper Canada.—Census of Population and Agriculture: 197,815. (Vol. IV, Census 1871, page 101.)
- 1829—Lower Canada.—Number of schools and students: schools 78; students 3,772. (Can. Arch. Series Q. Vol. 190-2, page 415.)
- 1829—Lower Canada.—Census of Population: 467,906. (Can. Arch. Series Q. Vol. 188-1.)
- 1829—Upper Canada.—Catholic population: 36,435. (Can. Arch. Series Q. Vol. 353-3, page 435.)
- 1829—Lower and Upper Canada.—Census of Indians: 18,709; Lower Canada 3,521; Upper Canada 15,181. (Can. Arch. Series C. Vol. 268, page 768.)
- 1830—Upper Canada, Newcastle District.—Statement of population: 14,730. (Journal of Assembly of Upper Canada 1839-40, page 175.)
- 1830—Upper Canada.—Census of Population and Agriculture: 213,156. (Vol. IV, Census 1871, page 102.)
- 1830—Upper Canada, London District.—Statement of population: 23,128. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 177.)
- 1831—Upper Canada.—Census of Population and Agriculture: 236,702. (Can. Arch. Series Q. Vol. 357-1, page 282 and 376-1, page 187.—Vol. IV, Census 1871, page 104.)
- 1831—Assiniboine and Red River.—Census of Population and Agriculture: 2,390. (Can. Arch. Series M. Vol. 399.—Vol. IV, Census 1871, page 105.)
- 1831—Lower Canada.—Census of Population and Agriculture: 553,134. (Can. Arch. Room 8.—Journal of Assembly 1831-1832, Appendix O.O.—Vol. IV, Census 1871, pages 106-110.)
- 1831—New Brunswick.—Estimate of population: 93,700. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1831—Nova Scotia.—Estimate of population: 139,334. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1831—Cape Breton.—Estimate of population: 28,802. (Bouchette—The British Dominions in North America, Vol. II, page 235.)

- 1831—Newfoundland.—Estimate of population: 75,900. (Bouchette—The British Dominions in North America, Vol. II, page 235.)
- 1832—Upper Canada.—Census of Population and Agriculture: 263,554. (Journal of Assembly 1849, Appendix B, page 184.—Vol. IV, Census 1871, page 112.)
- 1832—Newfoundland.—Population: 59,280. (Collated for Cyclopaedia of Commerce, page 1405.)
- 1832—Lower Canada.—Census of Population and Agriculture: 547,065. (Can. Arch. Series Q. 211-2, page 460.)
- 1832—Assiniboine and Red River.—Census of Population and Agriculture: 2,731. (Can. Arch. Manuscript Room.—Manitoba Provincial Library, Winnipeg.)
- 1833—Assiniboine and Red River.—Census of Population and Agriculture: 2,982. (Can. Arch. Manuscript Room.—Manitoba Provincial Library, Winnipeg.)
- 1833—Upper Canada.—Census of Population and Agriculture: 295,863. (Journal of Assembly of Upper Canada 1834, Appendix, page 143.—Vol. IV, Census 1871, page 113.)
- 1833—Lower Canada.—Census of Indians: 3,912. (Can. Arch. Series Q. Vol. 218, page 192.)
- 1833—Prince Edward Island.—Population estimated at 32,292. (Journal of Assembly 1834-35, Appendix C.)
- 1834—Upper Canada.—Census of Population and Agriculture: 321,145. (Journal of Assembly of Upper Canada 1835, Appendix 41 and Journal 1849, Appendix B.—Vol. IV, Census 1871, page 114.)
- 1834—New Brunswick.—Population: 119,457. Number of Indians estimated at 1,700. (Journal of Assembly 1835, Appendix.—Can. Arch. Pamphlet 1495, pages 54 and 74.—Vol. IV, Census 1871, page 115.)
- 1834—Assiniboine.—Census of Population and Agriculture: 3,356. (Can. Arch. Series M. Vol. 399.—Vol. IV, Census 1871, page 116.)
- 1835—Assiniboine.—Census of Population and Agriculture: 3,649. (Can. Arch. Series M. Vol. 399.—Vol. IV, Census 1871, page 118.)
- 1835—Upper Canada.—Census of Population and Agriculture: 347,359. (Journal of Assembly of Upper Canada 1836, Appendix 46 and Journal 1849, Appendix B.—Vol. IV, Census 1871, page 119.)
- 1836—Upper Canada.—Census of Population and Agriculture: 374,099. (Journal of Assembly 1836-37, Appendix 8.—Vol. IV, Census 1871, page 120.)
- 1836—Lower Canada.—Population: 572,827. (Journal of Assembly 1849.—Estimate by Bouchette.)
- 1836—Newfoundland.—Population: 73,705. (Collated for Cyclopaedia of Commerce, page 1405.)
- 1837—Upper Canada.—Census of Population and Agriculture: 397,489. (Journal of Assembly of Upper Canada 1838, Appendix, page 245.—Vol. IV, Census 1871, page 121.)
- 1837—Nova Scotia.—Population estimated at 199,906. (Sanctioned by several authors.)
- 1837—Lower Canada.—Estimate of population: French 434,000; English 166,000; total 600,000. (Can. Arch. Series Q. Vol. 242-4, page 1036.)
- 1838—Prince Edward Island.—Population: 32,305. (Journal of Assembly 1839, Appendix A.)
- 1838—Upper Canada.—Census of Population and Agriculture: 399,422. (Journal of Assembly of Upper Canada 1839, Appendix, page 440.—Vol. IV, Census 1871, page 122.)
- 1838—Assiniboine and Red River.—Census of Population and Agriculture: 3,966. (Can. Arch. Series M. Vol. 399.—Manitoba Provincial Library, Winnipeg.—Vol. IV, Census 1871, page 124.)
- 1838—Nova Scotia.—Population: 202,575. (Journal of Assembly 1839, Appendix 32.—Vol. IV, Census 1871, page 125.)
- 1839—Upper Canada.—Census of Population and Agriculture: 409,048. (Journal of Assembly of Upper Canada 1839-40, Appendix, page 138.—Vol. IV, Census 1871, page 126.)
- 1840—Upper Canada.—Census of Population and Agriculture: 432,159. (Journal of Assembly 1841, Appendix T.—Can. Arch. Series Q. Vol. 431A, page 79.—Executive Council Chamber, Upper Canada 1840, page 109.—Vol. IV, Census 1871, page 128.)
- 1840—Lower Canada.—Estimate of population: 716,670. (Can. Arch. Series Q. Vol. 431-A-1, page 83.)
- 1840—New Brunswick.—Census of Population and Agriculture: 156,162. (Journal of Assembly 1841, Appendix.—Vol. IV, Census 1871, page 129.)

- 1840—Assiniboine and Red River.—Census of Population and Agriculture: 4,704. (Can. Arch. Series M. Vol. 399.—Manitoba Provincial Library, Winnipeg.—Vol. IV, Census 1871, page 130.)
- 1841—Nova Scotia.—Indian population: 1,425. (Journal of Assembly 1842, Appendix 6.)
- 1841—Upper Canada.—Estimate of the Indian population: 11,143. (Province of Canada 1841, page 188.)
- 1841—Upper Canada.—Census of Population and Agriculture: 455,688. (Journal of Assembly of Upper Canada 1842, Appendix M.—Vol. IV, Census 1871, page 131.)
- 1841—Prince Edward Island.—Population: 47,042. (Journal of Assembly 1842, Appendix N.—Vol. IV, Census 1871, page 132.)
- 1841.—British Columbia.—Estimate of the Indian population: 62,100.
- 1842—Upper Canada.—Census of Population and Agriculture: 487,053. (Journal of Assembly 1843, Appendix F.F.—Vol. IV, Census 1871, pages 134-140.)
- 1842—Lower Canada.—Census of Population and Agriculture, by counties. (Can. Arch. Room 8.)
- Note.—Part of this census is missing.
- 1843—Assiniboine and Red River.—Census of Population and Agriculture: 5,143. (Can. Arch. Series M. Vol. 399.—Manitoba Provincial Library, Winnipeg.—Vol. IV, Census 1871, page 141.)
- 1844—Lower Canada.—Census of Population and Agriculture: 697,084. (Journal of Assembly of Canada 1846, Appendix D.—Vol. IV, Census 1871, pages 144-158.)
- 1845—Newfoundland.—Census of Population and Agriculture: 96,295. (Parliamentary papers of Newfoundland 1817-1887, page 54.—Vol. IV, Census 1871, page 160.)
- 1845.—British Columbia.—Estimate of the Indian population: 60,100.
- 1846—Assiniboine and Red River.—Census of Population and Agriculture: 4,871. (Can. Arch. Series M. Vol. 399.—Manitoba Provincial Library, Winnipeg.—Vol. IV, Census 1871, page 161.)
- 1847—Maritimes.—Census of Indians: Nova Scotia 961; Cape Breton 500; New Brunswick 935; Gaspé District 434; St. Pierre et Miquelon and Newfoundland 200; Prince Edward Island 250. (Journal of Assembly of Nova Scotia 1848, Appendix 14.)
- 1847—British Columbia.—Estimate of the Indian population: 63,340. (Can. Arch. Library Room, Hudson Bay Company reports and maps F. 6.)
- 1848—New Brunswick.—Estimate of population: 208,012. (Journal of Assembly of Canada 1849, Appendix N.)
- 1848—Upper Canada.—Census of Population and Agriculture: 725,879. (Journal of Assembly of Canada 1849, Appendix B.—Vol. IV, Census 1871, pages 164-171.)
- 1848—Lower Canada.—Population variously estimated at 765,797-770,000-774,764-777,129 and 786,693. (Journal of Assembly 1849, Appendix B.)
- 1848—Prince Edward Island.—Population: 62,678. (Can. Arch. Library Room Pamphlet 2,166.—Journal of Assembly 1849, Appendix Y.—Vol. IV, Census 1871, page 174.)
- 1849—Assiniboine and Red River.—Census of Population and Agriculture: 5,391. (Can. Arch. Manuscript Room.—Manitoba Provincial Library, Winnipeg.—Vol. IV, Census 1871, page 175.)
- 1850—Upper Canada.—Census of Population: 803,503. (Journal of Assembly 1851, Appendix L.)
- 1851—Upper Canada.—Census of Population and Agriculture: 952,004. (Can. Arch. Room 8.—Vols. I and II, Census 1851.—Vol. IV, Census 1871, pages 178-199.)
- 1851—Lower Canada.—Census of Population and Agriculture: 890,261. (Can. Arch. Room 8.—Vols. I and II, Census 1851.—Vol. IV, Census 1871, pages 202-222.)
- 1851—New Brunswick.—Census of Population and Agriculture: 193,800. (Can. Arch. Room 8.—Journal of Assembly 1852, Appendix.—Vol. IV, Census 1871, pages 224-230.)
- 1851—Nova Scotia.—Census of Population and Agriculture: 276,854. (Can. Arch. Room 8.—Vol. IV, Census 1871, pages 232-239.)
- 1851—Newfoundland.—Population estimated at 101,600. (Collated for Cyclopedia of Commerce, page 1405.)
- 1851—British Columbia.—Estimate of the Indian population: 55,000.

- 1853—Victoria, British Columbia.—111 men, 50 women, 93 children. (Douglas' Journal 1850-1885, page 131.)
- 1855—Prince Edward Island.—Census of Population and Agriculture: 71,496. (Journal of Assembly 1856, Appendix D.)
- 1856—British Columbia.—Estimate of the Indian population: 48,900.
- 1856—Assiniboia.—Census of Population and Agriculture: 6,691. (Vol. IV, Census 1871, pages 242-244.)
- 1857—Newfoundland.—Census of Population and Agriculture: 122,638. (Abstract and Returns of Census of Population.—Vol. IV, Census 1871, pages 246-252.)

## CHAPTER II

### (1) RURAL AND URBAN DISTRIBUTION

The subject of rural and urban distribution is a familiar one\*, and many of the implications of census data therefore need not be pointed out. The treatment in the following summary includes:—

- (1) The history of rural and urban growth since 1871.
- (2) The sex composition of the rural and urban population.
- (3) The age composition of the rural and urban population.
- (4) Composition of the rural and urban population as indicated by race and birthplace.
- (5) Occupational composition of the rural and urban population.
- (6) Urbanization as a symptomatic phenomenon.

**The History of Rural and Urban Growth in Canada.**—To trace the history of rural and urban growth it is necessary to use a uniform definition of rural and urban throughout. In past censuses this has been based upon the distinction between incorporated and non-incorporated places. This is logical enough, inasmuch as the incorporation of a town or village is a reflection of the needs of the surrounding area. Scattered over newly settled provinces are a large number of small incorporated villages, some with a population of less than one hundred, but representing a real necessity to the people of the rural community. The type, occupational and otherwise, of persons living in them is quite different from that in the adjoining countryside and there are doubtless many reasons for their incorporation. On the other hand, in the older and more thickly settled provinces, there is a tendency to incorporate aggregates only after they reach a certain size, the latter differing in the case of each province. Aggregates not reaching these sizes remain as a part of the surrounding townships which are sometimes almost as thickly populated as the urban centre itself. Thus, a thickly settled province might conceivably have a smaller percentage urban than a thinly settled one, since the large intrinsically urban aggregates in the former were included as rural. The difficulty cannot be fully overcome by the practice usually adopted of limiting the term "urban" to incorporated aggregates over a minimum population of 1,000 or 2,000 as the case may be. This method ignores certain important principles in urbanization and disregards the necessities behind, and the many advantages arising from incorporation. More accurate classification would not be attained by its use since emphasis is still laid on incorporation. It would be obviously incorrect to show the population of a large new province as almost entirely rural, when it has hundreds of incorporated villages under a certain size. It seems reasonable to conclude that the number of incorporated urban units varies not only as the density of population but also as the area of the country. The size of these urban units is another matter.

The disadvantages of the distinction between rural and urban based entirely upon incorporation are obvious enough, but the necessity of rendering the data comparable from census to census has led to its adoption and the tables herewith show the population classified in this way. The foregoing leads up to the point that it is important in historical data on the subject, to know the number of incorporated places as well as the total urban population. The number of such places or the units making up the total urban population at the seven decennial censuses of Canada is recorded in Statement I following.

\*See also 1931 Census Monograph *The Rural and Urban Composition of the Canadian Population* by S. A. Cudmore and H. G. Caldwell.

I. NUMBER OF INCORPORATED PLACES, CANADA AND PROVINCES, 1871-1931

Province	1871	1881	1891	1901	1911	1921	1931
CANADA.....	197	333	400	595	1,018	1,441	1,603
Prince Edward Island.....	1	2	2	2	3	7	8
Nova Scotia.....	2	10	12	28	40	44	45

Quebec.....	76	116	130	187	232	358	423
Ontario.....	111	193	231	253	293	314	330
Manitoba.....	2	3	15	22	49	52	56
Saskatchewan.....	-	-	-	35	249	429	466
Alberta.....	-	-	-	28	103	175	208
British Columbia.....	1	3	3	29 <sup>1</sup>	25	32	47

<sup>1</sup> For list of incorporated places, see Part 2 of this chapter.

<sup>2</sup> Includes many small mining towns of a temporary character, possibly not all incorporated, but it was on this number of units that the urban population (90,197) of this year was based.

The growth of the rural and urban population in Canada since 1871 is shown hereunder in four ways: (1) the absolute increases from census to census; (2) the percentage of the total population, rural and urban, at each census; (3) the rural and urban population from census to census as a multiple of the rural and urban respectively of 1871 Census; (4) in graphic form combining the ideas of (1), (2) and (3) on a semi-logarithmic-scale chart which depicts the relative as well as the absolute populations and increases.

II. GROWTH OF RURAL AND URBAN POPULATION OF CANADA, 1871-1931

Year	Rural	Urban

CHART I

**Sex in Relation to Rural and Urban.**—It is common knowledge that urban populations tend to have larger proportions of females, though whether this reflects choice or occupational necessity is revealed only on extended analysis. The fact that practically the only female occupations in rural communities are teaching and domestic service makes a female movement to urban centres almost a matter of necessity. The difference in past and present composition is probably largely due to the fact that in the past, females remained on the farms without money wage, while in the present era they have entered the wage-earning classes. The trend in the rural and urban movement is, therefore, intimately connected with the trend in occupations.

At the same time there are other very important influences. It will be mentioned in the section on conjugal condition that approximately 75 p.c. of both the male and female population marry. The balance between the married and not married clearly affects the balance in rural and urban sex ratios. Among recent immigrants especially, the married males are in excess of the married females. This phenomenon in itself if it occurred exclusively in a rural or urban locality is sufficiently important to disturb the balance in the sex ratios. At the last census, 48.4 p.c. of the total male population of Canada was rural as compared with 44 p.c. of the total female population, but of the married population the percentage rural was 44.1 p.c. in the case of the male and 44.0 p.c. of the female. There was, therefore, as large a proportion rural of married females as of males. The female sex ratios, rural and urban, vary according as the marriage rate of the males is high or low.

Another factor controlling the balance between the sexes, rural and urban, is the birth rate, the rural rate being higher than the urban. Since at birth there is no great difference in proportions between the sexes, and as under migration ages ratios are very much as they were at birth, it follows that the greater the rate of natural increase in the country the nearer the proportions rural and urban. Consequently decreasing marriage and birth rates in the population lead to a larger proportion of urban. These are by no means unimportant factors and are in themselves additional reasons for the greater female proportion urban.

To obtain a reasonably clear conception of the sex attitude towards rural and urban life, the following summary statements, III, IV and V are shown.

III. RURAL AND URBAN POPULATION, BY SEX, WITH THE PERCENTAGE OF EACH SEX AND THE NUMBER OF MALES PER 1,000 FEMALES, CANADA, 1931-1921

Item	Population in					
	1931			1921		
	Number	Per cent	Number of males per 1,000 females	Number	Per cent	Number of males per 1,000 females
Total						
Males.....	5,374,541	51.79	1,074	4,529,643	51.54	1,064
Females.....	5,002,245	48.21	-	4,258,306	48.46	-
Rural <sup>2</sup> —						
Males.....	2,602,912	54.17	1,182	2,382,326 <sup>1</sup>	53.71	1,160
Females.....	2,201,816	45.83	-	2,053,501	46.29	-
Urban—						
Males.....	2,771,629	49.74	990	2,147,317	49.34	974
Females.....	2,800,429	50.26	-	2,204,805	50.66	-

<sup>1</sup> Includes 485 members of the Royal Canadian Navy.

<sup>2</sup> Includes Royalty (1740).

IV. MARRIED POPULATION, RURAL AND URBAN, PERCENTAGE OF TOTAL POPULATION IN EACH CATEGORY AND PERCENTAGE RURAL AND URBAN OF MARRIED POPULATION, BY SEX, CANADA, 1931-1921

Item	Number	Percentage based on total populations of categories in Statement III	Per cent rural and urban
Married males.....	2,033,240	37-83	100-00

Urban.....	890,347	40-48	1,145,398	52-07	163,965	7-45

<sup>1</sup> Under 20, the present generation, mostly Canadian born; 20-59, the immigration period population, and over 60, the past generation of Canadian born with the older type of immigrant.

<sup>2</sup> Stated ages only.

**Age in Relation to Rural and Urban.**—In the foregoing consideration of the sex composition of rural and urban, the matter of age distribution was also involved. The rural parts particularly are largely dependent upon married women and children for their female population. There are other aspects, however, of the age factor in a comparison of rural and urban parts. If the age distribution in past census years is considered for comparable units, a fair indication of the age at which persons move to or from these units may be arrived at, since accurate allowances for deaths can be made. Further, the age distribution especially by sex, is the basis for computing the potentialities for births and deaths. The changing proportions at different ages from census to census go far in indicating changes in birth and death rates. Different types of employment also predicate employees of different ages. Thus it is a significant point if the rural population at working ages are older or younger than the urban population. Further, children and older persons are largely dependent upon those of middle age, and comparative dependency by rural and urban may be partially measured by comparative age distribution.

VI. RURAL AND URBAN POPULATION, BY SEX AND QUINQUENNIAL AGE GROUPS, CANADA, 1931-1921

Age group		Rural		Urban <sup>1</sup>

Female.....	1,107,841	50.33	1,662,834	59.36

<sup>1</sup> Not stated age is included.

**Immigration in Relation to Rural and Urban Population.**—Certain important changes have taken place since the early years of the century in the immigrant attitude towards rural and urban residence. During the period of heavy immigration the trek of immigrants was largely into rural areas. One of the most striking illustrations of change in this respect is the percentage rural of the different races in 1931 as compared with 1921, races that were largely rural in 1921 being no longer so in 1931.\* As explanatory of this, the year of arrival of the rural and urban immigrant population is important.

X. PERCENTAGE RURAL OF IMMIGRANT POPULATION<sup>1</sup>, BY YEAR OF ARRIVAL, CANADA, 1931

Year of arrival	Per cent rural	Year of arrival	Per cent rural
1931.....	45.23	1921-1925.....	36.82
1930.....	44.42	1916-1920.....	36.62

The Occupational Aspect of Rural and Urban.—It is clear that "rural" population is not synonymous with "farm" population. After all incorporated places regardless of size have been segregated, there remain a considerable number of population aggregates which are essentially urban in occupation, modes of living and possibly population types, but which are included in the rural figures. First among these are suburban non-incorporated aggregates, sometimes known as "rural municipalities" or "police villages", e.g., the population of York county, Ont. and of Montreal Island. Rural municipalities like St. James and West Kildonan, Man. are as large in population as many cities. A list of such suburban areas surrounding the larger cities, with their 1931 population, is given in Statement XII.

XII. SUBURBAN AREAS (NOT INCORPORATED) FOR 8 OF THE LARGEST CITIES, 1931

City	Total population	Unincorporated suburban areas
Montreal.....	818,577	4,578
Toronto.....	631,207	143,850
Vancouver.....	246,593	35,713
Winnipeg.....	218,785	45,404
Hamilton.....	155,547	8,163
Quebec.....	130,594	6,536
Ottawa.....	126,872	9,764
Windsor.....	63,108	4,863
Total.....	2,391,283	258,871

	Number	Per cent of total
Total urban population, 1931.....	5,572,058	53.70
Urban population and suburban population for above cities.....	5,830,929	56.19
Percentage suburban.....	-	2.49

When the population of this list is added to the population of incorporated urban units, the percentage urban is increased from 53.7 to 56.2.

There are in addition numerous other places, the occupations of whose population are other than farming. These are small unincorporated hamlets, police villages, etc., which are not in the neighbourhood of large cities. There are several occupations such as lumbering, fishing, trapping, etc., which are essentially "rural" some of these being in incorporated places and others in the hamlets already referred to. If the non-farm population is considered as non-rural (confining the term rural to farming occupations) the population of Canada, 1931, is distributed as follows:—

XIII. POPULATION CLASSIFIED AS URBAN UNDER AND OVER 1,000 AND RURAL, FARM AND NON-FARM WITH PERCENTAGE OF TOTAL FARM AND NON-FARM, CANADA AND PROVINCES, 1931

Province	Total population	Non-farm population			Farm population	Per cent	
		Urban units over 1,000	Incorporated units under 1,000	Other non-farm		Non-farm	Farm
CANADA.....	10,376,786	5,160,901 <sup>1</sup>	411,157 <sup>1</sup>	1,581,306	3,223,422	68.9 <sup>1</sup>	31.1
Prince Edward Island.....	88,038	17,183	3,202	12,690	54,963	37.6	62.4
Nova Scotia.....	512,846	223,215	8,439	107,227	173,965	66.1	33.9
New Brunswick.....	408,219	126,781	2,159	100,785	178,494	56.3	43.7
Quebec.....	2,874,255	1,683,400	130,206	317,051	743,593	74.1	25.9
Ontario.....	3,431,633	2,015,665	80,327	550,141	785,550	77.1	22.9

Northwest Territories.....	9,723	-	-	9,723	-	-	-

<sup>1</sup> Includes some 65,000 farm population, residing in urban units.

A number of important facts are observable in Statement XIII. One is that the only definite distinction that can be made between rural and urban for provincial comparison is that between farm and non-farm. The dividing line between rural and urban in other respects is ill-defined, for the province with a small population in small incorporated units (under 1,000) has a large rural non-farm population, and *vice versa*. Thus Ontario has only 80,327 persons in incorporated units under 1,000, but has a rural non-farm population of 550,141, while Saskatchewan with 103,784 in small incorporations (the largest number in Canada except Quebec) has only 69,473 rural non-farm, by far the smallest percentage rural non-farm of the provinces. Clearly the explanation lies in the considerable population of Ontario which is situated in suburban areas, police villages, etc., while in Saskatchewan incorporation is extended to very small aggregates. The largest percentage of non-farm population is in British Columbia; the smallest in Prince Edward Island, with Saskatchewan a close second. It must be recognized of course that in addition to the non-farm rural population in unincorporated hamlets and suburban areas, there are types of rural occupations which do not necessitate a grouping of the population in semi-urban aggregates.

The population which is not farm and yet not in incorporated areas would seem to be an important element in the balance between rural and urban and in the growth or decline of rural populations. It would appear that they are much more subject to change than the strictly farm population. Formerly they constituted an important part of the rural population. The change from small scale to large scale manufacturing is responsible for a considerable amount of the decline or retardation in the growth of the rural population. The occupations formerly included in non-farm rural population were many and diverse, some of them being carried on in conjunction with farming, namely, carpentering, blacksmithing, tanning, coopering, milling, carriage building and many others. As the classification of the population as farm and non-farm was made for the first time in 1931, an idea of their numbers in previous censuses can be gathered only from the Census of Occupations, and that only inferentially from the apparent size of establishments. For more detailed information on this point, the reader is referred to Volume VII of the Census Report, which deals with the Gainfully Occupied.

**Urbanization as a Symptomatic Phenomenon.**—It is easy to arrive at mistaken *a priori* conclusions concerning urbanization as a symptomatic phenomenon. As already indicated there are at least three aspects to be considered in this regard, each of them connected with the origin of urbanization in recent as opposed to early times.

The first is a result of the recent displacement of small business by large, which has promoted the growth of cities at the expense, not only of the smaller towns and villages, but of the rural non-farm population already described.

A second is the attitude of individuals and races towards urban life as compared with rural, which leads not only to an exodus from the farms of persons who desire city life, but to the erection of a number of small urban communities by races of gregarious habits. The trek to the large cities is largely one of young people, and is greater amongst the female population than the male, while that toward the newly erected smaller urban units is probably in the majority of cases by persons of all ages.

A third aspect, usually overlooked, involves the *necessity* for urban centres. As already indicated, urbanization is not only a phenomenon of occupational trend, gregariousness or attitude towards urban life, but one also of area and density. In the Prairie Provinces there were many cases of townsites planned prior to the arrival of a single inhabitant. The population of such towns for some years would be entirely different from the population of the surrounding country; it would be one engaged in services to the adjacent farms, not a rural population increasing naturally in density until incorporation became a necessity. This type of urban centre depends entirely upon the surrounding country to be served, and usually occurs in very thinly settled areas. Now this is the basis of a remarkable phenomenon, namely, that a thinly settled country may be more urban than a thickly settled. Thus Saskatchewan is much more urban than Prince Edward Island, although the latter is the most thickly populated province of Canada; more than a third of Saskatchewan's urban population is in places under 1,000 population. The urbanization of the province of Saskatchewan is based principally on two of the aspects mentioned—the gregariousness of certain races and the necessities of its large and thinly settled areas.

## (2) DATES OF INCORPORATION OF URBAN CENTRES OF CANADA WITH 1931 POPULATION, BY PROVINCES

### INTRODUCTION

Under the terms of the British North America Act the right to make laws in relation to municipal institutions is assigned exclusively to the legislatures of the provinces.

In the exercise of this sovereign power the legislatures of the several provinces have enacted statutes called Municipal Acts, in which they delegate to appointed officers the right of erecting a district into an urban corporation, when such a district is able to produce evidence of its urban character as prescribed in the Acts. Every petition for urban incorporation which is unable to produce such statutory evidence must come directly before the respective legislature, which, if it is satisfied with the evidence contained in the petition, will grant same by way of what is called a Special Act.

The list of cities, towns and villages herein includes all incorporations whether granted under a Municipal Act, a Special Act, or by Ordinance of a Governor as was often the procedure before Confederation.

A brief statement of the law and practice in each province in regard to urban incorporation at the date of the 1931 Census is given under the name of the province to which it relates.

### PRINCE EDWARD ISLAND

Incorporations in this province may be granted under:—

- (I) "*An Act for the better government of certain towns and villages in this island,*" passed in 1870, and amended in 1874. This Act does not specify a population requirement. No incorporations have as yet been made under its authority. It makes no provision for the erection of cities.
- (II) *Special Act*: By this is meant a special act of the provincial legislature. All incorporations to date have been made under Special Acts.

Urban centre	County or census division	Date of incorporation <sup>1</sup>			Population 1931	Historical notes
		As a village	As a town	As a city		
Prince Edward Island <sup>2</sup> —						
Alberton, t.....	Prince.....	-	1913	-	590	Several towns in Canada founded for years before they were incorporated.
Borden, t.....	Prince.....	-	1919	-	385	
Charlottetown, c.....	Queens.....	-	-	1855	12,361	<sup>2</sup> By an Act of the Legislature passed in the year 1870, amended in 1874, it is provided that the residents of any town or village desiring incorporation may present a memorial to the Lieutenant-Governor in Council for such purpose.
Georgetown, t.....	Kings.....	-	1912	-	812	
Kensington, t.....	Prince.....	-	1914	-	612	This date taken from Municipal Statistics, but not located in Statutes.

Summerside, t.....	Prince.....	-	1903 <sup>3</sup>	-	3,759	

### NOVA SCOTIA

Incorporations in this province may be granted under:—

- (I) *Village Supply Act*: No statutory provision has ever been made for the incorporation of a village, but under this Act the Governor in Council may appoint three commissioners to be a body corporate, to look after the affairs of a village organized under the Village Supply Act (water supply, fire protection, etc.) which requires a population of 400 on an area of 640 acres.
- (II) *Towns Incorporation Act, 1888*: It originally required a population of 700. In 1918 this was raised to 1,000 and in 1923 to 1,500.
- (III) *Special Acts*: Cities and villages may be incorporated under Special Acts. Districts not having the statutory requirements may also be erected into towns under Special Act.

Urban centre	County or census division	Date of incorporation			Population 1931	Historical notes
		As a village	As a town	As a city		
Nova Scotia <sup>1</sup> —						
Amherst, t.....	Cumberland.....	-	1889	-	7,450	Although certain of the larger towns of Nova Scotia had secured incorporation by special legislation before the year 1888, it was not until then that a general Towns' Incorporation Act was passed, enabling the rate-payers of any town, by means of an election at the polls to bring such town under the provision of the act for the purpose of incorporation. <sup>2</sup> Founded as Port Royal 1605 by De Monts and Poutrincourt. In 1710 given name of Annapolis. <sup>3</sup> Founded as a town by Governor Cornwallis in 1749. Although we find so far back as 1790 a resolution of the Assembly to the effect that an address should be presented to the Lieutenant-Governor requesting him to grant a charter to the town of Halifax for incorporating the same, yet incorporation was not secured until 1841, and then it was by means of an act of the legislature. Formerly called Havre de Chahictio. <sup>4</sup> Founded around 1717 and was given a council. Finally taken by English 1758. <sup>5</sup> Incorporation as a village took place around 1896 but no record available. <sup>6</sup> Changed from Ship Harbour in 1860. <sup>7</sup> Formerly known as Tris- ket Wedge. <sup>8</sup> This date taken from Municipal Statistics, but not located in Statutes.

## NEW BRUNSWICK

Incorporations in this province may be granted under:—

- (I) *Villages Incorporation Act, 1920*: No statutory provision for the erection of a village existed until this Act was passed. It requires a population of 300 persons on an area not greater than 1,500 acres of land.
- (II) *Towns Incorporation Act, 1896*: This Act prescribed no population requirement. Previous to the passing of this Act no statutory provision existed for the erection of a town.
- (III) *Special Acts*: Cities may be erected by Special Acts. Villages and towns may also be erected under Special Acts if they have not the statutory requirements of the Villages Act or Towns Act, respectively.

Sussex, t.	Kings	-	1904	-	2,252	<sup>6</sup> This date taken from Municipal Statistics, but not located in Statutes.
Upper Mills, t. <sup>4</sup>	Charlotte	-	1874	-	-	
Woodstock, t.	Carleton	-	1856	-	3,259	

QUEBEC

Incorporations in this province may be granted under:—

- (I) *The Municipal Code*: It provides that any territory forming part of a rural municipality and containing 40 inhabited houses within an area of 60 arpents may be erected into an incorporated village.
- (II) *Cities and Towns Act, 1903*: Under this Act a village of 2,000 population may be erected into a town; and a village or town of 6,000 population may be erected into a city.
- (III) *Special Acts*: Communities unable to satisfy the statutory requirements of the Municipal Code or the Cities and Towns Act may be erected into villages, towns and cities by Special Act.

ONTARIO

Incorporations in this province may be granted under:—

(I) *The Municipal Act*: This Act provides for the erection of villages, towns and cities as follows:—

- (a) *Villages*: A district having a population exceeding 750 on an area not exceeding 500 acres may be erected into a village.
- (b) *Towns*: A village having a population of 2,000 may be erected into a town. In unorganized districts a locality having a population of at least 500 on an area not exceeding 750 acres may also be erected into a town.
- (c) *Cities*: A town having a population of 15,000 may be erected into a city.

(II) *Special Acts*: Districts which do not qualify as to population and area under the Municipal Act may be erected into villages, towns and cities by Special Act.

MANITOBA

Incorporations in this province may be granted under:—

- (I) *The Municipal Act*: It brings all incorporated villages, towns and cities, except Winnipeg and St. Boniface, within its scope; and provides for the erection of:—
- (a) *Villages*: A district having a population of over 500 persons within an area of 640 acres may be erected into a village.
  - (b) *Towns*: A district having a population of over 1,500 persons within an area of 640 acres may be erected into a town.
  - (c) *Cities*: A town containing over 10,000 inhabitants may be erected into a city.
- (II) *Special Acts*: Localities which do not qualify under the Municipal Act may be incorporated by Special Act.

## SASKATCHEWAN

Incorporations in this province may be granted under:—

- (I) *The Municipal Acts:* There is now no general Municipal Act, but all statutory provisions relating to municipal institutions are to be found in R.S.S. 1930 under the heading—"Cities, towns, villages, Rural Municipalities and Local Improvements." They provide for the erection of:—
- (a) *Villages:* A district having a population of 100 persons within an area not greater than 640 acres may be erected into a village. A summer resort may also be erected into a village.
- (b) *Towns:* A village may be erected into a town if it has a population of over 500 persons.
- (c) *Cities:* A town having a population of 5,000 may be erected into a city.
- (II) *Special Acts:* Localities which do not qualify under the Municipal Acts may be erected into urban municipalities by Special Acts.

ALBERTA

Incorporations in this province may be granted under:—

- (I) *The Village Act*: A district containing 25 separate buildings, each of which has been continuously occupied as a dwelling house for at least one month may be erected into a village.
- (II) *The Town Act*: Any village containing a population of over 700 persons may be erected into a town.
- (III) *Special Acts*: Localities which do not qualify under the aforesaid Acts may be incorporated by Special Acts. All cities are incorporated by Special Acts.

BRITISH COLUMBIA

Incorporations in this province may be granted under:—

- (I) *Village Municipalities Act*: ~~<sup>1</sup> It provides that a locality with less than 1,000 population may be erected into a village. No area is specified. There is no Act providing for the erection of towns.~~
- (II) *Municipalities Incorporation Act*: Any locality in the province not exceeding 2,000 acres, and having a population of 100 male British subjects may be erected into a city.
- (III) *Special Acts*: Districts which do not qualify under the above-mentioned Acts may be incorporated by Special Acts.

### YUKON TERRITORY

The Yukon Territory was established as a self-governing territory in 1898 by the Yukon Territory Act. This Act provided that the Yukon would be governed by a commissioner and a council of six persons appointed by the Governor in Council.

Laws passed by this governing body are called Ordinances, and they become effective on the date they are assented to by the Commissioner. These Ordinances must be mailed to the Secretary of State within ten days after the passing thereof, and laid before both Houses of Parliament. They may be disallowed by the Governor in Council within two years after the passage.

In 1908 the council was made elective and its membership increased to ten, but in 1919 this membership was reduced to three.

In 1901 an Ordinance was passed incorporating the City of Dawson. It provided for an elected Mayor. On March 30, 1914, a plebiscite was taken with the result that the constitution of the City of Dawson was changed making the Commissioner *ex-officio* Mayor and providing for a council of two persons to represent the districts of North and South Dawson, respectively.

Chapter 4 of the Ordinances of 1919, vested all rights and duties under the provisions of "The Dawson City Corporation Ordinance" in the Commissioner.

In 1901 The Towns Ordinance was passed. It provides that a district containing ten dwellings may be erected into a town by order of the Commissioner. Provision is made for an elective official called an Overseer. Lawsuits for or against the towns are initiated or defended in the name of the Overseer.

## CHAPTER III

### AGE

Scarcely any attribute of population can be adequately depicted by means of statistical data, without introducing the subject of age. Most, if not all, of the activities of the population are at par, under par, or at an optimum, at some period of life. Employment is at its best for males around the age of 40, and for females, at a definite earlier age; marriage occurs most frequently at a certain age; so does motherhood; death is overwhelmingly more frequent during the earliest and latest years; school attendance is confined to certain age periods. By reviewing the events of the year of birth as traced from age, peculiarities of the population at any particular age may be better understood. The population, too, is more mobile at certain ages and consequently, when the age of immigrants and others of similar characteristics is known, an approximation of the date and conditions under which they moved can be arrived at. The extent to

which data on ages may be exploited is only beginning to be realized, for by means of it a multitude of events and attributes can be traced back to their original causes. Accordingly the Census of 1931 devotes a whole volume (Vol. III) to age.\* Eleven general attributes of the population, as well as their interplay in relation to sex, area, type of locality, etc., are given by quinquennial age groups. These attributes can now be studied and understood in a measure not possible in any previous census.

Since a study of age has been made to aid in the interpretation of the data in practically every section of the present volume, it will not be necessary in this chapter to deal with age in relation to these same subjects. This section, therefore, will be confined to explanatory and general material leading to a better understanding of the possibilities and methods of using data on age distribution.

**Quinquennial Age Distribution.**—The age distribution of the population has been shown throughout by five-year age groups, mainly to provide uniform bases of comparison and to conform with the practice followed in other countries. We know, of course, that the five-year age groups do not show definitely the critical age of every attribute or enable us to define all limits, *e.g.*, to define the limits of school attendance it would be necessary to have the ages 6 to 17, which are not fixed by the five-year group. Other age limits are characteristic of other attributes, but in order to bring them all into relationship with one another a common denominator is necessary, and this is attainable only by adopting a uniform age grouping. If the ages were shown by single years, it would fulfil all purposes, but in the first place it would not be practicable, and secondly, there are defects in the single age presentation which will be described later. The quinquennial presentation is both convenient and largely free from defects.

**Single Ages.**—The most conspicuous feature of single ages is the obvious preference for certain digits. More persons report their ages at numbers ending in zero than any other adjacent number. Next in preference are numbers ending in 5, even numbers and then certain minor preferences. Since there is no logical reason for believing that the population at these ages is larger than at an adjacent age, it is safe to conclude that they are mis-statements. This tendency or bias is by no means peculiar to Canada, to any one census year, or to statements of age alone. When the average person is asked for a figure, he must rely to a certain extent upon memory and is quite apt to give a round number which is generally an approximation to but not the exact truth. This explains the preferences for digits 5 and 0. The reasons underlying the other preferences are more deep-seated. However, by showing age distribution by five-year groups instead of single ages, most of these inaccuracies of statement are ironed out. If ages are required by single years, it is customary to rely upon figures interpolated by standard methods rather than to use the figures as stated. The ages by single years in their crude form are more interesting than useful.

It is of interest to note how the sexes and different classes of people differ in their mis-statements and whether or not there has been any improvement in this respect in recent censuses over earlier ones.

The accompanying analysis (Statement I) illustrates the preference for round numbers, etc., as shown in the ages of the total population of Canada for 1881 and 1931. For the sake of simplicity, in measuring these preferences the most elementary method is used. There are methods by which they could be measured more accurately, but they involve detailed explanation which might be confusing to some readers. In this analysis the excesses at round and even numbers are taken as percentages of the average of the three-year group of which the number in question is the middle, *e.g.*, in 1881 the number at the age of 12, is 105,101, at the age of 11, 94,009, and at the age of 13, 96,479, the average of the three being 98,530. The number at 12 is 6.7 p.c. in excess of this average and can be compared with the corresponding percentage in 1931. This is only a rough method of comparison, but it is simple. Attention is confined to preferences only (not to avoidances), and only the digits ending in 0, 5, and certain even numbers are examined.

\*See also 1931 Census Monograph *The Age Distribution of the Canadian People* by M. C. MacLean.

## CENSUS OF CANADA, 1931

I. PREFERENCES FOR CERTAIN DIGITS IN REPORTING AGES BY SINGLE YEARS,  
CANADA, 1931 and 1881

Age	Preference for digits ending in 0 as per cent of average of three years		Age	Preference for digits ending in 5 as per cent of average of three years		Age	Preference for certain even digits as per cent of average of three years	
	1931	1881		1931	1881		1931	1881
10.....	2.4	6.9	5.....	—	0.8	2.....	2.3	10.1
20.....	—	4.4	15.....	—	—	8.....	0.4	1.7
30.....	9.9	6.9	25.....	—	0.1	12.....	0.3	6.7
40.....	17.2	9.4	35.....	6.1	5.8	18.....	2.3	6.1
50.....	19.2	10.2	45.....	12.4	15.1	22.....	—	6.4
60.....	21.4	14.4	55.....	2.5	5.8	28.....	5.9	8.5
70.....	20.4	22.2	65.....	14.3	11.5	32.....	2.8	5.7
80.....	15.2	23.0	75.....	5.5	14.4	38.....	10.0	8.5
90.....	6.9	37.0	85.....	—	—	42.....	13.0	3.6
						48.....	8.3	9.4
						52.....	11.0	3.8
						58.....	8.9	4.9
						62.....	4.8	1.0
						68.....	7.7	6.0
						72.....	9.0	6.2
						78.....	8.7	10.8
						82.....	5.5	—
						88.....	—	2.8

Generally speaking, no improvement has been shown in the fifty years; in fact mis-statements seem to be more prevalent between the ages of 30 and 70 in the later years. For most purposes, however, the matter is not serious, since it has been shown by the late Mr. Knibbs of Australia and others that these mis-statements of round numbers are apt to be mainly errors of less than five years, *e.g.*, the person who mis-states his age in saying he is 40 is very probably 39 or 41 while he is almost certain to be between 35 and 44. As a result, in most cases, the age is correct when the quinquennial grouping is used, although probably a better grouping would be 3-7, 8-12, 13-17, and so on.

Investigations by the Dominion Bureau of Statistics on the subject lead to the conclusion that the serious mis-statements of age are not the result of predilection or preference for certain digits, but are intentional under-statements around the age of 40, probably especially by females, and over-statements at older ages by both males and females and similar deliberate mis-statements including those at critical ages such as 21.

It is noticeable that the preferences are greater in the older ages than in the younger. This is quite natural. The older a person is, the more difficult it is to state his exact age unless he has some reason for keeping it continually in mind. It is doubtful, too, whether these preferences have any connection with illiteracy. To illiterate persons, one number seems pretty much the same as another, and there is further evidence that it is not only the illiterate person who uses round numbers. Similar mis-statements were examined in the case of persons reporting weeks unemployed. It was found that the even numbers were greatly exaggerated and that clerical workers, actuaries, accountants and other persons familiar with figures were just as inaccurate as labourers, but that young persons did not seem to exaggerate as much as older persons.

**Male and Female Preferences.**—From the foregoing it would appear that there are no sex differences in preferences for certain digits in reporting age. If, as is commonly supposed, females mis-state their age to a greater extent than males, it will not be apparent in tabulations of these preferences. However, since the subject is of interest, a table, showing the male and female percentage preference calculated by the same method as used in comparing 1881 and 1931, is appended (Statement II).

