SADLER (John), was defcended from an aneient family in Shrophire ; born in 1615; and educated at Cambridge, where he became eminent for his great knowledge in the oriental languages. He removed to Lincoln's-Inn, where the made no fmall progrefs in the fudy of the law ; and in \(164+\) was admitted one of the mafters in chancery, as alfo one of the two matters of requefts. In 1649 he was chofen town-clerk of London, and the fame year publifhed his Rights of the King. dom. He was greatly efteemed by Oliver Cromwell, by whofe fecial warrant he was continned a matter in Chancery, when their number was reduced to fix. By his intereft it was that the Jews obtained the privilege of building for themfelves a fynagogue in London. In 1658 he was made member of parliament for Yarmouth ; and next year was appointed firit commiffioner under the great feal with Mr Taylor, Mr Whitelocke, and others, for the probate of wills. In 1660 he publifhed his Ollia. Soon after the Reftoration, he loft all his employments. In the fire of London in \(1 \in 66\), he was a great fufferer ; which obliged him to retire to his feat of Warmwell in Dorfethire, where he lived in a private manner till 1674 , when be died.

SADOC, a famous Jewifh rabbi, and founder of the fect of the Sadducees.

SADOLE Г (James), a polite and learned cardinal of the Romifh church, born at Modena in 1477 . Leo X. made him and Peter Bembus his fecretaries, an office for which they were both well qualified; and Sadolet was foon after made bifhop of Carpentras, near Avignon : he was made a cardinal in 1536 by Panl III. and employed in feveral negociations and embaffies. He died in \(15+7\), not withont the fufpicion of poifon, for correfponding too familiarly with the Proteftants, and for teftifying too much regard for fome of their doctors. His works, which are all in Latin, were collected in 1607 at Mentz, in one volume 8 vo . All his contemporaries fooke of him in the higheft terms.

SAFE-GUARD, a protection formerly granted to a ftranger who feared violence from fome of the king's fubjeets for feeking his right by courfe of law.

SAFE-Condua, is a fecurity given by a prince under the great feal, to a flranger for his fufe-coming into and palfing out of the realm; the form whereof is in Res. Orig. 25. 7 here are letters of fafe conduct which mult be enrolled in chancery; and the perfons to whom granted muft have them ready to thow ; and touching which there are feveral flatutes. See Prero. gatife.

SAFFRON, in the materia medica, is formed of the Sce Cro- Atigmata of the crocus officinalis *, dried on a kiln, and prefled together into cakes. Of this there are two kinds, the Englifh and Spanith ; of which the latter is by far the moft efteemed. Saffron is principally cultivated in Cambridgethire, in a circle of about ten milcs diameter. The greateft part of this tract is an open level country, with few inclofures; and the cuftom there is, as in mof other places, to crop two years, and let the land be fallow the third. Saffron is generally planted upon fallow-ground, and, all other things being alike, they prefer that which has borne barley the year before.

The faffron ground is feldom above three acres, or Saffor. lefs than one ; and in chooing, the principal thing they Safror. have regard to is, that they be well expofed, the foil not poor, nor a very fliff clay, but a temperate dry mould, fuch as commonly lics upon chalk, and is of an hazel colour ; though, if every thing elfe anfwers, the colour of the mould is pretty much neglected.

The ground being made choiee of, about Lady-day or the begimuing of A prid, it muft be carefully plough ed, the furrows beins drawn much elofer together, and deeper if the foil will allow it, than is donc for agy kind of corn ; and accordingly the charge is greaier.

About five weeks a'ter, during any time in the month of May, they lay between 20 and 30 loads of dung upon eacll acre, and having fpread it with great care, they plough it in as before. The fhorteft rotten dung is the beft; and the farmers, who have the conveniency of making it, fpare no pains to make it good, being furc of a proportionable price for it. About midfummer they plough a third time, and between esery i6 feet and an half they leave a broad furrow or trench, which ferves both as a boundary to the feveral parcels, and for throwing the weeds into at the proper feafon. The time of planting is commonly in the month of July. The only inftrument ufed at this time is a fmall norrow fpade, cominonly called a fpit-hozel. The method is this: One man with his thovel raifes about three or four inches of earth, and throws it betore him about fix or more inches. Two perfons, generally women, follow with roots, which they place in the farthet edge of the trench made by the digger, at about three inches from each other. As foon as the digger las gone once the breadth of the ridge, he begins again at the other fide; and, digging as before, covers the roots lalt fet, which makes room for another row of ruots at the fame diflance from the firft that they are from une another. The only dexterity neceflary in digging is, to leare fome part of the firft fratum of earth untouched, to lie under the roots ; and, in fetting, to place the roots directly upon their bottom. The quantity of roots plant. ed on an acre is generally about 16 quarters, or 128 . buftels. From the time of planting till the becifining of September, or fometimes later, there is no more la. bour required; but at that time they begin to vegetate, and are ready to flow themfelves above ground, which may be known by digging up a few of the roots. The ground is then to be pared with a tharp lioe, and the weeds raked into the furrows, cthervife they would hinder the growth of the faffron. In fome time after, the flowers appear.

They are gathered before they are full blown, as well as after, and the proper time for it is early in the norning. The owners of the faffron-fields get together a fufficient number of hands, who pull off the whole Howers, and throw thern by handfuls into a basket, and fo continue till about is o'elock. Having then carried home the flowers, they immediately fall to pick. ing out the ftigmata or chives, and sogether with then a pretty large proportion of the fylus itfelf, or ftring to which they are attached: the reft of the flower they throw away as ufelefs. Next morning they returi to the ficld, without regarding whether the weather be wet or dry; and fo on daily, even on Sunjays, tiil th. whole crop is gathered. - The next labour is to dry the chives on the kiln, The kilo is buit upon a thick
plas

\section*{S A F [600 ] S A G}
s.fror, plank, that it may be moved from place to place. It is Supported by four fhorit legs: the outhde confifts of cight pieces of wood of three inches thick, in form of a quadrangular frame, about 12 inches fquare at the bottom on the infide, and 22 on the upper part; which latt is likewife the perpendicular height of it. On the forefide is left a hole of about eight inches fquare, and four inches above the plank, though which the fire is put in; over all the reft laths are laid pretty thick, clofe to one another, and nailed to the frame already mentioned. They are then plaftered over on buth fides, as arc alfo the planks at bottom, very thick, to ferve for an hearth. Over the mouth is laid a haircloth, fixed to the edges of the kiln, and likewife to two rollers or moveable pieces of wood, which are turned by wedges or ferews, in onder to ftretch the eloth. Infead of the hair-cloth, fome people ufe a net-work or iron-wire, by which the fafiron is fooner dricd, and with lefs fuel ; but the difficulty of preferving it from burning makes the hair-cloth preferred by the beft judges. "lhe kiln is placed in a light part of the houfe; and they begin with putting five or fix theets of white paper on the hair-cloth, and upon thefe they lay out the wet faffron two or three inches thick. It is then covered with fome other theets of paper, and over thefe they lay a coarfe blanket five or fix times doubled, or inttead of this, a canvas pillow flled with flraw; and after the fre has been lighted for fome time, the whole is covered with a board having a confiderable weight upon it. At firt they apply a pretty ftrong heat, to make the chives fweat as they call it ; and at this time a great deal of care is neceflary to prevent burning. When it has been thus cried about an hour, they turn the cakes of faffron upfide down, putting on the coverings and weight as before. If no finitter accident happens during thefe firlt two hours, the danger is thought to be over; and nothing more is requifite than to keep up at very gentle fire for 24 hours, turning the cake every half hour. That fuel is beft which yields the laft fmoke; and for this reafon charcoal is preferable to all others.

The quantity of faffron produced at a crop is uncertain. Sometimes five or fix pounds of wet chives are got from one rood, fometimes not above one or two ; and fometimes not fo much as is fufficient to defray the expence of gathering and drying. But it is always obferved, that about five pounds of wet faffron go to make one pound of dry for the firlt three weeks of the crop, and lix pounds during the lat week. When the heads are planted wery thick, two pounds of dry faffron may at a medium be allowed to an acre for the fint crop, and 24 pounds for the two remaining ones, the third being coufiderably larger than the fecond.

To obtain the fceond and third crops, the labour of hocing, gathering, picking, \&c. already mentioned, mult be repeateo; and about midfummer, after the third crop is gathered, the roots mult all be taken up and tranfplanted. For taking up the roots, fometimes the plough is made ufe of, and fomctimes a forked hoe; and then the ground is harrowed once or twice over. During all the time of ploughing, harrowing, \&e. 15 or more people will find work enough to follow and gather the heads as they are turned up. The roots are next to be carried to the houfe in faciss, where they are cleaned and rafed. This labour confifts in cleaning the roots
thoroughly fran earth, decayed old pieces, involsera, or exerefcences; after which they become fit to be planted in new ground immediately, or they may be kept for fome time, without danger of fpoiling. The quantity of roots taken up in proportion to thofe plant. ed is uncertain; but, at a medimm, 24 quarters of clean roots, fit to be planted, may be had from each acre. There fometimes happens a remarkable change in the roots of faffron and fome other plants. As foon as they begin to fhoot upwards, there are commonly two or three large tap-roots fent forth from the fide of the old one, which will run two or three inches deep into the ground. At the place where thefe bulbs firft come ont from, the old one will be formed fometimes, though not always, and the tap-root then decays. The bulb increafes in hignefs, and at laft falls quite off; which commonly happens in April. But many times there tap-routs never pioduce any bulbs, and remain barren for ever after. All fuch roots therefore fhould be thrown away in the making a new plantation. This degencracy of the roots is a difeale for which no cure is as yet known.

When faffron is offered to fale, that kind ought to be chofen which las the brondeit blades; this being the mark by which Englifh faffron is diftinguifhed from the foreign. It ought to be of an orange or fiery-red colour; and to yield a dark yellow tincture. It hould be chofen frefh, not above a year old, in clufe cakes, neither dry nor yet very moill, toush and firm in tearing, of the fame colour within as without, and of a Itrong, acrid, diffufive fmell.

This drug has been reckoned a very elegant and ufe. ful aromatic. Befides the virtues it has in common with other fubflances of that clafs, it has been accounted one of the higheft cordials, and is faid to exhilarate the fpirits to fuch a degree as, when taken in large do. fes, to occafion immoderate mirth, involuntary laughter, and the ill effects which follow from the abufe of fpirituous liquors. This medicine is particularly ferviceable in hytteric depreffions proceeding from a cold caufe or obltruction of the uterine fecretions, where other aromatics, even thofe of the more generous hind, have little effect. Saffron innu.irs the whole of its virtue and colour to rectificd fpiri, proof-fpirit, wine, vinegar, and water. A tincture diawis with vinegar lofes greatly of its colour in keeping: the watery and vinons tinctures are apt to grow four, and then lofe their colour afo: that made in pure fpirit keeps in perfection for many years.

Meadow-Safrron. See Colchicum.
SAGAN, in fcripture-hillory, the fuffragan or deputy of the Jewilh high prielt. According to fome writers, he was only to officiate for him when he was rendered incapable of attending the fervice through ficknefs or legal uncleannels on the day of expiation; or, according to others, he was to allift the high-prieft in the care of the affairs of the temple and the fervice of the priells.

SAGAPENUM, in pharmacy, \&c. a gum-refin brought to us in two forms; the finer and purer is in loofe granules or fingle drops; the coarfer kind is in maffes compofed of thefe drops of various fizes, cemented together by a matter of the fame kind. In either cafe, it is of a firm and compaet fubftance, confiderably heavy, ard of a reddith colour on the outfide, brownifi within,
within, and fpotted in many places with fmall yelowifh or whitith fpecks. Its fmell is ftrong and difagreeable; its tafte acrid and urpleafant.

It is brought to us from Perfia and the Eaft Indies. The plant which produces it has never been defcribed; but is fuppofed to be, as Diofcorides fays, of the ferula kind, from the feeds and fragments of the ftalks fometimes met with in the body of it.

Sag apenum is a very great attenuant, aperient, and difeutient. It is good in all diforders of the breaft that owe their origgin to a tough phlegm. It has alfo been found to difcufs tumors in the nervous parts in a remarkable manner ; and to give relief in habitual headachs, where almoft all things elfe have failed. Its dole is from ten grains to two fcruples; but it is now feldom given alone. It has been found, however, to do great things in afthmas; in obftructions of the vifeera, particularly the fpleen; in nervous complaints; and even in epilipfices. It alfo promotes the menfes, and expels the fecundines; and is an ingredient in the theriaca, mithridate, and many other of the fhop compofitions.

SAGE, in botany. See Salvia.
Sage (Alain Rene), an ingenious French romancewriter, was horn at Ruys in Brittany in the year 1667. He had a fine flow of imagination, was a complete maftcr of the French and Spanifh languages, and wrote feretal admired romances in imitation of the Spanifh authors. Thefe were, The Bachelor of Salamanca, 2 vols 12 mo ; New Adventures of Don Quixote, 2 vols 12 mo ; The Devil on Two Sticks, 2 yols 12 mo ; and Gil Blas, 4 vols \(12 m o\). He produced alfo fome comedies, and other pieces of pleafantry; and died in 1747, in a little houfe near Panis, where he fupported himfalf by svriting.

SaGE (the reverend Johm), fo juftly admired by all who knew him for his claffical learning and reafoning powers, was born, in 1652, in the parifh of Creich and county of Fife, North Britain, where his anceftors had lived for feven generations with great refpect though with little property. His father was a captain in Lord Duffus's regiment, and fought for his king and country when Monk ltormed Dundee on the 3oth of Auguft 165 .

The iffuc of the civil wars, and the loyalty of captain Sage, left him nothing to beflow upon his fon but a liberal education and his own principles of piety and virtue. In thofe days the Latin language was tanght in the parochial fchools of Scotland with great ability and at a trifling expence ; and after young Sage had acquired a competent knowledge of that language at one of thofe ufeful feminaries, his father, without receising from an ungrateful court any recompenfe for what he had loft in the caufe of royalty, was fill able to fend him to the univerfity of St Andrew's, where having remained in college the ufual number of terns or feffions, and performed the exercifes required by the ftatutes, he was admitted to the degree of malter of arts, the higheft honour which it appears he ever received from any univerfity.

During his refidence in St Andrew's he ftudied the Greek and Roman authors with great diligence, and was likewife inltructed in logic, metaphyfics, and fuch other branches of philofophy as then obtained in the fchools, which, though we affect to fmile at them in this erlightened age, he always fooke of as highly ufe-
Vol. XVI. Part II.
ful to him who would underftand the poets, liitorians, and orators of ancient Greece, and even the fathers of

Sezc. the Chrittian church. In this apinion every man will arree with him who is at all asquainted with the ancient metaphyfics, and has read the writings of Clemens Alexandrinus, Origcin, 'lertullian, Chry foltome, and other fathers of great name; for each of thofe writers adopted the prineiples of fome one or vilher of the philofophical fects, reafoned from their notions, and often made ufe of their terms and platafes.

When Mr Sage had taken his matter's derree, the narrownefs of his fortune compelled him to accept nt the firt literary employment which was offered to him; and that happened to be nothing letter than the office of fchoolmatter in the parifh of Bingry in Fifuthire, whence he was foon removed to Tippermair is ih: county of Perth. In thefe liumble flations, thonsh haw wasted many of the neceflarics and almont afl the conforts of life, he profecuted his Rudles with great fuscefs ; but in doing fo, he unhappily imbihed the feed. of feveral difeafes which afficted him through lite, an? notwithftanding the mative vigour of his conlit sou impaired his health and flortened his day" Ifom th: miferable drudgery of a parifhi-fchoohaller, he wa: relieved by Mr Drummond of Cultmalundie, who invited him to fuperintend the education of his fos. whom he accompanied firf to the public fichoul at Perth, and alterwards to the univerlity of St Andrew's This was Itill an employment by no means arlequate to his merit, but it was not wholly witliou! adsantag. At l'erth he gained the friendifip and ellum of 1 : Rofe, afterwards lord bifhop of Edinburgh, and at S: Andrew's of every man capable of properly ellimating genius and learning.

The education of his pupils was completed in \(1688_{f}\) when he was left with no determinate object of purfini, In this moment of indecilion, lis friend Dr Rofe, who had been promoted from the parfonage of Perth to t! profetorflip of divinity in the univerfity nhich he was leaving, recommended himi fo effectually to 1 r, uncle then archbifnop of Glafgow, that he was by tha* prelate admitted into orders and prefented to ose of the churches in the city. He was then about \(3+\) years of age, had ftudied the Scriptures with great afteduity, was no ftranger to ecclefiatical hittory, or the apologics and other writings of the ancient fathers, was thorough mafter of fchool-divinity, had examined with great accuracy the modern controverfies, efpecially thofe between the Romifh and riformed churches, and between the Calvinitts and Remonltrants ; snd it was perhaps to his honour that he did not fully approve of all the articles of faith fubfcribed by any one of thefe contending fects of Chriltians.

A man fo far advanced in life, and fo thonoughly accomplifhed as a fcholar, would naturally be looked up to by the greater part of the clergy as foon as he became one of their body. This was in fact the cafe: Mr Sage was, immediately on his admiftion into orders, appointed clerk to the fynod or prebytery of Glafgow; an office of great truft and refpectability, to which we know nothing fimilar in the cluturch of Ensland.

During the eftabliffument of epifopacy in Scotand, from the rettoration of Charles 11. will che year 1690 . the authority of the bihops, though they poffe fied the
\& G
fole
\(\underbrace{}_{\text {Sur- }}\) loie power of ordination, was very limited in the government of the church. They did every thing with the confent of the prebyters over whom thej prefided. Diocefan fynods were held at ftated times for purpofes of the fame kind with thofe which employ the meetings of peefbyteries at prefent (fee Presbytertasis), and the orly prerogative which the bifoop feems to have enjojed was to be permanent prefidene, with a nergtive wice over the deliberativas of the aftembly. The acts of each fynod, anci Sometimes the charge delivered by the bifhop at the opening of it, were regifered in a book kept by the clerk, who was always one of the molt eminent of the diocefan clergy.

Mr Sage continued in this office, dicharging in Glargow all the duties of a clergyman, in fuch a manner as endeared him to his flock, and gained hin the efteem even of thofe who were difenters from the eftablifhment. Many of his brethen were trimmers in ecclefiatical as well as in civil politics. They had been republicans and prefoyterians in the daye of the covehant; and, with that ferocious zeal which too often charucterizes interefled converts, had concurred in the feverities which, during the reign of Charles II. were exereifed againd the party whom they had forfaken at his reloration. When that party again raifed its head during the infatuated reign of James, and every thing indicated an approaching change of the eftablihnment, thofe whofe zeal for the charch had fo lately incited them to perfecute the diffenters fuddenly becane all gentlenefs and condefenfion, and advanced towards the preßbyterians as to their old friends.

The conduet of Mr Sage was the reverfe of this. He was an epifcopalian and a royalift from convietion: and in all his difcourfes public and private he laboured to intlil into the minds of others the principles which to himfelf appeared to have their foundation in trath. 'I'o perfecution he was at all times an enemy, whilht he never tamely betrayed through fear what he thought it his duty to maintain. The confequence was, that in the end of the year 1688 he was treated by the rabble, which in the weftern counties of Scotland rofe agaim the eftablihed ehurch, with greater lenity than his more complying brethren. Whilkt they, without the finallet apprelemfion of their danger, were torn from their families by a lawlefs force, and many of them perfecuted in the cruclleft manuer, he was privately warned to withdraw from Glafgow, and never more to recurn to that city. So much was eonfiftency of conduet and a fteady adherence to principle refpected by thofe who feemed to refpeet nothing eife.

Mr Sage retired to the metropolis, and earried with him the fynodical book, which was afterwards demanded by the prefyytery of Glafgow, but not recovered till about three or four years ago, that, on the death of a nephew of Dr Rcfe the lath eftablifhed bifhop of Edinburgh, it was found in his poffeffion, and reftored to the prefbytery to which it belonged. Mr Sage bad detained it and given it to his diocefan and friend, from the fond hope that epifcopacy would foon be re-ctablifhed in Scotlend; and it was douktlefs with a view to contribute what he could to the realifing of that hope, that, immediately on his, being obliged to leave Glafyow, he commenced a keen pol-mical writer. At Edinburgh he preached a while, till refufing to take the oathis of ahicgiance when required by the govern-
ment, he was ouliged to reite. In this extremity, in found proteftion in the houle of Sir Willian Lrace the theriff of Kinrols, who approned his principles and admired his virtue. Returning to Edinhurgh, in Ifig;, he was oblerved, and obliged to abfcond. Yet he returned in 1695 , when his friend Sir William Brace was imprifone? as a fufpected perfon. He was foor forced to look for refuge is the hiils of Augus, unde: the name of Jack fon.

After a while Mr Sage found a fafe retreat with the countefs of Callendar, who employed him to inftruct her family as chaplain, and her fons as tutor. Thefe occupations did not wholly ergare his active mind: for he employed his pen in defending his order, or in expofing his oppreflors. When the countefs of Callendar had no longer fons to indruet, Sare acceptel the invitation of Sir John Steuart of Garntully, whad wanted the help of a claplain, and the converfation of a fcholar. With Sir John he continued till the decency of his manners, and the extenfivenefs of his learning, recommended him to a higher ftation. And, on the 25th of January 1\%05, he was confecrated a bifhop by Paterlion the archlifiop of Glafgow, Rofe the hifhop of Edinburgh, and Douglas the bifhop of Dumblain. But this promation did not prevent fickuefs from falling on him in November 1706. After lingering for many months in Scotland, he tried the effet of the wates of Bath in 1709, without fueeefs. A: Bath and at Londun he remained a twelvemonth, rccognifed by the great and careffed by the learned. Yet though lise was invited to flay, he returned in 1710 to his native country, which he defired to fee, and where he wifhed to die. And though his body was debilitated, he engaged, with undiminifhed vigum of mind, in the publication of the works of Drummon! of Hawthoruden, to which the celchrated Kuddiman lent his aid. Bifhop Sage died at Edinburgh on the 7 th of June 171 I , lamented by his friends for his vistues, and feared by his adverfaries for his talents.

His works are, 1 , T, Two Letters concerning the Perfecution of the Epifeopal Clergy in Seotland, which with other two by different authors were printed in one volume at London in 1689. 2dly, An Aecount of the late Eftablifhment of Prefbyterian Gevernment by the Parliament of Scotland, in 1690 , London, 169.3 .3 dly , I'he Fundamental Charter of Prefbytery, L London, 1695. 4thly, The Principles of the Cyprianick Age with regard to Epifcopal Power and Jurifdiction, London, 1095. 5thly, A Vindication of the Principles of the Cyprianick Age, London, 1701. 6thly, Some Remarks on the Letter from a Gentleman in the City, to a minitter in the Country, on Mr David Williamfon's Sermon before the General Agembly, Edinbnrgh, 1703. 7thly, A Brief Examination of forme Things in Mr Meldrum's Sermon, preached on the 1 tht of May 1703, againft a Toleration to tlafe of the Epifcopal Perfuafion, Edinburgh, i 703. 8thly, The Reafonablenefs of a I'cleration of thofe of the Epifcopal Perfuafion inquired into purely on Church Principles, Edinhurgh, 1704. 9thly, The Life of Gawin Douglas, in 1710 . ictrly, An introduction to Drunmond's Hittory of the Five James's, Edinburgh, 1711. Of the principles maintained in thefe publications, different readers will think very differently; and it is pro. batle that the acrimony difplayed in forme of them will
azene ne gereraily enncemned in the piefent day ; whilit the learning and aentenefs of their aththor wall he univerfally acknowledged and admired by all who can ciftin. gaifh merit in a friend or an adverfary.

SAGENE, a Ruffian long meafure, 500 of whech make a vert: the fagene is equal to feven Englifh fect.
SAGINA, in botany: A genus of the tetrarynia order, belonging to the tetrandria etafs of plants; and in the natural method ranking under the 22 d order, C.ryviotbertei. The ealyx is tetraphyllous; the petals fou; the capfule is unitucular, quadrivalved, and polyfpermous.

SAGITTARIA, arrow-head: A genus of the poly andria order, belonging to the monceciaclafs of plants; and in the natural method ranking under the fitch order, Tripeldotoilece The male calys is triplyyllous ; the corol1a tripetalous; the filaments generally about 14 ; the female calyx is triphyllous; the corolla tripetalous; many pitils; and many naked feeds. There are four fpecies, of which the moft remarkable is the fagittifolia, growing naturally in many parts of England. The root is curpofed of many ftrong fibres, which frike into the mud; the foottalks of the leaves are in length proporriomabie to the depth of the water in which they grow; fo they are fometimes almoft a yard long: they are thick and fungous; the leaves, which fout upon the water, are thaped like the point of an arrow, the two rars at their bafe fpreading wide afunder, and are very glappointed. The flowers are produced upon long ttalks which rife above the leaves, ftanding in whorls round them at the joints. 'They conlift of three buad white petals, with a clufter of Itamina in the imiddle, which have purple fummits. There is always a bulb at the lower part of the root, growing in the folid carth beneath the mud. This bulh conflitutes a confiderable part of the food of the Chinefe; and upon that aecount they cultivate it. Horfes, goats, and fwine, eat it ; cows are not fond of it.

SAGITTARIUS, in aftrenorny, the name of one of the 12 figns of the zodiac.

SAGO, a fmple brought from the Eaft Indies, of confiderable ufe in diet as a reforative. It is produred from a fpecies of palin. tree (Cycas circinatis, L..) growing fontaneoufly in the Ealt Indies without any culture. The progrefs of its vegetation in the early flazes is very flow. At fift it is a mere fhrub, thiek fet with shorns, which makes it difficult to come near it; but as foon as jts. ftem is once formed, it rifes in a fhort time to the height of 30 feet, is about fix feet in circumference, and impereeptilly lofes its thorns. Its lignoous bark is atout an inch in thicknefs, and covers a multitude of long fibres; which, being interwoven one with another, envelope a mafs of a gummy hind of meal. As foon as this tree is ripe, a whitifl duft, which tranfires through the pores of the leaves, and whtheres to their extremities, proclaims its maturity. The Malais then cut them down near the root, divide them into feveral feaions, which they fplit into quarters: they then fooop out the mafs of mealy fubitarce, which is enveluped by and adheres to the fibres; they dilute it in pure water, and then pafs it through a ftraining bag of tine eiuth, in order to feyarate it from the dibre.. When this palle has loft part of its meilture by evaror:1tion, the Malais throw it into a kind of earthen vetfels, of different thapes, where they allow it is dry and hatd-
en. 'I his prite is wholefume rentifing fond, aud preferves fur many yearn. The Indians eat it diluted with water, and functimes bakes or builed. \(\because\) hrough a primeiple of lumanity, they offerve the finet pait of this meal for the arsed and infirm. A jelly is furnetimes nade of it, which is white and of a celicions flavour.
SAGUM, in Roman antiquity, a militay labit, open from top to boitum, and uftaliy fattencd on the right floulder with a buckle or claf?. It was not dif. ferent in fhape from the chlamys of the Greeks and the paludimentum of the kenerals. The only difference hetween them was, that the paludamentum was made of a richer It :If, was generally of a purpic colour, and both lonerer and fuller than the fagum.

SAGUNIUM, an arcient tnwn of Spain, now called Morvedro, where there ate fill the ruins of a Ro. man amphitheatre to be feen. The new town is feated on a river callec Morvedro, is miles to the north of Valencia, in E. Long. o. 10. N. L.at. 33. 38. It was taken by Lnid Peterborough in \(17=6\).

SAICK, or Sareve, a Turkifh veffel, very comnow in the Levant for carrying merchandire.
SAIDE, the modern name of Sidon. Sec Sidoy.
SiIL, in navigation, an affemblage of feveral breadths cf canvas fewed together by the lifts, and edged round vaith cord, faftened to the yards of a Bip, to make it drive before the wind. Sce Shrp.
The edges of the eluths, or pieces, of which a fail is compofed, are generally fewed together with a donble feam ; and the whole is kirited round at the edges with a cord, cailed the boliorope.
Although the form of fails is extremely diffeent, they are all neverthedefs triangular one quadrilateral figures; or, in other words, their fulfaces are contaned either between three or four fides.
The former of thefe are fometimes fpread by a yarj, as lateen-fails; and otherwife by a ltay, as atay-fails; or by a nalk, as ihoulder of-mutton fails; ia all which cafes the foremolt leech or edge is attached to the faic yard, maft, or ftay, throughout its whole length. The latter, or thofe which are four-fided, are either extended by yards, as the priacipal tails of a thip ; or by yards and hooms, as the itudeding fail, divers, ringtails, and e.l thote fails which are fet ucealionaily: us by gaffs and booms, as :he main-fills of duop, and ton gratimes.
The prineipal fails of a :hip (Plate CCCCJLIT. fiy.z.) are the courtes or lower fails a; the tnp-fails t, which are next in order above the courfes; and cic tup- onlant fails \(c\), which are expanded above the top fails:
the courles ate the nain-fall, fore fail, said mizen, main flay-fail, ture thay-fail, and nisen thay:dail: hos mome particulurly the three trift. The main-tay yall is rarcty wied except in find veffls.
In all quadrangular fails thie upper elige is chith the head; the fides or fitits are callid ice.les; and the buttom or lower edge in termed the fict. If the heechis paralke to the foor, the two lover carnerb ar: ce...iminated ches, and the upper corncrs earings.

In aul triangular fails, and in thufe hior-fled fails whereis the head is nut parathe to the tur, the fureanclt eorner at: the foot is culted th: tock, and the dftes lower-conzer the ciue ; the foren:o:? perpendicuiar or Aupiag edge is called the fore-fecth, and the k.aud.not? :he ojer-itu.u.

\section*{S A I}

The heads of all four-fided fails, and the fore-leeches of lateen-fails, are attached to their refpective yard or gaff by a number of fmall cords called robonds; and the extremities are tied to the yard-arms, or to the peek of the gaff, by earings.

The ftay-fails are extended upon flays between the mafts, whereon they are drawn up or down occafionally, as a curtain flides upon its rod, and their lower parts are ftretched out by a tack and fheet. The clues of a topfail are drawn out to the extremities of the lower yard, by two large ropes called the lop-fail heets; and the clucs of the top-gallant fails are in like manner extenced upon the top-fail yard-arms, as exhibited by fig. 2.

The fudding-fails are fet beyond the leches or fkits of the main-fail and fore-fail, or of the top-fails or top-galiant fails of a fhip. Their upper and lower edges arc accordingly extended by poles run out beyond the extremities of the yards for this purpofe. Thofe fails, however, are only fet in favourable winds and moderate weather.

All fails derive their name from the matt, yard, or ftay, upon which they are extended. Thus the principal fail extended upon the main-malt is called the mainfail, \(d\); the next above, which flands upon the maintop maft, is termed the main-top fail, \(e\); and the higheft, which is fpread acrofs the main-top-gallant maft, is named the main-top-gallant fuil, \(f\).

In the fame manner there is the fore-fail, \(g\); the fore top-fail, \(b\); and the fore-top-gallant-fail, \(i\); the mizen, \(k\); the mizen top-fail, 1 ; and mizen top-gal-lant-fail, \(m\). Thus alfo there is the main-tay-fail, o; main top-maft fay-fail. \(p\); and main-top-gallant ftayfail, \(q\); with a middle ftay-fail which ftands between the two laft.
N. \(B\). All thefe flay-fails are between the main and fore-mafts.

The ftay-fails between the main-maft and mizen-mat are the mizen flay-fail, \(r\); and the mizen top-naft flay-fail, s; and fometimes a mizen top-gallant flay-fail above the latter.

The ftay-fails between the foremalt and the bowiprit are the fore flay-fail, \(t\); the fore top-mant ftay-fail \(u\); and the jib, \(x\). There is befides two fquare fails extended by yards under the bow-fprit, one of which is called the Jprit-fail, \(y\); and the other the Jprit-fail iof \(-\frac{f a i l}{}\) The \(z\).

The fudding-fails being extended upon the different yards of the main-maft and fore-maft, are likewife naned according to their ftations, the lower, top-maft, or top-gallant fludding fails.

The ropes by which the lower yards of a hip are hoifted up to their proper height on the mafts, are called the jears. In all other fails the ropes employed for this purpofe are called baliards.

The principal fails are then expanded by haliards, fieets, and howlines; except the courfes, which are always ftretched out below by a tack and fheet. They are drawn up together, or truffed up, by bunt-lines, clue-lines, \(d d\); leech-lines, \(\varepsilon e\); reef-tackles, \(f f\); labline, \(g\); and fpiling-lines. As the bunt-lines and leechlines paifs on the other fide of the fail, they are expreffed by the dotted lines in the figure.

The courfes, tep-fails, and top-gallant fails, are wheeled about the maft, fo as to fuit the qarious dires-
tions of the wind by braces. The higher futding fails, and in general all the ftay-fails, are drawn down, fo as to be furled, or taken in, by downhauls.
Some experienced fail-makers contend, that it would be of much advantage if many of the fails of fhips were made of equal magnitude; in which cafe, when neceffity required it, they could be interchangeably ufed. For example, as the mizen top-fail is now made nearly as large as the inain top-rुallant dail, it would be eafy to mike the yards, mafts, and fails, fo as mutually to fuit each other. The main and fure-top fails differ about two feet at head and foret, and frons one to three feet in depth. Thefe likewife could be eafily made alike, and in fume cafes they are fo. 'The fame may be faid of the main and fore top-gallant fails, and of the mizen top-gallant fail, and main fore-royal. The main-fail and fore-fail might alfo, with refpect to their head, be made alike; but as the former has a gore at the leech, and a larger gore at the foot for clearing it of the gallows, boats, \&c. which the latte: has not, there might be more difficulty in arranging them. The difficulty, however, appears not to be infurmountable. Thefe alterations, it is chought, would be extremely ufeful in the event of lofing fails by ftrefs of weather. Fewer fails would be thus neceflary, lefs ronm would be required to fow them, and there would be lefs danger of confufion in taking them out. But perhaps the utility of thefe alterations will be more felt in the merchant-fervice than in the navy, which latter has always a large ftore of fpare fails, and fufficient room to fow them in order. Thus, too, fpare yards and mafts might be confiderably reduced in number, and yet any cafual damages more eafly repaired at fea. Top-maft itudding fails are occafionally fubitituted for awnings, and might, by a very little attention in planning the rigging of a fhip, be fo contrived as to anfiver both purpofes. See Shipbuilding.
SAIL is alfo a name applied to any veffel beheld at a diftance under fail.

To fet SAIL, is to unfurl and expand the fails upon their relpective yards and ftays, in order to begin the action of failing.
To Make SAIL, is to fpread an additional quantity of fail, fo as to increafe the fhip's velocity.

To Borten SAIL, is to reduce or take in part of the fails, with an intention to diminifh the fhip's velocity.

To Strike SAIL, is to lower it fuddenly. This is particularly ufed in faluting or doing homage to a fuperior force, or to one whom the law of nations aeknowledges as fuperior in certain regions. Thus all foreign veffels ftrike to a Britih man of war in the Britifh feas.
SAILING, the movement by which a veffel is wafted along the furface of the water, by the action of the wind upon her fails.
When a thip changes her flate of reft into that of motion, as in advancing out of a harbour, or from her ftation at anchor, fhe acquires ber motion very gradually, as a body which arrives not at a certain velocity till after an infinite repetition of the action of its weight.

The firt impreffion of the wind greatly affects the velocity, becaufe the refiftance of the water might deAtroy it ; fince the velocity being but fmall at firft, the

 rreliliniereirn. Acelle.

S
2

\% 迹
\[
y^{2} \mathrm{y}
\]

. hril.

refiltance of the water which depends on it will be very feeble: but as the thip increafes her motion, the foree of the wind on the fails will be diminithed; whereas, on the contrary, the refiftunce of the water on the bow will accumulate in proportion to the velocity with which the veffel advances. Thus the repetition of the degrees of force, which the action of the fails adds to the motion of the fhip, is perpetually decreafing; whilht, on the contrary, the new degrees added to the effort of refittance on the bow are always angmenting. The velocity is then accelerated in proportion as the quantity added is greater than that which is fubtracted ; but when the two powers become equal ; when the impreffion of the wind on the fails has lot fo much of its force, as only to act in proportion to the oppofite impulfe of refiftance on the bow, the fhip will then aequire no additional velocity, but continue to fail with a conftant uniform motion. The great weight of the fhip may indeed prevent her from acquiring her greateft velocity; but when fhe has attained it, fhe will àdvance by her own intrinfic notion, without gaining any new degree of velocity, or leffening what the has aequired. She moves then by her own proper force in vacuo, without being afterwards fubject either to the effort of the wind on the fails, or to the refiftance of the water on the bow. If at any time the impulfion of the water on the bow fhould deftroy any part of the velocity, the effort of the wind on the fails will revive it, fo that the motion will continue the fame. It mult, however, be obferved, that this ftate will only fubfit when thefe two powers act upon each other in direct oppofition; otherwife they will mutually defroy one another. The whole theory of working fhips depends on this counteraction, and the perfect equality which fhould fubfift between the effort of the wind and the impulfion of the water.

The effect of failing is produced by a judicious arrangement of the fails to the direction of the wind. Accordingly the various modes of failing are derived from the different degrees and fituations of the wind with regard to the courfe of the veffel. See Seamanship.

To illuftrate this obfervation by examples, the plan of a number of thips proceeding on various courfes are reprefented by fg. 3 . which exhibits the \(3^{2}\) points of the compafs, of which C is the centre; the direction of the wind, which is northerly, being exprefed by the arrow.

It lias been obferved in the article Close-Hauled, that a fhip in that fituation will fail nearly within fix points of the wind. Thus the fhips \(B\) and \(y\) are clofehauled; the former being on the larboard-tack, fteering E. N. E. and the latter on the flarboard tack, failing W. N. W. with their yards \(a b\) braced obliquely, as fuitable to that manner of failing. The line of battle on the larboard tack would accordingly be expreffed by CB , and on the ftarboard by \(\mathrm{C} y\).

When a flip is neither clofe-hauled, nor fteering afore the wind, the is in general faid to be failing large. The relation of the wind to her courle is precilely determined by the number of points between the latter and the courfe clofe-hauled. Thus the fhips \(c\) and \(x\) have the wind one point large, the former fteering E. 6 N. and the latter W. \(b\) N. The yards remain al.
moft in the fame pofition as in B and \(y\); the bowlines and fheets of the lails being only a litule flackewed.
s:il.
The fhips \(d\) and \(u\) have the wind two points large, the one fteering eant and the other weft. In this manner of failing, however, the wind is more particularly faid to be upon the beam, as being at right an fors with the keel, and comeiding with the porition of ithe: thip's beams. 'The yards are nuw more acrofs the frim, the bowlines are caft off, and the foets more relax:fo that the effort of the wind bein's applied nearer rie the line of the fhip's courfe, her velucity is greatic augmented.

In \(e\) and \(t\) the flups have the wind three puints herse, or one point abatit the beam, the courfe of the Corme: being E. \(b\) S. and that of the latter W. \(b\) S. The fheets are ftill more flowing, the angle which the yards make with the keel further diminithed, and the courfe accel: rated in proportion.

The fhips \(f\) and \(f\), the firt of which fteers E.S.E. and the fecond W.S. W. have the wind four points large, or two points abaft the beam. Ing and \(r\) the wind is five points large, or three points abaft the beam, the former failing S.E.b E. and the laticr S. W. 6 W. In both theie fituations the fheets are ftill farther Ilackened, and the yards laid yet more athwart the fhip's length, in proportion as the wind approaches the quarter.

The fhips \(b\) and \(q\), fteering S.E and S.W. have the wind fix points large, or more properily on the quarter; which is confidered as the mof favourable manner of failing, becaufe all the fails co-operate to increafs the fhip's velocity : whereas, when the wind is right aft, as in the fhip \(m\), it is cvident that the wind in its paffage to the foremoft fails will be intercepted by thofe which are farther aft. When the wind is on the quarter, the fore-tack is brought to the cat-heaff; and the main-tack being cail off, the weather-elue of the main-fail is hoifted up to the yard, in order to let the wind pafs fretly to the fore-fail; and the yards are dif. pofed fo as to make an angle of about two points, or nearly \(22^{\circ}\), with the keel.

The fhips \(i\) and \(p\), of which the former fails S.E.bS. and the latter S. W. 4 S. are fuid to have the wind three points on the larboard or Itarboard quarter: and thofe expreffed by \(k\) and \(o\), two points; as flecring S.S.E. and S.S.W. in both which pofitions the yards make nearly an angle of 160 , or about a point and an half, with the fhip's lergth.

When the wind is one point on the quarter, as in the fhips \(l\) and \(n\), whofe eourfes are S.LE. and S. 6 W . the fituation of the yards and fuils is very little difis: rent from the lait mentioned; the angle which thicy make with the keel being fomewhat lefs than a point, and the ftay-fails being rendered of very little fervice. The finip \(m\) fails right afore the wind, or with the wind right aft. In this pufition the yards are laid at right angles with the hip's length : the fay-fails being entirely ufelefs, are hauled down; and the main-fail is drawn up in the brails, that the fore-fail may operate; a meafure which coufferably facilitates the Itcerage; or effort of the helm. As the wind is then interected by the man-top-Fail and main-top gallant-fait, in its paffage to the fore-top-fail and fore-top-gallant-fail, thefe latter are by confequence entircly becalined ; and
:nigh:

Surin: mingt therffure be furded, to prevent their being fretted
s.int. by flapping againd the mat, but that their cffort con-
mint.
tibutes greatly to prevent the flip from broaching-to,
when the duviates trom her courfe to the right or left therenf.
'Clus all the different methocis of failing snay be divided into lour, viz. Abe-hauled. large, quartering, and afore the wind : all which relate to the direction af the wind with regard to the flip's courfe, and the arrangement of the fails.

Sailisg alfo implies a fantiontar mode of navigation, formed on the pinciples, and regulated by the Jaws, of trigonometry. Hence we fay, Plain Saling, Mercator's, Middle latitule, Jarallel, and Great-circle Saling. See the article Navigation.

SAII-making, the art of making fails. See Sail and Ship-building.

SAILOR, the fame with Mariner and Seaman.
SAIN'l", means a perfon eminent for piety and virtue, and is generally applied by us to the apoftles and wher holy perfons mentioned in Scripture. Wut the Romanilts make its application much more extenfive. Uuder the word Canowization we have already faid fomething on their practice of creating faints. Our readers, however, will not, we trut, be diplealed with the following more changed account, which they themfelves give of the matter. The canonization of faints, then, they tell us, is the crrolment of any perion in the canon or catalugue of thole who are called faints ; or, it is a judsment and fentence of the church, by which it is diclarcd, that a deceafed perfon was cni?ent for fanctity during his lifetime, and efpecially towards the end of it ; and that confequently he mutt now be in glory with God, and deferves to be honoured by the chucle on earth with that veneration which fhe is wont to pay to the bleffed in heaven.

The difcipline with regrard to this matter has varied. It would feem that in the firf ages every bibhop in his own dioceie was wont to declare what perfons were to be honoured as faints by his people. Hence St Cyprian, about the middle of the third century, B, 3 . ep. (i, requires that he be info:med of thole who mould die in prifon for the faith, that fo le might make mention of them in the holy facrifice with the martyrs, and might honour them afterwards on the anniverfary day of their liappy death. This reneration continued formetimes to be confined to one country ; but formetimes it extended to diftant provinces, and even become univertal all ower the charch. It was thus that St Lanrence, St Ambrofe, st Augultinc, it Bafil, and many others, appear to lave been canonized by cullom aad mive:fal perfuation. In thofe ages none were reckonaf faints tut the apollles, the martyrs, and very eminent confenlo:s, whule fanctity was notorious everywhere.

Atterwards it appears that canonizations were wont to be performed in provincial fynods under the direcivan of the metropolitan. It was thus that \(S\) : Ifidore of Seville w"d canonized in the oth century, by the Eth council of Toledc', 44 years after his death. 'This namer of canonization continued occafionally down to the wh century. The laft inftance of a fant caronized in that way, is that of St Walter abbot of Ponsuife, who mas declared a faint by the archbiniop of So:ten in the yar 1153 .

In the 52 h century, in order to prevent milades in fo delicate a matter, I'upe Alexander III judged it proper to referve this declaratio:s to the holy fee of Rome exclutively; and decreed that no one thould for the future be honoured by the church as a laint without the exprets ayprobation of the pope.

Since that time, the canonization of faints has been carried on in the form of a procefs; and there is at Ronse a congregation of cardinals, called the congregution of boly rits, who are affitted by feveral divines une der the name of confultors, who examine fuch naters, and prepure them for the decifion of his holiuels. When therefore any putentate, province, city, or religious, bo. dy, think fit, they apply to the pope for the canonization of any peifori.
'the furt juredical lep ia this bufinefo mut be taken by the biftop in whie diocefe the perfon for whom the application is made had lived and died, who hy his own authority calls witnefies to attelt the opinion of the holinefs, the virtues, and miracles, of the perion in quetion. When the deceated has refided in ditferent dioceles, it may be neceltary that different bihops take fuch depofitions; the originals of which are preferved in the archives of their refpective churches, and authentic copies fealed up are fent to Rome by a fpecial meffenger, where they are depolited with the congregation of rites, and where they muit remain for the face of ten years without being opened. They are then upe:3ed, and maturdy examined by the congregation, and with their adivee time pope allows the cande to go on or nut as lie thinks proper. The fulicitors for the canonization dre then referred by his holinefs to the faid congregation, which, with his authority, gives a commiffion to one or more bihops, or other refpectable perfons, to examiae, on the fput and in the places where the perfon ia quettion bas lived and died, iuto his charater and whole behaviour. Thefe commilfioners fummon witneffes, take depolitions, and collect letters and other writings of the venerable max, and get all the intelligence they can concernins him, and the opinion generally entertained of him. 'The report of theie commifioners is confidered attentively and at length by the congregation, and every pat of it difcufled by the confultars, when the congreggtion determines whether or not they can permit the procefs to go on. If it be allowed to proceed, a cardinal, who is called ponent, undertakes to be the principal arent in that affair. The firft que!tion then that comes to be examined is, whether or not the perfon propuled for canonization can be proved to have been in an emisent degree endued with the moral vistues of prudence, jutice, fortitud, and temperance ; and with the theological virtues of faith, hope, and charity? All this is canvaffed with great deliberation; and there is a ditinguithed ecceliattic called the promoter of the boly fatio, who is fworn to make all reatunable objections to the prouls that are adduced in favour ol the canonization. If the decilion be favoarable, then the proofs of miracles dune to how the fanc. tity of the peifon in quettios are permitted to be broughe turward; :hen two miracles mutt be veri ied to the fatisfaction of the congreration, both as to the reality of the facts, and as to their havin: been trulj absoe the power si nature. If the decilion on this come out likewife favourable, shen the whoie is laid

\section*{S A Y}

Lefore the pope and what divines he ciroofes (1). Pub-- hic prayer and fanting are likewife preferibed, in order th ohtain light and direction frow heaven. Afre: all this long procedure, when the pope is refolved to give his approbation, he ifucs a bull, fiet of beatifation, \(\mathrm{b}_{j}\) which the perfon is declared brefet, and afterward; another of fand. foctinn, by whicls the name of fuime is given him. Thefe bulls are pubilited in S: Peter's charect with very great folemnity

A perfon remarkable for holineif of lise, even before he is canonized, may be venerated as fuch b,y thoit win are nerfualed of his eminent wirtue, and his prayers may be implored: but all this mult reft on frivare opinion. After lyis canonization, his name is inferted in the Sintrolouyy, or catalozue of fuine os which the refpective portion is read every cay in the choir at the divine office. A day is alfo appoiated for an yearty commemoration of hin. His name may be mentioned in the prblic church fervice, and his irteretffon with God befought. His reiics may be eufriteed : he may be painted with rays of glory, and aitars and churclees may be dedicated to God in honour of him, and in thank fgiving to the divine goodncis for the bleffings beftowed on him in life, and for the glory to which fie is reifed in heaven.

The affair of a canonization is receffarily scre expenfive, becaufe fo many perfons mutt be employed about it; fo many journeys mult be made ; fo many writings for and araink it mult be crawn cat. The expence altogether amounts to about \(25,00=\) Roman crowns, or L. Gopo Sterling. But it is generalily contived to canorize two or three at a time, by which means the particilar expence of each is very much leffered, the folemnity being common.

1: often happens that the folicitors for a canonization are unfucesfeful. Thus the Jefuise, evell when their interelt at Rome was greateit, could not obtain the canonization of Bellarmire ; and it is remarkable, that the objection is faid to have been, his having defended the indirect power of the pope over Chritian pirces even in temporals.

Several authors have written on cononization, and particulaly Profper Lambertini, alterwards pope under the name of Benedict XIV. who had teld the office of promioter of the fuith for many years. He publifined on it a barge work in feveral volumes, in folio, of which there is an abridgment in French. In this learned performance there is a full hitlory of the canorization of fains in Feneral, and of all the particular procefes of that kind that are on record: an account is given of the nianatr of proceeding in thefe extraordinary trials; and it is fown, that, belides the affinance of providence, which is implored and expected in what is fo much conaeked with religion, all prudent human means are mace ufe of, in ordtr to avoid miftakes, and to obtain all the evicience of which the matter is furceptible, and which mule appear more than fufficent to every impartial judyre. See POPE, POPER Y, \& C.

Sal Alemiroth. See Chemistry, no 1047.
Native Sal Ammoniuc. 'This falt, according to Mongon, is met with in the form of an efflorefeence on the furface of the earth, or adhering in powder to rocks. Sonetimes, as in Perfia and the country of the Kalmucks, it is found as hard as ftone. It is met with of different colours, as grey, black, green, and red, in the neighbourlood of volcanoes, in the caverns or grottoes of ほuzzuoli, and in the mineral lakes of Tufcany, as well as in fome mountains of Tartary and Tlibet. At SolFaterra, near Naples, it is found in the crevices, of a yellowifh colonr, like common fal-ammoniac more than once fublimed. For common fal ammoniac, fee Сне-Mistry-Iuder at Ammoniac and Ammoniatal Salt.

SALADIN, a famous fultan of Egypt, equally renowned as a warrior and leginlator. He fupported himfelf by his valour, and the influence of his amiable character, againt the united efforts of the chicf Chriftian potentates of Europe, who carried on the molt unjuit wars againft him, under the falfe appellation of Holy Wars. See the articles Egypt and Croisade.

SALAMANCA, an ancient, large, rich, and populous city of Spain, in the kingdom of Leon, fituated on the river T'ormes, about 75 miles weft from Madrid. It is faid to have been founded by Teucer the fon of Telamon, who called it Salamis or Salmantica, in memory of the ancient Salamis. Here is an univerfity, the greateft in Spain, and perhaps inferior to none in the whole world, in refpect at leaft to its revenues, buildings, number of fcholars, and matters. Here are alro many grand and magnificent palaces, fquares, convents, churches, colleges, chapels, and hofpitals. The bithop of this country is fuffragan to the archbifhop of Compoitella, and has a jearly revenue of 1000 ducats. A Roman way leads from hence to Merida and Seville, and there is an old Roman bridge over the river. Of
the colleges in the univerfity, four are appropriated to Saly young men of quality; and near it is an infirmary for poor fick fcholars. W. L.ong. 6. Io. N. Lat. 41.0.

SALAMANDER, in zoology. See Lacerta.
SALAMIS, an ifland of the Archipelago, fituated in E. Long. 34. O. N. Lat. 37. 32. - It was famous in antiquity for a battle between the Greek and Perfiaiz Acets. In the council of war held among the Perliars on this occafion, all the commanders were for enfgagiug. becaufe they knew this advice to be moft agreeable to the king"s inclinations. Queen Artemifia was the only perfon who oppofed this rclolution. She was queen of Halicarnaftus; and followed Xerxes in this war with five thips, the beft equipped of any in the fleet, except thofe of the Sidonians. This princefs diftinguifhed lierfelf on all occafions by her fingular courage, and ftill more by her prudence and conduct. She reprefented, in the council of war we are fpeaking of, the dangerous confequences of engaging a people that were far more expert in maritime affairs than the Perfians; alleging, that the lofs of a battle at fea would be attended with the ruin of their arny; whereas, by fpinning out the war, and advancing inte the heart of Grecce, they would create jealoufies and divifions among their enemies, who would feparate from one another, in order to defend each of them their own conntry; and that the king might, almof without ftriking a blow, make himfelf mafter of Greece. This advice, though very prudent, was not followed, but an engagement unanimouly refolved upon. Xerses, in order to encourage his men by his prefence, caufed a throne to be erceted on the top of an eminence, whence he might fafcly behold whatever happened; having feveral fcribes about him, to write down the names of fuch as fhould fignalize themfelves againf the enemy. The approach of the Peifian fleet, with the news that a freng detachment from the army was marching againit Cleombrotus, who defended the ifthmus, fruck fuch a terror into the Peloponnefians, that they could not by any intreaties be prevailed upon to fay any longer at Salamis. Being therefore determined to put to fea, and fail to the ifthmus, Themiftocles privately difpatched a trulty friend to the Perfian commanders, informing them of the intended flight; and exhorting them to fend part of their fleet round the ifland, in ooder to prevent their efcape. The fame meffenger affured Xerxes, that 'Themiftocles, who had fent him that advice, deligned to join the Perfians, as foon as the battle began, with all the Athenian thips. The king giving credit to all he faid, immediate= ly caufed a ftrong fquadron to fail round the ifland in the inight in order to cut off the enemy's fight. Early next morning, as the Peloponnefians were preparing to fet fail, they found themfelves encompaffed on all fides by the Perfian fleet; and were againtt their will oblized to remain in the ftraits of Salamis and expole themfelves to the fame dangers with their allies. The Grecian flet confifted of 380 fail, that of the Perfians of 2000 and upwards. Themiftocles avoided the engagement till a certain wind, which rofe regularly every day at the fame time, and which was entirely contrary to the enemy, began to blow. As foon as he found himfelf favoured by this wind, he gave the fignal for battle. The Perfians, knowing that they fought under their king's eye, advanced with great refolution; but the wind blowing directly in their faces, and the largenels and

Amwif, nmmoer of their frips embarraffing them in a place fo Itrait and narrow, their courage foon abated; which the Greeks obferving, ufed fuch efforts, that in a fort time breaking into the Perfian flect, they entirely difordered them ; fome flying towards Phalarus, where their army lay encamped; others faving themfelves in the harbours \(0^{\text {r }}\) the neighbouring iflands. The Ionians were the firft that betook themfelves to flight. But Queen Artemifia ditinguifled herfelf above aill the rett, her fhips being the lalt that fled: which Xerxes obferving, cried out that the mea behaved like women, and the women with the courage and intrepidity of men. The Atlenians were fo incenfed againft her, that they offered a reward of 15,000 drachmas to any one that fhould take her alive : but the, in fpite of all their efforts, got clear of the thips that purfued \(\mathrm{h} \cdot \mathrm{r}\), and arrived fafe on the coalt of Afia. In this engagement, which was one of the moft memorable actions we find recorded in hiltory, the Grecians loft fo frips; and the Perfians 200, belides a great miny more that were taken, with all the men and anmunition they carried.

The ifland of Salamis io of a very irregular fhape ; it was reckoned ;o or 80 ftadia, i.e. 8 or is miles long, reaching weftward as far as the mountains called Kerata or The Ho ne. Paufanias informs us, that on one fide .of this illand ftood in his time a temple of Diana, and on the other a tropliy for a victory ohtained by The-- miftocles, toxether with the temple of Cychreus, the fite of which is now thought to be occupied by the church of St Nicholas.

The city of S.lamis was demolifhed by the Athenians, becaufe in the war with Caffander it furrendered to the waredonians, from difafection. In the fecond century, when it was vifited by Paufanias, fome ruins of the \rora or market place remained, with a temple and imare of ijax; and not far from the port was fhown a fone, on which, they related, Telamon fat to viek the Salaminian fhips on their departure to joiu the Greciea fleet at Aulis. The walls may fill be traced, and it has been conjectured were about four mies in circumference. The level fpace within them was now covered with green corm. The port is choked with mud, and was partly dry. Amoug the fcattered marbles are fome with infcriptions. One is of great antiquity, before the introduction of the Ionic alphabet. On another, near the port, the name of Solon occurs. This senowned lawgiver was a native of Salamis, and a ftatue of him was erected in the marker-place, with ore hand covered by his veft, the modrlt attitude in which the was accuftomed to addrefs the people of thens. An infeription on black marble was alfo copied in 1676 near the rnin of a temple, probably that of Ajax. The inland of Salamis is now inhabited by a few Albanians, who till the ground. Their village is called thmpeliki, "t the Vineyard," and is at a diftance from the port, fanding more inland. In the church are marble fragments and fome infcriptions.

S ILARY, a recompenfe or confideration made to a perfon for his pains and induftry in another man's bufinels. The word is ufed in the flatute 23 Edw. III. cap. I. Salarium at firt lignified the rents or profits of a fale, hall, or houfe (and in Gafcoigne they now call the feats of the gentry fala's, as we do balls) ; but af:erwards it was taken for any wages, Atipend, or annual allowance.

SaLACIA, in botany; a genus 0 the trigynia order, belonging to the gynandria clifs of plants. The calyx is quinquefid ; the corolla quinquepetalous ; the anthcres fitting on the top of the germ.

SALE, is the exchan re of a commodity for mones; barter, or permutation, is the exchanse of (ne commo. dity for another. When the larazain is concluded, an obligation is contracted he the buycr to pay the value. and by the feller to deliver the commodity, a: the time and place agreed on, or inmediately, if no time le fpe-
cifed.

In this, as well as other mercartile contracts, the fafety of commerce requires the moft good faith and veracity. Theretore, although, by the laws of England, a fale, above the value of i 1 . be not liading, unlefs carseft be paid, or the bargain confirmed by writing, a merchant would lofe all creclit who refufed io perform his agreement, although thefe legal requirites were omitted.

When a fpecific thing is fold, the property, even before delivery;, is in fome refpect vefted in the buyer: and if the thing perifies, the buyer mutt bear the lofs. For example, if a horfe dies before celivery, he mult pay the value: but if the bargain only determines the quautity and quality of the goods, without ipecifying the identical aiticles, and the feller's warenoufe, with all lis go ds, be burned, he is intitled to no payment. He muitt alfo bear the lofs if the thing perifh through his fault ; or when a particular tim: and place of delivery is agreed on, if it perifh before it be tendered, in terms of the bargain.

If a perfon purchafe goods at a fhop without agrecing for the price, he is liable for the ordiuary marke:price at the time of purchafe.

If the buyer proves infolvent before delivery, the feller is not bound to deliver the goods without payment or fecurity.

If the importation, or ufe of the commodities fold, be prohilited by law, or if the buyer knows that they were fmuggled, no action lics for delivery:

The property of goods is generally prefumed, in favour of commerce, to belong to the poffefor, and cannot be challenged is the hands of an onerous purchafer. But to this there are fome exceptions. By the Scots law, ftolen goods may in all cafes be reclaimed by the proprietor, and alfo by the Englifh law, unlefs they were bought 'maf fic in open market; that is, in the accuftomed public places, on ftated days in the conntry, or in a fhop in London; and horfes may be reclaimed, unleif the fale be repularly entered by the book-keeper of the marict. In all cates, if the grods be cricted by the lawful proprictor, the feiler is liabie to the purchafer for the value.

Actions fyr payincrit of thop-accounts, as well as other dehts not conftituted by writing, are limited in England to fix years. The eeftimony of one witnefs is admitted; and the feller's books, atthough the perfen that kept them be dead, are gond evidince for one year. In Scotland, merchauts books may be proved within thuee years of the date of the latt articke, by one witnefs, and the creditor's books and oath in fupplement. After three years, they can only be proved by the oath or writ of the debtor. A merchant's books are in all caleg good evidence againft him.
SALEP, in the materia medica, the dried root of a
fpecies of orchis. See Orichis.
Secers

Scveral methods of preparing falep have been propolicd and yracticd. Gcoffroy has delivered a very juaicious piocefs for this purpofe in the Hizoire de l'Acafimie Renatedes Sciences, 17.10 ; and Retmus, in the Swedifh Tranfacions 1764, has improved Geoffroy's method. But Mr Moult of Rochdale has lately favoured the public with a new mancr of curing the orchis root; by which falcp is prepared, at leaft equal, if not fuperior, to any brought from the Levant. The new root is to be wafhed in water: and the fine brown fkin which covers it is to he feparaicd by means of a fnall brufh, or by deping the root in hot water, and rubbing it with a coarfe linen cloth. When a fufficient number of roots have been thus cleaned, they are to be fpread on a tin-plate, and placed in an oven heated to the ufual degree, where they are to remain fix or ten minutes, in which time they will have lof their milky whitenefs, and acquired a tranfparency like horn, without any diminution of bulk. Bcing arived at this ftate, they are to be removed, in order to dry and harden in the air, which will require feveral days to cffect; or by ufing a very gentle heat, they may be finifhed in a few bours.

Salep thns prepared, may be afforded in thofe parts of England where labour bears a high value, at about eiglit-pence or ten-pence per pound: And it mirht be fold ftill cheaper, if the orchis were to be cured, without \(f\) :parating from it the brown fkin which covers it; a truublefome pant of the procefs, and which does not contribute to render the root either more palatable or iatutary. Whereas the foreign falep is now fold at five or fix fhillings per pound.

Salep is faid to contain the greateft quantity of regetalle nourifhment in the fnalleft bulk. Hence a very judicious writer, to prevent the dreadful calamity of famine at fea, has lately propofed that the powder of it should conflitute part of the provifions of every fhip's company. This powder and portable foup, diffolved in huiling water, form a rich thick jelly, capable of fup. purting life for a confiderable length of time. An ounce of each of thefe articles, with two quarts of boiling water, will he fufficient \{ubfiftence for a man a day; and as being a mixture of animal and vegetable food, muft piove more nourihing than double the quantity of ricecake, made by boiling rice in water: which laft, however, failors are often obliged folely to fubfift upon for feveral months; efpecially in voyages to Guinca, when the hread and flour are exhaulted, and the beef and pork, having been falted in hot countries, are become unfit for ufe.
"But as a wholefome nourifhment (fays Dr Percival *), rice is much inferior to falep. I digefted feveral alimentary mixturcs prepared of mutto io and water, beat up with bread, fea-bifcuit, falep, rice-flowcr, fa-go-powder, potato, old cheefe, \&c. in a heat equal to that of the human body. In 48 hours they had all acquired a vinous fmell, and were in brik fermentation, except the mixture with rice, which did not emit many air-buobles, and was but little changed. The third day feveral of the mixtures were fiveet, and continued to ferment ; others had loft thcir inteftine motion, and were four.; but the one which contained the rice was become putrid. From this experiment it appears, that sice as an aliment is flow of fermentation, and a very weak corrector of putrefaction. It is therefore an im-
proper diet for hofpital-paitents; but more particularly for failors in long vovages; becaufe it is incapable of preventing, and will not comribute much to check, the progrels of that fatal difeafe, the lea- fcurvy. Under certain circumftances, rice feems difpofed of itfelf, whihout mixture, to become phtrid; for by log keeping it fometimes acquires an offenfive fcetor. Nor can it be confulered as a very mutritive kind of food, on acconnt of its difficult folubility in the fomach. Expcricnce contirms the truth of this conclufton; for it is obferved by the planters in the Weft Indies, that the negroes grow thin, and are lefs able to work, whilit they fubfift won rice.
"Salep has the fingular property of concealing the tafte of falt water; a circumftance of the highelt importance at fea, when there is a fcarcity of frefh water. I diffolucd a dram and a half of common falt in a pint of the mucilage of ialep, fo liquid as to be potable, and the fame quantiry in a pint of fpring-water. 'The falep was by no means difagree:lble to the tafte, but the water was rendered extiemely unpalazable. This experiment fuggefted to me the trial of the orchis root as a corretor of acidity, a property which would render it a very ufeful diet for childrca. But the folution of it, when mixed with vinegar, feemed only to dilute likc an equal proportion of water, and not to cover its fharpnefs. Salep, however, appears by my experiments to retard the acetous fermentation of milk; and confequently would be a good lithing for mik pottage, elpecially in large tuwns, where the cattle being fed upon four draff muft yield acefcent milk.
"Salep in a certain proportion, which I have not yet been able to afcertain, would be a very ufeful aud prostable addition to bread. I directed one ounce of the powder to be diffolved in a quart, of water, and the mucilage to be mised with a fufficient quantity of flour, falt, and yeaft. The flour amourted to two pounds, the yeaft to two ounces, and the falt to 80 grains. The loaf when baked was remarkably well fermented, and weighed three pounds two ounces. Another loaf, made with the fame quantity of flour, \&c. weighed two pounds and 12 ounces; from which it appears that the falep, though ufed in fo fmall a proportion, increafed the gravity of the loaf fix ounces, by abforbing and retaining more water than the flour alone was capable of. Half a pound of frour and an ounce of falcp were mixed together, and the water added according to the ufual method of preparing hread. 'The loaf when baked weighed 3 ounces and an half; and would probably have been heavicr if the falep had been previoully diffolved in about a pint of water. But it fhould be remarked, that the quantity of four ufed in this trial was not fufficient to conceal the peculiar tate of the falep.
"The reftorative, mucilaminous, and demulcent qualities of the orchis root, render it of confiderable ufe in various difeafes. In the fca-feurvy it powerfully obtunds the acrimony of the fluids, and at the fame time is eafily affimilated into a mild and nutritious chyle. In diarrhoeas and the dyfentery it is highly ferviceable, by fheathing the internal coat of the inteltines, by abating irritation, and gently correcting putrefaction. Io the fymptomatic fever, which arifes from the abforption of pus from ulcers in the hungs, from wounds, or from amputation, falep ufed plentifully is an admirable demul-
cent，and well adapted to refit the diffolution of the crafis of the blood，which is fo evident in thefe cafes． And by the fame mucilaginous quality，it is equally efficacious in the frangury and dyfury；efpecially in the latter，when arifing from a venereal caufe，hecaufe the difeharge of urine is then ectended with the mont exquifite pain，from the ulceration about the neck of the bladder and through the courfe of the urethra．I have found it alfo an ufeful aliment for patients who la－ bour under the flonc or gravel．＂The ancient chemifts appear to have entertained a very high opinion of the orchis root，as appears from the fecreta fecretorum of Raymund Lully，a work dated 1565 ．

SAIERNO，an ancient and confiderable town of Italy，in the kingdom of Naples，and capital of the Hither Principato，with an archbihop＇s fee，a cafte， harbour，and an univerity chiefly for medicine．It is feated at the bottom of a bay of the fame name．E． Long．14． 43 ．N．Lat． 40.45.

SALET，in war，a light covering or armour for the head，anciently worn by the light－horfe，only dif． ferent from the cafque in that it had no creft and was little more than a hare cap．

SALIANT，in fortification，denotes projeting． There are two kinds of angles，the one faliant，which have their point outwards；the other re－entering，which bave their points inwards．

Saliant，Salient，or Saillant，in heraldry，is applied to a lion，or other beaft，when its fore－legz are raifed in a leaping potture．

SAIIC，or salieue，Law，（Lex Sulica），an ancient and fundamental law of the kingdom of France，ufually fuppofed to have been made by Pharamond，or at lealt by Clovis；in virtue whereof males only are to inherit．

Some，as Poftellus，would have it to have bcen called Salic，q．d．Gallic，becaufe peculiar to the Gauls．Fer Montanus infifts，it was becaufe Pharamond was at firf called Salizus．Others will have it to be fo named，as having been made for the falic lands．Thefe were noble fiefs which their firft kings ufed to beftow on the fal－ lians，that is，the great lords of their falle or court， without any other tenure than military fervice；and for this reafon，fich fiefs were not to defeend to women， as being by nature unfit for fuch a temure．Some， again，derive the origin of this word from the Salians， e tribe of Franks that fettled in Gatl in the reign of Julian，who is faid to have given them lands on condition of their perfonal fervice in war．He esen paffed the ronditions into a law，which the new conquerors ac－ quiefced in，and called it falic，from the name of their former countrymen．

SALICORNIA，jontrd glasshort，or Salt－ noort：A genus of the monogynia order，belonging to the monandria clafs of plants；and in the natural me－ thod ranking under the 12 th order，Holoracie．T＇he calyx is ventricofe，or a littie fwelling out and entire； there are no petals，and but one feed．There are fous fpecies，of which the molt remarkable are， 1 ．The fru－ ticofa，with obtufe points，grows plentifully in moft of the falt markhes which are neverlowed by the trides in many parts of England．It is an annual plant，writh thick，fucculent，jointed falks，which trail upon the ground．The flowers are produced at the ends of the joints toward the extremity of the branches，which are fmall，and fearce difcernible by the naked eye．2．The
percnnis，with a frubby branching falk，grows natu－ rally in Sheppey ifland．This liath a frruliby bianch－ ing ftalk about fix inches long；the foints of the arti culations are acute；the ftalfes branch from the boto tom，and form a lind of pyramid．They are peren－ nial，and produce their flowers in the fame manner as the former．

The inhabitants near the fea－coalts where thefe plants grow，cut them up toward the latter end of furmer， when they are fully grown ；and，after having dried them in the fun，they burn them for their ahes，which are ufed in making of glafs and foap．Thefe herbs are by the country people called kelp and promifeuouf． ly gathered for ufe．See the atticle Salsola；alfo Dyeing of LEAGHER，p．750，note A．
S．A LII，in Roman antiquity，priets of Mars，where－ of there were 12，intituted hy Numa，wearing painted， particuloured garments，and high bonuets；with a fteel cuinaffe on the breaft．They were called faili， from faltare＂to dance；＂becaufe，after afliting at［ a － crifices，they went dancing about the ftreete，with buck－ lers in their left－land，and a rod in their right，Atrik－ ing mufically with their rods on one another＇s bucklers， and finging hymns in honour of the gods．

SALINO，one of the Lipari ifiands，fituated be－ tween Sicily and Italy，confifts of two mountains both in an high flate of cultivation．The one lying more towards the north than the other is rather the highet of the two，and is cailed del Capo，＂the head．＂＇The other is called della Foflu felice，or＂the happy valley．＂ One third of the extent of thele hills from the bottom to the fummit is one continued orchard，confiting of vines，olive，fic，plum，apricot，and a vaf diverfity of other trees．The white roofs of the houles，which are everywhere interfperfed amid this diverfity of verdure and foliagc，contribute to variegate the profpect in a very agreeable manner．The back part of almok all the houfes is thaded by an arbour of vines，fupported by pillars of brick，with crofs poles to futtain the branches and foliage of the vines．Thofe arbours fhel－ ter the houfes from the rays of the fun，the lheat of which is quite feorcling in thefe fouthern regions．The vines are extremely fruitful ；the poles bending under the weight of the grapes．
The feenes in this iffand are more intercfing to the lover of natural hiftory than to the antiquiarian．See Keticulum．
On the fouth fide of the i月and，hewever，there are fill to be feen forme tine ruins of an ancient bath，a Roman work．They confitt of a wall 10 or 11 fa－ thoms in extent，and terminating in an arch of no great height，of which only a fmall part now renains． The building feems to have beca reduced to its prefent flate rather hy the ravages of men than the irjunies of time．Alinolt all the houfes in the inand are buile of materials which have belonged to ancient monu－ ments．The ancients had，in all probability，lecths of frefh as well as of fait water in this ibland ；for when－ ever the prefent inhabitants lave occafion for a furing of frefh water，they have only to dig a pit on the nore，and pure fiveet watcr lows in great abundance．
There were formerly mines of alum here，from which the inhabitants drew a very confiderable yearly revenuc． But whether they are exlaufted，or whatever circum－ flance may have cauled them to be given up，they are \(4 \mathrm{H}_{3}\)

Sali．
Salu．

Sallibury; now no longer known. The ifland abounds in a vasiety of fruits.

On the ealt-fide it is very populous. There are two places which are both called I.nvza, "the tongue," and wheh contain a gcod number of inhabitants; the one is near Salino, the other is diftinguifhed by the name of St Marma: there are befides thefe two other vil lages. All thefe places together may contain about 400 inhabitants : the circunderence of the ifland may be about is miles.

SALISBURY, the capital of the county of WiltGire in England, fitnated in W. Long. 1. 55. N. Lit. 51.3. 'I his city owed its firft rife to its cathedral, which was begun in 1219 , and finifhed in 1258 . According to an eitinate delivered in to Henry III. it coft forty thonfand merks. It is a Gothic building, and is certainly the noft elegant and regular in the kingdom. The doors and chapels are equal in number to the months, the windows to the days, and the pillars and pilaters to the hours in a year. It is built in the form of a lantern, with a fpire in the middle, and nothing but buttreffes and ghafs windows on the outlide. The fpire is the higheft in the kingdom, being 410 feet, which is twice the height of the monument in London. The pillars and pilafters in the church are of fufile marble; the art of making which is now either entirely loft or little known. This magnificent church has lately undergone moft bcautiful alterations; wilh an addition of two fine windows, and an organ prefented by the king. The roof of the chapter-houfe, which is 50 fect in dianneter and 150 in circumference, bears all upon one flender pillar, which is fuch a curiofity as can hardIy be matched in Europe. The turning of the weftern road throngh the city in the reign of Edward III. was a great advantage to \(i t\). The chancellorfhip of the molt noble order of the garter, which is annexed to this fee, was firft conferred on bifhop Richard Beauchamp. The hofpital of St Michael's, near this city, was founded by one of its bihops. Dr Seth Ward, bifhop of this fee in the reign of Charles II. contributed greatly to the making the river Avon navigable to Chrift-church in Hampfhire. The fame prelate, in 1683 , built an hofpital for the entertainment of the widows of poor clergymen. There are three other churches befides the cathedral, which is without the liberty of the city, and a greater number of boarding fchools, efpecially for young ladies, than in any other town in. England. Here is a manufacture of druggets, flannels, bonelace, and thofe cloths called Salifbury whites; in confideration of which, and its fairs, markets, affifes, boarding-fehools, and clergy, the city may be juftly faid to be in a flourihhing condition. It was incorporated by Henry III. and is governed by a mayor, high-fteward, recorder, deputy-recorder, 24 aldermen, and 30 affitants or common-council men. The number of fouls is about 10,000 . A new council chamber is juit now (June 1794) building here with proper courts of juftice, by the earl of Radnor; to which Mr Huffey is alfo a great benefactor. That quarter called the clofe, where the canons and prebendaries live, is like a fine city of itfelf. Here is an afSembly for the ladies every Tuefday, and coaches fet out from hence to London every day. In this town we feveral charity-fchools; the expence of one of them
is entirely defrayed by the bihop. The city gives title of earl to the noble famil of Cecil.

SAlisburr Plain, the extenfive downs in Wilthire, which are thus denominated, form in fummer one of the moft delightful parts of Great Iritain for extent and beauty. It exter as 28 miles weft of Weymourlh, and 25 eaft to Winchetter; and in fome places is near 40 miles in breadth. That part about Salifbury is a chalky down, and is fameus for feeding numerous flocks of theep. Confiderable portions of this tract are now enclofing, the advantares of which are fo great, that we hope the whole will undergo fo beneticial an alteration.

SALIVA, is that fluid by which the mouth and tongue are continually moiftened in their natural ftate; and is fupplied by glands which form it, that are called falivary glands. This humour is thin and pellucid, it capable of being concreted by the fire, almoft without talte and fmell. By chewing, it is expreffed from the glands which feparate it from the blood, and is intimately mixed with our food, the digeftion of which it greatly promotes. In hungry perfons it is acrid, and copioufy difcharged; and in thofe who have falted long it is highly acrid, penetrating, and refolvent. A too copious evacuation of it produces thirl, lofs of appetite. bad digeftion, and an atrophy.

SALIVATION, in medicine, a promoting of the flux of faliva, by means of medicines, mottly by mercury. The chief ufe of falivation is in difeafes belonging to the glands and membrana adipofa, and principally in the cure of the venereal difeafe; though it is fometimes alfo ufed in epidemic dileafes, cutancous difeafes, \(\& c\). whole crifes tend that way.

SALIX, the willow, in botany: A genus of the diandria order, belonging to the dicecia clafs of plants : and in the natural method ranking under the 50 th order, Amentacea. The amentum of the male is faly; there is 110 corolla; but a nectariferous glandule at the bafe of the flower. The female amentum is fcaly ; there is 110 corolla; the ftyle bifd; the capfule unilocular and bivalved; the feeds pappous. The willow trees have been frequently the theme of poetical defeription, both in ancient and modern times. In Virgil,"Horace, and in Ovid, we have many exquifite allufions to them and their feveral properties; and for a melancholy lover or a conten plative poet, imagination camnot paint a fitter retreai than the banks of a beautiful river, and the flade of a drooping willow. There are 31 fpecies; of which the molt remarkable are, I. The caprea, or common fallow-tree, grows to but a moderate height, having fmooth, dark-green, brittle branches; oval, waved, rungh leaves, indented at top, and woolly underneath. It grows abundantly in this country, but more frequently in dry than moift fituations: it is of a brittle nature, fo is unfit for the bafket-makers; but will ferve for poles, ftakes, and to lop for fire-wood; and its timber is good for many purpoles. 2. The alba, white, or filver-leaved willow, grows to a great height and confiderable bulk, having fmooth pale-green hoots; long, fpear-haped, acuminated, fawed, filvery-white leaves, being downy on both fides, with glands below the ferratures. This is the common white willow, which grows abundantly about towns and villages, and by the fides of rivers and brooks, \&c. 3. The vitellina, yellow or golden willow,
grows but to a moderate height ; having yellow, very pliant, fhouts; oval, acute, ferrated, very fmeoth leaves, with the ferratures eartilaginons, and with callous punctures on the foot ttalks. 4. The purpurea, purple, or red willow, grows to a large height, having long, reddifh, very pliable fhoots, and long fptar-fhaped, ferrated, fmooth leaves, the lower ones being oppofitc. 5 . The viminalis, or ofier-willow, grows but a moderate feight, having flender rod-like branches; very lons, pliaet, greenifh fhoots; and very long, narrow, fpearfhaped, aeute, almoft eutire leaves, hoary, and filky underueath. 6. The pentandria, pentandrous, broadleaved, fweet-fcented willow, grows to fome confiderable ftature, having brownifh-green branches; oblong, broad, ferrated, fmooth, fweet-feented leaves, fhining above; and pentandrons flowers. 7. The triandria, or triandrous willow, grows to a large ftature, having numerous, ercct, greyifh-green branches, and pliant fhoots; oblong, acute-pointed, ferrated finooth, fhininggreen leaves, eared at the bafe; and triandrous flowers. 8. The fragilis, fragile or crack-willow, rifes to a middling ftature, with brownifh, very fragile, or brittle branches, long, oval lanceolate, fawed, fmooth lcaves of a flining-green on both fides, having dentated glandular foot-flalks. This fort in particular being exceedingly frarile, fo that it eafly cracke and breaks, is unfit for eulture in ofier-grounds. 9. The Babylo. nica, Babylonizn pendulous falix, commonly ealled weeping willow, grows to a largith lize, having numerous, long, fender, pendulous branches, hanging down loofely all round in a eurions manner, and long, narrow, fpear-fhaped, ferrated, finooth leaves. This curious willow is a native of the eaft, and is retained in our handy plantations for ornament, and exhibits a moft agreeable variety; particularly when difpofed fingly by the verges of any piece of watcr, or in fpacious openings of grafsground.

All the fpecies of falis are of the tree kind, very hardy, remarkably faft growers, and feveral of them attaining a confiderable flature when permitted to run up to itandards. They are mollly of the aquatic tribe, being generally the moft abundant and of molt profperous growth in watery fituations: they however will grow frcely almolt anywhere, in any common foil and expefure; but grow conliderably the tafteft and ftrongeft in low moift land, particularly in marfhy fituations, by the verges of rivers, brooks, and other waters; likewife along the fides of watery ditches, \&c. which places often lying watte, may be employed to good advantage, in plantations of willows, for different purpofes.

SALLEE, an ancient and confiderable town of Africa in the kingdom of Fc 2 , with a harbour and feperal ports. The harbour of Sallee is one of the belt in the country; and yet, on aecount of a bar that lies acrofs it, hips of the fmalleft draught are foreed to unload and take out their guns before they can get into it. There are docks to build mips; but they are hardly ever ufed, for want of Rill and materials. It is a large place, divided into the Old and New Towns, by the river Guero. It has long been famous for its rovers or pirates, which make prizes of all Chiltian hips that come in their way, except there is a treaty to the contrary. The town of Sallce in its prefent fate, though large, prelents nothing worthy the obferwation of the
traveller except a battery of 24 pieces of cannon fronting the fea, and a redoube at the entrance of the river, which is ahout a quarter of a mile broad, and penetratcs feveral miles into the interior country. W. Long. 6. 30. N. Lat. 34. 0.

SALIET, or SAllad, a difi of eatable herls, ordinarily accompanying roall meat ; compured chicfly of erude, freh herbage, feafoned with falt, oil, and vine. gar.

Menage derives the word from the Latin falato; of fal, "falt;" others from /akedo; Du-Canre from fi/dama, which is ufed in suforius and Columella in the fume fenfe.

Some add muftard, hard eggs, and fugar ; others, pepper, and other fpices, with oran;e-peel, faffon, \&e.

The principal fallet-herbs, and thofe which ordinarily make the batis of our Entrlifh. fallets, are lettuee, celery, endive, ereffes, radift, and rape; along with which, by way of furniture, or additionals, are ufed purflane, fpinach, forrel, tarragon, burnet, corn-fallet, and ehervil.
the gardeners call fome plants fonall berls in fallets: thefe fhould always be eut while in the feed-leaf: as creffes, multard, radifh, tumep, fpinach, and lettuce: all which are raifed from feeds fown in drills, or lines, from the middle of February to the end of Mareh, under glaffes or frames; and thence to the middle of May, upon natural beds, warmly expofed; and luring the fummer heats in more thady places; and afterwards in September, as in March, Sic.; and laftly, in the riyour of the winter, in hot-beds. If they chance to be frezen in very frolly weather, putting them i:1 fpring-water two hours before they be ufed recovers them.

SALLO (Denis de), a Erench writer, fanous for being the projector of literary journals, was born at Paris in 1626. He fudicd the law, and was admitted a counfellor in the parliament of Paris in 1652 . It was in \(166_{4}\) he fchemed the plan of the Jounal des Sçavan; and the year following began to publifh it under the name of Sieur de Heronville, which wa: that of his valet de chambre. But he played the critic fo feverely, that authors, furprifed at the novelty of fuch attacks, retorted fo powerfully, that M. de Sallo, un. able to weather the florm, after he had publithed his third Jounal, deelined the undertaking, and curned it over to the abbé Gallois; who, without prefuming to eritieife, contented himfelf merely with griving titles, and making extracts. Such was the origin of literary journals, which afterwards fprans up in other cumatries under different titles; and the fuccefs of rhem, under judicious management, is a clear proof of their utility: M. de Sallo died in 16 ofng.

SALLUSTIUS (Caius Crifpus), a celcbrated Ro. man hiftorian, was born at Anuitcrnum, a city of Italy, in the year of Rome 662, and berore Chritt 85. His education was liberal, and he made the bell ufe of it. His Roman Hillory in fix bonks, from the death of Sylla to the confpiracy of Catiline, the great work from which he elniefly derived lis glory among the antients, is unfortunately loft execpting a few fraginen:s; but his two detaehed pieces of Hittory which happily remain entire, are fufficient to jutify the great cncomiums lie has received as a writer.-He has lad the fingular honour to be twice tranflated by a toyal hand: fritt by our Elizabeth, accordiug to Camden; and

Salloftius and fecondly, by the prefent Infant of Spain, whofe II verion of this elegant hiftorian, lately primted in folio, is one of the molt beautiful books that any country has produced fince the invention of printing. No man has inveighed more fharply againt the vices of his age than this hiftorian; yet no man had lefs pretenfions to virtue than he. His youth was fpent in a moft lewd and profligate manner; and his patrimouy aimoft fquanderch away when he had fcarcely taken poffeffion of it. Marcus Varro, a writer of undoubted credit, relates, in a fragment preferved by Aulus Gellius, that Salluft was actually caught in bed with Faufta the daughter of Sylla, by Milo her hufband; who fcourged him very feverely, and did not fuffer hiim to depart till he had redeemed his liberty with a confiderable fum. A. U.C. 694, he was made queftor, and in 702 tribune of the penple; in neither of which places is he allowed to have acquitted himfelf at all to his ho. nour. Dy virtue of his cqueftorkip, he obtained an admiffion into the fenate; but was expelled thence by the cenfors in 7-4, on account of his immoral and debauched way of life. In the year 705 Cefar seftored him to the dignity of a fenator; and to introduce him into the houle with a better grace, made him queftor a fecond time. In the adminiltration of this office he behaved himfelf very fcandaloully; expofed evcry thing to fale that he could find a purchafer for; and if we may believe the author of the invective, thought nothing wrong which he had a mind to do : Nibil rion venale bubur rit, cujus aliguis emptor fuit, nibhl non aquan et versum duxit, guod it/i facere collibuiffet. In the year 707, when the African war was at an end, he was made protor for his fervices to Cæfar, and fent to Numidia. Here he acted the fame part as Verres had done in Sicily ; outrageoufly plundered the province; and returned with fuch immenfe riches to Rome, that he purchafed a nooft magnificent building upon mount Quirinal, with thofe gardens wrich to this day retain the name of Sallufian gardens, betiides his country houfe at Tivoli. How he fpent the remaining part of his life, we have no account from ancient writers. Eulebius tells us, that he married Terestia, the divorced wife of Cicero; and that he died at the age of 50 , in the year 710 , which was about four years before the battle of A ctisim. Of the inany things which he wrote, befide his Hiftories of the Catilinarian and Jugurthine wars, we have fome orations or fpecches, grinted with his fragments.

SAILLY-ports, in fontification, or Popern-Gates, as they are fomerimes called, are thofe under-ground paffages which lead from the 汭er works to the outward ones ; fuch as from the higher flank to the lower, or to the terailles, or the communication from the middle of the cutain to the ravelin. When they are made for men to go through only, they are made with fteps at the entrance and going out. They are about 6 feet wide and \(i \frac{1}{2}\) feet high. There is alfo a gutter or hore made under the fally-ports, which are in the middle of the curtains, for the water which runs down the ftreets to pals into the ditch; but this can only be done when they are wet ditches. When fally-ports ferve to carry guns through them far the out-works, inftead of making therm with fteps, they mult have a gradual nope, and be 8 fect wide.

SALMASIUS (Claudius), a French writer of un-
common abilities and immenfe erudition, defcended Salma from an ancient and noble fanily, and born at or near Semur in 1596. His mother, who was a Proteftant, infuted her notions of religion into him, and he at length converted his father: he fettled at Leyden; and in \(165^{\circ}\) paid a vifit to Chritina queen of Sweden, who is reported to have Thowin him extraordinary marks of regard. Upon the violent death of Charles I. of England, he was prevailed on by the royal family, then in exile, to write a defence of that king; which was anfwered by our famons Milton in 1051, in a work intitled Dejenfio pro Populo Anglicano cuntra Claudii Salminfii Deferfionem Regram. This book was read over all Europe; and conveyed fuch a proof of the writer's abilities, that he was refpected even by thofe who hated his principles. Salmafius died in 1653 ; and fome did not fcruple to fay, that Milton killed him by the acutenefs of his reply. His works are numerous, and of various kinds; but the greateft monuments of his learning are, his Note in Hijliorice Augufz Scriptores, and his Exercitationes Pliniana in Solinum.

SALMO, the Salmon; a genus of the order of abdominales. 'The head is fmooth, and furtiifhed with teeth and a tongue; the rays of the gills are from four to ten; the back-fin is fat behind; and the belly-fins have many rays. There are 29 \{peeies; of which the muft remarkable are,
1. The falar, or common falmon, is a northern fifh, being unknown in the Mediterranean fea and other warm climates: ir is found in France in forne of the rivers that empty themfelves into the ocean, and north as far as Greenland; they are alfo very common in Newfoundland, and the northern parts of North Ame. rica. Salmons are taken in the rivers of Kamtlchatka; but whether they are of the fame fpecies with the Enropean kind, is not very certain. They are in feveral countries a great anticle of commerce, being cured different ways, by fulting, pickling, and drying : there are flationary fifheries in lceland, Norway, and the baltic ; but we believe nowhere greater than thofe at Colraine in Ireland; and in Great Britain at Berwick, and in fome of the rivers of Scotkand. In the Hillory of ( umberland, we are told that "they depofit their fpawn even on the upper fide of Pooley bridge, bat always in the ftream of Eamont. At thofe times it is not an eafy matter to drive them away by throwing ftones at them. They will take a bait of roc, or fimall finh, while upon the rudd, or laying their fpawa. We have never heard of a falmon or falmon fmelt being feen in the lake. They go up the river Derwent in September, through the lake of Baffenthwaite, up the riwer which runs through Kefwick into the vale of St John, where they depofit their fpawn in the fmall threams and feeders of the lake. The young falmon are called falmon fmeits, and go down to the fea with the firft floods in May."

The falmon was known to the Romans, but not to the Greeks. Pliny fpeaks of it as a fifh found in the rivers of Aquitaine: Anfonius cnumerates it among thofe of the Mofcl. The fatmon is a fith that lives both in the falt and freih waters; quitting the fea at certain feafons for the fake of depoliting its fpawn, in fecurity, in the gravelly beds of rivers remotc from their mouths. There are fcarce any difficultics but what they will overcome, in order to arrive at places fir for
their puppofe: they will afeend rivers hundreds of miles, force themfelves againft the mofl rapid ftreams, and fpring with amazing agiinty over catarads of feveral feet in height. Salinon are frequently taken in the Rhine as high up as Bafil ; they gain the fources of the Lapland rivers in fpite of their torreut-like currents, and furpafs the perpendicular falls of Leixhip, Kenverth, and Pont Aherglaftyn. It may here be proper to cen'radict the vulgar error, of their taking their tail in their mouth when they attempt to leap; fuch as Mr Pemant faw, fprung up quite Atraight, and with a ftrons trenulous motion.
The falmon is a firf fo generally known, that a very brief defeription will ferve. The lergeft we ever heard of weighed 74 pounds. The colour of the back and fides are grey, fometimes fpotted with black, fometimes pain: the covers of the gills are fubjeci to the fane variety; the belly filvery; the nofe fharp-pointed; the end of the under jaw in the males often turns up in the form of a hook; formetimes this curvature is very confiderable: it is faid that they lofe this hook when they return to the fca. The teeth are lodged in the jaws and on the tongue, and are nender, but very fharp ; the tail is a little forked.
2. The trutta, or fea-tront, migrates like the true falmon up feveral of our rivers; fpawns, and returns to the fea. That defcribed by Mr Pennant was taken in the Tweed below Berwick, June 5769. The flape was more thick than the common trout ; the weight three pounds two ounces. The irides filver ; the head thick, frnooth, and dufky, with a glofs of blue and green; the back of the fame colour, which grows fainter towards the fide-line. The tack is plain, but the fides, as far as the lateral line, are marked with large diftinct irregularly-haped fpots of black : the lateral line fraight; the fides beneath the line, and the beills, are wlite. Tail broad, and even at the end. The dorfal fin had 12 rays; the pectoral it; the ventral 9 ; the atal \(: c\). The fleth when boiled is of a pale red, but weil- -avoured.
3. The fario, or trout; the colours of which vary greatly in different waters, and in different feafous. Trouts differ allo in fize. One taken in Llynallet, iJenbighinire, which is famous for an excellent kind, meafured 17 inches, its depth three and thrce quarters, its weight ene pound ten ounces; the head thick; the nofe rather flaarp; the upper jav a little longer than the lower; beth jaws, as well as the lead, were of a pale brown, blotehed with black; the teeth fharp and ftrons, difpofed in the jaws, roof of the mouth, and tongue. The back was dufly ; the lides tinged with a purplifh bloon, marked with deep purple fpots, nixed with black above and below the fide-line, which was ftraight; the belly white. The firit dorfal fin was fpotted; the fpurious fin brown, tipped with ted; the pectorad, ventral, and anal fins, of a pale brown; the edses of the anal fin white; the tail very little forked when exrended.- The Itomachs of the common trouts are uncommonly thick and nuff cular. They feed on the flell-finh of lakss and rivers, as well as on fmall fifh. They likewife take into their formachs gravel or fmall fones, to affirt in comminuting the teftaceons parts of their food. The trouts of certain lakes in Ircland, fuch as thofe of the proviace of Galway and foine othess, are fe
markable for the great thicknefs of their funnachs, stimo. which, from fome fight refemblance to the organs of - , dizeftion in birds, have beea called gizzards; the Irifa name the fpecies that has them gillaroo trousts. Thefe flomachs are fometimes ferved up to table under the former appellation. Trouts are mof voracious fifh, and afford exeellent diverfion to the angler. The paffion for the fort of angling is fo g great in the neighbour- \(^{\text {n }}\) hood of Lorton, that the liberty of finting in lome of the Itreams in the adjacent countics is purchafed at the rate of 101 . per anaum. Thefe fifh flift their quarters to fpawn ; and, like falnon, make up towards the heads of rivers to depofit their roes. The under jaw of the trout is fubject, at certain times, to the fame curvature as that of the falmon.
" It is caught (fay the editors of the Hiltory of Cumberland) in very great plenty at all feafons of the year; one weighing a pound and a half is an ufual fize. though fome are caught of 4 lb. weight. Five or fix ounces is a common weight ; the largelt are commonly the belt for the table, when they cut of a deep falmos colour. In the winter months great quarticics are potted along with the charre, and fent to London, \&c. Ithe angler, on a favourable day, here enjoys lis diverfion in higher perfection than in mult places. A trout occationally ftrays out of the Eanome into the lake, and vice verff, out of the lake into the river. They are eafly dittinguifhed by their fpots; and it is obferved, that a fifh taken from its uftual place is not in fo good a condition as one of equal liwgth taken on its own ground ; hence it is probsble, that they do not enrionate, except when difeafod or fpawaing. Geld fifh (thofe without (pa:va) are the finmett and beft: 'They have been taken wut of a follid piece of ice, in which they were frozen, as it were in a cafe, perfectly uninjured, after an iniprifonment of feveral liours."
4. Whe fpecies, called from its colour the white, migrates out of the fea into the river Elk in Cumberland, from july to Scptember. When dreffed, their Gufl is red, and moft delicious eating. They have, on their firlt appearance from the falt water, the lernen falinorez, or tahmon loufe, adieering to thent. They have both milk and fpawn; but no fry has as yet becn obferved. 'This is the lilh called by the scots pbirooss. They never excecal a fout in length. The upper jaw is a litte longer than the lower; in the frft are two rows of teeth, in the lut une: oa the tongue are fix teeth. The back is Atraight : the whole body of an elegant form : the lateral line is itraight; colour, between that and the top of the back, dulky and filvery intermixed; beneath the line; of an exquifite whtenefs; firt doral in fputied with black: tail black, and much forked.
5. The famlet is the leat of the trout kind; is frequent in the Wye, in the upper part of the Severn, and the rivers that run into :t, in the north of England, and in Wales. It is by feveral imarined to bee the fiy of the falmon; bue Mr Pennant ditients from that opinion. See lis Bru. Z \%ol. 111. 303.
This feccies has a eereral refemblance tu the trout, therefure mult be delecribed comparatively. 1 \(A\), The head is proportionably narrowet, and the mooth jets than that of the trout. \(2 d / j\), Their body is deeper. 3 dly, They feldorn exceed fix or feven inches in length: a: mont, eight and a lialf. \(4^{\prime}\) hy, 'Tbe fectoral ting have
gencrat's.
generally but one large black; fpot, though fonsetimes a fingle fmall one attends it; whereas the pectoral fins of the trout are more numerouny marked. 5thly, The fpurions or fat tin on the back is never tipped with red; nor is the edge of the anal fin white. \(6 / 2 / 2\), 'The fpots on th.e hody are fewer, and not fo bright: it is alfo maked from the back to the fides with fix or feven lares bluinh hars; but this is not a certain character, as the fane is fometimes found in young trouts. \(7^{\mathrm{h} / \mathrm{h}}\), The tain of the famlet is much more forked than that of the trout. Thefe fifh are very frequent in the rivers of Scotland, where they are called pirs. They are allo common in the Wye, where they are known by the name of /kirlin?s, or laforings.
6. The alpinus, or red charr (umbla minor, or cafe chart of Peanant), is an intabitant of the lakes of the north, and of thofe of the mountainous parts of Europe. It affects clear and pure waters, and is very rarely known to wander into running freams, except into fuck whofe bottom is fimilar to the neighbouring lake. It is found in vaft abundance in the co'd takes on the finmenits of the Lapland Alps, and is almof the only fifn that is met with in any plenty in thofe regions ; where it would be wonderful how they fubfited, had net Providence fupplied them with innumerable larve of the grat kind: thefe are food to the filh, who in their turn are a fupport to the inicratory Laplanders, in their funmer voyages to the difant lake. In fuch excurfions thofe vacant people find a luxarious and ready repart in thefe fin, which they drefs and eat without the addition of fauces; for exercife and temperance render ufelefs the inventions of epicurifm. There are but few lakes in our inand that produce this firh ; and cven thofe not in any abundance. It is found in Ulfwater and Windcrmere in Weftmoreland; in Llyn Quellyn, near the font of Snowdon; and, before the difcovery of the coppermines, in thofe of Llynberris; but the mineral ftreams have entirely deftroyed the fifh in the laft lakes. In Scorland it is found in Loch Inch, and other neighbouring laken, and is faid to go into the Spey to \{pawn.
"The largeft and moft beautiful we ever received (fays Mr Pennant) were taken in Windermere, and were communicated by the Rev. Mr Farih of Carlife, with an account of their natural hiftory. He fent five Specimens; two under the name of the cafe charr, male and femalc; another he called the geld charr, i. e. a charr which had not fpawned the preceding feafon, and on that account is reckoned to be in the greateft perfection. The two others were infcribed, the red charr, the filver or gild charr, the carpia lacus benaci, Ran Svn. Pifc. 66. which laft are in Wefmoreland diftinguifhed by the epithet red, by reafon of the fefh afluming a higher colour than the other when dreffed.
" The umbla minor, or cafe charr, fpawns about Michaelmas, and chiefly in the river Brathy, which uniting with another callcd the Rowwthay, about a quarter of a mile above the lake, they both fall into it together. 'The Brathy has a black rocky bottom; the bottom of the Rowthay is a bright fand, and into this the charr are never obferved to enter. Some of them, however, fpawn in the lake; but always in fuch parts of it which are fony, and refemble the channel of the Bratby. They are fuppofed to be in the higheft per-
fection abont May, and continue fo all the fummer: yet are rarcly causht after April. When they are fpawning in the river they will take a bait, but at no other time; being commonly taken, as well as the other fpecies, in what they call breidforffs, which are in length abont 24 fathoms, and about five where broadef. The feafon which the other fpecies fpawn in is from the berinning of Jaruary to the end of March. They are never known to afcend the rivers, but always in thofe parts of the lake which are fpringy, where the botton is finooth and fandy, and the water warmef. The fithernen judge of this warmth, by obferving that the water fulcom frcezes in the places where they fpawn except in intenfe frots, and then the ice is thinner than in other parts of the lake. They are taken in greateft plenty from the end of September to the end of November; at otlrer times they are hardly to be met with. This Cpecies is much mure efteented for the table than the other, and is very delicate when potted. The length of the red charr to the divifion in its tail was 12 inches ; its bigget circumfercince almoft 7 . The firt dorfal fin was five inches and three quarters from the tip of its nofe, and confitted of 12 branched rays, the firft of which was fho:t, the fifth the longelt; the fat fin was very fmall. Each of the five fifh had double noitrils, and fmall teeth in the jaws, roof of the mouth. and on the tongue. -. The jaws of the cafe-charr are perfectly even ; on the contrary, thofe of the red-charr were unequal, the upper jaw being the broadeft, and the teeth hung over the lower, as might be perceived on paffing the finger over them. - The reld or barren chare was rather more flender than the others, as being without fpawn. The back was of a gloffy dulky blue; the fides filvery, mixed with blue, Ipotted with pale red; the fides of the belly were of a pale red, the bottom white. The tails of each bifurcated."
7. The thymallus, or grayling, haunts clear and rapid Itreams, and particularly thofe that How through mountainous countries. It is found in the rivers of Derbyflire; in fome of thofe of the north ; in the Tame near Ludlow ; in the Ling, and other ftrea nis near Levminfter; and in the river near Chriftchurch, Hampthire. It is alfo very common in Lapland: the inhabitants make ufe of the guts of this fifh inftead of rennet, to make the cheefe which they get from the milk of the rein-dcer. It is a voracions fith, rifes freely to the fy, and will very eagerly take a bait. It is a very fwift fwimmer, and difappears like the tranfient paffage of a fhadow, from whence we believe it derived the name of umbra.

Effugienfque oculos celeri levis umbra natatu. Aufon.
The umbra fwift efcapes the quickelt eye.
Tbymslus and thymus are names beftowed on it on account of the imaginary ficent, compared by fome to that of thyme; but we never could perceive any particular finell. It is a fift of an clegant form; lefs deep than that of a trout: the largeft we ever heard of was taken ncar Ludlow, which was about half a yaid long, and weighed four pounds fix ounces; but this was a very rare inftance. The irides are filvery, tinged with yellow: the teeth very minute, feated in the jaws and the roof of the mouth, but none on the tongue : the head is duky; the covers of the gills of a glofly green: the back and fides of a fine filvery grey; but when the inh is juft is ftraight : the fcales are large, and the lower edges duky, forming ftraight rows from head to tail: the tail is much forked.
8. The eperlanus, or fmelt, inhabits the feas of the northern parts of Europe, and probably never is found as far fouth as the Mediterranean : the Seine is one of the French rivers which receive it; but whether it is found fouth of that, we have not at prefent authority to fay. If we can depend on the oblervations of navigators, who generally have too much to think of to attend to the minutix of natural hiftory, thele fifh are taken in the Straits of Magellan, and of a molt furprifing fize, fome meafuring. 20 inches in length and 8 in circumference. They inhabit the feas that wah thefe iflands the whole year, and never go very remote from fhore except when they afcend the rivers. It is remarked in certain rivers, that they appear a long time before they Spawn, being taken in grcat abundance in November, December, and January, in the Thames and Dee, but in others not till February; and in March and April they fpawn; after which they all return to the falt water, and are not Seen in the rivers till the next feafon. It has becn oblerved that they never come into the Merfey as long as there is any fnow-water in the river. Thefe fifh vary greatly in fize ; but the largett we ever heard of was 13 inches long, and weighed half a pound. They have a very particular fcent, from whence is derived one of their Englifh names, (melt, i. e. fmell it. That of Jparling, which is ufed in Wales and the north of England, is taken from the French Jperlan. There is a wonderful difagreement in the opinion of people in refpect to the feent of this fin: fome affert it flavours of the violet; the Germans, for a very different reafon, diftinguifh it by the elegant title of finckffich. -Smelts are often fold in the ftreets of London fplit and died. They are called dried fparlings ; and are recommended as a relifh to a glafs of wine in the morning. It is a fifh of a very beantiful form and colour; the hud is tranfparent, and the fkin in general fo thin, that with a good microfcope the blood may be oblerved to circulate. The irides are filvery ; the pupil of a full black; the under jaw is the longelt: in the front of the upper jaw are four large teeth; thofe in the fides of hoth are fmall ; in the roof of the mouth are two rows of teeth; on the tongue two others of large teeth. The fcales are fmall, and readily drop off: the tail confits of 19 rays, and is forked. The colour of the back is whitifh, with a caft of green, beneath which it is varied with blue, and then fucceeds a beautiful glofs of a filvery hue.
9. The lavaretus, or gwiuiad, is an iuhabitant of feveral of the lakes of the Alpine parts of Europe. It is found in thofe of Switzerland, Savoy, and Italy; of Norway, Sweden, Lapland, and Scotland ; in thofe of Ireland, and of Cumberland; and in Wales, in that of Llyntegid, near Bala, in Merionethhire. It is the fame with the ferra of the lake of Genera; the fchelly of Hulfe-water ; the pollen of Lough Neagh ; and the vangis and jurengis of Loch Mabon. In Scotland there is a tradition that it was firt introduced there by their beauteous but unfortunate queen, Mary Stuart; and as in her time the Scotch court was much Frenchified, it fecms likely that the name was derived from the French

Vol. XVI. Part. II.
vendidif, a "dace;" to which a night obferver might
be tempted to compare it from the whitenefs of its be tempted to compare it from the whitenefs of its fcales. The Britifh name gwiniad, or zubiting, was beftowed upon it for the fame reafon. It is a gree garious filh, and approaches the fhores in valt hoals in fpring and in fummer; which proves in many places a bleffed relief to the poor of inland countries, in the fame degree as the annual return of the her. ring is to thofe who inhabit the coafts. Between 7000 and 8000 bave been taken at one draught. The gwiniac is a finh of an infipid tafte, and mult be eaten foon, for it will not keep long; thofe that choofe to preferve them do it with falt. They die very foon afte: they are taken. T'heir fpawning feafon in Llyntegid is in December. The largeft gwiniad we e:er heard of weighed between three and four pounds: the head is fmall, fmooth, and of a dur?y hue : the eyes very large; the pupil of a deep blue: the nofe blunt at the end; the jaws of equal length: the mouth fmall and toothlefs: the branchioftegous rays nine : the covers of the gills filvery, powdered with black. The back is a little arched, and flightly carinated: the colour, as far as the lateral line, is gloffed with deep blue and par. ple ; but towards the lines affumes a filvery caft, tinged with gold ; beneath which thofe colouss entirely prevail. The tail is very much forked : the fcales are large, and adhere clofe to the body.

SALMON, in ichthyology. See Salmo, no 1.
SAlason-Fibery. See Salinon-Fisuerr.
SALON, or Saloon, in architeeture, a lofty, 反pacious fort of hall, vaulted at top, and ufually compre-
hending two flories, hending two flories, with two ranges of windows.
The falon is a grand 1oom in the middle of a building, or at the head of a gallery, \&c. Its faces, or fides, are all to have a fymmetry with each other; and as it ufually takes up the height of two ftories, its ceiling, Daviler obferves, fhould be with a moderate fweep.

The falon is a fate-room much wfed in the palaces in Italy; and from thence the mode came to us. Ambaffadors, and other great vifitors, are ufually received in the falon.

It is fometimes built fquare, fometimes round or oval, fometimes octagonal, as at Marly, and fometimes in other forms.
SALONA, a fea-port town of Dalmatia, feated on a bay of the gulph of Venice. It was formerly a very confiderable place, and its ruins fhow that it was 10 miles in circumference. It is 18 miles north of Spalatto, and fubject to Yeaice. It is now a wretched \(F\) rrib's, village, preferving few ditinguifhable renains of its an- Trel unis cient fplendor. Doubtlefs the two laft ages have de. froyed all that had efcaped the barbarity of the northern nations that durnolifhed it. In a valuabie MS. relation of Dalmatia, written by the fenator Giambattifta Guiltiniani, about the midale of the 16 th cemtury, there is a hint of what exifted at that timc. "The nobility, grandeur, and magnifience of the city of Salona, may be imàgined from the caults and arches of the wonderful theatre, which are feen at this day ; from the vaft flones of the fureit marble, which lies leattered on, and buried in the fields ; from the beautiful column of three pieces of martle, which is fill fanding is che place where they fay the arfenal was, towards the feaflore; and from the many arches of furpriling beauty,
\[

Saluas.

\section*{\(S\) A L}

Salorichi fupported by very high marble columns; the height of the arches is a flone-throw, and above them there was an aqueduct, which reached from Salona to Spalatro.

There are to be foen many mins and veftiges of large palaces, and many ancient epitaphs may be read on fne marble fones; but the earth, which is increafed, bas buried the moft ancient ftones, and the moft valuable things." E. Long. 17. 29. N. Lat. 44. 10.

SALONICHI, formerly called Theffalonica, a feaport town of Turkey in Europe, and capital of Macedonia, with an archbifhop's fee. It is ancient, large, populous, and rich, being about 10 miles in circuinference. It is a place of great trade, carried on principally by the Greek Chrittians and Jews, the former of which have 30 churches, and the latter as many fynagogues ; the Turks alfo have a few mofques. It is furrounded with walls, flanked with towers, and defended on the land-fide by a citadel, and near the harbour with three forts. It was taken from the Venetians by the Turks in 143 I . The principal merchandize is filk. It is feated at the bottom of a gulph of the fame name, partly oa the top, and partly on the fide of a hill, near the river Vardar. E. Long. 23. 13. N. Lat. 40.41 .

SALSES, a very frong caftle of France, in Rouffillon, on the confines of Languedoc. It was taken from the Spaniards by the French in 1642; and is feated on a lake of the fame name, among mountains, 10 miles north of Perignan. E. Long. 3. O. N. Lat. 4.3. 35.

SAL.SETTE, an iffand of the Eaf Indies, adjacent to Bombay, from which it is in one place divided only by a narrow pafs fordable at low water. It is abont 26 miles long, and eight or nine broad. The foil is rich, and by proper cultivation capable of producing any thing that will grow in tropical climates. It is everywhere well watered, and when in the poffeftion of the Portuguefe furnithed fuch quantities of rice, that it was called the Granary of Goa. It abounds alfo in all kinds of provifions, and has great plenty of game, both of the four-footed and feathered kind. It has pretty high mountains; and there is a tradition that the whole was thrown up from the bottom of the fea: in confirmation of which it is faid, that on the top of the higheft hill there was found, fome years ago, a tone anchor, Guch as was anciently ufed by the inhabitants of that - ountry. Here we meet with the ruins of a place called C.anara, where there are excavations of rocks, fuppofed to be contemporary with thofe of Elephanta. They are much more numerous, but not comparable to the former either in bignefs or workmanhip.

The ifland of Salfette lately formed part of the Porruguefe dominions in India. It ought to have been ceded to the Englifh along with Bombay, as part of the dower of Catharine of Libon, efpoufed to Charles II. The fulfilment of this artick, however, being evaded, the ifland remained in poffefion of the Portuguefe; and notwithftanding the littlc care they took of it, the revenue of it was valued at 60,0001 . Such was the negligence of the Portugucfe government, that they took no care to fortify it againit the attacks of the Maratas, from whofe dominions Salfette was only feparated by a very narrow pafs fordable at low water. Here they had only a miferable redoubt of no confequence, till, on the appearance of an approaching
war with the Marattas, they began to build another, which indeed would have anfwered the purpofe of protecting the illand, provided the Marattas had allowed them to finifh it. This, however, was not their inten. tion. They allowed them indeed to go quietly on with their works, till thcy faw them almoft completed, when they came and took poffeflion of them. The Marattas thus became dangerous neighbours to the En. lifh at Bombay, until it was ceced to the latter by the treaty concluded with thefe people in 1780 . E. Long. 72. 15. N Lat. 19. o.

SALsola, Glass-vort : A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 12 th order, Holoraced. The calyx is pentaphyllous; there is no corolla; the capfule is monofpermous, with a fcrewed feed.

The fpecies are, I. The kali, which grows naturall \({ }_{F}\) in the falt marfhes in divers parts of England. It is an annual plant, which rifes above five or fix inches high, fending out many fide branches, which Spread on every fide, garnithed with Thort awl-fhaped leaves; which are flefliy, and terminate in acute fpines. The flowers are produced from the fide of the branches, to which they fit clofe, and are encompaffed by fhort prickly leaves; they are fmall, and of an herbaceous colour. The feeds are wrapped up in the empalement of the flower, and ripen in autumn; foon after which the plant decays. 2. The tragus grows naturally on the fandy thores of the fouth of France, Spain, and Italy. This is alfo an annual plant, which fends out many diffufed Italks, garnifhed with linear leaves an inch long, ending with tharp fpines. The flowers come ont fron the fide of the ftalks in the fame marner as thofe of the former; their cmpalements are blunt, and not fo clofely encompaffed with leaves as thofe of the other. 3. The foda, rifes with herbaceous ftalks near threc feet high, fpreading wide. The leaves on the principal ftalk, and thofe on the lower part of the branches, are long, flender, and have no fpines; thofe on the upper part of the ftalk and branches are fender, fhort, and crooked. At the bafe of the leaves are produced the flowers, which are fmall, and hardly perceptihle ; the empalement of the flower afterwards encompaftes the capfule, which contains one cochleated feed. 4. The vermiculata grows naturally in Spain. This. hath Thrubby perennial ftalks, which rife three or four feet high, fending out many fide-branches, garnihed with flefhy, oval, acute-pointed leaves, coming out in clufters from the fide of the branches; they are hoary, and have fliff prickles. The flowers are produced from between the leaves toward the ends of the branches; they are fo fmall as fcarce to be difcerned, unlefs they are clofely viewed. The feeds are like thofe of the other kinds. 5. The rofacea grows naturally in Tartary. This is an amual plant, whofe ftalks are herbaceous, and feldom rife more than five or fix inches high. The leaves are awl-fhaped, ending in acute points; the ernpalements of the llowers fpread open: the flowers are fmall, and of a rofe colour, but foon fade : the ieeds are like thofe of the other forts.

All the forts of crlafs-wort are fometimes promifeun oufy ufed for making the fal kali, but it is the third fort which is efteemed beft for this purpofe. The manner of making it is as follows: Having dug a trench

\section*{S A L}
near the fea, they place laths acrofs it, on which they lay the herb in heaps, and, having made a fire below, the liquor, which runs out of the herbs, drops to the bottom, whieh at length thickening, becomes fal kali, which is partly of a black, and partly of an ahh-colour, very fharp and corrofive, and of a faltifh tate. This, when thoroughly hardened, becomes like a flone; and in that flate is tranfported to differont countries for making of glafs.

SALT, one of the great divifions of natural bodies, but which has never yet been accurately defined. The characteritic marks of falt have ufually been reekoned its power of affecting the organs of tafte, and being foluble in water. But this will not ditinguinh falt from quicklime, which alfo affects the fenfe of tafte, and diffolves in water; yet quicklime has been univerfally reckoned an earth, and not a falt. The only diftirguifhing property of falts, therefore, is their eryfallization in water: however, this does not belong to all falts; for the nitrous and marine aeids, though allowed on all hands to be falts, are yet incapable of eryitalliza. tion, at leaf by any method hitherto known. Several of the imperfect neatral falts alfo, fuch as combinations of the nitrous, muriatic, and regetable acids, with fome kinds of earths, crytallize with very great difficulty. However, by the addition of firit of wine, or fome other fubitances which abforb part of the water, l:eeping the liquor in a warm place, se. all of them may be reduced to cryftals of one kind or other. Salt, therefore, may be defined a fubllance affecting the orgrans of tafte, foluble in water, and capable of cryftal1:zation, either by itfelf or in conjunction with fome other body; and, univerfally, cvery falt eapable of being reduced into a folid form, is alfo capable of eryilatlization per fe. Thus the clafs of faline bodies will be fafficiently diftinguifhed from all others: for quicklime, though foluble in water, cannot be cryftallized without addition either of fixed air or fome other acid; yet it is molt commonly found in a folid flate. The precious fones, bafaltes, \&e. though fuppofed to be formed by crytallization, are neverthelefs ditinguifhed from falts by their infipidity and infolubility in water.

But acids and alkalis, and combinations of both, when in a concrete form, are falts, and of the pureff fort. Hence we conclude, that the bodies, to which the name of falts more properly belongs, are the eoncretions of thofe fubHances; which are aecordingly ealled acid falts, alknline falts, and neutral fals. Thefe laft are combinations of acid and alkaline falts, in fuch proportion as to render the compounds neither four nor alkaline to the talte. This proportionate combination is called faturation: thus the common kitchen-falt is a neutral falt, compofed of marine acid and mineral alkali combined together to the point of faturation. The appellation of neutral falts is alfo estended to denote all thofe combinations of acids, and any other fubftance with which they can unite, fo as to lofe, wholly or in great meafure, their acid properties.

But altho' this general defnition of falts is commonly received, yet there are many writers, efpecially mineralogits, who confine the denomination of \(f_{a} / l\) s in the manner we firt mentioned, viz. to thofe fubttances oaly which, befices the general properties of falts, have the power of cryftallizirg, that is. of arranging thcir particles fo as to form regularly-fhaped bodies, called cryphls, when the water fuperfluous to their corcrete suiftence has beea cwaprorated.

The ancient ehemifts afferted that fait was one of the component principles of metals, and indeed of every thing elfe: a ductrine which was atternpted to be revived by the late Dr Price of Guildford, who thought it probable trat the bafis of all imperfect me tals is faline, becaufe Mr Schecle had lately extracted a real acid from arfenic, whieh, by the addition of a proper quantity of phlogitton, becomes a feminetal. But here the argument will hold only with regard to the femimetals, all of which are volatile in the fire, and therefore may poffibly have a volatile bafis, fuch as all acids are in fome degree: but fome of the imperfect metals, as tin and copper, may be reduced to a cala equally refractory with quieklime itfelf; and even zinc, though volatile in clofe veffels, is yet capable of being reduced to an exceedingly refractory calx called fowers of zinc; and it is to be obferved, that the regulus of arfenic, even in its moft perfeet metalline form, eannot be calcined like other metals. The common opinion that metals have an earthy, rather than a faline bafis, feems to be well founded.
The origin of falts is very much, or rather totally, unknown. Some eminent chemifts, partieularly Stall, have fuppofed that the number of fubitances truly and effentially faline is very fmall; nay, that there is but one faline principle in nature. This principle they fuppofe to be the vitriolic acid, as beiag the molt fimple and indeftruetible of them all. Stahl delivers his opinion on this fubject in the following words: "That he confiders the vitriolic acid as the only fubitance effentially faline; as the only faline principle which, by uniting more or iefs intimately with other fubflances that are not faline; is capable of forming an innumerable multitude of other ialine matters, which nature and art flew us; and, fecondly, that this faline prineiple is a fecondary prineiple, compofed only by the intimate union of two primary priziciples, water and earth.

In fupport of this theory Mr Macquer argues in the following manner: "Every true chemit will eatily difcover that this grand idea is eapable of eomprchending by its generality, and of connecting together, all the phenomena exhibited by faline fubllances. But we muft at the fame time acknowledge, that when we cxamine the proofs upon which it is founded, alchough it has a great appearance of truth by its confilteney with the principles of chemiltry, and with maay phenumena, yet it is not fupported by a fufficint number of facis and experiments to afcertain its truth. We mighe here exanine what degree of probability ought to be granied to this theory of falts; but this could not be pro. perdy acconplifled, without cutering into long details, and pentetrating into the depths of chenillry. Wra are therefore obliged to relate only what is moft eifential to be known concerning this grand hypxielis We mas pereeive at once, that the former of shofe pruputitions, upon which is founsed thic theory when we mentioned, cannot be demontliated, unlel's jo be presioufiy prow ved that exery faline matter, excepting pere visulie arid, is nothing but his fame acis difecrertly mounfied, the prinary propertics of which are mure or lets alected or difgnifed loy the union contr:ced with other hite itances. But we confefs, that chenifts are not capable of proving decificly this opinion; which, however, will appear very probable from the following reflections.
"Firft, Of all faline matters known, noare is is llrous, AIz

\section*{S A L [ 6zo ] S A L}

Sait. fo unalterable, fo eminently poffefed of falise properties, as vitriolic acid."

The vitriolie acid, when combined with other fub)flances, forms vitriolic falts, which vary both in fpecific nanics and propertics, according to the various fubfances will which the acid is combined. Thus the vitriolic acid, combined with mineral alkali, forms the falt called Glauber's fall, or fal mirabile. When it is combined with calcarcous carths, it forms vitriolic falts with bafes of calcareous earth, which are commonly called felenites. When combined with argillaceous earths, it forms alun. When combined with netals, it forms vitriolic falts with metallic bafes, to which the general nane rutriols is given; and in commerce are commonly called copperas. , he vitriols principally ufed are, 1. The martial vitriol; called alfo Englyfh vitriol, Sreen vitriol. or green copperas, which is a combination of vitriolic acid with iron. 2. The vitriol of copper, called alfo thue vitriol, Cyprian vitriol, or blue copperas; which is a combination of vitriolic acid and copper. 3. The vitriol of zinc, called alfo zubite copperas, and Goflar vitrinh, which is a combination of the fame acid with a femimetal called ainc. It is a property peculiar to the vitriolic acid, that all the combinations of it, with thofe fubftances with which it can form neutral falts, are fufceptible of cryftallization.
"' Secondly, Amonglt the other faline fubftances, thofe which appear molt active and mof fimple, as nitrous and marine acids, are at the fame time thofe whofe properties moft refemble the propertics of vitriolic acid."

The nitrous acid, combined with all the fubftances with which it can mix, forms faline fubftances, in general called nitrous falts; fpecifying each particular falt by the name of the fubitance united to the acid. Thus nitrous acid, with fixed vegetable alkali, forms a faline fubftance called nitre, or faltpetre. With mineral atkali, forms cubic or quadrangular nitre. When mixed with metallic fubitances, forms metallic nitres, which are \(f_{p}\) ecified vitre of gold; sitre of filver, or lunar nitre, iunar cryfals, and crypals of filver, nutrous cryfals of mercary; nitre of copper, \&c.
" Thirdly, We may give to vitriolic acid many of the characterific properties of nitrous acid, by combining it in a certain manner with the inflammaible principle, as we fee in the volatile fulphureous acid; and even, according to an experiment of Mr Piech, related in a memoir concerning the origin of nitre, which gainad the prize of the academy of Berlin, vitriolic acid, mixed with vegetable and animal matters fufceptible of fermentation, is really transformed into a nitrous acid by the putrefaction of thefe matters. See Chemistry, \(10 \% 720\).
"Fourthly, The marine acid, although its principles are lefs known than thofe of the nitrous acid, may be approximated to the character of vitriolic and nitrous acids by certain methods. This acid, after it has been treated with tin and other metallic matters, is capable of forming either with fpirit of wine, as vitriolic acid does, which it cannot do in its natural ftate; and when iron is diffolved in it, it feems to be approximated to the nature of nitrous acid. Reciprocally,
the approximation of vituolic acid to the character of narine acid feems uot impoffible. Having once diftilled very pure vitriolic acid upon a confiderable quantity of white arfenic, I was ftruck with a ftrong fmell like that of marine acid, which was not either that of arfenic or of vitriolic acid ; for this has no fmell when it is pure."

The marine acid, combined with various natters, forms marine falts, or fimply falts, fpecified by the names of their particular bafes. The fea-falt, or kitchen falt, and fal gen, are combinations of marine acid and mineral alkali. When this acid is combined with volatile alkali, it forms fal ammoniac (A.) With metals it forms metallic falts, called falt of gold, falt of copper, \&c. according to the variuus metals combined with the acid. The falt of filver is alfo called luna corvea; the falt of lead is often called plumbum corneinn; and the falts of antimony, and of arfenic, are known by the names of butter of antimony, and butter of arfenic.
"Fifthly, Oily vegetable acids becone fo much ftronger, and more fimilar to vitriolic acid, as they are more perfectly deprived of their oily principle, by combining them with alkalis, earths, or netals; and afterwards by feparating them from thefe fubtances by diftillation, and 'efpecially by frequently repeating thefe operations. They might perhaps be reduced to a pure vitriolic acid, by continuing fufficiently this method : and reciprecally, vitriolic and nitrous acids, weakened by water, and treated with much oily mat. ters, or fill better with Cpirit of wine, acquire the characters of vegetable acids. We may fee a remarkable inflance of this in Mr Pott's differtation De acido nitri vinofo. [The mon remarkable experiment in which is related under the article Chemistry, \(n^{\circ}\) 781.]
"Sixthly, The properties of fixed alkalis feem to be very different from thofe of acids in general, and confequently of vitriolic acid. Yet if we confider that a large quantity of earth enters their compofition; that nuch of it may be feparated by repeated folutions and calcinations; and alfo, that by depriving thefe faline fubftances of their earthy principles, they be: come lefs fixed, more deliquefcent, and, in a word, more fimilar to vitriolic acid in this refpect; -we thall not think it improbable, that fixed alkalis owe their faline properties to a faline principle, of the nature of vitriolic acid, but much difguifed by the quantity of carth, and probably of inflammable principle, to which it is united in thefe combinations. The properties of volatile alkalis, and the transformation of fixed alkali, or of its materials, into volatile alkali in putrefaction, and in feveral diftillations, feem to fhow fufficiently that they are matters effentially faline, as fixed alkalis are, and that their volatility which diftinguifhes them proceeds from their containing a lefs quantity of carth, but more attenuated, and a portion of very fubtile and volatile oil, which enters thcir compofition. [For fome other particulars relating to the tranfmutation of falts, fee Chemistry, no 784.\(]\)
"Belides thefe principal facts, there are many others, too numerous to be even fightly mentioned here ; they may be found fcattered in the works of chemilts, particularly of Stahl. But perfons who would collect and compare all the experiments relating to this
fubject,
(A) Ammoniacal falts is alfo a general name given to all neutral falts compofed of an acid faturated with a volatile alkali,

\section*{S A L}
2. fubject, ought to know, that many of them are not fufficiently afcertaincd; and that perhaps a greater number of them have not been fufficiently profecuted, and are, properly fpeaking, only begun. We mult even acknowledge, that many of thofe experiments which we have mentioned have not been fufficiently profecuted.
"The fecond fundamental propofition of the theory of falts, namely, 'That the vitriolic acid is compounded of only the aqueous and earthy principles,' is, like the firlt, fupported by many facts which give it a degree of probability, but which do not amount to a complete demonftration. This propofition may be fupported by the following confiderations.
" Firft, Experience conftantly fhows, that the properties of compound bodies are always the refult of thofe of the component parts of thefe bodies, or rather they are the properties of thefe component bodies modified by one another.
"Thus, if a body be compofed of two principles, one of which is fixed and the other volatile, it will have a lefs degree of fixity than the former, and a lef3 volasility than the latter. If it be compofed of two principles, one of which is fpecifically heavier than the other, its fpecific gravity will be greater than that of one of them, and lefs than that of the other. The fame obfervation is applicable to all the other effential properties, excepting thofe which deftroy each other; as, for inflance, the tendency to combination, or the diffolving power; for thefe latter properties are weakened fo much more in the compounds as their principles are more ftrongly united, and in more juft proportion.
"We ubferve, neverthelefs, that the properties of compound bodies are not always exactly intermediate betwixt the properties of the component bodies; for, to produce this mean, the quantities of each of the component parts mult be equal, which is the cafe in few or no compounds.
" Befides, fome particular circumftances in the manner in which the principles unite with one another, contribute more or lefs to alter the refult of the combined properties: for inflance, experience fhows, that when feveral bodies, particularly metals, are united together, the fpecific gravities of which are well known, the allay formed by fuch union has not the precife §pecific gravity which ought to refult from the proportion of the allayed fubftances; but that in fome allays it is greater and in others lefs. But we are certain, on the other fide, that thefe differences are too inconfiderable to prevent our diftinguifting the properties of the principles in the compounds which they form, efpecially when they have very different propèrties.
"Thefe things being premifed, when we examine well the properties of vitriolic acid, we thall eafily find that they partake of the properties of the aqueous and of the earthy principles.
"Firt, When thos acid is as pure as we can have it, it is like the pureft water and the pureft vitritiable eaths, free from colour or fmedl, and perfeetly tranfparent.
"Secondly, Although we cannot deprive the vitriolic acid of all the water fuperabundant to its faline effence, and therefore its precife fuecific gravity has not beer determined, we know that when it is well
concentrated, it is moce than twice as heary as plure water, and much lef heavy than any earthy fubstance.

