FALL AND WINTER 1905.

W. F. ALLEN'S

PRICE LIST

— OF —

**Choice Strawberry Plants,
DEWBERRY TIPS, SEEDS, ETC.**

St. Louis County, Mo., September 14, 1905.
W. F. Allen, Salisbury, Md.: Dear Sir.—I take pleasure in writing you a few lines to let you know that my Rocky Ford Cantaloupes were just something grand. They cannot be beat. All my neighbors raise melons but they are not in it with mine, the seed of which I bought of you, and your tomatoes are fine. I just know where to get my seed, of you, and nowhere else. **Your Strawberry Plants give me good satisfaction and they are always the stock I ask for.** You are honest in your dealings and you may count on me as one of your steady customers.

I remain,

CHARLES WIEDOW.

Today, September 18th,

I have been looking over my plant beds carefully and to tell the truth the sight of them is a better stimulant for "a tired mind or body" "for a case of the blues" or even a "case of indigestion" than any doctor can prescribe. Now don't say that this isn't true for it is, and any one of my customers who can come and see for themselves and don't agree with me fully and truly I will present them with a hundred plants of my celebrated money maker the NEW HOME Strawberry. In one piece there are 420 rows of plants nearly three hundred yards long and every row from TWO to THREE FEET ACROSS, another patch of 10 acres are nearly as good and other smaller patches are equally as fine. Friends kindly excuse me for being proud of this the finest crop of plants I have ever grown. My trade has grown very rapidly and it is especially gratifying that I can supply my customers (who are my friends) the coming season with plants from what is probably the finest strawberry bed in America consisting of NINETY varieties, and then there are my Dewberry plants, no one grows better. I have LUCRETIA, Austin's or Mayes and the Premo, for three years I have not had enough dewberry plants to supply my trade. I may not this year but I can supply over 300,000 before I throw up my hands and hollow "QUIT" and THEY ARE NICE.

In addition to growing millions of plants I have for several years been growing many acres of truck crops for the large Eastern Markets such as Cantaloupes, Tomatoes, Cucumbers etc, for instance; for eight years I have grown 50 acres of cantaloupes alone each year. Several times I have failed to get good seed true to name, this has led me to enter the seed business and in doing so I shall use every precaution to supply only the best in vitality and purity, and I hope all those using seeds will appreciate my efforts to supply them with only the best and give me at least a trial order. Many of the seeds I offer are grown on my farm and I know there are none better. Those I do not grow myself are grown for me by expert growers in different parts of the country where the particular species grows to the greatest degree of perfection therefore producing seed with the greatest degree of vitality. I WANT YOUR ORDER FOR STRAWBERRY PLANTS, DEWBERRY PLANTS AND SEEDS. May I have it? Yours faithfully,

W. F. ALLEN.

My Spring Catalogue will be the largest I have ever sent out and contains hundreds of descriptions. It will be sent to all who receive this without asking, about first of January and to all others who request it by postal or otherwise.

COPYRIGHTED
BY W. F. ALLEN

"NEW HOME"

This great shipping and keeping berry has been thoroughly tested for six years. It has been grown by the acre and shipped by the car load. It has a record of great productiveness, uniformly large size, and unsurpassed keeping qualities. (Excelling even the Hoffman in this respect.) Does not need to be picked oftener than three times a week, and for market that can be reached in 12 to 24 hours, twice a week is sufficient. No trouble to get pickers. Grow the "NEW HOME" and let your competitors do the worrying about getting their crop marketed.

CONANT & BEAN,
FOREIGN AND DOMESTIC
Fruit and Produce,
15 FANEUIL HALL MARKET,
North Side.
M. S. BEAN. H. M. KENDALL

Boston,.....October 29th, 1904.

Mr. W. F. Allen,
Salisbury, Md.