II. PREFERENCES FOR CERTAIN DIGITS IN REPORTING AGES; BY SINGLE YEARS AND SEX, CANADA, 1931

Age	Preference for digits ending in 0 as per cent of average of three years		Age	Preference for digits ending in 5 as per cent of average of three years		Age	Preference for certain even digits as per cent of average of three years	
	Males	Females		Males	Females		Males	Females

						82.....	5.8	5.3
						88.....	-	-

**Unstated Ages.**—One of the great difficulties in statistical analysis emanates from such classifications as “not given” or “not stated”. This is especially true of data on ages. It is most important that the age distribution at each census be given in comparable form. In earlier censuses a large element of the population were of unstated ages, making a comparison very difficult. In 1891, there were 63,116 persons who did not state their age; in 1931 only 3,771. The former figure represented 1.31 p.c. of the total population; the latter less than .04 p.c.

Now if there is no *one* great reason for not stating age, if, in other words, the non-statement of age is merely accidental, *e.g.*, the result of failure to come in personal contact with the person enumerated, no serious error arises despite the lack of complete data. The stated ages can be used as a large sample and the unstated distributed in proportion thereto. If, however, there is a single great cause for withholding information on age, that cause must be found before the age distributions of different censuses can be properly compared. It has been suspected that persons not stating their age were elderly people. If this be so, the non-statement of age becomes a very serious matter, since in 1891 for example, the number of persons in Canada whose age was not reported by the enumerators nearly equalled the total population over 70 years of age.

The extent of this non-statement, an idea of its effect upon the age distribution and the substantial improvement in recent decades may be obtained from Statement III, submitted herewith, which shows the number of unstated ages back to 1881. It may be mentioned here that the number in the four older provinces in 1871 was practically negligible.

III. POPULATION, NUMBER OF NOT STATED AGES AND NUMBER PER 100,000 OF THE POPULATION, BY SEX, CANADA, 1881-1931

Census year	Population	Persons of unstated age			Number of persons of unstated age per 100,000 of the population		
		Both sexes	Males	Females	Both sexes	Males	Females

1891.....	4,833,239	63,116	31,535	31,581	1,305	652	653
1901.....	5,371,315	49,077	29,766	19,311	914	554	360
1911.....	7,208,643	36,633	26,687	9,996	509	370	139
1921.....	8,787,949	21,262	11,588	9,674	242	132	110
1931.....	10,376,786	3,771	2,711	1,060	36	26	10

In view of the importance of the question, a study was made by the Dominion Bureau of Statistics of the nature of these unstated ages. When unstated data are broken up by areas or cross-classified with other attributes of the population, here and there certain facts or causes are found which make it possible to allocate the data more or less accurately to definite categories. For example, in one locality the unstated ages may comprise its entire population and in such a case it is almost certain that the age distribution differs very little from that of the surrounding

area and the data may be spread proportionately over most of the age range. In another case it may happen that the non-statements were due to failure to enumerate a certain section of the population, such as children under 15 years, Indians, etc. If the total population is small and the non-stated ages large, the stated ages sometimes show defects in certain age groups, thus indicating that the unstated were largely in these groups. A number of observations from this study of the nature of unstated ages may be summarized herewith.

1. In 1881 the unstated ages numbered 58,769, the main part of which (over 90 p.c.) were distributed as follows:—

Locality	Unstated age	Stated age
The Territories.....	45,586	10,860
Cariboo, B.C.....	3,310	4,240
Yale, B.C.....	2,656	8,544
Extension, Man.....	2,779	13,073
	54,331	35,317

The above figures prove absolutely that the unstated ages were not confined to older persons; in the Territories, for instance, the unstated comprised over 80 p.c. of the total population, all of whom could not possibly have been old persons. In fact, the presumption is that the age distribution of the 54,331 unstated was that of the whole population, not a certain age section of the population.

2. In 1871 the number not stating their age amounted to only 1,700, but it happened that they were from small localities. The following examples from the census of that year again provide absolute proof that all unstated ages could not have been those of old persons.

Locality	Unstated age	Stated age
Pic, Algoma.....	216	155
Nipigon.....	426	12
	642	167

3. In the 1861 Census, in which data on ages were given by subdistricts, the "not stated" were distributed over a large variety of conditions; in one case the total Indian population showed unstated ages; in another a classical college; in another the population under 20 were not given according to the age grouping used and, consequently, were added to the "not stated," while the remaining population were given as of stated ages. It would therefore appear that the total number unstated in the 1861 Census, was distributed in practically the same proportions as the total population of stated ages.

4. In the 1931 Census 3,771 persons in the population did not state their age and of these 1,397 or 37.1 p.c. were single, while of the total population over 15 years of age 37.6 p.c. were single. It is an established and reasonable fact that old persons are apt to be married or widowed where the proportion single is small and decreasing. The proportion single, then, of the not stated, would place them only a little older than the average age of persons over 15. Similarly, of the total population 15 years of age and over, 6.2 p.c. were widowed and of the 3,771 not stated only 5.7 p.c. were widowed. This suggests that the "not stated" were somewhat younger than the population over 15, which is to be expected, if they include persons under 15.

These observations seem to indicate that unstated ages have no particular bias and it would therefore appear that there is sufficient justification for the distribution of the unstated ages in any province from census to census in the same ratio as the stated in that province. The comparative data 1851-1931, included in Table 8, give percentages on stated ages only.

#### STAGES OF DEVELOPMENT OF THE AGE DISTRIBUTION OF CANADA

The question as to whether Canada is a young, middle-aged or old country is best answered by the nature of the age distribution of the people, which determines the stage to which ageing has progressed. The following chart, therefore, shows the age distribution in 1881 as compared with 1931—fifty years later.

It is quite obvious from this chart that a great increase has taken place in the proportion of older persons to younger. The fact that the figure of 1931 is flatter than that of 1881 clearly illustrates this. The most marked characteristic, however, appears in the middle age groups which are convex in 1931 and concave in 1881. This is mainly the result of immigration. The shaded portion of each figure shows the difference between corresponding ages of the two censuses; the shading of either the 1881 or the 1931 figure signifies an excess in that year. It is seen that up to the age of 30 the 1881 proportions were larger and then, after this age, were smaller. The 25-29 age group is a peculiar one standing somewhat by itself. This is probably due, at least in part, to emigration. There are also differences caused by the children of immigrants and of mixed Canadian and immigrant parentage, which will be described elsewhere.

**The Early Ages.**—In comparing the age distribution of 1931 with former censuses, it is noticeable that in 1931, for the first time, the number of persons under 5 years of age was smaller than that in the next quinquennial age group. This was true of some of the provinces in earlier censuses, but never for Canada as a whole. The obvious inference is that it is due to a decline in the birth rate during the years 1926 to 1931. There is no doubt that the number of births was smaller in these five years than in the preceding years. At the same time caution should be used in drawing general conclusions on this point. In another section of this volume (Chapter IV on Conjugal Condition) the age distribution of the married is traced through different censuses. It is obvious there, that the present century has been exceptionally favourable to marriages and births and that, about the year 1921, this condition reached a very high point. It is quite incorrect to make general deductions from comparisons of figures for any period with those for a period that is exceptional, as in the post-War years, and the chapter concludes that despite the small 1931 proportion under 5 years of age there seems to be no evidence that anything unusual has happened in connection with the birth rate in the past five years.

**Septuagenarians.**—The subject of "70-year-olds" is of interest because at that age persons become eligible for old age pensions. In this connection it is important to compare the present population over 70 with that of former census years, and also to consider the number of persons approaching that age, *i.e.*, the number of persons, who, if they live, will be over 70 within, say, the next thirty years.

IV. PERCENTAGE OF THE POPULATION 70 YEARS OF AGE AND OVER, 1881-1931 AND PERCENTAGE AT CERTAIN AGE GROUPS, 1931

Census year	Per cent of the population 70 and over	Per cent of the population at certain age groups, 1931		
		60-69	50-59	40-49
1881.....	2.52			
1891.....	2.81			
1901.....	3.08			
1911.....	2.82			
1921.....	2.83			
1931.....	3.31	5.07	8.25	11.87

**Centenarians.**—The number of persons stating their age at or over 100 years in 1931 was 163. The chief purpose of reference to this figure is to suggest that caution be used in accepting figures of centenarians as reliable. In 1871, Mr. Taché, then Chief of the Census, made a study of centenarians, tracing, where possible, the true age of the person who stated his age at any figure over 100. In only an odd case was the true age coincident with the stated age, the latter being as a rule greatly in excess. There is no reason to believe that the situation has improved since then. In fact there seems to be a continuing tendency on the part of old persons to over-state their age and it would therefore appear that the value of data on age diminishes as the ages under review are increased. Fortunately, for statistics, the number of these persons is very small and the data concerning them are not often needed. Where accuracy in age statements is most necessary, there it is generally found.

**Age by Sex.**—The sex differences in age distribution have, among other values, considerable historical value. The best method of presenting these sex differences is by ratios of the number of males per thousand females in each five-year age group, as shown in Statement V.

V. NUMBER OF MALES PER THOUSAND FEMALES, BY QUINQUENNIAL AGE GROUPS, CANADA, 1931

Age group	Males per 1,000 females	Age group	Males per 1,000 females
All ages.....	1,074		
0-4.....	1,022	55-59.....	1,186
5-9.....	1,022	60-64.....	1,140
10-14.....	1,022	65-69.....	1,093
15-19.....	1,021	70-74.....	1,067
20-24.....	1,036	75-79.....	1,029
25-29.....	1,089	80-84.....	944
30-34.....	1,081	85-89.....	828
35-39.....	1,090	90-94.....	712
40-44.....	1,166	95-99.....	636
45-49.....	1,219	100 and over.....	831
50-54.....	1,208	Not stated.....	2,558

The striking differences, *i.e.*, the ages where the male proportion is much larger or smaller than the average for all ages, are mainly connected with immigration. At early ages the sex ratio is nearer unity, there being no very great difference between the number of males and females at birth (about 1,022 males to 1,000 females). In the group 25-29, the masculinity of the population is above average, and continues to increase until the age group 45-49, when it is 1,219 (as compared with the average 1,074). From then it gradually decreases until in the group 70-74 it is less than average, or 1,067. Over the age of 80, the sex ratio swings below unity and thereafter the population becomes predominantly feminine; at 90 and over, there are only 701 males per 1,000 females, *i.e.*, the femininity of the population is 1,426 per 1,000 males, a much greater degree than that of masculinity at ages 45-49. The high masculinity around 45-49 is undoubtedly due to the fact that the immigrants who arrived in the early part of the century were overwhelmingly males, while the femininity at old ages is probably mainly because females live longer than males. It may be worth observing that the masculinity at the ages 30-34 is less than in the groups immediately before or after. It is not improbable that the Great War may have been at least partly the cause of this.

**Age by Province.**—The age differences as between the separate provinces are for many reasons especially interesting. The provinces receiving the most immigrants have larger proportions than average at the ages already indicated, as well as a higher degree of masculinity. The provinces showing the smallest proportions at the early ages usually have the lowest birth rates and the older provinces the highest proportions at the older ages.

VI. PERCENTAGES OF THE POPULATION IN EACH FIVE-YEAR AGE GROUP, CANADA AND PROVINCES, 1931

Age group	Canada	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Yukon	North-west Territories
All ages.....	100-00	100-00	100-00	100-00	100-00	100-00	100-00	100-00	100-00	100-00	100-00	100-00

**Age by Nativity of Parents.**—A study of the ages of immigrants and of Canadians of the third generation as compared with the second, is especially valuable, since it helps to elucidate historical and other points on which there are no direct data. The question of percentage distribution of the population by nativity of parents is considered so important that the percentages thereof by quinquennial age groups are not only tabulated herewith (Statement VII) but are also depicted graphically (Chart 2).

VII. PERCENTAGE DISTRIBUTION OF THE POPULATION, BY NATIVITY OF PARENTS AND QUINQUENNIAL AGE GROUPS, CANADA, 1931

Age group	Total population	Population with both parents Canadian	Population with one parent Canadian	Immigrant population <sup>1</sup>
All ages.....	100-00	100-00	100-00	100-00
0-4.....	10-35	11-92	16-31	0-99

## CHAPTER IV CONJUGAL CONDITION

Conjugal condition, next to sex and age, is probably the most fundamental attribute of the population. Its aspects, as based upon an analysis of Tables 16 to 21, may be divided into two general classes: (1) vital; (2) economic and social.

(1) **Vital Aspect of Conjugal Condition.**—By "vital" is meant the basis which the married state supplies to the fertility of the population.\* In relation to this as well as to the second aspect, the age of the married is a most essential part of data on the subject. In the vital aspect the age of females is of more importance than that of the males, and certain ages, too, are more important than others. Since nearly all the births occur to mothers between 15 and 45, the number and distribution of the married female population as between these ages, compared both with the total female population and the population of both sexes, furnishes basic information on fecundity. If this comparative number is small and inclined towards the older ages of the 15-44 group, the expected number of births will also be small. If the actual number of births is larger than expected on this basis, then either natural fertility is higher than the average or some other favourable condition must have set in.

The past trend of age distribution and the proportion married, as a basis of birth rates, is most interesting. It is useful to compare, back to 1871, what the birth rates per 1,000 total population would have been according to the age distribution and the proportions married at each age. †Assuming the birth rate according to the age of the married female to be the same as in 1931, the calculated rates 1871-1931 would be as follows:

1931.....	22.4 (actual rate)
1921.....	24.3
1911.....	23.4
1901.....	Data on married by age not available.
1891.....	21.6
1881.....	21.5
1871.....	21.2

\*See also 1931 Census Monographs *Fertility of the Canadian People* by W. R. Tracey and *Racial Origins and Nativity of the Canadian People*, Chap. XIII, by W. B. Hurd. The term "vital" used here for convenience is, of course, borrowed from "vital statistics" which seem to have the biological rather than economic bearing.

†This indirect method is not popular with statisticians, but it is not used here to standardize birth rates.

It is thus seen that the combined influence of the age of the population, the age of the married females and the proportion of females married must have steadily become more favourable to the birth rate from 1871 to 1921. In 1931 they were less favourable than in 1921 or 1911 but more favourable than in the closing years of the last century. The difference between the lowest, 1871, and the highest, 1921, is considerable enough to allow 27,000 more births in 1921 than in 1871 as the result of these influences alone. Although the age distribution of the female sex is the more important in relation to fecundity, the age of the males also has a direct bearing in this regard, especially since there is a definite relationship between the ages of husband and wife. On the average, the difference between their ages is about four years; consequently the number and distribution of married males 19-49 is of greater importance from the point of view of fecundity than that of the other age groups. However, in a comparison between Canada and another country, data on the females alone will be sufficient.

I. PERCENTAGE MARRIED FEMALES OF THE TOTAL POPULATION 15-44 IN THE UNITED STATES AND CANADA, FOR CENSUS YEARS 1891-1931

Census year		Per cent married females 15-44 years of age, of total population		Census year		Per cent married females 15-44 years of age, of total population	
Canada	United States	Canada	United States	Canada	United States	Canada	United States
1931	1930	11.85	14.53	1901	1900		12.99
1921	1920	12.51	14.19	1891	1890	10.78	12.68
1911	1910	11.67	13.69				

<sup>1</sup> Figures not available.

(2) **The Economic and Social Aspects.**—While the data on conjugal condition as given in the main tables supply valuable information on fertility, they are probably of still greater importance in the analysis of the economic and social aspects of conjugal condition. In relation to the latter, information for both sexes, for the older as well as the younger age groups, and for the single, widowed and divorced in addition to the married, is also of importance.

The married state is a condition into which enter about 75 p.c. of the population born alive and is therefore the normal state, the single person at the age of 65 being an anomaly.

It is no mere surmise that a married population is more stable than a non-married, for there are abundant data to show that a moving population is largely unmarried or unaccompanied by the wife or husband. The married state presupposes a certain degree of prosperity or prospects (since the normal person does not marry without some means of support) and is a proper condition for the upbringing of a family irrespective of the matter of financial support. There are plenty of data in the Canadian Census of 1931 to show that the children of the widowed or of the married with the wife or husband absent are more illiterate and attend school more irregularly than the children of parents both of whom are alive and living together.

Variations in conjugal condition as between different areas or as between census years are of great significance from the point of view of their results; they are no less significant from the point of view of their causes and to determine these causes it will be necessary to compare conditions in 1931 with those in previous census years.

**Developments in Conjugal Condition since 1871.**—The changes that have taken place since 1871 both in the proportions of persons within the married state and in the proportions of those who have been married (even though subsequently widowed or divorced) are, at first, difficult to understand and wrong conclusions may easily be the result of misunderstanding. The figures in Tables 16 to 18 show that the proportions married, both male and female, have been growing. The accompanying figures (Statement II) summarize the percentage married and the percentage "at one time married" of both sexes for Canada, 1871 to 1931. In both conditions and for both sexes these proportions have steadily increased. This fact, apart from its causes, is itself significant for it indicates that any advantages arising from the married state have been increasing during the past sixty years.

## II. PERCENTAGE OF THE POPULATION, ALL AGES, NOW OR EVER MARRIED, BY SEX, CANADA, 1871-1931

Year	Per cent in the married state		Per cent "at one time married"	
	Males	Females	Males	Females
1871.....	29.86	30.63	31.88	35.04
1881.....	31.55	32.28	33.87	37.41
1891.....	32.36	33.37	34.91	38.81
1901.....	33.76	34.51	36.45	40.30
1911.....	34.85	36.07	37.24	42.35
1921.....	37.49	38.32	40.22	43.96
1931.....	37.83	38.74	40.63	44.58

The progressive increases shown above are definite enough but at the same time may appear surprising. Age distribution is a factor of considerable import in analyzing these increases. As the age of the population advanced it became increasingly favourable to the married or "at one time married" state; it has not as yet advanced to the point where it ceases to be favourable to the married state, *i.e.*, when, with an increasing percentage of older people, the proportion married is reduced because of the larger proportion widowed. It is necessary, therefore, to remove from the above figures the influence of age distribution before the true trends can be ascertained. For this purpose, the percentages of the total population married or "at one time married" were corrected on the basis of the age distribution of each of the census years 1871-1931, using constant age-group \*rates, *viz.*, those of 1931. The results illustrate the variations due to the age factor. They are shown in index form in the first part of Statement III, the second part of which shows the actual proportions corrected for the influence of age distribution.

## III. EFFECTS OF AGE DISTRIBUTION ON THE MARRIED AND THE "AT ONE TIME MARRIED" SECTIONS OF THE POPULATION IN EACH CENSUS YEAR SINCE 1871

Year	Proportion married		Proportion "at one time married" ( <i>i.e.</i> , not single)	
	Males	Females	Males	Females
(a) INDEX NUMBERS <sup>1</sup> OR RATES AS AFFECTED BY AGE DISTRIBUTION ALONE. PROPORTIONS OF THE TOTAL POPULATION				
1871.....	100.0	100.0	100.0	100.0
1881.....	105.8	106.1	106.0	107.0
1891.....	113.0	111.6	113.3	113.2
1901.....	120.6	116.1	120.9	118.5
1911.....	128.0	118.5	123.3	120.2
1921.....	129.9	119.7	129.8	121.7
1931.....	133.8	123.0	134.4	126.0
(b) PERCENTAGE MARRIED AND "AT ONE TIME MARRIED" CORRECTED FOR THE INFLUENCE OF AGE BY THE INDEXES SHOWN IN (a)				
1871.....	29.86	30.63	31.88	35.04
1881.....	29.82	30.42	31.95	34.95
1891.....	28.53	29.90	30.80	34.29
1901.....	27.16	29.72	30.14	34.00
1911.....	27.23	31.20	30.15	35.23
1921.....	28.86	32.01	31.69	36.12
1931.....	28.27	31.50	30.21	35.38

<sup>1</sup> In calculating the index numbers the year 1871 is the base and the proportions of the married and the "at one time married" at each age and for each census year are those of 1931.

The situation revealed by a comparison of the percentages in the second part of the table between census years is most interesting and leads to important conclusions. In the first place the variation from year to year in the married and "at one time married" in the case of both sexes has been slight during the last sixty years, one important exception being the decade ending in 1921 which shows a relatively high figure in every case. The general tendency is downward from 1871 to 1901, then upward until 1921, followed by a decrease in 1931. The two trends, *viz.*, a progressive decrease in the later years of the past century and an increase in the first

\*For the reason that rates for all the years are not available. The method is one of necessity not of choice

twenty years of the present century, are of considerable importance since this would seem to provide an explanation for conditions in 1931. The steadily increasing rates of the married and "at one time married," if considered alone, seem to contain numerous contradictions. For example, the 1931 proportions "at one time married," as shown by the first section of Statement III, are the highest since 1871 but this is also true of the percentage single over 65 years of age, two obviously contradictory ideas. It is popularly assumed that 1931 was a year of rapid decline both in marriage rates and birth rates. The obvious reason for this assumption is that the comparison is being made only with 1921, the peak, and probably an abnormally high year. Compared with the previous century figures and even the pre-1921 present century figures, those for 1931 are quite normal.

It has been difficult to make a comparison for birth and marriage rates over the same sixty-year period owing to lack of reliable vital statistics previous to 1921. We can effect some comparison, however, by inference. The explanation of the situation in 1921 is not difficult to find. It is quite reasonable that, as an immediate aftermath of the War, there would be large proportions both married and recently married, since Canadian single persons as well as a large number of the immigrant population from allied and enemy countries left Canada during the War years. In addition, many of the returned men married overseas and probably there was a greater tendency than usual toward marriage immediately after the War. Still, the influence of the War is apt to be over-rated, for many conditions often attributed to it are found on careful analysis to be really part of a trend dating back to the beginning of the century. This is true of the proportions married. It is quite clear that the figures of 1921 are but the culmination of a trend operating since the beginning of the century. The effects of the War then in this respect, must have been slighter than usually supposed. The true explanation of the situation must be sought in the natural consequences of immigration on a tremendous scale.

Prior to the beginning of the century the population of Canada was emigrating to the United States in large numbers. The male emigrants were not necessarily single adults as was the case of subsequent immigration to Canada and later emigration. The exodus did not reduce the proportions single in Canada but rather increased them. The birth rate then seems to have been no lower than at present, the incoming children more than making up for the outgoing single adults. Since emigration seems to go hand in hand with periods of business depression, it is quite probable that fewer of those remaining were marrying. This process went on from shortly after 1861 to 1890-1900 or approximately to 1896. Then immigrants began to pour in. They were preponderantly single adult males and their presence caused a sagging in the proportion of married persons in Canada, which continued until early in the present century. Thus when the pioneering element of the population had begun to feel themselves established, and at a time of comparative prosperity, actual or potential, there was a very large number of males at marriageable ages who were economically able to marry. The result was, in all probability, a very high marriage rate extending over a period of years. Then came the War, immediately resulting in the exodus of a large number of the single immigrant males in addition to native Canadians.

Two processes therefore, brought the proportions married by 1921 above what may be regarded as normal—a progressive increase since the beginning of the century in the number marrying and a decrease by war and emigration in the number single. That the marrying process was the more important of the two may be illustrated indirectly by the following facts. Between 1901 and 1921 the population of Canada increased over 63 p.c. which is popularly supposed to be chiefly the result of immigration. But in the meantime the population under 5 years of age increased 64.5 p.c. and the population 5-9 years of age increased 70 p.c. Since very few persons at those ages were immigrants, it may be concluded that the bulk of the increase came from births. There is another way of illustrating this point; of the 3,400,000 increase in population between 1901 and 1921, as many as 348,000 or nearly 25 p.c. were increases in the population under 10 years of age, while only one-eighth (12.9 p.c.) of the increase in 1891-1901 occurred in the population under 10 years of age. Thus it is seen that the birth rate and, inferentially, the proportions marrying must have increased progressively during the first twenty years of the century to a point of culmination in 1921 which must be considered abnormal.

Between 1921 and 1931 these rates decreased. In 1931, however, the proportions married were higher than they were at the beginning of the century (even after allowing for age distribution) and it may be presumed, then, that the marriage rate was also higher although the drop

from 1921 generally leads to the erroneous conclusion that an abnormally low point had been reached. The marriage rate of the year 1931 (as shown in vital statistics) if maintained over a period of fifty years, would lead in 1981 to the same proportions of the "at one time married" at the age of 65 as in 1931. The accompanying analysis (Statement IV) is based upon the marriage and death rates for specific age groups in 1931. According to the death rate of 1931, out of every 100,000 males born alive, 86,030 would be alive at the age of 15 and 58,004 at the age of 65. Assuming all persons to be single at the age of 15, and applying the marriage rate of 1931, it is found that 6,685 or 11.5 p.c. of the males still living at the age of 65 would be single, i.e., 88.5 p.c. would be married, widowed or divorced. The actual proportion of single males at 65 and over in 1931 was 10.5 and, since some marry after 65, it is clear that there is very little difference between the two proportions. In the case of females the calculated proportion is 12.2 p.c. single at 65, while the proportion single at 65 and over, in 1931 was 10.9, again a small difference that could be explained by those marrying after 65. Accordingly the marriage rate of 1931 cannot have been much lower, if any, than the average over the previous fifty years.

IV. OUT OF 100,000 BORN ALIVE, NUMBER EXPECTED TO BE (a) SINGLE, (b) MARRIED OR "AT ONE TIME MARRIED" AT CERTAIN AGE GROUPS PROVIDING THE MARRIAGE AND DEATH RATES OF THE YEAR 1931 WERE MAINTAINED

Age	Number alive at age per 100,000 born alive	Average per cent not married in interval	Average per 100,000 marrying at age (total at age in one year)	Rate per 100,000 estimated on single persons	Number single at age	Number married, widowed or divorced at age	Number married who died in interval

Percentage single at 65.....	-	-	-	-	12.2	-	-

NOTE:

Males—

Number "at one time married" = 51,319 living at 65 + 22,252 dead = 73,571.  
Chances of those alive at 15 to be married before death = .855.

Females—

Number "at one time married" = 53,742 living at 65 + 22,984 dead = 76,726.  
Chances of those alive at 15 to be married before death = .868.

It may appear inconsistent with the foregoing that during the past forty or fifty years the proportion married over 65 years has been decreasing and the proportion single increasing. This is true especially of males. The percentage of males married or "at one time married" over 65 years has steadily decreased from 93.6 in 1891 to 89.5 in 1931 while the percentage single has increased from 6.4 in 1891 to 10.5 in 1931. The percentages of married females at the same ages are about the same now as in 1891, but the percentage single has increased from 8.2 in 1891 to 10.9 in 1931. There is really no contradiction in these figures. The conjugal condition at 65 and over is practically a completed process and the period over which this process was operating must be borne in mind. The persons 65 years and over in 1931 were 15 and over in 1881; between 1891 and 1901 they were 25 to 35 and over, these being the ages at which most of the marriages occur. As already explained, marriages were declining during the last part of the past century with the

natural result that the proportions at older ages which occurred in the present century were also declining. The higher marriage rates at the beginning of the present century are not yet reflected in the proportions married at 65 and over but may be expected to be in the next twenty or thirty years. They are already reflected in the case of females in the married state. In 1921 the percentage of married females over 65 was 39·8; in 1931 it was 40·2, although 1921 had declined steadily from 1891.

On the other hand it is noticeable that the proportion married at the younger ages has been increasing, especially in the case of females; for instance, the percentage of those 15-19 married in 1891 was 4·5; in 1931 it was 5·1 (Statement VI). There is little doubt that this may be attributed to the immigration process already described.

V. PERCENTAGE IN THE MARRIED CONDITION, BY AGE GROUPS AND SEX, CANADA, 1891-1931

1931.....	5·10	36·87	74·15	87·50	89·58	89·05	89·14

**Comparison by Provinces.**—The proportions married and "at one time married" in 1931 show wide variations when compared for separate provinces. The highest proportion of persons in the married state in the case of both sexes is in British Columbia; the lowest in Quebec (if the Yukon is excluded). British Columbia also leads in the case of the "at one time married", while the lowest in this category is Saskatchewan (Statement VII).

## CENSUS OF CANADA, 1931

## VII. PERCENTAGE (a) MARRIED, (b) "AT ONE TIME MARRIED," BY SEX, CANADA AND PROVINCES, 1931

Province	Per cent married		Per cent "at one time married"	
	Males	Females	Males	Females
CANADA.....	37.8	38.7	40.7	44.6
Prince Edward Island.....	35.0	36.8	38.7	44.6
Nova Scotia.....	35.8	37.2	39.1	44.7
New Brunswick.....	34.8	35.9	38.0	42.2
Quebec.....	34.2	33.5	37.0	38.5
Ontario.....	41.8	41.8	44.9	48.9
Manitoba.....	37.4	39.5	39.8	44.5
Saskatchewan.....	34.7	39.1	36.8	42.6
Alberta.....	36.9	41.6	39.2	45.7
British Columbia.....	42.5	45.2	45.5	51.8
Yukon.....	28.6	44.0	34.1	50.2
Northwest Territories.....	38.5	41.8	41.9	49.5

It can be readily demonstrated that age distribution is the main cause of the variation as between provinces. Statement VIII shows for both sexes and for those in the married and "at one time married" states, the percentages by provinces corrected for the influence of age distribution.

## VIII. PERCENTAGE (a) MARRIED, (b) "AT ONE TIME MARRIED," BY SEX, CORRECTED FOR THE INFLUENCE OF AGE DISTRIBUTION, CANADA AND PROVINCES, 1931

**The Widowed.**—The foregoing deals with those in the married state and those who have been married (*i.e.*, including widowed and divorced). The widowed as a class require separate consideration. They are the persons who, although not married, have, in most cases, family responsibilities, and who in the case of females, include many persons reduced to a state of dependency. The increasing proportions widowed since 1871 are submitted in Statement IX.

IX. PERCENTAGE WIDOWED, BY SEX, CANADA, 1871-1931

Year	Males	Females	Year	Males	Females
1871.....	2.12	4.64	1911.....	2.33	5.31
1881.....	2.33	5.12	1921.....	2.64	5.55
1891.....	2.55	5.44	1931.....	2.77	5.77
1901.....	2.68	5.77			

Now there are many influences which determine not only the changing proportions widowed, but also the sex differences. There is no doubt that the chief influence in the increases since 1871, has been advancing age, as already shown in the case of the married. The main reasons why there are more female widowed than male are: (1) because the husband is older than the wife and is more likely to die first; and (2) because more widowers re-marry.

It should be noticed, however, that if the change in the rate is reckoned in thirty-year periods instead of ten, the period from 1901 to 1911 showed hardly any increase in the case of either sex while a considerable increase was shown in 1871-1901. The trend of the period 1901-31 was principally, though not wholly, due to the fact that the percentage widowed actually decreased in 1901-11. A slowing up is also seen between 1921 and 1931. This last could be due to increasing longevity. The 1901-11 phenomenon is, of course, connected mainly with immigration. The increase between the 1911 and 1931 figures is exceptional in the case of the male widowed, but not in the case of the female widowed. This fact provides a good illustration of the difficulties encountered in tracing the influence of the War in phenomena of this kind. If the exceptional increase in 1921 had been in the case of the female widowed, it would at once have been attributed to the War, but, strangely enough, it was in the case of the males.

In the 1921 figures, the fact that so few widows are traceable to the War, is, without doubt, attributable to the fact that although the War greatly increased the number of widows, these "war widows" were apt to be young and eligible and many of them promptly re-married. Immigration movements must also be considered in explaining the 1911-21 figure. There is little doubt that large numbers of the wives of British and other immigrants who left Canada in 1914-18, either accompanied their husbands or followed them later and, if widowed by the War, were not in the population of Canada in 1921.

**The Divorced.**—This condition is so exceptional that it needs but passing comment. In so far as Canada is concerned it is practically a phenomenon of the present century, but its trend is uncertain. The percentage divorced was about the same in 1931 as in 1921 and only one-hundredth of one per cent greater than in 1911. Here again re-marriage is such a strong factor that it is very unsafe to use the figures of Tables 16b and 17 as measuring any increasing or decreasing tendency towards divorce.

**Sex Differentiation in the Number Married.**—If the husband and wife lived together in every case, the number of married males in any given area and for any year would be the same as the number of married females. The fact that this is not the case calls for explanation. In 1931 there were 2,033,240 married males and only 1,937,950 married females, an excess of 95,290 males. It is interesting to compare these excesses from census to census as follows:—

1871.....	698
1881.....	1,004
1891.....	4,251
1901.....	24,861
1911.....	80,385
1921.....	66,634
1931.....	95,290

The above figures are for Canada as a whole, and show that the number of married male residents of Canada whose wives were living in some other country was very much larger than the number of married female residents whose husbands were domiciled abroad. It is not necessarily a question of legal separation. A goodly number of the excess is composed of such people as the Chinese, in whose case, the immigration of women is severely restricted. In 1911 the immigrants included married men whose wives had not yet immigrated, and the later immigration of these wives partly explains the drop from 80,385 in 1911 to 66,634 in 1921. It must be remembered that these excesses are merely net figures, *i.e.*, the excess of 95,290 married males in 1931 is the difference between the number of husbands whose wives are absent and the number of wives whose husbands are absent. Whatever the cause, there is no doubt that the consequences of this phenomenon are highly important. The data on illiteracy and school attendance contain ample proof that there is both greater illiteracy and poorer attendance on the part of children whose parents are not living together. The effect of separation is certainly reflected in these two attributes of population and there is little doubt that it appears in several others.

While in Canada as a whole the married males are in excess, there is strong evidence that in smaller areas the number of absent husbands exceeds the number of absent wives. For instance if it is examined for separate counties there are several thousands of cases where the married females are in excess of the married males, in which cases the husband was either out of Canada or in another county of Canada.

**Conjugal Condition by Racial Origin.**—Table 20 shows the conjugal condition of the different races in Canada in 1931 while Statement X at the conclusion of this chapter gives the percentages by sex in the married state, corrected for differences in age distribution.\* It is interesting to know that, in the case of males, the highest percentages are among the Chinese and Japanese, the Czechs and Slovaks and the Hungarians, while the lowest are among the Scandinavians, the French, various small races such as the Spanish, Portuguese, etc., and unspecified races. In the case of females, the highest are the Belgians, Finnish and Czechs and Slovaks and the lowest the French, the above-mentioned "various" and such Asiatics as Syrians, Hindus, etc.

The influence of age distribution upon the variation as between races is measured in the same statement. There are a number of causes for the differences as between the sexes. One of these, of course, is the degree of masculinity of each race. Thus, among the Scandinavians, 31·2 p.c. of the males and 40·7 p.c. of the females are married; among the Finnish, 38 p.c. of the males and 46·3 p.c. of the females are married. The masculinity of the Scandinavian is indicated by a ratio of 1,380 males per 1,000 females and of the Finnish 1,356 males per 1,000 females. The ratio of masculinity of the Irish race, in which the proportions married as between sexes are approximately the same, (*viz.*, 38·5 and 38·9) is 1,040 males per 1,000 females. It is clear, however, that there is another factor, which has already been discussed, working against this cause, *viz.*, the excess of husbands over wives in Canada. Passing over the Chinese as the extreme example, we may consider the Czechs and Slovaks. Although their masculinity is almost two to one, the males show 53·6 p.c. married and the females only 46·1; there is an excess of 6,008 Czech and Slovak husbands over Czech and Slovak wives in Canada. Some of this excess may be caused by the men having wives of a race other than their own, but the Czechs and Slovaks are not exceptionally prone to marry out of their own race. While there are 10,759 Czech and Slovak husbands in Canada, the number of Czech and Slovak wives is only 4,751. Some of the latter may be married to husbands of other races, but it is safe to say that in 1931, the wives of considerably more than half the Czech and Slovak husbands were out of Canada. The immigrants of this race, it may be mentioned, comprise principally recent arrivals. The older immigrants such as the Dutch and Germans, especially the latter, show very little excess of married males and many of them are married to wives of other races. The percentage married of German males is 36·9; of German females, 39·9; and the difference can be almost entirely explained by the masculinity of the German population, *viz.*, 1,098 males per 1,000 females.

\*See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People*, Chap. III, by W. B. Hurd.

## X. PERCENTAGE IN THE MARRIED STATE, BY RACE AND CORRECTED FOR THE DIFFERENCES IN AGE DISTRIBUTION, CANADA, 1931

n.o.s.—not otherwise specified.

<sup>1</sup>Percentages married are divided by the index of correction for age distribution which is constructed on the assumption that every race in 1931 had the same percentages married at different ages as a standard, so that only the age distribution varied. In this index the French are taken as the base so that the corrected figures show what the percentage married would be if all the races had the same age distribution as the French.

After allowing for age distribution the highest percentages for the males occur in the Czechs and Slovaks, the Hebrews and the Indians, while the lowest are the Scandinavians, the "other" Europeans and the Irish. In the case of the females, the Roumanians, the Hungarians and Ukrainians show the highest percentages married while the Scottish, Irish and various races with very small representation in Canada show the lowest. Analysis of the statement leaves little doubt that the variations as between the sexes are due to: (1) the masculinity of the population; (2) the cases in which the wife is absent, and (3) the difference in tendency as between sexes to marry out of their own race.

## CHAPTER V BIRTHPLACE

The census of birthplace shows both the country of birth of the immigrant population and the province of birth of the Canadian born.\* It must be remembered that, in the huge movement of population which took place during the present century, interprovincial as well as immigrant and emigrant movements were involved. An exceptionally good example of this occurs in the case of British Columbia for, in 1931, over 37 p.c. of the native population and more important still, nearly 63 p.c. of the adult† native population were born in other provinces of Canada.

The difference between an indigenous and an imported population is a fundamental one, environment and early training influencing considerably the attitude of a person towards his place of residence. Since imported populations are to a large extent adult populations, it follows that their training and traditions are characteristic of their respective countries of birth. A study of the ages of immigration shows clearly that the formative period of the average immigrant's life is spent in another country which is, in the majority of cases, his native land.

In 1931, Canada had a population of 10,376,786, of whom 2,307,525 or 22 p.c. were born in other countries. If the adult population alone is considered, out of 6,055,980 persons over 19 years of age, 2,060,436 or 34 p.c. were born outside of Canada, almost half of them in foreign

\* See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People* by W. B. Hurd.

† Over 19 years of age and including not stated ages.

countries. In the above figures, only the proportion of the population of immigrant birth has been dealt with. If the movement of population as between provinces is taken into consideration, 7,277,757 or 70 p.c. of the total population in 1931, were residing in their province of birth, a very large proportion of whom were children. Of the adult population only, 3,395,110 or 56 p.c. were born in their province of residence. The 2,660,870 or 44 p.c. of the adults who were born outside their province of residence represented all the Canadian provinces and practically every country and type of civilization in the world. Thus the young and inexperienced population (56 p.c.) living within their native province had the task of moulding the attitudes and customs of an almost equal number of strangers (44 p.c.). Such a thing as being province-minded in Canada, therefore, seems an anomaly. The more patriotism is circumscribed by locality, the more unreal and superficial it is apt to be.

The importance of data on country of birth becomes more apparent, the more deeply the subject is studied. For this reason and in order to cover all aspects of the situation, the main tables of this section are presented in exceptionally detailed form.

**Historical Data on Birthplace.**—Tables 22-25 show the country of birth of the population at census years 1851 to 1931. It is very difficult to compare data on this subject because of the geographical changes in Europe after the Great War; *e.g.*, a person who early in the century migrated to Canada from a certain part of Austria or Hungary might not realize that in 1931 his birthplace should be recorded as Poland or Roumania. This possibility was dealt with in detail in the instructions to enumerators, so that the 1931 compilations are probably as accurate as could possibly be obtained. In comparing the census figures of several years, however, a grouping of certain European countries whose boundaries were changed is advisable. Accordingly, although Tables 22-25 are given as reported by the enumerated, the data as shown in the following statement are probably as far as the census can go in supplying strictly comparable figures.

#### I. POPULATION, BY STATED BIRTHPLACE, CANADA, 1871-1931

Birthplace	1871	1881	1891	1901	1911	1921	1931
Total.....	3,605,010	4,324,810	4,833,239	5,371,315	7,206,643	8,787,949	10,376,786

Italy.....	218	777	2,795	6,854	34,739	35,531	42,578
Russia, Lithuania and Ukraine.....	416	6,376 <sup>4</sup>	9,222	31,231	89,984	112,412	133,869
Central Countries <sup>1</sup> .....	102	-	695	28,407	129,421	159,379	317,350
Scandinavian Countries.....	588	2,076	7,827	18,388	61,240	64,795	90,042
Other.....	305	215	169	2,547 <sup>5</sup>	6,951	7,667	11,002
Asia.....	-	-	9,129	23,580	40,946	53,636	60,608
United States.....	64,613	77,753	80,915	127,899	303,680	374,022	344,574
Other countries.....	1,942	7,455	9,413	1,421	3,165	3,294	3,051

<sup>1</sup> Include Austria, Czechoslovakia, Hungary, Yugoslavia, Poland, Galicia and Roumania.

<sup>2</sup> Includes only six provinces.

<sup>3</sup> Includes birthplace not stated.

<sup>4</sup> In this year Poland included with Russia.

<sup>5</sup> In this year Roumania included with "other".

<sup>6</sup> Born at sea included with British Possessions.

**Birthplace by Year of Arrival.**—An historical presentation of the subject can again be used in dealing with birthplace and year of arrival of the immigrant population and should be especially valuable in conjunction with the previously-mentioned comparative statement. The birthplaces of all immigrants, as reported in 1911, should tally (after allowing for death and emigration), with those reported in 1931, as having arrived on or before June 1, 1911. In this way the immigrants' point of view in regard to birthplace in 1911 can be compared with the results of 1931. Such a comparison is attempted in the accompanying statement.

II. IMMIGRANT POPULATION AS REPORTED IN THE CENSUS OF 1911, AND THE IMMIGRANTS ARRIVING BEFORE 1911 AS REPORTED IN THE CENSUS OF 1931, BY BIRTHPLACE,<sup>1</sup> WITH THE PERCENTAGE OF THE 1911 IMMIGRANT POPULATION SURVIVING IN 1931

Birthplace	Immigrant population, Census 1911	Immigrant arrivals before 1911, Census 1931	Per cent of 1911 immigrant population surviving in 1931
<i>British Isles</i> .....	784,526	455,755	58.09

At sea.....	807	503	62.33

<sup>1</sup> Stated birthplace only. There were 19,708 *British* immigrants who did not state their birthplace.

It was to be expected that where the same immigrant enumerated both in 1911 and 1931 reported the same country of birth in the two years, although its name had been changed in the meantime, the result would be palpable in the percentages in the last column. Had it not been for a number of other factors intervening such as differential emigration, deaths, etc., these percentages would be the same for all countries; as it is, they vary from 35.47 and 34.63 for immigrants from Germany and "other countries" respectively, to 90.77 for those from the Lesser Isles, 79.05 from Syria, 77.71 from Wales, 73.50 from South Africa and 72.67 from countries of Central Europe. The last-mentioned group of countries is of special applicability to the question raised. The fact that the percentage for this group is so high would make one suspicious if it were not that South Africa and Syria were still higher. Furthermore, the central group includes nearly all the countries in which interchanges of territory took place. It is also true that Germany lost territory to Poland (as well as to France), but this would contribute somewhat to the high percentage in the central countries, especially if many who on the census schedule stated their birthplace as Germany in 1911 changed it correctly to Poland in 1931. This might partly explain why the percentage surviving of those giving Germany as birthplace was so small in 1931. The only explanation of the high percentage of Central Europeans surviving in 1931 seems to be that this element did not emigrate to the same extent as certain others. The one definitely suspicious figure is that for the Lesser (British) Isles (90.77 p.c.); deaths alone would be expected to reduce the 1911 population more than 9.23 p.c. in twenty years, and the high survival rate cannot be due to transfer of territory.

**Birthplace of the Canadian Born.**—Still pursuing the historical aspect of birthplace, it is important to ascertain what interprovincial movements of the population have taken place. The means of making such familiar concepts as "easterly" and "westerly" movements more definite are supplied in birthplace data. In the introductory remarks of this chapter it was mentioned that in 1931, 44 p.c. of the adult population of Canada were born outside their province of residence, and taking British Columbia as a single example, that 63 p.c. of the Canadian-born population were born in other provinces of Canada. A further analysis of this subject showing the trend in interprovincial movement, is presented herewith (Statement III).