5ns:
"Thirdly, This acid is much !efs fixed than any pure earth, fince, however well it may be coneentrated, it may always be entircly dititled ; for which purpofe a much ftronger degree of heat is requilitc than for the diftillation of pure water.
"Fourthly, We do not know the degree of folidity of vitriolic acid, or the adhefion of aggregation, which its integrant parta have one to another, becaule for thas purpofe the vitriol:c acid ought to be deprived of ail fuperabundant water: but if we jucge of it by the folid confiftence of this acid when highly concentrated, as we fee from the vitriolic acid called glaciat, the integrant parts of this acid feem lufceptible of a nuch Itrunger adhefion than thole of pure water; but much lefs than thofe of earth, as we fee from the inflanse of hard ftones.
"Fifthly, The union which this acid contracts with water and with earthis, fhows that thefe fubitances enter into its compolition; for we know, that in general compounds are'difpofed to unite fupcrabundantly with the principles which compofe them. All thele properties of vitriolic acid, which fo fenfibly partake, and much more than any other acid, of the properties of earth and of water, are fufficient to induce us to believe that it is compofed of thele two principles; bu: it has one very eminent property, which is common with it to neither water nor pure earth, which is, its violent and corrotive tafte. This property is fufficiert to raife doubts, if we could not explain it from prineiples, which feem certain and general, relating to the corrb:nation of bodies.
"TVe obferve, then, concerning the property now in queftion, that is, of tafte in general, that is cas only. be confidered as an irritation made upon the organs \(3 t^{\circ}\) talle by fapid bodies; and if we reflect attentirely up. on it, we thall be convinced, that no fubtence that is not impreffed by fone impulfe can irritate or agita:e our fenlible organs, but by a peculiar force of its integrant parts, or by their tendency to combination; that is, by their diffolving power. According to this notion, the tafte of bodies, or the imprelion made cp. on our fenfible organs by their tendency to combiation, or by their diffolving power, are the fame properts ; and we fee accordingly, that every folvent has a tate, which is fo much more ftrons as its diffolving poser is greater ; that thofe whofe tatte is fo viokent that it amounts to acrimony, corrofion, and cauticity, when applied to any other of the feafible parts of our body belides the organs of tafte, excite in them itching and pain.
"This being premifed, the queftion is, How earti., in which we perceive no talfe nor difolving power, and water, which has but a very weal diffolving power, and little or no tatte, thould form by their combination a fubtance, fuch as the vitriolic acid is, powertilly corrotive and folvent?
"To conccive this, let us confider, firt, that everf part of matter has a power by which it combiues, or tends to combine, with other parts of mater. Sec al. \(\mathrm{l} y\), that this force, the effects of which are percep: bict, in chemical operations, only anong the very fmail mu= lecules, or the integrant and conllituent parts of bexac, feems proportionable to the deality or ipecific sravisy of thefe parts. Thirdy, that this fume fore is lameited 6

\section*{S A L}

Gat.. in every integrant molecule of matter: that if we confider this force as not fatisfied, and confequently as a firmple tendency to combination, it is the greatelt porfible in an integrant molecule of matter perfectly infulated, or attached to nothing; and is the fmalleft poffif ble, or none, when it is fatisfied by its intimate combination with other parts capable of exhaufting all its action; its tendency being then changed into adhefion.
"Hence we may infer, that the integrant parts of the earthy principle have effentially, and like all the other parts of matter, a force of tendency to union, or of cohefion in uniou, aecording to their condition; that as this eartly principle has a much more confiderable denity or fpecific gravity than all other fimple bodies that we know, we may probably prefume that its primary integrant molecules have a more confiderable force of tendency to union, in the fame proportion, than the integrant parts of other principles; that confequently when they colicre together, and form an aggregate, their aggregation mult alfo be ftronger and firmer than that of any other body. Accordingly we fee, that the pureft earthy fubftances, whofe parts are united and form maffes, fuch as, for inftance, the ftones called vitrifable, are the hardeft bodies in nature. We are no lefs certain, that as the tendeney of the parts of matter to unite is fo much lefs evident as it is more exhaufted and fatisfied in the aggregation, the parts of the earthy principle being capable of exhaufting mutually all their tendency to union, we may thence infer, that every feninble mars of pure earthy matter muft appear deprived of any diffolving power; of taftc ; in a word, of tendency to union from the firmnefs of its aggregation. But we may alfo infer, that when thefe primary integrant parts of the earthy principle are not united together in aggregation, then, refuming all the activity and tendency to union which are effential to them, they muft be the ftrongeft and moft powerful of all folvents.
" Thefe being premifed, if we fuppofe again, with Stahl and the beft chemitts, that, in the combination of the faline principle or of vitriolic acid, the parts of the earthy principle are united, not with each other, as in the earthy aggregation, but with the primary parts of the aqueous principle, each to each, we may then eafily conceive, that the primary integrant parts of the water, baving efientially much lefs tendency to combination than thofe of earth, the tendericy of thefe latter to union will not be exhaulled, but fatisfied oaly partly, by their combination with the former ; and that confequently a compouid muft refult, the integrant parts of which will hate a ficug diffolving power, as vitriolic aeid is.
- We may fee fron hence how much miftaken cluemits are, who, contidering earth only in its aggregation, or rather not attending to this yate, and not diftinguilhing it from that fate in whieh the parts of this fame earth are fo feparated froms each other by the inte:pofition of another body, that they eannot touelh or cohere together, have confidered the earthy principle as a fubftanee without force or aetion, and have very inprup ily ealled that a palive principle, which of all others is the fronget, moft active, and moft powerful.
"However this general theory of falts may conform with the moit important phenomena of chemiftry, we mult acknowledge, that it can only be propofed as a fyematical opivion, till it be evidently demonftrated
by the decifive means employed in chenical demonitrations, namely, by decompofition and recompolition: thus, if we could reduce vitriolic acid to earth and water, and make that acid by combining together thefe two principles, this theory would ceafe to be a fyftem, and would become a demonftrated tiuth. But we muft confefs, that this theory is lefs fupported by experiment than by argument, from the many difficulties that are inevitable in fuch inquiries. For on one fide, we know that the fimpler bodies are, the more difficult is their decompofition; and on the other fide, the ftronger the aggregation is, the greater is the difficulty of making it enter into a new combintion. Thus, as vitriolic acid is very fimple, fince it is a compound of the firt order, it ought ftrongly to refift decompofition; and as the aggregation of pure earth is the firmeft that we know, it cannot eafily be made to enter as a principle into a new combination with water to form a faline matter. The following are the principal cxperiments which have been made relative to the fubject.
"Firlt, We feem to be certain, from many proofs, that all faline fubftanees, comprehending thofe that contain vitriolic acid, as vitriolated tartar, Glauber's falt, and other vitriolated falts which are fufficiently fixed to fupport a perfect drying, or rather calcination, being alternately diffolved, dried, and calcined a number of times, are more and more diminifhed in quantity, and that earth and water are feparated from them each operation. But alkaline falts appear to be ftill more furceptible than any other faline matter of this kind of decompofition.
"S Secondly, When nitre is burat in clofe veffels, fo that we may retain not only all that remains fixed after this burning, but alfo what exhales in vapours, as in the experiment of the clyffus of nitre, we have a proof which feems decifive, that the mineral acid of this falt, which is not very far from the fimplicity of vitriolic acid, is totally dccompofed and reduced into earth and water. For if we examine the fixed refiduum in the retort, we find that it is only the alkali that was contained in the nitre, charged with a fuperabundant earth, which is feparable from it by folution and filtration. And if the liquor in the receiver, formed by the vapours condenfed there, be examined, which ought to be ni.. trous acid; if this aeid had not been deftroyed, we find, that, fo far from being acid, it is only pure water, fometimes even charged with a little fixed alkali, which had been raifed by the force of the detonation. Thus nitrous acid is made to difappear in this experiment, and in its place we find only earth and water.
"'Tnirdly, The phenomena of limedtone, whieh by calcination and extinction in water acquires faline properties that it had not lefore its attenuation by fire and its combination with water; and alfo the experiment of Beccher, who allerts, that if a vitrifiable fonc be alternately made red hot, and extinguifhed in water a number of times, it may be fo attenuated that it fhall be like a faline gelatinous inatter; thefe, I fay, fhow that faline matters ate actually formed by the intimate combination of the very attenuated parts of earth with thofe of water. We find in the writings of Beccher and Stalnl, and particularty in the Specinen Beccherianum of the latter anthor, many other obfervations and experiments tending to prove the fame propofition; but we muft confefs, that none of the experiments we have mentioned, excepting that of the decompofition

\section*{\(S\) A L}
of nitrous acid by burning, are abfolutely decifive; principally becaufe they have not been fufficiently repeated or profecured, nor carefully enough examined in all their circumtances."

On this theory it is obvious to remark, that our author has omitted to mention the moft active part of the compofition of falts, namely elementary fire. Of this both acids and alkalis undoubtedly contain a great quartity in a very active fate, as is evident from their performing the effects of fire when applied to certain fubltances; nay, from their actually burting into flame when mixed with fome kinds of oils. For aa explanation of the realon of which, fee Heat, and the various detached articles reiztive to that fubject. Whatever doubts we may have of the power of mere water combined with mere earth to affect the organs of tafte, we can have none that the element of fire is capable of fo doins, ; and from the very tafting of thefe fubitances, we may be affured, that whatever gives that peculiar fenfation to the tongue which we call acid or alkaline, gives alfo the other properties of the falt, whatever they naay be. In alkalis, no doubt the greateft part of the compofition is earth; but from what has been faid on Quicklime, it appears, that mere earth, by the artificial action of fre alone, acquires all the properties of falt, that of crytallizing fer fe excepted: it feems probable therefore, that, in the more perfect operations of nature, the fame materials are ufed; only the proportions are fuch, that the fubltance is more fuluble, and its caulticity greater, than even quicklime itfelf. With regard to acids, the earthy parts feem to be fewer; and in all probabiiity the moft confiderable ingredient in their compofition is water: but in what manner this element is united to that of fire fo as to produce the peculiar phenomena of acids, cannot be explained.

The acid of tartar (the purett part of which, or that faline fubtlance which fint cryftallizes by evaporation in the veffels in which it is purifitd, is called cream of tartar), and alfo all other concrete vegetable acids analogous to it, when mixed with various other fubtances, form compounds, generally called tartareous falts, or foluble tartars, becaufe they are diffolved by water more eafily than the acid of tartar itfelf. Acetous falts, that is, all falts containing the acid of vinegar, are alfo combined with various bafes, and form faline fubflances of different names; the prisicipal of which are, the acetous falt of copper, called cry/fals of Venus, or of terdigris, by the chemints, and dijfilled or cryfallized verdigris in commerce ; the acetous falt of lead, commonly called falt or fugar of lead; and the acetous mercurial falts. Sugar is an effential regetable falt, of a pleafant fweet talle, containing a vegetable acid combined with earth and oil.

Potafh is a fixed vegetable alkali, extracted from the athes of wood. Concrete volatile alkalis are generally called volatile falts; although this name is fometimes alfo given to the volatile falt of amber, which is not an alkaline but an acid falt. Borax is a neutral faline matter, whofe origin, whether anmal or vegetable, is as yet unknown, its oomponents being not fufficiently examined. It is foluble in water, and very nearly as cryfallizable as alum. When boras is expofed to the fire, it firf bubbles and foams very much, but afterwards it melts into a clear glafs. When acids are combined with the alsaline fart of borax, a fubitance of a fingular na.
ture is feparated from it, comanolly called fedation falt. Although this fubtance acts as an acid in horax, by fa turating its alkali, yet it his no acid tafte, nor duth it turn the tincture of heliotropium to a red, as other acids do. It is the property of horax to facilitare conlide:ably the fufion of metals, of earths, and uilier minerat? Some fpecies of flones ard earths cannot be wititi it: all, except they are mixed with boras. For this [r:sperty horax is commonly ufed as a flas (thatt is, a finliance which tacilitates the fufion ois other bumbits) in varioue manufactories; but efpecially in foldering metals, and in affaying ores. Phofphorie falts are combinations of alkaline, earthy, and metallie fubftances with the acid obtained from the phofphorus of urise. Ecfides the above-mentioned falts, there are feveral cthers to be met with in the writings of the chemical and medical authors; but, as they are of little confequence, we fhall onit any account of them.

Some new neutral falts have been formed by the de. phlogitticated mavine, or, according to the new theory; the oxygenated muiatic acid. - This was firlt taker nutice of by M. Berthollet, and the difcovery is thus illuftrated by Dr Dcilfuif, in Crell's Arria's for the year 1 \(_{1} 88\), vol. i. p. 319.
"In the month of November 1786 (fays be), whilf I was preparing to tranflate Higgins's experinents refpeciing the acetous acid, I found the following amongit the numerous obfervations which that work contains, p. 180. 'The acid eiffic Buid which iffues, when two pounds of manganefe are mixed and difilied with two or three of ordinary fpint of fea-falt, may all, except a fmall portion of phlogiftic air, be condenfed in a foiution of fixed vegetable alkali; and the folution thus :!npregnated yields a confiderable quantity of nitre, whith. crytallizes in the ordinary form, and detorates na redhot coals. The folution at the fame time yields regenerated fea-falt.' The part of this propofition whict. relates to the form of the eryfals and to their detena. tion is fufficiently plain; but that I might have a it:!? more complete conviction on the fubject, I repeated the experiment upon a fmall fcale.
"For this purpofe I put into a wial an nunce of pulverifed oxyd (calx) of manganefe with an ounce anis a half of muriatic acid, and by means of a bert tube I directed the vapour into another viai, which conn a ch a folution of vegetable alkalio. I then diftilited by the gentle heat of a fmall lamp. From the vial containire the alkali went a fecond tube, for the purpofe of carrying off the air which I boped to obtain by this procefs.
"As foon as the oxygenated muriatic acid appeared. fome air efcaped through the tube, which flowed a.l the properties of common atmulpheric air; and as foo: as all the air whicb the vials co: tained previons to the diftillation had been expeiled, no more fuch air appea:ed. The wapours of the oxygenated muriatic acid were abforbed by the fulution of vegtable alkali, withou: the extrication of the fmaliet portion of carboric acid (fixed air) from the alkali. As fatt as the alkali, which adhered to the fides of the glafs, abforbed the acid vapour, prifmatic crytals appeared; and many more, which 1 obtained a few hours aftenwards, were formeds in the liquis. Althongla thefe crytals detonased is the fire, they had a tafte very differen: from that of

\section*{S A L [ 624 ] S A L}
salt. more intolerable by the fuffocating odour of the nitro. mariatic acid (aqua regia). In order to complete the eryitallization, I evaporated in the fame vial the remaining liquor. As foon as the vapour appeared, a quantity of carhonic acid was difengaged, and afterwards fome atmofpheric air. The falt which I obtained by cryftallization after the evaporation was a true muriat of potafh, which did not detonate in the fire. Probably Mr Higgins performed the operation in the way I have defcribed; but he was too halty in concluding this falt to be nitre merely becaufe it detonated. I gave an account of this experiment to Mr Kirwan at the time, and foon after communicated it to Profeffor Gadolin, who offered to affitt me in repeating the experiment.
" We agreed to employ cryftallized carbonat of foda (mild mineral alkali); ard the following was the refult of our experiment. We difolved fome of this carbonat in a large quantity of water, and we employed two or three hours a day, for feveral fucceffive days, in introducing into the folution as much oxygenated muriatic gas as was fufficient eutirely to faturate it ; we then poured the faline liquor into a glafs bafon, and left it covered over to eraporate fpontaneounly. After fome time a number of prifmatic cryftals were formed, which detonared in the fire like nitre. They occafioned a brown precipitate from a folution of iron in fulphuric or vitriolic acid; and mixed with fal ammoniac, they gave out a ftrong emmoniacal odour, accompanied with fome efferveficence, which was to be attributed to the cxtrication of fixed air during the misture. The remainiug part of the liquor evaporated again, produced frefh cryitals, which, though they certainly had a faint fmell of oxygenated muriatic acid, in reality confitted partly of muriat of foda (common falt), and partly of uncombined foda; for they did not detonate, and they precipitated iron of a light green colour. The liquor which appeared above thefe cryftals, however, had not yet entirely loft the fmell of the oxygenated muriatic acid. Since this, M. Gadolin has nade the following experiment, which hic communicated to me. He put two drams of magnefia, faturated with carbonic acid, into an ounce and a half of water, into which he introduced during feveral hours a quantity of oxygenated muriatic gas. The water evidently acquired the odour of the oxygenated muriatic acid. He filtered the liquor, and wafhed and dried that part of the magnefia which had not been diffolved, and which weighed one dram \(4-5\) ths, fo that the water was found to have diffolved 1.5 th of a dram. As foon as the liquor began to boil, a ftrong effervefcence was occafioned, fome oxygenated muriatic gas was difengared, and a fmall quantity of carbonat of magnefia was precipitated. When the liquor had become cool, it was filtered, that it might be teparated from the precipitated powder. It had till the fame odour; and on being again leated, an effervefcence fimilar to the firt took place, and a frefl quantity of carbonat of maguefia was feparated. This phenomicnon appeared every time M. Gadolin boiled the liquor aftei its cooling, till at laft he had evaporated it to dryucfs, when there ftill remained a fmall quantity of mag. ncfia. Hence M. Gadolin concludes, that water, oxygenated muriatic acid, and carbonat of magnefia, form a combination which heat does not decompofe till the vapour of the water carries off the oxygenated muriatic acid, at which time the carbonat of magnefia is precini-
tated. In confequence of what we have now refated, we ought to reckon, in addition to the two falts difeovered by M. Berthollet, another falt, to which, according to the new French nomenclature, might be given the name murias oxygenatus majnefic liquidus, becaufe we cannot obtain it in a concrete form. The oxygenated muriatic acid appeara to enter into a very different, or at leait into a much more intimate, combination with the metals ; a fubjeCt which greatly merits the attention of the chemift.

The probability of this propofition is ftrengthened by the theory of M. Berthollet; according to which the mercury in corrolive muriat of mercury (corrofive fublimate) is combined with the oxygenated muriatic acid, fo as not to be feparated from it without great difficulty.

Common Salt, or Sea-Salt, the name of that falt ex. tracted from the watcrs of the occan, which is ufed in great quantities for preferving provifions, \&c.

It is a perfect neutral falt, compofed of marine or muriatic acid, faturated with mineral alkali. It has a faline but agreeable flavour. It requires about four times its weight of cold water to be diffolved, and nearly the fame quantity of boiling water, according to Macquer. But according to Kirwan, it only requires 2,5 its weight of water to be diffolved in the temperature of fixty degrees of Fahrenheit. This falt always contains fome part formed with a calcarcous bafe; and, in order to have it pure, it mult be diffolved in diftilled water; then a folution of mineral alkali is to be poured in it until no white precipitation appears; then by filtrating and evaporating the folution, a pure common falt is produced. Its figure is perfectly cubic, and thofe hollow pyramids, or tremies as the Frenich ca!l thern, as well as the parallelopipeds formed fometimes in its cryfallization, confift all of a quantity of fmall cubes difpofed in thofe forms. Its decrepitation on the fire, which has been reckoned by fome as a characeeritic of this falt, although the vitriolated tartar, nitrous lead, and other falts, have the fame property, is owing chiefly to the water, and perhaps ailo to the air of its cryfal. lifation.

Its fpecific gravity is 2,120 according to Kirwan. The acid of tartar precipitates nothing from it. One hundted parts of common falt contain thirty-three of real acid, fifty of nincral alkali, and feventeen of water. It is conmonly found in falt water and falt fprings, in the proportion of even thirty-fix per cent. It is found alfo in coals, and in beds of gypfum. This fait is unalterable by fire, though it fufes, and becomes more opake : nevcrthelefs a violent fire, with the free accefs of air, caufes it to evaporate in white flowers, which ftick to the neighbouring bodies. It is only decompofed, as Macquer affirms, by the vitriolic and nitrous acid; and alfo by the boracic or fedative falt. Butalthough nitre is decompoled very eafily by arfenic, this neutral marine falt is nowife decompofed by the fame. According to Mongez, the fixed vegetable alkali, when cautic, decompofes alfo this marine falt. It preferves from corruption almoft all forts of animal food much better for ufe than any other falt, as it preferves them without deftroying their tafte and qualities; but when applied in too fmall a quantity, it then forwards their corruption.

Of this moft ufeful commodity there are ample fores on land as well as in the ocean. There are few countries

\section*{5 A I.}
trich sio not afford vat quantitics of rock or fulil falt. Mines ( \(A\) ) of it have long been difooveret and wrourhe i.s England, Spais, Italy, Germany, Hungary, Po land, and other countrics of Europe. In feveral parts of the word, there are huge mounsains which wholly confift of foffl fatt. Of this kiad are two mountans in Rufia, righ Afracan: fereral in the kingdunis of Trunis and Alsie-s, in A frica; and feveral alfo in Afia; sad the whole inland of Ormus in the Perfian gulf al moft entirely confints of folil falt. The new world is likewife Aored with treafures of this wefeful mineral, as well as with alf other kindz of fubterranean pouduetion:, Moreover, the fta afort's fuch valt plenty of common falt, that ail mankind might thence be fupplied witl: ruantities fufficient for their occafions. There arc alfo innumerable fpring?, ponds, lakes, and rivers, impreynated with common falt, from which the innabitants of many countries are plentifully fupplied therewith. In fome countries which are remote from the fea, and have litule comenerce, and which are r.at bleffed with :nines of falt or falt-waters, the neceffities of the intabitants have forced them to insent a method of extrac:ing their common fait from the athes of veretables. The muriatic falt of vegetables was deferibed toy Dr Grew under the title of lixizinted marine folt. L.ectwenthoek obtained cubical erytals of this falt from a lixivium of foda or kelp, and allo from a folution of the lixivial falt of carduus beneditus; of which he lath given figures in a letter to the Rnyal Society, pubslithed in \(\mathrm{N}^{\circ} 173\), of their Tranfactiors. Dr Daģuer, in Adt. Acad. N. C. vol. v. ubf. 150. takes nutice of great quantities of it which he found mixed in potahter, And the ingenious Dr Fothergill cxtrated plenty of it from the afhes of fern: See Medical Ef. Cayr, vol. ". article 13 .

The muriatic falt which the escellent Mir Boyle ex. traceel from fandiver, and fuppofed to be produced from the materials nied in making glafs, was doubtlefs reparated from the kilp macie wife of in that procefs. Kunciel aifo informs us, that he took an alkaline falt; and after calcining it with a moderate fire, diffolved it in pure water, and placing the folution in a cool collar, obtained from it many ceytals of a neutral falt. He fuppofes, that the alkaline falt was by the procefs conwerted into this sieutral fait. But it is more reafonatle to believe, that the alkaline falt which he applied was not pure, but mined with the muriatic falt of verceables, which by this proces.s was only feparated from it.

It is douhteifs chiefly this muriatic falt which, in forse of the inland parts of Afra, they extract from the athe: of duck-vieed and of Adam"s fro-tree, and wefe fos their common falt.

That they are abite in thofe conntries to make common falt to protit hrom veretables, ought not whe wondered at, linee \(\vdots 1\) )elli and Agra, capitals of \(\operatorname{In}\) doftan, falt is fo fearce as ufuaily to be frid fur haif-acrown a ponns? (A) Amongft the falt mines of chief note are thofe of Sorthwich in Chinitre, Aiem rise it Caitrid, Ihil :-

\section*{S A L [ 626 ] S A I.}

Salt. eaith, as in Hungary, Mofcovy, Sibcria, Poland, Calabria, Egypt, Ethiopia, and the Eaf Indies. "In Endand (lays Migellan), the falt mines at Northwich are in a hisg gromud, and contain it in layers or frata of vaiuus colours, of which the yellow and brown are the moft pentiful, as I have oblerved on the fpot, which I vifited in June 1782, in company with my worthy and learned friend Mr Volta, profeffor of NaEural Phitiofophy in the Univerfity of Pavia, and well known by his geat abilities, and many difcoveri:s in that brench of bnowledgc. The mine into which we defeer.k was excarated in the forn of a vaft dome or vauls mader ground, fupported by varions columas of the fain, that wore purpofely left to fupport the incumbent weight. And the worknien having lighted a numter of cradles ail round its circumference, it furnifhed us with the moft agreeable and furprifing fioht, whilf we were defending in the lar re tub, which ferves to bring up the lumps that are broken from the mine, \&c. See the defoription of the famous falt-mines of Wilieczka is Poland, hy Mr Berniard, in the Gournal de Phy. fique, vol. 16. for 1780 , pag. 459 , in which the miraculous tales concerning thofe fubterrancons habitations, viliages, and towns, are reduced to their proper magnitule and eftimate." But the Enolifh foffil falt is unfit for the ufes of the kitchen, until by folution and coction it is freed from feveral impurities, and reduced into white falt. The Britifh white falt alfo is not fo proper as feveral kinds of bay falt for curing fifh and fuch flefh-meats as are intended for fea provifions, or for exportation into hot countries. So that fur thefe purpofes we are obliged, either wholly or in part, to ufe bay falt, which we purchafe in France, Spain, and other forcign comutries.

Howerer, it does not appear that there is any other thing requifite in the formation of bay falt than to evaporate the fea water with an exceedingly gentle heat ; and it is even very probable, that our common fea falt by a feeond folution and cryfallization might attain the requifite degree of purity. Without entering into any particular detail of the proceffes afed for the preparation of bay-falt in different parts of the world, we thall content ourfelves with giving a brief account of the beft methods of preparing common falt.

At fome convenient place near the fea-fhore is erected the faltern. This is a long, low building, confifting of two parts ; one of which is called the fore-boufe, and the other the pan-boufe, or loiling bloufe. The forehoufe ferve's to receive the fuel, and cover the workmen ; and in the boiling-houfe are placed the furnace, and pan in which the falt is made. Sometimes they have two pans, one at each end of the faltern; and the part appropriated for the fuel and workmen is in the middle.

The furnace epens into the fore-houle by two mouths, beneath each of which is a mouth to the afh -pits. 'To the mouths of the furnace doors are fitted; and over them a wail is carried up to the roof, which divides the fore-houfe from the boiling-houfe, and prevents the duft of the coal and the afhes and fmoke of the furnace from falling into the falt pan. The fore-houfe communicates with the boiling-houfe by a door, plaaed in the wall which divides them.

The body of the furnace confilts of two chambers, divided from each other by a brick partition called the mid-feaber; which from a broad bafe terminates in a
narrow edge nigh the top of the furnace; and by means of thort pillars of caft iron crected upon it, fupports the bottom of the falt pan; it alio fills up a confiderable part of the furnace, which otherwife would be too large, and would confume more coals than, by the help of this contrivance, are required. To each chamber of the furnace is fitted a grate, through which the aftes fall into the afh-pits. The grates are made of long bars of iron, fupported underneath by flrong crofs bars of the fame metal. They are not continued to the fartheft part of the furnace, it being unncceffary to throw in the fuel fo far: for the flame is driven from the fire on the grate to the fartheyt part of the furnace ; and from thence palfes together with the fmoke, through two flues into the chimney; and thas the bottom of the falt pan is everywhere equally heated.

The falt pans are made of an oblong form, flat at the bottom, with the fides erected at ri;ht angles; the lengtlo of come of thefe pans is 15 feet, in breadth 12 feet, and the depth 16 inches; but at different works they are of different dimenfions. They are commonly made of plates of iron, joined together with nails, and the joints are filled with a ftrong cement. Within the pan five or fix ftrong beams of iron are fixed to its oppofite fides, at equal diftances, parallel to each other and to the bottom of the pan, from which they are diItant about eight inches. From thefe beams hang down ftrong iron hooks, which are linked to other hooks or claps of iron firmly nailed to the hottom of the pan; and thus the bottom of the pan is fupported, and pre. vented from bending down or changing its figure. The plates moft commonly ufed are of malleable iron, about four feet and a half long, a foot broad, and the third of an inch in thicknefs. The Scots prefer fmaller platcs, 14 or 15 inches fquare. Several make the fides of the pan, where they are not expofed to the fire, of lead; thofe parts, when made of iron, being found to confume fatt in ruft from the fteam of the pan. Some have ufed plates of caft iron, five or fix feet fquare, and an inch in thicknefs; but they are very fubject to break when nncqually heated, and fhaken (as they frequently are) by the violent boiling of the liquor. The cement moft commonly ufed to fill the joints is plafter made of lime.

The pan, thus formed, is placed over the furnace, being fupported at the faur corners by brick work; but alony the middle, and at the fides and ends, by round pillars of caft iron called taplins, which are placed at three feet diftance from each other, being about eight inches high, and at the top, where fmalleft, four inches in diameter. By means of thefe pillars the heat of the fire penctrates equally to all parts of the bottom of the pan, its four corncrs only excepted. Care is alfo taken to prevent the fmoke of the furnace from paffing into the boiling-houfe, by bricks and ftrong cement, which are clofely applied to every fide of the falt pan. In fome places, as at Blyth in Nothumberland, befides the common falt pans bere deferibed, they have a preparing-pan placed between two falt pans, in the middle part of the building, which in other works is the fore-houle. The fea-water being received into this preparing-pan, is there heated and in part evaporated by the flame and heat conveyed under it through flues from the two Surnaces of the falt pans. And the hot water, as occalion requires, is conveyed through troughs. 8

\section*{S A I}
from the preparing.pan into the fait pans. Varicus other contrivances have heen insented to leffen the espence of fuel, and feveral patents have been obtained tor that purpofe; but the falt-boilers have found their old methuds the mof convenient.

Between the ficies of the pan and walls of the boil-ing-houfe, there ru:'s a walk five or fix feet broad, where the workmen ftand when they draw the falt, or have any other bufincfs in the boiling houfe. The fame walk is continued at the end of the pan, next to the chimney; but the pan is placed clole to the wall at the end adjoining to the fore-houfe.

The roof of the boiling-houfe is covered with boards fallened on with nails of wood, iron nails quichly mouldering into ruft. In the roof are feveral upenings, to convty off the watery vapours; and on each fide of it a window or two, which the workmen upen when they look into the pan whilf it is boiling.

Not far dittant from the faltern, on the fea-hore, between full fea and low-water marks, they alfo make a little pond in the rocks, or with flones on the fand, which they call their fump. From this pond they lay a pipe, through which, when the tide is in, the feawater runs into a well adjoining to the faltern; and from this well they pump it into troughs, by which it is eonveyed into their hlip or ciftern, where it is fured up until they have occation to ule it.

The ciftern is built clofe to the faltern, and may be placed mof conveniently between the two boiling. houles, on the back fide of the fore-houle; it is made either of wood, or brick and clay; it fornetimes wants a cover, but ought to be covered with a fhed, that the falt-water centained therein may not be weakened by rains, nor mixed with foot and other impurities. It hould be placed fo high, that the water may conveniently run out of it, through a trough, into the Talt pans.

Befides the buildings already mentioned, feveral others are required; as ture-houfes for the falt, cifterns for the bittern, an office for his majetty's falt-officers, and a dwelling-houfe for the falt-boilers.

All things being thus prepared, and the fea-water having flood in the cillern till the mud and fand are fettled to the bottom, it is drawn off into the falt-pan. And at the four corners of the falt-pan, where the flame does not toueh its bottom, are placed four fmall lead pans called foratch pans, which, for a falt-pan of the fize abovementioned, are ufually about a foot and an half long, a foot broad, and three inches deep; and have a bow or eircular handle of iron, by which they mav be drawn out with a hook, when the liquor in the pan is boiling.

The falt pan being filled with feawater, a ftrong fire of pit-coal is lighted in the furnace; and then, for a pan which contains about 1400 gallons, the falt boiler takes the whites of thrce eggs, and incorporates them well with two or three gallons of fea water, which he pours into the falt-pan while the water con tained therein is only lukewarm; and immediately ftirs it about with a rake, that the whites of eggs may every where be equally mixed with the falt-water.

Initead of whites of eggs, at many falterns, as at molt of thofe nigh Newealtle, they ufe blood from the butch -rs, tither of theep or black cattle, to clarify the fea-
water : And at many of tle Scots fulteres they co ret give themflees the trouble of clarifying it.
\(53^{\circ} \cdot\)
As the water grows hot, the whites of eggs feparate from it a black frothy feum, rhiell arifes to the furfac: of the water, and co:ers it all over. As foon as the pat begins to bril, this feum is all rifen, and is is then time. to kin it off.

The meft convenient inftrumerts for this purpofe ar: fimmers of thin afh board, fes or tirht inclies beozd, and fo long that they may reach above haif viay over the filt-pan. Thefe fkimmers have handles fiteed to them; and the falt-hoiler and his uffitant, each holding one of them on the oppolite fides it the pan, apply them fo to each otber that they cuerlap in the middle? and beginning at one end of the pan, carry them gen:lf forward together, along the furface of the boiling 1:quor, to the other end ; and thus, without breakines the feum, collect it all to one erd of the pan, from whence they eafly take it out.

After the water is kimmed, it appears perfectly clear and tranfument; and they continue boiling it brikkly, till fo much of the freh or aqueous part is evaporated, that what remains in the pan is a frong brise almoft fully faturated with fat, to that fmall faline eryttals begin to form on its Eurface; which operation, in a pan filled 15 inches deep with water, is ufually gerformed in five hours.

The pan is then filed up a fcoond time with cicar fea-water drawn fiom the cillurn; and abuut tlee tiace when it is half filled, the feratch-pans are taken ou:, and being emptied of the ferateh found in them, are again plared in the corners of the falt-pan. Tlie feratelt taken out of thefe pans is a fine white calcaneous sarth found in the form of powder, which feparates from the fea-water during its coction, before the falt begins to form into grains. 'This fubtile powder is volently asitated by the boiling liquor, until it is driven to the corners of the pan, where the motion of the liquor beinf: more gentle, it fubfides into the feratch pans placed there to receive it, and in them it remains undifturbed, and thus the greatelt part of it is feparated from the brine.

After the pan hath ayain been filled up with fea-water, thee whites of eggs are mixed with the liquor, by which it is clarified a fecond time, in the manner befure deferibed; and \(i\) is afterwands boiled down to a diong mine as at firtt ; which fecond builing may take up abont four hours.

The pan is then filled up a third time with clear feawater; and alter that, a fourth time ; the liquor being each time clarified and boiled down to a Arong brine, as before related; and the ferateh-pans being taken out and emptied every time that the pan is filled up.

Then, at the fourth boiling, as foon as the erytais begin to firm on the furface of the brine, they flacken the fre, and only liffer the brine to limmer, or boil very gently. In this heat they contarely endeavour to keep it all the tine that the falt corns or granulates. which may be nine of ten hours. The fath is faid to granulate, when its minute ervflals conere to pether into little maffes or grains, which fisk down j: the brine ard lie at the bottom of the falt pan.

When moft of the liquor is ewaporated, and the falt thus lies in the fan almoft dry on its furface, is is then 4b=

\section*{\(S\) A L [62 \(]\) S A I}
S.'t. time.to wraw it out. This part of the procefs is performed by raking the falt to one fode of tle pan into a long heap, where it drains a while from the brine, and is then filled out into barrows or other proper veffels, and carricd into the flore-honfe, and delivered intu the cuftody of his majetty's officers. And in this manner the whole proeefs is performed in \(2+\) hours; the fal: being ufually dritwn every mornieg.

In the fore-houfe the falt is put hot into drabs, which are partitions like falls for horfes, lined on thrse fodes and at the bottom with boards, and having a llidinghoart on the fore-fide to put in or draw out as occation requires. The botems are made fhelving, being high of at the back-fide, and gradually inclining forwards ; by which reans the faline liquor, which remains mixed with the falt, eafily drains from it; and the falt, in three or four days, hecomes fufficiently dry; and is then taken out of the drabs, and laid up in large leaps, where it is ready for cale.

The faline liquor which drains from the falt is not a pure brine of cominon falt, but hath a Garp and bitter tafte, and is therefore called litern; this liquer, at fome works, they fave for partic far ufes, at others throw away. A conliderable quantity of this bittern is left at the bot:om of the pan after the procels is finithed; which, as it contains much falt, they fuffer to remain in the pan, when it is flled up with fea-water. bint at each procefs this liquor becomes more harp and bitter, and allo increafes in quantity: fo that, after the third or fouth procefs is fininhed, they are obliged to take it out of the pan: utherwife it mixes in fuch quartities with the falt, as to give it a bitter tafte, and difpofis it to grow foft and rin in the open air, and renders it unfit for domeftic ules

After each procefs there alfo achleres to the bottom and fides of the pan a white flony cruft, of the fare calcareous iubtance with that hefore collected fiom the builitig liquor. This the operators call fone-firatch, diiliaguifhing the other fuand in the lead-pans by the name et pouvier-foratch. Once in eight or ten days they feparate the fonc-feratch from their pans with sion picks, and in feveral places find it a quarter of an inch in tlicknefs. If this tlony cruft is fuffered to adhere to the pan much longer, it grows fo thick that the pan is bumt by the fire, and quickly weare away.

In M. de Castés's 'Travels round the World, we find the following important fact. "I had been anxious (fays that author) to afcertain by comparifon, whether fea-water contains falt in greater quantity under the torrid than under the uther zones; and my experiments on this fubject ferved to thow, coutrary to what I ex. fected, that fea-water is impregnated with falt in lefs "uantity within tlian without the tropics." Thefe ex. feriments were made on a hundred pounds of fea-waler, taken at the depth of ten fathoms, and weighed in water-icales. M. de Pages has given a table of thefe esperiments, from which it appears that \(1 c 0 \mathrm{lb}\). of feawater in \(4^{6^{\circ}} 12^{\prime \prime}\) S. lat. gave \(4^{\frac{3}{2}} \mathrm{lb}\). of falt, and in \(1^{\circ} 16^{\prime}\) ot.ly \(3^{\frac{1}{2}} \mathrm{lb}\). ; and that in 74 N . lat. it gave \(4 \frac{3}{4} \mathrm{lb}\). and in \(4^{\prime} 22^{\prime}\) only \(3^{\frac{1}{2}} \mathrm{lb}\). thele being the highett and loweft latitudes in which the experiments were made, and allo the freateft and leulk quantities of falt.

Uhif on Siats, is a. dinind Lranch of his majetty's
extraordinary re:sulue, and conists in an exciit of 35. \& l. per buthel impofed upon all talt, by feveral tatutes ot King William and other fubfequent reigns. This is mot generaliy called an excife, begafe under the maratsement of difisent commillioners : but the comm.f. 1 oners of tue talt-duties lawc, by flatute 1 Ann, c. 21. the fame powers, and mult oblerve the fame regulations; as thafe of other excifes. Thin; tax had alually bee:s sonly temonary : but by flatute 26 Geo. 1I. c. 3. was made perpetual.

Triple S゙alts, a hind of faits formed by the union of there ingredients; the comnon neutrals being compefed only of two. They are but lately difeoveres; and it is chiefly to the induttry of Mr Bergman that we ow: the knowledge we have of them. Sometimes we mees cven with falts of four ingredients; in which cate w: call the refulting compaunds quadruple falts. The moft renarkable of thefe complicated fubtanees are the following.
1. Aplironitrum, or mineral alkali, cambined with a fmall guantity of calcarcons earth. The three ingre. dients here are fixed air, pure alkali, and calcareous carth. "' i his filt (fays Crontedt) is fo thoagly umted with the calcarcous earth, that the latter conters with it into the very cryltals of the falt; though, d: repeated folutions, the earth is by derrees feparaied trom it, and falls to the botom aftur every folution." Cartheuler afferts, that, on throwing into its fulution in water an fixed mineral alkali, the calcareous earth wato precipitated; and on the contrary, by adding oil of witriol, nitrous acid was expeiled, aud a Glauber's falt produced; "fromi which (tays M. Magelan) it is cvident. that the aplanonitrum is a triple filt arinng tron the combination of the nitrons acid with calcueous tarth and mineral fued alkahi." Wallerius mentions three finecics of this falt; viz. one which contains only a mixturc of calcareous earth with fisud mineral alk.di. This, he fays, is the aphronitrum of the ancients; but he thinks that it ougite to le rather called aphronatron, as they betlowed the name \(6^{-}\)notron upon the mineral alkal. I he fecond feecies is that deferibed by Croniteds under the title of culca-enus nitre. The third is that deferibed by Hofman under the title of aphronitrum janenfe, into whole competition the vitrishic acid enters. It is a kind of Glauber's falt, and is irequently con:fonnded with it.

The aphronitrum of Crontteds is deferibed by him as appearing on old walls and below vaults, or in placez where it cannut be wathed away by the rain. When it contains any condiderable quantity of calcarcous oarth, it floots into rhomboidal cryltals, a figure frequently affected by the calcareous earth when it thoots into eryftals: but when the aphronitrum is purer, it furms pritmatic eryftals. From thefe circumftances, M. Ma;gellan thinks, that the aphronitrum is not only a triple but a multiple falt; as thefe pieces of uld murtar, covered with this white froft, on ancient walls, are the very fance from which the faltpetre-makers extract the muthe: water of nitre ; after mixing with it the vegetable aftes to furnith the alkali.
2. Common falt with magnefia, or mineral alkait, contaminated by muriatic magnefia. 'I'his is a cumpound of common lalt with magnefia, and is very deli, yuefcent, owing to the compound of magneia and fpi-
rit of fult : for neither mineral aikati sor pure fatalt are at all deliqueftent in the air.
3. Vitriolatect magnefla uth vitriol of iron, or EP. fom falt contaninated with coperas. This, according to M. Nonet, is turd in fome nimeral watens.
4. Native aium cunaminated with copperas. This is fometimes found in the aluminoes fehitus, and eflorefces in a featacry. foum, and is perlaps the plumofe: alum of the ancients.
5. Native alum contaminted with fulpinar. Dr Wi. theing iufores us, that this fale is met with about Weinerghurg and beliton, two nlacts in Stafordhire, where the coul-pits are on fie. "I: fublimes to the furades, whence it may le collected in confederable cuan. tity curing dry or frofy wezthcr. Our author, however, does nct cettainly affirm that this is a true cliemical union, but the yarts. he fays, cannot be diftinsuitted by the eye. It is kept in a delicuefecm tate by an acceis uf vitriolic acid.
6. Native alum contaminated by witriulated cobalt. This is fourd in fome of the mines of Herregrund and Idria, where it faocs into long and fender mamens. M. Murellan fuppofes that this mag be the tribies of the Greeks. On diffolving it in water, the prefence of :he vitriolic acid is difonered by ad Jine a Indution of terra ponderofa in muriatic acid; the phepgiticated alkali throws down a precipirate of cotal, which forms - blue glafs with cobate or microcofnic ait.
7. Vitriol of copper with iron, the virorolum fer cec-ces. proum ryancum of Linawus. It is alfo called Vitriol of Hungary, becaufe found in plenty in that country. Its colour is that of bluc mixed with greea; but ioretimes the one fhade prevails, and fometimes the other.
8. Vittiol of copper, irun, and zinc, is prepared in Sweden fiom the wate: pumpel nut of the copper mines at Dalame. The copper does no: precipitate trom 2 folution of this talt berbint is on iron, as is the are with the common lifue vitriol. Large crytals of this fatt are often found in the warer, the copper mincs :rom whence it is prepared.
9. Vitriol of copper and zine. This is a cquadruple frit, flyled by Limnxus t'itrio um ferreo zimen cupreum cyneum. Its colour is bluc inclining to green ; and it loes not preciptate the copper by whing on : ont as the common blue vitrol cues. it is called the blue witriol of Gollar. Mongez makes a feparate article of a compound talt mentioncd by Wallerius, contifing alfo -if a vitriolated cupper with zinc, but whofe cryltals are of a fue red colour, found lately in the mines of rahlun in sweden. He adils, that the palt-blue colour of the fomper falt hows the predominancy of the copper, Ly which it is necefariy differguilhed fom the later, where the vitriol is cverifaturated. M. Magellan, how iser, is of opinion, that the red colvur is owing to a proper çuartity of iron in a dephlogiflicatcd flate, which fias been overlooked in that compornd. To this kind alfo Wallerius refers the yellowifa vitriol found in Flanpary.
10. Vitriol of iren and zins; the green vitricl froms Golar in the Fiartz; the vitreo'um zince jerreuth wiride of Linneres. It is of a pale.green culour.

At his acceffion to the fee, the archbihop nult pay 100,000 crowns to Rome for the pall 'There is an onder of kuight. hond here, intituted in 1711 , in honour of Se Rupert, who was the firt bifhop of Saltifurg about the berinning of the sth century.

Saltseurg, the capital of a German archbinopric of the fame name, and which takes its own from the river Salza, on which it fiands, and over which it has a bridge. It is a very handforne place, well fortified, and the refidence of the archbiniop. The houfes are high, and all built of flone: the roofs are in the Italian taite, and you nay walk upon then. The caltle here is very ftrong, and as ftrongly garrifoned, and well provided with provifions and warlike fores. The archbifhop's palace is magnif.eest; and ial the area before it is a fountain, efteemed the largett ind grandeft in Gemmany. The ftables are very lofty; and the number of the horfes ufually kept by the archlifhop is daid to be upwards of 20 :. The city, of which one part itards on a fleep rock, is well built, but the ftreets are narrow and badly paved. Befides the above-mentioned, there are two other Atately palaces belonging to the archbihop, one of which is called the Nuebou, and the other Mira* bella. The latter of thefe has a very beautiful garden; and the number of trees in the orangery is fo great, that Mr Keyfler tellia us, 20,000 oranges have been gathered from them in one year. The river Salea runs clofe by the walls of this garden. There are a great many other fine ftructures in the city, public and private, fuch as palaces, moniafteries, hofpitals, and churches. In the cathedral dedicated to St Rupert (the apofle of Bavaria, and a Scotchman by birth), all the altars are of marble of different kinds, and one of the organs has above 3200 pipes. The whole Aructure is cxtremely handfome. It is built of freefone in initation of \(\mathrm{St} \mathrm{Pe}_{\mathrm{c}}\) ter's at Rome. The portico is of marble, and the whole is covered with cupper. Before the portico there is a large quadrangular place, with arches and galleries, in which is the prince's refidence and there is a ftatue Peter. In the middle of this place of an unnatural of the Virgin in bronze ; it is fine, but of an nnnatural fize. There are large areas encompaffed with handfome buildings on both fides of the church. In the middile of that which is to the left, there is a moft magniticent. fountain of marble, and fome valuable figures of gigantic fize. There is likewife a fountain in that to the right, but it is not to be compared with the former one, and the Neptune of it makes but a very pitiful figure. This town contains many more excellent buildings and ftatues, which remind one that the borders of Italy are not far diftant. The winter and fummer riding fchools here are noble Atructures. The univerfity was founded in : 620 , and committed to the care of the Benediftines. Befides it, there are two colleges, in which the young noblemen are educated. E، Long. 33. c. N. Lat. 47.45.

SALVADORA, in botany: A genus of the monogynia crder, belonging to the tetrandria clafs of
plants;
with troad heart-fiaped woolly lezzes fanding upon lone foot-italks; they are fawed on their edzes, and their upper furfaces are rough: the leaves, which are upon the flower Atalks, are oblong and oval, ftanding upon fhorter foot falks, and are very nighty fawed on thir edges; they grow in whorled fpikes toward the top of the branches; the whorls are pretty far ditant. but fex fowers in each; they are of a pale hlre, about the fize of thofe of the comno:s fort. I'bis fage is preferred to all the others for making tea.
3. The auriculata, comrnon lage of virtue, which is alfo well known in the gardens and marke:s. The leaves of this is narrower than thafe of the common fort: they are loary, and fome of them are ind ated on their ed ies toward's the bare, which indentures lave the appearance of ears. The fpikes of flowers are longer than thofe of the two formes forts, and the whorls are generally uaked, having no leaves between them. The flowers are fmaler, and of a deeper blue than thaic of common red fage.
4. The pomifera, with 「pear-haped oval entre leaves, grow naturally in Crete. This lath a farubby dalk. which rifes four o: five feet hish, dividirg into feveral branches. The howets grow in Epikes at the end of the branches; they are ot a pale blue colocr, and have obtufe empalements. The brancles of this fart lave often punctures made in them by infects, at which olaces grow large protuberances as bir as apples, in the fame manner as the galls upon an oak, and the ruugh balls on the briar.

All the forts of fage may be propacated by feeds, if they can be procured; but, as fome of thern do no: nerfect their feeds in this counery, and moft of the forts, but efpecially the common kincis for ufe, are tafily propagated by nips, it is not worth while so raile them from feeds.

SALVIANUS, an ancient father ot the Clirifian church, who fourified in the :th ceatury, and was well frilled in the fciences. It is faid he lived in continence with his wife Palladia, as if the has been his filter; and that he was fo afticted at the wictedaefs of that ane, that he was called the Jeremish if the ffoh ceatury. He acquired fuch reputation for his picty and learning, that he was named the m.3ter of the bi/hofs. Ife wente a Treatife on Providence; another on Avarice; and fome epiatles, of which Baluze has given an cxecllent edivion; that of Conrad Ritemfufins, in 2 vols citave. is alfo ci?cemed.
SAJUTA [IONi, the act of faluting, greeting, or paying refpee and reverence :o any cae.

When men (wites the compiler of L'T. Prit des wricfotes es Ufor:s al dis Cowumos) falute each other in an ami. Lterstorts. cabic manner, it Iignifies little whether they move a particular part of the body, or practile a paricular ceremony. In thefe actions there muft exif difirei: cultoms. Every nation imagines it employs the motr rea. fonable ones; but all are equally fimple, and rocne are io be treated as ridiculous. This infirite number of ceremanies ray be reduced so 11.0 air.ds; to :tverences or fulutations; and to the touch of fome Fart of the human body. To bend and froftrate one's felt 12 exprefs fentiments of refpect, appears to be a natural motion ; for terrified perfons throw themfelves on the earth when they adore invifiole beige The affo.inoniti icich of

Satulation the perfon they falute, is an cxprifion \(n\) " eadernefs. fis nations decline from their aucient fimpicity, much farce and wrimace are introducel. Supertition, the manners of a people, and their fituation, influence the modes of falutation; as may be ohferved from the in. fances we collect.

Modes of falutation have fometimes wer different charasters, and it is no unintereling fueculation to ex. amine their thades. Many difplay a refnement of delieacy, while others are remarkable for their fimplicity, or for their fenfibility, In seneral, howerer, they are frequently the fame in the imfancy of mations, and in mure polimed focieties. Refrect, humility, fear, and Ateem, are expreffed muciz in a fimilar manner ; for thefe are the natural confequences of the orgamization of the body. Thele demontlrations become, in time, omly empty civilities, which lignify nothing; we flall notice what they were originally, without reflecting on - what they are.

The firl nations have no peculiar modes of falutaion ; they know no reverences, ur other compliments, or they defpife and cifdain them. 'The Corenkenders Jugh when they fee an Europian uncoeer his head and bend his body hefore him whom he calls his fuperior. 'The inanders, near the Philippines, take the hand or foot of hin they falnte, and with it they gently rat, their face. The Iaplanders apply their nofe ftrong'y againft that of the perfon they latute. Dampier fays, that at New Guinea they are fatisfied in placing on their heads the leaves of teees, which have ever pafed for fymbols of friendhin and peace. This is at leatt a victurefque faime.

Other falutations are very incommocions and mainful; it requires great ptactice to enable a man to be po. iite in an inand fituated in the Straits of the Sonnd. Houtman tells us, they faluted him in this odd way : os They raifed his left foot, which ther paifed gently over the right leg, and front thener over his face." The inlabitants of the Philippines hend their botiv very low. in placing their hands on their chects. and raifing at the fame time one foot in the air, with their knee bent. An Ethiopian takes the robe of another, and its it about his own wait, fo that he leaves his friend half naked. 'I'his cuftom, of undetingeg on thefe oecations iakes other forms; fometimes men place thenfelves rased before the perfon whom they falute: it is to thow rheir humility, and that they are mownthy of appearinor in his prefrice. This was prattifed before Sir jofeph Banks, when he receivel the vifte of :wo iemale Otabeitans. Their innocent limplicity, no doubt, aid not afprar immodelt in the cyes of the virtujfo. Some ©intes they only undref partiaty. The lapanefe only take ofl a nipper ; the people of Arracan, their fandals is the flecet, and lheir llockings in the houfe.

In the procrefs of time, it aspears fervile to urnover one"s felf. "1"he grandices of Spain claim the right of appearing covered before the king, to how that they are :ifs: fo much lubjected to liin at the refl of the nation; .nd (this writer obferves) we may remark, that the Eneligh de bot uneorer sheir heauls formeh as the - ther :arioms of Firope. In a word, there is no: a nations (obferes the inmorots Montaigne), even to the
 triends, but that ca:s he juitifed in their cuitoms. It

lulicrous activis, and thus make all :ineir ceremazies farcical. The greater part pull the fingers till ther crack. Snelprave gives an old repruentation of the embafly which the king of Dahomy fert to him. The ceremonies of falutation conflied in the moft riuidenlous contortione. When two negto monarchs vilit, they em. brace in fapping three times the midjle finger.

Ilarbarous nations frecuently imprint on their falutations the difpofitions of their charicter. When the inlubitants of Camena (faps Athonans) would how a peculiar mart. of efteem. they breathed a vein, and prefented for the beverage of their friend the blood as it iffued. The Franks to:e hair from their head, and prefented it to the perfon they faluted. The flave cut his hair, and offered it to his mafter. The Chincfe are fingularls affeced in their perforal civitites: they even calenlate the number of their reterences. 'Ihefe are their moft remarkable potures. The men move their hancs in an afferionate manner, while they are jone? together on the breat, and bow their head a little. If they sefpect a perfon, they raife :beir hands joined, an il then lower them to the eart! in bending the body, If two perfons meet after a long feparation, they both fall on their knces, and bend the face to the carth, and this ceremony they repeat two or three times. Surely we may differ here with the fentiment of Montaisne, and confers this ceremony to be ridiculous. It arifes from their national affectation. They fubftute artificial ccremonies for natural actions. Their expreffions mean as little as their ceremonies. If a Chinefe is afked how he finds himfelf in health? he anfwers, Very cuel!: thonks to vour abundant felicity: if they would tell a man that he looks well, they fay, Profperity is painted on your face: or, 2 our air announces your bappinefs. It you render them any fervice, they fay, \(A f_{y}\) fhimhes poille be immortul. If you praife them, they auliser, fiow Jhall I dare in perfinate my/elf of what you fay of me: If you dine whth them, they tell you at partin?. \(W^{*}\) have not treated you swith fufficient difincion. 'The vat rons titles they invent for each other it would be im. poffible to tranilate.

It is to be ubferved, that all thefe anfwers are prefribed by the Chinefs rittal, or academy of compli. ments. "lhere are deternanet the number of bows ; the expeefrins to be employed : the gemule tions; and. the inclintions which are to be nade to the rirht ur Joft hand: the falntation of the maller befure the chair where the franger is to be featesi, for he falutes it moit pofumndy, and wipes the dut away with the firts of his robe; all thefe and other things are noticed, even to the filent gettures, by which vou are entreated to ellter the boufe. The lower chafs of people are equally nice in the fe punctilios; and ambaffadors pali 40 days in practifin: them before they are enabled to appear ส* court. A tribunal of ceranonics has becu coected, and every day very odd decrees are ifued, to which t? Chinefe moit religiounty fubinit.

The marks of honour are ficquently arbitrary; to be feated, with ns, is a makk of repole and 5amiliarity ; t" tand up, that of refpec.. 'ihere are cuntries, however, in wheln princes will only be addreffed by perfons who are feated, and it is confidered as a favonz to be permit:ed to ftand in their perfence. This cultom prevails in defpotic countries : a defput cannot fuffer with. out difruat the elonted figure of his fuhjects: he is

\section*{\(S^{\prime} \mathrm{A}\) r}
lutc. Ileafed to bend their bodice with their erenins: his prefeace nuft lay thofe who bethold him proftrate on the earth : he defires no eagcrnefs, no attention; he would only infpire terror.

The pope makes no reverence to any mortal except the emperor, to whom he foops a very litte when he pernits him to kifs his lips.

SALUT'E, in military matters, a difcharge of artillery, or finall arms, or both, in honour of fome perfon of extraordinary quality. The colours likewife falute royal perlons, and generals commanding in chief; which is done by lowering the point to the ground. In the field, when a regiment is to be resiewed by the king or his gencral, the drums beat a mareh as he paffes along the line, and the officers falute one after another, bowing their half-pikes or fwords to the ground; then rccover and take off their hats. The enfigns dalute all rogether, by lowering their colours.

Salute, in the navy, a teftimony of deference or homage rendered by the hips of one nation to another, or by fhips of the fame nation to a fuperior or equal.

This ceremony is rarioufly perfiomed, according to the circumftances, rank, or fituation, of the parties. It confifts in fring a certain number of canoon, or volleys of frmall arms; in ftriking the colours or top-fails; or in one or more general fhants of the whole fhip's crew, mounted on the mafts or rigging for that purpofe.

The principal regulations with regard to falures in the royal navy are as follow :
"When a flag-officer falutes the admiral and commander in chief of the fleet, he is to give him fifteen guns; but when captains falute him, they are to give him feventeen guns. The admiral and commander in chief of the fleet is to return two guns lefs to flay.oficers, and four lefs to captzins. Flag-officers faluting their fuperior or fenior officer, are to give hint thirteen guns. Flag-officers are to return an equal number of guns to flat.officers bearing their flags on the fame maft, and two gruns lefs to the reft; as alfo to captains.
"When a captain falutes an admiral of the white or blue, he is to give him lifteen guns; but to vice and rear admirals, thirteen guns. When a flag-officer is faluted by two or more of his majefty's fhips, he is not to return the falute till all have finifhed, and then to do it with fuch a reafonable number of guns as he fhall judge proper.
"In cafe of the meeting of two fquadrons, the two chiefs only are to exchange falutes. N'nd if fingle thips meet a fquadron confiting of more than one Hag, the principal flag only is to be faluted. No falutes fhall be repeated by the fame fhips, unlcfs there has been a feparation of fix months at leaft.
" Nore of his majetty's hips of war, commanded noly by captains, fhall give or receive falutes from one another, in whatfoever part of the world they mect.
"A flag officer commanding in chief fhall be faluted, upon his firlt hoifing his flag, by all the thips prefent, with fuch a number of gurns as is allowed by the firth, third, or fifth articles.
"When any of his majefty's fluips fhall meet with any thip or fuips belonging to any furcign prince or flate, within his majelty's feas (which extend to Cape Fimifterre), it is expected, that the faid foreign thips do - Vol. XVI. Part Il.
trike their top-fail, and take in their flag, in ac.
Eaiu*c. knowledgement of his majefly's fosereignty in thofe feas: and if any fhall refufe or offer to refift, it is enjoined to all Aag-officers and commanders to ufe their utmoft endeavours to compel them thereto, and not fuffer athy difmonuur to be done to his majefy. And if ant of his majelty's fubjeets thall fo much forget their duty, is to omit friking their top fail in pafita, by his majcty's fieps, the name of the thip and matler, and from whence, and whither bound, iogether with afidavits of the fact, are to be fent up to the Cecretary of the admiralty, in order to their being proceed.d againft in the admiralty court. And it is to be ohferved, that in his majefty's feas, his majelty's thips are in nowife to trike to any; and that in other pares, no fhip of his majely's is to Itmike her flag or top-fail to any foreigner, unlefo fuch forcign hip mall have finf flruck, or at the fame time thrike, lier fag or topail to his majefty's fhip.
"' The flas-officers and commanders of his majeny's flips are to be careful to maintain his majefty's lionour upon all occations, giving protection to his fubjects, and endearouring, what in them lies, to fecure and encourage them in their lawful commerce; and they are not to injure, in any manacr, the fubjects of his majeAy's friends and allies
"If a foreign admiral mects with any of lis majefly's mipe, and falutes them, he fall receive gun for gun If he be a vice-admiral, the admiral thatl anfwer with two guns lefs. If a rear-admiral, the: almial and vice-admiral mall return two kefs. But if the flip be commanded by a captain only, the flag-officer thall give two guns lefs, and captains an equal mumber.
"When any of his majelty's fhips cone to an anchor in a foreign port or road, within cannon-fhot of its forts, the captain may falute the place with fuch a number of guns as have been cuftomary, upon good affurance of having the like number tetumed, bnt not otherwife. But if the mip bears a 肘, the fag. officer thall firft caretully inform hinuflelf how Aldys of like rank, belonging to other crowned head,, lave given or returnce falutes, and to infit upon the fane terins of refpect.
"It is allowed to the commanders of his majeity's thips in forcign parts, to falute the perfunis of any admirals, commanders in chitf, or captains of Mips of war of foreign nations, and foreign noblemen, or Atrangers of quality, as alfo the factorics of the kins: s fubjects, coming on board to vifit the sthip; and the number of gums is left to the conmander, as thall be fuitable to the vecafion and the quality of the perfona vifiting ; lut he is neverthelefs to remain aconcmat le for any excefies in the abufe of this liberts. If the thip sifited be in company with other hips of war, the captain is not to make ufe of the civilisics allowed in the preceding articles but with leave and confent of the commander in chief or the fenior eaptain.
" Merchatht-hips, whether foreigues or lehontins to his majetty's fubjects, faluting thee adnairal of the Aect, Aall be anfwered by fix atans \(k\) fe; when th cy falute any other flage flips, the fiatl be anfwere'? by four guns lefs; and if the folute men of war consmanded b: captains, the dhall be anfwered b two gims lefs. If ferce I merchant-11:sps daluse in conyan , ne return is to be made tall all have frimin. 6 , and then ho \(\pm 1\).

\section*{S A M}

Salozzo fuch a number of guns as hall be thought proper ; but though the merchant-fhips fhould anfiver, there hall be no fecond return -
"None of his majetty's fnips of war fhall falute any of his majefty's forts or eafles in Great Britain or Ireland, on anv pretence whatioever."

SALUZZO, called by the French S.lucer, a town and caftle of Italy, in Piedmont, and capital of a marquifate of the fame name, with a bifhop's fee. It is fituated on an eminence at the foot of the Alps near the river Po, in E. Long. 18. 27. N. Lat. 44-35. It is fubject to the king of Sardinia.

Saluzzo, the marquifate of, a province of Piedmont in Italy, bounded on the north by Dauphiny and the province of the Four Vallevs, on the eaft by thofe of Saviglano and Foffano, on the fouth by that of Cona and the county of Nice, and on the weft by Barcilonetta. It was ceded to the duke of Savoy in 1601.

SAM. 1, a town and fort in the hands of the Dutch on the Gold Coaft of Africa, flands on an eminence, the fort being watered by the pleafant river of St Geor ge, that difcharges itfelf into the fea. The town contains above 200 houles, which feen to form three diftinct villages, one of which is inmediately under the cannon of the Dutclr fort St Sebattian. Des Marchais deems this town to be one of the largeft on the whole cuaft, Barbot likewife agreeing with him in its fituation, extent, and number of inhabitants The fole em. ployment of the natives is fifhing; a circumftance which eatily accounts for their poverty. The government of this place is republican, the magiftrates having the fupreme power, being fubject to periodical changes, and under the authority of the king of Gavi, who feldom however interferes in the affairs of the Atate. This prince refides fome leagues ditiant from the fea, is rich, and much relpected by his neighbours.

SAMANEANS. in antiquity, a kind of magi or pinilofophers, have been confounded by fome with the Bramins. They proceeded from Ariana, a province a, Perfia, and tlre neighbouring countries, 「pread themSelves in India, and taught new doctrines.

The Bramins, before their arrival, it is faid, were in the higheft period of their glory, were the only oracles of India, and their principal refidence was on the banks of the Ganges, and in the adjacent mountains; while the Samaneans were fettled towards the Indus. Others fay, that the Bramins acquired all their knowledge from the Sananeans, before whofe arrival it would be difficult to prove that the Bramins were the religious teachers of the Indians. The moft celebrated and ancient of the Samanean doctors was Boutta, or Budda, who was born 683 years before Chritt. His feholars paid him divine honours; and his dactrine, which confifted chicfly in the tranfmigration of fouls, and in the worPhip of cows, was adopted not only in India, but allo in Japan, China, Siam, and Tartary. It was propagated, according to M. de Sainte Croix, in Thibet, in the 8tb century, and fucceeded there the ancient religion of Zamolxis. 'I he Samancans, or Budditts, were entirely deftrayed in India by the jealous rage of the Gramins, whofe abfurd practices and fables they affected to treat with contempt; but feveral of their books are ftill preferved and refpeiced on the coafts of Malabar.

\section*{S A M}

We are told, ton, that feveral of the Branin orders have adopted their manner of living, and openly profefs the greatelt part of their doctrines. \(L^{\prime} E_{z, \mu} V\) Vdom, ou Ancien Comment du Vedam, publifhed by M. de S. Croix, Paris 1779. See Bramins.
S A MAR, a Spanih ifand not far from Manilla in the Eaft Indies, is called \(5 . m\) mar on the fide which looks towards the other illes, and Pbabuo on that next the Uniern ocean. It is like the trank of a man's boly, without vol. viii head or legs. 1ts greateft length, fron Cape Baliqua-p. 1j\%ton, which, with the point of Manilla, makes the Hrait of St Bernardino. in 13 degrees 30 minutes nortl latitude, exterds to that of Guignan in II degrees towards the fouth. The other two points, making the greateil breadth of the inand, are Cabo de Spirito Santo, or Cape of libe Holy Gbof, the high mountains of which are the firt difcovered by hips from New Spain; and that which lying oppofite to Leyte weftward, makes another ftrait, fcarce a ftone's throw over. The whole compafs of the ifland is about \({ }_{13}\) - leagues. Between Guignan and Cape Spirito Santo is the port of Borognon, and not far from thence thufe of Palapa and Catubig, and the little ifland of Bin, and the coaft of Catarman. Veffels from countries not yet difcovered are very frequently caft away on the before-mentioned coaft of Palapa. Within the ftraits of St Bernardino, and beyond Baliquaton, is the coatt of Samar, on which are the villages of Ibatan, Bangahon, Cathalogan, Paranos, and Calviga. Then follows the frait of St Juanillo, without which, flanding eaftward, appears the point and little ifland of Guignan, where the compals of the inland ends It is mountainous and craggy, but fruitful in the few plains there are. The fruits there are much the fame as that of Leyte; but there is one particular fort, called by the Spaniards chicoy, and by the Chinefe, who put a great value on \(i t, \int e y z u\), without kernels.

SAMARA, in botany ; a genus of the monogynia order, b-longing to the tetrandria clafs of plants. The caly \(x\) is quadripartite, the corolla tetrapetalous; the ftamina immerfed in the bafe of the petal; the ftigna funnel-flaped.
S.iMARCAND, or SARMACAND, an ancient and famous town of A fia, capital of the kingdom of the fame name in the country of the Ubeck Tartars, with a caftle and a famous univerfity. The houfes are built with ftones, and it carries on a trade in excellent fruits. It is pleafantly feated near the river Sogde, a branch of the Amu, E. Long. 69. O. N. Lat. 39. 50. This town was the capital of the kingdom of Sogdia in the time of Alexander the Great, when it was called Maracanda. It was afterwards the capital of the empire of Tamerlane the Great. In the time of Jenghiz Khan, it was forced to yield to the arms of that cruel conqueror ; by whom the garrifon, amounting to 30,000 men, were butchered ; 30,000 of the inhabitants, with their wives and children, were prefented to his generals; the reft were permitted to live in the city, on paying a tribute of 300,000 dinars or crowns of gold.
SAMARIA (anc. geog.), one of the three larger Cisjordan diftricts, fituated in the middle between Galilee to the north and Judea to the fouth, beginning at the village Ginæa, in the Campus Magnus, and end-
ing at the toparchy called Acrobatena (Jofephus). Its
foil differing in nothing from that of Judea；both equally hilly and champaign，both equally fertile in corn and fruit（id．）Called the kingdom of Samaria in．E－ phraint（Bible）；comprifing the ten tribes，and confe－ quently all the country to the north of Judea and caft and weit of Jordan．

Samaria，the capital city of the kingdom of Sa－ maria，or of the ten tribes．It was built by Omri king of Ifrael，who began to reign in the year of the world 3079 ，and died 3886 （I Kings xvi．24．）He hought the liill Samaria of Shemer for two talents of filver，or for the fum of \(1.68_{+}: 7: 6\) ．It took the name of Samaria from Shemer the owner of the hill；though fome think there were already fome beginnings of a cit 5 ，becaufe，before the reign of Omri，there is men－ tion made of Samaria（1 Kings xiii． \(\mathbf{3 n}^{2}\) ．）ir the year of the world 3030．But others take this for a prolep． fis，or an anticipation，in the difcourfe of the man of God， who fpeaks of Samaria under the reign of Jeroboam．

Howeser this be，it is certain that Samaria was no confiderable place，and did not become the capital city of the kingdom of Ifrael till after the reign of Omri． Before him，the kings of Ifracl dwelt at Shechem，or at ＇Tirzah．Samaria was fituated upon an agreeable and fruitful hill，and an advantageous fituation，and was 12 miles from Dothaim， 12 from Merrom，and four from Atharoth．Jofeplus fays，it was a day＇s journey from Jerufalem．Befides，though it was built upon an emi－ nence，yet it mut have water in abundance；fince we find medals ftruck in this eity，whereon is reprefented the goddefs Aftarte treading a river under foot ；which proves it to have been well watered．And Jofephus obferves，that when it was taken by John Hircanus the plince of the Jews，he entirely demolifhed it，and cau－ fed even the brook to flow over its ruins，to obliterate all the footfeps of it．

The kings of Samaria omitted nothing to make this city the ftrongef，the fineft，and the richeft，that was poffible．A hab built there a palace of ivory（ \(t\) Kings xxii．39．），that is，in which there were many onnaments of ivory．Amos deferibes Samaria under Jeroboam II． as a city funk into all exceffes of luxury and effenina－ cy（Amos iii． 15 ，and iv．1， 2 ）．

Ben－hadad king of Syria built public places or ftreets in Samaria（ 1 Kings xx．34．）probably for traffic， where his people divelt to promote trade．His fon Ben－hadad befieged this place under the reign of \(A\)－ hab（1 Kings xx．1，2，3，\＆c．）in the gear of the world 3103.
The following year，Ben－hadad brought an army into the field，probably with a defign to march againt Samaria：but his army was again cut in pieces．Some years after this，Ben－hadad came a third time，lay down before Samaria，and reduced it to fuch neceffities by fa－ mine，that a mother was there forced to eat her own child；but the city was relieved by a fenfible effect of the protection of God．

Lafty，it was befieged by Shalmanefer king of Affy－ ria，in the ninth year of Hothea king of Irrael（ 2 Fings xrii． \(6,7, \& 2\) ．），which was the fourth of Hezekiah king of Judal．It was raken three years after，in the year of the world 3283 ．The prophct Hofea fpeaks of the cruelties exercited by Shalmanefer againt the befieged （Hof．x．4，8，2．xiv．1．）；and Micah fay：，that this

\section*{S A M}
city was reduced to a heap of itones（Mic．i．6）．The Samaria， Cuthites that were fent by Efar－baddon to inhabit the Janosicants country of Samaria，did not think it worth their white to repair the ruins of this city；they dwelt at Sbechem， which they made the capital city of their fate．They were fill upon this footing when Alexarder the Great came into Phomicia and Judea．Howrwer，the Cu：－ thites had rebuilt fome of the houfes of Samaria，even from the time of the return from the captivity，fince Ezra then fpeaks of the inhabitants of Samaria（Ezra i．．17．Nehem．iv．2．）；a．d that the Ssmaritan，being jealous of the favours that Alexar der the Great had conierred on the Jews，revolted from him vilile this prince was in Egypt，and burnt Andronachus alive， whom Alexander had left goveruor of Syria．Alex． ander marched againt them，tonk Saniaria，and put in Macedonians to inhabit it ；giving the country round it to the Jews；and to encourage them to cultivate it， he granted them an exemption from tributc．The kil R of Egypt and Syria，who fuccecded Al：xazder，di－ prived them of the property of this country．

But Alexander Balas king of Syria reflored to Jo． nathan Maccabrus the citics of Lydda，Ephrem，ans Ramatha，which he cut off from the country of \(\mathrm{S}_{\mathrm{d}}\) ． maria（ 1 Mac．x． 30,39 ，and xi． 28,34 ．）Laills， the Jews re－entered into thie full puffefion of this whule country under Jolun Hircanus the Afmonzan，whin took Samaria，and ruined it in fuch a manner，accord－ ing to Jofephus，that he made the river run through its ruins．It continued in this condition to the yoar us the world 39＋7，when Aulus Gabinius，the proconful of Syria，rebuilt it，and gave it the name of Gabinid． na．But it was yet but very inconfiderable，till Herud the Great reflored it to its ancient luftre，and gave is the Greek name of Scbafte，which in Latin is Ausull ， in honour of the emperor Augufus，who had gives him the property of this place．

The facred authors of the New Teffament \｛peak in 2 t little of Samaria ；and when they co mention it，it is rather in refpect of the country about \(i t\) ，than of the city itfelf．（Sce Luke xxiio i1．Juhn ir：4，5．）－ It was there our Lord had the conserfation with the wo－ man of Samaria，that is，with a Samaritan woman of the city of Sychar．After the death of Si Stephen． （Acts viii．1，2，3．），when the difcipies were difperfed through the citics of Judea and Samaria，S：Philip the deacon withdrerr into the city of Samaria，where 1： made feveral converts．When the apoftes heard that this city had received the word of God，they fent Pe－ ter and John thither，to communicate the Holy Ghotl to fuch as had been baptized．It was there they found Simon Magus，who offered manes to the apofles，be－ ing in hopes to buy this power of communicating the Holy Ghoft．Samaria is never called Sebafte int the books of the New Teflament，though ftrangers hardly knew it but by this name．St Jerome fays，that it was thought Obadiah was buried at Samaria．They alfo fhewed there the tombs of Elifha and of St John the Baptift．There are found many ancient medals that were frruck at Sebafte，or Samaria，and fome bi－ fhops of this city have fubferibed to the ancient coun－ cils．

SAMARITANS．Wre have already fpoken of the Samaritans under the article Cuth．The Samaritans + L \(=\)

\section*{S A M [ 63 J ] S A M}

Samaritans are the people of the city of Samaria, and the iuhabitants of the province of which Samaria was the cari. tal city. In thia fenfe, it fhould feen that we might give the name of Samaritans to the Ifraelites of the ten tribes, who lived in the city and territory of Sa. maria. However, the facred authors commonly give the name of Samaritans only to thofe ftrange people whom the kings of Affyria fent from beyond the Fuplrates to inhabit the kingdom of Samaria, when they took away captive the Ifraelites that were there before. Thus we may fix the epoch of the Samaritans at the taking of Samaria by Sahnanefer, in the year of the world 3283 . This prince carried away captive the Ifraclites that he found in the country, and affigned them dwellings beyond the Euphrates, and in Affyria, (: Kings xvii. 24.) He fent other inhabitants in their flead, of which the molt confiderable were the Cuthites, a people defcended from Cuh, and who are probably of the number of thofe whom the ancients knew by the name of Scythians.

After Salmanefer, his fucceffor Efar-haddon was informed, that the people which had been fent to Samaris were infefted by lions that devoured them, (2 Kings xvii. 25. ); this he imputed to the ignorance of the people in the manner of wormipping the god of the country. Wherefore Efar-haddon fent a priet of the God of Ifrael that he might teach them the religion of she Hebrews. But they thought they might blend this religion with that which they profeffed before; fo they continued to worthip their iods as before, in conjunction with the God of Ifrael, not perceiving how abfurd and incompatible thefe two rebgions ware.

It is not known how long they contimed in this fate; but at the return form the captivity of Babylon, it appears they had entirely quitted the worthip of their idols; and when they anted permiflion of the Ifraelites that they might labour with them at the rebuilding of the temple of Jerufalem, they affirined, that from the time that Elar-haddon had brought them into this country they had always worfhipped the Lord, (Ezrah iv. 1,2,3.) And indeed, after the return from the captivity, the feripture does not any where reproach them with idolatrons worhip, though it does not diffemble either their jealoufy againit the Jews, nor the ill offices they had dore them at the court of Perfia, by their flanders and calumnies, or the fratagems they contrived (:) linder the repairing of the walls of Jerufalem. (Nehem. ii. 10, 19. iv. 2, Sic. vi. 1, 2, Exc.)

It does not appear that there was any temple in Samaria, in common to all thefe people who came thither from beyond the Euphrates, before the coming of Alexander the Great into Judea. Before that time, every one was left to his own difcretion, and wormipped the Lord where he thought ft. But they prefently comprehended, from the books of Mofes which they had in their hands, and from the example of the Jews their neighbours, that God was to be worthipped in that place ouly which he had chofen. So that fince they could not go to the temple of Jerufalem, which the Jews would not allow of, they bethought themfelves of building a temple of their own upon mount Gcrizim, near the city of Shechem, which was then their capital. Theretore Sanballat, the governor of the Samaritans, applicd himfelf to Alexander, and told tion be bad a fon-in-law, called Manafles, fon to Jaddus
the high-prieft of the Jews, who had retired to Samaria Sarraritass with a great number of other perfons of his own nation; that he defired to build a temple in this province, where he might exercife the high-priefthood; that this undertaking would be to the advantage of the king's affairs. becaufe in building a temple in the province of Samaria, the nation of the Jews would be divided, who are a turbulent and feditious people, and by fuch a divifion would be made weaker, and lefs in a condition to undertalie new enterprizes.

Alexander readily confented to what Sanballat defired, and the Samaritans prefently began their building of the temple of Gerizim, which from that tine they have always frequented, and fill frequent to this day, as the place where the Lord intended to receive the: adoration of his people. It is of this mountain, and of this temple, that the Samaritan woman of Sychar fpoke to our Saviour, (John iv. 20.) See GíR1zim.

The Samaritans did not long continue under the obedience of Alexander. They revolted from him the very next year, and Alexander drove them out of samaria, put Macedonians in their room, and gave the province of Samaria to the Jews. This preference that Alexander gave to the Ifraelites contributed not a hittle to increafe that hatred and animofity that had already obtained hetween thefe two people. When any Ifraelite had deferved punilhment for the violation of fome important point of the law, he prefently took refuge in Samaria or Shechem, and embraced the way of wormip according to the temple of Garizim. When the Jews were in a profperous condition, and affairs were favourable to them, the Samaritans did not fail to call themfelves Hebrews, and pretended to be of the race of Abraham. But no fooner were the Jews fallen into diferedit or perfecution, but the Samaritans immediately difowned them, would have nothing in common with them, acknowledged themfelves to he Phonicians originally, or that they were defcended from Jofeph and Manaffeh his fon. This ufed to be their practice in the time of Antiochus Epiphanes.

The Samaritans, having received the Pentateuch, or the five books of Mofes, from the prieft tbat was fent by Efar-haddon, have preferved it to this day, in the fame language aad character it was then, that is, in the old Hebrew or Phœnician charaCtcr, which we now call the Samaritan, to diftinguifh it from the modern Hebrew character, which at prefent we find in the books. of the Jews. Thefe lait, after their captivity, changed. their old characters, and took up thofe of the Chaldee, which they had been ufed to at Babylon, and which they continue fill to ufe. It is wrong, fays F. Calmet, to give this the wame of the Hebrew character, for thet can be faid properly only of the Samaritan text. The critics have taken eotice of fome variations between the Pentateuch of the Jews and that of the Samaritans; but thele varieties of reading chiefly regard the word Gerizim, which the Samaritans feem to have purpofely intraduced to favour their pretenfions, that mount Gerizim was the place in which the Lord was to be adored. The other various readings are of fmall importance.

The religion of this pcople was at firt the Pagan Every one worfhipped the deity they had bcen ufed to in their own country ( 2 Kings xvii. 25, 30, 3 I.)

Ama ine The Babylonians worhipped Succoth-benoth ; the Cuthites, Nergal ; the Hanathites, Afhima ; the Avites, Nibhaz and Tartals; the Sepharvites, Adrammelech and A nammelech. If we would enumerate all the names of falfe gods to whom the Samaritans lave paid a facrilegrious worhip, we fhould have enough to do. This matter is fuficiently perplexed, by reafon of the different names by which they were adored by different nations, infonuch that it would be almoit imporfible to clear up this affair. See Succoth-benoth, \&cc. Afterwards, to this profane worlhip the Samaritans added that of the Lord, the God of Ifrael, ( 2 Kings xvii. 29, 30, 31, 32.). They gave a proof of their little regard to this wormip of the true Gor, when under Antiochus Epiphanes they confecrated their tomple at Gerizim to Jupiter Argivus. In the time of Alexander the Great, they celebrated the fabbatical year, and confequently the ycar of juhilee alfo. We do not know whether they did it exactly at the fame time with the Jews, or whether they obferved any other epoch; and it is to little purpole that fome critics lave attempted to afcertain the firf begianing of it. Under the kings of Syria they followed the epoch of the Greeks, or that of the Seleucide, as other people did that were under the government of the Seleacidx. After that Ferod had re-cttablifhed Samaria, and had given it the name of Sebalte, the inhabitants of this city, in their medals, and all puolic acte, took the date of this new eftablifment. But the inhabitants of Samaria, of which the greater part were Pagans or Jews, were no rule to the other Samaritans, who probably reckoned their jears according to the reigns of the emperers they were fubject to, thil the time they fell under the jurifliction of the Mahometans, under which they live at this day; and they reckon their year by the Hegira, or, as they fpeak, according to the reign of Inmael, or the Ifhmaelites. Such of our readers as defire to be further acquainted with the hiftory of the ancient Samaritans, we refer to the works of Jolephus, where they will fiud that fubject largely treated of.

As to their belief, it is objected to thern, that they receive only the Pentateuch, and reject all the other books of fcripture, chiefly the prophets, who have more exprefsly declared the coming of the Mefliah.They have aifo been accufed of believing God to be sorporcal, of denying the Holy Ghoft, and the refurrection of the dead. Jefus Chrift reproaches them (John iv. 22.) with worfhipping they know not what; and in the place already referred to he feems to exclude them from falvation, when he fays, that "Salvation is of the Jews." True it is, that thefe words might only fignify, that the Meffiah was to proceed from the Jews; but the crime of fchifm alone, and a feparation from the true church, was fufficient to exclude them from falvation. The Samaritan woman is a fufficient teftimony that the Samaritans expected a Mefliah, who they hoped would elear up all their doubts (John iv. 25.) Several of the inhabitants of Shechem believed at the preaching of Jefus Chirf, and feveral of Samaria beliered at that of St Philip; but it is faid, they foon fell back to their former errors, being perverted by Simon Magus.

The Samaritans at prefent are very few in number. Jofeplı Scaliger, being curicus to know their ufages,
wrote to the Samaritans of Egrpt, and to the hiph-Simarieners: prielt of the whole fect who relided at Neapolis in Sy. Sumbeus. ria. They returned two anfivers to Scaliger, dated in thic year of the Hegira 998. Thefe were preferved in the French king's library, and were tranीatud into Latin by father Morin, and printed in England in the collection of that father's letters, in \(\mathbf{3 8 2}\), under the title of Antiquilates Ecclefia Orientalis. By thefe letters it appears, that they believe in God, in his fervant Mofes, the holy law, the mountain Gerizim, the houfe of God, the day of vengeance and of peace ; that they value thenfelves upon obferving the law of Mofes in many points more rigidly tlan the Jews themfelves. They keep the fabaath with the unnot fricinefs required by the law; without lirring from the place they are in, but only to the fynagngue. They gu not nut of the city, and abttain from their wives on that day. They never delay circumeifion beyond the eighal day. They fill facrifice to this day in the temple on mount Cerizien, and give to the prielt what is en. joined by the law. They do not marry their sin niece, as the Jews do, nor do they allow themfelves a plurality of wives. Their hatred fur the Jews may be feen through all the hithory of Jofephus, and in Ceveral places of the New Teftament. The Jewifh hitorian informs ns, that under the government of Coponius, one pafiover night, when they opened the gates of the temple, fome Samaritans had feattered the bones of dead men there, to infult the Jews, and to interrupt the devotion of the feftival. The evangelilts fhew us, that the Jews and Samaritans held no correlpondence together (John iv. 9.) "The Jews leave no dealings with the Samaritans." And the Samaritan woman of Sychar was much furprifed that Jefus talked with her, and aksed drink of her, being a Samaritan. When our Saviour fent his apoftles to preach in Judea, he forbad them to enter into the Samaritan citics, (Matt. x. 5) ; becaufe he looked upon thein as fchifmatics, and as Atrangers to the covenant of Ifrael. One day when he font his difciples to provide him a lodring in one of the cities of the Samaritans, they would not entertain him, becaufe they perceived he was going to Jerufalem. (Luke ix. 52.53.) " Becaure his face was as though he would go to Jerufalem." And when the Jews were provoked at the refroaches of Jefus Chrit, they told him he was a Samaritan (John viii. 48.). thinking they could fay nothing more fevere againt him. Juftphus relates, that fome Samaritans having kilied feverl Jews as they were going to the feaft at Jerufalem, this oceafioned a kind of a war between them. The Samaritans continued their fealty to the Romans, when the Jews revolted from them; yet they did not efeape from being involved in lume of the calamities of their neighbours.

There are ftill at this day fome Samaritans at Shechem?, otherwife called Naploufe. They have priefts there, who fay they are of the lamily of Aaron. 'They have a high-prielt, who refides at Shechem, of at Gerizim. who offers facritives there, and who declates the: fatit of the palfover, and all the ether feelts, to all itie difperfed Samaritans. Some of them are to be found a: Gaza, fome at Danafcus, and fonte at Grand Cairo.

SAMBUCUS, elner, in botany: A genus of ife trigynia order, belonging to the pentanitria clafs o: plants; and in the naturn methed ranking naver th:

\section*{S A M}

\section*{S A M}

Eambuces \(43^{d}\) order, Dumofe. The calyx is quinquepartite; the corulla quinquefd ; the berry trifpermous.

The innft remarkable fpccies are, I. The nigra, or common black elder-tree, rifes with a tree-ftem, branching numeroufly into a large fprcading head, twenty or thirty feet high ; pinnated leaves, of two or three pair of oval lohes and an odd one; and large five parted umbels of white flowers towards the ends of the branches, fucceeded by bunches of black and other different coloured berries, in the varieties; which are-Common black-berried elder-tıee-White-berried elder-Greenberried elder-Laciniated, or parfley-leaved clder, having the folioles mich laciniated, fo as to refenble parley leaves-Gold-ftriped-leaved elder-Silver-ftriped elder-Silver-dufted elder. 2. The racemofa, racemofe red-berried cldcr, rifes with a tree-like ftem, brancling ten or twelve feet high, having reddifh-brown branches and buds; pinnated leaves of fix or feven oval deeply-fawed lobes; and compound, oval, racemous, clutters of whitifh-green flowers, fucceeded by oval clutters of red berries. This is a refident of the mountainous parts of the fouth of Europ;, and is rctained in our gardens as a flowering fhrub, having a peculiar fingularity in its oval-cluftered flowers and berries. 3. The Canadenfis, or Canada fhrubby elder, viles with a hrubby flem, branching eight or ten feet high, having reddifh fhoots; fomewhat bipinnated leaves, often ternate below, the other cumpoled of five, feven, or nine oval lobes; and towards the ends of the branchez, cymofe quinquepartite unbels of Howees, fucceeded by blackifh red berries. All the forts of elder are of the deciduons tribe, very hardy, and grow freely anywhere; are generally free thooters, but particularly the common elder and varieties, which make remarkably ftrong, jointed floots, of feveral feet in length, in one feafon; and they flower moftly in fummer, except the racemofe elder, which sencrally begius flowering in April ; and the branches being large, fpreading, and very abundant, are exceedingly confpictoous; but they emit a moft difagreeable odour. The flowers are fucceeded in the moft of the forts by large bunches of ripe berries in autumn, which, although very uupalateable to eat, are in ligh eftimation for making that well known cordial liquor called elder wine, particularly the common blackberried elder. The merit of the elder in gardening may be both for ufe and ornament, efpecially in large grounds.

SAMIAN EARTH, in the materia medica, the name of two fpecies of marl ufed in medicine, viz. 1. The white kind, celled by the ancients collyrium famium, being aftringent, and therefure good in diarrheeas, dyfenteries, and hremorrhagies; they alfo ufed it externally in inflammations of all kinds. 2. The brownih-white kind, called ofer famius by Diofcorides; this alfo ftands recommended as an aftringent.

SAMIELS, the Arabian name of a hot wind pecu-

Ives's Voyate from Englanisto India in quater, and fometimes it col I757. to the very gates of Bagdad, but never affects any body "within the walls. Some years it does not blow at all, and in others it appears fix, eight, or ten times, but feldom continues more than a few minutes at a time. It ofteu paffes with the apparent quicknefs of lightning. The Arabians and Perfians, who are acquainted with
the appearance of the firy at or near the time this wind \(S_{2 n}\) arifeth, lave warning of its approach by a thick haze, which appears like a cloud of dult arifing out of the horizon; and they immediately upon this appearance throw themfelves with their faces to the ground, and coutinue in that pofition till the wind is paffed, which frequently happens alinof initantaneoufly; but if, on the contrary, they are not careful or brifk enough to take this precaution, which is fometimes the cafe, and they get the full force of the wind, it is inftant death.

The above method is the only one which they take to avoid the effects of this fatal blaft ; and when it is over, they get up and look round them for their companions; and if they fee any one lying motionlefs, they take hold of an arm or leg, and pull and jerk it with fome force; and if the limb thus agitated feparates from the body, it is a certain fign that the wind has had its full effect ; but if, on the contrary, the arm or leg does not come away, it is a fure fign there is life remaining, although to every outward appearance the perfon is dead; and in that cafe they inmediately cover him or them with clothes, and adminititer fome warm diluting liquor to caufe a perfpiration, which is certainly but flowly brought about.
'The Arabs themfelves can fay little or nothing about the nature of this wind, only that it always leaves behind it a very frong fulphureous fmell, and that the air at thefe times is quite clear, except about the horizon, in the north-weft quarter, before obferved, which gives warning of its approach. We have not been able to learn whether the dead bodies are fcorched, or diffolved into a kind of gelatinous fubtance; but from the fories current about them, there has been frequent reafon to believe the latter; and in that cafe fuch fatal effects may be attributed rather to a noxious vapour than to an ablolute and excelfive heat. The fory of its going to the gates of Bazdad and no farther may be reafonably enough accounted for, if the effects are attributed to a poifonous vapour, and not an exceffive heat. The above mentioned wind, Samiel, is fo well known in the neighbourhood of Bagdad and Baflora, that the very children fpeak of it with dread.

SAMOGITIA, a province of Poland, bounded on the north by Courland, on the eaft by Lithuania, on the weft by the Baltic Sca, and on the fouth by Regal Pruffia, being about 175 miles in length and 125 in breadth. It is full of forelts and very high mountains, which feed a great number of cattle, and produce a large quantity of honey. There are alfo very active horfes, in high efteen. The inhabitants are clownifh, but honeft; and they will not allow a young woman to go out in the night without a candle in her hand and two bells at her girdle. Roffenna and Wormia are the principal places.

SAMOIEDA, a country of the Ruffian empire, between Afiatic Tartary and Archangel, lying along the fea-coaft as far as siberia. The inhabitants are fo rude a people that they can hardly pretend to humanity, except in their face and figure : they have little underftanding, and in many things refemble brutes, for they will eat carrion of every kind. They travel on the fnow on fedges, drawn with an animal like a reindeer, but with the horns of a flag. 'Thofe who have feen them affirm, that no people on the earth make fuch ihocking figures: their flature is fhort; their fhoulders
molus and faces are broad, with that broad noles, great blubber hanging lips, and ftaring eyes; thcir complexion is dark, their hair long and as black as pitch, ande they have very little beards; and it is faid that all the Samoied women have black nipples. If they have any religion at all, it is idolatry, though there has been fome attempts of late to convert them. Their huts are made of birch bark fewed together, which is laid upon ftakes fet in the groand, and at the top is a hole to let out the fmoke; the fire is made in the midale, and both men and women lie naked round them all night.They have litele regard to the nearnefs of kin, and take as many wives as they can keep: their only employment is lunting and fithing.

SAMOLUS, in botany: A genus of the monozynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the zift order, Precie. The corolla is falver-lhaped, the ftamina furrounded by finall fcales at its throat. The capfule is unilocular inferior.

SAMOS (anc. geog.), an ifland at no great diftance from the promontory Mycale, on the continent of the Hither Aria, and oppofite to Ephefus; the diftance only feven Atadia (Strabo) ; a free ifland, in compafs 87 miles (Pliny) ; or 100 (Ifidorus): with a cognominal town (Ptolemy, Horace) ; famous for the worhip and a temple of Juno, with a noted afylum (Virgill, Strabo, Tacitus) ; and hence their coin exhibited a peacock (Athenrus): The country of Pythagoras, who, to avoid the oppreffion of tyrants, retired to Italy, the land of freedom. Samos, though not fo happy in producing wine, which Strabo wonders at, all the adjoining iflands yielding a generous fort, yet abounds in all the neceffaries of life. The \(V a / a\) Samia, among earthen ware, were held in high repute. Samii, the people (Ovid). -'The ifland is now in the hands of the Turks. It is about 32 miles in length, and 22 in breadth, and extremely fertile. The inhabitants live at their eafe, their taxation by the Turks being moderate. The women are very nafly and ugly, and they never fhift above once a month. They are clothed in the Turkin manner, except a red coif, and their hair hanging down their backs, with plates of filver or block-tin faftened to the ends. They have abundance of melons, lentils, kidney.beans, and excellent mufkadine grapes. They lave white figs four times as big as the cornroon fort, but not fo well tafted. Their filk is very fine, and their honey and wax admirable; befides which, their poultry are excellent : they have iron mines, and molt of the foil is of a rufty colour : they have alfo emery ftone, and all the mountains are of white marble. The inlabitants are abont \(\cdot 2,000\), who are almoft all Greeks; and the monks and priefts occupy moit part of the illand. They lave a bifhop who refides at Cora. Sce Polrcrates.
2bac's Voy. SAMPAN, is a Chinefe boat without a keel, lookIge to Cbina ing almoft like a trough ; they are made of different di-
nit the Eult ind the Eul' menfions; but are moftly covered. 'Thefe boats are as
sflict. Srifict long as floops, but broader, almoft like a baking trough; and have at the end one or more decks of bamboo fticks : the cover or roof is made of bamboo fticke, arched over in the fhape of a grater; and may be raifed or lowered at pleafure : the fides are made of boards, with little holes, with fhutters inftead of win-
couss: the boneds are fattened on both fises to pols, which have notclies like Iteps on the infides, that the roof may be let down, and reft on them: on buth ends of the deck are commonly two little doors, at leaft there is one at the hirdinoft ead. A fine white fmonih car. pet fpread up as far as the boards makes the floor, which in the inidde confifts of loofe boards ; but: this carpet is only made ufe of to ncep un. As thefe Loats greatly differ from ours in thape, they are likewife row. ed in a different manner : for iwo rowers, pulting then!felves at the back end of the fampan, work it forvands very readily by the motion of tivn oars; and can aimot turn the veffel jut as they pleafe: the ores, whic! are covered with a little hollow quadrangular irun, ars: laid on iron fwivels, which are fatenced in the fides of the fampan : at the iron the oars are pieced, which makes them look a little bent: in common, a rower fits before with a fhort oar ; but this he is forced to lay afide when he comes near the city, on accuunt of the great throag of fanipans; and this inconvenience has confirmed the Clinefe in their old way of rowing. Inftead of pitch, they make ufe of a cement like our putty, which we call chimam, but the Chinefe call it liang. Some authors fay that this cement is made of lime and a refin exuding from the tree oong jea, and bamboo ockam.

Befides a couple of chairs, they have the following furniture: two oblong tables or boards on which fome Chinefe characters are drawn; a lanthorn for the night-time, and a pot to boil rice in. They bave alfo a little cover for their houfehold god, decorated with gilt paper and other ornaments : before him flands a pot filled with afhes, into which the tapers are put before the idol. The candles are nothing elfe than bamboo chips, to the upper end of which faw-duft of fanda!wood is fuuck on with gum. Thefe tapers are everywhere lighted before the idols in the parodas, and before the doors in the flreets; and, in large cities, occafion a fmoke very pernicious to the cyes. Before this idol ftands fome famfo, or Chinefe brandy, "ater, \&c. We ought to try whether the Chinefe would not like to ufe juniper-wrood intlead of fandal wood; which later comes from Surate, and has almott the fame fmell with juniper.

SAMSON, one of the judges of Ifracl, memorable for his fupernatural ftrength, his victorics over the Pliilitines, and his tragical end, as related in the book of yudjes.

SAMson's Pof, a fort of pillar erected ia a תrip's hold, between the lower deck and the kelifon, under the edge of a hatchway, and funinined with fevenal notches that ferve as fleps to mount or defeend, as occafion requires. This pott being firnly driven into its place, not ondy ferves to fupport the beam and furtify the veffel in that place, but alfo to prevent the cargo or materials contaioed in the hold, from fhifting to the oppofite fide, by the rolling of the fhip in a turbulent and heary fea.

Books of SAMUEL, two canonical books of the Old !'ellanaent, as being ufually afcribed to the prophet Samuel.
'The books of Samuel and the books of Kings are a cortinued hiftory of the reigns of the kings of 1 frad and Judah; for which reafon the books of Samuel are likewife fyled die fryl and jccond books of Kings. Since

Sumvia, the firit 24 chapters, contain all that relates to the Siva. Hitory of Sannel, and the latter part of the firlt book and all the fecond include the relation of events that happened after the death of that prophet, it has been fuppoied that Samucl was author only of the firlt \(2+\) chapters, and that the prophets Gad and Nathan finithed the work. The firt bock of Samuel comprehends the traufactions under the government of Eliand Samuel, and under Saul the firit king ; and alfo the acts of David while he lived under Saul ; and is fuppofed to contain the fpace of 101 years. The fecond book contains the hiltory of about 40 years, and is wholly fyent in relating the tranfactions of Darid's reign.

SAMYDA, in botany: A genus of the monogynia order, helonging to the decandria clafs of plants; ar:d in the natural method ranking with thofe of which the order is doubtful. The calyx is quinquepartite and coloured; there is no corolla; the capfule in the infide refembles a berry, is trivalved and unilocular ; the feeds nefling.
STe culu's
SANA, or SANAA, a large, populons, and handfome
Fraveds ly town of Afia, capital of Arabia Felix, is fituated in सHeron. Proper Yemen, at the foot of mount Nikkum, on
which are fill to be feen the ruins of a cafte, which the Arabs fuppofe to have been buile by Shem. Near this mountain flands the caftle; a rivulet runs upon the other fide; and near it is the Buftan el Metwokkel, a〔pacious garden, which was laid out by Imam Metwokkel, and has been embellifhed with a line garden by the reigning imam. The walls of the city, which are built of bricks, exclude this garden, which is iaclofed within a wall of its own. The eity, properly fo called, is not very extenfive: one may walk round it all in an hour. The city-gates are feven. Here are a number of mofques, fome of which have been built by Turkifh pachas. Sana has the appearance of being more populous than it actually is; for the gardens occupy a part of the fpace within the walls. In Sand are only 12 public baths; but many noble palaces, three of the moft fplendid of which have been built by the reigning Imam. The palace of the late Inam El Manzor, with fome others, bclong to the royal fanily, who are very numerous.

The Arabian palaces are built in a ftyle of architecture different from ourso The materials are, however, burnt bricks, and fometimes even hewn ftones; but the houfes of the common people are of bricks which have been dried in the fun. There are no glats windows, except in one palace, near the citadel. The reft of the houfes have, intead of windows, merely fhutters, which are opened in fair weather, and thut when it is foul. In the lafl cafe, the houfe is lighted by a round wicket, fitted with a piece of Mufcovy glafs; fome of the Arabians ufe frmall panes of itained glafis from Venice.
At Sana, and in the other cities of the Eaf, are great fimferas or caravanferas for merchants and travel. lers. Each different conmodity is fold in a itparate market. In the market for bread, none but women are to be feen ; ard their little fhops are portable. The feveral claftes cf mechanics wolk, in the fame manner, in particular quarters in the open flreet. Writers go about with their cefks, and make ont brieves, copybooks, and inftrut feholars in the art of writing, all
at the fame time. There is one market where oid clothes are taken in exchange for new.

Wood for the carpenter's purpofe is extremely dear throngh Yemen; and wood fur the fire at Sana is no lefs fo. All the hills near the city are bleak and bare, and wood is therefore to be brought hither from the diftance of three days journey; and a camel's burthen commonly cofts two crowns. This fearcity of wood is particularly fupplicd by the ufe of a little pit-coal. Peats are burnt here ; but they are fo bad, that ftraw munt be intermixed to make then burn.

Fruits are, however, very plenteons at Sana. Here are more than 20 different foecies of grapes, which, as they do not all ripen at the fame time, continue to afford a delicious retrefliment for feveral months. The Arabs likewife preferve grapes, by hangingt then up in their cellars, and eat them almoll through the whole year. The Jews make a little wine, and might mak. more if the Arabs were not fuch enernies to flrong liquors. A Jew convicted of conveying wine into an Arab's houlc is feverely punihed; nay, the Jews mult even ufe great cantion in buying and felling it among themfelves. Great quantities of grapes are dried here; and the exportation of raifins from Sana is confiderable. One fort of thefe grapes are without flones, and contains ouly a foft grain, the prefence of whick is not perceptible in eating the raifin.

In the cafte, which fands on a hill, are two palaces. "I faw (fays Niebuhr) about it fome ruing of old buildings, but, notwithftanding the antiquity of the place, no re:narkable inferiptions. There is the mint, and a range of prifons for perfons of different ranks. The reigning Imam refides in the city; but feveral princes of the blood-royal live in the caftle. The battery is the mot elevated place about thefe buildings; and there I met with what I had no expectation of, a Germari mortar, with this infcription, Forg Selos Gof. mick, 1513. I faw alfo upon the fame battery feven iron cannons, partly buried in the fand, and partly fet upon broken carrias es. Thefe feven fraall cannons, with fix others near the gates, which are fired to announce the return of the different feltivals, are all the artillery of the capital of Yemen."

SANADON (Noel Etienne), a Jefuit, was born at Rouen in 16,6 , and was a dittinguinhed profeffor of humanity at Caen. He there became acquainted with Huet bifhop of Avranches, whofe tafte for literature and poetry was fimilar to his own. Satadon afterwards taught rhetoric at the univerfity o? Paris, and was enteufled with the education of the prince of Conti, after the death of Du Morceay. In 1728 he was made libravian to Louis XIV. an office which he retained to his dcath. He died on the 2 ft September 1733, in the 58 th ycar of his age.
His works are, 1. Latin Poems, in \(12 \mathrm{mo}, 1715\), and repinted by Barbou, in \(8 \mathrm{vo}, 175+\). His ftyle poffefles the graces of the Auguftan age. His language is pure and nervous; his verfes are harmonious, and his thoughts are delicate and well chofen; but fometimes his imagination flags. His Latin poems confitt of Odes, Elegies, Epigrams, and others, on varicus fubjects. 2. A tranीation of Horace, with Remarks, in 2 vols 4 to, printed at Paris in 1727 ; but the beft edition of this work was printed at A miftertanz in 1735 , in 8 ros 12 m , in whith are alfo merted the and precifion in the cpiftles and fatires. In general, his verlion is rather a paraphrafe than a failltifil tranf. lation. Learnesd men have juntly cenfured him for the liberty which he has taken in making confiderable chancis in the orler and trusture of the odes. He has allo given offence by his uncoutlo orthography. 3 . A Collecion of Difoourfes delivered at different times, which affurd itrong proofs of his knowledge of oratory and poetry. 4. A book chiteted Prieres at Infliutions Cöretiznes.
SANBALLAT, the chicf or governor of the Cuthites or Samaritans, was always a great encmy to the Jews. He was a native of Horon, or Horonain, a city beyond Jordan, in the country of the Muabites. He lived in the time of Nehemiah, who was his great opponant, and from whofe book we learn his hiltory. There is one circumfiance selated of hiun which has occafioned fome difpute among the learned; and the thate of the quention is as follows: When Alexander the Great cane into Phocnicia, and fat down before the city of Tyre, Sanhallat cuisted the interefts of Darius king of Perfia, and went at the head of 8000 men to offer bis fervice to Alexarder. This prince readily entertained him, and being much folieited by him, gave hinn leave to ereet a temple upon mount Gerizin, whiere he conllituted his fon-in.law Manateh the highl-prictl. But this fory carrics a flayrant anachronifn: for 120 years before this, that is, in the year of the wortd 3550 , Sanballat was governor of Sumaria; wherefive the learned Dr Prideaux (in his Cumnection of the Hiftories of the Old and New Teflament) fuppofes two Sanballats, and endeavours to reconcile it to truth and probability, by flowing it to be a mittake of Jofephus. This authior makes Sanballit to flourith in the time of Davius Codomannus, and to build lis temple upion thount Gerizim by licence from Alexander the Great ; whereas it was performed by leave from Darins Nothus, in the 15 th year of his reigu. This takes away the dificiculty arifing from the great are of sanballit, and brings him to be conterrporary with Nehemi.i., as the Sclipture hiltoiy requires.

SANCHEZ (Frangois), called in Latin Sanaius, was of I.as Brocus in Spain, and has been diguificat liy his (aith countrymen with the pompous tites of \(l\) P Pere de ia Langue Latine, et te Dosteun de tous les Gens-de-elettres. He wrote, i. An excellent treatific intitled Minerva, or de Cavfis Lirguas I.atina; which was puiblifed at Amflerdam in 1714 , in 8 ws . The authons of the Porrerad Methode de la l.angue Latine taive been much ind bited to this work. 2. The Art of Speaking, and the Me. thood of traullating Authors. 3. Several other karned pieeces on grammar. He died in the year 1600 , in his 77 th year.

Vou. XVI. Part IL.

We mut be careful to dithinguilh him from another Sanchona. Fraviçis Sanchez, who died a! Touloufe in 163?. 1i.is tho. lat wias a l'orturuefe phyficiaa who fettled at roulzuf, and, though a Chisitian, was born of Juith pareves. He is faid to have been a man of genius and a philufopher. His works have been colleefed under thee title of Upera Nedica. His junai fume tragolus quilzm fbilo. Apstici non ingubtiles. They were printed ai 'Iouloure in 1636.

SANCHONIATHO, a Phenician philofopher and hiftorian, who is faid to have flourified bufore the itnjan war about the time of Semiramis. Of this moft ancient writer, the only remains extant are fuadry frayments of cofmogony, and of the hiftory of the gods and firft mortals, preferved by Eufebius and Theuduret ; both of whom rpeak of Sanchoniatho as an accusate and faithful hiftorian; and the ormer adde, that lis work, which was tranflated by Philo- Byblius frow the Phenician into the Greek language, cortains mary things relating to the hitary of the Jews which di. ferve great credit, both becaise they agere with the Jewifh writers, and becanfe the auther acceived thefe particulars from the annals of Hie:om,jalus, a pricts of the god Jao.

Several modem writers, however, of great laa:ning, lave called in quettion the rery exitence of Sanchuri: tho, and have contended with much plavibiliey, that the fragments which Eurebius adoptel as genuine upoa the authority of Porphyry, were forged by that au:hur. or the pretended tranfator Philo, from cumity to the Chritians, and that the Pagats might have fumbething to fhow of equal antiquity with the tooks of Mofec. Thefe oppolite opinions have produced a contr-verds that has filled volumes, and of which our limits would hardly adrit of an abtract. We fall therefore in few worls ftate what to us appears to be the eruth, and refe: fuch of our readers as are defirous of fuiler infumation to the works of the authors (A) neationed at the bo:tom of the page.
'l'he controverfy refpeeting Sanchoniatho refolves itfelf into two quattions: 1. Was thene in reality fuch a writer? 2. Wras he of the very remete antiquity which his trauflator claims for him?

I'hat there was really fuch a writer, and that the frarments preferved by Eufcbius are inde \(d \Gamma^{2}\) ts of his linlory interpulated perhaps by the trannator ( E ), we are compelled to belite by the followiser wafons. Eथ. febius, who admited them into his work is authentic. was one of the mont lamed men of his atre. and a diligent fa:cher into antiquity. His conduct at the Nicene council thows, that an coer dubere he then sht tor himfelf, neisher liafied by anthority to the one lide, nor carried over by the rage ot imanation to the other. Tle had better means than any mok 7 whiter ca? have if fatisfying limfe'f with refoct? th the anthent sity \(0^{f} a\) very extraordinaty work, which had then bui laiely

(в) Of this there are indeed leveral pronts. Philo makes Sanchoria:h frcat of 3 bus as the nocf a ciowt city of Pleenicia, which, in all probability, it was not. TVe read in the book of jusges of Rerith or Bernius, :hce city where Sanchoniath, himfelf lived; but not of Byblus, which was the native city of lhitu, and co a hieh he is therefore patial. He inakes him likewife talk of the Greeks at a period long before any of the Gereia flates were known or probably peopled.

\section*{S A N}

Sazcinnia- been tramfated into the Greek languaçe, und made getho.
nerally known ; and there is nothiny in the work itfelf,
or at leaft in thofe parts of it which he has preferved, that coukl induce a wife and good man to obtrude it upon the public as genuine, had he himfelf fufpected it t1) be fpurions. Too many of the Chritian fathers were indeet very credulons, and ready to admit the authenticity of writings without duly weighing the merits of their clain; but then fuch writinge were always believed to be favourable to the Chriftian caufe, and inimical to the caule of Paganifm. That no man of common fenfe could fuppofe the colmogony of Satichoniatho favonrable to the caufe of revealed religion, a farther proof cannot be requifite than what is furnifhed by the following cestract.
"He fuppofeth, or affirms, that the principles of the univerfe was a dark and windy air, or a wind made of dark air, and a turbulent evening chaos; and that thefe things were boundlefs, and for a long time had no bound or figure. But when this wind fell in love with nis own principles, and a mixture was made, that mixture was callced defire or cupid (rioos).
" This misture completed, was the beginning of the (xтtreas) making of all things. Put that wind did not know its own production ; and of this, with that wind, was begotten Mox, which fome call Mud, others the putrefastion of a watery mixture. And of this came all the feed of this building, and the generation of the univerfe.
"But there were certain animals, which had no fenfe, out of which were begotten intelligent animals, and were called Zofhefemin, that is, the fpies or overfeers of Heaven; and were formed alike in the fhape of an egg. Thus fhone out Mot, the fun and the moon, the lefs and the greater flars.
"And the air niining thoroughly with light, by its fiery influence on the fea and earth, winds were begotten, and clouds and great defluxions of the heavenly waters. And when all thefe things firf were parted, and were feparated from their proper place by the heat of the fun, and then all met again in the air, and dathed arainlt one another, and were fo broken to pieces; whence thunders and lightenings were made: and at the ftroke of thefe thunders the fore-mentioned intellicrent animals were awakened, and frighted with the found; and mole and female flirred in the earth and in the fea: 'This is their generation of animals.
"After thefe things our author (Sanchoniatho) goes on faying: Thefe things are written in the Cofmojony of Tarutus, and in his memoirs: and out of the conjectures, and fures natural figns which his mind faw, and found out, and wherewich he hath enlightenec us.
: Afterwards declaring the names of the wirds, north and foutb and the reft, he makes this epilogue. - But thefe firft men confecrated the plants thooting out of the earth, and judged them gools, and worhipped then; unon whon they themfelves lived, and all their pofterity and all before them : to thefe they made their meat and drink offerings.' 'Thwa he concludes: - thefe were the devices of worhip agreeing with the iveakuefs and want of boldnefs in their minds."

Let us fuppofe Eufebius to have been as weak and sredulus as the darkef monk in the darkett age of Europe, a fuppofition which no man will make who enens ary thing of the writings of that eminent hitto-
rian ; what could he fee in this fenfelefs jargon, which Sanchos even a dreaming monk would think of employing in fupport of Chriflianity? Eufebius calls it, and calls it truly, dircct atheifm; but could he imagine that an ancient fyttem of atheifm would contribute fo much to make the Pagans of his age admit as divine revclations the books of the Old and New 'Ieftaments, that lie Thould be induced to adopt, without examination, an impudent forgery not 200 ycars old as genuine remains of the mof remote antiquity ?

If this Phenician cofinogony be a fabrication of Por. phyry, or of the pretended tranflator, it inut furely have been fabricated for fome purpofe; but it is impoffible for us to conccive what purpole cither of thefe writers could have intended to ferve by forging a fyftem fo extravagantly abfurd. Porphyry, though an enemy to the Chrifians, was not an atheilt, and would never have thought of making an atheif of him whom he meant to obtrude upon the world as the rival of Mofes. His own principles were thofe of the Alexandrian Platonifts; and had he been the forger of the works which beat the name of Sanchoniatho, inftead of the incomprehenfible jargon about dark wind, evening chaos, Mot, the overfeers of beaven in the phape of an egs, and animation proceeding from tive found of thunder, we flould doubtlefs have been amufed with refined fpeculations concerning the operations of the Demiurgus and the other perfuns in the Platonic Triad. See Platonism and PorphyRY.

Father Sinon of the oratory inagines * that the aib. Cri purpofe for which the hittory of Sanchoniatho was vol. i. p. forged, was to fupport Paganifm, by taking fron it its \({ }^{140}\). mythology and allegories, which were perpetually objected to it by the Chritian writers; but this learned man totally miftakes the matter. The primitive Chriflians were too much attached to allcgories themfelves to reft their objections to Paganifin on fuch a foundation: what they objected to that fyltem was the immoral ftories told of the gods. To this the Pagan priefts and philofophers replied, that thefe ftories were only matbologic allegories, which veiled all the great truths of Theology, Ethics, and Pleyfics. The Chritians faid, this could not be; for that the fories of the gods had a fubttantial foundation in fact, thefe gods being only dead men deified, who, in life, had like paffions and infirmities with other mortals. This then was the objection which the forger of the works of Sanchoniatho had to remove, if he really forged them in fupport of Paganifin ; but, inftead of doing fo, he gives the genealogy and hiftory of all the greater gods, and fhows, that they were men deilied after death for the exploits, fome of them grofsly immoral, which they had performed in this world. We have elfewhere (Polythe1sm, \(\mathrm{n}^{\circ} 17\).) given his account of the deification of Chryfor, and Ouranos, and \(G e\), and Hypfigos, and Muth; but our readers may not perhaps be ill pleafed to accompany hina through the hiftory of Ouranos and Cronus, two of his greatelt gods; whence it will appear how little his writings are calculated to fupport the tottering caufe of Paganifm againtt the objections which were then urged to it by the Chriftian apologifts.
"Ouranos (fays he), taking the kingdom of his fa* ther, married Ge his fifter, and by her had four fons: Ilus, who is called Cronus; Betylus; Dagon, who is Siton, or the god of corn; and Atlas. But by other wives Quranos.

\section*{S A N}
athonis. Quranos had muck intue, wherefore \(G\) ebeing gricved at sho. it and jealous, reproached Ouranos, fo as they parted from each other. But Ouranos, thourh he parted from lier, yet by force invaling her, and lying with her when he lifted, went away again; and he alfo attempted to kill the children he had by her. Ge alio ofen defended or arenged herfelf, gathering auxiliary powers unto her. But sween Croncs came to man's age, finny Hermes Trismegifus as his counfelior and affitant (for he was his fecretary), he uppofed his father Ouranos, avenging his mother. But Cronus had children, Perfeplione and Athena; the former died a virgin, but by the counfel of the latter Athena, and of Hermes, Cronus made of iron a fcimitar and a fpear. Then Hermes, fpeaking to the affifants of Cronus with enchanting words, wrought in them a keen defire to fight againft Ouranos in the behalf of Ge ; and thus Cronua warring ayainft Ouranos, drove him out of hiskingdom, and fucceeded in the imperial power or office. It the fight was taken a well-beloved concubine of Ouranos big with child. Cronus gave her in marriage to Dagon, and the brought forth at his houfe what fhe had in her womb by Ouranos, and called him Dimaroon. After thefe things Cronns builds a wall round about his houfe, and founds Byblus the firlt city in Phenicia. Afterwards Cronus, fuppecting his own brother Atlus, with the advice of Hermes, throwing him into a deep hole of the earth, there buried him, and laving a fon called Sadid, he difpatched him with his own fword, having a fufpicion of him, and deprived his own fon of life with his own hand. He alfo cut off the head of his own daughter, fo that all the gods were amazed at the mind of Cronus. But in procefs of time, Ouranos being in flight, or banifhment, fends lis daughter AHarte, with two other fiffers Phea and Dione, to cut off Cronus by deceit, whom Cromus taking, made wives of thefe finters. Ouranos, unobertanding this, fent Eimarmene and Hore, Fatc and Beauty, with other auxiliaries, to war againft him: but Cronus, havisg gained the affections of thefe alfo, kept them with himfelf. Morcover, the god Ouranos devifed batulin, contriving ftoncs that moved as having life. But Cronus begat on Aftarte feven daughters called Titanides or Artemides; and he begat on Rhea feven fons, the youngeft of whom, as foon as he was born, was confecrated a god. Alfo by Dione he had daughters, and by Aftarte moreover two fons, Pothos and Eros, i. e. Cupid and Love. But I)agon, after he had found out bread, cork, and the plongh, was called Zeus Arotrius. To Sydyc, or the juft, one of the Titanides bare Afclepius. Cronus had alfo in Perea three fons, I. Cronus his father's manefake. 2. Zeus Belus. 3. Apollo."

Is it conceivable, that a writer fo acute as Porphyry, or indeed that any man of common fenfe either in his age or in that of Philo, would forge a book flled with fuch fories as thefe, in order to remove the Chriftian objections to the immoral characters of the Pagan divinities? The very fuppofition is impofflible to be made. Nor let any one imagine that Sanchoniatho is here writing. allegorically, and by his tales of Oararos, ard \(G e\), and Cronus, is only perfonifying the beaven, the earth, and time. On the contrary, he affures us, that Ouranos, or Epigeus, or Autochtbon (for he gives him all thefe names), was the fon of one Eliaun or Hypfifos, who dwelt about Byblus, and that from him the ele-
ment vohich is orer ma was called beaver, oa aceviat suachecis of its excellent beauty, as the carh vias namud \(G e\) after his fifter and wife. And his traalator is very angry* with the Ireotoric Greeks, as he calls them, becaufe that, " by a great deal of force and frainine Aco Af=d Eslator, lahoured to turr all the fories of the gods iato allegu. Evarg. ries and plyyfical difcourfes." This prores unaufwer- lib. z. capo ably, that the authar of this book, whoever he was, did 6 . not mean to veil the great truths of religion urder the cloak of mytholngic allegories; and therefore, if it was forged by Porphyry in fuppori of Pagaifm, the forger fo far mittook the tate of the queftion between him and his adverfarics, that he contrived a book, which, it admitted to be ancient, totally overtlirew his own caufe.
'I'le next thing to be inguired into with repeet to Sancloniatho is his antiquity. Did he really live and write at fo carly a period as Porphyry and Philo pretend? We thiuk he did no:; and what coneributes not a little to confinn us in our opinion, is that mark of nationa! ranity and partiality, common to after-timer, in making the facred myiteries of his own countrj original, and conveyed from Phenicia into Esppt. This, however, furnifhes an aditional proof that Porghyry was rut the forger of the wook; for he well kneve that the myfteries had their origin in Efypt (fee Misteries), and would not have fallen into fuch a blunder. He is guilty, indeed, of a very great anachronifm, when he makes Sanchoniatho contemporary with Semiramis, and yet pretends that what he writes of the Jews is compiled from the rccords of Hierombalus the priell of the god Jao; for Bochart has made it appear in the lighe:t degree probable \(\dagger\), that Hicrombalus or Jeromb.bial is \(+G\) erer. Sase the Jerul-laal or Gidcon of feripture.

Betwcen the reign of Semiramis and the Trojan war a period clapfed of near \(8=0\) years, whereas Gideon fici:rithed not above feventy years defore the deflruction of Troy. But fuppofing Sanchoniatho to have really confulted the records of Gidcon, it by no neans follows that he flourithed at the fame period with that judge of Ifacl. He fpeaks of the building of Tyre as an ancient thing, while our bet chronologers \(\ddagger\) place it in the time of Gideon. Indeed, were we certain that any writings had been left by that holy man, we hould be abliged to conclude, that a large tract of time had intervened between the death of their author and their falling into the hands of Sanchoniatho; for, fundy, they could not, in a fhort period, have been fo completely corrupted as to give any countenance to his impious abfurdities. His atheillic cofmogony he does not in. deed pretend to have got from the annals of the priett of Jao, but from records which were difulited in his own town of Berytus by Thoth a Phenician pliforo. pher, who was afterwards made king of Egspt. But furcly the annals of Gideon, if writen by himfelf, and preferved pure to the days of Sanchoniatbo, mutt have contaited fo many truths of the Mofaic religion, as mult have prevented any man of fenfe from adopting folimpoffible' a theory as Thoth's, though fanctioned by the greatelt name of profane antiquity. Stillingthect indeed thinks it molt probable that Sanchoniatho became acquainted with the moft renarkable paffages of the life of Jerub-baal from annals writion by a Phemician pen. He obferves, that inmediately after the death of Gideon, the Ifraelites, with their ufual pronencers to idolatry, worhiped Baal.berifh, or the idul of Durytus,

\section*{S A N [ 644 ] S A N}

Sanchno the town in which Sanclsoniatlou lived; and from this Tho,
Sancroft.

\section*{r} circundlariee he concludes that there mull have been Such an inicreoure between the Hebrevsand Herytians, that in proct fs of time the later poople might affime to thenfelves the Jerub-bat of the fonmer, and hand diown his actions to polterity as thofe of a prielt inflead of a griat commanker. All this may be true; Lut if fo, it amoments to a domonitration that the antiguty of Sanchoniatho is not fo hireh by many ages as \({ }^{\text {a }}\) that which is clainsed for him by Philo and Porphyry, thourg he may till be nore ancient, ats we think Vof-
One Hij?. fus has proved him to be \({ }^{*}\), than any other profane
hithan whoic writings have come down to us either entire on in lidyments.

But granting the authenticity of Sanchoniatho's hiAlory, what, it may be alked, is the value of his fragsnats, that we fhond be at any trouble to alcertan wlether they be genuine remains of high antiputy, or the fremeres of a moderr impoltor? We anlwer, with the ilhultrous Stillingfeet, thet though thore fragments contain fuch aufurdities as it wonld be a difgrace to redGon to fuppofe ucclible; though the whole cofmogny in the groffett link of atheifm; and though many perfons nake a figure in the hiftory, whote very exiltence may well be doubted; yet we, who have in our hands the ught of divine revelation, may in this dungeon dikover many evcellent relicks of ancient tradition, which throw ao febble light epon many paffages of holy fcripture, as they sive us the origin and progrels of that idulatry thich was fo long the opprobrium of human nature. They furnin too a complete confutation of the extravagant chrorology of the Chaldeans and Egyptians, and fhow, if they be genuine, that the world is indeed not oller than it is laid to be hy Mofes. We flall conciude the article by carnelly recommending to our readers an aitentive perufal of Cumberland's Sanchontaq分о.

SANCROT (William), archhillop of Canterbury, was born-a: Fretinefield in Suffolle in 16:6; and admitted into. Emannel collers, Cambrid.ge, in 1633. In 1642 he was chected a fellow; and, for refining to tahe the covenatat, was cjected from his fellowhip. In 3 cila he was chofen one of the miverfity preachers; and in 1603 was nominated to the dennry of York. In 1664 he was inftilled dean of St Paul's. In this fation he fet.himflif with unwearied diligence to repair the cathedral, till the fre of London in 1666 employed his thou hits on the mene noble undertaking of rebuild. ing it, toward which he gave 1 fool. He alfo rebuilt the deanry, and improved the revenue of it. In 1668 he whs adimitted archdeacon of Canterbury, on the kints's. prefentation. In 1677 , being now prolocutor of the convocation, he was unexpectedly advanced to the archbifhopric of Canterbury. In \(167^{8}\) he was committed to the tower, with fix other bihops, for prefentin: a petition to the king againft reading the declaration of jmlulgence. Upon king lames Il.'s withdrawing himfelf, he concurred with the lords in a declaration to the prince of Orange for a free parliament, and diae indalgence to the Proteftant difenters. But when that prince and his confort were declared king and queen, his grace' refulng to take the oaths to their majefties, he sas fufpended and deprived. He lived in a very prizate manner, till he died in 1693 . His learning, integrity, and piety, made him an exalted ornament of the church.

He publified a volime in 12 mo , intitled Modern Po. lities, taken from Machiavel, Borgia, and other choice authors: Familiar Letters to Mr North, an 8 vo pamphlet; and three of his fermons were printed together after his death.

SANCTIFICATION, the act of fanctifying, or rendering a thing holy: The reformed divines define fanctitication to be an aftit of Gol's grace, by which a perfon's defires and affections are alienated from the wordel; and by which he is made to die to lin, and to lise to nighteovinefs; or, in other words, to fecl an abhorrence of all vice, and a love of religion and virtue.

SANCTMON, the authority given to a judicial act: by which it becomes legal and authentie.

SANC'IORIUs, a moft incenmus and leame phytician, was a profeffor in the univerfity of Padaa, in Lhe beginning of the \({ }^{\prime}\) fth century. He contrived a kind of thatical. chair, by means of which, after eitimating the aliments received, and the leafible difcharges, he wat enabled to determine with great exactuefs the quantity of infenfible perfpiration, as well as what kind of victuals and drink increafed or diminifhed it. On thefe expeniments he erected a curiotis fyftem, which he publifhed under the title of \(D\) e medicina flatico: of which ve have an Englifh tranflation by De Quincy. Sanctorius publihed feveral other treatifis, which fhewed great albilities and learning.

SANCTUARY, arring the Jews, alfo called Sance tum fandorum, or Holy of bolies, was the holief and moft retired part of the temple of Jerufalem, in which the alk of the covenant was preferved: and into which none but the high-prieft was allowed to enter, and that only snce aycar, to intureede for the people.
Some difinguin the fanctuary from the fancture fenctornm, and maintain that the whole temple was called the fanthury.
'lo try and examine any thing by the weight of the fanctuary, is to examine it by a juff and equal foale; becaufe, among the Jews, it was the cufton of the prielts to keep llone weiglits, to ferve as landards for regulating all weights by, though thele were !:st at all: different from the royal or prolane weighs.

Sanctuary, in the Romith church, is alfoufed for that part of the church in which, the altar is placed; encompafled with a rail or hallultrade.

Sanctuary, in our ancient cultoms, the fame with Asylum.
\(S A N D\), in naturai hitory, a genus of foffils, the characters of which are, that they are formd in minnte conictions; forming tugether a kind of powder, the genmine particles of which are all of a tendency to one de. terminate fhape, and appar regular theugh more or lefs complete concretions; not to be diffolied or difunited by water, or formed into a colerent mafs by means of it, bue retaining their figure in it; tranfarent, vitrifiable by extreme heat, and not diffeluble in nor effervefing with acids: Sauds are fubject to be varionfly biended, both with homogenc and heterogene fubltances, as thatof talks, \&ec. and hence, as well, as from their valious colours; are fubdivided into, 1. Wlate fands, whether pure or mixed with other arenaceons or heterogeneous' particles; of all which there are feveral fpecies; differ. ing no lefs in the finenefs of their particles than in the different-degrees of: colour; from a bright and Saining
d thite, to a brownih, yellowif, eteenifh, \&ce, white. 2. The red and reddilh fands, both pure and impure. \(\hat{2}\). The yellow fands, whether pure or mixed, are allo very numerous. 4. The brown fands, ditinguiihed in the fane manner. 5. The back fands, whereof there are only two fpecees, viz. a fire himine greyifh-black fand, and anotier of a fine Phiniag reddith black colour. 6. The green kind ; of which there is unly one known fyecies, viz. a coarde variegated duficy green fend, commeni i: Vivinia.

Sand is of great ufe in the giafs-manufacture: a white kind of fand being employed for makins of the white alafs, and a coarfe greenith-locking fand for die green glalis.

In astricuture, it feems to be the office of fand to mal:e unctuaus earths fertite, and fit to fopport veresabies, Sec . For earth abone, we find, is liable to coalefee, and gather into a hard collereat mafs, as ippcars in clay ; and being thus embodied, and as it were ghted together, is no way difpofed to nourith vegetables. But if fuch earth be mixed with fand, its ports are thereby hept open, and the earth itfelf loole, fo as thus to give roon for the juices to alcend; and for plants to be nowrihed thereby. A regetable planted only in fand, or in a fat glebe, or in earth, receives little growth or increafe; but a mixture of both rendere the mafs fertile. In effect, earth is in fons neafure nade orranical by means of fand: pores and 'ipaces, fumthing analogous to vefels, being thereby maintained, by which the juices may be conveyed, prepared, digeftect, circulated, and at length difcharged. Common fand is, therefore, a very good addition, by way of manure, to all forts of clay-laids; it watms theni, and makes them nuore open and loofe.

Samp-Eel, in ichthyology. See Ammodytes.
\(S_{\text {and. Flonds, a name given to the flowing of fand fo }}\) curnmon in the deferts of A abbia. Mir Bruce gives the Fullowitis accurate defription of forre that he faw in traveling thro" that long and dienty defert. "At one n'tock (fay; he) we ali-lted among fome acaciateres at Ward el Hatboub, having yone twenty-one miles, Wie were here at ot.ce fiuprifed and territied by a foght tirdy one of the m: At magnificent in the world. In that valt expanfe of defert frum weft ama to nurth-welt of ust we catw an number of protigious pillars of fand at Wfferent diflances, at tines movias with areat celerity, at others italking on with a majefic !lownes: at intervals we thouflit they were coming io a few minutes th overntelm Ls; and fmall quantities of fand did actually more tha: once reach as. Aysain they would retreat fo as to be almoft out of fight, their tups reathinf to the very coonds. Therethe tops oftern feparated. from the budies; and theie, once disjuinad, eifperfed in the air, and did not appear more. Sometimes they were broken near the middle, as if fruch with a larye Eanmon fhet. About mon they beyen to advance whth confideable fuiftuefs upon us, the wind being very firoing at north. Eleven of them ranred alonglice of us about the diftance of thiree miles. 'The greate? diamete: of the largelt appeared to me at that diltance as if it wou'd meafure ten feet. They retired from uswith a wind at fonth eall, leaving an impreflion upon my mind to which I can give no name, though furely: ote ingredient in it was fear, with a confiderable dew
of winder and aftominment. It was in vain to :hink of Alying, the fwifteit horfe o, rateit failing Mip could be of no ufe to carry nes uett of this dajacer ; and the full pertiunfion of this riveted me as if to the fpot uthere 1 ftood, and lee the ramels gain on me fo muclu is my ftite of lamenctis, that it was with forne difficuty I could ove.take them
"the rame anpearance of movin \(\underline{y}\) pillars of fand prefentec menfelves to us this day in form and difpoltion lite liofe we had feen at Wadi Halboub, ouly- they fanded to be mose in number and lefs in fize. They came ieveral times in a direction clofe upon us, that is, I believe, within le?s chan two milcs. 'ithey began im. mediately atter fun-rife, like a thick wood, and almoft darkened the fun: his rays thining through them for near an lour, save them an appearance of pillars of fire. Our people now became defperate : the Greels hrieked out, and laid it was the day of judernent. Ifmael pro. nomaced it to be heil, and the Theororis, that the world was on fire. I aked Idris if ewer he thad before feen fuch a fight? He iaid he had weten feen them as terrible, thought never wore; but what he feared mote was that extreme rednef: i: the air, whieh was a fure prelage of the coning of the linnom." See Smoom.

