jeet of a fincere and fond idolatry, being leeld forth by her zealous high-priefts to the refined vanity of man as a fort of mirror, in which he may behold his own cherifhed features, and admirc a beanty of his own coms. polition, painted with the moft delicate glow of huma. nity, and decked out with every ornament with which the courtly fancies of a Voltaire, a Diderot, a Mirabean, could contrive, to fmooth over or to hide all traces of created imperfection. We leave this idol to the wornhip of her intoxicated and unfortunate votaries. The folemu farce in the church of Notre Dame at Paris was an adoration every way worthy of the Divinity; and our horror in reading the defcription of the ceremunial was not without fome allay of pleafure, when we faw among her moft active prifts an artift, whom we had feen a few years before the mackinijle de l'opera at St Peterfburgh, and grand-mafter of the lodge des Mouffes. We hope to be forgiven the pun, when we fay that the ancient fabric which wastlat day profaned by the abomination of defolation, was then in rcality the temple de Notre Dame. Mr Drigonzi was, by his profeffion, a fit fuceeffor in the priefthood to thofe fages de la France (fuch was the appellation that they gave each other), whom we have jult now named; and his Tours de Theatre, for which we have frequently admired his talents, were a very proper accompaniment to the fincffe and rufe of thefe foi-difant philofophers, who, under the malk of the moft refined humanity, habitually practifed arts of difhonefty which would have ruined the character of the meaneft pedlar. No one will think that we exprefs ourfelves too ftrongly who reflects on the many infamous tricks played by Voltaire to his bookfellers. No one will think the charge too harfh, when he learns that Diderot, after having pretended to the poffeflion of an immenfe library, and fold it to the emprefs of Ruffia for an enormous fum, bad to ranfack the warehoufes of the bookfellers of Paris and throughout all Germany, in order to fill his fhelves. As for Mirabcau, he furpafies eulozy.

Moft afficuous were thofe apofles in fpreading this fanaticifm, of which they enjoved the courtly profits: and we imagine that the employment was as agreeable as it was lucrative ; for we cannot fuppofe that Le Kain had more enjoyment, when fafeinating his Parifian audience in the character of Voltaire's Mahomet, than its author felt in the frde-box, when grinning to himfelf, and confcious what a fordid and envious wretch he was, he found himfelf crowned by the firlt actrefs, and workhipped by the audience as the apoftle of philanthropy and univerfal benevolence.

Such was the worfhip, fuch were the priefts, of this Gallic idol; and, like their predeceffors the Druids, they have made human facrifices a cuttomary oblation at the Ohrine. We wonder at thefe things, and are furprifed that any thing which can even be nicknamed philofo. phy can produce fuch effects. But the takk of this apoftlefhip was as eafy as it was agreeable. It was not the work of a day \(;\) it was the completion of a 1tudierd corruption of principles, which is now above a century old. We may fay that it began under the clever but infarnous Dubois; who from being the valet de chambre of an infirm bifhop, became cardinal, and fovereign of the Gallic church, and almoft of the ftate. When objected to by the bigotted Louis XIV. (on a prefentation for preferment) as a Janfenift, "Ob qui non," faid the duke of Orleans, "Ob, Sire, qui non, il n'eft
al qu'ather." He was at the utmoll pains to bring into the coirt every man of eminent talents in gay literature, and of licentious principles in religion and morals, whom he employed in corrupting the minds of the young courtiers, and giving then favourable impreffions of the indulgence which they might expect from him when he thould have the fole direction of affairs. This fyftem was moft affiduoully purfued during that moft licentious and diffolute adminittration of the regent Orleans, who was himfelf a fpecimen of elegant fenfuality not to be matched in the annals of the world. Long before the prefent day, all thinking men in France faw the mummery of the church, and groaned under its oppreflion ; and having no other notions of religion but what they were accuitomed to from their cradle, no wonder that they difcarded the principle along with thofe detcftable acceffuries. The nation, therefore, being greedy of flattery, buoyed up by a felf-conceit, in which even the ancient Grecks have not furpaffed them, and having been thus itudioufly corrupted, and long immerfed in a luxurious and refined feniuality, of which we in this nation have not yet acquired an adequate idea, was fully prepared for feeling all the effects of this fanaticifn of Naturalism.

But this idolatry we abhor. It thoeks our reafon; and, although it may at firt feem to flatter our thoughtlefs vanity, it really debafes our nature, by taking from us our intellectual kindred to the mind of perfect wifCom. Who would not feel pleafure in being the relation of a Bacon, of a Newton, or would thank the man who detected the falfe pedigree? It puts an end to our fond hopes, that the day will come when we fhall furpafs in underftanding, in worth, and in felieity, the wiftit, the bett, and the moit fortunate of our「pecies.

We camot but lament the appearances, howerer faint, of this fanaticiim among ourfelves. We cannot but obferve, that fome of the hired direetors of public opinion in matters of tafte and fcience have of late hhowed a wonderful tendernefs for the bold and licentious opinions in religion, morals, and politics, which are daily pouring in upon us from the preffes of Paris. Perhaps they may be incited to this conduct by the fuccefs of their brother journalifts in that profigate metropolis; and may hope to be one day, like them, the directors of the public councils and the fovereigns of the nation. We truft, however, that the better part of the reflecting natives of Britain will not allow themfelves to be fneered out of their higheft boait and their fweetelt comforts; namely, that they are not the chance fragmests of a fatal chaes, but the beautiful productions
of a wonderful Artif, and the darling objects of his care: and we affurc ourfelves that ten thoufands of our countrymen are ready to rally under the banners of true religion and found philofophy, and to follow the fleps of a Clarke, a Butler, a Newton, and a Boyle, who fo eminently diftinguifhed themfeives in the saufe of \(\mathrm{Na}-\) ture's God.

By nature, then, we mean that admirable fytem of general laws, by which the adored Author and Governor of the univerfe has thought fit to connect the various parts of this wonderful and goodly frame of things, and to regulate all their operations.
tie are not afraid of continually appealing to the laws of nature: and as we have already obferved in the article Philosophy, we conlider thefe general laws as the moit magnificent difplays of Infinite Wifdom, and the contemplation of them as the moft cletering employment of our underftandings.

\section*{Igneus efl illis vigor et celefis origo Seminitus.}

At the fame time we defpife the cold-hearted philofopher who ftops fhort here, and is fatisficd (perhaps inwardly pleafed) that he has completely accounted for every thing by the laws of unchariging nature; and we fufpect that this philofopher would analyre with the fame frigid ingenuity, and explain by irrefiftible stayr, the tender attachment of her whofe breaft he fucked, and who by many anxious and fleeplefs nights preferved alive the puling infant. But let us rather liften to the words of him who was the moft fagacious obferver and the moft faithful interpreter of nature's laws, our illiftrious countryman Sir Ifaac Newton. He fays,
"Elegantiffima hacce rerumeompages non nift confilio et doninio entis fapientifimi et potentiflimi oriri potuit. Omnia, fimili conftructa conflio, fuberunt unius dominio. Hic omnia regit, non ut anima mundi, fed ut univerforum dominus. Propter dominium fuum dominus deus, \(\begin{gathered}\text { avtrxpatī̄p } \\ \text { nuncupatur. Deus ad fervientes ref. }\end{gathered}\) picit, et deitas cft dominatio dei, non in corpus proprium, uti fentiunt quibus deus eft natura feu anima mundi, fed in fervos. Deus fummus eft ens eternum, infiaitum, abfolute perfectum. Ens utcunque perfectum, at fine dominio, non eft dominus dens.
" Hunc cognofeimus, folummodo per proprietates ejus et attributa. Atribuuntur ut ex phenomenis dignofcuntur. Phenomena funt fapientidime et optio mix rerum fructurx, atque caufx finales. - Hunc admiramur ob perfectiones; hunc veneramur et colimus ob dominium" ( E ).

L'Epinafte au P. Frifi houtbant fa Throrie des Fleures; Tableau des principales Rivieres du Monde, par Genetté; Stevins fur les Eclufes: Truilé des Ecrufés, par Boulard, qui a remparté l: Prixe de l'Acad. de Lyons; Bleifwyck Difertatio de Aggeribus; Boflut et Viallor fur la Congrudion des Digues; Stevia Hydrofatica; Tielman vas der Hort Thearums Alachinarimm Univerfale: De la Lande fur les Canaus de Narization; Racolta di Autori dj; Trattano del Moto dell' Acque, 3 tom. 4 to, Firenaa 1 \(7^{2} 3\). - This moft valuable collec. tion contains the writings of Archimedes, Albizi, Galico, Caftelli, Michelini, Borelli, Montanari, Viviani, Cafini, Guglielmini, Grandi, Manfredi, Picard, and Narduci ; and an account of the numberlefs works which have been carried on in the embankment of the Po,

\section*{R O A}

Rifar-Witer. This is generaily much fofter and letur accommodated to economical purpofes than fpring-water. For thougis rivers proceed driginally from fprings, yat, by their maid motion, and by being eipned during a long enurfe to the influence of the fun and air, the carthy and metallic falts which they contain are decompofed, the acid flies off, and the terreftrial parts precipitate to the botton. Rivers are alforendered fofter by the vaft quantity of rain-water, whieh, paffing along the furface of the earth, is conveyed into their ehannels. But a!! rivers earry with them a great deal of mud and other impurities; and, when they flow near large and populous towns, they become impregna ted with a number of heterngenenus fuhtances, in which ftate the water is certainly unfit for the purpofes of life; yet, by remaining for fome time at reft, all the feculencies fubfide, and the water becomes fufficiently pure and potable.

RIVERS (Earl). See Woderite.
RIVINIA, in botany: A genus of the monogrnia order, belonging to the tetrandria elafs of plants. - The perianth is four-leaved, coloured, and permanent, the leaflet oblong-egged and obtufe; there is no corolla, unlefs the calyx be confidered as fuel. There are four or eight filaments, fhorter than the calyx, approaching by pairs, purnanent; the anthers are fmall. The germ is large and roundifh; the Hyle very fiort; the ftigma fimple and obtufe. The berry is globular, fitting on the green reflected calyx, nne-celled with an incurved point. There is one feet, lensform and rugged. This plant is called Solonoides ty Tournefort, and Piercen by Miller. It grows naturally in moft of the illands of the Weft Indics. 'The juice of the berries of the plant will fain paper and linen of a bright red colour, and many experiments made with it to enlour flowers have fucceeded extremely well in the following manner: the juice of the herries was preffed out, and mixed with common water, putting it into a phial, fhaking it well together for fome time, till the water was thoroughly tinged; then the flowers, which were white and juit fully blown, were cut off, and their talks placed into the plial ; and in one night the flowers have been finelv variegated wilh red; the flowers on which the experiments were made were the tuberofe, and the double white narciflus.

ROAD, an open way, or public paflage, forming a communication between one place and another.

Of all the people in the world the Romans took the mot pains in forming roads; and the labour and expences they were at in rendering them facious, firm, Araisht, and fmooth, are incredible. They ufually Atrengthencl the ground by ramming it, laying it with Ainse, pobiest, or fands. and fometimes with a lining of maforry, pulbith, brieks, \&c. bonnd together with mortar. In forne places in the Lionois, F. Meneftrier oblerves, tha: he has found huge clunters of fiats cemented with hime, reaching 10 or 12 fect drep, and makiag a mats. as lard and compact as mathe; and which, after relifing the injuries of time fur 1600 years, is fill farce penetrable by all the force of hammers, mattocks, \&ec. and yet the flints it confifts of are ant bigger than eggs. The mofl noble of the Roman suods wac the Vïa Appia, which was caried to fuch a
vaft length, that Procopins reckons it five days journey to the end of it, and Leipfrus computes it at 350 miles: it is 12 feet broad, and made of fquare free-tone generally a foot and a half on each fide : and though this has lafted for above 1800 years, yet in many places it is for feveral miles together as entire as when it was firt made.

The ancient roads are diftinguifhed into military roads, double roads, fubterraneous roads, \&c. The military roads were grand roads, formed by the Romans for marching their armies into the provinces of the empire; the principal of thefe Roman roads in England are Watling-Atreet, Tkenild-Atreet, Fofs-way, and Erminage-ftrect. Double roads among the Romans, were roads for carriages, with two pavements, the one for thofe going one way, and the other for thofe returning the other: thefe were feparated from each other by a cauleway raifed in the middle, paved with bricks, for the conveniency of foot paffergers, with horders and mounting fones from fpace to fpace, and military columns to nark the difance. Subterraneous roads are thofe dug through a roek, and left vaulted; as that of Puzzuoli near Naples, which is near balf a league long, and is 15 fcet broad and as many high.

The firt law enacted refpecting highways and roads in Eugland was in the year 1285 ; when the lords of the foil were enjoined to enlarge thofe ways where bufhes, wouds, or ditehes be, in order to prevent robberies. The next law was made by Edward III. in the year 1346; when a commiffion was granted by the king to ldy a toll on all forts of carriages paffing from the holpital of St Giles in the fields to the bar of the Old 'temple, and alfo through another highway called Porfpool (now Gray's Inn Lane) joined to the before-named himhway; which roads were become alnoft impaffable. Little further relating to this fubject occurs, till the reign of Henry VIII. when the parifhes were entrufted with the care of the roads, and furveyors were annually elected to take care of them. But the increafe of luxury and commerce introduced fuch a number of heavy carriages for the convcyance of goods, and lighter ones for the cousenience and eafe of travelling, that parim aid was found infufficient to keep the beit frequented roads in repair. This introduced toll-gates or turnpikes; that fomething might be paid towards thei fupport by every individual who enjoyed the benefit of the fe improvements, by paffing over the roads.

Speaking of roads, the Abbé Raynal jufly remarks. " Let us tracil nver all the enuntries of the earth, and wherever we flall find no facility of trading from a city to a town, and from a village to a hamiet, we may pronounce the people to be barbarians; and we fhall ouly be deceived refpecting the degree of barbarifm."

Road, in navigation, a bay, or place of anchorage, at fome diftance from the fore, whither hhips or veffels occationally repair to receive intelligence, orders, or neceffary fupplies; or to wait for a fair wind, sie. The excellence of a road confift chiefly in its being protected from the reigning winds and the fwell of the fea; in having a good anchoringground, and being at a competent diftance from the flore. Thofe which are not fufficiently inclofed are termed ofen roals.

ROAN, in the manege. A roan horfe is one of \(a\)
- Shorrif y /lo melro't of RIVERS.

ak bay, forrel, or black colour, with grey or white fpots interiperfed very thick. When this party-coloured coat is accompanied with a black head and black extremitics, he is called a ronn borfe with a black-a-moor's bead: and if the fame mixture is predominant upon a deep forrel, he is called claret.roan.

ROANOAK, an ifland of Nurth America, near the coaft of North Carulina. Here the Englifh Frift attempted to fettle in 158 ; but were obliged to leave it for want of provifions. E. Long. 75.0. N. Lat. 35.40 .

Roavoax, a river of North America, which rifes in Virginia, runs through Carolina, and at length fallis into the fea, where it forms a long narrow bay called Allemarle found.

ROASTING, in metallurgic operations, fignifies the diffipation of the volatile parts of an ore by heat. See Metallurgy, pafin.

ROB, in pharmacy, the juices of fruits purified and infpiflated till it is of the confiftence of honey.

ROBBERY, the rapina of the civilians, is the felonions and forcible taking, from the perfon of another, of goods or money to any value, by violence or putting him in fear. 1. There mult be a taking, otherwife it is no robbery. A mere attempt to rob was indeed held to be felony fo late as Henry IVth's time; but afterwards it was taken to be only a mifdemeanour, and punifhable with fine and inprifonment; till the fatute 7 Geo. II. c. 2I. which makes it a felony (tranfportable for feven years) unlawfully and malicioufly to affault another, with any offenfive weapon or inftrument;--or by menaces, or by other forcible or violent manner, to demand any money or goods;--with a felonious intent to rob. If the thief, having once taken a purfe, returns it, fill it is a robbery: and fo it is whether the taking beftrictly from the perfon of another, or in his prefence only; as where a robber by menaces and violence puts a man in fear, and drives away his fhcep or his cattle before his face. 2. It is immaterial of what value the thing taken is: a penny, as well as a pound thus forcibly extorted, makes a tobbery. 3. Lafly, the taking muft be by force, or a previous putting in fear; which makes the violation of the perfon more atrocious than privately ftealing. For, according to the maxim of the civil law, "que vi rapuit, fur impprobior afle ridetur." This previous violence, or putting in fear, is the eriterion that diftinguifhes robbery from other larcenics. For if one privately steals fixpence from the perfon of another, and afterwards keeps it by putting him in fear, this is no robbery, for the fear is fuofequent : neither is it capital as privately ftealing, being under the value of twelvepence. Not that it is indeed neccflary, though ufual, to lay in the indifiment that the robbery was cormmitted by putting in fear: it is fufficient, if laid to be done by violence. And when it is laid to be done by putting in fear, this does not imply any great degree of terror or affright in the party robbed: it is enough that fo much force or threatening, by word or gefture, be ufed, as might create an apprehenfion of danger, or induce a man to part with his property without or againt his confent. Thus, if a man be knocked down without previous warning, and fripped of his property while fenfelefs, though frictly he cannot be faid to be put in fear, yet this is undoubtedly a robbery. Or, if a per-

Vox. XVI. Past I.
fon with a fword drawn begs an alms, and I give it him through miftruft and apprehention of violence, this is a felonious robbery. So if, under a protence of fale, a man forcibly extorts money from another, neither thall this fubterfuge avail him. But it is doubted, whether the forcing a higler, or other chapman, to fell his wares, and giving him the full value of them, amounts to fo heinous a crime as robbery.

This fpecies of larceny is debarred of the benefit of clergy by ftatute 23 Hen. VIII. c. t. and other fubfequent Itatutes; not indeed in general, but only when committed in a dwelling-houfe, or in or near the king's highway: A robbery therefore in a ditant field, or footpath, was not punifhed with death; but was open to the benefit of clcrgy, till the flatute 3 \& 4 W. and M. c. 9. which takes away clergy from both principals and acceffories before the fact, in robbery, wherefoever committed. See Law, \(\mathrm{N}^{\circ}\) claxxvi. 30.

ROBERT eruce, king of Scotland, in 1306; a renowned general, and the deliverer of his country from a flate of vaffalage to the Englifh. See Scotland.

Robert, king of France, furnamed the Wife and the Pious, came to the crowr in 996, after the death of Hugh Capet his father. He was crowned at Orleans, the place of his nativity, and afterwards at Rheims, after the imprifonment of Charles of Lorraine. He married Bertha his coulin, daugliter of Conrad king of Burgundy ; but the marriagc was declared null by Gregory V.; and the king, if we can give credit to cardinal Peter Damien, was excommunicated This anathema made fuch a noife in France, that all the king's courtefans, and even his very domeftics, went away from him. Only two continued with him ; who were fo deeply impreffed with a fenfe of horror at whatever the king touched, that they purified it with fire : this fcruple they carried fo far, as to the very plates on which he was ferved with his meat, and the veffels out of which he drank. The fame cardinal reports, that as a punifhment for this pretended incef, the queen was delivered of a monter, whicl had the head and neck of a duck. He adds, that Robert was fo ftruck with altonifhment at this fpecies of prodigy, that he lived apart from the queen. He contracted a fecond marriage with Cm ttance, daughter of William count of Arles and Provence; but the arrogant difpolition of this princefs would have totally overturned the kingdom, and throwa it into confufion, lad not the wifdom of the king prevented her from intermeddling with the affairs of the ftate. He carefully concealed from her whatever aets of liberality he fhowed to any of his domeftics. "Take care (faid he to thems) that the queen don't perceive it."- Heary duke of Burgundy, brother of Hugh Capet, dying in 1002, without lawful iffue, left his dukedom to his nephew the king of France. Robert invefled his fecond fon Henry with this dukedom, who afterwards coming to the crown, refigned it in favour of Robert his cadet. This duke Robert was chief of the firf royal branch of the dukes of Burgundy, who flourifhed till 1361. This dukedom was then re united to the crown by king John, who gave it to his fourth fon Philip the Bold, chief of the fecond houle of Burgundy. wh ch was terminated in the perfon of Charles the Kafh, who was flain in 1477. King Rubert was fo much eiteemed for his wifdom and prudence, that

Qq

\section*{R O B}

Rubert. he was offered the empire and kingdom of Italy, which, howeter, he declined io accept. Hugh, called the Great, whom he had had by Conltanee, heing dead, he cauled lais fecond fon IRenry I. to be crowned at Rheins. He died at Melun, July 20. 1031, at the age of fio. Ro. bert was, aceording to the knowledge of the times, a wife prince. Helgand, friar of Flcury, relates, in his life of him, that, to prevent lis fubjects from falling into the crime of perjuy, and incurring the penalties which followed thereon, he made then fwea: upoa a flarine from which the relics had been previoufly removed, as if intention did not conftizute perjury ! and long after fimilar reafoning was adopted. Robert huilt a great number of churches, and procured a reftitution to the clergy of the tithes and wealth which the laylords had made themfelves matters of. The depredations were fuch, that the laity poffefed the ecclefiaftical treafurcs by hereditary titlcs; they divided them among their children ; they even gave benctices as a dowry with their daughters, or left them to their fons as lawful inheritance. Although Robert was pious, and although he refpected the clergy, yet it was evident that he oppofed the bifhops with a firmnefs and refolution of which, for many ages, they had had no examples. Lutheric archbifhop of Sens had introduced into his diocefe the cuftom of proving by the eucharit perfons aecufed as guilty of any crime. The king wrote to him in the following Arong terms: "I fwear (fays he) by the faith I owe to God, that if you do not put a flop to the grofs abufe complained of, you niall be deprived of your priethoo!." 'The prelate was forced to compls. He punifhed, in 1022, the Manichéens, canons of Otleans, by burning them at the ttake. There are, however, recorded of him fome lefs fevere actions, which it is right to mention. A dangerous confpiracy againft his perfon and government having been difcovered, and the authors taken into cultody, he Ceized the moment when their judges had met to fentence them to death, to carfe an elegant repa? to be ferved up to them. Next day they were admitted to the cucharilt. Then Robert told them, that he gave them cheir purdon, "becaufe none of thofe can die whom Jefus Chrift came to receive at his table" One day when he was at prayers in the chapel, he perceived a thief, who had cut off the half of the fringe of his mantle, procecding to take the remainder; "Friend (fays he with a pleafant countenanec), be content with what you have already taken, the reft will very well ferve fome other." Robert cultivated, and was a patronizer of the fciences. There are feveral hymus wrote by him, which till continue to be fung in the church. His reign was happy and tranquil. Accordiar to fome authors, he initituted the urder of the Star, commonly attributed to king John.

Robert of France, fecond fon of Louis VIII. and hrother to St Louis, who erected in his favour Artois into a royal peerage in the year 1237. It was during this time that the unlucky difference between pope Gregory IX. and the emperor Frederic II. took place. Gregory offered to St Louis the empire for Robert ; but the French nobleffe, having met to deliberate on this propofal, were of opinion that he ought to reject it. He gave the pope for anfwer: "That Count Robert efteemed himfelf fufficiently honoured by being the brother of a king, who furpaffed in dignity, in
flrength, in wealth, and in birth, all other monarchs in the world." Robert accompanied St Louis into Egypt, and fonght with more bravery than prudence at the battle of Maffonre, on the 9 th of February \(125^{\circ} \mathrm{O}\). In his purfuit of the cowards through a certain finall village, he was killed by flones, tlicks, and other things which they threw at him from the windows. He was ais intrepid prince, but too paffionate, dogmatical, and quarrelfome.

Robret II. Count of Artois, fon of the preceding, furnamed the Good and the Noble, was at the expedition into Africa in 1270 . He drove the rebels from Navare in 1276. He brought a very powerful affiltance to Charles I. king of Naples, of which kingdom he was regent during the captivity of Charles II. He defeated the Arragonians in Sicily in 1289, the Englifh near Bayonne in 1296, and the Flemifh at Furnes in 1298. But having in 1302 imprudently attempted to force thefe laft, when encamped near Courtray, he reccived no lefs than 30 wounds; and in that expedition loft both his honour and his life. He was a brave, but paffionate and fierce man, and good at nothing but pugilittic encounters. Mahaud his daughter inherited the dukedom of Artois, and gave herfeff in marriage to Otho duke of Eurgundy, by whom fhe had two daughters, Jane wife of Philip the Lonģ, and Blanche wife of Charles the Fair. In the mean time Philip, fon of Robert II. had a fon,

Robert III. who difputed the dukedom of Artois with Mahand his aunt; but he loff his fuit by two fentences given in againt him in 1302 and 1318 . He wifhed to revive the procels in 1329 , under Philip of Valois, by means of pretended new titles, which svere found to be falfe. Robert was condemued the third time, and banithed the kingdom in 1331. Having found an afylum with Edward III. king of England, he undertook to deelare him king of France; which proved the caufe of thofe long and cruel wars whicl diflrefled that kingdom. Robert was wounded at the fiege of Vannes in 13.42, and died of his wound in Eugland. John, fon to Robert, and count of Eu, was: taken prifoner at the battle of Poitiers in 1356 , and terminated his career in 1387 . His fon Plilip II. high conftable of France, carried on war in Africa and Hungary, and died in 1397 , being a prifoner of the Turks. He liad a fon named Charles, whio died in 1472 , leaving no iflue.

Robert of Anjou, firnamed the Wife, third fon of Charles the Lame, fucceeded his father in the kingdom of Naples in 1309, by the protection of the popes, and the will of the people, to the exclufion of Charobert fon of his eldeft brother. He aided the Roman pontiffs againft the emperor Henry VII. and, after the death of that prince, was nominated in 1313 vicar of the empire in Italy, in temporal matters, unlefs a new emperor was elected. This title was given him by Clement \(V\). in virtue of a right which he pretended :o have to govern the empire during an interregnum. Robert reigned with glory 33 years, eight montbs, and died on the 19th of January 1343, aged 64. "This prince (fays M. De Montigni) had not thofe qualities which confitute heroes, but he had thofe which make good kings. He was religions, affable, generous, kind, wife, prudent, and a zealous promoter of juttice." He was called the Solomon of his age. He loved the poor,

\section*{R O B}
and caufed a ticket to be placed upon lis palace, to give notice when he meant to diflribute from the tirrone. He had no other paffion but a very great love for learning. He ufed to fay, that he would rather renounce his crown than his ftudy. His court foon became the fanetuary of the fciences, which he encouraged equally by his example and his bounty. This prince was verfed in theology, jurifprudence, philofophy, mathematics, and medicine. Bocaec fays, "that fince the days of Solomon we have not feen fo wife a prince upon the throne." For a great part of his life he had no talte for poctry; he even defpifed it, as, in his opinion, unworthy of a main of learning. A converfation which be had with Petrarch, however, undeceived him; he retained this poct at his court, and attempted himfelf to write fome poems, which are flitl extant. He was forced to engage a little in war, for which he poffeffed no great talertis: alluding to which, may be feen on his tomb a wolf and a lamb drinking out of the fame veffel. Philip of Valois refrained from giving battle in 1339, hy the repeater advice which this prince gave him, who was a great friend to France, both from inclination and interell. He detefted quarrels among Chrifian princes, and had ftudied the fcience of aftrology, not fo much to know the courfe of the ftars, as to learn by this chimerical fcience the hidden things of futurity. He believed that he read in the grand book of heaven a very great misfortune which would befal France if Philip hazarded a battle againft the Englifh.

Robert the Firf, called the Magnificent, duke of Normandy, fecond fon of Richard II. fucceeded in 1.208 his brother Richard III. whom it is reported he poifoned. He lad early in his reign to fupprefs frequent rebellions of feveral of the great vaffals. He re-eftablifhed in his eftates Bandouin IV. count of Flanders, who had been uriufly ftript of his poffeffions by his own fon. He forced Canute king of Dennark, who was alfo king of England, to divide his poffeffions with his eoufins Alfred and Edward. In the year 1035, he undertook barefooted a journey to the Holy Land; on his return from whieh he died, being poifoned at Nice in Bithynia, leaving as his fucceffor William his natural fon, afterwards king of England, whom lue had caufed before his departure to be publicly acknowledged in an affembly of the flates of Normandy.

Robert, or Rupert, furnamed the Short and the Mild, elector Palatine, fon of Robert the Niggardly, was born in 1352 , and elected emperor of Germany in 1400 , after the depofition of the cruel Wenceflas. In order to gain the affection of the Germans, he wifhed to reftore Milanès to the empire, which Wenceflas had taken fiom it; but his attempts in this refpect were unfucceffful. His attachment to the anti-pope Gregory XII. entirely alienated the affections of the German princes. To fuch a degree were they incenfed againft hiin, that they entered into a confpiraey to cut him off; but his death, which happened on the 18 th of May 3410, being then 58 years old, put a fop to their machinations. Robert began to fettle the fovereignty of the German princes. 'The emperors had formerly retained in therr own hands the power of life and death, within the territorics of a great many of the nebles; but he yielded them this right by his letters patent.The chief fault imputed to this prince was an excels of
lenity. But, if we eonfider the plots which lee had to Robert, derect, the confpiracies which lie lad to fruthrate, the Robertfor. fecret and powerful enemies he had to dal with; if we inquire alfo into the commotions which the wicked adminituation of Wenceflas had excited, the irruptions and devaltations of plonderers and lighway robbers, which the nooles countenanced, and the diftreffed fituation in which he found Germany, we mult without helitation conclude, that his lenity indicated his prudence, in reftoring by flow degrees the empire to its original tranquillity. Robert had his virtues, he loved his fubjects, and governed them with wifdom. Poffefied of much political knowledge for the age in which he lived, he wanted nothing but talents for war to make him an aceomplifhed prince. He was twice married. The name and rank of his frtt wife is unknown; he had by her a fon, who died before him. His fecond wife was Elizabetll, daughter of Frederic burgrave of Nuremberg, by whom he had five fons and three daush. ters. The three daughters were, Margaret married to Charles duke of Lorrain; Agnes to Adolphus duke of Cleves; Elizabcth to Frederic duke of Autria. His fons were, Louis the firt of the electural branch, which became extinct in 1559; John father of Chriftopher king of Denmark ; Frederic who died without iflue ; Otho count of Sinthein ; laftly, Stephen, from whom defcended the elector, and the other counts palatine of the Rhine, who are extant at this day:

Robert (of Bavaria), prince palatine of the Rhine, and duke of Cumberland, the fon of Frederic, elector palatine, by Elizabeth, daurhter of James I. king of England, diftinguifled himelf by his valour as a general and adnural ; firlt in the Dutch, and then in the Englih fervice. He was unfuccefsful in the caufe of his uncle Charles I. againit the parliament forces; but under Charles II. he defeated the Dutch fleet, and was made lord high adniral of England in 1673. This prince was a lover of the feiences, and particularly fkilful in chemiftry. He died in 1682.

ROBERTSON (Dr William), one of the mofl celebrated hiltorians of his age, was one of thofe great characters whofe private life, flowing in an even and unvaried flream, can afford no important information to the biographer, although his writings will be read to the lateft poiterity with undiminifhed pleafure. He was born at the manfe of Borthwick in the year 1721. His father was, at the time of his death, one of the minifters of the OldGrey Friars church in Edinburgh, which the Doctor came afterwards to fupply. In 1743 he was licenced preacher, and placed in the parifh of Gladsmuir in \(17+4\); whence, in 1758 , he was tranflated to Lady Yeller's parifh in Edinburgh. In 1-61, on the death of Principal Goldie, he was elceted principal of the univerfity of Edinburgh, and appointed one of the minifters of the Old Grey Friars church. About this period he reccived the degrec of Doctor of Divinity, and was appointed hiftoriographer to his majetty for Scotland, and one of his majelty's chaplains tor that kingdom.

We find it not eafy to afcertain at what period were frft unfolded the great and fingular talents which dettined Dr lobertfon to be one of the firt writers that refened this illand from the reproach of not having any good hiftorians. We are, however, aftifed, that before the publication of any of his litcrary performances,

\section*{R O B}

Roher:fon. even from his frit appearance in public life, his abilities had begun to attrect the notice of obferving men ; and to his more intimate fricuds he difcovered marks of fuch higl.-minded ambition, as, feconded by thofe abilities, could not have failed to carry him to the firt honours of his profeffion, in whatever fphere he had been pla. ced, and whatever oppolition he might have had to combat.
The firft theatre that offered for the difplay of his talents, was the General Affembly of the Church of Scotland. It is the annual meetings of this court that produce to view men who would otherwife remain in the deepeft obicurity. 'There the humble paftor, whofe lot has been ealt in the remutefl corner of the Highland wilds, feels himfelf, tor a time, on a footiug of equality with the lint citizen in the kingdom: he can there difpute with lime the prize of eloquence, the molt flatteriag diftinction to a liberal mind; a diftinction which is naturally fouglat after with the greater eager. neís in that affembly, as the fimple eftablifhment of the church of Scotland has rendered it the only pre-eminence to which the greatelt part of its menbers can ever hope to attain.

From the moment Dr Robertfon firft appeared in this affembly, he beeame the object of univerfal attention and applaufe. His fpecthes were makied with the fame manly and perfuative eloquence that diltinguifhes his hiftorical compofitions; and it was obferved by all, that while his young rivals in oratory contented themfelves with opening a caufe, or delivering a fludied harangue, he fhowed equal ability to fart objections, to anfwer, or to reply; and that even his mott unpremeditated effufions were not unadorned with thofe harmonious and feemingly meafured periods, which have been fo much admired in his works of labour and refection. He foon came to be conlidered as the ableft fupporter of the caufe he chofe to cfpoufe, and was now the unrivalled leader of one of the great parties which have long divided the church of which he was a member.

When we refect upon this circumftance, and confider how much mankind are the fame in every fociety, we Thall be the lefs furprifed to find, in the literary works of \(\operatorname{Dr}\) Robertfun, an acquaintance with the human heast, and a knowledge of the world, which we look for in vain in other hiftorians. The man who has fpent his life in the difficult tank of conducting the deliberations of a popular affembly, in regulating the paffions, the interefls, the prejudices, of a numerous faction, has advantages over the pedant, or mere man of letters, which no ahility, no fudy, no fecond-hand information, can ever compenfate.

The firt work which extended the Doctor's reputation Deyond the walls of the general affembly, was a fermon preached at Edinburgh before the fociety for propagating Chriftian knowledge, and afterwards pub. lifhed; the fubject of which was, "The flate of the world at the appearance of Jefus Chrift.' The ingenuity with which a number of detached circumftances are there collected, and fhown to tend to one fingle poir:, may perhaps rival the art which is fo much admired in the bifhop of Meaux's celebrated Univerfal Hifory.

This fermon did great honour to the author; and it is probably to the reputation be gained by it, that we
ought to attribute the unanimity with which he was Robe calted to be one of the minifters of Edinburgh-an event which happened not long after, viz. in the year 1758. In 1759, he publifhed, in two volumes quarto, - The Hiftory of Scotland, during the reigns of Queen Mary and of King James VI. till his Acceffion to the Crown of England, with a Review of the Scots Hilto. ry previous to that period.' This work in its ftructure is one of the moft complete of all modern hiftories. It is not a dry jejune narrative of events, dellitute of ornament ; nor is it a mere frothy relation, all glow and colvuring. The hiftorian difcovers a fufficient fore of imagination to engage the reader's attention, with a due proportion of judgment to check the exuberance of fancy. The arrangement of his work is admirable, and his deferiptions are animated. His Ayle is copious. nervous, and correct. He has difplayed confummate fkill in rendering fuch paffages of our hiftery as are familiar to our recollection agreeable and entertaining. He has embelliflied old materials with all the elegance of modern drefs. He has yery judicioufly avoided too circumltantial a detail of trite facts. His narratives are fuccinct and fpirited; his reflections copious, frequent, and generally pertinent. His fentiments refpecting the guile of Mary have indeed been warmly controverted by Meffrs Tytler, Stuart, and Whitaker; and the general opinion now feems to be, that their vietory is complete. That victory, however, on the part of Whitaker, is fullied by the acrimony with which he writes. Dr Robertfon was no rancorous or malignant enemy of the unfortunate queen. While relating, what he doubtlefsbelieved, he makes every poffible allowance for Mary from the circumptances in which the was placed; and his hiftory will be read with pleafure by candid men of all parties as long as the language in which it is compofed fhall continue to be underttood.

In 1769 , Dr Robertfon publifhed, in three volumes quarto, The Hiftory of the Reign of the Emperor Charles V. with a View of the Progrefs of Society in Europe, from the Subverfion of the Roman Empire to the beginning of the 16 th century. - The vaft and general importance of the period which this hiftory comprifes, together with the reputation which our hiItorian had defervedly acquined, co-operated to raife fuch high expectations in the public, that no work ferhaps was ever more impatiently wifhed for, or perufed with greater avidity. The firft volume (which is a preliminary one, containing the progrefs of fociety in Europe, as mentioned in the title) is a very valuable part of the work; for it ferves not only as a key to the pages that follow, but may be confidered as a general introduction to the fludy of hiftory in that period in which the feveral powers of Europe were formed into one great political fyftem, in which cach took a ftation, wherein it has fince remained (till within a very few years at leaft) with lefs alterations than could have been expected, after the fhock occafioned by fo many internal revolutions, and fo many foreign wars. Of the hiflory itfelf, it may be fufficient to obferve, that it is jufly ranked annong the capital pieces of hiftorical ex. cellence. There is an elegance of expreffion, a depth of difcernment, and a correctnefs of judgment, which do honour to the hiltorian. The characters are inimitably penned. They are not contrafted by a fudied antithelis, but by an oppofition which refults from a:

\section*{\(R \quad O \quad B\)}
erfon. very acute and penetrating infight into the real merits of each character, fairly deduced from the feveral circumftances of his conduet exemplified in the hiftory. For this twork the Doftor got L. 4500 Sterling.

In 1779, Dr Robertion publified The Hiftory of America, in two volumes quarto. This celebrated work may be confidered with great propriety as a fequel to the preceding hiftory. From the clofe of the 15th century we date the moft fplendid era in the annals of modern times. Difcoveries werc then made, the influence of which defcended to pofterity; and events happened that gave a new direclion to the fpirit of nations.

To the inhabitants of Europe, America was in every refpect a new world. There the face of the earth changed its appearance. The plants and trees and animals were ftrange; and nature feemed no longer the fame. A contincrit opened that appeared to have recently come from the hands of the Creator, and which fhowed lakes, rivers, and mountains, on a grander fcale, and the vegetable kingdom in greater magnificence, than in the other quarters of the globe; but the animal tribes in a fate of degradation, few in number, degenerated in kind, imperfect, and unfinifhed. The human fpecies in the earlieft fage of its progrefs, vaft and numerous nations in the rudeft form of the favage fate which philofophers have contemplated, and two great empires in the loweft degree of civilization which any records lave tranfmitted to our review, prefented to the philofoplic eye at this period the molt fruitful fubject of fpeculation that was to be found in the annals of hiftory.

The difcovery of the New World, moreover, was not only a curious fpectacle to the philofopher, but, by the change which it effected, an interefting fectacle to the human race. When Columbus fet fail for unknown lands, he little expected that he was to make a revolution in the fyftem of human affairs, and to form the deftiny of. Europe for ages to come. The importance and celebrity therefore of the fubject had attracted the attention of philofophers and hiftorians. Views and fketches of the new sorld had been given by able writers, and fplendid portions of the American fory had been adorned with all the beauties of eloquence. But, prior to the appearance of Dr Robertion's hiftory, no author had beftowed the mature and profound inveftigation which fuch a fubject required, or had finifhed, upon a regular plan, that complete narration and perfect whole which it is the province of the hiftorian to tranfmit to pofterity. And as the fubject upon which our author entered was grand, his execution was mafterly. The character of his former works was inmediarely difcerned in it. They had been read with uncommon admiration. When the Hiftory of Scotland was firt publifhed, and the author altogether unknown, Lord Chefterfield pronounced it to be equal in eloquence and beauty to the productions of Livy, the pureft and moft claffical of all the Roman hiftorians. His literary reputation was not confined to his own country : the teftimony of Europe was foon added to the voice of Britain. It may be mentioned, indeed, as the characteriftic quality of our author's manner, that he poffeffed in no common degree that fupported elevation which is fuitable to compofitions of the higher clafs; and, in his Hiftory of America, he difplayed that hap-
py union of ftrength and grace which becones the ma. Roberton, jefty of the hiftoric mufe. In the fourth book of his firlt volume, which contains a defcription of America when firft difcovered, and a philofophical inquiry into the manners and policy of its ancient inhabitants, he difplays, moreover, fo much patient inveftigation and found philofophy, abounds in fuch beautiful or interefting de: feription, and exhibits fuch varisty and copioufnefs of elegant writing, that future times will probably refer to it as that part of his works which gives the beft idea of his genins, and is the moft finifhed of all his produc. tions.

In 1787 appeared a tranflation of the Abbé Claxio gero's Hiftory of Mexico ; in which work the author threw out various reffections, tending in feveral inflano ces to impeach the credit of Dr Robertfon's Hiftory of America. This attack induced our learned hiftorian to revife his work, and to inquire into the truth of the charges brought againit it by the luftorian of New Spain: and this he appears to have done with a beco-ming attention to the importance of the facts that are controverted, and to the common interefts of truth. The refult he publifhed in 1788 , under the title of Additions and Corrections to the former Editions of Dr Robertfon's Hiftory of America. - In many of the difputed paflages, he fully anfiwered the Abbé Clavigero, and vindicated himfelf: in others he candidly fubmitted to correction, and thus gave additional value to his own work.

The literary labours of Dr Robertion appear to have been terminated in 1791 by the publication of An Hiftorical Difquifition concerning the Kinowledge which the Ancients had of India, and the Progrefs of Trade with that Country prior to the Difcovery of the Paffage to it by the Cape of Good Hope; with an Appendix, containing Obfervations on the Civil Polity, the Laws, and Judicial Proceedings, the Arts, the Sciences, and Religious Inftitutions of the Indians. T'he perufai of Major Rennell's Memoir, for illuftrating his map of Hindoftan, fuggefted to Dr Robertion the defign of examining more fully than he had done, in his Hiftory of America, into the knowledge wbich the ancients had of India, and of confidering what is certain, what is obfcure, and what is fabulous, in their ac. counts of that remote country. Of his various performances, this is not that of which the defign is the moft extenfive, or the exccution the moft elaborate; but in this hiftorical difquitition we perceive the fame patient affiduity in collecting his materials, the fame difcernment in arranging them, the fame perficuity of narrative, and the fame power of illuftration, which fo eminently diftinguilh his other writings, and which have long rendered them the delight of the Britif reader at home and an honour to Britifh literature abroad.
A truly ufeful life Dr Robertfon clofed on the 11th of June 179.3, at Grange-Houfe, near Edinburgh, after a lingering illnefs, which he endured with exemplary fortitude and refignation. It may be truly obferved of him, that no man lived more refpected, or died more fincerely lamented. Indefatigable in his literary refearches, and poffeffing from nature a found and vigorous underttanding, he acquired a fore of ufeful knowledge, which afforded ample fcope for the exertion of his extraordinary abilities, and raifed him to the moft diftinguifhed emineace in the republic of letters, As

\section*{\(R\) O \(13 \quad[310]\)}

Ro'igus a minifter of the gofpel, he was a faithful paftor, and B. buiz. jully merited the elleem and veneration of his flock. R.bitiz. In a word, the may be promounced to be one of the moft perfect characters of the age : and his name will bee a latting homour to the ifland that gave him birth. His conserfation was cheerful, entertaining, and inftructiec ; his manners affable, pleafing, and condearing.

Dr Robertfon left three fons and two daughters. The eldet fon is procurator for the church of Scotland, and an adrocate. The other two are officers in the army ; and one of them diftinguifhed himfelf under loord Cornwallis in fuch a manner as to command the warnocी praife from that illuflrious gencral.

ROBIGUS AND ROBIGO, a Roman god and gooddefs, who juined in the prefervation of corn from bighe. Their fettival was kept on the 25 th of April.

ROBIN hood. Sec Hood.
Robin Rerl-Bregf. Sec Motacilla.
ROBINTA, fale acacia, in Eotany: A genus of the decandria order, belonging to the diadelphia clafs of plants; and in the natural mothou ranking under the 32 d order, Papilionace.e. The calyx is quadrifid; the legnmen gilbhons and clongated. There are niue fpecies. The mofl remarkable are the caragnana and ferox, the leaves of the former of which are conjugated, and compofed of a number of finall folioles, of an oval figure, and ranged by pairs on onc common tock. The flowers are leguminous, and are cluftered on a filament. Every flower confifts of a fmall bell-fhaped petal, cut into four fegments at the edge, the upper part being rather the widelt. The keel is fmall, open, and rounded. The wings are large, oval, and a little raifed. Within are 10 flamina united at the bafe, curved towards the top, and rounded at the fummit. In the midl of a theath, formed by the filaments of the flamina, the piftil is perccivable, confilling of an oval germen, terminated by a kind of hutton. This germen becomes afterwards an oblorg flattilh curved pod, containing four or five fe ds, of a fize and flape irregular and unequal ; yet in both refpects fomewhat refembling a lentil.

This trce grows naturally in the fevere climates of Northern Afia, in a fandy foil mixed with black light earth. It is particularly found on the banks of great rivers, as the Oby, Jenifia, \(\delta c\). It is very rarely met with in the inhabited parts of the country, becaufe cattle are very fond of its leaves, and hogs of its roots; and it is fo hardy, that the fevereft winters do not affuct it. Gmelin found it in the neighbourhood of Tobohk, buried under 15 feet of fnow and ice, yet had it not fufiered the Ieafe clamage. Its culture confilts in being planted or fowed in a lightifh fandy foil, which muti on no account have been lately manured. It thrives bell near a river, or on the edge of a broek or fpring; but prefently dies if planted in a marfhy fpot, where the water flagmates. If it is planted on a rich fuil, well tilled, it will grow to the height of 20 feet, and in a very few years will be as big as a common birch trec.

In a very bad foil this tree degencrates, and becomes a mere hrub: the leaves grow hard, and their fine bright grecu colour is changed to a dull decp green. The Tongufian Tartars, and the inhabitants of the northern parts of Siberia, are very fond of the fruit of this tree, it being almof the ouly fort of pulfe they eat. 3. Strallumberg, author of a well-efleemed defcription
of Sileria, affures us that thin fruit is tulerably pheafant Rnfris, food, and very nouilhing. Thefe peafe are firll infufed in boiling water, to take off a certain acrid tane they have, and are afterwards dreffed like common peafe or Windfor beans; and being ground into meal, pretty grood cakes are made of them. The leaves and tender thoots of this tree makc excellent fodder for feveral forts of cattle. 'The roots, being fiveet and fucculent, are very well adapted to fattening hogs; and the fruit is greedily eaten by all forts of poultry. After feveral experiments fomewhat fimilar to the methods ufed with anil and indigo, a fine blue colour was procured from its leaves. The finaller kind of this tree feems fill bet. ter adapted to anfwer this purpofe. The friking elegance of its foliage, joined to the pleafing yellow colour of its herutiful flowers, fhould, one would imargine, bring it into requell for forming nofegays, or for fpeedily making an elegrant hedge.

Bedides the qualities above recited, it pofefes the uncommon advantage of growing exceedingly quick, and of being eafly tranfplanted. There are large plantations of it now in Sweden, Norway, Lapland, and Iceland. Linneus afflures us, that, after the Pinus fol. quinis, erroneoufy called the cedar tree of Siberin, this tree, of all that are to be found in Siberia, is mon worthy of cultivation.
2. The robinia ferox is a heautiful hardy fhruk, and, on account of its robuit flrong prickles, might be introduced into this country as a hedge plant, with much propricty. It refifts the fevereft cold of the climate of St Peterfourgh, and perfects its leed in the garden of the emprefs there. It rifes to the height of lix or eight feet; does not fend out fuckers from the root, nor ramble fo much as to be with difficulty kept within bounds. Its flowers are yellow, and the general colour of the plant a light pleating green. A figure of it is given in the Fiora Rofica by Dr Pallas, who found it in the fouthem diftricts, and fent the leeds to St Peterfburgh, where it has profpered in a lituation where few plants can he made to live.

ROBINS (Benjamin), a molt ingenious mathematician, was born at Bath in 1707. His parents were Quakers, and of low condition, confequently neither able nor willing to have him much inftructed in human learning. Neverthelefs his own propenfity to feience procured him a recommendation to Dr Pumberton at London; by whofe affiftance, while he attained the fublimer parts of mathenatical knowledge, he commenced teacher of the mathematics. But the bufnefs of teaching, which required confinement, not fuiting his active difpofition, he gradually declined it, and engaged in bufinefs that required more exercife. Honee he tried many lahorious experiments in gumery, from the perfuafion that the refinance of the air has a much greater influence on fwift projectiles than is generally inagined. Hence alfo he was led to confider the mechanic arts that depend on mathematical principles; as the conflruction of mills, the building of bridges, the draining of fens, the rendering of rivers navigable, and the making of larbours. Among other arts, fortification much engared lis attention ; and he met with opportunities of perfecting himfelf by viewing the principal Atrong places of Flanders, in fome tours he made abroad with perfons of diftinction.

Upor. his return from one of thefe excurfions, he found
obins. found the learned amufed with Dr Buskcley's work, intitled The Analy \(f\), in which an attempt was made to explode the method of fluxions. Mr Robins was therefore advifed to clear up this affair by giving a diftinct account of Sir Ifaac Newton's doctrines, in fuch a manner as to olviate all the objections that had been made without naming them. Accordingly he publifhed, in 1735, A Difcourfe conccrning the Nature and Certainty of Sir Ifaac Newton's Method of Fluxions: and fome exceptions being made to his manner of defending Sir Ifaac Newton, he afterwards wrote two or three additional difcourfes. In \(173^{8}\) he defended the fame great philofopher againft an objection contained in a bote at the end of a Latin piece, called Matho, five Cofmethenria puerilis; and the following year printed Remarks on M. Euler's Treatife of Motion, on Dr Smith's Syftem of Optics, and on Dr Jurin's Difcourfe of dittinct and indiftinct Vifion annexed to Dr Sinith's work. In the meanwhile, Mr Robins did not folely confine himfelf to mathematical fubjects: for in 1739 lie publifhed three pamphlets on political affairs, without his name; when two of them, relating to the convention and negociations with Spain, were fo univerfally cfteemed, as to occafion lis being employed in a very honourable poft; for on a committee being ap. puinted to examine into the paft conduet of Sir Robert Walpole, he was chofen their fecretary.

In \(174^{2}, \mathrm{Mr}\) Robins publifhed a fmall treatife, intitled Neru Principles of Gumnery, containing the refult of many experiments; when a Difcourfe being publifhed in the Philofophical Tranfactions, in order to invalidate fome of his opinions, he thought proper, in an account he gave of his book in the fame 'Tranfactions, to take notice of thofe experiments; in confequence of which, feveral of his Differtations on the Refiftance of the Air were read, and the expcriments exhibited before the Royal Society, for which he was prefented by that honourable body with a gold medal.

In 1748 appeared Lord Anfon's Voyage round the World, which, though Mr Walter's name is in the title, has been generally thought to be the work of Mr Robins. Mr Walter, chaplain on board the Centurion, had brought it down to his departure from Macao for England, when he propofed to print the work by fubfeription. It was, however, it is faid, thought proper, that an able judge flould review and correct it, and Mr Robins was appointed; when, upon examination, it was refolved that the whole fould be written by Mr Robins, and that what Mr Walter had done fhould only ferve as materials. Hence the introduction entire, and many differtations in the body of the work, it is faid, were compofed by him, without receiving the leaft affiftance from Mr Walter's manuticript, which cliefly telated to the wind and the weather, the currents, courfes, bearings, diftanccs, the qualities of the ground on which they anchored, and fuch particulars as senerally fill up a failor's account. No production of this kind ever met with a more favourable reception; four large impreffions were fold within a twelvemonth; and it has been tranflated into moft of the languages of Europe. The fifth edition, printed at London in 1749 , was revifed and corrected by Mr Robins himelf. It appcars, however, from the corrigenda and addenda to the oft volume of the Biographia Britannica, printed in the beginning of the fourth volume of that work, that

Mr Robins was only confulted with refpect to the dif- Robins, pofition of the drawings, and that he had left England Robinfor, before the book was printed. Whether this be the fact, as it is afferted to be by the widow of Mr Walter, it is not for us to ceterminc.

It is certain, lowever, that Mr Robins acquired the fame, and he was foon after defired to compofe an apology for the unfortunate affair at Preftonpans in Scotland, which was prefixed as a preface to The Report of the Proceedings of the Board of General Officers on their Examination into the Conduct of LieutenantGeneral Sir Joln Cope; and this preface was efteemed a mafterpiece in its kind. He afterwards, through the intereft of Lord Anfon, contributed to the improvements made in the Royal Obfervatory at Greenwich. Having thus eftablifhed his reputation, he was offered the choice of two contiderable employments; either to go to Paris as one of the commiffaries for adjufting the limits of Arcadia, or to be engineer-general to the Eaft India company. He chofe the latter, and arrived in the Eaft Indies in 1750 ; but the climate not agreeing with his conltution, he died there the year following.

ROBINSON (the moft Rev. Sir Richard), archbifhop of Armagh and Lord Rokeby, was immediately defeended from the Robiufons of Rokeby in the North Riding of the conuty of York, and was born in 1709. He was educated at Weftminter fchool, from whence he was elected to Chrit-Church, Oxford, in 1726. After continuing his ftudies there the ufual time, Doctor Blackburne, archbifhop of York, appointed him his chaplain, and collated hina firft to the rectory of Eiton, in the Eaft Riding of Yorkhire, and next to the prebend of Grindal, in the carhedral of York. In 175 he attended the Dukc of Dorfet, lord-lieutenant of Ireland, to that kingdom, as his firlt chaplain, and the fame year was promoted to the bihopric of Killala. A family connection with the Earl of Holderneffe, who was fecretary of fate that year, with the Earl of Sandwich and other noblemen related to him, opened the fairelt profpects of attairing to the firt dignity in the Irifh church. Accordingly in 1759 he was tranflated to the united fees of Leighlin and Ferns, and in \(17^{61}\) to Nildare. The Duke of Northumberland being appointed to the lieutenancy of Ireland in 1765, he was advanced to the primacy of Armagh, made lordalmoner, and vice-chancellor of the univertity of Dublin. When Lord Harcourt was lord-lieutenant of Ireland in 1777, the king was plafed by prive-feal at St James's, February 6th, and by patent at Dublin the 25 th of the fame month, to create him Baron Rokeby of Armagh, with remainder to Matthew Robinfon of Weit Layton, Efq; and in 1783 he was appointed prelate to the moft illuftrious order of St Patrick. On the death of the Duke of Rutland lord-lieutenant of Ireland in 1787, he was nominated one of the lordsjuftices of that kingdom. Sir William Robiufon, his brother, dying in 1785 , the primate fucceeded to the title of baronet, and is the furvivor in the direct male line of the Robinfons of Rokeby, being the Sth in defeent from William of Kendal. His grace died at Clifton near Brittol in the end of October 1794.

No primate ever fat in the fee of Armagh who watched more carefully ovcr the intereft of the church of Ireland, as the flatute-book evinces. The act of the

\section*{\(R \quad O \quad B\)}

Rumblafon. 11 th and 12 th of his prefent majefly, which fecures to bifhops and eeclefialtical perfons repayment by their fucceffors of expenditures in purchafing glebes and houfes, or building new houfes, originated from this excellent inan, and muft ever endear his name to the clergy. The other adts for repairing churches, and facilitating the recovery of ecelefialtical dues, were among the many happy exertions of the primatc.

But it was at Armagh, the ancient feat of the primacy, that he difplayed a princely munificence. A rery elegant palaee, 90 feet by 60 , and 40 high, adorns that town; it is light and pleafing, without the addision of wines or lefter parts; which too frequently wanting a fufficicat uniformity with the body of the edifice, are unconnected with it in effect, and divide the atten. tion. Large and ample offices are conveniently placed bchind a plantation at a frmall difance. A round the palace is a large lawn, which fpreads on every fide over the hills, fkirted by young plantations, in one of which is a terrace, which commands a mott beautiful view of cultivated hill and dale; this view from the palace is much improved by the barracks, the fchool, and a new church at a diftance; all which are fo placed as to be exceedingly ornamental to the whole country.

The barracks were erected under the primate's direction, and form a large and handfome edifice. The fchonl is a building of confiderable extent, and admirably adapted for the purpofe; a more beautiful or better contrived one is nowhere to be feen ; there are apatments for a mafter, a fchool-room 56 feet by 28 , a large dining room and 「pacious airy dormitories, with every other neceflary, and a fpacious play-ground walled in ; the whole forming a handfome front: and attention being paid to the refidence of the mafter (the falary is 4001 . a year), the fchool flourihes, and mult prove one of the greateft advantages to the country. This edifice was built entirely at the primate's expence. 'The churcls is erected of white ftone, and having a tall fpire, makes a very agrecable object, in a country whore churches and fpires do not abound. The primate built three other churches, and made confiderable reparations to the eathedral ; he was alfo the means of erecting a public infirmary, contributing amply to it himfelf: he likewife conftruted a public library at his own coft, endowed it, and gare it a large collection of books; the room is 45 feet by 25 , and 20 high, with a gallery and apartments for the librarian. The town he ornamented with a makket-houfe and fhambles, and was the direct means, by giving leafes upon that condition, of almolt new-building the whole place. He found it a nett of murd cabins, and he left it a well-built city of ftone and flate. Thefe are noble and fpirited works, in which the primate expended not lefs than \(\mathrm{I} . .39 .=00\). Had this fum been laid out in improving a paternal eftate, even then they would be deferving \&reat praife; but it is not for his pofterity but the public good that his grace was fo munificest. A medal was ftruck by the ingenious Wiilliam Muffop of Dublin, which has on one fide the head of the primate, infcribed " Richard Rohinfon, Baron Rokeby, Lord Primate of all Ireland." And on the revorfe, the fouth front of the obfervatory at Armagh, erected by his grace, with this admirable motto, "The Heavens declare the glory of God." mDCCLXIXIX.
Robinson (Robert), a diffenting minifter of confi-
derable note, was born on the 8th of October 1735 at Siwaffham in Norfolk. His father died when he was young; and his maternal grandfather Robert Wilkin, of Milden-hall, Suffolk, gent. who had ever been diffa. tistied with his daughter's marriage, deprived him of his maternal inheritance, cutting him off with half-aguinea. His uncle, however, who was a fubflantial fanncr, in fome meafure fupplied this lofs. He took Mr Robinfon home, and placed him under the Rev. Jofeph Brett, at Scarning fchool in Norfolk, with a view to the miniltry of the church of England; where he had for one of his fchool-fellows the lord chancellor Thurlow. When about the age of 15 or 16 , he imbibed the notions of George Whitfield; on which accomnt he was difcarded by his uncle, and again expofed to poverty and want. He firl directed his thoughts towards the miniltry in the year 1754, and commenced preacher in the following year at the age of 20 ; preaching his firft fermon to a congregation of poor people at Milden-hall. He continued for a year or two as one of Mr Whitficld's preachers, and during that period he married. In the year 17;8, however, he determined to feparate from the Methodifts; after which he fettled at Norwich with a finall congregation formed chielly of his methoditicic friends, being at that time an Independent. In the year \(175 y\) he was invited to Cambridge, and for two years preached on trial to a congregation confitling of no more than 34 people, and fo poor that they could only raife L. \(3: 6\) : 0 a quarter for his fubfiftence. In June 1761 he fettled as their paftor, and was ordained in the uffual nanner; at which time we are told he exercifed the office of a barber. In 1774, his congregation had fo mueh increafed as to confift of 1000 fouls, including children and fervants.

In Cambridge Mr Robinfon's talents foon attraEted notice, and he quickly fet up a Sunday evening lecture, which was well attended. His preaching was altogether without notes; a method in which he was peculiarly happy: not by trutting to his memory entirely, nor by working himfelf up to a degree of warmth and paffion, to which the preachers among whom he firit appeared commonly owe their ready ntterance; but by thoroughly fludying and making himfelf perfectly mafter of his fubject, and a certain faculty of expreffion which is never at a lofs for fuitable and proper words. In fhort, his manner was adnurably adapted to enlighten the underfanding, and to affect and reform the heart. He had fuch a plainnefs of feech, fuch an eafy and apparent method in dividing a difcourfe, and fuch a familiar way of reafoning, as difcovered an heart filled with the tendercft concern for the meaneft of his hearers ; and yet there was a decency, propriety, and juftnefs, that the moft judicious could not but approve. Several gentlemen of the univerfity, eminent for character and abilities, we are told, were his conftant hearers.

The circumftances which lof him his uncle's patronage paved the way for the future events of his life. The incident which made him difcard the common fentiments on the fubject of baptifm, at once marked the turn of his mind, and fhows what apparently fight caufes frequently determine the lot and ufefulnefs of our lives. He was invited to the baptifm of a child; the minifter who was to perform the fervice kecping the company in long expectation of his appearance, fome

\section*{R \(O \quad \mathrm{~B}\)}
fon. one fugzeRed, that fuppofing the child were not baptized at all, he faw not how it could affect his happ:nefs. Though the ronverfation was not purfied, the hint fruck lifr Rotindon's mind; and he immediately determined to read the New Teftament with this particular view, to examine what it faid concerning the haptifm of infants. He accordingly began with the Gofpel of Matthew ; and, in fuecelfion, perufed the hiftorical and epiftolary books; in expectation that he thould find in every fullowing part what he had not met with in the preceding parts of the facred volume; namely, \(1^{\text {aflages recommending and urging this rite. But ob- }}\) ferving, on the whole, a total filence about it, he thought it his duty to felinguifh the practice, as without foundation in the rule of our faith; which appeared to him to Speak only of the baptifm of believers.

This change of his fentiments was inore unfavourable than the former aiterations ia his religious jublgment to his worldy views; and having marricd very carly in lite fron pure affection, he was involved in great difficulties fur near 12 years after his fettlement in Cambris fe: as, in that courfe of time, his fanily became aumerous, and the fupport of an aged mother, as well as of a wife and ten childrens depended upon him. Lut unexpectied fupplics, from quaiters or which he was ignorant, frequently relieved his necffities, and confirned his truft in Providence: yet the fituation of his family muit, it is eafy to conceive, have much afiected his mind. For he appears to have poffeffed great tendernefs and fuffibility, and to have regarded with feculier endearment his domeftic conections.

It may be reckoned a circumflance worthy of mention, that the finere of Mr Robinfon's minifty was the fame in whicin his great-grandfather Mr Shelly, of Je Cus College, and vicar of All. Saints, had, with others, diffufed the principles of the Puritans, about the beginning of the laft century. The reputation of the 1)ifenters in the univerfity and neighbourhood had for almolt a century been finking into contempt, when Mr Robinfon fetted with the baptift church at Stone-Yard. I is abilities and afficuity, however, raifed their reputation. The place in which his people affembled, which was at foilt a barn, afterwards a ftable and granary, and then a mieeting-houfe, but flill a damp, dark, and ininous place, foon became too fmall for the andience; and feveral of the ruw auditors being men of fortuse, they purchafed the fite, and crected at their own expence a new houfe in the year 1764.
His labours as a preacher were not limited to the town of Cambuidge ; but foon after his coming there, he fet up feveral lectures in the adjacent villages. His lectures were either annual or occafional, or ftated on fixed days. The ufual time was half an hour aiter fix in the evening ; and fometimes at fire in the morning ; and now and then in the fummer at two in the afternonn, for the fake of thofe who came from a diflance.

He died on the gith of June \(1 \% 90\), at the houfe of William Ruffe, Efq; of Showell green near Eirmirgham. He had laboured undir an alarming diforder for fome time before; hut on the Sunday preceding his death he neached a chatity fermon. On Monday he was feized with a tit; in Thefday he recoverel aud we) to bod teleratly weil, and was found dead next morning.
The abilities of Mr Rodinfon wete very confiderable. - appears from his numb:oun wooks ; and he pofelicd Fos. XII. Part 1.
the quality of erepreffing his thotughta in an eafy and Recher eo a forcible manner. But he appears to have been of an Ruchicfo to unfleady temper, and, in our opinion, acquires but hittle credit either from the frequency with which he changed his religious creed (for we have reafon to believe he died a Socinian), or from the foolifh and undeferved acrimony with which he treated the Cl:urch of Engiland. His Plan of Lectures on the Principles of Norconformity, for the Inftruction of Catechumens, is a piece of the moit unjult and illiberal abufe that we have cver feen, and wonld have difgraced the mutt high it: inc Puritan of the laft century:。
Mr Robinfon's largeit work, the Hiftory of Baptifin and of the Baptifts, was puiblifited fince his death, aṅ is written in the fame fly le and with the fame conidence as his other works. Yet, as we have heard it rentarked hy a learned and liberal profeflor of Theology in the church which he oppoftd, it is not a hetle remankab!* that there is in it no argument or fact againft infant bar: tifn which was not anfwered by 1)r Wall ne.rily tom ycars ago, of whofe arguments No Robinfon howevc: takes no notice.
ROBORANTS, in pharmacy, medicines whicis Arenthen the parts, and give new vigour to the corefitution.
ROCHETORT, a handfome and confiderable :ow: of France in the territory of Aunis. It was conftructed by Lonis XIV. and is buile in the midd of manfles exprefsly drained for that purpofe; and time evincest the utility of the project, for as a port it foon beeam: as neceflary and inportant to the clown of Fance as Breft or 'toulon. It has a department of the maritue. and has large rnagazines of maval dtores. There is alfo one of the finctl halls of arms in the kinedom. and a great many workmen employed in smaking them : there ate alfo forges for anchors, and work houfes for hip-carpenters, who are employed in every thine that relates to the fitting out of haips that come within the compats of their province. They likewife ca:t great guns here ; aud have artits, whofe employment is icupture and paimting. There are alto focks for buildinet men of war, repe-walks, margazines of provifinas and powder, a mantacio! \(y\) of fail-cloth, an hot ital for frilors, and proper places to ciean the frips. Add to thefe, the houfes of the intendant, the fyuare of the capuchins, and the luperb ftrucure which contain, lodgings for 300 marine guards, where they are tau slit: the hufinefs and exercifes belonging to feamen and officers who go on torid the men of war.

Befide the ufual number of worlmen which wewe employed at Rochefort during the monarchy, whiche amounted to about gco, there were about 600 galley flaves, cccupied in the moft painful and labotious brancles of fervice. The town is fituated on the river Charente, about five leagues from its mouth, and was fortified by Louis XIV. at the time he conftrected it ; but its fituation is at fo conliderable a diftance from the fea, as to render it fufficiently fecure from any attack, and they have therefore clofed up the battemente, and nc= gleced the fortifications. The town is laid out with grat beauty ard elegance. The freets are all very Broad and ttraight, extending through the whole plaee from f.de to fide; biat the buildings do n t correfpand with ther in this refpect, as they are nomfly low and is :ergla:. W. Lorg. ©. 54. N. Lat. 46. 2 . K. r

Rocric-

Rochefur ROCHEFOUCAULT (Francis earl of), defcendcaut.t. cd of an illuftrious family, next in dignity to that of
the fovereizns. was chamberlain to king Clarles VIII. and Louis XII. His charatter at conert was admired a: obliging, gencrous, upright, and firicere. In 1494 he flood godtather to Francis I. who, when he canme to the throne, continued to pay great refpect to that fpiritual relation. 110 made him his chamberlain in ordinary, and crected, in 1515 , the barony of Ruchefuucault into an earklom; and, in his writ of erection, obforves, that he did this in memory of the great, honuurable, hirchly ufeful. and commendable fervices which the faid Francis had done to his predeceffors, to the crown of France, and to himfelf. The earl of Rochcfoucault died in 1517 , leaving behind him an illutrions memory, and a chara ior univerfally yefpected. Since hin time all the eldet fons of that family have taken the name of lorancis.

Rochifoucault (Trancis duke de la), prince of Marfillac, governor of Poitnh, was born in 1603. -He was the fon of Francis, the firt duke of Rochefoncault, and was dittinguifhed equally by his coulraye and his wit Thefe fhining qualitie. endeared luim to all the nohility at court, who were ambitious of decorating themfelves at onee with the laurels of Mars and of Apollo. He wrote two excellent works; the one a book of Maxiins, which M. de Voltaire fays has contributed more than any thing elfe to form the talle of the French nation; and the other, Memoirs of the Regency of Queen Anne of Auftria. It was partly at the infization of the beautiful duchers de Longuewille, to whom he had been long attached, shat the duke de Rochefoucault engaged in the civil wars, in which he fignalized himfelf particularly at the battle of St Antoine. Beholding one day a portrait of this lady, he wrote underncath it thefe two lines from the tragedy of Alcyonćc:
"Pour meriter fon caur, pour plaire à fes beaux yeux, "F'ai fait la guerre uux rois, je l'aurois fait aux deux." Which may be thus rendered in Englih:
* To gain her heart, and pleafe her fparkling eyes,
" I've war'd with kings, and would have brav'd the Asies."
It is reported, that after his rupture with Madame I.ongueville, he parodied the above verfes thus:
- Poar ce cour inconfant, qu'enfin je connois mieux,
" Fe fuis laguerre aux rois, j'en ai perdu les yeux."
After the civil wars were ended, he thought of nothing but enjoying the calm pleafures of friendihip and literature. His houfe became the rendezvous of every perfon of genius in Paris and Verfailles. Racine, Boijcau, Savigne, and La Fayette, found in his convcrfation clarms which they fought for in vain elfewhere. He was not, however, with all his elegance and genius, a member of the French Acaderay. The neceffity of making a public fprech the day of his reeeption was the only caufe that he did rus clain admittance. This nobleman, with all the courage he had difplayed upon various critical occafions, anl with his fuperiority of bith and uncuttlanding over the common run of men, did not think himfelt capalle of facing an audience, to utter only four lines in public, without being out of countenance. He died at Paris in 1680, aged 68,
leaving behind him a character which has been varioufly drawn by thofe who during his life were proud of his friendfhip. That he was well acquainted with human nature is certain; and his merit in that refpect was fully admitted by Swift, who was hinfelf not eafily impofed upon ty the artificial difguifes of the hypocrite.

ROCFIELLE, a celebrated eity of France, capital of the teritory of Aunis, with a very commodious and fafe harbour, which, though it does not admit veffels of any confiderable burden, is yet well calculated for trade. " It may be divided (fays Mr Wraxal) into three parts; the bafon, whieh is the innermoft of thefe, is oully a quarter of a mile in circunference; and at the entrance are two very noble Gothic towers, called the Tower de St Nicholas, and the Tour de la Chainc. They are now in a ftate of decay, but were anciently defigned to protect the town and harbour. Without thefe towers is the Avant Port, extending more than a league, and bounded by two points of land to the north and fouth. Beyoud all is the road where the largett thips ufually anchor, protected from the fouth-weft winds by the iflands of Re, Olcron, and Aix." The celebrated mound erected by Richlieu extends from fide to fide acrofs the whole harbour, nearly an Englifh mile in length, and when the fea retires is ftill vifible. "I walked out upon it (fays Mr Wraxal) above 300 feet. Its breadth is at this time more than 150 feet, and it widens continually towards the bafe. No effort of art or power can poffibly -imprefs the mind with fo vatt and fublime an idea of the genius of Richlieu, as does this bulwark againft the fea. While I ftood upon it, in the middle of the port, between the waves which rolled on either fide, and contemplated its extent and Atrength, I was almof inclined to fuppofe this aftonihing work to be fuperior to human pover, and the production rather of a deity than of a mortal. A fmall opening of about 200 feet was left by Pompey Targon, the arehiteet who couftructed it, to give entrance to veffels, and fhut up by clains fixed acrofs it. A tower was likewife erected at each end, no remains of which are now to be feen. Neither the duke of Buckingham, nor the earl of Lindfey, who were fueceffively fent from England to the aid of the befieged by Charles the Firfl, dared to attack this formidable barrier: they retired, and left Roehclle to its fate. In all probability, a thoufand years, aided by florms and all the fury of the fea, will make little or no impreftion on this mound, which is defigned to endure as long as the fame of the Cardinal, its author."

Before the revolution, Rochelle was a bifhop's fee, and contained a college of humanities, an aeademy, a fchool for medieine, anatomy, and botany, and a mint. It camnot lay claim to any remote antiquity, being merely a little collection of houfes on the faore, inhabited by fifhermen, when William IX. lalt count of Poictou, rendered himfelf mafter of it in 1139 . Fronz this Prince it defeended to his only daughter Elcanor, afterwards queen of Henry II. of England ; and her charter ineorporating the town is still preferved in the regifters of the city. In the year 1540, Rochelle was the grand afylum of the Proteftants; and the maffacre at Paris was foon followed by the fiege of Rochelle, which began in November 1572, and was raifed irs June 157.3 ; but in 1628, after a moft obllinate refittance, and a fiege of 13 months, it furrendered to tbe

1efer. the mercy of Louis XIII. At the beginning of the firt fiege, the number of inhabitants in the city amounted to \(7^{2,000}\); in the fecond they diminifned to 28,000; and they wele, when Mr Wraxal was there, between 17 and 18,000, of which fearce 2000 were Huguenots. The houfes of this city are line, and fupported with piazzas, under which perfons may walk in all weathers; and the ftreets in general are as ftraight as a liue. There are feveral handiome churches, and other ftructures, befides a renarkable pump in the fquare of Dauphiny, which throws out the water through feveral pipes. There are no remains of the old fortifications, except on the fide of the larbour, where there are bulwarks and Atrong towers to defend the entrance. The new fortifications are in the manner of Vauban. Before Canada was ceded to England, and New Orleans to Spain, the trade of Rochelle was very lucrative. It revived about the year 1773 , and, befide that to the coaft of Guinea and the Eaft Indies, the inhabitants carried on a confiderable trade in wines, brandy, falt, paper, linen cloth, and ferge. It is feated on the occan, in W. Long. I. 11. N. Lat. 46. 10.

ROCHESTER, a city of Kent, in England, is fituard on the Medway, feven miles and a half north of Maidltone, and 30 from London. It appears to lave been one of the Roman Itations, from the bricks in the walls, as well as the Roman coins that have been found about it. It has three parifh churches built with ftone and fints, befides the cathedral, which is but a inean ftructure. This little city, which was made a bifhop's fee by king Ethelbert, anno 604, has met with many misfortunes. In 676, it was facked by Eldred king of Mercia; in 839 and 885 , befieged by the Danes, but refcued by king Alfred. About 100 years after, it was befieged by king Ethelred, and forced to pay L. 100. Anno 999 it was taken and plundered by the Danes. Anno 1088 it was befieged and taken by William Rufus. In king John's time it was taken from the Barons, after three month's fiege ; and the very next year, viz. 1256, its caltle, founded by William the Conqueror, was ftormed and taken by feveral of the Barons, under the French king's fon. In the reign of Henry III. it was befieged by Simon Montford, who burnt its then wooden bridge and tower, and fpoiled the church and priory, and then marched off. This city las alfo been feveral times deftroyed by fire, viz. in 1130 , on June 3 . in 1137, and in 1177 ; after which it is faid to have continued defolate till 1225 , when it was repaired, ditched, and walled round. In the Saxon lieptarchy there were three mints in Rochefter, two for the king and one for the bifhop. In 1281, its old wooden bridge was carried off by the ice, in a fudden thaw after a fiolt which had made the Medway paffable on foot. Apother was built in the reign of Richard II. but pulled down again, on the rumour of an invalion from France. It was afterwards reftored, but fo often fubject to expenfive repairs, by reafon of the rapid courfe of the river under it, as well as the great bieadth and depth of it, that in the reign of Edward III. it was refolved to build a new bridge of tone; and the fame was begun, ayl in a manner completed, at the expence of Sir John Cobham and Sir Robert Knolles, Edward III.'s generals, out of the fpoils they had taken in France. It has 21 arches. The town is governed by a mayor, recorder, 12 aldeımen, 12
common-councilmen, a town-clerk, three ferjeants at Roehefier; mace, and a water-bailiff. To its cathedral belong a dean and fix prebendarirs. Gundulph's tower ftands on the nortl2 fide of the cathedral, and is fuppofed to have been built by the bifhop, as a place of fecurity for the treafures and arcl.ives of that church and fee. Some fuppofe it to have been intended for a bell tower, and others for an ecclefiaftical prifon; but whatever might be its deftination, its machicolations, its loop-hole windows, and the thicknefs of its walls, thows Atrength and defence were confidered as neceffary: This tower was óo fect high, but fome part las lately falien down; the walls are fix fect thick, and contain within them an area of 20 feet fquare: it was divided into five floors or ftories of unequal height, and had a communication with the upper part of the church, by means of an arch or bridge, the ileps of which arc ftill vilible. It is fuppofed to have been erected after the cathedral was built. For the maintenance of its bridge, certain lands are tied down by parliament, to which it has fent members from the firft. The town-houfe, कuilt in the year 1687, for the courts, affizes, and feffions, and the clarity-fchool, are two of the beft public buildings here.-A mathematical fchool was founded here, and an alms-houfe for lodging fix poor travellers every night, and allowing them 4 d . in the morning when they depart, except perfons contagioully difeafed, rogues, and proctors. In the fummer here are always fix or eight lodgers, who are admitted by tickets from the mayor. The Roman Watling-ftreet runs through this town from Shooters-Hill 10 Dover. The mayor and citizens hold what is called an admiralty-court once a-year for regulating the oytter-fifhery in the creeks nod branches of the Medway that are within their jurifdiction, and fur profecuting the cable-hangers, as they are called, who dredge and fith for oytters withont being free, by having ferved feven years apprenticefhip to a fifherman who is free of the filhery. Every licenfed dredger pays 6 s .8 d a-year to the fupport of the courts, and the fifinery is now in a flourihing way. Part of the caftle is kept in repair, and is ufed as a magazine, where a party of foldiers do conftant duty. The bridge was repaired in 174, and pallifadoed with new iron rails. Rochefter contains about 700 houfes, and 2000 inhabitants. It confilts of only one principal ftreet, which is wide, and paved with flints. The houfes are generally well built with brick, and inhabited by tradefinen and innkeepers. It has alio four narrow Itreets; but no fort of manufactory is carried on herc. Stroud is at the wett end of this place, and Chatham at the eaf. It is 27 miles north-welt by weft of Canterbury, and 30 foutheaft by calt of Londun. Long. O. 3G. E. Lat. 51. 23. N.

honne of thefe bofons are fo formed as to rect ive the I cod amd part of the human body; ore of this kind is fund on a rock calle.t hing Arthu's bed, in the parith of North Hall in Conwall, where are atho othes, call! al by the comatry people Arthur's troughs, in which they fay he ufed to feed his dugs.

Roca-Crybal, in matural hillury, otherwife called Pertgeryhol, a name given to the third order of cryftals, from their being alised to a rock or other folid budy. See Crystal.

Rock Sali. See Salt.
Ro:on-D\%. See Petroleum.
Rocs. Fi/k. Sec Goblus.
ROCKEF. \(\mathrm{I}^{\prime}\), an articial fire-work, confiting of a ripondrical cafs of paper, filled with a compotition of wrain combutible ingredients; which, being tied to a tiek, mounts into the air, and then burlts. See Pyпотесияз.

Thbory of the Fih;ht of Sky Rockets. Mariotte takes - "rife of rockets tu bee asing to the impalie ar relittawce of the air ayainit the llame. Dir Delagulier ac--. .unts for it othicrwife.

Conceive the rocket to have no vent at the choak, and to be fet on fire in the comical bure; the confequence will be, cither that the rocket would burit in the weakelt place, or, if all its parts were equaly itrong, and able to fullain the impulfo of the flame, the rockit would berm out mimuraisit. Now, as the force of t'u flame is equaile, fuppofe is action dowawards, or time upwards, fufficient to lift \(+^{-}\)pomads. As these forecs are equal, but their direetoms contrary, they wil! Seffroy cach other"s action.

Inagine then the rooket opened at the chonis: by this mears the action of the flane downward, is taken awny, and there \(\mu\) eniains a force equal to 40 pomuds atiug upwards, to carry up the rocket, and the Itick \(i t\) is tied to. Accordingly, we find that if the compofition of the rocket be very weik, fo as not to give an :n pulfe greater than the weight of the rocket and fich, it docs not sife at all; or if the compolition be fow, fo that a fmall part of it only kindles at fryt, the rocket will not rilc.

The fick ferves to keep it perpendicular ; for if the rocket flould begin to frumble, moving round a point in the clook, as being the common centre of gravity of recket and itick, there would be fo much friction ayain: the air by the fick between the centre and the poiat, and the point would beat araint the air with fo mush velocity, that the fricion of the medium W) med refore it to its propendicularity.

When the comparition is bumt out, and the impulfe upwards is coafed, the common centre of gravity is
bought lower towalds the middle of the nick; by which moans the velucity of the point of the Alick is ciscitafd, and that of the point of the rocket increafed ; fo that the whole will tumble down, with the rocket-end formont.

All the whike the rocket burns, the common centre of gravily is fiifting and getting downwards, and lint the laller and the lower as the flick is the lighter, fo that it fomstimes begins to tumble hefore it be burnt out ; but when the tick is a little too heavy, the weight of the beket bearing a lefs proportion to that of the thick, the common centre of gravity will not get for low but that the rocket will rife itraight, though not fo fatt.
Rosket, in botany. See Brasstca.
ROCKINGHAM, a town in Northamptonfhire, in Fengland, 8- miles from London, Itands on the river Welland. It has a charity-fchool, a market on Thurfday, and a fair on Sept. 8. tor five days. Its forelt was reckoned one of the largelt and richent of the kingdom, in which William the Conqueror built a calle; it ex. tended, in the time of the ancient Britons, almont from the Wellind to the Nen, and vias noted formerly for iron-works, great quantities of flags, i. e. the refufe of the iren-ore, bein.g met with in the adjacent fields. It extended, according to a furvey in 1641 , near 14 miles in length, from the welt end of Middleton-Woods to the twen of Mansford, and five miles in breadth, from Brigttock to the Welland; but is now dimenbered into parceli, by the interpufition of fields and towns, and is duvided intu three batiwicks. In feveral of its woods a great quantity of charcoai is made of the tops of trees, of which many wagyun-luads are fent every jear to Peterborough. 'There is a fpacions phain in it callect Rockinghamthise, which is a common to the forr towns of Cuturshair, Ruckingham, Corby, and Gretton. King Willian Rufus called the council here of the great men of the kingdom. W. Long. o. 46. N. Lat. 52. 32 .

ROD, a land meafure of IC feet and a half; the fanc with perch and pole.

Black Rod. See L'shar of the Black Rol.
Fiybing Rod, alurg tapuer rol or wand, to which the line is fitened fur angling. See Frrhing Roil.

RODNEI (George Midjes), Lord Rodrey, was born in the year 1718 . Of the place of his birth and the rank of his amellors we have not been able tu procure any well authenticated account. His father was a naval officer; and commandines, at the time of his fon's birth, the yacht in which the king, attended by the loke of Chandus, was pafing to or from Ifanover, he alked and obtaincd leave to have the honour of calliner kis infant fon George Bridyes. The royal and noble godtathers adviied Captain Rodaey to educate his boy for his uwn profeflion, promifing, as we have been told, to promute him as rapid!y as the merit he thuold difplay and the regulations of the navy would permit.

Of young Rodncy's early exertions in the dervice of his country, nothing, however, is known to the writer of this ab:tract, nor, indeed, any thing of fufficient imfortince to be inferted in articles fo circumferibed as all our biographicai fletenes mull be, till 1751, when we fod him, in the ramls of a Commodore, fent out to make
make aceurate difcoverics refpecting an inand which was fuppofed to lic about \(50^{\circ} \mathrm{N}\). L. and about 300 leagues W. of England : but he returned without having feen any fueh ifland as that which he was appoint. ed to furver. In the war whicly foon followed this vovage of difovery, he was pronoted to the rank of a reir-admiral, and was employed to bombard HaveredeGrace ; whicia in 1759 and ifto he contiderably damaged, torether with fome fhipping. In 176 he was fent on an expedition arainft Martinico, which was reduced in the berinning of the year \(1 ; 62\), and about the fame time St Lucia furrendered to Captain Harvey. Both thete inards were reilored to the French at the peace of 176.3.

In reward for his fervices, he was created a knight of the Bath ; but beiry inattentive, as many feamen are, to the rules of conomy, his circunfances became fo enbarrafted that he was obliged to fyy from his country, with very fight hopes of ever being able to acturn. He was in France when the ill-advifed plicy of that court made them take a decided part with America againt Gerat Britain; and it is faid that fome men in power, no Atrangers to the defpcrate flate of Sir George's aftairs, offered him a high command in the French nave, if he would carry arms againft his own country. This effer be rejected with becoming indignation. Soon af. ter this gallant behaviour, the Duke de Chartres, afterwards the infamons Orleans. tuld Sir George that he ras to have a command in the flect which was to be opfood to that under the command of his countryman Mir Kenpel ; and with an infulting air alked hin what he thought womld be the confequence of their meeting? "That my countryman will cary yrur Highnefs with lim it learn Englith," was the high-fpirited replyWhan the divitions, which the mutual reeriminations of Admiral Kejpet and Sir Fugh Palifier excited in the Britifn eavy, made it difficult for the minitry to proctire experienced, and at the fame time popular, commanders for their fieete, Lord Sandwich wrote to Sir George Bridzes Rodney, oftiering him a principal comseated : but the difficulty was for the veteran to tud mo1."y to pay his accounts in France, for that he might be prarited to leave that kingdon- The money, it las i,een repeatedy afirmed, was advanced to bin by the eturtiers whofe ofier he had before indignantiy rejevted. He arrived, therelere, in Enyland, and was again emfloyed in the fervice of his country. His firll exploit ifter his appointment was in January \(178=\), when he took ig Spanifh tranfuorts bound to Cadiz from Bilboa, together with a \(G_{4}\) gun mip and 5 frigates, their conwiy. On the ath of the fame montl be fell in wirh t. Spanifh fleet, confiting of it fail of the line, under the connmand of I Hon Juan de Langara; of which one vas blown ap during the en ragement, five were taken and carried into Gibraltar, among whish was the adniral's thip, and the reft were much fhattered. In April the fame ycar, he fell in with the French fleet, under the ecmmend of Ahmiral Guichen, at Martinicn, whom he oblized to fight, and whom he completely beat; though from the mattered thate of his swn fleet, and the unwilliagnefs of the enemy to rifk another action, he took. none of their lips. The fuccofsful cforts of our gallant adminal during the year 1780 were generally applauded through the nation. He received the thauks of Luth Houfes of Darlizment, and acdellies of thanks from
va ious parts of Great Britain, and the ifinnds to which his victories were more particularly ferviceable. In Decenber the fome year, he made an attempt, together with General Vaughan, on St Vinesnt's, but failed. In 1-81, he continied his exertions, with much fucceft, in defending the lVeft India iflands; and, along with the above named general, fre conquered St Euftatins; on which orcaliou his conduct to the inlabitants has been much, though perhaps unjutly, cenfured. The ifland was certainly a neft of contraband traders.

On the 12 th of April 1782 , lie came to a cluíc ace tion with the French fleet under Count de Grafic; disring which he fink one fhip and took five, of which the admiral's fhip, the Viile de Paris, was cne. 'The following year brought peace; but, as a reward for his munerous fervices, he lad a qrant of L. 2000 a.year jur himfelf and his two fuccefors. He had lons before been created a baronet, was rear-didmiral of Great Bri. tain, and at leurth was jutly promuted to the peerane, by the title of Baron Rodncy of Stoke, Somerfethise, and made vice admiral of Great Britain. He was once alfo governor of Greenwich Hofpital.

Lord Rodney had been tivice married ; finf to the filter of the Earl of Northampton, and fecondly to the daughter of Jobn Clies, Fiq; with whon hee did not refide tor feveral vears befor his death, which happened on the 2 th of May \({ }^{1} 792\). He was fucceeded in title and eflate, by his fon Ceorge, who married in tos Martha, daughter of the Right Hon. Alderman harley, by whon he has iffue.

Of the pivate life of Lord.Podney we know but little. His attention to the vaints of the feamen, alad the warrart cfficers fexing under lam, incicated that hunanuty which is always alined to irue courage. He has often, from the nimber of difhes which his ranik brough to his table, felected fomething very plain for himifelf, and fent the reft to the midhipmenis melis. His public tranfactions will tranfnit his name with ho. nuur to pollerity ; his bravery was mnquetionable, and his fuccefs has been feldum equalled. It has, indeed, been very generally fuid, that ius fikill in naval tactics was not great, and that he was indebted to the fuperior abiLities of Capt. Young and Sir Charles Doughas for the manceurres by which he was fo fucceffrui againt Lamgara and 1 ) © Graffe. but, fuppoching, this to be tre: , it detracta not from his merit. A weak or fuolith comimander could not always make chwice of the aitleit officers fir his firft capiaius, wer would fuch a mea be guided by their advice.

Whatever was Lord Rodney's fill in the feiense of naval war, or however much he may have heen beholicon to the counfels of others, he certainly poffefied himicif the diftiaguihed merit of indefatigable exertion; for he never umitted any thing nithin the compafs ef li:s pover to bring the enemy to action. He therafore manuellio:ably deferwes the refpect and the gratitude of his comnery. In the year \(1 ; 83\) the Houle of Afitmbly in Jamaica voted L. 1co, towards erecting a marbie fatue to him, as a mark of their glotitude ard vencration tor his gallant fervices, fo timely and glorioufy performed for the falvation of that illand in particular, as weil as the whole of the Britith Welt Iudia ithads anl trade is general. Wie have not, howeser, leard of any fuch tribate lecing paid to him in Lritain cisher before or fince his dua:l.

\section*{R 0 I}

ROE, the feed or fpawn of fint. That of the male fiftes is ufually diflinguithed \(\mathrm{byy}^{-1}\) the name of fofit ree, or milt; and that of the female, lard roc, of Pawn. So inconceivably numerous are thefe ovula or fmall eggs, that M. Petit found \(342,1+4\) of them in a carp of 18 inches; but M. Licuwenlock found in a carp no more than 211,629 . This laft gentleman obferves, that there are four times this number in a cod; and that a common one contains \(9,34+, 000\) eggs.

Rol, in zoology. See Cervus.
ROELI.A, in botany: A gemis of the monogynia order, belonging to the pentandria elafs of plants; and in the natural inethod ranking under the 2 gth order, Camfanacee. The corolla is funnel-fhaped, with its bottom thut up by ftaminiferons valvules; the figma is bifid; the capfule bilocular, and cyliudrical inferior.

ROGA, in antiquity, a prefent which the emperors made to the fenators, magitratcs, and even to the people; and the popes and pitriarchs to their clergy. Thefe rogx were ditributed by the emperors on the firl day of the year, mi their birth-day, or on the natalis ties of the cities; and by the popes and patriarchs in p:ffion-weck. Roga is alfo ufed for the common pay of the fondicrs.

ROGATION (rogatro), in the Roman juripprudence, a demand made by the confuls or tribunes of the Roman people, when a law was propofed to be paffed. Regatio is allo ufed for the decree itfelf made in confequence of the people's giving their affent to this demand ; to diftinguifh it from a fenatits conjultum, or dccree of the fenate.

Rogation-Heck, the week immediately fucceeding Whitfunday; fo callid from the three feafts therein, viz. on Monday, 'Tuefday, and Wednefday.

ROGER de Hovenes, a learned man of the \(\mathrm{s}_{\mathrm{t}}\) th century, was born in Yorkhire, molt probably at the town of that name, now called Howden, fome time in the reign of Henry I. After he had reccived the firt parts of edncation in his native country, he fudied the civil and canon law, which were then become the mot fahionable and lucrative branches of learning He became domeftic chaplain to Henry 11. who employed him to tranfact feveral ecclefiaftical affairs; in which he aequitted himfelf with honour. But his moft meritorious work was, his Annals of Eugland, from A. D. 731, when Bede's Ecclefiaftical Hittory ends, to A. D. 1202. This work, which is one of the moft voluminous of our ancient hiltories, is more vahable for the lincerity with which it is written, and the great variety of facts which it contains, than for the beauty of its Ityle, or the regularity of its arrangement.

ROGUE, in law, an idle furdy heggar ; who by anciont flatutes is for the firfo offence called a rogue of the firfl deyree, and punithed by whippins, and boring through the gritice of the right ear with a hot iron; ant for the fecond offence, is terneed a rogue of the feront degree, and, if above 18 years of age, ordered to be execured as a flun.

ROFIAN (Peter de), Chevalicr de Gié, and marfo:l wf lirance, better known by the name of \(M_{a}\) mal de Gre', was the fon of Louis de Rohan, the fintt of the rame, lord of Guémené and Montauban, and defeended of one of the mott ancient and moft illuftrions Kianilies of the kingdom. The family of Rohan, before the Revolution, held the ank of privece in France
in confequence of deriving its origin from the firit fo. vereigns of Brittany, and clearly admitted by the dukes of Brittany thenfelves in the flates general of that province held in 1088 . The houfe of Rohan had ftill another advantase, which was common to it with very few families, cven the moft diftinguifod among the princes, namely, that inftead of having been agorandifed by the wealh procured from alliances, it had held in itfelf for feven centuries the largeft poffeffions of any family in the kingdom.

One of the molt diftinguifhed branches of this family was I'eter, the fubject of the prefent article. Lous XI. rewarded his bravery with the ttaff of marthal of France in \(1+75\). He was one of the four lords who governed the kingdom during the indifpofition of that prince at Chinon in \({ }^{1} 48\). Two years afterwards he oppofed the attacks of the archduke of Auftria upon Picardy. He commanded the san-guard at the battle of Fornoue in 1495, and fignalized himfelf much in that engagement. His bravery procured him the countenance and confidence of Louis XII. who appointed him his prime counfellor, and gencral of the army in Italy; but thefe advantages he loft, by incurring the difpleafure of Anne of Brittany the queen.

The marfial had topped fome of her equipage on the road to Nantz; for which that vindictive princefs prevailed on her hufband to enter into a procefs againft him before the parliament of Touloufe, at that time the moft rigorous and fevere in the kingdom. He was on the 15 th of February 1,06 found guilty, banifhed from the court, and deprived of the privileges and emoluments of his office for five years. The expence of this profecution amounted to more than 31,000 livres, and it did no honour either to the king or the queen. If indeed it be true, that the queen was never fo much delighted as with the humiliation of her encmies, fhe had good reafon to be fatisfied here. John of Authon, who hatk entered into a pretty full detail of this affair, reports that Gié, being removed to the Chateau de Dreux, became an object of ridicule to the witneffes who had fworn againtt him. He wore a long white beard, and, qquite full of the thoughts of his difgrace, took it on one occafion in his hands and covered his face with it. An ape, belonging to Alain d'Albret, count of Dreux, jumped from a bed where his mafter was repoling himfelf, and attacked the beard of Gie, who, with fome diffculty, extricated himfelf. This fcene not only occafioned much laughter to the whole company who were prefent, but likewife became inftantly the fubject of the farces and mummeries which were then acting in France. Even the febool-boys made a reprefentation of it, where, alluding to the name of the queen, they faid, that there was a marfhal who wifhed to fhoe an als (un ane), but that he received fuch a blow with the foot, as threw him over the wall into the garden. Marefehal de Gié died at Paris, the 22d A. pril \({ }^{1} 5^{\prime 3}\), perfectly difgufted with courts and grandeur.

Rohan (Henry duke of), peer of France, and prince of Leon, was born at the Chateau de Bkin in Brittany in 1579. Henry IV. under whofe eyes he gave diftinguifhed proofe of his bravery at the fiege of Amiens, when only 16 years of age, loved him with as much affection as if he had been his own fon. After the death of Henry, he beeame chief of the Caivinilts
and died of his wounds the \(13^{\text {th }}\) of April following, at

1an. in France; and was equally formidable for his genius as his fword. In defence of the civil and religious rights of his party, he maintained three wars againt Louig XIII. The frit, which terminated to the advantage of the Proteitants, broke ont when that prince wifhed to eftabhif the Romif relivion in Le Bearn: the fecond, becanfe of the fiege which Cardinal De Richlieu canfed to be laid to Rochelle: and the third, when that place was befleged a fecond time. The confequences of this war are fufficiently known: Rochelle furrendered : and the duke de Rohan perceiving, that after the taking of this place, the majority of his party were endeavouring to make up matters with the court, fucceeded in procuring for them a gereral peace in 1629 , upon very honourable and advantageous terms. The only facrifice of importance which the Huguenots were nbliged to make, was their fortifications; which put it out of their power to renew the war. Some factious perfons, diffatisfied with feeing their fortreffes fall into their enemies hands, were ready to accufe their general of having fold them. This great man, undeferving of fuch odious ingratitude, prefented his brealt to thefe enraged malcontents, and faid, "Strike, ftrike! I wifh to die by your hands, after I have hazarded my life in your fervice." Thre peace of 1629 having extinguilted the flame of civil war, the duke de Rohan, no longer of ufe to his party, and becone difagrecable at court, retired to Verice. There is a very particular anecdote of him, extracted from the Memoirs of the duchefs of Rohan, Nargaret of Bethune, daughter of the fanous Sully. Whilf the duke de Rohan was at Venice, a propofal was made to him from the Porte, that for 200,000 crowns, and an annual tribute of 20,000, the Grand Signior would give him the ifland of Cyprus, and fully invelt him with the dignity and prerogatives of king. The duke was warmly inclined to comply with this propofal, and to fettle in the inand the Proteftant families of France and Germany. He negrociated this bufinefs at the Porte by means of the intervention of the patriarch Cyril, with whom he had much correfpondence ; but different circumitances, and in particular the death of the patriarch, occurred to break off the treaty. The republic of Venice chofe Rohan for their commander in chief againft the Iniperialits ; but Louis XIII. took him from the Venctians, and fent him ambaffador into Swiffertand, and into the Grifons. He wihhed to affit thefe people in bringing back La Valteline under their obedience, the revolt of which the Spaniards and Imperialifts encouraged. Rohar, being declared general of the Grifons, after many victories, drove the German and Spanifh troops entirely from La Valteline in 1633. He defeated the Spaniards again in 1636 at the banks of the lake of Corme. France, not thinking it proper to withdraw her troops, the Grifons rofe up in arms, and the duke de Rohan, not fatisfied with the conduct of the court, entered into a fpecial treaty with them the 28 th March 1637. This hero, fearing the refentment of cardinal de Richlieu, retired to Geneva, with a view to join his friend the duke of Saxe-Weimar, who wifhed him to undertake the command of his army, then ready to engage the Imperialifs near Rhinfield. Although he declined this honour, yet he took the command of the regiment of Naffau, with which he threw the enemry into confufion; but was himelf wounded, February 28. 1683 ,
the age of 59. He was interred May 27th, in the church of St Pierre in Geneva, where there is a magnificent monument of marble erected to his memory, having on it the moft illuftrious actions of his life. The duke de Rohan was one of the greateft generals of his time, equal to the princes of Orange, and capable, like them, of fettling a commonwealth; but more zealous than they for religion, or at leaft appearing to be fo. He was vigilant and indefatigable, not allowing himfelf any pleafures which might take of his attention from lis neceffary employments, and well qualified for being the head of a party ; a poft very dificult to re. tain, and in which he had to fear equally from his enemiss and his friends. It is in this lighe that Voltaire has viewed this illuttrous chavacter, when he compofed the following verfe:

> Avec tous les talens le Ciel l'avoit fait naitre: Il ugit en Heros; en Sage il corrivit.
> Il fut méme srand bosme en combattont fon M1uitres Et plus grand larfqu'il le fervit.

His military virtues were much heightened by the fweetnefs of his difpofition, his affable and courteous manners, and by a generofity which had few examples. Neither ambition, pride, nor a view of gain, could ever be traced in his character. He was wont to fay, that "s true glory and a zeal for the public good never dwele where felfointeref reigned." Rohan had alwass a particular regard for Henry the Fourth: "Truly (faid he, fometimes after the death of that prince) when I think of him, my heart is ready to break. A wound received in his prefence would have afforded me more fatisfaction than now to gain a battle. I would have valued an encomium from him in this art, of which he was the greateft mafter of his time, more than than the united praifes of all the commanders now living." He wrote feveral interefting performances:-1. The Interefts of Princes, printed at Cologne in 1666 , in 12 mo : in which work he fully exanines the public interefts of all the princes of Europe. 2. The Perfect General, or an abridgement of the wars from Cafar's Commen. taries, in \(12 m 0\). In this he makes it appear, that a knowledge of the tactics of the ancients might be of nuch ufe to the maderns. 3. A Treatife on the Corruption of the ancient Militia. 4. A Treatife on the Government of the Thirteen Provinces. 5. Memoirs; the beft edition of which is in 2 rols 12 mo . They contain the hiftory of France from 1610 to 1629 . 6. A Collection of fome Political Difcourfes on State Affairs, from 1612 to \(1629,8 v o\), Paris, \(1644,1693,1755\); with the Memoirs and Letters of Henry Duke de Ro. han relative to the war of La Valteline, 3 vols \(12 \mathrm{mog}_{3}\) Geneva, 1757 . I'his was the firft edition which appeared of thefe curious memoirs: We owe it to the great attention and diligence of M. le Baron de Zurlauben, who publifhed them from different authentic. mauuferipts. He likewife ornamented this edition with geographical, hittorical, and genealogical notrs, and a preface, which contains an abridged, but highly interelting life, of the duke de Rohan, author of the memoirs. The abbe Pérau has alfo written a life of him, which occupies. the 2 t it and 22 d volunes of the Filtory of the Illuftrious Men of France. Some want of firit might bs excufed in the detail of wars finihed upwards of 140

Pohavit years ago : ret the memoirs of the duke ce Rolan atill II Wrill. afford conliderable pleafure in the perufal. He tells his toory with humour, with finficient exactnefs, and in fuch a flyle as procures the confidence of the reader.

ROITAUI.T' (James), a celebrated Cartclian phoIofopher, was the fon of a merchant of Amiens, where lie was horn in 9620 . He became well f:silhed in the mathematics, and zanght them it Paris, where he became acquainted with M. Clerfelier, an advocate, who gave him his daughter in marriage. Rohault alr,s taught phitofophy in the fame city with uncommon applauke. Ile there improved the arts, and gave excellent lectures to the aatifts and workmen. He died at Paris in 1675 . He wrote, in French, I. A 'l'reatife on Natural Philofophy. 2. The Elements of the Mathematics. 3. A Prentife on Mechanies, which is very curions. f. Philofophical Converfations; and other wolks. Ilis Phylices have been traulated iuto Latio, by Dr Samucl Clarse, with notes, in which the Cantefian curors are correted upon the Newtunian fyltem.

ROLANIDRA, in botany : A genus of the polygamia fegregata order, behousint; to the fyugenelia clars of plants; and in the natural method ranking under the 49th order, Compnfite. The cummon caly \(x\) confifts of dittinet fof fuli, between cach of which are fhort /gurme, the whole forming a round head. 'The partial calyx is bivalyed. 'The corolla is fmall and funnel-haped, the tule frallas a threarl, the lacinie fhort and acute. The flamina are Eve; the flyle hitid. It has no other feed woffel except the partial calyx, which eontains a long thre-fided feed. Of this there is only one fpecies, vi\%. the Argentea; a native of the Weft Indics, and found in copres and wafte lards.

ROLL, in manufactorics, fomething wound and folded up in a cylindrical form.

Few itufs are made up in rolls, except fatins, yawfes, and erapes; which are apt to break, and take phaits not eafy to he got ont, if folded otherwife. Rib)lome, laces, gallone, and paduas of all kinds, are alio thus roillecl.

A rull of tobaeco, is tobaceo in the leaf, twifted on the inill, and wound twift over twith about a flick or roller. A great deal of tobacco is fold in America in rolls of various weights; and it is not till its arrival in Encland, Spain, France, and Holland, that it is cut.

A roll of parchment, properly denotes the cquantity of fo flins.

The ancierts made all their books up in the fonn of rolls; and in Cicerv's time the liluraries confifed wholly of fuch rolls.

Roll, in law, fignifies a fchedule or parehment which may le rolled up by the hand into the form of a pipe.

In thefe fchecules of parchment, all the pleadings, memerials, and afts of court, are entered and filed by the proper officer; which being done, they become records of the court. Of thefe there are in the exchequer feveral kinds, as the great wardrobe roll, the cofferer's roll, the fulfidy-roll, \&c.

Roll is alfo ufed for a lita of the names of perfons of the fame condition, or of thofe who have entered int, the fame engagement. Thus a court-roll of a manor, is that in which the namte, rente, and fervices, of each senant are copried and ctrovitch.

Colvestiead Rorx, a roll in the two temples, in which every bencher is taxed yearly at 2 s . every barrifter at is 6 d . and evety gentleman under the har at 1 s . to the cook and other officers of the houfe, in confideration of a diuner of calves.heads provided in Eatter-tem.

Muffer-Rour, that in which are entered the foldiers of every troop, company, regiment, sec. As foon as a foldier's name is writtesa down on the roll, it is death for him to defert.

Robrs-Offie, is an office in Chancery-lane, London, appointed for the cufiody of the rolls and records in chaseery.

Mafler of the Rouls. Sce Master of the Rolls.
Rider-Rous, a fchecule of parehment frequently fewed or added to fome part of a roll or record.

Roiss of Partoment, are the manufeript regiflers or rulls of the proceedings of our ancient parliaments. whith before the invention of printing were all engrofsed on parchment, and prochaimed openly in every county. In thefe rolls are alfo contained a great many decitions of difticult points of law, which were frequently in former times referred to the decifion of that high court.

Role, or Roller, is alfo a piece of wood, iron, brafs, \&c. of a cylindrical form, wfed in the conifuction of leveral machints, and in feveral works and manufactures.

Thus in the glafs manufacture they have a runningroll, which is a thick cylinder of calt brafs, which ferves to conduct the melted glafs to the end of the table ous which larre looking-glaffes, \&ce. are caft.

Founders alfo ule a roll to work the fand which they ufe in making their mothls.

The preffes called calendars, as ferving to calendar ftuffs withal, confilt, among other effential parts, of two rollers. It is alfo between the two rollers that the waves are given to filks, moliairs, and other fluff proper to be talbied.

Impreflions from copper-plates are alio taken by paffing the plate and paper between two rollers. See Rollent-prefs Printing.

Rolls, in flating-mills, \&ic. are two iron inftruments of a cylindical furm, which ferve to draw or itreteh out plates of gold, filver, and other metals.

Ronlis. in fugar-works, are two large iron barrels which ferre to bruife the canes, and to exprefs the juice. 'Thele are caft hollow, and their cavities are hilled up with wood, the cylinders of which are properly the rollers.

ROLLER, iu furgery; a long and broad bandage, ufually of linen cloth, rolled ronud any part of the budy, to keep it in, or difpofe it to a flate of health.
ROLLI (Paul), was born at Rome in 1687. He was the fon of an architect, and a pupil of the celebrated Gravina, who ivfipired him with a tatte for learning and poetry. An intelligent and learned Englifh lord having brought him to London, intruduced him to the royal family as a maficr of the 'Tufcan language. Rolli Pemaind in England till the death of queen Caroline Wis protector, and the patronzfs of literature in general. IVe returned to Italy in 1747 , where he died in 1767 , in the 8cth year of his age, leaving behind him a very curious collection in natural hiffor, \&c. and a valuable and well choren library. His principal works firt ap-

\section*{R O L}
- 1. peared in London in 1735 , in \(8 v o\). They confift of odes in blank verfe, elegies, fongs, and other things, after the manner of Catullus. There is likewife, by him, a Collection of Epigrams, printed at Florence in 1776 , in \(8 v 0\), and preceded with his life by the abbe Fondini. What Martial faid of his own Collection may be faid of this, "That there are few good, but many indifferent or bad, pieces in it." Rolli, however, bore the character of one of the beft Italian poets of his age. During his ftay in London, he procured editions of feveral authors of his own country. The principal of thefe were, the Satires of Ariofto, the Burlefque Works of Berni, Varchi, \&cc. 2 vols, in 8 vo , which poffers confiderable merit. 'The Decameron of Boccace, 1727 , in 4 to and folio ; in which he has faithfully copied the celcbrated and valuable edition publifned by the funtes in 1527 : and, lafly, of the elegant Lucretia of Marchetti, which, after the manufcript was reviled, was printed at London in 1717, in 8 vo, through the influence and attention of Rolli. This edition is beautiful ; but the work is thought of pernicious tendency. There are likewife, by him, tranlations into Italian verfe of the Paradife Lolt of Milton, printed at London in folio in 1735 ; and of the Odes of A nacreon, London \(\mathbf{I}_{729}\), in 8 vo.

ROLLIN (Charles), a jufly celebrated French writer, was the fon of a cutler at Paris, and was born there on the 30 th of January \(\mathbf{i} 661\). He ftudied at the cullege 1)u Pleffis, in which he obtained a burfary through the intereft of a Benedictine monk of the White Mantle, whom he had ferved at table, and who difoovered in him fome marks of genius. Here he acquired the regard of M. Gobinet, principal of that college, who had a particular efteem for him. After having tudied humanity and philofophy at the college of Du Pleflis, he applied to divinity three years at the Sorbonne; but he did not profecute this fudy, and never rofe in the church higher than to the rank of a tonfured prieft. He afterwards became profeflor of rhetoric in the fame coliege; and, in 1688, fucceeded Horfan, his mafter, as profeffor of cloquence, in the royal college. No man ever exercifed the functions of it with greater eclat : he often made Latin orations, to celehrate the memorable events of the times; and frequently accompanied them with poems, which were sead and efteemed by every body. In ligy, he was chofen rector of the univerfity; and continued in that office two years, which was then a great mark of diflin?ton. By virtue of his ofice, he fpoke the annual panegyric upon Louis XIV. He made many very ufeful regulations in the univerfity; and particularly revived the ftudy of the Greek language, which was then much neglected. He fubfituted academical exerciies in the place of tragedies; and introduced the practice which had been formerly obferved, of caufing the ftudents to get by heart pafages of Scripture. He was a man of indefatigable attention; and trained innumerable perfons, who did honour to the church, the fate, and the army. The firl prefident Portail was pleafed one day to reproach Rollin in a jocular ftrain, as if he exceeded even himfelf in doing bufinefs: to whom Rollin replied, with that plainefs and fircerity which was natural to him, "It becones you well, Sir, so reproach me with this; it is this habit of labour in me which has diftinguifhed you in the place of Vos. XVI. Part I.
advocate-general, which has raifed rou to that of firlt
Rnlin. prefident : you owe the greatnefs of your fortune to me."

Upon the expiration of the rectorfhip, cardinal Noailles engaged him to fuperintend the ftudies of his nephews, who were in the college of Laon ; and in this office he was agreeably employed, when, in 1699 , he was with great reluctance made coadjutor to the principal of the college of Beauvais. This college was then a kind of defert, inhabited hy very few fludents, and without any manner of difcipline : but Rollin's great reputation and induftry foon re-peopled it, and made it that flourihing fociety it has ever fince continued. In this intuation he continued till 1712; when the war between the \(j\)-fuits and the Janfenifts drawing towards a crifis, he fell a facrifice to the prevalence of the former. Father le Tellier, the king's confeffor, a furious agent of the Jefuits, infuled into his mafter prejudices againt Rollin, whofe connections with cardinal de Noailles would alone have fufficed to have made him a Janfenift ; and on this account he loft his fhare in the principality of Beauvais. No man, however, could have loit lefs in this than Roilin, who had every thing left him that was neceffary to make him happy ; retirement, books, and enough to live on. He now began to be employed upon Quincilian ; an author he juitly valued, and faw neglected not without uneafinefs. He retrenched in him whatever he thought rather curious than ufful for the intruction of youth; he placed fummaries or contents at the head of each clapter; and he accompanied the text with fort fe lect notes. His edition appeared in 5715 , in 2 vols 12 mo, with an elegant preface, fetting forth his method and views.

In tyio, the univerfity of Paris, willing to have a head fuitable to the importance of their interefts in the then critical conjuncture of affairs, chofe Rollin again rector: but he was difplaced in about two months by a lettre de cachet. The univerfity had prefented to the parliancent a petitiun, in which it protefted againft taking any part in the adjuftment of the late difputes; and their being congratulated in a public oration by Rollin on this flep, occationcd the letter which ordered them to choofe a fector of more moderation. Whatever the univerfity might fuffer by the removal of Rollin, the public was probably a gainer ; for he now ap. plied himnelf to compofe his treatife upon the Manner of Studsing and Tcaching the Belles Lettres, which was publifhed, two volumes in 1726 , and two more in \(1728,8 \mathrm{vo}\).

This work has been jufly efteemed for the fentiments of religion which auinate its author, whofe zeal for the public good prompted him to felect the choiceft paffages of Greek and Latin authors. The fyle is fufficiently clegant, but the language on fome eccations is not renarkable for delicacy; and in the book altogether there is neither much order nor depth. The author has indeed fpoken of common things agreeably, and has fpoken as an orator on fubjects which demanded the inveftigation of the philofopher. One can fararely reduce any thing in him to principles.- For example, the three fpecies of eloquence: the fimple, the temperate, and the fuhlime, can fcarcely be underfood from him when we read that the one refembles a frugal table; the fecond a beautiful ruin, with green wood growing

Lulfin. no its banks; and the third thunder and an imperuous river which overthows every thing that oppofes it.

The work, however, lias been exccedingly fucceesful, and jufly \([0\); and its fuccefs encouraged its author to undertake another work of equal ufe and entertainment; his Bifloire Ancienne, Sec. of "Ancient lliftory of the E. Fyptans, Carthaginiany, Alfyrians, Babylonians, Medes and Perlians, Macedonians, and Greeks," which he finified in 13 vols 8 vo. and publifhed between 1730 and 1738. M. Voltaire, after having obferved that Rollin was " the firt member of the univerlity of Paris who wrote Freuch with dignity and correctuef," fays of this work, that "though the latt solumes, which were written in too great a hasry, are not equal to the frift, it is neverthelefs the beft compilation that has yet ap. peared in any language: becaufe it is feldom that com. pikrs are eloquent, and Rollin was remarkably fo." Lhis is perhaps faying too much. There are indeed in this work fome paffages very well handled; but they are only fuch as he had taken from the ancient authors, in doing juftice to whom he was always very happy. The reader will eafly difcover in this work the lame attachment to religion, the fane defire for the public good, and the fame love of virtuc, which appears, in that on the Bellics Lettres. But it is to be lamented that his chronolugy is neither exact nor correfponding; that he flates facts inaccuratcly; that he has not fufficiently examined the exaggerations of ancient liftorians; that he often intertupts the moft folemn narrations with mere trifles; that lis ftyle is not uniform ; and this want of uniformity arifes from his borrowing from writers of a modern date 40 or 50 pages at a time. Nothing can be more noble and more refined than his reflections; but they are frewed with too fparing a hand, and want that lively and laconic turn on account of which the hiftorians of antiquity are read with fo much pleafure. He tranfgrefles the rule which he himfelf had eftablifked in his Trreatife on Studies. "The precepts which have a refpest to manners (fays he) ought, in order to make an impreflion, to be thort and lively, and pointed like a dart. "Ilhat is the molt certain method of making them enter and remain on the mind." There is a wifible negligence in his diction with regard to grammatical cuttom, and the clooice of his expreffions, which he does not choofe at all times with fufficient talle, al. though, on the whole, he writes well, and has preferved himfelf free from many of the faults of modern authors. While the latt volumes of his ancient hiftory were printing, he publifhed the firt of his Roman Hiftory; which he lived to carry on, through the eighth and into part of the ninth, so the war againft the Cimbri, about 70 years before the battle of Actium. Mr Crevier, the worthy difciple of Rollin, continued the hiltory to the battle of Actium, which clofes the tenth volume; and has fince completed the original plan of Rollin in 16 vol3 12 mo , which was to bring it down from the foundation of the city to the reign of Conflantine the Great. This hinory had not fo great fuccels as his Ancient Hiftory had. Indeed it is rather a moral and hiftorical difcourfe than a formal hiftory; for the author does little more than point out fome more remarkable events, while he dwells with a fort of prolixity on thofe parts which furnim him a free field for moralizing. It is al. ternately diffufe and barren; and the greatelt advantage of the work is, that there are feveral pallages from \(1^{\circ}\).

Livy tranfate 1 with great elegance into French. He alfo publifhed \(A\) Latin Tranfation of moit of the Theological Writings relative to the difputes of the Times in which he lived. Rollin was one of the molt zealous adlerents of deacon Pâris; and before the inclofure of the cemetery of St Medard, this diftinguifhed character might lave been often feen praying at the foot of his tomb. 'This he confeffes in lis Letters. He pub. lifhed alfo Lefter Pieces; containing different Letters, Latin Harangues, Difcoarfes, Complimentary Addreffes, Ex. Paris 1771,2 vols. 12 mo . A collection which might have been contained in one volume, by keepin. in only the beft pieces. It is notwithtanding valuable for fome good pieces which it contains, for the favour able opinion which it exhibit6 of folid probity, found reafon, and the zeal of the author for the progrefs of virtue and the prefervation of talte. The Latin of Rollin is very correct, and much after the Ciceronian ftyle, and embellifhed with molt judicions thonghts and agreeable images. Full of the reading of the ancients, from which he brought quotations with as much propriety as plenty, he exprefled himfelf with much firit and excellence. His Latin poems deferve the fame culo. gium.

This excellent perfon died in \(17+1\). He had been named by the king a member of the academy of infcriptions and belles lettres in 1701 : but as he hal not then brought the college of Beauvais into repute, and found he had more bufinefs upon his hands than was coufifent with a decent attendance upon the funetions of an academician, he begged the privileges of a veteran, which were honourably granted him. Neverthelefs, he maintained his connections with the academy, atteuded their affemblies as often as he could, laid the plan of his ancient hiftory before them, and demanded an academician for lis cenfor. Rollin was a man of an admirable compofition ; vcry ingenious, confummate in polite learning, of rigid morals, and eminently pious. He was rather too religious; his religion carrying him into the territories of fupertition; and he wanted nothing but a mixture of the philofophic in his nature to make him a very perfect character. Nothing could be more benign, more pacific, more fweet, more moderate, than Rollin's temper. He fhowed, it mult be owned, forme zeal for the caufe of Janfenifm; but in all other refpects he was exceedingly moderate. The celcbrated poet Roufleau conceived fuch a veneration for lim, that he came out of banilhment incognito to Paris, on purpofe to vifit him and pay his refpects to him. He looked upon his hiftories, not only as the beit models of the hiftoric kind, but as a complete fyftem of politics and morals, and a moft inftructive fchool for princes as well as fubjects to learn all their dutes in.

Inftead of bluhing at the lownefs of his birth, Rollin on no occafion hefitated to fpeak of it. "It is from the Cyclops's Thop (fays he, in a Latin epigram to one of his friends, to whom he had fent a fmall fword) that I have taken my flight towards Parnaffus." He was not, however, without fome fhare of vanity, efpecially at hearing mention made of his writings, of which the well-timed praifes of his adherents had given him a very high opinion. He fpoke without any diffimulation what he thought; and his opinions were lefs the cffect of prefumption than of opennefs of heart. He was one of thofe men who are vain without any mixture of

\section*{R O L [ 323 ] R O M}
ing, pride. Rollin froke pretty well ; but he had a greater tisfaction might be derived from his works than from his converfation. His name became fanous throughout Europe; feveral princes fought the honour of his friendthip- The duke of Cumbertand and the princeroyal of Pruffia (afterwards king) were among the lift of his admirers. This monarch honoured him with feveral letters: in one of which he pays him the following compliment, "Men of your claratter are fit companions for kings." As to the literary merit of this author, it was, we fufpect, ton much extolled in his own time, and has been two much undervalued in ours.

ROLLING, the motion by wich a hip rocks from fide to fide like a cradle, occafioned by the agisation of the waves.

Rolling, therefore, is a fort of revolution about an imaginary axis paffing through the centre of gravity of a thip: fo that the nearer the centre of gravity is to the ked, the more violent will be the rolling motion; becaufe the centre about which the vibrations are made is placed fo low in the bottom, that the refillance made by the keel to the volume of water which it difplaces in rolling, bears very little proportion to the force of the vibration above tlye centre of gravity, the racius of which extends as high as the matt-heats.

But if the centre of gravity is placed higher above the keet, the radius of ribration will not only be diminifhed, but an additional force to oppofe the motion of rolling will be communicated to that part of the thip's bottom which is below the centre of gravity.

So far as relates to the effect of rolling, when produced by the quality or flowage of the ballat, and to the manner by which it may be prevented, viz. a change of the quantity or difpofition of the ballaft, we thall endeavour to explain under the artiele Trim. It may, however, be neceffary to renark, that the conftruction of the fhip's bottom may alfo contribute to diminith this movement confiderally.

Many fatal difaters have happened to fhips arifing from a viodent rolling; as the lefs of the mafts, loofer.sing of the cannon, and Araining violently on the decks and fides, fo as to weaken the fhip to a great degree. See Pitching.

\section*{Rolling-Prefs. See Rolling. Press.}

Rolling-Tackle, a pulley or purchafe faltened to that part of a fail-yard which is to the windward of the maft, in order to confine the yard clofe down to the leeward when the fail is furled.

It is ufed to prevent the yard from having a great friction againft the rraft in a high fea, which would be equally pernicions to both.

ROLLO, the conqueror of Normandy, was a Norwegian duke, banifhed from his country by Harold Harfagre, who conquered Norway in 870 , on aceount of the piracies he exercifed. He firft retired with his Alet among the iflands of the Hebrides to the northweft of Scotland, whither the flower of the Norwegian novility had fled for refuge ever fince Harold hat become mafter of the whole kingdom. He was there received with open arms by thofe warriurs, who, eager for conquett and revenge, waited only for a chief to undertake fome glorious enterprife. Rollo fetting thimfelf at their head, and feeing his power formidable, Wailed towards England, which had been long as it
vere a ficld open on all fides to the violence of the northern nations. Lut the great Alfred had fome years before eftablifhed fuch order in his part of the illand, that Rollo, after feveral fruitlefs attempts, defpaired of forming there fuch a fettement as thould make him amends for the lofs of his own country. He pretended, therefore, to have had a fupernatural drean, which promifed him a glorious fortune in France, and which ferved at leaft to fupport the ardour of his followers. The weaknefs of the government in that kingdom, and the confufion in which it was involved, were fill more perfualive reafons to infure them of fuccefs. Having therefore failed up the Seine to Rouen, he immediately took that capital of the province, then called Neuflia, and making it his magazine of arms, he advanced up to Paris, to which he laid fiege in form. This war at length ended in the entire ceffron of Neuftria, which Charles the Simple was obliged to give up to Rollo and his Normans in order to purchafe a peace. Rollo received it in perpetuity to himfelf and his pofterity, as a feudal duchy dependant on the crown of France. A defcription of the interview between Charles and this new duke gives us a curieus picture of the manners of thefe Normans (as they were called by foreigners) ; for the latter would not take the oath of fealty to his fovercign lord any other way than by placing his hands within thofe of the king; and abolutely refufed to kifs his fect, as cuftom then required. It was with great difficuley he was prevailed on to let one of his warriors perform this ceremony in lis llead; *it the officer to whom Rullo deputed this fervice, fuddenly raifed the \(\mathrm{king}^{2}\) s fuot fo high, that he overturned him on his back; a piece of rudenels which was only laughed at: to fuch a degree were the Normans feared, and Charles defpifed.

Soon after, Rollo was perfuaded to embrace Chrintianity, and he was baptized with much ceremony by the archimhop of Ronen in the cathedral of that city. As foon as he faw himfelf in full pofftion of Normandy, he exhibited fuch virtues as rendered the province happy, and deferved to make his former outrages forgotten. Religious, wife, and liberal, this captain of pirates became, after Alfred, the greateft and molt humane prince of his time.

ROMAN, in general, fomething belonging to the city of Rome. See Rome.

King of the ROMANS, in modern liftory, is a prince elected to be fucceffor to the raigning emperor of Gemany.

ROMANCE, in matters of literature, a fabulous reJation of certain adventures defigned for the entertainment and inftruction of the readers, and difiering from the novel as it always exhibits actions great, dangerous, and generally extravagant. Many authors of the firft name have written on the ancient romance. It has exercifed the pen of Hurd, of Warburton, and of forne ladies, who have not thought it any derogation to the fenfibility of their fex to mite antiquarian refearela with the cultivation of the lelles liftres. We have not, however, feen anywhere fo concife, juft, and elegant an account of the origin and progrefs of romances as in D'Ifracli's Curiofities of Literature. "Romance (fays this writer) has been elegantly defined the offspring of fiction and love: Men of learning have amufed themfelves with tracing the epocha of romances. In this
refearch

\section*{R O M \\ \(\left[\begin{array}{ll}324\end{array}\right]\) \\ R O M}

\section*{Romane}

\section*{\(\rightarrow+\)} sefearels they have difflayed more ingenuity than judge. nent ; and fome have fancied that it may have exifted as far back as the time of Ariftotle; Dearchus, one of his difciples, having written feveral works of this amufing fpecics.
"Let us, however, be fatisfied in deriving it from the Theagenes and Chariclea of Heliodorus, a bithop who lived in the 4 th century, and whofe work has been lately t:annated. This elegant prelate was the Grecian Fenelan (A). Beautiful as thefe compofitions are when the imagination of the writer is fufficiently flored with a.ccurate obfervations on human nature, in their birth, like many of the fine arts, they found in the zealots of acligion men who opporfed their progrefs. However Heliodorus may have delighted thofe who were not infenfible to the felicities of a fine imagination, and to the cuchauting degancies of fylle, he raifed himfelf, emong his hrother ecclefiatlics, enemies ; who at length to far prevaited, that it was declared by a fynod, that his performance was dangerous to young perfons, and that if the author did not fupprefs it, he mult retign his D:ifroprick. We are told he preferred his romance to his bihoprick. Even fo late as in Racinc's time, it was held a crime to perufe thefe unhallowed pages. He informs us, that the firlt effulions of his mufe were in confequence of ftudying that ancient romance, which his mafter obferving him to devour with the keennefs of a fanifhed man, he fratched it from his hands and flung it in the fre; a fecond copy experienced the fame fate. What could Racine do? He bought a third, and took the precaution of dcrouring it fecre:', till he got it by heart; after which he offied it to this mater with a frmile to burn, if he ehofe, like the others.

The decifion of thefe bigots was founded in their opinion of the immorality of fuch works. They alleged, that the writers paint too warnly to the imagination, addrefs themfelves too forcibly to the pafions; and in general, by the frecdom of their reprefentations, hover on the borders of indecency. This cenfure is certainly well-founded. Many of the old romances, and even of the dramas, acted in Scotland two centuries ago, are fuch as common proftitutes would in this age think indecent. But we are at prefent concerncd with the origin of romance.
"The leamed Fleury thirks that they were not known till the 12 th century, and gives as their original the hiftory of the dukes of Normandy. Verdier, whofe opinion is of no great weight, fays the invention of romance was owing to the Normans of France; and that thefe fictions being originally written in the old Norman language, they were intitled Normances; the name was afterwards altered to that of Remances. The Spaniards, who borrowed then from the French, called them Romunzes, which alfo did the Italians.
"Dom Rivet, one of the learned affociates of the con-
gregation of St Maur, authors of the Literary Hiftory of France, fixes their origin in the 10 th century. He fays, that the moft ancient romance known was one which appeared in the middle of that century, under the title of Pbilomena, or the Beloved. This romance contains the pretended expleits of Charlemarne before Narbonne. At Touloufe, he tells us, they have preferved a copy of the Philomena in its original language; that is to fay, the Romaunt or polihed; fuch as was then fpoken at currt. They preferred this language to the Latin, which was then that of the cemmon people, but vitiated with their corruptions.
"So far have we travelled on the road of conjecture: we fhall now turn into the path of fact. It is certain that thefe conpolitions derive their name from the language in which they were lift writen. Ablé Itaild has given us the character of the earlieft romanees, which we frall tranferibe; for to add to what is well ex. prefed, however it may pleafe the sanity of a writer, feidom tends to the gratification of the reader.
- The firt romances were a monttrous affemblage of hiftories, in which trath and fiction were equally blendod, but all without probability; a compolition of amorous adventures, and all the extravagant ideas of chivalry. The incidents are infinitely multiplied; defttute of comection, of order, and art. Thefe are the ancient and miferable romances which Cervantes, in his celebrated fatirical romance of Don Quixote, has covered with an eternal ridicule.'
"It is, however, from thefe productions rather in their improved flate, that poets of all nations have drawn their richelt inventions. The agreeable wildnefs of that fancy which characterifed the eaftern nations was caught: by the crufaders. When they returned home, they mingled in their own the cultoms of each country. The Saracens, who were men like themfelves, becaufe they were of another religion, and were therefore their enemies, were pictured under the tremendous form of \(P a y\) nim Giants. The credulous reader of that day followed with trembling anxiety the Rocd.crofs hivisht. It was thus that fiction embellifhed religion, and religion invigorated fiction. Such incidents have ealivened the cantos of Ariofto, and adorned the epic of Taffo. Spenfer is the child of their creation; and it is certain that we are indected to them for fome of the bold and ftrong touches of Milton."

Ocher circumftances however have bcen affigned as the fources of thefe extravagant fictions. "Cafites were erected to repulfe the vagrantattacks of the Normans; and in France (from the year 768 to 987 ) thefe places became fatal to the public repofe. 'I he petty defpots who raifed thefe caftes, pillaged whocver pafficd, and carried off the females who pleafed them. Rapine, of every kind, was the privilege of Lords! Mezeray ob. ferves, that it is from thefe circumflances romancers have
(A) An ingenious and learned friend inquires, "Is not the romance of the Golden Afs, by Apuleius, to be confidered as an earlier fpecimen than that of Heliodorus?" To this our author has no objection ; but he would not warrant any romance to be the firft that cver was written. It is thus that fome writers, more learned than fagacious, have difcovered the firt inventor of epiftolary correfpondence. A lady receives this honour: fuch leaning is defperate! From the Afiatic Refearches and other publications on Oriental literature, we are led to believe, that the native country of romance is the eaft; where it feems to have flourifhed in all its extravagant grandeur from time immemorial,
"De Saint Foix, in his Hiftorical Eflays on this fubject, thus exprefles himfelf: 'Women and girls were not in greater fecurity when they paffed by abbeys. The monks fuftained an affault rather than relinquifh their prey: if they faw themfelves lofing ground, they bronght to their walls the relies of fome faint. Then it generelly happened that the affailants, feized with awful vencration, retired, and dared not to purfue their vengeance. This is the origin of the enchanters, of the enchantmeuts, and of the enchanted caftles, deferibed in romances.'
" To thefe may be added what the author of Northern Antiquities, Vol. I. p. \(=43\), writes, that 'as the walls of the caltles ran wind: ing round them, they often called them by a name which figniied ferpents or dragners; and in thefe were commonly fecured the women and young maids of ditinction, who were feldom fate at a time when fo many bold warriors were rambling up and down in fearch of adventures. It was this cultom which gave oecafion to ancient romancers, who knew not how to deferibe any thing fimply, to invent fo many fables concerning prineffes of great beauty, guarded by dragons.'
"The Italian remances of the 1 thth century were fpread abroad in great numbers. They formed the polite literature of the day. But if it is not permitted to authors freely to exprefs their ideas, and give full play to the imagination, thefe works mult never be placed in the Atudy of the rigid moralift. They indeed puthed their indelicacy to the verge of grofluefs, and feemed tather to feck than to avoid fcenes which a modern would blufh to defcibe. They (to eniploy the expreffion of one of their authors) were not afhaned to name what God had created. Cinthio, Bandello, and others, but chiefly Boccacio, rendered libertinifin agreeable, by the fafcinating charms of a polifhed ftyle, and a luxuriant imagination.
"' This however mult not be admitted as an apology for immoral works ; for poiton is till poifon, even when it is delicious. Such works were, and ftill continue to be, the favourites of a nation which is fligmatifed for being prone to illicit pleafures and impure amous. They are ftill curious in their editions, and are not par\&monious in their price for what they call an uncaltrated copy: There are nany Italians, not literary men, who are in poffeffion of an ample library of thefe old novelifts.
"If we pafs over the moral irregularities of thefe romances, we may difeover a rich vein of invention, which only requires to be releafed from that rubbif which disfigures it to become of an invaluable price. The Decamerons, the Hecatommiti, and the Novellas of thefe writers, made no inconfiderable figure in the little library of our Shakefpeare. Chaucer is a notorious imitator and lover of them; his Knight's Tale is little more than a paraphrafe of Boccacio's Tefeoide. Fontaine has eaught all their charms with all their licentioufnefs. From fuch works, thefe great poets, and many of their contemporaries, frequently borrowed their plots; not uncommonly kindled at their flame the ardour of their genius; but bending too fubmiffively to their own peculiar tafte, or that of their age, in extracting the ore, they have not purifed it of the alloy.
romances of the laft century. They were then carried to a point of perfection, which as romances they cannot exceed. To this the Altrea of D'Urfé greatly contributcd. It was followed by the illuftrions Baffa, the great Cyrus, Clelia, \&c. which, though not adapted to the prefent age, gave eflebrity to their authors. Their ftyle, as well as that of the Attrea, is diffufe and infipid. Zaide (attributed by iome to Segrais, bat by Huet to Madame La Fayctte) and the prineefs of Cleves are tranflated, and though they are malterpieces of the kind, were never popular in our country, and are little adapted to its genius.
" It is not furprifing that romances have been regarded as pernicious to good feufe, morals, tafte, and literature. It was in this light they were confidered by Boileau; becaufe a few had ficceeded, a erond imitated their examples. Gombervill: and Scudery, and a few more were admired; but the fatioit diliulved the illution. This he did mott effectually by a dialogue, in which he ridicules thofe citizens of a certain diftrict, whofe characters were concealed in thefe romances, under the names of Brutus, Horace Colks, Lueretius, and Clelia. This dialogue he only read to his friends, and did not give it for a long time to the putlic, as he efteemed mademoifelle de Scudery: but when at length it was publifed, it snited all the romanee writers againlt our fatirit.
*From romances, which had now exhautted the patience of the public, fprung nuvels. They attempted to allure attention by this inviting title, and reducing their works from ten to two volumes. The name of romance difgulled ; and they fubltituted thofe of hitto ries, lives, memoirs, and adventures. In thefe worla (obferves Irail) they quited the unatural incidents, the heroic projects, the complicated and endlefs ialtrigues, and the exertion of noble paffions; heroes were not now taken from the throne, they were fought for even amongtt the loweft ranks of the people. On this fubject, I hall jult obferve, that a novel is a very dangetous poifon in the hand of a libertine; it may be a falitary medicine in that of a virtuous writer." See Novel.

ROMAGNA, a province of Italy, in the pope's teritories, bounded on the north by the Ferrarefe, or the fouth by Trifcany and the duchy of Urbino, on the eaft by the Gulf of Venice, and on the welt by the Buiognce and a part of Tufeany. It is fertile in corn, wine, oil, fine fruits, and paflures. It has alfo mines, mineral waters, and falt-works, which make its principal revenue. Ravenna is the capital temm.

ROMANIA, a province of Turkey in Europe, bounded on the north by Bulgaria, on the eaft by the Black Sea, on the fouth by the Archipelago and the fea of Marmora, and on the weit by Macedonia and Bulgaria; beiug 200 miles in length and 150 in breadth. It was formerly called Thrace, and is the principal and largeft of all the provinces the Turks poffefs in Europe. It is a fruitful country in corn and pattures, and there are mines of filvor, lead, and alum. It is divided into three great governments or fangiacates; namcly, Kirkel, of which Philipoli is the capital ; Galipoli, whofe capital is of the fame name; and Dyzantium, or Byzia, or Viza, of which Conflantinople is the capitab, The Turks befow the name

Ruman．，name of Romelia on all the territorics they polfefs in \(\underbrace{\text { R．nne．}}\) Eurnpe．

ROMANO（Giulio），a famous painter，was the difciple of Raphaed，who had fuech an affection for him， that he appointed him，with John Francis Penni，his heir．His conceptions were more extraordinary and more elevated than even thofe of his inafter，but not fo natural．He was wonderful in the choice of atti－ tudes；but did not perfecly underfand the lights and thades，and is frequently harth and nuyraceful．The folds of his draperies，fays Din Frefnoy，are neither beautiful nor great，eafy nor natural，but all extrava－ gant，like the fantaftical habits of comedians．He was， however，fupcrios to moft painters，hy his profound knowledge of antiquity；and，by converfing with the works of the mof excellent poets，particularly Homer， le made himfelf mafter of the qualifications neceffarily req̧uired in a great defigner．Juhio Romano was aifo well filled in arehitecture．He was employed by car－ dinal de Medicis，who was afterwards pope under the name of Clenens VII．；and afterwards went to Mantua， whither he was invited by Frederic Gonzaga，marquis of that city，in order to avoid his bein：jultly punifhed for his laving drawn at Rome the defigns of 20 ob－ feene plates，engraved by Mark Antony，to which A－ retinc added the fame number of fonnets．Julio Ro－ mano embellithed the city of Mantua with many of his performances both in painting and architecture；and died in that city in \(15+5\) ，at \(5+\) years of age，much regretted by the marguis，who had an extraordinary friendmip for him．

ROME，a very ancient and celebrated city of Ita－ 1），lituated on the river Tiber，in E．Long． \(13^{\circ}\) ．N． Lat． 41.45 ．once the capital of the greateft empire in the world；and famous in modern hiftory for being the centre of an eceleliaftical tyranny；by which for many ages the greatelt part of the world was held in fubjec－ tion．

Romansitc－
fiended frome E． neas．

The ancient Romans derived their origin from \(\mathbb{R}\)－ neas the Trojan hero：and though fome hiftorians pre－ tend to treat his voyage into Italy as a mere fable，yet no fufficient reafons for rejecting this account have been offered，nor has any more probable hiftory of the origin of the Roman name been given；fo that，without en－ tering into the difpute，we fhall proceed to the hiltory of Eneas and his fucceffors as they are recorded by the generality of Latin writers．

When the Greeks，by the treachery of the fons of Antenor，or by whatever other means it happened， were become matlers of Troy，F．neas with the forces under his command retired into the fortrefs of the city，
3 Enezs fie， from Trny to meure 1d2．

\section*{326 \\ R O M}
gitivee，refolving to attack them in their ftrong－holds upon the mourtain．Eneas，to avoid the hazard of being forced in his laft refuge，had recourfe to nego－ ciation；and，hy his heralds，intreated the enemy not to confrain him to a battlc．Peace was granted him， on condition that he with his followers quitted the Tro－ jan tcrritorics ：and the Grecks，on their part，promi the Greet fed not to molett him in his retreat，but to let him fafely pafs through any country within the extent of their domination．

Upon this affurance 太eneas cquipped a fleet，in or－ der to feck a fettement in fome toreign land．We are told，that at his departure he left his eldett fon Afca－ nius with the Dafylites，a people of Bithynia，who de－ fired to have him for their king；but that the young prince did not remain long with them：for when Sca－ mandrius（Attyanax），with the reft of the Hectoride whom Neoptolemus perinitted to return home from Greece，repaired to him，he put himfelf at their head， and led them back to their native country．

The Trojan having croffed the Hellefpont，arrived in the peniufula of Pallene，where he built a city，call－ ed from him 压neia，and left in it a part of that mul－ titude which had followed him．From thence he fail－ ed to Delos；and thence to Cythera，where he erected a temple to Venus．He buist another to the fame god－ defs in Zacynthus，in which illand he likewife inftitu－ ted games，called the races of Wineas and Venus：the Itatues of hoth，fays Dionyfius，are Handing to this day．In Leucas，where the＇Irojans landed，was to be feen，in the fane author＇s time，a temple erected to Ve － nus the mother of Eneas．Nor were Actium and Am． bracia without monuments that teftified his arrival in thofe places．At Dodona werc found brazen vales， upon which the name of the Trojan hero，who had made an offering of them to Jupiter，was engraven in old characters．Not far from Buthrotos，in Epirus，a Trojan camp which had efcaped the injuries of time， retained the name of Troja．All thefe antiquities，ftill fubfifting in the reign of Auguftus，were then looked upon as indifputable proofs of 灰neas＇s voyarge to Epi－ rus：＂and that he came into Italy（adds the fame Dionyfus）we have the concurrent tellimony of all the Romans；the ceremunies they obferve in their facri－ fices and fettivals bear witnefs to it；as alfo the Sibyl－ line books，the Pythian orades，and many other things which nobody can reafonably reject as invented merely for ornament．＂

The firft land of Italy which FEneas madc，after croffing the lonian fea，was cape Minerva，in lapygia； and here he went on thore．Sailing afterwards trom hence，and coafting along the fouth－ealt of Italy and the eaft and fouth fides of Sicily，he arrived with his fleet either by choice or by ftrefs of weather at the port of Drepanum in that ifland．Elymus and Egeftus，who had efcaped from Troy a little before him，had brought a Trojan colony to this place．Aneas augnented it by a good number of his followers，whom，pleafed to have found a fafe refting place after many dangers and fatiguing woyages，he willingly left＂behind him at their requeft；though certain authors pretend that he was conffrained to it by the difficulty of tranfporting them， becaufe fome Trojan women，weary of the fea，had burnt a confiderable part of his ships．

Eneas，leaving Drepanum，Iteered his courfe for I－
taly acpols the Tyrrhenian Cea. Tothe cape where he firt landed, he gave the name Palinurus, from one of his pilots who died there. The little inland of Leucafia, not far diftant, whither he failed next, got its name \(\mathrm{i}_{1}\) like manner from a daughter of Fineas's filter, who there ended her days. The port of Mifenum, the ifland of Prochyta, and the promontory of Cijeta, where he fucceflively arrived, were fo called from being the burial places, the firt of a noble Trojan his companion, the fecond of his kinfwoman, and the third of his nurfe. At length the Trojan prince and his chofen Land finimed their tedious and painful voyages on the coalt of the lince famous Latium. This was a fmall territory on the eaft fide of the river Tiber, containing a part of the prefent Campagna di Roma: Latinus was the king of it ; his capital town, Laurentum; his fubjects, a people who, till his time called Aborigines, had from him taken the name of Latins. Here, far removed from their implacable enemies the Greeks, Aneas and his followers undertook to raife a fecond 'Iroy: they fortified a camp near the mouth of the Tyber, gave it the name of Troy, and flattered themfelves with the hopes of a quiet fettlement, and a period to all their unhappy adventures.

When Aneas arrived in Italy, Latinus was engaged in a war with the Rutuli, a neighbouring people, in which he was attended but with very indifferent fuccefs, when news was brought him that a foreign army had made a defcent on his coafts, pillaged the maritime part of his dominions, and were fortifying themfelves in a camp at a fmall diftance from the fea. Hereupon he marched againft them with all his forces, hoping to oblige them to reimbark and abasdon his dominions, without meeting with any great refiftance from a band of vagabonds, as he fuppofed, or pirates, come only to feek for plunder: but finding them, as he drew near, well-armed, and regularly drawn up, he thought it advifable to forbear cngaging troops that appeared fo well difciplined; and, inftead of venturing a battle, to defire a parley. In this conference Latinus underftanding who they were, and being at the fame time ftruck with terror, and touched with compaflion for thofe brave but unfortunate men, entered into a treaty with them, and afligned them a tract of land for a fettlement, on condition that they fliould employ their arms and exert their valour in defence of his dominions, and look upon the Rutuli as a common enemy. 'This condition Eneas readily accepted;: and complied with his engagement fo faithfully, that Latinus came at length to repofe an entire confidence in the Trojan ; and in proof of it gave him Lavinia, his. daughter and only child, in marriage, fecuring to him by that means the fuccefion to the throne of Latium. EEneas, to teltify lis gratitude to Latinus, and affec. tion for Lavinia, gave her name to the camp he had pitched; and inftead of Troy called it Lavinium. The Trojans followed the example of their leader; and by making alliances with Latin families, became, in a fhort time, one and the fame penple with the Latins.

In the mean time Turnus, the queen's nephew, who had been brought up in the palace under the eye of Latinus, and entertained hopes of marrying Lavinia and fucceeding to the throne, feeing the princefs befowed on a. ftranger, and all his views defeated, went
over to the Rutuli ; and by firring them up, brought on a battle between them and the Latins, in which both he and Latinus were killed. Thus Reneas, by the death of his father-in-law, and by that of a troublefome rival, came into the quiet poffeflion of the kingdom of latium, which he governed with great wifdum, and tranlmitted to his polterity.

Ancas is faid to have reigned thrce years; during which time he eftablinhed the worfhip of the gods of his own country, and to the religion of the Latins added that of Troy. The two Palladiums, which had been the proteftors of that city, became the tutelary deities of Lavinium, and, in after ages, of the whole Roma! empire. The worhip of Vefta was likewife introduced by Aneas; and virgins, from her called \(V\) efals, were appointed to keep a fire continually burning in honour of that goddefs. Jupiter, Venas, and many other deities who dige been revered in Troy, became, in all likelihood, known to the Latins by means of Eneas; which gave occafion to the poets of reprefenting him under the character of a pions hero.

While Rneas was thus emplnyed, the Rutuli, an* cient enemies of the Latin name, entering into an alliance with Mezentius king of the Tyrihenians, took the ficld with a defign to drive out thofe new-comers, of whofe power they began to conceive no fmall jeabur 6 . our of his Trojans and Latins. Hs.eupon a battle enfued, which lafted till night; when Eneas being pufhed to the banks of the Numicus, which ran clofe by Lavinium, and forced into that river, was there drowned. The Trojans concealed his body; and pretending that he had vanifhed away on a fudden, made him pafs for a deity among his credulous fubjects, who accordingly erected a temple to him under the citle of Fupiter Indiges.

Epon the death of Eneas, his fon Eurylcon, called Succeeded alfo Afcanius and Iulus, afcended the throne; but as by hisfor the foung king did not think it advifable to venture Afcanius, a battle in the very beginning of his reign, with a formidabie enemy, who promifed himfelf great fuccefs from the death of 正neas, he had the prudence to confine himfelf within the walls of Lavinium, and to try whether he could, by an honourable treaty, put an end to fo dangerous a war. But the haughty Mezentius demanding of the Latins, as one of the conditions of a peace, that they fhould pay him yearly, by way of tribute, all the wine produced in the territory of Latium, Afcanius rejected the propofal with the utmof indignation; and havirg caufed all the vines throughout his dominions to be confecrated to Jupiter, and by that means put it out of his power to comply with the enemy's requeft, he refolved to make a vigorous fally, and try whether he could, by force of arms, bring the infulting Tyrrhenian to more reafonable terms. The main body of the enemy's army was encamped at fome diftance from Lavinium ; but Laufus, the fon of Mezentius, with the flower of their youth under his com. mand, lay entrenched at the very gates of the city. The Trojans, who had been long accuftomed to make vigorous fallies, marching out in the night, attacked the poit where Laufus commanded, forced his entrenchments, and obliged the troops he had with him to fave themfelves by flying to the main body of the army encamped on the plain; but the unexpected amival and:

\section*{R O M}
overthrow of their advance guard fruck them with fuch ter ror, that, iuflead of flopping the fight of their companions, they fled with them, in great diforder, to the neighbouring mountains. The Latins purfued them, and in the purfuit Laufus was killed: whole death fo difcouraged Mezentius, that he immedintely fued for peace; which was uranted him, upon condition, that for the furure the Tiber hould be the boundary between the Latin and Hetrurian territories.

In the mean time Lavinia, who had been left with child by Encas, entertaining a frong jealoufy of the anbition of her fon-indaw, retired to the woods, and was there peaceably delivered of a fon, who, from his father, was named Exneas and, from the place of his birth, had the furnane of Syloius: but as the queen's flirgt, who had difappeared on a fudder, raifed fufpicions at Lavinium prejudicial to the reputation of Afcanius, he ufat all pofible means to remove them, caufed diligent fearch to be made after Lavinia, calmed her fears, and prevaiked upon her to return to the town with her fon, whom he ever after treated as a brother. I avinum grew every day more populons; but as it was in reality the patrimony of Lavinia, and the inheritance of her fon Sylvius, Afcanius refolved to refign it to them, and build elfewhere another city for himfelf. This he made the place of his relidence, and the capital of his new kingdon, calling it Alba Loonga; Alibs, from a white frw, which we are told Eneas had found in the place where it vas built ; and Louga, to ditinguith it from another town of the fame name in the country of the Marf; or rather, becaufe it extendeal, without having much breadth, the whole length of a lake near which it was built. It was 30 ycars after the building of Lavinium that Afcanius fixed his abode at Alha; and there he died, after a reign of about 38 years, 12 of which he lad refided at his new fettemient. Hickeft a fon called \(I u / u s\); fo that between him and Sylvius laty the right of fucceffion to the Latin throne: the latter being the fon, and the former the graudfon, of Fintas.

The Latins not thinking it their interef to continue divided, as it were, into two llates, refolved to unite Alba and Lavinimm into onc Covereignty ; and as Sylvius was bom of 1 arinia the daughter of Latinus, and he had thereby" an undoubted tixle to the kingdon of his grandfather, whercas the other was but the fon of a flranger, the Latins bellowed the crown on Sylvius; and, to make luhes fume amends, decreed to him the favercign power in affairs of religion; a power which thenceforth continued in his family. Sylvius was fuceceded by 13 kings of the fame race, who for near \(q 00\) yeus regmed at Alla; but we fearce know any thing of thom befodes their names, and the years of their refpective reigns. Eneas Sylvius died, after a reign of 29 years. His fon, called alfo Aneas Sylvius, govern. ed Latium 31 years. Latimus Sy/vius, who fucceeded him, fwaycd the feeptre for the fpace of 51 years Alba reigned 39 ; Capetus, by Livy named Alys, 26 ; Capis, 28 ; and Capetus, 13 . Tibcrimús, wîı fucceeded him, engared in a war which proved fatal to him; for in a battle which was fought on the banks of the Albula, he was foreed into that river and drowned. From him the river took the name of Tiber, which it has borne tver fince. Agrippa fucceeded Tiberinus after a reign of eight ycars; and left the throne, which
he had held 41 years, to Alladius; who reigned 19, and was fucceeded by Aventinus, who left his name to the hiil Aventinus, where he was interred. Proca, who fucceeded him, and reigned 23 years, was the father of Numitor and Amulius; and at his death bequeathed the throne to his elder fon Numitor. But Amulins, who furpafted his brother in courage and underftanding; crove him from the throne; and to fecure it to himíelf, murdered AEgeftus, Numitor's only fon, and confecrated his daughter Rhea Sylvia to the worlhip of Vefta, by which fhe was cbliged to perpetual virginity. But this precaution proved ineffectual ; for as the Vef. tal uas going to a neighhouring fpring to fetch water for the performance of a facriice to Mars, fhe was met and ravifhed by a man in a military habit, like that in which the god Mars is reprefented. Some authors think that this comnterfeit Mars was a lover come thither by her appointment ; others charge Amulius himfelf with ufing this violence to his niece, not fo much to gratify his lult, as to have a pretence to deftroy her. For ever after he caufed her to be carefully watched, till fhe was delivered of two fons; and then exaggerating her crime in an affembly of the people, he prevailed upon them to fentence her to death, and to condemn the fruit of her criminal amour to be thrown into the fome authors, changed by Amulius, at the requelt of lus and \(R\) his daughter Antho, iuto pérpetual confinement, but exccuted againt the twins; who being laid in a wooden trough, and carried to the foot of mount Palatine, were there turned adrift on the Tiber, which at that time overfowed its baniks. But the wind and ftream proved both fo farourable, that at the fall of the water the two infants were left fafe on the ftrand, and were there happily found by Faultulus, the chief of the king's fhep. herds, and fuckled by his wife Acca Lauremia, who for her diforderly life was called Lupa; and this probably gave rife to the fabulous miracle of their being nurfed by a wolf.

As Fauftulus vas probably well acquainted with the birth of the twins, he took more than ordinary care of their education, and fent them to Gabii to be inftructed there in Greck literaturc. As they grew up, they appeared to have fomething great in their mien and air which commanded refpect; and the afcendant which they aflumed over the other mepherds made them dreaded in the forefts, where they exercifed a fort of empire. A quarrel happening between the herdfmen of Amulius and thofe of Numitor, the two brothers took the part of the former againt the latter ; and fome blood being Ahed in the fray, the adverfe party, to be revenged on Romulus and Renius (for fo the twins were called), on the Ceftival of Lupercalia, furprifed Remus, and carried him bcfore Numitor, to be punifhed according to his deferts. But Numitor feeling himfelf toucled in the prifoner's favour, afked him where he was born, and who were his parents. His anfwer immediately flruck Numitor with a lively remembrance of his two grandfons; their age, which was about 18 years, agreed with the time when the two infants were expofed upon the Tiber; and there needed no more to change his anger into tendernefs.

In the mean time Romulus, eager to refcue his brother, and purfue thofe who had carried him off, was preparing to be revenged on them ; but Fauftulus dif-

\section*{\(\mathrm{R} O \mathrm{M}\), \([320] \quad \mathrm{R} O \quad \mathrm{M}\)}
ic. fuaded lim from it ; and on that occafion, difclofing to him his birth, awakened in his breaft fentiments worthy of his extraction. He refolved, at all adventures, to attempt the delivering of his mother and grandfather from oppreflion. With this view he affembled the country people, over whom he had affumed a kind of fovereignty, and engaged them to come to the city on an appointed day, and enter it by different gates, provided with arms, whicl they were to conceal. While Romulus was thus difpofing every thing for the execution of his defign, Numitor made the fame difcovery to Remus concerning his parents, and the oppreffions they groaned under; which fo fired him, that he was ready to embark in any enterprife. But Numitor took care to moderate the tranfports of his grandfon, and only defired him to acquaint his brother with what he had heard from him, and to fend him to his houfe. Romulus foon came, and was followed by Fautulus, who took with'him the trough or niiff in which the twins had been expofed, to fhow it to Numitor: but, as the fhepherd betrayed an air of concern and earneftnefs in his looks, he was ftopped at the gate of the city, led before Amulius, and examined concerning his burden. It was eatily known by its make and infcription, which was ftill legible; and therefore Faufulus owned what it was, and confeffed that the twins were living; but, in order to gain time, pretended that they were feeding Hocks in a remote defert. In the mean time, the ufurper's death being refolved on, Remus undertook to raife the city, and Romulus to inveft the king's palace. The country people came at the time appointed, and formed themfelves into companies each confiting of 100 men. They had no other enfigns but bundles of hay hanging upon long poles, which the Latins at that time called manipuli; and hence came the name of manipulares, originally given to troops raifed 'in the country. With this tumultuous army Romulus befet the avenues of the palace, forced the guard, and having killed the tyrant, after he had reigned 42 years, leftored his grandfather Numitor to the throne.

Affairs being thus fettled at Alba, the two brothers, by the advice of Numitor, undertook the founding of a new colony. The king beftowed on them thofe lands near the Tiber where they had been brought up, fupplied them with all manner of inftruments for breaking up ground, with naves, and beafts of burden, and granted full likerty to his fubjects to join them. Hereupon moit of the Trojans, of whom there ftill remaired 50 families in Auguftus's time, chofe to follow the fortune of Rumulus and Remus, as did alfo the inhahitants of Pallantium and Saturnia, two fmall towns. For the more £peedy carrying on of the work, it was thought proper to divide thole who were to be employed in the building of the city into two companies, one under the command of Romulus, the other of Remus; but this divifion, which was defigned purely with a view to the public welfare, and that the two parties might work by way of emulation, gave birth to two factions, and preduced a jealoufy between the two brothers, which broke out when they rame to cloofe a place for the building of their new city ; for Remus was for the Aventine, and Romulus for the Palatine mount. Upon which, the matter being referred to their grandfather, he advifed the contending parties to have recourfe to the gods, and to
Voz. XVI. Part.I.
put an end to the difpute by augury, to which he was, Rome. himfelf greatly addieted. The day appointed for the cereniny being come, the brothers pofted themfelves each upun his hill; and it was agreed, that whoever fhould fee the firft fight, or the greateft number, of vultures, thould gain his caufe. After the two rivals had waited fome time for the appearance of a favourable omen, Romulus, before any had appeared, fent to acquaint his brother that he had feen fome vultures; but Remus, having actually feen fix, while his brother's meffengers were yet on their way, haftened, on their arrival, to mount Palatine, to examine the truth of what they had told him. He had no fooner got thither, than by an unexpected good fortune twelve vultures appeared to Romulus. Thefe he immediately flowed to his brother; and, tranfported with joy, defired him to judge himfelf of the truth of what his meffengers had told him. However, Remus difcovered the deceit ; and, being told that Romulus had not feen the twelve ? vultures till after he had feen fix, he infifted on the time of his feeing them, and the other on the number of birds he had feen. This widencd the breach between the two brothers; and, their parties being divided, while each man efpoufed the caufe of his leader, the difpute grew fo warm, that, frow words they came at length to blows. The flepherd Fauftus, who was equally dear to both the brothers, endeavouring to part the combatants, was by an unknown hand laid dead on the fpot. Some writers tell us, that Remus \(D\) aatio of likewife loft his life in the fray; but the greater num- Renus. ber place his death later, and fay that he was killed by one Fabius, for having, in dcrifion, leaped over the wall of the new city: but Livy fays, the more common report was, that Remus fell by the hand of his brother.

Romulus, being now head of the colony, by having Fo got the better of his brother's party in the late engage of Romen
ment, applied his thoughts sholly to the buildig of ment, applied his thoughts wholly to the building of the city, which he propofed to call after his own name. He chofe mount Palatine for its fituation, and performed all thofe ceremonies which the fuperfition of the Hetrurians had introduced. He firt offered facrifices to the gods, and ordered all the people to do the fame : and from that time decreed, that eagles fhould be the aufpices of his new colony. After this, great fires were kindled before their tents, and all the people leaped through the flames to purify themfelves. When this ceremony was over, they dug a trench yound the fpot where the affemblies of the people were afterwards held, and threw into it the firt.-fruits of whatever they were allowed to make ufe of for food : every man of the colony was ordered to caft into the fame trench an handful of earth, broughty either from his own or fome reighbouring country. The trench they called Mundus, that is, the world, and made it the centre round which the city was to be built. Thera Remultes, yoking an ox and a cow to a plough, the coulter whereof was brafs, marked out, by a deep furrox, the whole compars of the city. Thefe two animats, the fymbals of marriage, by which cities are peopled, were afterwards flain upon the altar. All the ficople followed the plungh, throwing inwards the cluds of earth which the ploughflare fometimes urned outwards. Wherever a gate was to be made, the plough was lifted up, and carried; and hence same the Latin word portn, "a gate," de-

Remr. rived from the verb portare, " to earry." As mount Palatine food by itfelf, the whole was inclofed within the line made by the plough, which formed almoft the figure of a fquare; whence, by Dionylius Halicarnaffenfis, it is called Roma Quadrata.

As to the exact year of the foundation of Rome, there is a great difagreement among liftorians and clronologers. Fabius licior, the moft ancient of all the Roman writers, places it in the end of the feventh Olympiad ; that is, according to the computation of Uther, in the year of the world 3256 , of the flood 1600 , and 748 before the Clurittian rera. The Romans, if we may fo call them, began to build, as Plutarch and others inform us, on the 2 ut of April; which day was then coulferated to Pales, goddefs of the thepherds: whence the feftival of Paks, and that of the foundation of the city, were afterwards jointly celebrated at Rome. the principal inhabitares followed the plough, being obliged to cultivate with their own hands the ungrateful foil of a barren country which they had fhared among thenifelves. Even the walls of Romulus's palace were made of whes, and covered with thatch. As every one had chofen his ground to build upon, without any regard to the regularity and beaury of the whole, the Atreets, if we may fo call them, were both crooked and nerow. In fhort, Rome, till it was rebuilt after the burning of it by the Gauls, was rather a diforderly heap of huts, than a eity built with any regularity or order.

As foon as the huilding of the city was finifhed, Ro-
importance, but to debate and refolve upon fuch public affairs as the king propofed, and to determine them by a plurality of voices. The people were allowed to creatc magithates, enact laws, and refolve upon any war which the king propoted; but in all thefe things the confent of the fenate was neceffary.

Romulus next proceeded to fettle the religious affairs of his people. Many of the Trojan atal Phrygian deities were added to thofe whons the Aborigines or Italian natives already worhipped. He chofe priefts, inftituted foftivals, and laid the foundation of a regular fyltem of religion; after which, as his colony was fill thinly peopled, he opened an afylum for fugitive flaves, homicides, autlaws, and debtors. 'Thefe, however, he did not at firt receive within the walls, but appointed for their habitation the hill Saturnius called afterwards Capitolinus, on which he ereetud a temple to a divinity of his own invention, whom he named the Afylean god, under whofe protection all criminals were to live fecurely. But afterwaids, when the city was enlarged, the afyhm was inclufed within the walls, and thofe who who dwelt in it included among the citizens of Rome.

When Romulus had thus fettled every thing relating Rape, \({ }^{2 c}\) to his new colony, it was found that a fupply of wo-sabine men was wanting to perpetuate its duration. This oc- men. cafioned fome difficulty; for the neighbouring nations refufed to give their daughters in marriage to fuch a crew of varabonds as had fettled in Rome; wherefore Romulus at laft refolved on the following expedient. By the advice of his grandfather Numitor, and with the confent of the fenate, he proclaimed a folemn feall and publie games in honour of the Equefrian Neptune called Confus. This occafioned a great concourfe of people, who flocked from the adjacent parts to behold thefe pompous hows, together with the new city. But, in the middt of the folemnity, the Romans, rulhing in with their fwords drawn, feized all the young women, to the number of \(68_{3}\), for whom Romulus chofe hufoands. A nonas all thofe who were thus feized, only one married woman, named Herfiltn, was found; and Romulus is faid to have kept her for himfelf.

This violence foon brou ght on a war with the neighbouring nations. Acron king of Crrina, a city on the confines of Latium, having entered into a leayue war wi with the inhabitants of Cruftuminum and Antemirx, houring invaded the Roman territories. Romulus marched tims. againft them without delay, defeated the confederate army, killed their king in fingle combat, decreed himfelf a triumph, and confecrated the fpoils of Acron to Jupiter Feretrius, under the name of Opima Spolia. The city of Cxnina was razed to the ground, and the inhabitants tranfplanted to Rome, where they were admitted to the privileges of citizens. The king then marched with one legrion (confinting at this time of 3000 foot and \(3=0\) horie) againft the Cruftumini and Antemnates, both of whom he defeated in battle, and tranfplanted the inhabitants to Rome; which being incapable of holding fuch a number, Romulus took in the hill Saturnius Rome: above-mentioned, on the top of which he built a cita-larged. del, committing the care of it to a neble Ruman named Tarpeius. The citadel was furrounded on all fides with ramparts and towers, which equally commanded the city and country. From the foot of the hill Saturnius a wall was carried on quite to the Tiber, and a gate
opened

\section*{R O M}
opened in it named Carmentalis, from Carmenta the mother of Evander, who either lived there, or had fome chapel or altar erected to her.

Romulus had now become fo formidable to his neighbours, and had fo well eftablifhed his reputation for clemency, that Several cities of Hetrutia voluntarily fubmitted to him. Coelius, an Hetrurian general, led the troops under his command to Rome, and fettled on an hill near the city, which from him took the name of Mount Calius. The Sabines, however, not in the leaft difmayed at this increafe of the Roman forces, fent a deputation to Romulus, demanding rellitution of the young women who had been carried off; and, upon his retufal, marched to Rome with an army of 25,000 foot and 1000 horfe, under the command of III of their king Titus Tatius. Romulus, having received ,ine-- fupplies from Numitor and from Hetruria, likewile took the field, with 20,000 foot and 800 horfe, with whom he feized an advantageons poit, and fortified himfelf fo ftrongly, that he could not be attacked. The Sabine monarch, perceiving the military kill of Ro. mulus, began to be apprehenfive of the event ; but was extricated out of his difficulties by the treachery of Tarpeia daughter to the governor of the citadel, who agreed to betray that important fortrefs to the eneny, on condition of being rewarded with the bracelets which the Sabines wore on their left arms. But when once they became mafters of this important place, they are faid to have cruthed 'Farpeia under the weight of their bucklers, pretending that thus they difcharged their promife, as they wore their bucklers alfo on their left arms. 'I.he poffeffion of the citadel enabled the Sabines to carry on the war with more fuccefs; but, at lait, in a general engagement, they had the miffortune to be driven back into the citadel, whither they were purfued by the Romans, who expocted to have retaken that important poft; but the enemy, rolling down great ftones from the top of the hill, wounded Romulus on the head, fo that be was carricd inSenvible out of the field of battle, while, in the mean time, his troops were repulfed, and purfued to the very gates of Rome. However, the king foon recovering limfelf, encouraged his routed troops, and drove the enemy back into the citadel. But while the two nations were thus fiercely contending, the women, for whofe caufe the war had been commenced, undertook the office of mediators; and having obtained leave from the fenate, marched in a body to the camp of the Sabines, where they pleaded the caufe of their hufbands fo effectually, that a treaty of union between the two nations was fet on foot, and a peace was at laft concluded, on the following terms. 1. 'That the two kings fhould refide and reign jointly at Rome. 2. That the city fhould fill, from Romulus, be called Rome; but the inhabitants Qurits, a name till then peculiar to the Sabines. 3. That the two rations fhould become one; and that the Sabines fhould be made free in Rome, and enjoy all the privileges of Roman citizens. As Rome was chiefly indebted for this increafe ot her power and fplendor to the Sabine women, honourable privileges and marks of diftinction were allowed :hem. Every one was comnanded to give way to them; in capital caufes they were exempted from the juriddiction of the ordinary judges; and their children were allowed to wear a golden ball hanging from their neeks,

\section*{\(331] \quad \mathrm{R} O \quad \mathrm{M}\)}
and a particular kind of robe called pratexta, to ditin. Rome. guilh them from the vulgar.

The two kings reigned with great harmony for the fpace of five years; during which time the only military exploit they accomplifhed was the reduction of the city of Cameria, at a fmall ditance from Rome. Four thoufand of the Camerini were tranfplanted to Rome, and a Roman colony fent to repeople Cameria; foon after which the Sabine king was murdered by the Lavinians, \({ }_{\text {Tatius nur. }}{ }^{26}\) on account of his granting protection to fome of his derd. friends who had ravaged their territories. The Lavinians, fearing the refentment of Romulus, delivered up the alfaffins into his hands; but he fent them back un: punithed, which gave occafion to fulpect that he was not difpleafed with the death of his colleague.

Soon after the death of Tatius, Rome was afflicted with famine and peftilence, which encouraged the Ca merini to revolt ; but Romulus marching againft them fuddenly, defcated them with the lofs of 6000 men. After which he attacked the Fidenates, whofe city flood about five miles from Rome, took their capital, and made it a Roman colony. This drew upon him the refcntment of the Veientes, a powerful nation in the neighbourhood, who claimed Fidenre as within their jurifdiction; but their forces being defeated in two engagements, and a great number of them taken prifoners, they were obliged to fue for peace. Romulus granted them a truce for 100 years, on condition that they delivered to him feven finall towns on the Tiber, together uith fome falt-pits near the mouth of that river, and fent 50 of their chief citizens as hoftages to Rome. The prifoners taken in this war were all fold for flaves.

The remaining part of the life of Romulus was ipent in making law's for the goud of his people; but towards the latter end of his reign, being elated with fuccefs, he began to enlarge the bounds formerly fet to his prerogative, and to behave in an arbitrary manner. He paid no longer any regard to the voice of the fenate, but affembled them only for form's fake to ratify his commands. The fenate therefore confpired to dettroy him, and accomplifhed therr purpofe while he was reviewing his troops. A violent torm of hail and thunder difperfed the army ; and the fenators taking this opportunity, when they were left alone with the king, inftantly killed him, and conveyed his body out of fight. Some writers tull us, that, the better to And \({ }^{27}\).keconceal the fact, they cut his body in pieces, each of witcRumuo them carrying away a part under his robe; after which lus. they told the multitude, that their king u as on a fudden furrounded by flame, and fnatched up into heaven. 'Ihis ftratagcm, however, did not fatisfy the foldicry, and violent difturbances were about to enfue, when Julius Proculus, a fenator of great difinection, having affembled the Curix, told them that Romulus had appeared to him, and enjoined him to acquaint the people, that their king was returned to the gods from whom he originally came, but that he nould continue to be propitious to them under the nane of 2 virinus; and to the truth of this flory Julius fiwore.

Romulus reigned, according to the common computation, 37 years: but fome hiiforians reduce the length of his reign to little more than 1.7 ; it being very unlikely, as they obferve, that a prince of fucle an active difpolition fhould perform nothing worthy of

Tt2 record пишை.
record during a period of 20 years. Be this as it will, however, the death of Romulus was followed by an interregnum, during which the fenators, to prevent anarchy and confulion, took the government into their own hands. Tatius added another hundred to that bndy; and thefe 200 fenators divided themfelves into decuries or tens. Thefe decuries drew lots which thould goveru firt ; and the decury to whofe lot it fell enjoyed the fupreme authority for five days; yet in fuch a manner, that one perfon only of the governing decury had the cufigns of fovereignty at a time. To thefe another decury fuccecded, each of then finting on the throne in his turn, \&ec. Bur the people foon growing veary of fuch frequent change of malters, obliged the fenate to refolve on the election of a king. The fenate ieferred the election to the people, and the people to the fenate, who at laft undertouk the tafk. Some difficulties, however, occurred: the Romans did not choole to be fubject to a Sabine; and the Sabines, as they had been fubject to Romulus after the death of Tatirs, infilled that the king flould be chofen out of their nation. At laft it was agreed, that the king fhould be a Sabine, but that the Romans fhould make the choice.

In confeņuence of this determination, the Romans elected Numa Ponapilius, an auttere philofopher, who had married Tatia, the daughter of 'ratius the late king. After the death of his wife, he gave limnfelf entirely up to philofophy and fuperftition, wandering from folitude to tolitude, in fearch of facred woods and fountains, which gave the people a great opinion of his fanctity. 'The philofopher at firft rejected the ufter of the kingdem ; but being at laft prevailed upon, he fet out fur Rome, where lie was received with loud acclamitions, and had his clection unanimoully confrmed by the fenate.

The reign of Numa is by no means memorable for battles or conquefts. He was averfento war; and made it his fudy to foften the manners of the Romans, rather than to exalt them to fuperiority over their neigh. bours. He difmiffed the celeres, encouraged agriculture, and divided the citizens into diftinct bodies of tradefmen. This laft meafure he took on purpofe to abolith the diftinction between Romans and Sabines, which had hitherto rent the city into two factions; and this effectually anfwered his end: for now all of each particular profeffion, whether Romans or Sabines, were obliged to affociate together, and had cach their refpective courts and privileges. In this divilion the milicians held the firf rank, becaufe they were employed in the offices of religion. The goldfmiths, carjenters, curriers, dyers, taylors, \&c. formed alfo diItinct communities; and were allowed to make byelaws among themfelves, to have their own feftivals, partieular facrif ces, \&c.

Though Numa himfelf is faid by Phtarch to have had pretiy juft notions of the Supreme Being, he neverthelefs added innumerable fuperlitions to thofe he found in Rome. He divided the miniters of religion into eight clafles, appointing to each their office with the greatelt precifion; he erected a temple to Janus, the fynibol of prudence, which was to remain open in time of war, and to be thut in time of peace. Another temple was erected to Bona Fides; and he invested a reev kind of deities called Dii Termini, or
boundaries, which he caufed to be placed on the borders of the Roman Hate, and of each man's particular lands.-'I'he laft reformation which Numa undertook, was that of the kalendar. Romulus had divided his year into ten months, which, according to Plutarch, had no certain or equal number of days; fome confifting of 20 , fome of \(35, \& \mathrm{kc}\). However, by other hiftorians, we are informed that he allotted to March, May, Quintilis, and October, 3 ! days; to April, June, Sextilis, November, and December 30 i making in all 304 days. But Numa being better acquainted with the ccleftial motions, added to thefe the two months of January and February. To compole thefe two months he added 50 days to the 304 ; and thus made the year anfwer to the courfe of the moon. He then took fix more from the months that had even days; and added one day merely out of fupertition, that the year might prove fortunate; for the pagans looked upon even numbers as unlucky, but imagined odd numbers to be fortunate. However, he could make out no more than 28 for February, and thereforc that month was always reckoned unlucky among the Romans. Befides this, he obferved the diffcrence between the folar and lunar year to be in days; and to remedy the inequality, lie added an intercalary month named Mercedinus or Mercedonius, of 22 days every two years: but as he knew alfo that the folar year confifted of 365 days 6 hours, he ordered that every fourth year the month Mercedinus fhould confift of 23 days. The care of thefe intercalations was left to the priefts, who left out or put in the intercalary day or month as they imagined it to be lucky or unlucky; and by that means created fuch confufion, that the feltivals came in procefs of time to be kept at a feafon quite oppofite to what they had bcen formerly.

Thefe are all the remarkable tranfactions of the suceeec \(3^{30}\) reign of Numa, which is faid to have continued 43 bycecc years; though fome think that its duration could not Hoflilit be above 15 or 16 . His death was followed by a fhort interregnum; after which Tullus Hottilius, the fon or grandfon of the famous Herfilia, was unani. moully chofen king. Being of a bold and fiery temper, he did not long continue to imitate his peaceful predeceffor. The Albans, indeed, foon gave him an opportunity of exercifing his martial difpolition. Cœlius, or, as he is called by Livy, Cluilius, who was at the head of the Alban sepublic; jealous of the growing greatnels of Rome, privately commiffioned fome of the mot indigent of his fuhjects to wafte tlie Ro. man territory ; in confequence of which, a Roman army entered the territories of Alba, engaged the robbers, killed many, and touk a great number prifoners. A war foon commenced, in confequence of this, between the two nations; but when the armies came in fight of each other, their ardour cooled, neither of them feeming inclined to come to an engagement. This inaction raifed a great difcontent in the Alban army againft Cluilius; infumuch that he came to a refolution of giving battle to the Romans next morning, or of forming their trenches if they thould decline it. Next morning, however, he was found dead in his bed; after which the Albans chofe in his Head one Mettus Fuffetius, a man remarkable for his hatred to the Roman name, as Cluilius liad been before him. Fuffetius, bowever continued in the fame

\section*{R O M} fate of inativity as his predeceffor, until he recti-
ved certain inteligence that the Veientes and Fidenates had refolved to deflroy both Romans and Albans when they fhould be weakened by a battle. Fuffetius then refolved to come to an accommodation with the Romans ; and, having obtained a conference with Tullus, both feemed equally defirous of avoiding the calamities of war. But, in order to eftablilh the peace on the moft perfect foundation, Tullus propofed that all, or at lealt the chief families in Alba, fhould remove to Rome; or, in cafe they were unwilling to leave their native city, that one common council hould be eflablifhed to govern both cities, under the direction of one of the two fovereigns. Fuffetius took afide thofe whoo attended hin, to confilt with them about this propofal; but they, though willing to come to an accommodation with Rone, abfolntely refufcd to leave Alba. The only difficulty remaining, then, was to fettle which-city h.ould have the fuperiority; and, as this could not be determined by argument, Tullus proporicd to determine it by fingle combat betwixt himfelf and Fuffetius. This propofal, however, the Alban general thought proper to decline ; and it was at laft agreed, that three clampions fhouid be chofen out of each camp to decide the difference. 'This produced the fammens combat between the Horatii and Curiatii, by which the fovereignty was docided in favour of Rome. See Horatil.
Tullus now refolved to call the Fidenates to an account for their treacherous behaviour during the war with A ba, and therefore cited then to appear before the fenate; but they, confcious of their guilt, refured to appear, and took up arns in conjunction with the Veientes. Fuffetius, iu obedience to the orders of Tullus, joined him with the Alban troops; but the day before the battle, he acquainted the principal officers with his defign, which was to fland neuter till fortune had declared for one fide, and then to join with the conqueror. This defign being approved, Fuffectiss, duriug the engagement, retired with his forees to a neighbouring eminence. Tullus perceived his treachery ; but diffembling his uncafinetis, told his nien that Fuffetius had polfeffed himfelf of that hill by his order, and that he was fiom thence to ruih down upon the enemy. The Vcientes, in the mean time, who had expected that Fuffetius was to join them, were difrnayed, and the Romanss obtained the victory. After the battle, Tullus returned privately to Rome in the night ; and having confulted with the fenate about the treachery of Fuffitius, returned to the camp by break of day. He then detached Horatius, who had conquered the three Curiatii, with a chofen body of horfe and foot, to demoliff Alba, as had been concerted at Rome. In the mean time, he comnanded both the Rorman and Alban troops to attend him unarmed, but gave private orders to the Romans to bring their fwords concealed uncler their garments. When they were affenbled, he laid open the treachery of Fuffictius, and ordered him to be torn in pieces by horfes. His accomplices were all put to the fword; and the inhabitants of Alba carried to Rome, where they werc admitted to the privileges of citizens, and forse of them everis admitted to the fenate.
Tullus now turned his arms againlt Fidenx, which he again reduced under the Roman yoke; and tock
waced a a frrong city of the Latins; after which he waged a fuccefsful war with the Sabines, whofe union with the Romans feems to have ceafed with the time of Numa. This was the laft of his martial exploits; after which we hear no more of hin, but that he became extremely fuperfitious in his advanced years, giving ear to many foolilh flories, as that it rained ftones, that miraculous voices were heard from heaven, \&c. and for this he appointed nine days expiatory facrifices; whence it became a cuftom to appoint nine days to appeafe the wrath of the gods as often as men were alarmed with prodigies. As to the manner of his death authors are not agreed. Some tell us that he was killed by lightning, tojether with his wife, Death of children, and his whole family ; while others are of who is fucopinion that he was murdered with his wife and chil- ceeded by dren by Ancus Martius who fucceeded him. He died Martius. after a reign of 33 years, leaving the city greatly increafed, but the dominions much the fame as they had been in the time of Romulus.

After a hort interreguum, Ancus Martius, the grandfon of Numa by his daughter Pompilia, and Marcus his relation, was unanimoully chofen by the people and feurate. Though naturally inclined to war, he begam his reign with attempting to reflore the ceremonies of Nunna, which had been neglected under Tullus Haftilius. He endeavoured alfo to draw the attention of his people to hufbandry and the peaceful arts; advifing them to lay alide all forts of violence, and to return to their former employments. This gained him the affections of lis fubjects, but brought upon hins the contempt of the neighbouring nations. The Latins, pretending that their treaty with Rome was expired, made inroads into the Roman territories. Ancus, after uring the ceremonies directed by Numa, His warlike took the field with an army confifing entirely of new exploit; levied troops, and reduced tlie cities of Politorium, Tille- and death. na, and Ficana, tranfplanting the inhabitants to Rome. A new colony of Latins repeopled Politorium; but Ancus retook the place next year, and entirely demolifhed it. He then laid fiege to Medulia; which, though it had been ruined by Tullus Hotilius, was now fltonger than ever. It fubmitted alter a fiege of four years, when Ancus found himfelf obliged to urkdertake a fecond expedition againft Ficana, which he had before reduced, as we have already related; and it was not without the utnolt difficulty that he reduced it a feoond time. After this he defeated the Latins in a pitched battle; vanquilhed the Firdenatess Veientes, and Sabines; and having taken in the hiil Janiculum to be included within the walls, and built the port of Oftia, he died in the 24th year of his reigu.

Ancus Martius left two fons behind him, one an infant, and the other about 15 years of age. Both, of the fe he put under the tuition of T'arquin, the fon of a rich merchant in Corinth, who had fled from that city to fecure his wealth from Cypflus tyrant of the place. He fettled in Tarquinii, one of the principal cities in Hetruria ; but finding that he could not there attain inis ans to any of the priucipal polts in the city on account of his hy Tarquas foreign extraction, he removed to Rone, where he 1 . had been gradually raifed to the rank of patrician and fenator. The death of Ancus Martius gave him an opportunity of afuming the regal dignity, and feting alide his pupils; and in the begining of his reign he

\section*{\(\mathrm{R} O \mathrm{M}\)}
tonk carc to ftrengthen inis party in the fenate by udding amother hundred to that body. Thefe were called fenatores minorum gentium, becanfe they were chofen out of the plebeians; however, they had the fame aulthority in the fenate as the others, and their children were called fatricians.

Tarquin was not inferior to any of his predeceffors cither in his inclination or abilities to carry on a war. As foon as he afcended the, throne, he recommenced holtilities with the Latins; from whom he took the citics of Apiolx, Cruftuminum, Nomentum, and Collatia. The inhabitants of Apiole were fold for ीaves; but thofe of Cruftuminum and Nomentum, who had fubmitted after their revolt, were treated with great clemeney. The inhabitants of Collatia were difarmed, and obliged to pay a large fum of money; the fovereignty of it, in the mean time, being given to Ecerius, the fon of Arunx, 'Tarquin's brother; from whence he twok the name of Collhtinus, which he tranfmitted to his pofterity. Corniculum, another city of Latium, was taken by fornt, and reduced to athes. This progrefs having greally alamed the Latins, feveral of them joined their furces in order to oppofe fuch a formidable enemy; but being defeated in a bloody battle near Fidenx: they were obliged to enter into an alliance with Rome; upon which the Latins having held a national conference, entered into a league with the Hetrurians, and again took the field with a very numerous army. But Tarquin, having defeated the confederate armies in two. yery bloody battles, obliged the Latin cities to fubmit to a kind of dependence on Rome; and, having eltered the city in triumph, brilt the circus maximus with the fpoils which he had taken from the enemy.

The war with the Latins was fcarce ended, when another commenced with Hetruria. This was accounted the moft powerful nation in Italy, and was at that time divided into 12 tribes or lucononies. Thefe appointed a national affembly, in which it was decreed that the whole force of Hetruria fhould be employed againt Tarquin; and if any city prefumed only to ffand neuter, it thould be for ever cut off from the na:ional alliance. Thus a great army was raifed, with which they ravaged the Roman territors, and took Fidenx by the treaclery of fume of its inhabitants. Tarquin, not being in a condition to ofpofe them at firft, was obliged to fubmit to the lofs occafioned by their ravages for a whole year; after which he took the field with all the forces he could raife. The Roman army was divided into two bodies, one under the king himfelf, the other commanded by his nephew Collatinus. The latter, having divided his forces in order to plunder the country, was defeated; but Tarquin, in two engagements, vanquifhed the army which "ppored him. He then marched again凡 Fidenx, where he gained a third battle; after which he took the city. Such of the citizens as were furpected to have been concerned in betraying it to the cnemy were whipped to death ; the reft were fent into banilhment, and their lands divided by lot among the Roman foldiers. Tarquin now hattened to oppofe the new army of the Hetrurians before their forces could be properly collected; and having come up with them at Eretum, a place about 10 niles from Rome, defeated them with Ercat flaugliter, for which victory he was decreed a
triumph by the fenate ; while the enemy, difieartened Row wh by fo many misfortunes, were glad to fue for peace; which Tarquin readily granted, upon the fole condition of their owning his fuperiority over them. In Eafigill compliance with this, the Hetrurians fent him all theroyalty enfigns of royalty which were in ufe among them, viz. hinn by a crown of gold, a throne of ivory, a feeptre with Hetrur: an eagle on the top of it, a tunic embroidered with gold, and adorned with figures of palm-branches, together with a purple robe enriched with flowers of feveral colours. Tarquin, however, would not wear thefe magnificent ornaments till fuch time as the fenate and people had confented to it by an exprefs law. He then applied the regalia to the decoration of his triumph, and never afterwards laid them alide. In this triumph he appeared in a gilt chariot, drawn by four horfes, clothed in a purple robe, and a tunic embroideted with gold, a crown on his liead, and a fceptre in his hand, attended by 12 difors with their axes and fafces.

Tarquin, having now obtained fome refpite from war, applied himfelf to the beautifying and ornament. ing the city. He built the walls of Rome with hewn ftone, and erected thofe famous common fewers which have defervedly been accounted one of the wonders of the world. Rome at this time contained four hills within its compafs, viz. the Palatinus, Tarpeius, Quirinalis, and Coclius. In the valleys between thefe hills, the rain-water and fprings uniting, formed great pools which laid under water the ftreets and public places: The mud likewife made the way impaflable, infected Buil's the the air, and rendered the city unhealthy. Tarquir undertook to free the city from this nuifance, by con- \({ }^{\text {ewerse }}\), anc veying off thefe waters by fubterraneous channels intothe city. the T'iber. In doing this, it was neceffary to cut thro' hills and rocks a channel large enough for a navigable ftream, and covered with arches ftrong enough to bear the weight of houfes, which were frequently built upon them, and food as firm as on the molt folid foundations. All thefe arches were made of hard ftone, and ne:ther trouble nor expence were fpared to make the work durable. Their height and breadth were fo confiderable, that a cart loaded with hay could eafily pals through them under ground. The expence of conftructing thefe fewers was never fo thoroughly underitood as when it becanse neceffary to repair them ; for then the ceufors gave no lefs than 1000 talents to the perfon appointed for this purpofe.

Befides thefe great works, Tarquin adorned the forum, furrounding it with galleries in which were fhop3 for tradefmen, and building temples in it for the youth of both fexes, and halls for the adminittration of public juitice. He next engaged in a war with the Sabines, on pretence that they had affifted the Hetrurians. Both armies took the field, and came to an engagement on the confines of Sabinia, without any confiderable advantage on either fide; neither was any thing of conlequence done during the whole campaign. Tarquin then, confidering with himfelf that the Ko. man forces were very deficient in cavalry, refolved to add fone new bodies of knights to thofe already inftituted by Romulus. But this project met with great oppofition from the fuperftitious augurs, as the original divifion of horfe into three bodies had been determined by auguries; and Actius Nævius, the chief of

\section*{\(R \quad O \quad M\)}
the diviners at that time, vislently oppofed the king's will. On this Tarquin, defirous to expofe the deceit of thefe people, fummoned Nrevius before an aflembly of the people, and defired him to thow a ipecimen of his art, by telling the king if what he thought of at that time could be done or not. The au jur replied, after confulting his birc's, that the thing was very pof. fible. On which Tarquin told him, that he had been thinking whether it was polfible to cut a flint with a razor; pulling at the fame time a razor and flin: from helow his robe. This fet the people a-laughing ; but Nixvius gravely defiring the king to try it, he was furpriled to find that the flint yielded to the razor ; and that with fo much eafe as to draw blood from his hand. The people teftified their furprife by loud acclamations, and Tareuin himfelf continucd to have a great veneration for augurs ever after. A fatue of brafs was erected to the memory of Nevius, which continued till the time of Auguftus; the razor and flint were buried i.ear it, under an altar, at which witnetfes were afterwards fworn in civil caufes.
This adrenture, whatever was the truth of it, caufed Tarquin to abandon his defign of increaling the number of bodies of horfe, and content himfelf with augmenting the number in each body. He then renewed the war with the Sabines, ravaged their country, defeated them in three pitched battes, obliging them at latt to fubmit to him and put him in poffeflion of their country. In the decline of life he employed himfelf in further decorating the city, building temples, \&.c. He was affaffinated in his palace, in the 8 th year of his age, by the fons of Ancus Martius, whom be had originally deprived of the kingdom.

After the death of Tarquin I. his wife T'anaquil preferved the kingdom to her fon-in-law: Servius Tullius, by artifuly giving out that the king was only ftunned, and would foon recover; upon which the fons of Ancus went voluntarily into banifhment. The fecond day after lis deceafe, Servius Tullius heard caufes from the throne in the royal robes and attended by the liciors; but as he pretended only to fupply the king's place till he Thould recover, and thought it incumbent on him to revenge the wicked attempt upon his life, be fummoned the fons of Ancus to appear before his tribunal; and on their non-appearance, caufed them to be declared infamous, and their eftates to be confifcated. After he had thus managed matters for fome time in fuch a manner as to engage the affections of the people, the death of Tarquin was publifhed as a thing that had newly happened, and Servius Tullius affumed the enfigns of royalty, having none to dilpute the honour with him.

The new king fhowed himfelf every way worthy of the throne. No fooner were the Hetrurians informed of Tarquin's death, than they fhook off the yoke; but Scrrius quickly reduced them to obedience, deprivin!s them of their lands, which he fhared among the poor Roman citizens who had none. For this he was decreed a triumph by the people, in fpite of the oppofition of the fenate, who could never be brought to approve of his clection to the kingdom, though he was foon after legally chofen by the tribes.

After Servius had obtained the fanction of the po pular voice, he marched a fecond time agaiult the revolted Hetrurians; and having again ranquifhed them,
was decreed another triumph. He then applied himfelf to the enlaryiny and adorning the city. To the hills Palatinus, Tarpeius, Quirinalis, Cuelius, and Aventinus, he adled the Efquilinus and Viminalis, fixincorges bis own palace on the Eiquilinus, in order to draw in- addery, and habitants thither. He likewife added a fourth tribe, fourth eribe which he called Tribus Efquilina, to thofe inftituted to thofe alby Romulus. He divided alfo the whole Roman territory into dikinct tribes, conmanding that there flould he at leaft one place of refuge in each tribe, fituated on a rifing ground, and ftrong enough to fecure the efiects of the peafants in cafe of a fudden alarm. Thefe ftrong-holds he called pagi, that is, "villages;" and commanded that each of them fhould have their peculiar temple, tutelary god, and magiftrates. Each of them had likewife their peculiar fetival, called paganalia; when every perfon was to pay into the hands of thofe who prefided at the facrifices a piece of muney, the men of one kind, the women of another, and the children of a :hird. By this means an exact computation was made of the men, women, and children, in each tribe.
In the mean time, his two wards, Lucius Tarquinius and Arunx, the grandchildren of Tarquin, heing grown up, in order to fecure their fidelity, he married them to his two daughters. And though the elder of thefe daughters, who was of a mild and tractable difpolition, refembled in character the younger of his pupils, as the elder of his pupils did the younger of his daughters, who was of a violent and vicious temper, yet he thought it advifable to give his elder daughter to ""arquin, and the younger to Arunx; for by that means he matched them according to their agts, and at the fame time hoped that the elder Tullia's sweet difpofition would temper Tarquin's impetuofity, and the younger l'ullia's vivacity roule the indolence of Arunx.
During the public rejoicing for this double marriage, the twelve lucumonies of Hetruria uniting their forces, attempted to inake off the Roman yoke; but were in 'feveral battles defeated by Servius, and oblised to fubmit to him on the fame conditions on which they had fubmitted to his predecefior. For this fuccefs Servius was honoured with a third triumph.

The king being thus difengaged from a troublefome \({ }_{\text {Reform }}{ }^{43}\) war, returned to the purfuit of his political fchemes; fhe fate-e and put in execution that mafterpiece of policy which Rome made ufe of ever after, ard which eflablifhed a perpetual order and regularity in all the members of tbe ftate, with refpect to wars, to the public revenues, and the fuffrages of the comitia. I he public fupplies had hitherto been railed \(u\),on the people at fo much an head, without any diftinction of rich and poor; whence it likewife followed, that when levies werc nade for the war, the rich and poor were cqually obligul to take the field, according to the order of their tribe; and as they all ferved at their own expence, the poorer fort could hardiy bear the charges of a campaign. Befides, as the moft indigent of the people faw themelves burdened with the fame taxes as the rich, they pretended to an equal authority in the comitia: fo that the election of kings and magifrates, the making of peace or war, and the judging of criminals, were given up into the hands of a populace "tio were eafily currupted, and had nothing to lole. Servius forreed a pro, eet to sume-

\section*{\(1 \quad\left[\begin{array}{lll}336\end{array}\right] \quad \mathbb{R} 0 \quad M\)}

Fome. dy theie cuils, and put it in cxecution, by enacting a law, enjoining all the Roman citizens to bring in an ac. count in writing of their own names and ages, and of thole of their fathers, wives, and children. By the fame law, all heads of families were commandel to deliver in upon oath a juft eftimate of their effeets, and to add to it the places of their aloode, whether in town or country. Whower did not bring in an accoust of his effects, was to be dcprived of his eftate, to be beat with rods, and publicly fold for a flave. Servius, from thefe particular accounts, which might be pretty well relied on, undertook to eafe the poor by burdening the sich, and at the fame time to pleafe the latter by increa-
fing their power.
44
Fisdivifion To this end, he divided the Roman people into fix of the peo- claffes: the firlt clafs confitted of thofe whofe eftates ple into and effects amounted to the value of 10,000 drachme, or 100,000 afes of brafs; the firft way of computing being ufed by the Greeks, and the latter by the Latins. 'This clafs was fubdivided into 80 centuries, or companies of foot. T'o thefe Servius joined 18 centuries of Roman knights, who fuught on horleback; and appointed this confiderable body of horfemen to be at the head of the firft clafs, becaufe the eftates of thefe knights, without all doubt, exceeded the fum rieceffary to be admitted into it. However, the public fupplied them with horfes; for which a tax was laid upon widows, who were exempt from all other tributes. This firt class, including infantry and cavalry, confifted of 98 centuries. The fecond clafs comprehended thofe whofe cftates were valued at 5700 drachmx, or 75,000 afes of brafs. It was fubdivided into 20 centuries, all foot. To thefe were added two centuries of carpenters, fmiths, and other artificers. In the third clafs were thofe who were efteemed worth 5000 drachmx, or 50,000 afes. This clafs was fubdivieded into 20 centuries. .The fourth clafs was of thole whole effeets were rated at the value of 500 drachmx, or 25,000 ales, and was divided into 20 centuries; to which were added two other centuries of trumpets, and blowels of the horn, who fupplied the whole army with tinis martial mufic. The fifth clafs included thofe only whofe whole fubfance did not amount to more than \(125^{\circ}\) drachmæ, or 12,500 ales; and this clafs was divided into 30 centurics. The fixth clais comprehended all thofe who were not worth fo much as thofe of the fifth clafs: they exceeded in number any other clafs, but neverthelefs were reckoned hut as one centurg.

The king drew from thefe regulations all the adrantages he had expeeted. Levies for the army were no longer raifed by tribes, nor were taxes laid at fo much a head as formerly, but all was levied by centurics. When, for inftance, an army of 20,000 men, or a large fupply of moncy, was wanted for the war, each cento.y furninhed its quota both of men and money : fo that the tirlt clafs, which contained mere centuries, thotgn fewer men, than all the others together, furnifhed more ren and more money for the public fervice than the whole Roman flate befides. And by this means t'ic Roman armies confifted for the moft part of thic rich citizer:s of Rome; who, as they had lands atud cffects to defend, fought with more refolution, while tixit riches enabled them to bear the cxpence of a campaign. As it was but juft the king frould -ate the fiof clafs arends for the veight laid on it,
le gave it almof the whole authority in public affairs : changing the comitia by curix, in which every man gave his vote, into comitia by centurics, in which the majority was not reckoned by fingle per[ons, but by centuries, how fer foever there might be in a century. Hence the firf clals, which contained more centurics than the cther five taken together, had every thing at its difpofal. The votes of this clafe were firft taken; and if the 98 centuries happened to agrce, or only 97 of them, the affair was determined; becaule thefe made the majority of the 193 centuries which compofed the fix claffes. If they difagreed, then the fecond, the third, and the other claftes in their ordcr, were called to vote, though there was very feldom any occafion to go fo low as the fourth clafs for a majority of votes: fo that by this good order Servius brought the affairs of the ftate to be determined by the judgment of the moft confiderable citizens, who underflood the public intereft much better than the blind multitude, liable to be impoled upor, and eafily corrupted.

And now the geople being thus divided into feverd The ce orders, according to the cenfus or valuation of their fusand eftates, Servius refolved to folcmnize this prudent regulation by fome public act of religion, that it might be the more refpected and the more lafling. Accordingly, all the citizens were commanded to appear, on a day appointed, in the Campus Martius, which was a large plain, lying between the city and the Tiber, formerly confecrated by Romulus to the god Mars. Here tlie centuries being drawn up in battalia, a folemn luftration or expiatory facrifice was performed in the name of all the people. The facrifice confifted of a fow, a fheep, and a bull, whence it took the name of frovetaurilia. The whole ceremony was called luflrum, è luendn; that is, from paying, expiating, clearing, or perhaps from the goddefs Lua, who prefided over expiations, and to whom Servius had dedicated a temple. This wife king confidering, that in the fpace of five years there might be fuch alterations in the fortunes of private perfons as to entitle fome to be raifed to an higher clafs, and reduce others to a lower, enjoined that the cenfus hould he renewed every five years. As the cenfus was ufually clofed by the luftrum, the Romans henceforth began to compute time by luitrums, each lutrum containing the fpace of five years. However, the luftrums were not always regularly oblerved, but often put off, though the cenfus had been made in the fifth year. Some writers are of opinion, that Serrius at this time coined the firt money that had ever appeared at Rome; and add, that the circumflances of the luftrum probably led him to ftamp the figures of the animals there flain on pieces of brafs of a certain weight.

The government of the city being thus eftablifhed The fre in fo regular a manner, Servius, touched with compaf. men. fion for thofe whom the misfortunes of an unfuccefsful war had reduced to flavery, thought that fuch of them as had by long and faithful fervices deferved and ohtained their feeedom, were much more worthy of being made Roman citizens, than unt:afable vagaoonds from foreign countries, who were admitted without dittinction. He therefore gave the freedmen their choice, cither to return to their own country, or continue at Romc. Thofe who chofe to continue there, he dividcd irto four tribes, and fettled them within the city :
te. and thongh they were diftinguihed from the plebeians by their old name of literti, or frecim:n, yet they enjoyed all the privilegres of free citizens. The fenate took offence at the regard which the king flowed to fuch mean people, who had but lately thaken off their fetters; but Servius, by a molt humane and judicious difeourfe, entirely appeafed the fathers, who paffed his inflitution into a law, which fubfifted ever after.

The wife king, having thus eftablifhed order among the people, undertook at lalt to reform the royal power itfelf; his equity, which was the main fpring of all his rcfolutions, leading him to act contrary to his own intereft, and to facrifice one half of the royal authority to the public good. His predseefiors had refersed to themfelses the cognizance of all caufes both public and private; but Servius, finding the duties of his office too much for one man to difcharge well, committed the cognizance of ordinary fuits to the fenate, and referved that ouly of flate-crimes to himfelf.

All things being now regulated at home, bnth in the city and country, Servius turned his thou rlats abroad, and formed a fcheme for attaching the Sabines and Latins to the Rumans, by fuch focial ties as mould be frengthened by religion. He fummoned the' Latin and Sabine cities to fend their deputies to Rome, to confult about an affair of great importance. When they were come, he propofed to then the building of a temple in honour of Diana, where the Latins and Sabines fhould mect once a year, and join with the Romans in offering facrifices to that goddefs; that this feltival thould be followed by a council, in which all difputes between the cities fhould be amicably determined; that there proper meafures thould he taken to purfue their common interett; and, lafliy, in order to draw the common people thither, a fair fhould be kept, at which every one might furnifh himfelf with what he wanted. The king's defign met with no oppofition: the deputies only added to it, that the temple fhould be an inviolable afylum for the united nations; and that all the cities fhould contribute toward the expence of building it. It being left to the king to choofe a proper place for it, he pitched upon the A ventine hill, where the temple was brilt, and affemblies annually held in it. The laws which were to be obferved in thefe general meetings were engraved on a pillar of brafs, and were to be feen in Anoultus's time, in the Latin tongue, but in Greek characters.

But now Servius was grown old; and the ambition of Tarquin his fon-in-law revived in proportion as the king advanced in years. His wife ufed her utmoft endeavours to cheek the rafhnefs and fury of her hufland, and to divert him from all criminal enterprifes; while her younger fifter was ever initigating Aruns, who placed all his happinefs in a private life, to the moft villannus attempts. She was continually lamenting her fate in being tied to fuch an indolent hurband, and wifhing the had either continued unnarricd, or were become a widow. Similitude of temper and manners, formed, by degrees, a grear intimacy between her and Tarquin. At length ihe propoied nothing lefs to him than the murdering of her father, fifter, and hurband, that they two might meet and afcend the throne together. Soon after, they paved their way to an incethuous marriase, he by poitoning his wife, and the her lrufband; and then had the affurance to afk the king's Vol, XVI. Part I.
and queen's confent to their marriage. Servius and Tarqui ia, thougli they did not give it, were filent, throush too much indulsence to a daughter in whom now was their only hope of pollerity. But thefe criminal nuptials were oniry the firlt itep towards a yet. greater iniquity. The wicked ambition of the newmarried couple firft fiowed itfelf again? the king: for they publicly deelared, that the crown belonged to then; that Servius was an ufurper, who, being appointed tutor to Tarquin's grandchildren, had deprived his pupils of their inheritance; that it was high time for an old man, who was but little able to fupport the weight of public affairs, to give place to a prince who was of a mature age, \&c.

The patricians, whom Servius had taken great pleafure in lumbling during the whole time of his reign, were eafily gained over to Tarquin's party; and, by the help of money, many of the poorer citizens were alfo browght o:er to his intereft. The king, being informed of therr trealonable practices, endeavoltred to difluade his daurhter and for-in law from fuch proceedings, whieh night end in their ruin; and exhorted them to wait for the kingdom till his death. But they, defpifing his couniels and paternal admonitions, refol. ved to lay their claim before the fenate; which Servius was ubliged to fummon: fo that the affair eame to a formal proceis. Tarquin reproached his father-in-law with having afcended the throne without a previous interregnum; and with having bought clre votes of the people, and deipiied the fuffrages of the fenate. He then urged his own right of inlieritance to the erorn, and injutice of Servius, who, being only his guardian, had kept poffefion of it, when he himfelf was of an are to govern. Servius anfwered, that he had been lawfully elected by the people; and that, if there could be an hereditary right to the kingdom, the fons of Ancus had a much better one than the grandions of the late king, who mult himfelf have been an ufurper. He then referred the whole to an affembly of the people; which being immediately proclainsed all over the city, the forum was foon filled; and Servius hara:ggued the multitude in fuch a manner as gained all their affec. tions. They all cried out with one voice, Let Servius reivn; het him continue to make the Rom ins bufity. Amidtt their confufed clanıours, thefe words were likewife heard: Let Turquin per;jb; let him de de; let us kill b:m. ihis language frightened him fo, that he retired to his houfe in great hate; while the king was conducted back to his palace with the aeclamations of the people.

The ill fuccefs of elis attempt cooled Tarquin's ardent dufire of reiguing ; but his ambition inade him act a new part. He undertook to regain the favour of his father-in-law by careffes, fubmiffions, and proteftations of a fincere regard and affection for him; infomuch that the king, who judged oi the poliey of others from his own, was fineerely reconciled to him, and tranquillity re-ellablithed in the royal farrily, But it was not long ere Tarquin, rouled by the cont: nual reprotches of his wife, began to renew his intrigues among the fenaters; of whom he had no fooner gamed a contilerable part 5 , than he clothed himfelf in the royal robes, and caufing the fafees to be carried before him by fome of his domefties, croffed the Roman forum, entered th: temple where the fenate ufed to meet, and feated hime: \(\mathrm{U}{ }^{1}\)
fel:
\(\underbrace{\text { Ronle. }}\)

Rome. fell on the throne. Such of the fenators as were in the faction he found already in their phaces (for he had given them private notice to be thcre early) ; ald the reft, being fummoned to affemble in Tarquin's name, made what hafte they could to the appointed place, thinkiug that Servius was dead, fince Tarquin affumed the title and functions of king. When they were all affemblud, Tarquin made a long fpeech, reviling his father in law, and repeating the invectives againf him, which he had fo often uttered, calling him a fave, an ufurper, a favourer of the populace, and an enemy to the fenate and patricians. When he was yet fpeaking, Servius arrived; and, rafhly giving way to the motions of his courage, without confidering his frength, drew near the throne, to pill Tarquin down from it. This raifed a creat noife in the aftembly, which drew the people into the temple; but nobody ventured to part the two rivals. Tarquin therefore, being more ftrong and vigornus, feized the old man by the wailt, and, lurrying hin through the temple, threw him down from the top of the fteps into the forum. The king, who was grievounty wounded, raifed himfelf up with fone difficulty : but all his friends had abandoned him; only two or three of the people, touched with compaffion, lent him their arms to condu? him to his palace.

As they were leading him on fo fowly, the cruel 'Tullia appeared in the form, whither fhe had hallenad in her chariot on the firlt report of what had paffed in the fenate. She found her hufband on the top of the fleps of the temple; and, tranfported with joy, was the firt who faluted him king. The example was im. mediately followed by the fenators of 'Carquin's party. Nor was this enough for the unnatural daughter: The took afide her hufoand, and fuggetted to him, ihat he would never be fafe fo long as the ufurper of his crown was alive. Hereupon Tarquin inीantly difpatched fome of his domeftics to take away the remains of the unfortunate king's life. The orders for the wicked parricide were no fooner given than 'Tullia mounted her chariot again, with an air of triumph, to return home. The way to her houfe was through a narrow freet, called vicus cyprius, or the good freet. There the affaffins had left the king's body, which was fill panting. At this fight, the charioteer, ftruck with horror, checked his horfes, and made a ftop: but Tullia forced him to go on ; and the blood of the father is faid to have dyed the wheels of the chariot, and even the clothes of the inhuman daughter, wbence the Atreet was called ever after vicus fectiratus.
arquin II. The new king proved a mort defpotic and cruel tyo a cruel ty- rant; receiving, in the very beginning of his reign, the
rann. furname of proul, on account of his capricious humour ranc. and haughty behaviour. All controverfies whatever were decided by himfelf and his friends; and he banihed, fined, and even executed, whom he pleafed. The cenfus and luftrum, the divifion of citizens into clafes and centuries, were abolifhed; and all hinds of aifemblies, even thofe for amufernent and recreation, were protibited, both in town and country. Nay, to fucb a height did Tarquin carry his infolence and tyranny, that the molf vistuous of the fenators went into voluntary banißment ; while many of thofe who remained were cut off on varions pretences, that the king might enjoy their eflates.

Targuia could not but be fenfible of the extreme dan-
ger in which he nood by lofing the affections of his people in fuch a manner. He thereforc provided a fufficient number of fuldiers, by way of guard, to prevent attempts upon his perfon ; aud gave his daughter to Oetavius Mamilius, one of the mont confiderable menamong the Latins, in order to flrengthen his intereft by this.foreign alliance, in cafe of a revolt among his fubjects. Mamilius accordingly procured many friends to his father-in-law, but he had like to have loft thens again by his haughty behaviour. IHe had defired the Latins to call a national council at Ferentinum, where he would meet them on. a day appointed by himfelf. The Latins accordingly met ; but after waiting for feveral hours, Tarquin did not appear. On this, one Turnus Herdonius, an enterprifing and eloquent man, who hated Tarquin, and was jealous of Mamilius, made a fpeech, in which he inveighed againft the haughty behavionr of 'Tarquin, fet forth the contempt which he had put upon the Latins, and concluded with deliring the council to break up and return home withont taking any further notice of him. Mamilius, however, prevailed upon them to return the day following; wher Tarquin made his appearance, and told the allembly that his defign in calling them together was to claim his right of commanding the Latin armies, which he faid was derived from his grandfather, but which he defired to be confirmed to him by them. Thefe words \(H\) were fcarce out of his mouth, when Herdonius, rifing up, entered into a detail of 'Tarquin's tyranny and arbitrary behaviour at Rome, which, he faid, the Latins would foon feel in an equal degree, if they complied with Tarquin's demand. To this fpeech the king made no reply at that time, but promifed to anfwer him next day. In the mean time, however, he bribed the domeftics of Herdonius to admit among his baggage a large quautity of arms : and then, telling the Latins that Herdonius's oppofition proceeded only from 'Tarquin's having refufed him his daughter in marriage, accufed him of having laid a plot to cut off all the deputies there prefent, and to ufurp a jurifdiction over the Latin cities; as a proof of which he appealed to the arms hid among the baggage of Herdonius. The accufed, confcious of his innocence, defired that his baggage might be fearched; which being accordingly done, and the arms found, he was hurried away without being allowed to make any defence, and thrown into a baton at the head of the fpring of Ferentinum, where a hurdle being laid upon him, and fones laid upon the hurdle, he was preffed down into the water and drowncd.

In confequence of this monAtrous treachery, Tarquis was louked upon by the Latins as their deliverer, and declared general of the I.atin armies ; foon after which, the Hernici and two tribes of the Volici entered into an alliance with him on the fame terms. In order to keep thefe confederates together, Tarquin, with their confent, erefted a temple to Jupiter Latialis on an hill near the ruins of Alba, where he appointed certain feafts called Ferice Latinue to be held on the 27th of innies April, where the feveral nations were to facrifice toge-the iiz ther, and on no account to commit any hoffilities againgt Latis each other during their continuance. The king then proceeded to make war on the reft of the Volfci who had refufed to enter into an alliance with him. Some depredations which they lad somnaitted in the territo-

\section*{\(\mathrm{R} O \mathrm{M} \quad\left[\begin{array}{llll}339 & 1\end{array} \quad \mathrm{R} O \mathrm{M}\right.\)}
ries of the Latins ferved for a pretence to begin the war ; but as Tarquin had no confidence in the Romaris, his army was compofed only of a finall body of them who were racorporated among the Latin auxiliaries. However, he defeated the eneray, took one of their cis ties by ftorm, and gave the bocty to his foldiers. He next turned his arms againt the Sabines, whom he entirely defeated in twe engagements, aud made the whole nation tributary; for which exploits he decreed himfelf two triumplis, and on his returu to Rome he employed the populace in finifing the fewers and circus which had been begun ly his grandather Targruin I.

In the mean time, the perfecutions of Tarquin againt his own fubjects daily druve fome of the mot coniderable into banifhment. A great number of patricians tools refuge in Gabii, a city of Latiom about \(\cdot 13\) miles from Rome ; where the inhabitants, touched with compafion fur their nisfortures, not only received them with kindnefs, but began a war with I arquin on their account. The Gabini feem to have been the moft formidable enemies whom the Romans liad hitherto met with ; fince Tarquin was obliged to raife a prodigious bulwark to cover the city on the fide of Gabii. 'I he war latted feven years; during which time, by the nuatual devaftations committed by the two armies, a great fearcity of provitions took place in Rome. 'The people foon grew clamorous; and Tarquin being unable cither to quiet then, or to reduce the Gabini, fell upon the following dithonourable and treacherous expedient. His fon Sextus Tarquinius preteaded to be on very bad terms with his father, and openly inveighed againlt him as a tyrant ; on which he was proclaimed a rebel, and publicly beaten in the forum. This being reported at Gabii, by perfons fent thither un purpofe, the inhabitants became very defirous of having Sextus anong them; and accordingly he foon went thither, having previoully obtained a folem promife from the inhabitants never to deliver him up to his father. Here he made frequent inroads into the Roman territories, and always came back laden with fpoil, his father fending arrainft kim only fuch weak parties as mult infallibly be woifted. By this means he foon came to have fuch a high degree of credit amoug the Gabini, that he was chofen general of their army, and was as much matter at Gabii as Tärquin was at Rome. Finding theu that his authority was fufficiently eftablifhed, he difpatched a flave to his father for inftructions; but the king, unwilling to return an explicit anfwer, only took the meffenger into the garden, where he Itruck off the heads of the talleft poppies. Sextus underfood that by this leint the king defired him to put to death the leading men in the city of Gabii, which he irmediately put in execution; and while the city was in confufion on account of this maffacre, he opened the gates to his father, who took poffeffion of the city with all the pride of a conqueror. - The inhabitants dreaded every thing from the haughty tyranny of the Roman monarch: however, on this occafion he confulted his policy rather than his revenge ; granted them their life, libetty, and cttates, and even entered into a treaty of alliance with them. The articles were written on the hide of an ox, which was fill to be feen in the rime of Auguftus, in the temple of Jupiter Fidins. After this, however, he made his fon Sestus king of Gabii ; fending off alda-
lis two othur fons, Titus and Aruax, the cne te buiif a city at Signia, the nther at Circxum, a promontory of the Tyrrhene fea, and both thefe to keep the Volic: in awe.
For fome time Targuin now enjoyet a profoun: peace; the Ronams, being accultomed to oppreffiors and the yoke of an imperious malter, makine no oppolition to his will. During this interval Tarquin met with the celebrated adventure of the Sibyl+;+3eose: whofe books were ever afterwards held in high eitima is tion at Rome, and Tarquin appointed two perfons of Ruolis of ditinction to take care of them. Thefe were cailed the sibytyo Duamviri : but their number was afterwards iccreafed to 10 , when they were called Decemviri; and then teo 15 , when they were termed Quindecemairi. At this time alfo the written civill law had its origin among the Romans; all the fatutes eracted by the kin!s being collected into one body; wbich, from Papirius the name of the collector, was called the Papirian law. The temple of the Capitol was allo finihed; for which purpofe the moft fkilful architeets and workmen were brought from Hetruria, the populace being obliged to ferve them in the mof laborious parts.
We now come to the important revolution which put \({ }^{5}{ }^{56}\). an end to the regal power at Rome, and introduced a of the r ? new firm of government, to which this city is allowed gal power. to owe the greatell part of her grandeur. Tarquin, as we have already feen, laad left himfelf no friends among the rich citizens, by reafon of the oppreflion under which he made them labour; and the populace were equally difaffected on accuunt of their being obliged to labour in his public works. Among the many perfons of diftinction who had been facrificed to the avarice or fufpicions of Tarquin, was one M. Junius, who had married the daughter of Tarquin I. This nobleman had a fon named L. Junius Brutus, who effaped the cruelty of the tyrant by pretending to be an idiot, which part he had ever fince continued to act. Soon after the finilhing of the works abovementioned, a violent playue happening to break out at Rome, Tarquin fent his fons Titus and Arunx to confult the oracle of Delphi; and the princes took Brutus along with them, to divert themfelves with his pretended folly by the waj. Brutus chofe for his offeriny to the Delphic Apollo a ftick of elder; which oceafioned much laugh. ter. However, he had the precaution to inclofe a rod of gold within the ftick; and to this probably it was owing, that the prieftefs gave the princes the following riddle, that he who hould firt kifs his mother Aowld fucceed Tarquin in the government of Rome. This anfwer had been given to their inquiries concerning the fucceffion; upon which the two brothers either drew lots which of them fhould kifs their mother at their return, or agreed to do it at once, that both might reign jointly: but Brotus, imagining the oracle had another meaning, fell down and kiffed the earth, the common mother of all living. This, in all probability, the prieftefo had meant; and had given the anfwer on purpofe to have another proof of Brutus's ingenuity, which had already difcovered itfelf, by his offering the elder ftick.
On the return of the princes to Rome, they found their father engaged in a war with the Rutuli. The treafury being exhaufted by the fums which Tarquin had expended in his public works, be had marched to

\section*{\(\mathrm{I} 0 \mathrm{M} \quad\left[\begin{array}{lll}340\end{array}\right]\)}

Rnne. Ardca, the rapital of that nation, which lay ahout 20 miles from Ponle, in hopes of taking it without oppofition. Contrary in his expectation, however, he was obliged to behece it in furm; and this condrained lim to lay a heasy tax upon his ful jects, which increafed the number of maleontents, and difpofed every thing for a revolt. As the liezer was carrici on very llowly, the gencral officers frequently made entertainments for owe arnether in their quarters. One day, when Sextus Tarquinins wa, entertaining his brothers, the ennverfation happencel to turn umom their wives: every one extolled the grood qualities of his own ; hit Collatinus beftowed luch extravagant praifes on his Lucretia, that the difpuee ended in a kind of quarrel. It was then refalved that they fhould mount their horfes and furprife their wives by their unexpected return. The king's daushters-in-law were employed in feafting and diverfion, and feemed much difconcerted by the appearance of their hufbands; but Lucretia, though the night was far advanced, was found, with her maids about her, fpinning and working in wool. She was not at all difcompofed by the company whom her hufband brought with him, and they were all pleafed with the reception the gave them. As Lucretia was very beautiful, Sextus \(\cdot\) ' 'arquinius conceived a paffion for her, which refolving to fatisfy at all events, he foon returned to Collatia in the abfence of Lueretia's hufoard, and was entertained by her with great civility and refpect. In the ni hi-time lie entered Lucretia's apartment, and threatened her with immediate death if She did not yiuld to his defires. But linding her not
to the intiminated with this menace, he told her, that, if fie till perfilled in her refufal. he would kill one of her male naves, and lay hin naked by her when flee was dead, and then declare to all the world that he had only revenged the injury of Collatinus. On this the virtuous Lucreria (who, it feems, dreaded prollitution lefs than the infamy attending it) fubmitted to the defires of Sextus; but refolved not to outlive the violtnee which had been offered her. She dreffed herfelf in mournine, and took a poniard under her robe, laving previouny wrote to her hufuand to meet her at her father Lucretius's boufe, where fhe refufed to difcover the caufe of her grief except in a full aftembly of her friends and relations. Here, addeffing herfelf to her huband Collatinus, me acquainted then with the whole affair; exhorted them to revelige the injury; and protefled that fhe would not outlive the lofs of her honour. Every one prefent gave her a folemn promife that they would revenge her quarrel ; but while they endeavonred to confort her, fhe fuddenly flabbed herfelf to the heart with the dagger whic! She had conecaled under her robe. See Chastity.