### III. NUMBER AND PERCENTAGE OF CANADIAN-BORN POPULATION,

<sup>1</sup> "Province of birth not stated" not included.

<sup>2</sup> Saskatchewan, Alberta, Yukon and Northwest Territories combined previous to 1901, Saskatchewan and Alberta combined in 1901. <sup>3</sup> 24 Canadian-born members of the Royal Canadian Navy not included.

The interprovincial spread is well illustrated by the fact that the percentage resident in province of birth decreased steadily from 1871 to 1921 rising again slightly in 1931. The eastern spread from the western provinces is also seen to be increasing rapidly. It is, moreover, a striking fact that Manitoba has had the smallest percentage of its population living in the province of birth of any province of Canada since 1901, and for that matter every census year since 1871. Only in 1931 did Quebec surpass British Columbia in having the largest percentage. In 1871 Quebec had a smaller percentage in their native province than any other, obviously because of the heavy outward movement in the preceding decade as already described in Chapter I (Population Growth).

Data of this type, when shown for the total population, are apt to be misleading, in view of the fact that the child population is largely resident in the province of birth. Birthplace cross-classified with age was compiled in a decennial census for the first time in 1931 and it is therefore now possible to compile data for that year similar to the preceding, for the adult population only (Statement IV) and also to calculate the number and percentage of persons under and over 20 years of age born and resident in each province (Statement V).

IV. NUMBER AND PERCENTAGE OF CANADIAN-BORN POPULATION 20 YEARS OF AGE AND OVER, BY PROVINCE OF BIRTH AND RESIDENCE, CANADA, 1931

<sup>1</sup> Persons of unstated age are included with those 20 years and over; those of unstated birthplace are excluded.

It is seen in Statement IV that in the case of those over 20 years, as well as of all ages, in fact because of those over 20 years, Manitoba has the smallest percentage living in their native province, British Columbia having the largest. The percentages in these statements reflect the general extent of emigration from the various provinces, and it is remarkable that the Prairie Provinces show lower figures than the others, which is largely due to an interchange of population among these three provinces themselves but partly also to a movement westward to British Columbia, and as was seen, a small but rapidly growing movement eastward.

Statement V confirms the previously-mentioned fact that of the total population of all classes 20 years and over, only 56 p.c. were born in the province of their present residence, Alberta's percentage of 11.8 being the lowest for any province.

**Birthplace by Age.**—The age of the population is most significant in interpreting birthplace data. It is elsewhere used as an aid in fixing the time of arrival in Canada and is of additional value, both in determining the period of human life during which mobility is greatest and in serving as a check on comparative figures of birthplace by censuses. All persons in 1931 under 10 years of age and born in a country other than Canada must have arrived since the Census of 1921. The 2,123,065 of the Canadian-born population under 10 years of age must have been born since 1921, and this figure may be compared with the vital statistics of those years.

More interesting still is the fact that 60,870 Canadian-born children under 10 years of age in 1931 were not residing in their native province. It follows, of course, that these moved from their province of birth between 1921 and 1931 and very probably accompanied their parents or guardians. Since it is unlikely that children migrate to a greater extent than the rest of the population, an estimate of the number of persons moving from their province of residence during that period may be made from the proportion of the population under the age of 10 to the total population, which is 1 to 4.7. There is a strong probability, therefore, that at least 286,000 persons (4.7 x 60,870) moved from one province to another during the period.

As there are no statistics of internal migration, this figure could be determined with an equal degree of certainty in no other way, but an attempt may be made on the basis of the age of arrival of immigrants. Only about 10 p.c. of immigrants from abroad are under the age of 10 years at the time of arrival. An estimate on this basis sets the interprovincial movement as high as 627,000. The average of these two estimates, 457,000, may be considered a fair though rather low estimate since it shows merely a net movement no allowance being made for retrograde movements, deaths, etc. The mean population over the ten years' time was about 9,500,000, so that practically 5 p.c. changed their province of residence at least once in the ten years. Combining this with other data we have the following interesting figures relating to the population changes between 1921 and 1931. In a population of 10,376,786 in 1931, there were 2,123,065 who came into Canada by birth; 748,648 came in by immigration, and approximately 500,000 changed their province of residence at least once. In rough proportions less than two-thirds of the population were stationary and at least one-third mobile. More detailed measurements might change these proportions, but it is probable that the change, if any, would be in the direction of greater mobility. In this connection it may be mentioned that the centre of population shifted 8 miles north and 30 miles west, or diagonally 31 miles west by north, between 1921 and 1931.

One very important aspect of birthplace by age is the comparative importance of representatives of different countries in the field of employment. There is a definite age *optimum* in the competition for employment as proved by the data on the ages of the gainfully occupied. There appears in Statement VI a calculation of the comparative employment potentialities of the male population classified by birthplace based upon the ages in 1931. It should be remembered that the same potentialities (subtracted from 100) measure potential dependency.

VI. POTENTIAL PERCENTAGE GAINFULLY OCCUPIED OF MALE POPULATION 10 YEARS OF AGE AND OVER, BY BIRTHPLACE, CANADA, 1931

Birthplace	Potential per cent gainfully occupied	Birthplace	Potential per cent gainfully occupied
Canada.....	71.48	Italy.....	91.17
England.....	88.10	Poland.....	91.56
Ireland.....	87.17	Roumania.....	92.06

Hungary.....	91.90		

While the above statement measures comparative dependency, there is another aspect of dependency which only tables of birthplace by age are capable of showing, *viz.*, the actual number of persons over 70 years of age at a given time and the potential number and proportion for the next two or three decades. One of the peculiarities of an immigrant population, in contradistinction to an indigenous one, is its abruptness of transition from one phase to another. This is especially true of age. Immigrants arrive at early adult ages and their effect in the first few decades of a period of immigration is to reduce the percentage which persons at the older ages bear to the total population, this proportion being considerably smaller than in an entirely native population. In a native population this old-age proportion is apt to increase very slowly, since the increasing number at the very early ages has a counterbalancing effect. It would be true even if the Canadian-born children of the immigrants were not taken into account. Immigrant populations usually show a concentration within close age limits which advances from year to year until it has passed the age of 70, when it causes a sudden and enormous increase in persons over that age. The 70-79-year-olds in 1941 will be the survivors of persons 60-69 in 1931; in 1951, of the 50-59; in 1961 of the 40-49 and so on. Consequently the proportions of the population at present in these age groups are very significant and indicate the probable proportions in the older groups at later census dates.

VII. PERCENTAGE OF THE POPULATION AT CERTAIN AGE GROUPS, BY BIRTHPLACE, CANADA, 1931

**Birthplace by Race.**—One of the most useful checks upon the accuracy of the racial classification of the population of Canada is its cross-classification with birthplace; and this is treated in the chapter on racial origin, where the first, second, third and fourth birthplace preferences are shown for each race. The incidence of birthplace, religion, nationality, year of arrival, conjugal condition, etc., will be treated in the chapters dealing with these features.

## CHAPTER VI

### YEAR OF IMMIGRATION

A study of population stability provides one of the best means of judging a country and, as a result, information on this subject, as obtained from the census, is of vital importance. Natural resources, climatic conditions and other characteristics are easily represented in quantitative form, but their influence in attracting population has a qualitative element which can be measured only by inference. The only direct evidence available is whether or not the population is remaining in the country. A huge increase in population over a short period of years is not necessarily a criterion of the country's desirability, since such an increase may be due to several causes, such as over-population in countries of emigration, special inducements, extensive advertising, or what is known as a boom. If the increase is merely the net result of a huge in-movement, over and above an out-movement, any conclusion based entirely upon it will be unreliable. The determining factor is not the fact that the population is increasing but that the same population is remaining in the country.

In measuring the stability of the population, a sharp distinction must be made between persons of native and immigrant birth. In many cases the native is a permanent resident from force of circumstances—the immigrant, on the other hand arrives largely at adult ages, when his place of residence is a matter of personal decision. The stability of the native population may be calculated by comparing the numbers by age from census to census, allowance being made in the comparison for births and deaths. The results of this method are, on the whole, satisfactory, although there is a certain element of estimate involved in the process. Data on the immigrant population may be obtained from the reports of the Department of Immigration which give the number of immigrants *arriving* during each calendar year, and the census (of 1931 for example), which gives the number *living* in Canada who arrived in that year. After allowance is made for deaths, the number remaining is known.

The enumeration of the immigrant population by year of arrival in Canada has been a feature of practically every census, although a more detailed treatment of the subject was carried out in 1931 than in any previous census. The time of arrival is shown by single years back to 1926, by five-year groups to 1911, and then in two large groups, 1901-1911 and all before 1901, a procedure that was not strictly followed in previous census years. The year of arrival covers the calendar year mentioned and the Immigration Department's data are in such form that the arrivals during the ten years between censuses can be calculated. The census year is from June to June but this does not interfere seriously with the usefulness of the figures for the calendar year of arrival. The data were compiled according to provinces, rural and urban areas and both sexes by various cross-classifications.

**Time in Canada.**—Without referring at all to immigration statistics, the census figures of year of arrival can be analyzed in such a way as to form a very useful concept, *viz.*, the length of time in Canada of the present immigrant population as compared with a normal life period. According to a life table, the present expectation of life at birth is approximately 60 years which may be considered an average life-time. A person of immigrant birth who has lived more than 30 years in Canada has necessarily spent the greater part of his life in this country, and such information on time in Canada, in addition to other factors, may provide a useful criterion as to the desirability of the Dominion as a place of residence. The total native and immigrant populations are compared by provinces in Statement I, which also shows the average time in Canada of the immigrant and the average age of the native born.

## I. MEAN AGE OF THE NATIVE POPULATION AND TIME IN CANADA OF THE IMMIGRANT POPULATION, CANADA AND PROVINCES, 1931

Province	Population		Mean age <sup>1</sup> of Canadian born	Average years residence in Canada of immigrant population
	Canadian born	Immigrant		
CANADA.....	8,066,268 <sup>2</sup>	2,299,076 <sup>3</sup>	25	17
Prince Edward Island.....	85,244	2,743	30	15
Nova Scotia.....	470,949	41,558	28	17
New Brunswick.....	383,755	24,313	27	16
Quebec.....	2,621,936	250,892	25	16
Ontario.....	2,626,718	801,141	28	16
Manitoba.....	463,460	235,850	21	19
Saskatchewan.....	603,134	316,989	19	18
Alberta.....	425,795	305,332	19	17
British Columbia.....	373,535	318,666	23	19
Yukon.....	2,637	1,505	28	23
Northwest Territories.....	9,105	87	23	34

<sup>1</sup> This mean age is somewhat raised by repatriated Canadians who, of course, did not spend all their years in Canada.

<sup>2</sup> "Age not stated" not included. <sup>3</sup> "Year of arrival not stated" not included.

The mean age of the Canadian-born population in 1931 was 25 years and the average number of years spent in Canada by the immigrant population was 17. The mean age of all the Canadian born, however, hardly provides an accurate comparison because a proportionately large number of children are included. The mean age of the Canadian born over 17, (*i.e.*, the age after which they might be said to move out on their own account) is given as follows:—

Canada.....	36.5
Prince Edward Island.....	41.0
Nova Scotia.....	39.5
New Brunswick.....	38.4
Quebec.....	36.0
Ontario.....	38.5
Manitoba.....	32.3
Saskatchewan.....	31.0
Alberta.....	32.0
British Columbia.....	34.2
Yukon.....	40.6
Northwest Territories.....	34.5

**Sex and Year of Arrival.**—A classification of year of arrival by sex discloses certain striking features of immigration that may prove to be an important contribution to a study of this subject. In the first fourteen years of the century the number of males arriving was about double the number of females. In comparing the 1931 figures, it is also found that the average time spent in Canada by immigrant males was 17.2 years and by females 16.9, a difference of less than half a year. This is very striking, since the difference would naturally be expected to be much greater. The equalization could not have been brought about by death, and the only plausible assumption is that the males were leaving Canada at a much greater rate than the females. In order to ascertain the truth of this assumption, the sex proportions of the arrivals from 1911 to 1915 as reported by immigration statistics were compared with the sex proportions in the 1931 Census of the arrivals of 1911-15. When the immigrants arrived in 1911-15, the males were roughly in the proportion of 2,020 per 1,000 females. In 1931 the 1911-15 arrivals in Canada's population were in the proportion of only 1,190 males per 1,000 females. It is certain, then, that female immigrants have proved to be much more permanent residents of Canada than males, although there seems to be a similarity between the sex proportions in both the outward and inward movements. Some of the equalization, of course, is caused by the fact that the sexes of immigrant children arriving with their parents were very nearly equal and after a lapse of 16 to 20 years there were more survivors from death among these children than there were among adults. It would appear too, that the single people move out faster than married, while most adult females arriving were either already married or had immigrated to Canada for the purpose of being married.

Since the point is so important, a summary of the average number of years spent by immigrants in Canada, according to sex and rural and urban distribution, is given in Statement II.

II. AVERAGE NUMBER OF YEARS IN CANADA OF IMMIGRANT POPULATION, BY SEX, RURAL AND URBAN, CANADA AND PROVINCES, 1931

Province	Rural		Urban	
	Males	Females	Males	Females
	years	years	years	years
CANADA.....	17.1	17.1	17.3	16.8
Prince Edward Island.....	12.9	14.5	17.5	17.6
Nova Scotia.....	15.4	16.1	17.9	17.3
New Brunswick.....	13.7	14.1	18.9	17.9
Quebec.....	18.4	18.2	15.7	15.9
Ontario.....	15.2	16.5	16.6	16.2
Manitoba.....	19.0	18.9	18.5	18.0
Saskatchewan.....	17.9	17.9	18.3	17.9
Alberta.....	16.3	15.8	17.8	17.2
British Columbia.....	18.8	17.6	19.7	18.2
Yukon.....	23.9	18.3	23.1	20.6
Northwest Territories.....	34.6	31.5	-	-

**Age of the Immigrant Arrivals.**—Table 29 shows the immigrants of Canada in 1931 by year of arrival, cross-classified by age. This information reveals certain features which would otherwise be impossible to trace. Thus until 1926 the immigrant arrivals, recorded in the Immigration Reports, were not classified by age, a division between adult and child arrivals being the only age distinction. A very important social phenomenon is involved in the question of the age of greatest mobility. Does this age change with time and conditions, or is it a constant factor? The 1931 Census contributes greatly towards a solution of this problem; the arrivals of 1926 for instance are shown by quinquennial age groups as in 1931 (Table 29) and subtracting 5 years from the age in 1931 the exact age of arrival is given. Statement III summarizes the results of Table 29, giving instead of age in 1931, the age at the time of arrival in Canada.

III. NUMERICAL AND PERCENTAGE DISTRIBUTION OF THE IMMIGRANT POPULATION, BY YEAR OF ARRIVAL<sup>1</sup> AND AGE AT TIME OF ARRIVAL, CANADA, 1931

Age at time of arrival	Year of arrival					
	1931	1926-1930	1921-1925	1911-1920	1901-1910	Before 1901

<sup>1</sup> Estimate was made using 1896, 1906, 1916, 1921, 1926 as years of arrival.

Information of this type is of further assistance in settling another question, namely, whether there is evidence that the age at arrival determines the permanency of residence in Canada. Statement IV following gives the number of arrivals reported by the Immigration Department at the various ages in each year 1926-30 and the number at corresponding ages ascertained from the Census of 1931 as surviving (*i.e.*, living in Canada) in that year. The comparison was possible only as far back as 1926 since immigration statistics, classified by age, were not available before that date. Certain adjustments in the Immigration Department's figures were necessary in view of the fact that its reports are based on fiscal years (ending March 31) while the census figures are for calendar years; the census figures were also adjusted because of a difference in the method of age grouping.

IV. IMMIGRANTS ARRIVING 1926-1930 AND NUMBER AND PERCENTAGE SURVIVING, BY AGE GROUPS, CANADA, 1931

Age group and year of arrival	Number arriving	Still in the 1931 population <sup>1</sup>	
		Number	Per cent
1926			
All ages.....	135,984	85,361	62.77
0-9.....	16,753	14,634	87.35
10-29.....	74,983	46,902	62.55
30-49.....	38,468	20,833	54.16
50 and over.....	5,780	2,992	51.76
1927			
All ages.....	158,884	97,673	61.47
0-9.....	20,398	16,135	79.10
10-29.....	89,133	55,207	61.94
30-49.....	42,822	23,417	54.68
50 and over.....	6,531	2,914	44.62
1928			
All ages.....	166,782	104,119	62.43
0-9.....	20,686	17,208	83.19
10-29.....	96,922	59,552	61.44
30-49.....	43,086	24,332	56.47
50 and over.....	6,088	3,027	49.72
1929			
All ages.....	164,992	101,263	61.37
0-9.....	26,895	20,191	75.07
10-29.....	89,316	54,292	60.79
30-49.....	41,587	22,981	55.28
50 and over.....	7,194	3,799	52.81
1930			
All ages.....	104,806	70,181	66.96
0-9.....	19,546	15,250	78.02
10-29.....	52,794	36,321	68.80
30-49.....	26,628	15,587	58.54
50 and over.....	5,838	3,023	51.78

<sup>1</sup> Yearly death rate per 100 males, 1931

All ages.....	1.05
0-9.....	0.14
10-29.....	0.26
30-49.....	0.50
50 and over.....	3.13

Thus the death rate, except in the "50 and over" group accounts for only a very small part of the difference between the number arriving 1926-31 and the number still in the population in 1931.

The fact that the percentage over 50 years is smaller than the rest could be partly explained by death, but death has had very little influence on the age groups under 50 years. It is striking, therefore, that the percentage surviving decreases rapidly with age. The most remarkable difference is between the survivors of those arriving under 10 years of age and the remainder. It is only to the superficial observer that it seems natural that these should show a higher percentage of survivors. There is no obvious reason why they should. Children of this age move only with parents or guardians and if the parents did not stay, the children would not. Conse-

quently it would seem to follow that the high percentage of those less than 10 years of age surviving reflects the permanency of residence of family immigrants in contrast to other immigrants. Taking the arrivals of 1926 as an example and allowing for deaths, the percentage surviving in 1931 by various age groups would be as follows:—

Age group.	p.c. surviving in 1931
All ages.....	67.6
0-9.....	89.2
10-29.....	63.6
30-49.....	56.6
50 and over.....	67.0

Without going into definite measurements, it is obvious that there is an age of fewest survivors. This age is somewhere around 39 years. Since the influence of death has been removed; the non-survival is mainly due to emigration, or to untraceable discrepancies, such as erroneous reporting of the year of arrival. Since the arrivals in each year examined behave very much in the same manner, there is reason to believe that these errors are not very large. It would seem safe to conclude, then, that the permanency of residence is influenced a great deal by the age of the immigrant on arrival. The family man, the very young and those over middle age seem to be more permanent than those around 30-49. Females are more permanent than males, it has been seen, and their average age, being somewhat lower than that of the males, tends to affect the age of least survival. A rather interesting fact, which will be shown in the chapter on Gainfully Occupied is that this age of least permanency among the immigrants corresponds fairly closely to the age of greatest variety of occupation among the working population. It is impossible not to connect the two.

**Time in Canada by Race.**—Data on the year of arrival provide a means of measuring quite definitely a feature of the population which frequently arises, the question of who are the old and the new immigrants. In the 1931 Census a cross-classification of race was made with the year of arrival and a summary for Canada is given in Table 30\*. The average number of years in Canada of the immigrant population and the percentage native-born of the total population each year, classified by racial origin are presented in Statement V. The two sets of data combined establish the comparative foothold of the various races.

V. RACIAL ORIGIN OF POPULATION, SHOWING AVERAGE YEARS OF RESIDENCE OF IMMIGRANTS AND PERCENTAGE OF EACH RACE NATIVE-BORN, CANADA, 1931

Racial origin	Average years in Canada of immigrants	Per cent Canadian-born
All races.....	16.6	77.8
English.....	18.2	70.1
Irish.....	17.4	85.6
Scottish.....	16.5	76.0
Other British.....	15.8	58.2
French.....	19.1	97.4
Austrian.....	15.7	53.7
Belgian.....	14.2	40.6
Czech and Slovak.....	7.9	27.8
Dutch.....	14.0	79.9
Finnish.....	10.8	28.2
German.....	15.7	69.5
Hebrew.....	15.8	43.8
Hungarian.....	7.0	27.8
Italian.....	15.7	53.1
Polish.....	12.0	47.1
Roumanian.....	14.0	50.7
Russian.....	16.0	54.0
Scandinavian.....	16.3	43.6
Ukrainian.....	16.5	57.0
Other European.....	9.5	32.1
Chinese and Japanese.....	19.7	23.9
Other Asiatic.....	18.4	51.8
Indian and Eskimo.....	21.5	99.3
Unspecified and others.....	16.3	81.5

\*See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People*, Chap. II, by W. B. Hurd. 85051—15

It is seen that the order from the largest to the smallest average number of years in Canada of the immigrant population among the specified races is: 1 Indian and Eskimo; 2 Chinese and Japanese; 3 French; 4 "other" Asiatics; 5 English; 6 Irish; 7 Scottish; 8 Ukrainian; 9 Scandinavian; 10 Russian; 11 "other" British and Hebrew; 12 Austrian; 13 Italian; 14 German; 15 Belgian; 16 Dutch; 17 Roumanian; 18 Polish; 19 Finnish; 20 "other" European (Greek, Spanish, Portuguese, etc.); 21 Czech and Slovak; 22 Hungarian.

It should be clear that this order is affected by the differential rates of emigration from Canada as well as by the time of arrival. Again it is obvious that, however long some of the races may have been in Canada, a recent arrival of large numbers of them will reduce their average time in Canada. This explains the position of the Chinese and Japanese near the top of the list and of the Dutch close to the bottom. The percentage Canadian-born of the total population of the respective races in the Dominion, shown in juxtaposition to the average years of residence of the immigrant part of such races helps in determining which is the oldest and which the youngest. From these two items in juxtaposition it is clear that the Indians and Eskimos, followed by the French, are the oldest races in Canada.

**Time in Canada by Birthplace.**—An analysis of the number of years of Canadian residence of immigrants, classified by birthplace, is superior to merely a racial classification, because of the definite character of the information provided and the impossibility of any confusion with the native born.

Even if the foreign born only of each race were used, the results would differ widely from those obtained in a definite study by birthplace, *e.g.*, a German might be from Russia, Austria, the United States, or elsewhere, while the German born would be from Germany only. Table 80 gives the year of arrival by birthplace and the accompanying statement shows the average time in Canada of those born in each country.

VI. AVERAGE TIME IN CANADA OF IMMIGRANT POPULATION, BY BIRTHPLACE, CANADA, 1931

Birthplace	Average years residence	Birthplace	Average years residence
England and Wales.....	18.7	Italy.....	16.3
Ireland.....	17.5	Poland.....	14.0
Scotland.....	16.5	Roumania.....	17.1
Lesser Isles.....	20.2	Russia.....	16.8
Newfoundland.....	17.7	Scandinavian Countries.....	16.0
Other British Possessions <sup>1</sup> .....	17.1	Ukraine.....	14.5
Austria.....	18.3	Yugoslavia.....	6.7
Belgium.....	14.6	Other Europe.....	12.8
Czechoslovakia.....	7.1	China.....	20.7
Finland.....	10.7	Japan.....	17.2
France.....	21.1	Other Asia.....	18.7
Germany.....	15.3	United States.....	18.4
Holland.....	11.4	Other countries.....	16.6
Hungary.....	7.4		

<sup>1</sup>Includes "at sea".

As in the case of race, the order of length of time in Canada, according to birthplace, from the longest to the shortest period may be arranged as follows: 1 France; 2 China; 3 Lesser British Isles; 4 England and Wales; 5 "other" Asia; 6 United States; 7 Austria; 8 Newfoundland; 9 Ireland; 10 Japan; 11 "other" British Possessions; 12 Roumania; 13 Russia; 14 various other countries; 15 Scotland; 16 Italy; 17 Scandinavian Countries; 18 Germany; 19 Belgium; 20 Ukraine; 21 Poland; 22 "other" Europe; 23 Holland; 24 Finland; 25 Hungary; 26 Czechoslovakia; 27 Yugoslavia. The low order of the last two is due of course to the recent organization of these countries, but it should not be overlooked that the average length of time in Canada of immigrants from the original territories that are now Czechoslovakia and Yugoslavia was probably very much longer than indicated by these figures.

**Time of Aliens in Canada.**—Table 54 shows the year of arrival of the foreign born, classified as naturalized and alien, and its main features for those 21 years of age and over are summarized in Statement VII.

VII. NUMBER AND PERCENTAGE ALIEN OF THE FOREIGN-BORN POPULATION 21 YEARS OF AGE AND OVER, BY YEAR OF ARRIVAL, CANADA, 1931

Year of arrival	Aliens	
	Number	Per cent
Total .....	418,887	43.28
Before 1901.....	17,858	15.62
1901-1910.....	52,458	17.95
1911-1920.....	92,989	36.92
1921-1925.....	56,525	59.44
1926-1930.....	193,581	93.53
1931 (5 months).....	3,417	88.45
Not stated.....	2,059	58.15

The differences in the percentages alien according to year of arrival are probably affected to a large extent by the type of country of birth but more particularly by the sex and age of the immigrant. This is probably the reason why the persons arriving in the years 1911-20 and 1921-25 show smaller proportions alien for the time they have been in Canada than the older immigrants. There is no way in which those arriving in 1931 could be other than aliens, except in so far as they were the wives or children of naturalized persons.

## CHAPTER VII NATIVITY OF PARENTS

The nativity of the parents of the 1931 population of Canada was compiled for nine classes of parentage, using all possible combinations of the three main classes, Canadian, British and foreign in relation to both parents. It did not seem feasible to make a compilation according to the specific birthplace of parents, as each birthplace represented by one parent would then have to be combined with all birthplaces represented by the other. One step, however, was taken towards indicating definite birthplace, in that the population by birthplace was also compiled by nativity of parents according to these same nine classes. The main value of the information on nativity of parents is in giving the parentage of the present population, whether native or immigrant, and if immigrant, of British or foreign birth. The degree of intermarriage between native and immigrant population is also shown. Thus out of 10,376,786 persons in 1931, 1,125,958 or 10.9 p.c. were of mixed parentage. This figure is, in some respects, rather misleading, since the "pure parentage" population is overweighted by child population whose parents are likely to be recent immigrants where they are not Canadians. Of 2,695,062 people with one or both parents British, 27.3 p.c. had one foreign or Canadian parent. In 22.8 p.c. of the 2,150,130 persons of foreign parentage, one parent was Canadian or British, while of 6,640,416 of Canadian parentage, 15.4 p.c. were mixed with British or foreigners. This last smaller proportion is principally due to the fact that the Canadian-born population and consequently their parents were younger than the British- or foreign-born. In many of the cases of Canadian-born population, therefore, three generations, not two, must be considered.

**Mixed Parentage by Age.**—A study of the nativity of parents in relation to age reflects in addition to what has already been said, many other interesting features about parentage. In the following summary statement the percentage of mixed parentage is shown for each quinquennial age group of the population in 1931.

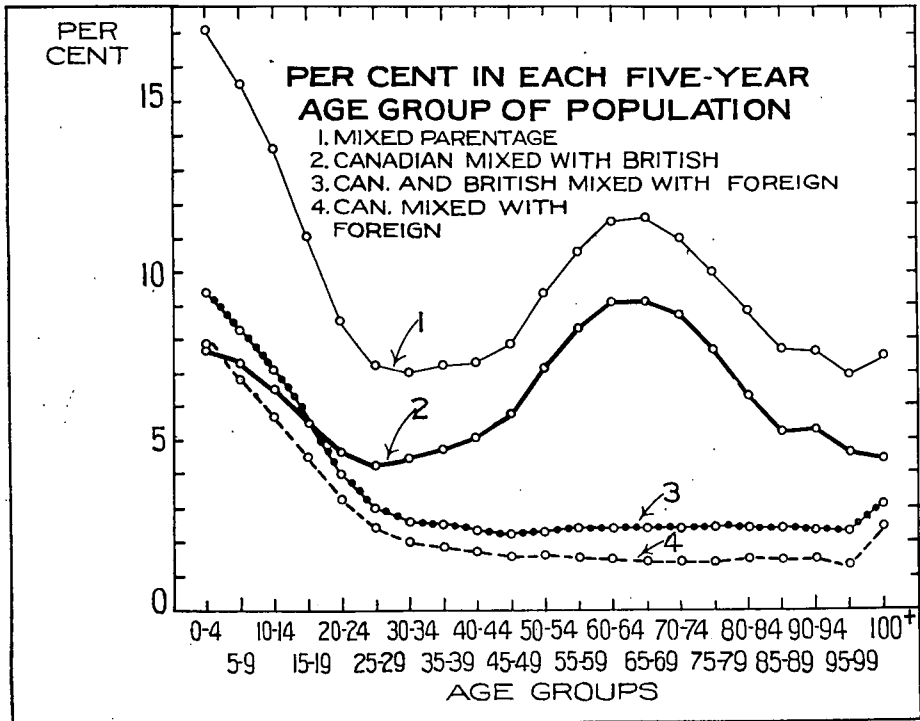

I. POPULATION, BY QUINQUENNIAL AGE GROUPS WITH PERCENTAGE<sup>1</sup> OF MIXED PARENTAGE, AND PERCENTAGE CANADIAN MIXED WITH BRITISH AND FOREIGN, CANADA, 1931

Age group	Population 1931	Per cent of mixed parentage	Per cent Canadian mixed with British	Per cent Canadian or British mixed with foreign	Per cent Canadian mixed with foreign
All ages.....	10,376,786	10.9	6.1	4.7	3.8
0-4.....	1,074,415	17.1	7.7	9.4	7.9
5-9.....	1,132,749	15.6	7.3	8.3	6.8
10-14.....	1,074,051	13.6	6.5	7.1	5.7
15-19.....	1,039,591	11.0	5.5	5.5	4.4
20-24.....	911,185	8.5	4.6	4.0	3.2

100 and over.....	163	7.5	4.4	3.1	2.5
Not stated.....	3,771	5.3	3.6	1.7	1.2

<sup>1</sup> Parentage not stated excluded.

It is easily seen that there is a definite trend in the proportions of mixed parentage. The highest proportions are at infant ages, decreasing steadily up to the age of 30-34, increasing until 65-69, and then once more decreasing. There is no doubt that the behaviour of the figures is connected in some way with the fact that four generations are represented in the table. Chart 1 illustrates this point even more clearly.

CHART 1

The two dips represent, respectively, the immigration of the early part of this century and the pre-Confederation era, the two peaks, the children of these immigrants. Four stages are clearly marked in the chart, two of tendency to mixed parentage and two to unmixed. From the stated ages the culmination of these periods can be ascertained. The unmixed belong to the periods before 1836 and between 1886 and 1891; the mixed culminated between 1861 and 1871 and have been increasing since 1886, particularly since 1900. The years 1840-46, 1861-71 and 1886-91 are definitely marked. The foreign strain overtook the British about the year 1911 and has been gaining since then. Previous to that date the foreign group had been insignificant, being mainly from the United States, and probably of British racial origin.

Statement II and Chart 2 give by sex similar information to that in Statement I and Chart 1.

II. POPULATION, BY QUINQUENNIAL AGE GROUPS AND SEX WITH PERCENTAGE OF MIXED PARENTAGE, AND PERCENTAGE CANADIAN MIXED WITH BRITISH AND FOREIGN, CANADA, 1931

Age group	Population 1931	Per cent of mixed parentage	Per cent Canadian mixed with British	Per cent Canadian or British mixed with foreign	Per cent Canadian mixed with foreign

CHART 2

**Sex Differences in Mixed Stocks.**—There is a difference in the growth of the proportion of males and females of mixed stocks. The foregoing figures and chart show that for females generally, the peaks and dips are the same as for males but the ages at which they occur are younger. This is a difficult point to interpret but is probably connected with immigration as a denominator rather than as a numerator, with the fact that the main influx of females took place later than that of the males. The females of mixed parentage show a high peak at the ages 60-64, *i.e.*, those born in the years 1867-71, probably because the female population who were 60-64 in 1931 were made up of a larger element of immigrant females than those at older or younger ages. Thus the female population of Canada 60-64 in 1931 consisted of 41 p.c. pure immigrant stock while the females 25-29 years of age in the same year consisted of only 35 p.c. pure immigrant stock.

The females on the whole and those over the age of 20 show a somewhat higher percentage of mixed parentage than do the males, but the opposite is true of those under 20. The point is, however, not very significant and the reason for it is doubtless similar to that just explained—that over the age of 20 the female population of all classes is smaller than the male, while under this age the sexes in the population are more nearly equal.

Since the percentages are based on two forces, *viz.*, the actual increase or decrease in the number of mixed births and the increase or decrease in the movement of immigrants, this method of presenting the situation is probably not the best. When the percentage is low, it may be due either to the fact that the mixed population was small or that the remaining population, because of heavy immigration, was large. As a result, while the general picture is suggestive and probably true, the periods between movements are not definitely marked. A much more exact picture would be portrayed if the actual numbers of the mixed population at the time of their birth were used. The date of birth is known within a five-year limit and the changes in death rate have probably not been abnormal except in the case of infant mortality. An estimate of the number of mixed population alive at the age of 2, based upon the number at each age in 1931 and upon the mortality rates in a life table, is given in Statement III. The results are probably sufficiently accurate to give a more faithful description of the situation than the immediately preceding figures and charts. Chart 3, it will be noticed, shows intervals of 25 years between stationary and rising periods, thereby marking the difference in age between parents and children. The effects of the last great wave of immigration upon the second generation began to tell about 1903, and there had been previous definite peaks around the years 1878, 1853, and 1828. There must be some significance in the fact that these periods are each 25 years long.

III. POPULATION IN CANADA OF MIXED PARENTAGE IN 1931, BY QUINQUENNIAL AGE GROUPS WITH PROBABLE NUMBER ALIVE AT 2 YEARS OF AGE

Present age	Number with mixed parentage	Date of birth	Probable number alive at age 2
All ages.....	1,125,958		
0-4.....	182,969	1926-1930	182,969

Not stated.....	180	-	-

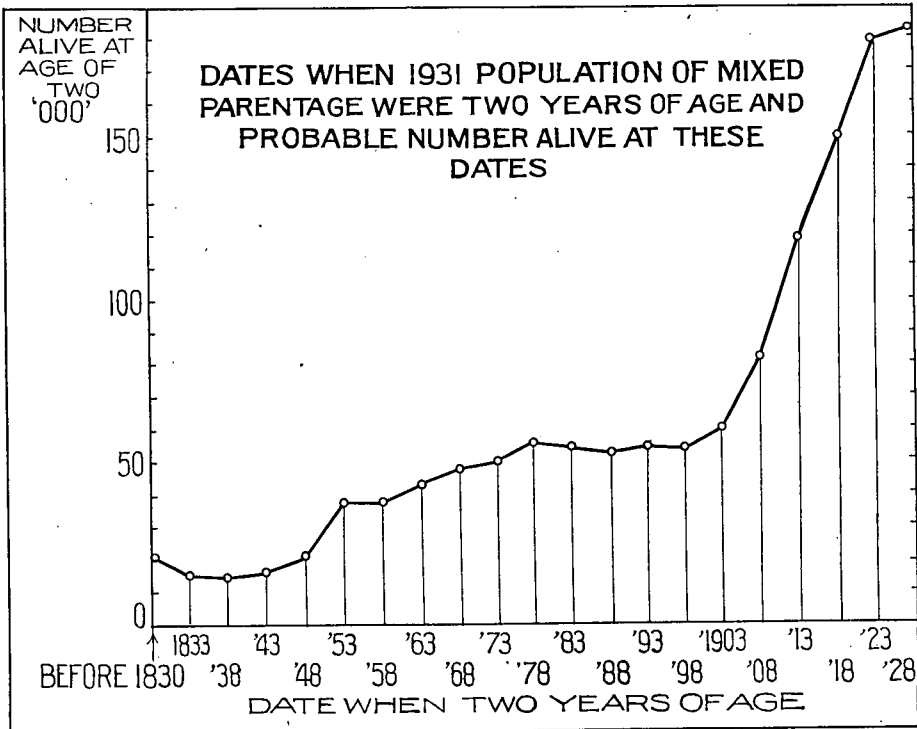

**Proportion of Different Classes of Parentage.**—A concise inventory of the parentage of the population of Canada should show the respective proportions Canadian, British and foreign. For this purpose, in the case of mixed population it would seem fair to apportion the population of each type of mixed parentage equally between the nativity classes of the two parents as is done in Statement IV.

IV. POPULATION, BY NATIVITY OF PARENTS, THE MIXED PARENTAGE DIVIDED EQUALLY, CANADA, 1931

Parentage <sup>1</sup>	Canadian	British	Foreign	Total
Pure.....	5,615,559	1,959,038	1,659,095	9,233,692
Canadian—British.....	123,314	123,314	-	246,627
British—Canadian.....	194,148	194,148	-	388,296
Canadian—Foreign.....	91,132	-	91,132	182,265
Foreign—Canadian.....	103,834	-	103,834	207,669
British—Foreign.....	-	27,005	27,005	54,009
Foreign—British.....	-	23,546	23,546	47,092
Parentage stated.....	6,127,987	2,327,051	1,904,612	10,359,650
Parentage not stated.....	-	-	-	17,136
Total population.....	-	-	-	10,376,786
Percentage (stated).....	59.2	22.4	18.4	100.00

<sup>1</sup> Nativity of father given first.

CHART 3

It is of additional interest to note the relative proportions Canadian-, British- and foreign-born in the present total population as compared with the proportions having Canadian-, British- and foreign-born parents.

V. PERCENTAGES OF TOTAL POPULATION IN EACH NATIVITY CLASS AND WITH PARENTS IN EACH NATIVITY CLASS, CANADA, 1931

Nativity	Percentage of	
	Population	Population of parentage
Canadian born.....	77.8	59.2
British born.....	11.4	22.4
Foreign born.....	10.8	18.4
<b>Total.....</b>	<b>100.0</b>	<b>100.0</b>

Percentage of population of pure parentage 89.1.  
 Percentage of population of mixed parentage 10.9.

**Parentage by Birthplace.**—Since parentage is given only for the general classes, Canadian, British, foreign and mixed, the data on parentage classified by birthplace do not seem to give much additional information except as regards the persons of foreign birth who are of Canadian or British parentage. As this is of value in relation to the re-immigration in the second generation of emigrants, the following table shows the number of foreign-born persons of Canadian or British parentage, by birthplace, in 1931.

VI. FOREIGN-BORN POPULATION, BY NATIVITY OF PARENTS, WITH NUMBER AND PERCENTAGE HAVING CANADIAN-OR BRITISH-BORN PARENTS, CANADA, 1931

Other countries.....	1,755	137	302	46	71	162	718	40.91

Since it is of importance to know to what parts of Canada these foreign born of Canadian or British parentage have gone, a summary of some of the information for the separate provinces is included herewith.

## VII. FOREIGN-BORN POPULATION, WITH NUMBER AND PERCENTAGE HAVING CANADIAN OR BRITISH PARENTAGE, CANADA AND PROVINCES, 1931

Province	Foreign-born population		
	Total	Having Canadian or British parentage	
		Number	Per cent
CANADA.....	1,122,695	150,357	13.39
Prince Edward Island.....	1,627	1,216	74.74
Nova Scotia.....	14,729	6,089	41.34
New Brunswick.....	11,689	6,733	57.60
Quebec.....	140,917	37,332	26.49
Ontario.....	277,715	41,363	14.89
Manitoba.....	130,438	7,642	5.86
Saskatchewan.....	217,544	16,086	7.39
Alberta.....	196,973	18,263	9.27
British Columbia.....	129,805	15,469	11.92
Yukon and Northwest Territories.....	1,258	164	13.04

**Parentage by Races.**—The considerations mentioned in the case of birthplace would also seem to apply to specific races in relation to parentage. Statement VIII shows the non-British and non-French races and the number and percentage of them having Canadian or British parentage.

## VIII. NON-BRITISH AND NON-FRENCH RACES WITH NUMBER AND PERCENTAGE HAVING CANADIAN OR BRITISH PARENTAGE, CANADA, 1931

Racial origin	Non-British and non-French races		
	Total	Having Canadian or British parentage

## CHAPTER VIII

## RACIAL ORIGIN

The summary tables on racial origin\* in this section include comparative figures by provinces since 1871 and, for 1931, a cross-classification by birthplace, age, sex and religion. The first of these tables is designed to show the growth of the different racial strains and to give a general view of their distribution throughout Canada. The second and fourth tables are mainly for the purpose of providing a background for racial differentiation as shown in the censuses of Canada (the question, as to whether the facts revealed by the data on racial origins are not equally revealed by data on birthplace alone, is answered by pointing out that in the case of many of the races the majority were born in Canada or the United States). Even the differentiation of British origins—English, Irish, Scottish, etc.—seems justifiable in so far as Canada is concerned, especially from the point of view of historic interest, rates of growth, and movement. There

\* See Part III, Tables 35-41. See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People* by W. B. Hurd.

are also undoubted racial tendencies as regard religion, in addition to those in regard to country of birth. The table on age, by sex, serves to reveal many basic attributes differentiating race, such as comparative fertility, death rates, and occupational tendencies.

**Growth by Race in Canada.**—In the table showing the growth of the different races in Canada, care must be taken to avoid erroneous comparisons as between different censuses. There are ten races which, if considered individually, as shown in previous census years, are not comparable, but, if combined in one group show figures which are comparable to a high degree. They are: German, Hebrew, Russian, Polish, Austrian, Ukrainian, Roumanian, Czech and Slovak, Hungarian and Yugoslavic and they represent nine countries of original habitat, as defined by the Treaty of Versailles, *viz.*, Germany, Russia, Poland, Austria, Ukraine, Roumania, Czechoslovakia, Hungary and Yugoslavia. In 1931 the aggregate of these races in Canada was 1,253,886, of whom 705,835 were born in Canada, 58,488 in the United States, and 489,563 elsewhere. Of this last number, 473,531 or 96·7 p.c. were born in the above-mentioned nine countries. It is, therefore, a safe presumption that practically all the near ancestors of those born elsewhere, except the 4,355 Germans from Switzerland, came from these nine countries, consequently the races originating in these nine countries are combined in Statement II as "Central group". The Swiss-Germans comprise 0·3 p.c. of the ten races, so that the assumption is that 99·7 p.c. sprang originally from the areas at present represented by the nine countries named.

The necessity for the above consideration does not apply to the Census of 1931, in which there is internal evidence that the numbers shown for the individual races of the group are accurate to a degree as high as the nature of the subject permits, notwithstanding the fact that some Ukrainians and Germans and a small number of other races, go under the nomenclature of "Austrian, n.o.s." (meaning that these failed to specify their race further than "Austrian"). It is a well-known fact that there are "Austrian", "Swiss" and "Prussian" types of Germans, and if these regard themselves as belonging to separate races, it is a question whether this distinction should not be carried out in census enumeration. If a distinction is made between Norwegian and Dane, it seems reasonable to distinguish between Austrian and Prussian.

The large group above designated, could, for purposes of comparison with former censuses, be subdivided with a fair degree of accuracy into four groups as follows: 1. German, Russian, Polish, Austrian, n.o.s., Ukrainian and Roumanian; 2. Czech and Slovak; 3. Hungarian or Magyar; 4. Yugoslavic. A difficulty arises, however, from the fact that in earlier censuses these were sometimes not shown separately but were combined into various residual groups such as "other Europeans".

For the purpose of illustrating clearly the foregoing statements, Statement I shows the races in the 1931 population, by country of birth, so arranged that the principal countries appear as far as possible, in juxtaposition. It will be seen that in addition to the large "Central" group already mentioned, there are certain minor groups which will be readily understood, *viz.*, Scandinavian races and Finnish; Belgian and French; and the French and Germans from Switzerland.