The fowing, of fand, though far from being fo tremendous and hartful as in Aralia, is of very bath confe. quences in this country, as many aduable pieces of hand have thus been entirely loft of which we give the fole. luwing infances from Ir Pemant, together with a proपable means of preventing then in furure. "I have more" than mence (firs he), on the eallern coafts of Sculland, obfersed the calamitums thate of fereral exten' ve trails, former! in a mout flomithing condition, at prefent covered with fands, unilable as th:ofe of the delerts of Arabia. 'Tle patilh of Furvic, in the county of Aherdeen, is nciu redueed to two farnis, and above L. 500 a-year lot to the Emen family, as appears by the "eth of the factor ta toso: made befure the court of Lefine, to afertzin the minimite's lalary. Not a weftige it to be teen ui ang buildinfs, uakfs a fragment of the chirch.
- The eftate of Coubin, near Fortes, is ancther melanchriy ialtance. This trat wats unce worth L. 300 a-year, at this thee oremhelneel with fand. 'Fhiz Arnne in:tndation was tell is anctivn in 1760 , chientywhen a frony wind grovaited. Its monem is fapid. that I have beea aftured, rhat :uppletree ias been focosered with it in one fiafor, thitit onl; the very funnrat appearect. 'This dittecfo was hrought on about ninety years aro, and was ocea oned by the cutting down fome trees, and pelling up the bent or far which grew on the tand hill.; which at hat gave rife to the a.ct of 15 Geoige \(11 . e 33\). 10 1: whibit the deltruction of thie ufeful plent.
"I hes leate to fluygeft to the public a pofible. means of puttiere a fory to thefe wethective rarajes. Providence hath kindiy enmed this pudt to grow only in pure fand. Mankind tras lett to make, in after-times. an application of it fintable to their wants. The fandhills, on a portion of the linuliare thares, in the parith, of J lanafa, ate ewstred wils is naturally, and kept 1 rn : in their place. The Datch perhaps oire the exitunce. of part at Icat of their country to the foring of it una the monite fotum, their fand-batks.
"IIy humane ant uniable frieud, the late Benjamin"
Stillingtiects.

\section*{S A N \(\quad\left[\begin{array}{lll}646\end{array}\right] \quad\) S A N}

Sand. Stillingfleet, Efq; recommended the fowing of this plant on the fandy wilds of Norfolk, that its matted roots might prevent the deluges of fand which that country experierces. It has been already remarked, that wherefoever this plant grove the falutary effects are foon obferved to follow. A hiugle plant will fix the fand, and gather it into a hillock; thefe hillocks, by the increafe of vegetation, aire formed into larger, till by degrees'a banier is made often againft the encroachments of the fea; and might as often prove preventative of the calamity in queftion. I cannot, thercfore, but recommend the trial to the inhabitants of many paits of North Britain. The plant grows in mot places near the fea, and is known to the Highlauders by the name of murah; to the Englifh by that of bent. glar, mat-grafs, or marram. Limmæus calls it arundo arenaria The Dutch call it belm. This plant lath ftiff and fharp-pointed leaves, growing like a rufh, a foot and a half long: the roots both creep and penetrate deeply into their fandy beds: the falk bears an ear five or fix inches long, not uulike rye; the feeds are fmall, brown, and roundifh. By good fortune, as old Gerard ubferves, no cattle will eat or touch this vegetable, allotted for other purpofes, fubfervient to the ufe of mankind."

SAND-Piper, in ornithology. See Tringa.
Sand-Stome, a genus of fonez belonging to the order of faxa; and including all thofe which confif of fuch minute particles that they cannot cafily be difcerned by the eye. The fpecies enumerated by Cronftedt are,
1. Thofe cemented by a clay, of which there are two varieties; one with porcclain clay, the other with common clay. 'The former is met with in Sweden under the ftratum of coal in a coal-mine in the province of Shone, and is very hard and refractory in the fire; the other is found in the ifland of Gothland.
2. With lime, refembling mortar made with coarfe fand. There are two varicties, one confifting of tranfparent grey.colourcd grains of quartz and white limeftone, the other of a loofe texture, hardening in the air ; but having the particles too fine to be vifible. The former of theic is found in Sweden, the latter in France and Livonia.
3. Sand-ftone having its particles bound together by an unknown cement. Of this there are four varieties; 1. Loofe; 2. Somewhat hard; 3. Compaet; 4. Very hard; all of them found in different parts of Swcden.
4. Cenzented by rult of iron, found in the form of lonfe ftones in feveral places.

Cronfedt informs us that the greateßt part of fandftones confift of quartz and mica, being thofe fubflances which moft readily admit of granulation without being reduced to powder. Some years ago the Baron de Dietrich fhowed a fingular variety of fand-ftone at Paris. It confifts of fmall grains of hard quartz which ftrike fire with fteel united with fome micaceous particles. It is fexible and claftic, the fexibility depending on the micaceous part and foftncls of the gluten with which the particles are cemented. This elaltic ftone is faid to have been found at Brazil, and brought to Germany by this excellency the marquis de Lavradio. There are alfo two tables of white marble, kept in the palace of Borghefe at Rome, which have the fame property. But the fparry particles of their fubfance, though canfparent, are rather foft, and may be eafily feparated
by the nail. They effervefce with aquafortis, and there is alfo a fmall mixture of minute particles of talk or ınica.

Sand-ftones are of great ufe in buidings which are required to refift air, water, and fire. Some of them are foft in the quarry, but become hard when expofed to the air. The loofe oncs are moft ufeful, but the folid and hard ones crack in the fire, and take a polifh when ufed as grinddones. Stones of this kind ought therefore to be nicely examined before they are em. ployed for the ufual purpofes. Our author obferves that the working mafons, or flone-cuters, ought to wear a piece of frize or baize before their months, to preferve themfelves from a confumption which their bufinefs is otherwife apt to bring on. Limefure, lowever, is not obferved to have this effect.

To the lift of fand-ftones Fabroni adds gritfone, of greater or lefs hardnefs; mofly of a grey, and fometimes of a yellowinh colour, compofed of a filiceous and micaceous fand, but rarely of a fparry kind, with greater or leffer particles clofely connected with an argillaceous cement. It ftrikes fire with fteel, vitrifies in a flong fire, and is generally indiffoluble in acids. It is ufed for mill-ftones, whei-fones, and fometimes for filtering ftones, as well as for building.

SANDAL, in antiquity, a rich kind of nipper worn on the feet by the Greek and Roman ladies, made of gold, slls, or other precious fuff ; confifting of a fole, with an hollow at one extreme to embrace the ancle, but leaving the upper part of the foot bare.
Sandai, is alfo ured for a fhoe or nipper worn by the popa and other Romif prelates when they officiate. It is alfo the name of a fort of nlipper worn by feveral congregations of reformed monks. This laft coniths, of no more than a mere leathern fole, fattened with latches or buckles, all the reft of the foot being left bare. The capuchins wear fandals; the recollects, clogs; the former are of leather, and the latter of wood:-

Sandst-Wood. See Saunders.
SANDARACH, in natiaal hifory, a very beautiful native foffl, though too often confounded with the common factitious red arfenic, and with the red matter formed by melting the common yellow orpiment.

It is a pure fubftance, of a very even and regular ftructure, is throughout of that colour which our dyers term an orangefintlet, and is confiderably tranp., even in the thickefl pieces. But though, with refpect to colour, it has the advantage of cinnahar while-in the mafs, it is valtly inferior to it when hoth are reduced to powder. It is moderately hard, and remarkably heavy; and, when expofed to a moderate heat, melts and flows like oil : if fet on fire, it burns very brilkly.

It is found in Saxony and Bohcmia, in the copper and filver mines; and is fold to the painters, who 6 ind it a very fine and valuable red: but irs virtues or qualities in medicine are no more afcertained at this time than thofe of the yellow orpiment.

Gum-Sandarach, is a dry and hard refin, ufually met with in loofe granules, of the hignefs of a pea, a horfe-bean, or larger ; of a pale whitifh yellow colour, tranfparent, and of a refinous fmell, brittle, very inflammable, of an acrid and aromatic tafte, and diffufing 2 very pleafant fmell when burming. It is produced from
nani-a fpecies of the juniper: (fee Juniperus.) It flows only from thefe trees in hot countries: but the natives promote its difeharge by makiog incifions in the bark.
Sandarach is eflecmed goond in diarrhoezs and in hremorrhagries.

The varnifh-makers make a kind of varnin of it, by diffolving it in oil of turpentine or linfech, or in fyinit of wine.

\section*{Pounded Sannar.ach. Sue Pounce.}

SANDEMANIANS, in ecclefiaftical hiftory, a modern feet that originated in Scotland about the year 1728; where it is at this time diftinguifted by the name of Giaffites, after its founder MIr John Glaf's, who was a minifter of the eftablifhed church in that kingdom ; but being charged with a deffgn of fubverting the national covenant, and fapping the fommation of ail national eftabliffments by the kirk judicatory, was expelled by the fynod from the church of Scotland. His fentiments are fully explained in a tract publifhed at that time, intitled, "The Teftimony of the King of Martyrs," and prefersed in the firt volume of his works. In confequence of Mr Glafs's expulion, his acherents formed themfelves into churches, confurmable in their in Pitution and difcipline to what they apprehended to be the plan of the firt churches recerded in the New Teftament. Soon after the year \(\mathbf{1 7 5 5}\), Mr Robert Sandeman, an elder in one of thefe churches in Scotland, publifhed a feries of letters addreffed to Mr Hervey, occafioned by his Theron and Afpatio ; in which he enceavours to fhow, that his notion of faith is contradictory to the feripture account of it, and could only ferve to lead men, profeffedly loolding the doetrines commonly called Calvinijfic, to eftablifh their own righteoufnefs upon their frames, inward feelinge, and various acts of faith. In thefe letters Mr Sandeman attempts to prove, that faith is neither more nor lefs than a fimple affent to the divine teflimony concerning Jefus Chrift, recorded in the New Teftament; and he maintains, that the word faith, or belief, is conttantly ufed by the apofles so fignify what is denoted by it in common difconre, viz. a perfuafion of the truth of any propofition, and that there is no difference between believing any common teftimony, and believing the apoftolic teltimony, except that which refults from the nature of the teftimony itfelf. This led the way to a controverfy, among thofe who were called Calvinifs, concerning the mature of juftifying faith; and thofe who adopted Mr Sanderan's notion of it, and who took the denomination of Sandemanians, forned themfelves into church order, in ftrict fellowhip with the churches in Scotland, but holding no kind of communion with other churches. The chief opinions and practices in which this fect differs from other Chillians, are, their weekly adminifration of the Lerd's Supper; their love-feafts, of vhich every member is not only allowed but required to partake, and which confint of their dining together at each other's houfes in the interval between the morning and afternoou fervice; their kifs of charity ufed on this oceafion, at the admiffion of a new member, and at other times, when they deen it to be neceffary or proper ; their weekly collection before the Lurd's Supper, for the fupport of the poor, and defraying other expences ; mutual exhortation; abllinence from blood and things ftrangled; wafling each other's feet, the precept.concerning which, as well as other precepts, they
underftand literally; ; community of goous, fo far as that every one is to conider all that he has in his poffeffion and power as liable to the calls of the poor and church; and the unlavefulnefs of laying up treafurcs on earth, by fetting them apart for any diftart, future, and uncertain ufe. They allow of public and private diserfions, fo far as they are not connected with circuntflances rcally finful ; but apprehending a lot to be facred, difapprove ot playing at cards, dice, \&c. They maintain a plurality of elders, paitors, or bithops, is each clurch; and the necelfity of the prefence of two elders in every act of difcipline, and at the adminilitration of the Lord's Supper. In the choice of thefe dders, want of learning, and engagenicuts in trade, \(\hat{\alpha} \mathrm{c}\). are no fufficient objection; but fecond marriages difqualify for the office; and they are ordained by prayer and fafting, impofition of hands, and giving the right hand of fellowhip. In their difcipline they are ftiet and fevere; and think themfelves obliged to ؟eparate from the communion and worfhip of all fuch religious focieties as appear to then not to profefs the fimple truth for their only ground of hope, and who do not walk in obedience to it. We thall only add, that is every çhurch tranfaction, they efteem unanimity to be abfolutely neceffary. From this abitract of the accourt which they have publifhed of their tenets and practices. it does not feem to be probable that their number fhoull be very confiderable..

SANDERS: See Saunders.
SANDIVER, a whitifh falt, continually caft up from the metal, as it is called, whereof glafs is made; and, fwimming on its furface, is fkimmed of.

Sandiver is alfo plentifully thrown out in the eruptions of volcanoes; fome is of a bine white, and others tinged bluith or yellowith.
Sandiver is faid to be detergent, and good for foulneftes of the fkin. It is alfo ufat by gilders of iron.

SANDIX, a kind of minium, or red.lead, made of cerufe, but nuch inferior to the true minium.

SANDOMIR, a city, the capital of a palatinate of the faine name, in Little Poland, on the Vitula. The Swedes blew up the caftle in 1656 ; and here, in 1659 , was a dreadful battle between the Tartars and Ruflians. It is 84 miles fouth-eaft of Cracow. Lat. 49. 26.

\section*{Long. 20.10.}

SANDORICUM, in botany: A genus of the moo nogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 23d order, Tribillate. The calyx is quinquedentate ; the petals five, and lincar-flaped: the netharium has ten denta, on which the antherax grow ; the fruit is a dru. pa, and five in number, each of which has one feed. There is ooly one [pecies, viz. the indicun, a native of Africa and the Latt Indies.

SANDPU, or SAN POO, the vulgar name of one of the moft mighty rivers in the word. the name it generally goes hy, and hy which it is beft known, is that of Bur, rampootio. Of this moft majeflic body of waters we have the following very aumaied account in Mraurice's Indian Antiquities. "An object equaily novel and grama now claims our attention; fo novel, as not to have been known to Europeans in the real extent of its magnificence before the year 1765 , and \({ }^{\circ}\) fo awfully grand, that the aftonifhed geographer, thinking the language of profe inadequate to convey his concention,

}
"This Aupendous objeet is the Burramnooter, a word which in Shanferit fignifies'sbe fon of Bratme; for no meaner origin could be afigned to fo wonderful a progeny. This fupreme monarch of Indian rivers derives its fource from the oppofite fide of the fame mountain from which the Ganses fprings, and taking a bold fweep towards the ealt, in a line directly oppofite to the courle of that river, wathes the valt country of Tibet, wheee, by way of dittinction, it is denominated Sanbso, or the rivt:. Winding witl a rapid current through Tibet, and, for many a league, amidft dreary deferts and regions remote from the habitations of men, it waters the borders of the territory of Laffa, the refidence of the grand Lama; and then deviating with a cometary irregularity, from an eaft to a fouth caft courfe, the mighty wanderer approaches within 250 miles of the -weftern frontiers of the valt empire of China. From this point its more direet path to the ocean lay through the gulph of Siam; but with a defultory counfe peculiar to itfelf, it fucdenly turns to the weft through Affam, and enters Bengal on the north-eaft quarter. Circlius round the wettern point of the Garrow mountains, the Burrampooter row takes a fouthern direction; and for 60 miles before it meets the Gances, its filter in point of origin, but not its rival in point of magnionde, glides majettically alons in a flream which is tcgularly from fuur to five miles wide, and but for its freflnefs, Mr Rennel lays, might pais for an arm of the fea. About 40 miles irom the ocean thefe mighty rivers unite their ftreams; but that geatleman is of opinion that their junction was formerly higher up, and that the accumulation of two fuch waft bodies of water, fcooped out the amazing bed of the Megrna lake. Their prefent conflux is below Litkipoor; and by that confluence a body of freth runring water is produced, hardly equalled, and not execeded, either in the old or the new hemifphere. So flwpenciono is that body of water, that it has formed a gulpit of fuch extent as to contain inands that rival omr Inle of Wight in fize and fertility; and with fuch reffiflefs violence does it wh? into the ocean, that in therainy ferton the rea ititlf, or at lealt its firface, is perfeatly forli for many leagues out."

SHNDWICH, a town of Kent, one of the cinque ports, and whinh has the title of an eandom. It con: itls of about 1500 houles, moll of them old, and built with wood, though there are a few new ones buile with brick and flints. It has three long namrow freets patved, and thinty crofs-ftrects or alleys, with about 6000 inlabitants, but no particular manifactory. The town is walled round, and alfo furtifitd with ditches and ramparts; but the walls are much deciyed, on accome of the hambour being fo choaked up with fand that a thip of 100 tons turthen cannot get in. L. Long. 1. 20. N. Lat. \(5^{1 .} 20\).

Sundwich Ilands, a group of illands in the South Sea, lying near New Irctand, were amone the lat dic. coveries of captain Cook, who fo named them in hu-
nour of the Earl of Sandwich, under whofe adminiftra- Sand tion thefe difcoveries were made. They confilt of eleven illands, extending in latitude from 18.54. to 22. \(15 . \mathrm{N}\). and in longitude from 150.54 . to 160.2 f . W. They are called by the natives, Owhybee, Mowef, Ranai, Morbio, Tahoorowa, Woahoo, Atooi, Neebebeow, Orechoun, Morotinne, and Tahoora, all inhabited except the two laft. An account of the mof remarkable of which will be found in their alphabetical order, in their proper places in this work. The climate of thefe iflands differs very little from that of the Weit Indies in the fame latitude, though perhaps more temperate; and there are no traces of thofe violent winds and hurricanes, which render the ftormy months in the Wedt Indies fo dreadful. There is allo more rain at the Sandwich Ifes, uhere the mountainous parts being generally enveloped in a cloud, fuccefive fhowers fall in the inland parts, with fine weather, and a clear nky, on the fea fhore. Hence it is, that few of thofe incon. veniences, to which many iropical countries are fubject, either from heat or moifture, are experienced liere, The winds, in the winter months, are generally from ealt fouth-eaft to north-calt. The vegetable productions are nearly the fare as thofe of the other iflands in this ocean ; but the taro root is luere of a juperior quality. The bread-fint trees thrive not in fuch abundance as in the rich plains of Otaheite, but produce double the quantity of fruit. The fugar-canes are of a very unufual lize, fome of them meafuring eleven inches and a quarter in circumference, and having fourteen leet catable. Theie is alfo a root of a brown colour, fhaped like a yam, and from lix to ten pounds in weight, the juice of which is very fweet, of a pleafant talte, and is an excellent fubftitute for fugar. The quadrupeds are confined to the three ufual forts, hogs, dogs, and rats. The fowls are alio of the common fort ; and the birds are beautiful and numerous, though not various. Goats, pige, and European feeds, were left by captain Cook; but the poffefion of the goats foon gave rife to a contelt between two diftritts, in which the breed was entirely deftroyed. 'The inhabitants are undsubtedly of the fame race that pofferfes the illands louth of the equator ; and in their perfons, language, cuftoms, and manners, approach nearer to the New Zealanders than to their leis dilant neighbours, either of the Socicty or Fiendly Inlands. 'They are in general about the middle hize, and well made; they walk very gracefully, run nimbly, ard are capable of bearing very great fae tigue. Nany of both fexcs have fine opén countenances; and the wormen in paticular have good eyes and tecth, witi a lweetnefs and fenfibility of look, that render them ury ençaging. There-is, one peculiarity, characteritic of every part of the le illanls, that even in the handfomen faces there is a fulnefs. of the noftril, without any flatnes or preading of the nofe. They fuffer their beards to grow, and wear their hair after vanous fafhions. The drefs of both men and women nearly refemble thofe of New Zealand, and both fexes wear necklaces of finall variggated frells. Tat:owing the body is practifed by every colony of this nation. The hands and armis of the women are allo very meatly marked, and they have the fingular cultom of tattowing the tip of the tongue. Like the New Zealanders, they have adopted the method of living together in villages, containing from an hundred to two hundred

wich. houfes, built pretty clofely together, without any order, and having a winding path between them. They are generally flanked, towards the fea, with detached walls, which are meant both for fhelter and defence. Thefe walls confift of loofe flones, and the inhabitants are very desterous in fhifting them fuddenly to fuch places as the direction of the attack may require. In the fides of the hills, or furrounding eminences, they have alfo little holes, or caves, the entrance to which is alfo focured by a fence of the fame kind. They ferve for places of zetreat in cafes of extremity, and may be defended by a fingle perfon againt feveral affailants. Their houfes are of different fizes, fome of them being large and commodious, from forty to fifty feet long, and from twenty to thirty broad; while others are mere hovels. The food of the lower clafs conlifts principally of fifh and vegetables, to which the people of higher rank add the fleth of dogs and hogs. The manner of (pending their time admits of little variety. They rife with the fun, and, after enjoying the cool of the evening, retire to reft, a few hours after fun-fet. The making of canoes, mats, \&e. forms the occupations of the men ; the women are employed in manufacturing cloth, and the fervants are principally engaged in the plantations and fifhing. Their idle hours are filled up with various amufements, fuch as dancing, boxing, wrefling, \&c. Their agriculture and navigation bear a great refemblance to thofe of the South-fea iflands. Their plantations, which are fpread over the whole fea-coaft, confift of the taro, or eddy-root, and fweet potatocs, with plants of the cloth-trees fet in rows. The bottoms of their canoes are of a fingle piece of wood, hollowed out to the thicknefs of an inch, and brought to a point at each end. The fides confift of three boards, each about an inch thick, neatly fitted and lathed to the bottom part. Some of their double canoes meafure 70 feet in length, three and a half in depth, and twelve in breadth. Their cordage, fih-hooks, and fifhing-tackle, differ but little from thofe of the other iflands. Among their arts muft not be forgotten that of making falt, which they lave in great abundance, and of a good quality. Their infruments of war are fpears, daggers, clubs, and nings; and for defenfive armour they wear ftrong nats, which are not eafily penetrated by fuch weapons as theirs. As the inlands are not united under one fovereign, wars are frequent among them, which, no doubt, contribute greatly to reduce the number of inhabitants, which, according to the proportion affigned to each ifland, does not exceed 400,000 . The fame fyftem of fubordination prevails here as at the other iflands, the fame abfolute authority on the part of the chiefs, and the fame unrefifting fubmifion on the part of the people. The government is likewife monarctical and hereditary. At Owbyhee there is a regular fociety of priefts living by themfelves, and diftinet in all refpects from the reft of the people. Human facrifices are here frequent; not only at the commencement of a war, or any fignal enterprife, but the death of every conliderable chief calls for a repetition of thefe horrid rites. Notwithftanding the irreparable lofs in the death of captain Cook, who was here murdered through finden refentment and violence, they are acknowledged to be of the moft mild and affectionate difpofition. They live in the utmoft harmony and friendifip with cach other; and in hofpitality to ftrangers they are not exceeded Voz, XVI. Part II.
even by the iuhabitants of the Friendly Inands. Their natural capacity feems, in no refpect, below the common ftandard of mankind; and their improvements in agriculture, and the perfection of their manufatures, are certainly adequate to the circumflances of their fituation, and the natural advantages which they enjoy:

SANDYS (Sir Edwin), fecond fon of Dr Edwor Sandys archbinhop of York, was born about 15 GI , and educated at Oxford under Mr Richard Hooker, author of the Ecclefialtical Polity. In 158 , he was collated to a prebend in the cathedral of York. He travelled into foreign countries; and, upon his return, grew famous for learning, prudence, and virtue. While he was at Paris, he drew up a tract, publifhed undcr the title of Europe Speculum. In 1602, he refigned his prebend; and, the year following, was knighited by king James I. who employed him in feveral important affairs. He was dexterous in any great employment, and a good patriot. However, oppoling the court with vigour in the parliament held in 162 , he, with Mr Selden, was committed to cuftody for a month. He died in \(\mathbf{1 6 2 9}\), having bequeathed \(15: 01\). to the univerfity of Oxford, for the endowment of a metaphylical leeture.

Sandys (George), brother of the foregoing Sir Edwin, and youngelt fon of archbifhop Sandys, was born in 1577. He was a mot accomplifhed gentleman; travelled over feveral parts of Europe and the Eaft; and publifhed a relation of his journey in folio, in 1615. He made an clegant tranlation of Ovid's Metamor. phofes : and compofed fome poctical pieces of his own, that were greatly admircd in the times of their being written. He alfo paraphrafod the Pfalns; and has left behind him a liranflation, with Notes, of one Sacred Drama written originally by Grotius, under the title of Cbrefus Patiens: on which, and Adamus Exul, and Mufenius, is founded Lauder's impudent charge of plagiarifm againtt our immortal Milton. Our author became one of the privy chamber to Charles I. and died in \(16+3\).

SAN Fernando, near the entrance of the Gulfo Dolce, in 15 degrees 8 minutcs north latitude, has lately bcen fortified by the Spaniards, with an intent to curb the Mufquito men, logwoorl-cutters, and bay-men. It is a very good harbour, with fafe anchurage from the north and eaft winds, in eight fathoms water.

SANGUIFICATION, in the animal œconomy, the converfion of the chyle into true blood. See Blood.
SANGUINARIA, BLOOT-wORT, in botany : A genus of the monogynia order, belonging to the polrandria clafs of plants; and in the natural method ranking under the 27 th order, Rbocade. The corolla is octopetalous : the calyx diphyllous; the filiquaa ovate and unilocular. There is only one fpecies, viz. the canadenfis, a native of the northern parts of America, where it grows plentifully in the woods; and in the fpring, before the leaves of the trees come out, the furface of the ground is in many places covercd with the flowers, which have fome refcmblance to our wood anemone ; hus they have flort naked pedicles, each fupporting one flower at top. Some of thefe flowers will have so or It 2 petals, fo that they appear to have a double range of leaves, which has occafioned their being termed doulle fowers; but this is only accidental, the fame \(+\mathrm{N}\)

Sancui- roots in different years producing different flowers. forba, Santedrim. The plant can bear the open air in this country, but
fhould be placed in a loofe foil and fheltered fituation, not too much expofed to the fun. It is propagated by the roots ; which may be taken up and parted, in September, every other year. The Indians paint themfelves yellow with the juice of thefe plants.

SANGUISORBA, greater wild burnet, in botany: A genus of the monogynia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 54th order, Mifellanee. The calyx is diphyllous; the germen fituated betwixt the calyx and corolla. The moft remarkable fpecies is the officinalis, with oval fpikes. This grows naturally in moit meadows in many parts of Britain. The falks rife from two to three feet high, branching towards the top; and are terminated by thick oval fikes of flowers of a greyth brown eolour, which are divided into four fegments almolt to the bottom. Thefe are fucceeded by four oblong cornered feeds. The leaves of this fort are compofed of five or fix pair of lobes placed along a midrib, terminated by an odd one. Thefe are heartthaped, deeply fawed on their edges, and a little downy on their under fides. The cultivation of this plant has been greatly recommended as food to cattle. See Agriculture, \(n^{\circ} 48\), \&c.

SANHEDRIM, or Sanhedrin, from the Greek word Euvifutov, which fignifies a council or affembly of perfons fitting together, was the name whereby the Jews called the great council of the nation, affembled in an apartment of the temple of Jerufalem to determine the moft important affairs both of their church and tlate. This council confifted of feventy fenators. The room they met in was a rotunda, half of which was built without the temple, and half within; that is, one femicircle was within the compafs of the temple; the other femicircle, they tell us, was bnile without, for the fenators to fit in ; it being unlawful for any one to fit down in the temple. The Nali, or prince of the fanhedrim, fat upon a throne at the end of the hall, having his deputy at his right hand, and his fub-deputy on his left. The other fenators were ranged in order on each fide.

The rabbins pretend, that the fanhedrim has always fubfifted in their nation from the time of Mofes down to the defruction of the temple by the Romans. They date the eftablifhment of it from what happened in the wilderncfs, fome time after the people departed from Sinai (Numb. xi. 16.), in the year of the world 25.14 . Mofes, being difcouraged by the continual murmurings of the Ifraelites, addreflicd himfelf to God, and defired to be relieved, at leaft, fiom fome part of the burden of the government. Then the Lord faid to him, " Gather unto me 70 men of the elders of Ifrael, whom thou knoweft to be the elders of the people, and officers over them; and bring them unto the tabernacle of the congregation, that they may fand there with thee: And I will come down and talk with thee there; and I will take of the firit which is upon thee, and will put it upon them; and they fhall bear the burden of the people with thice, that thou bear it not thyfelf alone." The Lord, therefore, poured out his fpirit upon thefe men, who began at that time to prophecy, and have not ceafed from that time. The fanhedrim was compofed of 70 counfellors, or rather 72 , fix out
of each tribe; and Mofes, as prefident, made up the Sabhed number 73. To prove the uninterrupted fucceffion of the judges of the fanhedrim, there is nothing unattempted by the partifans of this opinion. They find a proof where others cannot fo much as perceive any appearance or thadow of it. Grotins may be confulted in many places of his Commentaries, and in his firt book De jure belli Ef pacis, c. 3. art. 20. and Selden de Synedriis veterum Hebraorum. Alfo, Calmet's Differtation concerning the polity of the ancient Hebrews, printed before his Comment upon the Book of Numbers.

As to the perfonal qualifications of the judges of this bench, their birth was to be untainted. They were often taken from the race of the priefts or Levites, or out of the number of the inferior judges, or from the leffer fanhedrim, which confifted only of 23 judges.They were to be fkilful in the law, as well traditional as written. They were obliged to ftudy magic, divination, fortune-telling, phyfic, aftrology, arithmetic, and languages. The Jews fay, they were to know to the number of 70 tongues; that is, they were to know all the tongues, for the Hebrews acknowledged but 70 in all, and perhaps this is too great a number. Eunueh were excluded from the fanhedrim, becaufe of their cruelty, ufurers, decrepid perfons, players at games of chance, fuel as had any bodily deformities, thofe that had brought up pigeons to decoy others to their pigeonhoufes, and thofe that made a gain of their fruits in the fabbatical year. Some alfo exclude the high-prieft and the king, becaufe of their too great power; but others will have it, that the kings always prefided in the fanhedrim, while there were any kings in Ifrael. Laftly, it was required, that the members of the fanhedrim fhould be of a mature age, a handfome perfon, and of confiderable fortune. We fpeak now according to the notions of the rabbins, without pretending to warrant their opinions.

The authority of the great fanhedrim was vaftly extenfive. This council decided fuch caufes as were brought before it by way of appeal from the inferios courts. The king, the high.prieft, the prophets, were under its jurifdiction. If the king offended againt the law, for example, if he married above 18 wives, if he kept tuo many horfes, if he hoarded up too much gold and filver, the fanhedrim had him ftripped and whipped in their prefence. But whipping, they fay, among the Hebrews was not at all ignominious; and the king bore this correction by way of penance, and himfelf made choice of the perfon that was to exercife this dif, cipline over him. Alfo, the general affairs of the nation were brought before the fanhedrim. The right of judging in capital cales belonged to this court, and this fentence could not be pronounced in any other place, but in the hall called Lafihat-baggazith, or the hall paved with fones, fuppofed by fome to be the Atoospuler, or favement, inentioned in John xix. 13. From whence it came to pafs, that the Jews were forced to quit this hall when the power of life and death was taken out of their hands, 40 years before the deltruction of their temple, and three years before the death of Jefus Chrift. In the time of Mofes this council was held at the door of the tabernacle of the teftimony. As foon as the people were in poffeflion of the land of promifc, the fanhedrin followed the tabernacle, It was kept fuccef,

\section*{S A N}
in fively at Gilgal, at Shithoh, at Kirjath.jearim, at Nob, at Gibeon in the houfe of Obed-edom ; and laftly, it was fettled at Jeru\{alem, till the Babylonifh captivity. During the captivity it was kept up at Babylon. After the return from Babylon, it continued at Jerufalens to the time of the Sicarii, or Affaffins. Then findin: that thefe profligate wretches, whofe number increafed every day, fometimes efcaped punifment by the favour of the prefident or judges, it was removed to Hanoth, which were certain abodes fituated, as the rabbins tell us, upon the mountain of the temple. Fiom thence they came down into the city of Jerufalem, withdrawing themfelves by derrees from thic temple. Afterwards they removed to Jamnia, thence to Jericho, to Uzzah, to Scpharvaim, to Bethfaniu, to Sephoris, laft of all to Tiberias, where they continued to the time o \(o^{i}\) their utter extinction. And this iq the account the Jews themfelves give us of the fanhedrim.

But the learned do not agree with them in all this. Father Pctau fixes the beginning of the fanhedrim not till Gabinins was governor of Judea, who, according to Jofephus, erected tribunals in the five principal cities of Judea; at Jerufalem, at Gadara, at Amathus, at Jericho, and at Sephora or Sephoris, a city of Galilee. Grotius places the origin of the fanhedrim under Mofes, as the ratbins do; but he makes it determine at the beginning of Herod's rei>n. Mr Bafnage at firf thought that the fanhestrim begas under Gabinius; but afterwards he places it under Judas Maccabæus, or under hịs brother Jonathan. We fce indeed, under Jonathan Maccabrus, (1 Macc. xii. 6.), in the year 3860 , that the fenate with the high-prieft fent an embafly to the Romans. The rabbius fay, that Alexander Jannens, king of the Jews, of the race of the Afmoneans, appeared before the fanhedrim, and claime' a right of fitting there, whether the fenators would or not. Jofephus informs us, that when Herod was but yet governor of Galilee, he was funimoned before the fenate, where he appeared. It muft be therefore acknowledged, that the fanhedrim was in bein:g before the reign of Herod. It was in being afterwards, as we find from the Gofpel and from the Acts. Jefus Chrif in St Matthew ( v .22 .) diftinguifhes two tribunals."Whofoever is angry with his hrother without a caufe Thall be in danser of the judgment." "This, they fay, is the tribunal of the 23 judges. "And whofocver mall fay to his brother Raca, fhall be in danger of the council :" that is, of the great fanhedrim, which had the tight of lite and death, at lealt generally, and before this right was taken away by the Romans. Some think that the jurifdiction of the comncil of 23 extended to life and death alfo; but it is certain that the fanhedrim was fuperior to this council. Sce alfo Mark xiii. 9. xiv. 55. xv. t.; Luke xxii. 52,66 ; John xi. 47.; Acts iv. 15 v .21 , where mention is made of the ly. nedrion, or fanliedrim.

From all this it may be concluded, that the origin of the fanhedrin is involved in uncertainty; for the council of the 70 elders eftablifhed by Mofes was not what the Hebrews underfand by the nanc of fanhedrim. Befides, we cannot perceive that this eftablifhment fubfifted eithcr under Joflua, the jud yes, or the kings. We find nothing of it after the captivity, till the time of Jonathan Maccabrus. The tribunals erected by Gabinius were very different from the fanhedrim, which was the Voi. XVI. Part II.
fupreme court of judicature, and fixed at Jeruf!em, where- Sunjack as Gabinuse eftablifhed five at five different cities. I.aftly, it is certain that this fenate was in being in tle time of Jefus Clain, buther alhaza had no longer then the pover of hife and death (Juhn sviii. 3 .)

S:INJ \(\perp\) CKS, a people inhabiting the Curditan, or Perfian mountains, fublitinz clielly by plunder, and the feanty pittance affurded by their own mutatainous country: " 1 'hes were much reduced (fays Mr Ives) Tues's Veyo by the late bathaw stelmet of Baydad, whopuitied res's inyo them in perion to their lubicrrarcan retrcats, and de. \&c. ftroyed many by the fword, and carried uff zreat numbess of priloners, who were fold for naves." Nutwithflanding this chock, in the year 175", they wore afsin become lo daring that they would attack caravans of \(フ=0\) men, and fometimes carry all uft. they are faid to be worfhippers o the evil principle.

SaN Juan de Puerto Rico, ufually called Porto Rico, one of the Well India in:uds beiongin: to Spain, is fitwated in ahout 18. N. 1.at. and between 65. 36. and 67.45 . W. Lons. and is about 4 leasues lonz and 20 broad. 'The illand is beautitully diverfted wath woods, vallejs, and plains, and i. er.tiemely fe tile it is well watered with fprings and rivers, abounds wih meadows, is divided by a ridge of monntans muning from caft to welt, and has a harbour to fyacious that the largell Chips may lie m it with fafety. Be:urt the arrival of the Spaniards it was inhabited by 4 or 500,000 pecple, who, in a ew years, were exiirpitud by its mercilels conquerms. Raynal lays, that its whole inhabitants amounts at prefent only to 15 wo Spaniards, Metoes, and Mulattoes, and abuut 300 . negrocs. This one of the fnelt iflands in the Wift Indies has been depopulated by the cruelty, and left uncultivated by the indolence, of its poffefors. But it is the appoirmment of Providence, who ftidum permits flagrant cames to pafs unpunined, that porerty and wretcheunefs !! unis be uniorm conf quences of oppreflion.

SANICULA, SANICLF, or \(S / f \cdot b\) al, in botan!: A genus of the digynia order, belon ing to the putandria clafs of plants; and in the natural method ranking under the 45 th oider, Umbillite. The umbels are clofe together, almoft in a round head; the fanit is fcabrous; the flosers of the difls abortive. 1 heie are three fpecies, viz. the canadenfis, marnlandica, and suropæa, tound in many parts bouli of Scotland and Enelanc? This plant was long celebrated for its healing virtues; but it is now totally difregarded.

SANIDIUM, in natural hiflory, the narre of a genus of foffils of the clafs of the felentie, but neither of the rhomboidal nor columnar kinds, nor any other way ditinguifable by its external figure ; beirg made up of feveral plain flat plates.
S. INIES, in medicine, a ferous putrid matter. ifluins from wounds. It differs from pus, which is thicker and \(u\) hiter.
SANNAZ.IRIUS (James', in Latin APius C Fro cenis Samnazarius, a celcbrated Latin and Italian preet, born at Naples in \(145 \%\). He by his wis in ratiated himfelf into the favour of kint Frederic; and, when that prince was dethroned, attended him into Firance, where he flaid with him till his death, which harpen.d in 15:4. Sannazarius then returned into Italy; where he applied hamelt to polite lieerature, and ya:ticularly

\section*{S A N}

Sarta. to Latio and Italian poctry. His gay and facctions humour made him fought for by all companies; but he was fo afliced at the news that lhillibert prince of Orange, general of the emperor's army, had cemolifhed his conentry-houfe, that it threw l:im into an illnefs, of which he died in 1530 . It is faid, that being informed a few days before his death, that the prince of Orange was killed in battle, he called out, "I fhall die contented, fince Mars his punifhed this barbarous enemy of the Mufes." He wrote a great number of Italian and Latin pocms: among thofe in Latin, his De Partu Virginis and Eclogues are chictly efteemcd ; and the moll celebrated of his Italian pieces is his suradia.

SANTA Cpu7, a large inand in the South Sea, and onc of the moft conla? erable of thofe of Snlomon, bring abour 250 miles in circunference. W. Long. \({ }^{2}\) 30. O. S. Lat. 10. 21.

Sang Ciruz, or St Croix, a fmall and unhealthy ifland, fituated in about \(\sigma_{+}\)degrees weft lungitude and 18 north latitude. It is about eighteen leagues in length, and from cliree to four in breadth. In 1643 it was inhatited by Dutch and Erglifh, who foon be- came enemies to each other; and in 16;0 were both criven out by 1200 Spaniards, who arrived there in five Thips. The triumph of thefe lafte! but a few montbs. The remains of that numerous body, which were left for the defence of the illand, furrendered without efittance to 10 . French, who had embarked in 1651 , frem St Chri? opher's, to make themfelves matiers of the inand.
'i hefe new inhabitants hoit no time in making themitlves acuuainted with a country fo much difputed. On a foil, in other refpecis excellent, they rnuad only one liver of a moderate fae, which, cliding geuty almot on a level with the lea throurh a flat country, furnithed only a brackifh water. 'Two or three fprings, which they found in the innermolt parts of the inland, made but teeble amends for this defed. The wells were for the moft part dry. 'The conflruction of refervnirs required zime. Nor was the climate more inviting to the new inhabitants. 'l'he inamd being ntt, and covered with old trees, f:arce afforded an opportunity for the winds to carry off the poifonous vapours with which its rusrates cio: thed atmofphere. 1 here was but one re. medy for this inconverience; which was to burn the noods. The Trench fet fire to them without delay; and, retting on board the:r thips, hecame fpectators from the fea. for feveral montis, of the conflagration they hat raifed in the illand. As foon as the flames were extingnithed, they went on fhore again

They found the foil fertile beyond belief. 'Iobacco, cotton, arnotto, indigo, and fugar, flourithed equally in it. So ranid was the progrefo of this colony, that in II jears lrom its enmmencement there were upon it 822 white perfons, with a proportionable number of flaves. It was rapidly advancing to profperity, when fuch obftacles were thrown in the way of its activity as made it decline again. 'This decay was as fudeen as its rife. In 1696 there ware no more than 147 men, with their wives and children, and \(K_{23}\) blacks renaining; and thefe were tranfported to St Domingo.

Some obfcure individuals, fosse writers unacquainted with the views of government, with their fecret nego.
tiations, with the character of their minifters, with the interefts of the protectors and the protected, who flatter themfelves that they can difcern the reafon of events amongft a multitude of impoitant or frivolous caufes, which may have equally occalioned them; who do not conceive, that among all thefe caules the molt natural may poffibly be the fartheft from the truth; who after having read the news, or journal of the day; with pro. found attention, decide as pcremptorily as if they had been placed all their lifetime at the helm of the ftate, and liad affifted at the council or kings ; who are never more deceived than in thofe circumfance in which they difplay forne thare of penctration; writers as abfurd in the praifes as in the blane which they befow upon nations, in the favourable or unfavourable opinion they form of minifterial operations: thefe idle dreamers, in a word, who think they are perfons of importance, becaufe their attention is always engaged on matters of confequence, beinor convioced that courts are always governed in their decifions by the moll comprehenfive views of profound policy, have fuppoled that the court of Verfailles had neglected Santa Cruz, merely becaufe they wifed to abandon the fmall inands in order to unite all their ftrength, induftry, and population, in the large ones; but this is a miltaken notion. 'This determination arofe from the farmers of the revenue, who found that the contraband trade of Santa Cruz with St 'Thomas was detrimental to their interells. The fyirit of finance hath in all times been injuious to commerce; it hath deltroyed the fource from whence it fprang. Santa Cruz continued without inhabitants, and without cultivation, till 1733, when It was fold by France to Denmark for 30,7501 . Soon after the Danes built there the fortrefs of Chriftiantadt. Then it was that this northern power feemed likely to take deep root in Armerica. Unfortunately, he laid her plantations under the yoke of exclufive privileges. In. duftrious people of a!l fects, particularly Moravians, ftrove in vain to overcome this great difficulty. Many attempts were made to reconcile the interelts of the co. lonifts and their oppreflors, but without fuccefs. The two partics kept up a continual ftruggle of animofity, not of induftry. At length the government, with a moleration not to be expeqed from its contitution, purchafed, in 1754, the privileres and effects of the company. The price was fixed at L. 412,500 , part of which was paid in ready moner. and the remander in bills upon the treafury, bening intere!t. From this tinse the navigation to the illands was opened to all the fubjects of the Danifh dominiuns. Of 345 plantations, which were feen at Santa Cruz, 150 were covered with fagar canes, and every habitation is limited to 3000 Danifh feet in length, and 2000 in breadtl. It is in. habited by 2136 white men, by \(22,24+1\) laves, and by 155 Ireedmen.

Sanfa Cruz, in Teneriff. Sce Teneriff.
\(S_{\text {ANTA }}\) Cruz, a town of Africa, on the coalt o: Barbary, and in the province o! Suez and kingdom of Morocco, with a harbour and a fort. The Moors took it from the Portuguefe in 1536 . It is feated at the extremity of Mount \(A\) tlas, on the Cape Aguer. W. Lons. 10.7. N. Lat. 30. \(3^{8 .}\)

Savis Cruz de la Sierra, a town of South America, and capital of a province of that name in Peru, and in the audience of Los Charcas, with a bifhop's
2. See. It is feated at the foot of a mountain, in a counum. try abounding in rood fruits, on the river Guapy. W. Long. 59. 35. S. Lat. 20. 40.

Sintd Fe de Bogntr, a town of South America, and capital of Nicw Granada, with an arehbilfop's fee, a fupreme court of jurice, and an univerfity.
The city is fituated at the foot of a fleep and cold mountain, at the entrance of a valt and fuperb plain. In \(177+\) it contained 1770 houles, 3246 families, and 16,233 inhahitants. Population mult neceffarily increale there, fince it is the feat of government, the place where the eoin is ftricken, the flaple of trade ; and laftly, fince it is the refidence of an archbihop, whofe immediate juridictior extends over 35 Spanifh villages, which are called towns; over 195 Indian colories, ancienty fubdued; and over 28 miffions, eftahlifhed in modern times. This arehbihop hath likevife, as metropolitan, a fort of infpection over the diocefes of Quito, of Panama, of Caraceas, of St Martha, and of Carthagena. It is by this latt place, though at the diflanee of 100 leagucs, and by the river Magdalena, that Santa Fe keeps up its comnunication with Europe. There are filver mines in the mountains about the city. W. Long. 60. 5. N. Lat. \(35^{8}\).

SANTALUM, in botary: A genus of the monogynia order, belonging to the octandria clafs of plants; and in the natural mechod ranking with thofe of which the order is doubtful. The caly x is fuperior ; the corolla monopetalous; the flamina placed in the tube ; the ftigma is fimple ; the fruit a berry.
The fantalum, or fanders, grows to the fize of a wai-nut-tree. Its leaves are entire, oval, and placed oppofite to each other. Its flower is nf one fingle piece, charged with eight flamina, and fupported upon the pitili, which becomes an infipid berys, refenbling in form that of the laurel. Its wood is white in the circumference, and yellow in the eentre when the tree is old. This difference of eolour comititutes two kinds of fanders, both employed for the fame purpofes, and having equally a bitter tafte, and an aromatic fmell. With the powder of this wood a pafte is prepared, with which the Chinefe, Indians, Perfians, Arabians, and Turks, anoint their bodies. It is likewife burnt in their houfes, and yields a fragrant and wholforme fmell. The greatef quantity of this wood, to which a fharp and attenuating virtue is aferibed, remains in India. The red fanders, though in lefs eftimation, and lefs generally ufed, is fent by preference into Europe. This is the produce of a different tree, which is common on the coaft of Coromandel. Some travellers confound it with the wood of Caliatour, which is ufed in dycing.
The fantalum album, or white fanders, is brought from the Eafl Indies in billets about the thicknels of a man's leg, of a pale whitifh eolour. It is that part of the yellow fanders wood which lies next the bark. Greai part of it, as met with in the fhops, has no finell or tatte, nor any fenfible quality that can recommend it to the natice of the phylieian.
The fantalum album, or rellow fanders, is the inteyior part of the wood of the liame tree which furnifkes the former, is of a pale ycllowih eclour, of a pleafant fmell, and a bitterih aromatic tafte, aceompanicd with an agreeable kind of pungency. This elcgant wood might undoubtedly be applicd to valuable medical pur-
pofes, though at prefent very rarely uied. Diftilled Sariazen with water, it yields a fragrant effential oil, which thickens in the cold into the conffitence of a ballam.

Sanceuil. Digefted in pure firit, it imparts a ricli yellow tinc. ture; which being committed to diftillation, the fpirit arifes without bringing over any thing confiderable of the flavour of the fanders The relidunm contains the virtues of fix times its weight of the wood. Hoffman looks upon this extract as a medicine of fimilar virtues to ambergris; and recommends it as an excellent reforative in great debilities.

SANTAREN, a handfome town of Portugal in Efremadura, feated on a mountain near the river Tajo, in a country very fertile in wheat, wine, and oil. They get in their harveft here two months after they have fown their corn. It was taken from the Moors in \(14+7\). W. Long. \(7 \cdot 45\) N. Lat. 39. 12.

SANTAUGUSTINE. See Augustine.
SANTEN, a town of Germany, in the circle of Wettphalia, and in the duchy of Cleves. It has a hand. fome chureh belonging to the Roman Catholics, wherein is an image of the Virgin Mary, which they prctend performs a great many miracles. Here the fine walks begin that run as far as Wefel, from which it is five miles diftant to the north-welt. E. Long. 6. 33. N. Lat. \(5^{1 .} 3^{8 .}\)
- SANTERRE, a fmall territory of France, in Picardy ; bounded on the north by Cambrefis, on the ealt by Vermandois, on the weft by Aimienois, and on the fouth by the river Somme. It is very fertile, and the capital town is Peronne.

SANIEUIL, or rather Santeul (John Baptift de), in Latin Santolius I'itorinus, an excellent Latin poct, was born at Paris in \(1630^{\circ}\). Having finifhed his Itudies in Louis the Great's college, he applied himfelf entirely to poetry, and celebrated in lis verfe the praifes of feveral great men: by which he acquired univerfal applaufe. He enriched Paris with a great number of inicriptions, which are to be feen on the public fountains, and the monuments confecrated to pofterity. At length, fome new lymns being to be ermpoled for the Breviary of Paris, Claude Santeuil lis brother, and M. Bolluet, perfuaded him to undertake that work; and he fucceeded in it with the greatelt applaufe. On which the order of Clugny dediring him to compofe fome for their Breviary, he complied with their requeft ; and that order, out of gracitude, grarted him letters of filiation, with an ammal penfion. Santenil was careffed by all the learned men of his time; and had for his admirers the two princes of Cindé, the father and fon, from whom he frequently received favours. Louis XIV. alio gave him a proof of his efteten, by beftowing a penfion upon him. He at tended the duke of Bourbon to Dijom, when that prince went thither in order to lold the ltates of bur. gundy; and died there in 8697 , as he was preparing to retun to Paris. Belides his Latin liymas, be wrute a great number of Latin puems, which have ali the fire and marks of genius difeuverahle in the works of great poets.

Io Santeuil we are indebted for many line churchhymns, as above-mentioned. Santeuil read the verles he made for the inhabitants of heaven with all :lac agltations of a demoniac. Defpreaux faid he was the

\section*{S A N [ 654 ] S A N}

Santeuil devil whom God compelled to praife faints. He was \(\square\) Santulina. among the number of poets whofe genius was as im. petuons as his mufe was decent.

La Bruyere has painted the character of this fingular and tululy onginal poet in the moft lively colours. "Inage a man of great facility of temper, complaifant and docile, in an inftant violent, choleric, paffionate, and capricious. A man fimple, credulous, playful, volatile, pucrile ; in a word, a child in gray hairs : but let him collect himfelf, or rather call forth his interior genius, I venture to fay, without his knowledge or privacy, what fallies ! what elevation! what images! what latinity! Do you fpeak of one and the fame per. Son, you will ank ? Yes, of the fame; of Theodas, and of him alone. He fhrieks, he jumps, he rolls upon the ground, he roars, he ftorms; and in the midit of this tempeft, a flame iffues that fhines, that rejoices. Without a figure, he rattles like a fool, and thinks tike a wife man. He utters truths in a ridiculons way; and, in an idiotic manner, rational and fenfible things. It is aftonihhing to find good fenfe difclofe itfelf from the bofom of buffoonery, accompanied with grimaces and contortions. What hall I fay more? He does and he fays better than he knows. Thefe are like two fouls that are unacquainted with each other, which have each their turr and feparate functions. A feature would be wanting in this extraordinary portrait, if I omitted faying, that he has at once an infatiable thirft for praife, ready to throw himfelf at the mercy of the critics, and at the bottom fo docile as to profit by their cenfure. I begin to perfuade myfelf that I have been drawing the portraits of two different perLons: it would not be impoffible to find a third in Theodas; for he is a good man, a pleafant man, an excellent man."

This poet ought not to be confounded with Claude de Santeuil, his brother, a learned ecclefiaftic, who alfo wrote feveral hymns in the Paris Breviary under the name of Santolius Maglioranus, a name given him from his having lived a long time in the feminary of St Magliore at Paris, in quality of fecular ecclefiaftic. He was efteemed not only for his poetical abilities, but alfo for his profound erudition and his exemplary piety. He died at Paris in 1684, aged 57. He wrote feveral other pieces of poetry, befides his hymns, which are printed with his brother's works.

SANTILLANE, a fea-port town of Spain, in the province of Afturias, of which it is the capital. It is feated on the fea-coaft, 55 miles eaft of Oviedo, and 300 north. weft of Madrid. W. Long. 4. 33. N. Lat. 43. 30 .

SANTOLINA, lavender-cotton, in botany: A genus of the order of polygamia æqualis, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 49th order, Compgitite. The receptacle is paleaceous; there is no pappus ; the calyx imbricated and hemifpherical.

The moft remarkable fpecies are, 1 . The chamæcyparifus, or common lavender-cotton, which has been long known in the Englith gardens; it was formerly titled abrootanum femina, or female fouthernwood, and by the corruption of words was called brotany hy the marketprople: it grows naturally in Spain, Italy, and the warn parts of Europe. This hath a ligneous ftalk, dividing into many brancies, garnifled with flender hoa-
ry leaves, that are four ways indented, and have a rank, ftrong, odour when handled. The branches are terminated by a fingle flower, compofed of many hermaphrodite florets, which are fiftular, cut into five parts at the top, of a fulphur colour, and are included in one com. mon fcaly empalement, having no borders or rays. Thefe are fucceeded by fmall, oblong, ftriated feeds, which are feparated by fealy chaff, and ripen in the empalement; the plants love a dry foil and a fheltered fituation. 2. The villofa, with woolly leaves, has a Shrubby ftalk, which branches out like the former, but the plants feldon grow fo tall. The branches are garnifhed very clofely below with leaves fhaped like thofe of the other fort, but Thorter, thicker, and whiter; the flowers are much larger, and the brims of the florets are more reflexed; they are of a deeper fulphur colour than the other. It grows naturally in Spain. 3. The decumbens, with linear leaves, is of lower ftature than either of the former, feldom rifing more than 15 or 16 inches hist. The branches fpread horizontally near the ground, and are garnifhed with Shorter leaves than either of the former, which are hoary and finely indented; the flalks are terminated by fingle llowers, of a bright yellow colour, which are larger than thofe of the firft fort. 4. The virens, with very long linear leaves, rifes higher than either of the former. The branches are more diffufed; they are flender, fmooth, and garnifhed with very narrow long leaves, which are of a deep green colour, but two ways indented; the ftalks are flender, naked towards the top, and terminated by fingle flowers of a gold colour. 5. The rofmarinifolia, with linear entire leaves, hath fhrubby ftalks, which rife about three feet high, fending out long fender branches, garnified with fingle linear leaves of a palc-green colour. The falks are terminated by large, fingle, globular flowers, of a pale fulphur colour. 6. The minor, with linear obtufe leaves, is fomewhat like the fifth; but the branches are fhorter, thicker, and clofer garnihed with leavcs, which come out in cluters. The flowerftalks are fparfedly difpofed, and have leaves to their top; the flowers are fmall, and of a yellow colour. 7. The chamæmelifolia, with obtufe woolly leaves, hath fhrubby ftalks, which rife three feet high, garnifhed with broader leaves than either of the former, whofe indentures are loofer, but double; they are hoary, and when bruifed have an odour like chamomile. The leaves are placed pretty far afunder, and the ftalks are garnifhed with them to the top. The ftalks are divided likewife at the top into two or three foot-ftalks, each fuftaining one pretty large fulphur-coloured flower.

All thefe plants may be cultivated fo as to become ornaments to a garden, particularly in fmall bofquets of ever-grecn fhrubs, where, if they are artfully intermixed with other plants of the fame growth, and placed in the front line, they will make an agreeable variety ; efpecially if care be taken to trim them twice in a fummer, to keep them within bonnds, otherwife their branches are apt to ttraggle, and in wet weather to be borne down and difplaced, which renders them unfightly; but when they are kept in order, their hoary and different-coloured leaves will have a pretty effect in fuch plantations. - They may be propagated by planting nips or cuttings during the fpring, in a

\section*{\(S\) A P}
miat border of light frefh earth, but mut be watered and after which they will require no farther care but to
keep them clean from weeds till autumn, when they fhould be tranfplanted where they are deligned to remain : but if the ground is not ready by that time to receive them, it will be proper to let them remain in the border until fpring; for if they are tranfplanted lite in autumn, they are liable to be deftroyed by cold in winter.

SANTORINI, an ifland of the Archipelago, to the north of Candia, and to the fouth-weft of Nanphio. It is eight miles in length, and near as much in breadth, and almoft covered with punice-ftune, whence the foil in general nuft be dry and barren; it is, however, greatly improved by the labour and induftry of the inhabitants, who have turned it into a orarden. It affords a great deal of oarley, pienty of cotton, and large quantities of wine. Fruit is farce except figs; and they have ncither oil nor wood. The inhabitants are all Greeks, and are about 10,000 in number. Pyrgos is the capital town, and there are feveral little towns and villages. They have but one fpring in the ifland, for which reafon they preferve the rain-water in cifterns. Thungh fubject to the Turks, they choofe their own magiftrates. E. Long. \(25 \cdot 5\). N. Lat. 39. 10.

SANZIO (Raphael). See Raphael.
SAO, a territory, called a kingdom, of Africa, on the gold-cuaft of Guinea, hardly two miles in length along the thore. It produces abundarce of Indian corn, yams, potatoes, palm-wine, and oil. The inhabitants are very treacherous, and there is no dealing with them without a great deal of caution. It contains feveral rillages, of which Sabo is the principal; and the Dutch have a fort here called Naffau.

SAONE, a confiderable river of France, which has its fource in mount Vofgue, rear Darney; runs through the Franche Conte, Burgundy, Beaujoleis; and falls into the Rhone at I,yons. It paiftes Ly Gray, Chalons, and Mafcon.
sidP, the juice found in vegetables.
We obferved, when treating of Pannts, that it has been long difputed whether the fap of plants be amalogous to the blood of anmals, and circulates in the fame manner. We alfo mentioned the conclulions that Dr Halesdrew from his numeruus experiments, which were all in oppofition to the doctrine that the fap circulates. As the fubject is curious and interefting, and as additional light has been thrown upon it of late years, we uifh to communicate it to our readers as fully as our - limits will permit.

As the vegetable econony is till but imperfectly underftood, and ex periments made for tracing the notion of the fap may lead to irrportant difcoveries, we are happy to find, that of latc years this dubject has been again revived. Dr Walker, profeftor of Natural Hiftory in the univerfity of Edinburgh, has publifhed in the 1 it volume of the Philofnphical Tranfactions of Edinburgh an account of a courle of very accurate and ingemous experiments, accompanied with obfervations and conclufions made with a eaution which inSpires confidence, and is indeed worthy of a difciple of Bacon. He is the firit perfon, as far as we know, who thought of comparing the thermometer with the motion of the fap.

It is well known that in the furing vegctables contain a sreat quantity of fap; and there are lome trees, as the birch and plane, which, if wounded, will difcharge a great portion of it. Whence is this moilture derived? Whether is it imbibed from the atmofphere, or does it flow from the foil through the roots? Thefe are the queftions which require firf to be anfwered: and 1)r Walker's experiments enable us to anfwer them with confidence.

He feleited a vigorcus young Lirch, 30 feet hish and 26 inches in circumference at the ground. He bored a hole jutt abuve the ground un the of of February, and cut one of its branches at the extremity. He repeated this every fecond day; but no moifture appeared at either of the places till the 5 th of May, when a imall quantity flowed on making an incifion near the ground. He then cut 21 incifions in the trurk of the tree, on the north fide, at the diftance of a foot from une another, and reaching from the ground to the height of 20 feet. The incilions were folid triangles, each fide being an inch lung and an inch deep, and penetrating through the hark and wood. Dr Walker vifited the tree almoft every day for two months, and marked exactly from which of the ircilions the fap flowed. He oblerved that it flowed from the lowelt incifion firt, and gradually afcended to the higheft. The following table will thow the progref: of the fap tuwards, and its correfpondence with the thermemeter.

The firl column is the day of the month on which the oblervation was made ; the fecond exprefies the number of incitions from which the fap flowed on the day of the month oppolite; and the third columu she degree of the thermometer at noon. Scme davs are omitted in March, as the incifions, though made o:s the 5 th, did not bleed till the 11 th. Sonve days are aliu paffed over in April, becaufe no obfervation was made on account of rain.
\begin{tabular}{|c|c|c|c|c|c|c|}

\end{tabular}

Dr li'alker found that the fip afeends through the wood, and thll more copioully between the wood and the bark; but none could he perceived afcending throush the pith or the bark. He found alfo, that when inc thermometer at noon is about \(q 9\), or between \(\psi 6\) and jo, the fap riles about one font in 24 hours; that when the thermometer is about 45 at noon, it afeends abou:

\section*{S A P [ 656 S A P}

Sap, one foot in two days; and that it does not afcend at Sapindus. all unlefs the mid-day beat be above 40 . He obferved
that it moves with more velocity thrugh young than through old brancles. In one young branch it moved through feven fuet in one day, the thernometer being at 49, while it moved in the trunk of the tree only feven feet in feren days. Dr Walker has thus explained the reafon why the buds on the extremities of branches unfoid firt ; beeaufe they are placed on the youngelt wood, to which the fap flows moft abundantly.

The effects produced by the motion of the fap deferve to be attended to. In thofe parts to which it has mounted, the bark cafily feparates from the wood, and the ligneous circles may, without difficulty, be detaehed from one another. The buds begin to fwell and their feales to feparate, while thofe branches to which the fap has not afcended remain clofely folded. Wien the faphas reached the extremities of the branches, and has thus pervaded the whole plant, it is foon covered with opening buds and ceafes to bleed. The bleeding ceafestirft in the upper parts of the tree, and in the lower parts fueceffively downwards, and the wood becomes dry. An inverted branch flows more eopioufly whencut thant hofe which are erect. This is a proof that the afcent of the fap is not oceafioned by eapillary attraction, for water which has rifen in a fmall glais tube by this attraction will not defcend when the tube is inverted.

It is evident that there is an intimate connection hetween heat and the afcent of the fap. It did not begin to flow till the thermometer flood at a certain point : when it fell below 40, it was arrefted in its progrefs. The fouth fide of the tree, when the fun was bright, bled more profufuly than the north fide; and at fun-fet the incifions at the top ceafed to bleed, where it was expofed moft to the cold air, while it fill continued to flow from the incifions next to the ground; the ground retaining its heat longer than the air.

SAP, in fieges, is a trench, or an approach made under cover of 10 or 12 feet broad, when the befiegers come near the place, and the fire from the garrifon grows fo dangerous that they are not able to approach uncovered.-There are feveral forts of faps; the fingle, which has only a fingle parapet; the double, having one on each fide; and the flying, made with gabions, \&e. In all faps traverfes are left to cover the men.

SAPINDUS, the soap-berry tree, in botany: A genus of the digy nia order, belonging to the octandria clafs of plants; and in the natural method ranking under the 2.3 order, Tribilati. The calyx is tetraphyllous; the petals four ; the capfules are flefhy, connate, and ventricofe.

The fpecies are four, the faponaria, fpinofus, trifoliatus, and chinenfis. The faponaria, with winged leaves, grows naturally in the iflands of the Weft Indies, where it rifes with a woody flalk from 20 to 30 feet high, fending out many branehes garnifhed with winged leaves compofed of feveral pair of fpear-hhaped lobes. The midrib has a membranaceous or leafy border, running on each fide from one pair of lubes to the other, which is broadeft in the middle between the lubes; the flowers are produced in loofe fpikes at the end of the branehes; they are fnall and white, fo make no great appearance. Thefe are fucceeded by oval berries as large as middiing eherries, fometimes
fingle, at others, two, three, or four are joined to- Saponatie getler; thele have a faponaceous nsin or cover, which inclofes a very finouth roundith nut of the fame form, of a flining black when ripe. The fkin or pulp which furrounds the nuts is ufed in Ameriea to wafl linen; but it is rery apt to burn and deftroy it if often ufed, being of a very acrid nature.

Thefe plants are propagated by feeds; they muft be put into finall pots, and plunged into a hot-bed of tanners bark. In five or fix weeks the plants will appear, when the glafes of the hot-bed fhould be raifed every day in warm weather, to admit frefh air to the plants. In three weeks or a month after the plants appear, they will be fit to be tranfplanted, when they mult be flaken out of the pots, and carefully parted, fo as not to injure their roots, and eaeh planted into a feparate fmall pot, and plunged into the hot-bed again, obferving to thade them from the fun mintil they lave taken new root; after which time they mult have free air admitted to them every day when the weather is warm, and will require to be frequently wa tered.

SAPONARIA, SOPEWORT, in botany: A genus of the digynia order, belonging to the dicandria clafs of plants; and in the natural metlood ranking under the 22d order, Caryophylles. The calyx is mono. phyllous and naked ; there are five ungulated petals: the capfule is oblong and uniloeular.

There are eight fpecies, the oficinalis, vaccaria, cretica, porrigens, illyrica, ocymoides, orientalis, and lutea. The officinalis, which is a l3ritifh plant, has a creeping root, fo that in a flort time it would fill a large fipaee of ground. The ftalks are abuut two feet high, and of a purplifh colour. The footftalks of the flowers arife from the wings of the leaves oppofite; they futtain four, five, or more purple flowers each; which have generally two fmall leaves plaeed under them. The ftalk is alfo terminated by a loofe bunch of flowers growing in form of an unbel; they have each a large fivelling cylindrical empalement, and tive broad obtufe petals, which fpread open, of a purple colour. Thefe are fucceeded by oval callules, with one cell filled with fmall feeds. - The decoction of this plant is ufed to cleanfe and feour woollen cluths: the poor people in fome countrics ufe it inftead of foap for waihing ; from which ufe it had its name.

SAPOR, taste. See Taste, and Anatomy, n' 1 今,
SAPOTA, Plum, in botany. See Achras.
SAPPERS, are foldiers belonging to the royal artillery, whofe bufinefs it is to work at the faps, for which they have an extraordinary pay. A brigade of fappers generally confits of eight men, divided equally into two parties; and whilt one of thefe partics is advancing the fap, the othier is furnifhing the grabions, fafeines, and other neceflary implements. They relieve each other alternately.

SAPPHIRA, was the wife of a rich merctiant in Gueldics, and equally ditinguifhed for her beanty and her virtue. Rhinfauld, a German officer, and governor of the town of Guedres, fell in love with her; and not buing able to feduec her either hy promifes or prefents, he imprifoned her hufoand, pretending that he kept up a traiterous correpomence with the enemies of the flate. Sapphira yielded to the paffion of the go-
hire. vernor in order to relieve her hufoand from chains; but private orders had already been gives to put him to death. His unitappy witow, overwhelmed with grief, complained to Charles duke of Burgundy. He ordered Rhinfauld to marry her, after having made over to her all his pofftitions. As foon as the deed was figned, and the marriage over, Charles commanded him to be put to death. Thus the children of a wife whom he had feduced, and of a hutband whom he had murdered, became lawful heirs to all his wealth.
S. \(\perp\) PPHIRE, a genus of precious ftones, of a blue co. lour, and the hardelt of all except the ruby and diamond. They are folund in the fame countries with the ruby; allo in Bohemia, Alface, Siberia, and Auvergne. M' Rome de l'Inle mentions one found at Auvergne, which appeared quite green or blue according to the pofition in which it was viewed. Cronftedt, however, informs us, that the blue fluor fpars are frequently met with in collections under the name of fapphires; and it is certain from Pliny, B. 37. chap. 9. that the fapphire of the ancients was our lapis lazuli. They are feldom found of a deep blue colour throughout, or free from parallel veins; and when they are but nightly tinged, they are named white fappbires. The late unfortunate king of France had one with a fripe of fine yellow topaz in the middle. Some are found half green and half red, and are foliated like the ruby. The fine hard fapplires, calied by the jewellers oriental, are of the fame nature with the ruby and topaz, excepting the mere circumftance of colour. They are commonly in two oblong hexagon pyramids, joined at their bafe, and pointed at top; fometimes alfo in hexagonal columns.

The fineft fapphires, like moft of the gems, come from the Eaft Indies. Ruffia does not produce the fapphire. In Scotland they are found of a hardnefs and luftre equal to the uriental, both light and deep coloured, at Benachie, and Invercauld, Aberdeenfhire; Portfoy in Banffinire, and many other places. Mr Deuchar, feal-engraver in Edinburgh, has in his poffeffion a beautiful fapphire, which was found in a donble cryftal. On one of thefe is cut a head, which was effected with the greateft difficulty, on account of its hardncis; the other is cut into facets, and has a fine water, and great brilliancs.

The fpecific gravity of thefe precious ftones, according to Bergman, is from 3,650 to \(3 \cdot 940\). According to others the fpecife gravity of the uriental fapphires is 3,994; that of the Brafilian 3,1307; and of thofe from Puy in Auvergne, 4,0769. When powdered, they are fufible with borax, or microcofmic falt, into a tranf. parent glafs; and the fame thing happens on treating them with magnefia alba. They are faid to lofe their colour by fire, and to become fo hard and tranfparent as fometimes to pafs for diamonds; but Mr Achard found this to be a miftake, and that the true fapphites are not in the leaft altered cither in colour, hardnefs, or weight, by the moft intenfe fire. Thofe of Puy in Auvergne, however, though by their colour and hardnefs they feem to approach the oriental fapphires, luie both their co. Inur and tranfparency in the fire, becoming black, and even vitrifying, which plainly fhows them to be of a different kind. Engettroom infurms us, that the fapphires, in their rough or native ftate, generally cryftal. lize in two oblong hexagonal pyramids pointed at top,

Vol, XVI. Pat IL.
and joined at their bafes, but are fometimes round of an
hexagonal or columnar form. - A good fapphire of ten carats is valued at 50 guineas; if it uecighs 20 carats, it is valued at 200 guineas; and, if under ten carats, its value may be found by multiplying, the carat at 1os. 6 d . by the fquare of its weight.-Supphires are preterabl: to common rubies for jewelling watches, on account o: the homogencous hardnefs of their fubllance; fome red Atones refembling rubies being met with, which are no: uniformly hard.

SAPPHO, a famous poetefs of antiquit, who fo: her excellence in her art has been called the Tenth Mufe, was born at Mitylene in the ife of Leelbos, about 610 years hefore Chrit She was coritemporary with Stefichorus and Alcæus ; which laft wes her countryman, and as fome think her fuitor. A verfe of this poct, in which he infinuates to her his paffion, is preferved in Aristotle, Rhet. lib. i. cap. 9. together with the fair damfel's anfwer.
Alc. I fain to Sappho would a wifh impart, But fear locks up the fecret in my heart.
Sap. Thy downcatt looks, refpect, and timid air,
Tou plain the nature of thy wifh declare. If lawlefs, wild, inordinate delire, Did not with thoughts impure thy bofom fire, Thy tongue and eyes, hy innocence made bold, Ere now the fecret of thy foul had told.
M. la Fevre obferves, that Sappho was not in her ufual good-humour when the gave fo cold an anfwer to a reques, for which, at another time, perhaps fie would not have waited. - It has been thought, too, that Anacreon was one of her lovers, and his editor Barnes has taken fome pains to prove it: but chrono\(\log y\) will not admit this; fince, upon inçuiry, it will be found that Sappho was probably dead before Ana. creon was born. Of the numerous poerns this lady wrote, there is nothing. remaining but fone fmall fragments, which the ancient Eholiafts have cited; a hymn to Venus, preforved by Dionyfius of Halicar. naffus; and an ode to one of her mitreffes \(t\) : which \(\$ 5 \mathrm{Sc}\) Partre, laft piece confirms a tradition delivered down from an- \(n^{9} 133\). tiquity, that her amorous paffion extended even to perfons of her own fex, and that fae was willing to have her miftreffes as well as her gallants.

Ovid introduces her making a facrifice to Phaon, one of her male paramours; from which we leam, that Sappho's love for her own fex did not keep her from loving ours. She fell defperately in love with Phaon, and did all the could to win him; but in rain: upon which the threw herfelf headlong from a rock, and died. It is faid that Sappho could not furbear following Phaon into Sicily, whither he retired that he might not fee her; and that during her 1tay in that illand the probably compofed the hymn to Venus, ftill extant, in which the begs fo ardenty the affitance of that goddefs. Her prayers, however, proved ineffectual: Phaun was cruel to the latt degree. The unfortunate Sappho was forced to take the dreadful leap; the wert to the promontory Leucas, and threw herfelf into the fea. The cruelty of Phaon will not furprife us fo much, if we refleet, that the was a widow (for the had been married to a rich man in the ine of Audros, by whom the had a daughter, named Cleis) ; that he had never been hand40

\section*{S A R [ 6; 8 ] \\ S A R}

Saraband fome; enat the had obferved no meaiure in her paffion to both lexes; and that Plizon had long known all her charms. She was, however, a very great wit, and for that alone deferves to be remembered. The Mitylenians held her merit in fuch high efteem, that they paid her fovereign honours after her death, and ftamped their money with her imagre. 'The Romans afterwards erected a noble flatue of porphyry to her; and in fhort, ancients as well as moderns have done honour to her memory. Voffius fays, that none of the Greek poets excelled Sappho for fweetnefs of verfe; and that fie made Archilochus the model of her ftyle, bet at the fame time toak care to foften the feverity of his expreffion. It muft be granted, fays Rapin, from what is left us of Sappho, that Longinus had great reafon to extol the admirable genius of this woman ; for there is in what remains of her fomething delicate, harmonious, and impaffioned to the laft degree.

SARABAND, a mulical compofition in the triple time, the motions of which are flow and ferious.

Saraband is allo a dance to the fame meafure, which ufually terminates when the hand that beats the time falls; and is therwife much the fame as the minnet.

The faraband is faid to be originally derived fiom the Saracens, and is ufually danced to the found of the guitar or caftanettes.

SARACA, in botany: a genus of the hexandria order, belonging to the diadelphia clafs of plants. There is no calyx: the corolla is funnel-fhaped and quadrifid; the filaments are on each fide the throat of the corolla; the legumen is pedicellated.

SARACENS, the inhabitants of Arabia; fo called from the word liara, which fignifies a defert, as the greateft part of A rabia is; and this being the country of Mahonet, his diciples were called Saracens.

SARAGOSSA, a city of Spair, in the kingdom of Arragon, with an archbifhop's fee, an univerfity, and a court of inquifition It is faid to lave been built by the Phenicians; and the Romans fent a colony here in the reign of the emperor Auguftus, whence it had the name of C.efor Auguflus, which by corruption has been ckanged into Saraf̧effa. It is a large, handfome, and well-built town. 'Tlie ftreets are long, broad, well-paved, and very clean, and the houfes from three to fix itories high. It is adorned with many magnificent buildings; and they reckon 17 large churches, and 14 handfome monatteries, not to mention others lefs confiderable. The river Ebro runs crofs the place, dividing it into two ; and on its bunks is a handiome quay, which ferves for a public walk. The Holy-ftreet is the largelt, and fo broad that it may be taken for a fquare: and here they have their bull-fights: in this ftreet there are feveral noblemens families, particularly that of the viccroyThe convents are handforne and richly adorned, as well as the churches. The cathedral church is a fpacious building, after the Gothic tafte; hut the fineft church is that of Nueftra Signora del Pilar, feated on the fide of the Ebro, and is a place of the greateft derotion in Spain. They tell us the Virgin appeared to St James, who was preaching the gofpel, and left him her imaze, with a handfome pillar of jafper: it is fill in this church which they pretend is the firt in the world vuilt to her honour. This image ftands on a marble pillar, with a little Jefus in her arms; but the place is fo Jark, that it cannot be feen without the affitance of
lamps, which are 50 in number, and all of filver. There are alio chandeliers and baluftrades of malty fil. ver. The ornaments of this inage are the richeft that can be imagined, her crown being full of precious ftones of an inettimable price; in thort, there is farce any thing to be leen but cold and jewels, and a valt number of people come in pilgrimage hither. The town-houfe is a fumptuous fructure, adorned with fine columns: in the hall are the pictures of all the kings of Arragon ; and in a corner of it St George on horfeback, with a dragon of white marble under him. It is feated in a very large plain, where the Ebro receives two other rivers; and over it are two bridges, one of fone and the other of wood, which laft has been thought the mott beantiful in Europe. A victory was obtained here over the French and Spaniards in 1710 , but it was ahandoned by the allies foon after. It is 97 miles welt: by north of "「arragona, 137 weft of Barcelona, and 150 north-eaft of Madrid. W. Long. O. 48. N. Lat. 41.47.

SARANNE. See Lilium.
SARCASM, in rhetoric, a keen bitter expreffion which has the true point of fatire, by which the orator fcoffs and infults his enemy : fuch as that of the Jews to our Saviour; " IIc [aved others, hinifelf he cannot fave."

SARCOCELE, in furgery, a fpurious rupture or hernia, wherein the tefticle is confiderably tumefied or indurated, like a fcirrhous, or much enlarged by a flefhy cxcrefcence, which is frequently attended with acute pains, fo as to degenerate at laft into a cancerousdifpofition. See Surgery.

SARCOCOLLA, a concrete juice brought from Perlia and Arabia, in fmall whitith-yellow rrains, witla a lew of a reddifh and lometimes of a deep red colour mixed with them; the whitelt tears ase preferred, as being the frefheft: its talte is bitter, accompanied with a dull kind of liwectnefs. This drug diffolves in watery liquors, and appears chiefly to be of the gummy kind, with a fmall admixture of refinous inatter. It is prin. cipally celebrated for conglutinating wounds and ulcers
 neither this nor any other drus has any jutt title to.

SARCOLOGY, is that part of anatomy which treats of the foft parts, viz. the mufcles, intelines, arteries, veins, nerves, and fat.

SARCOMA, in furgery, denotes any flefhy excrefcence.
S.ARCOPHAGUS, in antiquity, a fort of fone coffin or grave, wherein the ancients laid thofe they had not a mind to burn.

The word, as derived from the Greek, literally fignifies \(f l y\)-eater ; becaufe at firt they ufed a fort of ftone lor the making of tombs, which quickly confumed the bodies. See the following article.

Sarcorhagus, or Lapis \(A J_{\text {hus }}\), in the natural hiftory of the ancients, a itone much ufed among the Greeks in their fepultures, is recorded to have always perfectly confumed the flefh of human bodies buried in it in forty days. This property it was much famed for, and all the ancient naturalits mention it. There was another very fingular quality alfo in it, but whether in all, or only in fome peculiar pieces of it, is not known: that is, its turning into ftone any thing that was put into veffels made of it, This is recorded tianus gives of it that it converted into tone fhoes of perfons buried in it, as alfo the uter.fils which it was in fome places cuftomary to bury with the dead, particularly thofe which the perfon while living moit delighted in. The utenfils this author mentions, are fuch as muft lave been made of very different materials; and hence it appears that this ftune had a power of confuming not only fleth, but that its petrifying quality extended to fubftances of very different kinds. Whether ever it really poffeffed this laft quality has been much doubted; and many, from the feeming improbability of it, have been afraid to record it. What has much encouraged the general difel ef of it is, Mínams's account of its takiner place on fubitances of very different kinds and textures; but this is no real objection, and the whole account has probably truth in it. Fetrifactions in thofe early days might not be diftinguimed from incruftations of fparry and ftony matter on the furfaces of budies only, as we find they are not with the generality of the world even to this day ; the incruftations of fipar un moffes and other fubftances in fume of our fprings, being at this time called by many fetrifod mofs. dic. and incruflations !ike thefe misht eafily be formed on fubftances enclofed in veffels made of this flone, by water pafing through its pores, difodging from the common mafs of the flone, and carrying with it particles of fuch fpar as it contained ; and aftewwards fa:ling in repeated drops on whatever lay in its way, it might again depolit them on fuch fulstances in form of incruftations. By this means, things made of ever fò different matter, which happened to be inelured, and in the way of the pafage of the water, would be equally incrutted with and in appearance turned into thone, without regard to the different configuration of their pores and parts.

The place from whence the ancients tell us they had this ftone was Affes, a city of Lycia, in the neighbourhood of which it was dug; and De loot informs us, that in that country, and in fome parts of the Eaf, there are alfn ftones of this kind, which, if tied to the bodies of living perions, wonld in the fame manner confume their Alth. HJ/l's Notes on Theophrighus, p. If.

SARCOIICS, in furgery, medicines which are fuppofed to generate fefh in urounds.

SARD.ANAPALUS, the laft king of Affyria, whofe character is one of the molt infamous in hiftory. II is faid to have funk fo far in depravity, that, as far as he conld, be changed his wery fex and nature. He clothed himfelf as a woman, and fpun anidft companies of his concubines. He painted his face, and behased in a more lewd manner than the moft lafivious harlot. In thort. he buried himfelf in the moft unbounded fers. frality, quite regardlefs of fex and the dicates of nature. Having grown odious to all his fubjects, a rebeliion was formed againtt him by Arbaces the Mede and Beletis the Babylonian. 'They were attended, lowever, with very bad fuceefs at firit, being defeated with great flanghter in three pitched battles. With great difficulty Belelis prevailed upon his men to keep the field only tive days longer; when they were joined by the Bacerisns, who had come to the affitanee of Sardanapalus, but
had been prevailed ypon to renounce their ableziance to surimis. hin. With this reinfore ment they twice defented the troups of Sardanapalus, who fhut limfelf up in Nineveh the capital of his empire. the city lield out for three vears; at the end of which, Sardanapalus firding himefelf unable to hold out an! longer, and dreading to fall into the hands of an enragred cllemy, retired into \(f\) is palace, in a court of which he cau ed a vat! piie of wood to te raifed; and heaping upon it all his grold ard filver, and royal apparel, and at the faree time inclofing his euruchs and concubines in an apartment within the pile, he fet fire to it, and fo deltroyed himfelf and all together.

IARDINIA, an ifland of the Mediterranean, boun. ded by the ftrait which disides it from Corfica on the north; by the Tufcan fea, which flows between this illand and Italy, on the caft; and by other parts of the Mediterraitan lea on the fonth and welt. It is about iutberb:ef, It 40 miles in length and 70 in breadeh, and contains Towr up the 420,000 iuhalitatis. The revenue arifes chiefly from Strolis. aduty upon falt, and is barcly fuflicient to defray the expences of govenment; but it certainly might be confiderably augmented, as the foil produces wine, corn, and oil, in abundance. Moft of the falt that is exported is taken by the Danes and Swedes; the Englioh furmerly took great quanticies sor Newfoundland, but ha. ving found it more convenient to procute it from Spain and Portugal, they now take litele or none. A p:ofitable tunny fifhery is carried on at the fouth-wett part of the ifland, but it is menupulized by the Duke de St Pierre, and a few inore people, who happen to be pro. prietors of the adjoining land. Wild boars absund in the hilly parts of the inand, and here are fome Eew deer, not fo large as thole in liritain, but in colour and make exaetly the fame. Beeves and thecp are ailo common, as well-as horfes.
he fendal fytem fill fubfits in a limited degree, and titles go with their ellates, fo that the purchater of the latier inherits the former: 'The reçular troops feldom execed 2000 men ; but the militia amount to near 26.000, of whom 11,000 are cavalry. heir hurfes are fmall, but uncommonly active. In a charge, we thould beat them: but, on a march, they would be fuperior to us the country people are generally arnied: but notwithtanding their hasing been jo long under the Spanifh and Italian government, alfafluations are by no means frequent ; and yet by the hws of the country, if a man flabs another without premeditated malice, within four hours atter quarrelling with bum, he is n-t liable to be hanged. On the other hand, the church affords \(n 0\) protection to the guilty. , he Sardinians are not at all bigoted; and, pext to the spaniands, the Englifh are their favourites. The whole illand is fubiect to the Duke of Savor, who enjoys the title of king of Surdinia. Sec Cagliart.

1lere is in this ifland a pleafing varicty of hills and valleys, and the foil is gemerally fruitful; but the inhabitants are a flothful generation, and cultivate but a litule part of it. On the coatt there is a fithery of anchovies and coral, of which they fend large guantitics to Genoa and Leghorn. This illand is divied into two parts; the one, called Capo-di-Carfiari, lies to the fouth; and the other Capo-di Lugary, which is leated to the north. I he principal towns are Cagliari the capital, Orillagno, and saflari.
\(\mathrm{O}_{2}\)
S.ARDIS,

Satis SARDIS, or SARDEs, now called Sardo or Sart, is an ancient town of Natulia in Affa, about 40 miles ealt of Snyyrna. It was nuch celebrated in carly antiquity, was curiched by- the fertility of the foil, and had been the capital of the L.jdian kings. It was feated on the fide of mount Tholus; and the citadel, placed on a lofty hill, was remarkable for its great flrength. It was the feat of King Crofus, and was in lis time taken by Cyrus; after which the Perfian Satrapas or conmandant relided at Sardis as the emperor did at Sufa. The city was alfo taken, burnt, and then evacuated by the Milefrans in the time of Darius, and the city and fortrefs furrendered on the approach of Alexander alter the battle of Granicus. Under the Romans Sardis was a very conliderable place till the time of Tiberius \(\mathbf{C x}\) far, when it fuffered prodigiounly by an earthquake. The munificence of the emperor, howewer, was nobly exerted to repair the various damages it then fuftained. Julian attenpted to reftore the heathen worhip in the place. He erected temporary altars where none had been left, and repaired the temples if any veftiges iemained. In the year 400 it was plundered by the Goths, and it fuffered confiderably in the fubfequent troubles of Afia. On the incurfion of the Tartars in 130, the Trurks were permitted to occupy a portion of the citadel, Separated by a ftrong wall with a gate, and were afterwards murdered in their fleep. 'The fite of this once noble city is now green and flowery, the whole being reduced to a poor village, containing nothing but wretched huts. There are, however, fome curious remains of antiquity about it, and fone ruins which diffilay its ancient grandeur. Sce Chandler's Travels in -4ia Minor, p. 251, \&ce.

There is in the place a large caravanfary, where travellers may commodioufly lodge. The inhabitants are generally thepherds, who lead their theep into the fine paitures of the neighbouring plain. The Turks have a mofque here, which was a Chriftian church, at the gate of which there are feveral columns of polifhed marble. There are a few Chritians, who are employed in gardening. E. Long. 28. 5. N. Lat. 37.5 i.
SARDONIUS risus, Sardonian Laughter. A convulise involuntary laughter; thus named from the herba fardonia, which is a fpecies of ranunculus, and is faid to produce fuch convulfive mutions in the cheeks as refemble thofe motions which are obferved in the face during a fit of laughter. This complaint is fometimes fpeedily fatal. If the ranunculus happens to be the caufe, the cure mull be attempted by means of a vomit, and frequent draughts of hydromel with milk.

SARDONYX, a precious flone confifting of a mix. qure of the chalcedony and earnclian, fometimes in Itrata, bu: at other tinnes blended together. It is found, 1 . Striped with white and red ftrata, which may be cut in cameo as well as the onyx. 2. White with red dentritical figures, greatly refembling the mocha-ftone; but with this difference, that the figures in the fardonyx are of a red colour, in the other black. There is no real difference, excepting in the circumftance of hardnefs, between the onyx, carnelian, chalcedony, fardony \(x\), and apate, notwithftanding the different names beftowed upon them. Mongez informs us, that the jellow, or orange-coloured agates, with a wary or undulating furface, are now conmonly called fardonyx. Sce Carwelis: and Onyz.

SaRGUS, in ichthyology. See Sparus.
SARIMPATAM, a country of Indottan, lying at the back of the dominions of the Samorin of Malabar, and which, as far as we know, was never fubdued by any foreign power. Mr Grofe relates, that "it has been confantly a maxim with the inhabitants of this country never to make any but a detenfive war; and even then, not to kill any of their adverfaries in battle, but to cut off their nofes. To this fervice the militaiy were peculiarly trained up, and the dre id of the deformity proved fufficiently ftrong to keep their neighburs, not much more martial than themfelves, frome effectually attacking them."

SARMENTOS压 (from furmentum, a long fhoot like that of a vine); the name of the 1 ith clafs in Linneus's Fragments of a Natural Method, conflling of plants which have clinbing flems and branches, that, like the vine, attach themelves to the bodies in their neighbourhood for the purpofe of fupport. See Botany, P. 459 ,

SAROTHRA, in botany: A genus of the trigynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 20th order, Rotacea. The corolla is pentapetalous; the capfule unilocular, trivalved, and coloured.

SARPLAR of Wool, a quantity of wool, otherwife called a pocket or balffack; a fack containing 80 tod; a tod two flone; and a fone 14 pounds.In Scotland it is called farpliath, and contains 80 ttone.

SARRACONIA, in botany: A genus of the monogyinia order, belonging to the polyandria clafs of plants; and in the natural method ranking under the \(54^{\text {th }}\) order, Mifcellanea. The corolla is pentapetalous; the calyx is double, and triphyllous below; pentaphyllous above ; the capfule quinquelocular ; the llyle has a ftigma of the furm of a thield.

SARSAPARILLA, in botany. See Smilax.
SARTORIUS, in Anatomy. See there, Table of the Mufles.

OldSARUM, in Wilts, about one mile north of New Sarum or Salifbury, has the ruins of a fort which belonged to the ancient Britons; and is faid allo to have been one of the Roman Itations. It has a double intrenchment, with a deep ditch. It is of an orbicular form, and has a very augult look, being erected on one of the moft elegant plans for a fortrefs that can be ima. gined. In the north-weft angle tlood the palace of the bifhop, whofe fee was removed hither from Wilton and Sherborn ; but the bifhop quarrelling with King Stephen, he feized the caftle and put a garrifon into it, which was the principal caufe of its deftruction, as the fee was foon after removed from hence to Salifbury in1219. The area of this ancient city is fituated on an artificial hill, whofe walls were three yards thick, the ruins of which in many places in the circumference are ftill to be feen, and the tracks of the ftreets and cathe. dral church nay be traced out by the different colou: of the corn growing where once the city ftood. Here fynods and parliaments have formerly been held, and hither were the flates of the kingdom fummoned to iwear: fidelity to William the Conqueror. Here alfo was a palace of the Britilh and Saxon kings, and of the Roman emperors; which was deferted in the reign of Henry 1II. for want of water, fo that one fam-houfe is all that is left ot this ancient city ; yet it is called the Bow
um rough of Oll Sarum, and fends two members to parliament, who are chofea by the proprietors of certain adjacent lands.

In February 1795 a fubterraneous paflage was difcovered at this place, of which we have the following account in the Gentleman's Magazine for March, in a letter dated Salibury, Feb. 10. "Some perfons of Salifbury on Saturday laft went to the upper verge of the fortification (the citadel), and on the right-hand, after they had reached the fummit, difcovered a large hole. They got a candle and lantern, and went down a flight of Ateps for more than 30 yards. It was an arehed way feven leet wide, neatly chificled out of the fnlid rock or chalk. It is probable the crown of the arch gave way from the fivden thaw, and fell in. 'There is a great deal of rubbith at the entrance. It appears to be between fix and feven feet high, and a circular arch overhead all the way. Thefe particulars 1 learned from the perfon who himfelf explored it ; but was afraid to go farther left it might fall in again and bury him. He thinks it turns a little to the right towards Old Sarum houfe, and continues under the foffe till it reached the outer verge. The marks of a chiffel, he fays, are vifible on the fide. There are two large pillars of fquareitone at the entrance, which appear to have had a door at foot. They are 18 inches by \(\mathbf{2 7}\), of good free-ftone, and the mafon-work is extremely neat. The higheft part of the archway is two feet below the furface of the ground.
"It is all now again filled up by order of farmer Whitchurch, who rents the ground of Lord Camelford, and thinks curiofity would bring fo many people there as to tread down his grals whenever grafs thall be there. I went into it 30 yards, which was as far as I could get for the rubbin. I meafured it with a line, and found it extend full 120 feet inwards from the two pillars fuppofed to be the entrance; then onwards it ap. peared to be filled to the roof with rubbifh. By meafuring with the fame line on the furface of the earth, I found it muft go under the bottom of the outer bank of the outer trench; where I think the opening may be found by digging a very little way. : Whether it was a Roman or a Norman work it is difficult to fay ; but it certainly was intended as a private way to go into or out of the cattle; and probably a fort or ftrong caftle was built over the outer entrance. I looked for infcriptions or coins, but have not leard of any being found."

SaSAFRAS. See Iaverus.
SASHES, in military drefs, are badges of ditinction worn by the officers of molt nations, either round their waik or over their thoulders. Thote for the Britifh army are made of crimfon filk : for the Imperial army crimfon and gold; for the Prufian army black tilk and filver; the Hanoverians yellow tilk; the Porsuguele crimfon filk with blue taffels.

SASINE, or Selsik. Sec Latw, No elsiv. 15 , Ec.

SASSA. See Mqzrrh, Opocalpasem, and Brace's Traveis, Vol. V. p. 27, sic.

SA'T AN, a name very common in Scripture, means. the devil ur chief ot the fallen angels. Sec Devil.
S. I TELLITE, in aftronomy, the fame with a fecosday planet or moon.

SATIRE. See Satyr.
Satrapa, or Satrapes, in Perfian antiquity, denotes an admiral; but more commonly the governct of a province.

SATM'IN, a glofly kind of filk fluff, the warp of which is very fine, and ftands fo as to cover the coarfer woof.
S.ITTIINET, a night thin kind of fattin, commoniy Ariped, and ordinarily ufed by the ladies for fumnier night-gowns.
SA IURANTS, in anatomy, the fame with Az. SORBENTS.
SATURATION, in chennitry, is the impregnating an acid with an alkali, or vice verfu, till eithes will receise no more, and the mixture will then become neutral.
SATURDAY, the fewenth and laft day of the week, fo called from the idol Seater, worfhipped on this day by the ancient Saxons, and thought to be the fanne as the Saturn of the Latins.
SATUREIA, sarory, in botany: A genus of the gynnoipermia order, belonging to the didynarria clafo of plants; and in the natural method ranking under the 42d order, Verticillate. The fegments of the cooolla are nearly equal; the flamina ftanding afunder.

Species. 1. The hortenfis, or fummer favory, is an. annual plant, which grows naturally in the fouth of France and Italy, but is cultivated in this country bock for the kitchen and medicinal ufe. 2. The montana, or winter favory, is a peremnial plant growing naturally in the fouth of France and Italy, but is cultivated iz gardens both for culinary and medicinal purpares.
Culture. Botb kinds are propagated b; feeds. Thore of the firt kind fhould be fown in the beginaing of A. pril upoo a bed of light earth, cither where they are to remain, or for tranfplanting. If the planta are to !tand unremoved, they thould be fown thinly; but if they are to be tranfplanted, they may be fown clofer. The fecond fpecies may be fown upon a poor dry foil, where the plants will endure the fevere!t winters, though they are often killed by the fruft when planted in good ground. The plants will continue feveral years; but when they are old, 'the fhoots will be fhot and not fo well furnifhed with leaves : it will therefore be proper to raife a fupply of young plants every year.
Lfes. Surmmer favory is a very warm pungent aromatie; and affords in difillation with water a fubtile effential oil, of a penetrating finell, and very hot acric talte. It yields little of its vilues by infurion to aqueous liquors ; restiied fpirit extrats the whole of iss tafte and fmell, and clevates nothing in dillillation.
SATURN, in aftronomy, one of the planets of our folar fyftem, revolving at the diflance of more than 900 millions of miles trom the lin. See Astronomy, n 31, 104-109, 191, and 269.
1)r Herfichel, who has to auch fignalized himfelf by his difcoveries in the celeftial regions, has not omited to make his ubfer vations on this plauct, which he cunfiders as one of the miof enga ing objects shat allonomy offers to our view. His atteution was tirft drawn to it in the year \(177+\), when le faw its ring retenblins. in appearance a narrow line. extendins on \(b\) th tides not much lefs than the dianeter of the planet's dikh. The oblervation was taken with a fire and an hals teet reAcclus.

\section*{S A T} flefem on the \(17^{\text {th }}\) of March ; and on the 3.1 of April, the fame year, when the planet appeared totally dipuised of this noble appendage, hy reafon of the edge of the ring being then turned directly towards the carth, and invifible on account of its thinnefs or incapacity to reflect the light to fuch a diflance. Durinf the fuc. cecding year, the ring appeared gradually opered, and at laft affumed the fhape of an ellipfe. "It Should be noticed (fays he), that the black difik or belt upon the ring of Saturn is not in the nuddle of its breadth. Nor is the ring fubdiviled by many fuch lines, as has been reprefented in ferral treatices of allronomy; but that there is one fingle, dark, confiderably broad line, belt, or zone, upon the ring, which I have alo *ays permanently found in the place where my figure reprefents it."

This zone, which is on the northern part of the ring, does not chanse its flape or colour like the belts of tupiter, fo that it is probably owing to fome permanent proiection. It cannot, however, be the fhadow of a chain of mountains, as it is vilible all round the ring ; and there could be no fhades vifible at the ends of the anfix, on acement of the direction of the fun's illunnintion, which would be in the line of the chain; and the fupposed ar:Hment will hold good anainft the fuppofition if caverns or corcavities. It is likewife evident, that this cark zone is containd between two concentric circles, as all the phenomena anfuer to the projection of fuch a zone. The Doftor gives a figure, reprefenting the planet as it appeared to him on the soth of Nay \(178=\); whence we fee that the zone is continued all the way round, with a gradual decreafe towards the middle, anfwering to the aprearance of a narrow circular plane projected into an ellipfis. Stee Philofoph. Tranf, for \(1790, \mathrm{p} .3\), \&c.

It hath been conjectured, that this appearance is owing to a divifion of the rine, or rather that there are two rings about the planet ; "but (tays Dr Herichel) if one ring, of a breadth fo confiderable as that of Saturn, is junlly to be efteemed the moft wonderful arch that by the laws of gravity can be held to ether, how improbable nult it appear to fuppofe it fubdiviled into sharrow flips of rings, which b; this feparation will be deprived of a fufficient cepth, and thus lofe the ouly dimenfon which can keep then from falliug upon the Ilanet? It is true, irdeed, that it may revolve with fuch velocity as greatly to afinit its frength, and that in the fubdivifions, of courfe, the different velucities for each divifion mav be equally fuppofed to keep them up."

As to the fubftance of the ting, the Doetor fuppofes it to be no lefs folid than that of Saturn limfelf. Thus in the two figures given with the Doctor's Differtation in the Plilofophical Tranfactions abuve refered to, the fhadow of the plant is delineated upon the ring as it aftually appeared, according to the fituation of the fun; and in like manner we will fee the thadow of the ring wpon the planet : and if we dednce the quantity of matter contained in the planet from the power by which the fatcoites are peferved in their orbits, the ring muft alio be taken into account. It is indecd evident that the ring exerts a very confiderable force upon thefe bodies, fince we find them afficted whn many irregularities in their motions, which we cannot properly afcribe to any ather caufe than the quantity of natter contained in the ring; or, at lean, it ougte to be allowed to have a proper fhare in producing thean.

The ring feems to be enlowed with a greater wefleetive power than the body of the phanet ; and the Doctor gives inftances of his lecing part of the ring highter than Saturn himfelf, as well as of his feeime it plainly through a telefcope which could [carcely afford light enough for the planet. The not remakable proper. ty of thes wonderful ring, however, is is extreme thinnefs. "When we were nearly in the plane or the ring (fays our author), I have repeatedly feen the firt, fecond, and third fatellites, nay even the fixth and feventh. pafs hetore and behind the ring in fuch a manner that ti.ey ferved as excellent micrometers to eftimate its thicknefis. It mas be propur to mention a few inftances, efpecially as they will ferve to folve fome phenomena that have been remarked by other aftronomers, though they have wot been accounted for in a manmer conliftently with other known facts. July 1 heh 1780 , at \(19^{\text {i }} 4^{\prime \prime} 9^{\prime \prime}\), fidercal time, the firit fatellite feened to hang upon the following arm, declining a little towards the nuth, and I faw it gradually adrance upon it towards the body of Satum: ; but the ring was not fo thick as the lucid point. July 23 d , at \(19^{71}+1^{\prime \prime} 8^{\prime \prime}\); the fecoud fatellite was a very litele preceding the ring ; but the ring appeared to be lefs than half the thicknefs of the fatellite. July \(2 \mathrm{y}^{\text {th }}\), at \(20^{n} 15^{\prime} 12^{\prime}\), the fecond fa. tellite was about the niddle, upon the following arm of the ring, and towards the fonth; and the fixth fatellite on the farther end towards the noth; but the arm was thiuner than either of them, Aug. zgth, at \(22^{\mathrm{h}} 12^{\prime} 55^{\prime}\), the third fatellite was upon the ring, near the end of the preceding arm, when the latter fecmed not to be the twurth, or at mof the third part of the ciameter of the fatellite; which, in the fituation it was, I took to be lefs than one fingle fecond in diameter. At the fame time, I alfo faw the feventh fatellite following the third, at a little diltance, in the fhape of a bead unon a thread, projecting on both fides of the fanc arin. Hence alfo we are fure that the arm appeared thimer than the feventh fatellite, which is confiderably Imaller than the fixth, which anain is lefs than the firf A Angult 31 ft , at \(20^{\mathrm{h}} \dot{3} 825\), the preceding arm was loaded about the middle with the thind fatellite. Otaber 15 ih, at \(0^{1} 43^{\prime} 44\), I faw the fixth fatellite, without obitruetion, about the middle of th: preceding arm, though the ring was but barely vilible with my 40 feet reflector, even while the planet was in the meridian. However, we were then a little iuclined to the plane of the ring, and the third fatellite, when it came near its conjunction with the firf, was for fituated, that it mult have partly covered it a few minutes after I loft it behind my houfe. In all thefe obferva. tions, the ring did not in the leaft interfere with my view of the fatellites. October i6th, I fillowed the fixth and ferenth fatullites up to the very dife of the pkanet ; and the ring, which was extremely faint, did not in the leaft obftruct my feeing them gradually approach the difk, where the feventh vanifhed at \(21^{\mathrm{b}} 46^{\circ}\) \(4 t^{\prime}\), and the fixth at \(22^{\mathrm{h}} 3^{6} 44^{\prime \prime}\). There is, however. fume fufpicion, that hy a refraction through fome very rare atmofphere on the two planes of the ring, the fatellites micht be lifted up and depreffed fo as to become viible on both files of the ring, even though the later hiould be equal in thicknefs to the diameter of the fmallen fatellite, which may anount to 1000 milcs. As for the arguments of its inceredible thinnefs, which

\section*{S A T} its beins in ifil).e when the earth paffes through its plane, we cannot fet much value upon them; for they muit have fuppofed the edge of the ring, as they have alfo reprefented it in their foures, to be fquare; but there is the greateft reafon to fuppofe it either Spherical or fphernidal ; in which caíe evidently the ring canoot difappear for any long time. Nay, I may venture to fay, that the ring cannot poffibly difappear, on account of its thinnefs: fince, either from the edge or the fides, even if it were fouare on the corners, it mult always expole to our fight fome part which is illuminated by the rays of the fun: and that this is plainly the cale we may conclude from its being vifible in my telefcopes durieg the time when others of lefs light had loft it ; and when evicently we were tumed towards the unenlightened fide, fo that we muft either fee the rounding fide of the unenlightened edge, or elfe the reflection of the light of Saturn upon the fide of the darkened ring, as we fee the reflecied light of the earth on the darkened part of the new moon. I will not, however, take upon ine to decide which of the two mar be the cafe, efpecially as there are other very firons reafons which induce us to think that the edge of the ring is of fuch a nature as not to reflect much light."

Several afronomers have fuppofed that the ring of Saturn is full of mountains and inequalities, like the moon ; and of this opinion Dr Herfchel himfelf was for a contderable time, till happenins to obferve one of thele lucid points with aitention ticr a confiderable time, he faw it leave the rins a'together, and fhow itfell as a fatellite never before obferved. With regard to the ring itfelf, he concludes his obfervations hit thele words: "Upon the whole, therefore, I cannot fay that I had any one inftance that could induce me to believe that the ring was not of one uniform thicknefs; that is, equally thick at equal diftances from the centre, and of an equal diameter throushout the whole of its conitruction. The idea of protuberant points upon the ring of Saturn, indeec, is of itfelf fufficient to render their exiftence inadmiffible, when we confider the enormous fize which fuch points ought to be of to render thens vifible at the diftaree we are from that planet.

With regard to the fatellites, the Doctor infurms us, that he was long convinced of the exifence of a fixth ; and had he been more at leifure at the time of his difcovering thofe of the Georgium Sidus, he would probably have completed the difcovery of the fatellites of Saturn alfo. The fixth was firft obferved diftinctly on the 28th of Augult 1789, and the feverth on the 1 ;ith of September the fame year. Thefe fatellites, however, do not occupy the place which we fhould have previouny fuppofed them, being, in fact, the innermof of the whole. The feventh is next the budy of the planet itfelf, and is very fmall. It revolves at the diftance of 27.4366 from the centre of Saturn, and feems to move exactly io the plane of the ring; but the Doetor nbferres, that it is exceedingly difficult to make a fufficient number of obfervations on it to determine the revolution exa\&ly. He computes its periodical time at \(22^{h} 40^{\prime} 46^{\prime \prime}\). The fixth fatellite is next to the feventh, and revolves at the diffance of \(35^{\prime \prime}\).c 58 from the centre of its primary in \(108^{\circ} 53^{\prime} 9^{\prime \prime}\). Its light is confiderably Grong, but not equal to that of the firt fatcllite of former attronomers, which lies imnediately beyond it.

The planet Saturn is now ohferved to hare bels of \(5_{2}\) urn fafeice upon its dilk as difinely as Jupiter. D: Hesfchel, on the gth of April \(37-5\), obferved a northern belt on his body, inclined a litule io the line of the ring. On the ift of May \(15-6\), there was another beit obferved, inclined about 1 io to the fame line, but fowre to the fouth; and on the fullowine inde came up is the place where the ring crofles the body of the planer. On the Sth of A pril two behs were obferved, and theie continued with variations, and fomctines the applarance of a third belt, till the 8 th of Septernber, when the account of the obfervations was difontioued. The Ductor remarks, that he generally obferved theie beis in equatorial fituations, though fometimes it was otherwife. Two conclufions, he fays, may be drawn trom the obfervations he made this year. "The firt, which relates to the changes in the appearance of the belts, is, that Saturn has probably a very conficerable atmon fphere, in which theie changes take place, juft a: the alterations in the belts of jupiter have becn fewn with great probabil ty to be in his atmofphere. This has a!to been confirmed by other obfervations. Thu, in occultations of Saturn's fatcllites, I have found them to hang to the dik for a long while before :ley would ranith. And though we ougl.t to make fome allowance for the eucroachment of li-ht, whereby a iatellite is feen to reach up to the dik fooner than it actually does, yet without a confiderable refraction it could hardly be kept fo long in view after the apparent contast. 'lhe time of hanging upon the difk ir the feventh fatellite has aftually amounted to 20 minutes. Now, as i:s quick motion during that interval carries i: through an aich of near fix degrees, we find that this would dtnote a refraction of about two feconds, provided the encroaching of light had no thare in producing the etfect. By an obfervation of the fixth fatellite, the rtfraction of Saturn's atmo'phere amounts to nearly the fame quantity ; for this fatellite remained about 14 or 15 minutes lone er in view than it fhould have done; and as it moves about \(2 \frac{3}{2}\) degrees in that time, and its orbit is larger than that of the feverth, the difference is inconfiderable. The next inference we may draw from the appearance of the belts on Saturn is, that this planet turns upon an axis which is perpendicular to his ring. The arrangement of the belts, during the courfe of 14 years that I have oblerwed them, has always followed the direction of the ring, which is what I have called being equatorial. Thus, as the ring opened, the belts began to advance towarcls the fouth, and to flow an incurvature anfwering to the prejetion of an equatorial line, or to a parallel of the fanc. When the ring clofed up, licy returned towards the nurth, and are nuw, while the ring pafies ever the centre, exactly ranging with the fhadow of it, on the body; generally one on each fide, with a white belt clofe to it. When I fay that the beits have always been equatorial, I pafs over trifling exceptions, which certainly were owing to lucal caufes. The ftep from equatorial belts to a rotation on an axis is fo caly, and, in the cafe of Jupiect, fo well afcertained, that I fhall not hefitate to take the fame confequence for granted here. But if there could semain a doubt, the oblervations of June 19 th, zoth, and 21 it, \(178=\), where the fame foot upon one of the belts was feen in thrce differcot fituations, would remove it completcly."

\section*{S A T [ 664 ] S A T}

Another evidence that Saturn, as well as the other planets, revolves upon its axis, is drawn from its flattened Thape, like thist of Mars, Jupiter, and Saturn. On the \(3^{\text {ift }}\) of May 178 t , the difk feemed to deviate as much from a turue circle as that of Jupiter, though by the interference of the ring this could not be fo well determined as after an interval of eight yeaw. On the 18th of Augult 1787 , the difference between the equatorial and polar diameters was meafured, the mem of three obferiations of the former being \(22^{\prime \prime} .81\), of the latter \(20^{\prime \prime} .51\). From thefe obfervations, it appears that the polar diameter of Saturn is to his equatorial diameter nearly as 10 to 1 T ; and that his axis is perpendicular to the plane of the rins.

In a fublequent paper, the Doctor gives up his rea* foning againft fixed lucid points in the ring, in confequence of having frequently obferved them in fuch fituations as could not by any means be accounted for by the fatelifes. He even attempts to invalidate his own arguments above-mentioned concerning the vaft magnitude of the mountains neceffary to make them vifible at this diftance. "As obfervations (fays he) eareful. ly made fhould always take the lead of theories, I hall not be concerned if fuch lucid foots as I am now going to admit, flould feem to contradict what has been faid in my laf paper concerning the idea of inequalitics or protuberant points. We may, however, remark, that a lucid and apparently protuberant point may exift without any great inequality in the ring. A vivid light, for infance, will feem to project greatly beyond the limits of the body on which it is placed. If, therefore, the luminous plaecs on the ring fhould be fuch as proceed from very bright refeeting regions, or, which is more probable, owe their exifence to the more fluctuating caufes of inherent fires acting with great violence, we need not imagine the ring of Saturn to be very uneven or difforted, in order to prefent us with fuch appearances. In this fenfe of the word, then, we may itill oppofe the idea of protuberant points, fuch as would denote immenfe mountains of elevated furface.
"On comparing together feveral obfervations, a few trials niew that the brighteft and beft obferved fpot agrees to 2 revolution of \(10^{\text {h }} 3^{2^{\prime}} 15^{\prime \prime} \cdot 4\); and caleulating its dillance from the centre of Saturn, on a fuppofition of its being a fatellite, we find it 17.227 , which brings it upon the ring. It is therefore certain, that unlefs we fhould imagine the ring to be fufficiently fluid to allow a fatellite to revolve in it, or fuppofe a notch, groove, or divifion in the ring, to fuffer the fatellite to pals along, we sught to admit a revolution of the ring itfelf. The denfity of the ring, indeed, may be fuppofed to ke very iuconfiderable by thofe who imagine its light to be rather the effect of fome Chining fluid, like an aurora borealis, than a reflection from fome permanent fubfance; but its difapparition, in general, and in my telefcopes its faintncfs, when turncd edgewife, are in no manner favourable to this idea. When we add alfo, that this ring calts a deep fladow upon the planet, is very fharply defined both in its euter and inner edge, and in brightnefs exceeds the planet itfelf, it feems to be alnooft proved that its confiftence cannot be lefs than the body of Saturn, and that confequently no degree of fluidity can be admitted fufficient to permit a revolving body to keep in motion fer any length of time. A groove might afford a paf-
fage, efpecially as on a former occafion we have aio ready confidered the idea of a divided ring. A circum. ftance alfo whieh feems rather to favour this idea, is, that in fome obfervations a bright fpot has been feen to project equally on hoth fides, as the fatellites have been obferved to do when they paffed the ring. But, on the other hand, we ought to confider, that the fpot has often been obferved very near the end of the arms of Saturn's ring, and that the calculated diftance is confequently a little too fmall for fueh appearances, and ought to be 19 or 20 feconds at leaft. We fould alfo attend to the fize of the foot, which feems to be variable: for it is hardly to be imagined that a fatelite, brighter than the fixth, and which could be feen with the moon nearly at full, fhould fo often efcape our notice in its frequent revolutions, unlefs it varied much in its apparent brightnefs. To this we muft add another argrument drawn from the number of lucid fpots, which will not agree with the motion of one fatellize only; whereas, by admitting a revolution of the ring itfelf in \(10^{\text {h }} 32^{\prime} 15 \cdot+\), and fuppofing all the fpets to adhere to the ring, and to thare in the fame periodical return, provided they laft long enough to be feen many times, we fhall be able to give an ealy folution of all the remainiug phenomena. Sce Phil. Tranf. \({ }^{7} 790\), p. 427.

Saturng in chemiltry, an appellation given to lead.

Saturn, in heraldry, denotes the black colour in blazoning the arms of fovereign princes.

Saturn, one of the principal of the Pagan deities, was the the fon of Colus and Terra, and the father of Jupiter. He depofed and callrated his father; and obliged his brother 'Titan to refign his crown to him, on condition of his bringing up none of his male iffue, that the fucceffion might at length devolve on him. For this purpofe he devoured all the fons he had by his wife Rhea or Cybele: but the bringring forth at one time Jupiter and Juno, the prefented the latter to her hufband, and feut the boy to be nurfed on mount Ida; when Saturn being informed of her having a fong demanded the child; but in his ftead his wife gave him a ftone fwaddled up like an infant, which he initantly fwallowed. Titan fincing that Saturn had violated the contract he had inade with him, put hinlelf at the head of his children, and made war on his brother, and hae ving made him and Cybele prifoners, conined them in Tartarus 1 but Jupiter being in the mean time grown up, raifed an army in Crete, went to his father's affiltance, defeated Titan, and reftored Saturn to the throne. Some time after, Saturn being tuld that Jupiter intended to dethroue him, endeavoured to prevent it ; but the latter being informed of his intention, depofed his father, and threw him into Tartans. But Saturn efcaping from thence fled into Italy, where he was kindly received by Janus king of the country, who affociated hiin to the government: whence Italy obtained the name of Suturnia Tellus; as allo that of Latium, from latio, "to lie hid." "There Saturn, by the wifdom and mildnefs of his government, is faid to have produced the golden age.

Saturn is reprefented as an old man with four wings, armed with a feythe; fometimes he is delineated under the iggure of a ferpent with its tail in its mouth. This is emblematic of the feafons, which roll perpetually in the fame circle, Sometimes alfo Saturn is painted
urnalia with a fand.glafs in his hand. The Greeks fay, that the ftory of his mutilating his father and deftroying his children is an allegory, which figuifies, that Time devours the paft and prefent, and will alfo devour the future. The Romans, in honour of him, built a temple and celebrated a feftival, which they called \(S a\). turnalia. During this fettival no bufinefs or profeffion was allowed to be carricd on except cookery; all diftinctions of rank ceafed; flaves could fay what they pleafed to their mafters with inpunity; they could even rally them with their faults before their faces.
SATURNALIA, in Roman antiquity, a feftival obferved about the middle of December, in honour of the god Saturn, whom Lucan introduces giving an account of the ceremonies obferved on this occation, thus. "During my whole reign, which latts but for one weck, no public bufinefs is done; there is nothing but drinking, finging, playing, creating imaginary kings, placing fervants with their mafters at table, \&c. There fhall se no difputes, reproaches, \&c. but the rich and poor, mafters and flaves, fhall be equal," \&c.

On this feftival the Remans facrificed bare-headed, contrary to their cuftom at other facrifices.

SATURNINE, an appellation given to perfons of a melancholy difpofition, as being fuppoled under the influence of the planet Saturn.

SATURNITE, a name given by Mr Kirwan to a new metallic fubitance, fuppofed to be difcovered by M. Monnet. It was met with in fome lead founderies at a place named Poulla ouen in Brittany; being feparated from the lead ore during its torrefaction. It refembles lead in colour, weight, folubility in acids and other propertics, but differs from it in being more fufible, brittle, eafily fcorified and volatilized, and likewife not being mifcible with lead in fution. Meffeurs Haffenfratz and Girond contended, that this faturnite was nothing but a compound of different fubllances, and accordingly gave an analyfis of it as confifting of lead, copper, iron, filver, and fulphur; the proportions of which muft natusally vary according to the quality of the ore put into the furnace. M. Monuet, however, infifted that the fubflance analyfed by them was not that which he had difcovered; but when he again vifited the mines abovementioned, he could meet with none of the fubtance there which he found before.

SATYAVRATA, or Menu, in Indian mythology, is believed by the Hindoos to have reigned over the whole world in the earlieft age of their chronology, and to have refided in the country of Dravira on the coaft of the eaftern Indian peninfula. His patronymic name was Vairafwata, or child of the fun. In the Bbagavat we are informed, that the Lord of the Univerfe, intending to preferve him from the fea of deftruction, caufed by the depravity of the age, thus told him how he was to act. "In feven days from the prefent time, O thou tainer of enemies, the three worlds will be plunged in an ocean of death; but, in the mided of the deitroying waves, a large veffel, fent by me for thy ufe, fhall it and before thee. Then thalt thou take all medicinal herbs, all the variety of feeds; and, accompanied by feven faints, encircled by pairs of all brute animals, thou fhalt enter the fpacious ark and continue is it, fecure from the flood on one immenfe ocean withont light, execpt the radiance of thy holy cotnpanions. When the thip fhall be agitated by an impetuous wind, thou Vol. XVI. Part II.
flaty laften it with a lare fea-ferpent on wry lign ; for I will be near thes: drawing the veftet, with thee and thy attendants, I will remain on the ocean, O chief of men, uritil a night of Brahmi fhall be comple?ely endel. 'Thou that then know my true greatnefs, rifhtly ma. med the fupreme Godlead; by n!y favour, all thy quc! tions fhall be anlwored, and thy mind abondantly in:Itructed." All this is faid to have been accomplifhed ; and the itory is evidentiy that of Noah difguifed by \(A\). fiatic fiction and allegory. It proves, as Sir TVilliam Jones has right!y obferveci, an ancient Indian tradition of the univerfal deluge deferibed by Mofes; and enables us to trace the connection between the eaftern and weflern traditions relating to that event. The fame leamed author has hown it to be in the highet degree probable, that the Satyaurata of India is the Cronus of Greece and the Saturn of Italy. Sce Saturn ; and Afatio Refearches,
Vol. I. p. 230, \&ec. Vol. I. p. 230, \&c.
SATYR, or SATIRE, in matters of literature, a difcourfe or poem, expofing the vices and follies of mankind. See Ponetry, Part II. Sect. x.

The chief fatirits among the ancients are, Horace, Jnvenal, and Perfius: thofe among the moderns, are, Regnier and Boileau, in French; Butler, Dryden, Rochefter, Buckingham, Swift, Pope, Young, \&c. among the Englifln; and Cervantes ainong the Spaniards.

SATYRIASIS. See Medicine, n 372.
SATYRIUM, in botany : A genus of the diandria order, belonging to the gynandria clafs of plants; and in the natural method ranking under the 42 d order, Fericillate. The nectarium is ferotiform, or infated double behind the flower.

SATYRS (in ancient mythology), a fpecies of demi gads who dwelt in the woods. I hey are reprefented as monfters, half-men, and half-goats; having homs on their heads, a hairy body, with the feet and tail of a goat. They are generally in the train that follow's Bacchus. As the poets fuppofed that they were remarkable for piereing eyes and keen raillery, they have placed them in the fame pietures with the Graces, Loves, and even with Venus herfelf.

SAVAGE (Richard), one of the moft remarkable charasters that is to be met with perhaps in all the re. cords of biography, was the fon of Anne countefs of Macclesfied ty the earl of Rivers, according to her own confeffion; and was born in 1698. This confeffion of adultery was made in order to procure a feparation from her hurband the earl of Macclestield: yet, having obtained this defired end, no fooner was her lpurious offspring brought into the world, than, without the dread of thance er poverty to excufe her, fie difeovered the refolution of difowning him; and, as long as he lived, treated him with the mof unnatural cruclty. She delivered him over to a poor woman to edncate as her own; prevented the earl of Rivers from leaving him a legacy of \(L .6000\), by declaring him dead; and in effect deprived him of another legacy which his godnother Mrs Lloyd had left him, by concealing from him lis birth, and thereby readering it impoffible for him to profecute his claim. She endeavoured to fend him iecretly to the plantations; but this plan being cither luid afide or frultrated, fhe placed him apprentice with a fhoemaker. In this fituation, however, he did not long coutinue: for his nurfe dying, he went to take care of the effects of bis fuppofed mother; and found in \(\xrightarrow{4} \mathrm{P}\)

\section*{S A V [ 666 ] S A V}

Savage. her boxes fome letters which difcovered to young Sa. vage his birth, and the caufe of its concealment.

From the moment of this difcovery it was natural for him to become diffatisfied with his fituation as a fhoemaker. He now conceived that he had a right to fhare in the affluence of his real mother ; and therefore he directly, and perhaps indifcreetly, applied to ber, and made ufe of every art to awaken her tendernefs and attract her regard. But in vain did he folicit this unnatural parent; She avoided him with the utmoft precaution, and took meafures to prevent his ever entering her houle on any pretence whatever.

Savage was at this time fo touched with the difcovery of his birth, that he frequently made it his practice to walk before his mother's door in hopes of feeing her by accident; and often did he warmly folicit her to admit him to fee her; but all to no purpole : he could neither foften her heart nor open her hand.

Mean time, while he was alfiduoully endeavouring to roufe the affections of a mother in whom all natural affection was extinet, he was deftitute of the means of fupport, and reduced to the miferies of want. We are not told by what means he got rid of his obligation to the fhoemaker, or whether he ever was actually bound to him; but we now find him very differently employed in order to procure a \{ubliftence. In fhort, the youth had parts, and a Atrong inclination towards literary purfuits, efpecially poetry. He wrote a poem; and afterwards two plays, Womon's a Riddle and Love in a Veil: but the author was allowed no part of the profite from the fift ; and from the fecond he received no other advantage than the acquaintance of Sir Richard Steel and Mr Wilks, by whom he was pitied, careffed, and relieved. However, the kindnefs of his friends not affording him a contant fupply, he wrote the tragedy of Sir Thomas Overbury; which not only procured him the efteem of many perfons of wit, but brought him in 2001. The celebrated Aaron Hill, Efq; was of great fervice to him in correcting and fitting this piece for the ftage and the prefs; and extended his patronage ftill farther. But Savage was, like many other wits, a bad manager, and was ever in diftrefs. As faft at his friends raifed lim out of one difficulty, he funk into another; and, whe \(n\) he found himfelf greatly involved, he wonld ramUle about like a vagabond, with fcarce a flirt on his back. He was in one of thefe fituations all the time wherein he wrote his tragedy above-mentioned; without a lodging, and often without a dinner: fo that he ufed to fcribble on fcraps of paper picked up by accident, or begged in the fhops, which he occafionally ftepped into, as thoughts occurred to him, craving the favour of pen and ink, as it were juft to take a memorandum.

Mr Hill alfo earnctly promoted a fubfcription to a volume of Miforllanies, by Savage; and likewife furniohed part of the poems of which the volume was compofed. To this mifcellany Savage wrote a preface, in which he gives an account of his mother's cruelty, in a very uncommon ftrain of humour.

The profits of his Trasedy and his Mifcelianies together, had now, for a time, fomewhat raifed poor Savage both in circumftances and credit; fo that the world juft began to behold him with a more favourable eye than formerly, when both his fame and life were endangered by a mof unhapyy event. A drunken frolic
in which he one night engaged, ended in a fray, and Savage unfortunately killed a man, for which he was condemned to be hanged; his friends earneftly fulicited the mercy of the crown, while his mother as earneftly exerted herfelf to prevent his receiving it. The countefs of Hertford at length laid his whole cafe before queen Caroline, and Savage obtaineda pardon.

Savage had now loft that tendernefs for his mother, which the whole feries of her cruelty had not been able wholly to reprels; and confidering her as an implaca. ble enemy, whom nothing but his blood could fatisfy, threatened to harafs her with lampoons, and to publifh a copious narrative of her conduct, unlefs the confented to allow him a penfion. This expedient proved fuccefsful; and the lord Tyrconnel, upon his promife of laying afide his defign of expofing his mother's cruelty, took him into his family, treated him as an equal, and enga. ged to allow him a penfion of 2001. a-year. This was the golden part of Savage's life. He was courted by all who endeavoured to be thought men of genius, and careffed by all who valued themfelves upon a refined tafte. In this gay period of his life he publifhed the Temple of Heolth and Mirth, on the recovery of lady Tyrconnel from a languihing illnefs; and The Wanderer, a moral poem, which he dedicated to lord Tyrconnel, in Atrains of the higheft panegyric: but thele praifes he in a fhort time found himfelf inclined to retract, being difcarded by the man on whom they were beftowed. Of this quarrel lord 'Iyrconnel and Mr Savage alfigned very different reafons. Our author's known character pleads too ftrongly againft him; for his conduct was ever fuch as made all his friends, fooner or later, grow wealy of him, and even forced moft of them to become his enemies.

Being thus once more turned adrift upon the world, Savage, whofe paffions were very ftrong, and whofe gratitude was very fmall, became extremely diligent is expoling the faults of lord Tyrconnel. He, moreover, now thought himfelf at liberty to take revenge upon his mother.-Accordingly he wrote The Baffard, a poem, remarkable for the vivacity of its beginning (where he finely enumerates the imaginary advantages of bafe birth), and for the pathetic conclufion, wherein he recounts the real calamities which he fuffered by the crime of his parents. -I'be reader will not be difpleafed with a tranfeript of fome of the lines in the opening of the poem, as a fpecimen of this writer's fpinit and manner of verlification.

Bleft be the baftard's birth! thro' wondrous ways,
He fhines eccentric like a comet's blaze.
No fickly fruit of faint compliance be;
He! ftamp'd in nature's mint with ecltafy!
He lives to build, not boalt, a gen'rous race;
No tenth tranimitter of a foolifh face.
He, kindling from within, requires no flame, He glories in a baftard's glowing name.
- Nature's unbounded fon, he ftands alone,

His heart unbias'd, and his mind his own.
-O mother! yet no mother!-'tis to you
My thanks for fuch dittinguif'd claims are due.
This poem had an extraordinary fale; and its appearance happening at the time when his mother was at Bath, many perfons there took frequent opportunities of repeating paffages from the Baftard in her hear-
ing. This was perhaps the firf time that ever the difcovered a fenfe of fhame, and on this occafion the power of wit was very confpicuous: the wretch who had, without fcruple, proclaimed herfelf an adulterefs, and who had firt endeavoured to farve her fon, then to tranfport him, and afterwards to hang him, was not able to bear the reprefentation of her own conduct ; but fled from reproach, though the felt no pain from guilt ; and left Bath with the utmof hafte, to fhelter herfelf among the crowds of London (A).

Some time after this, Savage formed the refolution of applying to the queen; who having once given him life, he hoped the might farther extend hicr goodnefs to him by enabling him to fupport it. - With this view, he publifhed a poem on her birth-day, which he entitled The Volunter-L Laureat; for which the was pleafed to fend him 501. with an intimation that he might annually expect the fame bounty. But this annual allow. ance was nothing to a man of his ftrange and fingular extravagance. His ufual cuftom was, as foon as he had received his penfion, to difappear with it, and fecrete himfelf from his noft intimate friends, till every fhilling of the 501 . was fpent; which done, he again appcared, pennylefs as before: But he would never inform any perfon where he had been, nor in what manner his money had been diflipated. - From the reports, however, of fome who found means to penetrate his haunts, it would feem that he expended both his time and his cafh in the moft fordid and defpicable fenfuality ; particularly in eating and drinking, in which he would indulge in the molt unfocial manner, fitting whole days and nights by himfelf, in obfcure houfes of entertainment, over his bottle and trencher, immerfed in filth and noth, with fcarce decent apparel ; generally wrapped up in a horfeman's great coat; and, on the whole, with his very homely countenance, and altogether, exhibiting an
object the moft difgulting to the fight, if not to fome \(S_{2} / 2=0\) other of the fenfes.

His wit and parts, however, ftill raifed him new friends as faft as his mifochaviour lof him his old ones. Yet fuch was his conduct, that occafional relief only furnifhed the means of occational excefs; and be defeated all attempts made by his friends to fix him in a decent way. He was even reduced fo low as to be deflitute of a lodging; infomuch that he often pafted his nights in thofe mean houfes that are fet open for cafual wanderers; fometimes in celliars amidat the riot and filth of the mof profigate of the rabble; and not fuldorn would lee walk the ftreets till he was weas \(y\), and then lie down in fummer on a bulk, or in winter with his affociates among the afhes of a glafs-houfe.

Yet, amidft all his penury and wretchednels, had this man fo much pride, and fo high an opinion of his own merit, that he ever kept up his fpirits, and was always ready to reprefs, with fcorn and contempt, the leait appearance of any light or indignity towards himfelf, in the behaviour of his acquaintance; among whom he looked upon none as his fuperior. He would be trea!ed as an equal, even by perfons of the higheft rank. We have an inftance of this prepofterous and inconfift. ent pride, in his refufing to wait upon a gentleman who was defirous of relieving him when at the lowelt ebb of diftrefs, only becaufe the meffage fignificd the gentleman's defire to fee him at nine in the morning. Savage could not bear that any one fhould prefume to prefcribe the hour of his attendance, and therefore he abfolutely rejected the proffered kindnefs. This. life, unhappy as it may be already imagined, was yet ren. dered more unhappy, by the death of the queen, in 1738; which Atroke deprived lim of all hopes from the court. His penfion was difcontinued, and the in. folent manuer in which he demanded of Sir Robert

Walpole
(A) Mr Bofwell, in his life of Dr Johnfon, has called in queftion the ftory of Savage's birth, and grounded hie fufpicion on two miftakes, or, as he calls them, falfehoods, which he thinks he has difcovered in his friend's memoirs of that extraordinary man. Johnfon has faid, that the earl of Rivers was Savage's godfather, and gave bim his own name; which, by lis direction, was inferted in the regifer of the parih of St Andrew'so Holborn. Part of this, it feems, is not true; for Mr Bofwell carefully infpedted that regifter, but no fuch entry is to be found. But does this omifion amount to a proof, that the perfon who called himfelf Richard Savage was an impoftor, and not the fon of the earl of Rivers and the countefs of Macclesfield? Mr Bufwell thinks it does; and, in behalf of his opinion, appeals to the maxim falfum in uno, faljum in omribus. The folidity of this maxim may be allowed by others; but it was not without furprife that, on fuch an occafion, we found it adopted by the biographer of Johnfon. To all who have compared his view of a celebrated caufe, with Stuart's letters on the fame fubject addreffed to Lord Mansfield, it mult be apparent, that, at one period of bis life, he would not have deemed a thoufand fuch milkakes fufficicnt to invalidate a narrative otherwife fo well authenticated as that which relates the birth of Savage. The truth is, that the omiffion of the name in the regifter of St Andrew's may be eafily accounted for, withont bringing fagainf the wretched Savage an accufation of impofure, which neither his mother nor her friends dared to urge when provoked to it by every poffible motive that can influence human conduct. The earl of Rivers would undoubtedly give the direction about regiftering the child's name to the fame perfon whom he entrufted with the care of his education; but that perfon, it io well known, was the counteff of Macclesfield, who, as fhe had rcfolved from his birth to difown her fon, would take care that the direction fhould not be obejed.