This extravasant action inflamed beyond meafure the minds of all prefent. Brutus, laying afide his pretended folly, drew the bloody dageer out of Lucretia's body; and, thowing it to the alfembly, fwore by the blood upon it that he would purfue Tarquin and his family with fire and fword: nor would he ever fuffer that or any other family to reign in Rome. The fame oath was taken by all the eompany; who were fo mucb fur prifed at the apparent trantition of Brutus from folly to wifdom, that they did whatever he defired them. By his advice the gates of the city were fhut, that no. tody might go out of it to inform Tarquin of what
was groing fonward; which, as Lucretius had been left governor of the city by Tarquin, was put in execution withnet diffictlty. The corple of Lucretia was then expofed to public view; and Brutus having made a fpeech to the penple, in which he explained the myftery of his conduct in counterfeiting folly for many years palt, proceeded to tell them that the patricians were come to a refolution of depoling the tyrant, and exfrorted them to concur in the fame defign. 'I he people Ta:quin teftified their approbation, and called out for arms; but depofed. Brutus did not think proper to trult them with arms till he had firft obtained a deeree of the fenate in favour of the defign. This was eafly procured: the fenate enacted that Tarquin had forfeited all the prerogatives belonging to the regal authority, condemned him and all his pofterity to perpetual baniftment, and devoted to the gods of hell every Roman who fhould hereafter, by word or deed, endeavour his reftoration ; and this dectee was unanimoully confirmed by the curiæ.

Tarquin being thus depofed, the form of government The form became the next object. Lueretius was for the prefent of govern declared Interrex ; but Brutus being again confulted, ment cla declared, that though it was by no means proper for \({ }^{\text {ged }}\) the flate to be without fupreme mayiflrates, yet it was equally neceffary that the power fhould not be centered in one man, and that it thould not be perpetual. For this reafon he propofed, that two magiltrates, called conf:ls, fhould be elected annually ; that the ftate fhould thenceforth have the name of ropublic; that the enligns of royalty fhould be abolifhed; and that the only enfigns of confular dignity thould be an isory chair, a white robe, and 12 lictors for their attendants. However, that he might not utterly abolith the name of king, he propufed that this title thould be given to hira who had the fuperintendency of religious matters, who fhould thencefortli be called rex fucrorum, or king of facred bings.

This feheme of Brutus being approved of, Brutus and Tuitus Collatinus were propofed by Lucritius as the two firf le:ves confuls, and unanimoufly accepted by the people, who Rome thought it was impoffible to find more implacable encmies to the Tarquins. They entered on their office in the year \(503 \mathrm{~B} . \mathrm{C}\). ; and Tullia, perceiving that now all was loft, thought proper to leave the city, and re. tire to her hufband at Ardea. She was fuffered to depart without moleflation, thourg the populace hooted at her, and curled her as the went along. Tarquin, in the mean time, being informed by fome who had got out of Rome before the gates were fhut, that Brutus was raifing commotions to his prejudice, returned in hafte io the city, attended only by his fons and a fevz friends; but, finding the gates fhut, and the people in arms on the walls, he returoed again to the camp: but bere again, to his furprife, he found that the confuls had taken the opportunity of gaining over the army to their interet ; fo that, being refufed admittance into the camp alfo, he was forced to fly for refuge, at the age of 76 , with his wife and three fons, to Gabii, where Sextus had been made king. Here he continued for fome time: but not finding the Latins wery forward to revenge bis caule, be retired into Hetruria ; where, being the country of his mother's family, he hoped to find more friends, and a readier affiltance for atte mpting the recovery of his throne.

\section*{R O M}

The Romans now congratulated themelves on their happy deliverance from tyranny. Huwever, as 'Tarquin. had by his policy proctred himfelf many friends and, by the-defection of their allies, the Roman dominions were left in much the fame thate as they had been in the time of Romulus. The territury of Rome had always been confined to a very nanow compals. Thongh almolt conllandy victorious in war for 243 years, they had not yet gained land enouzh to fupply their city with provifions. The main flrensth of the flate lay in the number of the citizens of Rome; which the enftom of tranfplanting the inhabitants of the conquered cities thither had fo prodigiouly increafed, that it put the Romans in a condition of ufurping the authority over other nations, the moll inconfiderable of which had an extent of territory far exceeding theirs. By frequent Lepredations and incurfions they fo haraffed the petty flates of Latium and Hetruria, that many of them were conftrained to enter into treaties with Rome, by which they obliged themfelves to furnifh her with auxiliaries whenever the hould be pleafed to invade and pillage the lands of her other neighbours. Submiffions of this kind the Rumans called moking allances with them, and theie ufeful alliances fupplied the want of a larger territory; but now, upon the change of her government, all the allies of Rome forfook her at once, a 1 d either food neuter, or efpoufed the caule of the banifhed king; fo that the was now obliged to maintain her liberties as the beft mieqhe.

The new confuls in the mean time took the mot effectual methods they could for fecuring the liberties of the republic. The army which had been employed in the fiege of Ardea marched home under the conduct of Herminius and Horatius, who concluded a truce with the Ardeates for 15 years. The confuls then again affembled the people by centuties, and had the decree of Taqquin's banifhment conirmed; a rex facrooum was elected to prefide at the facrifces, and many. of the laws of Strvius Tullius were revived, to the great joy of the people, who were thus rettored to their ancient right of voting in all important affairs. 'Tarquin, however, refolved not to part with his kingdom on fuch eafy terms. Having wandered from city to city in order to move compafion, he at length made Tarquinii the feat of his refidence; where he engaged the inhabitants to fend an embafly to Rome, with a modeft, fubmiffive letter from himfelf, directed to the Roman people. The ambaffadors reprefented in fuch frong terms to the fenate how reafonable it was to let the king be heard before be was condemned, and the danger which threatened the flate from the neighbouring powers if that common juftice were refufed, that the confuls inclined to bring thefe agents before the people, and to leave the decifion thereof to the curiæ; but Valerius, who had been very active in the revolution, ftrenuoufly oppofed this, and by his influence in the fenate got it prevented. As that illuftrious body had been greatly thinned by the murders comnitted by Tarquin, new members were elected from among the knights, and the ancient number of 300 again completed. The old fenators had been called patres or "fathers;" and as the names of the new ones were now written on the fame roll, the whole body received the name of putres confcrifti.

The old king was not to be foiled by a fingle at.
tempt. He prevailed on the inhabitants of Tarquinii R me, to fend a fecond embaffy to Rome, under pretence of demanding the eftates of the exiles, but with private indructions to get the confuls affaflinated. The reftoration of the eftates of the exiles was oppofed by Brutus, but Collatinus was for complying with it ; whereupon Brutus accufed his colleague of treachery; and of a defign to bring back the tyrant. The matter was then referred to the people, where it was carried by one 63 vote in favour of the Tarquins. But whilf the people \(A\) corfpiwere employed in loading carriages with the effects of \(\mathrm{r}_{\mathrm{d}} \mathrm{y}\) y fo-med the exiles, and inf felling what conld not be carried off, in his f3the ambaffadors found means to draw fome of the neareft relations of the confuls into a plot with them. Thefe were three young noblemen of the Aquilian family (the fons of Collatinus's fifter), and two of the Vitcllii (whofe fitter Brutus had married) ; and thefe latt engaged Titus and Tiberius, the two fons of Brutus, in the fame confpiracy. 'lhey all bound themfelves by folemn oaths, with the dreadful ceremony of drirking the blood of a murdered man and touching his entrails. They met at the houfe of the Aquilii, where they wrote letters to Tarquin and gave them to the ambaifadors. But though they ufed all imaginable precaution, their proceedings wers overheard by une Vindicius a nive, who immediately communicated the whole to Valerius; upon which all the criminals were apprehended. Erutus food judge over his own fons; and, Bratis notwithftanding the interceffion of the whole a!fembly, cutes rwe and the tears and lamentations of his children, com-or his an as manded them to be bebeaded; nor would he depart fons reade till he faw the execution of the fentence. Having performed this piece of heroic barbarity, he quitted the tribunal, and left Collatinus to perform the relt. Collatinus, however, being inclined to fpare his nephews, allowed them a day to clear themfelves; and caufed Vindicins, the only witaefs againft them, to be delivered up to his mafters. This roufed the indignation of the people in general, efpecially of Valerius, who bad promiled to protect the witnefs, and therefore he refufed to deliver him up to the lietors. The multitude called aloud for Brutus to return; which when he had done, he told them that he had executed his two fons in confequence of his own paterual authority over them, but that it belonged to the people to determine the fate of the relt. Accordingly, by a decree of the curix, all the delinquents fuffered as traitors except the ambaffadors, who were fpared out of refpeet to their character. The flave Vindicius had his liberty. granteo him; and was prefented with 25,000 afes of brafs, in value about L. So: 14: 7 of our money: The decrec for relloring the eftates of the exiled Tarquins was annulled, their palaces were deftroyed, and their lands divided among the indigent people. The public only retained a fiece of ground, near the Campus Martius, which the king had ufurped. This they conlecrated to Mars, and it afterwards became a common field where the Roman youth exercifed themfelves in running and wreftling. But after this confectation, the fuperftitious Romans ferupled to ufe the corn whicle they found there ready reaped to their hands: fo that, with fome trecs, it was thrown into the Ciber; and the water being low, it ftopped in the middle of the river, and began to form a fine illand named afterwardz Infula Sacra.

The behaviour of Brutus towards his two fons fruck fuct

\section*{each otice} dom by furce. He firt engaged the Volfei and Tarquinienfes to join their forces in order to fupport his rights. 'The confuls marehed out without delay to meet them. Bratus command:d the houfe and Valerius the foot, drawn up in a fquare battalion. The two armies being in fogt of each other, Brutus advanced with his cavalry, at the fame time that Arunx, one of 'Tarquin's fons, was coming forward with the enemy's horfe, the king himfelf fullowing with the legions. Arunx no vanced towards lim with no lifs fpeed; and as both were aftuated only by motives of hatred, without quected in every thing the faid, anoi refufed to hear Collatimus fpeak in bis own derence; io that the couful was on the noint of being driven nut with isnominy and cifgrace, when Lucretius interpoled. and prevailed upon Brutus to alluw his colleague quietly to refien the fatces. and retire of tis own accord fro:7 the city. Brutus then, to remove all fufpicions of perfonal ennity, procured him a prefent of 20 talen:s out of the pullic treafury, to which be added five of his own. Collatinus then retired to I.aviniun, where he lived in peace, and at laft cied of old aze.

After the abdication of Collatinus, Valeríus wes chofen in his room; and as his temper agreed much better with lirutus than that of Collatimus, the two confuls lised in sreat harmony. Nothing, however, could make the dethoned king forego the hope of recovering his kingthoughts of felf-prefervation, both of them were pierced through with their lanees. The death of the two generals ferved as a prolude to the battle, which continued with the utmof fury till night, when it could not be known which fide had got the victury, or which lad loft the greateft number of inen. A report was fpread, however, that a vuice had been heard out of a neighbouring wood, declaring the Roinans conquerors; and this, probably a flratagem of Valerius, operated fo powerfully on the fuperftitious minds of the Volfci, that they left their camo in cuafufion, and returned to their own country. It is faid that Valerius, having cauled the dead to be munbered, found that the Tolfer had lu!t \(11,300 \mathrm{men}\), and the Rumans only one fhort of that number.

Valerius beines loft withont a colleague in the con. fulhip, and having for fome reafons delayed to choofe one, began to be fufpected by the people of afpirings at the fovereignty; and thefe furpicions were in fome meafure countenanced by his building a fine houfe on the fteep part of the hill Palatinus, which overlooked the forum, and was by them confiecred as a citadel. But of this Valerius was no fooner informed, than he caufed this houfe to be pulled down, and immediately called an aflenuly of the pecple for the election of a conful, in which he left them entirels free. They chofe Lucretius ; and, being ahamed of having fufpected Va. lerius, they complimented him with a large groundplot in an agrecable place, where they built him a boufe. 'The new conful died a few days after his propotion, fo that Valerins was once nore left fole go-
vernor. In the interval betwixt the death of Lueretins and the choice of ancther conful, Valerius gave the people fo many friking profs of his attachmen: to their isteref, that they befowed upen him the furramc of Foplizo'a or "popular;" nor was he eter call. ed by another name afterwards.

Th hen I'oplicola's year of confulhip expired, the Romans thought fit, in confequence of the critical fituation of affars, to clect him a fecond time, and joined with him T'. Lucretius, the brother of the famous Lw. cretia. 'They began with reftoring the cenfus and lufrum ; and found the number of Roman citizens, a: or : bove the age of puberty, to amount to 130,000 . As they appreliended an attack from the Latins on acconet of 'Tarquin, they were at gecat pains to fortify Sinquirinum or Singliuria, an important pult on that fide. Contrary to their expeciations, however, the Iatins remained quiet ; but an haughty embally was received from Purfena king of Clufium in Hetruria, com-1 manding them cither to take back the Tarquins to Rome, or to reftore them their eftates. To the firl of thefe demands the cunfals teturned an abfolute refufal: and, as to the fecond, they anfwered, that it was impracticable; a part of thote cttates having been confecrated to Nars, and the reft civided among indigent people, from whom they could not be recovered. The imminent dancer which now threatened the city, procured Valerius the honour of a third confulithip: and with him was joined Horatius Pulviliue, who had enjoyed the dignity for a few months before in the interval betwixt the death of Lucretius and the expiration of the frft confulate.

While the Romans were making the moft sigerous 60 preparations for defence, Porfena, attended by his fon feats thex Arunx and the exiles, inarched towards the city at the army.
head of a formidable army, which was quickly joined by a confiderable body of Latins under Mamilius, the fon-in law of Tarquin. The confuls and the fenate took all imazinable care to fupply the common people with provifions, lett famine thould induce them to open the gates to 'larquin; and they detired the country people to lodge their effects in the fort Janiculum, which overlooked the city, and which was the only fortifed place poffefled by the Romans on that fide the Tiber. Porfena, however, foos drove the Romans out of this fort ; upoa which the confuls made all their troops pais the river, and drew them up in order of battle to defend the bridge, while Porfena advanced to engage then. The victory was a long time doubtful; but at laft the Romans fled. Horatius Cocles, nephew Bravery o? to the conful, with Sp. Lartius and 'I'. Herminius, Horatius who had commanded the right-wing, pofted themfelves Cocles. at the entrance of the bridge, and for a long time bravely defended it: but at latt, the delenlive arms of Lattius and Herminius being broken, they retired; and then Horatius defiring them to advife the confuls from lim to cut the bridge at the other end, he for a while fustained the attack of the enemy alone. At lalt, being wounded in the thigh, and the fignal given that the bridge was almolt broken down, he leaped into the river, and fwam acrofs it through a mower of darts. Ihe Romans, in token of gratitude for this cminent fervice, erected a flatue to him in the temple of Vulcan, gave him as much land as he himfelf with one yoke of oxen could plough in one day; and each of the inha-

\section*{R G M}
bitants, to the number of \(300,00=\), gave him the value of as much food as each confumed in a day. But notwithitanding all this, as he had lote one eye, and from his wounds continued leme throughout the remainder of his lise, thefe defects preverted his cver being raifed to the confulate, or inveled with any military command.

The city was not fet Fuly insefted; but as it was very dificult to find provifions for fuch a muleitude, the inlabitants foon began to be in want. Porfena being informed of their difficultics, told them that he would fupply them with provifions if they would take back their old mafters; but to this they replicd, that kunger was a lefs evil than flavery and opprefion. 'Ihe conftancy of the Romans, however, was on the point of failing. when a young patrician, named Mutias Cordus, with the confent of the ferate and confuls, undertook to affaffinate Porfena. He got accefs to the Hetrurian camp, difguiled like a piafant, and made his way to the king's tent. It happened to be the day on which the troops were all reviewed and paid; and Por. fena's fecretary, marnificently drefled. was fitting on the fame tribunal with the king. Mutius, mitaking him for Porfena, inftantly leaped upon the tribunal and killed him. He then attempted to make his efcape; but being feized and brought back, he owned his defign; and with a countenance expreffive of defperate rage and difappointmeat, thruf his hand which had mifed the blow into a pan of burning coals which ftood by, and there held it for a confiderable time. On this, Porfena, chansing his reientment into admiration, granted him his life and liberty, and even reftored him the dagser with which he intended to have ftabbed himfelf. Mutius took it with his left hand, having loft the ufe of the other; and frem this time had the name of Suere, h, or "left handed." He then, in order :o induce Porfena to break up the fiege, invented a Atory that 300 young Romans, all of them as refolute as himfelf, had fworn to take awny the life of the king of Hetruria, or to perith in the attempt. This had the defired effect; Porfena fent deputies to Rome, whofe oaly dernands were, that the Romans fhould reflore the eftates of the 'Iarquins, or give them an equivalere, and give back the feven fmall towns which had been formerly taken from the Veientes. The latter of thefe demands was cheerfully complied with; but the former was ftill refufed, until Porlena fhould hear the frong reafons they had to urge asainft it. A truce being agreed on, deputies were fent to the Hetrurian camp to plead the Roman caufe againft the Tarquins, and with them ten young men, and as many virgias, by way of hoftages for performing the other article.

The reception which Porfena gave the deplities ratfed the jealouly of the Tarquins; whe fill retaining their ancient pride, refufed to admit Porfena for a judge between them and the Romans. Bnt the kins, without any rend to their oppofition, refolved to fatisfy himfelf, by an exact inquiry, whether the protection he had given the Tarquins was juit. Io:t while the care was ready to be opened before the Roman deputies, news were brought that the young worren whom the Romans had fent as hoftages had ventured They had gone to bathe in the river, and Clixlia hap- gening to turn her cyos towards her native city, that
to fubmit; and farce was this war ended, when another a, 1. de.lai tor embaty was fent to Rome, the purport of which was, Targ : :n.
embaify to him with a prefent of a throne adorned with ivory, a feptre, a crown of gold; and a triumplat robe.

Thus the Romans efcaped the greateft danger they lad hitherto been in. However, they did not yet ajoy tranquillity. 'The Sabines revolted, and contimed the war for fone tine with great obftinacy: but being de. feated in feveral engagements, they were at laft obliged Targin. Before they began this war, however, an that the Romans hou'd raife the frege of Fidene which had revelted, and receive the 'larquins; who, on their part, fhould graut a general amuefty. The anobaliadors were to allow the Romans a whole year to confider on thele owereures ; and to threaten them with a war in cale they refufed to comply with them. The chicf view of 'I'anquin and his partifans in promoting this embafly was, to lay hold of that oppostunity to raife a fec ition in the city. To the ambairadors, therefore, of the Lation, he joined fome of his own emiflarics, who, oa thir arsival in the city, found two forts of people difpofed to enter into their meafures; to wit, the flaves, and the meaner citizens.

The flaves had formed a confpiracy the ycar before to feize the Capitol, and fet fire to the city in feveral quarters at the fame time. But the plot being difcovered, thofe who were concerned in it had been all crucifed, and this execution had highly provoked the whole body of flases. As to the meaner citizens, who were for the molt part overwhelmed with debt, and cruelly ufed by their creditors, they were well apprifed that there could happen wo change in the government but to their advantage. Thefe were the confpirators pitclod upon, and to them were given the foll. lowing parts to af: the citizens were to make themfenes matters of the ramparts and gates of the city; at an appointed hour of the night; and then to raife a great fhout as a fignal to the flaves, who had engaged to maffacre their mafters at the fame inftant: the gates of the city were then to be opened to the Tarquins, who were to chter Pome while it was yet reeking with the blond of the fenators. "The confpiracy was ripe for execution, when 'Tarquin's principal agents, Publius and Mareus, botls of his own name and family, being terrified with frightful dreams, had not courage enough to proceed in their defien tith they had confulted a divner. However, they did not difoover to him the confpiracy; but only anked him in general terms, what fuccefs they might expect in a project they had formed? 'The footlafayer, without the lcalt hefitation, returned the following anfwer: Your ploject suill end in your ruin; dfourden pourfelves of fo beazy a load. Ilereupon the 'Tarquins, fearing left fome of the other coufpirators thould be beforehand with them in informing, went immediatcly to S . Sulpitius, the only conful then at Rome, and dilenvered the whole matter to him. The conful greatly commended them. ard detained them in his houfe, till, by private inquiries, he was aflured of the truth of their depontions. Then he afferbled the fematc, and gave the Latin ambaffadors their andience of leare, with an antwer to their propofals; which was, that the Romans would neither receive : he I'arquias, ror raife the fitge of Fidenx, being all
to a man ready to facrifice their lives in defence of thesil
hberties, and willing to mudergo any dangers rather than fubmit to the governsent of a tyant.
'The ambafladors' beins difmifral with this anfwer, and conducterl out of the city, Suipitius laid open to the fathers the dre dful confinacy. It fartock them with horor: but they were all at a lofs in what manner they foould apprehend and punill the guilty; fince, by the law of Poplicol', there was an appeal to the people in all capital cafes ; and the two wimedes, who were Atrangers, might be excepted againft by Roman citizens. In this perplexity they left the whole conduct of this critieal affair to Sulpitius; who took a method which he thought would equally ferve to prove the guilt and punim the griblty. He engased the two informers to affemble the confpirators, and to appoint a rendezwous at midnight in the formm, as if they defigned to take the lait meafures for the execution of the enterprife. In the mean time he nied all proper means to fecure the city, and ordered the Roman knights to hold themfelves ready, in the houfes adjoining to the forum, to execute the orders they hould receive. 'The confpirators met at the time and place appointed by tlue two "Parquins; and the knights, upon a figual agreed on beforehand, inwefted the forum, and blocked up all the avenues uo it fo clofly, that it was impofible for any of the confpirators to make their efcape. As foon as it was light, the two confuls appeared with a ftrong guard on the tribunal ; for Sulpitius liad fent to his colleague Manius, who was befieging Fidenx, defiring him to laflen to the city with a chofen body of troops. The people were convened by curix, and acquainted with the confpiracy which had been formed againft the common liberty. The acculed were allowed to make their defence, if they had any thing to offer againft the evidence: but not one of them denying the fact, the confuls repaired to the fenate, where fentence of death was pronomecd againtt the confpirators, in cafe the people approved it.

This decree of the fenate being read to and approved The con \({ }_{79}\) by the affembly, the people were ordered to retire, and rator \(p 1\) the confpirators were delivered up to the foldiers, who \({ }^{\text {nifhed. }}\) put them all to the fword. 'I'he peace of Rome was thought fufficiently fecured by this ftroke of feverity; and therefore, though all the confpirators were not prnifhed with death, it was judged proper not to make any further inquiries. 'The two informers were rewarded with all the privileges of Roman citizens, 100,000 ales, and 20 acres of land. Three feltival-days were appointed for expiations, facrifices, and public games, by way of thankfgiving to the gods. But the general joy was difturbed by a melancholy accident: as the people were conducting Manius Tullius the conful from the circus to his houle, he fell from his clariot, and died three days after.
'The city of Fidenz was not yet rednced: it buld out during the following confulhip of . Abutins and P. Veturius; but was taken the next year by '1. La:tius, wl.0, together with Q . Clxlins, was raifed to the confular diguity. 'I'he Latins, coraged at the lofs of this town, began to complain of their leading men; which opportunity Tarquin and Mamilius improved fir far, as to make all the Latin cities, 24 in number, enter into an alliance againft Rome, and to bind themfelves by oath never to violate their engagements. The La-

Rome. tirs made vait preparations, as dia likewife the Romans; but the latter could procure no affiftance from their neighbours. As the Latin nation was much fuperior to them in ftrength, they fent deputies to folicit fuccours from the feveral ftates with which they were furrounded: but their negociations proved every where unfuccefsful; and, what was worfe than all, the republic lrad rebellious fons in her own bofom, who refufed to lend thcir aid in defence of their country. The poorer fort of people, and the debtors, refufed to take the military oaths, or to ferve; allieging their poverty, and the fruitlefs hazards they ran in fighting for the defence of a city, where they were opprefled and enflaved by their creditors. This fpirit of nutiny fpread among the inferior claffes, moft of them refuing to lift themfelves, unlefs their debts were all remitted by a decree of the fenate; nay, they began to talk of leaving the city, and fettling elfewhere.

The fenate, apprehending a general infurrection, affembled to deliberate on the means of quieting thofe domeftic troubles. Some were for a free remiffion of all debts, as the fafelt expedient at that juneture; others trged the dangerous confequences of fuch a condefcenfion, advifing them to lift fuch only as were willing to ferve, not doubting but thofe who refufed their affitance would offer it of their own accord when it was no longer defired. Several other expedients were propofed: but at length this prevailed; to wit, that all actions for debts fhould be fufpended till the conclufion of the war with the Latins. But this the indigent debtors thought only a fufpention of their mifery ; and therefore it had not the intended effect on the minds of the unruly multitude. The fenate might indeed have profecuted the ringleaders of the fedition ; but the law of Poplicola, called the Ealerian law, which allowed appeals to the afembly of the people, was a protection for the feditious, who were fure of being acquitted by the accomplices of their rebellion. The fenate, therefore, to elude the effect of a privilcge that put fuch a reftraint upon their power, refolved to create one fupreme magitrate, who, with the title of diatator, fould have an abfolute power for a time: but as this could not be done without friking at the law of Poplicola, and transferring the power of the people in criminal cafes to a magittrate fuperior to all laws, it was neceffary to ufe artifice, in order to obtain the confent of the curix. They therefore reprefented to them in a public affembly, that, in fo difficult a conjuncture, when they had their domeftic quarrels to decide, and at the fame time a powerful enemy to repulfe, it would be expedient to put the cormonwealth under a fingle governor, who, fuperior to the confuls themfelves, fhould be the arbiter of the laws, and as it were the father of his country; that his power fhould have no limits: but, however, left he mould abufe it, they ought not to trutt him with it above fix months.

The people, not forefeeing the confequences of this change, agreed to it; but the greateft difficulty was to find a man duly qualified in all refpects for fo great a truft. T. Lartius, one of the confuls, feemed to be of all men the moft unexceptionable; but the fenate, fearing to offend his colleague by an invidious prefe. rence, gave the confuls the power of choofing a dictator, and obliged them to name one of themfelves, not doubting but Cloelius would yield to the fuperior ta=

Vol XVI. Part I.
lents of hiz colleague ; nor were they difappointed in their expectations. But Lartius, with the fame readinefs, named Clolius; and the only conteft was, which of the two thould raife the other to the fupreme autho. rity. Each perfited obitinately in remitting the dignity to his colleague, till Clolins, Aarting up on a fudden, abdicated the confulihip, and, after the manner of an interrex, proclamed Titus Lartius dictator, who therenpon was obliged to take upon him the government of the republic.

82
Lartius indeed took as much fate upon him, after He choores he had entered upon his office, as he had thown mo- a yencral detty in refufing it. He began by creating, without of horle. the participation either of the fenate or people, a general of the Roman horfe; an office which lafted only during the dictatorthip, and which all fublequent dicr tators revived immediately after thecir election. Sp. Caffus, formerly conful, and honoured with a triumph, was the perfon he advariced to this fecond ftation in the republic. Lartius, having by this means fecured the Roman knights, refolved, in the next place, to make the people refpect and fear him. Witl this view he never appeared in public, without being attended by 24 lictors, to whofe fafces he again added the axes which Poplicola had caufed to be taken from them. The novelty of this fight was alone fufficient to awe the feditious, and, without executions, to fpread confternation throughout Rome. The murmurs of the inferior claffes being by this means filenced, the dictator commanded a cenlus to be taken, according to the inftitution of King Servius. Every one, withont excep. tion, brought in his name, age, the particulars of his \(\varepsilon_{3}\) eftate, Sc. and there appeared to be in Rome 150,700 Number of men who were palt the agre of puberty. Out of thefe the Rothe dictator formed four armies : the firlt he command. \({ }^{\text {maze }}\) ed himfelf; the fecond he gave to Cloelius his late colleague; the third to Sp . Caffius his general of the horfe; and the fourtlis he left in Rome, under the command of his brothet Sp. Lartius, who was to guard the city. The Latins not being fo forward in their preparations as was expected, all their holtilities againd Rome this campaign amounted to no more than the fending a detachment into the Roman territory to lay it walte. The diChator gained fome advantage over that party; and the great humanity with which he treated the prifoners and wounded, difpofed the Latins to lilten the more readily to the overtures which he at the fane time made them for a fufpenfion of hoftilities. At length a truce was agreed on for a year; and then Lartins, feeins the republic reftored to its former tranquillity, refigned the dictatorfhip, though the time appointed for its duration was not yet expired.

The following confulhip of Sempronius Atratinus and Minutius Angurinus, produced nothing memorable. But the next year the truce expired, when Aulus Pofthumius and T. Virginius too's poffellion of the confulthip. Both Romans and Latins were bufied in making the neceffary preparations for war. The nobility of Latium, who were for the mur part in the intereft of the Tarquins, having found neeans to exclude the citizens from the Latin diets, earried all before them in thofe affemblies: whereupon many of the citizens removed with their families to Rome, where they were well received. The Latins being bent upon war, the fenate, notwithftanding the perfect har-

\section*{R" O M}

Rume. camped in the night, and returned to their relpective 86 The who!e arion fubuits. countries before break of day.

The Latins having now no remedy but an entire fubmiffion, fent ambaffadors to folicit a peace at Rume, yielding themfelves abfolutely to the judgment of the fenate. As Rome had long fince made it a maxim to foare the nations that fubmitted, the motion of 'litus Lartius, the late dictator, prevailed; and the ancient treaties with the Latins were renewed, on condition, however, that they fhould reftore the prifoners they had taken, deliver up the deferters, and drive the Roman exiles out of Latium. 'Thus ended the laft war which the Romans waged with their neighbours on account of their banifhed king; who, being now abandoned by the Latins, Hetrurians, and Sabines, retired into Campania, to Ariftodemus tyrant of Cumre, and there died, in the geth year of his age and \(14^{\text {th }}\) of his exile.

The Romans were no fooner freed from thefe dangerous wars, than they began to opprefs one another ; and thofe domentic fends took place which continucd more or lefs during the whole time of the republic. The fint difturbances were ocealioned by the oppreffion of the plebeians who were debtors to the patri- cians. The fenate, who were at the head of the patricians, chofe to the confulate one Appius Clansius, who violently oppofed the pretenfions of the plebeians; but gave him for his colleague one P. Servilius, who was of a quite contrary epinion and difpofition. The confequence of this was, that the confuls difagreed; the fenate did not know what io dctermine, and the people were ready to revole. In the midft of thefe difturbances, an army of the Volfci advanced towards Rome; the people refuled to ferve; and had not Servilins procured fome troops who ferved out of a perfonal affection to himfelf, the eity would have been in great dangror.

But though the Volfci were for this time driven back, they had to intention of dropping their defigns; they engaged in an alliance with them the Hernici and Sabines. In the mean time, the difputes at Rome continued with as much violence as ever. Nay, though they were exprefsly told that the Vulfcian army was on its way to befiege the city, the plebeians ablulutely refufed to mareh agrant them; faying, that it was the fame thing whether they were chained by their own eountrymen or by the eneny. In this extremity Servilius promiled, that when the enemy were repulfed the fenate would remit all the debes of the plebeians. This having engaged then to ferve, the conful marched out at their head, defeated the enemy in a pitched battle, and took their capital, giving it up to be plundered by his foldiers, without referving any part for the public treafurg.

Whatever might have been the reafons of Servilius for this Itep, it furnifhed Appius with a pretence for sefuing him a triumph, as a man of a feditious difpofition, who aimed at popularity by an exceffive indulgetnee and profufenefs to his foldicss. Servilius, incenfed at this injuftice, and encouraged by the acclamations of the people, decreed himfle a triumph in fpite of Appius and the fenate. After this he marched a sainit the Aurunci, who had entered Latium; and, in conjundtion with Pofthumius Regillens, be utterly defated then, and obliged them to retire into their own fownty, Eut meither the fervices of the general ne:
his fuldiers cosid moliify the ferate and patrician paray, Appius even doubled the feverity of his judgments, and imprifoned all thofe who had beea fet at liberty during the war. The prifoners cried for relief to Servilins; but he could not obtain the accomnlifiment of thofe promifes which the fenate never had meant to pertorm; neither did he choofe to quarrel openly with the whole patrician body; fo that, ftriving to preferve the friendhip of both parties, he incurred the hatred of the one and the contempt of the other. Purceiving therefore that he had luft all his intereft with the pleheians, he joined with the patricians againft them; but the plebeians rufhing tumultuoully into the forum, made fuch a noife, that no fentence pronounced by the judges could be heard, and the utmoft confulion prevailed through the whole city: Several propofal, were made to accommodate matters; but through the obltinacy of Appins and the majority of the fenators, they all came to nothing. In the mean time it was neceffary to raife an army araint the Sabines, who had invaded the territories of the republic ; but the people refufed to ferre. Manius Valerius, however, brother to the celebrated Poplicola, once more prevailed upon them to march out againtt the common eneny; having previouny obtained affurances from the fenate that cheir griesances hould be redrefted. But no founer had sictory declared in favour of the Romans, than the fenate, apprehending that the foldiers at their retura would challenge Valerius, who had been nominated dictator, for the performance of their promifes, defired him and the two confuls to detain them itill in the field, under pretence that the war was not quite finithed. The confals obered; but the dictator, whofe anthority did not depend on the renate, dibanded his army, and declared his foldiers free from the oath which they had taken; and as a further proof of his attachment to the plebeians, he chofe out of that order 400 , whom he invelted with the dignity of knights. After this be clamed the accomplifnment of the promifes made by the foratc: but inttead of performing then, he had the mortification to hear himfelf loaded with reproaches; on which he refigned his office as dicta-, tor, and aequainted the people with his inability to falfil his engagements to them. No founer were thefe The foideto tranfactions known in the army, than the foldiers, to a revolt, bus man, deferted the confuls and other ufficers, and reti-all the red to a hill called afterwands Mons Sacer, three milcs \({ }^{\text {troubles are }}\) from Rome, where they continued to obferve an exaci ended by difcipline, vffering no fort of violence whatever. The tribur es fenate, after takins proper meafures for the defence of of the the city, fent a deputation to the maiecontents; but penfico it was anfwered with contempt. In hort, all things tended to a civil war, when at laft matters wete compromifed by the inftitution of tribunes of the people, who had power to prevent the paffing of any law that might be prejudicial to the people, and whofe perfons were declared facred, infomnch that wheever offered the leaft violence to the perfon of a tribune was declared accurfed, his effects were to be confecrated to Ceres, and he himflif might be killed with impunity; and all the Romass were to engage themfelves, in their own name and that of their potterity, never to repeal this law. The people, after thefe regulations, erected an altar to Jupiter the 'lerrible; on the top of the hill where the: car p had foed; and when they had offer-

Rome. ed facrifices to the god, and confecrated the place of their retreak, they returned to Rome, led by their new maspiftrates and the deputies of the fenate.

Thus the Roman conftitution, which had originally been monarchic, and fron thence had frafied into an ariflocracy, befan now to verge towards a democracy. The tribures immediately after their election obtained permifition from the furate to elect two perfons as their nimiters or affitants, who fould eafe them a little in the great nultiplicity of their affairs. Thefe were called plebeian adiles; and afterwards came to have the infpection of the public baths, aqueducts, with many other offices originally belonging to the confuls, after which they were called fimply adiles.

All oppolition to the making of regular levies being now at an end, the conful Cominius led an army againtt the Volfci. He defeated them in battle, and took from them Lon;rula and Polulca; after which he befieged Corioli, a city Atrongly fortified, and which might be called their capital. He carried this place,
05 and gained a victory over the Antiates, the fame day; Bravery of but Caius Marcius, an eminent patrician, had all the Caius Mar-glery of both actions. The troops detached by the cills Coriotanus.
conful to feale the walls of Corioli being repulfed in their firt aflault, Marcius rallicd the runaurays, led
them on afrefh to the charge, drove back the enemy within their walls, and, entering the city with them, made himfelf malter of it. This exploit atchieved, he with all expedition put himfelf in the foremoft ranks of the couful's main army, that was juft going to engage with the Antiates, who were cone to the relief of the place; and there he behaved with equal bravery, and had equal fuccefs.

The next day the conful, having erected his tribunal before his tent, called the foldiers together. His whole fpeech to them was little more than a panegyric upon Marcius. He put a crown upon his head; affigned him a tenth part of all the fpoil; and, in the name of the republic, made him a prefent of a fine horfe with flately furniture, giving him leave at the fame time to choofe out any ten of the prifoners for himfelf; and lattly, he allotted him as much money as he could carry away. Of all thefe offers Marcius accepted only the horfe, and one captive of the ten, an old friend of his family, that he might give him his liberty. To add to the glory of the brave warrior, the conful beftowed on him the furname of Coriolanus, transferring thereby from himfelf to Marcius all the honour of the conquelt of Corioli. Cominius, at his return to Rome, difand. ed his army; and war was fucceeded by works of religion, public games, and treatres of peace. A cenfus and a luftrum clofed the events of this memorable confulthip. 'There appeared to be in Rome at this time no more than 110,000 men fit to bear arms; a number by many thoufands lefs than at the lall emrollment. Doubtlels great numbers had run away to avoid being flaves to their creditors.

Under the following adminiltration of T. Gerganius and P. Minucius, Rome was terribly afflicted by a famine, occafoned chiefly by the neglect of ploughing and fowing during the late troubles; for the fedition had happencd after the autumnal equinox, about fow-ing-time, and the accommodation was not made till

Volfci, and even into Sicily, to buy corn. Thofe who embarked for Sicily nitt with a tempett which retarded their arrival at Syracule; where they were conftrained to pals the winter. At Cumre, the tyrant Ariltodemus feized the money brought by the commiflaries; and they themfelves with difficulty faved their lives by flight. The Volfci, far from being difpofed to fuccour the Romans, would have marched againt them, if a fudden and moft dellructive peftilence bad not defeated their purpofe. In Hetruria alone the Roman commiffaries met with fuccefs. They fent a confiderable quantity of grain from thence to Rome in barks: but this was in a thort time confuned, and the mifery became exceftive: the people were reduced to cat any thing they could get ; and nature in fo great extremity loathed nothing.

During this diftrefs a deputation came from Velitre a Volfcian city, where the Romans had formerly planted a colony, reprefenting that nine parts in ten of its inhabitants had been fwept away by a plague, and praying the Romans to fend a new colony to re-people it. The confcript fathers without much hefitation granted the requeft, preffed the departure of the colony, and without delay named three leaders to conduct it.

The people at firt were very well pleafed uith the propofal, as it gave them a profpect of relief in their hunger: but when they refiected on the terrible havoc the plaguc had made among the old inhabitants of Velitræ, they began to fear that the place might be fill infected; and this apprehenfion became fo univerlal, that not one of them would confent to go thither. Neverthelefs the fenate at length publifhed a decree that all the citizens Mould draw lots; and that thole to whofe lot it fell to be of the colony fhould inftantly march for Velitrz, or fuffer the fevereft punifhments for their difobedience: fear and hunger madic the people comply; and the fathers, a few days after, fent away a fecond colony to Norba, a confiderable city of Latium. But the patricians were difappointed as to the benefit they expected from thefe meafures. The plebeians who remained in Rome being more and more preffed by hunger and want, grew daily more angry with the fenate. At firft they affembled in fmall companies to vent their wrath in abufive complaints; and at length, in one great body, ruked all together into the forum, calling out upon their tribunes for fuccour.

The tribunes made it their bufinefs to heighten the Diaurban general difcontent. Having convened the people, Spu-ces taifed rius Icilius, chief of the college of tribunes, inveighed by the tri moft bitterly againft the fenate; and when he had ended his harangue, exhorted others to Speak freely their thoughts ; particularly, and by name, calling upon Brutus and Sicinius, the ringleaders of the former fedition, and now ædiles. Thefe men, far from attempting to extinguifh the fire, added frefh fuel to it: And the more to inflame the fpirits of the multitude, they encmerated all the paft infults which the people had luffered from the nobles. Brutus concluded his haraugue with loudly threatening, that if the plebeians wonld follow his advice, he would foon oblige thofe men who had cauled the prefent calamity to find a remedy for it ; after whicb the affembly was difmifled.

The next day, the confuls, greatly alarmed at this commotion, and apprebending from the menaces of Brutus fome very mifchicyous event, thought it advi2
rable

\section*{R O M}
fable to convene the fenators, that they might confider of the beft means to avert the anpending evil. The fathers could not agree in opinion. Some were for employing foft words and fair promifes to quiet and gain over the moft turbulent. But Appius's advice prevailtd : which was, that the confuls fhould call the people together, affure them that the patricians had not brought upon them the miferies they fuffered, and promife, on the part of the fenate, all poffible care to provide for their neceffities; but at the fame time fhould reprove the difturbers of the public peace, and threaten them with the fevereft punifhments if they did not amend their behaviour.

When the confuls, towards the clofe of the day, having affembled the people, would have fignified to them the difpofition and intention of the fenate, they were interrupted by the tribunes. A difpute enfued, in which no order or decency was obferved on either fide. Several fpeaking at the fame time, and with great vociferation, no one could be well underfood by the audience. The confuls judged, that being the fuperior magiftrates, their authority extended to all affemblies of the citizens. On the other fide, it was pretended, that the affemblies of the people were the province of the tribunes, as the fenate was that of the confuls.

The difpute grew warm, and both parties were ready to come to blows; when Brutus having put fome queftions to the confuls, ended it for that time. Next day he propofed a law which was earried, that no perfon whatever fhould interrupt a tribune when fpeaking in an affembly of the people; by which means the influence and power of the popular party was confiderably inereafed, and the tribunes became formidable opponents to the confuls and patricians. An opportunity foon offered for both parties to try their frength. A great fleet of thips laden with com from Sicily, a great part of which was a prefent from Gelon the king of that country to the Romans, and the reft purchafed by the fenate with the public money, raifed their fpirits once more.

But Coriolanus incurred their refentment, by infifting that it fhould not be diftributed till the grievances of the fenate were removed. For this, the tribunes fummoned him to a trial before the people, under pretence that he afpired at the fovereignt \(y\).

When the appointed day was come, all perfons were filled with the greateft expectations, and a vaft concourfe from the adjacent country affembled and filled up the forum. Coriolanus, upon this, prefented himfelf before the people with a degree of intrepidity that merited better fortune. His graceful perfon, his perfuafive eloquence, the eries of thofe whom he had faved from the enemy, inclined the auditors to relent. But being confounded with a new charge which he did not expect, of having embezzled the plunder of Antium, the tribunes immediately took the potes, and Coriolanus was condemned to perpetual exile.

This fentence againft their braveft defencer ftruck the whole body of the fenate with forrow, conflernation, and regret. Coriolanus alone, in the midft of the tumult, feemed an unconcerned fpectator. He returned home, followed by the lamentations of hundreds of the moll refpectable fenators and citizens of Rome, to take a lafting leave of his wife, his children, and his mother Veturian Thu recommending his dittle children to
their care, he left the city, without followers or for Rume. tune, to take refuge with Tullus Attius, a man of great \(\underbrace{-}\) power among the Volfcians, who took him under his He leaves protection, and cepoufed his quarrel.
the city,
The firft thing to be done, was to induce the Volfei and jonn to break the league which had been made with Rome; the Voltes, and for this purpofe Tullus fent many of his citizens thither, in order to fee fome games at that time cele. brating; but at the fame time gave the fenate private information, that the flrangers had dangerous intentions of burning the city. This had the defired ef. fect ; the fenate iffued an order that all ftrangers, who. ever they were, fhould depart from Rome before funfet. This order Tullus reprefented to his countrymen as an infraction of the treaty, and procured an embaffy. to Rome, complaining of the breach, and demandin! back all the territories belouging to the Volfcians, of which they had been violently difpofieffed; declaring war in cafe of a refufal: but this meffage was treated by the fenate with contempt.

93
War being thus declared on both fides, Coriolanus Gains yreaz and Tullus were made generals of the Voliciass; and advantages accordingly invaded the Ronian territories, ravaging Rover the and laying watte all fuch lands as belonged to the plebeians, but letting thofe of the fenators remain untouched. In the mean time, the levies went on very flowly at Rome; the two confuls, who were reelected by the people, feemed but little frilled in war, and even feared to excounter a general whom they knew to be their fuperior in the field. The allies alfo fhowed their fears, and flowly brought in their fuccours; fo that Coriolanus continued to take their town one after the other. Fortune followed him in every expedition; and. he was now fo famous for lis victories, that the Volfici left their towns defencelefs to follow him into the field. The very foldiers of his colleague's army came over to him, and would acknowledge no other general. Thus finding himfelf unoppofed in the field, and at the head of a numerous army, he at length invefted the eity of Rome itfelf, fully refolved to beliege it. It was then 99 hat the fate the the the the fenate and the people unanimoully agreed tocity. fend deputies to him, with propofals of reltoration, in cale he hould draw off his army. Coriolanus received their propofals at the head of his principal officers, and, with the fternnefs of a general that was to give the law, refufed their offers.

Another embalfy was now fent forth, conjuriag him not to exact from his native city aught but what became Romans to grant. Coriolanus, however, fill perfifted in his former demands, and granted them but three days in which to finif their deliberations. In this exigence, all that was left was another deputation ftill more folemn than either of the former, compofed of the pontifis, the priefts, and the augurs. Thefe, cloathed in their habits of cerenoony, and with a grave and mournful deportment, iflued from the city, and entered the eamp of the conqueror: but all in vain, they found him fevere and inflexible as before.

When the people faw them return inefeetuaily, they began to give up the commonwealth as lott. Theitemples were filled with old men, with women and children, who, proitrate at their altars, put up their ardent prayers for the prefervation of their counery. Nothing was to be heard but anguifh and lanentation, nothing to be feen but feencs of affright and ditrefs. At lengtio.

\section*{\(R \quad\) O M [ \(3: 0\) ] \\ R O M}

Bome. it was inggeited to them, that what could not be effected by the interceffion of the fenate or the adjuration of the priefts, might be brousht abont by the teas of his wire, or the commands of his mother. This deputation feened to be relifhed by all; and even the fenate itfelf gave it the fanction of their authority. Veturia, the mother of Coriolanus, at firf made fome hefitation to undertake fo pious a work : however, the at latt undertook the embaffy, and fet forward from the city, accompanied by many of the principal matrons of Kome, with Volumnia his wife, and his two children. Coriolanus, who at a diftance difeovered this mournful train of females, was refolved to give them a denial, and called his officers round him to be witnefs of his refolution; bat, when told that his mother and his wife were among the number, he intantly came down from his tribunal to meet and embrace them. At firt, the womens tears and embraces took away the power of words; and the rough foldier himfelf, hard as he was, conld not refrain from fharing in their diftrefs. Co. riolanus now feemed much agitated by contending paf. fions; while his nother, who faw him moved, feconded her words by the moft perfuative eloquence, her teare : his wife and children hing round him, intreating for protection and pity; while the fair train, her companions, added their lamentations, and deplored their own and their country's diftrefs. Coriolanus for a moment was filent, feeling the ftrong conflict between hor:vur and inclination: at length, as if rouzed from his dream, he flew to take up his muther, who had fallen at his fect, crying out, " O my mother, thou haft faved Rome, but loft thy fon." He accordingly gave orders to draw off the army, pretending to the officers that the city was too frong to be taken. Tullus, who had long envied his glory, was not remifs in aggravating the lenity of his conduct to his countrymen. Upon their return, Coriolanus was ीlain in an infurrection of the people, and aftenwards honourably buried, with late and ineffeetual repentance.

The year following, the two confuls of the former year, Manlius and Fabius, were cited by the tribunes to appear before the people. The Agrarian law, which had been propofed fone time before, for equally dividir: the lands of the commonwealth among the people, was the object invariably purfued, and they were acculed of having made uajuttifiable delays in putting it uff.
It feems the Agrarian law was a grant the fenate could not think of giving up to the people. The confuls, therefore, made many delays and excufes, till at length they were once more ubliged to have reconse to a diciator; and they fixed upon Quintus Cincinnarus, a man who had for fome time given up all views of amhition, and retired to his little farm, where the deputies of the fenate found him holding the plough, and drefled in the mean attire of a labouring husbandman. He appeared but little elevated with the addreffes of ceremony and the pompous habits they brought him; and, upon declaring to hisn the fenate's pleafure, he tefified rather a concern that his aid thould be wanted. However, he departed for the city, where both parties were ftrongly enflamed againf each other: but he was refolved to fide with neither; nnly, by a frict attention to the interelts of his country, inftead of gaining the considence of fartion, to obtain the efteen of all,

Thus, by threats and well-timed fubmifion, he pres vailed upon the tribunes to put off their law for a time, and carried himfelf fo as to be a terior to the multitude whenever they refufed to enlift ; and their greateft encomager whenever their fubmilfion deferved it. Thus, having reftored that tranquillity to the people which he fo much loved himfelf, he again gave up the fplendors of ambition, to enjoy it with a greater relifh in his little farm.

Cincinnatus was not long retired from his office when a frefh exigence of the fate once more required his arfiftance. The Aiqui and the Volfci, who, though ftill worfted, fill were for renewing the war, made new inroads into the temitories of Rome. Minutius, one of the confuls who fucceeded Cincinnatus, was fent to oppofe them ; but being naturally timid, and rather more afraid of being conquered than defirous of vietory, his army was driven into a defile hetween two mountains, from which, except through the enemy, there was no egrefs. 'This, however, the Equi had the precaution to fortify ; by which the Roman army was fo hemmed in on every fide, that nothing remained but fubmition to the enemy, famine, or immediate death. Some knights, who found means of getting away privately through the enemy's camp, were the firft that brought the account of this difafter to Rome. Nothing could exceed the conftefnation of all ranks of people when informed of it. The fenate at firt thought of the other conful ; but not having fufficient experience of his abilities, they unanimonnly turned their eyes upon Cincin. natus, and refolved to make him dictator. Cincinnatus, the only parfon on whom ikeme could now place her whole dependence, was found, as before, by the meffengirs of the fenate, labouring in his little field with cheerful induttry. He was at firt altonifhed at the enfigns of unbounded power with which the deputies came to invelt him ; but thill more at the approach of the principal of the fenate, who came out to meet him. A dignity fo unlooked for, however, had no effect upon the fimplicity or the integrity of his inanners : and being now poffeffed of abfolute power, and called upon to nominate his mafter of the horfe, he chofe a poor man named Tarquitius, one who, like himfelf, defpifed riches when they led to dihonour. Upon entering the city, the dictator put on a lerene look, and intreated all thofe whe were able to bear arms to repair beforc fun-fet to the Canpus Matius (the place where the levies were made) with neceffary ams, and provifions for five days. He put limfelf at the head of there; and, marching all night with great expedition, he arrived before day within fight of the enemy. Upon his approach, he ordered his foldiers to ratie a loud Thout, to apprize the conful's army of the relief that was at hand. The Equi were not a little amazed when they faw thenfelves between two enernies; but ftill mone when they perceived Cincinnatus making the Atrongeft entrenchments heyond them, to prevent their efcape, and incloling them as they had inclofed the conful. 'lo prevent this, a furious combat enfued; but the Fiqui, being attacked on both fides, and unable to refitt or fly, begged a ceffation of arms. They offered the dictator his own terms: he gave them their lives; but obliged them, in token of fivitude, to pafs under the yoke, which was two fpears fet upright, and another acrofs, in the form of a gallou's, beucuth which

\section*{\(\mathrm{R} O \mathrm{M}\)}
- the vanquimed were to march. Their eaptains and ge. nerals he made prifoners of war, being referved to adorn his triumph. As for the plunder of the enemy's camp, that he gave entirely up to his own foldiers, without refenving any part for himfelf, or pernitting thofe of the delivered army to have a fhare. 'Thus, having refiucd a Roman army from inevitable deftruction, having defeated a powerful enemy, having taken and fotified their city, and, Itill more, having refufed any part of the fpoil, he refigned his dictatornip, after having enjoyed it but 14 days. 'The fenate would have enriched him; but he declined their proffers, choofing to retire vace more to his farm and his cottage, content with temperance and fame.

But this repofe from forcign invafion did not leffen the tumults of the city within. The clamours for the Agrarian law fill continued, and fill more fiercely, when Sicinius Dentatus, a plebeian, advanced in years, but of an adnuiable perfon and military deportment, came forward, to enumerate his hardfhips and his merits. This old foldier mate no feruple of extolling the various merits of his youth ; but indeed his atchievements fuppoited oftentation. He had ferved his countiry in the wars 40 years; he had been an officer 30, firlt a centurion, and then a tribune: he had fonght 120 battes, in which, by the foree of his fingle arm, he had faved a multitude of lives: he had gained 14 civic, three mural, and cight golden crowns, befides 83 chairs, 60 bracelets, 18 gilt fears, and 23 horfe-trappings, whereof nine were for killing the enemy in fingle combat : moreover, he had received +5 wounds, all before, and nove behind. Thefe were his honours: yet, notwithftanding all this, he had never received any frare of thofe lands which wete won from the enemy, but continued to drag on a life of povety and contempt ; white others were poffeffed of thwle very terrirories which his valour had won, without any merit to deferve them, or ever having contributed to the conqueft. A cafe of fo much hardhip had a ttrong effect upon the multitude; they unamimulfy demanded tha: the law might be paffed, and that fuch merit fhould not go untewarded. It was in vain that forme of the ienators rofe up to fpeak againt it ; their voices were drowned \(\mathrm{Ly}_{\mathrm{s}}\) the cries of the people. When reafon, therefore, could no longer be lieard, paffion, as ufual, fucceeded; and the young patricians, running furioufly into the throng, broke the balloting urns, and difperfod the multitude that offered to oppofe them. For this they were fome time after fined by the tribunes; but their refolution, neverthelefs, for the prefen:, put off the Agrarian law.

The commonwealth of Rome had now for near 60 years been fluetuating between the contending orders that compofed it, till at length, each fide, ats if weary, were willing to refpire a while from the mutual exertions of their claims. The citizens, now, therefore, of every rank, began to complain of the arbitrary decifions of their magiftrates, and wihted to be guided by a written body of laws, which being known might prevent wrongs as well as punifíh them. In this both the fenate and the peaple concurred, as hoping that long bad harafed the ftate. It was thereupon ayreed; that ambaffadors frould be feut to the Greck cities in Italy, and to Athens, to bring home fuch laws from
thence as by experience had been found mor equitable and ufeful. Fur this purpofe, three fenators, Pothumius, Sulpicius, and Manlius, were fixed upon, and galleys affigned to convoy them, agreeable to the majenty of the Romam poople. While they were upon this commiffion abroad, a dreadful plague depopulated the city at home, and fupplied the interval of their abfence with oither anxiety than that of wihes for their return. In about a year the plague ceafed, and the ambaffadors returned, bringing home a Eody of laws, collected from the molt civilized fates of Greece and Italy, which being afterwa:ds formed into ten tables, and two more being adued, made that cell brated code called the Lawes of the Tweive Tables, many fragments of which remain to this day.

The ambaffadors were no fooner returned, than the Decemvis tribunes required that a body of men fhould be cho- \(e^{\prime}\) eetec. fen to digeft their new laws into proper form, and to give weight to the execution of them. After long ciebates whether this choice fhould not be partly made fiom the people as weil as the patricians, it was at laft as reed that 10 of the prineipal fenators frould be elected, whofe power, continuing for a year, fhould be equal to that of kings and confuls, and that without any appeal. The perfons chofen were Appius and Genut:us, who had been elceted confuls for the ea fuing vear; Pofthumins, Sulpicius, and Manlius, the three ambaffadors; Sextus and Romulurs, furmer confu!s ; with Iulius Veturius, and Horatius, fenators of the firf conifderation.

The decemviri beingnow invelted with abfoute power, agreed to take the reins of government by terns, and that eachs fhould difyenke juffice for a day.

Thefe mayittates, for the firf year, wrought with extrerre application: and their work being finifhed, it was expected that they would be contented to give up their offices; bur having known the charms of rea power, they were now unvilling to relign it : they l'hey be therefore pretended that fome laws were yet wanting come atem to compiste their defign, and intreated the fenate for a comtinuance of thetr offices; to which that body \(2 f\) iented.

But ther foon threw of the maik of moderation; and, regardlefs either of the approbation of the fenaze or the people, refolved to continue therafelves, araint all order, in the decemvirate. Ac conduct fo notorious produced difcontents; and thefe were as fure to produce fiefh acts of tyraniv. The city was become alo moft a defert, with refpect to all who had ary thing to lofe; and the decemvirs rapacity was then or.Iy difcontinued, when they wanted frefh objeets to esercife itupon. In this ftate of flavery, profcription, and mutual diftrult, not one citizen was found to frrike forhis country's freedom; thefe tyrants continued to rule without controul, heing conflantly guarded, not withr their lictors alone, but a numerous crowd of dependenns, clients, and even patricians, whom their vices hadconfederated round them..

Io
In this gloomy nituation of the fate, the Fequi and Invafion ne Volfi, thore conftant enemics of the Romana, under- t'e Arqui took their incurlions, refolved to profit by the inteltime and vilas divifions \(a^{-}\)the people, and advanced within about 10 miles of Rome.

But the decemviri, being put in poffeffion of ail the military as well as of the civil power, divided their ar-

Rome. my into tliree parts; whercof one continued with Appius in the city, to kecp it in awe; the other two were commanded by his colleagues, and were led, one arainf the Equi, and the other againft the Sabines. The Roman foldiers had now got into a method of punifhing the generals whon they difiked, by fuffering themfelves to be vanquifhed in the fiedd. They put it in practice upon this oceafion, and thamefully abandoned their camp upon the approach of the enemy.

Never was the news of a vietory more joyfully received at Rome than the tidings of this defeat : the genetals, as is always the eafe, were blamed for the treachery of their men: fome demanded that they fhould be depofed; others cried out for a dictator to lead the trrops to conquett : but anong the ref, old Sieinius Dentatus the tribme fooke lis fentiments with his ufual opennefs; and treating the generals with contempt, fhowed all the faults of their difeipline in the camp, and of their conduct in the field. Appius, in the mean time, was not remifs in obferving the difpofition of the people. Dentatus, in partieular, was marked out for vengeance, and, under pretence of doing him particular honour, he was appointed legate, and put ar the head of the fupplies which were fent from Rome to reinfurce the army. The office of legate was held facred anoong the Romans, as in it were united the authority of a general, with the reverence due to the pricthood. Dentatus, no way furpecting his defign, wont to the camp with alaerity, where he was received with all the external marks of refpect. But the generals foon feund means of indulging their defire of revenge. He was appointed at the head of 100 men to go and examine a more commodious place for encampnient, as he had very candidly affured the commanders that their prefent fituation was wrong. The foldiers, however, who were given as his attendants, were affaffins; wretches who had long been minitters of the vengeance of the decenviri, and who now engaged to murder him, though with all thofe apprehenfions which his reputation, as he was called the Roman \(A\) chilles, might be fuppofed to infpire. With thefe defigns, they led him from the way into the hollow bofoin of a retired mountain, where they began to fet upon him from behind. Dentatus, now too late, perceived the treachery of the decemviri, and was refolved to fell his life as dearly as he could ; he therefore put his back to a rock, and defended himfelf againft thofe who preffed mof clofely. Though now grown old, he had ftill the remains of his former valour, and killed no lefs than 15 of the affailants, and wounded 30. 'The affaflins now therefore, terrified at his amazing bravery, fhowered in their javelins upon him at a diftance; all which he reecived in his flield with undaunted refolution. The combat, though fo unequal in numbers, was mamaged for fome time with doubtful fuccefs, till at length his alfailants bethought themfelves of afcending the rock againt which he food, and thus poured down itones upon him from above. This fuceceded; the old foldier fell bencath their united efforts, after having fhown by his death that he owed it to his fortitude, and not his fortune, that he had conic off ro many times victorious. The decemviri pretended to join in the general forrow for fo brave a man, and decreed him a funcral, with the firf military honours : but the greatnefs of their apparent difteefs, compared with their
known hatred, only rendered them till more deteitable to the people.

But a tranfaction Atill more atrocious than the for- \(\mathrm{T}_{\mathrm{t}}\) mer ferved to infpire the citizens with a refolution to for: break all meafures of obedience, and at laft to rettore Viry freedom. Appius, who fill remained at Rome, fitting one day on his tribunal to difpenfe juftice, faw a maiden of exquilite beauty, and aged about 15 , paffing to one of the public fchools, attended by a matron lier nurfe. Conceiving a violent paffion for her, he refolved to obtain the gratification of his defire, whatever foould be the confequence, and found means to inform himfelf of her name and family. Her name was Virginia, the daughter of Virginins a centurion, then with the army in the field; and the had been contracted to Icilius, formerly a tribune of the people, who had agreed to marry her at the end of the prefent campaiga. Appius, at firf, refolved to break this match, and to efpoufe her himfelf: but the laws of the Twelve Tables had forbidden the patricianis to intermarry with the plebeians; and he could not infringe thefe, as he was the enacter of them. Nothing therefore retwained but a criminal enjoyment; whieh, as he was long ufed to the indulgence of his paffions, he refolved to obtain. After laving vainly tried to corrupt the fidelity of her nurfe, he had recourfe to ano. ther expedient, ftill more guilty. He pitched upon one Claudius, who had long been the minitter of his pleafures, to affert the beautiful maid was his Iave, and to refer the caufe to his tribunal for decifion. Claudius behaved exactly aecording to his inftructions: for entering into the fchool, where Virginia wat playing among her female companions, he feized upen her as his property, and was going to drag her away by force, but wis prevented by the people drawn together by her cries. At length, after the firtt heat of oppofition was over, he led the weeping virgin to the tribunal of Appius, and there plaufibly expofed his pretenfions. He afferted, that the was born in his houfe, of a female flave, who fold her to the wife of Virginius, who had been barren. That he had feveral credible evidences to prove the truth of what he faid; but that, until they could come togetber, it was but reafonable the flave fhould be delivered into his cuitody, being her proper mafter. Appius feemed to be ftruck with the juftice of his elaims. He oblerved, that if the reputed father himfelf were prefent, he might indeed be willing to delay the delivery of the maiden for fome time; but that it was not lawful for him, in the prefent cafe, to detain her from ber ma. fter. He therefore adjudged her to Chaudius, as his fave, to be kept by him till Virginins fhould be able to prove his paternity. This fentence was received with loud clamours and reproaches by the multitude: the women, in particular, came round Virginia, as if willing to protect her from the judge's furs; while Icilius, her lover, boldly oppofed the decree, and obliged Claudius to take refuge under the tribunal of the decemvir. All things now threatened an open infarrection ; when Appius, fearing the event, thought proper to infpend his judgment thll the arrival of Virginius, who was then about 11 miles from Rome, with the army. The day following was fixed for the trial ; and, in the mean time, Appins fent letters to the generals to confine Virginius, as his arrival in town might only ferve to

\title{
\(\mathrm{R} O \mathrm{M}\)
}
kindle fedition ansong the people. Thefe letters, however, were intercepted by the ceriturion's friends, who fent him down a full relation of the defign laid againt the liberty and the honour of his only danghter. Virginius, upon this, pretending the death of a near relation, got permiffion to leave the camp, and few to Rome, infpired withs indignation and revenge. Accordingly, the next day lie appeared before the trihunal, to the aftonilhment of Appins, leading his weeping daughter by the hand, buth habited in the deepeft mourning. Claudius, the accufer, was alfo there, and began by making his demand. Virginiue next fpoke in turn: he reprefented that his wife had many children; that the had been feen pregnant by numbers; that, if he had intentions of adopting a fappofititious clild, he would have fixed upon a boy rather than a pirl ; that it was notorious to all, that his wife had herfelf fuckled her own chitd; and that it was fuprifing fuel a claim fhould be now revived, after a 15 years difoontinuance. While the father fpoke this with a ftem air, Yirginia fond trembling by, and, with locks of perfuative innocence, added weight to ail his remonflances. The people feemed entirely fatisficd of the hardhip of his cafe, till Appius, fearing what he faid might have dangerous effects upon the multitude, interrupted him, under a pretence of bcing fufficiently infrueted in the merits of the caufe, and fonally adjudged her to Claudins, ordering the lictors to earty her off. The lictors, in obedience to his command, foon drove off the throng that prefed round the tribunal ; and now they feized upon Virginia, and were delivering her up into the hands of Claudius, when Virginius, who found that all was over, feenied to acquiefee in the fentenee. He therefore mildly intrcated Appius to be permitted to take a laf farewel of one whom he had long confidered as his child ; and fo fatisfied, he would return to his duty with frefh alacrity. With this the decemsir complicd, but upon condition that their endearmerits fhould pafs in his prefence. Virginius, with the moot poignant anguifh, took his almoft expiing daughter in his arms, for a while fupported her head upon his breaft, and wiped away the tears that rolled down her lovely vifage; and liappening to be near the Mops that furrounded the forun, he fnatched up a knife that lay on the fhambles, and buried the weapon in her hreat ; then holding it up, reeking with the blond of his daugher, "Appius (he eried) by this blood of innocence, I devote thy head to the infernal gods." Thus faying, with the bloody knife in his land, and threatening deftruction to whomfocer fhould oppofe him, he ran throagh the eity, wildly calling upon the people to thrike for frecdom, and from tience went to the camp, in order to fpread a like llame through the army.

He no fonner arrived at the camp, followed by a number of his fiends, bnt he informed the army of all that was done, ftill holding the bloody knife in his hand. He afked their pardon, and the pardon of the gods, for having committed fo rafl an action, but aferibed it all to the dreadfui neceffity of the times. The arny, already predifpofed, inmmediately with fhouts echoed their approhation; and decamping, Ieft their generals hehind, to take their flation onee more upon mount Aventine, whither they had retired about 40

Vol. XVI. Part I.
years before. The other arnif, which lial been to oppofe the Sabines, feemed to feel a like refentment, and came over in large parties to join them.

Appius, in the mean time, did all he could to quell The decem, the dilurbances in the city; but finding the tumult tira \({ }^{\circ}\) e aboineapable of controul, and perceiving that his mortal lifhed. enenies, Valcrius and Horatius, were the moft active in oppofition, at firlt attempted to find fafety by fight; neverthelers, being encourared by Oppius, who was one of his colleagus, he ventured to affermble the fenate, and urged the punithment of all deferters. The fenate, however, were far from giving him the relief he fought for; they forefaw the dangers and miferies that threatened the ftate, in cafe of oppofing the incenfed army; they therefore difpatched meffengers to them, offering to rellore their former mode of government. To this proporal all the people joyfully affented, and the army gladly obeyed. Appius and Oppius, one of his colleagues, both died by their own hands in prifon. The other eight decemvirs went into voluntary exile; and Claudius, the pretended mafter of Virginia, was driven out after them.

The tribunes now grew more turbulent : they pro-New difure pofed two laws ; one to perinit plebeians to iniernar-bances. ry with patricians; and the other, to permit the:s to be admitted to the confulthip alfo. The fenators received thefe propofals with indignation, and feemed refolved to undergo the utmot extremities rather than fubmit to enact them. However, finding their refiltance only increafe the commotions of the flate, they at laft confented to pafs the law concerning intermarriages, hoping that this coneeffion would fatisfy the people. But they were to be appeafed but for a very thort time: for, returning to their old cultom of refufing to enlit upon the approach of an enemy, the confuls were forced to hokl a private conference with the elhief of the fenate; where, after many debates, Claudius propofed an expedient as the molt probable means of fatisfying the people in the prefent conjuncture. This was, to create fix or eight governors in the room of confuls, whereof one half at leat fhould be patricians. This project was cargerly embraced by the people; yet fo fickle were the multitude, that though many of the plebeians Alood, the choice wholly fell upon the patricians who offered themfelves as candidates. Thefe new magittrates were called military tribunes; they were at firft but three, afterwards they were increafed to four, and at length to fix. They had the power and enfigns of confuls; yet that power being divided among a number, each fingly was of lefs anthority. The firlt that were chofen only continned in office about three months, the augurs laving found fomething amifs in the eeremonies of their clection.

The military tibunes being depofed, the confuls once more ean.e into office; and, in order to lighten the weight of bufinefs which they were obliged to fuflain, a new office was erected, namely, that of cenfors, The office to be chofen every filth ycar. Their bufinefs was to of cenfor take an ellinate of the number and eftates of the inflituted people, and to diftribute them into their proper clafles; to infpect iuto the lives and manners of their fallow-citizens; to degrade lenators for mifconduct ; to difmount knights; and to turn down plebeians fiom their tribes into an inferior, in cafe of middemeanour. The two firft

ccnions were Papirius and Sempronius, both patricians; and from tiis urder they continued to be eleefted for 1ecar 102 years.

This new creation ferved to reitore pmace for fome - ime amonr the orders; and the triumph geined over the Voifvians hy Geganius the conful, adled tu the univerfll latisfaction that reisned among the people.

This calno. hwevere, wats but of fhort comtinuance : f. ro fone time after, a tamine preffing hard upon the poor, the uinal complaints aramit the rich were renewedt; a id thefe, as lefore, proving ineffectual, promuced ne:w fedrions. The confuls were accufed of neglect iir not haviur laid in proper quantities of com: they, however, differgaded the nurmurs of the popplace, content with exerting all their care in attempts to fup. ply the preffing necethities. But though they did all that could he expected from arive magifrates, in providing and diltributing provitions to the pror ; yet Spurius Melias, a rich knight, who had bought up all the corn of I'ufeany, by far ou thone them in liberality. This denagrogue, inflaned with a fecret defire of be-- uning powerful by the contentions in the flate, diltributed corn in great quantities among the poorer fort Each day, till his houfe became the afylum of all fuch as wifhed to exclunge a life of labour for one of layy sopendence. When he hat thus gained a fufficient nu nher of partizans, he procured large quantities of arms to be Eronght into his lwufe by night, and forned a confpiract, by which he was to obtain the command, while fone of the tribunes, whom he had found means to corrupt, were to act under him, in feizisg upon the liberties of his crunt:y. Ninucius forn difcovered the plot: and informing the fenate thereof, they inmediately formed the refulation of creating a diciator, who fhowd have the power of quelling the confpinacy, without appaling to the peopit. Cincianatus, who whe now to years old, was chofen once more to refene his count:y from impending danzer. He began by funmoning Nixlius to appear ; who rufufid to obey. He next fent Ahala, the mafter of his herle, to fo:ee him; who, metting him in the forum, and frefling Mizelius to follow him to the dictator's tribunal, upon his refufal rhala killed hine upon the fput. ' 1 le dictator applauded the refolution of his officer, and commanded the confpirator's goods to be fold, and his hatere to be dennolifhed, ditributing his fores among the people.

The tribunes of the people were mich enraged at the death of Malius; and, in order to punifh the fenate, at thee resst election, intead of confuls, infifted upon reforing their military tribunes. With this the fenate were obliged to comply. The next year, however, the government returned to its ancient chanael, and confuls were: clufen.
The Veicntes had long been the rivals of Rome: othey had ever taken the opportunity of its interual diftreftes to ravage its territurics, and had even threatened its ambafadors, fent to complain of thefe injuries, with outrage. In war they had been extremely formidable, and had cut off aimoft all the Fabian family ; who, to the number of 305 perfons, had voluntarily undertaken so defend the fromtiers againlt their incuifons. It feemed now therefore determined, that the city of Veii, whatever it fhould coft, was to fall; and the Romans accordingly fat regularly down before
it, prepared fors a long and painful refinanee. The Arength of the place, or the unikilfuluefs of the befiegers, may be inferred from the continuance of the thege, which tatted for 10 years; during which tine the army continued encarped round it, lying in winter under tents made of the fains of beats, and in fummer driving oa the operations of the attack. Varions was the fuecefts, and many were the comminders that direeted the fisare: fometimes all ithe befiegers works were deftroyel!, and ma:y of their men cut off by fallies from the town; fometimes they were annoycld by an army of Veians, who attempied to bring affitance frore without. A fiege fo bloody feemed to threaten depopulation to Rone itfelf, by draming its forees contimually away; fo that a law was obliged to be made for all the bachelors to marry the widows of the foldiers who were flain. In order to citry it on with greater vigour, Furins Carnillus wis created dictator, and to him was intruted the fule power of nazarsing the long protracted war. Camillus, who, withous intrizue or any fulicitation, had raifed himfelf to the firf eminence in the ftate, had been malle one of the cen. fors fone time before, and was confidered as the heat of that office: be wis afterwards made a military tribune, and had in this poft gained feveral advantares over the enem\%. It was his great comage and abiIties in the afove olinces that made hinn thought mon worthy to ferve his cotanery on this prefing vecafion. Upon his appointment, numbers of the people flocked to his ftandari, contident of fuceefs undicr fo expenienced a connander. Confcius, hosever, that be was umble to take the city by florn, he fecretly wroucht a nisie into it with valt lebour, which openc? into the midit of the citadel. Cerrain thus of fueceff, and rincliur the city incapable of relief, he fent to thas fenate, defirinf that all who choie to chare in the plunder of 'reii fhould immediatcly repair to the army. Then giving his men direftions how to enter at the breach, the city was initantly filled with his legions, to the amnzement and conftemation of the befieged, who, but a moment before, had retted in perfect fecurity. Thus, like a fecond Troy, was the city of Veiifor: taken, after a 10 years fiege, and with its fpoils en-Can riched the conquerors; while Camilins bimfelf, tranfported with the honour of having fubdued the tival of his native city, triumphed after the manner of the kings of Rume, having his chariot diawn by four milk-white horfes; a diftinction which did not fail to difgult the majority of the fpectators, as they confidered thofe as facred, and more proper for doing honour to their gods than their generals.

His nlual good fortune attended Camillus in another His, expedition againft the Talifci; he routed their army, fity and befieged their capitai city Falerii, which threatened a long and vigorous iefitance. Here a fchoolmatter, who had the care of the children belonging to the principal men of the city, having found means to decoy them into the Roman camp, offered to put them into the hands of Camillus, as the fureft means of inducing the citizens to a fpeedy furrender. The general was itruck with the treachery of a wretch whofe duty it was to protect innocence, and unt to betray it ; and immediately ordered him to be ftripped, his hands tied behind bim, and in that ignominious manzer to be whipped into the town by his own fcholars.

㱜 0 M
gage them io his quarrel, he aquainted them with the great pletry of Italy, and made them tafte of fome Italian wines. Upon this the Senones refolved to follow him; and a numerous army was immediately formed, which paffing the Alps, under the conduct of their He. trurian guide, and leaving the Celtæ in Italy unrmolefted, fell upon Umbria, and poffefied themfelves of all the country from Ravenna to Picentim. They were about fix years in fettling themfelves in their new acquifitions, white the Romans were carrying on the fiege of Veii. At length Arunx brought the Senones before Clufuum, in order to beliege that place, his wife and her lover having fhat themfelves up there.

The fenate, being unwiling to engage in an open The Rno war with a nation which lad never offended them, fent rans fead an embalfy of three young patricians, all brothers, and an embanfy of the Fabian family, to bring about an accommodation between the two nations. Thefe ambafiadors, being arrived at the camp of the Gatis, and conducted into the council, offered the mediation of Rome; and denanded of Brennus, the leader of the Gauls, What injury the Clulini had done him; or what pretenfions any people from a remote country cold have upon Hetruria? Brennus anfwered proudly, that his right lay in his frood, and that all thinss belonged to the batse; bist that, without having recourie to this primitive law o: natnre, he had a jut complaint againt the Clufians, who, having more lands than they could cultivate, had refufed to yield to him thofe they left untiled: And what otlier notives had you yourfelves, Romans (faid he), to conçuer fo mary neiohbouring netions? You have deprived the Sabines, the Albans, the Fidenates, the \(\mathbb{E} q u i\), and the Volfci, of the beft part of their territories. Not that we accufe you of injustice ; but it is evident, that you thought this to be the prime and moft ancient of all laws, to make the weak give way to the ltrong. Forbear therefore to intereft yourfelees for the Clufini, or allow us to take the part of the people you have fubdued."

The Tabii were highly provoked at fo hauglity an imment anfwer; but, diffembling their refentment, defired leave condua of to go into the town, unler pretence of conferring with the ambaro the magiltrates. But they were no fonner there, than \({ }^{\text {ia lors. }}\) they began to ttir up the inhabitants to a rigorous defence; nay, forgetting their chameter, they put themfeives at the head of the belieged in a fally, in which Q. Fabius, the chief of the ambatadors, ficw with his own hand one of the principal officers of the Gatls. Hereupon Brennus, calling the gods to wituels the perfidiunfnefs of the Romans, and their violating the law of natious, immediately broke up the fiege of Clufum, and marched leifurcly to Rome, having fent an herald \(r=3\) befure him to demard that thofe ambafifdors, who had The Gauls fo manifetly violated the !aw of nations, fhould be de- require livered up to him. The Ruman fenate was greatly celvered perplexed between their regard for the law of nations up to them and their affection for the Tabii. The wifeft of the bit are reo fenate thought the demand of the Gauls to be but juft fufes. and reafonable: however, as it concerned perfons of great confequence and credit, the confcript fathers reFerred the affair to the people allembled by curix. As the Fabian family was very popular, the curix were fo far from condemning the thrce brothers, that, at the next clection of military tuibunes, they were chofen the bii as an lieh affront on his natio:, haftened lis march to Rome.

As his army was very numerous, the inhabitants of the towns and villages through which he pafled left their habitations at his approach ; but he ftopped nowhere, deelaring that his defign was only to be revenged on the Romans. The fix military tribunes, to wit, Q. Fabius, Cafo Fabius, Caius Fabius, Q. Sulpitius, Q. Scrvilius, and Scxtus Cornelius, marched out of Rome at the head of 40,000 men, without either facrificing to the gods or confulting the anfpices; effential ceremonies amoner a people that drew their courage and confidence from the propitions firns which the augurs declared to them. As moft of the military tribunes were young, and men of more valour than experience, they

129
The Ro mans entirely defeated.

130 They re:iinto the C'a pi:ol. advaneed boldly aroint the Gauls, whofe amny was 70,000 ftrong. The two armies met near the river Allia, about fo furlongs from Rome. The Romans, that they might not be furrounded by the enemy, extended their wings fo far as to make their centre very thin. Their beft troops, to the number of 24,000 men, they pofted between the river and the adjoinng hills; the reft they placed on the hills. 'The Gauls firft attacked the latter, who heing foun put into confufion, the forces in the plain were Aruck with fuch terror that they fled without drawing their fwords. In this general diforder, moft of the foldiers, inftead of returning to Rome fled to Veii : fome were drowned as they cndeavoured to fwim acrofs the Jiber; many fell in the purfuit by the fword of the eonquerors; and fome goe to Rome, which they filled with terror and confternation, it being believed there that all the reft were cut off. The day after the battle, Brennus marched lis troops into the neighbourhood of Rome, and encamped on the banks of the Anio. Thither his feouts brought him vord, that the cates of the city lay open, and that not one Roman was to be feen on the ramparts. This made him apprelienfive of fome ambufeade, it being unreafonable to fuppofe that the Romans would abandon their city to be plundered and facked without making any refitance. On this confideration he advanced flow!y, which gave the Romans an opportunity to throw into the Capitol all the men who were ft to bear arms. They carricd into it all the provifions they could get ; and, that they right laft the longer, admitted none into the place hut fuch as were capable of defending it.

As for the city, they had not fufficient forces io defend it; and therefore the old men, women, and children, feeing themfelves abandoned, fled to the neigh. bouring towns. The Veftals, before they left Rome, tonk care to lide every thing appropriated to the gods which they could not carry off. The two palladiums, and the facred fire, they took with them. When they came to the Janiculus, one Albinius, a plebeian, who was conveying his wife and children in a carriage to a place of fafety, fecing the facred virgins bending under their load, and their feet bloody, made his family alight, put the priefteffes and their gods into the carriage, and conducted them to Cære, a city of Hetruria, Where they met with a favourable reception. The Teftals remained at Crre, and there continued to per-
of the moft illuftrious and venerable old men, sather than fly from their native city, chofe to devote themfelves to death by a vow, which Fabius the high pontiff pronounced in their names. The Romans believed, that, by thefe voluntary devotements to the infernal gods, diforder and confufion was brought among the enemy. Of thefe brave old men fome were pontifices, others had been confuls, and others generals of armies, who had been honoured with triumplis. "To complete their facrifice with a folemnity and pomp becoming the magnanimity and conitancy of the Romans, they dreffed themfelves in their pontifical. confular, and trimmphal robes; and repairing to the fornas, feated themPelves there in their curule chairs, expecting the enemy and death with the greateft conitancy.

At length Bronnus, having fpent three days in tufe-Runn \({ }^{I_{3}}\) lefs precautions, entered the city the fourth day after the battle. He found the gates open, the walls with-buru out defence, and the houfes without inlabitants. Rome appeared to him like a mere defart ; and this folitude increafed his anxiety. He could not helieve, either that all the Romans were lodged in the Capitol, or that fo numerous a people fhould abandon the place of their nativity: On the other hand, he could nowhere fee any armed men but on the walls of the citadel. However, having firt fecured all the avenues to the Capitol with ftrong hodes of guards, he gave the reft of his foldiers leave to difperfe themfelves all over the city and plander it. Brennus himfelf advanced into the forum with the troops under his command, in good order; and there he was ftruck with admiration at the unexpected fight of the venerable old men who had devoted themfelves to death. Their magnificent habits, the majefly of their countenances, the filence they kept, their modefty and conftancy at the approach of his troops, made him take them for fo many deities: for they continued as motionlefs as fatues, and faw the enemy advance without thowing the leaft concern. The Gauls kept a great while at an awful dillance from them, being afraid to come near them. But at length one foldier bolder than the reft, having out of curiofity touched the beard of M. Papirius, the venerable old man, not being ufed to fuch tamiliarity, gave him a. blow on the head with his ivory ftaff. The foldier in revenge immediately killed him; and the reft of the Gauls lollowing his example, naughtered all thofe venerable old men without merey.

After this the enemy fet no bounds to their rage and fury. They plundered all places, dragging fuch of the Romans as had fhut themfelves up in their houles into the ftrects, and there putting them to the fword without diftinction of age or fex. Brennus then invefted the Capitol; but being repulfed with great lofs, in order to be revenged of the Romans for their refiftance, he refolved to lay the eity in afhes. According. ly, by his command, the foldiers fet fire to the houfes, demolifhed the temples and public cdifices, and rafed the walls to the ground. Thus was the famous city of Rome entirely deftroyed; nothing was to be feen in the place where it ftood but a few little hills covered with ruins, and a wide wafte, in which the Gauls who invefted the Capitol were encamped. Brennus, finding he fhould never be able to take a place which nature had fo well fortified otherwife than by famine, turned the fiege into a blockads. But in the mean time, his

\section*{\(R \quad O \quad M\)} ed in wine, and made a dieadiul flaughter of them. Thofe who made their efcape under the fhater of the night fell next day into the lands of the peafants, by whom they were maflacered without mercy. This defeat of the enemy revived the courage of the Romans feattered about the country, elpecially of thofe who had retired to Veii after the unfurtunate battle of Allia. There was not one of them who did not condemn himfelf for the exile of Camillus, as if he had been the author of it; and looking npon that great man as their laft refouree, they refolved to clioofe him for their leader. Accordinely, they fent without delay ambaffadors to bim, befectching hinn to take into his prorection the fugitive Romans, and the wreeks of the difeat at Allia. But Camillus would not accept of the comniand of the troops tull the people afembled by curix had legally conterred it upon lim. He thought the public anthority was lodged in the hands of thofe whe were fhut up in the citadel, and therefore would undertake nothing at the head of the Roman troops till a comminifiun was brought him from thence.
To do this was very difficult, the place being invefted on all fides by the enemy. However, one Pontius Corininis, a mau of mean birth, but bold, and very ambitious of glory, undertook it. He put on a light habit, and, providing himfelf with cork to keep the longer above water, threw himfelf into the Tiber above Rome in the begimning of the night, and fuffered himfelf to be carried down with the ftream. At length he came to the foot of the eapitol, and landed at a fteep place where the Gauls had not thought it neceflary to poft any centincls. There he mounted with great difficillty to the rampart of the citadel; and having made himfelf known to the guards, he was admitted into the place, immediately affembled, Pontius gave them an account of Camillus's victury; and in the name of all the Romans at Veii demanded that great eaptain for their general. There was not much time fpent in debates: the curix being called together, the act of condemnation which had been paffed on Camillus was abrugated, and he named dietator with one voice. Pontius was imnue. diately difpatehed with the decree; and the fame good fortune which had attended him to the capitol accom.
panied him in his return. Thus was Camillus, from the Itate of banifhment, raifed at onee to be fovereign magiltrate of his comntry. His promotion to the command was no fooner known, but foldiers flocked from all parts to his camp; infomueh that he foon faw himfelt at the lead of above 40,000 men, partly Rumans and partly allies, who all thought themfelves invinerble under fo great a general.

While he was taking proper meafures to raile the The Gav blockade of the eitadel, fome Gauls rambling round the e deavuls place, perecived on the fide of the hill the pint of Pon- to furprife tius's hands and fect. They obferved likewife, that the the Capio mols on the rocks was in feveral places torn up. From \({ }^{\text {ol }}\); thefe marks they coneluded, that fomebody had lately gone up to and returned from the capitol. The Gauls immediately made their report to Brennus of what they had obferved; and that experienced commander laid a defign, which he imparted to nobody, of Jurprifing the place by the fame way that the Roman had afcended. With this view lie chofe out of the army fuch foldiers as had dwelt in mountainous countries, and been aceuHomed from their youth to climb precipices. Thefe he ordered, afier he had well examined the nature of the place, to alcend in the night the fame way that was marked out for them; climbing two abrealt, that one might fupport the other in getting up the iteep parts of the precipice. By this means they advanced with much diffienlty from rock to rock, till they arrived at the foot of the wall. They proceeded with fuch filence, that they were not difcovered or heard, either by the centinels who were upon guard in the citadel, or even by the dogs, that are ufually awaked and alarmed at the leat noile. But though they eluded the fagacity of the dogs, they could not efcape the vigilance of the geefe. A flock of thefe birds was kept in a court of the capitol in honour of Juno, and near her temple. Notwithftanding the want of prosifions in the garrifon, they had been fpared out of religion; and as thefe ereatures are maturally quick of hearing, they were alarmed at the firlt approach of the Gauls; fo that running up and down, with their eackling and beating of their wings, they awaked Manlus, a gallant foldier, who fonse years before had been conful. He founded an alarm, and was the firft man who mounted the ram. part, where he found two Gauls already upon the wall. One of thefe offered to difcharge a blow at him with his battle-ax; but Manlius cut off his right hand at one But are difo blow, and gave the other fuch a puffi with his buckler, covered and that he threw him headlong from the top of the roek rejulfed. to the bottom. He, in his fall, drew many others with him; and, in the niean time, the Romans cruwding to the place, prefied upon the Gauls, and tumbled them one over another. As the nature of the ground would not fuffer them to make a regular retreat, or even to fly? mott of them, to avoid the fwords of the enenay, threw thenuelves down the precipice, fo that very few got fafe baek to therr camp.

As it was the cuttom of the Romans at that time not to fuffer any commendable action to go unreward. ed, the tribune Sulpitius alfembled his troops the nest morning, in order to beflow the military rewards on thofe who, the nis he betore, had deferved them. Among thefe Manlius was tirft named; and, in acknowledgment of the important fervice he had juft rendered the thate, every foldier gave him part of the com whith he recei- redipuingly from the public fock, and a litte meafure of wine nut of his fianty allowance. An inconfiderable prefer: indeed in itfelf, but very acceptable at that time en the perfon on whom it was beftuwed. 'The tribune's sext care was to punifh the negligent: accordingly the captaia of the guard, who ought to have had an eye over the cencinels, was condenned to die, and, purtuant to his fentence, thrown down from the top of the capitol. The Romans extended their punifhment; and rewards even to the animals. Gefe were ever after had in hoom: at Rome, and a flock of them always kept at the expence of the pubtic. A golden image of a fuofe was ereted in memory of them, and a goone every year carrid in triumph upon a foft litter fnely adomed; whillt dogs were held in abhorrence by the Romans, who every year is.paled one of them on a branch of chler.

The blockade of the Capitol had already lafted feven months; fo that the famme began to be very fenfibly ficle both by the befieged and beliegers. Camillus, fince hio nomination to the dictatonfhip, being mafter of the country, had polted ftrong guards on all the rocals; fo that the Gauls dared nut fir out for fear of being catt to pieces. Thus Brennus, who befieged the Cepitul, was befieged himelf, and fuffered the fame maconveniences which he made the Romans undergo. Hefles, a plague raged in his camp, which was placed in the midit of the ruins of the demolinied city, hif men lying confufedly among the dead carcafes of the Romans, whom they liad fiain, and fot buriecl. So great a number of them died in one quarter of the city, that it was afterwards called Eufla Gellico, or the place where the dead bodics of the Gauls were burnt. But, in the mean time, the Romans in the Capitol were troote pincled with want than the Gauls. 'I hey were aeduced to the laft extremity, and at the fame time irsurant both of the lamentable condition to which the enenij's army was brought, and of the fteps Camilus was taking to relieve them. 'That great general only waited for a favourable opportunity to lall upon the enemy; but, in the mean time, fuffered them to pine away in their infected camp, not knowing the extreme want the Romans endured in the Capitol, where they were fo deftitute of all forts of provifions, that they could no longer fubfitt. Matters being brought to this fad pafs on both fides, the centinels of the Capitol, and thole of the enemy's army, began to talk to one another of an accommodation. Their difcourfes came at lengigh to the ears of their leaders, who were nut averfe to the defign.
The fenate, not knowing what was becone of Camil. lus, and finding the nifelves hard pinched by hunger, refolved to enter upon a negotiation, and empowered Sulpitius, one of the molitary tribunes, to treat with the Gauls; who made no great difficuliy in coming to terme, they being no lefs defirous than the Romans to put an end to the war. In a conference, therefore, between lirenums and Srilpitius, an agreenent was made,
\(13^{3}\)
The \(\mathrm{RA}_{\mathrm{A}}\). mans agree to pay. 1050 pounds of pold fur eheir rasfus. and fuorn to. The Romans were to pay to the Cauls \(10: 0\) pounds weight of gold, that is, 45,000 . Sterling; and the latter were to raife the fiege of the Capitu', and quit a!l the Koman territorics. On the day appointed, Sulpitius brought the fum agreed on, and Bremnus the fcales and weights; for there were no gold or filver coins at that time, metals paffing only by
weight. We arc told, that the weights of the Cuuls were falle, and their fcales untruc; which Sulpitias complainiug of, Brennus, inftead of redreffing the injultice, threw his fword and hele into the fcate where the weights were; and when the tribune afked him tl.e meaning of to extraordinary a behaviour, the only a a. fiver hê gave va:", Va vicis! "Wo to the conquered!" Sulpitius was fo llung with this haughty anfwer, that he was for carrying the gold back into the Capitol, and furtaining the fiege to the laf extremity: bur others chourtht it advilable to put up the affront, lince they liad fubmitted to a far greater one, which was to pay any thing at all.

During thefe difputes of the Roman deputies amons themfelves and with the Gauls, Camillus advanced witi his army to the very gates of the city ; and being there informed of what was doing, he counmanded the main budy to fullow him nowly and in good order, while he, with the choicett of his men, haftened to the place of the parcy. The Romans, overjoyed at his unexpected arrival, opened to make roum for hin as the fupreme ongigit rate of the republic, gave him an account of the treaty they had made with the Gauls, and complained of the wrong Brennus did them in the execution of it. They had fcarce done fpeaking, when Camillus cried out, "Carry baek this gold into the Capitol; and you, Gauls, retire with your feales and weights. Rome mult not be redcemed with gold, but with fleel. Brenrus teplied, That he contravened a treaty which was concluded and confirmed with mutual oaths. "Be it fo (anfwered Camillus) ; yet it is of no furce, having been made by an inferior nagiltrate, without the privity or confent of the dictator. 1 , who am invelted with the fupreme anthurity over the Romans, declare the contract woid." At thefe words Brenmus flew into a rage; and both fides drawing their fwerds, a confufed fenfle enfued among the ruins of the houfes, and in the narrow lanes. The Crauls, after an inconfiderable lots, thought fit to retire within their camp; which they abandoned in the night, not caring to engage Camillus's whole army, and, having marched eiglat miles, encamped on the Grabinian way. Camillus purfued thenz as foon as it was day, and, coming up with them, gave them a total overthrov. The Gauls, according to Livy, made hut a faint refillance, being difheartened at the lois they had futtained the day before. It was not, fays that author, fo much a battle as a flaughter. Nany of the Gauls were flain in the action, more in the entitely wi purfuit ; but the greater number were cut off, as they " wandered up and down in the fiolds, by the inhahitants of the neighbouring villsres. In fhort, there was not one fingle Gaut left to carry to his countrymen the news of this fatal cataftrophe. The camp of the barbarians was plundered: and Camillus, loaded with rpoils, reauned in triumph to the city, the foldiers in their fongs flyling him, Romulus, Fatber of his cosntry, and Sccond founder of Rume.

As the houfes of Rnme were all demolifhed, and the walls razed, the tribunes of the people renewed, with more warmth than ever, an old project which had occafioned great difputes. They had formerly propofed a law for dividing the fenatc and government between the cities of Veii and Rome. Now this law was revi- Difpuiter ved; nay, motl of the tribunes were for entirely aban-about reconing their cld suined city, and making Veii the fole "."oving to fcat \({ }^{\text {cile }}\)

\section*{R O M}
ome. feat of the empire. The people were inclined to tavour the froject, Veii orering then: a place fortiked \(b_{y}\) art and nature, grod houfes ready built, a wholefome air, and a fruitful lerrisory. Os the other hand, they had no raterials for recuilding a whole city, were quite exhaulted by mistontunes, and even their flrength was greatly dimiuibed. This gave them a reluctance to \(\mathrm{fo}_{0}\) freat an undertaking, and embolfined the tribunes to utter feditious harangues agrintl Camillus, as a man tou anibitious of being the rettofer of Rume. They even intinuated that the name of Romalus, which had been given him, threatened the republic with a new king. But the fenate took the part of Camillus, and, being defirous to fee Rome rebuilt, continued him, coutrary to cuilum, a full year in the office of dictator; during which tine he made it his whole hatinefs to fupprefs the ftroner iuclination of the people to remove to Veii. Having affenbled the carire, he expoftulated with them upon the matter; and, by arguments drawn from prudence, religion, and glury, prevailed upon then to lay aride ail thoughts of leaving Rome. As it was neceffary to have the refolution of the people confirmed by the fenate, the ditator reported it to the confeript fathers, leaving every one at full liberty to wote as he pleafed. While L. Lucretius, who was to give his opinion the firt, was begianing to fpeak, it happened that a cent:rion, who with his company had been npen guat, and was then mare'sing by the fenate-houre, cried out alond, "Plant your colours, enir 7 "; this is the belf place to flay in." Thefe words were condi.!ered as dictated by the gods themfelves; and Lucretins, taking occation from them to urge the neceffity of Ataying at Rome, "An happy omen, (cricat be); I adore the gods who gave it." The wheple fenate applouded his words; and a decree was palled without opposition for rebuildiry the city.

Though the tribunes of the people were defeated by Camillus in this point, they refolved to exercife their authority argainf another parrician, who had imieed dsferved puailment. This was Q. Fiblus, who had violated the law of nations, and thereby provoked the Gauls, and occafromed the bunning of Rome. His crime being netorivas, he was fummoned by C. Martius Rurilus before the afembly of the people, to anfuer for his conduct in his embafiy. The crimian had reafon to fear the fevereft punithment: but his relations gave out that he died fuddenly; which generally - trappened when the accufed perfor had courage enough to prevent his condemation, an? the frame of a pablic punithment. Oa the other leand, the republic gave an home fituated on the Capitul to M. Manlius, as a monument of his valour, and of the gratituse of his follow-citizens. Camillus clued this year by laying down his \(i\) - tatorfhip: whereupan an interrernum enfued, during which be governed the thate altemately with P. Coraelins Scipio ; and it fell to his lot to preside at the slection of new masitrates, when L. Valerius Poplicola, L. Virginius Tricotus, P. Cornelius Cofiss, A. Manlius Capiculinus, L. Fimilius Mamerciuns, and L. Pofthmius Albinus, were chofen. The fril care of thefe new magittates was to collect all the ancieut monuments of the religion and civil laws of Kume which could be fornd among the ruins of the demolithed city. The laws of the twelve tables, and fone of the laws of the kings, had been written on brafs, and
fixed up in the furm ; and the treatics naude with ie Rano. veral natums had been engraved on pillars erected its the tempits. Pains were therefore taken to gather up the ruins of thefe precions monments; and what could not be found was furplied by memory. The pontifiees, on thei: part, zound care to reettablifh the religivus ceremonies, and mate alio a lift of lacky and unlucky days.

And now the governors of the republic applied them. The ciey felves wholly to rebuild the city. Plutaren tills uc, rebuilt. that as the wrorkmen were digring anion! the ruins of the temple of Mars, they found Romulus's augural ttaff unturelied by the flanes; and that this was looked upon as a prodigy, from whence the komans inferred that their city would continue for ever. The expence of i,ukining prisate houles was panly defrayect ont of the pullic treafure. 'The eetilies bad the direction of the works; but they had fo little talte for order or beauty, that the city, when rebailt, was even lefs regular than in the time of Romulus. And thourh in Augutur's time, when kome became the capital of the known world, the temples, palaces, and private honfes, were built in a more marnificent manaer than before; yet even then thefe new decoratiens did not rectify the faults of the flan upon which the city had been built after its firt demislition.

Rome was fearce refored, when her citizens were a genera: alarned by the news that all her neighbours were come eonninabining to her detlractiont The Equi, the Volici, the tion agaisis Ifeturians, and even her old frienls the Latins and the Rothe Hernici, entered into an alliance again ther, in hopes of opprefling her befure the had recovered her fremy. The repablic, under this terror, nomiated Camilins dictator a third time. This great connmander, having appointed Servilius to be his general of horfe, fammoned the citizens to take arms, whout excepting even the old men. He divided the new levies into three bodies. The firlt, under the command of \(A\) Manlius, he ordered to encarrp under the walls of Rome; the feend he fent into the neighbourhood of Vcii ; and marehid bimfelf at the head of the third, to relieve the tribunes, who were clofely befieged in their camp by the united forces of the Volfci and Latins. Finding the enemy encamped near Lankiam, on the declivity of the hill Maseius, he pofted hiarfelt behind it, and, by lighting fres, gave the diffreffic Kemans notice of his arrival. The Voife and Latins, when they underfood that Camillus was at the head of an army nexly arrived, were to tenined, that they fhut themfives up in their camp, wbich they fortifid with great trees cut down in hafte. The dictator, ob- \({ }^{145}\) ferving that this barrier was of green woow, and that defeathes has every monning there arofe a great wind, which hlew to fis and full apon the enemy's camp, furmed the defizn of ta-Latim. king it by fire. With this view he ordered one part of his army to go by break of day with fire brands tos the windward filte of the camp, alid the other to make a brifl attack on the oppofte fide. By this means the eneny were entirely defeated, and their camp taken. Camillus then commanded his men to extinguith the Hames, in order to fave the booty, with which he rewarded his army. Ite thea left his son in the camp to guard the prifoners; and, entering the country of the IEqui, made himfelf mafter of their capital city Bola. From thence be marched ayaint the Volfcis.
whor:
whim hie entirdy reluced, after they had waged war With the Romian; tor the pace of so7 years. Having Hetr this untraztable people, he penetrated into comuria, in order to relite Sutrim, a town in that comerty in alliance with Rome, and betieged by a numerous army of lietrurians. But, notwithtanding all the expedition Canillus could ufe, he did not reach the place before it had capitulited. Thic Sutrini, being greatly difteffed for want of provifions, and exhaufted with labour, had furrendered to the Hetrurians, who had granted then nothing but their lives, and the cloaths on their lancks. In this deflitute coadition they had left thior own country, and were going in fearch of netp habitations, when they mot Camillus leading an amy to their elicf.

The unfortunate mulitude no fooner faw the Romans, but they threw themfelves at the dictator's feet, whe, moved at this melancholy fight, defired thens to take a lithe rest, and refieth themfelves, adding, that lie would foon dry up their teass, and transfer their forrows from thein to their enconies. He imagined, that the IIcturians would be wholly taken up in plundewing the eity, withont being upan their guard, or olferving aay dicipline. And herein he was not miftaken. The Hetrurians dio not dream that the dictator could come fo feeedily from fuch a ditance to furprife them; and therefore were wholly employed in piuntring the houfes and earrying off the booty, or faatting on the provilions they had found in them. Many of then were put to the fword, and an incredible mumber made prifoncrs; and the city was reftored to its ancient inhahitants, who had not waited in vain for the pe:fornaatce of the dictator's promife. And now, after thefe glorivus exploit, which were finifhed in fo fhort a time, the great Camillus entered Rome in trimmph a third time.
Camilhus having refizned his dictatorfhip, the repubTie clofe fix new military tribune:, Q. Quinclins, (). S'ervius, L. Julius, I. Aquilius, L. Lueretius, and Ser. Sulpitius. During their adminitration the country of the Æqui was laid wafte, in order to put it out of their power to revolt anew; and the two citics of Cortuofa and Costenebra, in the lucumony of the Tarquinienfes, were taken from the Hetrurians, and entircly demolifhed. At this time it was thought proper to repair the Capitol, and add new works to that part of the hill where the Gauls had endeavoured to fcale the citadel. Thefe works were efteemed very benutiful, as Livy informs us, exen in the time of Augulus, after the city was e:mbellifhed with moft magnificent decorations.

And now Rome being reinfated in her former Aouribing condition, the tribunes of the people, who tal been for fome time quict, began to renew their fechitious harangues, and revive the old quarrel about the divifion of the conquered lands. The patricians had appropriated to themfelves the Pomptin territory lately taken from the Volfei, and the tribunes laid loold of this opportunity to raife new difurbances. But the citizens being fo drained of their money that they had not *nough left to cultivate new farms and fock them with cattle, the declamations of the tribunes made no impreffion upon their minds; fo that the project vanifhed. As for the military tribunes, they owned that their Alection had been defective; and, lett the irregularities of the former comitia flould ve continued in the fuc-
ceeding ones, they voluntarily laid down their office. So that, after a fhort interregnum, during which M. Manlius, Ser. Sulpicius, and L. Valerius Potitus, governed the republic, lix new military tribunes L. Papirius, C. Sergius, L. REmilins, L. Menenius, L. Vale. rius, and C. Cornelius, were chofen for the enfuing year, which was fpent in works of peace. A temple, which had been vowed to Mars during the war with the Gauls, was built, and confecrated by T. Quinctius, who prelided over the affairs of religion. As there had hitherto been but few Roman tribes beyond the Tiber which had a right of fuffrage in the comitia, four new ones were added, under lhe name of the Stellatina, Tramontina, Sabsuina, and Arnierfis; fo that the tribes were now in all 25 , which enjoyed the fame rights and privileges.

The expectation of an approaching war induced the centuries to choofe Camillus one of the military tribunes for the next year His cons Le were Sur Comet保 Q. Servilius, L. Quinctius, L. Horatius, and P. Valenus. As all thete were incn of moderation, they a.greed to inveft Camillus with the fole mangement of affairs in time of war; ancl accordingly in full fenate trausterred all their power into his hands; fo that he bceame in effect dictator. It had been already determined in the fenate to turn the arms of the republic againit the Hetrurians ; but, upon advice that the Antiates had entered the Pouptin territory, and obliged the Ronans who had taken poffeffion of it to retire, it was thought neceffary to hamble them before the republic engaged in any other enterprife. The Antiates had joined the Latins and Hernici near Satricum; fo that the Rumans, being terrified at their prodigious numbers, flewed thenfelves very backward to engage: which Camillus perceiving, he inftantly mounted his horfe, and riding through all the ranks of the army, encouraged them by a proper fpeech; after which he difmounted, took the nest itandard-bearer by the hand, led him towards the enemy, and cried out, Soldiers, allvance. The foldiery were afhamed not to follow a general who expred himfelf to the firft attack ; and therefore, haviug made a great fhout, they fell upon the enemy with incred ble fury. Canillus, in order to in- Who \({ }^{\text {r4s }}\) eseafe their eagernefs ftill more, commanded a ftandard the Antito be thrown into the middle of the enemy's battalions; which made the foldie:s, who were fighting in the firt ranks, exert all the refolution they could to recover it. The Antiates, not being able any longer to make head againft the Romans, gave way, and were entirely defeated. The Latins and Hernici feparated from the Volfei, and returned home. The Volfci, feeing themfelves thus abandoned by their allies, took refuge in the neighhouring city of Satricum: which Camillus immediately invefted, and took by affalt. The Vollci threw down their arms, and furrendered at diferetion. He then left his army under the command of Valerius; and returned to Rome to folicit the confent of the fenate, and to make the neceffary preparations for undertaking the fiege of Autium.

But, while he was propofing this affair to the \(\mathrm{fe}-\mathrm{Hi}{ }^{\text {ris nether }}\) nate, deputies arrived fyom Nepet and Sutrium, two ci-fucceffes, ties in alliance with Rome in the neighbourhood of Hetruria, demanding fuccours againit the Hetrurians, who threatened to behiege thefe two cities, which were the keys of Hetruria. Hereupon the expedition againgt

\section*{R O M}

Antium was laid afide, and Camillus commanded to haften to the relief of the allied cities, with the troops which Servilius had kept in readinefs at Rome in cafe of an emergeney. Camillus immediately fet out for the new war ; and, upen his anrival before Sutrium, found that important place not only befieged, but almoft taken, tbe Hetrurians having made themfelves matters of fome of the gates, and gained poffeffion of all the avenues leading to the city. However, the inhabitants no fooner heard that Camillus was eome to their rclief, but they recovered their courage, and, by barricadoes made in the ftreets, prevented the enemy from making themfelves inalters of the whole city. Camillus in the mean time having divided his army into two bodies, ordered Valerius to march round the walls, as if he defigned to fcale them, while he witb the other undertook to charge the Hetrurians in the rear, force his way into the city, and fhut up the enemy between the befierged and his troops. The Romans no fooner appeared but the He trurians betook themfelves to a diforderly fight through a gate which was not invefted. Camillus's troops made a dreadful flaughter of them within the eity, while Valerius put great numbers of them to the fword without the walls. From reconquering Sutrium, Camillus haftened to the relief of Neper. But that city being better affected to the Hetrurians than to the Romans, had voluntarily fubmitted to the former. Wherefore Ca millus, having invefted it with his whole army, took it by affault, put all the Hetrurian foldiers without diftinction to the fword, and condemned the authors of the revolt to die by the axes of the lictors. Thus ended Camillus's military tribunefhip, in which he aequired no lefs reputation than he had done in the moft glorious of his dictatorhips.
\(n\) In the following magitracy of fix military tribunes, an- a dangerous fedition is faid to have taken place through the ambition of Marcus Manlius, who had faved the eapitol from the Gauls in the manner already related. Thoush this man had pride enough to defpife all the other great men in Rome, yet he envied Camillus, and took every apportunity of magnifying his own exploits beyond thofe of the dictator. But not finding fuch a favourable reception from the nobility as he defired, he conccrted meafures with the tribunes of the people, and flrove to gain the affeetions of the multitude. Not content with renewing the propofal for the diftribution of conquered lands, he alfo made himfelf an advocate for infolvent dehtors, of whom there was now a great number, as molt of the lower clafs had been obliged to borrow money in order to rebuild their houfes. The fenate, alarmed at this oppofition, ereated \(A\). Cornelius Coffus dictator, for which the way with the Volci afforded them a fair pretence. Manlius, however, fill continued to inflame the people againit the patricians. Befides the moft unbounded perfonal generolity, he held affemblies at his own houfe (in the citadel), where he confidently gave out that the fenators, not content with

VoL. XVI. Part I.
being the poffeffors of thofe lands which ought to inave been equally divided among all the citizens, had concealed, with an intent to appropriate it to their own ufe, all the gold which was to have been paid to the Gauls, and which would alone be fufficient to difeharge the debts of a! ! the poor plebeians; and he moreover promifed to thow in due time where this treafure was concealed. For this affertion lee was brought before the dictator; who commanded him to difcover where the pretended treafure was, or to confefs openly before the whole affembly that he had กandered the fenate.Manlius replied, that the dictator himfelf, and the principal perfons in the fenate, could only give the proper intelligence of this treafure, as they had been the mott active in fecuring it. Upon this he was committed to prifon; but the people made fuch difturbance, that the fenate were foon after fain to relcafe him. \(\mathrm{By}_{\mathrm{y}}\) this he was emboldened to continue his former practices; till at laft the fenate gave an ordcr to the military trihunes to take care that the commonwealth fuffered no detriment from the pernicious projects of Marcus Manlins, and even gave them authority to affaffinate him, if they found it neceftary fo to do. At latt, hovever, he was publicly accufed of afpining to be king; huwever, the people, it is faid, were fo itruck with cratitude, on account of his having delivered the capitol from the Gauls, that they could not refolve to condemn him. But the military tribunes, who, it feems, were bent on his deftruction, having appointed the affembly to be held without the city, there obtained their wifh. Manlius who \({ }^{155}\) was thrown headlong from the capitol itfelf: it was condemnod thenceforth decreed that no patrician fhould dwell in and executhe eapitol or citadel; and the Manlian family refolved \({ }^{\text {ted }}\) that no member of it fhould ever afterwards bear the prænomen of Marcus. No fooner was Manlius dead, however, than the people lamented his fate ; and becaufe a plague broke out foon after, they imputed it to the anger of the gods on account of the deftruction of the hero who had faved the ftate (A).

The Romans, having now triumphed over the Sabines, the Etrurians, the Latins, the Hernici, the Equi, and the Volfeians, began io look for greater conqueits. They accordingly turned their arms againlt the Samnites, a people about \(1: 0\) miles ealt from the city, defcended from the Sabines, and inhabiting a large tract of fouthern Italy, which at this day makes a confiderable part of the kingdom of Naples. Valerius Corvus and Cornelius were the two confuls, to whofe care it firft fell to manage this dreadinl contention between the rival thates.

Valerius was one of the greatell commanders of his \({ }^{152}\). time; he was furnamed Corvus, from a itrange cir-the Samcumftance of being affifted by a erow in a fingle com-nites. bat, in which he fought and killed a Gaul of a pigantie flature. To his colleague's care it was configned to lead an army to Samnium, the enerny's capital; while Corvus was fent to relieve Capua, the capital of the
\(\mathrm{Z}_{2}\) Cam-
(s) The above accounts are exactly conformable to what is to be found in the bet Latin hiftorians; neverthelefs they are far from being reckoned univerfally authentic. Mr Hooke, in his annotations on the death of M. Manlius, has given very ftrong reafons againft believing either that Camillus refcued the gold from the Gauls, or that Manlius was condemad. See Hooke's Roman Hifory, Vol. II. p. 326, it Jeq.

Cunpanians．The Samnites were the braver men the Ronans had ever jet encountered，and the contention beisucen the two rations was nanaged on both fides with the mof determined refolution．But the fortune of Rome prexailed；the shamnites at length fled，aver－ sing．that they were not able to withiland the fierce looks and the lire－darting eyes of the Romans．The other conful，however，was not at firft fo fortumate； for having unwarily led his army into a decfle，hee was in danger of being cut oft，hatl not Decius，a tribune of the army，poffefled himfelf of an hill which com－ manded the cluemy：fo that the Samnites，being at－ tacked on either fide，were defeated with great dlaugh－ ter，no lefa than 30,000 of them being left dead upon the field of battle．

Some time aiter this vietory，the foldiers who were ftationed at Caprua mutinying，forced Quintius，an old and eminent follice，who was then reliding in the coun－ try，to be their leader；and，conducted by their rage more than their generad，came within eight miles．of the city：So terrible an enemy，almoll at the gates， not a little alurmed the fenate ；who immediately created Valerius Corvus dictator，and fent him forth with ano－ ther army to oppofe them．The two armies were now drawn up againit each other，while fathers and fons be－ held thenfelves prepared to engage in oppolite caufes ； but Corvus，knowing his inftuence among the foldiery， initead of going forward to meet the mutineers in an， hoftile manner，went with the molt cordial friend hip to embrace and expoftulate with his old acquaintances． His conduct had the defired effect．Quintius，as their fpeaker，only defired to have their defection from their duty furgiven：and as for himfelf，as he was immocent of their confpiracy，he had no reafon to folicit pardon for his ufferees．

A war between the Romms and the Latins followed foon after；but as their habits，arms，and language， were the fame，the moit exact difcipline was neceffiry to prevent coufulion in the engagement．O Orders， thercforc，were iflued by Manlins the conf：1，that no foldier thould leave his ranks upon whatever provoca－ tion；and that he thould be certainly put．to death who thould offer to do otherwife．With thefe injunctions， both armies were drawn out in array，and ready to be－ gin；when Metius，the generall of the eneny＇s cavalry， pulthed forward from his lines，and challenged any knight in the Roman army to fingle combat．For fome time there was a general paufe，no foldier offering to difobey his orders，till Titus Manlius，the conful＇s own fon，burning with fhame to fee the whole body of the Romans intimidated，beldly fallied out againf his ad－ verfary．The foldiers on hoth fides for a while fufpend－ ed the general engagement to be fipectators of this fierce encounter．Manlius killed lis adverfary；and then defpoiling him of his armour，returned in triumph to his father＇s tent，where be was prepating and giving orders relative to the engagement．Howfoever he might have heen applauded by his fellow－foldiers，being as yet doubtful of the reception he fhould find from his father，he came，with helitation，to lay the enemy＇s fooils at his feet，and with a modef air indinuated，that what lie did was entirely from a fpirit of hereditary vir－ tur．lint he was foon dreaiffully made fenfible of his error，when his father，turning away，ordered him to be lo 3 publicly forth befure the amy，and there to
have his head fruck off on account of his difobeying orders．The whole army was ftruck with horror at this unnatural mandate ：fear for a while kept them in fufpenfe；but when they faw their young champion＇s head fluck off，and his blood ftreaming upon the ground，they could no longer contain their execrations and their groans．Iis dead body was carried forth without the camp，and being adorned with the fpoils of the vanquifhed enemy，was buried with all the pomp of military dillrefs．

In the mean time，the battle joined with mutual a blo fury；and as the two armies had often fought under batele the fame leaders，they combated with all the animo－the 1 ， fity of a civil war．The Latins chiefly depended on their bodily Atrengtly ；the Romans，on their invincible courage and conduct．Forces fo nearly matched fecm－ ed only to require the protection of their deities to turn． the feale of victory ；and，in fact，the angurs had fore－ told，that whatever part of the Roman army fhould be diftrefled，the commander of that part fhould devote himfelf for his country，and die as a facrifice to the immortal gods．Manlius commanded the right wing， and Decius led on the left．Both fides fought for fome time with doubtful fuccefs，as their courage was equal ； but，after a time，the left wing of the Roman army began to give ground．It．was then that Decius，who． commanded there，refolved to devote himfelf for his country，and to offer his own life as an atonement to fave his．army．－Thus determined，he called out to Manlius with a loud voice，and demanded his inftric－ tions，as he was the chicf pontiff，haw to devote him－ felf，and the form of the words he fhould ufe．By his directions，therefore，being cluthed in a long robe，his head covered，and his arms Atrtched forward，ftanding． upon a javeliir，he devoted hinfelf to the celctial and infernal gods fur the fafety of Rome．Then arming himfelf，and mounting on horfeback，he drove furiouf－ ly into the mida of the enemy，carrying terror and coniternation wherever he came，till he fell covered with wounds．In the mean time，the Roman army conli－ dered his devoting himfelf in this manner as an affurance of fuccefs；nor was the fuperfition of the Latins lefs， powerfully：infleenced by his refolution；a total rout． began to enfue：the Romans prefled them on every fide ；and fo great was the carnage，that．fcarce a fourth． part of the enemy furvived the defeat．This was the lait whe battle of any confequence that the Latins had with the tur Romans ：they were forced to beg a peace upon lard conditions；and two years after，their firongelt city， Pxdum，being taken，they were brought under an entire fubnilficn to the Roman power．

A fignal difgrace which the Romans foflained about this time in their contedt with the Samnites，made a paufe in their ufual good fortune，and turned the feale for a while in the enemy＇s favour．＇The \｛enate having denied the Samnites peace，Pontius their general was refolved to gain by flratagem what he had frequently loft by force．Accordingly，leading his army into，a defile called Cla：dium，and taking poffeffion of all its outiets，he fent 10 of his folliers，habited like fleptrerds， with directions to throw themfelves in the way the Ror mans were to march．The Roman conful met them， and takiug theon for what they appeared，demanded the route the Samite army had taken；they，with feeming indifference，replied，that they were gone to Luceria，a

\section*{R O M [ 3631 R O Mi}
13. . Town in Apulia, and were then actually befleging it. The Roman general, not fufpecting the ftratagem that was laid againf him, marched direetly by the fhortef road, which lay through the defiles, to relieve the city; and was not undeceived till he faw his army furrounded, and blocked up on every fide. Pontius thus having the Romans entirely in his power, firt obli red the army to pafs under the yoke, having been previoully ftripped of all but their garments; he then fipulated that they fhould wholly quit the territories of the Samnites, and that they fowld continue to live upon terms of former confederacy. 'The Romans were conftrained to fubmit to this ignominious treaty, and marched into Capua difarmed and half naked. When the army arrived at Rome, the whole city was moft furpifingly aflicted at their flameful return; nothing but grief and refentment was to be feen, and the whole city was put into mouming.

But this was a tranfitory calamity : the war xas carried on as ufual for many years; the power of the Samnites decliming every day, while that of the Romans continually increafed. Under the conduct of Papirius Curfor, who was at different times conful and dictator, repeated triumphs were gained. ,Fabins Maximus alfo had his fhare in the glory of conquering them; and Decius, the fon of that Decius whom we faw devoting himfelf for his country about 40 years before, followed the example of his father, and rufhed into the midft of the enemy, imagining that he could fave the lives of his countrymen with the lofs of his own.

The fuccels of the Romans againf the Samnites alarmed all Italy. The Tarentines in particular, who had long plotted underhand againt the republic, now openly declared themfelves; and invited into Italy Pyrrhus king of Epirus, in hopes of being able by his means to fubdue the Romans. The offer was readily accepted by that ambitious monarch, who had nothing lefs in view than the conquet of all Italy.Their ambafladors carried magnificent prefents for the king, with inftuctions to acquaint him, that they only wanted a general of fance and experience; and that, as for troops, they could themfelres furnihi a numerous army of 20,000 horfe and 355,000 foot, made up of Lucanians, Meftapians, Samnites, and Tarentines. As foon as the news of this deputation were brought to the Roman camp, Aimilius, who had hitherto made war on the 'Tarentines but gently, in hopes of adjuting mat;ers by way of negociation, took other meafures, and began to commit all forts of hoftilities. He took cities, ftormed caftles, and laid the whole country wafte, burning and defroying all before him. The Tarentines biought their army into the field; but Amilius foon obliged them to take refuge within their walls. However, to induce them to lay afide the defign of receiving Pyrrhus, he ufed the prifoners he had taken with great moderation, and even fent them lack without ranfom. Thefe highly extolled the generofity of the conful, infomuch that many of the inhabitants were brought over to the Roman party, and they all began to repent of their having rejected a peace and fent for Pyrrhus.

But, in the mean time, the Tarentine ambaffadors arriving in Epirus, purfuant to the powers they had seceived, made an abfolute treaty, with the king; who
immediately lent before lim the famous Cyneas, with 3200 men , to take poffeffion of the citadel of Tarentum. This eloquent minitter foon found means to depole Agis, whom the "larentines had chofen to be their general and the governor of the city, though a fncere friend to the Romans. He likewife prevailed upon the 'Parentines to deliver up the citadel into' his hands; which he no fooner got poffelfion of, than he difpatched neffengers to Pyrrhus, foliciting him to hatten his departure for Italy. In the mean time, the conful Emilius, finding that he could not attempt any thing with fuccefs againf the Tarentinesthis campaign, refolved to put his troops into winter quarters in Apulia, which was not far from the territory of Tares. tum, that was foon to become the feat of the war. As he was obliged to pafs through certain defiles, with the fea on one fide and high hills on the other, he was there attacked by the Tarentines and Epirots fron great numbers of barks fraught with balifte (that is, engines for throwing ttones of a valt weight), and from the hills, on which were potted a great many arch ers and flingers. Hercupon Fmilius placed the I'arentine prifoners between him and the enemy; which the Tarentines perceiving, foon left off molefting the Romans, out of compaffion to their own countrymen ; fo that the Romans arrived fafe in Apulia, and there took up their winter-quarters.

The next year Kmilius was continued in the command of his own tronps, with the title of proconfu.; and was ordered to make war upon the Salentines, who had declared for the 'l'arentines. The prefent exigence of affairs obliged the Romans to enlift the proletarii, who were the meanelt of the people, and therefore by way of contempt called proletarii, as being thought incapable of doing the ftate any other fervice than that of peopling the city, and Atocking the republic with fub. jects. Hitherto they had never been fuffered to bear arms; but were now, to their great fatisfaction, enrolled as well as others. In the mean time Pyrrhus arrived at 'Tarentum, having narrowly elcaped fhipwreck; and being conducted into the city by his faithful Cyneas, was receired there with loud acclanations.

The T'arentines, who were entirely dcvoted to their Pyrrhus pleafures, expected that he frould take all the fatigues obliges the of the war on himfelf, and expofe only his Epirots to to learn the danger. And indeed Pyrrhus for fome days dillembledast of war. lis defign, and faffered the Tareneines to indulge without retraint in their ufual diverfions. But his hips, which lad been difperfed all over the Ionian fea, arriving one after another, and with them the troops which he had put on board at Epirus, he began to reform the diforders that prevailed in the city. The theatee was the place to which the jdle "「arentines reforted daily in great numbers, and where the incendiaries ftirred up the people to fedition with their harangues : he therefore caufed it to be "hut up, as he did 1ikewife the public gardens, porticces, and places of exercife, where the inlabitants ufed to entertain thenLelves with news, and forak with great frcedom of their governors, cenfuring their couduct, and fettling the go. vernment accordines to their different humours, which occafioned great divifions, and icnt the city into various factions. As they were a very volmpuous and indolent people, they fpent whole days and nights in feadt, mafquerces, plays, £:c. Thefe therefore l'y rrhus abZ 22
folutely

Rome. folutely prohibited, as no lefs cangerous than the affemblies of prating politicians. They were ntter Arangers to military exercifes, and the art of handling arms; but Pyrrhus laving caufed an exact regifter to be made of all the goung men who were fit for war, picked out the ftrongeit amongtt them, and incorpurated them among lis own troops, faying, that he would take it upon luimfelf to give then couragc. He cxereifed then daily for feveral hours ; and on that occation behaval with ao inexorable feverity, inficting exemplary punifument on fuch as did not attend or failed in their cluty. By thefe wife incafures he pievented feditions annong the citizens, and inured their youth to military difcipline; and becaufe many, who bad net been accuflumed to fuch feverity and rigour, withdrew from their native country, Pyrrhus, by a public pruclamation, declased all thofe capitally guilty who fhould attenipt to abandon their cuuntry, or abfent themfelves from the common mufters.

The farentines, being now fenfible that Pyrrhus was deternined to be their mafiet, began lously to complair of his conduct; but he, being informed of whatever paffed among them by his fpies, who infunated themilelves into all companies, privately difpatched the moft factious, and fent thofe whom he fufpected, under various pretences, to his fon's court in Epirus.

In the mean time, P. Valerius Lærinus, the Roman conful, entering the country of the Lucanians, who were in alliance with the Tarentines, commited great ravages there; and having taken and fortified one of their cafles, waited in that neighbourhood for Pyrrhus. The king, though he had not yet received any fuccours trom the Samnites, Meflapians, and other allies of the I arentines, thought it highly difhonourable to continue fthut up in a city, while the Romans were ravaging the country of his friends. He therefore teck the eld with the troops he had brought with him from Epius, fome recruits of Tarentum, and a tmall number of ltalians. But before he began hollilities, he wrote a letter to Lasinus, commanding him to difband his army; and un his refufal, imnediately marched towards thofe parts where Lxvinus was waiting for him. The Romans were encanped on the hither fide of the river Siris; and Pyrrhus appearing on the oppofite bank, made it his firft bufinefs to reconnoitre the eneny's camp in perfon, and fee what appearance they made. With this view he croffed the liver, attended by Megacles, one of his offieers and chief favourites; and having obferved the conful's intrenchments, the manner in which he had pofted his advanced guards, and the grood order of his camp, he was greatly furprifed; and addrefing Megacles, "Thefe people (faid hee) are not fuch barbarians as we take them to be: let us try thema beforc we condemn them." On his return, he changed his refolution of attacking them; and, fhut. ting himfelf up in his iutrenchments, waited for the arrival of the confedcrate truops. In the mean time, he polted firong guards along the river, to prevent the enemy from pafing it, and continually fent out fcouts to difcover the defigns, and watcl the motions of the conful. Some of thefe being taken by the advanced guards of the Romans, the conful himfelf led them through his camp, and having fhewed them his army, Iecot them back to the king, telling them, that he had many other troops to fhow them in due time.

Lxvinus being determined to draw the enemy to a battle before Pyrihus received tise reinfurcements he expeeted, having harangued his troops, marched to the banks of the Siris; and there drawing up his infantry in battalia, ordered the caralry to file off, and march a the Rc great way about, in order to find a paflage- at fome mans. place not defended by the enemy. Accordingly, they paffed the river without being obferved; and falling upon the guards which Pyrrhus had pofted on the banks over-againtt the contular arny, gave the infantiry an opportunity of creffing the river on bridges which Levinus had prepared lur that purpofe. But before they got uver, Pyrrhus, haflening irom his camp, which was at fome dirtance from the river, hoped to cut the Roman army in pieces while they were difordered with the difficulties ot palling the river, and climbing up the tteep banks; but the cavalry covering. the intantry, and Ilanding between them and the Epirots, gave them time to form themiclves on the banks of the river. . On the other hand, Pyrrhus drew up his men as falt as they came from the camp, and pertormed fuch deeds of valour, that the Rumans thought him worthy of the great reputation he had acquired.
is the cavalry alone had hitherto engaged, Pyrrhus, who conlided moft in his infantry, haftened back to the camp, in order to bring them to the charge; but took two precautions before he began the attack: the hirlt was, to ride through the ranks, and fhow himfelf to the whole arny; for his horfe having been killed under him in the firft onfet, a report had kieen fpread that he was flain: the fecond was, to change his habit and helmet with Megacles; for having been known in the engagement of the horfe by the richnefs of his attire and arrour, many of the Romans had aimed at him in particular, fo that he was with the utmof difficulty taken and faved, after his horfe had been killed under him. Thus difguifed, he led his phalanx againt the Roman legions, and attacked them with incredible fury: Lxvinus fuftained the fhock with great refolution, fo that the victory was for many lours wamly difputed. The Romans gave feveral times way to the Epirots, and the Epirots to the Romans; but both parties rallied again, and were brought back to the charge by their commanders. Megacles, in the attire and helmet of Pyrrhus, was in all places, and well fupported the character he had affumed. But his difguife at laft provedfatal to hinn : for a Roman knight, by name Dexter, taking him for the king, followed him wherever he went; and having found an opportunity of difcharging a blow at him, itruck him dead on the fpot, ftripped him of his helmet and armour, and carried them in triumph to the conful, who, by fhowing to the Epirots the fpoils of their king, fo territied them, that they began to give ground. But Pyrrhus, appearing bare-headed in the firtt files of his phalanx, and riding through all the lines, undeceived his men, and infired them with new courage.

The advantage feemed to be pretty equal on both fides, when Levinus ordered his cavalry to advance; which Pyrrhus obferving, drew up 20 elephants in the front of his army, with towers on their backs full of howmen. The very fight of thofe dreadful animals clinlled the bravery of the Romans, who had never before feen any. However, they ftill advanced, till their horfes, not being able to bear the fmell of them, and frightened
filghtenied at the frange noife they made, either threw their riders, or carried them on full fpeed in fpite of their utmolt efforts. In the mean time, :he archers, difcharging thowers of darts frum the towers, wounded feveral of the Romans in that confufon, while others were trod to de.th by the elephats. Nöwithitanding the dioiorder of the cavalry, the legiunaries Itill kept their ranks, and conld not be broken, till Pyrrhus at-
tacked them in perfon at the head of the Theffalian horfe. The onlet was fo furious, that they were forced to yield, and retire in diforder. The king of Epirus reftained the ardour of his troops, and would not fuffer them to purfue the eneiny . an elephant, which had been wounded by a Roman foldier named Minucius, having caufed a great diforder in his army, this accident favoured the retreat of the Romans, and gave them time to repafs the river, and take refuge in Apulia. The Epirot remained mafter of the field, and bad the pleafure to lee the Romans fly before him : but the victory coft hin dear, a great number of his beft offcers and foldiers having been flain in the battle; whence be was heard to fay after the action, that he was both conqueror and conquered, and that if he gained fuch another victory, he fhould be obliged to return to Epirus alone.

His firft care after the action was to bury the dead, with which the plain was covered; and herein he made no ditinction between the Romans and his own Epirots. In viewing the bodies of the former, he obferved, that none of them had received difhonourable wounds; that they had all fallen in the pofts affigned them, fill held their fwords in their hands, and fhowed, even after death, a certain martial air and Gercenefs in their faces; and on this occation it was that he uttered thofe fanous words: "O that Pyrrhus had the Romans for his foldiers, or the Romans Pyrrhus for their leader! together, we Gould fubdue the whole world."

The king of Epirus underftood the art of war too well not to reap what advantage he could from his victory. He broke into the countries in alliance with the Romans, plundered the lands of the republic, and made iscurfions even into the neighbourhood of Rome. Many cities opened their gates to him, and in a fhort time he made himfelf mafter of the greatelt part of Campania. While he was in that fruitful prowince, fubfifting his troops there at the expence of the Romans, re was joined by the Samnites, Lucanians, and Meflapians, whom he had fo long expected. After having reproached them for their delay, he gave them a good fhare of the fpoils he had taken from the enemy; and having by this means gained their affections, he narched without lofs of time to lay liege to Capua: but Lx vinus, having already received a reinforcement of two legions, threw fome troops into the city; which obliged Pyrrhus to drop his defign, and, leaving Capua, to march flraight to Naples Lxvinus followed him, haraffing his troops on their narch; and-at length, by keeping his arny in the neighbourhood, forced him to give over all thoughts of making himfelf mafter of that important city. The king then, all on a ludden, took' his route towards Rome by the Latin way, furprifed Fregelle, and, marching through the country of the Hernici, fat down before Pranefte. There, from the top of an hill, he had the pleafure of feeing Rome ; and
is faid to have advanced fo near the walls, that he drove a cloud of dult into the city: But he was foon forced to retire by the other conful I. Coruncanius, who, having reduced Hetruria, was jut then returned with his victorious army to Rome. The king of' Epirus, therefore, having no hopes of bringing the Hetrurians into his intereft, and feèisg two confular armies ready to fall upon him, railed the fiege of Prene'se, and haftened back into Campania; where, to his great fu:prie, he found Lxvinus with a more numerous anmy tnan that which he had defeated on the banks of the Siris. The conful we.st to meet him, with a derer to try the fate of another battle ; which Pyrrhus being unwilling to decline, drew up his army, and, to Arike terror into the Roman legions, ordered his men to beat their bucklers with their lances, and the leaders of the elephants to force them to make a hideous noife. But the noife was returned with fuch an univerfal fhout by the Romans, that Pyrrhus, thinking fo much alacrity on the part-of the vanquithed too fure a prognoitic of victory, altered lis mind; and, pretending that the auguries were not favourable, retired to Tarentum, and put an end to the campaign.

While Pyrrhus continced quiet at Tarentum, he \({ }^{1}{ }^{160}\) had time to reflect on the valour and conduct of the to peace. Romans; which made him conclude, that the war in which he was engaged mult end in his ruin and difgrace, if not terminated by an adrantageous peace. He was therefore overjoyed when he heard that the fenate had determined to fend an honourable embaliy to him, not doubting but their errand was to propole terms of peace. The ambaffadors were three men of dittinguifhed merit ; to wit, Cornclius Dolabella, who was famous for the fignal victory he had gained over the Senones, Fabricius, and Rmilius Pappus, who had been his colleague in the confulate two years before. When they were admitted to an audience, the only thing they demanded was a furrender ot the prifoners, either by the way of exchange, or at fuch a ranfom as thould be agreed on; for Pyrrhus, in the late battle, had made 1800 prifoners, molt of them Roman knights and men of diftinction in the republic. They had fought with great bravery, till their horfes, frizhtened with the roaring of the king's elephants, had either thrown them, or obliged them to difmount; by which unforefeen accident they lad fallen into the enemy's hands. The fenate, therefore, pitring the condition of thofe brase men, had determined, conuary to their cultom, to redeem them. Pyrthus was: greatly furprifed and difappointed when he found that they had no other propolals to make; but, concealing his thoughts, he only anfwered, tbat he would confider of it, and let them know his refolution. Accordingly, he aftembled his council : but his chief favourites were divided in their opinions. Milo, who commanded in the citadel of Ta:entum, was for coming to no conpufition with the Rumans; but \(C y-\) neas, who knew his matter's inclination, propofed not onl:- fending back the prifoners withont ranfom, but difpatching an embafy to Roine to treat with the fenite of a latling peace. His advice was approved, and he himfelf appointed to go on that embany. After thefe refolutions, the king acquainted the ambaffadors, that he intended to releafe the prifoners without ranfom, fince he had already riches enough, and dc- tewards be had feveral conferences with Fabricius, whofe virtue he had tried with mighty offers of riches and grandear ; but finding him proof againft all temptaions, he wfolved to try whether his intrepidity and courage were equal to his virtue. Writh this view, he caufed an elephant to be placed behind a curtain in the thall where he received the Roman ambaffador. As FaBricius had never feen on of thofe beafts, the king, taking a turn or two in the hall with hin, brought him within the elephant's reach, and then caufed the curtain to be drawn all on a fudden, and that montrous animal to make his ufual neife, and even lay his trunk on Fabricius's head. But the intrepid Roman, without betraying the leaft fear or concern, "Does the great king (fail he, with furprifing calnnefs), who could not thager me with his ofrers, think to frighten me with the braying of a beat ?" Pyrrhus, aftonithed at his immoveable confancy, invited him to dine with him; and on this occalion it was, that the converfation turn. ing upon Epicurean philofophy, Fabricius made that celcbrated exclamation, " O that Pyrrhus, both for Rome's fake and his own, had placed his happinefs in the boafted indolence of Epicurus."

Every thing Pyrrhus heard or faw of the Romans increaled his earneltnefs for peace. He fent for the three ambafiadors, releafed 200 of the prifoners without ranfom, and fuffered the relt, on their parole, to return to Rome to celcbrate the Saturnalia, or feals of Saturn, in their own familics. Faving by this obliging behaviour gained the good-will of the Roman ambaffadors, he fert Cyneas to Rome, almoft at the fame tinc that they left Tarentum. The infructions he gave this faithful miniter, were, to bring the Romans to grant thefe three articles: 1. That the Tasentines fhould be included in the ireaty made with the king of Epirus. 2. That the Greek cities in Italy hoould be fuffered to enjoy their laws and liberties. 3. That the republic hould reftore to the Samnites, Lucanians, and Bruttians, all the places me had taken from them. Upon thefe conditions, Pyrrhus declared himbif ready to forbear all further hoftilities, and conclude a lafing peace. With there inftructions Cyneas fet out for Rome; where, partly, hy his eloquence, partly by rich prefents to the fenators and their wives, he foon grained a good number of voices. When he was admitted into the fenate, he made an harangue worthy of a difciple of the grcat Demonhenes; after which, he read the conditions Pyrrhus propofed, and, with a great deal of eloquence, endeavouring to fhow the reafonablenefs and moderation of his maAer's demands, afked leave for Pyrrhus to come to Rome to conclude and fign the treaty. The fenators were genemily inclined to agree to "Pyrrhus's terms ; but neverthelefs, as feveral fenators were abfent, the determination of the affair was poflponed to the next day; when Appius Claudius, the greateft orator and moft learned ci illan in Kome, o!d and blind as he was, caufed himfelf to be carried to the fenate, where he bad rot appeared for many years; and there, partly by his cloquerce, partly by his authority, fo prepofefled the mnis of the fenators againft the king of Epirus, and the conditions he offered, that, when he had done 「peaking, the confeript fathers unanimoully paffed a deeree, the fubltance of which was, That the war wath D'yrrhus
nould be continued; that his ambaffador fould be fent back that very day; that the king of Epirus thould not be permitted to come to Rome; and that they mould acquaint his ambaffador, that Rome would enter into no treaty of peace with his malter till he had left Italy.

Cyreas, furprifed at the anfwer given him, left Rome the fame day, and returned to Tarentum, to acquaint the king with the final refolution of the fenate. 'Pyrrhus would have willingly concluded a peace with them upon honourable terms; but, as the conditions they offered were not by any means confllent with the reputation of his arms, he began, without lufs of time, to make all due preparations for the next campaign. On the other hand, the Romans having raifed to the confulate P'. Sulpicius Gaverrio, and Y. Decius Mus, difpatched them both into \(A\) pulia, where they found Pyrrhus encamped near a little town called sfculum. There the confuls, joining their armies, fortifed themfelves at the foot of the Apennines, having between them and the enemy a large deep fream which divided the plain. Both armies continued a great while on the oppolite banks, ह-fore either rentured to pals over to attack the other. The Epirots allowed the Remans to crofs the fream, and draw up on the piain. On the other hand, Pyrius placed his men likewife in order of battle in the fame plais; and all the ancients do him the juftice to ray, that no commander ever underflood better the art of drawing up an army and directing its motions. In the right wing he placed his Epirots and the Samnites; in his left the Lucanians, Brutcians and Salentines; and his phalans in the centre. The centre of the Roman army conifted of four legions, which were to engage the enemy s phalanx; on their wings were pofted the light-armed auxiliaries and the Roman horfe. The confuls, in order to guard their troops againft the fury of the elephants had prepared chariots, armed with long points of iron in the fhape of forks, and filled with foldiess carrying firebrands, which they were direcied to throw at the eleplants, and by that means frighten then, and fet their wooden towers on fire. Theie chariots were polted over-againt the king's elephants, and ordered not to itir till they entered upon action. To this precaution the Roman generals added another, which was, to direct a body of Apulians to attack Pyrthus's camp in the heat of the engagement, in order to force it, or at leaf to draw off part of the enemy's troops to defend it. At length the attack began, both parties being pretty equal in number; for each of them conlited of about 40,000 men. The phalanx fuftained, for a long time, the furious onfet of the legions with incredible bravery: but at length being forced to give way, Pyrrhus commanded his elephants to advance, but not on the fide where the Romans had pofted their chariots; they marched round, and, falling upon the Roman horfe, foon put them into confufion. Then the phalanx, returning with frefh courage to the charge, made the Roman legions in their tum give ground. On this occafion Decius was killed, fo that one conful only was left to command the two lioman armies. But while all things feemed to favour Pyrrhus, the hody of pulians which we have mentioned above, faling unexpe \(\because\) edly on the camp of the Epirots, obliged the king to difpatch a frong detachment to defend his intrenchments.

Upon the departure of thefe troops, fome of the Epirots, imagining that the carnp was \(t\) iken, began to lole courage, and retire; thofe who were next to them followed their example, and in a flort time the whole army gave way. Pyrrhus having attempted feveral times in wain to rally lis forces, returned to the charge with a fmall number of his friends and the molt courereous of his officers. With thefe he futained the fury of the vietorious legions, and covered the retreat of his own men. But, being, alter a moft gallant behaviour, dangerouly wounded, he retired at laft with his fmall band in good order, leaving the Romans mafters of the field. As the fun. was near fetting, the Romans, being extremely farigued, and a great number of them wounded, the conful Salpicius, not thinking it advifable to purfue the enemy, founded a retreat, repaffed the itream, and brought his troops back to the camp. Sulpicins appeared in the field of battle the next day, with a defign to bring the Epirots to a fecond engagenent ; but finding they had withdrawn in the night to Tarentum, he likewife retired, and put his troops into winter-quarters in Apulia.

Both armies continued quiet in their quarters derring winter; but early in the fpring took the field anew.The Romans were conmanded this year by two men of great fame, whom they had raifed to the confulate the fecond time: thefe were the celebrated C. Fabricius and Q. Æmilius Pappus ; who no fooner arrived in Apulia, than they led their troops into the territory: of Tarentum. Pyrnus, who had received confiderablereinforcements from Epirus, met them near the frontiers, and encamped at a fmall ditance from the Roman army. While the confuls were waiting here for a favourable opportunity to give battle, a meffenger from Nicias, the king's phylician, delivered a letter to Fabricius; wherein the traitor offered to take off his matter by poifon, provided the conful would promife hin a reward proportionable to the greatnefs of the fervice. The virtuous Roman, being filled with horror at the bare propofal of fuch a crime, Immediately communicated the affair to lis colleague; who readily jcined with him in writing a letter to Pyrrhus, wherein they warned him, without difcovering the crininal, to take care of himfelf, and be upon his guard againtt the treacherous defigns of thofe alout him. Yyrrhus, ont of a deep fenfe of gratitude for fo great a benefit, releafed inmediately, without ranforn, all the prifoners he had taken. But the Romans, difdaining to accept either a favour from an enemy, or a recompenfe for not committing the hlackent treachery, declared, that they would not receive their prifoners but by way of exchauge ; and accordingly fent to Pyrihus an equal number of Samuite and Taremtine prifoners.

As the king of Epirus grew every day more weary of a war which he feared would emd in his diforact, he fent Cyneas a fecond time to Rome, to try whether he could, with his artful harangues, prevail upon the confeript fathers to hearken to an accommodation, upon fuch terms as were couffifent with his honour. But the ambaffador found the fenators itcady in their former refolution, and determincd not to enter into a treaty with his mafter till he had left Italy, and withdrawn from thence all his forces. This gave the king great mineafuefs; for he had already loft molt of his reteran troops and bef officers, and was fentible that he fhould

1 , fe the reft if he ventured another engagement. While Rome. he was revolving thefe melancholy thoughts in his \(\quad 165\) mind, ambaffadors arrived at his camp from the Syra-pyrrhus cufians, Agrigentines, and Leontintes, imploring the af-ones into fiftance of his arms to drive out the Carthaginians, and sicity. put an end to the troubles which threatened their rerpective ftates with utter deftruction. Pyrrhus, who wanted only fome honourable pretence to leave Italy, laid hold of this; and appointing Milo governor of Ta. rentum, with a flrong garrifon to keep the inhabitants in awe during his abfence, he fet fail for Sicily with 30,000 foot and 2500 horfe, on board a fleet of 200 fhips. Here he was at firft attended with great fuccels; but' the Sicilians, difgufted at the refolution he had taken of paffing over into Africa, and much more at the enormous exactions and extortions of his minifters and courtiers, had fubmitted partly to the Carthaginians and partly to the Manertines. When Carthage heard of this change, new troops were railed all over Afriea, and a numerous army fent into Sicily to recover the cities' which l'yrrhus had taken. As the Sicilians daily deforted from him in crowds, he was no way in a condition, with his Epirots alone, to withftand fo powerful an enemy; and therefore, when deputies came to him from the Tarentines, Samnites, Bruttians, and Lucanians, reprefenting to him the loffes they had futained Ince his departure, and remonftrating, that, without his affiflance, they muft fall a facritice to the Romans, he laid hold of that opportunity to abandon the inliad, ref and return to Italy. His flect was attacked by that of te reteres Carthare ; and his army, after their landing, by the into lesty Mamertines. But Pyrrius having, by his heroic bravery, efcaped all danger, marched along the feathore, in order to reach Tarentum that way. As he paffed through the country of the Locrians, whe had not long before maflacred the troops he had left there, he not only exercifed all forts of cruelty on the inhabitants, but plundered the temple of Proferpine to fupply the wants of his army. The immenfe riches whith he found there, were, by his order, fent to Tarentum by fea; but the fhips that carried them being dafhed againft the rocks by a tempeft, and the mariners all lott, this proud prince was convinced, fays Livy, that the gots were not imaginary beings, and caufed all the treature, which the fea had thrown upon the fhore, to be carefully gathered up, and replaced in the temple: nay, io appeafe the wrath of the angry goddefs, he put all thofe to death who had advifed him to plunder her temple. However, fuperftition made the ancients afcribe to this act of impiety all the nisfortunes which afterwards befel that unhappy prince.

Pyrrhus at length arrived at Tarentum ; but of the army he had carried into Sicily, he brought back into Italy only 2000 horfe and not quite 20,000 fout. He therefore reinforced them with the belt troups he could raife in the countries of the Samnites, Lucanians, and Bratians: and hearing that the two new confirls, \(\mathrm{C}_{1}\) rins Dentatus and Cornelius Lentulus, had divided their forces, the one inviding Lucania and the other Samnium, he likewife divided his ariny into two bodies, marching with the cho:ce of his Epirots againit Dentatus, in hopes of furpifing him in his canp near Leneventum. But the conful haring notice of his anproach, went out of his intrenclmeats with a tlrons detachonent of legionaries to meet hinn: repudfed his

169
1. ueterly d feaced by Cur usba ta.ls.
van-gnard, put many of the Epirots to the fword, and took fome of their elephants. Curius encouraged with chis fuccefs, marched his army into the Taurafian fields, and drew it up in a plain which was wide enough for his troops, but too narrow for the Epirot phalanx, the phalangites being fo crowded that they could not handle their ams without dificulty. But the king's eagernels to try his ftrength and nill with fo renowned a commander, inade him engage at that great difadvantage. Upon the firt fignal the action began ; and one of the king's wings giving way, the victory feemed to incline to the Romans. But that wing where the king fought in perfon repuled the enemy, and drove them back quite to their intrencluments. This advantage was in great part owing to the elephants; which Curius perceiving, commanded a corps de referve, which he had puiled near the camp, to advance and fall upon the eleplants. Thefe carrying burning torches in one hand, and their fwords in the other, threw the former at the elcphants, and with the latter defended themfelves againt their guides; by which means they were both forced to give way. The elcphants being put to fight broke into the phatanx, clofe as it was, and there cauled a general diforder; which was increafed by a remarkable accictent: for it is faid, that a young elephant being wounded, and thereupon making a dreadful noife, the mother quitting her rank, and haftening to the affiftance of her young one, put thofe who ftill kept their ranks into the utmoft confulion. But, however that be, it is certain that the Romansobtained at laft a complete victury. Orofius and Eutropius tell us that Pynhus's amy confifted of 80,000 foot and 6030 horfe, including lis İpirots and allies; whereas the confular army was fearce 20,000 itrong. Thofe who exaggerate the king's lofs fay, that the number of the nain on his hide amounted to 30,000 men; but others reduce it to 20,000. All writers agree, that Curius took 1220 pritoners and cight elephants. This victory, which was the moft decifive Rome had ever gained, brought all Italy under fubjection, and paved the way fur thofe valt conquelts which afterwards made the Romans mafters of the whole known world.

Pyrrlus being no way in a condition, after the great lofs he had fuftained, to keep the field, retired to Tarentum, attended only by a fmall hody of horfe, leaving the Romans in full poffeffion of his camp; which they fo nuch admired, that they made it ever after a model to form theirs by, And now the king of Epirus refolved to leave Italy as foon as poffible; but concealed his defign, and endeavoured to keep up the drooping fpirits of his allies, by giving them hopes of fpeedy inccours from Greece. Accordingly he difpatched ambaffadors into Etolia, Illyricum, and Macedon, demanding fupplies of men and money. But the anfwers from thofe courts not proving favourable, he forged fuch as minglt pleafe thofe whom he was wil. ling to deceive; and hy this means fupported the courage of his fricuds, and kept his enemy in play. When he could conceal bis departure no longer, he pretended to be on a fudden in a great pafion at the dilatorinefs of his friends ins fending him fuccours; and aequainted the Tarentines, that he mult go and bring them over himelf. However, he left behind him a trong garrifon in the citadel of Tarentum, under the command of the fame Mie, who lad kept it for him during his ftay
in Sicily: In order to keep this governor in his duty, he is faid to have made him a very ftrange prefent, viz. a chair covered with the flin of Nicias, the treacherous phylician, who had offered Fabricius to poifon his maller. After all thele difguifes and precautions, Pyrrhus at laft fet fail for Epirus, and arrived fafe at Acrocerau. nium with 8000 foot and 500 horfe; after having fpent to no purpofe fix years in Italy and Sicily.

Though, from the manner in which Pyrrhus took his leave, his Italian allies had little reafon to expect any further affiftance from him, yet they continued to amufe themfelves with vain hopes, till certain accounts arrived of his being killed at the fiege of Argos, as hai been related under the article Epirus. This threw the Samnites into defpair: fo that they put all to the iffue of a general battle ; in which they were defeated with fuch dreadful naughter, that the nation is faid' to have been almoft exterminated. This overthrow was foon followed by the fubmifion of the Lucanians, Brut conte ma tians, Tarentines, Sarcinates, Picentes, and Salentines; Italy. fo that Rome now became miftrefs of all the nations from the remotelt parts of Hesturia to the Ionian fea, and from the Tyrrhenian fea to the Adriatic. All thefe nations, however, did not enjoy the fame privileges. Some were entirely fubject to the republic, and lad no laws but what they received from thence; others retained their old laws and cuftoms, but in fubjection to the sepublic: fome were tributary; and others allies, who were obliged to furnifh troops at their own expence when the Romans required. Some had the privilege of Roman eitizenfhip, their foldiers being incor* porated in the legions; while others had a right of fuffrage in the clections made by the centuries. Thefe different degrees of honour, privileges, and liberty, were founded on the different terms granted to the conquered nations when they furrendered, and were afterwards increafed according to their fidelity and the fervices they did the republic.
The Romans now became refpected by foreign na- Other con
tions, and received ambaffadors from Ptolemy Pliladel-quets mac tions, and received ambattadors from Ptolemy Philadel- quets mac
phus king of Egypt, and from Apollonia a city of Ma- by the Ru cedon. Semfible of their own importance, they now granted protection to whatever nation requefted it of them: but this not with a view of ferving one party, but that they might have an opportunity of fubjecting both. In this manner they affited the Mamertines againf Hiero king of Syracufe, which brought on the wars with the Carthaginians, which terminated in the total deftruction of that ancient republic, as has been related under the article Carthage. The interval between the firt and fecond Punic wars was by the Ro. mans employed in reducing the Doii and Ligurians, who had revolted. Thefe were Gaulifh nations, who had always been very formidable to the Romans, and now gave one of their confuls a notable defeat. However, he foon after fufficiently revenged himfelf, and defeated the enemy with great flaughter; though it was not till forne time after, and with a good deal of difficulty, that they were totally fubdued. During this interval aldo, the Romans feized on the iflands of Sardinia, Corlica, and Malta; and in the year \(219 \mathrm{~B} . \mathrm{C}\). the two former were reduced to the form of a province. Papirius, who had fubdued Corfica, demanded a triumph; but not having intereft enough to obtain it, he took a method entirely new to do himfelf juitice. He put 6

\section*{R O M}
himjelf at the head of his victorious army, and marched to the temple of Jupiter Latialis, on the hill of Alba, with all the pomp that attended triumphant victors at Rome. He made no other alteration in the ceremony, but that of wearing a crown of myrtle inftead of a crown of laurel, and this on account of his having defeated the Corficans in a place where there was a grove of myrtles. The example of Papirius was afterwards followed by a great many generals to whom the fenate refufed triumphs.

The next year, when M. Emilius Barbula and M. Junius Pera were confuls, a new war fprung up in a kingdom out of Italy. Illyricum, properly fo called, which bordered upon Macedon and Epirus, was at this tirse governed by a woman named Trula, the widow of king Agron, and guardian to her fon Pinzus, who was under age. The fuccefs of her late huftand againft the Etolians had flufhed her to fuch a degree, that, inftead of fettling the affairs of her ward in peace, fhe commanded her fubjects to cruife along the coatl, feize all the fhips they met, take what places they conld, and fpare no nation. Her pirates had, purfuant to her orders, taken and plundered many fhips belonging to the Roman merchants; and her troops were then helieging the illand of Iffa in the Adriatic, though the inhabitants had put themfelves under the protection of the republic. Upon the complaints therefore of the Italian merchants, and to protect the people of Iffa, the fenate fent two ambaffadors to the Illyrian queen, Lucius and Caius Coruncanue, to demand of her that the would reftrain her fubjects from infefting the fea with pirates. She anfwered them haughtily, that fhe could only promife that her fubjects hould not for the future attack the Komans in her name, and by public authority: "but as for any thing more, it is not cuftomary with us (faid the) to lay reftraints on our lubjects, nor will we forbid them to reap thok advantages from the fea which it offers them." Your cuttoms then (replied thee youngell of the ambafladors) are very different from ours. At Rome we make public examples of thofe fubjects who injure others, whether at home or abroad. Teuta, we can, by our arms; force yon to reform the ahufes of your bad government." Thefe unfeafonable threatenings provoked Teuta, who was naturally a proud and imperious woman, to fuch a degree, that, without regard to the right of nations, the caufed the ambaffadors to be murdered on their return home.

When fo notorious an infraction of the las of na. tions was known at Rome, the people demanded vengeance; and the fenate having firtt honoured the manes of the ambaffadors, by erecting, as was ufual in fuch afes, ftatues three feet high to their memory, ordered a flect to he equipped, and troops raifed, with all poffible expedition. But now Tenta, reflectirg on the enormity of her proceedings, fent an embaffy to Rome, affuring the fenate that the had no hand in the murder of the ambaffadors, and offering to deliser up to the republic thofe who had committed that barbarous affalfination. The Romans being at that time threatened with a war from the Ganls, were ready to accept this fatisfaction: but in the mean time the Illyrian fleet having gained fome advantage over that of the Achroans, and taken the inand of Corcyra near Epirus, this fuccefs made Teuta believe herfelf invincible, and forgret the promife the had made to the Romans ; nay, fle
fent her flect in feize on the ifland of Ifa, which the Romans liad taken under their protection.

Hereupon the confuls for the new year, P. Pofthumius Albinus and Cn. Fulvius Centumalus, embarked for Illyricum; Fulvius having the command of the fleet, which confifted of 100 galleys; and Pofthumius of the land forces, which amounted to 20,600 foot, belides a finall body of horfe. Fulnius appeared with his flect before Corcyra in the Adriatic, and was put in poffeflion both of the illand and city by Demetrius of Pharos, governor of the place for Queen Teuia. Nor was this all; Demetrius found means to make the inhabitants of Apollonia drive out the Illyrian garrifon, and admit into their city the Roman troops. As Apol. lonia sas one of the keys of Illyricum on the fide of Macedon, the confuls, who had hitherto aeted jointly, no fooner faw themfelves in poffelition of it than the feparated, the fleet-cruifing along the coaft, and the army penetrating into the heart of the queen's dominions. The Andyoan's, Parthini, and Atintanes, voluntarilv fubmitted to l'ofhumius, being induced i,y the perfuations of Demetrius to fhale off the Illyrian yoke. The conful being now in pollemion of moit of the inland towns, retumed to the coaft, where, with the alfiltance of the flect, he took many froner hold., among which was Nutria, a place of great Arength, and defended by a numerous ga:rifon ; fo that it made a vigorons defence, the Romaris having loff before it a great many private men, feveral legionary tribunes, and one quxitur. However, this lofs was repaired by the taking of to Illyrian veftels, which were returning home laden with hooty. At length the Roman fleet appeared before Ifta, which, by 'Centa's order. was till clofely befieged, notwithitanding the loftes the had fufained. However, upon the approach of the Roman fleet, the Illyrians difperfed ; but the Pharians, who lersed among them, followed the example of their countryman Demetrius, and joined the Romans, to whom the Iffani readily fubmitted.

In the mean time \(S_{p}\). Corvilius and \(Q\). Fabius Masimus being raifed to the confulate a fecund time, Pofthumius was recalled from Illyricum, and refufed a triumpla for having been too prodigal of the Roman blood at the fiege of Nutria. His colleague Fulvius was appointed to command the land forces in his room, in quality of proconful. Hereupon Teuta, who had founded great hopes on the change of the confuls, retired to one of her ftrong-holds called Rhizon, and from thence early in the fpring fent an embally to Rome. The fenate refufed to treat with her; but granted the young king a peace upon the following conditions: 1. That he fhould pay an annual tribute to the republic. 2. 'Tlat he fhould furrender part of his dominions to the Romans. 3. That he fhould never fuffer above three of his fhips of war at a time to fail beyond I.yfus, a town on the confines of Macedon and Ilyricum. The places he yielded to the Romans in virtue of this treaty, were the iflands of Corcrra, Ifa, and Pharos, the city of Dyrrhachium, and the country of the Atintanes. Soon after Teuta, either out of thame, or compelled by a fecret article of the treaty, abdicated the regency, and Demetrius fucceeded her.

Before this war was ended, the Romans were alarm- The Gauls ed hy new motions of the Gauls, and the great progrefs of lufubria which the Carthaginians made in Spain. At this time ria fubdu3 A

\section*{[ 370 ]}

Fone. alio the fears of the people were excited by a prophecy faid to be saken out of the Sybilline books, that the Gauls and Greeks thould one day be in pontefion of Rome. This propheey, however, the fenate found means to clude, as they pretended, by hurying two Gauls and two Grecks alive, and then telliag the multitude that the Guals and Greeks were now in the polfeffion of Roms. The difficultics which fupertition had raifed beine thus furmounted, the Romaus made vaft preparations agziaft the Gauls, whom they feem to have dread. ed abuve all other nations. Some fay that the number of forces raifed by the Romans on this occafon amounted to no fewer than \(900,0 x\) men. Of this incredible rultitude \(248,0>2\) foot and \(2 \pi, 002\) horfe were Romans or Campanians; neverthelefs, the Gauls, with only \(50,00=\) foot and 2 ,: \(=0\) horfe, furced a paflage through Hetruria, and took the road towarts Rome. Here they had the good fortune at firft to defeat one of the Roman armies; but being foon after met by two others, they were utterly defeated, with the lofs of more than \(50,0-0\) of their number. The Romans then entered their country, which they cruelly ravaged; but a plague breaking out in their army, obliged then to return home. This was fullowed by a new war, in which thoofe Gauls who inhabited Iafubria and Liguria were tutally fubdued, and their country reduced to a Roman province. Thefe conquets were fullowed by that of Iftria; Dimaluin, a city of inportance in Illyricum ; and Plaros, an illand in the Adriatic fa.

The fecond l'unic war for fone time retarded the concucts of the Romans, and even threatened their flate with entire deftruction; but Hannibal being at kilt recalled from Italy, and entirely defeated at Zama, they made peace upon fuch advantageous terms as gave them an entire fuperiority over that republic, which they not long after entirely fubverted, as has been re-
2,3 lated in the hifury of Carthage.

The fuccefsful iffue of the fecond Punic war had greatly increafed the extent of the Roman empire. They were now maters of all Sicily, the Mediterranean iflands, and great part of Spain ; and, through the diffenfions of the Afiatic flates with the king of Macedon, a pretence was now found for carrying their arms into thefe parts. The Gauls in the nrean time, however, continued their incurfions, but now ceafed to be formidable; while the kings of Macedon, through mifeonduct, were firtt obliged to fubmit to a difadvantageous peace, and at laftotally fubdued (fee Macenov). The reduction of Macedon was foon followed by that of all Greece, either by the name of allies or otherwife : while Antiochus the Great, to whom Hannibal thed for protection, by an unfuccefsful war firft gave the Romans a footing in Afia (fee Syria). The Spaniards and Gauls contimed to be the molt obltinate enemies. The furmer, particularly, were rather externinated than reduced; and even this required the utmolt care and vigilance of Scipio Nemilianus, the conqueror of Carthage, to execute. See Spain and Numantla.
Thus the Romans attained to a height of power fuperior to any other nation in the world; but now a fe174 dition broke out, which we may fay was never terminaSedition of ted but with the overthrow of the republic. This had theGrachi its origin from Tiberius Sempronius Gracchus, defcended from a fanily which, though plebeian, was as illu-

Atrious as any in the commonwealth. His father had been twice railed to the confulate, was a great general, and had been honoured with two triumphs. But he was Itill more renowned for his domeftic virtues and probity, than for his birth or valour. He married the daughter of the firt Africanus, faid to be the pattern of her fex, and the prodigy of her age; and had by her feveral children, of whom threc only arrived to ma. turity of age, 'Tiberius Gracchus, Caius Gracchus, and a daughter named Sempronia, who was married to the fecond Africanus. Tiberius, the eldeft, was deemed the moft accomplified youth in Rome, with refpect to the qualities both of body and mind. His extraordinary talents were heightened by a noble air, an engaging countenance, and all thofe winning graces of nature which recommend merit. He made his firft carpaigns under his brother-in-law, and diftinguifhed himfelf on all oceations by his courage, and by the prudence of his conduct. When he returned to Rome, he applied himfelf to the fludy of eloquence; and at 30 years old was accounted the beft orator of his age. He married. the daughter of Appius Claudius, who had been forinerly conful and cenfor, and was then prince of the femate. He continued for fome time in the fentinents both of his own and his wife's family, and fupported the interelts of the patricians; but without openly attacking the popular faction. He was the chief author and negociator of that fhameful neceffary peace with the Numantines; which the fenate, with the utmof injutice, difannulled, and condemned the conful, the quxthor, and all the officers who had figned it, to be delivered up to the Numantines (fee Numintia). The people indeed, out of efteem for Gracchus, would not fuffer him to be facrificed: but, however, he had juft reaton to complain, both of the fenate and people, for paffing fo fcandalous a decree againt his general and hinfelf, and breaking a treaty whereby the lives of fo many citizens had been faved. But as the fenate had chiefly promoted fuch bafe and iniquitous proceedings, he refolved in due time to fhow his refentment againft the party which had contributed mof to his difgrace.

In order to this, he ftood for the tribunefhip of the people; which he no fooner obtained, than he refolved to attack the nobility in the moft tender part. They had ufurped lands unjuflly; cultivated them by flaves, to the great detriment of the public ; and had lived for about 250 years in open defiance to the Licinian law, by which it was enacted that no citizen fhould poffers. more than 500 acres. This law Tib. Gracchus refolved to revive, and by that means revenge himfelf on the patricians. But it was not revenge alone which prompted him to embark in fo dangerous an attempt. It is pretended, that his mother Cornelia animated him to undertake fomething worthy both of his and her family. The reproaches of his mother, the authority of fome great men, namely of his father-in-law Appius Clandius, of P. Craflus the pontifex maximus, and of Alutius Screvola, the moft learned civilian in Rome, and his natural thinf after glory, joined with an eager defire of revenge, confpired to draw him into this moft unfortunate fcheme.

The law, as he firf drew it up, was very mild : for A newla it only enacted, that thofe who polfeffed more than 500 propofed acres of land thould part with the overplus ; and that

\section*{\(\boldsymbol{R} \mathbf{O} \mathrm{MI}\left[\begin{array}{llllll}371\end{array}\right] \quad \mathrm{O} \quad \mathrm{M}\)}

2one. the full waine of the faid lands thoulf be pail them out of the public treafury. 'The lands thus purchafed by the publie were to be divided among the poor citizens; and cultivated either by themfuses or by freemen, who were upon the [pot. Tiburius allowed every child of a family to hold 250 acre3 in his own name, over and above what was allowed to the futher. Nothing could be more mild than this new haw ; ince by the Lictian he might have alfolutely deprivel the rich of the lands they unjuftly poffelfid, and made them accountable for the profits they liad received from them during their long pufleftion. But the rich putricians could not fo much as bear the name of the Licinian luzv, though thus qualifed. Thofe chictly of the fenatorial and equefrian order exclaimed againt it, and were continually mounting the roftra one after another, in order to diffuade the people from accepting a law which, they faid, would raile dilturbances, that might prove more dangerous than the evils which Tiherius pretended to redrefs by the promulgation of it. Thus the zealous tribune was obliged day after day to enter the lifts with frefli adverianies; but he ever got the better of them both in point of eloquence and argument.

The people were charmed to hear him maintain the caufe of the unfortunate with fo much fuccefs, and beflowed on him the highed commendations. The rich therefore had recourle to violence and calunny, if order to deftroy, or at leaft to diferedit, the tribune. It is faid they hired affalins to difpatch him; but they could not put their wicked defign in execution, Gracchus being always attended to and from the roftra bya guard of about 4000 men. His adverfaries therefure endeavoured to ruin his reputation by the blackeft calumnies. They gave out that he aimed at monarchy ; and publifhed pretended plots laid for crowning him king. But the people, without giving car to fuch groundlefs reports, made it their whole bulinels to encourage their tribune, who was hazarding both his life and reputation for their fakes.

When the day eame on which this law was to be accepted or rejected by the people affembled in the comitium, Gracchus began with haranguing the mighty croud which an affair of fuch importance had brought together both from the city and country. In his fpeech he fhowed the juftice of the law with fo much elo. quence, made fo moving a defeription of the mileries of the meaner fort of people, and at the fame time fet forth in fuch odious colours the ulurpation of the public lands, and the immeafe riches which the avarice and rapacionfuefs of the great had raked together, that the people, tranlported with fury, demanded with loud cries the billets, that they might give their fuffrages. Then Gracchus, finding the minds of the citizens in that warmth and emotion which was neeeffary for the fuccefs of his defign, ordered the law to be P-6 read.
Oprofed by But unluckily one of the trihunes, by name Marcus the tribune Oravius Cacina, who had always profeffed a great netavius. friendithip for Gracchus, having been gained over by the patricians, declared againt the proceedings of his friend and colleague; and pronounced the word which had been always awful in the mouth of a tribune of the people, Veto, "I forbid it." As Octavius was a man of an unblameable character, and had hitherto been rery zealous for the publication of the law, Gracehus
was greatly furpilied at this uncxpected ofpofition from lis friend. Huwever, he kept his temper, and only defircd the people to affemble again the next day to hear their two tribumes, one in defence of, the other in oppofition to, the law propofed. 'i'he people met at the time appointed; when Gracchus addieflug limfelf to his colleague, conjured him by the mutual duties of their function, and by the bonds of their aneient friendthip, not to oppofe the good of the people, wham they were bound in honour to protect againt the ufurpation of the great : nay, taking his colleague afide, he addrcifed him thus, "Porliaps you are perfonally concerned to oppofe this law; if fo, I mean, if yoi have more than the five hundred acres, I myfelf, poor as I ann, engage to pay you in money what you will lofe in land." But Octavius, cither ont of thame, or from a principle of honour, continued immo:eable in the party he had embraced.

Gracchus therefore had recourfe to another expedient ; whieh was to fufpend all the magitrates in Rome from the extcution of their offices. It was lawful for any tribune to take this ftep, when the paffing of the law which he propofed was prevented by mere chicanery. After this, he affenbled the peopic anew, and made a fecond attempt to fueceed in his defign. When all things were got ready for eollecting the fiuffrages, the rich privately conveyed away the urns in which the tablets were kept. This kindled the tribune's indignation, and the rage of the people. The comitium was like to become a feld of battle, when two venerable fenators, Manlius and Fulvius, very feafonably interpofed; and throwing themfelves at the tribune's feet, prevailed upon him to fubmit his law to the judgment of the confcript fathers. This was making the fenators judges in their own caufe : but Gracchus thought the law fo undeniably jult, that he could not perfuade himelf that they would reject it; and if they did, he knew that the incenfed multitude would no longer keep any meafures with them.

The fenate, who wanted nothing but to gain time, affected delays, and came to no refolution. There were indeed fome among them, who, out of a principle of equity, were for paying fome regard to the complaints of the trihune, and for facriticing their own intereft to the relief of the diftreffed. But the far greater part would not hear of any compofition whatioever. Hereupon Gracchus brought the affair anew hefore the people, and earnelly intreated his colleague Octavius to diop his oppulition, in compafion to the many unfortunate people for whom he interceded. He put him in mind of their ancient friendnip, took him by the hand, and affectionately cmbraced him. But ftill Octavius was inflexible. Hercupen Gracchus refolved to deprive Octavius of his tribunethip, fince he alone obftinately withftood the defires of the whole body of fo great a people. Having therefore aftembled the people, he to!d them, that finee his colleague and he were divided in opinion, and the republic duffered by their divifion, it was the province of the tribes affembled in comita to re-eftablith concord among their tribunes. "If the caufe I maintain (faid he) be, in your opinion, unjuit, I am ready to give up my feat in the college. On the contrary, if you judge me worthy of being continued in your fervice in this fation, deprive him of the tribunefip who aiene obitructes my wifhes. As foon as yen thall have
nominated

Rome. norainated onc to fucceed him, the law will pafs without oppofition." Having thus fpoken, he difmiffed the aftembly, after having fummoned them to meet again the next day.

A nd now Gracchus, being foured with the oppofition he had met with from the rich, and from his obtlinate colleague, and being well apprifed that the haw would pafs in any furm in which he flould think fit to propofe it, refolved to revive it as it was at frift paffed, without abating any thing of its feverity. There was no exception in favour of the children in fannilics ; or reimburfement promifed to thofe who fhould part with the lands they poffeffed above 500 acres. The next day the people being affembled in vaft crowds on this extraordinary occafion, Gracehus made frefh applications to Octavius, but to no purpofe; he obftinately perfifted in his oppofition. Then Gracclus turning to the people, "Judge you, (faid he), which of us deferves to be deprived of his office." At thefe words the firlt tribe voted, and declared for the depolition of Octavius. Upon which Gracelus, fufpending the ardour of the tribes, made another effort to bring over his opponent by gentle methods. But all his endeavours proving ineffectual, the other tribes went on to vate in their turns, and followed the example of the firt. Of 35 tribes, 17 had already declared againft Octavius, and the 1 Sth was juit going to determine the affair, when Gracchus, being willing to try once more whether he could reclaim his collcague, fufpended the collecting of the fuffrages; and addrefling Octavius in the molt preffing terms, conjured him not to expofe himfelf, by his obllinacy, to fo great a difgrace, nor to give him the gricf of having calt a
blemilh upons his colleague and friend, which neither time nor merit would ever wipe off. Octavius, how. ever, continuing obfinate, was depofed, and the law pafted as Gracchus had propofed it the latt time. The depofed tribune was dragged from the roftra by the incenfed multitude, who would have infulted him firther, had not the fenators and his friends facilitated his efcape.

The Iticinian law being thus revived with one confent both by the city and comitry tribes, Gracchus cauled the people to appoint trimmsirs, or three commiffioners, to haften its execution. In this commiffion the people gave Gracchus the firlt place; and he had interelt enough to get his father-in-law Appius Claudius, and his brother Caius Gracchus, appointed his colkagues. Thefe thrce fpent the whole fummer in travelling through all the Italian provinces, to examine what lands wete held by any perfon above 500 acres, in order to divide them among the poor citizens. When Gracchus returned from his progrefs, he found, by the seath of his chief agent, that his abfence hach not abated either the hatred of the rich, or the love of the poor, toward him. As it plainly appeared that the deceafcd had been poifoned, the tribune took this occafion to apply hinfelf again to his protectors, and implore their alliftance againtt the violence and treachery of his cnemics. The populace, more attached after this aceident to their hero than ever, declared they would Itand by bim to the laft drop of their blood; and this their zeal encouraged him to add a new claufe to the law, viz. that the commiffioners fhould likewife inquire what lands had been ufurped from the republic. This was wuching the fenators in a moft tender point; for moft
of them had appropriated to themfleles lands belonging to the republic. But after all, the tribune, upon a trice inquiry, found that the lands taken from the rich would not be enough to content all the poor citizens. But the following accident cafed him of this diffeculty, and cuableri him to top the murmurs of the makontents anong the people.

Attalus Philometer, Ling of Pergamus, having be- The ine queathed his dominions and effects to the Romans, Eu-fures of A demus the Pergamean brought his treafures to Rume at this time; and Gracchus immediately rot a new law pafied, mation the pe tonple by among the poor citizens who could not have lands; Gacchus and that the difpofal of the revenues of Pergamus fhould not be in the fenate, but in the comitia. By thefe Iteps Gracebus moft effectually humbled the fenate; who, in order to difcredit him among the people, gave out that Eudeinus, who had brought the king's will to Rome, had left with Gracelus the royal diadem and mantle of Attalus, which the law-making tribune was to ufe when he thould be proclaimed king of Rome. But thefe reports only ferved to make Gracchus be more upon lis guard, and to infpire the people with an implacable hatred againt the rich who were the anthors of them. Gracchus being now, by his power over the minds of the multitude, ahfolute mather of theifuffroges, formed a defign of railing his father-in-law Appius Claudius to the confulate next year, of promoting his brother Cains to the tribunefhip, and getting himfelf continued in the fame office. The laft was what moft nearly concerned him; his perfon, as long as he was in office, being facred and inviolable. As the fenate was very active in endeavouring to get fuch only elected into the college of teibunes as were enemies to Gracehus and his faction, the tribune left no fone unturned to fecure his clection. He told the people, that the rich had refolved to aftaflinate him as foon as he was out of his office; he appeared in mourning, as was the cuftom in the greatel calamities; and bringing his children, yet young, into the forum, recommended them to the people in fuch terms, as fhowed that lie defpaired of his own prefervation. At this fight the popnlace returned no anfwer, but by onteries and menaces againgt the rich.

When the day appointed for the election of new tribunes came, the people were ordered to allemble in the capitol in the great court before the temple of J11piter. The tribes being met, Gracchus produced his petition, intreating the people to continue lim one year longer in the office of tribune, in confideration of the great danger to which he was expofed, the rich having vowed his detruction as foon as his perfon thould be no more facred. 'I'his was indeed an unufual requelt, it having been long cullomary not to continue any tribune in his office above a year. However, the tribes began to vote, and the two firlt declared for Gracchus. Hereupon the rich made great clamours; which territied Rubrius Varro, who prefided in the college of tribunes that day, to fuch a degree, that he religned his place to Q. Munmius, who offered to prelide in his room. But this railed a tumult among the tribunes themfelves; fo that Gracchus wifely difmiffed the affembly, and ordered them to meet again the next day.

In the mean time the people, being fenfible of what importance it was to them to preferve the life of \(f 0\) powerful

\section*{R O M \(\quad\left[\begin{array}{ll}373\end{array}\right] \quad R \quad O \quad\) M}
powerful a protector, not only conducted hinn home, but watched by turns all nisht at his door. Next morning by break of day, Gracclus having affemHed his friends, led then from his houle, and potted one half of them in the comitium, while he went up himelf with the other to the eapitol. As foon as he appeared, the people faluted him with loud acclanzations of joy. But fearee was he phaced in his tribunal, when Fulvins Flaccus a fenator, and friend to Gracchus, breaking through the crowd, cane up to him, and gave himf notice, that the fenators, who were affembled in the temple of Faith, which almoft touched that of Jupiter Capitolinus, had confpired araain't his life, and were refolved to attack him openly on his very tribunal. Hereupon Gracchus tucked up his robe, as it were, to prepare for a battle; and, after his example, fome of his party, feizing the faves of the apparitors, prepared to defend themrelves, and to reptl force by force. Thefe preparations terrified the other tribunes; who immediately abandoned their places in a cowardly manner, and mixed with the crowd; while the priefts ran to fhut the gates of the temple, for fear of its being profaned. On the other hand, the fiends of Gracchus, who were difperfed by parties in different places, cried out, \(W\) 'e are ready: What mufl we do? Gracchus, whofe voice could not be heard by all his asherents on account of the tumult, the clamours, and the confufed cries of the different parties, put his hand to his head; which was the fignal agreed on to prepare for battle. But fome of his enemies, putting a malicious conftruction upon that gefture, immediately flew to the fenate, and told the fathers, that the feditious tribune had called for the crown to be put upon his head. Hereupon the fenators, fancying they already faw the king of Pergamus's diadem on the tribunc's head, and the royal mantle on his fhoulders, refolved to give the conful leave to arm his legions, treat the friends of Gracchus as enemies, and turn the comitium sinto a field of battle.

But the conful Mutius Scævola, who wias a prudent and moderate man, refufed to be the intriment of their rath revenge, and to difhonour his confulate with the maffacre of a difarmed people. As Calpurnius Pifp, the other conful, was then in Sicily, the moft turbulent among the fenators cried out, "Since one of our confuls is abfent, and the other betrays the republic, let us do ourfelves juftice; let us immediately go and demolith with our own hands this idol of the people." Scipio Nafica, who had been all alons for violent meafures, inveighed bitterly againgt the conful for refufing to fuccour the republic in her greateit diftrefs. Scipio Nafica was the great grandfon of Cncius Scipio, the uncle of the firtt Africanus, and confequently coufin to the Gracchi by their mother Cornelia. But neverthelefs not one of the fenators betrayed a more irreconcileable hatred againtt the tribune than he. When the prudent conful refufed to arm his legions, and put the adherents of Gracchus to death contrary to the uftul forms of juttice, he fet no bounds to his fury, but, rifing up from his place, cried out like a madman, "Since our conful betrays us, let thofe who love the republic follow me." Having uttered thefe words, he immediately walked out of the temple, atsended by a great number of fenators.

Nafica thew his robe over his. huwhers, 2ut hawre covered his head with it, advac in wh: h.s fo! wer is into the crowd, where he wa jcined by a corit.7j of a fuff the clients and friends of the patricint, omed with enfues, in ftases and clubs. Thefe, falling ind:ererenty upon all which who ftood in their way, difperf, the cruad. Many of rach:is
 mult all the feats being overtumed and broken, Nafica, arined with the leg of a broken bench, :.rocked down all who oppofed him, and at length reached Gracchus. One of his party feized the tribune by the lappet of his robe : but he, quitting his gown, fled in his tunic ; and as he was in that hurry of lipirits, which is infeparable from fear, leaping over the broken benches, he had the misfortune to flip and fall. As he was getting up again, he received a blow on the head, which itunced hins: then his adverfaries ruthing in upon him, with repeatel blows put an end to his life.

Rome was by his death detivered, according.to Cicero, from a domettic enenny, who was more formidable to her than even that Numantia, which had firt kindied his refentments. Perhaps no man was ever born with greater talents, or more capable of aggrandizirg himfelf, and doing honour to his country. But his great. mind, his manly courage, his lively, eafy, and powerful eloquence, were, fays Cicero, like a fword in the hands of a madman. Gracchus abufed them, not in fupporting an unjuft caufe, but in conducting a good one with too much violence. He went fo far as to make fome believe that he had really fomething in view befides the interelt of the people whom he pretended to relieve; and therefore fome hiftorians have reprefented him as a tyrant. But the moft judiciot:s. writers clear him from this imputation, and aferibe his firt defign of reviving the Licinian law to an eager defire of being revenged on the fenators for the affront they had very unjuftly put upon him, and the conful Mancinus, as we have hinted above. The law he attempted to revive had an air of juftice, which gave a fanction to his revenge, without cafting any blenifh on his reputation.

The death of Gracchus did not put an end to the tumult. Above 300 of the tribune's friends loft their lives in the fray; and their bodies were thrown, with that of Gracehus, into the Tiber. Nay, the fenate carried their revenge beyond the fatal day which had ftained the Capitol with Roman blood. They fought for all the fricnds of the late tribune, and without any form of law allafinated fome, and furced others into banilhment. Caius Billius, one of the moft zealous defenders of the people, was feized by his enemics, and Thut up in a cafis with fnakes and wipers, where he miferably perihed. Though the laws prohibited any citizen to take away the life of anotber before he had been legally condemmed, Natica and his followers were acquitted by the fenate, who enacted a deerce, jultifying all the cruelties committed againft Gracchus and his adherents.

Thefe diflurbances were for a fhort time interrupted by a revolt of the flaves in Sicily, occaioned by the cruelty of their matters; but they being foon reduced, the contefts about the Sempromian \(i_{1}\) re as it was called, again took place. Roth parties were determined not to yield; and therefore the molt fatal effer s enturd. The tritt thing of confeguence was the death of Sici-

\section*{\(\mathrm{T} O \mathrm{M} \quad[374] \quad \mathrm{R} O \mathrm{M}\)} their weitht in gold, to any one who fhould bring them ai profirpcion begual
pin Africase: the Second, who was privately frangled in his bed by fume of the partilans of the pleberan party, ahsiut 129 B. C. Caius Gracchus, brother to him whon had beenf formerly killed, not only undertonls the retival of the Sempronem law, but propofed a new one, granting the rights of Ruman citizens to all the Italian altics, who eould receive no thare of the lands divided in eonfequence of the Sompronian law. The confequences of this were muth worfe thans the former; the flame fpread throurh all Italy; and the nations who had made wiry with the republie in its infancy again conmenced enemies more formidable than before. Fregellie, a city of the Vulfei, revolted: but being fuddenly attacked, was obliged to fubmit, and was rafed to the ground; which quicted matters for the prefent. Gracchus, however, fill continued his attempts to humble the fenate and the relt of the patrician body: the uitimate confequence of which was, that a price was fee on his head, and that of Fulvius his conlederate, no lefs than to Opinius the chicf of the patrician party. Thus the cuitom of profeription was begun by the patricians, of which they thenfelves foon had enough. Gracchus and Fulvius weet facrificed, but the diforders of the republic were not fo cafily cured.

The inundation of the Cimbri and Teutones put a flop to the civil diicords for fome time longer; but they being defeated, as related under the articles Cimgri and Miuroves, nothing prevented the troutles from being revied with greater fury than before, except the war with the Sicilian flaves, which had again commenced with more dangerous circumitanees than ever. But this war being totally ended about 99 B. C. no farther obttacle remained. Marius, the conqueror of Jugurtha * and the Cimbri, nndertook the caufe of the petbeians againft the fenate and patricians. Having affociated himfelf with Apuleius and Glaucin, two factious men, they carried their proceedings to fuch a length, that an open rebellion commenced, and Marius himfelf was obliged to act againtt his allics. Peace, however, was for the prefent reftored by the maflacre of Apuleius and Glancia, with a great number of their followers; upon which Marius thought proper to leave the city.

While factious men thus endeavourd to tear the republic in picces, the attempts of well meaning people to heal thofe divifions ferved only to involve the ftate in calamities fill more grievous. 'The confuls obferved, that many individuals of the Italian allies lived at Rome, and falfely pretended to be Roman citizens. By means of them, it was likewife perceived, that the plebecian party had acquired a great deal of its power ; as the rotes of thefe pretended citizens were always at the ferice of the tribunes. The confuls therefore got a law paffed, commanding all thofe pretended citizens to return home. This was fo much refented by the Italian flates, that an univerfal defection took place. A fcheme was then formed by M. Lisius Drufus, a tribune of the people, to reconcile all orders of men ; but 385. this only made matters worfe, and procured his own af-

The banghty Romans were now made thoroughly fer: fible that they were not invincible : they were deteated in almott every engagenent ; and mutt foon have yielded, had they not fallen upon a method of dividing their enemie. A law was paffed, enneting, that all the mations in Italy, whofe alliance with Rome was indifputable, fhould enjoy the right of Roman citizens. This drew off feveral nations from the alliance; and at the Gane time, Sylla taking upon him the command of the Roman armies, fortune foon declared in favour of the latter.

The fuecefs of Rome againtt the allies ferved only to brino greater miferies upon herfelf. Marius and sylla became rivals; the former adhering to the people, and the later to the patricians. Marius affociated with one of the tribunes named Sulpitius ; in conjunction with whom he raifed fuch dilturbances, that Sylla was foreed to retire from the city. Having thus driven off his rival, Marius got himfelf appointed general againft Mithrilates \(\dagger\) king of Pontus ; but the loldiers refufed to obey any other than Sylla. A civil war immediate-f ly enfued, in which Marius was driven out in his turn, and a price fet upon his head and that of Sulpitius, with many of their adherents. Sulpitius was foon feized and kitled ; but Marius made lis efe:tpe. In the mean time, however, the cruelties of Sylla rendered him obnoxious both to the fenate and people ; and Cin\(n a\), a furious partifan of the Marian faction, being chofen conful, cited hiin to give an account of his conduct. Upon this sylla thought proper to fet out for Afia: Marius was recalled from Africa, whither he had fled; and immediately on his landing in Italy, was joined by a great number of fhepherds, flaves, and men of defperate fortunes; fo that he foon faw himfelf at the head of a confiderable army.

Cinna, in the mean time, whom the fenators had de. Hyr pofed and driven out of Rome, folicited and olstained a powerful army from the allies; and being joined by Settorius, a mott able and experienced gencral, the two, in comjunction with Marius, indvanced towards the capital; and as their forees daily increafed, a fourth army was formed under the command of Papirius Car. bo. The fenate raifed fome forces to defend the city; but the troops being valtly inferior in number, and likewife inclined to the contrary fide, they were obliged to open their gates to the confederates. Marius entered at the head of a nunerous guard, compofed of flaves, whom he called his Bardiuans, and whom he defigned to employ in revenging himfolf on his enemies. The firlt order he gave thefe affaffins was, to murder all who came to falute him, and were not anfwered with the like civility. As every one was forward to pay his compliments to the new tyrant, this order proved the deftruction of vaft numbers. At lalt thefe Bardixans abandoned themfelves to fuch exceffes in every kind of vice, that Cinna and Sertorius ordered their troops to fall upon them; which being inilantly put in execution, they were all cut off to a man.

By the deftruction of his guarls, Marius was reduced to the neceffity of taking a method of gratifying his revenge fomewhat more tedious, though equally effectual. A conference was held between the four chiefs, in which Marius feemed quite frantic with rage. Scrtorius endeavoured to moderate his fury; but, being
\(\begin{array}{lll}\mathrm{R} & \mathrm{O} & \mathrm{M} \\ \text { Cinna and Carbo, a a refolution was taken }\end{array}\)
over.ruled by Cinna and Carbo, a refolution was taken to nurder without mercy all the fenators who had oppofed the popular faction. This was immediately put in erecution. A general Iaughter commenced, which latted five days, and during which the greatef pari of the obnoxious fenators were cut off, their heads ftuck upon poles over-againft the roffra, and their bodies dragged with hooks into the forum, where they were lefit to be devoured by dogs. Syilla's houfe was demolifited, his goods conifcated, and he himfelf declared an enemy to his country ; however, his wife and children had the good fortune to make their efcape.This maflacre was not confined to the city of Rome. The foldiers, like as many blood-hounds, were difperfed over the country in fearcll of thofe who fled. The neighbouring towns, villages, and all the highways, fuarmed with affaflins ; and on this occation Plutarch obferves with great concern, that the molt facred ties of friendhip and hofpitality are not proof againf treaclery, in the day of adverity, for there were but very few who did not diccover their friends who had iled to them for helter.
2. This laughter being over, Cinna named himfelf and Marius confuls for the enfuing year ; and thefe tyrants feemed refolved to begin the new year as they had ended the old one : but, whilie they were preparing to renew their cruelties, Sylla, haring proved victorious in the eafl, fent along letter to the fenate, giving an account of his many vietories, and his refolution of returning to Rome, not to reftore peace to his country, but to revenge himfelf of his enemies, i. o. to deftroy thofe whom Marius had Ipared. This letter occafioned an oniveral terror. Marius, dreading to enter the lift writh fuch a renowned warrior, gave liminfelf up to exceffive drinking, and died. His fon was affociated with Cinna in the goverrment, though not in the confulfhip, and proved a tyrant no lefs cruel than his father. The fenate declared one Valerius Flaccus general of the forces in the eall, and appointed him a corifiderable army; but the troops all to a man deferted him, and joincd Sylla. Soon after, Cinna declared himfulf confial a third time, and took for his collcague Papirius Carbo ; but the citizens, dreading the tyranny of thefe inhuman monfers, fled in crowds to Sylla, who was now in Greece. To him the fenate fent deputies, begring that he would have compafion on his country, and not earry his refentment to fuch a length as to begin a civil war : but he replied, that he was coming to Rome full of rage and revenge; and that all his enemies, if the Roman people confented to it, fhould perifh either by the fword or the axes of the executioners. Upor this feveral very numerous armiss were forned againft him ; but, through the mifconduet of the generals whe commanded them, thefe armies were everywhere defeated, or went over to the enemy. Pompey, afterwards fyled the Great, fignalized himfelf in this war, and embraced the party of Sylla. The Italian nations took fome one fide and fome another, as their different inclinations led them. Cinna, in the mean time, was killed in a tumult, and young Marius and Carbo fucceeded hinn ; but the former having ventured an engagement with Sylla, was by liim defeated, and foiced to Aly to Prenefte, where he was clotely befieged.

Thus was Rome reduced to the loweft degree of mifery, when one Pontius Telefinus, a Samnite of great - 186 experience in war, projected the total ruin of the city. Rome in He had joined, or pretended to join, the generals of the urmof: the Marian faction with an army of 40,000 men ; and danger therefore marched towards Prenette, as if he defigned fram Teleto relieve Marius. By this means he drew Sylla and finus a Pompey away from the capital; and then, decamping in the night, over-reached thefe two generals, and by break of day was within 10 furlongs of the Collatine gate. He then pulled off the mak; and declaring himfelf as much an enemy to Marius as to Sylla, told his troops, that it was not his delign to affift one Roman againft another, but to deftroy the whole race. "Let fire and fword (faid he) defroy all; let no quarter be given; mankind can never be free as lung as one Roman is left alive."- Never had this proud metropolis been in greater danger; nor ever had any city a more narrow efcape. The Roman youth marched out to oppofe him, but were driven back with great naughter. Sylla himfelf was defeated, and forced to fy to his camp. Telefinus advanced with more fury than ever; but, in the mean tine, the other wing of his army having been defeated by M. Craffus, the victorious general attacked the body where Telefinus commanded, and by putting them to flight, faved his country from the moft imminent danger.

187
Sylla, having now no enemy to fear, marched firt Monatrozs to Atemnx, and thence to Rome. From the former crielty os city he carried 8000 prifoners to Rome, and caufed \({ }^{\text {Syta. }}\) them all to be affacred at once in the circus His cruelty nest fell upon the Preneflines, \(12, x 0\) of whom were raffacred without mercy. Young Marius had killed himfelf, in order to avoid falling into the hands of fuch a cruel enemy. Soon after, the inhabitants of Norba, a city of Campania, finding themfelves unable to refift the forces of the tyrant, fet fire to their houles, and all perifhed in the flames. The taking of thefe cities put an end to the civil war, but not to the cruelties of Sylla. Having affembled the people in the conitinm, he told the.i, that he was refolved not to fpare a tingle perfon who had borne ar ns againt him. This cruel refolution he put in execution with the moit unrelenting vigour; and having at laft cut off ail thofe whon he thought capable of oppofing him, Sylliz caufed hi felf to be declared perpetual dictator, or, in other words, king and abfolute fovereign of Rome.

1 his revolution happened about 80 B. C. and from He is prothis time we may date the lofs of the Ronan liberty. ciaimed Sylla indeed refigned his power in two years; but the perfecual citizens of Rote having once fubmitted, were ever after \(n\) ore inclined to fubmit to a nalter. Though individuals retained the fame enthufialtic notions of liberty as before, yet the minds of the generality feen from this tire to have inclined towards monarchy. New matters were indeed alrcady prepared for the republic. Czfar and Ponpey had e rineotly dittin. guilhed theaclves by their martial expluits, and were already rivals. They weze, however, for fone tine prevented fron raifing any difturbances by bcing kept at a diftance from each other. Sertorius, one of the generals of the Marian faction, and the only one of them poffefied cither of houour or probity, had retired

Into Spain, where he crected a republic iudependent of Rone. Pompey and Metellus, two of the bett reputed grenerals in Ronce, were fent againt hin; but intlead of conquering, they were on all occafions conquered by him, and obliged to abandon their enterprife with difgrace. At latt Sertorius was treacherouny murdered ; and the traitors, who after his death ufurped the con in and, being totally deftitute of his ablilites, were eatily defented by Pompey: and thus that general reaped an undefersed honour from conchding the war with fuccers.

The Spanith war was fearce ended, when a very dangerons one was excited by Spartactus, a Thracian glatiator: For fome time this rebel proved very fuccoffinal ; but at laft was totally defeated and killed byo Craflus. The fugitives, however, rallice again, to the number of 5000 ; but, heing totally defeated by Pompey, the latter took occafion from thence to claim the glory which was juitly duc to Crafus. Beivg thus hecome extrencly popular, and fetting no bounds to his ambition, he was chofen conful along with Craflus. Botlo generals were at the head of powerful armies; and a contelt between them immediately began about who thould firlt lay down their arms. With difficulty they were in appearance reconciled, and immediately began to oppofe one another in a new way. Pompey coirted the fasour of the people, by reinftating the tribunes in their ancient power, which had been greatly abridged by Sylla. Craflus, though naturally covetous, entertained the populace with furprifing profufion at ic,000 tables, find at the fame time diltributed corn fufficient to maintain their families for three months.Thefe prodigious expences will feem hefa furpriing, when we conlider that Craflus was the richeft man in Ronse, and that his eltate amounted to upwards of 7000 talents, i. e. 1,356,250 l. Aterling. Notwithtanding his utmolt efforts, however, Pompey ftill had the luperiority; and was therefore propofed as a proper perfon to be employed for clearing the feas of pirates. In this new flation a moft extenfive power was to be granted to him. He was to have an abfolute authority for three years over all the feas within the flraits or pillars of Hercules, and over all the comntrics for the fpace of 400 furlongs from the fea. He was empowered to raife as many foldiers and mariners as he thought proper; to take what fums of money he pleafed ont of the public treafiny without being accountable for them: and to choofe out of the fenate fifteen fenators to be his lieutenants, and to execute his orders when the hinufelf coukl not be prefent. The fentible part of the people were againft invefting one man with fo much power; but the unthinking imultitude rendered all oppofition fanitlefs. The tribune Roficins atempted to fpeak againft it, but was prevented by the clamous of the prople. He then lield up two of his fingers, to Rhow that he was for dividing that extenfive commitfion between two perfons: but on this the aflembly burft out into fuch hideous outcrice, that a crow Hy ing aecidentally over the comitum, was flunned with the noife, and fell down among the rabble. This law being agreed ro, Pomper executed his commifion fo much to the pullic fatisfaction, that on his return a new law was plopofed in his farmur. By this he was to be appoint. cd general of all the forces in Afia : and as he was itill zo retain the fovercignty of the feas, he was now in
fact made fovercign of all the Roman empire. This law was fupported by Cicero and Caflar, the former afpiring at the confulate, and the latter pleafed to fee the komans fo readily appointing themfelves a matter. Pompcy, however, executed his commiffion with the utmint fidelity and fuecefs, completing the conquelt of Pontus, Albania, Iberia, \&c. which had been fuccefffully begun by Sylla and Latcullus.

But while Pompey was thus aggrandifing himelf, C-t the republic was on the point of being fubverted by a confpiracy formed by Lucius Sergius Catiline. He was defended from an illultrious family; but having quite ruined his eftate, and rendered himfulf iufamons by a feries of the mott detettable crimes, he affociated with a mumber of orhers in circunftances fimilar to his own, in order to repair their broken fortunes by ruining their country. Their fcheme was to murder the confuls together with the greateft part of the fenators, fet fire to the city in different places, and then feize the government. This wicked defign mifcarricad twice: but was not on that account dropped by the confpirators. Their party increafed every day; and both Cefar and Craffus, who fince the departure of Pompey had ftudied to gain the affections of the people as far as poffible, were thought to have been privy to the confpiracy. At laft, havever, the matter was difcovered by means of a young knight, who had indifcreetly revealed the fecret to his paramour. Catiline then openly took the field, and forn raifed a confiderable army : but was utterly defeated and killed about \(62 \mathrm{~B} . \mathrm{C}\).; and thus the republic was freed from the prefent danger.

In the mean time, Cefar continued to advance in popularity and in powcr. Soon after the defeat of Catiline, he was created pontifex maximus; and alter that was fent into Spain, where he fubdued feveral nations that had never hefore been fubject to Rome. While he was thus employed, his rival Pompey returned from the eaft, and was reecived with the higheft honours ; but though flill as ambitious absever, he now affected extraordinary modetly, and declined accepting of the applaufe which was offered him. His aim was to aflume a fovereign authority without feeming to defire it ; but he was foon convinced, that, if he defired to reign over his fellow-citizens, it mult be by force of arms. He therefore renewed his intrigues, and fared no pains, however mean and fcandalous, to increafe his popularity. Cefar, on his return from Spain, found the fovereignty divided between Cralfus and Pompey, each of whom was ineftectually fruggling to get the better of the other. Cxefar, no lefs ambitious than the other two, propofed that they fhould put an end to their difterences, and take hiin for a partner in their power. In fhort, he projected a triumvirate, or aflociation of the three perfons, (Pompey, Craffins, and himelf), in which triun fhould be lodged the whole power of the fenate and ratc. people; and, in order to make their confederacy more lafting, they bound themfelves by mutual oaths and promifes to fland by cach other, and fuffer nothing to be undertaken or carried into execution without the unanimous confent of all the three.

Thus was the liberty of the Romans taken away a fecond time, nor dicl they ever afterwards recover it; though at prefent none perccived that this was the calf,

\section*{\(\mathrm{R} O \mathrm{M}\) \\ }
excep: Cato. The affociation of the trium rirs was for \(\alpha\) a long time kept fecret ; and nothing appeared to the people exicept the reconciliati m of Pompery and Craffus, for which the fate reckened ifelf indebted to Cwfar. The firlt confequerice of the triamvirate was the confulaip of Julius Cefar. But though this was obtained hy the favour of Pomper and Craflas, he found himfelf difappoinred in the colleague he wanted to affociate with hiin in that ofice. He had pitched upon one whom he knew he could manaze as be pleafed, and dif. tributed large funs among the people in order to engage them to vote for him. The fenate, however, and exen Cato himfelf, refolved to defeat the triumvir at his own weapons; and haring therefore fet up another candidate, dittributed fuch immenfe fums on the oppofite fide, that Cxfar, notwithitanding the vaft riches be had acquired, whs furced to yield. This defeat proved of fmall confequence. Céfar fet himfelf to engage the affections of the people; and this he did, by an arrarian law, fo effectually, that he was in a manner idiolized. The law was in itfelf rery reafouable and juft; neverthelefa, the fenate, perceiving the defign with wheh it wist propofed, thought themfelves bound to oppofe it. Their oppofition, however, proved fruitlefs: the con ful Bibulus, who fhewed himfelf molt antive in his endeavours againfl it, was driven out of the afferbly with the greateft indignity, and from that day became of tio confideration ; fo that Crefar was reckoned the fole conful.

The nest ftep taken by Cefar was to fecure the knights, as he had already done the people; and for this parpofe he abated a third of the rents which they anmully paid into the treafury; after which he governed Rome with an abfolute fway during the time of lis confunate. The reign of this trimnvir, however, was ended by his expedition intu Gaul, where his military exploits aequired hin the higheft rephtation. Pompey and Craflus in the mean time became confuls, and groverned as defpotically as C £ar himfelf had done. On the expiration of their firf confulate, the republic fell into a kind of auarchy, entircly owing to the diforders occafioned by the two late confuls. At laft, however, this confufion was ended by raifing Craflus and Pompey to the confulate a fecond time. This was no fooner done, than a new partition of the empire was propofed. Craffus was to have Syria and all the eattern provinces, Pompey was to govern Africa and Spain, and Cafar to be continued in Gaul, and all this for the fpace of five years. This law was paffed by a great majority; upon which Craffus underfook an expedition arsainft the Parthians, whom he imagined he fhould eafily overconie, and then enrich himfelf with their fooils; Cxfar applied with great affiduity to the completing of the conquelt of Gaul; and Pompey having nothing to do in his province, flaid at Rome to govern the republic alone.

The affairs of the Romans were now haftening to a crifis. Craflis, having oppreffed all the provinces of the eaf, was totally defeated and killed by the Parthians*; after which the two great rivals Cafar and Pompey were left alone, without any thind perfon who could lold the halance betwecen them, or prevent the deadly quarrels which were about to enlue. Mayters, however, continued pretty quiet till Gaul was redaced to a Roman prosince fo. 'line queftion than was, wheFus. XVI. Patt I.
ther Cefar or Pompey fhould firit refigs the command of their armies, and return to the rank of private per-

Rome. fons. As both partics faw, that whoever fifit Laid dowa his arms mult of courfe fubmit to the other, botin refufed to difarn themfelves. As Cefar, however, hal a nafled inmenfe rishes in \(G\) aul, he was now in a condition not only to maintain an army oapable of vying with Ponpuy, but even to buy over the leading men in Rome to his interelt. One of the comiuls, named Emilius Pauhus, calt him no lefs than 1500 taients, or 310,525 . fleyling; hut the other, named Marcelus, could not be gained at any price. Pompey had put at the head of the trihunes one Scriboniua Curio, a young patrician of great abilities, but fo exceedingly debauched and extravagant, that he owed upivards of four millions and i half of our money. Cxfax, by enabling him to fatis.y his creditors, and fupplying him with money to purfue his debaucheries, fecured him in his interelt; and Curio. without feeming to be in Cxfar's intereft, fuund meatr to do him the moft effential fervice. He propofed that both generals fhould be recalled ; being weil affured th.t: Pumpey would never confent to pait with his army, or lay down the goverument of Spain with which he had been invofted, fo that Cafar might draw frona Ponao pey's refufal a pretence for continuing himelf in his province at the head of his troops. This propofal threw the oppofite party into great embarralfinents; ard while both profeffed their pacific intentions, both continued in readinefs for the moft obltinate and bloody war. Cicero took upon himfelf the office of mediator: bue Pompey would hearken to no terms of acconmodation. The orator, furprifed to find him fo wibinate, at the fame time that he neglected to flengthea his army, afked him with what forces he defiened to make heid againlt Cæfar? To which the other anfwered, that he needed but Atamp with his foot, and an army would thart up out of the ground. This confidence he affimed becaufe he perfuaded himfelf that Cæiar's men wouh abandon him if mattcrs came to extremities. Ciefar, however, though he affected great moricration, set kept himfelf in readinefs for the worft ; and therefore, when the fenate paffed the fatal decree for a civil war, he was not in the leaft alarned. This decree was iftued in the year 49 B. C. and was exprefled in the followins words: for de \(\mathrm{r}-\mathrm{s}\) "Let Be C. and for the fill "Let the contuls for the year, the proconful Pompey; "war. the pretors, and all thofe in or-near Rone who have been confuls, provide for the public fafcty by the moit proper means." This decree vas no fooner paffed, than the conful Marcellus went, with his colleague Lentulus, to an houfe at a fmall diftance from the town, where Pompey then was; and prefenting him with a fword, "We require you (faid he) to take upon you with this the defence of the republic, and the conmand of her troops." Pompey obeyed; and Ciefar was by the fame decree divefted of his office, and one Lucius Domitius appointed to fucceed him, the new governor being empowered to raife 4000 men in order to take poffeftion of his province.

War being thus refolved on, the fenate and Pompey began to make the neceffary preparations for oppofing Cxfar. The attempt of the latter to withland their anthority they termed a fumult ; from which contemptible epithet it appeared that they cither did not know, or did not dread, the enemy whom they were bringing upon theafelves. However, they ordered 30,000 Ro-

Hafli ities hegun by Cix?
man forces to be affembled, together with as many fo. reign troops as Pompey thould think proper; the expence of which arnainent was defrayed from the public treafury. "Ihe gotemments of provinces, and all public honours, were betowed upon fuch as were remarkahle for cheir attachment to Pompey and their enmity to Cafar. The latter, however, was by no means wanting in what concent his own intereft. Three of the tribunee who liad been his friends were driven out of Ronie, and arrived in his camp difguiled like naves. Cæfar thowed them to his army in this ignominious habit; and, fetting forth the iniquity of the fenate and patricians, exhortcd his men to fland by their general under whom thes had ferred fo long with fuccefs; and finding by their acelamations that he could depend on them, he refolved to begin hoftilities immediately.

The firt defign of Cefar was to make himfelf mafter of Ariminum, a city bordering upon Cilalpine Gaul, and confequently a part of his province; but as this would be looked upon as a declaration of war, he refolved to keep his delign as private as poflible. At that time he himfelf was at Ravenna, from whence he fent a detachment towards the Rubicon, defiring the officer who commanded it to wait for bim on the banks of that river. The next day he affifted at a fhow of gladiators, and made a great entertainment. Towards the clofe of the day he rofe from table, defiring his guets to fay till he came back, which he faid would be very foon; but, inftead of returning to the company, he immediately fet out for the Rubicon, having left orders to fome of his molt intinate friends to follow him through dif: ferent roads, to avoid being oblerved. Having arrived at the Rubicon, which parted Cilalpinc Gaul from Italy, the fucceeding misfortunes of the empire occurred to his mind, and made him hefitate. 'Turning then to Afmius Pullio, "If I do not crofs the river (faid he), I am undone; and if I do crofs it, how many calamities flall I by this means bring upon Rome!" Having thus fpoken, lie mufed a lew minutes; and then crying out, "The die is caft," he threw himfelf into the river, and crofling it, marched witb all poffible fpeed to Ariminum, which he reached and furprifed before day. break. From thence, as he had but one legion with him, he difpatehed orders to the formidable army he had left in Gaul to crofs the mountains and join him.

The activity of Cæfar tlruck the oppofite party with the greatelt terror; and indeed not without reafon, for they had been extremely negligent in making preparations againft fuch a formidable opponent. Pompey himfelf, no lefs alarmed than the reft, left Rome with a defign to retire to Capua, where he had two legions whom he had formerly draughted out of Cafar's army. He communicated his intended flight to the fenate; but at the farce time acquainted them, that if any magiftrate or fenator refufed to follow him, he fhould be treated as a friend :o Cafar and an enemy to his country. In the mean time Crfar, having raifed new troops in Cifalpine Gaul, fent Mare Antony with a detachment to feize Aretium, and fume other officers to fecure Pifaurnm and Fanum, while he himfelf marched at the head of Takes feve-gates to him. From Auximum he advanced into Pi zal cowaso cenum, where he was joined by the twelth legion from 'Iranfalpine Gaul. As Picenum readily fubmitted to him, he led his [orees againf Corfinium, the capital of
the Peligni, which Domitus Ahenobarbus defended with thirty cohorts. But Cxfar no fooner inveffed it, than the garrifon betrayed their commander, and delivered him up with many fenators, who had taken refuge in the place, to Crfar, who granted them their lives and liberty. Domitius, fearing the refentment of the conqueror, had ordered one of his flaves, whom he ufed as a phyfician, to give him a dufe of poifon. When he eame to experience the humanity of the conqueror, he lamented his misfortune, and blamed the haflinefs of his own refolution. But his phyfician, who had only given him a feeping draught, comforted him, and received his liberty as a reward for his affection.

Pompey, thinking himfelf no longer fafe at Capua Bcfie after the reduction of Corfinium, retired to Brundu- Pom flum, with a defign to carry the war into the eaft, who where ail the governors were his creatures. Cæfar fol-gera, lowed him clofe; and arriving with his army before Brundufium, invefted the place on the land-fide, and undertook to fhut up the port by a ftaceado of his own invention. But, before the work was completed, the fleet which had conveyed the two confuls with thirty cohorts to Dyrrhachium being returned, Pompey refolved to make his efeape, which he conducted with all the experience and dexterity of a great officer. He kept his departure very fecret; but, at the fame tince, made all neceffary preparations for the facilitating of it. In the firft place, the walled up the gates, then dug deep and wide ditches crofs all the ftreets, except only thofe two that led to the port; in the ditches he planted tharp poiuted ftakes, covering them with hurdles and earth. After thefe precautions, he gave exprefs orders that all the citizens fhould keep within doors, left they flould betray his defign to the enemy ; and then, in the fpace of three days, embarked all his troops, except the light-armed infantry, whom he had placed on the walls; and thefe likewife, on a fignal given, abandoning their pofts, repaired with great expedition to the Thips. Cæfar, perceiving the walls unguarded, ordered his men to fcale them, and make what hafte they could after the enemy. In the heat of the purfuit, they would have fallen into the ditches which Pompey had prepared for them, had not the Brundufians warned them of the danger, and, by many windings and turnings, led them to the haven, where they found ail the fleet under fail, except two veffels, which had run aground in going out of the harbour. Thefe Crefar took, made the foldiers on board prifoners, and brougbt them afhore.

Cxfar, feeing himfél, by the flight of his rival, mafter of all Italy from the Alps to the fea, was defirous to follow and attack him before he was joined by the fupplies which he expected from Aria. But being def. titute of hipping, he rcfolved to go firf to Rome, and fettle fome fort of government there; and then pafs into Spain, to drive from thence Pompey's troops, who had taken poffefion of that great continent, ander the command of Afranius and Petreius. Before he left Brundufum, he fent Scribonius Curio with tbree legions into Sieily, and ordered Q. Valerius, one of his lieutenants, to get together what flips he could, and crofs over with one legion into Sardinia. Cato, who commanded in Sicily, upon the firf news of Curio's landing there, abandoned the ifland, and retired to the camp of the confuls at Dyrrhachium; and Q. Valerins no fooner appeared with his fmall flect off Sardinia,
than the Caralitini, now the inhabitants of Ca riari, drove ont Aurelius Cotta, who commanded there for the fenate, and put Cxfar's lieutenant in poffeffion both of their city and ifland.