The question may arise as to whether a grouping of ten races, some of them differing widely, is of value, even though the grouping is done solely to effect an adequate comparison between censuses. The answer mainly depends upon the particular purpose for which the information is required. Such a grouping has little or no value for ethnical study, but it is doubtful that this has ever been the purpose of taking a census of races. When the races have fused and their differentiation is no longer important from a *social* point of view, a census of races will be unnecessary but, up to the present time, the races in Canada show several important points of differentiation which are of great social significance. It is these points that are important in a census rather than ethnological differentiations. The various races forming the aforementioned large group have several points in common. They formerly inhabited adjoining areas, and that they mingled more or less freely is evident from the interchange of countries of birth. The fact that they did not fuse before coming to Canada or the United States is highly significant. The German in Canada shows six principal countries of birth, *viz.*, Switzerland, Germany, Russia, Poland, Austria and Roumania, the number from Russia being almost as great as that from Germany; yet he remains German. Does he cease to be German when transplanted to Canada? The manifest intermarrying of the six races and their opportunities for fusion would seem sufficient justification for showing them as a group. If they do not show mutual resemblance it is a strong argument in favour of a census of races.

## II. RACIAL GROUPS ARRANGED TO ELIMINATE INCOMPARABILITY, CANADA, 1871, 1881, 1901-1931

Racial origin	1871 <sup>a</sup>	1881	1901	1911	1921	1931

Unspecified.....	7,561	40,806	31,539	147,345	21,249	8,898

<sup>1</sup> Includes German, Hebrew, Russian, Polish, Austrian, n.o.s., Ukrainian, Roumanian, Czech and Slovak, Hungarian and Yugoslavic.

<sup>2</sup> Four provinces only.

The most interesting racial group from the historical point of view seems to be that comprising the British races. It will be seen that at the time of Confederation, the largest of these groups was the Irish, and that the Irish and Scottish together outnumbered the English by almost two to one. The English, however, outnumbered the Irish after 1881, while the Scottish took second place after 1911. Those of Irish origin, from 1881 to 1901, increased only 3·3 p.c. whereas from natural increase alone they might be expected to have increased at least 30 p.c. Thus it will be seen that the smaller proportion of Irish to English and Scottish races was due, not only to waning immigration but also to emigration. The races comprised under "Central group", already discussed, now exceed the Irish and have increased almost five-fold since 1881. However, in proportion to the total population they have increased only from approximately 6 p.c. to 12 p.c., while the remaining races, except the British group and the French, have increased from 5 to 8 p.c. and now number some 800,000. The French comprise the largest single group, except in 1921, but like the British, they have decreased in proportion to total population since 1881.

Statement II shows that the oldest inhabitants of Canada were the French, British, Central European group, Indians, Dutch and Negroes. Negroes have declined in absolute numbers since 1881, being the only racial group that has done so. As it is important as well as interesting to determine the oldest inhabitants of a country, the following average years in Canada since 1881 are given\*:-

Racial origin	years	Racial origin	years
1. Negro.....	32·6	7. Scandinavian.....	19·3
2. Central European...	23·5	8. Japanese.....	19·1
3. Dutch.....	22·5	9. Italian.....	18·9
4. Chinese.....	22·5	10. Belgian.....	18·0
5. Hindu.....	22·0	11. Greek.....	17·2
6. Other British.....	21·9	12. Bulgarian.....	13·6

The rate of increase, as well as the number at the starting point (1881), were used in determining the average time in Canada. It is seen that the members of the Central European group are the oldest inhabitants except the Negroes, and that the Bulgarians are the most recent.

\*Thus the English with 881,301 in 1881 are credited with 60 years, their 1,260,899 in 1901 with 40 years and so on. For obvious reasons, the British and French races, also the aborigines, are omitted in this list. In the chapter *Year of Immigration*, the immigrant part of these races was tested for time in Canada. In the list following the whole race is tested, necessarily by a different method.

<sup>1</sup> "Austrian, n.o.s." mother tongue included with German in all cases.

<sup>2</sup> Includes Manx, Welsh, Indian, Japanese, etc.

<sup>3</sup> Not given.

<sup>4</sup> From racial origin of parents of 1929-31 average of live births.

**Racial Differentiation and Fusion.**—The most important attributes of race from the points of view of differentiation and fusion appear to be birthplace, mother tongue, religion and intermarriage and for these attributes data are tabulated in their respective sections. The features of chief importance in cross-classification with race are summarized in Statement III which, showing these attributes of the races as enumerated in 1931 is one of the most interesting compilations of the entire census. For each race the principal country of birth, together with the second, third, and fourth in order according to the number reporting such country as their birthplace is shown and similarly for the other attributes. Thus, of the Hungarian race, Hungary is the principal country of birth, Roman Catholic the principal religion, Magyar the principal mother tongue and Hungarian the principal race into which marrying. The second places were, Canada for birthplace, Presbyterian for religion, German for mother tongue, and German for race of wife; the third places Czechoslovakia, Lutheran, English and English respectively; while the fourth places were Roumania, United Church, Slovak and French respectively. On the whole, this statement shows that race differentiation is a reality and is not merely the result of country of birth or other attributes, and also that racial persistence exists to a degree.

The race showing the faintest trace of its origin is the Dutch, whose principal country of birth is Canada, principal religion United Church, principal mother tongue English but principal race in marriage, *Dutch*. Although 80 p.c. of them were born in Canada, and 86 p.c. in Canada and the United States combined, only 67 p.c. of the population 10 years and over give their mother tongue as English (and only 17 p.c. as Dutch), only 32 p.c. of them belong to the United Church and only 77 p.c. to their four principal religions combined. Taking all these things into consideration, the proportion marrying with other Dutch is surprisingly high. On the other hand, 98 p.c. of the Germans 10 years and over have as mother tongue either German or English, although only 79 p.c. of all ages were born in Canada or the United States.

**Age by Racial Origin.**—The data on the ages of the races reveal indirectly many racial attributes. If a race shows a large proportion at the ages of childhood, the indications are that it is increasing very rapidly; if it shows the same proportion as the rest of the population it may mean that the race is largely Canadian-born or that it either emigrated from the United States, or that the immigration was recent and, as differentiated from earlier immigration, contained a large proportion of women and children. Thus the Ukrainian race shows 25 p.c. under 10 years of age, as compared with about 18 p.c. in the Irish or Scottish, and 26.3 p.c. in the French. Age indicates whether the race is largely indigenous or immigrant. Immigrants arrive chiefly at the early adult ages and this is especially true of the immigrants of the early part of the present century who were mainly single adult males. A preponderance, or an unexpectedly large proportion of any race in 1931 at adult ages is almost a certain indication that they are largely immigrant. Thus in the case of the Chinese, the largest age group is the 40-44 group, which contains about 17 p.c. of the whole, as compared with less than 5 p.c. in the case of the French, a highly indigenous race.

An indigenous population naturally has the largest numbers in the earlier age groups, these numbers decreasing as the ages advance, but still having at old ages (65 years and over) a greater proportion than that of an immigrant population. The French race should serve as a standard as being the most indigenous except the Indians. Now the French race shows a large natural increase, but so do certain other races, and the immigrant or non-immigrant character of age distribution can be illustrated by comparing various quinquennial age groups of the French population with that of the Ukrainian, the two being comparable in the matter of natural increase. Thus, at the ages 25-49, the Ukrainians have 312 per 1,000, while the French have only 286, and the French have more under 10 and over 65.

IV. NUMBER IN EACH QUINQUENNIAL AGE GROUP PER THOUSAND POPULATION OF FRENCH AND UKRAINIAN ORIGIN. (SPECIFIED AGES ONLY), CANADA, 1931

Age group	French	Ukrainian	Age group	French	Ukrainian
0-4	132	119	35-39	56	69
5-9	131	133	40-44	49	55
10-14	116	134	45-49	43	42
15-19	108	124	50-54	36	28
20-24	92	90	55-59	29	19
25-29	75	81	60-64	23	13
30-34	63	65	65 and over	48	26

Another feature of age is that it supplies one of the important bases for differential rates of birth, death and marriage. The ages of females are particularly important from the point of view of the birth rate. A large proportion of females at the early adult ages (between 15 and 45 years) provides a basis for a high birth rate. Taking again the example of the French and Ukrainians, the former have less than 45 p.c. at these ages while the latter have about 49 p.c.

The foregoing are only certain special features of age distribution, but they illustrate the fact that any comparison between races, from the point of view of age, must depend upon the purpose for which the comparison is made. Generalizations are not possible in matters pertaining to racial origin by age, as they are in various other attributes of population such as sex. We can say, for example, that a race is 49 p.c. female and draw certain conclusions therefrom but it is doubtful whether such concepts as mean age or median age of a race are of any real value; consequently, it is extremely difficult to give any summary comparison of race by age. However, an approximation to such a generalized statement is made in the accompanying figures, giving the proportions of population by racial origin under 25, over 65 and between these extremes.

V. PERCENTAGES AT CERTAIN AGES, OF THE POPULATION, BY RACIAL ORIGIN, CANADA, 1931

## CHAPTER IX

### RELIGIONS

A census of religions is of special statistical interest apart from the information it furnishes as to participation in church activities. The summary of religions shown in Tables 42 to 45 of this volume is designed chiefly from the former point of view. The first important requirement is to trace from an early date the development of the different denominations in Canada. Second and at least equally important is the sex and age attitude as regards separate denominations which can be shown adequately for our purpose by the statistics of the one year, 1931. Third is the age distribution designed to show the different potentialities of the separate denominations, especially as regards their increase by birth. The distribution by age was not given on a complete scale in any former census of Canada and consequently the material for a very important social study is missing. Still another requirement is the connection between religious denominations and racial origin. A cross-classification of religion and racial origin was made for the first time in Canada in 1931.

A summary of religions by censuses 1871-1931 is given in this volume in Table 42; of religions by age and sex in Table 43; of religions by birthplace in Table 44, and of religions by racial origin in Table 45.

**History and Development.**—A great deal of caution must be exercised in comparing from census to census the actual number attached to any religious denomination. Each census has recorded the number belonging to the denominations as reported by the persons enumerated. This is the best that a census can do. Many denominations however have from time to time changed their names, or wholly or partly combined with some other group. Probably the most serious handicap to comparability is the large number of persons who did not report any denomination at all. An effort is made here to throw some light on this situation. Any numerical assignment of the large number of "not stated" must necessarily be a matter of estimate. It seems that they may reasonably be segregated without seriously affecting statistics of the larger religious bodies. In 1871, 80 p.c. of those not reporting their religion (in the five provinces for which religions data is available), were in Ontario and it can quite naturally be assumed that their distribution between the various religions would be somewhat similar to the general distribution of the population in that year. In 1881, 76 p.c. were in the Northwest Territories and British Columbia, and would be mainly Indians and a few white people in outlying regions. Again in 1891 and in 1901 practically 50 p.c. were in the Northwest Territories and the Yukon.

The growth of religious denominations in Canada since 1871 is given in Table 42. In this connection, it is clear that attention must be confined to the principal religions which usually include about 95 p.c. of the population. The reason for this has already been given, *viz.*, that in the case of the smaller sects changes of nomenclature and re-grouping have occurred and also that the numbers of "not stated" in the earlier years probably included many members or adherents of these smaller sects. Even in the case of the main religions certain re-grouping of the data of Table 42 must be made in the interest of comparability. It is impossible to compare from census to census the figures opposite Presbyterians and United Church and as a result, Presbyterians, Methodists, Congregationalists and United Church have been combined throughout. Similarly the Roman Catholic figures are lacking in comparability by the inclusion of Greek Catholics in 1931, but not in former censuses. In 1921, Greek Catholic and Greek Orthodox were combined as "Greek Church". In addition those of "not stated" religion have been divided proportionately between the various denominations. A re-arrangement, therefore, of Table 42 on a much more comparable basis is submitted in the accompanying analysis of growth showing the numbers in the principal religions for Canada and the provinces 1871-1931 (Statement I) and the percentage increase in Canada from census to census of these same religions (Statement II).

<sup>1</sup> Reformed Episcopal included with Anglicans (734) in 1931.<sup>2</sup> Greek Catholics (186,654) included in 1931.<sup>3</sup> Information as to religions not available.<sup>4</sup> The Census of 1870 recorded 5,452 Roman Catholics and 4,841 Protestants.

"Not stated" has been distributed between stated religions and "other denominations".

II. PERCENTAGE INCREASE IN PRINCIPAL RELIGIONS, CANADA, 1871-1931

Religion	1871-81	1881-91	1891-1901	1901-11	1911-21	1921-31
Anglican.....	16.9	12.2	4.2	52.0	34.6	16.2
Baptist.....	21.7	3.1	4.0	20.3	9.9	6.1
Jewish.....	98.1	166.1	153.7	353.3	67.8	24.2
Lutheran.....	22.0	41.8	42.3	146.4	23.7	37.7
Roman Catholic.....	18.0	10.8	11.4	26.9	19.6	20.7 <sup>1</sup>
United, Presbyterian, Methodist and Congregational.....	23.2	14.0	8.5	24.4	16.6	11.2
Other denominations.....	63.4	4.1	73.4	81.8	37.7	37.6 <sup>1</sup>

<sup>1</sup> Greek Catholic not included with Roman Catholic for 1931, but with "Other denominations".

There still remain for consideration the smaller sects. Clearly there is no useful purpose served by endeavouring to trace these separately further back than 1901, since the 1871-1891 figures are not comparable from census to census. It seems to have been the practice at each census in the earlier years to give separately only such religions as exceeded a certain number and to combine all the remainder as "other sects". As a result a certain religion, if of decreasing numbers, might appear as "other denominations" in a census subsequent to one giving it a separate classification, and, if increasing, be given separately in one census while it had been included in the residual group in the previous census. Even after 1891 this practice was not abolished, so that in giving a comparable summary of the smaller sects it will be necessary to make certain combinations from 1901-1931.

<sup>1</sup> Since the number of males in Canada is in excess of the number of females, the "favoured by males" class is the natural one. Consequently those religions which in this class closely approach the 50 p.c. mark, are really favoured by females. In only one case does the excess in the population not explain the superiority in point of numbers of the males, viz., "no religion", a point which makes the figures of the "favoured by females" class all the more striking.

<sup>2</sup> Includes Reformed Episcopal in 1931.

**Age Distribution of Religious Denominations.**—As of social rather than immediate religious or denominational interest, the age distribution of the sects is highly important. Age classes are more or less definite cross-sections of the population. In Canada there are three age groups which divide the population into three fairly distinct classes, persons under 20, 20-59, and 60 and over. The first of these are mainly Canadian born of the present generation; further they are persons whose religion and many other characteristics are determined for them, not by them. The second group are largely and, in many areas in Canada, predominantly immigrants of the present century representing the beliefs, customs and training of practically every country in the world. The third group are Canadian born of a past generation or immigrants of the old type: British, German, Dutch and similar races. The religious denomination of these three groups is of real interest and Statement V shows religions classified accordingly.

V. NUMBER AND PERCENTAGE OF POPULATION IN EACH AGE GROUP AND RELIGIOUS DENOMINATION, CANADA, 1931

Religion	Age group								
	Under 20			20-59			60 and over

<sup>1</sup> Less than one-tenth of one per cent.

Adherence of the young to the religion of their parents is an aspect of the age distribution which is of special social interest. If such adherence of the young persists, then it follows that the denominations showing the greatest natural increase tend to grow the fastest, if not retarded by emigration. Natural increase is dependent upon the age distribution of the population, especially of the female population. Even if the birth rate per married female at any age were the same for all denominations, a considerable difference might be found in the general birth rate (*i.e.*, the total births divided by the total population of the denominations) as the result of the age distribution of the females. Statement VI shows the potential birth rate of each denomination, assuming the birth rate per female at each age to be the same as that of all denominations in 1931.

## VI. POPULATION, BY RELIGIOUS DENOMINATIONS, AND EXPECTED NUMBER OF BIRTHS, WITH RATE PER 1,000, CANADA, 1931

**Racial Distribution of the Religious Denominations.**—Of the many more or less familiar aspects of racial origin in relation to religion, one is of particular value for the light that it throws upon the growth or retardation of each separate denomination. For the first time, in Canada, religions were cross-classified with racial origins in 1931 and a summary is given in Table 45\*. It is clear therein that practically every race in Canada favours a denomination reflecting the principal religion of the country of origin of that race. There are some apparent exceptions such as the Dutch, but they are not real exceptions. The country of origin of the Dutch in Canada is largely either Canada or the United States. On the whole, however, the races representing present-century immigration clearly reflect the country of origin in their religious denomination. An analysis of the religions according to race was made in Chapter VIII on Racial Origin. In this analysis the first, second, third and fourth religion favoured by each race was determined. In the present chapter the reflection of the growth of the race upon the growth of the denomination seems of chief importance. Accordingly Statement VII (which should be studied with Statements I, II and III) shows two facts: (1) the increase of the races since 1901; and (2) the principal religion of each race with the number and percentage in that religion in 1931.

\*See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People*, Chap. XV, by W. B. Hurd.

VII. ABSOLUTE INCREASES IN THE DECADE OF THE POPULATION, BY RACIAL ORIGIN, 1901-1931,  
WITH NUMBER AND PERCENTAGE OF EACH RACIAL ORIGIN ADHERING TO THE  
PRINCIPAL RELIGION, CANADA, 1931

## (a) ABSOLUTE INCREASES IN DECADE, 1901-1931

Racial origin	1901-11	1911-21	1921-31

German.....	Lutheran.....	147,290	31.1
Hungarian.....	Roman Catholic.....	29,425	72.5
Roumanian.....	Greek Orthodox.....	12,192	42.0
Yugoslavic.....	Roman Catholic.....	12,298	76.0
Czech and Slovak.....	Roman Catholic.....	24,266	79.7
Finnish.....	Lutheran.....	38,742	88.3
Polish.....	Roman Catholic.....	124,252	85.4
Russian <sup>1</sup> .....	Roman Catholic.....	24,874	28.2
Ukrainian.....	Roman Catholic.....	156,315	69.6
Greek.....	Greek Orthodox.....	6,127	64.0
Hebrew.....	Jewish.....	155,351	99.1
Chinese.....	Confucian, etc.....	24,693	53.1
Japanese.....	Confucian, etc.....	15,090	64.5
Indian and Eskimo.....	Roman Catholic.....	67,201	52.1
Negro.....	Baptist.....	8,024	41.2

<sup>1</sup>The principal religion of the Russians appears anomalous, which is doubtless due partly to an element of so-called Russians who are not real Russian. That this element is German, largely Austrian Germans, not Ukrainians, is more than probable.

## CHAPTER X

## OFFICIAL LANGUAGE

The official language data must be sharply distinguished from the data on the mother tongue. The latter is presumably the language that, being used in the home, is natural to a person whether he is able to speak it or not, on account of youth, infirmity, separation from race, birthplace or family or some other reason. The official languages of Canada are English and French. Information on this subject should apply only to persons old enough to speak the language. The method of compiling the data classified by five-year age groups throughout was especially advantageous in this respect, for the person using the data can decide for himself what denominator he wishes to use in calculating the percentages speaking either language; in addition, accurate comparison with the other attributes is made possible through these quinquennial age compilations.

If the first five years of age are regarded as "non-lingual", we had in Canada in 1931 a "lingual" population of 9,302,371 (*i.e.*, persons 5 years of age and over) of whom 6,401,817 or 68.8 p.c. spoke English only, 1,423,850 or 15.3 p.c. French only, and 1,300,773 or 14.0 p.c. both English and French, while 175,931 or 1.9 p.c. spoke neither English nor French but some other language.

Any statement on language, unless qualified by age, is apt to be misleading. Since the proportions speaking the official languages are largely dependent upon the proportions within certain age groups, the accompanying summary (Statement I) of the official language condition of the 1931 population is divided into two main age groups: (1) children 5-20 years, and (2) adults, 20 years and over. Of the two groups the adult population has a greater proportion of its total speaking both official languages (*i.e.*, bi-lingual) and also a greater proportion speaking neither of them.

I. NUMBER AND PERCENTAGE OF POPULATION SPEAKING OFFICIAL LANGUAGE AND NUMBER PER 1,000 POPULATION, BY BROAD AGE GROUPS, CANADA, 1931

Language spoken	Total (5 years and over)		Adults (20 years and over)		Children (5-20)	
	Number	Per cent	Number	Per cent	Number	Per cent
Total.....	9,302,371	100.0	6,055,980	100.0	3,246,391	100.0
English only.....	6,401,817	68.8	4,272,656	70.6	2,129,161	65.6
French.....	1,423,850	15.3	699,903	11.6	723,947	22.3
English and French.....	1,300,773	14.0	948,018	15.6	352,755	10.9
Neither English nor French.....	175,931	1.9	135,403	2.2	40,528	1.2

## NUMBER PER 1,000 POPULATION

Able to speak English.....	828	862	765
" " " French.....	293	272	332
" " " neither.....	19	22	12

**Sex and Official Language.**—There are very interesting differences in the sex attitude towards official language. Statement II shows the total population 5 years of age and over, and the percentage thereof speaking the official languages, classified by both age and sex. It is quite apparent from this summary that in almost every classification more males are bi-lingual than females.

**Province and Official Language.**—Since in all provinces one or other of the official languages predominates by a very wide margin, a study of the numbers speaking them in each province is necessary. Statement III compares the provincial populations over 10 years of age according to their use of official languages. This comparison is based on the 1921 and 1931 census data, the former of which on this subject includes only persons 10 years of age and over, which necessitates keeping this limit for the whole table.

II. POPULATION 5 YEARS OF AGE AND OVER, AND PERCENTAGES SPEAKING OFFICIAL LANGUAGES, BY QUINQUENNIAL AGE GROUPS AND SEX, CANADA, 1931

Age group	Population 5 years and over		Percentage speaking							
			English only		French only		English and French		Neither English nor French

**Official Language by Race.**—Facts on the official language spoken by the various races of Canada are interesting mainly because of the light which they throw upon the adherence or non-adherence of the two main races to their language.\* The extent to which each of the two principal races is responsible for the number speaking its own language is not revealed by the race's total population alone, since some speak it as an acquired language. It is necessary to know, for instance, the number of English-speaking races that speak English only. Such information also is valuable in differentiating between the other races in their capacity to acquire the official languages of Canada.

Statement IV classifies, by *racial origin*, the total population and the percentage thereof born in the United States and British countries combined, also the average length of Canadian residence of immigrants, and the percentage of each race's total population 10 years of age and over that is illiterate and that speaks the official languages.

\*See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People*, Chap. IX, by W. B. Hurd.

IV. TOTAL POPULATION, PERCENTAGES BRITISH- AND UNITED STATES-BORN, AND AVERAGE NUMBER OF YEARS IN CANADA OF IMMIGRANT POPULATION, PERCENTAGES OF POPULATION 10 YEARS OF AGE AND OVER ILLITERATE, AND SPEAKING AN OFFICIAL LANGUAGE, BY RACIAL ORIGIN, CANADA, 1931

<sup>1</sup> Included with Other European.

<sup>2</sup> Exclusive of Yukon and Northwest Territories.

<sup>3</sup> Less than one one-hundredth of one per cent.

**Official Language, Rural and Urban.**—One interesting sidelight is the respective capacities of rural and urban people to learn the official language; it is especially interesting to compare the proportions of them who are able to speak both languages and also the proportions unable to speak either. About twice as many in urban localities speak both French and English as do those in rural localities, and about three times as many of the latter as the former speak neither of these languages. There is, of course, greater opportunity for intermingling in urban residence than rural, and probably also greater necessity for acquiring the official language in urban occupations. Consequently without a study of the underlying data the obvious conclusion or expectation would be that larger proportions among the urban populations than among the rural have *acquired* both official languages. Whether or not the complete data bear out these expectations depends upon many factors since the acquisition of both official languages is as much a matter of capacity to acquire them as of opportunity, intermarriage, necessity and so on.

Statement V compares the percentages of the rural and urban population of Canada speaking both official languages and speaking neither of them, classified by sex and age in 1931.

## V. PERCENTAGES SPEAKING BOTH AND NEITHER OFFICIAL LANGUAGES, BY QUINQUENNIAL AGE GROUPS, SEX, RURAL AND URBAN, CANADA, 1931

## CHAPTER XI

## MOTHER TONGUE

Mother tongue, as has been stated elsewhere, is a different concept from official language and may be defined as the language of the home whether the person has learned to speak it or not. Official language may be acquired, but, except through intermarriage (the race of a person is that of the father), there is no way of acquiring mother tongue. While knowledge of the official language is intimately dependent upon age, no reason can be shown for connecting the mother tongue with age. The term if its meaning were interpreted correctly, would reflect a relationship, not between the individual and his mother tongue, but between his home and his mother tongue. Again, mother tongue (as distinguished from official language) is not, or should not be, a matter of preference by the person but something that is inherited by him. The mother tongue by its very nature cannot be acquired during one's lifetime. If a Russian gives English as mother tongue it should be because his parents were born in an English-speaking country or because the parents were English-speaking and used English in the home; it should not be because the person had acquired English and preferred it to Russian. Misunderstanding of the word "spoken" in the question "Language other than English or French spoken as mother tongue?" may cause irregularities in the data which are more noticeable when shown by age groups.

**Mother Tongue by Race.**—Probably the most useful function of data on mother tongue is as a check on racial origin figures. The extent of intermarriage is indicated by the figures of mother tongue cross-classified by racial origin and in the section on racial origin the first, second, third and fourth most frequent languages recorded as mother tongue are shown for each race. Statement I shows the population of each race in Canada, 1931, in comparison with the number giving the corresponding mother tongue. There are many reasons why the two sets of figures should not correspond exactly.

## I. POPULATION, BY RACIAL ORIGIN, COMPARED WITH POPULATION GIVING THE CORRESPONDING MOTHER TONGUE, CANADA, 1931

Racial origin	Population	Number giving corresponding mother tongue	Racial origin	Population	Number giving corresponding mother tongue
All races.....	10,376,786	10,376,786	Italian.....	98,173	85,520
British.....	5,381,071	5,914,402	Norwegian.....	93,243	64,125

Icelandic.....	19,382	16,034	Unspecified.....	8,898	

<sup>1</sup> Yiddish.<sup>2</sup> Probably due in part to under-statement of the population but also to such incidences as Ukrainian mother with father of another race, etc.

The table in the racial origin section is summarized in Statement II, showing by sex the percentage of each race speaking the corresponding mother tongue. Although the linguistic preferences or powers of the person enumerated should not enter into the data, they apparently have caused some of the differences in the figures for males and females.

One valid reason for the difference between male and female data is that the mother tongue may have been, in some cases, connected with the birthplace instead of the race; another, that married females may have reported to the enumerator the mother tongue of their own homes (*i.e.*, of their husbands) instead of that of their mothers, and the language their children speak might be either that of the father or of the country of birth of the children.

## II. NUMBER AND PERCENTAGE OF EACH RACE GIVING THE CORRESPONDING MOTHER TONGUE, BY SEX, CANADA, 1931

Racial origin	Population of each race giving corresponding mother tongue			
	Number		Per cent	
	Males	Females	Males	Females
All races.....	4,912,565	4,573,330	91.40	91.43

All other <sup>1</sup> .....	379	256	1,222	2,888	178	264	82	1,763

<sup>1</sup> Includes all European born not reporting a European mother tongue.

It is quite natural that a person should give the mother tongue as that of the country of birth, e.g., a race which has been in Canada for perhaps more than two generations might well give English or French, while a Ukrainian might reasonably give Polish, Roumanian or Russian as mother tongue. The table is interesting as showing the manner in which the mother tongue is clustered among the countries adjoining the country of birth.

**Rural and Urban Phases of Mother Tongue.**—The reason for considering the subject of rural and urban distribution by mother tongue is to ascertain the tendencies of the different mother tongues according to the type of residence and the extent to which they are concentrated in these types.

Mother tongue statistics by rural and urban types of residence are given in Statement IV, which includes classification by sex because of the differences in sex attitude towards rural and urban residence. In this case it is the mother tongue that should influence the type of residence and not the reverse.

## IV. MOTHER TONGUE OF RURAL AND URBAN POPULATION, AS PERCENTAGE OF TOTAL RURAL AND URBAN POPULATION, BY SEX, CANADA, 1931

<sup>1</sup> Less than one one-hundredth of one per cent.

It becomes obvious that urban residence favours English more than does rural, and that urban females favour it more than do urban males, while among rural persons, there appears to be no sex differentiation. That urban residence favours English more than rural is easily enough explained; more of the persons to whom English is natural are urban than those to whom other mother tongues are natural, and moreover, the younger generation—those who are largely Canadian-, other British- or United States-born—have been tending to move into the cities. The sex attitude is probably due principally to the fact that the females are younger and consequently further removed from foreign birth than the males. The percentage of rural persons having British racial origin in 1931 was 47.6 while the percentage of urban persons was 55.6. This alone might explain why urban residents have larger proportions with English mother tongue than have rural. It is not the full explanation, however, because there are a number of people of other than British races giving English as mother tongue and these also favour urban residence. Of the rural population 81.6 p.c. have at least one parent Canadian or British as compared with 86.0 p.c. of the urban population; in this connection a decided sex difference is shown in Statement V, which partially explains why females favour English as mother tongue more than do males. At the same time it could fully account for the preference for English among the urban population as compared with the rural. Of those with at least one parent Canadian or British but not giving English as mother tongue, the proportions rural and urban are nearly the same.

## V. PERCENTAGES WITH AT LEAST ONE PARENT CANADIAN OR BRITISH, NOT GIVING ENGLISH AS MOTHER TONGUE, BY SEX, RURAL AND URBAN, CANADA, 1931

Sex	Rural	Urban
Both sexes.....	81-6	86-0
Male.....	80-5	84-4
Female.....	83-0	87-7

## CHAPTER XII

## NATIONALITY

Nationality is a term which is frequently misunderstood as a result of the confusion which often exists between it and racial origin.\* The former is a legal status which may be attained by the individual's own act, the latter an unalterable heritage. Only by accident is there even a slight connection between the two. There were actually in Canada in 1931 persons born in Iceland of Hebrew racial origin and of Italian nationality, and English persons born in China of Canadian nationality. With Tables 35-41 and 50-62, of Volume I of the Census of Canada, 1931, available there is no reason why the confusion mentioned should ever recur.

**Definition of Nationality.**—It seems advisable to include in this summary a clear definition of the three general classes of nationality into which the population is primarily divided: (a) Canadian nationals; (b) British subjects who have not had five years' domicile; (c) Aliens.

(a) **Canadian Nationals.**—The basic legal definition of Canadian nationality is to be found in the Immigration Act, which defines a Canadian citizen as a person included in one of three categories: (1) a person born in Canada, who has not subsequently become the citizen of a foreign state; (2) any British subject who has been domiciled for five years in Canada; (3) any subject of a foreign power who has become naturalized and has not subsequently become an alien or lost Canadian domicile (R.S. Canada, 1927, c. 93).

The part which Canada played in the negotiating of the Peace Treaty and her subsequent enrolment as a member of the League of Nations necessitated an enlargement of these terms of the Immigration Act. In other words, there arose the need of an official definition of the term "Canadian citizen" as distinct from "British subject"—a definition that would be internationally recognized. An act was accordingly passed by the Parliament of Canada in 1922, entitled "An Act to define Canadian nationals and to provide for the renunciation of Canadian nationality" (R.S. Canada, 1927, c. 21). It defined a Canadian national as (1) any British subject who is a Canadian citizen within the meaning of the Immigration Act; (2) the wife of any such person; and (3) any person born out of Canada whose father was a Canadian national at the time of that person's birth, or, with regard to persons born before the passing of the Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian national as defined in the Immigration Act.

It will be seen from this that Canadian nationality has several bases. Of course the sum total of Canadian nationals is not ascertainable through the Canadian Census alone. That total includes Canadians who have left Canada for permanent domicile elsewhere, retaining their Canadian citizenship. The only source of information for these individuals is the censuses of the countries in which they are living. We know, for example, that in 1930 there were 1,278,421 persons residing in the United States who had been born in Canada, of whom 368,557 had retained their Canadian citizenship.

(b) **British Subjects.**—As previously stated, there is now a statute establishing a class of "Canadian citizen" within the wider class of "British subject". No one can be a Canadian citizen without being a British subject, but there was a time when persons were admitted to naturalization in Canada who could not qualify as British subjects outside of Canada.

What is known as the Imperial Naturalization Act came into force on January 1, 1915, and since January 1, 1918, it is the only method of naturalization. Persons naturalized under this act are entitled to all the political and other rights, powers and privileges, and are subject to all the obligations, duties and liabilities, of a natural-born British subject, and from the date of naturalization have the same status as a natural-born British subject.

The Naturalization Act (R.S. Canada, c. 138, as amended by 21-22, Geo. V, c. 39) provides that the following persons shall be deemed to be British subjects and, therefore that they require only domicile and not naturalization to become Canadian citizens:—

\*See also 1931 Census Monograph *Racial Origins and Nativity of the Canadian People*, Chap. VIII, by W. B. Hurd.

- (a) Any person born within His Majesty's dominions and allegiance;
- (b) any person born out of His Majesty's dominions whose father was, at the time of that person's birth a British subject, and who fulfils any one of the following conditions, that is to say, if either
- (i) his father was born within His Majesty's allegiance, or
  - (ii) his father was a person to whom a certificate of naturalization had been granted, or
  - (iii) his father had become a British subject by reason of any annexation of territory, or
  - (iv) his father was at the time of that person's birth in the service of the Crown, or
  - (v) his birth was registered at a British consulate within one year or in special circumstances, with the consent of the Minister, two years after its occurrence, or, in the case of a person born on or after the first day of January, one thousand nine hundred and fifteen, who would have been a British subject if born before that date, within twelve months after the first day of August, one thousand nine hundred and twenty-two;
- (c) Any person born on board a British ship whether in foreign territorial waters or not;
- (d) The wife of a British subject, the wife of an alien being deemed an alien. (The Census being as of June 1, 1931, the amendment to the Act, regarding the "National Status of Married Women", does not apply as it did not come into force until January 15, 1932.)

(c) **Aliens.**—"Alien" means a person who is not a British subject. Under this term are included all foreign-born persons who have not become naturalized Canadians, and also Canadian- and British-born persons who have renounced their British citizenship (by naturalization or marriage) and owe allegiance to a foreign country.

Birthplace and nationality need not correspond, and there may be Canadian-born aliens as well as foreign-born Canadians. According to the 1931 Census there were 16,802 Canadian born and 4,613 other British born who were aliens while 135,426 British born had not yet fulfilled the conditions of 5 years domicile and consequently were not Canadian nationals; on the other hand 614,971 foreign born were full Canadian nationals.

**Influence of Intermarriage upon Nationality.**—The change in the law by which the Canadian female at marriage assumed the citizenship of her alien husband, has, no doubt, wrought drastic changes in the actual number belonging to the three main classes of nationality. If a census had been taken after the Act of 1932, instead of just before, the data on nationality would have been quite different from those obtained from the 1931 Census. The influence of intermarriage upon the figures of 1931 is manifest. For example, of the 16,802 Canadian-born and 4,613 British-born aliens, 15,516 and 3,932 respectively were females. Although the sexes in the foreign-born population were represented by 667,129 males and 455,566 females, the alien foreign born consisted of 343,009 males and 164,715 females, *i.e.*, less than half were females, while the naturalized foreign born consisted of 324,120 males and 290,851 females.

When the nationality of the foreign born is cross-classified by country of birth, the differences in the sex distribution are still more striking. There were, for instance, in the population of Canada 22,269 males and 15,122 females born in Austria; but of these, 8,073 males and 3,615 females were of Austrian nationality. Thus the males in the Austrian-born population were 1,473 per 1,000 females, but 2,233 males per 1,000 females were both of Austrian birth and nationality. Although the foregoing facts are similar for all the foreign born, they can scarcely be regarded as indicating a sex attitude towards nationality. They interfere rather seriously with the significance of the figures on nationality as representing present conditions but render them, nevertheless, very interesting as an historical record.

**Nationality of Minors.**—The 1931 statistics on the nationality of minors (all persons under 21) and of females show inconsistencies which have resulted from provisions in a law which have since been removed. Table 50 shows the total number of persons and the number over 21 years of age, by sex and province of residence, classified as Canadians or aliens. Statement I is a summary analyzing a little further the data pertaining to aliens.

I. ALIENS UNDER AND OVER 21 YEARS OF AGE, BY SEX AS PERCENTAGES OF THE POPULATION IN THESE AGE CLASSES, CANADA AND PROVINCES, 1931

Province	Per cent under 21		Per cent over 21	
	Males	Females	Males	Females
CANADA.....	2.0	2.0	9.7	5.0
Prince Edward Island.....	0.5	0.4	1.1	0.7
Nova Scotia.....	0.4	0.4	2.4	1.3
New Brunswick.....	0.4	0.4	1.8	1.3
Quebec.....	0.7	0.8	5.0	3.0
Ontario.....	1.8	1.9	7.9	4.0
Manitoba.....	3.5	3.6	12.9	8.6
Saskatchewan.....	4.0	3.7	15.0	10.0
Alberta.....	6.0	5.9	20.0	13.3
British Columbia.....	2.7	2.5	21.2	7.7
Yukon.....	3.5	1.8	18.2	9.5
Northwest Territories.....	0.3	0.2	7.2	2.0

Two facts are clearly brought out in the figures of this summary: (1) the proportion of aliens among minors is small in comparison with the proportion among majors; (2) the proportion alien among minors is practically the same for both the sexes; while among adults the proportion of alien males is much greater than of alien females. Both of these facts, undoubtedly, are due to the laws which made naturalization or alienization automatic for married females and children. Another striking fact which is brought out by probing more deeply into the figures of Statement I is that the alienization of the minors seems to be more closely related to that of the female majors than of the male. This, likewise, is chiefly caused by the automatic agency referred to and not by the greater influence of females over minors.

**The Attitude of the Foreign Born Towards Nationality.**—For reasons previously mentioned, attitude towards nationality must be sought among foreign males only. Table 54 cross-classifies the nationality of the foreign born by birthplace. The following summary statement shows the male representatives of the different birthplaces according to the first, second, third and fourth largest numbers of them choosing the various nationalities with the percentage which each forms of the total of a given nativity. Thus 22,269 males were born in Austria; 12,149 of these were Canadian nationals, making Canada the first choice; 8,073 were Austrian nationals, 827 were Polish and 252 Roumanian.

II. FOREIGN-BORN MALE POPULATION SHOWING COUNTRY OF BIRTH AND FIRST FOUR CHOICES OF NATIONALITY, CANADA, 1931

<sup>1</sup> Less than 0.1 p.c.

<sup>2</sup> Fifth choice of nationality is Poland with 0.6 p.c.

**Race Attitude Towards Nationality.**—Data on the attitude of male majors towards nationality in Canada must, as already established, be interpreted differently from those of female majors and of minors. A study of the nationality of a race in Canada, to be properly understood, must take into consideration the extent of intermarriage, the rates of marriage and the natural increase of that race.\* Only after allowance has been made for these factors, which were governed by a law that was substantially amended in 1932, should the attitudes of the individual races be compared. Table 50 gives the races classed as Canadians or aliens by sex and by majors and

<sup>1</sup> Exclusive of Yukon and the Northwest Territories.

<sup>2</sup> Including Galician and Bukovinian.

minors. Table 58 shows the races by sex cross-classified with country of allegiance. Both tables, especially the latter, if used cautiously will be quite valuable. They constitute an excellent guide in defining race as used in the census, in comparing the nationality of males and females, and in indicating the manner in which the races are intermingling. In a study of the above-mentioned table, Statement III, reproduced from the report on Vital Statistics of the year 1931, will be very helpful, as it shows the births of 1931 cross-classified by the race of both father and mother.

## CHAPTER XIII

### ILLITERACY

Illiteracy census data\* are based upon the answers to the two questions (1) "Can read?" (2) "Can write?" in conformity with the general practice followed in previous census years. The data are of practically no value in judging degree of literacy, in contradistinction to illiteracy since the answer "Yes" to these questions may cover various shades of meaning. They include the person who can read or write only a few words, along with the well educated. The statement of the person enumerated, based on his common sense regarding what the questions mean is our only source of information.

\*See also 1931 Census Monograph *Illiteracy and School Attendance* by M. C. MacLean.

Considered from the negative side, however, *i.e.*, as data on *illiteracy*, the questions seem somewhat more adequate. They are worded clearly and simply and admit of the answer "Yes" or "No" and consequently they call for a minimum of judgment and no effort of memory. The persons recorded by the census as illiterate are thus below a fixed minimum standard; they may possibly be more numerous than indicated since the person enumerated may be unwilling to admit illiteracy, but the personal contact of the enumerator should go far in eliminating this error. Further, it has been suggested that the enumerator's judgment may sometimes be at fault, as he is apt to assume that the person who cannot speak the official language must be illiterate, but no evidence of this appears in the Canadian census data, although it is a matter which could be easily detected in compilation.

This point was investigated after the 1921 Census by two methods. In the first place, an array of data was taken comparing the proportion illiterate and the proportion unable to speak either official language. If inability to speak the official languages accompanied high illiteracy rates in a large number of districts, it might be regarded as the result of possible error. The investigation, however, proved that the correlation of the two sets of data was by no means high. The second method involved the examination of the illiteracy of colonies of persons of the same race. If these were unable to speak the official languages and the enumerator assumed them to be illiterate without making proper inquiries, it would show up clearly in the compilations. On investigation of the original schedules, there was no trace found of an individual enumerator who had made an improper assumption on this score, so that this bias may be largely discounted.\*

There remain, nevertheless, other points that should be mentioned here. The first is the possibility that the person enumerated is unwilling to admit illiteracy, as a result of which some persons with a knowledge of little more than the alphabet may return themselves as able to read. At the same time there are those other persons who, through lack of judgment, under-estimate their ability. It seems reasonable that these two forms of bias neutralize or cancel each other in mass figures. If a set of data is true of, say, a hundred persons or more, the requirements of statistics are satisfied. The exaggerations of one individual are balanced by the under-statements of another.

**Progress in the Elimination of Illiteracy.**—Assuming the data on illiteracy to be comparable from census to census, the progress in the elimination of illiteracy is capable of definite measurement. There are three censuses for which the data can be given on a comparable basis, *viz.*, 1891, 1921 and 1931, and Statement I shows the number illiterate 10 years of age and over compared for these three years; the Indians are deducted from the 1921 and 1931 figures, in order to conform with the method used in compiling the 1891 data.

I. ILLITERACY IN CANADA, 1891, 1921 AND 1931  
(Exclusive of Indians)

Year	Population 10 years and over <sup>1</sup>	Unable to read or write	
		Number	Per cent
1891.....	3,588,043	494,147	13.8
1921.....	6,601,669	299,287	4.5
1931.....	8,082,324	275,088	3.4

<sup>1</sup> Includes not stated ages.

**Age and Illiteracy.**—The age limit upon which practically all the literacy data are based is 10 years and over in order to ensure that the population represented as illiterate has had an opportunity of school attendance for a sufficient length of time to learn to read and write.

The progress in the elimination of illiteracy, to be adequately represented, must take into consideration the variation of illiteracy with age. The role played by age in this connection is a most important one. It provides a means of comparison by dates. The extent of illiteracy is much higher among older persons than among the young, indicating the lack of adequate schooling during the period of school age of these older persons. An idea of this variation of illiteracy with age may be obtained by apportioning among the quinquennial age groups the total number of persons unable to read or write as in Statement II.

\*From 1921 Census Monograph *Illiteracy and School Attendance in Canada* by M. C. MacLean, p. 19, "It is noticeable that 9,099 belonging to five different races could not speak any language except their own and yet were not illiterate, . . . clear evidence that the enumerators made inquiries in the cases of persons who could not speak their (the enumerators') language. If they did so in the case of some races, there is no reason to assume that they did not do so as a regular practice. In the case of 20 other races or race groups, 24,092 or 3.1 p.c. of the total over 10 were illiterate, over and above the number who could speak only their own language. . . . In the case of Germans, for example, there were only 3,818 unable to speak English or French and yet 6,958 were illiterate, leaving at least 3,140 illiterate who must have been able to speak English or French. The Germans are not an illiterate race and would not naturally be assumed as being illiterate. . . ."