Dear Sir:

Understanding that you are to offer your berry the "New Home" to growers this season, we wish to give you our experience with it, also the opinion of those to whom we made sales. The first consignment we received were thought to be Gandys, only it was remarked by all that they were much brighter and firmer than they had ever seen before, even for this variety.

We sold this particular lot mostly to retailers and without exception, they pronounced it the best and most satisfactory berry they had ever handled.

Since then we have sold to wholesale buyers from outside cities and towns as far as Portland Me., and have heard nothing but good reports concerning it. Many retail dealers have told us that after keeping them in their stores two and three days, they were just as bright and firm as when they received them. Everything considered, we think it is the best berry we know of for shipping long distances and predict for it, great popularity and success.

Very truly yours,

Conant & Bean

Dict. H. H. K.

Messrs. Conant & Bean have sold a considerable quantity of the "NEW HOME" Strawberries to out of town trade, and here is a letter received by them from one of their customers in Portland, Maine:

Portland, Maine, Nov. 11th, 1904.

Messrs. Conant & Bean,
Boston, Mass.,

Gentlemen:—Replying to your inquiry as to our opinion of the "NEW HOME" Berry, shipped you by W. F. Allen, and which we have purchased of you, would say that this berry is, in our judgment, a first-class one for carrying long distances and for re-shipping purposes. It has arrived in Portland after a trip of four hours by express, in good condition, and has stood up well afterwards. Another good point is the holding of the color as we have found to be the case with this berry. We think well of it.

Very truly yours,

L. B. Griffin Fruit Co.

Fac-simile of original of above letter will be found on page 4, Spring Catalogue, 1905. It must be remembered that the berries above referred to, were picked in Salisbury, and shipped over 500 miles by freight to Boston, being two nights and one day on the road, arriving in Boston the second morning, then sold and re-shipped to Portland, Maine, by express. If you grow berries for market, you need the "NEW HOME."

Price \$10.00 per 1000,—one price to all.

For Sale Only by W. F. ALLEN, Salisbury, Md.

Choice Strawberry Plants.

NEW HOME.—As LATE and LARGE as Gandy, fruit a bright red color that does not lose its lustre and turn dark a long time after being picked. Uniformly large size and THE BEST KEEPING AND SHIPPING BERRY GROWN, Hoffman not excepted. Vigorous grower, and unlike Gandy, will produce a large crop on either high or low land. The fruit is so firm and keeping qualities so excellent, it does not need to be picked oftener than three times a week, when it will usually make 1000 quarts or more per acre at each picking during the height of the season. Pickers are always anxious to pick these berries and several have told me that they could

pick 40 quarts or more per hour, and one man declares that he picked 20 quarts in twenty minutes. One of my little boys only 7 years old picked 37 quarts in two hours.

The above was a part of my description in last spring's catalogue. The New Home has again proven to be the GREATEST MONEY MAKER ON MY FARM. I shipped it the past season by the car load and it always sold for more money than any other variety on the market. It produces big crops. It is easy to pick. Its color is brilliant scarlet and does not fade or turn dark after picking. It keeps longer than any other variety. It sells for more money because it will keep and hold its color longer than any other variety in the market. It is the variety YOU should plant if you grow berries to ship.

OTHER VARIETIES.

My list of strawberry plants this season is the most complete I have ever grown and I should like to give descriptions in this list but space will not permit. Should I be favored with your order, however, I can supply you with very fine plants true to name. MY SHIPPING SEASON BEGINS OCTOBER 15th and all orders will be filled promptly after that date.

Dewberries.

TWO HILLS OF DEWBERRIES TIED TO A STAKE.