In the mean time the general himfelf advanced towards Rome; and on his mareh wrote to all the fenators then in Italy, defiring them to repair to the capital, and afiift him with their counfel. Above all, he was defirous to fee Ciecro ; but could not prevail upon him to return to Rome. As Ceefar drew near the capital, he quartered his troops in the neighbouring municipia; and then advancing to the city, out of a pretended refpect to the ancient cuftoms, he took up his quarters in the fuburbs, whether the whole city crowded to fee the famous conqueror of Gaul, who had been aljent near ten years. And now fuch of the tribunes of the people as had fled \(t 0^{\circ} \mathrm{him}\) for refuge reaflumed their functions, mounted the roftra, and endeavoured by their fpeeches to reconcile the people to the head of their party. Marc Antony particularly, and Caffius Longinus, two of Cefar's moft zealous partifans, moved that the fenate flould meet in the fuburbs, that the general might give them an account of his conduct. Accordingly, fuch of the fenators as were at Rome affembled; when Cæfar made a fpeech in juftification of all his proceedings, and concluded his harangue with propofing a deputation to Pompey, with offers of an accommodation in an amicable manner. He even defired the conicript fathers, to whom in appearance he paid great deference, to nominate fome of their venerable body to carry propofals of peace to the confuls, and the general of the confular army ; but none of the fenators would take upon him that commifion. He then began to think of providing himfelf with the neceffary fums for carrying on the war, and had recourfe to the public treafury: But Metellus, one of the tribunes, oppofed him; aileging, a law forbidding any one to open the treafury, but in the prefence and with the confent of the confuls. Cæfar, however, without regarding the tribune, went directly to the temple of Saturn, where the public money was kept. But the keys of the treafury having been carried away by the conful Lentulus, lie ordered the doors to be broken open. This Metellus oppofed: but Cefar, in a paffion, laying his hand on his fword, threatened to kill him if he gave him any farther difturbance; which fo terrified Metellus, that he withdrew. Cæfar took out of the treafury, which was ever after at his command, an immenfe fum; fume fay, 300,000 pounds weight of gold. With this fupply of money he raifed troops all over Italy, and fent governors into all the provinces fubject to the republic.

Cefar now made Marc Antony commander in chief of the armies in Italy, fent his brother C. Antonius to govern Illyricum, affgued Cifalpine Gaul to I.icinius Crafus, appointed M. Emilius Lepidus governor of the capital; and having got together fome fhips to cruife in the Adriatic and Mediterranean feas, he gave the command of one of his flects to P. Cornelius Dolabella, and of the other to young Hortenfins, the fon of the famous orator. As Pompey had fent governors into the fane provinees, by this means a general war was kindled in almoft all the parts of the known world. However, Cxfar would not truft any of his lientenants with the conduct of the war in Spain, which was PoonFey's favomite province, but took it aron hincelf; ;and
having fettled his affairs in great hate at Rome, returned to Ariminum, affembled his legions there, and paffing the Alps, entered Tranfalp:ne Gaul. There he was informed that the inhabitants of Marfeilles had refolved to refufe him entrance into their city; and that L. Donitius Ahenebarbus, whom he lad generounly pardoned and fet at liberty after the reduction of Corfinium, had fet fail for Ma: Ecilles with feven galleys. having on board a great number of his clients and laves, with a defign to raife the city in favour of Pornpey. Cæfar, thinking it dangerous to let the enemy take poffeffion of fuch an important place, fent for the 15 chief magiftrates of the city, and advifed them not to begin a war with him, but rather follow the example of Italy, and fubmit. The magifrates returned to the city, and foon after informed him that they were to ftand neuter; but in the mean time Domitius arriving with his fmall fquadron, was received into the city, and declared general of all their forees. Hereupon Cæfar immediately invefted the town with thrce legioris, and ordered twelve galleys to be built at Arelas, now Arles, in order to block up the port. But as the fiege was like to detain him too long, he left C. Trebonius to carry it on, and D. Brutus to command the fleet, while he continued his march into Spain, where he began the war with all the valour, ability, and fuecefs of a great general. Pompey had three generals in this continent, which was divided into two Roman provinces. Varro commanded in Farther Spain; and Petreius and Afranius, with equal power, and two confiderable armics, in Hither Spain. Cæfar, while he was yet at Marfeilles, fent \((\). Fabins, one of his lieutenants, with three legions, to take poffeflion of the paffes of the Pyrenees, which Afranius had feized. Fabius executed his commilfion with great bravery, entered Spain, and left the way open for Cæfar, who quickly followed him. As foun as he had croffed the mountains, he fent out fcouts to obferve the fituation of the enemy ; by whom he was informed, that Afranius and Petreius having joined their forces, confifting of five legions, 20 cohorts of the natives, and 5000 horfe, were advantageounly potted on an hill of an eafy afcent in the neighbourhood of Iletda, now Lerida, in Catalonia. Upon this advice Cxfar adranced within light of the enemy, and encamped in a plain between the Sicoris and Cinga, now the Segro and Cinca. Between the eminence on which Afranius had poted him- 1 - rutuced felf, and the city of Ilerda, was a frmall plain, and in the d fuctis in middle of it a riling ground, which Cælar attempted to Spain. feize, in order to cut off by that means the communication between the enemy's camp and the city, from whence they had all their provifions. This occationed a fharp difpute between three of Cæfar's legions and an equal number of the encony, which lated tive hours with equal fuccefs, both parties claining the victory. Wut atter all, Atranius's men, who had irit Feized the pott, maintained themfiles in poffeflion of it in frite oi Cex.. far's utmolt efforts. Two days after this battle, continual rains, with the melting of the frow on the mountaine, fo fweded the two rivers betweea which Cafor was encanped, that they urefflowed, broke down his bridges, and laid under wates : he neighiouring country to a great difance. This cut off the communication between his camp and the citics that had deelared for li:n; and reduced him to fuch itraits, that his an \({ }^{\circ}\) was realy to dee for fabine, wheat being fold in his

Rone. camp at 50 Roman denarii per lumet, that is, Il. 12 s . \(1 \frac{1}{~ d}\). fterling. He tried to rebuild his bridges, but in rain; the violence of the fircam rendering all his endeavours fruit! fs.

Upon the new's of Cxfar's difterf, Pompey's party at Rome began to take courage. Sevcral perfous of dillinction went to congratulate A franius's wife on the fuccefs of her hulband's arms in Spain. Mayy of the fenators who had hithertor food neuter, hallened to Pompey's camp, taking it for granted that Crefar was reduced to the laft exteemity, and all hopes of his party kult. Of this nunber was Cicero; whe, without any regard to the remonflrances of Aitiens, or the letters Cefar himflf wrote to him, celliring him to join ncither party, he left Italy, and landed at Dy rriachium, where Poinpey received him with great marks of joy

20
Orecomes
his difficul. tes, and r cure"al sju. and fremdinip. But the joy of Fompey's party was not long-lived. For Crefar, atiter having astemptecl fe. veral times in wain to rebuild his bridges, cauled boats tu be made with all pofible expedition; and while the enemy were diserted by endeavyuring to intercept the fuccours that were fent hima from Gaul, he taid hold of that opyurtunity to convey lis buats in the night on carriages 22 miks from his camp; where wich wondefful quicknefs a great detachment paffed the Sicoris, and encarping on the oppofite bank unknown to the enemy, buik a bridge in two days, opened a comms:nication with the noighbouring comuty, rcceived the fupplies from Gaul, and whered the wants of his foldiers. Calar beine thus dhivered from danget, purwed the anniss of Afranius and Petrcius with fuch fuFerior addrets and conduct, that he fored then to tubrait without coming to a batile, and by that ineans bee?me mafier of all Hither Spwin. The two generals dithanded their troms, feat them out of the province, aid returned to Italy, atter having folemnly promifed rewer to aftemble forees amain, or make war upon Ciefar. Upon the news of the reduction of Hither Spain, the Spamiards in thartive Spain, and one Roman legion, seereded from Varm, Pompey's goveruor in that pruwince, which obliged him to lurrader his other legion and all his money.

Crfar having thus reducel all Spain in a few months, appointed Caffus Longinus to govern the two prorinces with four lagions, and then returned to Warfeiles; *hich city was jut! upon the point of furrendering aiter a moof vigo:ous reilltance. Though the inhabitantio had hy their late treachery deferved a fevere punifiment, yet he granted then thicir lives and liberty; but itripped their arfenals of anms, and obliged them to deliver up aill their fhips. From Marfeilles Crefar marched into Cifalpine Gaul; and from theace haftened to Rome, where he laid the foundation of his future grandeur. He found the city in a very different flate from that in which he had left it. Moit of the fenators and magriftrates were Aed to Pompey at Dyrshachium. However, there were fill pretors there; and anong them M. EEmilius lepidus, who was afterwards one of the triumvirs with Octavius and Marc Antony. The pretor, to ingratiate himfelf with Cefar, nominated hin ciftator of his own authority, and againt the inelination of the fenate. Cxfar accepted the new dignity; Lut neither abufed his power, as Sylla had done, nor retained it foleng. During the 11 days of his dietatoifip, he goverued with great moderation, and gained
the affictions both of the people and the patricians. He recalled the exiles, granted the rights and privileges of Romaa citizens to all the Gauls beyond the Po, and, as pontilex maximus, filled up the vacaucies of the fa. cerdutal collieges with his own friends. Though it was expected that be would have abrolutely cancelled all debis contracted fince the begimimg of the troubls, he only reduced the intcreft to cnc-fouth. But the chicf we he made of his dictatornip was to prefide at the dection of conful, for the ne:st ycar, when he got himfelt, and Servilius lamicac, one of his moft zeatuas partilans, prontoted to that dignity.

And now bejng tefolved to finllow Pompey, and carry the war into the entl, he fet out for Brundufum, whither lee had ordered 12 legions to repair with all pof not fible expedition. But on his arrival he found only five cati. there. The reft, being afmaid of the dangers of the fea, and unvilling to engage in a new war, had marched leifurely, complaining of their general for allowing them no refpite, but hurrying them continually from one country to another. However, Crefar did not wait for then, but fet fail with only five legions and 600 horfe in the begiming of lanuary. While the relt weere waiting at Brundurime for thips to tranfport them over into L :pirus, Cæiar arvived fafe with bis five legions is Chaonia, the northern pari of Epirus, near the Ceraunian mountains. There be landed his troops, and fent the hips back to Brundutium to bring over the legions that were left behind. The war he was now entering upon was the mof difficult he had yet undertaken. Pumpey had for a whole year been afenbiing troups from all the eadern countries. When he left ltaly, he had only dive legions; but fince his arrival at Dyarhachium he had bren reinforced with one from Sicily, another from Crete, and two from Syria. Three thourand archers, fix: colorts of ningers, and feven thoufand horfe, had keen fent him by princes in alliance with Rome. All the free cities of Afra had reinforced his army with their belt troops; nay, if we give credit to an tiitorical peit, fuccours were brought him from the Indus and the Gauges to the ealt, and from Arabia and Ethiopia to the forth; at leall it is certain, that Greece, Alia Minor, Sy ria, Paleftine, Ligypt, and all the nations from Lhe Meditermacan to the Leplarates, took up arms in his fayour. He had alnooft all the Roman knights, that is, the flower of the young nobility, in his fquadronm, and his legions contitted motlly of veterans inured to dangers and the toils of war. Pompey himfalf was a general of great experience and addrefs; and had under him fore of the bett commanders of the republic, who had formerly conducted armies themfelves. As fur his navy, he had above 500 hips of war, betides a far greater number of fimall veflels, which were continuaily cruiling on the coalts, and intercepted fuch frips as carried arus or provitions to the enemy. He had likewife with hin above \(2 c 0\) fenators, who formed a Fore numerous fenate than that at Rome. Comelius Lentulus and Claudius Marcellus, the lalt year's con. fuls, prefided in it ; but under the direction of Pompey their protector, who ordered thein to affemble at Theffalonica, where he built a ttately hall for that purpofe There, in one of thsir aflemblies, at the motion of Cato, it was decreed, that no Roman citizen flould be put to death but in battle, and that no city fubject to the republic fould be facked. At the fame time the
confoript \{athers afferbled at Theftaloniea deereed, that they alone reprefented the Roman fenate, and that thofe who relided at Rome were encouragers of tyranay, and fricnds to the tyrant. And indeed, as the fiown of the nobility was with Pompey, and the mont wirtious men in the republic had taken refuge in lis camp, he was generally look a! upon as the only hoje and fupport of the public likerty. Iferse masy parsors of emisent prolity, who had hithertu food net.tr, flocked to hinn from all parts. Among thefe were young Brutns, who afterwards confpied agaiall Crefar, Tidits sextius, and Lalsienus. Bratus, whote father had been put to cieath in Galatia by Punpey's order, had never fpuken to him, or fo much as faluted him fince that time: but as he now lookerd upon him as the defender of the pub-
- Lic liberty, he joined hin, facrificing therein his private refentment to the interefe of the prablic. Pompery ieceived hims with great joy, and was willing to confer lupon him fome command; but he deelined the offer. Tidins Sextius, though extremely old and lanae, yct left Rome, and went as far as Macedonia to join Pomney there. Labienus like wife forfook his old benefator, urder whom he had ferved during the whole courfe of the Gaulih war, and went over to his rival, though Cæfar hat appointed him commander in chief of all the forces on the cother fide the Alps. In flort, Pompey's Farty grew into tuch reputation, that his caufe was generaily called the gocd rouff, while Cefar's adherents were looked upon as enemies to their country, and abettors of tyranny.

As fova as Cæfar landed, he mareled directiy to Oricum, the nearelt city in Epirus, which was taken without oppofition, The like fuccefs attended lim at Apollonia, which was in no condition to fland a fiege; and thefe wo conquefts oiped a way to Dyrrhachium, where Pompey bad his nagazines of arms and provifions. This hieccefs, howeser, was internupted by the news that the flet which he had fent back to Brundulium to tranfport the reft of his troops had been attacked by Bibulus, one of Pompey's adrinals, who had taken 30, and inhumanly burnt them with the feamea on board. This gave Cxtär g̣teat unealinefs, efpecially as he heard that Bibulus, with 110 thips of war, had taiken pofeffon of all the harthours between Salonium and Oricum; fo that the legions at Brundufinu could not ventare to crofs the fea without great danger of faling into the enemy's hands. By this Cæfiur was fo much embarrafed, that he made propofals of accommodation upon very moderate terms; being no other than that both Pumpey and he fhould difland their armies within three days, renew their former friendihip with folemn oaths and return together to Italy. Thefe propofals were fent by Vibullius Rufus, an intimate friend of Pompey, whom Cxfar had twice taken prifoner. Pompey, however, probably clated with his late good fortune, anfisered that he would not bearken to any terms, left it flould be faid that he owed bis life and return to Italy to Cafar's favour. However, the latter again fent one Vatinius to confer with Pompey about a treaty of peace. Labicnus was appointed to receive the propofals; tunt while they were conferring together, a party of Pompey's men coming up to them, difcharged their darts at Vatinius and thofe who attended him. Surse of the guards were wounded, and Vatinius narrowly efcaped with his life.

\section*{\(8 \mathrm{I}]\) \\ ] R (}

In the mean time Crefar afvanced towards Dyrrha- Rnme. clicurn, in hopes of furprifing that important place; but Pompey mexpectedly appcarino, he halted on the orlher fide of the river \(A p\) us, where he intreuched hin. felf, as having tue a fmall nunber of troops in coun. parifon of the formidahle army whels atte.ided Pon. pey. The luiter, howe ver, notwithfarding his fuperiority, dant not crofs the river in Ciffar s lifht; fo that the two anmies continucd for fome time quiet in their sefpective danps. Cæfar wrote letter after leiter to Mare Antony, who commanded the legions be had lefe in Italy, to cume to his aftitance; but receiving no ario fwer, Caziar difguifed hinfelf in the hatit of a fiave. and with all inaaginable fecetcy went on board a fukerman's bark, with a defign to go over to Erundufiun, though the enemy's flect was cruifing on the coats both of Creece and Ital\}. 'Ini:s detign, howeser, mifcarried, by reafon of the boat being put back by contraty winds; and thus Caflar was retlored to his folliliers, who had been wery unealy at his ableace. He was no fooner lauded than he difpatched Pofllomius, one of his lieutenants, with moll preffing erders to Mare Antony, Gabinius, and Caleaus, to bring the troops to him at all adventures. Gabinius, unwilling to expofe all the hopes of his general to the hazards of the fea, thought it fafer to march a sTeat way about hy Illy rictom, and therefore engaged ali the legionarics he coull to follow him by land. But the Iliyrians, who had, wankown to him, declared for Pomper, feil unexpectedly upun hita and killed him and his nern, net one eleaping. Mare Artony and Calenis, who went by fea, were in the greateft danger from one of Pompey's adinirals ; but lad the good luck to bring their treops fafe to fhore it Nyphxum, in the neighowrieod of Apollowia. As fuon as it was koown that Aniony was landed, Pompey marched to prowent his joinduse Criar. On the other hand, Cefar iuftanty di campect, and iaftening to the relief of his henitemat, joined hina befere lonngey carne up. Thea Pormpey, nut cari..g to engage therm when united, retired on an aivantageous polt in the neighbourhoud of Dyrthachinn, known by the name of Afrarugiut, and there ezcaniped. Cxfar having thus at length git all his troops together, refolved to linish the war by one general action, and determize the tate of the world, either by his own deatla or by that of his rival. To this end he offered Pompey batte, and kept his zrmy a great while drawn up in figlit of the eneny. But Pompey declining an engagement, he decaniprod, and turned towards Dyrrhachiun, as if he deligned to furprife it, hoping by this means to draw Poinpey into the phain. Lut Pompey, looking upon the taking of Dyrrhachium as a chimerical project, folluwed Cxfar at fome ditance, and letting him draw near to the city, encamped on a hill called Petra, which commanded the fea, whence he could be fupplied with provilions frum Greece and Afia, while Crefar was forced to briug corn by land ficm Epirus, at a aft expence, and through many dangers.

This inconvenience put Cæfar upon a new defign, which was to furround ain army far more numerous than his own, and, by flutting them up within a narrow tract of ground, diftreis thont as much for want of furage as his troops were diftrcffed for want of corn. Purfuant to this defign, he drew a line of circumvalla- B
 hien liis camp

\section*{\(\mathrm{R} O \quad \mathrm{M}\)}

Frme. Him fo clofely blocked up, that thongh his men were plentifully fupplied with provifions by fea, yet the horfes of his army began foon to die in great numbers for want of forage. Crefar's men, though in the utmoft diftrefs for want of corn, yet bore all with incredible cheerfulnefs; protefting, that they would rather live upon the bark of trecs than fufter lomper to efcape, now they had him in their power. Cafar tells us, that in this extremity fuch of the army as had been in Sardinia found out the way of making bread of a ecrtain root called cleru, which they fteped in milk : aud that when the enemy infulted them on account of the barsing condition which they were in, they lurew feveral of there loaves among them, to put them out of all hopes of fubduing them hy famine. "Su long as the earth produces fueh roots (faid they), we will not let Pompey cfeape." At length Pumpe'y, alarmed at the diftempers which began to prevail ia his army, made feveral attempts to break through the barriers that inclofed lim, but was always repulfed with lofs. At length, being reduced to the utmolt extremity for want of forage, he refulved at all events to force the enemy's lines aud efcape. With the affifance, therefore, and by the advice of two deferters, he embarked his archers, ningers, and light-armed infantry, and marching him- felt by land at the head of 60 cohorts, went to attack that part of Cafar's lines which was next to the fea, and not yet quite finifhed. He fet out from his camp in the dead of the night, and arriving at the poit he defigned to force by break of day, he began the attack by fea and land at the fame time. The ninth legion, which defended that part of the lines, made for fome tine a vigorous refiftance; but being attackedi in the rear by Pompey's men, who came by fea, and lanc.ed between Cæfar's two lines, they fled with fuch precipitation, that the fuccours Marcellimus fent them from nueighbouring poit could not fop them. The enfign who carried the eagle at the head of the routed kgion was mortally wounded; but neverthelefs, before he died, had prefence of mind enough to confign the eagle to the cavalry of the party, defining them to deliver it to Cefar. Pompey's men purfued the fugitives, and made fuch a flaughter of them, that all the centurions of the fret cohort were cut off except one. And now Pompcy's army broke in like a torrent upon the pofts Cæfar had fortified, and were advancing to attack Marcellinus, who guarded a neighbouring fort; but Marc Antony coming very feafonably to his relief with 12 cohorts, they thought it advifable to retire.

Soon after Ciefar himelf amived with a Arong reintared angrat danger.
forcement, and pofled himfelf on the fhore, in order to prevent fuch attempts for the future. From this poll he obferved an old camp which he had made within the place where Pumpey was inclofed, but afterwards abandoned. Upon his quitting it, Yompey had taken poffillion of it, and left a legion to guard it. This port Ceffar refolved to reduce, hoping to repair the lofs he had lullained on this unfortunate day, by taking the legion ntich Pomprey had pofted there. Accordingly, he advaned fecretly at the head of 3.3 cohorts in two lines: and arriving at the old camp before lompey could have notice of his mareh, attacked it with great sircur, forecd the fint intrenchment, notwithtanding the brave reliftance of T'itus Pulcio, and penetrated to the fecond, whithor the legion had retired. Wut here

\section*{\(\left.3^{82}\right] \quad \mathrm{R} O \mathrm{M}\)}
his forture changed on a fudden. His right wing, in looking for an entrance into the camp, marched along the outfide of a trencli which Cxfar had formerly carried on from the left angle of his camp, abour 400 paces, to a neighbouring river. This trench they mif. took for the rampart of the camp; and being led away by that miltake from their left wing, they were foon after prevented from rcjoinirg it by the arrival of lompey, who came up at the head of a legion and a large budy of horfe. 'Then the legion which Cæfar had attacked taking cournes, made a brilk fally, dove his men back to the firt intrenchment which they had feized, and there put them in gieat diforder while they were attempting to pals the ditch. Pompey, in the mean time, falling upon them with his cavalry in flank, completed their defeat; and then flying to the enemy's right wing, which had paffed the trench mentioned above, and was flut up between that and the 1 amparts of the old camp, made a moft dreadful naughter of them. The trench was filled with dead bodies, many falling into it in that diforder, and others pafing over them and prefling them to death.

In this diftrefs, Cxlar did all he could to thop the fight of his legionaries, but to no purpofe: the ftan-dard-bearers themfelves threw down the Roman cagles when Cxfar endeavoured to ftop them, and left them in the hands of the enemy, who on this uccafion took 32 Itandards; a difgrace which Cæfar had never fuffered before. He was himfelf in no fmall danger of falling by the hand of one of his own men, whom he took hohd of when flying, bidding him ftand and face about; but the man, apprehenfive of the danger he was in, drew his fword, and would have killed him, had not one of his guards prevented the blow by cutting off his arm. Ciefar loft on this occafion 960 of his foot, 400 of his horfe, 5 tribumes, and 32 centurions.

This lofs and difgrace greatly mortified Cæfar, but Herey did not difcourage him. After he had by his lenity his affirs, and eloquent fpeeches recovered the fpirit of his troops, he decamped, and retired in good order to Apollonia, where he paid the army, and left his fiek and wounded. From thence he marched into Macedon, where Scipio Metellus, Pompey's father-in-law, was encamped. He hoped either to draw his rival into fome plain, or to overpower Scipio if not allifted. He met with great difficulties on his march, the countries through which he paffed refufing to fupply his army with provifions; to fuch a degree was his reputation funk fince his laft defeat! On his entering Theffaly he was met by Donitius, one of his lieutenants, whom he had fent with three legions to reduce Epirus. Having now got all his forces together, he marched diractly to Gomphi, the firft town of Theffaly, which hard been formerly in his intereft, but now declared againt him. Whereupon he attacked it with fo much vigour, that though the garrifon was very numerous, and the walls were of an uncommon height, he made himfelf matter of it in a few hours. From hence he marched to Metropolis, another confiderable town of Theffaly, which immediately furrendered; as did all the other eities of the country, except Lariffa, of which Scipio had made himfelf maller.

On the other hand, Pompey being continually inportuned by the fenators and officers of lis army, left his camp at Dyrrhachium, and followed Catar, fimly. refulved

\section*{R O M} vantage, and follow Pompey to whatever country he fhould retire. Hearing, therefore, of his being at Amphipolis, he fent off his troops before him, and then embarked on board a little frigate in order to crofs the Hetlefpont; but in the middle of the Arait, he fell in with one of Pompey's commanders, at the head of ten fhips of war. Cæfar, noway ternified at the fuperiority of his force, bore up to him, and commanded him to fubmit. The other infantly obeyed, awed by the terror of Cafar's name, and furrendered himfelf and his fleet at difcretion.

From thence he continued his voynge to Ephefus, then to Rhodes ; and being informed that Pompey had been there before him, he made no doubt but that he was fied to Egypt; wherefore, lofing no time, he fet fail for that kingdom, and arrived at Alexandria with about 4000 men; a very inconfiderable force to keep fuch a powerful \(\cdot\) kingdon under fubjection. But he was now grown fo fecure in his good fortune, that he expected to find obedience everywhere. Upan his landing, the firft accounts he received were of Pompey's miferable end, who had been affaffinated by orders of I: urderedthe treacherous king as foon as he went on hore; and is gypt foon after one of the murderers came with his head and ring as a moft grateful prefent to the conqueror. But Cefar turned away from it with horror, and fhortly after ordered a magnificent tomb to be built to his memory on the fpot where he was murdered; and a temple near the place, to Nemefis, who was the goddefs
that punifned thofe that were cruel to men in adver. fity.

It fhould Seem that the Egyptians by this time had fome hopes of breaking off all alliance with the Pomans; which they confidered, as in fact it was, but a fpecious fubjection. They firt began to take offence at Cæfar's carrying the enfigns of Roman power before him as he entered the city. Photinus, the eunuch, alio treated him with difrefpect, and even attempted his life. \({ }_{21 t}\) Cæfar, however, concealed his refentment till he had a The Egrpforce fufficient to punifh his treachery; and fending rel with privately for the legions which had been formerly en-Cowar, rolled for Pompey's fervice, as being the nearelt to Egypt, he in the mean time pretended to repofe an entire contidence in the king's minitter. However, he foon changed his manner when he found himfelf in no danger from his attempts; and declared, that, as being a Roman conful, it was his duty to fettle the fucceffion to the Egyptian crown.

There were at that time two pretenders to the crown of Egypt : Ptolemy, the acknowledged king ; and the celebrated Cleopatra his filter: who, by the cuitom of the country, was alfo his wife, and, by their father'swill, fhared jointly in the fucceffion. However, not being contented with a bare participation of power, fhe aimed at governing alone; but being oppofed in her views by the Roman fenate, who confirmed her brother's title to the crown, fhe was banifhed into Syria with Arfinoe her younger filter.

Cæfar, however, gave her new hopes of obtaining the kingdom, and fent both for her and her brother to plead their caufe before him. Photinus, the young king's guardian, who had long borne the moft inveterate hatred as well to Cæfar as to Cleopatra, difdained this propofal, and backed his refufal by fending an army of 20,000 men to befiege him in Alexandria. Cæfar \({ }^{212}\) brave, And befiege bre repuld the enemy for fome tune ; but finding him in the city of too great extent to be defended by fo fmall Alcsandria. an army as he then had with him, lie retired to the palace, which commanded the harbour, where he purpofed to make a ftand. Achillas, who commanded the Egyptians, attacked him there with great vigour, and ftill aimed at making himfelf mafter of the fleet that lay before the palace. Cæ〔ar, however, too well knew the importance of thofe fhips in the hands of an enemy ; and therefore burnt them all in fpite of every effort to prevent it. He next poffeffed himfelf of the ille of Pharos, which was the key to the Alexandrian port, by which he was enabled to receive the fupplies fent him from all fides; and in this fituation he determined to withifand the united force of all the E. gyptians.

In the mean time, Cleopatra having heard of the prefent turn in lier favour, refolved to depend rather on Crfar's favour for gaining the government than her own forces. She had, in fact, aftembled an army in Syria to fupport her claims; but now judged it the wifeft way to rely entirely on the decifion of ler felfelecied judge. But no arts, as fhe juitly conceived, were fo likely to influence Cxfar, as the charms of her perfon. The difficulty was how to get at Crefar, as her enemies were in poffeffion of all the avenues that led to the palace. For this purpore, fhe went on board a fmall veffel, and in the evening landed near the palace; where, being wrapped up in a coverlet, the wa

\section*{\(R \quad 0 \quad \mathrm{M} \quad\left[\begin{array}{lll} & 54 & ]\end{array}\right.\) \\ R O M}

Sume. carriced by one Afpolodonis into the very chamber of Caxar. Her atdrefs at firf pleafed him; but her carefles, which were carried berond the bounds of imnocence, entirely bronght him ove to fecond her claims.
While Cleopatra was thus employed in forwarding her own views, her fifter Arfince was alfo ftrenuoully engaged in the camp in purfing a feparate interelt. She had found means, by the affitance of one Ganymede ler confident, to make a large divifion in the Egyptian arny in her fasour ; and foon after caufed Achillas to be murdered, and Ganymede to take the command in his ftead, and to carry on the fiege with greator vigour than before. Ganymede's principal cffort was by letting in the fea upon thofe canals which fupplied the palace with frefh water; but this inconvenience Cafar remedied by dirging a great number of wells. His next endeavour was to prevent the junction of Crofar's 2 th legion, which he twice attempted in vain. He foon after made himfelf mafter of a bridge which joined the inte of Pharos to the conthent, from which poft Cafar was refolred to diflodge him. In the heat of action, fome mariners came and joined the combatants; but being feized with a panic, inflantly fled, and fprcad a general telror through the arny. All Crefar's endeavours to rally his forces werc in vain, the confufion was paft remedy, and numbers were drowned or put to the fiword in attempting to efcape; on which, feeing the irremediahle diforder of his troops, he retired to a fhip in order to get to the palace that was jult oppofite. However, he was no fooner on board than great crowds entered at the fame time with him ; upon which, apprehenfive of the fhip's fmking, he jumped into the fea, and fwam 200 paces to the fleet that lay before the palace.

The Alexandrians, finding their efforts to take the palace ineffectual, endeavoured at leaft to get their king out of Cefar's power, as he had feized apon his perion in the beginning of their difputes. For this purpofe they made ufe of their cuilomary arts of difimulation, profefing the utmoft defire for peace, and ouly wanting the prefence of their lawful prince to give a fanction to the treaty. Cxfar, who was fenfible of their perfidy, neverthelefs concealed his fufpicions, and gave them their king, as he was under no apprelienfions from the abilities of a boy. Ptolemy, however, the initant he was fet at liberty, inftead of promoting peace, made every effort to give viryour to hoftilities.

In this manner Ciefar was hemmed in for fome time: but he was at latt relieved from this mortifying fituation by Mithridates Pergamenus, ome of his mof faithful partizans; who, collecting a numerous army in Syria, marched into Egypt, took the city of Pelcfurn, repulfed the Egyptian anny with lofs, and at laft, joining with Cæfar, attacked their camp, and made a great faughter of the Egyptians. Ptoleny himfelf, attempting to efcape on board a veffel that was failing down the river, was drowned by the Mip's finking; and Cæfar thus became mafter of all Egspt without anv further oppolition. He therefore appointed, that Cleopatra, with her younger brother, who was then but an infant, fhould jointly govern, according to the intent of their father's will ; and drove our Arinoe with Ganymede into banifhment.

Crefar now for a while feemed to relax from the Wfual activity of hisconfet?, cancirated with the charms
of Cleopatra. Inftead of quitting Egypt to go and quell the remains of Pomper's party, le abaudoned hin felf to his plealures, palfing whole nights in feafts with the young queen. He evern refolved to attend her up the Nilc into Ethiopia; hut the brave vcterans, who had long followed his fortune, buldly reprehended his conduct, and refufed to be partners in fo infamous an expedition. Thus, at length, rouzed from his lethargy, he left Cleopatra, by whom he had a fon who was aficrwards mamed Caforio, in order to oppore Pharnaces the king of Pontus, who had now made fome inroads upon the dominions of Rome. Here he was attended with the greateft fuccefs, as we have related under the article Posiros; and having fettled affairs in this part of the empire, as well as time would permit, he em barked for Italy, where he arrived fooner than his enemies could expect, but not before his affairs there al, folutely required his prefence. He hard been, during his abfence, created conful for five years, dietator for tian iut one yeat, and tribune of the people for life. But Antony, who in the mean time governed in Rome for him, had filled the city with riot and debauchery, and many commotions enfued, which nothing but the arrival of Cxfar conld appeafc. However, by his moderation and humanity, he foon reftored tranquillity to the city, fearce making any diftinction between thofe of his own and the oppofite party. Thus having, by gentle means, reftored his authority at home, he prcpared to march into Africa, where Pomper's party had found time to rally under Scipio and Cato, affited by Juba king of Mauritania. But the vigour of his proceedings had like to have been retarded by a mutiny in his own army. Thofe veteran legions, who had hitherto conquered all that came before them, began to mmmur tor not having received the rewards which they had expected for their palt fervices, and now infifted upon their difcharge. However, C æfar found means to quell the mntiny; and then, according to his ufual diligence, landed with a fimall party in Africa, the reft of the ar:my following foon after. After many movements and fkirmifhes, he refolved at lait to come to a decifive battle. For this parpofe he invelted the city of Tapfus, fuppofing that Scipio would attempt its relicf, which turned out according to his expeetation. Scipio, joining with the young king of Mauritania, advanced with his army, and cncamping near Cxfar, they foon came to a general battle. Ceefar's fuccefs was as ufual ; the enemy received a complete and final overthrow, with paretear little lofs on his fide. Juba, and Petreius his general, Pompe killed each other in defpair; Scipio, attenpting to efcape by fea into Spain, fell in among the cnciny, and was flain ; fo that, of all the generals of that undone party, Cato was now alone remaining.
'ithis extraordinary man, having retired into Africa after the battle of Pharlalia, had led the wretched remains of that defeat through burning deferts and tracts infefted with ferpente of various malignity, and was now in the city of Utica, which he lad been left ty) defend. Still, however, in love with even the how of Rornan government, he had formed the principal citizens into a femate, and conceived a refolution of holding out the town. He accordingly aflembled his fenators upon this occafion, and exhorted them to Catok fland a fiege; but finding his admonitions ineffectual, hiarfelf he flabbed himelelf with his fivord t. Upon bis deate + see c

\section*{\(\mathrm{R} \circ \mathrm{M} \quad[385] \quad \mathrm{R}\) O MI}
t.e war in Africa being completed, Cæfar returned in triumpls to Rome; and, as if he had abridged all his former triumphs only to increale the fplendor of this, the citizens were aftonifhed at the magnificence of the proceffion, and the number of the countries he had fubdued. It latted four days: the firt was for Gaul, the fecond for Egypt, the third for his victories in Afia, and the fourth for that over Juba in Africa. To every one of his foldiers he gave a funn equivalent to about 1501 . of our money, double that fum to the centurions, and four times as much to the fuperior officers. The citizens alfo fhared his bounty; to every one of whom he diftributed 10 bufhels of corn, 10 pounds of oil, and a fum of money equal to about two pounds Sterling of surs. He, after this, entertained the people at about 20,000 tahles, treated them with the combat of gladiators, and filled Rome with a concourfe of fpectators from every part of Italy:

The people now feemed eager only to find out new modes of homage and unufual methods of adulation for their great enflaver. He was created, by a new title, Magither Morum, or Matter of the Morals of the People; he received the title of Emperor, Father of bis country: his perfon was declared facred; and, in fhort, upon him alone were devolved for life all the great dig. nities of the flate. It muft be owned, however, that no fovereign could make a better ufe of his power. He immediately began his empire by repreffing vice and encouraging virtue. He communicated the power of judicature to the fenators and the knights alone, and by many fumptuary laws reftrained the feandalous luxuries of the rich. He propofed rewards to all fuch as had many children; and took the moft prudent methods of repeopling the city, that had been exhaufted in the late commotions; and befides his other works, he greatly teformed the kalendar.

Having thus reftored profperity once more to Rome, he again found himfelf under a neceffity of going into Spain, to ofpofe an army which had been raifed there under the two fons of Pompey and Labienus his former general. He proceeded in this expedition with his ufual celerity, and arrived in Spain before the ene. my thought him yet departed from Rome. Cneius and Sextus, Pompey's fons, profiting hy their unhapFy father's example, refolved as much as poffible to protract the war; fo that the firt operations of the two armies were fpent in fieges and fruitlefs attempts to furprife each other. At length Cæfar, after taking many cities from the enemy, and purfuing young Pompey with unwearied perfeverance, compelled him to come to a battle upon the plains of Munda.

After a moft obiftinate engazement, Crfar gained a complete victory (fee Muxis) ; and having now fubdued all his enemies, he returned to Rome for the latt time to receive new dignities and honours, and to enjoy an accumulation of all the great offices of the ftaie. Still, however, he pretended to a moderation in the enjoyment of his power; he left the confuls to be named by the people; but as he poffeffed all the authority of the office, it from this time began to fink into contempt. He enlarged the number of femators alfo; but as he had previounf deftroyed thrir power, their new honours were but en'pty titles. He took care to pardon all who had been in arms againft him, but not till he had deprived them of the power

Vol. XVI. Part I.
of refiftance. He even fet up once more the flaties of Pompey; which, lowever, as Cicero obferved, he only did to fecure his own. The relt of this extrao:dinary man's life was employed for the advantage of the ftate. He adorned the city with magnificent buildings; he rebuilt Carthage and Corinth, fending colo. nies to both cities; he undertook to level feveral mountains in Italy, to drain the Pontine marfhes near Rome, and defigned to cut through the Ifthmas of Peloponnefus. Thus he formed mighty projects and defigns be- His vant yond the limits of the longeft life; but the greatelt of deligns. all was his mtended expedition againft the Parthians, by which he defigned to revenge the death of Cralus; then to pafs through Hyrcania, and enter Seythia along the banks of the Cafpian fea ; from thence to open himfelf a way through the immeafurable foreft of Germa. ny into Gaul, and fo return to Rome. Thefe were the aims of ambition: but the jealoufy of a few individuals put an end to then all.

The fenate, with an adulation which marked the degeneracy of the times, continued to load Cæfar with frefh honours, and he continued with equal vanity to receive them. They called one of the morths of the year after his name; they flamped money with his image ; they ordened his flatue to be fet up in all the cities of the empire; ther indtituted public facrifices on his bitth-day; and talked, even in his life-time, of entolling him in the number of their gods. Antony, at one of their public feltivals, foolifhly ventured to offer him a diadem; but he put it back again, refufing it feveral times, and receiving at every refufal loud acclamations from the people. One day, when the fenate ordered him fome particular honours, he neglected to rife from his feat ; and from that moment is faid to have been marked for deftruction. It began to be rumoured that he intended to make himfelf king; for though in fact he already was fo, the people, who had an utter averfion to the name, could not bear his affuming the title. Whether he really defigned to aflume that empty honour mult now for ever remain a fecret ; but certain it is, that the unfnfpeeting opennefs of his conduct marked fomething like a confidence in the innocence of his intentions. When informed by thofe about him of the jealoulies of many perfons who envied his power, he was heard to fay, That he had rather die once by treafon, than to live continnally in the apprehenfion of it : and to convince the world how little he had to apprehend from his enemies, he dilbanded his company of Spanifh guards, which facilitated the enterprife againft his life.

A deep-laid confpiracy was formed againft him, com. A confpipofed of no lefs than 60 fenators. At the head of fracy formthis confpiracy was Brutus, whofe life Cæfar had fpa- ed againk red after the battle of Pharfalia, and Caffius, who had been pardoned foon after, both prextors for the prefent year. Brutus made it his chief glory to have been defcended from that Brutus who firlt gave liberty to Rome; and from a defire of following his example, broke all the ties of private friendnip, and entered into a confpiracy which was to deftroy his benefactor. Caffins, on the other hand, was impetuous and proud, and hated Cææar's perfon ftill more than his caufe. He had often fought an opportunity of gratifying his revenge by affaflination, which took rife rather from private than public motives.

\section*{R ○ M [ \(3^{86}\) ] H O M}

Earse. The confpirators, to give a colour of juilice to their procecuings, remitted the execution of this defign to the ides of Mareh, the day on which it was reported that Cefar was to te offered the crown. 'The augurs had foretold that chis dyy would be fatal to him ; and the night preceding, he heard his wife Calphumia launenting in her deep, and being awakened, the confeffed to hin that hee dreant of his being affidinated in her anns. 'Thefe omens, in fome meafure, began to change his intentions of soing to the fenate, as he had ecfo'ved, that day; but cne of the ennfpirators eoming in, prevaised upon him to keep his refw tion, telling him of the reproach which wonld attend his faying. at home till his wite lad lucky dreams, and of the preparations that were made for his appearance. As he went along to the fenate, a fave, who haftened to lim with infurmation of the co:fpiracy, attempted to cone near him, but could nut for the crowd. Artenidorus, a Greek philofopher, who had difeovered the whole plot, dulivered to him a memorial, comtainins the heads of his information ; but Cæfar gave it, with other papers, to one of his fecretaries without reading, as was ufual in things of this nature. As foon as he had taken his place in the fenate, the confpirators came near him, under a pretence of faluting him; and Cimber, who was one of then, approached in a fuppliant pollure, pretending to fue for his brother's pardon, who was hamithed by his order. A!l the confpirators feconded lim with great tendernefs; and Cimber, feeming to fue with dill greater fubmilfion, tonk
221 hold of the bottom of his robe, holding him fo as to \(\mathrm{H}-\mathrm{i}=\mathrm{mur}\) prevent his rifing. This was the fignal agreed on. dercd. Cafea, who was behind, flabbed him, thougis nightly, in the foulder. Cafar inllantly tumed round, and with the Alyle of his tablet wouncied him in the arm. However, all the confyiraters were now alarmed; and jnelofing hir round, he recived a fecond flab from an maknewn hand in the breatl, while Caffius wounded him in the face. He itill defended himfelf with great vigour, ruhhing among them, and throwing down fuch as oppored him, till he faw Brutus among the conipiraters, who, coning up, ftruck his dagger in his thigh. From that moment Cafar thought no more of deferding himfelf, but looking upon this confpirator, cried out, "And you too, Brutus!" 'Then covering lis head, and foreading his robe before him in order to fall with greater deceney, he funk down at the bafe of Pompey's thatue, after receiving three and twenty wounds, in the 22256 th year of his age, and \(4^{\text {th }}\) of his reign.
Great cor. As foon as the confpirators had difpatehed Cæfar, fufios nece-they began to addrefs themfelves to the fenate, in or-
der to vindieate the motives of their enterprife, and to excite them to join in procuring their country's freedom; but all the lenators who were not accompliees fled with fuch precipitation, that the lives of fome of them were endangered in the throng. The people alfo being now alarmed, left their ufual occupations, and ran tumultuoufly through the city ; fome actuated by their fears, and ftill more by a deifre of plunder. In this ttate of corfufion, the confpirators all retired to the capitol, and guarded its acceffes by a body of gladiators which Brutus had in pay. It was in vain they alleged they only firteck: for freedom, and that they killed a tyrant who ufurped the rights of mankind : the people, aceufomed to Juxury and eafe, little regarded their profefo
fions, dreading mare the dangers of poverty than of fubjertion.

The friends of the late dictator now began to find that this was the time for coning into greater powes than before, and for fatisfying their ambition under the veil of pronoting juttice. Of this mumber was \(A_{n-}\). tony, whom we have alhcady fern alting as a lientenant under Cafar. He was a man of moderate abilitics and excelive vices; ambitions of power, but lkilled in war, to which he had been trained from his jouth. He was conful for this year ; and refolved, with Lepidus, who was foad of cummotions like himidf, to feize this oppontunity of affuming the fovereign power. I.epidus, therefore, tonk poficfion of the formu with a band of foldicrs at his derotion; and Antony, beimr conful, was permitted to command them. Their firt ftep was to poftefs themfelses of all Cælar's papers and noney; and the next to convene the femate, in order to determine whether Cachar had been a legral magitrate or a tyrannical ufurper, and whether thole who killed him merited rewatds or punifhments. '1 here were many of thefe who had received their promotions from Cxfar, and had acquired large \(f\), rtumes in confequence of his pird appointments : to vote him an ufurper, therefore, would be to endanger their properiy ; and yet to vote him innocent, might endanger the flate. In this dilemma they fecmed willing to reconcile extremes; wherefore they approved all the acts of Cæfar, and yut granted a gene:al pardon to all the conipirators.

This decree was very far fronz giving Antony fatisfaction, as it granted fecmity to a number of men whon were the avowed enemies of tyranny, and who would be foremot in oppofing his fchemes of rettoring abfolute power. As theseture the fenate had ratilied all Cæfar's acts without ditinction, he formed a fcheme upon this of making him rule when dead as imperioul. ly as he had done when living. Reing, as was faid, poffeffed of Cæfar's books of accounts, he fo far gained upon his fecretary as to mase him infert whatever he thought proper. By thele meats, great fums of money, which Cæfar never would have beftowed, were here diftributed among the people; and every man who was averfe to repubhcan principles was here fure of finding a gratuity. He then demanded that Cefar's funeral obfequics fhould be perfonned; which the fenate now could not decently forbid, as they had never declared him a tyrant. Accordinsly, the body was brought furth into the forum with the utmolt folemnity; and Autony began his operations upon the paffions of the people, by the prevailing motives of private intcrelt. He firf read Cxfar's will, in which he had left Oetavius, his filter's grandfon, his heir, per-inflame mitting him to take the name of Cofar; and three the per parts of his phivate fortune Brutus was to inlerit in eafe ple. of his death. The Roman people were left the gardens which he had on the other fide the Tiber; and every citizen, in particular, was to receive 300 fefter. ces. This laft bequeft not a little contributed to inereafe the people's affection for their late dictator ; they now began to confider Cefar as a father, who, not fatisfied with doing them the greateft good while living, thought of benchiting them even alter his death. As Antony continued reading, the multitude began to be moved, and fighs and lamentations were heard from every quarter. Antony, feeing the audience fa-

\section*{\(\mathrm{R} O \mathrm{M}\)}
vourmbe to his deligns, now begas to audrefs the af. fembly in a more pathetic ftrain : he prefented before them Cxfar's bloody robe, and, as he unfolded it, tonk care they fhould obferve the number of fabs in it : he then difplayed an image, which to them appeared the body of Crefar, all covered with wounds. The people could now no longer contain their irdignation; they unanimounly cried out for revenge; all the uld foldicrs who had fought urder him, burnt, with his body, their coronets, and other marks of conqueft with which he had honourred them. A great number of the firt matrons in the city threw in their ornaments alfo ; till at length, raze fucceeding to forrow, the multitude ran with flaming brands from the pile to fet fire to the confpiraturs houfes. In this rage of refentment, meeting with one Cinna, whom they miltook for anothcr of the fame name who was in the confiriacy, they tore himin in pieces. The confpirators themfelves, huwever, being well guarced, repulfed the nultitude with no great troubic: but perceiving the rage of the people, they theught it fafet to retire from the city. Di. rine honours were then granted him ; and an altar was erected on the place where his body was hurnt, vihere afterwards was erected a column inferibed, To the \(f a\). ther of his cunatry.

In the mean time, Antony, who had excited this flame, refolved to make the bell of the oecation. Having gained the pemple by his zeal in Cxfar's caufe, he next endeavoured to bring over the fenate, by a fearing concern for the freedom of the fate. He therefore propofed to recal Sextus, Pompey's ouly renaiaing fon, who had concealed himfelf in Spain fince the death of his father: and to grant bim the command of all the neets of the empire. His next ftep to their corfidence, was the quelling a fedition of the people, who rofe to revenge the death of \(\mathbf{C x f a r}\), and puting their leader ^ mathus to icath, who pretended to be the fon of Marius. He after this pretended to dread the refentnent of the multitude, and demanded a guard for the fecurity of his perfon. The fenate granted his requeft; and, under this pretext, he drew round him a body of 6000 refflute men, attached to his interefl, and ready to execute his commands. Thus he continued every day maknig rapid frides to abfolute power; all the authority of government was lodged in his hands and thofe of his two brothers alone, who Thared among them the confular, tribunitian, and pretorian power. His vows to revenge Crfar's death fermed cither poltponed, or totally forgotten; and his only aim feemed to be to confirm himfelf in that power which he had thus arffully acquired. But an obttacle to his ambition feemed to arife from a quarter on which rofed he feaft expected it. This was from Oetavius, or Oc- grand-nephew, and adopted fon of Cixfar, and was at Apollonia when his kinfinan was fain. He was then about 18 years old, and had been fent to that city to iinprove himpelf in the ftudy of Grecian literature. Up. on the news of Cerfar's death, notwithitanding the earneft difluafions of ill his frientls, he refolved to return to Rome, to claim the inheritance, and revenge the death of his uncle. From the former profeffions of Antony, he expected to find him a warm affirtant to his ains; and he doubted not, by his concurrence, to rake fignal vengeance on all who had a hand in the con
fpiracy- IVowever, he was greatly difappointed. Antony, whofe projects were all to aggrandize himfexf, gave him but a very cold reception, and, inftead of granting him the fortune left him by the will, delayed the payment of it upon various pretences, hoping to check his ambition by limiting his circumflances. Lut Octavianue, inftead of abating his claims, wen fold his own patrimonial eftate, to pay fuch legracics as Cwfar had left, and particularly that to the people. By thefe means he gained a degree of popularity, which his enemies vainly laboured to diminith, and which in fact he had many other methods to procure. His converfation was clegant and infinuating, his face comely and graceful, and his affection to the late dietator fo fincere, that every perfon was charmed either with his piety or his addrefs. But what added ftill more to his interen was the name of Cwfar, which he had affumed, and, in confequence of which, the former followers of his uncle now flocked in great numbers to lim. All thefe he managed with fuch art, that Antony now began to curceive a viclent jealouly for the talents of his young opponent, and fecretly laboured to counteract all his defigns. In fact, he did not want reafon; for the army near Rnme, that had long winted to fee the confpirators punifhed, began to turn from him to his rival, whom they fas more fincerely bert on gratifying their defires. Antony laving procured alfo the government of Hither Gaul from the people, two of his legrions that he liad brought home from his former government of Macedonia, went over to Octavianus, notwithftanding all his remonftrances to detain them. This produced, as ufual, interviews, complaints, recriminations, and pretended reconciliations, which only tended to widen the difference; fo that, at length, both fides prepared for war. I hus the flate was divided into three diltinet factions; that of Octavianus, who aimed at procuring Cafar's inheritance, and revenging his death; that of Autony, whofe fole view was to obtain ablesute power; and that of the confpirators, who endeavoured to reftore the fenate to its former authority.

Antony being raifed by the people to his new go. vernment of Cifalpine Ganl, contrary to the inclinations of the fenate, refolved to enter upon his province immediately, and oppofe Brutus, who commanded a fmall budy of troops there, while his army was yet entire. He accordingly left Rome, and marching thither, commanded Brutus tu depart. Brutus, being unable to oppore him, retired with his forces; but being purfued by intony, he was at latl befieged in the city of Mutina, of which, he fent word to the fenate.

In the mean while, Octavianus, who iy this time had raifed a body of \(10,=00\) men, returned to Rome; and being refulved, before he aitempted to take vengreance on the confpirators, if puffible to dim:nin the power of Antony, began by bringing over the fenate to fecond his defigns. In this he fuceceded by the credit of Cicero, who had long hated Antony becaufe he elought him the enemy of the flate. Alecord ng-A \({ }^{227}\) \% ly, by means of his cloquence, a decree was pafted, or. ts aksout dering dntuny to raire the liege of Mutina, to eva- betnea cuate Cifalpine Gaul, and to await the futher orders \({ }^{\text {kem. }}\) of the fenate upon the banks of the Rubicon. Antony treated the order with contempt; and inltead of
obcying, therto fo fubmiffive. Nothing now therefore remained for the fenate but to declare him an enemy to the ftate, and to fend Oetavianus, with the army he liad raifed, to curb his infolence. The latter was very ready to offer his army for this expedition, in order to revenge his own private injuries, before he undertook thofe of the public. The two confuls, Hirtius and Panfa, joined all their forces; and thus combined, they marched at the head of a numerous army, againt Antony, into Cifalpine Gaul. After one or two ineffectual conflicts, both arries came to a general engagement; in which Antony was defeated. and comprlled to fy to Lepidus, who commanded a hody of forces in Further Gaul. This victory, however, which promifed the fenate fo much fuccefs, produced effects very different from their expectations. The two confuls were mortally wounded; but Panfa, previvus to his death, called Octavianus to his bed-fide, and advifed him to join with Antony, telling him, that the fenate only defired to deprefs both, by oppoling them to each other. The advice of the dying conful funk deep on his fpirits; fo that from that time he only fought a pretext to break with them. Their giving the command of a party of his army to Decimus Brutus, and their denying him a triumph foon after, ferved to alienate his mind entirely from the fenate, and made him refulve to join Antony and Lepidus. He was willing, however, to try the fenate thoroughly, before he came to an open rupture; wherefore he fent to demand the confulfip, which was refufed him. He then thought himfelf obliged to keep no meafures with that affembly, but privately lent to found the inclinations of Antony and Lepidus, concerning a junction of forees, and found them as eager to affit as the fenate was to oppofe him. Antony was, in fact, the general of both armies, and Lepidus was only nominally fo, his foldiers refufing to ohey him upon the appruach of the former. WhereEore, upon being affured of the affllance of Octavianus upon their arrival in Italy, they foon croffed the Alps with an army of 17 legions, breathing revenge againft all who had oppofed their defigns.

The fenate now began, too late, to perceive their error in difobliging Octavianus; and therefore gave him the confulihip which they had fo lately refufed, and, to prevent his joining with Antony, flattered him with new honcurs, giving him a power fuperior to all law. The fifft ule Octavianus made of his new authority was to procure a law for the condemnation of Brutus and Caffius; after which, he joined his forces with thofe of Antony and Lepidus.
228 They are recanciled, and divide the empire wich Lefi:dos.

The meeting of thefe three ufurpers of their country's Frcedom was near Mutina, upon a little inand of the river Panarus. Their mutual fufpicions were the caufe of their meeting in this place. Lepidus firt entered, and, finding all things fafe, made the fignal for the other two to approach. Octavianus becan the conference, by thanking Antony for his zeal in putting Decimus Brutus to death; who, being abandoned by his army, was taken as he was defigning to efcape into Macedonia, and beheaded by Antony's command. Their conference lafted for three days; and the refult The fecond of it was, that the fupreme authority fhould be lodged triumvi- in their hands, under the title of the sriumvirate, for tate. the face of five years; that Antony fhould have

Gaul; Lepidus, Spain ; and Octavianns, Africa, and the Mediterranean iflands. As for ltaly, and the eaItern provinces, they were to remain in common, until their general enemy was entirely fubdued. But the laft article of their union was a dreadful one. It was agreed that all their enemies thould be deftroyed; of which each prefented a lift. In thele were comprifed Cruete \({ }^{233}\) not only the enemies, but the friends of the triumvi- of the rate, fince the partifans of the one were often fonn umvir among the oppofers of the others. Thus Lepidus gave up his brother Paulus to the vengeance of his colleague ; Antony permitted the profcription of his uncle Lucius; and Octavianus delivered up the great Cicero. 'l'he moft facred rights of nature were violated; 300 fenators, and above 2000 knights, were included in this terrible profcription; their fortunes were conff.cated, and their murderers enriched with the fooil. Rome foon. Eelt the effeets of this infernal union, and the horrid cruclties of Marius and Sylla were renewed. As many as could efcape the cruelty of the triumvirs, fled thither into Macedonia to Brutus, or found refuge with young Pompey, who was now in Sicily, and covered the Mediterranean with his numerous navy. Their cruclties were not aimed at the men alone ; but the fofter fex were in danger of being marked as objests cither of avarice or refentment. They made out a liit of 1400 women of the beft quality, and the richeft in the city, who were ordered to give in an account of their fortunes, to be taxed in proportion. But this feemed fo unpopular a meafure, and was fo firmly oppofed by Hortenfia, who fpoke againil it, that, infread of 1400 women, they were content to tax only 400. However, they made up the deficiency, by ex. tending the tax upon men; near 100,000 , as well citizens as Atrangers, were compelled to furnifh fupplies to the fubverfion of their country's freedom. At laft; both the avarice and vengeance of the triumviri feemed fully fatisfied, and they went into the fenate to declare that the profeription was at an end; and thus having deluged the city with blood, Oetavianus and An-. tony, leaving Lepidus to defend Rome in their abfence, marched with their army to oppole the coafpirators, who were now at the head of a formidable army in Afia.

Brutus and Caffus, the principal of thefe, upon the They: death of Cæfar, being compelled to quit Rume, went oppofe into Greece, where they perfuaded the Roman Itudents \(\frac{\text { Brurug }}{\text { Caflus }}\) at Athens to declare in the caufe of freedom; then parting, the former raifed a powerful army in Macedonia and the adjacent countries, while the latter went into Syria, where he foon became mafter of 12 legions, and reduced his opponent Dolabella to fuch Itraits as to kill himfelf. Both armies foon after joining at Smyraa, the figlit of fuch a formidable force began to revive the declining fpirits of the party, and to re-unite the two generals ftill more clofely, between whom there had been fome time before a flight mifunder. ftanding. In fhort, having quitted Italy like diftrefsed exiles, without having one fingle foldier or one town that owned their command, they now found themfelves at the head of a flourihing army, furnifhed with all the neceffaries for carrying on the war, and in a condition to fuppurt a conteft where the empire of the world depended on the event. This fuccels in raifng levies was entirely owing to the juttice, moCeration,
deration, and great humanity of Brutus, who in every inflance feemed ftudious of the happinefs of his country.

It was in this flourifhing flate of their affairs that the confpirators had formed a refolution of going againft Cleopatra, who, on her fide. had made great preparations to affift their opponents. However, they ware diverted from this purpofe by an information that Octavianus and Antony were now upon their march, with 40 legions to oppofe them. Brutus now, therefore, moved to have their army pafs over into Greece and Macedonia, and there mect the enemy ; but Caffus fo far prevailed as to have the Rhodians and Lycians firft reduced, who had refufed their ufual contribution. This expedition was immediately put in execution, and extraordinary contributions were raifed by that means, the Rhodians having fcarce any thing left but their lives*. The Lycians fuffered titl more feverely; for having thut themfelves up in the eity of Xanthus, they defended the place againft Brutus with fuch fury, that neither his art nor intreaties could prevail upon them to furrender. At length, the town being fet on fire, by their attempting to burn the works of the Romans, Brutus, inftead of laying hold on this opportunity to ftorm the place, made every effort to preferve it, intreating his foldiers to try all means of extinguifhing the fire: but the defperate phrenzy of the citizens was not to be mollified. Far from thinking themfelves obliged to their generous enemy, for the efforts which were made to fave them, they refolved to perifh in the flames. Wherefore, inftead of extinguifhing, they did all in their power to augment the fire, by throwing in wood, dry reeds, and all kinds of fuel. Nothing could exceed the diltrefs of Brutus upon feeing the townfmen thus refolutely bent on deltroying themfelves: he rode about the fortifications, ftretching out his hands to the Xanrhians, and conjuring them to have pity on themfelves and their city; but, infenfible to his expoftulations, they rufhed into the flames with defperate obItinacy, and the whole foon became an heap of undiftinguifhable ruin. At this horrid fpectacle, Brutus offered a reward to every foldier who would bring him a Lycian alive. The number of thofe whom it was poffible to fave from their own fury amounted to no more than 150.

Brutus and C -fius met once more at Sardis, where, after the ufual ceremonies were paffed between them, they refolved to have a private conference together, when, after much altercation, they were at lait perfectly reconciled. After which, night coming on, Caf fins invited Brutus and his friends to an entertainment. Upon retiring home, it was that Brutus, as Plutarch rutur fees tells the flory, faw a fpectre in his tent. It was in fjectre. the dead of the night, when the whole camp was perfectly quiet, that Brutus was employed in reading by a lamp that was juit expiring. On a fudden he thought he heard a noife as if fomebody entered; and looking towards the door, he perceived it open. A gigantie figure, with a frightful afpect, ftood before him, and continued to gaze upon him with filent feverity. At laft Brutus had courage to fpeak to it: "Art thou a dæmon or a mortal man? and why comelt thou to me?" "Brutus," replied the phantom, "I am thy evil genius, thou fhalt fee me again at Philippi." "Well then," anfwered Brutus, without being difcompofed,
"s we fhall meet again." Upon which the phantom vanifhed; and Brutus calling to his fervants, akked if they had feen any thing; to which replying in the negative, he again refumed his ftudies But as he was flruck with fo ftrange an occurrence, he mentioned it the next day to Caffius, who, beins an Epicurean,
afcribed it to the effect of imagrination too much exerthe next day to Caffius, who, being an Epicurean,
afcribed it to the effect of imagination tou much exercifed by vigilance and anxicty. Brutus appeared fatis-
fied with this folution of his late terrors; and, as Anfied with this folution of his late terrors; and, as Antony and Octavianus were now advanced into Macedonia, they foon after paffed over into Thrace, and ad-
wanced to the city of Philippi, near which the forces nia, they foon after paffed over into Thrace, and ad-
wanced to the city of Philippi, near which the forces of the triumvirs were pofted.

A battle foon enfued; in which the republicans were
defeated, and Caffus killed, as is related in the article Philifpi.
The firlt care of Brutus, when he became the fole ihe regeneral, was to affemble the difperfed troops of Cal-p blicancgeneral, was to affemble the difperfed troops of Caf-piblicana-
fius, and animate them with freth hopes of victorp. As efeated. they had loft all they poffefted by the plundering of their tamp, he promifed them 2000 denarii each man to make up their lofles. This once more infpired them
with new ardour ; they admired the liberality of their to make up their loffes. This once more infpired them
with new ardour ; they admired the liberality of their general, and with loud fhouts proclaimed his former intrepidity. Still, however, he had not confidence
fufficient to face the adverfary, who offered him battle intrepidity. Still, however, he had not confidence
fufficient to face the adrerfary, who offered him battle the enfuing day. His aim was to Harve his enemies, who were in extreme want of provifions, their fleet having been lately defeated. But his fingle opinion was over-ruled by the reft of his army, who now grew
every day more confident of their flrength, and more over-ruled by the reft of his army, who now grew
every day more confident of their frength, and more arrogant to their new general. He was, therefore, at
laft, after a refpite of 20 days, obliged to comply with arrogant to their new general. He was, therefore, at
laft, after a refpite of 20 dass, obliged to comply with their folicitations to try the fate of the battle. Both armies being drawn out, they remained a long while oppofite to each other without offering to engage. It is faid that he himfelf had lot much of his natural ardour by having again feen the fpectre the night preceding : however, he encouraged his men as much as poffible, and gave the fignal for battle within three hours of fun-fet. Fortune argain declared againt him; and the They are two triumviri exprefaly ordered by no means to fufferdefeated a a the general to efcape, for fear he thould renew the feend
war. Thus the whole body of the enemy feemed chicfyy ita. the general to efeape, for fear he thould renew the fecond
war. Thus the whole body of the enemy feemed chicfly ine. intent on Brutus alone, and his capture feemed inevitable. In this deplorable exigence, Lucilins his friend refolved, by his own death, to effect the general's de-
livery. Upon perceiving a body of Thracian horfe refolved, by his own death, to effect the general's de-
livery. Upon perceiving a body of Thracian horfe clofely purfuing Brutus, and jurt upon the point of taking him, he boldly threw himfelf in their way, tell-
ing them that he was Brutus. The Thracians, overtaking him, he boldly threw himfelf in their way, tell-
ing them that he was Brutus. The Thracians, overjoyed with fo great a prize, imnediately difpatched
fome of their companions, with the news of their fucjoyed with fo great a prize, imnediately difpatched
fome of their companions, with the news of their fuccefs, to the army. Upon which, the ardour of the purfuit now abating, Antony marched out to meet his prifoner; fome filently deploring the fate of fo virtuous a man ; others reproaching that mean detire of life for which he confented to undergo captivity. Antony now feeing the Thracians approach, began to prepare himfelf for the interview; but the faithful Lucilius, advancing with a cheerful air, owned the deceit that he had put upon him: on which the triumsir, Atruck with. fo much fidelity, pardoned him upon the fpot; and from that time forward loaded him with benefits, and he\%. noured him with his friendhip.

r fius, and ant they poffeffed by the plundering of

\section*{R O M}

In the mean time Brutus, with a fmall number of friends, paffed over a rivulet, and, night coming or, fat down under a rock which conccaled him from the purfuit of the enemy. After taking breath for a little time, lie fent out one Statilius to give him fome information of th ofe that remained; but lie neser returned, being killed by a party of the ene ny's horfe. Prutus judging very righty of his fate, now refolved to die likewife, and fpoke to thofe wha food round him to lend him their lall fad affillance. None of the:s, huwever, would render him fo melancholy a piece of fervice. At lat one Strato, averting his head, prefented the fword's point to Brutes; who threw himflf upon it, and innisaidately cexpired.

From the moment of Brutus's death the trium viri began to act as fovereignts, and to divide the Roman domi:aions between them, as theirs by right of concluelt. Fowever, though there were apparently three who thus participated all the power, yet, in fact, only two were actually pofeffed of it ; fince Lepidus was at Grit admitted merely to curb the mutual jealoufy of Antony and OEtavianus, and was poffeffed neither of inserft in the an \(y\) nor authority among the people. Their firt care was to punim thofe whom they had fornerly ir arked for vengeance. The head of Brutus was fent to Rome to be thrown at the foot of Cafar's flatue. His afhes, however, were fent to his wife Porcia, Caro's caurhter, who afterwards killed herfelf by fwallowing burning coals. It is obferved, that of all thofe who had a hand in the death of Cxtar, not one died a naiural death.
The power of the triumviri being thus eftablifhed upo:a the ruins of the commonwealth, Antony went into Greece, and fpent fome time at Athens, converting anteng the philofophers, and affiling at their difpuses in perfon. From thence he paffed over inro Afia, where all the monarchs of the eaft, who acknowiedged the Roman power, came te pay him their obedience. In this naainer he procecied from kingdom to kingdorn, attended by a crowd of fovereigns, exacting contributions, diflributing favours, and giving away crowns with carpricious infolence. He prefented the kingdom of Carpadocia to Syfence, in prejudice of Ariarathes, only becaufe he found pleafure in the beauty of Glaphyra, the mother of the former. He fettled Herod in the kingdorn of Judea, and fupported him againf ctery oppofer. But anoong all the fovereigns of the eaft who thared his favours, none had fo large a part as Cloopaira, the celebrated queen of Egypt.

It happened that Serapion, her governor in the ifland of Cyprus, had fornerty furnimed fome fuccours to the confpirators; and it was thonght proper that fhe foonld aniwer for his concuekt on that occafion. Accordingly, having received orders from Antony ro cone and elear herflt of this ingutation of infdelity, the
readily complied, equally confcious of the goodnefs of her caute and the power of her beauty. She had already experienced the force of her charms upon Cafar and Ponmey's cldeft fon; and the addition of a few years fince that time thad not impaired their luftre. Antony was now in 'Tarfus, a city of Cilicia, when Cleopatra refolved to attend his court in perion. She failed down the river Cydnus, at the mouth of which :he city-flocd, with the moft fumptuous pageantry. Her galley was covered with gold; the fails were of - surple, large, and foating in the wind. The oars of
filver kept tune to the found of flutes and cynbals. She
herfelf lay reclined on a couch fpangled with fars herfelf lay reclined on a couch fpangled with flars of gold, and with fuch ornaments as pocts and painters had ufually afcribed to Venus. On each fide were boys like Cupids, who fanned her by turns; while the molt beautiful nymphs, dreffed like Nereids and Graces, were placed at proper dittances around her. Upon the banks of the niver were kept burning the moft exquifite perfumes, while an infinite number of people gazed upon the fight. Antony was captivated with her beauty: and, leaving all his bufnefs to fatisfy his paffion, fhortly after followed her into Erypt.

White he thus remained idle, Octavianus, who took upon him to lead back the veteran troops and fettle them in Italy, was affiduouny employed in providing for cheir fubliftence. He had promifed the.; lands at home, as a recompenfe for their pall fervices; but they could not receive new grants, without turning out the former inhabitants. In confequence of this, multitudes of women, with children in their arms, whofe tender years and innocence excited univerfal compa!fion, dally Elled the temples and the flreets with their diftreffes. Numbers of humbandmen and fhepherds came to deprecate the conqueror's intention, or to obtain an habitation in fome other part of the world. Anuongft this number was Virgil the poet, who in an humble manner begred permifion to retain his patrimonial farm : Virgil obtained his requeft ; but the relt of his countrymen, of Mantua and Cremona, were turned out without mercy.
 the infolent foldiers plundered at will; while Sextusfatained Pompey, being mafter of the fea, cut off all furtign by the \(k\) communication, and prevented the peophe's receiving mans. their ufual fupplies of corn. 'To thefe mifchiefs were added the commencement of another civil war. Fulvia, the wife of Antony, who had been left behind him at Rome, had feit for fome time all the rage of jealoufy, and reiolved to try cvery method of brimping back her huiband from the arms of Cleopatra." She confidered a breach with Octavianus as the only proballe means of roufing him from his lethargy ; and accordingly, with the affiltance of Lucius her brother-in-law, who was then conful, and entirely devoted to her intereft, the began to fow the feeds of diffenfion. The pretext was, shat Antony fhould have a flare in the dilltribution of lands as well as Octavianus. This produced fome negociations between them; Oetavianus uffered to make the seterans themfelves umpires in the difpute. Luciar refuled to acquiefee; and being at the head of more than fix legions, mofly compofed of fuch as had been difpoffelfed of their lands, he refolved to compel Oetavianus to accept of whatever temns he Thould effer. Thus a new war was excited between Octavianus and Antony : or, at lealt, the generals of the latter affuied the lanetion of his name. Oqavianus, however, proved victorious: Lucius was hemmed in between two armies, and conftraned to retreat to Perulia, a city of Etruria, where he was clofely befieged by the oppufite party. He made many defperate fallies, and Fulvia did all in her power to relieve him, but withont fuccefs. He was at lalt, therefore, reduced to fuch extre\(n\) ity by famine, that lre came out in perfon and ceilvered himfelf up to the merey of the conquetor. Octavianus :eceivel ham very honourably, and generoufly pardoned him and aid his followers. Thus having con-

\section*{\(\mathrm{R} O \mathrm{M}\)}
eiufod the war \(\mathrm{i}, \mathrm{a}\) a few month, he returnel in trium to Rome.

Antony, who, during this intervil, was reveliing in all the Itulied luxuries procured him lyy his inflions rnitrefs, having heard of his brother's overtlirow, and his wite's being compelied to leave Italy, was refolved
- to oppore Octavianus without delay. He accordingly failed at the had of a contirterable fleet from Alexaulria to Tyre, from thence to Cyprus and Rhodes, and had an interview with Fuisia his uife at Athens. He mach b'dmed her for occalioning the late diforders, teftified the utmont cuntempt for her perfon, and, leaving her upon her deuth-bed at Sycion, haitened inte Italy to fight Oetavianus. They both met at Brunslufurn ; and it was now thongth that the flames of a civil war were guing to bidze out once more. The forees of Antony were numernus, but mollly newly raifed: however, he was aflited by Sextus Ponpcius, who in thefe oppofitions of interets, was daily coming into power. Octavian:s was at the head of thole veterans who had always beea irrefittible, but who feemed no way difpofed to fight againt Antony their former general. A negociation was therefore propofed; and a reconciliation was effected. All offences and affronts were mutually forgive. ; and to cement the union, a martiare was concluded between Antony and Octaria, the fiter of OCtavianus. A new divifion of anus was to have the command of the welt, Antony of the eaít, while Lepidus was woliged to content himfelt with the provinces in Africa. As for Sextus Pompeius. he was permited to retain all the illands he had already poffelfed, tosether with Peloponnefus: he was alfo granted the privilege of demanding the confulthip. in his abfeace, and of difeharging that office by any of kis friends. It was likewife ilipulated to leave the fca open, and pay the people what corn was due out of Sicily. Thus a general peace was concluded, to the great fatisfaction of the prople, who now expected a cefiation from all their calamities.

This calm feened to continue for fome time: Antony led his foeces againtt the Parthiars, over whom his lieutenant, Ventidius, had gained great advantajes. Octavianus drew the greateft part of his army into Gaul, where there were Some ditu:banecs ; and Pompey went to fectre his newly ceded province to his interef. It was on chis quarter that freh motives were given for renewing the war. Antony, who was obllFred by treaty to quii Peioponocies, refuled to evacuate it till \(P\) ompey lad fatisfed him for fuch debts as were due to him from the inhabitants. This Fompey woud by no means comply with; hut imenediately fited out a new fleet, and renewed his tormer enteryrifes, by cutting off fuch corn and provifions as were configned to Italy. Thus the grievances of the poor were again renewed; and the poople began to complain, that inlead of three tyrants they were now opprefted by four.

In this exigence, OAavianus, who bad long meliitated the beft means of dimimithing the rumber, refolved to berin by getting rid nf Pumpey, who kept the ftate in continual alarms. He w.os mater of two ifcets; one of which he had caufed to be built at Ravenna; and ancther which Menodorus, who revolted from Pompey, brought to his aid. His firf attempt was to in. vade Sicily ; but bcing overgowered in his parfage by

Pompcy, and afterwards flattered in a flom, he was obliefed to defer his defigns to the enfuna year. Du* rin this interval he was remfored by a 月ect of 12.0 frips, givea him by Antony, with which he refolved once more to insade Eicily on thrce feereal qua:ters. Lut fortune feomed Alli determined to ofpole him. He was a fecond time difailud and thattered by a form: which io raifed the vanity of Pumpry, that he beraza to ityle himfelf the fin of Neplune. However, Octavianus was not to be intimidated by any diffraces; for having florily rcilited his nave, and rectuited his forces, he gave the command of buth to Agiipa, his faithfut friend and aflociate in war. Arvipa proved him- \(=10\) fulf worthy of the trutt repofed in lim: he began his Pompeius operations by a victory over Pumpey; and, though he cefented was thortly after worlted himfelf, he fuon after gave prifoner his adverfary a complete and final overthrow. Thus undone, Pompey relolved to fly to Antony, from whom he expeceed reluge, as he had formerly obliged that trimovir by giving protection to his mother. However, he tried once nore, at the head of a fmall body of men, to make himelf independent, and even furprifec Antony's nfficers whot had been fent to accept of his fuburiffions. Neverthelefs, he was at laft abandoned by his foldiers, and delivered up to 'Titus, Antony's lieutenant, who fhortly after caufed hion to be flain.

The death of this general removed one very powerful obfacle to the ambition of Octavinus, and he sefolved to take the earlieit opportuaisy to get rid of the reft of his aflucittes. An efience was foon furnihed by Lepidus, that ferved as a lufficient pretext for deprivit:g him of his fhare in the trimmirate. Being now at the had of 22 legions, with a lanong body of cavalry, he idly fuppofed that his prefent power was more than an equivalent to the popularity of Octavianus. He therefore refolved upon adding Sicily, where he then was, to his province; pretending a right, as having firf invaded it. His colleague fent to expoltulate upon thefe preceedings; but Lepidus fiercely replied, 'that he was determised to have his fhare in the admuifitration, and would no longer fubmit to let one alone faffefs ali the authority.' Octaviauus was previoufly informed of the difpolition of Lepidus's foldiers; for lee had, by his fectet intriguts and largeffes, entircly attaehed them to himfelf. Wherefore, without further ciclay, lee with great boldnefs went alone to the camp of Lepidus, and with no other affifance than his private bountics, and the authority he had gained by his former victoriez, he refolved to depofe his rival. The foldie:s thronged round him with the molt dutiful alacrity, while Lepidus haftened to prevent their defection. But Oetavians, though he received a wound from one of the centurions, went with great prefence of mind to the place where the military enligns were planted, and, fourining one of them in the air, ati he legiunary foldiers ran in crowds and faluted him as their general. Lepidus beimy thus abandoned by his men, divefted himfelf of all the marks of his authority, which he episte could no longer keep, and fuiomifively threw himfelfan baat the fect of Oetavianus. This general fpared his rime.s. life, notwitiftanding the remonfrances of his army; but deprived him of all his former autbority, and banifhed him to Circæu:n.

Octavianus was reccived upon his return to Rome with underfal joy: the fenators met him at the gates,

Nu:tiv.
and conducted him to the capitol: the people followed, crowned with gailands of flowers; and after hasing returned thanks to the gods, waited upon him to his palace. "Ihere remained now but one obftacle to lis ambition, which was Antony, whom he refolved to remove, and for that purpofe began to render his character as contemptible as he poffibly could at Rome. In fact, Antony's conduct did not a little contribute to promote the endeavours of his ambitious partner in the flate. He had marched againf the Parthians with a prodisions army; hut was forced to return with the lofs of the fourth part of his forces, and all his bagt gage * This extremely diminifhed his reputation; but lis máking a triumphal entry into Alexandria foon after, entirely difgufted the citizens of Rome. Hourcver, Autony feemed quite regardlefs of their refentment : totally difregarding the bulinefs of the fate, he fpent whole days and nights in the company of Cleopatra, who ftudied every art to increafe his paffion, and vary his entertainments. Nut contented with fharins in her company all the delights which Eggpt could efford, Antony was refolved to enlarge his fphere of luxury, hy granting her many of thofe kingdoms which helonged to the Roman empire. He gave her all Phonicia, Celo-Syria, and Cyprus; with a great part of Cilicia, Arabia, and Judea; gifts which he had no right to beftow, but which he pretended to grant in imitation of Hercules. This complication of vice and folly at length totally exalperated the Romans; and Octaviznus, willing to take adwantage of their refentment, took care to exaggerate all his defects. At length, when lie found the people fufficiently invitated againf him, he refolved to fend Octavia, who was then at Rome, to Antony, as if with a view of reclaining licr hufband; but, in fact, to furnifh a fufficient pretext of declaring war againtt lim, as he knew the would be difniffed with contempt.

Antuny was now in the city of Leucopolis, revelling with his infidious paranour, when he heard that Octavia was at Athens, upon her journey to vifit him. 'This was very unwelcome news to him as well as to Cleopatra; who, fearing the charms of her rival, endeavoured to convince Antony of the flrength of her paffion. He frequently canght her in tears, which fhe feemed as if willing to hide; and often intreated her to tell him the caule, which fre feemed willing to fuppref3. Thefe arrifices, together with the ceafelefs flattery and importusity of her creatures, prevailed fo much upon Antony's weaknefs, that he commanded Octavia to return home without feeing her, and attached himfelf fill more clofely to Clcopatra than before. His ridiculous paffion now began to have no bounds. He refolved to own her for his wife, and entirely to repudiate Octavia. He accorcingly afiembled the people of Alexandria in the public theatıe, where was raifed an alcove of filver, under which were placed two thrones of gold, one for himfelf and the other for Cleopatra. There he feated bimfelf, dreffed like Bacchus, while Cleopatra fat befide him clothed in the ornaments and attributes of Ifis, the principal deity of the Egyptians. On that occafion he declared her queen of all the countries which he had aiready beftowed upon her ; while he affociated Cæfario, her fon by Cæfar, as her partner in the government. To the two children which he had by her himfelf he gave the title of king of kings, with very extenfive do.
minions ; and, to crown his abfurdities, he fent a mis nute account of his proceedings to the two confuls at Rome. It was now neceffary to aét up to his imaginary dignity; new luxuris and pageantries were now therfore fudiad, and new inarks of profufion found out : not lefs than \(60,000 \mathrm{l}\). of our money were layifhed upon one fingle entertainment; it is faid, upon this occafion, that Cleopatra diflolved a pearl of great value in vincrar, and drank it off. But we are told of one circumflance that might well reprefs their delighte, and teach mankind to rclifh the beverage of virtue, however fimple, above their greateft luxuries. He was fufpeious of being poifoned in every meal; he feared Cleopatra, whons he fo much loved, and would eat nothing without having it previoully tafted by one of his atterdants.

In the mean time Octavianus had now a fufficient Octavia pretext for declaring war; and informed the fenate of refolves his intentions. However, he defered the execution of make wi his defign for a while, being then employed in quelling an infurrction of the Illyrians. The following year was chithy taken up in preparations againt Antony, who, perceiving his detign, renonftrated to the fenate, that he had many caufes of complaint againt his colleague, who had feized upon Sicily without offering him a fhare ; alleging that he had alfo difpoffefled Lepidus, and kept to himielf the province he had commanded; and that he had divided all Italy among his own fol. diers, leaving nothing to recompenfe thofe in Afia. To this complaint Oetavianus was contented to make a farcaftic anfwer; implying, that it was abfurd to complain of his diftribution of a few trifing diftriets in Italy, when Antony having conquered Parthia, he might now reward his foldiers with cities and provinces. The farcafm upon Antony's mistortunes in Parthia fo provoked him, that he ordered Canidius, who commanded lis army, to march without intermiffion into Europe; while he and Cleopatra followed to Samos, in order to prepare for carrying on the war with vigour. When arrived there, it was ridiculous enough to behold the odd mixture of preparations for pleafure and for war. On one fide all the kings and princes from Europe to the Euxine fea had orders to fend him thither fupplies both of men, provifions, and arms; on the other fide, all the comedians, dancers, buffoons, and muficians of Greece, were ordered to attend him. Thus, frequently, when a fhip was thought to arrive laden with foldiers, arms, and ammunition, it was found only filled with players and theatrical machinery. When news was expected of the approach of an army, meffengers only arrived with tidings of a frefh quantity of venifon. The kings who attended him endeavoured to gain his favour more by their entertainments than their warlike preparations; the provinces ftrove rather to pleafe him by facrificing to his divinity, than by their alacrity in his defence; fo that fome were heard to fay, "What rejoicings would not this man make for a viciory, when he thus triumphs at the eve of a dangerous war!" In fhort, his beft friends now began to forfake his interelts.

His delay at Samos, and afterwards at Athens, where he carried Cleopatra to receive new honours, was ex. tremely favourable to the arms of Octavianus. This general was at firf fearcely in a difpofition to oppofe him, has he gone into Italy ; but he foon found time
to put himfelf in a condition for carrying on the war, and fhortly after declared it againft him in form. All Antony's followers were invited over to join him, with great promifes of rewards : but they were not declared enemies, partly to prevent their growing defperate, and partly to give a fhow of moderation to his own party. At length both found themfelves in readinefs to begin the war, and their armies were anfwerable to the empire they contended for. The one was followed by all tiie forces of the eaft ; the other drew all the frength of the weft to fupport his pretenfions. Antony's force compofed a body of 100,000 foot and 12,000 horfe; while his fleet amounted to 500 fhips of war. The army of Octavianus muftered but \(80,0 \times 0\) foot, but equalled his adverfary's in his number of cavalry: his fleet was but half as numerous as Antony's; however, his fhips were better built, and mannicd with better foldiers.
The great decifive engagement, which was a naval 2t one, was fought near Actium, a city of Epirus, at the entrance of the gulph of Arrbracia. Antony ranged his hips before the mouth of the gulph; and Oztavianus drew up his fleet in oppofition. Neither general aflumed any fixed ftation to command in ; but went about from thip to hip wherever his prefence was neceffary. In tbe mean time, the two land armies, on oppofite fides of the gulph, were drawn up, only as fpectators of the engagement; and encouraged the fieets by their thouts to engage. The battle began on both fides with great ardour, and after a manner not practifed upon former occafions. The prows of their veffels were armed with brazen points; and with thefe they drove furiounly againt each other. In this conflict the fhips of Antony came with greater force, but thofe of Octaviantus avoided the fhock with greater dex. terity. On Antony's fide, the fterns of the fhips were raifed in form of a tower; from whence they threw arrows from machines for that purpofe. Thofe of Oc tavianus n:ade ufe of long poles hooked with iron, and fire-pots. They fought in this manner for fome time with equal animofity; not was there any advantage on either fide, except a fmall appearance of difordcr in the centre of Antony's fleet. But all of a fuddem Cleopatra determined the fortune of the day. She was feen Aying from the engagement attended by 63 fail; ftruck, perhaps, with the terrors natural to her fex : but what increafed the general amazement was, to behold Antony himfelf following foon after, and leaving his fleet at the mercy of the conquerers. The engagement, notwithftanding, contilued with great obftinacy till five in the evening; when Antony s forces, partly conftrained by the conduct of Agrippa, and partly perfuaded by the promifes of Octavianus, fubmitted to the conqueror. The land-forces foon after followed the example of the navy ; and all yielded to the conques or without ftriking a blow the fourth day after the battle.

When Cleopatra fled, Antony puriued her in a fiveoared galley; and coming along-fide of her fhip entered, without feeing or being feen by her. She was in the ftern, and he went to the prow, where he remaiaed for fome time filent, kolding his head between his hands. In this manner he continued three whole days; during which, either through indignation or fhame, he neither faw nor fooke to Cleopatra. At laft, when they were arrived at the promontory of Tenarus, the Vol. XVL. Part I.
queen's female attendants reconciled them, and every thing went on as before. Still, horrever, he had the confolation to fuppofe his army continued faithful to him; and accordingly difpatched orlers to his liet tenant Canidius to conduct it into I fia. However, he was foon undeceived when he arrived in Africa, w' ere he was informed of their fubmiffion to his rival. This account fo tranfported him with rage, that he was hardly prevented from killing himfelf; but at length, at the entreaty of his friends, he returned to Alexandria, in a very different fituation from that in which he had left it fome time before. Cleopatra, however, feemed to retain that fortitude in her misfortunes which had utter\(1 y\) abandoned her admirer. Having amaffed confiderable riches by means of confifcation and other acto of violence, fhe formed a very fingular and unheard of project ; this was to convey her whole flect over the i!thnus of Suez into the Red Sea, and thereby fave herfelf in another region beyond the reach of Rome, with all her treafures. Some of her vefiels were actually tranfported thither, purfuant to her orders; hut the Arabians haviag burnt them, and Antony difuading her from the defivn, the abandoned it for the more improbable fcheme of defending Esypt againt the conqueror- - He refolves She omitted oothing in her poumer to pur -to defend She omitted nothing in her power to put has advice in Egyp
practice, and made all kindâ of preparations for war ; againt the at leaft hoping thereby to obtain better terns from O c-conqueror. tarianus. In fact, the had always loved Antony's fortunes rather than his perfon; and if fhe could have falten upon any method of faving herfelf, though even at his expence, there is no doubt but fae would have embraced it with gladnefs. She even fill had fome hopes from the power of her charms, though fhe was arrived almolt at the age of 40 ; and was deffrous of trying upon \(O_{c}\). tavianus thofe arts which had been fo fueceffitil with the greatelt men of Rone. Thus, in three e:nbaffies which were fent one after another from Antony to his rival in Afia, the queen had always her fecret djents, charged with particular propofals in her name. Antony defired no more than that his life might be fpared, and to have the liberty of paffing the remainder of his days in ainfcurity. T'o thefe propofals Octavianus made no reply. Cleopatra fent him alfo public propofals in favour of her children; but at the fame time privately refigned him her crown, with all the enfigns of royalty: To the queen's public propofal no anlwer was given; to her private offer he replied, by giving her affurances of his flavour in cafe fae fent wway Antony or put him to death. Thefe negociations were not fo private but they came to the knowledge of Antony, whofe jea- loufy and rage was now heightened by every concurrence. He huilt a fall folitery house upon a mole in the fea; and there he paffed his tive, fhunning all commerce with mankind, and profeffing to imitate Timon the n:an-hater. However, his furious je:loury drove hin even fro n this retreat into fociety; for hearing that Clcopatra had many fecret conferences with one Thyrfus, an emiffary fro'n Octavianus, he feized upon hi:, and having ordered him to be cruelly fourged, be fert him back to his patron. At the fame time he: fent letters by him, importing, that be had challifed Thyrfus for infulting a was in his msfortunes; but withal he gave his rival permiffion to avenge hi: felt, by fcourging Hiparchus, Antony's freedman, in the fame manaer. The revenge, in this cafe, would have

\section*{R O M}

Rone. been higllyy pleaing to Antony, as Hiparechus had left hinin to join the fortunes of his more fucceefful rival.
Mcanwlile, the opecations of the war were earried vigorouny forward, and Egypt was once more the Livatre of the contending armies of Rome. Gallus, the lieutenant of Ottarianus, took Paretonium, which opened the whole country to his incurfions. On the othicr fide, Antony, who had fill confiderable forces by fea and liund, wanted to take that import unt place from the enen.y. He therefore marched towards it, Batering himefelf, that as foon as he floonld flaow hin.ofelf to the legions which he had once cormanded, their affiction for their ancient general would revive. He approachd, thercfore, and exhorted them to reniember their fornier vows of fidelity. Gallus, however, ordered all the trumpets to founid, in order to hinder Antony from being heard, fo that he was obli-
217 ged to retire.
Pelufum
Octavianus limfelf was in the mean tine advancing with another army before Pelufum, which, by its -flong lituation, miglt have retarded his progrefs for fonse time. But the governor of the e city, either wanting courage to defend it, or previoufly inftructud by Cleopatra to give it up, permitted him to take poffeffion of the place ; fo that Octavianus had now no obfacle in his way to Alexandria, whither he marched with all expecition. Antony, upon his arrival, fallied out to oppofe him, fighting with great defperation, and putting the enemy's cavalry to fight. This flight adrantage once more revived his declining hopes ; and, being nattrally vain, he re-entered Alexandria in triuniph. Then going, all armed as he was, to the palace, he enbraced Cleopatra, and prefented her a foldier who had ditinguifhed himfelf in the late engagenent. The queen rewarded hin very magnificently ; prefenting hun with ana kead piece and breafl- plate of gold. With thefe, however, the foldier went off the nest night to the othicr army. Antony could not bear this defection without frech indignation; he refolved, therefore, to make a bold expiring effort by fea and land, but previoufy offered to fight lis adverfary in fingle combat. OAtavianus ton well knew the inequality of their fituations to comply with this forlorn offer ; lie only, therefore, coolly replicd, that Antony lad ways enough to 248 die betides fingle combat.
Antony de. The evening before the day appointed for the laft Seried by his defperate attempt, he ordered a grand entertainment to
be prepared. At day-break he pofted the few troops he had remaining upon a rifing ground near the city: . from whence he fent orders to kis galleys to engage the enemy. There he waited to be a fpectator of the combat; and, at firt, he had the fatisfaction to fee them advance in guod order; but his approbation was foon turned into rage, when he faw his fhips only faluting thofe of Octavianus, and both fleets uniting together, and failing back into the harbour. At the very fame tire his cavalry deferted him. He tried, however, to lead on his infantry ; which were eafily vasquifhed, and be hir felf compelled to return into the town. His anger was now ungovernable ; he could not help crying out aloud as he paffed, that he was betrayed by Cleopatra, and delivered by her to thofe who, for her fake alone, were his enemies. In thefe fufpicions he was not deceived; for it was by fecret orders from the queen that the flect had paffed over to the enerny.

Cleopatra had, for a long while, dreaded the effeers of Antony's jealoufy ; and had, fome time before, prepared a method of obviating any fudden fallics it might produce. Near the temple of Ifis fhe had erected a building, which was feemingly defirned for a fepulchre. Hither the removed all her treafure and mott valuable effects, covering them over with torches, fargots, and other combultible satter. This fepulchre fhe deligned to anfwer a double purpofe; as well to fereen her from the fudden refentments of Antony, as to make Octavianus believe that fhe would burn all her treafures in cafe he refufed her proper terms of capitulation. Here, therefore, fie retired from Antony's prefent fury ; Mhutting the gates, which were fortified with bolts and bars of iron: but in the mean time gave orders that a report fhould be fpread of her death.This news, which foon reached Antony, recalled all his former luve and tendernefs. He now lamented her death with the fame violence he had but af few minutes before feemed to defire it ; and called one of his freedmen, naned Elos, whom he had engaged by oath to kill him whenever fortune fhotild drive him to this latt refource. Eros being now commanded to perform his promife, this faithful follower drew the fword, as if going to execute his orders ; but turning his face, plunged it into his own bofom, and died at his maftcr's feet. Antony for a while hung over his faithful fer- Stabs vant, and, commending his fidelity, took up the fivord, fivord. with which flabbing himfelf in the belly, he fell backward upon a little couch. Though the wound was mortal, yet the blood flopping he recovered his firits, and earneftly conjured thofe who were come into the room to put an end to his life; but they all fled, being feized with fright and horror. He therefore continued in agonies for lome time; till he was informed by one of the queen's fecretaries that his miftrefs was fill alive He then earnefly defired to be carried to the place where fhe was. They accordingly brought him to the gate of the fepulchre ; but Cleopatra, who would not pernit it to be opened, appeared at the window, and threw down cords in order to puli him up. In this manner, affifted by her two female attendants, fhe raifed him all bloody from the ground; and while yet fufpended in the air, he continued ftretching out his hands to encourage her. Cleopotra and her maids had only juft ftrength fufficient to raife him ; and at laft, with much flraining, they effected their purpofe, and carried him to a couch, on which they gently laid him. 'Here the gave way to her forrow, tearing her clothes, beating her breaft, and. kiffing the wound of which he was dying. She called. upon him as her lord, her hußand, her emperor, and. feemed to have forgot her own diftreffes in the greatnefs of his fufferings, Antony entreated her to moderate the tranfports of her grief, and afked for fome wine. After he had drank, he entreated Cleopatra to endeavour to preferve her life, if the could do it with honour ; and recommended Proculus, a friend of Octavianus, as one the might rely on to be her interceffor. Juft as he had done fpeaking, he expired ; and Proculus made his appearance by command of Oetavianus, who had been. informed of Antony's defperate conduct. He was fent to try all means of getting Cleopatra into his power; his maater having a double motive for his folicitude on. this occafion; one, to prevent her deftroying the treafurcs fhe had takein with her into the tomb; the other,

\section*{R O M}
to preferve her perfon as an ormament to grace his triumph. Cleopatra, however, was upon her guard, and would nor confer with Proculus, except through the gate, which was well fecured. In the mean time, while he defignedly drew out the conference to forne length, and had given Gallus, one of his fellow-foldiers, directions to carry on the converfation in his abfence, he entered with two more by the window at which Antony had been drawn up. is foon as he was entered, he ran down to the gate; and one of the women crying out, that they were taken alive, Cleopatra, perceiving what had happened, drew a poniard, and attempted to flab herfelf; but Proculus prevented the blow, and gently remonftrated that the was cruel in refufing fo good a prince as his mafter was the pleafure of difplaying his clemency. He then forced the poniard out of her hand, and examined her clothes to be certain fhe had no poifon about her. Thus leaving every thing fecured, he went to acquaint his mafter with his proceedings.

Octavianus was extremely pleafed at finding her in his power: he fent Epaphroditus to bring her to his palace, and to watch her with the utmolt circumfpection. He was likewife ordered to ufe her, in every refpect, with that deference and fubmiflion which were due to her rank, and to do every thing in his power to render her captivity agreeable. She was permitted to have the honour of granting Antony the rites of burial, and fumifhed with every thing fhe defired, that was becoming his dignity to receive, or her love to offer. Yet ftill the languifhed under her new confinement. F er exceffive forrow, her many loffes, and the blows the had given her bofom, produced a fever which the feemed willing to increafe. She refolved to abftain from taking any nourifhment, under the pretence of a regimen neceflary for her diforder; but Octavianus being made acquainted with the real motive by her phyfician, began to threaten her with regard to her children, in cafe the perfifted. This was the only punifhment that could now affect her; fhe allowed herfelf to be treated as they thought proper, and rceeived whatever was preferibed for her recovery.

In the mean time Octavianus made his entry into Alexardria; taking care to mitigate the fears of the inhabitants, by converfing familiarly as he went along with Areus, a philofopher, and a native of the place. The citizens, however, trembled at his approach ; and when he placed himfelf upon the tribunal, they proftrated themfelves, with their faces to the ground, before him, like criminals who waited the fentence of their execution. OEtavianus prefently ordered them to rike; telling them, that three motives induced him to pardon them: His refpect for Alexander, who was the founder of their city ; his admiration of its beanty ; and his friendithip for Areus, their fellow-citizen. 'Two only of particular note were put to death upon this occalion; Antony's eldeft fon Antyllus, and Cefario, the fon of Julius Cæfar ; both betrayed into his hands by their refpective tutors, who themfelves fufficed for their perfidy: fhortly after. As for the reft of Cleopatra's children, he treated them with great gentlenefs, leaving them to the care of thofe who were entrufted with their education, who had orders to provide them with every thing fuitable to their birith. When fhe was recovered from her late indifpofition, he came to vifit her in perfon. Cleopatra had been preparing for this intervicw, and
made ufe of every method the could think of to propitiate the conqueror, and to gain his affetion ; but in vain. However, at his departure, Octavianus imagined that he had reconciled her to life, and to the indignity of being fhown in the intended triumph, which he was preparing for on his return to Rome: but in this he was deceived. Cleopatra, all this time, had kept a correfpondence with Dolabella, a young Roman of high birth, in the camp of Octavianus; who, perhaps, from compafion, or Atronger motives, was interefted in the misfortunes of that princefs. From him the learnt the intentions of Octavianus, and that he was determined to fend her off in three days, together with her children, to Rome. She new therefore determined upon dying; but previouny intreated permiffion to pay her oblations at Antony's tomb. This requelt being granted her, fhe was carried with her two female attendants to the ftately monument where he was laid. There fhe threw herfelf upon his coffin, bewailed her captivity, and renewed her proteltations not to furvive him. She then crowned the tomb with grarlands of flowers ; and havins kiffed the coffin a thoufand times, the returned home to execute her fatal refolution. Having bathed, and ordered a fumptuous banquet, fhe attired herfelf in the moft fplendid manner. She then feafted as ufual ; and foon after ordered all but her two attendants, Charmion and Iras, to leave the roon. Then, having previounly ordered an afp to be fecretly conveyed to her in a bafket of fruit, fhe fent a letter to Octavianus, informing him of her fatal purpofe, and defiring to be buried in Her death. the fame tomb with Antony. Octavianus, upon receiving this letter, inftantly difpatched meffengers to prevent her, but they arrived too late. Upon enteriag the clamber, they beheld Cleopatra lying dead upon a gilded couch, arrayed in her royal robes. Near her, Iras, one of her faithful attendants, was 1lretched lifelefs at the feet of her miltrefs: and Charmion herfelf, al. molt expiring, was fettling the diadem upon Cleopatra's head. She died at the age of thirty-nine, after having reigned twenty-two years. Her death put an end to the monarchy in Egypt, which had hourithed there from time immemorial.

Octavianus feemed much troubled at Cleopatia's death, as it deprived him of a principal omament in his intended triumph. However, the manner of it a good deal exalted her character among the Romans, with whom fuicide was confidered as a virtue. Her dying requeft was complied with, her body being laid by Antony's, and a magnificent funeral prepared for her and her two faithful attendants.

After having fettled the affairs of Egypt, he left Alexandria in the beginning of September, in the year of Rome 720 , with a defign to return through Syria, Afia Minor, and Greece, to Italy. On his arrival at Antioch, he found there I iridates, who had been raifed to the throne of Parthia in oppolition to Phralates, and likewife ambafladors from Phrahates, who were all come on the fame errand; to wit, to folicit the affifance of the Romans againf each other. Octavianus gave a friendly anfwer both to Tiridates and the ambaftadors of Phrahates, without intending to sclp cither; but rather with a delign to anmate the one againt the other, and by that means to weaken both, fo far as to render the Parthian name no longer formidable to Rone. After this, having appointed Miffala

\section*{R O M \\ R O M}

Rome. Corvinus governor of Syria, he marched into the province of Afia, properly fo called, and there took up his winter quarters. He fpent the whole winter in fettling the affairs of the feveral provinces of Afia Minor and the adjacent iflands; and early in the fpring paffed into Greece, whence he fet out for Rome, which he entered in the month Sextilis, afterwards called \(A u_{o} u / f\), in three triumphs, which were celebrated for three days

2:3 together.

A nd now Octavianus was at the height of his wifhes, fole fovereign, fole matter, of the whole Roman empire. But, on the other hand, the many dangers which attend an ufusped pewer, appearing to him in a flronger light than ever, flled his mind with a thoufand perplexing thoughts. The natural averion of the Romans to a kingly sovernment, their love of liberty, and the ides of March, when his father Julins was murdered in full fenate by thofe very men whom he thought the moft devoted to his perfon, made him fear there might arife another Brutus, who, to reftore liberty to his country, might affaffinate him on his very throne. This he knew had happened to Julius Cæfar; whereas Sylla, after having laid down the authority he had ufurped, died peaceably in his bed in the midtt of his enemies. The paffion of fear outweighed in his foul the charms of a diaden, and inclined him to follow the example of Sylla. He was indeed very unwilling to part with his authority ; but fear began to get the better of his ambition. However, before he came to any refolution, he thought it advifable to confult his two moft intimate and trufty friends, Agrippa and Mæcenas ; the former no lef, famous for his probity than his valour; and the latter a man of great penetration, and generally efteemed the molt refincd politician of his age. Agrippa enlarged on the many and almof inevitable dangers which attend monarchy, infupportable to a free people, and to mes educated in a commonwealth. He did not forget the examples of Sylla and Cæfar; and clofed his fpeech with exhorting Octavianus to convince the world, by reftoring liberty to his country, that the only motive for his taking up arms was to revenge his father's death.
ardir= Mxcenas, on the other hand, remonitrated to him, fadcairom that he had done too much to go back; that, after by Mx- fo much bloodihed, there could be no fafety for him cenas. but on the throne; that, if he divelted himfelf of the fovereign power, he would be immediately profecuted by the childrea and friends of the many illultrious perfons whom the misfortunes of the times had forced him to facrifice to his fafety; that it was abfolutely neceffary for the welfare and tranquillity of the republic, that the fovereign power fhonld be lodgred in one perfon, not divided among many, \&xc. Octavianus thanked them both for their filendly advice, but thowed himfelf inclined to follow the opinion of Mrecenas; whcreupon that able minifter gave him many wife inftructions and unles of government, which are related at length by Dio Callius, and will ever be looked upon as a malterpiece in politics. Among other things he told him, That he could sot fail of being fuccefsful in all his undertakings, happy in his lifetime, and famous in hiftory after his death, if he never deviated from this rule; to wit, To govern wthers as he would wilh to be governed himfelf, had he been born to obey and not to commaud. He added,

That if, in taking upon him the fovereign power, he dreaded the name of king, a name fo odious in a comnonwealth, he might content himfelf with the title of Cafar or Imperator, and under that name, which was well known to the Romans, enjoy all the authority of a king.

This advice Octavianus followed, and from that time laid afide all thoughts of abdicating the fovereign power; but, to decerve the people into a belief that they ftill enjoyed their ancient government, he continued the old magiltrates, with the fame name, pomp, and ornaments, but with juft as much power as he thought fit to leave them. They were to have no military power, but only their old jurifdiction of deciding finally all caufes, except fuch as were capital; and though fome of thefe laft were left to the governor of Rome, yet the chief lue referved for himiflf. He paid great court to the people: the very name that covered his ufurpation was a compliment to them; for he affected to call it the power of the tribunefhip, though he acted as abfolutely by it as if he had called it the dictatorial power. He likewife won the hearts of the populace by cheapnefs of provifions and plentiful markets; he frequently entertained them with fhows and fports; and by thefe means kept them in good-humour, and made them forget ufturpation, flavery, and every public evil; people in eafe and plenty being under no temptation of inquiring into the tith of their prince, or relenting acts of power which they do not immediately fecl.

As for the fenate, he filled it with his own creatures, raifing the number of the confcript fathers to 1000 . He fupplied feveral poor fenators with money out of the treafury to difclarge the public officcs, and on all occafions affected an high regard for that venerable body; but at the fame time divelled them of all power, and reduced them to mere cyphers. To prevent them from raifing new difturbances in the diftant provinces, he iffucd an edict, forbidding any fenator to travel out of Italy without leave, except fuch as had lands in Sicily, or Narbonne Gaul, which at that time comprehended Languedoc, Provence, and Dauphiny. To thefe provinces, which were near Italy, and in a perfect Atate of tranquillity, they had full liberty to retire when they pleafed, and live there upon their eftates. Before he coded lis fixth confulfhip, he took a cenfus of the people, which was 4 t years after the latt; and in this the number of the men fit to bear arms amounted to 463,000 , the greateft that had ever been found before. He likewife celebrated the games which had been decreed by the fenate for his victory at Actium ; and it was ordered, that they fhould be celebrated every fifth year, four colleges of prielts being appointed to take care of them; to wit, the pontifices, the augurs, the feptemvirs, and quindecinvirs. The more to gain the affections of the people, he annulled, by one edict, the many fevere and unjult laws which had been enacted during the triumvirate. He raifed many public buildings, repaired the old ones, and added many Itately ornaments to the city, which at this time was, if we may give credit to fome ancient writers, about 50 miles in compals, and contained near four millions of fouls, reckoning men, women, children, and flaves. He attended bufinefs, reformed abufes, howed great regard for the Roman name, procured public abundance, pleafure, and jollity.

\section*{R O M}
often appearing in perfon at the pablic diverfions, and in all things ftudying to render himfelf dear to the populace.

And now OCtavianus, entering upon his feventh confulhip with M. Agrippa, the third time conful, and finding all things ripe for his defign, the people being highly pleafed with his mild government, and the fe. nate filled with his creatures, whofe fortunes depended upon his holding the power he had ufurped, went by the advice of Agrippa and Mxeenas to the fenatehoufe: and there, in a fudied fpeech, offered to refign his authority, and put all again into the hands of the people upon the old foundation of the commonwealth; being well appriled, that the greater part of the confeript fathers, whofe interefts were interwoven with his, would unanimoufy prefs him to the contrary: Which happened aceordingly; for they not only interrupted him while he was fpeaking, but, after he had done, unanimounly befought him to take upon himfelf alone the whole government of the Roman empire. He, with a feeming reluctance, yielded at laft to their requeft, as if he had been compelled to accept of the fovereignty. By this artifice he compaffed his defign, which was, to get the power and authority, which he had ufurped, confirmed to him by the fenate and people for the fpace of 10 years: for he would not accept of it for a longer term, pretending he fhould in that time be able to fettle all things in fuch peace and order that there would be no further need of his authority ; but that he might then eafe himfelf of the burden, and put the government again into the hands of the fenate and people. This method he took to render the yoke lefs heavy; but with a defign to renew his leafe, if we may be al. lowed the exprefinn, as foon as the ten years were expired; which he did accordingly from ten years to ten years as long as he lived, all the while governing the whole Roman empire with an abfolute and uncontrouled power. With this new authority the fenate refolved to diltinguith him with a new name. Some of the confeript fathers propofed the name of Romulus, thereby to import that he was another fonnder of Rome; others offered other titles; but the venerable name of Auguf. ius, propofed by Manutius Planens, feemed preferable to all the reft, as it exprefled more dignity and reverence tlan authority, the noof facred things, fuch as temples, and places confecrated by augurs, being termed by the Pomans Auguffa. Octavianus himfelf was inclined to aflume the name of Romulus; but, fearing he thould be fufpected of aftecting the kingdom, he declined it, and took that of Auguflus, by which we fhall henceforth dillinguilh him.
'Ihough the whole power of the fenate and people was now refted in Augultus, \(y\) et, that he might feem to fare it with the confeript fathers, he refufed to gosern all the provinees; afligning to the fenate fuch as were quiet and peaceable; and keeping to himfelf thofe which, bordering upon barbarous nations, were moft expofed to troubles and wars, faying, He delired the fathers might enjoy their power with eafe and fafety, while he underwent all the dangers and labours: but, by this politic conduct, he fecured all the military power to himfelf; the troops lying in the provinces he had chofen; and the others, which were governed by the fenate, being quite dettitute of forces. The latter were called finatoriol, and the former imperial, provincus. O.
ver the provinces of toth forts were fet men of diftinction, to wit, fuch as had been confuls or prators, with

Reme. the titles of proconful and proprasor; but the government of Egypt was conmitted to a private knight, Auguftus fearing left a perfon of rank, deperding upon the wealth and fituation of that country, might raife new dilturbanees in the empire. All thefe governors held their empluyment only for a year, and were upon the arrival of their fuccetlors to depart their provinces immediately, and not fail to be at Rome withim three months at the fartheft. This divifion of the provinces was made, according to Ovid, on the ides of Jdnuary; whereas he was velted by the fenate and people with the forereign power on the feventh of the ides of the fame month, as is manifelt from the Narbonne marbles; and from that time many writers date the years of his empire. Thus ended the greateft commonweath, and at the farme time began the greatelt monarehy, that had ever been known ; a monarchy which infinitely ex. celled in power, riches, extert, and contimuance, all the empircs w bich had preceded it.

It comprehended the greateft and by far the befl part Extent, \&e, of Europe, Afia, and Africa, being near 4000 miles in of the Rolength, and about half as much in breadth. As to the man ensyearly revenues of the empire, they have by a moderate \({ }^{\text {pirc. }}\) computation been reckoned to amount to forty millions of our money. But the Romans themfelves now ran headlong into all manner of luxury and effeminacy. The people were become a mere mob; thofe who were wont to oirect mighty wars, to raife and depofe great kings, to befow or take away potent empires, were fo funk and debauched, that, if they had but bread and fhoves, their anbition went no higher. 'The nobility were indeed more polite than in former ages; but at the fane time idle, venal, vicious, infenfible of private virtue, utter llrangers to public glory or diferrace, voil of zal for the welfare of their country, and folely intent on gaining the favour of the emperor, as knowing. that certain wealth and preferment were the rewards of ready fubmifion, acquiefcence, and flattery. No wonder, therefore, that they loft their liberty, without being ever again able to retrieve it.
ever agan able to retrieve 1 .
Augufus, now abifolute mafter of the Rorran em. Milirary pire, took all methoss to ingratiate himfelf with hiseftab ifffoldiers, by whofe means he had attained fuch a height ments of of power. With this view, he difperfed them through Auguflus, different parts of Italy in 32 colonies, that he mirht the more eafily reaffamble them on proper occafions. He kept 25 legions conitantly on foot, 17 of which were in Europe; viz. eiglit on the Rhine, four on the Danube, three in Spain, and two in Dalmatia. The other eight were fent into Afia and Afriea; four of them being quartered in the neighbourhood of the Euphrates, two in Egypt, and two in Africa Propria, that is, the ancient dominions of Carthage. All thefe forces, amounting to 170,650 men, were conftantly kept on foot by the Roman emperors for feveral ages. In the neighbourlood of Rome were always quartered \(12 \mathrm{cn}-\) horts, that is, about 10,000 men ; nine of which were called pretoriun coborts; the other three, cit" esborts. Thefe were eftahlimed as a guard to the emperor, and to maintain peace and tranquillity in the city, but had often a great thare in the dillubances which took place thronghout the compire. Ecrid. = thefe, Aigutus conftanty kept at fea two pownful navies; the one ridine

\section*{R O M}

Porne. al anclior near Ravenna in the \(\Lambda\) driatic fea, to command 1)alinatia, Greece, Cyprus, and the reft of the ealtern prosinces; the other at Difenum in the Mediterianean, to keep in awe the weftern parts of the empire. They were likewife to keep the feas elear of pirates, to consoy the veffels which brought to Rome the annual tributes from the provinces beyond fea, and to tr ufport com and other provifions neceffary for the relief and fubfiftence of the city. \(A_{6}\) to the civil government, Anruftus enacted fereral new laws, and reformed fome of the old ones: however, he affected to do nothine without the advice of the fenate; who were fo well pleafed with the complaifance fhowed them on all occafions, that to the relt of his titles they added that of Pater Patrit, or "Father of lis Comutry."

And now Auguftus having futted all things with regard to the civil and military eftabliffments of the empire, turned lis arms againt the Spanifh nations called the Cintabrians and Aflugians, who had never been fully futclued. 'The war, however, terminated as ufua, in favour of the Romans; and thefe brave nations wete foreed to receive the yoke, though not without the mofl violent refinance on their part, and the utnont difficulty on that of the Ronans (Sce Asturta).
\(2 ヶ 7\) ? By his and lis other conquictis the name of ugutus His friend-becane fo celchrated, that his friendhip was courted fip ourted ly the moft diflant monarchs. Phrahates king of Parby the 1:in.g. of Parthaa ald Indis. thia confented to a treaty with him upon his own terms, and gave him four of his own fons with their wives and children as hoflages for the performance of
the articles; and as a further inftance of lis refpect, he delivered up the Roman eagles and other enfigus which had been taken from Craftus at the batele of Carrhæ. He rectived alfo an embafly from the king of India, with a letter written in the Greek tongue, in which the Indian monarch informed him, that "thougl he reigned over 600 kings, le had fo great a value for the friendfuip of Augutlus, that he had fent this embaffy on fo long a jounney on purpofe to defire it of him; that he was ready to meet him at whatfoever place he pleafed to appoint ; and that, upon the firit notice, he was ready to affift him in whatever was siyght." "This letter he fubferibed by the name of \(P O_{0}\) rus king of India. Of the amhaftadors who fet out from India, three only reached the prefence of Auguftus, who was at that time in the ifland of Samos, the others dying by the way, Of the three furvivors one was names Zarma, a gymnofophilt, who followed the emperor to Athens, and there burnt himfelf in his prefence; it being cuftemary for the gymnofophifts :n put an end to their lives in this manner, when they thought they lad lived long enough, or apprehended fome misfortune, Soon atter this the Reman dominions were extended fouthward over the Garamantes, a people whofe country reached as far as the river Niger. All this time the emperor continued to make new regulations for the groud of the fate; and among other things caufed the Sibylline oracles to he reviewed. Many of thefe he rejected; but fuch as were reckoned authentic, he cauled to be copied by the puntifices themfelves, and ludged them in golden cabinets, which he placed in the temp.e of A pollo, built by him in his palace.

The Kunan empire had now exterided itfelf fo far, that it feemed to lave arrived at the linits preferibed to it by nature; and as. foon as this was the cafe, it
began to he attacked by thofe nations which in pro cefs of time were to overthrow it. The Germans, by which bare the Romans confounded a great number of nations dwelling in the northern parts of Europe, began to make incurfons into Gaul. Their firft attempt happenced in the year 17 B . C. when they at firt gained an inconfiderable advantage, but were foon driven hack with rreat Iofs. Soon after this the Rhieti, who feem to have inhabited the country bordering on the lake of Confance, invaded Italy, where they committed dreadful devaltations, putting all the males to the fword without dittinetion of rank or age; nay, we are told, that. when women with child happened to fall into their hands, they confulted their augurs whether the clild was male or female; and if they pronounced it a male, the mother was immediately maffacred. Againt thefe barbarians Auguftus fent Drufus the fecond fon of the emprels Livia; who, though very young, found means to gain a complete victory with very little lofs on his part. Thofe who efcaped took the road to Gaul, being joined by the Vindelici, another nation in the neighbourhood; but Tiberius, the elder brother of Drufus, marelied againtt them, and overthrew them fo completely, that the Rhxti, Vindelici, and Norici, thrce of the moft barbarous nations in thofe parts, were fain to fubmit to the pleafurt of the emperor. To keep their country in awe, Tiberius planted two colonies in Vindelicia, opening a road from thence into Noricum and Rhætia. One of the cities which he built for the defence of his colonies was called Dryfomagzs; the other, Augufa Vindelicorum ; both of which are now known by the names of Nimingben and Augburg.

Augutus, who had long fince obtained all the temporal honours which could well be conferred upon him, now began to aflume thofe of the fpiritual kind alfo; being in the year 13 B . C. created Pontifex Maximus: an office which he continued to hold till his death; as did alfo his fucceffors till the time of Theodofus. By virtue of this office he corrected a very grofs miftake in the Roman kalendar; for the pontifices having, for the fpace of \(3^{6}\) years, that is, ever fince the reformation by Julius Cæfar, made every third year a leap year, inftead of every fourth, twelve days had been inferted inftead of nine, fo that the Roman year confifted of three days more than it ought to have done. Thefe three fuperfluous days laving been thrown out, the form of the year has ever fince been regulatly obferved, and is fill known by the name of the old flyle in ufe among us. On this occafion he gave his own name to the month of Auguft, as Julius Cæfar had formerly done to the month of July:

In the year 11 B. C. Agrippa died, and was fucceeded in his high employment of governor of Rome by Tiberius; but, before invefting him with this ample power, the emperor caufed him to divorce his wife Agrippina (who had already brought him a fon, and was then big with child, , in order to marry Julia the widow of Agrippa and daughter of the emperor. Julia was a princefs of an infamous character, as was known to almolt every body excepting: A uguftus himfelf; however, Tiberius made no hefitation, through fear of difobliging the emperor.

The emperor now fent his two fons Tiberius and Drufus againtt the northern nations. Tiberius reda-
ome. ced the Pannonians, who had attempted to fake off the yoke after the death of Agrippa. Drufus performed great exploits in Germany; but while he was confidering whether he thould penetrate futher into thefe northern countries, he was feized with a violeut fever, which carried him off in a few days. He was fucceeded in his command by Tiberius, who is reported to have done great things, but certainly made no permanent conquelts in Germany. However, he was honoured with a triumph, and had the tribunitial power for five years conferred upon him; which was no founer dune, than, to the great furprife of Auguitus and the whole city", he defred leave to quit Rome and recire to Rhodes. Various realons have been affigned for this extraordinary refolntion: fome are of opinion that it was in order to avoid being an eyc-witnefs of the debaucheries of his wife Jlin, who fet no bounds to her lewdnefs: though others imagine that he was offended at the honours which Auguftus had conferred on his grandchildren, efpecially at his ftyling them princes of the Roman yruth; which left him no hopes of enjoying the fovereign power. However, Augnitus politicly refufed to comply with his requeft, and his mother Livia ufed her utinoft endeavours to diffuade him from his refulution : but Tiberius continued obitinate; and hinding all other means ineffectual, at laft thut himfelf up in his houfe, where he abftained four whole days from nourifhment. Augultus, perceiving that he could not get the better of his obftinate and inflexible remper, at latt complied with his requetl. Tiberius foon grew weary of his retirement, and, giving out that he had left Rome only to avoid giving umbrage to the emperor's two grandchildren, delired leave to return; but Augullus was fo much difpleafed with his having obttinately infilted on leaving Rome, that le obliged him to remain at Rhodes for feven years longer. His mother, with much ado got him declared 1.fi ed the emperor's lieutenant in thofe parts; but Tiberius, dreading the refentment of his father-in-law, contmued to act as a private perfon during the whole time of his fay there.

A profound peace now reigned throughout the whole empire; and in confequence of this the temple of Janus was thut, which had never before happened fince the time of Numa Pompilius. During this pa. cific interval, the Saviour of mankind was born in Judæa, as is recorded in the facred hiftory, \(74^{8}\) years after the foundation of Rome by Romulus. 'Three years after, Tiberins returned to the eity, by permilfion of Auguitus, who yet would not allow him to bear any public office; but in a fho:t time, Lucius Cæfar, one of the emperor's grandchildren, died, not without fufpicions of his being foifoned by Livia. 'l iberius fnow. ed fuch great concern for his death, that the affection of Augritus for him returned; and it is faid that he would at that time lave adopted Tiberius, had it not been for giving umbrage to his other grandfon Caius Cæír. This obitacle, however, was foun after removed; Caius being taken off alfo, not without great fufpicions of Livia, as well as in the former cafe. Al:guftus was exceedingly concerned at his death, and immediately adopted 'Tiberius as his fon; but adopted alfo Agrippa Pofthumius, the third fon of the famus Agrippa; and obliged Tiberius to adopt Germanicus the fon of his brother Drufus, thought he had a for of his own named Drujus; which was a great mortifica-
tion to hinn. As to Agrippa, however, who might have been an occafion of jealouly, Tiberius was foon freed from him, by his difgrace and banihment, which very foon took place, but on what account is not known.

The worthern nations now began to turn formidable : and though it is pretended that Tiberius was always fuccefsful againt them, yet about this time they gave the Romans a molt terrible overthrow; three legions and fix cohorts, under Quintilius Varus, being alinof entirely cut in pieces. Auguilus fet no buands to his grief on this fatal occafion. For fome munths he let his hair and beard grow, frequently tearing his garments, knocking his head againt the wall, and crying out like a diftracted perfon, " Reftore the legions, Varus!" Tiberius, however, was foon after fent into Germany ; and for his exploits there he was honour= ed with a triumph. Auguitus now took him for his colleague in the fovereignty; after which he fert Germanicus againt the northern barbarians, and Tiberius into Illyricum. This was the laft of his public aets; for having accompanied Tiberius for part of his journey, he died at Nola in Campania, in the 75 th year of his age, and 5 oth of his reign. Livia was fufpected of having hatened his death by giving him poiloned figs. Her reafon for this was, that fhe feared a reconciliation between him and his grandfon Agrippa whom he had banithed, as we have already related. Some months b-fore, the emperor had paid a vifit to Agrippa, unknown to Livia, Tiberius, or any other perfon, excepting one Fabins Maximus. This man, on his return home, difcovered the fecret to his wife, and dhe to the emprefs. Augutus then perceiving that Fabius had betrayed hirm, was fo provoked, that he banithed hin from his prefence for ever; upon which the unfortunate Fabius, nuable to furvive his difgrace, laid violent hands on himfelf.

Tiberius, who fucceeded to the empire, refulved to fecure himlelf on the throne by the murder of \(A\) grippa; whom accordingly he caufed to be put to death by a military tribune. Though this might have been a fufficient evidence of what the Romans had to expect, the death of Augultus was no fuoner known, than the confuls, fenators, and knights, to ufe the expreffion of Tacitus, ran lieadlong into 毋avery. The two confuls firt took an vath.of fidelity to the emperor, and then admimitered it to the fenate, the people, and the ful- 268 diery. Tiberius behaved in a dark mylterions man- D fim of Ii ner, taking care to rule with an abfolute fway, but at berius the faine time feeming to hefitate whether he thonid accept the fovereign power or nut ; infomuch that one of the fenators took the liberty to tell him, that other men were now in performing what they had promifed, but he was llow in promining what he had aleady perfurmed. At lath, however, his modefty was overcome, and lie declared hisacceptance of the fovereignty in the folluwing worls: "I acecpt the empire, and will inold it, till fuch time as you, confeript fathers, in your great prudence, thall thimk proper to give revole to my old age."

Tiberius had fearee taken poffeffion of the throne, Revolt of when news were brought him that the armies in Pan- te Panno nonia and Germany liad mutinicd. In Pannonia, tbree ianaod lecious havinor been allowed fome days of eronan le legions laving been allowed fome days of relasation from their ufual duties, either to mourn for the death of suguftus, or to rejuice for the acceffion of Tiberius, grew turbulent and feditious. Rome. nicers were headed by one Pucennius, a common fu! dier; who, before he ferved in the army, had made it his whole bufincfs to form parties in the theateres and playhoufes to hifs or appldud fuch aetors as he liked or viffiked. luflamed by the fpeeches of this man, they epenly revolted; and though liberius himfelf wrote to them, and fent his forn Drufus to endeavour to quell the tumult, they maffacred fome of their officers, and infulted others, till at laft, being frightened by an eclipfe of the moon, they began to fhow fome figns of repentance. Of this favourable difpofition Drufus took advantare ; and even got the ringleaders of the revolt condenned and executed. Immediately after this they were again terrified by fuch violent ftorms and dreadful rains, that they quietly fubmitted, and cvery thing in that quarter was reltored to tranquillity.

The revolt of the German legions threatened much more danger, as they were more numerous than thofe of Pannonia. They proceeded nearly in the fame way as the Pannonian legions, falling upon their officers, efpecially the centurions, and beating them till they almoft expired, drove them out of the camp, and fome of them were even thrown into the Rhine. Germanicus, who was at that time in Gaul, haftened to the camp on the firft news of the difturbance; but being unable to prevail on them to return to their duty, he was obliged to feign letters from Tiberius, granting all their demands. Thefe were, That all thofe who hat ferved 20 years Rhould be difcharged; that fuch as had ferved 16 fhould be deemed veterans; and that fome legacies which had been left them by Auguftus fhould not only be paid immediately, but doubled. This latt article he was obliged to difcharge without delay out of the money which he and his friends had brought to defray the expences of their journey ; and on receiving it, the troops quietly retired to their winter-quarters. But, in the mean time, fome deputies fent either by Tiberius or the fenate, probably to quell the fedition, occafioned frefh difturbances; for the legionaries, taking it ir.to their heads that thefe deputies were come to revoke the conceffions which Germanicus had made, were with dificulty prevented from tearing them in pieces; and, notwithftanding the utmort endeavours of Germanicus, bchaved in fuch an outrageous manner, that the general thought proper to fend off his wife Agrippina, with her infant fon Claudius, fhe herfelf at the fame being big with child. As the was attended by many women of dittinction, wives of the chief officers in the camp, their tears and lamentations in parting with their hufbands occafioned a great uproar, and drew together the foldiers from all quarters. A new fcene enfucd, which made an impreffion even upon the moft obflinate. They could not behold, without fhame and compaffion, fo many women of rank travelling thus forlorn, without a centurion to attend them, or a foldier to guard them ; and their general's wife among the reft, carrying her infant child in her arms, and preparing to fly for thelter againit the treachery of the Roman legions. This made fuch a deep impreflion on the minds of many of them, that fome ran to fop her, while the rett recurred to Germanicus, earnefty intreating him to recall his wife, and to prevent her from being ohliged to feek a fanctuary among foreigners. The general improved this favourable difpofition, and in a flort time they of their own accord feized and
maflacred the ringleaders of the revolt. Still, however, two of the legions continued in their difobedience. Againt them therefore Germanicus determined to lead thofe who had returned to their duty. With this view he prepared veffels; but before he embarked his troops, he wrote a letter to Cacina who commanded them, acquainting him that he approached with a powerful army, refolved to put then all to the fword without diftinetion, if they did not prevent him by taking vengeance on the guilty themfelves. This letter Cecina communicated only to the chief officers and fuch of the foldie1s as lad all along difapproved of the revolt, exhorting them at the fame time to enter into an affociation againit the feditious, and put to the fword fuch as had inrolved them in the prefent ignominy and guilt. This propofal was approved of, and a cruel maflacre immediately took place; infomuch that when Germanicus came to the camp, he found the greateft part of the legions deftroycd. 'This greatly affeeted the humane Germanicus, who caufed the bodies of the fain to be burnt, and celebrated their obfequies with the ufual folemnities; however, the fedition was thus effectually quelled, after which he led his army into Germany. There he performed many great exploits + ; but fill all that he could perform was far + see Ger from fieeing the empire from fo dangerous and trouble- many. fome an enemy. In the rear 19, he died, of poifon, as was fuppofed, given by Pifo, his partner in the government of Syria, to which Germanicus had been promoted after his return from the north.

In the mean time, Tiberius, though he affected to court the favour of the people by various methods, yet flowed himfelf in general fuch a cruel and bloodthirfly tyrant, that he became the object of univerfal abhorrence. Though he had hated Germanicus in his heart, he punifhed Pifo with death; but in alout a Tire year after the death of Germanicus, having now no cruel tyobject of jealoury to keep him in awe, he began to rant. pull off the mark, and appear more in his natural character than before. He took upon limfelf the interpretation of all political meafures, and began daily to diminifh the authority of the fenate; which defign wàs much facilitated, by their own aptitude to flavery; fo that he defpifed their meannefs, while he enjoyed its effects. A law at that time fubfifted, which made it treafon to form any injurious attempt againt the majefty of the people. Tiberius affumed to himfelf the interpretation and enforcement of this law ; and extended it not only to the cafes which really affected the fafety of the ftate, but to every conjuncture that could poffibly be favourable to his hatred or fufpicions. All freedom was now therefore banifled from convivial meetings, and diffidence reigned amongtt the deareft relations. The law of offended majefty being revived, many perfons of diftinction fell a facrifice to it.

In the beginning of thefe cruelties, Tiberius took Rife of \({ }^{272}\) into his confidence Sejanus, a Roman knight, but by , janus a birth a Volician, who found out the method of gain- wicked mi ing his confidence, by the moft refined degree of diffimulation, being an over-match for his mafter in his own arts. He was made by the emperor captain of the Pretorian guards, one of the moft confidential truits in the ftate, and extolled in the fenate as a worthy aflociate in his labours. The fervile fenators, with
me．ready adulation，fet up the ftatues of the farourite be． fide thofe of Tiberius，and feemed eazer to pay him fimilar honours．It is not well known whether he was the advifer of all the cruelies that enfued foon after； but certain it is，that，from the beginning of his minitry，Tiberius feemed to become more fatally fu－ fpicious．

It was from fuch humble berinnings that this mi－ nifter even rentured to afpire at the throne，and was refolved to make the emperor＇s foolith contidence one of the firt Iteps to his ruin．However，he confidered that cutting off Tiberius alone would rather retard than promote his defigns while his fon Drufus and the children of Germanicus were yet remaining．He therefore began by corrupting Livia，the wife of Dru－ fus；whom，after having debauched her．he prevailed upon to poifon her hufband．This was effected by means of a flow poifon（as we are told），which gave his death the appearance of a cafual diftemper．Tiberius， in the mean time，either naturally phlegmatic，or at leaf not much regarding his fon，bore his death with great tranquillity．He was even heard to jeft upon the occafion；for when the ambafladors from Troy came fomewhat late with their compliments of condolence，he enfwered their pretended diftreffes，by condoling with them alfo upon the lofs of Hector．

Sejanus having fucceeded in this，was refolved to make his next attempt upon the children of Germani－ cus，who were undoubted fucceflors to the empire． However，he was frufrated in his defigns，both with regard to the fidelity of their governors，and the chaf－ tity of Agrippina their mother．Whereupon he re－ folved upon changing his aims，and removing Tiberius out of the city；by which means he expected more frequent opportunities of putting his defigns into exe－ cution．He therefore ufed all his addrefs to perfuade Tiberius to retire to fome agreeable retreat，remote from Rome．By this he expected many advantages， fince there could be no accef＇s to the emperor but by him．Thus all letters being conveyed to the prince by foldiers at his own devotion，they would pafs through his hands；by which means he mult in time become the fole governor of the empire，and at laft be in a capacity of removing all ubftacles to his ambition．He now therefore began to infinuate to Tiberius the great and numerous inconveniences of the city，the fatigues of attending the fenate，and the feditious temper of the inferior citizens of Rome．Tiberius，either prevailed upon by his perfuafions，or purfuing the natural turn of his temper，which led to indolence and debauchery， in the twelfth year of his reign left Rome，and went into Campania，under pretence of dedicating temples to Jupiter and Augutus．After this，though he removed to feveral places，he never returned to Rome；but fpent the greatelt part of his time in the illand of Caprea，a place which was rendered as infamous by his pleafures as deteftable by his cruelties，which were fhoekingr to liuman nature．Buried in this retreat，he gave him－ filf up to his pleafures，quite regardlefs of the miferies of his fubjects．Thus ar inlurrection of the Jews，upon placing his ftatue in Jerufalem，under the government of Pontius Pilate，gave him no fort of uncalinefs．The falling of an amphitheatre at Fidenæ，in which 50，000 perfons were either killed or wounded，no way affected马his repofe．He was only emplored in fudjing how

Vos．XVI．Part II．
to va！y his odious pleafures，and forcing his feeble frame，fhattered by age and former debaucheries，into the enjoyment of them．Nothing can prefent a more horrid picture than the retreat of this impure old man， attended by all the r．initers of his perverted appetites． He was at this time 67 years old ；lis perfon was mott difpleafing ；and fome fay the difagrecablenefs of it in a great meafure，drove him into retirement．He was quite bald before；his face was all broke out into ul－ cers，and covered over with platers ；his body was bowed forward，while its extreme height and leannefs increafed its deformity．With fuch a perfon，and a rind fill pore hideols，being gloomy，fufpicious，and cruel，lie fat down with a view rather of forcing his appetites
than fatisfying them．He fpent whole nights in de－ than latisfying them．He fpent whole nights in de－ Flaccus and Lucius Pifo to the firit poits of the cm－ pire，for no other merit than that of having fat up with him two days and two nights without interruption． Thefe lie called his friends of all hours．He made one Novelins Torgnatus a pretor for being able to drink off five bottles of wine at a draught．His luxuries of ano－ ther kind were ftill more detettable，and feemed to in－ creafe with his drunkennefs and gluttony．He made the moft eminent women of Rome fubfervient to his lufts； and all his inventions only feemed calculated bow to rake his sices more extravagant and abominable．The numberlefs obfcene medals dug up in that illand at this day bear winels at once to his thame，and the veracity of the hiftorians who have deleribed his de－ baucheries．In fhort，in this retreat，which was fur－ rounded with rocks on every fide，he quite gare up the bufnefs of the empire；or，if he was ever active，it was only to do mifchief．But，from the time of his retreat，he became more cruel，and Sejanus always endeasoured to increafe his dittrufts．Secret fpies and informers were placed in all parts of the city，who converted the moft harmlefs actions into lubjects of offence．If any per！on of merit teflified any concern for the glory of the empire，it was immediately con－ ftrued into a defign to obtain it．If another fpuke with regret of former liberty，he was fuppofed to aim at re－eltablifhing the commonwealth．Every action became liable to forced interpretations；joy expreffed an lope of the prince＇s death ；melancholy，an en－ vying of his profperity．Sejanue found his ain every day fucceeding ；the wretched emperor＇s terrors were an inftrument that he wrought upon at his pleafure， and by which he levelled every obftacle to his defigns． But the chief objects of his jealoufy were the children of Germanicus，whom he refolved to put out of the way． He therefore continued to render thera obnoxious to the emperor，to alarm him with falfe reports of their ambition，and to terrify them with alarms of his in－ tended cruelty．By thefe rreans，he fo contrived to widen the breach，that he actually produced on both fides thofe difpofitions which he pretended to obviate； till at length，the two princes Nero and Diufus were declared cuemies to the ftate，and atterwards flarved to death in prifon；while Agrippina their nother was fent into banifhment．
In this namner Sejanus proceeded，rennoving all who Atood between him and the empirc，and every day in－ creafing in confidence with I ibcrius，and puwer with the fenate．The number of his flatues caccedid even 3 E thore

thofe of the emperor; people fwore by his fortune, in the fame manuer as they would have done had he been actually upon the throne, and he was more dreadad than even the tyrant who actually enjoyed the empire. But the rapidity of his rife feemed only preparatory to the greatuefs of his downfall. All we know of his firlt difgrace with the emperor is, that Satrius Secundus was the man who had the boldnefs to accufe him. Antonis, the mother of Germanicus, feconded the accufation. What were the particulars of his crimes, we cannot learn; but certdin it is, that he atrempted to ufurp the empire, by aiming at the life of Tiberins. He was very near difpatching him, when his practices were difcovercd, and his own life was fubflituted for that againit which he aimed. Tiberius, fenfible of the traitor's power, proceeded with his ufual diffimulation in having hiin apprehended. He granted him new honours at the very time he refolved his death, and took him as his colleague in the confulthip. The emperor's letter to the fenate began only with flight complaints agraintt his friend, but ended with an order for putting him in prifon. He intreated the fenators to protect a poor old \(m\) an, as he was, abandoned by all; and, in the mean time, prepared
 The fenate, who had long been jealous of the favourite's power, and dreaded his cruelty, immediately took this opportunity of going beyond their orders.

Sejanut dif a A frange revolution now ap peared in the city; of thofe numbers that but a moment before were preffing into the prefence of Sejanus, with offers of fervice and adulation, not one was found that would feem to be of his acquaintance: he was defoted by all; and thofe who had formerly received the grcateft benefits from him, feemed now converted into his molt inveterate enemics. As he was conducting to execution, the people loaded him with infult and exeeration. He attempted to hide his face with his hands; but even this was denied him, and his hands were fecured. Nor did the rage of his enemies fubfide with his death; his body was ignominioully dragged about the ftreets, and his whole family executed with him.

His death only lighted up the emperor's rage for fur-
ther executions. The prifons were crowded with pretended accomplices in the confpiracy of Sejanus. Tiberins began to grow wcary of particular executions ; he therefore gave orders that all the accufed mould be put to death together without further examination. Of 20 fenators, whom he chofe for his council, he put 16 to death. "Let them hate me (cried he) fo long as they obey me." Hic then averred, that Priam was an happy man, who outlived all his pollerity. In this :nanner there was not a day without fome barbarous execution, in which the fufferers were obliged to undergo the moft Mameful indignitics and exquifite torments. When one Camillus had killed himfelf to avoid the torture: "Ah (cried Ciberius), how that man has been able to efcape me!" When a prifoner earneflly intreated that he would not defer his death: \({ }^{\text {s. }}\) No (cried the tyrant), I am not fufficiently your fricad, to fhorten your torment." He often fatisfied his eyes with the tortures of the wretches that were put to death before him ; and in the days of Suetonius
the rock was to be feen, from which he ordered fuch as had difpleafed hin to be thrown headlong. As he was one day examining fome perfors upon the rack, he was told that an old friend of his was come from Rhodes to fee him. Tiberius fuppofing him brought for the purpofe of information, inmediately ordered him to the tortute; and when he was convinced of his miltake, he ordered him to be put to death, to prevent farther difcovery.
In this manner did the tyrant continue to torment others, although he was himfelf it:ll more tortured by his own fufpicions; fo that in one of his letters to the fenate, he confeffed that the gods and goddeffes had fo afflicted and confounded him, that he knew not what or how to write. In the mean time, the frontier proviuces were invaded with impunity by the bariarians. Mefia was feized on by the Dacians and Sarmatians ; Gaul was wafted by the Germans, and Armenia conquered by the king of Parthia. Tiberius, however, was fo much a nave to his brutal appetites, that he left his provinces wholly to the care of bis lieutenants, and they were intent rather on the accumulation of private fortune than the fafety of the flate. Such a total diforder in the empire produced fuch a degree of anxiety in him who governed it, that he was heard to wifh, that heaven and earth might perih when he died. At length, however, in the 22d ycar of his reign, he began to feel the approaches of his diffolution, and all his appetites totally to forfake him. He now, therefore, found it was time to think of a fucceffor, and hefitated for a long while, whether he fhould choofe Caligula, whofe vices were too apparent to efcape his oblervation. He had been often heard to fay, that this youth had all the faults of Sylla, without his virtues; that he was a ferpent that would fting the empire, and a Phaeton that would fet the world in a flame. However, notwithftanding all his \(\mathrm{Chonfes}^{279}\) well-grounded apprehenfions, he named him for bis fuc-Calipula ceffor; willing, perhaps, by the enormity of Caligula's his fucconduet to cover the memory of his own.

But though he thought fit to choofe a fucceffor, he conccaled his approaching decline with the utmoft care, as if he uts willing at once to hide it from the world and himfelf. He long had a contempt for phyfic, and refufed the advice of fuch as attended him: he even feemed to take a pleafure in being prefent at the fports of the foldiers, and ventured himfelf to throw a javelin at a boar that was let loofe before him. The effort which he made upon this occafion caufed a pain in bis fide, which haftened the approaches of death : fill, howevcr, he feemed willing to avoid his end ; and ftrove, by change of place, to put off the inquietude of his own reflections. He left his favourite ifland, and went upon the continent, where he at laft fixed at the promontory of Mifenum. It was here that Charicles, his phyfician, pretending to kifs his hand, Felt the failure of his pulfe; and apprifed Macro, the emperor's prefent favourite, that he had not above two days to live. Tiberius, on the contrary, who had perceived the art of Charicles, did all in his power to imprefs his attendants with all opinion of his health : he continued at table till the evening; he faluted all his guefts as they left the room, and read the acts of the fenate, in which they bad abfolved fome perfons he had written againf, with great indignation. He refolved

\section*{\(R \quad\) O M 403 ] R O M}
me. rcfolved to take fignal vengeance of their lifobedience, and meditated new fchemes of cruelty, when he fell into fueh faintings, as all believed were fatal. It was in this fituation, that, by Macro's advice, Caligula prepared to fecure the fucceffion. He reecived the congratulations of the whole court, caufed himfelf to be aeknowledged by the Pretorian foldiers, and went forth from the emperor's apartment amidf the applaufes of the multitude; when all of a fudden he was informed that the emperor was recovered, that he had begun to fpeak, and defired to eat. This unexpeeted account filled the whole court with terror and alarm : every one who had before been earneft in teftifying their joy, now re-aflumed their pretended forrow, and left the new emperor, through a feigned folicitude for the fate of the old. Caligula himfelf feemed thunderftruck; he preferved a gloomy filence, expecting nothing but death, inftead of the empire at whieh he had afpired. Macro, however, who was hardened in ctimes, ordered that the dying emperor fhould be difpatched, by fmothering him with pillows, or, as others will have it, by poifon. In this manner Tiberius died, in the 78 th ycar of his age, after reigning 22.

The Romans were, at this time, arrived at their highelt pitch of effeminaey and vice. The wealth of almof every nation of the empire, having, for fome time, circulated through the city, brought with it the luxuries peculiar to each country; fo that Rome prefented a deteftable picture of various pollution. In this reign lived Apicius, fo well known for having reduced gluttony into a fyltem ; fome of the moft notorious in this way, thought it no fhame to give near 100 pounds for a fingle fifh, and exhault a fortune of 50,000 pounds in one entertainment. Debaucheries of every other kind kept pace with this; while the deteftable folly of the times thought it was refining upon pleafure to make it unnatural. There were at Rome men called /pintria, whofe fole trade it was to fudy new modes of pleafure; and thefe were univerfally favourites of the great. 'The Senators were long fallen from their authority, and were no lefs eftranged from their integrity and honour. Their whole fiudy feemed to be, how to invent new ways of flattering the emperor, and various methods of tormenting his fuppofed enemies. The people were ftill more corrupt : they had, for fome years, been accuftomed to live in idlenefs, upon the donations of the emperor; and, being fatisfied with fubfiftence, entirely gave up their freedom. Tco effeminate and cowardly to go to war, they only railed againd their governors; fo that they were bad foldiers and feditious citizens. In the 231. 18th year of this monarch's reign, Chrift was crueified. cif cru- Shortly after his death, Pilate is faid to have written to Tiberius an aceount of his paffion, refurrection, and miracles; upon which the emperor made a report of the whole to the fenate, defiring that Clirift might be accounted a god by the Komans. But the fenate being difpleafed that the propofal had not cone firlt from themfelves, refufed to allow of his apotheolis; alleging an ancient law, which gave them the fuperintendance in all matters of religion. They ceen went fo far, as by an edict to command that all Chriftians fhould leave the eity: but Tilberius, by another edic, threatened death to all fuch as ihould aceufe them; by which means thicy continued enreolefted during the ref of his reign,

No monarch ever came to the throne with more advanitages than Caligula. He was the fon of Germani. cus, who had been the darling of the army and the people. He was bred among the foldiers, from whom he received the name of Caligula, from the fhort bufkin, called caliza, that was worn by the cormmon centinels, and whieh was aifo ufually worn by him. As he approached Rome, the principal men of the flate went out in crowds to meet him. He received the congratulations of the people on every fide, all equally pleared in being free from the cruelties of riberius, and in hoping new advantages from the virtues of his fueceffor.

Caligula feemed to take every preeaution to imprefs them with the opinion of an happy change. A midft the rejoicings of the multitude, he advaneed mourning. with the dead body of Tiberius, which the foldiers brought to be burnt at Rome, according to the cuftom of that time. Upon his entrance into the city, he was rceeived with new titles of honour by the fenate, whofe chief employment feemed now to be, the art of increafing their emperor's vanity. He was left co-he:r with Gemellus, grandfon to Tiberius; but they fet afide the nomination, and declared Caligula fole fucceffor to the empire. The joy for this election was not consned to the narrow bounds of Italy; it fpread through the whole empire, and vitims without number were facrificed upon the occafion. Some of the people, upon his going into the ifland of Campania, made vuws for his return; and fhortly after, when he fell fick, the multitudes crowded whole nights round his palace, and forne even devoted themfelves to death in cave he recovered, fetting up bills of their refulutions in the Atreets. In this affection of the citizens, frangers themfelves feemed ambitious of fhariny. Artabanus, king of Parthia, fought the emperor's alliaace with affiduity. He came to a perfonal conference with one of his legates; paffed the Euphates, adored the Roman eagles, and kifled the emperor's images ; fo that the whole world fcemed combined to praife him for virtues which they fuppofed him to poffetis.

The new emperor at firf feemed extremely careful of the public favsur; and having performed the fune. ral folemnities of Tiberius, he haltered to the iflands of Pandataria and Pontia, to remove the afhes of his mother and brothers, expofing himfalf to the dangers of tempeftuous weather, to give a luftre to his piety. Having brought them to Rome, he inftituted annual fulemnities in their honour, and ordered the month of September to be called Germanicus, in memory of his father. Thefe ceremonies being over, he conferred the fame honours upon his grandmother Antonia, which had before been given to Livia; and ordered all informations to be burnt, that any ways expofed the enemies of his family. He even refufed a paper that was offered him, tendiug to the difeovery of a confpiraey againit him; alleging, That he was confcious of nothing to deferve any man's hatred, and therefore had no fears from their machinations. He caufud the inftitutions of Auguftus, which had been difufed in the reign of Tiberius, to be revived; unde:took to reform many abufes in the flate, and feverely punifhed corrupt governors. Among others, he banifhed Pontius Pilate into Gaul, where this unjuft magiftrate afterwards put a: end to his life by fuicide. He banifhed the fpintrix,
ronte.

or insenters of abominable recreations, from Rome; attempted to sellose the ancient manner of clecting magiltrates by the fufi yses of the people; and gave them a lice juriddiction, without any appeal to himielf. Although the will of 7 iberins was annulled by the fenate, and that of Livia fupe refied by Thberius, yet he cauled all their legacies io be punctu:lly paid; and in order to mike Gemellus anends for miffing the crown, he ceufed him to be cleceed Pitir.ops Juvencutis, or principal of the youth. He refl. d fome kings to their daminions who had been unjutly difpoffefed by Tiberius, and gave them the arrcars of their revenucs. And, that he might applear an encourager of every virtue, he ordered a. Fenmale flave a large fum of money for enduring the molt exquifite tormerits without difcovering the fecrets of her n:after. So many conceffions, and fach apparent virtue, could not fail of receiving jull applaufe. A fhield of gold, baring his image, was decreed to be carried annually to the Capitol, attended by the fenate and the fons ot the nobility fruging in praife of the emperor's vistues. It was likewife ordained, that the day on which he was appointed to the empire fhould be called Pubits; implying, that when he came to govern, the city received a new fomidation.

In lefs than eight months all this fhew of moderation and clemency vanifhed; while furious paffions, unexampled avarice, and capricious cruelty, began to take their turn in his mind. As moft of the cruelties of Tiberius arofe from fufpicion, fo moft of thofe committed by Caligula took rife from prodigality. Some indeed affert, that a diforder which happened foon after his acceffion to the empire, entirely difcompofed his underfanding. However this may be, madnefs itfelf could fcarce dichate cruelties more extravagant, or incontiftencies more ridiculons, that are imputed to him; fome of them appear almot beyond belief, as they feem entirely without my motive to incite fuch barbarities.

The firft object of his cruelty was a perfon named Politus, who had devoted himfelf to death, in cafe the emperor, who was then fick, fhould recover. When Caligula's health was re-eftablifhed, he was informed of the z.cal of Politus, and actually compelled him to (omplete his vow. This ridiculous derutee was therefore led round the city, by children, adorned with chaplets, and then put to death, being thrown head!ong from the ramparts. Another, named Sccundus, liad roucd to fight in the amphitheatre upon the fame occalion. To this lee was alfo compelled, the emperor limiecif choofing to be a fpectator of the combat. Huwever, he was more fortunate than the former, being fo fucceffful as to kill his adverfary, by which he obtained a releafe from his von. Gemellus was the next who fuffered from the tyrant's inhumanity. The pretence againft him was, that he had wihed the emperor might not recover, and that he had taken a counter-poifon to fecure him from any fecret attempts again? his life. Caligula ordered hin to kill himfelf; but as the unforturate youth was ignorant of the manner of doing it, the emperor's meffengers foon inftructed him in the fatal leflon. Silenus, the emperor's fa-ther-in-law, was the next that was put to death upon night furficions; and Gercinus, a fenator of noted integrity, retufing to witnefs falfely againft him, thared his fate. After thefe followed a crowd of victims to the emperor's avarice or fufpicion. The pretest againit
them was their enm'ty to his family; and in proof of his accufations he produced thofe very menosials which but a while before he pretended to have hurnt. Among the number of thofe who were facrificed to his jealoufy, was Macro, the late favourite of Tiberins, and the peifon to whom Caliguta owed his empire. He was acculed of many crimes, fome of which were common to the emperor as wall as to him, and his death brought on the ruin of his whole family.
'Thefe cruelties, however, only feemed the firft fruits of a mind naturally timid and fulpicious: his vanity and profufion foon gave rife to others which were more atrocious, as they fiprung from lefs powerful motives. His pride finft began by afluming to limelf the title of ruler, which was ufually granted only to kings. He would alfo have taken the crown and diadem, had he not been advifed that he was already fupcrior to all the nonarchs of the wonld. Not long after, he affumed divine honours, and gave himfelf the names of fuch divinities as he thought molt agreeable to his nature. For this purpofe he caufed the heads of the ftatues of Jupiter and fome other gods to be ftruck off, and his own to be put in their places. He frecquently feated himfele between Caftor and Pollux, and ordered all who came to their tenple to worihip, fhould pay their adorations only to him ; nay, at lati he altered their temple to the form of a portico, which he joined to his palace, that the very gods, as he faid, might ferve him in the quality of porters.

He was not lefs notorious for the depravation of his appetites than for his ridiculous prefumptions. Neither perfon, place, nor fex, were obllacles to the indulgence of his unnatural lufts. There was fearec a lady of any quality in Rome that efcaped his lewdners; and, indeed, fuch was the degeneracy of the times, that there were few ladies who did not think this difgrace an honour. He comnitted inceft with his three fiters, and at public feafts they lay with their heads upon his bofom by turns. Of thefe he prollituted Livia and \(A\) grippina to his vile companions, and then banifhed them as admltereftes and confpirators againft his perfon. As for Drufilla, he touk her from her huband Longinus, and kept hey as his wife. Her he loved fo affectionate\(l_{y}\), that, being fick, he appointed her as heirefs of his empire and fortune; and the happening to die before him, he made her a goddefs. Nor did her example when living, appear more dangerous to the people than lier divinity when dead. To mourn for her death was. a crime, as the was bccome a goddefs; and to rejoice for her divinity was capital, becaufe fhe was dead. Nay, even filence itfelf was an unpardonable infenfibility, either of the emperor's lofs or his filter's advancement. Thus he made his fifter fublervient to his profit, as before he had done to his pleafure; raifing vaft fums of money by grantirg pardons to fome, and by confifcating the goods of others. As to his marriages, whether he contracted them with greater levity, or diffolved them with greater injuftice, is not eafy to determine. Being prefent at the nuptials of Livia Oreftilla with Pifo, as foon as the folemnity was over, he commanded her to be brought to him as his own wife, and then difmiffed her in a few days. He foon after banifhed her upon fufpicion of cohabiting with her hufband afier fhe was parted from him. He was enamour-. ed of Lollia Paulina, upon a bare relatiou of her grand-:

\section*{\(R \cap M\)}
mother's beauty; and thereupon took her from her hufband, who commanded in Macedonia: notwith:Anding which, he repuliated her as he had done the former, and likewife forbad her future marrying with any other. The wife who caught moit firnly upon his affections was Mitonia Cefonia, whofe chief merit lay in her perfeet acquaintance with all the alluring arts of her fex, for the was otherwife poffeffed neither of youth nor beauty. She continued with him during his reign; and he loved her fo ridiculountr, that he fometimes fhowed her to his foldiers dreffed in armour, and fometimes to his companions flark naked.

But of all his vices, his prodigality was the moit remarkable, and that which in fome meafure gave rile to the reft. The luxuries of former entperors were fimplicity itfels, when compared to thofe which he practifed. He contrived new ways of bathing, where the richeft oils and moft precions perfumes were exhaufted with the utmoft profufion. He found out difhes of immerife value; and had even jewels, as we are told, diffolved among his fauces. He fometimes lhad fervices of pure guld prefented before his guefts intlead of meat; whferving, that a man fhould be an aceonomit or an emperor.

For fereral days tugether he flung confiderable fums of money among the people. He ordered fhips of a prodigions bulk to be built of cedar, the ftems of ivory inlaid with gold and jewels, the fails and tackling of various filks, while the decks were planted with the choicefl fruit trees, under the fhade of which he otten dined. Here, attended by all the miniters of his picafures, the molt exquifite fingers, and the mof beautifut youths, he coafted along the fhore of Campania with great fplendor. All his buildings feemed rather calculated to raife aftonifhment, than to aufwer the purpofes of utility. But the mot notorious inftance of his truitlefs profufion was the vaft bridge at Puteoli, which he undertook in the third year of his reign. To fatisfy his defire of being malter as well of the ocean as the land, he caufed an intrite number of thips to be faftened to each other, fo as to make a floating bridge from Baix to Puteoli, acrofs an arm of the fea three miles and an half broad. The hips being placed in two rows, in form of a cerefent, were fecured to each other with anchors, chains, and cables. Over thefe were laid vaft quantities of timber, and upon that earth, fo as to make the whole refemble one of the ftreets of Rome. He next cauled feveral houfes to be built upon his new bridge, for the reception of himfelf and his attendants, into which frefh water was conveyed by pipes from land. He then repaired thither with all his court, attended by prodigious throngs of people, who came from all parts to be fpectators of fuch an expenfive pageant. It was there that Caligula, adorned with all the magnificence of eaftern royalty, fitting on horfeback with a civic crown and Alexander's breait-plate, attended by the great officers of the army, and all the nobility of Rume, entered at one end of the bridge, and with ridiculous inportanee rode to the other. At night, the number of torehes and other illuminations with which this expenfive Itucture was adorned, calt fuch a gleam as illuminated the whole bay, and all the neighbouring mountains. This feemed to give the weak emperor new caufe for exultation; bualting that he had curned night into day, as well as fea into land.

The nes: morning le agrain rode over in a triumphant chariot, followed by a numerous train of charivteers, and all his foldiers in gliterimg arnour. He then afcended a roftrum eretted for the occafion, where he made a ©olemn oration in praife of the greatncis of his enterprife, and the affiduity of his workmen and his amy. He then diftributed rewards among his men, and a fplendid feait fucceeded. In the midit of the entertaiment many of his attendants were thrown into the fea; feveral thips filled with fpectaturs were attacked and funk in an hottile manner; and although the majority elcaped through the calmnefs of the wedther, yet many were drowned; and fome who endeavulutd to fave themflyes by climbing to the bridge. wele tiruck down again by the emperor's command. The calmnefs of the fea during this pageant, which continued for two days, furnifhed Caligula with freth opportunities for boalting; being heard to fay, " thai Neptune took care to keep the fea finooth and ferene, merely out of reverence to him."
Espences like thefe, it may be naturally fuppofed, muft have exhaufted the molt unbounded wealth: in fact, alter reigning about a year, Caligula found his revenucs totalily exhaufted; and a fortune of about 18,000,000 of our money, which Tiberius had anaffed together, entirely fpent in extravagance and folly. Nuw, therefore, his prodigality put him upon new methods of fupplying the exchequer; and as before his profution, fo now his rapacity became boundlefs. He put in practice all kinds of rapine and exturtion; while his principal ftudy feemed to be the inventing new impolts and illicit confifcations. Every thing was taxed, to the very wages of the meaneft tradefman. He caufed freemen to purchafe their freedom a feeond time; and poifoned many who had named him for their heir, to have the immediate pofeffion of their fortunes. He fet up a brothel in his own palace, by which he gained conliderable fums by all the methods of proflitution. He alfo kept a gaming-houfe, in which he himfelf prefided, ferupling noue of the meanelt tricks in.order to advance his gains. On a certain occafion having had a run of ill huck, he faw two rich kuights paffing though his court; upon which he fuddenly rofe up, and caufing both to be apprehended, confifeated their eftates, and then joining his former companions, boafted that he never had a better throw in his life. Another time, wauting money for a itake, he went down and caufed feveral noblemen to be put to death; and then returniug, told the company that they fat playing for trifics while he had won 60,000 fedterees at a caft.

Such infupportable and capricious cruelties produced Ridiculous many fectet confpiracies again!t him; but thele were expeditions for a while deferred, upon account of his intended ex- arainft Bripedition againft the Germans and Britons, which he Gernany, undertook in the third year of his reign. For this purpofe, he caufed numerous levies to Le made in all parts of the empire; and talked with fo much refolution, that it was univerfally believed lie would conquar all before him. His mareh perfectly indicated the inequality of his temper: fonsetimes it was fo rapid, that the cohorts were obliged to leave their ftandards behind them; at other tirmes it was fo fow, that it more refembled a pompous proceffion that a military expedition. In this difpofition he would caufe himfelt to. be carried on eight mens fhoulders, and order all the.
neighbouring
neighbouring citics to have their flrects well fwept and watered to defend him from the duft. However, all thefe mighty preparations ended in nothing. Infead of conquering Britain, he ouly gave refuge to one of its banified princes; and this he defcribed in a letter to the fenate, as taking poffeflion of the whole inand. Intcad of conquering Germany, he only led his army - to the fea hore in Batavia. There difpofing his e:gines and warlize machines with great folemnity, and drawing up his men in order of battle, he went on board his galley, with which coafting along, he commanded his trumpets to found and the lignal to be given as if for an engagement ; upon which, his men having had previous orders, immediately fell to gathering the fiells that lay upon the fhore into their helmets, terming them the fpoils of the conquered oceen, worthy of the palace and the capithl. After this doughty expedition, calling his army together as a general after victory, he harangued them in a pompous manner, and highly extolled their atchievements; and then diftributing money among them, difinificd them with orders to be joyful, and congratulated them upon their riches. But that fuch exploits fhould net pafs without a memorial, he caufed a lofty tower to be erected by the fea-fide; and ordered the galleys in which be had put to fea to be conveyed to Rome in a great meafure by land.

After numberlefs inftances of folly and cruelty in this expedition, among which he had intentions of defroying the whole army that had formerly mutinied under his father Germanicus, he began to think of a triumph. The fenate, who had long been the timid minifters of his pride and cruelty, immediately fet about confulting how to fatisfy his expectations. They confidered that a triumph would. even to himfelf, appear as a burlefque upon his expedition: they therefore deereed him only an ovation. Having come to this refolation, they fent him a deputation, informing hian of the honours granted him, and the decree, which was drawn up in terms of the mof extravagant adulation. However, their flattery was far from fatisfying his pride. He confidered their conduct rather as a diminution of his power, than an addition to his glory. He therefore ordered them, on pain of death, not to concen themfelves with his honours; and being met by their meffengers on the way, who invited him to come and partake of the preparations which the fenate had decreed, he informed them that he would come; and then laying his hand upon his fword, added, that he would bring that alfo with him. In this m uner, either quite omitting his triumph, or deferring it to another time, he entered the city with only an ovation; while the fenate paffed the whole day in acclamations in his praife, and ipeeches filled with the moft exceffive flattery. This conduct in fome meature ferved to reconcile him, and foon after their exceffive zeal in his caufe entirely gained his favour. For it happened that Protogenes, who was one of the moft intimate and the moft cruel of his favourites, coming into the houfe, was fawned upon by the whole body of the fenate, and particularly by Proculus. Wherenpon Protogenes with a ferce look, afked how one who was fuch an cnemy to the emperor could be fuch a frierd to him? There needed no more to excite the fenate againat Proculus. They inftantly feized upon him, and violently tore him
in picces; plainiy howing by their conduct, that tyranny in a prince produces cruelty in thofe whom he governs.-It was after returning from this extravagant expedition, that he was waited upon by a deputation of the Jews of Alexandria, who came to deprccate his anger for not worhipping his divinity as other nations had done. The emperor gave them a very ungracions reception, and would probably have deftroyed their countrymen if he had not foon after been cut off.

This affair of the Jews remained undecided during his reign; but it was at laft fettled by his fucceffor to their fatisfaction. It was upon this occafion that Philo made the following remarkable anfwer to his affociatcs, who were rerrified with apprehenfions of the emperor's indignation;" Fear nothing (cried he to them), Caligula, by declaring againft us, puts God on our fide."

The continuation of this horrid reign feemed to threaten univerfal calamity: however, it was but hort. There had already been feveral confpiracies formed to a conl deftroy the tyrant, but without fuccefs. That which acy fu at laft fucceeded in delivering the world of this mon-ed he cm fter, was concerted under the infuence of Caffius Cherea, tribuue of the pretorian bands. This was a man of experienced courage, an ardent admirer of freedom, and confequently an enemy to tyrants. Befides the motives which he had in common with other men, he had received repeated infults from Caligula, who took all occafions of turning him into tidicule, and impeach. ing him of cowardice, merely becaufe he had an effeminate voice. Whenever Cherea came to demand the watch-word from the emperor, according to cuftom, he always gave him either Venus, Adonis, or fome fuch, implying effeminacy and foftnefs. He therefore fecretly imparted his defigns to feveral fenators and knights whom he knew to have received perfonal in. juries from Caligula, or to be apprehenfive of thofe to come. Among thefe was Valerius Afraticus, whufe wife the emperor had debauched. Annius Vincianus, who was fufpected of having been in a former confpiracy, was now deffrous of really engaging in the firlt delign that offered Befides thefe, were Clemens the prefect; and Califtus, whofe riches made him obnoxious to the tyrant's refentment.

While thefe were deliberating upon the mof certain and Ipeedy method of deftroying the tyrant, an unexpected incident gave new Atrength to the confpiracy. Pompedius, a fenator of diftinction, having been accufed before the emperor, of having froken of him with difrefpect, the informer cited one Quintilia, an actrefs, to con rm his accufation. Quintilia, however, was poffefled of a degree of fortitude not eafily found. She denied the fact with obftinacy; and being put to the torture at the informer's requef, fhe bore the fevereft torments of the rack with unfaken conftancy. But what is moft remarkable of her refolution is, that The was aequainted with all the particulars of the confpiracy ; and although Cherea was appointed to prefide at her torture, fhe revealed nuthing: on the contrary, when fhe was led to the rack, fhe trod upon the toe of one of the confpirators, intimating at once her knowledge of the confederacy, and her own refolution not to divulge it. In this manner fhe fuffered until all her limbs were diflocated; and in that deplorable ftate vas prefented to the emperor, who ordered her a gratuity for what the bad fuffered. Cherea could now no lon-

\section*{R O M}
e. ger contain his indignation at being thus made the influment of a tyrant's cruelty. He therefore propofed to the confpirators to attack him as he went to of fer facrifices in the Capitol, or while he was employed in the fecret pleafures of the palace. The reft, however, were of opinion, that it was bef to fall upon him when he fhould be unattended; by whick means they would be more certain of fuccefs. After feveral deliberations, it was at laft refolved to attack him during the continuance of the Palatine ganes, which lafted four days; and to ftrike the blow when his guards fhould have the leaft opportunity to defend hiss. In confequence of this, the three firf days of the games affed without affording that opportunity which was fo ardently defired. Cherea now, therefore, began to apprehend, that deferring the time of the confpiracy might be a mean to divulge it : he even began to dread, that the honour of killing the tyrant might fall to the lot of fome other perfon more bold than hinfelf. Wherefore, he at laft refolved to defer the execution of his plot only to the day following, when Caligula thould pals through a private gallery, to fome baths not far diftant from the palace.

The lat day of the games was more fplendid than the reft ; and Caligula feemed more fprightly and condefcending than ufual. He took great amufement in feeing the people fcramble for the fruits and other rarities thrown by his order among them; and feemed no way apprehenfive of the plot formed for his dettruction. In the mean time, the confpiracy began to tranfyire; and had he poffeffed any friends, it could not have failed of being difoovered. The confpirators waited a great part of the day with the mot extreme anxiety; and at one time Caligula feemed refoived to fpend the whole day without any refrehment. This unexpected delay entirely exafperated Cherea; and had he not been :eftrained, he would have gone and perpetrated his defign in the midat of all the people. Juft at that inftant, while he was yet hefitating what he fhould do, Afprenas, one of the confpirators, perfuaded Caligula to go to the bath and take fome flight refrefhment, irs order to enjoy the reft of the entertailment with greater relifh. The emperor therefore rifing up; the con-〔pirators ufed every precaution to keep off the throng, and to furround him, under pretence of greater affiduity. Upon entering into the little vaulted gallery that led to the bath, he was met by a band of Grecian children who had been inftructed in finging, and were cone to perform in his prefence. He was once nore therefore going to-return into the theatre with them, hed not the leader of the band excufed himfelf, as having a cold. This was the moment that Cherea feized so trike him to the ground; erying out, "Tyrant, think upon this.". Immediately after, the other confpirators ruflied in ; and while the emperor continued to refint, crying out, that he was not yet dead, they difpatched him with 30 wounds, in the 29 th year of his age, after a fhort reign of three years ten months and eight days. With him, his wife and infant daugh. ter allo perifhed; the one being flabbed. by a centurion, the other having its brains dalhed out againft the wall. His coin was alfo melted down by a decree of the fenate ; and fuch precautions were taken, that all feemed willing, that neither his'features nor his name miglit be tranfmitted to pofterity.

As foon as the death of Caligula was made public, it Rome produced the greateft confufion in all parts of the city. 288 The confpirators, who only aimed at deftroying a ty- -288 est conrant without attending to a fucceffor, had all fought fufion enfafety by retiring to private places. Some thought fees on bis the report of the emperor's death was only an artifice death. of his own, to fee how bis enemies would behave. Others averred that he was ftill alive, and actually in a fair way to recover. In this interval of fufpenfe, the German guards finding it a convenient time to pillage, gave a loofe to their licentioufnefs, under a pretence of revenging the emperor's death. All the confpiratore and fenators that fell in their way received no mercy: Afprenas, Norbanns, and Anteius, were cut in pieces. However, they grew calm by degrees, and the fenate was perrnitted to affemble, in order to deliberate upor. what was neceflary to be done in the prefent emergency.

In this deliberation, Saturninus, who was then co:lful, infifted much upon the benefits of liberty; and talk. ed in raptures of Cherea's fortitude, alleging that it deferved the highent reward. This was a language. highly pleafing to the fenate. Liberty now became the favourite topic ; and they even ventured to talk of extinguifhing the very name of Cxfar. Impreffed with this refolution, they brought over fome cohorts of the city to their fide, and boldly feized upon the Capitol. But it was now too late for Rome to regain her priftine freedom; the populace and the army oppofing their endeavours. The former were ftill mindful of their ancient hatred to the feuate ; and remembered the donations and public fpectacles of the emperors with regret. The latter were fenfible they could have no power but in a monarchy ; and had fome hopes that the election of the emperor would fall to their determination. In this oppoirtion of intereffs, and variety of opinions, chance feemed at laft to decide the fate of the empire. Some foldiers happening to ron abuut the palace, difcovered Clandius, Caligula's uncle, lurkirg in a fecret place, where he bad hid himfelf through fear. Of this perfonare, who had hitherto been defpifed for his imbecillity, they refolved to make an emperor: and accordingly carried him upon their thoulders to the camp, where they proclaimed him at a time he expected nothing but death.
The fenate now, therefore, pereeiving that force Clandius alone was likely to fettle the fucceffion, were refolved made eve. to fubmit, fince they had no power to oppofe. Clau- ferer. dius was the perfon moft nearly allied to the late emperor, then living; being the nephew of Tiberius, and the uncle of Caligula- The fenate therefore paffed a decree, confirming him in the empire ; and went foon after in a body, to render him their compulive homage. Cherea was the firlt who fell a facrinice to the jealoify of this new monarch. He met death with all the fortitude of an ancient Romaz; defiring to die by the fame fword with which he had killed Caligula. Lupus, his friend, was put to death with him ; and \(S_{3}-\) binlus, one of the confpirators, laid violent hands on himflf.
Claudius was 50 years old when he began to reign, The complicated difeafes of his infancy had in fome eafure affected all the faculties both of his body and ind. He was continued in a flate of pupillage much longer than was ufual at that time; and feemed, in

\section*{R O M [ 408 ]}

290 til he was placed all at once at the head of affairs. His hapiy
adumumer The commencement of his reign gave the molt promiadmimatra tos: in the besinn ng of hisre bi..
every part of his life incapable of conducting himfelf. Not thant he was entirely deftitute of undertanding, fince he had made a tolerable proficiency in the Greek and Latin languages, and even wrote an hiftory of his own time ; which, however deltitute of other merit, was not contemptible in point of tyle. Neverthelcts, with this thare of erudition, he was unable to advance himide in the fate. and feemed utterly neglected unfins hopes of an happy continuance. He began by paffing an act of oblivion for all former words and actions, and difannulled all the crnel edicts of Caligula. He forbade atl perfons, upon fevere penalties, to facrifice to him as they land done to Caligula; was affidnous in hearing and examining complaints; and frequeutly adminillered jultice in perfon; tempering by lis mildnefs the feverity of the law. We are told of lis bringing a woman to acknowledze her fon, by adjuldging her to marry him. The tribuncs of the people coming one day to attend hir when he was on his tribumal, he courteoully exculed himfelf for not having roon for them to lit down. By this deportment he fo much gained the affections of the people, that upon a vague report of his being flain by furprife, they ran about the flreets in the utmof rage and confternation, with horrid imprecations againft all fuch as were acceffary to his death; nor could they be appeafed, until they were affured, with certainty, of his fafety. He took a more than ordinary care that Rome flould be continually fupplied with corn and provifions, fecuring the merchants againft pirates. He was not lefs affiduous in his buildings, in which he excelled almof all that went before hin. He conftructed a wonderful aquæduct, called after his own name, much furpafing any other in Rome, either for workmanhip or plentiful fupply. It brought water frors 40 miles diftance, through great noountains, and over deep valleys; being built on ftately arches, and furnifhing the highett parts of the city. He made alfo an haven at Oftia ; a work of fuch inmenfe expence, that his fucceffors were unable to maintain it. But his greatef work of all was the draining of the lake Fucinus, which was the largeft in Italy, and bringing, its water into the Tiber, in order to Atrengthen the current of that river. For effecting this, arrong other vatt difficulties, he mined through a mountain of ftone three miles broad, and kept 30,000 men en ployed for is years together.
'To this folicitude for the internal advantages of the ftate, he added that of a watcliful guardianihip over the provinces. He reftored Judea to Herod Agrippa, which Caligula liad taken from Herod Antipas, liis uncle, the man who had put John the Baptift to death, and who was banithed by order of the prefent emperor. Clandins alfo reitured fuch princes to their kingdoms as had been unjutly difpoffefled by his predecefors; but deprived the Lycians and Rhodians of their liberty, for having promoted iufurrections, and crucified fome \({ }_{29}\) citizens of Rome.
His exx ci- He even undertook to gratify the poople by foreign sion againt conquef. The Britons, who had, for near roo years,
saritain
been left in fole poffenion of their
one Bericus, who, by many arguments, perfuaded the emperor to make a defcent upon the ifland, magnifyins the advantages that wonld attend the conquen of it. In purfuance of his advicc, therefore, Placitius the pretor was ordered to pafs over into Gaul, and make preprations for this great expedition. At firt, indeed, his foldiers feemed backward to embark; declaring, that they were unwilling to make war beyond the limits of the world, for fo they judged Britain to be. However, they were at laft perfuaded to go ; and the Britons, under the conduct of their king Cynobelinus, were feveral times overthown. And thefe fucceffes foon after induced Clandius to go into l3ritain in perfon, upon pretence that the natives were fill feditions, and: had not delivered up fome Roman fugitives who had taken fhelter anong them; but for a particular account of the exploits of the Romans in this ifland, fee the articlc England.

But though Clandius gave in the beginning of his reign the highelt hopes of an happy continuance, he foon began to leffen his care for the public, and to commit to his favourites all the concerns of the empire. This weak prince was unable to act but under the direction of others. The chief of his directors was his wife Meffalina: whofe name is almoft become a common appellation to women of abandoned characters. However, the was not lefs remarkable for her cruelties than her lufts; as by her intriguez the deftroyed many of the moft illuftrions families of Rome. Subordinate to her were the emperor's freedmen; Pallas, the treafurce; Narciffis, the fecretary of ftate; and Callitus, the mafter of the requelts. Thefe entirely governed Clandius; fo that he was oniy left the fatigues of ceremony, while they were ponteffed of all the power of the ftate.

It would be tedions to enumcrate the varions cruelties which thefe infidions advifers obliged the feeble emperor to commit : thofe againfl his own family will fuffice. Appius Silanus, a perfon of great merit, who had been married to the emperor's mother-in-law, was put to death upon the fuggettions of Meflalina. After him he new both his fons in-law, Silanns and Pompey, and his two nieces the Livias, one the daughter of Drufus, the other of Germanicus ; and all without permitting them to plead in their defence, or even without affigning any caufe for his difpleafure. Great numbers of others fell a facrifice to the jealouly of Meffalina and her minions; who hore fo great a fway in the fate, that all offices, dignities, and governments, were entirely at their difpofal. Every thing was put to fale : they took money for pardons and penalties; and accumulated, by thefe means, fuch vaft fums, that the wealth of Crocfus was confidered as nothing in comparifon. Ore day, the emperor complaining that his exchequer was exhaufted, he was ludicrouny to!d, that it might be fufficiently replenifhed if his two freedmen would take him into partuerthip. Still, however, during fuc! corruption, he regarded his favourites witlo the higheft efteem, and even folicited the fenate to grant them peculiar marks of their approbation. Thefe diforders in the miniflers of government did not fail to produce confpiracies againft the emperor. Statius Corvinus and Gallus Affinius formed a confpiracy agrainft him. Two knights, whofe names are not told us, privately combined to affaflinaie him. But the revolt whict
which gave him the greatelt uneafinefs, and which was punifhed with the moft unrelenting feverity, was that of Camillus, his lieutenant-general in Dalmatia. This general, incited by many of the principal men of Rome, openly rebelled againt him, and aftumed the title of emperar. Nothing cruld exceed the terrors of Clandius, upon being inforined of this revolt: his nature and his crines had difipofed him to be more cowardly than the rell of mankind; fo that when Camillus commanded him by letters to relinquiih the empire, and retire to a private ftation, he feemed inclined to obey. However, his fears upon this occation were foon removed: for the legions whieh had deelared for Canillus being terrified by fome prodigies, fhortly after abancloned him ; fo that the man whom but five days before they had aeknowledged as emperor, they now thought it no infamy to deftroy. The cruelty of Meffalina and her minions upon this occafion feemed to have no hounds. They fo wrought upon the emperor's fears and fulpicions, that numbers were executed with. out trial or proof; and fearee any, even of thofe who were but fufpected, efcaped, unlefs by ranfoming their lives with their fortunes.

By fuch cruelties as thefe, the favourites of the emperor endeavoured to eftablifh his and their own authoricy: but in order to increafe the neceffity of their affiftance, they laboured to augment the greatnefs of his terrors. He now became a prey to jealoury and difquietude. Being one day in the temple, and finding a fivord that was left there by accident, he convened the fenate in a fright, and informed them of his dan. ger. After this he never ventured to go to any fealt without being furroulded by his guards, nor would he fuffer any man to approach him without a previous feareh. Thus wholly employed by his anxiety for felfprefervation, he entirely left the eare of the ftate to his favourites, who by degrees gave him a relifh for flanghter. From this time he feemed delighted with inflicting tortures; and on a certain occafion continued a whole day at the city Tibur, waiting for an hangman from Rome, that he might feaft his eyes with an execution in the manner of the ancients. Nor was he lefs regardlefs of the perfons he condemued, than cruel in the infliction of their punifhment. Sueh was his extreme stupidity, that he would frequently invite thofe to fupper whom he had put to death but the day before ; and often denied the having given orders for an execution, but a few hours after pronouneing fenrence. Suetonins affures us, that there were no lefs than 35 fenators, and above 300 knights, executed in his reign; and that fuch was his unconcern in the midd of flaughter, that one of the tribunes bringing hins an account of a certain fenator who was executed, he quite forgot his offence, but calmly acquiefeed in his punifhment.

In this manner was Claudius urged on by Meffalina to commit cruelties, which he confidered only as wholefome feverities; while, in the mean time, fhe put no bounds to her enormities. The impunity of her patt vices only inctealing her confidence to commit new, her debaucheries became every day more notorious. and her lewdnefs exeecded what had ever heen feen at Rome. She caufed tome women of the frit quality to commit adultery in the prefence of their hufbands, and deitroyed fuch as refuled to comply. Aiter appearing for

Vol. XVI. Part II.
fome years infatia; in her defires, fhe at length fixe her affections upon Caius Silius, the moft beautirul youth in Rome. Her love for the young Roman feemed to amount even to madnefs. She obliged him to divorce his wife Junia Syllana, that the might entirely polfers him herfelf. She obliged him to accept of immenfe treafures and valuable prefents ; cohabitin \(\boldsymbol{y}\) with him in the molt open mavner, and treating hin \(n\) with the moft fhamelefs familiarity: 'The very imperial ornaments were transferred to his houfe; and the emperor's flaves and attendants had orders to wait upon the adulterer. Nothing was wanting to complete the infolence of their conduct, but their being married together; and this was foon after effeced. They rclied upon the emperor's imbecility for their fecurity, and only waited till he retired to Oftia to put their ili. judged project in execution. In his abfence, they celebrated their nuptials with all the ceremonies and fplendor whieh attend the moft confident fecurity. Meffalina gave a loofe to her paffion, and appeared as z Bacchanalian with a thyrfus in her hand; while Silina aflumed the character of Bacchus, his body beitug adorncd with robes imitating iny, and his legs covered rith bunkins. A troop of lingers and dancers attended, who heightened the revel with the molt lafcivious fongs and the moft indecent attitudes. In the mifit of this riot, one Valens, a buffonn, is faid to have climb. ed a tree; and being demanded what he faw, anfwered that he perceived a dreadful form coming from Oftia. What this fellow fpoke at random was actually at that time in preparation. It feems that fome time before there had been a quarrel between Meffalina and Na;ci: fus, the emperor's frit freedman. This fubtle minitte: therefore delired nothing more than an opportnnity of ruining the emprefs, and he judged this to be -3 molt favomable oecafion. He firlt made the difcovery by means of two concubines who attended the en:peror, who were inftructed to inform him of Metfilina's marriage as the news of the day, while Narcifus, himfeif Itepped in to confirn their information. Finding it operated upon the emperor's fears as he could wihh, he refolved to alarm hins itill more by a difcovery of all Meffalina's projects and attempts. He asgra: an ted the danger, and urged the expediency of feedily punilhing the delinquents. Claudius, quite terified ai fo unexpected a relation, fuppofed the cinmy were already at his gates; and frequently interrnpted his frecdman, by alking if he was itill matier of the enspire. Being affured that he yet had it in his power to continue fo, he refolved to go and punifl the affront offered to his dignity without delay. Nothing conld exceed the conflemation of Meffalina and her thoughtlefs companions, upon being informed that the emperor was coming to diftub their feftivity. Every one retired in the utmoft confulion. Silius was taken. Meflalina took flelter in fome gardens which fhe had lately feized upon, having expelled Afiaticus the true owner, and put him to death. From thence fhe fent Britannicus, her only fon by the emperor, with Octavia her daughter, to intercede for her, and implore his mercy. She foon after followed them herfelf; but Narcifiss had fo fortified the emperor againt her arts, and contrived fuch methods of diverting his attention from her deíace, that the was obliged to return in deiprair. Naneifas being thus far fuccefsful, led Claudius 3 F゙

Rome. \(\underbrace{\text { Rorre. }}\)

Fonie. to the houfe of the adulterce, there fowing him the apartments adorned with the fpoils of his own palace ; and then conducting him to the pretorian camp, reviwed his courate by giving hin affarances of the readinefs of the foldiers to defend him. Having thus artfully wrou tht upon his fears and refentment, the wretched Silius wns commanded to appear; who, making no deicnc., was initantly put to death in the emperor's prefence. Several others fhared the fame fate; but Meffalina feill flattered herfelf with hopes of pardon. She refolved to leave neither prayers nor tears unattempted to appeafe the emperor. She fometinues even gave a loofe to her refentment, and threatened her acculfers with vengeance. Nor did the want ground for entertaining the moft favourable expectations. Claudius haviny returned from the execution of her paramour, and having allayed his refentment in a banquet, began to relent. He now therefore commanded his attendants to apprife that miferable creature, mearing Meffalina, of his refolution to hear her accufation the next day, and ordered her to be in readinefs with her defence. The perraifion to defend herfelf would have been fatal to Narciffus"; wherefore he rufhed out, and ordered the tribunes and centurions who were in readinefs to execute her immediately by the emperor's command. Claudius was informed of her death in the midft of his banquet; but this infenfible idiot fhowed not the leall appearance of emotion. He continued at table with his ufual tranquillity : and the day following, while he was fitting at dinner, he afked why Meffalina was abfent, as if he had totally forgotten her crimes and her punifinment.

Claudius being now a widower, declared publiclf, that as he had hitherto been unfertunate in his marriages, he would remain fingle for the future, and that he would be contented to forfeit his life in cafe he broke his refolution. However, the refolutions of Claudius were hut of Thort continuance. Having been accuflomed to live uader the controul of womer, his prefent freedom was beconse irkfome to him, and he was entirely unable to live without a cirector. His freedmen therefore perceiving his inclinations, refolved to procure him anuther wife; and, after fome deliberation, they fixed upon Agippina, the danghter of his bro-

296 ther Germanicus. This woman was more prattifed in vice than even the former emprefs. Her cruelties were more dangerons, as they were directed with greater caution: the had poifoned her former huiband, to be at liberty to attend the calls of ambition; and, perfectly acquainted with all the infirmities of Claudius, only made ufe of his power to advance her own. However, as the late declaration of Claudius Ieemed to be an obftacle to his marrying again, perforis were fuborned to move in the fenate, that he fhould be compelled to take a wife, as a matter of great iniportance to the commonweallh; and fome more determined flatterers than the refl left the houfe, as with a thorough refolution, that inftent, to conftrain him. When this decree paffed in the fenate, Clsudius had fearce patience to contain himfelf a day before the celebration of his nuptials. However, fuch was the deteftation in which the pcople in general held there inceftuous matches, that though they were made lawfint, yet only ne of his tribunes, and one of his freedmen, followed his example.

C!audius kaving now received a new dircctor, rub.
mitted with more implicit obcdience than in any for. mer part of his reign. Agrippina's chief aims were to gain the fucceffion in favour of her own fon Nero, and to fet afide the claims of young Britannicus, fon to the emperor and Meflalina. For this purpofe the married Nero to the emperor's daughter Octavia, a few days after her own marriage. Not long alter this, fhe urged the emperor to ftrengthen the fucceffion, in imitation of his predeceffors, by making a new adoption: and caufed lim take in her fon Nero, in forne meafure to divide the fatigues of government. Her next care was to increafe her fon's popularity, by giving him Seneca for a turor. This excellent man, by birth a Spaniard, had been banimed by Claudius, upon the falfe teltimony of Meffalina, who had accufed him of ajultery with Julia the emperor's niece. The people loved and admired him for his genius, but fill more for his frict rorality ; and a part of his reputation neceffarily devolved to his pupil. This fubtle woman was not lefs affiduous in pretending the utmoft affection for Britannicus; whom, howerer, fhe refolved in a proper time to deftroy: but her jealoufy was not confined to this child only; fhe, fhortly after her acceffion, procured the deaths of feveral ladies who had been her rival in the emperor's affections. She difplaced the captains of the guard, and appointed Burrhus to that command; a perfon of great military knowledge, and frongly attached to her interefts. From that time the took lefs pains to difguife her power, and frequently entered the Capitol in a chariot; a privilege which none before were allowed, except of the facerdotal order.

In the 12 th year of this monarch's reign, the perfuaded him to reftore liberty to the Rhodians, of which he had deprived them fome years before; and to remit the taxes of the city llium, as having been the progenitors of Rome. Her defign in this was to increafe the popularity of Nero, who pleaded the caule of hoth cities with great approbation. Thus did this ambitious woman take every flep to aggrandize her fon, and was even contented to become hateful herfelf to the public, merely to increafe lis popularity.

Sucb a very immoderate abufe of her power ferved at laft to awaken the emperor's fufpicions. Agrippina's imperious temper began to grow infupportable to him; and he was heard to declare, when leated with wine, that it was, his fate to fuffer the diforders of his wives, and to be their executioner. This expreffion funk deep on her mind, and engaged all her facultics to prevent the blow. Her firft care was to remore Narciffus, whom fhe hated upon many accounts, but particularly for his attachment to Claudius. This minifler, for fome time, oppofed her deffigns; but at length thought fit to retire, by a voluntary exile, into Campania. The unlappy emperor, thus expofed to all the machinations of his infidious confort, feemed entirely regardlefs of the dangers that threatened his deftruc. tion. His affection for Britannicus was perceived every day to increafe, which ferved alfo to increafe the vigilance and jealoufy of Agrippina. She now, therefore, refolved not to defer a crime which fhe had meditated a long while hefore; namely, that of poifoning her hufband. She for fome time, however, debated with herfelf in what manner fhe fhould adminiter the poifon; as the feared too ftrong a dofe would difcover her treachery, and one too weak might fail of its effees,

\section*{R \(O\) M}

At length the determined upon a poifor of fingular efficacy to deftroy his intellects, and yet not fuddenly to terminate his life. As the had been long converlant in this horrid practice, the applied to a voman called Locyfa, notorious for affifting on fuch accafions. 'The poifon was given to the emperor among muhtrooms, a difh he was particularly fond of. Shortly after having eaten, he dropped down infenfible; but this caufed no alarm, as it was ufual with him to fit eating till he had itupified all his facuities, and was obliged to be carried off to his bed from the table. However, his conftitution feemed to overcome the effects of the potion, when Agrippina refolved to make fure of him: wherefore he directed a wretched phyfician, who was her creature, to thruft a poifoned feather down his throat, under pretence of making him vomit ; and this difpatched him.

The reign of the emperor, feeble and impotent as he was, produced no great calamities in the flate, fince his cruelties were chiefly levelled at thofe about his perfon. The lift of the inhabitants of Rome at this time amounted to fix millions eight hundred and fortyfour thoufand fouls; a number little inferior to all the people of England at this day. The general character of the times was that of corruption and luxury: but the military fpirit of Rome, though much relaxed from its former feverity, fill continued to awe mankind ; and though during this reign, the cmpire might be jutly faid to be without a head, yet the terror of the Roman name alone kept the nations in obedience.

Claudius being deftroyed, Agrippina took every precaution to conceal his death from the public, until the had fettled her meafures for fecuring the fucceffion. A frong guard was placed at all the arenues of the palace, while fhe amufed the people with various reports; at one time giving out that he was fill alive; at another, that he was recevering. In the meanwhile, fhe made fure of the perfon of young Britannicus, under a pretence of affection for him. Like one overcome with the extremity of her gricf, fhe held the child in her arms, calling him the dear image of his father, and thus preventing his efcape. She ufed the fame precautions with regard to his filters, Octavia and Antonia ; and even ordered an entertainment in the palace, as if to amufe the emperor. At laft, when all things were adjufted, the pałace-gates were thrown open, and Nero, accompanied by Burrhus, prefect of the Prxtorian guards, iffued to receive the congratulations of the people and the army. The cohorts then attending, proclaimed lim with the loudeft acclamations, though not without making fome inquiries after Britannicus. He was carried in a chariot to the reft of the army; wherein having made a fpeech proper to the occafion, and promifing them a donation, in the manner of his predeceffors, he was declared emperor by the army, the fenate, and the people.

Nero's firft care was, to fhow all pulfible refpect to the deceafed emperor, in order to cover the guilt of his death. His obfequies were performed with a pomp equal to that of Auguttus: the young emperor pronounced his funeral oration, and he was canonized among the gods. The funcral oration, though fpoken by Nero, was diawn up by Seneca; and it was remarked, that this was the firf time a Roman emperor needed the affittance of another's cloguence.

Nero, though but 17 years of age, began his reign Rome. with the general approbation of mankind. As he owed the empire to Agrippina, fo in the begianing he fubmitted to her directions with the moft implicit obedience. On her past, fhe feemed refolved on guvernines with her natural ferocity, and confidered her private animofities as the only rule to guide her in public jultice. Immediately after the death of Claudius, The caufed Silanus, the pro.conful of Afia, to be affaffinated upon very flight fufpicions, and without ever acquainting the emperor with her defign. The nevt object of her refentment was Narcilfus, the late emperor's favourite; a man equally notorious for the greatnefs of his wealth and the number of his crimes. He was obliged ta put an end to his life by Agrippina's order, though Nero refufed his confent.

This bloody onfet would have been followed by His \({ }^{297}\) nany feverities of the fame nature, had nut Senecalentadmiand Burrhus, the emperor's tutor and general, oppo- niftration fed. Thefe worthy men, although they owed their for five rife to the emprefs, were above being the inftruments \({ }^{3}\) of her cruclty. They, therefore, combined together in an oppofition; and gaining the young emperor on their fide, formed a plan of power, at once the moft merciful and wife. 'The beginning of this monarch's reign, while be continued to act by their counfels, has always been confidered as a model for fucceeding princes to govern by. The famous emperur Trajan ufed to fay, "That for the firl five years of this prince all other governments came fhort of his." In fact, the young monarch knew fo well how to conceal his innate depravity, that his neareft friends conld icarce perceive his virtues to be but affumed. He appeared juft, liberal, and humane. When a warrant for the execution of a criminal was brought to him to be figned, he was heard to cry out, with feeming concern, "Would to Heaven that I had never learned to write!" The fenate, upon a certain occafion, giving him their applaufe for the regulanity and jutice of his adminiftration; he replied with fingular modelty, "That they fhould defer the ir thanks till he had deferved them." His condefcention and affability were not lefs than his other virtues; fo that the Romans began to think, that the clemency of this prince would compenfate for the tyranny of his predeceffors.

In the mean time, Agrippina, who was excluded from any fhare in government, attempted, by esery poffible method, to maintain her declining power. Perceiving that her fon had fallen in love with a freedwoman, named ARe, and dreading the influence of a concubine, fhe tried every art to prevent his growins paffion. However, in fo comupt a couri, it was no difncult matter for the emperor to lind other coanfdents ready to affit him in his wilhes. The gratifi- He zorocation of his paffion, therefore, in this intance. only vrkes his ferved to increale his hatred for the empretis. Nor was nather. it long before he gave evident marks of hix difubedience, by dufplacing Pallas her chicf favourite. It was upon this occafion that the firf perecived the tutal declenfion of her authority ; which threw her intu the wolt ungovernable fury. In order to give terror to her rage, the proclamed that Britamicus, the real heir to the throne, was thill living, and ia a condition to receive his father's empire, which was now puffelfd by an ufurper. She threatened to go to the camp, and
there

brhavicur of che em ycror.
there expofe his bafeneis and her own, invoking all the furies to her alfiltance. Thefe menaees ferved to alarm the fufpicions of Nero; who, thourg apparently guided by his goveraors, yet lrad hegum to give way to his natural depravity. \(\mathrm{H} e\), thercfore, deternmined upon the death of Britannicus, and contrived to have him poifoned at a public banquet. Agrippira, however, flill rotained her natural ferocity: fhe took eviry opportunity of ollining and flattering the tribumes and centurions; fle heaped up treafures with a rapacity beyond her natural avarice; all her actions feemed calculated to raic: a faction, and nake berfelf formidable to the emperor. Whereupon Neso commanded lier German gnard to be tation from her, and obliged her to lodge cur of the palace. He alfo forbid particular perfons in vifit her, and went himfelf but rarely and ceremo. nioully to pay her his refpects. She now, therefore, began to find, that, with the emperor's favour, the had 1, the the affiluity of her friends. Slie was even accufed by Silana of confpiring againt her fon, and of detigning to mary Ylantils, a perfon defeended from Anguflus, and of making him cmperor. A fhort time after, Pallas, her favutrite, tugether with Burlhus, were arraigued for a fimilar offence, and intending to fet up Cornelus Sylla. Thefe informations being proved woid of any foundation, the infonmers were banifhed; a punifhent which was confideted as very inadequate to the greatnefs of the offence.

As Nero inceafed in years, his crimes feemed to increate in equal proportion. He now began to nad a pleafure in ruming abeut the city by night, difgnifed like a flave. In this vile hahit he entered taserns and brothels, attended by the kiwl miniters of his pleafurvs, attempting the lioes of fuch as oppofed him, and frequently endan, remg his own. In imitation of the emperor's example, numbers of profigate young uten infefted the flrects likewife; fo that every night the cily was filled with tumalt anel diforder. However, the perple bore an thefe levities, which they afaibed to the emperor's youth, with patience, baving orcation every cay to expericnce his liberality, and having alfo been gratified by the abolition of many of their taxef. The provinces allo were no way afficted by thefe riots; for except difturbances on the fide of the Parthiana, which were foon fupprefied, they enjoyed the noft perfect tianguillity.

But thofe fenfualitics, which, for the firt four years of his reign, produced but few diforders, in the fifth prcame alarming. He firft began to trawfyrefs the buounds of decurcy, by publicly abandoning Oetavia, his prefent wife, and then by taking Poppea, the wife of his favourite Otho, a womm more selebrated for ber beauty than her virtues. This was another grating circumftance to Agrippina, who vainly ufed all her interet to diffrace Poppea, and reindate herfelf in her fon's lof favour. Hitkorians affert, that he even offer-- dt to fatisfy his paflion herfelf, by an incefluous compliance; and that, had not seweca interpofed, the fon would have joined in the muther's crime. 'This, however, does mot feem probable, fince we find Poppea vicLurvous, foon after, in the contentivn of intercts; and at lait impeling Nero to parricide, to fatisfy her revelge. She bergan her arts by urging him to divorce 2is prefent wific, and marry herfelf: fie reproached him as a inpil, who waited not only power over others, but
liberty to direet himfulf. She ininnuated the dangerousdefigns of Agrippina; and, by degrees, accultomed his mind to reflect on parricide without horror. His eruelties againit his mother began rather by various circumilances of petty malice than by any downright injury. He encouraged feveral perfons to teafe her with litigious fuits; and employed fome of the meaneft of the people to ling fatirical fongs againtt her, under her windows: but, at latt, finding thefe ineffectual in breakine her fpirit, he refolved on putting her to death. His firt attempt was by poifon ; Lut this, thongh twice repeated, proved incffectual, as the had fortilied her conftitution againft it by antilotes. 'This failing, a hip was contrived in fo artificial a maner as to fall to pieces in the water; on board of which the was invited to fail to the coatts of Calabria. However, this plot was as incfectual as the former: the mariuers, not being apprificl of the fecret, difturbed each other's operations; fo that the inip not finking as readily as was expected, Agrippina found means to continue fwimming, till fhe was taken up by fome trading veffels paffing that way. Nero finding all his machinations were dilcovered, refolved to throw off the maik, and put her openly to death, without further delay. He therefore caufed a report to be foread, that fhe had confpired againft him, and that a poniard was dropped at his leet by one whos pretended a command from. Agrippina to affaffinate him. In confequence of this, he applied to his governors Seneea and Burrhus, for their advice how to act, and their affifance in ridding him of his fears. Things were now come to fuch a crifis, that no middle way could be taken; and either Nero or Agrippina was to fall. Sencea, therefore, kept a profound filence; while Burhhus, with more refolution, refufed to be perpetrator of fo great a crime; alleging, that the arniy was entirely devotect to all the defcendants of Cæfar, and would never be brought to imbrue their hands in the blood of any of his family. In this embarraffment, Anicetus, the contriver of the flip above-mentioned, offered his fervices; which Nero accepted with the greateft joy, crying out, "That then was the firlt moment he ever found himfelf an emperor." This freedman, therefore, taking with him a body of foldiers, furrounded the houfe of Agrippina, and then forced. open the doors. The executioners having difpatched her with feveral wounds, left her dead on the couch, and muther his went to inform Nero of what they had done. Somebe muddel hittorians fay, that Nero cante immediately to view the \({ }^{\text {ed, }}\) body ; that he continued to gaze upon it with pleafure, and ended his horrid furvey, by coolly obferving, that he never thought his mother had been fo handiome. However this be, he vindicated his conduct next day to the fenate; who not only excufed, but applauded his impiety.

All the bounds of sirtue being thus broken down, 304 Nero now gave a loofe to his appetites, that were not Folly and and only fordid but inhuman. There feemed an odd con-Nerv. traft in his difpotition; for while he practifed cruelties which were fufficient to make the mind hudder with horror, he was fond of thofe amufing arts that foften and refine the heart. He was particularly addicted, even from childhood, to mulic, and not totally ignorant of poctry. But chariot-driving was his favourite purfint.. He never miffed the circus, when chariot-races were tobe exhibitcd there; appearing at firt privately, and
foon after publicly; till at laft, his paffion inereafing by indulgence, he was not content with being merely a fpectator, but refolved to become one of the principal performers. His governors, hewever, did all in their puwer to reftrain this perverted ambition ; but finding fim refolute, they inclofed a fpace of ground in the valley of the Vatican, where he firt exhibited only to fome chofen frectaturs, but fhortly after invited the whole town. The praifes of his Hatteriarg fubjects only flinulated him thill more to thefe unbecoming purfilits; io that he now refolved to affume a new character, and to appear as a finger upon the ttage.

I-Iis paffion for mufic, as was obfervel, was no lefs natural to him than the former; but as it was lefs manly, fo he endearoured to defend it by the example of fone of the moit celebrated men, who practifed it with the fame foudnefs. He had been intrueted in the the principles of this art from his childhood; and upon his advancement to the empire, be had put himfelf under the molt celebrated matters. He pationtly fubmitted to their inftructions, and ufed all thofe methods which fingers practife, either to mend the voice, or improve its volubility. Yet, notwithfanding all his affiduity, his voice was but a wretched one, being both feeble and unpleafant. However, he was refolved to produce it to the public, fuch as it was; for fiattery, lie knew, would fupply every deficiency. His firlt pub. lic appearance was at ganes of his own inftitution, colled jureniles; where he advanced upon the flage, tuning his inftrument to his voice with great avpearance of 1kill. A groutp of tribunes and centurions attended behind him; when his old governor Burhus lloed by his hopeful pupil, with indignation in his conntenance, and praifes on his lips.

He was delirous alfo of becoming a puet: but he was unwilling to undergo the pain of ftady, which a proficiency in that att requires; he was defirous of beinis a poet ready made. For this purpofe, he got together feveral perfons, who were conlidered as great wits it court, though but very little known as fuch to the public. Thefe attended him with verfes which they had compoled at home, or which they blabled out ex. emporancoufly; and the whole of their compolitions being tacked together, by his direction, was called a puem. Nor was he without his philofophers alfo; lee took a pleafure in hearing their debates after fupper, but he heard them merely for his anmement.

Furnithed with fuch talents as thefe for giving pleafure, he was refolved to make the tour of his empire, and give the molt public difplay of his abilities wherever he came. 'The place of his firt exhibition, upon leaving Rome, was Naples 'I'te croweds there were fo great, and the curiofity of the people fo earnelt in hearing him, that they did not perceive an earthquake that happened while he was finging. His defire of gaining the fuperiority over the other actors uas truly ridiculous: he made interelt with his judges, reviled his competitors, formed private factions to fupport him, all in imitation of thofe who got their hivelihood upon the flage. While he continued to performs no man was permitted to depart from the theatre, uponany pretence whatfoever. Some were fo fatigued with hearing him, that they leaped privately from the walls, or pretended to fall into fainting fits, in order to be
carried out, Tiay, it is faid, that feveral women were celivered in the theatre. Soldiers were placed in feveral parts to obferve the looks and gefures of the fpectators, either to dircet them where to point their applanfe, or reftrain their difpleafure. An old fenator, named \(V i f\) folhen, afterwa:ds emperor, happening to fall antet upon one of thefe occalions, very narrowly efeaped with his life.

After bing fationed with the praifes of his countrymen, Nero refolved upon going over ino Greece, to receive new theatrical honours. The occalon was this. The cities of Grecee had made a law to fend hirs the crowns from all the games; and deputies wele accordingly difpatched with this (to him) important embaffy. As he one day entertained them at his table in the moft fumptuous nanner, and converfed with them with the utnoft familiarity, they intreated to hear him fing. Upon his complying, the artful Greeks teltibied all the marks of ecttafy and rapture. Applaufes fo warm were peculiarly pleating to Nero: he could not refrain from crying out, That the Grecks alone were worthy to hear him; and accordingly prepared without delay to go into Greece; where he ipent the whole sear enfuing. In this journey, his retinue refembled an arn:y in number; but it was only compofed of fingers, dancers, taylors, and other attendants upon the theatre. He paffed over all Greece, and exhibited at all their games, which he ordered to be celebrated in one year. At the Olympic games he refulved to flow the people fonmething extrardinary; wherefore, he dove a charout with 10 horfes; but being unable to futain the violence of the motion, he was driven from his feat. The fpectators, however, gave their unanimous applaufe, and be was crowned as conqueror. In this manner he obtained the prize at the Iीllmian, Pythian, and Nemeangames. The Greeks were not fparing of their crowns; he obtained 1800 of them. An infortunate finger happened to oppole him on one of thefe occalions, and exerted all the powers of his art, which, it appears, were prodigious. But he feems to have been a better finger than a politician; for Noro ordered him to be killed en the fpot. Upon his return from Greece, he entered Naples, through a breach in the walls of the city, as was cultomary with thofe who were conquerors. in the Olympic games. But all the fplendor of his return was relerved for his entry into Rome. There he appeared feated in the chariot of Augutus, dreffed in robes of purple, and crowned with wild olive, which was the Olympic grarland. He bore in has hand the Pythian erown, and had 1100 more carried before him. Belide him fat one Diodorus, a mufician; and behind him fullowed a band of lingers, as numerous as a legion, who fung in honour of his victories. The fenate, the knights, and the people, attended this puerile pageant, filling the air with their acclamations. 'The whule city was illuminated, every freet fmoked with incenfe; wherever he pafled, victims were hain; the pavement was itrewed with faffron, while garlands of flowers, ribbons, fowls, and pafties, (for fo we are told), were fhowered down upon him from the windows as he palled along. So many honours only inflamed his defires of acquiring new ; he at laft began to take leflons in wrefling; willing to imitate Hercules in frength, as lue lad rivalled Anollo in activity. He alfo caufed a liv:

\section*{\(R \circ \mathrm{M} \quad[414] \quad \mathrm{R} O \mathrm{M}\)}
S. me. lion of panteboard to be made with great art, againft which he undauntedly appeared in the theatre, and Rruck it down with a blows of his club.

But his cruelties even outdid all his other extravagancies, a complete lit of which would exceed the limite of the prefent article. He was often heard to obferve, that he had rather be hated than loved. When one lappened to fay in his prefence, That the woild
305 'might be burned whet he was dead: "Nay,"' replied Perning of Nero, "let it be burnt while I am alive." In fact, a Ronis.
ral conflagration, he mousted his domeltic ftage, and fung the deflruction of Troy, conparing the prefent defolation to the celelurated calanities of antiquiry. At leugth, on the fixth day, the fury of the flames was flopped at the foot of mount Efquiline, by levelling with the ground an infinite number of buildings; fo that the fire found nothing to cncounter but the open fields and empty air.

But fearec had the late alarm ceafed, when the fire broke out anew with frefl rage, but in places more wide and facious; whence fewer perfons were deftroyed, but more temples and public porticoes were overthrown. As this Iccond conflagration broke out in certain buildings belonging to 'ligellinss, they were both generally afcribed to Nero; and it was conjectured, that, by deflonying the old city, he aimed at the glory of building a new one, and calling it by his name. Of the fourteen quariers into which Rome was divided, fonr remained entire, three were laid in affes, and, in the feven others, there remained here and there a few houfes, miferably fhattered, and half confumed. Among the many ancient and ftately edifices, which the rage of the flames utterly confumed, Tacitus reckons the temple dedicated by Servius Tullins to the Moon; the temple and great altar confecrated by Evander to Hercules; the chapel vowed by Romulus to Jupiter Stator; the court of Nuna, with the temple of Vefta, and in it the tutelar gods peculiar to the Romans. In the fame fate were involved the ineftinable treafures acquired by fo many vit:ories, the wondetful works of the bett painters and feulptors of Greece, and, what is fill more to be lamented, the ancient writings of celebrated anthors, till then preferved perfectly entire. It was obferved, that the fire began the fame day on which the Gauls, having formerly taken the city, burnt it to the ground.

Upon the minins of the demolifhed city, Nero founded a palace, which he called his golden boufe; though it was not fo much admired on account of an immenfe profufion of gold, precious ftones, and other ineftimable ornaments, as for its waft extent, containing fapcious fields, large wilderneffes, artificial lakes, thick woods, orchards, vincyards, hills, groves, \&c. The entrance of this flately edifice was wide enough to receive a coloffus, reprefenting Nero, 120 feet high : the galleries, which confited of three rows of tall pillars, were each a full mile in length ; the lakes were encompaffed with magnificent buildings, in the manner of cities; and the woods flocked with all manner of wild beafts. The houfe itfelf was tiled with gold : the walls were covered with the fame metal, and richly adorned with precious flones and mother-of-pearl, which in thofe days was valued above gold : the timber-work and ceilings of the rooms were inlaid with gold and ivory : the roof of one of the banqueting-rooms refembled the firmament both in its figure and motion, turning inceffantly about night and day, and fhowering all forts of fweet waters. When this magnificent Aructure was ifnifaed, Nero approved of it only fo far as to fay, that at length be began to lodge like a man. Pliny tells us, that this palace extended quite round the city. Nero, it feems, did not finifh it ; for the firt order Otho figned was, as we read in Suetonius, for fifty millions of lefterces to be employed in perfecting the golden palace which Nero had begun.

\section*{R O M}

The projectors of the plan were Scverus and Celer, two bold and enterprifing inen, who foon after put the emperor upon a atill more expenfive and arduous under. taking, namely, that of cutting a canal through hard rocks and fleep mountains, from the lake Avernus to \({ }^{0}\) the mouth of the ' Ciber, 160 miles in length, and of fuch breadth that two galleys of five ranks of oars might eafily pafs abreat. His view in this was to open a communication between Rome and Campania, free from the troubles and dangers of the fca; for, this very year, a great number of veffels laden with corn were thipwrecked at Mifenum, the pilots choofing rather to venture out in a violent form, than not to arrive at the time they were expected by Ncro. For the exccuting of this great undertaking, the emperor ordered the prifoners from all parts to be tranfported into Italy ; and fuch as were convicted, whatever their crintes were, to be condemned only to his works. Nero, whe undertook nothing with more ardour and readinefs than what was deemed impoffible, expended incredible fums in this rafh undertaking, and exerted all his might to cut through the mountains adjoining to the lake Avernus ; but, not being aole to remove by art the oblacles of nature, he was in the end obliged to drop the enterprife.

The ground that was not taken up by the founda. tions of Nero's own palace, lie affigned for houfes, which were not placec, as after the burning of the city by the Gauls, at random, and without order ; but the ftreets were laid out resularly, fpacions and Araisht; the edifices reftrained to a certain height, perinaps of 70 feet, according to the plan of Auguftus; the courts were widened; and to all the great houfes which ftood by themfelves, and were called illes, large porticoes were added, which Nero engaged to raife at his own expence, and to deliver to each proprietor the fquares about them clear from all rubbifh. He likewife promifed rewards according to every man's rank and fubfance; and fixed a day for the performance of his promife, on condition that againf that day their feveral houfes and palaces were finifhed. He morcover made the following wife regulations to obviate fuch a dreadful calamity for the future; to wit, That the new buildings fhould be raifed to a certain height without timber; that they flould be arched with itone from the quarries of Gabii and Alba, which were proof againlt fire; that over the common 「prings, which were diverted by private men for their own ufes, overfeeers mould be placed to prevent that abufe; that every citizen fhould have ready in his houfe fome machine proper to extinguifh the fire ; that no wall fhould be common to two houles, but every houle be inclofed within its own pecu. liar walls, Exc. Thus the city in a fhort time rofe out of its afhes with new luftre, and more beatiful than erer. However, fome believed, that the ancient form was more conducing to health, the rays of the fun being lardly felt on account of the narrownefs of the fircets, and the height of the buildings, whereas now there was no fhelter againft the forching heat. We are told, that Nero defigned to extend the walls to Oftia, and to bring from thence by a canal the fea into the city.

The emperor uled every art to throw the odium of this conflagration upon the Clrititians, who were at chat time gaining ground in Rome. Nothing could

\section*{\(4157 \quad R \quad O \quad M\)}
be more deadful than the perfecution raifed againft them upon this falfe accufation, of which an account is given under the article Ecel.fiatical Hisforr. Hitherto, how- \({ }^{3}\) 3:9 ever, the citizens of Rome feemed comparatively ex-racy of of empted from his cruelties, which chiefly fell upon ftran- Pifu. gers and his neareft connections; but a confpiracy formed againt him by Pifo, a man of great power and integrity, which was prematurely difcovered, opened a new train of fufpicions that deftroyed many of the principal families in Rome. This confpiracy, in which leveral of the chief men of the city were concerned, was firtt difcovered by the indifcreet zeal of a woman named Efi haris, who, by fome means now unknown, had been let into the plot, which the revealed to Volufius, a tribune, in ordor to prevail upon lim to be an accomplice. Volufius, inflead of coming into her defign, went and difcovered what he had learned to Nero, who immediately put Epicharis in prifoa. Soun afier, a freedman belonging to Screa:us, one of the accomplices, made : farther difoovery. The confpirators were examined apart; and as their teftimonies differed, they were pul to the torture. Natalis was the firt who made a confeffion of his own guilt and that of many others. Scanius gave a lift of the confpirators ftill more ample. Lucan, the puet, was amonoft the number ; and he, like the relt, in order to fave himfelf, ftill farther enlarged the catalogue, naming, among others, Attilia, his own mother. Epicharis was now, therefore, again called upon and put to the torture; but her fortitude was proof againt all the tyrant's cruelty; neither fcourging nor burning, nor all the malicious methods ufed by the executioners, could extort the finalleft confefion. She was therefore remanded to prifon, with orders to have her tortures renewed the day following. In the meantime, the found an opportunity of flangling herfulf with her handkerchief, by hanging it againt the back of her chair. On the difcoveries already made, Pifo, Lateranus, Fennius Rufus, Subrius Flavius, Sulpicius Afper, Veltinus the conful, and numberlefs others, werc all executed without mercy. But the two moil remarkable perfonages who fell on this occafion were Seneca the philofopher, and Lucan the poet, who was his nephew. It is not certainly known whether Seneca was really concerned in this confpracy or not.This great man had for fome time perceived the outrageous conduct of his pupil; and, finding himfelf incapable of controuling his favage difpofition, had retired from court into lolitude and privacy. However, his retreat did not now protect him ; for Nero, either having real teflimony asainlt him, or elfe hating him for his virtues, fent a tribune to inform him that he was fufpected as an acconsplice, and foon after fent him an order to put himelf to death, with which he complied.

In this manner was the whole city fllled with flaurh. ter, and frightful inftances of treachery. No matter was fccure from the vengeance of his flaves, nor even parents from the baler attempts of their children. Not only throughout Rome, but the whole country round, bodies of foldiers were feen in purfuit of the fufpected and the guilty. Whole crowds of wretches loaded with chains were led every day to the gates of the palace, to wait their fentence from the tyrant's own lips. He always grefided at the torture in perfon, attended by Ti-
gellinue,

\section*{\(R \quad O \quad M\)}

Roms. Echlinus, captain of the guard, who, from being the polt abandoned man in Rome, was now becone his principal minitter and favourite.

Nor were the Roman provinces in a better fituation than the capital city. The example of the tyrant feemed to influence his governor:, who gave inftances sot only of their rapacity, but of their cruelty, in every part of the empirc. In the feventh year of his reign, the Britons revolten, under the conduet of their queen

Succefs
a.gainft the Jirthians, \&c. Doadicca* ; but were at laft [o completcly defeated, that ever after, during the continuance of the Romans amoner them, they loft not only all hopes, but even all defire of freedom.

A war allo was carricd on againt the Parthisus for the greateft part of this reign, conducted by Corbulo; who, after many fuccefles, liad difpoffeffed Tiridates, and fettled T'igranes in Armenia in his room. 'Tiridates, however, was foon after reftored by an invalion of the Parthians into that country; but being ouce more oppofed by Corbulo, the Romans and Parthians came to an agreement, that Tiridates fhould contiaue to govern Armenia, upon condition thai he fhould lay down his crown at the feet of the emperor's llatue, and receive it as coming fron him ; all which he thortly af. ter performed. A ceremony, however, which Nero defireal to have repeated to his perfon; wherefore by letters and promiles he invited Tiridates to Rome, franting him the moft magniticent fupplies for his journey. Nero attended his arrival with very fumptuous preparations. He received him feated on a throne, accompanied by the fenate flanding round him, and the whole army drawn out with all imaginable fplendor. 'lividates afcended the throne with great reverence: and approaching the emperor fell down at his feet, and in the moft abject terms aeknowledged himfelf his flave. Nero raifed him up, telling him with equal arrogance, that he did well, and that by his fubmifion he had gained a kingdom which his anceftors could never acquire by their arms. He then placed the crown on his head, and, after the moft coltly ceremonies and entertainments, he was fent back to Armenia, with incredible fums of moncy to defray the expenees of his return.

In the t2th year of this emperor's reign, the Jews alfo revolted, having been feverely opprefled by the Roman governor. It is faid that Florus, in particular, was amived at that degree of tyranny, that by public proclamation he gave permifion to plunder the conntry, provided he received half the fpoil. Thefe oppreffions drew fuch a train of calamities after them, that the fufferings of all other nations were flight in comparifon to what this devoted people afterwards endured, as is related under the article Jews. In the mean time, Nero proceeded in his craelties at Rome with unabated feverity:

The valiant Corbulo, who had gained fo many victories over the Parthians, could not efeape his fury. Nor did the emprefs Puppxa herfelf efcape; whom, in a fit of anger, he kicked when fhe was pregnant, by which fhe mifcarried and died. At laft the Romans began to grow weary of fuch a monfter, and there appeared a general revolution in all the provinces.
'The firf appeared in Gaul, under Juliu; Vindex, who commanded the legions there, and publicly protefed againft the tyranical government of Nero. He ap- peared to have no otier motive for this revole than that
of freeing the woild from an oppreflor ; for when it was told him that Nero had fet a reward upon his head of \(10,202,000\) of fefterces, he made this gallant anfwer, "Whoever brings me Nero's head, ©hall, if he pleafes, have mine." But fill more to fhow that he was not actuated by motives of private ambition, he proclaimed Sergius Galha emperor, and invited him to join in the revolt. Galha, who was at that time go. vernor of Spain, was equally remarkable for his wifdom in peace and his courage in war. But as all talents under corrupt princes are dangerous, he for fome years had feemed willing to court obfcurity, giving himfelf up to an inactive life, and avoiding all opportunities of fignalizing his valour. He now thercfore, either through the caution attendinc old age, or from a total want of ambition, appeared little inclined to join with Vindex, and continued for fome time to deliberate with his friends on the part he should take.