## CENSUS OF CANADA, 1931

II. ILLITERATES 10 YEARS OF AGE AND OVER, BY QUINQUENNIAL AGE GROUPS,  
CANADA, 1931

(Indians included)

Age group	Population	Illiterates	Number per 10,000		Number per 10,000 over the age indicated	
			Population	Illiterate	Population	Illiterate
			10,000	10,000	10,000	10,000
10 years and over.....	8,169,622	309,396	10,000	10,000	10,000	10,000
10-14.....	1,074,051	12,010	1,315	388	8,685	9,612
15-19.....	1,039,591	16,253	1,273	525	7,412	9,087
20-24.....	911,185	20,645	1,115	667	6,297	8,420
25-29.....	786,281	23,576	962	762	5,335	7,658
30-34.....	708,836	23,325	868	754	4,467	6,904
35-39.....	688,463	25,210	843	815	3,624	6,089
40-44.....	646,099	26,127	791	845	3,833	5,244
45-49.....	585,211	27,281	716	882	2,117	4,362
50-54.....	488,681	25,625	598	828	1,519	3,534
55-59.....	367,025	23,938	449	774	1,070	2,760
60-64.....	294,597	21,750	361	703	709	2,057
65-69.....	231,134	20,864	283	674	426	1,383
70-74.....	171,600	18,900	210	611	216	772
75-79.....	98,629	12,324	121	398	95	374
80-84.....	49,171	6,758	60	218	35	156
85-89.....	19,129	2,954	23	96	12	60
90-94.....	4,932	941	6	30	6	30
95-99.....	1,073	297	1	10	5	20
100 and over.....	163	80	-	3	-	17
Not stated.....	3,771	538	5	17	-	-

From this statement and Chart 1 it is seen that more than half of the illiterates are over 45 years of age and that more than 35 p.c. of them have passed 54 years, although only 15 p.c. of the entire population are over this age. It is very significant that the largest single age group is that from 45-49, which represents persons born between 1881 and 1886 who were of school age between 1886 and 1900; the majority of them were probably not in Canada during this period but arrived within the first ten years of this century. The age group 25-29, made up of all persons attaining school age between 1906 and 1911 has a larger proportion illiterate than either the group immediately younger or older; it is important to ascertain in which provinces the special peculiarity of this age group occurs (Statement III).

III. NUMBER OF ILLITERATES IN THE THREE AGE GROUPS FROM 20 TO 34 INCLUSIVE, CANADA  
AND PROVINCES, 1931

Province	Illiterate in age group		
	20-24	25-29	30-34
CANADA.....	20,645	23,576	23,325
Prince Edward Island.....	119	99	92
Nova Scotia.....	1,075	1,073	1,030
New Brunswick.....	1,923	1,529	1,324
Quebec.....	6,172	6,147	6,221
Ontario.....	4,244	5,957	5,840
Manitoba.....	1,537	1,715	1,830
Saskatchewan.....	2,124	2,791	2,645
Alberta.....	1,542	2,044	1,998
British Columbia.....	1,447	1,807	1,878
Yukon.....	63	64	71
Northwest Territories.....	399	350	396

There is more than a mere suggestion that the illiteracy of the 25-29 group reflects the lack of school accommodation under pioneering conditions in the early part of the century. It is interesting to observe that the very opposite is true of Quebec and the Northwest Territories. The case of Quebec affords an illustration of the tricks figures are apt to play. Statement IV presents the figures for illiteracy in Quebec in greater detail. The percentages for "both sexes" behave quite normally, increasing steadily with age. In number, however, the illiterate males increase with age, while the females decrease, the latter being the result of a rapidly decreasing female population. The fact, then, that in the total figures the 25-29 group illiterate in Quebec is numerically smaller than the group on either side, is not an illiteracy phenomenon at all but rather a population phenomenon. It is an accidental condition brought about by the addition of increasing and decreasing series of widely differing dimensions.

IV. NUMBER AND PERCENTAGE ILLITERATE, IN THE THREE AGE GROUPS FROM 20 TO 34 INCLUSIVE, BY SEX, QUEBEC, 1931

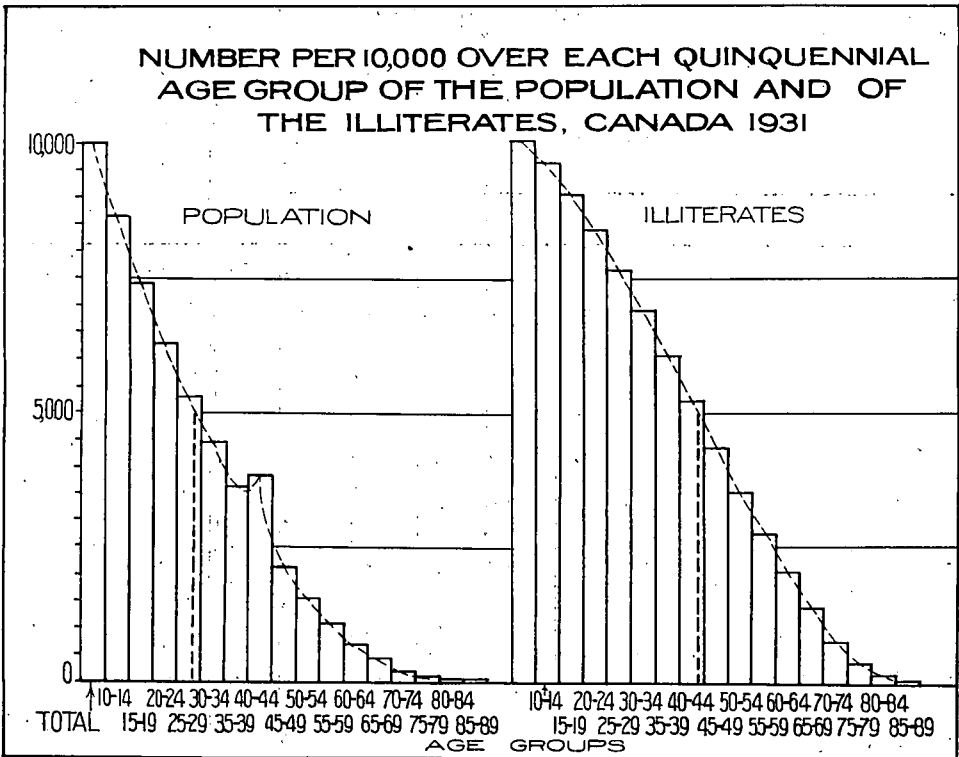

Age group	Illiterate					
	Number			Per cent		
	Both sexes	Male	Female	Both sexes	Male	Female
20-24.....	6,172	4,009	2,163	2.3	3.1	1.6
25-29.....	6,147	4,123	2,024	2.7	3.6	1.8
30-34.....	6,221	4,263	1,958	3.2	4.3	2.0

**Sex and Illiteracy.**—The illiteracy of males is greater than that of females, but this is largely the result of the location, racial composition and other conditions of the female population. More females are living in urban areas and it is there that the smaller degree of illiteracy prevails. The percentages illiterate of the population 10 years of age and over, by sex and provinces may be seen in Statement V.

V. PERCENTAGES ILLITERATE OF THE POPULATION 10 YEARS OF AGE AND OVER, BY SEX, CANADA AND PROVINCES, 1931

Province	Per cent illiterate		
	Both sexes	Male	Female
CANADA.....	3.79	4.32	3.21
Prince Edward Island.....	2.65	3.09	2.17
Nova Scotia.....	4.26	4.92	3.56
New Brunswick.....	6.91	8.75	4.97
Quebec.....	4.76	6.21	3.29
Ontario.....	2.30	2.71	1.87
Manitoba.....	4.46	4.05	4.92
Saskatchewan.....	4.13	3.66	4.70
Alberta.....	3.44	3.05	3.93
British Columbia.....	3.96	4.18	3.67
Yukon.....	22.64	15.88	38.33
Northwest Territories.....	58.13	54.62	62.38

CHART I

**Rural and Urban Illiteracy.**—There is a wide distinction between rural and urban illiteracy. The statement that urban illiteracy is much less than rural, although true as an isolated phenomenon, is subject to certain qualifications. It is not strictly true that rural persons, because they are rural, are more illiterate than urban persons because they are urban. There are several rural communities less illiterate than some urban communities. The one strong reason why a rural population, as such, is commonly regarded as more illiterate than an urban population is the lack of school advantages. In Canada, however, this is true only of new and thinly settled areas. Where it does occur, it is usually not a rural phenomenon at all but rather a matter of the

## VI. PERCENTAGES ILLITERATE IN EACH QUINQUENNIAL AGE GROUP.

population type—a type probably comprised of many recent immigrants. Then again the age distribution may be largely responsible for a greater degree of illiteracy, for the older the persons are the higher the rate of illiteracy. If we take the same age and the same type of persons both rural and urban, we have a more nearly adequate means of comparison. The percentage illiterate in 1931 for each quinquennial age group classified by rural and urban residence and by sex and province appears in Statement VI. There is no consideration given here to the types of population (race, nativity, etc.) and to this extent the comparison is inadequate.

Since the phenomenon of illiteracy increases progressively with age and is intimately connected with the date and the circumstances attending the date at which the person was of school age, it would seem that the best way to describe the difference between rural and urban illiteracy is to say that, in the case of males at least, the rural is 15 years behind the urban. The progress in eliminating illiteracy cannot proceed much faster than is indicated in the differences between ages. It is clear from Statement VI that the difference between rural and urban is even greater than that indicated by the comparative percentages taken on the whole population over 10 years. These rural percentages are nearer the urban by virtue of the larger proportion of young persons in rural areas. There is also a larger proportion of old persons, but the absolute numbers of the latter are so small that they do not affect the general average to any appreciable extent.

The gradation by which the percentages illiterate decrease from the older ages to the younger in both rural and urban is highly interesting. There is almost a steady ratio between the percentages of rural in each age group as shown by Chart 2 with semi-logarithmic scales; it also shows that there are interesting irregularities around the ages 35, 60 and 80 and that the progress below the age of 40 has not been quite so good as that above this age, *i.e.*, there has been a fairly definite arrest in the progress of eliminating illiteracy since the beginning of the century, which is caused by pioneering conditions and an influx of young adult immigrants. Furthermore the irregularities are more pronounced in the urban illiteracy than in the rural. The two periods of slowing up of progress correspond so closely to the two periods of heavy immigration that it seems reasonable to connect them.

To throw more light on the matter, Statement VII and Chart 3 show the percentages illiterate by age, sex, and rural and urban for the Canadian-born population of the Prairie Provinces, 1926. Similar material was not available for Canada, 1931, but information for the Prairie Provinces affords a sufficiently accurate comparison for a study of the difference between the illiteracy of Canadian-born and total population.

VII. PERCENTAGES ILLITERATE OF THE CANADIAN-BORN POPULATION IN EACH QUINQUENNIAL AGE GROUP, BY SEX, RURAL AND URBAN, PRAIRIE PROVINCES, 1926

Age group	Per cent illiterate			
	Rural		Urban	
	Males	Females	Males	Females
10 years and over.....	1.84	1.97	0.61	0.58
10-14.....	1.12	1.16	0.37	0.33
15-19.....	1.37	1.48	0.48	0.43
20-24.....	2.10	3.20	0.72	0.85
25-29.....	2.01	3.04	0.57	0.63
30-39.....	1.73	1.83	0.60	0.45
40-49.....	1.91	2.02	0.45	0.56
50-64.....	3.18	2.81	0.99	0.84
65 and over.....	6.22	6.24	2.04	1.97
Not stated.....	25.53	45.45	12.50	13.04

It is shown clearly in this statement that persons between the ages of 20 and 29 were more illiterate than the groups immediately younger or older. Since they were Canadian-born their school opportunities were solely in Canada. The school age for these people began, for the most part, during the first decade of the century, a time of pioneering and meagre school accommodation. Chart 3 illustrates the point more clearly still.

CHART 2

Since illiteracy in Canada is to a considerable extent associated with population movement and periods of development in the history of Canada rather than with scholastic or mental attainments, it is quite clear that data on illiteracy, especially by age, geographical area, race, etc., are symptomatic and to some degree quantitative measurements of certain conditions prevailing at such periods. As some of these conditions could not otherwise be described quantitatively, the data must be regarded as highly valuable.

**Illiteracy and Race.**—In former censuses, and as late as 1921 race was the factor of illiteracy next in importance to age. It is noteworthy, however, that in 1931 the Canadian or British born of practically all the races had, with few exceptions, uniformly low rates of illiteracy. It will become clear from a study of Statement VIII that the racial differences in illiteracy are influenced by birthplace as well as by race. The factor of age is probably responsible for considerable obscurity on the illiteracy of the British-born races. The races that have been longest in Canada have more British born at older ages than the races of more recent immigration, and they have, therefore, certain proportions illiterate which are not attributable to race. The foreign born of the different races have widely varying degrees of illiteracy. Of the total of 272,796\* illiterate persons in Canada 10 years of age and over, 91,692 or 33.5 p.c. were foreign-born, although the total foreign born over 10 years was only about 13.0 p.c. of the entire population over that age. Considerably more than half of the illiterate people of foreign birth belonged to only four races out of the 33 shown in Statement VIII.†

CHART 3

## CHAPTER XIV

### SCHOOL ATTENDANCE

The importance of census data on school attendance\* is illustrated by the fact that at the last census 2,159,461 of a total population of 10,376,786, or over one-fifth of the entire population, were reported as having attended school at sometime during the year. This figure is almost as large as the number of wage-earners in the same year, namely, 2,570,097. The average number of children at school throughout the school year and the average number of wage-earners at work the whole year are respectively, 1,876,000 and 2,095,000.

**The Purpose of a Census of School Attendance.**—Data on school attendance obtained at a census, like all other attributes of the population and especially the rapidly changing or "movable" attributes are essentially different from current figures which are collected directly and from other sources. The chief element of difference between the data on school attendance obtained at a census and those collected from schools is that the current data do not give the number not at school, *i.e.*, they reveal only a part of the phenomenon, while the census reveals the whole. Furthermore, the number of persons who at a fixed date report themselves as having been at school during the year is not necessarily the same as the number of persons who attended school during the year; in fact, the former is always less, since there were persons at school during the year who died or left Canada before the census date. In a rapidly moving population this difference may be considerable. A census of industries offers a parallel example, in which two sets of data are necessary to give a complete picture; there is always a marked difference between the data as obtained from the employee and from the employer, the latter stating how many persons worked for him during the year, while the former reports the industries in which he worked and for what length of time. The totals of these reports could be expected to agree only under conditions of absolute immobility.

**Comparative Figures of School Attendance by Census Years.**—Probably a comparison between census years is one of the most important phases in a study of school attendance. Under present conditions, practically every person in the population goes to school at some period of life but such has not always been the case. In considering the relation between school attendance and the educational status of the present population, the school attendance of the past must be taken into account. In the same way, present school attendance influences the future educational status. Since nearly all school attendance takes place between the ages of 5 and 19, the educational status of persons in the present population involves school attendance as far back as 1851. If there were records back to that date they would give an indication of the educational status of the present total population who were Canadian-born or who arrived in Canada during childhood. For the early years, however, there are no complete records on the subject, but at least some idea can be gleaned from the information at hand.

It is possible to give the number of persons not Canadian-born who arrived in Canada while still at school age, and also, of course, the number Canadian-born. An analytical statement of this sort will be useful (see Statement I).

\*See also 1931 Census Monograph *Illiteracy and School Attendance* by M. C. MacLean.

#### I. NUMBER OF PERSONS IN PRESENT POPULATION LIVING IN CANADA AT SCHOOL AGE (5-19) AT VARIOUS CENSUS DATES

Census at which of school age	Population, 1931			Per cent of population 5-19 in each census year attending school
	Total	Canadian-born <sup>1</sup>	Immigrant <sup>1</sup>

1861.....	151,077 <sup>2</sup>	124,666	26,411 <sup>2</sup>	<sup>2</sup>
1851.....	23,563 <sup>2</sup>	18,460	5,103 <sup>2</sup>	

<sup>1</sup> The fact that it is impossible to separate repatriated Canadians from either the Canadian born or immigrants leads to a slight duplication. <sup>2</sup> Figures for school attendance are not available. <sup>3</sup> School attendance figures for 1871 and 1881 are for all ages. Populations of Yukon and Northwest Territories are included in 1871 population. <sup>4</sup> Not comparable with first four figures because it includes *all* immigrants 5-19 years of age arriving before 1901 whether they were in Canada at ages 5-19 or not.

**School Attendance by Sex.**—There are some interesting sex differences shown in the census data of school attendance. At the very early ages girls attend in larger proportions than boys; from about the age of 7 to 12 or 13 the proportions are approximately equal with a slight male bias; between the ages of 14 and 18 girls attend in much larger proportions; above this age the male element is predominant. The last two classes correspond roughly to high school and university ages. The fact that girls attend in larger proportions than boys at the very early ages may be due to several causes, one of which is probably their earlier maturity.

Now considerable changes have been taking place in the respects mentioned over past censuses. In Statement II which shows the percentage at school at different ages, male and female, in 1921 and 1931, it will be seen that the differences mentioned were more marked in the former year than in the latter.

II. PERCENTAGES AT EACH SCHOOL AGE, ATTENDING SCHOOL, BY SEX, CANADA<sup>1</sup>, 1931-1921

Age	1931			1921		
	Both sexes	Male	Female	Both sexes	Male	Female
5-24 years.....	51.89	51.62	52.17	49.27	49.22	49.32

20-24 ".....	2.83	3.62	2.02	2.27	3.11	1.45

<sup>1</sup> Nine provinces only.

**School Attendance at the Early Ages.**—It will have been observed that there are certain ages at which the main bulk of the population attend school. Below and above these ages the attendance is by a scattered few. The smallness of attendance at the later ages is, of course, due to the fact that, on the whole, the population consider their schooling completed on reaching a certain standard or grade. However, as seen in the statement comparing boys and girls, greater proportions now attend at the later ages (14 and over) than formerly. This is easily understood. The opposite seems to be true of the proportions attending at the very early ages, especially the age of 5. That this is really a "pre-school" age is indicated by the small numbers who attend at this age compared with 7, for example. That any person attends at 5 years is remarkable, since this age is manifestly considered abnormal for school attendance. The 5-year-olds at school, therefore, may be considered in a class by themselves calling for explanation. The sex, rural and urban and provincial distribution will probably go far towards providing such explanation (Statement III).

## CENSUS OF CANADA, 1931

## III. PERCENTAGE DISTRIBUTION OF POPULATION AT 5 YEARS OF AGE, ATTENDING SCHOOL, BY SEX, RURAL AND URBAN, CANADA AND PROVINCES, 1931-1921

Province	Percentage of population at 5 years of age attending school								Percentage of 5-year-old school population in each province	
	1931				1921					
	Males		Females		Males		Females		1931	1921
	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban		
CANADA.....	9.35	12.66	10.05	13.32	12.58	14.99	13.83	15.23	100.00	100.00
Prince Edward Island.....	9.07	3.74	12.18	8.94	14.29	9.71	11.24	9.74	0.72	0.81
Nova Scotia.....	18.24	19.78	20.02	21.12	14.63	13.46	15.33	14.28	8.85	5.78
New Brunswick.....	5.05	1.67	5.56	1.92	7.13	3.78	8.16	4.66	1.73	2.12
Quebec.....	12.95	7.24	13.84	7.96	20.53	14.60	23.15	15.04	28.85	37.98
Ontario.....	10.67	23.13	11.51	23.91	13.73	21.52	14.99	21.77	46.77	38.14

Saskatchewan.....	5.58	6.06	6.14	6.35	7.76	13.08	7.81	12.67	2.03	2.98
Alberta.....	3.40	2.08	4.03	2.27	6.34	3.95	6.62	4.19	5.12	6.84
British Columbia.....	5.01	5.43	5.43	5.79	4.22	5.22	5.74	5.01	2.40	1.76

**Rural and Urban School Attendance.**—The comparative figures of rural and urban school attendance should be interpreted largely as a matter of advancement of settlement. The lower figures shown for rural areas are due to regional differences in advancement of settlement and should not be considered as indicating a simple rural phenomenon; in other words, the lower figures do not mean that the rural population, to any appreciable extent, are unwilling to send their children to school but that they are unable to send them. It is true that there is evidence of other than regional conditions affecting school attendance, *e.g.*, the Census of Families shows that, other things being equal, children of illiterate parents, or from families where the parents are separated, show poorer school attendance than others. The changes that have taken place in rural and urban school attendance since 1921, may be seen in Statement IV.

## IV.—PERCENTAGES OF POPULATION 5 TO 24 YEARS OF AGE NOT ATTENDING SCHOOL, BY AGE GROUPS, RURAL AND URBAN, CANADA, 1931-1921

Age group	Percentage not attending school			
	1931		1921	
	Rural	Urban	Rural	Urban
5 - 24 years.....	49.92	46.40	52.62	48.64
5 ".....	90.30	87.01	86.81	84.89
6 ".....	49.87	43.68	51.61	44.13
7 - 9 ".....	9.30	5.53	14.67	7.99
10 - 14 ".....	9.07	4.01	14.74	7.19
15 - 19 ".....	74.56	58.83	80.19	69.74
20 - 24 ".....	98.31	96.27	98.60	96.91

The question has been raised as to whether the rural figures are affected by the fact that the census calls only for the attendance during the nine months immediately preceding the census date, *i.e.*, for the months September to May. In some rural districts, mainly the Prairie Provinces, certain schools are open throughout the summer months, so that attendance during June, July and August would form a large part of the year's attendance. In order to ascertain the location and enrolment of summer schools in these provinces, a questionnaire was sent at the time the 1931 Census schedule was being prepared, asking whether provision ought to be made for such schools in the schedule by changing the nine months to the full year. The conclusion reached from the results of this questionnaire was that the confusion caused by changing the question, both in destroying comparability with the Census of 1921 and in other ways, would be out of proportion to any gain that might be expected from making provision for such schools, their enrolment being small and the number attending during the three summer months who would not continue after September also being very small. This applies as well to the question of the number of months at school; there is strong evidence that those recorded as being at school only 1 month or 3 to 6 months were not to any appreciable extent the pupils of these summer schools.

**School Attendance of the Canadian Born and Immigrants.**—The difference expected in the attendance of Canadian-born and immigrant children would naturally have a bearing upon the fact that the one was a more or less static and the other a mobile population during the year for which the census figures were recorded. It is remarkable that no strong evidence appears to justify such expectations. The British born are as much immigrant as the foreign born, but in both 1931 and 1921 they showed better school attendance and more months at school than the Canadian born. One reason for this is that the British born are more urban than the foreign born. Statement V shows, age for age, the percentages not attending school of the Canadian, British and foreign born in rural areas, 1931.

V. PERCENTAGES OF RURAL POPULATION, CANADIAN-, BRITISH- AND FOREIGN-BORN, NOT ATTENDING SCHOOL, BY SINGLE YEARS OF AGE, CANADA, 1931

Age	Per cent not attending school			Age	Per cent not attending school		
	Canadian born	British born	Foreign born		Canadian born	British born	Foreign born
5-24 years.....	45.88	68.83	67.21	13 years.....	7.43	2.85	5.45
5 ".....	88.74	85.09	89.27	14 ".....	17.07	9.76	11.48
6 ".....	46.78	38.78	52.16	15 ".....	33.48	30.93	30.85
7 ".....	12.95	9.00	16.80	16 ".....	53.61	63.38	55.46
8 ".....	5.48	3.91	8.37	17 ".....	70.86	84.00	73.08
9 ".....	3.79	2.44	6.56	18 ".....	82.68	92.30	86.09
10 ".....	2.89	2.00	4.21	19 ".....	89.83	95.80	91.78
11 ".....	2.84	1.67	3.68	20-24 ".....	96.82	98.75	98.16
12 ".....	3.94	2.29	3.97				

**Months at School.**—The foregoing has dealt only with the question as to whether or not the children were present at school at any time during the nine months preceding the census. This gives more point to the fact that 2,002,327 persons between the ages 5-24 in all Canada were recorded as not having been at school at all during these nine months. The number of months at school, however, is the true measurement of school attendance. The accompanying statement is interesting in that it compares the average number of months at school for the different ages as well as for the nine provinces.

VI. AVERAGE NUMBER OF MONTHS SPENT IN SCHOOL (OUT OF NINE MONTHS) OF (a) THOSE ACTUALLY ATTENDING SCHOOL, (b) THE POPULATION AT SCHOOL AGE, CANADA AND PROVINCES, 1931

Age	Average number of months at school out of nine months									
	Canada	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia
(a) Of those actually attending school

**Persons Not Attending School.**—It is difficult to appraise the population not attending school, for the reason that it is first necessary to know whether or not they should be expected to be at school. In several of the foregoing statements it was seen that age played a heavy role in school attendance. Now there is one age group in which the proportion of the population at school is so large that school non-attendance at these ages may justly be considered more or less pathological. This is the age group of 10 to 14 years. In 1931 there were in all Canada 71,540 persons at ages 10-14 not at school. A full analysis of these 71,540 would no doubt, disclose practically all the causes of school non-attendance that are relevant to the pathological aspect of the subject. Even here a certain reason for school non-attendance exists which is not pathological, *viz.*, that the child of 13 may have already completed a good school course and therefore may have no need to attend school longer. However, it is probable that the child who is advanced at this age is more apt to continue at school for further advancement than the one whose progress has been slower. This minimizes the probability that there are many among the aforementioned 71,540 absent from school during the year (at the beginning of which they were at ages 9 to 13) who do not constitute cases deserving special notice.

It is remarkable that 21,269 of the above-mentioned children were urban, of whom 12,520 or nearly 59 p.c. were females. If we place the figures of non-attendance along with the figures of gainfully occupied, we find that, at ages 10 to 14, only 2,515 females were gainfully occupied, while 15,770 males at these ages were so occupied. Some boys who were gainfully occupied during one part of the year probably went to school at another, while gainful occupation could account for less than one-fifth of the non-attendance of the girls 10-14 in urban centres alone and for only one-fourteenth of the total non-attendance of girls at these ages.

In further reference to the relationship between the numbers not at school and the numbers working, Statement VII will be of interest.

VII. NUMBERS 10-19 YEARS OF AGE, BY SCHOOL ATTENDANCE, GAINFUL OCCUPATION AND SEX, CANADA, 1931

Item	Both sexes	Male	Female
Not at school.....	761,425	391,121	370,304
At school less than 7 months.....	46,447	23,992	22,455
Available for gainful occupation at least 5 months in a year.....	807,872	415,113	392,759
Gainfully occupied.....	459,334	325,775	133,559
Lower limit of number not at school and not gainfully occupied <sup>1</sup> .....	348,538	89,338	259,200

<sup>1</sup> Since some reported as at school might also have been gainfully occupied.

In the case of females, the figures do not mean exactly the same as in the case of males, for some of the females may be married and accordingly would not be reported as having a gainful occupation; furthermore, other females may be usefully, if not gainfully, occupied in the home. This probably explains most of the large difference in the number of males and females not at school and yet not gainfully occupied.

## CHAPTER XV

### THE CANADIAN BORN

A section of tables (75-78) is devoted in this volume to the Canadian born and another to the immigrant population (79-81), assembling material under these two headings for the convenience of the reader and summarizing the references to these two divisions of the population which occur in practically every chapter of Volume I. The Canadian born as the indigenous portion of our population is of special interest in a population study apart from any consideration of the relative merits or rights of the Canadian and the immigrant. The size of a population stock and the proportion of it resident in its native habitat as distinguished from the interchange of population stocks among the different countries of the world should form at least one basis for a study of the meaning of nationalities with their different claims. If there is an inherent operative attachment to native soil one can understand national isolation in the present world; if, on the other hand, there is a free interchange of peoples of different countries and if the persons moving to a new country become citizens in fact as well as in name and have the same privileges and attachment to their new home as the indigenous population, what is the meaning of national isolation?

According to the 1931 Census, 8,069,261 of the population of Canada were Canadian-born. Of the 8,055,544 Canadian born of stated parentage 6,519,927 had one or both parents Canadian-born while 2,509,453 had one or both parents immigrants.\* At the same time 120,415 immigrants living in Canada in 1931 had one or both parents Canadian-born. These latter added to the total number of Canadian born for the sum total of the Canadian stock living in Canada, bring the total of such to 8,189,676 plus an unknown number who did not state their parentage. The total number of Canadian stock living in Canada in 1931 was, therefore, about 8,200,000.

The United States Census of 1930 reported 3,337,345 of its white population as of Canadian stock, including 2,058,924 native (U.S.) and 1,278,421 foreign born. Thus of the total of Canadian stock in the world 8,200,000 were living in Canada; 3,337,000 were living in the United States and an unknown, but probably large number were living in other parts of the globe. There is little doubt that immigrants returning to their countries of birth at different times were accom-

\* Obviously the number with one parent Canadian or immigrant explains why these two figures do not total to 8,055,544.

panied by children who were born in Canada, in addition to the Canadian born who themselves emigrated to countries other than the United States and had children there. However, the total of the two figures given above alone shows 11,537,000 as of Canadian stock. This can be compared with the total population of Canada (in 1931) of 10,377,000 of whom 2,307,000 were immigrant and only something over 5,615,000 had both parents Canadian-born.

The number of Canadian born, living in Canada of pure Canadian stock—*i.e.*, with both parents Canadian (5,546,091), is not much larger than the number of Canadian stock living in other countries of the world, and the number of immigrant stock in Canada is much less than the number of Canadian stock in the United States alone.

**General Attributes of the Canadian Born.**—The attributes of the Canadian born as compared with the immigrant have been treated in some detail in other chapters of this volume. They will be referred to here merely by way of summary.

In the matter of age 26·3 p.c. are under 10 and 48 p.c. are over the age of 21 as compared with 3·6 and 87·9 p.c. respectively in the case of immigrants. The Canadian born predominate at the earliest and latest ages; while the immigrant are found preponderantly at the middle ages. This difference in age distribution influences most of the other attributes.

As concerns sex the Canadian born have almost equal proportions male and female, while the immigrant are more than 56 p.c. male.

As to types of residence, the Canadian born are 48 p.c. rural while the immigrant are 40 p.c., the difference being largely explained by age, since the larger rural families would represent the younger element of the population.

Regarding conjugal condition 31 p.c. of the Canadian born and 64 p.c. of the immigrant were in the married state while 3·8 Canadian born and 5·8 immigrant were widowed—again largely a matter of age.

Of the Canadian born 55·7 p.c. gave English as mother tongue compared with 61·5 of the immigrant, while 34·2 p.c. Canadian born and 3·0 immigrant gave French as mother tongue.

In the matter of illiteracy 3·6 p.c. of the Canadian born 10 years of age and over and 4·4 p.c. of the immigrant could neither read nor write; but of the immigrants only 0·54 of the British born as opposed to 8·65 of the foreign-born immigrants could neither read nor write. It is rather striking that according to the United States Census 3·3 p.c. of the Canadian born living in the United States could neither read nor write, a figure almost exactly the same as in Canada. Less than 1 p.c. of the native whites of Canadian parentage could neither read nor write. Comparing the non-French of the two categories 0·6 p.c. of the Canadian born and 0·4 p.c. of the United States born of Canadian parentage could neither read nor write, which corresponds very closely to 0·5 p.c. of the British races in Canada unable to read or write. This sums up six attributes of the Canadian born, the most important of them being probably age, both as being most closely associated with the nativity and as being basic to the other attributes.

The most important privilege (as distinguished from attribute) is the right to vote. Of the Canadian born 3,837,567 persons or 48 p.c. were over the age of 21, while 1,586,807 of the immigrant population who have become Canadian citizens were over 21 years of age—a relative voting strength of roughly 2½ to 1.

## CHAPTER XVI

### THE IMMIGRANT POPULATION

As in the case of the preceding chapter and the section of tables on *The Canadian Born*, the section on *The Immigrant Population* merely assembles and summarizes material on this subject for the convenience of the reader who should observe, however, that practically every subject of the volume includes treatment of some aspect of the immigrant population. This is particularly true of the sections on *Birthplace*, *Year of Immigration* and *Nativity of Parents*. The main points of difference between the Canadian born and the immigrant are mentioned in the chapter on *The Canadian Born*. Here attention will be confined to the broad aspects of immigration.

In a country divided into provinces, each of which is to a degree self-governing, it is difficult to draw the line between the immigrant and the migrants from another province. This is especially true in times of depression when each municipality is saddled with the support of so many of its population and is not willing to assume responsibility for additional population from other municipalities. Legally, of course, the admission or rejection of immigrants is the right of the Federal Government, and in the legal sense, the immigrant is, of course, the person previously domiciled outside the Dominion. In a population study, however, the subject of immigration must be considered in a broader sense than the legal. The difference between an immigrant and a non-immigrant population is one between an indigenous and non-indigenous population; or between the static and the moving. The important aspects in which the immigrant differs from the native would seem to be: (1) unfamiliarity with the environment; (2) alienage in customs, manners and psychology; (3) non-parity with the native in age (from the fact that the immigrant moving to a strange country is apt to be adult), in sex (apt to be male), in marital state (apt to be single, or if married, unaccompanied by wife and family); (4) lacking in interest in his adopted country (especially true if he has left his family behind him); (5) unsettled by necessity and possibly by temperament; (6) probably of a different type of character from the person who never leaves home; (7) possibly of a different economic status from the individual who can make a living without leaving home. All these are in addition to unfamiliarity and possible lack of sympathy with the laws of the adopted country and to differences in legal status from the native such as citizenship. Examining the points of difference thus enumerated it is obvious that only in the two last-mentioned is the "immigrant" necessarily different from the migrant from another province; while even in the case of one of these—unfamiliarity with the laws—the migrant is probably unfamiliar with such of the laws as are provincially or municipally controlled. The migrant from one of the Maritime Provinces to British Columbia has much farther to travel than the migrant from Washington or Oregon and this difficulty of travel and distance from home are apt to have a bearing upon his age, sex and conjugal condition, *i.e.*, there may be greater alienism in some respects while less of course in legal respects in the case of this migrant than in the case of the American from an adjacent state.

In view of the foregoing it would seem that statistics on the subject of immigration are incomplete without figures on all types of migration. Consequently it is important to consider the portion of the population of each province that is: (1) indigenous; (2) born elsewhere in Canada; (3) born outside of Canada. This leads us further afield since the indigenous population is apt to be more largely child population and also more nearly equal in the matter of sex. Consequently we have also to consider these three classes by sex and age distribution. It seems to be particularly significant that in the last census, British Columbia's population of 694,263 consisted of only 233,195 British Columbia born and of these 171,799 or nearly 74 p.c. were under the age of 20, while less than 61,396 were of voting age, out of a total population of voting age of 448,238. The population over 20 years of age consisted of 61,396 born in British Columbia, 103,252 born in other provinces of Canada, 177,280 born in other parts of the Empire and 119,038 born in foreign countries. This chapter will conclude by showing in Statement I the figures for the other provinces similar to those just given for British Columbia. The division "over and under 20" is made because the exact figures for "over and under 21" are not available in this classification.

The appearance of the figures in the statement, particularly of the distribution of the persons over 20 years of age is striking. It is seen that less than 60 p.c. of persons of voting age in all Canada were born in their province of residence, but in the provinces west of Ontario only about 20 p.c. of the persons of voting age were born in their province.

One must remember that the term "voters" is virtually synonymous with "legislators". The attachment to "country" on the part of the legislators in the province at present, therefore, must only be attachment to the future home of their children, not an attachment derived from their own experience. The great majority of the persons under voting age were born in their province of residence. This difference between the nativity composition of those over and under voting age together with the possible or probable difference in attitude between imported and indigenous voters makes it obvious that symptoms of discontinuity need cause no great surprise.

## I. NATIVITY OF THE POPULATION UNDER AND OVER 20 YEARS OF AGE, CANADA AND PROVINCES, 1931

Province	Population under 20 years of age				Population 20 years of age and over

## CHAPTER XVII

## THE GAINFULLY OCCUPIED

The census data on gainfully occupied include not only wage-earners but several classes of occupied persons, such as employers, persons working on own account and farmers' sons working at home.\* "A gainful occupation, in census usage, is an occupation by which the person who pursues it earns money or money equivalent or in which he assists in the production of marketable goods. Children working at home merely on general household work or chores, or at odd times on other work are not to be entered as gainfully occupied.... A person who happened to be idle or unemployed at the date of the census was enumerated as of the occupation usually followed when employed, or of the occupation in which last regularly employed."†

The manner in which the people are occupied is probably one of the most important items of information in a population study. In a full and clear account of the disposition of the population, it is necessary also to account for the persons who are *not* occupied. The 1931 Census gives 3,927,230 persons over 10 years of age as in "gainful occupations" in the nine provinces of Canada. This represents more than one-third of the 10,362,833 total population. The word *gainful* must be stressed in referring to this one-third. Many others are *usefully* occupied, such as women doing housework but not paid stipulated amounts for their services, etc. Some of these women may be taking in boarders or doing odd jobs, and thus contributing actual money to the family support, but if they are not classed as "boarding house keepers" or some equivalent term for their class of work they are not recorded as gainfully occupied.

The Census of Families and Earnings shows that considerable amounts must have been added to the family "earnings" which were not contributed by the so-called wage-earners of the family. We can arrive at the numbers usefully, but not gainfully occupied only by inference, *i.e.*, by dividing the persons not gainfully occupied into certain categories. The reason for the lack of occupation of children below working ages, of all persons at school and of those on income is self-evident. There remains, however, a large body, particularly of females, who are not married, or widowed heads of families, who may be working at home but are not "gainfully occupied". There is no means of obtaining directly from census records the number of such persons, although it can be approximated roughly by inference. Thus, girls of working age who are not at school or gainfully occupied, married, or heads of families or on income need not be considered unoccupied. It depends upon their home environment. If they live on farms the presumption is that they are usefully occupied; if elsewhere, it is still possible that they do useful work in helping at home, since some of these homes have several family wage-earners or boarders and these girls take the place of domestic servants and although not on stated wages are paid in kind, pocket money, etc.

\* See also 1931 Census Monograph on the Canadian occupational structure by A. H. LeNeveu and Volume VII of the Seventh Census of Canada.

† Census Bulletin XXXIV, 1931.

Statement I serves as a preliminary in clearing up the question of how the population is disposed among occupations.

I. DISTRIBUTION OF THE POPULATION ACCORDING TO OCCUPATION, GAINFUL OR OTHERWISE, BY VARIOUS AGE GROUPS AND SEX, CANADA,<sup>5</sup> 1931

Item	All ages	Under 10	10-14	15-19	20-24	25-69	70 and over	Not stated
Total population.....	10,362,833	2,203,774	1,072,647	1,038,363	910,121	4,739,854	344,406	3,668
Male.....	5,386,502	1,113,965	542,192	524,607	463,120	2,546,502	173,474	2,642

Female.....	1,012,262	351,345	479,826	172,685	8,406	-	-	-
Married females not gainfully occupied <sup>2</sup> .....	1,868,651	-	12	24,717	155,352	1,634,838	53,285	447
Widowed, divorced or other female heads of families not gainfully occupied and not on income <sup>3</sup> ....	139,500	-	14	721	3,394	104,997	30,374	-
Remaining population <sup>4</sup> .....	2,388,880	1,494,858	82,122	236,124	108,775	283,739	180,041	3,221
Male.....	1,078,821	756,394	34,049	51,582	18,262	115,271	100,621	2,642
Female.....	1,310,059	738,464	48,073	184,542	90,513	168,468	79,420	579
On income.....	210,138	-	4	197	882	105,987	103,068	-
Male.....	121,130	-	3	69	276	54,380	66,403	-
Female.....	89,008	-	1	128	606	51,607	36,665	-

<sup>1</sup> And thus not likely to be included among occupied.

<sup>2</sup> The persons on income can not be separated by conjugal condition. There is a slight duplication, therefore, between the married females, the widowed, divorced, etc., heads of families not gainfully occupied and the persons on income.

<sup>3</sup> Some few of these, viz., married female heads, are also included in the above "married females."

<sup>4</sup> This residual population, in addition to all the remaining dependent population, contains all the males on income and some of the females.

<sup>5</sup> Nine provinces only.

**The Age Distribution of the Gainfully Occupied.**—As with other classifications of the population, probably the most fundamental attribute of the gainfully occupied, after sex, is age. Age explains many features of occupation. There is an age at which earnings of the wage-earning section of the gainfully occupied are at a maximum in the aggregate of occupation, and above and below which the earnings scale down. This is partly a matter of the different types of industry to which persons are attracted at the various ages, but it is not wholly so, since it holds true for individual occupations. In matters of employment there is a much wider distinction between the boy and the man than between the girl and the woman. There are many reasons for this age distinction in occupation over and above the obvious one of degree of maturity. It is a distinction that we would not expect to obtain to such an extent in an old country with a homogeneous population. In Canada, for example, it does not hold to the same degree in Quebec as in the provinces with a mixed population. One of its mainsprings is the manner of settlement—at a certain stage of development of a country single adult males form an unusual proportion of the population with the resulting phenomenon of concentration of adults at mature ages and of very young children and with deficiencies in numbers at the intermediate ages. This was characteristic of the age distribution of Canada both in 1921 and 1931.

Arising from various causes, the sharp occupational distinction between ages gives unusual importance to the questions: "How are boys occupied?", "How old is the male before he is doing a man's work?" and "What are female occupations?". The last-mentioned question is probably largely a matter of world economic trend and the unusual condition of the War period, but it has also, no doubt, some connection with the intermediate gap in the age distribution between juvenile and mature adult ages, which has already been mentioned. The girl matures earlier than the boy; deficiencies in the number of the male population in the early twenties could well be filled for many occupations by females in their late teens.

As the answers to these questions are a very important feature of the data on gainfully occupied, it is well that such data lend themselves to fairly unequivocal analysis of these points. In ascertaining what occupations are characteristic of different ages, the following method would seem to be unusually free from ambiguities. Each occupation, taken individually, forms a certain

1329  
668

percentage of all occupations, and these percentages are taken as the proper share of the occupations in the population. Now if any occupation has a larger share of boys under 18 than its proper share, then this is one of the occupations characteristic of juveniles; if smaller, it is not. Agriculture, for example, has 34 p.c. of all males in occupation, which constitutes its proper share of males at all ages. But it includes over 60 p.c. of the occupied males under 18 years of age, or over four times its share of these males and is, therefore, distinctly a juvenile male occupation. A classification of occupations on this basis enables us to distinguish between juvenile and other occupations (Statement II). In the statement, the cases where the occupation has its share or more of the age are underlined.

II. PERCENTAGE OF MALES 10 YEARS OF AGE AND OVER, BY OCCUPATION, IN VARIOUS AGE GROUPS, CANADA, JUNE 1, 1931.

Occupation	Per cent of males in age group									
	All ages	Under 18	18-19	20-24	25-34	35-44	45-54	55-64	65-69	70 and over

<sup>1</sup> Less than one one-hundredth of one per cent.

The general classes in this statement make a list sufficiently short to be easily examined for tendencies at the different ages, but a list showing greater variety of occupations would provide much more satisfactory measurement. In a grouping by broad general classes each of which includes several types of occupations it often happens that a certain age is not prominent in the class but stands out distinctly in a part of the class.

The statement shows both the ages typical of the occupation class and the occupation classes typical of the age. Thus agriculture takes more than its share of persons under 25 and over 55, while persons under 18 are over-represented in agriculture, fishing, "other" transportation and recreational service.

One of the most interesting and important facts disclosed by this analysis and summarized in Statement III is that as the ages advance up to 44 there is an increase in the number of occupations over-represented, by age groups, ranging from 4 at the ages under 18 to 17 at the ages 35-44, after which there is a decrease to 4 at 70 and over. This likewise will be shown more satisfactorily in longer lists. Another interesting fact observed in Statement II, is that the different occupations seem to have distinct preferences in the matter of age. Thus both logging and water transportation employ a greater number of persons aged 20 to 34; fishing, persons under 18 and over 65; manufacturing, those between 25 and 54, and so on. The class most indifferent to age seems to be recreational service, while logging, water transportation, road transportation and "other" transportation show a very narrow preference for two or three age groups.

The behaviour of the spread of occupation as between the different age groups has far-reaching consequence in the matter of unemployment, earnings, etc. It is clear that a person's opportunities in the field of employment increase with the number of occupations open to him. Statement III showing the number of occupation classes which have their share or more of each age group emphasizes this point.