Tbat which, in Johnfon's life of Savage, Mr Bofwell calls a fecond falfehood, feems not to amount even to a miflake. It is there ftated, that "Lady Macclesfield having lived for fome time upon very uneafy terms with her hufband, thought a public confeffion of adultery the moft obvious and expeditious method of obtaining her liberty." This Mr Bofwell thiaks cannot be true; becaufe, having perufed the journals of both houfes of parliament at the period of her divorce, he there found it authentically afcrtained, that fo far from voluntarily fubmitting to the ignominious charge of adultery, fhe made a frenuous defence by her counfel. But what is this to the purpofe? Johnfon has nowbere faid, that fhe confeffed her adultery at

Suage. Walpole to have it reftored, for ever cut off this confi. derable fupply; which poffbly had been only delayed, and might have been recovered by proper application.

His difirefs now became fo great, and fo notorions, that a fcheme was at length concerted for procuring him a permanent relief. It was ;ropoled that he fhould retire into Wales, with an allowance of 501 . fer annum, on which he was to live privately, in a cheap place, for ever quitting his town-haunts, and refignitig all farther pretenfions to fame. This offer he feemed gladly to accept; but his intentions were only to deceive his friends, by retiring for a while, to write another tragedy, and then to return with it to Londen in order to bring it upon the flage.

In 1739, he fet out for Swanfey, in the Briftol flagecoach, and was furnihed with 15 guineas to bear the expence of his journcy. But, on the 14 th day after his departure, his friends and benefactors, the principal of whom was no other than the great Mr Pope, who expected to hear of his arrival in Wales, were furprifed with a letter from Savage, in forming them that he was yet upon the road, and could not proceed for want of money. There was no other remedy than a remittance; which was fent him, and by the help of which he was enabled to reach Briftol, from whence he was to proceed to Swanfey by water. At Briftol, however, he found an embargo laid upon the fhipping; fo that he could not immediately obtain a paffage. Here, therefore, being obliged to ftay for fome time, he, with his ufual facility, fo ingratiated himfelf with the principal inhabitants, that he was frequently invited to their houfes, diftinguifed at their public entertainments, and treated with a rcgard that lighly gratified his vanity, and therefore eafily engaged his affections. At length, with great reluetance, he proceeded to Swanfey; where he lived about a_year, very much diffatisfied with the
diminution of his falary; for he had, in his letters, treated his contributors fo infolently, that moft of them withdrew thcir fubferiptions. Here he finifhed his tragedy, and refolved to return with it to London : which was ftrenuoufly oppofed by his great and conftant friend Mr Pope; who propofed that Savage flould put this play into the hands of Mr Thomfon and Mr Mallict, in order that they might fit it for the fage, that his friends fhould receive the profits it might bring in, and that the author fhould receive the produce by way of annuity. This kind and prudent fcheme was rejected by Savage with the ntmoft contempt. - He declared he would not fubmit his works to any one's correction; and that he would no longer be kept in leading-Arings. Accordingly he foon returned to Briflol, in his way to London; but at Briftol, meeting with a repetition of the fame kind treatment he lad before found there, he was tempted to make a fecond flay in that opulent city for fome time. Here he was again not only careffed and treated, but the funn of 321 . was raifed for him, with which it had been happy if he had immediately departed for London: Bur he never confidered that a frequent repetition of fuch kindnefs was not to be expected, and that it was poffible to tire out the generofity of his Briftol friends, as be had before tired his friends everywhere elfe. In Mort, he remained here till his company was no longer welcome. His vifits in every family were too often repeated; his wit had loft its novelty, and his irregular behaviour grew troublefome. Neceffity came upon him before he was aware ; his money was fpent, his clothes were worn out, his appearance was fhabby, and his prefence was difyuiftful at cvery table. He now began to find every man from home at whofe houfe he called; and he found it difficult to obtain a dinner. Thus reduced, it would have been prudent in hin to have withdrawn from the place; but prudence and Savage were never acquainted.
the bar of either houle of parliament, but only that her confeffion was public; and as he has taught us in his Dictionary, that whatcver is notorious or generally known is public; public, in his fenfe of the iword, that confeffion certainly was, if made to different individuals, in fuch a manner as fhowed that the was not anxious to conceal it from hér hußand, or to prevent its notoriety. She might, however, have very cogent reafons for denying her guilt before parliament, and for making aftrenuous defence by her counfel; as indeed, had the acted otherwife, it is very little probable that her great fortune would have been refored to her, or that the could lave obtained a fecond hurband.

But Mr Bofwell is of opinion, that the perfon who affumed the name of Richard Savage was the fon of the fhoemaker under whofe care Lady Macclesfield's child was placed; becaufe " his not being able to obtain payment of Mrs Lloyd's legacy muft be imputed to his confcioufnefs that he was not the real perfon to whom that legacy was left." He muft have a willing mind who can admit this argument as a proof of inpofture. Mrs Lloyd died when Savage was in his 1oth year, when he certainly did not know or fufpect that he was the perfon for whom the legacy was intended, when he had none to profecute his claim, to thelter him from oppreffion, or to call in law to the affifance of juttice. In fuch circumflances he could not have obtained payment of the money, unlefs the executors of the will had been infpired from heaven with the knowledge of the perion to whom it was due.

To thefe and a thoufand fuch idle cavils it is a fufficient anfwer, that Savage was acknowledged and patronized as Lady Macclesfield's fon by Lord Tyrconnel, who was that lady's nepbew ; by Sir Richard Steel the intimate friend of colonel Brett, who was that lady's fecond lufband; by the Queen, who, upon the authority of that lady and her creatures, once thought Savage capable of entering his mother's houfe in the night with an intent to murder her ; and in effect by the lady herfelf, who at one time was prevailed upon to give him 501 . and who fled before the Satire of the Bafard, without offering, either hy herfelf or her friends, to deny that the author of that poem was the perfor whom he called himfelf, or to infinuate fo much as that he might \(p\) Iffibly be the fon of a fhoemaker. To Mr Bofivell all this feems flrange: to others, who look not with fo keen an cye for fuppofititious births, we think it muft appear convincing.
ge. acquainted. He flaid, in the midit of poverty, hunger, and contempt, till the miftrefs of a coffee-houfe, to whom he owed about eight pcunds, arrefted him for the deht. Hie renained for fome time, at a great expence, in the houfe of the fheriff's officer, in bopes of procuring bail; which expence he was enabled to defray, by a prefent of five guineas from Mr Nafh at Bati. Nó bail, however, was to be found; fo that poor Savage was at laft lodged in Newgate, a prifon fo named in Britol.
But it was the fortune of this extraordinary mortal always to find more friends than be deferved. The keeper of the prifon took compaffion on him, and greatly foftened the rigours of his confinement by every kind of indulgence; he fupported him at his own table, gave him a commodious room to himfelf, allowed him to ftand at the door of the gaol, and even frequently took him into the fields for the benefit of the air and exercife: fo that, in reality, Savage endured fewer hardhips in this place than he had ufually fuffered diring the greateft part of his life.

While he remained in this not intolerable prifon, his ingratitude again broke out, in a bitter fatire on the city of Briftol; to which he certainly owed great obligations, notwithllanding the circumftances of his arref ; which was but the act of an individual, and that attendcd with no circumftances of injufticc or cruelty. This fatire he entitled London and Briffol delineated; and in it he abufed the inhabitants of the latter, with fuch a fpirit of refentment, that the reader would imagine he had never received any other than the moft injuious treatment in that city.

When Savage had remained about fix months in this hofpitable prifon, he received a letter from Mr Pope, (who fill continued to allow him 201. a-year) containing a clarge of very atrocious ingratitude. What were the particulars of this clarge we are net informed; but, from the notorious character of the man, there is reafon to fear that Savage was but too juflly accufed. He, however, folemnly protefted his innocence; but he was very unufually affected on this occafion. In a few days after, he was feized with a diforder, which at firft was not fufpected to be dangerous: but growing daily more languid and dejected, at laft a fever feized him; and he expired on the 1ft of Augult 1743, in the 46 th year of his age.

Thus lived, and thus died, Richard Savage, Efq; leaving behind him a character ftrangely chequered with vices and good qualities. Of the former we have feen a variety of inftances in this abftract of his life; of the latter, his peculiar fituation in the world gave him but few opportunities of making any confiderable difplay. He was, howceer, undonbtedly a man of excellent parts; and had he received the full bencfits of a liberal education, and had his natural talents bcen cultivated to the beft advantage, he might have made a refpeetable figure in life. He was happy in a quick difcernment, a retentive memory, and a lively flow of wit, which made his company much coveted; nor was his judgment both of writings and of men inferior to his wit: but he was too much a flave to his.paffions, and his paffons were too eafly excited. He was warm in his friendifips, but implacable in his enmity; and his greateft fault, which is indeed the greateft of all faults, was ingratitude. He feemed to thiuk every thing. due
to his merit, and that he was little obliged to any one for thofe favours which he thought it their duty to conter on him : it is therefore the lefs to be woncered at, that he never rightly eflimated the kinduefs of his many friends and benefactors, or preferped a grateful and due fenfe of their generofity towards him.
The works of this orginal writer, after having long lain difperfed in magazines and fugitive publications, have been lately collected and publifhed in an elegant edition, in 2 vols 8 vo ; to which are prefixed, the admirable Memoirs of Savage, written by \(\mathrm{D}_{\mathrm{T}}\) Samuel Johnfon.

Savage is a word \(f_{0}\) well underitond as fcarcely to require explanation. When applied to inferior animals, it denotes that they are wild, untamed, and cruel; when applied to man, it is of much the fame import with barbarian, and means a perfon who is untaughr and uncivilized, or who is in the rude flate of uncultivated nature. That fuch men exift at prefent, and have exitted in moft ages of the world, is undeniable: out a queftion naturally occurs refpecting the origin of this favage flate, the determination of which is of confiderable importance in developing the nature of man, and afcertaining the qualities and powers of the human mind. Upon this fubject, as upon moft others, opinions are very various, and the fyftems built upon them are confequently very contracietory. A large fect of ancient philofophers maintained that man fprung at firit from the earth like his brother vegetables; that he wat without ideas and without fpeech; and that many ages elapfed before the race acquired the ufe of language, or attained to greater krowledge than the beafts of the foreft. Other fects again, with the valgar, and almolt all the poets, maintained that the frit mortals were wifer and happicr, and more powerful, than any of their offispring; that mankind, inftead of being originaly favages, and riing, to the fate of civilization by their own gradual and progreffive esertions, were created in a high degree of perfection; that, bowever, they degenerated foom that flate, and that all nature degene rated with them. Heace the various ages of the werld have almoit everywhere been compared to gold, filver, brafs, and iron, the golden having been always fuppoled to be the firft age.

Since the revival of letters in Europe, and efpecially during the prefent century, the fame queftion has been much agitated both in France and England, and by far the greater part of the moft fathionable names in modern feience have declared for the oliginal favagifm of men. Such of the ancients as held that opiaion were countenanced by the atheilitic cofmogony of the Phenicians, and by the early hiltory of their own nations; the moderns build their fyflem upon what they fuppore to be the conflitution of the human mind, and upon the late improvements in arts and fciedces. As the queftion mant finally be decided by hiftorical evidence, before we make our appeal to fact3, we fhall contider the force of the modern reafonings from the fuppoied innate powers of the humars mind; for that reafouing is totally different from the other, and to blend them torecther would only prevent the reader from baving an adequate conception of either.
Upon the fuppofition that all mankind were original1) favages, deflitute of the ule of fpeech, and, in the frietelt fenfe of the words, mutumi of turgt fray, the

\section*{\(S\) A V}

Savage. great difficulty is to conceive how they could emerge from that ftate, and become at laft enlightened and civilized. The modern advocates for the univerfality of the favage ftate remove this difficulty by a number of inftinets or internal fenfes, with which they fuppofe the human mind endowed, and by which the favage is, without reflection, not only enabled to dittinguih between right and wrong, and prompted to do every thing neceflary to the prefervation of his exiftence, and the coutinuance of the precies, but alfo led to the difcovery of what will contribute, in the firft inftance, to the eafe and accommodations of life. Thefe inftincts, they think, brought manlaind together when the reafoning faculty, which had hitherto been dormant, being now roufed by the collifions of fociety, made its obfervations upon the coufequences of their different actions, taught them to avuid fuch as experience fhowed to be pernicious, and to improve upon thofe which they found beneficial ; and thus was the progrels of civilization begun. But this theory is oppored by objections which we know not how to obviace. The bundle of inftinets with which modern idlenefs, under the denomination of philofophy, has fo amply furnifhed the human mind, is a mere chimera. (See \(1_{\mathrm{N}}\) stinct.) But granting its reality, it is by no means fufficient to produce the confequences which are derived from it. That it is not the parent of language, we have fhown at large in another place (fee Language, \(n^{\circ}\) I-7.) ; and we have the confeffion of fome of the ablelt advocates for the original favagifm of man, that large focieties muft have been formed before language could have been invented. How focieties, at leaft large focieties, could be formed and kept together without language, we have not indeed been told ; but we are affured by every hiftorian and every traveller of credit, that in fuch focieties only have mankind been found civilized. Among known favages the focial florge is very much confined; and therefore, had it been in the firft race of men of as enlarged a nature, and as fafe a guide, as the inftinctive philofophers contend that it was, it is plain that thofe men could not have been favages. Such an appetite for fociety, and fuch a director of conduct, inftead of enabling mankind to have emerged from favagifm, would have effectually prevented them from ever becoming favage; it would have knit them together from the very firft, and furnifhed opportunities for the progenitors of the human race to have begun the procefs of civilization from the moment that they dropt from the hands of their Creator. Indeed, were the modern theories of internal fenfes and focial affections well founded, and were thefe fenfes and affections fufficient to have impelled the firf men into fuciety, it is not eafy to be conceived how there could be at this day a favage tribe on the face of the earth. Natural caufes, operating in the fame direction and with the fame force, mutt in every age produce the fame effects; and if the focial affections of the firf mortals impelled them to fociety, and their reafoning faculties immediately commenced the procefs of civilization, furely the fame affections and the fame faculties would in a greater or lefs degree have had the fame effect in every age and on every tribe of their numerous offspring; and we fhould every where obferve mankind advancing in civilization, inftead of ftanding ftill as they often do, and fometimes retreating by a retrograde notion. This, however, is far from being the cafe. Hordes of favages exift in al-
moft every quarter of the globe; and the Chinefe, who have unduubtedly been in a fate of civilization fur at leall 2000 years, have during the whole of that long period been abfolutely ftationary, if they have not lolt fome of their ancient arts. (See Porcelain). The origin of civilization, therefore, is not to be luoked for in human inftinets or human propenfities, carrying men forward by a natural progrefs; for the fuppofition of fuch propenfities is contrary to fact ; and by fact and hiftorical evidence, in conjunction with what we know of the nature of man, muft this great queftion be at laft decided.

In the article Religion, no 7. it has been Shewn that the firf men, if left to themfelves without any inAtruction, inftead of living the life of favages, and in process of time advancing towards civilization, muit have perifhed before they acquired even the ufe of fome of their fenfes. In the fame article it has been fhown ( \(n^{*}\) 14-17.), that Mofes, as he is undoubtedly the oldeft hifturian extant, wrote likewife by immediate infpiration ; and that therefore, as he reprefents our firft parents and their immediate defcendants as in a ftate far removed from that of favaģes, it is vain to attempt to deduce the originality of fuch a Itate from hypothetical theories of human nature. Wc have, indeed, heard it obferved by fome of the advocates for the antiquity and univerfality of the favage flate, that to the appeal to revelation they have no abjection, provided we take the Mofaic account as it flands, and draw not from it con. clutions which it will not fupport.

They contend, at the fame time, that there is no ar* gument fairly deducible from the book of Genefis which militates againt their pofition. Now we beg leave to remark, that befides the reafoning which we have al. ready ufed in the article jult referred to, we have at much politive evidence againft their pofition as the nature of the Mofaic hiftory could be fuppofed to afford.

We are there told that God created man after his own image; that he gave him dominion over every thing in the fea, in the air, and over all the earth; that lie appointed for his food various kiads of vegetables; that he ordained the Sabbath to be obferved by him, in commemoration of the works of creation; that he prepared for him a garden to till and to drefs; and that, at a teft of his religion and fubmifion to his Creator, he forbade him, under fevere penalties, to eat of a certain tree in that garden. We are then told that God brought to him every animal which had been created; and we find that Adam was fo well acquainted with their feveral natures as to give them names. When too an helpmate was provided for him, he immediately acknowledged her as bone of his bone, flefh of his Alefh, and called her woman, becaufe the was taken out of man.

How thefe facts can be reconciled to a ftate of ig. norant favagifm is to us abfolutely inconceivable; and it is indeed frange, that men who profefs Chriftianity fhould appeal to reafon, and Itick by its decifion on a queftion which revelation has thus plainly decided againt them. But it is agreeable to their theory to believe that man rofe by how fteps to the full ufe of his reafoning powers. 'l'o us, on the other hand, it appears equally plaufible to fuppofe that our firf parents were created, not in full maturity, but mere infants, and that they went through the tedious procefs of childhood and

\section*{S A V. [ 671 ] S A V}
vage. youth, \&c. as to fuppofe that their minds were created weak, uninformed, and uncivilized, as are thofe of favages.

But if it be granted that Adam had a tolcrable thare of knowledge, and fome civilization, nothing can be more natural than to Cuppofe that he would teach his defcendants what he knew himfelf; and if the Scriptures are to be believed, we are certain that fome of them poffeffed more than favage knowledge, and better than favage manners. But inftead of going on to further perfection, as the theory of modern philofophers would lead us to fuppofe, we find that mankind degencrated in a moft aftonifhing degree; the caufes of which we have already in part developed in the article PolyTHE1SM, \(n^{\circ} 4\), \&c.

This early degeneracy of the human race, or their fudden progrefs towards ignorance and lavagifm, appears to lead to an important conlequence. If men fo very foon after their creation, poffeffing, as we have feen they did, a confiderable thare of knowledge and of civilization, inftead of improving in either, degenerated in both refpects, it would not appear that human nature has that frong propenfity to refinement which many philofophers imagine; or that had all men been originally favage, they would have civilized themfelves by their own excrtions.

Of the ages before the flood we have no certain account anywhere but in Scripture; where, though we find mankind reprefented as very wicked, we have no reafon to fuppofe them to have been abfolute favages. On the contrary, we have much reafon, from the fhort account of Mofes, to conclude that they were far advanced in the arts of civil life. .Cain, we are told, built a city; and two of his early defcendants invented the harp and organ, and were artificers in brafs and iron. Cities are not built, nor mufical inftruments invented, by favages, but by men highly cultivated: and furely we have no realon to fuppofe that the righteous pofterity of Seth were behind the apoftate defcendants of Cain in any branch of knowledge that was seally ufeful. That Noah and his family were far removed from favagifm, no one will controvert who believes that with them was made a new covenant of religion; and it was unqueftionably their duty, as it mult atherwife have been their wih, to communicate what knowledge they poffeffed to their pofterity. Thus far then every confiftent Chrifian, we think, muft determine againft original and univerfal favagifm.

In the preliminary difcourle to Sketches of the Hiftory of Man, Lord Kames would infer, from fome facts which he ftates, that many pairs of the human race were at firt created, of very different forms and natures, but all depending entirely on their own natural talents. But to this ftatement he rightly obferves, that the Mofaic account of the Creation oppotes infuperable objections. "Whence then (fays his Lordfhip) the degeneracy of all men into the favage flate? To account for that difmal cataftrophe, mankind muft have fuffered fome dreadful convulfion." Now, if we miftake not, this is taking for granted the very thing to be proved. We deny that at any period lince- the crea. tion of the world, all men were funk into the flate of favages; and that they were, no proof has yet been brought, nor do we know of any that can be brought, unlefs our falmionable philofophers choofe to prop their
theories by the buttrefs of Sanchoniatho's Phenician Savape. cofmogony. (See Sanchoniatho.) His Lordhip, however, goes on to fay, or rather to fuppofe, that the confufion at Babel, \&ce, was this dreadful convulfion: For, fays he, "by confounding the language of men, and fcattering them abroad upun the face of all the earth, they were rendered favage.." Here again we have a pofitive aftertion, without the lcaft hadow of proof; for it does not at all appear that the confufion of language, and the fcattering abroad of the people, was a circumftance fuch as could induce univerfal favagifm. There is no reafon to think that all the men then alise were engaged in building the tower of Babel; nor does it appear from the Hebrew origmal that the language of thofe who were engaged in it was fo much changed as the reader is apt to infer from our Englim ver. fion. (See Philology, \(n^{\circ} 8-16\).) That the builders were foattered, is indeed certain; and if any of them were driven, in very fmall tribes, to a great diftance from their brethren, they would in procefs of time inevitably become favages. (See Pozytheism, \(\mathrm{n}^{2} 4\) - K , and Language, \(n^{8} 7\).) ; but it is evident, from the Scripture account of the peopling of the earth, that the defcendants of Shem and Japheth were not fcattered over the face of all the earth, and that therefure they could not be rendered favage by the cataftrophe at Mabcl. In the chapter which relates that wonderiul event, the generations of Shem are given in order down to Abram ; but there is no indication that they had fuffered with the builders of the tower, or that any of them had degenerated into the fate of favages. On the contrary, they appear to have poffefled a confiderable degree of knowledge; and if any credit be due to the tradition which reprefents the father of Abraham as a ftatuary, and himfelf as fkilled in the fcience of aftrunomy, they muft have been far advanced in the arts of refinement. Even fuch of the pofterity of Ham as either emigrated or were driven from the plain of Shinar in large bodies, fo far from finking into favagifm, retained all the accomplifhments of their antedilivian anceftors, and hecame afterwards the inftructors of the Grecks and Ro. mans. This is evident from the hiftory of the Egyptians and other eattern nations, who in the days of Abra. ham werc powerful and highly civilized. And that for many ages they did not degenerate into barbarifm, is apparent from its having been thought to exalt the character of Mofes, that he was learned in all the wi.dom of the Egyptians, and from the wifdom of Solomon having been faid to excel all the wifdom of the eaft country and of Egypt.
Thuts decided are the Scriptures of the Old Teftament againft the univerfal prevalence of faragifm in that period of the world; nor are the inot authentic Pagan writers of antiquity of a different opinion. Mochus the Phenician*, Democritus, and Epicurus, apptar to be - Sir-ie, the fint champions of the favage flate, and they are 1 b win. followed by a numerous body of poets ard rhaplodits, \(D_{\text {in }}\) I.... among the Greeks and Romans, who were urqueltion: fida Dean ably devoted to fable and fiction. The account which: firi. they have given of the origin of man, the reader will find in another place (fee T'neology, Parti. feet. 1.) : Zut we harely think that he will employ it in fupport of the faftionable doestine of original Gavagitm. A gaint the wild reverics of rhis fohool are poited all the leaders of the other fects, Greeks and barbarians ; the phitu-
fophe:3

Savace. fophers of both Academies, the fages of the Italian and Alexandrian fchools; the mani of Perlia; the Bramins of India, ard the Druids of Gaul, \&c. 'The teltimony of the early hiftorians among all the ancient nations, indeed, who are avowedly fabulits, is very little to be depended on, and has been called in queftion by the moft judicious writers of Pagan antiquity. (See Plutarch Vita Thef.fub init. Thucyd, 1. I. cap. I. Strabo, 111. P. 507. Lizy Pref. and Varro up. Auguf de Ciqu. Dei.) The more populous and extenfive kingdoms and focieties were civilized at a period prior to the records of profane hiltory: the prefmetion, therefore, with. out taking revelation into the account, certainly is, that the were civilized from the beginning. This is rendered further probable from other circumitances. To account for their fytem, the advocates of favagiim are obliged, as we have feen, to have recourfe to numerous fuppofitions. They imagine, that fince the creation dreadful convulions have happened, which have fpread ruin and devalation over the earth, which have deftroyed learning and the arts, and brought on Eavagifm by one fudden blow. But this is reafoning at random, and without a veftige of probability: for the only convulfion that can be mentioned is that at Babel, which we have already fhewn to be inadequate.

Further, it does not appear that any people who were once civilized, and in procefs of time had degenerated into the favage or barbarous flate, have ever recovered their priftine condition without foreign aid. From whence we conchude, that mam, once a favage, would never have raifed himelf trom that hopelefs ftate. This appears evident from the hiftory of the worid ; for that it requires ftrong incitements to keep man in a very high ftate of knowledge and civilization, is evident from what we know of the numerous nations which were famed in antiquity, but which are now degenerated in an aftonifhing degree. That man cannot, or, which is the fame thing, has not rifen from barbarifm to civilization and fcience by his own efforts and natural talents, appears further from the following facts. The rudiments of all the learning, religion, laws, arts, and feiences, and other improvements that have enlightened Europe, a great part of Afia, and the northern coalt of Africa, were fo many rays diverging frons two points, on the banks of the Euphrates and the Nile. In proportion as nations receded from thefe two fources of humanity and civilization, in the fame proportion were they more and more immerfed in ignorance and barbarifm. The Grecks had made no progrefs towards civilization when the Titans firlt, and afterwards colonies from Egypt and Phenicia, taught them the very elements of fience and *See \(\mathcal{T}_{i}\) - urbanity*. The aborigines of Italy were in the fame to- ftate prior to the arrival of the Pelafgi, and the colonies from Arcadia and other parts of Greece. Spain was indebted for the firft feeds of improvement to the commercial fpirit of the Phenicians. The Cautls, the Britons, and the Germans, derived from the Romans all that in the carly periods of their hiftory they knew of fcience, or the arts of civil hife, and fo on of other nations in antiquity. The fame appears to be the cafe in modern times. The countries which have been difcovered hy the reflefs and inquifitive fpirit of Europeans have been generally found in the loweft fate of favagifm; from which, if they have emerged at all, it has been exactly in pronortion to their connection with the inha-
bitants of Etrope. Even weftern Europe itfelf, when funk in ignorance, during the reign of monkery, did not recover by the efforts of its own inhabitants. Had not the Greciks, who in the 15 th century took refuge in Italy from the cruelty of the Turks, brous!at with then their ancient bookz, and taught the Italians to read them, we who ate dijputing about the origis of the favage flate, and the inate powers of the human mind, had at this day been grofs and ignorant favages ourfelves, incapable of reafoning with accuracy upon any fubject. That we have now advanced far before our malters is readily adonitted ; for the human mind, when put on the right track, and fpurred on by emulation and other incitements, is capable of making great improvements: but between improving fcience, and emerging from favarifin, every one perceives there is an immenfe difference.
Lord Kamcs obferves, that the people who inhabit a grateful foil, where the neceffaries of life are eafily procured, are the firft who invent ufeful and ingenious arts, and the firlt who figure in the exercifes of the mind. But the Egyptiaus and Chaldeans, who are thought to fupport this remark, appear from what we have feen to have derived their knowledge from their antediluvian progenitors, and not from auy advantages of fitwation or Itrength of genius. Betides, the inhabitants of a great part of Africa, of Notth and South America, and of many of clie iffands lately difcovered, live in regions equally fertile, and equally productive of the neceffaries of life, with the regions of Chaldee and Egypt; yet thefe people have beeni favages from time imnemorial, and continue fllll in the fame ftate. The Athenians, on the other hand, inlabited the molt barren and ungrateful region of Greece, while their perfection in the arts and fciences has never been equalled. The Norwegian colony which fettled in Iceland about the beginning of the 8th century, inhabited a moft bleak and barren foil, and yet the fine arts were eagerly cultivated in that dreary region when the reft of Europe was funk in ignorance and barbarifm. Again, there are many parts of Africa, and of North and South Armerica, where the foil is neither fo luxuriant as to beget indolence, nor fo barren and ungrateful as to deprefs the fpirits by labour and poverty; where, notwithltanding, the inhabitants ftill continse in an uncultured ftate. From all which, and from numerous other inftances which our limits permir us not to bring forward, we infer that fome external influence is neceffary to impel towards civilization 「avages; and that in the hiftory of the world, or the nature of the thing, we find no inftance of any people emerging from barbarifm by the progreffive efforts of their own genius. On the contrary, as we find in focieties highly cultivated and luxurious a ftrong tendency to degenerate, fo in favages we not only find no mark of tendency to improvement, but rathes a rooted averfion to it. Alrong them, indeed, the facial appetite never reaches beyond their own horde. It is, therefore, too weak and too confined to difpofe them to unite in large communities; and of courfe, had all mankind been once in the favage fate, they never could have arrived at any confiderable degree of civilization.

Inftead of trulting to any fuch natural progrefs, as is contended for, the Providence of Heaven, in pity to the human race, appears at cifferent times, and in dif-
ferent countrics, to have raifed up fome perfons endowed with fuperior talents, or, in the language of poetry, fome heroes, demi-gnds, or god-like men, who having themfelves acquired fome knowledge in nations already civilized, by ufeful inventions, legiflation, religious infitutions, and moral arrangements, fowed the firt feeds of civilization among the hordes of wandering difunited barbarians. Thus we find the Chinefe look up to their Fohee, the Indians to Brahma, the l'erlians to Zoroatter, the Chaldeans to Oanes, the Egyptians to Thoth, the Phenicians to Melicerta, the Scandinavians to Odin, the Italians to Janus, Saturn, and Picus, and the Peruvians to Manco. In later times, and almof within our own view, we find the barbarous nations of Rufia reduced to fome order and civilization by the aftonifhing powers and exertions of Peter the Great. The endeavours of fucceeding monarchs, and efpecially of the prefent emprefs, have powerfully contributed to the improvement of this mighty empire. In many parts of it, howewer, we ftill find the inhabitants in a ftate very little fuperior to favagifm; and through the molt of it, the lower, and perhaps the middling orders, appear to retain an almoft invincible averfion to all further progref \(e^{*}\). A fact which, when added to numerous others of a fimilar nature which oceur in the hiltory of the world, feems to prove indifputably that there is no fuch natural propenfity to improvernent in the human mind as we are taught by fome authors to believe. The origin of favagifm, if we allow mankind to have heen at firf civilized, is cafily accounted for by natural means: The origin of civilization, if at any period the whole race were fivages, cannot, we think, be accounted for otherwife than by a miracle, or repeated miracles.

To many perfons in the prefent day, efpecially, the doctrine we have now attempted to eftablifh, will appear very humiliating; and perhaps it is this alone that has prevented many from giving the fubject fo patient a hearing as its importance feems to require. It is a fathionable kind of philofophy to attribute to the human mind very pre-sminent powers; which fo flatter our pride, as in a great meafure, perhaps, to pervert our reafon, and blind our juigment. The hiftory of the world, and of the difpenfations of God to man, are certainly at variance with the popular doctrine refpecting the origin of civilization: for if the human mind be poffefted of that innate virour which that doctrine attrihutes to it , it will be extremely difficult to account for thofe numerous facts which feem with irrefrible evidence to proclaim the centrary; for that unceafing eare with which the Deity appears to have watched over us; and for thofe various and important revelations He has vouchfafed to us. Let us rejoice and be tharkful that we are men, and that we are Chriftians; but let not a vain philofophy tempt us to imagine that we are angels or gods.

SAVAGE I/land, one of the fmall iflands in the South Sea, lying in S. Lat. 19. 1. W. Long. 169. 37. It is about feven leagues in circuit, of a good height, and has deep water clofe to its fhores. Its interior parts are fuppofed to be barren, as there was no foil to be feen upon the coatt ; the rocks alone fupplying the trees with humidity. "The inhabitants are exceedingly warlike and fierce, fo that Captain Cook could not have any intercourfe with them.

Vol. XVI. Part II.
S.IVANNA-LA-MAR, a town of Jamaica, fithated in the county of Cornwall in that ifland.-It is the connty-town, where the affize courts are held, the latt Tueldays in March, June, September, and Decem. her. It has lately been ornamented by an elecant court-houle, and contains abont one hundred other houfes. It belongs to Weftmoreland parih, in which are 89 fugar-eflates, 105 other eftates, and 18,000 naves.

SAVANNAH, the capital of the country of Georgia in North America, fituated in W. Long. 101. 20. N. Lat. 32.0 .

SAVARY (James), an eminent French writer on the fubject of trade, was born at Done, in Anjou, in 1622. Being bred to merehandize, he continued in trade until 1658 ; when he left off the practice, to cultivate the theory: He had married in If.50; and in 1660, when the king declared a purpole of afligning privileges and penfio.so to fuch of his rubjects as had twelve children alive, Mr Savary was not too rich to put in his claim to the royal bounty. He was aftenvards admitted of the cuuncil for the relomation of commerce; and the orders which paffed in 1670 were drawn up by his inftructions and advice. He wrote Le Parfait Negociant, 4 to ; and, Avis et confeils fur les plus importantes matieres du Commerce, in 4 to. He died in 1690 ; and out of 17 children whom he lad by one wife, left 11. 'Two of his fons, James and Philemon Lewiz, labonred jointly on a great work, Digionnuire Univerfelle dis Commerce, 2 vols folio.- This work was begun by James, who was infpector-general of the manufactures at the cuftomloule, Paris ; who called in the af. fiftance of his brother Philemon Lewis, although a canon of the royal church of St Maur ; and by his death left him to finith it. This work appeared in 1723 , and Philemon afterwards added a third fupplemental volume to the furmer. Poftlethwayte's Englith Dictionary of Trade and Commeree is a tranflation, with confiderable improvements, from Savary.

Savary, an emment French traveller and writer, was born at Vitre, in Brittany, abult the year 1748 . He ftudied with applaufe at Rennes, and in 1776 travelled into Egypt, where he remained almoft three years. During this period he was wholly engaged in the 1 tudy of the Arabian language, in fearching out ancient monuments, and in examining the national manners. After making himfelf acquainted with the knorledge and philofophy of Egypt, he vilited the iflands in the Archipelago, where he fpent 18 months. On bis retum to France, in i 782 , he publifhed, 1. A 'lranflation of the Kuran, with a fhort Life of Mahomet, in 1983 , 2 vols 8vo. 2. The Murality of the Koran, or a cullection of the mof excellent maxims in the lioran: a work extracted from his tranfation, which is elleemed both elegant and faithful. 3. Letters on Egypt, in 3 vols 8vo, in 1785 . In there the author makes his obfervations with accuracy, paints with vivacity, and renders interelting every thing he relates. His duferiptions are in general faithrut, but are perhaps in fome inflances too much ornanented. He has been jufly cenfured for painting modern Egypt and its inhabitants in too high coluurs. Thefe letters, however, were bought up by the eurious public, and read with pleafure and advantage. Encouraged by this flattering recep. tiod, lie prepared his letters upua Grece. He died 40
feen

Savary, foom after at Paris of a malady contrafted from too Suacif, intenfe application. A fenfible olalrution in the right lobe of the liver had made a decilive progrefs, which the return of fummer, fome fimple medicines, 2 ftrict ugimen, and travelling, feemed to remove.

On his return into the country adjacent to Paris, his health however was fill doubtful; for it is well known that when the organization of one of the wifeera has been much deranged, deep traces of it will ever remain. His active miul, however, made him regardlefs of his health, and he conceived it his duty to profit by thofe appearances of recovery which he experienced at the clofe of the fummer and the beginning of autumn, to put into order his travels into the iflands of the Archi. pelago, intended as a continuation of his letters on Ejypt. His warmth of temper was exafperated by fome lively criticifms which had been made on his former productions, and he gave himelelf up to fludy with a degree of activity of which the confequences were fuf. ficiently obvious. An obftruction in the liver again took place, and made a new progrefs; his digeftion became extremely languid; fleeo quite forfook him, buth by night and by day; a dry and troublefone cough came on ; his face appeared bloated, and his legs more and more inflamed. The ufe of barley water and cream of tartar fill however promoted, in fume degree, the urimary fecretions, and afforded fome little glimmering of Ir pe. In this fituation lie returned to Paris in the beginning of the year 1788, to attend to the publication of his new work concerning the iflands of the Archipelago, particularly the ifle of Candia. He had then all the fymptoms of a dangerous dropfy, which became ftill more alarming foom the very exhaufted flate of the vifuera. The right lobe of the liver was extremely hard and fenfible. The patient had fhiverings without any regular returns, and his frength was undermined by a beetic fever. At the-fame time fill more uneafy fympsoms took place, thofe of a dropfy in the chett; but the circumfances which deftroyed all hope, and announced ? is approaching diffolution, wete a fevere pain in the left fide, with a very troulblefome cough, and a copious and bloody expectoration (in hepotici, 反ays Hippocrates, finturs cruentum mortiferam:) ; his refpiration became more and more dificult; his ftrength was exhaufeed and his death took place on the 4 th of February 1789, attended with every indication of the mof copious querflowing in the chent, and of an abfeef in the liver.Thus was deftroyed, in the vigoner of his age, zn author whofe character and talcuts rendered him worthy of the happielt lot.

Mr Savary's genius was lively and well cultivated; his heart warm and benevolent; his imagination vifowous; his memory retentive. He was cheerfal and open; and had fo great a talent for telling a fory, that his company was not lefs agreeable than infructive. He did not mingle much with the werld, but was fatisfied with performing well the duties of a fon, of a brother, and of a friend.

SAUCTSSE, or SAvcisson, in mining, is a long pipe or bag made of cloth well pitched, or fometimes of leather, of about an inch and an half diameter, filled with powder, going from the chamber of the mine to the entranee of the gallery. It is generally placed in 3 wooden pipe called ar auger, to prevent its grow-
ing damp. It ferves to gi:e fire to mines, caffions, bumb-chents, \&c.

Saucisson, is likewife a kind of fafcine, longer than the common ones; they ferve to raife batteries and to repair breaeles. They are alfo ufed in making epanlements, in Itupping pañagres, aud in making traverfea over a wet diteh, sie.

SAVE, a river of Germany, which has its fouree in Upper Carniola, on the frontiers of Carnthia.It rans througi Carniola from wett to eaft, afterwards feparates Sclavonia from Cruatia, 13ofnia, and part of Servia, and then falls into the Danube at Belgrade.

SAver-krout. See Croute.
SAVERNAKE-Furfot is fituated near Marthorough in Wilthire, and is 12 miles in circumference, well ftocked with deer, and delightulul from the many villas cut through the woods and coppices with which it abounds. Eight of thefe viftas meet, like the ray of a far, in a point ne the middle of the foreft, where an uetagon tower is erected to correfpond with the wiftas; thirough one of which is a view of Tottenham Park, Lord Ailefuy's feat, a flately sclifice erected after the model, and under the direction, of our modern Vitruvius, the Earl of Burlington, who to the Atrength and convenience of the Englihh architecture has added the elegance of the Italian.

SAVILE (Sir George), afterwa:ds marquis of Ha lifax, and one of the greatell ftatefmen of his time, was born ahout the year 1630 ; and fome time after his return from his thavels was created a pcer, in confederation of his own and his father's merits. He tias a ftrenuous oppofer of the bill of exclufion; but propofed fuch limitations of the duke of York's authority, as fhould difable him from doing any harm either in church or flate, as the taking out of his hands all power in ecclefiaftical matters, the difpofal of the public moner, and the power of making peace and war; and lodging thefe in the two houfes of parliament. After that bill was rejected in the houle of lords, he preffed them, though without fuccees, to proceed to the limitation of the duke's power; and began with moving, that during the king's life lee might be obliged to live five hundred: miles vut of England. In A ugut 1682 he was created a marquis, and foon after made privy-feal. Upon King Jan:es's accuffion, he was made prefident of the council; but on his refulal to confent to the repeal of the tift, he was difmifled form all public employnentso In that aflicmbly of the lords which met after king James's wilhdrawing himfelf the firlt time from Whiteball, the marquis was chofen their prefident; and upon the king's return from Fevertham, he was fent, together with the earl of Sbrewfoury and lord Delavere, from the Prince of Oranse, to order his majelly to quir the palace at Whitehall. In the conventicn of parliament he was chofen fpeaker of the houfe of lords, and flrenuouly fupported the motion for the vacancy of the throne, and the conjunctive fevercigety of the prince and princefs; upon whofe acceffion he was agaiu made privyfeal Yet, in 1689 , he quitted the court, and became a zeabus oppofer of the meafures of gozernment till bis. death, which happened in April 1695. The rev. Mr Grainger obferves, that " he was a perfon of unfettlech principles, and of a lively imagination, which fometimez. got the better of his judgment. He would never lufe
savid bis jeft, though it fpoiled his argument, or hrought his fincerity or teen his religion in queftion. He was di-- \{ervedly celebrated for his parliamentary ralents; and in the fandus contell relating to the bill of exclufion was thought to be a match for his uncle Shaftßury. The pieces lie has left us fhow him to have been an ingenious, if not a matterly writer; and his Adoice to a Dough. ter contains more good fenfe in fewer words than is, perbapes, to be found in any of his contemporary atuthors." His lordnip alfo wrote, The Anatomy of an EquivulerI: a Leter to a Difienter; a Rough Dranght of a New Model at Sea; and Maxims of State; all which were pristed together in one volume 8 vo . Since thefe were alfo poblifhed under his name the Charater of kizg Charles II. 8 wo ; the Character of Biftop Burnet, and Hiftoricad Obfervations upon the reigns of Edward I. II. III. and Richard II. with Remarks upon their faithful Counfellors and faffe Favourites.

SA VIN, in botany. See Jumiperus.
SAVIOUR, an appellation pecnliarly given to Jefus Chritt, as being the Meffah and Saviour of the world. See Jesus.

Order of St Saptour, a religious order of the Romin Church, fornded by St Eridgct, about the year 345, and fo called from its being pretended that our Saviour himfelf declared its contitution and rules to the foundrefs. According to the conftitutions, this is princiFally founded for religions women who pay a particular honour to the holy virgin ; but there are fone monks of the order, to adminifter the facrament and firitual affiftance to the nums.
\(S \perp\) UL the for of Kifh, of the tribe of Benjamin, was the firit king of the Ifraelites. On account of his difubedient conduEt, the kingden sas taken from his family, and given to David. Lier the I'ift Book of Samuel.

Shul, othermife called Paul. See Paul.
SAUMUR, a confiderable town of France, in An. jou, and capital of the Saumarois, with an ancient caftil. The town is fmail, tut pleafantly fituated on the Loire, acro's which is a long bridge, continned through a number of iflands. Saumur was anciently a moil im. portait pafs over the river, and of confeguence was frequently and fiercely difputed by either party, during the civil wats of Fraite in the fixteenth century. The fortincations are of great Arength, and Henry the Fenth, on the reconciliation which took place between lim and Henry the Third, near Tours, in 1589, desaanded that Saumur thould be delivered to him, as ote of the cities of fafety. The ca'tle overlooks the town and river. It is built on a lofty eminence, and has a venerable and magnifetnt appearance, and was lately urfed as a prifon of ilate, where penturs of rank were frequently confmed. The Kings of Sicily, and Dukes of. A njou of the froufe of Valuis, who defcended froms John king of France, often reticled in the cafte of Saumur, as it comlitured a part of their Angevin doainiens E. Lons.c. 2. N. Lat. 47. 1 \%

SAUNDERS, a kind of wood brought:from the Ealt Indies, of which there are three kinds; white, ydlow, and red. See Pterocarpus and Santalum.

SAUNDERSON (Dr Robert), an emiuent caluif, was born at Rotherham in Yonkflire on the 1gth September \(158 \%\) and wzs defcended of an ancient fa-
mily. Heattended the gremmar-fchool at Rotherhars, ess.cented where he made fuch wonderful proficiency in the lan.guages, that at 13 it wis judged proper to fend him in Lincoln college, Oxfurd. In 1605 he was appointed logic reader in the fane college. He coos orders in 1611, and was promoted fuccefively to feveral benefices. Archbishop Laud recommended him to king Charles I. as a profound cafuift ; and shat monardts who feems to have been a great admirer of cafuittical leanning, appointed him one of his chapiains in 163 r . Charles propofed 「everal cafes of confcience to him, and received fo great fatisfaction from his anfwers, that at the end of his month's attendance lie told him, that he would wait with impatience during the intervening is months, as he was refolved to be inore iotimately wequainted with him, when it would again be his torn to officiate. The king regularly attended his fermons. and was wont to lay, that "he carried his ears to hear other preachers, but his confcience to hear Mr Saunderfon."

In \(16+2\) Charles created him regins profefor of divinity at Oxford, with the cauonry of Chritt church an. nexed : but the civil wars prevented him till \(16 ; 6\) from entering on the office 3 , and in 1648 he was ejected by the wifturs which the parliament had commiffuned. He mult have flood high in the public opinion; for in the fame year in which he was appointed profeffor of divinity, both houfes of parliament recemmended lim to the king as one of their truttees for fettling the affairs of the church. 'The kins, too, repofed great confidence in his jud gnent, and frequently confuted him about the thate of his affairs. When the parliament propofed the abolition of the epifcopal form of cliurch-gowernment as incompatible with monarchy, Charles defired him to take the fubjeet under his confideration and deliver his opinion. He accordingly wrote a treatife en. tited, Epifcopacy as eftablifhed by law in England not prejudicial to regal power. At taking lease, the king advifed him to publith Cafes of Confcience: he replied, that " he was now grown old and unfit to Write cales of confcience." The king faid, "it was the fimpleat thing he ever had heard from him; for no Yourg inan was fit to be a judje, or write cales of coo. feience." Walton, who wrote the life of Dr Saunder. fon, informs us, that in one of thefe conferences the king tuld him (Dr Saunderfon), or one of the re? who was then in company, that " the remembrance of two errors did much affict him ; which were his arent to the eart of Strafford's death, and the abulifling of epifcupacy in Scotland; and that if Gud ever refured hini to the peaceable puffefion of his crown, he would prove wis repentance by a public confeflion and a voluntary penance, by walking barefoot from the Tower of London, or Whithall, to St Paul's church, and would defire the pcople to intercede with God for his pardua."

Dr Saunderfon was taken prifuner by the parliament's troops and conseyed to Lincoln, in order to procure in exchange a Puritan divine named Clark. whon the king's army had taken. The exchange was agreed to, on condition that Dr Saunderfun's liviry fhould be reflered, and his perfon and property remain unmoletted. The firit of thele deraands was readily complied with: and a fitpulation was made, tha: the fecond fhould be obferved; but it was impolishle to reftrain the licentioufnefs of the foldiers. They esterd \(4 \mathrm{C}_{2}\)

6nnterfor his church in the time of divine fervice, interrupted him when reading prayers, and even had the audacity so take the common prayer book from him, and to tear it to pieces.

The Honourable Mr Boyle, having read a work of Dr Saunderfon's entitled De juramenti olligatione, was fo snuch pleafed, that he inquired at Bifhop Barlow, whether he thoug'it it was poffible to prevail on the author to write Cafes of Confcience, if an honorary penfion was affigneed him to enable him to purchafe books, and pay an amanmeutis. Saunderfon told Barlow, "that if any future tract of his could be of any ufe to mankind, he would cheerfully fet about it without a penfion." loyle, however, fent him a prefent of 501 , fenible no doubt, that, like the other royalifts, his finances could not be great. Upon this Samderfon publifhed his book De Conjfientia.

When Charles II. was reinflated in the throne, he recovered his procflorfhip and cononry, and foon after was promoted to the bihopric of Linculn. During the two years and a lalf in which he poffeffed this new office, he fpent a confiderable fum in augmenting poor vicarages, in repairing the palace at Bugden, \&cc. He died January 29. \(1662-3\), in his 76 th year.

He was a man of great acutenefs and folicl judgment. "That ttaid and well-weighed man Dr Saunderfon (fays \(\operatorname{Dr}\) Hanmond) conceives all things deliberately, dwells upon them difcreetly, difcerns things that differ exactly, pafith his judgment rationally, and expreffes it aptly, clearly, and honeftly." Being afked, what bonk's he had read moll? he replied, that "he did not read many books, but thofe which he did read were well chofen and frequently perufed." Thefe, he faid, were chiefly three, Arittotle's Rhetoric, Aquinas's Secunda Secunde, and 'Iully's Works; efpecially his Offices, which he had not read over lefs than 20 times, and could even, in his old age, recite without book." He added, that "the learned civilian Dr Zouch had written E/ementa juris prudentie, which he thought he could alfo fay without book, and that no wife man could read it too often." He was not only converfant with the fathers and fclooolmen, with cafuiltical and controverfial divinity; but he was well acquainted with all the hifories of the Englifh nation, was a great antiquary, had rearched minutely into records, and was well fkilled in heraldry and genealogy.

It will now be proper to give a fhort account of his works. 1. In 1 fir 5 he publithed Logice Artis Compendium, which was the fyttem of lectures he had delivered in the Univerfity when he was logic-reader. 2. Sermons, amounting in number to 36 , printed in 1681 , folio, with the author's life by Walton. 3. Nine Cafes of Confcience refolved; firft collected in one volume, in \({ }_{1} 678\), 8vo. 4. De juramenti obitigntione. This book was tranflated into Englifh by Charles I. while a prifoncr in the Ifle of Wight, and printed at London in \(1665,8 \mathrm{vo}\). 5. De Olligatione corfcie.tiac. 6. Cenfure of Mr Antony Afcham his book of the confufions and revolutions of government. 7. Pax Eccl-fir concerning Predeftination, or the Give points. 8. Epifcopacy, as eftablifhed by law in England, not prejudicial to the segal power, in 1661 . Befides thefe, he wrote two Difcourles in defence of Uher's writings.

Saunderson (Dr Nicolas), was born at Thurltone in Yorkinire in 1682 , and may be confidered as a
prodigy for his application and fuccefs in math.ematical Saunderfon litcrature in circumftances apparently the moft unfavourable. He loit his fight ly the fmall-pox before he was a year old. But this difafter did not prevent him from fearching after that knowledge for which nature bad given him fo ardent a defire. He was initiated into the Greck and Roman authors at a free-felool at Penmiton. After fpending fome years in the ftudy of the languages, his father (who had a place in the excife) began to teach him the common rules of arithnetic. He foon furpaffed his father; and could make long and difficult calculations, without having any fenfible marks to affit his memory. At 18 he was taught the principles of alrebra and geometry by Richard Weit of Undoorbank, Efq; who, though a gentleman of fortune \(3_{3}\) yet, being ftrongly attached to mathematical learning. readily undertook the education of fo uncommon a genius. Saunderfon was alfo affilted in his mathematical fludies by br Nettleton. Thefe two gentlemen reat books to him and explained them. He was next fent to a private acaderny at Attercliff near Sheffield, where logic and metaphyfics were chiefly taught. Bur thefa fciences not fuiting his turn of mind, he foon left the acadomy. He lived for fome time in the country without any inftructor; but fuch was the vigour of his own mind, that few inftructions were neceffary : he only required books and a reader.

His father, befides the place he had in the excife, poffeffed alfo a finall cllate; but having a numerous family to fupport, he was unable to give him a libcral education at one of the univerfities. Soine of his friends, who had remarked his perfyicuous and interefling man* ner of communicating his ideas, propofed that he fhotld attend the univerfity of Cambridse as a teacher of mathematics. This propofal was immediately put in execution; and he was accordingly conducted to Cambridge in his 25 th year by Mr Johtua Dunn, a fellowcommoner of Chrin's college. Though he was not reccived as a member of the college, he was treated with. great attention and refpect. He was allowed a chamber, and had free acceis to the library. Mr Whiton was at that time profeffor of mathematics; and as he read lectures in the way that Saunderfon intended, it was. naturally to be fuppoled he would view his project as an invalion of his office. But, inflead of meditating. any oppotition, the plan was no fooner mentioned tohim than the gave his confent. Saunderfon's reputan tion was foon fpread through the univerfity. When his lectures were announced, a general' curiofity wasexcited ta hear fuch intricate mathematical fubjeets explained by a man who had been blind from his-infancy. The fubject of his lectures was the Principia Mathematica, the Optics, and Arithmetica Univerfalis of Sir Ifaac. Newton. He was accordingly attended by a very nun:erous audience. It will appear at firl incredible to; many that a blind man fhould be capable of explaining' optics, which requires an accurate knowledge of the nature of light and colours; but we muft recollect, that the theory of vifion is taughe entirely by lines, and is fubject to the rules of geometry.

While thus employed in explaining the principles of the Newtonian philofophy, he became known to its illuftrious author. He was alfo intimately acquainted with Halley, Cotes, De Meivre, and other eminent mathematicians. When Whifton was removed from his.
profeffor.
rfon. profeflormip, Saunderfon was univerfally allowed to be the man belt qualified for the fucceftion. But to cnjoy this office, it was neceflary, as the ftatutes dircet, that he fhould be promoted to a degree. To obtain this privilege the leads of the univerfity applied to their clancellor the duke of Somerfet, who procured the royal mandate to confer upon him the degree of mafter of arts. He was then eleeted Lucafian profefor of mathematics in November 1711. His inanguration fpeech was compofed in claffical Latin, and in the flyle of Cieero, with whofe works le had been much converfant. He now devoted his whole time to his lectures, and the inftruction of his pupils. When George II: in 1728 , vifited the Univerfity of Cambridge, he expreffed a defire to fee Profeffor Saunderfon. In compliance with this defire, he waited upon his majelty in the fenatehoufe, and was there, by the king's command, created doctor of laws. He was adnitted a member of the Royal Society in 1736.

Saunderfon was naturally of a vigorous conftitution; but having confined himfelf to a fedentary life, he at length became fcorbutic. For feveral years he felt a numbnefs in his limbs, which, in the fpring of 1,39 , brought on a mortification in his foot; and, furtunately, his blood was fo vitiated by the fcurvy, that affiftance from medicine was not to be expececd. When he was informed that his death was near, he remained for a little fpacc calm and filent; but he foon recovered his former vivacity, and converfed with his ufual eafe. He died on the 1yth of Apill 1739 , in the 57 th year of his age, and was buried at his own requert in the chancel at Boxworth.

He married the daughter of the reverend Mr Dic. lens, rector of Boxworth, in Cambridgethire, and by her had a fon and daughter.

Dr Saminderfon was tather to be admired as a man of wonderful genius and affiduity, than to be loved for amiable qualities. He fpoke his fentiments freely of characters, and praifed or condemned his friends as well as his enemies without referve. 'This has been afcribed by fome to a love of defamation; but perhaps with more propriety it has been attributed by others to an inflexible love of truth, which urged him upon all occafions to fpeak the fentiments of his mind without difguife, and without confidering whether this conduct would pleafe or give offence. His fentiments were fuppofed unfavourable to revealed religion. It is faid, that he alleged he conlel not know God, becaufe he was blind, and could not fee his works; and that, upon this, Dr Holmes replied, "Lay your hand upon yourfelf, and the organization which you will feel in your own body will diffipate fo grofs an error." On the other hand, we are informed, that he had defired the facrament to be given him on the evening before his death. He was, however, feized with a delirium, which rendered this impoflible.

He wrote a fyftem of algebra, which was publifhed, in 2 volumes 4 to, at London, after his death, in the year 1740 , at the expence of the Univerfity of Cambridge.

Dr Saunderfon invented for his own ufe a Palpable Arithmetic; that is, a method of performing operations in arithmetic folely by the lenfe of touch. It confifted of a table raifed upon a fmall frame, fo that he could apply his hands with equal eafe above and bclow. On this table were drawn a great number of parallel lines
which were croffed by others at right angles; the eflyes \(S_{\text {surderion }}\) of the table were diviced l,y notehes half an inch dittant from one another, and between each notch there were five parallels; fo that every fquare inch was divided in. to a hundred little fquares. At each argle of the fquares where the parallels interfeeted une another, a hole was made quite through the table. In each hole he placed two pins, a big and a fmall one. Itwas by the various arrangements of the pins that Saunderfor performed his operations. A defeription of this me. thod of making calculations by his table is given under the article \(\mathrm{B}_{\mathrm{I}}\) ind, \(\mathrm{n}^{\prime} 38\), though it is there by miltake faid that it was not of his own inseution.

His fenfe of touch was fo perfect, that he could dif. cover with the greateft exactnefs the Aighteft inequali. ty of furface, and could diltinguifh in the mott finifhed works the fmalleft overfight in the polifh. In the cabinet of medals at Cambridge he could fingle out the Roman medals with the utmoft correctnefs; he could alfo perceive the flighteft variation in the atmofphere. One day, while fome gentlemen were making obferva. tions on the fun, he took nutice of every little cloud that palfed over the fun which could interrupt their labours. When any object paffed before lis face, cven though at fome diftance, he difcovered it, and could guefs its fize with confiderable accuracy. When he walked, he knew when he paffed by a tree, a wall, or a houfe. He made thefe diftinctions fros the different ways his face was affected by the motion of the air.

His mufical ear was remarkably acute; he could difinguilh accurately to the fifth of a note. In his youth he had been a performer on the flute; and he had made fuch proficienty, that if he had cultivated his talents in this way, he would probably have beeu as eminent in mufic as he was in mathematics. He recognized not only his friends, but even thofe with whon he was nightly acquainted, by the tuse of their voice; and he could judye with wonderful exactnets of the fize of any apartment into which he was conducted.

SAVONA, a large, handfume, populous, and ftrong town of Italy, in the territory of Genoa, with two caftles, and a bifhop's fec. It contains feveral handfome churches and well-built fructures. It was taken by the king of Sardinia in 1746 , at which time it had a capacious harbour; but the people of Genoa, being afraid that it would hurt their own trade, choaked it up. It is feated on the Mediterrancan fea, in a well. cultivated country, aboundug in filk and all kinds of good fruit. E. Long. 8. 14. N. Lat. 44. 21.

SAVONAROLA (Jerume), a famous Italian monk, was born at Ferra:a in 1452 , and deferuded of a noble family. At the age of 22 he affumed the habit of a Dominican friar, withuut the knowledge of his parents. and dillinguifhed himble in that onder by his piety and ability as a preacher. Florence was the theatre where he chofe to appear ; there he pieached, confefed, and wrote. He had addrets enough to place himfelf at the head of the faction whech oppofed the fanity of the Medici. He explained the Apocais pre, and the:e found a prophecy which forctuld the detruction of his oppo. nents. He prodicted a renovatiun of the chureh, and declaimed with much feverity argaint the cle"gy and the count of Ronie. Aicxander Vl. excommunicated him, and prohibited him from preachins. He derided the anathemas of the Pope: yet he torbore preaching 4.

\section*{\(S\) A V \(\left[\begin{array}{lll}678\end{array}\right] \quad\) S A V}

Saronarola for fome time, and then refumed his employment with more applaufe than before. The Pope and the Medici family then thought of attacking him with bis own weapons. Savonarola having polted up a thefis as a fubject of difputation, a Francifcan, by their inftigation, offered to prove it beretical. The Francifcan was feconded by his brother friars, and Savonarola by his; and thus the two orders were at open war with eacin other. 'l'o fettle the difpute, and ins convince their antagonifts of the fuperior fanctity of Savonarola, one of the Dominicans offered to walk through a fire; and in order to prove his wickednefs, a Francifcan agreed to the fame experiment. The multitude, eager to witnefs fo extraordinary a fpeetacle, urged both parties to come to a decifion; and the magiftrates were conftrained to give their confent. Accordingly, Saturday the 7 th of April 1498 was fixed for the trial. On that day the champions appeared; but when they faw one another in cold blood, and beheld the wood in flames, they were feized with fear, and were very anxious to efcape by any fubterfuge the imminent danger into which they had rafhly thrown themfelves. The Dominican pretended he could not enter the flames without the hof in his hasd. This the magiftrates obltinately refufed to allow; and the Dominican's fortitude was not put to the teft. The Francifcans iacited the multitude againf their opponents, who accordingly afaulted their monaflery, broke open the gates which were flut againt them, and entered by force. Upon this, the magittrates thought it neceffury to bring Savonarola to trial as an impoltor. He was pat to the \(t\) rture, and examined; and the anfwers which he gave fully evinced that he was both a cheat and a fanatic. He boatted of having frequent converfations with God, and found his brother friars credulous enough to believe him. One of the Dominicans, who had hared in his fufferings, affirned, that he faw the Holy Ghoft in the thape of a dove, with feathers of gold and filver, twice in one day alight on the fhoulder of Savonarola and peek his ear; he pectended allo that he had violent combats with demons. Joim Francis Picus earl of Mitandula, who wote his life, affures us, that the devils which infefted the convent of the Dominicans trembled at the light of triar ferome, and that out of rexation they always fupprefld fome letters of his name in pronomining it. He expelled them from all the cells of the monatlers. When he went reurd the consent fprinking doly water to defend the friaro from the intults of the demons, it is faid the evil fyirits faread thick clonds, befurc him to preveni his pafiage. Ato length, the por \({ }^{\circ}=\) Alexander VI. fent the whief of the Duminicans, witl: bithop Romolino, to degrade him from holy orders, and to deliver him up to the fecular judges with his two frnati:al affociates. They were condemned to be hanged and burned on the \(2 \mathrm{~g}^{\mathrm{d}} \mathrm{May}\) 1498. Savorarola fubmitted to the execution. of the Fentence wilh greas firmiefs and devotion, and without uttering a word refpecting his innocence or kis gnilt. He was \(\frac{1}{6}\) years of age. Immediately after his death, his Confeffion was publifhed in his name. It contained many, estravayancies, but nothing to deferse fo fevere and infamous a punifhment. His adherents did not fail to attribute to him the power of working miracles; and fo flrong a veneration had they for their chief, that they preferved with pious care any parts of his body-which they could fnatch from the flames. The earl of Mirandula,
the author of his life, has defcribed him 2e an eminent faint. He gravely informs us, that his heart was found in a niver; and that he bad a piece of it in his poffeffion, which had been very ufeful in curing difeafes, and ejecting demons. He remarks, that many of bis perfecutors came to a miferable end. Savonarola has allo been defended by Father Quetif, Bravius, Baroa, and other religious Dominicans.

He wrote a prodigious number of book in farour of religion. He has left, 1. Sermons in Italian; 2. A Treatife entitled, Triumflius crucis; 3. Eruditarum Canfiforum, and feveral ochers. His works have been pub lithed at Leydea in 6 volunes 12 mo .
SAVORY, in botany. See Saruzeid.
SAVOUR. See Taste.
SAVOY, a duchy lying between France and Italy, and which takes its. name from the Latin. Sabaadia, ah. tcred afterwards to Saboia, and Sobojia.

This country was anciently inhabited by the Celtes; whofe defcendants therein, were fubdivided into the Allobroges, Nantuares, Veragri, Seduni, Salalf, Centrones, Garocelli, and foni: others of inferior note. Of all thefe the Allubroges were the molt confiderable The reduction of thefe tribes, in which Juhtus Czfar had made a great progrefs, was completed under Aub gultus. Aiterwards this country thaied the fate of the reft of the weltern empire, and was over-run by the northern barbarians. The Burgundiant held it a confiderable time; but when or how it nirft became a diftinet earldom under the prefent family, is what hilorians are not agreed about : thus much, however. is cero tain, that Anadxus I. who lived in the ith century, was count of it. In 1416, Amadxus VIII. was created by the enperor Sirifmund duke of Savoy; and Victor Amadaus firt took the title of king of sicily, and afterwaids of Sardmia. See Sardinia Savoy was lately conquered by the French, and added ta. the republic as the eighticth departmeat. As this arrangement, though decreed by the convention to laft for ever, may probably be of Chort duration, we fhatl write of the duchy as of an independent ttate. Savoy, then, is bounded to the fouth by France and Piedmont; to the north by the lake of Geseva, whieh feparates it from Switzerland; to the weft, by Frauce; and to the eaft, by Piedmont, the likilanefe, and Switzerland; its greateit length being about eighty-eight miles, and breadth about feventy. fix .
As it lies anmung the Alps, it is full of lofty moun. tains, which in general are very barren : many of the hirgheit of them ane perpetually covered with ice and hiow. The fummit of thofe celled Montagnes Maudites, "the curfed mountains," are faid to be more than two Engtifh niles. in purpendicular height above the level of the lake of Geneva, and the level itfelf is much hisker than the Meditertineaa: In fore few of the valleys there is corn-land and patture, and a good breed of cattle and mules; and along the lake of Geneva, and in two or three other places, a tolcrable wine is produced. Mount Senis or Cemis, between Savòy and Piedmont, over which the highvay from Geneva: to Turin lies, is as high, if not higher, than the Montagnes Maudites; but of all the mountains of the A!ps, the higheft is mount. Rochmelon, in Piedmont, between Fertiere and Novalefe. The roads over thefe mouna tains are very tedions, difagrecable, and dangerous; efpecially as huge maffes of fnow, called by the Italians
4. avalanches, and fragments of rooks, frequently molt down into them from the impending precipices. The way of traselling is either in Redges, chairs, or on the backs of mules: in fome phaces the path on the hrink of the precipices is fo marrow, thet there is hut juat ronm for a fingle perfon to pafs. It begins to fonut on thefe mondains commonly about the begimizg of Oc tober: In funmer, in the months of July, Ao ruft, and September, many of then yield very fone orrals, with a great variety of flowers and heits; and othens box wond, walnuts, chefnuts, and pilus. The height and different combinations of thefe mountains, their towering fun?nits rifing above one arother, and covered with frow, the many cataraets or falls of water, the noife and rapidity of the river \(A \mathrm{rc}\), the froth and green tincure of its water, the echocs of its murerous Itreams tumbling trom cliff to clif, form altogether a vary rosantic feene. Thefe monutainoms taits, notwithtanding their beight, are not ahogetber free from thunder in finumer, and are alfo much expufed to thick clouds, which fometimes fettle unexpectedly on them, and continue feveral days. There are fome wolves atnong the thickets; and they abound with hares, rapicapias or chamois, and marnottes. In the lower parts of Savoy, there are alfo bears, wild boars, deer, and 1 abbits; and among the defolate mountains are found great quantities of rock.cryftal. In the ghacieres or ice valieys, between the ligh nountains, the air is exiremely cold, even in the months of July and Auguit. The furface of thefe ice-valleys looks like a fen or lake, which, after heing agitatel by fierce and cuntary winds, has been Irozen all at once, interfperfed with histous eracks and chaifns. Tlie nniie of thefe cracks, when frift made by the heat of the moon day fun, and reverberated by the furrounding roeks and mountaios, is altoxithirg. The heikit of the impending mountains is fisch, that the fun's rays feldum reach the ice-valleys, exerpt a f w hours in the middle of fummer. The awalacties or fnow-balls, which the leat concufforn of the air will oceafion, tumble dowa the mountains wath amazing rapidity, continually increafing, and carrying all before thon. People have leen taken ont alive, after beiag buried feveral days under them. The momtainous nature of this dechy yenders the plough a ufe2.fs influment of agricuiture. The peafants lreak up the hungry foil with the piekaxe and ipone, and to improse it carry up poould and duno in bafkets. For the Turpofe of prefercing it from droutht in the fpring and thomer, they cut fnall refencirs above it, the water of which may be let ount at will; and to prevent the castly from givin!t way, break the ceclivity of the menntains by building wads on the fulefor its furpert, which frequestly affume the appearance of ancient fortification, atad are a very pleating deception to tavellers. The Saveyands earry their hetter fort of cieefe inta Piccimunt, as the flavour is much citersed there; but they gain zwere by their fains of bears, chamuis, and borgurtins (a fpecies of the wild guat), or by the fale of ginwfe and pheadants, which thes carry in great numbers to 'furin.

The clief rivers are the Rhone, which, on the fide of Genera, feparates Saxoy from France; the Arue, which has fome particles of gold in its fands; the ifere, the Seran, the Siers, and the Aic. There are alo a great many takes is this country, which yield
plenty of fith, but whene of them are ve:g large, together with medicinal and reciprocatiag forings and hot baths.
The language of the common poople is a comept Fiench; but the better fort, and thofe that live in the great cities, fpeak as guod Frencla as they do in Paris itfelt.
In their temper, howerer, and cifuofation, the Savoyards sefemble the Germans more than the French, rtaining finl much of the old German honefy and fimplicity of manners, which no doubt is partly owing to the poveaty and bartennefs of the country. To this alr, joined to their longevity and the fraitulaefs of their women, which arc the effects of their cheerful difpofition, healthy air, activit:", temperance, and fobricty, it is owing that great numbers of them are obliged to go abroad in queft of a livelitond, which they carn, thofe at leaft who have no trader, by howing marmottes, cleaniag fhoes, fweeping chimners, and the like. It is faid, that there are gemerally ibjut 18,000 of them, young and old, aloout Paris. In fummer they lie in the Areets, and in winter, forty, ffy, or fixty of them lodere tosether in a room: they are fo looneff that they may be trufted to any amount The children are often carried abruad in bafkets before the are able to walk. In many villarges of Savoy there is hardly a man to be feen throughoit the vear, excepting a month or two. Thofe that have families gencrally fet out aric retum about the fame feafon, when their wires commonly lie in, and they never tail to bring home forme pari of their fmall camings. Sume of them are fuch contummate mafters of economy, that they fot up foops and make fortunes, and others return home with a competency for the reft of their dars. An old nan is often difpatche: wids letters, litele prefents, and seme nooncy, from the younger fort, to their parents and relations, and b-ings back with him fieth colonies, letters, meflages, and news. The cuhivatioz of theirs grounds, and the reaping and gathering in of the harvett and wintage, are generally left to the irnm.cu and chidden; but all this is to the under:' ocd of the mo:ntainous pats of thavey. Grea: numbers of the mountaincers of both fexes are faid to be hane and defo: ined; and they are much fubject to a kiad of wens, which grow about their throxts, and very muched distigne them, efpecialiy the women; but that is the only iaconresience they feel form she:r.
The nobility of Savoy, and the ctrer domiaions of the liny of Sardina, lebour under great harimips ard. rellrietions, unheard of ius other countries, which we bave net room here to parienlarize. A minate accouts of them will be foum iu Mr lieytler's Travels. In fhort, the king hias left neithur liberty, power, aor much propeoty, to any but timfelf and the clergy, whofe overpertewn wealth he has atfo greatly curesiicd.
No other religeon is profeffed or solerated in Sarey but that of the church of Rome. The deerres, however, of the conncil of Trent are not admitsed; nor are the churv lics afylums for malefzecurs.
This duchy is divided into thofe of Chablais, Generois, and Savoy Proper, the counties of Tarantaife and Mzurienne, and the baruny of Faucigny.
SAURIN(Jamcs), a celclurated preacher, was born at Nifines in 1677 , and was the fon of a Prorethan: huwyer of conderable eminence- the afplicd so hisftudies
8.cy Saurin.

Seurin, with great fuccefs ; but at length being captivated with a military life, he relinquifhed them for the pro-* feffion of arms. In 1694 he madc a campaign as a cadet in lord Galloway's company, and foon afterwards obtalned a pair of colours in the regiment of colonel Renault which ferved in Piedmont. But the duke of Savoy having made peace with France, he returned to Genesa, and refumed the ftudy of philofophy and theology under Turretin and other profeffors. In 1700 Be vifted Holland, then came to England, where he remained for feveral years, and marricd. In 1755 he returned to the Hague, where he fixed his refidence, and preached with the moft unbounded applaule. To an exterior appearance highly prepoffeffing, he added a Atrong harmonious voice. The fublime prayer which be recited before his fermon was uttered in a manner highly affecting. Nor was the attention excited by the prayer diffipated by the fermon: all who heard is were charmed; and thofe who cane with an intention to criticife, were carricd along with the preacher and forgot their defign. Saurin had, however, one fault in his delivery ; he did not manage his voice with fufficient akill. He exhaufted himfelf fo much in his prayer and the beginning of his fermon, that his voice grew feeble towards the end of the fervice. His fermons, efpecially thofe publifhed during his life, are diftinguified for jultnefs of thought, force of reafoning, and an eloquent unaffected Atyle.

The firf time that the celebrated Abaddic heard him preach, he exclaimed, "Is it an ancel or a man who fpeaks ?" Saurin died on the 30th of December i730, aged 53 years.

He wrote, 1. Sermons, which were publifhed in 12 vols 8 vo and 12 mo ; fome of which difplay great genius and eloquence, and others are compofed with negligence. One may obferve in them the imprecations and the averfion which the Calvinifts of that age were wont to utter againft the Roman Catholics. Saurin was, notwithfanding, a lover of toleration: and his fentiments on this fubject gave great offence to fome of his fanatical brethren, who attempted to oblcure his merit, and embitter his life. They found fault with him becaufe he dis: not call the pope Antichrif, and the Remilh church the subore of Babylon. But the \(\int\) p prophetic metaphors, however applicable they may be, were certainly not intended by the benevolent religion of Jefus to be bandied about as terms of reproach; which would teach thole to rail who ufe them, and irritate, without convincing, thofe to whom they were applied.

Saurin, therefore, while he perhaps interpreted thefe metaphors in the fame way with his oppofers, difcovered more of the moderation of the Chriftian fpirit. Five volumes of his fermons were publifhed in his life, the reft have been added fince his deceafe.
2. Difcourfes Hittorical, Critical, and Moral, on the mof memorable Events of the Old and New Teftament. This is his greateft and moft valuable work. It was printed firf in two volumes folio. As it was left unfinifhed, Beaufobre and Roques undertook a continuation of it, and increafed it to four volumes. It is full of learning: is is indeed a collection of the opinions of the beft authors, both Chriftian and Heathen ; of the philofophers, hiftorians, and critics, in every fubject which the author examines. 3. The State of Chrifiaaity in France, \(\boldsymbol{F}^{25}\), 8vo. In this book he difcuffes
many important points of controverfy, and calls in queftion the truth of the -miracle faid to be performed on La Foffe at Paris. 4. An Abridgment of Chriftian Theology and Morality, in the form of a Catechifm, \(1722,8 v o\). He afterwards publifhed an abridgment
of this work. of this work.

A Differtation which he publifhed on the Expediency of fometimes difguifing the Truth, raifed a multitude of enemies againt him. In this difcourfe his plan was, to ftate the arguments of those who affirm that, in certain cafes, it is lawful to difguife truth, and the anfwers of thole who maintain the contrary. He does not determine the queftion, but feems, however, to incline to the frft opinion. He was immediatcly attacked by feveral adverfaries, and a long controwerfy enfued; but his doctrines and opinions were at length publicly approved of by the fynods of Campen and of the Hague.

The fubject of this controverfy has long been agita. ted, and men of equally good principles have fupported oppofite fides. It would centainly be a dangerous naxim that falfehood can ever be lawful. There may, indeed, be particular cafes, when the motives to it are of fuch a nature as to diminifh its criminality in a high degree; but to leffen its ruilt is a very different thing from juf. tifying it by the laws of morality.

SAURIN (Jofeph), a geometrician of the academy of Sciences at Paris, was born at Courtoufon in the principality of Orange, in 1659. His father, who was a minifter at Grenoble, was his frft preceptor. He made rapid progrefs in his ftudies, and was admitted minitter of Eure in Dauphiry when very young: hut having made ufe of fome violent expreflions in one of his fermons, he was obliged to quit France in 1633. He retired to Geneva, and thence to Berne, where he obtained a confiderable living. He was fcarcely fettled in his new habitation, when fome theologians raifed a perfecution agaiuft hira. Saurin, hating controverfy, and ditgufted with Switzerland, where his talents were entircly concealed, repaired to Holland. He returned foon after to France, and furrendered himfelf into the hands of Boffuet bifhop of Meaux, who obliged him to make a recantation of his errors. This event took place in 1690. His enemics, however, fufpected his fincerity in the abjuration which he had made. It was a general opinion, that the defire of cultivating fcience in the capital of France had a greater effect in producing this change than relicion. Sarrin, however, fpeaks of the reformors with great alperity, and condemns them for going too far. "Deceived in my opinions concerning the rigid fyftem of Calvin, I no longer regarded that reformer in any other light but as one of thole extravagant geniufes who are carried beyond the bounds of truth. Such appeared to me in general the founders of the reformation ; and that juft idea which I have now obtained of their character has enabled me to thake off a load of prejudices. I faw in moft of the articles which have feparated them from us, fuch as the invocation of faints, the worfhip of images, the diftinction of meats, \&c. that they had much exaggerated the inevitablc abufes of the people, and imputed thefe to the Romifh church, as if fandioned by its doetrines. Befides, that they have mifreprefented thofe doctrines which were not connected with any abufa One thing which furprifed me much when my eyes began to open, was the falle idea, though in appearance.

\section*{\(S\) A U}

Sarrin full of refpet, for the word of God, which the reform-
II
uvagefia. ers entertained of the perfection and perfpicuity of the Holy Scriptures, and the manifeft mifinterpretation of paffages which they bring to fupport that idea (for that mifinterpretation is a point which can be proved). Two or three articles ftill raifed fome ubjections in my mind againft the Romith church; to wit, Tranfubstantiation, the adoration of the facrament, and the infallibility of the church. The adoration of the facrament I confidered as idolatry, and, on that account, removed from her communion. But foon after, the Expotition of the bifhop of Meaux, a work which can never be fufficient. ly admired, and his Treatife concerning changes, reverfed all my opinions, and rendered me an enemy to the Reformation." It is faid alfo, that Saurin appeafed his confcience by reading Poiret's Cogitationes rationales. This book is written with a view to vindicate the church of Rome from the charge of idolatry.

If it was the love of dittinction that induced Saurin to return to the Romifh church, he was not difappointed; for he there met with proteetion and fupport. He was favourably received by Louis XIV. obtained a penfion from him, and was treated by the Academy of Sciences with the molt flattering refpect. At that time (1717), geometry formed his principal occupation. He adorn. ed the Fournal des Savans with many excellent treatifes; and he added to the memoirs of the Academy many interefting papers. Thefe are the only works which he has left behind him. He died at Paris on the 29th December 1737, in his 78 th year, of a fever. He married a wife of the family of Croufas in Switzerland, who bore him a fon, Bernard. Jofeph, diftinguihed as a writer for the theatre.

Saurin was of a bold and impetuous fpirit. He had that lofty deportment which is generally miftaken for pride. His philofophy was auftere; his opinions of men were not very favourable; and he often delivered them in their prefence: this created him many enemies. His momory was attacked after his deceafe. A letter was printed in the Mercure Suife, faid to be written by Saurin from Paris, in which he acknowledges that he had committed feveral crimes which deferved death. Some Calvinit minitters publifhed in 1757 two or three pamphlets to prove the authenticity of that letter; but Voltaire made diligent enquiry not only at the place where Saurin had been difcharging the facerdotal office, but at the Deans of the clergy of that department. They all exclaimed againft an imputation fo opprobrious. It muft not, however, be concealed, that Voltaire, in the defence which he has publifhed in his general hiftory of Saurin's conduet, leaves fome unfavourable impreffions upon the reader's mind. He infinuates, that Saurin facrificed his religion to his intereft ; that he played upon Bofluet, who believed he had converted a clergy: man, when he had only given a litile fortune to a pliilofopher.

SAURURUS, in botany: A genus of the tetraggnia order, belonging to the heptandria clafs of plants; and in the natural method ranking under the fecond order, Piperitc. The calyx is a catkin, with uniflorous fcales : there is no corolla; there are four germina, and four monofpermous berries.

SAUVAGESIA, in botany: A genus of the monogynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe

Voz. XVI, Mart II.
of which the order is doubtful. The corolla is pentapetalous and fringed ; the calyx peritaphyllous; the nectarium the fame, laving its leaves placed alternately with the petals ; the capfule urilocular.

SAUVEUR (Jo!eph), an cminent French mathematician, born at La Fleche in 1653 . Hie was abfolutely dumb until he was feven years of age: and even then his orgaus of fpeech did not difengage themfelves fo freely, but that he was cyer after obliged io fpeak with great deliberation. Mathematics were the only ftudies he had any relifh for, and thefe he cultirated with extraordinary fuccefs; fo that lee cormenced teacher at 20 years of age, and was fo foon in yogue, that he had prince Eugene for liis fcholar. He was made mathematical profeflor in the royal college in 1686 ; and ten years after was admitted a member of the Academy of Sciences. He died in 1716 ; and his writings, which connit rather of detached papers than of connected treatifes, are all inferted in she Memuirs of the Academy of Sciences. He was twice married; and by the laft wife had a fon, who, like himfelf, was dumb for the firf feven years of his lirc.

SAW, an inftrument whicls ferves to cut into pirces feveral folid matters; as wood, ftone, ivorr, \&c.

The beft faws are of tempered feel ground bright and fmooth : thofe of iron are only lammer-hardened: hence the furt, befides their being fiffer, are likewife found fmoother than the laft. They are known to be well hammered by the diff bending of the biade; and to be well and evesly ground, by their bending equally in a bow.

Sar- \(\quad\) 万ु 7. See Pristis.
SAXE (Maurice count of), was bom the 13 th Oc. tober 16g6. He was the natural fon of Frederic Auguftus II. elector of Saxony, and king of Poland, and of the counters of Kunigimarc, a Swedith lady; celebrated both for her wit and beauty. He was educated along with Frederic Auguitus the electural prince, afterwards king of Poland. His infancy announced the future warrior. Nothing could prevail ou him to apply to his ftudies but the promife of being allowed, after he had finifhed his tafk, to mount on horfeback, or exercife himfelf with arms.

He ferved lis firt campaign in the army commanded by prince Eugene and the duke of Marborough, when only twelve years old. He fignalized himfelf at she fieges of Tournay and Mons, and particularly at the battle of Malplaquet. In the cvening of that memorable day, he was heard to fay, "I'm content with my day's work." During the campaign of 171 . prince Eugene and the duke of Marboroush made many public encomiums on lis merit. Next year the young count accompanied the king of Poland to the dierse of Stralfund, the ftrongelt place in Pomerania, and difplayed the greatef intrepidity. He fwam acrofs the river in figlit of she enemy, with a pittol in his hand. His valour fhore no lefs confpicuondy on the bloudy day of Gaedelburck, where lie conmanded a reginent of ca. valry. He had a horfe killed moder him, after he had three times sallied his regiment, and led them on to the charge.

Soon after that campaigr, his mother prevailed on him to marry the countefs of Lubin, a lady both rich and beautiful. This union lafted but a thont time. In 1721 , the count procured a diflolution of the mariage; 4 K

\section*{S A X [ 682 ] S A X}
saxe. a ftep of which he afterwards repented. The countefs left him with regret ; but this did not prevent her from marrying foon after. The count of Saxe was too fond of pleafure and variety to fubmit to the duties which narriage impofes. In the midft, however, of the pleafires in which he fometimes indulged, he never loft fight of his profeffion. He carried along with him wherever he went a library of military books; and even when he feemed molt taken up with his pleafures, he never failed to fpend an hour or two in private fludy.

In 1717 he went to Hungary, where the emperor had an arny of 15,000 men under the command of prince Eugene. Young count axe was prefent at the fiege of Belyrade, and at a battle shich the prince gained over the Turks. On his return to P.land in 1718, he was made a knight of the yolden eagle.
The wars in Europe being concluded by the treaties of Utrecht and Poffarowitz, count Saxe went to France. He had always profeffed a partiality for that country. French, indeed, was the only foreign langua, re which during his infancy he was willing to learn. He fpent his whole time during the peace in fludying mathematics, fortification, and mechanics, feiences which exactly fuited his genins. The mode of exercifing troops had fruck his attention when very young. At is he invented a new exercife, which was tau ht in Saxony with the greatef fuccefs. Having obtained a regiment in France in 1722 , be formed it himelf according to his new plan. Fron that moment the libevalier Forllar, an excellent judge of military talents, predicted that he would be a great man.

In 1726 the States of Courland chofe him for their fovereign. But both Poland and Ruffia rofe in arms to oppofe hin. The Czarina wifhed to beftow the duchy on Menzikoff, a happy adventurer, who from a paftry-cook's boy brcame a general and a prince. Menzikoff fent soo Ruffians to Milan, where they befieged the new chofen duke in his palace. Count Saxe, who had only 63 men, defended himfelf with altonifling intrepidity. The fiege was raifed, and the Rufians obli. ged to retreat. Soon after he retired to Ufmaiz, and prepared to defend his people againit the two hoftile nations. Here he remained with only 300 men, till the Ruffian general approached at the head of \(40: 0\) to force his retreat. That general invited the count to a conference, during which he intended to furptife him, and take him prifoner. The count, informed of the plot, reproached him for his bafenels, and broke up the conference About this time he wrote to France for meen and money. Mademoifelle le Convreur, a famons actrefs, pawned her jewels and plate, and fent him the fum of 40,000 livres. This actrefs had formed his mind for the fine arts. She had made him read the greater part of the French poets, and given him a tafte for the theatre, which he retained even in the camp. The count, unable to defend himfelf againft Ruflia and PoIand, was obliged in the year 1729 to leave his new dominions, and retire into France. It is faid that Anne Iwanowa, duchefs dowager of Courland, and fecond daughter of the ezar Iwan Alexiowitz, had given him hopes of marriage, and abandoned him at that time becaufe the defpaired of fixing his wavering paffion.This inconflancy lof him not only Courland, but the throne of Ruffia itfelf, which that Pincefs afterwards filled.

Count Spxe, thus fript of his territories, devotet himfelf for fome time to the ftudy of mathematics. He compofed alfo, in 13 nights, and during the intervals of an arue, his Reveries, which he corrected afterwards. This book is written in an incorrect but forcible ftyle; it is full of remarks both new and profound, and is cqually ufeful to the foldier and the general.

The death of the king of Poland his father, in 1723 , kiudled a new war in Eirope. His brother, the elector of Saxony, offered him the command of all his forces, but he preferred the French fervice, and repaired to the marechal of Berwick's army, which was encamped on the Rhine. "Count," faid that general, who was preparin : to attack the enemy's entienchments at Etlinghen, "I was going to lend for 300 men, but your arrival is of more valoe than theirs." When the attack began, the count, at the head o a regiment of grenadiers, forced the enemy's lines, and by his bravery decided the victory. He behaved at the fiege of Plilipfburgh with no lefs intrepidity. For thefe fervices he was, in 1734, rewarded with the rank of lieutenantgeneral. Peace was concluded in 736 ; but the death of Charles VI. emperor of Germany kindled a new war almoft immediately.

Prague was befieged by the count of Saxe in 174t, near the end of Nuvember, and taken the fame month by affault. 'The conquet of Egra followed that of Prague. It was taken a few days after the trenches were opened. This fuceefs gave fo much joy to the Emperor Charles VII. that he wrote a congratulatory letter to the conqueror with his own hands.

In 1744 he was made marechal of France, and commanded a part of the French army in Flanders. During. that campaign he difplayed the gieateft military conduct. Thourh the enemy was fuperior in number, he obferved their motions fo Nkiffully that they could do nothing.

In January 1745, an alliance was concluded at Warfovia between the queen of Hungary, the king of Enigland, and the States of Holland. The ambaflador of the States General, meeting narechal Saxe one day at Verfailles, afked his opinion of that treaty. "I think (fays he), that it the king my mafter would give me an unlimited commifion, I would read the original at the Hajue before the end of the year." This anfwer was not a bravado; the marechal was capable of performing it

He went foon after, though exceedingly ill, to take the command of the French army in the Low Countries. A gentleman feeing the feeble condition in which be left Paris, afked him how he could in that fituation undertake fo great an enterprife? "The queftion (replied he) is not about living, but fetting out." Soon after the opening of the campaign, the battle of Fontenoy v as fought. Marechal Saxe was at the point of death, yet he caufed hinfelf to be put into a litter, and carried round all the pofts. During the action he mounted on horieback, though he was fo very weak that his attendants dreaded every noment to fee him expire. The victory of Fontenoy, owing entirely to his vigilance and capacity, was followed by the reduction of Tournay, Bruges, Ghent, Oudenarde, Oftend, Ath, and Bruffels: This laft city was taken on the 28th February 174 ; and very foon after the King fent to the marechal a letter oí naturalization conceived in the moft
flattering

\section*{S A X}

8art. fattering terms. The fucceeding campaigns gained bim additional honours. After the victory of Raucoux, which he gained on the isth Ottober 1746 , the king of France made him a prefent of fix pieces of cannon. He was, on the 2tb nf January of the following year, created marechal of all the French armies, and, in 1748 , commander.general of all thofe parts of the Netherlands which were lately conquered.

Holland now began to tremble for her fafety. Maefricht and Bergen-op-Zoum had already fallen, and nothing but misfortuncs feemed to attend the furthcr profecution of the war. The States General, therefore, offered terms of peace, which were accepted, and a treaty concluded on the 18th October 1748.

Marechal Saxe retired to Chambord, a country feat which the king of France had given him. Some time after be went to Berlin, where the king of Pruffia received him as Alesander would have received Cæfar. On his return to France, he fpent his time among men of learning, artits, and philofophers. He died of a fever, on the 30th Norember 1750, at the age of 54.

Some days before his death, talking to M. Senac his phyfician about bis life, "It has been (lays he) an excellent dream." He was remarkably careful of the lives of his men. One day a general officer was pointing out to him a poft which would have been of great ufe. "It will only coft you (fays he) a dozen grenadiers. "That would do very well," replicd the marechal, "were it only a dozen lieutenant generals."

It was impoffible for marechal Saxe, the natural brother of the king of Poland, eleted fovereign of Courland, and poffefled of a vigorous and reftlefs imagination, to be deflitute of ambition. He conflantly entertained the notion that he would be a king. After Iofing the crown of Ruffia by his inconftancy in love, he formed, it is faid, the projeet of affembling the Jews, and of being the fovereign of a nation which for \(17: 0\) years had neither poffeffed chief nor country. When this chimerical idea could not be realized, he caft his eyes upon the kingdom of Corfica. After failing in this projeet alfo, he was bufily employed in planning a fettlement in fome part of America, particularly Brazil, when death furprifed him.

He had been educated and died in the Lutheran religion. "It is a pity" (faid the queen of France, when fie beard of his death) that we cannot fay a fingle De profundis (praye for the dead) for a man who has made us fing fo many \(T_{c}\) Deums." All France lamented his death.

By his will, which is dated at Paris, March 1. 1.48, he directed that his body fhould be buried in quicklime: " that nothing (fays he) may remain of me in this world but the remembrance of me among my friends." Thefe orders, however, were not complied with; for his body was embalmed, put into a leaden coffin, which was inclofed in another of copper, and this covered with one of wood, bound about with iron His heart was put into a filver gilt box, and his entrails into another coffin. Louis XV. was at the charge of his funeral. By his erder his coupfe was interred with great pomp and Iplendor in the Lutheran church of St Thomas, at Strafburgh, on the 8th February 1751.

The marechal was a man of ordinary ftature, of a robuft conflutution, and extraordinary ftrength. To
an arpect, noble, warlike, and mild, he joined the ex. Sar fraza. cellent qualities of the heart. Affable in his manners, and difpofed to fympathize with the unfortunate, his generofity fometimes carried him beyond the limits of his fortune. On his dcath-bed he reriewed the errors of his life with remorfe, and exprefed much penitence.

The be! edicion of his Reveries was printed at Pa. ris 1757 , in 2 vols 4 to. It was compared with the greatelt attention with the original manufcript in the king's library. It is accompanied with many defuys exactly engraved, and a I.ife of the Author. 'I'he Life of marechal Saxe was written by M. d'Elipagnac, 2 vols. 12 mo . This hitory is written in the panegyrical fyle. The author is, however, impartial enough to remark. that in the tbree battles upon which the reputatio: of marechal Saxe is founded, he engaged in the molt faqourable circumftances, "Never did a general (íays he) ftand in a more advantareous fituation. I Ionsured with the conndence of the king, he was not reftrained in any of his projects. He always commanded a numerous army: his foldiers were fteady, and his officers pof. leffed great merit."
\(S+\) XIFRAGA, Saxifrage, in botany: A genus of the digynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 13 th order, Susculente. The calyx is quinquepartite: the corolla pentapetalous ; the capfule biroltrated, unilocular, and polyfpermous.

There are 38 1pecies; of which the mof remariable are, 1. The granulata, or white faxifra;e, which grows naturally in the meadows in many parts of England. The roots of this plant are like grains of corn, of a reddih coloun without ; from which arife kidney-haped hairy leaves, ftanding upon pretty long foot?alks.The ftalks ase thick, a fuot high, hairy, and furruwed: thefe branch out from the bottom, and have a few fmall leaves like thole below, which fit clofe to the falk: the fowers terminate the falk, growing in [mall clufters; they have five white petals, inclofing ten flamina and the two ftyles. There is a variety of this with duuble flowers, which is very omamental. 2. The pyramidata, with a pyramidal Italk, grows naturally on the mountains of Italy. The leares are tongue-hhaped, gathered into heads, rounded at their points, and have cartilaginous and fawed borders. The ftalk rifes two feet and a half high, branching out near the ground, forming a natural pyramid to the top. 'The flowers have tove white wed se-fhaped petals, and ten \(\mathbb{I}\) amina, placed circularly the length of the tube, terminated by roundifh purple fummits. When thele plants are ftrong, they produce very large pyramids of flowers, which make a tine appearance. 3. The punctata, commonly called L-niton prade or none-f, peitty grows naturally on the Alpr, and allo in great plenty on a monntan of I cland called AIongerton, in the county of Kerry in that ifland. The roots of this are peremial ; the leaves are oblong, oval, and placed circularly at bottom. They have broad, flat, furowed foot-1talks, and are deeply crenated \(2:\) their edges, which are white. The flalk riles a tur: high, is of a purple colour, Itiff, nender, and lairg: It fends out from the fide on the upper past feveral fhort foot-falks, which are tenninated by white flowers footted with red. 4. The eppofitifulia, grows nazural\(+R_{2}\)

Saso, Iy on the Alps, Pyrenees, and Helvetian mountains: it Saxony. is alfo found pretty plentifully growing upon Inglebo-
rongh hill in Yorkfhire, Snowdon in Wales, and fome other places. It is a perennial plant, with ftalks trailing upon the ground, and are feldom more than two inches long, garnifhed with fmall oval leaves ftanding oppofite, which lie over one another like the fcales of filh : they are of a brown green colour, and have a refemblance of heath. The flowers are produced at the end of the branches, of a deep blue; and thus make a pretty appearance during their continuance, which is great part of March and the beginning of April. All thefe ffecies are eafly propagated by offsets, or by parting their roots.
SAXO-Grammaticus, defeended from an illuftrious Coxe's Tra- Da:iih (a) family, was born about the middle of the 12 th whs into Uenmarlo century. Stephens, in his edition of Saxo-Grammaticus, printed at Soroë, indubitably proves, that he mult have been alive in 1156 , but cannot afcertain the exact place and time of his birth. See Stephens's Prolegomena to the Notes on Saxo-Grammaticus, p. 8, to 24 ; alfo Holberg, vol. i. p 269.; and Mallet's North. Antiq. vol. i. p. 4. On account of his uncommon learning, Saxo was diftinguifhed by the name of Grammaticus. He was provolt of the cathedral church of Rofkild, and warmly patronized by the learned and warlike \(\Lambda\) bialon, the celebrated arclibihop of Lunden, at whofe intligation he wrote the Hiftory of Denmark. His epitaph, a dry panegyric in bad Latin verfes, gives no account of the era of his death, which happened, according to Stephens, in 1204. His hittory, confiting of 16 books, beging from the earlieft account of the Danifh annals, and concludes with the year 1186. According to the opinion of an accurate writer, the firlt part, which relates to the origin of the Dantes, and the reigns of the ancient kings, is full of fables; but the eight latt books, and particularly thofe which regard the events of his own times, deferve the utnoft credit. He wrote in Latin ; the ftyle, if we confider the barbarous age in which he flourithed, is in general extremely elegant, but rather too poetical for hiftory. Mallet, in his Hilgoire de Dannemarc, vol. i. p. 182, fays, "that Sperling, a writer of great erudition, has proved, in contradiction to the aflertions of Stephens and others, that SaxoGrammaticus was fecretary to Abfalon; and that the Saxo provof of Rofkild wes another perfon, and lived earlier."

SAXONY, the name of two circles of the German empire, an electorate, and a cuchy of the fame. The lower circle is bounded to the fouth by the circle of UPper Saxony, and a part of that of the Upper Rhine; to the north, by the duchy of Slefwick, belonging to the king of Denmark, and the Baltic; to the weit, by the circle of Weftphalia and the north fea; and to the calt by the cirele of Upper Saxony. The flates belonging to it are the dukes and princes of Magdeburg and Bremen, Zell, Grubenhagen, Calenburg, Wolfenbuttle, Halberftadt, Mecklenburg-Schwerin, Mecklen-burg-Guftro, Holitein-GluckItadt, Holtein-Gottorf,

Hildefheim, Saxe-Lawenburg ; the archbihopric of Lubeck; the principalities of Schwerin, Ratzeburg, Blankenburg, Ranzau; the imperial cities of Labeck, Gotzlar, Muhlhaufen, Nordhauien, Hamburgh, and Bremen. The dukes of Bremen and Magdeburg are alternately directors and fummoning princes; but, ever fince the ycar 1682, the diets which nfed generally to be held at Brunfwick or Lunenburg have been difcontinued. 'Towards the army of the empire, which, by a decree of the empire in 1681, was fettled at 40,000 men, this circle was to furnifh 1322 horfemen and 2707 foot; and of the 300,000 florins granted to the imperial cheft in 1707, its quota was 31,271 florins; both which affeffments are the fame with thofe of Upper Saxony, Burgundy, Swabia, and Weftphalia. This circle at prefent nominates only two affeffors in the chambers judicatory of the empire, of one of which the elector of Brunfwick-Lunenburg has the nomination, who mult be a Lutheran, and is the ninth in rank. The inhabitants of this circle are almoft all Lutherans.

The circle of Upper Saxony is bounded by that of Franconia, the Upper Rhine, and Lower Saxony ; and alfo by the Baltic fea, Pruffra, Poland, Silefia, Lufatia, and Bohemia. It is of great extent, and contains the following flates, viz. the electors of, Saxony and Brandenburg, Saxe-Weimar, Saxe-Eifenach, Saxe-Cobourg, Saxe-Gotha, Saxe-Altenburg, Saxe-Querfurt, the Hither and Farther Pomerania, Canin, Anhalt, Quidlenburg, Gcrnrode, Walkenried, Schwarzburg, Sonderhaufen, Schwarzburg-Rudolitadt, Mansfekd, Stolberg, Barby, the counts of Reuffen, and the counts of Schonberg. No diets have been held in this circle fince the year 1683 . The elector of Saxony has always been the fole fummoning prince and director of it. Moft of the inhabitants profefs the Proteftant religion. When the whole empire furnifhes 40,000 men, the quota of this circle is 1322 horfe and 2707 foot. Of the 300,000 florins granted by the empire in 1707, it contributed only 31,271 florins, 28 kruitzers, being rated no higher than thofe of. Weltphalia, Lower Saxony, Swabia, and Burgundy, theugh it is much larger. Agreeable to a refolution and regulation in 1654, this circle nominates now only two affeflors of the clarnber-court.
'The electome confilts of the duchy of Saxony, the greateft part of the margravate of Meiffen, a part of the Vogtland, and the northern half of the landgravaie of Thuringia. The Lufatias alfo, and a part of the country of Henneberg, belong to it, but are no part of this circle. The foil of the electoral dominions lying in this circle is in general excreding rich and fruitful, yielding corn, fraits, and pulfe in abundance, together with hops, flax, hemp, Itubacco, anifeed, wild faffron, wood; and in fome places woad, wine, coals, porcelain clay, terra figillata, fullers-earth, fine Giver, various forts of beaxtiful marble, ferpentine flone, and almott all the different fpecies of precious fones. Sulphur ilfo, alum, vitriol, fand, and free Itone, falt-fprings, armber, turf, cinnabar, quickfilver, antimony, bifmath, ayfenic, cobalt, and other minerals, are found in it. 'This
country,
(A) Some authors have erroneoufy conjectured, from his name Saxo, that he was born in Saxony; but Saxe was no uncommon appellation among the ancient Danes. See Olaus Wormius Munumenta Danica, p. 186, and Stephens's Prolegomera, Fi 10.

\section*{S A X \([635] \quad\) S A X}
rony. country, befides the above articles, contains likewife valuable mines of filver, copper, tin, lead, and iron; and abounds in many places with horned cattle, fheep, horfes, and venifon. The principal rivers by which it is watered are the Elbe, the Schwerze-Ellter, the Mulde, the Saale, the Unllrut, the Weiffe-Ellter, and the Pleiffe. Thefe rivers, as well as the lakes and rivulets, abound in fifh; and in the White-Elfter are found beautiful pearls. This electorate is extremely well cultivated and inhabited, and is faid to include about 250 great and fmall towns, upwards of 5000 villages, 195 royal manors, and near as many royal caftles, betides private eftates, and commanderies. The provincial diets here confitt of three claffes. The firft is compofed of the prelates, the counts, and lords, and the two univerfities of Leipfic and Wittenberg. To the fecond belong the nobility in general, immediate or mediate, that is, fuch as ftand immediately under the fef-chancery or the aulic judicatories, and fuch as are immediately under the jurildietion of the antman. The third clafs is formed of the towns in general. The general provincial diets are ordinarily held every fix years; but there are others, called felection diets, which are convened commonly every two years. We would here oblerve, that not only thefe diets, but thofe in moft of the other ftates of Germany, are at prefent extremely infignificant and unimportant, retaining little more than the thadow of their former power and privileges; for even the petty princes, though they depend upon their more potent neighbours, and mult be careful nut to give them any umbrage, are almolt as abfolute in their refpective territories as the grand feignior himfelf. As to religion, it was in this country that the reformation took its rife in the 16 th century, to which it hath ever fince adhered, according See \(R e\) - to the doctrines of Luther *. The two late electors, mation, when they embraced Popery in order to qualify themfelves to be elected kings of Poland, gave the moft folemn affurances to their people, that they wonld inviolably maintain the ettablithed religion and its profeffors in the full and free enjoyment of all their eccletialtical rights, privileges, and prerogatiyes whatfoever, in regard to churches, worhip, ceremonies, ufages, univerfities, fchouls, benefices, incomes, profitz, jurifdietions, and imnurities. The electoral families fill continue Roman Catholics, though they have loft the crown of Yoland, for which they at firit embraced Popery. With refpect to ecclefiaftical matters, the country is divided into parifhes, and thefe again into firitual infpections and confiltories, all fubordinate to the eccetialtical conncil and upper confiftory of Diefden, in which city and Leipfic the Calvinifts and Roman Catholies enjoy the free exercife of their religion. Learning flouriftes in this electorate ; in which, beifdes the free-lchrods-and gymnafia in molt of the chief towns, are the two eclebrated univerfities of Wittenberg and leeipzig, in the laft of which are alfo focieties for the liberal arts and the German languars, with booksellers and printurs of the greateft eminence. A great variety of manufactures are alfo carried on in this country. The principal are thofe of fine and coarie linen, thread, fine lace, paper, fuse glafles and mirrors; porcelain, equal it not hipe-
riof to that of China†; iron, bials; and fteel warts; manufactures of gold and filvct, cotton, wool, and filk; gloves, caps, lats, and tapeftry ; in which, and the natural productions mentioned above, toretler with cye-
ing, an important fereinn commerce is carried on. A great addition has been made fince the year 1719 to the electoral tenitories, \(\mathrm{Ly}_{\mathrm{y}}\) the extinction of the collateral branches of Zeitz, Merfeburg, and Weifenfels, whefe dominions devolved to the cheer electural branch, defeended from the margraves of Arifien. The firt of thele, who was elector of Saxony, was Fredrrick the Warlike, about the beginning of the 15 th century.

This elector llyles thimielf duke of Saxony, Jilier=. Cleve, and Lerg, as alfo of Engern and Weltphalia, arch-marfhal and eleetor of the Holy Roman empire, landgrave in Thuringia, margrave of Meiffen, and ot Upper and Lower Lufatia, burgrave of Margdeburg, princely count of Henneberg, count of La Mark, Ravenberg, Barby, and Hanau, and lord of Ravenftein. Among the electors he is reckoned the ixth, as great-marfal of the empire, of which he is alfo vicar, during an interregnum, in all places rot fubject to the vicariate of the count palatine of the Rline. He is moreover fole direetor of the circle; and in the vacancy of the fee of Mentz claims the direstorium ai the diet of the empire. His matricular affefment, on account of the electorate, is 1984 florins, befides what he pays for other diftricts and territories. To the cliam-ber-courts he contributes, each term, the fum of \(15+5\) rix-dollars, together with 83 rix-dollars and 62 kruitzers on account of the county of Mansfeld. In this electorate, fubordinate to the privy council, are various colleges tor the departments of war, foreign affairs, the finances, fiefs, mines, police, and ecclefiaftical affairs, together with ligh tribunals and courts of juftice, to which appeals lie from the inferior. The revences of this elector are as confiderable as thofe of any prince in the empire, if we except thole of the houle of Auftria. They arife from the oruinary and extraordinary fubtidies of the ftates; his own demefnes, confifting of 72 bailiwics; the impont on beer, and the fine porcelain of the country; tenthe of corn, fruit, wine, \&ce. his own filver mines, and the tenths nt thofe that belong to particulars: all which, added logether, bring in an yearly revente of be:wixt \(7=0,0001\). and 805,0001 . yet the electorate is at prefeat deefly in debt. The regular troops commoniy amount to \(20,000 \mathrm{men}\), exclufise of the militia of the ban, the arriere-ban, and the body of miners and !unters, who are obliged is time of war to bear arms. 'The whole electusute is divided into circles.

The electo:al circie, or the duclyy of Suxuny, is bounded by the circles of Maifin, Leipaig, and f"iburingia, the priacipaity of Anhalt, the srarche of Diandenbury, and Lufatia. 'the principality of Andait lics acrufs it, and divides is into two parts. lts greatelt length and breadth is computed at about 40 miles ; but though it is wa:ered by the Elbe, the Black Eller, an 1 the Mulds, it is act very fruithal, the foil for the molt part confitiug of fand. It comains \(2+\) towns, thee bo ronglis, betwizt 4 .o and \(50=\) villages, 16, nublemens eitates, 11 fupermsendencies, three inipections, under osie confitury, and it prefecturates ar ditriets. The prefent duchy of Sexony is not :o be confounded with the old ; for the latter was of a mush 'ricaice exient, and contanced in it thole larye tratis anciently callid Eajlplathe, Engerr, and IV Jlabultat, of whiela the ctec. toral circle was 110 past, but was taken by Abert : he toral circle was marge of Sulewobel, l:om the VeLedio Hes
dua
fon Bernard obtaining the dignity of duke of Saxony from the emperor Frederic 1．the name of duchy was given to this country ；and the electoral dignity having been afterwards annexed to the duchy，it acquired there－ by allo the name of the clectioral circle．
＇The country of Saxony is remarkable for being the mother of the prefent Englifh nation ；but concerning the Saxons themfelves，previous to that period，we have very few particulars．The Saxons（fays Mr Whitaker） lave been derived by our hiltorians from very different parts of the globe；India，the north of Afia，and the forefts of Germany．And their appellation has been equally referred to very different caufes；the name of their Indian progenitor，the plundering difporition of their Afiatic fathers，and the fhort hooked weapons of their warriors．But the real origin of the Saxons，and the genuine derivation of their name，feem clearly to be thefe．

In the earlier period of the Gallic hiftory，the Celtz of Gaul croffed the Rhine in confriderable numbers，and planted various colonies in the regions beyond it．Thus the Volcex Tectofages fettled on one fide of the Hercy－ nian foreft and about the banks of the Neckar，the Hel－ vetii upon another and about the Rhine and Maine， the Boii beyond buth，and the Senones in the heart of Germany．Thus alfo we fee the Treviri，the Nervii， the Suevi，and the Marcomanni，the Quadi，the Venedi， and others，in that country ；all plainly betrayed to be Gallic nations by the Gallic appellations which they bear，and all together poffefling the greateft part of it． And，even as late as the conclufion of the firt century， we find one nation on the ealtern fide of this great con－ tinent actually fpeaking the language of Gaul，and ano－ ther upon the northern ufing a dialect nearly related to the Britifh．But as all the varions tribes of the Ger－ mans are confidered by Strabo to be yempoas 「axalac，or Fenuine Gauls in their origin；fo thofe particularly that lived immediately beyond the Rhine，and are afferted by Tracitus to be indubitably native Germans，are exprefsly denominated rancia．，or Gauls，by Diodorus，and as exprefsly declared by Dio to have been diftinguifhed by the equivalent appellation of Celt．e from the earlieft period．And the broad line of nations，which extend－ ed along the ocean，and reached to the borders of Scy． thia，was all known to the learned in the days of Dio－ dorus，by the fame fignificant appellation of \(\Gamma \alpha \lambda \alpha / \alpha\), or Gauls．

Of thefe，the moft noted were the Si－Cambri and Cimbri；the former being feated near the channel of the Rhine，and the latter inhabiting the peninfula of Jutland．And the denominations of both declare their original；and hhow them to have been derived from the common Itock of the Celtre，and to be of the fame Cel－ tie kindred with the Cimbri of our own Somerlethire， and the Cymbri or Cambrians of our own Wales．The Cimbri are accordingly denominated Cefte by Strabo and Appian．And they are equally afferted to be Gauls by Diodorus；to be the defcendants of that nation which facked the city of Rome，plundered the temple of Del－ phi，and fubdued a great part of Europe and fome of Ara．

Immediately to the fouth of thefe were the Saxons， extending from the ifthmus of the Cherfonefus to the current of the Elbe．And they were equally Cel－
tie in their origin as their neighbours．They were de－ nominated Amibrones as well as Saxons；and，as fuch， are included by Tacitus under the general appellation of Cimbri，and compreliended in Plutarch under the equal one of Cielto－Scyine．And the name of Ambrones appears particularly to have been Gallic；being common to the Saxuis beyond the Elbe，and the Ligurians in Cifalpme Gaul；as both found to their furprile，on the irruption of the former into Italy with the Cimbri． And what is equally furprifing，and has been equally unnoticed by the critics，the Welfh diftinguifh England by the name of Lougr or Liguria，even to the prefent moment．In that irruption thefe Saxons，Ambrons， or Ligurians，compofed a body of more than 30，000 men，and were priacipally concerned in cutting to pieces the large armies of Manlius and Cxpio．Nor is the appellation of Saxons lefs Celtic than the other．It was originally the fame with the Belgic Suefones of Gaul ；the capital of that tribe being now intitled Soi－ fous by the French，and the name of the Saxons pro－ nounced Saifen by the Wellh，Sajon by the Scotch，and Sajenach or Saxfenaib by the Irifh．And the Surfones or Saxoncs of Gaul derived their own appellation from the pofition of their metropolis on a river，the ftream at Soilons being now denominated the \(A_{1} f_{n e}\) ，and formerly the AXon，Ueff－on or Axon importing only waters or a river，and S －ueff－on or S －ax－on the waters or the river． The Sueffones，therefore，are actually denominated the \(U_{i f f}\) fues by Ptolemy；and the Saxones are actually in－ titled the ifxones by Lucan．

Thefe，with their brethren and allies the Cimbri， having been more formidable enemies to the Romans by land，than the Samnites，Carthaginians，Spaniards， Gauls，or Parthians，in the fecond century applied them－ felves to navigation，and became nearly as terrible by fea．They foon made themfelves known to the inla－ bitants of the Britifh inles by their piracies in the northeris channels，and were denominated by thein Locblyn or Lochlynach；lucd－lyn fignifying the people of the wave，and the D being quiefcent in the pronum－ ciation．They took poffeffon of the Orkncy iflands， which were then merely large fhoals of land，uncovered with woods，and overgrown with rufhes；and they land－ ed in the north of Ireland，and ravaged the country． Before the middle of the third century they made a fe－ cond defcent upon the latter，difembarked a confidera－ ble body of men，and defigned the abfolute fubjection of the ifland．Betore the conclufion of it，they carried their naval operations to the fouth，infefted the Britifh channel with their little veffels，and made frequent de－ fcents upon the coalts．And in the fourth and fifth centuries，acting in conjunction with the Picts of Cale－ donia and the Scuts of Ireland，they ravaged all the eaftern and fouth－eaftern fhores of Britain，began the formal conquett of the country，and finally fettled their victorious foldiery in Lancafhire．

SAY，or SAyE，in commerce，a kind of ferge much ufed abroad tor linings，and by the religious for fhirts； with us it is ufed for aprons by feveral forts of artifi－ cers，being ulually died green．

SCABlOSA，Scabrous，in botany：A genus of the monogynaa order，belonging to the tetrandria clats 6

\section*{\(S\) C A}
rita of plants; and in the natural rethod ranking under the 48 th order, Aggregata. The conmon calyx is poly. phylious; the proper one is double fuperior; the recep. tacle is paleaceous or naked. The muft remarkable fpecies are, I. The arvenfis, or meadow-fcabious, grows naturally in many places of Britain. It hath a ftrons, thick, fibrous root, fending out many branching Italks, which rife to the height of three feet; the lower leaves are fometimes almoft entire, and at others they are cut into many fegments almoof to the midrib. 'The flowers are produced upon naked footitalks at the end of the branches; they are of a purple colour, and have a faint odour. 2. The fuccifa, or devil's bit, grows naturally in woods and moitt places. This has a fhort tap-root, the end of which appears as if it was bitten or cut off, whence the plant has taken its name. The leaves are oval and Spear fhaped, and f:mooth; the falks are fin tle, about two teet high, garnifhed with two leaves at eaeh joint; they generally fend out two fhort foot-Ralks from their upper joint, ftanding oppofite, which are turminated by purple-flowers. - Both thefe have been recommended as aperient, fudorific, and expectorant ; but the prefent practice has no dependence on them.

SCABRITA, in botany : A genus of the monogynia order, belonging to the tetrandria clafs of plants. The corolla is monopetalous, and falver fhaped; there are two feeds emarginated fuperior; the calyx is truncated.

SCEVOLA (C. Mucius), a ynung Roman of illuftrious birth, is particularly celebrated in the Roman hiltory for a brave but unfuccefstul attempt upon the life of Porfena king of Hetruia, about the year betore Chrift 504. See the article Rome, n \(\mathrm{n}^{2} 1\).

Scexvola, in botany; a genus of the monogynia order, belonging to the pentandria clafs of plants. The corolla is monopetalous; the tube flit longitudinally; the border quinquefid and lateral. The fruit is a plum inferior and monofpermous; the nueleus bilocular.

SCAFFOLD, among builders, an affemblage of planks and boards, fultained by treffels and pieces of wood fixed in the wall; whereon mafons, bricklayers, \&c. Rand to work, in buildiug high walls, and plaAterers in plaftering ceilings, \&c.

SCAFFold, alfo denotes a timber-work raifed in the mannc: of an amphitheatte, for the more conmodious viewing any fhow or ceremony: it is alfo ufed for a little itage raifed in fome public place, whereon to behead criminals.

SCALA-nova (anciently Neapolis), called by the Turks Koufbadafe, is fituated in a bay, on the flope of a hill, the houfes nining one above another, intermixed with minarees and tall flender cypreffes. "A Hreet, through which we rode (fays Dr Chandler \(\dagger\) ), was hung with goat-flkins expofed to dry, died of a noft lively red. At one of the fountains is an ancient coffin ufed as a ciflern. The port was filled with fmall craft. Before it is an old fortrefs on a rock or inet frequented by gulls and feamews. By the water fide is a large and good khan, at which we paffed a night on our return. This place belonged once to the Eplhefians, who exchanged it with the Samians for a town in Caisa.".
SCALADO, or Scallade, in the art of war, a furious aflault made on the wall or rampart of a city, or other fortised place, by means of ladders, without carrying on works in form, to fecure the men.

SC-1LD-cream, fumetimes allo called Cloutedeream: a curious method of preparin c cream for butter, almoft peculiar to Devonflire. Dr Hales, in Phil, fophical Tranfactions, volume 49, page 3+2, 1755, part. 1f, gives fome account of the method of preparing this delicate and luxurious article: other writers alfo fpeak of it. With an elucidation or two, we thall tearly quote Mr Feltham's account from the Gentleman's Masazine, volume 61. part 2. It is there obfeived, that the purpofe of making fcald-cream is far fuperior butter than can be procured from the ufual raw creain, being preferable for flavour and keepius; to which thofe accuftomed are fo partinl, as fellom to eat any other. As leaden cilterns would not anfwere for fcaldins cream, the dairies molly adopt brafs pans, which lold from three to five gallons for the nilk; and that which is put into thofe pans one moming, fands till the rext, when, without ditturbing it, it is fet over (on a trivet) a lteady brilk wood fire, devoid of fmuke, where it is to remain from feven to fifteers menutcs, according to the fize of the pan, or the quantity in it : the precife time of removing it from the fire muit be particularly attended to, and is, when the furface begins to wrinkle or to gather in a litte, thowing firns of being near the anita. tion of boiling, which it mult by no means do ; it is then intantly to be taken off, and placed in the dairy until the next morning, when the fine cream is thrown up, and may be taken for the table, or for butter, into wheh it is now foon cuverted by flirring it with the hand. Some know when to runove it from the fre by founding the pan with the finger, it heing then lefa fonorous; but this is only acquired by experience. Dr Hales obferves, that this method of preparing tnilk will take off the ill talte it fometimes acquires from the cows teeding on turnips, cabbrgc, \&c.
aCALDS, in the hiftory of literature, a name given by the ancient inhabitants of the northera countris to their poets; in whofe writings thear hiflory is recorded.

SCALE, a mathematical inftruncnt coniflting: of feveral lines drawn on wood, brafs, filver, sce. an 1 varioully divided, according to the purpofes it is it. tended to ferve; whence it acquires various denoninations, as the plain fale, diazonal fule, plothry's fion, is. See Geometry.

Scile, in mufic, fometimes denominated a patma: a diayram, a \(\int\) ries, ant ordir, it dia fm. It confitls of the regular gradations of foun!, by which a compoler or pertormer, whether in rifing or delcending, maj pats from any given tune to another thefe gradations are feven. When this order is repeated, the firit nute of the fecond is confentancous with the lowe of wote in the firtt ; the fecoud of the former with the fecond or the latter; and fo through the whole netave. I he tecond order, therelore, is jultly elteemed only a repetition of the firf. For this reafon the fcale, among the m cietmes, is tometimes limited to an octave; at other tines extenc. ed to the conpafs of any paticular voice or indrumes t. It likewife Irequently includes all the practical :sradations of mufical found, or the whole number of octines employed in compolition or execution, arranged ia the:r natual order.

SCalene, or Scalenous Triangle, coritwon, in geometry, a triangle whofe fides and angles ure tite equal. See Geometry.

SC.A-

\section*{S C A [ 688 ] S C A}

Sratenur, 3colger.

SCALENUS, in anatomy. Sce there, Table of the Muftes.

SCALIGER (Jnlius Cæfar), a learned critic, poet, phyfician, and philofopher; was born at the cattle of Ripa, in the territories of Verona, in \(148+\); and is faid to have been defcended from the ancient princes of Verona, though this is not mentioned in the letters of naturalization he obtained in France in \(15 \approx 8\). He learned the firt rudiments of the Latin tongue in his own country; and in his 12 th year was prefented to the Emperor Maximilian, who made him one of his pagcs. He ferved that emperor 17 years, and gave fisnal proofs of his valour and conduct in feveral expeditions. He was prefent at the battle of Ravenna in April 1512 , in which he had the misfertune to lofe his father Benediet Scaliger, and his brother Titus; on which his mother died with grief: when oeing reduced to neceffitous circumflances, he entered into the order of the Francifcans, and applied himfelf to fudy at Bologna; but foors atter changing his mind with refpect to his becoming a monk, he took arms again, and ferved in Piedmont. At which time a phyfician perfuaded him to ftudy phyfic, which he did at his leifure-hours, and alfo learned Greek; and at laft the gout determined hiim, at 40 years of age, to abandon a miiitary life. He foon after fettled at Agen, where he married, and began to apply himfelf ferioully to his fudies. He learned firft the French tongue, which he fpoke perfeetly in three months; and then made himfelf mafter of the Gaicon, Italian, Spanifh, German, Hungarian, and Sclavonian : but the chief object of his ftudies was pulite literature. Meanwhile, he fupported his farnily by the practice of phyfic. He did not publifh any of his works till he was 47 years of age; when he foon gained a great name in the republic of lettens. He had a graceful perfon, and fo ftrong a memory, even in his old age, that he dictated to his fon 200 verfes which he had compofed the day before, and retained without writing them down. He was fo charitable, that his houfe was as it were an hofpital for the poor and fick; and he liad fuch an averfion to lying, that he would have no correfpondence with thofe who were given to that vice; but, on the other hand, he had much vanity, and a fatirical fpirit, which created him many enemies. He died of a retention of urine in 1558. He wrote in Latin, 1. A Treatife on the Art of Poetry. 2. Exercitations againft Carden: which sporks are much efteemed. 3. Commentaries on Ariftote's Hifory of Animals, and on Theophraftus on Plants. 4. Some Treatifes on Plyyfic. 5. Letters, Orations, Poems, and other works, in Latin.

Scaliger (Jofeph Juftus), one of the moft learned critics and writers of his time; he was the fon of the Sormer, and was born at Agen in France in 1540. He fludied in the college of Bourdeaux; after which his father took him under his own care, and employed him in tranferibing his poems; by which means he obtained fuch a tafte for poetry, that before he was 17 years old he wrote a tragedy upon the fubject of Dedipus, in which he introduced all the poetical ornaments of fyle and fentiment. His father dying in 1558 , he went to Paris the yea: following, with a delign to apply himfelf to the Greek tongue. For this purpofe he for two months attended the lectures of Turnebus; but findiug that in the ufual courfe he fhould be a long
time in gaining his point, he fhut himfelf up in his clofet, and by conftant application for two years gained a perfect knowledge of that language. After which he applied to the Hebrew, which he learned by hinfelf with great facility. He made no lefs progrefs in the fciences; and his writings procured him the reputation of one of the greateft men of that or any other age. He embraced the reforned relition at 22 years of are. In \(15 \sigma_{3}\), he attaclied himfelf to Lewis Cafteignier de la Roch Pozay, whom he attended in feveral journeys; and in 1593, was invited to accept of the place of honorary profeflor of the univerfity of Leyden, which he com. plied with. He died of a dropfy in that city in 1609. He was a man of great temperance; was never married; and was fo clofe a fludent, that he often fpent whole days in his ftudy without eating; and though his circumflances were always very narrow, he conftantly refufed the prefents that were offered him. He publifhed many works; the principal of which are, 1. Notes on Seneca's Tragedies, on Varro, Aufonius, Pompeius Feftus, \&ic. 2. His Latin Poems. 3. A 'Treatife de Emendatione Temporum. 4. Eufebius's Chronicle with Notes. 5. Canones I/agogici; and many other works. The collections intitled Scaligeriana, were collected from his converfations by one of his friends; and being ranged into alphabetical order, were publifined by Ifaac Voflius.

SCALLOP, in ichthyology. See Pecten.
In the Highlands of Scotland, the great fcallop fhell is made ufe of for the fkimming of milk. In old times, it had a more honourable place; being admitted into the halls of heroes, and was the cup of their feftivity when the tribe affermbled in the hall of their chieftain.

SCALPEL, in furgery, a kind of knife ufed in ana. tomical diffections and operations in furgery.

SCALPER, or Scalping-Iron, a furgeon's inArument ufed for fcraping foul carious bones.

SCALPING, in military bittory, a barbarous cuftom, in practice among the Indian warriors, of taking off the tops of the fcalps of the enemies fkulls with their hair on. They preferve thern as troplies of their victories, and are rewarded by their chiefs according to the number of fcalps they bring in.

SCALPRA Dentalia, infruments ufed by the furgeons to take off thofe black, livid, or yellow crufts which infeft the teeth, and not only loofe and deftroy them, but taint the breath.

SCAMMONY, a concreted vegetable juice of a fpecies of convolsulus, partly of the refin, and partly of the gum kind. See Convolvulus.

The beft fcammony comes from Aleppo, in light fpongy maffes, cafily friable, of a fhining afh-colour verging to black; when powdered, of a light grey or whitifh colour : an inferior fort is brought from Smyrna, in more compact ponderous picces, of a darker colour, and full of fand and other impurities. This juice is chicfly of the refinous kind; rectified fpirit diffolves five ounces out of fix, the remainder is a mucilaginous fubftance mixed with drofs; proof-fpirit totally diffolves it, the impurities only being left. It has a faint unpleafant finell, and a bitterifh, fomewhat acrimonious, tafte.

Scammony is an efficacious and ftrong purgative. Some have condemned it as unfafe, and laid fundry ill qualities to its charge; the principal of which is, that
adium its operation is unccrain, a full cofe proving fometines ineffectual, whilit at others a much fimaller one occafions dangerous hypercatharfes. This difference, however, is owing entirely to the different circumftances of the patient, and not to any ill quality or imenularity of operation of the medicine: where the inteltines are lined with an exceffive luad of mucus. the feanmony palfes throngh without exerting itfelf upon them; where the natural mucus is deficient, a fmall dofe of this or any other refinous cathartic irritates and inflames. Many bave endeavoured to abate the force of :this drug, and correct its imaginary virulence, by ex. poling it to the fume of fulphur, diffolving it in acid juices, and the like; but this could do no more than deltroy as it were a part of the midicine, without making any alteration in the reft. Scammony in fubftance, disdiciounly manared, ftands nut in need of any corrector: if triturated with furar or with almonds, it hecomes fufficiently fale and mild in operation. It may likewife be conveniently diffolved by trituration in a Itrong decoction of hiquorice, and then poned off from the feces; the college of Wertemberg a ?iures us, that by this treatment it becomes mildly purgative, without heing attended with gripes, or other inconseniences; and that it likewife \(y\) :oves inoffentive to the palate. The common dufe of fammony is from thee to twive yrains.

SCANDAIUM MagNATUM, in law, is a defamatory fpeceb or writing to the injury of a perfon of digcity; for which a writ that hears the fane nume is granted for the accovery of danarges.

SCANDERBEG, the fumame of Georese Cafriot king of Albinia, a province of Turkey in Europe, dependent on the Ottoman empirc. He was delivered up with his three elder brothers as hoffages, by their father, to A nurath II. fultan of the Turks, who poifoned his brothers, but fpared him on account of his youth, being likenife pleafed with his juvenile wit and amiable perfon. In a thort time he became one of the molt renowned generals of the age; and revolting from Anurath, he joined I-Iunniade Corvin, a molt fornidable enerny to the Ottoman power. He defeated the fultan's army, took Amurath's fecretary prifoner, cblized him to fign and teal an order to the governor of Croia, the capitad of Albania, to deliver up the sitadel and city to the bearer of that ordur, in the name of the fultan. With this forsed order he repared to Croia; and thus recovered the throne of his anceftors, and maintained the independency of his country againtt the numerous amnies of A murath and his fucceffor Mahommed II. who was obliged to make peace with this hero in 1461 . He then went to the elfittance of Ferdinand of Ariagon, at the requeft of Pope Pius IT. and by his affitance Firdinand gained a complete victory uver his enemy the count of Anjou. Scanderber died in \(1+57\).

\section*{SCANDEROON. Sec Alexandretta.}

SCANDINAV1A, a genemal name for the countries of Norway, Sweden, and Demmalk, anciently under the dominion of one prince. The inhabitants of thefe countries, in former times, were excefively addicted to war. Fiom their carlieft years they applied themfelves to the military art, and accultomed thenfelses to cold, fatigue, and hunger. liven the very fuorts of routh and childhood were dangerous. *Voz. XVI. I'at II.
hey conffed in taining frightful leaps, clin bin? \(n\) a the ftecpelt rocks, firhting naked with cifenfore wer. pons, wrefling with the utmont fury; fu that it was ufual to fee them grown up to be robuft men, and tetrible in the combat, at t!e aspe of 15 . At this callv age the young men hecane: their own ni:llos; which they dud by receiving a fivord, a buck !er, and a lance. This ceremony was performal at fome public noceting. One of the principal men of the affenbly named the youth in public; after which he was oblifed to provide for his own fubliftence, aad was eicher how to live by hunting, or by juining in fome iacurfor againts the enemy. Great care wis taken to prevent the young men from too early connections with the female fex ; and indeed they cuuld have un hope \(t\), gain the affection of the fair, but in propurtion to the conrage and addrefs they had fhown in their mili:an exercifes. Accordingly, in an ancient fons, we find Bartholin, king of Norway, extremely furprifed that his milerels foould prove unkind, as he could perform: eight different exercitcs. The children were penerally born in camps; and beins inured from their iafancy to bchold nothing but a.ms, efluino of blood, and flums. tet, they imbibed the cruel difpolition of their Gathers, and when they broke forth upon other nations, butsved ather like furies than like human creatures.