In the mean time, Nero, who had been apprifed of the proceedings againft him in Gaul, appeared totally regardlefs of the danger, privately flattering himfelf that the fuppreffion of this revolt would give him an opportumity of frefl confifations. But the actual revolt of Galba, the news of which arrived foon after, affected him in a very different manner. The reputation of that gencral was fuch, that from the moment he declared againlt him, Nero confidered himfelf as undone. He received the account as he was at fupper ; and inftant. ly, ftruck with terror, overturned the table with his foot, breaking two cryltal vafes of immenfe value. He then fell into a fuoon ; from which when he recovered he tore his clothes, and Itruck his head, crying out, "that he was utterly undone." He then began to meditate llaughters more extenfive than he yet had committed. He refolved to mattacre all the governors of provinces, to deftroy all exiles, and to murder all the Gauls in Rome, as a punifhment for the treachery of their countrymen. In hhort, in the wildnefo of his rage, he thought of poifoning the whole fenate, of burning the city, and turning the lions kept for the purpores of the theatre out upon the people. Thefe defigns being impracticable, he refolved at laft to face the danger in perfon. But his very preparations ferved to mark the infatuation of his mind. His principal care was, to provide waggons for the convenient carriage of his mufical inftruments; and to drefs ont his concubines like Amazons, with whom he intended to face the enemy. He alfo made a refolution, that it he came off with fafety and empire, he would appear again upon the theatre with the lute, and would equip himfelf as a pantomime.

While Nern was thus frivoloufly employed, the revolt became geueral. Not only the armies in Spain and Gaul, but alfo the legions in Germany, Africa, and Lulitania, declared againlt him. Virginius Rufus alone, who commanded an army on the Upper Khine, for a while continued in fufpenfe; during which his forces, without his permiffion, falling upon the Gauls, ronted them with great flaughter, and Vindex flew himfelf. But this ill fuccefs no way advanced the interefts of Nero; he was fo detefted by the whole empire, that he conld find none of the armies faitluful to him, however they might difagree with each other. He therefore mifera called for Loculta to furnifh him with poifon ; and, thus fituatio prepared for the wort, le retired to the Servilian gar- Nuro.

\section*{\(R 0 \mathrm{M} \quad[417] \quad \mathrm{R} \quad \mathrm{M}\)}
me. dens, asith a refolution of Alying inio Erypt. He accordingly difpatched the freedmen, in whicb he had the mott confidence, to prepare a fleet at Ollia; and in the meanwhile founded, in perfon, the tribunea and centurions of the guard, to know if they were willing to Share his formanes. But they all excufed themelves, under divers pretexts. One of then had the bolduefs to anfwer him by part of a line from Vircil: Ufique adeone miferum eft mori? "Is death then fuch a mistortine?"' Thus deflitute of every refource, all the exped:ents that cowardice, revenge, or terror could protuce, took place in his mind by turns. He at one time refolved to take refuge among the Parthians; at another, to deliver himfelf up to the ine:cy of the infargents: one while, he determined to mount the rollrum, to ank pardon for what was paft, and to conelude with promifes of amend. meat for the future. With thefe gloomy delibcrations he went to bed ; but waking abont midnight, he was furprifed to find his guads liad left hin. The pratorian foldiers, in fact, having been corrupted by their commander, had retired to their camp, and proclaimed Galba emperor. Nero immediately fent for his friends to deliherate upon his prefent exigence; but his friends alfo forfook him. He went in perfon from houfe to houfe; but all the doors were fhut againft him, and none were found to anfwer his inquiries. While he was purfuing this inquiry, his very domeftics followed the general defection; and having plundered his apartment, efeaped different ways. Being now reduced to defperation, he defined that one of his fasourise gladiators night come and difpatch him; but even in this requet there was none found to obey..." Alas! (cried he) have I neither friend nor enemy ?" And then running defperately forth, he feemed refolved to plunge headlong into the Tiber. But jutt then his conrage begimning to fail him, he made a fudden ftop, as if willing to recollect his reafon; and aiked for fome feeret plaee, where he might re-afume his courage, and meet death with becoming fortitude. In this diftrefs, Phaon, one of his freedmen, offered him his country-houfe, at about four miles diftant, where he might for fome time remain conceated. Nero accepted his offer ; and, halfdrefled as he was, with his head covered, and hiding his face with an handkerchief, he mounted on horfeback, attended by four of his donnefties, of whom the wretehed Sporus was one. His journey, though quite froit, was crowded with adventures. Round him he heard pothing but confufed noifes from the camp, and the cries of the foldiers, imprecating a thoufand evils upoa his head. A palfenger, meeting him on the way, eried, "There go mien in purfuit of Nero." Another alised him, if there was any news of Nero in the city? His horfe taking fright at a dead body that lay near the road, he dropped his handkerchief; and a foldier that was near, addreffied him by name. He now therefore quitted his horfe, and forfaking the highway, entered a thieket that led towards the back pats of Iliaon's houfe, through which he crept, making the beft of his way among the reeds and brambles, with which the place was overgrown. When he was arrived at the back part of the houfe, while he was waiting till there fhould be a breach made in the wall, he took up fome water in the hollow of his hands from a pool to drink ; faying, "To this liquor is Nero reduced." When the hole FWas made large enough to admit him, he crept in upon Vol. XVI. Part II.
all-fours, and took a hont repofe upon a vretched pai-
 let, that had been prepared for his reception. Being preffed by hunger, he demanded fornewhat to eat : they brought him a piece of brown bread, which he refnfed; bit he drank a litele water. During this interval, the fenate finding the pretorian guards had taken part with Galba, declared him emperor, and condermed Nero to die more majorum : thas is, " accordine to the rigour uf. the ancient laws." 'thefe dreadful tidiags were quickfy brought by one of Phaon's llaves from the city, while Nero yet continued lingering between his hopes and his feats. \(V\) :hen he was told of the refolution of the fenate arsainf him, he alked the meffenger what he meant by being punimed "s according to the rigour of the ancient law's?" To this he was anfwered, that the criminal was to he fripperd naked, his head was to be fixed in a piliory, and in that pofture he was to be fcourged to death. Nero was fo tenified at this, that he feized two poniards which he had brounlit with him, and examining their points, returned them to their fheaths, faying, that the fatal moment was not yet arrived. However, he had little time to fpare; for the foldiers who had been fent in purfuit of him were juft then approaching the houfe: wherefore hearing the found of the horfe's feet, he fet a dagger to his throat, with which, by the affifance of Epaphroditus, his fretdman and fecretary, he gave himfelf a mortal wound. Iie was not quite dead when one of the cen. His dcath turions entering the room, and pretending he came to his relief, attempted to ftop the blood with his cloak. But Nero, regarding him with a fern countenance, faid, "It is now too late. Is this your fidelity ?"Upon which, with his eyes fixed, and frightfully itaring, he expired, in the 32 dyear of his age, and the \(14^{\text {th }}\) of
his reign.

Galba was 72 years old when he was deelared emperer, and was then in Spain with his legions. Howperor, and was then in Spain with his legions. How the begins
ever, he foon found that his being raifed to the throne nirg of his was but an inlet to newidifquictudes. His firf embar-reigt. raflment arofe from a diforder in his own army; for upore his approaching the camp, one of the wings of horfe repenting of their choice, prepared to revolt, and he found it no cafy matter to recomeile them to their duty. F:e allo narrowly efeaped affafination from fome nlaves, who were prefented to him by one of Nero's freedmen with that intent. The death of Vindex affo ferved to add not a little to his difquictudes; fo that, apon his very entrance into the empire, he had fonse thoughts of putting an erd to his own lifc. But hearing from Kome that Nelo was dead, and the empire transferred to him, he immediately affuned the title and enfigns of command. In his journey towards Rome he was met by Rufus Virginius, who, fnding the fenate lad decreed tin! the government, eame to yield him obedience. This general had more than once refufed the empire himfelf, which was offered him by his foldiers; alleging, that the fenate alone had the difpofal of it, and from them only he would accept the honour.

316
Uncafiners of Galba in nirg of his
\(\qquad\)

\(\qquad\)

Galba having been brought to the empire by means Faulta of lis their power to commit any future difturbance. Fis firft niftation. approach to Ronse was attended with one of thofe rigorous trokes of juttiee which ought rather to be denominated cruely than any thing elfe. A bodyo ma-
§ G riners,
riners, whom Nero had taken from the oar and enlisted among the legions, went to meet Galba, three miles from the city; and with loud importunities demanded a confirmation of what his predeceffor had done in their favour. Gallo, who was rigidly attached to the ancient difcipline, deferred their requeft to another time. But they, confidering this delay as equivalent to an absolute denial, indited in a very difrefpectful manner; and fore of them even had recourfe to arms : whereupon Galba ordered a body of horfe attending him to ride in among them, and thus killed 7000 of them; but not content with this punishment, he afterwards ordered them to be decimated. Their infolence demanded correction; but foch extenfive punifhments deviated into cruelty. His next ftp to curb the infolence of the folders, was his difcharơing the German colors, which had been eftablind by the former emperors as a guard to their perCons. Thole he feat home to their own country unitewarded, pretending they were difaffected to his perfon. He feemed to have two other objects alfo in view ; namely, to punish those vices which had come to an enormons height in the lat reign, with the fricten feverity; and to replenihh the exchequer, which had been quite drained by the prodigality of his predeceffors. But thee attempts only brought on him the imputation of feverity and avarice; for the late was too much corrusted to admit of filch an immediate tranfition from vice to virtue. The people had long been maintained in floth and luxury by the prodigality of the former emperors, and could not think of being obliged to feck for new means of fubfifence, and to retrench their fluperfuities. They began, therefore, to fatirize the old man, and turn the fimplicity of his manners into ridecult. Among the marks of avarice recorded of him, he is faid to have groaned upon having an expenfive four ferved up to his table; he is faid to have prefented to his fteward, for his fidelity, a plate of beans; a famous player upon the flute, named Camus, having greatly delighted him, it is reported, that he drew out his purfe, and gave him five-pence, telling him, that it was frisate and not public money. By fuck ill-judged frugalitics, at fuch a time, Galba began to lofe his popularity ; and he, who before his acceffion was efteemed by all, being become emperor, was confidered with ridicule and contempt. But there are forme circumflances ahleged againft him, leis equivocal than thofe trifling ones already mentioned. Shortly after his coming to Rome, the people were prefented with a moll grateful f spectacle, which was that of Locufta, Elis, Policletus, Petronus, and Petinus, all the bloody miniters of Nero's cruelty, drawn in fetters through the city, and publicly executed. But Tigellinus, who had been more active than all the refl, was not there. The crafty villain had taken care for his own fafety, by the largeness of his bribes; and though the people cried out for vengeance against him at the theatre and at the circus, yet the emperor granted him his life and pardon. Helotus the eunuch, also, who had been the inflrument of poifoning Claudius, efcaped, and owed his fafety to the proper application of his wealth. Thus, by the inequality of his conduct, he became defpicable to his subjects. At one time the wing himfelf fevere and frugal, at another remiss and prodigal ; condemning forme illultrious perform without any hearing, and pardoning others though guilty : in fort, nothing was done but
by the mediation of his favourites; all offices were venat, and all punifhments redeemable by money.

Affairs were in this unfettered posture at Rome, when the provinces were yet in a wolfe condition. The faccess of the army in Spain in choofing an emperor in. duce the legions in the other parts to with for a fimilar opportunity. Accordingly, many feditions were kindled, and feveral factions promoted in different parts of the empire, but particularly in Germany. There were then in that province two Roman armies; the one which had lately attempted to make Rufus Virginus emperor, as has been already mentioned, and which was commanded by his lieutenant; the other commanded by Vitelline, who long had an ambition to obtain the empire for himfelf. The former of there armies defpifing their prefent general, and confidering themselves as fufpected by the emperor for having been the lat to acknowledge his title, refulved now to be foremolt in denying it. Accordingly, when they were fummoned to take the oaths of homage and fidelity, they refused to acknowledge any other commands. but thofe of the fenate. This refufal they backed by s a meffage of the praetorian bands, importing, that they were refolved not to acquiefce in the election of an emperot created in Spain, and defiring that the Senate fhould proceed to a new choice.

Galba being informed of this commotion, was fenfile, that, betides his age, he was left reflected for want of an heir. He refolved therefore to put what. he had formerly defigned in execution, and to adopt forme perfon whole virtues might deferve fuch advancemont, and protect his declining age from danger. His favourites underflanding his determination, inflantly.

me. fince lhe could not by peaceable fucceffion. In fact, his circumftances were fo very defperate, that he was heard to fay, that it was equal to him whether he fell by his enemies in the field or by lis creditors in the city. He therefore raifed a moderate fim of money, by felling his interett to a perfon who wanted a place; and with this bribed two fubaltern officers in the prestorian bands, fupplying the deliciency of largeffes by promifes and plaufible pretences. Having. in this manwer, in lefs than eight days, corrupted the fidelity of the foldiers, he thole fecretly from the emperor while he was facrificing; and affembling the foldiers, in a fort fpeech urged the cruclties and avarice of Galba. Finding thefe his invectives received with univerfal Rounts by the whole army, he entirely threw off the mank, and avowed his intentions of dethroning him. The foldiers being ripe for fedition, immediately feconded his views: taking Otho upon their fhoulders, they inftantly proclaimed him emperor: and, to ftrike the citizens with terror, carried him with their fwords drawn into the canip.

Galba, in the mean time, being informed of the revolt of the army, feemed utterly comounded, and in viant of fufficient refolution to face an event which he thould have long forefeen. In this manner the poor old man continued wavering and doubtful ; till at laft, being deluded by a falfe report of Otho's being flain, he rode into the forum in complete armour, attended by many of his followers. Jut at the fame inttant a body of horfe fent from the camp to deftroy him en. tered on the oppofite fide, and each party prepared for the encounter. For fome time hoftilities were fulpenced on each fide; Galba, confufed and irrefulute, and lis antagonifts ftruck with horror at the bafenefs of their enterprife. At length, however, finding the emperor in fume meafure deferted by his adherents, they rufhed in upon him, trampling under foot the crowds of people that then filled the forum. Galba feeing them approach, feemed to recollect all his former furtitude ; and bending his head forward, bid the affaffins ftrike it off if it were for the good of the people. This was quickly performed; and his head being fet upon the point of a lance, was prefented to Otho, who ordered it to be contemptuoufly carried round the camp; his body remaining expofed in the ftrects till it was buried by one of his flaves. He died in the 73 d year of his age, after a thort reign of feven months.

No fooner was Galha thus murdered, than the fenate and people ran in crowds to the camp, contending who fhould be foremolt in extolling the virtues of the new emperor, and depreffing the character of hin they had fo unjuftly deftroyed. Each laboured to excel the reft in his infances of homage ; and the lefs his affections were for him, the more did he indulge all the vehemence of exaggerated praife. Otho finding himfelf furrounded by congratulating multitudes, immediately repaired to the fenate, where he received the titles ufually given to the emperors; and from thence returned to the palace, feemingly refolved to reform his life, and affume manners becoming the greatnefs of his fation.

He began lis reign by a fignal inftance of clemen= cy, in pardoning Narius Celfus, who had been highly favoured hy Galba; and not contented with barely forsjiving, lee advanced him to the highelt honours; af-
ferting, that " fidelity deferved esery reward." This Rome.
act of clemency was followed by another of juftice, act of clemency was \(10 l l\) owed by another of jutice, vourite, he who had bect the promoter of all his crucltiey, was now put to death; and all fuch as had been unjuitly barifted, or ftripped, at his inttigation, during Nero's reign, were relored to their country and fortunes.

In the mean time, the legions in Lower Germany Vitei, having been purchafed by the large gifts and fpecious evolts. promifes of Vitellius their general, were at length induced to proclaim him ensperor ; and regardlefs of the fenate, declared that they had an equal right to appoint to that high fation with the cohorts at Rome. The news of this conduet in the army foon fpread confternation tlıroughout Rome; but Otho was particularly ftruck with the account, as being apprehenfive that nothing but the blood of his cotntrymen could decide a conteft of which his own ambition only was the caufe. He now therefore fought to come to an agreement with Jitellius; but this not fucceeding, both fides began their preparations for war. News being received that Vitellius was upon his march to Italy, Otho departed from Rome with a saft army to oppofe him. But though he uas very powerful with regard to numbers, his men, being little ufed to war, could not be relied on. He feemed by his behaviour fenfible of the difproportion of his forces; and he is faid to have been tortured with frightful dreams and the moft uneafy apprehenfions. It is alfo reported by fome, that one night fetching many profound fighs in his fleep, his fervants ran haftily to his bed-fide, and found him ftretched on the ground. He alleged he had feen the gholt of Galba, which had, in a threatening manner, beat and puihed him from the bed; and he afterwards ufed many expiations to appeafe it. However this be, he proceeded with a great fhow of cou. rage till he arrived at the city of Brixcllum, on the itver Po, where he iemained, fending his forees before him under the conduct of his generals Suetonius and Celfus, who made what hafte they could to give the enemy battle. The army of Vitellius, which confitted of 70,000 men, was commarded by his generals Valens and Cecina, he himfelf remaining in Gaul in order to bring up the reft of lis forces. Thus both fides haftened to meet each other with fo much animofity and precipitation, that three confiderable battles were fought in the fpace of three days. One near Placentia, another near Cremona, and a third at a place called Caflor; in all which Otho had the advantage. But thefe fucceffes were but of thort-lived continuance; for Valens and Cecina, who had hitherto acted feparately, joining their forces, and reinforcing their armies with frefh fupplies, refolved to come to a general engagement. Otho, who by this time had joined his army otho de at a little village called Bedrigum, finding the enemy, feaied as notwithfanding their late lofics, inclined to come to a Bedriacum. battle, refolved to call a council of war to determine upon the proper meafures to be taken. His generals were of opinion to protract the war : but others, whofe inexperience had given them confidence, declared, that nothing but a batule could relieve the miferies of the ftate ; protefting, that Fortune, and all the gods, with the divinity of the emperor himfelf, favonred the defign, and would undoubtedly profper the enterprife.

In this advice Otho acquifeced: he had been for fume time fo untafy under the nar, that he fermed willing to exchange fufpenfe for danger. However, he was fo furrounded with flatceers, that he was prohibited from being petfonally prefent in the engasement, but prevaiced upon to referve himfle fore the fortune of the empire, and watit the cvent at Brixellum. The aflairs of hoth armes bing thus aljufled, they came to an engargement at Dedriacum; where, in the beginning, thofe on the fite of Otho feemed to have the advantage. At length, the fuperior difcipline of the legions of Titellius turned the fcale of victory. Othe's army ficd in freat confution towards 13 edriacun, heing purfued with a mifcrable faughter all the way.

In the mean sime. Otho waited for the news of the battle with great impatience, and feemed to tax lis meffengers with celay. The firf account of his defeat was brought lim by a common foldicr, who had efaped from the field of hattle. However, Otho, who was thill furrounded by flateeres, was defired to give no credit to a bafe fugitive, who was guilty of falfehood only to cover his own cowardice. 'The faldicr, however, thill perfifed in the veracity of his report; and, finding, none inclined to helieve limm, immediately fell upon his fword, and expired at the emperer's feet. Otlou was fo much frimk with the death of this man, that he cried out, that he would calufe the ruin of no more fuch valiant and worthy foldiers, but would end the conteft the forteft way; and therefore having exhortad his followers to fubmit to Vitellius, he put an end to his own life.

It was no fooncr known that Otho thad killed himfelf, than all the foldiers repaired to Virginius, the commander of the German lcgions, earnelly intreating him to take upon lim the reins of govemment ; or at leaft, intrenting his modiation with the generals of V itellius in their favour. Upou his declining their requelt, Rubius Gallus, a peifon of confiderable note, tuidertook their cmbanfy to the fenerals of the conquering army ; and foon after obtaned a patdon for all the adherents of Otho.

Vitellius was immodiately after declarcl cmperor by the fenate; and received the marks of dittinction which were now accuflomed to folluw the appointment of the Arongert fide. At "the fame time, Italy was fevercly diltrefted by the foldies, who committed fuch outrages as exceeded all the oppreflions of the moft calanitons war. Vitellius, who was yet in Gaul, refolved, hefore he fet out for Rome, to punith the pratorian cohorts, who had been the inftruments of all the late difturlances in the flate. He therefore caufed them to be difarmed, and deprived of the name and honour of toldiers. He alfo ordered 150 of thofe who were noolt guilty to be put to death.

As he approached towards Rome, he paffed through the towns with all imaginable fplendor ; his paflage by "ater was in painted galleys, adurned with garlands of flowerto and profufly furnifhed with the greatef deliracits. In his journey there was neither order nor difcipline anoug his foddicrs; they plundered wherever they carre with impunity; and he feemed no way difleafed with the licentioufuefs of their hebaviour.

Upon his anival at Rome, he entered the city, not 23 a place he came to rovern with juftice, but as a tuwn tha: became his own by the lews of conqueft. He
marched through the freets mounted on horfeback, all in armour ; the fenate ard people going before hini, as if the captives of his late victory. He the next day made the fenate a fpeech, in which he magnified hiss own actions, and pumifed them extrandinary adantages fiom his atminiflration. He then harangued the people, who, being now long accuflomed to fatter all in authority, highly applanded aud bleffed their new emperor.

In the ne can tiore, hiss folliers leeing permitted to fa. His Sia \(3^{32 \pi}\) tiate themfelves in the debaucheries of the city, grew totally unfit for war. The pilucipal affairs of the flate were managed by the loweft wetclacs. Vitellins, more abandoned than they, gave himfelf up to all kinds of laxury and profufenefs: but gluttony was his favomrite vice, fo that he brought himeff to a labit of voniting, in order to renew his incals at pleafure. His entertainments, though feldom at his cwon cefl, were prodigiouly expenfive; be frequently invited himfelf to the tables of his fubjects, breakfalting with one, clining with another, and fupping with a thircl, all in the fane day. The molt memorable of thefe entertaiments was that made for him by his brother on his arrival at Rone. In this were ferved up 2000 fevenal diflas of fifl, and ;oso of fowl, of the mott valuable kinds. But in ome particular diff he feemed to have outdone all the former profufion of the moll luxurious Romans. This difh, which was of fuch magnitude as to be callect the fiseld of ATiteraw, was filled with an olio made from the founds of the fifh called fearri, the brains of pheafants and woodcocks, the tongues of the moit coltly birds, and the fpawn of lampreys brought from the Carpathia: fea. In order to couk this difh properly, a furmace was built in the fields, as it was too large for any kitchen to contain it.

In this manner did Viteclius proceed; fo that Jofiphus tells us, if he had reigned long, the whole cmpire would not have been fufficient to have maintained his ghittony. All the attendants of his court fought to raife thenfelves, not hy their citues and abilitices, but the fumptuoufnefs of their entertainments. This prodigality produced its attendant, want; and that, in rmin, gave rife to cruclty.

Thofe who hats formenly been his affeciates were now deftroyed without mency. Going to vifit one of them in a viulent fever, he mingled poifon with his water, and delivered it to him with his own hands. He never pardoned thofe money-lenders who carne to demand payment of his furmer detsts. One of the number coning to falute him, he immediately ordered him to be carricil off to execution; but fhortly after, commanding him to be brought back, when all his attendants thought it was to pardon the unhappy creditor, Vitellius gave them foon to underfood that it was merely to have the pleafure of feeding his eyes with his torments. Having condemned another to death, he executed his two fons with him, only for their prefuming to intercede for their father. A Roman knight being dragged away to execution, and crying out that he had made the emperor lis heir, Vitellius denanded to fee the will, where finding himfllf joint heir with another, he ordered both to be executed, that he might enjoy the legacy without a partner.
by the continuance of lich vices and ci.edties as thefe he became odious to all mankind, and the aftro. Togers

\section*{R O M}
logers began to prognoflicate his ruin. A writing was fet up in the forum to this effece: "We, in the wame of the ancient Chaldeans, give Vitelihus warning to depart this life by the kalcucs of Oetober." Vitellins, on his part, received this information with terror, and ordered all the attrologers to be banifhed from Rome. An old woman having foretold, that if he furvived his mother, he thould reign many years in happinefs and fecurity, this gave him a delire or putirg her to death; which he did, liy refuling her fuftenance, under the pretence of its being prejudicisal to her health. But he foon fuw the futility of ulying upon lued vain prognoitications; for his foldiers, hy their crueliy bitants of Rome, the legions of the Laft, whe had at firft acquiefeed in lis dominion, began to rerolt, and thortly after unanimoufly refolved to make Vefpatian cmperor.

Vefpafian, who was appointed commander againft the rebellions Jews, had reduced mof of their cowntry, except Jcrufalem, to lubjection. 'lhe death of Nero, however, had at firt intermpted the progrefs of his arms, and the fucceffion of Galba gave a tomporasy check to his conquelts, as he was obliged to fend his fou Titus to Rome, to receive that emperor's cominands. Titus, however, was fo long detained by contrary winds, that he seceived news of Gaiba's death before he fet fail. He then refolved to continue nenter during the civil wars between Otho and Vitellins; and when the latter prevailed, he gave him his homage with reluctance. But being defirous of acquiring reputation, though he diniked the government, he detemined to lyy liege to Jerufalem, and actually made preparations for that great undertaking, when he was given to une!erfand that Vitellius was detelled by all ranks in the empie. - Thefe mumurings increafed every day, while Velpanan fecretly endeavoured to advance the difeontents of the army. By thefe means they began at length to fix their eyes upon him as the perfon the moit capable and willing to terminate the miferies of his country, and put a period to the inguries it fuffered. Not only the legions under his come mand, but thofe in Mratia and Pamonia, came to the fame refolution, fo that they declared themfelves for Vefualian. He was alfo without his own confent proclamed emperor at Alexandria, the army there confirming it with extraordinary applaule, and paying their accultomed honiage. Still, however, Velpafian femed to cecline the honour done him ; till at length his foldiers compelled him, with their threats of innmediate deatl, to accept a title which, in all probability, he wifhed to enjuy. He row, therefore, called a council of war: where it was refolved, that his fon Ti tus fhould carry on the war againlt the Jews; and that Mutianus, one of his generals, flonld, with the greateft part of his legions, enter ltaly; while Vefpalian himielf thould levy forces in all parts of the ealt, in order to reinforce them in eafe of neceflity.

Durings the fe preparations, Vitellius, though buried in floth and luxury, was refolved to nake aat effort to detend the empire; wherefore his clief commanders, Valens and Cecina, were ordered to make all poffible preparations to refilt the invaders. The firt army that entered Italy with an hottile intention was under the commend of Antonius Primus, who was met by Cc-
cina near Cremona. A battle was expeefed to cuftue; Reme. but a nesuciation taking place, Cecina was presaled upen to change fides, and declase for Vifpafian. His army, however, quickly repented of what they had dunc ; and imprifuning their sencral, attacked Anto- 3128 nius, though without a lcader. The ensagement cop-Vuilrus tinued during the whole night: in the moning, after adefented. f:ort repalt, buth armics engaged a feecncl time; when the foldiers of Antonius faluting the rifing fun, according to cullom, the Vitellians fuppofing that they had re. ceived new reinforcements, betook thomfelves to Right, with the lofs of \(3=, 000\) men. Shortly atier, feceing their general Cecina from prifon, they premiled upon him to intercede with the conquerors for pardon; wlich they shtained, thourh not without the mult horid barbarities cunnnitted upon Cremona, the eity to whidn they had retiod for fielter.

When Vitellius was informed of the defeat of his army, his former infolenco was converted into an extreme of timidity and irrefulution. At leneth he commanded Julius Prifous and Alphinus Varns, witl fome furces that were in readinets, to guard the paftes of the Apennines, to prevent the encony's march to Rome; referving the principal hody of his army to fecure the city, under the comnand of his brother Lucius. Fut being perfuadud to repair to his army in jerfon, his prefence only ferved to incrafe the contempt or his foldiers. He there appeared irrfolute, and fill luxurions, withont counsel or conduet, ignorant of war, and demandiner from others thofe inflructions which it was his cuty to give. After a thort continuance in the canp, and underftandiag the revolt of his flect, he returned emice more to Rume: bat every day only forved to render his affairs ftill more defperate; till at lalt he made offers to Vefpafian of religning the empire, provided his life were granted, and a fulficient revemue for las fapport. In order to enforce his reguett, he iffued from his palace in deep mounning, with all his domettics wecping round him. He then went to offer the fwood of juftice to Cecilius, the conful; which he refufing, the abject emperor prepared to lay down the enfigns of the empire in the tonple of Concore. Dut being interrupted by fome, who cried sut, 'lhat ine lumielf uas Concord, he refolved, upon fo weak an encouracement, till to mantain his power, and immediately prepared for his defence.

During this fuctuation of cotmfels, one Sabinus, who had advifed Vitellits to relign, percciving his defperate lituation, refolve!, by a bold flep, to ublige Vefpafian, and accordingly feized upon the Capitol. The CapiBut ine wis premature in his attempt; for the foidiers tol bunt. of Vitellins attacked hin with grat fury, and, prevailing by their numbers, foon laid that beautifui buildins in aftes. During this d:eadtul confagraticn, Vitellius was feafting in the palace of 'T'iberius, and beholding all the horrors of the affalt with great fatisfaction. Sabinus was taken pifoner, and hoitly alter exccuted by the emperor's conmand. Young Domitian, his nephew, who uas afterwards emperor, cfeaped by flight, in the habit of a pricft; and all the rett who furvicd the fire were put to the fword.

But this fuccefs ferved little to improve the affairs of Vitellius. He wainly fent mefionger after meffenger to bring Vefpalian's gencral, Antonius, to a compulition.

This commaulur give no anfwer to his requefts, but thill continucd his match towards Rome. Being arrive! before the wall, of the city, the forces of Vitellius were refolved upon defending it to the utmoft extrewity. It was attacked on three fides with the utmont So \(y\); while the army within, fallying upon the befiefers, defended it with equal obftinacy. 'The battle laftcil a whole day, till at latt the befieged were driven into the city, and a dreadful flanghter made of them in all the flreets, which they vainly attempted to defend. In the mean tinee, the citizens flood by, looking on as tuth fides fought : and, as if they had been.in a theatre, clapped their hands; at one time enconraging one partr, and again the other. As either turned their tacks, the citizens would then fall upon them in their places es refuge, and fo kill and plander them withont mercy. But what was nill more remarkable, during thefe d-cadfel flaughers both within and without the city, the people would not be prevented from celchrating ane of the:r riotous fealts, called the Saturnalia; fo \(t^{\text {lhat }}\) at one time might have been feen a flrange mixt:re of inith and mifery, of cruelty and lewdnefs; in ene place, buryings and flaughters; in another, drumkentefs and featting : in a word, all the horrors of a civil war, and all the licentioufnefs of the mod abandone. fecurity !

During this complicated fcene of mifery, Vitellius retired privately to his wife's houfc, upon mount Avent:ne, defignins that night to fly to the army commanded by his brother at 'Tarracina. But, quite incapable, through fear, of foming any refolution, he changed his minel, and returned again to his palace, now void and defolate; all his flaves forfaking him in his di?refs, and purpofely avoiding his prefence. There, after wandering for fome time quite difconfolate, and fearing the face of every creature he met, he hid himfolf in an obfcure corner, from whence he was foon taken loy a party of the cunquering foldiers. Still, howcuer, willing to add a few hours more to his miferable Ific, he begged to be kept in prifon till the arrival of Vefpatian at Rome, pretending that he had fecrets of importance to difoover. But his intreaties were vain: the foldiers binding his hands behind him, and throwing an halter roind his neck, led him along, half naked, into the public forum, upbraiding hin, as they proceeded, with all thofe bitter reproaches their malice coukd fuggeft, or his own cruelties deferve. They alfo ticd his, hair backwards, as was ufual with the zrolt infamous malefactors, and held the point of a fword under his chin, to present his hiding his face from the public. Some caft dirt and filth upon him as he paffed, whers Itruck him with their hands; fome ridiculed the defucts of his perfon, his red fiery face, and the.enoimous greatnefs of his belly. At length, being come to the place of punifhment, they killed him with many blows; and then dragging the dead body through the freets with at hook, they threw it, with all poffible ignominy, into the river Tiber. Such was the miferable end of this emperor, in the 57 th year of his age, after a thort reign of eight months and five days.

Yitellius being dead, the conquering army purfued their enemies throughout the city, while neither houfes nor temples afforded refuge to the fugitives. The frecets and public places were all ftrewed with dead, each man lying flain where it was his misfortune to be
overtaken by his unmereiful purfucrs. But not orly the enemy fuffered in this manner, but many of the citizens, who were obnoxious to the foldiers, were dragged from their houfes, and killed without any form of trial. The heat of their refentment heing fomewhat abated, they next began to feek for plunder; and under pretence of fearching for the enemy, left no place without marks of their rage or rapacity. Befides the foldiers, the lower rabble joined in thefe deteftable outrages; fome flaves came and difcovered the riches of their maftcos; fome were detected by their nearelt friends; the whole city was filled with outcry and lamentation; infomuch, that the former ravages of Otho and Vitellius were now confidered as תlight evils in comparifon.

At length, howevcr, upon the arrival of Mutianus, general to Vefpafian, thefe flaughters ceafed, and the flute began to wear the appearance of former tranquillity. Vefpafian was declased emperor by the una-Vef fosif nimous confent both of the fenate and the army; andirulait dignificd with all thofe titles, which now followed ra- \(\begin{aligned} & \text { empero } \\ & \text { Rume. }\end{aligned}\) ther the power than the merit of thofe who were ajpponted to govern. Mcffengers were difpatched to him into Esypt, detiring his return, and tellifying the utmoft delire for his govermment. However, the winter being dargerous for failing, he deferred his voyage to a more convenient feafon. Perlaps, alfo, the diffenfions in other parts of the empile retarded his return to Rome; for one Claudius Civilis, in Lower Ger-Revil many, excited his countrymen to revolt, and deftroyed Claudiu the Roman garrifons, which were placed in different Civilis. parts of that province. But, to give his rebellion an air of juftice, he caufed his army to fwear allegiance to Vefpafian, until he found himfelf in a condition to throw off the mafk. When he thought himfelf fufficiently powerful, he difclaimed all fubmiftion to the Roman government; and having overcome one or two of the licutenants of the empire, and being joined by fuch of the Romans as refufed obedience to the new emperor, he boldly advauced to give Cerealis, Vefpafian's general, battle. In the beginning of this engagement, he feemed fuccefsful, breaking the Roman legions, and putting their cavalry to flight. But at length Cerealis by his conduct turned the fate of the day, and not only routed the enemy, but took and deftroyed their camp. This engagement, however, was not decifive ; feveral others enfued with doubtful fuccefs. An accommodation at length took place. Civilis obtained peace for his countrymen, and pardon for limfelf; for the Roman empire was, at this time, fo torn by its own divifions, that the harbarous nations around made incurfions with impunity, and were fure of obtaining peace whenever they thought proper to demand it.

During the time of thefe commotions in Germany, 334 the Sarmatians, a barbarous nation in the north-eaft of of the \(S_{3}\) the empire, fuddenly paffed the river Ifer, and marched matians. into the Roman dominions with fuch celerity and fury, as to deftroy feveral garrifons, and au army under the command of Fonteius Agrippa. Howevcr, they were driven back by Rubrius Gallus, Vefpafian's lieutenant, into their native forefts; where feveral attempts were made to confine them by garrifons and forts, placed along the confines of their country. But thefe hardy nations, laving once found the way into the empire,

2e. never after defifted from invading it upon every opportunity, till at length they over-ran and deftroyed it entirely.

Vefpafian continued fome months at Alexandria in Egypt, where it is faid he cured a blind and a lame man by touching tlem. Beiore he fet out for Rome, he gave his fon Titus the command of the army that was to lay liege to Jerufalem; while he himfelf went forward, and was met many miles from Rome by all the fenate, and near hall the inhabitants, who gave the fincerelt teltimunies of their joy, in having an emperor of fuch great and experienced virtues. Nor did he in the leaft difappoint their expectations; being equally affiduous in rewarding merit, and pardoning his adverfaries; in reforming the manners of the citizens, and fetting them the belt example in his own.

In the mean time, Titus earried on the war againft the Jews with vigour, which ended in the terrible deftruction of the city, mentioned under the article Jews. After which his foldiers would have crowned I'itus as conqueror; but he refuled the honour, alleging that he was only an inftrument in the hand of Heaven, that manifeftly declared its wrath againt the Jews. At Rome, however, all mouths were filled with the praifes of the conqueror, who had not only fhowed himfelf an excellent general, but a courageous combatant : his return, therefore, in iriumph, which he did with his father, was marked with all the magnifiecnee and joy that was in the power of men to exprefs. All things that were efteemed valuable or beautiful among men were brought to adorn this great occation. Among the rich fpoils were expofed vaft quantities of gold taken out of the temple; but the book of their law was not the leaft remarkable amongit the magnificent profufion. A triumphal arch was erected upon this occafion, on which were deferibed all the victories of Titus over the Jews, which remains almoft entire to this very day. Vefpafian likewife bult a temple to Peace, wheren were depofited moft of the Jewifh fpoils; and having now calmed all the commotions in every part of the empire, he fhut up the temple of Janus, which had been open about five or fix years.

Vefpafian laving thus given fecurity and peace to the empire, refolved to correct numberlefs abufes which facl grown up under the tyranny of his predecefors. To effect this with greater eafe, he joined Titus with him in the confulfhip and tribunitial power, and in fome meafure admitted him a partner in all the higheft offices of the ftate. He began with refraining the licentioufnefo of the army, and foreing them back to their priftine difeipline. He abridged the procefles that had been carried to an unreafonable length in the courts of jultice. He took care to rebuild fuch parts of the city as had fuffered in the late commotions; particularly the Capitol, which had been lately burnt; and which he now reftored to more than former masnificence. He likewife built a famous amphitheatre, the ruins of which are to this day an evidence of its ancient grandeur. The other minous cities of the empire alfo fhared his paternal care; he improved fuch as were declining, adorned others, and built many anew. In fuch acts as thefe he paffed a long reign of clemency and moderation; fo that it is faid, no man fuffered by an unjuit or a fevere decree during his adminittration.

Julius Sabinus feems to be the only perfon who was
treated with greater rigour than was ufual with this emperor. Sabinus was commander of a fmall army in Gaul, and had declared himfelf emperor upon the death of Vitellins. Howerer, his amny was thorivy ater over- Avertures come by Vefpaliant thre flight. He or lome time wandered onus. through the Roman provinces, withnut being difcovered: but finding the purfuit every day become clofer, he was obliged to hide himfelf in a cave; in which he remained concealed for no lefs than nine years, attended all the time by his faithful wife Empona, who provided provifons for him by day, and repaired to him by night. However, fhe was at laft difeovered in the performanee of this pious office, and Sabinus was taken prifoaer and carried to Rome. Great interceffion was made to the emperor in his behalf: Empona herfelf appearing with her two childreu, and inplosing her hulband's pardon. However, neither her tears nor intrea. ties could prevail; Sabinus had been too dangerous a rival for mercy; fo that, though the and her children were fpared, her hufband fuffered by the executioner.

But this feems to be the orly inflance in which he clemency refented paft offences. He caufed the daughter of \({ }^{-} \mathrm{Vi}\) and good tellius, his avowed enemy, to be married into a noble qualities of family, and he himfelf provided her a fuitable fortune. One of Nero's fervants coming to beg for pardon for having once rudely thrult him out of the palace, and infulted hins when in office, Vefpafian only took his revenge by ferving him jut in the fame manner. When any plots or confpiracies were formed againt him, he difdained to punith the guilty, faying, That they deferved rather his contempt for their ignorance, than his refentment; as they feemed to envy him a dignity of which he daily experienced the uncalinefs. His liberality towards the enconragement of arts and learning, was not lefs than his elemency. He fettled a conftant falary of 100,000 fetterces upon the teachers of rhetoric. He was particularly favourable to Jofephus, the Jewifh hitorian. Quintilian the orator, and Pliny the naturalit, flourifhed in his reign, and were highly elleem. ed by him. He was no lefs an encourager of all other excellencies in art; and invited the greateit maters and attificers froin all parts of the world, making them confiderable prefents, as the found occafion.

Yet all his numerous acts of generolity aad magnincence could not preferve his character from the imputation of rapacity and avarice. He re ivel many obfolete methods of taxation; and even bonght and fold comnodities himfelf, in order to increafe his fortune. He is charged with advanciurs the mort avaricious gevernors to the provinces, in order to thare their plunder on their return to Rome. He defeended to fome very unufual and difhonomrable impolls, even to the laying a tax upon urine. When his fon Titus remonttated. againft the meannefs of fuch a tax, Vefpafian taking a picee of money, demanded if the fmell offended him; and then added, that this very money was produced by urine. But in excufe for this, we mult oblerse, that the exchequer, when Vefpafian came to the throne, was fo much exhauted, that he informed the fenate that it would require a fupply of three hundred mi!lions (of our moncy) to reeeftablith the commonwealth: 'Ihis necefity mut naturally produce more numerousand heavy taxations than the empire had hitherto experienced: but while the provinces were thus obliged ta

Rinerc.
contrinute to the fupport of lis power, lie took every precaution to provide for their falety; fo that we find but \(t\) wo infurrections in this reign. - In the fonrth year of lrisreign, Antiuchus king of Comagena, holding a private correfpondence frith the Parthians, the declared enemies of Rome, was taken prifomer in Ci . licia, by Pyrthus the governor, and fent bound in Rome. But Vefpafian greneroufly prevented all ill treatment, by giving him a refidence at Lacedemon, and allowing-him a revenue fuitalle to his dignity. About the fame time alfo, the Alani, a barbarous people inlabiting along the river lanais, abandoned their barren wilde, and invaded the kingdom of Media. From thence paffing into Armenia, after great ravages, they overthew Sinidates, the king of that country, with prodisious faughter. Titus was at length fent to chaltife their infolence: bat the barbarians retired at the approach of the Roman army, loaded with plunder; being compelled to wait a more favourable opportunity of renewing their irruptions. "Thele incurfions, however, were but a thanfient florm. the effeets of which were foon repaired by the emperur's moderation and afliduity. We are told, that he now formed and cttablifhed a thoufand nations, which had fearely before amoumted to 200 . No provinces in the c: pire lay out of his view and protection. He had, ruring his whole reigm, a particular regand to Britain; his gencrals, Petilius Cerealis, and Julius Frontinus, brought the greatelt part of the inland intu fubjection ; and Agricols, who fucceeded foon after, completed what they had begun. See Exgland.

In this it anmer, having reigned 10 years, loved by his fuljocts, and deferving their affection, he was furprifed by an indifpofition at Carpania, which he at once declared wonld be fatal, crying out, in the fpirit of Paganifin, " Methinks I am going to be a grod." Removing from thence to the city, and afterwards to a country-feat near Reate, he was there taken with a flex, which brought him to the laft extremity. However, perceiving his end approach, and jult going to expire, he cried out, that an emperor ought to die ftanding; wherefore, raiting hio pelf upon his feet, he expired in the hands of thole that futtained him.

Titus beine joyfully received as emperor, notwithfanding a llight oppolition from his brother Domitian, who maintained that he himfelf was appointed, and that Titus had falfifed the will, beran his reign with every virtue that became an emperor and a man. During the life of his father there had been many imputations again!t hins; but upon his exaltation to the throne he feemed entirely to take leave of his former viees, and became an cxample of the greateft:oderation and humanity: He lad long loved Berenice, fifter to Agrip. pa king of Judea, a woman of the greatelt beanty and allurements. But knowing that the connection with her was entirely difagreable to the people of Rome, he fent her away, notwithftanding their \(n\) utual paffion and the many arts the ufed to indnce hir to change his refolutions. He next difcarded all thofe who had been the former minifters of his pleafures, and forbore to countenance thic eo panions of his loofer recreations, though he had formerly taken great pains in the feleetion. 'I'his moderation, added to his jutice and generofity, procured him the love of all good men, and the eppellation of the delight of monkind, which all his ac-
tions feemed calculated to enfure. As he came to the throne with a!l the advantages of his father's popularity, he was refolved to ufe every nethod to increafe it. He therefore took particular care to punih all informers, falfe witneffes, and prometers of diffenfion, condemnins them to be fourged in the mot public fiects, next to be drasged through the theatre, and then to be banifhcd to the uninhebited parts of the empire, and fold as flaves. ISis courtefy and readinefs to do good have been celebrated even by Chritian writers; his principal rule hemr, never to fend any petitioner diffatisfied away. One night, recullecking that lie had done nothing beneficial to :ankind the day preceding, he cried out among his friends, "I have lutt a day." A lentence too remarkable not to be univerlally known

In this reign, an eruption of mount Vefuvins did confiderable damage, overwhelming many towns, and f fending its afhes into comotrits more than 100 miles dittant. Upon this : emorable occafion, lliny the naturalit tolt his life ; for, being impelled by too eager a curiofity to obferve the cruption, he was fuffocated in the flames \(\dagger\). There happened alfo about this time at fire at Rome, which continued three days and nights viu fuceeffively, which was followed by a plague, in which \(10,0<0\) men were buried in a day. The emperor, however, did all that lay in his power to repair the damare fultained by the public; and, with refpeet to the city, declared that he would take the whole lols of it upon himfelf. Thefe difafters were in fome meafure counterbalaneed by the fueceffes in Britain, under Agricola. ' 1 his exedient general having been feut into that conniry towards the latter end of Vefpafin's reign, ffowed himfelf equally expert in quelling the refractory, and civiliang thofe who had formerly fubmitted to the Roman power. The Ondovices, of inhabitants of North Wales, were the fir! that were fubdued. He then made a defeent upon Mona, or the iflaud of Anglefea; which furrendered at diferetion. Having thus rendered Limfelf matter of the whole country, he took every method to reftore difeipline to his own army, and to introduce fome fhare of politenefs amung thofe whom he had conquered. He exhorted them, both by advice and cxample, to build temples, theatres, and itately houfes. He canfed the fons of their nobility to be inAtructed in the liberal arts; he had them taught the Latin language, and induced them to imitate the Roman modes of drefling and living. Thus, by decrees, this barbarous people began to affume the luxarions manners of their conquerors, and in time even outdid them in all the refmements of Senfual pleafure. For the fucecfs in Britain, Titus was faluted emperor the 15 th time; but he did not long furvive his honours, being feized with a violent fuer at a little dillance from Rome. Perceiving his death to approach, he declared, that during the whole courfe of his life he knew but of one action which he repented of; but that action he did not thiak proper to exprefs. Shortly after, he died (not without fufpicion of treachery from his brother Domitian, who lad long wifhed to govern) in the \(4^{\text {lft }}\) year of his age, having reigned two years two months and twenty days.

The love which all ranks of people bore to Titus, 9 ccee 1 facilitated the election of his brother Domitian, not- \(5, \mathrm{D}\) ). withftanding the ill opinion many had already conceived tian. of him. His ambition was already but too well
\(\mathrm{R} O \mathrm{M} \quad[4\)
ne. known, and his pride foon appeared upoc his coming to the throne; having been heard to declare, that he had given the empire to his father and brother, and now received it again as his due.

The beginning of his reign was dniverfally acceptable to the people, as he appeared equally remarkable for his clemency, liberality, and juftice. He carried his abhorrence of cruelty fo far, as at one time to forbid the facrificing of exen. His liberality was fuch, that he would not accept of the legacies that were left him by fuch as had children of their own. His juftice was fuch, that he would fit whole days and reverle the partial fentences of the ordinary judges. He appeared very careful and liberal in repairing the libraries which lad been burnt, and recovering copies of fucl books as lad been loff; fending on purpofe to Alexandria to tranfcribe them. But he foon began to fhow the natural deformity of his minud. Inftead of cultivating literature, as his father and brother had done, he neglected all kinds of ftudy, addicting himfelf wholly to the meaner purfuists, particularly archery and gaming. No emperor before him entertained the people with fuch various and expenfive fhows. During thefe diverfions he diftributed great rewards \(s\) fitting as prefident himfelf, adorned with a purple robe and crown, with the priefts of Jupiter and the college of Flavian priefts about him. The meannefs of his occupations in folitude were a juft contraft to his exbibitions in public oftentation. He ufually fpent his hours of retirement in catcling fies, and flicking them through with a bodkin; fo that one of his fervants being alked if the emperor was alone, he anfwered, that he had not fo much as a fly to bear him company. His vices feemed every day to increafe nor. With the duration of his reign; and as he thus became
vice more odious to his penple, all their murmurs only ferved to add ftrength to his fufpicions, and malice to his cruelty. His ungrateful treatment of Agricola feemed the firf fymptom of his natural malevolence. Domitian w'as always particularly fond of obtaining a military reputation, and therefore jealous of it in others. He had marched fome time before into Gaul, upon a pretended expedition againft the Catti, a people of Germany ; and, without ever feeing the enemy, refolved to have the honour of a triumph upon his seturn to Rome. For that purpofe he purchafed a number of flaves, whom he dreffed in German habits; and at the head of this miferable proceffion entered the city, amidft the apparent acclamations and cencealed contempt of all his fubjects. The fucceffes, therefore, of Agricula in Britain affected him with an extreme degree of envy. This admirable general, who is fearce mentioned by any writer except Tacitus, purfued the adwantages which he had already obtained. He routed the Caledonians; overcame Galgacus, the Britith chief, at the head of 30,000 men ; and afterwards fending out a fleet to four
: Scote the coaft, firft difcovered Great Britain to be an inland**. He likewife difcovered and fubdued the Orkneys, and thus reduced the whole into a civilized province of the Romän empire. When the account of thefe fuccefles was brought to Domitian, he received it with a feeming pleafure, but real uneatinefs. He thought Agricola's rifing reputation a reproach upon his own inartivity; and, inftead of attempting to emulate, he refolved to fupprefs the merit of his fervices. He ordered him, therefore, the external marks of his approbation, and \& Ves. XVI. Part II.

\section*{\(42 \mathrm{~S} 3 \quad \mathrm{R} \quad \mathrm{O} \quad \mathrm{M}\)}
took care that triumphant ornaments, flatues, and other
Rome honours, thould be decreed hin ; but at the fame time he removed him from his command, under a pretence of appointing him to the government of Syria. By thefe means, Agricola furrendered up hiz government to \(\mathrm{Sa}-\) luftius Lucullus, but foon found that Syria was otherwife difyofed of. Upon his return to Rome, which was privately and by night, he was coolly received by the emperor; and dying fome time after in retirement, it was fuppofed by fome that his end was hattened by Domitian's direction.

Domitian foon after found the want of fo experienced Mary basa commander in the many irruptions of the barbarous rot- n3. nation that furrounded the empire. The Sarmatians sine in Europe, joined with thofe in Afia, made a formi vile che dable invafion; at once deftroying a whole legion, and a general of the Romans. The Dacians, under thee conduct of Decebalus their king, made an irruption, and overthrew the Romans in feveral engagements. Lofles were followed by loffes, fo that every feafon became memorable for fome remarkable overthrow. At laft, however, the ftate making a vigorous exertion of its internal power, the barbarians were repelled, partly by force and partly by the affiftance of money, which only ferved to enable them to make future invafions to greater advantage. But in whatever manner the enemy might have been repelled, Domitian was refolved not to lofe the honour of a triumpl. He returned in great fplendor to Rome; and not contented with thus triumphing twice without a vietory, he refolved to take the furname of Germanicus, for his conqueft over a people with whom he never contended.

In proportion as the ridicule increared againt him, his pride feemed every day to dumand greater homage. He would permit his flatues to be made only of gold and filver; afflumed to himfelf divine honours; and ordered that all men firuld treat hinn with the fame appellations which they gave to the divinity. His cruelty was not behind his arrogance: he caufed numbers of the noft illuftrious fenators and others to be put to death upon the moft trifling pretences. Saluftius Lucullus, his lieutenant in Britain, was deltroyed only for having given his own name to a new fort of lances of his own invention. Junius Rufticus died for publifhing a book, in which he commended Thrafea and Prifcus, two philefophers who oppofed Vefpafian's coning to the throne.

Such cruelties as thefe, that feem elmoft without a motive, may naturally be fuppofed to have produced rebellion. Lucius Antonius, governor in Upper Germany, l:nowing how much the emperor was detefted at home, affumed the enfigns of imperial dignity. As he was at the head of a fermidable army, lins fuccefs remained long doubtful ; but a fudilen overfowing of the Rhine dividing his army, he was fet upon at that junctuse by Normandus, thie emperor's general, and totally routed. The news of this vitiory, we are told, was brought to Rome by fupernatual means, on the fame Monatious day that the battle was fought. Domitian's feverity cruele ef of was greatly increafed by this finceefs, of thort duration the empeIn order to difever thinfe who weer accomplices with the adverfe paty, he invented new toitures, fometimes cutting off the hands, at other times thrulling fire into the privities, of the peaple whon he fufpected of being his enemis. During thefe crueltics, he aggravated

\section*{R 10 M}
their guilt by hypocrify, never pronouncing fentence withour a preamble full of gentlenefs and mercy. He was particularly terrible to the fenate and nobility, the whole body of whom lie frequently threatened entirely to extirpate. At one time, he furrounded the fenatehoufe with his troops, to the grent conllernation of the fenators. At anothicr, he refolved to amufe limfelf with their terrors in a different manner. Having inwited them to a public entertainnent, he reccived them all very formally at the entrance of his palace, and conduEced them into a fpacious hall, hung round with black, and illuminated by a few nelancholy lamps, that diffafed light only fufficient to thow the horrors of the - place. All around were to befeen nothiug but coffins, with the names of each of the fenators written upon them, together with other objects of terror, and inftruments of execution. While the company beheld all the preparations with filent agony, feveral men, having their bodics blackened, each with a drawn fword in one hand and a flaming torch in the other, entered the hall, and danced round them. After fome time, when the gueits expected nothing lefs than initant death, well knowing Domitian's capricious cruelty, the doors were fet open, and one of the fervants came to inform them, that the emperor gave all the company leave to withdraw.

Thefe cruelties were rendered ftill more odious by his luft and avaricc. Frequently after prefiding at an execution, he would retire with the lewdeft profltutes, and ufe the fame baths which they did. His avarice, which was the confequence of his profufion, knew no bounds. He feized uppon the eftates of all againt whom he could find the fmallef pretentions; the moll trifling action or word againft the majefty of the prince was fufficient to ruin the poffefor. He particularly exacted large frums from the rich Jews ; who even then began to practife the art of peculation, for which they are at prefent fo remarkahle. He was excited ayainit them, not only by avarice, but by jealoufy. A prophecy had been long current in the ealt, that a perfon from the line of David thould rule the world. Whereupon, this fufpicious tyrant, willing to evade the predittion, commanded all the Jews of the lineage of David to be diligently fought out, and put to death. Two Chriftians, grandfons of St Jude the apofle, of that line, were brought before him; but finding them poor, and uo way ambitious of temporal power, he difmiffed them, confidering them as objects too mean for his jealoufy. However, his perfecution of the Chriftians was more fevere than that of any of his predecefiors. By his letters and edicts they were banifhed in feveral parts of the empire, and put to death with all the tortures of ingenious cruelty. The predictions of Chaldeans and affrologers alfo, concerning his death, gave him moft violent apprehenfions, and kept him in the moft tormenting difquietude. As he approached towards the end of his reign, he would permit no criminal, or prifoner, to be brought into his prefence, till they were bound in fuch a manner as to be incapable of injuring bim ; and he generally fecured their chains in his own hands. His jealoufies increafed to that degree, that he ordered the gallery in which he walked to be fet round with a pellucid flone, which ferved as a mirror to reflect the perfons of all fuch as approached him from behind. Every omen and prodigy gave him frefh anxiety.

But a period was foon to be put to this montter's
cruelty. A meng the number of thote whom he at ance carefled and fufpected, was his wife Donitia, whom he had taken from Allius Lamar, her former hafband. 'I his woman, however,...was become obnoxipus to him, for having placed her affections upon one! Paris, a a ed ay player; and he refolved to difpatch her, with feveral hum. others that he cither hated or fufpected. It was the tyrant's method to put down the names of all fuch as he intended to deftroy in his tablets, which he, kept about him with great circumfpection. Domitia, fortunately happeniug to get a fight of them, was ftruck at finding her own name in the catalogue of thofe tated to deltruction. She fhowed the fatal litt to Norbanus and Pctronius, prafects of the protorian bands, who found themelves fet down; as likewife to Stephanus, the comptroller of the houlehold, who came into the confpiracy with alacrity. Parthenius alfo, the chief chanberlain, was of the number. Thefe, after many confultations, determined on the firt opportunity to put their defign in execution; and at length fixed on the 18 th day of September for the completion of their attempt. Domitian, whofe death was every day forctuld by the aftrologers, who, of confequence, inult at laft be right in their predictions, was in fome meafure apprehenfive of that day; and as he had been ever timorous, fo he was now more particularly upon his guard. He had fome time before fecluded himfelf in the mof fecret receffes of his palace; and at midnight was fo affrighted as to leap out of his bed, inquiring of his attendants what hour of the night it was. Upon their falfely affuring him that it was in hour later than that which he was taught to apprehend, quite tranfported, as if all danger was paft, he prepared to go to the bath. Juft then, Parthenius his claamberlain came to inform him that Stephanus the comptroller of his houfehold defired to fpeak to him upon an affair of the utmoll importance. 'The emperor having given orders that his attendants Chould retire, Stephanus entered with his hand in a fcarf, which he had worn thus for fume days, the better to conecal a dagger, as none were permitted to approach the emperor except unarmed. He began by giving information of a pretended confpiracy, and exhibited a paper in which the particulars were fpecified. While Domitian was reading the con- He is \({ }^{3!}\) ! tents with an eager curiofity, Stephanus dre \(w\) his dag. deeed. ger, and flruck him in the groin. The wound not being murtal, Domitian caught hold of the affiffin, and threw him upon the ground, calling out for affitance. He demanded alfo his fword, that was ufually plaeed under his pillow; and a boy who attended in the apartment running so fetch it, found only the fcabbard, for Parthenius had previouny removed the blade. The ftruggle with Stephanus fitll continued: Domitian fill kept him under, and at one time attempted to wrelt the dagger from his hand, at another to tear out his eyes with his fingers. But Parthenius, with his freedman, a gladiator, and two fubaltern officers, now coming in, ran all furioully upon the emperor, and difpatched him with many wounds. In the mean time, fome of the officers of the guard being alarmed, came to his affintance, but too late to fave him; however, they flew Steplanus on the fpot.

When it was publicly known that Domitian was flain, the joy of the fenate was fo great, that being affembled with the utmoft hafte, they began to load his
memory with every reproach. His flatues were commanded to be taken down; and a decree was made, that all his infcriptions fhould be erafed, his name fruck out of the regiters of fame, and his funeral omitted. The people, who now took little part in the affairs of government, looked on his death with indifference; the foldiers alone, whom he had loaded with favours, and enriched by largeffes, fincerely regretted their benefactor. The fenate, therefore, refolved to provide a fucceffor before the army could have an opportunity of taking the appointment upon themfelves: and Cocceius Nerva was clofen to the empire the very day on which the tyrant was nain.

Nerva was of an illuftrious family, as moft fay, by birth a Spaniard, and above 65 years old when he was called to the throne. He was, at that time, the moft remarkable man in Rome, for his virtues, moderation, and refpect to the laws; and he owed his exaltation to the blamelefs conduct of his former life. When the fenate went to pay him their fubmiffions, he received then with his accultomed humility; while Arius Antonius, his mof intimate friend, having ennbraced him with great familiarity, congratulated him on his acceffion to the empire : and indeed no emperor had ever flewn himfelf mote worthy of the throne than Nerva; his only fault beine that he was too indulgent, and often made a prey by his infidious courtiers.

However, an excefs of indulgence ard humanity were faults that Rome could eafily pardon, after the cruelties of fuch an emperor as Domitian. Being long accutomed to tyranny, they regarded Nerva's gentle reign with rapture, and even gave his imbecility the name of benevolence. Upon coming to the throne, he folemnly fiwore that ne fenator of Rone fhould be put to death by his command, duriug his reign, though they gave ever fo juft a caufe. He conferred great favours, and beftowed large gifts, upon his particular friends. His liberality was fo extentive, that, upon his firt promotion to the enppire, he was confrained to fell his gold and filver plate, with his other rich moveables, to enable him to continue his liberalities. He releafed the cities of the cmpire from many fevere inpolitions, which had been laid upon them by Vefpalian; took off a rigorous tribute, which had been laid upon carriages; and reflored thofe to their property who bad been unjultly difpoffeffed by Domitian.

During his fhort reign he made feveral good laws. He particularly prohibited the caftration of male children; which lad been likewife condemned by his predeceffor, but not wholly removed. He put all thofe flaces to death who had, during the lant reign, informed againf their mafters. He permitted no flatues to be erected to honour him, and converted into money fuch of Donitian's as lazd been fpared by the feuste. He fold many rich robes, and much of the fplendid furniture of the palace, and retrenched feveral unseafonable expences at court. At the fame time, he had fo little regard for money, that when Herodes Atticus, one of his fubjects, had found a large treafure, and wrote to the emperor how to difpofe of it, he received for anfwer, that he might ufe it; but the finder flill informing the emperor that it was a fortune too large for a private perfon, Nerva, admiring lis honefty, wrote him word, that then he might atufe it.
A life of fuch generofity and mildnefs was not,
however, without its enemies. Calpurnius Crafins, Rume., with fome others, formed a dangerous confpiracy to deftroy him; but Nerva would ule no feverity: he retted fatisfied with banifhing thofe who were culpable, though the fenate were for inflicting more rigorous punifhments. But the moft dangerous infurrection againft his interefts was from the pratorian bands; who, headed by Cafparius Olianus, infifted upon revenging the late emperor's death, whofe memory was trill dear to them from his frequent liberalities. Nerva, whofe kindnefs to good men rendered him flill more obnoxious to the vicious, did all in his power to fop the progrefs of this infurrection; he prefented himfelf to the mutinous foldiers, and, opening his boform, defired them to Atrike there, rather than be guilty of fo much injuttice. The foldiers, however, paid no regard to his remonflrances; but, feizing upon Petronius and Parthenius, flew the fi in the mof ignominious manner. Not content with this, they even compelled the emperor to approve of their fedition, and to make a fpecch to the people, in whick he thanked the cohorts for their fidelity. So difagreeable a conftraint upon the emperor's inclinations was, in the end, attended with the molt happy effeits, as it caufed the adoption of 'Trajan to fucceed him in the 354 cmpire. Nerva perceived that in the prefent turbulent Adopts difpofition of the times, he ftood in need of an affifant his fuccers in the empire, who might fhare the fatigues of govern-for. ment, and contribute to keep the licentious in awe. For this purpofe, fetting afide all his own relations, he fixed upon Ulpius Trajan, an utter ftranger to his family, who was then governor in Upper Gerinany, to fucceed lim. Having put his deternination in exccution, and performed the accuftomed folemnities, he inftantly fent off ambafladors to Cologne, where Trajan then refided, intreating his affilance in punifhing thofe from whons he had received fuch an infult. The adoption of this adinirable nian, proved fo great a curb to the licentioufnefs of the fuldiery, that they continued in perfect obedience during the ref of this reign ; and Caliparius being fent to him, was, by his command, either banifhed or put to death.

The adopting 'I'rajan was the lat public act of ?eath os Nerva. In about three montlis after, having pat him- Nerva. fell in a violent paffion with one Regulus a lenator, he was feized with a fever, of which he thoatly atter died. after a fhort reign of one year four months and nine days. He was the firlt foreign emperor who rcigaed in Rome, and juttly reputed a priuce of great generofity and moderation. He is alfo celebrated for his widdun, though with lefs reafon, the greateft inflance he gave of it, disring lis reign, being in the choice of his incceffor. 336
Trajan's family was originally from Italy, but he him- Great quafelf was born in seville in Spain. He very early ac- lities of companied his father, who was a general of the Ro. Frajan mans, in his cxpeditions along the Euphrate's and the Rhine; and while yet very young, acquired a confiderable reputation for military accompliflments. He enured his body to fatrgue ; he made long marches on foot ; and laboured to acçuire all that Rill in war which was neceflary for a commander. When he wa; made general of the army in Lower Germane, which was one of the moft confiderable employments in the empire, it made no alteration in lis namners or way of living; and the conmander was feen noway differing from the private tribune, except in his fuperior wifdon and vir-

\section*{R O M \\ \(R \quad \mathrm{O} \quad \mathrm{M}\)} nied with all the advantages of perfon. His body was majeftic and vigorous ; he was at that middle time of hife which is happily tempered with the warmth of youth and the ceution of age, being 42 years old. To thefe qualities were alded, a modety that feemed peculiar to binifelf alone; fo that nankind found a pleafure in praifing thofe accomplifhments of which the poffefor feemed no way confcions. Upon the whole, Trajan is diftinguilked as the greateft and the beft emperor of Rome. Others might have equalled him in war, and fome might have been his rivals in clemency and goodnefs; but he feems the only prince who united thefe talents in the greaief pe:fection, and who appears equally to engage our admiration and our regard. Upon being informed of the death of Nerva, he prepared to return to Rome, whither he was invited by the united intreatics of the flate. He therefore began his march with a difcipline that was for a long time unknown in the armies of the empire. The countries through which he palfed were neither ravaged nor taxed, and the entered the city, not in a triumphant manner, though the had deferved it often, but on foot, attended by the civil officers of the Itate, and followed by his foldiers, who marched filently forward with modefty and refpect. It would te tedious and unneceffary to enter into a detail of this grood monarch's labours for the flate. Hisapplication to buffuefs, his moderation to his enemies, his modelly in exalcation, his liberality to the deferving, and hisfrugality in his own expences; thefe have all been the fubject of panerysic among his contemporaies, and they continue to be the admiration of potlerity. Upongiving the prefect of the pretorian band the fword, according to cuftom, he made ufe of this remarkable exprefion, " Take this fword, and ufe it, if I have merit, for me; if otherwife, againft me." After which he added, That he who gave laws was the firt who was bound to obferve them. His failings were his love of women, which, howcver, never hurried him beyond the hounds of decency; and his immoderate paffion for war, to which he had been bred up from his childhood. The firt war he was engaged in after his coming to the throne was with the Dacians, who, during the reign of Domitian, had committed numberlefs ravages upon the provinces of the empire. He therefore raifed a powerful army, and with great expedition marched into thofe tarbarous countries, where he was vigoroully oppofed by Decebalus, the Dacian king, who for a long time withitood his boldeft efforts; but was at laft entirely reduced, and his kingdom made a Roman province, See Dacsa. At his return to Rome, he entered the city in triumph; and the rejoicings for his victories lafted for the fpace of 120 days.

Having thus given peace and profperity to the empire, Trajan continued his reign, loved, tronoured, and almoft adored, by his fubjects. He adorned the city with public buildings; he freed it from fuch men as lived by their vices; he entertained perfons of merit with the utmoft familiarity; and fo little feared his enemies, that he could fcarcely be induced to fuppofe
look upon the Chriftians with a fufpicious eye. The extreme veneration which he profefled for the religion of the empire, fet him feduloufly to oppofe every innovation, and the progrefs of Chrittianity feemed to alarm him. A law had for fome time before been paffed, in which all Heterix, or focieties diffenting from the eftablifhed religion, were confidered as illegal, being reputed nurferies of impofture and fedition. Under the fanction of this law, the Chriftians were perfecuted in all parts of the empire. Great numbers of them were put to death, as well by popular tumults as by edicts and judicial proceedings. However, the perfecution ceafed after fome time; for the emperor having advice from Pliny, the pro-conful in Bithynia, of the innocence and limplicity of the Chriftians, and of their inoffenlive and moral way of living, be fufpended their punifhments. But a total Itop was put to them upon Tiberianus the governor of Paleftine's fending him word, That he was wearied out with executing the laws againft the Galileans, who crouded to execution in fuch multitudes, that he was at a lofs how to proceed. Upon this information, the emperor gave orders, that the Chriltians fhould not be fought after; but if any offered themfelves, that they fhould fuffer. In this manner the rage of perfecution ceafed, and the emperor found leifure to turn the force of his arms againtt the Armenians and Parthians, who now began to throw off all fubmiffion to Rome.

While he was employed in thefe wars, there was a infurree 35 dreadful infurrection of the Jews in all parts of the em-tion of \(t\) pire. This wretched people, ftill infatuated, and ever Jews. expecting fome fignal deliverer, took the advantage of Trajan's abfence in the eaft to maffacre all the Greeks and Romans whom they got into their power, without reluctance or mercy. This rebellion firt began in \(\mathrm{Cy}-\) rene, a Roman province in Africa; from thence the flame extended to Egypt, and next to the inand of Cyprus. Thefe places they in a manner difpeopled with ungovernable fury. Their barbarities were fuch, that they eat the flefh of their enemies, wore their kin , fawed them afunder, calt them to wild beafts, made them kill each other, and ftndied new torments by which to deftroy them. However, thefe crnelties were of an long duration: the governors of the refpective provinces making head againdt their tumultuous fury, foon treated them with a retaliation of cruelty, and put them to death, not as human beings, but as outrageous perts to fuciety. As the Jews had practifed their cruetties. in Cyprus particularly, a law was publicly enaeted, by which it was made capital for any Jew to fet foot on the ifland.
During thefe bloody tranfactions, Trajan was pro-succêtes 359 fecuting his fuccefles in the ealt. His firt march was Diajan it into Armenia, the king of which country had difchamed the eaft. all alliance with Rome; and received the enfigns of royalty and dominion from the monarch of Parthia. However, upon the news of 'Trajan's expedition, his fears were fo great, that he abandoned bis country to the invaders; while the greateft part of his governors and mobility came fubmiflively to the emperor, acknowledging themfelves his fubjects, and making bim the molt cofly prefents. Having in this manner taken poffeflion of the whote country, and gotten the king into his power, he marched into the dominions of the

\section*{R O M}
king of Purchia. There entering the opulent kingdom of Mefopotamia, he reduced it into the form of a Roman province. From thence he went againft the Parthians, marchinr on foot at the head of his army; in this manner crolfing the rivers, and conforming to all the feverities of difcipline which were impofed on the meaneft foldier. His fuceeffes againft the Parthians were great and numerous. He conquered Syria ind Cbaldea, and trok the famous city of Babylon. Here, attempting to erofs the Euphrates, he was oppofed by the enemy, who were refolved to Itop his pafage: but he fecretly caufel boats to be made upon the adjoining mountains; and bringing them to the water fide, paffed his army with great expedition, not, however, without great flaughter on both fides. From thence he trayerfed trafts of country which had never before been invaded by a Ruman army, and feemed to take a pleafure in purfuing the fame march which Alexander the Great had formerly marked out for him. Having paffed the rapid freams of the Tigris, he advanced to the city Cteliphon, which he took, and opened himfelf a paflage into Perlia, where he made many conqueils, that were rather filendid than ferviceaole. After fubduing all the country bordering on the Tigris, he marched fouthward to the Perfian gulph, where he fubdued a monarch who poffeffed a confiderable inland made by the divided Areams of that river. Here, winier coming on, he was in danger of lofing the greatelk part of his army by the inclemency of the climate and the inundations of the river. He therefore with indefatigable pains fitted out a fleet, and failing down the Perfian gulph, entered the Indian ocean, conquering, oven to the Indies, and fubduing a part of them to the Roman empiec. He was prevented from purluing further conquetis in this ditant country, both by the revolt of many of the provinces he had already fubdued, and. by the farcity of provilions, which feemed to con:radid the reports of the fertility of the countries he was induced to invade. The inconveniences of increafing age alfo contributed to damp the ardour of this enterprife, which at one time he intended to purfue to the confines of the earth. Returning, therefore, along the Perfian gulph, and fending the fenate a particular aecount of all the nations he had conquered, the names of which alone compofed a long eatalogue, he prepared to punilh thofe countries which had revolted from him. He began by laying the fanous city of Edefla, in Mefopotainia, in aithes; and in a thort fpace of time, not only retook all thofe places which had before acknuwledged fubjection, but conquered many other provinces, to as to make himfelf matter of the molt fertile kingdoms of ali Afia. In this traia of fuecefles he featce meet with a repulfe, except before the city Atra, in the deferts of Arabia. Wlerefore judging that this was a froper time for bounding lis conquefts, he refolved to give a matter to the countries he had fubdued. With this refolution he repaired to the city Ctefiphon, in Perfia; and there, with great ceremony, crowned Parthamafpates king of Parthia, to the great joy of all his fubjects. He eftablifhed another king alfo over the kingdom of Albauia, near the Cafpian fea. Then placing governors and lieutenants in other provinees, be refolved to return to his eapital in a more magriticent manner than any of his predeceffurs had done before him. He accordingly left Adrian general of all
his forees ir the cart ; and continued his joumey towards Rome, where the mofl magnificent preparations were made for his arrival. However, he liad not gut farther than the province of Cilicia, when he found himfelf too weak to proceed in his ufial naanner. He thenefore caufed himfelf to be carried on fhip-board to the city of Seleuria, where he dicd of the apoplexy, havi:ig been attacked by that diforder once before. During the time of his indifpofition, his wife Plotina conflantly attended near him; and, knowing the emperor's difilike to Adrian, it is thought forged the will, by which he was adopted to fuccred.

Trajan died in the \(6_{3} d\) year of his age, after a reign 3 位ice of nineteen years fix month3 and fifteen days. How ind is fuchighly he was eiteemed by his fubjects appears by theirceeded hy: manner of bleffing his fueceffors, always wihhing them Adriano the fortune of Augultus, and the goodnefs of Trajan. His military virtues, however, upon which he chiefly valued himfelf, produced no real advantages to his country ; and all his conquelts difappeared when the power was withdrawn that enforced them.

Adrian was by defcent a Spaniard, and his anceftors were of the fame city where Trajan was born. He was nephew to Trajan, and married to Sabina his grand-niece. When Trajan was adopted to the empire, Adrian was a tribune of the army in Mrefia, and was fent hy the troons to congratulate the emperor on his advancement. However, his brother-in-law, who defired to have an opportunity of congratulating Trajan himfelf, fupplied Adrian with a earriage that broke down on the way. But Adrian was refolved to lofe no time, and performed the reft of the journey on foot. This affiduity was very plealing to the emperor ; but he difiked Adrian from feverai more prevailing motives. His kinfman was expenfive, and involved in debt. He was, befides, inconftant, capricious, and apt to envy another's reputation. Thele were fault, that, in Trajan's opinion, could not be compenfated cither by his learning or his talents. His great fill in the Greek and Latin languages, his intimate acquaintance with the laws of his country and the philofophy of the times, were no inducement to Trajan, who, being bred himfelf a foldier, defired to lave a military man to fuceeed him. For this reafon it was that the dying emperor would by no means appoint a fucceffor; fearful, perhaps, of injuring his great reputation, by adopting a perfon that was unworthy. His death, therefore, was concealed for forme time by Plotina his wife, till Adrian had founded the inclinations of the arny, and found them firm in his interelts. They thea produced a forged inAtrument, importing that Adrian was adopted to fuceeed in the empire. By this artifice he was elected by all orders of the flate, though then abfent from Rome, being left at Autioch as general of the furces in the ealt.

Upon Adrian's elect:on, his firft care was to write the fenate, exculfig himfelf for aluming the empire without their previous approbation; imputing it to the halty zeal of the army, who rimbtly judeed that the fenate ought not lons to remain without a head. He then began to purfue a courfe quite oppofite to that of his predeeffor, taking every method of deelining-war, and promuting the arts of peace. He was quite fati fied with prefervins the ancient limits of the enpire, and feemed no way ambitiots of extenfive conquert.

\section*{R O M}
 fons of the enemy.

Having thus fettled the affairs of the eaft, and leaving Severus governor of Syria, he took his journey by land to Rume, fending the athes of Trajan thither by fea. Upon his approach to the eity, he was informed of a masnificent triumph that was preparing for him; but this he modeftly deelined, defiring that thofe honours might be paid to Trajan's memory which they had defigued for him. In confequence of this command, a moft fuperb triumplh was deereed, in which Trajan's Itatue was earried as a principal figure in the proceffion, it being remarked that he was the only man that ever triumphed after he was dead. Not content with paying limm thefe extraordinary honours, his afhes were placed in a golden urn, upon the top of a culumn 140 feet high. On this were engraven the particulars of all his exploits in baffo relievo; a work of great labour, and which is ftill remaining. Thele teflimonies of refpect to the memory of his predeceffor did great honour to the heart of Adrian. His virtues, however, were contrafted by a frange mixture of vices; or to fay the truth, he wanted Atrength of mind to preferve his general rectitude of character without deviation. As an emperor, however, his conduct was moft admirable, as all his public tranfactions anpear dictated by the foundeft policy and the moll diinterelled widdom. Lut thefe being already enumerased under the article ADRIAN, it would be fuperfluous to repeat them in this place. He was fucceeded by

Marcus Antoninus, afterwards furnamed the Pious, whom he had adopted fome tine before his death. See Antoninus Pius.

From the beginning of the reign of Antoninus Pius, we may date the decline of the Roman enipire. From the time of Cæfar to that of Trajan, fearce any of the emperors had either abilities or inclination to extend

\section*{430 ] \(\quad \mathrm{N} \mathrm{O} \mathrm{M}^{\prime}\)}
the limits of the empire, or even to defend it againt the barbarous nations whe furrounded it. During all this fpace, only fome inconfiderable provinces to the northward of Italy, and part of the illand of Britain, had been fubjugated. However, as yet, nothing wat loft ; but the degeneracy and corruption of the people had fown thofe feeds of diffolution which the empire quickly began to feel. The diforders were grown to fuch an height, that even 'Trajan himlelf could not cure them. Indeed his eaftern conquets could fearee bave. been preferved though the republic had been exifting in all its glory; and therefore they were quietly refigned by his fueceffor Adrian, as too diftant, difaffec. ted, and ready to be over-run by the barbarous nations. The province of Dacia, being nearer to the centre of government, was more cafily preferved; and of confequence remained for a long time fubject to Rome. During the 23 years of the reiun of Antoninus, few remarkable events happened. The hiltorians of thole times are exceflive in their praifes of his juftice, generofity, and other virtues, both public and private. He put a ltop to the perfecution of the Chrittians, which raged in the time of Trajan and Adrian, and \({ }^{3}\) reduced the Brigantes, a tribe of Britons, who had re-. volted. However, during his reign, feveral calamities betel the empire. The Tiber, overflowing its banks, laid the lower part of Rome under water. The inundation was followed by a fire, and this by a famine, which fwept off great numbers, though the emperor took the utmoll care to fupply the city from the mof ' diftant provinces. At the fame time the cities of Narbonne in Gaul, and Antioch in Syria, together with the great fquare in Carthage, were deftroyed by fire; however, the emperor foon reftored them to their former condition. He died in the year 163 , univerfally lamented by his fubjects, and was fueceeded by Mareus Aurelius, furnamed the Pbilofopher, whom he had adopted towards the latter end of his reign.

The tranfactions of this emperor the reader will find related under the article Antovinus Philofophus (A).

After

\footnotetext{
( A ) As, after the death of Marcus Aurelius, the Roman empire declined very faft, it inay not he amifs here to give fome account of the military and other eftablifhments of the Roman emperors. Mr Gibbon obferves, that, in the tincs of the commonwealth, the ufe of arms was confined to thofe who had fome property to defend, and an interell in maintaining the laws which were propofed to be enacted. Lut, as the public freedum declined, and war became degraded into a trade, thofe who had the property of the country chofe rather to hire others than to expofe their own perfuns, as is the cafe with our modern armies. Yet, even after all conlideration of property had been laid afide among the coumon foldiers, the officers continued to be chofen from amang thufe who had a liberal education, togerher with a good hare of property. Huwever, as the common foldiers, in which the thength of an army confifts, had now no more of that virtue called patriotigm, the legions which were formerly almoft invincible, no longer fought with the fane ardour as before. In former times, the profoffon of a foldier was more honourable than any other; but, when the foldiers came to be looked upon as hirelings, the honour of the profeffion funk of courfe, and, by this means, one of the ftrongeft mutives which the folders had to fubmit to their fevere difcipline, and exert themfelves againtt their enemies, was removed. On the very fift entrance of a foldier into the Roman fervice, a folemn oath was adminiftered to him, by which he engared never to defert his ftandard; to fubmit his own will to that of his leaders, and to factinee his life for the fafety of the emperor and the empire. The attachment which the Romans had to their ltandards was indeed aftonithing. The golden eayle, which appeared in the front of the legion, was almolt an ubject of adoration with them; and it was efteemed inpious, as well as ignominions, to abandon that facred enfign in the time of danger. The centurions had a right to punifh with blows, the generals with death; and it was an inflexible masim of the Roman difcipline, that a good foldier fhould dread his officers much more than the enemy.

Notwith\{anding all ilhis, fo fenfible were the Romans of the infuffeiency of mere valour without Rkill, that
}
me. After the death of Marcus Aurchus, his fon Commodus fucceeded to the imperial throne without oppofition. He was in every refpect unworthy of his fa-
ther; and fo prone to vice, that he was generally believed to have been the Son, not of Marcus Aurelius, but of a celebrated gladiator, with whom the empreís

Fautina
military exercifes were the unremitted ohject of their difcipline. The recruits and young foldiers weere conflactly trained both in the mornias and evening; and even the veterans were not excufed from the daily repetition of their exercift. Large fheds were erected in the winter-quatters of the troops, that thefe uffull lebours might not be interrupted by tempeftuous weather, and the weapens ufed in thefe imitations of war were always twice as heavy a, thofe made wfe of in real action. The foldiers were diligently infructed to march, to run, leap, , fwim, carry heavy burders, and handie every feceies of weapon either for offence or defence: to form a variety of colutionj; ead to move to the found of futes in the prryhic or martial dance. It was the policy of the ablef generals, and even of the emperois themfelves, to encourage thefe military ftudies by their prefence and example; and we are informed that Adrian, as well as Trajan, frequently condefeended to inftruct the unexperienced foldiers. to reward the diligent, and fometimes to difpute with them the prize of fuperior Itrength and dexterity. Under the reigns of thofe princes, the ficience of tactics was cultivated with duccefs; and, as long as the empire retained any vigour, their military inftructions were refpected as the molt perfect model of Roman difcipline.

From the foundation of the city, as the Romans had in a manner been continually engaged in war, many alterations had taken place in the conititution of the legions. In the time of the emperors, the heary-armed infantry, which compofed its principal frength, was divided into 10 cohorts and 55 companies, under the orders of a correfpondent number of tribunes and centurions. The firlt cohort, which always clained the pont of honou: and the cultody of the eagle, was formed of 1105 foldiers, the moft approved for valour and fidelity. The remaining nine cohorts confited each of 555 ; and the whole body of legionary infantry confifted of 6100 men. Their arms were uniform, and exceliently adapted to the nature of their fervice; an open helmet with a lofty creft; a brcalt-plate or coat of mail ; greaves on their legs, and a large buckler on their left arm. Their buckler was of an oblong and concave figure, four fcet in length, and two and an half in breadth; framed of a lizht wood, covered with a bull's hide, and ftrongly guarded with brafs plates. Befides a lighter fpear, the legionary carried the pilum, a ponderous javelin about fix feet long, and terminated by a mafly triangular point of iteel is inches in length. This weapon could do execution at the diftance of 10 or 12 paces; but its froke was fo powerful, that no cavalry durft venture within its reach, and fcarce any armour could be formed proof againft it. As foon as the Roman had darted his pilum, he drew his fword, and rufhed forward to clofe with the enemy. It was a fhort wrll-tempered Spanifh blade with a double edge, and equally calculated for the purpofes of pufhing and ftriking; but the foldier was always inftructed to prefer the former ufe of his own weapon, as his body remained thereby the lefs expofed, while at the fame time he inflifted a more dangerous wound on his adverfar:The legion was ufually drawn up eight deep; and the regular diftance of three feet was left between the files and ranks. Thus the foldicr poffefied a free fpace for his arms and motions; and fufficient intervals were allowed, through which feafonable reinforcements might be introduced to the relief of the combatants. The cavalry, without which the force of the legion remained imperfect, was divided into ten troops or fquadrons: the birit, as the companion of the firtt cohort, confifted of 132 men ; whilt each of the other nine amounted only to 66 . The entise eftablifhment formed a body of 726 horfe, naturally connected with its refpective legior ; but oceafionaliy aeting in the line, and compoling a part of the wings of the anny. The caralry of the ancient repuhlic was compofed of the nobleft youths of Rome and Italy, who, by performing their ninitary fervice on horfeback, prepared themfelves for the offices of fenator and conful ; but after the alieration of manners and government which took place at the end of the commonwealth, the moft wealthy of che equeftrian order. were engaged in the adminifration of juftice and of the revenue; and, whenever they embraced the profefion of arns, they were immediately entruited with a troop of horfe or a cohort of foot, and the cavalry, as well as the infantry, were recruited from the provinces. The horfes were bred for the molt part in Spain, or in Cappadocia. The Roman troopers deipiled the complete armour which encumbered the cavalry of the eaft. Inftead of this, tneir arms confilted only of an helmet, an oblong fhield, light boots, and a coat of mail. A javelin and a long broad fword were their principal offenfive weapons. They feem to have borrowed the ufe of lances and iron maces from the barbarians.

Befides the legionaries, the Romans, efpecially in the times of the emperors, began to take auxiliaries into their pay. Confiderable levies were regularly made among thofe provincials who had not yet attaincd to the :ankof Roman citizens. Many dependent princes and communities, dilperfed round the frontiers, were permitted, for a while, to hold their freecom and fecurity by the tenure of military fervice. Even felect troops of barbarians were compelled to enter into the fervice; which was afterwards found to be a moft detructive expedient, not only as it carried the Roman military fill among barbarians who were othervife unacquainted with it, but it gave thefe auxiliaries them.felves frequent opportunities of revolting, and at latt of dethroning the emperors at pleafure, and even of overturning the empire itfelf. The number of auxiliaries was feldom inferior to that of the legionaries themfelves. The braveft and moft faithful bands annong them were placed under the command of prefeets and centurions, and feverely trained in the arts of Roman difcipline; but the far greater part retained thofe arms which they had ufed in their native country. By this iuftitution, each legion, to whom a certain number of auxiliaries was allotted, contained withia itelf every fpecies of ligheer troops, and of miffile weapons:

Ratae. Faulliaa was fuppofed to be intimate. According to man blood, and capable from his infancy of the molt Mr Gibbon, Lowevcr, Commodus was not, as has been reprefented, a tiger born with an infatiate thirft of huinhuman actions. Nature had formed him of a weak, rather than a wicked difpofition. His fimplicity and timidity
and was capable of encountcring every nation with the advantages of its refpective arms and difcipline. Nor was the legion deftitute of what, in modern language, would be flyled a train of artillery. This confitted of 10 rnilitary engines of the largelf fize, and 56 fmaller ones; but all of them, either in an oblique or horizontal manner, difcharged flones and darts with irrefittible violence.
The camp of a Roman legion prefented the appearance of a fortified city. As foon as the fpace was marked out, the pioneers carcfully levelled the ground, and removed every impediment that might interrupt its perfect regularity. Its form was an exact quadrangle ; and it may be computed that a fquare of 700 yards was fufficient for the encampinent of 20,000 Romars, though a finilar number of modern troops would expofe to the eneniy a front of more than treble that extent. In the midit of the camp, the pratorium, or general's tent, arofe above the others; and the cavalry, infantry, and auxiliaries, had each their refpective ltations appointed them. The ftreets were broad, and perfectly fraight; and a vacant fpace of 200 feet was left ori all fides between the tents and rampart. The rampart itfelf was i2 feet higb, armid with a line of frong and intricate paiifades, and defended by a ditch 12 feet deep and as much broad. This labour was performed by the legions themfelves, to whom the ufe of the fpade and the pick-ax was no lefs familiar than that of the fword or pilum. Whenever the trumpet gave the fignal of departure, the camp was almoll infantly broke up, and the trowps fell into their ranks without delay or confufion. Befides their arms, which the foldiers fearcely conlidered as an incumbrance, they werc laden with their kitchen-furniture, the inltruments ol fortification, and provifions for many days. Under this weight, which would opprefs a modern foldier, they were taught to advance by a regular ftep, near 20 miles in fix hours. On the appearance of an enemy, they threw afide their baggage, and, by eafy and rapid evolutions, converted the column of march into an order of battle. The fiingers and archers flirmiifted in the front ; the auxiliaries formed the firt line, and were feconded or fuftained by the legions. The cavalry covered the flanks, and the military engines were placed in the rear.

The numbers of the Roman armies are not eafily calculated with any tolerable accuracy. We may compute, however, that the legion, which confifted of 6831 Romans, might, with its attendant auxiliaries, amount to 12,500 men. The peace eftablifthment of Adrian and his fucceffors was compofed of no fewcr than 30 of thefe formidable brigades; and molt probably formed an army of 370,000 men. Intead of being confined within the walls of fortified cities, which the Romars confidered as the refuge of weaknefs or pufiliarimity, the legions were encamped on the banks of the great rivers, and along the frontiers of the barbariaris. Three leglons were fufficient for Britain. The principal ftrength lay upon the Rhine and Danube, and confifted of 16 legions, difpofed in the following proportions a two in the Lower, and three in the Upper Gemnany ; one in Rhétia; one in Noricum ; four in Pannonia; three in Mafia; and two in Dacia. The defence of the Euphrates was intrufted to eight legions, fix of whom were placed in Syria, and the other two in Cappadocia. With regard to Egypt, Africa, and Spain, as they were far removed from any important feene of war, a fingle legion maintained the domeftic tranquility of each of thofe great provinces. Italy was defended by the city cohorts and praturian guards formerly mentioned. Thefe differed nothing from the legions in their arms and inftitutions, except in a more fplendid appearance, and a lefs rigid difcipline.

The Roman navy, though fufficient for every ufeful purpofe of government, never feemed adequate to the greatnefs of the empire. The policy of the emperors was directed only to preferve the peaceful dominion of the Mediterranean fea, which was included within their dominions, and to protect the commerce of their fubjects. Two permanent fleets were flationed by Auguftus, one at Ravenna on the Adriatic, and the other at Mifenum in the bay of Naples. A very confiderable force was alfo flationed at Frcjus in Provence ; and the Euxine was guarded by 40 thips and 3000 foldiers. To all thefe we may add the fleet which preferved the communication between Ganl and Britain, and a great number of veffels contantly maintained on the Rhine and Danube to hasafs the enemy, or iutercept the paffiage of the barbarians. The whole military eftablifment by fea and land amounted to about 450,000 men.

It was not, however, to this formidable power alone that the empire owed its greatnefs. The policy of the !aws contributed as much to its fupport as the mattial eftablifhment itfelf. According to Mr Gibbon, though the provinces might occafionally fuffer from the partial abufe of celegated authority, the general principle of government was wife, finuple, and beneficent. Among thefe beneficent principles he reckons that of univerfal toleration; but to this there were feveral exceptions: for the Britifh Druids were perfecuted and deftroyed by the Romans on account of their religion ; the Egyptians and Jews were fometimes perfecuted ; and the Chritians were frequently fo, and that even under the very beft emperors, Trajan and Marcus Aurelius. However, as a very general toleration of religious fentiments did take place under the heathen emperors of Rome, we null certainly look upon this as one of the caufes of the profperity of the empire.

Another thing which greatly contributed to the flrength and profperity of the empire, was the extending of the freedom of Rome to fo many people. "The narrow policy (fays Mr Gibbon) of preferving, without any foreign mixture, the pure blood of the ancient citizens, had checked the fortune and haftened the ruin of Athens and Sparta. During the moft flourifing era of the Athenian commonwealth, the number of citizens decreafed gradually from about 30,000 to 21,000 . If, on the contrary, we ftudy the growth of the Roman republic, we
may difcorer, that notwithfanding the inceffant demands of wars and colonies, the citizem, who, in the time of Servins Tuilins, amounted to no more than 83,000 , were multiplied, before the end of the fucial war, to the number of \(463,=00\) men able to bear arms in the fervice of their commry. When the allies of Rome claimed an equal fhare of bonours and privileges, the fenate prefersed the chance of war to a conceffion; however, at laft, all the Italian ftates, except the Samnites and Lucanians, weve admitted into the bolum of the republic, and foun contributed to the ruin of public freedom. When the popular afembles had been lappreffed by the adminitration of the emperors, the conquerors were ditinguithed fiom the vançinfed nations only as the irit and muit honourable order of fubjects; and their increnfe, however rapid, was no longer expofed to the fame dangers. Yet the princes who adopied the maxims of Alguitus, guarded with the Atrictut care the dignity of the Roman name, and diffufed the treedo:n of the city with a prudent it erality.
"lill the privileges of the Romans had been progreffively extended to all the innabitants of the empire, an important ditinetion was preferved between Italy aid the provinces. The etates of the Itaians were exempted from taxes, and thei: perfons from the a bitrary juridiction of governors. From the foot of the Alps to the extremity of Calabria, all the natives of Italy were born citizens of Rome. The provinces of the enpire were defitute of any public foree or contitutional treedom. The free ftates and cities, which aad embraced the caufe of Rome, were infenfibly funk into real fervitude. The public authority wis everywhere engroffed by the mirifers of the fenate ard of the emperors, and that authority was abfoluts. But the fane falutary maxims of go. vernment which had fecured the peace and obedience of Italy, were extended to the moft ditant conquets. A nation of Romans was gradually formed in the provinces, by the double expedient of introducing colonies, and of admitting the mof faithtul and deferving provincials to the freedom of Rume.
"So leafible were the Romans of the influence of language over national manners, that it was their moft ferious care to extend with the progrefs of thei arms, the ule or the Latin tongue. The eattern pioviaces, howerer, were lefs ducile in this refocet than the weftern unes; and this obvious difference made a dittination between the two portions of the empire, which became rery remarkable when it began to decline. Nor was the infaence of the Greek language and fentiments consned to the narruw limits of that once cel brated country: Their empire, by the progrels of colunies and conqueft, had been diffufed from the tdiatic to the Euphrates and Nile. A fia was covered with Greck cities, and the long reifn of the Macedonian kings had introduced a filent revilu. tion into Syria and Egypt. In cheir oompous cutetr, thoí princes uaited the elegance of Athens with the luxury of the eat ; and the example of the cuurt was imitated, at an humble dillance, oy the hisher ranks of their fubjects. Such was the general diviton of the Roman empire into the Latin and Greck languages; to which we may add a third difinction fur the body of the natives in Syria, and efpecidly in Egypt. The ufe of their ancient dialeets, by fecluding them from the commerce of mankind, checked the improvements of thele baroarians. The fothful effeminacy of the former expofed then to the coutempt, the fulen ferocioulncfs of the lacter excited the averion, of the Ronan conqueru:s. They leldon dufired or deferved the freedom of the city; and it is remarked, that more thac 230 yeari clapied after the ruin of the Proiemits, befori a native Egrptian wis admitred into the fenate of Rome.
"The number of fubjects who aci:nowi=dged the laws of Rome, of citizens, of provincials, and of flaves, cannot now be fixed with fuch accurty as the importance of the object would deferve. We are infurmed, that when the emperor Claudius exercifed the offce of cenfor, he took an ace sunt of \(6,9+5,20 ว\) Roman citizens; who, with the proportion of women a.d children, rull have amunated to abunt 20,002,20) of fouls. The maltitude of rubjects of an inferiur rank was uncertain and fuctuating : buc after weighing with attention every circumfance which could infuence the balance, it feems probable that theee exifed, in the ticie of Claudius, abont twice as many proviucials as the:e were Roman citizens, of either fex, and of cwery are; and that the naves were at lea@ equal in number to the free inhabitants of the Roman world. i'he total amount of ihis imperfeet calculation wunld rife to abont 120 millions of perfons ; a degree of population which polubbly excecds that of modern Europe, and forms the mult numerous lociety that his ever been united under the facze fytern of government.
"Domettic peace and unon were the naturad confequences of the modnate and comprthenfive pulicy embraced by the Romans. The vanquifed uations, blended iato one great people, relisned the hope, nay even the wifh, of reluming their independence, and fearcely conlidered their own exiftence as ditinct from the exiltences oi Rome. The eftablifhed authority of the emperurs pervaded, without an effort, the wide extent of their duminions, and was exercifed with the fame facility on the banks of the Thames, or of the Nile, as on thofe of the "liber. The lezions were dettined to ferre againt the puilic cnemy, and the cisil magitrate feldum recuired the aid of a military force.
"It was fearely puinble that the eyes of contemnoraries fhould difoover in the publie felicity the latent caufes of decay and corruption, This long pace, and the unitorm government of the Rumans, introduced a 1 b w and fecret puifors into the sit is of the empice. The minds of men were gradually reduesd to the fame level; the fire of genius was extin ruiked, and even the military fuirit evaporated. The nutives of Europe were brave a id robuf. Spain, Gaul, Eritan, and Illyricam, fupplicd the legions with cacellent foluiers, and coubtitused the

\section*{\(R \quad 0 \quad \mathrm{M} \quad\left[\begin{array}{lll}434\end{array}\right] \quad \mathrm{R} \quad \mathrm{O} \quad \mathrm{M}\)}

Rone. a paralled. Many vory ftrange inflances of his cruelty are related by the ancients. He is faid to have cut afunder a corpulent man whom he faw walking along the fleet ; partly, to try his own Itrength, in which he greatly excelled; and partly, as he himfelf owned, out of curiofity, to fee liis entrails drop out at once. He took pleafure in cutting off the fect, and putting out the cyes, of fuch as he met in his rambles throu, h the city; telling the former, after he had thus mained them, that now they belonged to the nation of Monnpoliii; and the latter, that they were now become Lufcinii, alluding to the word lufcus, "one-eyed." Some he murdered becaufe they were negligently dreffed; others, becaufe they feemed to be trimmed with too much nicety. He pretended to great akill in furgery, efpecially at letting blood: but fometimes, intead of eafing by that means thofe whom he vifited, or who were prevailed upon to recur to him, he cut off, by way of diverfion, their ears and nofes. His lewdnefs and debaucleries were equally remarkable, and equally infamous. However, he is faid to have been exccedingly well gkilld in archery, and to have performed incredible feats in that way. He excelled all men in frength ; and is faid to have run an elephant through with his fpear, and to have killed in the amphitheatre 100 lions, one after another, and each of them at one blow. Forgetful of his dignity, he entered the lifts with the common gladiators, and came off conqueror 735 times; whence he often fubfcribed himfelf in lis letters, the conqueror of 1000 ghadiators.

The public tranfactions of this reign were but very peace with few. Soon after his father's death, Commodus concluthe harła- ded a peace with the Marcommanni, Quadi, \&c. on rians.
the following conditions. 1. That they fhould not fettle within five miles of the Danube. 2. That they fhould deliver up their arms, and fupply the Romans with a certain number of troops when required. 3 . That they thould affemble but once a month, in one place only, and that in prefence of a Roman centurion. 4. That they flould not make war upon the Jazyges, Buri, or Vandals, without the confent of the people of Rome. On the other hand, Cummodus promifed to abandon, which accordingly he did, all the caltes and fortreffes held by the Romans in their country, excepting fuch as were within five miles of the Danube. With the other German nations, whom his father had almolt entirely reduced, he concluded a very d'Jhonourable peace; nay, of fome he purchafed it with. large fums of money.

Soon after the return of the emperor to Rome, his fifter Lucilla, perceiving that he was univer\{ally abhorred on account of his cruelty, formed a conlpiracy againft his life. Among the confpirators were many fenators of diftinction. It was agreed among them that they fhould fall upon the emperor while he was going to the amphitheatre through a narrow and dark palfage; and that Claudius Pompeianus, to whom Lucilla had betrothed her daughter, fhould give the firft blow. But he, inftead of ftriking at once, fhowed him the naked dagger, and cried out, "This prefent the fenate fends. you:" fo that the guards had time to refcue the emperor, and to feize the confpirators, who were foon after put to death. The emperor banifhed his fifter to the inand of Caprex, where he foon after caufed her to be privately murdered.

The favourite minifter of Commodus was one Pea. rennis ;
real ftrength of the monarchy. Their perfonal valour remained; but they no longer poffeffed that public courage which is nourifhed by the love of independence, the fenfe of national honour, the prefence of danger, and the habit of command. They received laws and governors from the will of their fovereign, and trutted for their defence to a mercenary army. The polterity of their boldeft leaders were contented with the rank of citizens and fubjects. The moft afpiring fpirits reforted to the court or ftandard of the emperors ; and the deferted provinces, deprived of political ftrength or union, infenfibly funk into the languid indifference of private lifc.
"The love of letters, almoft infeparable from peace and refinement, was fafhionable among the fubjects of Adrian and the Antonines; who were themfelves men of learning and curiofity. It was diffufed over the whole extent of their empire ; the moft northern tribes of Britons had acquired a tafte for rhetoric; Homer as well as Virgil were tranfcribed and fudied on the banks of the Rhine and Danube ; and the moft liberal rewards fought out the fainteft glimmenings of literary merit. The fciences of phyfic and altronomy were cultivated with fome degree of reputation; but, if we except Lucian, an age of indolence paffed away without producing a fingle writer of genius who deferved the attention of polterity. The authority of Plato, of A riftotle, of Zeno, and Epicurus, Atill reigned in the fchools; and their fyltems, tranfmitted with blind deference from one generation of difciples to another, precluded every generous attempt to correct the errors or enlarge the bounds of the human mind. The beauties of the poets and orators, inftead of kindling a fire like their own, produced only fervile imitations; or, if any ventured to deviate from thefe models, they deviated at the fame time from good fenfe and propriety. The provincials of Rome, trained by an uniform artificial education, were engaged in a very unequal competition with thofe buld ancients, who, by expreffing their genuine feelings in their native tongue, had already occupied every place of honour. The name of poet was almot forgotten; that of orator was ufurped by the fophifts. A cloud of critics, of compilers, of commentators, darkened the face of learning, and the decline of genius was foon followed by the corruption of tafte.
"Longinus obferves and laments the degeneracy of his contemporaries, which debafed their fentiments, enerva:ed their courage, and deprefled their talents; comparing them to pigmies, whofe ftature has been diminifhed by conftant preffure on their limbs. This diminutive ftature of mankind was conftansly finking below the old ftandard, and the Roman world was indeed peopled by a race of pigmies; when the fierce giants of the nortb broke in and mended the puny breed. They reftored a manly freedom; and, after the revolution of ten centuries, freecom became the happy parent of tafte and fcience."

\section*{R O M}

2onie.
rennis; who in oppreflion and cruelty feems to have been nothing inferior to thofe of the mof tyrannical emperors. During the firtt part of the reign of Commodus, lie ruled with an abfolute fway ; but at latt was torn in pieces by the enraged foldiery, whom he had offended by his too great feverity. He was fucceeded in his place by a freedman named Cleander; for the emperor himfelf was fo much taken up with his plea. fures, that he could not beftow even a moment on the affairs of fate. The new minitter abufed his power in a more flagrant manner than even his predeceffor had done. By him all things were openly fet to fale; offices, provinces, public revenues, juftice, and the lives of men both innocent and guilty. The minifter, who ruled the emperor without controul, infufed fuch terrors into his timorous mind, that he changed the captains of his guards almoft continually. One Niger enjoyed the dignity only fix hours; another only five days; and feveral others a fill fhorter fpace. Moft of thofe officers loit their lives along with their employments; being accufed of treafon by Cleander, who continually folicited, and at laft obtained, that important poft for himfelf.

In the year 187 happened a remarkable revolt. One Maternus, a common foldier, having fled from his colours, and being joined by many others guilty of the fame crime, grew in a fhort time fo powerful, the banditti flocking to him from all parts, that he over-ran and plundered great part of Gaul and Spain ; flormed the Atrongelt cities; and ftruck the emperor and people of Rome with fuch terror, that treops were raifed, and armies difpatchẹd againft him. Pefcennius Niger was fent to make head againft him in Gaul, where he became very intimate with Severus, who was then governor of Lyons, and who wrote a letter to the emperor, commending the prudent and gallant behaviour of Ni ger in purfuing the rebels. Maternus. finding himfelf reduced to great Atraits, divided his men into feveral fmall bands, and marched privately with them by different ways into Italy; having nothing lefs in view than to murder the emperor during the folemnity which was kept annually in honour of the mother of the gods, and on his death to feize upon the empire for himfelf. They all arrived at Rome undifcovered; and feveral of his men had already mixed themfelves with the emperor's guards, when others of his own party betrayed him. He was immediately feized and executed; and his death put an end to the difturbances which fome of his followers had begun to raife in other provinces. In the fame year broke out the mof dreadful plague, fays Dio Caffus, that had been known. It lafted two or three years; and raged with the greatef violence at Rome, where it frequently carried off 2000 perfons - -day. The following year a dreadful fire, which confumed a great part of the city, was kindled by lightning; and at the fame time the people were afflicted with a dreadful famine, occafioned, according to fome authors, by Cleander, who, having now in view nothing lefs than the fovereignty itfelf, bought up underhand all the corn, in order to raife the price of it, and gain the affections of the foldiery and people by diftributing it among them. Others tell us, howewer, that Papirius Dionyfius, whofe province it was to fupply the city with provifions, 'contributed towards the famine, in order to make the people rife againft Clean-
der. Be this as it will, the populace afcribed all kome. their calamities to this hated minitter; and one day, while the people were celebrating the Circaflian games, a troop of children, having at their head a young woman of an extraordinary ftature and fierce afpect, entering the circus, began to utter aloud many bitter in vectives and dreadful curfes againft Cleander; which being for fome time anfwered by the perple with other invectives and curfes, the whole mulritude rofe all of a fudden, and flew to the place where Cleander at that time refided with the emperor. There, renewing their invectives, they demanded the head of the minifter who had been the occafion of fo many calamities. Hereupon Cleander ordered the pretorian cavalry to charge the multitude; which they did accordingly, driving then with great faughter into the city. But the populace difclarging fhowers of fones, bricks, and tiles, from the tops of the houfes and from the windows, and the city-guards at the fame time taking part with the people, the pretorian horfe were foon obliged to fave themfelves by flight: nor was the @aughter ended till the emperor, apprifed of the tumult, caufed the head of Cleander to be fruck off and thown out to the ellraged populace. The emperor himfelf did not long fur-Commodus vive Cleander ; being cut of by a confiracy of Marcia nurdered. his favourite concubine, Lretus captain of the guards, and Eclectus his chamberlain.

No fooner was the death of Commodus known, than the fenate affembled, and declared him a public enemy, loading him with curfes, ordering his ftatues to be bro* ken to pieces, and his name to be rafed out of all public iufcriptions; and demanded his body, that it might be dragged though the ftreets, and thrown into the Tiber. But Helvius Pertinax, whom the confpirators mertimar had previnully defigned for the empire, and who had rifed toths already affumed it, prevented fuch an outrage, by let *mpire. ting the fenators know that Commodus was already buried. This extraordinary perfonage had paffed through many changes of fortune. He was eriginally the fon of an enfranchifed flave, called Fhius, who only gave him fo much learning as to qualify him for keeping a little fhop in the city. He then became a fchoolmafter, afterwards ftudied the law, and after that became a foldier; in which ftation his behaviour was fuch as caufed him to be foon made captain of a cohort againft the Parthians. Being thus introduced to armis he went through the ufual gradation of military preferment in Britain and Maffia, until he became the commander of a legion under Aurelius. In this flation he performed fuch excellent fervices againft the barbarians, that he was made conful, and fucceffively governor of Dacia, Syria, and Afia Minor. Ir the reign of Commodus he was banifhed; but foon after recalled, and fent into Britain to reform the abufes is the arny. In this eniployment his ufual extraordinary fortune attended him: he was oppofed by a fedition among the legions, and left for dead among many others that were flain. However, he got over this danger, feverely purithed the mutineers, and eftablifhed regularity and difcipline among the troops he was fent to command. From thence he was removed into Africa, where the fedition of the foldiers had like to have been as fatal to him as in his former government. Removing from Africa, and fatigued with an active life, be betook himfelf to retirement: but Commodus,

\section*{I \(0 \mathrm{MI} \quad[4.56]\) \(R \quad \mathrm{O} \quad \mathrm{M}\)}

Runie. willing to keep him fill in riew, made him prefect of the city; which employment he filled, when the confpirators fixed upon liin as the properel perfon to fuccied to the empire.

His being advanced by Commodus only ferved to increaf: his fears of falling as an nbject of his fuipicions; when therefure the confpirators repaired to his houfe by night, he corfidered their arrival as a command from the emperor for his death. Upen Lxtus entaing his apartment, P'ertinax, without any flow of fear, cried out, That for many days he had expeeted to end his life in that manner, wondering that the emperor had deferred it fo lons. However, he was not a litele furprifed when informed of the real caufe of their vifit; and being Ilrongly urged to acecpt of the empire, he at lalt complied with their offer.
ibeiag carried to the camp, Pertinax was prochamed emperor : foon after the citizens and funate confented; the joy for the election of a new fovereign heing fearee equal to that for the death of the former. The provinces quickly followed the example of Rome; fis that he began his reign with miverfal fatisfaction to the whole empire, in the 6Sth year of his age.

Nuthing could exceed the wifdom and juttice of this monarch's reign the thort time it continued. He punifhed all thofe who had ferved to corrupt the late emperor, and difpofed of his ill-got poffeftions to public ufes He attempted to reftrain the licentioufnefs of the pratorian bands, and put a top to the injuries and infolences they commaited againt the people. He fold inoft of the buffoons and jetters of Commudus as ीaves; particularly fuch as had whfene na:mes. He continually frequented the fenate as often as it fat, and never refufed an audience even to the meanelt of the people. His fuecefs in forcign affairs was equal to his internal policy. When the barbarous nations abroad had certain intelligence that he was emperor, they immediateiy laid down their arns, well knowing the oppofition they wert to expect from lo experienced a commander. His great error was avarice; and that, in fome meafure, ferved to haften his ruin.

The proturian foldicrs, whofe manners he had at:empted to reform, having been long corrupted by the indulgence and profution of their former monarchs, began to hate hinı for the parfimony and difcipline he had merohisced among them. They therefore refolved to dethone hins ; and for that purpofe declared Maternes, an ancient fenator, emperor, and endeavoured to carry him to the camp to proclaim him. Maternus, however, was too jutt to the merits of Pertinax, and too taithful a fubjte, to concur in their Seditious defigns; wherefore efcaping out of their hands, he fled, firlt to the emperor, and then out of the city. They then nominated one Faleo, another fenator; whom the fenate would have ordered for execution, had not Pertmax interpofed, who declared that during his reign no fenater hould fuffer death.
- lic pratorian foldiers then refolved unanimoufy not to \(u \kappa\) any fecret confpiracies, or private contrivances, but bodily to feize upon thee emperor and compire at once. They accordingly, in a tumultuous manner, marched through the flreets of Rome, and entered the palace without oppotition. Such was the terror at their appruach, that the greateft part of the emperor's attendants forfook him; while thofe who remained earnen-
ly intreated him to My to the body of the people, and intereft them in his deferce. However, he rejected their advice ; ceclaring, that it was unworthy his inperial dignity, and all his paft actions, to fave himfelf by light. Having thus refolved to facc the rebels, he had fome hopes that his prefence alone would terrify and confound them. But what conld his former vir* tutes, or the dignity of command, avall a a aintt a tumulthous rabble, nurfed up in vice, and minifers of former tyranny? One lhanfus, a fungrian, fruck him with his lance on the brealt, crying out, "The foldiers fend you this." Pertinax finding all was over, covered his head with his robe, and funk down, mangled with a multitude of wounds, which he received from various affafins. Eclectus, and fome more of his attendants, who attempted to defend him, were alfo flain: his fon and daughter only cfcaped, who happened to be lodged \(\omega:\) t of the palace. Thus, after a rejgrn of three months, l'ertinax fell a facri ce to the licentious fury of the pratoriar army. From the number of his adventures, he was called the ternis-bal! of Portune; and certainly no man cver experienced fuch a variety of fituations with fo blamelefs a character.

The foldiers having conmitted this outrage, retired The empire with great precipitation; and getting out of the city expmedecto to the rell of their companions, expeditioully fortified bumzhe by their camp, expecting to be attacked by the citizens. Didins JuTwo days laving palfed without any attempt of thislianus. kind, they became more infolent; and willing to make ufc of the power of which they found themfelves porfeffed, made proclamation, that they would fell the empire to whoever would purchafe it at the lighelt price. In corfequence of this proclamation, fo odious and unjuf, only two bidders were found; namely, Sulpicianus and Didius Julianus: The former, a confular perfon, prefect of the city, and fon-in-law to the late emperor Pertinax ; the latter, a confular perfon likewife, a great lawyer, and the wealthicit man in the cityHe was fitting with fome friends at dinner when the proclamation was publifhed; and being charmed with the profpeet of unbounded power, immeditat!y rofe from table and haftened to the camp. Sulpicianus was got there before him; but as he had rather promifes than treafure to beftow, the offers of Didius, who produced immenfe fums of ready money, prevailed. He was received into the camp by a ladder, and they inftantly fwore to obey him as emperor. Fren the camp he was attended by his new electors into the city; the whole body of his guards, which confifted of 10,000 men, ranged around bin in fuch order as if they had prepared for battle, and not for a peaceful ceremony. The citizens, hewever, refufed to confirns his election ; but rather curfed him as he paffed. Upon being conducted to the fenate-houfe, he addreffed the few fenators that were prefent in a very laconic fpeech: "Fathers, you want an emperor ; and I am the fisteft perion you can choofe." But even this, fhort as it feems, was unneceffary, fince the fenate had it not in their power to refufe their approbation. His fpeeclz being backed by the army, to whom he had given abunt a million of our money, fucceeded. The choice of the foldicrs was confirmed by the fenate, and Didius was acknowledged emperor, now in the \(57^{\text {th }}\) ycas of his age.
It fhould feem by this weak monarch's conduct when

\section*{R \(O\) M}
feated on the throne, that he thought the government of an empire rather a pleafure than a toil. Inflead of attenpting to gais the hearts of his fubjects, he gave himedelf up to eafe and inaativity, utterly recardleles of the duties of his fataion. He was mild and gentck i:deed; neither injuring any nor expecting to be injured. But that avarice, by which he became opulent, frill followed him in his exaltation ; fo that the very foldiers who elected him, froon begax to detet him for thofe qualities, fo very oppofite to a military character. The people alfo, againt whofe confent he was chofen, were no lefs jinimical. Whenever he iffued from his palace, they openly poured forth their imprecations againf him ; crying out, that he was'a thief, and had folen the empirc. Didius, howeece, in the true fpirit of a trader, patiently bure it all ; fometimes beckoving them with frniles to approach him, and tettifying his regard by every kind of fubmififion.
Whilc Didius was thus contemptuounfy treated at home, two valiant generals, in different parts of the empire, difclaimed his authonity, and boldly refolved to attempt the throne for themfdes. Thefe were, Pefcennius Niger, governor of Syria; and Septimics Severus, commander of the Gernian legions. Niger was beloved by the people for his clemencicy and valour; and the report of his propofing Pertinax for his model, and refolving to revenge his death, gained him univerfal citeem annong the people. Being thus apprifed of their inclinations, he eafily induced his arnyy in Syria to proclain binn emperor ; and his title was, fhortly after, acknowledged by all the kings and potentates in Afia, who fent their ambatadors to him as their hawful prince. The pleafure of being thus treated as a monarch, in fome meafure retarded his endeavours to fecure lis titile. Entirely fatisfied with the homage of thofe about him, he neglefed the opportunities of fuppreling his rivals; and gave himfelf up to luxury and feafting at Antiocl. The condut of Screrus, an African by birth, was very different. Being proclaimed by his arny, he hegan by promifurg to revenge the death of Pestinax, and took upon liim his name. He next fecured the fidelity of all the ftrong places in his province; aud then refolved, with the utmon! expedition, to march with his whole force direetly to Ronce:
In the mean time, Didius, who difregarded the attempts of Niger, was greatly alarmed at thofe of Severus. He firft, with many folicitations, procured the fenate ro proclaim him a traitor. He tlen applied himfeli to make the neeeflary provifions to oppore him, in which he found noihing but dilappointment. The cohorts that elceted him were enervated by vice and Juxary; the people detefted lis cault ; and the citices of tealy tad long been difufed to the arts of war. Some advfed hin to march forward, and neet Severus as lie was erefling the Alps: others were for fendiug the ge nerals upon that expedition. 'The unfortunate Didius, une qual to the tafk of empire, and quite conformuded with the multiplicity of counrces, could take no other refolution but that of awaiting his rival's coming at Rome. Accordngly, foon after being informed of his, approach, lie obtained the confent of the fenate to fond his amblafladors, offering to make him a partuer of the empire. Eut Severus rejucted this offer, conicious of his own flrength, and of the weaknefs of the propofer. The fenate foon appeared of the fanie Ientiments; and

437 ] R O NI
pereciving the timidity and weaknefs of their prefent mafter, Eegan to abandon him, alleging, that he who could noi defend :he empire was not worthy to govern it. Didius vainly endeavoured to reduce them to their duty, firlt by intreaties, and then by threats; but thefe only ferved to hatten his deftruction. The fenate being called together, as was formerly practifed in the times of the commonwealth by the confuls, they unani:nouly decreed, That Didius Thomid be deprived of the empire, atd that \(S\) :verus hould be proclaimed in his ftad. They then cormanded Didius to be nain; and fent meffengets for this purpole to the palace, where they lound him difarmed, and weeping among a few friends that ftill adhered to his intereft. Wheio the executioners began to prepare for their fatal errand, he expollulated with them; demanding what crime te had committed! He could not be perfuaded to thirk, that paying his money, and receiving an empire in exclange, deferved to fevere a punifmment. The executioners, however, were neither able nor willing :o erter into the merits of the caufe; they prefently led him into the fecret baths of the palace, and obliging him to fretch his neck forwards, after the manner of condenmed criminals, fruck off his head, and placed it up in thole counts where he had formerly yleaded with great fuccels.
'fhe fenate having thus difpatehed Didius, fent am- Severus debafladors to Severus, yielding him obedience, granting clared em. him the tefygns and the ufual titles of empire, and in-percr. forming lim of the deach of Didius. Sceerus, who was now about 47 years of age, received them with all proper refpeet ; and entertaining them honourably continued his march towards Ronse. As lee came nea:the city, his firll exertion of power was, to have all the protorian foldiers who had lately fold the empire come forth unarmed to meet him. There, thourh fenfible of their danger, had ro other relource left but compliance ; and accordingly cane forward with branches of laurel, as if to welcome his approach. Severus, how. ever, foon fhowed how little capable their prefent fubmiffion was to atone for their pat offences : after :braiding them, in a fhort fpeecl. with all their crimes, he commanded them to be intantly fripped of their military habits, deprived of the name and honour ot foldiers, and banifned \(1 x\) miles from Rome. He then entered the city in a military manner, took pfeffor of the palace, and promifed the fenate to conduet himfelf with elemency and juftice. Eiowever, though he united great vigour with the molt refned policy, yet his frican cunning was confidered as a particular defect in him. He is celebrated for his wit, learning. and prudence; but equally blamed for infidelity and cruclty. In mort, he feemed alike difpofed to the performance of the erreatef acts of virille and the mont bloody fescritics. He began his command, by feizing all the children of fuch as had errploymeuts or antho sity in the eaft, and cetained them as pled.res for their fathers loyal:y. He next fupplied the city with coin; and then with all poffible expedition marehed againft Niger, who was !till confidered and hunoured as emperor of the calt.
One of the chicf obflacles to his march was, the Niger deleaving behind him Clodius Albinus, commander of the cd and legions in liritain, whom he by all means withed to fe-klled. cure in his interefls. For this end, te endeavoured to

\section*{R O M \(\left[\begin{array}{lll}438 & ]\end{array} \mathrm{l} \quad \mathrm{O} \quad \mathrm{M}\right.\)}

Pante.
prevall upon him, by giving him hopes of fuccecting to the enppire ; jufinuating, that he himfelf was declining. and his children were as yet but infants. To deceive hina flill farther, he wrote in the fame flyle to the fenate, gave lim the title of Caflor, and ordered money to be coined with his image. Thefe artifices ferving to lull Albinus into falfe fecunty, Severus marched againft Niger with all his forces. After fome undecifive conflits, the lall great battle that was fought between thefe extraordinary men wals upon the plains of lffus, on the very fpot where Alexander had formerly conquered Darius. Beflides the two great armies drawn up on the plain, the neighbouring mountains were covered with infinite numbers of people, who were merely led by curiofity to become fpectators of an engage:nent that was to deternine the empire of the world. Severus was conqueror; and Niger's head being ftruck off by fome foldiers of the conquering arny, was infultingly carried through the camp on the point of a lance.

This victory fecured Severus in the poffefion of the throne. However, the Parthians, Perlians, and forne other neighbouring nations, took up arms, urder a pretence of vindicating Niger's caufe. The emperor marched againt them in perion, had many engagements with them, and obtained fuch fignal victories over them, as enlarged the empire, and eftablifhed peace in the eaft.

Niger being no more, Severus now turned his view's againt Albinus, whom he refolved by every means to deftroy. For this purpofe he fent affaffins into Britain, under a pretence of bringing him letters, but in reality to difpatch him. Albinus being apprifed of their defigns, prevented their attempt by reciurring to open force and proclaiming himfelf emperor. Nor was he without a powerful army to fupport his pretenfions; of which Severus being fenfible, bent his whole force to oppofe him. From the ealt he continued his courfe acrofs the fraits of Dyzantium, into the moft weftern parts of Eurupe, without internifion. Albinus being informed of his approach, went over to meet him with his forces into Gaul; fo that the campaign on both fides was carried on with great vigour. Fortune feemed for a while variable; but at laft a decifive engagement came on, which was one of the moft defperate recorded in the Roman hiftory. It lafted from morning till night, without any feeming advantage on either lide; at length the troops of Severus began to fly, and he himfelf happening to fall from his horfe, the army of Albinus cried out, Victory. But the engagement was foon renewed with vigour by Lxtus, one of Severus's commanders, who came up with a body of referve, defigning to deftroy both parties and make himfelf emperor. This attempt, though defigned againlt both, turned out entirely to the advantage of Severus. He therefore again charged with fuch fury and exaetnefs, that he foon plucked the victory from thofe who but a mort time before feemed conquerors; and purfuing them into the city of Lyons, took Albinus prifoner, and cut off his head; treating his dead body with infults that could only flow from a mean and revengeful iemper. All the fenators who were flain in battle he ordered to be quartered, and fuch as were taken alive wore inmcliately executed.

Having thus fecured himfelf in poffeffion of the empire, upon his return to Rome he loaded his foldiers with
rewards and honours; giving them fuch privileges as Arengthened his own power, while they deltroyed that of the Ilate. For the foldicrs, who had hitherto fhowed the ftrongef inclination to an abufe of power, were now nade arbiters of the fate of emperors; and we fhall henceforward behold them fetting them up, and dethroning them, at pleafure.

Being thus fecure of his army, he refolved to give way to his natural turn for conquelt, and to oppofe his arms againll the Parthians, who were then invading the frontiers of the empire. Having therefore previouly given the government of dumeflic policy to one Plantianus, a particular favourite of his, to whofe daughter he married his fon Caracalla, he ict out for the ealt, and profecuted the war with his ufual expedition and fuccefs. He furced lubriiffion from the king of Armenia, deltroyed feveral cities in Arabia Felix, landed on the Parthian coafts, took and plundered the famous city Ctefiphon, marched back tlirough Paleftine and Egypt, and at length returned to Rone in triumph.

During this interval, Plautianus, who was left to direct the affairs of Rome, began to think of afpiring to the empire himfelf. Upon the emperor's return, he employed a tribune of the pratorian cohorts, of which he was the commander, to affaffinate him, as likewife his fon Caracalla. The tribune feemed cheerfully to undertake this dangerous office; but inftead of going through with it, informed Severus of his favourite's treachery. He at firft received it as an improbable flory, and as the artifice of fome onle who envied his favourite's fortune. However, he was at laft perfuaded to permit the tribune to condnct Plautianus to the cmıperor's apartments. With this intent, the tribune went and amuled hinn with a pretended account of his killing the emperor and his fon, defiring him, if he thought it fit to fee them dead, to come with him to the palace. As Plautianus ardently defired their deaths, he readily gave credit to this relation; and following the tribune, he was conducted at midnight into the inmermult receffes of the palace. But what mult have been his difappointment, when, inflead of finding the emperor ly ing dead, as he cxpected, he helocld the room lighted up with torches, and Severus, furrounded by his friends, prepared in array to receive him. Being anked by the emperor, with a llern countenance, what had brought him there at that unfeafonable time? he was at frit utterly confounded ; wherefore, not knowing what excufe to make, he ingenuoufly confefled the whole, intreating forgivenefs for what he had intended. The einperor feemed in the begimning inclined to pardon; but Caracalla his fon, who from the earliett age flowed a difpofition to cruelty, fpurned him away in the midit of his fupplications, and with his fword ran him through the body.

Severus haviug efcaped this danger, fpent a confiderable time in rifiting fome cities in Italy, permitting none of his officers to fell places of trult or dignity, and dittributing jullice with the ftrictett impartiality. He took fuch an exact order in managing lis exchequer, that, notwithitanding his great expences, he left more money behind him than any of his predeceffors. His armies alfo wre kept upon the moft refpectable footing; fo that he feared no invafion. Being equally attentive to the prefersation of all parts of the empire, he refolved to make his lalt expedition into Britain,

\section*{R O M [.439] R O M}
where the Romans were in danger of being deArojed, or compelled to lly the province. Wherefore, after appointing his two fons Caracalla and Geta joint fuccer. fors in the empire, and taking.them with him, he land ed in Britain, to the great terror of fuch as had drawn down his refentment. Upon his progrefs into the country, he left his for Geta in the fouthern part of the province, which had contirued in obedience, and marched with his fon Caracalla againt the Caledonians. In this expedition, his army fuffered prodigious hardhips in purfuing the enemy; they were clliged to hew their way through intricate foretts, to drain extenfive marfhes, and form bridges over rapid rivers; fo that he lout 50,000 men by fatigue and ficknefs. However, he fupported all thefe inconveniences with the greatef bravery; and is faid to have profecuted his fucceffes with fuch vigour, that he compelled the enemy to fue for peace; which they cbtained, not without the furrender of a confiderable part of their country. We muft here obferve, however, that the licits and Caleconians are fo often confounded together by hiltorians, that many mitakes have thence arifen concerning the progrefs and conquents of the Romans in the north of Britait. But from the boundars formed by the famous wall of Severus (fee Skyerus's \(W^{\prime}\) all), we muft conlude, that no part of Calcdonia, properly fo called, had been either on this or any otber occalion ceded to him; and there is reafon to believe, that be rather received checks from the people of that territory, than was ever able to make any confiderable imprefion upon them. Be this, however, as it may, after baving made peace, and built his wall, he retired to York; where, partly through age and fatigue, and partly through grief at the irreclaimable life of Caracalla, he found himfelf daily declining, having already lof the ufe of his feet. To add to the diftrefs of his fituation, he was informed that the foldiers had revolted, and declared his fon emperor. In this exigence, be feemed once more to recal his natural vigour ; he got bimfelf immediately put into his litter, and commanded the new emperor, with the tribunes and centurions, to be brought before him. Though all were willing to coult the favour of the young emperor, fuch was the authority of Severus, that none dared to difobey. They appeared before him confounded and trembling, and implored pardon upon their knees. Upon which, putting his hand to his head, he cried out, "Know, that it is the head that governs, and not the feet." However, foon perceiving his diforder to increale, and knowing that he could not outtive it, he called for poifon; which being refufed him, he loaded his ftomach with food; which not being able to digeft, it foon brought him to his end, in the 56 th year of his age, after an active though cruel reign of about 18 years.
Caracalla and Geta being acknowledged as eniperors by the army, began to fhow a mutual batred to cach other even before their arrival at Rome. Their only agreement was, in refolving to deify Severus their father; but foon after, each fought to attach the fenate and army to his own particular interef. They were of very oppofite difpofitions: Caracalla was fierce and cruel to an extreme degree ; Geta was mild and merciful; fo that the city foon found the dangerons effcts of being governed by two priuces of equal power and contrary inclinations.

But this oppofition was of no long continuance; for Caracalla being refolved to govern alone, furiouny entered Geta's apartment, and, followed by ruffians, few 379 him in his mother's arms. Having committed this de-dered by teftable murder, he iffued with great hafte from the pa-Carac3l/a. lace, crying out, That lis brother would have flain him; and that he was obliged, in felf-defence, to retaliate the intended injury. He then took retuge among the pretorian cohosts, and in a pathetic tone legan to inplore their affifance, ftill making the fame excufe for his conduct. To this he added a much more prevailing argument, promifing to beftow upon them the largeftes ufually given upon the election of new emjerors, and diftributing among them almoft all the treafures which had been amafled by his father. By fuch perfualives the foldiers did not helitate to proclaine him fole emperor, and to thigmatize the memory of his brother Geta as a traitor and an enemy to the common. wealth. The fenators were foon after induced, either through favour or fear, to approve what had been done by the army : Caracalla wept for the death of his brother whom he had hain; and, to carry his hypo- Whopro crify to the utmolt extreme, ordered him to be adored smoft as a god

Being now emperor, he went on to mark his courfe with blood. Whatever was done by Domitian or Nero fell thort of this mentter's barbarities. Lxtus, who firft advifed him to murder his brother, was the firft who fell a facrifice to his jealoufy. His own wife Plau. tina followed. Papinian, the renowned civilian, was beheaded for refufing to write in vindication of bis cruel. ty; anfwering the emperor's requef, by obferving, That it was much eafier to commit a parricide than to defend it. He commanded all governors to be flain that his brother had appuinted; and deftroyed not lefs than 2000 perfons who had adhered to his party. Whole nights were fpent in the execution of his bloody decrees; and the dead bodies of people of all ranks were carried out of the city in carts, where they were burnt in heaps, without any of the ceremonies of a funeral. Upon a certain occafion, he ordered his foldiers to fet upon a crowded audience in the theatre, only for difcountenancing a charioteer whom be happened to favour. Perceiving himfelf hated by the pcople, he publicly faid, that he could infure his own fafety though not their love; fo that he neither valued their reproaches nor feared their hatred.
This fafety which he fo much built upon was placed \({ }^{38}\) : in the protection of his foldiers. He had exhautled His extrathe treafury, drained the provinces, and committed a vagant fols thoufand acts of rapacity, merely to keep them fledfant nnd trea. cruct in his interefts; and being difpofed to truft himfelf chery. with them particularly, he refolved to lead them upon a vifit through all the provinces of the empire. He tirlt went into Germany ; where, to oblige the natives, he dreffed himfelf in the habit of their country. From thence he travelled into Macedonia, where he pretended to be a great admirer of Alexander the Great ; and among other extravagancies cauled a ftatue of that monarch to be made with two faces; one of which refembled Alexander and the other himfelf. He was fo corrupted by flattery, that he called himfelf Alexander; walked as he was told that monarch bad walked; and, like him, bent his head to one fhoulder. Shortly after, arriving at Leffer Afia and the suins of Troy, as be

\section*{\(\mathrm{R} O \mathrm{M}\)}

Enome.
hening the to‥b of Achifics, he took it into his hapmerin. to die at that tine he nfed the fame cere monies that were porformed a* the tomb, of Patroclus. Paffing thence into Egypt, he mafacred in the mo!t terrible manner the inhabitants of Alexandria, on accourt of the fatires they compoled on him, as is related under the article Alrasispria.

Going from thence into Syria, he invied Artibanus king of Parthia to a conferance; detring his dauglaer ir marriage, and promiling him the mota honourable protection. In confequence of this, that king sntt him on a \{pacious plain, unarmed, and un!- atteaded with a valt concouife of his nobles. This was what Caracalla defired. Regaidlefs of his prozife. or the law of nations, he inflantly furrounded him with armed erocps, let in wild beafts among his attendants, and made a moft terrible naughter among them ; Artabanus himfelf ceraping with the cunof dificulty. For this vile treachery he utained from the lenate the fur38: name of P, olbius.

Upon his return towards Rome, it nould feent as if his vices were incxhaultible; for laving been guilt, of
parricide, he now refolved to marry the mother of Geta whom he lad tlain. It happened that one day feeing her chrop her weil, which difeled her raked hofom, which was extemely beautitul, lee told her, that he would po!fels thofe ctums he beheld, if it were lawful. To this unnatural requeft fhe helitated not to anfwer, that he might enjoy all things who puffithed all. Whareupon, fetting afude all duty and refpeet for his ceceafed fither, he celebated his nuptals with hoe in publie, to tally difregarding the cenfuets and tis: fareatics of iranl.ind.

However, though he eifrerarcid fianic, he was no: iafenfible t, fear. He was ever uncaly in the confcioufuefs of being univertally hated; and was continually confulting allrologers concernins what death he fooudd dic. Anong others, he fent one of his cunlidants, named Mfaernianus, with orders to confuit all the aftrologers in the city concerning his end. Materniamos conficesed this as a proper time to get rid of Macrime, :he emperor's principal commander in SIffupotaria; a man who was daily fupplanting him in his matter's favour. He therefore informed hin by litter, as if from the attrulogers, that Macrinus had a dofigi agzoint his life; and they coniequently advifed him to put the confpirator to dedth. This letter was fent fealed, and made up, amungit many others, to be conveyed with the greater fecrecy, and delivered to the emperor as he vias preparing for a charict-race. Howtver, as it newer was his cuftom to interrupt his pleafores for his butinets, he gave the packet to Macrinus to read utcr, asd :o in'orm him of the coctents when more at leifure. In penufing these letters, when Macrimus came to that which regarded himlell, he was umable to contain his furprife and terror. Hisfift care was, to referve the letter in quefion to himfelf, and to accusint the emperor only with the fubtlance of the reft. He then tet about the moft probable means of compafing his ceath, by which alune he could expuct any fafety. Iength he determined :o apoly to one Martialis, a man of 1 cat frength, and a cinturion of the guards, who lated the eniperor from various motires: particulaily fo: the death if a brother, whom Caracalla laad ordered

\section*{\(44^{\circ}\) ] R O M}
to be hain. Iim therefure Macrinus exhneted to ro venge his brother's death, by killing the tyrant, waich he might ealily effect, as being always fo n ar his perfon. Martialis readily uadertnok the dangerous tafk; being wiling to mecteceath hmeli, to he mi ht obtain bis defire of ceeing the tyrant expire be ure hin. Accordingly, as the emperor was ridi,g out one day 4 - is \(\pi\) near a little ciey called Car'a, he happened to with-deec. diaw himfelf privately, upon a natural ccafion, with only one page to hold his horle This was the opportuility Martialis had fo long and ardently delired: wherefore running to him as if he had heen called, he fabbed the emperor in the back, fu thit he died immediately: Martials unconcernedly returned to his troop; but reti ing by infentible desrees, he endeavour. ed to fesure himelf by flight. Lut his companions foon mifting him, and the page giv ne information of what bad been cone, he was purfucd by the German lore and cut in pieces.
1)uring the ruign of this excerable tyrant, whicle continued fix sears, the empire was every day declining; the foldiers were entirely mallers of ewery election; and as there were various armies in different parts, fo there were as many interefts all op:ofite to each other. Caacalla, by fatisfying their mon unreafonable appetites, deftroyed a!difcipline among them, and all fubordiaation in the Itate.

The foldicrs, now without an emperor, after a ful M tinn penfe of two days, fixed ugon Macrinus, who took all pulible methodisto concul his being privy to Caracalla's murder. "1he fenate confirmed their choice fhortIv after; and likewife that of his fon Diadumenus. whom he twok as a partiter in the empire. Macrints was 53 years old when be entered upoan the grovernment of the empirc. He was of obfcure parentage; forne fay loy birth a lvoor, who by the mere rotation of of. lice, being litit mate proiect of the pratorian bands, was now, by treafon and ace dent, called to fill the throne. We are told but little of this emperor, except lis engasing in a bloody though undecided baitle with Artabans king of Parthix, who came io taxe vengeance fur the injury he had fultained is the late reisn: huw. crer, this munarch linding his reed enemy dead, was content to make pace, and e̛urned into J'arthiz. S mething is alf, faid of the feverity of this emperur's difeprine; for to hed, a pitch of licentianiads was the Ro nan army now arrived, that the noft levere punit.ments were unable to rellain the fuidiers; and yet the moll gentle intlictions were luoked upon as fevitity. It was this rigurons difcipine, together with the artifices of Mxfa, grandmother to Heliozabalus t e natural foa of Caracalli, thet cauled the emperor's ruin. Heliogabalus was priett of a temple dedierted to the Sun, in Emela, a city of Ploenicia; an I though bu: \(1+\) years old was greatly losed hy the army or the beauty of his peifon, and the remory of his lather, whom they ftill confidered as their greateft benefactor. I his was foon perceived by tlee grandinother ; who being wery rich in gold anc juwels, gave liberal prefents amugg then, while they frequently repaired to the temple, both from the garrifon in the city and the ramp of N5... crinus. This intercourfe gruwig every day more lite quent, the foldicrs, being diggulted will the feverities of their prefent emperor, began to thisk of placing Heliogabalus in his ftead. Accordircivy, fouding fur him

\section*{}
me. to their camp, he was immediately proclaimed; and fuch were the hopes of his virtues, that all men began to affect his interefts.
Macrinus, who at this time was purfuing his pleafures at Antioch, gave but little attention to the firt report; only fending his lieutenant Julian, with fome legions, to quell the infurrection. However, thefe, like the reft, foon declared for Heliogabalus, and flew their general. It was then that Macrinus found he had treated the rebellion too flightly; he therefore refolved, with his fon, to march dircelly againft the feditious legions, and force then to their duty. Both parties met on the confines of Syria: the battle was for fome time furious and obftinate ; but at laf Macrinus was overthown, and obliged to feek fafety by flight. His principal aim was to get to Rome, where he knew his prefence was defired; wherefore he travelled through the provinces of Afia Minor with the utmof expedition and privacy, but unfortunately fell fick at the city of Chaleedon. There thofe who were fent in purfuit, overtook and put him to death, together with his fon Diadumenus, after a fort reign of one year and two monthis.
The fenate and citizens of Rome being oblized to fubmit to the appointment of the army as ufual, Heliogabalus afcended the throne at the age of 14. One at To early an age, invefted with unlimited power, and furrounded with flatterers, could be expected to act only as they thought proper to direet. This young emperor was entirely ied by them; and being fenfible that it was in bis power to indulge all his appetites, he fludied only their gratification. As he is defcribed hy hiftorians, be appears a monfter of fenfuality. His fhort life therefore is but a tiffue of effeminacy, luft, and extravagance. He married, in the finall faree of tour years, fix wives, and divorced them all. He huilt a temple to the fun; and willing that his g.od thould lave a wife as well as himfelf, he married him to Pallas, and thortly afier to the moon. His palace was a place of rendezvous for all the proftitutes of Rome, whom he frequently met naked, calling them bis fellow foldiers, and companiuns in the field. He was fo fond of the fex, that he carried his mother with hin to the fenateloufe, and demanded that the fhould always be prefent when matters of importance were debated. He even went fo far as to build a fenate-houfe for women, with fuitable orders, habits, and dillinetions, of which his mother was made prefident. They met feveral times; all their debates turning upon the fafhions of the day, and the different formalities to be ufed in giving and receiving vifits. To thefe follies, he added great crueley and boundlefs prodigality; fo that he was heard to fay, that fuch difhes as were cheaply obtained were fcarce worth eating. His fuppers therefore generally cot 6000 crowns, and often 60,000 . He was always drefled in cloth of gold and purple, enriched with precious flones, and yet never wore the fame habit twice. His palace, his chambers, and his beds, were all furnifhed of the richeit fluff, covered with gold and jewels. Whenever he touk horfe, all the way between his apartment and the place of mountiag was covcred with gold and filver duft fterwn at his approach.

Thefe exceffes were foon perceived by his grandmother Mæfa, whofe intrigues had firft raifed him to the throne: fo that the thought to leffen his power bey di-
£oz, Xilit. Part 11.
viding it. For this purpofe, under a pretence of freeing him from the cares of public bufinefs, the perfuaded him to adopt his coufin-gerrnan, Alexander, as his 397 fucctfor ; and likewife to make him his partner in the idnte Aconfullhip. Heliogabaius, having thus raifed his coufin, and tak:s had fearce given him his power, when the wifned a a ain \({ }^{h} m\) ior his to take it away; but the virtues of this young prince culleague. had for greatly endeared the people and the army to him, that the attempt had like to have been fatal to the tyrant himfelf. The pratorian foldiers mutiny ing, attempted to kill him as he was walking in his gardeso: but he efcaped, by hiding himfelf from their furs. However, uipon returning to their camp, they continued the fedition; requiring that the emperor fhou'tl remove fuch perfons from about him as oppreffed the fubject, and contributed to contaminate him. They required alfo the being pernitted to guard the young prince themfelves, and that none of the emperor's favourites or familiars !nould ever be permitted to converfe with him. Heliogabalus was reluftantly obliged to comply; and confcious of the danger he was in, made preparations for death, when it thould arrive, in a manner truly whimfical and peculiar. He lmi't a lofty tower wilh fleps of gold and pearl, from when-e to throw himfelf headlong in cafe of neceffity. He at o prepared cords of purple filk and gold to ltaangh hime. fiff with; he provided ryilden fworad and dajgers 18 Rab himfelf with; and poifon to be kept in boxes ot emerald, in order to obitain what death he chofe bes? Thus fearing all things, but particulaly fufpicious of the defigns of the fenate, he banifhed them all out cit the city: he next attempted to joinon Alexiuder, and fpread a report of his death; but perciving the fuidiers berin to mutiny, he immediately wook him in his chariot to the canip, where he experienced a freth murtification, by finding all the acclamations of the army directed only to his fuccefor. 'I his sot a little raifed his indignation, and excited lis defire of revenge. He returned towards the city. threatening the moft fevere punifhments againtt thole who had dippleafed him, and meditating frefh crueltics. However, the fold:ors were \({ }_{\text {It }}\) morde unwilling to give him time to pat his defigus in execu-h, the fol tion: they followed hin directily to his palace, purfind diers. him frum apartment to apartnent, and at hat found hiun concealed in a privy; a lituation very different from that in which he expected to die. Faving dragged him from thence through the freeis, with the moit bitter invectives, and having difpatched l:iin, they attempted once more to fquetze hirs pampered body into a privy; but not ealily ellecting this, they threse it irto the Tiber, with heavy weights, that none rright afterwards find or give it burial. This was the mife:abie and ignominions death of Heliogabalus, in the 1sth. year of his age, after a deteftable reign of four years. His mother alfo was flain at the fame time by the foldiers; as were alfo many of the opprobrious afociates of his criminal pleafures.
Alexander being, without oppofition, declared cm - ririves of peror, the fenate, in their ufual method of adulation, Alesander. were for conferring new titles upon lim; but he modelly declined them all, alleging, that tites were only tonourable when given to wirtue, not to ftation. This outfet was an liappy omen of his future virtues; and few princes in linfury have beell more commend by his contenproraris, or indeed more deferved commenda-

\section*{K O M \(\quad\left[\begin{array}{lll}442\end{array}\right] \quad \mathrm{R} \quad \mathrm{O}\) M}

Rome. tion. Io the moft rigid jultice he added the greateft humanity. He loved the good, and was a fevere reprover of the lewd and infamous. His accomplifhments were equal to his virtues. He was an excellent mathenatician, geometrician, and mufician; he was equally foilled in painting and fulpture; and in poetry few of his time could equal him. In flort, fuch were his talents, and fuch the folidity of his judgmeat, that though but 26 years of age, he was confidered ats a wife old man.

The firt part of his reign was fpent in a reformation of the abufes of his predeceffor. He reflored the fenators to their rank; nothing being undertaken wi:hout the mont fage advifers, and moft mature deliberation. Among the number of lis advifers was his mother Namnara; a woman eminent for leer virtues and accomplifhenents, and who made ufe of her power as well to fecure leer fon the affections of his fubjects, as to procure them the mofl jult adminitration. He was a rigid punither of fuch magitlrates as took bribes, faying, That it was not enough to deprive fuch of their places; for their trufts being sreat, their lives, in moft cafes, ought to pay for a breach of them. On the contrary, he thought he could never fufficiently reward fuch as had been remarkable for their juftice and integrity, keeping a regitter of their nanmes, and fometimes afking fuch of them as appeared modelt and unwilling to approach him, why they were fo backward in demanding their reward, and why they fuffered him to be in their debt? His clemency extended even to the Chriltians, who had been punifhed in the former teigns with unrelenting barbarity. Upon a contelt between them and a company of cooks and vintners, about a piece of public ground, which the one claimed as a place for public worthip, and the other for exercifing their refpective trades, he decided the point by his refcript, in thefe words: "It is better that God be worfipped there in any manner, than that the place fhould be put to ufes of drunkennefs and debauchery."

His abilities in war were not inferior to his affiduity in peace. The empire, which from the remiffinefs and debauchery of the preceding reigns now began to be at- tacked on every fide, wanted a perfon of vigour and conduct to defend it. Alexander faced the enemy wherever the invalion was mont formidable, and for a thort time deferred its ruin. His firl expedition, in the tenth year of his reign, was againlt the Parthians and Perfians, whom he oppofed with a powerful army. The Perfians were routed in a decifive engagement with great flaughter; the cities of Ctefiphon and Babylon were once more taken, and the Roman empire was reftored to its former limits. Upon his return to Antioch, his mother Mammea fent for the famous Origen, to be inllructed by him in the principles of Chriftianity ; and after difeourling with him for fome time upon the fubject, difmiffed him, with a proper fafeguard, to his native city of Alexandria. About the fame tine that Alexander was victorious in the Eaft, Furius Cekis, his general, obtained a fignal victory over the Maunitanians in Africa. Varius Macrinus was fuccefsful in Germany, and Junius Palmatus returned with conqueft from Armenia. However, the nunber of thefe victories only hatened the decline of the empire, which was walted by the exertion of its own
ftrength, and was now becoming little more than a fplen. did ruin.

About the \(3^{\text {th }}\) year of his reign, the Upper Germans, and other northern nations, began to pour down immenfe fwarms of people upon the more fouthern parts of the empire. They palled the Rhine and the Danube with fuch fury, that all Italy was thrown into the moll extreme confternation. The emperor, ever ready to expofe himfelf for the fafety of his people, made what levies lie could, and went in perfon to ftem the torrent ; which he fpeedily effected. It was in the courfe of his fucceffes againt the enemy, that he was cut off by a mutiny among his foldiers. 'The legions encamped about Moguntia, having been abominably corrupted duning the reign of Heliogabalus, and trained up in all kinds of rapine and difobedience, required the inoft frict command. Alexander could neither endure their tumultuary obedience, nor they his regular difcipline. His own faults, and thofe of lis mother Mammaa, were objected againt lim. They openly exelaimed, That they were governed by an ava-Is murder. ricious woman, and a mean fpirited boy: and refolvedes. upon electing an emperor capable of ruling alone. In this general revolt, Maximinus, an old and experienced commander, held frequent conferences with the foldiers, and enflamed the fedition. At length, being determined to difpatch their prefent emperor, they fent an executioner into his tent; who immediately ftruck of his head, and, mortly after, that of his mother. Hc died in the 29th year of his age, after a profperous reign of thirteen years and nine days.

The tumults occafioned by the death of Alexander Suceeeded \(39^{2}\) being appeafed, Maximinus, who had been the chiefby Maxipromoter of the fedition, was chofen emperor. 'I'his minus, a extraordinasy man, whofe character deferves particular min of gi. attention, was born of very obfcure parentage, beingture and the fon of a poor herdfman of Thrace. In the begin. extraordining he followed his father's profeffion, and only exer- \({ }^{\text {nary }}\) cifed his perfonal courage againf the robbers who in- trength. fefted the part of the country in which he lived. Soon after, his ambition increaling, he left his poor employment, and eulifted in the Roman army ; where he foon became remarkable for his great Atrength, difcipline, and courage. This gigantic man was nolefs than eight feet and a half high; he had a body and ftrength correfponding to his fize, being not lefs remarkable for the magnitude than the fymmetry of his perfon. His wife's bracelet ufually ferved him for a thumb-ring ; and his flength was fo great, that he was able to draw a carriage which two oxen could not move. He could frike out an horfe's tecth with a blow of his fift, and break its thigh with a kick. His diet was as extraordinary as the reft of his endowments; he generally eat 40 pounds weight of flef every day, and drank fix gal. lons of wine, without committing any debanch in either. With a frame fo athletie, he was poffeffed of a mind undaunted in danger, and neither fearing nor regarding any man. 'The firft tinue he was made known to the emperor Severus, was upon bis celebrating games on the birth-day of his fon Geta. Maximinus was then a :ude countryman, and requefted the emperor to be pernitted to contend for the prizes which were diftribated to the beft runners, wreftlers, and boxers, of the arnuy. Sevcrus, unwilling to infringe the military difcipline.

\section*{\(\mathrm{R} O\) M}
would not permit him at finf to combat, except with flaves, againft whom his ftrength appeared altonifhing. He overcame 16 in running, one after the other: he then kept up with the emperor on horfeback; and having fatigued him in the courfe, he was oppofed to feven of the moft aetive foldicrs, and overcame them with the greateft eafe. From that time he was paricularly noticcd, and taken into the emperor's body-guards, in which his affiduity and prompt obedience were particularly remarkable. In the reign of Caracalla, he was made a centurion, and diftinguifhed himfelf in this tation by his flrict attention to the morals and difcipline of thofe he commanded. When made a tribune, he fill retained the hard fimplicity of his life; eat as the sreaneft centinel; fpent whole days in exerciling his troops; and would now and then limfelf wrefle with eight or ten of the flrongeft men in the army, whom he threw with fcarce any effort. Being thus hecome one of the moft remarkable men in the empire, both for couragc, difcipline, and perfonal activity, he gave, fhoitIy after, a very high inftance of his unfhaken fidelity: for when Macrinus was made emperor, he refufed to ferve under a prince that had betrayed his fovereign ; and retired to Thrace, his native country, where he followed commerce, and purchafed fome lands, content with privacy rather than a guilty dependence. Upon the acceffion of Heliogabalus to the throne, this bold veteran once more returned to the army; but was, in the very beginning, difgufted at the bafe effeminacy of the emperor; who, heating amazing inflances of his ftrength, afked him, if he were equally capable in combats of another nature? This lewd demand was fo little fuitable to the temper of Maximinus, that be inflantly left the court. Upon the death of Heliogabalus, he again returned to Rome, and was received with great kindnefs by Alexander, who particularly recommended him to the fenate, and made him commander of the fourth legion, which confifted of new-raifed foldiers. Maximinus gladly aceepted of this charge, and perform. ed his duty with great exactnefs and fucceefs, fetting an example of virtuc and difcipline to all the commanders of the army. Nor was his valour lefs apparent againit the Germans, whither he was fent with his legion; fo that he was unanimounly confidered as the boldeft, braveft, moft valiant, and moft virtuous foldier in the whole empire. He foon, however, forfeited all thefe jufly morited titles, when he was raifed to the throne; and, from being the moft loved commander in the ar\(m y\), he became the molt crucl tyrant upon earth. Yet in fact, his former sirtues were all of the fevere and rigid kind, which, without any edvcation, might very eafily degenerate into tyranny; fo that he might have mittiken his fucceeding cructity for difcipline, and his feverity for juftice. However this be, Maximinus is confidered as one of the greateft monfters of cruelty that ever difgraced power ; and, fearful of nothing him. felf, he feemed to fport with the terrors of all mankind.

He began his reign, by endeavouring to force obedience from every rank of people, and by vindicating his authority by violence. The fenate and people of Rome were the firt that incurred his refentment. They utterly refufing to confirm the elcution of the ariny, he was the frit emperor who reigned without lluir concurrence or approbation. However, he feem-
ed regardlefs of their oppofition, proceeding to fecure his election by putting all fuch to death as had been railed by his predecelfor. The Chrilians alfo, lhaving found favour in the former reign, felt the weight of his refentment; and were perfecuted in feveral parts of the empire, particularly in thofe where he hinfelf refided. His cruelty likewife extended to the rich, whofe lives and eftates became a frequent facrifice to avarice and fufpicion. But what appears fill a morc extraordinary inllance of his cruelly, being aftamed of the meannefs of his extraction, he commanded all fuch as were beft acquainted with him and his parentage to be fain, although there were fome among the number that had relieved him in his low condition.

However, his crueltics did not retard his military His \({ }^{337}{ }^{30}{ }^{3}\) operations, which were carried on with a fuirit be-in war. coming a better monarch. He overllirew the Germans in fevcral battles, walled all their comery with fire and fiword for 400 iniles tugether, and fet a refolution of fubduing all the northern nations as far as the ocean. In thefe expecitions, in order to attach the foldiers more firnly to him, he increafed their pay; and in every duty of the camp, he himfelf took as much pains as the meancll centinel in his army, flowing incredible courage and affiduity: In every engagement, where the conflict was hottef, Maximinus was always feen fighting there in perfon, and deftroying all before him: for, being bred a barbarian, he confidcred it as his duty to combat as a common foldier, while he commanded as a general.

In the mean time, his cruelties lad fo alienated the conifpira. minds of his fubjets, that feveral confpiracies were cies formed fecretly aimed againft him. Magnus, a confular per-agzint hime fon, and fome others, had plotted to break down a wooden bridge, as foon as the emperor had pated it, and thus to abandon him to the enemy. But this being difcovered, gave Maximinus an opportunity of indulging his natural feverity, upon this pretext alone cauling above 4000 to be flain. Shortly after, fonc of Alexander's old foldiers withdrawing themfelves from the camp, proclaimed one Quarcianus as cmperor, who had been lately difgufted at Maximinus for being difmiffed from employment. The foldiers, in fact, conArained him to accept of the dangerous fuperiority to which he was expofed : and Mootly alter, in the firit of the times, the perfon who had been the promoter of his advancement, murdered him in his bed, and carried his head to Maximinus; who received him kindly at firll, but foon put hiim to a cruel death, for his complicated guilt of treafon and treachery.

Thefe partial infurrections were foun after followed by a firit of general difcontert throughout all the empire. The provinces of Africa were the frit that fhowed their deteftation of the tyrant, whofe cutor:ions and cruelties among then were become infuppotable. They firl flew his procurator : and afterwards conflidering how dangerous a crime they had committed, they refolved to throw off all expectations of pardon, ard create a new emperor. Gordian was then proconful of Africa, a perfon of great lame for his vitucs, and Gurcam highly reverenced for a blamelefs life of near 80. cniprour. Him, therefore, they retermines to elect : and accordingly the foldiers and natives affembling together, tumultuonfly entered his houfe, tciolved to put their defign in execution. Gordian, who at frrik fuppoied

Rome they were come to kill him, being made fenfible of their intentions, utterly refufed their offer, alleging his extreme age, and Maximinus's fewcr. But all his op. pofition was vain : they conitrained him to accept of the proffured dignity; and he, with his fon Gordian, who was 4 ( wea:s of age, were declared emperors. Be. ing thus raifed contrary to his inclination, the old man imancdiate'r wrote to the fenste, declaring that he had unwillingly accepted of the empire, and would only keep his authority till he liai freed it from the turanay of its prefent oppeffor. The fenate very jug. tully cenfirned his tection, atjodsimer Maximinus as an enemy and traitur to the llate. The cuizens atho thowed an equal \%eal in the caule : they flew upon fuch as were the reputed friends of Maximinus, and tore then in pieces; even fome who were innocent falling a facrisice to the multitude's blind rage. So great an alteration being made in the city againft the interelts of Maximinus, the fenate were refolved to drive the uppolition to the extrene; and accordingly made all meceffary preparations for their fecurity, o:dering Maximinus's governors to be difphaced, and commanding all the provinces to acknowledge Gordian for emperor. 'Ilus order was diferently received in different patts, as people were affected to one or the ot her party: in fome provinces the governors were flain ; in others, the meffengers of the feaate : fo that all parts of the empire felt the confequences of the civil war.

In the mean time, when Naximinus was informed
Oraxinoinus of thefe clarges againt him, his rape appeared ungop. haring vernatle. He roard like a favage beath, and violent-
ly fruck his head againt the wall, fhowings every inftance of unguverahle dittraction. At length his fury teing fornewhat fublided, he called his wiole army tofuther; and, in a fet lipech, exhorted them to revenge his carfe, giving them the fronget affurances that they flumeld poffefs the eftates of all fuch as had e Ferded. 'I he foldiars unanimouny promifed to be faithful; they received his laanngue with their ufual acilamations; and, thens enconared, he led them tov.ads Ronse, breathing nuthins tat flaughter and revuge. However, he found many obilacles to his inpetuofity; and, though be detired nothing fo inuch as dijpteh, his marchea were inconmodious and flow. The tumuluons and difobedient arnies of the empire wete at frefent very different from the legions that were led on by Sylla or Cxiar ; they were loaded with hatgate, and followed by flaves and women, rather referbliur an eafern caravan, than a miltary batzlion. 'Tor thefe incenvenicaces alfo was added the hatred of the cities through which he paffed, the inhahitants all abandoning their boufes upon his approach, and fecuring their provifions in proper hidingplaces. Howerer, in this complication of inconveniences and misfortunes, his affairs began to wear a lavourable appeurance in Afriea: for Capelianus, the governur of Numicid, raifed a hody of troops in his favour, and manched ayainlt Gordian, towards Carthage ; where he fought the younger Gordian, flew hin?, and dettroyed his arny. The father, hearing of the death of his fon, together with the lofs of the tatte, Atrangled himfelf in his own girdle. Capeliasus purfuing his victory, entered Carthage; where he grave a lude to pillage and flaughter, under a pretence of reveging the caute of Maximinus. The news of
thefe fucceftes was foon brought to the emperor, who now inereafed his diligence, and flatered himelf with a feeedy opportunity of revenge. Ife led on his large army by hathy journeys into Italy, threatening deftruc. tion to all his opposers, and ardently wifhing for frefh opportunities of haughter.

Nothing eould exceed the confernation of the fenate upon the news of this defeat. They now faw themfelves not only deprived of the aflitance of Gordian and lis fon, on whom they greatly relied; but alfo oppofed by two furmidahle tyrants, each comnanding a victuniuns inmy, directly marching towards Rome, and meditating nothing but vengeance. In this afficting exigence, they, with great folemnity, met at the temple of Jupiter, and after the molt mature deliberations, chofe Pupienus and Balbinus ennerors conjointly. Thefe were men who had acquired the efteem of the public both in war and peace, having commanded armies, and governed provinces, with great reputation; and being now appointed to mela med gow appointed to oppole Maximinus, they enperurs. made what levies they coull, both in Rome and the country. With thefe, Papienus marehed to itop the prugrels of the invaders, leaving the city to a freth and untooked for calamity. This was occationed by two of Maximinus's foldiers, vibo, entering the fenatehoufe, were flain by two lenators. This quickly gave offence to the body of the plxtorian fuldiers, whe inIlantly refolved to take revenge, bue were onpofed by the citizens; fo that nothing was feea throughout Rome, but tumult, ीaughter, and cruelty. In this misverfal cuntulion, the calamity was increafed by the foldiers fetting the eity on fre, while the wretehed inhabitants were combating each wher in the midit of the flames.

Neverthelefs, Maximinus himfelf, in whofe favour theice feditions were promoted, did not feem to be more fortunate. Upon being informed of the new election of emperors, his fury was again renewed, and he palied the Alps, expecting, upon entering Italy, to refreth his fatigued and famithed army in that fertile part of the country. But in this he was entirely difaippointed ; the fenate had taken fuch care to remo:e all kineds of fultenance to fortified places, that he - ftill found himfelf reduced to his former necefities, while his army began to murmur for want. 'To this another difappointment was added hortly after: for approach-Aq.ileir ing the city of Aquileia, which he expected to enter leticged by without any diffientry, he was allonilhed to find it Maxime prepared for the moit obftinate refiftance, and refolved to hold out a refrylar fiege. 'This city was well fortified and populous, and the inhabitants greatly averie t.) Maximinus's government ; but what added fill more to its ftrength, it was commander by two excellent generals, Crifpinus and Menophilis, who lad fo well furnifhed it with men and ammunition, that Maximinus found no fmall refiflance, cven in invelling the place. His firt attempt was, to take the city by florm ; but the befieged threw down fueh quantitics of fealding! pitch and fulphur upon his foldiess, that they were unable to continue the afinult. He thear determined upon a blockade; but the inhabitants were fo refolute, that even the old men and children were fers combating upon the walls, while the women cut oif their hair to furnih the foldiers with bow-ftringso Maximinus's rage at this uncepected oppolition was
now ungovernatle: having ro enemy to wreck his refeatment upoul, he turned it agsinnt his own conmmand. ers. He put many of his generals to death, as if the sity had held out through their ne.glect or incapacity, while famiu.e made great dspredations s:pon the rett of his arny. Nothing now appeared on cither fide to terminate the conteft, except the total deflruction of eitler. But a muttiny in Maxininisus's own arny a while refejed the declining cripire from deftruction, and faved the lives of thourands. The foldiers being long harafled by famine and fatiges, and hearing of revilts on every tide, refolved to terminate their calamities by the tyrant's death. His great flenyth, and his being always arrned, were, at firlt, the principal motives to deter any from affinfiuating him; but at length laving made his guards accomplices in their defign, they fet upon hin, while he fept at noen in his tent, and fiew both him and his fon, whom he had made his partner in the empire, without any oppofition, after an ufurpation of about three years, and iu the 6 foth year of his age.
The tyrant being dead, and his body thrown to the dogs and birds of prey, Pupienis and Balbinus continied for fome time emperons without oppoltion. But the pratoriai foldicts, who had loug bect notorious for mutiny and inisafon, foon reeolved on further chanige. Nor did the diffenfens het ween the new made emperurs themfelves a li.tle cuntribute to their downfill : for thulith both were renarkable for wiitom and aree, yet they could not rellrain the mutral jealivify of each other's power. Pupicens clained the Iuperiority from his great expecience: whilc Balbinus was equally a!piring upon account of his family and fortunc.

In this ill.judged sonteft, the pratorian foldiers, who were enemies to both, fet upon then in their palace, at a time thcir glards were anuled with freing the Capitoline games. Piqpinus perceiving their tumillturus approach, fent wath the utnoilt fiped for atlillance from his colleague ; tut he, out of a culpable fufpicion that fomeehing: was defigued only againt himfelf, refufed to fend fuch of the German guards 2 s were next his perfon. Thus the fededitious foldiers fourd an eafy aecefs to bath the emprorors apartments; and drag. ging them from the palace towards the camp, flew thein buth, leaving their diad hodics in the frects, as a dread. ful intance of their fedition.
In the midit of this fedition, as the mutipeess were proceeding along, they by accident met Gordian, the grandfon of him who was flain in Africa, and declared him emperor on the fput. The fenate and people had been long reduced to the necefity of fuffering their enperors to be nominated by the army ; to that all they couid do in the prefint inikance was to confren their choice. 'This prince was but 16 years old when he began lis rtign, but his vistues feenied to compenfate for his, want of experience. His principal aims were, to unite the oppoting members of the goverume:rt, and to reconele the foldiers and citizcus to each other. His learning is faid to have been equal to lis simtues; and we are aflured that he had 62,000 . books in lis library. His refipect for Mijithexus, his governor and infltuctor, was fucth, that he mariied bis daughter, and profited by his counicts in all the crixical circuuntances of hisis reign.
'The firt fout years of this emperor's reign werg Rome. attended with the utmoft profperity ; but in the fifth \(-\underbrace{}_{4=4}\) he was alarmed with accounts from the caft, that Sa- Hisfievert por, king of Perfia, had furiouly invaded the confnes agaimert. of the Roman empire, and lasing taken Antioch, had Eor'jasuiz. pillaged Syria and all the adjacent proviness. Befides the Perlians, the Goths alfo invaded the empire ut their fide, pouring down like an inundation from the north, anc ritempting to fux their reflutnce in the kingdom of Thrace. To oppofe bath thefe invafos:, Gordian prepared an army; and hesing gained fome victorics gever the Goths, whan he obliged to retire. h. turned his arms againtt the Petlans, whom he detod: d upon feveral occafions, and forced to return home with dilgrace. In gaining thefe advantages, Mifthæus, whom he had made pretorian prefect, had the principal Thare; fut he dying foon afuer (as it is fuppofid beins poifoned by Philip an Arabian, who was appointed his fucceffor), the fortunes of Gordian feemed to die with him. The army began to be no longer fupplied with provifions as ufual; inurmurs were heard to prevail, and thefe were attolly fumented by Philip. I luings thus procectiag from bad to worle, Pliilip was at firt made lis equal in the command of the empire; flortly after, inveited with the fole power:'snes. and, at lensth, finding himfelf caciable of perpetratinged by lht his loug meditated cruelty, Gordian was, by his order, hp, win flain, in the 2:d year of his age, afecr a fucceffful reith of near fix years.

Plilip havins thus murdered lis benefafor, was fo furtunate as to be immediately acknosled, edi emperor by the army. The fenate alio, thuth they feenicd at firf to oppofe his power, confrrmed lits lection, and gave him, as ufual, the title of rivorfous. Philip was about 40 years old when he came to the throne; being the fon of an obfcure Arabian, whe had been captain of a band of robbers. Upon his exaluation, lee affinciated lis fon, a huy of fix years of ige, as his partuer in the empire; and, in order to fecure his power at home, made peace with the Perlians, ato! marehed his army towaris Rome. On his way, having conceised a defire to vilit his native country of Arabia, he built there a city called \(P\) bilippopolis: and from thenee retarning to Rume, he was received at emperor, and treated with all the marks of fubmifion, though uut of joy. 'To put the people in good hrmour, he caufed the r \({ }^{426}\) the lecular ganes to be ceitorated, with a magnifeencerande! jeas fuperior to any of his predeceflors, it being juit \(10=0\) of \(\mathrm{R}, \mathrm{m}=\). years after the building of the city. Upon uceation us thefe games, we are told that both Flulip and his fon were conveited to Chrifianty. However this be, a nurdeter and an ungrateful ulurper dees ro great honour to yhatever opinion he may happen to embrace. We have little aecount of the latier part of his reign in the wretched and mutilated hiloties of the times; we only larn, that the Goths having invaded the empire, Mainus, Philip's lieutenant, who was fent againdt them, revolied, and caufed hinifelf io be declared urpetor. This revole, however, was but of thore duration; for the army which had railed him repented of their safhnds, depofed hion with equal lewity, and put him tu death. Decius was the perfon whom Philip apposinted to eommand in the roun: of the terolsing gencal. The chel norit of Decius with the emperer

\section*{R O M [ 446 ] \\ \(R \quad O \quad M\)}

Nos, that when Marinus had rebelled, he averred in the fenate, That the traitor's prefumption wonld be vety flortly his ruin; which, when it happened accordimgly, Philip appointed him to fucceed in the command of the rebellious army. Decins, who was a ir an of gicat fubtlety, being thus entrufted with fo mueh power, upon arriving at the army found that the foldiers were refolved on invelting him with the fupreme authority. He therefore feemed to fiffer their importunities, as if through conftraint; and, in the mean time, fent Philip word, that he had unwillingly affumed the title of emperor, the better to fecure it for the rightful poifeffor ; adding, that he only looked for a convenient opportunity of givirs up his pretenfions and title together. Philip knew mankind too well, to rely upon fuch profeffions: he therefore got together what forces he could from the feveral 497 prowinces, and led them forward towards the confines
of Itals. However, the army was fearce arrived at Verona, when it revolted in favour of Decius, and fetting violently upon Philip, a centinel, with one blow, cut off his head, or rather cleaved it afunder, feparating the under jaw from the upper. Such was the deferved death of Philip, in the 45 th year of his age, after a reign of about five years; Decius being univerfally acknowledged as his fucceflor, A. D. 248.

The activity and wifdom of Decius in fome meafure fopped the laztening decline of the Roman empire. The fenate fecmed to think fo highly of his merits, that thes voted him not inferior to Trajan; and indeed he feemed ir every inftance to confralt their dignity in particular, and the welfare of all inferior ranks of people. He permitted them to choofe a cenfor, as was the cuftom in the flouriming times of Rome; and Valerian, his general, a man of fuel ftrict morals, that his life was faid to be a continual cenforfhip, was chofen to that dignity. - But no virtues could now prevent the approaching downfall of the ftate ; the obftinate difputes between the Pagans and the Chritians within the empire, and the unceafing irruptions of barbarous nations from without, enfeebled it beyond the power of a remedy. To ftop thefe, a perfecution of the Chriftians, who were now grown the noft numerous body of the people, was impolitically, not to fay unjuftly, begun; in which thoufands were put to death, and all the arts of cruelty tried in wain to leffen their growing number. This perfecution was fueceeded by dreadful devalations from the Goths, particularly in Thrace and Moclia, where they had been moft fuccefsful. Thefe irruptions Decius went to eppofe in perfon; and coming to an engagement with them, flew 30,000 of the barbarians in one battle. However, being refolved to purfue his victory, he was, by the treachary of Gallus his own general, led into a defle, where the king of the Goths liad fecret information to attack him. In this difadrantageous fituation, Decius firt faw his fon killed with an arrow, and foon after his whole army put to the rout. Wherefore, refolving not to furvive his lors, he put fpurs to his horfe, and inftantly plunging into a quagmire, was fwallowed up, and his body could never be found after. He died in the \(50 t h\) year of his are, after a hort reign of two years and fix months; leaving the character of an rxcellent prince, and one capable of averting the de-
ftrection of the empire, if human means could have effected it.

Gallus, who had thus betrayed the Roman army, had addrefs enough to get himfelf declared emperor by by Gail that part of it which furvived the defeat ; he was 4 ; years old when he began to reign, and was defcended from an honourable family in Rome. He bought a difhonourable peace from the enemies of the tlate, agreeing to pay a confiderable anmal tribute to the Gotlis, whom it was his duty to reprefs. Having thus purchafed a fhort remifion from war, by the difgrace of his country, he returncd to Rome, to give a loofe to his pleafures, regardlefs of the wretehed fituation of the empire.

Nothing can be more deplorable than the flate of the Roman provinces at this time. 'The Goths and other harbarous nations, not fatisfied with their late empire. bribes to continue in peace, broke in upon the eaftern parts of Europe. On the ather lide, the Perfians and Scythians committed unheard of ravages in Mefopetamia and Syria. The emperor, regardlefs of every national calamity, was loft in debauch and fenfuality at home; and the Parans were allowed a power of perfecuting the Chriftians through all parts of the Itate; thefe calamities were fucceeded by a peftilence, that feemed to have in general fpread over every part of the earth, and which continued raging for feveral years in an unheard of manner; and all thefe by a civil war, which followed thortly after, between Gallus and his general \(\mathbb{F}\) milianus, who having gained a lićtory over the Goths, was proclaimed emperor by his conquering army. Gallus hearing this, was foon roufed from the intoxications of pleafure, and prepared to oppule his dangerous rival. Both armies met in Mrefia, and a battle enfued, in which AEmilianus was victorious, and Gallus, with his fon, were nain. His death was merited, and his vices were fuch as to deferve the deteftation of pofterity. He died in the 47 th year of his age, after an unhappy reign of two years and four months, in which the empire fuffered inexpreffible calamities. Emilianus, after his victory over Gallus, expected to be acknowledged emperor ; hut he foon found himfelf miferably dilappointed. The fenate refufed to acknowledge his claims; and an army that was ftationed near the Alps chofe Valerian, their own commander, to fucceed to the throne. In confequence of this, Amilianus's foldiers began to confider their general as an obftacle to the univerfal tranquillity, and new him in order to avoid the mifchiefs of a civil war.

Valerian being thus univerfally acknowledged as emperor, although arrived at the age of 70 , fet about reforming the tate with a fpirit that feemed to mark a good mind and unabated vigour. But reformation was then grown almolt impracticable. The difputes between the Pagans and Chrifians divided the empire as before ; and a dreadful perfecution of the latter en. fued. The northern nations over-ran the Roman dominions in a more formidable manner than ever; and the empire began to be ufurped by a multitude of petty leaders, each of whom, neglecting the general fate, Set vale 49 ? a up for himfelf. To add to thefe calamities, the Perfians, taicen priunder their king Sapor, invaded Syria; and coning faner, and into Mefopotamia, took the unfortumate Valerian pri-fuitel by
foner, the s'r-

\section*{\(R \quad \mathrm{O} \quad \mathrm{M}\)}
foner, as he was making preparations to oppoie them. Nothing can exceed the indignities, as well as the cruelties, which were practifed upon this unhappy monarch, thus fallen into the hands of his enemies. Sapor, we are told, always ufed him as a fooctool for mounting his horfe; he added the bitternefs of ridicule to his infults, and ufually obferved, That an attitude like that to which Valerian was reduced, was the beft flatue that could be erected in honour of his victorg. This horrid life of infult and fufferance continued for feven years, and was at length terminated by the cruel Perfian's commanding his prifoner's eyes to be plucked out, and afterwards cauling him to be flead alive.
The news of the defeat of the Roman ariny by the Perfians, and the captivity of Valerian, no fooner reached the barbarous nations at war with Rome, than they poured on all lides into the Roman tenitories in incredible multitudes, threatening the empire, and Rome itfelf, with utter deftruction. The Goths and Seythians ravaged Pontus and Afia, commotting cvery where dreadful devaftations; the Alemanni and Franks having over-sun Rhetia, advanced as far as Ravenua; putting all to fire and frood; the Quadi and Sarmatians feized on great part of Dacia and Pannonia; thile other barbarous nations, invading Spain, made themfelves mafters of Tarraco and other impertant places in that province. In the mean time Gallienus, the fon of Valerian, having promifed to revenge his father's captivity, and reprefs the barbarians, was chofen emperor without any oppofition. He was at that time in Gaul ; but halteued into Italy, from whence he drove out the barbarians, cither by the terror of his approach, or by overcoming them in battle. In Dacia and Pannonia, alfo, the barbarians were driven back by Regillianus, who commanded there, and who is faid to have gained feveral viEtories in one day.

But in the mean time, one Ingenuus, a man of great reputation in war, and univerfally beloved both by the people and foldiery, caufed himfelf to be proclaimed emperor in Pannonia, where he was gencrally acknowled. ged as well as in Mcefia. Gallienus no fooner heard of his revolt, than he marched from the neighbourhocd of Ravenna, where he then was, into Illyricum, engaged Ingenuus, and put him to fight. Some authors tell us, that Ingenuus was killed after the battle by his own foldiers; whilc others affirm, that he put an end to his own life to avoid falling into the hands of Gallienus, who ufed his victory with a cruelty hardly to be paralIelled. The following letter to Verianus Celer, one of his officers, will thow the difpofition of this emperor : " I fhall not be fatisficd (fays he) with your putting to death only fuch as have borne arms againft me, and might have fallen in the field: you muft in every city deltroy all the males, old and young; fpare none who have wifhed ill to me; none who have fpoken ill of me the fon of Valerian, the father and brother of princes. Ingenuus emperor! Tear, kill, cut in pieces without mercy : you undertand me; do then as you know I would do, who have written to you with my own hant." In confequence of thefe crvel orders, a moit dreadful havock was made among that unhappy people ; and, in feveral cities, not one male child was left alive. The troops who had formerly ferved under Ingenuus, and the inhabitants of Mifefia who had efcaped the general
flaughter, provoked by the \(\int\) cruclties, proclaimed Re- Rons. gillianus emperor. He was a Dacian by birth, defcended, as was faid, from the celebrated king Decebalus whon Trajan had conquered; and had, by feveral gallant actions, gained reputation in the Roman armies. After he was proclaimed emperor, he gained great advantages over the Sarmatians; but was foon after murdered by his own foldiers. Thefe revolts were quickly followed by many others. Indeed it is not furprifing, at a time when the reins of government were held with fo loofe an hand, that a crowd of ufurpers thould itart up in every province of the empire. The great number of ufurpers who pretended to the empire about this time have been dititinguifted by the name of the thirty trrants. However, there were only 19; viz. Thic chires Cyriadts, Macrianus, Balifa, Udenatus, and Zenobia? rants. in the eaft: in Gaul, and the weftern provinces, Pottlumus, Lolliamus, Victorinus and his mother Victoria, Marius, and Tetricus; in Illyricum, and on the confines of the Danube, Ingenuus, Regillianus, and Aureolus ; in Pontus, Saturninus ; in Muria, Trebelianus; in Theffaly, Pifo; in Aclaia, Valens; in Egypt, Amilianus: and in Africa, Celfus. Several of thefe pretenders to the empice, however, though branded with the opprobrious appellation of tyrants, were eminent examples of virtue, and almoft all of them were poffeffed of a confiderable fhare of vigour and ability. The principal reafon affigned for their revolt was, the infamous character of Gallienus, whom neither offeers nor foldiers could bear to ferve. Many of them, howsever, were forced by the foldiers to alume the imperial dignity much againit their will. "You have lof,", faid Saturninus to his foldiers when they inveited him with the purple, "a very ufeful commander, and have made a very wretched emperor." The apprehenfions of Saturninus were juftified by the event. Of the 19 ufurpers already mentioned not one died a natural death; and in Italy and Rome Gallienus alone coutinued to he acknowledged empercr. That pince indeed honoured Odenatus prince of Palmyra with the title of Augufur, who continued to poffefs an independent fovereignty in. the eaft all his lifetime, and on his death tranfnitted it to his wife Zenobia. See Palmyra.

The confequences of thefe numerous ufurpations Fataicunfewere the moft fatel that can be conceived. The elec-quences of tions of thefe precarious emperors, their life and death, hefe ulurwere equally deftructive to their fubjects and adher pation: rents. The price of their elevation was infantly paid to the troops by an immenfe donative drawn from the exhauted people. However virtuous their character, and however pure their intentions might be, they found themfelves reduced to the neceffity of fupporting their ufurpation by frequent acts of rapine and cruelty, When they fell, they involved armies and provinces in their fall, as appears from the letter of Gallienus already quoted. Whill the forces of the flate were difperfed in private quarrels, the defencelefs provinces lay expofed to every invader. The bravelt ufurpers were compelled, by the perplexity of their fituation, to conclude dibonourable treaties with the barbarians, and even to fubmit to Mameful tributes, and introduce fuch numbers of barbariaus into the Roman fervice as feencd fufficient at once to everthrow the empire.

But when the empire feemed thus ready to fluk at once, it fuddenly revived on the death of Callienus, who was murdered by Martian, one of his own generals, while lie befieged Aareolus, one of the tyrants, in Milan. His death gave gencral fatisfaction to ell, except his foldiers, who hoped to reap the reward of their treachery by the flunder of Milan. But Leing fruftrated in thefe expectations, and in fome menfure kept within bounds by the largetles of Martian, Flavius Clandius was nominated to lucceed, and joyfully accepted by all orders of the flate, and his tille confirmed by the fenate and the people.

We are not fufficiently affired of this emperor's lineage and conntry. Some affirn that lie was born in Dalmatia, and defcended from an ancient family there; others affert that he was a Trojan ; and others, that he was fon to the emperor Cordian. But, whatever might have been his defcent, his merits were by no mans doubtful. He was a man of great valour and conduet, having performed the molt eminent fervices againt the Goths, who had long continued to make irmptions into the empire. He was now about 55 years old, equally remarkahle for the ftrength of his hody and the vigour of his mind; he was chalte and temperate, a rewarder of the good, and a fevere punifuer of fuch as tranfgreffed the laws. 'Thus endowed, therefore, he in fome mafure put a fop to the precipitate decline of the empire, and once inore feemed to reftore the glory of Rome.
His firf fuccefs, upon being made emperor, was againt Aureolus, whom he defeated near Milan. His next expedition was to oppofe the Goths, againitt whom he led a sery numerous army. Thefe bartharians had made their principal and mont fucceffful irruptions into Thrace and Macedonia, fwarmed over all Greece, and llad pillaged the famous city of Athens, which had long been the fchool of all the polite arts to the Romans. The Goths, however, had no veneration for thofe embellifhnents thas tend to foften and humanize the mind, but deftroyed all monuments of talte and learning with the moit favage alacrity. It was upon one of thefe occafions, that, having heaped together a large pile of books in order to burn them, one of the commanders difluaded them from the delign, alleging, that the time which the Grecians firould watte on books would ouly render them more unqualified for war. But the empire feemed to tiemble, not only on that fide, but almoft on every quarter. At the fame cine, abuve 300,000 of thcfe barbarians (the Heruli, the Trutangi, the Virturgi, and many namelefs and uncivilized nations) came down the river Danube, with 2002 fhips, frauglit with men and amsernition, fipreading terror and devaltation on every fide.

In this Rate of univerfal difmay, Claudins alone feemed to continue unflaken. He narched his difproportioned army againft the favage invaders; and though Lut ill prepared for fuch an engagement, as the forces of the empire were then emplayed in different parts of the world, he came off vieturious, and made an incredible flauglter of the enemy. The whole of their great army was cither cut to pieces or taken prifuners : houfes were filled with their arins; and farce a province of the empirc, that was not furnifhed with flaves from thofe that furvived the cefeat. Thefef fuccefies were followed by many others in different parts of the enpire; fo that
the Goths, for a confiderable time after, made but a feeble oppufition. He fome time after marehed againft the revolted Gcrmans, and overthrew them with conflderable flanghter. His latt expedition was to oppofe ITetricus and Zenobia, his two puifant rivals in the empire. But on his march, as he approached near Sirmium, in Pannonia, he was feized with a peltilential fever, of which lie died in a few days, to the great regret of his by At At fulbjects, and the irreparable lofs of the Roman em-lian. pire. His reign, which was not quite two ycars continuance, was active and fucceffful; and fuch is the character given of him hy hiftorians, that the is fuid to have united in liminfelf the moderation of Auguttus, the valour of Trajan, and the piety of Aistosinus.
Inmediately after the death of Claudins, the army made unanimons choice of Aurelian, who was at that time maller of the horfe, and effectined the molt valiant conunander of his time. However, his promnotion was not without oppofition on the part of the fenate, as Quintillus, the brother of the deceafed emperor, put in his claim, and was for a while acknowled yed at Rome. But his authority was of very flort duration; for finding limfalf abandoned by thofe who at frit indligated him to declarc for the throne, hic clofe to prevent the feverity of lis risal by a olluntary death, and canting his veins to be opened, expired, after having reigned but 17 days.

Aurclian becing thus univerfaily acknowledged by all the thates of the empire, affiumed the command, with a greater thow of power than his predecefiers had enjoyed for fonte tinie before. This active monarch was bon of mean and obfecure parcutares in \(1 \mathrm{D}_{\mathrm{a}}\) cia, and was aloout 55 years old at the time of his coming to the throne. He had fpent the early part of his life in the army, and had rifen through all the gra. dations of military duty. He was of unflaken courage and amazing flrength; lie in one engagement killed to of the enemy with his own hand, and above 900 at feveral different times. In fhort, his valour and expedition were fuch, that he was compared to Julius Crefar; and, in fact, only wanted mildneff and clemency to be every way his equal.

The whole of this monarch's reign was fpent in repreffing the irruptions of the northern nations, in humbling every other pretender to the empire, and punifhing Lhe monftrous irregularities of his own fubjects. He deffeated the Marcomanni, that had invaded Itty, in three feveral engagenents, and at length tutally deflroyed tieit army. He was not lefs fucceffull againtt Zenobia, the queen of the Eaft, a woman of the moft heroic qualifications, who had lung difctaimed the Roman power, and ellablifined an empire of her own, as is related under the atticle Palmyra.

Aurelian having thus brought back peace to the empire, endeavoured, by the rigours of jultice, to bring back virtue alio. He was very friet in punifhing the crimes of the foldiery : in his orders to his lientenants, he infiffed that the peafants flould not be plunderce upon any pretences; that not even a grape, a grain of falt, or a drop of oil, flould be exacted unjufly. He caufed a foldier, who had committed adtultery with his holtefs, to have his feet tied to the tops of two trees, furcilly bent at top to meet each other ; which being let loofe, and !uddenly rccoiling, tore the

\section*{R O M}
criminal in two. This was a fererity that might take the name of cruelty; but the vices of the age, in fome meafure, required it. In thefe punilhments in. flicted on the guilty, the Chriftians, who had all along been growing nore numerous, were fharers. A aainit thefe he drew up feveral letters and edicts, which fhowed that he intended a very fevere perfecution; but if we may believe the credulous hillorians of the tines, he was diverted juit as he was going to fign them by a thundesbolt, which fell fo near his perfon, that all the people judged him to be deftroyed.

But, however Heaven might have interpofed on this occalion, it is certain that his feverities at laft were the caufe of his deitrution. Meneflhus, his principal fecretary, having been threatened by him for fome fault which he had committed, began to confider how he might prevent the meditated blow. For this purpofe, he forged a roll of the names of feveral perfons, whom he pretended the emperor had marked out for death, adding his own to frengthen him in the confidence of the party. The feroll thus contrived was fhown with an air of the utmoft fecrecy to fome of the perfons concerned ; and they, to procure their fafet y , immediately agreed with hin to deftroy the emperor. This refohition was foon put in execution : for, as the emperor paffed with a [mall guard from Uraclea, in Thrace, towards Byzantium, the confpirators fet upon him at once, and flew hin with very Imall reffilance. He was flain in the 6oth, or, as fome fay, in the 63d year of his age, after a vely active reign of almolt five years.

The number of pretenders to the throne, which hat formerly infelted the empire, were, by the laft monareh's aetivity, fo entirely removed, that there now feemed to be none that would venture to declare himfelf a candidate. The army referred the choice to the fenate ; and, of near cight months elapfed in thefe negociations. At length, however, the fenate made choice of Tacitus, a man of great merit, and noway ambitious of the honours that were offered him. Upon being folicited to accept the empire, he at firlt refufed, and retired to lis country-houfe in Carr pania, to avoid their importunities: but being at length prevailed upon, he accepted the reins of govemanent, being at that time 75 years old.

One of the firit afts of his government was the puniflment of thofe who had confpired againft the late emperor. Menellhus was impaled alive, his body being thrown to be devoured by wild beafts; his eftate allo was confifeated to the exchequer; and his ready money, which was very confiderable, applied towards paying the army. During this fhort reign, the fenate feemed to have a large thare of authority, and the hiforians of the times are liberal of their praifes to fuch emperors as were thus willing to divide their power. Tpon endeavouring to obtain the confulfhip for his brother Probus, he was refufed it by the fenate; at which the feemed no way moved, but calmly remarked that the fenate belt knew whom to choofe. This moderasion prevailed in all the relt of his conduct : he was exeremely temperate; his table was plain, and firnithed with nothing expenfive; he even prohibited his ennprefs from wearing jewels, and forbad the ufe of gold and embroidery. He was fond of learning, and the znemory of fuch men as had deferved well of their - Vol. XVI. Part II.

\section*{\(\mathrm{R} O \mathrm{M}\)}
country. He particularly efteemed the works of his namefake Tacitus the hiftorian; commanding that they \(\underbrace{\text { Ran.e. }}\) fhould be placed in every public library throughou: the empire, and that many copies of them fhould be tranfcribed at the public charge. A reign begun with fuch moderation and jufice, only wanted continuance to have made the empie happy; but aiter enjoying the 502 empire about fix months, he died of a fever in his His data rarch to oppore the Perlians and Seythians, who had invaded the eaftern parts of the empire.

Upon the death of Facitus the army feemed divided in the choice of an emperor ; one part of it chofe Floianus. brother to the deceafed; but the majority were for fome tine undetermined. They alleged amongit each other the neceffity of chooling one eminent for valour, honour, piety, clem=ncy, and probity; but the lat virtue being that chiefly infiled upoin, the whole army, as if by common confent, cried out that Probus fhould be emperor. He was accordingly confirmed in thio dignity with the ufual folemnities: and Flarianus finding himfelf deferted, even by thole legions who had promifed to fand up in his fupport, opened his arteries and bled himfelf to death.

Probus was 41 rears old when hes 503 throne, being born of noble parentage at Sirmium in fed to the l'annonia, and bred up a fuldier from his youth. He empire. begañ early to diflinguith himfelf for his difcipline and valour ; being frequently the firft man who in befieging towns faled the walls, or that burt into the enems's camp. He was no lel's remarkable for lingle combats, and faving the lives of many eminent citizens. Nor was his activity and courage, when elected to the empire, lefs apparent, than in his private fation. He firft reproffed the Germans in Gaul, of whom he few 400,000. He then marched into Dalmatia, to oppole and fubdue the Sarrrictians. From thence he led his forees into Thrace, and forced the Goths to fue for 508 peace. He after that turned his arms towards A fia; His confubducd the proviuce of Ifuria; and marching on-g:etts. ward, conquered a people called the Blemycs:- who, leaving their native forells of Ethiovia, had poffeffed themfelves of Arabia and Judea, and had continued in a thate of rebellion fince the reign of Gallicnus. Narfis allo, the king of Perfia, fubmitted at his approach : and upon his return into Europe, he divided the depopuhated parts of Thrace among its barbarous invaders: a circumfance that alterwards produced great calamities to the empire.

His dilirence was not lefs confpicunus in fupprefing inteftine cumn otions. Saturninus, being compuled by the Esptians to declare himfelf emperor, was deteated and fain. I'roculus alfo (a perfon remarkable only for his great attachment to women, and who houfed in a kitter, that, having taken 100 Sarmatian virgins prifo. arrs, he deprived ten of that mame in one night, and a!! the selt within a fortnight) fet up againt the emperor; but was compelled to fly, and at length delice:ed up by the Germans. A: the lame time Conofus (who u as a remarkable votary to Bacchus, being able to drink as :nuch wine as ten could do, without being difordered ) rebelled, and being overcome hanged himfelf in defpair. Probus, when he faw him immediately after his death, could not avoid pointing to him, and faying, "There hangs nut a man but a cak." Still, howewer, notwithtanding every cffort to give quict to the expire, the barbarians who furroumled it kept it in continual alarins. They were frequently repulfed into their native wilds, but they as certainly returned with fref rage and increafed ferocity. The Goths and Vandals, finding the cmperor engased in quelling domeflic difputes, renewed their accuitomed inroads, and once more telt the punifhment of their prefumptions. They were conquered in feveral engagements; and Probus returned in triumph to Rome. His active temper, however, would not fuffer him to continue at reft whillt a fingle enemy was latt to conquer. In his laftexpedition he led his foldiers argainft the Perfians; and going through Sirmium, the place of his nativity, he there employed feveral thoufands of his foldiers in draining a fen that was incomrodions to the inhabitants. The fatigues of this undertaking, and the great reftraint that was laid fpiracy, which ended in his ruin: for taking the opportunity as he was marching into Greece, they fet upon and flew him after he had reigned fix years and four months with general approbation.

Carus, who was protorian prefect to the deceafed
and yet at the fame time oppofing the new-made emperor, the competitors led their forces into Mafia; where Dioclefan being victorious Carinus was flain by a tribune of his own army, whofe wife he had formerly abuled.

508
Diuclefian was a perfon of mean birth; being ac-nioclefiat counted, according to fome, the fon of a ferivener; and raifed to of a llave, according to others. He received his name the em from Dioclea, the town in which he was born; and pire. was about 40 years old when he was eleeted to the empire. He pardoned all who had joined Carinus, without injuring either their fortunes or honours. Confcious alfo that the weight of empire was too heavy for one alone to fuftain, he took in Maximian, his general, as a partner in the fatigues of duty, making him his. cqual and companion on the throne. Thus mutually Take- \(\mathrm{Ma}_{3}\) aftitling each other, theefe two continued to live in ferict ximan for friendihip; and though fomewhat differing in temperhis partues (as Maximian was rather a man of vicious inclinations), yet they concurred in promoting the gencral good, and humbling their enemies. And it muft be oblerved, that there never was a period in which there were more numerons or formidable enemies to oppole.

The peafants and labourers in Gaul made a dange- In 5 ro rous infurrection, under the conduct of Amandus and tions, and Helianus, but were fubdued by Maximian. Achilleus, other calawho commanded in Egypt, proclaimed himfelf empe- mitie. ror ; and it was not without many bloody engagements that he was overcome, and condemned by Dioclefian to be devoured by lions. In Africa, the Roman legions, in like manner, joined with many of the natives, fized upon the publie revenues, and plundered thofe who continued in their duty. Thefe were alfo fubdued by Maximian; and, after a long dubious war, conftraned to fue for peace. About the fame time, a principal commander in Britain, named Caraufius, proclained himfelf cmperor, and polfeffed himfelf of the illand. To oppofe this general's clains, Maximian made choice of Confantills Chlorus, whom he created Crefar, and marricd to 'Theodora hirs daughter-in-lw. He, upon his arrival in Britain, finding Carantius very frong, and continually reinforced from Germany, thought proper to come to an accommodation; fo that this ufurper continued for feven years in quitt poffeflion of the whole ifland, till he was flain by Alectus, his friend and intinate. About this time allo, Narles, king of Perfia, began a dangerous war upon the enrpire, and invaded Mefopotamia. To ftop the progrefs of the enemy upon this quarter, Dioclefian made choice of Galerius (furnamed Armentarius, from the report of lis. being born of a cow-herd in Dacia) ; and he likewife was created Cæfar. His fuceefs alfo, though very doubtful in the beginning, was in the end terminated according to his wifhes. The Perlians were overcome in a decifive engagement, their camp plundered and taken, and their king's wives and children made prifoners of war. There only remained, of all the enemies of the Roman empire, thofe who lay to tbe northward unfubducd. 'Thefe were utterly unconquerable, as well upon account of their favage fiercenefs, as the inhofpitable feverity of the climate and foil from whence they iffued. Ever at war with the Romans, they iffued forth, when the armies that were to reprefs their inva. frons were called away; and upon their return, they as fuddenly withdrew into cold, barren, and inacceffible

\section*{R O M}
me. places, which only themfelves could endure. In this manner the Guths, Sarmatians, Alani. Quadi, \&ec. poured down in incredible numbers; while every defeat feemed but to increafe their Atrength and perfeverance. Of thefe, multitudes were taken prifoners, and fent to people the more forthern parts of the empire; ftill greater numbers were deflroyed; and though the reft were driven back to their native forefts, yet they continued ever mindful of their inveterate enmity, and, like a favage beatt, only continued inactive, till they had licked their wounds for a new encounter.

During this interval, as if the external miferies of the - empire were not fufficient, the tenth and laft gretit perfecution was renewed againft the Chriftians. This is faid to have exceeded all the former in feverity : and fuch was the zeal with which it was purfued, that, in an ancient infcription, we are informed that they had effaced the name and fuperftition of the Chrittians, and had reftored and propagated the worfhip of the gods. Their attempts, however, were but the malicious efforts of an expiring party; for Chriftianity fhortly after was its enemies. In the midit of the troubles raifed by this perfecution, and of the contelts that Atruck at the internal parts of the ftate, Dioclefian and Maximian fur- prifed the world by refigning their dignities on the fame day, and both retiring into private ftations. Hiftorians are much divided concerning the motives that thus induced them to give up thofe honours which they had purchafed with fo much danger. Some afcribe it to the philofophical ture of Diociefian ; and others, to his being difgufted with the obftinacy of his Chriftian fubjects: but Lactantius afferts, that he was compelled to it, together with his partree, by Galerius, who cowing to Nicomedia, upon the emperor's recavery from a great ficknefs, threatencd him with a civil war in cafe he refuicd to refign. However, of this we are well affured, that he Rill preferved a dignity of fentiment in his retirement, that might induce us to believe he had no other nootive for refignation than the love of quiet, and the confcioufnefs of his inability to difcharge on a fick-bed the duties of a fovereign. Having retired to his birth-place, he fpent his time in cultivating lis garden, affuring his vifitors that then only he began ta enjoy the world, when he was thought hy the reft of mankind to forfake it. When alfo fome attempted to perfuade tim to refume the empire, he replied, That if they knew his prefent happinefs, they would rather endeavour to initate than difturb it. In this contented manner he lived fome time, and at lat died either by poiion or madnefs, it is uncertain which. His reign, which continued 20 years, was active and ufeful; and his authority, tinctured with feverity, was well adapted to the depraved fate of morals at that time.

Maxinian, his partner in the empire and in refignation, was by no means fo contented with his fituation. He longed once more fur power, and diturbed the two fucceeding reigns with various efforts to refume it; attempting to engage Dioclefian in the fame defign. Bcing ubliged to leave Rome, where he had bred great confulion, he went over into Gaul, where he was kind\(1_{\text {y }}\) received by Conflantine, the then acknowledged emperor of the weft. But here alfo continuing his intrigues, and endeavouring to force his own daugher and dettroy her huiband, he was deteeted, and condunn.
ed to die hy whatever death he fhould think proper ; and Lactantius tells us that he chofe hanging.
Upon the refignation of the two emperors, the two

Upon the refirgnation of the two emperors, the two \(\mathrm{Sonfan}^{513}\) Cæfars whom they had formerly chofen were univer-tiun, \(\mathrm{CH}_{1} \mathrm{l}_{\mathrm{s}}\) fally acknowledred as their fuceeflors. Confantius rus, and Chlorus, who was fo called from the plainnefs of his cialerise. complexion, was virtuous, valiant, and merciful. Ga. \({ }^{\text {earee orb. }}\) lerius, on the other hand, was brave, but brutal, incontinent, and cruel. As there was fuch a difparity in their tempers, they readily agreed, upon coming into full power, to divide the empire; Conflantius being appointed to govern the weftern parts; namely, Italy, Sicily;, the greatelt part of Africa, together with Spain, Gaul, Britain, and Germany: Galerius had the catern parts allotted to his Thare; to wit, Illyricum, Pannonia, Thrace, Macedonia, all the provinces of Greece, and the Leffer Afin, together with Egypt, Syria, Judea, and all the countries eaftward. The greatnefs of the divifion, however, foon induced the emperors to take is two partners more, Severus and Maximin, who were made Crefars, and affilted in the conducting of affairs ; fo that the empire now was under the guidance of four perfons, all invefted with fupreme authority.

We are informed but of few particulars of the reiga of Conitantius, except a detail of his character, which appears in every light moft amiable. He was frugal, chalte, and temperate. His mercy and juftice were equally confpicuous in his treatment of the Chritians, whom he would not fuffer to be injured; and when at length perfuaded to difplace all the Chritian officers of his houfchold that would not change their seligion, when fome of them complied he fent them away in difgrace; alleging, that thofe who were not true to their God, would never be faithful to their prince.

In the fecond year of his reign he went over into Britain; and leaving his fon Conftantine as a kind of hoftage in the court of his partner in the empire, took up his relidence at York. He there continued in the practice of his ufual virtues; till falling fick, he began to think of appointing his fon for his fuccefor. He accordingly fent for him with all fpeed; but he was patt recovery before his arrival : notwithttanding, he received him with marks of the ntmolt affection, and railing himfelf in his bed, gave him feveral ufeful inftructions, particularly recommending the Chrittians to his protection. He then bequeathed the empire to his care ; and crying out, that noue but the pious Comftantine fhould fueceed him, he expired in his arms.

In the mean time, Galerius, his particer in the empire, being informed of Conftantiree's advancenent, teftified the moft ungovernable rage, and was even going to condemn the meflenger who brouglit him the account : but being difiuaded, he feemed to acquiefee in what he could not prevent, and fent him the marks of royalty; but at the fame time declared Severus emperor, in op. pofition to his interefts. Jutt about this time alfo, anotlier pretender to the empire flarted up. This was 514 Maxentius, a perfon of mean extriction; but very nuch ufurps the favoured by the foldiers, whom he permitted to pillage throne. at diferetion. In order to oppofe Maxentins, Severus led a numerous army towards the gates of Rume; but lis foldiers confidering againft whom they were to fight, immediately abanduned him; and thortly after he put an end to his own life, by opening his veirs. T'o revenge his death, Galerius marched into Italy, re*

\section*{R O M}
protection. After this, he confulted with feveral of the principal teachers of Chriftianity, and nade a public avowal of that facied perfuation.

Conllantine having thus attached his foldiers to his intereft, who were moftly of the Chrittian perriation, loft no time in entering Italy with 90,000 foot and 8000 horfe; and foon advanced to the very gates of Rome. The unfortunate Maxentius, who had long gi- Maxens ven himelf up to cafe and debauchery, now began to make preparations when it was too late. He firk put add in practice all the fuperflitions rites which paganifm taught to he neceffiary; and then confulted the Sibylline books; from whence he was infurmed, that on that great day the enemy of Rome thould perifh. This prediction, which was equivocal, he appliced to Conllantine: wherefore, leaving all things in the beft pofturc, lee advanced from the city witl an army of 100,000 foot and 18,000 horie. The engagement was for fome time fierce and bloody, till his cavalry being routed, victory declared upon the fide of his opponent, and he himfelf was drowned in his flight by the breaking down of a bridge as he attempted to crofs the river Tiber.

Conftantine, in confequence of this sictory, entering the city, difclamed all praifes whieh the fenate and people were ready to offer; afcribing his fuccefs to a liperior power. He even caufed the crofs, which he was faid to have feen in the heavens, to be placed at the right of all his ftatues, with this infcription: "That under the inflnence of that viciorious crofs, Confantine had delisered the city from the yoke of tyrannical power, and bad reftored the fenate and prople of Rome to their ancient authority." He afterwards ordained. that no criminal fhould for the future fuffer death by the crofs; which had formenly been the mort ufual way of punifhing flaves conricted of capital offences. Edicts were foon after iffued, declasing that the Chritlians fhould be eafed from all their grievances, and received into places of truft and authority. Thus the new religion was feen at once to prevail over the whole Roman empire; and as that enormous fabric had beea built and guided upon pagan principles, it loft a great deal of its Itrength and coherence when thofe principies were thus at once fubverted.

Things continued in this fate for fome time, Conftantine all the while contributing what was in his power to the intertil of religion, and the revival of learning, which had long been upon the decline, and was almott wholly extinct in the enipire. But in the midit of thele affiduities, the peace of the empire was again diturbed by the preparations of Maximin, who governed in the ealt, and who, defirous of a full participation of power, marched againft Licinius with a very numerous army. In confequence of this Atep, after many conflicts, a ge- Maximin neral engagenient enfued, in which Maximin fuffered a defeat and totai deleat ; many of his troops were cut to pieces, death. and thofe that farvived fubmitted to the conquerca. Maxinin, howevcr, having efcaped the general carnage, once more put himfelf at the head of another army, refolving to try the fortune of the field; but death prevented his defign. As he died by-a very extraoidinary kind of maducts, the Chriftians, of whom he was the declared enemy, did nut fail to afcribe his end to a judgment from heaven; but this was the age in which falle judgments and talie miracles made up the bulk of their unintructive hiftory.

Cons

\section*{\(\begin{array}{llllll}R & 0 & \text { M } & 453 & 1\end{array}\)}

Contentine and Licinius thus remaining undilputed polfeltors and partners in the empire, all things piomifid a peaceable continuance of friendimip and power. However, it was foon found, that the fare ambition that aimed after a part, would be contert with nothing lefs than the whole. Pagan writers afcribe the rupture between thefe two potentates to Conltantine; winle the Chritians, on the other hand, impute it wholly to Licinius. Both, perheps, might have concurred: for Licinius is convicted of having perfecuted Chritianity, which was fo highly favoured by bis rival: and Confantine is known to bave been the firit to berin the preparations fer an open rupture. Both fides exerted all their power to make oppofition : and at the head of very formidable armies, came to an en ragement near Cybalis, in Pannonia. Conftantine, previous to the battle, in the middt of bis Chritian binops, begged the affifance of Heaven ; while Licinius, with equal zeal, called upon the pagan priefts to intercede with the gods in his favour. Conftantine, after an obftinate refiftance from the eneny, became victorious; took their camp; and, after forne time, compelled Licinius to fue for a truce, which was agreed upon. But this was of no lons continuance; for foon after, the war breaking out afreh, and the rivals conning once more to a general engagement, it proved decifive. Licinius was entirely defeated, and purfued by Conltantine into Nicomedia, where he furrendered himfelf up to the sictor; having firf obtained an oath that his life gould be fpared, and that he haouid be permitted to pals the remainder of his days in retirement. This, however, Conftantine fhotly ater broke; for either fearing his defirgns, or finding him actually engaged in freth confpiracies, he commanded him to be put to death, together with Martian his general, who fome time before had been cicated Cxfar.

Conflantine being now fole monarch of the empire, without a rival to divide his powet, or any perfon from whofe claims he conld have the leatl apprehenfions, refolved to eftablifh Chriftianity on fo fure a bafis, that no תew regulations thould make it. He commanded that in all the provinces of the empire the orders of the bifhops fhould be exactly obeyed; a privilege of which, in fucceeding times, thefe fathers made bent a very indifferent ufe. He called alfo a general council of thefe, to meet at Nicea, in ordet to reprefs the herefies that had already crept into the church particularly that of Arius. To this place repaired about 318 bihops, befides a mulltitude of prebyters and deacons, together with the emperor himfelf; who all, to about 1 ?, concurred in condemning the tenets of Arius; who, with his affuciates, was banifhed into a remote part of the empire.

Having thus reftored univerfal tranquillity to the empire, he was not able to ward off the calamities of a more domeltic nature. As the hillories of that period are entirely at variance with each other, it is not eafy to tell the motives which induced him to pur his wife Faufta and his fon Cripus to death. The moft plaufible account is this: Faulta the emprels, who was a woman of great beauty, but of extravagant defires, had long, though fecretly; loved Crifpus, Conftantine's fon by a former wife. She had tried every art to infpire this youth with a mutual paffion; but, finding her more diftant cffo:ts ineffectual, had even the confidence to smake him an open confeflion of her defires. This pro-
diseed an explamation, which was fatal to both. Criipus received her addrefles with deteltation; and the, to be revenged, acculed him to the emperor. Confantire, fired at once with jealoufy and yave. ordered him to die without a leering; nor did his innocence appear till it was too late for redrefs. 'Ilie only reparation therefure that remained, was the putting Fauta, the wicked intrument of his former crucley, to death; which was aecordingly executed upon her, together with force others who had been accompliees in her falichood and treachery.

But the private misfortunes of a few were not to be weighed againft evils of a more genera! sature, which the Roman empire fortly after experienced. Thefer a: fer arofe from a meafure which this emperor conceived and the fea: of executed, of transferring the feat of the empire fromenipe to Rome to Byzantium, or Cignitaruinople. as it was af. Co hac:io terwards called. Whatever might have been the rea- \({ }^{\text {Dide. }}\) ions which induced lim to this undertakiny; whetler it was becaufe he was ofended at fune afronis he received at Rome, or that he fuppoled Contansinople more in the centre of the empire, or that he thought the eatern parts more required his prefence, experience has thown that they were weak and rroundels. The e npire had long betore been in the mof declining tlate; but this in a great meafure çave precipitation to its downfall. Afier thas it never reluned its furmer fplendor, but banuihed.

His fint defign was to build a city which he might make the capital of the world; and for the purpuie, he made clavice of a fituation at Chalcecton in Alia Minor; but we are told, that in layins out the ground. plan, an eagle caught up the line and ftew with it over to Byzantiun, a city which lay upos the oppolite lide of the Bosphorus. Here, therefore, it was thought expedient to fix the feat of the empire ; aud indeed nature feems to have formed it with all the coavenierces and all the beauties which might induce \(p\) wer to makerit ilue feat of refidence. It was lituated on a plain that rofe gently from the water; it commanded that Atrait which unites the Mediterranean with the Euxine fea, and was furnifhed with all the advatages whoch the r oll indulgent climate could bellow. Ihis city, therefore, he beautified with the mofe magnificent edifices; he divided it into \(1+\) regions ; buslt a capitol, an amphitheatre, many churches, and other public works; and having thus rendered it tqual to the magni cence of his idea, he dedicated it in a very folemn manner to the God of martyrs ; in about two years after, repairing thither with his whole e surt.

This removal produced no immedrate alteration in the government of the empire; the inhabitants of Rome, tho' with relu iance, lub nitted to the charge; nor was there for two or threc years any didurbance in the itate, until at length the Goths, "ndug that the Ro s.ans had withdrawn all their garrilons along the Danube, renewed their inroads, and ravased the country with unheard-of erucley. C attuntine, however, foon repreffed their incurtions, and fo itraitened them, that near 100,000 of their nu::ber perithed by culd and hunger. Thefe and lome other inlurrecti ns beinf happlly fuppreffed, the government o: the empire was drided as follows. Conffantme, the emperor's eldeft fon, commanded in Gaul and the wetern provinces ; Contantius governed Africa and Ilyrucum ; and

\section*{R O M [ 454 ] \\ \(R \quad \mathrm{O} \quad \mathrm{M}\)}

Rome. Conftans ruled in Italy. Dalmatius, the emperor's brother, was fent to defend thofe parts that bordered upon the Goths; and Amibalianus, his nephew, had the charge of Cappadocia and Armenia Minor. This divifion of the cmpire fill farther contributed to its downfall: for the united ftrength of the fate being no longer brought to reprefs invafions, the barbarians fought with fuperior numbers; and conquered at laft, though often defeated. Conftantine, however, did not live to feel thefe calamitics. The latter part of his reign was peaceful and fplendid; ambaffadors from the remoteft Indies came to acknowledge his authority; the Perfians, who were ready for frefh inroads, upon-finding him prepared to oppofe, fent humbly to defire his friendhip and forgivennefs. He was ahove 60 years old, and had reigned above 30 years, when he found his health began to decline. To obviate the effects of lis diforder, which was an intermitting fever, he made ufe of the warm baths of the city; but receiving no benefit from thence, he removed for change of air to

522 Death of Con fantine. Helenopolis, a city which he had built to the memory of his mother. His diforder increafing, he changed again to Niconsedia; where funding himfulf without hopes of recovery, he caufed himfelf to be baptized; and having fonn after received the facrament, he expired, after a memorable and active reign of 32 years. This monareh's charater is reprefented to us in very different lights: the Chifitian witers of that time adoming it with every frain of panegyric ; the heathens, on the contrary, loading it with all the virtlence of invective. He eftablifhed a religion that continues the blefling of markind; but purfued a feheme of politics that deftroyed the enpire.

From the time of Conflantine to the divifion of the empire between Valentinian and his brother Valens, the hiftory of Rome is related under the article ConstanTinople, where alfo that of the eattern part is carried down to the final deftruction of that city by the Turks. In the beginning of the reign of Valentinian, the province of Libya Tripolitana was grievoully oppreffed by the barbariaus of the defert, and almoft equally fo by Romanus its own governor. His conduct was fo exceedingly opp:effie, that the inhabitants feat a deputation to Valeutinian, complaining of their unhappy fituation, and defiring redreis. Palladius was accordingly fent to inquire into the fate of the province; but being gained over by Romanus, he made a falfe report to the emperor; and thus the unhappy province was left a prey to the mercilefs invaders and rapacions governor. During the relt of this reign the barbarians continued their inroads iato the empire; and anong others, we find the Saxons now putting in for a flare of the fpoils of the ruined empire: however, their army was at this time entirely cut off. At latt Valentinian himfelf took the field againtt thefe northern barbarians; and entering the country of the Quadi, deftroyed all with fire and fword. The barbarians on this were fain to fue for peace in a very humble manner; but Valeutinian, falling into a great paflion while fpeaking to them, threatened to extirpate the whole nation at once. His fury on this occafion produced an apoplexy, or fome other mortal diforder; for he fuddenly lell down, and being couvejed by his attendants into his chamber, he was feized with violent convulfive fits and contortions of all his limbs, in the agonies of which he expired,
in the year 375 , the \(55^{\text {th }}\) of his age, and 12 th of his reign.

After the death of Valentinian, his fon Gratian took upon him the impenial dignity; foon after becoming matter of the whole empire by the death of Valens. The tranfactions of his reign, and thofe of his partner Theodufius, are related under the article ConstantinOple, \(\mathrm{n}^{\circ} 77-89\). The death of Theodofius gave the finifhing ftroke to the Roman affairs; his fon Honorius, to whom he left the weftern empire, being poffeffed of no abilities whatever, and indeed feeming to have been but very little removed from an idiot. The barbarians appear to have been abundantly fenfible of the advantages offered them by the death of Theodofius. He expired in the month of January; and before the acceffion of fpring, the Goths were in arms. The barbarian auxiliaries alfo now declared their independency; and along with their countrymen, furioully affailed the declining empirc. The Goths were now headed by an experienced commander, their celebrated king Alaric ; who would have proved formidable even in better times of the empire. He firt over-ran Greece, which he accomplifhed without oppofition, through the treachery of the governor, who commanded the troups that defended the pals at I'hermopylx to retire at the approach of the enemy. Athens, Corinth, Argos, Sparta, yielded without refiftance; and the whole country was ravaged and deltroyed by the blood-thirity barbarians. At laft, in the year 397, he was oppofed by Stilicho, the general of Honorius, a man of great valour and experience in war. 'The Goths were defeated with great lofs, and afterwards befieged in their canp ; but through miftake or negligence in the Roman commander, they were fuffered to efcape, and make themfelves malers of the province of Epirus. Alaric then, having found means to conelude a treaty with the minifters of Conftantinople, Stilicho was obliged to retire.