III. CLASSIFICATION OF AGE GROUPS ACCORDING TO THE NUMBER OF OCCUPATIONAL CLASSES IN WHICH EACH HAS AN AVERAGE OR EXCESSIVE REPRESENTATION, CANADA, 1931

Age group	Number of occupational classes having their share or more of age group	Age group	Number of occupational classes having their share or more of age group
Under 18.....	4	45-54.....	14
18-19.....	8	55-64.....	13
20-24.....	9	65-69.....	7
25-34.....	15	70 and over.....	4
35-44.....	17		

The choice of occupation is widest at ages 35-44, before and after which it narrows down almost progressively. This peak group may be shown, in many other ways than this, to be that at which "man-power" is greatest, but the range of occupation is not due entirely to this "man-power"—it is at least partly due to the peculiar heterogeneity of nativity and consequently of race in this group; e.g., a person of one race might consider an occupation as adult work that a person of another race might consider juvenile or senile.

**Male and Female Occupations.**—A classification of the female occupations can reasonably be made on the following basis. All occupations have approximately 83 p.c. males and 17 p.c. females. Any occupation that has more than 17 p.c. females has more than its share and may be said to lean to feminism. Of course there are degrees of feminism which will be taken up later. The following occupations have more than 17 p.c. females (Statement IV).

IV. OCCUPATIONS WITH THEIR SHARE OR MORE OF FEMALES GAINFULLY OCCUPIED AND THE PERCENTAGE EACH OCCUPATION FORMS OF TOTAL GAINFULLY OCCUPIED FEMALES, COMPARED WITH PERCENTAGE MALES UNDER 25 AND PERCENTAGE THESE FORM OF TOTAL GAINFULLY OCCUPIED MALES UNDER 25, CANADA, 1931

<sup>1</sup> Less than one one-hundredth of one per cent.

This statement gives a fairly exhaustive list of the occupations in which females are prominent. The list furnishes a basis for classifying "female occupations", although it is scarcely accurate to class all of these occupations as such. It is necessary to have a selected list like this because the number of possible occupations is so large that it would be impossible to show all the occupations in which females appear. A study of the information given by this list, especially in view of the order in which the occupations are arranged, enables us to ascertain the extent of, and the reasons for any tendency towards a feminine cast in occupations. In the first 43 occupations more than 50 p.c. of the workers are female and, therefore, these may be regarded as distinctly female occupations. To show whether occupations which have a preponderance of females have also a preponderance of young men, the statement also contains the percentage of males under 25 in each occupation included.

**Juveniles in Occupation.**—This subject has been partly covered in connection with age and sex, but it would seem that the most important feature in a study of juvenile occupations is the apparent trend. It is almost impossible to measure this trend satisfactorily since the classification of occupations in past censuses was not uniform. We can not give a list of comparable occupations for years back and show the proportions of juveniles from year to year. In Statement V a list of occupations is made up from the 1931 Census showing the occupations in which persons under 25 had more than their share (27.51 p.c.) of representatives. Opposite each occupation is given the percentage of the workers in the occupations made up of persons under 25 and the percentage of the total number under 25 in the occupation in 1931.

V. PERCENTAGE OF PERSONS UNDER 25 GAINFULLY OCCUPIED IN OCCUPATIONS HAVING THEIR SHARE OR MORE OF PERSONS UNDER 25 AND PERCENTAGE EACH OCCUPATION FORMS OF TOTAL GAINFULLY OCCUPIED UNDER 25, CANADA, 1931

<sup>1</sup> Not agricultural, mining or logging.

**Old Persons in Occupations.**—The types of occupations followed by old persons have already been partly indicated in Statement IV. The most striking feature of these figures is the narrowing down of occupation types as old age is approached. An adequate definition of old age in connection with occupation would place the minimum age at 70, since this is the age at which old age pensions begin, but in certain types of occupations persons are superannuated or pensioned at 65. Statement VI, therefore, gives both classes (i) 65 years and over and (ii) 70 years and over. A selection is made of the occupations in which, in 1931, the 70-year-old males had more than their share (2·2 p.c.) of the male gainfully occupied. For the male population 70 years and over, as well as for those 65 years and over, the percentage of the total gainfully occupied males over 70 and 65 respectively who are engaged in each class of work is indicated. The proportion of the male workers 70 years and over and those 65 years and over, to the total males in the occupation, is also given in percentages.

VI. NUMBER AND PERCENTAGE GAINFULLY OCCUPIED MALES 70 AND OVER, AND 65 AND OVER, IN OCCUPATIONS HAVING THEIR SHARE OR MORE OF MALES 70 AND OVER, WITH THE PERCENTAGE THE GAINFULLY OCCUPIED MALES CONSTITUTE OF THE TOTAL GAINFULLY OCCUPIED MALES IN THEIR RESPECTIVE AGE GROUPS, CANADA, 1931

<sup>1</sup> Less than one-tenth of one per cent.

**Gainfully Occupied and Immigration.**—It has already been shown that the greatest variety of male occupations and the greatest proportions in gainful occupations are found between the ages 25 and 64—the greatest variety being more particularly in the 35-44 age group. This is also true of earnings and duration of employment, a fact which has a significance that seems to be often overlooked. It is equally true of all the provinces of Canada as will be made clear in Statement VII, which shows the median age of the gainfully occupied males and females in each province.

VII. MEDIAN AGE OF THE GAINFULLY OCCUPIED POPULATION, BY SEX, CANADA AND PROVINCES, 1931

Province	Median age		Province	Median age	
	Males	Females		Males	Females
CANADA.....	36.7	25.6	Ontario.....	37.5	26.9
Prince Edward Island.....	38.3	26.6	Manitoba.....	36.8	24.6
Nova Scotia.....	38.3	26.0	Saskatchewan.....	36.0	24.5
New Brunswick.....	36.8	25.0	Alberta.....	35.2	24.9
Quebec.....	34.0	24.9	British Columbia.....	40.6	26.1

Although some of the differences in the ages of occupation between provinces are due to the nature of the occupations, it can easily be demonstrated that most of them are due to the existence of large proportions of mature adults in some provinces and small proportions in others. The extremes, Quebec and British Columbia, have a difference of *almost 7 years* in the mid-ages of the male workers. British Columbia has a large mature adult population resulting from immigration while that of Quebec is young. The fact that males at ages 35-44 are reaching out to all varieties of occupations—occupations which might otherwise be considered juvenile, old age or female occupations as well as adult male occupations—enables them to obtain and retain a firm foothold in the occupational field. Now of the male population 35-44 years of age, over 43 p.c. are immigrant as compared with less than 23 p.c. immigrant in the total population. It is important to know the part immigrants play in occupations. For this purpose we have several sets of data, first, the occupations followed by immigrants as compared with those by Canadians (Statement VIII), secondly, the occupations and employment of immigrants by year of arrival (Statement IX), thirdly, the intended occupations of immigrants on arrival (Statement X), and also others.

In the matter of age there are considerable differences between persons from different countries and also between what may be termed older immigrants as compared with more recent arrivals. Certain peoples, notably the Dutch and German, have been a long time in Canada; others, notably the Czechs, Slovaks and Poles, have come only in small numbers until quite recently. Still others came principally in the last few years of the past century and the first ten years of the present. Those coming at the time of pioneer settlement show many points of difference from later arrivals, and of course their age is determined by the fact that they arrived twenty years ago. Then there are others like the Chinese, who are practically limited to males. They are almost distinct from the others in the matter of age, being the oldest workers as a class in Canada.

VIII. GAINFULLY OCCUPIED 10 YEARS OF AGE AND OVER, BY OCCUPATION, BIRTHPLACE AND SEX, (1) AS PERCENTAGE OF TOTAL POPULATION 10 YEARS OF AGE AND OVER, (2) AS PERCENTAGE OF MALES AND FEMALES IN EACH OCCUPATION, CANADA, 1931

(1) PERCENTAGE OF TOTAL POPULATION 10 YEARS OF AGE AND OVER

n.s.—not specified; n.e.s.—not elsewhere specified.

<sup>1</sup> Not agricultural, mining or logging.

X. IMMIGRANTS ARRIVING AT DIFFERENT PERIODS, BY INTENDED OCCUPATIONS AS STATED TO THE DEPARTMENT OF IMMIGRATION, CANADA, 1931

Intended occupation class	Number in class on arrival			
	Year of immigration			
	1926-31	1921-25	1911-20	1905-10
Total.....	743,789	517,513	2,050,104	1,270,532
Farming.....	376,181	202,781	583,024	517,423
Labouring.....	45,995	47,272	538,631	267,765
Mechanics.....	56,189	58,538	323,274	243,430
Trading and clerical.....	35,095	28,151	110,794	73,795
Mining.....	4,560	7,887	32,740	31,306
Female domestic servants.....	76,936	51,416	135,746	56,901
Other.....	148,833	121,468	325,895	79,912

Since the figures of Statement X refer to the *class* of immigrant arriving (*i.e.*, they include the wives and children in the class as well as the worker), there are no figures in the Census of 1931 with which to compare them, except in the single case of female domestics. The number of these in the population of 1931 can be compared with the arrivals of different periods as in Statement XI.

XI. IMMIGRANT FEMALE DOMESTIC SERVANTS, BY YEAR OF IMMIGRATION, CANADA, 1931

Year of immigration	Number arriving as reported to Immigration Dept.	Number in the population of 1931	Per cent in the population of 1931
1926-31.....	76,936	21,322	27.71
1921-25.....	51,416	5,909	11.49
1911-20.....	135,746	8,072	5.95

Statement XII provides a commentary on, though not a direct comparison of, the number of males in the different classes of occupation in 1931 arriving at different periods.

XII. GAINFULLY OCCUPIED MALE IMMIGRANTS, BY OCCUPATION CLASS AND PERIOD OF ARRIVAL, CANADA, 1931

Occupation class	Year of immigration		
	1926-31	1921-25	1911-20
Total.....	218,222	122,450	319,054
Farming.....	73,176	29,290	81,320
Labouring.....	53,745	20,856	43,196
Trading and clerical.....	13,608	13,384	44,325
Mining.....	9,750	4,901	7,356
Other <sup>1</sup> .....	67,943	54,019	143,757

<sup>1</sup> Including skilled workers in all occupations designated as "mechanics" by the Immigration Department.

**Race in Occupations.**—Apart from the subject of immigration, there is an interest attached to the question of the extent to which the different races gravitate to certain occupations. For a study of this question there is very good material in Bulletin XLV of the Census of 1931. Table 4 of this bulletin is herewith given in full (Statement XIII).

In this table "all races" is taken as a base. *i.e.*, 100 p.c. Agriculture, for example, accounts for 33.97 p.c. of the males of all races, which may be regarded as the proper share of each race in agriculture. Those exceeding this percentage may be said to have a peculiar bias to agriculture. In this occupation it will be interesting to note the order in which the races are thus biased (Statement XIV).

XIV. PERCENTAGE OF GAINFULLY OCCUPIED MALES OF EACH RACE ENGAGED IN AGRICULTURAL OCCUPATIONS, CANADA, 1931

Racial origin	Per cent of males in agricultural occupations	Racial origin	Per cent of males in agricultural occupations
All races.....	33.97		
1. German and Austrian.....	55.09	8. Indian.....	29.08
2. Scandinavian.....	53.86	9. Other Central European.....	28.17
3. Dutch.....	52.48	10. English.....	27.91
4. Eastern European.....	48.51	11. Japanese.....	19.42
5. Irish.....	36.70	12. Chinese.....	11.77
6. French.....	34.09	13. Italian.....	6.42
7. Scottish.....	32.46	14. Hebrew.....	1.60

Thus agriculture takes more than its share of six racial groups including four, the Dutch, Irish, French and German races, which may be considered largely Canadian. From the data in the main tables, we find that about 60 p.c. of the persons in agriculture belong to these races, although only about 52 p.c. of all gainfully occupied belong to them. For the time being they might be termed the agricultural races, but it would be very unsafe to say that this is a permanent tendency among these races, since another census might show different results. However, it is significant that more than three of them are largely Canadian, while at least one more—the Scandinavian group—are predominantly Canadian- or United States-born. Analysing each occupation in the same manner, the following classification may be made:—

XV. OCCUPATIONS HAVING THEIR SHARE OR MORE THAN THEIR SHARE OF GAINFULLY OCCUPIED MALES, BY RACIAL ORIGIN, CANADA, 1931

Occupation group	Racial origin
Agriculture.....	German and Austrian, Scandinavian, Dutch, Eastern European, Irish, French.
Fishing.....	Indian, Japanese, Scandinavian, Dutch.
Logging.....	Japanese, Scandinavian, Indian, Eastern European, French, Other Central European, Chinese.
Mining.....	Other Central European, Italian, Eastern European, Scottish, Scandinavian, Japanese.
Coal Mining.....	Other Central European, Italian, Scottish, Eastern European, Japanese.
Other Mining.....	Other Central European, Italian, Eastern European, Scandinavian.
Manufacturing—	
Vegetable Products.....	Italian, German and Austrian, French, Hebrew, English, Scottish.
Animal Products.....	Hebrew, Italian, French, German and Austrian.
Textile Products.....	Hebrew, Italian, French.
Wood Products.....	Japanese, English, German and Austrian, Hebrew, Scottish.
Metal Products.....	English, Scottish, Italian.
Non-Metallic Mineral Products.....	Italian, English, French, Scottish.
Chemical and Allied Products.....	Japanese, English, Scottish, Irish, Italian.
Miscellaneous Products.....	Hebrew, English, German and Austrian, Scottish.
Electric Light and Power.....	English, Scottish, Irish, Italian.
Building and Construction.....	French, English, Italian, Scandinavian, Scottish.
Transportation—	
Railway Transportation.....	Eastern European, Italian, Irish, Scottish, Other Central European, English.
Water Transportation.....	Japanese, Scottish, French, English.
Road Transportation.....	French, English, Irish, Italian, Scottish.
Other Transportation.....	English, Scottish, Irish.
Warehousing and Storage.....	English, Hebrew, Scottish, Irish.

XV. OCCUPATIONS HAVING THEIR SHARE OR MORE THAN THEIR SHARE OF GAINFULLY OCCUPIED MALES, BY RACIAL ORIGIN, CANADA, 1931—Con.

Occupation group	Racial origin
Commercial.....	Hebrew, English, Scottish, Irish, Italian.
Finance, Insurance.....	Hebrew, Scottish, English, Irish.
Service—	
Public Administration and Defence.....	English, Irish, Scottish.
Professional.....	Scottish, Hebrew, English, Irish.
Recreational.....	Hebrew, Italian, English, Irish, Japanese, Scottish.
Personal.....	Chinese, Japanese, Italian.
Laundering.....	Chinese, Hebrew, Japanese, Italian.
Clerical.....	English, Scottish, Irish, Hebrew.
Other (labourers and unskilled workers).....	Other Central European, Italian, Eastern European, Chinese, Japanese, French, Indian.
Unspecified.....	English, Hebrew, Italian, French, Irish, Scottish.

Statement XVI consists of lists of the different occupations in which the various races have their share or more of gainfully occupied males.

XVI. OCCUPATIONS IN WHICH EACH RACE HAS ITS SHARE OR MORE OF GAINFULLY OCCUPIED MALES, CANADA, 1931

Racial origin

		workers)				
		Unspecified				

From the above can be seen the number of occupations in which any race had a normal or excessive representation of its gainfully occupied males. Statement XVII summarizes the results of Statement XVI.

XVII. NUMBER OF OCCUPATIONS IN WHICH THE VARIOUS RACES HAVE THEIR SHARE OR MORE OF GAINFULLY OCCUPIED MALES, CANADA, 1931

Racial origin	Number of the 30 occupations listed	Racial origin	Number of the 30 occupations listed
Scottish.....	21	Eastern European.....	6
English.....	20	German and Austrian.....	5
Italian.....	18	Other Central European.....	5
Irish.....	14	Scandinavian.....	5
Hebrew.....	13	Chinese.....	4
French.....	11	Indian.....	3
Japanese.....	10	Dutch.....	2

This seems to be an important account of the attitude of races towards occupations. Thus the Scottish head the list in spite of their inferior numbers as compared with the English, having the average or more in 21 of the 30 classified occupations, the next being the English with 20. All the races, except the Scottish, English and Italian, may be said to specialize in occupations since they are found to be adequately represented in less than half of the occupations, the Dutch being the most specialized of all. Of course the numbers of persons at occupation ages is partly responsible for this and if allowances were made for these numbers, the English, Irish and French would not hold so high a rank and the Italians and Hebrews would take a higher one. Allowing for numbers, the Scottish, Italians and Hebrews are the least specialized occupationally of all the races thus classified. The Dutch are one of the oldest races in Canada (the Indians being undoubtedly the oldest) and they show the greatest degree of specialization. The Chinese are more easily understood. But the only ready explanation of such facts lies in the various racial characteristics.

## CHAPTER XVIII

### UNEMPLOYMENT

Since unemployment is treated very fully in Volume VI of the Census of 1931,\* the present volume will summarize only those aspects of the subject which are of general social interest. They include the relation of the various attributes of the population to unemployment and the possible use of census data as symptomatic of or actual measurement of conditions relative to longer periods than the one year enumerated. This volume does not deal with unemployment as such but with the population as distributed through employment or unemployment in the same manner as it deals with the population as distributed in relation to the other attributes. In other words, we are not concerned with unemployment as technically understood, but with the question as to who are occupied, gainfully or otherwise, and who are not.

**Scope of Census Data on Unemployment.**—The different forms of employment of the population belong more properly in the previous chapter *The Gainfully Occupied*, a group including both wage-earners and other gainfully-occupied workers. This section confines itself strictly to that part of the population to which unemployment records are applicable, namely the wage-earners. There are others, no doubt, who suffer from unemployment but their class of occupation does not permit definite records of such. Farmers, for instance, who are working on their own account belong in this class, for, however slack their business, it is quite probable that they continue their work if only on a very small scale. A census question might be framed to meet such cases, but the results would be so partial that it would be scarcely worth while attempting to deal with them. There are others for whom no occupation is recorded. These may either be unemployables or persons on income, but they are not included among the number liable to unemployment. Unemployment as recorded pertains only to wage-earners in stated occupations. If a person enumerated at the census gives an occupation and states that he is in class "W", *i.e.*, employed as a wage-earner, not as an employer or person working on his own account, certain additional information is required of him concerning unemployment; of the remainder of the population no inquiries are made on this score.

The number of persons 10 years of age and over classed as wage-earners in 1931 was 2,570,097, including 2,022,260 males and 547,837 females. Since the total number of persons in the nine provinces 10 years and over, in that year, was 8,159,059—4,252,537 males and 3,906,522 females—it is seen that there were 2,230,277 males and 3,358,685 females, 5,588,962 in all or 68.5 p.c. of the population over 10 years of age who were not in this category and for whom, consequently, no unemployment was recorded. It will make the above-stated data much clearer if the distribution of the population is given according to employment and occupational categories as in Statement I.

#### I. OCCUPATIONAL STATUS OF THE POPULATION 10 YEARS OF AGE AND OVER, BY SEX, CANADA, 1931

Item	Number		Per cent	
	Males	Females	Males	Females
Population 10 years and over.....	4,252,537	3,906,522	100.00	100.00
<b>I. Gainfully occupied.....</b>	<b>3,261,371</b>	<b>665,859<sup>2</sup></b>	<b>76.69</b>	<b>17.04</b>
Wage-earners <sup>1</sup> .....	2,022,260	547,837 <sup>2</sup>	47.55	14.02
Other.....	1,239,111	118,022	29.14	3.02
<b>II. Occupied but not gainfully and on income.....</b>	<b>789,869</b>	<b>2,848,835</b>	<b>18.57</b>	<b>72.93</b>
Married, widowed and divorced females.....		2,098,910 <sup>3</sup>	—	53.73
Number at school at least 7 months.....	668,739 <sup>4</sup>	660,917 <sup>4</sup>	15.73	16.92
Persons on income.....	121,130	89,008 <sup>5</sup>	2.85	2.28
<b>III. In no category of occupation<sup>6</sup>.....</b>	<b>201,297</b>	<b>391,828</b>	<b>4.73</b>	<b>10.03</b>

<sup>1</sup> Unemployment data are recorded for these persons only.

<sup>2</sup> Including 66,798 gainfully occupied married females, of whom 42,949 were wage-earners.

<sup>3</sup> Exclusive of the 66,798 gainfully occupied married females.

<sup>4</sup> Those at school less than this time could have been included with I.

<sup>5</sup> Possibly some of these are included with the "married, widowed, etc."

<sup>6</sup> This includes old persons, girls working at home, children at school less than 7 months, etc.

\*See also 1931 Census Monograph on Unemployment by M. C. MacLean.

It may be noted from this statement that the proportion of the population 10 years of age and over for whom employment or unemployment is recorded is 47.55 p.c. of the males and 14.02 p.c. of the females. Of the same population there are no records of occupation, income received, school attendance or home responsibilities for 4.73 p.c. of the males and over 9.97 p.c. of the females. In so far as the males are concerned, they can probably be added to the number not at work, but the figures for the females are much more indefinite. Many girls are usefully occupied at home and yet are not categorized as "gainfully occupied"; the distinction between "usefully" and "gainfully", in this case, referring solely to the money or other consideration paid them personally for their services.

The 2,022,260 males and 547,837 females who were in the wage-earner class, worked on an average 41.3 and 46.7 weeks respectively; *i.e.*, there was an average of 1,606,739 males and 492,084 females with full-year employment. There were, to repeat, 4.73 p.c. of the males and over 9.97 p.c. of the females who were not in any category, these percentages representing almost exactly one male in twenty-one and one female in ten (of the total population 10 years of age and over of each sex). Still another aspect might be considered. The equivalent of 471,275\* wage-earners were idle any day in the year, while within the same age limits, about 600,000 or a fourth again as many, were in no occupational category and comprised an element of the population of which very little is understood by the public. However, an investigation of the census schedules clearly revealed that where these were not girls living at home or female relatives living with the family, they were in the main unemployables—institutional cases, physically unfit persons, etc.

**Classification of the Unemployed Wage-Earners on an Economic Basis.**—The seriousness of unemployment can not be measured by the bare figures of the number of persons unemployed. The fact that 1,027,479 persons or 39.98 p.c. of the wage-earners lost some time during the census year gives no conception of the extent of unemployment. Some concept of it might be built on the fact that of 133,645,044† possible weeks of work, 24,506,280 weeks or an average of 9.54 weeks for every wage-earner were lost from various causes. Much depends upon the type of person losing time—a week lost by a boy is not the same as a week lost by a man with full earning power. Since earning power, and consequently, earnings as well, vary widely with age and sex, these two attributes of population are very important. The figures of unemployment will, therefore, be much more significant if the weeks lost in 1931 are classified by age and sex and shown with the average weekly wage at each age as is done in Statement II.

II. NUMBER OF WAGE-EARNERS AND NUMBER OF WEEKS LOST, BY AGE GROUPS AND SEX, WITH CORRESPONDING AVERAGE WEEKLY WAGE, CANADA, YEAR ENDED JUNE 1, 1931

Age group	Weeks lost		Average weekly wage		Wage-earners	
	Males	Females	Males	Females	Males	Females
All ages.....	21,607,109	2,899,171	\$ 22.56	\$ 12.01	2,022,260	547,837
17 and under.....	834,644	419,043	6.70	5.80	75,275	48,761
18-19.....	1,300,628	529,176	10.20	8.36	107,926	70,684
20-24.....	3,534,232	870,023	15.20	11.35	308,351	174,474
25-34.....	5,717,693	562,180	21.84	14.61	539,145	132,603
35-44.....	4,166,550	261,074	27.68	15.95	437,893	59,352
45-54.....	3,344,154	155,176	28.95	14.75	327,464	33,867
55-64.....	1,896,397	76,434	26.73	12.07	163,571	10,070
65-69.....	523,283	19,263	23.49	9.03	39,461	3,816
70 and over.....	289,528	6,802	20.48	7.04	23,174	2,210

Unemployment classified by conjugal condition further illustrates the economic seriousness of the situation in 1931. Statement III shows the number of wage-earners and of weeks lost, classified by conjugal condition and sex.

\* The total number of weeks lost was 24,506,280; this figure divided by 52 gives 471,275 as the average number of persons losing 52 weeks or the whole year, corresponding to 469,958 idle on June 1, or on a specific day in the 52 weeks. It is seen that the number for the average day and that for the specific day are very close together.

† The number of weeks that would have been worked if every wage-earner (2,570,097) had worked 52 weeks.

III. WAGE-EARNERS AND TOTAL AND AVERAGE TIME LOST, BY CONJUGAL CONDITION AND SEX, CANADA, YEAR ENDED JUNE 1, 1931

Conjugal condition	Wage-earners		Weeks lost		Weeks lost per wage-earner		Weeks lost per wage-earner losing time	
	Males	Females	Males	Females	Males	Females	Males	Females
Total.....	2,022,260	547,837	21,607,109	2,899,171	10.7	5.3	24.3	21.1
Single.....	805,088	472,440	9,758,399	2,435,981	12.1	5.2	26.2	20.8
Married.....	1,156,778	42,949	11,157,320	281,737	9.6	6.6	22.8	22.4
Widowed.....	53,569	30,929	657,227	170,874	12.3	5.5	25.7	22.0
Divorced.....	2,509	1,434	33,009	10,152	13.2	7.1	26.1	23.0
Not stated.....	4,316	85	1,154	427	0.3	5.0	26.8	26.7

The married males lost over 11,000,000 weeks during the year, an average of 9.6 weeks per person, which is only a little lower than the average weeks lost for all male wage-earners (10.7 weeks).

A still more minute analysis is possible if the weeks unemployed are considered in relation to age and occupation groups. The accompanying statement shows the occupation groups in the order of number of weeks lost.

IV. NUMBER OF WEEKS LOST, BY OCCUPATION GROUP, AGE AND SEX, CANADA, YEAR ENDED JUNE 1, 1931

Occupation group	Per cent of total wage-earners in each group	Per cent of total weeks lost for age group

<sup>1</sup> Less than one one-hundredth of one per cent.

<sup>2</sup> Not including agricultural, mining or logging.

Somewhat similar information, although presented in a different manner and for much smaller occupation groups, is given in Statement V, showing, in order of magnitude, the average number of weeks lost by all workers in certain selected occupations, classified by age and sex.

The purpose of presenting this material in a different manner from that of the preceding statement needs explanation. In the earlier statement (IV) the order of importance of the percentage of time lost in wide groups of occupations is shown. Clearly this order is intelligible only when applied to very large groups, and even then it is necessary to add information about the number employed in the group. In the second statement the order of seriousness is shown in so far as it affects each occupation; a very small occupation may or may not be the most seriously affected. The relative importance of the total weeks lost in each occupation, as compared with the weeks lost by all the occupations listed in the statement, is shown in the last column. This column means, for example, that labourers and unskilled workers lost 45.8 p.c. of the time lost by all the male workers listed in the statement whereas (as is shown in the previous statement) they lost 37.09 p.c. of the 22 million weeks lost by all male workers.

V. AVERAGE NUMBER OF WEEKS LOST IN SELECTED OCCUPATIONS, BY CERTAIN AGE GROUPS AND SEX, CANADA, YEAR ENDED JUNE 1, 1931

Occupation	Average number of weeks lost by age group				Weeks lost by occupation as per cent of total weeks lost by all occupations listed

<sup>1</sup> Not including agricultural, mining or logging.

Another feature of unemployment that illustrates the economic seriousness of the time lost is the frequency of occurrence of stated periods of time lost. This is shown in Statement VI by conjugal condition of the workers, since, obviously, the significance of time lost varies with the conjugal condition. The average number of weeks lost by all wage-earners was 9.54, or about 2 months out of 12. Clearly this is not true of every wage-earner, for some lost no time while others lost practically the whole year. In percentages the frequency of periods lost appear in Statement VI.

VI. PERCENTAGE DISTRIBUTION OF THE NUMBER OF WAGE-EARNERS LOSING STATED PERIODS OF TIME, BY CONJUGAL CONDITION AND SEX, CANADA, YEAR ENDED JUNE 1, 1931

Duration interval	Per cent losing stated periods of time of				
	Total wage-earners	Wage-earners losing time			
		Total	Single	Married	Widowed and divorced
<b>MALES</b>					
Total.....	100.00	100.00	100.00	100.00	100.00
Losing no time.....	56.00	—	—	—	—
“ 1-8 weeks.....	7.35	16.70	13.46	19.28	14.66
“ 9-16 “.....	8.11	18.42	16.73	19.81	16.77
“ 17-24 “.....	7.58	17.24	17.26	17.23	17.14
“ 25-32 “.....	9.71	22.06	22.33	21.85	22.25
“ 33-40 “.....	5.13	11.67	13.21	10.45	12.44
“ 41 and over.....	6.12	13.91	17.03	11.37	16.73
<b>FEMALES</b>					
Total.....	100.00	100.00	100.00	100.00	100.00
Losing no time.....	74.86	—	—	—	—
“ 1-8 weeks.....	6.69	26.59	27.44	21.95	21.64
“ 9-16 “.....	5.32	21.14	21.27	19.80	21.35
“ 17-24 “.....	3.57	14.20	14.04	14.98	15.29
“ 25-32 “.....	4.21	16.75	16.15	20.38	19.83
“ 33-40 “.....	2.32	9.22	8.90	11.20	10.77
“ 41 and over.....	3.04	12.10	12.21	11.69	11.12

The average number of weeks lost by those losing time was 23·85; but these weeks were lost by only 40 p.c. of the wage-earners, while the remainder reported no lost time. Almost one-third of the total number of wage-earners lost 9 weeks or more, while about one-fifth lost half the year. Of those who lost time, 46 p.c. lost half the year or more. The behaviour of this half-year group by conjugal condition is most interesting, for of those who lost any time 49 p.c. of the single, 44 p.c. of the married, and 49 p.c. of the widowed and divorced lost more than 25 weeks.

If the unemployment of 1931, by week periods is compared with similar data for 1921, one striking difference is noted.

Percentages of total wage-earners of both sexes losing stated periods of time, 1921:—

Time lost	Percentage
1- 4 weeks—7·05 or average of 1·76 p.c. per week.	
5- 8 “ 6·24 “ “ “ 1·56 “ “ “	
9-13 “ 6·33 “ “ “ 1·27 “ “ “	
14-17 “ 3·58 “ “ “ 0·90 “ “ “	
18-26 “ 6·92 “ “ “ 0·77 “ “ “	
27 and over 4·54 “ “ “ 0·17 “ “ “	

In these 1921 figures is seen a progression, the percentages decreasing as the number of weeks lost increases. In 1931, however, the largest group not only of the males but of both sexes combined is that losing 25-32 weeks. This constitutes the most striking difference between unemployment in 1921 and 1931; the proportion of persons losing any time was very nearly equal in both years, but those who did lose time in 1931 were unemployed for much longer periods. The number losing no time comprised 65·34 p.c. of the total number of wage-earners in 1921 and 60·02 p.c. in 1931; losing 8 weeks or less 13·29 p.c. in 1921 and 7·21 p.c. in 1931; and losing more than 8 weeks 21·37 p.c. in 1921 and 32·77 p.c. in 1931.

**Social and Dynamic Features of the Unemployment of 1931.**—In the foregoing, the time lost through unemployment during the census year was shown as distributed amongst various classes of persons mainly for the purpose of measuring or illustrating its economic seriousness. It will now be necessary to throw some light on other features, as for instance, the relation, if any, between the stability or mobility of the population and unemployment. The best measure of stability is the time in Canada of the immigrant population. The following statement shows the total and the average number of weeks lost per wage-earner of the Canadian-born and immigrant populations, the latter given by year of arrival.

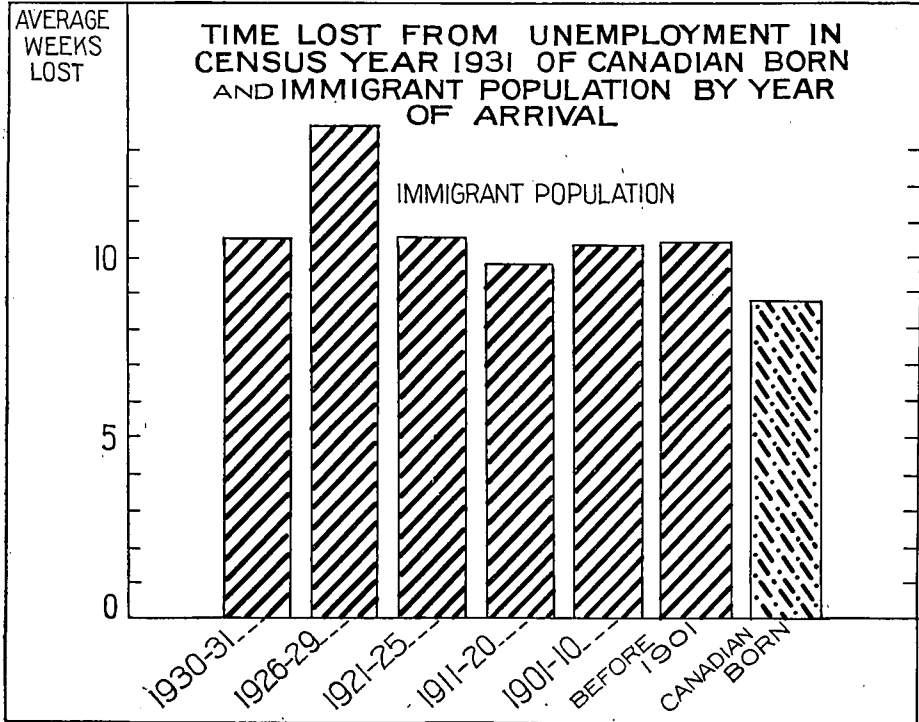

VII. TOTAL NUMBER OF WEEKS LOST AND AVERAGE NUMBER OF WEEKS LOST PER WAGE-EARNER BY CANADIAN-BORN AND IMMIGRANT POPULATION, BY YEAR OF IMMIGRATION, CANADA, YEAR ENDED JUNE 1, 1931

Year of immigration	Total weeks lost	Average weeks lost per wage-earner
All wage-earners.....	24,506,280	9·54
Canadian-born.....	14,533,845	8·78
Immigrant.....	9,972,435	10·90
Arriving 1930-31.....	344,620	10·57
1926-29.....	2,551,960	13·05
1921-25.....	1,229,154	10·56
1911-20.....	2,641,024	9·84
1901-10.....	2,467,803	10·34
Before 1901.....	721,565	10·41
Not stated.....	16,309	6·96

The differences in the average number of weeks lost by the persons arriving during stated periods, as illustrated in Statement VII and Chart 1, are undoubtedly most significant. In the chart, it is immediately noticeable that the arrivals of 1926-29 lost the greatest number of weeks, while, with the exception of the Canadian born, the arrivals of 1911-20 showed the lowest rate of unemployment. There is little doubt that this latter group were at an advantage in so far as age is concerned, since in 1931 they were at the age of greatest working capacity. The pre-1901 arrivals, moreover, were mainly persons over 50 who would suffer in the employment field because

of old age. The 1926-29 immigrants seem to have had no handicap on the score of age, and were fortunate in arriving during a period of great industrial activity. The 1930-31 arrivals, on the other hand, came during a period of depression, and the 1911-20 group at a period of heavy emigration, the result of war service and other causes.

CHART I

It is noticeable, also, that the Canadian born, although handicapped by age, suffered less from unemployment in the census year than any class of the immigrants shown in the statement. On an average the immigrant lost 2.12 weeks more than the Canadian. Grade of occupation would naturally be expected to be the most immediate cause of this difference, but data on the occupations of Canadian and immigrant wage-earners is not available. This matter may be approached indirectly by showing, first, the distribution of the immigrant population according to year of arrival, birthplace and race classes, and, secondly, the distribution of the races by gainful occupation as in Table 84.

VIII. TOTAL AND AVERAGE NUMBER OF WEEKS LOST BY IMMIGRANT POPULATION, BY NATIVITY AND YEAR OF IMMIGRATION, CANADA, YEAR ENDED JUNE 1, 1931

Year of immigration	Birthplace							
	British Possessions		United States		Europe		Asia	
	Weeks lost		Weeks lost		Weeks lost		Weeks lost

Not stated.....	9,070	6.53	3,317	7.77	2,031	8.75	1,521	6.06

Statement VIII shows that the immigrants from European countries had not only the greatest unemployment in 1931, but that they must have caused the exceptionally high rate of unemployment amongst the arrivals of 1926-29. The unemployment of these 1926-29 arrivals is shown by broad race groups in Statement IX.

IX.—TOTAL AND AVERAGE NUMBER OF WEEKS LOST BY WAGE-EARNER EUROPEAN ARRIVALS OF 1926-1929, BY RACIAL ORIGIN GROUP, CANADA, YEAR ENDED JUNE 1, 1931

Racial origin	Weeks lost	Per person	Racial origin	Weeks lost	Per person

Russian.....	45,242	16-03	Others.....	30,041	12-00

**Immediate Causes of Time Lost from Work.**—The term "immediate" must be emphasized here, since it is not proposed to go into the fundamental causes of unemployment. In the case of persons designated as "wage-earner" the census schedule called for answers to two main questions, *viz.*, how many were idle on June 1, and how many weeks were lost during the year through (1) no job, (2) temporary lay-off, (3) illness, (4) accident, (5) strike or lockout, and (6) other causes. It might be expected that during the year, the worker would lose time through more than one of these causes, but the compiled results, as shown in Statement X, indicate that there were very few such cases of duplication; in fact, only 6 p.c. of the wage-earners reported more than one cause.

X. UNEMPLOYMENT AMONG WAGE-EARNERS AND TIME LOST, BY CAUSE, CANADA, YEAR ENDED JUNE 1, 1931

Cause of unemployment	Persons losing time	Weeks lost	Per cent of total time lost	Weeks lost per wage-earner	Weeks lost per person losing time through indicated cause
All causes.....	1,092,183	24,506,280	100-00	9-54	-
No job.....	747,815	19,674,606	80-28	7-66	26-31
Temporary lay-off.....	204,746	3,078,527	12-56	1-20	15-04
Illness.....	112,226	1,403,556	5-73	0-55	12-51
Accident.....	19,354	227,462	0-93	0-09	11-75
Strike or lockout.....	1,318	11,536	0-05	-	8-75
Other causes.....	6,724	110,593	0-45	0-04	16-45
Total number losing time.....	1,027,479				
More than one cause.....	64,704				

Illness as a cause of unemployment must have been reported only when it was the sole cause; if a person without a job was ill, he would not, except in a negligible number of cases, report illness as a partial cause of the time lost. It is probable that if all the other causes had accounted for only a small number of weeks lost, the figures for illness would have been much larger than that shown above. Furthermore, there were about 60 p.c. of the wage-earners who reported no time lost from any cause. This is a very large proportion losing no time through illness during the whole year. It should be emphasized that all time lost from any cause was remunerative time, so that a holiday or any leave for sickness or otherwise with pay, was not included in the time lost. One good reason for the tendency to report only one cause is that some of them cannot co-exist, *e.g.*, a person could hardly lose time through strike, lockout, accident or temporary lay-off when he was without a job.

From this point of view it must now be clear that we cannot expect the data to measure definitely such matters as the different tendencies of males and females in reporting various causes of unemployment; these sex differences are at least interesting and are therefore shown in Statement XI.

XI. UNEMPLOYMENT AMONG MALE AND FEMALE WAGE-EARNERS AND TIME LOST, BY CAUSE, CANADA, YEAR ENDED JUNE 1, 1931

Cause of unemployment	Persons losing time		Weeks lost		Average weeks lost per person		Average weeks lost by persons losing time	
	Males	Females	Males	Females	Males	Females	Males	Females
All causes <sup>1</sup> .....	889,743	137,736	21,607,109	2,899,171	10.68	5.29	24.23	21.05
No job.....	660,371	87,444	17,538,659	2,135,947	8.67	3.90	26.56	24.43
Temporary lay-off.....	172,345	32,401	2,646,391	432,136	1.31	0.79	15.36	13.34

Other causes.....	4,737	1,987	73,842	36,751	0.04	0.07	15.59	13.50

<sup>1</sup>Excluding duplication.

The females according to these figures, lost less time than the males from illness as well as from all the other main causes, although it is clear that they had more opportunity to report illness than the males since their time lost from these other causes was much less. This and possibly other unexpected features of the statement can only be explained by the presumption that only long periods of unemployment, involving serious loss of earnings were included in the figures.

There is another set of data on unemployment in 1931 of which, up to this point, only bare mention has been made. The wage-earner was asked, not only how many weeks he lost, but also whether or not he was at work on June 1, *i.e.*, on a certain day taken as a cross-section of the year. The compilation of these data supplied a mass of information which was not only a check upon the data for the year (allowing for seasonal differences) but also revealed certain features which in yearly data are very obscure. The information in Statement XI is a case in point. The obscurity in the yearly data arises from the fact that in stating the cause of unemployment it was possible and natural for a person to give more than one cause, so that the aggregate number of different causes could not be expected to be the same as the total number of persons losing time.

The probability that the person reported only longer continuous\* periods of unemployment is another source of confusion. The yearly data do not seem to measure the probability of being unemployed from any cause so much as the probability of being seriously unemployed from that cause. It is hardly probable, however, that a certain small section of the wage-earners lost an average of say about three months from illness, while all the remainder lost no time whatever. Now the data giving the causes of unemployment as on one day, June 1, 1931 make the point definite (Statement XII). On that date the person was either at work or not, and, if not at work, his absence could have resulted from only one of the classified causes. There could be no duplication and no question as to whether it was a long period or a short one. These data for one day, making allowance for seasonal bias, may be taken as a sample of the year, and thus provide a clear statement of the causes of unemployment.

XII. UNEMPLOYMENT AMONG WAGE-EARNERS, BY CAUSE AND SEX, CANADA, JUNE 1, 1931

Cause of unemployment	Number not at work		Percentage of total wage-earners		Percentage of number not at work	
	Males	Females	Males	Females	Males	Females
All causes.....	422,076	47,882	20.87	8.74	100.00	100.00
No job.....	358,497	36,146	17.73	6.60	84.94	75.49
Temporary lay-off.....	37,165	5,450	1.84	0.99	8.80	11.38
Illness.....	20,224	5,460	1.00	1.00	4.79	11.40
Accident.....	4,249	216	0.21	0.04	1.01	0.45
Strike or lockout.....	283	17	0.01	-	0.07	0.04
Other causes.....	1,658	593	0.08	0.11	0.39	1.24

\* *i.e.*, he would report in *weeks* not in *days*.

It is striking that, as regards the percentage of the total wage-earners, the figures for June 1 have the same appearance as the figures for the whole year. A smaller proportion of the total female wage-earners (than of the male) was idle from all the causes except illness and, even in the case of illness, the proportions were the same. It is noticeable that, in the case of illness, the 1.00 p.c. in the June 1 figure is very nearly commensurable with the 0.55 and 0.51 weeks lost during the year, since 0.55 weeks is equivalent to something like 1 p.c. of the year. From this point of view the female figures are almost exactly the same for the year as for June 1, a fact that lends credence to the yearly figures. It is significant, however, that illness was the source of 11.38 p.c. of the female causes of unemployment on June 1 as compared with 4.79 p.c. of the male causes. This was, of course, partly the result of the proportionately great influence of the other male causes. Since 19.87 p.c. of the total male wage-earners and 7.74 p.c. female reported other causes than illness, it follows that there were left only 80.13 p.c. males as compared with 92.26 p.c. females who could possibly report illness. The commensurability with the yearly figures points to the fact that long periods of time only are reported by those reporting unemployment.

**Seasonal Aspects of Unemployment During the Census Year.**—The seasonal aspects are measurable to a certain extent by the correspondence of the figures of unemployment as on June 1 with the average number of weeks lost expressed as a percentage of 52 weeks. The comparison for occupation groups is shown in Statement XIII.