The laws of this poople, in fume nieal.re, refemble] thofe of the ancient Lacedcmonians. They inew n virtue but bravery, and no vice but cowardice. The greatef penalties were indicted on fuch as Aled frem battle. The laws of the ancient Danes declared fuch perfone infamons, and excluced them from fowiety. Amons the Germans, cowards were funstimes luffocated in mud ; after which they were covered over with hurdle. tu fhow, fays Tacitus, that thongh the puan' hment of crimes fould be public, there are certian degrees ef cowardice and infany which onght to he buried in oblivion. Frothoking of Demmark enacted, by law, that whocese folieited an eminert poll onthe upon ail occafions to attack one enemy, to face two, to retire onty one ftep back from three, and never to riake an actual retreat till affaulted by fuar. The rules of jrflice thenfelves were adapted and warped on thefe prejudices. War was looked upon as a real act ot jufice, and force was thought to be an incontellable title over the weak, and a vilible mark that Gud had intended them to be fubject to the itrony. They had no d ube but that the intentions of the Deity had been to ctiablifh the fane dependence among men that tises flace among iaferior creatures; and, fettime ont from this priaciple of the natural inequality amons neen, they had from thence inferred that the weak had ni riglit to what they could not defend. This ma*in was ad opted with fuch rigour, that the nane o divite judsement was given mot only to the julicatory emba:, but to conthet, and battles of all furts; riقury beins, in their eppinion, the onde certain mark by which providence enables us :o didinguith those whum it has appointed so command others.--1,atly, their relipion. hy annexine eternal happined, to the nilitary bintues, mes the utmolt pullible degree of vigonit to that propenficy which thefe people had for war, and to their contempt of death, of which we thall now give fome intlances. We are informed that Hawle, furnamed Biaman ; or Bier-south, a king of Deumark. Who lived in the be-

\section*{S C A}

Seandina ginning of the ninth century, had founded on the via. coalts of Pomerania a city named Tyuin or 7om/burg. To this place he fent a colony of young Danes, beflowing the governneent on a celebrated warrior called Palnatukn. In this colony it was forbidden to mention the word far, even in the noof immineat dangers. No citizen of Jomburg was to yield to any number of enemies however great. The fight of inevitable death was not to be taken as an excufe for fhowing the fmallefl apprchenfion. And this legifator really appears to have eradicated from the minds of moft of the youths bred up under him, all traces of that fentiment fo natural and fo univerfal, which makes men think on their deftruction with horror. Nothing can fhow this better than a fingle fact in their hiftory, which deferves to have place here for its fingularity. Some of them having made an irruption into the territorics of a powerful Norwegian lord, named Haquir, were overcome in fpite of the obitinacy of their refiftance; and the moft diftinguifed among them being made prifoners, were, according to the cuftom of thofe times, condemued to death. The news of this, far from aflicting them, was on the contrary received with joy. The firll who was led to punifhment was content to fay, without changing countenance, and without expreffing the leaft fign of fear, "Why fhould not the fame happen to me as did to my father? He died, and fo muft I." A warrior, named Thorcbill, who was to cut off the head of the fecond, having afted him what he felt at the fight of death, he anfwered, "that he remembered too well the laws of Jomburg to utter any words that denoted fear." The thind, in reply to the fame queftion, faid, "he rejoiced to die with glory; and that he preferred fuch a death to an infamous life like that of Thorchill's." The fourth made an anfwer much longer and more extraordinary. "I fuffer with a good heart; and the prefent hour is to me very agreeable. I only beg of you (added he, addrefling himfelf to Thorchill) to be very quick in cutting off my head; for it is a queftion often debated by us at Jomburg, whether one retains any fenfe after being beheaded. I will therefore grafp this knife in. my hand; if, after my head is cut off, I Atrike it towards you, it will fhow I have not loft all fenfe; if I let it drop, it will be a proof of the contrary Make hatte therefore, and decide the difpute." Thorchill, adds the hiftorian, cut off his head in a moft expeditious manner; but the knife, as might be expected, dropt from his hand. The fifth fhowed the fame tranquillity, and died rallying and jeering his enemies. ' 1 he fixth begged of T'horchill, that he might not be led to punifhment like a fheep: "Strike the blow in my face (faid he), I will fit ftill without flarinking; and take notice whether I once wink nuy eyes, or betray one fign of fear in my countenance : for we inhabitants of Jomfburg are ufed to exercife ourfelves in trials of this fort, fo as to meet the flroke of death without once moving." He kept his promife before all the fpectators, and received the blow without betraying the leafl fign of fear, or fo much as winking with his eyes. The feventh, fays the hiforian, was a very beautitul ycung man, in the flower of his age. His long hair, as finc as filk, floated in curls and ringlets on his moulders. Thorchill anked him, what he thought of death? "I receive it willingly ( faid he), fince I have fulfilied the greateft duty of life, and have feen
all thofe put to death whom I would not furvive. I only beg of you one favour, not to let my hair be touched by a flave, or ftained with my blood."
Neither was this intrepidity peculiar to the inhabitauts of Jomfurg ; it was the general character of all the Scandinavians, of which wee fhall only give this further inftance. A warrior, having been thrown upon his back in wrefling with his encmy, and the latter finding himfelf without his arms, the vanquifted perfon promifed to wait, without chane,ing his pofture, till his antagonift fetched a fword to kill him; and he faithfully kept his word.-To die with his arms in bis hand was the ardent winh of every free man; and the pleafing idea which they had of this kind of death led them to dread fuch as proceeded from old age and difeafe. The hiltory of ancient Scandinavia is full of inflances of this way of thinking. The warriors who found themfelves lingering in difeafe, often availed themfelves of their few remaining moments to Shake off life, by a way that they fuppofed to be more glorious. Some of them would be carried into a field of battle, that they might die in the engagement. Others flew themfelves: many procured this melancholy fervice to be performed by their friends, who confidered it as a moft facred duty. "There is, on a mountain of Iceland, (fays the author of an old Iceland romance), a rock fo high, that no aninal can fall from the top and live. Here men betake themfelves when they are afllicted and unhappy. From this place all our anceftors, even without waiting for ficknefs, have departed into Eden. It is ufelefs, therefore, to give ourfelves up to groans and complaints, or to put our relations to needlefs expences, fimce we can eafily follow the example of our fathers, who have all gone by the way of this rock." - When all thefe methods failed, and at lat when Chriftianity had banifhed fuch barbarous practices, the difconfolate heroes confoled themfelves by put. ting on complete armour as foon as they found their end approaching.

SCANDIX, Shepherds Nefdee, or Venus Comb, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 45 th order, Umbellate. The. corolla is radiating; the fruit fubulated; the petals emarginated; the florets of the difc frequently male. The moft remarkable fpecies is the odorata, with angu. lar furrowed feeds. It is a native of Germany; and has a very thick perennial root, compofed of many fibres, of a fweet aromatic tafte like anifeed, from which come forth many large leaves that branch out fomewhat like thofe of fern, from whence it is named fweet-fern. The flalks grow four or five feet high, are fiftulous and hairy ; the flowers are difpofed in an umbel at the top of the ftalk, are of a white colour, and have a fweet asomatic fcent.-This Species is eafily propagated by freds, which, if. permitted to fcatter, will fupply an abundance of young plants, that may be put into any part of the garden, and require no care.

SCANNING, in poetry, the meafuring of verfe by feet, in order to fee whether or not the quantities be duly obferved. The term is cbiefly ufed in Greek and Latin verfes. Thus an hexameter verfe is fcanned hy refolving it into fix feet; a pentameter, by refolving it into \(k\) ve feet, \& c .

\section*{S C A}
:anto, SCANTO, or Spavento, a fudden impreffion of horror upon the mind and body. It is extremely dreaded by the inhabitants of Sicily; and the wild ideas of the vulgar part of the inhabitants refpecting it are almoft incredible, and their dread of a fudden thock is no lefs furprifing. There is farce a fymptom, diforder, or accident, they do not think may befal the human frame in confequence of the fcanto. They are perfuaded that a man who has been frightened only by a dog, a viper, fcorpion, or any other creature, which he has an antipathy to, will foon be feized with the fame pains he would really feel, had he been torn with their teeth, or wounded with their venomons fting ; and that nothing can remove thefe nervous imaginary pangs but a ftrong dofe of dilena, a fpecies of cantharides found in Sicily.

SCAPE-GOAT, in the Jewifh antiquities, the goat which was fet at liberty on the day of fulemn expiation. For the ceremonics on this occafion, fee Levit. xvi. 5, 6, \&cc.

Some fay, that a piece of fcarlet cloth, in form of a tongue, was tied on the forehead of the fcape-goat. Hoff: Lex. Unit, in voc. Lingua.

Many have been the difputes among the interpre. ters concerning the meaning of the word fcape goat; or rather of azazel, for which fape-goat is put in our verfion of the Bible.

Spencer is of opinion, that azazel is a proper name, Gignifying the devil or evil dxmon. See his reafons in his book De leg. Helr. ritual. Differt. viii. Among other things, he obferves, that the ancient Jews uled to fubftitute the name Sameël for Azazel; and many of them have ventured to affirm, that at the fealt of expiation they were obliged to offer a gift to Samael to ob. tain his favour. Thus alfo the goat, fent into the wildcrnefs to Azazel, was underftood to be a gift or Blation. Some Chritians have been of the fame opinion. But Spencer thinks that the genuine reafons of the cesemony were, 1. That the goat, loaded with the fins of the people, and fent to Azazcl, might be a fymbolical reprefentation of the miferable condition of finners. 2. God fent the goat thus loaded to the evil dæmons, to fhow that they were impure, thereby to deter the people from any converfation or familiarity with them. 3. That the goat fent to Azazel, fufficiently expiating all evils, the lfraelites might the more willingly abfain from the expiatory facrifices of the Gentiles

SCAPULA, in anatomy, the houlder, or Moulder. bone.

Scapula (John), the reputed author of a Greek lexicon, ftudied at Laufanne. His name is recorded in the annals of literature, neither on account of his talents nor learming, nor virtuous induftry, but for a grofs act of difingenuity and frand which te committed aenainf an eminent literary character of the 16 th century. Being employed by Henij Stephens as a corrector to his prefs while he was publifhing his Thefurus lingta Grei", Scepula extracted thofe words and explications which he reckoned muit ufeful, comprifed them in one volume, and publifhed them as an uriginai work, with his own name.

The compilation and printing of the Thefaurus had colt Stephens immenfe labour and expence; but it was fo much admired by thofe learned men to whom he had
thown it, and feemed to be of fuch effential impertance semegiap to the acquifition of the Greek language, that lie rea. Scarabz:\%. fonably hoped his labour would be crowned with ho. nour, and the money he had experded would be repaid by a rapid and cxtenfive falc. But hetore his work came abroad, Scapula's abrid,gment appeared; which, from its fize and price, was quickly pu.chafed, while the 'Chefaurus itfelr lay neyle ed in the author's hands. The confequence was, a bankruptey on the pat of Stephens, while lie who had occationed it was enjoying the fruits of his treachery. Scapula's Lexicon was hrit printed in 1572 , in 4 to. It was afterwards enlaryed, and publihed in foliu. It las gone though teveral editions, while the valuable work of Stephens has never been reprinted. lis fuccefs is, however, not owing to its fuperior merit, but to its price and more commodious fize. Stephens charges the author with omit. ting a gicat many important articles. He accules him of mifundertanding and perverting his meaning ; and of tracing out abfurd and trifling etymologies, which he himfelf had been careful to avoid. He compofed the following epigram on Scapula :

\section*{Quidam erirtuviv me capulo senus abdidit enjem Eger eram a Scapulis, fanus et buc redeo.}

\section*{Doctor Buby, fo much celebrated for his knowledge} of the Greek languare, and his fuccefs in teaching it, would never permit his fcholars at Wefminfter fchool to make ufe of Scapula.

SCAPULAR, in anatomy, the name of two pair of arteries, and as many veins.

Scapular, or Scupitary, a part of the habit of feveral religivus orders in the church of Rome, worn over the gown as a badge of peculiar veneration for the 1:leffed Virgin. It confifts of two narrow 0ips or breadths of cloth covering the back and the breaft, and hanging down to the feet. - The devotecs of the feapulary celebrate its feftival on the 10 th of July
SCARABASUS, the Beetle, in zoglogy, a gen"s of infects of the colsoptera vorder: the anteunx of the beetles arc of a clavated figure, and fiffile longitudinally; and their legs are frequcntly dentated. There are 87 fpecies; all, however, concurring in one contmon formation of having cates to their wings, which are the more necefary to thofe infects, as they often live under the furface of the earth, in holes, which they dig out by their own induftry. The cafes prevent the various injurics their rcal wings ruight futtain by rubbing or cruming againft the fides of their an bode. Thefe, though they do not affit fiisht, yet keep the internal wings clean and even, and produce a loud buzeing noife when the animal rifes in the air.
If we examine the formation of aill animals of the bectle kind, we frall frod, as in Mell fith, that their bones are placed externally, and their mufcles within. Thefe nufles are formed wery much like thofe of quadrupeds; and are formed with fuch tuipriting ftrensth, that, bulk for bulk, they are a thoufand times itronger than thofe of a man. The flrength of thefe nuffes is of ufe in difging the animal's fubternaneous abode, whither it moit frequenty returns, cven atter it becomes a winged infect capable of hying.

Befides the dificrence which refilits from the thape and colour of thete animals, the fize alfo makes a confiderable one; fome beetles being not larger than the

Scarabous. head of a pin; white others, fuch as the eichlant lives enticly under ground, it has no oceafion-for scarabugs bettle, are as big as one's filt. But the greatelt difference among them is, that fome are produced in a month, and in a fingle feafon go through all the ftages of their exifence; while others take near four years to their produation, and live as winged infects a year more.

The may-bug, dorr-beetle, or cock-chaffer, lias, like all the rett, a pair of cafes to its wings, which are of a reddifh brown colour, fprinkled with a whitifh duft, which eafly comes off. In lome years their neeks are feen covered with a red plate, and in others with a black; thefe, however, are dittinct forts, and the ir dif. ference is ly no means accidental. The fore legs are very fhort, and the better calculated for burrowing in the ground, where this infeet makes its retreat. It is well known, for its evening buzz, to children; but fill more formidably introduced to the acquaintance of the hufoandman and gardener, for in fome feafons it has been found to fwarm in fuch numbers as to eat up every veretable production.

The two fexes in the may-bug are eafly diftinguifhed from cach other, by the fuperior lengith of the teffs, at the end of the horns, in the male. They begin to copulate in funmer; and at that feafon they are feen joined tegether for a confiderable time. 'I'ley fly about in this flate, the one hanging pendant from the tail of the other. It has been luppofed, that, like fnails, they are licrmaphrodites, as there feems to be a mutual infertion.

The female being impregnated, quickly falls to bosing a hole into the ground, wherein to depofit her burdèn. 'This is generally about half a foot deep; and in it the places her exgs, which are of an obleng flape, with great regularity, one by the other. They are of a bright yellow colour, and no way wrapped up in a common covering, as fome have imagined. When the female is lightened of her burden, fhe ayain afeends from her hole, to live, as betore, upon leaves and vegetables, to buzz in the funmer evening, and to lie hid among the brancles of trees in the heat of the day.

In about three months after thefe egrs have been thus depofited in the earth, the contained infect begins to break its theH, and a fmall grub or maggot crawls forth, and feeds upon the roots of whatever vegetable it happens to be neareft: All fubitances, of this kind, feem equally grateful; yet it is probable the mother infect has a choice among what kind, of vegetables the fall depoift her young. In this manner thefe voracious creatures continue in the worm flate for more than three years, devouring the roots of every plant they approach, and making their way under ground in queft of food with great difpatch and facility. At length they grow to above the fize of a walnut, being a great thick white maggot with a red head, which is feen mott frequently in hetw turned earth, and which is fo eagerly fought atter by birds of every Ipecie. When largett, they are found an inch and a half long, of a whitish yellow colvur; with a body confilting of twelve fegments or joints, on each fide of which there are nine breathing holes, and three red feet. The head is larger in proportion to the budy, of a readifl colour, with a pincer before, and a fenicircular lip, with which it cuts the roots of plants, aud fucks out their moilture. As this infcet
eyes, and accordingly it is found to , have none; but is furnifhed with two feelers, which, like the crutch of a blind man, ferve to direct its motions. Such is the form of chis animal, that lives for years in the worm fate under ground, fithl voracious, and every year changing its ilsim.

It is hot till the end of the fourth ycar that this extraordinary infeet preparcs to enierge from its fubterraneons abode, and even this is not effected but by a tedious preparation. About the latter end of autums, the grub Degins to perecive the approaches of its transformation: it then buies itfeff detper aud deeper in the earth, fometimes fix feet bencath the fulface; and there forms itfelf a capacious apartnent, the walls of which it renders very fmooth and fhining by the excretions of its body. Its abode being thus formed, it begins foon after to fhorten itfelf, to fwell, and to burft its laft fkin in order to aflume the furm of a chryfalis. This, in the beginning, appears of a yellowith colour, which heightens by degrees, till at laft it is feen nearly red. Its exterior form plainly difcovers all the veltiges of the future winged infect, all the fore parts being diftiuctly feen; while, behind, the amimal feems as if wrapped in fwacdling clothes.

The young may-bug continues in this tate for about three months longer; and it is not till the beginning of January that the aurelia divefts itfelf of all its impediments, and beeomes a winged iniect completely formed. Yet fill the animal is far from attaining its natural firngth, health, and appetite. It undergous a kind of infant imbecility; and unlike molt other infects, that the, inftant they become flies are arrived at their ftate of full perfection, the may-bug continues feeble and fickly. Its colour is much brighter than in the perfect animal; aill its parts are foft; and its voracions nature feems for: a while to have entiely forfaken it. As the animal is very often found in this Hate, it is fuppofed, by thofe unacquainted with its real hiftory, that the old ones, of the former feafon, lave buried themfelves for the winter, in order to revilt the fun the cufuing fummer. But the fact is, the old one never furvives the fealen; but dies, like all the other winged tribe of iufecte, from the leverity of cold in winter.

About the latter end of May, thefe infects, after having lived for four years under ground, burt from the earth when the firlt mild evening invites them abroad. They are at that time feen rifing from their long imprifonment, from living ouly upon roots, and imbibing only the moifture of the cath, to vifit the mildnefs of the fummer air, to choofe the fiveetctl vegetables for their banquet, and to driak the dew of the evening. Wherever an attentive obferver then walks abroad, he will fee them burfing up before him in his pathway, like ghofls on a theatre. He will fee every part of the earth, that had its furface beaten into hardnefs, perforated by their egreflion. Wheia the feafon is favourable for them, they are feen by myriads buzzing aloug, hitting againft every object that intercepts their Hight. The mid-day fun, howcrer, feems too powerful for their conflitutions: they then lurk under the leaves and branches of fome fhady tree; but the willow feems particularly their mott favausite food; there they luri in clufters, and feldom.

Walls © पuit the tree tuit they have devorred all its verdure. paration, ther are feen in an evening as thick as flakts of fnow, and kitting againt every objcet with a fort of capricisus blindnefl. Their duration, however, is but fort, as they never furvive the fealion. They begin to join fluoply atior tincy have been let looic froin their prifon; and when the femple is impregtated, the cautioully bores a hooe in the ground, wifli an inArument fitted for that purpofe with which fhe is furmihited at the tail; and there depofits her ergss, generally to the number of threcfrore. If the fafon and the foil be adapted to thecir propagation, thefe foon multiply as already defectued, and yo through the variuus flages of their cuntemptibie exultence. This infe?, however, in its worm fate, thouyh prejudicial to man, nakes one of the chief repafts of the fcathered tribe, and is gereredfy the firf nourilhment with which they fitpply their young. Hogs will root up the land for them, and at firft cat theni greedily; but feldom ineddle with them a fecond time. Rooks are particilarly fond of thefe worns, and deevoar them in great number s. The inlanbitants of the county of No:folk, some time fince, went into the practiee of deftroying their rookeries ; bur in propotion as they deffroyed one plague, they were peftered with a greater; and thefe infects multiplided in fuch an aniasing abundance, as to deftroy not only the verdure of tlie bields, but even the roots of vegetables not yet thot forth. Oae faras in particular was fo injured by them in the ycar 1751 , that the occupier was not alle to pay lis rent ; and the landiord was not only content to lofe his income for that year, but alio yave money for the fupport of the farmer and his family. In lreland they fuffered fo much by thefe infects, that they came to a reffulution of fetting fire to a wood, of forne extent, to prevent their mifchievous propagation.
" Neither the fevereit frofts in our climate (fays Mir Rack ), nor even keeping them in water, will kill then.. I have kept fome in watcr near a week; they appear. ed motionlefs; but on explofing them to the fun and air a few hours, they recovered, and w.cre as lively as ever. Hence it is evident tisey can live without air. On exanining them with a microfcope, I could never difcover any organs for refpiration, or perceive any pulfation. When numerous, they are not delfroyed without great difficulty ; the bellt method is, to plough up the iand in thin furrows, and empioy children to pick them up in bafiects ; and then ftrew fait and quick lime, and harrow in. About 30 years fince 1 remember many farmers crops in Norfolk were almotr ruined by them in their grub-flate; and in the next feafon, when they took wing, the trees and hedrecs in many parilhes were flripped bare of their leaves as in winter. At firte the perple ufed to brufh them down with poles, and then fiveep them,up and burn thein. Onc farmer made wath that he gathered 80 buffels ; but their number feemed not much leffened, except juft in his own fields."

The fcarabzus carnifex, which the Americians call the tumble--hung, particullarly demands our attention. It is all swer of a duffy black, rounder than thofe animals aite generally found to be, and fo ftrong, though not much larger than the common black beetle, that if one of them be put under a hrafs candleftick, it will caufe it to move buck wards and forwards, as if it were by an
 accultomed to the light: but this ftrength is givery i: for much more uffful purpofes than thofe of excition \(\frac{5}{5}\) s.arbs. 1,wh. luma:a curiolity ; fur there is no creature more homer.ous, cither in feskin, fublitence, or providing a p: \(p \times r\) retrat for its young. 'I'hey are enduwn when fogncity to difeover fublittence oy their exceilent fmentur, ...nodirects them in fiethes io excrements ju.t fasten or mis man ur bealls, on which they infaratly drop, and .ill unanimonfy to work in forming rulnd bali, or peáct. thereot, in the midde of which they lay an egb. Thele pellets, in September, t'my convey three feet deep : the earth, where they lie tull the approach of fermg. when the eerss are hatched and burtit their nefto, aid the infects find their way ont of the carth. "They affit each other witla indentigable indultry in ros lins thefe globular pellets to the place where they are to be buried. This they are to perturm \(w\) : th the tall foremott, by raifing up their binder part, and thovin: along the ball with their lind-fet. l'hey are always accompanied with other bectles of a larger fize, and ro: a more elegant tructure and culour. The breat of this is covered with a thite of a crimfun coluer, and hinin? like metal ; the head is of the like cuour, mixed uita green ; and on the crown of the head itands a mining black horn, bending backwards. Phete are called the kixys of the beelles; but for what reafon is uncertain, lince they partake of the fane diety crudgery with the relt

The elephint-bete is the lasgett on this kind hitherto known; ind is found in South America, paricularis is Guisea and Surinarn, as well as about the riwer Oruenoko. It is of a black colour; and tie whole budy is covered with a very hard the!l, full as thic! and as frong as that of a fmall crab. Its lencth, trom the hinder pant to the eyes, is almalt four inches; and from the fame part to the ead of the probofeis or trask, fuar inches and three quarters. The tranfucrfe dbameter o: the body is two inehes and a quarter; and the bremith of each elytron, or cafe for the winge, is a:s inch and three-tenths. The anteme of feelers are quite horioy: for which reafon the provofcis wr trunk is nuveable as is infertion into the head, and feems to fupply the place of felers; the horns are eight-temths of an mach lumb. and terminate in points. \(1^{\text {ine probofeis is on inch and }}\) a quarter long, and turns tupwads; making a croocied line, tenn:inting in two horns, each of which is near a quarter of an inch long; but they are not perfurated at the end libe the probefeis of other infectso Abous four-tenths of ar inch above the lied, or tiar fide nex: the body, is a prominerice or fmail hurn; which, it the rell of the trun: were away, would caufe this part to refembic the horn of a rhinwceros. There is indecd a beetle fo called; hat then the horns or trunk has no fork at the end, though the lower horn relembles this. The feet are and forked at the end, but not liac lobslers claws. Ste Plate CCCCXLIV.

SCARBOROUGH, a town of the Nort Riding of Yorkfhive, leated on a fteep rock, near which are fuch crugny clifis that it is almost inacceffible whevery fide. On the top of this rock is a large green ! air. with two wells of fref water fpringing out of the ...et. It has of late been greatiy frequeuted un account \(u\) us mineral waters called the Scurborouzo joSpa, on whath account it is much mended in the number and bezuty if the buiddings. The fpring was uuder the cliff, part os

Sespho which fell down in 1737, and the water was loft; but rough, Sca-dona. in clearing away the ruins in order to rebuild the wharf, it was rccoveres, to the great joy of the town. The waters of Scarborough are chalybeate and purging. The two wells are botl impregnated with the fame principles, in different proportions; though the purging well is the moft celebrated, and the water of this is ufually called the Serboough water. When thefe waters are poured out of one glals into another, they throw up a number of air buobles; and if they are Maken for fome time in a phial clofe flopped, and the phial be furdenly opened befrie the commotion ceafes, they difplode an elaftic vapour, with an audible noife, which fhows that they abound in fixed air. At the fountain they have a brifk, pungent, chalybeate tafte; but the purging water taftes bitterith, which is not ufually the cafe with the chalybeate one. They lofe their ch byeate virtues by expofurc and by keeping; but the pursing water the fooneft. They both putrefy by keeping; but in time recover their fweetnefs. Four or five half pints of the purging water drank within an hour, give two or three eafy motions, and raife the ipirits. The like quantity of the chalybeate purges lefs, but exhilarates more, and paffes off chiefly by urine Thefe waters have been found beneficial in heetic fevers, weakneffes of the fomach, and indigeftion; in relaxations of the fyftem; in nervous, hyfteric, and hypochondriacal diforders; in the green ficknefs, fcurvy, rheumatifm, and althmatic complaints; in gleets, the fluor albus, and other preternatural evacuations; and in habitual coftivenefs. Here are aftemblies and balls in the fame manner as at Tunbridse. It is a place of fome trade, has a very good harbour, and fends two members to parliament. E. Long. 54. 18. N. Lat. 0 3:

SCARDONA, a fea port town of Dalmatia, featad on the eaftern banks of the river Cherca, with a bimop's fee. It has been taken and retaken feveral times by the Turks and Venetians; and thefe laft ruined the fortifications and its principal buildings in 1537 ; but they have been fince put in a fate of defence.
*ravels into "No veftiges (fays Fortis) now remain vifible of that Dumatia. ancient city, where the ftates of Liburnia held their af. fembly in the times of the Romans. I however tranferibed thele two beautiful infciiptions, which were difcovered fome years ago, and are preferved in the houfe of the reverend Canon Mercati. It is to be hoped, that, as the population of scardona continucs increafing, new lands will be broken up, and confequently -more frequent difcoveries made of the precious monuments of antiquity. nd it is to be wifhed, that the few men of letters, who have a hare in the regulation of this reviving city, may beftow fome particular atten. tion on that article, fo that the honourable memorials of their ancient and illuftrious country, which once held fo eminent a rank among the Liburnian citics, may not be loft, nor carried away. It is almolt a fhame, that only fix legible infcriptions actually exift at Scaidona; and that all the others, fince many more certainly muft have been dug up there, are either miferably broken, or loft, or tranfported to Italy, wheie they lofe the greateft part of their merit. Roman coins are very frequent\(1 y\) found about Scardona, and feveral valuable ones were Shown to me by that hofpitable prelate Monfignor fresifani, bifhop and father of the rifing fettlement. One of the principal gentlemen of the place was fokind as to
give me feveral fepulchal lamps, which are marked by the name of Fortis, and by the elegant form of the let. ters appear to be of the bett times. The repeated devaftations to which Scardona has been expofed, have Scarron. left it no traces of grandeur. It is now, however, beginning to rife again, and many merchants of Servia and Bofnia have fettled there, on account of the convenient fituation for trade with the upper provinces of Turkcy. But the city has no fortications, notwith fanding the affertion of P. Farlati to the contrary." E. Long. 17. 25 . N. Lat. 4355.

SC. 1 RIFICATION, in furgery, the operation of making feveral incifions in the Rein by means of lances or other inftruments, particularly the cupping inftrus ment. Sce Surgery.

SCARLET, a beautiful bright red colour.
In painting in water colours, minium mixed with a little vermilion produces a good fcarlet : but if a flower in a print is to be painted a fcarlet colour, the lights as well as the fhades fhould be covered with minium, and the fhaded parts finifhed with carmine, which will produce an adinirable fcarlet.

Scarlet.Fever. See Medicine, a 230.
SCARP, in fortirication, is the interior talus or nope of the ditch next the place, at the foot of the rampart.

Scarp, in heraldry, the fcarf which military commanders wear for ornament It is borne fomewhat like a battoon finifter, but is broader than it, and is continued out to the edges of the \(\operatorname{seld}\), whereas the battoon is cut off at each end.

SCARPANTO, an inand of the Archipelago, and one of the Sporades, lying to the fouth-welt of the ine of Rhodes, and tu the north-eaft of that of Candia. It is about 22 miles in length and, in breadth; and there are feveral high mountains. It abounds in cattle and game; and there are mines of iron, quarries of marble, with feveral good havbours. The Turks are mafters of it, but the inhabitants are Greeks.
\(S C+R P E\), a river of the Netherlands, which has its fource near Aubirny in Artois, where it wafhes Arras and Douay; after which it runs on the con nes of Flanders and Hainault, palfing by St imand, abl a little after talls into the S'cheldt.

SCARRON (Pau!), a famous bulefque writer, was the fon of a counfellor in parliament, and was born at Paris about the end of the year, 610 , or in the beginning of the fucceeding year. His father marrying a fecond time, he was compelled to aftume the ecelefiaft. cal profeflion. At the age of 24 he vifited Italy, where he freely indulged in licentous plafures. After his return to Paris he perlifted in a lie of difipation till a long and painful difeafe convinced him that his conftitution was almoft wurn out. At length when engaged in a party of pleafure at the age of 27 , he lolt the ufe of there legs whath aianced jo gricejully, and of thofe hands which could pant and play on the lute with fo mu-b ele. gince. In the year 1638 he was attending the carnival at Mens, of which he was a canon. Having dreffed himfelf one day as a favage, his fingular appearance excited the curiofity of the children of the town. Ihey followed him in nultitudes, and he was obliged to take thelter in a math. This wet and cold fituation produced a numbneis which totally deprived hin of the ufe of his limbs; but notwithftanding this misfortune be contiaued gay and cheerful. He took up his relidence at Paris,

Paris, and by his pleafant humour foon attracted to his houfe all the men of wit about the city. The lofs of his health was followed by the lofs of his fortune. On the death of his father he entered into a procefs with his mother.in law. He pleaded the caufe in a ludicrous manner, though his whole fortune depended on the decifion. He accordingly lof the caufe. Mademoifelle de Hautefort, compafionating lis misfortunes, procured for him an audieniec of the queen. The poet requefted to have the title of Valetudinari:n to her majefty. The queen fmiled, and Scarron confidered the finile as the commifion to his new office. He therefore affumed the title of Scarron, by the grace of God, unworthy valetuainarian to the queen.

Cardinal Mazarine gave him a penfion of 500 crowns; but that minifter having received difdainfully the dedieation of his Typhon, the poet immediately wrote a Mazarinade, and the penfion was withdrawn. He then attached himfelf to the prince of Condé, and celebrated his vietories. He at length formed the.extraordinary refolution of marrying, and was accordingly, in 1651 , married to Mademoifelle d'Aubigné (afterwards the famous Madam de Maintenon), who was then only 16 years of aje. "At that time (fays Voltaire) it was confidered as a great acquifition for her to gain for a hufband a man who was disfigured by nature, impotent, and very little enriched by fortune." When scarron was queftioncd about the contraet of marriage, he faid he acknowledged to the bride two large invincible eyes, a very beautiful Thape, two fine hands, and a large portion of wit. The notary demanded what dowry he would give her? Immediately replied Scarron, "The names of the wives of kings die with then, but the name of Scarron's wife fhall live for ever." She reftrained by her modefy his indeeent buffooneries, and the good company which had formerly reforted to his houfe were not lefs frequent in their vifits. Scarron now became a new man." He became more decent in his manners and converfation: and his gaiet f, when tempered with moderation, was till more agreeable. But, in the mean time, he lived with fo little economy, that his income was foon reduced to a fraall annuity and his marquifate of Quinet. By the marquifate of Quinet, he meant the revenue he derived from his publieations, which were printed by one Quinct. He was aecuftomed to talk to his fuperiors with great freedom in his jocular ftyle. In the dedication to his \(D_{2 n}\) faphet d'Armenic, he thus addreffes the king. "I fhall endeavour to perfuade your majefty, that you would do yourfelf no injury were you \(t\) to do me a fmall favour; for in that cafe I fould become more gay: if I foould become more gay, I Mould write Sprightly comedies: and if I mould write fprightly comedies, your majefty would be anufed, and thus your money would not be lof. All this appears fo evident, that I fhould certainly be convinced of it if I were as great a king as I am now a poor unfortunate men."

Though Scerron wrote comedies, he had neither time nor patience to fludy the rules and models of dramatic poetry. Ariftotle and Horace, Hautus and Terence, would have figghtened hini; and perhaps he did not know that there was ever fuch a perfon as Arifophanes. He faw an open path before him, and he followed it. It was the faffion of the tites to pillage the Spanifh writers. Scar:on was acquawated with that

Ingruage, and he found it eafier to we the materials
which were atready por which were already prepared, than to rack his brain in inventing a fubject ; a reftraint to which a genius like his coald not eality fubmit. As he borrowed liberally from the Spanih writers, a dramatic pieee did not colt him mueh labour. His labour confifted not in making his comic characters talk humorouny, but in keeping up ferious characters; for the ferious was a fureign lan. guage to him. The great fuecefs of his Foldelet Maier was a vaft allurement to him. The comedians who aeted it eagerly requefted more of his productions. They were written without much toil, and they procured him. large fums. Tiey ferved to arnufe him. If it the neceflary to give more reafons for Scarron's readinefs to engage in thefe works, abundance may he had. He dedicated his books to his firker's greghourd bitch ; and when the failed him, he dedieared them to a certain Monfeigneur, whon he praifed hisfler, but did not mueh cltem. When the office of hiltoriographer became vacant, be folieited for it without fucceis. At length Fouquet gave him a penfion of 1600 lizres. Chriltina queen of Sweden having come to Paris, was anxious to fee Searron. "I permit you (Faid the to Scarron) to fall in love with me. The queen of France bas made you her valctudinarian, and 1 create you my Rolunt:" Searron did not long erjoy that ti:le: he was feized with fo viofent a hiccough, that every perfon thought he would have expired. "If i recover (he faid), I will make a fine fatire on the hiceourh." His gaiety did not forfake him to the laft. Wishin a few minutes of his death, when his domelties were fhedding tears about him, "My good friends (faid he), I flall never make you weep fo much for me as I have made you laugh." Juf before expiring, he faid, "I could never believe before that it is fo ealy to laugh at death." He died on the \(14^{\text {th }}\) of October \(166=\), in the 5 it year of his age.

His works have been collected and publified by Eruzen de la Martiniere, in 10 vols 12 mo , 1737 . There are, 1. The Eneid traveltied, in 8 books. It was afterwards continued by Moreau de Brafey. 2 Typhon, or the Gigantomachia. 3. Many comedies ; as, Jodelet, or the Mafter Valet; Judelet cufied; Don Japhe:d'Armenie; The Ridiculous Heir; Every Man his own Guardian; The Foolifh Marquis; The Scholar of Salamanca; The Falfe Appenrance; The Prince Corfaire, a tragi-comedy. Befides thefe, he wrote other pieces in verfe. 4. His Comie Romance in profe, which is the only one of his works that deferves attention. It is written with much purity and gaiety, and has contribated not a litule to the improve:ment of the French language. Searron had great pleafure in readiny his works to his friends as he counpofed them: he called it erying his works. Segrais and another of his friends coning to him one day," Take a chair (fays Searron to them) and fit down, that I may examine my Comic Romance." When he obiferved the e mpany laugh, "Verr well (faid he), my book will be well received fiec is makes perfons of fuch delicate tatte laugh.". Nor was he deeeived. His Romance had a prodi gious run. It was the only one of his works that Boileau could fubmit to read. 5. Spanif Novels tramfated int, French. H. A volume of Letters. 7. Pueus; conilitin? of Songs, E. pithles, Stanzas, Odes, and Epigrams. The whole collection abounds with lprightineff and gaiety. Siamon
raveraite a lugh in the mott ferioua fubjects ; but his fallies are rather thole of a buffom than the effations of ingenuity and tafte. He is continually falline into the mean aud the obfeene. If we flould make any exception in favour of fome of his comedies, of forne paftages in his Eneid traveflied, and his Comic Romance, we raut acknowledre that all the reft of his works are only fit to be read by footmen and buffoons. It has been faid that he was the mof eminent man in his are for hurlefque. This might make him an agreeable comparion to thofe who chofe to laugh away their time; but as he has left nothing that can inflruct poiterity, he has but little sitle to polthumous fame.

SCENE, in its plimary fenfe, denoted a theatre, or the place where dramatic pieces and other public fhows were exhibited; for it does not appear that the ancient poets were at all acquainted with the modern way of changing the feenes in the different parts of the play, in order to raife the idea of the perfons reprefented by the actors being in different places.
'The original fcene for acting of plays was as fimpie as the reprefentations them/clves: it confitted only of a plain plot of ground proper for the occation, which was in fome degree fladed by the neighbouring trees, whofe branches were made to meet together, and their vacancies fupplied with boards, iticks, and the like ; and to complete the Thelter, thefe were fometimes corered with Rkins, and fomctimes with only the brauches of other trees newly cut down, and foll of leaves. Afterwards more artiticial fcenes, or Ccenical reprefentations, were introduced, and paintings uled inftead of the whects themflucs. Scenes were then of three forts; iragic, comic, and fatyric. The tragie foene reprefonted ftately magnifieent edifices, with decorations of pillars, fatues, and other things fuitable to the palaces of kinys: the comic exhibited private houfes with balco. nies and windows, in imitation of common buildings: and the fatyric was the reprefentation of groves, mountains, dens, and other rural appearances; and thefe decorations either turned on pivots, or flid along grooves, as thofe in our theatres.
'I'o keep clofe to nature and prohability, the feene thould never be thifted from place to place in the courle of the play: the ancrents were pretty fevere in this refocet, particularly lerence, in fome of whofe plays the ccene never hifts at all, but the whole is tranlacted at the door of fome old man's houfe, whither with inimitable ait he occafionally brings the actors. The French are pretty trict with refpect to this rule; but the Englifh pay very little regard to it.

Scene is alfo a part or divifion of a dramatic poen. Thus plays are divided into acts, and aits are again fubdivided into feenes; in which fenfe the feene is properly the perfons prefent at or concerned in the action on the thage at fuch a time: whenever, therefore, a new actor appears, or an old one difappears, the action is changed into other hands; and therefore a new feene then comnences.

It is one of the laws of the ftage, that the fcenes be well conuccted; that is, that one fucceed aucther in fuch a manner as that the flage be never anite empty fill the end of the act. Sce Pofrey.

SCENOGRAPIIY, (from the Greek, exnyn fiens, and \(\gamma\) farn defription), in perfpective, a reprefentation of - body on a ferfrective plane; or a description thereof
in all its dimenfions, fuch as it appears to the eyc Pirspyctive.
SCEPTIC, exntetxon, from owerruavi, "I confider: luok about, or deliberate," properly fignities confulera. tive and irquifitive, or one who is always weighing reas fons on one tide, and the other without ever deciding bes tween thern. It is chiefly applied to an ancient feet of philotophers founded by Pyriho (fee Prer,ho), who, according to Laestius, had various other denominations: From their matter they were called Pyrrhonizns; from the diftinguilhing teuets or characterific of their philofophy they derived the name of Aforetict, fromatogen, " to doubt ;" from their fufpenfion and hefitation they were called erheăici, from - "xer., "to ftay or keep back ;" and laitly, they were called setetici or feckers, from their never getting beyond the fearch of truth.
'That the ferptical philolophy is abfurd, can admit of no difpute in the prefent age; and that many of the fol. lowers of Pyrrho carried it to the moft sidiculous height, is no lefs true. Bat we cannot belice that he himfelf was fo extravagrantly fecptical as has fometimes beet aflerted, when we reflect on t!e particulars of his life; which are ftill preferved, and the refpectful manner it which we find him mentioned by his contemporaries and writers of the firft name who flomilted fuon atier him. The truth, as far as at this diftance " wer time it ean be difcovered, feems to be, that he learned from Democritus to deny the real exittence of all qualities in bow dies, except thofe which are effential to priniary atoms', and that he referred every thing elfe to the perceptions of the mind produced by external objects, in other words; to appearance and opinion. All knowledge of comfe appeared to him to depend on the fallacions report of the fenfes, and confequently to be uncertain; and in this notion he was contirmed by the general fpirit of the Eleatic fehool in which he was educated. He was further confirmed in his feepticilin by the fubtilties of the Dialectic fehools, in which he bad been intructed by the fon of Stilpo; choofing to overturn the cavils of fophiftry by recurring to the doctrine of miverfal :mcertainty, and thus brcaking the knot which he conld not unkofe. Fur being naturally and habitually inelined to conlider imnoveable trancuillity as the great end of all philofophy, he was ealily led to defpife the diffenfions of the dogmaifts, and to infer from their endlefs difputes, the uncertainty of the gueftions on which they debated; controverfy, as it has often happened to others, becoming alfo with refpeet to him the parent of feepicifm.

Pyrrho's doctrines, however new and extraurdinary; were not totally difregarded. He was attended by feweral feholars, and ficceeded by feveral followers, who preferved the nemory of his notions. 'lhe now eminent of his followers was "Pinmon (fee Timox), in whon. the public fucceffon of profetfors in the Pyrhonic fehool terminated. In the time of Cicero it was amoft extinct, laving fuffered much from the jealouty of the dogmatifts, and from a natural avertion in the human mind to acknowledge total ignorance, or to be last in albolute darknets. The difciples of ' Pimon, however, till coutinued to profels fecpricilin, and alacir notions were embraced privately at leaft by many others. 'I he feliool itfelf was aterwards reviwed by Ptolxmeus a Cyrnian, and was continued by Enefademus a contemporary of Ci ceno, who wrote a treatife on the priaciples of the Pyrthonic philufophy, the beasts af which a:c preferved by

Photius. From this time it was continued through a feries of preceptors of little notc to Sextus Empiricus, who alfo gave a fummary of the feeptical doctrine.

A fyttem of philofoplyy thus founded on doubt, and clouded with uncertainty, could neither teach tenets of any importance, nor prefcribe a certain rule of conduct; and accordingiy we find that the followers of feepticifm were guided entirely by chance. As they could form no certain judgment refocting good and evil, they accidentally learned the folly of eagerly purfuing any apparent good, or of avoiding any apparent evil; and their minds of courfe fettled into a flate of undifturbed tranquillity, the grand poftulatum of their fy 7 cm .

In the fchools of the feeptics we find ten diftinct topics of argument urged in fupport of the doetrine of uncertainty, with this precaution, however, that nothing could be pofitively afferted either concerninop their number or their force. Thefe arguments chiefly refpect objects of fenfe: they place all knowledze in appearance; and, as the fame things appear very different to different people, it is impofible to fay which appearance moft truly expreffes their real nature. They likewife fay, that our judgment is liable to uncertainty from the circumftance of frequent or rare occurrence, and that mankind are continually led into different conceptions concerning the fame thing by means of culton, law, fabulous tales, and eftablifhed opinions. On all thefe accounts they think every human judgment is liable to uncertainty; and concerning any thing they can only affert, that it feems to be, not that it is what it feems.

This doubtful reafoning, if reafoning it may be called, the fceptics extended to all the fciences in which they difcovered nothing true, or which could be abfolutely afferted. In all nature, in phyfics, morals, and theology, they found contradictory opinions, and inexplicable or incomprehenfible phenomena. In phyfics, the appearances they thought night be deceitful; and refpecting the nature of God and the duties of morality, men were, in their opinion, equally ignorant and uncertain. To overturn the fophiftical arguments of thefe fceptical reafoners would be no difficult matter, if their reafoning were worthy of confutation. Indeed, their great principle is fufficiently, though fhortly, refuted by Plato, in thefe words. "When you fay all things are incomprehenfible (fays he), do you comprehend or conceive that they are thus incomprehenfible, or do you not? If you do, then fomething is comprehenfible; if you do not, there is no reafon we fhould believc you, fince you do not comprehend your own affertion."

But feepticifm has not becn confined entirely to the ancients and to the followers of Pyrrho. Numerous fceptics have arifen alfo in modern times, varying in their principles, manners, and claractcr, as chance, prejudice, yauity, weaknefs, or indolence, prompted them. The great object, however; which they feem to have in view, is to overturn, or at leaft to weaken, the evidence of analogy, experience, and teftimony; though fome of them have even attempted to fhow, that the axions of geometry are uncertain, and its demonftrations inconclufive. This laft attempt has not indeed been often made ; but the chief aim of Mr Hume's philofophical writings is to introduce doubts into every branch of phyjics, metapbyjics, biflory, ethics, and theology. It is needlefs to give a fpecimen of his reafonings in fupport of modern fcepticifm. The molt important of them have
been noticed elfewhere (fee Miracle, Metaphysics, Scepticifor and Philosophy, \(n^{\circ} 41\). ) ; and fuch of our readers as have any relifh for fpeculations of that natire can be no ftrangers to his Effays, or to the able confuretions of theem by the Doctors Reid, Campbell, Gregory, and Beattic, who have likewife expofed the weakrefs of the fceptical reafonings of Des Cartes, Malbranche, and otier philofophers of great fame in the fame fchool.

SCEPTICISM, the doctrines and opinions of the fceptics. See the preceding article.

SCEPTRE, a kind of royal ftaff, or batoon, borne on folemn occations by kings, as a badge of their command and authority. Nicod derives the word from the Greek oknrus.", which he fays originally fisnified "a javclin," which the ancient kings ufually bore as a badge of their authority; that inftrument beins in very great veneration among the heathens. But oxnirguv does not properly fignify a javelin, but a Raff
 cordingly, in the fimplicity of the earlier ages of thie world, the fceptres of kings were no other than long walking tlaves: and Ovid, in fpeakiiks of Jupiter, defcribes him as refting on his fceptre (Met. i. v. 178.) The fceptre is an enfign of royalty of greater antiquity than the crown. The Greek tragic and other poets put fceptres in the hands of the moit ancient kings they ever introduce. Juftin obferves, that the fceptre, in its original, was an bafla, or fpear. He adds, that, in the mot remote antiquity, men adored the bijle or feeptres as immortal gods; and that it was upon this account, that, even in his time, they fill furnifhed the gods with fceptres. - Neptune's fceptre is his trident. Tarquin the Elder was the firft who affumed the fceptre among the Romans. Le Gendre tells us, that, in the firft race of the French kings, the feeptre was a golden rod, almof always of the fame height with the king who bore it, and crooked at onc end like a crozier. Frequently inftead of a feeptre, kings are feen on medals with a palm in their hand. See Regalia.

SCH \(x\) FFERA, in botany: A genus of the tetrandria order, belonging to the dieecia clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is quadripetalous; the corolla is quadripetalous, quinquepetalous, and often wanting ; the fruit is a bilocular berry with one feed. Of this there are two fpecies, hoth natives of Jamaica; and grow in the lowlands near the fea: viz. I. The Completa. 2. Laterifora.

SCHA FFHAUSEN, a large, handfome, and itrong town of Swifferland, capital of a canton of the fame name, with a caftle in the form of a citadel. It is well built, with fine large Atreets, and adorned with feveral fountains; and the greateft part of the houfes are painted on the outfide. It is well fortified, and the cathedral is the largett church in Swifferland; befides which, the minfter, with the monaftery adjoining thereto, the arfenal, the town-houfe, the great clock (which fhows the courfe of the fun and moon with their eclipfes), and the fone bridge over the Rhine, are well worth the obfervation of a traveller. That river is of great confequence to the inhabitants with regard to trade. E. Long. 8. 5 I. N. Lat. 47. 39.

The Canton of Sch.ffrhausen, in Swiferland, is bounded on the north and weft by Suabia; on the eaft by the canton of Zurich, and the bihhoprick of Con. 4 T flance:

\section*{\(S^{\prime C H}\)}

Scherlule, flance; and on the fouth by the fame, and by Thusrgaw. Scheele.
derland, vifited Uplal, and chofe this opportunity to fee the Acudemical Laboratorg. Scheele was accor. dingly appointed by the Univerfity to exhibit fome chemical experiments to them. 'I'his office he under. took, and Thewed fome of the moft curious proceffes in chemiflry. The two Princes afked him many queftions, and expreffed thei: approbation of the anlwers which he retumed to them. The Duke anked hiun what countryman he was, and feemed to be much pleafed when Scheele informed him that he was born at Stralfund. At their departure they told the profeffor, who was prefent, that they thould efleem it a fawour if he would permit the young man to have fice accefs to the Laboratory, as often as he chole, to make experiments.

In the year 1777 Schecle was appointed by the Medical College to be apothecary at Koping. It wats at that place that he foon Rewed the world how great a man he was, and that no place or fituation couid confone his abilitics. When he was ar Stockholm he fhewerl his aentenefs as a chemitt, as lie dilcovered there the new and wonderful acill contained in the fparry fluo:. It has been confidently asterted, that Selieele was the lirt who difcovered the nature of the aerial acid; and that whilf he was at Upfal he made many experiments to prove its properties. 'This circumfance might probably have furnifred Bergman with the means of handlugg this fubject more fully. At the fame place he bergan the feries of excellent experiments on that romarkable mineral fubflance, manganefe; from which inveltigation he was led to make the very valuable and interetting difcovery of the dephlogifticated marine acid. At the fame time he firl obferved the ponderous earth.

At Koping he finifhed his differtation on Air and Fire; a work which the celebrated Bergman molt warmly reconmended in the friendly preface which he wrote for it. The theory which Scheele endeavours to prove in this treatife is, that fire confifts of pureair and phlogifton. According to more recent opinions (if inflammable air be phlogifion), water is compofed of thefe two principles. Of thefe opinions we may fay, in the words of Cicero, "Opiniones tain variz furt, tamque inler fe difflentes, ut alterum frofera feri potef, at earum nulla, altorum cerse non potgll ut plus una, vera fit." The author's merit in this work, exclunve of the encominms of Bergman, was fufficient to obtain the approbation of the public; as the ingenuity difplayed in handling fo delicate a fubject, and the many new and valuable obfervations (A) which are difperfed throush the treatife, juftly entitled the author to that fame which his book procured lim. It was fpread abroad through every country, became fcon out of print, was reprinted, and tranflated into many languages. The Englifh tranflation is enriched with the notes of that accurate and truly philofophic genius Richard Kirwan, Efq.

Scheele now diligently employed himfelf in contribu. ting to the Tranfactions of the Academy at Stockholm.
duces all the neceffaries of life, as wine, fif, wood, has, horfes, lheep, wool, black eattle; and deer. The principal town is of the fame name.

SCHEDULE, a fcioll of paper or parchment, annexced to a will, leafe, or other deed; containing an arventory of goods, or fome other matter omitted in the body of the deed. - The word is a dimuntive of ile Latin fabedr, or Greck \(\sigma \chi^{65 n}\), a leaf or piece of yaper.
\(\therefore C H E E L E\) (Charlcs-William), was born on the 19th of December 1742, at Stralfund, where his father kept a fhop. When he was very young, he rereived the ufual inftructions of a private folioul; and was afterwards advanced to an academy. At a very arly ase he fhewed a firong defire to lollow the profeffion of an apothecary, and his father fuffered him to gratify his inclinations. With Mr Banch, an apothecary at Gottenburg, he pated his apprenticethip, which was completed in fix ycars. He remaned, however, fome tinse longer at that place, and it was there that he fo excellently laid the firt foundations of his knowledge. Amont the various books which he rcad, that treated of chemical fubjects, Kunckel's Laboratory feems to have been his favourite. He ufed to repeat many of the experiments contained in that work privately in the night, when the refl of the family had retired to ref. A friend of Scheele's had remarked the progrefs which he had made in chemiftry, and had afked him by what inducements he had been at firft led to ftudy a feience in which he had gained fuch knowledge ? Scheele returned the following anfiwer: "The firft caufe, my friend, arofe from yourfelf. Nearly at the beginning of my apprenticethip you advifed me to read Neuman's Chenil?ry; from the perufal of which I became eager to make experiments myfelf; and I remember very well how I mixed together, in a conferve-glafs, oil of cloves and funing acid of nitre, which immediately took fire. I fee allo till before my eyes an unlucky esperiment which I made with pyrophorus. Circumdances of this kind did but the more inflame my defire to repeet experiments." After Scheele's departure siom Gottenburg, in the year \(:, 65\), he obtained a place sith Kaltrom, an apothecary at Malmo. Two years afterwards he went from thence to Stockholm, and manarged there the fop of Mr Scharenberg. In 1,77.3, he cha:syed this appointment for another at Upfal, under Mr Loock. Here he was fortunately fituated; as, from his acquaintance with learned men, and from having free accefs to the Univerfity Laboratory, he had opportunities of increafing his knowledge. At this place alfo he happily commenced the friendfhip which fublifted between him and Bergman. During his zefidence at this place, his Royal Highnels Prince Henry of Eruffa, accompanied by the Duke of Sun-

\section*{SCH}
heele. He firt poinicd out a new way to prepare the falt of benzoin. In the fame year he difcovered that arienic, freed in a particterar manner from phlogiton, partakes of all the properties of an acid, and has its peculiar af. finities to other fubfances.

In a Differtation on Flint, Clay, and Alumi, he clearly overturned Beaumés opinion of the identity of the filiceous and argillacenus carths. He publifhed an Analyfis of the Human Calculus. He Rewed alfo a mode of preparing mercurius dulcis in the humid way, and improved the procefs of making the powder of AI. garoth. He analyfed the mineral fubftance called molytdena, or flexible black lead. He difcovered a beautiful green pigment. He fhewed us how to decompofe the air of the atmofphere. He difcovered that fome neutral falts are decompofed by lime and iron. He decompofed plumbaro, or the common black lead. He obferved, with peculiar ingenuity, an acid in milk, which decompofes acetated alkali ; and in his experiments on the fugar of milk, he difcovered another acid, different in fome refpects from the above-mentioned acid and the common acid of fugar. He accompliffed the decompofition of tungfein, the component parts of which were before unknown, and found in it a pectihiar acid earth united to lime. He publithed an exeellent difertation on the different forts of æther. He found out an eafy way to preferve vinegar for many years. His inveftigation of the colouring matter in Prufian blue, the means he employed to feparate it, and his difcovery that alkali, fal ammoniac, and charcoal, mixed together, will produce it, are flong manks of his penetration and genius. He found out a pecuIiar fu'eet matter in expreffed oils, after they have been boiled with litharge and water. He Thewed how the acid of lemons may be obtained in cryftals. He found the white powder in thubarb, which Model thought to be felenite, and which amounts to one-feventh of the weight of the root, to be calcareous earth, united to the acid of forrel. This fuggefted to him the examisation of the acid of forrel. He precipitated acetated lead with it, and decompofed the precipitate thus ohtained by the vitriolic acid, and by this procefs he obtained the common acid of fugar ; and by fowly dropping a folution of fixed alkali into a folution of the acid of fugar, he regenerated the acid of forrel.- From his examination of the acids contained in fruits nnd berries, hs found not one fpecies of acid alone, viz. the acid of lemon, but another alfo, which he denominated the malaceous acid, from its being found in the greateft quantity in apples.

By the decompofition of Bergman's new metal (fiderite) he fhewed the truth of Meyer's and Klaproth's conjecture conccrning it. He boiled the cals of fiderite with alkali of tartar, and precipitateċ nitrated mercury by the middle falt which he obtained by this ope. ration; the calx of mercury which was precipitated was found to be united to the acid of phofphorus; fo that h demonftrates that this calk was pholphorated iron. He found alfo, that the native Pyufian bhe contained the fame acid. He difcovered by the fame merns, that the ferlate acid, as it was called, was nut an acid /ut generis, fut the phofphoric united to a finall quantity of the mineral alkali. He fuggetted an improverm int in the procefs tor obtrining nagnefra from Epfom fah; he advifie the adding of an cqual weight
of common falt, to the Epfom falt, fo that an equal weight of Glauber's falt may be obtained : but this will not fucceed unlefs in the colld of winter. Thefe are the valuable difcoveries of this great philofopher, whick are to be found in the Tranfactions of the Royal Society at Stockholm. Moft of his eflays have been publifhed in French by Madame licardet, and Monf. Morveau of Dijon. Dr Beddoes alfo has made a very valuable prefent to his countrymen of an Englifh trantation of a greater part of Scherle's difertations, to which he las added fome ufeful and ingenious notes. The following difcoveries of Schecle are not, we believe, publifhed with the reff. He fhewed what that fubtance is, which has been generally called 'the earth o! the fluor fpar.' It is not produced unlefs the fluor acid meet with filiceous earth. It appears from Scheele's experiments to be a triple fait, confifting of fint, acid of fluor, and fixed alkali. Scheele proved alfo, that the fluor acid may be produced without any addition of the vitriolic or any mineral acid: the fluor is melted with fixed alkali, and the fluorated alkali is decompofed by acctated lead. If the precipitate be mixed with charcoal duft, and expofed in a retort to a ftrong heat, the lead will be revived, and the acid of fluor, which was united to it, will país into the receiver poffefted of all its wfual properties. This feem: to be an ingenious and unanfwerable prof of its eviftence.

He obfersed, that no pyrophor:s can be raade unlefs an alkali be prefent ; and the reafon why it can be prepared from alum and coal is, that the comment ailon always contains a little alkati, whicit is ajded ia oldes to make it chryflalize; for if this be feparated form it, no pyrophorus can be procured fron it. Itis haft differtation was his very valuable obfervations on the acid of the gallnut. Ehrhart, one of Schecic's moft intimatis friends, afferts, that he was the difcore:cr of both of the acids of fugar and tartar. Wie are alfo indebted to hor. for that mafterpiece of clecnical riecumpofitior, the feparation of the acid of phof florus from bones. This appears from a letter which Schecle wate to Gahn. who has generally ihad the reputation of hids great difcovery. This acid, which is focurions in the eye of the chemit, begins to craw the attention of the physician. It was frit ufed in medicine, united to the ninera! alkali, by the ingenious. Dr Pearfon. The value of this addition to the materia medica cannot be beter evinced than from the increafe of the demand for :t, and the quantity of it which is now prepared and fold in locadoin.
We may ftamp the character of Scheele as a finilufopher from his nany and important diforeries. What concerns him as a man we are inforned of by lis fitend., who affirm, that his moral charater was irreproaciable. From his outward appcanance, you would t:ot at firl \({ }^{2}\) fight have judged him to be a man of extraozinaty abilities; but thure was a quicknefs in lis eye, whicit, to an accurate obferver, would point out the penetraion of his mind. He mixed but litule with the crowd of conmon aequaintance; for this he had neither time nor inclination, as, when his profeffion permitted hinn, he was for the molt part employed in his experinumta inquiries. Lut he had a foul for sriend hir?; nor could even his philofophical purfuits withhold him from eruly enjoy ing the focicty of thofe whom he could clecem and love. Before he adopted any opirion, or a particular theory, he confidered it with the greatef attention : but \(\div \mathrm{Cl}^{2} \quad\) when

\section*{S C H [700] S C H}

Scheeie when ance his lentiments were fixed, he adhered to them, II Schemmitz. \(\underbrace{\text { schenmitz. }}\) and defended them with refolution. Not but that he was ingenuous enough to fuffer himfelf to be convinced by weighty objections; as he has fhewn that he was open to conviction.

His chemical apparatus was neither neat nor convenient; his laboratory was fmall and confined; nor was he particular in regard to the velfels which he employed in his experiments, as often the firt phial which came to hand was placed in his fand-heat : fo that we may juftly wonder how fuch difcoveries, and fuch clegant experiments, could lave been made under fuch unfavourable circumftances. He underfood none of the modern languages except the German and Swedifh ; fo that he had not the advantage of being benefited by the early intelligence of difcoveries made by foreigners, but was forced to wait till the intelligence was conveyed to him in the flow and uncertain channel of tranfation. The inportant fervices which Scheele did to natural philofophy entitled him to univerfal reputation; and he obtained it : his name was well known by all Europe, and he was member of feveral learned academies and philofophical focicties.

It was often wifhed that he would quit his retirement at Koping, and move in a larger fplere. It was fug. gefted to him, that a place might be procured in Enyland, which might afford him a good income and more leifure; and, indeed, latterly an ofler was made to him of an amnuity of 3001 . if he would fettle in this country. But death, alas! put an end to this project. For half a year before this melancholy event, his health had heen declining, and he himfelf was fenfible that he would not recorer. On the 19 th of May 1y86, he was confined to his bed; on the 21 it he bequeathed all of which he was poffefled to his wife (who was the widow of his predeceffor at Koping, and whom he had lately married) ; and on the fame day he departed this life. So the world lont, in lefs than two years, Bergman and Scheele, of whom Sweden may juftly boaft; two philofophers, who were beloved and lamented by all their contempurarits, and whofe memory polterity will never ceafe molt gratefully to revere.

SCHEINER (Chrifopher), a German mathematician, aftronomer, and Jefuit, eminent for being the firt who difcovered fpots on the fun, was boru at schwaben in the territory of Middleheim in 1575. He firit difcovered fpots on the fun's difk in 1611, and made obfervations on thefe phenomena at Rome, until at length reducing them to order, he publifhed them in one vol. folio in 1630 . He wrote alfo fome fmaller things relating to mathematics and philofoply; and died in : 690.

SCHELD, a river which rifes on the confines of Picardy, and runs north-eaft by Cambray, Valenciennes, 'Iournay, Oudenarde, \&c. and receiving the Lis at Ghent, runs eall by Dendermond, and then north to Antwerp: below which city it divides into two branch. es, one called the Wefler-Scheld, which feparates Flanders from Zealand, and difcharges itfelf into the fea near Flufhing; and the other called the Ofter-Scheild, which runs by Bergen op zoom, and afterwards between the iflands Beveland and Schowen, and a little below falls into the fea.

SCHEMNITZ, a town of Upper Hungary, with threc cafles. It is famous for mines of filver and other
metals, as alfo for hot baths. Near it is a rock of Scherardia a fhining blue colour mixed with green, and fome fpots of yellow. E. L.ong. 19 . O. N. Lat. 48. 40.

SCHERARDIA, in botany; a genus of the monogynia order, belonging to the tetrandria clafs of plants. The corolla is monopetalous and funnel-haped; there are two three-toothed feeds.

SCHETLAND. See Shetland.
SCHEUCHZERIA, in botany: A genus of the trigyria order, belonging to the hexandria clafs of plants; and in the natural method ranking under the fifth order, Tripelatoided. 'The calyx is fexpartite; there is no corolla, nor are there any fyles; there arc three inflated and monofpermous capfules.

SCHIECHS, or Schech, among the Arabs, is a name applied to their nobles. "Among the Bedouins," fays Niebuhr, "it belongs to every nuble, whether of the higheft or the loweft order. - Their nobles are very numerous, and compofe in a manner the whole nation; the plebeians are invariably actuated and guided by the fchicchs, who fuperintend and direct in every tranfaction. The fchiechs, and their fubjects, are born to the life of fhepherds and foldiers. The greater tribes rear many camels, which they either fell to their neighbours, or employ them in the carriage of goods, or in military expeoitions. The petty tribes keep flocks of thecp. A mong thofe tribes which apply to agriculture, the fchiechs live always in tents, and lcave the culture of their grounds to their fubjects, whofe dwellings are wretched huts. Schiechs always ride on horfes or dromedarics, infpecting the conduct of their fubjects, viliting their friends, or hunting. Traverfing the defert, where the horizon is wide as on the ocean, they perceive travellers at a diftance. As travellers are feldom to be met with in thofe wild tracts, they eafily difcover fuch as pais that way, and are tempted to pillage them when they find their own party the ftrongeft."
SCHINUS, in botany: A genus of the decandria order, belonging to the dicecia clafs of plants; and in the na. tural method ranking under the 43 d order, Dumofa. The male calyx is quinquefid; the petals five. The female flower is the fane as in the male ; the berry tricoccous.

SCHIRAS, or SChirauz, a large and famous town of Perlia, capital of Farfitan, is three miles in length from ealt to wett, but not fo much in breadth. It is feated at the north-weft end of a fpacious plain furrounded with very ligh hills, under one of which the town ftands. The houfes are built of bricks dried in the fun; the roofs are flat and terraced. There are 15 handfome mofques, tiled with fones of a bluifh green colour, and lined withio with black polifhed marble. There are many large and beautiful gardens, furreunded with walls fourteen feet ligh, and four thick. They contain various kinds of very fine trees, with fruits almolt of every kind, befides various beautiful flowers. The wines of Schiras are not only the beit in Perfia, but, as fome think, in the whole world. The women are much addicted to gallantry, andSchiras is called an earthly paradife by fome. The ruins of the famous Perfepolis are 30 miles to the north-eaft of this place. E. Long. 56. O. N. Lat. 29. 36.

SCHISM, (from the Greek, \({ }^{\text {© }}\) 宁 \(\mu \alpha\), clift, fifure), in its general acceptation figniifies divifion or fepuration; but is chiefly ufed in fpcaking of feparations happening
ifus from diverfity of opinions among prople of the fame religion and faith.

Thus we fay the fohijm of the ten tribes of Judah and Benjamin, the fobi/mof the Perfians from the Turks and other Mahometans, \&c.

Among ecclefiatical authors, the great fchifm of the Weft is that which happened in the times of Clement VII. and Urban VI. which divided the church for 40 or 50 years, and was at length ended by the election of Martin V. at the council of Conftance.

The Romanits number 34 fchifins in their church. -They beftow the name Eng \(\mathrm{I}_{\mathrm{j}}^{\mathrm{f}} \mathrm{J}_{\mathrm{c}} \mathrm{c}\) bifm on the reformation of teligion in this kingdom. Thofe of the church of England apply the term fobifin to the feparation of the nonconformills, viz. the pribyterians, independeuts, and anabaptifts, for a further reformation.

SCHISTUS, in mineralogy, a name given to feveral different kinds of ftones, but more efpecially to fume of the argillaceous kind ; as,
1. The bluifh purple fchifus, fchitus tegularis, or common roof-nate. This is fo foft that it may be nightly fcraped with the nail, and is of a very brittle lamellated texture, of the fpecific gravity of 2,576 . It is fufible per \(f e\) in a ftrong heat, and runs into a black fcoria. By a chemical analyfis it is found to confift of 26 parts of argillaceous earth, 46 of filiceous earth, 8 of magnefia, 4 of calcareous earth, and 14 of iror. The dark-blue fate, or fchiftus fcripterius, contains more magnefia and lefs irun than the common purple fchifus, and cffervefces more brinkly with acids. Its fpecific gravity is 2,701 .
2. The pyritaceous fchiftus is of a grey colour, brown, blue, or black ; and capable of more or lefs decompotition by expofure to the air, according to the quantity of pyritous matter it contains and the flate of the iron in it. When this laft is in a femi-phlogitticated fate it is eafily decompofed; but very flowly, or not at all, if the calx is much dephlogitticated. The aluminous fchittns belongs to this fpecies.
3. The bit uminous fchiftus is generally black, and of a lameliated textu:e, of various degrees of hardnefs, not giving fre with flecl, but emitting a flrong fmell when heated, and fometimes without being heated. M. Magellan mentions a fpecimen which burns like coal, with a itrong fmell of mineral bitumen, but of a yellowifh brown, or rather dark afh-colour, found in Yorkfhire.-This kind of fchiftus does not fhow any white mark when fcratched like the other fchiftus.

SCHMIEDELIA, in botany : A genus of the digynia order, belonging to the octandria clafs of plants. The calyx is diphyllous; the corolla tetrapetalous; the germina pedicellated, and longer than the flower.

SCHOENOBATES (from the Greek, \(\sigma \chi^{0 \cdot v}(\sigma, a\) rope; and \(\beta \times 1 . \omega, I\) zualk), a name which the Greeks gave to their rope-dancers: by the Romans called funambuli. See Rope-dancer and Funambulus.

The fchanobates were ीaves whofe mafters made money of them, by entertaining the people with their feats of activity. Mercurialis de arte gymnaflica, lib. III. gives us five figures of fchanobates engraven after ancient ftones.

SCHOENUS, in botany : A genus of the monogynia order, belonging to the triandria clafs of plants; and in the natural method ranking under the 3 d order,

Calamaric. The glumes are paleaceous, univalved, and Scknasis thickfet; there is no corolla, and only one roundifh feed between the glumes.

SCHOLASTIC, fomething belonging to the berg. fchools. See School.

Scholastic Divinity, is that part or fpecies of divinity which clears and difcuffes queftions by reafon and arguments; in which fenfe it ftands, in fome meafurb oppofed to fofrive divinity, which is founded on the authority of fathers, councils. \&c. The fchouldivinity is now fallen into contempt; and is fcarce regarded anywhere but in fome of the univerfities, where they are flill by their charters obliged to teaca it.

SCHOLIAST, or Commentator, a grammarian who writes \(\int\) cholia, that is, notes, glofies, \&c. upon ancient authors who have written in the learned languages. See the next article.
SCHOLIUM, a note, annotation, or remark, occa. fionally made on fome paffage, propofition, or the like. This term is much ufed in geometry and other parts of mathematics, where, after demonftrating a propofition, it is cuftomary to point out how it might be done fome other way, or to give fome advice or precaution in order to prevent miltakes, or add fome particular ufe or application thereof.
SCHOMBERG (Frederick-Armand duke of), a diflinguifhed officer, fprung from an illuftrious family in Germany, and the fon of count Schomberg by an Englifh lady, daughter of lord Dudley, was born in 1608 . He was initiated into the riilitary life under FrederickHenry prince of Orange, and afterwards ferved under his fon William II. of Orange, who highly efteemed him. He then repaired to the court of France, where his reputation was fo well known, that he obtained the government of Gravelines, of Furnes, and the furroming countries. He was reckoned inferior to no general in that kingdom except marefchal Turenne and the prince of Condé; men of fuch exalted eminence that it was no difgrace to acknowledge their fuperiority. The Frencls court thinking it neceflary to diminifh the power of Spain, fent Schomberg to the affillance of the Portuguefe, who were engaged in a war with that country refpecting the fucceffion to their throne. Schomberg's military talents gave a turn to the war in favour of his allits. The court of Spain was obliged to folicit for peace in 1668, and to acknowledge the houfe of Braganza as the juft heirs to the throne of Portugal. For his great fervices he was created count Mentola in Portugal; and a penfion of 50001 . was beftowed upon him, with the reverfion to his heirs.
In 1673 he came over to England to command the army ; but the Englifh at that time being difgufted with the French nation, Schomberg was fuipected of coming over with a defign to corrupt the army, and bring it under French difcipline. He therefore found it neceflary to return to France, which he foon left, and went to the Netherlands. In the month of June 1676, he forced the prince of Orange to raife the fiege of Maeftricht ; and it is faid he was then raifed to the rank of marefchal of France. But the French Disionaire Hiflorigue, whofe information on a point of this nature ought to be authentic, fays, that he was invefted with this honour the fame jear in which he took the
furtrefs

\section*{SCH}

Nifh m- fortrefs of Bellegarde from the Spaniards while ferving in Portugal.

Upon the revocation of the edict of Nantes, when the perfecution commenced againf the Proteflants, Schomberg, who was of that perfuation, requefted leave to retire into his own comntry. This requeft was refufed; but he was pernitted to take refuge in Portugal, where he had reafon to expect he would be kintly received on account of paft ferviecs. But the relgious zal of the Portugnele, though it did not prevent them from accepting aflifance from a heretic when their kingdom was threatened with fubverfion, could not permit them to give him fhelter when he came for protection. The inquifition interfered, and obliged the king to fend him away. He then went to Holland by the way of England. Having accepted an invitation from the elector of Brandenburg, he was invefted with the goverument of Ducal Pruffia, and appointed commander in chief of the elector's forces. When the prince of Orange failed to England to take poffeffion of the crown which his father-in-law James II. had abdicated, Schomberg obtained permifion from the elector of Brandenburg to accompany him. He is fuppofed to Have been the author of an ingenious Aratarem which the prince employed after his anival i.s London to difcover the fentiments of the people refpecting the revoIution. The flratagem was, to fpread an alarm over the country that the Irith were approaching with fire and fword. When the prince was ettablifhed on the throne of England, Schomberg was appointed commander in chief of the forces and maller of the orduance. In April 1689 he was made kuight of the garter, and naturalized by act of Parlianent; and in May following was created al baron, earl, marquis, and duke of the Singdom of England, by the name and title of baron 'leys, earl of Brentford, marquis of Harwich, and duke of Schomberg. The Honfe of Commons voted to him L. r00,000 as a reward for his fervices. Of this he only received a fmall part; but after his death a genfion of L. 500 , a-year was beftowed upon his fon.

In Auguft 1689 he was fent to Ireland to reduce that Fingdom to obedience. When he arrived, he found himfelf at the head of an army confifting only of 12,000 foot and 2000 horfe, whike king Janes commanded an aimy three times more numerous. Schomberg thought it dangerous to engage with fo luperiur a force, and benge difappoirted in lis promifed fupplies from England, judred it prudent to renain on the defenfive. He therefore pofted himfelf at Dundalk, about five or fix miles chfance from James, who was encamped at Ardee. For fix weess he remained in this pofition, without attempting to give battle, while from the wetnefs of the fealon he lof :acarly the half of his army. Sichomberg was much blamed for not coming to action ; but fome excellent judges admired his conduet as a difplay of great military talerts. Had he riked an engagement, and been defeated, Ireland would have been lott. At the famous battle of the Boyne, fought on the 1 ft July 1690, which decided the fate of James, Schomierg pafled the siver a: the head of his cavalry, defeated eight iquadrons if the enemy, and broke the Inifh infantry. When the lieach Proteltants loit their, commander, Schonbers went to rally and lead them on to charge. Whit thus engared, a party of king James's guards, s.bio had been !epuated from the refl, paffed Schom.
berg, in attempting to rejoin their own army. They Schoal. attacked him with great fury, and gave him two wounds in the head. As the wounds were not dangerons, he mizlit foon have recovered from them; but the French Proteftants, perhaps thinking their general was killed, immediately lired upon the guards, and hot him dead on the fpot. He was buricd in St Patriek's cathedral.

Ihifhup Bumet fays, Schomberg was " a calm man, of great application and conduct, and thought much better than he fpoke ; of true judgment, of exact pron bity, and of a humble and obliging temper."

SCHOOL, a public place, wherein the languages, the arts, or fciences, are taught. Thus we fay, a grammar fchool, a writing fohool, a fchool of natural philofophy, \& - The word is formed from the Latin fchola, which, according to Du Cange, fignifies difipline and correcion ; he adds, that it was anciently ufed, in general, for all places where feveral perfons met togcther, either to ftudy, to converfe, or do any other matter. Accordingly, there were fchola palatinx, being the feveral pofts wherein the emperor's guards were placed; fobols foutariorum, fobola geniliuni, \&c. At length the term paffed alfo to civil magiftrates; and accordingly in the coce we meet with fchola chartularis. rum, Jholu agentium, \&ic.; and even to ecciefaltics, as fibo!a cantorum, fibola fucerdotum, \&c.

The Hebrews were always very diligent to teach and fudy the laws that they had received from Mofes. The father of the family ftudied and taught them in his ow:13 family. The Rabbin taught them in the temple, in the fynagozies, and in the academits. They pretend, that even before the deluge there were fchools for knowledge and piety, of which the patriarchs had the direction.They place Adam at their head, then Enoch, and laftly Noah. Melchifedec, as they fay, kept a fchool in the city of Kajrath-fepher, otherwife Hebron, in Paleftine. Abraham, who had been inflructed by Heber, taught in Chaldæa and in Egypt. From him the Egyptians learned aftronomy and arithmetic. Jacob fucceeded Abraham in the office of teaching. The fcripture fays, he was " a plain man dwelling in tents;" which, according to the Chaldee paraphralt, is, "that he was a perfect man, and a minitter of the houfe of doctrine."

All this, indeed, mult be very precanious and uncertain. It cannot be doubted but that Mofes, Aaron, and the elders of Ifracl, inftructed the people in the wildernefs, and that many good Ifraelites were very induftrious to iaftract their families in the fear of God. But all this does not prove to us that there were any fuch fchools as we are now inquiring after. Under JoThua we fee a kind of academy of the prophets, where the children of the prophets, that is, their difciples, lived in the excreife of a retired and auttere lite, in Itudy, in the meditation and reading of the law of God. Here were fchools of the prophets at Naioth in Ra. mah; I Sam. six. 12, 20, \&c. See the article ProPHET.

Thefe fchools, or fucieties of the prophets, were fucceeded by the fynagogues. See the article SynagOGUE.

Ciburiy-Schools are thofe fchools which are fet apart Ly public contributions or private donations for the inderaction of poor children, who could not othervife enjoy the benc.jts of education. In no country are
thool thefe more numerous than in Great Britain, where charity and benevolence are characteritic of the nation at large. The following is a fummary view of the number of charity-fehnols in Great Britain and Ireland, according to the beit information at prefent, 1795 .
\begin{tabular}{|c|c|c|c|}
\hline & Schats. & Euys. & Gir's. \\
\hline At London & 182 & \(44+2\) & 2970 \\
\hline In other parts of South Britain, & 1329 & 19506 & 3915 \\
\hline In North Britain, by the account publifhed in 1786, & 135 & 5187 & 2618 \\
\hline In Ireland, for teaching to read and write only, & 163 & 2406 & 600 \\
\hline In ditto, erected purfuant to his majelly's charter, and encouraged by his bounty ni L. 1000 per annun, for inlrueting, employing, and wholly maintaining the children, exclufive of the & & & - \\

\end{tabular}

Sundry-Schools are another fpecies of charity.fchocls lately inflituted, and now pretty common in Great Britain. The inflitution is evidently of the frit importance; and if properly encouraged muft have a very favomable effect on the morals of the people, as it tends not only to preferve the children of the poor from fipending Sunday in idlenefs, and of confequence in diffipation and vice, but enables them to lay in for the conduct and comfort of their future life a litock of nfetul knowledge and virtuons principles, which, if negleced in early life, will feldom be fought for or obtained amid! the hurry of bufinefs and the cares and temptations of the world.

The excellent founder of Sunday-fehonls was Mr Raikes, a gentleman of Gloncefterihire, who, together with Mr Stock, a clergyman in the fame consty, and who, we believe, was equally initrumental in the bufineis with Mr Raikes, flewed the example, and convinced many of the utility of the plan. From Gloucefterthise the inflitution was quickly adopted in every county and almolt every town and parif of the kingdom; and we have only further to remark on a plan fo generally known, fo much approvcl, and fo evidently proper, that we hope men of eminence and weight will always be found fufficiently numerous and willing to beftow their time and countelance in promoting it to the utmoft of their powcr.

SCHOONER, in fea-language, a fmall veffel with two mafts, whofe main-fail and fore-fail are fufpended from gaffs, reaching from the maft towards the ftern, and ftretched out below by booms, whofe foremoft ends are hooked to an iron, which clafps the maft fo as to turn therein as uperi an axis, when the after cends are frong from one fide of the veffel to the other.

SCHORL, a precions fonc of the fecond order, of which the varieties are, Siberian, ruby-coloured, reddifh, green, brown, blue, and black; mother of emerald, dark green ; lapis crucifer, or the crofs fone; bar fchorl; horn blend, black, green, or blue; Cianite, bluc fchorl; Thumfein; Lasman's quadrangular fchorl.
'Tranfparent fehorl is chryfalized in polygonal prifms, Sc' or?. generally with four, fix, or nine fides; fome of them are fo fine as to pafy for gens of the frit order, efpecially for the emerald. In the femitranfpatent fchorls there are likewife fome of great beauty, as the ruby-coloured, lately difcovered in Siberia by counfellor Herman, in a bed of reddifh argilla, mixed with fragments of felt fpath, quartz, and mica, on a low granite mountain. The bed of argilla is evidently produced by the decompofition of granite; which operatio: Herman fuppofes mult have fet at hicerty the ruiuy fchorl formerly pent up in the chinks or fiffures of the decompofed part of the mountain. The difcovery is quite new, no fuch fpecies being before known, as it is as hard as the firt order of precious ftones, the diamond excepted, takes a fine polifh, and eopuals in colour the oriental ruby, though not in tranfparency.

Its feructure is made up of fine cylindric columns, like needles collccted into brondles or treffes, lying one on another in different directions, whilft eash individual column is made up of fane plates o- laminx, like the gems. It is fufible per fe into a white tranfparent glafs, and melts imperiectly with boraz when calcined, as it does with microcofnic fait and mineral alkali, irto a fmall vitroous globe, with litle fpots of a white enamal colo:r. Acids have no efere upon it, ewen whea calcined. Laftly, it lofes its colour in the fire, atter having firt tuined blue. 'f he mother of emerailds is likewife a femitanfparent fehorl, in the opition of fome able naturalifts, although Mr Born aterts it ta be a jade, we know not upon what authority.

The fitructure of the femitranfparent fchorls, and fome of the tranfparent that are not fo Derfectly dia. pharous as to conctal their texture, is obfeurely \{parry; but that of the opaque is either filamentous, like af. beftos, or hand and brittle like threads of glafs, or it is compofed of fcales. Of this laft kind is that called born blend, which is generally green or black; but there is a beautiful varicty of it fonnd on the mourt St Gothard, in Switzerland, of a tine flys-blue colour covered with filver talk. Dar fehorl has been found on the Carpathian mountains chryfallized in prifms. Lapis crucifer, or the crofs itone, is found fometimes near Brazzil in Switzerland, and there named Tanffstein, or chriftening fone ; but oftener at Thum in Saxony, and therefore named there Thumftein. It is a fchorl in form of a crofs: that of Brazil confifts of two hexagonal chryttals. The exact eytallization of the other is unknown to us.

Mot countries produce fchots. Roffia is particularly rich in fchorls. It is even difficult to point out all the different places of the empire which produce thein; but we fhall take notice of thofe molt remarable, particularly new difcoverics. The ruby-coloured fothorl mertioned ahove was found by Mr Hernan at Sarapoulky, a village in the governmont of Perm, ten verts from Mourfinky Slabode, in Siberia. The Siberian infpector, Mr Laxman, lias lately difocovered in the mountain Alpeftria, on the river Sleudenka near the lake Baikal, the following new fchorls. Firt, a rreen tranfparent fehorl, of fo britile a nature as nut io bear carriage without breaking into fmall pieces :rancated. Pallas is pofitive in declaring this dak greca tchorl a hyacinth. 'I his laft has often fome of the fmall yel. lowifh white garnets flicking in it, defcribed in the arti--

Echatia de Garnet, where an account will be found of the II fpecics of matrix that contains them all. Schorls are Schurnar. likewife found in the mountains and mines of Nifelga, Krafnavolok, and Sondala, as likewife between the Onega Lake and White Sea. - Black fehorl is likewife found near the White Sea, and in the Altai, Ural, and Daurian inountains.

Nonc of the tranfparent fchoils have been found in Scotland as far as we lave heard; but. many varieties of the opake kinds have been found in various places, particularly in the iCand of Arran, where there is a bed of grecnith horn like fchorl of immenfe extent near the harbour of Lamlafh.

Finc fpecimens of fehorl are dear; the ruby fchorl from Siberia, 25 to 50 rubles a ring ftone; the green, when fine, from 15 to 30 . The high price of the ruhy fchorl is owing to its novelty and rarrity; and of the green, is owing to its paffing for an emerald. The fpecific gravity of fchorl is 3,6 .

SCHOTIA, in botany: A genus of the monogynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the 33 d order, Lo- \(^{-}\) mentaces. The calyx is femiquinquefid ; the corella has five petals, which are equal ; the tube is turbinated, carnous, and perfitent. The legnmen pedicellated, and contains two feeds; there is ouly one foccies, viz. the fpeciofa, or African lignum vite.

SCFIREBERA, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking with thofe of which the order is doubtful. The calyx is quinquepartite; the corolla funnel-haped, with the filaments in the throat, and having each a fcale at the bafe.

SCHREVELIUS (Cornelius), a laborious Dutch critic and writer, who has given the public fome editions of the ancient authors more elegant than correct: his Greek Lexicon is efteemed the befl of all his works. He died in 1667.

SCHULTENS (Albert), profeffor of Hebrew and of the eaftern languages at Leyden, and one of the moft learned men of the 18th century, was born at Groningen, where he ftudied till the year 1706, and from thence contisued his fucies at Leyden and U. trecht. Schultens at length applied himeff to the ftudy of Arabic books, both printed and in manufcript ; in which he made great progrefs. A fhort time after he became minifter of Waffenar, and two years after profeffor of the eaftern torgues at Franeker. At length he was invited to Leyden, where he taught Hebrew and the eaftern languages with extraordimary reputation till his death, which happened in 1750 . He wrote many learned works; the principal of which are, 1. A Commentary on Job, 2 vols 4to. 2. A Commentary on the Proverbs. 3. Vetus छg regia via Hebraizandi. 4. Animadver/iones philologica E critica ad varia loca Veteris Teflamenti. 6. An excellent Hebrew grammar, \&cc. Schultens difcovered in all his works found criticifm and much learning. He maintained againft Gouffet and Drieffen, that in order to have a perfect knowledge of Hebrew, it is neceffary to join with it, not only the Chaldee and Syriac, but more particularly the Arabic.

SCHURMAN (Anna Maria), a moft extraordinary German lady. Her natural genius difcovered itfelf at fix years of age, when the cut all forts of figures in
papcr with her iciffars without a pattern. At eight, Schurm: the learned, in a feir days, to draw flowers in a very agreeable manner. At ten, flie took but three hour's to learn embroidery. Afterwards fhe was taught mufic, rocal and inftrumental; painting, fculpture, and engraving; in all of which the fucceeded admirably. She excelled in miniature-painting, and in cutting portraits upon glafs with a diamond. Hebrew, Greek, and Latin, were fo familiar to her, that the moft learned men were aftonifhed at it. She fpoke French, Itan lian, and Englih, fluently. Her hand-writing, in almott all languages, was fo inimitable, that the curious preferved fpecimens of it in their cabinets. But all this extent of learning and uncommon penetration could not protect her from falling into the errors of Labadie, the famous French enthufiaft, who had been banifhcd France for his extravagant tenets and conduct. To this man fhe emtirely attached herfelf, and accompanied hin wherever he went; and even attended hin in his latt illnefs at Altena in Holftein. Her works, confifting of De vite bumana termir:, and Difertatio de ingenii mulielris ad docrinam et meliores literas aptitudine, and her Letters to her learned correfpondents, were printed at Leyden in 1648 ; but enlarged in the edition of Utrecht, 1662 , in 12 mO , mnder the following title: A. M. Schurman Opufcula Hebraa, Grata, Latina, Gallica, Profaica, et Metrica. She publifhed likewife at Altena, in Latin, A Defence of her attachment to Labadie, while fhe was with him in 1673; not worth reading. She was born at Cologne in 1607 , but refided chiefly in Holland, and died in Friefland in 1678.

SCHALBEA, in botany; a genus of the angio. fpermia order, belonging to the didynamia clafs of plants. The calyx is quadrifid, with a fuperior lobe; the lowermoft longef, and emarginated.

SCHWARTS (Chriftophcr), an eminent hitorypainter, born at Ingolftadt in 1550, who was diftin. guifhed by the appellation of the German Raphael. He learned the firt principles of the art in his own country, but finifhed his fludies at Venice; when he not only made the works of Titian his models, but had the advantage of receiving fome perfonal inftructions from that illuftrious mafter. His performances were foon in the higheft efteem, as his manner of painting was very different from what the Germans had been accuftomed to before that time: he was, therefore, invited by the elcetor of Bavaria to his court, and appointed his principal painter. He died in 1594; and his moft capital works, as well in frefico as in oil, are in the palace at Munich, and in the churches and convents.

SCHWARTENBURG, a town and caftle of Germany, and circle of Upper Saxony, in the landgravate of Thuringia, and capital of a county of the fame name belonging to a prince of the honfe of SaxonyIt is feated on the river Schwartz, 20 miles fouth-eaft of Erford, and 35 north of Cullembach. E. Long. 11. 27. N. Lat. 50.45.

SCHWARTZEMBERG, a town of Germany, in the circle of Franconia, and capital of a principality of the fame name. The cafte is feated on the river Lec, 5 miles north-weft of Nuremberg, and 20 eaft of Wertzburg, fubject to its own prince. E. Long. 10. 27 . N. Lat. 49. 43.

\section*{S C I [ 705 ] S C I \\ SCWTWEIDNITZ, a itrong town of Germany, in}

Silcisa, and capital of a province of the fame name, with a cafle. It is the handfomett town of Silefia, next to Breflaw. The ftrects are large, the church fine, and the houles well built. The fortifications are not very confiderable, and the royal palace is turned into a convent. All the magiftrates are Roman Catholics ; but moft of the inhabitants are Protefants, who have a church without the town, as aifo a public fchool and bells. It is feated on an eminence on the river Weifiritz, 27 miles fouth-eaft of Lignitz, and 22 fouthweit of Brehaw. E. Long. 16. 4 8. N. Lat. 50. 46.

SCHTIEINFURT, a very flong, free, and imfirial town of Germany; in Franconia, with a mag. nificent palace, where the fenators meet, who are is in number. The environs are rich in cattle, corn, and uine; the inhabitants are Proteftants, and not very rich. However, they carry on a large trade in woollen and linen cloth, goofequills, and feathers. It is feated on the river Miain, 27 miles north-eaft of Wirtzburg, and 22 weit of Bamberg. E. Long. 10. 25. N. Lat. 50. 4.

SCHWENKFELDIA, in botany : A grenus of the monogynia order, belonging to the pentandria clafs of flants ; and in the natural method ranking with thofe that are doubtful. The calyx is quinquefid; the corolla funnel-haped; the ftigma parted into five; the berry quinquelocular, with a number of feeds. Of this there are three fpecies, viz. I. Cincrea; 2 Afpera; 3 . Hirus. The two firt are natives of Guiana, the other of Jamaica. The leaves of all of them are remarkably rough, and fick to the fingers or clothes.

SCHWENKIA, in botany; a genus of the monogynia order, belonging to the diandria clafs of plants. The corolla is almoft equal, plaited at the throat, and glandulous; there are three barren ftamina; the capfule bilocular and polyfpermous.

SCHWINBURG, a town of Denmark, on the eaftern coalt of the ifland of Fionia, over-againt the intands of Arroa and Langeland. E. Long. IO. 55. N. Lat. 55.8.

SCHWITZ, or Swirz, a canton of Swifferland, which gives name to them all. It is bounded on the weft by the lake of the four cantons, on the fouth by the canton of Uri, on the eaft by that of Glaris, and on the north by thofe of Zurich and Zug. Its principal riches confitt in cattle, and the capital town is of the fame name. This is a large, handfome place, feated near the lake of the four cantons, in a pleafant coun. tiy among the monntains. E. Long. 8. 41. N. Lat. 47. 2.

SCIACCA, anciently called Therme Sipinuntia, in Sicily, derives its prefent denomination from the Arabic word Scheich. It is a very ancient place, being mentioncd in the account of the wars between the Greeks and Carthaginians, to the latter of whom it belonged. It is defended by aucient walls and the caftle of Luna. It flands upon a very fteep rock, ranging over the fea, and excavated in every direction into prodigions magazines, where the corn of the neighboaring territory is depolited for exportation; there is no harbour, but a fmall bay formed by a wooden pier, where lighters lie to load the corn which they carry out abeut a mile to thips to anchor.

The town is irregularly but fubitantially built, and Vol, XVI. Fart. II.
cultams 13,000 inhabitants, though Amico's Lexicon Topogrophicum fays the laft enumeration found only 9484 . His accounts do not take in ecclefraftics, and

Sesinn
Scill2. feveral denominations of lay perfons.

SCIRNA, il ichthyology, a genus belonging to the order of thoracici. The membrane of the gills has fix rays; the opercula and whole head ase fealy. There are five fpecies.

SCIATICA, the hip-gout. See Medicine, \(n^{2}\) 207.

SCIENCE, in philofophr, denotes any doctrines deduced from felf-evident principles.

Sciences may be properly divided as follows, I. The knowledge of things, their conftitutions, properties, and operations: this, in a little more calarged fenfe of the word, may be called fueser, or noturel philofoply; the end of which is fpeculasive truth. See Philosophy and PHYsics.-2. The nkill of rightly applying thefe powers, \(\pi_{\rho} z x+1 \times n\) : The mott comiderable under this head is ethics, which is the feeking out thore rules and meafures of human actions that lead to happinefs, and the means to practife them (fee Moral Philosophy) ; and the next is mechanics, or the application of the powers of natural agents to the ufes of life (fee Mechasics). -3. The doctrine of figns, emдяigтixn; the mof ufual of which being words, it is aptly enough terned logic. See Logic.

This, fays Mr Locke, feems to be the mof general, as well as natural, divifion of the objects of our underftanding. For a man can employ his thoughts about nothing but either the contemplation of things themflyes for the difcovery of truth; or about the things in his own power, which are lais actions, for the attainment of his own cnds; or the figns the mind makes ufe of both in the one and the other, and the right ordering of them for its clearer information. All which three, viz. things as they are in themfolves knowable, actions as they depend on us in order to happinefs, and the right ufe of figns in order to knowledge, being toto ceelo different, they feem to be the three great provinces of the intellectual world, wholly feparate and diltinet one from another.

SCILLA, the scuill, in botany: A genus of the monogynia order, belonging to the hexandria clafs of plants; and in the natural method ranking under the 10th order, Coronaria. The corolla is hexapetalous and deciduous; the filaments filiform.

The mof remarkable fpecies is the maritima, or feaonion, whofe roots are ufed in medicine. Of this there are two forts, one with a red, and the other with a white rout; which are fuppofed to be accidental varie. ties, but the white are generally preferred for midicinal ufe. The roots are large, fomewhat oval.fhaped, compofed of many coats lying over cach other like onions; and at the bottom come out feveral fibres. From the middle of the root arife feveral hining leaves, which contipue green all the winter, and decay in the fpring. Then the flower-ftalk comes out, which rifes two feet high, and is naked half-way, terminating in a pyra. midal thyrfe of flowers, which are white, compored of fix petals, which fpread open like the points of a ftar. This grows naturally on the fea-fhores, and in the ditches, where the falt-water naturally flows with the tide, in molt of the warm parts of Europe, fo cannot be propagated in gardens; the froft in winter al-
ways deflroying the roots，and for want of fali－water they do not thrive in fummer．Sometimes the roots which are bought for ufe put forth their Hems and prodnce fuwers，as they lie in the druggifts fhops．－ This root is very naufentes to the tafte，intenfely bit－ ter，and fo acrimonious，that it ulcerates the flin if much handed；Taken internally，it powerfully ftinu． lates the folids，and promotes urine，fiweat，and ex－ pectoration．If the dofe is confiderable，it proves cmetic，and fometimes purgative．The principal ufe of this medicine is where the prime vix abound with micous matter，and the lungs are oppreffed by tena－ cious phlegm．It has been recommended in hydropic cafes，taken in powler，froin four to ten grains in a dofe，mixed with a double quantity of nitre．The moft commodions mode of exhibiting this root is as a bolus or pill．Liquid forms are too difagreeable to mot people；though this may be remedied in fome degree by the addition of fome aromatic dilitilled waters．It yields the whole of its virtues to aqueous and vinous mentrua，and likewife to veretable acids．

SCILLY，or Silley，a clufter of fmall iflands and rocks，fituated in the Atlantic Ocean，in W．Long． \(7^{\circ}\) ． N．Lat． \(50^{\circ}\) ．

Thefe iflands were firlt called Cafiterides，or the Tin Ifles，from their being rich in that metal．＇The common opinion is，that this is a Greek appellation ； which in the mott obvious fenfe is truc：But as the Phennicians were familiar with the metal，and with the country that produced it，before the Greeks knew any thing of either，it is very likely they introduced the names of both from their own language．Strabo fays thefe idands were ten in number，lying clofe to－ gether，of which only one was unimhabited：the peo－ ple led an erratic life，lived upon the produce of their cattle，wore an under－garment which reached down to their ankles，and over that another，both of the fame colour，which was black，girt round a little below the breal with a girdle，and walked with flaves in their bands．The riches of thefe iflands were tin and lead， which，with the Rins of their cat tle，they exchanged with foreign merchants，that is，the Pheenicians from Cadiz，for earthen－ware，falt，and utentils made of brafs．An author of as great or greater antiquity； seems to inciude a part at leaft of Cornwall amongft theie illands；or rather he fuggefts，that they were not perfect iflands except at full fea，but that at ebb the inhabitants paffed from one to anotler upon the fands，and that they even tranfported their tin in large Iquare blocks upon carriazes from one inand to another． He farther takes notice，that fuch as inhabited about l3e－ lerium（the Land＇s End）werc in their coaverfation with frangers remarkably civil and courteous．O－ ther ancient writers flyle thefe inands Hefperides，from their wellern fituation，and Oyfrymrides，affertiug that the land was extremely fertile，as well as full of mines； and that the people，though very brave，were ensirely addicted to commerce，and boldly paffed the feas in their leather boats．

The Romans were exceedingly defirous of having a thare in this commerce，which the Pheenicians as care－ fully laboured to prevent，by concealing their naviga－ tion to thefe iflands as much as，it was in their power． At length，however，the Romans prevailed；and Publius Cralus coming thither，was fo well pleafed with the
indu？ly and mannsrs of the people，that he taught them various improvements，as wall in working their mines，which till that time were but Rallow，as in carrying their own merchandife to diferent markets． ＇lhere is no room to doubt that they folluwed the fate． of the reft of Britzin，and particultuiy of Cornwall，in beconing fubjer to the Ronaan empire．We find them called in the Lincrary of Antoninus，Sigdteles；by Supitius，sillene；and by Solinus they are termed Silures．All we know of them daring this period is， tlat their tin tra Ic continuect，and that fometimes fate－ prifoners were cxiled，or，to ufe the Roman phafe，ico． legated hither as well as to other inands．

Whten the legions were withdrawn，and Britain with its dependencies left in the power of the natives，there is no reafon to queltion that thefe iflands flared the faine lot with the reit．As to the appellation which from this period prevailed，the ordinary way of wri－ ting it is Scilly；in records we commonly find it［pelt Silly，Sillyy，or Sulley；but we are told the old Bri－ tifi appudlation was Sulleh，or Sylleh，which figni－ fies rocks confecratect to the 「un．We have not the leaf notice of any thing that resards them from the fifth to the tenth century．It is，however，with much appearance of truth conjectured，that fome time within this fuace they wore in a great meafure deftroyed by an earthquake，attended with a finking of the earth， by which mott of their lowlands，and of courfe the greatefl part of their improvements，were covered by the fea，and thofe rich mines of tin which hac rendered them fo famous fwallowed up in the deep． They have a tradition in Cornwall，that a very exten－ five tract of country called the Lionefs，in the old Cominh Lethoufow，luppofed to lie between that coun－ try and Scilly，was lof in that manner；and there are many concurrent circumfances which render this pro－ bable．In reference to thefe iffands，the cafe is ftill Atronger；for at low ebbs their ftone－inclofures are fill vilible from almoft all the ines，and thereby afford an， ocular demonttration that they were formerly of far greater extent，and that in remoter ages their inhabi： tants mut have been very numerous，and at the fame time very induftrious．This fuffeciently proves the fact，that ly fuch an earthquake they were deflroyed； and that it happened at fome period of time within． thufe linits that have been affigned，appears from our hearing nothing more of their tin trade，and from our having no notice of it at all in any of our ancient chronicleó，which，if it had fillen out later，from thair known atteation to extrardinary events，muft certainly lave happened．

It is geuerally fuppofed，and with grcat appearance of trutl，that king Atheltan，after having overcome a very powerful confederacy formed againit him，and having reduced Exeter，and driven the Britons be－ jond the river＇Tamar，which he made the boundary of their Cornilh dominions，paffed over iata thefe inads， （then furely in a bicter ftate than now，or they would not have been objects of his vengeancc），and reduced them likewife．Hitory does not inform us，that the Danes ever fixed themfelves in thefe inlands；but as their method of fortifying is very well known，it has been conjectured that the Giant＇s Cafte in the ine of St Mary was erected by them；and indeed，if we con－， fider the convenient fituation of thefe inands，and the

\(\underbrace{\text { Scilly. }}\) trade of piracy which that nation carried on, there feems to be nothing improbable in that conjecture. It is more cortain that there were churches erceted in thefe illes, and that there were in them alfomany monks and hermits, before the conquef.

The fertility of the iflands is much infifted upon in all the accounts; and it is exprefsly faid of St Mary's, ahat it bears exceeding good corn, infomuch that if men did but caft corn where fwine had rooted, it would come up. There is mention nade of a breed of wild fwine, and the inhabitants had great plenty of fowl and fin. But notwithtanding the fertility of the scountry, and the many commodities that men had or might have there, it was neverthele fs but thinly peopled; and the reafon affigned is, becaufe they were liable to be frequently fpsiled by French or Spanifh piratcs. In Leland's time, one Mr Davers of Wilthire, and \(M\) r Whittiugton of Glouceferfhirc, were proprietors of Scilly, and drew from thence, in rents and commodities, about 40 merks a-year.

The inhabitants at that juncture, and long lefore, appear to have carried on a fmall trade in dried Nate and other fith to Bretagne, with which they purchafed falt, canyas, and other neceflaries. This feems to be the remains of a very old kind of commerce, fince, for many ages, the people of that country, thofe of the Scilly ines, and the people of Cornwall, looked upon themfelves as countrymen, being in truth no other than remnants of the ancient Britons, who, when driven out by the Saxons, took refure in thofe iflands, and in that part ef France which had before been called IImorica, and frum hence fiyled Bretagne, Brituany, or Little Brituin, and the people Bretons. This, in all probability, was a great relief to thofe who dwelt in thole ines; who, during the long civil war between the houfes of York ard Lancafter, had their intercourfe with England fo much interrupted, that if it had not been for this commerce with their neighbours on the French coatt, they might have been driven to the laft dill refs.

The Seilly, or Silley illands, lie due weft from the Lizard ab ut \(\mathrm{I}_{7}\) leagues; wett and by fouth from the sli Land's End, next Monn's Bay, at the diftance of 10 leagues; and from the weftern Land's End, they lie well-forth-weff, at the diffance of fomething more than nine learues. There are five of them inhathited; and that calleck Samfon has one family in it. The larsect of thefe is Se Mary*s, which lies in the nuth latiitude of 49 degrees 55 minutes, and in the longitude of 6 degrees 40 minates we!t from Greenwich. It is tewn miles and a half in length, about one and a halt in breadth, and between mine and ten miles in compals. On the welt fide there projects an ifthmus. Beyond this there is a peninfula, which is yery high ; and upon which ftands Star Catle, built ial 1593 , with fome -utworks and batteries. On thefe there are upwards of threefeore pieces of cannon mounted; and for the defence of which there is a garrifon of an entire company, with a matter.gunner and fix other gunners. In the magazine there are arns for 300 if onders, whe, when fummoned, are bound to march into the fortrefs. Underneath the cafle barracks and lines ftands Hugh Town, very improperly built, as lying fo low as to be fubject to inundations. A mile within land flands Church 'Town, fo demominated from their place of wor-
fhip s it confifts of a few houfes os ly, with a courthoufe. About two furlongs ealt of this lies the Olid Town, where there are more houfes, and fome of them very convenient dwellings. The numher of iahabitarts is this ifland is about 600 or 700 ; and it prodeces to the: lord proprietor 300 l . per annum.

Trefcazv lies directly north from St Mary's, at the difance of two miles. It was formerly fyled \(S\) S Nicholus's iflant ; and was at leaft as large as St Mary's. though at prefent about half the fize. The remains of the abbey are yet vifible, the fituation well chofe:: with a fine bafon of frefh water before it, half a mile long and a furlong wide, with an ever-green bank high enough to keep, out the fea, and ferving at once to prcierve the pond, and helter the abher. In this pond there are moft excellent cels, and the lands lyiar round it are by far the beft in thofe iflands. There ars about half a fcore fone houfes, withra church, whicl: are called Dolpbin Town; an old cafte built in the reign of Henry VIII. called Oliver's Cafte ; and a new block-houfe, raifed out of the ruins of that cafle, which is of far greater ufe. This inland is particularly noted for producing plenty of the fineft famphire, and the only tin works that are now vifible are found hcre. There are upon it at prefent about 40 families, who are very induftrious, and fpia more wool than in St Mary's. Its anmual value is computed at 80 I . a -year.

A mile to the eaft of Trefcaw, and about two miles from the moft northern part of St Mary's, lies the ine of St Martin's, not much inferior in lize to that of Trefeaw. It very plainly appears to have been formerly extremely well cuitivated; notwithftanding whic! it was entirely deferted, till within fomewhat lefs than a century ago, that Mr Thomas Ekises, a conliderable merchant, engaged fome people to fettle there. He likewife caufed to be erefted a hollow tower twenty fect in height, with a fpire of as many feet more; which being neatly covered with lime, ferves as a daymark for directing fhips croffing the channel or coming into Scilly. St Irartin's produces fome corn, affords the beft pafturc in thefe illands, nourihes a gicat nimber of theep, and has upon it 17 families, who pretend to have the fecret of burning the beft kelp, and are extremely attached to their own illand. As a proof of this, it is obfervalle, that though fome of the inlabitants remt lands in Sc Mary's, yet they continne to refide here, going thither only occafionally.

St Alynes, which is alfo called the Ligbt-boufe 17 md , lies near three miles fouth-wert of St Mary's; and is, though a very little, a very well cultivated ifand, fruitful in coin and grals. The only inconvenience to which ohe people who live in it are fubject, is the watat of good water, as their capital advantage confilts in having feveral good coves or fmall ports, where boats may lie with fafety; which, however, are not much ufeč. The light-houfe is the principal ornament and great fupport of the iffand, which ftands on the moft clevated grounct, butit with flone from the foundation to the lanthorm, which is fifty-one feet high, the gallery four, the fafh-lights elcven feet and a half high, three feet two inches wide, and fisteen in number. The floor of the lanthorn is of brick, upon which Ilands a fubffantial iron grate, fquare, batred on every fide, with one great chimney in the canopy-roof, and feveral leffer ones to let out the fmoke, and a large pair of fmith's bellowa
\(+\mathrm{U}_{2}\)

\section*{S C I} are io fixed as to be eafily ufed whenever there is oc-
cafion. Upon the whole, it is a noble and cominodious dructure; and being plattered white, is a ufeful daymark to all thips coning from the fouthward. The iseeper of this light-houfe has a falary from the Trinityhoufe at Deptford of 401. a.year, with a dwellinghoufe and ground for a garden. His affitant has 201. a-year. It is fupplied with coals by an annual thip; and the carriage of thefe coals from the fea-fide to the light-lioufe is looked on as a confiderable benefit to the poor inhabitants. They have a neat little church, built hy the Godolplin family. There are at prefent 50 huwfholds in the ifland, which yietd the proprietor 401. a.year.

Brehar, or, as pronomced, Bryer ifland, lies northweft of St Mary's, and to the weft of Trefcaw, to which, when the fea is very low, they fometimes pafs over the fand. It is very moumtainous, abounds with fea and land fowls, excellent famphire, and a great pariety of medical herbs. 'There are at prefcut thirteen familics, who have a pretty church, and pay 301. a-year to the proprietor.

South from hence, and wef from Trefcaw, flands the inand of Samfon, in which there is not above one family, who fubfift chiefly by the making of kelp. 'To the weflward of thefe there lie four illands, which contain in the whole 360 acres of meadow and arable land. The eaftern ifles, fo denominated from their pofition in refpect to St Mary's, contain 123 acres; and there are alfo feven other rocky and feattered iflands, that have each a little land of fome ule; and tefides thefe, immumeratle rocks on every fide, among which we muft reckon Scilly, now nothing more than a large, ill-fhaped, craggy, inacceffible ifland, lying the farthelt north-welt of any of them, and conlequently the nearef to the continent.

The air of thefe iflands is equally mild and pure; their winters are feldom fubject to froit or frow. When the former happens, it latts not long; and the latter never lies upon the ground. 'The heat of their fummers is much abated by fea-breezes. They are indeed fiequently incommoded by fea fogs, but thefe are not unwholefome. Agues are rare, and fevers more fo. The mult fatal dittemper is the fmall-pox ; yot thofe who live temperately furvive commonly to a great age, and are remarbably free from difeafes. The foil is very good, and produces grain of all forts (except wheat, of which they had anciently plenty) in large quantities. They ftill grow a little wheat, but the bread made of it is unpleafant. They eat, for this reafon, chiefly what is nade of barley; and of this they have fuch abundance, that Urough they ufe it both for bread and beer, they have more than fuffices for their own confumption. The ufe of potatoes is a new improvemont; and they profper to fuch a degree, that in fome places there are two crops in a-year. Roots of all forts, pulfe, and falads, grow well ; dwarf fruit-trees, groofeberries, currants, rafpberries, and every thing of that kind, under proper ithelter, thisve exceedingly; but they have no trees, though formenly they had elder; and porthelik, i. \(e\). the harbour of willows, proves they had thefe likewife; and with a little care, no doubt, great improvements might be made. The ranunculus, ancmone, and molt kinds of flowers, are fuccefsfully cultivated in their gardens. They have wild fowl of all
iorts, irom the fivan to the fnipe ; and a paticular kied called the bedge chicken, which is not inferior to the ortolan : allo tame forl, puffins, and rabbits, in great numbers. Their black cattle are gencrally finall, but very well tafted, though they feed upon ors-weed. Their horfes are little, but ftrong and lively. They have alfo large flocks of fine flocep, whofe flecees are tolerably good and their flell excellent. 'I'here are no venomous creatures in thefe illands.

We nult now pafs to the fea, which is of more confequence to thefe illes than that fmall portion of land which is diftributed amongft them. St Mary's harbour is very fafe and capacions, having that inland on the fouth ; zhe ealtern inlands, with that of St Martin, on the eaft ; T'refcaw, Brchar, and Samfon, to the north; St Agnes and feveral fmall iflands to the weft. Ships ride here in three to five fathom water, with good anchorage. Into this harbour there are four inlets, viz. Broad Sound, Smith's Sound, St Mary's Sound, and Crow Sound: fo that lardly any wind can blow with which a fhip of 150 tons cannut tafely fail through one or other of them, Crow Sound only excepted, where they cannot palis at low water, but at high there is from 16 to 24 feet in this paffage. Befides thefe there are two other larbours;-one called New Grynfoy, which lies between Drehar and Trefeaw, where hiips of 300 tons may ride fecurely. The other is called OId Grynfey, and lies between Trefcaw, St Helen's, and Theon, for Imaller fhips. The former is guarded by the batteries at Oliver's Caffle; the latter by the Blockhoufe, on the eattern fide of 'l'refeav, called Dover. Small coaiters bound to the northward have more convenient ontlets from thefe little harlbours than from St Mary's, where, at the weft end of Hugh Town, there is a tine pier built by the prefent earl of Godolphin, 430 feet long, 20 feet wide in the narrow eft part, and 23 feet in height, with 16 feet of water at a fpring, aud to at a neap tide; fo that under the thelter of this picr, veffels of 150 tons may lie feeurely, not only clofe to the quay, but all along the ftrand of the town.

In this harbour, and in all the little coves of the feveral illes, prodigious quantities of mackerel may be caught in their feaion; alfo foal, turbot, and plaife, remarkably good in their kind ; and ling, which from its being a thicker filh, mellower, and better fed, is wery juftly preferred to any canght nearer our own coalts. Salmon, cod, pollock, are in great plenty, and pilchards in valt abundance. To thefe we may add the alga marina, fucus, or ore-weed, which ferves to feed both their fmall and great cattle, manures their lands, is burned into kelp, is of ufe in phyfic, is fometimes prefurved, fometimes pickled, and is in many other refpects very beneficial to the inbabitante, of whom we are nest to fpeak.

The people of Seilly in general are robuft, handfome, active, hardy, indultious, generous, and goodnatured ; fpeak the Englifh language with great proprity; have frong natural parts (though for want of a good fohool they have little education), as appears by their dexterity in the feveral employments to which they are bred. They cultivate molt of their lands as well as can be expected under their prefent circumftances. They are bred from their infancy to the management of their boats, in which they excel; are good
fifhermen, mirable houfewives, fpin their own wool, weave it into coarfe cluth, and knit ftuckings. They have no timber of their own growth, and not much from Eugland; yet they have many joiners and cabinet-makers, who, out of the fine woods which they obtain trom captains of hips who put in here, make all kinds of comeltic furniture in a very neat manaler. They are free from the land tax, malt-tax, and excife; and being funifted with plenty of liquors trom the veffels which are driven into their roads for refrelhment, for necellary repairs, or to wait for a fair wind, in retura for provifions and other convenuences; this, with what little fifh they can cure, makes the beft part of their trade, if we except their kelp, which has been a growing manufacture for thete fourfore years, and produces at prefent about 5001 . per annum.

The right honourable the earl of Godolphin is Ayled proprictor of Scilly, in virtue of letters-patent granted to the late earl, then lord Godulphin, dated the 25 th of July 1698 , for the teim of 89 years, to be computed from the end and expiration of a term of 50 years, granted to Francis Godolphin, Efq; by king Charles I.; that is, from the year 1709 to \(179^{9}\), when his leafe de. ternines. In virtue of this royal grant, his lordfhip is the fole owner of all lands, houfes, and tenements; claims all the tithes, not only of the fruits of the carth, but of fith taken at fea and landed upon thofe prenuifes; barbour-duties paid by hips; and one moiety of the wrecks, the other belonging to the admiralty. There is only one eccletiatieal perfon upon the iffands, who relides at St Mary's, and vilits the other innabited illands once a year. But divine fervice is peformed, and fermons read, every Sunday in the churches of thofe iflands, by an honeft layman appoiated for that purpofe; and there are likewife clurch-wardens and overfeers, regularly chofen in every parih. As to the civil government, it is adminitered by what is called the Court of Twelve; in which the comnander in chief, the proprietor's asent, and the chaphain, have their feats in virtue of their offices: the other nine are chofen by the people. Thefe decide, or rather compromife, all differcnees; and punith fmall offences by fines, whippings, and the ducking.ftool: as to greater enormities, we many conclude they have not been hitherto krown; fince, except for the foldiers, there is no prifon in the iflands. But in cafe of capital offences, the criminals may be tranfported to the county of Cornwall, and there brought to jultice.

The great importance of thefe infands arifes from their advantageous lituation, as luoking equaly into St G corge's Channel, which divides Great Britain from Ireland, and the Englith Channel, which feparates Britain from France. For this reafon, mott thips bound from the fouthward trive to make the Scilly iflands, in order to fteer their courfe with greater certainty. It is very fonvenient alfo for veffels to take thelter amonglt them; which prevents their being driven to Milford H ven, nay forectimes into fome poit in Ireland, if the wind is flrong at eaft ; or, if it hlows hard at northwett, from being forced back into fome of the Cornifh harbours, or even on the French coafts. If the wind Should not be very high, yet if unfavourable or unfteady, as between the channels often happens, it is better to put into Scilly, than to beat about at fea in bad weather.

The intercourfe between thefe two chamels is anothes motive why thips come in here, as chooling rataer to
s:illy. Wait in fafciy for a wind, than to run the hazard on \(a^{2}\) being blown ont of their courle; and therefore a frons gale at eaft feldom fails of bringing thitty or forty vefles, and frequently a larger number, into sicilly; nut more to their own futisfaction than to that of the inhabitants. Ships homeward-bound fion: Anurica ofte: tuncl there, from the delire of making the firt land in their power, and fur the fake of refrefliment. Thele reafons have an influence on fortign Gh p , as well as our own; and afford the natives an opportunity of fhowing their wonderful desterity in conducting them fafely into St Mary's harbuur, and, when the wind ferves, through their founds. Uponfiring a gun and makiner a waft, a boat immediately puts off from the neareft ifland, with feveral pilots on board; and having with amazing activity dropped one of them into every nip, till only two men are left in the boat, thefe return again to land, as the wind and uther circumftances direct, in one of their little cores.

Refpecting a current which often prevails to the wefe ward of Scilly, Mr Rennel has publihed fone obfervations of much importance. "It is a circurnfance (fays he) well known to feamen, that thips, in cuming from the Atlantic, and fteering a courfe for the Britif channel, in a parallel formewhat to the fouth of the Scilly iflands, do notwithilanding often find themfelves to the nurth of thofe inands; or, in other words, in the mouth of St George's or of the Brifol channel. This estraordinary error has paffed for the effects either of bal fleerage, bad obfervations of latitule, or the indraurht of the Briftol channel: but none of thefe account for it fatisfactorily; becaufe, admitting that at times there may be an indranght, it cannot be fuppofed to extend tu Seilly; and the cafe has happened in weather the moft favourable for navigating and for taking ubferva. tions. The confequences of this deviation from the iutended tract have very uften been fatal; particularly in the luis of the Nincy packet in our own times, and that of Sir Clumleney Shosel and others of his fleet at the beginning of the prefent century. Numbers of cafes, equally melancholy, but of kfs celebrity, have occurred: and many others, in which the danger las been inuninent, but not fatal, have fearely reached the public ear. All of thefe have been relerred to aecident ; and therefore no attempt feems to have been made to inveligate the caufe of them.
"I am, however, of opinion, that they may be ime puted to a fpecific caufe; namely, a current: and Ifall thereforc endeavour to inveltigate both that and its effects, that feumen may be apprized of the times when they are particularly to expect it in any conficerable desree of freagth; for then only it is lilety to accation mifchief, the current that prevai's at ordinary times being probably too weak to produce an error in the reckonins, equal to the difference of paral!el between the fouth part of Scilly and the tract in which a commas. der, prident in lis meafures, but unfufpicious of a clirent, would choofe to fail.".

The original caufe of this current is the prevaleace of wefterly winds in the Atlantic, whichs impel the waters along the north coat of Spain, and accumulare them in the Bay of Bifcay; whence they are projette? along the coaft of France, in a dircetion noth well bs

Scilly. weft to the veett of Scilly and Ircland. The major afligns flrong reafons for the exillence of this current between Uhhant and Ireland, in a chart of the tra?s of the Hector and Atlas, Eaft India Mijps, in 1778 and 1787. The following remarks on the effect of this current are abridged from the author's work, which is well worthy the perufal of all failors and flipmafters.
ift, If a fhip crofes it obliquely, that is, in an eaft by fouth or more foutherly direction, fhe will continue much longer in it, and of courfe be more affected by it, than if the croffed it more dircelly. The fame confequence will happen if fhe croffes it with lisht winds. 2dly, A good obfervation of latitude at noon would be thought a fufficient warrant for runsing eaftward during a long night ; yet as it may be poffible to remain in the current long enough to be carried from a parallel, which may be decmed a very fafe one, to that of the rocks of Scilly, it would appear prudent, after experiencins a continuance of frong wefterly winds in the Atlantic, and approaching the Channel with light fouther: ly winds, either to malke Ufhant in tine of peace, or at all events to keep in the parallel of \(48045^{\prime}\) at the highef. \(\mathrm{a}^{\text {dly }}\), Ships bound to the weftward, from the mouth of the Channel, with the wind in the foutl-weft quartes, fhould prefer the larboard tack. 4thly, Major Rennel approves the defign of removing the lighthoure of Scilly (if it be not aiready removed) to the fouth weft part of the high rocks. sthly, He recommends the fendints a veffel, with time-keepers on board, to exmine the foundings between the parallels of Scilly and UThant ; from the meridian of the Lizard Point as far weft as the moderate depths extend, A fet of timekeepers, he obferves, will eftect more in one funumer, in Ikillu! hands, than all the feience of Dr Halley could do in the cour fe of a long lite.

In time of war, the inportance of thefe iflands is fill more confpicuous; and it is highly probable, that they aflordect the allies a place for affembling their fleet, when the Britons, Danes, Scots, and Irifli, failed under the command of Anlaff, to attack King Athelthan; which convinced bim of the neceflity of adding them to his donimions. Upon the like principle, Henry VIII. when upon bad terms with his ncighbours, caufed an old forterefs to be repaired; and Queen Elizabsth, who had more to fear, diected the coniltruction of a cafte, which, in part at lenf, thill remains. But the mod fingular inllance of the detriment that might arife from thefe iflands falling ints other lands than ourn own happened in 165 !, when Sir John Gienville toi: fielter in them with the remains of the Cornifa cavalicrs. Fur the depredations conmitted by his frigates foen made it evident that Scilly was the key of the Englith conmerce; and the elanours of "the merchants thereupon rofe fo high, that the parliament were forced to fend a flect of fifty fail, with'a great boity of land forecs on board, under sir George Ayfcte and admiral Blake, who with great difficulty, and no incontiderable lofs, made themfelves matters of Trefeaw and Brehar; where they erected thofe lines and fortifications near the remains of the old fortrcís that are ealled Oliver's Caple. But at lensth, finding that little was to be done in that way, they chofe to grant Sir John Grenville a molt honourable capitulation, as the fureft means to recover places of fuch confequence: with which the farlianent were very little
fatisfed, till Mr Blake gave them his reafons; which appeared to be fo well founded, that they direeted the artickes he had concluded to be punetually carried into execution.

SCIO, or Chio, a celcbrated ifland of the Arclipelago (fee CHro). It is 32 miles lonis and 15 hroad, is a mountainous but very pleafant country. The principal mountain, called anciently Pelinaus, prefents to view a long lofty range of hare rock, refecting the fina; but the receffes at its feet are diligently cultivated, and reward the hufbandman by their rich prodnce. The Ropes ave clothed with vines. The groves of Iemon, orange, and citron-trees, regularly planted, at once perfume the air with the odour of their bloffoms, and delight the eye with their golden fruit. Myrtles and jafmines are interfperfed, with olive and palm-trees, and cyprefles. Amid the fe the tall minarces rife, and white houfes glitter, dazzling the beholder. The inlabitants export a large quantity of pleafant wine to the neirhbouring iflands, but their primcipal trade is in filks. They have alfo a fmall comnerce in wool, cheefe, figs, and inattic. The women are better bred that in other parts of the Levant ; and though the drefs is odd, yet it is very neat. The partridges are tame, being fent every day into the fields to zet their living, and in the evening are called back with a whifte. The town called Scio is large, pleafant, and the belt built of any in the Levant, the houfes being beauliful and commodious, fome of which are terraffed, and others covered with tiles. The flrects are paved with flint-ftones; and the Veretians, while they had it in their poffefion, made a great many alterations for the better. The calle is an odd citadel built by the Genoefe, in which the Turks have a garrifon of 1400 mch . The harbour of Scio is the rendezvous of all Mipping that goes to or comes from Conflantinople, and will hold a heet of foufenre veffels. Tlrey reckon there are 10,000 Turks, 103,000 Greeks, and 10,000 Latins, on this ifland. The Thrk, took it from the Venetians in \(1695^{\circ}\). Scio is a bilhop'* fee, and is feated on the fea-fide, 47 miles welt of Smyrna, and 210 fouth-wef of Conltantimple.

There are but few remains of anticquity in this phacc. "The moit curious of them (fays Dr Chandler) is that which has been named without reafon the Sibool of \(40-\) mer. It is on the coatt at fome ditance from the eity northward, and appears to have heen an cyee temple of Cybele, formed on the toll of a lock. The thape is oval, and in the centre is the image of the guillelis, the head and an arm wanting. She is reprelented, as ufual, fittiv?. The chair has a lion carved on cach fide, and on the bacir. The area is bounded by a low rim or feat, and about five yards over. 'I he whole is hewn ont of the mountain, is r:!de, inditinct, and probably of the moft remote antiquity. From the llope higher up is a line view of the rich vale of Scio, and of the clannet, with its fhining iflands, beyond which are the monmtzins on the mai:land of Afia."

SCIOPPIUS (Gatpar), a learned German writer of the 17 th century, was born at Neumark in the Upper Palatinate on the 27 tho ol May 1576 . He flurlied at the univerlity with fo much fuccefs, that at the age of iG he became an author; and publifhed books, fays Ferrari, whicl deferved to be admired by old men. His difpofitions did not correfpond with his genius. Naturally paffionate and malevolent, he affaulted without
oppius mercy the character of emirent men. He abjured the fy:tern of the Protefarts, and became a Roman catholic about the year \(1 ; 99\); but his character remained the fame. He poffered all thofe qualities which fitted him for making a diflinguifhed figure in the literary world; inagination, meinoty, profond learning, and invincible impudence. He wns faniliar with the terms of reproach in moft of the languages. He was entirely ignorant of the manners of the world. He neither fhowed refpeet to his fuperiors, nor did lie bethave with de(ene) to his equals. He was poffefied with a fienzy orf an urcommon kind: he was indeed a perfese firebrand, featering around him, as if for his amufment, the moft atrocions calumnies. Jofrph sicaliget, above all others, was the object of his fatire. That learned man, having drawn up the hiftory of his own family, and deduced its genealory from princes, was feverely attacked by Scioppies, who ridiculed his high pretenfions. Scaliger in his turn wrote a book intitled The Life and Parentage of Gafpar Scioppins, in which he informs us, that the father of Scioppius had been fucceflively a grave-digger, a journcynan flationer, a hawker, a foldier, a mitiler, and a brewer of beer. We are told that his wite was long kept as a mittrefs, and at length forfaken by a debauched man whom fle followed to I-Mngary, and oblized to return to her beßand; that then he treated luer hathiy, and condemned her to the loweit offices of tervitude. His daughter, too, it is anid, was as diforderly as her mother: that after the Hight of her huband, who was going to be huned for fone infamous crimes, fle becarie a common proflitute; and at length grew fo feandalous, that the was comminted to prifon. Thefe fevere accufations againft the tanily of Scioppius inflamed him with more eagernefs to attack his antagonift ancuv. He colicked ail the calumnes that had been thrown out againt Scaliger, and Eomed then into a buge volvme as if he had intended to crufh him at once. He treated with great contempt the King of England, James I. in Wis Licclefioficus, sic. and in his Coillyriunl Regium Britannia Keri graviter ex o witis inioranti munere niffum; that is, "An Lye-falve for his Britamic Majelty." In one of his works he had the addacity to abute Henry IV. of France in a moft fomrilous maneer, on which accuent his book was burned at Paris. He was heng in effgy in a farce which was eeprefented before the kirg of England, hut he gloried in his dithonour. Provoked with his infolence to their fuvercign, the fervants of the Englifh ambaffador affahtul him at Madrid, and corrected him feverely ; but he hoatted of the xounds he had rectived. He publifted more than thirty dufamatory libels againt the Jefuits; and, what is very furprifing, in the very place whese be declaims with molt virulence againt that fociety, he fubfribes his awn name with expeeffions of picty. I Gujpar Scivpptus, airealy on the brink of the grave, and ready to appear lefore the trikunal of Yefus Cbrig 10 give an account of my ruaris. Toware's the end of his life he employed bimelef in Atedying the Apocalypfe, and afirmed that he had found the key to that mytlerious book. He fent forre of his expofitions to Cardinal Mazarine, but the eardinal did not lind it convenient to read them.

Ferrari tells us, that during the laft fourteen years of his life he fhut himfelf up in a fimall apartment, where he dewoted himfelf folely to ftudyo. The fame writer
accunints us, that he conld repat the Scriptures almof Scioppius enticty by leart; but his good qualities were eclipfed by his vices. For his lowe of flander, and the furions affalts which he tnade upon the moft emirutit men, he was called the Cerlitus of literature. He accufes cven Ciccro of barbarims and improprictici. He died on the 19th November 1649 , at the age of 74, at Padua, the only retreat which rea ained to him from the multitude of eremies whom he had created. Four hundred books are afcribed to lim , which are faic to difcover great genius and learning. 'Ihe chief of thefe are, 1. Firefmiliam Lilti IV. 159 , in Svo. 2. Commentarises de arte crition, 16 C 1 , in 8vo. 3. De fua ad Catholicos migration, IG6o, in 8 vo. 4. Notationes Critica in Phedrum, zzs Priafeia, Patuvit, 1664, in Evo. 5. Suffe8urum lecionum Litri V. 1664, in 8vo. 6. Claficum lelli focri, 1619 , in 4 to. 7 Collyrium regium, 1611 , in Svo. 8. Giammatica Hiblofophica, 1644, in 8vo. 9. Re. latio ad Reges et Principes Ne Stratagematilus et Societatio \(\tilde{f} f / u, 164 \mathrm{~T}\), in 12 mo . This lat mentioned book was publithed under the name of aiphonfo de Vargas. IEe was at firft well difpofed to the Jefuits; but thefe fa. thers on one occafion oppofed him. He prefented a petition to the diet of Ratifbonne in 1630 , in order to obtain a penfion; but the Jefuits, who were the confeflors botlı of the emperor and the electors, had influence to prevent the petition from being granted. From that moment Scioppius turned his whole attllery againt the Jefuits.

SCIPIO (Publins Cornclius), a renowned Roman general, furiamed Africanur, for lis corquefts in that comntry. His other fignal military exploits were, his taking the city of New Carthage in a Engle day; his complete victory over Hanribal, the fameus Carthaginizn §eneral ; the defeat of Syphax king of Numidia, and of Antioches in Afia. He was as eminent for his chaftity, and his genemus bchaviour to his prifoners, as for his valour. He died 1 io D. C. aged about 5 1.

Scifio (Lacius Cornelius), lis biother, furnamed Afraticus, for his complete viftery over Antiochus at the battle of DIagnefia, in which intiochus loft 50,000 infantry and foon cavalry. A triuaph, and the furnarne of Affuticus, were the rewards of his valour. Yet his ungrateful countrymen accufed lim, as well as his brother, of prenlation: for which he was tined: but the public fale of this cffects troved the faliehood of the charge; for they did not froduce the amomet of the fine. He formitiocd about 100 B. C.