The Dewberry is constantly growing in favor and is today next to the Strawberry the most popular of all the small fruits. The vines trail on the ground like a sweet potato vine, in size and quality it is the equal of any blackberry and greatly exceeds them in productiveness. The plant is perfectly hardy and commences ripening its fruit immediately after late strawberries. Indeed by planting the latest varieties of strawberries and earliest dewberries there need not be a single day's gap between the two. The dewberry is sweet and luscious with few seeds and no hard core. This fruit has become very popular in all markets where known and more and more are being grown every year and nearly always marketed at paying prices. If let trail on the ground they should be well mulched to keep the immense load of fruit from being spoiled by falling on the ground. The best way, however, is to stake them as shown in our illustration. This illustration is a true copy of a photograph made from two hills of one year old dewberries tied

to a stake three and one-half feet high. The photograph was taken after the sixth picking and I could have found hundreds of hills equally as good. Our plan of cultivation is to plant in rows each way two and one-half feet one way by five feet the other making about 3,500 plants per acre, cultivate both ways till plants get long and troublesome and then cultivate only the wide way and turn vines to keep the cultivator from tearing them off, or better yet use sweeps on your cultivators such as offered in my spring catalogue, these will run under the vines and weed up the grass without disturbing them. Leave vines lay on the ground till all danger of winter killing is over, and then early in spring before buds put out, stakes should be driven between each alternate hill the two and one-half foot way. The stakes should be two and one half or three feet above the ground and one hill from each way tied to the top of the stake (see illustration). Or where timber for stakes is scarce they can be used at longer intervals by using wire to lay the vines over, same as grapes. I use binder twine for tying to stakes. When grown as above directed the plot or field in bloom is prettier than you can imagine and when fruit comes it is the wonder, admiration and delight of all who see it.

LUCRETIA DEWBERRY.

Lucretia.—The standard dewberry, earlier than the earliest blackberry and as large as the largest of them. The canes are of great hardiness and exceedingly prolific, thriving everywhere; of slender trailing habit, and entirely free from disease and insect attacks. The fruit is superb, large and handsome, jet black, rich and melting, and ships and keeps well. I grow the Lucretia largely for market having had as many as fifty acres in fruit at one time.

AUSTIN'S IMPROVED DEWBERRIES.

Austin's Improved (*Mayer*).—An early dewberry of excellent quality and large yield, but the berries lack firmness for long shipment; hence valuable chiefly for home use and local markets. Berries large, short and thick; canes vigorous, hardy and productive. Ripens fully a week earlier than *Lucretia* and for this reason is valuable to grow in connection with that variety. I have shipped many thousands of quarts of this variety to Philadelphia, 125 miles, and New York, over 200 miles, and received good prices having marketed over half the crop before other varieties are in the way. I always plant about one third of my field in this variety. It is very hardy and never fails to give a full crop.

PREMO DEWBERRY.

Premo. This remarkable new Dewberry is a sport from the grand old Lucretia. The great profitableness of Lucretia with many growers has been because it was the earliest of the blackberry family to ripen. Now we have Premo still earlier and larger; that means extra money in market and an earlier taste of delicious Dewberries for the family. Premo has imperfect flowers and so, in planting, every third or fourth row should be of Lucretia., or better yet, where one is equally fond of both varieties, they can be planted in alternate rows. Remember that Premo is a delicious great blackberry, that begins to ripen when the raspberry season is scarcely half over.

My stock of dewberry plants is probably the largest and certainly equal to the best in the country, and I shall be pleased to have your order whether for a dozen or a hundred thousand. My plants will be ready by October 15th and the last of October or November is the best time to plant. Will book orders now and hold plants until spring if it is your wish.

Did you find the little envelope enclosed offering the Rural New Yorker 3 weeks for 10c? Say, do you read the Rural? If you don't send the 10 cents, it will do you good. No doubt about it the Rural is the best all around farm paper published. All original matter, not made up from clippings. Send the dime sure, if you are not satisfied, let me know and I will pay your dime back quick. Try it. W. F. ALLEN.

Price List of Vegetable Seeds

NOT USUALLY PLANTED IN THE FALL, BUT FOR WHICH THERE IS SOMETIMES A DEMAND FOR SPECIAL ORDERS, OR FOR FALL OR WINTER PLANTING IN THE FAR SOUTH.