XIII. PERCENTAGE IDLE ON JUNE 1, 1931, AND PERCENTAGE OF YEAR IDLE, BY OCCUPATION GROUP AND SEX, CANADA, YEAR ENDED JUNE 1, 1931

Occupation group	Males		Females	
	Percentage idle June 1	Percentage of the year idle	Percentage idle June 1	Percentage of the year idle
All occupations.....	20.87	20.54	8.74	10.17
Agriculture.....	15.38	15.81	11.38	13.37
Fishing and Logging.....	37.61	32.00	33.33	12.77
Mining and Quarrying.....	35.18	32.73	—	—
Manufacturing.....	18.20	19.37	14.10	18.73
Building and Construction.....	29.24	29.67	24.44	21.75
Transportation and Communication.....	13.14	13.98	8.24	9.88
Commercial.....	9.19	8.67	10.30	11.67
Finance, Insurance.....	4.78	4.94	4.47	4.62
Service.....	9.07	8.94	6.97	8.29
Professional.....	6.48	5.48	4.88	4.42
Personal.....	13.28	13.83	7.83	9.92
Clerical.....	8.81	7.69	8.13	7.33
Labourers.....	38.28	36.50	15.65	21.46

The percentage of time lost by the male wage-earners during the year corresponds very closely with the unemployment of June 1, except for easily understood seasonal differences. The female correspondence, however, is not nearly so close. Whether this is a genuine seasonal difference determined by the nature of the occupations of the two sexes is open to question.\* General commensurability or correlation of the two sets of data, especially noticeable in the case of the males, indicates that the data, as taken by the census, have value in determining probabilities of unemployment in other than census years, especially when weight is attached to the various causes and conditions of unemployment as shown by the cross-classifications of the census.

\* A more thorough study of this phenomenon has led to the conclusion that the main reason was the small number of females involved. The commensurability applied only in the case of fairly large numbers.

## CHAPTER XIX

## FAMILIES AND EARNINGS

Probably the most detailed compilations of the Census of 1931 are those relating to families and earnings. Family composition and status are vital population attributes and anything less than a thorough treatment of these subjects would be entirely misleading.\* The data were compiled for provinces, individual cities of 30,000 and over, urban communities classified as 1,000 to 30,000 and under 1,000, rural communities, racial groups, nativity groups and other classifications so numerous and so important that it will be necessary to list them as below:—

- (1) All families according to conjugal condition, nativity, origin and sex of head, and composition of family.
- (2) All families with husband and wife living together according to nativity and literacy of head, tenure of home and composition of family, classified by age, literacy, school attendance and earnings.
- (3) All families having only one person as head, classified as in Item 2.
- (4) All families of one person only according to nativity, conjugal condition and literacy.
- (5) All families with male immigrant head according to nativity and year of immigration of head, tenure of home and composition of family.
- (6) All families with husband and wife living together according to class of worker of husband, tenure of home, and composition, earners and earnings of family.
- (7) All families with wage-earner heads and husband and wife living together, according to literacy, occupation and earnings of husband, tenure of home, and composition, earners and earnings of family.

**Definition of Family.**—A brief definition of *family* as understood in the census is necessary. In some census publications certain confusion arises in the use of two terms “the census family” and “the private family.” There is really no necessity for these two terms. The census family refers to the *household*, while the private family refers to the *family* as commonly understood, and the use of these separate terms would prevent any possible misunderstanding. The *family* is composed of the head, wife, own children, guardianship children and other dependents usually though not necessarily related to the head. The *household* may consist of more than one family and includes lodgers and domestics. The household is an economic, not a biological unit. The earnings of the family mean earnings upon which all the members are dependent. The earners of the family are the biological members, guardianship children and other dependents.

A household consisting of head, wife, 3 children of their own, 1 guardianship child, 1 other dependent and 2 lodgers has thus 9 persons. The earnings of this household are, say \$1,200, and out of this amount 9 persons are lodged, but the amount received for board is not known. What is the difference between this \$1,200 and the same amount earned by a family of head, wife and 7 children? Even if the complication of lodgers did not come in, the matter would not be entirely clear, since it is quite possible that children who are earning may be boarding wholly or in part away from home; nor is it possible to know whether all the family earners contribute to the support of the family. It is clear, therefore, that the importance of earnings in relation to families cannot be stressed to too great an extent. The relationship between the size of families and their earnings is only a symptomatic quantity which can be usefully applied when other facts are known, *e.g.*, the amount paid for rent, the number of rooms, etc. The more carefully it is applied the more valuable it becomes. As a detached item of information it is useless.

The same precautionary methods should be used in dealing with information on the size of families. The family as enumerated at the census is an economic, not a biological unit, and includes only the children living at home, not the total number of children born to the family, some of whom may have died or may be permanently detached from the home. To make this point absolutely definite it is considered necessary to show here by percentages and by numbers per 10,000 a comparison of two sets of figures.

\* See also 1931 Census Monograph *The Canadian Family* by A. J. Pelletier, F. D. Thompson and A. Rochon.

I. PERCENTAGE AND NUMBER PER 10,000 FAMILIES IN 1931 WITH BOTH PARENTS ALIVE CLASSIFIED ACCORDING TO NUMBER OF CHILDREN LIVING AT HOME, CANADA, 1931, AND THE FAMILIES REPRESENTED IN THE BIRTHS OF 1930, 1931 AND 1932 ACCORDING AS THAT BIRTH WAS THE FIRST CHILD, SECOND, ETC.

<sup>1</sup>Families with both parents alive.

The number of families included in Columns (1) and (3) of the above statement, was 1,412,157; the number of families represented in the births of 1930, 1931 and 1932, and shown in the Columns (2) and (4) was 715,125, a little over half the former number. The births are not necessarily completed in either case so that there is no vital difference in this respect between the two, although in the first case some of the mothers may be no longer active, while in the second they are undoubtedly so. The method of showing 3 years rather than one in the vital statistics data is advisable in that it provides a much larger sample for comparison.\* The figures show clearly that the number of children born to the family is much larger than the number living at home at the time of the census. The lack of comparability between the two is entirely one-sided; *i.e.*, the second set is almost certain to be under-representative of the average number of children since mothers in the birth statistics are still active and have not necessarily completed their life quota. This comparison illustrates the impossibility of using the census figures on size of families as a measurement of fertility. They merely measure certain economic and social features of the population such as the number of persons dependent upon the earnings of the family and the tendency towards families remaining together. A guide to the manner in which data on families should be presented is provided by a comparison of this type. The presentation should include classifications by both economic and social units, including race, literacy and conjugal condition of heads, status of children, etc.

**General Description of the Canadian Family in 1931.**—In 1931 the number of families in Canada was 2,419,360 consisting of 9,346,195 persons, so that 1,030,591 persons in the population (nearly 10 p.c.) were not attached to any family. Of the total number of persons in families 2,419,360 were heads; 1,857,105 were wives of male heads; 4,881,050 were children born to these families; 84,108 were children in the families as wards, and 104,572 were dependents other than wives and children. Further description, following, is shown in tabular form.

\*One weakness in taking 3 years lies in the danger that prolific mothers might be represented more than once. A careful investigation, however, led to the conclusion that the error due to this is very small.

II. NUMBER OF PERSONS IN FAMILIES ACCORDING TO CONJUGAL CONDITION OF HEAD, CANADA, 1931

Conjugal condition of head	Families	Persons	Distribution of persons					Persons without children but with other dependents	Persons with no dependents
			Parents	Own children	Guardian-ship children	Other dependents			
All families.....	2,419,360	9,346,195	3,081,791	4,881,050	84,108	104,572	104,204	1,090,470	
Two married heads.....	1,857,105	8,140,001	2,824,314	4,299,330	60,828	65,633	69,738	820,158	
One married head.....	103,313	239,288	58,946	129,705	2,465	3,805	2,705	41,662	
Widowed head.....	285,625	758,839	195,636	447,039	13,889	12,286	9,116	80,873	
Divorced head.....	4,145	8,641	2,322	4,276	57	163	112	1,711	
Single head.....	169,172	199,426	573	700	6,869	22,685	22,533	146,066	

III. AVERAGE SIZE OF FAMILY, CANADA, 1931

Conjugal condition of head	All persons including head	Dependent on head				Number of children per family with children	Number of dependents per family with dependents (except wife or husband)
		All dependents	Own children	Other dependents	Wife or husband		
All families.....	3.86	2.86	2.02	0.08	0.77	2.92	2.92
Two married heads.....	4.38	3.38	2.32	0.07	1.00	3.04	3.06
One married head.....	2.32	1.32	1.26	0.06	-	2.20	2.21
Widowed head.....	2.66	1.66	1.57	0.09	-	2.29	2.31
Divorced head.....	2.08	1.08	1.03	0.05	-	1.84	1.85
Single head.....	1.18	0.18	0.01	0.17	-	1.22	1.31

The average size of families with children and both parents living, not including dependents, is 5.04 persons, while the average size of all families of this class including both children and other dependents is 4.38 persons. Thus the typical size of the family with children is still the popularly conceived 5 members. Clearly the families without children or with only one head are the cause of the smaller averages found in the above statement. The tendency amongst families with children or dependents to keep the size of their family up to average by bringing in other dependents where children are not up to quota is strikingly seen in the very slight variation between the two sets of figures "Children per family with children" and "All dependents per family with dependents." Of the total 188,680 dependents other than wife or children, 126,461 are with families having two married heads. If the children are included, of the 5,069,730 persons dependent on the head, 4,425,791 or nearly 90 p.c. are dependent upon two married heads.

The persons with no family connection\* whatsoever, 1,030,591 or nearly one-tenth of the total population comprise an interesting group. Some of them at least are children having apparently no claim to dependency and the remainder, if they have any dependents, are not living with them. In addition there are 1,090,470 persons who are heads of families, and who have no children or other dependents living with them. This makes 2,121,061 persons, or about one-fifth of the population, who, considering the matter from an economic standpoint, have no family responsibilities.

**Sex Distribution of Head of Families.**—A general description of family composition ought to include some classification of family heads according to sex. Statement IV shows the heads of families in 1931 by sex, conjugal condition and family class.

\*Employees in institutions form a considerable proportion of these persons not belonging to families. See page 319.

## IV. HEADS OF FAMILIES, BY SEX, CONJUGAL CONDITION AND CLASS OF FAMILY, CANADA, 1931

Conjugal condition of head and class of family	Heads of families			Per cent in each family class		Per cent of class of head in each family class	
	Both sexes	Males	Females	Males	Females	Males	Females
All classes.....	2,419,360	2,133,819	285,541	88.20	11.80	100.00	100.00

With dependents only.....	9,116	3,260	5,856	35.76	64.24	3.52	3.03
Without children or dependents.....	80,873	32,393	48,480	40.05	59.95	34.98	25.12
Divorced head.....	4,145	1,961	2,184	47.31	52.69	100.00	100.00
With children only.....	2,234	619	1,615	27.71	72.29	31.57	73.95
With children and dependents.....	88	33	55	37.50	62.50	1.68	2.52
With dependents only.....	112	81	31	72.32	27.68	4.13	1.42
Without children or dependents.....	1,711	1,228	483	71.77	28.23	62.62	22.11
Single head.....	169,172	128,484	40,688	75.95	24.05	100.00	100.00
With children only.....	560	12	548	2.14	97.86	0.01	1.35
With children and dependents.....	13	1	12	7.69	92.31	-	0.03
With dependents only.....	22,533	16,261	6,272	72.17	27.83	12.66	15.41
Without children or dependents.....	146,066	112,210	33,856	76.82	23.18	87.33	83.21

One striking feature of the female heads as shown in the preceding data is that the dependents in the "homes" tend to be other than their own children. Single women and widowed females are especially responsible for dependent persons including both guardianship children and other dependents.

This leads to a classification of the female population under various headings (Statement V).

## V. FEMALE POPULATION, MISCELLANEOUS CLASSIFICATIONS, CANADA, 1931

Item	Number	Per cent
Total number of females.....	5,002,245	100.00
Under 15 years of age.....	1,622,606	32.44
Over 15 years.....	3,379,639	67.56
With dependents.....	1,642,483	48.60
With husband as head of family.....	1,447,026	42.82
Heads of families.....	195,457	5.78
Without dependents.....	1,737,156	51.40
With husband as head of family.....	410,079	12.13
Heads of families.....	90,084	2.67
All others.....	1,236,993	36.60

**Economic Conditions of the Canadian Family.**—The tabulation of the material on families from the Census of 1931 includes information on the general occupational class of the head, tenancy, earners in the family, and earnings of both the head and others.

It has been noted that families with two married heads comprise about 90 p.c. of the persons in families in Canada and about 75 p.c. of the total number of families. Because of its size and importance and the desirability of determining various conditions for this class alone, it was studied more thoroughly than the others especially in regard to economic conditions. As a result, no information on certain points is available for the remaining families which represent a large element of the population quite differently situated, as regards occupation class and earnings.

The compilations show 1,857,105 families with two married heads, and for this group the occupational class of workers, earners and earnings of the family, and tenancy. First as regards tenancy:—

VI. NUMERICAL AND PERCENTAGE DISTRIBUTION OF FAMILIES WITH HUSBAND AND WIFE LIVING TOGETHER, BY TENANCY CLASS, CANADA, 1931

Tenure	Number	Per cent
Total number of families (two married heads).....	1,857,105	100.00
Owners.....	1,052,836	56.69
Tenants.....	804,269	43.31
First tenant.....	652,420	35.13
Sub-tenant.....	143,215	7.71
Free tenant.....	8,208	0.44
Tenancy not stated.....	94	0.01
Families employed and living in institutions.....	332	0.02

By first tenant is meant the person who rents the house or apartment from the owner and who may in turn sub-let a part of it to the sub-tenant. A classification of this type is useful in that it gives the number of families living in sub-rented lodgings, viz., 143,215 or 7.71 p.c. of the total of 1,857,105. The conditions of rental are apt to be entirely different from those governing lodgings rented directly from the owner. The first tenant usually has accommodation over and above sleeping and living quarters which the sub-tenant has not. The fact that nearly all the "no pay" workers and many of the "no occupation" family heads are sub-tenants throws some light upon the type of person in this group.

The occupational class to which the head of the family belongs is a most important point. The classification of families with two married heads according to class of worker of head and to size and composition of family, is given in Statement VII.

VII. FAMILIES WITH HUSBAND AND WIFE LIVING TOGETHER SHOWING NUMBER OF FAMILIES, PERSONS, AVERAGE SIZE AND FAMILY COMPOSITION, BY OCCUPATIONAL CLASS OF HEAD, CANADA, 1931

Occupational class of head	Families	Persons	Average size of family	Composition of family			
				Heads	Children	Guardian-ship children	Other dependents
All classes.....	1,857,105	8,140,001	4.38	2.00	2.31	0.03	0.04
Employer.....	320,961	1,708,294	5.32	2.00	3.23	0.05	0.04
Own account.....	388,614	1,706,443	4.39	2.00	2.31	0.04	0.04
Wage-earner.....	1,033,863	4,371,293	4.23	2.00	2.17	0.03	0.03
No pay.....	17,540	64,335	3.67	2.00	1.65	0.01	0.01
Income.....	74,352	217,446	2.92	2.00	0.85	0.05	0.02
No occupation.....	21,769	72,190	3.32	2.00	1.25	0.05	0.02

The consistent gradation in the size of family from employer to income is very interesting. It seems advisable to show similar data cleared of the rather misleading influences of rural and urban residence.

VIII. FAMILIES WITH HUSBAND AND WIFE LIVING TOGETHER SHOWING NUMBER OF FAMILIES, PERSONS, AVERAGE SIZE AND FAMILY COMPOSITION, BY OCCUPATIONAL CLASS OF HEAD, RURAL AND URBAN, CANADA, 1931

Occupational class of head	Families	Persons	Average size of family	Composition of family			
				Heads	Children	Guardian-ship children	Other dependents
RURAL							
All classes.....	823,666	3,875,067	4.70	2.00	2.62	0.04	0.04
Employer.....	253,876	1,404,441	5.53	2.00	3.44	0.05	0.04
Own account.....	279,965	1,260,245	4.50	2.00	2.41	0.04	0.05
Wage-earner.....	238,638	1,050,037	4.40	2.00	2.34	0.03	0.03
No pay.....	17,205	63,138	3.67	2.00	1.66	0.01	0.01
Income.....	25,470	70,717	2.78	2.00	0.71	0.05	0.02
No occupation.....	8,512	26,489	3.11	2.00	1.03	0.00	0.02

VIII. FAMILIES WITH HUSBAND AND WIFE LIVING TOGETHER SHOWING NUMBER OF FAMILIES, PERSONS, AVERAGE SIZE AND FAMILY COMPOSITION, BY OCCUPATIONAL CLASS OF HEAD, RURAL AND URBAN, CANADA, 1931—Con.

Occupational class of head	Families	Persons	Average size of family	Composition of family			
				Heads	Children	Guardianship children	Other dependents
URBAN							
All classes.....	1,033,439	4,264,934	4.13	2.00	2.07	0.03	0.03
Employer.....	67,085	303,853	4.53	2.00	2.46	0.03	0.04
Own account.....	108,649	446,198	4.11	2.00	2.04	0.03	0.04
Wage-earner.....	795,225	3,321,256	4.18	2.00	2.13	0.02	0.03
No pay.....	341	1,197	3.51	2.00	1.51	—	—
Income.....	48,882	146,729	3.00	2.00	0.93	0.05	0.02
No occupation.....	13,257	45,701	3.45	2.00	1.39	0.04	0.02

It is thus seen that the distinction between rural and urban does not materially change the order in the size of family. There is evidently a definite basis for it other than mere accident of location, class of persons, etc. That employers should have the largest families is rather unexpected. There is a possibility that the size of the families of both employers and "own accounts" have some connection with age. Since there are two married heads still living, it may be presumed that, in the majority of cases, they are not very old. At the same time, the employer and "own account" are apt to be older than the wage-earner and thus probably have a more nearly completed family. The first explanation that would present itself is, of course, that the employer could best afford to keep the family together. Whether or not income actually has anything to do with the size of families is a matter for speculation. The persons reporting no pay are presumably farmers' sons working on the home farm, and those on income older persons with grown up families.

The approximate family earnings per person in family, *i.e.*, earnings other than those of the head, appear in Statement IX.

IX. AVERAGE EARNINGS OF WIFE AND CHILDREN PER PERSON IN FAMILY WITH HUSBAND AND WIFE LIVING TOGETHER, BY OCCUPATIONAL CLASS OF HEAD, CANADA, 1931

Occupational class of head	Earnings <sup>1</sup> of wife and children (Approximate average per person in family)		
	Total	Rural	Urban
	\$	\$	\$
All classes.....	36	16	54
Employer.....	23	13	67
Own account.....	21	10	48
Wage-earner.....	44	25	51
No pay.....	5	5	8
Income.....	92	45	112
No occupation.....	121	58	152

<sup>1</sup> Assuming all wives and children gainfully occupied earn at the same rate as those stating earnings.

This gives a good indication of how families whose heads are in the "no occupation" class are supported. A comparison of earnings per person in the family is provided in Statement X.

X. FAMILIES WITH WAGE-EARNER HEADS, NUMBER OF PERSONS AND PERSONS EARNING IN SUCH FAMILIES WITH TOTAL EARNINGS AND EARNINGS PER PERSON, BY AMOUNT OF WAGES OF HEAD, CANADA, 1931

Wages interval of head	Families	Persons	Persons earning <sup>2</sup>	Total earnings <sup>1</sup>	Earnings per person in family <sup>1</sup>
				\$	\$
All families.....	2,419,360	—	—	—	—
With wage-earner heads <sup>2</sup> .....	1,147,784	4,522,943	1,527,283	1,526,010,380	337
Receiving \$2,950 and over.....	53,070	202,391	64,537	242,430,340	1,198
\$1,950-\$2,949.....	99,789	386,409	125,869	249,745,240	639
\$ 950-\$1,949.....	458,258	1,835,303	608,397	693,119,010	379
\$ 450-\$ 949.....	303,161	1,224,842	410,528	254,685,040	208
Less than \$450.....	233,506	873,998	317,952	86,030,750	98
With earnings not stated.....	35,543	127,770	10,928	4,308,670 <sup>3</sup>	34

<sup>1</sup> Approximate.

<sup>2</sup> Stating earnings.

<sup>3</sup> Exclusive of heads'.

Thus the \$120 per person earned by the members of families whose heads were in the "no occupation" class was as much as the average earnings per person in about one-third of all the families stating earnings. The larger earnings per person in families on income reflect the fact that the heads of such families tend to be older persons, while the small earnings of the "no pay" class reflect the fact that the heads are younger persons, living to a large extent in rural districts. It may be noted also that the wives and families of wage-earners contribute over a sixth of the total income of the family, the head contributing the remainder.

Another item of information that will further indicate the ages of the various classes of heads and, consequently, the cause of the variation in family earnings, is the proportion of the children over 15 years of age living at home (Statement XI).

XI. CHILDREN OVER 15 YEARS OF AGE LIVING AT HOME AS PERCENTAGE OF TOTAL CHILDREN LIVING AT HOME, BY OCCUPATIONAL CLASS OF HEAD OF FAMILY, RURAL AND URBAN, CANADA, 1931

Occupational class of head	Total	Rural	Urban
	p. c.	p. c.	p. c.
All classes.....	30.8	29.0	32.7
Employer.....	43.6	43.6	43.8
Own account.....	20.2	15.7	34.0
Wage-earner.....	27.9	21.7	30.0
No pay.....	10.0	10.1	7.4
Income.....	69.8	62.9	72.5
No occupation.....	67.0	61.1	69.9

The larger proportion of children over the age of 15 seems to constitute at least a part of the difference in family earnings between employer and "own account". The latter has a much younger family. The families on income and with no occupation, on the other hand, seem to consist largely of elderly heads with grown up children.

To complete this picture of the Canadian family, it is necessary to show the occupations of its various members at one certain time, giving the year 1930-31 as a sample. This is only possible for the one class of families, those with two married heads.

XII. NUMBER OF PERSONS IN FAMILIES WITH HUSBAND AND WIFE LIVING TOGETHER AND NUMBER PER 100 FAMILIES, BY STATUS OF VARIOUS MEMBERS, CANADA, 1931

Item	Number of persons in families	Per 100 families
All persons.....	8,140,001	438.3
Father earning.....	1,760,984	94.8
Father on income.....	74,352	4.0
Father without occupation.....	21,769	1.2
Mother earning.....	38,890	2.1
Mother full time with family.....	1,818,215	97.9
Children earning.....	517,573	27.9
Children under 7 years.....	1,433,488	77.2
Children 7-14 at school.....	1,453,658	78.3
Children over 15 at school.....	310,145	16.7
Children over 7, not included above.....	584,466	31.5
Guardianship children.....	60,828	3.3
Other dependents.....	65,633	3.5

**Family Composition Compared for Rural and Urban.**—In a comparison of family composition as between rural and urban areas, size of family, class of head, type of persons in family and their dependency upon the head are all points that must be considered. Statements XIII and XIV and Chart 1 summarize these features for both rural and urban areas.

XIII. NUMBER OF FAMILIES AND PERSONS IN FAMILIES AND NUMBER AND TYPE OF PERSONS PER FAMILY, BY CONJUGAL CONDITION, CLASS AND SEX OF HEAD, RURAL AND URBAN, CANADA, 1931

Conjugal condition and class of head	Number of families		Number of persons		Number of persons per family									
	Rural		Urban		Rural					Urban				
	Total	Sex of head	Total	Sex of head	Total	Heads	Own children	Guardian-ship children	Other dependents	Total	Heads	Own children	Guardian-ship children	Other dependents
Male heads with dependents.....	712,920	830,592	3,716,961	3,910,986	5.21	1.93	3.16	0.05	0.07	4.71	1.95	2.67	0.04	0.05

<sup>1</sup> Less than one one-hundredth of one per cent.

The fact that there were only 68,228 more children in urban families than in rural is probably the most striking feature of the comparison between the number of children in families of rural and urban areas. At the same time there were 247,798 more urban families than rural, with nearly the same proportion (about 70 p.c.) having some children. When the families of 4 children or less are compared, there are 214,308 more families and 366,830 more children in urban families than in rural. In 80 p.c. of the total number of families with children, the average number of children living at home is larger for urban than rural, although the general average is decidedly lower for urban. This lower average is mainly due to the fact that the proportion of large families is comparatively much greater in rural areas.

Of families of 5 children and less including those with no children, there are 968,858 in rural and 1,251,461 in urban communities, representing around 90 p.c. of all the families in both cases. These rural families have 1,534,028 children living at home or 1.58 per family, while the urban have 1,882,223, a slightly smaller average per family. In the remaining 116,923 rural families there are 872,383 children or an average of 7.5 per family and in the urban 82,118 with 592,416 children, an average of 7.2 per family. In all rural families the average number of children is 2.2 and in all urban families 1.9. The number of children in families of more than 5 is, if taken as an average of all families, responsible for 0.8 and 0.4 respectively of the average for all families in rural and urban areas. The difference between these two is equal to and is the cause of the difference between the general average for all rural and urban families. Thus the larger rural family is not necessarily the result of rural conditions alone, since this section of the population as well as any other is governed by general conditions of every type, but is caused by a small section of the population, the families with more than 5 children.

In the majority of cases the urban family has greater family responsibilities than the rural. This is rather striking since it would seem much easier for the rural family to carry the heavier load. There is no doubt that rural families considering the actual number of children born, are more prolific. The phenomenon noted above is a matter of the number of children who stay at home. The more advanced age of the urban family is only a negligible factor which would, if anything, be to the advantage of the rural family. The ages of the children of rural and urban families, as shown in Statement XV, provides information for further examination of this subject.

XV. NUMBER OF FAMILIES AND CHILDREN AND NUMBER OF CHILDREN PER FAMILY, BY CERTAIN AGE GROUPS, RURAL AND URBAN, CANADA, 1931

Item	Number		Per family	
	Rural	Urban	Rural	Urban
Number of families.....	1,085,781	1,333,579	-	-
Number of children.....	2,406,411	2,474,639	2.22	1.86
Under 7 years.....	775,563	718,318	0.71	0.54
7-14 years.....	855,235	831,123	0.79	0.62
15 and over.....	775,613	925,198	0.71	0.69

The excess of 149,585 children over 15 years of age in urban communities is a most significant point showing clearly that the rural children are leaving home to a greater extent than the urban. In both cases the number of the children under 7 is smaller than the number in the next 8 years, the result probably of the present declining birth rate.

**Families According to Birthplace of Head.**—The comparison between rural and urban as already shown indicates a considerable degree of sectionalism in family composition. The mere accident, that a class of people who tend to have large families, were living in rural communities rather than in urban, may have contributed in no small measure to the fact that the average rural family is larger than the urban. If this is true to any extent, the larger family is not a rural, but a population class phenomenon. On the other hand, if the class with the large family lives in a rural community it is always possible that rural residence is responsible for the size of its families. The only way in which doubts of this nature can be settled is to compare rural and urban residence of families by every possible classification. If one class has a larger family both in rural and urban areas, it is clear that to this extent the class is responsible; if the rural families are larger than the urban, class for class, then to this extent rural residence is responsible. The same comparison, as above, for size of families will later be made for separate classes of families, but first it will be necessary to give a description of the family composition of the nativity classes by which the data were compiled, *viz.*, Canadian-, other British-, United States-, European- and elsewhere-born as follows:—

XVI. NUMERICAL AND PERCENTAGE DISTRIBUTION OF POPULATION LIVING IN FAMILIES, BY NATIVITY, CONJUGAL CONDITION OF HEAD AND CLASS OF FAMILY, CANADA, 1931

Without children or dependents.....	86,007	25,371	10,170	22,301	2,217	-	-	-	-	-

The families of persons "born elsewhere", made up largely of Orientals, are characterized by having the smallest proportion with two married heads and with children or dependents, and the largest proportion with one married or single head. The European-born family also tends to one married head; the United States-born to single and divorced heads; the British, to two married heads and the Canadian to widowed heads and the smallest proportion with one married or divorced head. This is an indication that the one married head is connected with immigration, where the immigrant comes without his wife.

It will be remembered in comparing rural and urban families, that in spite of the smaller average size of urban families, they were larger in the majority of cases. The larger average for rural families was due to a few very large families. These large families (with 6 or more children) can be compared by birthplace classes (Statement XVII).

A further description by nativity groups shows the size of family and other particulars (Statement XIX). In Statement XX it will be seen how far these nativity classes affect the difference between the size of rural and urban families. The distribution of families according to racial origin of head and size of family is compared for rural and urban areas in Statement XXI.

XVII. PERCENTAGE DISTRIBUTION OF CHILDREN IN ALL FAMILIES AND IN "LARGE" FAMILIES, BY NATIVITY OF HEAD, CANADA, 1931

Nativity of head	All children	Children in families with 6 or more children
All classes.....	100.00	100.00
Canadian born.....	66.19	74.04
British born.....	16.11	7.67
United States born.....	4.59	4.24
European born.....	12.63	13.55
Born elsewhere.....	0.48	0.50

XVIII. NUMBER OF CHILDREN IN ALL FAMILIES, AND IN LARGE AND SMALL FAMILIES, WITH THE PROPORTION OF THE GENERAL AVERAGE SIZE OF FAMILIES CONTRIBUTED BY EACH, BY NATIVITY OF HEAD, RURAL AND URBAN, CANADA, 1931

Statement XXI shows clearly that the distinction between rural and urban in the size of families of children living at home is due largely to the facts that the rural, irrespective of class of people, have the very large families and that the classes who tend to have very large families are in rural rather than urban residence. The "average family" is just as large in urban as in rural districts. Now the very large family is a matter of custom as well as of residence and population class, and as such is subject to change. It would seem, therefore, that the ultimate tendency of the average size of family is towards uniformity as between classes and types of residence. When the very large family is a thing of the past, the average size of family will tend to vary much less with conditions than it does at present. The conditions under which the "average urban family" was as large as, if not larger than, the rural in 1931 may have been temporary and economic; it is possible that the urban family had members living at home who would have been elsewhere if employment conditions had been better. These factors render a comparison between the size of families in 1931 and in earlier census years very ambiguous.

## CHAPTER XX

### HOUSING AND RENTALS

The significance of the data on housing and rentals is, to perhaps a greater degree than the majority of the subjects summarized in this volume, dependent upon the attitudes and conditions in different localities. It is almost impossible to give a single picture of housing and rental conditions in Canada. Averages of data thereon over wide areas are entirely misleading, so that it is difficult to portray at all adequately conditions for Canada as a whole or even for the provinces. At the same time classification by small localities is beyond the scope of this volume\*, which is confined to general summaries. The question arises then as to which features of the subject lend themselves to general summary treatment and it would seem that the following, although subject to variation with locality, are most suitable.

\* See also 1931 Census Monograph on Housing and Rentals by H. F. Greenway.

1. What proportion of the householders and of the population are owners, tenants, etc.?
2. What proportion of the population live in single houses, flats, etc.?
3. What proportion live in various sized homes?  
The average number of rooms per person or of persons per room over a large area unless related to detailed descriptive data, has little meaning.
4. What classes of people according to occupation, conjugal condition, etc., are living in different types of homes and subject to different degrees of crowding?
5. What are the degrees of crowding experienced by different classes of people, according to amounts of rental? Average rentals per room seem to mean very little.
6. What is the relation of rooming accommodation to the size of the family?
7. What is the extent of the rooming space and of rentals in relation to the earnings of the family?

In other words, any feature of housing and rentals for the country as a whole is significant only where it is shown in relation to something else. An isolated picture is impossible.

The first description that seems necessary concerns the disposition of the 10,362,833 population of Canada in 1931 in relation to households.

I. NUMBER OF FAMILIES AND PERSONS, BY TYPE OF HOUSEHOLD, ETC., CANADA<sup>1</sup>, 1931

Item	Families	Persons
Total population.....	-	10,362,833
Total number of families.....	2,419,360	9,346,195
Families of heads of households.....	2,265,159	8,918,965
<i>Excluding hotels, rooming houses, etc.</i> .....	<i>2,252,729</i>	<i>8,882,690</i>
<i>In hotels, rooming houses, etc.</i> .....	<i>12,430</i>	<i>36,276</i>
Lodging families in ordinary households, hotels, etc.....	154,201	427,230
Lodgers (in 350,155 households).....	-	555,606
<i>In ordinary households (in 336,160 households)</i> .....	-	<i>496,093</i>
<i>In hotels, rooming houses, etc. (in 13,995 households)</i> .....	-	<i>59,513</i>
Domestics, etc. (in residence).....	-	274,462
Residents in institutions, lumber camps, etc., not shown in families or as lodgers or domestics..	-	186,570

<sup>1</sup> Nine provinces only.

The class designated as "domestics, etc." includes employees of the household who are resident therein but are not members of the family. The term does not apply merely to servants but to the residual portion of the household which, although entitled to enumeration amongst the population, cannot be properly designated. This explains the fact that the total in the class is considerably larger than the number in domestic service. The same considerations apply to "residents in institutions, etc.", which of course implies permanent residence. Persons capable of being designated definitely as domestic servants and resident students form respectively by far the greatest proportions of these last two classes, but as in all enumerations, there are certain numbers remaining which no amount of forethought could code or classify.

It is worthy of note that 496,093 of 555,606 individual lodgers and 151,084 of 154,201 lodging families, were living in private households, not in hotels or rooming houses. The lodging family is much smaller than the household family, the latter having an average of nearly 4 persons compared with an average of 2.8 for the former.

A glaring inequality of housing conditions is revealed in a comparison of different classes of households. There are 160,113 households of only one person, while there are 142,415 with more than one family, *i.e.*, the household family and one or more lodging families. The composition of these two classes of households, and also of households of only one family but of more than one person, may be seen in Statement II, which of course does not include hotels or rooming houses.

## II. COMPOSITION OF HOUSEHOLDS OF ONE AND OF MORE THAN ONE FAMILY WITH NUMBER OF ROOMS AND PERSONS PER HOUSEHOLD, CANADA, 1931

Item	Households of one family		Households of more than one family
	One person	Two or more persons	
Number of households.....	160,113	1,950,201	142,415
Number of families.....	160,113	1,950,201	293,499
Number of rooms occupied.....	545,793	11,163,608	965,630
Number of persons.....	160,113	8,910,890	944,776
Number of heads of households.....	160,113	1,950,201	142,415
Dependent on head of household.....	-	6,315,026	314,035
Wives.....	-	1,661,250	93,467
Children.....	-	4,478,873	209,996
Guardianship children.....	-	76,469	6,440
Other dependents.....	-	98,434	5,032
Other members of household.....	-	645,663	487,426
Rooms per household.....	3.41	5.72	6.78
Rooms per person.....	3.41	1.25	1.02
Persons per household.....	1.00	4.57	6.63
Heads of households.....	1.00	1.00	1.00
Dependents.....	-	3.24	2.21
Others.....	-	0.33	3.42

Although in this connection too much dependence should not be placed upon averages, they show that the households with lodging families have one room more than those with only one family and 3.37 rooms more than those with only one person. If the rent were the same in all three cases, it is probable that the households with lodging families would have 3 persons each (in addition to the head of the household) for every room over the average size of one-family households and these persons would help to pay the rent. With the same population per room as the one-family household, the household with one person would have approximately 437,000 persons instead of 160,113, and the households with more than one family approximately 772,000 instead of 944,776.

Of the 142,415 households of more than one family, 64,068 are rural; since the proportion rural is only a little smaller than for all households, this class shows only a slight tendency in favour of urban localities. Of the 160,113 one-person households, 93,802 are rural, indicating a stronger rural preference. That these one-person households are not mainly in dwellings left on the hands of the occupant through inheritance is suggested by the fact that 62,037 of the 160,113 such householders are tenants not owners. Incidentally, 25 of these one-person dwellings had more than 21 rooms, and 20 of the 25 householders were owners. Statement III sets forth the distribution of the one-person and two-family households by number of rooms in the dwelling.

## III. HOUSEHOLDS OF ONE PERSON AND OF TWO OR MORE FAMILIES, BY SIZE OF DWELLING, CANADA, 1931

Number of rooms	Households of one person	Households of two or more families
Number of households.....	160,113	142,415
With 1 room.....	42,986	847
2 rooms.....	31,911	3,595
3 ".....	20,626	6,591
4 ".....	17,941	12,711
5 ".....	13,060	17,310
6-7 ".....	20,310	51,965
8-9 ".....	8,806	31,812
10 ".....	1,798	7,860
11-15 ".....	1,369	8,563
16-20 ".....	95	692
21 and over.....	25	201
Not stated.....	1,186	268

It is quite evident that this classification of the two groups of households according to stated number of rooms does not provide an adequate comparison. Nearly half of the households of one person occupy only 1 or 2 rooms, while nearly three-fourths of the households of two or more families have more than 5 rooms.

**Types of Homes.**—The "type" of home, as used here, refers to the class of household, the ordinary household as compared with hotels, boarding houses, etc. A great deal of the remaining descriptive data in this summary pertains to the ordinary household only, so that it is almost essential at the outset to state the number of homes which, belonging to another type of household, will be consistently omitted (Statement IV).

IV. NUMBER OF HOUSEHOLDS, FAMILIES AND CHILDREN, BY TYPE OF HOUSEHOLD, RURAL AND URBAN, CANADA, 1931

Type of household	Households	Families	Children in families of head of household
Total households.....	2,275,171	2,419,360	4,704,019
Ordinary households.....	2,252,729	2,403,813	4,658,869
Hotels and rooming houses.....	6,575	9,215	8,690
Institutions.....	3,824	623	520
Camps, tents, etc.....	12,043	5,709	6,840

RURAL

Total households.....	1,021,929	1,085,781	2,316,560
Ordinary households.....	1,012,014	1,078,589	2,307,500
Hotels and rooming houses.....	1,449	1,803	2,341
Institutions.....	999	211	189
Camps, tents, etc.....	7,467	5,178	6,530

URBAN

Total households.....	1,253,242	1,333,579	2,388,359
Ordinary households.....	1,240,715	1,325,224	2,381,369
Hotels and rooming houses.....	5,126	7,412	6,349
Institutions.....	2,825	412	331
Camps, tents, etc.....	4,576	531	310

**Ordinary Households.**—The number of ordinary households and the number of families and persons of which they are composed, can now be classified by kind or condition of tenure (Statement V).

V. NUMBER OF ORDINARY HOUSEHOLDS AND FAMILIES AND PERSONS OF WHICH THEY ARE COMPOSED, BY TYPE OF TENURE, CANADA, 1931

Type of tenure	Households	Families	Persons
All types.....	2,252,729	2,403,813	10,015,779
Owners.....	1,362,896	1,362,896	5,525,694

<sup>1</sup> Includes such varied dwellings as tents, box cars, construction camps, etc.

It is seen in the first place that over 75 p.c. of the households occupy single houses and that almost the same percentage of the population are living in them, so that the single house is undoubtedly the most typical household. The households of two or more families tend to reside in semi-detached houses, rows and terraces. Naturally the households in hotels and rooming houses are larger than the other types since the "household" of the hotel or rooming house includes the lodgers and staff in addition to the household family, and only households with 9 or more lodgers were designated as rooming houses.

The term "other" includes such miscellaneous types of households as large construction camps, etc., in which persons who had no other permanent place of residence were living at the date of the census. \* The households of two or more families are invariably larger than those of one family. In view of data shown elsewhere in this chapter, this difference is caused, not so much because the two-family house is larger as because more persons are crowded into the same size of house.

**Size of Home.**—The classification of homes by size can be only approximated, since number of rooms provides the only available data on the subject. The number of separate rooms is distinctly a measure, for no matter how small it may be, a separate room per person is an accommodation superior to that of sharing one's room with another. Indirectly, it has added meaning, since the separate room demands higher rent, which in turn involves greater family earnings. Statement VII shows the number and percentage of all ordinary households, classified according to number of rooms.

The question of the value of data of the type shown in Statement VII should be dealt with. The value undoubtedly is entirely dependent upon the methods used in handling the data, which should be considered only for selected areas and in relation to other information, such as kind of dwelling, rental, earnings of householder, etc. Their usefulness for Canada as a whole is thus limited but would be greatly enhanced if the number of persons occupying one room, two rooms, etc., was known.

Statement VII, showing a total of 12,675,031 rooms occupied, contains all that is necessary with respect to the 545,793 rooms in households of only one person. But this leaves 12,129,238 rooms occupied by 9,855,666 persons. The question arises as to whether it is justifiable to draw any conclusions regarding the nature of the accommodation, or whether the average of 1.23 rooms per person has any meaning. In the first place there are 40,352 households in which a whole family and 847 cases where two or more families are living in one room. Even for families having no children or dependents this accommodation is extremely limited.

The typical household of one family lives in a 5- or 6-roomed house, and where there are lodging families, in 6 or 7 rooms. It can be judged from the distribution of the figures that these typical households very probably have the average number of persons, *viz.*, 1 person per 1.23 rooms for the one-family household and 1.02 for the lodging-family households. About one-third of both types of households are in smaller quarters than these and another third in larger. Consequently, it can be safely stated that one-third of the households in Canada have not sufficient accommodation to give 6 rooms to 5 persons, that another third have this and that the remainder have greater accommodation. Thus only two-thirds of the number of average families in Canada have adequate household accommodation of 6 rooms for 5 people, and the remainder must either contract the family or the space per person. In at least 45,000 cases, there are 2 or more persons to a room.

A much clearer idea of the housing situation may be obtained from Statement VIII, which shows the monthly rentals classified according to the number of rooms and population of urban households. From these data fairly good averages depicting the size of the house and the rooms per person can be deduced. The housing situation is not covered completely since neither households with widowed, divorced, single or one married head, nor households of only one person are included. There were, in all, 675,631 rented houses in urban localities and the statement covers only 530,480 of these. Of the difference of 145,151, as many as 66,311, were households of only one person.

<sup>1</sup> Excludes households with widowed, divorced, single or one married head, and also households of only one person.

<sup>2</sup> Wage-earner and non-wage-earner indicate type of family head.

An illustration is provided in Statement VIII of the manner in which the concept of the housing situation acquires a more definite character as the numbers and averages in Statement VIII are related to other sets of conditions. Since it is now known that the number of rooms per household increases with higher rentals, it is obvious that the number of rooms does provide a fair description of the housing situation. The number of rooms per person also increases with rentals but in a somewhat different manner. The households of two or more families have larger houses and fewer rooms per person than the one-family households in the same rental class, which seems to indicate both inferior and more crowded dwellings. Again the \$60 and over households are not the largest, and consequently must go in for quality rather than size although the size seems sufficient for the number living in them since they have as many as, or more rooms per person than those at lower rentals. In the majority of cases, then, the number of rooms would seem to provide a good index of accommodation, except for the most expensive dwellings (about 16,545) and those occupied by two or more families (about 27,000).

The analysis and conclusions may be made more definite still by showing a classification of family earnings according to the rental and number of rooms (Statement IX). In this case it will be necessary to confine the data to wage-earners of one-family households, since there is no information available on size of income of the non-wage-earners or earnings of two-family households.

IX. URBAN HOUSEHOLDS OF ONE FAMILY WITH HUSBAND AND WIFE LIVING TOGETHER IN RENTED HOME, BY RENT PAID, EARNINGS, ETC., CANADA, 1931

The sets of averages in Statement IX illustrate the significance of the number of rooms per household and per person. There is practically no compensation in quality for the smaller dwellings and the fewer rooms per person, both of which involve low rentals and earnings, indicating that on the whole they permit only of inferior accommodation. The lodgers are added to the statement to show both the proportion of the rental paid by them and the rooming space which they occupy. The earnings stated exclude, of course, persons on income, and amounts received from lodgers but include those of the head, wife and children who are earning. It would seem that the average rental is about \$25 a month, an amount which would, of course, vary with different localities.

CENSUS OF CANADA, 1931

X. HOUSEHOLDS OF THE CITY OF MONTREAL, BY NUMBER OF PERSONS, ROOMS AND OTHER CLASSIFICATIONS, 1931

The figures of this statement do not include hotels, rooming houses, institutions or the residual group inhabiting such makeshift quarters as camps, tents, box cars, etc.

Now, amongst various types of information which cannot be obtained for Canada as a whole there is one which, if given, even for only two large urban localities, will serve as a link between the sets of data shown in the preceding statement. It is obtainable only for Montreal and Toronto, and permits a cross-classification of the households according to both the number of rooms and the number of persons, thereby indicating to some extent what the average number of rooms per person in the country as a whole is likely to mean. Statements X and XI show separately for households of from 1 to 20 persons, the number of households, the population and the number of persons that have 1 room, less than 1 room and more than 1 room each.

The striking feature of the statements is the manner in which they illustrate the lack of elasticity in the housing situation. As households increase in size, the number of rooms per person decreases. The small families seem to be, on the whole, well accommodated and they are, of course, more numerous than the large families. The large families, or large households, comprising more than the members of the family, seem to be accommodated in inverse proportion to their size.