Scipso (tublins Emilianne), was the fon of Paulus Emilius; but beigg adopted ty Scipio Africanns, he was called Scipio. Aifrimazus janion. He howed limfelf worthy of adoption, following the foot?eps of Scipio Africants, whom he equalled in military fame and public virtas. His chief victories were the conque!t of Carthage and Numantia; I'es thefe fignal fervices to his country could not proteft him from an untimely fate. He was franged in his bod by order of the Decenviri, who dreaded lis popularity, 129 B. C. aged 56.

SCIRO, an ifland of the Archipelago, to the wit of Mytilene, to the nottlecall of Negroponi, and to the fouth.ealt of Sciati. It is 15 miles in length, ard 8 in breadth. It is a mommainous country, but has no mines. The vines make the beauty of the illant, and the wise is cxceltent; noo do the natives want

8 erocho wiond. 'There is but one village; and that is built on II Sciurte. a rock, which runs up like a fugar-loaf, and is 10 miles from the harbour of St George. The inhabi-
tants are all Grecko, the cadi being the only Turk anong thern.

SCIROCHO, or Sirocho, a name generally given in Italy to every unfawourable wind. In the fouth-welt it is applied to the hot fuffocating blalts from Africa, and in the no-th ealt it means the cold bleak winds from the Alps.

SCIRPUS, in botany: A genus of the monogynia order, belonging to the triandria clafs of plants; and in the natural method ranking under the 3 d order, \(C a\). lamaria. The glumes are paleaceons, and imbricated all round. There is no corolla; and only one beard. lefs reed.

SCIRRHUS, in furgery and medicine, a hard tumor of any part of the body, void of pain, arifing, as is fuppofed, from the infpifation and induration of tine fluids contained in a gland, though it may alfo appear in any other part of the body, efpecially in the fat; being one of the ways in which an inflammation terminates. Thefe tumors are exceedingly apt to degenerate into cancers.

SCITAMiNEF. 'See Botany, p. 459.
SCIURUS, the squirrel; a genus of quadrupeds belonging to the order of glires. It has two fore-tceth in each jaw, the fuperior ones thaped like wedges, and the inferior ones compreffed. There are in fpecies; of which the moff remarkable are,
1. The vulgaris, or common fquirrel, with ears terminated with long tufts of hair; large, lively, black cyes; head, body, legs, and tail, of a bricht reddinh brown; breaft and belly white; hair on each lide the tail lies flat. In Sweden and Lapland, it changes in winter into grey. In Ruffia it is fometimes found black. In many parts of England there is a beautiful variety, with milk white tails.-This fpecies inhabits Europe and North America, the northern and the temperate parts of Afia: and a variety is even found as far fouth as the ine of Ceylon. It is a neat, lively, active animal; lives always in woods: in the fpring, the female is feen purfued from tree to tree by the males, feigning an efcape from their embraces; makes its neft of mols and cried leaves between the fork of two branches; brings three or four young at a time; has two holes to its neft ; ftops up that on the fide the wind blows, as Pliny juftly remarks; lays in a hoard of winter provifion, fuch as nuts, acorns, \&c.; in fummer, feeds on buds and young thoots; is particularly fond of thofe of fir, and the young cones; fits up to eat, and ufes its forefeet as hands; covers itfelf with its tail ; leaps to a furprifing diftance; when difpoled to crols a river, a piece of bark is its boat, its tail the fail; is in great plenty in Dunmallet, and there called Conn. Boys frequently surfe this beautiful and active animal under cats. *There are three creatures, the fquirrel, the fieldmoure, and the hird called the nuthatch, which live much on hazel nuts; and yet they open them each in a different way. The firt, after rafping off the fmall end, fplits the fhell in two with his long fore-teeth, as a man does with his knife; the fecond nibbles a hole with his teeth, fo regular as if drilled with a wimble, and yet fo fmall, that one would wonder how the kerad can be extraAted through it; while the laft pecks
an isregular ragged hole with its bill; but as this artift has no paws to hold the nut firm while he pierces it, like an adroit workman, he fixes it, as it were in a vice, in fome cleft of a tree, or in fome crevice; when, ftanding over it, he perforates the ftubborn fhell. While at work, they make a rapping noife, that may be heard at a confiderable diffance." "White's Selborne.
2. The cinereus, or grey fquirrel, with plain cars; hair of a dull grey colour, mixed with black, and often tinged with dirty yellow; belly and infides of the legs white; tail long, bufty, grey, and friped with black: fize of a half-grown rabbit - Inhabits the woods of Northern Afra, North America, Peru, and Chili. They are very numerous in North America, do incredible damage to the plantations of maize, run up the ftalks and eat the young ears. Defcend in valt flocks from the mountains, and join thofe that inhahit the lower parts; are profcribed by the provinces, and a reward of three-pence per head given for every one that is killed. Such a number was deftroyed one year, that Pennfylvania alone paid in rewards \(L .8000\) of its currency. Make their nefts in hollow trees, with mors, ftraw, wool, \&c. Feed on maize in the feafon, and on pine cones, acorns, and mafts of all kinds: form holes under-ground, and there depofit a large ftock of winter provifion. Defcend from the trees, and vifit their magazines when in want of meat ; are particularly bufy at the approach of bad weather; during the cold feafon keep in their nef for feveral days together; leldom leap from tree to tree, only run up and down the bodits \(;\) their hoards often dellroyed by fwine; when their magazines are covered with deep fnow, the fquirrels often perifh for want of food; are not eafly thot, nimbly changing their place when they fee the gun levelled; have the actions of the common fquirel; are eafily tamed; and their flefh is efteemed very delicate. Their furs, which are imported ninder the name of petit-gris, are valuable, and ufed as linings to cloaks.
3. The niper, or black fquirrel, with plain ears; fometimes wholly black, but often marked with white on the nofe, the neck, or end of the tail; the tail fhorter than that of the former ; the body eçual. It inhabits the north of Afia, North America, and Mexi. co; breeds and aflociates in leparate troops; is equally numerous with the former: commits as great ravages among the maize; makes its nefl in the fame manner, and forms, like them, magazines for winter food. The finell are taken near the lake Baikal, and about Bargu-zinkoi-oltrog, upon the Upper Angara, in the diltrict of Nertfchind, which are the bett in all Siberia; thefe continue black the whole year, the others grow rutty in fummer. - There is a variety with plain ears; coarfe fur mised with dirty white and black; throat and infide of the legs and thighs black; tail much fhorter than thofe of fquirrels ufually are; of a dull jellow colour, mixed with black; body of the fize of the grey fquirrel. It inhabits Virginia; the planters call it the cat fquirrel.
4. The flavus, or fair fquirrel, with the body and tail of a flaxen colour; of a very fmall fize, with plain round ears, and rounded tail. Inhabits the woods near Amadabad, the capital of Guzurat, in great abundance, leaping from thee to tree. Linneus fays it is an inhabitant of South America.
5. The friatus, or ground fquinel, with plain sars;

\section*{\(S\) C I}

Scirrus. ridge of the back marked with a black ftreak; each fide with a pale yellow ftripe, bounded above and below with a line of black; head, boxy, and tail, of a reddif brown; the tail the darkeft: breait and belly white; nore and feet pale-red ; ejes full - Inhabits the north of Afia, but found in the greatelt abundance in the forefts of North America. They never run up trees except they are purfued, and find no other means of efcaping : they burrow, and form their habitations under ground, with two ertrances, that they may get accefs to the one in cale the other is fopped up. Their retreats are formed with great fkill, in form of a long gallery, with branches on each fide, each of which terminates in an enlarged chamber, as a magazine to ftore their winter provifion in ; in one they lodge the acorns, in ancther the maize, in a third the hickery ruts, and in the lait their favourite food the chinquapin chefnut. They very feldom fir out during winter, at leaft as long as their provifions laft; but if that fails, they will dig into cellars where apples are kept, or barns where maize is flored, and do a great deal of mifchief; but at that time the cat defteoys great numbers, and is as great an enemy to them as to mice. During the maize harvelt thefe fquirrels are very bufy in biting off the ears, and filling their mouths fo full with the corn, that their cheeks are quite diftended. It is obfervable that they give great preference to certain food; for if, after filling their mouths with rye, they happen to meet with wheat, they fing away the firf, that they may indulge in the laft. They are very wild, bite feverely, and are fearcely ever tamed; the ficins are of little ufe, but are fometimes brougbt over to line cloaks.
6. The gles, or fat fquirrel, with thin naked ears; body covered with foft afh coloured hair; belly whitin; zail full of long hair: from nofe to tail, near fix inches; tail, four and a half: thicker in the body than the common 〔quirel. - Inhabits France and the fouth of Europe; lives in trees, and leaps from bough to bough; feeds on fruits and acorns; lodges in the hollows of trees; remains in a torpid ftate during winter, and grows very fat It was efteemed a great delicacy by the Romans, who had their gliraria, places contructed to keep and feed them in.
7. The fagitta, or arrow \{quirrel, with a fmall round head, cloven upper lip: fmall blunt ears, two fmall warts at the utmoft corner of each eye, with hairs growing Out of them: neck thort: four toes on the fore feet; and inftead of a thumb, a flender bone two inches and a half long, ludged under the lateral membiane, ferving to Aretch it out: from thence to the hind legs extends the membrane, wbich is troad, and a continuation of the flin of the fides and belly: there are five toes on the hind feet; and on all the toes, fhap comprefed bent claws: the tal is covered with long hairs difpofed horizontally: colour of the head, bodj, and tail, a bright bay; in fome parts inclining to orange : breaft and belly of a yeilowin white: length from nofe to tail, eighteen inches; tail, fifteen.-Inhabits Java, and others of the Indian illands: leaps from tree to tree as if it flew: will catch hold of the boughs with its tail. Niewhoff, p. 354. deferibes this under the name of the flying cat, and fays the back is black.
8. The.volans, or Aying fquirrel, with round naked ears, full black cyes, and a lateral menbrane from the fore to the hind legs: tail with long hairs difoofed hori-

Vos. XVI. Part II.

\section*{\(13] \quad \mathrm{S}\) C 0}
zontally, longeft in the middle: its colour above, a browr. ifh afn ; beneath, white tinged with yellow; much lefs than the common fquirrel. Inhabits Fiuland, Lapland, Poland, Ruffia, North America, and New Spain: lives in hollow trees: fleeps in the day: during the ni, ht :o very lively : is gregarious, numbers being found in \(0: 5\) tree: leaps from bough to bough fometimes at the diftance of ten yards: this àtion has improperly been called hying, for the animal cannot go in any other di. rection than forward; and even then cannot keep an even line, but finks coniderably before it can reach the place it aims at : , fenfble of this, the fquirrel mouits the higher in proportion to the dilance it wifhes to reach : viken it would leap, it fretches out the forclegs, and extending the membranes becomes fpecifically liquiter than it would otherwife be, and thus is en.h'ed to fpring further than other fquirrels that have not this apparatus. When numbers leap at a time, they i:cm
like leares blown off by tlie wind. Their like leares blown of by thie wind. Their food the fai: as the other fquirrels. They are eafily tamed: bring three or four joung at a time. See fig. 3 \& 4 , the one reprefenting the animal in what is called a fljing, the other in a Fitting, polture.

SCIURUS, in botany: A genus of the morogynia order, belonging to the diandria clals of plants; and in the natural method ranking with thofe that are doubt ful. The caly \(x\) is quinquedentate; the corolla bilabiated; the flanients are barren; the capfules five, and joined together ; bivalved, unilocular, with one feed. Of this there is one fpecies, viz. aromatica, a native of Guiana.

SCLAVONLA, a country of Europe, between the rivers Save, the Drave, and the Danule. It is divided into fix counties, viz. Pofegra, Zabrab, Creis, Warafo den, Zrein, and Walpon and belongs to the houfe of Auftria. It was fornierly called a kingriom; and is wery narrow, not being above 75 miles in breadth ; but it is 300 in length, from the frontiers of Aultia to Bet. grade. The eattern part is called Ratzia, and the in. habitants Ratzians. Thefe, from a particular notion, are of the Greek church. The language of Sclavonia is the mother of four others, namely, thofe of Husigary, Bohemia, Poland, and Rufia.
SCLERANTHUS, in botany: A genus of the digynia o:der, belonging to the dodecandria clats of plants, and in the natural method ranking under the 2ad order, Caryophyllei. The calyx is monophyllous; there is no corolla; there are two feeds contained in the caly \(x\)

SCLERIA, in botany: A geaus of the teriandria order, belonging to the monocia clafs of plants : and in the natural nethod ranking under the ath order, Graming. 'Ihe calyx has a gluma, with from two to lix valves; the flowers numerous; the feed a furt of nut, fmall, oblong, and thining. There are fix fipecies, all of them natives of the Wran Indies.

SCLEROTICS, medicines proper to harden and confolidate the felh of the parts to which they are applied; as purnain, houfe-leck, flea-wort, garden nighthlade, \&c.

SCOLOPAX, in ornithology, a senus belonging to the order of grallie. Thee back is cylindrical, obtufe, and longer than the head; the notrils are linear; the face is covered; and the feet have four toes. There are is fecies; of which the following ate the priacipal.

\section*{}

Scolopax.
Plate
1. The arguata, or curlex, fiequents our fea-coalts and marthes in the winter time in large fiocks, walking on the open fands; feeding on hells, frogs, crabs, and other marine infects. In furnmer they retire to the mountainous and unfrequented parts of the country, where, they pair and breed. Their eggs are of a pale olive colour, marked with irregular but diftinct fpots of pale brown. Their fent is very rank and filhy, notwithftanding an old Englifh proverb in its favour. Curlews differ much in weight and fize; fome weighing 37 ounces, others not \(22:\) the length of the largeit to the tip of the tail, 25 inches; the breadth, three feet five inches; the bill is feven inches long: the head, neck, and coverts of the wings. are of a pale brown; the middle of each feather, black; the breaft and belly white, marked with narrow oblong black lines: the back is white, fpotted with a few black flrokes: the quill-feathers are black, but the inner webs fpotted with white; the tail is white, tinged with red, and beautifully barred with black; the legs are long, Atrong, and of a bluifh grey colour; the bottoms of the toes flat and hroad, to enable it to walk on the foft mud, in fearch of food.
2. The pheopus, or whimbrel, is much lefs frequent on our fhores than the curlew; but its haunts, food, and general appearance, are much the fane. It is obferved to vift the neighbourhood of Spalding (where it is called the curlew knot) in vaft flocks in April, but continues there no longer than May; nor is it feen there any other time of the year: it feems at that feafon to be on its paffage to its breeding place, which Mr Pernant furpects to be among the Highlands of Scotland. The fpecific difference is the fize; this never exceeding the weight of 12 ounces.
3. The rufficola, or woodoock, during fummer inhabits the Alps of Norway, Sweden, Polifh Pruffia, the march of Brandenburg, and the northern parts of Europe s they all retire from thofe countries the beginning of winter, as foon as the frofts commence; which force them into milder climates, where the ground is open, and adapted to their manner of feeding. They live on worms and infects, which they fearcll for with their long bills in foft grounds and moit woods.Woodcocks generally arrive here in flocks, taking advantage of the night or a mift : they foon feparate; but before they return to their native haunts, pair. They feed and fly by night ; beginning their fliglit in the evening, and return the fame way or through the fame glades to their day retreat. They leave England the latter end of February, or beginning of March; not hut they have been known to continue here accidentally. Thefe birds appear in Scotland firtt on the eaftern coats, and make their progrefs from eaft to weft. They do not arrive in Breadalbane, a central part of the kingdom, till the begiuning or middle of Novenber; nor the coafts of Nether Lorn, or of Rofsfhire, till Decemher or January : they are very rare in the remote Hebrides, and in the Orkneys. \(f_{2}\) few fragglers now and thent arrive there. They are equally farce in Caithnels. Our fpecies of woodoock is unknown in North America : but a kind is found that has the general appearance of it ; but is fcarce half the fize, and wants the bars on the breaft and helly. The weight of the wondeock is ufually about 12 ounces; the length near 14 inches; and the breadth, 26 ; the bill is three
inches long, dufky towards the end, reddith at the bafe; tongue nender, long, Tharp, and hard at the point ; the eyes large, and placed near the top of the head, that they may not be injured when the bird thrufts its bill into the ground ; from the bill to the eyes is a black line; the fore-head is a reldifh afh colour; the crown of the head, the hind part of the neck, the back, the coverts of the wings, and the fcapulars, are prettily barred with a ferrugizous rtả, black, and grey; but on the head the black predominates: the quill-feathers are duky, indented with red marks. The chin is of a pale yellow; the whole under fide of the body is of a dirty white, marked with numerous tranfverfe lines of a dunky colour. The tail confitts of 12 feathers, dunky or black on the one web, and marked with red on the other; the tips above, are afh.coloured, below white; which, when thooting on the ground was in vogue, was the fign the fowler difcovered the birds by. The legs and toes are livid; the latter divided almoft to their very origin, having only a very fmall web between the middle and interior toes; as thofe of the two fpecies of fnipes found in England.
4. The agocephala, or godwit, weighs 12 ounces and a half; the length is 16 inches; the breadth 27 ; the bill is four inches long, turis up a little, black at the end, the reft a pale purple; from the bill to the cye is a broad white ftroke; the feathers of the heac, neek, and back, are of a light reddih brown, marked in the middle with a dufky fpot; the belly and vent feathers white, the tail regularly barred with black and white. The fix firf quill-feathers are black ; their interior edges of a reddifh brown; the legs in fome are dunky, in others of a greyifh blue, which perhaps may be owing to different ages; the exterior toe is conneeted as far as the firf joint of the middle toe with a ftrong ferrated membrane. The male is dittinguihed from the female by fome black lines on the breat and throat ; which in the female are wanting. Thefe birds are taken in the fens, in the fame feafon and in the fame manner with the ruffs and reeves *; and when fattened are efteemed a great delicacy, and fell for half a crown or five fhillings a piece. A fale of the fame fpecits is placed in the net. They appear in fmall flocks on our coafts in September, and continue with us the whole winter; they walk on the open fands like the curlew, and feed on infects.
5. The glottis, or greenhank, is in length to the end of the tail, 14 inches; to that of the toes, 20 ; its breadth, 25. The bill is two inclees and a half long; the upper mandible black, Atraight, and very flender ; the lower refleens a little upwards; the head and upper part of the neck are afh-coloured, marked with fmall dufky lines pointing down; over each paffes a white line; the coverts, the fcapulars, and upper part of the back, are of a brownih afh-colour; the quill-feathers dufky; but the inner webs fpeckled with white; the breaft, belly, thighs, and lower part of the back, are white ; the tail is white, marked with undulated dufky bars : the inner coverts of the wings finely croffed with double and treble rows of a dunky colour. It is a bird of an elegant fhape, and fmall weight in proportion to its dimenfions, weighing only fix ounces. The legs are very long and flender, and bare above two inches higher than the knees. The exterior toe is united to the suiddle toe \({ }_{8}\) as far as the fecond joint, by a ftrong men-

\section*{S C.O \\ S C O}

Scologzx, membrane which borders their fides to the very end. -Scolopen- Thefe birds appear on the Englifh coafts and wet dг3. grounds in the winter-time in but fmall aumbers.
6. The calidris, or red-fhank, is found on moft of our fhores ; in the winter-time it conceals itfelf in the gutters, and is generally found fingle or at moft in pairs. It breeds in the fens and marfhes; and flies round its neft when difturbed, making a noife like a lapwing: It lays four eggs, whitifh tinged with olive, marked with irregular fpots of black chiefly on the thicker end. It weighs five ounces and a half: the length is 12 inches, the breadth 21 ; the bill near two inches long, red at the bafe, black towards the point. The head, hind part of the neck, and fcapulars, are of a dufky ath-colour, obfcurely fpotted with black; the back is white, fprinkled with black fpots; the tail elegantly barred with black and white ; the cheeks, under fide of the neck, and upper part of the breaft, are white, ftreaked downward with dufky lines; the belly white; the exterior webs of the quill-feathers are dukky; the legs long, and of a fine bright orange colour; the utmoft toe connceted to the middle toe by a fmall membrane ; the inmoft by another ftill fmaller.
7. The gallinago, or common fnipe, weighs four vunces; the length, to the end of the tail, is near 12 inches; the breadth about 14 ; the bill is three inçhes long, of a dufky colour, flat at the end, and often rough like fhagrin above and below. The head is divided lengthwife with two black lines, and three of red, one of the laft paffing over the middle of the kead, and one above each eye: between the bill and the cyes is a dufly line ; the chin is white; the neck is varied with brown and red. The fcapulars are beautifully ftriped lengthwife with black and yellow; the quill-feathers are dufky; but the edge of the firf is white, as are the tips of the fecondary feathers: the quill-feathers next the back are barred with black and pale red; the breaft and belly are white; the coverts of the tail are long, and almoft cover it; they are of a reddifh brown colour. The tail conffits of 14 feathers, black on their lower part, then croffed with a broad bar of deep orange, another narrow one of black; and the ends white, or pale orange. The vent feathers are of a dull yellow; the -legs pale green; the toes divided to their origin. In the winter-time fnipes are very frequent in all our marfhy and wet grounds, where they lie concealed in the rufhes, \&c. In fummer they difperfe to different parts, and are found in the midft of our higheft mountains as well as of our low moors; their neft is made of dried grafs; they lay four eggs of a dirty olive colour, narked with dufky fpots; their young are fo often found in England, that we doubt whether they ever entirely leave this illand. When they are difturbed much, particularly in the breeding feaion, they foar to a valt height, making a fingular bleating noife ; and when they defcend, dart down with vaft rapidity : it is alfo amuling to obferve the cock, while his mate fits on her eggs, poife himfelf on her wings, making fometimes a whiftling and fometimes a drumming noife. Their food is the fame with that of the woodcock; their flight very irlegular and fwift, and attended with a fhrill fcream. "They are moft univerfal birds, found in every quarter of the globe, and in all climatts.

SCOLOPENDRA, in zoology, a genus of infects welonging to the order of aptera. The feet are very
numerous, being as many on each fide as there are Scolopenjoints in the body ; the antenne are fetaceous: there are tri two jointed pappi, and the body is deprefled. Thefe infeets are very formidable and noxious in the warm countries, where they grow to the length of a quarter of a yard or more, though in this climate they feldom grow above an inch long. The fcolopendra is alfo called the centipes from its number of feet. In the Ealt Indies it grows to fix inches in length, and as thick as a man's finger: it confifts of many joints; and from each joint proceeds a leg on each fide: they are covered with hais and feem to have no cyes; but there are two feclers on the head, with which they find out the way they are to pafs: the head is very round, with two fmall fharp teeth, with which they inflict wounds that are very painful and dargerous. A failor that was bit by one on board a flip felt exceffive pain, and his life was fuppofed to be in danger ; but by the application of roafted onions to the part he recovered.. The bite of the fcolopendra morfitans § in Jamaica is § see Plase faid to be as poifonous as the fing of a fcorpion. - ececrivo Some of the fpecies live in holes in the earth : others under ftones, and among rotten wood; fo that the removing of thefe is exceedingly dangerous in the countries where the fcolopendre breed.-Thefe infects, like the fcorpion, are fuppofed to be produced perfect from the parent or the edg, and to undergo no changes after their firt exclufion. They are found of all fizes; which is a fufficient reafon for believing that they preferve their firft appearance through the whole of their exittence. It is probable, however, that, like moft of this clafs, they often change their fkins; but of this we have no certain information. The fcolopendra forficata is the largeft in this country, of a dun colour, finooth, and compofed of nine fealy fegments, without reckonitig the head. The feet are 15 in number on each fide, and the laft longer than the reft, and turned backwalds, form a kind of forky tail. The autenire are twice the length of the head, and confif of 42 fhort fegments. 'The infect's prugrefive motion is very quick, and fometimes ferpentinc. It \({ }^{\circ}\) is found under ftones on the ground, under fower-pots and garden boxes.
SCOLYMUS, in botany: A genus of the polygamia æqualis order, belonging to the fyngenefia clafs of plants; and in the natural method ranking under the 40 th order, Compyolit. The receptacle is paleaceous; the calyx inhbricated and prickly, without any pappus.

SCOMBER, the Mackerel, in ichethyology, a genus belonging to the order of thoracici. The head is fmooth and comprefed, and there are feven rays in the gill membrane. There are ten \(\Gamma_{\mathrm{p} e c i e s}\); - of which the molt remarkable are the following.
s. The fcomber, or common mackerel, a fummer-fith of paffage that vifis our fhores in valt fhoals. It is lefs ufeful than other fpecies of gregarious tifh, heing very tender, and unit for carriage ; not. but that it may be preierved by pickling and lalting, a method, we believe, practifed only in Cornwall, whese it proves a great relief to the poor during winter. It was a fitl greatly eiteented by the Romans, becaufe it furnifhed the precious garum, a fort of pickle that gave a high relin to their fances; and was befides ufed medicinally. It was drawn from different kinds of fif,, but that made from the macherel bad the preference : the beft was made at 4 X 3

Ca:-

\section*{S C \(O\)}

Carthagena, vaft quantities of mackercl being taken near an adjacent ine, called lrom that circumitance Soomtraria, and the garum, prepared by a certain company in that city, bore a high price, and was diftinguifhed by the titie of garum fociorum. This fith is eafily taken by a bait ; but the beft time is during a frefh gale of wind, which is thence called a mackerel gale. In the fpring the eyes of mackerel are almoft covered with a white filn ; during which period they are half blind. This film grows in winter, and is calt the beginning of fummer. It is not often that it exceeds two pounds in weizht, yet there have been initances of fome that weithed uptwards of five. The nofe is taper and fharp pointed; the eyes large; the jaws of an equal length; the teeth fmall, but numerous. The forn of this fifh is very elegant. The body is a little compreffed on the fides: towards the tail it grows very flender, and a litale angular. It is a moft beautiful fifh when alive; for nothing can equal the brilliancy of its colour, which death impairs, but does not wholly obliterate.
2. The thunnus, or tumy, was a fith well known to the ancients: it made a confidcrable branch of commerce: the time of its arrival in the Mediterranean from the ocean was obferved, and flations for taking them were eltablifhed in places it molt frequented.

There are till very conliderable tumay fifheries on the coall of Sicily, as well as feveral other parts of the Mediterranean ; where they are cured, and make a great article of provifion in the adjacent kingdoms. They are caught in nets, and amazing quantities are taken; for they come in vaft fhoals, keeping along the Thores. See Tunny-Fisherr.

They frequent our coafts, but not in thoals like the tunnies of the Mediterranean. They are not uncommon in the lochs on the weftern coaft of Scotland; where they come in purfuit of herrings ; and often during night frike into the nets, and do confiderable damage. When the fifhermen draw them up in the morning, the tunny rifes at the fame time towards the furface, ready to catch the fifh that drop out. On perceiving it, a flrong hook baited with a herring, and faftened to a rope, is inflantly flung out, which the tunny feldom fails to take. As foon as hooked, it lofes all fpirit; and after a very little refiftance fubmits to its fate. It is dragged to the fhore and cut up, either to be fold Frefh to people who carry it to the country markets, or is preferved falted in large cafks. The pieces, when frefl, look exactly like raw beef; but when boil. ed turn pale, and have fomething of the flavour of falmon.

One that was taken when Mr Pennant was at Inverary in 1769 , weighed 460 pounds. The finh was fevun feet ten inches long: the greateft circumference five feet Yeven; the leaft near the tail one foot fix. The body was round and thick, and grew fuddenly very nender towards the tail, and near that part was angular. The irides were of a plain green : the teeth very minute. The tail was in form of a crefeent; and two feet feven inches between tip and tip. The olan on the back was fmooth, very thick, and black. On the belly the fcales were vilible. The colour of the fides and belly was filvery, tinged with crerulean and pale purple : near the tail marbled with grey.
'l'hey are known on the coalt of scotland by the
name of matkrelfiure: Michrel, from being of that genus; and fure, from the Danifh, for "great."

SCONE, a town of Scotland, remarkable for being the place where the kings were anciently crowned. W. Long. 3. 10. N. Lat. 56. 28. Here was once an abbey of great antiquity, which was burnt by the reformers at Dundee. Kenneth II. upon his conqueft of the Picts in the ninth century, having made Scone his priucipal refidence, delivered his laws, callod the Macalpine lawe, from a tumulus, named the Mote Hill of Scone. The prefent palace was bcgun by the earl of Gowrie ; but was completed by Sir David Murray of Gofpatrie, the favourite of king Janes VI. to whom that monarch had granted it ; and the new poffelfor in gratitude to his benefactor put up the king's arms in feveral parts of the houfe. It is built around two courts. The dining room is large and handfome; and has an ancielt and magnificent chimney-piece, and the king's arms, with this motto:

\section*{Nobis bre inviaa miferunt contum fex proavi.}

Beneath are the Murray arms. In the drawing rcom is fome good old tapeltry, with an excellent figure of Mercury. In a fmall bed-chamber is a medley fcrip-ture-piece in needle-work, with a border of animals, pretty well done, the work of queen Mary during her confinement in Loch Leven Cattle. The gallery is about 155 feet long, the top arched, divided inte compartments filled with paintings in water-colours. The pieces reprefented are various kinds of huntings; that of Nimrod, and king James and his train, appear in every piece. Till the deftruction of the abbey, the kings of Scotland were crowned here, fitting in the famons wooden chair which Edward I. tranfported to Weftminfter abbey, to the great mortification of the Scots, who looked upon it as a kind of palladium. Charles II. before the battle of Worcefter, was crowned in the prefent chapel. 'The old pretender refided for fome time at Scone in \(\mathbf{1 7 1 5}\); and his fon paid it a vifit in 1745.

SCOPARIA; in botany: A genus of the monogrnia order, belonging to the tetrandria clafs of plants; and in the natural method ranking under the 40 oth order, Perfonata. The calyx is quadripartite; the corolla the fame, and rotaceous; the capfule unilocular, bival. ved, and polyfpermous.

SCOPER, or scupper Holes, in a thip, are holes made through the fides, clofe to the deck, to carry off the water that comes from the pump.

SCOPOLIA, in batauy : A genus of the oefandria order, belonging to the gynandria clafs.of plants; ant in the natural method ranking under the isth clafs, Sarmentacea. The calyx is diphyllous; the corolla quadrifid ; the anthere coalefee in tiso caiumns, one placed above the other. Of this there is only one ipecies, viz. the Compofita.

SCORBUTUS, the Scurvy. See Médcine, \({ }^{\circ}\) 8.
SCORDIUM, or Water-girmander, in botany, a fpecies of Teucrium.
SCORIA, or Dross, among metallurgifts, is the recrement of metals in fufion; or, more determinatel. speaking, is that mafs which is produced by inciting metals and ores: when cold. it is buitte, and not dilfoluble in water, bcing properly a kind of glas.

Seorifiez- SCORIFICATION, in metallurgy, is the art of
tinn, reducing a body, either entirels or io part, into fcoria. SCORPENA, in ichthyology, a fenus belonging to the order of thoracici. The head is large and tharp; the eyes are near each other; there are teeth in the jaws, palate, and fauces; and there are feven rays in the membrane of the gill. The fpecies are three, viz. the porcus, fcrofa, and borrida. According to Mr Willoughhy, the fcorprena is a fih of the anguiliform sind, called by the people of Cornwall father-lafker. Scorpana is alfo the name of a fith caught in many parts of the Mediterrañean. It feldom grows to more than a pound weight. Its body is long, but not flatted, and is moderately thick. Its head is extremely large, and is armed with prickles, and it grows gradual. ly lefs from thence to the tail. The prickles about the head are accounted renomous, and the fifhermen ufually cut them off as foon as the fifh is caught. Its tail is not forked, but rounded at the end. The belly and belly-fins are reddifh.

SCORPIO, in zoology, a genus of infects belonging to the order of aptera. It bas eight feet, helides two frontal claws; the eyes are eight in number, three on each fide of the thorax, and two on the back. It has two claw.fhaped palpi, a long jointed tail, with a pointed wenpon at the extremity; it has likewife two combs fituated betwixt the breaft and abdomen. There are fix fpecies, all natives of fouthern climates.

Of all the claffes of noxious infects the fcorpion is the moft terrible, whofe fhape is hideous, whofe fize among the infeets is enormous, and whofe fting is generally fatal. Happy for Britain, the foorpion is entirely a ftranger among us! In fereral parts of the continent of Europe it is but too well known, though it feldom grows above four inches long: but in the warm tropical climates, it is feen a foot in length, and in every refpect as large as a lobiter, which it fomewhat refembles in flape. There have been enumerated nine different kinds of this dangerous infect, inglyding fpecies and varieties, chiefly diftinguifhed by their calour ; there being fcorpions yellow, brown, and afh-coloured; others that are the colour of rufty iron, green, pale yellow, black, claret colour, white, and grey. There are four principal parts diftinguifhable in this animal; the head, the brealt, the belly, and the tail. The fcortyion's head feems, as it were, jointed to the breaft ; in the middle of which are feen two eyes; and a little more forward, two.eyes more, placed in the fore part of the head: thofe eyes are fo finall, that they arefcarcely perceivabie; and it is probable the animal has but little occafion for feeing. The mouth is furnithes. with two jaws: the undermoft is divided into two, and the parts notched into tach other, which ferses the animal as teeth, and with which it breaks its food, and thrufts it into its mouth: thefe the forpion can at pleafure pull back into its mouth, fo that no part of them can be feen. On each fide of the head are two arms, each compofed of four joints; the latt of which. is large, with ftrong mufcles, and made in the manner - a lobller's claw. Below the breat are cight atticniated legs , each divided into fix joints; the two hindnoft of which are each provided with two crooked claws, and here and there cosered with hair. The Delly is divided into feren little rings; from the lowelt
of which is ecntinited a tail, corpofed of dis joirts, Scorpio., being armed with a crooked ftirg. This is that fatal inftrument which rerders this insee fo formidable: it is lung, pointed, hard, and bollow; it is pierced rear the bafe by two fmall holes, through which, wher the animal ftings, it ejects a drop of poifon, which is white, caufic, and fatal. The refervoir in which this poifon is kept, is in a fmall bladder sear the tail, into which the venom is dizilled by a peculiar apparatus. If this bladder be greatly preffed, the venom will be feen iffuing out through the two holes above-mentioned; fo that it appears, that when the animal fings, the bladder is preffed, and the venom iffues through the two apertures into the wound.

We have here given the common account of the fiting of thefe noxieus animals; but though we cannot pretend to determine between them, we fhall lay before our readers the following obfervations from a treatife on Trofical Djeafes, \&c. by Dr Mofeley of the Chelfea Hofpital. "Galen jufty obferves, that a perion who had not witneffed the fact, would not fuppofe that fo fimall an injury as the fting of a fcorpion, or the bite of a poifonous fpider, could produce the vivent effecta which they do in the whole body. He fays, the acyleus, or fting, of a fcorpion ends in the misuteft point: and has no perforation through which any poifon can pafs into the wound. Yet, he fays, we mult fuppois the venom to be fome frirital fubltance, or moiture, is which a great power is concentrated in a fmall compais. Before I had an opportunity (fays Dr Mofeley) of examining this fubject, my refpect for the opinion of Galen made me doubt the accuracy of Leeuwenhork, Redi, Mead, and others, who affert that there is as aperture near the cufpis of a fcorpion's fing; and that through this aperture a liquid poifon is injected when a wound is inficted. Repeated experiments, with the beft glaffes, have never enabled me to difcover any foramen, or opening, whatever."

The following cure may alfo be worth the reader'e notice. "Mrs Pidgeley, at Kingfon in Jamaica, in January 1781, was ftung by a fcorpion in the foot, above the little toe. The part became ir.tantly red and painful ; and foon after livid. The pain increalad to great feverity. Some rum was applied to the wound, on which the pain immediately left the foot, and paft: 1 up to the groin, with great agony. The pain 1 in paffed upwards, and diffuled itfelf about the pit of the itomach, reck, and throat, attended with tremors, coll fweats, and languors. As the pain paifed the abdomen, it occafioned a violent purging and fainting, which ceafed on its advancing higher. I * was called to her, * Dr iricer. and gave her the following medicines, a few dofes of iey. which removed every fymptom. She had beer e:atrencly ill for thirty-fix hours. Bo Sal. Succin. Dij : Ciamphor. gr. xij ; Limnabar. Antimisn. gr. s; Coryeza. Curb. q. \(\int\) fiant lofif fex. One of thefe was taken cvery loont, with four fpoonfuls of the following mixtuie: If \(A q\). Mentha 3 vij; Elix. Pareguric. 3 ij; Syr. Croii इit; Alifce."

There are few animals more formidabie, or more truly mifchierous, than the forpion. As it takes refuge in a fmall place, and is generally found fieltering in houfes, it mult frequently fting thofe amor: 5 whom

Scorpio. whom it reindes. In fome of the towns of Italy, and in France, in the province of Languedoc, it is one of the greateft pelts that torments mankind: but its malignity in Europe is trifing, when compared to what the natives of Africa and the ealt are known to experienee. In Batavia, where they grow twelve inches long, there is no removing any picce of furniture, without the utmoft danger of being ftung by them. Bofman affures us, that along the Gold Coaft they are often found larger than a lobfter; and that their fting is inevitably fatal. In Europe, however, they are by no means fo lazge, fo venomous, or fo numerous. 'The general fize of this aninal does not exceed two or three inches; and its fing is very feldom found to be fatal. Maupertius, who made feveral experiments on the fcorpion of Languedoc, found it by no means fo invariably dangerous as had till then been reprefented. He provoked one of then to fting a dog, in thrce places of the belly where the animal was with. out hair. In about an hour after, the poor animal feemed greatly fivollen, àd became very fick: he then caft up whatever he had in his bowels; and for about three hours continued vomiting a whitif liquid. The belly was always greatly fwollen when the animal began to vomit ; but this operation always feemed to abate the fwelling; which alternately fwelled, and was thus emptied, for three hours fueceffively. The poor animal after this fell into convulfions, bit the ground, dragged himfelf along upon his fore-feet, and at laft died, five hours after being bitten. He wes not partially fwollen round the place which was bitten, as is ufual after the fting of a wafp or a bee; but his whole body was in. fated, and there only appeared a red frot on the places whicre be had been ftung.

Some days after, however, the fame experiment was tried upon another dog, and even with more aggravaied cruelty : yet the dog feemed no way affected by the wounds: but, howling a little when he received them, continued alert and well after them; and foon after was fet at liberty, without thowing the fmallett fymptoms of pain. So far was this poor creature from being terrified at the experiment, that he left his own mafter's foufe, to come to that of the philofopher, where he fad received more plentiful entertainment. The fame experiment was tried by frefh forpions upon feven other dogs, and upon three hens; but not the fmalleft deadly fymptom was feen to enfuc. From hence it appears, that many circumftances, whieh are utterly unknown, muft contribute to give efficacy to the fcorpion's venom. Whether its food, long fafling, the fcafon, the nature of the veffels it wounds, or its fate of maturity, contribute to or retard its malignity, is yet to be afcertained by fuccecding experiment. In the trials made by our philofopher, he employed forpions of both fexes, newly caught, and feemingly vigorous and active. The fuccefs of this experiment may fure to fhew, that many of thofe boated antidotes which are given for the cure of the foorpion's Aling, owe their fuccefs rather to accident than their own cflieacy. They only happened to cure when their fing was no way dangerous; but in cafes of actual malignity, they might probably be utterly unferviceable.
The foorpion of the tropical climates being much larger than the fomer, is probahly much more venomous. Helbigine, however, whu vefded formany years
in the eaf, affures us, that he was often fung by the feorpion, and never received any material injury from the wound: a painful tuinor generally enfued ; but he always cured it by rubbing the part with a piece of iron or ftone, as he had feen the Indians practife before him, until the flefh became infentible. Seba, Moore, and Bofman, however, give a very different account of the fcorpion s malignity : and affert, that, unlefs ipeedily relieved, the wound becomes fatal.

It is certain, that no animal in the creation fe. ns endued with fuch an irafcible nature. They have often been feen, when taken and put into a place of fecurity, to exert all their rage againit the fides of the glafs-veffel that contained them. They will attempt to fting a flick when put near them; and attack a moufe or a frog, while thofe animals are far from offering any injury. Maupertius put three forpions and a moufe into the fame veffel together, and they foon itung the litthe animal in different places. The moufe, thus affaulted, ftood for fome time upon the defenfive, and at laft killed them all, one after another. He tried this experiment, in order to fee whether the moufe, after it had killed, would eat the fcorpions; but the little quadruped feemed fatisfied with the vietory, and even furvived the feverity of the wounds it had received. Wolkanter tried the courage of the fcorpion againft the large fpider, and inclofed feveral of both kinds in glafs veffels for that purpofe. The fuccefs of this com: bat was very remarkable. The fpider at firt ufed all its efforts to intangle the feorpion in its web, which it immediately began finning; but the forpion refeued itfelf from the danger, by flinging its adverfary to death : it foon after cut off, with its claws, all the lege of the fpider, and then fucked all the internal parts at its leifure.-If the fcorpion's fkin had not been fo hard, Wolkamer is of opinion that the fpider would have obtained the victory; for he had often feen one of thefe fpiders deftroy a toad.

The fierce fpirit of this animal is equally dangerous to its own fpecies; for fcorpions are the cruellett enemies to each other. Maupertius put about 100 of them together in the fame glafs; and they fcarce came into contact when they began to exert all their rage in mutual deftruction : there was nothing to be feen but one univerfal carnage, without any diftinction of age or fex; fo that in a few days there remained only It, which had killed and devoured all the reft.

But their unnatural malignity is fill more apparent in their cruelty to their offspring. He inclured a female fcorpion, big with young, in a glafs veffel, and the was feen to devour them as faft as they were excluded: there was but one only of the number that efcaped the general deltruction, by taking refuge on the back of its parent; and this foon alter revenged the caufe of its brethren, by killing the old one in its turn.

Such is the terrible and unrelenting nature of this infect, which neither the bonds of fociety nor of nature can reclaim: it is even afferted, that, when driven to an extremity, the fcorpion will often deftroy itfelf. The following experiment was ineffectually tried by Maupertius: "But," fays Mr Goldimith, "I am fo well affured of it by many ege-witneffes, who have ieen it both in Italy and America, that 1 have no doubt remaining of its veracity. A fcorpion, newly eaught.

(illliler . lígilla

icorpin, is phaced in the midft of a circle of burning charcoal, upirus. and thus an egrefs prevented on every fide: the forpion, as I am affured, runs for about a minute round the circle, in hopes of efcaping : but finding that impoffible, it ttings itfelf on the back of the head; and in this manner the undaunted fuicide inftantly expires."

It is happy for mankind that thefe aninals are thus deftructive to each other; fince otherwife they would multiply in fogreat a degree as to render fome countrics uniahabitable. The male and female of this in. fect are very cafily diftinguifhahle: the male being fraller and lefs hairy. The female brings forch her young alive, and perfert in their kind. Redi having bought a quantity of fcorpions, felected the females, which, by their fize and roughncfs, were eafily diftinguifhable froin the reft, and putting them in feparate glafs veffels, he kept them for fome days without food. In about five days one of them brought forth 38 young ones, well-haped, and of a milk-white colour, which changed every day more and more iuto a dark rulty hue. Another female, in a different veffel, brought forth 27 of the fame colour; and the day following the young ones feemed all fixed to the back and belly of. the female. For near a fortnight all thefe continued alive atid well : but afterwards fome of them died daily; until, in about a month, they all died except two.

Were it worth the trouble, thefe animals might be kept living as long as curiofity fhould think proper. Their chief food is werms and infects; and upon a proper fupply of thefe, their lives might be lengthened to their natural extent. How long that may be, we are not told; but if we may argne from analogy, it cannot be lefs than feven or eirht years; and perhaps, in the larger kind, double that duration. As they have fonsewhat the form of the lobfter, fo they refemble that animal in cafting their Thell, or more properly their fkin; fince it is folter by far than the covering of the lobiter, and fet with hairs, which grow from it in great abundance, particularly at the joinings. The young lie in the womb of the parent, each covered up in its own membrane, to the number of 40 or 50 , and united to each other by an oblong thread, fo as to exhibit altogether the form of a chaplet.

Such is the manner in which the common fcorpion produces its young: but there is a fcorpion of America pooduced from the egg, in the manner of the fpider. The eggs are no longer than pins points; and they are depolited in a web, which they fpin from their bodies, and carry about with them, till they are hatched. As foon as the young ones are excluded from the fhell, they get upon the back of the parent, who turns her tail over them, and defends them with her fting. It feems probable, therefore, that captivity produces that unnatural difpofition in the fcorpion which induces it to deftroy its young ; fince, at liberty, it is found to proteet them with fuch unceafing affiduity. For the various modes of preventing the fatal confequences of the bites of thefe and other noxious animals, we refer to Mofeley's treatife above quoted.

Scorpio, Scorpion, in aftronomy, the eighth fign of the zodiac denoted by the character \(\bar{m}\). See Astroкому.

Scorpion Fly. See Panorpa.
SCORPIURUS, Caterpillars, in botany: A genus of the decandria order, belonging to the diadelyhia
claif of plants; and in the natural method ranking un- Scorzonera, der the 32 d order, Pafilionacee. The legumen is con- Scur. tracted by incifions on the infide betwixt every two feeds, revoluted round.

There are four fpecies; the moft remarkable of which is the vermiculata, a native of Italy and Spain. It is an annual plant, with trailing herbaceous §alks, which at each joint have a fpatular-fhaped leaf vith a long foot-flalk. From the wings of the leaves come out the foot-flalks of the flowers, which fuftain at the top one yellow butterfly flower, fucceeded by a thick twifted pod having the fize and appearance of a larger caterpillar, from whence it had this title. This has long beem preferved in the gardens of this country, more on account of its odd fhape than for any great beauty. It is propagated by fowing the fecds on a bed of lighe eartb; and when the plants come up, they muft be kept free from weeds and thinned, fo that there may be a foot difance betwecn them.

SCORZONERA, Viper-grass, in botany: A gerus of the polygamia æqualis order, belonging to the fyngenelia clafs of plants ; and in the natural method ranking under the 49th order, Compofitix. The receptacle is naked; the pappus plumy ; the calyx imbricated, with fcales membranaceous on their margins.
The moft remarkable fpecies is the hifpanica, or common fcorzonera, which is cultivated in the gar. dens of this country, both for culinary and medicinal purpofes. The root is carrot-fhaped, aboit the thicknefs of a finger, covered with a dark brown flin, is white within, and has a milky juice. The ftalk riles three feet high, is finooth, branching at the top, a:Id garnihed with a few narrow leaves, whofe bafe half embrace the ftalk. The flowers are of a bright yellow colour, and terminate the falks in fealy empalements compofed of many narrow tongue-fhaped hermaphrodite florets 1 y ing imbricatim over each other like the fcales of fifh, and are of a bright yellow colour. After thefe are decayed, the germen, which fits in the cominon empalements, turns to oblong cornered feeds, having a roundifh ball of feathered down at the top. This plant is propagated by feeds; and muit be carefully thimed and kept free from weads, otherwife the plants will be wak.
'The roots of fcorzonera were formerly much celebra. ted for their alexipharmic virtues, and for throwing out the fmall-pox ; but have now almof entirely loit their character: however, as they abound with an acrid juice, they may fometimes be of ufe for flrengthening the vifcera, and promoting the fluid fecretions.
iSCOT, a cuflomary contribution laid upon all fuhjects, according to their abilities. Whoever were aneffed in any fum, though nut iu equal proportions, were faid to pay foot and lot.

Scor (Michadl) of Balvirie, a learned Scottilh author of the 1 th century. This fingular man nade the tour of France and Gernany; and was received with fome diftinction at the court of the emperor Frederic II. Having travelicd enough to gratify his cibrivfity or his vanity, lie returned to Sootland, and cave himfelf up to ftudy and contemplation. Hic was hi Hee in languages; and, confidering the age in which he lived, was no mean prof cient in philofophy, mathenatics, and medicine. He tranflated into Latin from the Arabic, the hiftory of animals by the celebrated Ily-
fician Avicenna. Fle publihed the whoie works of Ariftote, with notes, and affected nuch to reafon on the principles of that great philofopher. He wrote' a book concerning The Secrets of Nature, in which he treats of generation, phyfiognomy, and the figus by which we judge of the temperaments of men and women. We have alfo a tract of his \(O n\) the Nature of the Sun and Moon He there fpeaks of the grand operation, as it is termed by alchymats, and is exeeedingly folicitcus about the projested powder, or the philofopher's flone. He likewife pullifined what he calls ALenfa Pbio lofopbica, a treatife replete with aftrology and chiromancy. He was much admired in his day, and was even fufpected of magic ; and had Roger Bacen and Cornelius Agrippa for his panegyrifts.

Scor (Reginald), a judicious writer in the roch century, was the younger fon of Sir John Scot of Scot's-hall, near Snieethe in Kent. He fludied at Hart-hall in the univerfity of Oxford ; after which he retired to Smeethe, where he lived a fudious life, and died in 1599. He publifhed, The perfea Platforn of a Hop-garden; and a book intitled, The Difcovery of Wicheraft ; in which he fhowed that all the relations concerning magicians and witches are chimerical. This work was not only cenfured by king James I. in his Demonology, but by feveral eminent divines; and all the copies of it that could be found were burnt.

SCOTAL, or cotale, is where any officer of a foreft keeps an ale houfe within the foreft, by colour of his office, making people come to his houfe, and there fpend their money for fear of his difpleafure. We find it mentioned in the charter of the foreft, cap. 8. "Nullus forreftarius faciat Scosallas, vel garbas colligat, vel aliquam collectam faciat," \&cc Manrvood, zi 6 . -The word is compounded of fcot and ale, and by tranfpofition of the words is otherwife called alefbot.

SCOTER. See Anas, no 6.
Nova SCOTIA, or New Scotland, one of the Bririfh fettlements in North America, fituated between \(43^{\circ}\) and \(49^{\circ}\) north latitude, and between \(60^{\circ}\) and \(67^{\circ}\) weit longitude, is bounded by the river St Laurence on the north; by the gulph of St Laurence and the Atlantic ocean on the eaft; by the fame ocean on the fouth; and by Canada and New England on the weft. - In the year 1784 , this province was divided into two governments. The province and government now flyled Neru Brunfwick is bounded en the weftward of the mouth of the river St Croix, by the faid river to its fource, and by a line drawn due north from thence to the fouthern boundary of the province of Quebec, to the northward by the fxid boundary as far as the weftern extremity of the Bay de Chaleurs, to the eaflward by the faid bay to the gulph of St Laurence to the bay called Bay Verte, to the fouth by a line in the centre of the Bay of Fund., from the river St Croix aforefaid, to the mouth of 2:a Mufquat river, by the faid river to its fource, and from thence by a duc eaft line acrofs the Ithmus into rice Bay Verte, to join the callern lot äbove defribed, including eil iflancs vithin fix leagues of the coatt.

The chiff rivers are, the river of Sit Laurence, which forms the nothern boundary. The rivers Rifgouche and Nipifigut run from weit to caft, and fall into the bay of it Laurence. The rivcrs of St John, Yaffaragre d:, Penobfcot, and St Croix, which run from
north to fouth, fall into Fundy Bay, or the fea a little to the eaftward of it.
'The feas adjoiniug to it are, the Atlantic ocean, Fundy Bay, and the gulph of St Laurcnce. The lefo fer bays are, Chenigto and Green Bay upon the ithmus which joins the north part of Nowa Scotia to the fouth; and the Bay of Chaleurs on the north-eaft ; the Bay of Chedibuta or the \{outh-eaft ; the Bay of the Inandz, the Ports of Bart, Chebucto, Profper, St Margaret, La Heve, port Maltois, port Ryfignol, port Vert, and port Joly, on the fouth; port l, Tour on the fouth eaft ; port St Mary, Anapolis, and Minas on the fouth fide of Fundy Bay, and port Rofeway, now the moot populous of all. - The chief capes are, Cape Portage, Ecoumenac, Tourmentin, Cape Port, and Epis, on the eall ; Cape Fogerie and Cape Canceau on the fouth-eaft; Cape Blanco, Cape Vert, Cape Theodore, Cape Dore, Cape L.a Heve, and Cape Negro, on the fouth; Cape Sable and Cape Fourche on the fouth-well. - The lakes are very numerous, but have not yet received particular names.

The face of the country, when viewed at a diftance, prefents a pleafingly variegated appearance of hilld and valleys, with fcarcely any thing like mountains to interrupt the profpect, efpecially near the fea. A nearer approach difcovers thofe fublime and beautiful feenes which are fo far fuperior to the gaudy embellifhments of art. Immenfe forets, formed of the talleft trees, the growth of ages, and reachieg alnoft to the clouds, everywhere cover and adorn the land: Their leaves falling in autumn, add continually to that cruft of mofs, vegetables, and decaying wood, that has for many centuries been accumulating; whillt the rays of the fun, unable to pierce the thick hade which everywhere covers the ground, leaves it in a perpetual fate of damp and rottennefs; a circuraltance which contributes, in no fmall degree, to increafe the fharpnefs of the air in winter.

The clouds, flying over the higher grounds, which are covered in every direttion with one valt foreft, and arrelled by the attraction of the woods, fill the country with water. Every rock has a fpring, and every fpring caufes a fwamp or morais, of greater or lefs extent in proportion to its caufe : hence it is, that travelling becomes almoft impracticable in fummer, and is feldom attempted, but in the fall of the year, when winter begins to fet in, and the ground is already frozen.

The land throughout the peninfula is in no part mountainous, but frequently rifes into hills of gradual afcent, everywhere clothed with wood From thefe arife innumerable fprings and rivulets, which not only fertilize and adorn the country, but have formed, in the midat of it, a large lake or piece of frefh water, which is of various depths, and of which, however, little more is known, than that it has upon its borders very large tracts of meadow.land highly improveable. That part of the province which is beyond the Bay of Fundy, and extends to the river St Laurenee, rifes alfo gradiually as we adrance from the fea quite.to Canada, but is, however, hardly anywhere mountainous. Its lands are for the moft part very rich, particularly at a di. flance f:om the fea; and its woods abound with the hardeft and lofticel trees.

Though this country, like Canada, is fubject to long
and fevere winters, fucceeded by fudden and violent heats, often much greater than what are felt in the fame latizudes in Europe, yet it cannot be accounted an unhealthy climate. The air in genemal in winter is very Sharp, frofty, and dry; the hly ferene and unclouded, by which every kind of cxercile adapted to the feafor is iendered pleafant and agreeable. The fogs are freciuent near the fea, but feldom fpread themfelves to any difance in land.

The winter commonly breaks up with heavy rains, and the inhabitants experience hardly any of the delights of the fpring, which in England is accounted the moft agreeable feafon of the year. From a lifelefs and dreary appearance, and the gloony frenes of winter wrapped around the regctable world, the country throws off its difguftful attire, and in a few days exhibits a grand and pleafant profpect: the vegetation being inconceivably rapid, nature paffes fuddenly from one extreme to another, in a manner utterly unknown to countries accultomed to a gradual progreffion of feafons. And, Arange as it may appear, it is an acknowledged fact, a fact which fumithes a certain proof of the purity of the air, that thefe fudden changes feldom, if ever, affect the health of Atrangers or Europeans.

In this country agriculture las yet made but fimall progrefs. Nova Scotia is almoft a continued foreft, prodecing every kind of wood which grows in the neighbouring provinces of New England. Fom fifths of all the lands in the province are covered with pines, which are valuable not only for furnifhing matts, fpars, lumber for the fugar plantations, and timber for building, but for vielding tar, pitch, and turpentine, commodities which are all procured from this ufeful tree, and with which the mother-country may in a few years cafly be fupplied.

All the various fpecies of birch, beech, and maple, and feveral forts of fpruce, are found in all parts in great abundance; as alfo numerous herbs and plants, either not common to, or not known in, England. Amorgit thefe none is more plentiful than farfaparilla, and a plant whofe root refembles riubarb in colour, taile, and effect; ; liketrife the Indian or mountain tea, and maiden-lair, an herb much in repute for the fame wurpofe, with fhrubs producing ftrawberries, rafpberries, and many other pleafant fruits, with which the woods in fummer ane well flored: Of thefe wild productions the cherries are bell, though fimaller than ours, and growing in bunches fomewhat refembling grapes. The faflufras tree grows plentifully in common with others; but amongft them none is more ufeful to the inhabitants than a fpecies of maple, dillinguithed by the name of the fugar tree, as affording a contiderable quanticy of that valuable ingredient. See Sugar.

Amongt the natural productions of Nova Scotia, it is neceflary to enumerate their iron-ore, which is fuppofed equally good with that found in any part of 4 . merica.

Lime-tone is likewife found in many places ; it is oxtremely good, and is now much ufed for building: imlependent of which, it gives the farmers and landlolders a great advantage for improving the ground, as it is found by experience to be one of the noft approved thines in the world for that purpole.

Several of the ufetul andi molt common European finits have been planted in many places; fo that the

Vol. XV1. l'art 11.
province nov produces great quantities of apples, fome pears, and a few plums, which are all good of their kind, efpecially the former. The fmaller fruits, fuch as currants, goofeberries, \(\& \cdot c\). grow to as great perfec. tion as in Europe; and the fance may be faid of all the common and ufeful kinds of garden plants. Among thefe their potatues have the preference, as being the moft ferviceable in a country abounding with fith; and indeed they are not to be exceeded in goodnefs by any in the world. 'Ihe maize, or Indian com, is a native of much warmer climates; and, though planted here, never arrives at more than two thirds of its natural birnefs; a defect which arifes as well from the fhortnefs of the fummer as the gravelly nature of the foil. Tobacco may likewife be cultivated with eafe in Nova Scotia, as it is already everywhere in Canada, from Lake Champlain to the ille of Orleans, for the purpufe of internal confumption.

This country is not deficient in the animal produc. tions of the neighbouring provinces, particularly deer, beavers, and otters. Wild fowl, and all manner r! game, and many kiuds of European fowls and quadr:peds, have from time to time been brought into it and thrive well. At the clofe of March the fifh begin so fpawn, when they enter the rivers in fuch fhuals as are incredible. Herrings come up in April, and the fturgeon and falmon in May. Bet the moft valuable appendage of New Scotland is the Cape Sable coatt, along which is one continued range of cod fifhing banks an 1 excellent harbours. 'This fiftery employs a great number of men, in lome feafons not lefs than 10,200 , when 120,000 quintal: will be caught, of which 40,000 may be exported. Thefe, at the loweft price, mull bring into the colony L. 26,000 Sterling, cither in caßh or in commodities neceffary to the inlabbitants.

Notwithetanding the comparatively uninviting ap. pearance of this country, it was here that fone of the firft European fettlements were made. The fift grant of lands in it was given by James I. to his fecretary Sir William Alexander, from whom it had the name of Nova Scolia or New Scolland. Since that period it has frequently changed hands from one private pruprietor to another, and from the French to the Englifh nation backward and forward.

It was in 1604 that the French fint fetuled in Nova Scotia, to which they gave the name of diadia. Inttead of fixing towards the eatt of the peninfula, where they would lave had larger feas, an caly navigation, and plenty of cod, they chole a limall hay, afterwards called French Bay, which had nune of thete adantages. It has been faid, that they were invited by the beauty of Port Royal, where a thoufand hips may ride in fafe. ty from evely wind, where there is an excellent bottom, and at all times four or five fathoms of water, and cighteen at the corrance. It is more probable that the frounders of this colony were led to choofe this fituation, from its vicinity to the countries abounding in furs. of which the exclufive trade had been granted to them. This conjecture is confumed by the following cirenmftance: that botly the firt monopolizers, and thofe who fucceeded them, took the utmoft pains to dive:t the attention of their coustrymen, whom an unfettied difpolition, or neceffity, brought into thefe regions, from the clearing of the woods, the breeding of cattle, fifing, and cvery kind of culture ; choofing rather to
\[

\section*{\(\mathrm{S} \quad \mathrm{C}\)}
engage the induftry of thefe adrenturers in lunting or in trading with the favages.

This colony was yet in its infancy when the fettlement, which has fince become fo famous under the name of Niw Eingland, was firt eftablifhed in its neighbourhood. The rapid fuccefs of the plantations in this new colony did not much attract the notice of the French. This kind of profperity did not excite any jealouly between the two nations. But when they besan to fufpect that there was likely to be a compctition for the beaver trade and furs, they endeavoured to fecure to themfelves the fole property of \(i t\), and were unfortunate enoueli to fucceed.

At their firf arrival in Acadia, they had found the peninfula, as well as the forefts of the neighbouring continent, peopled with fmall farage nations, who went under the gencral rame of Abenakies. Though equaliy fond of war as other favage nations, they were more fociable in their manners. The miflionaries eafily infinuating themfelves among them, had fo far inculcated their tenets, as to make enthufiafts of them. At the fame time that they taught them their religion, they infpired them with that hatred which they themfelves entertained for the Englifh name. This fundamental article of their new workip, being that which made the ftrongeft impreffion on their fenfes, and the only one that favoured their paffion for war, they adopted it with all the rage that was natural to them. They not only refufed to make any kind of exchange with the Englifh, but alfo frequently diturbed and ravaged the frontiers of that nation.

This produced perpetual hoftilitics between the New Englanders and the French fettlers in Acadia, till that province was, at the peace of Utrecht, for ever ceded to the Englifh, who feemed not for a long time to diicover the value of their new acquitition. They reftored to it its ancient name of Nova Scotia; and having built a night fortification at Port-Royal, which they called Annapolis in honour of Queen Anne, they consented themfelves with putting a very fmall garrifon into it. In procefs of time, however, the importance of Nova Scotia to the commerce of Great Britain began to be perccived; and at the peace of 1749 , the miniftry offered particular advantages to all perfons who chofe to go over and fettle in Acadia. Every foldier, failor, and workman, was to have 50 acres of land for himielf, and ten for every perfon he carried over in his family. All non-commifioned officers were allowed 80 for themfelves, and 15 for their wives and children; enligns 200 ; lieutenants 300 ; captains 402 ; and all officers of a higher rank 6 co ; together with 30 for each of their dependents. The land was to be tax free for the firt ten years, and never to pay above one livre two a About 18 fols fix deniers* for fifty acres. Befide this the governSterling. ment engaged to advance or reimburfe the expences of
gether made up 7006 tons. They conftrueted three floops, which did not exceed 1 Io tons burden. Their exportation for Great Britain and for the other parts of the globe did not amount to more than 729,850 lisres 12 fols 9 deniers \(t\). Continuing, however, true to its allegiance when the other colonies threw off the dominion of Great Britain, it has now become a place of great confequence both to the mother-country and the Weft Indies. Its thipping and feamen are rapidly increafing, as well as its produce, which affords the pleafing profpect of being able to fupply itfelf with all the neceffaries of life. The number of perfons who have abandoued their habitations in the more fouthern provinces, and fettled either there or in Canada, cannot be eltimated, by the moft moderate calculation, at lefs than 80,000 ; and it is without doubt the moft convenient in point of fituation of any province in America for a maritime power of Europe to be poffeffed of.

Scotid, in architecture, a femicircular cavity or channel between the tores in the bales of columns.

SCOTISTS, a fect of fchool divines and philofophers, thus called from their founder 7. Duns \(S_{\text {Sotus, a }}\) Scottifh cordelier, who maintained the immaculate conception of the virgin, or that fhe was born without origiral fin, in oppofition to Thomas Aquinas and the Thomits.

As to pliilofophy, the Scotifts were, like the Thomits, Peripatetics (fee Peripatetics) ; only diftinguifled by this, that in each being, as many different qualities as it had, fo many different formalities did they diftinguifl ; all diftinct from the body itfelf, and ma. king as it were fo many different entities; only thefe were metaphyfical, and as it were fuperadded to the being. The Scotifts and Thomifts likewife difagreed about the nature of the divine co-operation with the human will, the meafure of divine grace that is neceffary to falvation, and other abftrufe and minute queftions, which it is needlefs to enumerate.

SCOTLAND, the country of the Scots, or that part of Great Britain lying to the north of the Tweed; is fituated between the \(54^{\text {th }}\) and 59 th degrees of north latitude, and extends in length about 278 miles, and in fome places near 180 in breadth; containing an area of 27,794 miles. On the fouth it is bounded by England; on the north, ealt, and weft, by the Deucaledonian, German, and Irifh feas.

It is extremely difficult to give any fatisfactory ac- Origin of count of the origin of the appellation of Scots, from which the name \({ }_{2}\) the country has derived its name. It has puzzled the moft eminent antiquaries, whofe conjectures ferve rather to perplex than to clear ap the difficulty. Nor is this to be wondered at, when Varro and Dionyfius could not agree about the etymon of Italia, nor Plutarch and Solinus abcut that of Rome. All that we know with any degree of certainty, concerning the appellation of Scol, amounts to this-That it was at firt a term of reproach, and confequently framed by enemies, rather than affumed by the nation diftinguifhed by that name. The Highlanders, who were the gemine defcendants of the ancient Scots, are ablolutely ftrangers to the name, and have been fo from the beginning of time. All thole who fpeak the Gaelic language call themfelves Albunich or Gael, and their country Alba or Gaeldochd.

The Picts, who poffeffed originally the northern and.

Scotia,

\section*{Scotland.} + About L. 30,410, 8. 10 d . terling. paffage, to build houfes, to furnifh all the necelfary inftrumients for fifhery or agriculture, and to defray the expences of fubfiftence for the firt year. Thefe encouragements determined 3750 per!ons, in the month of May 1749 , to go to America, in hopes of bettering their fortme,

Thus encouraced, the province of Nova Scotia began to flourifh, though in 1769 it fent out only 14 veffels and 148 boats, which together amounted to 7324 tons, and received 22 veffels and 120 boats, which to-

\(\underbrace{\text { Scotlaň2. }}\)

\section*{\(\xrightarrow{\sim}\)}
eaftern, and in a latter period allo the more fouthern, divifion of North Britain, were at firf more powerful than the Caledonians of the weft. It is therefore probable, that the licts, from a principle of malevolence and pride, were ready to traduce and ridicule their weaker neighbours of Argyle. Thefe two nations fpoke the fame langugge, the Gaelic. In that lan ruage Son, or Scode, firnifies a corner or fmall divifion of a countrg. Accordingly, a corner of north Eritain is the very name which Giraldus Cambrenfis gives the little kingdom of Argyle, which the fix fons of Muredus king of Ulfter were faid, according to his information, to have erected in scotland. Scot in Gaelic is much the fame with little or consemptible in Englifh; and Scotlan, literally" fpeaking, lignifies a fmall flack; mctaphorically, it ftands for a fmall body of men. (Dr fifacpherfon's Differt.)

Others obferve, that in the fame language the word Scuit fignifes a wanderer, and fuppofe that this may have been the origin of the name of Scot; a conjecture which they think is countenaticed by a paffage in Amdianus Marcellinus (1. xxvii), who characterizes the men by the epithet of roaming; "per diverfa vayantes." (Mr Macpherfon and Mr Whitaker).

All that we can fay is, that for fome one of the reafons couched under the above difparaging epithets, their malicious or fueering neighbrurs, the Picts or the Britons, may have given the appellation of Scots to the ancettors of the Scottifh nation.

At what time the inhahitants of the weft of Scotland came to be diftinguifhed by this name is uncertain. Porphyrius the philofopher is the firt who mentions them, about the year of the Chrifian era 267 ; and towards the middle of the \(4^{\text {th }}\) century we fund them mentioned with other Britih nations by Am. Marcellinus, in the paffage above referred to.

The origin of the Scots has been warmly difputed by- many antiquaries of note ; particularly by Mr Macpherfon and Mr Whitaker. The firt contend:, that they are of Caledonian, the latter, that they are of Irifh extraction. Each fupports his pofition with fuch arguments and authorities, that an impartial inquirer is almoft at a lofs which of their opinions he ought to efpoufe. What appears moft probable is, that they are both partly in the right and partly in the wrong. -The Seots feem to have been originally defcended from Britons of the fouth, or from Caledonians, who being prefted forward by new culonies from Gaul, till they came to the weftern thore of Britain, paffed over from thence into Ireland, probably about tas years bcfore the Chriftian era. About the year of Chilt 320, they returned again into Britain; or at leaf a large colony of them, under the conduct of Fergus, and fettled on the weftern coafts of Caledonia, from whence they liad formerly migrated As early as the year \(34^{\circ}\), we find them affociated with the Piets in their expeditions to the Roman province; and for 90 or 100 years after, their ravages are frequently mentioned by the Roman and Britif writers. (Whitaker's bijl. of the Britons, 284).

The teritory of the ancient Scots, before the annexation of Pictasia, comprehended all that fide of Caledonia which lics along the north and weftern ocean, from the frith of Clyde to the Orkneys. Towards tae caft, their dominions were divided from the Pietif
territories by thofe high mountains which run from Scotlan?s. Dumbarton to the frith of lain - In procers \(\left\langle\tilde{i}\right.\) " \(\mathrm{m}_{1}\)., the cots, under the reign of kenneth the fon of pin became fo powerful as to fubdue entirely \(+\therefore\) neighbours the Picts, and gave their own denomination to all Caledonia Pictavia, and Valentia; all which are Atill comprehender under the sreneral name of "asit'ond.

Like thofe of all other nations the hiforians of Scot. land aftume too great an entiquity for their country. men; however, they are much lels evtrava gant in this refpect than many others. By them the ruign of Fer- Fe-gis the gus, the firlt Scots monarch, is placed ia 230 B . C. firt ling of gus. the fin seots monarch, is placed in B. C. se.tland. He was the fon of lerchard an I ifh p:ince; and is fand to have been called into cotland by the Caledo. nians, to affit them agai.ft the fouthern Britons, with whom they were then at war. Having landed on one of the Ebudæ or weltern ifles, he had a conference with the Calcdonians, whole language and manners he found to be the fame with thofe of hie countrymen. Having then landed in Scotland, and taken the field at the head of his new allies, he engaged the Britons under their king Coilus Victory declared in favour of the Scots; Collus was defeated and killed; and from lim the province of Kyle firt received its name. if ter this Fergus was declared king of the Scots, with the folemnity of an oath. But he did not long enjoy his new dignity : for having been recalled to Ireland to quitt fome commotions there, he was drowned, by a fudden tempeft, on his return, at a place in Ireland called from lim Kinock-Fergus, or Carrik-Fergus; i.e. Fergus's Rock.

Fergus was fucceeded by his brother Feritharis, to the prejudice of his two fons Ferlegus and Mainus. This, we are told by the ancient Scottim writers, was done in conformity to a law, by which it was ordained, that whill the children of their kings were infants, one of their relations who was reckoned the mof fit for the government fhould be raifed to the throne, but that after his death the fovereignty fhould return to the fons of the omer king. This was the cafe at prefent; however, Ferlegus, impatient for the crown, made a formal demand of it from his uncle. I he difpute being referred to an affembly of the ftates, Feritha. ris was confimed on the throne; and Ferlegus would have been condemned for fedition, had not his uncle interpoled. Howtver, he was imprifoned; but laving made his efcape; he fled firtt to the licts, and then to the Britons, in order to excite them againt Feritharis. With both he failed in accomplining his purpofe: but, in the mean time, his uncle being ttabbed in his bed, the fufpicion fell upon Ferlegus, who was thereupon fet afide from the fucceffion, and died in obe feurity, the thone being conferred upon his brother Mainus.

The reigns of Mainus, Dornadil, and Nothat, afford nothing renarkable, excepting that Dornadil, who was a great lunter, infituted the laws of hunting in this country. Nothat was killed in a battle with Reuther his rephew; upon which the latter was immediately inveltes witl the forereignty. A bloody war enfued, in which both parties were reduced to the laft extremity, and glad at length to conclude a peace. The fate of Reutleer is not known; but it is generally fuppofed that he ended his life in the year 187 B . C.
'The reigns of Reutha, 'Thereus, Jafina, and Fimnan, \(4 Y 2\)
afford
scotiand. afford no remarkable tranfactions, excepting that under the laft we find the firft beginnings of the Scottifh parliament; as he enacted, that kings fhould do nothing without the confent of their grand council.After him followed Durthus, Even, and Gillus, whore reigns afford nothing of confequence. Even II. the nephew of Finnan, who fuceceded Gillus, is faid to have built the towns of Innerlochy and Invernefs. He overcame Belus king of the Orkiress, who had invaded S'cotland; and was fueceeded by lis fon Eder, in whofe time Julius Cxfar invaded the fouthern parts of this illand. Eder is aid to have affled the Britons againit the common enemy. He was fucceeded, after a reign of 48 years, by his fon Even III. who is reprefented as a monfter of crieity and luft. Not content with having 100 noble concubines of his own, he imprifoned, and put to death.

We meet with nothing memorable in the hiftory of Scotland from this time to that of Agricola, excepting that the famous Caractacus, who was carried prifoner to Rome, is faid to lave been one of the Scottifh monarchs; which, however, feems not very probable, as the Romans in his time had not penetrated near fo far as Scotland. The invafion of Agricola happened du-
by their king, who is faid to have been well acquainted with the manner of fighting and difeipline of the Romans, were yet oblifed to retreat ; but at laft, finding that the enemy made fuch progrefs as endangered the fubjugation of the whole country, he refolved to cut off their communication with the fouthern parts, and likewife to prevent all poflibility of a retreat by fea. Agricola, though folicited by fome of his officers, refufed to retreat ; but divided his troops into three bodies, having a communication with each other. Upon this, Galgacus refolved to attack the weakeft of the three, which confifed only of the ninth legion, and lay at that time, as is Caid, at a place called Lochore, about two miles from Loch-Leven in Fife. The attack was made in the night: and as the Romans were both unprepared and inferior in number, the Scots penetrated into the heart of their camp, and were making a grat flaughter, when Agricola detached fome light-armed troops to their affitance ; by whom the Caledonians in their turn were routed, and forced to \(\mathrm{Al}_{\mathrm{y}}\) to the maribes and inaccellible places, where the enemy could not follow them.

This engagement has been magnified by the Roman hiftorians into a victory, though it can fcarce be admitted from the teftimonies of other hitorians. The Romans, however, certainly advanced very confiderably, and the Scots as conilantly retreated, till they came to the foot of the Grampian mountains, where Great vie. the Caledonians refolved to make their laft fand. In by the Rothe eighth year of the war, Agricola advanced to the mans. foot of the mountains, where he found the enemy realy to receive him. Tacitus has give:a us a fpeech of Galgacus, wlich ihe has undouitediy fabrieated for hinn, in which he fets forth the afpiring difpofition of the Romans, and encourages bis countrymen to defand themfelves vigoroufly, as knowing that every thing valuable was at fake. A delperate engagument accordingly enfued. In the beginning, the Britons had the advantage, by the dexterons management of their bucklers: but Agricola having ordered three Tungrian and two Batavian colorts, armed with fhort fwords, and embofled bucklers terminating in a point, to attack the Scots, who were armed with long fwords, the latter foon found thefe weapons ufelefs in a clofe encounter; and as their bucklers only covered a fnall part of their bodies, they were eatily cut in pieces by their adverfaries. The molt forward of their cavalry and charioteers fell back upon their infantry, and difordered the centre: but, the Britone endeavouring to out-flank their enenies, the Roman general oppofed them with his horfe; and the Caledonians were at laft routed with great flanghter, and forced to fly into the woods, whither the Romans purfued with fo litule caution, that numbers of them were cut off. Agricola, however, having ordered his troops to proceed inore regularly, prevented the Scots from attacking and eutting off his men in feparate parties, as they had expected; fo that this victory proved the greateft froke to the Caledonians that they bad hitherto received. This battle is fuppofed by fome to have heen fought in Strathern, half a mile fouth from the kirk of Conrrie; but others imagine the place to have been near Fortingral.Camp, a place fomewhat farther on the other fide of the 'ray.

Great as this vietory was, it feems not to have been

Sentand prociuçist of any folid or lafing advantage to the Romans ; fince we find that Agricola, inltead of putting an end to the war by the immediate conqueft of all Caisdonia, retreated into the country of the Forefli, commonly fuppofed to be Forfarfhire, though others imasine it to have been the county of Fife. Here he reccived hontarges from part of the Caledonians; and ordered part of his fleet to fail round Britain, that they might difcover whetler it was an inand or a continent. The Romans no foone: had left that part of the country, than the Caledonians demolifhed all the forts they had raifed: and Agricola being foon after recalled by Domitian, the further progreis of the Roman arms was ftopped; Galyacus proving fuperior to any of the fucceffurs of that general.

From the time of Agricola to that of Adrian, we know little of the affars of Scotland, excepting that during this interval the Scots mult have entirely driven the Romans out of their country, and reconquered all that tract which lay between Agricola's chain of forts and Carlifte on the weft, and Newcatte or 'linmouthBar on the eaft; which Adrian, on vifiting Britain, thought proper to fix es the northern boundary of the Roman dominions. Here he built a wall of turf between the mouth of the Tine and the Solway frith, with a view to fhut out the barbarians; which, however, did not anfwer the purpole, nor indeed could it be thought to do fo, as it was only built of iurf, and guarded by no more than 18,000 men, who conld not be fuppofed a fufficient fore: to defend fuch an extent of fortification.

On the departure of Adrian, he left Julius Severus as his lieutenant: but this man, though one of the greateft commanders of his age, did not canty his arms to the northward of Adrian's wall ; and this lone isterval of peace gave fo much fecurity to Mogold the Scottih monarch, that he degentrated into a tyrant, and was murdered by fome of his noblemen. The ealy intance of his tyianny which is produced, however, is a law by which it was enacted, that the eftates of fach as were conderned mould be forfeited to his exchequer, without any part thereof being allotted to their wiecs and children; an ace which fubfifts almoft in its full furce to this day in Great Britain and the beft regulated Eu. ropean governments.

In the reign of Antoninus Pius, the proprator Lollius Urbius drove the Scots far to the northward, and repaired the chain of forts built by Agricola, which lay between the Carron on the frith of Forth and Dinglals on the Clyde. Thefe were joined together by turf walls, and tormed a much better delence than the wall of Adrian. However, after the deach of Antoninus, Commodus baving recalled Calpurnius Agricola, an able commander, who kept the Scuts in awe, a more dangerous war broke out than had ever been experienced by the Romans in that quarter. The Scots having paffed the wall, put all the Romans they could meet with to the fword: but they were foon repulfed by Ulpius Marcellus, a general of confummate abilities, whom Commodus rent into the inland. - In a fhort time the tyrant alfo recalled this able commander. After his departure, the Roman difcipline in Britain fuffered a cotal relaxation; the foldiery grew mutinous, and great diforders enfued: but thefe were all happily removed by the arrival of Clodius Albiaus, a perfon
of great fiill and experience in militayy affairs. His Ecneland. prefence for lome time reftrained the Scots within proper bounds: but a civil war breaking out between him and Sevcrus, Albinus croffed over to the cuntincat with the greatell part ci the Ruman forces in Britain : and mecting his antagonif at Lyons, a dreacfui battle enfued, in which ribinus was utterly defeated, and his army cut in pieces. See Rome, no 375.

The abfeuce of the Roman forces gave encoware- Wars of Se ment to the Scots to renew their depredations, which verne with they did with fuch fuccefs, that the emperor becance the Sco:s. epprehentive of lofing the whole ifland; on which he determined to go in perfon and quell thefe troublefome enerries. The army he collected upon this occalion was far more numerous than any the Romans had ever fent into Britain; and being commanded by fuch an able general as Severus, it may eafly be fuppofed that the Scuts mult have been rery hard preffed. The par. ticulars of this impurtant expedition are very imper. fectly related; however, we are affured that Severns lolt a valt number of men, it is faid not lefs than 50,000 , in his march through Scotland. Notwithftanding, he penetrated, it is faid, to the moft northern extremity of the inland, and obliged the eneny to yield up their arins. On his return, he built a much ftronger fortification to fecure the frontiers againtt the enemy than had ever been done before, and which in lome places concided with Adrian's wall, but extended farther at each end. But in the mean time, the scots, provoked by the brutality of the emperor's fon. Caracalla, whom he had left regent in his abfence, again took arens: on which Severus himfelf too's the feld, with a defign, as it would feem, to extiphate the whole nation ; for he gave orders to his foldiers " not to fpare even the child in the mother's belly." 'I'he event of his furious declaration is unknown: but in all probabuity the death of the enipernr, which happened foon after, put a fop to the execution of this revenge; and it is certain that his fon Caracalla, who fucceeded Severus, ratified the peace with the Scoss.

During all thefe impostant tranactions, Scotland was governed by Dunald I. who is faid to have been tise fint Chrittian king of this country. From him to th: time of Eugene I. no remarkable occurrence offers ; but under the latter, the Roman and Pictifh forces were united againit the Scots. Tlie Picts were commanded by their king, named Harguf; and the Romans by Maximus, who murdered Valentinian III, and afterwards aftumed the empire f. The allies defered Eu- \({ }^{28}\) gene in the county of Galloway; bu: Maximus being of the seote obliged to return fonthward on account of an infurrec- -1y Masition, the Picts were in their turn defeated by the Scois. naus. Next year, however, Maximus narched axainf the §recllon: scots into ; who being now reduced to eapable of beariut arms, but the women alfo. In this enganement the Yicts would have been utterly defeated, had not they been fupported by the Romans; but Eurene being killed, witis the greateft part of his nobility, the Scots were deieated; and fo well did the conquerors improve their victory, that their antagonilts were at latt tually driven out of the country. Some of them took refuge in the Fbudz iflands, and fome in Scandinavia and Ireland, from whence they made frequent defcenis upon Scotland. The Pitis were at firt mightily pleafed

\section*{S C O \(\left[\begin{array}{lll}726 & ] & \text { S C O }\end{array}\right.\)}

Scotand. with the victory they had gaincl over tlicir antagonifts: but beins commanded to adopt the laws of the Romans, and to cloofe no king who was not fent them from Rome, they began to repent of their having

12
They return under Eergis II. contributed to the expulfion of the cots; and in the year 421, when Autulphus king of the Goths fent over a body of exiled "cots to Britain, under Fergus, a defcendant of the royal family of Scotland, the Picts immediately joined them araint the common enemy. The confequence of this was, that the Britons were pufhed to the laft extremity ; and the Romans being oblised, on account of the inundation of northern barbarians who poured in upon them, to recal their forces from Britain, the inhabitants were reduced to the moft miferable fituation that can be imagined. In the time of Fergus II. they were obli, red to give up all the country which lies to the noth of Adrian's wall; and in the reign of Grimus or Graham, the fucceffor of Fergus, they were obliged to write that remarkable letter to Rome, intitled, "The groans of the
千 See Eng- Britons \(\dagger\)." This, however, not being attended with
innd, \(n^{8} 27\) - fuccefs, the Britons were oblized to call in the Saxons to their affiftance. By thefe new allies the Scots were defeated in a great battle, and their king (Eugene) drewned in the river Humber; which put a fop for fome time to thefe incurfions.

Hitherto we have feen the Scots very formidable enemies to the fouthern Britons. But when the Saxons became the enemies of the Britons, the "cots joined in a flrict alliance with the latter; and the famous king Arthur is faid to have been affited by the Scots in all his battles with the "axons: neither does it appear that this league was ever diffolved again, though the united efforts of the sicots and Britons were not fufficient to
preferve the independency of the latter.

The next remarkable event in the hiftory of Scotland is the war with the Piets, which took place in the ninth century. The occafion of the quarrel was, that Dongal king of Scotland pretended a right to the Pietifh throne; which, however, was rejected by the Picts : upon which both parties had recourfe to arms; but when every thing was ready for the campaign, Dongal was drowned in croffing the river Spey.

At this time the dominions of the Scots comprehended the weftern iflands, together with the counties of Argyle, Knapdale, Kyle, Kintyre, Lochaber, and a part of Breadalbane ; while the Picts poffefled all the reft of Scotland, and part of Northumberland; fo that the Piets feem to have been by much the moft power ul people of the two. However, the Scots appear to have been fuperior in military fikill; for Alpin, the fucceffor of Dongal, having engaged the Pictith army near Forfar, after an obitinate engagement defeated them, and killed their king, though not without the lofs of a great number of his own men. The Pits chofe Brudus, the fon of their former king, to fucceed him; but foon after depofed and put him to death, on account of his ftupidity and indolence. His brother Kenneth fhared the fame fate on account of his cowardice; till at laft another Prudus, a brave and Spirited prince, afcended the throne. Having raifed a powerful army, he began with offering terms of peace to the Scots ; which, however, Alpin rejected, and infifted upon a total furrender of his crown. Drudus on this endearoured to procure the affitance of Edwin
king of Northumberland. Edwin accepted the money ; Scotland. but pretending to be engayed in other wars, he refufed the afliftance which he at firft promifed. Brudus, not difmayed by this difappointment, marched refolutely agaiuft his enemies; and the two amies came to an entragement near Dundee. The fupetior kill of the Scots in military affairs was about to have decided the victory in their favour, when Brudus bethought himfelf of the following fratagem to preferve his army fiom deftruction. He caufed all the attendants, and eren the women who attended his army, to affemble and how themflelves at a diftance as a powerful seinforce. ment coming to the Picts. This ftruck the Scots with fuch a panic, that all the efforts of Alpin could not recover them; and they were accordingly defeated with great !laughter. Alpin himfelf was taken prifoner, and foon after beheaded by order of the conqueror. This execution happened at a place now called Pit-alp;, but in former times Bas-alpin, which in the Gaelic languare fignifies the deoth of Alpin. His head was after. wards ftuck upon a pole, and expofed on a wall.

Alpin was fucceeded by his fon Kenneth II. who being a brave and enterprifing prince, refolved to take a moft fevere revenge for his father's death. The Scots, however, were fo dipirited by their late defeat, that they were exceedingly averfe to any renewal of the war: while, on the other hand, the Picts were fo much elated, that they made a law by which it be. came death for any man to propofe peace with the Scots, whom they refolved to extemmate; and fome of the nobility were expelled the council on account of their oppofition to this law The confequence of this was, that civil diffenfions took place among them, and a bloody battle was fought between the oppofite parties, befole the Scots had thought of making any farther refiltance.

By thefe diftractions Brudus, who had in vain en. deavoured to appeafe them, was fo much affected, that he died of grief; and was fucceeded by his brother Druksen. - The new prince alfo failed in his enden. vours to accommodate the civil differences; fo that the Scots, by gaining fo much refpite, at laft began to recover from their confternation; and fone of them having ventured into the Pictifh territories, carried off Alpin's head from the capital of their dominions, fuppofed to have been Abernethy. In the mean time, Kenneth found means to gain over the nobility to his fide by the following ftratagem; which, however ridiculous, is not incredible, if we confider the barbarifm and fuperfition of that age. Having invited them tostratagem an entertainment, the king introduced into the hall where they flept a perfon clothed in a robe made of the fkins of filhes, which made fuch a luminous appearance in the dark, that he was miitaken for an angel or fome fupernatural meffenger. To add to the terror of thofe who faw him, he denounced, through a fpeaking trumpet, the mof terrible judgnents, if war was not immediately declared againft the Picts, the murderers of the late king. In confequence of this celeftial admonition, war was immediately renewed with great vigour. The Picts were not deficient in their preparations, and had now procured fome affiftance from England. The firf battle was fought near Stirling ; where the Piets, being deferted by their Englith auxiliaries, were utterly defeated. Druken efcaped by the fwift-

\section*{S C O [ 727 ] S C O}
sectand riefs of his borfe, and a few days after made applica-\(-\) tion to Kenneth for a ceffation of hoflilities; but as the Scottifh monarch demanded a furrender of all the Hictifh dominions, the treaty was inltantly broken off. Kenneth purfued his good fortune, and conquered the counties of Merns, Angus, and Fife; but as he march. ed againft Stirling, he received intelligence that the e counties had aysiu revolted, and cut off all the garrifons which he had left, and that Drufken was at the head of a confiderable army in thefe parts. On this Kenneth haftened to oppole him, and a negociation asain took place. The refult was equally unfavourable with the reft. Kenneth iufited on an ablolute furrender of the counties of Fife, Merns, and Angus ; which being refufed, both parties prepared for a decifire battle. The engrgement was very bloody and defperate, the Piets fighting like men in defpair. Drufken renewed the battle feren times; but at laft was entirely defeated and killed, and the counties in difpute became the immediate property of the conqueror.

Kenneth did not fail to improve his victory, by reducing the reft of the Pictifh territories; which he is faid to have done with the greatelt cruelty, and even to hare totally exterminated the inhabitants. The ca. pital, called Came'on, (luppoled to hare been Aberne. thy), held out four months; but was at lalt taken by furprife, and every living creature deftroped. This was followed by the reduction of the Maiden Caftle, now that of Edinburgh; which was abandoned by the garrifon, who fed to Northumberland.

After the reduction of thefe important places, the reit of the country made no great reliftance, and Kenneth became mafter of all the kingdom of Scotland in the prefent extent of the word; fo that he is juttly to be elteemed the true founder of the Seotifh monarchy. Befides this war with the Pi\&ts, Kenmeth is faid to have been fucce[sful açain! the Saxons, though of thefe wars we have very little account. Having reigned 16 years in peace a fer his rubjugation of the Picts, and compoled a code of laws for the good of his people, Kenneth dicd of a fiftula, at Fort Teviot, near Duplin in Perthfire. Before his time the feat of the Scots government had been in Argylefhire; but he removed it to Scone, by transfening thither the famous black fone fuppofed to be the palladium of Scotland, and which was afterwa:ds carried off by Edivard I. of England, and lodred in Weftainter abbey.

Kenneth was lucceeded by his brother Donald, who is reprefented as a man of the worlt charafter; fo that the remainiug Piets who had fled out of Scotland were encouraged to apply to the Saxons for affiltance, promising to make Scotland tributary to the Saxon power after it faould be conquered. Tlis propofal was accepted; and the confederates invaded Scotland with a puwerful army, and took the town of Berwick; however, they were foon after defeated by Donald, who took alfo their fhips and provifions. This capture proved their ruin; for fome of the fhips being loaden with wine, the Scots indulged themfelves fo mnch with that ligtor, that they became incapable of defending thenfelres; the confequence of this was, that the confederates rallying their troops, attacked them in tkat flate of intoxication. The Scots were defeated with exceffive flaughter. Twenty thoufand of the common lefeated \(b\), faxpoldiers lay dead on the fot ; the king and his princi-
pal nobility were taken prifoners; and all the country 3 3eser- C . from the " Fweed to the Forth berame tle property of \(\rightarrow\). the conquerors. Still, however, the confederates found themfelves unable to purfue their vifory farther ; and a peace was concluded, on condition that the "axons fhould become mafters of all the conquered country. Thus the Forth and Cly de became the fouthom boundaries of the Scottin dominions. It was a preed that the Forth fhould from that time forward be called the Scots Sea; and it was make capital for any cotfman to fet his foot on Englifh sround. They were to erect no forts near the Enclith confines, to pay an annual tribute of a thouland pounds, and to give up \(60^{\circ}\) of the fons of their chief nobility as hoft ages. A mint was erected by the Saxon prince named \(G\) boreth, at Stirling ; and a crofs raifed on the bridge at that place, with the following infcription, implying that this place was the boundary between Scotland and England:

\section*{Anglos a Scotis feparat cruxi ila remstis: \\ Arma bic Jant Bruti, funt Scoti fub bai cruce tuti,}

After the conclufion of this treaty, fo humiliatiny to the Scots, the Pi=ts, finding that their intereft has been entirely neglected, fled to Norway, while thole who remained in England were maffacred. Dunald fhared the common fate of unfortnate princes, being dethroned and fhut up in prifon, where he at laft put an end to his own life in the year \(8 ; 8\). - In jutice to this unhappy monarch, however, it mult be obferved, that the character of Donald, and indeed the whole ac. count of thefe tranfactions, refts on the credit of a fingle author, namely Boece; and that other writers reprefent Donald as a hero, and fuccefsful in his wars: but the obfcurity in which the whole of this period of Scottilh hiltory is involved, renders it impoffible to determine any thing fatisfactory concerning thele matters.

Donald was fucceeded by his uephew Conftantice, the fon of Kenneth Mac Alpis, in whofe reign Scotland was firt invaded by the Dines, who proved fuch formidable enemies to the Englifh. This invalion is faid to have been occafioned by fome exiled Picts who fled to Denmark, where they prevailed upon the king of that country to fend his two brothers, Hungar and Hubba, to recover the Pictifh dominions from ConAtantine. Thefe princes landed on the coaft of Fife, A d bT where they conm'tted the molt horrid barbarities, not fparing even the ecclefiaftics who had taken refuge in the inand of May at the mouth of the Forth. Con. ftantine defeated one of the Danilh armies commanded by Hubba, near the water of Leven; but was himfelf defeated and taken prifoner by Hungar, who caufed him to be beheaded at a place fince called the Deril's Cove, in the year 874.

This unfortunate action coft the Scots 10,000 men: but the Danes feem not to hare purchafed their victory very eafily, as they were obliged immediately afterwards to abandon their conquelts, and retire to their own country. However, the many Danifh monuments that are ftill to be feen in Fife, leave no room to douht that many bloody fcenes have been acted here between the Scots and Dancs befides that above-inentioned.

Conlantine was fucceeded by his brother Eth, fur. named the 5 wifl forte, trom his a ility Conceming him we find nothing memi rable; indeed the accuunts are fo confufed and contradictory, that it is impolfible.

Scot'ans, to form any decifive opinion conceming the tranfactions of this reign. All agree, however, that it was bint fhott ; and that he was fuccected by Gregory the fon of Dongal, contemporary with Alfred of England, and

18
Jixploits of Gregory the Great. that both princes defervedly acquired the name of Greut. The Danes at their departure had left the Picts in poffeffion of Fife. Againft them Gregory immediately marched, and quickly drove them into the north of Engiand, where their confederates were already maters of Northumberland and York. In their way thither they threw a garrifon into the town of lerwick; but this was prefently reduced by Gregory, who put to the fword all the Danes, but fpared the lives of the Picts. From Berwick, Gregory purfued the Danes into Northumberland, where he defeated them; and paffed the winter in Berwick. He then marched againft the Cumbrians, who being moftly Picts were in alliance with the Danes. Them he eafly overcame, and obliged to yield up all the lands they had formerly poffeffed belonging to the Scots, at the fame time that he agreed to protect them from the power of the Danes. In a Short time, however, Conflantine the king of the Cumbrians violated the convention he had male, and invaded Annandale; but was defeated and killed by Gregory near Lochmaben. After this vietory Gregory entirely reduced the counties of Cumberland and Weftmoreland, which, it is fail, were ceded to him by Alfred the Great; and indeed the fituation of Alfred's affairs at this time renders fuch a ceffion by no means improbable.

We next find Gregory engaged in a war with the Erifh, to fupport Donach, an Irifh prince, againft two rebellious noblernen. The Irifh were the firlt dygreffors, and invaded Galloway ; but being repulfed with great lofs, Gregory went over to Ireand in perfon, where the two chicfains, who had leen enemies to each other before, now joined their forces in order to oppofe the common enemy. The firit engagenent proved fatal to one of their chiefs named Rrian, who was killed with a great number of his followers. After this victory Gregory reduced Dundalk and Drogheda. On his way to Dublin he was oppofed by a chieftain named Sorneil, who thared the fate of his confederate, being alfo killed, and his army entirely deteated. Gregory then became guardan to the young prince whom he came to affif, appointed a regency, and whliged them to fwear that they would never admit into the country either a Dane or an Englifunan without his content. Having then placed garrifons in the ttrongeff fortreffes, he returned to Scotland, where he buitt the city of Aberceen ; and died in the year 892,
19 at his cafle of Dundore in the Garioch.
Donish 111. Gregory was fucceeded by Donald III. the fon of Contlantise, who initated the virtues of his predeceffor. The Scots hiftorians unanimoufly agree that Northumberland was at that time in the hands of their countrymen; while the Englifh as unanimoully affirm that it was fubject to the Danes, who paid homage to Alfred. Be this as it will, however, Donald continued to hive on good tems with the Englifh monarch, and fent him a body of forces, who proved of confiderable advantage to him in his wars with the Danes. The reign of Donald was but hort; for having marched argainf fome rotibers (probably no other than the Danes) who had swaced and ravaged the counties of

Murray and Kofs, he died at Forres foon after, Maving Scotland, defcated and fubdued them in the year os3. He was fucceeded by Conftantine III. the fan of Eth the Sivittfooted, concenning whom the molt remarkable particular we find related is his entering into an alliance with the Danes againft the Englifh. The occafion of this con-Conflan. federacy is faid to have been, that the Englifh monarch, tine tIf. enEdward the Elder, finding the Scots in poffeffion of ters it to an the northern counties of England, made fuch extrava- with dhe gant demands upon Confancine as obliged him to ally \(\mathbf{b}\) nes with the Danes in order oo preferve his dominions in \(a_{k}\) ainft fecurity. However, the leagtue fubfited only for two Engiand. years, after which the Danes found it more for their advantage to refume their ancient friendhip with the Englin.

As foon as Conftantine had coneluded the treaty with the Danes, he appointed the prefumptive heir to the Scottifh crown, Malcolm, or, according to fome, Eugene the fon of the late king Donald, prince of the fouthern counties, on condition of his deiending them againft the attacks of the \(\mathrm{Eng}_{\mathrm{g}}\) lifh. The young prince bad foon an opportunity of exerting lis valour: but not behaving with the requifite cantion, he had the misfortune to be clefeated, with the lols of almoll ali his army, he himfelf being carried wounded out of the field; and in confequence of this difafter, Confantine was obliged to do homage to Edward for the puffefions he had to the fouthward of the Scots bomdary.

In the beginning of the reign of Athellan the fon of Edward the Elder, the northern Danes were enconraged by fome confpiracies foumed againt that monarch to throw off the yoke; and their fuccefs was fuch, that Athelfan thought proper to enter into a treaty with Sithric the Danifh chicf, and to give him his daugliter in marriage. Sithric, however, did not long furvive his nuptials ; and his fon Guthred, endeavouring to throw off the Englifh yoke, was defeated, and ebliged to fly into Scotland. This brought on a feries of hoftilites between the Scots and Englifh, which in the year 938 infucd in a general engagement. At this time tine Scuts, Irif, Cumbrians, and Danes, were confederated againtt the Englifh. The Scots were commanded by their king Conftantine, the Irih by An. laf the brother of Guthred the Danif prince, the Cumbrians hy their own fovereion, and the Danes by Froda. The cenerals of Atheiftan were Edmind lis brother, and 'Iurketil his tavourite. The Englify attacked the entrenchments of the confederates, where the chief refillance they met with was from the Sicots. Conflantine was in the utmoff danger of being killed or taken prifoner, but was refened by the bravery ofls itterly his foldiers: however, aftet a mott obttinate engesentent, dereated by the confederates wre defeated with fuch flawhter, that the flain are faid to have been momeralle. 'lhe confequence of this victory was, that the Scots were deprived of all their poffeffons to the fouthward of the Forth ; and Conftantine, quite difoiritcel with his misfortune, refigned the crown to Malcolon, and retired to the monallery of the Culdees at Si Andrew's, where he died five years after, in 243.
'The dithelfes which the Englifh futained in their fubfequent wars with the D.mes gave the Scots an ouportunity of setrieving their affairs; and in the year 944, we find Malcolm, the fuccefor of Conflantine, invelted with the fovereignty of Northumberland, on con-

Scotland. dition of his holding it as ficf of the crown of England, and affiting in defence of the northern border. Soon after the conclufion of this treaty Malcolm died, and was fucceeded by his fon Indulfus. In his reign the Danes became extremely formidable by their invafions, which they now renewed with greater fury than ever, being exafperated by the friendhip fubfifing between the Scots and Englifh monarchs. Their firf delcent was upon Eaft Lothian, where they were foon expelled, but croffed over to Fife. Here they were a fecond time defeated, and driven out ; and fo well had Indulfus taken care to guard the coalts, that they could not find an opportunity of landing; till having feemed to fteer towards their own country, the Scots were thrown off their guard, and the Danes on a fudden made good their landing at Cullen, in Banffshire. Here Indulfus foon came up with them, attacked their camp, and drove them towards their fhips, but was killed in an ambufcade, into which he fell during the purfuit. He was fucceeded by Duffus, to whom hiftorians give an excel. lent character ; but, after a reign of five years, he was murdered, in the year 965. He was fucceedcd by Culen the fon of Indulfus, who had been nominated prince of Cumberland in his father's lifetime, as heir-apparent to the throne. He is reprefented as a very degenerate prince; and is faid to have given himfelf up to fenfuality in a manner almoft incredible, being guilty of incontinence not only with women of all ranks, but even with his own fifters and daughters. The people in the mean time were fleeced, in order to fupport the extravagance and luxury of their prince. In confequence of this, an aflembly of the flates was convened at Scone for the refettling of the goverument; but on his way thither Culen was aftaffinated, near the village of Methren, by Rohard, thane or fheriff of Fife, whofe daughter the king had debauched.

The provocations which Culen had given to his nobility feem to have rendered them totally untractable and licentious; which gave an occafion to a remarkable revolution in the reign of Kenneth III. who fucceeded Culcr. This prince, being a man of great refolution, began with relieving the common people from the oppreffions of the nobility, which were now intolerable; and this plan he purfued with fo much fuccefs, that, ha. ving nothing to fear from the great barons, fie ordered them to appear before him at Lanerk ; but the greateft part, confcious of their demerits, did not attend The king fo well diffembled his difpleafure, that thofe who came were quite charmed with his affability, and the noble entertainment he gave them; in confequence of which, when an affembly was called next year, the guilty were encouraged to appear as well as the innocent. No fooner had this aftembly met, however, than the place of meeting was belet with armed men. The king then informed them that none had any thing to apprehend excepting fuch as had been notorious offenders; and thefe he ordered to be immediately taken into cuftody, telling them, that their fubmitting to public jultice muft be the price of their liberty. They were obliged to accept the king's offer, and the criminals were accordingly punihed according to their deferts.

About this time Edgar, king of England, finding himfelf hard preffed by the Danes, found means to unite the king of Scotland and the prince of CumberVoz. XVI. Part II.
land along with himfelf in a treaty againft the Danes : Scotiand. which gave occafion to a report that Kenneth had become tributary to the king of England. This, however, is utterly denied by all the Scots hilorians; who affirm that Kenneth cultivated a good conefpondence with Edjar, as well becaufe he expected affilance in defending his coafts, as becaufe he intended entirely to alter the mode of fucceffion to the throne. About this time the Danes made a dreadful invafion. Their original intention feems to have been to land on fome patt of the Englifh coafts; but finding them probably too well guarded, they landed at Montrofe in Scotland, con:mitting every where the moft dreadful ravazes. Fierneth at that time was at Stirling, and quite unprepared; however, having collected an handful of troops, he cut off many of the enemy as they were ftraggling up and down, but could not prevent them from befieging Perth. Neverthelefs, as the king's army conftantly in. creafed, he refolved to give the enemy battle. 'Ihe fcene of this action was at Loncarty, near Perth. 'The king is faid to have offered ten pounds in filver, or the value of it in land, for the head of eveny Dane which Thould be brought him ; and an immunity from all taxes to the foldiers who ferved in his army, provided they \(=4\) fhould be victorious: but, notwithilanding the utmoft Defearsthe effurts of the Scots, their enemies fought fo defperate. Danes. ly, that Kenneth's army mult have been totally defeated, had not the fugitives been ftopped by a yeoman and his two fons of the name of Hay, who were coning Rite of tbe up to the battle, armed with fuch ruftic weapons as fami y of their condition in life afforded. Buchanan and Boece Eirrul. inform us, that thefe countrymen were ploughing in a field hard by the fcene of action, and perceiving that their countrymen fled, they loofed their oxen, and made ufe of the yukes as weapons, with which they firf obliged their countrymen to ftand, and then annoyed their cnemies. The fight was now renewed with fuch fury on the part of the Scots, that the Danes were utterly defeated; and, after the battle, the king rewarded Hay with the barony of Errol in the Carfe of Gowrie, ennobled his family, and gave them an amorial bearing alluding to the rutlic weapons with which they had atchieved this glorious exploit.

In the year 994, Kenneth was murdered at the in- Kenneth Atigation of a lady named Fenellc, whofe fon he had murdered caufed to be put to death. The murder was perpetrated in Fenella's caltle, where the had perfuaded the king to pay her a vifit. His attendants waited long near the place; but being at length tired out, they broke open the doors, and found their king murdered : upon which they laid the caftle in afhes; but Fenella eicaped by 2 poftern. The throne was then feized by an ufurper named Comlantine; who, being kilked in battle after 2 reign of a year and an half, was fucceeded by Grime, the grandfon of king Duffus; and he again was defeated and killed by Malcolm the fon of Kenneth, the lawful heir of the Scottifh throne. After this victory, however, Malcolm did not immediately affume the fovereignty; but afked the crown from the nobles, in confequence of a law paffed in the reign of Kenneth, by which the fucceffion to the throne of Scouland became hereditary. This they immediately granted, and Mal. coln was accordingly crowned king. He joined himfelf in frict alliance with the king of England; and proved fo fuccefsful againt the Danes in England, that
\(4 Z\) Swero

SEul on. Siweyn tiacir king sefoired to direck his whole force a raint hin by an invafon of Scotiand. H:s firn attempt, however, proved ver; unineefstai ; all his foidiers being cut in pieces, except fone few who efcaped to their fhips, while the lofs of the Ssots an:ounted to no mure than 30 men. But in the mean time, Dunsan, urince of Cumberlaud, havinz reselected to pay his homare to the king of Encland, the I itter invaded that country in corijunetion with the Daves. Dalcoln took the field againft them, and defeated tooti ; but while he was thus employed in the fudti, a new army of

Sper. Malcolon advanced againt them with an army diefeated by much inferior in nember; and his men, nerle¿ing every the Dades thins but the blind impulfes of fury, wore ainolt all cut to pieces ; Malcolm himfelf being defperaiely wounded

By this victory the Danes were fo much ciatec, that they fent for their wives and children, intending to fettie in this country. The cafte of Nairn, at that time thought almoll impresnahle, fell into their hands; and the towns of Elsin and Forres were abandoned both by their garrilons and inhabitants. The Scots were everywhere treated as a conquerd penole, and employed in the moft fervile offices, by the haughty conquerors; who, to render the caftle of Nairn, as they thought, abfolutely impregnahle, cut throurh the fmall ifthmus which joined it to the land. All this time, however, Malcolm was raifing forces in the fouthern counties; and having at laft got an army together, he came up with the Danes at Murtloch, near Balveny, which appears at this day to have been a ttrong Danif, fortification. Here he attacked the encmy; but having the mistorture to lofe three of his general officers, he was
 and encamped at a plase called Bare, in the neighinour- hood of which both parties prepared io decide the fat: The Dalce of Sicotian ; for as Moray and the northern provinces agam de. were already in the poffefinn of the Danes, it was evi-fesied. dent that a viotory at this time mult put them in pof. feffion of the whole. 'The encagement was delperate, and fo bloody, that the rivalet which proceeds from Locin Tay is faid to have had its water dyed with the blood of the flain; but at laft the Danes gave way and fed. There was at that time in the army of Malcolm, a young prince of the name of Keith ( A ). He purfued Rife of tie Canus; and having overtaken him, engased and killed fanilv of him ; bat another Scuts officer comirr, up at the fame \({ }^{\mathrm{K} \text { itit. }}\) time, difpured with Keith the glory of the ation. While the difpute lifted, Malcolm came up ; who fuffered them to lecide it by fingle combat. In this f con 1 combat Keth proved alfo victorious, and killed his antagonit. The dying perfor confeffed the jullice of Keith's claim; and Malcolm dipping his finger in his blood marked the thicld of Keith with three ftrokes, pronouncing the words Veritus vincit, "Truth avercomas," which has ever fince been the armorial barins and motto of the family of Keith (B).
The flattered r-mains of the Dazih furces reached their flips; but being driven back by contrary wids, and provifions becoming fearce, they put afhore 500 men on the coalt of Buchan, to procure them fume food: but their communication with the thips being foon cut off, they fortified themfelves as well as they could, and made a defperate refiftance; but at latt were all put to the fword. The place where this maffacre happened is fill called Crudine ; being prohably an abbreviation of Cruor Danorum, the blood of the Dares, a name impofed on it by the eccleflaitics of thofe days.

Sweyn, not yet difcouraged, fent his fon Canutc, af- Anothers terwards king of England, and one of the greateft war- isvafi en rious of that agc, into Scotland, with an army more powerful than any that had yet appeared. Canute landed in Buchan; and, as the Scots were much weakened by fuch a long continued war, Malcolm thought proper to act on the defenfive. But the Scots, who now thought themfelves invincibie, demanded to be led on to a \(\xi_{\text {a.eral engagement. Malcolm complied with }}\) their detire, and a battle enfued; in which though neither party had much reafon to boalk of victory, the Danes were fo much reduced, that they willingly concluded a peace on the following terms, viz. That the Peace conDanes thould immediately depart Scotland ; that as cluced. long as Makolm and Sweyn lived, neither of them fhould wage war with the other, or help each other's enemies;
(a) This prince is faid to have comenanded a colony of the Catti, a German nation who fettled in the northe mot part of Scotland, and from whom the county of Caithnefs takes its name.
(B) Mr Gordon, in his Itinerarium Septentrionsle, obferves, that in all probatility the Scots gained two vietories over the Danes on the prefent occafion; one near the place called Karbodde, already mentioned; and the other at Aberlemno, fur miles from Brechin. At hoth places there are monuments with rute fculptures. erecttd moft probably in memory of a vitory. That at Karboddo is called Camus's crofs; near which, fomewhat more than a century ago, a large fepulchre, fuppofed to be that of Camus, was difcovered. It confifted of four great Rones ; and had in it a huge fkeleton, fuppofed to be that of the Danifh prince. The fatal ftroke feemed to have been given him on the back part of the head; a confiderable portion of the Ikull being cat away, probab'y by the laroke of the fisord. ane ara: tie feld in which the batie was fougirt
fhould be fet phart and confecrated for the burial of the deac. Ttere fifulations were punctually fulther ty Makois, who buitt in the neighbothond a chapd iedicated :o Olaus, the tutclar faint of thefe northern nations.

After all thefe glorious exploits, and becomins the fecord levinater in the Scotifin mation, Malcolm is faid to have flained the latter part of his :eign with avarice
and oppeffion: in confequence of which he was murdered at the ace of אo years, ofter he had reiçned above 30. This atafunation was perpetated when he was on hiss way to Glamis. His own domeftics are faid to have heen pripy to the murder, arci to have fed alons with the corfpira:ors ; bit in pafing tice lake of Fur. far on the ice; it gave way with them, and they were all drowned, their hodizo being difcovered fome days after. The latter part of this account is confirmed \(\dot{b} y\) the follptures upon fone fones ercied near the fpot ; one of which is fill calles! Malco:n's gruve-fore; and :H1 of them exhibit fome rude reprefentations of the nurder and the fate of the affaftins.

Malcolm was fucceeded, in the veat 1035 , by his greadion Duncar: I. but he is faid to have had arother grandfen, the famous Maclueth; thongh Some are ce Ginion that Macbeth was rot the grandfon of Mad. colm, but of Fenclla whon urdered Kenneth III. 'I he firl years of Duncun's reign were pafed in trancullity, but demenlic broils foon took place on the following eccafion. Banque, thane of L.ochaber, and anceftor to the reyal family of Stuant, adted then in the capacity of feward to Duncan, by collecting his serits ; but being very rivid in the execution of his cfice, he was way-laid, robbed, and aimot murdered. Of this outrage Banquo con:plained as toon as he recovered of his wounds and could appear at court. 'ihe rubbers nere fummoned to furmender themfelves to juftice: hut infte:d of oheying, ther killed the mefferper. Macbeth reprefented this in fuch frong terms, that he was fert with an army toreduce the infurgents, who had already deftroytu many of the king's friends. Tlis commifion he performed with fuch fuccers, that the rebel cbief jut an erd to his own life: ater which Macheth fent his lead to the king, and then proceeded with the utmeft feverity againfl the infurgenta, who were compofed of Iribmer, Inlanders, and Hiphlanders.

This infuretion was fearcely quelled, when the Danes larded again in Fife; and Duncan put lemfrle at the head of an amy, having the thanes Nacloeth and Bancro ferving under him. The Danes were commanded \(\mathrm{k} y\) Sweyn ling ot Norway, and cldett fon of Camte. He procetled with all the barbarity natural to his natior, putting to death mer, women, and ch.ldren who fell in his uay. A battle was fought beween the iwn nations near Culrof, in which the Scots were cefeated: but the Danes purchater their victory fo deally, that they could not improve it: and Duncan retreated to Perth, while Macbeth was fent to raife mere forces. In the mean time Swern laid fige to Perth, which was defended by Duncan and Banquo. The 1)anes were fo much dilfefted fur wart of provifions, that ihey at lait confented to treat if a peace. provided the prefing necefities of the army were relicwed. 'I he Sccts hiforians inform us, that this ircaty was fot on roat in order to amule Sweyn, and gain time for the

Aratagem nisich Dutcan waspreparin-3. 71.: xas in S: tisus wther than a barbarous contivance of infufing irica:- cating herbs into the liquors that were font alony with who a-e the other prowifins to the l)anita camp. 'J'he fe fopn-detwed. rifes had their intended effect ; and while the llanes were under their influence, Macbeth and Bançuo broke into their carp, whore they put all io the fword, and it was with dificuity that frme of Swey:. \(n\) attendaris carted him on boarc'; and we are iokd lhat lis was ine only hip of all the Aeet that returned to Nownay. It was not lone, howewer, hefore a freh body ot Danes landed at Kinghora in the couaty of Tife: but the were cntirely defeated by Macbethand Danziun. Such of the Danes as efcaped fled io their Mips ; but betore they depatted they obtained lase to buy their dead in Inchoolm, a fmall ifland :-ive in the Iorth, where one of their monnmerts is ftill to be feen.

Thus ended the formidable invafions of the Danes: atter which Duncals applied himflelf to the adminitare tion uf juffice, and the reformation of the manners of his fubjeets. Macbeih, however, who had ob:ained great reputation by his fucecfs againt the Danes, began in tom anbitious defigns, and to arpire to the clown itfelf. 'The fables relating to his ulurpation are fo well known from the tragcty cumpoied by Shakc. fueare which bears the narte of Alacbett, that we thall rot take notice of them here; but orly obferve, that Dunc n at laft Duncan, not knowing he had if dangerous an murderes enemy near his petion, whole Shemes reçurec to be by Maewatched, was murdered at Ime:ncis by Macbeth, who bethe, whes the fucceeded him in the throne.
1) using the greatef part of the rinel o! the ufurjer, Malcoln, the true heir io the crom ot Scutlane', kef: clolc in his principality of Cumberland, without any thou his of atcending his father's throne. Aacbeth for lome time governer with moderation, but at laf became a tyrant. Becoming jealoua of Banquo, the mot power!ul fubjeed in his donnmions, he invited him to an mentertaiment. and caufed him to be treacheroufy murdercd. His fon Fleance was defired to the fanie fate. but efcaped to liales. Afte: him Macduff, the thane of Fife, was the mur powcrifl perfon in Scotand ; for which seafon, Míacbeih detemmeed to dettroy him. On this Macdutf fied in Frame; and Viacbeth cruelly put io ceath his wife, and childen who were ret mifarit, and fequeltored his cftate. Macduff wowed re-siacten renge, and encouraged Malcolm :s attempt to dethrone drista ur'a the tyrant. Nacheth oppoted tham whih. his wisole force; but being deteated in a pithed batuic, he iowk tetuge in the mot inaccentible olles of the Itighlands, where lie dutended hinielf for iwo yeats; but in the mean time Nfakcolm was acknowlagged king of Scot. land, and crownec it Szone.

I he war hetwsen Barbeth anc tice s.ew ang corif and baie? need for iwn years atiter the coronat of of the later: but at liat he wias kited in a daldy by Maccut. Finw ever the public tranquillity did not end with has lire. His followers leted one of his kinfmen named Luliaeb, fu-namud tle ldes, to fucced him: but he mot beind able to withtand Makolm, withdres to the noait
 isgir, after a reign of four months.

Makoln heing now Rablithed on the throne, fe: maic \({ }^{4}\).

Scotland. I. That they fhould place the king in his chair of flate at the coronation. 2. That they fhould lead the van of all the royal armies. 3. That they fhould have a regality within themfelves: and, 4 . That if any of Maeduff's family fhould happen to kill a nobleman unpremeditately, he fhould pay 24 marks of lilver, and, if a plebeian, 12. The king's next care was to reinftate in their fathers poffeffions all the children who had been difinherited by the late tyrant ; which he did in a convention of his nobles held at Furfar. In the tine of William the conqueror, we find Malcolm engaged in a dangerous was with England, the oceafion of which was as follows. On the death of Edward the Confeffor, Harold feized the throne of England, to the prejudice of Edgar Atheling the true heir to the crown. However, he created him earl of Oxford, and treated him with great wfpect ; but on the defeat and death of Harold, William difcovered fome jealouly of Edgar. Soon after, William having occafion to pay a vifit to his dominions in Normandy, he appsinted Edgar to attend him, along with fome other noblemen whom he fufpected to be in his intereft; but on his return to England, he found the people fo mueh difaffected to his government, that he proceeded with great feverity, which obliged great numbers of his fubjects to take refuge in Cumberland and the fouthern parts of Malcolm's dominions. Edear had two fifters, Margaret and Chriftina: thefe, with his two chief friends, Gofpatric and Martefwin, foon made him fenfible how precarious his life was under fuch a jealous tyrant, and perfazded him to make preparations for flying into Hungary or fome foreign country. Edgar aecordingly fet fail with his mother Agatha, his two fifters, and a great train of 2n:ertairs Anglo-Saxon noblemen; but by ftrefs of weather was Rdera an forced into the frith of Forth, where the illuftrieus exiles Erylifh landed at the place fince that time called the Queen's
prisec. Ferry. Malcolm no fooner heard of their landing than be paid them a vifit in perfon; and at this vilit he fell in love with the princefs Margaret. In confequence of this, the chicf of Edgar's party repaired to the court of Scolland. William foon made a formal demand of Edgar ; and on Malcolm's refufal, declared war againlt lim.

William was the mof formidable enemy the Scots

\section*{Far be-} ewern Seo land arid England. had ever encountered, as having nut only the whole force of England, but of Normandy, at his conmand. However, as he had tyrannized moft unmercifully over
but when they came to particular fipulations, the Seotand. parties immediately difagreed. The three fons of Ha rold, with a body of Irifh, made a defcent upun Somer- England fethire, and defeated a body of Englinh ; but the Irifh Envaded. having thus obtained an opportunity of acquiring fome booty, immediately retired with it, after having ravaged the country. The Danes landed at the mouth of the Humber from 40 fmall fhips, where they wcre joined by Edgar and his party; and had the allies been unanimous, it is probable that William's government would have been overthrown.

By this time William had taken from Gofpatric the carldorn of Nerthumberland, and given it to Robert Cummin one of his Norman barons; but the Northunsbrians having joined Gofpatric, and received the Danes as their countrymen, murdered Cummin and all his followers at Durlam, where they had been guilty of great cruelties. After this they laid fiege to the forts built by William in Yorkfhire; but not being able to reduce them, the Englifh, Scots, and Danes, united their forces, took the city of York itfelf, and put to the fword three thoufand Normans who were there in garrifon; and this fuccefs was followed by many incurfions and ravages, in which the Danes and Northumbrians aequired great booty. It foon appeared, however, that thefe allies had the intereft of Edgar no more at heart than the Irifh; and that all the dependence of this for. lorn prince was upon Malcolm, and the few Englifhmen who had followed his fortune: for the booty was no fooner obtained, than the Dancs retired to their fhips, and the Northumbrians to their habitations, as though they had been in perfect fafety. But in the mean time William, having raifed a confiderable army, advanced northwards. He firlt took a fevere revenge upon the Northumbrians; then he reduced the city of York, and put to death all the inhabitants; and pérceiving that danger was fill threatened by the Danes, he bribed them with a fum of money to depart to their own country.

Malcolm was now left alone to encounter this formidable adverfary; who, finding himfelf unable to oppole fo great a force, withdrew to his own domiwions, whert he remained for fome time upon the defenfive, but not without making great preparations for his Englifh fubjects, they were much more inclined to affilt his enemies than their own prince; and he even found himfelf obliged to give ap the county of Northum. berland to Gofparric, who had followed Edgar, upon condition of his making war on the Seots. This nobleman accordingly invaded Cumberland; in return for which Malcolm ravaced Northumberland in a dreadful marner, carrying of an immenfe booty, and inviting at - the fame time the Irifh and Daues to join him.

Even at this time the Danes kept up their claims upon the crown of England, fo that they could not be fuppofed very zealous for the intereft of Edran: The Irifh were alfo interefted in advancing the caufe of Harold's three fons, who bad put themfelves under their protection; and befides, their chief view feems to have been to obtain plunder at the expence of any party. However, as all thefe views tended to the pulling down of William's power, an union was formed agraint uin; invading England once more. His fecond invafion A fectrd took place in the year 1071, while William was employ-nvafiono ed in quelling an infurrection in Wales. He is faid at this time to have behaved with the greatelt cruelty. He invaded England by Cumberland; ravaged Teef. dale ; and at a place called Hundreds-keld, he maffacred fome Enylifh noblemen, with all their followers. From thence he marched to Cleveland in the north-riding of Yorkifhire ; which he alfo ravaged with the utmoft cruelty, fending back the booty with part of his army to Scotland: after which, he pillaged the biftopric of Durbam, where he is faid not to have fpared the noolt facred edifices, but to have burnt them to the gronud. In the mean time Gafpatrie, to whom William had. had again ceded Northumberland, attempted to make diverfion in his favour, by invading. Cumberland : but being utterly deleated by Malcolm, he was obliged to Shut hinfelf up in Bamborough caftle; while Maleolm returned in triumph with his army to Scotland, where he married the prineefs Margaret.

The next year William, having greatly augmented

\section*{\(S \mathrm{C} O\)}
otland. his army, invaded Scotland in his turn. The particulars of the war are unknown; but it certainly ended much to the difadvantage of the Scots, as Malcolm agreed to pay him homage. The Englifh hitorians contend that this homage was for the whole of his dominions; but the Scots with more fhow of reafon affirm, that it was only for thofe he poffeffed in England. On the conclufion of the peace, a crufs was erected at Stanmore in Richmondhire, with the arms of both kings, to ferve as a boundary between the poffeffions or Williann and the feudal dominions of Malcolm. Part of this monument, called Reccrofs, or rather Roy-crofs, or The crofs of the kings, was entire in the days of Cam. den.

This peace between Malcolm Canmore and William produced the greateft alteration in the manners of the Scots. What contributed chiefly to this was the excellent difpofition of queen Maraaret; who was, for that age, a pattern of piety and politenefs: and next to this was the number of foreigners who had fettled in Scotland; among whom were fome Frenchmen, who laid the foundation of that friendthip with the Scots which lafted for ages. Malcolm himfelf, alfo, though by his ravages in England he feems naturally to have been a barbarian, was far from being averfe to a reformation, and even fet the example himfelf. During her bufband's ablence in England queen Margaret had chofen for her confeffor one Turgot, whom the alfo made her affiltant in her intended reformation. She began with ncw-modelling her own court ; into which fhe introduced the offices, furniture, and manner of living, common among the more polite nations of Europe. She difmiffed from her ferviee all thofe who were noted for immorality and impiety : and charged Turgot, on pain of her difpleafure, to give his real fentiments on the ftate of the kingdom, after the beft inquiry he could make. By him the was informed, that faction reigned among the nobles, rapine among the commons, and incontinence among. all degrees of men. Above all, he complained that the kingdom was deftitute of a learned clergy, capable of reforming the people by their example and doetrine. All this the queen reprefented to her hufband, and prevailed upon hin to fet about the work of reformation immediately ; in which, however, te met with confiderable oppofition. The Scots, accuitomed to opprefs their inferiors, thought all reftrictions of their power were as many fteps towards their flavery. The introduction of foreign offices and titles confirmed them in this. opinion; and fueh a dangerous infurrection happened in Moray and fome of the northern counties, that Malcolm was obliged to march againft the rebels in perfon. He found them, indeed, very formidable; but they were fo much intimidated by lis refolution, that they intreated the clergy who were among them to intercede. with the king in their favour. Maleolm reecived their fubmiffion, but refufed to grant an unconditional pardon. He gave all the common - people indeed leave to return to their habitations, but obliged the better fort to furrender themfelves to his pleafure. Many of the moft guilty: were put to death, or condemned to perpetual imprifonment ; while others had their eftates confileated. This feverity checked the rebelious fpirit of the Scots, upon which Malcolm returned to lis plans of reformation. Still, however, he found himfelf oppofed cven in thofe abufes,

733] S C O
which were moft obvious and glaring. He durf not Scotland. entirely abolih that infamous practice of the landlord claiming the firt night with his tenant's bride ; though, by the queen's influence, the privilege was changed into the payment of a piece of money by the bridegroom, and was afterwards known by the name of mercheta mulierum, or "the woman's merk." In thofe days the Scots were without the practice of faying grace after meals, till it was introduced by Margaree, who gave a glafs of wine, or other liquor, to thofe who remained at the royal table and heard the thankfgiving: which expedient gave rife to the term of the gracedrink. Befides this, the terms of the duration of Len: and Eafter were fixed; the king and queen beftowed large alms on the poor, and the later wahhed the feet of fix of their number; many churches, monafteries, \(\& \mathrm{c}\). were erected, and the clerical revenues augmented. However, notwithtanding thefe reformations, fome hittorians have complained, that, along with the manners of the Englifh and French, their luxurics were alfo introduced. Till this reign the Scots had been remarkable for their fobriety and the fimplicity of their fare; which was now eonverted into excela and riot, and fometimes ended fatally by quarrels and bloodfhed. We are told, at the fame time, that even in thofe days, the nobility eat only two meals a-day, and were ferved with no more than two difhes at each meal; but that their deviation from their ancient temperance oceafioned a diminution of the ftrength and fize of the people.

In the year 1077, Malcolm again invaded England; England but upon what provocation, or with what fuccefs, is again in not well known. But in 1088 , after the death of the vadec. Conqueror, he again efpoufed the caufe of Edgar Atheling, who had been redueed to implore bis affiftance a fecond time, when William Rufus aleended the throne of England. At the time of Edjar's arrival, Malcolm was at the head of a brave and well-diciplined army, with which he penetrated a great way into the country of the enemy; and, as it is faid, returned to Scotland with an inmenfe booty. Some hillorians tell us, that in this expedition Makolm met with a defeat, which obliged him to return; and indeed this is not a little. countenanced by others, who fay, not indeed that he was defeated, but that it was the will of God he fhould proceed no farther. But, be this as it will, William. refolved to revenge the injury, and prepared great armaments both by fea and land for the invafion of Scotland. His fuceefs, however, was not anfwerable to the greatnefs of his preparations. IJ is feet was dafhed to pieces by ftorms, and aimoft all on board of it .perihed. Malcolm had allo laid watte the country through which his antagonift was to pafs, in fuch an effectual masner, that Wililiam loft a great part of his troops by fatigue and famine ; and, when he arrived in Seotland, found himfelf in a fituation very litele able to relift Malcolm, who was advancing againlt him with a powettul army. In \(a^{3}\) this dillrefs, Rufus had recourfe to Robert de Now- The \({ }^{23}\) Ergbray earl of Northumberland, who diffuaded him from lina aray verituring a battle, but advifed him by all means to in great open a negociation by means of Edgar and the other dailger. Einglifh noblemen who refided with Malcolm. Edgar undertook the negociation, on condition of his being reflored to his eftates in Eigland; but met with more diffieulty than he imagined. Aralcolm had never yat recơgnized the right of Willian. Rufus to the throne

Ecniand. oi Engiand, and therefore refufed io treat with him as a fovercign prince; but offered to enter into a negnciation with bis brother liobert, fumamed Curt-infe. from the thortuefs of his legs 'The twer puinces accordingly met; and Makoln, having thown Rohert the difpofition of his army, oflered to chi off his brother Willian, and to pay to kim the homage he had been accuftomed to pay to the Congueror for his Eng. lifh dominions. But Robert gencrouny anfiwered, tha* he lad refigned to Rufus his right of primogeniture in Engiand : and that he had cren become one of Witliam's fuhbects, therely accepting of an Englith chate. An interview with william then followed ; in which it was agreed that the king of England fionid reftore to Malcolm all his fonthern poffefione, for which he fhould pay the fame homage he hall been accuflomed to do to the Conqueror ; that he fhould reflore to Malcolm 12 difputed manors, and give him likecwife 12 merks of gold yearly, befides refloring Edjar to ail his Enclibl efates.
This treaty was concluded in Lothian, according to the Englifo hiforians; but at Lecels in Yorithire, accordirg to the Scots. However, the Englith monawh looked upon the terms to be fo wory inhonourable, that he refulved not to fulfil then. Sion after his-lieparture Edgar and Robert hevan to profo him tur tultil his engapements; but recziving only crative anfuers, they paffed owir into Nommandy: After their depaiture, William applied himefelf to the fortiacation of this northetn boundanies, efpecially Carlife, which had been deltroyed by the Danes 200 years before. - A.S this place lay within the feodal curnisions of Madeolhn, he complained of William's proceeding as a breach of the late treaty ; and foon after reparied to the Englith count at Gloucetter, that he mithe have a pelferal interview with the king of England, and obtain redrefs. On his arrival, William refuled him admittance to his prefence, without paying him homage. Malcon offered this in the fame nanner as had been done by his predeceffore, that is, on the confines of the two king. doms; but this being rejected by William, Maleolif returned to Scotland in a rage, and prepared again for wat.