For full description and information about all these varieties, see our new Annual Seed Book for 1906, which will be ready about Jan. 1st.

McWHORTER

IMPROVED FERTILIZER DISTRIBUTER.

A complete, practical and attractive machine, simple in construction, easily understood, and effective in operation. It will pay for itself the first week, in the saving of labor alone, besides the satisfaction and saving in having your fertilizer evenly distributed. For top dressing strawberries, it has no equal. It distributes the fertilizer all over the row evenly, and just where you want it, just the quantity you want, as fast as a man can walk. For sowing fertilizer, in the drill, push the spouts all together and your fertilizer is evenly distributed from the bottom of the furrow just where you want it, and just the quantity you want without waste and far better than by hand, or with any other machine made. To spread the spouts for top dressing strawberries or broadcasting, and to close them for sowing fertilizer in the drill, requires less than one-half minute. I have sold a great many of these machines the past season and have not had a single complaint. No one who grows strawberries, or runs a truck farm and garden, can afford to be without this machine. It is a wheel-barrow arrangement to be pushed by man power, (no horse) and can be used all day by an ordinary able man, without being unusually tired at night. Price, f. o. b. factory, \$11.00 each.

Price, f. o. b. factory, \$11.00 each.

IMPROVED HORSE FERTILIZER DISTRIBUTER.

This machine is made in two sizes. No. 14 will top dress or sow in the furrow 2 rows at a time. No. 16 works 3 rows at a time and will broadcast a breadth of 8 feet 6 inches every trip across the field. No. 14 will broadcast 6 feet at a trip. In building this machine, every tried and approved feature of our well known hand fertilizer distributor has been carefully preserved. We refer especially to our unequalled belt feed, strengthened to meet the demands of horse machine. This feed is without doubt superior in all respects, and is so pronounced by farmers everywhere. We urgently advise spreading fertilizers well for furrow work, especially when using heavy. These distributors put this matter readily and thoroughly under the control of the operator. These machines are worked with one horse. (No. 14) and will distribute fertilizer in three furrows at once, if 3½ feet or less apart. Over that width, and up to 5 feet, it will distribute in 2 furrows. It will side dress 2 rows of any growing crop on each side of both rows. It will also side dress one side of 3 rows, that is to say, either the North side or South side as may be desired. It will distribute over 2 beds of strawberries of ordinary width, spread nicely to suit the case. It can be instantly changed to a broadcaster, taking a scope of 6 feet. No. 16 will be instantly changed to a broadcaster, taking a scope of 6 feet. No. 16 will be found a most convenient machine, for doing furrow work, side and top dressing on rows up to 8 feet apart, and broadcasting.

Price	Shipping Weight	Hopper Capacity.
No. 14. \$35.00	300 pounds.	1300 lbs. fertilizer
No. 16. \$45.00	312 pounds.	1400 lbs. fertilizer

Are You Bothered With
MOLES?
THEN BUY THE
Out O' Sight Mole Trap

The best Mole Trap ever offered, to which thousands will testify. It has only to be tried to be appreciated. Especially valuable for hot beds, on account of its convenient height. This Mole Trap outsells all others because it **cocks the business best**. It is designed right and built right. The secret of mole catching is a good trap. This is positively the best and cheapest mole trap made. I guarantee it to be so. You will appreciate its value by giving it a trial. The peddle is so sensitive if carefully set that it is impossible for a mole to pass under the trap without being caught. It will catch where all others fail. It catches going or coming. Several years ago I bought six—got them about night and went out and set four of them. The next morning I had caught three moles and no mole had passed the fourth trap. Full particulars for setting with each trap. Price 90 cents each (postage 25 cents if to go by mail), \$1.75 for two. These ordering plants or seeds can have traps packed in same package with but little if any additional express charges. One trap would make no additional charge, half dozen but very little. Address all orders to W. F. ALLEN, Salisbury, Md.