**Owned Homes.**—An adequate comparison between owned and rented homes should include classifications by every possible type of condition. Although owned homes have assigned values while rented homes have stated rentals, they may be rendered comparable, provided a suitable means can be found of equating values and rentals. The means of comparison, however, even between owned and rented houses of the ordinary type (*i.e.*, exclusive of hotels, etc.), which is provided by the available data, is very limited, but such material as has been found is presented in Statements XII and XIII.

<sup>1</sup> The figures of this statement do not include hotels, rooming houses, institutions or the residual group inhabiting such makeshift quarters as camps, tents, box cars, etc.

The second part of Statement XIII shows in a striking manner the difference in size between the owned and rented homes. In both rural and urban localities, there are over twice as many owned houses of 8 or more rooms as there are rented; in fact, this is almost true of households of more than 5 rooms. Of the urban households, 71 p.c. of the owned homes and only 41 p.c. of the rented homes have at least 6 rooms. It is not, therefore, a mere matter of indifference whether a person owns or rents a home.

**Value of Owned Homes.**—Statement XIV contains urban owned homes according to the occupational class of the owner.

XIV. URBAN HOMES BY OCCUPATIONAL CLASS OF HEAD, NUMBER ACCORDING TO TENURE AND FOR OWNED HOMES BOTH THE NUMBER AND CUMULATIVE NUMBER PER 10,000 ACCORDING TO VALUE, CANADA, 1931

Item	Total	Employer	Own account	Wage-earner	No occupation	Income
NUMBER AND PER CENT BY CLASS OF TENURE						
Total.....	1,240,715	73,743	133,440	833,689	100,553	99,290
Rented—Number.....	675,631	24,754	58,690	513,196	50,343	28,648

Not specified.....	1,554	250	305	705	117	177

NUMBER PER 10,000 OWNED HOMES BY STATED VALUES						
Total.....	10,000	10,000	10,000	10,000	10,000	10,000
At least \$ 500.....	9,752	9,907	9,741	9,738	9,721	9,746
" " \$ 1,000.....	9,060	9,601	9,087	9,012	8,897	8,991
" " \$ 2,000.....	7,362	8,581	7,485	7,241	7,060	7,153
" " \$ 3,000.....	5,686	7,407	5,935	5,466	5,363	5,459
" " \$ 4,000.....	4,091	6,114	4,506	3,760	3,775	3,980
" " \$ 5,000.....	2,853	4,965	3,391	2,427	2,625	2,918
" " \$10,000.....	668	1,896	979	394	542	827

Certain striking differences, as between employers and others, are seen in the two sections of this statement giving the values of owned homes. Thus, nearly 50 p.c. of the homes of employers are valued at more than \$5,000, as compared with 24 p.c. of the homes of wage-earners; 34 p.c. of "own account"; 29 p.c. of those on income and 26 p.c. of those with no occupation. The proportion of homes valued at \$10,000 or more, is small in all occupational classes; and of these rare and valuable homes more than one-third are owned by wage-earners.

The foregoing statements suggest the possibility of establishing a connecting link between the data on owned and rented houses. The average number of rooms in owned and rented urban homes is 6.57 and 5.05 respectively. The average value of the owned home is roughly \$4,800 and the average yearly rental of the rented home is about \$324. The value and rental per room is respectively \$730 and \$64.

## CHAPTER XXI

## FARM POPULATION AND FARM WORKERS ↓

In the first six censuses of Canada, the population was divided only into urban and rural, *i.e.*, the population living within the boundaries of incorporated cities, towns and villages and the population living outside of the above-mentioned places. They provided no means of distinguishing between population living on farms and that living outside of urban centres but deriving its livelihood from occupations other than farming. In the minds of many, the term "rural population" was often confused with farm population and no statistics were available to show the number of persons living outside of cities, towns and villages, but working in urban centres or at occupations other than farming. To meet the need for a classification which would give the number of persons directly dependent on agriculture for their livelihood provision was made in 1931 to separate the farm population from the remainder of the rural population.\*

## FARM POPULATION

**Definition.**—The farm population as the term is used in the census, includes the total number of persons living on farms on June 1, 1931. It would, therefore, include a certain number of persons engaged in occupations other than farming, such as sons and daughters of farmers living at home but having other occupations, school teachers boarding in farm homes and a small number of other persons boarding with farmers but following other pursuits. The farm population, on the other hand, would not include farm labourers and their families who do not reside on the farms where they are employed. These two above-mentioned factors would have a counter-balancing effect and neither would be very large.

**Total Farm Population.**—Table 116 of the main tables gives the rural population "on farms" and "not on farms" by counties together with the total number of farms and the number of farm workers, *i.e.*, the number of persons 14 years of age and over gainfully occupied in agriculture divided into (a) members of the family, (b) permanently hired men and (c) temporarily hired males and females. This last division, no doubt, contains a certain amount of duplication because farmers were asked to report all persons who had worked for them for any length of time during the year 1930. Some persons worked for several farmers during the course of the year and in that case were reported by each one.

Of the 4,792,135 persons living outside of incorporated cities, towns and villages in the nine provinces in 1931, 3,223,422 or 67.26 p.c. lived on farms and 1,568,713 or 32.74 p.c. had no connection with the farm. In the provinces, the percentage of the rural population living on farms was as follows: Prince Edward Island 81.24, Nova Scotia 61.87, New Brunswick 63.91, Quebec 70.11, Ontario 58.81, Manitoba 66.20, Saskatchewan 88.99, Alberta 81.86 and British Columbia 33.47.

It is of interest to note particularly the low percentages in Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. The percentages by counties or census divisions indicate that close to large urban centres a greater proportion of the rural population does not live on farms. This fact is due to the existence of rural areas where the population is urban in character, works in the cities and lives in the suburbs. It will be noted in particular that only 40.22 p.c. of the population of Halifax county, 15.02 p.c. of St. John county, New Brunswick, 36.40 p.c. of the rural population of Montreal and Jesus Islands and 13.99 p.c. of that of York county, Ontario, live on farms. Similarly in Manitoba, the percentages of the rural population living on farms in Divisions 5, 6 and 9 (adjoining Winnipeg) are 55.41, 51.36 and 32.88 p.c. respectively. The same thing is true for the areas adjoining Calgary and Vancouver.

In other areas, farther removed from urban centres, the high percentage of the rural population not living on farms is due to the importance of mining, fishing or lumbering in these areas.

**Urban Farm Population.**—The farm population is not entirely confined to rural areas as a certain number of farms are situated within the limits of incorporated cities, towns and villages. Statement I gives the number and population of these farms by provinces. The urban farms are

\*See also 1931 Census Monograph *The Population Basis of Agriculture* by O. A. Lemieux.

few in number and their population forms only 2.00 p.c. of the total farm population. Because of the small number of these farms and the necessity of simplifying compilation, they were included in Table 116 of the main tables under the rural municipality adjoining the city, town or village in which they were located. As Table 116 deals with rural population on and off farms, the population of these urban farms was not included.

I. NUMBER OF FARMS IN URBAN AREAS AND FARM POPULATION BY SEX, CANADA AND PROVINCES, 1931

Province	Number of farms	Population		
		Both sexes	Male	Female
CANADA.....	14,136	65,718	34,606	31,112
Prince Edward Island.....	169	515	259	256
Nova Scotia.....	815	3,725	1,926	1,799
New Brunswick.....	379	1,720	895	825
Quebec.....	6,165	33,419	17,325	16,094
Ontario.....	4,040	15,410	8,064	7,346
Manitoba.....	422	2,003	1,109	894
Saskatchewan.....	655	2,605	1,390	1,215
Alberta.....	969	4,198	2,302	1,896
British Columbia.....	522	2,123	1,336	787

A study of the schedules of these urban farms shows that in the majority of cases they are small farms whose operators had also another occupation so that the revenues of the farm formed only a small percentage of their total income.

**Part-Time Farming.**—In order to understand fully what is meant by “part-time farming”, reference must be made to the definition of a “farm” as used in census work. A farm is a tract of land of one acre or more which produced in 1930 agricultural products to the value of \$50 or more, which in 1931 was under crop of any kind or was being used for pasture. It will be readily seen that within the scope of this definition there were in 1931 a large number of small farms of insufficient size to furnish a livelihood for a farm family; accordingly some or all of the working members of such families follow other occupations. These small farms may be in reality only a home but because of the definition must be included as farms. Statement II gives the number of these farms and their population as at June 1, 1931.

II. FARMS WHOSE OPERATORS REPORTED AN OCCUPATION OTHER THAN FARMING, AND POPULATION OF THESE FARMS, BY SEX, CANADA AND PROVINCES, 1931

Province	Number of farms	Population		
		Both sexes	Male	Female
CANADA.....	56,704	255,512	132,150	123,362
Prince Edward Island.....	1,315	5,686	2,912	2,774
Nova Scotia.....	12,225	58,819	30,434	28,385
New Brunswick.....	6,859	36,877	18,961	17,916
Quebec.....	11,086	57,076	29,198	27,878
Ontario.....	14,420	55,418	28,589	26,829
Manitoba.....	2,788	11,594	5,993	5,601
Saskatchewan.....	1,727	6,564	3,489	3,075
Alberta.....	2,144	7,775	4,199	3,576
British Columbia.....	4,140	15,703	8,375	7,328

These farms represent 7.78 p.c. of the total number of farms in Canada and their population, 7.93 p.c. of the total population. Statement III shows by provinces the ratios which these farms and their population bear respectively to the total number of farms and the total population.

III. RATIOS OF PART-TIME FARM OPERATORS AND THE POPULATION OF THEIR FARMS TO ALL FARM OPERATORS AND FARM POPULATION, CANADA AND PROVINCES, 1931

Province	Per cent of total farms	Per cent of total rural farm population
CANADA.....	7.78	7.93
Prince Edward Island.....	10.22	10.35
Nova Scotia.....	30.99	33.81
New Brunswick.....	20.16	20.66
Quebec.....	8.15	7.68
Ontario.....	7.50	7.05
Manitoba.....	5.14	4.56
Saskatchewan.....	1.27	1.17
Alberta.....	2.20	2.10
British Columbia.....	15.87	15.66

It is of interest to note in the above statement the relatively high percentages in Nova Scotia, New Brunswick and British Columbia.

**Occupations of Part-Time Farm Operators.**—Statement IV gives the occupations of part-time farm operators by provinces. It will be seen that occupations as labourers, in personal services, commercial occupations, transportation and communication, fishing, hunting and trapping are the ones which predominate, together with persons living on income.

IV. OCCUPATIONS OF PART-TIME FARM OPERATORS, CANADA AND PROVINCES, 1931

Item	Canada	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

<sup>1</sup> Indicates farm labourers working for wages, who also operate small farms.

## CHAPTER XXII

### CENSUS OF INSTITUTIONS

The Census of Institutions taken for the first time in 1931, covers hospitals, mental, charitable, benevolent, penal and corrective institutions. The full report of this census appears in Volume IX of the census.\* The summary in Volume I is found in Tables 117-121.

**Number of Institutions.**—The number of institutions of the various types on June 1, 1931, was 1,362 with 129,210 inmates, who were apportioned among four main classes of institutions (Statement I). The staff numbered 50,726 and the maintenance cost for the year ending on the census date, \$60,665,827.

#### I. NUMBER OF INMATES IN INSTITUTIONS, BY TYPE OF INSTITUTION, CANADA, 1931

Type of institution	Inmates
Total.....	129,210
In hospitals.....	35,501
" mental institutions.....	31,686
" charitable and benevolent institutions.....	53,532
" penal and corrective institutions.....	8,491

The statistics of these institutions should not be mis-interpreted as reflecting the prevalence of illness or the number of physical and mental defectives, indigents and criminals within the population. They reflect rather the extent of treatment of patients in hospital and inmates of other institutions, for the data cover only the institutionalized cases. The total of 129,210 cannot all be considered as pathological or surgical cases since many of them are patients in maternity hospitals and wards. Any serious study of the institutionalized cases must take the different types of institutions separately. They cannot be considered as a whole.

**Hospitals.**—The different types of hospitals (referring entirely to institutions for physical ailments), although not the largest from the point of view of inmates, are by far the most important in number, staff and maintenance cost, being 60 p.c. or more of the whole in these three, although less than 30 p.c. in respect of inmates. This point is raised because it might be misleading if attention was not called to what it signifies. The hospital inmates are short-term patients. The average number of patients throughout the year was about 37,000, *i.e.*, there was an average of this number of patients in hospitals on any day in the year (June 1 being lower than this average). The average stay of patients was about 14 days, so that the 37,000 represents about 27 times this number of persons, if no person was admitted more than once. In some of these hospitals such as sanatoria and hospitals for incurables, the patients remain for an extended period, but in most cases the stay is short and the patients come and go, with the result that the inmates of hospitals represent a much larger section of the total population than the inmates of the other institutions where the stay is much longer.

Of the 12 different types of hospitals listed in Table 118, the general public is by far the most important comprising about 55 p.c. of the total number of hospitals, over 60 p.c. of the bed capacity, over 70 p.c. of the total staff and over 60 p.c. of the total number of patients. Next in importance is the tuberculosis hospital, followed by those for incurables and the Dominion hospitals, the latter being for wards of the Dominion Government. These four types combined had almost 90 p.c. of the total number of patients in all hospitals on June 1, 1931. One interesting aspect of Table 118 is the average daily occupation per bed, *i.e.*, the percentage of occupancy to bed capacity. Three types of hospitals stand out prominently in this respect, *viz.*, the tuberculosis, the incurable and the orthopaedic where the daily occupation ranges around 80 p.c. At the other extreme is the isolation hospital with a little over 40 p.c. which is easily understood since this type is designed for the special purpose. The private hospitals show on the whole, lower occupancy or—expressing it in another way—larger bed capacity to average occupation than the general public type.

\*See also 1931 Census Monograph on Dependency by J. E. Robbins.

**Mental Institutions.**—Table 121 shows that mental institutions consist of four kinds from the standpoint of control, *viz.*, the public, the county or municipal, the Dominion and the private; the first mentioned are by far the most numerous having about 90 p.c. of the total number of both patients and personnel. The number of patients in all mental institutions at the census date, *viz.*, 31,686, is interesting when compared with the total population, 31 per 10,000, or almost 1 per 300 population. The actual number of mental cases in the population is not known. With a notable lack of success an attempt was made at some past censuses to enumerate feeble-minded persons. It is probably impossible to ascertain by means of a census the prevalence of this attribute of the population. The Census of Institutions shows, of course, the institutionalized cases and the figures are, surprisingly large; so large in fact that they indicate a necessity for finding some means of enumerating the total number of persons mentally ill in the population. That one person in every 300 should be either insane or feeble-minded is itself sufficiently astonishing but this is only the proportion of the afflicted who are being cared for in institutions and it is very probable that on the whole only the worst cases are institutionalized.

There is one point about mental institutions which deserves attention, *viz.*, the similarity, as between provinces in the proportion of inmates (average during year) to their total population (Statement II).

II. AVERAGE NUMBER OF INMATES IN MENTAL HOSPITALS PER 100,000 OF THE POPULATION FOR PROVINCES, 1931

Province	Inmates of mental institutions per 100,000 population	Province	Inmates of mental institutions per 100,000 population
Prince Edward Island.....	304	Manitoba.....	309
Nova Scotia.....	317	Saskatchewan.....	233
New Brunswick.....	195	Alberta.....	216
Quebec.....	301	British Columbia.....	361
Ontario.....	308		

While there are three extreme cases, New Brunswick, Saskatchewan and Alberta, probably owing to under-development of institutions, it is remarkable that the other six provinces should show figures so close together, the maximum variation being only 60 per 100,000 between Quebec with 301 and British Columbia with a high of 361.

The exact significance of the large ratio of inmates to the total population can be judged only by an expert. However, even the expert can learn a great deal from the contents of Volume IX which shows mental cases by diagnosis. At least 1,315 or just over 4 p.c. of the total inmates are senile cases. Many others have mental diseases arising from causes which may be regarded as "external" and are thus in the same category as patients in ordinary hospitals afflicted with physical illness. A very important and little understood point is the distinction between the feeble-minded and the large variety of cases which are classified under the general term insane. The number of inmates diagnosed as having some degree of insanity was about three times that of the feeble-minded. The insane person is frequently one with a good brain gone wrong. While some forms of insanity are hereditary, others may be caused by accidents, nervous exhaustion or over-stimulation, to which the best elements in the population are probably more exposed than the worst; and senile decay is probably only the familiar case of "the seventh age of man" as described by Shakespeare. The feeble-minded person, on the other hand, never had a good brain. Statement III shows the comparative illiteracy of the insane and feeble-minded. The former compare favourably with the general population; the latter have an illiteracy of some 40 p.c. in contrast to less than 4 p.c. in the general population over 10 years of age.

III. LITERACY OF ALL PATIENTS IN MENTAL INSTITUTIONS, BY AGE ON ADMISSION AND BY INSANITY AND MENTAL DEFICIENCY, CANADA, JUNE 1, 1931

T.=Total; I.=Insane; M.D.=Mentally Deficient.

**Charitable and Benevolent Institutions.**—Table 119 shows that charitable and benevolent institutions embrace homes for adults, homes for adults and children, orphanages, day nurseries, schools for deaf and blind, children's aid societies and juvenile immigration societies. The first three, the homes and orphanages, have a bed capacity of 32,560 out of the total of 40,014 or over 80 p.c. All the others, excepting the schools for deaf and blind, are strictly speaking not designed to provide residence for those benefited. In the case of the institutions designated as charitable and benevolent therefore, the number of inmates and bed capacity does not convey a clear idea of the full extent and scope of their activities. As a matter of fact these institutions are a miscellany of the different institutions not included under hospitals, or mental, penal and corrective institutions; hence they cannot be properly grouped or classified under one head. Furthermore, they do not reflect any single social feature, e.g. they do not represent paupers or other social minors for some of the inmates of these homes are paying their way; while juvenile immigration societies have a sphere of action that is very difficult to define. In short, the institutions grouped in this section represent the interest which one part of the population takes in the other part: It is significant, for example, that in addition to the many shelters and other such homes that spring up during depression times, no less than 40,014 beds are provided for the

dependent and semi-dependent portion of the population, provision for whom is not within the scope of the other three main types of institutions, the gaols, etc. On the average then, there is provided by this group of institutions a bed for every 260 men, women and children in the population and the activities of the group give employment to a staff of 8,033 or 1 in every 489 occupied persons in the population.

**Penal and Corrective Institutions.**—The penal and corrective institutions include penitentiaries and reformatories of which the former (on June 1, 1931) had 3,748 inmates and the latter 4,743; they do not include gaols. The statistics of these penal institutions are not intended to represent the criminal tendencies of the population. They are solely for the purpose of showing the number, status and other data pertaining to the institutionalized cases. The numbers of institutions, staff and inmates are given in Table 120.

### CHAPTER XXIII THE BLIND AND DEAF

In contradistinction to the immediately preceding chapter which treats of only the institutionalized defectives, the present chapter deals with two kinds of the physically defective, the blind and the deaf; the latter do not include persons who are deaf in the ordinary sense of the word, but rather those who suffer from what is ordinarily regarded as deaf-mutism.

#### THE BLIND

The blind in Canada (nine provinces) in 1931, not including 106 blind deaf-mutes, numbered 7,343, or 7 in 10,000 of the population, as compared with 3,266 or 6 in 10,000 at the beginning of the century and 4,388, or less than 5 in 10,000 in 1921. The explanation of the increase between 1921 and 1931 is very simple, merely the increase in old persons in the population. Almost 60 p.c. of the blind persons in 1931 were over 60 years of age. They represented nearly 49 in 10,000 or about 1 in every 200 persons at these ages, and just about 2 in every 100 persons over 80 years of age. Sex differences in the prevalence of blindness are inconsiderable at the older ages, but at ages under 60, particularly at ages 40-59, male prevalence is marked, the male blind being almost twice as numerous as the female, while the male population at these ages is only 1,300 to 1,000 female.

Among the data collected by the Census of 1931 was the age at which vision was lost. Of the 7,343 blind or rather the 7,127 of stated ages, 787 or about 11 p.c. were blind at birth while 2,874 lost vision when past 60 years of age. The following cumulative statement is interesting.

I. CUMULATIVE NUMBER OF BLIND PER 10,000 BLIND POPULATION, BY AGE AT WHICH VISION WAS LOST, CANADA, 1931

Age at which vision was lost	Per 10,000 blind	Age at which vision was lost	Per 10,000 blind
Blind at birth.....	1,104	All ages.....	10,000
Under 1 year.....	1,284	After birth.....	8,896
“ 5 years.....	1,709	After 1 year.....	8,716
“ 15 “.....	2,469	After 5 years.....	8,291
“ 25 “.....	3,018	“ 15 “.....	7,531
“ 35 “.....	3,648	“ 25 “.....	6,982
“ 45 “.....	4,483	“ 35 “.....	6,352
“ 55 “.....	5,437	“ 45 “.....	5,517
“ 65 “.....	6,707	“ 55 “.....	4,563
“ 75 “.....	8,378	“ 65 “.....	3,293
Over 75 “.....	1,622	“ 75 “.....	1,622

This analysis indicates that over half the blind lost their vision after the age of 50 years. It must be remembered, however, that this is not a probability table, since it does not take into consideration that fewer persons are alive at the older ages. The adjusted data giving the probability or expectation of blindness before or after various ages is recorded in Statement II.

## II. PROBABILITIES OF BLINDNESS PER 100,000 POPULATION, AT CERTAIN AGES, FOR CANADA

Age	Blind per 100,000 population	Age	Blind per 100,000 population
All ages.....	69	Over 45 years.....	170
Over 1 year.....	62	“ 55 “.....	263
“ 5 years.....	63	“ 65 “.....	408
“ 15 “.....	76	“ 75 “.....	670
“ 25 “.....	93	“ 80 “.....	792
“ 35 “.....	124		

**Illiteracy of the Blind.**—Among the blind over the age of 10 years the percentage illiterate, in the sense of cannot read and write, was 34·65, as compared with 3·79 in the population as a whole. The age of least illiteracy is between 15 and 19 among the blind (only 19·7 p.c.), as compared with 10-14 in the general population. This is rather significant when we remember that 78·64 of the blind did not lose their vision until after the age of 10 years and 82·91 after the age of 5, and that the blind can be and are taught to read. It would seem doubtful that the blindness can be accepted as the only cause of the high percentage of illiteracy. The average age of the blind is greater than that of the remainder of the population, which of course is contributory to their illiteracy. That the age of least illiteracy is between 15 and 19 among the blind as compared with 10-14 in the general population is probably due to the fact that the blind are being taught at these ages.

**Conjugal Condition.**—The blind over the age of 15 years showed 67 p.c. married, widowed and divorced, a figure comparable to that of the total population. The greater age of the blind is reflected in the fact that nearly 30 p.c. are widowed as compared with 6 p.c. in the population as a whole. The proportion divorced is almost exactly the same as in the total population.

**Birthplace and Race.**—Of the blind, 1,672 or about 23 p.c. were immigrants, a proportion which is much the same as for the general population; 3,004 or about 40 p.c. were of immigrant or mixed parentage, a smaller percentage than obtained in the population (about 46 p.c.). Of the Indians and Negroes, 0·27 and 0·22 p.c. respectively were blind as compared with 0·07 of the total population, *i.e.*, over three times as great a proportion; otherwise there was no great racial distinction.

**Causes of Blindness.**—As many as 1,283 or about one-sixth of the cases of blindness were due to accidental causes and 1,301 to causes designated as “senility”. The largest single cause was cataract (983), while 414 cases were attributed to infectious (epidemic) diseases, including 124 to measles. If this diagnosis is correct, nearly 6 p.c. of the total cases of blindness and nearly 11 p.c. of the cases not congenital, accident or senility were due to these epidemics. Over 50 p.c. of those blinded by infectious diseases were under the age of 50 in 1931, while only about 30 p.c. of those blinded by all other causes were under that age. About 57 p.c. of those afflicted by the so-called epidemics lost their vision before the age of 20, whereas 25 p.c. of all other blind lost their sight before this age; about 75 p.c. of the blindness from measles developed before the age of 20.

**Occupation.**—The blind showed 1,271 or about one-sixth gainfully occupied, of whom 437 were in agriculture and only 106 unspecified or unskilled workers.

## DEAF-MUTES

Deaf-mutes in Canada in 1931 numbered 6,767 or 576 less than the blind. They had increased from 6,159 in 1901 but from 5,331 in 1921.

## III. DEAF-MUTES PER 10,000 POPULATION, CANADA, 1881-1931

Census year	Deaf-mutes per 10,000 population	Census year	Deaf-mutes per 10,000 population
1881.....	12·6	1911.....	6·4
1891.....	10·1	1921.....	6·1
1901.....	11·6	1931.....	6·5

In 1931, 6,001 of the deaf-mutes were Canadian-born, while only 766 were immigrant and 2,063 of immigrant parentage. These figures on a percentage basis are much smaller than obtained among the blind and the ordinary population.

**Age at which Infirmity Began.**—Of the deaf-mutes about 61 p.c. were so at birth, about 90 p.c. before the age of 5 years, and 95 p.c. before the age of 10. This is in sharp contrast to the blind of whom only 21 p.c. lost their vision before the age of 10.

**Literacy.**—The deaf-mutes show under 30 p.c. illiterate, considerably less than the blind. It is a rather striking fact that of the deaf-mutes whose infirmity began before the age of 10, 27 p.c. were illiterate, while of the remainder the percentage was 33.

**Conjugal Condition.**—Only 32 p.c. of the deaf-mutes over 15 years of age were married, widowed or divorced—about half the proportion shown by the blind.

**Nativity and Race.**—It has already been mentioned that the deaf-mutes are mainly Canadian-born or born of Canadian parents. As compared with about 7 per 10,000 in the total population, the deaf-mutes amongst the population from the British Isles showed only 3, from the United States less than 6, from Europe 3 and from other countries less than 1. The races which had more than the average number of deaf-mutes per 10,000 were French 10, Austrian 10, Icelandic 6 and unspecified 38; the Ukrainians showed 7 which was about average.

**Causes.**—Apparently over 60 p.c. of deaf-mutism was congenital. Of the remainder (2,683), 1,199 or nearly 45 p.c. were due to epidemic diseases, of which measles was responsible for 177 cases and scarlet fever for 401.

**Occupation.**—The gainfully occupied among the deaf-mutes were 1,968 or 38 p.c. of all deaf-mutes over the age of 15. Nearly 40 p.c. were in agriculture and 15 p.c. in unskilled work, a higher percentage in the latter than among the blind. Among the blind a preference was shown for three occupation groups other than agriculture and unskilled work, *viz.*, non-metallic mineral products, commercial pursuits and administrative and professional occupations; among deaf-mutes, a preference was also shown for three, fur and fur products, textile goods and wearing apparel and electric light and power.

## CHAPTER XXIV

### CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS

#### WORKERS IN RETAIL AND WHOLESALE TRADE AND IN SERVICE ESTABLISHMENTS, 1930

According to the results of the Census of Merchandising and Service Establishments there was an average of 400,628 persons engaged in retail merchandise trade in Canada during 1930. An additional 96,737 persons were employed in the field of wholesale distribution, while 108,863 were occupied in service establishments included in this census. In all, 606,228 persons were engaged in the trading and service establishments of the country. This was 5.84 p.c. of the total population and 15.44 p.c. of the gainfully occupied population 10 years of age and over.

The total number of workers comprised 175,964 proprietors, 384,504 full-time employees, and 45,760 assistants on a part-time basis. Male workers numbered 475,586 and female workers, 130,642.

The schedules for the Census of Merchandising and Service Establishments asked that each firm report the average number of employees on its payroll during 1930. Male and female employees were to be separately reported and a further distinction was to be made between part-time assistants and those on a full-time basis. Part-time employees were taken to mean those employed during part of the normal working week or part of the normal working day. Employees engaged during certain seasons of the year only, but on a full-time basis during the period of employment, were to be considered as full-time employees. Proprietors and firm

members who devoted all or practically all their time to the business in question were to be separately reported. Stockholders of incorporated companies, who were also actively engaged in the business, were to be included with the employees rather than with the proprietors, but some firms did not adhere to this distinction.

Information on gainfully occupied persons in the Census of Population was compiled from the returns of the census enumerators, who secured for each individual gainfully occupied the name of the industry and occupation in which he or she was normally engaged. The Census of Population was taken as of June 1, 1931, whereas the number of employees reported to the Census of Merchandising and Service Establishments represents the average number employed during the year preceding the population census. The results of the two censuses, taken on two entirely different bases, cannot be expected to be in entire agreement, though a close correspondence will usually be found if the trade is easily defined. Further comparisons between the results of these two censuses will be made in this chapter.

### WORKERS IN RETAIL MERCHANDISE ESTABLISHMENTS

It required 400,628 persons to carry on the business of the 125,003 retail stores in Canada during 1930. Included in the total number of workers were 125,169 proprietors, 238,683 full-time employees and 36,776 assistants on a part-time basis. If each store were under individual proprietorship, the number of proprietors would, of course, equal the number of shops. A classification of the 125,003 retail stores according to form of organization shows that 99,197, or rather less than 80 p.c. of the total number, were individual proprietorships in each of which one proprietor only would be reported. There were 10,358 stores operated by partnerships. An additional 15,047 were under the corporate form of ownership these including most of the 8,534 units of chain companies for which no proprietors would be shown. In partnerships, the number of proprietors in excess of the number of stores was offset by the absence of proprietors in multiple shops and others under the corporate form of ownership so that, on the whole, the total number of proprietors of retail establishments was about equal to the number of stores.

Table 126 presents summary figures of retail trade for the entire Dominion, the provinces and each city of 30,000 population or more, and shows the number of stores, the total number of workers and the distribution thereof as between proprietors and full-time and part-time employees. Ratios of total workers to the total gainfully occupied, which are also shown, are found to vary fairly consistently with the degree of urbanization of the various provinces. In comparison with the Dominion average of 10.20 p.c., the ratios of retail workers to total gainfully occupied range from a minimum of 7.02 p.c. in Prince Edward Island to a maximum of 11.49 p.c. in Ontario. The ratio of retail workers to the total gainfully occupied is, of course, much greater for the urban centres than for the provinces as a whole and is seen from Table 126 to vary from a minimum of 8.76 p.c. in Verdun to a maximum of 22.59 p.c. in Victoria. The low ratio for Verdun may be readily explained. In the Census of Population, from which the figures relating to the total gainfully occupied were secured, each person was listed in the locality where he resided rather than in the place where he was employed. The reports for the Census of Merchandising and Service Establishments, on the other hand, show the average number of workers engaged in each locality, although some of these persons may have resided in adjoining centres. Persons residing in Verdun but engaged in retail trade in Montreal would be listed in the former city for the Census of Population but not for the Census of Merchandising, thus lowering the apparent ratio of retail workers to total gainfully occupied.

**Percentage Distribution of Workers in Retail Merchandising Establishments According to Basis of Employment.**—Table 129 presents the percentage distribution of workers according to basis of employment and shows that the total retail workers in the Dominion as a whole consisted of 31.24 p.c. proprietors, 59.58 p.c. full-time employees and 9.18 p.c. part-time employees. The proportion of proprietors to total workers varies considerably for the different provinces, ranging from 28.19 p.c. in Ontario to 42.03 p.c. in Prince Edward Island. Chain and department stores constitute the largest operators under the corporate form of ownership. Ratios of proprietors to total employees are largely dependent upon the proportions of the total business transacted by these two types of stores.

**Percentage Distribution of Workers According to Sex.**—Slightly more than three-quarters of the total workers in retail merchandising establishments in 1930 were male. The ratio of proprietors was 90.64 p.c. male and 9.36 p.c. female, for full-time employees, 69.55 p.c. male and 30.45 p.c. female; and for part-time employees, 63.97 p.c. male and 36.03 p.c. female. These ratios were fairly constant for the various provinces except Saskatchewan and Alberta, for both of which there was even a more striking preponderance of male workers because of two factors: (1) the greater proportion of farm implement dealers as compared with all retail establishments and the consequent increased number of male proprietors and (2) the lesser importance of department and variety stores, the kinds of business in which female employees form a considerable proportion of the total workers.

**Percentage Distribution According to Size of Locality.**—That the workers in retail trade are largely concentrated in the urban centres is self-evident, but the actual distribution is of some interest and is shown below in Statement I. While 52.68 p.c. of the total workers in retail merchandise trade are in places of 30,000 population or more, only 29.15 p.c. of the total population are in such localities. In contrast to this, only 19.79 p.c. of the total retail workers in the Dominion are in places of less than 1,000 population, while 50.26 p.c. of the total population reside in these rural districts. Statement I also indicates the distribution of proprietors and paid employees according to size of locality and shows a small percentage of employees with a correspondingly large percentage of proprietors in the rural districts—districts in which the corporate form of enterprise in retail trade is as yet of minor importance.

I. PERCENTAGE DISTRIBUTION OF POPULATION AND RETAIL MERCHANDISE WORKERS ACCORDING TO SIZE OF LOCALITY, CANADA, 1930

Size of locality <sup>1</sup>	Per cent of total population <sup>1</sup>	Per cent of total retail merchandise workers <sup>2</sup>	Per cent of total employees <sup>2</sup>	Per cent of total proprietors and firm members <sup>2</sup>
Places of—				
Less than 1,000.....	50.26	19.79	11.89	37.17
1,000-10,000.....	12.43	16.25	14.44	20.21
10,000-30,000.....	8.16	11.28	12.01	9.69
30,000 and over.....	29.15	52.68	61.66	32.93
All places.....	100.00	100.00	100.00	100.00

<sup>1</sup> In 1931.    <sup>2</sup> In 1930.

### WORKERS IN RETAIL SERVICE ESTABLISHMENTS

The service establishments included in this census are divided into nine broad groups as follows: Amusement and Recreation group, which includes such establishments as billiard rooms, bowling alleys and theatres; Business Services, such as advertising agencies; Domestic Services,\* of which laundries and cleaning, pressing and repairing establishments are most numerous; Educational Services, including business colleges and music schools; Personal Services, such as barber shops and beauty parlours; Repair and Service Shops, including all types of automobile repairs; Photography; Undertaking; and Storage and Transportation.

The Census of Merchandising and Service Establishments does not include the professions, such as medicine, law, dentistry, etc.; or trade services, such as building trades; or financial institutions, such as banks, trust and insurance companies, or real estate and stock agencies.

There were 42,223 service establishments included in this section of the census and these provided work for 108,863 persons, of whom 44,622 were proprietors, 55,257 were full-time employees and 8,984 were part-time employees. These 108,863 persons formed 1.05 p.c. of the total population and 2.77 p.c. of the gainfully occupied 10 years of age and over.

Summary of figures showing the average number of persons in 1930 engaged in retail service establishments by provinces and cities are presented in Table 127. A percentage distribution of these workers according to basis of employment, *i.e.*, according to whether they are proprietors or full-time or part-time employees, is given in Table 129, while their distribution by sex is

\* "Domestic Services", of course, does not refer to domestic service in families.

shown in Table 130. Proprietors form a greater proportion of the total working force in retail service establishments (40.99 p.c.) than they do in the retail merchandise trade (31.24 p.c.). Part-time employees, on the other hand, are of somewhat lesser importance in service establishments as compared with retail stores; those working on this basis form 8.25 p.c. of the total number in the former type of establishment as compared with 9.18 p.c. in the latter.

The percentage of male to total workers is also greater in the service than in the merchandising establishments, the distribution for the former being 83.66 p.c. male and 16.34 p.c. female. Males represented 92.59 p.c. of the total number of proprietors, 75.78 p.c. of the full-time employees and 87.71 p.c. of the part-time employees.

### WORKERS IN WHOLESALE TRADE

There were 13,140 establishments classified as wholesale outlets for the Census of Merchandising and Service Establishments and these employed an average of 96,737 workers per working day in 1930. These workers formed 0.93 p.c. of the Dominion population and 2.46 p.c. of the total gainfully occupied 10 years of age and over. A comparison by provinces shows wide variations in the ratios of workers in wholesale trade to total gainfully occupied, the percentages ranging from a minimum of 1.08 p.c. for Prince Edward Island to a maximum of 3.62 p.c. for Manitoba. The high ratio shown for Manitoba is due, of course, to the relatively large number of persons engaged in the wholesale grain trade in that province.

A summary of the workers in wholesale trade by provinces and cities is given in Table 128. A comparison by cities shows that the proportion of wholesale workers to total gainfully occupied covers a range from 0.09 p.c. for Verdun to 11.32 p.c. for Saint John. The low ratio for Verdun has already been explained in the section on retail trade, while the high ratio for Saint John may be attributed to the high degree of concentration in that city of the entire wholesale trade of the province of New Brunswick.

A percentage distribution of the total workers as between proprietors and employees is given in Table 129. Since most of the wholesale establishments are operated under the corporate form of ownership and since these firms operate on a much larger scale than do retail or service establishments, the ratio of proprietors to total workers is much lower for wholesale trade than for the other two divisions (retail trade and service establishments). Proprietors formed only 6.38 p.c. of the total workers in wholesale trade for the Dominion as a whole. The figures by provinces show that the percentage of proprietors to total workers was highest in Prince Edward Island at 9.80 p.c. and was lowest in the Prairie Provinces, reaching a minimum of 2.18 p.c. in Saskatchewan. Each bulk tank station from which petroleum products are distributed by tank wagon to retail service stations or other wholesale purchasers was classified as a wholesale establishment. These are almost exclusively operated by the large oil companies and the concentration of such outlets in the Prairie Provinces is, therefore, effective in reducing the ratio of proprietors to total workers below the average for the Dominion as a whole.

Part-time employees form but a negligible proportion of the total workers in wholesale trade and are not tabulated.

The distribution of employees according to sex is given in Table 130 and shows that for the Dominion as a whole 83.22 p.c. of the total were male; in fact, almost all proprietors in wholesale trade are males.

### COMPARISON OF STATISTICS OF WORKERS IN RETAIL AND WHOLESALE TRADE IN THE CENSUS OF POPULATION AND THE CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS

Reference was made at the beginning of this chapter to certain differences which one might expect to find in the statistics on workers in retail and wholesale trade as given in the results of the Census of Population and in those of the Census of Merchandising and Service Establishments.

It has already been pointed out that the Census of Population was taken as of June 1, 1931, whereas the Census of Merchandising and Service Establishments relates to the average number of persons engaged during the year 1930. When figures for specified trades, as given in these censuses, are examined, a few differences are found which cannot be explained by the different methods of reporting.

There are two trades included in the Census of Merchandising and Service Establishments, *viz.*, restaurant services and automotive retailing, for which it is impossible to secure from the Census of Population comparable figures on the number of persons employed. In the Census of Population the restaurant group is included under "Service" and forms part of the class "Hotels, Restaurants and Taverns". While two automotive trades—automobiles and accessories, and filling stations—are included in the industry group "Retail Trade" in the Census of Population, automobile garages are included under "Transportation" and automobile repair shops and service stations under "Service". As the garage classification for the Census of Population is much wider than that used for the Census of Merchandising and Service Establishments, it is not possible to compare the figures for workers in such establishments.

A comparison of the number of workers in retail merchandising establishments, other than restaurants and automotive retailing, as shown in the results of the Census of Population and the Census of Merchandising and Service Establishments, is given in Statement II.

II. WORKERS IN RETAIL MERCHANDISING ESTABLISHMENTS, OTHER THAN RESTAURANTS AND AUTOMOTIVE RETAILING, AS RECORDED IN THE CENSUS OF POPULATION FOR JUNE 1, 1931, AND IN THE CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS FOR 1930

Class of establishment	Census of Population, June, 1, 1931	Census of Merchandising, 1930
Total.....	309,298	329,035
Food stores.....	98,803	98,604
General and departmental <sup>1</sup> .....	83,885	88,719
Apparel <sup>2</sup> .....	23,270	34,717
Building materials.....	20,606	20,467
Furniture and household <sup>3</sup> .....	11,093	14,849
Other.....	70,749	68,573
Secondhand.....	892	3,106

<sup>1</sup> Part of the difference in the figures for general and department stores is due to the assigning of employees in restaurants operated by department stores to restaurants in the population census, and not to department stores, as in the Census of Merchandising. It is probable that a number of persons reported in the Census of Population as working in warehouses or garages, and classified accordingly, were actually employed by department stores, thus reducing the total under the head "general and departmental" in this census.

<sup>2</sup> The main difference between the figures for the two censuses appears to be accounted for by the fact that workers in tailoring, dressmaking or millinery shops were grouped under "Service" in the population census rather than "Retail Trade" as in the merchandising census.

<sup>3</sup> Disparity in the totals for the two censuses is due in this instance also to slight differences in the schemes of classification used.

Of the total of 329,035 workers reported for the Census of Merchandising, 104,568 were proprietors or firm members and 224,467 were employees. The Census of Population had 215,931 wage-earners in the total of 309,298 workers; the difference, 93,367, may be taken as the number of persons working on their own account, largely as proprietors or firm members in retail merchandising establishments. There is a smaller number of workers on their own account shown in the Census of Population, mainly because some workers are classed under "Service" rather than under "Retail Trade" as in the merchandising census.

The number of workers in wholesale trade in the Census of Population is 60,787, which is considerably less than the 96,737 persons reported as engaged in wholesale establishments in the Census of Merchandising. This discrepancy is due chiefly to differences in the classifications used in the two censuses. The industry classification "Wholesale Trade" in the Census of Population does not cover the following groups which are included in the Census of Merchandising under "Wholesale Trade": bulk tank stations, district and general sales offices, manufacturers' sales branches, sales offices of elevators (line and independent), milk stations, chain store warehouses, film exchanges, warehouses (distributing), and others. If figures for these establishments are excluded from the Census of Merchandising totals, there were employed in the more regular types of wholesale houses 62,753 persons as compared with the 60,787 shown in the Census of Population.

For wholesaling and retailing combined, with the exception of the trades already mentioned, the Census of Population shows 370,246 persons engaged, compared with 391,788 workers from the Census of Merchandising and Service Establishments.

In conclusion it should be stated that data relating to the number of persons engaged in the distribution of goods and services is but one division of the information secured for the Census of Merchandising and Service Establishments, the results of which are published in detail in Volumes X and XI of the 1931 Census Report. These two volumes present a complete analysis of wholesale and retail trade and of service establishments to show value of sales or amount of receipts by kinds of business and for cities, towns and counties. Data are also given to show operating expenses including rental costs, total wage payments, capital invested, stocks on hand and other phases of the distributive services of the country. As already stated, employment figures on retail and wholesale trade and service establishments given in the report of the Census of Occupations refer to conditions as existing on June 1, 1931. The employment figures given in the reports of the Census of Merchandising and Service Establishments are intended to round out and complete the other information obtained in connection with that census to show the average number of persons whose services were required in 1930 to distribute goods and services in that year to the extent indicated by the value of sales and amount of receipts reported.

<sup>8</sup> Included in Northwest Territories. <sup>7</sup> Figures not available. <sup>8</sup> It will be noticed that Manitoba, British Columbia and Northwest Territories are only partially covered in 1851 and 1861. It is probable that these areas contained 100,000 persons, including Indians, in these two decades, who are not represented in the figures.

<sup>1</sup> Included in Northwest Territories.

<sup>2</sup> Some slight element of estimation in apportioning the sexes was necessary here. This element, negligible for all practical purposes, makes it possible to give complete figures by sex, which otherwise would be impossible.

<sup>3</sup> Royal Canadian Navy included in rural total.

# AGE

<sup>2</sup> Comparable figures for 1911 are impossible to obtain, owing to a totally different interpretation of "urban" in that year. All incorporated centres of less than 1,500 population were classed as rural.

TABLE 13. Percentage<sup>2</sup> distribution of the population, by quinquennial age groups, sex, rural and urban, Canada and provinces, 1931-1921<sup>1</sup>—Con.

No.	Province	All ages	Age group									
			0-4	5-9	10-14	15-19	20-24	25-29	30-34	35-39	40-44

<sup>a</sup> Less than one hundredth of one per cent.

<sup>4</sup> As corrected by The Quebec Boundaries Extension Act, 1912.

<sup>5</sup> Northwest River Arm and Rigolet on Hamilton Inlet population deducted from Quebec as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, March 1, 1927.

<sup>6</sup> As corrected by The Ontario Boundaries Extension Act, 1912.