The firt of Malcoin's military operations now proved fatal to him ; but the circumitances of his death are, rarionfly related. Aceording to the Sento lifiorian i; Maicoln laving laid fiege to Alowick, and reduced the place to fuch ftraits, that a kuight came out of the cafle, having the heys on the point of a fpeart, aid gre- tending that lie defigned to lay them at Malcolmistect: fut inftead of this, he ran hin through the eye with the fpear, as foon as he came within reach: They add, that prise: Edward, the king's eldef foil, was mortally wounded in attempting to revenge bis father's death. The Englith hiftorians, on the other hand, contenc', that the Scots were furprifed in their camp, their amny entitely defeaten!, and their king killed. On this occation the Scots hiforians alfo inform us, that the tamily of liercy received its name; the knight who killed the Scots king having been furnaned Pierce-eyy. from the manaer in which be gave that monareh the fatal ftroke. Cueen Mlargazer, who was at that time lying ill in the cafle of Edinburgh, died four days after ber hufoand.

Atter the death of Maicoim Canmore, which fior-
pened in the -3 :one , the thrme was ufurped by ins brother Danald Bane; who, rotwithtanding the great sirtues and ciurious atchevements of the late kines, had been at the heal of a llrong party during the whole of his liruther'a rign. The nifurpir, giving way to the Dondit harbarous prejudees of him!elf and his countrymer, ex- batue. pellece out of the kingdom all the forcigness whom Makcohn hat introdaced, and abliged them to take refizge in England. Edgar himft! hat long retided at the liaglifh comt. where le was in high reputation: and, by his interelt there, found means :o tefcue his nephess roting lidgar, the king of Scotland's eldeth Ion, out of the hands of the ufurper Donald lane. The favour he thowal to him, however, produced an accufation again? himfelf, as it he deligned to adupt youns Edgar as his fon, and fit hinn up as a pretedder to the Erglith threne. 'I'his accufation was preferred by an Englifnman whofe alame was Orgar; bit, is no legal proots of the gnit could be obtained, the culton: of the times renciered a fiagle combat between the pa:ties unavaidable. Orgar was one of the Arongelt and noft ac- A invie tive men in the ning dons but the age and infimaties c nbato of Edgar allowed him to be defended by another. For a long time none could be fourd who would crater the lifts with this champion ; but at latt ore Godwin of Winchelter, whole family had bren under obligations to Edsar or his anceitiors, offered to defend his canfe. Orgar was evercome and killed: and, when dyitg, confeffed the taltehood of his acculation. "Ihe conque-" rer obtained all the lands of his adseifary, and Wilhan lived ever afterwatds on terms of the trictet frienthin: with Edgar.
'lhis combat, trifing as it may feem to us, produced fery coniderable cffects. The party of Edyar and his brother's (who had likewife taken refuge at the Englith court) ievived in Scotland, to fuch a degree, that IOntald was ohliged to call in the Dancs and Nor:wegians to his affitance. In order to encage them Donald more effertually to his intereft, the uburper yielded univerlo up to them the O:kney and Shetland illands; but when the Orker his new allies cane to his affifance, they behared in and cherfuch a manner as to become more intolerable to the the Scots than ever the Englih had been. 'This difcon-Daneso tent wasigualy inereafed when it was found that Wil liam defigned to place on the throne of Scotland a natural fon of the late Malcolm, named Dunian, who had ferved ia the Englith amies with great reputation. Dónalì attenpted to maintain himedi on the throne by the affitance of his Norwegian allies: but, being abandoned by the Scots, he was obliged to lly to the ines, ix order to rate anore forces: and in the mean time Duncan was cruwncu at Senne with the ufual ioIemaity.

The Scots were now greatly ditirefied by two ufurpers who contenदed for the kingdom, each of them supported by a toreig army. One ot them, however, was forn dipatched. Malpedir, thane of Mearns, furprifed Duncan in the cattle of Mentieth, and killed him; alter which he replaced Donald on the throne. The affection of the Scots, howerer, was hy this time entirely alienated from Donald, and a manifelt intention of calling in' young Ligar was fown. 'To prevent this, Donald cfered the young prinec all that part of Scotland which lay to the louthwand of the lorth ; but the tems: were rejected, and the meffensers who broughe nifhment, in which he died fone time after. allow to have been a title denotins independency.
brometit tisen were put to deatil as trditore. The king of England aifo, dreacing the neiphbourhood w the Norwenians, interpofed in young Edpar's lavour, and gave Atheling, the command of an army in crder to reftare lis nephew. Donald prepared to oppofe his enemies with all the forces he could raife; but was deferted by the Scots, and obliged to flee : his enemies purfued him fo ciofely, that he was foon tzken; and being brought lefore Edzar, he ordered his eyes to be put ont, condemnine him at the farne time to perpe:ual ba-

The hiltorians of thefe times inform us, tha: this revolution was owing to the interpolition of S: Cuthbert, who appeared to Edgar, informing him tha: he fhould frove victorious, provided he repaired rutat day to his church, and received his banncr from the lands of the canons; which ine accordingly did, an 1 prosed cver af. ierwards a moft gratcful votary to his patron. During his reizn a ftrick iriendfhip fubfifted between the courts of England and Scotland; owing io :hc marriage of Henry I. of England with the Princers Matilda, filter to Edrgar. Tiis has given occafion to the Engiif hiforians to affert that Edgar held the kingdom of Sco:land as a fendatory of Henry ; and to this purpofe have forred certain writings, by which Edgar acknowledges "That he held the kingdom of Seotland by gift from his Lord William king of England; and with conient of his raid lord, he gives to Alnurhty Gon, and the church of Durham, and to the glorious hifhep of \(S t\) Cuthbert, and to bibop William, and to the monks of Durham, and their fucceffors, the manfions of Berwick and Coldingham, with feveral other lands poffeffed by his father Malcolm : and this charter is granted in the prefence of bifhop William, and Tursot the prior; and confirmed by the croffes of Edgar his brother, and other noblemen." But that thefe writings are forged, appears from the non-exiftence of the original charter, and from their being relaied in guite a diferent manner by fone other authors.--For the fame purpole a feal has been forged of Edrar fitting on horfeback, with a fword in his right-hand, and a field on his le't arm, within a borler of France. But this lan circumflance is a fufficient proof of the forgery; fince, in the farae repofitory in which this feal is kept, there are fise chatters of the farne Edgar, which are undoubtedly fcuuine: and on the feals belonging to them he is reprefented fitting on two fwords placed acrofs, with a fceptre in one hand, a fword in the other, a royal diadem on his head, with this infcription round it, Scotorum Basileus, which the bet Englifh antiquaries

After a reign of nine years, Edoar died at Dundee, in the year 1107 ; and was fucceeded by his brother Alexander I. furnamed the Fierce from the impetuofity of his temper. On his ecceftion to the throne, howeser, the Scots were fo jgnorant of this true character, on account of his appearance of piety and devotion, that the northern parts of the kingdom were foon filsed with ravages and bloodmed, by seafoa of the wars of the chieftains with each other. Alexander immediately raifed an army, and marching into Moray and Kofs-hire, attacked the infurgents feparately; and having fubdued them all, he putgreat rumbers of them to death. He then fet himself to :educe the exorbitant power of the nobles, and to deliver the common pocic
from the oppeffion und which they groanec. it renar's able inflance of this appeared un his return from
the expedition jut now mentioned. In paffing throued the expedition jut now mentioned. In pafting through the liearns, lee met with a widow, who complained that lier luuband and fon had been put to death by the yound earl their fuperior. Alexander immediately alighted from his horle, and fivore that he would not remount him till he had inquired into the julice of the complaint; and, finding it to be trie, the offender was hanged on the fpot. Thefe vigorous penceedings prevented all attempts at open rebellion; but produced many confpiracies among the profligate part his private fabjects, who had been acculomed to live under a more remifs guvernment. The moft remarkable of thefe took place whik the king was engaged in buildins the eatle of Baledgar, fo called in memory of his brother Edgar, who had laid the foundation fose. It was \(f:-\) tuated in the Carfe of Gowrie, which, we are told, hac formerly belonged to Dunald Bane, but afterwards came to the crown, either by donation or forfcituse. The confpirators briled one of the king's chamberlains t, introduce them at night iato the royal bed-chamber: but Alexander, alamed at the noife, drew his fword, and killed lix of them ; after which, by the help of a knight named Alexander Curron, he efcaped the dan jer, by fecing into Fife. The confpirators chiefly refided in the Meams, to which Alexander once more repaired at the head of an army; ont the rebels retreated northward, and croffed the Spey. The king purfued them acrofs that river, defeated them, and brought to jufticy all that fell into his hands. In this oattle, Carren difinguifhed himferf fo eminently, that he obtained the name of Skrimgeour or Skrimzeour; which indeed is no other than the Errliीh word \({ }_{k}\) rmiger or forbeer.
'The next remarkable tranfaction of A lexander's reizn, His explnite as recorced by the Engliih hiftorians, was his journey in England. into England, where he paid a vift to Henty I. whom he found engaged in a war with the Wrlfh. The occafion of it was this: Henry had planted a culony of Flemings on the borders of Waies, in order to keep that turbulent people in awe, as well as to introduce into his kindom the manua?ures for which the Flemings were famous. The Weifh, jealous of this grow. ing colony, isvaded England: where they defeated the earl of Chetter and Gilbert Strongbow, the two mot powerful of the Englifh fubjects. Alexander, in viriue of the reaity which he had fwom fo: his Englifh fofferfous, readily agreed to lead an army into Wales. There he defeated one of the chieftaios, ard reduced him to great ftrais; ; but could not prevent him from efcaping to Griffich prince of North Wales, with whom he was clorely allied. Henry alfo marched azainit the enemy. but with much wote fuecefs in the field than Allexan. der ; for he loft iwo-thircts of his ammp, with almoll his whole baggare, by fatigue, fasoine, ant the attacks of the Welf. This kis, Loweser, fe made up in fome meafure by biz policy; for havisy found means to raile a jealouly betseen the two Wrelh chiefs, he induced them to conclude a peace, but not without rettoring all his lands to the one, and payines a confikerable fum of money to the other. Alexancier died in :124, after a reign of feventeen years; and was busied at Dunfermine.

This prince, dying a bachelor, was fixceecied by histisine favig. younger brothcr Dacid; whu interered is the aficirs uxh the 0 Encl.

Scotiand. of England, and took part with the emprefs Maud in the civil war the carried on with Stephen. In II \(3^{6}\), David met his antagonift at Durham; but as neither party cared to venture an engarement, a negociation took place, and a treaty was concluded. This, however, was obferved but for a fhort time; for, in the following year, David again invaded England, on fome frivolous pretences. He defeated Stephen at Roxburgh ; and forsed him to retreat precipitately, after loling one lialf of his army. Next year he renewed his invation ; and, though he limfelf was a man of great mildnefs and thumanity, he fuffered his troops to commit fuch outrages, as firmly united the Englifh in oppofition to him. His grand-nephew William cut in pieces the vanguard of the Englifh arnyy at Clithero; after which he ravaged the country with fuch cruelty, that the inhabitants became exafperated beyond meafure againit him. New affociations were entered into againtt the Scots; and the Englifh army recei ving great reinforcements from the mous ftandard was produced. The body of this ftandard was a kind of box which moved upon wheels, from which arofe the malt of a fhip furmounted by a filver crofs, and round it were hung the banners of St Peter, St John de Beverly, and St Wilfred. Standards of this kind were common at that time on the continent of Europe; and fo great confidence had the Eng. lifh in this flandard, that they now thought themfelves invincible. They had, however, a much more folid :ground of confidence, as being much better armed than their antagonifts. The armies met at a place called Culton Moor. The firt line of the Scots army was compofed of the inhabitants of Galloway, Carric, Kyle, Cunningham, and Renfrew. Thefe by fome hiftorians are called Pits, and are faid to have had a prince of their own, who was a feudatory to David. The fecond line confifted of the Lothian men, by which we are to underfland the king's fubjeets in England as well as the fouth of Scotland, together with the Englifh and Normans of Maud's party. The third line was formed of the clans under their different chieftains; but who were fubject to no regular command, and were always impatient to return to their own country when they had acquired any booty. The Englifh foldiers having ranged themielves round their ftandard, difmounted from their horfes, in order to avoid the long lances which the firf line of the Scots army carried. Their front-line was intermixed with archers; and a body of cavalry, ready for purfuit, hovered at fome diftance. The Picts, befides their lances, made ufe of targets; but, when the Englifh clofed with them, they were foon difordered and driven back upon the centre, where David commanded in perfon. His fon made a gallant refiftance, but was at laft forced to yield: the laft line feems never to have been engaged. David, feeing the victory decided againt him, ordered fome of his men to fave themfelves by throwing away their badges, which it feems Maud's party had worn, and mingling with the Englifh; after which he himfelf, with his fhattered ferces, retreated towards Carline. The Eng-
63 lifh hiftorians fay, that in this battle the Scots were toThe Scots tally defeated, with the lof \({ }^{2}\) of 10,000 men; but this entirely de-feems not to be the cafe, as the Englifh did not purfue, feated. and the Scots were in a condition for carrying on the
war next year. However, there were now no great ex-

\section*{\(3^{6} 1\) S C O}
ploits performed on either fide; and a peace was con. Sentane cluded, by which Henry prince of Scotland was put in pefleffion of Huntingdon and Northumberland, and took an oath of fealty to Stephen. David continued faithful to his niece the emprefs as lons as he lived; and died at Carlife in the jear 1153 , after a glorious reign of fomewhat more than 29 years.

David was fucceeded by his grandfon Malcolm IV. furnamed the Maiden, on account of his continence. He appears to have been a weak and fupertitious prince, and died of a depreffion of fpirits in the year 1165. He was fucceeded by his bruther William I. Willain who immediately entered into a war with Henry II. of engages i England, on account of the earldom of Northumber Hary wi land, which had been given up by Malcolm; but Hen- Henry Englu ry, finding his affairs in a very embarraffed fituation, confented to yield up this county, on William's paying him homage, 1 ather than continuc the miferies of war. In 1172, he attempted to avail himfelf of the unnatural war which Henry's fons carried on againft their father, and invaded England. He divided his army into three columns: the firft of which laid fiege to Carlife; the fecond he himfelf led into Northumberland ; and the king's brother, David, advanced with the third into Leicefterfhire. William reduced the caftles of Burgh, Appleby, Warkworth, and Garby ; and then joined that divifion of his army which was befieging Carline. The place was already reduced to fuch ftraits, that the governor had agreed to furrender it by a certain day, provided it was not relieved before that time: on which the king, leaving fome troops to continue the fiege, invefted a caftle with fome of the forces he had under his command, at the fame time fending aftrong reinforcement to his brother David; by swhich means he himfelf was left with a very fmall army, when he received intelligence that a ftrong body of Englifh under Robert de Stuteville and his fon were advancing to furprife him.-William, fenfible of his inability to refift them, retired to Alnwick, to which he inftantly laid fiege; but in the mean time acted in fuch a carelefs and unthinking manner, that his enemies actually effected their defigns. Having dreffed a party of their foldiers in Scots habits, they took the king himfelf prifoner, and carried him, with his feet tied under the belly of a horfe, to Richmond Caftle. He was then 65 carried in chains before Henry to Northampton, and prifuner b erdered to be traniported to the caftle of Falaife in the Englif Normandy, where he was fhut up with other fate pri- and obline foners. Soon after this an accommodation took place mage for between Henry and his fons, and the prifoners on both his kingfides were fet at liberty, William only excepted, whodom. bore his confinement with great impatience. Of this Henry took the advantage, to make him pay homage for the whole kingdom of Scotland, and acknowledge that he held it only as a feu of the crown of England ; and, as a fecurity, he was obliged to deliver into the hands of Henry all the principal forts in Scotland, viz. the cafles of Roxburgh, Berwick, Jedburgh, Edinburgh, and Stirling; William at the fame time agreeing to pay the Englifh garrifons which were put into thefe caftles. David, the king's brother, with 20 barons, who were prefent at the figning of this fhameful convention, were put into the hands of Henry as hoftages fol William's good faith; after which the king was fet at liberty, and returned to Scotland.

Sedzes The affairs of Scotland were new in the greatelt con-
fufion. The people of Gallowey, at the head of whom where two noblemen or princes called Othred and Gilbert, -had taken the opportunity of afferting their independency on the crown of Scetland; and, laving expelled all the Scots officers out of the country, they demiolithed all the forts which William had ereeted in their conntry, and put to death all the foreignere. Jut in the nican time a quarrel eniuiag between the two chiefs, Othred was murdered by Gilbert, who inmediately ap plied to Henry for protection.

Henry, in order to give all pofible fanction to the convention betwist him and William, fummoned him to oneet him and his fon at York. William obered the fummons, and along with him appeared all the great nubility and landholders; who confirmed the convention of Falaife, fwore tealiy to Henry, and put themfelves and their conntry under his protection. In the mean time, Gilbert, who was at the head of the rebels in Gailloway, had offered to put himfeff and his people under the protection of the king of Englaad, and to pay to Henry 2000 merks of filver yearly, with 500 cows and as many hozs, be way of tribute: however, Henry, that he might oblipe his new feudatory Whlliem, retufed to have any concern in the affair. On this, William ordered his general Gilchrilt to march a atingt him; which he did with fuch fuccefs, that Gilbirt was entirely eefeated, and Galloway agaiu reduced under the comition of Scotlard. Very foon after this vietory, Gilchritt fell under the king's difleafure on to Wrilliam; and on fufpicion, or proof, of her incontinence, put her to death at a village called Maynes, near Dundec. The kin \(\mathrm{p}^{\text {being highly difpleafed at }}\) fuch a grois affiont to himfelf, fummoned Gilchr:at to take his trial for the murder : but as the general did not choofe to make his appearance, his eitates were confifcated, his caftes demolifhed, and he himfelf banifled. He took refuge in Encland ; but as it had been aoreed in the convention between William and Henry that the one fhould not harbour the traiterous fubjects of the other, Gilchritt was ferced to return to Scotland with his two funs. There they were expufed to all the miferies of indigesce, and in perpetual fear of being difcovered, fo that they were obliged to fkulk from place to place. William, on his return from an expedition againit an ufurper whom he had defeated, happened to obferve three ftrangers, who, though difguifed like ruftics, appeared by their noble mien to be above the vulgar rank. William, who firlt difcovered them, was confirmed in this apprehenfion, by feeing them trike out of the high road, and endeavour to avoid notice. He ordered them to be feized and brought before him. The oldett, who was Gilchrift himfelt, fell upon his knees before him, and gave fuch a detailof his misfortunes as drew tears from the eyes of all prefent; and the king reftored him to his former honours and eftates. From the family of this Gilchrift that of the

The Scots continued to be in fubjection to the Englifh until the acceffion of Richard I. This monarch being a man of romantic valour, zealouny undertook en expectition iato the Holy Land againft the Turks, according to the fuperfition of the times. That he Vol. XVI. Part II.
mirhth fecure the quiet of his duminions in his abfence, Seotaon he determined to make the king of Scotland his friend; and for this purpofe, histhought rothing could be more acceptable than relealing him aud his Jubjeets from that Wit'janrefubjection which even the Eaglith themfelves conlidered leafed from as forced and unjut. However, be cetermined not to bu, R himage lofe this opportunity of fupplying himfet with a fumchard 10 of money, which could not but be abfolutcty neceflary in fuch an expenfive and dangerous undertakin r. He therefore made Williar pay lin 10,000 merks for this releafe: after which he entered into a convention, which is fill extant ; and in this he acknowledges, that " all the conventions and acts of fubmifion from William to the crown of England had been extorted from him by unprecedented writings and dureffe." This tranfaction happened ia the year 118 g .

The generofity of Richard met with a grateful return from William; for when Richard was imprifoned by the emperor of Germany in his return from the HoIy Land, the king or Scotland fent an army to aflit his regency aginlt his rebellious brother John, who had wickedly ufuroed the throne of England. Fur this Richard owned his obligation in the higheft degree; but IVilliann afterwards made this an handle for fuch higlı dennands as coald not be conrlied with. Neverthelefs, the two monarchs continued in friendikip as long as Richard lived. Some differences happened with King Iohn about the poffelfion of Northumberland and other northern counties: but thefe were all finally adjuted to the mutual fatisfaction of both parties; and William continued a faithfilally of the Englifn monarch till his death, which happened in the year 1214 , atter a reign of \(\$ 9\) years.

William was fucceeded by his fon Alexander II. a Alexan. youth of 16. He revived hia clain to Northumber-der II. land and the other northern connties of Eagland; but John, fuppofing that he had now thoronglily fubdued the Englith, not only refufed to corfider the demands of Alexander, but made preparations for invading Scotland. John had given all the country between Scotiand and the river Tees to Hugh de Baliol and another nobleman, upon condition of their defending it againft war with the Scots. Alexander fell upon Northumberland, which John king he eafly reduced, while John invaded Scotland. Alex. of Englais? ander retired to Melros, in order to defend his orn country; upon which John burnt the towns of Wark, Alnwick, and Morpeth, and took the Atrong calles of Roxburgh and Berwick. He next plundered the abbey of Coldingham, reduced Dunbar and Haddington, ravaging the country as he paffed along. His next operation was directed againlt Edinburgh; but biing oppofed by Alexander at the head of an arny, he precipitately marched back. Alexander did not fail to purfue ; and John, to cover his retreat, bumat the towne of Berwick and Coldinghan. In this retreat the king of England himfelf fet his men an example of barbarity; by fetting fire every morning to the houfe in which he had lodged the preceding night. In fhort, fuch defolation did John fpread all around him, that Alexander found it impoffible to continue his purfuit; for which reafon he marched weftward, and invaded England by the way of Carlifle. This place he took and fortified; after which he marched fouth as far as Richmond, receiving homage from all the great barons as he went 5 A along.

\section*{S C O} along. At Richmond he was again ftopped by John's ravages, and obliged to return though Weftmoreland to his own dominions.

When the Englifi barons foand it neecflary to put themfelves under the protection of Louis, fon to the kirig of France, that prince, among o:her aets of fo .reignty, fummoned Alexander to do him homage; but the latter being then engaged in the fiege of Carline, which had fallen iuto the hands of King John, he could not immediately attend. In a fhort time Alexander found himfelf obliged to abandon this enterprife: afier which he laid fiege to Barnard caftle; but being baffled here alfo, marehed fouthwards through the whole kinedom of England, and met Louis at London or Dover, where the prince confirmed to him the rights tn Northumberland, Cumberland, and Weftmoreland. He continued a faitiful ally to Louis and the barons in their wars with John; and, in 1216, brought a freth army to their affiftance, when their affairs were almoft defperate. This once more turned the fcale againtt John; but he foon after dyins, the Englih eafily became reconciled to the government of Henry III. and the party of Louis dwindled every day, till at lat the was obhiged to drop all thoughts of being king of England.

As long as Louis continued in England, Alesander proved faithful to his intereft; but, in 1217, he was on fuch good ternis with Henry as to demand his eldelt tifter, the Prineefs Joan, for a wife. His requett was granted, and in I221 he efpoufed the princefs; while his eldeft fifter Margery was married to Huhert de Burgh julticiary of England, and his fecond lifter to Gilbert earl Marfhal, the two greatef fubjects in England.

As long as the queen of Scolland lived, a perfect Harmony fubfifted between the Scots and Englifh: but in 1239 Queen Joan died without children; and Alexander foon after married Mary, the daughter of Egelrand de Coucy, a young and beautiful French lady, by whom he had a fon named Altaenter, in 12:1. From this time a coolnefs took place between the two courts, and many differences arofe; but no hoftilities were commenced on either fide during the lifetime of Alexander, who died in 1249 in the 35 th year of his reign.

Inmediately after the death of his father, Alexander III. took poffeffion of the throge. He is the furt of the Scotskints of whofe coronation we have any particular aecount. We are told, that the ceremony was performed by the bifhop of St Andrew's, who girded the king with a military belt, probably as an emblem of his temporal juridiction. He then explained in Latin, and afterwards in Gaelic, the laws and oaths relating to the king; who agreed to and received them all with great appearance of joy, as he alfo did the benediction'and ceremony of coronation from the fame prelate. After the ceremony was performed, a Highlander, probably one of thofe who went under the denomination of Sannachies, repeated on his knees before the throne, in his own language, the genealogy of Alexander and his anceftors, up to the firt king of
now thought it a proper opportunity to caufe him do bomage for the thole kingdom of Scotland. But A.
lexander, notwith fanding his youth, replied with sreat
fenfe and modetty, that his bufinefs in England was maYenfe and modefty, that his bufinefs in England was ma-
trimony; that he had come thither under Henry's proteetion and invitation; and that he was no way prepared to anfwer fuch a difficult queftion.

Henry feems to have heen encourayed to make this attempt by the diftracted fate of the scots affairs at that time; for, during the minority of the king, the nobility threw every thing into confufion by their diffenfions with one another. The family of Cummin were now become exceedingly powerful; and Alexander II. is blamed by buchanan for allowing them to obtain fuch an exorbitant degree of power, by which they were enabled almofl to thake the foundation of government. Notwithfanding the king's refufal to fubmit to the homage required of hiin, they imazined that Henry's influence was now too great ; and fearing bad confequences to themfelves, they withdrew from York, leaving Heury in full poffeffion of his fon-in-law's perfon. Hienry, however, to fhow that he deferved all the confidence which could be repofed in him, publicly declared, that he dropped all claim of fuperiority with regard to the crown of Scotland, and that he would ever afterwards act as the father and guardian of his foninlaw ; confirming his affurances by a charter. Yet when Alexander returned to Scotland, be found they had made a ftrong party againt his Jenglifh conuections. They now exclaimed, that Scotland was no better than a province of England; and having gained almoft all the nobility over to this opinion, they kept the king with his and queen as two ttate-prifoners in the caftle of Edin- queen br burgh. Heniy had feeret intelligence of theic pro- his rebeliticeedings; and his queen privately fent a phylician whom fhe could truf, to inquire into her daughter's fituation. Having found means of being admitted into the young queen's prefence, fhe trave him a molt lamentable accourt of her fituation. She faid, that the place of their continement was very unwholefome, in confequence of which their health was in inminent danger ; and that they had no concern in the affairs of grovernment. Hiforians do not inform us by what means :hey were reduced to this difmal fituation ; only in general, that the Cummins ufurped the whole power of the flate. Henry did not well know how to act. If he proceeded at once to violent mealures, he was afraid of the lives. of his daughter and fou-in.law; and, on the other hand. by a more cautious conduct, he left them expofed to the wieked attempts of thofe who kept them in thraldom, fome of whom, he very well knew, had defigus on the erown itfelf. By advice of the Scots royalifts, among whom were the earls of Dunbar, Fife, Stratherne, Carrie, and Robert de Bruce, Henry affembled his military tenants at York, from whence he himfelf advaneed to Newcalle, where he publilhed a manifefto, difclaiming all defigns againft the peace or independency of Scotland ; declaring, that the forees which had been collected at York were defigned to maintain buth; and and that all he meant was to have an interview with the king and queen upon the borders. From Neweaftlehe proceeded to Wark, where he privately difpatched: the Earl of Glocefter, with his favourite John Manfel. and a train of trufty followers, to gain admifion inte the caftle of Edinburgh, which was then held by John Balicl and Robert de Rofs, noblemen of great infiuence both in England and Scotland. . The Earl and Manfe:

\section*{S C O}
\(\underbrace{\text { Stotland. }}\) gained admittance into the caftle in difguife, on pretence of their being tenants to Baliol and Rofs; and their followers obtained accefs on the fame account, without any fufpicion, till they were fufficiently numerous to have maitered the garrifon, had they met with any refiftance. The queen immediately informed them of the thraldom and tyranny in which the lad been kept; and among other things declared, that fhe was flill a virgin, as her jailors obliged her to keep feparate from her hufoand. The Englifh, being mafters of the cafle, ordered a bed to be prepared that very night for the king and queen; and Henry, hearing of the fuccefs of his party, fent a fafe-conduet for the royal pair to meet him at Alnwick. Robert de Rofs was furnmoned by Henry to anfwer for his conduct; but threw. ing himfelf at the king's feet, he was punifhed only by the feequetration of his eitate, as was John Baliol by a heasy fine, which the king of England referved entirely to his own ufe.

Alexander and his queen were attended to Alnwick by the heads of their party; and when they arrived, it was agreed that Henry fhould act as his fon-in-law's guardian; in confequence of which, feveral regulations were made in order to fupprefs the ezobbitant power of the Cummins. That ainbitious family, however, were all this time privately ftrengthening their party in Scotland, though they outwardly appeared fatisfied with the arransements which had been made. This rendered Alexander fecure ; fo that, being off his guard, he was furprifed when aftep in the caitle of Kinrofs by the earl of Menteith, who carried him to Stirling. The Cummins were joined in this treafon by Sir Hugh de Aberncthy, Sir David Lochose, and Sir Hugh de Barclay ; and, in the mean time, the whole nation was thrown into the utmof confulion. The great feal was forcibly taken from Robert Stuterville, fubftitute to the chancellor the bithop of Dunkeld; the eltates of the soyalifts were plundered; and even the churches were not fpared. 'The king at laft was delivered by the death of the ear! of IMenteith, who is faid to have been poiloned by his wife, in order to gratity her paftora for a young Englith gentleman named john Ruffo. This charge, however, was never proicd; but it is certain that the earl died at a juncture very critical for Scotland, and that his death ditconcerted all the fehemes of his 1 arty, which never afterwards could make head -againt the poyalits.

Alexander being thus refored to the exercife of regal authority, acted with 1 reat wiidom and moderation. He pardoned the Cummins and their adherents, upon their lubmitting to his authority a after which, he applied himfelt to the resulation of his other affairs : but a form was now ready to beeak nipon him from another quarter. We have atready feen, that the ufurper Donati liane, brother to Malcom Canmore, fad engaged to deliver up the illes of Orkney and Shetland to the king of Norway, for affilling him in making good his pretentions to the crown ut Scotland. Haquit, the kith of Norway, at this time alleged, that thefe endagements extended to the delivering up the illands of Bute, Arrar, and others in the Frith of Clyde, as belonging to the Ebude or Weftern ifles; and as Alexander did not think proper to comply with thefe demands, the Norwegian monarch appeared with a flect of \(t 65\) fait, having on board 20,000 troops,

739 J S C O
who landed and took the cafte of Air. Alesander im. Soopand. mediately difpatched ambatiadors to enter into a treaty with Haquia; but the latter, flufhed with fuccefs, would hearken to no terms. He made himfelf matter of the ifies of Bute and Arran; after which he paffed over to Cunningham. Alexander, prepared to oppore him, divided his arny into three bodies. The firit was commanded by Alexander high feward of Scotland (the great grandfather of Robert II), and confited of the Argyle, Athol, Lenox, and Galloway men. The fecond was compoled of the inhabitants of Lothian, Fife, Merfe, Berwick, and Stirling, under the command of Patrick earl of Dunbar. The king himfelf led the centre, which conlited of the inhabitants of Perth. fhire, Angus, Mearns, and the northern counties. Haquin, who was an excellent commander, difpofed \({ }_{76}\) his men in order of battle, and the engagement began Defea's the at a place called Largs. Both parties fought with Norwegreat refolution ; but at laft the Norwegians were de- gisas. feated with dreadful naughter, no fewer than 16,005 of them being killed on the fpot. The remainder efeaped to their thips; which were fo completely wreck. ed the day after, that Haquin could fearce find a veffed to carry bim with a fcw friends to Orkney, where he foon after died of grief.

In confequence of this vietory, Ouren or John king of the inland of Man fubmitted to Alexander; and his example was followed by feveral other princes of the iflands belonging to the Norwegians. Haquin's fon, Magnus, a wife and learned prince, foon after arrived in Scctland with frefh reinforcements, and propofed a treaty: but Alexander, inftead of liftening to an accommodation, fent the eatls of Buchan and Murray, with Allen the elamberlain, and a confederable body of men, to the weftern iflands, where they put to the fword fome of the inhabitants, and hanged their chiefs for having encouraged the Norwe jian invacion. In the mean time, Magnus returned to Nomway ; where a treaty was at lalt concluded between him and Alexander. By this Maguus renounced all right to the contefted iflands; Alexander at the fame tine confenting to pay him 1002 neerks of lilver in the fpace of two zerainselfe jears, and soo ycarly ever after, as an acknowledse- in net and if ment for thele iflands. To cement the friendhip inore Orkney' firmly, a marriage was concluded betueen Margaret \& \& the daughter of Alexander, and Eric the fon and heir of Magnus, who was alfo a chidd; and, fome years af. ter, when the parties were of proper age, the matriage was confummated.

From this time to the accefforn of Edward I. of Ensland, we find nothing remarkable in the hiftory of Scoiland. That prince, however, proved a more cruel enemy to this country than it had ever expericneed. Alexander was pretent at the coronation of Edward, who was then newly arrived from the Holy Land, where he had been in a crulade. Soon after this \(A\). lexander paid him homage for his Englih eftates; partieularly for the lands and loidthip of Pentith and others, which Henry had given him alung with lis daughter. He prosed an excellent ally to Edward in his wais againtt the French; and the latter pafed a charter, by which he acknowledged that the fenves of the king of Scotland in thofe wars were not in confequence of his holding lands in England, but as an ally to his crown, Eyen at this time, howewer, Edwas?

Scotland. had fomned a defign on the liberties of that kingdom; for in the charter juif mentioned, he inferted a falvo, acknowledging the fupciosity, by which he referved his right to the homage of the kingdom of Scotland, when it fhould be clained by him or lhis lucirs. The bifhop of Norwich fuggetted this fatvo: and this was the reafon why Alexander would not perform the ho- mage in perfon, buc left it to be performed by Rubert Truce cail of Carric ; Alexander ftanding by, and exprefsly declaring, that it was ouly paid for the lands he held in England. - No acts of hoftility, lowever, took place during the lifetime of Alexander, who was killed on the 19th of March 1285, in the 4 th year of his age, by his horfc rufhing down the black rock near Thinghorn as he was hunting.

Boilh before and after the death of Alexander, the great fubjects of Scotland feemed to have been fenfible of Edward's anbitious defigns. On the marriare of Margaret wih Eric prince of Norway, the tates of Scotland pafted an act obliging therifelves to receive her and her heirs as queen and fovereigns of Scotland. Edward at that time was in no condition to oppofe this meafure, in which the Scots were unanimons; and therefore contented himfelf with forming factions among the leading men of the country. Under pretence of sefuming the crofs, he renewed his intrigues at the court of Rome, and demanded leave from the pupe to collect the tenths in Scotland; but his holinefs replicd, that lie could make no fuch grant without the confent of the government of Scotland. On the death of IVargaret queen of Norway, her daughter, in confequence of the act above-mentioned, was recognized by the flates as queen of Scotland. As the was then but two years old, they came to a refolution of excluding from all fhare in the government, not only Edward I. but their queen's father ; and they accordingly eftablithed a regency from among their own number, confilling of the fix following noblcmen; viz. Robert Wihart bifhop of Glafgow, Sir James Cummin of Badenoch, fenior, James lord high Aleward of Scotland, who were to have the fuperintendency of all that part of Scotland whicl lay to the louth of the Forth; William Frafer bihhop of St Andrews, Duncan M‘Duff earl of Fife, and Alexander Cummin earl of Buchan, who were to have the direction of all affairs to the north of the fame river.-- With thefe arrangements Eric was exceedingly difpleafed, as confidering himfelf as the only richtfful guardian of his own child. He therefore cultivated a good correfpondence with Edward, from whom he had received conliderable pecuniary favours; and pereeiving that the ftates of Scotland were unanimous in excluding all foreigncrs from the management of their concerns, he fell in with the views of the king of Eng. land, and named commiffioners to treat with thofe of Edward upon the Scots affairs. Thefe negociations terminated in a treaty of marriage between the queen of Scotland and Edward prince of Wales, young as they bath were. This alarmed the flates of Scotland, who refolved not to fuffer their queen to be difpofed of without their confent. It was thesefore agreed by the commiffioners on both fides, to acquaint them with the refult of their conferences, and to demand that a deputation fhould be fent up for fettling the regency of Scotland, or, in other words, for putting the foveseiga power inte the hands of the two kings. As the
two parties, however, were within the prohibited de- Scotrand grees of coufan cuinity, being firlt coufins, a difpenfation was applied for to Pope Boniface, who granted it on condition that the peers of Scotland confented to the matcl.

Though the Scots nobility were very much againt this mateh, they could not refufe their confent to it when propofed by the father and grand-uncle of their young queen. They therefore appoinied the lifhops of St Andrew's and Glafrow, with Robert Biuce lord of Annandale, and John Cummin, to attend as their deputies, but with a falvo to all the liberties and honours of the realm of Scotland; to which Edward ayrecd.. Thefe deputies met at Salifoury with thofe of England. and Norway ; and it was at lait agreed, I. That the young queen fhould be fent from Norway (fiee of all inarriagc-engagements) into England or Scotland. 2. That if the queen came to England, the fould be at liberty to repair to Scotland as foon as the diltractions of that kingdom fhould be fetted: that the fhould, on her arrival in her own dominions, be free of all natrimonial contraess; but that the Scots fhould engage not to difpofe of her in marriage without her father or Edward's confent. 3. The Scots deputies promifed te give fuch fecurity as the Norwegian commiffioners thould require, that the tranquillity of the nation hould be fettled before her arrival. 4. That the commiffioners of Scotland and Norway, joined with commif. fioners from England, fhould remove fuch regents and officers of fate in Scotland as fhould be fufpected of diliffection, and place others in their'fead. If the Scots and Norwegian commiffioners fhould difagree on that or any other head relating to the government of Scotland, the decifion was to be left to the arbitration of Englifh commiffioners.

The party of Edward was now fo frony in Scotland, that no oppofition was made to the late agreement, in a parliament held at Brechin to deliberate upon the fettlensent of the kingdom. It is uncertain whether he cominunivated in form to the Scottion parliament the pope's difpenfation for the marriage : but mott probatly he did not; as, in a letter written to him by the flates of Scotland, they mention this as a matter they heard by report. On the whole, however, they highly approved of the narriage, upon certain conditions to which Edward was previoufly to agree; but the latter, without waiting to perform any conditions, immediately fent for the young queen from NurwayThis exceedingly difpleafed Eric, who was by no meansinclined to put his daughter into the hands of a prince whofe fincerity he fufpected, and therefore fhitted of the departure of the princel's till he fhould hear farther from Scotland. Edward, alarmed at this, had again recourfe to negociation; and ten articles were at laiz drawn up, in which the Scots took all ima sinable precautions for the fafety and independency of their country. Thefe articles were ratiliied by Edward on the 28 th of Augut 1289 ; yet, cven after the affair of the marriage was fully fettled, he loft no time in procuring as ftrong a party as he could. At the head of thefe. were the bifhop of St Andrew's and John Baliol. That prelate, while he was in England, was highly careffed by Edward, from whom he had great expectations of preferment; and Baliol, having great effates in Eng-land, confidered the latter as his fovereign. The bi-. hop,

\section*{S C O}
frop, on his return to Scotland, acted as a fpy for Edward, and carried on with him a fecret correfondence, informing him of all public tranfactions. It àppears from this correfpondence, that the Scots were far frum being unanimous as to the marriage. Drace earl of A nnandale fufpested, for fome ruafon or other, that the young queen was dead; and, foon after Michaelmas 1290, affernbled a hody of forees, and was joined by the earl of Mar and Athol. Intehipence of thefe com. motions was carried to Edward by Baliol ; and the bithop of St Andrew's adviled Edward, in cale the report of the queen's death hould prove trae, to march a body of troops towards Scotland, in order to fecure fuch a fucceffor as he thought proper.

Edward, in the mean time, confented to allow ambaffadors to be fent from Scotland to bring over the young queen; previous to which, he appointed the bifhop of Durham to be lieutenant in Scotland for the queen and her future humand; and all the officers there, both civil and military, obliged themfelves to furrender their employments and fortreffes to the kind and queen (that is, to Edvard) inmediately on their arrival in Scotland. But while the molt marnisicent preparations were making for the reception of the young queen, certain intelligence of her death was received; but it is not certainly known whether this event happened before the arrival of the ambaffadors in Norway or after her departure from that country.
'The Scots were thrown into the utmoft confternation by the news of their queen's death; while, on the other hand, Edward was as well prepared as if he had known what was to happen. The ftate of Scotland at this time indeed was to the laft degree deplorable. The act of fucceffion eftablifhed by the late king had no farther operation, being determined by the death of the queen; and fince the crown was rendered hereditary, there was no precedent by which it conld be fettled. The Scots, in general, however, turned their eyes upon the pofterity of David earl of Huntingdon, brother to the two kings Malcolm the Maiden and his fucceffor Willian, both of whom died without lawful iffue. The earl had three daughters. Margaret, the eldef, was married to Allan lord of Galloway; the only iflue of which narriage was Derverguill wife to John Baliol, who had a fon of the fame name, a competitor.
for the crown. The fecond danghter, Ifabella, was S:o:bnd. married to Robert Bruce ; and their fon Robert was a candidate likewife. The third danghter, Ada, had been married to Henry Hafings, an Englifh nobienan, and predeceffer to the prefent earl of Funtingdon. John Haflings, the fun of this marriage, was a third competitor ; bitt as his claim was confeftedly the wort of the three, he only put in for a third of the kingdom, on the primeiple that lais mother was jointheir with her two filters (c). Several other clamants now farted up. Florence earl of EIolland pretended to the coown of Scotland in ri he of his great crandmother Ada, the eldell lawful fiter of William, fometime king; as did Rubert de Pynkeny, in the right alfo of his great-grandmother Marjory, fecond filler of the fame king William. Patrick Galliohtly was the fon of Henry Gallightly, a battard of William; William de Rofs was defcended of Trabel ; Patrick earl of March, of Ilda or'Ada; and William de Vefci, of Narjory; who were three natural daughters of king William. Roger de Mandeville, defeended from Aufrie, another natural daughter of Willian, alfo put in lis claim; but the right of Nicolas de Soulis, if baftardy could give a risht, was better than the former. His grandmother Marjory, the wife of sllan le Huiffier, was a natural dauthter of Alexander II. and confequently fifter to Alexander III. John Cummin lord of Badenoch derived lis claim from a more remote fource, viz. Donald Bane, who ufurped the crown abont 202 years before this time; but he was willing to refign his pretenfions in favour of John Baliol. The latter indeed had furely the beft right ; and, had the fucceffion been regulated as it is in all hereditary kiugdoms at this day, he nould undoubtedly have earried it. Buec and Hattings, however, pleaded that they were preferable, not only to John Baliol the grandchild of Margaret, but alfo to Derserguil her daurhter and his mother, for the following reafon. Derverguill and they were equally related to their grandfather earl David: fhe was indeed the daughter ot his eldeft daughter ; but fhe was a woman, they were men; and, faid they, the nale in the fame degree onght to fucceed to fovereignties, in their own nature impartible, preferable to the female.

Notwithitanding this number of candidates, how-

\section*{\(\mathrm{S} C \mathrm{O} \quad\left[\begin{array}{lll}74^{2}\end{array}\right] \quad \mathrm{S} C \mathrm{O}\)}
ficolland. ever, it was foon pereeived, that the claims of all of them might be cut off excepting two, viz. Baliol and Bruce, of whom the formcr had the preference with refpect to hereditary right, and the latter as to popnlarity. Batiol had ftrongly attached himfelf to Edward's party ; which being by far the moft powerful in Scotland, gave him a decided fuperiority over Bruce. The event was, that Edward, by his own party moft probably, though, fome fay, by the unanimous voice of the Scot's parliament, was apprinted to decide between the two competitors. It foon appeared, however, that Edward had no mind to adjudge the crown to any perfon but himfelf; for, in an affembly held at Norham on the toth of May 129 t , Brabanzon the chief juttice of England informed the meinbers, "That his matter was come thither in confideration of the ftate of the rcalm of Scotiand, which was then with-
paid by the Englifl monarchs to the crown of France Scotiane was removed from all relation to the crown of Eng. land. With regard to the homage paid by William king of Seotland to Henry II. of England, it was not denied that he performed it for the whole kingdom of Scotland : but they pleaded, that it was void of itfelf, becaufe it was extorted when William was a prifoner to Henry; and they produced Richard I.'s charters, which pronounced it to have been compulive and iniquitous.

But, however urgent thefe reafons of the Scots micrht le, Edward was by no means difpofed to examine into their merits. Inftead of this, he clofeted the feveral pretenders to the crown; and having found them all ready to comply with his meafures, he drew up the following charter of recoguition to be figned by them all.
"To all who thall hear this prefent letter.
"We Florence earl of Holland, Robert de Bruce The candi lord of Annandale, John Baliol lord of Calloway, Jolen dates Gign Haltings lord of Abergavenny, John Cummin lord of an affent. Badenoch, Patrick de Dunbar earl of March, John Vefci for his father Nicholas Soulis, and Williaun de Kofs, grceting in the Lord:
"Whereas we intend to purfue our right to the kingdom of Scotland ; and to declare, challenge, and aver she fame before hin that bath molt power, jurifdiction, and reafon to try it s and the noble prince Edward, by the grace of God king of England, \&c. having informed us, by good and lufficient realons, that to him belongs the fovereign feigniory of the fane: We therefore promife, that we will hold firm and table his act ; and that he fhall enjoy the realm to whom it Thali be adjudged before him. In witnefs whereof, we have fet our feals to this writing, made and granted at Nurlam, the Tuefday atter the Afcention, in the year of Crace s20r."

Edward then declared, by the mouth of his chancellor, that although, in the difpute which was arifen between the leveral climants, touching the fucceflion to the kingelon of scotland, he acted in quality of fovereign, in order to render jultice to whomfoever it was due; yet lie did not thereby meau to exclude himble from the heceditary right which in his own perforn he might have to that crown, and which right he intended to affert and impruve when he foould think fit: and the king himifelf repeated this protefation with his own munth in Fren:h. The candidates were then fewally called upon by the Englilh chancellor, to know whether they were willing to acknowledge Edvard's claim of fuperinity over lic cown of Scotlan!, and to fubmit to his award in difpoting of the fame; which being anfwered in the affumative, they were thea admited 10 prove their rights. But this was mere matter of form; for all the forere of England was then affembled on the borders in order to fupport the claims of Ectward, and nothing now remained but to furnifh him with a finficient pretcuce for naking ule of it. He obferved, that the Scots wese not fo unanimons as they ought to be in recognifitig his fupesiority, and that the fubmilfion, which had been figned by the candidates, was not fufficient to carry it into Elward ad exccution; for which reafon he demanded that all the mands pof forts in Scotland should be put into his poffefion, that ine firtifie he might refign them to the finceefsful candidate. places in

Though nothing could be more fhameful than a tame scotiand,

\section*{S C O}
compliarce with this latt demand of Edward, the regency of Scotland without hefitation yielded to it alfo ; for which they gave the following realons. "That whereas they (the ftates of Scotland) bad, with one affent, already granted that King Edward, as fuperior lord of Scotland, fhould give fentence as to their feveral rights and titles to the crown of Scotland, Sc. but as the faid king of England cannot pret his judgement in full execution to anfwer effectially without the poffeffion or feifin of the faid country and its cafles; we will, grant, and affent, that he, as fovereign lord thereof, to perform the things aforefaid, fhall bave Seifin of all the lands and caftles in Scotland, until right be done to the demandants, and to the guardians and community of the kingdom of Scotland, to rellore both it and its caftles, with all the royalties, dignities, franchifes, cuftoms, rights, laws, ufages, and polfefions, with their appurtenances, in the fame flate and condition they were in when he teceived thens; faving to the king of England the homage of him that Mall be king; fo as they may be reftored within two months aiter the day the rights ftall be determined and afirmed; and that the profits of the mation which fhali be received in the mean time fhall be kept in the hands of the chamberlain of Scotland that now is, and one to be joined with him by the king of Eunland; fo as the charge of the government, calles, and officers of the realni, inay be deducted. In witnefs whereof, \&c."

For thefe reafons, as it is faid, the regency put into the hands of Edward all the forts in the country. Gilbert de Umfreville alone, who had the command of the caltles of Dundee and Forfar, refufed to deliver them up, uatil he foould be indemnified by the flates, and by Edward hinfeli, from all penalties of treafon of which he might a terwards be in daiger-

But though Edward had thus got into his hands the whele power of the nation, he did not think proper to determine every thing by his own authority: Inftead of this, he appointed commiffoners, and proniled to frant letters patent declaring that fentence mould be palted in Scotland. It lad been all along forefeen that the great difpute would be between Brnce and Baliol; and though the plea of Cumenin was judged frivolous, yet he was a inan of too much infurence to be neglected, and he agreed tacitly to relign it in favour of Balin?. Edward accordingly made him the complinent of joining him with Baliul in mominating 40 commiffoners. Buce was to name 40 more; and the nanles of the \(8=\) were to be given in to Edward in three days; a'ter which the king was to add to them 24 of his own choofing. The place and time of meeting wcee left in their own option. They umanimoufly pitched upon Fierwick for the place of meeting; but as they could pot agree about the time, Edward appointed the \(2 d\) of Augut following. Soon after this, the regents refigned their comaifions to Edsard; but he returned them, with powers to act in his nume ; and he nominated the tilhop of Caithnefs to be chancellor of Scotland ; joining in the commifion with him Walter de Heracidefham an Englifman, and une of his own fecretaries. Still, bowever, he met with great difficulties. Many of his own great men, particularly the earl of Gloucefter, were by no means fond of increafing the power of the Englifh monarch by the acquifition of Scotland ; and therefore threw fuch obftacles in his way, that he
was again obliged to have recourfe to negociation and Sentrond. intrigue, and at laft to delay the recting until the 2 d of June in 1292: but during this interval, that he might the better recone..e the Seots to the lofs of their liherty, he propofed an union of the two kingdoms; and for this he iffued a writ by virtue of his fuperiority.

The commiffoners traving met on the fecond of June 1292, ambaffadors for Norvay preiented themfelves in the affembly, demanding that their mafter fhould be adnuitted into the number of the claimazts, as father and next beir to the lise queen. This demand too was admitted by Edward, after the ambafiadors had acknowledged his fuperiority over Scotland: after which he propufed that the claims of Bruce and Baliol hould be previouly examined, but without prejudice to thofe of the other competitiors. 'This being agreed to, he ordered the comnifioners to examine by what laws the; ought to proceed in furming their report. The difcuffion of this gueftion was attended with fuch difficulty, and the upinions on it were fo various, that Edward once more adjourned the affembly to the 12 th of OEtober followins; at which time he required the members to give their opinions on the two following poinis: 1. By what laws and cutoms they ought to proceed to judgment ; and, fuppofing there could be no law or precedent found in the two kingdoms, in what manner ? 2. Whether the kingdom of Scotland ought to be taken in the fame view as all other fiefs, and to be awarded in the fame manner as earldoms and baronies? 'The commiffioners replied, that Edward ought to give jultice conformable to the ulage of the two kingdoms : but that if no certain laws or precedents could be found, he might, by the advice of his great men, enact a new law In anfwer to the fecond queflion they faid, that the fucceffion to the kirgdom might be awarded in the fame manner as to other eflates and great baronies. Upon this, Edward ordeted Bruce and Baliol to be called before him; and both of them urged their refpective pleas, and anfwers, to the following purpofe.

Bruce pleaded, 1. That Alexander II. defpairing of Pleas of heirs of his own body, had declared that he beld Lime to Bruce ane. be the true heir, and offered to prove by the teflimony Bilol. of perfons fill alive, that he declared this with the adviee and in the prefence of the good men of hin kingdom. Alczander II!. alfo had deciared to thofe with whom he was intinate, that, taiiing iTHe of bis own body, Bruce was his right he:r. The per pie of Scotland alfo had taken an oath for mainaming the fucerfion of the neareft in Hood to Alcxander III. who ought of right to inheri, fakiny Margaret the Maidea. of Norway and ber infae. - Daliut anfivered, that nothing could be concluced from the ackrowledgment of Alexander II. for that he lift heirs of his body; but made no anfwer to what was faid of the fentiments of Alexancer III. and of the oath made by the Scotilh, ration to maintain the fucceffion of the rex: of bood.
2. Bruce pleaded, thet the is ist of reigning oughe: to be decided accorbing in the matural lavs, by which kings reifin; and no: according to any law or ulare in force between fubject and feblject: That by the law of nature, the neareft collateral in theod has a right to the crown; but that the contitutions which prevail among vaffals, bind not the lord, much lefs the fovereign: That aithough in private imheritances, which

Feothani. are diviible, the eldeft female heir has a certain prerogative, it is not fo in a kingdon that is indivible; there the neareft heir of blood is preferalde whenever the fucceffion opens.-To this Baliol replied, that the - claimants were in the coust of their lord paramount; and that he ought to give judgment in this cafe, as in the cafe of any other tenements, depending on his crown, that is, by the common law and ufige of his kinedom, and no other. 'That by the laws and ufages of England, the eldeft female heir is prefened in the fuccefion to all inheritances, indivifible as well as divifible.
3. It was urged by Bruce, that the manner of fucceffion to the kingdom of scotland in former times, made for his claim; for that the brother, as being neareft in degree, yvas wont to be preferred to the fon of the deceafed king. Thus, when Fenneth Macalpin died, his brother Donall was preferred to his fon ConAlantine, and this was ecn rmed by feveral other authentic inftances in the hiftory of Scotland... Baliol anfwered, that if the brother was preferred to the fon of the king, the example proved againfl Bruce; for that the fon, 1 not the brother, was the neareft in deyre. He admitted, that after the death of Malcolm III. his brother ufurped the throne; but he contended, that the fon of Malcolm complained to his liege lord the king of England, who difpoffeffed the ufurper, and placed the fon of Malcolm on the throne; that after the death of that fon the brother of Malcoln III. again ufurped the throne; but the King or England again dif roffe?ed him, and raifed Edgar, the fcoond fon of Malcolm, to the fosereignty.
4. Bruce pleaded, that there are examoles in other countries, particularly in Spain and Savog, where the fon of the fecond daughter excluded the grandfon of the eldef daughter. Daliol anfwered, that examples from forcign countries are of no importance; fur that according to the laws of England and Scotland, where kings reign by fucceflion in the direct line, and earls and barons fucceed in like manner, the iffue of the younger filler, although nearer in degree, exchudes not the iffue of the eldelt fifter, although more remote ; but the fucceffion continues in the direct line.
5. Bruce pleaded, that a female ought not to reign, as being incapable of governing: That at the death of Als xander III. the mother of Baliol was alive; and as fle could not reign, the kingdom devolved upon hin, as being the neareft male heir of the blood royal. But to this Baliol replied, that Bruce's argument was inconfifient with his claim: for that if a female ought not to reign, Ifabella the mother of Bruce ought not, nor muft Bruce himfelf clain through her. Befides, Bruce himfelf had foorn fealty to a feniale, the maiden of Norway.

The arguments being thus ftated on both fides, Ed-
judgment given in fa-

\section*{vour of Ba-}
liol, ward demanded an anfwer from the council as to the merits of the competitors. He alfo put the following queftion to them: By the laws and ufages of both kingdoms, docs the iffue of the eldeft fifter, though more remote in one degree, exclude the infue of the fecond fifter, though nearer in one degree? or ought the nearer in one degree, iffuing from the fecond fifter, to exclude the more remote in one degrce ifluing from the eldeft fifter? To this it was anfwered unanimounly, That by the laws and ufages of both kingdoms, in every heritable fucceffion, the more remote in one de-
gree lienally defeended from the eldeft fifter, was pre- Sentiar ferable to the nearer in degree ifluing from the fecond fitter. In confequence of this, Bruce was excluded from the fucceffinn; upon which he entered a elaim for one thind of the kingdom: but being baffed in this alfo, the kingtom of Scotland being determined an indivifible fee, Edward ordered John Baliol to have feifin of Scotland; with this caveat, however, "That this judgment fhould not inpair his claim to the property of Scotland"

After fo many difgraceful and humiliating concef- Wha is fions on the part of the Scots, John Baliol was crown-crowned ed king at Scone on the 3 cth November 1292 ; and Scure. finifhed the cesemony by doing homare to the king of England. All his fubmiffors, however, could not fatisfy Edward, as long as the leaft fhadow of indepen. dence remained to Scotland. A citizen of Berwick appealed from a fentence of the Scots judges appointed ly Edward, in order to carry his caufe into England. But this was oppofed by Baliol, who pleaded a promife made by the Enslith monarch, that he fhould "obferve the laws and ufages of Scotland, and not withdraw any caufes from Scotland into his Englifh courts." Edward replied, that it belunged to him to hear the complaints made againft his own miniters; and concluded with afferting his rioht, not ouly to try Scots caufes in End land, but to fummon the king of Scotland, if neceffary, to appear before him in perfon. Ba. liol had not fpirit to refift; and therefore figned a moft difgracelul infrument, by which he declased, that all the obligations whish Edward had come under were atrcady fulfilled, ard therefore that he difcharged them all.

Edward now thought proper to give Baliol fome marks of his favour, the mott remarkable of which was giving lim teifin of the Inle of Man; but it foon appeared that he intended to exercife his rights of fuperiority in the molt provoking manner. The firf inflance was in the cale of Malcolm earl of Fife. This nolleman had two fons, Colban his heir, and another who is conftantly mentioned in hifory by the familyname of Macduff.- It is faid, that Malcolm put Macduff in poffe fion of the lands of Reres and Crey. Malcolm died in 1266; Colban his fon, in 1270 ; Duncan the fon of Colban, in 1288 . 'To this laft carl, his fon Duncan, an infant, fucceedd. During the nonage of this Duncan, grand-nephew of Macduff, WilGam bifhop of St Andrew's, guardian of the earldom, difpoffefled Macduff. He corrphained to Edward ; who having ordered his caufe to be tried, refored him again to polfeftion. Matters were in this ftate when Baliol held his tirft parlianient at Scone, Ioth February 1292. There Macduff was cited to anfwer for having taken poffeflion of the lands of Reres and Crey, which were in poffefion of the king fince the death of the laft earl of Fife. As his defences did not fatisfy the court, he was condemmed to imprifonment; but an action was referved to him againft Duncan, when he fhould come of age, and againft his heirs. In all this defence, it is furprifing that Macduff fould have omitted his ftoongeft argument, riz. that the regents, by Edward's authority, had put him in poffeffion, and that Batiol had ratified all things under Edward's authosity: However, as foon as he was fet at liberty, he petitioned Baliol for a rehearing; but this being iefufed, he appealed

\section*{S C O}

Scotand. to Edward, who ordered Baliol to appear before him in
perfon on the 25 th of March 293 : but as Baliol did not obey this order, he fummoned him again to appear on the 14th of October. In the mean time the Englinh parliament drew up certain fanding orders in cafes of appeal from the king of Scots; all of which were harfh and captious. One of thefe regulations provided, "that no excufe of abfence fhould ever be received either from the appellant, or the king of Scotland refpondent ; but that the partics might have courfel if they demanded it."

Though Baliol had not the courage to withftand the fecond fummons of \(E d w a r d\), he behaved with confiderable refolution at the trial. The caufe of Macduff being come on, Edward aked Baliol what he had to offer in his own defence; to which he replied, "I am king of Scotland. To the complaint of Maeduff, or to ought elfe refpecting my kingdom, I dare not make anfwer without the advice of my people."-Ediward affected furprife at this refufal, after the fubmiffions which Baliol had already made him ; but the latter fteadily replied, "In matters refpecting my kingdom, I neither dare nor can anfwer in this place, without the advice of my people." Edward then defired him to afk a farther adjournment, that he might advife with the nation. But Baliol, perceiving that his doing fo would imply an acquiefcence in Edward's right of requiring his perfonal attendance on the Engliih courts, made anfwer, "That he would neither afk a longer day, nor confent to an adjournment." - It was then refolved by the parliament of England, that the king of Scotland had offered no defence; that he had made evafive and difrefpectful anfwers: and that he was guilty of manifeft contempt of the court, and of ooen difobedience. To make recompenfe to Macduff for his imprifonment, he was ordered damages from the king of Scots, to be taxed by the court; and it was allo determined that Edward fhould inquire, according to the ulages of the countiy, whether Macduff recovered the tenements in queftion by the judgment of the king's court, and whether he was difpoffeffed by the king of Scots. It was alfo refolved, that the three principal caftles of Scotland, with the towns wherein they were fituated, and the royal jurifdiction thereof, fhould be taken into the cuftody of the king, and there remain until the king of Scots fhould make fatisfaction for his contenpt and difobedience. But, before this judgment was publicly intimated, Baliol addreffed Edward in the following words: "My lord, I am your liege-man for the kingdom of Scotland ; that, whereof y ou have lately treated, refpects my people no lefs than myfelf: I ahcrefore pray you to delay it until I have confulted my people, left I be furprifed through want of advice: They who are now with me, neither will nor dare advife me in abfence of the reft of my kin:gdom. Atter 3 have advifed with them, I will in your firft parliament after Eatter report the refult, and do to you what I ought."

In confequence of this addrefs, Edward, with confent of Macduff, Atopped all proceedings till the day after the fealt of Trinity 129+. But before this term Edward was obliged to fufpend all proceedings againft the Scots, by a war which broke out with France. In a parliament held this year by Edward, the king of Scotland appeared, and confented to yield up the whole re-

Wos. XVI. Part II.
venues of hiz Ënglifh eftates for three years to affiz Scrtand. Edward againt his enemy. He was alfo requefled and ordered by Edward to extend an embargo laid upon the Englifh veffcls all over Scotland; and this embargo to endure until the king of England's further pleafure thould be known. He alfo requeted him to fend fome troops for an expedition into Gafcony, and required the prefence and aid of fevcral of the Scottifl barons for the fame purpofe. The Scots, however, eluded the The Sco., commands of Edward, by pretending that they could enter into not bring any confiderable force into the field ; and, winh unable to bear lis tyranny any longer, they negociated France. an alliance with Philip king of France. Having affembled a parliament at Scone, they prevailed upon Baliol to difmifs all the Englifhmen whom he maintained at his court. They then apprinted a committee of twelve, four bifhops, four earls, and four barons, by whofe advice every thing was to be regulated; and, if we may credit the Englifh hiftorians, they watched the conduct of Baliol himfelf, and detained him in a kind of honourahle captivity. However, they could not prevent him from delivering up the cafles of Berwick, Roxburgh, and Jedburgh, to the bifhop of Carlife; iur whofe cuttody they were to remain during the war between England and France, as a pledge of his allegiance. Notwithftanding this, Baliol concluded the alliance with Philip; by which it was ftipulated, that the latter hould give in marriage the eldelt daughter of the count of Anjou to Baliol's fon; and it was alfo provided, that Baliol fhould not marry arain without the confent of Philip. The king of Seotland engaged to affit Philip in his wars at his own expence, and with his whole power, efpecially if Edward invaded France; and Philip on his part engaged to affit Scotland, in cafe of an Englifh invafion, either by making a diverfion, or by fending fuccours.

Puffed up with the hopes of affiftance from France, The \({ }^{96}\) Scots the Scots invaded Cumberland with a mighty army, nvare and laid fiege to Carlife. The men ahandoned the withour place; but the women mounted the walls, and drove fuccefs. the affailants from the attack. Another incurlion int, Northumberland proved almoft as difgraceful. Their whole exploits confifted in burning a nunnery at Lameley, and a monaltery at Corebridge, though dedieated to their patron St Andrew; but having attempted to ftorn the caftle of Harbottle, they were repulfed with lofs. In the mean time Edward, with an army equal in number to that of the Scots, but much fuperior on account of its difcipline, invaded the eaft coatt of Scotland. Berwick had either not been delivered according to promife, or had been refumed by the Scots, and was now defended by a numerous garrifon. Edward allault- Eerwicte ed it by fea and land. The thips which began the at-taken, and tack were all cither burnt or difiabled; but Edward the inhabihaving led on his armiy in perfon, took the place by facred by florm, and cruclly butchered the inhahitante, to the Edvard. number of 8000 , without diftinetion of fex or arge. In this town there was a building called the Kell-ball, which certain Flemings poffefled by the tenure of defending it at all times againlt the king of England. Thirty of thefe maintained their ground for a whole day againt the Englifh army ; but at night the building beiog fet on fire, all of them perithed in the flames. The fame day the cafle capitulated; the garrifon, coinfilting of 2000 men, marched out with all the herours

scotiand. of war, after having fworn never to bear arms againat 98 England.

Baliol's re. nunciacion of his alle yiance to England.

In the mean time, Baliol, by the advice of his parliament, folemnly and openly renounced his allegiance to Edward, fending the followins declaration.
" To the magnificent prince, Edward, by the grace of God, king of England; John, by the fame grace, king of Scotland.
"Whereas you, and others of your kingdom, you not being ignorant, or having caufe of ignorance, by your violent power, have notorioufly and frequently done grievous and intolerable injuries, contempts, gricvances, and ftrange damages againft us, the liberties of our kingdom, and againtt God and jultice; citing us, at your pleafure, upon every flight fuggetion, out of our kingdom; unduly vexing us; feizing our calles, lands, and poffeflions, in your kingdom; unjuftly, and for no fault of ours, taking the goods of our fubjects, as well by fea as land, and carrying them into your kingdom; killing our merchants, and others of our kingdom; carrying away our fubjects and imprifoning them : For the reformation of which things, we fent our meffengers to you, which remain not only unredreffed, but there is every day an addition of worfe things to them ; for now you are come with a great army upon the borders, for the difinheriting us, and the inhabitants of our kingdom; and, proceeding, bave in. humanly committed flaughter, burnings, and violent invations, as well by fea as land: We not being able to fuftain the faid injuries, grievances, and damages any longer, nor to remain in your fealty or homage, extorted by your violent oppreffion, we reftore them to you, for ourfelf, and all the inhabitants of our kingdom, as well for the lands we hold of you in your kingdom, as for your pretended government over us."

Edward was prefented with this renunciation by the hands of the intrepid Henry abbot of Aberbrothwick; and as it was favourable to his political views, he received it rather with contempt than anger. "The foolifh traitor," faid he to the abbot, "lince he will not come to us, we will go to him." The abbot had been perfuaded by his enemies, of whom he had many in Scotland, to prefent this letter, in hopes that Edsward would have put hins to death; but he had addrefs enough to efcapc fafe out of his hands, without receiving any other anfwer.

Though this feheme of renunciation had bcen con. Scotland, certed fome time before, the declaration was not fent to Edward till after the taking of Berwick. The fate of Scotland, however, after it, was foon decided. "The Earl of March had taken part with Edward, but the countefs hetrayed his caftle of Dunbar into the hands of the Scots. Edward fent a chofen body of troops to recover the place. The whole force of Scotland oppofed The Scots. them on the heights above Dunbar; but leaving their deffatec at advantageous poft, and pouring down on their enemies Dunbar. in confufion, they were difperfed and defeated.

The caftle of Dunbar furrendered at difcretion ; that of Roxburgh followed the fame example; the cafte of Edinburgh furrendered after a fhort fiege; and Stirling was abandoned. The Scots, in the mean time, were guilty of the greateft extravagances. 'During the fhort interval between the lofs of Berwick and the defeat at Dunbar, an order was made for expelling all the Englifh ecclefiaftics who held benefices in England; all the partizans of Enyland, and all neutrals, were declared traitors, and their eftates confifcated. But the great fucceffes of Edward foon put an end to thefe impotent acts of fury. Baliol was obliged to implore the mercy Baliol fub of the conqueror. Divefted of his royal ornaments, mits, and and bearing a white rod in his hand, he performed a \(u\), f mofl humiliating penance; confeffing, that by evil and \({ }^{\text {nance.d }}\) falfe counfel, and through his own fimplicity, he had grievoufly offended his liege lord. He recapitulated his various tranfgreffions, in concluding an alliance with France while at enmity with England ; in contracting his fon with the niece of the French king ; in renouncing lis fealty ; in attacking the Englifh territories, and in refitting Edward. He acknowledged the juttice of the Englifh invafion and conqueft; and thereforc he, of his own free confent, refigned Scotland, its people, and their homage, to his liege-lord Edward, 2d July 1296.

The king of England purfued his conquefts, the barons everywhere crowding in to fwear fealty to him, and renounce their allegiance with France. His jour. Sootland ney ended at Elgin, from whence he returned fouth-fubduc⿻ ward; and, as an evidence of his laving made an abfolute conquelt of Scotland, he carried off from Scone the wooden chair in which the kings were wont to be crowned. This chair had for its bctom the fatal flone regarded as the national palladium ( D ). Some of th:e charters
(n) "This fone is thus defcribed by W. Hemingford, T". i. p. 37. "Apud monatterium de Scone pofit: \& erat lapis pergrandis in ecclefia Dei, juxta magnum altare, concavus quidem ad modum rotunde cathedre conjechus, in quo futuri reges loco quali coronationis ponebantur ex more. Rege itaque novo in lapide polito, mifarum folemnia iucepta peraguntur, et praterquam in elevatione facri dominici corporis, femper lapidatus, manfit." And again, T.i. p. 100.. "In redeundo per Scone, precepit tolli et Londoniis cariari, lapidem illum, in quo, uz fupra dietum eft, Reges Scotorum folebant poni loco coronationis fux, et boc in fignum regni conquefi et rffignati." Walfughan mentions the ufe to which Edward put this fone: "Ad Weftonaftcrium trantulit illum, jubens inde fieri celebrantium cathedram facerdotum." "This account of the fatal flome is here tranfcribed, that it may be compared with the appearance of the ftone that now bears its name at Weftminfter.
Fordun has preferved the ancient rhymes conerning it ; L. xi. c. 25 .
" Hic rex fictotam. Scotiam fecit fibi notam,
Qui fine menfura tulit inde jocalia plura,
Et pariter lapidem, Scotorum quem fore fedem
Regum decrevit fatum; quod fic inolevit,
Ni fallat futum, Scoti quocunque locatum
Invenient lapidsm, regnare tenctur iliddm.".

\section*{S C O}

\section*{S C O}

Scotlond. chatters belonging to the abbey were cantied off, and the feals torn from others: "which," fars Lord Hailes, " is the only well-vonched exanple which I have found of any outrage on private property committed by Edward's army. It is mentioned in a cilarter of Rubert I. and we may be affured that the outrage was not dimi. nilhed in the relation."

On the 28th of Augult 1296 , Edward held a par. lianent at Berwick, where he received the fealty of the clergy and laity of Scotland. It is faid, that while the Englifh monarch was employed in the conque!t of Scotland, he had promifed the lovereignty to Robert Bruce, lord of Anriandale, in order to fecure his fidelity ; but being put in mind of his promife, he anfwered, "Have I no other bulincfs but to conquer kingdoms for you ?"" Bruce filently retired, and paffed his days in obfensity. Among thofe who profelfed their allegiance at this parliament was Robert Bruce the younger, earl of Carrick. After this, Edward took the moft effectual methods of fecuring his new conqueft. He ordered the eftates of the clergy to be reftored ; and having received the fealty of the widows of many of the Scottifi barons, he put them in poffeffion of their jointure-lands, and cven made a decent provifion for the wives of many of his prifoners. Yet, though in every thing he behaved with great moderation towards the Scots, he committed the government of certain diftricts, and of the chief caftles in the fouth of Scotland, to his Englifh fubjects, of whofe fidelity and vigdance he thought himfelf affured. In order to conciliate the affections of the clergy, he granted to the Scottifh bifhops, for ever, the privilege of bequcathing their effects by will, in the lame manner as that privilege was enjoyed by the archbifhops and bifhops of England. In honour of the "glorious Confefior St Cuthbert," he gave to the monks of Durham an annual penfion of 40 pounds, payable ont of the revenues of Scotland, by the tenure of maintaining, before the fhrine of the faint, two wax-tapers of 20 pounds weight each, and of diftributing twice a-year one peniny each to 3000 indigent perfons. At lait, having fettled every thing, as he thought, in tranquillity, he departed for
102 England, with all the pride of a conqueror.
The tranquillity eftablifhed by Edward, however, was of fhort duration. 'The government of Scotland at that time required many qualities which Edward's vicegerents had not. Warenne, earl of Surry, who had been appointed governor, took up his abode in England, on pretence of recovering his health. Creffingham, the treafurer, was a voluptuous. proud, and felfifh ecclefiaftic ; while Ormefby the juticiary was hated for his feverity. Under thefe officers the adminiftration of Edward became more and more feeble; bands of robbers infetted the hichways, and the Englifh government was univerfally defpifed. At this critical moment arofe Sir William Wallace, the hero fo much celebrated in Scot- tifn fables, and'by which indeed his real exploits are fo much obfcured, that it is difficult to give an anthentic relation of then. The molt probable account is, that
he was the younger fon of a gentleman (Wallace of Ellerflie) in the neighbourhood of Paifey. Having

Scotland. been outlawed for fone offence (generally fuppofed to have been the killing of an Englifhman), he afociated with a few companions, of fortunes equally defperate with his own. Wallace himfelf was endowed with great ftrength and courage, and an active and ambitious fpirit ; and by his affability, eloqucnce, and wifdom, he maintained an authority over the rude and undifciplined multitudes who flocked to his ftandard. In May \(129^{-}\) he began to infelt the Englifh quarters; and being fuc cefsful in his predatory incurfions, his party became more numerous, and he was joined by Sir Willians Douglas. With their united forces, thefe two allies attempted to furprife Ormefby the jufticiary, while he held his courts at Scone; but he faved himfelf by a precipitate flight. After this the Scots roved over the whole country, affaulted caftes, and maffacred the Englifh. Their party was joined by many perfons ot rank; among whom were Robert Wiheart bihop of Glafgow, the Steward of Scotland and his brotner Alexander de Lindfay, Sir Richard Lundin, and Sir Andrew Moray of Bothwell. Young Bruce would have been a valt acceffion to the party; for he poffefed all Carrick and Annandale, fo that his territories reached from the frith of Clyde to Solway. But the wardens of the weftern marcles of England fufpected his fidelity, and fummoned him to Carlifle. He obeyed, and made oath on the confecrated hoit, and on the fword of Bccket, to be faithtul and vigilant in the caufe of Edward; and to prove his finccrity; he invaded with firc and fword the eftate of Sir William Douglas, and carried off his wife and children. However, he inftantly repented of what he had done: "I trult (faid he), that the pope will abfolve me from an extorted oath ;" on which he abandoned Edward, and joined the Scottifh army.

All this time Edward was in France, not in the leaft fufpecting an mfurrection among people whon he inagined he had thoroughly fubdued. As foon as he received the intelligence, he ordered the earl of Surre to fupprefs the rebels; but he declining the command of the army hindelf on account of his health, reforned it to his nephew, Lord Henry Percy. A great army, Diffenfios fome fay no fewer than \(40,000 \mathrm{men}\), was now affembled, of the with which Percy marched againft the Scots. He Scots. found them encamped at Irwin, with a lake in theifront, and their flanks fecured by ertreuchments, fo that they could not be attacked without the utmoft danger. The Scots, however, ruined cvery thing by their diffenfions. Wallace was envied on account of his accomplifhments, which had raifed his reputation above the other officers, whole bith and circumfances were higher than his. His companions accordingly became jealons, and began to fuggett, that an oppolition to the Englifh could only be productive of farther mational deftruction. Sir Richard Lundin, an officer of great rank, formed a party againt Wallace, and went over to Ed. ward with all his followers. He aitempted to juillify \(5 \mathrm{~B}=\)

This was the fone which Gathelus fent from Spain with his fon when he invaded Irejund. which kigy roous won in Ireland, brought over with him, and placed at Scone. As the moft proper anthorits for a flons af :he nature, ree Alas of Sir Wrieram Wallare. by Bind Horry; B. B. c. 4.

\section*{S C O [ \(\left.74^{8}\right]\)}

Scoilnd. his treachery, by faying, "I will remain no longer of the cattle of Dundee, he was informed that the Ens- Senimd. a party that is at variance with itfelf;" without confidering that he limfelf, and his party, were partly the occafion of that variance. Other leaders entered into a negociation with the Englifh. Bruce, the Steward and his brother Alexander de Lindefav, and Sir Wilham Douglas, acknowledged their offences, and made fubmiffons to Edward for themfelves and their adheyoj rents.

Noik of them fulnut oo the Englik.

This fcandalons treaty feems to have been negociated by the bifnop of Glafgow, and their recantation is recorded in the following words.-" Be it known to all men: Whercas we, with the commons of our country, did rife in arms againft our lord Edward, and againit his peace, in his territories of Scotland and Galloway, did burn, flay, and commit divers robberies; we theretore, in our own name, and in the name of all our ad. herents, agree to make every reparation and atonement that fhall be required by our fovereign lord; referving always what is contained in a writing which we have procured from Sir Henry Percy and Sir Rubert Clifford, commanders of the Englifh forces; at Irvine, 9th July 1297." To this inftrument was fubjoined, "Elerit a Sire Willaume;" the meaning of which lord Hailes fuppofes to be, that the barons had notified to Sir William Wallace their having made terms of accommodation for themfelves and their party.

Edward accepted the fubmifion of the Scottifh barons who had been in arms, and granted liberty to thofe whom he had made prifoners in the courfe ot the former year, on condition that they thould ferve him in his wars againft France. The inconftancy of Bruce, however, was fo great, that acknowledgments of fubmiffion or oaths of fealty were not thought fufficiently binding on him; for which reaion the bifhop of Glafgow, the Steward, and Alexander de Lindefay, became fureties for his loyalty and good behaviuur, until he fhould deliver his daughter Marjory as an hoftage.

Wallace alone refufed to be concerned in thefe fhameful fubmiffons; and, with a few refolute followers, 1 efolved to fubmit to every calamity, rather than give up the Biberty of his country. The barons had undertaken to procure his fubmiffion as well as their own ; but finding that to be impoffible, the bifhop of Glafgow and Sir William Douglas voluntarily furrendered themfelves prifoners to the Englifh. Edward, however, afcribed this voluntary furrender, not to any honourable motive, but to treachery. He afierted, that Witheart repaired to the caftle of Roxburgh under pretence of yielding himfelf up, but with the concealed purpofe of forming a confpiracy in order to betray that caftle to the Scots; and in proof of this, Edward appealed to intercepted kettcrs of Wifheat. On the other hand, Wallace, afcribing the bifhop's conduct to traiterous pufllanimity, plundered his houfe, and carried off his family captives.

Immediately after the defection of the barons at Irvine, Wallace with lis band of decermined followers attacked the rear of the Englifh army, and plundered their baggage; but was obliged to retire, with the lofs of 1000 men. He then found himfelf deferted by almoft all the men of eminence and property. His army, however, increafed confiderably by the acceffion of numbers of inferior rank, and he again began to act on the offeriuve. While he employed himelf in befieging
lifh army approached Stirling. Wallace, having char- \(\longrightarrow\) ged the citizens of Dundee, under the pai.s of death, to contunue the blockade of the caltle, haltened with all his troops to guard the important paffage of the Forth; and encamped behind a rifing ground in the neighbourhood of the abbey of Cambulkenneth. Brian Fitz-A1lan had been appointed governor of Scotland by Edward; but Warenne, who waited the arrival of his fucceffor, remained with the army. Imagining that Wallace might be induced by fair means to lay down his aims, he difpatched two friars to thé Scottifh camp, with terms of capitulation. " Return," faid Wallace, " and tell your maiters, that we came not here to treat but to affert our right, and to fet Scotland free. Let them advance, they will find us prepared." The Eng liff, provoked at this anfwer, demanded impatiently to be led on to battle. Sir Richard Lundin remonftrated by a long narrow bridge in prefence of the enemy. He told them, that the Scots would attack them before they could form on the plain to the north of the bridge, and thus certainly defeat them: at the fame cime he offered to fhow them a ford, which having crofled with 500 horfe, and a chofen detachment of infantry, he propofed to come round upon the rear of the enemy, and by this diverfion facilitate the operations of the main body. But this propofal being rejected, the Enclifh army began to pals over; which was no fooner perceived by Wallace, than be rufhed down upon them, and broke them in a moment. Creflingliam the treafure: was killed, and many thoufands were flain on the field, or drowned in their flight. The lofs of the Scots would have been inconfiderable, had it not been tor that of Sir Andrew Moray, the intimate friend and companion of Wallace, who was mortally wounded in the engagement. The Scots are faid to have treated the dead body of Crellingham with the utmult indignity; to have flead him, and cut his fkin into pieces, which they divided among themfelves; while others tell us, they uled it for making girths, and faddles.
'I'he victory at Stirling was followed by the furrender of Dundee caftle, and uther places of ftrength ir Scotland; at the fame time the Scets took poffeffion of Berwick, which the Englifh had evacuated. But as a famine now took place in Scotland by the bad feafons and mileries of war, Wallace marched with his whole army into England, that be might in fome meafure relieve the neceffities of his countrymen by plundering the enemy. 'I'his expedition latted three weeks, during which time the whole tract of country from Cockermouth and Carlifle to the gates of Newcaftle was laid walte with all the fury of revenge and rapacity ; though Wallace endeavoured, as far as poffible, to reprefs the licentioufnefs of his foldiers.

In 1298 , Wallace aflumed the title of "Goverror of Scotland, in name of king John, and by confent of the Scottifh nation;" but in what manner this office was obtained, is now in a great meafure unknown. In a parliament which he convoked at Perth, be was confirmed in his authority; and under this title he conferred the conltabulary of Dundee on Alexander furnamed Skrimgeour and his heirs, on account of his faithful aid in bearing the royal flardard of Scotland. This
grant
frant is faid to have been made with the confent and approbation of the Scottifh nobility, 2gth March 129 S. From this period, however, we may date the very great jealoufy which to sk place betwees Wallace and the nobles who pretended tu be ot his party. His elevation wounded their pride : his great fervices reproached their inactivity in the public eauie; and thus the counftis of Scotland were perplexed with diftruft and enve, when almoit its very exintence depended on unauimity.

In June : 299 , Edward, who had all this time been in Flancers, returned to England, and fummoned the Seortiff barons, under pain of rebellion, to attend him in parliament; and, on their difobeying his fummons, he adranced with his army towards Scotland. His main force, commanded by hinfelf, affembled at Berwick; but a body of troops, under the earl of Pembroke, baving landed in the north of Fife, were defeated with great lofs by Walliace, on the 12 th of June. The fame month Edward invaded Scotland by the way of the eafiern borders. No place refifted him exeept the caftle of Dirletun. After a refolute defence, it fursendered to Anthony Beck, bifhop of Durham.

Meanwhile the Scots were affembling all their !trength in the interior part of the country. Few barons of eminenee repaired to the national ftandard. They whofe names are recorded, were John Comyn of Badenoch, the younger ; Sir John Stewart of Eonkill, brother to The Strward; Sir John Graham of Abercorn; and Maeduff, the grand-uncle of the young earl of FifeRobert Bruce again aeceded to the Scottifh party; and with his followers guarded the important cattle of Air, which kept the communication open with Galloway, Argylefhire, and the ifles.

The aim of Edward was to perietrate into the weft, and there to terminate the war. He appuinted a flet, with provifions, to proeeed to the finth of Clyde, and awast his arrival in thofe parts. This precaution was abfolutely neceffiary for the fubfittence of his numerous army in a country impoverifhed and watte.

Waiting for accounts of the arrival of his fleet, he eftabli:hed his head-quarters at Templelifton, between Edinburgh and Linlithgow.

A dangerous infurrection arofe in his camp. He had beffowed a donative of wise among his ioldiers; they became intoxicated ; a national quarrel enfued. In this tunult the Welifh flew is Englif ceclefaitics. The Eargifh horfemen rode in among the Welih, and revenged this outrage with great flaughter. The Welih in difguft feparated themfelves from the army. It was reported to Edward, that they had mutinied, and gone over to the Ecots: " I care not," faid Edward, diffembling the danger; "let my enemies go and juin ny enemies; I truft that in one day 1 thail ehattife them all."

Edward was now placed in moft critical circumitances. As the fleet with provifions had been detained by contrary winds, he could not venture to advance, neither evuld he fubfift any longer in his prefent quarters. 'To retteat would have fullied the glory ot his arms, and expofed him to the obloquy and murmurs of a ditiontented peoole. Yet be iulmitted to this bard neceffity. Abandoning every profptct of ambition and revenge, he commanded his army to return to the eaftern borders. At that moment intelligenee arrived that the Scuts were advanced to Falkirk.

Edward initantly marched azain? them. Fis army Sontiand. lay that night in the felds. While Edward tlept on the ground, his war-horfe leruck him and broke two of his ribs. The alarm arofe, that the king was wounded. They who kaew not the caufe, repeated the cry, " The king is wounded; there is treafon in the camp : the cremy is upon uss." Edward monnted un horieback, and by his prefence difpelled the panic. With a fortitude of firit fuperior to pain, he led on his troopa. At Fite bare:e break of day, the Scution amy was deferied, forming of Falkrk, on a llony field at the fide of a fmall emizence in the ncighbourhood of Falkirk.

Wallace randed his infantry in four bodies of a circular form. The archers, commanded by Sir John Stewart, were plased in the intervals. The horfe, amounting to no mare than a tioufand, were at fome diflance in the rear. On the front of the Scots lay a morals. Having drawn up his troops in this uruer, Wallace pleafantly faid, "Now I have bruught jou to the ring, dance according to your filll."

Edward placed his chiief confidence in the numerous and tormidable body ot hor femen whom he had felecteci for the Scottilh expedition. Thefe he ranged in three lines. The firt was led by Bigot Earl Marfal, and the Earls of Hereford and Lincols; the fecond by the bifhop of Durham, having under him Sir Ralph Baffet of Drayton; the thind, intended for a referse, was led by the king himself. No mention is made of the difpulition of this infantry: it is probabie that they were drawn up behind, to fupport the cavalry, and to annoy the Seots with their arrows and other miffic weapons.

Bigot, at the head of the frit line, rufted on to the charge. He was checked by the morafs, whieh in his impetuofity he had overluoked. This obliged him to incline to the folid ground on his left, towards the right flank of the Bcottifh army. The bihop of Dirrham, who led the fecond line, inelined to the right, tursed the morafs, and advanced towards the left flank of the Seottifh army. He propofed to halt till the reierve fhould advance. "Tu maff, bihop," cried Zaffet, and iuftantly charged. The thock of the Englifh cavalry on each fide was violent, and galiantly withitood by the Seottith infantry; but the Scottith cavalry, difmayed at the number and force of the Englifh men-at-arims, immediately quitted the feld. Stewart, while giving orders to his archers, was thrown from lis horie and flain. His archers crowded round his body and perifl:ed with him. Often did the Englifh frive to fore the Scotailh eircle. "They could not penetrate into that The Srom wood of fpears," as one of their hiitorians fpeaks. By def fated repeated charges, the outernott ranks were brought to with gicaie the ground. The Englifh infantry incedarity gailed Raugluct. the Scots with fhowers of flones and arrows. Macduff and Sir John Graham fell. At leugth the Scots were broken by the nembers and weight of the Englith cavalry, and the rout became univelfal.

The number or the Scots llain in this batele must have been rety great. As is commonly the cafe, it is exaggerated by the hiftorians of the wetors, and redused tuo low by the hiltorians of the vanquifhed.

On the fade of the Englifh the lofs was inconfiderable. The only perfons of note who fill were Brian le Jay, mafter of the Englif 'Templars, add the prior of Tior\({ }_{6}\) mainen

seetand. phichen in Scotland, a knight of ancther order of religious foldiery ( E ).

The Scots in their retrcat burnt the town and cafle of Stiling. Edward repaircl the cafle, and made it a place of arms. He then marched to the weff. At his approech, Bruce burnt the calle of Ayr, and retired. Edward wonld have purfued him into Carrick ; but the want of provilions flopped his further proyrefs. He turned isto A nnandale, took Bruce's caftle of Lochmaben, and then departed out of Scotland by the weftern borders.

Here may be remarked the fatal precipitancy of the Scots. If they had fudied to protract the campaign, intead of hazarding a general action at Falkirk, they would have foiled the whole power of Edward, and re-

II2
Alject condition of Inhn BaLiol.
duced him to the neceffity of an inglorious retreat,
In 1299 Edward thought proper to releafe John Baliol the unfortunate king of Scotland, whoin he had kept clofe prifoner ever lince the year 1206 . Before this time Baliol had ufed the mof difgraceful methods to recover his liberty. He had folemnly declared, that " he would never have any intercourfe with the Scots; that he had found them a falle and treacherous people; and that he had reafon to fufpect them of an intention to poifon him." However, not withtanding all his protellations, Edward till detained him in captivity ; but at laft releafed hin at the mediation of the pope, though after a fingular form: Hc ordcred the governor of

Dover to convey him to the Frencl coaft, and there Scotland. to deliver him to the papal nuncio, "with full power to the pope to difpofe of Baiol and his Englifh eltate." In confequence of which lie was conveyed to Witfand, delivered to the nuncio in prefence of a notary and wit. neffes, and a receipt taken for his perfon. Notwithflanding this abject ftate, however, the Scots continued to own him for their king, and to affert their national independency. Tho' the misfortune at Falkirk had deprived them of a very confiderable extent of territory, they were ftill in poffeflion of the whole country begond the Forth, as well as the county of Galloway. By general confent William Lamberton bihop of St Andrew's, Robert Bruce earl of Carrick, and John Cummin the younger, were chofen guardians of Scotland in name of Baliol. Wallace at this time was reduced to the condition of a private man; nor had he any longer the command of the Scots armies, nor any thare in their comncils. - The new guardians undertook to reduce the caltle of Stirling, and Edivard prepared to defend it. The Scots pofted themfelves at the Torwood, and chofe Edward \({ }^{113}\) their ground judicioully, fo that Edward could fcarce obligel to have raifed the fiege without dillodging them; which retirc. finding it impoffible for him to do, he returned home in diffult. Next year he invaded Scotland on the weft fide, wafted Annandale, and reduced Galloway ; but the Scots being now taught by expericnce to avoid a general action, chofe their polts with fuch /kill, that Edward
(E) "This account of the action at Falkirk, extracted from Lord Hailes's Annals, is drawn, his Lordhip informs us, from the teftimony of the Englifh liftorians. "They have donc juftice (he obferves) to the courage and fteadinefs of their enemies; white our hiftorians reprefented their own countrymen as occupied in frivolous unmeaning contefts, and, from trcachery or refentment, abandoning the public caufe in the day of trial.
"It would be tedious and unprofitable to recite all that has been faid on this fubject by our own writers from Fordun to Abercrombie. How Wallace, Stewart, and Comyn, quarrelled on the punctilio of leading the van of an army which ftood on the defenfive: How Stewast compared Wallace to 'an owl with borrowed feathers,' : How the Scottifh commanders, bufied in this frivolous altercation, had no leifure to form their arny : How Comyn traiteroully withdrew with \(10,000 \mathrm{mcn}\) : How Wallace, from refentment, followed his exanple: How by fuch difaftrous incidents, the Scottifh army was enfeebled, and Stewart and his party abandoned to deftruction. Our hiftories abound in trafh of this kind: There is fcarcely one of our writers who has not produced an invective againft Comyn, or an apology for Wallace, or a lamentation over the deferted Stewart. What diffenfions may have prevailed among the Scottifh commanders, it is impoffible to know. It appears not to me that their diffenfions had any infuence on their conduct in the day of battle. The truth feems to be this: 'rlhe Englifh cavalry grcatly exceeded the Scottifh in numbers, werc infinitely better equipped and more adroit : the Scottifh eavalry were intimidated, and fled. Had they remained on the field, they might have preferved their honour; but they never could have turned the chance of that day. It was natural, however, for fuch of the infantry as furvived the engagement, to impute their difaller to the defection of the cavalry. National pride would afcribe their flight to treachery rather than to pufillanimity. It is not improbable that Comyn commanded the cavalry: hence a report may have been fpread, that Connyn betrayed his country; this report has been embeilifhed by each fucceflive relator. 'When men are feized with a panic, their commander muff from necefity, or will f:om prudence, accompany them in their flight. Earl Warrenne fled with his army from Stirling to Berwick; yet Edward I. did not punith him as a traitor or a coward.
" The tale of Comyn's treachery, and Wallace's ill-timed refentment, may have gained credit, becaufe it is a pretiy tale, and not improbable in it fh: but it amazes me that the ftory of the congrefs of Bruce and Wallace after the battle of Falkink thould have gained credit. I lay afide the full evidence which we now poffefs, 'that Eruce was not, at that time, of the Englifh party, nor prefent at the battle.' For it muit be admitted, that our hitorians knew nothing of thofe circumitances which demontrate the impoffibility of the congrefs. But the wonder is, that men of found judgment fhould not have feen the abfurdity of a long converfation between the commander of a flying army, and one of the leaders of a victorious army. When Fordun told the ytory, he placed a ' narrow but inacceflible glen' betwe en the fpeakers. Later hittorians have fublituted the river Carron in the place of the inacecffible glen, and they make Bruce and Wallace talk acrofs the river like two young declaimers fiom the pulpits in a fchool of rhetoric."

\section*{\(751] \quad \mathrm{S}\) C O}
olland. ward could not penetrate farther ; and the fame year - a truce was concluded with the Scots, to contiaue till

\section*{114}
e crown This year a new competitor appeared for the crown scotand of Scotland. Boniface VIII. in a bull directed to Edimed by ét Bunl. ward, averred, that Scotland belonged anciently, and did fill belong, to the holy fee; and fupported his extravagant claim by fome ftrange authorities; fuch as, that Scottand had been miraculouly converted by the relics of St Andrew: atter which he proceeded to fhow the futility of Edward's pretenfions, and that Scotland never had any fendal dependence on England. He required Edward to fet at liberty all the Scottifh ecelefiaftics, particularly Wiheart bift op of Glafgow, and to remove his officers from the patrimony of the church: "But (added he) Thould you have any pretenfions to the whole, or any part of Scotland, fend your proctors to me within fix months; I will hear and ectermine according to juttice; I take the caule under my own peculiar cornizance."

This interpofition of the pope had probably been procured by Scottifh emiffaries at the court of Rome; but, however ridiculous his pretenfions might be, they afforded matter of very ferious confideration to Edward. After fpending a whole winter in deliberations, Edward and his parliament made feparate anlivers to the pope. The anfwer of the parliament was to the following purpofe: All England knows, that ever fince the firlt eftablifhment of this kingdom, our kings have been liegelords of Scotland. At no time has the kingdom of Scotland belonged to the church. In temporals, the kings of England are not amenable to the fee of Rome. We have with one voice refolved, that, as to temporals, the king of England is independent of Rome ; that he fhall not fuffer his independency to be queftioned; and therefore, that he fhall not fend commiffioners to Rome. Such is, and fucb, we truft in God, ever will be, our opinion. We do not, we cannot, we muft not, permit our king to follow meafures fubverfive of that government which we have fworn to maintain, and which we will maintain."

The king entered into a more full refutation of the pope's arguments; and having, as he thought, anfwered them fufficiently, he marched again into Scotland: but, by the mediation of France, another truce was concluded, to laft till St Andrew's day 1302.

After the expiration of the truce, Edward fent an army inta Scotland, under the command of John de Se-- grave. This general dividcd his troops into three bodies; but, keeping them fo far diftant that they could not fupport each other, they were all engaged and defeated in one day by the Scots, near Ronlin (fee RosLin). This, however, was the laft fuccefsful exploit of the Scots at this period. The pope deferted them; and the king of France concluded a peace with England, in which all mention of the Scots was induftrioully avoided; fo that they were left alone to bear the whole weight of Edward's refentment, who now invaded their country in perfon with a mighty army. He met with no refiftanee in his progrefs, except fiom the caftle of Brechin, which was commanded by Thomas Manl, a brave and experienced officer. He held out for 20 days againt the whole power of the Englifh army; but at lalt, being mortally wounded, the place capitulated.

From thence he proceeded northward, according to Sialard, fome hitiorians, as far as Caithefs. He then returned towards the foutl, and wintered in Duntermline. In that place there was an abbey of the Benedictine order; a building fo fpacious, that, according to an Englifh hiftorian, three fovereisn princes with all their retinue misht have been ladged conveniently within its precincts. Fiere the Scottifh nobles fometimes held their aftemblies. The Englifh foldiers utterly demol:hed this magnificent fabric.

The only fortiefs that remained in the poffeftion of the Scots was the caftle of Stirling, where Sir William Oliphant commanded. To protect this fingle place of refuge, Comyn affumbled all his forces. He pofted his army on the fouth bath of the river, in the neighbourhood of Stirling, there to make the laft fland for the national liberty. The Scots fondly imarined, that Edward would attempt to force the paffage, as the impetuous Creffingham had attempted in circumftances not diffimilar. But the prudence of Edward fruftrated their expectations. Having difcovered a ford at fome di. flance, he croffed the river at the head of his whole cavalry. The Scots gave way, and difperfed themfelves.

All refources but their own courage had long failed Capitula. them; that laft refource failed them now, and they ha- Edward. ftened to conciliate the favour of the conqueror. Previous to this, Bruce had furrendered himfelf to John de St John, the Englifh warden. Comyn and his followers now fubmitted to Edward. They flipwlated for their lives, liberties, and eftates: referving always to Edward the power of inflicting pecuniary mulets on them as he mould fee fit.

From the general conditions of this capitulation, the following perfons were excepted: Wihheart bifhop of Glafgow, the Steward, Sir John Soulis, David de Graham, Alexander de Lindefay, Simon Frafer, Tho. mas Bois, and Wallace. With refpect to them, it was provided, that the biffop of Glafgow, the Steward, anc Soulis, fhould remain in exile for two years, and fhould not pafs to the north of Trent; that Grahan ard Lindefay foould be banithed from Scotland for fis mouths; that Frafer and Bois fhould be banifhed for three years from all the dominions of Edward, and fhould not be permitted, during that fpace, to repair to the territories of France. "As for Willian TVallace, it is agreed, that he mall iender himifulf up a: the will and mercy of our fovereign lord the king, if it thall feem good to him." "Thefe were all the conditions that the Scottifn nation Atpulated for the man who had vanquifhed the Englith at Stirling, who had expelled them from Scotland, and who had once fet his country free!

Amid this wreck of the national liberties, Wallace fcorned fubmifiion. He lived a frce man: a free nan he refolved to dic. Frafer, who had too oft complied with the times, now caught the fame heroic fentiments. But their endeavours to 10 ufe their countrymen were in vain. The feafon of relittance was patt. Wallace perceived that there remained no more hope; and fonglt out a-place of concealment, where, eluding the vengeance of Edward, he might filently lament over his fallen country.

Edward aftembled at St indrew's what is calichen porbianint.

\(: 23\) Walace he- conqueror. Wallace alone remained an exception. Ed. Walace he- conqueror. Wallace alone remained an exception. Ed. estcuted. ward, who had received into favour thofe who had proved traiturs over and over again, fhowed a mean revenge
farfiament, Wiallace, Frafer, and the gariifon of Stirline, were fummoned to appear: They appeared not, and fentence of outlawry was pronounced aqaintt them.

Edward now prepared to befiege the calte of Stirlins; and, forefeejng that the reduction of this place would be attended with confiderable difficulty, he ftrip. ped the abbey of St Andrew's of the lead which covered it, iu order to employ the metal in bullets for his battering machines. Oliphant was folemnly fummoned to furrencer; but in vain. Edward drew out all his artillery, and battered the walls with fones of 200 pounds weight. The belieged, however, defended themfelves with obfinacy, and killed a great number of the Englifh: but at laft they were ohliged to furrender: and Edward, looking upon the conqueft of Scotland as now complete, fot out fur York, and from thence te Iincoln.

Though Edward had thus met with all the fuccefs lie could defire in his expectitions againf the Scots, he could not but perceive that his dominion over thern mult be very precarions, as long as he laeld them in the fubjection of a conquered people. He refolved therefore once more to renew his attempts for an union of the two kingdoms. He began with taking into favour the bifhop of Glafgow, Rohert Bruce, and John Mowbray, who, next to Bruce and the Cummings, was anongit the greatefl of the Scottifh nobility. To them he recommended the fettling the affairs of their comntry, but in fuch a manner as to leave it in his power to ef. fect the propofed union with England. This fcheme, however, was by no means agreeable to Bruce; who had now no other competitor for the crown but Cumming, who was in a great meafure incapable of oppofing his deligns: neither indeed could it ever be made agreeable to the bulk of the nation; and therefore came to nothing at laft. Scotland, however, was fubdued. Its inhabitants had renounced every idea of afferting againt the only man who difcovered a fteady and honourable fpirit, and whofe friendfhip feemed worth the courting. Ralph de Haliburton, a prifoner, offered his affitance for difcovering Wallace; and for this purpofe le was granted a tempolary liberty: but what he did in this very difhonourable employment is unknown. Certain it is that Wallace was difcovered, and betrayed into the hands of the Englifh, by Sir John Menteith, as is commonly fuppofed; whe is alfo faid to have been the intimate friend of Wallacc, thourh withont any jult foundation. Be this as it will, however, this celebrated and heroic patriot was arraigned at Weftminfter as a i raitor to Edward, and as having burnt villages, ftormed catlles, and naughtered many fubjects of England. Wallace denied his ever having been a traitor, and indeed with truth; for he had always been the avowed cnemy of Edward, and had not at any time owned allegiance to him. But whatever his defences might have been, they were of no avail with a judge who had refolved on his deftruction. Wallace was condemmed to die a traitor's death, and the fentence was executed with the utunoft rigonr! In his laft moments he afferted that independency which a degenerate nation had resounced. His head was placed on a pinacle at Lon-
don, and his mangled limbs were diftributed over the kingdom.

After the death of Wallace, Edward thought of no. Edward's thing but fettline the affairs of Scotland as a conquered recautions country ; however, he took care to preferve the ancient for fettling forms as far as was confiftent with the dependent itate of he scots the nation. It has been faid, indeed, that Edward \({ }^{\text {ffirs, }}\) abrogated all the Scottifh laws and cuftoms, and endeavoured to fubfitute the Enslifh in their flead ; but this is denied by others. Lord Hailes gives us at lentel the record with refpect to thefe laws, in the following words. "And, with refpect to the laws and ufages of the government of Scotland, it is ordained, that the cufom of the Scots and the Brets fhall for the future be prohibited, and be no longer practifed. It is alfo ordained, that the king's lieutenant fhall forthwith affemble the grood people of Scotland : and that, at fuch af. fembly, fhall be read over the flatutes made by David king of Scots, and alfo the additions and amendments which have been made by other kings; and that the lieutenant, with the affifance whicl he fhall then have, as well of Englifhmen as of Scots, fhall amend fuch of thefe ftatutes and ufages as are plainly againft the laws of God and reafon, as they beft may in fo fhort a fpace, and in fo far as they can without confulting the ling; and as to matters which they cannot undertake to correct of themfelves, that they be put in writing, and laid before the king by the lieutenant, and any number of commiffioners, with parliamentary powers, whom the Scots fhall think fit to choofe. That they fhall meet with commiffioners appointed by the king, and finally determine as to the premiffes."

This is the record by which it is generally fuppofed that the law of Scotland was abrogated. But Lord Hailes is of opinion, that the ufage of the Scots and Brets Dis \({ }^{125}\) here mentioned was fomething different from the com-abrogate mon law of the land. "We know (fays he), from our the ancieal ftatute-book, that the people of Galloway liad certain ulages peculiar to themfelves; Stat. Alex. 11. c. 2. One was, that caufes were tried among them without juries [2uon. Attach. c. 72. 73. placed in fome ancient MSS. among LL. David I. c. 15.], and this may probahly have been the ufage which Edward abolifhed. 'Ihe people of Galloway were fometimes diltinguifhed by the name of Scots: thus the ruild Scot of Galloway is an expreffion to be found in ancient inltruments, and is proverbial even in our own days. The ufuge of the Brets, I take to be what relates to the judse called brithibh, or brehon; in Ireland, breban; and confequently, that the thing here abolifhed was the commutation of punifhments by exacting a pecuniary mulet."

An indemnity was now granted to the Scots upon Indemnity certain conditions. Varions fines were impoled, fromgrated to , one to five years rent of the eftates of the delinquents. the Scuts. 4 One year's rent was to be paid by the clergy, excluding the bifhop of Glafgow; two by thofe who were more early in their fubmiffions than Comyn; three by Comyn and his affociates, and by the binop of Glafgow; four years rent was to be paid by William de Baliol and John Wifheart ; and five by Ingelram de Umfraville, becaufe they had ftood out longer. Three years rent was alfo paid by the vallals of Baliol, Wifheart, and Uinfraville. Thefe fines were to be paid in moieties. The perfon taxed was to pay half his income annually: and thus Umfraville, taxed in five years rent, was al-

Bactland. fived ten years to difcharge the fine. This wat an ex\(\xrightarrow{\square}\)

of the Eing land aus, after a long and oblinate contert, was Scot ith govert- - Within reduced under the dominion of Edward. prefs refervation to Edward of all the royal demefnes which Paliol might have alienated. There was alfo an exeeption for thofe who were already in cultody, and thofe who lad not yet fubmitted.

\section*{netut.} which the inceflant labour of fffeen years had cttabilhed by craft, dififulataion, and violence, with a walte of treafure, and the effution of much 1 hood. 'The canfes of this event are related as follows. Derverguill of Galloway had a fon, John Bdiliol, and a daughter named Marjory. John Comyn was the fon of Marjory, and, fetting Baliula arize, was heir to the pretenfions of Derverguill. He had for many years maintained the contelt againft Edward ; but at laft laid down his arms, and fwore fealty to the conqueror ; and as Baliol had repentedly renounced all pretenlions to the crown of Scotland, Comyn might now be confiliered as the rightful heir. His rival in power and pretentions was bruce earl of Carrick. This young nobleman's grandather, the compecitor, had patiently acquiefeed in the award of Edward. His father, yielding to the times, had ferved under the Englifh banners. But young Erruce had more ambition, and -a toore refllefs fipirit. In lis earlier years he acted upon no regular plan. By turns the partifan of Edward and the vicegerent of Baliol, he fiems to have forgoten or fitited his pretenfions to the crown. But his character developed itfelf by degrees, and in maturer age became firm and confiftent. According to the trad tionary report, Bruce male the following propofal to Cumyn: "Support my tite to the crown, and I will give you my ettate ; or give ne your ettate, and I will fupport your's." The conditions were properly drawn out and ligned by both parties ; but Comyn, either though fear or treachery, revealed the whole to Edward. On this the king thowed Bruce the letters of his accufer, and queltioned hiin very hard; but the latter found means to pacify him by mild and judicious anfwers. Notwithttandiug this, however, Edward fill furpected him, thouyh he difenbled his fentiments, until he thould get the brothers of Bruce into liss power, and then deftioy all the family at once. The king having drank frecly one eveniug, in formed fome of his lords that he had refolved to put Bruce to death next day. The earl of Clouceftet, hearing this refolution, fent a mefienger to Bruce, with twelve pence and a pair of fpurs, is is he had meant to reltore what he had horrowed. Bruce undertlood the meaning of his meffare, and prepared for fight. The ground was covered with fow, which would have difeovered his fight; but, it is faid, that Bruce ordered his farrier to invert the ihoes of his horfes, and immediately fet out for Scotland in company with his fecretary and groom. In his way the oblerved a foot-pallenger whofe behaviour feened to be tufpicious, and whom he foon difcovered to be the bearer of letters from Comyn to the Englifh monarch, urging the death or imnediate imprifonnent of Bruce. The latter, filled with refentment, innmediately beheaded the meffenster, and fet furward to his raftle of Lochmaben, where he arrived the feventh day a.fer his departure from London. Soon after this lie repaired to Dumfries, where Comyn happened at that time to refide. Bruce requetled ai interview with him VoL. XVI. Part II.
in the consent of the Minorites, where he reproached Scular 1. him with his treachery. Comyn gave him the lie, and . Bruee inftantly ftabbed him; after which he haftened i:o out of the convent, and called "To horfe." His at-And kills tendants, Lindefay and Kirkpatrick, perceiving lim Jatn Co. pale, and in extreme a cyitation, inquired how it was with my:i him? " Ill (replied Bruce); I duubt I have Aain Comyn." "You doubt!" cried Kirkpatrick; on faying which, he tuthed into the place where Comyn lay, and inftantly difpatched him. Sir Robert Comyn, a relation, attempted to defend his kinfman, and fared his fate. Bruce had now gone fo far, that it was in vain to think of retracting; and therefore fet himfelf in oppolition to Edivard in good earnell. The jufticiaries were then holding their court at Dunsfies; who hearing what had happened, imaginect their own lives to be in danger, and barricaded the doors. Bruce ortered the houfe to be fet on lire: upon which they furrendered; and Bruce granted them leave to depart out of Scotland without moleftation.

The above account of this cataftrophe is taken from Opuman the Scots hittorizns; thofe of England differ in many Lord Ha:les particulars. Lord Hailes fuppofes buth to be wrong coneconing and that the true circumitances of the quarrel are unknown. "My opinion (fays he) is, that Bruce, when he met Comyn at Dumfries, had no intention of embruing his hands in his hood, nor any immediate pur. pofe of afferting lis right to the crown of Scotland; that the flaughter of Comyn was occafioned by a hatly quarrel between two proud-fpirited rivals; ane that Bruce, from neceffity and defpair, did then affert his preterfions to the crown."

The death of Comyn affected the Scots variouly, according to their different views and interelts. The relations of the deceafed viewed it as a cruel aflafmation, and joined with Edward in lchemes of revenge. Some who wifhed well to the peace of their country, thousht that it was better to fubmit quiet!y to the goverument of the Englih, than to attempt a revolution, which could not be effected withont much danger and bloodfhed; but, on the other hand, the friends of Bruce now faw the neceflity they were under of proceeding to the coronation of the new king without lofs of time. The Robers ceremony was therefore performed at Scone on the 25 therowned of March 1306, in prefence of two earls, the bithops of kirg of St Andrew's and Glafgow, the abbot of Scont, John by a wo de Athol, and John de Menteith. It had been cufto- man. mary, fince the days of Macbeth, for one of the family of Fife to put the crown on the king's head ; and Bruce found the prepoftefion of the Scots in favour of this circumftance fo ftrong, that he was oblired to feek for an expedient to fatisty them. Macduff the carl of Fife was at that time in England, where he had married a near relation of Edward. His litler was wife to the earl of Buchan, one of the heads of the family of Comyn, and confequently the determined enemy of R ?bert. By an uncommon effort of female patriotifm. She poltponed all private quarrels to the gnod of her country, and in her huband's abfence repaired, with all his warlike accoutrements, to Bruce, to whom the delivered them up, and placed the crown upon his head. 'lhis crown is faid to have been made by one Conrers an Engrlifhman, who narrowly efcaped beiug punifted for i: \(b y\) Edward.
'Lbe bing of England received intelligence of all thefe 5 C pre

Scolland proceedings with aftonifhment; and without delay fent a body of troops under the eommand of Aymer de Valence earl of Pembroke, to fupprefs the rebellion. Bruce omitted nothing for his defence. He had always been confidered by his countrymen as a promiting accomplifhed young nobleman, but firmly attached to Edward's perfon and government; for which reafon he had not been trufted by thofe independent patriots who joined Wallace. 13ut their confidenee was now gained by his rendering limfelf fo obnoxious to Edward, that no por-

133
He is de-
feated at Methven fibility of a reconciliation was left ; and he foon faw himfelf at the head of a fmall army. With thefe, who confifted of raw and unexperienced foldiers, Buce formed a camp at Methven near Perth, which laft was the head-quarters of the enemy; but knowing the difadvantage under which he laboured from the inexperienee of his men, he refolved to aet upon the defenfive. The Englin gemeral at laft fent Bruce a challenge to fight hiin, which was accepted; but the day before the battle was to have been fought by agreement, the Scots were attaeked by furprife, and totally defeated. Bruce behaved with the greateft valour, and had three horfes killed under hin. Being known by the flaughter which he made, John Mowbray, a man of great courage and refolution, ruthed upon him, and eatching hold of his horle's bridle, cried out, "l have hold of the newmade king!" but he was delivered by Chriftopher Seaton. Some Scottifh hiflorians have afferted, that on this occafion all the prifuners of note were put to death; but others inform us, that though Edward did fend orders to that purpofe, the Englifh general pardoned all thofe who were willing to fwear fealty to his mafter: however, it is certain, that after the battle of Methven, 134 many prifoners were hanged and quartered.
Ys diftroffed 'This difafter almoft gave the finithing ftroke to the after this deteat. affais of Bruce. He now found himfelf deferted by a great part of his army. The Englith had taken piifoners great numbers of women whofe hufbands followed Bruee; and all thofe were now ordered, on pain of death, to accompany their hurbands. Thus was Bruce burdened with a number of ufelefs mouths, and found it hard to fubifit. The confequence was, that moft of his men departed with their families, fo that in a few days his army dwindled down to 500 . With thefe he retreated to Aberdeen, where he was met by his brother Sir Neil, his wife, and a number of other ladies, all of whom offered to follow his fortune through every difficulty. But, however heroic this behaviour might be, it put Bruce to fome irronveniencc, as he could fearce procure fubfiftence; and therefore he perfuaded the ladies to retire to his cafle of Kildrommey, under the protection of Sir Neil Buce and the Earl of Athol. In the mean time the defertion among Bruce's troops continued, fo that now he had with him no more than 200 men ; and as winter was coming on, he refolved to go into Argylefhire, where Sir Neil Campbell's eftate

135
Reaches
Argylefir wiph great dificuity. liay, who had gone before to prepare for his rececpion. In his way thither he encountered incredible difficulties; and fome of his followers being cut off at a place called Dalry, the reft were fo difheartened, that they all forfook him, excepting Sir Gilbert Hay, Sir James (fometimes called Lord) Douglas, and a few domeftics. Bruce, however, kept up the fpirits of his little party by reeounting to them the adventures of pripces and patriots in circumfances fumilar to his own. Having
croffed Lochlomond in a fmall crazy boat, he was dif- Scot'and. covered by lis truity friend the Earl of Lenox, who had been proferibed in England, and now lived in a \({ }_{136}\) kind of exile on his own eftate. The meeting between Meets with thefe friends was very affecting, and deew tears from the carl of the eyes of all prefent. Lenox, who had heard nothing Lenux ; of Bruce's misfortunes, furnihhed him and his half-famifhed attendants with plenty of provifions: but being foon made fenfible that it was impofible for them to live in a place where they were well known, and furrounded by enemics, Bruce refolved to feek out fome more fafe habitation. For this purpofe Sir Neil Campbull had already provided thipping ; but our adventurers liad fearcely fet fail, when they were purfued by a large fquadron of the enemy's flect. The bark which carried the earl of Lenox efcaped with the utmoft difficulty to Cantire, where Bruce was already landed: With and, at their meeting, both agreed that their perfons \(\mathbf{w} \cdot \mathrm{m}\) he fhould never afterwards be feparated while they remain- fies to Cara ed alive.

In the mean time Edward having compromifed fome differences with his Englih fubjects, refumed his old project of entirely fubduing Scutland; and his intention now appears to have been to divide the lands of fuch as he fufpected of difaffection among his Englifh followers. He ordered a proclamation to be made, that E all who had any title to the honour of knighthood, ei-prepara. ther by heritare or eftate, fhould repair to Weftminfter rio s for a to reeeive all military ornaments, their horfes excepted, fion of Scot? from his royal wardrobe. As the prince of Wales came land. under this denomination, he was the firf who underwent the ceremony; which gave him a right to confer the like lionour on the fons of above 300 of the chief nobility and gentry of England. The prince then repaired, at the head of this yallant train, to Edward; who received them, furrounded by his nobility, in the moft folemn manner. The king then made a fpeech on the treachery of the Scots, whofe entire deftruction he vowed. He declared his refolution of once more heading his army in perfon; and he defired, in cafe of his death, that his body might be carried to Seotland, and not buried till fignal vengeance was taken on the perfidious nation. Having then ordered all prefent to join him within fifteen days, with their attendants and military equipages, he prepared for his journey into Scotland. He entered the country foon after Bruce's defeat at Methven. The army was divided into two Enters 139 bodies; one commanded by the king himfelf, the other country, by the prince of Wales, and, under him, by the earls and beof Lancalter and Hereford, with orders to proceed great cruelnorthwards, and penetrate into the conntries where the ty. intereft of Bruce was Atrongeft. As he paffed along, Edward caufed all that fell into his hands, whom be fufpected of favouring Bruee's party, to he immediately executed. The bifhop of Clafgow was the only exception to this barbarity; he was taken, but had his life fpared on account of his function.

In the mean time, as the prinee of Wales continued his march northwards, Bruce's queen began to be alarmed for her own fafety. She was advifed to take fanctuary at the flarine of St Duthac in Rofshire ; but there fhe was made prifoner by William earl of Rofs, 140 who was of the Englifh party. By Edward's ordet fhe Rolert's was fent to London; her daughter, who was, taken at quen and the fame time, being fhut ny in a religions houfe. The ciavghen pridircctions foners.

Scoland. dircetions for the entertainment of the queen are fill

147 Whromle) calile \(k \in n\), and e garritun aluacred. preferved \(\ddagger\). She was to be conveged to the manor of Bruftewick; to have a waiting-woman and a maid-fervant, advanced in lite, fedate, and of good converfation: a butler, two men-fervants, and a foot-boy for her clamber, fober, not riotous, to make her bed: three greyhounds when the inclines to lunt ; venifon, fifh, and the faireft houfe in the manor. In 1308, the was removed to another prifon; in 1312 , the was removed to Windfor cafle, 20 fhillings per week being allowed for her maintenance. In 1314, fhe was committed to Rochefter caltle, and was not let at liberty till the clofe of that ycar:
The on'y fortrefs which Bruce poffefted in Scotland was the cattle of liildrommey; and it was foon befiege by the earls of Lancafter and Hereford. One OBurn treacher ully burnt the magazine; by which means the garrifon, deflitute of provifions, was obliged to furrender at difcretion. The conmon foldiers were hangel; Sir Neil Bruce and the carl of Athol were fent prifon. ers to Edward, who caufed them to be hanged on a gallows 50 feet high, and then beheaded and burnt. The countefs of Buchan, who had crowned King Robert, was taken priloner; as was Lady Mary Bruce, the king's fifter. Some liftoríans fay, that Edward ordered thefe two ladies to be thut up in wooden cages, one to be hang over the walls of the cafte of Roxburgh, and the other over thofe of Berwick, as public fpectacles: but Lord Hailes only tells us, that the countcfs of Buchan was put into clofe confinement in
were put to death; among whom were Thomas and Sectlond. Alexander Bruce, two of the king's brothers, and John Wallace, brothor to the celebrated Sir William. Bruce himfelf, in the mean time, was in fuch a defpicable fituation, that it was thought he never could give more difturbance; and it was even reported that he was data. All his mistortunes, however, could not intimidate him, or prevent his meditating a molt fevere revenge upon the deftroyers of his family. He firtt removed to the caftle of Dumbarton, where he was hofpitably received and entertained by Arsus lord of Kintyrc; but, fufpecting that he was not fafe there, he failed in three days to Rachrin, a fmall ifland on the Irinh conaf, where he fecured himfelf effectually from the purfuit of his enemies. It was during his flay in this ifland, that the report of his death was generally propagated. Notwithftanding this, his party increafed confiderably; and, even when he landed on this inland, he was attended by 300 men. Howerer, after having lived for tome time in this retreat, being apprehenfive that the report of his death might be generally credited among his friends in Scotland, it was refolved to attempt the furprife of a fort held by the t ng. lifh under Sir John Haftings, on the inte of Arran. This was ferformed with finceefs by his two friends \({ }_{1} 143\) Douglas and Sir Robert Buyd, who put the greatellf.ret oa the part of the garrifon to the fword. The king, hearing Il f Ar. of their fuccefs, paffed over into Arran; but, notran, knowing where his people refided, is faid to have found them out by blowing a horn. He then fent a trufty fervant, one Cuthbert, into his own country of Carrick; with onders, in cafe he found it well affected \({ }_{5} \mathrm{C} 2\) to
(F) M. Weftminfter, p. 455. fays, "Capitur etiam et illa impillima conjuratrix de Buchan, de qua confultus Rex, ait, Quia gladio non percuffit, gladio non peribit; vernm, propter illicitam conjurationem quam fecit, in domicilio lapideo et ferreo, in modum coronæ fabricato, firmiflime obftratur, et apud Bervicum fab dio forinfecus fufpendatur, ut fit data, in vita et polt mortem, (peculum viatoribus, et opprobrium fempiternum." Other Englih hiforians, copying M. Weftminfter, have faid the fame thing. We cannot, therefure, blame Abercrombie for faying, "She was put in a wooden cage flaped like a crown, and in that tormenting polture lung out from high walls or turrets to be gazed upon and reproached by the meanet of the multitude :" Vol. I. p. 579. Hemingford, Vol. I. p. 221 . relates the ftory in a manner fomewhat different. He fays, that the earl of Buchan her hufband fought to kill her for her treafon; but that Edward reftrained him, and ordesed her to be confined in a wooden cage.

The intentions of Edward I. touching the durance of the courtefs of Buchan, will be more certainly larned from his own ordere, than from the report of M. Wefmintter. His orders iun thas: "By letters under the privy-feal, be it commanded, that the chamberlain of Scotland, or his deputy at Berwick upon Tweed, do, in onc of the turrets of the faid cafte, and in the place which he fhall find moft convenient, caufe conftruct a cage ftrongly latticed with wood (de fuif, i. e. beams of timber or palifades), crofs-barred, and fecured with iron, in which he fhall put the countefs of Buchan. And that he take care that fae be fo well and fafely guarded therein, that in no fort the may iffue therefrom. And that he appoint one or more women of Berwick, of Englifh extraction, and liable to no fufpicion, who Jout mniller to the faid counte/s in watrg und drinking, und in all things elfe conventent, in ber faid lidgang piace. Fnd that he do caufe her to be fo well and frietly guarded in the cage, that fhe may not fpeak with any one, man or woman, of the Scottifh nation, or with any cne elfe, faving with the women who fhall be appointed to attend her, or with the guard who fhall have the cuftody of her perfon. And that the cage be fo confructed, that the countefs muy buer therrn the a nevencence of a decent cha anber (efement de chambre courdoife) ; neverthelefs, that all things be fo wedl and furcly ordered, that no peril arife touching the right cuftody of the faid countels. And that he to whom the charge of her is committed fhall be refponfible, body for body ; and that he he allowed his charges." Fadera, i, ii. p. so14.

Sucl were the orders of Edward I, and be furcly was not a man who would fuffer his orders to be difobeyed. Here, indced, there is a detail concerning the cuflody of a female prifoner, which may feem ridiculoufly minute, but which is inconfiftent with the ftory related by M. Wefminfter aid other hiftorians. To thofe who have no notion of any cage but one for a parrot or a fquirrel, hung out at a window; we defpair of rendering this man. cate intelligible.

\section*{S C O}

Scotland. to his cane, to light a fire on a certain point near his cafte of Tunbers, whence it could be difeerned in Arran. Fruce and his party perceived the fignal, as they thourht, and immediately put to fea. 'Their voyage took up but little time ; and as bruce had now 400 men along with him, he refilved immediately to act on the offenfive. His firt exploit was to furprife his own calle of Tunberry, which had been given, along with Bruce's eflate, to lord Henry Percy. Him he drove out, along with the linglith garrifon; but, in the mean time, he met with his fervant Cutlibert, who gave hinı difagreceable intelligence. This man had met with very little encourravement on his landiurs in Scotland; in confequence of which he had not lighted the fire agreed upon as a figural of his fuceefs, that which Bruce hiad obferved having beeen kiudled by accident. He alfo told him, that the Englifh were in full poffeffion of the country, and advifed his malter to be upon his guard. Soon after this the king was joined by a lady of fortune, who brought along with her to warrior:. Dy her he was firtt particularly informed of the miferable fate of his family and relations; which, inftead of diheartening, animated him the more with a defire of reverige. However, he did not immediate-

145
Douglas re
cove s his
ows eltare. ly attempt any thing himfelf, but allowed Douglas to attempt the recovery of his eftate of Douglas-dale, as Bruce himfelf had recovered his in Carrick. In this expedition Douglas was joined by one Thomas Dickfon, a man of comfiderable fortune, and who gave him intelligence concerning the fate of the country. By his advice he kept himfelf private till I'alm Sunday; when he and his followers with covered armour rcipaired to St Bride's church, where the Englith were performing divine fervice. 'The latter were finprifed, but made a biave defence; though, being overpowered by numbers, they were at laft obliged to yield. Donglas, without farther refiftance, took pofiffion of his own cafile, which he found well furnithed with arns, provitions, and money. He dettroyed all that he could not carry with him, and alfo the caftle itfelf, where he bnew that he muft have been befieged if he had kept it.

While Bruce and his friends were thus fignalizing then.felves, and fruggling with the Englift under fo many diladvantages, it is natural to think that they mult have met with many dangerous and difficut adventures. Miany of thefe, indeed, are telated by the Scots hiftorians; but muft of them have the appearance of fables, and it is now impoffible to diflinguif, the tue frem the falfe; for which reafon we fhall pafs them all ower in lilence, confluing ourrelves only to thole faces which are at onee important and well authenticated.

In 13C 7 , the earl of Pembroke advanced into the weft of Scotland to encounter bruce. The latter did not decline the combat; and Pembroke was defeated.

146
The Eng. lifh twice difeated by Three days after this, Bruce defeated with great 』laughter another Englifh general named Ralph de Monther. mer, and obliged hin to fly to the cafle of Air. The
Rubert, at the approach of fuccours fiom England. This year the Englifh performed nothing, except burning the monaftery at Paifley. Idward, however, refolved ftill to execute his utmoft vengeance on the Scots, though he had lung been tetarded in his operations by a tedious and dangerous indifpofition. But now, fup-
pofing that his malady was decreafed fo far that he Seotarct could fafely proceed on his march, he offered up the horfe-liter, in which he had hithento been carried, in the cathedral clurch of Carlifle; and, mountinr himfelf on hurfebaek, proceeded on the way towards Solway. He was fo weak, lowever, that he could advance no farther than lix miles in tour days; after which he expired in fight of Seotland, which he had fo ofien devoted to defluction. With lis dying breath Death of \({ }^{4}\). he gave orders that his body fhould accompany his Edward \(I_{2}\) army into Scotland, and remain unburicd until the country was totally fubdued; but his fon, difregarding this order, cauled it to be depolited in Wethmintter abbey.

The death of fuch an inveterate enemy to the Scottifl name, could not fail of railing the fpirits of Bruce and his party ; and the inactive and timid behaviour of his fon Edward II. contributed not a little to give them freth courage. After having granted the guardianthip of Scotland to his favourite Piers de Gavefton carl of Pembroke, whom his father had lately banifhed, he advanced to Cumnock, on the frontiers of Airthire, and then retreated into f .ngland; conferring the office of guardian of Scotland upon John de Bretagrie earl of Richmond, a fortnisht atter he had beftowed it on Gavefloar. He was no tooner gone than Bruce invaded Galloway. The inhabitants refufing to follow his Robert der ftandard, be laid wafte the country; but was deleated, feated in and obliged to retire nonthwards by the guardian. In Ualloway. the noth he over-ran the country without oppofition; and foon began to move fouthwards again in order to repair his late difgrace. He was encountered by Comyn earl of Buchan with an undifciplined body of Eng1 fi, whom lie entirely defeated and difperfed. But about his time he was feized with a grievous diflemper, which weakened him fo much, that no hopes were lett of his recovery. In this enfeebled fituation, he was attacked by the earl of Buctran and Jolin Mowbray an Englifh commander, whu had affembled a budy of the EEferats toops in order to efface their late difhonour. The in his urun armites inct at Invelury in Aberdeenfhire. Bruce was and reco too weak to fupport himelf, and thenefore was helld ver. from upon horfeback by two attendants: but he had the dileafe, plealure of fecing lis enemies totally defeated, and purfined with great llanghter for many miles; and it is reported, that the agitation of his fipirs on that day proved the means of curing hin of his difcafe. This battle was fuught on the 22d of May 1308.

The king of Scotland now took revenge of his enemies, after the manner of that barbarous age, by walling the country of Buchan with fire and lisord. His fucceffes had fo raifed his character, that many of the Scots who had hitherto adhered to the Englif cauke, now came over to that of Robert. Edward, the king's brother, invaded Galloway, and defeated the inhahitants of that country. John de St John, an Enghifh com-Succiffes mander, with 1500 horlemen, attempted to furprife Edward him ; but Edward having rectived timely information Bruce, of his defigns, ordered the infantry and meaner part of his army to entrench themfelves ftiongly, white he hinıfelf, with no more than 50 horfemen, well armed, under cover of a thick mift, attacked his enemies, and put them to flight. After this he reduced all the forteffies in the country, and totally expelled the Enghfifion it. A bout this time alfo, Douglas, when roving about the mountainous

Seat!an! \(\xrightarrow{-}\)
tainous parts of Tweedale, furpricd and mace prifoners 'lhenas Randolfh the kins's ncphew, and AJexander Stewart of Bonklinl, who had hitherto continued inimical to the interefrs of Rotert. Randolph was conducted to the king, but talked as him in an lain lity Alanis; ufon which his uncle pat him into clofe confinement.

The next explcit of Robert was a sainft the lord of Lorn, a divifion of Ajrylethire. It was this moble. man who had reduced t!e king to fuch Atraits after his defeat at Metheen; and he now refilved to take ample revenge. Having entered the country, the king arrived at a narrow pass, where the tro ps of Lom lay in ambuth. "Ihis pafe had a hirg mountain on the one fide, and a procipice walbed by the fea on the other: but Robert havine ordered Douglas to make a circuit and gain the fumnsit of the nountain with part of the army, he entered himfelf with the reit. He was inme. diately attacked; but Douplas with his men ruibed doxn the hill, and decided the vienory in favour of the king ; who foon a'ter took the catte of Dunftaffnage, the chief refidence of this molbemen.