Not long after this, Alaric invaded Italy itfelf. The emperor, Itruck with terror, would have abandoned the country and fled into Gaul: but this difgraceful and petnicious meafure was oppofed by Stilicho; who propofed to the court of Honorius, at that time at Milan, that if they would maintain their ground during his abfence, he would foon return with an army capable of oppofing the barbarians. This being agreed to, Stilicho immediately fet out for Rhxtia, where the moft confiderable hody of the Roman forces at that time was, and collected his troops with the utmoft diligence. But in the mean time Honorius was in the grearet danger ; having been obliged to take refuge in the town of Aita in Piedmont. To this place the Goths intantly laid fiege, and a capitulation had been propofed, when the drooping fpirits of Honorius were at once revised by the anrival of Stilicho, whom he had fol long expected. The Goths were now befieged csis in their turn, and obliged to come to a decifive batule fis:ed at: at Pollentia. The engagement lated the whole day; Pollentia. but at laft the Goths were compelled to retreat. Their camp was inftantly invelted; their entrenchments forced with great flaughter; the wife of Alaric was taken, with all the wealth which had been amaffed in plundering Grecce; while many thoufands of Roman prifoners were releafed from the mofl deplorable flavery. The victory, however, was not fo decifive but that A

\section*{R O M}

1e. laric continued fill extremely formidaole: and Stilicho chofe rather to conclude a treaty with hinn, and allow him an annual percoan, than to continue the war with vigour. Alaric, who was not very icrupulous in his obfervance of clis treaty, in his retreat attempted to make himflf mater of the city of Verona: but Stilicho coming up with him near :hat place, gave him a terrible defeat, in which the lofs was litle lefs than it had been at Pollentia; after which he effected a retreat out of Italy, but not without the greatell difficulty and danger.

Italy being theus lappily delivered, Honorius entered Rome in trimph, having Stilicho along with him in the triumphal chariot. On his entry into the city, he al. Jlihed the Kows of gladiators ; which, though fortidden by Coufantine, fad been tolerated by his fucceffors, and even by Theodulus himfelf, out of complaifance to the people, who were beyond meafure fond of that inhuman diverfion. However, foon after, the emperor was obliged to leave the meiropolis and retire
 rians, who now broke in upon the empire on all fides. Such multitules now made their appearance, that it is not a little cifficult to account for their fudden emigration. Mr Gibbon accounts for it from a fuppofed ruolution in the north-eaftern parts of China. "The Chinefe annals (fays he), as they lave been interpreted by the seamed incultry of the prefent age, may be ufefully applied to reveal the feeret and remote caufes of the fall of the Roman empire. The extenfive territory to the north of the great wall was poffeffed, after the High: of the Huns, by the victorious Sienpi; who were fometimes broken into independent tribes, and fometimes re-united under a fupreme chief; till at length ftyling themfelves Topa, or "t mafters of the carth," they acquired a more folid confiftence, and a more formidab!e power. The 'Tupa foon compelled the paftoral nations of the eaftern defert to achnowledge the fuperiority of their arms; they invaded China in a period of weaknels and inteftine difcord; and thele fortunate 'Tartars, adopting the laws and manners of the wancuifhed people, founded an imperial dynalty, which reigned near 160 vears over the no: thern provinces of the nonarchy. Sone generations before they afeended the throne of China, one of the Topa frinces liad enlited in his cavalry a fave of the name of Moko, renowned for his valuur ; but who was tempted, by the fear of punithment, to defert his ftandard, and to range the defert at the head of 100 followers. This gang of robbers and outlaws fwelled into a camp, a tribe, a numerous people, diftinguifhed by the appellation of Geougen; and their hereditary chieftains, the pofterity of Moko the flave, affumed their rank among the Scythian monarchs. The youth Toulun, the greateft of his defcendants, was exercifec by thofe misfortunes which are the fchool of heroes. He bravely Aruggled with adverfity, broke the imperious yoke of the Topa, and became the legiflator of his nation, and the conqueror of Tartary. His troops were difributed into regular bands of 100 and of 1000 men ; cowards were ftoned to death; the molt iplendid honours were propofed as the reward of valour; and Toulun, who had knowledge enough to defpife the learning of China, adopted only fuch arts and inftitutions as were farourable to the military fpirit of his government. His
tents, which lie remored in the winter feafon to a more fouthern latitude, were pitched during the fummer on the fruitful banks of the Selinga. His conquets Atreiched fro \(n\) the Corea far beyond the river Irtifn. He vanquifhed, in the country to the north of the Caf pian fea, the nation of the Huns; and the new title of Kban, on Cagan, exprefled the fame and power which he derived from this memorable victorv.
"The chain of events is interrupted, or rather is con. cealed, as it paffes from the Volga to the Vittula, through the dark interval which ftparates the extreme limits of the Chinele and of the Roman geography: Yet the temper of the barbarians, and the experience of fucceffive emisrations, fuificiently declare, that the Huas, who were oppreffed by the arms of the Geuugen, foon withdrew from the prefence of an iniulting victor. The countrics towards the Euxine were already occupied by their kiadeed tribes; and their hally fight, which they foon converted into a bold attack, would more natura!ly be directed towards the rich and level plains :hrough which the Viftula gently fows into the Baltic fea. "The north mult again have been alarmed and agitated by the invafion of the Huns; and the nations who reteeated before them muil lave prefled with incumbent wieht on the confines of Germany. The inhabitants of thofe regions wich the anciente have afligned to the Suevi, the Vandals, and the Burgundians, might embrace the refolution of abandoning to the Euritives of Sarmatia their woods and morafles; or at lealt of difeharging their fuperfluous numbers on the provinces of the Roman empire. About ©ur years after the victorious Toulun had a〔umed the title of kban of the Geougen, another barbasian, the haughty Rhodogat, or Radagaifus, marched from the northem extremities of Gemany almolt to the gates of Rome, and left the remains of his a:my to atchicve the deilruction of the welt. 'The Vandals, the Suevi, and the Burgundians, formed the Arength of this migthty hoft: but the Alani, who had found an hofpitable reception i:1 their new \(\int\) eats, added their active cavalry to the heary infantry of the Germars; and the Guthic adventu. rets crowded fo eagersy to the standard of Radayaifue, that by fome hiflorians he has been thyied the king of the Gotbs. Twelve thoufand warriors, dillin sufifod above Ratagaithe rulgar by their noble birth of tiecir valiant deels, fos nevades glittered in the van; and the whole maltitude, whels lidy with was not lefs thar, 200,200 figtting men, mithe be in- antsormy. crealed by the aecrifion of women, ut childere, and of dlaves, to the amount of 100,025 prrions. This formidable emigration iffued from the farse coaft of the Buttic which had poured forth the myritds of the Cimbri and Teutones to aflault Rome and Italy in the vigour of the republic. After the denarture of thofe barbatians, their native country, which was matked by the veftiges of their greainefs, long ramparts, and ci. gantic moles, remained during ferse ages a vont and dreary fulitude; till the human frecits was roatered by the powers of generation, and the vacaney was s.11ed up by the influs of new inhabitants. "liae nations who now ufurp an extent of land which they are un. able to cultivate, would foon be affitled by the indu. frious poverty of their neighbours, if the governmens of Europe did not proicet the claims of dommion and property.
"The cortefpondence of natione was in that age fo

Rome.
imperfect and precarious, that the revolutions of the north might efeape the knowled re of the court of Ravenna; till the dark cloud which was collected along the enat of the Baltic burf in thunder upon the banks of the Upper Danube. The emperor of the weft, if his minifters difturbed his amufements by the news of the impending danger, was fatisfied with being the occafion and the fpectator of the war. The fafety of Rome was intrutted to the counfels and the fword of Stilicho; but fuch was the feeble and exhaufted fate of the empire, that it was inpoffible to reftore the fortifications of the Danule, or to prevent, by a vigorons effort, the invafion of the Germans. The hopes of the wizilant minitter of Honorius were confined to the defence of Italy. He ouce more abandoned the provinces; recalled the troops; preffed the new levies, which were rigoroufly exacted, and pufillanimounly ciuded; employed the moft efficacious means to arreft or allure the deferters; and offered the gift of freedom, and of two pieces of gold, to all the flaves who would enlitt. By thefe efforts he painfully collected from the fubjects of a great empire an army of 30,000 or 4 ?,000: men ; whieh, in the days of Scipio or Camillus, would have been iuftantly furnihed by the free citizens of the territory of Rome. The 30 legions of Stilicho were reinforeed by a large body of barbarian auxiliaries ; the faithful Alani were perfonally attached to his fervice; and the troops of Huns and of Coths, who marehed under the banners of their native princes Hulden and Sarus, were aninated by intereft and refentment to oppofe the anabition of Radagaifus. The king of the confederate Germans paffed, without refiltance, the Alps, the Po, and the Appenine: leaving on one hand the inacceffible palace of Honorius, fecurely buried among the marfhes of Ravenna; and on the other, the camp of Stilicho, who had fixed his head-quarters at Ticinum, or Pavia, but who feems to have avoided a decifive battle till he had affembled his dittant forces. Many cities of Italy were pillaged, or deflroyed : and the fiege of Florence by Radagaifus is one of the earlieft events in the hiflory of that celebrated republic, whofe firmuefs checked and delayed the unkilful fury of the barbarians. The fenate and people trembled at their approach within 180 miles of Rome; and anxinully compared the danger which they had efcaped with the new perils to which they were expofed. Alarie was a Chriftian and a foldier, the leader of a difciplined army; who underflood the laws of war, who refpected the fanctity of treaties, and who had faniliarly converfed with the fubjects of the empire in the fame canps and the fame churches. The favage Radaguifus was a ftranger to the manners, the religion, and even the languase, of the civilized nations of the fouth. The fiercenefs of his temper was exafperated by crucl fupertition: and it was univerfally believed, that he had hound himfelf by a folemn vow to reduce the city intn a heap of flones and athes, and to facrifice the moft illuftrious of the Roman fenators on the altars of thofe gods who were appeafed by human blood. The public danger, which thould have reconciled all domettic animofities, difplayed the incurable madnefs of reli rious faction. The oppreffed votaries of Jupiter and Mercury refpected, in the implacable enemy of Rome, the character of a devout pagan; loadly declared, that they were more apprebeofive of the facrifices than of the arms of Radagai-
fus; and fecretly rejoiced in the calamitics of their country, which condemned the faith of their Chrittian adverfaries.
"Florence was reduced to the laft extremity; and the fainting courage of the citizens was fupported only by the authority of St Ambrofe, who had communicated in a drean the promile of a \{peedy deliverance, On a fudden they beheld from their walls the banners of Stilicho, who advanced with his united force to the relief of the faithful city; and who foon marked that fatal fpot for the grave of the barbarian hotl. The apparent contradictions of thofe writers who varioully relate the defeat of Radngaifus, may be reconciled without offering much violence to their refpective teltimonses. Orofius and Augullin, who were intimately connected by friendllip and religion, aferibe this miraculous victory to the providenee of God rather than to the valour of man. They trictly exclude every idea of charice, or even of bloodhed; and politively affirm, that the Romans, whofe eamp was the feene of plenty and idienefs, enjoyed the dittrefs of the barbarians, flowly expiring on the flatp and barren ridge of the hills of Frefule, which rife above the city of Florence. Their extravagant affertion, that not a fingle foldier of the Chrillian army was killed, or even wounded, may be difmiffed with filent contempt; but the relt of the narrative of Auguftin and Orofins is confiftent with the flate of the war and the character of Stilicho. Confcions that he commanded the laft army of the republic, his prudence would not expofe it in the open field to the headifrong fury of the Germans. The method of furrounding the enemy with trong lines of circunvallation, which he had twice employed againft the Gothic king, was repcated on a larger lcale, and with more confiderable effect. The examples of Ceffar muft have been familiar to the most illiterate of the Roman warriors; and the fortifications of Dyrrhachium, which comuected \(2+\) caflies by a perpetual ditel and rampart of 15 miles, afforded the inodel of an intrenchment which might confine and farse the moft numerous hoft of barbarians. The Roman troops hat tefs degenerated from the induftry than from the valour of their anceftors ; and if the fervile and laborious work offended the prise of the foldiers, Tufcany could fupply many thoufand peafants, who would labour, though perhaps they would not fght, lor the falvation of their native country.The imprifoned multitude of horfes and men was gradually deftroyed by famine, lather than by the fword; but the Rumans were expofed, during the progrefs of fuch an extenfive work, to the frequent attacks of an impatient enemy. The defpair of the huugry barbarians would precipitate them againft the fortifications of Stilicho; the general might fometimes indulge the ardour of his brave auxilharies, who eagerly prefied to affault the camp of the Germans: and the fe various incidents might produce the tharp and bloody conflicts which dignify the narrative of Zofimus, and the Chronicles of Profper and Marcellinus. A feafonable fupply ot men and provifions had been introduced into the walls of Florence; and the famifhed holt of Radaraifus was in its tura befieged. The proud monareh of fo mary warlike nations, after the lofs of his braveft warriors, was reduced to confide either in the faith of a capitulation, or in the clemency of Stilicho. Hut the death of the royal captive, who was ignominioufly beheaded, difgraced the triumph of Rome and of Chriltianity ; and

\section*{R O M}
the fhort delay of his execution was fufficient to brand the conqueror with the guilt of cool and deliberate cruelty. The famifhed Germans who efcaped the fury of the auxiliaries were fold as Пaves, at the contemptible price of as many fingle pieces of gold: but the difference of food and climate fwept away great numbers of thofe unhappy ftrangers; and it was obferved, that the inhuman purchafers, inftead of reaping the fruit of their labour, were foon obliged to add to it the expence of interring them. Stilicho informed the emperor and the fenate of his fuccefs; and deferved a fecond time the glorious title of Deliverer of Italy.
" The fame of the vitory, and more efpecially of the miracle, has encouraged a vain perfuafion, that the whole army, or ratber nation, of Germans, who migrated from the fhores of the Baltic, miferably perifhed under the walls of Florence. Such indecd was the fate of Radagaifus himfelf, of his brave and faithful companions, and of more than one.third of the various multitude of Sueves and Vandals, of Alani and Burgundians, who adhered to the ftandard of their general. The union of fuch an army might excite our furprife, but the caufes of feparation are obvious and forcible; they were the pride of birth, the infolence of valour, the jealoufy of command, the impatience of fubordination, and the obflinate conflict of opinions, of interefts, and of parfions, among fo many kings and warriors, who were mataught to yield or to obey. After the defeat of Ra -remail:- dagaifus, two parts of the German hoft, which mult of the have exceeded the number of 100,000 men, fill reny of mained in arms between the Apennine and the Alps, or between the Alps and the Danube. It is uncertain whether they attempted to revenge the death of their general : but their irregular fury was foon diverted by the prudence and firmnefs of Stilicho, who oppofed their march, and facilitated their retreat ; who confidered the fafety of Rome and Italy as the great object of his eare, and who facrificed with too much indifference the wealth and tranquillity of the diftant provinces. The barbarians acquired, from the junction of fome Pannor.ian deferters, the knowledge of the country and of the roads; and the invafion of Gaul, which Alaric had defigned, was executed by the remains of the great army of Radagaifus.
"Yet if they expected to derive any affiftance from the tribes of Germany who inhabited the banks of the Rhine, their hopes were difappointed. The Alemanni preferved a flate of inactive neutrality ; and the Franks diftinguifhed their zeal and courage in the defence of the empire. In the rapid progrefs down the Rhine, which was the firf act of the adminiftration of Stilicho, he had applied himfelf with peculiar attention to fecure the alliance of the warlike Fra.ks, and to remove the irreconcileable enemies of peace and of the republic. Marcomir, one of their kings, was publicly convicted before the tribunal of the Roman magiflrate of violating the faith of treaties. He was fentenced to a mild, but diftant exile, in the province of Tufcany; and this degradation of the regal dignity was fo far from exciting the refentment of his fubjects, that they punifhed with death the turbulent Sunno, who attempted to revenge his brother, and maintained a dutiful allegiance to the princes who were eftablifhed on the throne by the choice of Stilicho. When the limits of Gaul and Germany were fhaken by the northern emigration, the Franks

Vol. XVI. Part II.
bravely encowntered the fingle force of the Vandals: who, regardlefs of the leffons of adverfity, had again -rats feparated their troops from the ftandard of their barba- The \(\mathrm{V}_{3} \mathrm{In}\). rian allics. They paid the penalty of their rafhnefs ; dalo defeatand 20,000 Vandals, with their king Godigifclus, were ed by the nain in the field of battle. The whole people muft have Framks. been extirpated, if the fquadrons of the Alani, advancing to their relief, haci not trampled down the infantry of the Franks; who, after an honourable refiftance, were compelled to relinquifh the unequal contef. The victorious confederates purfued their march; and on the laft day of the year, in a feafon when the waters of the Rhine were moft probably frozen, they entered without oppofition the defencelefs provinces of Gaul. This memorable paffage of the Suevi, the Vandals, the Alani, and the Burgundians, who never afterwards retreated, may be confidered as the fall of the Roman empire in the countries beyond the Alps ; and the barriers, which had fo long feparated the favage and the civilized nations of the earth, were from that fatal moment levelled with the ground.
" While the peace of Germany was fecured by the attachment of the Franks and the neutrality of the Alemamni, the fubjects of Rome, unconfcious of their approaching calamities, enjoyed a flate of quiet and profperity, which had feldom bleffed the frontiers of Gaul. Their flocks and herds were permitted to graze in the paftures of the barbarians; their huntfmen penetrated, without fear or danger, into the darkeft receffes of the Hercynian wood. The banks of the Rhine were crowned, like thofe of the Tiber, with elegant houfes and well cultivated farms; and if a poet defcended the river, he might exprefs his doubt on which fide was lituated the territory of the Romans. This feme of peace and plenty was fuddenly changed into a defert, ked by the and the profpect of the fmoking ruins could alone difinguif the folitude of nature from the defolation of man. The flourifhing city of Mentz was furprifed and deftroyed; and many thoufand Chrifians were inhumanly mafifacred in the church. Worms perifhed after a long and obftinate fiege: Scrafhurg, Spires, Rheims, Tournay, Aras, Amiens, experienced the cruel oppreffion of the German yoke ; and the confuming flames of war Ipread from the banks of the Rhine over the greatelt part of the 17 provinces of Gaul. That rich and extenfive country, as far as the Ocean, the Alps, and the Pyrenees, was delivered to the barbarians, who drove before them, in a promifcuous crowd, the bilhop, the fenator, and the virgin, laden with the foils of their houfes and altars."

In the midft of thefe calamities a revolt happened in Revolt of Britain, where one Conllantine, a comnon foidier, was raifed to the imperial throne, merely for the fake of his Honorius name. However, he feems to have been a man of con-acknowfiderable abilities, and by no means unfit for the high \({ }^{1}\) diper as dignity to which he was jaifed. He governed Britain his partrer with great profperity ; paffed over into Gaul and Spain, pirce. the inhabitants of which fubnitted without oppolition, being giad of any protector whatever from the bartarians. Honorius, iucapable of defending the empire, or repreffing the revolt, was obliged to acknowledge him for his partner in the empire. In the mean time, Alaric, with his Goths, threatened a new invafion unlefs he was paid a certain fum of noney: Stilicho is faid to have occafioned this demand, and to have infift-

\section*{\(R \quad\) O M \(\quad\left[\begin{array}{lll}458 & \text { M }\end{array}\right.\)}

大ime.
ed upon fending him the money he demanded; and this was the caure of his difgrace and death, which happened foon after, with the extirpation of his family and friends. Naly, fuch was the general hatred of this unfortunate miniter, that the foldiers quartered in the cities of Italy no fooner heard of his death, than they murdered the wives and children of the barbarians whom Stilicho had taken into the ferviee of Honorius. The enrared hufbands went over to Alaric, who made a new demand of money; which not being readily fent, he laid fiege to Rome, and would have taken it, had not the emperor complied with his demand. The ranfom of the eity was 5000 pounds of gold, 30,000 of filver, 40 co filk garments, 3000 fkins dyed purple, and 3002 pounds of pepper. On this occalion the heathen temples were fripped of their remaining ornaments, and among others of the flatue of Valour; which the pagans did not fail to interpret as a prefage of the fpecdy ruin of the ftate.

Alaric having received this treafurc, departed for a flort time : hut foon after he again blocked up the city with a numerous army ; and again an aecommodation with Honorius was fet on foot. Howerer, for fome reafons which do not clearly. appear, the treaty was broken off, Rome was a third time befieged, and at latt taken and plundered. Alarie, when upon the point of breaking into the city, addrefling his foldiers, told them, that all the wealth in it was theirs, and therefore he gave them full liberty to feize it ; but at the fame time he frictly enjoined them to fhed the blood of none but fuch as they fhould find in arms; and above all, to fpare thofe who fhould take fanctuary in the holy places, efpecially in the churehes of the apoftles St Peter and St Paul; which he named, becaufe they were moft fpacous, and confequently capable of affording an afylum to great numbers of people. Having given thefe orders, he abandoned the eity to his Goths, who treated it no better, according to St Jerome, than the Greeks are faid to have treated ancient Troy; for after having plendered it for the fpace of three, or, as others will have it, of fix days, they fet fire to it in feveral places; fo that the flately palace of Salluft, and many othcr magnificent buildings, were reduced to athes; nay, Procopius writes, that there was not in the whole city one houfe left entire ; and both St Jerome and Philotorgills affert, that the great metropolis of the empire was redueed to an heap of athes and ruins. Though many of the Goths, purfuant to the orders of their general, refrained from fhedding the blood of fuch as made no refiftanee ; yet others, more cruel and blood-thirfty, maffaced all they met : fo that the ftreets in fome quarters of the city were feen covered with dead bodies, and fivimming in blood. However, not the leaft injury was offered to thofe who fled to the churches; nay, the Goths themfelves conveyed thither, as to places of fafety, fuch as they were defirous fhould be fpared. Many of the ftatues of the gods that had been left entire by the emperors as excellent pieces of art, were on this oecafion deltroyed, either by the Goths, who, though moftly Arians, werc zealous Chiftians, or by a dreadful ltorm of thunder and lightning which fell at the fame time upon the city, as if it had been fent on purpofe to complete with them the deltruction of idolatry, and abolifh the finall remains of pagan fupertition. However, notwithitanding thefe accounte, fome affirm that
the city fuffered very little at this time, not fo much as when it was taken by Charles V .

Alaric did not long firvive the taking of Rome, being cut off by a violent fit of ficknefs in the neighboure Death con hood of Rhegium. After his death the affairs of Ho-queror. norius feemed a little to revive by the defeat and death of Conflantine and fome other ufurpers; but the proviaces of Gaul, Britain, and Spain, were now almoot entirely occupied by barbarians; in which ftate they continued till the death of Honorius, which happened in the year 423 , after an unfortunate reign of 28 years.

After fome ufurpations which tonk place on the death of Honorius, his nephew Valentinian III. was declared emperor of the weit, and his mother Placidia regent during his minority. He was fearce feated on the throne, when the empire was attacked by the Huns under the celebrated Attila. The Romans, however, wretched and degenerate as they were, had they been unanimous, would even yet have been fuperior to their enemies. The emprefs then had two celebrated generals, Bonifacius and Actius; who by their union might have faved the empire : but unhappily, through the treachery of Aetius, Bonifacius was obliged to revolt; and a civil war eufued, in which he loft his life. Aetius, however, notwithtanding his treachery, was pardoned, and put at the head of the forces of the empire. He defended it againt Attila with great fpirit and fuccefs, notwithftanding the deplorable fituation of affairs, till he was murdered by Valentinian with his own hand, on a fufpicion that he afpired to the empire. But in the mean time the provinces, except Italy itfelf, were totally over-run by the barbarians. Genferie king of the Vandals ravaged Africa and Sicily; the Gorhs, Suevians, Burgundians, \&e. had taken poffeffion of Gaul and Spain ; and the Britons were oppreffed by the Scots and Picts, fo that they were oblyred to call in the Saxons to their affiftance, as is related mander the article England. In the jear 455, Valentinian was murdered by one Maximus, whofe wife he had ravifhed. Naximus immediately affumed the empire ; but felt fuch violent anxieties, that he defigned to refign it and fly out of Italy, in order to enjoy the quiet of a private life. However, being diffuaded from this by his friends, and his own wife dying foon after, he forced the emprefs Eudoxia to marry him. Eudoxia, who had tenderly loved Valentinian, provoked beyond meafure at beiag married to his murderer, invited Genferic king of the Vandals into Italy. This proved a molt fatal fcheme : for Genferic immediately appeared before Rome ; a violent tumult enfued, in which Maximus Rome taloft his life; and the city was taken and plundered hy ken and Genferic, who carried off what had been left by the phunderect Goths. A vefel was loaded with coftly flatues; half feric, the covering of the eapitol, which was of brafs plated over with gold; facred veffels enriched with preeious flones; and thofe which had been taken by Titus out of the temple of Jerufalem ; all of which were lo̊t with the veffel in its paffage to Africa.

Nothing could now be more deplorable than the fiate of the Roman affairs: neverthelefs, the empire conti. nucd to exit for fome years longer; and even feemed to revive for a little under Marjorianus, who was declared emperor in 458. He was a man of great courage, and poffeffed of many other excellent qualities. Hz
defeated

\section*{\(\mathbf{R} \mathbf{O}\) M \(\left[\begin{array}{lll}459\end{array}\right] \quad \mathrm{R}\) O \(\mathbf{M}\)}

defeated the Vandals, and drove them out of Italy. With great labour he fitted out a fleet, of which the Romans had been long deftitute. With this he defigned to pals over into Africa; but, it being furprifed and burnt by the enemy, he himfelf was food after murdered by one Ricimer a Goth, who had long governed every thing with an absolute fray. After the death of Marjorianus, one Anthemius was raised to the emfire : but beginning to counteract Ricimer, the latter openly revolted, befieged and took Rome; where he committed innumerable cruelties, among the ref putting to death the unhappy emperor Anthemius, and raining one Olybius to the empire. The tranfactions of his reign were very few, as he died food after his acceffion. On his death, one Glycerius ufurped the emfire. He was depofed in 474, and one Julius Nepos had the name of emperor. He was driven out the next year by his general Oreftes, who caufed his fo Auguthus or Auguflulus to be proclaimed emperor. But the following year, 476 , the barbarians who ferved in the Roman armies, and were diftinguifhed with the title of allies, demanded, as a reward for their fervices, the third part of the lands in Italy; pretending, that the whole country, which they had fo often defended, belonged of right to them. As Oreftes refuted to comply with this infolent demand, they refolved to do themselves justice, as they called it ; and, openly revoting, chofe one Odoacer for their leader. Odoacer was, according to Ennodius, meanly born, and only a private man in the guards of the emperor Augnfulus, when the barbarians revolting, chore him for their leader. However, he is fid to have been a man of uncommon parts, equally capable of commanding an army and governing a fate. Having left his own country when he was yet very young, to Serve in Italy, as he was of a feature remarkably tall, he was admitted among the emperor's guards, and continued in that flation till the prefent year; when, putting himflf at the head of the barbarians in the Roman pay, who, though of different nations, had, with one confent, chofen him for their leader, he marched againft Oreftes and his for Augurftulus, who fill refuted to give them any flare of the lands in Italy.

As the Roman troops were inferior, both in mumbet and valour, to the barbarians, Orefles took refuge in Pavia, at that time one of the belt fortified cities in Italy : but Odoacer, invefing the place without lo rs of time, took it foo after by affault, gave it up to be plundered by the soldiers, and then fer fire to it; which reduced molt of the houfes, and two churches, to afhes. Oreftes was taken prifoner, and brought to Odoacer, who carried him to Placenta, and there caused him to be put to death, on the 28 th of August, the day on which he had driven Nepos out of Ravenna, and oblimed him to abandon the empire. From Placenta, Odoacer marched ftraight to Ravenna, where he found Paul, the brother of Oreftes, and the young emperor Auguftulus. The former he immediately put to death; but flaring Auguftulus, in confideration of his youth, he frapped him of the enfigns of the imperial dignity, and confined him to Lucullanum, a cattle in Campana ; where he was, by Odoacer's orders, treated with great humanity, and allowed an handfome maintenance to fupport hinffelf and his relations. Rome readily fuburitted to the conqueror, who immediately caused
himielf to be proclaimed king of Italy, but would not affume the purple, or any other mark of the imperial
\(\qquad\) dignity. Thus failed the very name of an empire in the Weft. Britain had been long fine abandoned by the Romans; Spain was held by the Goths and Suevans; Africa, by the Vandals; the Burgundians, Goths, Franks, and Alans, had erected feyeral tetrarchies in Gaul; at length Italy itfelf, with its proud metropolis, which for fo many ages had given law to the reft of the world, was enflaved by a contemptible barbarian, whore family, country, and nation, are not well known to this day.

From this time, Rome has ceafed to be the capital of an empire ; the territories of the pope, to whom the city is now fubject, being inconsiderable. The origin of the pope's temporal power, and the revolutions of Italy, are related under the article Italy; and a fetch of the fpiritual ufurpations of the popes may be feen under the articles History, feet. ii. and Reformatton ; and likewife under the various hitorical articles as they occur in the course of this work.

It is thought that the walls of modern Rome take Description in nearly the fame extent of ground as the ancient; but of modern the difference between the number of buildings on this Rome. foot is very great, one half of modern Rome lying wafte, or occupied with gardens, fields, meadows, and vineyards. One may walk quite round the city in three or four hours at molt, the circumference being reckoned about I 3 Italian miles. With regard to the number of the inhabitants, modern Rome is also greatIf inferior to the ancient: for, in 1709 , the whole of there amounted only to 138,568 ; among which were 40 bishops, 2686 priefts, 3559 monks, 18 r 4 nuns, 393 courtefans, about 8000 or 9000 Jews, and 14 Moors. In 1714 , the number was increased to 143,00 . In external splendor, and the beauty of its temples and palaces, modern Rome is thought by the mot judicious travellers to excel the ancient. There was nothing in ancient Rome to be compared with St Peter's church in the modern. That Nome was able to recover itself after fo many calamities and devaftations, will not be matter of furprife, if we confider the prodigious fums that it has fo long annually drawn from all countries of the Popish perinafion. There fums, though fill coliderable, have been continually decreasing fince the Reformation. The furface of the ground on which Rome was originally founded is furprifingly altered. At presfont it is difficult to diftinguifh the fever hills on which it was fart built, the law grounds being almoft filled up with the ruins of the ancient frets and hones, and the great quantities of earth wafted down from the hills by the violence of the rains. Anciently the fuburbs extended a raft way on all lines, and made the city appear almond boundless; but it is quite otherwise now, the country about Rome being almost a defers. To this and other causes it is owing, that the air is none of the mot whotefome, efpecially during the fummer heats, when few go abroad in the day-time. No city at peefent in the world furpafles, or indeed equals, Rome, for the multiplicity of fine fomsains. noble edifices, antiquities, curiofitics, paintings, ftetue, and feulptares. The city hands on the tiber, 10 miles from the Tuscan fica, \(3^{8} 0\) from Vienna, 560 from Paxis, fo from Amitterdam, 810 from London, and goo from Madrid. The Tiber is subject to free\(3 \mathrm{Mz}_{2}\)
quant

\section*{R O M}

IRome.
mage. A fmall part of the city is feparated from the other by the river, and is therefore called Traveflere, or beyond the Tiber. There are fevcral bridges over the river, a great number of towers on the walls, and 20 gates. The remains of Rome's ancient grandeur confift of ftatues, coloffufes, temples, palaces, theatres, naumachias, triumphal arehes, circufes, columus, obelifks, fountains, aquecuets, maufoleums, ther\(\mathrm{m} x\) or hot-balhs, and other ftructures. Of modern buildings, the fplendid churches and palaces are the moft remarkable. Mr Addifon fays, it is almoft im. polfible for a man to form in his imagination fuech beautiful and glorious fcenes as are to be mer with in feveral of the Roman churches and chapels. This gentleman tells us alfo, that no part of the antiquities of Rome pleafed him fo much as the ancient ftatues, of which there is ftill an incredible variety. Next to the ftatues, he fays, there is nothing more furprifing than the amazing varicty of ancient pillars of fo many kinds of marble. Rome is laid to be well paved; but not well lighted, nor kept very clean. 'Two-thirds of the houfes are the property of the churches, convents, and alms houfes. Proteftants are not obliged to kneel at the elevation of the hoft, or at meeting the eucharift in the ftreets; and they may have flenl-meat ahways at the inns, even during Lent. Here are many academies for promoting arts and fciences, befides the univerfity. The carnival here is only during the eight days before Lent, and there are no fuch feenes of riot as at Venice: proftitutes, however, are publicly tolerated. To maintain good order, there is a body of \(3 c 0\) Sbirri, or Halberdeers, under their barigella, or colonel. There is little or no trade carried on in Rome, but a vaft deal of money is fpent by travellers and other ftrangers. The principal modern ftructures are the church of St Peter, and the other churches; the aqueducts and fountains; the Vatican, and the other palaces; the Campidelio, where the Roman fenate refides, \&c. The priacipal remains of antiquity are the pila miliaria of fime marble; the equeftrian brafs ftatue of Marcus Aurelius Autoninus; the marble monument of the emperor Alexander Severus ; marble butts of the emperors and their conforts; three brick arches of the temple of Peace, built by the emperor Vefpafian ; the triumphal arch of Septimus Severus and of Jallienus; the circus of Antoninus Caracalla; fome parts of the eloaca-maxima; the columna Antonina, reprefenting the principal actions of Marcus Aurelius; the columna Trajani, or Trajan's pillar ; fome fragments of the curia, or palace of Antoninus Pius, and of Nerva's forum; the maufolæum of Augutus, in the Strada Pontifici; the remains of the emperor Severus's tomb without St John's gate ; the pyramid of Caius Ceftus near St Paul's gate ; the porphyry cof. fin of St Helen, and the original ftatue of Conftantine the Great, in the church of Sit John of Lateran: a font of oriental granite, in the chapet of St Giovanni in fonte, faid to have been erected by Conflantine the Great ; an Egyptian obelifk near the ehureh of St Maria Maggiore; the ftately remains of Dioclefian's baths; the celebrated Pantheon; the obelifs of Sefottris and Augutus by the Clementine college; the church of St Paul fuori della Mura, faid to have been built by Conftantine the Great; the Farnefe Hercu.
les, in white marble, of a Coloffian fize and exquifite workmanfhip, in a court of the Farnefe palace, and an admirable group cut out of one block of marble, in another court of the famc palace. Beffides thefe there are a great many more, which our bounds will not allow us to take any further notice of. Here is a great number of rich and well-regulated hofpitals. Near the church of St Sebaftiano alle Catacombe, are the moft fpacious of the catacombs, where the Chriftians, who never burned their dead, and fuch of the Pagan Romans as could not afford the expence of burning, were buried. Along the Via Appia, without St Sebaftian's gate, were the tombs of the principal families of Rome, which at prefent are ufed for cellars and fore-houfes by the gardeners and vinedreffers.

ROMNEY, a town of Kent in England. It is one of the cinque-port towns, and is feated on a marh of the fame name, famous for feeding cattle; but the air is very unhealthy. It was once a large and populous place, but the retiring of the fea has reduced it very much; however, it fends two members to parliament.

ROMORENTIN, is a fmall town fituated on the river Saudre, in the territory of Blafois in France, famous for its woollen manufacture. It is faid to be a very ancient place; and the inhabitants pretend that Cafar built a tower here, of which there are till fome confiderable remains. They have a manufacture of ferge and cloth, which is ufed for the elothing of the troops.
ROMPEE, or Rompu, in heraldry, is applied to ordinaries that are reprefented as broken ; and to chevrons, bends, or the like, whofe upper points are cut off.

ROMULUS, the founder and firft king of Rome. Sce Rome, \(\mathrm{n}^{\circ} 14\).

KONCIGLIONE, is a town of Italy, in the Ecclefiaftic State, and Patrimony of St Peter, in E. Long. 13. N. Lat. 42. 12. It is a fmall place, but had a pretty good trade, and was one of the richett in the proviuce, while it belonged to the dukes of Parma, which was till 1649 , when pope Innocent X. became mafter of it, and it has ever fince continued in the poffeffion of his fucceffors.

RONDELETIA, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The corolla is funnelfhaped; the capfule bilocular, inferior, and polyfpermons, roundifh and crowned.
RON:I, one of the Hebrides iflands, is reckoned about 20 leagues diftant from the north-eaft point of Nefs in Lewis - about a mile long, and half a mile broad. It has a hill in the weft part, and is only vifible from Lewis in a fair fummer's day. There is a chapel in the illand dedicated to St Ronan, fenced with a fone wall round it. This church the natives take care to keep very neat and clean, and fweep it every day. There is an altar in it, on which there lies a big plank of wood about so feet long. Every foot has a hole in it, and in every hole is a ftone, to which the natives afcribe feveral virtues; one of them is fingular (as they fay) for promoting fpeedy delivery to a woman in travel. The inhabitants are extremely ignorant, and very fuperititious. See Martin's Defrription.

\section*{\(R \quad \mathrm{O}\)}

RONSARD (Peter de) was born nt the cante of Poiffoniere in Vendomois in 1524. He was defcended of a noble family, and was educated at Paris in the college of Navarre. Academical purfuits not fuiting lis genius, he left college, and bccame paze to the ake of Orleans, who refigned him to James Stuart, king of Scots, married to Magcalene of France. Ronfard continued in Scotland with IVing James upwards of two years, and afterwards went to Fiance, where he was employed by the duke of Orleans in feveral negociations. He accompanied Lazanus de Baif to the diet of Spires. Having from the converfation of this learned man imbibed a paffion for the belles-lcttres, lie ftudied the Greek language with Baif's fon under Dorat. It is seported of Konfard, that his practice was to ftudy till two o'clock in the morning; and when he went to bed, to awaken Baif, who refumed his place. The mufes poffefled in his eyes an infinity of charms; and he cultivated them with fuch fuccefs, that he acquired the appellation of the Prouce of the Puets of his time. Henry 1I. Franeis II. Charles IX, and Henry III. loaded him with favours. Having gained the firft prize of the Jeux Floraux, they thought the reward promifed below the merit of the work, and the reputation of the poet. The city of Touloufe caufed a Minerva of maffy dilver of confiderable value to be made and fent to him. This prefent was accompanied with a decree, declaning him Tbe Fremb Poet, by way of diftinction. Ronfard afterwards made a prefent of his Minerva to Henry II. and this monarch appeared as much elated with this mark of the poet's efteem for him, as the poet himfelf could have been had he received the prefent from his fovereign. Mary, the beautiful and unfortunate queen of Scots, who was equally fenfible of his merit with the Toulonefe, gave him a very rich fet of table-plate, among which was a veffel in the form of a rofe-buth, reprefenting Mount Parnaffus, on the top of which was a Pegafus with this infeription:

\section*{A Renfard, l'Apolion de la fource des mufes.}

From the above two aneedotes of him may eaflly be inferred the reputation in which he was held, and which he continued to keep till Malherbe appeared. His works poffefs both invention and genius; but his affectation of everywhere thrufting in his learning, and of forming words from the Greek, the Latin, and the different provincialifms of France, has rendered his verfification difagreeable and often unintelligible.

> Ronfard, dit Defpréaux, far une autre méthode, Reglant tout, brouilla tout, fit un art à fa mode; Et toutefois long temps eut un heureux deftin; MIais fa mufe, en Firançois parlant Grec et Latin, I'it dans l'ùge fuivant, par un relsur grotefque, Tomber de fes grands mots le fale pédanteque.

He wrote hymns, odes, a poem called the Franciad, eclogues, epigrams, fonnets, \&c. In his odes he takes bonbaft for poetical raptures. He wines to imitate Pindar; and by labouring too much for lofty expreffions, he lofes himfelf in a cloud of words. He is obfcure and larh to the laft degree: faults which he might eafily have avoided by lludying the works of Marot, who had before he wrote bronght French poetry very near to perfection. "Marot's turn and ityle
of compofition are fuch (fays Bruyere), that he feems Ronfard. to have written after Ronfard: there is hardly any dif. ference, except in a few words, between Marot and us. Ronfard, and the authors his contemporaries, did more differvice than good to atyle: they checked its courfe in the advances it was making towards perfection, and had like to have prevented its ever attaining it. It is furprifing that Marot, whofe works are fo matural and eafy, did not make Ronfard, who was fired with the ftrong enthufiafm of puetry, a greater poet than either Ronfard or Marot." But what could be expected from a man who had fo little talle, that he calicd Marot's works ' a dunghill, from which rich grains of gold by induftrious working might be drawn?' As a fpecimen of our author's intolerable and ridiculous af. fectation of learning, which we have already cenfured, Boileau cites the following verfe of Ronfard to his miftrefs: Eftes-qious fas ma jeule entelechie? "are not you my only entelechia?" Now enteleclina is a word peculiar to the peripatetic philofophy, the fenfe of which does not appear to have ever been fixed. Hermalaus Barbarus is faid to have had recourfe to the devil, in order to know the meaning of this new term ufed by Ariftotle; but he did not gain the information he wanted, the devil, probably to conceal his ignorance, speaking in a faint and whifpering fort of voice. What could Ronfard's miftrefs therefore, or even Ronfard himfelf, know of it ; and, what ean excufe in a man of real genius the low affectation of ufing a learned term, becaule in truth nobody could underttand it. He has, however, fome pieces not deflitute of real merit; and there are perhaps few effufions of the French mufe more truly poetical than his Four Seafuns of the Vear. where a nolt fertile inagrination difplays all its riches.

Ronfard, though it is doubtful whether he ever was in orders, held feveral benefiees in commendam; and he died at Saint. Cofme-les-Tours, one of thefe, December 27. 1585 , being then 61 jears of age. He appeared more ridiculous as a man than as a poet : he was particularly vain. He talked of nothing but his family and his alliances with crowned heads. In his panegyrics, which he addreffes to himielf without any ceremony, he has the vanity to pretend, that from Renfar:l is derived the word \(\approx \sim 0 / f_{3} n o l\), to denote both a mulician and a poet together. He was born the year after the defeat of Francis I. before Pavia: "Juit as heaven (faid he) withed to indemnify lirance for the loffes it had futtained at that place." He bluthed not to tell of his in trigues. All the ladies fought after him ; but lie never laid that any of them gave him a denial of their favours. His immoderate indulgence in plealiure, joined to his literary labours, ferved to haften his old age. In his \(j\) oth year he was weak and valctudinary, and fubject to attacks of the gout. He retained his wit, his vivacity, and his readinefs at poetic compolition, to his laft moments. Like all thofe who afpire after public efteem, he" had a great number of admirers and forne enemics. Though Melin de Saint-Gelais railed at him centinually, Rabelais was the perfon whom he mult dreaded. He took always care to inform himfelf where that jovial restor of Mendon went, that he might not be found in the fame place with him. It is repurted, that Voltaire acted a fimilar part with regard to Yeron *, \&see Fe* of whole extemporary fillies and bon nots he was nuch row. araid.

\section*{R 0 O \(\left[\begin{array}{lll}4 \sigma_{2}\end{array}\right] \quad \mathrm{R} O \quad 0\)}
- 5nowis Rool:
afraid. Ronfard's poems appeared in 1567 at Paris in 6 vols 4to, and in 1604 in 10 vols 12 mol .

KOOD, a guantity of land equal to 40 fquare perches, or the fourth part of an acre.

ROOF, exprefles the covering of a houfe or building, by which its inhabitants or contents are protected from the injuries of the weather. It is perhaps the effential part of a houfe, and is frequently ufed to exprefs the whole. To come under a perfon's roof, is to enjoy his protection and fociety, to divell with him. Tefum was ufd in the fame fenfe by the Romans. To be within our walls rather expreffes the being in our poffefion : a roof therefore is not only an effential part of a houfe, but it even feems to be its characterifStrisures tic feature. The Greeks, who have perhaps excelled on vations all nations in tafte, and who have given the mot perlinds of \(100 f\). fect nodel of architectonic ordomance within a certain limit, never erected a building which did not exhibit
this part in the diftinctelt manner; and though they borrowed much of their model from the orientals, as will be evident to any who eompares their architecture with the ruins of Perfepolis, and of the tombs in the momtains of Sciras, they added that form of roof which their own climate taught them was neceffary for fheltering them from the rains. The roofs in Perlia and Arabia are flat, but thofe of Greece are without exception floping. It feems therefore a grofs violation of the true prineiples of talte in architecture (at leaft in the regions of Europe), to take away or to hide the roof of a houfe; and it mult be afcribed to that rage for novelty which is fo powerful in the minds of the rich. Our anceftors feemed to be of a very different opinion, and turned their attention to the ornamenting of their roofs as much as any other part of a building. They howed them in the mott confpicuous manner, running them up to a great height, broke them into a thoufand lanciful fhapes, and iturk them full of highly dreffed windows. We laugh at this, and call it Gothic and clumfy; and our great architects, not to. offend any more in this way, eonceal the roof altogether by parapets, baluftrades, and other contrivances. Our forefathers certainly did offend againt the maxins of true tafte, when they emriched a part of a houfe with marks of elegant habitation, which every fpectator nult know to be a cuniberfome grarret : but their fucceflors no lefs offend, who take off the cover of the houfe altogether, and make it impolfible to know whether it is not a mere fireen or colonnade we are looking at.
\({ }^{3}\) Sir Chrifto-crred pher Wren St Paul's chureh in London. The whole of the upper in the row of St Pau London.
order is a mere fereen. Sueh a quantity of wall would have been intolerably offenfive, had he not given it fome appearance of habitation by the mock windows or niehes. Even in this ftate it is gloomy, and it is odd, and is a puz:zle to every fpectator-There hould be no puzzle in the defigu of a building any more than in a difcourfe. It has been faid that the double roof of our great churches which have aifles is an ineongruity, looking like a houfe fanding on the top of another houfe. But there is not the leaft occafion for fuch a thought. We know that the aifle is a fhed, a cloifter. Suppole on'y that the lower roof or thed is hidden by a baluftrade, it then becomes a portico, againt which the conno:feur has no objection: yet there is no diffe-
rence; for the portico mutt have a cover, otherwife it is neither a thed, cloifter, nor portico, any more than a building without a roof is a houfe. A houfe without a vilible roof is like a man abroad without his hat ; and we may add, that the whim of concealing the climneys, now fo fafhonable, changes a houfe to a barn or florehoule. A houre flould not be a copy of any thing. It has a title to be an original; and a fereen-like houfe and a pillar-like candleftick are fumilar folecifins in tatte.

The architect is anxions to prefent a fine object, and little at a very dimple outline difeuffes all his concems with the tention roof. He leaves it to the carpenter, whom he frequent- paid by ly puzzles (by his anangements) with coverings almoft to this \(p\) impoffible to execute. Indeed it is feldom that the idea of a buil of a roof is adnitted by him into his great compofitions; ing. or if he does introduce it, it is from mere affectation, and we may fay pedantry. A pediment is frequently Ituck up in the middle of a grand front, in a fituation where a roof camot perform its office; for the rain that is fuppoled to flow down its fides muft be received on the top of the level buildings which flank it. This is a manifeft incongruity. The tops of dreffed windows, trifing porches, and fometimes a projecting portico, are the only fituations in which we fee the figure of a roof correfpond with its office. Having thus loft fight of the principle, it is not furprifing that the draughtiman (for lie hould not be called architect) runs into every whim : and we fee pediment within pediment, a round pediment, a hollow pediment, and the greatelt of all abfurdities, a broken pediment. Nothing could ever reconcile us to the fight of a man with a hat without its erown, becaufe we cannot overlook the ufe of a hat.

But when one builds a houfe, ornament alone will Advantage not do. We muft have a covcr; and the enomous ex-ol a hish pence and other great inconvemiences which attend the pitched coneealment of this cover by parapets, baluftrades, and \({ }^{\text {ioof. }}\) fereens, have obliged architects to confider the pent roof as admiffible, and to regulate its form. Any man of fente, not under the influence of prejudice, would be determined in this by its fitnefs for anfwering its purpofe. A high pitched roof will undoubtedly fhoot off the rains and fnows better than one of a lower piteh. The wind will not fo eafily blow the dropping rain in between the fates, nor will it have fo much power to Atrip them off. A ligh pitched roof will exert a fmaller thruft on the walls, both becaufe its ftrain is lefs horizontal, and becaufe it will admit of lighter covering. But it is more expenfive, becanfe there is more of it. It requires a greater fize of timbers to make it equally ftrong, and it expofes a greater furface to the wind.

There have been great changes in the pitch of roofs: our forefathers made them very high, and we make them very low It does not, lowever, app the very low. It does not, however, appear, that this changes in change has been altogether the effect of principle. In the pitch of the limple nnadorned habitations of private perfons, roofso every thing comes to be adjulted by an experience of inconveniences which have refulted from too low pitched roofs; and their pitch will always be nearly fuch as fuits the climate and covering. Oir architects, however, go to work on different principles. Their profuffed aim is to make a beautiful object. The fources of the pleafures arifing from what we call tafle are fo various, fo complicated, and even fo whimfical, that it

\section*{\(R \quad 0 \quad 0\)}
of. is almoft in vain to look for principle in the tules adopt ed by our profefed architects. We cannot help think. ing, that much of their practice refults from a pedantic veneration for the beautiful productions of Grecian architceture. Such architects as have written on the principles of the art in refpect of proportions, or what they call the ordonnance, ate very much puzzled to make a chain of teafoning; and the molt that they have made of the Greek architecture is, that it exhibits a nice adjuftment of itrength and ftrain. But when we confider the extent of this adjuftment, we find that it is wonderfully limited. The whole of it cunfitts of a balement, a column, and an entablature; and the entablature, it is true, exhibits fomething of a connection with the framework and roof of a wooden building; and we believe that it really originated from this in the hands of the orientals, from whom the Greeks certainly borrowed their forms and their combinations. We could eafly fhow in the ruins of Perfepolis, and among the tombs in the mountains (which were long prior to the Greek architecture), the fluted column, the bafe, the Ionic and Corinthian capital, and the Doric arrangement of lintels, beams, and rafters, all derived from unqueftionable principle. The only addition made by the Greeks was the pent roof; and the changes made by them in the fubordinate forms of things are fuch as we foouid expect from their saquifite judgment of beanty.

But the whole of this is very limited; and the Greeks, after making the roof a chief feature of a houfe, went no farther, and contented themfelves with giving it a flope fuited to their climate. This we have followed, becaufe in the milder parts of Europe we have no cogent reafon for deviating from it ; and if any architect fhould deviate greatly in a building where the outline is exhibited as beautiful, we foould be diiguited; but the difgut, though felt by almoft every fpectator, has its origin in nothing but habit. In the profeffed architect or man of education, the difgult arifes from pedantry: for there is not fuch a clofe connection between the form and ufes of a roof as thall give precife determinations;

463 ] \(\quad\) R 0
in L.ondon of two orders, and he coupled his columns; \(\qquad\) and fill the lintels which form the architrave are of fuch length that they could carry no additional weight, and he was obliged to trufs them behind. Had he mat!e but one order, the architrave could not have carried is own weight. It is impoffible to execute a Doric entablature of this face in brick. It is attempted in a very noble front, the Academy of Arts in St Peterburth. But the architect was obliged to make the mutuies and other projecting members of the corniche of granite, and many of them broke down by their own weight.

Here is furely an error in principle. Since ftone is And the efthe chief material of our huildings, onght not the mem- fest of our bers of ornamented architecture to be refinements on uliog dote. bers of ornamented architecture to be refinements on the effential and unaffected parts of a fimple fonebuilding. There is almolt as much propricty in the architecture of Indid, where a dome is nade in imita. tation of a lilly or other flower inverted, as in the Greck imitation of a wooden building. The principles of mafonry, and not of carpentry, Bould be feen in our architecture, if we would have it according to the rules of juit tafte. Now ue affrm that this is the characteriftic feature of what is called the Crothic architecture. In this no dependence is had on the tranfuerfe ftrength of ftone. No lintels are to be feen ; no extrasagant projections. Every fone is preffed to its neighbour:, and none is expoted to a tranfeerfe ftrain. The Greeks were enabled to execute their coloffal buildings only by uling immenfe blocks of the hardeft materials. The Norman mafon could raile a building to the fries with. out ufing a ftone which a labourer could not carry to the top on his back. Their architects fudied the principles of equilibrium ; and having attained a wonderfui knowledge of it, they indulged themfelves in exhibiting remarkable inftances. We call this falfe tatte, and lay that the appearance of infecurity is the greateft faut: But this is owing to our habits: our thoughts may be faid to run in a wooden train, and ceitain fimple mixims of canpentry are familiar to our imagination ; and in the careful adherence to thele confits the beauty and fymmetry of the Greek architecture. Had we been as much habituated to the equilibrium of preffure, this apparent infecurity would not have met our eye: we would have perceived the ftrength, and we fould have relifhed the ingenuity.

The Gothic architecture is perhaps intitled to the Rutivial name of rational architecture, and its bcauty is founded arfure of on the characterific diftinction of our fecies. It de the rathis ferves cultivation: not the pitiful, fervile, and un- architicfkilled copying of the monuments; this will produce incongruities and abfurdities equal to any that have crept into the Gretk architecture : but let us examine with attention the nice difpofition of the groins and fpaundrels; let us ftudy the tracery and knots, not as ornaments, but as uffeul members; let us oblerve how they have made their walls like honcy-combs, and adlmire their ingenuity as we pretend to adnoire the inftinct infufed by the great architect into the bee. All this cannot be underitood without meehanical knowledge; a thing which few of our profeffonal architects have any thare of. Thus would architectonic tatte be a mark of faill ; and the perfon who prefents the difign of a buid. ing would know how to excite it, without committir. it entircly to the maton and carpente".

Thefe obfervations are not a digrethen from our fub-

Roof. jce.: The fame principles of mutual preflure and equilibrium have a place in roofs and many wooden edificea; and if they had been as much ftudied as the Normans and Saracens feem to have ftudied fuch of them as were applicable to their purpofes, we might have produced wooden buildings as far fuperior to what we are familiarly aequainted with, as the bold and wonderful churches fill remaining in Europe are fuperior to the timid productions of our ftone architecture. The ceintres ufed in building the bridge of Orleans and the corn-market of Paris, are late inftances of what may be done in this way. The laft mentioned is a dome of 200 feet diameter, built of fir planks; and there is not a piece of timber in it more than nine feet long, a foot

JI
The Normtan archi tects often roof ed with ftone.

12
Effects of the rivalShip between the mafon* and carl enters of atucicnt times.

The Norman architects frequently roofed with ftone. Their wooden roofs were in general very fimple, and their profeffed aim was to difpenfe with them altogether. Fond of their own fcience, they copied nothing from a wooden building, and ran into a fimilar fault with the ancicut Greeks. The parts of their buildings which were neceffarily of timber were made to imitate flone-buildings; and Gothic ornament confifts in cramming every thing full of arches and fpaundrels. Nothing elfe is to be feen in their timber works, nay even in their fculpture. Look at any of the maces or fceptres ftill to be found about the old cathedrals; they are filver ftecples.

But there appears to have heen a rivalhip in old times between the mafons and the carpenters. Many of the baronial halls are of prodigious width, and are routed with timber: and the carpenters appeared to have borrowed much knowledge from the mafons of thofe times, and their wide roofs are frequently conftructed with great ingenuity. Their aim, like the mafons, was to throw a roof over a very wide building without employing great logs of timber. We have feen 100fs 60 feet wide, without having a piece of timber in it above 10 feet long and 4 inches fquare. The Parliament Houfe and Tron-Chureh of Edinburgh, the great hall of 'Tarnaway cafte near Elgin, are fpecimens of thofe roofs. 'I hey are very numerous on the continent. Indeed Britain retains few monuments of private magnifieence. Ariftocratic flate never was fo great with us; and the rancour of our civil wars gave moft of the performances of the carpenter to the flames. Weftminter-hall exhibits a fpecimen of the falfe taite of the Norman roofs. It contains the effential parts indeed, very properly difpofee ; but they are hidden, or intentionally covered, with what is conceivcd to be ornamental ; and this is an imitation of fone arches, crammed in between fiender pillars which hang down from the principal frames, truffes, or rafters. In a pure Norman roof, fuch as Tarnaway hall, the effential parts are exhibited as things underftood, and therefore relifhed. They are refined and ornamented; and it is here that the inferior kind of tafte or the want of it may appear. And here we do not mean to defend all the whims of our anceflors; but we affert that it is no more neceffary to confider the members of a roof as things to be concealed like a ganet or privy, than the members of a ceiling, which form the mot beautiful part of the Greek arelitecture. Should it be faid that a roof is only a thing to keep off the rain, it may be anfwered,
that a ceiling is only to keep off the duff, or the floor to be trodden underfoot, and that we fhould have neither copartments in the one nor inlaid work or carpets on the other. The ftructure of a roof may therefore be exhibited with propriety, and made an ornamental feature. This has been done even in Italy. The church of St Maria Maggiore in Rome and feveral others are fpecimens: but it inuft be acknowledged, that the forms of the principal frames of thefe roofs, which refemble thofe of our modern buildings, are very unfit for agreeable ornament. As we have already obferved, our imaginations have not been made fufficiently familiar with the principles, and we arc rather alarmed than pleafed with the appearance of the immenfe logs of timber which form the couples of thefe ronfs, and hang over our heads with every appearance of weight and danger. It is quite otherwife with the ingenious roofs of the German and Norman architects. Slender timbers, interlaced with great fymmetry, and thrown by neceffity into figures which are naturally pretty, form altogether an object which no carpenter can view without pleafure. And why fhould the gentleman refufe himfelf the fame pleafure of beholding feientific ingenuity ?

The roof is in fact the part of the building which requires the greatef degree of fkill, and where fcience will be of more fervice than in any other part. The architect feldom knows much of the matter, and leaves the talk to the carpenter. The carpenter confiders the framing of a great roof as the touchttone of his art; and nothing indeed tends fo much to fhow his judgment and his fertility of refource.

It muft therefore be very acceptable to the artift to have a elear view of the principles by which this difficult problem may be folved in the beft manner, fo that the roof may have all the ftrength and fecurity that can be wifhed for, without an extravagant expence of timber and iron. We have faid that mechanical fcience can give great affitance in this matter. We may add that the framing of earpentry, whether for roofs, floors, or any other purpofe, affords one of the moft elegant and moft fatisfactory applications which can be made of mechanical fcience to the arts of common life. Unfortunately the practical artift is feldom poffeffed even of the fmall portion of feience which would almoft in-therto pai fure his practice from all rifk of failure; and even our to it. moft experienced carpenters have feldom any more knowledge than what arifes from their experience and natural fagaeity. The moft approved author in our language is Price in his Britifh Carpenter. Mathurin Jouffe is in like manner the author mott in repute in France; and the publications of both thefe authors are void of every appearance of principle. It is not uncommon to fee the works of earpenters of the greatef reputation tumble down, in confequence of millakes from which the mote elementary knowledge would have faved them.

We fhall attempt, in this article, to give an account of the leading principles of this art in a manner fo familiar and palpable, that any perfon who knows the common properties of the lever, and the compafition of mution, fhall fo far underftand them as to be able, on every occafion, fo to difpofe his materials, with refpect to the flrains to which they are to be expofed, that he flall always know the effective ftrain on every piece, and

\section*{\(\pi \quad 0 \quad 0\)}
fall, in mot cafes, be able to make the difpofition fuck as to derive the greater poffible advantage from the materials which he employs.

It is evident that the whole mull depend on the prim. ciples which regulate the itrength of the materials, relative to the manner in which this ftrengen is exerted, and the manner in which the train is laid on the piece of matter. With reflect to the first, this is not the proper place for conlidering it, and we mull refer the reader to the article Strength of Material in Mechanics. We foal jut borrow from that article two or three propositions fatted to our purpale.

The force with which the materials of our edifices, roofs, floors, machines, and framings of every kind, refill being broken or eruhted, or pulled asunder, is, inmediately or ultimately, the cohefion of their particles. When a weight hangs by a rope, it tends either immediately to break all the fibres, overcoming the cohefion among the particles of each, or it tends to pull one parcel of them from among the reft, with which they are joined. This union of the fibres is brought about by forme kind of gluten, or by twitting, which causes them to bind each other fo hard that any one will break rather than come out, fo much is it withheld by friction. The ultimate reffance is therefore the conefrom of the fibre; the force or ftrength of all fibrous materials, fuck as timber, is exerted in much the fame manner. The fibres are either broken or pulled out from among the reft. Metals, ftone, glads, and the like, refit being pulled afunder by the fimple collefion of their parts.

The force which is neceffary for breaking a rope or wire is a proper meafure of its strength. In like mannet, the force neceffary for tearing directly afunder any rod of wood or metal, breaking all its fibres, or tearing them from among each other, is a proper meafure of the united ftrength of all thee fibres. And it is the fimplett ftrain to which they can be expofed, being jut equal to the fum of the forces neceffary for breaking or difengaging each fibre. And, if the body is not of a fibrous ftructure, which is the cafe with metals, ftones, glass, and many other fubfrances, this force is fill equal to the fipple fum of the cohefive forces of each particle which is feparated by the fracture. Let us diftinguifh this mode of exestion of the cohesion of the body by the name of its \(A_{B}\). solute Strength.

When folid bodies are, on the contrary, exposed to great compreffion, they can refit only to a certain degree. A piece of clay or lead will be fqueezed out ; a piece of freestone will he crushed to powder; a beam of wood will be crippled, fuelling out in the middle, and its fibres lofe their mutual cohefion, after which it is eafily crufted by the load. A notion may be formed of the manner in which the fe trains are refitted by conceiving a cylindrical pipe filled with final foot, well taken together, fo that each fphericle is lying in the clefeit manner poffible, that is, in contact with fix others in the fame vertical plane (this being the porision in which the foot will take the leal room). Thus each touches the reft in lix points: Now fuppofe them all united, in there fix points only, by forme cement. This affemblage will tick together and form a cylindrical pillar, which may be taken out of its mould. Sup-

Vol. XVI. Part II.
pole this pillar finding upright, and loaded above. The fupports arifing from the cement act obliquely,

Roof. and the load tends either to force them afunder laterally, or \(t o\) make them nide on each other: either of thefe things happening, the whole is crufted to pieces. The refittance of fibrous materials to fuch a train is a little more intricate, but may be explained in a way very fimilar.

A piece of matter of any kind may aldo be deftroved by wrenching or twifing it. We can deafly form a notion of its refiftance to this kind of fain by confdering what would happen to the cylinder of frail foot if treated in this way.

And laftly, a beam, or a bar of inetal, or a piece of Atone or other matter, may be broken tranfverfely. This will happen to a rafter or joilt fupported at the ends when overloaded, or to a beam having one end tuck haft in a wall and a load laid on its projecting part. 'This is the fran to which materials are molt commonly exposed in roofs; and, unfortunately, it is the train which they are the leaft able to bear ; or rathen it is the manner of application which causes an exterual force to excite the greatest polfible immediate train on the particles. It is againft this that the carpenter mut chiefly guard, avoiding it when in his power, and, in every cafe, diminishing it as much as poffible. It is neceffary to give the reader a clear no- their timon of the great weaknefs of materials in relation weakrefs to this tranfverfe ftrain. But we fall do nothing in reativa more, referring lam to the articles Strain, Stress, cerf Strength.
trains.
Let \(A C B D\) (fig. i.) reprefent the fide of a beam plate projecting horizontally from a wall in which it is CCCL firmly fixed, and let it be loaded with a weight if appended to its extremity. I his tends to break it: and the leal reflection will convince any perfon that if the beam is equally ftrong throughout, it will break in the line \(C D\), even with the furface of the wall. It will open at \(D\), while \(C\) will ferve as a fort of joint, round which it will turn. The crofs faction through the line CD is, for this reafon, called the fiaion of fracture, and the horizontal line, drawn through C on its under furface, is called the axis of frallure. The fracture is made by tearing afunder the fibres, foch as DE or FG. Let us fuppofe a seal joint at C , and that the beam is really faxed through along CD, and that in place of its natural fibres threads are fubtituted all over the fection of fracture. The weight now tends to break there threads; and it is our bulinefs to find the force neceflary for this purpole.

It is evident that DCA indy be confidered as a bended lever, of which \(C\) is the fulcrum. If \(f\) be the force which will jut balance the conation of a thread when hung on it fo that the fmalleft addition with break it. we may find the weight which will be fufficient for this, purpofe when hung on at \(A\), by faying, \(\mathrm{AC}: \mathrm{Cl}\) ) \(=f:\), and : will be the weight which will int break the thread, by hanging by the point A. 'This gives us \({ }_{f} f \times \frac{\mathrm{CD}}{\mathrm{C} \AA}\). If the weight be hang on at \(a\), the force jut fufficient for breaking the fame thread will be \(=f \frac{\mathrm{CD}}{\mathrm{C} a}\). In like manner the force 7 , which mut be hung on at A in order to break an equally flong or an 3 N
equals

\section*{\(R \quad 0 \quad 0\)}
\(\underbrace{\text { Ronf. }}\) cqually refifting fibre at \(\dot{\mathrm{F}}\), muft be \(=f \times \frac{\mathrm{CF}}{\mathrm{CA}}\).

\section*{roor} fo on of all the reft.

If we fuppore all the fibres to excit equal refiftances at the inftan: of fracture, we know, from the fimpleft clements of mechanics, that the refiftance of all the particles in the lime CD, cach acting equally in its own place, is the fame as if all the individual refiltances were united in the middle point \(g\). Now this total refiftance is the refiftance or ftrength \(f\) of each particle, multiplied by the number of particles. This number may be exprefled by the line CD, becaufe we have no reafon to fuppofe that they are at unequal ditances. Therefore, in comparing different fections together, the number of particles in each are as the fections themfelves. 'Therefore DC may reprefent the number of particles in the line \(\mathrm{DC}^{\prime}\). Let us call this line the depth of the beam, and exprefs it by the fymbol \(d\). And fince we are at prefent treating of roofs whofe rafters and other parts are commonly of uniform breadth, let us call AH or BI the breadth of the beam, and exprefs it by \(b\), and let CA be called its length, \(I\). We may now exprefs the ftrength of the whole line CD by \(f \times d\), and we may fuppofe it all concentrated in the middle point \(g\). Its mechanical energy, therefore, by which it refits the energy of the weight \(w\), applied at the diftance ; is \(f . \mathrm{CD} . \mathrm{C} g\), while the momentum of \(w\) is \(w . \mathrm{CA}\). We mult therefore have \(f . \mathrm{CD} . \mathrm{C} g=w . \mathrm{CA}\), or \(f l . \frac{1}{1} / d\) \(=w . l\), and \(f!: w=l: \frac{1}{d}\), or \(f l: w=2 l: d\). That is, twice the length of the beam is to its depth as the abfolute Atrength of one of its rettical planes to its relative Atrength, or its power of refilting this tranfverfe fracture.

It is evident, that what has been now demonftrated of the refillance exerted in the line \(C D\), is equally true of every line paraild to CD in the thicknefs or breadth of the beam. The abfolute ftrength of the whole fection of fracture is properly reprefented by \(f . d t\), and we fill have \(2!: d=f d b: w\); or twice the length of the beam is to its depth as the alfolute flrength to the relative ftrength. Suppofe the beam 12 feet long and one foot deep ; then whatever is its abfolute ftrength, the \(2{ }^{4}\) th part of this will break it if hung at its extreanity.

But even this is too favourable a flatement; all the fibres are fuppofed to meet alike in the inftant of fracture. But this is not true. At the inflant that the fibre at D breaks, it is ftretched to the utmof, and is exerting its whole force. But at this inflant the fibre at \(g\) is not fo much ftretched, and it is not then exerting its utmoft force. If we fuppofe the extention of the fibres to be as their diftance from C , and the actual exestion of each to be as their extenfions, it may eafily be fhown (fee Strencth and Strain), that the whole refiftance is the fame as if the full force of all the fibres were united at a point \(r\) diflant from C by one third of CD. In this cafe we mull fay, that the abfolute Itrength is to the relative Arength as three times the length to the depth; fo that the beam is weaker than lyy the former ftatement in the proportion of two to three.

Even this is more ftrength than experiment juftifies; and we can fee an evident reafon for it. When the beam is Atrained, not ouly a:e the upper fibres ftretched, but the lower fibres are compreffed. This is
very diflinetly feen, if we attempt to break a piece of cork cut into the fhape of a beam : this being the cafe, \(\mathbf{C}\) is not the centrc of fracture. There is fome point \(c\) which lies between the fibres which are flretched and thofe that are compreffed. This fibre is neither Atretched nor fqueezed; and this point is the real centre of fracture: and the lever by which a fibre D refifts, is not DC , but a: horter one \(\mathrm{D} c\); and the energy of the whole refiftances muft be lefs than by the fecond ftatement. Till we know the proportion between the dilatability and compreffibility of the parts, and the relation between the dilatations of the fibres and the refiffancts which they exert in this Itate of dilatation, we cannot politively fay where the poiut \(c\) is fituated, nor what is the fum of the actual refiftances, or the point where thair action may be fuppofed concentrated. The firmer woods, fuch as oak and chefnut, may be fuppofed to be but flightly compreffible ; we know that willow and other foft woods are very compreffible. Thefe laft mult therefore be weaker: for it is evident, that the fibies which are in a ftate of compreffion do ngt refift the fracturc. It is well known, that a beam of willow may be cut through from C to g without weakening it in the leaft, if the cut be filled up by a wedge of hard wood ttuck in.

We can only fav, that very found oak and red fir have the certre of effort fo fituated, that the abfolute Itrength is to the relative ftrength in a proportion not lefs than that of three and a half times the length of the beam to its depth. I fquare inch of found oak will carry about 8000 pounds. If this bar be firmly fixed in a wall, and project 12 iaches, and be loaded at the extremity with 200 pounds, it will be brokes. It will juft bear 190, its relative flrength being \(\mathbb{T}^{\frac{1}{2}}\) of its abfolute ftrength; and this is the eafe only with the fineft pieces, fo placed that their annual plates or layers are in a vertical pofition. A larger \(\log\) is not fo Arong tranfverfely, becaufe its plates lie in various di-
rections round the heart.

Thefe obfervations are enough to give us a dillinct notion of the valt diminution of the flrength of timber when the ftrain is acrofs it; and we fee the jultice of the maxin which we inculcated, that the earpenter, in framing roofs, hould avoid as much as poffible the expofing lis timbers to tranfverfe ftraiss. But this cannot be avoided in all cafes. Nay, the ultimate ftrain, arifing from the very natire of a roof, is tranfverfe. The rafters muft carry their own weight, and this tends to break them acrofs : an oak beam a foot deep will not carry its own weight if it project more than 60 feet. Befides this, the rafters muft carry the lead, tyling, or nates. We muft therefore confider this tranfverfe Itrain a little more particularly, fo as to know what Arain will be laid on any part by an unavoidable load, laid on either at that part or at any other.

We have hitherto fuppofed, that the beam had one Effer when of its ends fixed in a wall, and that it was loaded at the beanmare other end. This is not an ufual arrangement, and was at the eods ta'sen merely as affording a fimple application of the and loaded mechanical prineiples. It is mich more ufual to have in the midthe beam fupported at the ends, and loaded in the die, \&c. niddle. Let the heam FEGH (fig. 2.) rett on the props E and G, and be loaded at its middle point C vith a weight \(W\). It is required to determiae the frain at the fection CD ? It is plain that the beam will
recelve.
receive the fame fupport, and fufter the fame thrain, if, inftead of the blocks \(E\) and \(G\), we fubftitute the ropes Efi, Gbog going over the pulleys \(/\) and \({ }^{\prime}\), and loaded with proper weights \(e\) and \(s\). The weight \(e\) is equal to the fupport given by the hlock E ; and g is equal to the fupport given by G. The fum of \(e\) and \(g\) is equal to W ; and, on whatever point W is hing, the weights \(e\) and \(g\) are to \(\mathrm{VF}^{7 \%}\) in the proportion of DG and DE to GE. Now, in this ftate of things, it appears that the ftrain on the fection CD arifes immediately from the upward action of the ropes \(F f\) and \(H h\), or the upward preffions of the blocks \(E\) and \(G\); and that the office of the weight \(W\) is to oblige the beam to oppole this ftrain. Things are in the fame ftate in refpect of ftisin as if a block were fubftituted at \(D\) fer the weight \(W\), and the weights \(e\) and \(g\) were hung on at \(E\) aud \(G\); only the dirtetions will be oppofite. The beam tends to break in the fection CD, becaufe the ropes pull it upwaids at \(E\) and \(G\), while a wright W holds it down at \(C\). It tends to open at \(D\), and \(C\) becomes the centre of fracture. The ftrain therefore is the fame as if the half ED were fxed in the wall, and a weiglt equal to \(g\), that \(i\), to the half of W, were hung on at \(G\).

Hence we conclude, that a beam fupported at both ends, bue not fixed there, and loaded in the middle, whll eary twice as much weight as it can carry at its extremity, when the other extremity is faft in a wall.

Ihe itrain vecafoned at any point L by a weight W, hung on at any cthe: point \(D\), is \(=W \times\) DE \(\overline{E G} \times I G\). For EG is to ED as \(\mathbb{E}\) to the prefure occafioned at \(G\). This would be balanced by fome weight \(;\) acting over the puliey \(b\); and this tends to Lreak the beam at L, by acting on the lever GI. 'The prefure at \(G\) is \(W \cdot \frac{D E}{E G}\), and thevefure the Itrain at I. is W. \(\frac{\text { DE }}{E G}\) IG.

In like manner, the ftrain oceafoncu at the point \(D\) by the weight Whag on there, is W \(\frac{D F}{E G} \times D G\); which is therefore equal to : W, when \(D\) is the midde point.

Hence we fee, that the gencral ftrain on the beam ariting from one weight, is proportionable to the rectangle of the parts of the beam, (for \(\frac{\text { W.DE.1)G }}{1 \mathrm{C}}\) is as DE.DG), and is greatef when the load is laid on the middle of the beam.

We alfo fee, that the frain at L , by a load a: D , is equal to the Arain at D by the fame load at I . And the frain at \(L\), from a load at \(D\), is to the frain by the fame luad at L as DE to LE. I hefe are all very obvious corollaries; and they fuffeciontly inform us concening the ftrains which are produced on any part of the timber by a load laid on any other part.

If we now fuppofe the beam to he fixed at the tro ends, that is, frmly framed, or held down by blocks at \(I\) and \(K\), placed beyond \(E\) and \(G\), or framed into polts, it will carry twiee as much as when its ends were Eree. For fuppofe it fawn through at CD; the *eight W lhung on there will be juft fufficient to break it at \(E\) and \(G\). Now ac!ore the connection of the fec-
tion CD, it will require anotier weight Wio break is there at the fame time.

Therefore, when a rafter, or any pices of timber, is firmly connected with three fixed points \(G, E, 1\), it will bear a grenter load between any two of them than if its connection with the renose point were removed; and if it be faitened in four puints, \(G, E, I, K\), it wil! be twice as ftrong in the middle part as without the two remote connections.

One is apt to expect from this that the joit of a flour will be much ftrengthened by beiag firmly built in the wall. It is a little trengthened; but the bold which can thus be given it is much too thort to be of any fenfible fervice; and it tends greatly to thatter the wall, beeave, when it is bent down by a load, it forees up, the wall with the nomentum of a long lewer. Judici-ous builders therefore take care not to bind the joints tight in the wall. But whea the joifts of adjoining rooms lie in the fame dirtction, it is a great advantaje
to make them of one picee. They are then twice as to make them of one picee. They are then twice as ftong as when made in two lengths. It is eafy to deduce from thefe premiffes the ftrain on Interences any point which arifes from the weight of the beam ::-
felf, or from any load which is unfounly diffufed user felf, or from any load which is unifomly diffufed user the whole or any part. We may always confoder the
whole of the weight which is thus uniformly difufed the whole or any part. We may always confider the
whole of the weight which is thus uniformly difufed over any part as maited in the middle point of that part ; and if the load is not uniformly diffuled, we may part; and if the load is not uniformly difuted, we may
ftill fuppofe it united at its centre of gravity. Th:s, to know the ftrain at L arifing from the weight of the to know the ftrain at L arifing from the weight of the
whole beam, we may fuppofe the whole weight aceumulated in its middle point D. Alfo the ftrain at L . arifing from the weight of the part ED, is the fame as if this weight were aceumulated in the middle point \(d\) of ED ; and it is the lame as if half the weiglit of ED of ED ; and it is the lame as if half the weight of ED
were hung on at 1). For the real ftrain at \(L\) is the upward proffure at \(G\), acting by the lever GI. Now call the weight of the part DEe; this upward preflure will be \(\frac{e x d \mathrm{E}}{\mathrm{EG}}\), or \(\frac{\frac{1}{2} e x \mathrm{DE}}{\mathrm{EG}}\).

Therefore the ftrain on the middle of a beam, arifing from its own weight, or from any uniform luad, \(i\). the neight of the beam or its load \(\times \frac{E D}{E G} \times 10 G\); tha: \(i_{s}\), hatf the weight of the beam or luad multiplied or acting by the lever DG: for \(\frac{E L}{E G}\) is \(\frac{1}{2}\).

Alio the flrain at \(L\), arifing from the weitht of the beam, or the uniform load, is : the weight of the bean on loud acting by the lewer I.G. It is therefore proportion:l to LG, and is greatelt of all at D. Thereture a beam of uniform ttrength thruighout, unformby luaded, will beak in the middle.

I: is of impustance to know the riation between Relacioz the frains arifing from the weights of the beams, or the ween from any unifomly diffuled load, and the relative as Araine ftength. We have already leen, that the relative and the re Atrength is \(f \frac{d b . l}{m l}\), where \(n\) is a number to be cifion ?rasigst. rered by experiment for every different fpecics of materials. Leaving out every circumltarce but what depends on the dimenfions of the beam, viz. \(c, b\), and \(/\), we fee that the relative trength is in the propotion of \(\frac{d^{2} l}{7}\),
\[
3 \mathrm{Nz} \quad \text { thet }
\]

\footnotetext{

} 1

 an thus he siven it is ghened; but the hold which to make them of one picee. They are then twice as

Lec that the relative frength is in the proportion of \(-\frac{7}{1}\),

Rorf that is, as the becadth and the fquare of the depth dircetly and the length inverfely.

Now, to confider firt the ftrain arifing from the weight of the beam itedt, it is evident that this weight increafes in the fame proportion with the depth, the breadth, and the length of the beam. 'Therefore its power of refliting this flrain mut be as its depth direct1y, and the fquare of its length inverfely. To confider this in a more popular manner, it is plain that the increafe of breadth makes no change in the power of refifting the actual itrain, becaufe the load and the abfolute flrength increafe in the fame proportion with the breadth. But by increafing the depth, we increafe the refilting fection in the fance proportion, and therefore the number of refilting fibres and the abfolute flrength: but we alfo increafe the weight in the fame proportion. This makes a compenfation, and the relative Itrengh is yet the fame. But by increafing the depth, we lave not only increafed the abfolute ftrength, but alfo its mechanical energy: For the refiftance to fracture is the fame as if the full ftrength of each fibre was exerted at the point which we called the centre of effort ; and we fhowed, that the diftance of this from the underfide of the beam was a certain portion (a half, a third, a fourth, \&xc.) of the whole depth of the beam. This diftance is the arm of the lever by which the cohefion of the wood may be fuppofed to act. Therefore this arm of the lever, and confequently the energy of the retiftance, increafes in the proportion of the depth of the beam, and this remains uncompetfated by any increafe of the Atrain. On the whole, therefore, the power of the beam to fuftain its own weight increafes in the proportion of its depth. But, on the other hand, the power of withftanding a given ftrain applied at its extremity, or to any aliquot part of its length, is diminithed as the length increafes, or is inverfely as the length; and the ftrain arifing from the weight of the beam alfo increafes as the length. Therefore the power of refifting the ftrain actually exerted on it by the weight of the beam is inverfely as the fquare of the length. On the whole, therefore, the power of a beam to carry its own weight, varies in the proportion of its depth directly and the fquare of its length inverfely.

As this fl rain is frequently a confiderable part of the whole, it is proper to confider it apart, and then to reckon only on what remains for the fupport of any extra22 seous load.

Fower of 2 beam to carry a lod uniformly riffifedo veriss length.

In the raxt place, the power of a beam to carry any load which is uniformly diffufed over its length, mult be inverfely as the fquare of the length: for the power of withftanding any ftrain applied to an aliquot part of the length (which is the cafe here, becaufe the load may be conceived as accumulated at its centre of gravity, the middle point of the beam) is inverfely as the length; and the adual ftrain is as the length, and therefore its momentum is as the 「quare of the length. Therefore the power of a beam to carry a weight uniformly diffufed over it, is inverfely as the fquare of the length. N. B. It is herc undertood, that the uniform load is of fome determined quantity for every foot of
the length, fo that a beam of double length carries a double load.
We have hitherto fuppofed that the forces which tend to break a beam traniverfely, are acting in a direc.
tion perpendicular to the beam. This is always the cafe in level floors loaded in any mamer; but in roofs, the action of the load tendiug to break the rafters is oh. lique, becaufe gravity always acts in vertical lines. It may alfo frequently liappen, that a beam is Atrained by a force asting obliquely. This modification of the ftrain is eafily difcuffed. Suppofe that the external force, which is meafured by the weight W in fig. 1 . acts in the direction A zu' inftead of AW. Draw C a perpendicular to \(\mathrm{A}=\mathrm{w}\). Then the momentum of this external force is not to be meafured by \(\mathrm{W} \times \mathrm{AC}\), but by \(\mathrm{W} \times a ́ \mathrm{C}\). The ftrail therefore by which the fibres in the fection of fracture DC are torn afunder, is diminithed in the proportion of CA to \(\mathrm{C} \dot{a}\), that is, in the proportion of radius to the fine of the angle \(\mathrm{C} A\) án \(^{\text {, }}\) which the beam makes with the direction of the external force.
To apply this to our purpofe in the moft familiar manner, let AB (fig. 3.) be an oblique rafter of a building, loaded with a weight \(W\) fufpended to any point C , and thereby occafioning a flrain in fome part B . We have already feen, that the immediate caufe of the ftrain on \(D\) is the reaction of the fupport which is given to the point B . The rafter may at prefent be confidered as a lever, fupported at \(A\), and pulled down by the lice CW. This occafions a preffure on B , and the fupport acts in the oppofite direction to the action of the lever; that is, in the direction \(B\) d, perpendicular to \(\mathrm{B}_{\mathrm{A}}\). This tends to break the beam in every part. The preffure exerted at B is \(\frac{\mathrm{W} \times \mathrm{AE}}{\mathrm{AB}}, \mathrm{AE}\) being \(a\) horizontal line. Therefore the frain at D will be \(W \times A E\)
\(\frac{A B}{-} \times \mathrm{BD}\). Had the beam been lying horizor. tally, the ftrain at D , from the weight W fufpended at \(C\), wonld have been \(\frac{W \cdot A C}{A B} \times B D\). It is therefore diminifhed in the proportion of \(A C\) to \(A E\), that is, in the proportion of radius to the cofine of the elevation, or in the proportios of the fecant of elevation to the radius.

It is evident, that this law of diminution of the ftrain is the fame whether the flrain arifes from a load on any part of the rafter, or from the weight of the rafter itfelf, or from any load uniformly diffufed over its length, provided only that thefe luads act in vertical lines.

We can now compare the ftrength of roofs which itrength of have different elevations. Suppoling the width of the roofs habuilding to be given, and that the weight of a fquare reng dife. yard of covering is alfo given. Then, becaufe the load reat elevaon the rafter will increafe in the fame proportion with pared.
its length, the load on the flant-fide BA of the roof will be to the load of a fimilar covering on the half AF of the flat roof, of the fame width, as \(A B\) to \(A F\). But the tranfverfe action of any load on AB, by which it tends to break it, is to that of the fame load on AF as AF to AB . 'I'he tranfverfe ftrain therefore is the fame on both, the increafe of real load on \(A B\) being compenfated by the obliquity of its action. But the ftrengths of beams to refit equal Atrains, applied to fimilar points, or uniformly diffufed over them, are inverfely as their lengths, becaufe the nomentum or encrgy of the ftrain is proportional to the length. There-

\section*{R O O}
fore the power of \(A B\) to withtand the frain to which ' it is really expoled, is to the power of AF to refift its ftrain as \(A F\) to \(A B\). If, therefore, a rafter \(A G\) of a teltain fcantling is jurt able to earry the roofing laid on it, a rafter \(A B\) of the fame fcantling, but more eievated, will be too weak in the proportion of AG to \(A B\). Therefore feeper roots requite fouter rafters, in order that they may be equally able to carry a roofing of equal weight per fquare yard. To be equally ttrong, they mult be made broader, or placed nearer to each other, in the proportion of their greater length, or they muft be made deeper in the fubduplicate propertion of their length. The following ealy confruction will enable the artift not familiar with computation to proportion the deptl of the rafter to the flope of the roof.

Let the horizontal line af (Sg. 4.) be the proper depth of a beam whofe length is half the width of the building ; that is, fuch as would make it fit for carrying the intended tiling laid on a fiat roof. Draw the vertical line \(f b\), and the line \(a b\) having the elevation of the ra'ter; make \(a g\) equal to \(a f\), and defcribe the femicircle \(b d g\); draw a \(d\) perpendicular to \(a b, a d\) is the required depth. 'The demonfration is evident.

We have now treated in fufficient detail what relates to the chief ftrain on the component parts of a roof, namely, what tends to break them traniverfely ; and we have enlarged more on the fubject than what the prefent oecafion indifpenfably required, becaufe the propofitions which we have demonftrated are equally applicable to all framings of carpentry, and are even of greater moment in many cafes, particularly in the contruction of machines. Thefe confift of levers in various forms, which are ftrained tranfverfely; and fimilar ftrains frequently occur in many of the fupporting and connecting parts. We thall give in the article Timber an account of the experiments which have been made by different naturalifts, in order to afcertain the abfolute ftrength of fome of the materials which are moft generally framed together in buildings and engines. The houfe-carpenter will draw from them abfolute numbers, which lee can apply to his particular purpofes by means of the propolitions which we have now eftablithed.

We proceed, in the next place, to conlider the other ftrains to which the parts of roofs are expofed, in confequence of the fupport which they mutually give each other, and the preffures (or thrufts as they are called in the language of the houfe carpenter) which they exert on each other, and on the walls or piers of the build. ing.

Let a beam or piece of timber AB (fig. 5.) be fufpended by two lires \(A C, B D\); or let it be fupported by two props \(A E, B F\), which are perfectly moveable round their remote extremities \(E, F\), or let it reft on the two polifhed plains KAH, LBM. Moreover, let G be the centre of gravity of the beam, and let GN be a line through the centre of gravity perpendicular to the horizon. The beam will not be in equilibrio unlefs the vertical line \(G N\) either paffes through \(P\), the point in which the directions of the two lines \(\mathrm{AC}, \mathrm{BD}\), or the directions of the two props EA, FD, or the perpendiculars to the two planes \(\mathrm{KAH}, \mathrm{LBM}\) interfect each other, or is parallel to thefe directions. For the fupports given by the lines or props are unqueftionably exerted in the direction of their lengths; and it is as well

\section*{469 ] \\ \(\begin{array}{lll}\mathrm{R} & \mathrm{O} & 0\end{array}\)}
known in mechanies that the fupports siven by planes are exerted in a diecetion perpendicular to thofe planes

Rouf. in the points of contact ; and we know that the weight of the beam acts in the fame manner as it it were all accumulated in its centre of gravity G, and that it acte in the direction GN perpendicular to the horizon. Moreover, when a body is in equilibrio between three forces, ther are acting in one plane, and their directions are either parallel or they pafs through one point.

The fupport given to the beam is therefore the fame as if it were fufpended by two bines which are attached to the lingle point \(P\). We may alfo infer, that the points of fufpenfion \(\mathrm{C}, \mathrm{D}\), the points of fupport \(\mathrm{E}, \mathrm{F}\), the points of contaft \(A, B\), and the centre of gravity \(G\), are all in one vertical plane.

When this pofition of the beam is difturbed by any external force, there muft either be a notion of the points \(A\) and \(B\) round the centres of fufpenfion \(C\) and D , or of the props round thele points of fuppurt E and F , or a fliding of the ends of the beam along the polifhed planes GH and IK ; and in confequence of thefe motions the centre of gravity \(G\) will go out of is place, and the rertical line GiN will no longer pafs through the point where the directions of the fupports interfect each other. If the centre of gravity rifes by this mo. tion, the body will have a tendency to recover its former pofition, and it will require foree to keep it away from it. In this cale the equilibrium may be fuid to be fable, or the body to have jlubility. Bur if the centre of gravity defcends when the body is moved from the pofition of equilibrium, it will tend to move fill farther; and ofar will it befrom recovering its former pofition, that it will now fall. This equilibrium may be called a tottering equilitrium. Thefe accidents depend on the fituations of the points \(\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}, \mathrm{F}\); and they may be determined by confidering the fubject geometrically. It does not much interef us at prefent; it is rarely that the equilibrium of fufpenfion is tottering, or that of props is ttable. It is evident, that if the beam were fulpended by lines from the point \(P\), it would have ftability, for it would fwing like a pendulum round \(P\), and therefore would always tend towards the pofition of equilibrium. Ihe interfection of the lines of fupport would fill be at \(P\), and the vertical line drawn though the centre of gravity, when in any other fituation, would be on that fide of P towards which this centre has been moved. Therefore, by the rules of pendulous bodies, it tends to come back. 'lhis would be more remarkably the cafe if the points of fufpention \(C\) and D be on the fame fide of the point P with the points of attachment \(A\) and \(B\); for in this cafe the new point of. interiection of the lines of fupport would fhift to the oppofite fide, and be ftill farther from the vertical line thiough the new pofition of the centre of gravity. But if the points of fulpenfion and of attachment are on op. pofite lides of \(P\), the new point of interfection may fhift to the fame fide with the centre of gravity, and lie beyond the vertical line; in this cafe the equilibrium is tottering. It is ealy to perceive, too, that if the equilibrium of fufpenfion from the points C and D be ftable, the equilibriun on the props AE and BF mult be tottering. It is not neceffary for our prefent purpofe to engage more particularly in this difcuffion.

It is plain that, with refpect to the mere momentary equilibrium, there is no diference in the fupport by tureades

Thons -threads, or props, or planes, and we map fubnitute the one for the other. We fhall find this fubfitution extremely ufeful, bccaufe we cafily conccive dilinct notions of the fupport of a body by ftrings.

Obferve farther, that if the whole figure be inverted, and things be fubflituted fur props, and props for Alrings, the equilibrium will ftill obtain: for by comparin' fig. 5 . with fig. 6 . we fee that the vertical line through the centre of gravity will pafs through the interfection of the two ftrings or props; and this is all that is neceflary for the equilibrium: only it mufl be obferved in the fubfitution of props for threads, and of threads for props, that if it be done without inverting the whole Ggure, a fable equilibrium becomes a

\section*{25 tottering one, and vice verfa.}

Tisamples. This is a moft ufe ful propofition, efpecially to the unlettered artifan, and cnables him to make a practical ufe of problems which the greateft mechanical geniuf.s have found no eafy tank to folve. An inflance will fhow the extent and utility of it. Suppofe it were required to make a manfard or kirb roof whofe width is \(A B\) (fir. 7.), and confiting of the four equal rafters AC, CD, DE, EB. There can be no doubt but that its beff furm is that which will put all the pazts in equilibrio, fo that no ties or flays may be neceffary for oppofing the unbalanced thruft of any part of it. Make a chain a c ded (fig. 8.) of four equal piects, luofely connected by pin-joints, round which the parts are perfeetly moveable. Sufpend this from two pins \(a, 2\), texed in a horizontal line. This chain or feltoon will arrange itfelf in fuch a form that its parts are in equilibrio. Then we know that if the fgure be inverted, it wiil compofe the frame or trufs of a kirb roof ar \(\mathrm{c}, \mathrm{h}\), which is alfo in equilibrio, the thrults of the pieces balancing each other in the fame manner that the mutual pulls of the hanging feftoon aciet did. If the proportion of the height \(d f\) to the width \(a b\) is not fuch as pleafes, let the pins \(n\), b be placed nearer or more diflant, till a proportion between the width and lreight is obtained whicl? pleafes, and then make the ligure ACDEB fig. 7 . fimilar to it. It is evident that this propofition will apply in the fame manner to the determination of the form of an arch of a bridge; but this is not a proper place for a father difcufion.
Weare now able to compute all the thrults and other preffures which are exelted by the patts of a rnof on each other and on the walls. Let All (g. g.) be a beam ftanding anyhow obliquely, and (s) its centre of gravity. Let us fuppofe that the ends of it are fupported in any directions AC, BD, by frings, props, or planes. Let thefe directions meet in the point \(P\) of the vertical linc PG paffing through its centre of rgraa ity. Through G draw lines \(\mathrm{G} a, \mathrm{G}\) b parallel to \(\stackrel{\rightharpoonup}{ } \mathrm{B}\), PA. Then
The weight of the beam \(\left.\begin{array}{l}\text { The preiflure or thruft at } \mathrm{A} \\ \text { 'Ihe preffure at } \mathrm{B}\end{array}\right\}\) are proportional to \(\left\{\begin{array}{l}\mathrm{PG} \\ \mathrm{P} \\ \mathrm{P} \ell\end{array}\right.\) For when a body is in equilibrio between three furces, thefe forces are p:oportional to the fides of a triangle which have their directions.

In like manner, if \(\mathrm{A} g\) be drawn parallel to P b, we - Thall have

Or, diawing \(\mathrm{B}_{\gamma}\) paralle to Pa
\(\left.\begin{array}{l}\text { Weight of beam } \\ \text { Thruft at } A \\ \text { 'Thruft at } B\end{array}\right\}\) are proportimal to \(\left\{\begin{array}{l}\Gamma r \\ D_{\gamma} \gamma \\ 1>\end{array}\right.\)
Thruft at B,\(\}_{\text {P }}\)
It cannot he difputed that, if Arength alone be confidered, the proper lorm of a roof is that which puts the whole in equalibrio, fo that it would remain in that rof is flape although all the joints were perfectly bofe orthe wh flexible. If it has any other fhape, additional ties or in equi braces are neceflary for prefervins it, and the parts are unneceflarily itrained. Whea this equilibrium is obtained, the rafters which compofe the roof are all acting on cach other in the direction of their leagths; and by this action, combined with their weights, they fultain no ftrais tut that of comprefion, the thrain of all others that they are the \(m\) oft able to refilt. We may confider them as io many indexible lines having their weights accumulated in their centres of gravity.: But it will allow an eafice inveltigation of the fubject, if we fuppofe the weights to tre at the joints, equal to the real vertical prefures which are exerted on thefe points. Thefe are very caflily computed: for it is plun, that the weight of the beam AB (fig. 9.) is to the part of this weigh: that is fupported at \(B\) as \(A E\) to \(A G\). Therefore, if IW peprefent the weight of the beam, the vertical preffure at \(B\) will be \(10 \times \frac{A C}{A B}\), and the vertical preffure at \(A\) will be \(w \times \frac{\mathrm{BG}}{A B}\). In like manner, the prop \(B F\) being confidered as another beam, and \(f\) as its centre of gravity and \(w\) as its weight, a part of this weight, equal to \(z v \times \frac{f \mathrm{~F}}{\mathrm{BF}}\), is fupported at B , and the whole vertical preffure at \(B\) is \(W \times \frac{A G}{A B}+w \times \frac{f F}{B F}\). And thus we greatly fimplify the conftruction of the mutual thrufts of roof frames. We need hardly obferve, that although thefe preffures by which the parts of a frame fnpport each other in oppofition to the vertical action of gravi. ty, are always cxerted in the direction of the pieces, they may be refolved into preflures asting in any oth:direction which may engage our attention.

All that we propofe to detiver on this fueject a: prefent may be included in the following propofition.

Let AliCDE (fig. 10.) be an afemblage of rafters in a vertical plane, retting on two fixed points \(A\) and \(E\) in a horizontal line, and perfectly movecable round all the jo uts \(\therefore, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}\); and let \(\therefore\) be fuppofed to be in equilibrio, and let us inveftigate what adjuftment of the different circumflances of weight and inclination of is different parts is neceffary for producing this equilibrium.

Let F, G, H, I, be the centres of gravity of the diferent rafters, and let thefe letters exprefs the weights of each. Then (by what has been faid above) the weight which prefes \(B\) directy dowawards is \(F \times \frac{A F}{A B}+G \%\) \(\frac{\mathrm{CG}}{\mathrm{BC}}\). The weight on C is in like manner \(\mathrm{G} \times \frac{\mathrm{BG}}{\mathrm{BC}} \div\) \(\mathrm{H} \times \frac{\mathrm{DH}}{\mathrm{CD}}\), and that on D is \(\mathrm{H} \times \frac{\mathrm{CH}}{\mathrm{CD}}+1 \times \frac{\mathrm{EL}}{1 \mathrm{DE}}\).

Let \(A b c d \mathrm{E}\) be the figure ABCDE inverted, in the manner already defcribed. It may be conceived as a thrcad fattened at \(A\) and \(E\), and luaded at \(b, c\), and

\section*{R \(\quad 0 \quad 0\)}
\(d\) with the weights which are really preffing on \(\mathrm{B}, \mathrm{C}\), and D . It will arrange itfelf into fuch a form that all will be in equilibrio. We may difcover this form by means of this fingle confideration, that any part \(b c\) of the thread is equally fretched throughout in the direction of its length. Let us therefore inveltigate the proportion between the weight \({ }^{2}\), which we fuppofe to be pulling the point \(b\) in the vertical direction \(b \beta\) to the weight \(\delta\), which is puling down the point \(d\) in a funilar manner. It is evident, that fince AE is a horizontal line, and the figures \(A b c a \mathrm{E}\) and ABCDE equal and fimilar, the lines \(\mathrm{B} b, \mathrm{C} f, \mathrm{D})\), are vertical. Take \(b f\) to reprefent the weight hanging at \(b\). By fleteching the threads \(b A\) and \(b c\) it is fet in oppofition to the contractile powers of the threads, acting in the directions \(b A\) and \(b c\), and it is in immediate equilibrio with the equivalent of thefe two contractule forces. Therefore make \(b g\) equal to \(b f\), and mance it the diagonal of a paraltelogram \(b b i g\). It is evident that \(b b, b i\), are the forces exerted by the threads \(t \mathrm{~A}, b\) co Then, feeing that the thread \(b c\) is equally flretched in both direc. tions, make \(c k\) equal to \(b: ; c k\) is the contratile force which is exeited at by the weight which is hanging there. Draw \(\dot{k} /\) parallel to \(i d\), and \(l m\) parallel to \(b c\). The force \(l\) c is the equivalent of the contractile forces \(c k, c m\), and is therefore equal and oppolite to the force of gravity acting at C. In like manner, make \(d n=c n\), and complete the parallelogram \(n d p o\), having the vertical line of \(d\) for its diagonal. Then \(s^{\prime} n\) and \(d p\) are the contractile forces exsited at \(d\), and the weight lianging there muit be equal to oci.

Therefore, the load at \(b\) is to the load at \(d\) as \(b g\) to do But we have feen that the oomprefing forces at \(\mathrm{B}, \mathrm{C}, \mathrm{D}\) may be fubRituted for the extending forces at \(b, c, d\). Thacrefore the weights at \(\mathrm{B}, \mathrm{C}, \mathrm{D}\) which produce the compreffions, are equal to the weights at \(b, c, d\), which pioduce the extenfions. Therefore \(b \delta: 10=\) \(E \times \frac{A F}{A B}+C \times \frac{C G}{B C}: H \times \frac{C H}{C D}+I \times \frac{E I}{D E}\).

Let us enquire what relation there is between this proportion of the loads upon the joints at B and D , and the angles which the rafters make at thefe joints with each other, and with the horizon or the plumb lines. Produce \(A B\) till it cut the verisal \(C\) : in \(Q\); draw \(13 R\) parallel to CD, and ES paralhei to DE. The timilarity of the ligures \(A B C D E\) and \(A b c d \mathrm{E}\), ard the fimilarity of cheir poition with refpect to the horizontal and plumb lines, fhow, without any further demonttration, that the triangles \(Q C B\) and \(g b i\) are firmilar, and that \((1 B: B C=g i: i b=b b: i b\). Therefore \(Q B\) is to BC as the contratile force exertes by the the ead \(A b\) to that exerted by \(b_{6}\); and therefore \(\triangle B\) is to \(B C\) as the compreffion of B t to the compretion on BC . (A). Then, becaufe \(b i\) is equal to \(c k\), and the triangles CBR and \((\hat{k})\) are fimilar, \(\mathrm{CB}: \mathrm{BR}=c k: k /,=\) \(c k: c m\), and \(C B\) is to 5 R as the comprefion on \(C B\) to the comprefino on CD. Anct, in like manner, be
caufe o \(m=d n\), we have \(B R\) to \(B S\) as the comprefiion on DC to the compreffion on DE . Al:o \(\mathrm{BR}: \mathrm{RS}=\) \(n d: d o\), that is, as the compreffion on DC to the load on D. Finally, combining all thefe ratios
\[
\mathrm{QC:CD}=g b: b i,=g b: b c
\]
\(\mathrm{CB}: \mathrm{BR}=k c: k l,=k c: d n\)
\(\mathrm{BR}: \mathrm{BS}=n d: n_{0}=d n: n_{0}\)
BS:RS \(=n_{0}: d_{0}=n_{0}: a^{\prime} n\), we have finally \(\mathrm{QC}: \mathrm{RS}=g b: 0 d=\) Load at \(\mathrm{B}:\) Load at D .

> Now
\(\mathrm{QC}: \mathrm{BC}=\int, \mathrm{QBC}: f, \mathrm{BQC},=f, \mathrm{ABC}: f, \mathrm{AB} b\)
\(\mathrm{BC}: \mathrm{BR}=f, \mathrm{BRC}: \int, \mathrm{BCR},=f \mathrm{CD} d: \int, b \mathrm{BC}\)
\(\mathrm{BR}: \mathrm{RS}=\int, \mathrm{BSR}: \ell, \mathrm{RBS}=\int, d \mathrm{DE}:,, \mathrm{CDE}\).

\section*{Therefore}
\(\mathrm{QC}: \mathrm{RS}=\int, \mathrm{ABC} \cdot f, \mathrm{CD} d . f, d \mathrm{DE}: \int, \mathrm{CDE} \cdot f, \mathrm{AD}\) b. \(f, b \mathrm{BC}\).

That is, the loads on the different juints are as the fines of the angles at thefe joints directly, and as the products of the fines of the angles which the rafters make with the plumb-lines inveriely.

Or, the loads are as the fines of the angles of the joints directly, and as the produtets of the cofines of the elceations of the rafters jointly.

Or, the loads at the joints are as the fines of the angles at the joints, and as the products of the fecants of elevation of the rafters jointly: for the fecants of angles are inverfely as the cofines.
Draw the horizontal line BT. It is evident, that if this be confidered as the radius of a circle, the lines \(B C, B C, B R, B S\) are the fecants of the angles which thefe lines make with the horizon. And they are alfo as the thrulls of thofe rafters to which thes are parallel. Therefore, the thruf which any rafter makes in its own direction is as the fecant of its clevation.
The horizcital thrult is the fame at all the angles. For \(i_{1}=k x,=m \alpha=n,=p \pi\). Thesefore both walls are equally prefled out by the weight of the roof. We can find its quantity by comparing it with the load on one of the joints:
Thus, \(\mathrm{QC}: C B=\int, A B C: \int, A B b\)
\(\mathrm{BC}: \mathrm{BT}=\) Rad. :/, \(\mathrm{ECF},=\) Rad. : \(\{, \mathrm{CB} 3\)
 It deferres remark, that the leagths of the beams the leengt.3: do not affect either the proportion of the luad at al the the different joints, nor the pofition of the rafters, be mand onThis depends merely on the weights at the angles. phen weigh of If a change of length affects the weight, this indeed at the affects the form alio: ard this is genenally the cafearget. For it feldora happens, indeed it never flould happen, that the weight on rafters of longer bearing are not greater. The covering alone increafes resally in the proportion of the length of the rafter.
If the preportion of the weithts at \(B, C\), and \(D\)
(A) 'rhis proportion might have been thown diresly without any ure of the invarted figure or conficeraticn of contractile forces; but this fubititation gives ditinct notions of the mode of acting even to perfons not much cenverlant in luch difquifions; and we with to make it familiar to the mind, becaufe it gires an caiy solation of the mof complicated problems, and furnifhes the practical carpente;, who has little feience, with folutions of the molt di ficult caies by experimeat. A feltoon, as we called it, may tatily be made; a ad we are certaing that the forms into which it willarrange itfle are medels of perfect frames.

\section*{\(\mathrm{R} 000 \quad\left[\begin{array}{llll}47 & 1\end{array} \mathrm{R} 0\right.\)}
are given, as alfo the pofition of any two of the lines, the pofition of all the reft is determined.

If the horizontal diflances between the angles are all equal, the forces on the different angles are pro. portional to the verticals drawn on the lines through thefe angles from the adjoining angle, and the thrufts from the adjoining angles are as the lines which conneet them.

If the rafters thenifelves are of equal lengths, the weiphts at the different angles are as thefe verticals and as the fecants of the elevation of the rafters jointly.

This propofition is xery fruifful in its pratical confequences. It is eafy to perceive that it contairs the vilole theory of the conftrution of arches; for each flone of an arcll may be confidered as one of the rafters of this piece of carpentry, fince all is kept up by its mere equilibrium. We may have an opportunity in fome future article of exhibiting fome very elegant and fimple folutions of the moll difficult cafes of this important problem; and we now proced to make ufe of the knowledge we have acquired for the conftruction of ronfs.

We mentioned by the bye a problem which is not unfrequent in practice, to determine the beft form of a kirb-roof. Mr Couplet of the Royal Academy of Paris has given a folution of it in an elaborate memoir in 1726 , occupying feveral lemmas and theorems.

Let AE (fig. 11.) be the width, and CF the height; it is required to conftruct a roof \(A B C D E\) whofe rafters \(A B, B C, C D, D E\), are all equal, and which fhall be in equilibrio.

Draw CE , and bifect it perpendicularly in H by the line DHG, cutting the horizontal line \(A E\) in \(G\). About the centre \(G\), with the diftance GE, defcribe the circle EDC. It muft pais through C, becaufe CH is equal to HE and the angles at H are equal. Draw HK parallel to FE , cutting the circumference in K . Draw CK, cutting GHI in D. Join CD, ED ; thefe lines are the rafters of half of the roof required.

We prove this by fhowing, that the loads in the angles C and D are equal. For this is the proportion which refults from the equality of the rafters, and the extent of furface of the uniform roofing which they are fuppofed to fupport. Therefore produce ED till it meet the vertical FC in N ; and having made the fide CBA fimilar to CDE, complete the parallecogran \(B C D P\), and draw \(D B\), which will bifect \(C P\) in \(K\), as the horizontal line KH H , bifects CF in Q. Draw KF , which is evidently parallel to DP. Make CS perpendicular to CF , and equal to FG ; and about S , with the radins SF , defcribe the circle FK IV. It mult pafs through K , becaufe SF is equal to CG , and \(\mathrm{CQ}=\) QF . Draw W K, W S , and produce BC , cutting ND in O .

The angle WKF at the circumference is one-half of the angle W S F at the centre, and is therefore equal to WSC, or CGF. It is therefore double of the angle CEF or ECS. But ECS is equal to ECD and DCS, and ECD is one-half of NDC, and DES is one-half of DCO, or CDP. Therefore the angle WKF is equal to NDP, and WK is parallel to ND, and CF is to CW as CP to CN ; and CN is equal to CP . But it has been thow above, that C N and C P are as the
loack upon D and C . Thefe are therefore squal, and the frame ABCOE is in equilinuio.

A comparifon of this folution with that of Mr Couplet will how its great advantage in refpect of fimplicity and perfpicaity. And the intelligent reader can eafily adapt the conftruction to any proportion between thic rafters \(A B\) and \(B C\), which other circumflances, fuch as garret-ronm, \&c. may render convenient. The confruction munt be fuch that NC may be to CP as CD ) to \(\frac{\mathrm{C} 1)+\mathrm{DE}}{2}\).

\section*{Whatever proportion of \(A B\) to \(B C\) is}
aflumed, the point D will be found in the circumference of a femicircle \(\mathrm{H}^{\prime} \mathrm{D} \cdot b^{\prime}\), whofe centre is in the line CE, and having \(\mathrm{AB}: \mathrm{BC=} \mathrm{CH}^{\prime}: \mathrm{HE},=c h: b \mathrm{E} .-\) The refl of the conftruction is fimple.
In buildings which are roofed with nate, tyle, or fhingles, the circumntance which is molt likely to limit the contruction is the flope of the upper ratiers C B, CD. This mult he fufficient to prevent the penetration of rain, and the itripping by the winds. The only circumilance left in our choice in this cafe is the proportion of the rafters A13 and BC. Nothing is eafier than making NC to CP in any defired proportion when the angle BCD is given.

We need not repeat that it is always a defirable thing to form a trufs for a roof in fueh a manner that it fhall be in equilibrio. When this is done, the whole force of thould a the ftruts and braces which are added to it is employed way cq be in preferving this form, and no part is expended in un b:io. neceffary ftrains. For we mult now obferve, that the equilibrium of which we have been treating is always of that kind which we called the tottering, and the roof requires ftays, braces, or hanging timbers, to give it fliffuefs, or keep it in fhape. We have alfo faid enough to enable any reader, acquainted with the molt elementary geometry and mechanics, to compute the tranfverfe flrains and the thrufts to whicls the component parts of all roofs are expofed.
It only remains now to fhow the general maxims by General \(3^{22}\) which all roofs muft be conftucted, and the cireumftances which determine their excellence. In doing this whints mu we thall be exceedingly brief, and almoft content our-le conft felves with exlibiting the principal forms, of which the ted. endlefs variety of roofs are only night modifications. We flall not trouble the reader with any account of fuch roofs as receive part of their fupport from the interior walls, but confine ourfelves to the more difficult problem of throwing a roof over a wide building, with. out any intermediate fupport ; becaufe when fuch roofs are confructed in the beft manner, that is, deriving the greateff polible ftrength from the materials employed, the bett conitruction of the others is neceffarily included. For all fuch roofs as reft on the middle walls are roofs of fmaller bearing. The only exception deferving notice it the roufs of churches, which have aines feparated from the nave by columns. The roof muft rife on thefe. But if it is of an arched form internally, the horizontal thrufts muft be nieely balanced, that they may not pufh the columns afide.

The fimpleft notion of a roof-frame is, that it con-s:mpleer 333 fifts of two rafters \(A B\) and \(B C\) (fig. 12.), meeting in intion of:
the ridge 13 .

Even this fimple form is fufceptible of better and worle
\(\begin{array}{lll}\mathrm{R} & \mathrm{O} & \mathrm{O}\end{array}\)
worfe. Tie have already feen, that when the weight of a \{quare yard of covering is given, a tteeper roof requires ftronger rafters, and that when the fcantling of the timbers is alfo given, the relative ftrength of a rafter is inverfly as its length. But there is now another circumitance to be taken into the account, viz. the fupport which one rafter leg gives to the other. The beft form of a rafter will therefore be that \(\mathrm{it}_{\mathrm{t}}\) which the relative ftrength of the legs, and their mutual fupport, give the greateit product. Mr Muller, in his Mihury Engineer, gives a determination of t!e beft pitch of a roof, which has confidcrable incenuity, and las been copied into many books of military edueation hoth in this illand and on the cortinent. D.fcribe on the sidth A C, fig. 13 . the femicircle A PC, and bifect it by the radius FD. Prodnce the rafter A B to the circumference in E , join EC, and draw the perpendicular E G.Now \(A B: A D=A C: A E\), and \(A E=\frac{A D \times A C}{A B}\), and \(A E\) is inverfely as \(A \Gamma\), and may therefore reprefent its frength in relation to the weight actually lying on it. Alfo the fupport which \(C B\) gives to \(A B\) is as CL, becaufe CE is perpendicular to AB. Therefore the furm which renders A \(\mathrm{E} \times \mathrm{EC}\) a maximum feems to be that which has the greateft frength. But AC: \(A E=E C: E G\), and \(E G=\frac{A E \cdot E C}{A C}\), and isthere. fore proportional to AE.EC. Now E G is a maximum when B is in F , and a fquare pitch is in this refpect the ftrongett. But it is very doubtful whether this conftruction is deduced from jutt principles. There is another ftrain to which the leg A B is expofed, which is noc taken into the account. This arifes from the curmturt which it unavoidably acquires by the tranfverfe prefure of its load. In this fate it is preffed in its win direction by the abutnent and load of the other leg. 'The relation between this ftrain and the refiftance of the piece is not very diftinctly known. Euler has given a differtation on this fubject (which is of great importance, becaufe it affects pofts and pillars of all kinds; and it is very well known that a po!l of ten feet long and fix inches fquare will bear with great fafety a weight which would crufh a poft of the fame fantling ard 20 feet long in a minute) ; but his detemination has not been acquiefced in by the firt mathematicians. Now it is in relation to thefe two ftrains that the ftrength -of the rafter fhould be adjulted. The finerofs of the firpport given by the other leg is of no confequence, if its owr frength is inferior to the ftrain. 'The force which tends to cruth the leg A \(B\), by compreffing it in its curved ftate, is to its weight as A B to BD , as is eafily feen by the compofition of forces; and its incurvation by this force has a relation to it, which is of intri. cate determination. It is contained in the properties demonftrated by Ternonlli of the elaftic curve. This determination alfo includes the relation hetween the cursature and the length of the piece. But the whole of this feemingiy limple problen is of much more cifficult inveltigation than Mr Muller was aware of; and his rules for the pitch of a ronf, and for the fally of a dock sate, which depends on the fame principles, are of no value. IJe is, however, the firit author who attenpted :u folve either of thefe problems on mechanical princi, 1 les fufceptible of precife reafonirg. Belidor's foluBions, in his Architerlure Hydrauligur, are below no:ice.

\footnotetext{
s'us. XVI. l'ar! I I.
}

Reafuns of economy have made carpenters prefer Romr. a low pitch; and although this does dimining the fupport given by the oppofite leg fatter than it increafea the relative firength ot the other, this is not of material confequence, becaufe the ftrength remaining in the oppofite leg is fill very great : for the fupporting ler is acting againtt compreffion, in which cafe it is vantly Atronger than the fupported lerg atting againit a tranfverfe Atrain.

Eut a roof of this fraplicity will not do in mof cafes. Thruít on There is no notice taken in iss conftuction of the thruft the wain, which it exerts on the wails. Nuw this is the frain which is the molt hazardous of all. Our ordinary walie, iuftead of being able to refift any confiderable ftrain prefling them outwards, require, in geseral, fone tics to keep them on foot. When a perion thinks of the thinnefs and height of the wallo of even a ftrong houfe, he will be furprifed that they are not blown down by any froug puff of wind. A wall of three feet thecis, and 60 feet high, could not withftand a wind blowing at the rate of 30 feet per fecond (in which cafe it acts with a force contiderably excecting two pounds on every (quare foot). if it were not itifiened by crois walls, joiths, and roof, which all help to tic :le differcut parts of the building together.

S
A carpenter is thereforc exceedingly carefal to avoit finw aroid. every horizontal thruf, or to oppuie them by othered. torces. And this introduces another efacutial part into the conflruction of a roof, namely the te or bsam AC. (fig. I4.), laid from wall to wall, binding the feet A and C of the rafters togcther. This is the fole office of the heam; and it thould be confide-ed in ao other lighe: than as a titing to prevent the roof from pulli.ing out the walls. It is indeet ufed for earrying the ceiling of the apartments under it ; and it is even made to lupport a fooring. But, conliderel as making part of a roof, ic is merely a thring: and the ftrain whicla it withfands tends to tear its parts afunder. It therefore acts with its whule abfolute force, and a very fmall fcantlin \(\Gamma\) would fuffice if we could contrive to fafen it firmly enusgin to the foot of the rafter. If it is of oak, we may fatily fulject it to a thrain of three tons for every ©quare inch of its fection. And fir will fately bear a itrata of two tons for every fuare inch. But we are oblifed to give the tie-beam much large: dimenfions, that we may be able to connect it with the foot of the rafte: by a mortife and tenon. Iron ftraps are alio frecquently added. By attending to this office of the tie bean?, the judicions carpenter is directed to the proper forns of the mortife and tenon and of the Rrap. We thall contider both of thefe in a propir place, after we become acquairted with the varions trains at the juints of a roof.

Thefe large dimenfions of the te-beann allou us to load it with the ceilings without any ritk, and even to lay floors on it witi moderation and caution. But when it has a great beating or Ipan, it is very apt to bend downwards in the middle, or, as the workmen term it, to fway or fwag ; and it requires a fupport. The queftion is, where to find this fupport? What fixed points can we find with which to connect the middle of the tie-bcam? Some inyeniuus carpenter thought of fuepending it from the ridge by a piece of timber B \(\cap\) (fig. 15.), called by our carpenters the hize pog?. It muat be acknowledsed that there was sleat insenuity in this thought. If was ato perfictly jur?. For the weight of the rafiers \(B A, L C \in\) terds iv make them thy

\section*{\(R \quad 0 \quad 0 \quad\left[\begin{array}{llllll}474 & 1\end{array}\right] \quad 0 \quad 0\)}

Fonf. out at the foot. This is prevented by the tie-beam, and this excites a prefure, by which they tend to comprefs each other. Suppofe them without weight, and that a great weight is laid on the ridge B. 'I his can be fupported only by the butting of the rafters in their own directions A B and C B, and the weight tends to comprefs them in the oppofite directions, and, through their intervention, to thretch the tie-beam. If reither the rafters can be compreffed, nor the tie-bean ftetched, it is plain that the triangle A BC muft retain its frape, and that \(B\) becomes a fixed point, very proper to be ufed as a point of fulpenfion. To this point, therefore, is the tie-beam fufpended by means of the kingpoft. A common fpectator, unacquainted with carpentry, wiews it very differently, and the tie-beam appears to him to carry the roof. The king.pott appears a pillar refting on the beam, whereas it is really a ltring; and an irou-rod of one-fixteenth of the fize would have done juft as well. The king.polt is fometimes mortifed into the tie-beam, and pins put through the joint, which gives it more the look of a pillar with the roof relting on it. This does well enough in many cafes. But the beft method is to conneet them by an iron ftrap, like a ftirrup, which is bolted at its upper ends into the king-poft, and pafes round the tic-beam. In this way a foace is commonly left between the end of the kingpoft and the upper fide of the tie-beam. Here the beam plainly appears hanging in the ftirrup; and this method allows us to rellore the beam to an exact level, when it has funk by the unavoidable compreffion or other yielding of the parts. The holes in the fides of the iron ftrap are made oblong inftead of round; and the bolt which is drawn through all is made to taper on the under lide; fo that driving it farther draws the tie-bean upwards. A notion of this may be formed by looking at fig. 16. which is a fection of the poft and beam.

It requires confiderable attention, however, to make this fulpenfion of the tie-beam fufficiently firm. The top of the king-pot is cut into the form of the archfrone of a bridge, and the heads of the rafters are firmly mortifed into this projecting part. Thefe projections are called joggles, and are formed by working the king.poft out of a much larger piece of timber, and cutting of the unncecflary wood from the two fides; and, left all this Thould not be fufficient, it is ufual in great works to add an iron-plate or ftrap of three branches, which are bolted into the keads of the kingpolt and rafters.

The rafters, though not fo long as the beam, feem to fland as much in need of fomething to prevent their bending, for they carry the weight of the covering.This cannot be done by fufpention, for we have no fixed points above them: But we have now got a very firm point of fupport at the foot of the king-pot.Braces, or fruts, E D, F D, (fig. 17.), are put under the middle of the rafters, where they are flightly mortifed, and their lower ends are frmly mortifed into joggles furned on the foot of the king. polt. As thefe braces are very powerfou in their refifance to compreffion, aud the king-poll equally fo to refilt extenfion, the points E and F may be confidered as fixed; and the
with two floping fiJes. They are fometimes formed with a double flope, and are called kirb or manfarde voofs. They fometime3 lave a valley in the middle, and are then called M roofs. Such roofs require another piece which may be called the trufs beam. becaufc all fuch frames are called truffes, probably from the French word trouff, becaufe fuch toofs are like portions of plain roofs, trouffés or ihortened.

A flat-topped roof is thus conifructed. Suppofe the three rafters \(\mathrm{AB}, \mathrm{BC}, \mathrm{CD}\) (fig. 18.) of which AB and \(C D\) are equal, and \(B C\) horizontal. It is plain that they will be in equilibrio, and the roof have no tendency to go to either fide. The tie-beam AD withitands the horizontal thrults of the whole frame, and the two rafters \(A B\) and \(C D\) are each prefled in their own directions in confequence of their butting with the middle rafter or trufs-beam BC . It lies between thern like the keyitone of an arch. They lean towards it, and it retts on them. The preflure which the trufs-beam and its load excites on the two rafters is the very fame as if the rafters were produced till they meet in G, and a weight were laid on thefe equal to that of BC and its load. If therefore the trufs-beam is of a fcantling fufficient for carrying its own load, and withltanding the conpreffion from the two rafters, the roof will be equally ftrong (while it keeps its fhape) as the plain roof A GD furnifhed with king-poft and braces. We may conceive this another way. Suppofe a plain roof AGD, without braces to fupport the middle B and C of the rafters. Then let a beam BC be put in between the rafters, butting upon little notches cut in the rafters. It is evident that this muft prevent the rafters from bending downwards, becaufe the points \(B\) and \(C\) cannot defcend, moving round the centres A and D , without fhortening the diflance BC between them. This cannot be without compreffug the beam BC. It is plain that BC may be wedged in, or wedges driven in between its ends B and C and the notches in which it is lodged. Thefe wedges may be driven in till they even force out the rafters GA and GD. Whenever this happens, all the mutual preflure of the heads of there rafters at G is taken away, and the parts GB and GC may be cut away, and the roof ABCD will be as frow as the roof AGD furnifhed with the king-poil and braces, becaufe the trufs-beam gives a fupport of the fame kind at B and C as the brace would have done.

But this roof \(A B C D\) would have no firmnefs of flape. Any addition of weight on one fide would deftroy the equilibrium at the angle, would deprefs. that angle, and caufe the oppofite one to rife. To give it ftifnefs, it muft either have ties or braces, or fomething partaking of the nature of both. The ufual method of framing is to make the heads of the rafters butt on the joggles of two frde-polts BE and CF, while the trufs-bcam, or ftrut as it is generally termed by the carpenters, is mortifed fquare into the infide of the heads. The lower ends \(E\) and \(F\) of the fide-pofts are connected with the tie-beam cither by mortifes or ftraps.
This conftruction gives firmnefs to the frame; for the angle B cannot defcend in confequence of any incquality of preffure, without forcing thewother angle \(C\) to rife. This it cannot do, being beld down by the pof CF. And the fame conftruction fortifies the tiebeam, which is now fufpended at the points \(E\) and \(F\)

\section*{Ir \(O \quad O\)}

Krof from the points \(B\) and \(C\) ，whofe frmnefs we have jurt
now fhowt．

But althourh this roof may be made abundantly ftrong，it is not quite fo ftrong as the plain roof AGD of the fame fcantling．The comprefion which BC muft futtain in order to give the fame fupport to the rafters at \(B\) and \(C\) that was given by braces properly placed，is confiderably greater than the compreffion of the braces．And this 1train is an addition to the tranfverfe ftrain which BC gets from its own load． Alfo this form neceffarily expofes the tie－beam to crofs frains．If BE is mortifed into the tie－beam，then the frain which tends to deprefs the angle ABC prefles on the tie－beam at E tranfvericly，while a contrary ftrain acts on \(\Gamma\) ，pulling it upwards．Thefe ftrains howerer are fmall；and this conttruction is frequently ufed，being fufceptible of fufficient ftrength，without nusch increafe of the dimenfions of the timbers；and it has the great advantage of giving free room in the garrets．Were it not for this，there is a much more per－ fee form reprefented in fig．ig．Here the two pofts I．E，CF are united below．All tranfverfe action on the tie－beam is now entirely removed．We are alnont difpofed to fay that this is the trongell roof of the fame width and nope：for if the iron ftrap which conneets the pieces \(\mathrm{BE}, \mathrm{CF}\) with the tie beam have a large bolt \(G\) through \(i t\) ，confining it to one point of the beam，there are five points \(\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{G}\) ，which cannot change their places，and there is no tranfucrle Atrain in any of the connections．

When the dimenfions of the building are very great， fo that the pieces \(\mathrm{AB}, \mathrm{BC}, \mathrm{CD}\) ，would be thought too weak for withftanding the crofs frains，braces may be added as is expreffed in fig． 18 ．by the dotted lines． The reader will ubferve that it is not meant to leave the top flat externally：it muft be raifed a little in the middle to thoot off the rain．But this mutt not be done by incurvating the beam BC．This would foon be crufhed，and fpring upwards．The flopes muft be given by pieces of timber added above the ftruting beam．

And thus we have completed a frame of a roof．It confilts of thefe principal nembers ：The rafters，which are immediately loaded with the covering；the tie－beam， which withftands the horizontal thrult by which the roof tends to fly out below and puh out the walls； the king pofts，which hang from fixed points and ferve to uphold the tie－beam，and alfo to afford other fixed points on which we may reft the braces which fupport the middle of the rafters；and lattly the truls or ltrut－ ting－beam，which ferves to give niutual abutment to the different parts which are at a diftance from each other．The rafters，braces，and truffes are expofed to compreffion，and mult therefore have not only cohetion but itifnefs．For if they bend，the prodigious com－ freflions to which they are fubjected would quickly crufh them in this bended fate．The tie－beams and king－polts，if performing no other office but lupport－ ing the roof，do not require 1 tifinefs，and their places might be fupplied by ropes，or by rods of iron of one－tenth part of the fection that esera the fmalleft oak ftretcher requires．Thefe menbers require no greater dimenfions than what is neceffary for giving fufficient joints，and any mote is a needlefs expence and load．All roof，howiver complice ted，confit of thefe effentia！parts，and if pieces of timber are to be fect
which perform none of thefe offices，they mufe be pro－ nounced ufelefs，and they are frequently hurtul，by producing crofs ftrains in fome other piece．In a rouf properly conftructed there fould be no fuch frains． All the timbers，except thofe which immediately carry the covering，fhould be either pufhed or drawn in the direction of their length．And this is the rule by which a roof mould always be examined．

Thefe cffential parts are fufceptible of numberlefs com．Are fifcep－ binations and varieties．But it is a prudent maxim to \({ }^{1 i}\) le of make the conftruction as fimple，and confinting of as few cimbina－ parts，as poffible．We are lefs expoled to the imperfec．uots and tions of workmanfhip，fuch as loofe joints，3c．Another varisties． effential harm arifes from many pieces，by the compref． fion and the flrinking of the timber in the crofs di－ rection of the tibres．The effect of this is equivalent to the fhortening of the piece which butts on the joint． ＇This alters the proportions of the fides of the triangle on which the fhape of the whole depends．Now in a roof fuch as fig．18．there is twice as much of this as in the plain pent roof，becaufe there are two polts． And when the direction of the butting pieces is very oblique to the action of the load，a fmall thrinking per－ mits a great change of thape．＇Thus in a root of what is called pediment pitch，where the rafters make an angle of 30 degrees with the horizon，half an inch compreffion of the king poll will produce a fagging of an inch，and occafion a great flrain on the tie－beam if the pofts are mortifed into it．In fig．2．of the roofs in the article Archirfeture，half ais inch flrinking of each of the two potts will allow the middle to farg above five inches．Fig． t ．of the fame plate is faulty in this refpect，by cutting the frutting－beam in the middle．The ttrutting－bean is thus thortened by three fhrinkings，while there is but one to fhurten the rafters． The confequence is，that the trufs which is includad within the rafters will fagg away from them，and then they mut bend in the middle till they again rett on this included trufs．This roof is，howeser，conitructed un the whole on good principles，and we adduce it only to how the advantages of fimplicity．This cutting of the trulfing－beam is unavoidable，if we would preferve the king－polf．But we are in doubt whether the fervice performed by it in this cafe will balance the inconven－ ence．It is emploved only to fupport the middle of the upper half of eath rafter，which it does but insper－ fectly；becaule the braces and ftrut mult be cui hals through at their croffing ：if thefe joinss are anade tight， as a workman would with to do，the fettling of the root \({ }^{-}\) will caufe them to wosk on each other crullwife with infliperable force，and will undoubtedly frain then ex． ceedingly：

This inethed of including a trufs within the rafters of a pent rool is a very contiderable addition to the art of carpentry．But to infure its full effect，it it ould al－ ways be exceuted in the manner reprefenied in fic． 1. Plate XLVIII，with butting rafters unker the pria－ cipal ones，butting on joggles in the lueads of the puils． Without this the ttrut－beam is hardly of any ervice． We would therefore recommend tig．C．as a preper confruction of a iruffed roof，and the king－pott which is placed in it may be employed to fippent the upper pat of the rafters，and alfo for preventing the true－ beam from bending in cither dircetion in conteq ruce of its great comprellion．It will alio give a fuffertion for the great bundens which are iomecimes accelary in

Plate ふLVilf．

Pise しじさん。

\section*{\(\begin{array}{lllll}R & 0 & 47^{6} & R & 0\end{array}\)}

Roof.
a theatre. The machinery has no other firm points to which it can be attached; and the portion of the fungle rafters whicla carry this king.poft are but fhort, and therefore may be confiderably loaded with fafety.

Tie ubferve in the drawings which we fumetinnes bave of Chinefe buildings, that the trulfing of rools is underllood by them. Indied they nult be very aperienced carpenters. We fee woulen buildings run up to a great height, which can be fuppurted unly by fuch truffing. One of thele is iketched in tig. 21. There are forme very excellent fpecimens to be feen in the laildings at Deptforel, belongint to the victuallinguffice, ufinally calted the Red \(\dot{H}\) oufe, which were erected about the year 1788, and we believe are the perform. ance of Mr James Arrow of the Poard of Works, one of the moft intelligent artits in this king.gdom.

Thus have we given an elementary, but a rational or feientific, account of this impurtant part of the art of carperitry. It is fuch, that any practitioner, with the trouble of a little reflection, niay alwass proceed with confidence, and without refting any part of his practice on the rague notions which habit may have given him of the frength and fupports of timbers. and of their manuer of aeting. 'T hat thefe frequently milleal, is proved by the nutual criticiims which are frequently publifhed thy the sivals in the profeffion. They have frequently fagacity erough (for it can teleom be called feience) to point our glaring blunders; and any peefon who will look at fr me of the performances of Mr Price, Mr W?att, Mr Arruw, and others of acknowledged reputation, will reodily fee them dittinguifhable from the works of infesior artirts by fimplicity alunie. A man without principles is apt to contiter an intricate conflruction as ingerious and effectual : and fach roufs fometires fail merely By being ingenimily loaded with timber, but more freguently fill by the wrome action of fome uflefs picce, which pretuces firains that are tranfverfe to uther pieces, of which, by rendering fume points too firm, cure them to be difeited by the reft in the general tubliding of the whmle. Intances of this kind are point--3. out ty Price in his Britifh Carpenter. Nothing finors :lie Alill of a carponter more than the diftinct nefs with which he can forciee the changes of thape which sulut take place in a thort time in eveny roof. A knowledige of this will ofter correct a condtruction which the mete mathematician thinks unexseptiomable, lecaufe lie does not reckon on the actual compreffion which mutt obtain, and imagines that his triangles, whinh fuifain no crufo Atrains, invariably retain their thape till the pieces break. The fagacity of the experibiced carpenter is not, however, enough without icience for perfecting the ant. Rut when he knows how n.wh a paticular piece will yield to compreffon in one cale, fcience will zell him, and nothing, bat fcience can do it, what will le the compreftion of the laine piece in another very different cafe. 'Thus he learns how far it will now yicld, and then be prcportions the parts fo :o tach cther, that when all have yielded according to their ftrains, the whole is of the fhape he wifhed to produce, and every joint is in a flate of frmmefs. It is nere that we ubferve the greateft number of improprietics. The iros ftraps are feceuently in pofitions not fuited to the actual ftrain on them, and they are in a Itate of vielent twift, which both tends frorgly to
break the Srap, and to cripile the pieces which they furround.

In like manner, we frequcutly fee joints or mortifes in a flate of violent Atrain on the tenons, or on the heels and thoulders. The joints were perlaps preperly fhaped to the primitive form of the trufs ; but by its fettling, the bearing on the pufl is changed: the brace, for cxample, in a very low pitched ioof, comes to prefs with the upper part of the fomlder, and, acting as a powerful lever un the tenon, breads it. In like manarer, the lower end of the brace, which at firt butted firmly and fquarely on the joggle of the king-pult, now prefles with one corner with prodisious force, and Celdon fails te fplinter off on that fide. We cannot help recommending a maxim of \(\mathrm{M}_{1}\) l'erronet the celebrated hydraulic architect of France, as a golden rule, viz. to make all the fhoulders of butting pieces in the form of an arch of a circle, having the oppolite eml of the piece for its centre. 'Thus, in fig. 18. if the joggle-juint \(B\) be of this form, having A for its centre, the fagging of the roof will make no partial beaning at the joint : for in the fagging of the roof, the piece A B turns or bends round the centre \(A\), and the counter-preffure of the joggle is till directed to \(A\), as it ought to be. We have jut now faid bends round A. This is too frequently the cale, and it is always very difficult to give the temon and mortife in this place a true and invariable bealing. 'I he ratter puthes in the direction BA , and the beam relifts in the direction AD . Tle abutmens fhould be perpendicular to neither of thele but in an intermediate direction, and it ought alfo to be of a currod farpe. But the carpenters perhaps think that this would weaken the bean too much to give it this thape in the fhoulder; they do not even aim at it in the heel of the tenon. 'The foulder is commonly even with the furface of the beam. When the bearing therefore is on this thoulder, it caufes the foot of the rafrer to Nide along the beam till the heel of the tenon bears againtt the outer end of the montife (See Price's Brityf Carpenter, Plate C. figr. I K). ihhs abutment is perpendicular to the beam in Pricec's book, but it is nore generally puinted a little outwards below, to make it more fecure againtt darting. The confequence of this conftruction is, that when the roof fettles, the thoulder comes to bear at the inner end of the mortife, and it rifcs at the outer, and the tenon taking hold of the wood beyond it, either tears it out or is itfelf bron ken. This joint therefore is feldom tru!led to the Itrength of the mortife and tenon, and is ufually fecit. red by an iron Atrap, which lies obliquely to the bean, to which it is bulted by a large bolt quite through, and then erubraces the outide of the rafter foot. Very frequently this Itrap is not made fufficiently ablique, and we have feen forne made almoft fquare \(w\) ith the beam. When this is the cafe, it not only keeps the foot of the rafter from llying out, but it binds it down. In this caie, the rafter acts as a powerful lever, whofe fupcrum is the inner angle of the fhoulder, and then the ftrap never fails to cripple the rafter at the point. All this can be prevented only by making the ftrap very long and very oblique, and by making its outer end (the flirsup part) fquare with its length, and making a notch in the ratter foot to receive it. It cannot now cripple the rafter, for it will rife along with it, turning round lar un this joint, becaule it is here that the ultimate frain of the whole roof is exertec, and its fituation will not allow the excavation neceflary for making it a good murtife and tenon.

Similar attention mult be paid to fome other itraps, fuch as thofe which embrace the middle of the rafter, and conneft it with the poft or trufs below it. We mult attend to the change of thape produced by the fagging of the roof, and place the ifrap in fuch a manner as to gield to it by turning round its bolt, but fo as not to become loofe, and far lefs to make a fulcrum for any thing acting as a lever. The ftrains aniing from fuch actions, in framings of carpentiy which change their fhape by lagging, are nomous, and nothing can relitt them.

We fiall clufe this part of the fubject with a fimple method, by which any carpenter, without mathematical fcience, may calculate with fufficient precilion the Atrains or thrufts which are produced on any point of his work, whatever be the obliquity of the pieces.

Let it be required to find thic borizontal thruft acting on the tie bean AD of fig. 18. 'I his will be the fane as if the weiglit of the whole roof were laid at \(G\) on the two rafters GA ard G1. Draw the vertical line GH . Then, having catcilated the weight of the whole roof that is furpo:ted by this fingle frame \(A B C D\). including the weight of the pieces \(A B, B C\), \(\mathrm{CD}, \mathrm{BE}, \mathrm{CF}\) themfelves, take the number of pounds. tons, Sc. which exprefes it from any feale of cqual parts, and let it from G to H. Draw HK, HL paraHel to GD, GA, and draw the line KL, which will be horizontal when the two fides of the roof have the fame nope. Then ML meafurec on the fame feale will give the lionizontal thuth, by which the firength of the tic-beam is to be regulated. GL will give the thruit uhich tends to cruth the rafters, and I.M will allo give the force which iencis to crufh the frut-bean BC.

In like manner, to find the ferain on the king-pof B1) of fg. 17. confider that each brace is preffed by half the weight of the rourty laid on BA or BC, and this preflure, or at laft its hu:tful effect, is diminifhed in the proportion of BA to 13 A , becaufe the action of gravity is vertical, and the effect whill we want ta counteract by the braces is in a direceion Ee perpendicular to \(B A\) or \(B C\). Eut as this is to be refifted by the brace \(f\) E acting in the direction \(f \mathrm{E}\), we mult draw \(f\) e per. pendicular to E \(e\), and fuppofe the Atrain augmented in the proportion of \(\mathrm{E} e\) to \(\mathrm{E} f\).

Having thus ubtained in tons, pounds, or other meafures, the flrains which mult be balariced at \(f\) by the cuhefion of the king-polt, take this meafure incm the feale of equal parts, and fet it off in the directions of the braces to G and H , and complete the patallelugram \(\mathrm{G} f \mathrm{HK}\); and \(f \mathrm{~K}\) meafured wn the fame fate will be the frain on the kiag-porl.

The artift may then exansine the frength of lis f trufs upon this principlt, that every fquare inch of oak will bear at an average 7000 pounds cemprefling of Atretching it, and may be fafely loaded with 3500 for any length of time; and chas a fquare inch of tir wiil in like manner fecurely bear 25 co . And̀, becaufe flraps are ufed to refift frome of thefe Atrains, a iquare anch of well wrought tough iron may be fafely ftrained
by 50,000 pouncis. But the artik will always recol. lect, tha: we canno: have the fame contideace in iron as in timber. The faults of this latt are much more cafily perceived; and when timber is too weak, it gives us warning of its failure, by yidding fenfioly before it breaks. This is not the cafe with iron; and unuch of its fervice depends on the honelly of the baackfinith.

In this way may any defign of a roof be cxamined. "ketch \({ }^{44}\) ni We thall here give the reader a iketch of two or three fome eviret truffed roofs, which lave been executed ia the chicfroof, is. varieties of circumitances which occur in co:mont prac. tice.

Fitr. 22. is the roof of St Paul's Church, Cuvent Garden, Lemdun, the work of Inigo Jones. Its coaltructions is fingular. 'i'he roof extends to a confideratle diflanice beyond the building, and the ends of the tie.beams fupport the Tufcan corniche, appearing like the mus. tules of the Doriz order. Such a roof could not ref on the tie-beam. Irigo Jones has therefore fupported it by a trufs below it ; and the height has allowed him to make this extremely ftrong, with very litele timber. lt is accousted the high.ft roof of its widh in Lomdon. But this was not difficult, by reafon of the great height which its extrense widid allowed him to empluy without hurting the beauty of it by too high a pitch. The fupports, however, are difpufed with judg ment.
Fig. 23. is a kirb or mandaid roof by Price, and lup. pofed to be of large dimenienis, having bracis to carry the middle of the rafters.

It will fenve exceeding? well for a church having pillaro. The middle part of the tic-beam being take: away, the Atrains are very well balanced, fo that there is no tik of its puthing afice the pilhars oa which it relts.
Fig. 2f. is the celebrated roof of the theatre of the univerfityw, Oxferd, hy Sir Chritopher Wren. The fpan between the walls is 75 feet. This is accounted a very ingenious, and is a fiugular performance. 'ITeiniddle part of it is almolt unchangeable in its form; batt from this. circumatance it does not ditribute the horizontal thrut with the fame regularity as the ufual con? ?ruction. The homizontal thrult on the tie-beam is about wive the weight of the ronf, and is withituod by arn iron ttrap bothe the beam, which Recthes the whole wid:! of the thilding in the form of a sope, making patt us the ormanent of the ceiling.

In all the roofs which we have ennfidered hisherto \(C_{i} f_{0}^{4 \pi}\) the thrult is difoharged entirely freas the walls by the whichine tie-bean. Dut this cammor always be done. We fre nut hic dio quenty want great elevation within, and arched ceil-charred ings. In fuch cales, it is a touch more difficult matter fon the to kecp the walls free of all prefiure outwares, and walls by the there are few buildings where it is complesely dunce Yet this is the greatet? fault of a toof. Wre thall jut point out the methods which may be inolf fuceetslully adopted.

We have faid that a tie-beam jut pelforms the office of a tring. Wie have fuid the fame of the hins: poll. Now fuppofe two rafters \(A D, B C\) (hit. 25.): moveable abote the point B , and retting on tle top of the walls. If the fine \(B D\) he fufpended from \(B\); and the twolines \(\mathrm{DA}, \mathrm{DC}\) be faflened to the feet. of :L" ratiers, and it thefe lines be incapable of extenfon, itis plain tha: 211 thrult is retroved from the walls as erf
feceuai'y

Rorf. fectually as by a common tie-leam. And by flomen. ing \(B \mathcal{L}\) to Bd , we gain a greater infide height, and more room for an arched ceiling. Now if we fubtitute a king-pof 131 (fig. 26.) and two ftyetchers or hanumer-beams \(\mathrm{D} \Lambda, \mathrm{DC}\) for the other fltings, and conneet them firmly by means of iron ftraps, we obtain our purpofe.

Let us compare this roof with a tie.beam roof in point of Arain and ftrength. Recur to fig. 25. and complete the parallelogram ABCF , and draw the diagonals AC, BF crofling in E. Draw BG perpendieular to CD. We have feen that the weight of the roof (which we may call W) is to the horizortal thruft at C as LF to EC; and if we exprefs this thruf by ' , we have \(T=\frac{W \times E C}{B F}\). We may at prefent confider \(B C\) as a lever moveable round the joint \(B\), and pulled at C in the direction EC by the horizontal thriff, and held back by the flring pulling in the direction CD. Suppofe that the forces in the directions TC and CD are in equilibrio, and let us find the force S by which the ftring CD is frained. Thefe forces mult (by the property of the lever) be inverfely as the perpendiculars drawn from the centre of motion on tine lines of their direction. '1'herefore \(\mathrm{BG}: \mathrm{BE}=\mathrm{T}: \mathrm{S}\), and \(S=T \times \frac{\mathrm{BE}}{\mathrm{BG}},=\mathrm{W} \times \frac{\mathrm{BE} \cdot \mathrm{EC}}{\mathrm{BF} \cdot \mathrm{BG}}\).

Therefore the ftrain upon each of the ties DA and \(D C\) is always greater than the horizontal thruft or the ftrain on a fimple tie-beam. This would be no great inconvenjence, becaufe the frallett dimenfions that we could give to thefe ties, fo as to procure fufficient fixtures to the adjoining pieces, are always fufficient to withftand this flain. But although the fame may be faid of the iton flraps which make the ultimate connections, there is always fome hazard of imperfect work, cracks or flaws, which are not perceived. We can judge with tolerable certainty of the foundnefs of a piece of timber, but cannot fay fo much of a piece of iron. Moreover, there is a prodigious flrain excited on the king poft, when BG is very flort in comparifon of BE, namely, the force compounded of the two ftrains \(S\) and \(S\) on the ties DA and DC.

But there is atother defect from which the ftraight tie-beam is entirely free. All roofs fettle a littleWhen this roof fettles, and the points B and D defeend, the legs BA, BC muit spread further out, and thus a preffure outwards is excited on the walls. It is feldom therefore that this kind of roof can be executed iu this fimple form, and other contrivances are neceflary for counteracting this fupervening action on the walls. Fig. 27. is one of the belt which we have feen, and is txecuted with great fuccefs in the circus or equeltrian theatre in Edinburgh, the width being 60 feet. The pieces EF and ED help to take off fome of the weight, and by their greater uprightuefs they exert a fmaller thruft on the walls. The beam \(\mathrm{D} d\) is alfo a fort of trufs-bean, having fomething of the fame effect. Mr Price has given another very judicious one of this kind, Britih Carpenter, Plate IK, fig. C, from which the tie-team may be taken away, and there will remain very little thruft on the walls. Thofe which he has given in the following Plate K arc, in our opinion, very faulty. The whole firain in thefe laft roofs tends to break the rafters and sies sranfverfely, and the fixtures of
the ties are alfo not well calculated to refit the frain to which the pieces are expoled. We hardly think that thefe roofs could be executed.

It is fearcely neceffary to remind the reader, that in Generi all that we have delivered on this fubject, we have at- fervati tended only to the contruftion of the principal rafters or truffes. In fmall buildings all the rafters are of one kind; but in great buildings the whole weight of the covering is made to relt on a few principal rafters, which are comected by beans placed horizontally, and either mortifed into them or fearfed on them. Thefe are called purlins. Small rafters are laid from purlin to purlin ; and on thefe the laths for tiles, or the fikintingboards for flates, are nailed. Tlus the covering docs lot immediately relt on the principal frames This allows fome more liberty in their conitruction, becaufe the garrets can be fo divided that the principal ratiers thall be in the partitions and the reft left unincumbered. This conftruction is fo far analogous to that of floors which are conftucted with girders, binding, and bridge. ing joifts.

It may appear prefuming in us to quetion the propriety of this practice. There are fituations in which it is unavoidable, as in the roofs of churches, which can be allowed to reft on fome pillars. In other fituations, where partition-walls intervene at a diftance not too great for a ftout purlin, no principal miters are necelfary, and the whole may be roofed with fhort rafters of very flender fcantling. But in a great uniform roof, which has no intermediate fupports, it requires at leaft fome reafons for preferring this method of carcafe-roufing to the fimpler method of making all the rafters alike. The method of careafe-roofing requises the felection of the greateft logs of timber, which are feldom of equal flrength and foundnefs with thinner rafters. In thefe the outfide planks can be taken off, and the belt part alone worked up. It alfo expofes to all the defects of workmanhip in the mortifing of pur. lins, and the weakening of the rafters by this very mortifing ; and it brings an additional load of purlins and fhort rafters. A roof thus conftructed maj furely be compared with a floor of fimilar conflruction. Here there is not a fladow of doubt, that if the girders were fawed into planks, and thefe planks laid as joilts fufficiently near for crrying the flooring boards, they will have the fame ftrength as before, except fo much as is taken out of the timber by the faw. 'This will not amount to one-tenth part of the timber in the binding, bridging, and ceiling joifts, which are an additional load; and all the mortifes and other joinings are fo many diminutions of the ftrength of the girders ; and as no part of a carpenter's work requires more kill and accuracy of execution, we are expofed to many chances of imperfection. But, not to reft on thefe confidera. tions, however reafonable they may appear, we fhall relate an experiment made by onc or whofe judgment and exactnefs we can depend.

Two models of floors were made is inches fquare of C nfirmed the fineft uniform deal, which had been long leafoned. "epcriThe one confilted of fimple joifts, and the other was ment. framed with girders, binding, bridging, and cciling joifts. The plain joits of the one contained the fanie quantity of timber with the girders alone of the other, and both were made by a mot accurate workman. Tbey were placed in mooden trunks 18 inches fquare

\section*{R O O}
f. within, and refted on a frong projection on the infide. Small fhot was gradually poured in upon the floors, fo as to fpread uniformly over them. .The plain joited foor broke down with 487 pounds, and the carcafe floor with 327 . The firt broke without giving any warning ; the other gave a violent crack when \(29+\) pounds had been poured in.

A trial had been made before, and the loads were 341 and 482 . But the models having been made by a lefs accurate hand, it was not thought a fair fpecimen of the fleength which might be given to a carcafe floor.

The only argument of weight which we can recollect in favour of the compound confruction of roofs is, that the plain method would prodigioufly inereafe the quantity of work, would admit nothing bat long timber, which would greatly add to the expence, and would make the garrets a mere thicket of planks. We admit this in its full force; but we continue to be of the opinion that plain roofs are greaty fuperior in point of itrength, and therefore fhould be adopted in cafes where the great difficulty is to infure this neceffary circumflance.
It would appear very negleefful to omit an account of the roofs put on round buildings, fuch as domes, cupolas, and the like. They appear to be the mott dificult taiks in the carpenter art. But the difficulty lies entirely in the mode of framing, or what the French call the trait de charpenteric. The view which we are taking of the fubject, as a part of mechanical fcience, has little connection with this. It is plain, that whatever form of a trufs is exeellent in a fquare build. ing mult be equally fo as one of the frames of a round one; and the only difficulty is how to manage their mutual interfections at the top. Some of them nufe be difcontinued before they reach that length, and common fenfe wily teach us to cut them fhort alternately, and aiways leave as many, that they may ftand equally thick as at their firtt fpringing from the bafe of the dome. Thus the length of the purlins which reach from trufs to trufs will never be too great.

The truth is, tbat a round building which gathers in at top, like a glafs-houfe, a potter's kiln, or a fpire fteeple, initead of being the moft difficult to erect with liability, is of all others the eafict. Nothing cau fhow this more forcibly than daily practice, where they are run up without centres and without fcaffoldings; and it requires grofs blunders indeed in the choice of their outline to pur them in much danger of falling from a want of equilibriunt. In like manner, a dome of carpentry can laardly fall, give it what fhape or what conftruction you will. It cannot fall unlefs fome part of it flies out at the bottom: an iton hoop round it, or flaps at the joinings of the truffes and purlins, which make an equivalent to a hoop, will effectually fecture it. And as beauty requires that a dome flall fpring almoft perpendicularly from the wall, it is evident that there is hardly any thruit to force out the walls. The only part where this is to be guarded againt is, where the tangent is inclined about 40 or 50 degrees to the horizon. Here it will be proper to make a courfe of firm horizontal joinings.

We doubt not but that domes of carpentry wiil now be raifed of great extent. The Halle du Bles at Pazij, of 200 fiet in diameter, was the invention of an in.
telligent earpenter, the Sicur Moulineat. He was no: by any means a man of fcience, but had much more mechanical knowledge thaa artifans ufually have, and was convinced that a very thin thell of timber might not only be fo thaped as to be nearlyin equilibrio, but that if hooped or firmly conneçed horizontally, it would have all the fliffers that was neceflary; and he prefented his project to the magittracy of Paris. The grandeur of it pleafed them, but they doubted of its polibility. Being a great public work, they prevailed on the Acadrmy of Scienees to confider it. The members, who were competent judges, were inftantly flruck with the juftnefs of Mr Muulineau's principles, and aftonithed that a thing fo plain had not been long familiar to every houfe-carpenter. It quickly became an univerfal tapic of converfation, difpute, and cabal, in the polite circles of Paris. But the Academy having giten a very favourable report of their opinion, the project was immediately carried into exceution, and foon completed, and now ftands as one of the great exhibitions of
Paris.

The conftruction of this dume is the funpleft thin that can be imagined. The cirenlar ribs which compofe it conif of planks nine feet long, 13 inches broad. and three inches thick; and each rib contits of three of thefe planks bolted together in fuch a manner that two joints meet. A rib is begun, for intance, with a plank of three feet long ftanding between one of fix feet and another of nine, and this is continued to the head of it. No machinery was neceffary for carrying up fuch finall pieces, and the whole went up like a piece of bricklayer's work. At various diftances thefe ribs were con. neeted horizontally by purlins and iron ftraps, which made fo many hoops to the whole. When the work had reached luch a height, that the difance of the ribs was two-thirds of the original diltance, every third rit. was difcontinued, and the fpace was left open and glazed. When carried fo much higher that the diftance of the ribs is one-third of the origimal diltance, every fecond rib (now confiting of two ribs very near sach other) is in like manner difcontinued, and the roid is glazed. A little above this the heads of the ribs are framed into a circular ring of timber, which forms a wide opening in the middle; over which is a glazed canopy or umbrella, with an opening between it and the dome for allowing the heated air to get our. All who have feen this dome fay, that it is the mot beautiful and magnificent object they have ever belreld.

The only difficulty which occurs in the conitruction of wooden domes is, when they are umequally toaled, by carying a heavy lanthern or cupola in the middle. In fuch a cafe, if the dome were a more fhell, it would be crufhed in at the trop, or the action of the wind on the lanthern might tear it ol:t of its place. Such a dome mult therefore confilt of trulted frames. Mr Price has given a very good one in his plate OP, cho' much Itronger in the trafies than there was any occalion for. 'This caufes a great lois of room," and throws the lights of the lantbern too far up. It is evidently copied from Sir Chritopher Wren's dome of St Paul's church in London; a model of propriety in its particular fituation, but by no micans a general no. dei of a wooden dome. It rets on the brick cone within it ; and Sis Chriftophe: has very ingenionfy made use of it for ftiffraing this co:ne, at aty intellircti
irant. perfon will perceive loy attending to its confruction (See Prire, Plate OP).

Fig. 28. reprefents a dome exceuted in the Regifter Office in Edinburah by James and Robert Adama, and is very agrecable to mechanical principles. The fpan is 50 feet clear, and the thicknefs is only \(4 \frac{1}{3}\).
49
Further re. marks on Normas soofs.

We cannot take leave of the fulject without taking fome notice of what we have already folken of with commendation by the name of Norman roofs. We called them Norman, becaure they were frequently ex-
conted by that people feon after their eftablifhenent in Italy and other parts of the fonth of Europe, and becane the prevailing tafte in all the great baronial caltles. Their architects were rivals to the Saracens and Moors, who about that time built many Chriftian churches; and the architecture which we now call Gothic feems to have arifen from their joint labonrs.

The principle of a Nornan roof is extremely fimple. The rafters all butted on joggled king-pofts AF, BG, CH, \&c. (fig. 29.), and braces or ties were then difpofed in the intervals. In the middle of the roof HB and HD are evidently ties in a ftate of extention, while the poft CH is compreffed by them. T'owards the walls on each fide, as between B and F , and be. tween F and L , they are braces, and are compreffed. The ends of the poits were generally ornamented with knnts of flowers, enibofled globes, and the like, and the whole texture of the trufs was exhibited and dreffed out.

This conftrution admits of empioying very flort itimbers; and this very circumfance gives greater It trength to the truls, becaule the angle which the brace or tie makes with the rafter is more open. We may alfo perceive that all thuft may be taken of the walls. If the pieces AF, BF, LF , be removed, all the remaining diagonal pieces act as ties, and the pieces dirceted to the centre act as ftruts; and it may alfo be oblerved, that the principle will apply equally to a fraight or flat roof or to a floor. A floor fuch as abe, having the joint in two pieces \(a b, b c\), with a ftrut \(b d\), and two ties, will require a much greater weight to hreak it than if it had a continued joilt \(a c\) of the fame feantling. And, taftly, a piece of timher acting as a tie is much flronger than the fame piece aeting as a ftrut: for in the latter fituation it is expofed to bending, and when bent it is much lefs able to withfand a very great Arain. It mult be acknowledged, however, that this ndvantage is balanced by the great inferiority of the joints in point of ftrength. The joint of a tie depends wholly on the pins; for this reafon ties are never ufed in heavy works wihhout Atrapping the joints with iron. In the roofs we are now deferibing the ciagonal pieces of the middle part only act purely as ties, while thofe towards the fides aet as Itruts or braces. Indeed they are feldom of fo very fimple conftruction as we have defcrbed, and are more gemerally conftucted like the flecteh in fig. 30. having two fets of rafters \(A B, \quad\) al, and the angles are filled up with thin planks, which give great Riffrefs and ftrength. They have aho a doulle fet of purlins, which comnect the different truffes. The roof being thus divided into fquares, other purtins 2 no between the middle points \(E\) of the rafters. The rafter is fupported at E. by a check put between it and the under rafter. The reidde point of each fquare of
the roof is fupported and fiffened by four braces, one of which fprings from \(e\), and its oppofite from the fimilar part of the adjoining trufs. The other two braces fpring from the middle points of the lower purlins, which go horizontally foom \(a\) and \(b\) to the next thufs, and are fupported by planks in the fame manner as the rafters. By this contrivance the whole becones very fliff and frons.

We hope that the reader will not be difpleafed with Conctu our having taken fome notice of what was the pride of our ancettors, and conflitnted a great part of the finery of the grand hall, where the feudal lord affembled his vaffals and difplayed his magnificence. The intelligent mechanic will fee much to commend; and all who look at thefe roofs admite their apparent flimfy lightnefs, and wonder at their duration. We have feen a hall of 57 fret wide, the roof of which was in four divilions, iike a kirb roof, and the truffes were about 16 feet afunder. They were fingle rafters, as in fig. 30 . and their dimenfions were ewily cight inches by lix. The roos? appeared perfeetly found, and had been ftanding ever fince the \(y\) ear 1425 .

Mucl of what lias been faid on this fubject may be applied to the confruction of wooden bridges and the centres for turning the arches of flone-bridges. But the farthe: difculfion of this mult be the employment of another article.

ROOFING, the materials of which the roof of a houle is compofed. See the foregoing article.

ROOK, in ornithology. See Corvus.
Rooks are very deftructive of corn, eipecially of wheat. They fearch out the lands where it is fown, and watching them more carefully than the owners, they perceive when the feed firft begins to fhoot up its blade; this is the time of their feeding on it. They will not be at the pains of fearehing for it at random in the fown land, for that is more trouble than fo fmall a grain will requite them for: but as foon as thefe blades appear, they are by them directed, without lofs of time or pains, to the places where the grains lie; and in three or four days time they will root up fuch valt quantities, that a grod crop is often thus deftroyed in embryo. After a few days the wheat continuing ro grow, its blades appear green above ground; and then the tince of danger from thefe birds is over; for then the feeds are fo far robhed of their mealy matter, that they are of no value to that bird, and it will no longer give itfelf the trouble to dettroy them.

Wheat that is fown fo early as to flout up its grcen Wakes before the harvelt is all carried in, is in no danger from thele birds; becaule while it is in a flate worth their fearching for, the feattered corn in the harweft fieids is eafier conse at, and they feed wholly on this, neglecting the fown grain. But as this cannot alwavs be done, the farmers, to drive away thefe ravenous and mifchievous birds, dig holes in the ground and ftick up the feathers of rooks in them, and hang up dead rooks oa fticks in feveral parts of the fields: but all this is of very litile ufe; for the living rooks will tear up the ground about the feathers, and under the dead ones, to fteal the feeds. A much better way than either is to tear feveral rooks to pieces, and to featter the pieces over the fields; but this lats but a little while, for the kites and o:her birids of prey foon carry off the piccer and feed unon them. A gun is a good remedy

Plate CCCIS.

\section*{R O O}
while the perfon who has it is prefent; \(b: t\) as foon as he is gone, they will return with redoubled vigour to the field and tear up every thing before them.

The beft remedy the farmer has is to wateh well the time of the corn's being in the condition in which they feed upon it; and as this lafts only a few days, he fhould keep a hoy in conftant pay to watch the field from day-break till the dufk of the evening. Evcry tume they fettle upon the ground to fly over it, the boy is to holloa, and throw up a dead rook into the air: this will always make them rife; and by degrees they will be fo tired of this conftant difturhance, that they will feek out uther places of preying, and will leave the ground even hefore the time of the corn's being unfit for them. The reafon of their rifing at the toffing up of their dead fellow creature is, that they are a bird extremely apprehenive of danger, and they are always alarmed when one of their comrades rifes. They take this for the riing of an out-bird, and all fly off at the fignal.

ROOKE (Sir George), a gallant naval commander, born of an ancient and honourable family in Kent, in 2650. His merit raifed him by regular feeps to be vicc-admiral of the blue: in which Ration he ferved in the butte of La Hogue, on the 22d of May 16,52 ; when it was owing to his vigorous behaviour, that the Iaft floke was given on that important day, which threw the French entirely into confution. But the next day he obtained Atill more glory; for he had orders to go into La Hogue, and burn the enemy's mips as they lay there. There were 13 large men of war, which had crowdel as far up as poffible; and the tranfports, tenders, and ammunition flips, were difpofed in fuch a manner that it was thought impoffible to burn them. Befides, the French camp was in fight, with all the French and Irith troops that were to have been empluyed in the invalion of Eugland; and feveral hatteries were raifed on the coalt, well provided with heavy artillery. The vice-admiral made the necelfary preparations for obeying lis orders, bu: found it impoffible to carry in the fhips of his fouadron: he thercfore ordered his Iight frigetes to ply in clofe to the thore ; and having manned out all his buats, went himfelf to give directions for the attack, burnt that very night fix three-ceck-fhips, and the next day fix mure, from 76 to 60 guns, togetlier with moft of the tranfports and ammunition veficls; and this under the fire of all the batteries juil memtionel, and in light of all the French and Irifh troups: yet this bold action cott the lives of no more than ten men. The vice-admiral's behavioer on this occafion appeared fo great to King William, that haviag no opportunity at that time of promoting him, he fettled a pention of 10001 . per anmun on him for life; and afterwards going to Portfmuth to view the fleet, went on board Mr Rooke's fhip, dised with him, and then conferred on him the honour of knighthood, he taving a little before nade him vice-admisal of the red.

In confequence of other fervices he was in 1694 raifed to the rank of admiral of the blue: towards the clofe of the next year, he was acimiral of the white; and was alfo appointed admiral and commander in chief in the Mediterranean.
During King William's reign, Sir George was twice elected member for Portinouth; and upon the accef-

Vol. XVI. Part II.

\section*{81 3 \(R \quad 0 \quad 0\)}
fion of Qucen Aane in 1702, he was conitituted viceadmiral and lieutenant of the admisalty of Enyland, as adio lieutenant of the flects and feas of this kingdom. Upon the declaration of war againft France, he was ordered to conmand a fieet fint againat Cadiz, the cuke of Ormend having the command of the land forces. On his paffarge loome, receiving an account that the galleons, under the efcurt of a ftrong French fquadron, were got into the harbour of Vigo, he refolved to attack them ; and on the ith of Oitober caricic before the harbour of Rondondello, where the French commander had neglected nothing nece?Tary for putting the place into the bedt pofture of defence. Eut not. withilanding this, a detachment of \(1 ;\) Englifh and io Dutch men of war, of the line of battle, with all the fire-fhips, were ordered in ; the frigates and bomb-veffils followed; the great fhips moved after them, and the army landed near Rondondello. The whule fervice was performed under Sir George's direetions, with alsmirable conduct and bravery; for, in fhort, all the flips were deftroyed or taken, prodigious damage done to thio enemy, and valt wealth acquired by the allies. For this action Sir George received the thanks of the Houle of Commons, a day of thankfgiving was appuinted botin by the queen and the ftates-general, and Sir Gcorge was promoted to a feat in the privy-counc:1; yet, notwithtlanding this, the Houfe of Lords refolved to inquire into his conduct at Cadiz. But he fo fully juftified himfelf, that a vote was paffed, approvis. his behavisur.

In the fpring of the year \(1 ; 0+\), Sir Gcorge commanded the fhips of war which convoyed King Cha. III. of Spain to Lißbon. In July, he attackeri Gibraltaı ; when, by the bravery of the Englim feamen, the place was taken on the 2 th, though the town wats extrencly frong, well furnihied with ammunition, and had ico guns mounted, all facing the fea and the narrow paftes to the land: An action which was conceived and exccuted in lefs thain a week; though it has fince endure 1 fieges of many months continuance, and nore thatinnce baffled the united forces of France and Spain. Thas brave officer being at laft obliged, by the prevalence of party-fpirit, to quit the fervice of his country, retired to his feat in Kent; where he fpent the remainder of his days as a private getalenan.

He was thrice manzied; and by his fecond lady Mrs Luttrell left one for. He died January 24 1708-9, in his 58 th year, and was buried in Canterbury cuiledral, where a munument is erected to his memory. In his private life he was a good hufoand and a !ind maro ter, lived hofpitably towards his neighbours, and left beliund hin a noderate fortune; fo moderate, that when he came to nake lis will, it furprifed thofe who were prefent: but Sir George affigned the reason in a few words, "I do not leave much (faid he), but what I leave was honcfly gotten; it never ceft a failor a tear, or the nation a farthing."

ROOM, a claamber, parlour, or other apartment is a houfe. See Aechitecture and Ventilation.

ROOT, among botanills, denotes that part of a phant which imbibes the nutritious juices of the carth, and tranfmits thein to the other parts. Sce P Past and Radix.

Colours exiralld from Roots. See Colour-Making,

3nロ!. Knpe1nakjng

Root, in algtora and arithrctic, denotes any number which, muitiplied by itfelf once or oftener, produces any other number; and is called the fquare, cube, biquadrate, Scc. root, according to number of multiplieations. Thus, 2 is the fquare-ront of 4 ; the cuoeroot of \(S\); the hiquadrateroot of 16 , Sce.

ROPE, is a worl ton familiar to need a definition; and we need fay no more than that it is only applied io a contiderabie eullection of twited fibres. Smaller bands are called lines, frings, cords; and it is not applied with great propriety even to thofe, nmefs they are eompored of fmaller things of the fame kind twifed iogether. Two hay bands trifted together would be calice a rofe. All the different kinds of this manufatume, from a finfing-line or whip-cord to the cable of a fint rate thip of war, go by the gencral name of Cordsge.

Ropes are made of every fubftance that is fufficiently -ibrous, flexible, and tenacious, but chichy of tic barks of plants. The Chincte and other orientals even make them of the ligneous parts of feveral plants, fuch as certain bamboos and reeds, the ftems of the aloes, the fibrous covering of the cocoa nut, the filaments of the cotton pod, and the leaves of fome graffes, fuch as the fparte (Lygesm, Linn.) The aloe (Aave, Linn.) and the fparte exceed all others in frencth. But the barks of plants are the molt productive of fibrous matter fit for this manufacture. Thofe of the Linden tree (Tiloa), if the willow, the brumble, the nettle, are frequently ufed: but hemp and fax are of all others the belt ; and of thele the hemp is prefened, and employed in all cordage excecding the fize of a line, and even in many of this denomination.

Hemp is very various in its uleful qualities. Thefe are great ftrength, and the length and finenefs of the fibre. Being a plant of wery greedy growth, it fucks up mueh of the unaltered juices of the foil, and therefore differs greatly according to its foil, climate, and culure. The beit in Europe comes to us through Riga, to which port it is brouzht from very dillant places to the fouthward. It is known by the name of Rige rein (that is, clean) lomp. Its fibre is not the longet (at leat in the drenied flate in which we get it) of all others, but it is the fineft, moft flexible, and frongen. The next to this is fuppofed to be the Peterburgh braak hemp. Other liemps are eftemed nearly in the following order:-Kiga outhot, Peterfburgh outhot, homp from Koningfburgh, Archangel, Sweden. Memel. Clucking is a name given to a hemp that comes from various places, long in the fibre, but coarfe and harth, and its flrength is inferior to hemps which one would think weaker. Its texture is fuch, that it does not admit fplitting with the hatchet fo as to be more completely drefed. It is therefore kept in its coarfe form, and ufed for inferior cordage. It is however a good and flrong hemp, but will not make fine work. There are doubtlels many grood henps in the fouthe:n parts of Europe, but litile of them is brought to our market. Codilla, lalf clean, \&ce. are. portions of the above-mentioned hemps, feparated by the drefing, and may be confidered as broken fibres of thofe hemps.

Only the firft qualities are manufactured for the rigging of the royal navy and for the bips of the Eaft India company.
 and there are few that better deferve the attention of the intellirent obferver. Hardly any art can be carried on without the alfiltace of the rope-maker. Cordare mathes the very hanews and mufcles of a ihip; and cyery improvement which can be made in its preparation, either in refpect to ftrength or pliablenets, muft be of immenfe fersice to the mariner, and to the com. merce and the dufence of nations.

We flall give a very thort account of the manuface ture, which will not incieed fully intruct the attitices. but will give fuch a view of the procefs as fhall enable the reader to judge, from principle, of the propuety of the difierent parts of the manipulation, and perccive its defeets, and the means for remowing them.

The aim of the ropemaker is to unite the flength rhe aim of a grat rumber of fhres. This would be done in which is the completcll manner by laying the fibres parallel to unte the each other, and faftening the bundle at the two ends: irength but this would be of very limited ufe, becaufe the fi-fibre: bres are thort, not exceeding three feet and a half at an average. .They muit therctore be entangled together, in furth a manner that the flrength of a fibre hall not be able to dsiw it ont froms among the reit of the busdle. 'This is done by thitting or twining them together, which caufes them mutually to comprefs each other. When the fibres are fo difpofed in a lons neain, that their ends fucceed each other along its knerth, without many of them meeting in one place, and this faain is twited round and romd, we may caufe them to comprefs each other to any degree we pleafe, and the fridtion on a fibre which we attempt to pu!l aut may be more than its cohedion can overcome. It. will therefore break. Confequently, if we pull at this. twitted fiain, we will not leparate it by drawing onc parcel out from among the reft, but the whole fibres will break; and if the dillribution of the fibres has heen very equable, the tlaain will be nearly of the fame itrength in every part. If there is any part where many ends of fibres meet, the fain will break in that part.

We know very well that we can twitt a flain of rhete \({ }^{3}\). fibres fo very hard, that it will break with any attempt brew may to twit it harder. In this Itate all the fibres are al he fo much ready ftrained to the utmoft of their flrength. Such a break with Akain of fibres can have no ftrength. It cannot carry a che leaft weight, becaufe each tibre is already Itrained in the aldiuonal fame manner as if loaded with as much weight as it is \({ }^{t}\) wift. able to bear. What we have faid of this extreme cale is true in a certain extent of every degree of thwitt that we give the fibres. Whatever force is actually exerted by a twifted fibre, in order that it may fufficiently comprefs the reft to hinder them from being drawn out, mult be confidered as a weight hanging on that fibre, and muft be deduced from its abfolute ftrength of cohefion, before we can eftimate the frength of the fkain. The ftrength of the fiain is the remainder of the abfolute ftrength of the fibres, after we have deduced the force employed in twifting them together.

From this obfervation may be deduced a fundamen-Practical tal principle in rope-making, that all twiting, beyond iufencace. what is neceffary for preventing the fibres from being drawn out without breaking, diminifhes the ftrength of the cordage, and thould be avoided when in our power. It is of importance to keep this in mind.

It is necelizer then to twif the fibere of hemp tonether, in order to make a rope ; but we thou!d make a sery bad rope if we contented ourfelves with twifting 1 in torether a bunch of hemp fufficiently large to witherve'fand the flrains to which the rope is to be expofed. As foon as we let it go out of our hands, it would untwit itfelf, and be again a loofe bundle of hemp; for the fibres are itrainec, and they are in a confiderable degree elaftic; thes contract arain, and thus untwit the rope or Ikain. It is neceltary to contrive the twit in fuch a manner, that the tendency to untwit in one part may act againt the fame tendency in another and balance it. The procefs, therefore, of rope-making is more complicated.

The fift part of this procels is EPINNING of ROPEyarss. This is done in various ways, and with different machinery, according to the nature of the intended cordage. We Thall confne our decription to the manufacture of the larger kinds, fuch as are wifed for the fanding and running rigeing of hips.

An alley or walk is inclofed for the purpofe, about 200 fathoms long, and of a hreacth fuited to the extent of the manuacture. It is fometimes covered above. At the upper end of this ropfowatk is fet up the fpina:e ning-wheel, of a form refembling that in fig. 1. The :CXLiband of this wheel goes over feveral rollers called whirle, turning on pisots in bars holes. The pirots at one end come through the frame, and terminate in little hooks. The wheel being turned by a winch, gives motion in one direction to all thole whirls. The fpinner has a bundle of dreffed hemp round his wait, with the two ends meeting before him. The hemp is laid in this bundle in the fame way that women fpread the fisx on the diftaff. There is great vasiety in this; but the general aim is to lay the fibres in fuch a manner, that as long as the bundle lafts there may be an equal number of the ends at the extremity, and that a fbre may never offer itfelf double or in a bight. The fpinner draws out a proper number of fibres, twifs them with his fingers, and having got a fufficient length detached, he fixes it to the hook of a whirl. The wheel is now turned, and the flain is switted, becoming what is called arope-yarn, and the Spinner walks backwards down the rope-walk. The part already twitted draws along stith it more fibres out of the bundle. The 〔pinner aids this with his fingers, fupplying hemp in due proportion as he walks away from the wheel, and taking care that the fibres come in equally from both fides of his bundle, and that they enter always with their ences, and not by the midale, which would double them. He fonuld alio endeavour to enter every fibre at the heart of the yarn. This will caufe all the fibres to mix equally in making it up, and will make the work fmooth, becaule one end of each fibee is by this means buried among the rett, and the other end only lies outward; and this, in paffing through the grafp of the fpinner, who prefles it tight with his thumb and palm, is alfo made to lic fmooth. The greatelt fault that can be committed in fpinning is conallow a fmal! thread to be twilted off from one fide of the hemp, and then to cover this with lemp fupplied from the other fide: for it is evident that the fibres of the central thread make very loner fpirals, and the fkin of fibres which covers them muft be much more oblique. This covering ha but little connection with what is
below it, and will eafly be detached. But even while it remains, the yarn cannot be frong; for on pulling it, the middle part, which lies the Itraighteft, mult bear all the frain, while the outer fihres, that are lying obliquely, are only drawn a lit:le inore parallel to the axis. This defect will always hopen if the hemp be fupplied in a confiderable body to a y 3m that is then rpiuning fmall. Into whatever part of the yarn it is made to enter, it hecomes a fort of loufely connected wrapper. Such a yarn, when untwilled a little, will have the appearance of firs. 2. while a good yarn lootss like fir. 3. A good finner therefore endeavours always to fupply the hemp in the form of a thin flat flain with his left hand, while his right is emplored in grafping firmly the yarn that is twining off, and in holding it tight from the whirl, that it may not run into loops or \%inks.

It is evident, that both the armanement of the fibres and the degree of twitins deperd on the fkill and dexterity of the fpinner, and that he muft be intructed, not by a book, but by a mafter. The degree of twitt depends on the rate of the wheel's motion, combined with the retrograde walk of the fipinner.

We may fuppofe him arri:ed at the lower end of the walk, or as far as is neceffary for the intended length of his yarn. He calls out, and another fpinner iramediately detaches the yarn from the hook of the whirl, gives it to another, who carries it afide to the reel, and this fecond fpinner attaches his owa hemp to the whin! hook. In the mean time, the fith fpinner keeps fat hold of the end of his yarn ; for the hearp, bins dry, is very elutic, and if he were to let it go out of his hand it would inftantly untwif, and become little better than loole hemp. He waits, therefore, till he fees the reeler begin to turn the reel, and he goes nowly up the walk, keeping the yarn of an equal tightuefs all the way, till be arrives at the wheel, where he waits with his yam in hand till another fpinner has finifhed his jaun. The firf Ipinner takes it off the whirl hook, joins it to his own, that it may follow it on the reel, and begins a new yarn.

Rope-yarns, for the greatef part of the large rig- nife-ent ging, are from a qualter of an inch to fomewhat morekinds of than a third of 30 inch in circumference, or of fuch a ope yara\% fize that \(t\) 6o fathoms weigh from 3 : to 4 pounds when white. The different lizes of yarus are named from the number of them contained in a ftrand of a rope of three inches in circumference. Few are fo coarfe that 16 will make a Arand of Britifh cordage; 18 is not unfrequent for cable yans, or yans ipun frem hanh and coarfe hemp; 25 is, we believe, the 5nell lize which is worked up for the rigging of a hip. Much taar are indeed fpun for founding lines, hilhing lines, and many other marine ufes and fur the other demands of fociety. Ien good fpinners will work up aboveriooweight of henip in a day; but this depends on the weather. In very dry weather the hemp is very elaftic, and requires great attention to make imooth work. In the warmer chnates, the finner is permitted to muillen the ras with which: he grafps the yarn ia his righth hand for each yarn. No werk can be done in an open finangr walk in rainy weather, hecaule the yarns would nut take on the tar, if immediately tarred, and would rot if kept on the recl for a long time.

The fecoud part of the procels is the converlion of \({ }_{3} \mathrm{P} 2\)

\section*{\(R \quad\) O P \(\left.\quad 4^{8+}\right] \quad R O \quad f\)}

Roie. the yarns into what may with propriety be callce a rope, lines.
cord, or line. "Ihat we may have a clear conception of the principle which regulates this part of the procefs, we ihall begin with the fimplelt pullble cale, the union of iwn yartos into one line. This is not a reny ufual fabric fo: rigging, but we fcleet it for its fimplicity.

When liemp has been fplit into very tine fibres by the hatchet, it becomes exceedingly foft and pliant, and aftor it has lain for fome time in the form of fine yarn, it may be unreeled and thrown loofe, without lofing much of its twitt. Two fuch yarns may be put on the whirl of a fpiming wheel, and thrown, like flaxen yarn, fo as to make fewing thread. It is in this way, indeed, that the failmaker's fewing thread is manufactured; and when it has been kept on the reel, or on balls or bobbins, for fome time, it retains its twit as well as its ufes require. But this is by no means the cafe with yarns fpunfor great cordage. The bemp is fo elnttic, the number of fibres twifted together is fo great, and the dianeter of the yarn (which is a fort of lever on which the elatticity of the f.bre exerts itfelf) is fo confiderable, that no keeping will make the tibues retain this conftrained pofition. The end of a rope-yarn being thrown luole, it will immediately untwit, and this with confiderable force and feeed. It would, therefure, be a fruitlels attempt to twit two fuch yarns together ; yet the ingenuity of man has contrived to make ufe of this very tendency to untwift not only to counteract itfelf, but ceen to produce another and a permanent twift, which requires force to undo it, and which will recover itfelf when this force is removed. Every perfon mut recollect that, when he has twifted a packthread very hard with his fingers between his two hands, it he nackens the thread by bringing his hands nearer together, the packthread will immediately curl up, running into loops or kinks, and will even twift itfelf into a neat and firm cord. Familia as this fact is, it would puzzle any perfon not accuttumed to thefe frobjects to explain it with distincenefs. We ball confoder it with lome care, not as a piece of mechanical curiolity, but as a iundamental principle in this manufačure, which will give us clear initructions to direct us in the nut delicate part of the whole procefs. And we beg the attention of the artifts themfelves to a thing which they feem to ? have werlooked.

Let \(m d, n d\) (fig. 4.) be two yarns fixed to one point \(d\), and let both of them be twifted, each round its own axis, in the direetion abc, which will caufe the fibres to lie in a ferew form, as reprefented in the figure. If the end \(d\) of the yarn \(m d\) were at liberty to turn sound the point \(d\), it would turn accordingly, as often as the end \(m\) is thrned round, and the yarn would acquire no twit ; but being attached to fome folid body it cannot turn without turning this body. It has, however, this tendency, and the body mult be foreibly prevented from torning. If it be held falt for a time, and then let go, it will be turned round, and it will not stop till it has turned as often as the end \(m\) has been twifted, and now all the twift will be undone. Thus it is the tendency of the yarn \(m d\) to untwift at the end \(d\) (becaufe it is kept faft at \(m\) ), which prodites this motion of the body attached to it at \(d\). What we have faid of the yarn \(m d\) is equally true of the yarn ad. Both tend to turn, and will turn, the body atsached at \(d\) xound the common axis, in the fame direc.
tion in which they are twifted. Let fig. 5. be fuppofed a crois fection of the two yarns touching each other at \(d\), and there glued to a buard. The fbres of eacl: pull obliquely, that is they both pull away from the buard, and puli laterally. The direction of this lateral pull of the fibres in the circumference of each yarn is reprefented by the little dats drawn round the circumferences. Thefe actions directly oppole and balaner each other at \(d\); but in the femicireles oe et, \(t f 0\), they evidently confpire to turn the board round in the fante direction. The fanc maty be faid of the outer halves of any circles defribed withiu thefe. In the inner halves of thefe inner circles the actions of fome fibres oppofe each other; but in every circle there are many more coufpiring astions than oppofing ones, and the coufpiring actions exat themielves by longer levers, fo that their joint momentun greatly excecds that of the oppoting forees. It may be demonftrated, that if all the tibres exert equal forces, the force which tends to turn the board round the common axis is \(\frac{2}{5}\) of the force employed to twift both the yarns.

Suppofe then that the folid body to which the yarns are attached is at liberty to turn rould the common axis ; it cannot do this without carrying the yarns round with it. They muft, therefore, turn round each other, and thus compofe a rope or cord \(k \ell\), having its component yarns (now called firands) lying in a direction oppofite to that of the fibres in each ftrand. The rope will take this t wit, white each of the ftrands is really untwitting, and the motion will not itop till all is again in equilibrio. If the yarns had no diameter and no rigidity, their claftic contraction would not be balanced till the cord had made half the number of turns. which had been given to that part of the yarn which is thus doubled up. But, as the yarns have a fenlible diameter, the fame ultimate contraction of the fibres witl be expended by the twiking of the cord in fewer turns, even if the yarns had no rigidity. The turns necelfary for this purpofe will be fo much fewer, in proportion to the \(t\) wilt of the yarns, as the fibres of the yarn lie mure obliquely, that is, as the yarns are more twifled. But further, this contractile force has to overcome the rigidity or ftifnefs of the yarns. This reguires furce murciy to bend it into the ferew form; and therefore, when all is again at reft, the tibres are in a fate of Atrain, and the rope is not fo much clofed by doulling as it would have been had the yarns been fofter. If any thing can be dune to it in this fate which will foften. the yarns, it will twit itfelf move up. It has therefore a tendery y to twilt more up; and it this be aided by anextercal force which will bend the ftrands, this will happen. Beating it with a fott mallet will have this efo feet ; or, if it be forcibid twined till the fibres are allowed io contract as nuch as they would have done had the yann been perfectly toff, the cord will keep .this. twilt without any cffort; and this tunft be condidered as is molt perlect thate, in relation to the degree of twith originally given to the yarns. I: will have no teudency to run into kinks, which is toth troublefome and dangerous, and the fibres will not be exerting any alelefs effort.

To attain this flate fhould therefore be the aim of every part of this fecond procefs; and this principle fhould be kept in view through the whole of it.

The component parts of a rope are called ftrands, as
has been already obferved; and the operation of uniting them with a permaneut twitt is called luying or clofing, the latter term being chiesy appropriated to cables and other very large cordage.

Liwes and cordage lefs than \(\mathrm{I}_{\frac{1}{2}}\) inches circumference are laid at the fpinuing-wheel. The workman fafteus the e:ds of eachof two or three yarns to fe paratewhirl- hooks. The remote ends. are united in a knot. This is put on one of the hooks of a fwivel called the loper, reprefented in fig. 6. and care is taken that the yarns are of equal lengths and twift. A piece of foft cord is put on the other hook of the loper; and, being put over a putley feveral feet from the ground, a weight is hung on it, which ftretches the yarn. When the workman fees that they are equally fletched, lee orders the wheel to be turned in the fame direction as when twining the yarns. This would twine them harder; but the fiwivel of the loper gives way to the ftrain, and the yarns immediately twitt around each other, and furm a line or cord. In doing this the yarns lofe their twifl. This is reflured by the wheel. But this fimple operation would make a wery bad line, which would be flack, and would not hold its twitt; for, by the turning of the loper, the Arands twit immediately together, to a great diftance fron the loper. By this turning of the loper the yarns are untwifted. The wheel reftores their twit only to that part of the yarns that remains feparate from the others, but cannot do it in that part where they are already twined round each other, becaufe their mutual preffure prevents the twint from ad. vancing. It is, therefore, necefiary to retard this tendency to twine, by keeping the yarns apart. This is done by a little tool called the top, reprefented in fig. 7 .

It is a truncated cone, having three or more notches along its fides, and a hardle called the ftaff. This is put between the frands, the fmall end next the loper, and it is prefled gently into the anale formed by the yanns which lie in the notches. The wheel bemg now turnech, the yarns are more twitted, or buracied uf, and thicir perfine on the top gives it a Atrong tenderey to Eume out of the angle, and alfo to turn round. The workman docs not allow this till he thatiks the yarns fufficiently hardened 'Then he yiedts to the pedfue, and the top cones away fiom the fwive, which immediately turns round, and the line begins to lay.Gradually yielding to this. prefiure, the workman fluwly comes up towards the wheel, and the laying goes on, tild the top is at laft clofe ti) the wheel, and the work is done. In the mean time, the yarms are fortened, bolh by the twning of eacin and the laving of the curd. The weight, therefore, gradually rifico. The we of this weiger is evidently to ollage the yarn to tahe a Froper degree of \(t\) wift, and not run into kinks.

A cord or line made in this way has always fome Pendescy to twith a little nore. However little friction there may be in the loper, there is fume, fo thet the turns which the cord has made in the loying a'e nut enough to balance completedy the ciaticity of the yarts; and the weight being appended caufes the frands to be more nearly in the direction of the axis, in the fame manner as it would fretch and untwift a little any rope (1) which it is hung. On the whule, loweser, the twift of a laid line is permanent, and noot like that upon thread doubled or thrown in a mill, which remains only
in confequence of the great foftnefs aisi Acxibility of the jarn.

The procefo for laying or clufing large cordage is makng. confiderably different from this. The flrands of which large os the rope is compofed conift of many yarns, and re-hawlerquire a confiderable degree of hardening. 'I'his cannot laid corbe done by a whirl driven by a whel-oand; it requires dape is the power of a crank turned by the hand. The ftrands, if fermed. when properly hardened, become wery thiff, and when bent: ronnd the top are not abie to traufmit force enough for laying the licary and unpliant rope whech forms beyond it. The claftic twift of the hardened frands muft, therefore, be affited by an external force. All this requires a different machinery and a different procels.

At the upper end of the walk is fixed up the tackle- Machinery board, fig. 8. This confifts of a ftrong oaken plank and mode called a breall board, having theee or mure holes in it; of ufing it fuch as \(A, B, C\), fitied with brafs or iton plates. Into thefe are put iron cranks, called heavers, which have hooks, or forelocks, and keys, on the ends of their fpindles. They are placed at inch a difance from each other, that the workmen do not interfere with each other while turning them round. This brealt-board is fized to the top of ftrong polts well fecured by truts or braces facing the lower end of the walk. At the lower end is ansther breatl-board lixed to the upright pofts of a fledge, which may he loaded with flones or other weights. Similar cranks are placed in the holes of this breat-board. The whule gous by the name of thee Metave' (iee fig. 9.) 'lhe top necelfary fur clofing large cordage is too heavy to be treld in the hand. It therefore has a lon: teuf, which has a truck on the end. 'I'his rells wi the ground; but even this is not enough in laying great cables." The top nut be fupported on a carriase, as thuwn in lic. 10. where it muft lie very lieady, and rew no attendaree, becaufe the mader workman has funficicnt androwment in attending to the manner in which the frands chefe behind the top; and in helping tluem by various methods. The top is, therefore, fixed to the carriate by lahing its ftaff to the two upright pofts. A piece of folt rope, or Itrap, is al:ached to the handle of the te \(p\) by the middle, and it. two cnds are brought back and wrapped feveral times tight round the rupe, in the direcimon of its twin, and boand down. 'I his is dirown at W, and it artatly afo fill. the laying of the rupe by its riction. Nhis both keeps the top lrom Hying too far from the point of union of the !lands, and brings the ftrands more regu. lumy into therr places.

The hith uperation is suarping the yarns. At each end of the walk are trames cahted warping frames, which easy a great number of rect or wizhes silled with rope-yaz. The formen of the walk takes off a yarn ent furn each, till he has nade up the number necerfary for his supe or thand, and bigsing the ends toge. eler, he partus the wiole tluytiv an ion ring fixed to the tep of a take driwen into she growed, and draws them through : then a kaos is tie.d on the end of the bundk, and a workmau. . Hls :t throuht this ring till the iatended length is drawio off the rects. The ent is made faft at the botom of the walk, or at the 1ledse, and the foreman comes back along the Excin of yams, to fee that none are hanging tlacke :lan the rett. He

Rapemaking.
takes up in his hand fuch as are flack, and draws them tight, keeping them fo till he reaches the upper end, where he cuts the yarns to alength, again adjults their siglitnefs, and joins them all together in a knot, to which he fixes the hook of a tackle, the other block of which is fixed to a firm poft, called the warsing-pof. The nkain is well ttretched by this tackle, and then feparated into its different ftrands. Each of thefe is knoted apart at both ends. The knots at their upper ends are made faft to the hooks of the cranks in the tackle buard, and thofe at their lower ends are fatlened to the cranks in the fledre. The fledge itfulf is kept in its place by a tackle, by which the ftrands are again ftretched in their places, and every thing adjufted, fo that the Dedre ftands fquare on the walk, and then a proper weight is laid on it. The tackle is now cut off, and the cranks are turned at both ends, in the contrary direction to the twift of the yarns. (In fome kinds of cordage the cranks are tumed the fame way with the fpinning twilt). By this the ftrands are twilled and hardened up; and as they contract by this operation, the fledge is dragged up the walk. When the foreman thinks rhe ftrands fufficiently hardened, which he eftimates by the motion of the nedge, he orders the heavers at the cranks to top. The middle frand at the fledge is taken off from the crank. This crank is taken out, and a ftronger one put in its place at D , fig. 9. The other ftrands are taken off from their cranks, and all are joined on the hoak which is now in the middle hole. The top is then placed between the flrands, and, being prefsed home to the point of their union, the carriage is placed under it, and it is firmly fixed down. Some weight is taken off the dledge. The heavers now begin o turn at both ends. Thole at the tackle-board continue to turn as they did befure; but the heavers at the fledge turn in the oppofite direction to their former motion, fo that the cranks at both ends are now turning ene way. By the motion of the nedge crank the top is forced away from the knot, and the rope begins to clofe. The heaving at the upper end reftores to the frand the twift which they are conftantly loling by the laying of the rope. The workmen juilge of this by making a chalk mark on intermediate points of the frands, where they lie on the ftakes which are fet up along the walk for their fupport. If the twift of the frands is diminifhed by the motion of clofing, they will hing then, and the chalk mark will move away from the tackle board: but if the twift increafes by turning the cranks at the tackle-board, the frands will fhorten, and the mark will come nearer to it.

As the cloling of the rope advances, the whole shortens, and the fledge is dragged up the walk. The top moves fatter, and at latt reaches the upper end of the walk, the rope being now laid. In the mean time, the nedge has moved feveral fathoms from the place where it was when the laying began.

Thefe motions of the Iledge and top mut be exactly adjuthed to each other. The rope mult be of a certain length. Therefore the nledge mult flop at a certain place. At that moment the rope thould be laid; that is, the top hould be at the tackle board. In this confifts the addrefs of the foreman. He has his attention directed buth ways. He looks at the flrands, and u hen be fees any of them hanging flacker between the fakes \$han the others, he calls to the heavers at the tackle-
board to heave more upon that frand. Ife finds it more difficult to regulate the motion of the top. It requires a confiderable force to keep it in the angle of the ftrands, and it is always difpofed to ftart forward. .To preveut or check this, iome ftrapg of foft rope are brought round the faff of the top, and then wrapped feveral times round the rupe behind the top, and kept firmly down by a lanyard or bandage, as is Thown in the figure. This both holds back the top and greatly affifts the laying of the rope, cauling the ftrands to fall into their places, and keep clofe to tach other. This is fometimes very difficult, efpecially in ropes compoled of more than three Atrands. It will greaily improve the laying the rope, if the top have a fharp, fmooth, tapering pin of hard wood, pointed at the end, projecting fo far from the middle of its fmaller end, that it gets in between the ftrands which are clofing. This lupports them, and makes their clofing more gradual and regular. The top, its notches, the pin, and the warp or ftrap, which is lapped round the rope, are all fmeared with greafe or foap to affift the clofing. The foreman judyes of the progrefs of clofing chiefly by his acquaintance with the walk, knowing that when the nedge is abreaft of a certain fake the top thould be abreaft of a certain orher thake. When he finds the top too far down the walk, he flackens the motion at the tackle board, and makes the men turn brifkly at the nedge. By this the top is forced up the walk, and the laying of the rope accelerates, while the ficdge remains in the fame place, becaufe the flrands are luling their twit, and are lengthening, while the clofed rope is fhortening. When, on the other hand, he thinks the top too far advanced, and fears that it will be at the head of the walk before the fledge has got to its proper place, he makes the men heave brifkly on the itrands, and the heavers at the lledge crank to work foftly. This quickens the motion of the fledge by thortening the ftrands; and by thus compentating what has been overdone, the fledge and top come to their places at once, and the work appears to anfwer the intention.

But this is a bad manner of proceeding. It is evident, that if the rands be kept to one deerree of hard. nefs throughout, and the lreaving at the nedge be unformly continued, the rope will be uniform. It may be a little longer or thorter than was intended, and the laying may be too hard in pruportion to the twift of the firands, in which cafe it will nut ketp it ; or it may be too flack, and the rope will tend to twi more. Either of thefe faults are difcoverable by flackenin:s the rope before it come off the hooks, and it may then be correted. But it the ertor in one place be compenfated by that in another, this will not be eafly feen before taking off the hooks : and if it is a large and fiff rope, it will hardly ever come to an equable fate in its different parts, but will be apt to run into loops during fervice.

It is, therefore of importance to preferve the uni: formity thronghout the whole. Mr Du Hamel, in his great work on rope-making, propofes a method which is very exact, but requires an apparatus hich is cumberfome, and which would be much in the way of the workmen. We thatk that the following method would Anothes be extremely ealy, embarrafs no one, and is perfectly method exact. Having determined the proportion between the propofed velocity of the top and nedge, let the diameter of the \&e

\section*{R \(O\) p}

1
truck of the top earriage be to that of anoolher truck f:xed to the fledre, in the proportion of the vetocity of the top to that of the fl.dge. Let a mark be made on the rim of eact: ; let the man at the tladge make a Erthel every time that the nurls on the fedge track is unipermoft. The mark on the carixac truck fould be uppermort at the forte infant; and in this way the forentan knows the tiare of the rope at all times without quitting his flation. Thris, in moking a cable of i2 2 fathoms, it is ufual to warp the yarns 180 fathoms, and to harden them up to ryo befure elofing. Therefor:, in the cloflas, the tol) imult move if fathoms, and the Acdre only 20 . The diameter of the carriage truek fhould therefore be feren tinies the diameter of the fiedre truck.
We have hicherto proceeded on the fuppofition, that the twit proluced by the crauks is propargated freely abong the frands and along the cloliar rope. But this is ne: the cafe. It is almot mavoidable that the twift is greater in the neighbourhond of the crank which produces it. 'the Itrands are frequently of very coanderable weight, and lit heavy on the fakes. Force is thercfore neceflary to overcome their friction, and it is only the ovenplus that is propargted beyond the fitake. It is proner to lift them up fiom time to time, and let them fail down again, as the fawer does with his marking line. This helps the twit to run along the Itracid. But this is not enourh for the clofed rope, which is of much greater weight, and nuch Aifiter. When the top approaches the tackle-board, the heaving at the flelge could not cau'e the flamis immediat ly behind the top to clofe well, without having presioully produced an extravarant dearee of twift in the intermediate rope. The effort of the crank mult thercfore We affited by men tationed alons the rope, talh furnifhed with a toul called a wooliter. This is a flont oak flick about three feet long, hasing a ftrap of fot ropeyarn or cordage faftemed on its middle or end. The Itray is wrapped round the laid rope, and the workman works with the ftiek as a hever, iwitting the rope round in the direction of the crank's motion. The woolders mould keep their eye on the men at the crank, and make their motion correfpond with his. Thus they fend forward the twit produced by the crank, withent either inereafing or diminifhing it, in that part of the rope which lies between them and the fledgc.

It is ufull before taking thie roje from the humks to heare a while at the nedge end, in order to harden the rope a little. They do this fo as to take it up about \(\frac{3}{\text { of }}\). The propriety or imprepricty of this practice depends entirely on the propertion which has been preciouly ohferved between the hardening of the Atrands and the twiting of the elofing rope. It is, in all cafes, better to adjult thefe precilely, and then nothing remains to be done when the top has arrived at the upper end of the walk. The making (cf two flrand and three frand line poisted cut the priscipie which fould be attended in in this cafe: namely, that the twin given to the rope in layine fhould be precifely what a perfectly foft rope wonld give to itfelf. We do nat fee any reafon for thinking that the froportion between the number of torns given io the Atrands and the number of turns given to the laid line by its own elafticity, will vary by any difference of diameter. We would therefore recomimend to the artifts to fette this proportion

\section*{4in ] \(\mathrm{R} O \mathrm{p}\)}
hy experimen.t. The line nom te male of the finc th, fmaile:l, and fortent thetadis or yaris. Thefe fould be made into flaza, and the firands foond be hardm. ed up in the direstion contrary, to the foinning twilt. The rope thould then be hid, hanging perpendicularly, with a finall weight on the top to kerp it down, and is very fmall weight at tie end of the rope. ithe numher of turns given to the flrands hacull lue carcfully nutiecd, and the number of turns which the rope ta'ses we itfel: in chofing. The weight fhoudd then be taken of, and the rope will make a few turrs moce. This whole number will never execed what is neceliay for the equilitrium; and we imagine it will not fail much Short if it. Wre are dealy of opinion an cract adjurtment of this particular will tend greatly to improve the att of rope-inaking, and that expreiments on good principics for afertaining this propotion would be highiy yaluabte, becaure there is no poist aboat which the artifts themfelves differ more in tucir opinioss and practice.
The cordage, of which we have been deferibing the Mutis of mandacture, is faict to be HAWSER-1.siD. It is notriking uncommon to make ropes of four tiranti. Thefe are f.rou '-laio ufed for throuds, and thio cordage is therefure called cir func shroun-thans corlage. A rope of the fane fire and arands, weight mull be frootber when it has four frands, becaule the Atrands are finaller: but it is mone dificult to lay clofe. When there cylindrical Rande are fimply laid tnefecticr, they leave a v cuity at the axis amunsting to \(\tau^{\prime}\) 's of the feetion of a trand. 'I'his is w be filled up by comprefing the flrands by twiting them. Fech mut fll up \(\frac{f}{5}\) of it by changing its fanpe; and \(\frac{1}{3}\) of this change is made on tach fide of the ftend. The greatctl change of fhape therefore made on any one part of a ftrand amounts only to \(\frac{1}{108}\) of the lection of the ftrand. The vacuity between four cylinders is \(r^{\prime}\) of one of them. This being divided into eight parts, is \(\frac{1}{2}\) of a itrand, and is the greateill comprefinu which any part of it has to undergo. This is nearly five times greater than the former, and mut he mure dificult to produce. Indeed it may be feen by looking at the figeres Ir. and 22. that it will be eatlor to comprefs a flrand into the obtufe angle of 120 degrees than into the right angle of 90 ; and without reafoning more atout the matter, it appears that the difficuley isill increafe with the nuriber of ftrands. Six ftrands mu? twach cac!s cther, and form an arch lcaving a hollow in the midile, into which one of the frards will fip, awd then the refl will hot completely furround it. Sucla a repe would be uneven on the furface. It would be weak: becaufe the central frand would be lack in comparion of the ret?, and would not be exenting its whole force when they are juft ready to break. Whe fee then that a four flrand rope muit be more difficul: to lay well than a lawfer-laid rope. Witn care, however, they may be laid well and clofe, and are much ufed in the royal navy.

Ropes are made of four ftrands, with a leeast or And wit? ftrand in the iniddle. This gives no additional ftreng th, s hears no for tixe reafon jult now given. Its only ufe is to make che madion the work better and more cafy, and to fupport all the Atrands at the farne diftance from the axis of the rope. This is of great confequence; becaufe when they are at unequal diftances from the axis, fome muft be more floping than others, and they will not refft alike. This
heart is made of inferior \(f\) tuff, flack laid, and of a fize juit cqual to the fpace it is to fill. When a rope of this fabric has been long ufed and become unferviceable, and is opened out, the heart is alwass found cut and chaffed to pieces, like very fhort oakum. This happens as follows: When the rope is violently trained, it flretcles greatly ; beeaufe the ftrands furrontud the axis obliquely, and the frain draws them into a pofition more parallel to the axis. But the heart has not the obliquity of parts, and cannot Aretch fo much; at the fame time, its yarns are tirmly grafped by the hard ftrands which furround them; they muft thercfore be torn into fhort pieces.

The prucefs for laying a rope with a heart is not very different from that atready deferibed. The top has a hole pierced through it, in the direction of the axis. The fkain or trand intended for the heart pafies through this hole, and is ftctched along the walk. A boy attends it, holding it tight as it is taken into the clofing rope. 13ut a little attention to what has been faid will fhow this method to be defective. The wick will have no more turns than the laid rope; and as it lies in the very axis, its yarns will he much ftraighter than the ftrands. Therefore when the rope is ftrained and feretched, the wick cannot ftetch as much as the laid ftrands; and being firmly grafped by them, it mult break into flort pieces, and the Itrands, having loft their fupport in thele places, will fonk in, and the cordage grow loofe. We hould endeavour to enable all to ftretch alike. The wick therefore fould be twitted in the fame manner as the ftrands, perhaps even a little more. It will thus communicate part of is Atrength to the rupe. Indeed it will not be fo uniFormly folid, and may chance to have three fpiral va. cuities. But that this does no harm, is quite evident from the fuperior ftrength of cable-laid cordage, to be defcribed prefently, which have the fame vacuities. In this way are the inain and fore fays made for hips of the line. They are chought ftronger than hawferlaid ropes, but unfit for running rigging; becaufe their ftrands are apt to get out of their places when the mope is drawn into hoops. It is alfo thought that the heart retaius water, rots, and commusicates its putreking. 'The fibres of heny are twifted into yarns, that they may make a line of any length, and Aick among each other with a force ergal to their own colncron. The yarns are made into cords of permanent twit by laging them.; and, that we may have a rope of any degiee of ftrength, many yaras aie united in one ftrand, for the fane reafon that many fibres were united in one yarn; and in the counfe of this procefs it is in our power to give the rope a folidity and hardnefs which makes it lefs penetrable by water, which wonld rot it in a thort while. Some of thefe purpofes ure inconfitent with others: and the fisill of a rape-naker lies in making the beft compenfation; fo that the rope may on the whule be the bef in point of Itrength, pliancy, and duration, that the quantity of hemp in it can produce.

There is another feecics of cordage in very seneral ufe. A rope of two or more ftrands may be ufed as a ftrand, in order to compofe a ftill larger rope; and in this manner are cables and other ground iackle com-
monly made; for this reafon fuch cordage is called Cable-laid cordage.

The procefs of cable-laying hardly differs from that of hawler-laying. Three ropes, in their fate of permanent twift, may be twifted together; but they will not hold it, like fine thread, becaute they are ftiff ard elaftic. They mult therefore be treated like flrands for a hawfer. We muft give them an alditional twill, which will difpofe them to lay or clofe themfcres; and this difpufition mult be aided by the workmen at the nedge. We fay the twitt fhould be an addition to their twift as a rope. A twift in the oppofite direction will indecd give them a difpolition to clofe behind the top; but this will be very fmall, and the ropes (now frands) will be exceedingly open, and will become more open in laying. The twint is therefore given in the direction of their twilt as a rope, or oppofite to that of the primary ftrands, of which the ropes are compofed Thefe primary dtrands are therefore partly untwited in cable-laying a rope, in the fame manner as the yarns are untwitted in the ufual procefs of rope-making.

Wre need not infift farther on this part of the manufacture. The reader mult be fenfible that the hawfers. intended for ftrands of a cable mult not be fo much twifted as thofe intended to remain hawfers; for the twift given to a finifhed hawfer is prefumed to be that which renders it moft perfect, and it muft be injured by any additıon. The precife proportion, and the diftribution of the working up between the hardening of the flrands and clufing the cable, is a fubject about which the artifts are no better agreed than in the cafe of haw. fer-laid cordage. Wre did not enter on this fubject while deferibing the procefs, becaufe the intronuction of reafunings and principles would have hurt the finplicity of the defcription. The reader being now acquainted with the different parts of the manipulation, and knowing what can be done on any occation, will now be able to judge of the propricty of the whole, when he learns the principle on which the trength of a rope depends.

We have already faid, that a rope-yarn nould be twifted till a fibre will break rather than be pulled out Moden from among the reft, and that all twitting beyond this is the arer. injurions to the ftrength of the yarn: And we advanced of rupes this maxim upon this plain contideration, that it is needlefs to bind them clofer together, for they will already break rather than come out; and becaufe this clufer binding is produced only by forcibly wrapping the out. or fibres round the inner, and drawing the outer ones sight. Thus thefe fibres are on the ftretch, and are itrained as if a weight were hung on each of them. The procefs of laying lines, of a peimanent twit, thows that we mull do a little more. We mull give the yarn a degree of elaftic contractility, which will make it \(l_{i y}\) itfelf and form a line or cord which will retain its twift. This muft leave the fibres of the yarns in a ftate of greater compreffion than is neceflary for jult kceping them together. But more than this feems to be needlefs and hurtul. The fame maxim mult direct us in forming a rope confilting of ftrands, containing more than one yarn. A needlefs excefs of twitt leaves them ftrained, and lefs able to perform their office in the rope.

It not unfrequently happens, that the workman, in order to make his rope folid and firm, hardens up
the ftranss till they really break: and we believe that, in the general practice of making large hawfers, many of the outer yarns in the ftrards, efpecially thofe which chance to be outermoft in the laid rope, and are therefore moft ftrained, are broken during the operation.

But there is another confideration which fhould alfo make us give no greater twift in any part of the operation than is abfonutely neceflary for the firm cohefion of the parts, and this independent of the ftrain to which the fibres or yarns are fubjected. Twifting caules all the fibres to lie obliquely with refpect to the axis or general direction of the rope. It may juft happen that one fibre or one yarn thall keep in the axis, and remain ftraight; all the reft mult be oblique, and the more ohlique as they are farther from the axis, and as they are more twifted. Now it is to be demonftrated, that when any frain is given to the rope in the direction of its length, a ftrain greater than this is actually excited on the oblique fibres, and fo much the greater as they are more oblique; and thus the fibres which are already the weakeft are expofed to the greateft Arains.

Let CF (fig. 13.) reprefent a fibre hanging from a hook, and loaded with a weight \(F\), which it is jult ahle to bear, but not more. This weight may reprefent the abfolute force of the fibre. Let fuch another fibre be -laid over the two pulleys A, B (fig. 14.), which are in a horizontal line AB , and let weights F and \(f\), equal to the former, be hung on the ends of this fibre, while another weight \(R\), lefs than the fum of F and \(f\), is hung on the middle point C by a hook or thread. This weight will draw down the fibre into fuch a pofition \(A C B\), that the three weights \(\mathrm{F}, \mathrm{R}\), and \(f\), are in equilibrio by she intervention of the fibre. We affirm that this weight \(R\) is the meafure of the relative ftrength of the fibre in relation to the form \(A C B\); for the fibre is equally ftretched in all its parts, and therefore in erery part it is frained by the force \(F\). If therefore the weights \(F\) sind \(f\) are held faft, and any addition is made to the weight \(R\), the fibre muft break, being already ftrained to its full frength; therefore R meafures its ftrength in relation to its fituation. Complete the parallelogram \(A C B D\), and draw the diagonal \(C D\); becaufe \(A B\) is horizontal, and \(A C=B C, D C\) is vertical, and coincides with the direction \(C R\), by which the weight \(R\) acts. The point \(C\) is drawn by threc forces, which are in equilibrio. They are therefere proportional to the Gides of a triangle, which have the fame directions; or, the force acting in the direction CA is to that acting in the direction \(C R\) as \(C A\) to \(C D\). The point \(R\) is fupported by the two forces \(\mathrm{CA}, \mathrm{CB}\), which are equivalent to CD ; and therefore the weight F is to the weight \(R\) as \(C A\) is to \(C D\). Therefore the abfolute ftrengths of the two fibres \(A C, B C\), taken feparatcly, are greater than their united ftrengths in relation to their pofition with refpect to CR : and fince this proportion remains the fame, whatever equal weights are hung on at \(\mathbf{F}\) and \(f\), it follows, that when aty strain \(D C\) is made to act on this.fibre in the direction DC, it excites a greater ftrain on the fibre, becanfe CA sad CB taken togetter are greater than CD. Each fitre futtains a ftrain greater than the half of CD.

Now let the weight \(R\) be turned round the axis \(C R\). This will caufe the two parts of the fibre \(A C B\) to lap sound each other, and compofe a twifted line or cond Vol. XVI, Part II.
\(C R\), as in fig. 15 . and the parallelogram \(A C B D\) will remain of the fame form, by the yielding of the weights \(F\) and \(f\), as is evident from the equilibrium of forces. The fibre will always affume that form which makes the fides and diagonal in the proportion of the weights. While the fobres lap round each other, they are frainec to the fame degree, that is, to the full extent of their ftrength, and they remain in this degree of frain in every part of the line or cord \(C R\). If therefore each of the fibres has the Arength AB, the cord has the ftrength DC; and if F and \(f\) be held fatt, the fmalleft addition to R will break the cord. The fum of the abfulute frength of the two fibres of which this thread is compofed is to the fum of their relative ftrengths, or to the itrength of the thread, as \(A C+C D\) is to \(C D\), or as AC is to EC .

If the weights F and \(f\) are not held fant, hut allowed to yield, a heavier weight \(r\) may be hung on at \(C\) without breaking the fibre; for it will draw it into another pofition \(A \subset B\), fuch that \(r\) thall be in equilibrio with \(F\) and \(f\). Since F and \(f\) remain the fame, the fibre is as much ftrained as before. Therefore make \(c a, c b\) equal to \(C A\) and \(C B\), and complete the parallelogram a \(c b d\). \(c d\) will now be the meafure of the weight \(r\), becaufe it is the equivalent of \(c a\) and \(c b\). It is evident that \(c d\) is greater than CD, and therefore the thread formed by the lapping of the fibre in the pofition \(a c b\) is fronger than the former, in the proportion of \(c d\) to CD , or \(c e\) to CE. The cord is therefore fo much ftronger as the fibres are more parallel to the axis, and it muft be Atrongeft of all when they are quite parallel. Bring the pulleys \(A, B\) clofe to each other. It is plain that if we hang on a weight \(R\) lefs thain the fum of \(F\) and \(f\); it cannot take down the bight of the fibre; but if equal to them, although it cannot pull it down, it will keep it duwn. In this cafe, when the fibres are paralled to each other, the Atrength of the cord (improperly to called) is equal to the united abfolute ftrengths of the fibres.

It is eafy to fee that the length of each of the fibres which compole any part CR of this cord is to the length of the part of the cord as AC to EC ; and this is the cafe even although they flould lap round a cylinder of any dianeter. This will appear very clearly to any perfon who confiders the thing with attention. Let \(a c\) (fig. 16.) be an indefinitely fmall portion of the fibre which is lapped obliquely round the cylinder, and let HKG be a fection perpendicular to the axis. Draw a e parallel to the axis, and draw ec to the centre of the circle HKG, and \(a e^{\prime}\) parallel to \(e c\). It is plain that \(e^{c} c\) is the length of the axis.correfponding to the fmall portion \(a c\), and that \(e^{\prime} c\). is cqual to \(a e\).

Hence we derive puother manner of exprefing the ratio of the abfolute and relative ftrength; and we may fay that the abfolute frength of a f.bre, which has the fame obliquity throughout, is to its iclative ftrength as the length of the fibre to the lengt? of the curd of which it makes a part. Aud we may fuy, that the ftrength of a rope is to the inited abfolute itrength of its yarns as the length of the cord to lle length of the yarns; for althougli the yarns are in vaious flates of obliquity, they conmibute to the flrensth of the cond in as mucli as the contribute imnediate? to the flrength of the ftrands. "The flength af the garns is to that of the flandy as the longth of the varas to that of the 30 flration

Rope-
nukions

\section*{\(R\) O'P [ 490 ] R O P}

Rosemoking,
frands, and the ftrength of the ftrands is to that of the rope as the length of the firf to that of the latl.

And thus we fee that twifting the fibres diminifhes the ftrensth of the anemblage ; becaufe their ebliquity, which is its neceflary confequence, enables any external force to excite a greater itrain on the fibres than it could have excited had they remained parallel ; and fince a greater degree of twifting neceffarily produces a greater obliquity of the fibres, it mult more remarkably diminif the ftrength of the cord. Moreover, fince the greater obliquity cannot be produced without a greater frain in the operation of twifting, it follows, that immoderate twitting is doubly prejudicial to the-ftrength of cordaye.
21
Thenretical deduetions ed by experment; and as many perfons give coneirmcurfimed fent more reatily to anemb propofition whell per atby Rea than when offered as the confequence of uncontroverted principles, we fhall mention fome of the experinents which have been made on this fubject. Mr Reaumur, one of the mof zealous, and at the fame time judicious, obfervers of nature made the following experiments. (Mem. Acad. Paris, 1711.)
1. A thread, confifting of 832 fibres of filk, each of which carried at a medium I dram and 18 grains, would hardly fupport \(5^{\frac{1}{2}}\) pounds, and fometimes broke with 5 pounds. The fum of the abfolute ftrengths of the fibres is 1040 drams, or upwards of 8 pounds 2 ounces
2. A Akain of white thread was examined in many places. Every part of it bore \(9 \frac{{ }^{2}}{2}\) pounds, but none of it would bear 10. When twifted flack into a cord of 2 yarns it broke with 16 pounds.
3. Three threads were twitted together. Their mean Atrength was very nearly 8 pounds. It broke with \(17 \frac{1}{2}\), whereas it hould have carried 24 .
4. Four threads were twifted. Their mean ftrength was \(7 \frac{1}{2}\). It broke with \(21 \frac{1}{2}\) inttead of 30 . Fuur threads, whofe ftrength was nearly 9 pounds, broke with 22 initead of 36 .
5. A fmall and very well made hempen cord broke in different places with \(58,63,67,72\) pounds. Another part of it was untwitted into its three frands. One of them bore \(29 \frac{1}{2}\), another \(33 \frac{1}{2}\), and the third 35 ; therefore the fum of their abfolute ftrengths was 98. In another part which broke with 72 , the ftrands which had already borne this Itrain were feparated. They bore 26,28 , and 30 ; the fum of which is 84 . tions. Each of thefe had a fathom cut off, and it was carefully opened out. It was white, or untarred, and containd 72 yarns. They were each tried feparately, and their mean ftrength was 90 pounds. Each correfponding piece of rope was tried apart, and the mean ftrength of the nine pieces was 4552 pounds. 23 But 92 times 72 is 6480 .
Fuather re- Nothing is more familiarly known to a feaman than marks on the fuperior ftrength of rope-yarns made up into a fkain
twifing. twifting.
without twifting. They call fuch a piece of rope a Salvage. It is ufed on board the king's fhips for rolling tackles, flinging the great guns, butt-lings, nippers for bolding the viol on the cable, and in every
fervice where the utmof frength and great plianey are wanted.

It is therefore fufficiently efablifhed, both by theory and obfervation, that the twifting of cordage diminifhes its flrength. Experiments cannot be made with fufficient precifion for determining whether this diminution is in the very proportion, relative to the obliquity of the fibres, which theory points out. In a hawfer the yarns lie in a great variety of angles with the axis. The very outermolt yarn of a ftrand is not much inclined to the axis of the rope: for the inclination of this yarn to the axis of its own ffrand nearly compenfates for the inclination of the ftrand. But then the oppofite yarn of the fame ftrand, the yarn that is next the axis of the rope lies with an obliquity, which is the fum of the obliquities of the frand and of the yarn. So that all the yarns which are really in the axis of the rope are exceedingly oblique, and, in general, the infide of the rope has its yarns more oblique than the outfide. But in a laid rope we fhould not confider the Atrength as made up of the frengths of the yarns ; it is made up of the ftrengths of the ftrands: For when the rope isviolently fretched, it untwifts as a rope, and the ttrands are a little more twifted; fo that they are relifting as ftrands, and not as yarns. Indeed, when we confider the proceis of laying the rope, we fee that it mult be fo. We know, from what has been already faid, that the three ftranids would carry more when parallel than when twifed into a rope, although the yarns would then be much more oblique to the axis. 'I'he chief attention therefore fhould be turned to the making the mofl perfect flrands.

We are fully authorifed to fay that the twif given to cordage fhould be as moderate as poflible. We are certain that it diminifhes the ftrength; and that the appearance of ftrength which its fuperior fmoothnefs and bardnefs gives is fallacious. But a certain degree of this is neceflary for its duration. If the rope is laid too nack, its parts are apt to open when it happens to be catched in fhort loops at its going into a pulley, \&c. in which cale fome of the ftrands or yarns are apt to kink and break. It alfo becomes too pervious to water, which foaks and rots it. To prevent thefe and other fuch inconveniences, a conliderable degree of firmnels or hardness is neceffary ; and in order to give the cordage this appearance of fuperior itrength, the manufacturer is difpoled to exceed.

Mr Du Hamel made many experiments in the royal Experi-dock-yards in France, with a view to alcertain what is ments of the beft degree of twit. It is ufual to work up the Du Hamel yarns to \(\frac{2}{3}\) of their length. Mr Du Hamel thought tain the this too much, and procured fome to be worked up beft degree only to \(\frac{3}{4}\) of the length of the yarns. The ftrength of win, of the firf, by a mean of threc experiments, was 432 I , \&c. and that of the lalt was 5187.

He caufed three ropes to be made from the fame hemp, fpun with all poffible equability, and in fuch proportion of yarn that a fathom of each was of the fame weight. The rope which was worked up to \(\frac{2}{3}\) bore 4098 pounds; that which was worked up to \(\frac{3}{4}\) bore 4850 ; and the one worked up to \(\frac{1}{5}\) bore 6205 . In another trial the ftrengths were 4250,6753 , and 7397. Thefe ropes were of different fizes.

He had influence enough, in confequence of thefe experiments, to get a confderable quantity of rigging
made of yams worked up only to \(\frac{3}{4}\) of their leugth, and had them ufed during a whole campaign. The oificers of the thips reported that this cordage was about \(\frac{i}{4}\) lighter than the ordinary kind; nearly \(\frac{\frac{1}{8}}{8}\) flenderer, fo as to give lefs hold to the wind, was therefore more fupple and pliant, and run cafier through the blocks, and did not run into kinks; that it required fewer hands to work it, in the proportion of two to three; and that it was at leaft \(\frac{1}{4}\) ftronger. And they faid that it did not appear to have fuffered more by ufing than the ordinary cordage, and was fit for another campaign.
Mr Du Hamel alfo made experiments on other \(\mathfrak{f a}\) brics of cordage, which made all twifting unneceffary, fuch as limply laying the yarn in flains, and then covering it with a worming of fmall line. This he found greatly fuperior in flrength, but it had no duration, becaufe the covering opened in every fhort bending, and was foon fretted off. He alfo covered them with a woven ceat in the manner practifed for houfe-furniture. But this could not be put on with fufficient tightnefs, without an enormous expence, after the manner of a horfe-ship. Small ropes were woven folid, and were prodigioully ftrong. But all thefe fabrics were found too foft and pervious to water, and wére foon rendered unferviceable. The ordinary procefs of ropemaking therefore mult be adhered to; and we malt codeavour to improve it by diminifhing the twift as far as is compatible with the neceffary folidity.

In purfuance of this principle, it is furely advifable ro lay fack all fuch cordage as is ufed for flanding rizging, and is never expofed to thort bending3. Shrouds, itays, back flays, pendants, are in this fituation, and can eatily be defended from the water by tarring, ferving, \&sc.

The fame principle alfo direets us to make fuch cordage of four ftrands. When the ftrands are equally hardened, and when the degree of twift given in the laying is precifely that which is correfpondent to the twift of the ftrands, it is demonftrable that the ttrands are lying lefs obliquely to the axis in the four-ftrand cordage, and thould therefore exert greater force. And experience fully confirms this. MrDu Hamel caufed two very fmall hawfers to be made, in which the ftrands were equally hardened. One of them had three ftrands, and the other fix with a heart. They were worked ap to the fame degree. The firlt broke with 865 pounds, and the other with 1325. Several comparifons were made, with the fame precautions, between cordage of three and of four ftrands, and in them all the fourftraid cordage was found greatly fuperior; and it appeared that a heart judicioufly put in not only made the work eafier and more perfect to the eye, but alfo increafed the ftrength of the cordage

It is furely unreafonable to relufe credit to fuch a uniform courle of experiment, in which there is no morive for impoition, and which is agreeable to every clear notion that we can form on this complicated fubject; and it argues a confiderable prefumption in the profeffional artifts to oppore the vague notions which they have of the matter to the calm. reflections, and mninute examination of every partieular, by a man of good underfanding, who had no interelt in mileading them.

The fame principles will explain the fuperiority of
cable-laid cordage. The general aim in rope-making is to make every yarn bear an equal inare of the geueral frain, and to put every yarn in a condition to bear it: But if this cannot be done, the next thing aimed
P.ope. making.

25 at is, to put the yarns in fuch fituations that the ftrains oi catioriy to which they are expofed in the ufe of the rope may lad corbe proportioned to their ability to bear it. Even this dage, \&co point cannot be attained, and we muft content ourfelves with an approach towards it.

The greateft difficulty is to place the yarns of a large ftrand agreeably to thofe maxims. Suppofing them placed with perfect regularity round the yarn which is in the middle: they will hie in the circumfcrences of concentric circles. When this whole mals is turned equally round this yarn as an axis, it is plain thas tley will all keep their places, and that the niddle yam is finply twitted round its axis, while thofe of the furrounding circles are lapped round it in fpirais, and that thefe fpirals are fo much more oblique as the yarns are farther from the axis. Suppofe the תedge kepz falt, fo that the frrand is not allowed to florten. The yarns mult all be ftretched, and therefore ftrained; and thofe muft be the moft extended which are the farthert from the middle yarn. Now allow the ned se to approach. The ftrand contracts in its general length, and thofe yarns contract moft which were molt extended. The remaining extenfion is therefore diminifhed in all; but fill thofe which are moft remote from the middle are moft extended, and therefore moft flraisied, and have the fmalleft remainder of their abfolute force. Unfortunately they are put into the moll unfavourable fituations, and thofe which are already mot Atrained are left the molt oblique, and have the greatelt !train laid on them by any external force. Bit this is unavoidable: Their greatelt hurt is the ltrains they fuftain in the manufacture. When the fltand is very large, as in a rine-inch hawfer, it is alrnot imporfible to bring the whole to a proper firmnefs for laying without ftraining the outer yarns to the utmoft, and many of them are broken in the operation.
The reader will remember that a two-Atrand line was in laying laid or clofed merely by allowing it to twill it fclf up at large rof \(=9\) the fwivel of the loper; and that it was the clafticity the itrands arifing from the twith of the yarn which produced this are twi.c) effect: and be would probably he furprited when we in a di eco faid, that, in laying a larger rope, the itrands are twita- Gite en that ed in a direction opp fite to that of the Spinzing of ipinning, Since the tendency to ctife into a rope is nothing but and are the tendency of the framds to untwit, it would feem confequentnatural to twilt the itrands as the yarns were twited y fronget. before. This would be truc, if the elallicity of the fibres in a yarn produced the fame tendency t.) untwist in the ftrand that it coes in the yarr. But this is not the eafe. The contraction of one of the outer yar:13 of aftrand tends to pull the Itrand backararl rund the axis of the Atrand: but the contraction of a fibre of this yarn tends to turn the yarn round its own axis, and not round the axis of the itrand. It tends to untwilt the yarn, but not to untwit the Arand. It twads to untwit the itrand only fo far as it tends to contrait the yarn. Let us fuppofe the yarn to be fpun up to one-half the length of the tibres. The cantraitiug power of this yatn will be only one-half of the ferce exerted by the thbres: therefore, whatever is the force necefiary for clofing the rope properly, the Ebees of 3 Q?

\section*{R O P [ 49: T R O P}

Fnre- the yarns mutt be exerting twice this force. Now let moking. the fame yarn, fpun up to one half, be made up in a ftrand, and let lle \(P\) rand be twifted in the oppofite direction to the fpinning till it has acquired the fame elaflicity fit for laying. The yarns are untwifed. Suppofe to three-fourtlis of the length of the filures. They are now cxerting only four-thirds of the force neceflary for layine, that is, two-thirds of what they were obliged to exert in the other cafe; and thus we have Aronger farns when the frands are equally frained. But they require to be more flained than the other; which, being made of more \(t\) withed yarn, fooner acquire the elafticity fit for laying. But fince the elaHicity which fits the flrand for laying does not increafe fo falt as the frain on the fibres of the yarn which produces it, it is plain, that when each has acquired that elafticity which is proper for laying, the ftrands made of the flack. twitted yarn are the ftrongelt ; and the yarns are alfo the ftrongelt; and being fofter, the rope will clole better.

Experience confirms all this; and cordage, whofe firands are twilted in the oppofite direction to the twitt of fpinning, are found to be tronger than the others in a proportion not lefs than that of 7 to 6 .

Such being the difficulty of making a large ftrand, and its defects when made, we have fallen on a method of making great cordage by laying it twice. A haw-fer-laid rope, flack \{pun, little hardened in the Atrands, and flack laid, is made a ftrand of a large rope called a calle or cablet. The advantages of this fabric are evident. The ftrands are reduced to one-third or one-fourth of the diameter which they would have in a hawfer of the fame lize. Such itrands cannot have their yarns lying very obliquely, and the outer yarns cannot be much more itrained than the inner ones. There mult therefore be a much greater equality in the whole fubftance of cable-laid cordage, and lrom this we fhould expect fuperio: Atrength.

Accordingly, their fuperiority is great, not lefs than in the proportion of 13 to 9, which is not far from the proportion of 4 to 3 . A cable is more than a fourth part, but is not a third part, ftronger than a hawfer of the fame fize or weight.

They are feldom made of more than three hawfers of three ftrands each, though they are fometimes made of three four-ftranded hawfers, or of four three-ftranded. The firlt of thefe two is preferred, becaufe four fimall ftrands can be laid very clofe; whereas it is difficult to lay well four hawfers, already become very hard.

The fuperiority of a cable-haid cordage being attributed entircly to the greater perfection of the ftrands, and this feeming to arife entircly from their fmallnefs, it was natural to expeet fill better cordage by laying cables as the ftrands of fill larger pieces. It has been tried, and with every requilite attention. But although they have always equalled, they have not decidedly excelled, common cables of the fame weight ; and they require a great deal more wort. We thall not thercfore enter upon the manipulations of this fabric.

There is only one point of the mechanical procefs of rope-making which we have not confidered minutely ; and it is an important one, viz. the diftribution of the
total flortening of the yarns between the hardening of the Itrands and the laying the rope, "This is a point about which the artifts are by no means agreed. There is certainly a pelfition of the flrands of a laid rope which \({ }^{28}\) puts every part in equilibrio; and this is what an ela-tion of the ftic, but perfectly foft rope (were fuch a thing poffible), total thurwould affume. But this cannot be difcovered by any the yarng of experiments made on large or even on firm cordage; and between
it may not be thought fufficiently clear that the pro-the handen. experiments made on large or even on firm cordage; and between
it may not be thought fufficiently clear that the pro-the harden. portion which would be difcovered by the careful fabri-ing of the cation of a very finall and foft line is the fame that trandsand will fuit a cordage of any diameter. We muft proceed rope. much on conjecture ; and we cannot fay that the arguments ufed by the partifans of different proportions are very convincing.

The general practice, we believe, is to divide the whole of the intended fhortening of the yarns, or the working up into three parts, and to employ two of thefe in hardening the ftrands, and the remaining third in clofing the hawfer.

Mr Du Hamel thinks, that this repartition is injudi- Ofinion cious, and that the yarns are too much ftrained, and and experithe ftrands rendered weak. He recommends to invert ments of this proportion, and to fhorten one-third in the harden. Du Hame 1. ing of the ftrands, and two-thirds in laying the hawfer. But if the tlrain of the yarns only is confidered, one fhould think that the outfide yarn of a ftrand will be more ftrained in laying, in proportion to the yarn of the fame ftrand, that is, in the very axis of the rope. We can only fay, that if a very foft line is formed in this way, it will not keep its twift. This fhows that the turns in laying were more than what the elafticity or hardening of the ftrands required. 'The experiments made on fof lines always fhowed a tendency to take a greater twilt when the lines were made in the firf manner, and a tendency to lofe their twitt when made in Mr Du Hamel's manner. We imagine that the true proportion is between thefe two extremes, and that we fhall not err greatly if we halve the total fhortening between the two parts of the procefs. If working up to two-thirds be infited upon, and if it be really too much, Mr Du Hamel's repartition may be better, becaufe part of this working will quickly go off when the cordage is ufed. But it is furely better to be riglit in the main point, the total working up, and then to adjull the diftribution of it fo that the finifhed cordage fhall precifely keep the form we have given to it.

There mutt be the fame uncertainty in the quadruple diftribution of the working up a cable. When a cable has its yarns thortened to two-thirds, we believe the opdinary practice has been, ift, To warp 180 fathoms: 2d, To harden up the itrands 30 fathoms; 3d, To lay or clofe up 13 fathoms; 4 th, 「o work up the hawlers nine fathoms; 5 th, To clofe up eight fathoms. This leaves a cable of 120 . Since Mr Du Hamel's cxperiments have had an influence at Rochefort, the praclice has been to warp \(19=\), to harden up 38 , to lay up 12, to work up the hawfers 10, and then to clofe up fix; and when the cable is finified, to horten it two fathoms mote, which our workmen call tbrowing the turn welf up. This leaves a cable of 122 fathoms.

As there feems little doubt of the fuperiority of cordage fhortened one-fourth over cordage fhortened onethird, the following diftribution may be adopted: warp.

Rope-
making. 28

\footnotetext{

eyig. R

- Iin.it.

- Hiv. 11.

\(\cdots\) ieg. 0

190 fathoms, harden up 12 , lay up 11 , mork up the hawfers : 2, and clofe up 12 more, which will leave a cable of 143.

There is arother queftion about which the artifts are divided in their opinions, viz. the frains made ufe of daring the operation. This is produced by the weinht laid on the Acdge. If this be too fimall, the ftrands will not be fufficiently tightened, and will run into kirks. The nedge will come up by farts; and a fmall inequality of twitt in the ftrands will throw it afkew. The top will not run well without a confiderable preffure to throw fr from the clofing point, and therefore :he cordage will neither clofe fairly nor firmly ; on the other hand, it is evident, that the frain on the ftrands is a complete expenditure of fo much of their force, and it may be fo great as to break them. Thele are the extreme pofitions. And we think that it may be fairly deduced from our principles, that as great a itruin Should be laid on the ftrands as will make good work, that is, as will enable the rope to elofe nearly and completely, but no more. But can any general rule be given for this purpofe?

The practice at Rochefort was to load the fledge till its weight and load were double the weight of the yarns when warped 180 fathoms. A lix-inch hawler will require about a ton. If we fuppofe the friction one-third of the weight ; the ftrain on each ftrand will be about two hundred and a quarter weight. Mr Du Hamel thinks this too rreat a load, and propores to put only five-fourths or three-feconds of the weight of the cordage; and ftill lefs if a fhorter piece be warped, becaufe it does not require so mueh force to throw the twift from the two cranks to the middle of the ftrand. We fhall only fay, that Atonger ropes are made by heavy loading the earriage, and working up moderately, than by greater fortening, and a lighter load; but all this is very vague:

The reader will naturally ak, after this account of the manufacture, what is the general rule for computing the Itrength of cordage ? It cannot be expected to be very precife. But if ropes are made in a mamer perfeetly limilar, we thould expect the Atrength to be in proportion to the area of their fection; that is, to the fquare of their diameters or circumferences, or to the number of equal threads contained in them.

Nor does it deviate far from this rule; yet Mr Du Hamel thous, from a range of experiments made on all cordage of \(3^{\frac{3}{2}}\) inch circumference and under, ilat the frength increafes a little fafter than the number of equal threads. Thus he found that ropes of
\begin{tabular}{rlr}
9 & threads bore 1014 pounds, inltead of & 946 \\
12 & 1564 & 1262 \\
18 & 2148 & 1893
\end{tabular}

We cannot pretend to account for this. We muft dfo oblerve, that the ftrength of cordage is greatly improved by making them of yarn fpun fine. This requires finely dreffed hemp; and being more fupple, the fibres lie clofe, and do not form fuch oblique fpirals. But all hemp will not fpin equally fue. Every llalk feems to confift of a certain number of principal fibres, which fplit more eafily into a fecond fet, and thefe more difficultly into a third fet, and fo on. 'the vitimate finenels, therefore, which a reafonable degree of dreffing caa give to hemp, bears fome proportion, :1ot is.
deed very procie, to the E:ze of the Raik. The Eri. tith and Duten ufe the beft hemo, fpin their yarn the freat, and their cordage is confiderably ftronger than

Rope. making: the French, much of which is made of teir own hemp, and others of a coarle and harh quality.

The following rule for judring of the weight which a rope will bear is not far from the truth. It fuppofes them rather too ftrong; but it is ro eafily remenbered that it may be of ufe.

Multiply the circumference in inclies by itself, and take the fifth part of the product, it will exprefs the tons which the rope will earry. Thus, if the rope have 6 inches cireumference, 6 times 6 is 36 , the fifth of which is \(7^{\frac{3}{5}}\) tons; apply this to the rope of \(3 \frac{3}{3}\), on which Sir Charles Knowles made the experiments formerly mentioned, \(3 \frac{1}{5} \times 3 \frac{3}{5}=10,25\), \(\frac{1}{5}\) of which is 2,05 tons, or 4592 pounds. It broke with 4550 .

Tuis may fuffice for an account of the mechanical of tarri \({ }^{32}\) part of the manufacture. But we have taken no no-and ties of tice of the operation of tarring ; and our reafon was, fects on the that the methods praftifed in different rope-works are \({ }^{\text {arength of }}\) fo excecdingly different, that we could hardly enume. \({ }^{10 p c s}\). rate them, or even give a general account of them. It is evidently proper to tar in the fate of twine or yarn, this being the only way that the hemp could be uniformly penetrated. The yam is made to wind off one reel, and having pafed through a veffel containing hot tar, it is wound up on another reel; and the fuperfluous tar is taken eff by paffing through a hole furrounded with fpongy oakum; or it is tarred in kkains or hauls, which are drawn by a captern through the tar-kettle, and through a hole formed of two plates of metal, hele together by a lever loaded with a weight.

It is eitablithed beyond a doubt, that tarred cordage when new is weaker then white, and that the difference increafes by keeping. 'I'lie following experiments were made by Mr Du Hamel at Rochefort on cordage of three inches (French) in circumference, made of the beit Riga hemp.
\begin{tabular}{|c|c|c|}

\section*{\(R O P\)}

Tope mslting.

Mr Du Hamel fays, that it is decided byexperience, 1 . That white cordage in continual fervice is onethird more durable than taried. 2. That it retains its force much longer while kept in ftore. 3. That it refifts the ordinary injuries of the weather one-fourth longer.

We know this one remarkable fact. In 1758 the fhrowds and ftays of the Shecr hulk at Portfmouth dockyard were overhawled, and when the worming and fervice were taken off, they were found to be of white cordage. On examining the forekeeper's books, they were found to have been formerly the fhrowds and rigging of the Royal William, of 110 guns, built in 1715 , and rigged in 1716. She was thought top-heavy and unfit fur fea, and umigged and her llores laid up. Some few years afterwards, her Chrowds and flays were fitted on the Sheer hulk, willere they remained in coritant and very hard fervice for about 30 years, while every tarred rope about her had been repeatedly renewed. This information we received from Mr Brown, boatfwain of the Royal William during the war \(17 ; 8\), \& c.

Why then do we tar cordage? We thus render it more unpliant, weaker, and lefs durable. It is chiefly ferviceable for cables and ground tackle, which muft be continually wetted and cren foakcd. The refult of careful obiervation is, I. That white cordage, expofed to be alternately very wet and dry, is weaker than tarred cordare. 2. That cordage which is fuperficially tarred is conflantly fronger than what is tarred throughcurt, and it refifts better the alternatives of wet and dry. A. B. The fhrouds of the Sheer hulk were well tarred and hlacked, fo that it was not known that they were of white cordare.

Tar is a curious fubfance, mifcible completely with water. Attempts were made to anoint cordage with rills and fats which do not mix with water. This was expeéted to defend them from its pernicious effects. But it was diftinctly found that thefe matters made the fibres of hemp olide fo eafily on each other, that it was hardly pofiche to twift them permanently. Before they grafped each cther fo hard that they could not be drawn, they were ftrained almoft to breaking.

Attempts have been made to increafe the ftrength of coroage by tanning. But although it remains a conftant practice in the manufacture of nets, it does not appear that much addition, either of ftrength or durability, can be given to cordage by this means. The trial has been made with great care, and by perfons fully able to conduct the procefs with propriety. But it is found that the yarns take fo long time in dryi..g, and are fo much hurt by drying flowly, that the room required for a confiderable rope-work would be inmenfe; and the improvement of the cordage is but trifing, and even equivocal. Indeed tanning is a chemical procefs, and its effect depends entirely on the nature of the materials to which the tan is applied. It unqueftionably condcrfes, and even Arengthens, the fibre of leather : but for any thing that we know à priori, it may deftroy the coherion of hemp and flax; and experiment alone could decide the queftion. The refult has been unfavourable; but it does not follow from this that a tan cannot be found which fhall produce on the texture of vegetables effects fimilar to what oak-bark and other aftringents produce on the animal fibre or membrane. It is well known that fome dyes increafe the
ftrength of flax and cotton, notwithftanding the corro-Rope.Dif fion which we know to be produced by fome of the ingredients. This is a fulject highly worth the attention of the chemitt and the patriot.

Ropa-Dincer. See Rope-Dayckr.
Rore-Yarn, among failors, is the yarn of any rope untwifed, but commonly made up of junk; its ufe is to make finnet, matts, \&cc.

ROQUET. See Rocket.
RORIDULA, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants. The corolia is pentapetalous; the calyx pentaphyllous; the capfule trivalved; the anthere fcrotiform at the bafe.

ROSA, the Rose: A genus of the polygamia order, belonging to the icolandria clafs of plants; and in the natural method ranking under the 35 thi order, Senticofe. There are five petals; the calyx is urceolated, quinquefid, cornous, and itraitened at the neck. The feeds are numerous, hifpid, and affixed to the infide of the calyx.

The forts of rofes are very numerous; and the botanills find it very difficult to determine with accuracy which are fpecies and which are varieties, as well as which are varieties of the refpective fpecies. On this account Linnæus, and fome other eminent authors, are inclined to think that there is only one real fpecies of rofe, which is the rofa canina, or "dog-rofe of the hedges," \&c. and that all the other forts are accidental varieties of it. However, according to the prefent Linnæan arrangement, they ftand divided into 14 fuppofed fpecies, each comprehending varieties, which in fome forts are but few, in others numerous.

The fuppofed fpecies and their varieties, according to the arrangement of modern botanifts, are as follow:
1. The caniaa, canine rofe, wild dog-rofe of the hedges, or hep-tree, grows five or fix feet high, having prickly-ftalks and branches, pimated, five or fevenlobed leaves, with aculeated foot-ftalks, fmooth pedunculi, oval fmooth germina, and fmall fingle flowers. There are two varieties, red-flowered and white-flowcred. They grow wild in hedres abundantly all over the kingdom ; and are fometines admitted into gardens, a fe to increafe the varicty of the fhrubbery collection.
2. The alba, or common white-rofe, grows five or fix feet high, having a green ftem and branches, armed with prickles, hifpid pedunculi, oval fmooth germina, and large white flowers. The varieties are,-large double white rofe-dwarf fingle white rofe-maidensbluht white rofe, being large, produced in clufters, and of a white and blufh-red colour.
3. The Gallica, or Gallican rofe, \&c. grows from about three or four to eight or ten feet high, in different varieties; with pinnated, three, five, or feven lobed leaves, and large red and other coloured flowers in dif. ferent forts. This ipecies is very extenfive in fuppofed varieties, bearing the above fpecific diftinction, leveral of which have been formerly confidered as diftinct fpecies, but are now ranged among the varieties of the Gallican rofe, confitting of the following nuted varietics.

Common red officinal rofe, grows erect, about three or four feet high, having fmall branches, with but few prickles, and large fpreading half-double deep-red
fowers. - Rofa mundi (rofe of the world) or ftriped red rofe, is a variety of the common red rofe, growing but three or four feet high, laving large fpreading femidouble red flowers, beautifully ftriped with white-and detp red. - York and Lancafter variegated rofe, grows five, fix, or eight feet hith, or more; bearing variegated red flowers, confifting of a mixture of red and white; alfo freçuenily difpofed in elegant ftripes, fometimes in half of the flower, and fometimes in fome of the petals.- Monthly role, grows about four or five feet high, with green very prickly fhoots; producing middle-fized, moderately double, delicate flowers, of different colours in the varicties. The varicties are, common red-fluwered monthly rofe-blufh-flowered-white-flowered-ftriped-flowered. All of which blow both early and late, and often produce flowers feveral months in the year, as May, June, and July ; and frequently again in Auguft or September, and fometimes, in fine mild feafons, continues till November or December: hence the name monthly rofe.-Double virginrofe, grows five or fix feet ligh, having greenifh hranches with fcarce any fpines; and with large double palered and very fragrant flowers. - Red damafle rofe, grows eight or ten feet high, having greenifh branches, armed with fhort aculea; and moderately-double, fine foft-red, very fragrant flowers. - White damafts rofe, grows eight or ten feet high, with greenith very prickly branches, and whitith-red flowers, becoming gradually of a whiter colour. - Bluth Belgic rofe, grows three or four feet high, or more ; having greenifh prickly branches, five or feven lobed leaves, and numerous, very double, bluifsred flowers, with fhort petals, evenly arranged. - Red Belgic rofe, having greenith and red fhoots and leaves, and fine double deep-red flowers.-. Velvet rofe, grows three or four feet high, armed with but few prickles; producing large velvet-red flowers, comprifing femidouble and double varieties, all very bcautiful rofes.Marbled rofe, grows four or five feet high, having brownif branches, with but few prickles; and large, double, finely-marbled, red Aowers.-Red-and-yellow Auftrian rofe, grows five or fix feet high, having flender reddilh-branches, armed with fhort brownifh aculea; and with flowers of a reddifh copper colour on one fide, the other fide yellow. This is a curious variety, and the flowers affume a fingularly agreeable appearance. Yellow Auftrian rofe, grows five or fix feet high, having reddith very prickly hoots; and-numerous brightyellow flowers.- Double yellow rofe, grows fix or feven feet high; with brownifh tranches, armed with numerous large and fmall yellowifh prickles; and large very double yellow flowers.- Frankfort rofe, grows eight or ten feet high, is a vigorous fhooter, with brownifh branches thinly armed with ftrong prickles; and produces largifh double purplifh-red flowers, that blow irregulanly, and have but little fragrance.
4. The centifolia, or hundred-leaved red rofe, Eic. grows from about three or four to fixs or eight feet high, in different forts, all of them !nifid and prickly; pimnated three and five lobed leaves; and large very double red flowers, having very numerous petals, and of different thades in the varieties. Tlle varictics are, - common Dutch hundred-leaved rofe, grows three or four feet high, with erect greenifh branches, but mocerately armed with prickles; and large remarkably double red flowers, with fort regularly arranged jetals.
-Blufh hundred liaved rofe, grows like the other, with large very double pale-red flowers.- Provence rofe, grows five or fix feet, with greenifh-brown prickly branches, and very large double globular red flowers, with large petals folding over one another, more or lefs in the varieties - The varicties are, common red Provence role, and pale Provence rofe; bceth of which ha. ving larger and fomewhat loofer petals than the fullowing fort. - Caboage Proverice role; having the petals clofely folded over one another like cabbagesDutch cabbage rofe, very large, and cabbages tolerably. - Childing Provence rofe-Great royal rofe, grows fix or eight feet high, producing remarkably large, fumtwhat loofe, but very elegan Aowers. - All thefe are large double red flowers, fomewhat globular ai firt blowing, becoming graklually a lit:le ipreading at top, and are all very ornamental fragrant rofes. - Mufs Provence rofe, fuppofed a variety of the common rofe; grows erectly four or five feet hight, lavies brownifh ftalks and branches, very clufely armed with fort prickles, and double crimfon-red Howers; having the calyx and upper part of the pecuncle furrounded with a rough moffy-like fubltance, effecing a curious liusularity. This is a fine delicate rofe, of a high fragrence, which, tegether with its moffy calyx, renders it o! great eftimation as a curiolity.
5. The cinnamomea, or cinnamon rofc, grows five or fix feet high, or more, with parplith branches thinly acukated; pinnated five or feven lobed leaves, having iimoft inermous petioles, fmooth peduneuli, and imcoth globular germina; with fmall purplifh-red cinnarronfcented flowers early in May. There are varieties with double flowers.
6. The Alpina, or Alpine inermous rofe, grows five or fix feet high, having finooth or unarmed reddif. branches, pimated feven-lobed fmooth leaves, formewhat hifpid pedunculi, oval germina, and deep-red lingle sowers; appearing in May. This fpecies, as leing free from all kind of armature common to the other forts of rofes, is efteemed as a fingularity; and from this property is uften called the eirzin rofe.
7. The Carolina, or Carolina aul Virsinia rofe, \&ic, grows fix or eight fect high, or more, having fmouth reddifh branches, very thinly aculeated; pinnated fivenlobed fmooth leaves, with prich:ly foot-ftalks; fomewha: hifpid pedunculi, globofe hifpid germen, and fingle red flowers in clufters, appearing mottly in Augn? and September. The varieties are, dwarf Pennfy lvanian roft, with fingle and double red flowers. American pale-red rofe. This fpecies and varieties grow maturally in due ferent parts of North America; they tfect a fine variety in our gardens, and are in eftimation for :heir lateflowesing property, as they often continue in bluw from Auguft unti] Octuber; and the flowers are ficceeded by numerous red berry-like heps in au:umn, catfins. variety all winter.
8. The villofa, or villofe apple-bearine rofe, grews fis or cight feet high, having llocigg erect brewrifh fmoo:h branches; aculeated \{parlecty ponatis :tson. lobed villote or hairy leaves, downy underreath, wih prickly fout-falks, hifpid poduncles, a shobular prich'y germen; and large lingle red flowers, fuececud by large round prickly hops, as big as little apples. This fpecies merits adonittance into every collection as a curiofity for the fingularity ol its fruit, both for varcicy

\section*{}

Fura. rusu ule; for it having a thick pulp of an agreeable acid relifh, is ofter made into a tolerable good fiveetmeat.
9. The pimpinellifolia, or burnet-leaved rofe, grows about a yard high, aeuleated fparfedly; fmall neatly pinnated feven-lobed leaves, having obtufe folioles and rough petiole:, fmooth peduncules, a glubular finooth germen, and fmall fingle flowers. There are varieties with red flowers-and with white flowers. They grow wild in England, \&c. and are cultivated in fhrubberics for variety.
10. The fpinofifima, or moft fpinous, dwarf burnetleaved rofe, commonly called Scotch rofe, grows but two or three feet high, very clofely armed with fpines; fmall neatly pinnated feven-lobed leaves, with prickly foot-Atalks, prickly pcdunculi, oval fmooth germen, and numerous fmall fingle flowers, fucceeded by round darkpurple heps. The varicties are, common white-flowered -red-flowered-ftriped-flowered-marbled-flowered. They grow naturally in England, Scotland, \&c. The firft variety rifes near a yard ligh, the others but one or two feet, all of which are fingle-flowered; but the flowers being numerous all over the branches, make a pretty appearance in the collection.

Ir. The eglanteria, eglantine rofe, or fweet briar, grows five or fix fect high, having green branches, armed with ftrong fpines fparfedly; pinnated fevenlobed odoriferous leaves, with acute folioles and rough foot-ftalks, fmooth pedunculi, globular fmooth germina, and fmall pale-sed flowers. The varieties are, common fingle-flowered-femi-double flowered-double-flower-ed-blufh double-flowered-yellow-flowered. 'I'his fpecies grows naturally in fome parts of England, and in Switzerland. It claims culture in every garden for the odoriferous property of its leaves; and hould be planted in the borders, and other compartments contiguous to walks, or near the habitation, where the plants will impart their refrefhing fragrance very profufely all around; and the young branches are excellent for improving the odour of nofe-gays and bow-pots.
12. The mofchata, or munk-rofe, fuppofed to be a variety only of the ever-green muk-1ofe, hath weak fmooth green ftalks and branches, rifing by fupport from fix to eight or ten fect high or inore, thinly armed with ftrong fpines; pinnated feven-lobed fmooth leaves, with prickly foot-ftalks; hifpid peduncles; uval hifpid germen; and all the branches terminated by large umbellate clufters of pure-white mufk-icented flowers in Auguft, sce.
13. The femperwirens, or ever-green mufk rofe, hath a fomewlat trailing ftalk and branches, rifing by fupport five or fix feet high or more, having a fmooth bark armed with prickles; pinnated five-lobed fmooth thining evergreen leaves, with prickly petioles, hifpid pedunculi, oval hifpid germen ; and all the branches terminated by clufters of pure-white flowers of a mufky fragrance; appearing the end of July, and in Auguft. The fempervirent property of this elegant fpecies renders it a curiofity amung the rofy tribe; it alfo makes a fine appearance as a flowering fhrmb. There is one varicty, the deciduous muik-rofe abovementioned. This fpecies and variety flower in Auguft, and is remarkable for producing them numeroully in clufters, continuing in fucceflion till Detob, or November.

I'h above 13 fpecies of rofa, and their refpective va.
ricties, are of the fhrub kind ; all deciduous, except the latt fort, and of hardy growth, fucceeding in any common foil and fituation, and flowering annually in great abundance from May till October, in different forts; though the general flowering feafon for the principal part of then is June and July: but in a full collection of the different fpecies, the blow is continued in conftant fucceffion feveral months, even fonetimes from May till near Chriftmas; producing their flowers univerfally on the fame year's thoots, rifing from thofe the year before, generally on long pedunculi, each terminated by one or more rofes, which in their characteriflic ftate confitt each of five large petals and many ftamina; but in the duubles, the petals are very numerous; and in fome forts, the flowers are fucccedcd by fruit ripening to a red colour in autumn and winter, from the feed of which the plants may be raifed: but the moft certain and cligible mode of propagating mof of the forts is by fuckers and layers; and by which methods they may be increafed very expeditioufly in great abun. dance.

The white and red rofes are uled in medicine. The former diftilled with water yields a fmall portion of a butyraceous oil, whofe favour exactly refembles that of the rofes themfelves. This oil and the diltilled water are very ufeful and agreeable cordials. Thefe rofes alfo, beffdes the cordial and aromatic virtues which refide in their volatile parts, have a mild purgative one, which remains entire in the decoction left after diftillation. The red rofe, on the contrary, has an altringent and gratefully corroborating virtue.

ROSA (Salvator), an admirable painter, born at Naples in 1614 . He was firf inftructed by Francefco Francazano, a kinfman: but the death of his father reduced him to fell drawings Nketched upon paper for any thing lee could get ; one of which happening to fall into the hands of Lanfranc, he took him under his protection, and cnabled him to enter the fchool of Spagnoletto, and to be taught moreover by Daniel Falcone, a diftinguifhed painter of battles at Naples. Salvator had a fertile imagination. He ftudied nature with attention and judgment; and always reprefented her to the greateft advantage: for every tree, rock, cloud, or fituation, that enters into his compofition, fhows an elevation of thought that extorts admiration. He was equally eminent for painting battles, animals, fea or land ftorms; and he executed thefe different fubjects in fuch tafte as renders his works readily diftinguifhable from all others. His pieces are excced. ingly fcarce and valuable ; one of the moft capital is that reprefenting Saul and the witch of Endor, which was preferved at Verfailles. He died in 1673 ; and as his paintings are in few hands, he is more generally known by his prints; of which he ctched a great number. He jainted landfcapes more than hittory ; but his prints are chiefly hiftorical. The capital landfcape of this mafter at Chifwick is a noble picture. However, he is faid to have been ignorant of the management of light, and to have fometimes fhaded faces in a difagreeable mannew He was however a man of undoubted genius; of which he has given frequent fpecimens in his works. A roving difpofition, to which he is faid to have given full foope, feems to have added a wildnefs to all his thoughts. We are told that he fpent the early part of his life in a troop of banditti; and that the rocky defolate feenes
in which he was accuflomed to take refuge, furnifhed him with thofe romantic ideas in landfeape, of which he is fo exceedingly fond, and in the defcription of which he fo greatly excels. His robbers, as his detached f. gures are commonly called, are fuppofed alfo to have been taken from the life.

Salvator Rofa is fufficiently known as a painter; but until now we never heard of him as a mufician. Among the mufical manufcripts purchafed at Rome by Dr Burney, was a mufic book of Salvator, in which are many airs and cantatas of different mafers, and eight entire cantatas, written, fet, and tranfcribed by this celebrated painter himfelf. From the fpecimen of his talents for mufic here given, we make no fcruple of declaring, that he had a truer genius for this fcience, in point of melody, than any of his predeceffors or cotemporaries: there is alfo a flrength of expreffion in his verfes, which fets him far above the middle rank as a poet. Like moft other attifts of real original merit, he complains of the ill ufage of the world, and the difficulty he finds in procuring a bare fubfiftence.

\section*{ROSACEA. Sce Gutq.я Rofacea.}

ROSACEOUS, among botanilts, an appellation given to fuch flowers as are compoled of feveral petals or leaves difpofed in a fort of circular form, like thofe of a rofe.

ROSAMOND, daughter of Walter Lord Clifford, was a young lady of exquifite beauty, fine accomplinments, and bleffed with a moft engaging wit and fweetnefs of temper. She had been educated, according to the cultom of the times, in the nunnery ot Godituw; and the popular flory of her is as follows: Heniy IL. faw her, loved her, declared his paffion, and triumphed over her honour. To avoid the jealouly of his queen Elinor, he kept her in a wonderful labyrinth at Woodfock, and by his connection with her had Willian Longfword earl of SaliBury, and Geoffrey bithop of Lincoln. On Henry's abfence in France, however, on account of a rebellion in that country, the queen found means to difcover her, and though ftruck with her beauty, the recalled fufficient refentment to poifon ber. The queen, it is faid, difcovered her apartment by a thread of filk ; but how fhe came by it is differently related. This popular'flory is not however fupported by hiftory; feveral writers mention no more of her, than that the queen fo vented her fpleen on Rofamond as that the lady lived not long after. Other writers aftert that fhe died a natural death; and the ftory of her being poifoned is thought to have arifen from the figure of a cup on her tomb. She was buried in the church of Goditow, oppofite to the high altar, where her body remained till it was ordered to be removed with every mark of difgrace by Hugh bifhop of Lincoln, in 1191. She was, however, by many confidered as a faint after her death, as appears from an infeription on a crofs which Leland fays llood near Godilow:

> Qui meat bac oret, fignum falutis adoret,
> Uique fibi detur veniam. Rofamunda prectur.
ofe's \(A n\) - And ako by the following ftory: Rnfamond, during

1;6, \&c At a
Vol. XVI. Part II.
faved; and as a token to them, fhowed a tree which fe faid would be turned into a tone when fhe was with the faints in heaven. Soon after her death this won. derful metamorphofis happened, and the ftone was fhown to frangers at Godflow till the time of the diffo. lution.

ROSARY, among the Roman Catholics. Sec Craplet.

ROSBACH, a town of Germany, in Saxony, famous for a victory obtained here by the king of Pruffia over the French, on Navember 5. 175\%, in which 10,000 of the French were killed or taken prifoners, with the lofs of no morc than \(j 00\) Pruffians. See PrusSia, \(\mathrm{n}^{\circ}{ }_{3} \mathrm{O}\).

ROSCHILD, a town of Denmark, in the inc of Zealand, with a bihop's fee and a fmall univerfity. It is famous for a treaty concluded here in 1658 ; and in the great church there are feveral tombs of the kings of Denmark. It is feated at the botiom of a fmall bay, in E. Long. 12. 20. N. Lat. 55. 40.

ROSCOMMON, a county of Ireland, in the province of Connaught, bounded on the well by the river Suc, on the ealt by the Sliannon, on the north by the Curlew mountains, on the fouth and fouth ealt by the King's county and part of Galway. Its length is 35 miles, its breadth 28 . The air of the county, both on the plains and mountains, is healthy; the foil yields plenty of grafs with fome corn, and feeds numerous herds of cattle. The Curlew mountains on the north are very high and fleep; and, till a road with great lahour and difficulty was cut through them, were impaffable.

Roscommon, which gives the title of earl to the family of Dillon, and name to the county, though not large, is both a parliamentary borougts and the county town.

ROSCOMMON (Wentworth Dillon, earl of), a celebrated poet of the \({ }^{1} 7\) th century, was the fon of James Dillon earl of Rofcommon; and was born in Ircland, under the adminiftration of the firt earl of Strafford, who was his uncle, and from whom he received the name of Wentworth at his baptifm. He pafied his infancy in Ircland; after which the earl of Strafford fent for him into England, and placed him at his own feat in Yorkfhire, under the tuition of Dr Hall, afterwards bifhop of Norwich, who inftucted him in Latin, without teaching him the common rules of gram. mar, which he could never retain in his memory, and yet he learnt to write in that language with claffical elegance and propricty: On the earl of Strafford's being impeached, he went to complete his education at Caen in Normand 5 ; and after fome years travelled to Rotar, where he beceme acquainted with the mon valuable remains of antiquity, and in particular was well frilled in medals, and learned to fpeak Italian with fuch grace and fluency, that he was frequently taken for a satise. He returned to England foon after the Refturation, at:d was made captain of the band of penfoners; but a difpute with the lord privy-feal, ahoat a part of his cftate. obliged him to refign his pof, an! revifit his native country, where the duke of Ormond appointed him captain of the guards. He was unlappily very fond of gaming ; and as he was returning to his lodgings from a saming-table in Dublin, he was attacked in the dark by three ruffans, who were employed to afalinate him.

\section*{\(R \quad\) O S \(\quad[498\)}

Of Rofcommon's works, the judgment of the public feems to be right. He is clegant, fut not great; he never labours after exquifite beautics, and he feldom falls into grofs faults. His verffecation is fmooth, but rarely vigorous, and his rlym.s are remarkably exact. He improved tafte, if he did rot enlarge knowledge, and may be numbered among the benefactors to Eng. lifh literature.

ROSE, in botany. Sec Rosa.
Effence of Roses. See liosas Otter.
Rose of \(\bar{J}\) ericho, fo called becaufe it grows in the plain of Jericho, though it did not originally grow there. It has perlaps been fo named by travellers who did not know that it was brought from Arabia Petrea. Rofe bufhes are frequently found in the ficlds about Jericho; but they are of a fpecies much inferior to thofe fo much extolled in Scripture, the flowers of which fome naturalitts pretend to have in their cabinets.
"The rofe thrub of Jericho (fays Mariti) is a fmall Trovefs plant, with a bulhy root, ahout an inch and a hall in thougb length. It has a number of ftems which diverge from Syria ons the earth : they are covered with few leaves; but it is "ale; ;ine loaded with flowers, which appear red when in bud, turn paler as they expand, and at length beconie white entirely. Thefe flowers appear to me to have a great reiemblance to thofe of the elder-tree; with this diffe. rence, that they are entirely deftitute of fmell. The thems never rife more than four or five inches from the ground. This fhrub fheds ite leaves and its flowers as it withers. Its branches then bend in the middle, and becoming entwined with each other to the top, form a kind of globe. This happens during the great heats ; but during moilt and rainy weather they again open and expand.
"In this country of ignorance and fuperfition, people do not judge with a philofophical eye of the alternate fhutting and opening of tbis plant: it appeass to them to be a periodical miracle, which heaven operates in order to make known the events of this world. The inhabitants of the neighbouring centons come and cxamine thefe thrubs when they are about to undertake a journey, to form an alliance, to conclude any affair of importance, or on the birth of a fori. If the ftems of the plants are open, they do not doubt of fuccels; but they account it a bad omen to fee them fhut, and therefore renounce their project if it be not too late.
"This plant is neither fubject to rot nor to wither. -It will bear to be tranfplanted; and thrives without degenerating in any kind of foil whatever."

Roses Otter (or effential oil of), is obtained from rofes by fimple diftillation, and may be made in the following manner: A quantity of frefh rofes, for example 40 pounds, are put in a ftill with 60 pounds of water, the rofes being left as they are with their calyxes, but with the ftems cut clofe. The mals is then well mixed together with the liands, and a gentle fire is made under the fill ; when the water begins to grow hot, and fumes to rife, the cap of the ftill is put on, and the pipe fixed; the chinks are then well luted with pafte, and cold water put on the refrigeratory at top: the receiver is allo adapted at the end of the pipe; and the fire is continued under the fill, neither too violent nor too weak. When the impregnated water begins to come over, and the fill is very hot, the fire is leffen-
tleman pafing that way took his part, and difarmed another, on which the third fought his fafety in flight. This generous affiftant was a diffanded officer of good family and fair reputation, but reduced to poverty; and his lordthip rewarded his bravery by refigning to him his poft of captain of the guards. He at length returned to London; when lie was made mafter of the horle to the duchefs of York, and marricd the lady Frances, eldeft daughter of Richard earl of Burlingion, who had been the wife of Colonel Courtney. He here diftinguifhed himfelf by his writings: and in imitation of thole learned and polite affemblies with which he lad beca acquainted abroad, began to form a fociety for refining and fixing the ftandard of the Enclim language, in which his great friend Mr Dryden was a principal affitant. This fcheme was entirely defeated by the religious commotions which enfued on king James's acceffion to the throne. In 1693 he was feized with the gout ; and being too impatient of pain, he permitted a bold French empiric to apply a repelling mudicine, in order to give him prefent relief; which drove the diftemper into his bowels, and in a fhort time put a period to his life, in January 168 4 . He was buried with great pomp in Weftminfter-abbey.

His poems, which are not numerous, are in the body of Englifh poetry collected by Dr Johnfon. His "Effay on Pranflated Verfe," and his tranflation of "Horacc's Art of Pottry," have great merit. Waller addreffed a poem to his lordfhip upon the latter, when he was 75 years of age. "In the writings of this nolleman we view (fays Fenton) the image of a mind naturally fcrious and folid; richly furnifhed and adorned with all the ornaments of art and fcience; and thofe ornaments unaffectedly difpoled in the molt regular and elegant order. His imagination might probably have been more fruitful and fprightly, if his judgement had been lefs feverc ; but that feverity (delivered in a mafculine, clear, fuccinct ftyle) contributed to make hin fo eminent in the didactical manner, that no mann, with juftice, can affirm he was ever equalled by any of our nation, without confeffing at the fame time that he is inferior to none. In fome other kinds of writing his genius feems to have wanted fire to attain The point of perfection; but who can attain it? He was a man of an amiablc difpofition, as well as a good poet ; as Pope, in his ' Effay on Criticifm,' hath teftiticd in the following lines:

> With manners generous as his noble blood; To him the wit of Greece and Rome was known, And every author's merit but his own."

We muft allow of Rofcommon, what Fenton has not mentioned fo diftinetly as he ought, and, what is yet very much to his honour, that he is perhaps the only correct writer in verfe before Addifon; and that, if there are not fo many or fo great beauties in his compofitions as in thofe of fome contemporaries, there are at leaft iewer faults. Nor is this his higheft praife; for Pope has celebrated him as the only moral writer of King Charles's reign :

Unhappy Dryden! in all Charles's days,
Rofcommon only boats urfpotted lays.

8

Refeen. The earl defended himfelf with fuch refolution, that mon. he had difpatched one of the aggreffors, when a gen-

\section*{R O S}
ed by gentle degrees, and the difillation continued till 30 pounds of water are come over, which is generally done in about four or five hours; this role-water is to be poured again on a frefh quantity ( 43 pounds) of rofes, and from 15 to 20 pounds of water are to be drawn by ditillation, following the fame procefs as before. The rofe-water thus made and cohobated will be found, if the rofes were good and frefh, and the diftillation carefully performed, highly fcented with the rofes. It is then poured into pans either of earthen ware or of tinned metal, and left exposed to the frefh air for the night. The ottar or effence will be found in the morning congealed, and fwimming on the top of the water ; this is to be carefully feparated and colIected either with a thin fhell or a fkimmer, and poured into a vial. When a certain quantity has thus been obtained, the water and feces muft be feparated from the clear effence, which, with refpect to the firt. will not be difficult to do, as the effence congeals with a fight cold, and the water may then be made to run off. If, after that, the effence is kept luid by heat, the feces will fublide, and may be feparated; but if the operation has hees neatly performed, thefe will be little or none. The feces are as highly perfumed as the effence, and muft be kept, after as much of the effence has been nkimmed from the rofe-water as could be. The remaining water fhould be ufed for fiefh dittillations, inftead of common water, at lealt as far as it will go.

The above is the whole procefs, as given in the Afratic Refearches by lieutcnant-colonel Polier *, of making genuine otter of rofes. But attempts (he fays) are of ten made to augment the quantity, though at the expence of the quality. Thus the rafpings of fandalwood, which contain a deal of effential oil, are ufed; but the impofition is eafily difcovered, both by the fmell, and becaufe the effential oil of fandal-wood will not congeal in common cold. In other places they adulterate the otter by difilling with the rufes a lweetfcented grafs, which colours it of a high clear green. This does not congeal in a flight coid. There are numerous other modes, far more palpable, of adulteration. The quantity of effential oil to be obtained from rofes is very preearious, depending on the fkill of the diftilLer, on the quality of the rofes, and the favourablenefs of the feafon. The culour of the otter is no criterion of its goodnefs, quality, or country The calyxes by no means diminih the quality of otter, nor do they impart any green colour to it. They indeed augment the quantity, but the trouble neceffary to itrip them is fuch as to prevent their being often ufed.

Rosk-Noble, an ancient Englif gold coin, firt ftruck in the reign of Edward 111. It was formerly current at is s. 8 d . and fo called becaufe flamped with a rofe. Sec Money.

Rose ll'voo. See Aspalathus.
ROSETTO, a town of Africa, in Esypt, is pleafan:ly fituated on the welt fide of that baaich of the Nile called by the ancients Bolbthnum, affirmed by Herodotus to have been tormed by art; the town and cafte being on the right hand as you enter that river. Any one that lets the hills about Roletto would judge that they lad been the ancient barriers of the fea, and conclude that the fea has not lolt noore gromid than the fpace between the hills and the water.

1 R O S
Rofetto is efteemed one of the pleafantelt places in Eyypt; it is about two miles lone, and confitts only of two or three flreets. The country about it is moft delightfu! and fertile, as is all the whole Delta on the other fide of the Nile, exhibiting the mofl pleafant profpect of gardens, orchards. and corn-fieids, excellently well cultivated. The calle ftands alout two miles north of the town, on the well fide of the river. It is a fquare building, with round tovers at the four corners, mounted with fome pieces of brafs canmon. The walls are of brick, cafed with fone, fuppofed to have been built in the time of the holy war, though Gace repaired by Cheyk Begh. At a litte ditance lower, on the other fide of the river, is a platform, mounted with fome guns, and to the eall of it are the Salt lakes, out of which they gather great quantities of that commodity. At fome farther diftanse, lailing up the river, we fee a high mountain, on which ftands an old building that ferves for a watch-tower. From this eminence is dilcovered a large and deep gulph, in form of a crefcent, which appears to have been the work of art, though it be now filled up, and difcovers nothing but its ancient bed. Rofetto is grown a confiderable place for commerce, and hath fome good manufactures in the linen and cotton way; but its chief bufinefs is the carriage of goods to Cairo, all the European merchandife being brought thither from Alexaudria by fea, and carried in other boats to that capital ; as thole that are brought down from it on the Nile are there fhipped off for Alexandria; on which account the Europeans have here their tice-coufuls and factors to trantact their buliners; and the government maiatains a beigh, a cuttorahoufe, and a garrifon, to keep all fafe and quiet.

In the country to the north of Rofetto are delightful gardens, full of orange, lemon, and citron trees, and almont all forts of fruits, with a variety of groves of palm-trees; and when the felds are green with rice, it adds greatly to the beauty of the country. It is about 25 miles noth-eaft of Alexandria, and 100 north-wctt of Cairo. E. Long 3 C 45 . N. Lat. 31.30

ROSICRUCIANS, a name affiumed by a fect or cabal of hermetcal philofophers; who arofe, as it has been faid, or at leaft became tirlt taken notice of, in Germany, in the beginning of the foutteenth century. They bound themfelves together by a folemn fecret, which they all fwore inviolably to preferve; and obliged themielves, at their admiffion into the order, to a frict obfervance of certain eflablified rules. They proten!. ed to know all fciences, and chiefly medicine; whereof they publifhed themelves the reftorers. They pretended to be malters of abundance of important fecrits, and, amorig others, that of the philofophier's flone; all which they affirmed to have received by tradition frem the ancient Egyptians, Chaldeans, the Magi, and Gynnofophifts. I hey have been dillinguifhed by feveral natres, accummodated to the several branches of their doetrilie. Becaufe they pretend to protract the period of human life, by micans of certain nottruans, and even to reflore youth, they were called Inerartales; as they pretend.
 and becaufe they have made no appearatee for feveral years, unilels the fect of Illuminated "hich lately tlarted up on the continent derives its origin from then, they have been called the invefite ebrethers. Their fuciety is

Roretron \(R=C \cdot b=\) cians \(\underbrace{\text { Clans }}\)

\section*{\(R \quad 0 \quad \mathrm{~S} \quad\left[\begin{array}{lll}500 & \mathrm{R} & \mathrm{O} \\ \mathrm{S}\end{array}\right.\)}

Rufirru. frequently figned by the letters F. R. C. which fome cians. -ry among thern interpret fratres roris coli; it being pre-
tended, that the matter of the philofophers ftone is dew concocted, exalted, \&c. Some, who are no friends to free-mafonry, make the prefent flourinling fociety of free-mafons a branch of Roficrucians; or rather the Ruficrucians themfelves, under a new nanme or relatron, viz. as retainers to buildiug. And it is certain, there are fome fret-mafons who have all the characters ni Roficrucians; but how the æra and original of mafonry (fee Masonry), and that of R oficrucianifin, here fixed from Naudæus, who has written exprefsly on the fubject, confift, we leave others to judge.

Notwithfanding the pretended antiquity of the Roficrucians, it is probable that the alchemitts, Paracelfifts, or fire-philofophers, who fpread themielves through almott all Europe about the clofe of the fixteenth century, affumed about this period the obfeure and ambiguous title of Rofierucian brethren, which commanded at fint fome degree of refpeet, as it feemed to be borlowed from the arms of Luther, which were a crofs placed upon a rofe. But the denomination evidently appears to be derived from the fcience of chemiftry. It is not compuunded, fays Mofheim, as many imagine, of the two words rofa and crux, which fignify rofe and crofs, but of the latter of thefe words, and the Latin ros, which fignifies dew. Of all natural bodies, dew was deemed the molt powerful diffolvent of gold; and the crofs, in the chemical languate, is equivalent to light, becanfe the figure of a crofs + exhibits, at the tame time, the thrce letters of which the word lux, or light, is compounded. Now lu: is called, by this fect, the feed or menflruum of the red dragon, or, in other words, that grofs and corporeal light which, when properly digefted and modificed, produces gold. Hence it follows, if this etymology be admitted, that a Rofierucian philofopher is one who, by the intervention and affillance of the dew, feeks for light, or, in other words, the fubllance called the philofopher's ftone. The true meaning and energy of this denomination did not efcape the penetration and fagacity of Gaffendi, as àppears by his Examen Pbilofophia Fludidana, fect. 15. tom. iii. p. 261. And it was more fully explained by Renaudot, in his Corferences Publiques, tom. iv. p. 87.

At the head of thele fanatics were Rebert Fludd, an Englifh phyfician, Jacob Behmen, and Michael Mayer; but if rumour may be credited, the prefent Illuminated lave a head of higher rank. The common principles, which ferve as a kind of centre of union to the Rolicrucian fociety, are the following: 'They all maintain, that the difolution of bodies, by the power of fire, is the only way by which men can arrive at true wifdom, and come to difcern the firt principles of things. They all acknowledge a certain analogy and harmony between the powers of nature and the doctrines of religion; and believe that the Deity governs the kingdom of grace by the fame laws with which he rules the kingdom of nature; and hence they are led to ufe chemical denominations to exprefs the truths of religion. They all hold, that there is a fort of divine energy, or foul, diffufed through the frame of the univerfe, which fome call the argheus, others the univerfal Spirit, and which others mention under different appellations. They all talk in the moft fupertitious manner -f what they call the fignatures of things, of the power
of the flars over all corporeal beings, and their particular influence upon the limman race, of the effieacy of magic, and the various ranks and urders of demons Thefe demons they divide into two orders, fylphs and ynomes; which fupplied the beantiful machinery of Pope's Rase of the Lock. In fine, the Rofierucians and. all their fanatical defcendants agree in throwing out the not crude incomprehentible notiuns and ideas, in the mot obfcure, quaint, and unufual expreffions.-Mon. Eccl. Hitt. vol. iv. p. 266, \&c. Englih edition, \(8 v o\). See Beehmen and Theosophists.

\section*{rosier. See Pilatre.}

ROSIERS-aux-Salines, a town of France, in Lorraine, and in the bailiwick of Nancy, famous for its falt-works. The works that king Staniflans made here are much admired. It is feated on the river Muert, in E. Long. 6. 27. N. Lat. \(4^{8 .} 3^{2}\).

ROSKILD, formerly the royal refidence and metropolis of Denmark, ftands at a fmall diftance from the Bay of Ifefiord, not far from Copenhagen. In its flourifling ftate it was of great extent, and compriled within its walls 27 churches, and as many convents.-Its prefent circumference is fearcely half an Englifh mile, and it contains only about 1620 fouls. The houfes are of brick, and of a neat appearance. The only remains of its original magnificence are the ruins of a palace and of the cathedral, a brick building with two fircs, in which the kings of Denmark are interred.. Little of the original building-now remains. According to Holberg, it was contructed of wood, and afterwards built with ftone, in the reign of Canute.From an infcription in the choir, it appears to have been founded by Harold VI. who is fyled king of Denmark, England, and Norway. Some verfes, in barbarous Latin, obfeurely allude to the principal ineidents of his life; adding, that he built this church, and died in 980.-See Coxe's Travels into Poland, Ruffa, Sweden, and Denmark, vol. ii. p. 525.

ROSLEY-hill, a village in Cumberland, with a fair on Whit-Monday, and every fortniglt after till September 29. for horfes, horned cattle, and linen cloth.

ROSLIN, or Roskelyn, a place in the county of Mid Lothian in Scotland, remarkable for an ancient chapel and cafte. The clapel was founded in \(14+6\), by St Clare, prince of Orkney, for a provolt, fix prebendaries, and two linging. boys. The outlide is ornamented with a multitude of pinnacles, and variety of ludicrous feulptume. The infide is 69 feet long, the breadth 34 , fupported by two rows of cluftered pillars, between feven and cight feet high, with an aifle on each fide. The arches are obtufely Gothic. Thefe arches are continued acrofs the fide aifles, but the centre of the church is one continued arch, elegantly divided into compartments, and finely fculptured. The capitals of the pillars are enriched with foliage, and a variety of figures; and amidft a heavenly concert appears a cherubiin blowing the ancient Highland bagpipes. The cafte is feated o, a peninfulated rock, in a deep glen far beneath, and acceffible by a bridge of great height. This had been the feat of the great family of Sin:lair. Of this houfe was Oliver, favourite of James V. and the innocent caufe of the lofs of the battle of Solway Mofs, by reafon of the envy of the nobility on account of his being preferred to the command.

\section*{R 0 S}

Near this place the Englifh recuived three defeats in one day under John de Segrave the Englifh regent of Scotland in 1301. The Scots, under their generals Cummin and Frater, had refolved to furprife Segrave ; with which view they began their march on the night of Saturday preceding the firft Sunday of Lent, and reached the Englifh army by break of day. Segrave, however, had tine to have fallen back upon the other divifiun which lay belind him ; but, either defpifing his enemies too much, or thinking that he would be difhonoured by a retreat, he encountered the Scots; the confequence of which was, that he himfelf was made prifoner, and all his men either killed or taken, except fuch as fled to the other divifion. As in this routted divilion there had been no fewer than 300 knights, each of whom brought at lealt five horfemen into the field, great part of the Scots infantry quiekly furnifhed themfelves with their horfes; but, as they were dividing the fpoils, another divition of the 'Engliih appeared, and the Scots were obliged to fight them alio. The Englifn, after a bloody engagement, were defeated a fecond time; which was no fooner done, than the third and moft powerful divifion made its appearance. The Scots were now quite exhaufted; and, pleading the exceffive labours they had already undergone, earneitly requelted their generals to allow them to retreat while it was yet in their power. Their two generals, who perhaps knew that to be impracticable, reminded them of the caufe for whick they were fighting, the tyranny of the Englin, \&c. and by thefe arguments prevailed upon them to fight a third tine ; though, previous to the engagement, they were reduced to the cruel necelfity of putting all the common foldiers whom they had made prifoners to the fword. The victory of the Scots at this time was lefs complete than the other two had been; fince they could nut prevent the retreat of the Englifh to Edinburgh, nor Segrave from being refcued from his captivity.

ROSMARINUS, rosemary, in botany: A genus of the monogynia order, belonging to the diandria clafs of plants, and in the natural method ranking under the 42 d order, Vertiill ate. The corolla is unequal, with its upper lip bipartite ; the filaments are long, curved, and fimple, each having a fmall dent. There are two fpecies, the angultifolia and latifulia, or narrow and broad leaved rofemary; of which the fecond has larger flowers and a flronger feent than the cther. There are two varieties; one of the firl fort with flriped leaves, cal. led the filver rofemary; and the other with yellow, whence it is called the golli-friped rofemary. Thefe plants grow naturaliy in the fouthern parts of France, Spain, and Italy; where, upon dry rocky foils near the fea, they thrive prodigioully, and perfume the air in fuch a manner as to be fmelt at a great diftance from the land. However, they are hardy enough to bear the cold of our ordinary winters, provided they be planted upon a poor, dry, gravelly foil, on which they will endure the cold much better than in a richer ground, where, growing more vigoroully in fummer, they are more aft to be injured by froft in winter; nor will they have fuch a Atrong aromatic feent as thofe on a dry and barren foil. They are to be propagated either by lips or cuttings.

Rofemary has a fragrant fmell, and a warm pungent bitterifh tafte, approaching to thofe of lavender: the leares and tender tops are Alrongett ; next to thofe, the
cup of the flower; the flowers themfelves are confiderably the weakent, but molt pleafant. Aqueous liquors extract great thare of the virtues of rofemary leaves by infufion, and elevate them in ditillation; along with the water arifes a confiderable quantity of effential oil, of an agreeable itrong penetrating fmell. Pure fpirit extracts in great perfection the whole aromatic flavour of the rofemary, and elevates very little of it in ditillation; hence the refinous mafs, left upon extracting the fpirit, proves an elegant aromatic, very rich in the peculiar qualities of the plant. The fowers of rofe. mary give over great part of their flawour in dif. tillation with pure fpirit ; by watery liquors, their fragrance is much injured; by beating, dellroyed.

ROSS, in Herefordhiire, in England, 119 miles from London, is a fine uld town, with a good trade, on the river Wye. It was made a free borough by Henry Ill. It is a populous place, famous for cyder, and was noted in Camden's time for a manufacture of iron-wares. There are in it two charity-fchools, whicl. lately have been enticheci by a legacy of 2001 . per ano num. from Mr Scott, in Dec. 1-85, a fecond Man of Rufs. And its market and fairs are well fored with cattle and other provilions. At the weft end of it there is a fine broad cauleway, conttructed by Mr John Krrle, the celebrated Man of \(R \frac{n}{s}\), who alfo raifed the fpire upward of 100 feet, and inclufed a piece of ground with a fone wall, and iunk a refervoir in its centre, for the ufe of the inlabitants of the town. He died ins 1714, aged go, with the bleffing of all who knew him, both rich and poor. There cannot be a pleafanter country than the banks of the Wre, between his town and Monmouth. WV. Long. 2. 25. N. Lat. 51. 56.

Ross, a county of Scotland, including Tayne and Cromarty, ftretching 80 miles in length, and 78 in breadth, is bounded on the weft by the wettern fea, and part of the ille of Sky; by Invernefs, on the fouth; Strathnavern and Sutherland, on the nurth and northealt; and by Cronarty and the Murray-Frith on the ealt. Tayne includes the greater part of Rofs, with the ines of Sky, Lewis, and Harries. Cromarty lies on the other fide of the Murray. Frith, to the northward of In. vernefs, extending but 12 iniles in length, bounded on the fouth and ealt by part of Rofs and the Frith of Murray, and by the Frith of Cromatty on the north. The flire of Rofs takes up the whole breadth of the ifland; and being much indented with bays and inkets from both feas, appears of a very irregular torm. Thefe bays afford lafe harbours for fhipping, efpec ally that of Cromarty, which is capacious enough to contain all the fleets of Europe, heing land-lucked on every fide, and is in all refpects one of the beft harbours in the known world. 'The Frith of Tayne, our the eafl fide of the fhire, runs up 25 mides from the fea, as far as the Cape Tarbat, dividing Rofs from Sutherland: it is about feven miles broad at the month, but, on account of quick fands, unfafe for navigation. The country of Rois is encumbered with huge mountains, on which the fnow lies for the greatell part of the year; thefe, however, yield good palture; but on the eaftern fide, next the Gernan occan, the country admits of agriculture, and produces good crops of corn. The valleys are fertilized by feveral rivers, among which we reckon the Okel, the Charron, and the Braan; be. fides a number of frelk-water lakes, which inderd aro found

\section*{R O S [ 502 ] R O T}
*ifs, found in esery part of this country. The valleys, or Rolfaro. Atraths, are generally covered with wood; and near Al-
frag there are foretts of fir 15 or 20 miles in length, well flocked with deer and game of all forts. Great numbers of black cattle, horfes. Theep, and goats, are fed upon the mountains; and the fea, rivers, and lakes, teem witl fift and fowl. The lochs on the weftern coaft abound with herrings in the feafon, particularly Loch Eu, about nine milcs long, and three in breadth ; one part of this is formed by a bay, or inlet of the fea; and the other is a lake of freth water. The fides of it are covered with wood, where formerly abundance of iron was fme'ted. Though the middle part of Rofs, called Ardro/s, is mountainous and fcarce inhabited, the north-call parts on the rivers Okel, Charron, and Frith of Tayne, are fruitful, and abound with villdges. Coygach and Afsrut, two northerly diftricts, are bare and hilly ; yet they abound with deer and black cattle; and we fee feveral good houfes towards the coaft, where there ane alfo promontories, and huge rocks of marble. Ardmeanach part of the peninfula betwixt the bays of Cromarty and Murray, is a barony, which of old be owed a title on the king of Scotland's fucond fon. The di rict of Glen-elchig, on the fouth-we ', was the paternal \(c\) "ate of the earl of Scafo th, chief of the clan of Mackenzie: but the la earl of that name, having rifen in rebellion, was in the year 1719 defeated at GlenThiel, in this very quarter, together with a fmall body of Spaniards by whom he had been joined. His auxiliaries were taken; and though he himfelf, with fome of his friends, cfcaped to the continent, his e ate and honours were forfeited. At the fame tinne, the king's troops, who obtained this victory, difinantled the caf. tle of Yion donnen, fituated on in ifland in a bay that fronts the ine of Sky. It belonged to the crown ; but the office of hereditary governor was ve ed in the earl of Senforth, and here he had erected his marsazine. Rofs is chicfly peopled by the Mackenzies and Frafers, two warlike clans, who fpeak Enfe, and live in the Highland fantion. 'There are filheries carrned on along the coa" ; but their chicf traffic is with theep and black cattle. 'The chief iowns of Rofs are Channeric, Dingwall, 'Tayne, and Fortrofe.

ROSSANO, a frong town of Italy, in the kingdom of Naples, and in the Hither Calabria, with an archbiflop's fee, and the title of a principality. It is pretty large, well peopled, and feated on an eminence furround. ed with rocks. There is nothing in this archiepifcopal city that claims much notice; the buildings are mean, the flreets vilely paved and contrived. The number of inhabitants docs not exceed 6000, who fubfitt by the fale of their oil, tbe principal object of their attension, though the territory produces a great deal of good wine and corn.

Roflano probably owes its origin to the Roman emperors, who confidered it as a poit equally valuable for firength and convenience of traflic. The Marfans, a family of French extraction, pofleffed this territory, with the title of prince, from the time of Charles II. to that of Alphonfus II. when the lalt male heir was, by that prinec's order, put to death in Ifchia, where he was confined for treafon. It afterwards belonged to Bona, quen of Poland, in right of her mother Iiabella, daughier to Alphonfus II. atid at her deceafe returned to the crowa. It was next in the poffefion of the Al.
dohrandini, from whom the Borghefi inherited it. So late as the 16 th century, the inhabitants of this ciiy fpoke the Greek language, and followed the rites of the eaftern church. Here was formerly the moft celcbrated rendezvous of the Bafilian monks in Magna Gracia. E. Long. 16.52. N. Lat. 39.45 .

ROS-solis, Sun-dew, an agreeable fpiritunus liquor, compoled of burnt brandy, fugar, cinnamon, and milkwater ; and fumetimes perfumed with a little mußk. It has its name from bcing at firt prepared wholly of the juice of the plant ros folis, or drofera. Sce Drosera.

ROSTOCK, a town of Germany, in the circle of Upper Saxony, and duchy of Mecklenburg, with an univerfity and a very good harbour. It is the beft town in this country; and has good fortifications, with an arfenal. The duke has a Itrong cafle, which may be looked upon as a citadel It is divided into three parts, the Old, the New, and the Middle Towns. It was formerly one of the Hanfeatic towns, and is fill Imperial, under the protection of the duke of Mecklenburg. It is feated on a lake where the river Varne falls into it, and carries large boats. The government is in the hands of 24 aldermen, elected out of the nobility, univerfity, and principal merchants; four of whom are burgomafters, two chamberlains, two ftewards for the river, and two judges of civil and criminal matters. Thefe 24 are called the Upper Houfe, and have in a manner the whole executive power lodged in them, with the power of coining money, and clecting officers. There is ulfo a common-council of 100 inferior citizens, who are fummoned to give their advice upon extraordinary emergencies relating to the whole commu. nity. The principal things worth feeing are the fortifications, the primes's palace, the fadthoule, the arfenal, and the publie library. The town is famous for good beer, which they export in great quantities. Some years ago they had no lefs than 250 privileged brewers, who, it is faid, brewed fo many thoufand tuns a year, belides what particular perfons brew for tleeir ows ufe. E. Long. 12.55 . N. Lat. 5 1. 8 .
'ROSTOFE, or Rostow, a large town of the Rulfian empire, and capital of a territory of tue fame name, with an archbihop's fee, feater! on the lake Coteri, in E. Long. +0. \({ }^{2} 5\). N. Lat. 57. i. \(^{-}\)he duchy of Roftof is bounded on the noth by Jarollow, on the eat by Suidal. on the fouth by the duchy of \(M\), leow, and on the weft by that of l'uere.

ROSTRA, in antiquity, a part of the Roman forum, wherein orations, pleadings, funeral barangues, \&c. were delivered

ROS'RUM, literally denotes the beak or till of a bird; and hence it has been tiguratively applied to the beak or head of a hip.

ROSICRUCIANS. See Rosicrucians.
ROI', a very fatal difeafe incident to theep, arifing from wet feafons, and too moilt palture. It is very difficult of cure, and is attended with the fungular circumftance of a kind of animals being found in the blood.veffels. See Ovis and Sheep.

ROTA, the name of an eccleliallical contr of Rome, compofed of 12 prelates, of whom one mut be a German, another a Frenchman, and two Spaniads; the other eight are Italians, three of whom mutt be Romans, and the other five a Bologncfe, a Ferraran, a Milanefe, a Venetian, and a Tufcan, This is one of

\section*{R O T [ 503 ] R O T}

1,:aeez the molt aurun tribunals in Rome, which takes coz. nizance of all fuits in the territory of the church, by appeal; as allo of all matters, beneficiary and patrimonial.

ROTACE \(\AA\) (from ritu, "a wheel"), the namc of the zoth order in Linnxus"s Fragments of a Natural Method; conftity of plants with one flat, wheel fha. ped petal, without a tube. See Botany, p. 45 r.

ROTALA, in botany; a genus of the monogynia order, belonging t) the triandria clafs of plants. The calyx is tridentate; there is no corolla; the capfule is trilocular and polyfermons.

ROTANG. See Calayus.
ROTATION, is a term which expreftes the motion of the different parts of a folid body round an axis, and diftinet from the progreffive motion which it may hase in its revolution round a ditant point. The earth has a rotation round its axis, which produces the viciffitudes of day and night; while its revolution round the fun, combined with the obliquity of the equator, produces the varieties of fummer and winter.

The mechanifm of this kind of motion, or the relation which fubfifts between the intenf:y of the moving forces, modified as it may be by the manner of applicaion, and the velocity of rotation, is highly interelting, both to the fpeculative philofopher and to the practical engineer. The preceffion of the equinoxes, and many other aftronomical problems of great importance and difficulty, reccive their folutions from this quarter: and the acual performarice of our mots valuable machines cannot be afcertained by the mere principles of equili. brium, but require a previous acguaintance with certain general propofitions of rotatory motion.

It is chiefly with the view of affiting the engineer that we propofe to deliver in this place a few fundamental propofitions ; and we thall do it in as familiar and popular a manner as pofible, although this may caufe the application of them to the abftrufe problems of aftronomy to be greatly deficient in the elegance of which they are fufeeptible.

When a folid body turns round an axis, retaining its Thape and dimentions, every particle is actually deferibing a circle round this axis, and the axis paffes through the centre of the circle, and is perpendicular to its plane. Moreocr, in any intant of the motion, the particle is moving at right angles with the radius vector, or line joining it with its centre of rotation Therefore, in order to alcertain the direction of the motion of any
P's:e particle P (fig. 1.), we may draw a lireight line PC from the particle perpendicular to the axis \(A B\) of rotation. This line widl lie in the plane of the circle \(\mathrm{P} m n\) of rotation of the particle, and will be its radius vector; and a line PQ drawn from the particle perpendicular to this radius vector will be a tangent to the circle of rotation, and will have the direction of the motion of this particle.

The whole body being fuppoied to turn together, it is cvident, that when it has made a complete rotation, each particle has defcribed a circumference of a circle, and the whole paths of the different particles will be in the ratio of thefe circumferences, and therefore of their radii ; and this is true of any portion of a whole turn, fuch as \(\frac{1}{3}, \frac{1}{4}\), or 20 degrees, or any arch whatever; therefore the velocities of the different particles are proportional to their radii vectores, or to their dittances from the axis of rotation,

And, lunty, all thefe motions are in parallel planes, R-1ation. to which the axis of rotation is perpendicular.

When we compare the rotations of different bodies \(\mathrm{H}_{n}{ }^{5}\) the in refpect of volecity, it is plain tha: it cannot be done ro arier of by directly comparing the velocity of any particle in dif ren: one of the bodies with that of any particle of the other; \({ }^{\text {bo }}\) ic- in for, as all the particles of each have differert velocities, rei ect of this comparifon can eftablith no ratio. But we fami- may be liarly conpare fuch motions by the number of complete comased turns which they rake in equal times, and we fay that the fecond hand of a clock tums 62 times fafter than the minute hand; now this comparifon is equally jult in any part of a turn as in the whole. While the minute. hand moves round one degree, the fecond-hand moves 6: ; theref.re, as the length or number of feet in the line uniformly defcribed by a body in its progreffive motion is a proper roeafure of its progreffive velo. city, fo the number of degrees defcribed by any particle of a whiling body in the circurference of its circle of rotarion, or the single defermed by any radius vector of that body, is a proper meafure of its velocity of rotation. And in this manncr may the rotation of two bodies be con?pared; and the velocity is with propritty termed angular velocity.

An angle is direttly as the length of the circumference on which it lands, and inretfely as the ractius of the circle, and may be expreffed by the fraction of which the numerator is the arch, and the denominator the radius. Thus the angle PC? may be expreficd by \(\frac{P p}{P C}\). This fraction expreffes the portion of the radius which is equal to the arch which meafures the angle: and it is converted into the ufual denomination of degrces, by knowing that one degrce, or the 360 h part of the circunference, is \(\frac{1}{57,296}\) of the radius, or tha: an arch of 57,256 degrees is equal to the radius.

When a folid body receives an impulfe on any one Effect, 起: point, or when that point is anyhow urged by a moring ef the reveforce, it cannot move without the other points alfo mo- \(n\) ected ving. And whatever is the motion of any particle, that in one tods. particle muft be conceived as urged by a foice precifly er. exeh competent to the production of that motion, by actug immediately on the particle itfdf. If this is not the particle immediately acsed on by the external force, the force which really impels it is a force ariling from the cohetion of the body. The particle immedately impelled by the external force is prelled rowards its rei shbouring particles, or is drawn away fiom them; aud, by this change of place, the connecting furces are brought into action, or are excited; thej act on the particles adj.ining, and clange, or tend to change, their dilances from the particles inmediarely betond them; and thus the forces which conncit this next feries of particles are alfo excited, and another feries of particles are made to exert their forces ; and this goes on through the budy till we come to the remote particle, whole motion we are confidering. The forces which consed it with the adjuining feries of particles are excited, and the particle is noved. We frequently fay that the external moving force is propagated 1 lh.s' the budy to the ditant particle; but this is not ace. rate. The particie is really and immediately noves if the forces which conned it with thofe adjoinung. It

\section*{R O T. i 504 1 : R O T}

Fonation will greatly affit our conception of the manner in which motion is thus produced in a diftant particle, if we confider the particles as fo many little balls, connected with each other by flender fpiral fprings like cork-fcrews. This would compofe a mafs which would be compreffible, or which could be ftretchicd, \&c. And if we give an impulfe to one of thefe halls, we fhall fet the whole alfemblage in motion round any axis which we may fuppofe to fupport it. Now any one of thefe balls is really and immediately moved by the elafticity of the
fpiral wires which join it to its neighbours.

We are but little acqueinted with the nature of there connecting forces. It can be learned only by the phenomena which are their effects. Thele are various, almof beyond defeription ; but the mechanical philofoplier has little to do with this variety. The diftinctions which are the unmediate caufes of fluidity, of hardnefs, foftnefs, clafticity, ductility, are not of very difficult conception. 'There is one general fact which is fufficient for our prefent purpofe - the forces by which the particles of bodies act on each other are equal. This is a matter of unexcepted experience; and no other foundation can be given to it as a law of mechanical nature.

An immediate confequence of this law is, that when two external forces A and B are in equilibrium by the intervention of a folid body (or rather when a folid body is in equilibrium between two cxternal forces), thefe forces are equal and oppofite; for the force \(A\) is in fact in immediate equilibrium with the oppofite forces exerted by the particle to which it is applied, and is therefore equal and oppofite to the force refulting from the combination of all the forces which connect that particle with the feries of particles immediately adjoining. This refulting force may with propriety be called the equivalent of the forces from the combination of which it refults. The ufe of this term will greatly abbreviate language. This firt fet of connecting forces confifts of a mumber of diftinet forces correfponding to each particle of the feries, and each force has an equal and oppolite furce correfponding to it: therefore the compound force by which the firt feries of particles acts on that to which the external force \(A\) is applied, is equal and oppofite to the compound force which con. nects this firft feries with the nest feries. And the fame thing mut be faid of each fucceeding feries of particles, till we come at lalt to the particle to which the external force 1 B is immediately applied. The force exerted by this particle is equal and oppofite to that external force; and it is equal to the compound force -xerted by the fecond feries of particles on that fide; therefore the forces \(A\) and \(B\) are equal and oppofite.

It refults from this propofition, that when any number of external furces are applied to a fulid body, and it is in aquilibrio betwetn them, they are fuch as would be in equilitrio if they were all applied to one point. Let the forces \(a \mathrm{~A}, b \mathrm{~B}, c \mathrm{C}\) (fig. 2.), be applied to three particles of the folid body. Therefore a A is immediately in equilibrium with an equal and oppofite force \(A_{x}\), refulting from the compofition of the force \(A D\), which connects the particles A and B , and the force AE which connects \(A\) with \(C\). In like manner \(b \mathrm{~B}\) is immediately in equilibrio with \(\mathrm{B} \beta\), the equivalent of the forces \(B F\) and \(B G\); and \(\epsilon C\) is in immediatc equilibrio
with the equivalent \(\mathrm{C} \times\) of the forces CH and CI . We Thall conceive it very clearly if we fuppofe the three forces \(A a, B b, C c\), to be exerted by means of threads pulling at the folid body. The connecting parts bctween \(A\) and \(B\), as allo between \(A\) and \(C\), are ftretched. The lines \(A B\) and \(A C\) may be confidered as elaf. tic threads. Each thread is equally ftretched through its whole length ; and therefore if we take AD to rcprefent the force with which the particle \(A\) is held back by the particle \(B\), and if we would alfo reprefent the force with which \(B\) is held back by \(A\), we mult make BF equal to \(A D\). Now ( \(n^{\circ} 9\). ) the forces \(A I\) ) and \(D F\) are cqual and oppofite; fo are the forces \(A E\) and CI ; fo are the forces CH and BG. Now it is evident, that if the fix forces \(\mathrm{AD}, \mathrm{BF}, \mathrm{BG}, \mathrm{CH}, \mathrm{CI}\), AE, were applied to one particle, the particle would be in cquilibriu; for each force is accompanied by an equal and oppofite force: and if the force \(A\) a were applied in place of \(\mathrm{AD}, \mathrm{AE}\), the equilibrium would remain, becaufe \(A \alpha\) is equivalent to \(A D\) and \(A E\). The fame is true of \(B B\) and \(C \times\). Therefore if the three forces \(A \sigma, \mathrm{~B}, \mathrm{C} x\), were applied to one point, they would be in equilibrio. Confequently if the three forces \(a \mathrm{~A}, b \mathrm{~B}, c \mathrm{C}\), which are refpectively equal and oppofite to \(A=, B s, C \times\), are fo applied, they will be in equilibrio. It is plain that this demontration may be extended to any number of forces.

We may juft remark by the bye, that if three forces are thus in equilibrio, they are acting in one plane; and, if they a:e not parallel, they are really directed to one point : for any one of them mult be equal and oppofite to the equivalent of the other two; and this equivalent is the diagonal of a parallelogram, of which the other two are the fides, and the diagonal and lides of any parallelogram are in one plane; and fince they are in one plane, and any one of them is in equilibrio with the equivalent of the other two, it mult pals thro' the fane point with that equivalent, that is, through the point of concourle of the other two.

Thefe very fimple propofitions are the foundation of the whole theory of thatics, and render it a very fimple branch of mechanical fcience. It lids been made abbranch of mechanical fcience. It lads by our very attempts to fimplify it. Many ela-abltufe by
frum borate treatifes have been written on the fundamental property of the lever, and in them all it has been thought next to an infuperable difficulty to demonltrate the equilibrium of a flraight lever when the parallel forces are inverfely as their diftances from the fulcrum.

We think the demonftrations of Archimedes, Fonfenex, D'Alembert, and Hamilton, extremely ingenious; but they only bring the mind into fuch a ftate of conception that it cannot refufe the truth of the propofition ; and, except Mr Hamilton's, they labour under the difadrantage of being applicable only to commenfarable diftances and forces. Mr Vince's, in the Pliilofophical Tranfactions for 1794 , is the moft ingenious of them all ; and it is wonderful that it has not occurred long ago. The difficulty in them all has arifen from the attempt to fimplify the matter by confidering a lever as an inflexible ftraight line. Had it been taken out of this abftract form, and confidered as what it rcally is, a natural body, of fome fize, having its particles connected by equal and oppofite forces, all difficulty would have vanified.

\section*{R \(O T\)}

That ve may apply thefe proportions to explain the motion of rotation, we mut recollect an unqueitionable propnition in dy namics, that the force which produces any motion is equal and opplite to the forse which would prevent it, when applied in the fame place and in the farre line, or which would extinguif it in the fame time in which we fuppofe it to be produced. ThereTore the force which is excited and made to aet on aay prarticle nf a body, by the action of an external force on another paricle, fo as to caufe it to move round an axis, is equal and opporite to the force which, when applied to that particle in the oppolite direction, would be in equil:brio with the extemal force.

The only ditinct bution we can form of the magnitude of any moving force is the quantity of motion which it can produce by actirg uniformly during fonte friven time. This will be lad by knowing the velocity Which it will produce in a body of known bulk. 'Thus we know that the weight of ten pounds of matter actins on it for a fecond will caule it to fall 16 feet with an uniforanly accelerated motion, and will leave it in a Hate fuc! that it would move on for ever at the rate of \(\hat{i} 2\) fett in a fecond; which we call communicating the velacity of 32 feet par fecond. In the fame manner, tiue belt way of acquiring a diftinct conception of the rotatory effort of a moving force, is to determine the quantity of rotatory motion which it can produce by ating uniformls during forse known time.

Let a folid body turn round an axis pailung through iigure. Leet this rotation be fuppofed to be produced by an external force acting in the direction FP. Let thin furce be fach; that if the body were free, that is, uncomected with any axis fupported by fixed points, it would, by acting uniformly during a fmall monnent of time, caufe its ceutre of grarity \(G(A)\) to defcribe a line of a certain length parallel to FP. This we know to be the effect of a moving force acting on any folid body in free fpace. The centre of gravity will always deferibe a fraight line. Other particles may chanee to move differently, if the budy, befides its progreffive motion, has alfo a motion of rotation, as is generally the cafe. Draw Gl parallel to FP, and make GI to GC as the velocity which the exteral force would communicate to the centre of the body (if moving freely, unconnected with a fupported axis), to the velocity which it communicates to it in the fame tine round the axis V'n L. XVI. Part II.

\section*{\(180 \quad T\)}
Cc. Alfo let in be the number of equal particles, o: Rotation. the quantity of matter in the body. Then \(m\). GI wuil exprefs the quantity of motion producel by ilus force, and is a proper meafure of it as a mosving force; for GI is twice the fpace deferibed dazing the givea time with an unifornly accelerated motion.

But fince the body cannot moye a:y way bit rou:d the axis paffing through C , the centre G will beria i) move with the relocity, and in the direction, (ril pu-. pendicular to the line \(C\left(\begin{array}{l}\text { ( }\end{array}{ }^{2} 2.\right)\) rind any particie 1 can only move in the direction AL, perp "ridicular :o C.A. Mareover, the velocizies of the different tart icl :s are as their radii sectures; and CG is actuatly croul tor the line GH, which expreflis the edocity of a parzid: in ( 5 . Thesefore C:I will in like manter exprefs th. velocity of the particle \(A\). If A exprefs is, quilanticy of matter, \(A \cdot C_{A}\) will exprefs its quantily of montion, and will reprefent the foree which would yrolsee it hy acting unifornly during the moment of time.
TVe exprefied the external moving force by m.Cl. Part of it is employed in erciting the force A.C.I. which urges the particle A. I inrict to df forer wibat part of the external force io neceliary for this puspote, drave CP perpendicular to FP. The preceoin? onicrvations fonw ins, that the force waned at \(A\) is c'gual io the foree whith, when applied at \(b^{\prime}\) in the direction FP, would balance the force \(A \cdot C .1\) iongliod wo \(A\) in th. dinction L.i. Therefore (by the property of the 1 ver ACP, which is impelled at ripht aughes at \(\lambda\) antu! \(P\) ) we mult have \(C P\) to \(C A\) as the fore \(A \cdot C A\), the balancins, preflire, which muth be eserte. at \(P\), wr at any point in the line \(1 \cdot \mathrm{P}\). 1 his profure is therefore \(\frac{A \cdot C A \cdot C A}{C P}\) or \(\frac{A \cdot C A^{2}}{C P}\). As we took m.GI for tire mcafure of the whole extemal foree, GI being the we locity which it would communicate to the whole bodi moving in free fyace, we may take \(\mathrm{G} i\) for the vocit; which would be comnunicated to the whole boty ty the preffure \(\frac{A \cdot A^{2}}{C^{2}}\), and then this preftioc will te properly expeefed by m. G i. In like manner, m.ik :n \(\operatorname{cy}\) exprefs the portion of the external fonce eimployed is communicating to another particle 13 the inulion which it aequires; and to un with refpest to all the partich s of the body.

It mult be defiable to fee the :nanmer is which the \({ }_{3} \mathrm{~S}\) sure.
(A) We take this term in its ufual fonfe, as exprefing that point where the fun of the equal gravitat:on o : each particle may be fuppofed united. It is by no means (thongh commonly fuppofed) the noilt where the "cuuivalent of the real gravitations of the particles may be fuppofed to act, and to produce the fame mution a: when acting on each particle feparately. It is this point only when all the particles gravitate alike, and in parallet directions. If the body were near the centre of the carth for infance, the gravitatioas of the different particles would neither be nearly equal nor in parallel lines; and the pince of its real centre of gravity, on whick the equivalent of its whole gravitation may be fuppofed to act, would be very different from \(G\). IVere we to denominate the point G, as ufually determined, by its matheratieal properties, we would call it the centre of position ; becaufe its diflance from any plane, or its pofition with refpect to any plane, is the avera;e ditance and pofition of all the particles. The true deligration of G is "the point through which if any plane subaterer he nade to pafs, and if perpendiculars to this plane be drawn from every particle, the fun of all the perpendiculars on one fijce of this plane is equal to the fime of all the perpendiculars on the other fide."

If we were to denomiuate \(G\) by is mechanical propertics, we would call it the Centre of inertias fur this is equal ia every practicle, and in the fame cirection: and it is not in confequence of gravity, but of inertia, that the body defribes with the point \(G\) a line paaniol to IP. Wie wint this sematl to be kept in mind.

\section*{\(R \quad 0 \quad T \quad[\quad 506] \quad R \quad 0 \quad T\)}

Rotation. forces are really concersed in giving motion to the dif. ferent particles.

Suppofe the external force to aft immediately on the external particle F. The line FC connecting this particle with the axis in \(C\) is either flretched or compreffed by the effort of giving motion to a remote particle A. It is plain that, in the circumfances \(r\) eprefented in the figure, the line FC is compreffed, anel the axis is puffed by it againf its fupports in the direction \(C\); and the body mult, on this account, refilt in the oppolite direction Ff. The particle A is dragged out of its pofition, and made to begin its motion in the direction AL perpendicular to AC . This cannot be, unlefs by the connection of the two lines AC, AF. A refits by its inertia, and therefore both \(A C\) and \(A F\) are fletched by dragging it into motion. 13y this mitlanee the line AC tends to contract itfelf again, and it pulls C in the direction \(\mathrm{C} c\), and A in the direction \(\mathrm{A} a ;\) and if we take \(\mathrm{C} c\) to reprefent the action on \(\mathrm{C}, \mathrm{A} a\) mult be taken equal to it. In like manner AF is firetched and tends to contrast, pulling \(F\) in the direction \(F q\) and \(A\) in the dircetion \(A \propto\) with equal forces. Thus the particle \(A\) is pulled in the directions \(\mathrm{A} a\) and \(\mathrm{A} \alpha\); the particle F is pulled in the direction \(\mathrm{F} ;\), and pufhed in the direction F ; and C is pulled in the direction \(\mathrm{C} c\), and pufhed in the direction \(\mathrm{C} x\). \(\mathrm{A} a\) a ad \(\mathrm{A} \alpha\) have produced their equivalcnt AL , by which A is dragged into motion; \(\mathrm{F} f\) and \(\mathrm{F}_{0}\) produce their cquivalent Fg , by which the external force is refilted, and \(\mathrm{F}_{g}\) is equal and oppofite to m. \(G\); the forces \(\mathrm{C} c\) and C s produce their equivalent \(\mathrm{C} d\) by which the axis is preffed on its fupports, and this is refilled by an equal and oppofite reaction of the fupports in the direction \(d \mathrm{C}\). The forces therefore which excite in the body the motion A.AL are both external, wiz. the impelling force \(g \mathrm{~F}\), and the fupporting force dC. AL therefure is not only the immediate equivalent of \(A\) " and \(A \propto\), but alfo the remote equivalent of \({ }_{\delta} \mathrm{F}\) and \(d \mathrm{C}\). Wic may therefore afcertain the proportion of \(g F\) (that is, of \(m . G i\) ) to AL (that is, of A.AC), indepencent of the property of the lever. \(g \mathrm{~F}\) is to \(A \mathrm{~L}\) in the tutio compounded of the ratios of \(g F\) to \(F_{p}\) or \(A=\), and of A, to AL. But we thall obtain it more eafiry by confidering \(g \mathrm{~F}\) as the equivalent of AL and \(d \mathrm{C}\). By what has been denonftrated above, the directions of the three forces \(g \mathrm{~F}, \mathrm{AL}\), and \(d \mathrm{C}\) mult meet in one point E , and \(g \mathrm{~F}\) mul be equal to the diaconal \(t\) E of the parallelogram Eet, of which the fides \(\mathrm{E} e, \mathrm{E}\) : are refpectively equal to AL and \(d \mathrm{C}\). Now \(t \mathrm{E}\) is to \(\mathrm{E} e\) as the fine of the angle \(t e \mathrm{E}\) to the fine of the angle Ete, that is, as the fine of CEA to the fine of CEP, that is, as CA to CP, as we have already demonftrated by the property of the lever. We preferred that demorill ration as the fhorteft, and as abundantly faniiliar, and as congenial with the gencral mechanifm of rotatory motions. And the intelligent rcader will ob-
ferve, that this other demonftration is nothing but the demonftration by the lever expanded into its own elements. Having once made all our readers fenfible of this internal procefs of the excitement and operation of the forces which connect the particles, we fhall not again have recourfe to it.

It is evident that the fum of all the forces \(g \mathrm{~F}\), or \(m . \mathrm{G} i\), mult be equal to the whole moving force m.GI. that \(m\). Pp may be \(=m\).GI. That is, we mul have \(m \cdot \mathrm{GI}=\int \frac{\mathrm{A} \cdot \mathrm{CA}^{2}}{\mathrm{CP}}\); or, becaufe CP is given when the pofition of the line FP is given, we muft have m.GI \(=\int A \cdot C A\) ties.
This equation gives us m.GI.CP \(=\int\) A.CA \({ }^{2}\). Now we learn in mechanics that the energy of any force applied to a lever, or its power of producing a motion round the fulcrum, in oppofition to any refiftance whatever, is expreffed by the product of the force by the perpendicular drawn from the fulcrum on the line of its direction. Therefore we may call \(m\).GI.CP the momeritum ( B ), energy, or rotatory effort, of the force m.GI. And in like manner/A.CA \({ }^{1}\) is the fum of the momenta of all the particles of the body in actual rotation; and as this rotation required the momentum m.GI.CP to produce it, this momentum balances, and therefore may exprefs the energy of all the refittances made by the inertia of the particles to this motion of rotation. Or \(\int A . C^{2}\) may exprefs it. Or, take \(p\) to reprefent the quantity of matter in any particle, and \(r\) to reprefent its radius veitor, or dittance from the axis of rotation, \(\sqrt{p} . r^{2}\) will exprefs the momentum of inertia, and the equilibrium between the momentum of the external force \(m\).GI, acting in the direction FP, and the combined nomenta of the inertia of all the particles of the whirling body, is exprefted by the equation \(m . G I . C P=\int A . \mathrm{CA}^{2},=\) fpr \({ }^{2}\). The ufual way of itudying elementary mechanics gives us the habit of affociating the word equilibrium with a flate of reft; and this has made our knowledge fo imperfcet. But there is the fame equilibrium of the actual immediate preffures when motion enfues from the action. When a weight A defcending raifes a finaller weight \(B\) by means of a thread paffing over a pulley, the thread is equally flretched between the acting and refitting weights. The Arain on this thread is undoubtedly the immediate moving force acting os B , and the immediate refifting force acting on A .

The fame equation gives us \(\mathrm{GI}=\frac{\int p \cdot r^{2}}{m \cdot C P^{\circ}}\).
. CG ; but CG reprefents the velocity of the centre. Hence we derive this fundamental proposition \(\int \rho \cdot r^{3}\)
\(: m \cdot C P \cdot C G=G I: C G\); or, that \(f \cdot p \cdot r^{2}\) is to \(m\). CP. CG as che velocity of the body moving freely to the velocity of the centre of gravity round the axis of rotation.
Therefore the velocity of the centre is \(=\frac{m \cdot \mathrm{GI} \cdot \mathrm{CP} \cdot \mathrm{CG}}{\int p \cdot r^{i}}\).
The velocity of any point B is \(=\frac{m \cdot \mathrm{GI} \cdot \mathrm{CP} \cdot \mathrm{CB}}{\int \mathrm{pr}^{2}}\)
This fraction reprefents the length of the arch defcribed by the point B in the fame time that the body unconneeted with any fixed points would have defribed GI.

Therefore the angular velocity (the arch divided by theradius) common to the whole body is \(=\frac{m \cdot \mathrm{GI} \mathrm{CP}}{\sqrt{p} r^{2}}\). It mar be here afked, how this fraction can exprefs an angle? It evidently expreffes a number; for both the numerator and denominator are of the fame dimenfions, namely, furfaces. It therefore expreffes the portion of the radius which is equal to the arch meafuring the angle, fuch as \(\frac{1}{2}, \frac{1}{3}, \frac{5}{2}\), \&.c. And to have this angle in degrees, we have only to recollect that the radius is \(=\) 57,2958.

This angular velocity will be a maximum when the axis of rotation paffes through the centre of gravity G. For draw from any particle \(A\) the line \(A a\) perpendicular to CG, and join \(A G\). Then \(C A^{3}=G A^{2}+\) \(\mathrm{CG}^{2} \pm 2 \mathrm{CG} \times \mathrm{Ga}\). Therefore \(\int \mathrm{CA}^{2}=\int \mathrm{CA}^{2}+\) \(\int \mathrm{CG}^{2} \pm \int 2 \mathrm{CG} \times \mathrm{G} a,=\int \mathrm{GA}^{2}+\mathrm{m} \cdot \mathrm{CG}^{2} \pm\) \(\int 2 \mathrm{CG} \times \mathrm{G} a\). But, by the nature of the centre of gravity, the fum of all the +Ga is equal to that of all the -Ga ; and therefore \(\pm \int_{2} \mathrm{GC} \times \mathrm{Ga}\) is nothing; and therefore \(\int \mathrm{CA}^{2}=\int \mathrm{GA}^{2}+m \cdot \mathrm{CG}^{3}\). Therefore \(\int \mathrm{CA}=\) or \(\int p r^{2}\) is fmallett, and \(\frac{m \cdot G I \cdot C P}{\int p r^{2}}\) is greateft when \(m . \mathrm{CG}^{2}\) is nothing, or when CG is nothing; that is, when C and G coincide.

The abfolute quantity of motion in the whirling body, or the fum of the motions of all its particles, is \(\frac{m, G I \cdot C P \cdot \int p, r}{\int P r^{2}}\). For the mation of each particle is \(\frac{m \cdot \mathrm{GI} . \mathrm{CP} \cdot p r}{\int p r^{2}}\).

The refflance which a given quantity of matter makes to a motion of rotation is proportional to \(\int p r^{2}\). For this mult be meafured by the forces which muft be fimilarly applied in order to give it the fame angular motion or angular velocity. Thus let one external force be \(m\). GI, and the other \(m \ldots \ldots\) - Let both be applied at the difance CP. Let \(r\) be the radius vector in the one body, and \(p\) in the other; now the angular velocities \(\frac{m \cdot \mathrm{GI} . \mathrm{CP}}{\int p r^{2}}\) and \(\frac{m \cdot \gamma_{1} \cdot \mathrm{CP}}{\sqrt{p p^{2}}}\) are cqual \(\mathrm{b}_{\mathrm{y}}\) fuppofition. Therefore \(m\). GI: \(m \cdot \gamma^{\prime}=\int \rho r^{2}: \int_{\rho p^{2}}\) :

As in the communication of motion to bodies in free fpace a given force always produces the fame quantity of motion; fo in the communication of motion to bodies obliged to : urn round axes, a given force, applicd at a given diftance from the ases, always produces the fane quantity of momentum. Whence it may eafily be dedueed (and we fhall do it afterwards), that as in the communication of motion annong free budies the fanme quantity of motion is preferved, fo in the coromunica-

507 ] R O T
tion of motion among whirling bodies the fame quan. Rotation. tity of whirling motion is prcterved.

This is a propolition of the utmof importance in prantical mechanics, and may indeed be confidered as the fundanental prepouition with refpect to all nachines of the rotatory kind when performing work; that is, of all machines which derive their eficacy from Icvers or wheels. There is a valuable fet of experiments by Mr Smeaton in the Philofophical Tranfuctions, Volume LXVI. which fully confirm it. We nall give an example by and by of the utility of the propofition, fhowing how exceedingly imperfećt the ufual theories of mechanice are which do not proceed on this principle.

With refpect to the general propofition from which all thefe deductions have been made, we muft obferve, that the demonftration is not reftricted to the time neceffary for caufing each particle to defcribe an arch equal to the radius vector. We aflumed the radius vecter as the necafure of the velocity merely to fimplify the notation. Both the progrefive motion of the free budy and the rotation of the whirling body are uniformly accelerated, when we fuppofe the external force to act uniformly during any time whatever ; and the fpaces deferibed by each motion in the fame tinse are in a conftant ratio. The formule nay therefore with equal propriety reprefent the momentary accelerations in the diffurent cafes.

It muft alfo be obferved, that it is not neceffary to 411 the parfuppofe that all the particles of the body are in oneticics of a plane, and that the moving force aets in a line FP 1 . body nus ing alfo in this plane. This was tacitly ailowed, merely yuffuted is to make the prefent invell igation (which is addrefled one frane. chiefly to the practical meclaric) more familiar and eafy. The equilibrium between the force \(A \times C A\), which is immediately urging the particle \(A\), and the force in. G i employed at \(P\) or \(F\), in order to excitc that force at A, would have been precifely the fame although the lines \(A C\) and \(F P\) bad been in different planes, provided only that thefe planes were paralicl. This is known to every perfon in the leaft acquainted with the wheel and axle. But if the external moving force sioes not act in a plane parallel to the circles of rotation of the different particles, it muft be refolved into two forces, one of which is perpendicular to thefe planes, or parallel to the axis of rotation, and the other lying in a plane of rotation. And it is this latt only that we confider as the moving force; the other tend mierciy to pufh the body in the direction of its axis, but has no tendency to turn it round that axis. When we come to conider the rotation of a body perfealy free, it will be neceflary to attend particularly to this circumitance. lut there are feveral important mechanical propofitions which do not require this.
The notion of any body is eftinated by that of its Tla= \(=5\) zicte centre of gravity, as is well known. The diferencer: a buly between the motion of the centre of a fiee body and n no-cul the motion of the centre of a body turneng round an ! :chac of cre axis, is evidently owing to the coniluction which the an ery parts of the lody have with this axis, and to the ac-..... tion of the points of fupport on this axi. This action muft be confidered as anotier cxternal furce, c.m. lined with that whicla aces on the particle l', atd aterefore mult be fuck ane it conbined with it, wouid i:oduce the very notion which we obfernc. That is, is

\section*{\(\mathrm{R} 0 \mathrm{~T} \quad\left[\begin{array}{lll}\mathrm{scs} & ] & \mathrm{R}\end{array} \mathrm{O}\right.\) T}

Rnontis. Wre fuppofe the bociy unconneesed with ary fsed points, bit as laning its axis acted on by the fane force, which thele points esert, the body wou'd tum as we oblerve it to du, the asis remaininer at refl.

Therefure juin I and 1 , and complete the parallelo-
 the forecs exerted by the axis an the lixed points.

If thesefore GI fiould coincide with Cill, and the point I with the point II, the fore GIK ranifles, art the body begins to turh round \(C\), without exerting any preflure on the peints of furport ; and lle initial motien is the farse as if the body were free. Ur, the axis at C is then a pontanoos asis of conserhon.
'llat this may be the cale, it is necefía:t, i, the firf place, that the external force aet in a direcion perperdicular to C G ; for \(G I\) is always parallel to \(F P\) : it being a leading propofition in dynamics, that when a moving force acts on any part whatever of a folid body, unconnected with fixed points, the centre of gravity will proceed in a feraight line parallel to the diestion of that force. Is the next place CIF mut be ecual to \(G I\); that \(i\), \(\left(n^{\circ} 21\right) \frac{m \cdot G I}{\int p} \cdot \frac{C P \cdot C G}{r^{3}}\) is equal to \(G I\), or \(\frac{m \cdot C P \cdot C G}{\int p r^{z}}=1\), and \(C P=\frac{\int p r=}{n_{\cdot} C G}\).

The equation \(\mathrm{CP}=\frac{\rho \rho r^{2}}{m \cdot C G}\) gives wis \(m \cdot \mathrm{CG} \cdot \mathrm{CP}\) \(=\int_{f} r^{2}=\int A \cdot \mathrm{CA}^{2}\). But it was mown ( \(\mathrm{n}^{\circ} 23\) ), that \(/ A \cdot C A^{2}=/ A \cdot G A^{2}+m \cdot C G-\) Therfore \(\therefore A \cdot G A^{*}=m \cdot C G \cdot C P-m \cdot C G \cdot C G,=m \cdot C G\) (CP-CG) \(=m \cdot \mathrm{CG} \cdot \mathrm{GP}\). Therefore we have (for another detcrmination of the point of impulte \(P\) fo as to nurihilate all prefure on tine axis) GP = \(\frac{\text { A.G. }}{=17 \cdot}\)

This is generally the mot effilj obtain. rd, the mathematical fituation of the centre of gravity being will krown.
\(A\). \(B\). When \(C P=\frac{f \rho r^{2}}{n \cdot C G}\), we fhall always have the celacify of the centre the fame as if the budy were frec, but there will always be a preffure on the points of fupport, whlefs FP be alfo perperdicular to CG. In niker pofitions of FP the pecfiuse on the axis, or on! its points of lipport, will be \(m\). GI \(\times 2\) fm. GCP.

It would be a defrable thing in our machines which derive their efficacy from a rotatory motion, to appiy the prefluses ariing from the powtr and from the relitt. ance oppufed by the wotk in fich a manner as to annihilate or diminith this peffure on the fupports of the axis of motion. Attention to this theoren will point out what may be doue; and it is at all times proper, nay neceffary, to krow what are the preflares in the points of fupport. If we are iznorant of the, we llall :in the ric: of our machine failing in thofe paits ; and cur anxiety to prevent this will make us load it with need.cfs and ill-difpofed ftrength. In the ordinary theories of machines, deduced entirdy from the prineiples ef equibbrium:, the preflare on the points of fupport (exclufive of what proceeds from the weight of the mathine itfelf) is fated as the fume as if the moving and refiting forces were applied immediately to thefe poirts in their own cirections. But this is in all cales crroneons; ard, in cales of fwift motions, it is greatly fo. We may be conviteced of this by a very fimple initance.

Suppose a line baid over a pulley, and a pound weisht at one end of it, and :en pounds at the ofher ; the preflure of the axis on its fupport is eleven pounds, aces ring to the ufal rule; whereas we diall find it only \(37^{7}:\) Fur, if we call the radins of the pulley 1 , the monentum of the mowng force is \(10 \times \mathrm{t}-1 \times 1,=\) \(y\) : and the moncutum of inertia is \(10 \times 1^{2}+1 \times 1^{2}\). \(\left(\begin{array}{ll}-18 .) & =11 .\end{array}\right.\) Therefore the angular velocity is ip. Bat the dilarice CG of the centre of gravity from the axis of motion is alfo !, !, ccanfe we may lippofe the t:on weishts in contad with the circumberence of the pulley. Therdore the relucity of the centre of ofavity
 fore diminifued \(\frac{80}{2} \frac{1}{5}\) by the figure of the axis of the pulley, and the II pounds prefs it with rizo of their weight that is, with 3 ris pounds.

Since all our machines confift of inert matter, which ef klinwing requires force so put it in motion, or to ftop it, or to change its motion, it is plain that fome of our natural power is expended in producing this effect ; and fince the principles of equilibrium only thate the propurion between the power and refikance which will preferve the machine at reft, our knowledge of the actual performance of a machine is imperfect, unkle we know how much of our power is thus emplored It is only the remainder whicl: can be flated in oppoition to the reliftance oppoled by the work. This renders it proper to give fome general propofitions, which enable us to cumpute this with eafe.

It would be very comvegient, for intlance, to know fome point in which we might fuppofe the whole rota tory part of the machine concentrated becure then wisenty the tory part of the machine concentated, becale then weforee recelcould at once tell what the momentum of its inertia is, iary to and what force we mut apply to the impeiled point of isercor:s the nachine, in order to move it with the delitid velocity.

Let \(S\), fig. 3 . be this point of a body thrnirg yound the fuppotted axis paning through \(\mathbb{C}\); liat is, let \(S\) be fueh a point, that if all the matter of the body were collected there, a force applicd at \(P\) will produce the fame angular velucity as it would if applied at the fare point of the body having its natural form.

The uhole matter being coilected at \(S\), the expreffion \(\frac{m \cdot G I \cdot C P}{\rho p \cdot r^{2}}\) of the angular veloci:y becomes \(\frac{m . C I \cdot C P}{m \cdot c S^{3}}\) ( \(n^{0} 22\).) ; and thefe are equal by fupprofition. Therefore \(\int p r^{2}=m \cdot \mathrm{CS}^{2}\), and \(\mathrm{CS}=\sqrt{\frac{1 p r^{2}}{m}}\).

This point \(S\) has been called the Centre of Grira Tion.

In a line or flender rod, luch as a working beam, o: the fpoke of a wheel in a machine, \(\mathrm{C} S\) is \(\sqrt{\frac{3}{3}}\) of its leneth.

In a circle or cyliacler, fuch as the fulid drain of a capitan, \(\mathrm{CS}=\sqrt{\frac{1}{2}}\) its radius, or nearly \(\frac{\mathrm{r}}{\mathrm{s}}\). But if it turns round one of its diameters, \(\mathrm{C} \mathrm{S}=\frac{1}{2}\) radius.

In the periphery of a circle, or rim of a whed, CS \(=\) radius nearly.

If it turn round a diameter, \(C S=\sqrt{\frac{2}{2}} r\) - lius. The. furface ot a fphere, or a thin foherical fhell, turnings round a diameter, has \(C S=\sqrt{\frac{2}{j}}\) radius, or reanly \(\frac{4}{3}\) or \(\frac{5}{6}\).

A folid fphere turning round a diancter has \(C S\), \(=\sqrt{\frac{3}{5}}\) radius, or nearly \(\mathrm{r}^{\frac{7}{7}}\). This is ufeful in the pre-
blem of the preceftion of the equineses. We may not Serve liy the way, that if we confider the whirling body as a fyltem of fereral bodies with rigid or inh rible connections, we may confater ail the mater of each of thrie bodies a, united in its centre of gyration, and the rotation of the whole will be the farle; for this loes not clange the vaiue of \(\frac{\int_{i} r^{2}}{m}\).

There is another way of making this correction of - the motion of a machine, or allowing for the inertia of the macline iffelf, which is rather limpler than the one now given. We can fi:pprfe a quantity of matter col leked at the point to which the nioving force is applied, fuch that its inertia will eppofe the fame reffifmee to rotation that the machine does in its natural furm. Suppofe the moving force applied at \(P\), as before, aud that inftead of the natural form of the body a quantity of matter \(=\frac{\int P r^{2}}{C P}\), colleeted at \(F\); the moving force will produce the fame angular velucity as on the body, in its natural form. For the angular velocity in this cale nut be \(\frac{m G I \cdot C P}{\frac{\rho^{2}}{r^{2}}} \cdot C P=\left(n^{3} 22 \cdot\right)\), which is \(=\frac{m}{\int P r^{2}}\) the fame as infore.

A point \(\cap\) may he found, at fuch a diftance from the axis, that if all the niatter of the bods wele colleetci there, and an exteruel force \(m\). GI applied to it in a direction ferpendicular or ary how inclined to CO , it will produce the fame angular velecity as when applied to the certre of favity G, with the fame inclination to the line C G.
In th:s cate, the argular velonty mult be \(\frac{m \cdot \mathrm{GI} \cdot \mathrm{CO}}{\mathrm{m}_{\mathrm{C}} \cdot \mathrm{CO}}\) ( \(\mathrm{n}^{n} 22\). ), which is \(=\frac{\mathrm{C} I}{\mathrm{CO}}\). This murt be equal (by fuppolition) to the angular velocity where the fame furce \(m\) GI is applied in the fame inclination in G. The angular velocity in this caie mint be \(\frac{\text { rm. GI CG. }}{J \mathrm{P}^{2}}\) Therefore we have \(\frac{\mathrm{CI}}{\mathrm{CO}}=\frac{m \cdot \mathrm{GI} \cdot \mathrm{CG}}{\rho_{p r} r^{2}}\), and \(\frac{\mathrm{CO}}{\mathrm{GI}}=\)
 \(\mathrm{GO}=\frac{\mathrm{A} \cdot \mathrm{G} \cdot \mathrm{A}^{2}}{m \cdot \mathrm{C}}\).

This point O has feveral remarkable properties.
In the frlt place, it is the point of a common heary roper. hody fivinging romind C by its gravity, where, if all its weight be fuppofed to be concentrated, it will perform its ofcilations in the fame tinie. For while the body has its natural form, the whele force of gravity may be fuppofed to be e::erted on its centre of gravit)When the matter of the body is colleeted at O , the force of gravity is concentrated there alfo; and if CG have the fame inclination to the lrovizon in the firt cafe that CO has is the fecond, the action of gravity will be applied in the fame angle of inclination, and the two bodies will acquire the fame angular velocity; that is, they will defeend from this fituation to the vertical fituation (that is, through an equal angle) in the fame time. Thefe two bodies will therefore of cillate in equal times. Fur this reafon, the poizt \(O\) fo taisen in the line \({ }^{-}\)
 that CO is equal to \(\frac{\int A \cdot C A^{2}}{m \cdot C G}\), or \(\mathrm{G} O=\frac{\int A \cdot G A^{2}}{m \cdot C G}\), is called the Cextree of Oenhelatioy of the bady; and a heavy puint fufpended by a thread of the length CO is callect its equivalent or fyethromous pradahen. on the fompte pendiuken, correfponding to the bor'y itfeli, which is confidered as a crem;sunil fendulum, or as confining of a number of fimple perdulumn, which by their righid connection difturh eacli uther's morio:ns.

That CO may le the equivalut pendulun, and O the centre of of liation, \(O\) muat be in the line \(\mathrm{C} C\) © otherwife it wond not re? in the fane porition with the body, when no force was keeping it with of its veltical pofition. The equation \(\mathrm{CO}=\frac{\int \mathrm{A} \cdot \mathrm{C} \lambda^{2}}{m \cdot \mathrm{C}} \frac{\mathrm{C}}{}\) only determines the dilance of the centre of ofcillation from the centre of fufpenfion, or the lenoth of the equivalent finple production, but does not determine the precife point of the body oceupied by the cenire of ofeillation; a circumflance alfo neceffary in forne cafes.

Mathematicians have determined the fituation of this Mode of deo point in many cafes of frequent occurrence. Huyghens, "t inu 5 in his Horofogium Ufillatorium, and all the belt writers "Ewaztion of treatifes of mechanies, have given the methad of inveftigation at length. The general procefs is, to multiply evers particle by the fantie of its dilance from the axiz of fufpenion, and to divide the fu:n of all theie produets by the product nf the wiole qnantity of matter multiplice by the diflance of its centre of grasity from the fame axis. The quotient is the ditance of the centre of ofellation, or the length of the equivalent fimple perdulum : for \(\mathrm{CO}=\frac{\int \mathrm{f}_{\mathrm{M}}{ }^{2}}{m \cdot \mathrm{CG}}\).
a. If the body is a heavy Araight line, fripended by one extremity, CO is \(\frac{2}{3}\) of its length.
t. This is nearly the cale of a flemed rod of a cylindrical or prifmatic ihape. It would be exactily fo if ali the puints of a tranfverfe fection were eçually dittant trom the axis of futipenion.
c. If the purdulum is an ifofecics triangle fufpended hy its apex, and vibrating perpendi ularly to its own piare, CO is \(\frac{3}{3}\) of its height.
d. This is nearly true of a very tender triansle (that is, whofe height many times exceeds its bafe) fivinging round its vertex in any dirction.
\(\therefore\) In a very flender cone or pyramid fwiaging fom its vertex CO , is \(\frac{t}{5}\) ot its height nearly.
\(f\). If a fphere, of which \(r\) is the radius, be fufpended by a thread whote weight may be neglected, ans whofe length is \(/\), the difance between its centre of fuppoafion and centres of ofellation is \(a+r+\frac{r^{2}}{a+r}\); and the diftance betwecn ito ceretres of Luls and ofcillation is \(\frac{r}{5} \frac{r}{n+r}\) Thus, in a commun fecond's pendulum, whole length at London is about 39 年 inches the centre of oftiliation will be found about \(7 \dot{s} 5\) of an inch below the centre of the ball, if it. be two inclu's in dia* meter.
g. If the weight of the thread is to be taken int , the account, we have the fcilowing difance between the centre of the ball and that of ofillation, where B is the weight of the ba!l, a the d.tance of the foint-

\section*{\(\mathrm{R} \quad \mathrm{O} \quad \mathrm{T}\)}

Roation. of fuppenfion and its centre, \(d\) the diameter of the ball, and \(w\) the weight of the thread or rod, \(\mathrm{CO}=\frac{\left(\frac{1}{3} w+\frac{2}{5} \dot{x}\right) d^{2}-\frac{1}{8} v v\left(\frac{\left(n d+a^{2}\right)}{\left(\frac{1}{2} w+\mathrm{B}\right) a-\frac{1}{2}} d \text {, or, if we }\right.}{2}\) confider the weight of the thread as an unit, and the weight of the ball as its nultiple (or as expreffed by the number of times it contains the wcight of the thread), \(\mathrm{GO}=\frac{\frac{\frac{1}{6} a}{\mathrm{~B}} \frac{\mathrm{t}}{\frac{1}{2}}}{}\).
As the point O , determined as above, by making \(\mathrm{CO}=\frac{\int p r^{2}}{n_{2} \mathrm{CC}}\), is the centre of ofcillation of the body thening round C , fo C is the centre of ofcillation of the fame body turning round O : for, refuming A.CA in place of \(p r\), we have \(\int A . C^{2}=m . C O . C G\). Now \(\int \mathrm{A} \cdot \mathrm{CA}^{2}=\int, \mathrm{A}^{2} \mathrm{OA}^{2}+\int \mathrm{A} . O C^{2}-\int \mathrm{A} \cdot \mathrm{OC} .2 \mathrm{O} a^{2}\), (Euclid, II. 12.13.), or \(m . C O . C G=\int \mathrm{A}_{2} \mathrm{OA}^{2}+\int A\). \(\mathrm{OC}^{2}-\int \mathrm{A} . \mathrm{OC}^{2} 20\) á. But \(\int \mathrm{A} . \mathrm{OC}^{2}=m \cdot \mathrm{OC}^{2},=m\). OC.OC; and (by the nature of the centre of gravity) \(\int A . O C .20 \AA=m . O C \cdot\) z OG. Therefore we have \(m . \mathrm{CO} . \mathrm{CG}=\int \mathrm{A} . \mathrm{OA}^{2}+m . \mathrm{OC} . \mathrm{OC}-m . \mathrm{OC} .2 \mathrm{OG}\); and \(/ \mathrm{A} . \mathrm{OA}^{2}=m . \mathrm{OC} . \mathrm{CG}+m . \mathrm{CO} .2 \mathrm{OG}-m \mathrm{CO} . \mathrm{CO}\), \(=m . \mathrm{CO}(\mathrm{CG}+2 \mathrm{OG}-\mathrm{CO}) . \quad \mathrm{But} C G+2 \mathrm{OG}\) is equal to \(C O+O G\), and \(C G+2 O G-C O\) is equal to OG. Therefore \(\int \mathrm{A} . \mathrm{OA}^{2}=m . \mathrm{CO} . \mathrm{OG}\), and \(\mathrm{CO}=\frac{\int \mathrm{A} \cdot \mathrm{OA}^{2}}{m . \mathrm{OG}}\), which is all that is wanted (according to \(n^{\circ} 39\).) to make \(C\) the centre of ofcillation when \(O\) is the centre of fufperfion.

If the point of fufpenfion, or axis of rotation, be anywhere in the circumference of a circle of which \(G\) is the centre, the point \(O\) will be in the circumference of another circle of which G is the centre : for, by \(\mathrm{n}^{\circ} 38\). \(G O=\frac{S A \cdot G A^{2}}{m \cdot C G}\). Now \(\int A \cdot G A^{2}\) is a fixed quantily; and therefure whilc CG is confant, OG will allo be conflant.
force confpiring with the one applied at O . Some curicus confequences may be deduced from this.

If the external force be applied to a point in the \(\mathrm{w}_{\mathrm{b}}\) line GC, lying beyond C , the motion of the centre will phyint be in the oppofite direction to what it would have ta-fometi ken had the body been free, and fo will be the prefocalled fures exerted by the points of fupport on the axis.

A force \(m\). GI applied at P produces the initial progreffive motion m.GH; and any force applied at O , perpendicularly to CG, produces the fame motion of the centre as if the body were free. Therefore a force \(m\).GH appliced thus at O will produce a motion m.GH in the centre, and therefore the fame motion which \(m\).Gl applied at P soould produce; and it will produce the nomentum \(m\).GI at P . Therefore if a force equal to the progrefive motion of the body be applied at O , perpendicularly to CO , in the oppofite direction, it will flop all this motion without exciting any frain on the axis or points of fupport. Therefore the equivalent of all the motions of each particle round C is conceived as pulfing through O in a direction perpendicular to CO ; and the blow given by that point to any body oppofed to its motion is confudered as equal to the compounded effect of the rotatory motion, or to the progreflive motion of the body combined with its rotation.

For fuch reafons O has been called the Centre ofimprope Percussion of the body tnrning round C . But the ty of the name of centre of momentsm, or rotatory efforf, wonld have ternh. been more proper.

We can feel this property of the point O when we give a fmart blow with a ftick. If we give it a motion round the joint of the writ only, and ltrike fmartly with a point confiderably nearer or nore remote than \(t\) of its length, we feel a painful hock or wrench in the hand ; but if we ftrilee with that point which is precifely at \(\frac{2}{3}\) of its length, we feel no fuch difagreeable Atrain.

We fee alfo that the difance CO is that at which an external force mult be applied; fo that there may not be any preffure excited in the axis upon its points of fupport, and the axis may be a fpontaneous axis of converfion. This we learn, by comparing the value of CO with that of CP in art. 30 . This being the cafe, it follows, that if an external force is applied in a direction paffing thro' O , perqendicularly to CO , it will produce the fame initial velocity of the cenrre as if the body were free: for as it exerts no preffure on the points of fupport, the initial motion muif be the fane as if they were not there.

If the external force be applied at a greater difance in the line CG, the velocity of the contre will be greater than if the body were free. In this cafe the preffure excited in the axis will be backward, and confequently the points of fupport will re-act forward, and this re-action will be equivalent to another external

Mechanical writers frequently fay, that O confidered as the centre of percuffion, is that with which the moft violent blow is Aruck. But this is by no means true; O is that point of a body turning round C which gives a blow precifely equal to the progreffive motion of the bady, and in the fame direction. As we have already faid, it is the point uliere we may fuppofe the whole rotatory momentum of the body accumulated. Every particle of the body is moving in a particular direction, with a velocity proportional to its difance from the axis of rotation ; ard if the body were fopped in any point, each particle tending to cortinue its motion any point, each particle tending to continuce its motion
endeavours to drag the ref along with it. Whatever point we call the centre of percuffion Phould have this
property, that when it is fopped by a fufficient force, point we call the centre of percuffion fhould have this
property, that when it is Atopped by a fufficient force, the whole motion and tendency 'to motion of every kind fhould be fopped; fo that if at that infant the fup-
ports of the axis werc anniliilated, the body would refhould be fopped; fo that if at that infant the fup-
ports of the axis were annililiated, the body would remain in abfolute reft.

The confideration of a very fimple cafe will how centere nf
The confideration of a very fimple cafe will how Centren
that this point of ftoppage cannot be taken indifferently. nerculfion, Suppofe a \{quare or rectangular board CDD' \({ }^{\prime}\), fig. 4 hone deadrancing in the diredion GH, perpendicular to its plane, without any rotation. Let \(G\) be the centre of gravity, and the middle of the board. It is cvident, that if a force be applied at \(G\), in the direction \(\mathrm{HG}_{\mathrm{G}}\),
We may alfo obferve, that the diftance of the axis from the centre \(S\) of gyration is a mean proportional between its diflance from the centre \(G\) of gravity and the centre O of ofcillation: for we had ( \(\mathrm{n}^{2}\).) \(\mathrm{CS}^{2}=\frac{\int p r^{2}}{m}-\), and \(\mathrm{CO}=\frac{\int p-r^{2}}{n \cdot \mathrm{CG}}\), and therefore \(\mathrm{CO} . \mathrm{CG}=\frac{\rho p r^{2}}{m}=\mathrm{CS}^{2}\) and \(\mathrm{CO}: \mathrm{CS}=\mathrm{CS}: \mathrm{CG}\).

\section*{\(R \quad 0 \quad \mathrm{~T}\)}
and equal to the quantity of motion of the board, all motion will be ftoppert : for when the point G is ftopped, no reafon can be affinned why one part of the board flall advance ore than another. The fame thing mult happen if the board be ftopped by a ftraight edge put in its way, and palfing throurh \(G\) : for example, in the line L.GM, or \(g \mathrm{G} b\). But if this edge be fo placed that the board thall meet it with the line IPK, then, becaufe this line does not divide it equally, and becaufe there is a greater quantity of motion in the part CIKC' than in the part IDD K, though the progreffive mution may be flopped, the upper part will advance, and a motion of rotation will commence, of which IK will be the axis. Now fuppofe that the board, inflead of having been moving along in the direction GH, every part with the fame velocity had heen fwinging round the axis CC' like a pendalun, from the pofition \(\mathrm{C} d d^{\prime} \mathrm{C}\), and that it is ftopped by a Atrairht edge meeting it in the line LGM parallel to \(\mathrm{CO}^{\circ}\), in the moment that it has attained the vertical polition CDDC ; all its motion will not be ftopped : for, although LGM divides the board equally, there is more motion in the lower part LDD'M than in the upper part CLMC', becaufe every particle of the lower part is deferibing larger circles and moving fwifter. Therefore when the line LGM is ftopped, there will be a sendeny of the lower part to advance, and the pivots C and C of the axis will be preffed backwards on their holes; and if the holes were at that inftant removed, a rotation would commence, of which LM is the axis. The board muft therefore be flopped in fome line IPK below LGM, and fo fituated, that the fum of all the momenta on each fide of it thall be equal. This alone can hinder a rotat:on rourd the axis IPK. From what has been already demonftrated, it appears, that this will be prevented if the edge meets the board in a line IPK paffing through O the centre of of oillation, which is \(\mathrm{f}_{3}-\) tuatcd in the line \(g G b\) paffing through the centre of gravity perpendicular to the axis \(\mathrm{CC}^{\prime}\). This line IOK may therefore be called the line or axis of percuffion.

But any point of this line will not do. It is evident that if the board hould meet the fixed edge in the line \(\xi \mathrm{GO} b\), all motion will be flopped, for the motions on each fide are equal, and neither can prevail. But if it be fopped in the line \(p \mathrm{P} q\), there is more motion in the part \(p q \mathrm{D}^{\prime} \mathrm{C}^{\prime}\) than in the part \(p q \mathrm{DC}\); and if the fupports at C and \(\mathrm{C}^{\prime}\) were that inftant taken away, there would commence a rotation round the axis \(p q\). Confequently, if the body were not flopped by an edge, but by a fimple point at \(P\), this rotation would take place. The motions above and below P would indeed balance each other, but the motions on the right and left fides of it would not. Therefore it is not enough for determining the centre of percuffion that we have afcertained its diftance \(g \mathrm{O}\) from the axis of retation by the equation \(g O=\frac{\int p r^{2}}{m \cdot g \mathrm{G}}\). This equation only gives us the line IOK parallel to \(\mathrm{CC}^{\prime}\), but not the point of percuffion. This point (fuppofe it \(P\) ) muft be fuch that if any line \(\beta \mathrm{Pq}\) be diawn through it, and confidered as an axis round which a rotation may commence, it foall not commence, becaufe the fum of all the momenta round this axis on the right fide is equal to the
\(11] \quad R \quad 0 \quad \mathrm{~T}\)
fum of the monenta on the left. Let us invertigate in Rotation what manner this condition may be fecured.

Let there be a body in a flate of rotation round the 52 axis \(\mathrm{D} d\) (fig. 5.), and let G be its centre of gravity, and CGO a line through the centre of gravity perpendicular to the axis \(\mathrm{DC} d\). At the moment under confideration, the centre of gravity is moving in the direction GH, perpendicular to the radius vector GC, as alfo perpendicular to a plane paffing through the lines \(\mathrm{D} d\) and CG. Let O be the centre of nfillation. Draw the line \(n \mathrm{O}\) paralicl to D d. The centre of percuffion muft be fomewhere in this line. For the phint of percuffion, wherever it is, muft be movilug in the fame direction with the progreffive motion of the body, that is, in a direction parallel to GH, that is, prerpendicular in the plane DCG. And its diltance frons the axis D. 1 inult be the fame with that of the centre of ufcil lation. Thefe conditions require it therefure tu be in fome point of \(n \mathrm{D}\). Suppofe it at P . Draw \(\mathrm{P} p\) perpendicular to D d. P naut be fu fituated, iliat aill the momenta tending to produce a rotation round the line p \(P\) may balance each other, or their fum tutal be nothing.

Now let A be any particle of the body which is out of the plane DCG, in which lie all the lines CGO, \(\phi \mathrm{P}, \pi \mathrm{OP}\), Sc. Draw ito radius ve¿or A a perpendicular to \(\mathrm{D} a\), and draw an parallel to CG, and therefore perpendicular to \(\mathrm{D} a\). The plane \(\mathrm{A} a n\) is perpendicular to the plane Dan (Euclid, XI. 4). Draw AL perpendicular to \(A a\), and \(A /\) perpendicular to a n. Thicn, while the body is beginaing to turn round \(\mathrm{D} d^{\prime}\), the incipient motion of the particle A is in the direction AL, perpendicular to its radius vector Aa. This motion AL may be confidered as compounded of the motion A/, perpendicular to the plane DCG, and the motion / L in this plane. It is evident that it is Al only which is oppofed by the external force ftopping the body at P , becaure \(\mathrm{A} /\) alone makes any part of the progreffive motion of the centre of gravity in the dire\&tion GH.

We have hitherto taken the ralii vedores for the meafures of the velocities or motions of the particles. Therefore the quantity of motion or the muving force of A is A.A a, and this is exerted in the direction AL, and may be conceived as exerted on any point in this line, and therefure on the point \(L\). That is, the point L might be confidered as urged in this direction with the force A.A \(a\), or with the two forces of which the force A.A \(a\) is compounded. The foree in the direction AL is to the force in the dircetion \(\mathrm{A} l\) as AL to A \(l\), or as a A to al l, becaufe the triangles \(A / L\) and a/A are fimilar. Therefore, inftead of fuppofing the point Lurged by the force A.A \(a\), afting in the direetion AI, we may fuppofe it impelled by the force A.al, acting perpendicularly to the line A , or to the plane DCG, and by the force A.A! acting in this plane, viz. in the direction L \(n\). This laft force ha nothing to do with the percuftion at P. Thercfure we need confider the point \(L\) as only impelled by the force A.A I. The moinentum of this force, or its power to urge the plane DCG forward in the direction GH, by turning it round \(\mathrm{D} d\), mult be \(\mathrm{A} . a l . a \mathrm{~L}\). (N.B. This is equal to A . \(\mathrm{A} a^{2}\), becaufe \(a l: a \mathrm{~A}=a \mathrm{~A}: a \mathrm{~L}\), and A.A \(a^{2}\), has been frown long ago to be the ge-

Fntation. nemi expreffion of the motatory momentun of a paritcle).

Draw \(L m\) perpendicular to \(P p\). If we confider \(P p\) as an axis about which a motion of rotation may be produced, it is plairs that the monenenm of the point \(L\) to produce fuch a rotation will be A.al. Lm. In like manner, its inomentum for producing a rotation ronnd \(n \mathrm{P}\) would be A.1/.Ln. In general, its momentun for producing rotation round any axis is equal to the product of the nerpendicular foree at L (that is, A.al) and the dillance of \(L\) from this axi..

In order therefore that 1 ' may le the centre of percuftion, the fum of all the furces A.al.L. \(m\) mult be equal to nothing; that is, the fum of the forces A.al.L.m on one firle of this axis P P muft be balaneed by the fum of forces \(A .2 i^{\prime} . L^{\prime} m^{\prime}\) on the other dide. T'o exprefs this in the wfual manner, we mutt have fA.al.n \({ }^{\prime}=0\). Dut \(n \mathrm{P}=n \mathrm{O}-\mathrm{OP}\). Therefore \(\int \mathrm{A} . a \ln \mathrm{O}-\int \mathrm{A} . a \operatorname{loP}=0\), and \(\int \mathrm{A} . a \ln \mathrm{O}=\) fA.al.OP. But OP is the fant wherever the particle \(A\) is muated ; and becaufe \(G\) is the centre of grasity, the fum of all the quantities A.al is m. GC, \(m\) being the quantity of matter of the boly; that is, \(\int A \cdot a l=\) n. GC, and \(\int A \cdot a l \cdot O P=\) m. GC.OP,\(=\) fA.al.n O. Hence we durise the final equatiou \(\mathrm{OP}=\frac{\int A \cdot a \cdot n \mathrm{O}}{m \cdot \mathrm{GC}}\).

Therefore the centre of percufion \(P\) of a bady tumirg round the axis i) \(d\) is determined by thele conditions: itt, It is in the plane DCG paffing through the axis and the centre of gravity; 2 d , It is in a lime \(n \mathrm{O}\) paffing through the centre of ofcillation, and parallel to the axis, and therefore its diflance \(P_{p}\) from the axis of rotation is \(\frac{\mathrm{A} \cdot \mathrm{A} a^{2}}{m \cdot \mathrm{CG}}\); and, 3 d , It diltance \(O P\) from the centre of ofcillation is \(\frac{\int \mathrm{A} \cdot a \ln \mathrm{O}}{m \cdot \mathrm{CG}}\).

In order therefore that the centres of ofcillation and petcuffion may coineide, or be one and the tame, \(O P\) muft vanifh, or SA.al.n O muft be equal to nothing, that is, the fum of all the quantities A.al.n O on one fide of the line CO nuul be equal to the fum of all the quantities \(A^{\prime} \cdot a^{\prime} k \cdot n^{\prime} O\) on the other fide.

Let \(1 \mathrm{~d} d \Delta\) be a plane paffing through the axis \(D d\) perpendicular to that other plane DCG through it, in which the centre of gravity is fituated, and kt Cg ? \({ }_{\mathrm{o}}\) be a third plane paffigg throngh the centre of giavity perpendicular to both the planes \(D / s \Delta\) and DCG. Draw \(/ r\) and \(a x\) perpendicular to \(a \mathrm{~L}\), and \(r\) i perpenpendicular to \(c r\), and then draw \(A \approx, A \dot{\alpha}\) perpendicular to \(a \propto\) and \(r \dot{x}\). It is evident that \(A \propto\) and \(A \dot{x}\) are refpeetively equal to \(a l\) and \(/ r\), or to \(a l\) and \(n n\); So that the two factors or conttituents of the momerrum of a particle A round the centre of. percuffion are the difances of the particle from the planes \(10 d^{\delta} \Delta\) and \(x_{0} C_{y}^{g} 2\), both of which are perpendicular to that plane through the axis in which the centre of gravity is placed.

Wre may fee, from thefe obfervations, that the centres of ofellation and percuffion du not necefarily coincide, and the circumftance which is neceflary for their coincidence, riz. that \(\int A . A \alpha_{.} A \dot{x}\) is equal to 0 . It is of importance to keep this in mund.

There occurs here another -oblervation of great int-
furce neting in the oppofate direction, and fince all mo. tion progrefive and rutatory is fopped by an extcrnal force applied at \(P\) is the direction \(q P\), it folluws that, if the \(\mathfrak{b o d y}\) were at \(r=\{\), and the fame force be applied thers, it will fet the body in zotation round the axis \(D d\), in the oppofite dircetion, with the fame angular velocity, and without any preffure on the pivots I) and d. For whatever motion of the particle 11 , in the direction AL, was thopped by a part of the extermal force applied at \(P\), the fame motion will he prodaced by it in the quiefeent particle \(A\) in the oppotite dires. tion L.A. And as the pivots \(D\) and d had no motios in the cafe of the body turning round them, they will acquire no motion, or will have no tendency to motion, or no preffure will be exerted on them, in the laft caft. Therefore when an external force is applied a: P in a direaion perpendicular to the line \(\mathrm{P}_{f}\), the line \(\mathrm{D} d\) will become a momentary fpontaneous axis of converfoon, and the incipient motion of the body will perfectly refembie the rotation of the fame body round a fixed axis Dal.

There is another fet of foress of which we hase as Fet taken no notice, viz. that part of each force AI. which is directed alongr the plane DCG, and is reprelented by \(/ L\) when the whole force is reprefented by \(\Delta I\), or by \(\Delta /\) when the whole force is reprefented by Aa. Thele forces being all in the plane DCG, and in the dincction CG or GC', can have nu effert on the rotation round any axis in that plane. But they tend, leparately, to pruduce rotation round any axis paffing through this plane perpendiculanly. And the momentam of \(A\) to produce a rotation round an axas perpendicular to this p!ane, in \(O\) for inftance, mult esidently be A. A/.n O, and round P it muth be A. A la P, \&ic. We fhall hase occalion to confider thele afterwards.

It is ufual in courfes of experimental pliblophy to orbath iluttrate the motions of bodies on inclined planes and curved furfaces by experiments with balls rolling down rims there furfaces. But the motions of fuch rolling ballselined are by mo means juit reprefentations of the motionsilanes they reprefent. The ball not only goes down the inclined plane by the aftion of gravity, but it alfo turns round an axis. Furce is neceflary for producing this rotation; and as there is no other fource but the weight of the ball, part of this weight is expended on the rotation, and the remainder only accelerates it down the plane. 'I'lue point of the ball which refts on the plane is hindered from niding down by friction; and therefore the ball tumbles, as it were, over this point of contact, and is inflantly catched by another point of contact, over which it tunbles in the fame manuer. A cylinder rolls down in the very fane way; and its motion is nearly the fanc as if a fine thread hat been lapped round it, and one end of it made faft at the head of the inclined planc. The cylinder rolls down by unwinding this thread.

The meehanifm of all fuch motions (and fome of atectan them are important) may be undentond by confidering of thefe them as foliows: Let a body of any thape be connect-motions ed with a cylinder FCl (fig. 6.) whofe axis paffes through \(G\) the centie of gravity of the body. Suppole that body fufpended from a fixed point \(A\) by a ilnead wound round the eylinder. 'I his body will defoend by the action of gravity, and it will alfo turn round, unxinding the thread. Draw the horizontal

\section*{R 0 O}
atien line OGC. It will pafs through inc puli: u! eonta C of the thread and cyliader, and \(C\) is the point pound which it legins to turn in deficending. Let O be its centre of ofcillation correfpondine to the momentary teatre of rotation C. It will begin to defeend in the fame manner as if all its matter were colletted in 0): for it may be confidered, in this intlant, as a pendulum fufpended at C . But in this cale O will defcend in the fame manner as if the body were falling frecly. Therefore the velucity of \(G\) (that i , the selocity of \(\mathrm{d} \mathrm{s}^{-}\) fcent, will be to the relocity with which a heavy hody would fall as CG to CO . Now fince the points \(\mathrm{C}, \mathrm{G}\), O, ate always in a horizontal line, and the radius CG is given; as alfo \(\mathrm{CO}\left(\mathrm{n}^{3}+9\right)\) the velocity of a body fall. ine freety, and of the body unwinding from this thread, will alwass be in the fame proportion of CO to CG, and fo wiil the faces defcribed in any given time. And thus we can compare their motions in every cafe when we know the place of the centre of ofcillation.

Cor. I. The weisthe of the defeending body will he to the tenfion of the thread as CO to GO: for the tenfion of the thread is the difference between the momentum of the rolling body and that of the boty falling freely.

Obferve, that this proportion between the weight of the body and the tenfion of the thread will he always the fame: for it has been demonitrated already, \(n^{\circ}+2\). that if \(C\) be in the circumference of a circle whofe centre is \(\mathrm{G}, \mathrm{O}\) will be in the circumference of another circle round the fame centre, and therefore the ratio of CG to CO is corftant.

Cor. 2. If a circular body FCB roll down an in. clined plane by untolding a thread, or by friction which prevents all gidins, the face deferibed will be to that which the body would deferibe frecty as CG to CO : for the tendency down the inclined plane is a determined proportion of the weight of the body. The motion of rotation in thefe cafes, both progreffive and

Something of the fame kiad obtains in common pendulous bodies. A ball hung by a thread not only ofillates, but alfo makes part of a rotation; and for this reafon its ofcillations differ from tho?e of a heav: point hausing by the fame thread, and the centre of ofcillation is a little below the centre of the ball. A ball hung by a thread, and ofeillating between cychoidal cheeks, does not ofcillate like a body in a cyclu'd, becaufe ats centre of ofeillation is continually fhifting its place. Huyghens avoided this by fulpending his pendulous body from two points, fo that it did not change its attitude during its ofcillation. If our fpringcarria;es were hung in this manner, haviuts the four lower flaples to which the fiaps are fixed as far afumder as the four upper flaples at the euds of the fpringe, the body of the carriage would perform its ofecilations without kicking up and down in the difagreeable manner they now do, by which we are frequently in danger of Ariking the glafes with our heads. The fwings would indeed be greater, but incomparahly ealier; and we could hold things almof as fecadily in our hand as if the carriage were not fivinging at ath.

This will fuffice for an account of the rotation round fxed axes, as the foundation for a theory of mact. ines actually performin: work. The limits of our under-

Vos. XVI. Part II.
taxiurg will rot ailcur us to do any zore tham juif poinot Rofzon out the method of applying \(i\) :
I.et there he any nachine of the rotatory kind, i. . . \(\epsilon_{3}\) compored of levers or wheels, and let its contruction be stind ef fuch, that the weciry of the point to which the power ifying is applied (which we thall eall the impelled fom!) is in at mation the relocity of the working puint in the ratio of m :", \({ }^{10}\) fralise. \(n_{4}\) It is well known that the energy of this machine will he the farne with that of an asio in peritiochio, of which the rawii are \(m\) and \(r\).

Let \(r\) exprefs the actual preffure eserted on the inpelled point hy the moving prower, and lee \(r\) be the actual prefure or refiftance exerted or the wosking point by the work to be performed. Let \(x\) be the inertia of the power, or the quartity of dead matter which mult move with the velocity of the impelled point in order that the moving powce may act. Thus the moving power may be the eveight of a bucke: 0 : water in a water-wheel; then \(x\) is the quansity 0 : matter in this bucket of water. Let \(y\) in like manner be the inertiz of the work, or matter which mutt be moved with the velocity of the working-point, in ordet that the work may he performed. Thus \(y\) may be a quantity of water which mut be continually puface along a pipe. 'Ilhis is quite different from the weishe of the water, thacerh it is proportional io it, and may be meafured by it.

Let \(f\) be a preffure giving the fame refitance when applitd at the working-point with the friction ot the machine, and let \(1 n^{2}\) be the momentum of the machine's inertia, siz. the fame as if a proper quanti:y of matter a were attached to the working-point, or to any point at the fame diftance from the axis.

This fate of things may be xepreiented by thee wheel and axle PQS (fig. \(i\) ) where \(x\) and \(y\) and \(a\) are reprefented by weights acting by lines. 1 ' is the impelled point, and \(R\) the working-point; \(C P\) is in and CR is \(n\). The moving force is reprefented by Pd, the refiftance by RB , ard the friction by \(13 \mathrm{~F}^{\text {o }}\) :

It is evident that the momentuns of the inertia of \(x, y\), and \(a\) are the fante as if they were for a moment attached to the points \(P\) and \(R\).

Hence we derive the following expreffions,
1. The aeguluar velocity \(=\frac{p^{m}-1+f_{n}}{2^{2} m^{2}+y+a n^{2}}\).
2. Velocity of the working-point \(=\frac{p m n-r+f n^{\prime}}{x m^{2}+y+a n^{3}}\)
3. Work performed \(=\frac{p m r-i n^{2} r}{x m^{2}+y+i n^{2}}\) for the

\section*{64} Frulula, \(27!t^{2}\) eir ulc is prasw

65
6
work is proportional to the prodacis of the effelance and the velocity with which it is overcome.

We fhall give a very timple example of the utility of thefe formulx. Let us fuppofe that whier is to be raifed in a bucket by the defeent of a weight, and shat the machine is a fimple pulley. Such a machine is cisfcribed by Defaguliers *, who lays he found it prefe. - Ex, te: rabie to all wher machines. 'The bucket dipped itillf ptit' vo. in the cifters. A chain from it went over a puller, ii p. 50j. and at its extremity was a fage on which a man could flep from the head of a flair. His pieponderance loruyht down the fage and raued the bucket, which difenarge 1 its witer intu another cittern. The manquit. ted the fage, and walked up flaiss, and there he fousud

\section*{R O \(\mathrm{T} \quad\left[\begin{array}{lll}514\end{array}\right] \quad \mathrm{R} \quad \mathrm{O} \quad \mathrm{T}\)}

Rotatno. it ready to receive him, becaufe the empty bucket is made heavier than the empty fage.

Now, if there be no water in the bucket, it is evident, that alchough the motion of the machine will be the quickeft poffible, there will be no work performed. On the other hand, if the loaded ftage and the full bucket are of equal weight, which is the ufual ftatement of fuch a machine in elementary treatifes of mechanics, the machine will ftand Itill, and no work will be performed. In every intermediate flate of things the machine will move, and work will be performed. Therefore the different values of the work performed muft be a feries of quantities which increafe from nothing to a certain magnitude, and then diminifh to nothing again. The maxim which is ufually received as a fundamental propolition in meclanics, viz. that what is gained in force by the intervention of a machine is loft in time, is therefore falfe. There mult be a particular proportion of the velocities of the impelled and workingpoints, which will give the greateft performance when the power and refitance are given ; and there is a certain proportion of the power and refiftance which will have the fame effect when the ftructure of the machine has previoully fixed the velocities of the impelled and working points.

This proportion will be found by treating the formula which cxpreffes the work as a fluxionary quan. tity, and finding its maximum. Thus, when the ratio of the power and refiftance is given, and we wifh to know what mult be the proportion of the velocities \(m\) and \(n\), that we may conftruct the machine accordingly, we bave only to confider \(n\) as the variable quantity in the third formula. This gives us
\[
n=m \times \frac{\sqrt{x^{2} \times \overline{r+f}}{ }^{2}+p^{2} x \overline{a+y}}{p a+y}-x \overline{r+f}
\]

This is a fundamental propofition in the theory of working machines: but the application requires much attention. Some natural powers are not accompanied by any inertia worth minding; in which cafe \(x\) may be omitted. Some works, in like manner, are not accompanied by any inertia; and this is a very general cafe. In many cales the work exerts no contrary ftrain on the machine at reft, and \(r\) is nothing. In moft inftances the intenfity of the power varies with the velocity of the impelled point, and is diminifhed when this increafes; the refiftance or actual preflure at the working point frequently increafes with the velocity of the working-point. All thefe circumftances muft be attended to; but fill they only modify the general propofition. Thele are matters which do not come within the limits of the prefent article. We only took this opportunity of thowing how imperfect is the theory of machines in equilibrio for giving us any knowledge of their performance or juft principles of their conftruction.

One thing, however, muft be particularly attended to in this theory. The forces which are applied to the body moveable round an axis are confidered in the theory as preffures actually exerted on the impelled points of the body or machine, as when a weight is appended to a lever or wheel and axle, and, by defcending uniformly, acts with its whole weight. In this cafe the weight multiplied by its diftance from the axis will always exprefs its momentum, and the rotation will (ce-
taris parisus) be proportional to this product. But in ternal impulfions. A body in motion ftrikes on the impelled point of the machine, and caules it to turn round its axis. It is natural for us to confider the quantity of motion of this impelling body as the meafure of our moving force. Suppoling \(n\) to be its quantity of matter, and \(V\) its velocity, \(n \mathrm{~V}\) appears a very proper meafure of its intenfity. And if it be applicd at the difance CP from the axis of rotation, \(n \mathrm{~V} \cdot \mathrm{CP}\) fhould exprefs its cnergy, momentum, or power to turn the machine round \(C\); and we ftould exprels the angular velocity by \(\frac{n V \cdot \mathrm{CP}}{\int p r^{2}}\). Accordingly, this is the manner in which calculations are ufually made for the conftruction and performance of the machine, as may be feen in almof every tratife of mechanics.

But nothing can be more erroneous, as we fhall fhow shown to by a very fimple inftance. It fhould refilt from thefe be errone principles that the angular welocity will be proportional \({ }^{\text {ncous. }}\) to CP. Let us fuppofe our moving power to be a ftream of water moving at the rate of ten feet per fecond, and that every fecond there paffes 100 pounds of water. We hould then call our moving force 1000 . It is evident, that if we fuppole the arm of the floatboard on which it frikes to be infinitely long, the impelled point can never move fafter than 10 feet in a fecond, and this will make the angular velocity infinitely frall, inftead of being the greatef of all. The rotation will therefore certainly be greater if CP be fhorter. We need not examine the cafe more minutely.

We mutt thercfore carefully diftinguifh between the Dinisation quanrity of motion of the impelling body and its mo-t ving power, as it is modilied by its manner of acting. The moving power is the preflure aflually exerted on the tity quanimpelled point of the machine. Now the univerfal fact of tion and the equality of action and reaction in the collifion of moving bodies aflures us, that their mutual preffure in their collition is meafured by the chanse of motion which each an impelfutai for tlis \({ }^{-}\)of motion is body. fuftains: for tlris change of motion is the only indication and meafure of the preffure which we fuppofe to be its caufe. A way therefore of afcertaining what is the real moving force on a machine actuated by the impulfion of a moving body, is to difcover what quantity of motion is loft by the body or gained by the machine; for thefe are equal. Having difcovered this, we may proceed according to the propolitions of rotatory motion.

Therefore let AEF (fig. 8.) reprefent a body moveable ronnd an axis paffing through C , perpendicular to the plane of the figure. Let this body be Atruck in the point \(A\) by a body moving in the direction FA, and let BAD be a tangent to the two bodies in the point of collifion. It is well known that the mutual actions of two folid bodies are always exerted in a direction perpendicular to the touching furfaces. Therefore the mutual preflure of the two bodies is in the direction AP perpendicular to AD. Therefore let the motion of the impelling body be refolved into the directions \(A P\) and AD. The force AD has no fhare in the preffure. Therefore let V be the velocity of the impelling body eftimated in the direction AP, and let \(n\) be its quantity of matter. Its quantity of motion in the direction AP will be \(n \mathrm{~V}\). effct

\section*{\(R \quad 0 \quad T\)}

R O T
R tion. " effect would be to prefs the axis on its fupports. But AP, the direction of the preflure, being inclined to AC, the point A is forced afide, and in fome fmall moment of time defcribes the little arch \(\mathrm{A} a\) round the centre C . The point P will therefore defribe a fmall arch \(\mathrm{P} p\), fubtending an angle \(\mathrm{PC} p=\mathrm{AC} a\). Draw ao perpendicular to AP , and a d perpendicular to AD . The triangles \(d \mathrm{~A} 0, \mathrm{ACP}\) are fimilar, and \(\mathrm{A} a: \mathrm{A}_{0}=\) \(\mathrm{AC}: \mathrm{CP}\). But the angles \(\mathrm{AC} a, \mathrm{PC} p\) being equal, the arches are as their radii, and \(\mathrm{A}_{a}: \mathrm{P}_{p}=\mathrm{AC}: C P\), \(=\mathrm{A}_{a}: \mathrm{A}_{0}\); therefore \(: p=\mathrm{A}_{0}\).
Now finee, in confequence of the impulfe, A defcribes \(\mathrm{A}_{a}\) in the moment of time, it is plain that \(\mathrm{A}_{0}\) is the fpace through which the impelling hody continues to advance in the direction of the preffure; and if V be taken equal to the fpace which it deferibed in an equal moment before the ftroke, \(v\) will exprefs the remaining velocity, and \(\mathrm{V}-v\) is the velocity lont, and \(n(\mathrm{~V}-v)\) is the quantity of motion loft by the impelling body, and is the true meafure of the preflure exerted. This gives us the whole circumflances of the rotatory motion. The angular velocity will be \(\frac{n(\mathrm{~V}-v) \cdot \mathrm{CP}}{\int p r^{2}}\), and the velocity of the point A will be \(\frac{n(\mathrm{~V}-v) \cdot \mathrm{CP} \cdot \mathrm{CA}}{\int p r^{2}}\). Call this velocity \(u\). The fimilarity of triangles gives us CA : \(\mathrm{CP}=\mathrm{A} a\) (or \(u\) ) : \(\mathrm{A} \circ\) (or \(v\) ) and \(u=\frac{v_{0} \mathrm{CA}}{\mathrm{CP}}\). Therefore \(\frac{V \cdot C A}{C P}=\frac{n(V-v) C P . C A}{\int P^{2}}\). From this we deduce \(v=\frac{n . \mathrm{V} \cdot \mathrm{CP}^{2}}{\int p r^{2}+n . \mathrm{CP}^{2}}\), and thus we have obtained the value of \(r\) in known quantities; for \(n\) was given, or fuppofed known; fo alfo was V : and fince the direction FA was given, its diflance CP from the axis is given; and the form of the body being known, we can find the value of \(\int p r^{2}\). Now we have feen that \(v\) is alfo the velocity of the point \(P\); therefore we know the abfolute velocity of a given point of the body or machine, and confequently the whole rotatory motion.

We have the angular velocity \(=\frac{n \mathrm{~V} \cdot \mathrm{CP}}{\int p r^{2}+n \cdot \mathrm{CP}^{2}}\) : we fhall find this a maximum when \(\int p r^{2}=r . \mathrm{CP}^{2}\); and in this cafe \(\mathrm{CP}=\sqrt{\frac{\sqrt{p r^{2}}}{n}}\), and \(v=\frac{r}{2} \mathrm{~V}\). So that the greatefl velocity of rotation will be produced when the flriking body lofes \(\frac{2}{2}\) of its velocity.

What we have now delivered is fufficient for explaining all the motions of bodies turning round fixed axes; and we prefurne it to be agreeable to our readers, that we have given the inveltigation of the centres of gyration, ofcillation, and percuffion. The curious reader will find the application of thefe theorems to the theory of machines in two very valuable differtations by Mr Enler in the Memuirs of the Academy of Berlin, vols viii. and \(x\). and occafionally by other authors who have treated mechanics in a fcientific and ufeful manner, going beyond the fchool-boy elements of equilibrium.

There remains a very important cafe of the rotation of bodies, without which the knowledge of the motion - of folid bodies is incomplete; namely, the rotation of free bodics, that is, of bodies unconnected with any fixed points. We hardly fee an inflance of motion of a
the hand, a ball from a cannon, the planets themfilves, are obfersed not ouly to advance, buat alfo to whirl round. The fanous problem of the preceffion of the: equinoxes depends for its folution on this doctrine; and the theory of the working of Ships has the fame foundation. We can only touch on the leading propofitions.

We need not begin by demonftrating, that when the direction of the external force paffes through the centre of the body, the body will advance without any rotation. This we confider as familiarly known to cre:y perfon verfant in mechanics; nor is it neceffary to demonitrate, that when the direction of the movins force docs not pals through the centre of gravity, this cer.tre will fill advance in a dircetion parallel to that of the moving force, and with the fame velocity as if the direction of the moving force had paffed through it. This is the immediate confequence of the equality of action and reaction obferved in all the mechanical phenomena of the univerfe.

But it is incumbent on us to demonftrate, that when the direction of the moving force does not pais thro' the centre of gravity, the body will not ouly adrance in the direction of the moving force, but will alfo turn round an axis, and we mulf determine the pofition of this axis, and the relation fubfilting between the progreffive and rotatory motions.

The cclebrated John Bernoulli was the firt who confidered this fubject; and, in his Difquiffiones Mechanicodynamice, he has demonftrated feveral propolitions concerning the fpontaneous axis of converlion, and the motions arifing from eccentric external forees: and although he affumed for the leading principle a propofition which is true only in a great number of cafes, he has determined the rotation of Spherical bodies with great accuracy..
This combination of motions will be palpable in fome fimple cafes, frich as the following: Let two equal bodiss A and B (fig. 9.) be connected by an inflexible rod (of which we may neglect the incrtia for the prefent). Let G be the middle point, and therefore the ceatre of gravity. Let an external force act on the point \(P\) in the direction \(F P\) perpendicular to \(A B\), and let AP be double of PB. Alio let the force be fuch, that it would have caufed the fyftem to have moved from the fituation \(A B\) to the fituation \(a b\), in an indefinitely fmall moment of time, had it acted immediately on the centre G. G would in this cafe have defcribed G \(g\), A would have defcribed \(\mathrm{A}_{a}\), and B would have deferibed \(B b\), and \(a b\) would have been parallel to \(A B\) : for the force imprefled on A would have been equal to the force impreffed on 13 ; but becaufe the force acts on P , the force impreffed on A is but one half of that impreffed on B by the property of the lever: therefore the initial motion or acceleration of A will be only half of the initial motion of B; yet the centre G mull ftill be at \(g\). We fhall therefore afcertain the initial motion of the fyttem, by drawing through o a line \(\alpha \delta^{\beta}\), fo that \(A\) a thall be \(\frac{1}{2}\) of \(B \beta\). This we fhall do by making \(A C=A B\), and drawing \(C a g \beta\). Then \(z_{i}\) will be the pofition of the fyftem at the end of the moment of time. Thus we fee that the body mult have a motion of rotation combined with its prigreffive motion.

\section*{I O T}
tion GI to be perienticular to the axis \(G g\). It whi therefore be paralicl to the planes of the circles deferibed round the axis by the differeat particles. Let C G \(g\) be a plane perpendicular to CI It will cat the plane of the circle deferibed by \(A\) in a fraight line \(c \pi\), and \(\delta\) will be the centre round which \(A\) is turning. Therefore A \(g\) will be the radius vector of \(A\), and \(A b\) is perpendicular to 1 g. Let \(A d\) be perpendicolar to \(c g\), and in A \(d\) take \(A\) e equal to \(G I\) or \(g i\). It is evident, that the ablolute motion of \(A\) is comporanded of the motions \(A e\) aud \(A b\), and is the dianonal if of the parallelogram A ef \(b\). In the line \(g i\), which is perpendicular to \(G g\), take \(g r\) to \(g A\), as \(A \in\) to \(A b\). and draw \(c C\) paadlel to \({ }^{\circ} G\), and produce \(b A\) till it cut \(c g\) in \(n\). We fay that \(\mathrm{C} c\) is in this moment a fpontaneons axis of converfion ; for, becaufe \(A n\) is perpendicular to \(A g\) and \(A d\) to \(C r\), the angle \(c_{8} A\) is equal to \(d \mathrm{~A} n\), or \(f b \mathrm{~A}\). Therefore, fince \(c g: q A=f b\) \(: b A\), the triangles \(c . s A\) and \(f b A\) are fimilar, and the angle \(g A c\) is equal to \(b A f\). Take away the common angle \(g \mathrm{~A} f\), and the remaining angle \(\epsilon A f\) is equal to the remaining angle \(b A g\), and \(.1 f\) is perpendicular to A \(c\), and the incipient motion of \(A\) is the fame in refpect of diection as if it were tursing round the axie \(c\) C. Morcover, A \(f\) is to \(f b\) or \(g i\) as \(A\) cto \(c g\). Therefore, both the direction aral velocity of the ablolute motion of A isthe fame as if the body were turning round the lixed axis \(c \mathrm{C}\) : and the combined motion \(A\) e of prosrel. fion, and the motion \(A b\) of rotation round \(G\) f, are cquivalent to, and really conftitute, a monientary timple motion of sotation round the asis C c given in polition, that is, determinable by the ratio of Aeto Ab.

On the other hand, the convele propontion is, that a fimple motion of rotation round a fixed axis C c, fuch that the centre \(G\) has the velucity and direction \(G I\) perpendicular to CG, is equivalent to, and produces a motion of rotation round an axis \(G g\), along with the progreffive motion GI of this axis, This prepoition is demonitrated in the very fame way, from the conideration that, by the rotation round \(\mathrm{C} c\), we have \(\dot{c} \mathrm{~A}\) : \(c g=A f: g i\). From this we deduce, that \(A b\) is perpendicular to \(A\) fr, and that \(f b: A b=\dot{c} g: g A\); and thus we refolve the motion \(d f\) inte a motion \(A b\) of rotation round \(G_{s}\), and a motion \(A\) e of progrefion common to the whole body.

But let us not confine the progreffive motion to the dire :tion perpendicular to the axis \(G\) g. Let us fuppofe that the whole losdy, while turning round \(\mathrm{G}_{r}\), is carried forwand in the direction and with the velocity \(G K\). We can always conceive a plane L, GC, which is perpendicular to the plane in which the axis \(G g\) and the direction \(G K\) of the progreffive motion are fituated sind the motion \(G \mathrm{~K}\) nuyy be conceived as compounded of a motion GI perpendicular to this plane and to the axis; and a motion of trandlation G L, by which the axis flides along in its own direction. It is evident, that in confequence of the firf motion GI, there arifes a motion of rotation round \(C c\). It is alfo evident, that if, while the body is turning for a moment round \(\mathrm{C} i\), this line be flid along itfelt in the dircction \(c \mathrm{C}\), a motion equal to \(G L\) will be induced on every particle \(A\), and compounded with its motion of rotation A F, and that if \(f\), be drawn equal and parallel to \(G L\), will be the fitnation of the particle \(A\) when \(G\) is in \(K\)

And thus it appears, that when the progreflive mo-
- . tion is perpondicuiar to the axis of rotation \({ }^{\text {matineg }}\) throngh the centie of gravity, the two motions mogreflive and rotatury are equivalent to a momentary limple motion of rotation round a fpontaneous axis of converfion, which is at reft: hut when the progreflive motion is inclined to the axis pating thro' the centre, the foontaneous ak is of conver on is flidiag in its enn direction.

We may conceive the whole of this very diftinctly and accurately by attendins to the motion of a farden roller. We may fuppofe it ix feet in civemnfurence, and that it is dragged along at the rate of three feet in a fecond from eaft to weft, the axis of the roller lying north ard fouth. Suppofe a claik line drawn on the furface of the roller parallel to its axis. The ruller will turn once round in two fecouds, and this line will be in contatt with the gromen at the intervals of every fix tect. In that inftant the line on the roller now ipoken of is at reft, and the motion is the fame as if it were fxed, and the roller really turning round it. In foort, it is then a pontaneous axis of converfion.

Now, fuppofe the reller dragged in the fame manner and in the fame direction aluner a fhect of ice, while the jee is floating to the fonth at the rate of four feet in a fecond. It is now plain that the bller is tuming round an axis throogh its centre of giavity, while the centre is carried in the dirsction \(\int 36^{\circ} 52^{\prime} \mathrm{W}\). at the sate of tuve feet per fecond. It is alfo plain, that wh ot the line drawn on the furface of the Hone is aptlied to the ice, its only motion is that which the ice iffelf has to the fouthwerd. The motion is now a mution of rotation sound this fpontancous axis of converfon, compounded with the motion of four fect fer fecond in the direction of this axis. And thus we fee that any complication of motion of rotation round an axis pafing through the centre of giavity, and a motion of progreffion of that centre, may aluays be reluced to a momentary or incipiert motion of rotation mond another axis paralle! to the former, compounded with a motion of that axis in its own direction.
'the demonft ation which we have given of there two propofitions points ont the method of findang the axis \(\mathrm{C} r\), the incipient retation round which is equivalent to the combined progreffive motion of the body, and the fotation romal the axis \(G g\). We have only to note the rotatory velocity A fof fome particle \(\therefore\), , and its diftance \(A_{g}\) from the axis, and the progreflive velucity GI of the whole body, ind then to make G C a foorth proportional to \(A k_{3} G I\), and \(g A\), and to place \(G C\) in a plane perperdicular :0 C 1, w!ich is perpenticalar to \(G g\), and to place \(C\) un that fide of \(G g\) which is moving in the prpolite diresion to the axis.

In the limple cafe of this probletr, which we exhibited in order to give us caly and fammar notions of the fubject, it appeared that the retrograde velocity of rotation of the point \(C\) was equal to the progroffive velocity of the centre. This malt be the cafe in every point of the ciscumference of the circle of which \((\mathrm{C}, \mathrm{fg}\). o. is the radius. 'Therelore, as the benly adrances, ard turns reurd \(G\), this circle will aplly itfelf in fieceffion to the line Cl parallel to G ; and any individual print of it, fuch as \(C\), will defcribe a cycloid of which this circle is the generating circle, C K the bafe, and CG half the altitude. The other points of the body will defcribe trochoids, clongated or contracted according ass the defcribing points are nearer to or wore semote from \(G\) than the point \(C\) is.
 cafe, ats well as in this limple one. fond when we lare afeeramed the dillance GC bitween the asis of wetation \(\mathrm{E}_{\mathrm{y}}\)
 neous axis of conve:fion pafing throurg C , we cau then rasde en afeertain the relation be ween the motions of rotation moecenzand pogrefion. We then brow that the borly wind itr cat:20 ratake one rotation roand its cent 1 axis, while its centre moves over a fpace equal to the ciramfererice of a circle of a known diameter.

We muft therefore proceed to the nicthorls for determians, the polition of the point C . This mut depend on the propurtion between the weluciry of the general progrellive notion, that is, the wlucity of, the centre, and the velocity of fome point of the body:'Tlis mull be afcentained by obfervation: In mof cafes which are interelting, we lean the pulition of the axin. the place of its poles, the comparatise progreflive wis. city of the cente, and the velocity of rotation of the different points, in a warity of ways; and it wouli not much incrate oar knowledge to detail the nuke whice may be followed for this purpole. The cimentlance which chistly inturefs us at prefent is to koow how thefe motions may be produced; what toree is necel. fary, and how it mult be applied, in ordu to produce \(=\) given motion of retation and progrellion ; or what will be the motion which a given iurce, applied in a given manner, will produce.

We have already given the principles on which we may proceed i: this inveltigation. Wre have fhown the circumfances which determine the place of the centre of percultion of a buly tuming round a given fixed axis. "llhis centre of percuffion is the point of the body where all the inherent forces of the whirling body precifly balance each other, or rather where they unite and compole one accumblated progreflive force, which may then be oppofed \(t y\) an equal and oppofite exiernil force 1f, thercfure the body is not whinling, but at rett on this fred axis, end if this exiernal forec to applied a: the cemtre of percation, now become a poirst of tmpu:funa, a rotation will conamence round the fixed axis precicly equal to what had been ftopped by this external force, but in the opporte direction; or, if the external foree be applect in the direction in which the cantre of percufion of the whirling body was moving at the intlant of ftoppage, the rotation produced by this impalfe will be the fame in every uljeet. Abed we found that ia the inttant of application of this cxterat force, either toltop or to begin the motion, no prefure whaterer wae excited on the fupports of the axis, and that the axi, wes, in this intant, a !eontancous axis of convertion.

Morcover, we have 慆w, art. \(8_{4}\), that a rotation round any axis, whetlier fixed ल fpomtancons, is equivalent to, or compounded 0 , a rotatun round anuther axis \(f^{\text {tratie }}\) so \(n\), and pafling throngh the centre uf gravity, and a progrffive nution in the darection of the centue's mation at the intant of :mpulfe.

Now, as the poftion of the tacel axis, and the known cilpofition of all the patides of the body with refpest to the avis, determines the place of the centre of percuffion, and furaifes all the madienatical conditions which mutt be implementel? in its determination, and the direction and magnitade of the turee which is produced and exented at the centite of fercoffion: fo, on the other hand, t!c browledye of the magnitude and

\section*{\(\pi \quad 0 \quad T\)}

Rotation direction of an external forec which is exated on the point of impulion of a body not connected with any fixed axis, and of the difpofition of all the parts of this body with refpect to this point, of impulfion, will furnih us with the mathematical circumantances which determine the pofition of the fpontaneous axis of converfion, and thercfore determine the polition of the axis through the centre (parallel to the fpontaneous axis of converfion), round which the body will whirl, while its centre proceeds in the direction of the external force.

The procefs, therefore, for determining the axis of progreffive rotation is jut the converfe of the procefs for determining the contre of percufion.

John Bernoulli was the firft who confidered the motion of free bodies impelled by forees whofe line of direction cid not pafs througia their centre of gravity; and f.e takes it for granted, that fince the body both advances and turns round an axis paffing throngh the centre of gravity, this axis is perpendicular to the plane paffing through the dircction of the force, and through the point of inpullion and the centre of gravity. Other authors of the firt name, fuch as Huyghens, Leibnitz, Roberval, \&ec. have thought themfelves obliged to demonfrate this. Their demonflation is as follows:
Lct a body whofe centre of gravity is G (fig. 11.) be impelled at the point P by a force acting in the direction PQ not pafing through the centre. The inertia of the whole body will refift in the fame manner as if the whole natter were collected in G, and therefore the refiltance will be propagated to the point \(P\) in the direction GP. The particle P , therefore, is impulled in the direction PQ , and reifted in the direction PA , and mult therefore begin to move in fome direction PB , which makes the diagonal of a parallelogram of which the fides have the directions \(P Q\) and \(P A\). The diagonal and fides of a parallelogram are in one plane. \(P\) is therefore moving in the plane \(A P Q B\) or \(G P Q\), and it is turning round an axis which palfes through G.Therefore this axis my/t be perpendicular to the plane GPQ.

It would require a feries of difficult propofitions to flow the fallacy of this reafoning in general terms, and to determine the polition of the axis through G. We fall content ourfelves with a very limple cafc, where there can be no hefitation. Let A and B (fig. 12.) be two equal balis connected with the axis \(a b\) by inflexible lines \(\mathrm{A} a, \mathrm{~B} l\), perpendicular to \(a b\). Let \(\mathrm{A} a\) be I , and E \(\quad\) 2. 'The centre of gravity G will evidently be in the lirie \(c \mathrm{G}\) parallel to \(\mathrm{A} a\) and \(\mathrm{B} b\), and in the middle of \(a b\), and \(c \mathrm{G}\) is \(1 \frac{1}{2}\). Let O be the centre of of illation. \(c \mathrm{O}\) is \(=\frac{\mathrm{A} \cdot \mathrm{A} a^{2}+\mathrm{B} \cdot \mathrm{B} b^{2}}{\overline{\mathrm{~A}+\mathrm{B} \cdot c \mathrm{G}}},=\frac{5}{3} .-\) Draw \(\mathrm{A} m, \mathrm{~B} n\) perpendicular to \(c \mathrm{G}\), and fuppofe the balls transferrect to \(m\) and \(n\). Their centre of ofcillation will be itill at O ; and we fee that if the fyliem in this form were ltopped at \(O\), all would be in equilibrio. For the force with whicl the ball A arrives (by fwinging round the axis) at \(m\), is as its quantity of matter and velocity jointly, that is, A.A a, or 1 . That of B arriving at \(n\) is \(\mathrm{B} . \mathrm{B} b\), or 2. The arm \(m \mathrm{O}\) of the lever turning round O is \(\frac{2}{5}\), and the arm \(n \mathrm{O}\) is \(\frac{7}{\top}\). The forces, therefore, are reciprocally as the arms of the lever on which they act, and their momenta, or powers to turn the line \(m n\) round \(O\), are equal and oppofite, and therefore balance each other; and therefore, at the
inflant of floppirg, no preffure is exerted at \(c\). Therefore, if any impulfe is made at \(O\), the balls at \(m\) and \(n\) will be put in motion with velocities \(I\) and 2 , and \(c\) will be a fpontancous centre of converfion. Let us fee whether this will be the cafe when the balls are in their natural places \(A\) and \(B\), or whether there will be any tendency to a rotation round the axis \(c \mathrm{O}\). The momentum of \(A\), by which it tends to produce a rotation round \(c \mathrm{O}\) is A. A \(a . \mathrm{A} m,=\mathrm{I} \times \mathrm{A} m\) : That of B is \(\mathrm{B} . \mathrm{B} b . \mathrm{B} n_{3}=2 \times \mathrm{B} n . \mathrm{A} m\) and \(\mathrm{B} n\) are equal, and therefore the momentum of B is double that of A , and there is a tendency of the fyttem to turn round 60 ; and if, at the inftant of floppage, the fupports of the axis \(a b\) were removed, this rotation round \(c \mathrm{O}\) would take place, and the point \(b\) would advance, and \(a\) would recede, \(c\) only remaining at reft. Therefore, if an impulfe were made at \(O, a b\) would not become a fpontaneous momentary axis of converlion, and \(O\) is not the centre of percuffion. This centre mult be fomewhere in the line OI parallel to \(a b\), as at P , and fo fituated that the momenta \(\mathrm{A}, \mathrm{A} a . \mathrm{A} \alpha\) and \(\mathrm{B}, \mathrm{B} \beta, \mathrm{B} \beta\) may be equal, or that \(\mathrm{A}_{\mathrm{a}}\) may be double of \(\mathrm{B}_{\varepsilon}\), or ap double of \(\iota_{\rho}\). If an impulfe be now made at P , the balls A B will be urged by forces as 1 and 2, and therefore will move as if round the axis \(a b\), and there will be no preffures produced at \(a\) and \(b\), and \(a b\) will really become a momentary fpontaneous axis of converfion.

Now join G and P. Here then it is evident, that a body or fytem \(A, B\), receiving an impulfe at \(P\) perpendicular to the plane \(a \subset \mathrm{G}\), acquires to itfelf a ipontaneous axis of converfion which is not perpendicular to the line joining the point of impreffion and the centre of gravity. And we have fhown, in art. 84. that this motion round \(a l\) is compounded of a progreffive motion of the whole body in the dircction of the centre, and a rotation round an axis paffing through the centre paratlel to a \(b\). Therefore, in this fyttem of free bodies, the axis of rotation is not perpendicular to the plane paffing through the centre of gravity in the direction of the impeling force.

As we have already obferved, it would be a lahorious Difficulty tafk to afcertain in general terms the pofition of the of afcerprogreffive axis of rotation. Although the procefs is taining its the inverfe of that for determining the centre of per- Fofition in cuffion when the axis of rotation is given, it is a molt general intricate bufinefs to convert the fteps of this procefs. The general method is this: The momentum of a particle A (fig. 5.) by which it tends to change the poiftion of the axis \(\mathrm{D} d\), has for its factors A a \(\mathrm{A} l\), and \(\mathrm{A}^{2}\), which are its diftances from three planes \(\mathrm{D} d \delta \Delta\), \(\mathrm{DCO} n\), and \(\mathrm{C}_{\gamma_{x}}\), given in pofition. The fum of all thefe muft be equal to nothing, by the compenfation of pofitive and negative quantities. We muit find three other planes (of which only one is in fome meafure deternined in pofition, being perpendicular to DCO \(n\) ), fo fituated that the fums of fimilar products of the diftances of the particles from them may in like manner be equal to nothing. This is a very intricate problem; fo intricate, that mathematicians have long doubted and difputed about the certainty of the folutions. Enler, d'A lembert, Frifi, Landen, and others, have at laft proved, that every body, however irregular its fhape, has at leaft three axes paffing through its centre of gravity, round which it will continuc to re-

\section*{R O T} volve while proceeding forward, and tlat thefe are at right angles to each other; an they have given the conditions which muft be implemented in the determination of thefe axes. B w they ill leave us excecdinrrly at a lofs for means to difcover the pofitions of the axes of a given body which have thefe conditions.

To folve this problem therefore in general terms, would lead to a difquifition altogether difproportioned to our work. We mult reftri \({ }^{7}\) ourfelves to thofe forms of body and fituations of the point of impulfion which adnuit of the coincidence of the centres of ofcillation and percuffion; and we muft leave out the cafes where the axis has a motion in the direction of its length ; that is, we thall always fuppofe the fpontancons axis of converfion to have no motion. Thus we fuall compreliend the phenomena of the planetary motions, fimilar to the preceffion of our equinoctial points, and all the interefting cafes of practical mechanics. The fpeculative mathematical reater will fill up the blanks of this inveftigation by confulting the writings of Euler and D'Alembert in the Berlin Memoirs, Frifi's Cofmographia, and the papers of Mr Landen, Mr Milner, and Mr Vince, in the Philofuphical 'Tranfactions. But we hope, by means of a beautiful propofition on the compofition of rotatory motions, to enable every reader to difcover the pofition of the axis of progreffive rotation in every cale which may intereft him, without the previons folution of the intricate problem mentioned above.

Let \(A B P C p<A\) (fig. 13.) be a fection of a body ghrough its centre of gravity \(G\), fo formed, that the part \(A B P C\) is fimilar, and fimilarly placed with the part \(A b p C\), fo that the plane \(A C\) would divide it equally. Let this body be impelled at \(P\) in the direction HP, perpendicular to the plane AC. The axis round which it will turn will be perpendicular to \(G \pi\). Suppofe it at \(A\). Then drawing \(A B\) and \(A b\) to fimi. lar points, it is plair- that \(\mathrm{B} \beta, b \beta\) are equal and oppofite; thefe reprefent the forces which would raife or lower one end of the axis, as has becn already obferved. The axis therefore will remain perpendicular to \(G \pi\) 。

Let the body be fo fhaped, that if the parts to the right and left of the point of impulfe \(\pi\) (the impulfe is here fuppofed not perpendicular to the plane AC, but in this plane) are equal and fimilarly placed; then the momenta round \(A C\) mult balance each other, and the axis EF will have no tendency to go out of the plane \(A B C b A\) perpendicular to the impulfe.

Any body whofe fhape has thefe two properties will turn round an axis pespendicular to the plane which paffes through the centre of gravity in the dircetion of the impeling force. This condition is always found in the planets when difturbed by the gravitation to a diAtant planet: for they are all figures of revolution. The direction of the difturbing or impelling force is always in a plane paffing through the axis and the difturbing body.

With fuch limitations therefore we propofe the fol lowing problem:

Let \(G\) (fig. 14.) be the centre of gravity of a body in free fpace, which is impelled by an cxternal force \(f\), acting in the line FP, which does not pafs through the centre. Let \(m\) be the number of equal particles in the body, or its quantity of matter. Let the force \(f\) be
fuch, that it would communicate to the body the velo. Rotation. city \(v\); that \(i s\), would caule the centre to move with the velocity \(\%\). It may be exprefled by the quantity of motion which it produces, that is, by \(m\) i, and it would produce the velocity \(m v\) on one particle. It is required to determine the whole motion progreffive and rotatory, which it will produce, and the fpace which it will deforibe during one twon mond its axis.

Draw GI parallel and PGC perpendicula. o FP, and let GI be taken for the meafure of the progreflive velocity \(v\).

It has been demonfrated that the centre G will proe ceed in the direction GI with the velocity, and that the body will at the fame time tum round an axis paffing through G, perpendicular to the plane of the figure, every particle defcribing circles in paralle planes round this axis, and with velocities of rotation proportional to their diftances from it. There is therefore a certain dillance GB, fuch that the vclocity with which a particle defcribes its circumference is cqual to the progref. five velocity w. Let LCD be this circumference. When the particle defcribing this circumference is in the line CGP, and in that part of it which lies beyond P from \(G\), its abfolute velocity mult be double that of the centre \(G\); but when it is in the oppofite point \(C\), its retrograde velocity being equal to the progreflive velocity of the centre, it muft be at ret. In cvery pofition of the body, therefore, that point of the accompanying circumference which is at this extremity of the perpendicular drawn through the contre on the line of dire ion of the impelling force is at reft. It is at that inftant a fpontancous contre of convertion, and the Atraight line drawn though it perpendicular to the plane of the figure is then a fpontaneous axis of converfion, and every particle is in a momentary fate of rotation round this axis, in directions perpendicular to the lines drawn to the axis at right angles, and with velocities proportional to thele diftances; and laftly, the body advances in the direction GI through a fpace equal to the circumference BCD , while it makes one turn round G .

Let \(A\) be one of the particles in the plane of the figure. Join AC, AG, AP. Draw A \(l\), A \(c, A d\) perpendicular to \(\mathrm{CP}, \mathrm{CA}, \mathrm{GA}\). The abfolute motion Ac of \(A\) is compounded of the progrcfive motion A \(b\) common to the whole budy and equal to GI, and the motion \(A d\) of rotation round the centre of gravity \(G\). 'I'herefore fince \(A b\) is equal tor \(r\), and \(A c\) is the diagonal of a parallelogram given both in fpecies and inagnitude, it is alfo given, and (as appears alfo from the reafoning in art. 85 .) \(\dot{r}\) is to Gl as CA to CG.

By the application of the foree \(n v\) in the direction FP, every particle of the body is ciragged out of its place, and exerts a refiftance equal to the notion which it acquircs. A part of this force, which we may call \(m \varepsilon\), is employed in communicating the motion \(A c\) to A. Therefore \(m\) r, which we have, and, from what has been lately fown, \(\mathrm{CG}: \mathrm{CA}=\mathrm{GI}: \mathrm{Ac},=v: \Delta c\), and therefore \(A_{c}=\frac{2 \cdot \mathrm{CA}}{\mathrm{CG}}\). But farther (agreeably to what was demonitrated in art. 16.) we liave \(C P: C A\) \(=A_{6}: m \dot{\varepsilon},=\frac{v \cdot \mathrm{CA}}{\mathrm{CG}}: m \dot{v}\), and thercfore \(m \dot{\varepsilon}=\) ข.C. \({ }^{\text { }}\)

\section*{\(120 \mathrm{~T} \quad[j: 0]\) IR O T}

Therefore the whide force employed in communicatisg to cach particle the motion it really acquires, or \(m \tau\), is equal to the fluent of the quantity \(\frac{\text { r. } \mathrm{CAs}^{2}}{\mathrm{Cl.CG}}\) v: \(m v=\frac{n \cdot \int C A}{C P C G}\), and \(m_{2} C P \cdot C G=\int C^{2}\), which by art. 23. is equal to \(\int \mathrm{GA}^{2}+m \cdot C G^{2}\). Therefore we hate \(m . C P . C G-m . C G . C G=/ G .1^{2}\), or m.G1.CG \(=\int \mathrm{CrA}^{2}\), and finally, \(\mathrm{CC}=\frac{/ \mathrm{CA} \mathrm{A}^{2}}{m . \mathrm{GP} .}\)

Now the form of the body gives us \(/ \mathrm{Cat}^{2}\), and the polition of the impelling force gives us m.GP. Therefore we can compute the value of \(C G\); and if \(T\) be the periphery of a circle whofe radius is unity, we have т.CG equal to the fpace which the body muft defribe in the direftion GI, white it makes one rutation round its axis.
Cor. 1. The angular velocity, that is, the number of turns or the number of degrees which one of the radii will make in a given time, is proportional to the impelling force: for the length of CG depends only on the form of the body and the fituation of the point of impultion; while the time of defcribing a times this length is inverfly as the force.
2. The angular velocity with any given force is as GP: for CG, and confequently the circumference त. CG, defcribed during one turn, is inverfely as GP.
3. PC is equal to \(\frac{/ \mathrm{PA}^{2}}{m \cdot \mathrm{GP}}\) : for we have \(\int \mathrm{PA}^{2}=\) \(\int G A^{2}+m \cdot G P=\quad\) Therefore \(\frac{\int P A^{2}}{m \cdot G P}=\frac{\int G \cdot A^{2}}{m \cdot G P}\) \(+\frac{m \cdot \mathrm{GP}^{2}}{m \cdot G P},=C \mathrm{G}+\mathrm{GP},=\mathrm{CP}\).
4. If the point \(C\) is the centre of impulfion of the fame body, \(P\) will be a (pontaneous centre of converfion (fee art. 41). at G , will fop the progreflive motion, but will make no change in the rotation; but if it be applied at \(P\). it will ftop all motion both progreffive and rotatory. If applied between P and G , it will fop the progreffive motion, but will Lcave fome motion of rotation. If anplied beyond P it will leave a rotation in the oppofite direction. If applied beyond G , or between G and C, it will increafe the rotation. All this will be eafi! y conceived by refecting on its effect on the body at reft.
6. A whirling body which has no progreflive motion cannot have been brought into this flate by the attion of a fingle force. It may have been put into this condition by the fimultaneous operation of two equal and oppofite forces. The equality and oppofition of the forces is neceflary for fopping all progreffive motion. If one of thens lias acted at the centre, the rotatory motion has been the effect of the other only. If they have acted on oppofite fides, they confpired with each sther in producing the rotation ; but have oppofed each other if they acted on oppofite fides.

In like manner, it is plain that a motion of rotation, together with a progreflive motion of the centre in the direction of the axis, could not have been produced by she action of a fingle force.
7. Whe the fpace \(S\) which a body defcribes du. ring one rotation has been obferved, we can difcover the point of impulfe by which a fingle force may have acted in producing both the motions of progreffion and rotation: for \(C G=\frac{S}{\pi}\), and \(. G P=\frac{\int \mathrm{GA}^{2}}{n \cdot C G},=\) \(\pi \int G^{\pi} I^{2}\)
m.S .

In this manner we can tell the ditances from the Applicrin centre at which the fun and planets may have received of his do: the fingle impulfes which gave them both their motions trine tote of revolution in their orbits and rotation round their motions axes.

It was found (art. 40.f) that the ditance \(O G\) of the centre of ofcillation or percuffion of a fphere fwinging round the fixed point \(C\) from its centre \(G\), is \(\frac{2}{5}\) of the thind proportional to CG , and the radius of the fphere, or that \(O G=\frac{2}{5} \frac{\mathrm{RG}^{2}}{\mathrm{CG}}\). Suppofing the planets to be homogeneous and ؟pherical, and calliner the radius of the planet \(r\), and the radius of its orbit R , the time of a rotation round its axis \(t\), and the time of 2 revolution in its orbit \(\Gamma\), and making \(1:\) : the ratio of radius to the periphery of a circle, we fhall have - R for the circumference of the orbit, and \(+\mathrm{R} \frac{1}{T}\) for the arch of this circumference deferibed during one rotation round the axis. This is \(S\) in the abovemen. tioned furmula. Then, diminifhng this in the ratio of the circumference to radius, we obtain \(\mathrm{CG}=\mathrm{R} \frac{t}{\mathrm{~T}}\), and \(\mathrm{OG}=\frac{2}{5} \frac{r^{2}}{\mathrm{CG}},=\frac{2}{5} \frac{T r^{2}}{t R}\). This is equivalent to \(\pi \mathrm{GA}^{2}\) \(\frac{\mathrm{m}_{\mathrm{s}}}{\mathrm{S}}\), and eafier obtained.
This gives us Gvo
\[
\left.\begin{array}{rr}
\text { For the Earth }= & \frac{r}{157} \\
\text { Mcon } & \frac{r}{555} \\
\text { Mars } & \frac{r}{195} \\
\text { Jupiter } & \frac{r}{2,8125} \\
\text { Saturn } & \frac{r}{2,588}
\end{array}\right\} \text { nearly. }
\]

We have not data for determining this for the furs But the very circumflance of his having a rotation in \(27^{1} 7^{h}+7^{\prime}\) makes it very probable that he, with all his attending planets, is alfo moving forward in the celcAtial fpaces, perhaps round fome centre of till more ge. neral and extenfive gravitation: for the perfect oppofition and equality of two forees, neceffary for civng a rotation without a progreffive motion, has the odils againf it of infnity to unity. This corroborates the conjectures of philcfophers, and the obfervations of Herfchel and other aftronomers, who think that the folar fyftem is approaching to that quarter of the heavens in which the confellation Aquila is fituated.
8. As in the communication of progrefive motion among bodirs, the fame quantity of motion is preferved befure and after collifion, fo is the communication of ro-

\section*{R O 'T}
on. fation among whirling bodies the quantity of rotatory - momentum is preferved. 'This appears from the general tenor of our formulx : for if we fuppole a body turning round an axis paffing through its centre, without any progreflive motion, we mult fuppofe that the force \(m v\), which put it in motion, has been oppofed by an equal and oppofite force. Leet this be fuppoled to have acted on the centre. Then the whole rotation has been the effect of the other acting at fome diftance GP from the centre. Its momentum is \(m v . G P\). Had it acted alone, it would have produced a rotation compounded with a progreflive motion of the centre with the velocity \(v\); and the body acquires a momentary fpontaneous axis of converfion at the diftance \(G C\) from the centre of gravity. The abfolute velocity AC of any particle is \(\frac{v . A C}{C G^{-}}\); its momentum is \(\frac{v . A C^{2}}{G C^{2}}\), and the fum of all the momenta is \(\frac{\int v . A C^{2}}{C G}\), or \(\frac{v \int A C^{2}}{C G}\), and this is equal to \(m v . G P\). But when the progreffive motion is ftopped, A \(b\), which was a conftituent of the abfolute motion of \(A\), is annihilated, and nothing remains but the motion \(A d\) of rotation round G. But the triangles \(d \mathrm{Ac}\) and G.AC were demonftrated ( \(\mathrm{n}^{\circ}\) 81.) to be fimilar; and therefore \(\mathrm{AC}: \mathrm{Ad}\) \(=\mathrm{CA}: \mathrm{GA}\). Therefore the abfolute velocity of the particle, while turning round the quiefeent centre of gravity \(G\), is \(\frac{v . G A}{G C}\); its momentum is \(\frac{v^{2} \cdot G A^{2}}{G C}\); the fum of all the momenta is \(\frac{v / G A^{2}}{G C}\); and this is ftill equal to \(m v\). Obferve, that now \(G C\) is not the diflance of the centre of converfion from the centre of gravity, becaufe there is now no fuch thing as the fpontancous axis of converfion, or rather it coincides with the axis of rotation. GC is the diftance from the centre of a particle whofe velocity of rotation is equal to \(\%\)

Now let the body be changed, either by a new diftribution of its parts, or by an addition or abftraction of matter, or by both; and let the famc force mvact at the fame diflance GP from the centre. We Qhall fill have \(m\) v.GP \(\frac{v \int G A^{2}}{G C}\); and therefore the fum of the momenta of the particles of the whirling body is fill the fame, viz. equal to the momentum of the forcc \(m v\) acting by the lever GP. If therefore a free body has been turning round its centre of gravity, and has the diftribution of its parts fuddenly changed (the centre however remaining in the fame place), or has a quantity of matter fuddenly added or taken away, it will turn with fuch an angular velocity that the fum of the momenta is the fame as before.

\section*{\({ }^{107}\) plication. We have been fo particular on this fubject, becaufe} plication it affects the celebrated problem of the preceffion of che pro- the equinoxes; and Sir Ifaac Newton's folution of it is He computes the velocity with which a quantity of matter equal to the excefs of the terreftrial fpheroid over the inferibed fplere would perform its librations, if detached from the fpherical nucleus. He then fupfofes it fuddenly to adhere to the fphere, and to drag it into the fame libratory metion; and he computes the

Vol. XVI. Part II,
libration of the whole mafs, upon the fuppofition that the quantity of motion in the libratory fpheroid is the fame with the previous quantity of motion of the librating redundant ring or fhell; whereas he fhould have computed it on the fuppofition that it was the quantity of momenta that remained unchanged.

The fame thing obtains in rotations round fixed axes, as appears by the perfect famenefs of the formulx for both claffes of motions.

This law, which, in imitation of the Leibnitzians, we might call the confervatio momentorum, makes it of importance to liare expreffions of the value of the accumulated momenta in fuch cales as molt frequently oceur. The moft frequent is that of a Iphere or fpheroid in rotation round an axis or an equatorial diameter ; and a knowledge of it is neceffary for the folution of the problem of the preceffion of the equinoxes. See Precession, no 33 .

Let APap(fig. 15.) be a fphere turning round the diameter \(P_{p}\), and let \(\mathrm{DD}, d d^{\prime}\) be two circles parallel to the equator \(A n\), very near each other, comprehending between them an elementary flice of the fphere. Let CA be \(=a, \mathrm{CB}=x\), and \(\mathrm{BD}=y\), and let \(\pi\) be the circumference of a circle whofe radius is 1 . Laftly, let the velocity of the point \(A\) be \(v\). Then
\(v^{y} \frac{y}{a}\) is the velocity at the diftance \(y\) from the axis, \(\Rightarrow y\) is the quantity of matter in the circumference whofe radius is \(y\); for it is the length of that circumference when expanded.
\(\frac{v \pi y^{3}}{a}\), or \(\frac{v y}{a} \times \pi y\), is the quantity of motion in this circumference turning round the axis \(\mathrm{P}_{p}\).
\(\frac{v+y^{\frac{3}{3}}}{a}\) is the momentum of the fame circumference.
\(\frac{v \pi y^{3}}{a} \dot{y}\) is the fluxion of the momentun of the circle whofe radius is \(y\), turning in its own plane round the axis.
\(\frac{v+y^{4}}{4^{*} a}\) is the fluent, or the momentum of the whole circle; and therefore it is the momentum of the circle DD.
\(\frac{v \pi y^{4} x}{4^{a}}\) is the fluxion of the momentum of the hemifphere; for \(\mathbf{B} b=\dot{x}\), and this fraction is the momen. tum of the fice \(d \mathrm{DD} \mathrm{D}^{\prime} d^{\prime}\).
\(y^{2}=a^{2}-x^{2}\), and \(y^{4}=a^{4}-2 a^{2} x^{4}+x^{4}\). Therefore \(\frac{v^{\pi}}{2 a} \times\left(a^{+} x-2 a^{2} x^{2} x+x^{4} \dot{x}\right)\) is the fuxion of the momentum of the whole fphere. Of this the fluent for the fegments whofe heights are \(C B\), or \(x\), is \(\frac{\pi}{2 a}\) \(\left(a^{4} x-\frac{2 a^{2} x^{3}}{3}+\frac{x^{5}}{5}\right)\).

Let \(x\) become \(a\), ind we have for the nomatstum of the whole fphere \(\frac{\eta^{9}}{2 a}\left(a^{5}-\frac{2}{5} a^{5}+\frac{5}{5} a^{5}\right)=v=\left(\frac{b^{3}}{2}-\right.\) \(\left.\frac{a^{4}}{3}+\frac{a^{4}}{10}\right)=v v_{x}^{4} \leq a^{4}\).

Let us fuppofe that this rotation has 1 cen prodiced ty the action of a force \(m u\); that is, a ferce which would communicate the velocity \(u\) to the whele matter 3 U

\section*{\(R \quad[522] \quad \mathrm{R} O \quad \mathrm{~T}\)}

Rnation. of the fphere, had it acted in a direction paffing through its centre; and let us fuppofe that this force acted on the equatorial point \(A\) at right angles to \(A C\) : Its momentum is \(m u a\), and this is equal to \(v=\frac{4}{15} a^{4}\). Allo, we know that \(m=\frac{2}{3}=a^{3}\). Therefore we have \(u \cdot \frac{2}{3}\) * \(a^{4}=v \frac{4}{5} * a^{4}, \frac{2}{5} u=\frac{4}{5} v\), and \(v=\frac{5}{5} u\).

Let EPQ \(p\) be an oblate fpheroid whofe femi-axis PC is \(a\), and equatorial radius EC is \(b\), and let \(v\) be the velocity on the equator of the inferibed fphere. Then fince the momentum of the whirling circle DD is \(\frac{v \tau 9^{4}}{4^{a}}\), the momenta of the fphere and fpheroid are in the quadruplicate ratio of their equatorial radii ; and therefore that of the whuls fpheroid is \(\frac{4}{5}+b^{+} v\). And if \(w\) be the velocity at E correfponding to the velocity \(v\) at A , fo that \(w=\frac{b}{a} v\), we have the momentum of the fpheroid, expreffed in terms of the equatorial velocity at the furface, \(\frac{4}{15} b^{3} a w\)

If the fame force \(m u\) be made to att in the fame manner at E , its momentum \(n b b\) is \(=\frac{4}{43} b^{1} a w\), and
 which the fame force \(m u\) acting at A or E will producc in the fpherc and the fpheroid, are as \(\frac{15 m u}{4^{x} a^{\prime}}\) and \(\frac{15 m u}{4 b^{3} a}\), that is, in the triplicate 1 atio of the equatorial diametcr \(b\) to the polar axis a.
Lafty, if the oblate fpheroid is made to turn round an equatorial diameter paffing through C perpendicular to the plane of the figure, it is plain that every fection parallel to the meridian EPQ \(p\) is an ellipfe fimilar to this meridian. If this ellipfe differs very little from the infcribed circle, as is the cafe of the earth in the problem of the preceffion of the equinoses, the momentum of each eilipfe may be confidered as equal to that of a circle rf the fame area, or whofe diameter is a mean proportional between the equatorial and polar diameters of the fphacroid. This radtus is to the radius of the circumfcribed circle as \(\sqrt{b a}\) to \(l\). Therefore the momenta of the fection of the fpheroid and of the circumferibed fphere are in the conflant ratio of \(b^{2} a^{2}\) to \(b^{4}\), or of \(a^{2}\) \(10 b\). And if the velocity in the equator of this circumfcribed fphere be called \(w\), the momentum of the fphere is \({ }^{4}{ }^{4} \pi b^{4} w\); and therefore that of the fpheroid is its \(\pi b^{2} a^{2} w\), agreeably to what was affumed in the article Precession, n 33.

This value of the momentum of a fpheroid round an equatorial diametcr is only a very eafy approximation ; an exact value may be obtained by an infinite feries. The whole matter of the fpheroid may be confidered as uniformly diftributed on the furface of a fimilar fpheroid whofe diameter is \(=\sqrt{\frac{5}{2}}\) of the diameter of the fpheroid. It will have the fame momentam, becaufe a triangle in one of the ellipfes, having an elementary arch of the circumference for its base, and the centre of the ellipfe for its vertex, has its centre of gyration diflant from the vertex \(\sqrt{\frac{5}{2}}\) the length of the radius of the ellipfe, and the problem is reduced to the finding the fum of thefe lines. But even when the ferics for this fum involves the 3 d power of the eccentricity, it is not more exact than the above approximation.

A fimilar propofition may be obtained for a prolate spheroid vibrating round an equatorial diameter, and
applied to the conjectural thape of the moon, for e:plaining her ofcillations.

The reader mult have obferved that the preceding 113 difquifitions refer to thofe motions only which refult to y mo from the action of external forces and to the fate of cionsacincipient motion. All circular motions, fuch as thofe companies of rotation, are accompanied by centrifugal forces. A by centricentral force is neceflary for retaining every particle in its circular path ; fuch forces mult therefore be excited in the body, and can arife only from the forces of cohefion by which its particles are held together. Thefe forces are mutual, equal, and oppofite; and as much as a particle \(A\) (fg. 5.) is retained by a force in the direction \(A a\) of the line which connects it with the fixed axis \(\mathrm{D} d\), or in the direction \(\lambda \mathrm{G}\) (fig. 10.), which connects it with the progreflive axis; fo much muft the point a of the axis \(\mathrm{D} d\) be urged in the oppolite direc. tion a A, or fo much mult the whole body be urged in the direction GA. Every point therefore of the axis 1) \(d\), or of the axis through \(G\) in fig. 10 . is carried in a variety of directions perpendicular to itfelf. Thefe forces may or may not balance each other. If this balance obtains with refpect to the fixed axis, its fupports will fuftain no preffure but what arifes from the external force; if not, one fupport will be more preffed than the other; and if both were removed, the axis would change its pofition. The fame mult be affirmed of the axis through \(G\) in fig. 10 . This, having no fupport, mult change its polition.

And thus it may happen, that the axis of rotation paffing through \(G\) which has been determined by the preceding difquilitions, is not permanent either in refpeet of the body, or in refpeet of abfolute fpace. Thefe two rotations are effentially different. The way to conceive both is this. Suppofe a fpherical furface deferibed round the body, having its centre in the centre of gravity; and fuppole this furface to revolve and to proceed forward along with the body : in fhort, let it be conceived as an immaterial furface attached to the body. The axis of rotation will pals through this furface in two points which we fhall call its poles. Now, we fay that the axis is permanent with refpect to the body when it has always the fame poles in this fpherical furface. Suppofe another fpherical furface deferibed round the fame centre, and that this furface alfo accompanies the body in all its progreflive motion, but does not turn with it. The axis is permanent with refpect to abfolute face when it has always the fame poles in this furface: it is evident that thefe two facts are not infeparable. A boy's top fpins on the fame point and the fame corporeal axis, while, towards the end of its motion, we oblerve it directing this round and round to different quarters of the room. And when we make an egg or a lemon fpin with great rapidity on its fide on a level table, we fee it gradually rife up, till it fand quite on end, fpinning all the while round an axis pointitg to the zenith.

This change in the pofition of the axis is produced by the unbalanced actions of the centrifugal forces exerted by the particles. Suppofe two equal balls \(A\) and \(B\) (fg. 16.) connected by an inflexible rod whole middle point is \(G\), the centre of gravity of the balls. This fyltem may be made to turn round the material axis \(\mathrm{D} d\), \(A\) defcribing the circle \(A E F A\), and \(B\) defcribing the circle BHKB. The \(\operatorname{rod} A B\) may alfo be conccived

Rot nin. as moveable round the point \(G\) by means of a pin at through the fituations A and B; their centrifugal forces urge them at the fame time in the directions \(C A\) and \(O B\), which impulions confpire to make the connecting rod recede from both ends of the axis D d . And thus the balls, inttead of deferibing parallel circles round this axis, will defcribe parallel Spirale, gradually opening the angles DGA, \(a\) GB more and more, till the balls acquire the pofition \(\alpha^{\beta}\) at right angles to the axis. They will not fop there, for each came into that pofition with an oblique motion. They will pals it ; and were it not for the refiftance of the air and the friction of the joint at \(G\), they would go on till the ball is came to defcribe the circle BHK, and the ball B to defcribe the circle AEF. The centrifugal forces will now have exhaufted by oppofition all the motions which they had acquired during their paflage from the pofition \(A B\) to the pofition \(\alpha \beta\); and now they will again defcribe fpirals gradually opening, and then contracting; till the balls arrive at their original pofition \(A B\), when the procefs will begin again. Thus they will continue a kind of ofcillating rotation.

Thus the axis is continuaily changing with refpect to the fyftem of balls; but it is fixed in refpect to abfolute fpace, becaufe the axis \(D d\) is fupported. It does not yet appear that it has any tendency to change its pofition, becaufe the centrifugal tendency of the balls is completely yielded to by the joint at G. The material axis has indeed futtained no change; but the real axis, or mathematical line round which the rotation was going on every moment, has been continually fhifting its place. This is not Co obvious, and requires a more attentive confideration. To fhow accurately the gradual change of pofition oi the real axis of rotation would require a long difcuffion. We fhall content ourfelves with exhibiting a cafe where the pofition of the momentary axis is unquetionably different from D \(d\), which we may fuppofe horizontal.

Take the balls in the pofition a \(\beta\). They came into this polition with a \{piral motion, and therefore each of them was moving obliquely to the tangents \(x \neq \gamma\) to the circle \(\alpha \delta \beta\) fuppofe in the directions \(\alpha \theta \beta \lambda\) They are therefore moving round the centre \(G\) in a plane \(\theta \propto \beta \lambda\), inclined to the plane \(\bar{\beta} \beta \gamma\) of the circle a \& \(\hat{\beta}\) \&. The momentary axis of rotation is therefore perpendicular to this oblique plane, and therefore does not coincide with \(\mathrm{D} d\).

We cannot enter upon the inveltigation of this evagation of the axis, although the fubject is both curious and important to the fpeculative mathematicians. A knowledge of it is abfolutely nectffary to a complete folution of the gieat problem of the preceffion. But when treating that article, we contented ourfelves with fhowing that the evagation which obtains in this natural phenomenon is fo exceedingly minute, that although multiplied many thoufands of times, it would efcape the nicelt obfervations of modern altronomers; and that it is a thing which does not accumulate beyond a certain limit, much too finall for obfervation, and then diminifhes again, and is periodical. Euler, D'Alembert, Fili, and De la Grange, have hown the momentary polition of the real variable axis correfponding to any given time; and Landen has with great ingenuity and elegance conneted thefe momentary fors.
fitions, and given the whole paths of evagation. Mr Rotasion, Segnor was, we belitve, the fref who hhowed (in a -Differtation \(D_{c}\) Mlotu Turlinum, Halle, 1755), that in every body there were at leaft three lines pafing through the centre of gravity at right angles to each other, forming the folid angle of a cube, round which the centrifugal forces were accurately balanced, and therefore a rotation begun round either of thefe three lines would be continued, and they are permanent axes of rotation. Albert Euler gave the firft demonftration in 1760 , and fince that time the inveltigation of thele axes has been extended and improved by the different authors already named. It is an ex: ceedingly difficult fubject; and we recommend the fynthetical inveftigation by Frifi in his Cofingraphes as the fitteft for inftructing a curious reader to whom the fubject is new. We hall conclude this differtation with a beautiful theorem, the enunciation of which we owe to P. Frifi, which has amazingly improved the whole theory, and gives eafy and elegant folutions of the moft difficult problems. It is analogous to the great theorem of the compolition of motions and forces.

If a body curns round an axis AGa (fig. 17.) paf-P, Frifi's fing through its centre of gravity \(G\) with the angulartheorent. velocity \(a\), while this axis is carried round ancther axis \(\mathrm{BG} b\) with the angular velocity \(b\), and if \(G D\) be taken to GK as \(a\) to \(l\) (the points \(B\) arid \(E\) being taken on that fide of the centre where they are moving towards the fame fide of the plane of the figure), and the line DE be drawn, though the whole and every particle of the body will be in a ftate of rotasion round a third axis CGr, lying in the plane of the other two, and parallel to DE, and the angular velocity c round this axis will be to \(a\) and to \(b\) as DE is to GD and to GE.

For, let \(\mathbf{P}\) be any particle of the body, and fuppofe a fpherical furface to be deferibed round \(G\) palfing through \(P\). Draw \(P R\) perpendicular to the plane of the figure. It is evident that PR is the common fection of the circle of rotation \(\mathrm{H}^{2}\) t ruund the axis \(A a\), and the circle \(\mathrm{KP} / \mathrm{k}\) of rotation round the axis BK. Let \(\mathrm{I}, \mathrm{K}\) \& be the diameters of the fe circles of rotation, \(F\) and \(G\) their centres. Draw the radii PF and PO, and the tangents PMI and PN. Ihefe tangents are in a plane MPN which tonches the fphere in P, and cuts the plane of the axis in a line MN, to which a line dawn from the centre \(G\) of the fphere through the point \(R\) is perpendicular. Let \(P N\) reprefent the velocity of rotation of the puint P round the axis \(\mathrm{B} /\), and \(\mathrm{P} f\) its velocity of rotation round \(\mathrm{A} a\). Complete the parallelogiam PN '. Then Pt is the direction and velocity of motion refulting from the compufition of 1 N and \(\mathrm{P} /\). \(l^{3}\). is in the plane MPN, becaufe the diagonal of a parallelegram is in the plane of its fides PN and \(\mathrm{P} f\).

Let perpendiculars \(/ \mathrm{F}, \mathrm{i} \mathrm{T}\), be drawn to the plane of the axes, and the paallelogram PN / will be orthographically projected on that plane, its projection beins al parallelogram RNIF. (1' here falls on the centre byaccident). Draw the dagonal RT. It is evident that the plane \(P R I T\) is perpendicular to the plane of the two axes, becaufe PR is fo. Tlecrefore the compound motion \(\mathrm{P}_{t}\) is in the plane of a circle of revolutions round fome axis fituated in the plane of the other two. Therefore produce \(T R\), and daw GC cutting it at right
angles

\section*{R O T [ \(52 t] \quad \mathrm{R} 0 \mathrm{~T}\)}
\(\underbrace{\text { Rotaticn. angles in } H \text {, and let LP/ be the circle, and PH a ra- }}\) dius. \(\mathrm{P} t\) is therefore a tangent, and perpendicular to PH , and will meet RT' in fome point Q of the line MN. Tle particle P is in a flate of rotation round the axis CG \(\iota\), and its velocity is to the velocities round \(\mathrm{A} a\) or \(\mathrm{B} b\) as P / to \(\mathrm{P} /\) or PN . 'I'he triangles PRN and OPN are fi milar. For PN the tangent is perpendieular to the radius OP, and PR is perpendicular to ON. Therefore \(O P: P N=P R: R N\), and \(R N=\frac{P R . P N}{O P}\). But the velocity of \(P\) round the axis \(B b\) is OP.b. Therefore \(R N=\frac{P R . O P . b}{O P},=P R . b\). In like manner \(R F\) \(=\mathrm{PR} . a\). Therefure \(\mathrm{RF}: \mathrm{RN}=a: b=\mathrm{GD}: \mathrm{GE}\). But NT : RN=fine NRT: fime NTR, and GD : GE \(=\) fine GED: fine GDE. Therefore fine NRT: fine NTR = ine GED : fike GDE. But RNT \(=\) EGD, for NR is perpendicular to EG and NT (being paraliel to IF) is perpendicular to DG. Therefore ' 1 'R is perpendicular to ED , and \(\mathrm{C} \varepsilon\) is parallel to ED, and the rotation of the particle \(P\) is round an axis parallel to ED.

And fince \(\mathrm{RN}, \mathrm{RF}, \mathrm{RT}\), are as the volocities \(b, a\), \(c\), round thefe different axes, and are proportional to EG, DG, DE, we have \(c\) to \(a\) or to \(b\) as ED to GD or GE, and the propofition is demonfrated.

This theorem may be thus exprefled in general
If a body revolves round an axis pafling through its centre of gravity with the angular velocity \(n\), while this axis is carried round another axis, alfo paffing through its centre of gravity, with the angular velocity \(l\), thefe two motions compofe a motion of every particle of the body round a third axis, lying in the plane of the other two, and inclined to each of the former axes in angles whofe fincs are inverfly as the angular velocities round them; and the angular velucity round this new axis is to that round one of the primitive axes as the tine of inclination of the tive primitive axes is to the fine of the inclination of the sew axis to the other primitive axis.

When we fay that we owe the enunciation of this theorem to P. Frifi, we grant at the fame tine that fumething like it has been fuppofed or affunsed by other authors. Newton feems to have confidered it as true, and even evident, in homogeneous fpheres; and this has been tacitly acquiciced in by the authors who followed him in the proolem of the preceffion. Inferior witers have carcletsly affumed it as a truth. Thus Nollet, Gravefande, and others, in their contrivances for exhibiting experiments for illultrating the compofition of vortices, proceeded on this aflumption. Even authors of more fcrupulous refearch have fatisfied themfelves with a very imperfect proof. Thus Mr Landen, in his excellent differtation on rotatory motion, Philofophical Tranfactions, Vol. LXV1I. contents himfelf with flowing, that, by the cquality and oppofite directions of the motions tound the axes \(\mathrm{A} a\) and \(\mathrm{B} \ell\), the point C will be at reft, and from thence concludes that CGc will be the new axis of rotation. But this is exceedirgly hafty (nute alfo, that this differtation was many years pofterior to that of P. Frifi): For although the feparate motions of the point C may be equal and oppofite, it is by no means cither a mathematical or a meclanical confequence that the body will turn round the axis \(\mathrm{C} c\).

In order that the paint \(C\) may remain at reft, it is neceffary that all tendencies to mution be annihilated: this is not even thought of in making the affumption. Frif has fhown, that in the motion of every patticle round the axis \(\mathrm{C} c\), there is involved a motion round the two axes \(\mathrm{A} a\) and \(\mathrm{B} b\), with the velocities \(a^{\prime}\) and \(b\); and it is a confequence of this, and of this only, that the impulfes which would feparately produce the rotations of every particle round \(\mathrm{A} a\) and \(\mathrm{B} b\) will, either in fucceffion or in conjunction, produce a rotation round \(\mathrm{C} c\). Moreover, Mr Landen's not having attended to this, has led him, as we imagine, into a miftake refpecting the velocity with which the axis clanges its pofition ; and though his procefs exhibits the path of evagation with accuracy, we apprehend that it does not affign the true times of the axes arriving at particular points of this path.

It follows from this propofition, that if evcry par-conclufi ticle of a body, whether folid or fluid, receives in one deduced intant a feparate impulfe, competent to the production from thio of a motion of the particle round an axis with a cer-propofritic tain angular velucity, and another impulfe competent to the produation of a motion round anorher axis with a certain velocity, the combined effect of all thefe impulfions will be a motion of the whole fyitem round a third axis given in polition, with an angular velocity which is alfo given : and this motion will obtain without any feparation or difunion of parts; for we fee that a motion round two axes conflitute a motion round a third axis in every particle, and no feparation would take place although the fytlem were incoherent like a mals of fand, except by the action of the centrifugal forces ariling from rotation. Mr Simpfon therefore erred in his folution of the problem of the preceffion, by fuppofing another force neceflary for enabling the particles of the fluid fpleroid to accompany the equator when difplaced from its former fituation. The very force which inakes the difplacement produces the accompaniment, as far as it obtains, which we fhall fee prefently is not to the extent that Mr Simpfon and other authors who treat this problem have fuppofed.

For the fame reafon, if a body be turning round any axis, and every particle in one inftant get an impulfe precifely fuch as is competent to produce a given angular velocity round another axis, the body will turn round a third axis given in pofition, with a given angular velocity: for it is indifferent (as it is in the ordinary compofition of mation) whether the forces act on a particle at once or in fucceffion. 'The final motion is the fame buth in refpect of dircetion and velocity.

Laftly, when a rigid body acquires a retation round an axis by the action of an impulfe on one past of it, and at the farme time, or afterwards, gets an impulfe on any part which, alone, would have produced a certain rotation round arother axis, the effect of the combined a Ztions will be a rotation round a third axis, in terms of this propofition ; for when a rigid body acquires a motion round an axis, not by the fimultaneous impulie of the precifely competent force on each particle, but by an impulfe on one part, there bas been propagated to every particle (by means of the connecting forces) an impulfe precifely competent to prosuce the inotion which the paticle really acquires; and when a igigid body, a!-

\section*{\(R 0 T\)}
may make a great change of the pofition of the axis of Ro•土!in\% rotation, as it may make in the velocity of a recthineal mation. Thus although the rotation round \(A\) a be in. de "nitely fmall, if another equally fmall rotation be impreffed round an axis \(B b\) perpenilicular to \(A a\), the axis will at unce thift to C 6 half way between them; hut a fucceffion of rotations is ncceffery for carrying the primitive materill axis into a new pedition, where it is again an axis. This transference, however, is pulfible, but gradual, and muft be accomplifitied by a moinuation of impulfes totally different from what we would at lirlt fuppofe. In ouder that A may pafs from A to C, it is not enough that it gets an impule in the direction AC. Such an impulfe would carry it thither, if the budy had not been whirling round \(A a\) by the more perfeverance of matter in its fate of notion; hut when the body is alseady whiring round A 0 , the particles in the circle IP \(i\) are moving in the circumference of that circle; and fince that circle alfo partakes of the motion given to \(A\), every particle in it mult be inceflantby deflected from the path in which it is moving. The contin:ta! agency of a force is therefore neceflary for this purpofe ; and if this force be difcontinued, the point A will immediately quit the plane of the arch \(\perp C\). along which we are endeavouring to move it, and will flart up.
'I his is the tbeorem which we formerly faid would enable us to overcome the difficulties in the invetigation of the axis of rotation.

Thus we can difoover what Mr Landen calls the \({ }_{\text {The }}^{128}{ }^{128}\) evagations of the poles of rotation by the action of cen. ase evas of trifigral forces: For in fig. 16. the known velocity of the med ef the ball \(A\) and the radius \(A C\) of its circle of rotation rasation by will give us the centrifugal force by which the balls the cection tend to tum in the plane \(\mathrm{D} \dot{\mathrm{A}} \mathrm{BD}\). This gives the gal forsers axis \(\mathrm{D} d\) atendency to move in a plane perpendicular to the planc of the firare ; and its feparation from the poles D and \(d\) dues not depend on the feparation of the connecting red . A B fiom ise prefent inclination to \(\mathrm{D} d\). but on the angle which the fpiral path of the ball makes with the plane of a circle of rotation round 1 ) 1 . The diftance of the new poles from \(D\) and \(d\) is an arch of a circle which meafures the angle made by the \{piral with the circle of rotation round the primitive axis. I his will gradually increale, and the mathematical arts of rotation will be defcribing a fpiral round D and \(\sigma_{0}\) gradually feparating from thefe points, and again apsproaching them, and coinciding with then again, at the time that the balls themfelves are nolt of all removed from their primitive fitution, namely, when \(A\) is in the place of B .
'The lame theorem alfo cnahits us to find the inci-stidthe ripient axis of rotation in the complicated cafes whichesfientaxis are almult inacceffible by means of the clenentary prin- "1 cony hiciples of rotation.

Thus, when the centres of ofeillation and perculfion do not coincide, as we fi.ipored in fig. 5. and 12. Suppofe, irft, that they do comcide, and find the pofition of the axis \(a l\), and the angular velocity of the rutation. Then find the centre of peroulfinn, the axis \(1^{2} p\), and the monentun round \(i\), and the angular velocity which this momentum would produce. "1hus we have obtained two rotations round given axes, aad with given anguiar velocities. Compound thile rotations by this theorem, and we obtain the required polition of :!xe

\section*{R O T}

Eneation. true incipient asis of rotation, and the angular velocity, without the intricate procefs which would otherwife have been necefflary.

If the body is of fuch a fhape, that the forces in the plane DCG do not balance each other, we fhall then difeover a momentum round an axis perpendicular to this plane. Compound this rotation in the fame manner with the rotation round \(\mathrm{D} d\).
132
Pofition of the .xivwhen the ce tres of perculion ana rotatimer do 110 coincide.

And from this fimple view of the matter we learn (what would be dificult to difeover in the other way), that when the centre of percuflion does not coincide with that of rotation, the axis is in the plane DGC, though not perpendicular to PC . But when there is a momentum round an axis perpendicular to this plane, the incipient axis of rotation is neither perpendieular to

I 33
Conclud.ng
remarks oll Seamanflip \({ }^{1} \mathrm{C}\), nor in a plane perpendicular to that paffing through the centre in the direction of the impelling force.

We muft content ourfelves with merely pointing out thefe tracks of invelligation to the curious reader, and recommending the cultivation of this moft fruitful theorem of Father Frifi.

Thefe are by no means fpeculations of mere curiofity, interefting to none but mathematicians: the uobleft art which is practifed by man mult receive great improvement from a complete knowledge of this fubject. We mean the att of seamanship. A thip, the moft admirable of machines, mult be confidered as a body in free fpace, impelled by the winds and waters, and continually moved round fpontaneous axes of convertion, and inceffantly checked in thefe movements. The trimming (ff the fails, the action of the rudder, the very difpofition of the loading, all affect her verlatility. An experienced feaman knows by habit how to produce and facilitate thefe motions, and to cheek or fop fuch as are inconvenicnt. Experience, without any reflection or knowledge how and why, informs him what polition of the rudder produces a deviation from the courfe. A fort of common fenfe tells him, that, in order to make the fhip turn her liead away from the wind, he mult increafe the furface or the obliquity of the head fails, and diminifh the power of the fails near the flern. A few other operations are dictated to him by this kind of common fenfe; hut few, even of old feamen, can tell why a fhip has fuch a tendeney to bring her head up in the wind, and why it is fo neceffary to crowd the fore part of the fhip with fails; fewer ftill know that a certain hifting of the loading will faeilitate fome motions in different cafes; that the crew of a great Thip rumning fuddenly to a particular place fhall enable the thip to aecomplifh a movement in a ftormy fea which could not be done otherwife; and perhaps not one in ten thoufand can tell why this procedure will be fuccefsful. But the mathematical inquirer will fee all this; and it would be a molt valuable acquifition to the public, to have a manual of fuch propolitions, deduced from a careful and judicious confideration of the circumltances, and freed from that great complication and intricacy which only the learned can unravel, and expreffed in a familiar manner, clothed wihh fueh reafoniug as will be intelligible to the unlearned; and though not accurate, yet perfuafive. Mr Bouguer, in his Traté du Nunire, and in his Manarure des Falfenux, has delivered a great deal of uffful information on this fulject; and Mr Bezout has made a very ulfful abftract of thefe works in his Cours de Mathematique. But the fubject
is left by them in a form far too abftrule to be of any general ufe: and it is unfortunately fo combined with or founded on a falfe theory of the action and refiftance of fluids, that many of the propolitions are totally inconfiftent with experiencé, and many maxims of feamanthip are falfe. This has oceafioned thefe doctrines to be neglected altogether. Few of our profeffional feamen have the preparatory knowledge neeeflary for improving the fcience ; but it would be a work of immenfe utility, and would acquire great reputation to the perfon who fuccefsfully profecutes it.

We fhall mention under the article Seamanship the chief problems, and point out the mechanical principles by which they may be fulved.

ROTHERAM, a town in the Weft Riding of Yorkfhire, feated on the river Don, near which there is a handfome ftone-bridge. It is a well built plaee, and the market is large for provifions. W. Long. I. 10. N. Lat. 53.25.

ROTHSAY, a town in the ifle of Bute, of which it is the capital. It is a well-built town of finall houfes, and about 200 families; and is withn thefe few years much improved. It has a good pier, and is feated at the bottom of a fine bay, whofe month lies exactly oppofite to Loch Steven in Cowal. Here is a fine depth of water, a fecure retreat, and a ready navigation down the Frith for an export trade. Magazines of goods for foreign parts might be moft advantageoufly erected here. The women of this town fpin yarn, the men fupport themfelves by finhing. W. Long. 5 . o. N. Lat. 55 50.

Rothfay gives the title of Duke to the prince of Scotland, a title which was formerly aceompanied with fuitable revenues, powers, and privileges. Of the origin of this title we have the tollowing account from the pen of the leained Dr M‘Leod of Glafgow. Some time between the 16 th of March and the 26 th of October 1398, John of Gaunt, who is ftyled Juhn duke of A quitaine and Laneafter, uncle to the king of England, and David, who is flyled earl of Carrick, eldeft fon of the king of Scotland, met for the purpofe of fettling the borders, and terminating all matters in difpute. At a fubfequent interview between the fame parties, David is ftyled Duke of Rothray. "This innovation probably proceeded on an idea, to which the interview of the two princes might naturally give rife, that it was unfuitable, and unworthy of the Scottilh national dignity, that the prinees of England fhould enjoy a title of nobility, which was efteemed to be of higher rank than that poffeffed by the hereditary prince of Scotland." And this, in the opinion of our author, was the oceafion of introducing the title of Duke into Scotland.

ROTTBCELLIA, in botany; a genus of the digynia order, belonging to the triandria clats of plants. The raehis is jointed, roundifh, and in many calies filiform; the calyx is ovate, lanceolated, flat, fimple, or bipartite; the florets are alcernate on the winding rachis.

ROTONDO, or Rotundo, in architecture, an appellation given to any building that is round both within and without; whether it be a clurch, a faloon, or the like. 'I'he molt celebrated rotundo of the ancients is the pantheon at Rome. See Pantheon.

ROI'TEN-stone, a mineral found in Derbyfhire,

\section*{\(\mathrm{R} O \quad \mathrm{~T}\)}
nefs, and ufed by mechanics for ail forts of fince grinding damr and polifhing, and fometimes for cutting of ftones. According to Ferber, it is a tripoli mixed with calcareous earch.

\section*{ROTTENNESS. See Putrefaction.}

ROTTERDAM, is a city in the province of Holland, in E. Long. 4. 20. N Lat. 52. Fituated on the north bauk of the river Maefe, about 37 niles fouth of A miterdam, nine fouth-eaft of the Hague, and 15 to the ealtward of Briel It is a large and populous city, of a triangular figure, handiunely built of brick, the ftreets wide and well paved. There are ten gates to the town, fix of which are at the land fide and four at the fide of the Maefe. It is fuppofed to take its name from the Roter, or Rotter, a little river that falls into the canals of this city, and from Dam, a dike. It is uncertain when it was firf built; and thougla it is fuppofed to be very ancient, yet we find no mention made of it before the 13 th century. In the year 1270 it was furrounded with ramparts, and lonoured with feveral privileges; but 27 years after it was taken by the Flemings. In the year 1418 , Brcderode chicf of the Haeks made himfelf mafter of it ; fuce which time it las continued yearly to increafe by means of the conveniency of its harbour. Its arms are vert, a pale argent, quarterly in a chief on the fint and third, or, a lion fpotted fable, on the fecond and fourth a lion fpotted gules.

Rotterdam is not reckoneri one of the principal cities of the province, becaufe it has not been always in its prefent flourifhing condition. The Dutch call it the firlt of the fecond rank, whereas it ought to be ofteemed the fecond of the firtt, being, next to Amfterdarn, the moft trading town in the United Provinces. lts port is very commodious; for the canals, which rum through moft parts of the town, bring the fhips, fome of 200 or 300 ton, up to the merchants door ; a con-- oeniency for loading and unloading which is not to be found in other places. The great thips go up into the middle of the tuwn by the canal into which the Maefe enters by the old head, as it comes out by the now. A Atranger, upon his fint entering this place, is aftonifhed at the beautiful confufion of chimneys intermix\(\epsilon d\) with tops of trees with which the canals are planted, and ftreamers of veffels; infomuch that he can hardly tell whether it be fleet, city, or foreft. The Harring Vliet is a very fine flrcet; molt of the houfes are new, and built of hewn ftone; but the grandeft as well as moft agreeable ftreet in Rotterdam is the Bomb Quay, which lies parallel with the Maefe; on one fide it is open to the river, and the other is ornamented with a grand facade of the bef houfes in the city, inhabited chicfly by the Englifh; they are five or fix florics high, mafly and very clumfy: wherever there is any attempt at ornament, it is the worft that can be conccivcd. One fees no Grecian architecture, except Doric entablatures, fuck upon the top of the upper fory, without pilafters; Ionic volutes, turned often the wrong way, and an attempt at Corinthian capitals, without any other part of the order. The doors are large, and ftuck with great knobs and clumfy earving; you afcend to thent, not in front, but by thee or fuar fteps going up on each fide, and you are affifted.by iron rails of a moft immenfe thicknefs. 'Thefe houfes are almof all window; and the window fluttcrs and frantes being painted green, the glafs has all a green call, which is
helped by the reflection from the trees that overinadow R.eterfam. their houfes, which, were it not for this circumftance, would be intolerably hot, from their vicinity to the canals. Moft of the houfes bave looking.glaffes placed on the outfides of the winduws, on bath fides, in order that they may foe every thing which paftes up and down the ftreet. The flair-cafes are nariow, neep, and come down almoit to the door. In general, the houfes rife with enormous fteep roofs, turning the gable end to the ftrcet, and leaning confiderably forward, fo that the top often projects near two fect beyond the perpendicular. The liomb Quay is fo broad, that there are diftinct walks for carriages and foot-paffengers, lined and fhaded with a double row of trees - You look over the river on fome beautiful meadows, and a fine avenue of trees, whicb leads to the Pet-houfe : it feems to be an elegant building, and the trees round it are fo difpofed as to appear a thick wood. This ftreet is at leaft half a mile in length, and extends from the old to the new head, the two places where the watcr entcrs to fill the canals of this extenfive city. When water runs through a ftreet, it then affumes the name of a canal, of which kind the Heeren-feet has the pre-eminence; the houfes are of free-fone, and very lofty; the canal is fpacious, and covered with thips: at one end ftands the Englifh clurch, a neat pretty buiking, of which the bifhop of London is ordinary.

This port is much more frequented by the Britilh merchants than A miterdam, infomuch that, after a froft, when the fea is open, fometimes 300 fail of Britilh veffels fail out of the harbour at once. There is always a large number of Britifh fubjects who refide in this town, and live much in the fame manner as in Great Britain. The reafon of the great traffic betwcen this place and England, is becaufe the Thips can senerally load and unluad, and return to England from Rotterdam, bcfore a flip can get clear from Amiler. dam and the 'Texel. Hence the Englifh merclants find it cheaper and more commotious, after their goods are arrived at Rotterdam, to fend tirem in boats over the canals to Amiterdam. Ancther great adiartage they have here for commerce is, that the Maefe is open, and the paffage free from ice, much foner in the fpring than in the Y and Zuyder-fea, which lead to Amiterdam.

The glass-houfe here is one of the heft in the feven provinces; it makes abundance of glafs.toys and endmelled bowls, which are fent to India, and exclunged for china-ware, and other oriertal commodities.

The college of admiralty here is called the calls se of the Macfe, the chief of all Folland and the United Provinces. The lieutenant-gencral, admiral of Hlolland, is obliged to go on board of a Rotterdam (nip in the Maefe when he goes to fca, and then he commanc's the fquadron of the Masfe.
\(\mathrm{O}_{n}\) the eaft fide of the city there is a large bafon and dock, where fhip-carpenters are contimually employed for the ufe of the adminaly, or of the Eaft India company. But the largell frips belonging to the admiralty of Rotterdam are kept at Helvoetfisys, as the moth commodious Itation, that place being lituated on the uccan; for it requires both time and trouble so work a large flip from the dock of Ru:terdam to the fea.

Rotterdam has four Dutch churches for the eftablifhed religion. There is one thing very remarkable

Rnetcriam in refpect to the great church, that the tower which leaned on one dide was fet up Itraight in the year 1655 , as appears by the infcription engraved on brafs at the bottum of the tower withinfide. In the chair of this church are celebrated, with no fmall folemnity, the promotions made in the Latin fchools. Befides, there are two Englifh churches, one for thofe of the church of England and the other for the Prefbyterians; and one Scotch church ; as likewife one Lutheran, two Arminian, two Anabaptilt, four Roman Catholic chapels, and one Jewiih fynagoguc.

Though the public buildings here are not fo ftately as thofe of Amfterdam and forne other cities, yet there are feveral of them well worth feeing. The great church of St Laurence is a good old building, where are many flately monuments of their old admirals. From the top of this church one may fee the Harue, Delft, Leyden, Dort, and moft of the towns of fouth I Iolland. There are feveral fine market-places, as three fifh-markets, the grat. market, the new-market, and the hogs-market. The Stadthoufe is an old building, but the chambers large and fnely adorned. The magazines for fitting out their flips are very good flructures. The Exchange is a noble building, begun in the year 1720, and finihed in 1736 . Upon the Great Bridge in the market-place there is a fine brals flatue erected to the great Erafmus, who was born in this city in \({ }^{5} 467\), and died at Bafil in Switzerland. He is reprefented in a furred gown, and a round cap, with a bonk in his hand. The flatue is on a pedeffal of marble, furrounded with rails of iron. Jutt by, one may fee the houfe where this great man was born, which is a very fmall one, and has the following difich written on the door:

\section*{Sidibus his ortus, mundum decoravit, Erafmus, Artibus, ingenio, religione, fide.}

Rotterdam and the whole of the United Provinces are now in the poffeflion of the French Republic. See Revolution and \(U_{\text {nited }}\) Provinces.
ROTULA, in anatomy, the fmall bone of the knee, called alfo futhlla.
ROTUNDUS, in anatomy, a name given to feveral mufcles otherwife called teres.

Rouad Sce Aradus.
ROUANE, or Roane, an ancient and eonfrderable town of France, in Lower Forez, with the title of a duchy; feated on the river Loire, at the place where it hegins to be navigable fur boats. E. Long. 4. 9. N. Lat. 46. 2.

ROUCOU, in dyeing, the fame with Anotta and Bixa.

ROUEN, a city of France, and capital of Normandy, had n archbifhop's fee, a parliament, a mint, a handfome cillege, an acaderay, two abbeys, and an old cafle. It is \(f\) vent miles in circumference, and furrounded with fix fuburbs; and contained before the revolution 35 parifies, and 24 convents for men and women. Tl.c metropolitan church has a very handfome front, on which are two lofty fteeples, whence there is a fine view of the town and country. The great bell is 13 feet ligh and 11 in diamcter. The church of the Be1.edictre ahbey is much admired by travellers. The parlianent houfe is adoned with beautiful tapeftry and fise pictures. There are a great number of foun-
tains, though the ioufes are ordinary; but the walk upon the quay is very pleafant, and there are 13 gates from thence into the city. The number of the inhabitants are about 60,000 , and they have feveral woollen nanufactures. It is feated on the river Seine; and the tide rifes fo high, that veffels of 200 tons may come up to the quay: but one of the greatelt curiofities is the bridge, of 275 paces in length, fupported by boats, and confequently is higher or lower according to the tide. It is paved, and there are ways for footpaffengers on each fide, with benches to fit upon; and coaches may pafs over it at any hour of the day or night. It is often called Roan by Englif hitorians; and is 50 miles fouth weft of Amiens, and 70 northwelt of Paris.

Though large, and enriched by commerce, Rouen is not an elegant place. The ftreets are allnof all narrow, crnoked, and dirty ; the buildings old and irregular. It was fortified by St Louis in 1253 , but the walls are now demolifhed. The environs, more peculiarly the hills which overlook the Seine, are wonderfully agreeable, and covered with magnificent villas. E. Long. i. Io. N. Lat. 49. 26.

ROVERE, or Roveredo, a flrong town of the Tyrol, on the consines of the republic of Venice; feated on the river Adige, at the foot of a mountain, and on the lide of a ftecam, over which there is a bridge, defended by two large towers and a ftrong cafle, 10 miles fouth of Trent. The town is tolerably well built, and governed by a chief magitrate, Ayled a Pode Zat. There are feveral churches and convents, that contain nothing worthy of notice. The moft remarkable thing, and what they call the great woonder of Roveredo, is its fpinning-houfe for a manufacture of filk, in which they have a great trade here to the fairs of Bolzano. They have alfo a very good trade in wine. Betwixt Thent and Roveredo is the ftrong fort of Belem, belonging to the houfe of Auftria. It is fituated on a rock, and commands the roads at the foot of the mountain. E. Long. 11. 1. N. Lat. 46. 12.

ROUERGUE, a province of France, in the government of Guienne; bounded on the eaft by the Cevennes and Gevandan, on the weft by Querci, orn the north by the fame and Auvergne, and on the fouth by Languedoc. It is 75 miles in length, and 50 in breadth; not very fertile, but feeds a number of cattle, and has mines of copper, iron, alum, vitriol, and fulphur. It is divided into a county, and the upper and lower marehe. Rhodez is the capital town.
ROVIGNO, a populous town of Italy, in Iftria, with two good harbours, and quarries of fine flone. It is feated in a territory which produces excellent wine, in a peninfula on the weftern coait. E. Long. 13. 53 . N. Lat. 45.14.

ROVIGO, is a town of Italy, in the territory of Venice, and capital of the Polefin di Rovigo, in E. Long. 12.25. N. Lat. 45.6. It is a fmall place, poorly inlabited, and encompaffed with ruinous walls. Formerly it belonged to the duke of Ferrara, hut has been fubject to the Venetians fince \(1 ; 00\), and is famons for being the birth-place of that learzed man Colius Rhodoginus. It was built upon the ruins of Adria, anciently a noble harbour one mile from Rovigo, that gave name to the guiph, but now a half-drowned village, inhabited by a few fifhermen.

ROUND.

\section*{R \(0 \quad \mathrm{U}\)}
weas ROUNDELAY, or Roundo, a fort of ancient案 poem, derived its name, according to Menage, from its form, and becaufe it fill turns buex again to the firft verfe, and thus goes round. The common roundelay confifts of 13 verfes, eight of which are in one rhyne and fivc in another. It is divided into couplets; at the end of the fecond and thira of whicla the becinning of the roundelay is repeated; and that, if poffitle, in an equivocal or punning fenfe. The roundelay is a popular poem in Fiance, but is little known aniong us. Ma. rot and Voiture have fucceeded the beft in it. Rapin remarks, that if the roundelay be not very exquifite, it is intolerably bad In all the anciunt ones, Menage obferves, that the verfe preceding has a lefs complete ferfe, and yet joins agreeably with that of the clofe, without depending neceffarily thereon. This rule, well obferved, makes the roundelay more ingenious, and is one of the fineffes of the poem. Some of the ancient wri ters \{peak of the roundelay or roundel as a kind of air appropriated to dancing; and in this fenfe the term feems to indicate little more than dancing in a circle with the inands joined

ROUND-House, a hind of prifor for the nightly watch in London to fecure diforderly perfons till they can be carried before a magiftrate.

Ruernd-Huffe, in a fhip, the uppermolt room or cabin on the fters of a hip, where the mafter lies.

ROUNDS, in military matters, a detachment from the main-guard, of an officer or a non-commiffioned officer and fis men, who go round the rampart of a garrifon, to liften if any thing be firring without the place, and to fee that the centinels be diligent upon their duty, and all in order. In Alrict garrifous the rounds go every half-hour. The centinels are to challenge at a diffance, and to reft their arms as the round paffes. All guards turn out, challenge, exchange the parole, and reft their arms, \&c.

Rounds are ordinary and extraordinary. The or dinary rounds are three; the town-major's round, the grand-round, and the vifiting-round.

Munner of soing the Rounds. When the townmajor goes his round, he comes to the main guard, and demands a ferjeant and four or fix men to efcort him to the next guard; and when it is dark, one of the men is to carry a light.

As foon as the fentry at the guard perceives the round coming, he fhall give notice to the guard, that they may be ready to turn out when ordered; and when the round is advanced within about 20 or \(30 \mathrm{pa}-\) ces of the guard, he is to challenge brikly; and when he is anfwered by the ferjeant who attends the round, Town maj, r's rount, he is to Kay, Stand ruand! and relt his arms; after which he is to call out immediately, Sirgen,t turn out the guard, twen-major's round: Upon the fentry calling, the ferjeant is to turn out the guard immediately, drawing up the men in good or der with foouldered arms, the officer placing himfelf at the head of it, with his arms in his hand. He then orders the ferjeant and four or fix men to advance toward the round, and challenge: the ferjeant of the round is to anfwer, Townom, jor's reund; upon which the ferjeant of the guard replics, Aivan is, ferjeant, wuith the farole! at the fame time ordering his men to reft their arms. The' ferjeant of the round advances alone, and gives the ferjeant of the guard the pao
Voz. XVI. Bart. II.

role in his car, that none elfe may fiear it; durine Donfithat which period the ferjeant of the glard holds the fpear \(R\), ifue. of his lallert at the other's brealt. The ferjeant of the round then returns to his poft, whilit the ferjeant of the guard leaving his men to keep the round from ad. vancing, rives the parole to his officer. This bein? found right, the officer orders his ferjeant to retura to his men; fays, Advarce, town-mujor's round! and erders the guaid to rell their arms; upon which the ferjeant of the guard orders his men to wheel back frora the centre, and form a lane, through which the town.major is to pals (the efcort remaining where they were), and go up to the officer and give him the parole, laying his mouth to his ear. The officer holds the fpear of his efponton at the town major's breat! while he gives him the parole.

The definn of rounds is net oniy to vifit the guards, and keep the centinels alert; but likewife to difcoser what paffes in the outworks, and beynnd them.

ROUSSILLLON, a pruvince of France, in the \(\mathrm{P}_{3}\) senees, bounded on the eaft by the Mediterrancaal \(\mathbb{f e a}\), on the wefl by Cerdagne, on the north by Lower Languedoc, and on the fouth by Catalonia, from which it is §eparated by the Pyrenees. It is a fertile country, about 50 miles in length, and 25 in breadth, and remarkable for its great number of olive-trees. Perpigna. is the capital town.

ROUSSEAU (James), an cminent painter, was bo:a at Paris in the year 1630, and ftudied firt under Swanevelt, who had married one of his relations; after which he improved himfelf by travelling into Italy. practifing folcly in perfpective, architecture, and landicaps. On his return home, he was employed at Marly. He diAtinguifhed himelf very much in painting buildings, and by his knowledze of, and attention to, the princip!es of perfpective. Louis XIV. employed him to deconte his hall of devices at St Germaine-en-Laie, where he reprefented the operas of Lulli. But lacing a Proteftant, he quitted France on the perfecution of his brethren, and retired to SwiTerland. L.ouis invited him back; he refufcd, but fent his defigns, and recommended a proper perfon to execute them. After 2 mort flay in Swifferland, he went to Holland; whence he was invited over to England Ly Ralph duke of Montague, to adorn lis new houfe in Bloontbury, where he painted much. Some of his pictures, both in landfcape and archiceture, are over doors at Hainptoncourt ; and he etched fome of his own detigus. His perfpectives having been molt commonly applied to decorate courts or gardens, have fuffered much from the weuther. Such of them as remain are moluments of an excellent genius. The colvurs are durable ard bight, and the choice of them moft judicious. He died in Soho-fquare, about the jear 159 : aged 63 .

Roveseau (John laptill), a celcbated French poet, was born at Paris in Ipril 1671. His father, who was a thounaker in good circumifances, made him Atudy in the beft collcges of Paris, where he ditlinguif?ed himfelf by his abilities. He at length applied himfelf entirely to poctry, and foon made himsif known by feveral thort pieces, that were filled with livily and agreeable images, which made him fought for by pertons of the firll rank, and men of the brigheft genius. He was admitted in quality of ciére, or pupil, into the academy of Inferiptions and Belles Leteres, in 3701 , ac.

\section*{R. \(0 \quad \mathrm{U}\)}

Rolfrau and almoot all the reft of his life attaclied himfelf to fone of the great lords, He attended marfhal Tallard into Englani, in qualiiy of fecretary, and here contraeted a friendhip with St Etremond. At his return to Paris, he was admitted into the pociteet company, lived among the courtiers, and feemed perfectly fatisficd with lis fituation; when, in 1708, he was profecited for being the author of fome couplets, in which the characters of feveral perfons of wit and merit were Hackened by the moft atrocious ealumnies. This profection made nuche noife; and Rouffean was banifled in 1712 out of the kingdom, to which he was never more to retura, by a decree of the parlianent of Paris, However, he always fleadily denied, and even on his death-bed, his being the author of thefe couplets.From the date of this fentence he lived in foreign countries, where he found illuftrious protettors. The count de Luc, ambalfador of France, in Swifferland, took him into his family, and ftudied to render his life agreeable. He took lum with him to the treaty of Baden in 171., where he was one of the plenipotentiaries, and prefented him to prince Eugene, who entertaininy a particulare elteenn for him, took hinn to Vienna, and introduced him to the emperor's court. Rouffeau lived about three years with prince Eugene ; but having loft bis favour by fatirifing one of his mittreffes, he retired to Bruffels, where he afterwards ufually refided, and where be met with much attention and much generofity, as we hall foon mention. - It was here that his difputes with Voltairc commeneed, with whom he had become acquainted at the college of Louis the Great, who then much admired histurn for poetry. At that time Voltaire af. fiduounfy cultivated the acquaintance of Rouffeau, and miade him a prefent of all his works; and Roulfcau, flattered by his recfper, announced him as a man who would one day be a glory to the agge. The author of the Henriad continued to confult him about his prodnctions, and to lavifh on bin the higheft encomiuns, while their friendidhip daily increafed. When they again met at Buiffels, however, they harboured the blackent malice agzainf one another. The caufe of this enmity, as Roufteau and his friends tell the flory, was a lecture which he had compofed from his Epititle to Julia, new Urania. This piece frightened Voltaire, as it plainly difcovered his rage againft him. The young man, vexed at thefe calumnies, underftood the whole as thrown out againft him. This is what Rouffeau afferts. But his adverfaries, and the friends of the poet whom he cried down, fulfected him, perlaps rather raflly, of having employed farcafins, becaufe he thought that his own reputation was in danger of being eclipfed by that of his rival. What is very fingular, thefe two celebrated charaters endeavoured each of then to prepoffefs the public with a bad opinion of the other, wlich they themfelves never entertained in reality, and to fmother in their brealt that efteem for each other which, in defrance of all their exertions, fill held its place. Rourfeau, from the period of this difpute, always reprefented Voltaire as a buffoon, as a writer poffefing neither talte nor judgment, who owed all his fuceefs to a particular mode which he purfied. As a poet he confidered him as inferior to Lucan, and little fuperior to Pradon. Voltaire treated him fill worfe. Rouffeau, according to him, was nothing better than a plagiarit,
who could make fiift to rhime, but could not make Rounfea any reflections; that he had nothing but the talentt of. arranging words, and that he had even loft that in fo. reign countries. He thus addrefles him, in a piece litte kuown :
Aufltót le Dieu qui m'inppire
T'arractba le luth el la lyre
2, 'r'avoient déllonarés ess mains;
Tu n'es phius qu'un reptile immonde,
Re but du Parnoffe et du monde
Enfévecii duns eses venias.

In confequence of the little effeem in which Rouffedid was held at Bruffels, he could never forget Paris. The grand-prior of Vendome, and the baron de Breteuil, folicited the regent duke of Orteans to allow hin to return ; which favour was obtained. But our poet, before he would make ufe of the luttres de rapel ifued in his favour, denanded a review of his procels, which he wifhed to be repealed, hot as a matter of favour, but by a folemn judgment of court; but his petition was refured. He then came over, in 1721 , to England, where he printed \(A\) Collection of bis Work, in 2 vols 12 mo , at London. This edition, publihed in 1723 , brought him near 10,000 crowns, the whole of which he placed in the hands of the Oftend company. The affairs of this company, however, foon getting into confufion; all thofe who had any money in their lands lof the whole of it, by which unfortunate event Rourfeau, when arrived at that age when he flood molt in need of the conforts of fortune, had nothing to depend upon but the generofity of fome friends. Boutet, public notary in Paris, was peculiarly generous and attentive to him: He found a thill greater afylum in the Duke d'Aren!berg, whofe table was open to hin at all times; who be: ing oblised in 1733 to go into the army in Germany, fettled on him a penfion of 1500 livers. But unfortionately he foon Ioft his good opinion, having been' im:prudent enough to publifh in a Journal (of which Voltaire accufed him), that the duke d'A remberg was the author of thofe verfes for which he himfelf had been baninhed France. He was therefore difmiffed from his table, and bis pide would not allow him to accept of the penfion after this rupture. Bruffels now became infupportable to him ; and the count du Luc, and M. de Senozan, receiver-general of the church revenue, being informed of his difappointments, invited him to come privately to Paris, in the hopes of procuring a diminution of the period of his banilhment. Some time previous to this Rouffeal had publifhed two new letters; one to P. Brumoi, on tragedy; the other to Rollin, on hittory.0 It is faid, he experted from his letter to Brumoi to get the favour of all the Jefuits; and from the one to Rollin, the patronage of the Janfenits. He had likewife written an Ode, in praife of Cardinal de Fleury, on Peace, which met with a favourable reception, although it was not equal to fome of his former pieces. He innagined his return to Paris would be found no difficult matter. He attempted it, and found he could not obtain a pars for a fingle year. Some fay; that Roulfeau had initated fome perfons in power, by an allegory, called The Yudgmetht of Pluto'; in which piece be deferibes one of the principal judges,

Reaư. whife finin Pluto had caufed to be taken off, and Atretched out on the feat in the bench. This fatire, joined to the fecret machinations of enemies, rendered all the attempts of his friends to procure his return abortive. After having faid three months at Paris, he returned to Bruffels in February 1740, at which place he dicd Mareh 17. 17+1, Itrongly imprefed with relizious fentiments. Immediately before he received the viaticum, he protefted he was not the author of thofe horrid verfes which had fo much embittered his life ; and this declaration, in the opinion of the virtuous part of mankind, will be conlidered as a fufficient proof of lis innocence. Some have faid that Rouffeau was profane, troublefome, capricious, forward, vindictive, envious, a flatterer, and a latiritt. Others again reprefent him as a man full of candour and opennefs, a faithful and grateful fricnd, and as a Chrittian affeeted with a fenfe of religion.Amid! fuch widely varied accounts it is difficult to form an opinion of his character. Such o? our readers as with to know more of this great poet may confult the Dictionary of M. Chaupepie, written with as much precifion as impartiality, who endearours to give a juft idea of his character. From what he fays, it does not appear that Rouffeau can be cleared from the accufation brought againft lim of having attacked his benefactors. We beliese he may be much more eafily freed from the imputation brought againft him by fome of having difowred his father: for what occafon had Roufcau to conceal the oblcurity of his birth ? It eaalted his own merit.
M. Seguy, in concert with M. the prince of la Tont Talis, las given a very beautiful edition of his works, agreeable to the poct's laft corrections. It was publimed in 1743 , at Paris, in 3 vols. 4 to, and in 4 suls. 12 mo , containing nothing but what was acknowledged by the author as his own. It contains, 1. Four Books of Odes, of which the.firft are facred odes, taken from the Pfalms. " Rouffau (fays Freron) anites in binfelf Pindar, Horace, Anacreon, and Malderbe. What fire, what genius, what flights, of imagination, what rapidity of defcription, what varicty of affecting itrokes, what.a crowd of brilliant compatifons, what richnels of rhymes, what lappy verfification; but efpecially what inimitable expreflion! His verfes are finimed in the higheft Ayle of perfection that French verfe is capable of aftuming." "The lyric rumpofitions of Rouffeau are, in general, above mediocrity. All his odes are not, however, of equal merit. The moft beautiful are thofe which he has addrefled to count du Luc, to Malherbe, to prince Eugene, to Yendeme, to the Chrittian princes; his Odes on the Ucath of the prince de Conti, on the battle of Peterwarncin ; and the Ode to Fortune, altho' there are certainty dome few weak ftanzas to be met with in it. There is confiderable neatrefs in the compolition of the Ode to a Widow, in his ftanzas to the Abbé de Chaulieu, in his addreffes to Roffignol, in his Odes to count de Bennevel, to M. Duche, and to count de Sinzindorf; and it is to be lamented that lie wrote fo few pieces of this kind, from which his genius feemed to kead him with difficulty. 2. Two books of Epilles, in werfe. Although thefe do not want their beauties, yet there prevails too much of a mifanthropic fpirit in them, which takes away greatly from their excellence. He makes too frequent mention of his enemies and his mif\(\therefore\).
fortunes; be difplays thofe principles which are fup. Pontean ported lefs on the bafiv of truth than on thofe varions -rpaffions which ruled his mind at the cime. He puts forth his anger in paradozes. If he be recknned equal to Horace in his odes, he is far inferior in his epittles. There is much more platofophy in the Roman poet than in him. 3. Cantatas. He is the father of this fpecits of poetry, in which he flands unrivalled. His pieces of this fort breathe that poetical exprefion, that picturefque tlyle, thofe happy turns, and thofe eafy graces, which conflitute the truc duaracter of this kind of writing. He is as lively and impetuous as he is mild and affecting, adapting himfelf to the paffions of thofe perfons whom he makes to fpeak. "1 confefs (fays M. de la Harpi) that 1 find the cantatas of Rouffeau more purely lyric than his odes, althourh he rifes to greater heighes in thefe. I fee nothing in his cantatas but bold and agreeable images. He always addreftes hinufelf to the imagination, and he never becomes ci. ther too verbofe or too prolix. On the contrary, in fome of the beft of his odes, we find fome languift. ing ftanzas, ideas too long delayed, and verfes of inex. cufable meannefs." 4. Allegories, the moft of which are happy, but fome of them appear forced. 5. Epigrans, after the manner of Martial ard Marot. IIe has taled care to leave out of this edition thofe picces which ilcentionfnefs and debauchery infpired. "Whey bear, indeed, as well as his othicr picces, the marks of genius; but fu:ch productions are calculated only to difhonour their authors, and corrupt the heat of thofe who read them, 5. A book of Poens on Furioers Subjeds, which fometimes want both eafe and delicacy. The mof ditinguithed are two celogues, initated from Virgil. 6. Four comedies in verfe; the Fluerer. whofe character is well fupported; the Imaginary Forefothers, a picce which had much lefs fuceefs, alihongh it affords fufficiently good fentinctat; the Cafrivisus Man, and the Dupe of Herfelf, pieces of wery inconfiderable merit. - . Three comedies in profe ; the Cuf: fee houfe, the Magic Girdle, and the Madragore, which are little better than his other theatrical pieces. The theatre was by no means his forte; he had a grenius mote fuited for fatire than comedy, more akin to Boileau: than Moliere's. 8. A Callerion of Lethers, in prote. In this edition he has felected the mont interefting. There is a larger collaction in 5 volumes. This latt has done at the fame time both injury and honour to his memory. Rouffeau in it fpeaks both in favour of and araintt the very fame perfons. He appears too haly in tearing to pieces the charaeters of thofe who dif. pleafed him. We bchold in them a nan of a lleadso charaeter and an elevated mind, who wihes to retum to his native country only that he might be enabled completely to juitify his reputation. We fee him argain correfonding with perfons of great merit and uncommon integrity, with the Abbe dolivet, Kacine thy fon, the poets La Foffe and Duche, the celebrated Resf. lin, M. le Frake de Pompisnan, ic. sec. We neet alfo with fome aneedotes and exact judgments of fereral writers. A bookfeller in Holland has publifhed his port-folio, which does him no honour. There are, in'deed, fone pieces in this wretched collection which did come from the pen of Rouffean; but he is lefs to be blaned for them than they are who have drawn thefe works from that oblivion to which our great poes had

coaligures

\section*{\(R \quad 0 \quad U\)}

Rouffeat. configned them. A pretty good edition of his Selea Pioces appeared it Paris in 1741, in a fmall 12 mo volume. His portrait, engraved by the celebrated Aved, his old friend, made its appearance in 1778 , with the following motto from Martial :

\section*{Certior in nofro carmine vultus erib.}

Rousseau (John-James), was born at Geneva June 2S. 1712. His father was by profeffion a clock and ratele maker. At his birth, which, he lays, was the firf of his misfortunes, he endangered the life of his nother, and he himfelf was for a long time after in a very weak and languifhing flate of health; but as his bodily ftrength inereafed, his mental powers gradually opened, and afforded the happieft prefages of future greatnefs. His father, who was a citizen of Geneva, was a well-informed tradefman; and in the place where he wrought he kept a Plutareh and a Tacitus, and thefe authors of conrle foon became familiar to his fon. A rafh juvenile ftep oceafioned his leaving his father's houfe. "Finding limfelf a fugitive, in a Atrange country, and without money or friends, he changed (fays he himfelf) his religion, in order to procure a fubfiftence." Bornex, bihop of Anneci, from whom he fought an afylum, committed the care of his education to Madame de Warrens, an ingenious and amiable lady, who had in 1726 left part of her walth, and the Proteftant religion, in order to throw herfelf into the bofom of the church. This generous lady ferved in the triple eapacity of a mother, a friend, and a lover, to the new profelyte, whom fhe regarded as her ion. The neceflity of procuring for himfelf fome fettlement, however, or perthaps his unfettled difpoftion, obliged Rouffeau often to leave this tender mother.

He poffeffed more than ordinary talents for mufic ; and the Abbe Blanehard flattered his hopes with a place in the royal chapel, which he, however, failed in obtaining for him ; he was therefore under the neceflity of teaching mufic at Chamberi. He remained in this place till 1741 , in which year he went to Paris, where he was long in very deffitute circumftances. Witing to a friend in 1743, he thus expreffes himfelf: "Every thing is dear here, but efpecially bread." What an expreffion; and to what may not genius be seduced! Meanwhile he now began to emerge from that obfcurity in which he had hitherto been buried. His friends placed him with M. de Montaigu, ambaffador from France to Venice. According to his own confeflion, a proud mifanthropy and a peculiar contempt of the riches and pleatures of this wolld, confituted the chief traits in his character, and a mifunderflanding foon took place between him and the ambaflador. The place of depute, under M. Dupin, far-mer-general, a man of confiderabic parts, gave him fome temporary relief, and ewabled him to be of fome benefit to Madam de Warrens his former benefatrefs. The year \({ }^{17} 70\) was the commencement of his literary carcer. The acadeny of Dijon had propofed the following 'queftion: "Whether the revirol' of the aats and friences has contributed to the refinement of manners?" Rouffeau at firt inclined to fupport the affirmative. " 'This is the pois winor um (fays a phllofupher, at that time a friend of his), take the negative ficte of the gueftion, and L'll promife you the greatef fuccefe."

His difcourfe againft the fciences, aceordingly, fiaving been found to be the beft written, and replete with the deepeft reafoning, was publicly crowned with the approbation of that learned body. Never was a paradox fupported with more eloquence; it was not however a new one; but he enriched it with all the advantages which either knowledge or genius could confer on it. Immediateiy after its appearance, he met with feveral opponents of his tenets, which he defended; and from one difpute to auother, he found himfelf involved in a formidable train of correfpon: dence, without having ever almoit dreamed of fuch oppofition. From that period he decreafed in happinefs as he increafed in celebrity. His "Difcourle on the caufes of inequality among mankind, and on the origin of focial compacts," a work full of almoft uninteiligible maxims and wild ideas, was written with a view to prove that mankind are equal ; that they were born to live apart from each other; and that they have perverted the order of nature in forming focieties. He beftows the higheft praife on the flate of nature, and depreciates the idea of every focial compaet. This dicourfe, and efpecially the dedieation of it to the republic of Geneva, are the chef-d'auvers of that kind of eloquence of which the ancients alone had given us any idea. By prefenting this performance to the magiltratcs, he was received again into his native country, and reinfated in all the privileges and rights of a citizen, after having with much difficulty prevailed on himfelf to aljgure the Catholic religion. He foor, however, returned to France, and lived for fome time in Pa ris. He afterwards gave himfelf up to retirement, to efcape the hafts of criticifm, and follow after the regimen which the ftrangury, with which he was tormented, demanded of him. This is an important epoch in the hillory of his life, as it is owing to this circumftance, perhaps, that we have the moft elegant works that have come from his pen. His "Letter to M. d 'alembert" on the defign of erecting a theatre at Geneva, written in his retirement, and publifhed in 1757, contains, along with fome paradoxes, fome very important and well-handled truths. This letter firlt drew down upon him the envy of Voltaire, and was the caufe of thofe indignities with which that author never ceafed to load him. What is fuggular in him, is, that although fo great an enemy to theatrical reprefen. tations himidelf, he cauled a comedy to be printed, and in 1752 gave to the theatre a paftoral (The Village Conjuror), of which he compofed both the poetry and mulic, both of them abounding with fentiment and elegance, and full of innocent and rural fimplicity. What renders the Village Conjuror highly delightful to perfons of tafte, is that perfect harmony of words and mufic which everywhere pervades it ; that proper connection among the parties who compofe it ; and its being perfectly correct from beginning to end. The mufician hath fopken, hath thought, and felt like a poet. Every thing in it is agreeable, interefting, and far fuperior to thole common affected and infipid productions of our modern petit-dramas. His Lictionary of Mufie affords feveral excellent articles; fome of them, however, are very inaccurate. "This work (fays M. la Borde), in his Eflay on Mufic, has need to be written over agair, to tave much trouble to thofe who wifh to fludy it, and prevent them from falling into errors, which

\section*{R O U} it is difficult :o avoid, from the engaging manner in
which Roufteau drags along his readers." The paffages in it which have any reference to literature may be eafily diftinguilhed, as they are treatcd with the agreeablenefs of a may of wit and the exactnefs of a man of tafte. Rouffeau, foon after the rapid fuccefs of his Village Conjuror, publifhed a Letter on French Mufic, or rather againh French mufic, written with as much freedom as livelinefs. The exafperated partifans of French comedy treated him with as much fury as if he had compired againf the Atate. A crowd of infignificant euthufiafts fpent their Arength in outcries againf him. He was infulted, menaced, and lampooned. Harmonic fanaticilm went even to hang him up in effigy.

That interefting and tender flyle, which is fo confpicuous throughout the Village Conjuror, animates feveral letters in the New Heloiia, in fix parts, publifined 1761 , in 12 noo. This epittolary romance, of which the plot is ill-managed, and the arrangement bad, like all other works of genius, has its beauties as well as its faults. More truth in his characters and more precifion in his details were to bave been wifhed. The chatacters, as well as their fyle, have too much famenefs, and their language is too affected and exargerated. Some of the letters are indeed admirable, from the force and warnth of expreffion, from an effervelcence of fentiments, from the irregularity of ideas which always chasaterife a paffion carried to its beight. But why is fo affecing a letter fo often accompanied with an unimportant digreflion, an infipid criticifm, or a felf contradicting paradux? Why, after having fhone in all the energy of fentiment, does he on a fudden tura unaffecting? It is becaufe none of the perfonages are truly interefting. That of St Preux is weak, and often forced. Julia is an atemblage of tendernefs and pity, of elevation of Soul and of coquetry, of natural parts and pedantry. Wolmar is a violent man, and almoit beyond the limits of nature. In fine, when he wifhes to change his fyle, and adopt that of the fpeaker, it may cafily be ohferved that he does not long fupport it, and cevery attempt embarraffes the author and cools the reader. In the He bifa, Rouffeau's unlucky talent of rendering every thing problematical, appears very confpicuous; as in his arguments in favour of and againt duelling, which afford an apology for fuicide, and a juft condemnation of it : in his facility in palliating the crime of adultery, and his vcry flrong reafons to make it abhorred: on the one hand, in declamations againft focial happinefs; on the other, in tranfporto in favour of humanity: here, in violent rhapfodies againft philofophers; there, by a rage for adopting their opinions: the exitence of God attacked by fophiftrj, and Atheifts confuted by the moft irrefragable arguments; the Chritian religion combated by the molt fpecious objections, and celebrated with the mofl fublime eulogies.

His Emilia afterwards made more noife than the new meloifa. This moral romance, which was publilhed in 3762 , in four vols 12 mo , treats chiefly of education. Rouffeau wifhed to follow nature in every thing; and though his fyftem in \{everal places differs from received ideas, it deferves in many refpects to be put in practice, and with fome neceflary modifications it has been 50. His precepts are exprefled with the furce and digaity of a mind full of the leading truths of morality. If he has not always been virtuous, no body at leart
has felt it more, or made it appear to more advan. Rouffese. tage. Every thing which he fays againft luxury fhows the vices and concrited opinions of his age, and is worthy at once of Plato or of Tacitus. IIs ftgle is peculiar to himfelf. He fometimes, howcver, appears, by a kind of affetted rudenefs and afperity, to ape at the mode of Montaigne, of whom he is a great admirer, and whofe fentiments and expreficons he often clothes in a new drefs. What is mon to be lamented is, that in wifling to educate a young man as a Chriftian he has fllled his third volume with orjections againft Chriftianty. He has, it mult be confeffed, given a very fublime eulogium on the goipcl, and an affecting portrait of its divine Author: but the miracles, and the prophecies which ferre to eftablifh his mifion, he attacks without the kaft referve. Admitting only natural religion, he weighs every thing in the balance of. reafon; and this reafion being falfe, leads him into dilemmas very unfavourable to his own repofe and happincis.

He divelt frum \({ }^{1754}\) in a fmall houfe in the country near Montmorenci; a retreat which he owed to the generofity of a farmer-general. 'The caufe of his love for this rctirement was, according to himelf, "that invincible [pirit of liberty which nothing could conquer and in competition with which honours, fortune, and reputation, could not fand. It is truc, this defire of liberty has oceafioned lefs pride than lazinefs; but this indolence is inconceivable. Every thing fartesit; the mot inconfiderable reciprocalities of focial life are to it infupportable. A word to § \(_{\text {peak, }}\), a letter to urite, 2 vifit to pay, things neccflary to be done, are to wre punifments. Hear my reafons. Alchough the ordiazry intercourfe between mankind be odious to me, intimate friendhip appears to me very dear ; becavise there are no mere ceremonies due to it ; it agrees with the hear, and all is accomplified. Hear, again, why I have always fhunned kindneffes fo much; becauie every act of kindnefs requires a grateful mind, and I find my heart ungrateful, from this alone, that gratitude is a duty. Laitly, that kind of felicity which is neceffary for me is not fo much to do that which I wifh, as not to do what I with, not to do." Roufteau enjoyed this felicity which he fo much wifhed in his retirement. With. out entirly adopting that too rizorous mode of life purfued by the ancient Cynics, he deprived himfelf of every thing that could in any ineafure add fu: to thite wifhed-for luxury, which is ever the companion of riches, and which inverts even caftom itelf. He mighthave been happy in this retreat, if he could have forget this public which he affected to defpife; but bis defire after a great name got the better of his felt love, and is was this thint after :eputation which made him introduce fo many dangerous paragraphs in his Emilia.

The French parliament condemned this book is 1762 , and entered into a criminal profecution agairit the author, which forced him to make a precipitate retreat. He directed lis fteps towards his mative country, which flat its gates upon him. Profcrihed in the place where he firt drew breath, he fought an afylem in Swizzerland, and found one iu, the principality of Neufchatel. His firf care was to defend his Emiliz againit the mandate of the arehbihop of Paris, br whom it had been anathenaztifed. In 1763 he publifhed a letter, in which he re-exhibits all his crross, les off vitb the mott animated difplay of eloquence, and in the moft infidious manner. In this letter he defcribes himfelf as " more vehement than celebiated in his refearches, but fincere on the whole, even agaiut limfelf; fimple and good, but fenfible anid weak; often doing cril, and always loving good; united by friendhip; never by circumfances, and keeping more tó his opinions than to his interefts; requiring nothing of men, and not wifling to be under any obligation to them; yielding no more to their prejudices than to their will, and preferving his own as free as his reafon; difputing about religion without licentionfnefs; loving neither impiety nor fanaticifra, but dilliking precife people more than buld fpirits," \&c. \&c. From this fpecimen; the limitations he would appoint to this portrait may eatily be difeovered.
\(=\) The letters of La Montaigne appeared foon after; but this work, far lefs eloquent, and full of envious difcuffions on the magiftrates and clergy of Geneva, irritatcd the-Proteftant minifters without effecting a reconciliation with the elergy of the Romith church. Rouffean had folemnly abjured the latter religion in 1753, and, what is fomewhat ftrange, had then refolved tolive in France, a Catholic country. The Proteftant clergy were nut fully riconciled by this change; and the protection of the king of Prufia, to whom the principality of Newfchatel belonged, wat not fufficient to refcue him From that obloquy which the minitter of MoutiersTravers, the village to which he had retired, had excited againft him. He preached againft Rouffeau, and His fermons produced an uproar among the people. On the night between the 6 th and 7 th September 1765 , fome fanatics, drove on by wine and the declanations of their minifer, threw fome ftones at the windows of the Genevan philofopher, who fearing new infults, in vain fought an afylum in the canton of Berne. As this Canton was connected with the republic of Genewa, they did not think proper to allow him to remain in Their city, being proferibed by that republic. Neither his brokea flate of health, nor the approach of winter, could foften the hearts of thefe obdurate Spartans. In vain, to prevent them from the fearthey had of the fpreading of his opinions, did he befeech them to thut him up in prifon till the fpring; for even this favour was dènitd him. Ohliged to fet out on a juurney, in the becinning of a very inclement feafon, he reachicd Strafbourg in a very deltitute fituation. He received from IMarfinal de Contades, who then commanded in that place, every accommodation which could be expected from generofity, humanity, and compaffion. He waited there till the weather was milder, when he went to - Paris, where Mr Hume then was, who determined on taking him with him to England. After having made func ltay in Paris, Rouffeau actually fet out for London in 1266 . Hume, much affected with his fituation and his misfortumes, procured for him a very agreeable fettlement in the country. Our Genevan philofoGher was not, however, long fatisfied with this new Trlace: He did not make fuch an impreffion on the ininds of the Erglifh as he had done on the French. "Flis free difpofition, his obdurate and melancholy temSper, was deemed no fingularity in England. He was there looked upon as an ordinary man, and the perio. dieal prints were filled with fatires againit him. In fartiectary, they publifhed a forged letter from the king
of Prulia, holding no: to ridicule the principles and conduct of this new Diogenes. Rouffeau imagined there was a plot between Hume and fome philofophers in France to deftroy his glory and repofé. He fent a letter to him, tilledf with the mof abifive expreffions, and reproaching, him for his conduct towards him. From this time herlooked upon Hume as a wicked and perfidious perfon, who had brought him to England with no other view than to expofe him to public ridicule; which foolih and chimerical idea was nowinhed by felf-love and a reflefs difpofition. He innagined that the Englif1 philofopher, amidit all lus kindaeffes, had formething difagrceable in the manner of exprefing them. The bad healith of Rouffeau, a Atrong and melancholy imagination, a too nice fenlibility, a jealous difpofition, joined with philofophic vanity, cherifhed by the falfe informations of his governefs, who poffeffed an uncommon power over him; all thefe taken together, might tend to prepolfefs him with unfavourable fentiments of fome innocent freedoms his benefactor nuight have taken with him, and might render. him ungrateful, which he thought himfelf incapable of becoming. Meanwhile, thefe falfe conjectures and probabilities ought never to have had the weight with an honef mind to withdraw itfelf from its friend and benefactor. Proofs are always neceffary in cafes of this kind; and that which Rouffeau had was by no means a certain demonttration. The Genevan plinlofopher, however, certaiuly returned to France. In palling through. Amiens, the met with M. Greffet, who interrogated him about his misfortunes and the controverfies he had been engaged in. He only anfwered, "You have got the art of making a parrot fpeak; but you are nut yet poffefled of the feeret of making a bear fipeak." In the mean time, the magiltrates of this city wifhed to confer on him fome mark of their efteem, which he abfolutely refufed. His difordered imagination viewed thefe flattering civilities as nothing elfe than infults, fuch as were lavifhed on Sancho in the illand of Barataria. He thought one part of the people looked upon him as like Lazarille of Tormes, who, being fixed to the buttom of a tub, with only his head out of the swater, was carried from one town to another to amufe the vulgar. But thefe wrong and whimtical ideas did not prevent him from alpiring after a refidence in Paris, where, without doubt, he was more looked on as a fpectacle than in any other place whatever. On the ift July 1770, Rouficau appeared, for the firft time, at the regency coffec-houle, dreffed in ordinary clothing, having for lome time previous to this wore an Armenian llabit. He was loaded with praifes by the furrounding multitude. "It is fomewhat fingular (fays M. Sennebier) to fee a man fo hauglity as he returning to the very place from whence he lad been banithed fo often. Nor is it' one of the fmallert ineonfintencies of this extraurdinary character, that he preferr.d a retreat in that place of which he had fpoken fo muel ill." It is as tingular that a peizfon under fentence of imprifonment fhould wifh to live in fo public a manner in the very place where his Icntence was in force arraint lim. His friends procured for him, however, liberty of ftaying, on condition that he fhould ncither write on religion nor politics: he kept his word ; for he wrote none at all. He was contented with living in a calm philufoplical manner, giving himfelf to the fuciety of a few.tried friends, fhumaing the
ceu. company of the great, appearigg to have given up all his whimfies, and affecting neither the chatacter of at philufopher nor, a bel efprit. He died of an apoplexy at Ermenon-ville, belonging to the marquis de Girardin, about ten leagues from Paris, July 2. 1778, aged 66 years. This nobleman has crected to his memory a very plain monument, in a egrove of puplars, which conflitutes part of his heautifnl gardens. On the tomb are inferibed the following epitaphs:

\section*{\({ }^{1}\) Ici repofe \\ L'Homme de la Nature \\ - Et de la Verite!}

Vitam impendere Vero *.
Hic jacent Ofa 7. F. Rouffeau.
The curious who go to fee this tomb likewife fee the cloak which the Genevan philofopher wore. Above the door is inferibed the following fentence, which might afford matter for a whole book: "He is truly feee, who, to accomplih his pleafure, has no need of the affiflunce of a Second perfor:"." Roufteau, during his flay in the environs of Lyons, married Mademoifelle le Yafeur, his governefs, a woman who, without either beauty or talents, had gained over him a great afcendancy. She waited on him in healelh and in fickners: But as if the had been jealous of poifeffing him alone, The drove from his mind, by the molt perfidions inifnuations, all thofe who came to entertain him; and when Rouffeau did not difmifs them, the prevented their return by invariably refufing them admittance. By thefe means he the more eafily led her huffand into inconfiftencies of conduct, which the originality of his character as well as of his opinions fo much contributed to, affift. Nature had perhaps but given hin "the embryo of his character, and art hacl probably united to make it more fingular. 'He did not ineline to afociate with any perfon; and as this method of thinkiag and living was uncommon, it procured him a name, and he difplayed a kind of fantafticalnefs in his behariour and his writings. Like Diogenes of oll, he united fimplicity of manncrs with all the pride of genius; and a large fock of indolence, with an extreme fenfibility, ferved to render his character fill more uncommon. "An indolent mind (fays he), terrified at every application, a warm, bilious, and irritable temperament, fenfible alfo in a high degree to every thing that can affect it, appear not poffible to be united in the fame perion: and yet thefe two contranieties compore the chief of mine. An active life has no charms for me. I would an hundred times rather confent to be idle than to do any thing againft my will; and I have an hundred times thought that I would live not amifs in the Baftille, provided I had nothing to do but juft continue there. In my younger days I made feveral attempts to get in there; Eut as they were only with the view of procuring a re'fuge and reft in my old age, and, like the excrions of an incolent parfon, only by fits and farts, they were never attended with the fmalleft fuccefs. When misfortunes came, they afforded me a pretext of giving my felf up to my ruling paffion." He often exaggerated "bis misfortunes to himfelf as well as to others. He endeavouricd particularly to render interelting by his defeription his misfortunes and his poverty, altliough the former were far lefs than he imagined, and notwith-
flanding he had certain refources againt the latter. In Revitas. other refpects he was charitalle, generous, fober, juf, conteuting himfelf with what was purely neceffary, and refuling the means which might have procured him wealth and offices. He cannot, like many other fo"phills, be accufed of having often repeated with a fue died enphafis the word Virtue, without infpiring the fentiment. When he is fpeaking of the duties of mankind, of the principles neceffary to our lappinefs, of the duty we owe to ourfelves and to our equals, it is with a copioufnels, a charm, and an impetuofity, that could only proceed from the heart. He faid one day to M. de Buffon, "You have afferted and proved before J. J. Roumean that mothers ought to fuckie their chils: dren." "Yis (fays this great naturalif), we have all faid fo; but M. Roulfeau alone forbids it, and caufes himfelf to be obeyed." Another academician faid, "that the virtues of Voltaire were without heart, and thofe of Roufferu without lead." He was acquainted at an tarly age with the works of the Greek and Roman au*thors; and the republican virtues there held forth to view, the rigorous aufterity of Cato, Brutus, \&c. car: ried him beyond the limits of a fimple eltimation of them. Influenced by his imagination, he adnuired every thing in the ancients, and faw nothing in his contemporaries but enervated minds and degenerated bodies.
His ideas about politics were alnolt as eccentric as his paradoxes about religion. Some reckon his Social Compac:, which Voltaire calls the Unfocial Compart, the greateft effort his genius produced. Others find it fuil of contradietions, errors, and cynical paffages, oblcure, ill-arranged, and by no means wortby of his fhinin; pen. There are feveral other fmall pieces wrote by him, to be found in a collection of his works publihed in 25 vols 8 vo and 12 mo , to which there is appended a very infigniticant fupplement in 6 vols.
The moft ufeful and mof important truths in this collection are picked out in his 'lhoughts; in which the confident fophilt and the impious author difappear, and nothing is offered to the reader but the eloquent writer and the contemplaive moralit. There were found in his port-folio his Confeffions, in twelve books; the firit fix of mhich were publiined. "In the preface to thefe memoirs, which abound with characters well drawn, and written with warnith, with energy, and fometires with elegance, he declares (fays M. Palifot), like a puevit? mifanthrope, who boldly introduces hinfelf on the ruins of the world, to declare to mankind, whom he fuppofes affembled upon thefe, suins, that in that innuncrable multitude, none could dare to fay, I am hetter than that man. This affectation of feeisig himfelf alone in the univerfe, and of continually directing every thing to himifelf, may appear to fome morofe minds a fanaticifm of pride, of which we have no examples, at lealt fince the time of Cardan." But this is not the only blame swhich may be attached to the author of the Confeffions. With uneafinefs we fee him, under the pretext of fincerity, difhonouring the character of his benefactrels Lady Warren. There are innucndos no lefs offeofive againtt obfcure and celebrated characters, which ought entirely or partly to have been fupprefled. A lady of wit faid, that Roufleau would have been held in higher eftimation for virtue, " had he died without his confeffion." The fame opiaion is eniertained by M. Senue-

Wnifeau: bicr, author of the Literary Hillory of Geneva: "His Rout. confeflions (fays he) appear to me to be a very dange- tous book. and paint Roufteau in fuch colours as we would never have ventured to apply to him. The excellent analy fes which we meet with of fome fentiments, and the delicate anatoṇy which he makes of fume actions, are not fufficient to counterbalance the deteftable matter which is found in them, and the unceafing obloquies everywhere to be met with." It is certair, that if Rcuffeau has given a faithful delineation of fome perfons, he has viewed others through a cloud, which forned in his mind perpetual fufpicions. He imagined he thought juftly and fooke truly ; but the fimpleft thing in nature, fays M. Servant, if diftilled through his violent and fufpicious head, might become poifon. Rouffeau, in what he fays of himfelf, makes fuch acknowledgments as certainly prove that there were better men than he, at leat if we may judge him from the firt fix books of his nemoirs, where nothing appears But his vices. They ought not perhaps to be feparated from the fix laft books, where he fpeaks of the virtues which make reparation for then; or rather the work ought not to have beeri publifhed at all, if it be true (which there can be little doubt of) that in his confeffions he injured the public manners, both by the bafenefs of the vices 'he difclofed, and by the manner in which he united them with the virtues. The other pieces which we find in this new edition of his works are, 1. The Reveries of a Solitiry W anderer, being a journal of the latter part of his life. In this he confeftes, that he liked better to fend his children into hofpitals deftined for orphane, than to take upon himfelf the charge of their maintenance and edueation; and endeavours to palliate this error, which nothing can exculpate. 2. Cionfiderations upon the Go. vernment of Poland. 3. The Aldventures of Lord Ed cuurd, a novel, being a kind of fupplement to the new Heloifa. 4. Various Memoirs and Fugitive Pieces, with 3 great number of letters, fone of which are very long, and written with too much fudy, but containing fome cloquent paffages and fome deep thought. 5. Emilia and Sopha. 6. The Levite of Ephraim, a poem in profe, in 4 cantos; written in a truly ancient fyle of fimplicity. 7. Letters to Sara. 8. An Opera and a Coomedy. 9. Tranglations of the firf book of Tacitus's Hifory, of the Epifode of Oinda and Sophroniu, taken from Taffo, \&c. \&.c. Like all the other writings of Rouffean, we find in thefe pofthumous pieces many admirable and fome ufeful things; but they allo abound with coutradietions, paradoxes, and ideas very unfavourable to reLigion. In his letters efpecially we fee a man chagrined at misfortunes, which he never attributes to himidif, fufpicious of every body about him, calling and believing himfelf a lamb in the midtt of wolves; in one word, as like Pafcal in the firength of his genius, as in his fancy of always feeing a precipicc about him. This is the reffection of M. Servant, who knew him, affifted him, and careffed him du:ing his retreat at Grenoble in : 7018. This magittrate having been very attentive in obferving his charater, ought the rather to be believed, as he infpected it without either malice, enyy, or rcfentment, and only from the concern he had for this philofopher, whom he loved and admired.

ROUT, in law, is applied to an affembly of perfons
going forcibly to commit fome unlawful act, whether they execute it or not. Sec Riot.

ROUTE, a public road, highway, or courfe, efpecislly that which military forces take. 'Chis word is alfo ufed for the defeat and fight of an ariny.

ROWE (Nicholas), defcended of an ancient family in Devoufhire, was born in 1673 . He acquired a complete tafte of the claffic authors under the farious Dr Buby in Welluninfter fchool; but poetry was his early and darling itudy. His father, who was a lawyer, and de gned hin for his own profeffion, entered him a fludent in the Midule 'lemple He made remarkable advances in the fudy of the law; but the love of the belles lettres, and of poetry in particular, flopt him in his career. His firft tragedy, the Anbitious Stepmother, meeting with univerfal applaufe, he laid afide all thoughts of rifing by the law. He afterward compofed feveral tragedies; but that which he valued himfelf moft upon, was his Tamerlane. The others are, the F ir Penitent, Ulyfis, the Royal cionvert, Yane Shore, and Lady Fane Grey. He alfo wrote a poem called the Birer, and feveral poems upon diffrent fubjects, which have been publifhed under the title of Mifcellaneous Works, in one volume, as his diamatic works have been in two. Rowe is chiefly to be confidered (Dr Johnfon obferves) in the light of a tragic writer and a tranीator. In his attempt at comedy, he falled fo ignominiously, that his Biter is not inferted in his works; and bis occat onal poems and mort compofitions are rarely worthy of either praife or cenfure, for they feem the cafual fpoits of a mind feeking racher to amufe its leifure than to' exercife its powers. In the conftruction of his dramas there is not much art ; he is not a nice obferver of the unities. He extends time, and waries place, as his convenience requires. To vary the place is not (in the opinion of the lcarned critic from whem thefe obfervations are borrowed) any violation of nature, if the change be made between the acts; for it is no lefs ealy for the fpectator to fuppofe limfelf at Athens in the fecond act, than at Thebes in the firlt; but to change the fcene, as is cone by Rowe in the middle of an act, is to add more acts to the play, fince an act is fo much of the bufinefs as is tranfacted without interruption. Rowe, by this licence, eafily extricates himfelf from difficulties; as in Lady Jane Gray, when we have been terri ied with all the dreadful pomp of public execution, and are wondering how the heroine or the poet will proceed, no fooner has Jane prenounced fome prophetic shimes, than-pafs and be gone-the fcene clofes, and Pembroke and Gardi.icr are turned out upon the flage. I know not (fays Dr Johnfon) that there can be found in his plays any deep fearch into nature, any accurate difcriminations of kindred qualaties, or nice dilplay of paffion in its progrefs; all is general and undefined. Nor does he much iutereft or affect the auditor, except in Jane Shore, who is always feen and heard with pity.- Alicia is a charater of empty noife, with no refemblance to real forrow or to natural madnefs. Whence then has Rowe his reputation?' From the reafonablenefs and propriety of fome of his fcenes, from the elegance of his dietion: and the fuavity of his verfe. He feldom moves either pity or terror, but he often elevates the fentiment; he feldom pierces the breaft, but he always delights the ear, and often improves the

\section*{R O W}
x.-. underftanding. Being a great admirer of Shakeipeare, he gave the public an edition of his plays; to which he prefixed an account of that great man's life. But the moft conliderablo of Mr Rowe's performances was a tranlation of Lucan's Pbarfalin, which he jult lived to fuilh, but not to publifh; for it did not appear in print till \(17=8\), ten years after his death.

Meanwlite, the love of poetry and books did not make him unfit for bufinefs; for nobady applied clofer to it when occafion required. The Duke of Queenfberry, when fecretary of flate, made him fecretary for public affairs. After the Duke's death, aill avenues were fopped to his preferment; and during the reft of Queen Anne's reign he paffed his time with the Mufes and his books. A flory, indeed, is told of him, which fhows that he had fome acquaintance with her miniters. It is faid, that he went one day to pay his court to the lord treafiurer Oxford, who afked him, "If he underftood Spanifh vell ?"' He anfwerce, "No:" but thinking that his Lordhhip might intend to fend him into Spain on fome honourable commiffion, he prefently added, "that he did not doubt but he could fhortly be able both to underfland and to fpeak it." The earl 2pproving what he faid, Rowe took his leave ; and, retiring a fevw weeks to learn the language, waited again on the Earl to acquaint him with it. His Lordhip afring him, "If he was fure he underftood it thoroughly?" and Rowe affirming that be did, "How happy are you, Mr Rowe," faid the Earl, "that you can have the pleafure of reading and underftanding the Hiitory of Doas Quixote in the original!" On the acceffion of George I. hie was made poet laureat, and one of the lard furveyors of the cuftoms in the port of London. The prince of Wales conferred on him the clerkhip of his council ; and the Lord Chancellor Parker made him his fecretary for the prefentations. He did not enjoy thefe promotions long; for he died Dec. 6.1718 , in his 45 th year.
Mr Rowe was twice married, bad a fon by his fritt wife, and a daughter by his fecond. He was a handfome, genteel man ; and his mind was as amiable as his perfon. He lived beloved; and at his death lad the honour to be lamented by Mr Pope, in an epitaph which is printed in Pope's works, although it was not affixed on Mr Rowe's monument in Weitminfterabbey, where he was interred in the poet's corner, oppofite to Chancer.

Rows (Elifabeth), an Englifl lady, eminent for her excellent writings both in profe and verfe, born at Ilchefter in Somerfetfhire in 1647, was the daughter of worthy parents, Mr Walter Singer and Mrs Elifibeth Portnel. She receied the firft ferious impreffions of religion as foon as fhe was capable of it. There being a great affinity between painting and poctry, this iady, who had a vein for the one, naturally had a tafte for the other. She was alfo very fond of mulic; chiefly of the grave and folemn kind, as belt fuited to the grandeur of her fentiments and the fublimity of her devotion. But poetry was her favourite employment, her difininguifhing excellence. So prevalent was her genius this way, that her profe is all poetical. In I 696 , a collection of her poems was publifhed at the defire of two friends. Her paraphirafe on the xxxviiith chapter of Job was written at the requeft of bifhop Kien. She had no other tutor for the French and Italian languages
Vol. XVI. Part II.
than the honourable Mr Thynne, who willingly took the tak upon himfelf. Her fhining merit, with the charms of her perfon and converfatiou, had procured her a great many admirers. Among others, it is faid, the farnous Mr Prior made his addrefles to Ler. But Mr Thomas Rowe was to be the happy man. This gentleman was honourably defcended: and his fuperior genius, and infatiable thirft after knowledge, were confpicuous in his carlieft years. He had formed a defign to compile the lives of all the illuftrious perfons in a:1tiquity omitted by Plutarch ; which, indeed, be party executed. Eight lives were publithed fince his dectafe. They were tranhated into French hy the ahber liellen. ger in 1734 . He foke with eafe and Auency; had a frank and benevolent temper, an inexhautible fund of wit, and a communicative difpofition. Such was :hman who, charmed with the perfon, character, and writings, of our authorefs, married her in 1710, and made it his fludy to repay the felicity with which the crowned his life. Too intenfe an application to itudy, bevond what the delicacy of his frane would bear, broke his health, and threw him into a contumption, whith put a period to his valuable life in \(\$\) ay \(: 715\), when he was but jult palt the 28 th ycar of hus age. Mrs Rowe wrote a beautiful elegy on his death; and continued to the laft moments of her life to exprefs the hisbett vereration and affection for his memory. As forn atier his deceafe as her affairs would perinit, the indulged her inclination for folitude, by retiring to Frome, in Sumerfethire, in the neighbourhood of which place the greateft part of her etate lay. In this recels it was that the compofed the molt celebrated of her works, Friendfinip in Death, and the Letters Moral and Er:tertaining. In 1736, the publifhed, the Hiftory of Jofeph; a poem which the lad written in her younger years. She did not long furvive this publication; for The died of an apoplexy, as was fuppofed, Feb. 20. \({ }^{\mathbf{1} 7367}\). In her cabinet were found letters to feveral of her friends, which the had ordered to be delivered im. mediately after her deceafe. The Rev. Dr I faac Watts, agreeably to her requeft, revifed and publithed her devotions in 1737, under the title of Devont Exercifes of the Heart in Meditation and Soliloquy, Praife and Prayer; and, in 1739, her Mifcellancous Works, in profe end verfe, were publifhed in 2 vols 8 vo, with au account of her life and writings prefixed.

As to her perfon, the was not a regular benuty; yct poffeffed a large thare of the charms of her fex. Sh: was of a moderate ftature, her hair of a fue coluur, her eyes of a darkiih grey inclining to blue, and full of fire. Her complexion was very fair, and a natural blung glowed in her cheeks. She fpoke graccfully ; her voice was exceedingly fweet and harmonions; and the had a foftnefs in her afpect which infpired love, yet not with out fome mixture of that awe and veneration which difinguifhed fenfe and virtue, apparent in the counteuance, are wont to create.

ROWEL, anong farriers, a kind of iffue anfwering to what in furgery is called a feton. See Farriery, fect. v.

ROWLEY, a monk who is faid to have flourifhed at Briftol in the 15 th century, and to have been an author voluminous and elegant. Of the poems attributed to him, and publifhed fome time ago, various
opinions

Rowiey, opinions have been entertained, which we have noticed Rusbur h. elfewhere. They feem now to be almof forgoten. See -anm Chatterton.

Rowley (William), who ftands in the third clafs of Arenatic writers, lived in the reign of king Charles I. and reecived his education at the univerlity of Caminidge; but whether he took any degree there, is nut evident; there being but few particulars preferved in regard to him more than his clofe intimacy and connecrion with all the principal wits and poetical geniufes of tisat age, by whom he was well belored, and with fome of whom he joined in their writings. Wood fyles him "the ormament, for wit and ingenuity, of Pembrokehall in Cambridge." In a word, he was a very great berefactor to the Englifh fage, having, exclulive of his aid lent to Middleton, Day, Heywood, Webfter, \&c. lift us five plays of his own compofing, and one in which even the inmortal Shakefpeare afforded hin fome affiltance.

ROXBURGH-shire, or Teviotdale, a county of Scotland, deriving its name from the town of Roxburgh, which is now defroyed, and the river Teviot, that runs through the hire into the Tweed, is divided into the thrce diftricts of Teviotdale, Liddifdale, and Ifkdale, or Eufdale, fo called from their refpective rivers, Teviot, Liddal, and Efk. It is bounded on the eaft and fouth-eaft by Northumberland and Cumberland, on the fouth and fouth-weft by Annandale, on the weft by Twceddale, on the north by the Merfe and 1, auderdale; extending about 30 miles from eaft to weft, and about 15 in breadth from the border of England to the Blue Cainu in Lauder-moor. The fhire exhibits a ough integular appearance of hills, moffes, and mountante, interfperfed, however, with harrow valleys, and "aterel with delightful flreams. Though the face of :he country is bare of woods, the valleys yield plenty ,if corn, and the hills abound with pafture for fheep and intack cattle. The principal mountains of this country are known by the name of Cockraw: from whence a range of very high hills runs weftward, dividing Scotland from England. On the confincs of this fhire are the debateable lands; the property of which was formerly difputed by the Scots and Englifh borderers, but adjudged to the Scots at the union of the crowns. Ruxburghnine yields plenty of lime and freeftone, which in former tines was freely ufed by the inhabitants in building caftles to defend them from the invalions of their Englith neighhours. - The moft ditingnifhed families in this county are the Scots and Kers, who raifed themfelves to wealtil and honours by their bravery and fuccefs in a fort of predatory war with their enemies of South Britain. The fhire is very populous; and the people are ftout and valiant. They were formerly inured to military difcipline and all the dangers of war, by living on dry marches contiguous to thofe of England; being fo ramerous and alert, that this and the neighbouring fhire of Bcrwick could in 24 hours produce 10,000 inen on horfeback, well armed and accoutred. In the fhire of Roxburgh we fill meet with a great number of old calles and feats belonging to frivate gentlenien, whofe anceflors fignalized themfelves in this manner; and we find the remains of old encampments, and a Roman military way, vulgarly called the coufecoay, running from Haunum to the Tweed. The principal tuwn, called Roxturgh, giving the title of
duke to the chicf of the Kers, was anciently a royal borough, containing divers parifhes, large and Hourỉhing, defended by a ftrong citancl, which was often alternately reduced by the Engliih and Sestch adventurers. It was in befiegring this caftle that James II. of Scotland lot his life by the burting of a cannon. In confequence of the almof continual wars between the two nations, this fortrefs was razed, the town ruined, and its royalty tranflated to Jedburgh, which is now a royal burough, fituated between the Tefy and Jed.

ROXENT-cAPE, or Rock of Lifbon, a meuntain and remarkable promontory in Portugal, fituated in the Atlantic ocean, at the nerth entrance of the Tagus, 22 miles north of Lifbon.

KOYAL, fonething belonging to a king: thus we fay, royal family, royal affent, royal exchange, \&e.

Roral Family. The firt and inott confiderable branch of the king's royal family, regarded by the laws of England, is the queen.
1. The queen of England is either queen regent, queen confort, or queen downger. The queen regert, regnant, or fovereign, is the who holds the crown in her own right ; as the firtt (and perhaps the fecond) queen Mary; queen Elifabeth, and qucen Anne; and fuch a one has the fame powers, prerogatives, rights, dignities, and duties, as if the had been a king. This is exprefsly declared by flatute IMar. I. It. 3. c. 1. But the queen confort is the wife of the reigning king; and fhe by virtue of her marriage is participant of divers prerogatives above other women.

And, firft, fhe is a public perfon, exempt and diftinet from the king; and not, like other married women, fo clofely comnected as to have lof all legal or feparate exiltence fo long as the marriage continues. For the queen is of ability to purchafe lands and to convey them, to make leafes, to grant copyholds, and do other acts of ownerfhip, without the concurrence of her lord; which no other married woman can do: a privilege as old as the Saxon era. She is alfo capalle of taking a grant from the king, which no other wife is from her. hufband; and in this particular fhe agrees with the augufta or piiifoma regina conjux divi imperatoris of the Koman laws; who, according to Juftinian, was equally capable of making a grant to, and receiving one from, the emperor. The queen of England hath feparate courts and oficers diftinct from the king's, not only: in matters of ceremony, but even of law; and her attorney and folicitor general are entitled to a place within the bar of his majefty's courts, together with the king's counfel. She may likewife fue and be fued alone, without joining her huband. She may alfo have a feparate property in goods as well as lands, and has a right to difpofe of them by will. In thort, fhe is in all legal proceedings looked upon as a feme fofe, and not as a feme covert; as a fingle, not as a married woman. For which the reafon given by Sir Edward Coks is this: becaufe the wifdom of the common law would not have the king (whofe continual care and fludy is for the public, and circa ardua regni) to be troubled and difquieted on account of his wife's domettic affairs ; and therefore it vets in the queen a power of tranfacing her uirn concerns, without the intervention of the king, as if the was an unmarried woman.

The queen hath alfo many exemptions, and minute prerogatives. Fur mintance: fie pays no toll ; .nor is neral, unlefs where the law has exprefly declared her exempted, fhe is upon the fame footing with other fubjeets; being to all intents and purpofes the king's fubject, and not his equal : in like inanner as in the imperial law, Augyfus legibus folutus non eff.

The queen hath alfo fome pecuniary advantages, which form her a diftinct revenue : as, in the firt place, The is intitled to an ancient perquifite called queen-gold, or ourum regina: which is a soyal revenue belonging to every queen-confort during her marriage with the king, and due from every perfon who hath made a volurtary offering or fine to the king, amounting to 10 merks or upwards, for and in confideration of any privileges, grants, licences, parduns, or other matter of royal favour conferred upon him by the king: and it is due in the proportion to one-tenth part more, over and above the entire offering or fine made to the king, and becomes an aftual debt of record to the queen's majefty by the mere recording of the fine. As, if 100 merks of filver be given to the king for liberty to take in mortmain, or to have a fair, market, park, chafe, or free-warren; there the queen is intitled to 10 merks in filver, or (what was formerly an equivalent denomination) to one merk in gold, by the name of queengold, or aurum regine. But no fuch payment is due for any aids or fubfidies granted to the king in parliament or convocation ; or for fines impofed by courts on offenders againt their will; nor for voluntary prefents to the king, without any confideration moving from him to the fubject ; nor for any fale or contract whereby the prefent revenues or pofiefions of the crown are granted away or diminithed.

The original revenue of our ancient queens, before and foon after the conqueft, feems to have confilted in certain refervations or rents out of the demefne lands of the crown, which were exprefsly appropriated to her majefty, diftinet from the king. It is frequent in domefday book, after fpecifying the rent due to the crown, to add likewife the quantity of gold or other renders referved to the queen. Thefe were frequently appropriated to particular purpofes ; to buy wood for her maje:ty's ufe, to purchafe oil for lamps, or to furniih her attire from head to foot, which was frequently very coflly, as one fingle robe in the fifth year of Henry II. flood the city of London in upwards of 80 pounds: A practice fomewhat fimilar to that of the eaftern countries, where whole cities and provinces were fpecifically afligned to purchafe particular parts of the queen's apparel. And for a farther addition to her income, this duty of queen-gold is fuppofed to have been originally granted; thofe matters of grace and favour, out of which it arofe, being frequently obtained from the crown by the powerful interceffion of the queen. There are traces of its payment, though obfeure ones, in the book of domerday, and in the great pipe-roll of Henry I. In the reign of Henry II. the manner of collecting it appears to have been well underfood; and it forms a diftinct head in the ancient dialogue of the exchequer swritten in the time of that prince, and ufually attributed to Gervafe of Tilbury. From that time downwards, it was regularly claimed and enjoyed by all the qucen-conforts of England till the death of Henry VIII. ; though after the acceffion of the Tudor family, the collecting of it feems to have
been muchin neglected: and there being rin queen confort
Royal. aftetwards till the acceffion of James 1. a period of near 60 years, its very nature and quantity then became a matter of doubt ; and beins referred by the king to the chiel juftices and chief baron, their report of it was fo very unfawourable, that his confort queen Anae, though fhe claimed it, yet never thouglat proper to exact it. In 1635, 11 Car. I. a time fertile of ex. pedients for raifing money upon darmant precedents in our old records (of which hip-money was a fatal izflance), the king, at the petition of his queen Henrietta Maria, iffued out his writ for levying it ; but atterwards purchaled it of his confort at the price of I 0,000 pounds; finding it, perhaps, too trilling and troublefome to levy. And when afterwards, at the Reftoration, by the abolition of military tenures, and the fines that were confequent upon them, the little that legally remained of this revenue was reduced to almott nothing at all ; in vain did Mr Prynne, by a treatife that does honour to his abilities ess a painful and judicious antiquarian, endeavour to excite quetn Catherine to evive this antiquated claim.

Another ancient perquifite belonging to the queer confort, mentioned by all our old writers, and therefore only worthy notice, is this: that on the taking a whale on the coafts, which is a royal fin, it thall be divided between the king and queen; the head only being the king's property, and the tail of it the queen's. De flurgione objervetur, quoal rex illum babelit intsoram: de balena vero fuffit, \(\sqrt{2}\) rex babeat caput, et regint caudam. The reafon of this whinfical divifion, as affigned by our ancient records, was, to furnilh the queen's wardrobe with whalc-bone.

But farther: though the queen is in all refpects a fubject, yet, in point of the fecurity of her life and perfon, fhe is put upon the fame fouting with the king. It is equally treafon (by the flatute \(2 ;\) Edward III.) to imagine or compars the death of our lacy she king"n companion, as of the king himfelf; and in violatio or defile the queen confort, anounts to the farre high erime ; as well in the perfon committing the fact, as ia the queen leerfelf if confenting. A law of Henry VIII. made it treafon alfo for any woman who was not a sirgin, to marry the king without informing him tiercof: but this law was foon after repealed; it trefpating tou Itrongly, as well on natural juftice as temale modetty. If however the queen be accufed of any fecies of treafon, the thall (whether coufort or dowager) be trided by the peers of parliament, as queen Amu Buleyn was in 28 Hen. VIII.

The huband of a queen regnant, as prince George of Denmark was to queen Anne, is her fubjét ; and may be guilty of hirli treafon againf her: but, in the infance of conjugal fidelity, he is not fubjected to th: fame penal reltrictions. For which the reafon feems io be, that if a queen confort is menfaithfal to the royal bed, this may debafe or baftardize the heirs to the crown ; but no fuch dauger can be coffequent on tie inflelity of the hußand to a queen regrant.
2. A queen dowager is the widow of the kiny, ard as fuch enjoys mott of the privileser belanging that as queen confort. But it is not lighla treaion to enanfpire her death, or to violate lier chatity; fur the fane reafon as was before alleged, becaute tloc fucceliona ios the crown is not thereby erdan ereed. Let till. fro 3 I2
digrimi:

\section*{RO}

Wowal. dignilate regali, no man can marry a queen-dowager without fpecial licence from the king, on pain of forfciting his lands and goods. This Sir Edward Coke tells us, was enacted in parliament in 6 Henry VI. though the flatute be not in print. But he, though an alien born, fhall ftill be entitled to dower after the king's demife, which no other alien is. A queen-dowager when married again to a fubject, doth not lofe her regal dignity, as peereffes-dowager do when they marry commoners. For Katharine, queen dowarer of Henry V. though the married a private gentlenan, Owen ap Meredith ap Theodore, commonly called Owen Tudor; yet, by the name of Katharine queen of England, maintained an action againtt the bifhop of Carline. Aud fo the dowager of Navarre marrying with Edmond the brother of king Edward I. maintained an action of dower by the name of queen of Navarre.
3. The prince of Wales, or heir apparent to the crown, and alfo his royal confort, and the princefs royal, or eldeft daughter of the king, are likewife peculiarly regrarded by the laws. For, by ftatute 25 Edw. III. to compafs or confpirc the deatlo of the former, or to violate the chaftity of either of the latter, are as much high treafon as to confpire the death of the king, or violate the chaltity of the queen. And this upon the fame reafon as was before given; becaufe the prince of Wales is next in fucceffion to the crown, and to violate his wife might taint the bloodroyal with baltardy; and the eldeft daughter of the king is alfo alone inheritable to the crown on failure of iffue male, and therefore more refpected by the laws than any of her younger filters; infomuch that upon this, united with other (feodal) principles, while our military tenures were in force, the king might levy an aid for marrying his eldeft daughter, and her only. The heir apparent to the crown is ufually made prince of Wales and earl of Chefter, by fpecial creation and inveftiture ; but being the king's eldeft fon, he is by inheritance duke of Cornwall, without any new creation.
4. The reft of the royal family may be confidered in two different lights, according to the different fenfes in which the term royol family is uled. The larger fenfe includes all thofe who are by any poffibility in. heritable to the cromn. Such, before the revolution, were all the defcendants of William the Conqueror; who had branched into an amazing extent by intermarriages with the ancient nobility: Since the revolution and act of fettlement, it means the Proteftant ithue of the princefs Sophia; now comparatively few in number, but which in procefs of time may poffibly be as largely diffufed. The more confined fenfe includes only thofe who are in a certain degree of propinquity to the reigning prince, and to whom therefore the law pays an extraordinary regard and refpect; but after that degree is paft, they fall into the rank of ordinary fubjects, and are feldom confidered any farther, unleis called to the lucceftion upon failure of the nearer lines. For though collateral confanguinity is regarded indefinitely with refpect to inheritance or fucceffion, yet it is and can only be regarded within fome certain limits in any other refpect, by the natural conftitution of things and the dicates of politive law.

The younger fons and daughters of the king, and
other branches of the royal family, who are not in the immediate line of fucceffion, were therefore little farther regarded by the ancient law, than to give them a certain degree of procedcnce before all peers and pub. lic officers as well eccleliaftical as temporal. This is done by the fatute \(3^{\prime}\) Henry VIII. c. 10 . which enacts, that no perfon except the king's children hall prefume to fix or have place at the fide of the cloth of eflate in the praliament chamber; and that certain great officers therein named thall have precedence above all dukes, except only fuch as Thall happen to be the king's fon, brother, uncle, neplew (which Sir Ed. ward Coke explains to fignify grandion or netos), or brother's or fifter's fon. But under the defeription of the king's clihdren, his grondfons are held to be included, without having recourfe to Sir Edward Coke's interpretation of nephere ; and therefore when his late majefty king Gcorge II. created his grandfon Edward, the fecond fon of Frederick prince of Waler deceafed, duke of York, and referted it to the houfe of lords to fettle his place and precedence, they certified that he ought to have precedence next to the late duke of Cumberland, the then king's youngelt fon; and that he might have a feat on the left hand of the cloth of eftate. But when, on the acceffion of his prefent majefty, thefe royal perfonages cealed to take place as the children, and ranked only as the brother and uncle of the king, they alfo left their feats on the fide of the cloth of eftate; fo that when the dake of Glouceiter, his ma. jefty's fecond brother, took his feat in the houfe of peers, he was placed on the upper end of the earls bench (on which the dukes ufually fit) next to his royal highnefs the duke of York. And in 1717, upon a queftion referred to all the judges by king George 1. it was refolved, by the opinion of ten againft the other two, that the education and care of all the king's grandchildren, while minors, did belong of right to his ma. jefty as king of this realm, even during their father's lifc. But they all agreed, that the care and approbation of their marriages, when grown up, belonged to the king their grandfather. And the judges have more recently concurred in opinion, that this care and approbation extend alfo to the prefumptive heir of the crown; though to what other branches of the royal fainily the fame did extend, they did not find precifely determined. The mof frequent inflances of the crown's interpofition go no farther than nephews and nieces; but examples are not wanting of its reaching to more dittant collate. rals. And the ftatute 6 Henry VI. before mentioned, which prohibits the marriage of a queen-dowager without the confont of the king, affigns this reafon for it : " becaufe the difparagement of the queen thall give greater comfort and example to other ladies of eftate, who are of the blood-royal, more lightly to difparage themfelves." Therefore by the flatute 28 Hen. VIII. c. 18. (repealed, among other fatutes of treafons, by 1 Edw. VI. c. t2.) it was made high treafon for any man to contract narriage with the king's children or reputed children, his filters or aunts ex parte fateria, or the children of his brethren or fifters; being exactly the fame degrees to which precedence is allowed by the ftatute 3 t Men. VIII. before-mentioned. And now, by ftatute 12 Geo. III. c. 1t. no defcendant of the body of king George II (other than the iffue of princefles married into forcign families) is capable of con.
al tafiny matrinory, without the previous confat of the king fignified under the great fal; and any marriage contracted without fuch a confert is :oid. Proviced, that fuch of the faid defeendants as are not above 25, may after a twelvementh's notice given to the king's privy council, contract and iolemrize marriage withont the confent of the erown; unieds both houfes of parliament Shall, before the expiration of the faid year, expiefsly declare their difapprobation ef fach intended marriage. And al! persons fulemnizing, affiting, or being prefent at any fuch prohibited marriage, mall incur the penalties of the itatute of gramunire.

Roraz Ock, a fair fpreading tree at Bofoobel, in the parih of Donnington in Staffordhire, the boughs whereof were once corered with iny ; in the thick of which king Charles II. fat in the day-cime with colonel Careleis, and in the night lodged in Bofcobel houfe: fo that they are mitaken who fpeak of it as an old hollow oak; it being then a gay flourihing tree, furrounded with many more. The poor remains thereof are now fenced in with a handfore wall, with this infeription in gold letters: Felicifiman arbarem quam in afylum foterij.jimi refis Caroli II. Deus op. max. jer quem reges regnant, bic crefcere voluit, \&ic.

ROYALTIES, the rights of the king, otherwife called the king's prerogative, and the regalia. See Prenogative and Regalia.

ROYENIA, in botary: A genus of the digtnia order, belonging to the decandria clais of plants; and in the natural method ranking under the 18 th order, Bicornes. The calyx is urceolated : the corolla monopetalous, with the limb revoluted; the capfule is unlocular and quadrivalved.

ROYSTON, a town of Ilertfordhire in England, feated in E. Long. O. I. N. Lat. 52. 3. It is a large place, feated in a fertile vale full of inns, and the market is very confiderable for corn. There was lately difcovered, elmoft under the market-place, a fubterraneous chapel of one Rotia, a Saxon Lady: it has feveral altars and images cut out of the chalhy fides, and is in form of a fugar-luaf, having no entrance but at the tep.

RUBEER (India). See Caoutchnuc.
RUBENS (Sir Peter Paul), the moft eminent of the Flemifn painters 23 was borr. in 1577 ; but whether at Antwerp or Cologne it is not cafy to determine. His father, who was a counflior in the fenate of Antwerp, had been forced by the civil wars to feek refuge in Cologne, and during his refuence there Rubeas is commonly faid to have been born.

The genius of Rubens, which began to unsold itfelf in his earlielt years, was cultivated with peculiar care, and embellimed with every branch of claffical and pulite literature.

He foon difcovered a furong inclination for defigning; and ufed to amufe himelf with that en ployment in nis leifure hours, while the reft of his time was devoted to other fudies. His mother, perceiving the bias of her fon, permitted him to aitend the inflructions of Tobias Verhaecht a painter of architecture and landfeape. He next became the pupil of Adam Van Oort, but he foon found that the abilitics of this mafter were infufficient to anfwer his clevated ideas. His furly ter per tow was
difuffil o Rubers, xicic natural difpoitioy was no- Taseno deft and amiable.

Arsious to find an artif whole genius and difpoiftions were congenial with his own, he becante the difeiple of Oetavio Van Veen, generall; known b; the nane of Otho Venius, a painter of fiegular merit, and who was not orly \&illed in the principles of his ant, but alfo diftinguifhed for learring and uther accomplingments. Between the mafter and feholar a renarkable fimilarity appeared in temper and inclination; indeed, in the whole turn of their minds. It was this cungeniality of fentiments which animated Rubens with tha: ardent paffion for the art of painting which at lenertis deterniasd him to purfue it as a protefiun. Irrom this time he gave up his whole mind to it ; and fo fuccefotil were his exertions, that he foon equalled his ma:ter.

In order to arrive at that perfection which he alicady beheld in idea, it became requifite to fludy the produc. tions of the moft eminent artifts. For this purpofe le travelled through Italy, vifting the meft waluable collections of paintings and antique flatues with which that country abounds.

Sandrart, who was intimately aequainted with Ru: bens, informs us, that he was recommended in the molt honourable manner to the duke of Mantua by the archduke Altert, who had witneffed his talents in the finif. ing of fome fine paintings der gued for his non palace. At Mantua he was received by the culte with the mold flattering marks of dittinction, and had opportenities of improving himfelf which he did no: neglect. Here he carefully itudied the works of Julio Romano. He next vifited Rome, where he had an opportunity of examinirg the productions of Raphatl The printings of Titian and Paolo Veronefe called him to Venier, where he accomplithed himfelf in the art of colocring.

He continued in Italy feven years. A: lengh receiving ittelligence that his mother was taken ill, he haftened to Antwerp: but his slial affection was not gratified with a tisht of her; the died before his arrival. He married fonn after: but his wife dying at the end of four years, he retired from Antwerp for fome time, and endeavoured to foothe his melanchely by a journey to Holland. At Uirecht he vitied Hurtoit, for whom he had a great value.

The tame of Rubens was now fprend over Eurnpe. He was invited by Mary of Medieis q̧uctn of Hunry IV. of France to Paris, where he painted the gallerie; in the palace of Luxemb:rorg. Thefe form a lenies of paintings which delineate the hittory of Mary : and afford a convincing proof how well gqualifed he was to excel in allegorical and emblematical compotions. While at Paris he became acquaintce with the dake of Buekingham, who was to taken wth h:is Eecat talents and accomplithments, that he judsed him wrell cualified to explain to Ifabella, the wife of Albert the archduke, the caure of the mifundertanding which had taken place betwzen the courts of Ermbard ard Spain. In this emplojnicnt Rubens acquit:ed himflf with fuch propriety, that Ifabella appointed him envoy to the king of Spain, with a comminion to propore termis of peace, and to bring back the infrnctions of that monareh. Philip was no lefs captivattal with Rubens: He conferred on him the honour of krighthood, ard made hiun fecretaty to bis prity council. Rubris revericed

\section*{\(R \quad\left[\begin{array}{lll}542\end{array}\right] \quad R \quad \mathbb{B}\)}

Rubers. returned to Druffels, and thence paffed over into Eagland in 1630 with a commifion from the Catholic king to negociate a peace between the two crowas. He was fucceffful in his negociation, and a treaty was concluded. Charles I. who then filled the Britifh throne, could not receive Rubens in a public character on account of his profeffion; neverthelefs, he treated him with every mark of refpect. Having engaged him to paint fome of the apartments of Whitehall, he not only gave him a handfome fum of money, but, as an acknowledgnent of his merit, created him a knight; and the duke of Buckingham, his friend and patron, purchafed of him a collection of pictures, ftatues, medals, and an-: tiques, with the fum of L. 10,000 .

He returned to Spain, where he was magnificently. honoured and rewarded for his fervices. He was crcated a genteman of the king's bedchamber, and named fecretary to the council of fate in the Netherlands. Rubens, however, did not lay afide his profeffion. He returned to Antwerp, where he married a fecond wife called Helena Forment, who, being an eminent beauty, helped him much in the figures of his women. He died on 30 th May \(16+0\), in the 63 d year of his age ; leaving vaft riches to his chilltren. Albert his eldeff fonfucceeded him in the office of fecretary of ftate in Flanders.

As Rubens was poffeffed of all the ornaments and advantages that render a man worthy to be efteemed or courted, he was always treated as a perfon of confequence. His figure was noblc, his manners engaging, and his converfation lively; his learning was univerfal. Though his favourite Itudy mult have occupicd him much, yet lie found time to read the works of the molt celebrated authors, and efpecially the poets. He fpoke feveral languages perfectly, and was an excellent ftatesman.

His houfe at Antwerp was enriched with every thing in the arts that was rare and valuable. It contained one fpacious apartment, in imitation of the rotunda at Rome, adorned with a choice collection of pictures which he had purchafed in Italy; part of which he fold to the duke of Buckingham.

His genius qualifed him to excel equally in every thing that can enter into the compofition of a picture. His invention was fo fertile, that, if he had occafion to paint the fane fubject feveral tinıes, his imagination always fupplied hin with fomething ftriking and new. The attitudes of his figures are natural and varied, the carriage of the head is peculiarly graceful, and his espreffion noble and animated.

He is by all allowed to have carried the art of cobouring to its highett pitch; he underftood fo thoroughly the true principles of the chiaro-fcuro, that he gave to his figures the utmof harmony, and a prominence refembling real life. His pencil is mellowed, his ftrokes bold nad eafy, his camation glows with life, and his drapery is fimple, but grand, broad, and hung with much flill.

The great excellence of Rubens appears in his grand compofitions; for as they are to be viewed at a diftance, le laid on a proper body of colours with uncommon boldnefs, and fixed all his tints in thicir proper places; fo that he never impaired their luftre by breaking or torturing them; but touched them in fuch a manner as to give them a lafting force, beauty, and hamony.

It is generally allowed, that Rubens wanted corre气.
nefs in drawing and defigning; fome of his fipures being heavy and too fhort, and the limbs in fume parts not being jultly fketched in the outline. Though he had fent feven years in Italy in fludying thofe antiques br which other celebrated artifts had modelled their tafte; though he had examined them with fuch minute attention as not ouly to perceive their beauties, but to the qualinied to defribe them in a Differtation which he wrote on that fubject : yet he feems never to have divelted himlelf of that heavy ftyle of painting, which, being peculiar to his native country, he had infenfibly acquired. The aftonifling rapidity too with which he painted, made him fall into inaccuracies, from which thofe works that he finithed with care are entirely exempted.

Among his finifhed pieces may be mentioned the Crucifixion of Jefus Chritt between the two Thieves, which was very lately to be feen at Antwerp; hut of all his works the paintings in the palace of Luxemburg beft difplay his genius and his ftyle.

It is the obfervation of Algarotti, that he was more moderate in his movements than Tintoretto, and more Soft in his chiaro-fcuro than Carravaggio; but not fo rich in his compofitions, nor fo light in his touches, as Paolo Veroncfe ; in his carnations lefs true than Titian, and lefs delicate than Vandyck. Yet he contrived to give his colours the utmoft tranfparency and harmony, notwithtanding the extraordiuary deepnefs of them; and he liad a ftrength and grandeur of ftyle entirely his own.

RUBIA, MADDER: A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 47 th order, Stellata. The corolla is monopetalous and campanulated; and there are two monofpermous berries. Thace are three fpecies, of which the moft remarkable is the tinctorum, or dyer's madder, fo much ufed by the dyer's and callico-printers. This hath a perennial root and annual falk: the root is compofed of nany long, thick, fucculent fibres, almott as large as a man's little finger; thefe are joined at the top in a head like afparagus, and run very deep into the ground. From the upper part, or head of the root, come out many fide-roots, which extend juft under the furface of the ground to a great diftance, whereby it propagates very fall ; for thefe fend up a great number of thoots, which, if carcfully taken off in the fpring foon after they are above ground, become fo many plants. Thefe roots are of a reddifh colour, fomewhat tranfparent; and have a yellowih pith in the middle, which is tough and of a bitterifh tafte. From this root arife many large fourcornered jointed Italks, which, in good land, will grow five or fix feet long, and, if fupported, fometimes feven or eight: they are armed with fhort herbaceous prickles; and at each joint are placed five or fix fpear-haped leaves: their upper furfaces are fmooth: but their midrib on the under fide is armed with rough herbaceous Spines, and the leaves fit clofe to the branches in whorls. From the joints of the ftalk come out the branches, which futain the flowers: they are placed by pairs oppofite ; each pair crofing the other: thefe have a few finall leaves toward the b.ottom, which are by threes, and upwards by pairs oppofite: the branches are terminated by loofe branching fpikes of yellow flowers, which are cut into four parts refembling flars. Thefe appear in June, and are fometimes fucceeded by feeds, which
inka which feldom ripen in England. For the manner of us. its cultivation and preparation for the ufe of dyers, fee the article Madder.

Madder-root is ufed in medicine. The virtues attributed to it are thole of a detergent and aperient; whence it has been ufually ranked among the opening roots, and recommended in obfructions of the vifecra, particularly of the tidneys, in coagulations of the blood from falls or bruifes, in the jaundice, and beginning dropfies. It is an ingredient in the ieteric decoction of the Edinburgh pharmacopceia.

It is obfervable, that this root, taken internally, tinges the urine of a deep red colour; and in the Philofophical Tranfactions we have an account of its producing a like effect upon the bones of animals who had it mixed with their food: all the bones, particularly the more folid ones, were faid to be changed, both externally and internally, to a deep red; but neither the flelhy or cartilazinous parts fuftect any alterations: fome of thele bones macerated in water for many weeks togcther, and aftenwards iteeped and boiled in fpirit of wine, loft none of their colour, nor communicated any tinge to the liquors. This root, therefore, was concluded to be pollefer of great fubtilty of parts, and its medical virtues hence to deferve inquiry. The fame trials, however, made by others, have not been found to produce the fame effects as thofe zbove-mentioned.- Of late the root has come into great reputation as an emmenagrogue.

RUBININSKA, one of the northern provinces of Ruffta, bounded by the province of Dwina on the north, by Syriancs on the ealt, by Belozera on the fouth, and by the lake Onega on the weft.

RUBRIC, in the canon law, fignifies a title or article in certain ancient law-bocks; thus called beeaufe written, as the titles of the clapters in our ancient bibies are, in red letters.

RUBUS, the Bramble, or Rafperry Lyf: A genus of the polygamia order, belonging to the icolandria clafs of plants: and in the natural order ranking under the \(35^{\text {th }}\) crder, Seniaga. The calyx is quinquefd, the petals five ; the bery confiting of monofpermous acini or pulpy grains. The principal fpecies is the common rafpberry, which, with its varieties, demands culture in every garden for their fruit ; particularly the common red kind, w lite fort, and twicebearing rafpberys; all of which are great bearers: but for the general plantations, we choure principally the common red and the white kind, as being generally the greateft bearers of all; planting alfo a thare of the twice-bearing furt, both as a curiofity and for the fake of its autumal crops of fruit, which in favourable feafons ripen in tolerabie perfection; obferving to allow all the forts fore open expofure in the krichen oarden, though they will profper in almoft any fituation.

The other fpecies are confidered as plants of variety, for hardy piantations in the frubbery. Sume of them are alfo very ornamental dowering plants; particularly the Virginian flowering rafpberry, and the doublebloffomed bramble, which have great nerit as furniture for ormamental compartments; and the white-berried bramble, which is a great curiofity. All the other fpe. cies and varieties ferve to diverffy large collections.

RUBY, a genus of precious ftones of various co lours; as, I . Of a deep red colour inclining a little to purple; the carbuncle of Pliny. 2. The fpinell, of the colour of a bright com poppy flower. 3. The balafs or pale red inclining to violet; fuppofed to be the mother of rubies. 4. The rubicell, of a reddifh yellow. According to Cronftedt, the ruby cryftallifes into an octocdral form, as well as the diamond, from which it differs very little in hardnel3 and weight, whence he concludes that they are both of the fame nature; but fome late experimeats have fhown that the diamond differs exceffively from all other gems, in being diffipable by a ftrong fire, which the others refift. Tavernier and Dutens inform us, that in the Eaft Indies all coloured gems are named rubies, without regard to what tlieir colours may be; and that the particular colour is added to the name of each in order to diltinguith them from one another. There are, howerer, fome folt fones of this kind which they call lacan; and it is certain, that the hard and brilliant rubies named crienta!', as well as the fapphires and topazes, are all the fame, excepting only the circemitance of cclou:. Some are partly red and partly blue, yellow, and fome quite colourlefs. "The fpinell rubies are about hali the value of diamonds of the fame weight; the balafs is valued at 30 Millings per carat. Tavernie: mentions \(1=0\) rubies in the throne of the great Mogul, frem 100 to 200 carats, and of a round one alnot \(2 \frac{1}{2}\) ounces: there is alfo mention made by uther travelle:s of rubies exceeding 200 carats in weight. According to Dutens, a perfect ruby, if it weighs more than \(3^{\frac{7}{2}} \mathrm{ca}\). rats, is of greater value than a diamond or the fame weight. If it weighs cne earat, it is worth 10 guineas; if two carats, 40 guineas; three carats, 150 gui neas; if fix carats, upwards of 1000 guineas:

According to the experiments of Bergmen and \(A\). chard, the texture of the ruby is foliated like that of diamonds; it is fufible with borax in a ftrong and lonfo continued heat, running into a tranfparent glafs of a pale green colour: the fame effect is produced by m:crocolmic falt ; but with fedative falt, or mineral or vegetable alkali, the glafs is opaque and diferently coloured. From the experiments of M. d'Arcet, it appears that the ruby does not lofe is colour in the greate! fire ; but Henckel fays, that, by means ot a burning glafs, he fuftened it in fuch a maner as to receive the impreffion of a feal of jafper. It beconns elcceric by being rubbed. Its fpecific gravity, according to Bergman, is from 3,180 to 4,240 ; but Brition teils us thas it is 4,283 . The fpecife gravity of the fpintll is \(3 ., 6 \approx\), of the Brafilien raby \(3,53 \mathrm{I}\).

Rubies are met with in the Capelan mountains of Pegu in the Ealt Indies; and at Caos, Ava, Bifnaga:. Calicut, Cananor, Ceilan, and Brafil. They are found in the fands of rivers of a red colour, in an argillaceo:s earth of an hard texture and greenith colour: fom:times they adhere to red rocks. The foinell rubies are met with in Hungary, Silelia, Bohemia, and Baafil. The balals comes priecipally from 13rail, thoush fome are alfo brought from the Laft Indies. The Eus bicell comes alfo from Leath, but are faid to lofe their colour in the fire. A variety of this gent, but of a foft quality, is found in great plenty on the leashote near Ely in Fifelhire, Scoilad. Tlicre is alio a fune
which comes near to the ruby found near Portfoy, Banffshire, and at Inverary, Argylethire, Scotland. The rubino di rocca of the Italians is a true garnet of a deep red and violet, or of the amethyt colour. What is called ruby of arfenic or of fulphur is the realgar: the ruby of zinc is the red blend; and the ruby of filver is the red filver ore.

Rubies may be artificially made from Brafilian topazes of a Imoky appearance, by giving them a gradual heat in a crucible filled with ahes, until it be red. hot.
Rock Rurr, the amethyflizontas of the ancients, is found in Syria, Calcutta, Cananor, Cambaya, and E. thiopia. It is the mott valued of all the fpecies of garnets, and is frequently fold as a ruby under the name of rubinus Rufficurn. See Garnet and Ruily.

RUCTATION, a ventofity ariling from indigedion, and difcharging itfle at the mouth with a very difagreeable noife.

RUDBECK (Olaus), a learned Swedih phyfician, born of an ancient and noble family in 1630 . He became profeffor of medicine at Upfal, where he acquired great applaufe by his extenfive knowledge ; and died in 1702. His principal works are, 1. Exercitatio anatomica, exhibens ductus novos bepaticos aquofos, Es vafa gidandularum ferofa, in 4 to. He there afterts his claim to the diffovery of the lymphatic veffels, againft the pretenfions of Thomas Bartholin. 2. Athlantica, five Manhein, vera Japbeti poflerorum fedes as patria, 4 vols folio, is full of ftrange paradoxes fupported with profound learning : he there endeavours to prove, that Sweden was the country whence all the ancient Pagan divinities and our firf parents were derived; and that the Germans, Englifh, French, Danes, Greeks, and Romans, with all other nations, originally came from thence.

RUDBECKIA, in botany: a genus of the poly. gamia fruftanea order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 49 th order, Compofite. The receptacle is paleaceous and conical ; the pappus confifts of a quadridentate margin; the calyx of a double feries of fcaly leaves.

RUDDER, in navigation, a piece of timber turning on hinges in the ftern of the Ship, and which, oppofing fometimes one fide in the water and fometimes another, turns or direfts the veffel this way or that. See Helm.

In the feventh volume of the Tranfactions of the Society inftitured at London for the Encouragement of Arts, Manufactures, and Conmerce, there is explained a method of fupplying the lofs of a fhip's rudder at fea. The invention, which is Captain Pakenham's of the royal navy, has been approved by Admiral Cornwallis, the commifioners of the admiralty, by the fociety in whofe tranfactions the account of it was firl publifhed, and who prefented to Captain Pakenham their gold medal, by the Trinity houfe, by the managing owners of Eaft India Thipping, by the duke of Sudermania the prefent regent of Sweden, and by the fociety for the improvement of naval architecture. The fubftitute here recommended for a loft rudder, fays the inventor, is formed of thofe materials without which no thip goes :o fea, and its conltruction is fimple and fpeedy. Captain Pakenham, however, did not give a particular ac-
count of his invention to the fociety whom he addreffed, and to whom he fent a model of his invention, till fuch time as he had an opportunity of reducing the theory. he had conccived to practice. On the 7th of July F788, he made thistrial with the Merlin of Newfound. land; and he declares that, during the diferent ma. nusurres of tacking and wearing, he could not difcover the leat variation between the operation of the ma, chine and that of the fhip's rudder: fhe was Ateere 1 with the fane eale by one man, and anfwered the helm in every fituation fully as quick. Admiral Cornwallis certifies the fame with relpect to the Crown of \(\sigma_{4}\) guni, which loft her rudder on the Kentifh Knock, when with the fubllitute fle was flecred to Portfmouth with the utmoft eafe in a heavy gale, and, as the admiral afferts, it would have taken her to the Eaft Indies.

The materials and conftruction are thus deferibed in the Tranfactions. " \(\mathrm{N}^{3} 1\). a top-maft inverted; the fidhole to thip the tiller in, and fecured with hoops CCCCX from the anchur flocks; the heel forming the head of the rudder. \(\mathrm{N}^{2}{ }^{2}\). The inner half of a jibb-boom. \(\mathrm{N}^{\circ} 3\). The outer half of a jibb-boom. N' 4 . A fih: the whole of thefe materials well-bolted together:-in a merchantman her ruff-tree. \(\mathrm{N}^{3}\). A cap, with the fquare part cut out to fit the ftern-poit, and acting as a lower gud. geon, fecured to the ltern-polt with lawfers, leading from the bolts of the cap, under the fhip's bottom, into the hawfe-holes, and hove well tort. N'6. A plank, or, if none on board the mips, gangboards. \(\mathrm{N}^{0} 7\). An-chor-itocks, made to fit the topmall as partners, fecured to the deek, and fupplying the place of the upper gudgeon, and in a merchant-fhip the clamps of her windlafs. \(\mathrm{N}^{3} 8\). A ftern-pot. \(\mathrm{N}^{2} 9\). Hoops from the anchor ftocks. No ic. Pigs of ballaft, to fink the lower part. The head of the rudder to pafs through as many decks as you wifh.'"

On this the Captain makes the following remarks : st It might probably be fuppofed, that a difficulty would occur in bringing the jaws of the cap to embracc the itern-poft ; but this will at once be obviated, when it is remembered that the top-chains, or haw-fers, leading from each end of the jaws, under the fhip's bottom, are in fact a continuance of the jaws themfelves. Nor can it be apprehended that the cap, when fixed, may be impelled from its ftation, either by the efforts of the fea, or the courfe of the Mip through the water, tho* even the hawfers, which confine it in the firf inftance, fhould be relaxed:-the experiment proves, that the partncrs mult be firft torn away, or the main-piece broken off.
"Since the improved fate of navigation, notwithflanding remedies have been found in general for the moft difaltrous accidents at fea, experience has evinced that nothing complete, had been hitherto invented to fupply the lofs of a rudder. The firft expedient within my knowledge were cables veered aftern, with tackles leading from them to the Mip's quarters. This practice was fuperfeded by the invention of the machine ufually called the Ip rwich machine; but the conltruction of it is complex and unwieldy, and veffels are feldom found in poffeffion of the materials which form it. Commodore Byron, in the Journal of his Voyare round the World, fays, that the lamer, with every affifance from lis own Ahip, was five days in conftructing it. Befides, like the

\section*{\(\pi\) U D}
imas. befone-mentioned fcherce, it can oris operale is fleer a flup large (and that but sery wildty), and of courfe, under the circumftance of a lee-fhore, defeat the molt niltul exert ons of a feaman. Several uther expedients have buen adopted, which I fhall not mention bere, as the fame defects equally appear in all.
" Thus it was apparent, that ample room was left for the dicosery of fome more certain tefource than any of the forner; and the fcheme which has fuggelted iticll to me, will, I truft, be found frilly to anfiwer the purpo \({ }^{\circ} \mathrm{c}\) intended. The materials are fuch as fcarcely any ohip can venture to fea without ; and the confraction fo fueedy, taly, and limple, that the capacity of the meancf fallor will at once conceive it. I need not, from mathematical principles, fhow the certainty of its effect. as it is formed and inanaged in the fame manner as a frip's common rudder: and as the common rudder is certaialy of all inventions the beft calculated for guiding a refled though the water, it will of courfe fullow, that whatever fustitute the neareff refembles that, muft be beft adapted to fupply its lofs."

RUDDLMAN (Thomas), one of the moft eminent grammariaus which Scotland has produced, was born in October \(167+\) at Raggel, in the parifh of Borndie and county of Banif. His father James Ruddiman was a farmer, and ftrongly attached to the houfe of Stuart.

Mr Ruddiman was inftructed in the principles of Lain grammar at the painf-fchool of Boyndic, where his application was fo rifrorous, and his piogrefs fo rapid, that he quickly furpaffed all his clafs-fellows. His malter George Morifon, who was a fkillul and attentive :eacher, being unwilling to check his ardour for leatnine, permitted him to follow the impulfe of his genius, and to advance without waiting the flow progrefs of the other boys.

The pleafure which the youthful mind receives from vivid defcretion, though wild and romantic, approaches to ceftacy, and often makes an imprefion which remains indelible. While at fchool, the firt book which charmed the opening mind of Ruddiman was Ovid's Mictamorphofes; nor did he ceafe to relifh the beauties of this author when his judgment was mature, for during the reft of his life Ovid was his favourite poet.

At the age of fixteen he became anxious to purfue his ftudies at the univerfity; but his father thinking him too young, oppofed his inclination. Hearing of the compctition trial, which was annually held at King's college, A berdeen, for a certain number of burfaries on the fonndation of that univerfity, Ruddiman's ambition was kindled. Without the knowledye of his father, ard with only a fingle guinea in his pocket, which his fifter had privately given him, fie fet out for that place. On the road he was met by a company of gypfeys, who robbed him of his coat, his thors, his ftcckings, and his guinea. This misfortune did not damp his enserpriling fipit: He continued his journey to Aberdeen, prefented liminel' before the profeffors as a candidate; and though he bad neither clothes to give him a decent appearance nor friends to recommend him, he gained the firf prize.
After attending the univerfity four years, he obtained the degree of mafter of arts; an honour of which he sras alvays proud. The thelis fays, the difputation on this occafion lafted ab aurora ugue ab vedserum, i. e.
"fram momis.g till nicglat." Thu' RuJdiman was only Ruld mav. twenty gears of age when lie left the univerity, it ap= pears from a book istilled Ris lorioorum \(L\), bri ire., compoled before tins period, but never publifhet, that he had then read the Roman claffes with uncommon attertion and advantage.

He was foon aftur cngaged as a tutor to the fon of Robert Iounc, Efq; of Aulduar, the great grandicn of Sir Peter ioung, who under the directions of Buchanan had been preceptor of fames VI. II is incune here mut have been very fmall, or his tituarion unpleafant; for within a year he accepted the office of fchoolmatter in the parih of Laurence-kirk The profefion of fchoolmalter in a country-parih at that period could open no fekd for ambiton, nor profpect of great emulunent; for by an act of parliament pafed in 033 , the falary appropriated to this ofice could not tue ins creafed above 2 co mesk, Scots, or L. \(11: 2: 2\) Siter. ling. In difcharging the duties of this bumble but im. purtant ftation, it is probable that he ufed Smfon's Ruclimerta Grammatia, which was then generally taught in the northern folouls, and by which he hinifef had been inffucted in the 1 inciples of Latin grammar.

Whon Ruddiman had font three years and a half in this cmployment, the celcbrated Dr Pitcaime happening to puls through Laurence-kirk, was detained ir that village by a violent \(1 t 01 \mathrm{~m}\). Pitcairne wanting amulement, inquired at the holtefs if fhe could procure any agreeable companion to bear him conpany at dinner. Sle replied, that the fchoolenaiter, thu:a, \(h\) young, was faid to be leamed, and, though modeth, the was fure could talk. Pitcairne was deligh:ed with the converfation and learning of his wew companion, invited bim to Edinburgh, and promited him his patronage.

When Kuddiman arrived in Edinburyh, the advo. zates library, which had been founded eishteen years before by Sir George Mackenzie, attratied his curio. fity and attention, and he was foon after appointed al: fittant-kecper under Mr Spottifwoode the principal libra. rian. His falary for executing this laborious office was L. \(8: 6: 8\). He had befides a fmall honomary prefent from thofe who were admitted advocates for corsecting their thefes: he was alfo paid for copying manufcripts for the ufe of the libiarg. And the laculty, before he had held the office two years, were fo highly pleafed with his condues, that they made hm a prefent of 50 pounds Seots, or L. \(4: 3: 4\) Sterling.

During the fitting of the court of kfion he attended the library from ten till three. But this con' nement did not orevent him from engeging in. other laberious duties: A part of his time was eccupied in seaching young gentlemen the Latiu language. Some he at:ended at their lodzmgs. fome wated upon him, and fome relided in his own houle. An exact litt el the names of thofe who attended hin, exprefing the date of their entry, and the fums which he was to receive from eacl, has been found in his pochet-book; a ca. rious ret ck which is ftill preferved.

When Ruddiman's nucrit as a ícholar became better known, his affitance was anxiount folicited by thofe who were engaged in literary publications. Friebairne, a refpectable bookjeller of that period, prevailed upen hin to correct and puepare for the preis sir Kubert
 rum in ea Buralis Britarnizz farte gas wibra mirlan

\section*{\(R \quad \mathrm{D} \quad, \quad\left[54^{6}\right]\)}

In 1713 he was deprived of his friend Dr litcaime, Ruddinu

Ruddiman. Piaicum of. He received for his labour L. 3 Sterling. At the requeft of Mr Spottifwoode librarian, for L. 5 Sterling lie contributed his aid to the publication of Sir Rubert Spotifiwoode's Practiques of the Laws of Sicotland.

In 1707 he commenced anctionecr, an employment not tery fuitable to the dignificd character of a man of letters: but to this occupation he was probally impclled by necefity ; for upoon balancing his accounts at the end of the preceding year, the whole furplus was L. 28 , 2 s . with profpects of L. \(236: 7: 6\) Scots. Ruddiman had a family; and fcems to have been a ftranger to that foolifh pride which has feduced fome literary men into the opinion, that it is more honourable to flarve than have ricourfe to an occupation which men of rank and opulence are accuftomed to defpife. The fame year he publifhed an edition of Volufeni de Animi Tranquillitate Dialogus, to which he prefixed the life of Volufenus. Volufenus or Wilfon was a learned Scotfman, and had the honour to be patronifed by Cardinal Wolfey (fee Walson). In 1709 he publifhed Fobnfoni Cantici Solomonis Paraphrafis Poetica, and Fobnfoni Cantica with notes, which he dedicated in verfe to his friend and patron Dr Pitcairne. The edition confifted of 200 copies. The expence of printing amounted to L. 5,10 s. Sterling, and he fold them at a fhilling each copy.

The philological talents of Ruddiman were next directed to a more important object, in which they became more confpicuous and ufeful. Freebairne the book [eller propofed to publifh a new edition of the Scottifh tranflation of Virgil's たeneid by Gawin Douglas bithop of Dunkeld. Of the contributions which fome eminent characters of the age prefented, the moft valuable were fupplied by Ruddiman. Freebairne acknowledged in general terms this obligation, but has not done him the juflice to inform the reader what thefe valuable contributions were, and Ruddiman's modefty reftrained him from publicly afferting his claim. From the pocket-book which has been already mentioned, it appears that Ruddiman correEted the work and wrote the gloffary; and there is flrong reafon to believe that he was the author of the 42 general rules for affiting the reader to underttand the language of Douglas. To thofe who wifh to be acquainted with the ancient language of this ifland, the gloffary will be a treafure, as it forms a compendious dictionary of the Anglo-Saxon. For this claborate work Ruddiman was allowed L \(8: 6: 8\) Sterling.

The reputation of Ruddiman had now extended to a diftance. He was invited by the magiftrates of Dundee to be rector of the grammar-fchool of that town; but the faculty of advocates, anxious to retain him, augmented his falary to L. \(30: 6: 8\) Sterling, and he declined the offer.

In 171 is he affited Biflop Sage in publifhing Drum. mond of Hawthornden's works; and performed the fame favour to Dr Abercrombie, who was then preparing for the prefs lis Martial. Atchievements.

On this occafion he teltified all the refpeit which friendfhip could infpirc to the memory of his decealed patron and furviving family. He compofed Pitcairne's epitaph, and conducted the fale of his library, which was difpofed of to Peter the Great.

In 1714 the Rudiments of the Latin tongue were publifhed. Eighteen or nineteen Latin grammars, compofed by Scotchnien, had appeared before this period; yet fuch is the intrinfic value of this little treatife, that it foon fuperfeded all other books on the fubject, and is now taught in all the grammar-fehools in Scotland. It has alfo been tranflated into other languages.

He was next called upon to publifh the works of Buchanan. The value of thefe he enhanced much by an claborate preface, his Tabula Refium Scotice Cbrowologica, and Propriorum Nominum Interpretatio. The interpretation of proper names was highly requifite; for Buchanan has fo difguifed them in the Roman drefs, that the original name is fearcely difecruible; and the preface puts the reader on his guard againft the chranological errors and factious fpirit of the hiftory. Ruddiman alfo added a learned differtation, intitled De Metris Buchananzis Libelhus, and fubjoined annotations critical and political on the Hiftory of Scotland. As he efpoufed the caufe of Queen Mary, he raifed againit himfelf an hoft of enemics, and gave occafion to that celebrated controverly which has been carried on with much keennefs and aninofity, and with little intermifo fion, even to the prefent times. For this work Ruddiman was promifed L. 40 Sterling.

He had now been fo long accuftomed to fuperintend the prefs, that he was led to form the plan of erecting a printing-office himfelf ( \(A\) ). Accordingly, in the year 1715, he commenced printer in partnerhip with his brother Walter, who had been regularly bred to the bufinefs. Some years after he was appointed printer to the univerfity, along with James Daldfon bookfeller.

The firf literary fociety formed in Scotland was innituted in the year 1718 . It probably derived its origin from the factious and turbulent fpirit of the times. The learned, anxious perhaps to find fome refpite from the political difienfions of the day, endeavoured to procure it in elegant amufement; for one of the fundamental articles of the new affociation was, that the "affairs of church and fate frould not be introduced." Ruddiman and the mafters of the high-fchool had the honour to found this fociety. They were afterwards joined by Lord Kaimes.

In 1725 the firt part of his Grammatice Latina \(I_{n}\) fitutiones, which treated of etymology, was pablifhed. The fecond part, which explained the nature and principles of fyntax, appeared in 17.31. He alfo wrote a third part on profody, which is faid to be more copious and correct than any other publication on the fubject. When urged to give it to the public, he faid dryly, "The age has fo little tafte, the fale would not pay the expence." Of this work he publifhed an abridgement,
(A) It has long been an object of curiofity to afcertain the time at which the art of printing was introduced into Scotland. Mr Robertfon, the keeper of the records, has lately difcovered a patent of King James IV: which renders it certain that a printing-prefs was frft eftablifhed at Edinburgh during the year 1507, 30 yeaw after Caxton had brought it into England, See Printing, P. 522.

\section*{\(R \quad \mathrm{D}\)}

Yman, ment, to which he fubjoined an abtratt of his profody.

Ruddiman next engaged in the management of a newfpaper, an employment for which his genits and intuffry feemed to render hin well qualified. But thofe who dhould expeet either much information or amufement from this publication, would perhaps be greatly difappointed. Thie newfpaper which he conduEted was the Caledonian Mercury, and was cftablifhed in 1720 by Willian? Reiland a lawyer. Ruddiman acted only in the capacity of printer for five years; but upon the death of Mr Rolland in 1729 , the property was tranf. ferred to him, or to his brother Walter and him con. junctly. This paper continued in the fanily of Ruddiman till the year 1772, when it was fold by the truftees of his grandehildren to Mr John Robertion.
The Caledonian Mercury was at frift printed three times a week, on Monday, Tuefday, and Thurday, in a fmail 4 to of fout pages, with two columns in each page, and 50 lines in each column ; fo that the whole paper contained only 400 lincs. It now contains in its folio fize 2480 lines.

Mr Ruddiman, after the death of Mr Spottifwoode librarian, remained for fome time in his former flation ; but was at length appointed keeper of the library, tho? without any increate of falary; and fome years after Mr Goodal, the defender of Quieen Mary, fucceeded him in the office of fub-librarizn.
The affiduous application of Ruddiman, fupported by fuch learning, was intitiled to wealth, wi.ch now indeed flowed upon him in what was at that period deemed great abundance. On the itt of Cetoler : 735 , it ap. peared from an exact flatement of his affairs, that he was worth L. 1882: \(5: 2\) Sterling; and on the 20th of May, the enfuing year, hisis wealth had increafed to L. \(198 ;: 6: 3\) Sterling. In 1710 he valued his effects at L. 24 I 14 : 9 Sterling.

In 1737 the fchoolmafters and tenchers in Edinburgh formed theniflyes into a fociety, in order to eftabliih a fund for the fupport of their wivss and children. Of this tcheme Ruldiman was an active promoter, and was choten treafurer. Perhaps it was this affiociation which in \(17+2\) gave the idea to the Scots clergy of forming their widows fund.

In \({ }^{7} 73 y\), he publihed Stereus Diplomatum ot Numifmatum Scotie Thef furus. This work was projeted and begun by Anderfon (hence called Anacr/jm's Diploma\(t a\) ), but was fuiilhed by Ruddiman. The pieface, wlich is an excellent commentary on Auderfon's perfurmance, was written by Ruddiman, and difplays a greater extent of knowled de than any of his other productions.

As Rudd; man had imbited from his fatier thofe political principles which attached him to the family of Stuart, he probably did not remzin an unconcerned fpectator of the civil commotions which in 1745 agitated Scotland. He did not, howerer, take any active part in the rebellion. His principles, he has been lieard to fay, induced him to be a quiet fubjett and a good citizen. He retired to the country during the fummer of 1745 ; and while his fellow.citizens were frilling each others blood, he was more happily engaged in writing Critical Obferations on Burman's Commentaries on Lucan's Pharfalia. The Caledonian Mercury was in the mean time marked with a jealous eye. His fon,
who had for fome time been the principal manayer of Rudtiman. that newfpaper, having eopied a paragraph which was reckoned feditious from an Englith paper, was imprifoned. The folicitation of 1 is father procured bis releafe: but it was too late; for the unfappy young mas had eontracted a ditemper in the tolbooth of Edinburgh which brought him to his grave.

During the laft feventeen years of his life Ruddiman was almolt inceffantly engaged in controverfy. To this he was in fome meafure compelled by the violent attacks which fome critics of the times had fucceltively made upon his wolks. He was firit called upon by Benfon, auditor in the exchequer, to detemmine the comparative merit of Buchanan and Johnfton as poets. He gave a decided preference to Buchanan in perfpicuity, purity, and variety of ityle; but, like a candid critic, allowed Johnton to be fuperior in the harmnny of his numbers. His next antaronit was Logan, oi: of the minitters of Edinburgh, a weak illitcrate man, but an obflinate polemic. The fubject of cunteft was, whether the crown of Scotland was ftriely hereditary; and whether the bith of Rubert III., was legitinate? Ruddiman maintained the affirmative in booh pointe, and certainly far furpaffed his antagonit in the povicrs of reafoning. He proved the legitinacy of Robert by the public records of the kingdoni with a force of argument which admits of no reply; but in difcuffing the firft queftion (by which hee was led to confider the contert between Bruce and Baliol) he was not fo fuccectsul: for there are many initances in the hiltory of Scotland in which the brother fucceeded to the crown in preference to the fon. He fhowed, however, that the Sicottih erown was at no period properly elective; and that, according to the old licentious conflitution of the kinsdom, the right of Bruce, who was the neareft in blood to the royal flock, was preferable to the claim of Baatiol though defcended from the elder daurhter.
But the labours of Ruddiman did not end whien the pen dropt from the feeble hard of Logan. He was foon called upon to repel the attacks of Love Cchoulmatter of Dalkcith, who maintaincd, in opporition to him, that Euchanan had neither reputed of lis treatment of Queen Mart, nor had been guilty of ingratitude to that pinincefs. That Buchanan ever repented there is reafon to doubt. Whether lie was guilty of ingratitude, let the unbiaffed determine, when they are affured by authentic records that Mary conferred on him a pelifion for 1 fe of \(; 00\) pounds Scots.
When Ruddiman had anived at his eightiect year, and was almoft bind, he was affiled by James Mian, naditer of an hoofpital at Aherdece, with a degree of rancour and virulence, united with fome learning and ability, which muft lave touclied him in a fenfificic manner, and darmed his fears for his reputation ater his deceafe. He was called a finijbud \(p\) edant, a jurious calumniator, and a corrutter of Bukbunan's suorks. The venerable old man again put on his arniour, enteced the lifts, and gained a complete vieturf. Man, with aill his acuteneff, could only point out twenty errors in two folio volumes. Some of theic were typographical, fome trifing, and fome doubfful. Ruddiman, with much pleadaintry, drew up againit Man an acceunt of 469 er rois, confifiting of 14 articles, of which two or three may be produced as a fpecinen. 1. Falfehoods and prevarications, 20. 2. Abfurditice, 69. 3. Paflares from

Fusfimar, claffe authors which were mifunderitood by Man, ic. Rucckein: The triumph whieh he gained over this virulent adverfary he did not lono enjoy; for he died at Edinburgh on the 19th of January 1.757 , in the 830 l year of his age, and was buricd in the Grey Fiars churchyard without any monument to ditlinguith his grave.

He was three times married, but left lehind him only one daughter, Alifon, who was maried in 174 , to James Stewart, Efq. He is fuppofed to have died worth I. 3000 Sterling.

Ine was of the middle fize, of a thin and ftraight make, and had eyes remarkably piereing Of his talents and leaning his works afford the moft fatisfactory proofs. His menory was tenacious and exact. He could repeat long paffages of his favourte poet Ond, to the anomt of 60 lines, and without omitting a word. He was fo great a mafter in the Latin language, that le has pertaps been equalled by none fince the days of Buchanan.

Ruddinian has left a character uritained by vice, and diftinguifhed by many virtues. Fis piety was excmplary. He fpent Sunday in religious employment; and we are informed had prayers read to hime every monning by his amanuenfis when the infirmities of ase required fueh an affiftant. He was frugal of his time, netther indolent nor foud of ammfement; and formarkably temperate, that it is faid he was ne:er intoxicated. Thuogh often forced into controverfy, and treated with infolence, he never defcended to feurrility and abufe, nor cherifhed refentnent againft his enemies. His candour was much adnired in one inflance in the favourable eharacter which he publifhed in the Caledonian Mercury of his antagonift Love ( B ), after his deceafe. Upon the whole, it mult be allowed that Ruddiman has been of great fervice to clafical literature, and an honour to his native country.

RUDESHEIM, a rich village of the Rhinegan, fituated about five miles from the city of Mentz, contains about 2500 inhabitants. The wine of this place is looked upon as without comparifor the beft of the Rhineşan, and confequently of all Germany. Baron Riefbeck fays, he found it much more fiery than that of Hochheim; but that for pleafantnefs of tatte there is. no comparifon betwixt them. The beft Rudefheim, like the beft Hochheimer, fells upon the fout for three gruilders the bottle. "You can (fays our duthol) have no tolerable wine here for one guilder, nor any very good for two ; at leaft I fhould prefer the worft Burgundy I ever tafted to any Rudefheimer 1 met with cither here or at Mentz for thefe prices. Indeed the wine of our hoft (a rich ecclefiatic) was far better than any we could get at the inn. It fland; to reafon, that the fame vintage furruifhes grapes of very diffeent degrees of goodnefs; but befides this, it is in the Rhi-
necau as every where elfe. Tine beit swises sate geserally ferit abroad by the poor and miduling imhabitants, and the worit hept for internal confumption; for the expence of the carriage being the fame in both cafes, Atrangers had much rather pay a double price for the good than have the pad. It is orly rich people, fuch as our hott was, who ean afford to keep the produce of thei land for their own drinking. Upon this principle, I have eaten much better Swifs checies ont of Switzerland than in it, and have drank much better Rhenifh in the inns of the northern parts of Gcrmany than in the country where the wine grows. The pofition of the country alfo contributes to render the wine dearer than it would otherwife be. As the beft winc glows in its more northern parts, the eafy tranfort by the Rhine to Helland, and all parts of the world. reifes its price above its real value. The place where the fower of the Rudefheim wine groivs is precifely the neek of the land, formed by the winding of the Rhine to the north, after it has run to the weftward from Mentz hither. This neek, which is a rock almoft perperdicuJar, enjoys the firt rays of the riiing and the laft of the fetting fun. It is divided into finall low terraces, which are carried up to the utmof top of the hill tike fteep fairs; thefe are guarded by fmall walls and eartlen mounds, which are often wathed away by the rain. The fill vine was brought hither from Franee. and they thill call the bell grape the Orleamois They plant the vine flocks very low, fearce ever more that four or five fect high. Thim way of planting the vine is favourable to the production of a great deal of wine. but not to its goodnefs, as the phlegmatic and harfo parts of it would certainly evaporate more, if the fap was refined through laigher and more numerous canals. This is undoubtedly the reafon why every kind of Rhenifh has fomething in it that is harfh, four, and watery. The harrett of the beth vineyards, which are the lower ones, in the above-mentioned neek of land, is often bought before-hand, at the adranced price of fome ducats, by Dutch and other merehants. It mult be a very rich tock to yicld above four meafures of wine.You may eafily imagine, that the cultivation of vineyards mutt be very expenfive in this country, as the dung, which is extremely dear, mutt be carried up to the top of the mountains on the peafants fhoulders"

RUDIMENTS, the firf principles or grounds of any art or fcience, called aifo the elements thereof.

RUE, in botany. See Ruin.
Rue (Charles de la), a French orator and poet, wás born at Paris in \(16 \not+3\). He was educated at the college of the Jefuits, where he afterwards became a profeflor of humanity and rhetoric. At an early age bis talent for poetry difclofed itfelf. In 1667 , when he was only \(2+\) years old, he compofed a Latin poem on the conque.ts of Louis XIV. which was fo much efteened by
(B) The following character of Love was publifhed in the Caledonian Mercury of the \(\mathbf{z} \boldsymbol{4}^{\text {th }}\) of September 1750. "On thurlday morning died at Daikeith, after a lingering 3lnefs, in the 55 th year of his age, Mr John Love, rector of the grammar.fchool there; who, for his uncommon knowledge in clafical learning, his indefatigable diligence, and ftriennefs of difcipline without feverity, was jufty accounted one of the moff fufficient mafters in this country." This character is doubtlefs jult ; though Love is now known to have been the fchoolmafter fatirized by Smolet in the beginning of his Roderick Rancom.

\section*{R U E \\ the celesratec Peter Corneille, that he tranfated it into} French, prefented it to the King, and at the fane time pafied fo bigh encomiuns an the fuperior merit of the original, that the atithor was reecived into the favour of that mosarch, and ever after treated by him with enguhar refpect.

De ha Rue, anxiors to preach the golpel to the Camadiens, requefed leave or ablence from inis fuperiors: but having deftined him for the pulpit, they reifed to comply with his requeit. Accordingly he commenced preacher, and became one of the molt eminent orators of his age. In his difcourles be would probably have been too lavifh of his wit, if he had not teen cautioned againft it by a judicious courtier "Continue, faid he) so preach as you do. We will hear you with pleafure as long as you reafon with us ; but avoid wit. Whe valure the wit contained in two verfes of a fogr more than all that is contained in moft of the fermions in Leent."

Reipecting the delivery of furmons, he entertained an opinion quite oppofite to tbe eftablithed practice of his countrymen. In France it was cuftomaty not to sead fermons frem the pulpit, but to recite tbem from snemory. This he confudered as a laborious tafk not compenfated by any advantayes. On the conerary, he was of opinion that reading fermons was preferable. The preacher, with his dilcourle before hin, cuald sead it with eafe, free from that timidity and embar* raffment wheh frequently attends the act of recollection ; and he would fave a confiderable, time which is ufually fpent in committing it to memory. In thefe fentiments many will not be difpofed to acquiefce: hut, without pretending to determine the oueflich, it may be afferted, that a fermon, whether read or recited, it fpoken in a ferious mamer, and with proper infections and tones of voice, will produce all the effects for which a fermon is calculated.

De la Rue died at Paris on the 27 th of May 17:5, at the age of 82 .

He was as amiable in fociety as he was veneratle in the pulpit. His cunverfation was pleafant and infruc. tire. His tafte and knowled e enabled bim to converfe with eafe, and to expiefs himelf with propriety on every fubject. He charmed his fuperio:s by his wit, and his inferiors by his affabliey. 'Though living amidit the bufte of the world, he was always prepared for the folitude of the clofe: and the retreat of the cloiker. In the pulpit he poured forth the fineft effurions of eloquence in the inoft ansmated and impreffive manner. He publifed Panegyrics, Funeral Orations, and Sermons. His beft fermon is that intitled \(D_{t s}\) Calumités Pulliques, and f.is moft admired funeral oration was compofed on the Prince of Luxemburg. 'I here are alfo tragedies of his writing, both in Latir and Franch, which were approsed by Corneille. He was one of thofe who publithed editions of the claffics for the ufe of the Dauphin. Virgil, which feil to his fhare, was pub!? ined with notes, and a Life of the Poet, in 1675, 4 te, and is a valuable and ufeful edition.
RUELLIA, in botany: A genus of the angiofrermia order, bilonging to the didynamia class of plants; and in the natural metlod ranking under the 4cth order, Perfonate. The calys is quinquepartite; the corolla fob-campanulated : the flamina appruaching together in pairs; the cal fule fpringing afunder by eneans of its claftic fegments.

Tuûnus canfeflo:s who had been condemned to prifon or banihhRuins. ment.

St Jerome, fuppofing that Rufinus would immediateIy proceed to Jerufalem, wrote to one of his friends there, congratulating him on the profpect of fo illuftrious a vifitor. To Jerufalem he went, and having built a monaftery on the Mount of Olives, he there affembled a great number of hermits, whom he animated to virtue by his exhortations. He converted many to the Chriftiau faith, and perfuaded more than 400 hermits who had taken part in the fchirm of Antioch to return to the clurch. He prevailed on many Macedonians and Arians to renounce their errors.

His attachment to the epinions of Origen fet him at variance with St Jerome, who, being of a temper peculiarly irritable, rot only retiacted all the praifes which he had lavihed upon him, but loaded him with fevere reproaches. Their difputes, which were carried to a very indecent height, tended to injure Chriftianity in the eyes of the weak. Theophilus, their matual fricnd, fettied their differences; but the reconciliation was of flort continuance. Rufinus having publifhed a tranflation of the principles of Origen at Rome, was fummoned to appear before Pope Anaftafius. But he made a fpecions apology for not appearing, and fent a vindieation of his work, in which he attempted to prove that certain errors, of which Orizen had been accufed, were perfectly conlitent with the opinions of the orthodox. St Jerome attacked Rufinus's tranflation. Rufimus compofed an eloquent reply, in which he declared that he was only the tranflator of Origen, and did not confider himfelf bound to fanction all his errors. Mott ecclefiaftical hiftorians fay that Rufinus was excommunicated by Pope Anaftafus ; but for this no good evidence has been brought. In 407, he returned to Rome; but the year arter, that city being threatened by Alaric, he retired to Sicily, where he died in 410.

His works are, I. A Tranflation of Jofephus; 2. A Tranflation of feveral works of Origen; 3. A Latin Verfion of Ten Difcourfes of Gregory Nazianzen, and Eight of Bafil's; 4. Chromatius of Aquileia prevailed on him to undertake a Tranfation of the Ecclefiaftical Hitory of Eufebius, which engaged him almoft ten years. He made many additions to the body of the work, and continued the hiftory from the 20th year of Conflantine to the dath of Theodofius the Great. Many parts of this work are necligently written, many things are recorded as facts without any anthority but common report, and many things of great importance are entirely onitted. 5. A Vindication of Origen. 6. 'Two Apologies addreffed to St Jerome. 7. Conmentaries on the prophets Hofea, Jocl, and Ainos. 8. Lives of the Hermits. 2. An Explanation of the Creed.

RUGEN, an ifand in the Baltic Sea, on the coaft of Pomerania, over againt Stralfund, about 23 miles in length and 15 in breadth, with the title of a principality. It is ftrong boch by art and nature, abounds in corn and cattle, and belongs to Sweden. The chief town is Bergen. E. Long, 14. 30. N. Lat. 5t: \(3^{7}\).

RUINs, a term particula ly ufed for magnif cent buildings fallen into decay by lenath of time, and whereof there only remains a confufed heap of materials. Such are the ruins of the tower of Babel, of the tower of Belus, two days jouney from Bagdat, in Syria, on
the banks of the Euphrates; which are now no more than a heap of bricks, cemented with bitumen, and whereof we only perceive the plan to have been fquare. Such alfo are the ruins of a farmous temple, or palace, near Schiras, in Perfia, which tbe antiquaries will have to have been built by Ahafuerus, and which the Perfians now call Tchclminar, or Chelminar ; q. d. the 40 columns; becaufe there are fo many columus remaining pretty entire, with the traces of others; a great quantity of bafforelievos, and unknown characters, fufficient to thew the magnificence of the antique architecture. The moft remarkable ruins now exifting of whole cities are thofe of Palmyra and Persepolis, of the grandeur of which fome idea may be formed from the views given in the plates referred to from thefe articles, to which may be added thofe of Herculaneum and Pompeium. The magnificent ruins fill remaining in Rome, Athens, \&c. of particular edifices, as temples, palaces, amplitheatres, aqueducts, baths, \&c. it were endlefs to enumerate, and beyond the plan of this work to reprefent.

RUIZIA, in botany: A genus of the polyandria order, belonging to the monodelphia clafs of plants; and in the natural method ranking under the 37 th order, Columniferc. The calyx is double; the external are triphyllous; the internal are parted into five. The corolla confifts of five petals, inclining to the right hand fide, and adhering to the famina, which are from 30 to 40. It has ten ftyli, and as many capfulx. Thele are compreffed and membranous. In each capfule are \(\mathfrak{t w o}\) feeds. There are four fpecies, viz. i. Cordata; 2. Lobata; 3. Palmata; 4. Lacinata, all natives of Alia and the Cape of Good Hope.

RULE, in matters of literature, a maxim, canon, or precept, to be obferved in any art or fcience.

Rule, in a monatic fenfe, a fyftem of laws or regulations, whereby religious houfes are governed, and which the religious make a vow, at their entrance, to obferve. Such are the rules of the Augulins, Benedictins, Carthufians, Francifcans, \&c. See Augustins, \&c.

Rules of Court, in law, are certain orders made from time to time in the courts of law, which attorneys are bound to obferve, in order to avoid confufion; and both the plaintiff and defendant are at their peril alfo bound to pay obedience to rules made in court relating to the caufe depending between them,

It is to be obferved, that no court will make a rule for any thing that may be done in the ordinary courfe; and that if a rule be made, grounded upon an affidavit, the other fide may move the court againft it, in order to vacate the fame, and thereupon fhall bring into court a copy of the affidavit and rule. On the breach and contempt of a rule of court \(2 n\) attachment lies; but it is not granted for difobedience to a rule, when the party has not been perfonally ferved; nor for difobeying a rule made by a judge in his clamber, which is not of force to ground a motion upon, unlefs the fame be enteted.

A rule of court is granted every day the courts at Weftminfter fit, to prifoners of the King's-bench or Fleet prifons, to go at large about their private affairs.

Rule of Three. See Arithmetic and Profortion.
Rule, or Ruler, an inflrument of wood or metal, with feveral lines delineated on it ; of great ufe in
n. pratical menfuration. When a ruler has the lines of chords, tangents, tures, \&c. it is called a plone facle.
RUM, a fpecies of brandy or virous fririts, dittiled from fugar-canes.
Runn, according to Dr Sbaw, differs from fimple furgar-fipit, in that it contains more of the natural flavour or effential oil of the fugar-cane; a great deal of raw juice and parts of the ciane itfelf being often fer. mented in the liquor or folution of which the rum is prepared. The unctuous or vily flaveur of rum is often fuppofed to procied from the large quantity of fat ufed in boiling the fugar; which fat, indeed, if coarfe, will ufually give a ftinking flavour to the fpirit in our ditililations of the fugar liquor or walh, from our refining fugar-houfes; but this is nothing of kin to the flavour of the rum, which is really the effect of the natural flavour of the cane.
The method of making rum is this: When a fufficieut flock of the materials are got together, they add water to them, and ferment them in the common method, though the fermentation is always carried on very flowly at firft ; becanfe at the beginning of the feafon for making rum in the iflands, they want yeaft or fome other ferment to make it work: but by degrees, after this, they procure a fufficient quantity of the ferment, which riites up as a head to the liquor in the operation; and thus they are able afterwards to ferment and make their rum with a great deal of expedition, and in large quantities.
When the wahh is fully fermented, or to a due degree of acidity, the difillation is carried on in the common way, and the fpirit is made up proof: though fometimes it is reduced to a much greater flrength, nearly approaching to that of alcohol or fpirit of wine ; and it is then called double-difilled rum. It might be eafy to rectify the finirit, and bring it to much greater purity than we ufually find it to be of: for it brings over in the ditiliation a very large quantity of the oil; and this is often fo difagreeable, that the rum mut bc fuffered to lie by a long time to mellow before it can be ufed; whereas, if well rectiied, it would grow mellow much fooner, and would have a much lefs potent flasour.
The bef flate to keep rum in, both for exportation and other ufes, is doubtlefs that of alcohol or rectified fipirit. In this manner it would be tranfported in one half the bulk it ufually is, and might be let down to the common proof-ftrength with water when receffary : for the common ufe of making punch, it would likewife ferve much- better in the ftate of alcolol; ; as the tafte would be cleaner, and the ftrength might always be regulated to a much greater exactnefs than in the ordinary way.

The only ufe to which it would not fo well ferve in this ltate, would be the common pratice of adulteration among our dilitillers; for when they want to mix a large portion of cheaper fipirit with the rum, their bufinecfs is to have it of the proof-Atrength, and as full of the flavouring oil as they can, that it may drown the flavour of the fpirits they mix with it, and extend its own. If the bufiness of rectifying rum was more nicely manazed, it feems a very praticable fcheme to throw out fo much of the oil, as to have it in the fine light flate of a clear fpirit, but lightly impregnated with it: in this cafe it would very nearly refemble arac, as is
proved by the mixing a very finall quantity of it with a taftelefs Ppirit, in which cafe the whole bears a very near refemblance to arac in flavour.

Rum is ufually very much adulterated in Britain; fome are fo bare-faced as to do it with inalt-fpirit ; but when it is done with molaffes foirit, the taftes of both are fo nearly allied, that it is not eafily difcovered. The belt method uf judging of it is by fetting fire to a little of it; and, when it has burnt away all the inflammable part, examining the phlegm both by the talte and fmell.

RUM is a confiderable inland, one of the Hebrides, or rather one continued rock, of nearly 30 miles in circumference. It is the property of \(\mathrm{Mr}^{r}\) Maclean of Coll; contains 300 inhabitants; grazes cattle and theep; pays 2001 . rent annually: but has neither kelp, free. ftone, nor lime.

RUMELIA, in geography, the fame with ancient Greece; now a part of TMurkey in Europe.

RUNIEN, the paunch, or-firlt fomach of fuch ani. mals as chew the cud; thence called Ruasin-ivir An:mals. See Conpardturs Anatomy, n \({ }^{\circ} 92\), \&c.

RUMEX, Dоск, in botany: A genus of the trigynia order, belonging to the hexandria clafs of plants; and in the natural method ranking under the it 2 th order, Holorazes. The calys is triphyllous; there are three connivent petals, and one triquetrous feed. There are 27 fpecies; of which the molt remarkable are,
1. The patientia, commonly called parterte rhubarb. This was formerly much more cultivated in the Britifh gardens than at prefent: the roots of this have been generally ufed for the monk's rhubarb, and has eren been thought to be the true kind; but others fuppofe the fecond fort fhould be ufed as fuch. The root is large, and divides into many thick fibres; their outer cover is brown, but they are yellow within, with fome reddith veins; the leaves are broad, long, and acute-pointed; their footftalks are of a reddifh colour ; the ltalks rife fix or feven feet high, and divide towards the top into feveral erect branches garninhed with afew narrow leaves terminating with loufe fpikes of large itaminous flowers. Thefe appear in June, and are fucceeded by pretty large three-cornered feeds, whofe coverings are entire, which ripen in autumn.
2. The alpinus, or rank's rhubarb, grows naturally on the Alps, but has long been cultivated in the gardens of this country. This hath large routs which Cpread and multiply by their offsets: they are thomer and thicker than the former, are of a very dark brown on the outfide, and yellow within. The leaves are of the round heart.fhape, flanding upon long footfalks. The ftalks rife from two to three feet high; they are thick, and have a few fmatl roundifi leaves on the lower part; but the upper part is clofely garnifhed with fpikes of white flowers ftanding erect clofe to the ftalks. Thele appear in the latter end of May, and are fucceeded by large triangular feeds which ripen in Augult.
3. The aquaticus, or water-dock, grows naturally in ponds, ditches, and flanding waters, in many parts of Britain. It is fuppofed to be the herba Britannica of the ancichts. It hath large roats which frike deep into the loofe mud, fending ont leaves which are abo-3 two feet long. 'The flalks rife five or fix feet high when the plants grow in water, but in dry land fee dom more than three: thefe are garnihed with narrew
leares,

\section*{\(R U N\)}
numinant feases amons, the filkes of flowers to the top. The flowers fland upon fender footfalks, which are reflexed: they are of an harbiccous colour, appear in June, and the feedi ripes in autumn.
4. 'The acutus, of Sharppointed dack, f the oxylapathum of the flops) ; but the markets are fupplied with roots of the common ducks which are indifferently gathered by thofe who collect them in the felds, where the kiud commonly called lutier dock (from its leaves being uled to wrap up butter) is much more common than this. The roots of this are fender, and run downright, fending out a few fmall fibres; the ftalks rife about two feet hiph, garnithed at bottom with leaves four inches long, and one and an half broad in the middle. They are rounded at their bafe, where they are fightly indented, but end in acute puints. From the joints of the ftalks come out alternately long footfalks, which fuftain the fpikes of flowers, which grow in fmall whorls ruund the atalks, at about an inch difant.

Thefe plants are but feldom cultivated; and fo eafily multiply by their numerons feeds, that they foon become troublefome weeds where they once get an entrance.

RUMINANT, in natural hinory, is applied to an animal which chews orer again what it has eat before; which is popularly called chowing the cut. Peyer, in a treatife De Ruminantilus et Ruminatione. fhows that there are fome animals which really ruminate; as oxen, theep, deer, goats, camels, harcs, and Equirels: and that there are uthers which only appear to do fo, as moles, crickets, bees, beetles, crabs, mulIets, \&c. The later clafs, he obferves, have their fomachs compofed of mufeular fibres, by which the food is ground up and down as in thofe which really ruminate. Mr Ray obferves, that ruminants are all four. footed, hairy, and viviparous; fome with hollow and perpetual horns, others with deciduous ones.

RUMP of the sacrifices. Mofes had orcained, shat the rump and fat of the fheep that were offered for a peace-offering fhould be put upon the fire of the al:ar (Lev. iii. 9. vii. 3. viii. 25. ix. 19.). The rump was efteemed the muft delicate part of the animal.

RUMPHIA, in botany: A genus of the monogypia order, belonging to the triandria elafs of plants: and in the natural method ranking with thofe of which the order is doubtful. The caly \(x\) is trifid; the petals three; the fruit a trilocular plum.

RUNDLET, or Runlet, a fmall veffel, containing an uncertain quantity of any liquor, from 3 to 20 gallons.

RUNGS, in a fhip, the fame with the floor or ground timbers; being the timbers which conftitute her floor; and are bolted to the keel, whofe ends are zung-heads.

Rong-Hends, in a hip, are made a little bending to direct the fweep or mold of the futtocks and naveltimbers; for here the lines begin which make the compafs and bearing of the mip.

RUNIC, a term applied to the language and letters of the ancient Goths, Danes, and other northern nations. Sce Alphabet.

RUNNER, in the fea-language, a rope belonging :o the garnet and the two holt-tackles. It is reeved in a fingle block joined to the end of a pendant: it
has at one end a hook to hitch into any hing; and, fall of the tackle, or the garnet, by which means it purchafes more than the tackle would without it.

RUNNING-thrush, amorg farriers. See Farriery, feft. xliv.

RUNNET, or Rennet, is the concreted milk found in the fomachs of fucking quadrupeds, which as yet have received no other nourithment than their mother's milk. In ruminating animals, which have feveral itomachs, it is senerally found in the laft, though fume. times in the next to it . If the runnet is dried in the fun, and then kept clofe, it inay be preferved in perfection for years. Not only the runnet itfelf, but alio the ftomach in which it is found, curdles miilk withou: any previous preparation. But the common method is, to take the inner membrane of a calf's ftomach, to clean it well, to Calt and hang it up in hrown paper: when this is ufed the falt is wathed off, then it is macerated in a little water during the night, and in the morning the infufion is poured into the milk to curdle it. But fee more particularly the article Cheese for a proper receipt to make runnet, upon which the quaLity of the cheefe greatly depends-The medicinal qualities of runnet are its aerimony, its refolvent power, and its ufefulnefs in furfeits from food of difficult digeftion.

RUPEE, a fiver coin current in the Eaft Indies, worth ahout 2 s .6 d .

\section*{Rupert, or Robert. See Robert}

Rupert, prince palatine of the Rhine, \&c fon of Frederic prince clector palatine of the Rhine and Elifabeth daughter to king James I of England, was born in 1610. He gave proofs of his bravery at the age of 13 ; and in 1642 came over into England, and offered his fervice to king Charles I. his unele, who gave him a command in his army. At Edgehill he charged with incredible bravery, and made a great hauphter of the parliamentarians. In \(1: 43\) he feized the town of Cirencefter; obliged the govenor of Litchfield to furrender ; and having joined his brother prince Maurice, reduced Briftol in three days, and paffed to the relief of Newark. In 1644 he marched to relieve York, where he gave the paliamentarians battle, and entirely defeated their right wing ; but Cromwell charged the marquis of Newcafte with fuch an irrefiftible force, that prince Rupurt was entirely defeated. Alter this the prince put himfelf into Brifol, which furiendered to Fairfax after a gallant refiftance The king was fo enraged at the lofs of this city, fo contrary to his expectation, that he recallud all prince Rupert's commiffions, and fent him a pafs to gro out of the kingom In 1648 he went to France, was highly complimented by that court, and kindly received by king Charles If. who fojourned there for the time Afterward he was conftitutedoadmiral of the king's navy; infefted the Dutch fhips, many of which he took; and having engaged with De Ruyter, obliged him to Ay. He died in 1682, and was interred in king Henry VII's chapel, Weftminfter, with great magnificence. Mr Grain. ger obferves, that he poffeffed in a high degree that kind of courage which is better in an attack than a defence; and is lefs adapted to the land-fervice than that of the fea, where precipitate valour is in its element. He feldom engaged but he gained the advantage, which
ert he generally loft by purfuing it too far. He was better qualified to form a citadel, or even to mount a breach, than patiently to fuftain a fiege; and would have furnifhed an excellent hand to a general of a cooler head. This prince is celebrated for the invention of prints in mezzotinto, of which he is faid to have taken the hint from a foldier's fcraping his rufty fufil. The firt print of this kind ever publifhed was done by his highnefs, and may be feen in the firf edition of Evelyn's Sculptra. The fecret is faid to have been foon after difcovered by Sherwin an engraver, who made ufe of a loaded file for laying the ground. The prince, upon feeing one of his prints, fufpected that his fervant had lent him his tool, which was a channeled roller; but upon receiving full fatisfaction to the contrary, he made him a prefent of it. The roller was aftenwards laid afide; and an inftrument with a crenelled edge, Thaped like a fhoemaker's cutting-knife, was ufed inftead of it. He alfo invented a metal called by his name, in which guns were caft; and contrived an excellent method of boring them, for which purpofe a water-mill was erected at Hackney-marfh, to the great detriment of the undertaker, as the fecret died with the illuftrious inventor.

Ruperq's Drops, a fort of glafs-drops with long and flender tails, which burft to pieces on the breaking' off thofe tails in any part; faid to have been invented by prince Rupert, and therefore called by his name. Concerning the caufe of this furprifing phenomenon fcarce any thing that bears the leaft appearance of probability has been offered. Their explofion is attended in the dark with a flafh of light; and by being boiled in oil, the drops are deprived of their explofive quality.

RUPIN, or Rapin, a town of Germany, in the marquifate of Brandenburg, and capital of a duchy of the fame name. It is divided into the Old and the New. The Old was nothing but an ancient cafte, very well furnifhed, the late king of Pruffia, before his father's death, refiding there. New Rupin is feated on a lake, and become a confiderable place of trade, with a manufactory of clorh. It is alfo noted for brewers. E. Long. 13. 23. N. Lat. 53. 0.

RUPPIA, in botany : A genus of the tetragynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 15 th order, Inuudiate. There is neither calyx nor corolla ; but four pedicellated feeds.
RUSCUS, snee-holly, or Butcher's Rroom: A genus of the fyngenefia order, belonging to the dioccia clafs of plants; and in the natural method ranking under the ith order, Sarmentaice. The male caly x is hexaphyllous; there is no corolla; the nectarium is central, ovate, and perforated at the top. The female calyx, corolla, and nectarium, are the fame as in the male; there is one Hyle, with a trilocular two-feeded berry.

The noft remarkable fpccies is the aculeatus, or common butcler's broom, common in the woods in many parts of England. It bas roots compofed of many thick fibres which twine about each other; from which arife feveral ftiff green falks about three feet high, fending out from their fides feveral fhort branches, garnifhed with ftiff, oval, heart-fhaped leaves, placed alternately on every part of the falk, ending with fharp prickly points. The flowers are produced in the aniddle, on the upper fide of the leaves; they are fmall,

Vol. XVI. Fart II.
and cut into fix parts; of a purple colour, fitting clofe Rufn, to the midrib. 'Ther' appear in June; and the female Rumwort. flowers are fuccceded by berries as large as cherries, of a fweetifh tafte, which ripen in winter; when they are of a beautiful red colour. As this plant grows wild in moot parts of England, it is rarely admitted into gardens; but if free of the rodts are planted under tal: trees in large plantations, they will fpread into large clumps; and as they retain their leaves in winter, at that feafon they will have a good effect. The feeds of this plant gencrally lie a year in the ground before they vegetate; and the plants fo raifed are long before they arrive at a fize big enough to make any figure, ar.d therefore it is much better to tranflant the roots. The root of this plant is accounted aperient, and in th 3 intention is fometimes made an ingredient in apozeris and diet-drinks, for opening flight obfructions of the vifcera and promoting the fluid feceetions. This plant is ufed by the butchers for befoms to fweep their block . Hucktters place the boughs round their bacon and cheefe to defend them from the mice: for they cannu: make their way through the prickly leaves.

RUSH, in botany. See Juscus.
Rush-Candles See Ru/b-Candies.
RUSHWORTH (John), the compiler of fome ule. ful collections refpecting the affairs of flate, was born in Northumberland about the year \(169 \%\), and was de. fcended of honourable anceftors After attending the univerfity of Oxford for fome time, he removed to Lincoln's Inn; but the fudy of law not fuiting his geniuz, he foon deferted it, in order to feek a fituation where he might more eafily gratify his love for political information. He frequented the meetings of parliament, and wrote down the fpeeches bath of the king and members During the fpace of 11 years, from 1630 to 1640 , when no parliament was held, he was a: attentive obferver of the great tranfactions of flate ia the flar-chamber, the court of honour, and exchequer chamber, when all the judges of Englard afficmbid there on cales of great cmergency. Nor did he ne. glect to obferve with a watchtul eye thofe events which happened at a diftance from the capital. He rifited the camp at Berwick, was prefent at the batile of New: born, at the treaty of Rippon, and at the great conncil of York.

In \(16 \div 0\) he was appointed affitant to Henry Elfynge clerk to the houfe of commons, and thus had the beil opportunities of being acquainted with the ir debates and proceedings. The commons confidered him as a perfon worthy of confidence. In particular, they trufted hin with carrying their meflages to the king whike le remained at York. And when the parliament create: Sir Thomas Fairfax their gencral. Ruthworth was appointed his fecretary, and difcharsed the office much to the advantage of his matter. When Fairfax refigned his commiffion, his fecretary returned to Lincoln's Inn, and was foon after (in 1651-2) chofer one of the committee that was appointed to deliherate concernin: the propriety and means of altering or new-modelliur the commun law. He was cleEted one of the reprio fertatives for Berwick upon Tweed to the parliancent which Richard Cromwell afficmbled ial \(16 ; 5\), and wa re-elccted by the fame town to the parliament whith re. flored Cbarles II. to the crown.
After the Refteration, he delivered to the king five. 4

\section*{\(R \quad \mathrm{~S}\)}

Ruhworth, ral hooks of the privy-council, which he had preferved in his own poffefion during the commotions which then agitated the councry. Sir Orlando Bridgeman keeper of the great feal chofe him his fecretary in 1677, an of fice which he enjoyed as long as Sir Orlando kept the feals. In 1678 he was a third time chofen member for Berwick, and a fourth time in the enfuing parliament in 1679 . He was alfo a member of the parliament which was convened at Oxford. The different offices he had held afforded him favourable opportunities of acquiring a fortune, or at lealt an independence; yet, whether from negligence or prodigality, he was never poffefed of wealth. Having run himfelf into debt, he was arrefted and committed to the King's Bench prifon, Southwark, where he lingered for the laft fix ycars of his life in the molt deplarable condition. His memory and judgment were much impaired, partly by age and partly by the too frequent ufe of feirituous liquors. Ine died on the 12 th of May 1690 .

His "Hiftorical Collections of private Faffages in State, weighty Matters in Law, remarkable Proecedings in Parliament," were publifhed in folio at different times. The firtt part, comprelending the years between 1618 and 1829 , appeared in 1659 . The copy had been entrutted by Oliver Cromwell to Whitelock, with inftructions to perufe and examine it. Upon perufing it, he thought it neceffary to make forme alterations and additions The fecond part was publifhed in 1685 ; the third in 1692 ; the fourth and laft, which comes down to the year 1648 , was publifhed in 1701 ; and altogether made feven volumes Thefe underwent a fecond edition in 1721; and the trial of the earl of Strafford was added, which made the eighth. 'Chis work has been much applauded by thofe who condemn the conduet of Charles I. and accufed of partiality by thofe who favour the caufe of that unhappy monarch. One perfon in partieular, Dr John Nelfon of Cambridge, in a Collection of the Affairs of State publifhed by the command of Charles II. undertook to prove, "that Rufhworth has concealed truth, endeavoured to vindicate the prevailing detractions of the late times, as well as their barbarous actions, and with a kind of rebound to libel the government at fecond-hand" This acculfation feems to be carried too far. His principles indeed led him to fhow the king and his adherents in an unfavourable light, and to vindicate the proceedings of parliament ; yet it cannot jultly be affirmed that he has mifreprefented or falfified any of the fpecehes or facts which he has admitted into his collection. Perhaps he may have ornitted fome papers merely becaufe they were unfavourable to the party which he had efpoufed : and is therefore not to be confidered as an impartial hittorian who relates the whole trath, but as an honett lawyer, who ftates all his facts fairly and candidly, but paffes over fuch as are injurious to his client's caufe.

RUSSELIA, in botany: A genus of the trigynia order, belonging to the pentandria clafs of plants. The caly \(x\) is five-leaved; the petals five above; the capfule is one-celled and many feeded.

RUSSIA, a very large and powerful kingdom, partly in Europe and partly in A fia, is bounded on the north by the Northern Occan, or Frozen Sea; on the ealt it is wafhed by the Eaftern Ocean, and is divided from America by Beh:ing's (formerly Anian) Straits, which are about 73 verfts ( 1 ) wide. From thence, towards the fouth, it extends along the chain of the Alcoutfie illandr, which approach the north-weft cuall of America; and from Kamtfchatka, towards the fouth-weft, it extends, by a chain of other iflands, called Keurilkie inands, as far as Japan ; on the fouth it borders on the Black Sea, on the nations which dwell at the foot of the Caucafian mountains, on a part of Perfia, the Cafpian Sea, the hordes of Kirghitikaifacki, on Ziunezoria, Chinefe Mun. galia and Daouria (b) ; and on the wef, on the Danifh and Swedih Lapland, the Baltic Sea, Courland, Livonia, Lithuania, Poland, and Turkey in Europc.

Rufia occupies more than a feventh part of the known continent, and nearly the 2 6th part of the whole globe. Its greateft extent from weft to eatt, viz. from the \(39 \frac{\frac{1}{5}}{2}\) to \(207 \frac{1}{4}\) degree of longitude, is 106 degrecs; and if the iflands of the Eaftern Ocean be included, it will then be 185 ; fo that the continental length of Ruflia, viz. from Riga to Tchoukotfkoy Nofs, which is the eafternmoft promontory, will conflitute about 8500 vcrils. 'The greatelt extent of this empire from north to fouth, that is, from the 78 th to \(50 \frac{1}{4}\) degree of latitude, is \(27 \frac{3}{4}\) degrees. Hence thie breadth of Ruffia, that is, from the Cape Taymour, which is the north-eaftern promontory, to Kiakhta, will conltitute about 3200 verths.

The greater part of this empire lies in the temperate zone, and a part of it, viz. that which is beyoud the \(66 \frac{1}{2}\) degrec of latitude, lies in the frigid zone; and the whole furface contains above \(2,150,000\) fquare vertss. There therefore is not at prefent, and never has been in any period, an enpire, the extent of which could be compared to that of Ruffia. "The length and breadth of this immenfe empire, taken in a flraight line, nay be thus difcovered. Its furthermoft point or fipot on the north is the Taymour Cape, which is the mof north-eaftern promontory in the government of Tobolfls, lying in the 7 sth degree of latitude ; its farthefl puint on the fouth is the mouth of the tiver Soulak, falling into the Cafpian Sea in the government of Cancafus, lying in the 43 d degree of latitude; its weiternmoft point is the ifland of Oezel in the government of Riga, in the \(39 \frac{\frac{1}{5}}{\frac{1}{5}}\) degree of longitude; and the furthermof point of it on the ealt is the TchoukotNoy Nofs, which is the moft eaftern cape in the government of Itkoutk, lying in the \(207 \frac{7}{4}\) degree of longitude.

In ancient times Rulfia was inhabited by various na- Originali tions; fuch as Ifunns, Scythians, Sarmatians, MąTa. habicants. getes, Sclavonians, Cimbri, \&ec. of whom an account is given under the various detached articles in this work. The origin of the Rulfians themfelves, though not prior to the minth century, is ftill covered with almof impenctrable obfeurity; partly owing to the irnorance and barbarity of thic people, and partly to the
(A) Verfla is the ufurl meafure of roads in Rufia, it 65 yards and two feet.
(в) Daouria is that extent of land which is traverfed by the river Amour. It is fo called on account of the Daouri, its ancient inhabitants, who were a race of the Toungoof or Manjouri.
miftaken policy which yet prevails in tire nation, of fuppreffing all accounts of their origin, and inquiries into their ancient ftate and fifuation; of which we have a remarkable inftance in the fuppreftion of a work by profeffor Muller, intitled De Originibus Gentis et Nominis Rufforum.

According to feveral authors of credit, the Ruffans derived their origin from the Slavi or Slavonians, corruptly called the Sclavonians, who fettled firt along the banks of the Volya, and afterwards near the Da rube, in the conntries named Bulgaria and Hungary: but being driven from thence by the Romans (whom the Ruftians call Wolochers, or Wolotaners), they firit removed to the river Borythenes, or Dneiper, then over-ran Poland, and, as is reported, built the city of Kiow. Afterwards they extended their colonies farther north, to the rivers which run into the Ilmen lake, and laid the foundation of the city of Novogorod. The towns of Smolenik and Tfemikow appear alfo to have been built by them, thongh the dates of thefe events cannot be alcertained. 'The molt ancient inhabitants, rot only of Ruffia, but all over Siberia, quite to the borders of China, are called TJbudi: for profeffor Muller, on inquining in thofe parts by whom the ancient buildings and fepulehral monuments he faw there, were ereeted, was everywhere anfwered, that they were the works of the Thudi, who in ancient times had lived in that country.

In the ninth century, the Scandinavians, that is, the Danes, Norwegians, and Swedes, emigrated from the north, and, croffing the Baltie, went to feck habitations in Ruffia. They frit fubdued the Courlanders, Livonians, and Ethonians; and, extending their conquefts fill farther, they exacted tribute from the Novogorodians, fettled kings over them, and traded as far as Kiow, and even to Greeee. 'Thefe new invaders were called W/aregers; which, according to profeffor Muller, ligsnifies "fea-faring people;" or, it derived from the old morthern word quor, it fignifies "warlike men." To thefe Waregers the name of Rufles, or Ruflans, is thought by the moft eminent authors to owe its origin; but the etymology of the word itfelf is eatirely uncertain.

In the dark ages of which we are fpeaking, it is in tivided pretty certain that Ruffia was divided among a great toa nur-number of petty princes, who made war upon each er nf retty other with the ferocity and cruelty of wild beafts; fo
ingdoms. that the whole country was reduced to the utmoft miSery ; when Goftomifel, a chief of the Novogorodians, pitying the unhappy fate of his countrymen, and feeing no other method of remedying their calamities, advifed them to offer the govermment of their country to the Warecrers. The propofil was readily accepted, and three primes of great abilities and valour were fent to govern them; namely, Kuric, sincus, and Truwor, generally fuppofed to have been brothcrs. The firlt took iup his refidence at Ladogra, in the principality of Great Nowgorod; the fecond at Bielo Ofero, or the White Lake; and the third kept his court at Ifoortk, or, according to others, at a binall town, then called ? aucrtag, in the principality of Pleflow. 'Ilhe three isothers reigned amicably, and made confiderable addisions to their dominions; all of which at length devolved so. Ruric.oy the deat of sincus and Truwor ; but wha:
the conquefts of the two brothers were, we have no re- Rufta.
cords to inform us of.
Rurie, to his honour, became realons for the Atric? Ruric \({ }^{5}\) admimitration of juttice ; and iffued a command to all Garic fove the boyars who polfefled territories under him, to exer-reigno cife it in an exact and tmiform manner. To this end, it was neceffary there thould be geueral laws. And this naturally leads us to conjecture, that letters were not entirely unknown in his duminions.

The Ruffian empire continued to flourifh till the end of the reign of Wolodomir, who afcended the throne in the year 976. Having fettled the affairs of his einpire in peace, he demanded in marriage the princers Anne, fitter to the Greek emperor Batilius I'orphyrogrenitus. His fuit was granted, on condition that he 6 Chould embrace Chriltianity. With this the Ruffian Chriuianimonarch complied; and that valt empire was thence- veintroduforward confidered as belunging to the patriarchate of \({ }^{\text {ce }}\) Conftantinople. Wolodomir received the name of B.ifilius on the day on which he was baptized; and, according to the Ruffian annals, 20,000 of his fubjects were bapized the fame day. Michael Syra, or Cyrus, a Greck, fent by Photius the patriareh of Conttantinople, was accepted as metropolitan of the whole coun. try. At the fame time, Wulotumir put away all his former wives and concubines, of whom he had upwards of 800 , and by whom he had 12 fons, who were baptized on the fame day with himfelf. The idols of paganim were now thrown down ; churches and monafteries were erected, towns built, and the arts began to flourith. The Sclavonian letters were now firt in-Learning troduced into Ruffia; and Wolodomir fent miffionaries and the arts to convert the Bulgarians; but only three or four of \({ }^{\text {cultivates. }}\) their princes cane to him and were baptised. 'I"hefe events happened in the year o8 87 .

Wuludonir called the arts from Greece, cultivated them in the peaceable periods of his reirn, and rewarded their profefors with generofity, that he might difpel the clouds of ignorance which enveloped his country, call forth the genius of his countrymen. and render them happy. He alfo founded public fehools, and enacted a law conceming the methuls of intrict \({ }^{\circ} y_{g}\) youth, and directing the conduet of the matters appointed to intruct then. He died in 1008 , and. contrary to all rules of found policy and prudence, divideo o his empire among his 12 fons. The confequence was, \(A\) civiluz: that they fell to making war and dentroying one another as foon as their father was dead. Suantepulk, one of the brothers, having defrowed and feized upon the dominions of two others, was himielf driven out by Ja. riflaus, and ubliged to Ay to Boletlaus king uf l'uland. This brought on a dreadful war betwixt the I'oles and Ruffians; in which the fonseres were votwrious, ald the latter loft a great part of their dor inims, as has bee"t related under the auticle Poland.

Jarilaus finding himfaif unoble to oppore the hing of Puland, now turned his anms acoant the red unt brothers, all of whom de diputhed ut ther du•minn and feised them for himelt. He wext attacked bie ED
 which he ventused ovec more to thy his firtume wits. Boletlaus: but in this feond expedtion he wa: attcaded with worfe fuccels than before ; being now reduced to the cundition of a vaffal and tributary to the

Rufia. victorious monarch. However, in the reign of Miecznaus II. the fucceffor of Doleflaus, the Ruflans again hook off the yoke, and a latting peace was confirmed by the marriage of Mieczflaus with the filler of Wolodomir.

Jarifaus now continued to enjoy the empire quietly, and was fo much addicted to reading, that he devoted even a part of the night to his ftudies. He invited men of letters to his court, and cauled many Greek books to be tranflated into the Ruffian language. It was he that in the year 1019, gave the people of Novogorod feveral law's, under the title of Gramuto Soudsinaia, to be obferved in the courts of juftice. These are the firlt laws that were reduced to writing in Ruffia; and, what renders them remarkable, is the conformity they have with thofe of the other northern nations. He founded a public fchool at Novogorod, where he maintained and educated 300 children at his own expence. His cour was the molt brilliant of the north, and furnified an afylum to unfortunate princes. He died in 1052; and fell into the fame error which his father had committed, by dividing his dominions amoug his five fons. This produced a repetition of the bloody fcenes which had been acted by the fors of Wolodomir ; the Poles took the advantage of the diftracicd fate of affairs to make continual inroads and invafions; and the empire continued in the moft deplurable fituation thll the year 1237, when it was totally fubdued by the Tartars. We are not informed of any particulars of this remarkable event, farther than that imnunierable multitudes of thefe barbarians, headed by their khan Batto, or Battus, after ravaging gieat part of Poland and Silefia, broke fuddenly into Ruffia, where they committed the greateft cruelties. Mot of the Ruffan princes, among whom was the great duke George Sevoloditz, were made prifoners, and racked to death; and, in fhort, none found merey but fuch as acknowledged themfelves the fubjects of the Tartars. The imperious conqueror impofed upon the Rufians every thing that is mof mortifying in flavery ; iufifting that they fhould have no other princes than fuch as he approved of; that they flould pay him yearly a tribute, to be brought by the fovereigns themielves on foot, who were to prefent it humbly to the 'Tartarian ambafiador on horfeback. They were alfo to proftrate themfelves before the haughty Tartar; to offer him milk to drink; and, if any drops of it fell down, to lick them up; a fingular mark of fervility, which continned uear 26

11
The empire haraffed by interna difenions

George Sevoloditz was fucceeded by his brother Michael Sevoloditz Zernigoukki ; who oppofed the Tartars, but was defeated by them, and lott his life. He left three fons, Feodor, Alexander, and Andrew, whofe wars with each other ended in the death of them all. A fon of Alexander, and of the fame name, was then placed on the throne by the Tartars; and his fon Danilow, or Daniel Alexandrovitz, removed his court from Wulodimir to Molcow, where he firft affumed the sitle of Great duke of Wolodinir and Mofoarv. Daniel Alexandrovitz left two fons, Gregory and John; the former of whom, named Kalita, from a purfe he ufed always to carry about him filled with money for the poor, afcended the throne; but he was foon affaffinated by another prince named Demetri Miclaelovilz, who was himiclf put to death for it by the Turtars; and

John, likewife furnamed Kalita, was then made czar. This John left three fons, John, Simon, and Andrew; and the eideft of thefe, commonly called Ivan Ivanovifz, was made czar, with the approbation of the Tartars, on whom he was dependent.

During thefe feveral reigns, which fill a fpace of up. wards of :00 years, and which all hiftorians have paffed over for want of records concerning them, the miferies of a foreign yoke were aggravated by all the calamities of inteftine diford and wars vonia, or brothers of the fhort-fword, as they are fometimes called, a kind of military order of religious, on one fide, and the Poles on the other, catching at the opportunity, attacked Ruffia, and took feveral of its towns, and even fome confiderable countries. The Tartars and Ruffians, whole interefts were in this cafe the fame, often united to oppofe their common enemies; but were generally worfted. The Livonians took Plenow ; and the Poles made themfelves maters of Black Rulin, the Ukraine, Podulia, and the city of Kiow. Cafimir the Great, one of their kings, carried his conquelts itill farther. He afferted his pretenfions to a part of Ruffia, in right of his relation to Bolellaus duke of Halitz, who died without iffue, and furcibly pofeffed himfelf of the duchies of Perzenyflia, Halitz, and Luckow, and of the diftricts of Sanock, Lubackzow, and Trebuyla; ail which countries he made a province of Poland.

The newly-conquered Ruffians were ill-difpofed to brook the government of the Poles; whole laws and cuftoms were more contrary to their own than thofe of the 'Tartars had been. They joined the latter to rid themfelves of the yoke; and affembled an army numerous enough to overwhelm all Poland, but deflitute of valour and difcipline. Cafimir, undaunted by this deluge of barbarians, prefented himfelf at the head of a few troops on the borders of the Viftula, and obliged his enemies to retire.

Demetrius Ivanovitz, fon of Ivan Ivanovitz, who commanded in Mofcow, made frequer.t efforts to rid himfelf of the galling yoke. He defeated in feveral battles Maymay khan of the Tartars; and, when conqueror, refuled to pay them any tribute, and affumed the title of great duke of \(A\) Iufiovy. But the oppreflors a greas a: of the north returned in greater numbers than before; \({ }^{\text {my }}\) c cut in and Demetrins, at length overpowered, after a ftruggle the Tartare of three years, perifhed with his whole army, which, if we may credit hiftorians, amounted to opwards of 240,000 men.

Baflius Demetrivitz revenged his father's death. He attacked his enemies, drove thein out of his dominions, and conquered Bulgaria. He made an alliance with the Poles, whom he could not fubdue; and even ceded to them a part of his country, on condition that they fhould help him to defend the reft againft any new incurfions of the Tartars. But this treaty was a weak barrier againft ambition. The Ruffians found new enemies in their allies; and the Tartars foon returned. Bafilius Demetrivitz had a fon who was called after his name, and to whom the crown ought naturally to have defcended. But the father, fufpecting his legitimacy, left it to his own brutlier Gregory, a man of a fevere and tyranuical difpoition, and therefore hated by the people, who afferted the fon's right, and proclained him their fovereign. The Tartars took cognizance

\section*{\(R U S\)}
ia. of the cifpute, and determined it in favour of Baflins; upon which Grecory had recourle to arms, drove his nephew from Mofcow to the principality of Uylitz, and forcibly ufurped and kept poffefion of his throute. Upon the death of Grecory, Baflins returned to Mofcow ; but Andrew and Detuctrius, fons of the late ufurper, laid fiege to that city, and ubliged him to retire to the monaftery of Troitz, where they tock him prifoner, with his wile and fon, and put out his eyes: hence the appellation of \(j: m n n i\), "blind," by which this Bafilius is diftinguifhed. The fubjects of this unfortunate prince, incenfed at the cruel treatment he had received, forced the perpetrators of is to fly to Novogorod, and rein!lated their lawful fovereig: at Mofcow, where he died.

In the midt of this general confufion, John Bafilovit \(z\) I. by his invincible £pirit and refined policy, became both the conqueror and deliverer of his country, and laid the firit foundation of its future grandeur. Obferving with indignation the narrow limits of his power at his acceffion to the throne, after the death of his father Bafilius the Blind, he began immediately to revolve withis himfelf the means of enlarging his dominions. Marriage, though he had in reality no regard or inclination for women, feemed to him one of the beft expedients he could begin with; and accordingly he dennanded and obtained Maria, fifter of Michael duke of Twer; whom he foon after depofed, under pretence of revenging the injuries done to his \(f_{a-}\) ther, and added this duchy to his own territories of Mofow. Maria, by whom he had a fon named \(\mathfrak{F o b n}\), who died before him, did nut live long; and upon her deat.. he married Sophia, caughter of Thomas Paleologus, who had been driven from Corffantinople, and forced to take felter at Rome, where the pope pertioned this princefs, in hopes of procuring thereby great advente:ge to the Romifh religion; but bis expectations were fruitrated, Suphia being obliged to conform to the Gretk church after her arrival in Ruffia. What could induce Batilovizz to feek a confort at fuch a ditance, is nowhere accounted for; unlefs it be, that he hoped ty this means to eitablifh a pretenfion to the empire of the eafl, to which her father was the next heir : bat however that may be, :he Rufians certainly owed to this alliance their deliverance from the Tartar yoke. Shocked at the fervile homage exacted by thofe proud victors, her huiband guing to meet their ambaffadors at fome diftance from the city, and ftanding to hear what they had to fay; whillt they were at dinner, Sophia told him, that the was furprifed to find that the had married a fervant to the Tartars. Netted at this reproach, Balilovitz feignec himfelf ill when the next deputation from the Tartars arrised, and under that pretence avoided a repetition of the ftipulated humiliating eeremonial. Another circumftance equally difpleating to this princefs was, that the Tartars had, by agrement, within the walis of the pazee at Mufcou; houfes in which their miniters refided; to fhow their power, and at the fame time watel the actions of the great duke. To gei rid of thefe, a formal embafly was fent to the Tartarian khan, to tell him, that Sophis having been favoured with a vifion from above, ordering her to build a iemple in the place where thofe houfes llood, her mind could nut be at eafe till the had fulalled the divine comand; and therfore his leave
was defired to pull them down, and give his peopie P.E. others. The khan coafented: the houfes within the -, Kremlin were demolifhed; and no new ones being provided, the Tartar refidents were obliged to leave Mor. cow ; their prisce not being able to revenge this breach of promile, by reafon of a war he was then enzaged in with the Poks. Batilovitz taking advantage is this circumtance, and having in the mean time conilderably increafed his furces, openly difclaimed all fub- His foceers. jection to the Tartars, attacked the:r dominions, a 1 made himfelf mafter of Cafan, where he was folemnly cowned with the diadem of that kingdorn, which is faid to be the fame that is now ufed for the coronatica of the Ruffian Covereisns. The proviace of Perma, with great part of Lapland and Aliatic Bulgaria, foon fubmitted to him; and Great Novogu:od, a city then fo famous that the Ruflans ufed to exprefs it, vaft importance by the proverbial exprefion of, \(W\) Wbo cinn rejifl God and the Great Novegorad? was reduced by his generals after a feven years fiege, and yielded him an immenfe treafure ; no lefs, fay fome writers, than 300 cast luads of gold and hilver, and other valuatle efiects. Alexander Witold, waiwode of Lithuania, was in purfeffion of this rich place, from which he had cxacted for fome years an annual tritute of \(t c 0, \mathrm{cco}\) rubles, a prodigious fum for thore days and for that country. When it was taken by John Bafilowitz, he, the better to fecure his conqueft, put it under the protcction of the Poles, voluntarily rendered himfelf their tritutary for it, and accepted a governor from the hand if their king Calimir, a weak and indulent priuce, tion whom he well knew he had nothing to fear. The Niovororodians continued to enjoy all their privileges till about two years atter; when John, ax.bitives of raigning without controul, entered their city wisi a numerous retinue, under preience of keeping to the Gretk faith, he benys acculed of an intention to embrace the Romifh religion; and with the affiltance of the archbimors Theophinhs, Rripped them all of their remaiaing rithes. He then depofed the treacherons prelate, and citaji:hdd over Novogorod new inagritrates, creatures of his unu; dettroying at ouce, by this means, a noble city, whith, had its liberties been protected, and its trade encuuraged, might have proved to him an inexhauribic fund of wealth. All the north beheld with terror and a!! 0 nithment the rapid increafe of the victor's purice : the reign nations courted his alliance; and the deveral petiy princes of Ruflia fubmitted to him without retitiance, acknowledging thenifelies his vaffals.

The Pules, however, comp!ained loud!y of his laie breach of faith in regard to Nurogorod, and tireczented reseuge : uoo: which Dafilovitz, elaied w:... his iseceffer, with the riches he had anaffec, a:is with the weak condition of moft of his neighburs, fu: a body of troeps into Lithuania, and foon became :..atur of invere it feveral of its towns. Calimir applied sor aff tonce to: azmas d Mathias king of Hungary: but was aniwees! by this bocene ine latt, that his own foldiers were quise usdifighned, for race that his ausiliaries had lately mutiand for w..n! wizy; and that it was impolfible for him to raite a new anmy out of the neighbouring cumatrics. The Pouht ra narch in this diffrefo was obliged to purchafe of J....2 a celation of arms for swo \}uars, durin- whith the Mulcovite made new accefions to his domilions.
'Ihe dukes of Servia, whofe tersteries were ais .t

Zntia, j30 miks in extent, had long thought themfelses ill ufed by the Lithmanians on account of their religion, which was that of the Greck church; and wanted to Nithdraw from their fuhjection to Poland, and pat themfelves under the protection of Ruflia. The following aecident afforded them the wifhed-for preterte. Their envoys arriving at Wilna, detired admittance to the kiug's prefence: which being rufufed, one of them condeavoured to force his way in; but the porter fhut the door rudely againt him, and in fo doing luroke one

Conclude an advan. eagcous treaty with the 5oles. of his fingers. The fervant was immediately put to death for this offence: but the Servians, by no means fatisficd with that, returned home in great fory, and prevaited upon their countrymen to futmit themfelves and their country to the Mufcovites. Calimir made feveral attempts to recall them, but to no purpofe.
ivatthias king of Hungary dying about this time, two of his fons, Uladifans, then king of Bohemia, and john Albert, contended for the vacant crown. Calimir wanted to give it to the latter, whom he accordingly affitted to the utmoft of his power ; and to enable him the better fo to do, though he was in great want of money as well as men, he purchafed a renewal of the truce with the Ruffians, and thereby gave John Bafi. lovitz time to eltablifh himfelf in his new accuilitions.

Cafinir died in the year \(\pm 492\), and was fueceeded on the throne of Poland by his ion Juln Albert, who, totally difregarding the Ruffians, involved himfelf unnceeffarily in a war with the brave Steplien duke of Moldavia: and though he had at the fame time both the Tartars and 'Turks againt him, his propentity to pleafure, and his lafcivious difpolition, rendered him fo indulent, that he not only did not fo much as attempt to molett Balilowit\% in any of his poffefions, but concluded a peace with him on terms very advantageons to the latter; and even entered into a treaty, by which he ftipulated not to affit the Lithianians, though they had chofen his brotier Alesander for their duke, in cafe the Ruffians fhould attack them, as it was luppofed they would. Alexander thinking to parry the inconveniences of this agreement, and to guard againft the defigns of his enenies, demanded in marriage Bafilowitz's daughter: Helena, by his fecond wife Suphia, and obtained leer. The Lithuanans then flattered themfelves with a profpect of tranquillity: but the anbitious czar, for Baflovitz had alfumed that title fince his eonquett of Cafan, aiming only at the increafe of dominion, foon fumd a pretence to break with his new allies, by alleging, that Polith Ruflia, as far as the river Beiczinn, lad formerly belonged to his ancettors, and thererore fhould be his; and that Alexander, by his marriage contract, had engaged to build a Greek church at Wilas for his Ruflian confort, which he had rot done but on the contrary endeavoured to force the Puilh Ruflians to embrace the religion of the church of Rome. In confequence of this tha, he fent into the terriories of his for-in-law, by ditherent ways, three armies, which reduced feveral phaces, dettroyed the comery about Sindenfoo, a:ad defeated the Lithu- zum field-namal Ollroky near the river Wedrafch, wheie ho foil unawas into an ambufh of the Ruflian? Nle:ander railed a new army of Silefans, Bohemians, and Moravians; but they eame too late, the Ruflans

fuccefs againft the Lithuanians, they invaded Livonia in the year 1522, with 130,003 men: but Walter Von Ylettenherg, grand-mafter of the knights of the erofs, with only 12,000 men, gave them a total overthrow killinar 10,000 of hig enemies, with farce any lofs on Livouia lis own lide. Bafflovitz difpirited \(b y\) this defeat, and to retire being then engaged in a war with the 'rartars, the Poles, and the city of Pleßiow, immediately difpatched an conbaffy to Plettenberg, and concluded a truce with him for 50 years. At the fame time he begged of that general to fend to Mofcow, that he might fee him, one of the iron-dragoons, as he called them, who had performed wonders in the late engagement. Von Plettenberg readily complied; and the czar, ftruck with admiratiun, rewarded the cuiraffier's accomplihments with confiderable honours and prefents.

Alexander had been clected king of Poland upon the death of his brother John Albert, which happened in the beginning of this year: but the Poles refufed to crown his confort Helema, becaufe the adhered to the Greek religion. Provoked at this affront, and probably flill more llimulated by ambition, Balilovitz refolved again to try his fortune with them; and accordingly ordered his fon Demetrius, now the eldell, to march againt Smolenko, and reduce that city. 'I'he young prinet did all that could be done: but the vigorous refitance of the belieged, and the arrival of the king of Poland with a numerous army, oblitred the Rulfans to raife the fiege and return home; and the clar was glad to nake a frefh truce with the Poles for fix years, upon the eafy terms of only returning the prifoners he had taken. Some writers fay, that flying into a violent paffon with his fon the moment he law him, and imputing the mifearriane of this expedition to his want of courage or conduet, he gave him a blow which laid him dead at his feet; to which is added, that remorfe for this rath action earried his father to his grave: but this account is not confirmed by authore whofe authority can be relied on. Certain it is, however, that neither of them long lurvived this event; and that Demetrius died fift: for Sophia, who had gained an abfolute afcendant over her huband, and wanted to give the fovereignty to her-own elindren, perfuaded him by various artful infinuations to fet afide and imprifon his graudfon Denatrius, the only child of the fate John, whom he had by lis firf wife Maria, and declare her then eldeft fon, Gabriel, his fucceffor. Age fund infirmities had rendered the ezar fo weak, that he blindly followed the iniquitous advice ; but fhortly after finding lis end approach, he fent for young Demetrius, expreffed great repentance for his barbarity towards him, and on his death-bed deelared him his towards him, and on his death-bed deelared him his He dies reign of 55 years; leaving behind him an immenfe ceeded by territory, chiefly of his ovn acquiring.
'The cezar was no fooner dead, than his fon Gabriel his fow whe takes the nanie of Ivanovitz, at the inftigation of his mother Sophia, Bafilus. put an end to the life of the young Demetrius, by confming him in pifon, where he periffed with hunger and enel; after which Gabriel was crowned by the name of Bafilius, and took the title of czar, as well as all the other titles belonging to the fovereignty. On his acceflion to the throne he expected that the Yoles would be in confusion about the clection of a new fovereigrn; but hio expertations being defeated by their unanmons election

8 ia. election of Sigifinund I. a prince of a mild and peace. ablle difpofition, he fent an army into Litluania, and laid fiege to Smolenfo. 'The place made a brave refiftance, till news arrived that the crown troops of Poland were coming to thio affifance, with the additional aid of 80,000 Crin 'Tartars; on which the Ruffians returned home with the utmoft precipitatiou. They were, howeser, quickly followed by the Poles, who reduced the czas to fubninit to fuch cerms as they pleared to impole. Baflius remained quiet till he thought himfccf capable of reverging the injuries he had futtainced; after which, pretending to fet out upon fome other expedition, he marched with a numerous arriny, and encamped in the neiglibourhood of Plekow, where the Poles, prefuming on the late treat \(y\), received him as a friend and ally. But in the nean time the Mufcovite priefts of the Greek church preached to their hearers concerning the expediency of laving a fovereign of their own religion; and brought them to fuch a height of enthufiafm, that they murdered their magiffrates, and opened their gates to the czar, who made then all flaves, and fent them away to different parts, replacing them with Mufcovites, the better to fecure his conqueft. Soon afier he took alfo the city of Smolennfo; and the Swecies, alarmed at his rapid progrefs, detired a prolongation of the truce, at that time fubfifting between the two flates, for 60 years longer. The duchy of Lithuania was the great object of the defigns of Bafilius; and to accomplifh his defign, he ordered I van Czeladin, a man of great refolution, and entcrpriing even to rafhnefs, to march thither with 80,000 nien. The army of the Poles dill not exceed 35,000 men, but was commanded by a moft experienced general. The two armies met on the oppofite barks of the Dneiper, near Orfova, and the Poles parfed that river in fight of their encmies. Cxeladin's officers advifed hint to fall upon the enemy when about half of them had croffed the river; but that general, too confident of fuccefs, rephied, that the other hali would then run away, and he was determined to gain a complete victory. The Lithuanians began the attack, but were repulfed by the Ruffians; who imprudently following them, boft an advantageons fituation, and found themeftres at once expofed to the full fire of the enemy's artillery. The Polifh cavaly then rufhed in among them fword in hand, and male dreadful havoc ; the trembling Ruffians fcarce even attempting to defend themfetwes. Thufe who endeavoured to Ay, fell into the Duciper and were drowned; and all the reft, including Czeladia limfelf, were made flaves.

Bafilius was at Smolenffo when he received the news of this dreadful defeat; on which he immediately fled to Mofow, where his danger increafed daily. The Ciim-Tartars ravaged his dominions, and the emperor Maximilian, with whom he lad been in alliance, deferted him; his troops were utterly defeated in Li vonia, where he was obliged to fubmit to a peace on diflowourable terns ; but what thefe terms were hiilorians do not inforn us. In the mean tine, the king of Poland firred up ihe 'Tartars to invade Ruffia, while the Ruflian molared in his turn endeaveured to excite them to an invafion of Poland. Thefe barbarians, equally treacheruas to boh partics, firft invaded and ravaged Podulia, a province of Pulaud; and
then having invaded Ruffia and defasted the amnes of the czar in the year 1521 , they pourcd in thither in fuch increcille multitudes, that they quickly madr anform

PuTis. thenfelves maiters of Mofeow. An army, which laid \({ }^{\text {Rakfon }}\) by been fent to oppofe their progrefs, was defeated wear the Tare the river Occa; and the czar's brother Andrew, who \({ }^{\text {ars. }}\). commanded it, was the very firt who fled. Baililus wilh great dificulty made his way to Novozorod; fo 1 terififed, that he hid hinfelf by the way under a baycock, to avoid a fraggling party of the crenty. The Tartars, however, foon obliged him to fign a writitr, by which he acknowledged limflelf their valal, and promifed to pay them a tribute of fo mucl a head for every one of his fubjects. Befides this, Machmetgerci, the coinmander of the Tartars, caufed his own Itatue to be fet tp at Morcow, as a mark of his fovereignty; compelled Bafilius to return to liis capital, to bring thither in perfon the firft payment of this tribute, and, as a token of his fubmififion, to proftrate himfelf before lis flatue. Machmet gerei then left Mofoow, and returned home with an immenfe booty, and upwards of 8o,oco prifoners, who were made flaves, and fold like cattle to the Turks and other enemies of the Chriftian nane. In his way back he attempted to take the city of Rezan ; but was repulfell with confiderable lofs by Iwan Kowen, who conmanded in that place for the Ruffiaus. Here the Tartar general marrowly efcaped with his life, his ccat being fhot through with a mufike ball: and the Mufcovites pulied down his flatue, and broke it to pieces as foon as the conqueross had letc them.
The Tartars were no fooner gone, than Baflius began to talk in a high frain of the revenge he intended to take of them: but was never able to execute his threats. He died in t ;33; and was fuceeded by his fon Ivaia or Johin Eatilovitz, an iufan: of fire years of age.
During the micority of the young prince, his twrofto \(\quad\).auncles Andrew and Grorge endeavolred to deprive fovitz l!. him of the crown; but their atterapts were defeated by the care and activity of his guardians; and the Pole; alfo inmediatly cormenced hoftilities, be:t culld make little progrefs. The new czar, as foon as he entered? the 19th year of his age, fhowed an :aclination for refeuing his fubjects out of that detperate frate of ignorance and baiharifn in which they had peen lititierto inmerfed. He fent a folendid embaffy to the cmiperor \(+i^{20}\) Charles V. who was then at Augfuing, to defire the fy to rerewal of the treaty of friendfhip which lad been cun_Charice \(P\). cluded with his father Maximinlian ; and ofering to clter into a league with him againh the Turks, as crenies to the Clirifian celigion; for his farther iniurnation in which, particulaty in repard to the doctrine and ceremonies of the Latin church, he requacted that his ambarfador might be allowe? to fend frum Germany to Ruffia proper piectiss tu inllfuct tem and his fubject: With thete he likewife deffred to have fome wifc and experienced thatefnen, alhe :o civilize the wila people uider his goveriment; and alfo, the better to help to rolilh them, he requelled that he would feud mechariics and artitits of cerery kind; in return for all which he offered to furning two tons of gold yearly, for 20 years togethec, to be curployed in the war aygaint the Turks. The err.petor readily agreed to the detire of the czar: and the Ruffian ambilididor accordingly ea-

Sutia. gised upwards of 300 Gcrman artifts, who were directed to repair to Lubec, in order to proceed from thence to Livocia. But the Lubeekers, who were very powerful at that time, and aimed at nothing lefs than the cngrofling of the whole commerce of the north, Itopped them, and reprefented ftrongly to the emperor, in the name of all the merchants in Livonia, the dangerous confequence of thas affording intruetions to the Ruffians, who would foon avail themfelves of it to rein their trade, and diftrefs the fubjects of his imperial majeity. 'The workmen and others intended for Ruffia were eafily prevailed upon to return to their refpective homes; and tle czar's ambaffador was arrefted upon his arrival at Lubec, and imprifoned there at the duit of the Livonians: however, he made his efeape flortly after; and the czar, though provoked to the lat degree at the behaviour of the Lubeckers, was obliged for fome time to fufpend lis refentment.

The filt enterprife of Baflovitz now was anainlt the Tartars of Cafan, who had hitherto been fuch formidable enemies. In this he was attended with great fuccets; the whole tervitory was conquered in feven years; but the capital, named alfo Cafan, being well fortilied and bravely defended, made fuch retiftanee as quite difheartened the betiegers, and made them think of abandoning their enterprife. Bafilovitz being informed of this, haftened to them with a confiderable reinforcement, endeavoured to revive their drooping courage, and exhrorted them to puh the fiege with redoubled vigour. However, the greater part, deaf to all his remonitrances, after loudly infifting upon a peace with the Tartars, and leave to return home, proceeded to mutiny, and fell upon their comrades who were for continuing the war. Bafilovitz, alarmed at this event, ruhed in among the combatants, and with great difficulty parted them : but neither menaces nor intreaties, nor even a promife of giving them the whole plander of the city if they took it, could prevail on them to continue the war. Their rage at laft prompted them to threaten the life of their fovereign; who, to provide for his own fafety, was obliged to muke the beft of his way to Mofcow; and the mutineers, no longer regarding any command, inftantly returned thither.

Ris me-
thond © fanihing

Bafilovitz, though juftly incenfed at this infolenee, took a method of puniming it whieh does honour to his humanity. Having felected a guard of 2000 of his bett troops, he ordered a great feaft, to which he invited his principal nobles and officers, to each of whom, according to the Ruffian cuflom, he gave very rich garments. The chief of the feditious were clothed in black velvet; and after the dinner was over, he made a \{peech to the whole company, fetting forth the behaviour of his troops before Cafan, their contempt of his commands, and their confpiracy to take away his life: to which lie added, that he was doubly forry to find the inftigators of fuch wickednefs among thofe who were ftyled, and who ought to be, his faithful counfellors; and that thofe who knew themfelves io be gruilty of fuch atrocious wickednefs could not do better than volantarily to fubmit themelves to his meercy. Upon this, moft of them inmediately threw themflves at his feet, and implored his pardon. Some of the mof criminal were exccuted, but the reft were only imprifoned.

Immediately after this punifhment of the rebels, Bafilovitz marched with a frefh army to re-invelt Ca fan before the Tartars had time to reeover themfelves. The befiegred ftill made an obftinate defenee, and the Ruffians again began to be difpirited; upon which the czar ordered his pioneers to undermine the walls of the citadel, a practice then quite unknown to the '「artars. 'I'his work being completed, he directed his priefts to read a folemn mals to the whole army, at the head of which he afterwards fpent fome time in private prayer, and then ordered fire to be fet to the powder, which acted fo effectually, that great part of the fonndation was immediarely blown up, and the Mufcovites rufhing into the city, flaughtered all before them; while the aftonifhed Tartars, crowdiug ont at the oppofite gate, croffed the river Cafanka, and Hed into the forefls. Among the prifoners taken on this occafion were Simeon king of Cafan with his queen; both of whom were fent to Mofcow, where they were treated with the utmort civility and refpect.

Encouraged by this fucceis, Bafilovitz invaded the Aftracas \({ }^{34}\) country of Aftracan, the capital of which he foon re-reduced. duced ; after which he prepared to revenge himfelf on the Livonians for their behaviour in ftopping the German artifts. John Bafilovitz I. had coneluded a truce with this people for 50 years; which being now expired, lodocus, archbifhop of Dorpt and canon of Munfter in Weftphalia, fentible of the danger to which he was expofed by the vicinity of the Ruflians, requeited the czar to give him a prolongation of the truec. Baflovitz defred him to choofe whether he would have a truce for five years longer, on condition that all the inluabitants of his archbifhopric fhould pay to him the annual tribute of a fifth part of a ducat for ni Livo each perfon, which the people of Dorpt had formerly agreed to pay to the grand-dukes of Plefkow; or, for 22 years, on this farther condition that he and the Livonians fhould rebuild all the Ruffian churches which had been demolifhed in their territories at the tine of the reformation, and allow his fubjeets the free exercife of their religion. Iodoeus evaded an anfwer as long as he could: out finding at lait that the affair grew ferious, he levied a confiderable fum from his fubjects, and ficd with it to Munfter, where he refigned his prebend and married a wife. His fucceffor, whofe name was Herman, and the deputies from Livonia, accepted of the conditions, and fwore to obferve them; with this additional claufe, that the prielts of the Romifh communion fhould be exempted from paying tribute.

But though the Livonians fwore to the oblervation Their \({ }^{35}\) of thefe terms, they were at that very time in treaty treachery, with Guftavus Vara, king of Sweden, to join them in attacking Ruffia. 'The king of Sweden very readily complied with their defires; upon which Bafilowitz invaded Finland. Guftavus advanced againft him with a powerful army ; but as neither the Poles nor I.ivonians gave him any affitance, he was obliged 'to conclude a treaty with the czar, and foon after to evacuate the conntry. Finland was at this time governed by William of Furftenberg grand-mafter of the ' Livoulan knights, and the arclibihop of Riga, with fome other prelates; between whom a quariel happened about this time, which foon facilitated the deligns of Bafilovitz on the country. The archbifhop, after at-

\section*{RU S}
tempting to fer himself above the grand-mater even in civil affairs, and to perfecute thole who adhered to the confeffion of Augsburg, chore for his coadjutor in the archbishopric of Riga Chriftopher duke of Mecklenburg. From the abilities and haughty temper of this lord, the Livonian knights apprehended that they had reafon to fear the fame fate which had befallen the Tentonic order in Pruffia; and the flep itself was, befides, unprecedented, and contrary to the eftablifhed laws of the country. Thee difoontents were heightened by letters faid to be intercepted from the archbishop to his brother Albert duke of Pruffia, inviting this lat totally to fupprefs the order of Livonian knights, and to fecularize their poffeffions, efpecially in Finland; fo that an open war broke out among the contending parties, and the archbishop was feized and made prifoner. He was, however, fool releafed through the mediation of the emperor of Germany and other potentates, back. ed by the powerful preparations of the Pruffians to avenge his cause; but in the mean time, the ftrength of their country being totally exhauted, the Livonians were obliged, instead of preparing for war, to due to the Czar for peace. Baflovitz replied, that he did not believe their intentions to be fincere while they kept 6000 Germans in pay ; and therefore, if they meant to treat of peace, they mut begin with difmifing there troops. The Livonians, having no longer any power to refift, did as they were ordered; but it availed them nothing. In \(155^{8}\) an army of 100,000 Ruffians entared the diftriet of Dorpt, and laid every thing waite before them with the mot flocking cruelty. After this they entered the territories of Riga, where they behaved with equal inhumanity; and having at lat fatiated themfelves with blood and treafure, they retired with an immenfe booty and a great number of prifoners.

The Livonians, now thoroughly convinced of their own folly in expofing themfelves to the refentment of the exafperated Ruffians, feet ambafladors to fue for peace in good earnelt. Thee offered the Czar a prorent of 30,000 ducats, and prevailed upon him to grant their nation a truce for four months, during which they returned home to get the money. But in this interval the Livonian governor of the city of Nerva, out of an idle frolic, freed forme cannon against Ivanogorod or Ruffian Nerva, fituated on the oppofite fine of the river, and kilted feveral of the Czar's fubjects who were affembled in an open place quite unarmed. The Rufffans, out of regard to the truce, did not even attempt to make reprifals; but immediately acquainted Bafilovitz with what had happened: which fo incenfed the Czar, that when the Livonian ambaffadors arrived, he told them, he looked upon their nation to be a fet of perjured wretches, who had renounced all honefty; that they might go back with their money and proposals, and let their countrymen know that his vengeance would foo overtake them.
The ambalifadors were farce arrived in Livonia, when an army of \(300,0 c \circ\) Ruffians entered the diftrict of Nevva, under the command of Peter Sifegaledrii, who had been a famous pirate in the Exine fa. He took the city of Nerva in nine days, and very Speedily made himfelf matter of Dorpt, where he found immense treasures. Several other garrifons, terrified by the approach of fuck numbers, quilted their pots; fo that the Ruffians became matters of a great part of Livonia almolt without

Vol. XVI. Part IK.

opposition. At lan, Gothard Letter, grand-mafter of the knights of Livonia, entreated Chriftian IIL. king of

RuTh. Denmark to take Riga, Revel, and the countries of Garnland, Wirrland, and Esthonia, under his protecton; but the advanced age of that monarch, the diglance of the places, and the want of fufficient power to withfand fo potent an adversary, made him decile the offer. However, he affilted them with forme money and powder, of which they food greatly in need. Having then applied, without fuccefs, frt to the emperor of Germany, and then to the court of Sweden, Kettles put himfelf under the protection of the Poles, who Lad hitherto been fuck formidable enemies to the Ruffians. In the mean time the latter purified their conqueft 3 ; they took the city of Marienburg, laid waft the diftrice of Riga, deftroyed Garnland, and penetrated to the rery gates of Revel. Felin, in which was the belt arilley of the whole country, became theirs by the tres. chary of its garrifon ; and here William of Furtenberg the old grand-mafter was taken, and ended his days in a prifon at Mofoow. The diffracted fituation of the Livonian affairs now induced the bishop of Oefel to fell his bifhopric to Ferdinand king of Denmark, who exclanged it with his brother Magnus for a part of HoleAten. The districts of Reval and Etthonia put themfelves under the protection of Sweden; and then the \({ }^{18}\) grand-mafter, finding himicli defected on all fides, fop- of 1. ivonipreffed the order of which he was the cleft, and ac. \({ }^{2 n}\) nights cepted of the duchy of Courland, which he held as a fuipreited. fief of the crown of Poland.

The Czar law with pleafure the divifion of Livonia between the Swedes and Poles, which, he rightly judged. would produce quarrels between the two nations, and thus give him the fairer opportunity of futzing thewhole to himfelf. Accordingly, in 1564, the Swedes offered him their aflitance again the Poles; but he, judging himfelf to be fufficiently flong without thea, attacked the Poles with his own forces, and was twice defeated, which checked his farther operations in Livonia. In 1569 he entered into a treaty of commerce A treaty with England, captain Richard Chancellor having a between fort time before difcovered a paflage to Archangel in England. Ruflia througlo the White Sea, by which that empire was likely to be fupplied with foreign goods, without the affiltance cither of Poland or Livonia. To the difcoverers of this new paffage Bafilovitz granted ma. ny exclufive privileges; and after the death of queen Mary renewed the alliance with queen Elizabeth, and which has been continued without interruption ever fine.

In the mean time, however, a prodigious army of an an ny Turks and 'Tartars entered Mufcovy, with a defign to and Tars Subdue the whole country. But Zerebrinov, the Czar's:ars cuts af. general, having attacked them in a defile, pat them to fight with conniderable flaughter. Then they retired towards the mouth of the Volga, where they expected a considerable reinforcement; but being cloddy purfued by the Ruffians and 'Tartars in alliance with them, they were again defeated ane forced to \(A_{y}\) tow ards \(A_{z o v}\) on the Black Sea. But when they cane there, they found the city almoft entirely ruined by the blowing up of a powder magazine, The Ruffians then attacked their flips there, took forme, and funk the ret! ; by which means almost the whole anne perished with hunger or the ford of the enemy.

From this time the empire of Raffia became fo for4 B
nidab!:

\section*{\(R\) U S [ 562 ]}
caufed him alro to be murdered left he flould divulge the fecret. In 1597 the Czar himelf was taken ill and died, not without great fufpicion of his heing poifoned by Guterov; of which indeed the Czarina was fo well convinetd, that the would never aiterwards fpeak to her brother.

With theolore ended the line of Ruric, who had Extinction governed the empire of Ruffia for upwards of 700 years. Boris, who in reality was pofieficd of all the power, and would irdeed have fuffered nobody clfe to reign, artfully pretended to lee muwilling to accept the crown, till compelted to it by the intraties of the people; and even then he put the acceptance of it on the iffine of an expedition which he was about to undertake açuint the 'Tatars. The truh of the matter, however, was, that no Tartar army was in the field, nor had Boris any intention of invaling that country; but by this pretence he aflembled an anny of 500,000 men, which he thought the moft effectual method of fecuring hinfelf in his new dignity. In 600 he concluced a peace with the Poles, but refolved to continue the war argaint the'Swedes; however, being difappointed in fome of his attempts againf that nation, he entered into an alliance with the Swedith monarch, and even propofed a match between the king's brother and his daughter. But while thefe things were in agitation, the city of Mofcow was defolated by one of the mont dreadful famines recorded in hiltury. Thoufands of people lay dead in the flreets and highways, with their mouths full of hay, ftraw, or eveu the moft filthy things which they had been attempting to eat. In many houfes the fatteft perfon was killed in order to ierve for food to the ref. Parents were faid to have eaten their cliitdren, and children their parents, or to have fold them to buy bread. One author (Petrius) fays, that he himfelt faw a woman bite feveral pieces out of a child's arm as the was carrying it along; and captain Margaret relates, that four women having ordered a peafant to come to one of their houfes, under pretence of paying him for fome wood, killed and eat up both him and his horfe. This dreadful calamity lafted three years, notwithitanding all the means which Boris could ufe to alleviate it; and in this time upwards of 500,000 people perifhed in the city.

In 1604 a young man appeared, who pretended to be Demetrius, whom Boris had caufed to be murdered, as we have already feen. Being fupported by the Poles, he proved very troublefome to Roris all his lifctime: and after his death deprived '1'heodure Boriffovitz, the new Czar, of the empire; after which he afcended the throne himfelf, and married a Pulifh princefs. However, he held the empire but a fhort time, being killed in an infurrection of his fubjects; and the unhappy Czao rina was fent prifoner to Jaroflaw.

After the death of Demetrius, Zußki, who had confpired againlt him, was chofen Czar; but rebellions continually taking place, and the empire being perpetually laraffed by the Poles and Swedes, in 1610 Zunki was depofed, and Uladiflaus fon of Sigifinund king of Po. land was elected. Howevcr, the Poles reprefenting to the Sigifmund, that it would be more glurious for him to be the conqueror of Rulfia, than only the father of its fovereign, he carricd on the war with fuch fury, that the Ruffians in defpair fell upon the Poles, who refided in great numbers at Mofcow. 'I he Poles being well
came within 18 miles of the city of Mofenw, where they Mof cow ta were totally defeated. The Czar no fooner heard chis Ben: and hurn by the rartar. news than he retired with his n:oft valuable effects to a well-fortilied cloyfter; upon which the 'lartars entered the city, plundered it, and fet lire to feveral churches.
:nidable, that none of the neighbouring nations could hope to make a total coanquett of it. The Poks Swedes indeed contmued to be very formidabic enemies; and, by the inftigation of the fomer, the Crim Tartars, in 1571, again invaded the country with an army of 70,500 men. The Rulfians, who might have preventcd tieeir paffing the Volga, retired before them till they A violent thom which happened at the leme time foon fpread the flames all over the city; which was entirely reduced to afies in fix hous, though its circumfereme was upwards of 40 miles. The fire likewife communicated itfelf to a powder-marazaine at fome difance from the city; by which accident upwards of 50 rods of the city wall, with all the buildings upon it, were decitroy. ed; and, according to the belt hiltorians, upwards of \(12 \approx, 000\) citizens were burnt or buried in the ruins, befides women, chiidren, and forcipurers. The cafte, however, which was flrongly fortified, could not be taken; and the Tartars hearing that a formidable army was coming againt them under the command of Magnus duke of Holltein, whom Baflovitz had nade king of Livonia, thought proper to retire. The war, neverthelefs, continued with the l'ules and Swedes; and the Czar being defeated by the latter after fome trilling fuccefs, was reduced to the neceffity of fuing for peace. But the nergotiations beilig fomchow or other broken off, the war was renewed wih the greatelt vigour. The Livolians, Poles, and Swedes, having united in a leaguc together againft the Ruflians, gained great advantages over them; and, in 1579, Stephen Battori, who was then raifed to the throne of Polard, levied an army exprefsly with a defign of invading Ruffa, and of regaining all that Poland had formerly claimed, which indeed was litule lefs than the whole empire. As the Poles underflood the art of war much better than the Ruffians, Bafilovitz found his undifciplined multitudes unable to cope with the regular forces of his enemics: and their conquefts were fo rapid, that he was foon obliged to fuc for peace: which, however, was not granted; and it is pofithe that the number of enemies which now attacked Ruffia might have overcome the empire entirely, had not the allies grown jealous of each cther; the confequence of which was, that in 1582 a peace was concluded with the P'oles, in which the Swedes were not comprehended. However, the Swedes finding themfilves unable to effect any thing of moment after the defertion of their allics, were fain to conclude a truce; flortly atter which the Czar, having been worfted in an engagenient with the Tartars, died in the year 1584
This great prince was fucceeded by his fon "heodore Ivanovitz; a man of fuch weak undertanding, that he was totally unfit for goverument. Under linn, therefore, the Ruflian Affairs fell into confufion; and Boris Gudenov, a ncbleman whofe fifter Theodore had married, found means to affurne all the authority. At lafl, unable to bear even the name of a fuperior, he refolved to ufurp the throne. For this purpofe he caufed the Czar's brothcr Demetrius, at that time only nine years of age, to be affafinated ; and afterwards, knowing that no truit could be put in an affafiu, he

\section*{\(R \quad\) U S \([563] \quad R \quad U \quad S\)}
fla. armed and moftly foldiers, had greatiy the advantage; however, they were on the point of being oppreffed by numbers, when they fell upon the moft cruel method of enfuring their fuccefs that could be devifed. This was by fetting fire to the city in feveral places; and while the diftreffed Ruffians ran to fave their fanilites, the Poles fell upon them fword in hand. In this confulion upwards of 1 -0,002 people perifhed; but the event was, that the Poles were finally driven out, and lof all footing in Ruffia.

The expulfion of the Poles was fuccecded by the election of Theodorovitz Romanor, a young noble. man of 17 years of age, whofe pofterity, till the acceffion of the prefent Emprefs, continued to enjoy the fovereiguty. He died in \(\mathbf{t} 54\), and was fucceeded hy his fon Alexis; whofe reign was a continued fcene of tismult and confufion, being haraffed on all fides by external enemies, and having his empirc perpetually difturbed by internal commotions.

The fuurces of thefe commotions were found in the multiplicity and inconfiftency of the laws at that period, and in the jarring claims of the nobles on the borders. An eniannyy ukife, or perfonal order, which is an edict of the fowereign, figned with his own hand, is the only law of Rumfia. Thefe ediets are as various as the opinions, prejudices, paffions, or whimô of men ; and in the days of Alexis they produced endlefs contentiuns. To remedy this evil, he made a felection, from all the edicts of his predeceffors, of fuch as had been faniliarly current for a huudred years; prefuming that thofe either were fourded in naturad jufice, or during fo long a currency had formed the minds of the people to confider them as juit. This direft, which he declared to be the common law of Ruffia, and which is prefaced by a fort of inftitute, is the ftandard law bouk at this day known by the title of the Ulogenie or eefiun; and all cdicts prior to it were declared to be ubfoicte. He fuon made his navel \(x\), , however, more bulky than the Ulogeniè; and the additions by his freceffors are beyond enumeration. This was undoubtedly a great and ufeful work; but Alexis performed another still greater.

Though there are many courts of judicature in this widely extended enpire, the emperur has always been lord paramount, and could take a caufe from any court immediately before himfelf. But as feveral of the old nobles had the remains of principalities in their families, and leld their own courts, the fovereign or his minifters, at a ditance up the countiy, frequently found it difficult to bring a culprit out of one ol thefe hereditary fendal jurifdietions, a d try him by the laws of the enpire. This was a very difagreeable limitation of in. perial puever: and the more fo, that fome families claim. ed even a right to repledge. A lucky opp rtunity of. fered of fettling this elifpute; and Alexis embraced it with great ability.

Some families on the old fronticrs were taxed with their defence, for which they yrere obliged to keep regiments on foor; and as they were but teantily intem. nifed by the thate, it functimes required the exe tion: of authority to make them keep up their levies. When the fromiers, by the conquen of Cafan, weee far extended, thote gentlemo of found the regiments no longer burdenfur:e, becaufe by the help of falfe mutere, the formor leanty allowance much more than reimburfed them for the expence of the eftablifment. The confe-
quence was, that difputes arofe among them about the Rufire, right of guarding certain diftricts, and law-fuits we:c necefiary to fettle their refpective elaims. Thefe were tedious and intricatc. One elaimant fhowed the order of the court, iffured a centu y or two back, to his anceftor for the marchin.: of his meli, as a proof that the right was then in his family. His epporient proved, that his anceftors had bee the real lords of the marches; but that, on accoumt of their negligence, the cuurt had iffurd an :mmanov ub fe to the cither, only at tha: particular period. The empecor ordered all the amily archives to be brought to Motcom, and all ducuments on both fides to be culle?ed. A time was let for the examination; a fine wooden court houfe was built; every paper was lodged under a good guard; the day was appointed when the court fould be opened and the claims heard; but that moning the houfe, with all its contents, was in two hours confumed by fire. The emperor then fiud, "Gentleme:3, henceforward your ranks, your privideges, and your conits, are the nation's, and the nation will gu?nd itfelf. Your ar. chives are unfortunately lof, but thofe of the mation remain. I am the keeper, and it is my daty to adminitter jultice for all and to all. Your ranks arc rot private, but national; attached to the fervices you are actually performing. Henceforward Colonel Buturlin (a private gentleman) ranks before Captain Vizzemiky (an old prince)."

This contitution, which eftablifhed the differnt A ervis', ranks of Ruffa as they remain to this day, is by connitution Toltaire afribed to Peter: but it was the work of wied in Alexis; who, when the fituation of himfelt and his rests fertian country is confidered, mult be allowed to have been emanoin a great and a groud man. He died in 1675 , and was R...ia. fliceseded by his fon Theodore Alexiovitz; who after an excelleut reign, darins the whole of which he exerted himillf to the utmoll for the good of his lubjees, died in 1582 , havins appointed his brocher P(ier I. Aocefion commonly called Peter the Great, his fucceffur. See of eeer

\section*{feteri.}
the Crest.
Theodure had another brother nomed Yobn; but as he was fubject tu the fallinsednefs, the Czar had preferred Peter, though very young, to the fucceffon. But through the intrigues of the princers Suphia, fifter to Theodore, a drong party was formed in favour of Johs: and foon after buth John and Peter were p:oclamed fove eigus of Reffee under the adninitration of Suphia herfelt, who was declared regent. However, this admjniftration did not continue long; for the pincefs regeat having confpired againt l'eter, and havins the mistor. tume to be difoovered, was contined for life in a convent. From this time alis John continued to be only a nominal fovereign till his death, which happened in 1696, l'eter comtinuin, to engrofs all the power.

It is to this emperor that Rufta is univerraby al. lowed to owe the whele of her pecfent greatnefs. The tio chare? private character of Peter hiinfelf feems to have beenter. but verr indifferent. Though he had been married in his eightcenth year to a young and beautiful princefs, he was not fufficiently reftrained by the iolemn sies of wedlock; and he was bof:les fo mach addicted io faiting and drunkennefs, the prevaiing vice of his countr?, that nobudy could lave inagined hiun capable of efectiog the retorraation upon his fubjects which he actually accomplified. In fypite o! ail difadvantages, however.

\section*{\(R\) U S \\ \(R \quad U \quad S\)}

Rutia. he applied himfelf to the military art and to civil government. He had alfo a very fingular natural defect, which, had it not been conquered, would have rendered hin for ever incapable of accomplifting what he afterwards did. This was a vehement dread of water; which is thus accounted for. When he was about five years of age, his mother went with him in a coach, is the fpring-feafon; and pafing over a dam where there was a confiderable water-fall, whilft he lay afleep in her lap, he was fo fuddenly awaked and frightened by the rulhing of the water, that it brought a fever upon him; and after his recovery he retained fuch a dread of that dement, that he could not bear to fee any ftanding water, much lefs to hear a running Atrean. This avertion, however, he conquered by jumping into water; and

60 Europe hiorelf. that he might have the opportunity of profiting by his And nalkes own obfervation and experience. Of this journey we afterwards became very fond of that element.

Being afhamed of the ignorance in which he had been brought up, he learned almof of himfelf, and withont a mafter, enough of the High and Low Dutch languages to fpeak and write intelligibly in both. He looked upon the Germans and Hollanders as the mont civilized nations; becaufe the former had already ereeted fome of thofe arts and manufactures in Mofcow, which he was defirous of fpreading throughout his empire; and the latter excelled in the art of navigation, which he confidered as more ncceffary than any other. During the adminiftration of the princefs Sophia, he had formed a defign of eftablifhing a maritime power in Ruffia; which he accomplifhed by the means which we have recorded in his life.

Having reformed his array, and introduced new difcipline among them, he led his troups againtt the Turk:; from whom, in 3696, he took the fortrefs of Azov, and had the fatisfaction to fee his fleet defeat that of the eneny. On his return to Mofoow were Aruck the firft medals which had ever appeared in Ruffia. The legend was, "Pet: Rufla." On the reverfe was Azov, with thefe words, licitcrious by fire and woater. Not withftanding this fuccefs, however, Peter was very much chagrined at having tris fhips all built by foreigners; having befides as great an inclination to have an harbour on the Baltic as him to fend fome of the young nobility of his empire into foreign countries, where they might improve. In 1697 he fent 60 young Ruffiaus into Italy; moft of them to Venice, and the reft to leghorn, in order to learn the method of conftructing their galleys. Forty mone were fent out by his direction for Holland, with an intent to inftruct themfelves in the art of building and working large fhips: others were appointed for Germany, to ferve in the land-forces, and to learn the military difcipline of that nation. At laft he refolved to travel through different countries in perfon, have given a fhort account elfewhere; and fhall here only add, that in executing his great defign, he lived and worked like a common carpenter. He laboured hard at the forges, rope-yards, and at the feveral mills for the fawing of timber, manufacturing of paper, wiredrawing, \&c. In acquiring the art of a carpenter, he began wilh purchafing a boat, to which he nade a mait himfelf, and by degrees he executed every part of the conftruction of a hip.

Befides this, Peter frequently went from Sweden to Amiterdam, where he attended the lectures of the celcbrated Ruyfch on anatomy. He alfo attended the lectures of burgomatter Witfen on natural philofophy. From this place he went for a few days to Utrecht, in order to pay a vilit to King Willian III of England; and on his return fent to Archangel a 60 ggun fluip, in the building of which he had affitted with his own hands. In 1698 he went over to England, where he employed limfelf in the fame manner as he had cione in Holland. Here he perfected hinfelf in the ant of fhip-building; and having engaged a great number of artificers, he returned with them to Holland; from Is oblieed whence he fet out for Vienna, where he paid a vifit to by a rebelthe emperor; and was on the point of fetting out for Ve- turn to his mice to finifh his innprovements, when he was informed uwn domir of a rebellion having broken out in his dominions.niuns. This was occafioned by the fupertition and obftinacy of the Ruffians, who having an almoft invincible attachment to their old ignorance and barbarifm, had refolved to dethrone the Czar on account of his innovations. But Peter arriving unexpectedly at Mofow, quickly put an end to their machinations, and took a inof fevere revenge on thofe who had been guilty. Having then made great reformations in every part of his empire, in 1700 he entered into a league with the kings of Denmark and Poland againlt Charles XII. of Sweden. The particulars of this famous war are related under the article Sweden. Here we fhall only obferve, that, from the conclufion of this war, Sweden ceafed not only to be.a formidable enemy to Ruffia, but even loft its political confequence in a great meafure altogether.

Peter applied himfelf to the cultivation of commerce, \(\mathrm{Hj}_{\mathrm{i}}{ }^{63}\) alfiduarts, and fciences, with equal aliduity as to the purfuits ous fririt od of war; and he made fuch acquifitions of dominion improve. even in Europe itfelf, that he may be faid, at the time of his death, to have been the moft powerful prince of his age. He was unfortunate in the Czarovitz his eldett fon, whom he contrived to get rid of by the forms of juftice (fee Peter I. note b), and then ordered his wife Catharine to be crowned with the fame magnificent ceremonies as if fhe had been a Greek em-the fettler prefs, and to be recognifed as his fucceffor; which fhe \({ }^{0,1}\) his wite accordingly was, and mounted the Ruffian throne upon the deceafe of her hufband. She died, after a glorious reign, in 1727 , and was fucceeded by Peter Il. a minor, fon to the Czarovitz. Many domeftic revolutions happened in Ruflia during the fhort reign of this prince; but none was more remarkable than the difgrace and exile of Prince Menzikoff, the favourite general in the two late reigns, and efteemed the richeft fubject in Europe. Peter died of the fmall-pox in 1730.
Notwithftanding the defpotifm of Peter the Great and his wife, the Ruffian fenate and nobility, upon the death of Peter II. ventured to fet afide the order of fucceffion which they had eftablifhed. The male iffue the throme of Peter was now extinguihted ; and the duke of Holftein, fon to his eldet daughter, was by the deftination of the late emprefs intitled to the crown: but the Ruffians, for political reafons, filled their throne with Anme duchefs of Courland, fecond daughter to John, Peter's eldeft brother; thongh her elder fifter the duchefs of Mecklenburgh was alive. Her reign was extremely profpcrous; and though the accepted of the crown un-

\section*{\(R \quad\) U S}
\({ }^{2}\) dyt limitations that fone thought derogatory to her dismity, yet the broke them all, afferted the prefogative of her anceftors, and puniliced the afpirimy Dolgorucki family, who had imfored upon her limitations, with a view, as it is faid, that they themflelves night govern. She raifed her favourite Biron to the duchy of Courland; and was colliged to give way to many fevere ex. ecutions on his account. Upon lier death in 1740 , John, the fon of lier niece the princefs of Mecklen. burgh, by Antony Mric of Brunfwic Wolfenbutcel, was, by her will, initiled to the fuceeffion: but being no more than two years sld, Biron was appointed to be adminiitrator of the eanpire during lis nollage. This ditination was difagrecalile to the princefs of Mecklen. burgh and her luffand, and unpopular among the Ruffians. Count Munich was employed by the princecfs of Mecklenburgh to arreft Birun; who was tried, and condemned to die, but was fent in exile to Siberia.
The adminitration of the princefs Anne of Mecklen. burgh and her hufhand was, upon many accounts, but particularly that of lier German conneetions; difareree. able not only to the Ruffians, but to other powers of Europt; and notwithfianding a profperous war they carried on with the Swedes, the princefs Elizabeth, daughter by Catharine to Peter the Great, formed fuch a party, that in one night's time the was declared and proclaimed emprefs of the Ruffias; and the pincefs of Mceklenburgh, her hufband, and fon, were made prifoners.

Elizabeth's reign may be faid to have been mure glorious than that of any of her predeceffors, her father excepted. She abolifhed capital punilhments, and introduced into all civil and military proceedings a moderation till her time unknown in Ruffia : bit at the fane tine the punithed the counts Munich and Ofterman, who liad the chief management of affairs during the late adminiftration, with exile. She nade peace with Sweden; and fetled the fucceffion to that crown, as well as to her own dominions, upon the mofl equitable foundation. Having glorioufly finihed a war, which had been ttirred up dgainft her with Sweden, the \(x\) xplaced the natural order of fucceffion in her own family, by declaring the duke of Holltein-Gottorp, who was deficended fron her elder fifter, to be her heir. She gave him the title of grand duke of Ruffia; and foon after her acceffion to the throne, fhe called him to her court ; where he re:ounced the fucceffion to the crown of Sweden, which undoubtedly belonged to him, emhraced the Greek religion, and married a princels of Anhalt-Zerbfi, by whom he had a fon, who is now heir to the Ruffian cinpire.

Few princes have had a more uninterrupted career of glory than Elizabcth. She was completely victorious over the Swedes. Her alliance was courted by Great Britain at the expence of a large fublidy; but many political, and fome private reafons, it is faid, determined her to take part with the hourfe of Auftria againt the king of Pruffia in 1756 . Her arms alone gave a turn to the fuccefs of the war, which was in disfavour of Pruffia, notwithflanding that momarch's amazing abiliries both in the field and cabinet. Her conquefts were fuch as portended the entire deltruction of the Pruflian fower, which was perlaps faved only by hicr critical death po January 5. 1762.

Elizabeth was fucceseded by Pter III. grand prince
of Ruflia and duke of Holtein; a prince whole eon. Rumbi. duct has been varicufly reprefented. Ife mounted the --6. throne poffeffed of an enthufiatic admiration of his charafte Pruffian majety's virtues; to whom he gave pe:tee, and of her fue. whofe princingles and practices he feems to have adopted cluer l'elez as the directories of lis future reign. Ife might havell. fummounted the efiectio even of thofe peculiarities, un. popular as they then were in Ruffia; but it is faid, that he aimed at reformations in his dorninion:, which even Peter the Great durlt not attempt ; and that he even ventured to cut off the beards of his clergy. He was cettainly a weak man, who hed no opinions of his own, but childithly adopted the fentiments of any perfin who took the trouble to teach him. His chici amufement was buffoonery; and he would fit for liwurs looking with pleafure at a merry-andrew finging drunken and vulgar fongs. He was a ftranger to the country, its inhabitants, and their manners; and fuffered himifle to be perfuaded by thofe about him, that the Kuffians were fools and beafts unworthy of his attention, except to make them, by means of the \(\mathrm{l}^{2}\) ruffian dificine, good fighting machines. Thefe fentiments regulated his whole conduct, and prepared the way for that revolution which impropricties of a different kind tended to hatten.

Becoming attached to one of the Vorontzoff ladies, Behavinur fifter to the princefs Dafhkoff, he difgutted his wife, of che en:who was then a lovely woman in the prime of life, of 1 refs and great natural talents and great acequired acconplifh- Drincefor. ments; whilit the lady whom he preferred to her was but one degree above an idiot. The princefs Dafhkoff, who was married to a man whofe genius was not fupcrior to that of the emperor, being dune d'hanneur and lady of the bedchamber, had of courfe much of the emprefs's company. Similarity of fituations knit thefe two illuftrions perfonages in the clofeft friendhip. The princefs being a zealous admirer of the French economifles, could make her converfation both amufing and inltructive. She retailed all her flatilical knowledge; and finding the emprefs a willing hearer, the tpoke of her in every company as a prociigy of knowledge, judgment, and philanthropy. Whilit the emperor, by his buffoonery and attachment to foreign manners, was daily incurring more and more the odium of his fubjects, the popularity of his wife was rapidly increafing; and fome perfons about the court expreffed their regret, that fo much knowledge of gevernment, fuch love of humanity, and fuch ardent wifhes for the profperity of Ruffia, fhould only furnifh converfations with Catharina Romanowna*. The emprefs and her Tte Prime favourite did not let thefe expreffions pafs unobferved: cefis \(D_{a j} \beta_{-}\) they continued their ftudies ia concert; and whilt the hef. former was enployed on her famous code of laws for a great empire, the latter always reported progrefs, till the middling circles of Mofeow and Se l'eterfourgh began to Speak familiarly of the bleffings which they inight enjoy if thefe tpeculations could be realized.

Meanwhile Peter III. was giving frefh caufe of dif. Peter', uncontent. He had recalled from Siberia count Munich, Popular who was indeed a fenlible, brave, and worthy man ilenith lifo but as he was fnarting uider the effects of Ruffian def. guts th: potifm, and had grounds of refentment againtt mott of maturf\% the great fanilies, he did not much difcourage the ernperor's unpopular conduct, but only tried to moderate it and give it a lfttern. Peter, however, was impatient.

\section*{\(R \quad \mathrm{U} ~ \mathrm{~S}\)}

Tufia. Are publicly ridiculed the exercife and evolutions of the Ruffian troops; and lantily adopting the Pruffian dif. cipline, without digeting and fitings it for the conntitution of his own fores, he conipletely ruined himfelf by difyufting the army.
What he loft was foon and eafily gained ly the cmif. ehe parey of ing to 8000 men, wele intantly brourht over by the Catharine, three brothers Orleff, who inad contrived to ingratiate themfelves with their officers. The people at large were in a fate of indifferenee, out of which they were roufed by the following neeans. A little manufeript was handed about, containing principles of legiflation for Ruffia, founded on matural rights, and on the claims of the different claffes of peopple which lad infenfilly been formed, and becone fo fainiliar as to appear natural. In that performanee was propufed a convention of deputies from ail the claffes. and frons every part of the empire, to converfe, but without authority, on the fubjects of which it treated, and to inform the fenate of the refult of their deliberations. It paffed for the work

While Catharine was thus high in the publie efteem and affection, the emperor took the alarm at her popularity, and in a few days came to the refolution of confining her for life, and then of marrying lis favourite. The fervants of that favourite betrayed her to her filter, who inparted the intelligence to the enuprefs. Cathasine faw her danger, and inflantly formed her refolution. She muft either tamely fubmit to perpetual imprifonment, and perhaps a cruel and ignominious ditath, or contrive to luul her hufband fron las throne. No other contrive to hur her huband rone his throne. No other
alternative was hift her; and the confequenee was what undoubtedly was expefted. The proper Heps were ta\(r\) ken; folly Fell before abilities and addrefs, and in three days the revolution was accomplifhed.
When the emperor faw that all was loft, he attempt- ed to enter Cronfadt from Oranienbaum, a town on the gulph of Finland, 39 verfts, or near 26 miles from Teeterburgh. The fentinels at the harbour prefented their nufkets at the barge; and though they were not leaded, and the men had no cartridges, he drew back. The Englifh Gailors called from thip to fhip for fome perfon to head them, declaring that they would take him in and defend him; but he precipitately withdrew.
- Munich received him again at Oranienbaum, and exhorted him to mount his horfe and head his guards, swearing to live and die with him. He faid, "No: I fee it cannot be done without fhedding much of the blood of my brave Holiteinians. I am not worthy of the faerifice." "Ihe revolution was fettled, and Cathatine declared autocratrix. The crown was faid to be
prefted upon her, and her fon was proclamed ber lieir, and as fuch great duke of all the Ruffias.

She bebaved with magnanimity and moderation ; retained Munich; even pardoned countefs Vorontzoff the emperor's favollite; and afterwards, on her marriage and nuvde. with Mr Paulotky, made a handiome fettement on rate beha. them. She allowed the expectations of golden days and viur. a philofophical government to lecome the fubject of faflionable converfation; and the princefs Dathkoff(c) was completely happy. The convention of deputies was even refolved on; and as they were not to be elected by the people, except here and there for the foow, Prince Galitzin and Count Panin, whom fhe had completely gained over, and who had the greateft abilities of any Rulfans about court, were at immenfe plins in apoointing a proper fet. 'In the mean time, a great She mikinumber of thowy patriotic proje?ts were begun, A tutes grave Englifh clergyman was invited over to fuperin. fch ools, tend tbe inftitution of fchools for civil and moral edu. eation; and the emprefs was mort liberal in her appointments. This inttutuion failed, however, to produce the effects expected from it. The clergyman appointed, though a moft excellent charater and real philanthropitt, had view's too contracted for the fphere in which he was placed; and Mr Betfioy, the Rufian Mecenas, to whom the emprefs referred him for initructions, preferred declamationt, and ftarge-playing, and bullets, to all other accomplifhments.

In the mean time, clegance of all kinds was introdu- \(n 1\) ferdg ced before the people were taught the principles of "e e ohites morals. The nobles were fent a cravelling; and as the \({ }^{3}\) travelRuffians more eafily aequire foreign languages than the prople of moft other nations, have great vivacity without flippaney, and in general undertland play, elicfe travellers were everywhere well received, efpccially at I'aris, where reafons of itate contributed not a litte to procure to them that attention with which they were teated. They were tavifhed with the manners of foreign courts, and imported fafhiess and fineries without bounds. The fovereign trened all this to her own account by encouraging a diffipation which rendered court favours neceflary, and made the people about her forget their Utopian dreams.

The convention of deputies at laft affumbled in the conven 77 capital. The emprefs's book of infructions ( \(D\) ) came \(i\) in of de. forth; and by fome great thin!s were doubtlefs expect- puntes af. forth; and by lome great thin!s were doubtles expect- 8 nobled,
ed. Ihe moll contequential of the deputies were pri- "nd the is vately inftrufted to be very cautious, and informed that ive. carriages and guards were ready !or Siberia. There was a granld proceffion at their prefentation. Eacn had the honour of kifing her ma, efty s hand and receiving a gold medal. They met in form to recoennife one another,
(c) This lady, during the progrefs of the revolution, certainly acted either from the moft difinterefted patriotifm or the mof generous frisadfhip. She might have taken part with the emperot, and dirccted the counfels of the empire; for her fiter, on whom he doated, acknowledged her fuperiority, and wanted nothang but pleafure. Detween them they enuld eafily have governed fueh a man as Peter III. but Catharine Kumanovina was a theoretical enthufiall, who loved the emprets becaufe fhe thought her a philuiopher and philianthoopift; and perhaps fle inight entertain hopes of direetay the conduct of Cietharme II. as the had formerly affited ker in her patriotic fudies.
(D) It is intitled, Infrugions for the Deputies to confurt about a New Code of Laws, \&c. and io a very refg.at. able work, whick does honour to the emprefs, by whors it was undoubtedly compofed.

\section*{\(R\) U S}
cther, then parted, and have never met fince. The Dafhkoff was handfumely given to undernand, that heo counfels were no ionger neceffary, and that the coald not do better than take the amufements of the tour of Europe. She was liberally lipplid, and has ever fince been treated with great kindnefs, but kept amufed with fomething very different from legination.

In the mean time, many I triotic things were really done. Taxes were frequently remitted where they were burthenfome. Every perfon was declared free who had ferved government without pay for two years. No man was allowed to fend beors from his cultivated eftates to his mines in Siberia, nor to any ditant eftates, but for the purpofes of agriculture. Many cot lunies of German peafants were in various places fetLied on the crown-lands, io tewh the natives the management of the dairy; a branch of rural econ my of which the Ruftans were till that period fo conmpletely ignorant, that there is not in their language an appropriated word for butter, or cheefe, or even for cream.

The Ruflians hoped to be lixewife influcted in agriculture ; but the colonilts were poor and igmurant ; and this part of the project came tu nothing, like the great nationai fchools. Other improvements however took place in favour of commerce; for all barriers were removed, and goods fuffered to pafs through the empire duty-free. The emprefs with great liberality cucouraged the introcuction of arts and manufactures. An acadeny was intituted of fculpture, painting, and architecture, \&c. a magnificent and elegant building was erecied for it, and nany eleves fupported in it at the expence of the crown. Seweral very promifing youths have been educated in that academy ; but as the Ruf. fians are childinly fond of finery, and camot be perfuaded that any thing fine was ever done by their own countrymen, the ftudents are all, on leaving the academy, fuffered to flarve.

The enprefs, whu has a very juft tafte in architecture, has herfelf deligned ferenal buildings equally ufeful and ornamental to her capital (fee Neva ans Petersburgh) ; and while fae has thus diligently cult:vated the aits of peace, the has not neglected thole of ing, and procured a number of Britifh officers to inHtruct her feamen in the feience of naval tactics. By land, her fucceffes agrain't the Turks, the Swerdes, and the l'oles (fee Jukrey, Suedpa, and Posamb!, compel us to believe, that her troups are better dikctplined, and her generals mure isillul, thay any whom the greatefl of her predeceflons could brias into the field; and perhaps it is not too much to lay, that the empire of Ruffit, thousgh the people are but just enocrging from a fate of barbarinn, is at this day the not puwerful in Euroje:

Ruffia is divided into two great paris b:a range of mountains caind Our \({ }^{\prime}\), or the Buth, which, shrough tle whole breadtl of it, form one continual wintennpted barrier, dividing Siberid from the remaining Rulita.That part of Rufia which lies on this Iide of the Oural muuntains prefents a very extentive plain verging weftward by an eafy defeent. The valt exient of this plain has a great variety of cifferent climates, foils, and products. Whe northern part of it is very woody,
marfny, and but little fit for cultivation, and has a fea- Ruraz. f:ble declivity towards the White and the Frozen Scaa. The cother part of this vast plain includes the whole extent along the river Volga as far as the deferts, extendins by the Calpian and the Azov Seas, aad contitutes the finelt part of Rufla, which in general is very rich and fruithul, having more arable and meadow land thas wood, marthes, or barren deferts.

The part lying on the otlier fide of the Oural mountains, known by the name of Siberia, is a flat tract of land of confiderable extent, declining imperceptibly to. uards the Glacial Sca, and equally by imperceptible degrees rifing tuwards the fouth, where at latt it forms a great range of mountains, conftituting the borders of Ruffia on the lide of China. Betwren the rivers Istih, Obe, and the Altay mountains, there is a very extenfive plain, known by the name of Burabin, cuja Stepe. viz. the delerts of Baraba, the northern part of which is excellent for agriculture ; but the fouthern part, on the contrary, is a defert full of fands and mathes, and sery unht for cultivation. ljetween the rivers Obe and Enifey there is more woodland than open ground; and the other fide of the Enifey is entirely covered with impervious woods, as far as the lake Baical ; but th: foil is fruifful everywhere: and wherever the trouble has been taken of clearing it of the wood, and of draining it from unnectflary water, it proves to be wery rich, and it for cultivation; and the cuantry beyond the Laical is furrounded by ridges of higa ftony mountains. Pruceedieg on farther towards the eait, the climate of Siberia becomes by degrees more and more fevere, the fumner grows therter, the winter loger, and the fiuts prove more intenfe.
Witb refpect to the variety of climetes, as well as Variery \(0^{52}\). the produce of the earth, Rullia auiurally may be di.climaiss. vided into three regions or divilions, vis. into the north. ern, midele, and fumhern divitions.

Thefe were abuut 20 years ago fuldivided into dif. ferent guvernments, for the better adminitration of jo: Hice.

The northers dimion, berrining from the 57 th degree of latitude, extends to the end of the Rutian dominions on the north. and includes the goveraments oi St Peterßorsh, Riga, Revel, Vyborg, Pfoor, Novaz rud. T'ver, Olonctz, Archanscl, Vulugda, Yarollavl, Koilroma, Viatka, Perme, and lobullk. The middle divilion is ueckomed fiom the 57 th ta the 5 -th degree of latitude, and includes the foremments of Muscow, Smoknik, l'olothk, Mughilev, 1 chernizov, Nurog arudSevetlioy, Kharkor, fonomez, Kouitk, Orel, Kaluega, Tucla, Riazane, Vladimir, Nicuci-Nurusurud, 'Tambur, Saratov, Y'enza, binbirlk, Liazane, Uula, Kulhivane, and Irkuutif. The futhern divition begins at the seth degree of Jatituse, and extends to the end of Rufis on the fuuth, including the grovermments of Kiev, Ekatherimolav, Caucafus, and the province of Taurids. Tiu th s may be added the Labitatiuns of the Cultacks of the Dun.
'I he northera dis:lion, thoagh deficient in urain, Pro' \({ }^{3}\) fruit, and gatien vegetables, has tha prefercsoce beture f ho no: the voher wo in the abundance of anima!, rare and he'c, midbala ble for their flems; in filhes of pattecular forts, fiv berode. very ufful for different puppoles of lits; in caith, and whe metals of inferiur kinds, sie. The michale divilion of Ruffan bounds in ditteren: kiads of gram, hemp, flax,
catils.
cattle, finh, bees, timber proper for every ufe, different kinds of wild beafts, metals, both of fuperior as well as of inferior kind, different precious ftones, \&c. This divifion is likewife molt convenient for the halyitation of mankind, on account of the temperature and pleafantnefs of the air. The fouth divifion has not that abuudance of grain, but has the preference in different dellcate kinds of fruit, quantity of finh, cattle, and wild animals, amongt which there are feveral fpecies different from thofe which are found in the middle divifion. It exceeds greatly both the other divifions in plants and roots fit for dying and for medical purpoles, as well as for the table ; neither is it deprived of precious ftones, as well as different metals.

The products of thofe three divifions conftitute the permanent and inexhaurtible riches of Ruffia; for, belides what is neceflary for home confumption, there is a great quantity of thofe products exported yearly into foreign countries to the amount of feveral millions of rubles. Thefe productions are brought from different places to fairs, eftablifhed in different parts of Ruffia, where the merchants buy them up, and forward them to different ports, and other trading towns, for exportation into foreign kingdoms. Thefe fairs are likewife the places where a confiderable quantity of goods imported from foreign kingdoms is difpofed of. The
8.

Fxecrnal cummerce rope principal yarmankas, that is, fairs, are the yarmanka Makarievfliaya, Korennaya, and libitikaya.

The external commerce of Ruffia may be divided into two different branches; ift, The commerce with the European nations, which is carried on by buying and felling goods either for ready money or upon credit. 2d, The commerce with the Afiatic nations, which is conducted by barter or exchange of goods.

The principal ports belonging to the firf part of Ruffia are, on the Baltic fea, St Peterburgh, Riga, Vyborg, Revel, Narva, Frederickfham, and the Baltic port; Archangel on the White fea, and Kola on the Northern Ocean ; Taganrog on the \{ea of Azov; Klierfon, Sevaltopole, Balaklava, Soudak, Theodofia, Kerche, and Phanagoria on the Black fea, befides others of fmaller note. In thefe ports commerce is carried on, as well as in feveral trading towns fituated on the frentiers of Poland, Sweden, and Turkey.

The products of Ruflia exported into the different European kingdoms confift chiefly in hemp, flax, different kinds of grain, tallow, hides, fail.cloth, iron, timber, linfeed, butter, hemp-oil, train-oil, wax, potafhes, tar, tobacco, brifles, linens, peltry, and other goods, the greateft part of which is exported chiefly by way of Sc Peterfourgh, Riga, and Archangel ; and in return frons the European kingdoms they receive woollen cluths, difierent kinds of goods made of worled, filk, cotton, and thread; wines and beer, white and moilt fugars, filks, cotton unwrought, and yarn; French brandy, liquurs, aurack, fhrub, different iron tools, and Soys; golld and filver in bars, in foreign money, and in other things ; brilliants, pearls, galanterie goods, coffee, culours 1 peltry, viz. beaver and otter Kkins; herrings, jiock-fifh, falt, tobaceo, different trees, oil, horfes, chis.a and earthen ware, \&cc. The greateft part of thefe goods is imported through the ports of St Peterßurgh and Riga, but a conliderable quantity is likewife admitted by land through different frontier cuftomooules.

The principal goods exported into Afia are partly the products of Ruffia, and partly imported from other European kingdonss, and confift of peltry and hides. The other goods are woollen cloths, bays, borax, bottles, printed linens, iron, and different kinds of ironware, calamancos, kerfeys, glue, ifinglafs, cochineal, indizo, laura, tinfel, gold and filver lace, foap; all kinds of arms, as piftols, guns, fabres; different kinds of li. nens, printed and glazed, friped linen, ticking, pallock, crah, \&c. From the Aliatic kingdoms they import different filk goods, raw filk, cotton, filk-wove ftuff, gold and filver in bars and in coin, cattle, horfes, sce.

The mountains within Ruffia, as well as thofe on its Moundiu frontiers, abound with minerals of various kinds. Gold, \&c. filver, quickfilver, copper, lead, iron-ore, very powerful loaditones, mountain-cryftal, amethyf, topazes of different forts, agatez, cornelian, beryl, chalcedony, ony \(x\), porphyry, antimuly, pyrites, aquamarines, chryfolites, ophites, and lapis lazuli, are found in then, befides marble, granite, trappe, maria or Mufcovy glafs, of remarkable fize and clearnefs, bafaltes, and coal, sec.; and in every part of Siberia, but particularly in the plains of it, are found benes of animals uncommonly large, mammoth's tecth (fee Mammort), and other foffils.

In the Ruffian empire are many lakes of very large Lakes. extent. I. The Laduga, anciently called Nevo, is the largett lake in Europe, extending in length 175 and in breadth 105 verfts; or it is 116 Englifh miles long and near 70 broad. It lies between the governments of \(S t\) Yeterfburgh, Olonetz, and Vyborg ; and communicates with the Baltic fea by the river Neva, with the Onegz lake by the river Svir, and with the IImen lake by the river Volkov. Several confiderable rivers fall into it, as the Panha, Sias, Oyat, and others. The Ladoga canal is made near this lake. 2. The Onega lake is fituated in the government of Olonctz. It it above 200 verfts long, and the greatelt width of it does not exceed 80 verts. 3. The Thchude lake, or Peipus, lies between the governments of St Ptterßurgh, Pfcov, Revel, and Riga. It is near 80 verfts long and 60 broad. It joins to the lake of Pfoov by a large neck of water. The length of this lake is 50 and the width about to verts. The river Velikaya flows into it. The river Narova comes out of the lake Peipus, which by the river Embakha communicates with the lake Wirtz-Erve, and from this latter flows the river Fellin, and runs into the bay of Riga. 4. The Ilmen lake, anciently called Moik, lies in the government of Novogorud. Its length is 40 and width 30 verlts. The rivers Mfta, Lovate, Shelone, and others, fall into it ; and only one river, Volkov, runs out of it, by which it is joined with the Laduga lake. 5. The Bielo-Ozero, that is, tinc White Lake, hies in the government of Novogorod. It extends 50 verts in length, and about 30 in width. There are many fmail rivers which run into it; but only one river, Shek fna, comes out of it, and falls into the river Volga. 6. The Altin, or Altay Jake, utherwife called the Telofk Lake, is fituated in the government of Kolhivane. It extends in Ength 126 and in width about \(8+\) verfts. The river Biya comes out of it, which being joined to the river Katounya, conflitute the river Obè. 7. The Baical Lake, otherwife cailed the Baical Sea, and the Hcly Sea, lies in the government of Irkout \(k_{k}\). Its extent in length is 600 , and in width from

\section*{\(R\) U S [500] \(\quad R \quad U \quad S\)}
i3. 30 to 50 verfts, and in the widef pinces as far as yovertts. 8. The Tchani Lake lies in the deferts of Earaba, between the rivers Obè and lrtih. It joins with a great many fmaller lakes, oecupies a vaft tract of land, and abounds wery much in fifh. 9. Between the Gulf of Finland and the White Sea there are feveral lakes which extend from 50 to 70 verts in length; and befides thefe there are many other falt lukes in different parts of Rulfia, fuch as the Ozero, that is, the hake Eltomfooyc, Bogdo, Inderfioye, Eleele, Koryakorfoye, Yanifievlioye, Borovye, and others; and the falt which is grot from them ferves for the ufe of the greatelt part of the empire. To thefe may be added the Cafpian, which, though called a fea, is more properly a lake, as it has no communication with the ocean either vifible or fubterraneous. See Casphan-Sea, and Peveviatics, \(n^{\circ} 277\).
Ruflia boaft likewife of a confiderable number of large and famous rivers. Of the Dvina or Dwina, the Ne. ra, Dnieper or Nieper, the Don, the Volga, the Irtic, the Onega, the Oby, and the Lena, the reader of this work will find fome account under their refpective names; but in this valt empire there are many other rivers worthy of notice, tho' not perhaps of fuch minute defcription. Among thefe the Boug, or, as it is fometimes written, Bog, rifes in Poland ; then directing its courfe to the fouth-eaf, it divides the government of Ecatherinollav from the deferts of Otchakor, now belonging to Ruffia, and falls into the Liman, which communicates with the Black fea.

The Kubane conifits of many springs or rivulets running out of the Cancalian mountains, and divides itfelf into two branches, the one of which falls inter the Azov Sea, and the other into the Black fea. This river, from its fource to the end of it, conflitutes the frontier of Ruffia.
The Oural, formerly Yaik, takes its rife in the Onral mountains, in the government of Oufa, which it divides from that of Caucafus, and extends its courfe about 3000 vertts. It receives many rivers, the principal of which are the Or, Sakmara, Yleck, and Terkool. The Kouma rifes in the Caucafian mountains, and runs through the plains between Terek and Volga, and at laft lofes itfelf in the fands, hefore it comes to the Cafpian fea. The Terek originates in the Caucafian mountains, runs between them, and then coming out, extends its courfe to the Cafpian Sea, and receives feveral rivers, as the Malka, Soonja, Bakfan, and Ackfaj.

The Bolhaya Petchora, that is, the great Petchora, rifes in the Oural mounteins, in the gevernment of Vologda, runs acrofs the whole breadth of the government of Archangel, and falls into the ley fea. It receives in its courfe feveral rivers, the principal of which are the Outcha and the Elma. The Eniffey is formed by the junction of two rivers, the Qulookema and the Baykema, which rife in the Altay mountains in Mungalia. It runs through the whole extent of Siberia, and falls into the Icy Siea. The extent of the Enifley is about 2500 verfts. It receives in its courfe feveral nivers, the prineipal of which are the Abakan, Elogooy; Podkamernaya T'ungoufka, Niznyaya Tungoufka, and "'ourookhan. The Yana, the Indighirka, and the KolFima, are likewife no inconlideable rixers in the government of Irkonthk. The firt rifes in the mountains

Foz. XTI. Part II.
which overfudow the banks of the river iacaa on the right hand, and extends its courfe 800 verts. The two

RuTin. latt take their fources in the mountains which extend on the cuafts of the Eallern fea. The leagtis of the Indishirka is 1200 and that of Kolhima 1500 vertts. The la!t, near iss mouth, is civided inso two brarches, and receives the rivers Omolon and Orooy. The Anadir is the caftermront of all the rivers in Siberia. It rifes out of the lake Ioanko, in the diftrict of Oshotik, and runs through the eaftern part of it, and then falls into the Eattern ocean. 'The Amour is formed by the jurction of two confiderable rivers, the Shilka ard Argoonya, which are joined jut by the frontiers of China. Is runs through the Chintefe dominions, and at latt falls into the Eaftern ocean. The Kamt C Ratka runs through the peninfula of the fame name, extending its courfe from the Verkhney to Nizney Otrog, that is, from the upper to the lower fort, and fails into the Eafter. ocean. The Penjina nifes in the Yablonnoy ridge of mountains, and falls into the Penjinkaya Gooba, that is, the gulf or the fea of Penjina.

In fuch a valt extent of country, ftretehing from the sese 90 temperate fo far into the frigid zone, the climatethe wes. mult vary conliderably in difierent places. In the ther. fouthern parts of the Ruffian empire, the longeft day does not exceed fifteen hours and a half; wheress in the moit northern, the fun in fummer is feen two months above the horizon. The country in general, though lying under different climates, is exceffively cold in the winter. Towards the north, the country is covered near three quarters of the year with fnow and ice; and by the feverity of the cold many unfortunate perfons are maimed, or perifin. This fort of weather commonly fets in about the latter end of Auguit, and continues till the month of May; in whieh interval the rivers are frozen to the depih of four or five feet. Water thrown up into the air will fall down ia icicles; birds are frozen in their flight, and travellers in their nedyes. In fome provinces the heats of fummer are as fcorching as the winter celds are rigorous.

The foil of Mufeovy varies ftill more than the cii-s.iis, 9 , mate, according to the influence of the fun and the lituztion of the country. In the warmer provinees, the procefs of vegetation is fo rapid, that comis commotivy reaped in two months after it begins to apocar above the furface of the ground. Fience the great variety of mufhroons produced-\{pontaneoun! in Ruffia, which may be confidered as a comfortal!e relici to the roc-: while they appear as delicacies at the tables of the rich. Above 1000 wagron-loads of them ufed to be fiuld arimually in Mofcow. Perhaps it is on account of the farcity of provifions that fuch a number cef falts are inftituted in the Mufcovite relig:on.

Dinde, the productions already meationed as pecehar And vere. to each of the tliree great ratural disions of the em- \({ }^{+3 b l e ~} 8\) roo fire, MIufcovy vidds thubarb, flax, l.mp, pature for tultions. cattle, was, and honey. Among otict terctables, we find in Rufia a particular kind of rice called t/yntho, plenty of excellent meions. and in the reiphbarhood nt Athrean the famons zouplytum, or animal plarit, whiclb the Mufcovies call bonnares, or lambsim, from its icCemblanee to a lumb. \section*{\(R \quad \mathrm{~S}\)}

Ruffia honcy, by which the peufant is often enriched. He cuts down a great number of trece in the forelt, and fawing the trunks into a number of parts, bores each of thefe, and ftops up the hollow at both ends, leaving only a little hole for the admittance of the bees; thus the honcy is fecured from all the attempts of the bear, who is extremely fond of it, and trics many different experiments for making himfelf mafter of the lufcious treafure.Of this honey the Rufians make a great quantity of ftrong metheglin for their ordinary drink. 'They like. wife extract from rye a finit, which they prefer to brandy.

The wild beafts in the northern part of Ruffia are the fane with thefe we have mentioned in the articles of Norway and Lapland: fuch as rein-deer, bears, foxes, ermins, martens, fables, hares, and fquirrels In the more fouthern provinces the Mufcovites breed black cattle, fmall but hardy horles, fheep, goats, and camels. The brecd of cattle and borfes has been enlaresed by the care and under the protection of Peter aud fucceeding fovereigns. The whole empire abounds with wild-fowl and game of all forts, and a variety of birds of prey; befides the different kinds of poultry, which are raifed in this as well as in otber countries. The external parts and provinces of Mufcovy are well fupplied with fea-fith from the Nothern ocean, the Baltic, or gulph of Finland, the White fea, the Black fea, and the Cafpian ; bu: the whole empire is plentifully provided with frelh-water fifh from the numerous lakes and rivers, yielding immenfe quantities of falmon, trout, pike, furgeon, and belluga: the laft heing a large fifh, of whofe roe the beft caviare is mads. Innumerable infects, Like thofe of Lapland, are hatched by the fummer's heat in the fand, moraffes, and forefts, with which this em: pire ahounds; and are fo teoublefome as to render great part of the country altogether minhabitable.
Enhabitants. The Ruffian empire is inlabited by no lefs than 16 different nations, of which our limits will hardly permit us to give the names. The firft are the Sclavonic nations, comprehendiag the Ruffians, who are the predominant inhabitants of the whole empire, and the Poles, who belides occupying the countries lately wrelted from the republic, lise in the govemments of Polatk and Moghilev, as well as in the diftrict of Salenghinfle and along the river Irtifh. 2. The Germanic nations, comprehending the Germana properly focalled, who inbabit Ethonia and Livouia; the Swedes iuhabiting the Rufian Finland, as well as fome of the illands on the Hatic fea; and the Danes, who iuhabit the inands of the Baltic fea, the Worms, and Grois or Creat Rore. 3. The I ettonian or Livonian mations, under which are claffed the original or real Lettonians or Letifhi, inhabiting Livonia; and the Lithuanians, who live in the government of Polatfi and Moghilev. 4. The Fiuns, or Tchudi, nations who inhabit the governments of Viberg and St Peterfargh, with many other diflices of the empire, being branched out into no fewer than 12 different trihes. 5. The T'artarian nations, who are all either Mahometans or idulaters. The Mahorgetan Tartars, commonly called by the Ruffians Tartare, dwell in Kazane, and the places adjacent; at Kelimor; at Oure, in the government of Pama; at 'Tomls and its neighbourhood, and are in general a fober, indultrisus, cleanly, and generous prople. The other Tartars
inhabit different parts of Sibcria, and are intermixed with itill different races, called aftenthe towns, rivers, and other places to which their habitations are nearef. They are, as we have faid, idolaters, and governed by Thamens. (Sec Shamen.) lBefides thefe, there are in the Ruflian elominjons the Nagay 'T'artars; the CrimTantars, inhabiting the Crinea, who, together witl the land belonging to them, came under the fubjection of Ruffa in 1783 ; the Mcfcheraki; the Bafhkirs; the Kirghittzi or Kirghis-kaiaks ; the Yakouti ; and the white Kalmuks. 6. The Caucaban nations, which are fix in number, and are each fubdivided into nany different tribes, of which it is probable that few of our readers lave ever heard the names, except of the Circaffians, who live in different fettlements bordering on the river Kubane. 7. The Samoyeds or Samocds, compreliending the Oftiacks*. Thefe inhabit the northernmolt part of Ruffia, along the coaft of the Icy fear - acks Oit 8. The Mungalian nations, comprehending the original Mungrals, who are chiefly difperfed in the deferts of Gobey; the Bourati, who live on the banes of the Baikal, and other places in the government of Irkoutk; and the Kalmuks, confiting of fodr different tribes. All thefe hordes fpeak the Mungalian language, obferve the religion of Lama and the Kalmuks live in large tents. 9. The Tongoufi, a very populous tribe, difperfed from the river Eniffey as far as the fea of Okhotfls, and from the Penjinkaya Gooba beyond the Chinefe frontier. They are all idolaters, and live by hunting and fifhing. 10. The Kamtchadels. 11. The Koriaki. 12. The Kouriltai. Of thefe three nations we have given fome account upder the article Kamt. schatka. 13. The Alcouti, who dwell in the iflands between Siberia and America, and very much refenble the Eiquinaux and the inhabitants of Greenland. They live in large huts, and feen to be idolaters.14. 'The Arintzi, a very numerous people fcattered in the goverument of Kolhivane. 15. The Yukaghiri, who are difperfect on the coalts of the Glacial fea, about the rivers Yana, Kolhima, and Lena, and as far as the fource of the Anadir. 16. The Tchouktchi, who occupy the north-caftern part of Siberia, between the rivers Kollima and Anadir. Befides thefe fisteen differeut nations, there are feattcred through the Ruffaty empire vaft numbers of Buckharion Tartars, Perfians, Gcorgians, Indians, Grecks, Servians, Albanians, Bulgarians, Moldavians, Valekians, Armenians, and Jrus.

The empire of Ruffia is fo widely extended, that notwithftanding the number of nations which it comprchends, it mult be conlidergd as by no means pienlous. At the laft revifion it was found to contain \(2 G\). millions of fouls; but it is to be obferved, that the nobbility, elergy, land as well as fea forces, different off. cers, fervants belonging to the court, perfons employed. under govermment in civil and other offices; the ftu. dents of different univerlitics, academies, feminaries and other fchools ; hofpitals of different denominations : likewife all the irregular troops, the roving hordes of different tribes, foreigners and colonits, or fettlers of difierent nations-are not included in the above-mention: ed number: but with the addition of all the fe, the population of Ruffia, of both fexes, may bẹ fuppofed to. come near to 28 millions.

\section*{\(R\) U S} Atigmatifed by their neighbours as ignorant and brutal, totally religned to floth, and addicted to dumkennefs, even in the moft beaftly excels; nay, they are accufed of beins arbitrary, perlidious, inhuman, and deftitute of every focial vitue. There is not a phrafe in their language analogous to ours, " the manners or the fentiments of a gentleman;" nor does gentleman with them exprefs any thing moral. Indeed they have no fuch diftinction. Cumning is profeff:d and gloried in by all; and the nobleman whom you detect telling a lie is vexed, but not in the leaft afhamed. In the whole regle: ment of the marine by Puter the Great, there is not one word addreffed to the honour, or even to the probity, of his offeers. Hopes of reward, and the conftant fear of detection and punifhment, are the oniy motives touched on. In every thip of war, and in every regiment, there is a fifcal or authorized fpy; a man of refpectable rank, whofe letters muft not be opened but at the riflc of the great knout (fee linout) ; and he is required by exprefs ftatute to give monthly reports of the behaviour of the offiecrs and privates.

Such regulations we eanrot think well adapted to improve the morals of the people; yet we believe they have been improved by the care, affiduity, and example of fome of their late fovereigns. Certain it is, the viee of drunkennefs was fo univerfally prevalent among them, that Peter I. was obliged to reftrain it by very fevere ediats, which, however, have not prodinced much effect. They numbered in the city of Mofeow no feiver than 4000 brandy-fhops, in which the inhabitants ufed to fot away their time in drinking itrong liquors and fmoking tobacco. This lat practice became fo dangerous, among perfons in the moft beally flate of intoxication, that a very fevere law was found . nceeflary to prevent the pernicions confequences, otherwife the whole city might have been confumed by conflagrations. The nobility were heretofore very powerful, each commanding a great number of vaffals, whon they ruled with the moft defpotic and barbarous authority: Lut their poffeffions have been gradually circumfcribed, and their power transterred in a great meafure 93 to the czar, on whom they are now wholly dependent. inelions At prefent there is no other degree of the nobility but
that of the hoyars: thefe are admitted to the council, and from among thein the waivodes, governors, and other great officers, are nominated, and their ranks with refpect to each other are regillated by the importance of their refyective offices.

Alexis, who introduced this order of precedency, abhorred the perfonal abafement of the inferior claffes to their fuperiors, which he would not accept of when exhibited to hinfelf; and it may appear furprifing that Peter, who defpifed mere ceremonials, hould have encouraged every extravagance of this kind. In a few years of his reign, the beautiful fimplicity of defignation and addrefs which his father had encouraged was forgotten, and the cumberfome and alnoft inefable tilles which difgrace the little courts of Germany were crowded into the language of Ruffia. He enjoined the loweft order of gentlensen to be addreffed by the phrafe, gour reffelabic birth; the next rank, by your ligh good

57 I \(\quad\) R U S
birth; the third, your excelicace; the fourth, your Rufas. bigh excellence; then came gour brilliancy and bizh -r-rlrilliancy. Itigluefs and majely were referved for the great duke and the czar.

Thefe titles and mades of addrefs were ordered with all the regularity of the manual exercife; and the man who fhould omit any of them when fpeaking to his fuperior might be lawfully beaton by the offended boyar. Before this period, it was polite and courtly to fpeak to every man, even the heir apparent, by addiag his father's name to his own; and to the great duke, Paul Pctrontz was perfectly refpectiul, or a fingle word lignifying dear father; when he was not named. '1 ho' pompons titles were unknown anong them before the era of l'eter, the fubordination of ranks was more complete than in any other European nation; but with this limplicity peculiar to them and the Poles, that they had but three ranks, the fovereign, the nobleffe or genery, and the ferfs. It was not till very lately that the mercantile rank formed any diftinction ; and that diflinction is no more than the freedom of the perfon, which was formerly a transferable commodity belonging to the boyar. Notwithllanding this fimplicity, which put all gentemen on a level, the fubifription of a perfion holding an infurior office was not fervant, but ßive; and the legal word for a petition in form was schelbbitii, which fignifies, "a beating with the forelieal,"" i.e. Ilriking the ground with the forehead; which was actually done. The father of Alexis abolifned the practice; but at this day, when a Ruffian petitions you, he touches his forehead with his finger; and if he be very earneft, he then puts his finger to the ground.
The Ruflian nobles formerly wose lung beards, and long robes with Arait fleeves dangling down to their ancles: their collars and flirts were generally wrought with filk of different colours: in licu of hats, they covered their heads with furred caps; and, inttead of fhoes, wore red or yellow leathern bufkins. The drefs of the women nearly refembled that of the other fex; with this difierence, that their garments were more loofe, their caps fantaftical, and their fhift-flecees thice or four ells in length, gathered up in folds from the floulder to the fore-arm. By this time, however, the French faftions prevail among the better fort throushout all Mufcory.
The common people are generally tall, healthy, and vancers robult, patient of cold and hunger, inured to hard-an! culf hips, and remarkably capable of bearing the moll fud-tozns. den tranfition from the extremes o! hot or cold weather. Nothing is more cuftomary than to fee a Ruffian, who is over-heated and fweating at every po-e, Grip himfelf naked, and plenge into a ziver: nay, wl.zn their pores are all opened in the hot bath. to which they have daily recourfe, they either practife this inmerfion, or futbeet themfelves to a difelarge of fome pailfuls of cold water. This is the cuficm of both men and women, who enter the baths pronifcuovify, and appear naked to each other, without leruplc or hefitation.
A Rufian will fubfitt for many days upon a little oatmeal and water, and cren raw rcots: an onion is a regale; but the food they gemerally ufe in their journeys is a kind of reebread, cut into fmall fquare picces, and dried again in the oven: thefe, when they are hungry, they foak in water, and eat as a very come\(+{ }_{4} 2\)
fortable

\section*{R U S [ 572 ] R U S}

Rullia fortable repalt. Both lexes are remarkably healthy and robult, and accuitom themfelves to fleep every day after dinner.

The Ruffian women are remarkably fair, comely, ftrong, and well-fhaped, obedient to their lordly huf. bands, and patient under difeipline : they are even faid to be fond of correction, which they confider as an infallible mark of their hußand's conjugal affection; and they pout and pine if it be with-held, as if they thought themfelves treated with contempt and difregard. Of this nenlect, however, they have very little caufe to complain; the Ruffan hufband being very well difpofod, by nature and inebriation, to cxert his arbitrary power. Some writers cbferve, that, on the weddingday, the bride preferts the bridegroom with a whip of
her own making, in token of fubmiffion; and this he fails not to employ as the inftrument of his authority. Very little ceremony is here ufed in match-making, which is the work of the parents. lerhaps the bridegroom uever fees the woman till he is joined to her for life. The marriage being propoled and agrecd to, the lady is examined, tark naked, by a certain number of lier female relations; and if they find any bodily defect, they endeavour to cure it by their own Mill and expe. rience. The bride, on her wedding-day, is crowned with a garland of wormwood, implying the bitternefs that often attends the married fate. When the prict has tied the nuptial knot at the altar, his clerk or fexton throws upon her head a handful of hops, wifning that fhe may prove as fruit ful as the plant thus fcattered. She is muffled up, and led home by a certain number of old women, the parith-prieft carrying the crofs before; while one of his fubalterns, in a rough goat-Asin, prays all the way that the may bear as many children as there are hairs on his garment. The new-married couple, being feated at tablc, are prefented with bread and falt; and a chorus of boys and girls fing the \(\epsilon\) pithalamium, which is always grofsly obfcene. This cercmony being performed, the bride and bridegroom are concucted to their own chamber hy an old woman, who exhorts the wife to obey her hufband, and retires. Then the bridegroom defires the lady to pull off one of his bufkius, giving her to underftand, that in one of them is contained a whip, and in the other a jewel or a purfe of money. She takes her choice; and if the dinds the purfe, interprets it into a good omen ; whereas Bould the light on the whip, fhe conftrues it into an unheppy prelage, and inftantly receives a bim as a fecimen of what the bas to expect. After they have remained two hours together, they are interrupted by a deputation of old women, who come to fearch for the figns of her virginity : if thefe are apparent, the young lady ties up her hair, which bcfore confummation hung loofe over her fhoulders, and vifits her mother, of whom the demards the marriage portion. It is generally agreed, that the Mufeovite hufbands are barbarous even to a proverb; they not only adminifter frequent and fevere corredion to their wives, but fometimes even torture them to death, without being fubitet to any punifhment for the murder.

The canon law of Mufcosy forbids the conjugal commerce on Mondays, Wednefdays, and Fridays; and whoever tranfgreffes this law, muft bathe himfelf before te enters the church-poich. He that marries a fecond
wife, the firl being alive, is not admitted farther than the church-door; and if any man efpoufes a third, he is excommunicated: fo that though bigany is tolerated, they nevesthelefs count it infanous. If a woman is barren, the lufband gencrally perfuades her to retire into a convent : if fair means will not fucceed, he is at liberty to whip her into condefceufion. When the czar, or emperor, has an inclination for a wife, the moit beautiful maidens of the empire are prefented to him for his choice.

The education of the czarovitz, or prince royal, is intrufted to the care of a few perfons, by whom he is Atrictly kept from the eyes of the vulgar, until le hath attained the 15 th year of his age: then he is publicly expofed in the market-place, that the people, by viewing him attentively, may remember his perfon, in order to alecrtain his identity; for they have inore than once been deceived ty impollors.

Such is the flavery in which the Mufcovites of both Alithority fexes are kept by their parents, their patrons, and the of parents emperor, that they are not allowed to difpute any cher thoir matel that may be provided for them by thefe direetors, however difagrecable or odious it may be. Otficers of the greatell rank in the army, both natives and foreigners, have been faddled with wives by the fovercien in this arbitraty manner. A great general fome time ngo deceafed, who was a native of Britain, laving been preffed by the late czarina to wed one of her ladies, faved himfelf from a very difagreeable marriafe, by pretending his conftitution was fo unfound, that the lady would be irreparably injured by lis conspliance.

In Ruffia, the authonity of parents over their children is almoll as great as it was among the ancient Romans, and is often exercifed with equal fevenity. Should a fatlier, in puniming his fon for a fault, be the immediate caufe of his death, he conid not be caller? to account for his conduct ; he would have done nothing but whit the law authorized himto do. Nor does this legral tyranny ceafe with the minority of children; it continues while they remain in their father's family, and is often exerted in the molt indecent manner. It is not uncommor, even in St Peterfourgh, to fee a lady of the highent rank, and in al! the pomp and pride of youthful beau\(t y\), flanding in the court-yard with her back bare, ex pofed to the whip of her father's fervants. And fo little difgrace is attached to this punimment, that the fame lady will fit down at table with her father and his guefts inmediately after the has fuffered her flogging, provided its leverity has not confined her to bed.

The Mufcovites are fond of the bagpipe, and have a kind of viclin, with a large belly like tbat of a lute: but their mulic is very barbarous and defective. Neverthelefs, there are public Schools, in which the chil. dien are regularly taught to fing. The very beggars ahk alms in a whining cadence, and ridiculous fort of recitative A Ruffian ambaffador at the Harue, having been regaled with the beft concert of vocal and inflrumental mufic that could be procured, was afked how he liked the entertainment? he replied, "Perfectly well: the beggars in my country fing jut in the fame manncr." The warlike mufie of the Ruflians confifts in kettle-drums and trumpcts: they likewife ufe hunting horns; tut they are not at all expert in the per-
formance.

\section*{\(R \quad U \quad S\)}
formance. It has been faid, that the Ruffians think it bencath the:n to dance, and that they eall in their Polifh or Tartarian Gaves to divert them with this exer. eile in thei hours of diflipation. Sucls nay have been the cafe formetly, or may be fo now, in the diftant and moll batbarous provinces of the cmpire; but at \(\mathrm{St} \mathrm{Pe}-\) turburgh danciag is at prefent much relihed, and a minuet is nowhere fo gracefully performed in Europe as by the fanionable peeple in that metropolis.

We have dfewhere obferved, that the Rufian larguage is a dialcet of the sclavonic, and the pureft per. haps that is now anywhere to be fuand (fee PriluloGy, Sect. ix. f 3.); but they have nothires ancient written in it, except a traulatio: of Chryfofom's Of. fices for Ealter, which are at this day good Rullan, and intelligible to exty boor, though certainly ret lefs than 800 years old. There is 2.3 Ruilan poetry which there is reafon to bulieve 202 years old ; and the oldeft tranfation of the Scriptures into that la:!grage is but a late thing, and come to them from Kouing fo berg. Seience lias made bit a very fmall procreefs among them; and the repatation of the imperial academy at St Peterfourgh has been hitherio furported by the exertions of foreigners. For antiquarian refearch they have as little relifh as for fientinc invelligation. Every thing, to pleale, mult be new ; and the only. checidations which we have of their antiquitics are the performances of Germans and other foreigners, fuch as profefors Bayer, Muller, and Gmelin. One native has indeed thuwn fome delire to recover and preferie what lee can of their mont ancient puetry; but in his refearch es, he feems more indebted tu an exquifitely nice ear than to any erudition. Eiradition indeed they hold in the moft fovereiga cuntempt. No genteman is ever taught Latin or Greek; and were a Ruffian ftranger in company to give any hint of his polfeffing fuch knowledge, every man with a fwo:d would draw away his eltair, and fit him down for a charity-boy. Peter the Great and the prefent emprefs have done what fovereigns cuuld do to difpel thefe clouds of ignorance, by inflituting fehools and colleges, and giving the raafters and profefors military rank; but all in vain. One of the molt accomplifed fcholars of the age, after having made himfelf extremely agrecable to a company of ladict, by means of his tafte in mufic, and a fword at his fide, was inftantly deferted by them upon foree perSon's whipering through the room that he was a man of learring ; and before his fair companions. would be reconeiled to him, he was obliged to pretend that he was a lientenant colonel, totally illiterate.

The two firlt fentences ol Prices shitherbatof's dedieation of his Hiftory of Rufia, which was printed in three volumes 4 to, in 177 C , afford an achmirable fpecimen of Ruffian lierature. "The hitory of the human underfanding (fars this dedicater) aflures us, that everywhere the feiences have followed the progrefs of the prefperity and the ftrength of kingdoms. When the Grecian arms had overthrown the greateit menarchy then in the world, when they had the famous gene1alo Miltiades, 'Ihemitecles, Arittides, Conen, and Al. cibiades, at the fame time fourified among them Anaximander, Anaxagoras, Archytas, Socrates, and Plato. And when Augultus had conquered the world, and had Thut thegates of the temple of Janus, and the proud Romans, under his happy govenment, cheerfully obeyed his con.
mands, then did Titus Livius, Thucydides, Virril, and Foria. Horace, adorn his court, and celebrate his glory:" - a paftage fo replete as this with blunders and anachronifrs it would fureiy be difficule to find in any other author.

The Ruffans were converted to the Chriftian whi. Religiono gion towards the latter end of the tenth century; as has been already related. Sirce that period they have conftfed th:e articles of the Greek church, minghed with certain fuperfitious etromonics of their own. They do rot believe in the popees infallibility or fupremacy, or even hold comnunios with the fee of Rume : they ufe arricular confefion, communiea:c in both kinde, acopte the Athanafiar. creed, and adhere to the etrabli hed lisurgy of St Eafil. 'Tlicy wornin the Virgin Mary, and cther baints ; and pay thei: adorations to cronf: and relics. 'They obforve four great fa?ts irs the year, curing which they neither talte fifh, fieth, nor any animal production : they will not drink afte: a man who has eatea felh, nor ufe a kniie that las cut micat in kfs than \(2 \div\) huurs after it has been ufed; nor will they, even though their health is at take, touch any trirg in whieh hotetfiurn or any animal foblatice has bectu infural. While this kind of Lent conimes, thy fub. fit upon cabbage, curuabers, and rye-bread, drinkiag nothine ftronger than a fort uf forall beer called qualf \(t\). They likewife falt every Wedneflay and Fri. day. Their common peance is to abilain from every fpecies of food and driak, but bread, falt, curumbers, and water. They are ordered to bend their budies, and continue in that paiaful penure, asd between whiles to frike their head amaint an image.

The Mufcuvites at all times reject as impure, horiflefh, clk, veal, hare, rabisit, \(\int_{s}\) 's milk, mare's milk, anj Venice-treacle, beeaufe the 淔俭 of wipers is an ingredient; alfo every thing that contains even the fmalle? quantity of mufk, civt, and caftor: yet they have no averfion to fwine's flcti; on the contrary, the country produces excellent bacon. 'lhey etcbrate 15 gran 1 leftivals in the year. On Paln-funday there is a nagriticent proceffion, at which the ezar affilts in perfon and on foot. He is apparelled in eloth of grold; his train is borne up by the prime of the nobility, and he is attended by lis whole cuurt. He is imnenediateiy preceded by the officers of his houfchold, oae of whem carries his bandkerchief on his arm, lying upon another of the richeft embroidery. He halis at a fort of flatform of fiee-ftone, where, turning to the eait, and bending his body alnoft double, he promounces a thort prayer : then he proceeds to the church of Jerufalem, where he renews lus oevotion. This exercife being performed, he retums to his palace, the bridle of the patriarch's horfe refting unon his arm. 'The horfe's head being covered with white liner, is held by fon:nobleman; while the patriarch, fitting folewife, and holding a crofs in li:s land, dillributes benedictions as he noves along: on his head he wears a cap edged with crmin, adorned with lones and buttons of gold and precious fenes: before him are diplayed Lanners us confecrated ftuf, in a varicity of colours. dibove 500 pricks walk in the proceften; thele who are near the patriarch bearing pictures of the Virgin Man, richly ornamented with gold, jewels, and pearls, torycther with croftes, whics, and religious bouks, inchuding a copy of the Gurpels, which they reckon to be ot iro ctimab's

鳃いた。 1－aール enimable value．In the midn of this proceflion is borne a triumphal arch；and on the top an apple．tree covered with fruit，which feveral litcle boys inclofed in the rnachine endeavour to gather．The lawyers and laity carry branclees of willow；the guards and the fpec－ tators proftrate themfelves on the gromed while the proccfico halts；and after the ceremony，the patriarch prefents a purfe of 100 rubles to the czar，who per－ haps invites him to dine at his table．During the fea－ fon of Eafter，the whole empire is filled with mirth and rejoicing：which，however，never fails to degenerate into lieat and debauchery；even the ladies may indulge themfelves with frong liquors to intoxication withorr fcandal．When a lady feuds to inquire concerning the health of her gueft whom fhe entertained over－night， the ufual reply is，＂I thank your miftrcfs for her grood cheer ：by my troth，I was fo merry that I don＇t remember how I got home．＂

During thefe carnivals，a great number of people，in reeling home drunk，fall down and perifh among the finow：It is even dangerous to relieve a perfon thus uvertakch；for，fhould lie die，the perfon who endea－ voured to affirt hin is called before the judge，and ge－ nerally pays dear for his charity．

The Mufcovite priefts ufe exorcifms at the admini－ Aration of baptifm．They plunge the child three times over head and ears in water，and give it the facrament of the Lord＇s Supper in one fpecies，until it lath attained the age of feven；after which the child is indulged with it in buth kinds．They likewife adminiller the facrament to dying perfons，tog ther with extreme unction；and if this be neglected，the body is denied Chriftian bu－ rial．Soon as the perfon expires，the body is depofi－ ted in a coffin，with a lunchion of bread，a pair of fhoes， iome few pieces of money，and a certificate fignicd by the parifh－prieft，and dirceted to St Nicholas，who is one of their great patrons．They likewife hold St Andrew in great veneration，and ridiculonfly pretend they were converted by him to Chriflianity．But next to St Nicholas，they adore St Anthony of Padua，who is fuppofed to have failed upon a mill－fone through the Mediterranean and Atlantic，and over the lakes Ladoga and Onega，as far as Novogorod．Every houfc is furnifhed with an image of St Nicholas，carved in the moft rude and fantaftic manner；and when it becomes old and worm－eaten，the owner either throws it into the river with a few pieces of coin，faying，＂Adien， brother；＂or returns it to the maker，who accommo－ dates him with a new image for a proper confideration． The good women are very careful in adorning their private St Nicholafes with rich clothes and jewels ；but on any emergency，thefe are refumed，and the faint left as naked as he came from the hand of the car－ penter．

There are monafteries in Ruffia；but neither the monks nor the nuns are fubject to fevere reftrictions． ＇The friars are either horfe．jockeys，or trade in hops， wheat，and other commodities ；the fifters are at liberty to go abroad when they pleafe，and indulge themfelves in all manner of freedons．

Heretofore liberty of confcience was denied，and every convicted heretic was committed to the flames； but fince the reign of Peter，all religions and fects are tolerated throughout the empire．Roman Catholics， Lutherans，Calvinifts，Armenians，Jews，and Maho－ zaetans，enjoy the free exercifc of their refpective forms
of worfhip；though it was not without great difficuity， and by dint of extraordinary folicitation from different powers，that the Ronifh religion was allowed．Peter knowing the dangerous tencts of a religion that might fet the Cpiritual power of the pope at variance with the temporal power of the emperor，and being well ac－ quainted with the meddling genius of its profeflors， held out for fome time againft the interceffion of Ger－ many，France，and Poland；and though at length he yielded to their joint interpofition，he would by no means fuffer any Jefuit to enter his dominions．

The government of Ruffia is mere defpotifm．The \(\mathrm{g}_{\mathrm{v}}^{\mathrm{v}} \mathrm{v}\) m whole empire is ruled by the arbitrary will and plea－mens． fure of the fovereign，who is fyled the caar or tzar，a title which is probably a corruption of Cxfar．Here－ tofore he was ttyled grand dule of Mufcovy：but fince the reign of Petcr，he is digniñed with the appellation of emperor of Rulfa；and the prefent fovereign is tyled emprefs of all the Rufius．The emperor is abfolute lord，not only of all the eflates in the empire，but alfo of the lives of his fubjects：the greatef noblemen call themfelves his flaves，and execute his commands with the moit implicit obedience．The common people revere him as fomething fupernatural ；they never men－ tion his name，or any thing immediately belonging to him，without marks of the mott profound refpect and awful veneration．A man afking a carpenter at work upon one of the czar＇s warelioufes，what the place was intended for ？anfwered，＂None but God and the czar knows．＂

The nobility of Ruffia were formerly rich and power－ ful，and ruled defpotically over their infcriors：but we have feen how the father of Peter the Great contrived to Arip them of their privileges，and they are now ve－ nal dependants on the court．They ftill retain the titles of their anceftors，though many of them are in the molt abject poverty and contempt．
All the peafants in the empire are confidered as im－ mediate flaves belonging to the czar，to the boyars，or to the monafteries．The value of eftates is computed； not by the extent or quality of the land，but from the number of thofe peafants，who may be fold，alienated， or given away，at the pleafure of their mafters．The number of thefe hufbandmen，whether living in villages or in the open country，being known，the cear，by re－ quiring a certain proportion of each lord or proprietor， can raife 300,000 men in lefs than 40 days．

The adminiftration is managed by a grand council， called dumncy loyiren，or＂council of the boyars，＂ who are the grandees of the empire，and act as privy counfellon＇s．To this are fubfervicnt fix inferior clam－ bers and courts of judicature，provided each with a prefident．The firlt regulates every thing relating to ambaffadors and foreign negociations；the fecond takes cornizance of military affairs；the third manages the public revenues of the empire；the bufinefs of the fourth is to encourage，protect，and improve trade and com－ mercc．The two laft hear and determine in all caufes， whether civil or criminal．

Pcter divided the empire into the eight goverrments of Mofoow，Archangel，A foph，Cafan，Aftracan，Chioff and the Ukraine，Siberia，Livonia，comprehcnding Ingria，Plefcow，and Novogorod，Smolenko，and Ve－ ronitz．The governors or waivodes were vefted with power to difpofe of all employments civil and mili－ tary，and receive the sevenues．They were directed to

\section*{\(R \quad \mathrm{U} ~ \mathrm{~S}\)}
defray all expences in their refpective governments, and fend a certain yearly fun to the great treafury. In a word, they enjoyed abfolute power in every thing but what related to the regular troups, which, though quareered in their grindiction, were neither paid nor directed by then, but received their orders inmediately from the czar or his generals.

In 1775 the prefent emprefs made a complete newmodelling of the internal government in a form of great femplieity and uniformity. By that reglement the divided the whole empire into 43 governments, as we have already mentioned, plaeing over cach, or where they are of lefs extent, over two contiguous governments, a governur-general with very confiderable powers. She. fubdivided tach government into provinces and diftricts; and for the better adminitration of juftice erected in them various courts of law, civil, criminal, and conmercial, anaiogous to thofe which are found in other countries. She eftablified likewife in every goverument, if not in every province, a tribunal of confcience, and in every diftriet a chamber for the protection of orphans. Amidit fo many wife inflitu: ons a chamber for the adminiftration of her imperial majefAty's revenues was not furgotten to be eftablifhed in each goverument, nor a tribunal of police in each difrict. The duty of the govemor-general, who is not properly a judge, but the guardian of the laws, is to take care that the various tribunals in his government difcharge their refpective daties, to protect the oppresfed, to enforce the adminillration of the laws; and when any tribunal fhall appear to have pronounced an irregular fentesce, to fop the execution till he make a report to the fenate and rective her majefty's orders: It is his bufinefs likewife to fee that the taxes be regukarly paid; and, on the frontiers of the empire, that the proper number of troops be kept up, and that they be attentive to their duty.

This reglement contains other inftitutions, as well: as many directions for the conducting of law. fuits in the different courts, and the adminittration of juiftice, which do her majefty the higheft honour; but the general want of murads, and what we call a fenfe of honour, in every order of men tbrough this vaft empire, mult make the wifett regulations of little avail. Ruffa is perhaps the only nation in Europe where the haw is not an incorporated profefion. 'There are no feuinaries where a practitioner mutt be elucated. Any man who will pay the fees of office nayy become an attorney, and any man who can find a client may plead at the bar. The judges are not more learned than the pleaders. They are not fited for their offices by any kind of education; nor are they neeeffirily chofen from thofe who have frequented courts and been-in the practice of pleading. A general, from a fuccefsfut or an equivocal campaign, may be inftantly fet at the head of a court of jutlice; and in the abfence of the imperial court from it PeterBurgh, the cormanding officer in that eity, whoever he tray be, prefides ex ufficio in the high court of jultice. The other courts genemaly chanke their prefidents every year. Many inconveniences muit arife from this finguiar confitution; but fewer, perhaps, than we are apt to imagine. The appointment to fo many interior governmeuts makes the Ruflian nobility arquainted with the grofs of the ordinary huli. nefs of law-courts; and a thatute or imperial cdict is law in every cafe. The great obltacles to the admi-
ditration of juntice are the contraricty of the laus ard \(R\) 侕a the venality of the judges. Firom infentor to fuperior .... courts there are two appeals; anil in a great proportion of the caufes the reportal of the fentence of the inforior court fubjects its judgess to a heary fine, unlefs they can produce an colict in full puint in iupport of their decifion. This inceed they feldum find any diffeuley to do; for there is hardly a cafe fo fimple but thet: edicts may be found clear an 1 precile for buth partic: ; and therefore the judece, fomible of checir fafety, are rery feldom ineorn rycible. 'I'o the principle of houour, which often guiles the couduct of judiges in other n?tions, they are fuct, abfolute thangere, hat an athicer has been feen fitting in itate and dilthibuting jutice from a bench to which lic was chained li; an iron collatr mund his nech, for having the day before beeen detected in conniving at fruggling. "This mata feemed not to be afnamed of the crime, nur did any one avoid his company in the evening.

Fow crimes are capital in Pufia: murder may be atoned by paying a fua of money; nay, the civil megiftrate takes nu cognizance of purder, withont having previoully received information at the fuit of fome individuals. Crimiuals were punifhed with torture and the moft cruel deaths sill the reign of the illuntrious Catbarine I. when a more merciful fyftem took place, and which the pefent emprefs lass firice confirmed by law. See the articles CATHARiNE 1. of Rufla, and \(E\) nizaskth Petrowna.

We have already mentioned the trafic of the Ruf. \({ }^{105}\) fians with the different nations buth of Afia and Eil revenus. rope, and fpecified iron as one of the articles which they export. We may here add, that in 1792 there were in the government of l'arma alone, which lies in the worthern divifion of the empire, \(8 \$\) copper and iron works belonging to the government and private perfons, and three gold works. The metals extracted in thefe works are chiely conveyed to St Peterfburgh by water carciage on the river Tchusovaya, which. falls into the Kama. With refpeat to the revenue of Rufia, it continually fuctuates, aceoreing to the increafe of commerce or the pleafure of the ezar, wha has all the weath of the empire at his difpual. He monopulizes all the belt furs, mines, minerals, and the trade by land to the Ealt-Indies; he forms uat atl the tobacco, winc, brandy, becr, mead, avd other liquors; the inns, taverns, piblic houles, bath, and fweatinthoufes. The cutlums npon merehandize, the inpots upon corn, and toll cxatted from citiee, towns, and villages, are very coniderable. He moffelfes demefincs to a very great value; inherits the effects of all thofe that die intellate, or under accufation of capital crimes: derives a duty from all haw-fuits; asd to fum up the whale, can command the furtunes of all his fubjects. All thefe articles produce a large revenue, whicb was three years ago eftimated at upwards of \(4,0,02,000\) rubles, or L. \(6,3,33.333: 6\) : 6 Sterlins: but then the intrinfic valuc of money is at leatt thric trmes greater in Ruffia than in Britain. The experaces in time of peace never cxeced \(3^{2}, 050,000\) rubles: the remanuer is not treafured up, but is employed by her imperial majely ia cunftructing public edi ces, making tarbours, canals, roads, and other uictul wor's., for the glay of the empire and the benefit of her fubjec.s.

The ftinding army of Ruffa is computed at 25:000 men ; befides theie, the Ruftans can affu.ble a bod of:

\section*{}

Run of 40,050 irregulars, Calmucks, Cuftacks, and other Ruta. I'artars, wholive under their dominion. But the num. ber may be doubled on any emergency. The czarina has likewife a conliderable flet in the Baltic, and a great number of formidable galleys, frigates, fire-fhips, and bomb-ketches.

RUST, the flower or calk of any metal, procisred by corroding and diffolvint its fuperficial parts by fome menfruum. Water is the great inftrument or argent in prociveing ruft: and hence oils, wid other fatty bodies, feenre metals from ruit ; water being no menItruum for oil, and therefore not able to make its way through it. All metals except gold are liable to ruf ; and even this allo if expofed to the fumes of fea-fiult. For remedies ngainft rutt, fee Iro:, par. ult.

RUS'IIC, in arelitecture, implies a reanner of building in imitation of nature, rather that according to the rules of art. See Architecture.

Rusric Gods, dii rufici, in antiquity, were the gods of the country, wr thofe who prefided over agrieulture, \&c. Varro invokes the 12 diii confentes, as the principal among the ruftic gods; viz. Jupiter, Tellus, the Sun, Moon, Ceres, Bacchus, Rubigus, Flora, Mincrva, Venus, Lympha, and Good Luck. Befides thefe 12 arch-ruftic gods, there were an infinity of leffer ones; as Pales, Veriumnus, Tutclina, Tulgor, Sterculius, Mellona, Jugatinus, Collinus, Vallonia, Terminus, Sylvams, and Priapus. Struvius adds the Satyrs, Fauns, Sileni, Nymphs, and even Tritons; and gives the empire over all the ruftic gods to the god Pan.

Rustic Orcitr, that decerated with ruflic quoins, rullic work, \&c.

Rustic Work, is where the flones in the face, \&ic. of a building, initead of being fmooth, are hatched, or picked with the point of a hanmer.

RUSTRE, in heraldry, a bearing of a diamond fhape, pierced through in the middle with a round hole. See Heraedry.

RUT, in hunting, the venery or copulation of deer.
RUTA, RUE: A genus of the monosynia order, belonging to the deeandria clafs of plants; and in the natural method ranking under the 26 th order, Multifa. liqua. The calyx is quinquepartite; the petals concare: the receptacle furrounded with 10 inelliferous pores; the capfule is lobed. In Come flowers, a fifth pirt of the number is excluded. There are feveral fpecies; of which the moft remarkable is the hortenfis, or common broad-leaved garden ruc, which has been long cultivated for medieinal ufe. This rifes with a fhrubby ftalk to the leight of five or fix feet, fending uut brancles on every lide, garnined with decompounded leaves, whofe finall lobes are wedge-fhaped, of a grey colour, and have a ftrong odour. The flowe:s are produced at the end of the branehes in bunches almoft in the form of umbels: they are coapofed of four yellow concave petals which are cut on their edges, and cight yellow flamina which are longer than the petals, terminated by roundif? fummits. The germen becomes a ronndith capfule, with four lobes puuched full of holes containing rough black feeds.

Rue has a itrong ungrateful fmeil, and a bitterifh penctating taite: the leaves, when full of vigour, are extrumcly acid, infomueh as to infame and blifter the nkin, if much hancled. With regard to their medicinal cirtues, they are powerfully flimulating, attenuating, and detersent; and hence, in cold ihlergmatic habits;
they quicken the circulation, diffolve tenacious juices, open obftructions of the excretery glands, and promote the fuid feeretions. The writers on the materia medica in general have entertained a very high opinion of the virtues of this plant. Boerhaave is full of its praifes; particularly of the effential oil, and the diftilled water cohobated or re-dililled feveral times from frefh parecls of the herb. After extravagantly commending other waters prepared in this manner, he adds, with regard to that of nte, that the gieateft commendations he can beftow upon-it fall thort of its merit: "What medicite (fays he) can be more efficacious for promoting fweat and perfpiration, for the cure of the hyfteric pasfion and of epileplies, and for expelling poifon ?"" Whatever fervice rue may be of in the two laft cafes, it undoubtedly has its ufe in the others: the cohobated water, however, is not the moft efficacious preparation of it. An citirat made by rectified firit contains in a fmall compafs the whole virtues of the rue; this menftrum takins up by infufion all the pungency and flavour of the plant, and elevating nothings in disillation. With water, its peculiar flavour and warmth arife ; the bitternefs, and a confiderable thare of the pungency, remaining belind.

Rüg. Bugas or Swedifl turnip. See Husbandry, p. 761.

Book of RUTH, a canonical book of the Old Teflament; being a kind of appendix to the book of Judges, and an introduction to thofe of Samuel; and having its title from the perfon whofe fory is here principally related. In this fory are obfervable the ancient rights of kindred and redemption; and the manner of buying the inheritance of the deceafed, with other particulars of great note and antiquity. The eanonicalnefs of this book wats never difputed; but the learned are not agreed about the epocha of the hiftory it relates. Ruth the Moabitefs is found in the genealogy of our Saviour. Matth. i. 5.

RUTILUS. See Cyprinus, ne 6.
RUTHERGLEN, or by contraction Rogles. the head borough of the netherward of Lanarkfhire in Scotland, is fituated in N. L.at. \(55^{\circ} 5 \mathrm{I}^{\prime}\), and W. Long. \(4^{\circ}\). \(13^{\prime}\); about two miles fouth-eaft of Glafgow, and mine weit of Hamilton. Few towns in Scotland can lay greater claim to antiquity than Rutherglen. Maitland, in his Hitory of the Antiquities of sicotland, vol. i. F. 92. tells us, that it was founded by a king Reuther, from whon it derived its name; and a tradition of the fame import prevails among the inhabitants. But withont laying any Itrefs on the authority of tradition, which is often falfe and always doubtful, we find, from feveral orifinal charters till preferved, that it was erected into a royal borough by king David I. about the year 1126.

The territory under the jurifdiction of the bornugh was extenfive, and the inhabitants enjoyed many dillinguifhed privileges, which were however gradually wreft. ed from them, by political influence, in favour of Glafgow, which in latter times rofe into confequence by trade ard manufatures. The ancient dimentions of the place are now unknown; but in the fields and gardens towards the eaft the foundations of houfes are ociafionally difcovered. It is now of a very reduced lize, cenfilting but of one principal flreet and a few lanes, and containing about \(1 \mathrm{li}_{3}\) inhabitunts.
About 150 yards to the fouth of the main Areet

\section*{\(\begin{array}{lllll}R & \text { U T } & 577 & R & \text { U } Y\end{array}\)}
ther- is a kind of lane, known by the name of Dins clykes. A circumflanee which beft the unfortunate queen Mary, immediately after her forces were routcd at the battle of Langfide, has ever fuce continned to characterife this place with an indelible mark of opprobrium. Her majcfly, during the battle, flood on a rifing ground about a mile from Rutherglen. She no foomer faw her army defeated than fhe took her precipitate flight to the fouth. Dins-d \({ }^{\text {ghes }}\) unfortunately lay in her way. Two rultics, who were at that inflant cutting grafs hard by, feeing her majelty fleeing in hafte, rudely attempted to intercept her, and threatened to cut her in pieces with their feythes if the prefumed to pro. ceed a ftep further. Neither beanty, nor even royalty itfelf, can at all times fecure the unfortunate when they have to do with the unfeeling or the revengeful. Relief however was at hand; and her majetty proceeded in her flight.

Adjoining to a lane called the Back.rore flood the caltle of Rutherglen, origrinally built at a period coeval, it is reported, with the foundation of the town. This ancient fortrefs underwent feveral fieges during the unhappy wars in the days of king Rubert Bruce, and it remained a place of ftrength until the battle of langfide; foon after which it was deffroyed by order of the regent, to revenge himfelf on the Hamilon family, in whofe cuflody it then was. The foundations of the buildings are now erafed, and the fite converted into dwelling-houfes and gardens.

The kirk of Rutherglen, an ancient building of the Saxon-Gothic ftyle, was rendered famous by two tranf. actions, in which the fate of Sir William Wallace and his country was deeply coneerned. In it a truce was concluded between Scotland and England in the year 1297 (Henry's Life of Walace, Book VI. verfe 862.), and in it Sir John Monteath bargained with the Englifh to betray Wallace his friend and companion (Life of Wallace, Book XI. verfe 796). This ancient building, having become ircommodious, was, in 1794 , pulled down, and one of a modern ftyle was erected in its place. Buried in the area were found valt quantities of human bones, and fome relics of antiquity.

No borough probably in Britain poffefes a political conflitution or fett more free and unembarraffed than Rutherglen. It was anciently under the influence of a felfelected magiftracy, many of whom lived at a diffance from the borough, and who contintued long in office without interruption. Negligence on the one hand, and an undue exertion of power on the other, at length excited the burgeiles, about the middle of the laft century, :o apply an effectual remedy to this evil. The community who, at that period, poffeffed the power of reforming the abufes that had lons prevailed in the management of the borough, were much affifted in their exertions by a Mr David Spens town-clerk, a gentleman unbiaffed by falie politics, and who was animated with a high degree of true patriotifm. Great oppofition was at firt made to the reform ; but the plan adopted by the burgeffes was wifely laid, and was profecuted with unrenitting affiduity. They were proof againft the influence and bribery of a party that ftruggled to contirue the old praciice; and having at length furmounted every difficulty, they formed a new conflitution or fett for the borough, which, in 1671 , was ap-

Voz. XVI. Part II.
proved of by all the inhabitants of the town, and after. R"elam: wards inferted in the records of the gencral convention of the royal boroughs of Scotland.
M.re,

Rutherglen, in conjunetion with Glafgow, Renfrew: and Dumbarton, fends a nember to the Britifn parliaa ment. The fairs of this town are generally well attended, and have long bern Eamous for a great foow of horfes, of the Lanarkinire breed, which are efteemed the bell draught-horfes in Britain. The inhabitamta of this borough !ill retain fome cuftoms of a very remote antiquity. One of thefc is the making of Rythere glen four cakes. The operation is atterded whih fome peculiar rites, which lead us to conclude that the practice is of Pagan origin. An account of thefe rites is given in Ure's Hitory of Rutherglen and Kilbride, p. 94.; from whence we have taken the above acconnt of this place, and which we do not heditate to recommend to the attention of fuch of our readers as are fond of natural and local hittory, being perfuad that they will find it to be both an ufeful and entertaining performance.

RUTLANDSHIRE, is the leall county in Eng. land, it being but 40 miles in circumference ; in which are two towns, 48 parifhes, and 3263 houfes. However, for quality it may be compared with any uther county; the air being good, and the foil fertile boih for tillage and pathures; and it not only affords plenty of com, but feeds a great number of horned cattle and freep. It is well watered with brooks and rivulets; and the principal rivers are the Weland and the Wrafh. It is bounded on the eaft by Lincolnfhire; on the funth by the river Weland, which parts it from Northemptonfire; and on the weft and north by Leicefterfhire. It has only two market-towns; namely, Okeham, where the afizzes and feftions are held, and Uppingham.

RUYSCH (Frederic), one of the mon eminent anatomifts of which Holland can boall, was born at the Hague in 1638 . Aftur making great progrefs at home, he repaired to Leyden, and there profecuied the fludy of anatomy and botany. He ftudied next at Francker, where be obtanced the degrec of doctor of phylic. He then returned to the Hague; and marrying in 1661, dedicated his whole time to the fudy of his profeffion. In 1665 be publifhed a treatife, entitled Diiuc:dutio valvulurum de variis lymplaticis et ladeis; which raifed his reputation fo high, that he was chofen profeflor of anatomy at Amilerdan. This honour he accepted with the more pleafure, becaufe his fituation at Amflerdam would gise hin cafy accels to eserg requifite help for cultivating anatomy and natural hittory. After he fettled in Amflerdam he was perpetually engaged in diffectins and in examining with the moll iuquifitive eye the various parts of the human body. He improved the fcience of anatony by new difcoveries; in particudar, he found out a way to preferve dead bodies.many years from putrefaction. His anatomical collection was curious and valuable. He had a feries of foctufes of all fizes, from the length of the little finger to that of a new born infant. He had allo bodies of full grown perfons of all ages, and a vaft number of amimals alnoft of every feceics on the glube, befides a ureat many other matural curiofities. Peter the Great of Rulfia, in his tour through Holland in the ycar \(16 g 8\), vifited Ruyfith, and was fo charmed with his couvcration, that ine

4 D . . . perad

\section*{\(\begin{array}{llllll}R & U & {[ } & 5.8 & 1 & R\end{array}\)}
nayh, pafed whoie days with him; and when tle hour of high a value on Ruyfch's calinet of cariofities, that
when he returned to Holland in 1717 , he purchafed it for 30,200 Rerins, and fent it to 1 \({ }^{2}\) eterBurgh.

In 1685 he was made profeffor of medicine, an office which he difcharged with great ability. In 1728 he got his thigh-bone brokez by a fall in his chamber. The year before this misfortune happened he had been treprived of his foa Henry, a youth of talents, and well skilled in anatomy and botany. He had leen created a ductor of phyfic, and was fuppofed to have affited his father in his difcoveries and publications. Ruyfch's family now confifted only of his youngeft daughter. This lady thad been early infuired with a paffion for anatomy, the favourite icience of her father and brother, and had ftudied it with fuceefs. She was therefore well qualified to affitt ber father in formine a fecond collection of curiofties in naturd hiflory and anatomy, which he began to make after the emperor of Ruffia liad purchafed the firft. Ruyfch is faid to have been of fo healthy a conftitution, that though he lived to the age of 93, yet during that long period he did not labour under tbe infirmities of difeafe above a month. From the time he broke his thigh he was indeed difabled from walking without a fupport ; yet he retained his vigour both of \(\min\) in and body without any fenfible alteration, till in 1731 his flrength at once delerted him. He died on the 22 d of February the fane year. His anatomical works are printed in 4 vols 4 to.

The Atyle of his writings is fimple and concife, but fometines inaccurate. Inftruction, and not oftentation, feems to be his only aim. In anatomy he undoubtedly made many difcoveries; but from not being fufficiently converfant in the writings of other anatomilfs, he pulblifhed as difcoveries what bad been known before. The academy of feiences at Paris in 1727 elected him a member in place of Sir Iface Newton, who was lately deceafed. He was alio a member of the Royal Society pi London.

RUYTER (Michael Adrian), a ditinguifhed naval wficer, was born at Fleffingue, a town of Zealand, in froj. He entered on a fea-faring life when he was only if years old, and was firlt a cabin-boy. White he advenced fucceffively to the rark of mate, matler, and eaptann, he aequitted himfelf with ablity and honsur in wll thefe employments. He repulfed the Irifh, wher atempted to take Dublin out of the hands of the Eag3ith. He made cight voyages to the Weft Indies and ten to Brazil. He was ther promoted to the rank of zear-admiral, and fent to affit the Portuguefe againtt the Spaniards. When the enemy came in fight, he adsanced boldly to meet them, and gave fuch unqueftionshle profs of valour as drew from the Portuguefe mu. sarch the warmeft applaufe. His gallantry was fill ware confpieneus before Salee, a town of Barbary. With one fingte veffel he failed through the roads of that place in defiatere of five Algerine Corfairs who game to attack him.

In 1653 a fquadron of feventy weffels was difpatched pgaink the Englifh under the command of Van Tromp. Ruryter, who accompanied the admiral in this expedi*ion, feconded him with great fixill and bravery in the - three battes which the Englifh fo.glorioufly won. He was afterwards flationed in the Mediterranean, where
he captured leveral Tukith weffels. In 1559 he received a commiftion to join the king of Dramark in his war with the Swedes ; and he not only nanntained his former reputation, but even railed it hishor. As the reward of his fervices, the bing of Deamark ennobled bim and gave him a penlion. In 1661 he run athore a veffel belouging to Tunis, releafed 40 Chrifian flaves, made a treaty with the l'unilians, and reduced the Algerine corfairs to fubmition. I-is country, as a cettimony of her gratitude for fuch illuferious fervices, raifed him to the rank of vice-admiral and commander in chief. To the latter diguity, the higheft that could be conferred upon lim, he was well iutitled by the fignal ficiory which he obtained over the combined deets of France and Suain. This battle was fousht in 1672 about the time of the conquet of Holland. The fight was maic. tained between the Englifh and Duich with the obflinate bravery of nations which were accultomed todifpute the empire of the main. Ruyter having thus. made himfelf malter of the fea, conducted a lieet of Indianen fafely into the "Texel; thus defending and: enriching his country, white it was become the prey of holtile invaders. 'I'he next year he had threc engage. ments with the fleets of lirance and England, in which, if poffible, his bravery was aill more diltinguifhed that. ever. D'Eftrees the French vice-admimal wrote to Colbert in thefe words: "I would purchafe with my life the glory of De Ruyter." But he did nut long enjoy the triumphs which he had fo honourably won. In anengagement with the French fleet off the coalt of Sici\(l_{y}\), he loit the day, and received a mortal wound, which put an end to his life in a few days. His corple was carried to Amflerdam, and a maruilicent moanment was there erected by the command of the tates-general. The Spanith council bellowed on him the title of duke, and rranfmitted a patent inve:ting him with that dignity ; but he died before it arrived.

When fome perfon was congratulating Louis XIV. upon De Ruyter's death, telling him he had now got rid of one dangerous enewy; he replied, "Every ose. mult be forry at the death of fo great a man:"

Kye, a town in Suffex, with two markets on Wednefdays and Saturdays, but no fair. It is one of the cinque-pots; is a handiome well-huilt place, governed by a mayor and jurnts, and fends two members to parJiament. It has a church built with itone, and a townhall: and confils of three flreets, paved with ftone. One fide of the town has been walled in, ard the othey is guarled by the fea. It has two gates, and is a place of confiderable trade in the Mipping way. From thence large quantities of corn are exported, and many of the inhabitants are fifhermen. It is 34 miles fouth-ealt: by fouth of Tunbridge, and 64 on the fane point from. Lanton. Tbe mouth of the bartoour is of late choaked. up with fand; but if well opened, it would be a good ftation for privateers that eruize againk the French. E. Long. O. 50 . N. Lat. 51.0 .

RYMER (Thomas), Efq; the author of the Fielera, was born in the north of England, and tducated at the grammar.fchool of Northallerton. He was admitted a. fcholar at Cambridgc, then became a member of Gray's Inn, and at length was appointed hiltoriographer to King William in place of Mr Shadwell. He wrote A

View of the Tragedies of the laft Age, and afterwards publifhed a tragedy named Edrar. For a critic lie was certain! y not well qualiffed, for he wanted candour ; nor is his judgment nuch to be relied on, who could condemn Shakefpeare with fuch rigid feverity. His tragedy will fhow, that his talents for poetry were by no means equal to thofe whofe poems he has publiely cenfurce.. But though he has no title to the appellation of poet or critic, as an antiquarian and hiftorian his memory will long he preferved. His Fadera, which is a. collection of all the public tranfations, treaties, \&e. of the kings of England wrih foreign princes, is efteemed one of our mott authentic and valuable recurds, and is oftener referred to by the beft Englifh hiftorians than perhaps any other book in tlie language. It was publifhed at London in the begiuning of the prefent century in 17 valumes folio. Three volumes more were added by Sanderfon after Rymer's death. The whole were replinted at the Hague in 10 rols in 1739. They were abridged by Rapin in French, and inferted in Le Clerc's Bibliotheque, a tranfation of which was made by Stephen Whatley, and printed in 4 vols \(8 \mathrm{vo}, 173 \mathrm{z}\).

Ryine: died \(14^{t h}\) Deeember 1713, and was buried in the parif cluteh of St Clemert's Danes. Some specimens of his poetry are preferved in the firt volume of Mr Nichol's Select Collection of Mifcellaneous Puems, 1780.

KYNCHOPS, in ornithology, a genus belonging to the order of anferes. The bill is firaight; and the fuperior mandible muell fhorter than the inferior, which is truneated at the point. The fpecies are two, viz. the nigra and fulva, both natives of America.

RYOTS, in the policy of Hindoftan, the modern name by which the renters of land are diftinguifhed. They hold their poffefions by a leafe, which may be confidered as perpetual, and at a rate fixed by ancient
furveys and valuations. This arrangernerit haz been fo long eftainlified, and aceords fo well with the ideas of the natives, conecruing the diftinction of caft, and time functions allueted to cacle, that it has been invariabil: maintained in all the provinces fubject cither to Maho. metans or Europeans; and to both it ferves as the \(\mathrm{B}_{2}\). fis on which their whole fyltern of finatce is founded.

Refpecting the precife mode, howerer, in which the ryots of Hinduftan held their poffeffons, there is much diverity of opinion; the chief of whien are very im:partially delineated in note iv. to the Appendix of Ro. bertfon's Hiftorical Difquiftion, \&ce. concerning IndiJ. P. 345. to which we refer fuch of our readers as are is. terefted in this fubjeet of frrance.

RYSCHIA, in botany: A gencs of the monogycis order, belonging to the pentandria clafs of plants 8 and in the natural method ranking with thofe tha: are doubtful. The calyx is pentaphyllous; the corolla is pentapetalous; and the apices turned baek, about three times the length of the ealyx ; the flaments are five, awl-fhaped, and frorter than the petals. The feedveffel is quadrilocular, and contains niany feeds. Of this there are two fpecies, riz. the Claufifolia and Souroutea.

RYSWICK, a large village in Holland, feated be tween the Hague and Delf, where the prince of \(O\). range has a palace, which ftands about a quarter of a mile farther. It is a very noble flructure, all of hewn Itone, of great extent in front, but perlaps not proportionably high. It is adorned with a marble Hair-c3fe, marble floors, and a magnificent terrace. There is a gond profpeet of it from the canal between Delft and the Hague. This place is remarkable for a treaty cenncluded here in 1697 between England, Germany, Holland, Frarice, and Spain. E. Long. 4. 20. N. Lat. 52. 8.

SAAVEDRA (Michael de Cervantes), a celebra. ted Spanih writer, and the inimitable author of Dors Quixote, was born at Madrid in the ycar 1549. From

\section*{S A A}

Saavedra. his infancy: he was fond of books; hut he apyticd himfelf wholly to books of entertainment, fuch as rovels and poctry of all kinds, efpecially Spanifh and Italian authors. From Spain he went to Italy, either to ferve Cardinal Aquaviva, 'to whom he was chamberlain at Rome; or elfe to follow the profeffion of a foldier, as he did fome ycars under the victorious banners of Marco Antonio Coloma. He was prefent at the battle of Iepanto, fought in the year 1571; in which he either loft his left hand by the fhot of an harqucbus, or had it fo maimed that he loft the uif of it. After this he was taken by the Moors, and carried to Algiers, where he continutd a captive five years and a half. Then he returned to Spain, and applied himfelf to the writing of comedies and tragedies; and he compofed feveral, all of which were well reccived by the public, and acted with great applaufe. In the year 158.4 he publifhed his Galatea, a novel in fix books; which he prefented to Afeanio Colonna, a man of high rank in the church, as the firit fruits of his wit. But the work which has done him the greatef honour, and will immortalize his name, is the hiftury of Don Quixote; the fult pat of which was printed at Madrid in the year 1605. This is a fatire upon books of knight-errantry; and the principal, if not the fole, end of it was to deftroy the reputation of thefe books, whieh had fo infatuated the greater part of mankind, efpecially thofe of the Spanifh nation. This work was univerfally read; and the moof eminent painters, tapellry-workers, engravers, and fculptors, have been employed in reprefenting the hiftory of Don Quixute. Cervantes, even in lis lifetime, obtained the glory of having his work rective a royal approbation. As King Plilip III. was itanding in a batcony of his palace at Madrid, and viewing the country, he obferved a fludent on the banks of the river Manzanares reading in a book, and from time to time breaking off and beating his forehea! with extraordinary tokens of pleafure and delight : upon which the king faid to thofe about him, "That feholar is either mad, or reading Don Quixote:" the latter of which proved to be the cafe. But virtus laudatur et alget: notwithtanding the yaft applaufe his book every where met with, ne had not intereft cnough to procure a finall penfion, but had much ado to keep himfelf from flarving. In the year 1615 , he publifhed a fecond part; to which he was partly moved by the prefumption of tome feribbler, who had publifhed a continuation of this work the year before. He wrote allo feveral novels; and among the reft, "The Troubles of Perfiles and Sigifmunda." He had employed many years in writing this novel, and finifhed it but jurt before his death; for he did not live to fice it publified. His ficknefs was of fuch a nature, that he himfelf was able to be, and actually was, his own hiftorian. At the end of the preface to the Troubles of Perfiles and Sigifinunda, he reprefents himFilf en horfeback upon the road, and a ftudent, who had overtaken him, engaged in converfation with him: "And happening to talk of my illnefs (fays he), the ftudent foon let me know my doom, by faying it was a dropfy I had got ; the thirft attending which all the warer of the ocean, though it were not falt, would not fuffice to queneh. Therefore Senor Cervantes, fays he, you muft drink nothing at all, but do not forget to eat ; for this alone will recover you without any other phyfic. I have been told the fame by others, anfwered I;
but I-can no more forbear tippling, than if I were bom to do nothing elfe. My life is drawing to an end; and from the daily jourmal of my pulfe, I flall have finifhed my courfe by next Sunday at the farthef.-But adieu, my merry friends all, for I am going to die; and I hope to fee you cre long in the velher world, as happy as heats can wifh." His dropfy increaied, and at lait proved fatal to him ; yet he continued to fay and to write bon mots. He reccived the laft facrament on the 18th of April 1616; yet the day after wrote a Dedication of the Troubles of Pertiles and Sigifmunda to the Coade de Lemus. The particular day of his death is not known.

SABA, a Dutch infand near St Euflatia in the Weft Indies. It is a feecp rock, on the fummit of which is Raynor, a little ground, very proper for gardening. Frequent fiffory, rains, which do not lie any time on the foil, give growth to plants of an exquiite flavour, and cabbages of an extraordinary fize. Fifty European families, with about one hundred and fifty flaves, here raife cotton, \(f_{\mathrm{p}} \mathrm{in}\) it, make flockings of it, and fell them to other colonies for as much as ten crowns* a pair. Throughout Ame- \({ }^{\text {Lh. }}\) : ; : rica there is no blood fo pure as that of Saba; the women there preferve a frethefs of complexion, which is not to be found in any other of the Caribbee illands. Happy colony ! elevated on the top of a rock between the flky and fea, it enjoys the benefit of both elements without dreading their itorms; it breathes a pure air, lives upon regetables, cultivates a fimple commodity, from which it derives eafe without the temptation of riches: is employed in labours lefs troublefome than ufeful, and poflefics in peace all the bleffings of moderation, health, beauty, and liberty. This is the temple of peace from whence the philofopher may contemplate at leifure the eriors and paffions of men, who come, like the waves of the fea, to frike and dafh themideles on the rich coafts of America, the fpoils and preffeffion of which they are perpetually contending for, and wrefting from each other: hence may he view at a diltance the nations of Europe bearing thunder in the midit of the ocean, and burning with the flames of ambition and avarice under the heats of the tropics; devouring gold without ever being fatisfied; wading through feas of blood to amafs thofe metals, thofe pearls, thofe diamonds, which are ufed to aciorn the oppreffors of mankind; loading innumerable fhips with thofe precious cafks, which furnifh luxury with purple, and from whicls flow pleafures, effeminacy, cruelty, and debauchery. The tranquil inhabitant of Saba views this mals of follies, and fpins his cotton in peace.

SAB eANS. Sce Sabians.
SABAZIA, in Greek antiquity, were nocturnal mylteries in honour of Jupiter Sabazius. All the initiated had a golden ferpent put in at their breatts, and taken out at the lower part of their garments, in memory of Jupiter's ravifing Proferpina in the form of a ferpent. There were alfo other fealts and facrifices diftinguifhed by this appellation, in honomr of Mithras, the deity of the Perfiaris, and of Bacchus, who was thus denominated by the Sabians, a people of Thracc.

SABBATARIANS, or sevenir day baptists, a fect of anabaptifts; thus called, becaufe they obferved the Jewifh or Saturday-Sabbath, from a perfuafion that. it was never abrogated in the New ''eftament by the infitution of any other.

\section*{\(S\) A B [ \(581 \quad 1 \quad\) S A B}
6. ath. SABBATH, in the Hebrew langitare, fignifies rofl. The feventh day was denominated the Sabbath, or day of refl, becaufe that iṇ it God had refted from all his works which he created and made. From that time the ferenth day feems to have been fet apart for religious ferviees; and, in confequence of a particular injunction, was afterwards obferved by the Hebrews as an holyday. They were commanded to fet it apare for facred purpofes in honour of the creation, and likewife in memorial of their own redemption from Egyptian bondage. ortance The impurtance of the inftitution nay be gathered
he infti-flom the different laws refpecting it. When the ten
on and cominandments were publifhed from Mount Sinai in tremendous pomp, the law of the Sabbath lield a place in what is commonly called the firt table, and by fubfequent flatutes the violation of it was to be punifhed with death. Six days were allowed for the ufe and fervice of man ; but the feventh day God referved to himfelf, and appointed it to be oblerved as a ftated tine for holy offices, and to be fpent in the duties of piety and devotion. On this day the minifters of the temple entered upon their week; and thofe who had attended on the temple fervice the preceding week went out at the fame tine. New loaves of thew-bread were placed upon the golden table, and the old ones taken away. Two lambs for a burnt-offering, with a certain proportion of tine flour, mingled with oil, for a bread offering, and wine for a libation, were offered. The Sabbath, as all other feftivals, was celebrated from evening to evening. It began at fix in the evening on Friday, and ended at the fame time the next day. have maintained, that the fanctification of the feventh day, mentioned in Gell. ii. is only there fpoken of \(\delta_{1 x} \pi \rho^{2 \lambda} \psi\) ar or by anticipation; and is to be underttood of the Sabbath afterwards injoined the children of Ifrael at the commencement of the Mofaic difpenfation. But without entering into a particular examination of all the arguments adduced to fupport this upinion, a few obfervations, it is prefumed, will be fufficient to how that it retls on no folid foundation.

It cannot eafily be fuppofed that the infpired penman would have mentioned the fanctification of the fewenth day amongit the primeval tranfactions, if fueh fanctification had not taken place until 2500 years afterwards. Writers, ambitious of that artificial elegance which the ults of criticifm have eftablifhed, often bring together in their narratives events which were themfelves far diftant, for the fake of giving form to their difeourfe; but Mofes appears to have defpifed all fuch fimfy refinements, and to have conftrueted his narnative in great conformity to the feries of events.

From the accounts we have of the religious fervice practifed in the patriarchal ase, it appears that, inmediately after the fall, when Adam was reftored to favour through a Mediator, a ttated form of public wor- fhip was inftitured, which man was required to obferve in teftimony, not only of his dependence on the Creator, but allo of his faith and bope in the promife made to our firf parents, and feen afar of. Of an inflitution then fo grand and important, ro circumftance would be omitted that is neceftary to preferve it, or that contributes to render the oblervance of it regular and folemn.
. That deiermined times are neceffary for the due ce- Sabba'h. lebration of divine fervice, cannot be denied. Such is the conftitution of man, that he muff have partieular secefiey times fet apart for particular fervices. He is doomed हftared to toil and labour ; to earn his bread in the fwtat of tays for his face; and is capable of performing religious du. the ferties ouly in fuch a manner as is conf!tert with his fitu. ation in the world. If flated times for religious folen:nitics had not been enjoined, the confequence would have been, that fuch folemnities would have been alsogether neglected; for experience thows, that if markind were left at liberty when and how often they fhould perform religious offices, thefe offices would no: be performed at ath. It is the obfervation of holy times that preferves the practice of holy fervices; and withour the frequent and regular returtis of hallowed days, man would quiekly forget the duty which he owes to God, and in a mort time no vetlige of religion would be found in the world.

Among the ordinarecs which God vouchfafed his oujections ancient people, we find that the pious oblermation oft., the car. holydays was particularly infelted upon; and the Sab-ly infirubath was enjoined to be kept holy, in the muft fulemn tion of the manner, and under the fevereft pemalties. Can it then cunsderes be fuppofed that lie would fuffer mankind, from the creation of the world to the Molaic era, to remain without an inftitution fo expedient in itfelf, and as well titted to anfwer the end propoled by it, under the one difpenfation, as ever it could be under the other? No; we have every imaginahle reafon to conclude, that when religious fervices were enjoined, religions times were appointed alfo; for the one neceffanly inplies the other.

It is no objection to the early inflitution of the Sabbath, that there is no nention of it in the hiftory of the patriarchal age. It would have lwelled the Bible to a molt enormous fize, had the facred hiftorian given a particular account of all the tranfactions of thofe times; befides, it would have anfwered no end. When Mules wrote the book of Genefis, it was unneceffary to relate minutely tranfactions and inftutions already well known by tradition: accordingly we fee, that his marrative is everywhere very concife, and calculated only to preferve the memory of the mofl important fact: However, if we take a view of the churel-fervice of the patriarchal age, we thall find that what is called the legal difpenfation, at leat the liturgic part of it , was no new fyftem, but a collection of inftitutions obferved from the beginsing, and republifhed in fuem by Mulcs. The Seriptures inform us that Cain and Abel offered faenifices; and the account which is given of the acceptance of the one, and the rejection of the other, evidently fhows that fated laws refpecting the fervice had then taken place. "In procefs of time," at the end of the days. "Abel brought an offering." Here was prief, altar, matter of facrifue, appointed sim., mutive to facrifie, atonement made, and accepted. The dittinction of animals into clean and unclean before the flond, and Ficah's facrifice immediately afecr his deliverance, with. out any new direction, is an unanfwerable prove of the fame truth. It is teftified of Abralam, by Gud himfelf, that he kept his charge, his commanaments, his flatutes, and hisluzus. Thefe expreffions compreliend the various branches, into which the law given at Sinai was divided. They contain the moral precepts, affimative and negative, the natter of religious ferrice, a body of

\section*{S A B \(\quad\) B 582 1 S A B}

Sabiati．laws to direet obedience，and to which man was to con－ form his conduet in every part of duty．Agreeably to this，we find that facrifieces were offered，altars and places of worthig confecrated，and the Sabbatb alfo mentioned as a well known folemnity，before the pro－ mulgation of the law．It is exprefsly taken notice of at the fall of manna；and the incidental manner in which it is then mentioned，is a convincing proof that the Ifraelites were no firangers to the inflitution ：fur had it been a new one，it mull have been enjoined in a politive and particular manner，and the nature of it muft have been hid open and explained，otherwife the

Seven，in the Hebrew language，is expreffed by a word that primarily fignifies fulnefs，completion，fuffrienty，and is applied to a wuck，or feren doys，becaufe that was the full time employed in the work of creation；to the Salbath，becaufe on it all thiugs were completed；and to an oath，becaufe it is fufficient to put an end to all itrife． This opening of the Hebrew root will enable us to come at the meaning of thofe expreffions of the hea－ thens，and alfo let us fee whence they derived their ideas and modes of fpeaking，and that the knowledge of the trarfactions at the creation，though much perverted， was never entirely lof by them．

It has been fuppofed by fome，that the lieathens bor－ rowed the notion of the facreinefs of the feventh diy from the Jews．But this opinion will not readily be admitted，when it is confidered that the Jews were held in the greatelt contempt by the furrounding nations， who derided them no lefs for their fabbaths than for their circumeifion．All furts of writers ridiculed them on this account．Seneca clarged them with fpendiug the feventh part of their time in floth．Tacitus faid， that not only the feventh day，but alfo the feventh year； was unprolitably wafted．Juvenal brings forward the fame charge；and Perfius upbraided them with their re－ tuitita fabbata．Plutarch faid that they kept it is honour of Bacchus．Tacitus affirmed，that it was in honour of Saturn ；but the molt abominable affertion of all is that of Apion，who faid that they obferecd the Sab－ bath in memory of their being cured on that day of a fhameful difeafe，called by the Egyptians fabto．

Some perceiving the force of this objection have con－ tended，that time was divided into weeks of fevers days，that each of the planetary gods，the Sun， \(\mathrm{Moon}_{4}\) Mercury，Venus，Mars，Jupiter，and Saturn，who were tile Dii mujarun gentium，might have a day appropriated to his fervice．But if fuch was the origin of weeks， how came the great and ancient goddefs Tellus to be omitted ？She was worhipped by the early idulaters as well as the other planets，and muft furely liave beea deemed by them as worthy of a particular day fet apart to her horour as the planct Saturn，who was long un－ difcovered；afterwards feen but occafionally，and at all times conlidered as of malign afpeet．（See Rema phan）

Others have fuppofed，that as ：he year was divided in－ to lunar months of fomething inore than 28 days，it was 1 matural to divide the month into quarte：s from the different phafes of the monn，which would produce as many weeks of feven days．But this fuppofition is lefy teuable than the former．The phafes of the moon are not lo precifly marked at the quarters as to attruck to them any particular notice，nor are she quarterly ap－ pearances of one month commonly like thofe of another： We camot，therefore，conceive what fhould lave induced the earliett obfervers of the phafes of the moon to divide the month into four parts rather than into three，or five， or feven．Had the ancient week conlitted of 14 days， it might have been inferred，with fome degree of piau－ fibility，that its length was regulated by the phafes of the moon，becaufe the flape of that luminary，at the end of the fecond çuarter，is very precifely marked； but there is nothing which，in the prefent hypothefis， could have everywlere led mankind to make their weeks confift of feven days．This divifion of time，therefore， can be accounted for only by admituing the primevatin－ fitution

\section*{S A B}

Eitution of the Sabhath, as related by Mofes in the book of Genefis. That inftution was abfolutcly ne. cetary to preferve among men a fenfe of reli gion; and it was renewed to the fows at the giving of the law, and ies obfervance enforced by the feveref penaltiem. It was accordingly oblerved by them with more or lefs flrictnefe in cvery peniod of their commonwealth, and there is none of the inflitutions of their civine lawsiver which, in their prefent fate of difperfon, they mare highly honour. They regard it, inded, with a fuperficious reverence, call it their fpout, their didight, and rpeak of it in the moft magnificent terms. They have often varied in their opinions of the manner in which it ought to be kept. In the time of the Maccabees, they carried theil respeet tor the fabbath fo very high, that they would not on that day defend themfelves from the attacks of their enemies. Biet afterwards they did not feruple to fand upon their necefrary defuce, althongh they would do nothing to prevent the enemy from carrying on their operations. When our Saviour was on earth, it was no fin to loofe a beall from the ftall, and lead hin to water ; and if he had chanced to tall into a ditch, they puiled him out : but row it is abfolutely unlawful to give a creature in that fituation any other affiflance than that of food: and it they lead an animal to water, they muft take care not to let the bridle or halter hang wofe, otherwife they are tranfgreffors.

As the law enjoins set on that day from all Cervile employments, in order to comply with the injunction, they undertake no kind of work on Friday but fuch as can ealily be accomplifher before evening. In the af. ternoon they put into proper places the meat that they have prepared to eat the day following. They afterwarde fet out a table covered with a clean cloth, and place bread upon it, which they alfo cover with another cloth : and during the fabbath the table is never mored out ol its place. About an hour before funfet, the women light the fabhath lamps, which liang in the places where they eat. 'They then fletch fork the: kands :t the light, and pronounce the following benedicion. "Pletec be thon, O Ged, king of the world, whe hat enjoined us, that are fanctined by rhy oumandracnts, to liglit the fabbath lamn." "There lamps are two or more in numbet, according to the fize sf the chamber in. which they are fu!pendel, and coutinue to burn during the greateft part of the might. In order to begin the fabbath well, they wath their hands and faces, trim therr hain, and pare their mails, beginsing it the forath finper, then going to the fecond, shen the tith, then the thirg, nind ending with the thumb. fif a jew cafts the parings of his nails to the ground, the is rafcub, that is, a ruicked man; for Satan has great power over thofe parings of rails; and it feems they are of great ufe to the wizzards, who know how ke employ them in their enchantments. If he burics shem in the eath, he is saedic, that is, a juh man: if jec bantus them in tive fire, le is chefol, that is, worthay of homomr, an holy man. When they have perfurmed thefe ereparatory ceremonies, they repair to the fyragognte, and enter upon their devotions. As foon as prayers begin, the departed fouls fpring out of the purgatonal fames, and have liberty to cool themelves in water while the fabbath lafts; for which reafon the Jews prolong the continuance of it as nuch as they can; and the Ratbins have frituly commanded them not to exbzutt
all the water on the Iabbath day, lef thof miferatle fouls thonld by that means be deprivel of the refremiag element. When they lave ended their prayers, they return home, and falute me anorher, by wibing a good fabbsth. They then fit doven to table. The mater of the fanily takes a cup fuli of wine. and liting ap tio hand, rays, " Bleffed be thou, O God oar Lurd, king of the world, who taft creased the fru:t of the vise. Wheffed he thon, O God our Lort, king of the world, who hat fanctitied us by thy cummantments, and given us thy holy fublath: and or thy good will and pleafure haft left it to us an inberitance, the memorial of thy works of crention. For it is the lexrinniag of the congegation of raints, and the memarial of the coming out of Enpt. And thou hail allo chofen us from all other people, and [anceificd us, and with love and pleafure haft left thy ho! fabbath an inheritance. Bleffed be thou, O Goci, whe functifief the (abbath." After tbit bencdicion is cnded, he dainks, find gives the cup to all that are prifent. He then removes the cloth, and taking Lread, Cays, "Bleffed be thon, O God our Lord, king of the world, who bringefl bread out of the earth." Then he breaks off a bir, and eais, and alfo gives a piece of it to crery one of the company.

On the morning of the fabbath, the Jews do not rife fo early as they do at other times. Thinking, the greater phafure they take on that dar, the more devoutly ther keep it. When they come into the fyoagogue, they pray as ufual, oaly the devotions are forsewhat lon rer, beins irterninghed with pfalmody, in honour of the falbath. The Pentatench is then produced, and feven fections of it ase reax! in order by feven perfons chofen for the purpufe. Sx.ved leffons are likewie read out of the prophets, which have fome relation to what was read out of the law. After morning prayers they return to their houfes, and eat the lecond fabbathmeal, fhewing every token of jow, in honorr of the fetival. But if one has feen any thim: ominoss in his Aleep; it he has drea sed that he burnt the book of the law ; that a beam has come out of the walls of his houle; that his :ceth have fallen out;-then he fatts until very late at night, for all fach drcams are had ones. In the riternoon they go agraia to the fynamogue, and ferform the evesian fervice, adding to the ordinary pravers forme "sfors that refpect the fabbath. When the devutional cuties are ended, they retiorn home, and light a candle refernlhiag a iowh, and again lit dumn to cat. Theog remain eating umil nar ix, and then the mafter of the family eukes a cuo, and prouring wire inso it rehearfes fore benedcations; after which he pours a litile of the wine upoa the ground, ard fays, " Bleffed be ther, O Lord, King of the undl, who hait created the irnit of the wine." "the holding the cup in his kft land, with the right he takes a box of fuece fpices, and fais "Bleffed be thou, O Lord Crod, who hatt crezted varioes kind's of fucet fpices." He fmells the fioices, and holds them out to :he sett, that they may do the farme. He then iakes the cup in lifs right hand, aad. going to the candle views the left very narrowly, and pronounces a blefling. With the cup in the lett hand, he examines the right in the fame manner. Again, heciting the cup in his right hand, tre rehearfes anothes benediction, and at the fame tifse pours fome of the wide on the ground. After this lee drinks a lit:he of is, asd then hands it about to the rell of the fancily, wi.e Enifo

This day was denominated by the primitive Chriftians the I:ard's clay. It was alfo fometimes called Sunday; which was the name giren to it by the heathens, who dedicated it to the fun. And indeed, al.' thourh it was originally ealled Sunday by the heathens, yet it may very properly retain that name among Chriitians, becaule it is dedicated to the honour of "The true light," which lighteth every man that cometh into the world, of Him who is ftyled by the prophet "The Sun of righteoufnefs," and who on this day arofe from the dead. But although it was, in the primitive tines, indifferently called the Lord's day or Sunday, yet it was never denominated the fabball; a name conflantly appropriated to Saturday, or the fiventh day, botlr by facred and eccleliaftical writers.

Of the change from the fertenth to the firf day of The merthe week, or even of the infitution of the Lord's day feflival, there is no account in the New Teftament. However, it may be fairly inferred from it, that the firi How day of the week was, in the apoftolic age, a fated cidental: time for public worfhip. On this day the apoftles were affembled, when the Holy Ghoit came down fo vifibly upon them to qualify them for the converfion of the world. On this day we find St Paul preaching at Troas, when the difciples came to break bread: and the directions which the fame apofle gives to the Corinthians concerning their contributions for the relief of their fuffering brethren, plainly allude to their religious affemblies on the firt day of the week.

Thus it would appear from feveral paffages in the New 'leflament, that the religious obfervation of the firt day of the week is of apofolical appointment; and may indeed be very reafonably fuppofed to be among thofe directions and inftructions which our bleffed Lord himfelf gave to his difciples, during the 70 days between his refurrection and afcenfion, wherein he converfed with them, and fooke of the things pertaining to the kingdom of God. Still, however, it mult be owned that thofe paflages, although the plainelt that occur, are not fufficient to prove the apoftelical inftitution of the Lord's day, or even the actual olfervation of it. In order, therefore, to place the matter beyond all controverfy, recourfe mult be had to ecclefiaftical teftimony.

From the confentient evidence and uniform practice of the primitive clurch, and allin from the attefation of Pliny, an beathen of no miean figure both in learning and power, we find that the firit day of the week was obferved in the carlieft ages as an holyday or fettival, in honour of the refurrection of Chrif. Now there are but two fources whence the cuftom could poffibly have arifen. It mult have been inftituted either by buman or divine authority: , by buman authority it was not infituted; for there was no general council in thofe early times, and without the decree of a general council it was impofible that any ecclefiaftical inftitution could have been univerfally eftablifhed at once. It re- But nevermains, therefore, that it mult have been inflituted by theles. is divine appears to be of divine origin.
(1) This, it feems, was once really the cafe. A Jew of Nagdeburg fell into a privy on a Saturday. He might have been taken out; but he told thofe who offered him their affitance to give themfelves no trouble, for there he was determined to keep holy the fabbath day. The bifhop, when he heard of it, refolved that he fhould fanctify the next day allo in the fame place; and fo, betwixt them, the poor Jew loft his life,

\section*{§ A}
sath. divine authority: and that it really was fo, will farther appear from the following confiderations. It is certain that the apofles travelled over the greateft part of the world, and planted churches in the remoteft parts of it. It is certain allo that they were all led by the fane foirit; and their defire was, that unity and uniformity fhould be obferved in all the churches which they had founded. It is not therefore furpriting that, in the primitive times, the fame docerine, the fame wormip, the fame rites and cuftoms, fould prevail all over the Chriftian world; nay, it would have been unaccountable had the cale been etherwife. For this reafon we may conclude that every cuftom, univerfally obferved in the early ages of the Chriftian church. and not inftituted by a general council, was of original appointment.

As the Lord's day is fanctilied, that is, fet apart to
Creator, Redeemer, and Sanctifier, a little confide. ration will eafily difcover how it ought to be obferved. Although a day feparated from worldly bufinefs, yet it is in no fenfe a day of idlenefs, but a fealon appropriated to the works of Galvation and labours of charity.

In the primitive times this holy day was obferved in the moft folemn manner. Fiom the monuments of thofe early ages we learn, that it was fpent in a due and conftant attendance on all the offices of divine wor. fhip. On it they hell their religious affemblies, in
which the writings of the apoftles and prophets were read to the people, and the doctrines of Chrittianity further preffed upon them by the exhottations of the clergy. Solemn prayers and praifes were offered up to God, and hymns fung in honour of Chrift ; the Lord's fupper was conflantly celebrated; and collections were tnade for the maintenance of the clergy and the relief of the poor. On this day they abftained, as much as they could, from bodily labour. I'hey looked upon it as a day of joy and gladnefs; and therefore all fafting on it was prohibited, even during the feafon of lent, their great annual faft. - Such was the zeal of thofe times, that nothing, no not the fevereft perfecutions, hindered them from celebrating holy offices on this day. They were often befet and betrayed, and as often naughtered in confequence of cruel edicts from emperors, thofe very emperors for whole happinefs and profperity they always offered up their fervent prayers. For this canfe, when they could not meet in the daytime, they affembled in the morning before it was light ; and when fick, in exile, or in prifon, nothing troubled them more than that they could not attend the fervice of the church. No trivial pretences were then admitted for any one's abfence from public worhip; for fevere cenfures were paffed upon all who ware abfent without fome urgent neceffity. When the empire became Chrittian, Contlantine and his fucceffors made Laws for the more folemn obfervation of the L.ord's day. 'lhey prohibited all profecutions and pleadings and other juridical matters to be tranfacted on it, and alfo all unnecellary labour ; not that it was looked nepon as a Jewith fabbath, but becaufe thefe things were confidered as inconfiftent with the duties of the lefival.

But although the primitive Chritians did not indulge themfelves in the practice of unnecefiary labour or trilling amulements, yet they did not wholly ablain srem working, if great neceffity required it. 'Ihe Vol. XVI, Part II,

\section*{58; J S A B}
council of Laodicea enjoined that men fould abtain Sablatho from work on the Lord's day if polrble; but if any were found to judaize, they were to be cenlured as great tranlgreffurs. So circumfpect were the primitire Chiftians about their conduct on this feflival, that on the one hand they avoided all things which tended to profane it, whilt on the other they cenfured all thofe who infited it fhould be obferved with Pharifaical ri. gour.

The primary duty of the Lord's day is fublic wor- AdvincaBip. The nature and defign of the Chriftian religionges refulefufficiently thows the neceffity and importance of af. ing from fembling for the duties of devotion. The whole fcope vacenberof Chrittianity is to bring us to an union with God, it. which cannot be obtained or preferved without frequent communications with him; and the reafons which Thow religious intercourfe to be the indifpenfable duty of Chrilhians in a private capacity, will bind it with equal or more force on them confidered as a conmunity.

The advantages of public wormip, when colly performed, are many and great. There are two, however, which deferve to be confidered in a particular manner. It gives Chrittians an opportunity of openly profeffing their faith, and teftifying their obedience to their Redeemer in the wifett and beft manner; and in an age when atheifm has arifen to an alarming lueight, when the Son of God is crucified afrefh, and put to open Thame, every man, who has any regard for religion, will cheerfully embrace all oppotunities of declaring his abhorrence of the vicious courfes purfucd by thofe degenerate apoftates. Ife will with pleafure lay hold on every occafion to teftily that he is neither afraid nor afhamed to confefs the truth ; and will think it his indifpenfahle duty openly to difavow the fins of others, that he may not incur the guilt of partaking of them.

Public worhip preferves in the minds of men a fenfe of religion, without which fociety could nut exif. Nothing can keep a body of men together and unite them in promoting the public good, but fuch principles of action as may reach and govern the heart. But thefe can be derived only from a fenfe of religious duties, which can never be fo Atrongly impreffed upon the mind as by a conitant attendance upon public worfhip. Nothing can be more weak than to neglect the public worthip of God, under the pretence that we can employ ourfelves as acceptably to our Maker at ho:ne in our clofets. Both kinds of worThip are indeed neceffary; but one debt camot be paid by the dilcharge of another. By public worlhip every inan profefies his belief in that Cod whom he ajons, and appeads to 1 fim for his fincerity, of which his neighbour cannot judge. Ey this appeal he endears himfelf more or lefs to others. It ercates confidunce; it roots in the leart benevolance, and all other Clirittan virtues, which producc, in common life, the fruits of mu. tual lowe and general peace.

Peophe in general ane ef opinion that the daties of the loord's day are over when fullic wormip is ended. But they fien, to forget for what 1 urpofes the day was fet apant. \(1:\) is not orly appropriated to the dutics of pallicic wornep, bat alfo fantificd to cur improvement in the knonclesige of the docirines of Chriflanity. Ji is an inkitution calculated to aileviate the condition of the luhoricus claffes of mankinc, and, in \(+E\)

\section*{S A B} is proper, it is neceffary, that man fhould refect on his condition in the world, that he fhould examine the flate of his foul, and inquire what progrefs lie has made in that work which was given him to du. Thofe that have children or fervants are obliged to look after their inftruction as well as their own. Thefe are the ends which the inftitution of Sunday was defigned to anfwer. Every man mult allow that thefe things muft be done at fome time or other; but unlefs there be fet times for doing them, the generality of mankind would wholly neglect them.
\(V\) ifiting and travelling (though very common) are enorinous profanations of this holy day. Families are thereby robbed of their time; a lofs for which no amends can ever be made thern : Servants, inftead of having leifure to improve themfelves in fpiritual knowledge, are burdened with additional labour: And in a man of any humanity, it muft excite many painful fenfations, when he reflects how often the uffful horfe on that day experiences all the anguifh of hunger, torn fides, and battered knees. Every kind of amufiment, every kind of common labour, is an encroachment on the particular duties of the Lord's day ; and confequently men profane the day by fpending it in any amufements, or undertaking upon it any ordinary employment unlefs it be a work of abfolute neceffity.

SABBATH-Breaking, or profanation of the Lord's day, is punifhed by the municipal law's of England. For, befides the notorious indecency and feandal of permitting any fecular bufinefs to be publiely tranfacted on that day in a country profefing Chriftianity, and the corruption of morals which ufually follows its profanation, the keeping one day in feven holy, as a time of relaxation and refrefliment, as well as for public worShip, is of admirable fervice to a fate, confidered merely as a civil inllitution. It humanizes, by the help of converfation and fociety, the manners of the lower claffes; which would otherwife degenerate into a fordid ferocity and favage felfithnefs of fpirit: it enables the indullrions workman to purfue his occupation in the enfuirg week with health and cheerfulnefs: it imprints on the minds of the people that fenfe of their duty to God fo neceffary to make them good citizens; but which yet would be worn out and defaced by an unremitted continuance of labour, without any llated times of recalling them to the worthip of their Maker. And therefore the laws of King Athelftan forbad all merchandizing on the Lord's day, under very fevere penalties. And by the ftatute 27 Hen. VI. c. 5 . no fair or market fhall be held on the principal feltivals, Goodfriday, or any Sunday (except the four Sundays in harveft ), on pain of forfeiting the goods expofed to fale. And, fince, by the ftatute I Car. I. c. i. no perfons Shall altemble, out of their own parifhes, for any fport whatfoever, upon this day; nor, in their parifhes, fhall ufe any bull or bear beating, interludes, plays, or other unlawful exereifes or paftimes; on pain that every of. fender fhall pay 3s. 4d. to the poor. This itatute does not prolibit, but rather impliedly allows, any innocent recreation or amufement, within their refpective parifhes, even on the Lord's day, after divine fervice is over. But by ftatute 29 Car. II. c. 7. no perfon is allowed to work on the Lord's day, or ufe any boat or barge, or expofe any goods to fale, except meat in
public houfes, milk at certain hours, and works of ne- Sazel ceffity or charity, on forfeiture of 5 s . Nor fhall any drover, carrier, or the like, travel upon that diy, under pain of 20 s .

SABELLIANS, a fect of Chriftians of the 3 d century, that emhraced the opinions of Sabellius, a philofopher of Esypt, who openly taught that there is but one perfon in the Godhead.

The Sabellians naaintained, that the Word and the Holy Spirit are only virtues, emanations, or functions of the Deity; and held, that he who is in heaven is the Tather of all things, that he defeended into the virgin, became a child, and was born of her as a fon; and that having accomplifhed the myttery of our falvation, he diffufed himfelf on the apoftles in tongues of fire, and was then denominated the Holy Ghof. This they explained by refembling God to the fun, the illuminative virtue or quality of which was the Word, and its warming virtue the Holy Spirit. The Word, they taught, was darted, like a divine ray, to accomplifh the work of redemption; and that being re-afcended to heaven, the influences of the Father were communi-cated after a like manner to the apolles.

SABIANS, an early fect of idolaters, which con: tinues to this day, and worfhips the fun, moon, and flars. See Polytheism, \(\mathrm{n}^{2}\) Io, \(11,12\).

SABINA, a province of Italy, in the territories of the church ; bounded on the north by Umbria, on the eaft by Farther Abruzzo, on the fouth by the Campagna of Rome, and on the welt by the patrimony of St Peter. It is 22 miles in length, and almoft as much in breadth; watered by feveral fmall rivers, and abounding in oll and wine. There is no walled town in it, and Magliano is the principal place.

SABINUS (George), a celebrated Latin poet, born in the electorate of Brandenburg in 1508. His poem Res gefta Cixfarum Germanorum, fpread his reputation all over Germany, and procured him the patronage of all the princes who had any regard for polite literature: he was made profeffor of the belles lettres at Frankfort on the Oder, redur of the new academy of Koning lourg, and counfelior to the elector of Brandenburg. He married two wives, the firt of which was the eldelt daughter of the famous reformer Melancthon; and died in 1560. His poems are well known, and have been often printed.

SABLE, or SABLE Animal, in zoology, a creature of the weafel-kind, called by authors mujlela zibellina. See Mustela, \({ }^{\circ} 6\).

The chafe of thefe animals, in the more barbarous times of the Ruffian empire, was the employ, or rather tafk, of the unhappy exiles in Siberia. As that country is now become more pupulous, the fables have in a great meafure quitted it, and retired farther north and eaft, to live in defert forefts and mountains: they live near the banks of rivers, or in the little iflands in them; on this aecount they have, by fome, been fup-
 c. 5.), which he claffes with the anmals converfant among waters.

At prefent the hunters of rables form themfelves into troops, from five to 40 each : the laft fubdivide into leffer parties, and each choofes a leader; but there is one that directs the whole: a fmall covered boat is provided for each party, loaded with provitions, a dog
.c. and net for every two men, and a veffel to bake their bread in: each party alfo has an interpreter for the country they penetrate into. Every party then fets out according to the courfe their chief points out: they go againtt the ftream of the rivers, drawing their boats up, till they arrive in the hunting country; there they ftop, build huts, and wait till the waters are frozen, and the feafon commences: before they begin the chace, their leader alfembles them, they unite in a prayer to the Almighty for fuceefs, and then feparate : the firt fable they take is called God's fable, and is dedieated to the church.

They then penetrate into the woods; mark the trces as they advanee, that they may know their way back; and in their hunting-quarters form huts of trees, and bank up the fnow round them: near thefe they lay their traps; then advance farther, and lay mure traps, ftill building new huts in every quarter, and return fueceffively to every old one to vifit the traps and take out the game to flkin it, which none but the chief of the party mult do: during this time they are fupplied with provifions by perfons who are employed to bring it on ीledges, from the places on the road, where they are obliged to form magazines, by reafon of the impracticability of bringing quantities through the rough country they mult pafs. "ilhe traps are a fort of pitfall, with a loofe board placed over it, baited with fifh or flefh : when fables grow fcarce, the hunters trace them in the new.fallen fnow to their holes; place their nets at the entrance; and fometimes wait, watehing two or three days for the coming out of the animal: it has happened that thefe poor people have, by the failure of their provitions, been fo pinehed with hunger, that, to prevent the cravings of appetite, they have been reduced to take two thin buards, one of which they applied to the pit of the fomach, the other to the back, drawing them tight together by cords placed at the ends : fuch are the hardihips our fellowcreatures undergo to fupply the wantonnefs of luxury.
'Ihe feafon of chace being finifhed, the hunters reaffomble, make a report to their leader of the number of fables each has taken; make complaints of offenders againll their regulations; punifh delinquents; fhare the booty; then continue at the head-quatters till the nivers are clear of iee; return home, and give to every church the dedicated furs.

Sable Cape, the mof foutherly province of Nova Scotia, in North America, near which is a fine cod-filhery. W. Long. 65. 34. N. Lat. 43. 24.

Sable Inte is adjoined to this eape, and the coafts of both are molt commodiounly fituated for fifheries.

Sable Trade, the trade earried on in the Msins or furs of fables; of which the following commercial hiflory was tranflated by Mr J. R. Fortter from a Ruffian performance on that fubject by Mr Muller.
"Sable, foble, in Ruffian; zobel in German. Their price varies from 1 l. to iol. Sterling, and above : fine and middling fable-fkins are without bellies, and the cuarfe ones are with them. Forty kins make a cullection called zimmer. The fineft fables are fold in pairs perfectly fimilar, and are deaser than fingle ones of the fame goodnefs; for the Ruflians want thofe in pairs for facing caps, cloaks, tipl ets, \&c. the blackell are reputed the beft. Sables are in fafon from Norember
to February ; for thofe caught at any other time of the year are fhort-haired, and thell ealled nedofoboli. The hair of fables differs in length and quality: the long hairs, which reach far beyond the inferior ones, are called os; the more a fkin has of fuch long hairs, the blacker it is, and the more valuable is the fur; the very beft have no other but thofe long and black hairs. Motchka is a technical term ufed in the Ruffian furtrade, expreffing the lower part of the long hairs; and fometimes it comprehends likewife the lower and fhorter hairs: the above-mentioned beft fable furs are faid to have a black motchka. Below the long hairs are, in the greater part of the fable-furs, fome fhorter hairs, called podofie, i. e. under-os; the more podolic a fur has, it is the lefs valuable: in the better kind of fables the podofie has black tipz, and a grey or rufty motehka. The firtl kind of motehka makes the middling kind of fable furs; the red one the worft, efpecially if it has but few os. Between the os and podufie is a luw woolly kind of hair, called podfada. The more podfada a fur has, the lels valuable : for the long hair will, in fuch cafe, take no other direction than the natural one; for the characters of fable is, that notwithftanding the hair naturally lies from the head towards the tail, yet it will lie equally in any direction as you Itrike your hand over it. The various combinations of thele eharacters, in regard to os, motchka, podufie, and podfada, make many fpeejal divitions in the goodnefs of furs: befides this, the furriers attend to the lize, preferning always, ceteris paribus, the biggelt, and thofe that have the greateft glufs. The fize depends upon the animal being a male or a female, the latter being always fmalier. The glofs vaniftes in old furs: the frefh ones have a kind of bloomy appearance, as they exprefs it; the old ones are faid to have done blooming : the dyed fables alvays lufe their glofs; beeone lefs uniform, whether the lower hairs bave taken the dye or not ; and commonly the hairs are fomewhat twilled or erifped, and not fo ftraight as in the natural ones. Some finnigaie the fkins, to make them look blacker; but the fimell, and the crifped condition of the long hair, betrays the cheat; and both ways are detected by rubbing the fur with a moit linen cluth, which grows black in fuch cafes.
"The Chinefe lave a way of dyeing the fables, fo that the colour not only lafts (which the Ruffian cheats cannot do), but the fur kecps its glufs, and the arifped hairs only difcover it. This is the icafon that all the fables, which are of the vell kind, either in pairs or feparate, are carried to Ruffia ; the reit go to Chima. 'The very bell fables eome from the environs of Nertchit fk and Yakutik; and in this latter diftrict, the comntry about the river Ud affurds fometimes fables, of whom ente fingle fur is often Cold at the rate of 60 or 70 rubles, 12 l. or 141 . The bellies of fables, which are fold io pairs, are about two fingers breadth, and are tied togrether by 40 picces, which are fold from 11. to 21 . Sterling. Tails are fold by the hundeed. The very bett fable-furs mutl have their tails; but ordinary fable 3 are often cropped, and 100 fold from 41 . to 81 . Sterling. The legs or feet of fables are feldom fold feparately; white fables are rare, and no common inerchandize, but buught only as curiofities: fome are yellowith, and are bleached in the fpring on the frow."

\section*{S A C}
rowed from the French, as are moft terms in this feience: in engraving it is exprefled by both horizontal and perpendicular lines crofling each other. Sable of itfelf figinifies conflatcy, learning, and grief; and ancient heralds will lave it, that when it is compounded with

The oceafion that introduced this colour into healdry is thus related by Alexander Nifbet, p. 8. The duke of Anjou, king of Sicily, after the lufs of that kingdom, appeared at a tournament in Germany all in black, with his field of that tincture, femé de larmes, i. e. befprinkled with drops of water, to reprefent tears, indicating by that both his grief and lofs.

SAbLEStAN, or Sablustan, a province of Afia, in Perlia, on the frontiers of Indoftan; bounded on the north by Khorafan; on the eaft, by the mountains of Balk and Candahar ; on the fouth, by Sagettan or Segellan; and on the weft, hy Iieri. It is a mountainous country, very little known to Europeans; nor is it certain whieh is the eapital town.

SABRE, a kind of fword or feimitar, with a very broad and heavy blade, thick at the baek, and a little falcated or crooked towards the point. It is the ordinary weapon worn by the Turks, who are faid to be very expert in the ufe of it.

SABURRA, in medicine, uffually denotes any collection of half putrid indigefted matter in the fomach and inteftines, by which the operation of digeftion is impeded.

SABURRK, GRitts, in natural hiftory; a genus of foffils, found in minute malfes, forming together a kind of powder, the feveral particles of which are of no determinate fhape, nor have any zendency to the figure of eryftal, but feem rudely broken fragments of larger maffes; not to be diffolved or difunited by water, but retaining their figure in it, and not cohering by means of it into a mafs; confiderably opake, and in many fpecies fermenting with acids; often fouled with heterogene matters, and not unfrequently taken in the coarfer ftony and mineral or metalline particles.

Gritts are of various colours, as, 1. The ftony and fparry gritts, of a bright or greyih white colour. 2. The red fony gritts. 3. The green fony gritts, compofed of homogene fparry partieles. 4. The yellow gritt, of which there is only one fpecies. 5. The black and blackifh gritts, compofed of flony or talky particles.

SACEA, a feaft which the aneient Babylonians and other orientals held annually in honour of the deity Anaitis. The Sacra were in the Eaft what the Saturnalia were at Rome, viz. a feaft for the flaves. One of the ceremonies was to choofe a prifoner condemned to death, and allow him all the pleafures and gratifications he would wifh, before he were carried to execution.

SACCADE, in the manege, is a jerk more or lefs violent, given by the horfernan to the horfe, in pulling or twitching the reins of the bridle all on a fudden
and with one pull, and that when a horfe lies heary upon the hand, or obftinately arms himfelf.

This is a correction ufed to make a horfe carry well; but it ought to be ufed difereetly, and but feldom.
SACERDOTAL, fomething belonging to priets. See Priest.

SACCULUS, in anatomy, a diminutive of faccus, fignities a little bag, and is applied to many parts of the body.

SACCHARUM, Sugar, or the Sugar Cane, in botany: A genus of the digynia order, belonging to the triandria elafs of plants; and in the natural method ranking under the \(4^{\text {th }}\) order, Gramina. There is no calyx, but a long down; the corolla is bivalved. There is but one ipceies of this genus, viz. the officina. It is a native of Africa, the Ealt Indies, and of Brazil ; from whence it was introduced into our Weft India inlands foon after they were fettled. The fugar-cane is the glory and the pride of thofe iflands. It amply rewards the induftrious planter, enriches the Britifh merchant, gives bread to thoufands of manufacturers and feamen, and brings an immenfe revenue to the crown. For the procefs of making fugar, fee Sugar.

Sugar, formerly a luxury, is now become one of the neceflaries of life. In crop-time every negro on the plantations, and every animal, even the dogs, grow fat. This fufficiently points out the nourifling and licalthy qualities of fugar. It has been alleged, that the eating of fugar fpoils the colour of, and cormpts, the teeth: this, however, proves to be a miftake, for no people on the earth have finer teeth than the negroes in Jamaica. Dr Alfton, formerly profefior of batany and materia medica at Edinburgh, endeavoured to obviate this vulgar opinion: he had a frre fet of teeth, which he aferibed folely to his eating great quantities of fugar. Externally too it is often ufeful : mixed with the pulp of roafted oranges, and applied to putrid or ill-difpofed ulecrs, it proves a powerful corrector.

SACCHI (Andrea), a celebrated painter, born at Rome in 1 594. He was the difciple of Franeifco Albano, whom he afterwards furpaffed in tafte and correctnefs. He diftinguifhed himfelf in a very eminent degree by his paintings in frefoo; and a Arong emulation fubfirting between him and Pietro de Cortona, they each arrived at a degree of perfection that neither of them might have known without fueh a competition. The works of Sacchi have fuch intrinfic nerit, and are finifhed with fuch uncommon care and fkill, as will always leeure the applaufe of the judicious, and preferve their true valuc. He died in 1668.

SACHEVEREL (Dr Henry), a famous elergyman of the Tory faction in the reign of queen Anne; who diftinguifhed himfetf by indecent and feurrilous fermons and writings againft the diffenters and revolution principles. He owed his conlequence, however, to being in difereetly profecuted by the houfe of lords for his alize. fermon at Derhy, and his 5 th of November fermon at St Paul's in 1709 ; in which he afferted the doEtrine of non-refiftance to goverument in its utmoit extent; and reflected feverely on the act of toleration. The high and low church parties were very violent at that time; and the trial of Sacheverel inflamed the highchurch party to dangerous riots and exceffes: he was, however, fufpended for three years, and lis fermons burned by the common hangman. The 'l ories beillg

\section*{S A C}

\section*{S A C}
\(k\) in adminiftration when Sacheverel's fufpenfion expired, he was freed with every circumftance of honour and public rejoicing; was ordered to preach before the commons on the 24 , th of May, had the thanks of the houre for his difeourfe, and obtained the valuatle reciory of St Andrew's, Hulborn.

SACK, a wine ufed by our anceflors, which fome have taken to be Rhenifh and forme Cana:y whe Vemner, in lis Via Rca, ad l'tiom Lomgam, printed in 1628, fays that fack is "completely not iu the third degree, and that fome affect to crink fack with fugar and fome without; and upon no other ground, as I think, but as it is beft pleafing to their palate." He gees on to fay, " that fack, taken by itfelf, is very hot and very pentrative ; being takcis with fugar, the heat is both fome what allayel, and the penetrative quality thereof alfo retarded." He adds ILt tier, that Rhenih, \&c. decline after a twelvementh, but fack and the otlier ftronger wines are bett when they are two or three years old. It appears to be lighly p:ubable that lack wais not a fweet wine, from its being taken with fugar, and that it did not receive its name from having a faccharine flavour, but from its being originally tored in facks or borachios. It coes not appear to have been a French wine, but a flrong wine the production of a hot climate. Probably it was what is called dry mountain, or fome Spanim wine of that kind. This corijecture is the more plautible, as Howell, in his Erench and Englifh Dictionary, printed in the year 1650 , tramfates fack by the words vin d'Epagne, vin foc.

Sack of \(W_{\text {ool }}\), a quantity of woch containing juft 22 flone, and every fone it pounds. In Scothand, a fack is 24 flone, cach ftone containing 16 pounds.
\(S_{\text {sck }}\) of Coultn \(\mathrm{H}_{\text {ool }}\), a quantity from one hundred and a half to four hundred weirht.

Saces of Earth, in fortification, are canvas bags filled with earth. They are ufed in mahing retrenelıments in hafte, to place on parapets, or the head of the breaches, \(\& \in\). to repair them, when beaten down.
SACKBUT, a mufical inftrument of the wind kind, being a fort of trumpet, though different from the common trumpet both in form and feze; it is fit to play a bafs, and is contrived to be drawn out or fhortened, according to the tone required, whether grave or acute. The Italians call it trombone, and the Latins tuba ducitilis.

SACKVILLE (Thomas, Lord Buckhuit, and earl of Dorfet), a ftatefman and poet, the fon of Richard Sackville, Efq; of Buckhurt, in the parifh of Wi. thian in Suffex, was born in the year 1536. He was fent to Hart-hall in Oyford, in the latter end of the reign of Edward VI. whence he removed to Cambrid \({ }_{5}\) e, where he took a mafter of arts degree, and thence to the Inner Temple. He now applied himfelf to the fturdy of the law, and was called to the har. We are told that he conmenced poet whilf at the univerfities, and that thefe his juvenile productions were much admired, none of which, however, have been preferved. In the fourth and fifth year of queen Mary, we find him a meinber of the houfe of commons; about which time, in 1557, he wrote a poetical piece, intitled The In. duciin, or The Mirror of Magif? \(r\) utes. This lat was meant to comp: ehend all the unfortunaice Great from the beginning of our hiltory; but the defign beiag dop. ped, it was infenced in the body of the watk. .te

Mirror of Magitrates is formed on a dramatic play; Saskvilte. in which the perfuas are introduced Speaking. The In. duction is written much in the fyle of Spencer, who, with fome probability, is fuppofed to lave imitzed this author.

In 1561, his traged) of Gorboduc was afted before queen Elifabcth by the gentlemen uf the Inner 'Tenple. Hhis was the firlt toicrable trarrody in our languare. The Companion to the Play honfe tells nes, that the three firt acts were writen by Mr Tho. Norten. Sir Finilip Sidney, in his Apology for Puctry, fays, " it is full of tately fyeeches, and well-founding phrafes climbing to the height of Seneca in his ityle, \&\&c." Rymer 'peaks highly in its commendation. Mr Spence, at the initization of \(M r\) Pope, republifhed it in \(173^{\circ}\), with a pompous prefacc. It is faid to be our firt dra. matic piece written in verfc.

Lat the firtt parliament of this reign, Mr Sackville wis nucmber for Suffex, and for Bucks in the fecond. Ia the mean time he made the tour of France and Italy, and in 1566 was imprifoned at Rome, when he wäs informed of his father's death, by which he becarre poffefled of a very confiderable fortunc.

Having wow obtained his liberty, he returned to Enoland; and being firl kuighted was created Lord Buckhurt. In 1570 lie was fent ambuftdor to France. In 1586 he was one of the commiffion rs appointed to ty the unfortunate Mary queen of Scots; and was the meferger employed to report the confirmation of her fentence, and to fee it exeented. The year folio sing he wert ambaffadur to the States Gericral, in confequence of their complaint againft the carl of Leicefer ; who, difiking his impartiality, prevaiied on the queen to recal him, ard confine him to his houfe. In this flate of confinement the cortirued about 10 montlu, when Leceder dying, he was reflored to favour, aw 1 in 1580 was intialed knight of the garter: but the: mof incontroverible prouf of the queen's yartialisy for lord Buckhult appeared in the year 159, when the cauded him to be elected cearicellor in the univenfity of Oxford, in oppotition to her favourie Elies. In 159 今, on the death of the treafurer Burleigh, lord Buchhurt fucceeded hin, and by virtue of lis office becane in effect prime nimiiter ; and when, in 1601 , the carls of Efex and Southampton were brought to trial, he fat as lord high iteward on tha: awfil ueceficr.
On the aeceffion of James I. he was grecioufy re ceived, had the office of lord high treaforer confinacd to him for life, and was created tar! of Diorfet. He continued in high favour with the king tall the day o? his death; which happered fuddeniy, on the tyth of A pril \(6<8\), in the council-chamber at Whithall. He was interred with great folemrity in We:anin!ter abbey. He was a grod poet, an able miniler, and an honett man. From him is defeended the prefent nuble family of the Dorfets. "It were neediefs (fays Mr Walpole) to add, that he was the patriares of a race of genius and wit."

Sackville (Charles, earl of Dorfet), a celcbrated wit and puet, defcended from the foregoing, was burn in \(2637^{\circ}\). He was, like Villiers, Ruchelles, Sedley, \&c. one of the libertines of king Clarlo's court, and fonctimes indulged himfelf in inexeufable exceffes. He openly difcountenauced the violent mafures of James 11. and congared caly for the prince in

Urangic,

Eacriment. Orange, liy whom he was made lord chamberlain of the loutefiotd, and taken into the privy-council. He died in 1706 , and lefft feveral poctical piecee, which, though not coufiderable enough to make a volume by thenifelves, may be found among the works of the minur pocts, publifited in \(17+9\).
SACRAMENT is derived from the Latin word fucramestun, which fignitics an oath, particularly the oatll taken by foldiers to be true to their country and general. The words of this oath, according to Polybius, were, otlemperaturus fum et faturus quicquid mandabitur ab imperatoribus juxta vires. The word was adopted by the writurs of the Latin church, and employed, perhaps with mo great propricty, to denote thofe ordiunan. ces of religion by which chritlians came under an obligation, equally facred with that of an oath, to obferve their part of the covenant of grace, and in which they lave the affurance of Chritt that he will fulfil his part of the fame covenant.
Of facraments, in this fenfe of the word, Proteftant churches admit of but two ; and it is not eafy to conceive how a greacer number can be made out from Scripture, if the definition of a facrament be jult which is given by the church of England. By that church, the meaning of the word facrament is declared to be " an outward and vifible fign of an inward and fpiritual grace given unto us, ordained by Chrit himedf as a means whereby we receive the fame, and a pledge to affure us thereef." According to this definition, bap. tifin and the Lord's Supper are certainly facraments; for each contifts of an outward and vifible fign of what is indelcyed to he an inward and fpiritual grace; both were ordained hy Chrift himfelf, and by the reception of each does the Chrifitian come under a folemn obligation to be true to his divine mafter, according to the terms of the covenant of grace. (See Baptism and Supper of the Lord.) The Romanitts, however, add to this number confirmation, perance, extreme undion, ordination, and marriage, holding in all feven facraments ; but two of thofe rites not being peeuliar to thc Chriflian ehurch cannot poffibly be Cibrijilan facraments, in contradiltinction to the facraments or obligations into which men of ill religions enter. Mariiage was inflituted from the beginning, when God made man male and fermale, and commanded them to be fruitful, and multiply and replewish the carth; and penance, as far as it is of the fame import with repentance, has a place in all religions which teach that God is merciful, and men fallible.The external feverities impofed upon penitents by the clurch of Rome (fee PENANCE) inay indeed be in fome refpeets peculiar to the difcipline of that church, thought the penances of the Hindoos are certainly as rigid; ; but none of thefe feverities were ordained by Chritt limeelf as the pledge of an inward and fpiritual grace; nor do they, like baptiim and the Lord's Supper, bring men under obligations which are fuypofed to be analogous to the meaning of the word jacramentum. Confirmation has a better title to the appellation of a facrament than any of the other five popifh rites of that name, though it certainly was not confidered as fuch by the earlict writers of the Chrilitian church, nor does it appear to lave been ordained by Chritit himfelf, (fce Confirmation). Ordination is by many churches confidered as a very important rite; but as it is not adnuniftered to all nien, hlor has any particular form ap.
propriated to it in the New Teftanient, it cannot be Sacra confidered as a Chritian facrament conferring grace generally neceflary to falvation. It is rather a form of authorifing certain perfons to perform certain offices, which refpeet not themfelves but the whole cliurch; and extreme unction is a site which took its rife from the miraculous powers of the primitive church vainly claimed by the fuceeeding clergy. (See Ordisation and Exxreme Unctiov.) Thefe confiderations feem to have fome weight with the Romifh clergy themfelves; for they call the eucharit, by way of eminnence, the boly facrament. Thus to expofe the holy facrament, is to lay the confecrated holt on the altar to be adored.The proceffion of the holy facrament is that in which this hoof is carried about the church, or about a town.
Numerous as we think the facraments of the Romilh church, a feet of Chrittians fprung up in Eugland eariy in the current century who increafed their number.The founder of this feet was a Dr Deacon, we think, of Manchefter, where the remains of it fubfilted very lately, and probably do fo at prefent. According to thefe men, every rite and every phrafe in the book called the Apoffolical Conflitutions were certainly in ufe among the apoftice themeives. Still, however, they make a diflinction between the greater and the leffer facraments. The greater facraments are only two, baptifm and the Lord's fupper. The leffier are no fewer than ten, viz. five belonging to baptifm, exorcijm, anointing with oil, the white garmert, a tafle of mill and boney, and anointing zuith cbrifm or ointment. The other five are, the fign of the crofs, imppofition of bands, unction of the fick, boly orilers, and matrimony. Of the nature of thefe leffer facraments, or the grace which they are fuppofed to confer, our limits will permit us to give no account.Nor is it neceffary that we fhould. The feet which taught them, if not extinguifhed, is certainly in its laft wane. It las produced, however, one or two learned men ; and its founder's Full, True, and Comprehenlive View of Chrifianity, in two Catechifms, is a work which the Chriltian antiquary will read with pleafure for information, and the philofopher for the materials which it contains for meditation on the workings of the human mind. It was publifhed in 8vo, in the year 1748.

Congregation of the Holy S.icrament, a religious eftablifhment formed in Franee, whofe founder was Autherius, bifhop of Bethlelem, and which, in 1644 , received an order from Urban VIII. to have always a number of ecclefiatics ready to exercife their miniftry among pagan nations, wherever the pope, or congregatiou do propaganda, hhould appoint.

SACRAMENTARIANS, a general name given to all fuch as have publifhed or held erroneous doctrines of the facrament of the Lord's Supper. The term is cliefly applied among Roman Catholics, by way of reproach, to the Lutherans, Calvinits, and other Proteftants.
SACRAMENTARY, an ancient Romilh clurchbook, which contains all the prayers and cerenionics practifed at the celebration of the facraments.

It was wrote by pope Gelafius, and atterwards revifed, corrected, and abridged, by St Gregory.

SACRE, or SAKER, in ornithology, the name of a fpecies of falcon, called by authors falco fuctr, and differ6
ently
red, ently deferibed by different authors, but by ail agreed to be an extremely bold and active bird. It is a native of the northern regions of Europe; and a variety called by fome writers the fpeckled partridge bawk is found at Hudfon's bay, North America.

SACRED, fomething holy, or tha: is folemnly offered and confecrated to God, with benedittions, unetions, se.

Kings, prelares, and priefts, are reckoned facred perfons; abbots are only bleffed. - The deaconhood, fubdeaconhood, and priefthood, are all facred orders, and are faid to imprefs a facred indelible character. The cuflom of confecrating kings with holy oil is derived (fays Gutlingius) from the Hebrews; among whom, he agrees with Grotius, it was never ufed but to kings who had not an evident right by fucceffion. He adds, that the Clriftian emperors never ufed it before Jultin the younger; from whom he takes it to have paffed to the Goths, \&c.

Sacred is alfo applied to things belonging to God and the church. Church-lands, ornaments, \&c. are held faered. -The facred eollege is that of the cardinals.

SACRED Majefy, is applied to the emperor and to the king of England; yet Loyfeau fays it is blafphemy. See Majfsty. The ancients held a place flruck with thunder as facred. In the civil law, facred plaee chiefly denotes that where a perfon deccafed has been interred.

\section*{Sacred Efixir. See Elixir.}

SACRIFICE, an offering made to God on an altar, by means of a regular minifter, as an acknowledgment of his power, and a payment of homage. Sacrifices (though the term is fometimes ufed to comprehend all the offerings made to God, or in any way devoted to his fervice and honour) differ fron mere oblations in this, that in a facrifice there is a real deflruction or clange of the thing offered; where as an oblation is only a fimple offering or gift, without any fuch change at all : thus, all forts of tythes, and fritt fruits, and whatever of mens worldly fubftance is confecrated to God, for the fupport of his worfhip and the maintenance of his miniflers, are offerings or oblations: and thefe, under the Jewifh law, were either of living creatures or other chings: but facrifices, in the more peculiar fenfe of the term, were either wholly or in part confumed by fire. They have by divines been divided into bloody and unbloody. Bloody facrifices were made of living creatures; unbloody of the fruits of the earth. They have alfo been divided into expiatory, impetratory, and eucharillical. The firft kind were offered to obtain of God forgivenefs of fins; the fecond, to proeure fome favour ; and the third, to exprefs thankfulnefs for favours already reccived. Under one or other of thefe heads may all facrifices be arranged; though we are told, that the Egyptians had 666 different kinds, a number furpaffing all credibility.

Concerning the origin of facrifices very various opisions have been held. By many, the Phenicians are fuppofed to have been the authors of them; though Porphyry attributes their invention to the Egyptians; and Ovid imagines, from the import of the name rigim and boffia, that no bloody facrifices were offered till wars prevailed in the world, and nations obtained victories
over their enemies. Thefe are mere liypothefes, con- Sserifice. tradicted by the moft aushentic records of antiquity, and entitled to no regard.

By modern deitts, lacrifces are faif to have had their origin in fuperfition, which operates much in the fame way in every country. It is therefore weak, according to thofe men, to derive this prafice from any particular people; fince the fame mode of reafoning would lead various nations, without any intercourfe with cach other, to entertain the fame opinions refpecting the natureof theirgods, and the proper meansof appeaing their anger. Men of grofs conceptions imagine their deties to be like themfelves, covetous and cruel. They are accuftomed to appeafe an injured neighbour by a compofition in money; and they endeavour to compound in the fame manner with their gods, by rich offerings to their temples and to their priefs. The moft valuable property of a fimple people is their cattle. Thefe offered in facrifice are fuppofed to be fed upon by the divinity, and are actually fed upon by his pricfts. If a crime is committed which requires the punilhment of death, it is accourted perfectly fair to appeafe the deity by offering one life for znother; becaufe, by favages, punifhent is confidered as a debt for which a man may compound in the beft way that he car, and which one man may pay for another. Hence, it is faid, arole the abfurd notions of imputed guilt and vicarions atonement. Among the Egyptians, a white bull was chofen as an expiatory facrifice to their god Apis. After being killed at the altar, his head was cut off, and cat into the river, with the following execratio: "May all the evils impendin 5 over thole who perform this lacrifice, or over the Egyptians in general, be averted on this head *."

Had facrifice never prevailed in the world hut amon. Berasour? fuch grofs idolaters as wormipped departed heroes, whe were fuppofed to retain in their tlate of deification all the paffions and appetites of their mortal Itate, this account of the origin of that mode of wormip would have been to us perfectly fatisfactury. We readily admit, that fuch mean notions of their gods may have actually led far diftant tribes, who could not derive any thing from each other through the channel of tradition, to imagine that beinys of human paffons and appetices might be appeafed or bribed by colly offerings. But we know from the mof incontrovertible authority, that facrifices of the three kinds that we have mentioned were in ufe among people who worfhipped the ruk God, and who muft have had very correct notions of his attributes. Now we think it impolfible that ficls notions could have led any man to fancy that the taing away of the life of a harmlefs animal, or the burnins of a cake or other fruits of the eat th in the fire, would lee acceptable to a Being felfexiftent, omnipotent, and onlnifcient, who can neither be injured by the crimes of his creatures, nor recerve any acceffon of lappineis from a thou fand workis.

Senlible of the force of fuclı reafoning as this, fume perfons of great nane, who admit the authenticity of the Jewifh and Chritian facrifces, and firmly rely on the atonement made by Chrift, are yet unwillint (it is difficult to conceive for what reafun) to allow that facrifiees were originally inftituted by God. Ot this way of thinking were St Chryfottom, Spencer, Grotius, and Warburton, as were likewife the Jews Maimunides, R.

Sxrifice. Leri, Een Gerfon, and Abarbawel. The greater part of thefe writers naintain, that facrifices were at firft a luman inflitution; and that God, in order to prevent their being offered to idols, introduced them into his service, thougla he did not approve of them as good in thenfelves, or as proper rites of worfhip. That the insinitely wife and good God fhould introduce into his ferviec improper rites of worhip, appears to us fo extremely improbable, that we cannot but wonder how fuch an opinion flould cver have found its way into the minds of fueh men as thofe who held it. 'Warburton's theory of facrifice is much more plaufible, and being more lately publifhed, is worthy of particular examination.

According to this ingenious prelate, facrifices had their origin in the fentiments of the human heart, and in the ancient mode of converfing by action in aid of words. Gratitude to God for benefits received is natural to the mind of man, as weil as his bounden duty. "This duty (fays the binhop *) was in the mott early times difcharged in expreffive actions, the leaft equivocal of which was the offerer's bringing the firt fruits of pafurage or agriculture to that fequeftered place where the Deity ufed to be more fulemnly inroked, at the fated times of public worthip; and these prefenting them in homage, with a demand which fpoke to this purpofe. -' I do hereby acknowledge thee, O my God! to be the author and giver of all good: and do now, with humble gratitude, return my warmef thanks for thefe thy bleffings particularly beflowed upon me." -Things thus devoted became theneeforth facred: and to prevent their defecration, the readieft way was to fend them to the table of the prieft, or to confume them in the fire of the altar. Such, in the opinion of our author, was the origin of eucharittical facrifices. Impetratury or precative facrifices had, he thinks, the fame origin, and were contrived to exprefs by action an invocation for the continuance of God's favour. "Expiatury facrifices (fays the learned prelate) were in their own nature as intelligible, and in practice as rational, as either of the other two. Here, inftead of prefenting the firft fruits of a griculture and pafturage, in corn, wine, oil. and wool, as in the eucharittical, or a portion of what was to be fown or otherwife propagated, as in the impetratory; fome chofen animal precious to the repenting criminal, who deprecates or fuppofed to be obnoxious to the Deity who is to be appeafed, was offered up and nain at the altar, in an action which, in all languages, when tranflated into words, fpeaks to this purpose:- I I confefs my tranfgreffions at thy footfool, Q my God! and with the decpeft contrition implore thy pardon; confeffing that I deferve death for thofe my offences.' The latter part of the confeffion was more foreibly expefled by the aflon of Itriking the devoted animal, and depriving it ot life; which, when put into words, concluded in this manter. - 'And I own that I myfelf deferve the death which I now indict on this aninal.'

This fy ftem of facrivice, which his lordfhip thinks fo well fupperted ty the mot early movements of limple nature, we admit to be ingenious, but by no means iatistactory. That mankind in the earlier ases of the world were aceutlomed to fupply the deficiencies of their language by exprffive gefticulations we are not inclined to controvert : the cuftom prevails among favage nasions, or nations half eivilized, at the prefunt day. His
lordithip, however, is of opinion, and we hcartily agree with him, that our firft parents were infructed by God to make articulate founds fignificant of ideas, notions, and things (fee Language, \(n^{2}\) 6.), and not left to fabricate a language for themfelves. That this heaven. taught language could be at firft copious, no man will fuppole who thinks of the paucity of ideas which thofe who fpoke it had to exprefs; but when we confider its origin, we cannot entertain a doubt but that it was precife and perfpicuous, and admirably adapted to all the real purpoles of life. A mong thele purpnfes muft furely be included the wormip of God as the moft important of all. Every fentiment therefore which enters into worfhip, gratitude, invocation, confeffion, and deprecation, the progenitors of mankind were undoubtedly taught to clothe in words the moft fignificant and unequivocal ; but we know from Mofes, whofe divine legation the bifhop furely admitted, that Cain and Abel, the eldeft children of our firft parents, worflipped God by the rites of facrifice: and can we fuppofe that this practice occurred to them from their having fo far forgotten the language taught them by their father, as to be under the neceffity of denoting by action what they could not exprefs by words? If this fuppofition be admitted, it will force another upon us fill more extrava. gant. Even Adam himfelf mult, in that cafe, have becone dumb in confequence of his fall; for it is not conceivable, that as long as he was able to utter articulate founds, and affix a meaning to them, he would ceafe, in the prefence of his family, to confefs his fins, implore forgivencis, and exprefs his gratitude to God fer all his macries.

The right reverend writer, as if aware of fome fuch objection as this to his theory, contends, that if facrifices had arifen from any other fource than the liglit of reafon, the Scripture would not have been filent conecrning that fource; "efpecially fince we find Mofes carefully recording what God immediately, and not nature, taught to Adam and his family. Had the original of iaerifice, fays he, been prefcribed, and directly commanded by the Deity, the lacred hiftorian could never have omitted the exprefs mention of that circumftance. The two capital oblervances in the Jewifh ritual were the Sabbath and Sacrifices. To imprefs the highelt reverence and veneration on the Sabbuth, lie is careful to record its divine original: and can we fuppofe that, had facrifices had the fame original, he would have neglected to eftablifh this truth at the time that he reeorded the other, fince it is of equal ufe and of equal importance? I thould have faid, indeed, of much greater; for the multifarious focrifues of the Law had not oniy a reference to the forfeilure of Adim, but likewife prefigured our redemption by Jefus Chrift."
But all this reafoning was forefech, and compltely anfivered before his lordithip gave it to the public. It is probable, that though the diftiuction of wreks was well known over all the eateern world, the Hebrews, during their refidence in Egypt, were very negligent in thair obfervance of the Sabbath. To enforce a scligious obfervance of that facred day, it became neceflary to inform them of the tine and occation of its furt inflitution, that they might keep it holy in memory of the creation; but, in a country like Egypt, the people were in danger of holding facrifices rather in toohigh than too low veneration, fo that there was not the fame ne-

\section*{S A C}

Fice. seffity for mentioning explicitly the early ionfitution of them. It was fufficient that they knew the divine in. ftitution of their own facrifices, and the parpofes for which they were offered. Befides this, there is reafon to believe, that, in order to guard the Hebrews from the infections of the heathen, the rite of facrificing was loaded with many additional ceremonies at its fecond in. fitution under Miofes. It might, therefore, be improper to relate its original fimplicity to a rebellous people, who would think themfelves ill-ufed by any additional burdens of trcuble or expcuce, however really neceffary to their happinefs. Bifhop Warburton fees clearly the neceffity of concealing fiom the Jews the fpiritual and refined nature of the Chrithian difpenfation, left fueh a backfliding people fould, from the contemplation of it, lave held in contempt their own economy. This, he thinks, is the reafon why the prophets, fpeaking of the reign of the Mefliah, borrow their images from the Mofaie difpenfation, that the people living under that difpenfation might not defpife it from perceiving its end; and we.think the reafon will hold equally good for their lavgiver concealing from them the fimplicity of the firt facrifices, left they fhould be tempted to murmur at their own multifarious ritual.

But his lordfhip thinks that faerifices had their origin from the light of natural reafon. We flould be glad to know what light natural reafon can throw upon fuch a fubject. That ignorant pagans, adoring as gods departed heroes, who till retained their fenfual appetites, might naturrally think of appeafing fuch beings with the fat of fed bealts, and the perfumes of the altar, we have already admitted; but that Cain and Abel, who knew that the God whom they adured has neitlicr body, parts, nor paffions; that he created and fuftains the univerfe; and that from his very nature he muft will the happinefs of all his creatures, fhould be led by the light of natural reafon to think of appeafing him, or obtaining favours from him, by putting to death harmefs animals, is a pofition which no arguments of his lordfhip ean ever compel us to admit. That A'bel's facrifice was indeed accepted, we know ; but it was not aceepted becaufe it proceeded from the movements of the human mind, and the defieceney of the original language, but becaufe it was offered through faith. The light of natural reafon, however, does not generate faith but fcience; and wheo it fails of that, its offspring is abfurdity. "Faith is the fubftance of things hoped for, the evidence of things not feen," and comes not by reafoning but by hearing. What things then were they of which Abel had heard, for which be hoped, and in the faith of which he offered facrifice? Undoubtedly it was a reftoration to that immortality which was forfeited by the tranfgreffion of his parents. Of fuch redemption an obfcure intimation had been given to Adam, in the promife that the feed of the woman fhould bruife the head of the ferpent; and it was doubtlefs to imprefs upon his mind in more friking colours the manner in which this was to be done, that \({ }_{\text {Sec }}\) Pro- bloody facrifices were firft inflituted \(\dagger\). As long as the
tuted a perfectly rational worfhip, as they fhowed the people that the wages of fin is death; but when men funk into idolatry, and loft all hopes of a refurrection from the dead, the flaughtering of animals to appeafe their deitics was a practice grossly fuperftitious. It reft-

Vol. XVI. Part I1.
ed in itfelf withont pointing to any farther enc!, and the 3serifice. grovelling worfhippers believed that by their facritices \(-r\) they purchafed the favour of their deitics. When once this nution was entestained, human facrifices were foon in. troduced; for it naturally occurred to thofe whlo offered them, that what they moft valued themfelves would be moft acceptable to their offended gods, (fee the next article). By the Jewih law, thefe abominable ofierings were ftrictly forbidden, and the whole ritual of facrfee reflored to its original purity, though nu: fimplicity.

All Chrilkian churches, the Socinian, if it can be called a church, not excepted, have till very lately agreed in believing that the Jewifh facrifices ferved, amongtt other ufes, for types of the death of Chitif and the Chriftian worhip, (fee Type.) In this heliof all fober Chrittians agree ftill, whilt many are of opinion that they were likewife fooderal rites, as they certainly were confidered by the ancient Romans *.

Of the various kinds of Jewinh facrifices, and the fubordinate ends for which they were offered, a full account is given in the books of Mofes. When an Ifraelite offered a luaf or a cake, the prieft broke it in two parts; and letting afide that half which he referved for himfelf, broke the otler into crusnbs, poured oil. wine, incenfe, and falt upon it, and fpread the whole upon the firc of the altar. If thefe offerings were accompanied with the factifice of an animal, they were thrown upon the viclim to be confumed along with it. If the offerings were of the cars of new corn, they were parched at the fre, rubbed in the hand. and then offered to the priefl in a veffel, over which he poured vil, incenfe, wine, and falt, and then burnt it upon the altar, having firf taken as much of it as of riglat belonged to himfelf.

The principal facrifices among the Iebrews confited of bullocks, fheep, and goats; but dores and tmites were accepted from thofe who were not able to trisg the other: thefe beafts were to be perfect, and without blemifh. The rites of facrificing were various; all of which are very minutely defcribed in the books of Mofes.

The manner of facrifeing among the Greeks aud Romans was as follows. In the choice of the victim, they took care that it was without bleminh or imperfection; its tail was not to be too fnail at the end ; the tongue not black, nor the ears clett; and that the bull was one that had never been yoked. 'lhe vietim being pitched upon, they gilt his forehead and homs, efpecially if a bull, heifer, or cow. The head they alfo adorned with a garland of flowers, a woollen infula or holy fillet. whence hung two rows if chaplets with twitted ribands; and on the middle of the body a kind of fole, pretty large, hung down on each fide: the leffer victims were ouly adorned with garlands and bundles of flowers, together with white tufts or wreaths.

The victins thus prepared were brought before the altar; the leffer being driven to the place, and the greater led by an halter; when, if they made any ftruggle, or iefufed to go, the refitance was taken for an ill omen, and the facrifiec frequently fet afide. The victim thus brought was carcfully examued, to fee that there was no defeet in it: then the prieft, clad in his facerdotal habit, and accompanied with the facrificer. and other attendants, and being wafted and purified ac\(4 \dot{F}\) cording

Sacrifice. cording to the ceremonies preferibed, turned to the right hand, and went ronnd the altar, fprinkling it with meal and holy water, and alfo befprinkling thofe who were prefent. Then the crier proclaimed with a loud voice, Who is here? To which the people replicd, Many and good. The prieft then having eslonted the penple to join with him by faying, Let us pray, confeffed his own unworthinefs, acknowleeging that he had been guilty of divers fins; for which he berged pardon of the gods. hoping that they would be pleafed to grant his requefts, accept the oblations offered them, and fend them all health and happinefs; and to this general form added petitions for fuch particular favours as were then delired. Prayers being ended, the prieft took a cup of wine; and having tafted it himfelf, caufed his affilants to do the like; and then poured forth the remainder between the horns of the victim. 'Then the prieft or the crier, or fometimes the moft honourable perfon in the compary, killed the beaft, by knocking it down or cutting its throat. If the facrifice was in honour of the celeftial gods, the throat was turned up towards heaven, but if they facrificed to the heroes or infernal gods, the vietim was killed with its throat towards the ground. If by accident the beaft efcaped the ftroke, leaped up after it, or expired with pain and difficulty, it was thought to be unacceptable to the gods. The beaft being killed, the prieft infpected its entrails, and made predictions from them. They then poured wine, together with frankincenfe, into the fire, to increafe the flame, and then laid the facrifice on the altar ; which in the primitive times was burnt whole to the gods, and thence called an bolocauf; but in after-times, only part of the victim was confumed in the fire, and the remainder referved for the facrificers; the thighs, and fometimes the entrails, being burnt to their honour, the company feafted upon the reft. During the facrifice, the prieft, and the perfon who gave the facrifice, jointly prayed, laying their hand upon the altar. Sometimes they played upon mufical inftruments in the time of the facrifice, and on fome occafions they danced round the altar, finging facred hymns in honour of the god.

Hunian SAcrific \({ }^{\prime}\), an abominable practice, about the origin of which different opinions have been formed. The true account feems to be that which we have given in the preceding article. When men had gone fo far as to indulge the fancy of bribing their gods by facrifice, it was natural for them to think of enhancing the value of fo cheap an atonement by the coft and rarity of the offering; and, oppreffed with their malady, they never refted till they had got to that which they conceived to be the moft precious of all, a human facrifice.
- Apud Eu fob. 「rucp.
Evang. s. It was cuftomary (fays Sanchoniathon \(\dagger\) ), in ancient times, in great and public calamities, before things became incurable, for priaces and magiftrates to offer up in facrifice to the avenging dxmons the deareft of their offspring," Sanchoniathon wrote of Phomicia. but the practice prevailed in every nation under heaven of which we have received any ancient account. The Egyptians had it in the early part of thcir monarchy. The Cretans likewife had it, and retained it for a longer time. The nations of Arabia did the fame. 'The people of Dumah, in particular, facrificed every year a child, and buried it underneath an altar, which they made ufe of inftead of an idol; for they did not admit of images.

The Perfians buried people alive. Ameftris, the wife of Xerxes, entombed 12 perfons quick under ground for the good of her foul. It would be endlefs to enumeratc every city, or every province, where thefe dire practices obtained. The Cyprians, the Rhodians, the Ploceans the Ionians, thole of Chios, Leibos, Tenedos, all had human facrifices. The natives of the Tauric Cherfoncfus offercd up to Diana cvery flranger whom chance threw upon their coat. Hence arofe that juft expoftulation in Euripides upon the inconfifency of the proceeding; whercin much good reafoning is implied. Iphigenia wonders, as the goddefs delighted in the blood of men, that every villain and murderer fhould be privileged to cfcape, nay, be driven from the threfhold of the temple; whereas, if an honef and virtuous man chanced to ftray thitber, he only was feized upon, and put to death The Pelafgi, in a time of fcarcity, vowed the tenth of all that fhould be born to them for a facrifice, in order to procure plenty. Arifo tomeres the Meffenian flew 300 noble Lacedemonians, among whom was Theopompus the king of Sparta, at the altar of Jupiter at Ithome. Without doubt the Lacedemonians did not fail to make ample returns; for they were a fevere and revengeful peopie, and offered the like victims to Mars. Their feftival of the Diamafticofis is well known; when the Spartan boys were whipped in the fight of their parents with fuch feverity before the altar of Diana Orthia, that they often espired under the torture. Phylarchus affirms, as he is quoted by Porphyry, that of old every Grecian fate made it a rule, before they marched towards an enemy, to folicit a bleffing on their undertakings by human victims.
The Romans were accultomed to the like facrifices. They both devoted themfelves to the infernal gods, and conftrained others to fubmit to the fame horrid doom. Hence we read in Titus Livius, that, in the confulate of Emilius Paulus and Terentius Varro, two Gauls, a man and a woman, and two in like manncr of Greece, were buried alive at Rome in the Ox -market, where was a place under ground, walled round, to receive them; which had before been made ufe of for fuch cruel purpofes. He fays it was a facrifice not properly Roman, that is, not originally of Koman inftitution; yet it was frequently practifed there, and that too by public authority. Plutarch makes mention of a like inflance a few years before, in the confulfip of Flaminius and Furius. There is reafon to think, that all the principal captives who graced the triumphs of the Romans, were at the clofe of that cruel pageantry put to death at the altar of Jupiter Capitolinus. Caius Marius offered up his own daughter for a victim to the Dii Averrunci, to procurc fuccefs in a battle againft the Cimbri; as we are informed by Dorotheus, quoted by Clemens. It is likewife attefted by Plutarch, who fays that her name was Calpurnin. Marius was a man of a four and bloody difpofition; and had probably heard of fuch facrifices being offered in the enemy's camp, among whom they were very common, or he might have beheld them exhibited at a diftance; and therefore murdered what was neareft, and fhould have been deareft to him, to counteract their fearful fpells, and outdo them in their wicked machinery. Cicero, making mention of this cuftom being common in Gaul, adds, that it prevailed among that people even at the

Ace. time he was fpeaking : from whence we may be led to infer, that it was then difcontinued among the Romans. And we are told by Pliny, that it liad then, and not very long, been difcouraged. For there was a law enacted, when Lentulus and Craffus were confuls, fo late as the \(6_{57}\) th year of Rume, that there fhould be no morc human facifices: for till that time thofe horrid rites had been celebrated in broad day without any mafk or controul ; which, had we not the beft evidence for the fact, would appear fcarce credible. And however they may have been difcontinued for a time, we find that they were again renewed; tho' they became not fo public, nor fo general. For not very long after this, it is reported of Auguftus Cæfar, when Perufia furrendered in the time of the fecond triumvirate, that befides multitudes executed in a military manner, he offered up, upon the Ides of March, 300 chofen perfons, both of the equeftrian and fenatorial order, at an altar dedicated to the manes of his uncle Julius. ` Even at Rome itielf this cultom was revived: and Porphyry affures us, that in his time a man was every year facrificed at the Ihrine of Jupiter Latialis. Heliogabalus offered the like victims to the Syrian deity which he introduced among the Romans. The fame is faid of Aurelian.

The Gauls and the Germans were fo devoted to this fhocking cultom, that no bulinefs of any moment was tranfacted among them without being prefaced with the blood of men. They were offered up to various gods; but particularly to Hefus, Taranis, and Thantates. Thefe deities are mentioned by Lucan, where he enumerates the varions nations who followed the fortunes of Cxfar.

The altars of thefe gods were far removed from the common refort of men; being generally lituated in the depth of woods, that the gloom might add to the horror of the operation, and give a reverence to the place and proceeding. The perfons devoted were led thither by the Druids, who prefided at the folemnity, and performed the crucl offices of the facrifice. 'Tacitus takes notice of the cruelty of the Hermunduri, in a war with the Catti, wherein they had greatly the advantage ; at the clofe of which they made one general facrilice of all that was taken in battle. The poor remains of the legions under Varus fuffered in fome degree the fame fate. ithere were many places deftined for this purpofe all over Gaul and Germany ; but efpecially in the mighty woods of Arduenna, and the great Hercynian forelt ; a wild that extended above 3 days journey in length. The places fet apart for this folemnity were held in the utmolt reverence, and only approached at particular feafons. Lucan mentions a grove of this fuit near Maffilia, which even the Roman loldiers were afraid to violate, though commanded by Cæfir. It was one of thofe fet apart for the facrifices of the country.
Claudian compliments Stilicho, that, among other advantages accruing to the Noman armies through his condnct, they could now venture into the awful foret of Hercynia, and follow the chace in thofe fo much sireaded woods, and otherwile make uife of them.

Thefe practices prevailed among ail the people of the north, of whatever denomination. Ihe Malfagetæ, the Scythians, the Getes, the Sarmatians, all the various nations upon the Baltic, particularly the

Suevi and Scandinavians, held it as a fixed priaciple, \(S_{2 \sim-f: 5}\) that their happineff and fecurity could not be obtained -but at the expence of the lives of others. Thair chicf gods were Thor and Woden, whom they thought they could never fufficiently glut with blood. Tbey had many very celelurated places of worthip; efpecially in the ifland Rugen, near the mouth of the Oder; and in Zeeland: fome, too, very famous among the Semnones and Naharvalli. But the moft reverenced o: all, and the moft frequented, was at Upfal; where there was every year a grand celebrity, which continued for tiine days During this term they facrifoced animads of all lorts : but the moft acceptable victims, and the moft numerous, were men. Of thefe facrifices none were efteemed fo aufpicious and falutary as a facrifice of the prince of the country. When the lot fell for the king to die, it was received with univerfal acelamations and every expreffion of joy; as it once happened in the rime of a famine, when they calt lots, and it fell to king Domalder to be the people's victim: and he was aecordingly put to death. Olaus Tretelger, another prince, was burnt alive to Woden. They did not fpare their own children. Harald the fon of Gonild, the firlt of that name, Dew two of his children to ubtain a florm of wind. "He did not let (fays Verltegan) to facrifice two of his fons unto his idols, to the end he might obtain of them fuch a tempeft at fea, as th suld break and difperfe the fhipping of Harald king of Denmark." Saxo Grammaticis men. tions a like fact. He calls the king Haquin; and ipeaks of the perfons put to death as two very hopeful young princes. Another king flew nine fons to prolony his own life; in hopes, perhaps, that what they were ahridged of would in great meafure be added to himfelf Such iniltances, however, occur not often : bu: the common victims were without end. Adaun Bremenfis, fpeaking of the awful grove at Upial, where thele horrid rites were celebrated, Ciy;, that there was not a fingle tree but what was reverenced, as if it were gifted with fome portion of divinity: and all this becaufe they were ftained with gore and foul with human putrefaction. The fane is obferved by scheifer iah h: account of this place.

The manner in which the victims were flaughtered, was diverle in dillerent places. So'ne of the Gaulifh nations chined them with a ftroke of an ax. The Celtæ placed the man who was to be olfered for a facrifice upon a block, or an altar, with his brealt upwards, and with a fword ftruck him forcibly acrofs th: Iternum ; then zumbling him to the ground, from his agonies and convultions, as well as from the effation of hlood, they formed a judginent of future events. The Cimbri ripped open the bowels; and from them they pretended to divine. In Norway they beat inens brains out with an ox-yoke. The fame operation was perforined in Iceland, by dafh.ng thein againit an altan of ftone. In many places tuey transtixed chem with arrows. After they were dead, they lufpended thein upon the trees, and left them to putrety. One of the writers above quoted mentions, that in his time 70 carcafes of this fors were found in a wood of the seevi. Dithorar of Merfourgh, an author of nearly the lime age, fpeaks of a place called Ledur in Zecland, where there were every year 99 verions facriticed to the row Swantowite. During tuefe bloody fetivals a ge:ieral 4 F 2

Sacrifice joy prevailed, and banquets were moft royally ferved. They fed, caroufed, and gave a lonfe to iadulgence, which at other times was not permitted. They imagined that there was fomething mylterinus in the number nine: for which reafon thefe feats were in fome places celebrated every ninth year, in others every ninth month ; and continued for nine days. When all was ended, 'they wafhed the image of the deity in a pool; and then difmifed the affembly. Their fervants were numerous, who attended during the terin of their feafting, and partook of the banquet. At the clofe of all, they were finothered in the fame pool, or otherwife 'made away with. On which Tacitus remarks, how great an awe this circumftance mult neceflariFy infure into thofe who were not admitted to thefe niytheries.

Thefe accounts are handed down from a variety of authors in different ages; many of whom werc natives of the countries which they defcribe, and to which they feem flrongly attached. They would not thcrefore have brought fo foul an imputation on the part of the world in favour of which they were each writing, nor could there be that concurreace of teftimony, were not the hiftory in general truc.

The like cuftom prevailed to a great degree at Mesico, and even under the mild government of the Peruvians; and in molt parts of America. In Africa it is ftill kept up; where, in the inland parts, they facrifice fome of the captives taken in war to their fetiches, in order to fecure their favour. Snelgrave was in the king of Dahoome's camp, after his inroad into the countries of Ardra and Whidaw ; and fays, that he was a. witnefs to the cruclty of this prince, whom he faw facrifice multitudes to the deity of his nation.

The fame abominable worthip is likewife practifed - occafionally in the illands vifited by Captain Cook, and other circumnavigators, in the South Sea. It feeme indeed to have prevailed in every comitry at one period of the progrefs of civilization, and undoubtedly laad the origin which we have affigned to it.

The facrifices of which we have been treating, if we except fome few inftances, confifted of perfons doomed by the chance of war, or affigned by lot, to be offered. But among the nations of Canaan, the victins were peculianty chofen. Their own children, and whatever was neareft and deareft to them, were deemed the molt worthy offering to their god. The Carthaginians, who were a colony from Tyre, carried with them the religion of their mother-country, and inftituted the fame worfhip in the parts where they fettled. It confifted in the adoration of feveral deities, but particularly of Kronus; to whom they offered human facrifices, and efpecially the blood of children. If the parents were not at hand to make an immediate offer, the magifrates did not fail to make choice of what was mof fair and promifing, that the god might not be defrauded of his dues. Upon a check being received in Sicily, and fome other alarming circumitances happening, Hamilcar without any hefitation laid hold of a boy, and offered him on the fpot to Kronus; and at the fame time drowned a number of priefts, to appeafe the deity of the fea. The Carthaginians another time, upon a great defeat of their army by Agathocles, imputed their mifcarriages to the anger of this god, whofe fervices had been neglected. Touched with this, and feeing the
enemy at their gates, they feized at once 300 children Sacrif of the prime nobilty, and offered them in public fur a facrifice. Three hundred more, being perfons who were fomehow obnoxious, yielded themfelves voluntarily, and were put to death with the others. The neglect of which they accufed themfelves, confilted in facrificing children purchafed of parents among the poorer fort, who reared them for that purpofe, and not felecting the molt promifing, and the molt honourable, as had been the cultom of old. In fhort, there were particular children brought up for the altar, a3 fheep are fattened for the mambles; and they were bought and butchered in the fame manner. But this indifcriminate way of proceedin 5 was thought to have given offence. It is remarkable, that the Egyptians looked out for the moft fpecious and handfome perforn to be facrificed. The Albanians pitched upon the beft man of the community, and made him pay for the wickednefs of the relt. The Carthaginians chofe what they thought the molt excellent, and at the fame time the mot dear to them; which made the lot fall heavy upon their children. This is taken notice of by Silius Italicus in his fourth book.

Kronus, to whom thefe facrifices were exhibited, was an oriental deity, the god of light and fire; and therefore always worthipped with fome reference to that element. See Phoenicia.

The Greeks, we find, called the deity to whom thefe offerings were made Agrauls; and feigned that The was a woman, and the danghter of Cecrops. But how came Cecrops to have any connection with \(\mathrm{C}_{5}\) prus? Agraulos is a corruption and tranfpofition of the original name, which fhould have been rendered \(U k E l\) Aur, or Uk El Aurus ; but has, like many other orien. tal titles and names, been frangely fophifticated, and is here changed to Agraulos. It was in reality the god of light, who was always worthipped with fire. This deity was the Moloch of the Tyrians and Canaanites, and the Melech of the eatt ; that is, the great and principal god, the god of light, of whom fire was ctteemed a fymbol ; and at whofe fhrine, inftead of viler victims, they offered the blood of men.

Such was the Kronus of the Greeks, and the Mo. loch of the Phenicians: and nothing can appear more focking than the facrifices of the Tyrians and Carthaginians, which they performed to this idol. In all emergencies of ftate, and times of general calamity, they devoted what was moft neceflary and valuable to them for an offering to the gods, and particularly to Moloch. But befides thefe undetermined times of bloodfhed, they had particular and preferibed feafons every year, when childreu were chofen out of the moft noble and reputable families, as before mentioned. If a pcrfon had an only child, it was the more liable to be put to death, as being efteemed more acceptable to the deity, and more efficacious for the general good. Thofe who were facrificed to Kronus were thrown into the arms of a molten idol, which ftood in the midft of a large fire, and was red with heat. The arms of it were ftretched out, with the hands turned upwards, as it were to receive them; yet floping downwards, fo that they dropt from thence into a glowing furnace below. To other gods they were otherwife flaughtered, and, as it is implicd, by the very hands of their parents. What can be more horric
fice horrid to the imagination, than to fuppofe a father - leading the dearell of all his fons to fuch an infernal frine? or a mother the molt enfaging and affectionate of her daughters, juft rifing to maturity, to be flaurhtered at the altar of Afhtaroth or Baal? Juftin defcribes this unnatural cuftom very pathetically: Quippe bomines, ut viatinas, immslabant: at impuberes (qua retus bofium mifericurcilain provacal) oris adnores bant; pacem ju:cuine corum expofentes, pro quarum vita Dii rogari maxime folent. Such was their blind zeal, that this was continually practifed; and fo much of vatural affection fill left unextinguifhed, as to render the fcene ten times more fhocking from the tendernefs which they feemed to exprefs. They embraced their children with great fondnefs, and encouraged them in the gentleft terms, that they might not be appalled at the fight of the hellifh procels; begging of them to fubmit with cheerfuluefs to this fearful operation. If there was any appearance of a tear rifing, or a cry unawares efcaping, the mother fmothered it with her kifles, that there might not be any fhow of backwardnefs or conitraint, but the whole be a freewill offering. Thefe cruel endearments over, they flabbed them to the heart, or otherwife opened the fluices of life; and with the blood warm, as it ran, befmeared the altar and the grim vifage of the idol. Thefe were the cutoms which the Ifraelites learned of the people of Canaan, and for which they are uporaided by the Pfalmit: "They did not deftroy the nations, concerning whom the Lord commanded them ; but were mingled among the heathen, and learned their works: yea, they facrificed their fons and their daughters unto dcvils, and fhed innocent blood, even the blood of their fons and of their daughters, whom they facrificed unto the idols of Canaan; and the land was polluted with blood. Thus were they defiled with their own works, and went a-whoring with their own inventions."

Thefe cruel rites, practifed in fo many nations, made Plutarch debate with himfelf, "Whether it would not have been better for the Galatæ, or for the Scythians, to have had no tradition or conception of any fuperior beings, than to have formed to themfelves notions of gods who delighted in the blood of men; of gods, who eftecmed human vi\&tims the moft acceptable and perfeet facrifice? Would it not (fays he) have been more eligitle for the Carthaginians to have had the atheift Critias, or Diagoras, their lawgiver, at the commencement of their polity, and to have been taught, that there was neither god nor demon, than to have facrificed, in the manner they were wont, to the god which they adored? Wherein they acted, not as the perfon did whom Empedocles defcribes in fome poeiry, where he expofes this unnatural cuftom. The fire there with many ide vows offers up unwittingly his fon for a facrifice ; but the youtb was fo changed in feature and Gigure, that his father did not know him. Thefe people ufed, knowingly and wilfully, to "go through this bloody work, and flaughter their own offspring. Even they who were childlefs would not be cxempted from this curfed tribute; but purchafed children, at a price, of the poorer fort, and put them to death with as little remorfe as one would kill a lamb or a clicken. The mother, who facrificed her child, Itood by, without any feeming fenfe of what the was loling, and without uttering a groan. If a ligh \(\mathrm{d}_{\mathrm{i}}^{\mathrm{d}}\)
by chance efcape, the lof all the honour which the Saeritege propofed to herfelf in the offering, and the child was notwithfaruing flain. All the time of this ceremony, Bad lucees. while the clildren were murdering, there was a noife of clarions and tabors founding befure the idol, that the cries and haricks of the victims might not be heark. "Tcll me now (Fdys llutarch) if the monters of old, the Typhons, and the giants, were to expel the gods, and to rule the world in their Aead; could they require a fervice more horrid than thefe infernal rites and, facrifices?"

SACRILEGE, sacrilegium, the crime of profaning facred things, or things devoted to God; or of alinating to laymen, or common purpofes, what was given to religious perfons and pious ufes.

SACRISTAN, a church-officer, otherwife called Sexton.

SACRISTY, in church-hitory, an apartment in a church where the facred utenfils were kept, being the fame with our Vestry.

SADDLE, is a feat upon a horfe's back, contrived for the conveniency of the rider.

A hunting-fadule is compofed of two bows, two bands, fore-bollters, panizels, and faddle-ftraps ; and the great faddle has, befides thefe parts, corks, hind-boifters, and a trouflequin.
'The pommel is common to both.
SADDUCEES, were a famous fect among the an. cient Jews, and confited of perfons of great quality and opulence. Refpecting their origin there are various accounts and various opinions. Epiphauius, and after him many other uriters, contend, that they took their rife from Dofitheus a fectary of Samaria, and their name from the Hebrew word pus jufl or jufire, from the great juttice and equity which they fhowed in all their actions; a derivation which neither fuits the word Sadducee nor the general character of the fect. They are thought by fome too to have been Samantans; but this is by no means probable, as they always ato tended the worthip and facrifices at Jerufalem and never at Gerizzim.

In the Jewim Talmud we are told that the Sadducees derived their name from Sadoc, and that the feet arufe about 260 years before Chrift, in the time of Antigonus of Socho, prefident of the Sanhedrim at Jerufalem, and teacher of the law in the principal divinity fehool of that city. He had often in his lectures, it feems, taught his icholars, that they ought not to ferve God as naves do their maters, from the hopes of a reward, but merely out of filial love for his own fake; from which Sadoc and Baithus inferred that there were no rewards at all after this life. They therefore feparated from their matter, and taught that there was no refurrection nor future flate. 'I his new doctrine quickly fpread, and gave rife to the feet of Sadducees, which in many refpects refembled the Epicureans.
Dr Pridcaux thinks, that the Sadducees were at fift no more than what the Caraites are now; that is, they would not receive the traditions of the elders, but thuck to the written word only; and the Plarifees being gieat promoters of thofe traditions, hence thefe two feets becane directly oppofite to each other. See Prideaux's Conn. part. ii. b. 2 and 3 . and fee alfo Pharisess and Caraites.

Afterwards the Sadducces imbibed other doetrines,

sidduces. which renjered them a fect truly impious; for they denied the refurrection of the dead, and the exiftence of angels, and of the fpirits or fouls of men departed (Mat. xxii. 23. Acts xxiii. 8.) They beld, that there is no \{piritual being but God only; that as to man, this world is his all. They did not deny but that we had reafonable fonls : but they maintained this foul was mortal; and, by a neceflary confequence, they denied the rewards and punimments of another life. They pretended alfo, that what is faid of the exiftence of angels, and of a future refurrection, are nothing but illufions. St Epiphanius, and after him St Auftin, have advanced, that the Sadducees denied the Holy Ghoft. But neither Jofephus nor the evangelifts accufe them of any error like this. It has been alfo imputed to them, that they thought God corporeal, and that they received none of the prophecies.

It is pretty difficult to apprehend how they could deny the being of angels, and yet receive the books of Mofes, where fuch frequent mention is made of angels and of their appearances. Grotius and M. Le Clerc obferve, that it is very likely they looked upon angels, not as particular beings, fubfilting of themfelves, but as powers, emanations, or qualities, is.feparable from the Deity, as the fun-beams are infeparable from the fun. Or perhaps they held angels not to be feiritual but mortal ; juft as they thought that fubftance to be which animates us and thinks in us. The ancients do not tell us how they folved this difficulty, that might he urged againft them from fo many paffages of the Pentateuch, where mention is made of angels.

As the Sadducees acknowledged neither punifhments nor recompenfes in another life, fo they were inexorable in their chaftifing of the wicked. They obferved the law themfelves, and caufed it to be obferved by others, with the utmolt rigour: They admitted of none of the traditions, explications, or modifications, of the Pharifees; they kept only to the text of the law ; and maintained, that only what was written was to be obferved.
The Sadducecs are accufed of rejecting all the books of Scripture except thofe of Mofes; and to fupport this opinion, it is obferved, that our Saviour makes ufe of no Scripture againft them, but paffages taken out of the Pentateuch. But Scaliger produces good proofs to vindicate them from this reproaeh. He obferves, that they did not appear in lfrael till after the number of the holy books were fixed; and that if they had been to choofe out of the canonical Scriptures, the Pentateuch was lefs favourable to them than any other book, fince it often makes mention of anoels and their apparition. Befides, the Sadducees were prefent in the temple and at other religions affemblies, where the books of the prophets were read indifferently as well as thofe of Mofes. They were in the chief employs of the nation, many of them were even priefts. Would the Jews have fuffered in thefe employments perfons that rejected the greateft part of their Scriptures? Menaffe ben-Irral fays exprefsly, that indeed they did not rejeet the prophets, but that they explained them in a fenfe very different from that of the other Jews.

Jofephus affures us, that they denied defliny or fate; alleging, that thefe were only founds void of fenfe, and that all the good or evil that happens to us is in conse-
quence of the good or evil fide we have taken, by the Saddue frce choice of our will. 'They faid alfo, that God was far removed from doing or knowing evil, and that man was the abfolute matter of his own actions. This was roundly to deny a providence; and upon this fonting I know not, fays \(F\). Calmet, what could be the religion of the Sadducees, or what influence they could afcribe to God in things here below. However, it is certain they were not only tolerated amons the Jews, but that they were admitted to the high-priefthood it[elf. John Hircanus, high-prieft of that nation, feparated himfelf in a fignal mamuer from the fect of the Pharifees, and went over to that of Sadoc. It is faid alfo, he gave ftrict command to all the Jews, on pain of dcath, to receive the maxims of this fect. Antobulus and Alexander Jannæus, fon of Hircanus, contipued to favour the Sadducees; and Maimonides affures us, that under the reign of Alexander Jannæus, they had in poffeffion all the offices of the Sanhedrim, and that there only remained of the party of the Pharifees, Simon the fon of Secra. Caiaphas, who condemned Jefus Chritt to death, was a Sadducee (Acts, v. 17. iv. 1.) ; as alfo Ananus the younger, who put to death St James the brother of our Lord. At this day, the Jews hold as heretics that fmall number of Sadducees that are to be found among them. See upon this matter Serrar. Triburef. Minclfe ben-I/rael, de Refurreqione mortsorum; Bnfnage's Hifiory of the Jews, \&c.; and Calmet's Difertation upen the Selis of the Fews before the Commensary of St Mark.

The fect of the Sadducees was much reduced by the deftruction of Jerufalem, and by the difperfion of the Jews; but it revived afterwards. At the beginning of the third century it was fo formidable in Egypt, that Ammonim, Origen's mafter, when he faw them propagate their opinions in that country, thought himpleff obliged to write againft them, or rather againft the Jews, who tolerated the Sadducees, though they denied the fundamental points of their religien. The emperor Juftinian mentions the Sadducees in one of his novels, banifhes them out of all the places of his dominions, and condemns them to the fevereft punifhments, as people that maintained atheiftical and impious tenets; denying the refurrection and the laft judgment. Annus, or Ananus, a difciple of Juda, fon of Nachman, a famous rabbin of the 8th century, declared himielf, as it is faid, in favour of the Sadducees, and ftrenuounly protected them againft their adverfai ies. They had alfo a celebrated defender in the 12 th century, in the perfon of Alpharag a Spanih rabhin. 'This doctor wrote againft the Pharifees, the declared enemies of the Sadducees; and maintained by his public writings, that the punity of Judaifm was only to be found among the Sadducees; that the traditions avowed by the Pharifees were ufelefs; and that the ceremonies, which they had multiplied without end, were an infupportable yoke. The rabbi Abraham ben-David Italleri replied to Alpharag, and fupported the fect of the Pharifees by two great arguments, that of their univerfality and that of their antiquity. He proved their antiquity by a continued fucceffion from Adam down to the year 1167; and their univerfality, becaufe the Pharifees are fpread all the world over, and are found in all the fynagogues. There are ftill Sadducees in Africa and in feveral other places. They deny the inmortality of the foul, and the refurrection of the body; but they are rarely found, at leaft there are but few who declare themfelves for thefe opinions.