II hile Robert and his affociates were thus gaining the admiration of their countrymen by the expluits which they daily pertorned, the Enflith were fo unfettled and fluctuating in their counfels, that their party knew not how to act. Edward fili imspined that there was a poflibility of reconciling the Scots to his government : and for this purpofe he employnd Wilham de Lambyrton, bilhop of St Andrew's, who, after having been taken prifoner, and carried from one place of confinement to another, had at balt made luch fubmiffions, as procared firlt his liberty, and then the contidence of Edward. This eccleliatlic havins taken a mott folemn oath of fidslity to Fidward, now relolved to ingratiate himelf, by publifhing againit Rubert and his adherents a fentence of excommunication, which had been refolved on lonir before. 'Ihis, however, produced no effect ; and the event was, that in 1300 , through the mediation of the king of France, Edward confented to a truce with the Scots. Ihis pacific difpulition, however, lafted not lans. The truce was fearcely concluded, when Edward charged the Scots with violatins it, and fummoned his barnns to mect him in arms at Newcaftle: yet, probably being douht. ful of the cvent of the war, he empusered Robert de \(L^{\top} m f r a v i l l e\), and three others, to conclude a new truce; declaring, howerer, that he did this at the requeft of Philip king of France, as his deareft father and! friend, but who was in no lurt to be conficlered as the ally of Sontland.

The new negociations were foon intermpted. They were again renewed; and in the be inning of the ytar 1310 the truce was concluded, but entirely d.fregarded by the Scots. The progrets of Bruce now became very alarming: The town of Perth, a place at that time of great importance, was threatened; and to relieve it, Edward ordcred a flet to fal up the river Tay : he alfo commanded the earl of Uliter to affemble a body of troops at Dublin, and from thence to invade Scotland; his uwn barons were oncored to meat him in arms at Berwick. About the end of September, he entered Scotland; paffed from Roxburgh, through the forelt of Selkirk, to Bissar; from thence lie penetrated into Renfiew; and turning back by the way of

Linlithsow, he retreated to Berwick, where he consi- Se than, nued inactive for eipht months.

Diring this irvation, Rebert had corefull: avoided a leattle with the Englifh ; well knowing, that an i:susfon underaken in atumn woukl ruin the leco:y amed cavaly, o: which the Englith placed their chief depatence. Ifis canfe was alr,s favoutu by a farcity whels prowiled at this tine in scotlan'; for as magazines and other relources ot modern war were then uaknowa, the Enchlith army were greatly vetarled in their opurations, and found it impufible to fubun in the country:

The fpirit of enterprife had now communic ted it- Limus felf to all ramks of people in scotland. In 1311, thecafefircaftle of Linithgow was lurpifed by a poor peaiant, wifed by named Wihan Binno:2. "the Einglifa garrifun were:he Scots fenure, and kept but a night guard; wif which Binnock being informed, contaled cisht refolate men in a load of lay, which he laa beca employed to drive into the callic. With thele, 23 foon as the srate was opened, he fell upon the feeble guard, and became maiter of the place; which was ditmantled by Robert, as weil as all the other canles taken in the courre of the war.

Edwaed now refolved to invade Scotland again; and for this purpofe crdered his army to affembie at lioxburgh. But Rubert, nut contented with defending Roner is his own country, relolved in his turn te invade Enge valers ing. lund. He accordingly entered that country, and cruel- a : d, and ly ravaged the bithopric of Dutham. He returned rake l'erth luaded with fpoil, and laid fiege to Perth. After re- non his remaining lix weeks before that place, he raifed the fiege, but returned in a few days; and having pruvided fasling ladders, approached the works with a chulen body of intantry. In a dank night he made the attack: anis having waded through the ditch though the water floud to his throat, he was the fecond man who reached the top co the walls. The town was then foon taken; aiter which it was plundered and burnt, and the fortiications levelled with the ground. This happead on . the Sth of January 1312.

Edward was now become averfe to the war, and renewed his neguciations for a truce ; but they thll cance to nothing. Rubert again invaded England; burnt great part of the city of Durham; and even thedtened to beliege Berwick, where the ling of England had, fecond time: fu: the time, fraed his relidence. He next reduced with grea: the catles of Butel, Dunfries, and Dalfwinton, with fucsefs, many other fortrefles. The cattle of Roxhurgh, a place of the utmuft importance, fext fell into his hands. The walls were faled while the garnifor was rewhing on the eve of Lent. They retreated into the inner tower; but their guvernor, a Fronchman, having received a mortal wound, they capitulated.

Kandulph, the king's nephew, who bad been imprifoned, as we lave already oblerved, was now receired into favour, and began to diflingnith himfelf in the canfe of his comitry. He blockaded the callle of Edimhurgh fo clofely, that all communication with the neighburing country was cut off. The place washurghacorrmanded by one Leland, a knight of Gafcony; but ken ng the gariton fufpecting lus fitelity, impuifoned him in Randolpt. a cunceon, and chule another commander in his tlead. Oue William Frank prefented himfeif to Ranculph, and infermed him how the walls night be fcaled. This man in his youth had refided in the caftle: and having

\section*{3 C 0}

\section*{Scothand,} \(\xrightarrow{\square}\) intrigue with a woman in the neighbourhood, lad been accuftomed to defeend the wall, during the night, by means of a ladder of ropes; whenc", by a Iteep and difficult path, he arrived at the fout of the rock. Randolph himfelf, with 30 men, undertook to feale tlie caftle walls at midnight. Frank was their uide, who ftill retained a perfect memory of the path, and who firt afcended the wall. Put before the whole party could reach the fummit, an alarm was given, the garrifon ran to arms, and a defperate combat enfued. "he Englifh fought valiantly till their commander was killed; after which they threw down their arms. Leland, the former governor, was releafed from his conhinement, and contered into the Scottifh fervice.

In 1313 . king Robert found the number of his friends increafing with his fucceffes. He was now joined by the earl of Athol, who had lately obtained a grant of lands from Edward. This year, through the media-
tion of France, the conferences for a truce were renewed. Thele, however, did not retard the military operations of the Scots. Cumberland was invaded and laid waft : the miferable inhabitants befought Edward's protection; who commended their fidelity, and defired them to defend themelves. In the mean time, Robert, leaving Cumberland, pafied over into the ife of Man, which he totally reduced. Edward found great difficulties in raifing the fupplies neceffary for carrying on the war; but at laft overcame all thefe, and, by the becinning of the year 1314, was prepared to invade Scotland with a mighty arniy. In March he ordered his fhips to be afembled for the invafion; invited to his affiftance E.th O'Connor, cliief of the Irith of Con naught, and 26 other Inih chiefs; fummoned them and his fuhjects in Ireland to attend his ftandard, and gave the command of thefe auxiliaries to the earl of Uilter. His barons were fummoned to meet him at Berwick on the 11 th of June; and 22,000 foot- foldiers, from the different counties of England and Wales, were required by proclamation to affemble at Wark.

In the mean time, the fucceffes of the Scots continued. Edward Bruce had reduced the catles of Rutherylen arid Dundee, and Jaid fiege to the cafle of Stirling. The governor of the place agreed to furrender, if he was not relieved before the 24th of June 1314; and to this Fdwand agreed, without confulting his brother. The king was highly difpleafed with this raff treaty, which interrupted his own operations, allowed the L. l glifh time to affemble their utmof force, and at laft obliged him either to raife the fiege or to put all on the event of a fingle battle. However, he refolved to abide by the agreement, and to meet the Englifh by the appoirted day. Having appointed a general rendezveus of his forces between Falkirk and Stirling, he found their number to anount to fomewhat nore than \(3=, 000\), befides upwards of 15,000 of an undifciplined rabble that followed the camp. He determined to wait the Englifh in a field which had the brook or burn of Bannock on the right, and Stirling on the left. His chief dread was the ftrength and number of the F.nglifh cavalry, and the fe he took every method to oppofe. The banks of the brook were fleep in many places, and the ground between it and Stirling was patly covered with wood. The king commanded many pits, of abcut a foot in breadth and two or three feet deep, to be dug in all places where ca-

\section*{\(\left.75^{8}\right]\)}

\section*{S C O}
valry could have aecefs. From the defaiption given Scothand, of them by the hiftorians of thofe times, there feem to have been many rows of them, with narrow intervals. They were carefully covered with brufhwood and fod, fo that they would eafily be overlouked by a ram and inpetuon:s enemy. It is faid by fome authors, that he alfo made ufe of caitrops, to annoy the horles in the molt effectual manner.

On the 23 d of June, the Seets received intelligence Difporition of the approach of Edward, and prepared to decide f the the fate of their country. The front of their army cx- cots, tended from the brook called Bannocklourn to the neighhourhood of St Ninians, pretty ncarly upon the line of the prefent turnpike-road from Stirling to Filfyth; and the fone in which the king is faid to have fixed his flandard is fill to be feell. Robert commanded all his foldiers to fight on foot. He gave the command of the centre to Douglas, and Walter the young fteward of Scotland; his brother Edward had the command of the right wing, and Randolph of the left ; the king himfelf taking charge of the referve, which confifed of the men of Argyle, Carrick, and the iflanders. In a valley to the rear, faid to be to the weftward of a sifing ground now called Gilles-bill, he placed the baggage, and all the ufelefs attendants on his ariny.

Randolph was commanded to be vigilant in prevent-A ararty of ing the Englinh from throwing fuccours into the cafte \({ }^{P}\), plifi caof Stirling; but 80 horfemen, commanded by Sir \(r_{\text {val }} y\) ded by Robert Cifford, made a circuit by the low grounds to Randolph, the calt, and appruached the cafle. The king, perceiving their motions, chid Randolph for his inadvertency, on which the latter hafted to encounter that body. As he advanced, the Enolifh wheeled to attack him. Randolph drew up his men in a circular form, holding out their fpears on every fide. At the firlt oulet Sir William Daynecourt, an Englifh commander of diftinguifthed valour, was killed ; but Randolph, who had only a fmall party with him, was furrounded on all fides, and in the utmoft danger. Douglas perceived his danger, and requefted the king to let him go to his affitance. Robert at firft refufed, but afterwards confented with reluctance. Douglas fet out without delay ; but as he approached he faw the Englifh falling into diforder ; upon which he called to his men to fop, and not diminifi the glory of Randolph and his men by fharing their victory.

\section*{\({ }^{86} 3\)}

Robert was in the front of the line when the van- An Engguard of the Englifh appeared. He was meanly dref-lifh knight 1 fed, with a crown above his helmet, and a battle.ax in killied in his hand. Henry de Bohun, an Englih knight, arm- hat hy king ed cap-a-pee, rode forward to encounter him. Robert Robert, did not decline the combat, and ftruck his antagonit fo 8 violently with his battle-ax, that he is faid to have cleft him down to the chin ; after which the Englif vanguard retrcated in coniufion. The Scottiih generals are faid to have blamed their king for his ramnefs in thus encountering Bohun; and he himfelf, confeious of the juitice of their charge, only replied, "I have broke my good battle-ax."

On Monday the 24 th of June, the whole Englifh Conmanarmy moved on to the attack. The van, confifting of de sof the archers and lancemen, was commanded by Gilbert de Englifa ar". Clare earlo Gloucefter, nephew to the Englifh king, \({ }^{\text {my, }}\) and Húmphy de Bohunconitable of England ; but the ground was to narrow, that the rell of the army had not
cotland, fufficient room to expand itfelf; fo that it appeared to the Scots as confifing of one great compact body. The main body was brought up by Edward in perfon, attended by Aymer de Valence earl of Pembroke, and Sir Giles d'Argentine, two experitneed commanders. Maurice abbot of Inchaffray, placiug himfelf on an eminence, celebrated mafs in the fight of the Scottifh army. He then pafted alonr the front, barctooted, with a crucifix in his hands, and in few words exhorted the Scots to fight for their rights and liberty. The Seots fell down on their knees; which being pereeived by Edward, he eried out, "They yield! See, they implore mercy" "they do," anfrered Umfraville, one of his commanders, " they do implore merey, but not from us. On that field they will be victorious or die."
re Eng- As both parties were violently exafperated againt 1 entirely each other, the engagement be an with great fury.
eated. The king of Scotland, perctiving that his troops were grievouly annoyed by the Englifh arehers, ordered Sir Kobert Keith the marifchal, with a few armed horfemen, to make a circuit and attack the archers in flank. This was intantly accomplifhed: and as the weapons of the arehers were ufelefs in a clofe encounter, they could make very little refiftance, at the fame time that their Hight fpread diforder through the whole army.

Robert now advanced with the refelve: the whole Englifh army was in the utmolt confufion; for the defeat of the archers had decided the victory in favour of the Scots. The young and gallant earl of Glouceßer attempted to rally the fugitives, but was thrown trom his horfe, and cut in pieces, which inereafed the general confufion. At this critical moment, the numerous attendants on the Scottifh camp, prompted by curiofity or the defire of plunder, ifised from their retirement. The Englith mitook them for a bocy of freth troops coming to the afiltance of their enemies, and fled with preeipitation on all fides. Many fonght refuge among the rocks in the utighbourhood of Stirling cafle, and many were drowned in the sivers. Pembroke and Sir Giles d'Argentine had never quitted Edward durin \({ }^{5}\) the action; but now, feeing the battle irretricvably loit, Pembroke confrained the king to quit the field. D'Argentine refufed to fly. He was a man of great valour, and had a high reputation in Scotland. According to the vulgar opinion, the three molt eminent worthies in that age were the emperor Henry of Luxemburg, Ro. bert Bruce, and Giles d'Argentine. He is faid to have thrice encountered two Suracen warriors in Palcitine, and to have killed them both each time. His valonr now availed him but little; for rufing into the miltt of the Scots army, he was inftantly cut in pieces. Douglas, with 60 horfemen, purfued Edward clofe. At the Torwood he met Sir Lawrence Abernethy, who was hafening to the Englifh rendezrous with twenty horfemen. The latter foon abandoned the caufe of the vanquifhed, and juined Douglas in the purfuit of Edward, who fled to Linlithgow. He had feareely arrived there, when le was alarmed by the approach of the Scot, and again olliged to lly. Douglas and Abernethy followed him with fuch affiduity, that (as Lord Hailes choofes to Latinize the expreffon of an ancient hiftorian!) ne aed mingendi lorus cencederetur ; but, notwithfanding their utmont efforts, Edward got fafe to Dunbar, where he was recsived by the earl of March, who protected him it he could be conveyed by fea to England.

\section*{\(759] \quad\) S C O}

Such was the derifie battle of Bannockbum, the senolant. greatelt defeat the Englifh ever fuftained from the Scots. On the fide of the latter no perfons of note were 月ain, excepting Sir William Vipont, and Sir Wialter Rofs the favonrite of Edward Bruce ; and fo grievouny was Ed. ward afficted by the death of this man, that he exclaimed, "O that "his day's work were undone, fo Rofs had not died!" On the Englifh fide were Пain 27 ba rons and bannerets, and 22 taken prifoners; of knishts 169 there werckilled 42 , and óo taken prifoners; of efquires "nglifh in there were killed 42 , and óo taken prifoners; of efquires "nglifh in there fell 700 ; but the number of the common men who the battle wert killed or taken was never known with any certair bu n. ty. The Weth who hadeferved in the Einlifh army were feattered over the colintry, and crucliy butehered by the Scottifi peafants. "The En lith, who had taken refuge among the rocks in the nei hourhou! of Stirling, furrendered at difcretion: the catle was furrendered, and the privy-feal of England fell into the hands of the king of Seots. 'The fpoils of the Fin rlifh eamp were immenfe, and enriehed the conquerors. along with the ranfom of many noble prifoners who fell into their hands. Robert flowed much generofity in his treatment of the prifoners who fell to his flare. He fet at liberty Ralph de Monthermer, and sir Narmaduke T'werge, two officers of high rank, without tanfom; and by lunmane and generous offices alleviated the misfortune of the relt. The dead bodics of the earl of Gloncefter and the lord Cliffurd were fent to England, that they misht be interred with the ufnal folemnity. There was one Balton, a Camelite friar and poet, whom Edward is faid to liave brought with him in his train to befpectator of his atchievements, and to record his triumphs. Baton was made prifoncr, and obliged to celcbrate the rictory of Robert over the Englifh. This he did i: wretched Latin rhynuts; which, however, procured his liberty. After the battle of Bannockburn, the earl of Hereford retreated to the caftle of Bothwell, where he was befieged by Edward Bruee, and foon obliged to furrender. He was exchanged for the wife, filter, and The king's danghter of the king, the young earl of Marr, and the fanily fet bifhop of Glafgow.
at liberty.
The terror of the Enclif after the defeat at Bronockburn is almoft ineredible. Walingham afterts, that many of them revolted to the Scots, and affifted them in plundering their own country. "The Englifh," \({ }^{160}\) fays he, "were fo bereaved of their wonted intrepidity, toon of the that an hundred of that nation would have fled from Englib. two or three Scotfmen." Edward Bruce and Douglas entered England on the eaftern fide, ravaged Northumberland, and lid the bithopric of Durhan urder contribution. From thence they proceeded to Richmond, laid Appleby and fome other towns in alhes, and re. turned home loaried with plunder. Edward fummoned a parliament at York, in order to enncert means for the public fecarity; and appointed. the carl of Pembroke, formerly the guardian of Scotland, to be guardian of the country between the Trent and the Tweed. Robert, however, fent ambaffadors to treat of a peace; but the Scots were too much elated with their good forture to make conceffions, and the Englih were not yet fufficiently lumbled to yicld to all their demands. The ravages of war were again renewed : the Scots continued their incurfons into England, and levied contributions in different places.
In 1315 , the Engrlifh affirs fcemed a little to revive

Fie is de.
feaced and killed,

The Sents, indeed, plundered Dumem and Hartlepool: but they were repulfed from Carlile, and failed in an attempt on Eerwick. 'The Trifh of Ultter, oppreffed by the Englith qovernment, implored the affillance of Robert, and offered to acknowledre his brother Fdward as their fovereign; who accordingly landed at Carrick. fergus on the 25 th of May 1315, with Geco men.This was an enterprize evidently beyond the power of Scutland to accomplim, and which could not but he peiceived by Robert. However, there were motives which induced him to confent. 'The offer of a crown, though ever fo vifionary, inflamed the ambition of Edward Bruce, whofe inpetuw:s valour made no account of difficulties, however great. It might have been deemed angenerous, and perhaps would not have been politic or fafe, to have rejected the propofals of the Irith for the advancement of his brother, to whom the king owed more than he could repay. Befides, the invafion of Ireland feemed a proper expedient for dividing the Englin. forces. The event proved unfurtunate. Edward, after performing and fuffering more than conld almot have been expected from humin nature, was at laft defeated and killed by the Engliih, as is related under the article IrEland, \(11^{\circ} 42\).

The ling limfelf had gone over into Ireland, in order to affit his brother in attempting the fubjection of that country ; and during liss abfence the Englifh had
T=2 made feveral attempts to difturl the tranquillity of Scot-
Unfuccers.
fulattempts of the Englifin on scu: iand, land. The earl of Arundel invaded the forel of Jedburgla with a numerous army ; but being drawn into an ambufcade by Douglas, he was defeated with great lofs. Edmund de Cailaud, a knight of Gafcony and gover- nor of Berwick, invaded and watted Teviotdale ; but while he was returning home loaded with fpoil, he was attacked, de enented, and killed by Douglas. Soon atter this, intellizence was conveved to Douglas that one Robert Nesille had boatted that he would encounter him whenever he faw his banner difplayed. Douglas did not lone delay to give him an opportunity. He advanced to the neighbourhood of Derwick, difplayed his banner, and hurst fome villages. Neville, provoked at thefe 1avages, took the field, encountered Donglas, and was defeated and killed. By fea the Englifh invaded Scotland, and anchored off Inverkeithing in the frith of Forth, where they foon after landed. Five loundred men, under the command of the carl of Fife and the fieriff of that country, attempted to oppofe their landing, but were intimidated hy the number of their enemies. Willianz Sinchair bifhop of Dunkeld happened to meet the fugitives; and having by his reproaches obliged them to rally, he led them on again to the charge, and drove the Englith to their thips with confiderable lofs. Fur this expluit Robert conerred the title of the ling's tijbuop on Einclair; and he was long remembered by lis countrymen on this account.

In 1317, alter king Robert hat returned from his Irih expedition, a bull was iflued ty the pope (Jotn XXII.) commanding a two years truce between Jingland and Scotland, under pain of excommunication. Two cardinals were difpatelred into Britain to make known his commands; and they were privately empowrred to infict the higheil fpiritual ceniures on Robert Bruce, or whomfeever elfe they thought proper. About the beginnirg of September 1217 , two meffellzers were feet to Robert by the cardinals. "' he king gave them
a gracious recention; and after confuicing with his La. Scotland, rons, returned for anfwer, that he very much defired a geod and perpetual peace, either by the mediation of the cardinals, or by any other means. He allowed the open letters irom the pope, which recommended peace, to be read in his prefence, and liftened to them with due refyect. But he would not receive the fealed letters addreffed to Robert Bruce grovernor of Scotland, alleging, that there might be many of his barons whofe nemes were Robert Brace, and that thefe barons might probably have fome flare in the government. Uulecis, therefore, the letters were addreffed to lim as \(k\) ing of Sroflant, he could not receive them without advice of his parliament, which he promifed immediately to affemble on the occafion. The meffengers attempted to apologife for the omiffion of the title of King. "The holy church was not wont," they faid, "durin the dependence of a controverfy, to write or fay any thing which might be interpreted as prejucicial to the claims of either of the contending parties." "Since then," anfwered the king, " my fpiritual father and my holy surited mother would not prejudice the caufe of my adverfary haviour of by beftorsing on me the appellation of king during the Rober, dependence of the controverfy, they ought not to have frejudiced my eaufe hy withdrawing that appellation from me. I am in poffeflien of the kingdom of Scotland; all my people call me king; and foreign princes addrefs me under that title; but it feems that my parents are partial to their Englith fin. Had you peefumed to prefent letters with fuch an addrefs to any other fovereign prince, you might perhaps have been anfiwered in a harfher tyle; but I reverence you as the mefiengers of the holy fee."

The meffengers, quite abafhed with this repiy, changed the difcourfe, and requefted the king that he would confent to a temporary ceffation of hoftilities; but to this he declares, that he never would confent, while the I nglifh daily invaded and plundered his people. 11is conifellors, however, informed the meffengers, that is the letters had been addreffed to the king of Scofs, the neguciations would inflantly have been opened. This difiefpeaful omiffion they imputed to the intrigues of the Englifh at the coust of Rome, hinting at the fame time that they had inceived this intelligence from 'A vignon.

When the meflengers had informed the carclinals of A parsal thefe proceedings, the latter determined to proclaim tru c proo the papal tuce in Scutland; in which hazarlous of-ciamed in foc they employed Adam Newton, guardian of the Scotland, monatlery of Minorites at Berwick, who was charged wihh letters to the elergy of iscotland, particularly to the biftop of St Andrew's. 'The monk found the kiner encanped with his army in a wood near Oid Cambus, making preparations for aflaulting Eerwick. Perfonal accefs was denied to the king; ; but the monk, in obed. ence to his mafters, proclaimed the truce by the authosity of the pope. The king fent him for anfwer, that he would liftein in no bulls, till he was treated as king of Scotland, and had inade limfuf matter of Berwick.

The poor monk, terrified at this anfwer, reguefted which 1 s either a fafe conduct to Berwick, or permiffion to pafs dircerarte into Scotland, and deliver his letters to the Scottifl by the kin clergy. Both were refufed; and he was commanded to leave the country, without lofs of time. He fet out for Berwick; but in his way thither was attacked by

Scotand. roivers, or fome who pretended to be fo. By them he was Atripped and robbed of all his parchments, together rith his letters and inflrutions; the robbers allo, it is faid, tore the pope's bull, withont any regard to its fanctity.

In I3IS, king Robert proceeded in his enterprize aoainlt Berwick, but refolved to employ artifice as well as force in the reduction of it. A citizen of Berwick, by name Spalding, having been ill ufed by the governor, refolved to resenge himfelf; and therefore wrote a letter to a certain Scottifn lord, whofe relation he had marricd. offering on a certain nirht to betray the polt where he kept guard. The nobleman communicated this important intelligence to the king. "Yon did well,", faid Robert, " in making me your confident; for if you had told this either to Randolph or Douglas, you would have offended the one whom you did nut truft: Both of them, however, fhall aid you in the execution of the enterprize." The king then commanded hirn to repair to a certain place with a body of troops; to which place he alio gave feparate orders to Douglas and Randolph to reparr at the fame hour, each with a body of troops under his command. The forces thus cautioully affembled marched to Benvick, and, affifted by Snalding, fcaled the walls, making themfelves mafters of the com in a fer hours. The garrifon of the cattle, perceiving that the number of Scots was but fmall, made a defperate fally with the men who had fled into the caftle from the town; but, after an obltinate conflict, they were defeated and oiriven back, chiefly by the extraordinary valour of a young knight named Sir IIFilliam Keith of Ga!lon. - This happencd on the 28 th of March 1318.

King Robert no fooner hard of the fuccefs of his forces againtt the town, than he haitened to lay fiege to the caftle of Berwick. This was foon obliged to capitulate; after which the Scots entered Northumberland, and took the caftles of Wark, Harbottle, and Mitford. In May, they again invaded England, and penetrated into Yorkmire. In their progrefs they burnt the towns of Northallerton, Boronghbridge, Scarborough, and Skipton in Craven, foreing the inhabitants of Rippon to rejeem themfelves by paying 1000 merks: after which they returned to Scotland with much booty; and, as an Englifh hitorian expreffes it, "driving their prifoners before them like flocks of Theep."

This year the interpofition of the pope was obtained againit Robert, with a view to intimidate the Scotilh nation ; and the two cardinals refiding in England were commanded to excommunicate Robert Bruce and bis adberents, on account of his treatment of the meffengers of the holy fee, and his aflatil of Berwiek, after a truce had been proclaimed by the \(p=p a l\) authority. This fentence was accordingiy put in execution, though Robert had cortainly been excommunicated onee, if not oftener, before. Meffengers were fent from Scotland to Rome, in order to procure a reverfai of the fentence; but Edwarl difpatched the bihop of IFereford, and Hugh d'Eppencer the Elder, to courteract this nergociation, informing his holinefs at the fame time of certain intercepted letters which had been witten from Avirnon to Scutland; upon which the pope ordered all the Scuts refiding at Avignon, and all of that place whu and correfmonded with Scotland, to be taken into cultody.

``` Iteland; of which an accoust is given uniter the ovticle Irelasio. \(\mathrm{n}^{3}\) 42. His bedy was quartered, ami diltrbuted for a pablic fipecivecie ove: Ireldad, and lay head was prefented ou Edward by John lord bearnmeham the commander of the Eriglinh armo ; in meturg for which ferrice, he was rewarded with the title 0 : tirl of Lownt.

In the mean time Edward, wino liad firmmones a parliament to meet at Lincoin, was obliged in prow rogne it on account of the Scottifh invaîoit, and in allemble an arn y at York for the defence of his coustry. At Michaelmas it was determired, in a patil. rent heid at I,ondon, that every city and town in England fhould furmith a certain proportion of men contpletely armed. Thus a confiderable body of troops was foon raifed; but, when they aflembled at lork, their party-animofities and mucual cititufe rofe to fuch an height, that it was found neceflary to fend them back to their habitations.

In I 3!9, Edward, having fucceeded fo well in his negociations with the court of Rome, refolved to make finilar attempts with other powers to tio prejudice of the Scottihh nation. Accordingly he requacted ilre count of Flanders to prohibit the Scots from enterin? h:s country : but to this requet he received the \(\mathrm{ft}_{\mathrm{i}}\) : lowiug remarkable reply: "Flanders is the common country of all men; I cannot prohibit any merchan:s from irafficking thither, for fuch prolibition would yso prove the ruin of my people." Finding himfelf baf-kiwari fied in this attempt, the Englinh nonarth orce moredgan irdetermined to have recourfe to war: and with this vades Scote view commanded his amy to affemble at Newcaille upon Tyne, on the 24th of July 1319 : hut before he proceeded, he requelted the prayers of the clergy for the fucceis of his expedition : and, to render their prayers the more effectual, he at the lame time demanded from them a great fum of money by way of luan.

Every thing being now in readinels, the Englifin Berwich army approached Berwick, which was commanded by hefleged Watier the Steward of Scotland. This nobleman had lw the Eng. long apprehended an attack from the Englifh, and lad lith. taken every means of clefeuce in his power. The enemy, however, confiding in their numbers, made a general aflault ; but were sepulfed on the - th of September, after a long and obitimate conteit. Their next attempt was on the fide towards the river. At that time the walis of Eerwick were of an inconfiderable height; and it was propoled to bring a veffel clofe to them, from whence the troops mieht cnter by a drawbridge let dusn from the matt. But the Scots annoyed the aflailants fo much, that they could no: bring this reffl withia the proper dillance: and at the cho of the tide it grounded, and was burnt by the befleged. - The Englifh had then recuurle to a new-ipvented drew in. esarite which they called a fore, but ion what reafon is vaited enunknown. In many particulars it refomblect the legtu i, \& e caled arketariz of the ancients. It appears to have heen a sors. large fabric compoled of timber. a:d well-roofed, having tages within it, and in height furpafiag ibe wall of the tewn. It was moved lipun wheels, and ferved for the couble purpufe of conducting the miress to the foot of the wall, and armed men to the ttorn. Tinis machine was counteracted by one coatrutte's 'y Joln

Seveland. Crab, a Flemifh engineer in the Scots fervice. This was a kind of moveable crane, whereby great ftones might be raifed on high, and then let fall upon the enemy. The Englifh made a general affault on the quarter towards the fea, as well as on the land fide; fo that the garrifon, exhaufted by continual fatigue, could fearce maintain their pofts. The great engine moved on to the walls; and, though ftones werc inceffantly difcharged againft it from the crane, their effect was fo fmall, that all hope of preferving Berwick was loft.

183
Deftrnyed
by the Scuts,

184 Who in. vade Eng. land. At length a huge flone ftruck it with fuch force, that the heams gave way, and the Scots pouring down combultibles upon it, it was reduced to ahes. The Englifh, however, fill continued the attack. The Steward, with a referve of 100 men , went from po!t to polt, relieving thofe who were wounded or unft for combat. One foldier of the referve only remained with him when an alarm was given that the Englifh had burnt a barrier at the port called St Mary's, poffeffed themftlves of the draw-bridge, and fired the gate. The Steward laftened thither, called down the guard from the rampart, ordered the gate to be fet open, and rufhed out upon the enemy. A defperate combat enfued, and continued till the clofe of the day, when the Englifh commanders withdrew their troops.

Notwithftanding this brave defence, it was evident that the town could not hold out long withnut a fpeedy relief; and Robert could not, with any probability of fuccefs, attack the fortificd camp of the Englifh. He therefore determined to make a powerful diverfion in England, in order to oblige Edward to abandon the undertaking. By order of the king, 15,000 men entered England by the weftern marclies. They had cencerted a plan for carrying off the queen of England from her refidence near York; but being difappointed in this attempt, they laid watte Yorkhire. The archbifhop of York haftily collected a numerous body of commons and ecclefiattics, with whom he encountered

\section*{185} \\ \section*{Giepe of Ber- \\ \section*{Giepe of Ber- \\ wiks raifec.} the Scots a: Mitton, near Borough-bridge, in the north. riding of Yorkßhire. The Englifh werc inftantly routed; 3000 were left dead on the field, and great part of thofe who fled perifhed in the river Swale. In this action 300 eccleflaftics loft their lives. The ntws of this fuccefsful mroad alarmed the befiegers of Berwick. The barons whofe eftates lay to the fouthward remote from the Scettifh depredations were eager for continuing the fiege. But they were oppofed by thofe of the north; who were no lefs.eager to abandon the enterprife, and return to the defence of their uwn country. With them the earl of Lancafter concurred in opinion ; who, undertanding that his favourite manor of Pontefract was expofed to the ravages of the Scots, departed with all his adherents. Edward, upon this, diew off the remainder of his army, and attempted to intercept Randolph and Doughas; but they eluded him, and resurned in fafety to Scotland.

The unfucceffal event of this laft attempt induced Edward ferioully to think of peace; and accordingly a truce between the two nations was concluded on the 2 If of December 1319; which interval of tranquillity the Ecots made ufe of in addrefing a manifefto to the Frope in juitification of their caufe. This was drawn up in a (pirited manner, and made a very confiderable alteration in the councils of Rome. The pope, forcSeeing that Robert would not be terrified into fubmif-
fions, ordered Edward to make peace with him in the Seotland heft manner he could. A negociation was accordingly fet on foot, which foon terminated ineffectually; the truce was not renewed, and in i322 a mutual invafion took place. The Scots penetrated into Lancaflire by Enyland the weftern marches; \(;\) and, after plundering the country, again invareturned home with an extraordinary booty; while Ed. ded by the ward made great preparations for an expedition into scots, and Scotland, which took place in Augult the faine year. the Engling. In this, however, he was not attended with fuccefs. Robert had caufed all the cattle to be driven off, and all the effects of any value to be removed from Lothian and the Meres; fixing his camp at Culrofs, on the north fide of the frith of Forth. His orders fur removing the cattle were fo punctually obeyed, that, according to common tradition, the only prey which fell into the hands of the Englif was a lame bull at Z'ranent in Eaft Lothian. Edward, however, ftill proceedcd , and penetrated as far as Edinburgh, but without any hopes of fubduing the kingdom. His provifions being confumed, many of his foldiers perifhed for want; and lee was oblixed at laft to retire without having feen an enemy. On their return, his foldiers burnt the abbeys of Holyrood, Melrofs, Dryburgh, \&c. killed many of the monks, and committed other facrileges: but when they returned to their own country, and began again to enjoy a plentiful living, they indulged themfelves in fuch exceffes as were productive of mortal difeafes; infomuch that, according to an Englifh hiftorian, almoft one half of the great army which Edward had brought from Eugland with him were deftroyed either by hunger or gluttony.

No fooner were the Englifh retired than they were purfued by the Scots, who laid fiege to the callle of Norham. Edward lay at the abbey of Biland in Yorkthise, with a body of troops zdvantageoufly pofted in the neighbourhond. T'be Scots, invited, as is faid, by fone traitors about the king's perfon, attempted to furprife him ; and it was with the utmoft difficulty that he made his efeape to York, abandoning all his baggage and treafure to the enemy. The Englifh camp was fuppofed to be acceffible only by a narrow pafs, but Douglas undertook to force it, and Randolph prefented himfelf as a volunteer in this dangerous fervice under his friend Douglas. The Highlanders and men of the The EngIfles climbed the precipice on whieh the Englift camp lim defratftood, and the enemy were driven out with great lofs. ed and driThe Scots purfued them to the very gates of York, ven wut uf wafted the country without controul, and returned home \({ }^{\text {their campo }}\) unmolefted.

Edward, difheartened by repeated loffes, agreed to a ceffation ofarms " with the men of Scotland who were engaged in war with him." But the king of Scotland would not confent to it in that form ; however, he gave his confent, on the proper form being employed, to which Edward now made no objection. This treaty was concluded on the 30th of March 1323, and was to endure until the : 2 th of June 1336. It was agreed, \(A\) eruce that, during the continuance of it, no new fortreffes concluded fhould be erected in Cumberland, to the north of the hetween Tyne, or in the counties of Berwick, Roxburgh, or England Dumfries; and by a very fingular article it was provid-land. ed, that "Bruce and the people of Scotland might procure abfolution from the pope; but in cafe there was no peace concluded befure the expiration of the
seotand. truce, that the fentence of excommunication thould revive." The treaty was ratified by Robert, under the Atyle of the Ling of Scolland, 7th June 1323.

The next care of Robert was to reconcile himfelf to the church, and to cibtain from the pope the title of ling, which had been fo long denied him; which at laft, though not without great difficulty, was obtained. This year a fon was born to the king of Scotland at Dunfermlinc, and named D.sid. The court-poets of the time foretold, that this infant would one day rival his father's fame, and prove victorious over the Englifh. But fcarce had this future hero come into the world, when a rival began to make his appearance. Joln Baliol, the unfortmate king of Scotland, had long been dead; but left a fon named Edward, heir to his pretenfions to the crown. The young prince had refided on his paternal eftate in Normandy, neglected and forgotten; but in \(1 \$ 24\) was called to the court of England, for the purpofe, undoubtedly, of fetting him up as a rival to young David Bruce, in cale his father, now broken with fatigues, fhould die in a thort time. The negociations for peace, however, ftill went on; but the commifioners appointed for this purpofe made little progrefs, by reafon of demands for feudal fovereignty ftill made by the Englifh. The reconciliation with the church was alfo broken off, by rcafon of the Scots kecping poffefion of Berwick. 'This had been taken during the papal truce; and Robert thought proper ftill to lie under the fentence of excommunication rather than to part with fuch an important fortrefs.

In the beginning of the year 1327, Edward II. was depofed, and fucceeded by his fon Edward III. then in lis \(15^{\text {th }}\) year. He renewed the negociations for peace, and ratified the truce which his father had made; but hearing that the Scots had refolved to invade England if a peace was not immediately concluded, he fummoned his barons to meet him in arms at Newcaltle, and fortified York.- We are not certainly informed of the reafons which induced the Scots at this time to difregard the truce; however, it is certain, that on the 15 th of June 1327, Douglas and Randolph invaded England by the weftern marches, with an army of 20,000 horfemen. Againt them Edward III. led an army, confifting, at the loweft calculation, of 30,000 men, who affembled at Durham on the \(13^{\text {th }}\) of July. The Scots proceeded with the utmolt cruelty, hurning and deftroying every thing as they went along; and on the 18 th of the fame month, the Englifh difcovered them by the fmoke and flames which marked their progrefs. They marched forward in order of battle towards the quarter where the fmoke was perceived; but, meeting with no enemy for two days, they concluded that the Scots had retired. Difencumbering themfelves then of their heavy baggage, they refolved by a forced march to reach the river Tyne, and, by polting themfelves on the north bank of that river, to intercept the Scots on their return. On the zoth of July, the cavalry having left the in. fantry behind, croffed the river at Haidon: but before the reft of the army could come up, the rivet was fo fwelled by fudden rains, that it could no longer be forded; and thus the troops remained divided for feveral days, without any accommodation for quartcrs, and in the greateft want of prowifions and forage. The fol-
diers now began to murmur; and it was refolved again Sconland. to proceed fouthwards. The king proclaimed a reward of lands, to the value of 1001 . yearly for life, to the 1 s obl 19 perfon who fhould firt difcover the enemy "on dry to offer a ground, where they might be attacked;" and many reward for knights and efquires fwam acrofs the river on this difowerng ftrange errand. 'The army continued its march for arce they three days without any news of the Scots; but on the fourtl day, certain accounts of them were brought by an efquire, Thomas Roleefby: who reported, that "the Scots had made him prifoner; but that their leaders, undertanding his bufinefs, had fet him at liberty; faying, that they had remained for eight days on the fame ground, as ignorant of the motions of the Englifh as the Englifh were of theirs, and that they were defirons and ready to combat." With this man for their guide, the Englifh foon came in view of the Scots. Ther were advantageoully pofted on a rifing ground, haviaç the river Were in front, and their flanks fecured by rocks and precipices. The Englifh difmounted and advanced, hoping to allure the Scots from their froug poft ; but in vain. Edward then fent a herald to Rarndolph and Douglas, with a meffage in the ftyle of chivalry: "Either," fays he, "fuffer me to pafs the river, and leave me room for ranging my forces; or do yot pals the river, and I will leave yon room to range yours : and thus fhall we fight on equal terms." 'lo this the Scottifh commanders anfwered, "We will do neither. On our road hither we have burnt and fpoiled the country; and here we are fixed while to us it leems good; and if the king of England is offended, let hin come over and chaftife us."

The armies continued in fight of each other for two days; after which the Englifh, undertanding that their encmics were diftreffed for provilions, refolved to mais. tain a clofe blockade, and to reduce them by famine. Next day, however, they were furprifed to find that the Scots had fecretly decanped, and taken poft two miles up the river in ground ftill itronger, and of more difficult accefs, amidft a great wood. The Englifh encanped iof oppofite to them near Stanhope park. At midnight Defiers: Douglas undertook a mott defperate enterprife, fome- aremer of what refembling thofe of the ancient heroes. With Dosglas to 200 horfemen he approached the Englith camp, and the king of entered it under the guife of a chief commander calling England. the rounds. Having thus eluded the centinels, he pafied on to the royal quarters, overthrew every thing that oppofed him, and furiouly affanled the king's tent. The domeftics of Edward defperately defended their mafter ; and his chaplaiv, with many others of his houlehold, were flain. However, the king himfelf efcaped; and Douglas, difappointed of his prey, rufhed through the enemy, and effectcd a retreat with inconfiderable lofs. -The following day, the Englim learned from a prifoner, that orders had bcen iffued in the Scottifh camp for all men to hold themfelves in readinefs that evening to follow the banner of Dunglas: on whicln, apprehending an attack in the might, they prepared for battle, lighting great fires, and keeping a ftriet watch; but in the morning, they were informed by two trumpeters whom they had taken prifoners, that the Scots had decamped before midnight, and were returning to be Scots had decamped before midnight, and were returning to decamp,
their own country. This report could fearcely be cre-and rcturn dited, and the amy remained for forne hours in order to their of battlt; but at length fome forots having croffed the own cous-

Scotland. river, seturned with certain intelligence that the Scottith camp was totally deferted: which when the young Eing of England was cestainly informed of, he burlt into tears: for the enterprife, which thus terminated in difappointment and diftonour, had colt an inmenfe fum. Every preparation had been made for oppoling an enemy, and anxiliaries had even been procured at a moft enormous expence from Hainault. Thefe auxiliaries confifted of heavy-armed cavalry ; and they were now fo much worn out, that they could Icarcely move. Their horfes were all cead, or had become unferviceable, in a campaign of three weeks; fo that they were obliged to procure horfes to convey themfelves to the fouth of England. Edward having refted at Durham for fome days, marched to York, where he difbanded his arniy. Barbour, a Scots hiftorian, relates, that there was a morafs in the rear of the Scottifh camp, which he calls the two-mile morals; that the Seots made a way over it with brufhwood, removing it as they went along, that the Englifh might not purfue them by the fame way. The Englifh hiftorians are filled with defcriptions of the frange appearance of the deferted camp of the Scots. They found there a number of fkins flretched between ftakes, which ferved for kettles to hoil their meat ; and for bread, each foldier carried along with him a bag of catmeal, of which he made cakes, toating them upon thin ion plates, which appear to have been part of their armour.

On the return of Dougles and Randolph, the king led his army againft the eaftern borders, and befieged the caftle of Norham. However, in 1328 , Edward, wearied out with continual loffes and difappointments,
197. The traty of Noreh. 3mjton. confented to a perpetual peace between the two kingdors on the following conditions. I. The flonc on which the kings of Scotland were wont to fit at the time of their coronation, Shall be reitored to the Scots. 2. The king of England agages to employ his good effices at the papal court for obtaining a revocation of all [piritnal procefees depending before the holy fee againft the king of Scots, or ayanit his kingdom or fubjects. 3. For thefe caufes, and in order to make reparation for the ravages committed in England by the Scots, the king of Scots fhall pay 30,000 merks to the king of England 4. Reftitution thall be made of the poffiffons telonging to ecclefaftics in either kingdom, whereof they may have been deprived during the war. 5. But there thall not be any reflitution made of inheritances which have fallen into the hands of the king of England or of the king of Scots, by reafon of the war between the two nations, or through the forfiture of former poffeffors. 6. Johanna, filter of the king of England, fhall be given in marriage to David, the fon and heir to the king of Scots. 7. The king of Scots thall provide the princels Jolianna in a jointure of 2000 . yeatly, fecured on lands and rents, according to a reafonable eftimation. 8. If either of the parties thall fail in performing thefe conditions, he thall pay 2000 pounds of filver to the papal treafury.

This peace, ratified at Nurthampton, is fyled ionominious by the Enslim hiforians, and the marriage of the Scots prince to the king of England's fifter, denominated that bafe marriage; becaufe at this time all pretenfuns to fovercignty over Scotland were given up, theugh they had in vail attempied to eftablifh them
by a ruinous war of 20 years. The marriage of the in- Scutland, fant prince was celebrated on the 12 th of July 1328.

On the 7 th of June 1329 died Robert Bruce, un-King \({ }^{198}\) queltionably the greatelt of all the Scottim monarchs. Keng Row His death feems to have been occafioned by the exceflive fatigues of military fervice; and his difeafe, calied by the biltorians of thofe times a leprofy, was probably an inveterate feurvy, occafioned by his way of living. He died at the age of 55 . He was married to Ifabella, daughter of Donald the tenth carl of Marr ; by whom lie had a daughter named Marjory, married to Walter the fteward of Scotland; whole bubband died in 1326 . The fecond wife of Robert was Elifabeth, the daughter of Aymer de Burgh earl of Uliter. By her he had a fon, David II. ; a daughter named Margaret, married to William earl of Su. therland ; a:other, named Matilda, married to an efquire named Thomas Ifaac ; and Elifabeth, married to Sir Walter Oliphant of Gafi. He had alfo a natural fou named Robert.

That king Rohert 1. was a man of unqueftionable virtue and humanity, as well as unequalled in the know: ledge of the military art, mult be evident from many particulars already related. The only queltionable part of his character is his fevere punifhment of a confpiracy a connt of formed againft him in the year 1320 ; a relation of cy againt which, to avoid interrupting our detail of more im. him. portant matters, we have deferred till now. - The chief of the confpirators were William de Soulis, whofe anceltor had been a candidate for the crown of Scoiland; the countefs of Sirathern, and fome other perforis of high rank. The countefs difcovered the plot; after which Soulis confeffed the whole, and was punifhed with perpetual imprifonment ; as well as the courtefs, notwithftanding her having made the difcovery. Gilbert de Malyerb and John de Logie, bath knights, and Richard Brown an efquire, were put to death as traitors: but the perfon moft lamented was Sir David de Brechin, for his bravery ftyled the fluwer of chivalry. He was nephew to the king, and ferved with great reputation againt the Saracens. To him the confpitators, after having exacted an oath of fecrecy, revealed their defigns. He condemned their undertaking, and refufed to fhare in it ; but did not difcover it, on account of the oath he had taken. Yet for this conceal. ment he was tried as a traitor, condemned and executed, without regard to his perfonal merit or his relation to the king. The confpirators were tried before the par. liament at Scone in 1320; and this feffion, in which fo much blood was thed, was long remembered by the vulgar under the name of the black parliament. Whether there was any thing real in this confpiracy, or whether the king only made ule of this pretence to rid hinfelf of fuch as were obnoxious to him, cannot now be known with ccrtainty.

After the death of Robert, the adminifuation was affumed by Randolph, in confequence of an ast paffed in 1318 , by which he was appointed regent in cafe of the king's death. In his new character he behaved himielf in a moft exemplary manner; and by impartially difcharging the duties of his fation, and rigidly adminittering juflice, he fecured the public tranquility in the molt perfect manner. A fevere exercife of jutice was now rendered not only neceffary, but indifpenfaite,

Scotiand During a lorg courfe of war, the common people had beer accuftomed to plunder and bloodfhed; and having now no Englifh enemies to empluy them, they robbed and murdered one another. The methods by which Randolph repreffed thefe crimes were much the fame with thofe which have been adopted in latter times; for he made the counties liable for the feveral robberies committed within their bounds. He even ordered the farmers and labourers not to houfe the tools employed by them in agriculture during the night-time, that the fheriff's officers might be the more vigilant in fecuring the:m. He gave orders for feverely punining all vagabunds, and obliged them to work for their livelihond; makin! proclamation, that no man hould be admitted into a town or borough who could not cain his beead by his labour. Thefe regulations were attended with the molt falutary effects. A fellow who had fecreted Lis own plough-iruns, pretending that they were folen, being detected by the fheriff's officers, was inttantly hanged. A certain man having killed a prielt, went to Rome, and obtained abfolution from the pope; after which he beldly returned to Scotland. Randolph ordered him to be tried, and, on his convictiun, to be executed: "Becaufe," faid he, "alchough the pope may grant abfolution from the fpiritual conicouences at fin, he cannot fereen offenders from civil punifiment."

King Robert, jut before his death, had delired that his heart might be depofited in our Saviour's fepulchre at Jerufalem; and on this errand the great commander Douglas was employed, who fet fail in June 1330 with a numerous and fplendid retinue. He anchored off Sluys in Flanders, the great emporium of the low countries, where he expected to find cumpanions in his pilgrimage; but learning that Alphunfus XI. the young king of Leon and Cafile, was engaged in a war with Ofinyn the Moor, he could not refift the temptation of fighting againt the enemies of Clrifianity. He met with an honourable reception at the court of Spain, and readily obtained. leave to enter into what was thought the common caufe of Chriltianity. The Spaniards firt came in fright of their enemy near Theba, a cafle on the frontiers of Andaluna, towards the kingdoin of Granada. The Mgors were defeated ; but Douslas giving way to his impetuous valour, purfued
the enemy too eagerly, and throwing among them the Sco:'anc. calket which contained the heart of his fovereign, cried out, "Now pafs thou onward as thou wert wont; Dcuglas will tollow thee or die." The fugitives ; 203 lied and furrounded Doughe who the fugities ral. 1. k.11-3 by followers, was killed in attempting to refoue Sir Wal. in Spain. ter S: Clair of Rollin. His body was brought back to Scotland, and interred in the chureh of Douglas. His courtrymen perpetuated his memory by bettuwing upon him the epithet of the good Sir Fomes Dosuglas. He was one of the greatet commanders of the age; and is faid to have been engaged in 70 battles, 57 of which he gained, and was defeated in 13.-Of him it is reported, that meeting with en oficer at the court of Alphonfus, who had his face quite disfigured with fcars, the latter faid to him, "It aitonifhes ine, that you, who are faid to have feen fo murh fervice, fhould have no matis of wounds on your face." "Thank heaven," anfwered Douglas, "I had always an arm to protećt my face."

In \(133^{1}\), Edward Baiiol began to rencw lis preten-Edward fions to the crown of Scotlend, about the fare time Bul:ol that David II. and his confort Johanna were crowned cram+ the at Scone; which ceremony was performed on the 2 th \(^{\text {crown }}\) Sco:tend of Nuvember. Some hittorians relate, that he was excited to this attempt by one Twynham Luwritun, a perion who had been excommunicated for refulin- to do penance for adultery, and afterwards was obliged to fly on account of his having way-laid the official, beat him, and extorted a fum of money from him. But however this may be, it is certain, that in this year differences began to arife with England, on the following account. It had becr provided by an article of the treaty of Northampton, that " Thomas lord Wake of Ledel, Henry de Beaumont, called earl of Bucban, and Henry de Percy, fhould be refored to their eflates, of which the king of Scots, by reafon of the war between the two nations, had taken poffeffion." This articlehad been executed with refpect to Percy, but not to the other two; and though Edward hal repeatedly complained of this neglect, he cuuld not obtais any fatisfaction ( c ).

The difinherited barons now refotwed to invade Scotland, though theis furce confitted of nu more than 3000 infantry,
(c) As this is an important period of hiltory, we fhall here tranferibe the opinion of lord Hailes concerning the caufes of this trange delay of executing an article feemingly of little importance where a ration was coneerned. "Dy the treaty of Northampton", fays he, "all the claims of the Englifh barons to inheritances in Scotland were difregarded, excepting thofe of Henry de Percy, Thomas lord Wake of Ledel, and Henry de Beaumont. Percy procured fatisfaction: but the others did nut.
"Henry de Beaumont, in the reign of Edward II. had affociated himfelf with the nohility againlt the D'Efpenfers, and on that account had fuffered imprifonment and exik. He aided queen Itabella in the invafion which proved the caufe of the depufion, captivity, and death of her huband. Although, under the admunitration of Mortimer, he had obtained a hare in the partition of the fpoils of the D'Efpenfers, he perfiled in oppoting tha meafures of the new favourite; and although his owa interelts were fecured by the ireaty of Nurthampioa, he boldly exclaimed againtt the injutice done to the other barons by that traty. He juined the princes of the blood-royal in their attempt to refcue the young king from the handa of Ifabella and her minion, and place lum in their own; and, on the failure of that ill-advifed coufpiracy, he again took refuge in foreign fants. It ap. pears that lord Wake, having followed the political upinicns ot Henry de Beaumont, was inwolved in bike calamities and difgrace. While the queer-duwager and Mortimer retained their influence, the claims of thote twa引arons were altogether overlooked: But within forty-cight hours after the execution of Niortimer, a peremptory demand was made by Edward III. to have their inneritance rettored.
©s The demand was unexpected and alaming. Nade at ile vary focment of :hy fall of Labella and Mortimer,

Sevtland.
infantry, and 400 men at arms. Fiward would not pcrmit them to enter Scotland by the ufual way, as he himfelf did not yet choofe openly to take part in their quarrel. For this reafon they were ohliged to take fipping, and landed at a place called Ravenfoare, Raqunjpur, or Ravenfourgh, at the mouth of the Humber ( H ). Randolph, having intelligence of the Englifh preparations, had marched an army to the frontiers of Eaft Lothian; but, being afterwards informed of the naval armament, he marched northwards; but died at
205 Muffelburgh, fix miles eaft of Edinburgh, on the 2cth Randolph of July 1332. With him died the glory of Scotland. the regent 'Thc earl of Marr, a man whofe only merit confifted in dict.
his being related to the royal family, was chofen to firc-

Baliol lends On the 3 ift of July, Edward Baliol and his affociat King. ates landed in the neighbourhood of Kinghorn, on the horn, and Forth; routed the earl of Fife, who oppofed them; and defeats the marched next day to Dunfermline. Having then orscots. Henry de Percy to arm againft them.
marched next day to Dunfermline. Having then or-
dered his fleet to wait for him at the mouth of the ceed him in the regency.-Edward, in the mean time, fell upon a moft curious expedient to fhow the juftice of his caule. In March 1332, he had publifhed a prolibition for any perfon to infringe the treaty of Northempton. The difinherited lords had been fuffered to embark, exprefsly for the purpofe of invading Scotland, after this prohibition was publifhed. After they were gone, Henry de Percy was empowered to punifh thofe who fhould prefume to array themfelves in contempt of his prohibition; and becaufe he undertood that the Scots wcre arming in order to repel thofe invaders whom Edward had indirectly fent againt then, he empowered Tay, he proceeded northwards, and encamped on the Miller's acce at Forteviot, with the river Earn in front. Nothing, hewever, could be more dangereus than his fituation at prefent, and his deftruction would have been inevitable. The earl of Marr was encamped with a nu-
merous army on the oppofite bank of the river Earn, in the neighbouhood of Duplin ; and another, nearly as numerous, had advanced from the fouth, through the I 19 in the A Auchterarder, eight miles to the weft of Forteviot.ger in the Hiftorians differ as to the number of the two armies. "1tinhh.urFordun fays, that the regent had with him 30,000 houd of men, and the carl of March as many ; and that Baliol had between 500 and 600 men at arms, that is, horfemen completely armed. Hemingford reckons each of the Scots armies at 40,000 , and Baliol's at 500 armed men. Knyghton fays, that Baliol, when lie landed in Fife, had 300 armed men, and 3000 more of different forts; but that he had in all only 2500 men in his camp at Earn. In this defperate fituation, the Englifh general formed a defign of attacking the Scots in their camp. They were dirceted to a ford by Andrew Murray of Tullibardine. The Scots kept no watch, but abandoned themfelves to intemperance and riotous mirth ; while their enemies, led by Alexander Moubray, croffed the river at midnight. They afcended a rifing ground, came unperceived on the right flank of the Scottifh army, and made a dreadful flaughter. At the firt attack, young Randolph hafted with 300 men at arms to oppofe the enemy; and being feconded by Murdoch earl of Menteith, Alexander Frafer, and Robert Bruce natural fon to the late king, he gave a check to the Englifh, and maintained the combat on equal terms. But now the regent himfelf, along with the whole multitude, rufhed forward to battle without the leaft order: fo that while the hindmot preffed on, the foremoft were thrown down, trodden upon, and fuffocated. The flaugh. ter lalted many hours, and the remains of this vaft army were utterly difperfed. Many men of eminence were killed; among whom were Donald earl of Marr, author of the whole cataftrophe; Thomas earl of Moray, Murdoch earl of Menteith, Robert earl of Carrick,
and in behalf of men who had loudly protefted againft the treaty of Northampton, it indicated a total and perilous change in the fyftem of the Englifh.
"Randolph, of late years, had beheld extraordinary viciffitudes in England. The D'Efpenfers alternately perfecuted and triumphant, and at length abafed in the duft : The fugitive Mortimer elevated to fupreme authority, wictorious over the princes of the bloody-royal, and then dragged to a gibbet. Hence it was natural for Randolph to wifh, and even to look, for fome new revolution, which might prove more favourable to the Scottifh interefts. Meanwhile, with great reafon and good policy, he delayed the reftitution of the inheritances claimed under the treaty of Northampton, in belaif of the avowed nppofers of that treaty.
"Befides, it was neceffary for Randolph to be affured that the Englifh, while they urged the performance of one article of that treaty, did, on their part, fincerely purpofe to perform its more important articles, by continuing to acknowledge the fucceffron in the houfe of bruce, and the independency of the Scottifh nation.
"Of this, however, there was much reafon to doubt. For the Englifh king lad taken Baliol under his protection, and had granted him a paffport to come into England, with permiffion to reffe there during a whole year, ( 10 th October 1330 ). Thefc things had no friendly or pacific appearance.
"Be this as it will, the event too fatally juftified the apprehenfions of Randolph; for, while Edward III. was demanding reftitution of the eftates referved by the treaty of Northampton, his fubfects were arming in violation of that treaty.
"It is remarkable, that, on the 24th March 1331-2, Edward appears to have known of the hoftile affociation of the difinherited barons. His words are, 'Quia ex relatu accepimus plurimorum, quod diverfi homines de regno noftro, et alii (meaning Baliol and his attendants), pacem inter nos, et Robertum de Brus, nuper Regem Scotorum, initam et confirmatam infringere machinantes, diverfas congregationes hominum ad arma indies faciunt, et, per marchias regni nofri, diAam terram Scotix, ad eam modo guerrino impugnandum, ingredi intendunt ;' Foedera, T. iv. P. 511. And yet, on the 22 d April following, he demanded reftitution of the inheritance of lord Wake, one of the barons in arms;" Foedera, T. iv. p. 518.
(H) This place does not now esift; having been overwhelmed by the fea many centuries ago.

Seotland. Alexander Frafer, and Robert Bruce. The flaughter
of the infantry and of the men at arms was very great;
the moft probable accounts make it 2000 men at arms,
and upwards of 13,000 common foldiers. The lofs of
the Englifh was inconfiderable.
The day after this victory, Baliol took poffeffion of Perth; and, apprehending an attack frorn the earl of March, caufed the ditch to be cleared, and the town to be fortified with pallifadoes. The firf information which the earl received of this dreadful defeat was from a common foldier, who fled from the place mortally wounded. When this poor wretch came up, he bad time to do no more than to fhow his wounds; after which he fell down, and expired. On his arrival at the field of battle, he found a dreadful confirmation of the intelligence given by the foldier; but inftead of taking his meafures with any prudence, he and his men hurried on headlong to Perth, actuated only by a blind impulfe to revenge. At firt they defigned to affault the place; but their hearts failing them, they next determined to reduce it by famine. This, however, could not be done unlefs the Scots were matters at fea. One John Crab, a Flemifh engineer (who had diftinguifhed himfelf by deftroying the famous engine called the fow at the fiege of Berwick), had continued for many years to annoy the Englifh on the eatlern coafts. After the blockade of Perth was formed, he came with ten veffels to the mouth of the Tay, where the Englifh fect was, and took the fhip belonging to Henry de Beaumont ; but foon after all his ten veffels were burnt by the Englif in a general engagement. After this the blockade of Perth was raifcd, the earl of March difbanded his army, and Edward Baliol was crowned king of Scotland at Scone, on the 24th of September \({ }^{1} 332\).

The new mokarcl was no fooner put in poffeffion of the kingdom, than he left Perth in the hands of the earl of Fife, while he himfelf repaired to the fouthern parts of the kingdom. But the party of king David was far from being extinguifhed. Baliol was fcarce gone, when the lown of Perth was furprifed, and its fortifications razed, by James Frafer, Simon Frafer, and Robert Keith. 'I'he earl of Fife was made prifoncr, wit! bis family and valfals. Andrew Murray of Tullibardine, who had directed the Englith to a ford on the river Earn, was put to death as a traitor. Such of the Scots as fill arthered to the interet of their infant prince, chofe Sir Andrew Murray of Bothwell regent. He was a brave and active man, but had not as yet fufficient force to attempt any thing conliderable.

In the mean time, Baliol behaved in a moff feanda-
ibehavi- lous manner. At Roxburgh, he made a folemn fur- ward for his liege-lord ; and, as if this had not been fufficient, he became bound to put him in poseftion of the town, cafle, and territory of Berwick, and of other lands on the marches, extending in all to the yearly value of 20001 . "on account," as the inftrument bears, " of the great honour and emolunients which we have procured through the fufferance of our lord the king, and by the powerful and acceptable aid which we have received from his good fubjects." He alfo proffered to marry the princefs Johanna, whon he confidered as only betrothed to David Bruce, and to add 5001 . to
hcr jointure; and this under the penalty of 10,0001 . Seotiand, to be appropriated as a portion to the young lady, or otherwife difpofed of for her behoof. He further engaged to provide for the maintenance of David Bruce as the king of England Thould advife; and, lafty, he became bound to ferve Edward in all his wars, excepting in England, Walcs, and Ireland, for the fpace of a year tozether, with 200 men at arms, and all at his own charges; and he bound his fucceffors to perform the like fervice with 100 men at arms. But afterwards Edward having engaged to maintain him on the throne of Scotland, Baliol bound himfelf to ferve him in al his wars whatever.

Though the greatelt part of the nation fubmitted to this fhany ful treaty, it roufed the indignation of thufe who wifhed well to the lilerties of their country. John, the fecond fon of Randolph, now carl of Moray by the death of his brother ; A rchibald, the youngell brother of the renowned Douglas; together with Simon Frafer, affembled a body of horfemen at Moffat in Annandale ; and, fuddenly travering the country, \(21 r\) affaulted Baliol unexpectedly at Annan. His brother Balioi furHenry made a gallant refiflance for fome time; but prifed, and was at laft overpowered with numbers, and killed, to- driven out gether with feveral other perfons of diftinction. Baliol fand himfelf efeaped almoft naked, with fcarce a fingle attendant, and fled to England. After his departure, the Scots began to make depredations on the Englifh frontiers. Edward iffued a proclamation, in which he folemnly averred, that the Scots, by their hoftile des predations, had violated the peace of Northampton. Baliol, in the mean time, being joined by fome Englifh barons, returned to Scotland; took and burnt a cafte wherc Robert de Colville commanded; and, eftablifh. ing his quarters in the neighoourhood of Roxburgh, began to make preparations for befieging Berwick. Juft after his arrival, Archibald Douglas, with 3030 men, invaded England by the weftern marches, plundered the country, and carried off mneh booty; in revenge for which, Sir Anthony de Lucy made an inroad into Scotland, defeated and took prifoner Sir William Douglas, eelebrated in hiltory by the appellation of the knight of Liddefdale, whom Edward caufed to be put in irons. About the fame time, Sir Andrew Murray the regent attacked Baliol, with a view to difeonfit him before the reinforcements which he expected out of England could arrive. A tharp conflict enfued at Rox-Tte 212 burgh, in which the regent, attempting to refcue a fol- rere es sedier, was taken prifoner: and thus Scotland was at once feated and । deprived of its two ableft commanders.

Archibald Doughas was now declared regent; and Edward prepared to invade Scotland, in order to take venyeance on its.inhabitants, as he faid, for the wrongs they had done, and to feek fuch redrefs as might feem good to himfelf. He ordered poffeffion to be taken of the ifle of Man in lis own mame; and foon after made it over to Sir William de Monta gue, who had fome claim of inheritance in it. The chief defign of Edward in this expedition, however, was to obtain poffeffion of the town of Berwick, which had been already ceded to him by Baliol. 'This appeared to Berwick the Scots a place of no lefs importance than it did to bee.erered hy Edward; and therefore they took all the precautions the E.ans in their power to prevent the lofs of it. The earl of 1 ith. March was appointed to command the cafle, and Sir.
seotland. Williams Kieith the town. The Scots made an obfio nate defence: yet it was evident that they muld form have yielded if they had not been relieved. At length the regent, with a numerons army, appeared in the neighbourtiood. He encicavoured to convey fuccours into the town, or to provoke the enemies to quit the advantage of the ground, ard engace in battle. But all his efforts were in vain; the Englifh obftrueted every paffage, and fond on the defenfive.

The regent then entered Northumberland, wated the country, and cvell affaulted Bamborough-cafte, where Philippa the young queen of England had her refidence. He fondly imagined that Edward IIT. would have abandoned the flege of Berwick, after the examphe of his father, in circumflances not diffimilap. Edwat 1 neverthelefs perfevered in his enterprife.

During a general affault, the town was fet on fre, and in a great meafure confumee. The inhabitarts haring experienced the evils of a fiege, and dreading the worfe evils of a ftorm, implored the earl of March and Sir William Keith to feek terms of capitulation. A truce was obtained; and it was agreed, that the town and cafte fhould be delivered up on terms fair and horourable, unlefs fuccours arrived before the hour of wef. pers on the Igth July.

It was feecially provided, "that Berwick thould the held as relieved, in cafe 200 men at arms, in a body, fhould force their pafiage into the town."

By the treaty, Sir William Keith was permitted to have an interview with the regent. He found him with his army in Northumherland; urged the necefity of his return; and frowed tim, that Berwick, if not inftantly relieved, was lof for ever. Perfuaded by his importunities, the 1 egent refolved to combat the Englifh, and either to fave Berwick or lofe the kingdom.

On the afternoon of the 19 th of Julf, the regent prepared for battlc. He dividec his army into four bodies. 'The firlt was led by John earl of Moray, the fon of Randolph; but as he was young and inexperienced in war, James and Simon Frafer, foldiers of approved reputation, were joined with him in the command. The fecond body wes led by the fteward of Scotland, a youth of 16 , under the infpection of his uncle Sir James Stewart of Rofyth. The third body was led by the regent himfelf, having with him the earl of Carrick and other barons of eminence. The fourth body, or referve, appears to have been led by Hugh earl of Rofs.

The numbers of the Scottifh army on that day are varionfly reported by hifforians. The continnator of Hemingford, an author of that age, and Knyegtom, who lived in the fucceeding age, afcertain their numbers with more precifion than is generally required in hiftorical facts.

The continuztor of Femingford minutely records the numbers and arrangement of the Scottif aimy. He fays, that, befides earls and other lords or great barons, there were 55 knights, 1100 men at ams, and

13,500 of the commons tightly armed, amnonting in Se thard. all to 14,655 .

With him Knyghton appears to concur, when his marrative is cleared from the errors of ifnorant or carelefs tranfcribers.

It is probable, however, that the fervants who tended the horfes of perfons of diftinction and of the men at z:m8, and the ufelefs followers of the camp, were more numerons than the actual combatants.

The Englith were adrantagenufty pofted on a rifing grourd at Hakydon, with a marthy hollow in their front. Of their particular difpofition we are not informed, ferther than that Baliol had the command of one of the wings.

If had been provided by the treaty of capitulation, *That Peruick fhould be contidered as relieved, in cafe 200 men at arms forced their paffage into the towe." This the Scottifh men at arms attempred ; B. \({ }^{216}\) hut Edward, aware of thecir purpofe, oppofed them in Halydor. perfon, and repulfed thern with great fiaughter. The Scottifi army ruthed on :o a general attack; but they had to defeend into the marfhy hollow before mounting the eminences of Halydun. After harine Atruggled with the difficulties of the pround, and after having been inceflantly galled by the Englifh archers, they reached the enemy. Ahtinough fatigued and difordered in their ranks, they fought as it became men who had conquered under the banners of Robert Bruce. The Englifh, with equal valour, had great advantages of ituation, arid vere better difciplined than their an. tagonits. The earl of Rois led the referve to attack in flank that wing where Baliol commanded; but he was repulfed and flain. There fell with him Kenneth earl of Su:herland, and Murdoch earl of Menteith.
In the other parts of the field, the events were equal- The Scors iy difattrous. The regent received a mortal wound, dcfeated, and the Scots eveiywhere gave way. In the field, refoche and during a purfuit for many miles, the number of eregent nain and prifoncrs was fo great, that few of the Scottifh army efcaped.

Befides the earls of Rofs, Sutherland, and Menteith, there were among the flain Malcoln earl of Lenox, an aged baron: he had been one of the foremeft to repair to the fandard of Robert Bruce, and his laft exertions were for his country: Alexander Bruce eal of Carrick, who atoned for the fort defection from the family of his benefactor; John Campbell carl of Athole, rephew ot the late king; James Frafer, and Simon Frafer: John de Graham, Alexander de Lindefay, Alan Stewart, and many other perfons of eminert rank.

The Steward had two uncles, John and James. John was killed, and James mortaily wounded and made prifoner ( 1 ).

The rcgent, mottally wounded, and abandoned on the ficld of batti-, only lived to fee his army difconfited and himelf a prifoner.

This vichory was obtained with very inconfiderable lofs.
(1) Fordun, I. xiii. c. 28 . relates, that Sir James Stewart wass fizin; the Euclihh hitarians, that he was moraally wounded and made prifoner. It may be remarked, that at Haly don two Stewarts fought under the banner of their chiefs; the one Alan of Dreghorn, the paternal anceftor of Charles I. and the other James of Rolych, the paternal anceftor of Oliver Cromwell,

Srothad. Lofs. It is related by the Englifh hitorians, that, on the fide of their countrymen, there were killed one knight, one efquire, and \(1 z\) foot-foldiers. Nor will this appear altogether incredible, when we remember, that the Englifh ranks remained unbroken, and that their archers, at a fecure diftance, inceffantly annoyed the Scottif infantry.

According to capitulation, the town and caftle of Berwick furrendered. The Englith king took twelve hoflages, for fecuring the fidelity of the citizens of Berwick.

Thus was the whole of Scotland reduced under the fubjection of Baliol, excepting a few fortreffes; fo that it became neceffary to provide for the fafety of the young king and queen. Accordingly, they were conreyed to France, where they were honourably entertained. Meanwhile, laliol employed himfelf in maLing new conceffions to his liege-lord Edward; and in 334 the work of fubmiffion was completed by a folemn inftrument drawn up by Baliol, in which he furrendered great part of the Scottif dominions, to be for ever annexed to the crown of England. In this inftrument Baliol faid, that "he had formerly become bound to make a grant to Edward of lands on the marches, to the amount of two thoufand-pound lands; that the Scottifh parliament had ratified his obligation ; and that he had accordingly furrendered Berwick and its territory ; and now, for completely difcharging his obligation, he made an abfclute furrender to the Englifh crown of the forelts of Jedburgh, Selkirk, and Ettrick; of the counties of Roxburgh, Peebles, and Dumfries; together with the county of Edinburgh, and the confabularies of Linlithgow and Haddington." This extraordinary furrender was made with fo much preeipitation, that Baliol furgot to exeept his own private eftate out of it. This, however, was generoully reftored to him by Edward; who proclaimed, that, "having alrezdy received fatisfaction in full, he had too much reverence for God, juftice, and good faith to man, to allow the ceffion to be prejudicial to the private rights of the king of Scots." At the fame time, Baliol preiented himfelf before his liege-lord; did homage, and fwore fealty, "for the whole kingdom of Scotland and the ifles adjacent."

A quarrel now arofe among the difinherited lôds, to whom this revolution had been owing, which produced the worft confequences to the interent of Baliol. The brother of Alexander de Moubray died, leaving daughters, but no iffue male. Moubray having claimed a preference to the daughters of his brother, Baliol countenanced his fuit, and, as it appears, put him in poffefion of the inheritance. Henry de Beaumont earl of Buchan, and David de Strathbolgie or Haftings, earl of Athol, efpoufed the caufe of the heirs.general ; but perceiving that their folicitations were not heard, they left the court in difguft, and retired to their caAles about the end of Augult 1334. Baliol foon perceived his error in offending thefe two powtrful lords; and in order to regain their favour, dimifed Moubray, and conferred on David de Strathbolgie the whole eftates of the young Steward of Scotland. Thus he alienated the affictions of Moubray, and added to the puwer of the earl of Athol, who was by far too powersul before.
About this time Sir Andrew Murray of Bothwell, Vol, XVI. Part II.
having regained his freedom, began to aftemble the Scotland. friends of liberty, and was immediately joined by Mou. bray. In a moment every thing was in confufion. patiot Geffrey de Moubray, governor of Roxburgh, revolted ; Batiol's Henry de Beaumont was befieged in his calle of Dun pary every darg by Murray and Moubray, and forced to furren-feated. der, but obtained liberty to depart inta England. Richard Talbot, endeavouring to pafs into England with a body of troops, was defeated and taken prifoner by Sir William Keith of Galfon. The Steward of Scotland, who had lain concealed in the ine of Bute ever fince the battle of Halidon, now paffed over to the caftle of Dunbarton, which was one of the few forts remaining to king David. With the affiftance of Dougal Campbell of Lochow, he made himfelf mafter of the caftle of Dunoon in Cowal. His tenants of the ine of Bute attacked and flew Alan de Lile the governor, and prefented his head to thei: mafter. John the fon of Gilbert, governor of the caftle of Bute, was made prifoner in the action. He ordered the garrifon to furrender, and attached himfelf to the Scottifh interen. Encouraged by thefe fucceffes, the Steward entered his ancient inheritance of Reafrew, and compeiled the inhabitants to acknowledge the fovereignty of David. Godfrey de Rofs, the goverror of Ayrlhire, fubmitted to the Steward. The earl of Moray returned from France, whither he had fled after the battle of Halidon, and was acknowledged regent alony with the Steward. The earl, baving raifed a body of troops, marched againtt the earl of Athol, conpelled him to retire into Lochaber, and at laft to furrender ; after which he embraced the party of the conquerors. Baliol was now ubliged to retire again into England, in He re-ires order to folicit affitance from Edward; and this was into Engreadily granted. Edward himfelf took the field at a and, and very unfavourable feafon for military enterpifes. His a Tiflance of army was divided into two parts. With the one Edi-Edward. ward wafted Lothian, while Baliol did the like in Anandale with the other; and, in the mean time, Patrick earl of March, notwithfanding the unfavourable pofture of affairs, renounced the allegiance he had fiworn to England. His motive for this was, that though the kings of England kad maintained him in an independency dangerous to Seotland, he was affured that they would never permit him to become formidable in a country which they themfelves poffeffed.

The year 1335 is remarkable for the fiege of Loch- \({ }^{219}\) leven caftle by the Englifh, under John de Strivelin. cant leven This fort was built on a fmall inland, and very d:fficult fucecefffulty of accefs. The Englifh commander erected a fort in befieged \(h\), the cemetery of Kinrass; and at the lower end of the ling. lake, from whence runs the ftream called the Water of Leven, he raifed a ftrong and lofty bulwark, by means of which he hoped to lay the iflend under water, and oblige the garrifon to furrender. But four of the Scots foldiers, having found means to approach the bulwark undifoovered, pierced it fo dexteroufy, that the waters, rufhing out with a prodigious force, overflowed part of the Englih camp; and the garrifon, fallying out during the confufion occafioned by this unexpected inundation, formed and plundered the fort at Kinrofs. At this time the Englifh commander, with many of his foldiers, happened to be abfent at Duntermline, celcbrating the dettival of St Margaret. On his rtturn, be fwore that he would never defilt till 5 E

\section*{S C O \([770] \quad \mathrm{S}\) C O}

Sontand. he had taken the place, and put the garrion to the fword ; however, his utmolt efforts were at laft baffled, and he was obliged, notwithftanding his oath, to defift.

In the mean time, the regents affembled a parliament at Dairly, near Cupar in Fife; but no plan of defence could be fallen upon, by reafor of the animofities and factions which prevailed among the barons. Through the mediation of the French, fome terms of peace were propoled; but being rejected, by the Enghifh, Edward again invaded Scotland, cruelly ravaging the country with one army, while Baliol and the earl of Warrene did the fame with another. Soon after this invalina, count Guy of Namur landed at Berwick with a confderable number of men-at-arms in the fervice of the Englifh. He advanced to the neighbourhood of Edinburgh ; but was defeated and taken prifoner by the earls of March and Moray, and Sir Alexandcr Ramfay. In this engagement, one Richard Shaw, a Scottifh efquire, was fingled ont by a combatant in the army of count Guy, and both pierced each other with their fpears; the ftrangcr being ftripped, was difcovered to be a woman. The earl of Moray treated Guy with the greateft refpect, not only allowing hins and the remainder of his troops to depart from Scotland without molctitation, but even attending him to the borders, accompanied by William Douglas and his brother James. On his return, William de Pref fen, warden of the cafle and foreft of Jedburgh, attacked and defeated his party; James Douglas was killed, the earl himfelf taken prifoner, and carried into England.

Thus was the Scottif nation once more reduced to the brink of ruin. Alexander de Mowbray, Geffrey de Mowbray, and fome others, prctending powers from "the earl of Athol and Robert the Steward of Scotland," concluded a treaty with Edward at Perth; the Subftance of which was, that all the Scots hould receive pardon, and have their fees, lands, and offices reftored, excepting thofe who by common affent in parliament fhould be excluded. The liberties of the church and the ancient laws and ufages of Scotland were to remain in full force. All offices were to be filled with Scotfmen, excepting that the king fhould appoint whom he pleafed within his regalities.
The earl of Athol now began to perfecute with the utmor fury thefe who withed well to the caufe of Scotland. With 3000 men he befieged the caftle of Kildrommey, which had hitherto been the great refuge of king David's party. Sir Andrew Murray of Bothweli refolved at all events to attempt the refcue of his wife and family, who were fhut up in this caftle. With 1100 men he furprifed \(\Delta\) thol in the foreft of Kiblain. The earl's men, feized with a panic, fled and difperfed themfelves ; on whicl their commander, refufing to accept of quarter, was killed. Sir Andrew Murray then afiembled a parliament at Dunfermline, where he was immediately appointed regent.

In 1336, the king of England perceiving that the Scots were taken uader the patronage of France, refolved to invade their country, and crafh them at once before they could have any affiltance from their new allies. In this expedition he penetrated as far as Invernefs; but the Scots, commanded by Sir Andrew Murray, avoided coming to a general action; fo that Edward could not effeet any thing of confequence.

The inhabitants of Aberdeen attacked one Thomas Rofheme, who had landed at Dunotar. They were defeated; but Rofheme feil in the action. Edward cha. flifed the vanquifhed feverely for their temerity, and laid the town in afhes. He then began to repair the caitles whofe fortifications had been demolifhed by king Robert. He put in a ftate of defence the cafles of Dunottar, Kinclevin, Lawriefton, Stirling, Bothwell, Edinburgh, and Roxburgh; greatly augmented the fortifications of Perth, and left a confiderable body of troops in the place. The Scots began to reduce thefe cattles as foon as Edward was departed; and in 1337, under Sir Andrew Murray, invaded Cumberland. No great expleits, however, were now performed on either fide. Edward being employed in preparations for invading France, had little leifure to attend to the affiars of Scotland; and the Scots, divided among themfelves, and deftitute of thofe leaders under whom they had acquired fo much glory, could not now annoy their enemies as formerly. The moft remarkable tranfaction was the fiege of the caftle of Dunbar, belonging to the earl of March. The Englifh commander was the earl of Salifbury. The earl of March was ablent; but his cueceiffully
and wife, the daughter of Randolph, from her complexion :he Engcommonly called Black Agnes, undertook to defend it lifh. in her hufband's abfence. The Englifh again employed that huge machine called a forw, formerly mentioned in our account of the fiege of Berwick: it met with the fame fate now as at that time; an huge fone, let fall upon it from the top of the walls, crufhed it to pieces. The Englifh, baffed in every attack, turned the fiege into a blockade; but Sir Alexander Ramfay baving found means to enter it with 40 refolute men, the garrifon made a fally, and cut in pieces the advanced guard of the enemy. The Englifh, difheartened by fo many misfortunes, abandoned the enterprife.

In 1338, Sir Andrew Murray the regent died, and was fucceeded in his office by Robert the Steward of Scotland. In 1339 he reduced the town of Perth and the caftle of Stirling; and gained over to the Scottifh intereft William Bullock, governor of the caftle of Cou par: after which, having expelled the enemy from every poft to the northward of the Forth, he employed himfelf in fettling the affairs of the nation as well as he could.

In 1341, the caftle of Edinburgh was furprifed by a Edirburgh device of Sir William Bullock. According to his ap- calle furpointment, one Walter Currie of Dundee privately re- prifed by ceived into his fhip the knight of Liddeföale, with Wil- Bullock. liam Frafer, Joachim of Kinbuck, and 200 refolute men. Currie caft anchor in Leith road, pretending to be an Englifh fhipmatter, who had a cargo of wine and provifions, with which he propofed to furnifh the commander of the cafle. His barrels and hampers were brought to the cafte-gate, and fudi.enly thrown down in fuch a manner as to obflruct the fhutting of it. Currie and his men then dew the centinels; and the knight of Litdefdale, with 2 party who lurked in the neighbourhood, rufhed in, overpowered the garrifon, and made themfelves mafters of the place.-On the fth of March this \(\mathrm{K}: \mathrm{ng}_{\mathrm{g}} \mathrm{David}^{23 \mathrm{~m}}\) year, the king and queen arrived from France, and anrives in landed at Inverbervie in Kincardinefhire.
In 1342, Sir Alexander Ramfay took the Arong fortrels of Roxburgh ; for which important fervice the king beftowed on hin the charge of fleriff of Teviotdale, at

third by the bihop of Lincoln, the lord Moubray, and Scotlase. Sir Thumas Rokeby; and the fourth and principal divifion was headed by Edward Baliol. - The king of Scotland headed a chofen battalion, compored of the flower of his nobility, and the auxiliaries with which be had been fupplied by France. The high feward of Scotland headed the fecond line; and the third was commanded by the earls of Moray and Douglas. While the Englifh were approaching, Lord Douglas and Sir David Graham firmithed with them, but were defeated with the lofs of 500 of their men; which feemed an omen of the difafter that was about to enfue. The general engagement began between the archers on both fides; but the Engliin being much fupcrior in the uif \({ }_{236}\) of the bow, the fteward of Scotland advanced to the re- The bat:le lief of his countrymen. The En lifh archers, unable of Dorhace to bear his attack, fell back upon Lord Henry Percr's civilion, which was thus put in confufion, and would hive been totally defeated, had not Baliol advanced to their relief with a body of 4000 horfe. The ttewar. 1 was then obliged to retire; by which means the flank of that divilion cornmanded hy David, and which was then entaged with another line of the Englifh, was left ex. pofed to an attack. Baliol perceived the adrantage; and, without purfuing the teward, attacked the king's divition, which was immediately cut in pieces or difperfed. David was left with about 80 noblemen and gen- The Sed tlemen, but ftill maintained the fight with obftinacy; defeated, nor would he yield cren when wounded in the head and their with an arrow, expecting every moment to be relieved king taked by the fteward and that line of his army which was ftill prifoner. entire under the Lords Moray and Douglas. At laft finding himfelf totally overpowered, he attempted to retreat, but was overtaken by a party under one John Copeland. I his captain, endeavouring to feize the king, had two of his teeth ftruck out by a blow of his gauntlet; but at laft, finding it in vain to relif, the king was obliged to give up his fword and furrender himfelf a prifoner. - Ater he was taken, Baliol attacked and totally routed that divifion of the Scottin army which had bitherto remained entire under the Lords Moray and Douglas. In this battle the Scots loft a great number of their nobility, and \(15,0=0\) commor foldiers. Many perfons of the firf dittinction were al. fo taken along with the king; and had it not been that the efcape of the Scots was favoured by the avarice of the Englih foldiers, who neglected the purfuit in order to plunder, ícarce a fingte Scotfman would have returned.

King David, after this unfortunate battle, was car- \({ }^{2} 3^{8}\) ried to the cafte of Banborough, where he was kept knne David with fo much privacy, that for fome time it was not after the known where he was, or that he had been taken pri- battle. foner. As foon as the truth was known, the queen of England demanded the royal prifoner from Copeland; but the latter pofitively refufed to F art with him even to the quetn, unlefs fhe could produce an order to that purpofe under Edward's hand and feal. This refolute behaviour was refented by the queen, and a complaint made to the king; in confequence of which Copeland was fummoned to appear before Edward, atter having refigued David to the cultody of Lord Nevil. The Englifh monarch, at that time in France, approved of all that he had done, rewarded him with 500 l. a year, and fent him back to England with the honour of

\section*{S C O [ 772 ] S C O}

Sculand. knibhthool. David was then efeorted by Cupeland, of the beft fanulies in the kingdom, fhonld remain in Scotang attended, it is faid, by 20,000 men, from the caftle of Osle in Northumberland, till the Lord Nevil, by indenture, delivered him into the hands of Sir Thomas Rokehy fheriff of Yorkfhire. In the fame pompous manner he was conducted all the way to London, which he enterch on a black comrfer. He was received in the capital with-the greatcll folemnity by the lord-mayor and other inagiftrates, the city-companics under arins lining all the ftreets through which he paffed, the houfes loaded with fpectators, who expreffed a generous concern for his captivity. Being arrived at the Tower, he was delivered, by indenture likewife, to the cuttody. of the conitable, the Lord John Darcy, on the 2d of

Scotland infefted witha dreadful plague.
and defended by him witb an army. 'The Scots hiitorians inform us, that the Englifh, in revenge for the damages done to their country by the hreach of the peace, proclaimed a tournament and other military exercifes at Berwick, to which they invited the Scots; but in their way thither the latter fell into an ambufcade, and were all cut in pieces.
The years 1349 and 1350 were remarkable only for a dreadful plague which invaded Scotland, after having ravaged the continent of Europe. According to Ferdun, one-third of the people of Scotland perifined at this time. The patient's flefl fwelled exceedingly, and he died in two days illnefs; but the mortality chiefly affected the middliug and lower ranks of people. The faine dreadful calamity continued throughout the years 1351 and 1352; occafioning ac ceffation of arms rot only in Scotland, but throughout all Europe.
All this time King David remained a prifoner in England; for though feveral treaties had been propofed, they had hitherto come to nothing, becaufe the Englifh monarch infifted upon being indempified for the ravaryes the Scots had committed in his territories. At laft it Terms pro-was agreed, that the king of Scotland flould be immePnfd for diately fet at liberty, on paying \(9^{\circ}, 000\) merks for his releafe of the seotrif1 munarch.
ranfon, by equal proportions, within the fpace of nine years: That \(\mathrm{t}=, 000\) merk3, being the firt proportion, thould be paid at the feaft of Candlemas next to come, the fecond at Candlemas 1357, and fo on till complete payment fhould be made of the whole: That, during the faid fpace of nine years, there fhould be a truce between the two kingdoms: That 20 Scots gentlemer,
of the bett farulies in the kingdom, fhonld remain in
England as holtages and fureties fur the faid fima ; and that, if any part thercof was not paid at the precife time appointed, then David flould remain a prifoner in England cill it was paid; or, if he was detained by any jult caufe, that the lord high feward, the Lord Douglas, John of the Ines, and others of the highert rank, fhould come and fupply his place.
\(245^{\circ}\)
Thefe terms were rejected by the Scots nobility ; Rejectedts and, in 1355 , war was secommenced with Eugland, at the nobithe infligation of France, who fent 40,000 crowns to war recon Scotland as a fupply for defraying the expences. mienced.
With this fum the guardian, having raifed an army, once more took the field ; but not before the Englifh had deftroyed the Lothians and Donyladale. A battle was fought on Nißbit-moor: in which the Englifh being drawn into an ambufcade, were totally defeated. The next attempt of the Scots was againit the town of \({ }_{\text {Berw }}{ }^{244} \mathrm{ck}\) Berwick, which they defigned to furprife by an efea-takes by lade. They met, however, with fuch a vigorous refift-the Scotw ance, that many perfons of dultinction were killed. However, the attack proved faccefsful ; but the acquifition was of no great importance, as the caftle fill held out. Edward, in the mean time, hearing of the lofs of the town, hurried back from France to London. Here he faid but three days, and majched northward to raife the fiege. He reached Durham on the z3d of Decenber 135 5 , where he appointed all his military tenants to meet him on the 1 ft of January 1356 . On the 14th Retalken of the fame inonth he arrived before Berwick, whichby Edwarè was inflantly retaken; but the Scots were allowed to depart for their own country. The reduction of this place produced an extraordinary effet: for Baliul now pereeiving that Edward meant wot to eltablifh him on the throne of Scotland, but to retain in his own poffeffion as many places of that country as he could, came at laft to the refolution of giving up to the king of England the whole of Scotland. This indeed was no more than a form, becaufe at that time he was not poffeffed of the kingdom. However, the ceremony was Baliol reperformad at Roxburgh; and Baliol prefented his crown bigne the and fome earth and tones by way of inveftiture. Ba-kiagdom of Liol in return was to have a revenue of 2000 pounds a- Sotland to. year; and as Edward was at the head of an excellent army, he bad little doubt of being able to force the Scots to fubmit.

The affairs of Scotland were how in a very critical fituation; and it was neceffary to gain time. For this reafon Edward was amufed with a negociation; and to this he the more willingly litened, as he was at that time wairing for his fleet, from which he had great expectations. A little time, however, difcovere the deceit. The Scots plainly told Edward, that they would die rather than fubnit to his demands; and he, in return, threatened a moft dreadful revenge. His fleet in the mean time arrived in the Frith of Forth; the mariners deftroyed and pillaged all that was within their reach, without fparing even the facred edifices, carrying off the flatues of the bleffed virgin, loading the monks with chains, and committing every thing in thofe days called impiety and facrilege. Edward haterby this time marched as far as Haddington, but was obliged to receive provifions all the way from his fleet; for the Scots had defolated the country through which he paffed. During his march his army was harafied, and

-embarrar -d by the layment
f his ran3n. and at latt his fleet being totally deftroye! by a form, he was obliged to return to England withut accomplifhing any thing. feated an 1 took priloner John king of France ar the battle of Poigiers. In this battle were \(30=0\) Scots, who ha'' gone over as atwiliaries to the French monarch, and who fuffered extremely. However, the fuccefs of Edward, inftead of rendering him haughty, fetmed to have a contrary effect ; and, by the mediation of Pope Innocent, a truce for two years was concluded with France, in which the Scots were comprehended. During this interval, the ranfom of the king of Scots was fettled at 100,000 merks to be paid in ten years; for which 20 hoftages were to be given as formerly. In confequence of this treaty, David at latt obtained his liberty in \(135^{8}\) : and Edward lind afide all hopes of ever fubduing Scotland. As fur Baliol. he was now funk in oblision: and it is not known what became of him, or when he died.

David, though now reftored to liberty, found himfelf greatly embarraffed with the payment of fuch a large fum as had been tlipulated for his ranfom; the kingdom of Scotland being then in a molt miferable and exhauft- ed fituation. After fending his queen, and going into England himfelf, he could obtain no greater favour than a reipite of a few months for the payment of the fecond moiety ; fo that he was at laft conttrained to ank affittance from France. This could fearcely be expecte.! in the diftreffed Gruation of that kingdon; hovever, it
was at laft agreed, that 50,000 marks fhould be said Ecrtass. to Scotlan!, in cale the Scota would confent tórenew -. -1 . the war the following year. Neither party, however, kept their word ; and David, being fill greatly ditreffed abont the remainder of his ranfom, at lat entered into a very extraordinary negociation with Edwar! by which he confented that the kins of Ergland fhow'd be his fuccellor tu the throne of Scotland But this negociation was defeated through the invincible hatred which the Scots bure to an Englith governor. David ess then, being entirely unable to difcharge the remainder Entes inse of his ranfom, was obliged to enter into a reew treaty ; \({ }^{2}\) new by which the kingdum of Scotland became inde* trea'y with to Edward the fum of 100,000 pounds Sterling, to be pail by equal proportions within the fpace of 25 years, during which there thould be a truce between the twis nations.

From this time we meet with little more of any moment in the reign of King David. After the death of his Qucen Johanna, the fifter of Edward, he married a Scots woman, of mean birth, named Margaret Logic ; but by neither of his wives had he any children. Quetn Margaret he divorced, on what pretence is not known; however, fhe left the kingdum, and complained perfonally to the pope, who theated ber as David's lawful wife, and enjoined her hufband to receive her as fuch under the moit fevere penalties. What effect thele threati lad on the king is not known; but it is certain that Margaret never returned to Scotland; and, on the \(22 \mathrm{~d} \mathrm{H}_{3}{ }^{2 \rho 3}\) of February 1371, David himfelf died, leaving the king- and is fue. dom to his nephew Robert Stewalt, the firt of that ceeded by family who fat on the throne of Scotland \((\mathrm{K})\).
(к) Concerning the origin of the Stewart family, we have the following account by the Scots hiftorians. Fleance, the fon of the celebrated Banquo, after his father's murder by Macbeth, fled into Wales, where he hat a fon named Walter, by a princefs of that country. After the reftoration of Malcolin Canmore, this Wralter returned to Scotland, where he was promoted to the high flewardhip, a dignity held by fervice, and which iatitled the poffefor to all the privileges of a baron. Walter was now diftinguifhed, from this office, by the title of Walter the Stewart, which defconded to his potterity ; and Stewarid, afterwards Stewart, or Stuart, became their furname.
On this fubject Lord Hailes has the following remarks. "Our hiftorians have recorded the atchievements of Walter the Stewart of Scotland in the reign of Malcolm III. He is iaid to have been the father of Alan, and the grandfather of that Walter who was indeed Stewart of Scotland in the reign of David I. and Malcolm IV. It may perhaps be afcribed te ferange prejudices, or to a fpirit of fcepticifm, when I declare, that hitherto I have feen no evidence that fuch a perfon as Walter Stewart oi Scotland, in the reign of Malcol.m III. did ever exif.
"We are gravely told, "That Waiter the fon of Feance, the fon © Banqu: Tharc of Lochaber, having killed a man at the court of Griffth, prince of Wales, fought refuge with Edward the Confefor: and having killed another man at Edward's court, fought refuge with Alan the Red, earl of Brittany: That, on the Notman invation, he came to England with the earl of Brittany, and fignalized himfelf at the battle of Haltings in 1066: That the earl of Brittany, by his firf wife Emma, daughter of Siwarc earl of Northumberland, had an only child Chritina; and that he beftuwed her in marriage on the young hero.". This is the tory which, after various improvements fince the days ot Boece, has had the good fortune to obtain credit.
-"That Walter, before he had well attained to the age of manhood, thould have naia two men in private quarrels, is a circumftance improbable, yet poffible; and therefore I object not to it. But his alliance with the earl of Brittany cannot be fo eaflily admitted.
"Alan, furnamed le Roux, a younger fon of Eudo earl of Brittany, was one of the galliant adrenturers who came over with William the Conqueror; be bad neither territories nor court. The hiftorians of Brittauy pofitively affert that he had no children. Befides, it is hard to fay by what accident Alan le Rous: fhould have become acquainted with Emma the daughter of Siward earl of Northumberland! I fuppote that our hillorians invented this alliance, in order to ftremgthen the connection between Walter the Stewart and Malcolm III,

\section*{"According}

\section*{S C O [ 774 ] S C O}

Scotand. Some authors tell us, that at the acceffion of Robert II. his title was difputed by William earl of Douglas. If any fuch claim was preferred, an affembly of the States fet it afide, and it was refolved that Robert fhould be crowned at Scone; and to take away for the future all difputes concerning the fucceffion, a particular aet was framed, by which the kingdom was fecured to Robert and his heirs.

The new king being thus eftablifhed on the throne, endeavoured to renew the war with the Englifh, in order to recover from them the town of Berwick, and fome other places on the borders. In this, however, he failed; and as 56,000 pounds of David's ranfom ftill remained unpaid, Robert bound himfelf to difcharge
then propofed an alliance with France; but the terms demanded by that kingdom being, that Scotland Should be obliged to make war with England whenever France fhould require it, Robert could not by any means be induced to confent to fuch a requifition, which would have obliged him to break through the molt folemn treaties, whenever the king of France fhould think proper to :break with England. A new treaty,
therefore, was entered into, by which it was provided, that neither Scotland nor France fhould be obliged to make war with England; and by another claule, that the difpenfation or authority even of the pope himfelf Thould never frce the kings or kingdoms of. France and Scotland from the obligations they lay under to affift one another, as often as required, in oppofition to the kingdom of Ergland. In cafe of a competition for the crown of Scotland, the king of France and his heirs were to take care that no Englih influence was ufed; but that the matter being by the greateft and belt part of the nation decided conformably to the laws and eftablifhments of Scotland, he fhould with all his power defend and affift the perfon fo eftablifhed. Laftly, it was agreed that no Frenchman fhould ever henceforth ferve for wages, or otherwife, againft Scotland, nor any Scotiman againft France.

This laft article occafioned a recal of all the Scots \({ }^{254}\) be from the Englith armies, which Edward looked upon rwixt the to be a prelude to an invafion. He accordingly inued icots and writs for affembling all the militia in the north of Eng- Englifh land. At this time an invincible hatred fubfifted be- borderers, tween the neighbouring people of both nations, which
"According to one account, the genealogies of their famtlies ftand thus: Siward earl of Northumberland *.
Emma \(=\) Alan earl of Brittany. Another daughter \(=\) Duncan king of Scots.

Chrifina \(=\) Walter the Stewart, Malcolm III.
\({ }^{6} 6\) Thus Walter the Stewart and Malcolm III. were coulins-german.
es According to another account, the genealogy of their families ftands thus:
\(\frac{\text { Siward Earl of Northumberland. }}{\text { Emma }=\text { Alan Earl of Brittany. }}\)

Chritina \(=\) Walter the Stewart.
" Thus the mother of Walter the Stewart and Malcolm III. were coufins-german.
" It is faid, "That Walter the Stewart had a fon, Alan, alfo Stewart of Scotland." The cvidence of this is to be found in a charter granted by Earl Gofpatrick, and in another charter granted by his fon Waldeve Earl of March, at Dunbar. In them Alden, or Aldan Dapifer, is mentioned as a witnefs; that is, fay our antiquaries, Allan, the flewart of Scotland.
"Ihis is the fundamental propofition on which the genealogy of the houfe of Stuart, as it is commonly underfood, may be faid to reft. It will be remarked, that this hypothefs takes it for granted, that Alden or Aldan, and Alan, are the fame; upon what authosity I know not. The Alden mentioned in the two charters feems to have been the ftewatt of Earl Gofpatick, and of Earl Waldeve, not the ftewart of Scotland.

To the charter by Earl Gofpatrick, there are eight witneffes: 'Andrew the arch-deacon; Adam bis brother; Nigel the chaplain; Ketel the fon of Dolphin; Ernald; Alden the Stewart (Dapifer) ; Adam the fon of Alden ; Adam the fon of Gofpatrick.' Is it poffible for credulity itfelf to believe, that the Alden placed fo low in such company, was the bigb flewart of Scotland, a man at lealt as honourable as Gofpatrick himfelf? I can have no doubt, that the witneffes to this charter were the dependents or houfehold-fervants of Earl Gofpatrick; and that if we interpret Nigellus Capellanus to be Nigel the earl's chaplain, we muft interpret Aldenus Dipifer to be Alden the earl's gewart.
" To the cliarter granted by Earl Waldeve, there are nine witneffes. Alden Dapifer is the feventh in order. There are only three amung them who feem to have been landed men: "Elias de Hajeftandena (probably

Haffenden).

\footnotetext{

eftate of Sir John Gordon, a man of great property in
secisland. extended not only through the lower ranks, but had per-
vaded the higher claffes alfo. The inhabitants of the borders, indeed, paid very little regard to the orders of their refpective fovereigns; fo that daily hoftilities were committed by them upon each other when there was peace between the fovercigns. The inbabitants of thefe countries hid eftablifhed with one another certain conventions, which have fince been collected, and go by the name of the Border laves. The families of Douglas and Percy, whofe eftates lay contiguous to one another, were at perpetual variance. It had been common for the borderers of both kingdoms, during a truce, to frequent each others fairs; and a fervant of the earl of March had been killed in a fray at that of Roxburgh, which was fill in the hands of the Englifh. Juftice for this mutder was demanded from lord Percy; but he flighted the complaint. On this the earl of March, with his brother the earl of Moray, affembling their followers, entered the next fair that was held in Roxburgh, plundered and burnt the town, and killed all the Englith who fell into their hands. The Englifh borderers were ordered to lay watte the lands of the earl of March; but, in their way thither, deftroyed the
the fouth of Scotland. Sir John in his turn invaded England, from whence he drove off a large booty in cattle, and a number of prifoners. In his retreat he was attacked by a body of frefh troops under Sir John Lifburn, at a place called Caram. An obitinate encounter followed. 'The Scots were five times repulfed; but at laft they renewed the charge with fuch fury, that they made Lifburn, his brother, and feveral other per. fors of diftinction, prifoners, together with all their furviving foldiers. On this lord Percy with 7000 men encamped at Duns, in the fouth of Scotland; but was ohliged to retire, probably for want of fubfittence for his army. In the mean time; Mufgrave, the governor of Berwick, who had been ordered to join l'ercy with a detachment from the garrifon, was on his march intercepted, defeated, and taken prifoner by Sir John Gordon; after which the boroer war becane general on both fides. The illuc of thefe diturbances is but little known; however, in 1377, we find them raging with more violence than ever. The fair of Roxburgh was once more the frene of action, and the town was ayain burnt down by the Scots. Lord Percy, who was now

Haffenden), William de Copland, and William de Hellebat (q. Elbottle) ; all the three are placed before Alden Dapifer.
"It has been remarked, "That in thofe days the title of flewart or dapifer was too high a title to be given to the retainer of an earl.' I anfwer, that the Saxon Chronicle, anno le93, fays, 'Moracl of Boebbahurh was thaes eorles fiward,' i. e. Morel of Bamborough was this earl's Rewart, or the Aewart of Robert Earl of Northumberland. Befides, to a charter granted by Earl Gofpatrick the Eilder, Lambertus Dapifer is a witnefs. If Lambertus Dapifer, in a charter of Golpatrick the Elder, implies Lambert the flewart of the family of March, why fhould Aldenus Dapifer, in the charters of the fon and grandfon of Golpatrick, imply the flesuart of Scotland?
"I believe that no defender of the common hypothelis will anfwer this objection, by pretending that Lamber. tus Dapifer was indeed /lewart of Scotland. Such an anfwer would leave ne room for Walter ftewart of Scotland, who is held to have been a diftinguifhed perfonage in the reign of Malcolon III.
"It is curious to fee upon what llight grounds our antiquaries have eltablifhed the connection between Aldenus Dapifer and the houfe of Stewart. Walterus flius Alani appears to have flourifhed in the reign of Da. vid I. In the reign of Malcolm IV. he is termed Dapifer. Hence it has been rafhly concluded, that \(W\) Walterus Dapifer flitus Alani was the fon of that Aldenus Dapifer who is a witnefs to the charters of Gofpatrick and. Waldeve.
"I perfuade myfelf, that Alden Datifer, and Alen the fatber of Walier ftewart of Scotland, in the reign of Malcolm IV. were different perfons; and that they had nothing in common but the Chrifian name, if iudeed they had that in common.
"Some of my readers may demand, "Who then was Alen the father of Walter, ftewart of Scotland in the reign of Malcolm IV. ?"
"I can only anfwer this queftion by demanding, "Who was the father of Martach Earl of Marre in the reign. of Malcolm III.; of Gilchrift Earl of Angus in the reign of Alexander I.; of Fergus. Lord of Galloway in the reign of Malcolm IV.; or of Frifinus de Moravia, anceftor of the fanily of Sutherland, in the reign of William the Lion? Or, to keep in the fuppofed line of the royall family of Stewart, "Who was the father of Banquho 'Thane of Lochaber?"
" Many anfwers may no doubt be made to this làf qृueftion. Kennedy fays, that the father of Banquho was. one of the feven fons of Corc king of Munßer; Sir George M‘Kenzie, Of Ferqulard, the fon of Kenneth III. : and Simpfon, The fon of Ferquhard Thane of Lochaber, the fon of Kenseth, the fon of Murdoch, the fon of Doir, the fon of Eth king of Scotland.
" It is renarkable, that Abercrombie relates all thofe contradictory fories, without ever fufpecting the natural inference arifing from them, "That if noble perfons are not fatisfied with a long pedigree, proved ! by authentic inftruments, they mult believe in flattering and ignorant fictions; and that if they foorn to. wait for the dawn of record to enlighten their defcent, they muft bewilder themfelves in dark aud fabulous. \&enealogies."
"In the reign of Davit.I. before the middle of the 12 th century, the family of the Stewarts was opulent and powerful. It may therefore have fubfifted for many ages previous to that time; but when, and what was itscommencement, we cannot determine.".

Scotland. earl of Northumberland, refolved to take fignal vengeance. He ravaged the Scots borders, particularly the earl of March's eftate, for three days, at the head of

\section*{Berwick}
taken and retalsen. 10,000 men. Some time after this, the Scots infurgents became powerful enough to furprife Berwick; which, however, was quidkly retaken by the Englifh, who foon after invaded Scotland. In this expedition, however, they fuicceeced fo ill, that Percy thought proper to defift from his expedition. The Scots in the mean time began hoftilities by fea, under one Mercer, an experienced failor ; but he had the misfortune to be taken prifoner by the Englifh, with all his fleet. In 1379, England was afflited with a dreadful plague, of which the Scots took advantage to invade the country. The Englifh hiftorians tell us that they behaved with the utmoft barbarity, killing and plundering the defencelefs inhabitants without mercy.

This predatory war continued, generally to the difadvantage of the Englifh, till the beginning of November 1380 , when a truce was concluded, to continue for a year; which, however, related only to the berders. T'his truce, like the otbers, was but very indifferently obferved; fo that, in 1383 , new negociations were fet on foot : but, in 1384, the war was renewed with greater fury than ever. In the fpring, the earls of Marel and Douglas took the cafle of Loclimaben, and intercepted a rich convoy which the Englifh were fending to Roxburgh ; burnt to the ground the caftle of Wark, and committed fuch devaftations in the north of England, that feveral gentemen offered to refign their eftates to King Richard, becaufe they were not able to defend them againft the Scors. Thic Duke of Lancafter entered Scotland at the head of an army ; but the inhabitants had removed evcry thing valuable, fo that he marched on to Edinburgh without accomplifhing any thing of confequence. On his return, he was hasaffed by flying parties of Scots, who deftroyed a confiderable number of his men. This year alfo the French fent a body of auxiliaries into \(\$\) scotland. The earls of Northumberland and Nottingham entered Scotland with an army of 10,000 hurfe and 6000 archers; but retired, after laving committed fome devaftations in the fouthern countics. The Scots revenged themfelves by laying wafte all the northern part of England to the gates of Neweaftle. Berwick was taken by the Scots, and foon after furrendered for the fum of 2000 marks. A truce was then, as ufual, concluded; but in the mean time king Robert was meditating a moot 256 fevere blow againt the Englifh.

Eormidabl invafion of England projected.

The Duke of Burgundy having come to the polferfion of the eftate of his father-in-law the earl of Flanders, claimed the fovereignty of the town of Ghent; but they refufed to fubmit to him, and in this refufal were protetted by king Richard II. of England. On this the duke of Burgundy propofed to the French court to invade England in concert with the Scots.This being agreed to, a fleet was fitted out at Sluys; on board of which John de Vienne, the French admiral, cmbarked, carrying along with him 50,000 pounds in gold, which the duke of Burgundy advanced in order to be diftributed in Scotland, where the admiral arrived fafe with a confiderable reinforcement, together with fupplies of all kinds of military ftores. Two tboufand auxiliaries, of whom 500 were men-at-arms, arrived with this feeti; and 400 fuiss of complete ar-
mour were brought along with them, in order to be diftributed among the braveft of the Scots.

The Scots were for a fhort time elated with the great attention which had been paid them by the French king; but, in the inean time, the Flemings haviag revolted, the French abaudoned the Scots to futtain the whole weight of the Englifh refentment, that they them. Selves might employ their arms in Flanders. King Richard took the field with a nore numerous army than had ever been muftered in England before. Hoftilities were begun by the Scots, who, according to cultom, invaded the northern parts of England, and carricd off a confiderable bonty: however, in their retreat, they were in the utmoft danger of being cut off by the duke of Lancafter, who had been fent with an army to intercept them. The Englinh army procceled northwards; but could accomplifh nothing, on account of the country being defolated, till they came to Ediuburgh, which they laid in afhes. Being, however, inceffantly harafscd by partics of the encmy, they were obliged to retreat.

Nothing remarkable happened till the year \(\mathbf{r} 378\), when, after a fhort truce, the war was renewed with frefh fury. Northumberland and Weltmoreland were ravaged by the earls of Fife and Douglas, and Lord Nithifdale defeated a hody of 3000 Englifh; after which he formed the plan of invading Ireland, the inhabitants of which had of late been very active againt the Scots. In 1388, Douglas obtained permiflion to raife a body of forces for this invafion; and having landed in fafety, defeated the Irin, plundered the town of Carlingford, and loaded fifteen hips with the booty. From thence the Scots failed to the ifle of Man, which in like manner was plundered and laid wafte; after which they returned with their bouty to Loch Rian in Scotiand.

Encourared by this fuccefs, Robert determined to England proceed on a more enlarged plan. Having affembled a 1 uvaded by parliament at Aherdeen, a double invafion of England two Scots was refolved upon. Two armies were raifed ; the one, arnies at confifting of 25,000 men, commanded by the earls of once. Menticth and Fife, Duuglas lord of Galloway, and. Alexander Lindfay; the other army, confifting of the like number, was commanded by the earls of Douglas, March, Crawfo:d, Moray, the lord high Conitable of Sentland, and other perfons of diftinćtion. The former entered Cumberland, and the latter Northumberland, both which cuuntries they laid wafte, and both armies were to meet within ten miles of Newcafle. The Enclifh were thrown into the greateft confternation. Newcaftle was defended by the earl of Northumberland, whofe age and infirmities rendered him incapable of taking the ficld ; but his place was abundantly fupplied, by his two fons Henry and Ralph, the former of whom is known in Englinh hiftory by the name of Hot/fur. The town was garrifoned by the flower of the Englifh nobility and gentry, as well as the inhabitants of the adjacent countrics, who had fled thither for refuge. Douglas felected 2000 fout and 300 horfenien out of the two armies, and eneamped on the north fide of the town, with a view, according to the Scots hifforians, of forming it next day. In the mean time, he was challenged by Hotfpur to fight him hand to hand, with flarp ground fpears, in fight uf both armies. Douglas bat beween earh accepted the challenge, and Percy was unhorfed the Douglas firf encounter, and obliged to take refuge within theand Heary 4

\section*{\(\mathrm{S} \mathrm{C} O\)}

Scotlan?. portcullis or gate of the town; from whence Donglas brought off his antagonift's lance, with a pennon affixed to it, and fiwore in his hearing that he would carry it into Scotland. Next day Douglas attempted to florm the town; but, being repulfed in the attack, he decamped in the night. Percy, breathing furions revenrye, purfued and overtook the Scots at Otterburn. His arrival was guite uncxpected, fo that the principal commanders of the Scottifh army vere fitting down to
fupper unarmed. The foldiers, however, fupper unarmed. The foldiers, however, were intantly prepared for battle; but in the hurry neceffarily attending a furprife of this kind, Dougliss forgot to put on his cuirafs. Both leaders encouraged their men by the moft animating fpeeches: and both partics waited for the rife of the moon, which happened that night to be unufually bright. The battle being joincd on the moon's firft appearance, the Scots began to give ground; but, being rallied by Douglas, who fuught with a battie-ax, the Englim, though greatly fuperiont in number, were totally routed. Twelve hundred were killed on the fpot; and 100 perfons of diftinction, among whom were the two Percies, were made prifoners by Keith marifechal of Scotland. On the fide of the Scots the greateft lofs was that of the brave earl Douglas, who was killed in confequence of going to battle without his armour, as above related. It was this fingle combat between Douglas and Percy, and the fubfequent battle, which gave rife to the celebrated ballad of Chevy Chace.

In the mean time the bifhop of Durham was marching towards Neweaftle with an army of 10,000 men; but was informed by the runaways of Percy's defeat, which happened on the 2 tit of July 1388. In a council of war it was refolved to purfue the Scots, whom they hoped eafily to vanquifh, as being wearied with the battle of the preceding day, and laden with plunder. The earl of Moray, who commanded in chief, having called a confultation of his officers, refolved to venture a battle. The prifoners were almoft as numeruus as the whole Scots army; however, the generals required no more of them than their words of bonour that they fhould continue inactive during the battle, and remain prifoners ftill. This condition being complied with, the Scots drew out their army for battle. Their rear was fecured by marfhes, and their flanks by large trees which they had felled. In fhort, their appearance was fo formidable, that the Englifh, arcading to encounter a refolute enemy fo frongly fecured, retired to Newcaltle, leaving the Scurs at Miberty to continue ther march to their own country.

Robert being now oppreffed with age, fo that he could no longer erdure the fatignes of government, the adminiftration of affairs devolved upon his fecond fon the earl of Fife; for his eldeft fon was by nature indolent, and befiocs lame by an unlucky blow he had received from a horfe. Early in the fpring of 1389, he invaded England with fuccefs: but the fame year a sruce was coneluded, to laft from the 19th of June 1389 to the 16 th of Auguft 1392 ; in which the allies of both crowns weré included. This truce was violently oppofed by the nobility, who fulpected their king of being too much under French influence. Upon this the court of France thought proper to fend over ambafladors to perfuade the nebility to comply; informing them, that in cafe of a refufil, they could expect no

Vol. XVI. Part II.
affiftance either of men or moncy from the continent. Scontiand. With difficulty they prevailed, and peace between Eng. land and Scotland was once more rettorcd. Scarce, however, was this truce frithed, when the peace of tle nation was moit fcandalounfy violated by Robert's third fon the earl of Buchan. This prince having a quarrel with the hiho? of Murray, burnt down the fine cathedral of Elgin, which has been called by hiforians the lanthorn and ornament of the north of Scolland. T'he king for this crime caufed his fon to be imprifoned ; and a civil war would have been the confequence, lat it not been for the veneration which the Scots retained for their old king. However, they did not long enjoy their beloved monarch; for he died on the Igtii of April 1390,
of his acign.

molus Scolnd ; but the name being thought nnlucky in Scotland, he chansed it for that of Robent,
thongh he was ftill called be the commomal tr Robcrt thongth he was ftill called by the commonalty Robert
Fobn Fernzier. He had been married to Anabella, the Fohn Fernzier. He had been married to Anuabella, the
danghter of Sir John Drummond, anceftor to the noble danghter of Sir John Drummond, anceftor to the noble
family of Perth; and was crowned along with his confort at Scone, on the \(13^{\text {th }}\) of Auguit 1390 . He confirmed the truce which had been entered into with England, and renewed the league with lrance; but the beginning of his reign was difturbed by the wars of the petty chieftains with each other. 1)uncan Stew- Rebelion art, fon to Alesander earl of Buchan, who had died in of Buctan! prifon for burning the cathedral of Elgin, affembling his followers under pretence of revenging his father \({ }^{3}\) death, laid walle the county of Angus. Walter Ogilvy, the fheriff of Angus, attempting to repel the invaders, was killed, with his brother and 60 of their fulluwers. The king then gave a commiffion to the earl of Crawford to fupprefs them ; which he foon did, and moott of them were either killed or executed. The folluwers of the earl of Buchan were compoied of the wildelt Fligh- \(26+\) landers, diftinguifhed by the title of Calkicenes, which Account of anfwers to that of banditti. That fuch a race of peo the catee ple exifted is certain from the records of Scotland ; but it is not eafy to determine how they obtained their fubfiftence, being woid of the knowledge of agriculture and of every civil art. There is fome reafon to believe that many of thern came from the Weftern Ines; and that they or their anceftors had emigrated from the eaftern parts of Irelaad. The lands they inhabited were never cultivated till towards the middile of the laft century; and, according to the mof authentic accounts, they heed entirely upon animal fond.
The earl of Crawford's fuccefs againft the followers of Buchan encouraged Robert to intruf him with a commiffion for fubduing other infurgents by whom the peace of the conntry was difturbed. The moft remark \(=64\) of thefe were the Clan Chatton and Clan Kay. As weecn the both thefe tribes were numerons and brave, Crawford shampions was not without apprehenfions that they mightr unite of che clan againt him as a conmon enemy, and defat him if he and clan attempted to fupprefs them ly furce. He propofed, Kas. therefore, that the two rival clans fhould each choofe 30 men, to determine their difercices by the fivord, without being allowed the ufe of any other weapun. The king and his nobility were to be fpectators of the combat ; the conquered clan were to be pardonce for al: theis former offences, and the conquezurs hozonred 5 F

Sentand with the royal favour. This propofal was readily accepted by both parties, and the north inch of Perth was to be the fcene of action. But, upon muftering the comlatants, it was found that one of them, belonging to the clan Chattan, had abfented himfelf. It was propofed to balance this difference by withdrawing one of the enmbatants from the clan Kay ; but not one of then could be prevailed on to refign his place. At laft one Henry Wynd, a faddler, thourh no way connected with either party, offered to fupply the place of him that was abfent, on condition of his receiving a French crown of gold (about 7. s. 6 d . of our money) ; which was immediately paid him. The combat then began with incredible fury; but at laft, through the fuperior valour and fkill of Henry Wynd, vietory declared in favour of the clan Chattan. Only ten of the conquerors, bcfides Wynd, were left alive ; and all of them defperately wounded. Of the clan Kay only one remained; and he having received no hurt efcaped by fwimming acrofs the Tay.

While thefe internal broils a ere going on, the truce which had lately been concluded with England was fo ill obferved, that it became neceffary to enter into frefh negociations. Thefe, like others which had taken place before, had very little cffect. The borderers on both fides had been fo accuftomed to ravage and plunder, that they could not live in quiet. King Robert alfo was thought to be too much attached to the king of England. He had introduced the new title of duke, which he beftowed firlt on the prince royal ; but making an offer of that honour to one of the heads of the Douglas family, it was rejected with difdain. That pou erful family had never loft fight of an ancient claim they had upon the caftle of Roxburgh, which was fill in the poffeffion of the Englin; and this year the fon of the earl of Donglas, Sir William Stewart, aurd others, broke down the bridge of Roxburgh, plundered the to:on, and deftroyed the forage and corn there and in the neiglibouring country. The Englifh applied for fatisfaction; but obtained none, as the confufion which involved the kingdom by the depolition of Richard II. and the acceffion of Henry IV. prcyented them from having recourfe to arms, the only argument to which the Scots patriots in thofe days would liften.

No fooner was the cataftrophe of Richard known in Scotland, than they refolved to avail themfelves of it; and invading the north parts of England, demolifhed the cafte of Wark, and laid the neighbouring country under contribution. The fituation of Henry's affairs did not admit of his refenting this infult. He contented himfelf with nominating his brother the earl of Weftmoreland, to treat with the Scots about a truce or peace; or, if that could not be obtained, to make a mutual agreement, that the towns of Dumfries in Scotland, and Penrith in England, fhould be free from hoftilities during the war. "'o this proporal the Scots paid no regard; and being encouraged by the court of France, who refented the depofition of Richard, they renewed their ravages in England. In 1400, the king of England called a parliament, in order to confult on the moft proper means of repelling the Scottinh invafions; and in this he \(w\) as greatily affinted by the divifions of the Scots among themfelves. The duke of Rothefay, the heir-
apparent of the crown, was now grown up to man's scontian!. eftate, and it was thonght proper to provide a fuitable 26, put up his fon's marriage at auction, and offered him eehevioury
to the lady whofe father could give him the highe? of Mnbert price. The earl of March was the higheft bidder ; and with readvanced a confiderable fum in ready, money, ou condi- yand to his tion that his daughter fhould become the royal bride - rigge.
This fordid match was oppofed by Douglas, who pro. pofed his own daughter the lady Margery. So degenerate was the court of Scotland at this time, that neither the king nor the duke of Rothefay oppofed this propofal of a ne \(\approx\) match, becaufe it was to be purchafed with a freth fum; and they even refufed to indemnify the earl of March for the money he had already advanced.
As the duke of Albany fided with Douglas, a council of the nubility was privately affembled, which annulled the contract of the lady Clizabcth Dumbar, the earl of March's daughter, in favour of the lady Margery, daughter to the earl of Douglas; but without taking any meafures for repaying the money to the earl of March. The continuator of Fordun informs us, that the earl of Douglas paid a larger fum for his daughter's fortune than that which had been advanced by the earl of March, and that the earl of Douglas's daughter was married to the duke of Rothefay : that, before the marriage was celebrated, March demanded Eurl of that the money he had advanced fhould be reimburfed; March rebut receiving an unfatisfactory anfwer, he declared, that as the king had not fulfilled his bargain, he would bring unexpeeted calamities upon the country. Accordingly he fled into I: ngland, leaving his cafte of Dunbar to the cuftody of his nephew Robert Maitland, who foon after put it into the hands of the earl of Douglas, call. ed in hiftory Archibuld the Grim, from the fternnefs of his vifage.

As foon as Robert heard of the revolt of the earl of March, he fent ambaffadors demanding back his fubject; but the requett was difregarded. On the other hand, the earl of March demanded repoffeffion of the cafte of Dunbar, pleading, that he had committed no act of treafon, but had come to England under a fafe conduct from king Henry, on purpofe to negociate his private affairs : but this requeft was difregarded; upon which he fent for all his family and followers to England, where they joined him in .great numbers. This produced a war between the two king. Invafion of doms. The earl of March, with Henry Percy- fure Scolland by named Hot/pur, invaded Scotland, penetrating as far Penry. as Haddington, and carrying off great numbers of the inhabitants into captivity. From thence they went to Pecbles, and ther to Linton, ravaging the country all the way as they paffed along. They next befieged the caftle of Hales, and took feveral of the neighbouring forts; but Archibald the Grim, or rather his fon, laaving raifed an arny againft them, they were ftruck with terror, and fled to Berwick, to the gates of which they were purfued by the Scots. At this timc the Scottifh admiral, Sir Robert Logan, was at fea with a fquadron; but mifcarried in an attempt he made upon Come Englih flips of war that protected their fleet when fifhing upon the coaft of Scotland. After this the Englifh plundered the Orkney inlands; which, though belong.

\section*{S C O}

Scotand ing to the crown of Norway, were at that time go. verned, or rather farmed, by Sinclair the Scots earl of Orkney and Caithnels.

All this time the earl of March continued under the protection of the king of England. He had received repeated invitations to return to his allegiance: but all of them being rejected, he was proclaimed a traitor; and the Scottifh governor made a formal demand of him from king Henry. With this the latter not only refufed to comply, but renewed his league with the lord of the illes. He pretended alfo, that at this time he had intercepted fome letters from the Scottifh regency, which called him "s a traitor in the higheft deyree;" and he alleged this as a reafon why he protected not only the earl of March but the lord of the Ines.

On the 25 th of July \(1+00\), the earl of March renounced his homage, fealty, and fervice, to the king of Scotland, and transferred them to Henry by a formal indenture. For this the earl was rewarded with a penfion of 500 merks Sterling, and the manor of ClipeItone in Sherwood forett. Henry now began to refive the claim of homage from the kings of Scotland, and even to meditate the conquelt of the kingdom. He had indeed many reafons to hope for fuccefs; the principal of which were, the weaknefs of the Scottifh government, the divided state of the royal family, and the diffenfions among the chief nobility. For this purpofe he made great preparations both by fea and land; but before he fet out on his journey, he received a letter from the duke of Rothefay, full of reproaches on account of the prefumptuous letters which Henry had addreffed to Robert and his nobility. The letter was addreffed by the duke to his adverfary of England, as the Scots had not yet recognized the title of Henry to the crown of England. Towards the end of it the duke, according to the cuftom of the times, defired Henry, in order to avoid the effufion of Clirittian blood, to fight him in perfon with two, three, or an hundred noblemen on a fide. But this challenge produced no other anfwer from Henry, than that "be was furprifed that the duke of Rothefay fhould confider noble blood as not being Cbrifian, fince he defired the effution of the one, and not of the other." Heniy arrived at Leith on the very day in which he had appointed the Scottifh nobility to meet him and pay their homage, and conclude a peace between the two crowns. In all probability, he expected to have been joined by gieat numbers of the difcontented Scots; and he flat. tered the Englifh with a promife of raifing the power -and glory of their country to a higher pitch than it had ever known. Under this pretext, he feized upon the fum of 350,000 pounds in ready money, befides as much in plate and jewels, which had been left by Richard in the royal treafury. He raifed alfo valt contributions on the clergy and nobility, and likewife on the principal towns and cities. At laft, finding that neither his valt preparations, nor the interell of the earl of March, had broupht any of the Scots to lis Itandard, be formed the fiege of Edinburgls calle, which was defended by the duke of Rotheray, and, as fome fay, by the earl of Douglas. Tlue duke of Albany, brother to king Robert, was then in the field with an army, and fent a letter to king Henry, promifing, that if he would remain where be was for fix days, he would give
him battle, and force him to raife the fiege, or bofe his Scotland. life. When this was written, the duke was at Calder. muir ; and Henry was fo much pleafed with the letter, that he prefented the herald who delivered it with his upper garment, and a chain of gold ; promifing, on his royal word, that he would remain where he was until the appointed day. On this occafion, however, the dukc forfeited his honour ; for he fuffered fix days to elapfe without making any attempt on the Englifh amy.

Henry, in the mean time, pufhed on the fiege of \(E\) dinburgli caflle; but met with fuch a vigorous refiftance from the duke of Rothefay, that the hopes of reducing it were but imall. At the fame time he was informed that the Welf were on the point of rebellion under the famous chieftain named Uzen Globlower. \(\quad 2 ; 0\) He knew alfo that many of the Englifh were highly Rut fans diffatisfied with his title to the crown; and that he ow- in his ated his peaceable poffeffion of it to the moderation of temp:. the earl of March, who was the real heir to the unfortunate Richard, but a noblemon of no ambition. For thefe reafons he concluded it beft to raife the liege of Edinburgh caftle, and to return to England. He then agreed to a truce for fix weeks, but which was afterwards prolonged, probably for a year, by the commifioners of the two crowns, who met at Kelfo.

In 1401, Scotland fuffered a great lofs by the death of Walter Trail, the archbifhop of St A ndrew's, a moft exemplary patriot, and a perfon of great infuence. Archibald Douglas the Grim had died fome time before, and his lofs was now feverely felt ; for the king limfelf, naturally feeble, and now quite difabled by his a se and infirmities, was fequeftered from the world in fuch a manner, that we know not even the place of his refidence during the laft invafion of Scotland by the Eirglifh. This year alfo queen Anabella died, fo that none remained who might be ahle to heal thofe divifons which prevailed among the royal family. Robert duke of Albany, a man of great ambition, was an enemy to the duke of Rothefay, the heir-apparent to the crown; and endeavoured, for obvious reafons, to imprefs his father with a bad opinion of him. 'This prince, however, appears to have been chargeable with no mifdeneanour of any confequence, excepting his having debauched, under promife of marriage, the daushter of William Linday of Rofly. But this is not fupported by any credible evidence; and, though it had been true, could never juitify the horrid treatment he met with, and which we are now about to relate.

One Ramorgny, a man of the vilefl principles, but Coripirsey an attendant on the duke of Rothefay, lad won his araint the confidence; and, perceiving how much he refented the duke of conduct of his uncle the duke of Albany, had the villany to fuggeft to the prince the difpatching hion by affaffination. The prince rejected this infamous propo. fal with fuch horror and difplealure, that the villain, being afraid he would difelufe it to the duke of Albany, informed the latter, under the feal of the mof inviolable fecrecy, that the prince intended to murder him ; upon which the duke, and William Lindfay of Rofy his affociate in the treafon, refolved upon the prince's death. By practiling upon the doating king, Linday and Ramorgny obtained a writ directed to the duke of Albany, impowering him to arrelt his fon, and to keep him under actraint, in order for his amendnment. The fame

Scotland. traitors had previouny poffefled the prince with an apprehenfion that his life was in danger, and had perfuaded him to feize the cafte of St Andrew's, and to keep poffefion of it during the vacancy of that fee. Robert had nominated one of his baltard brethren, who was then deacon of St Andrew's, to that bifhopric : but being a perfon no way fitted for fuch a dignity, be declined the honour, and the chapter refufed to elect any other during his lifetime; fo that the prince had a profpect of poffefling the cafle for fome time. He was riding thither with a fmall attendance, when he was arrefed between the towns of Nidi and Stratirum (according to the continuator of Fordun), and hurried to the very calle of which he was preparing to take poficifion.

The duke of Albany, and the earl of Douglas, who was likewile the prince's eneny, were then at Culrofs, waiting the event of their detetlable confpiracy; of which they were no fooner informed, than they ordered a ftrons body of ruffians to carry the royal captive from the catlle of St Andrew's; which they did, after clothing him in a ruffet cloak, mounting him on a very fiery horfe, and committing him to the cuftody of two execrable wretches, John Selkirk and John Wright, who

W"ho is
flarved to
dedh. were ordered by the duke of Albany to ftarve hin to death. According to Buchanan, his fate was for fome time prolunged by the compafion of one of his keeper's daughters, who thruft thin oat cakes through the chinks of his prifon-walls, and by a woman who, being a wet nurfe, found means to convey part of her milk to him through a fmall tube. Both thefe charitable females were detected, and put to death; the young lady's inhuman father being himfelf the profecutor. The prince himfelf died a few days after, on Ea-fter-eve, his hunger having impelled hini to devour part of his own feth.

In the mean time, Robert, being yet ignorant of the murder of his fon, had renewed, or rather confented to renew, hoflilities with Eugland. On the expiration of the truce, Henry had fent a commiffion to the earls of Northumberland and Weftmoreland, to offer the Scots any terms they could reafonably defire; but every offer of this kind being rejected, there was a neceflity for renewing hoflilities. The earl of March had received another penfion from Henry, on condition of his keeping on foot a certain'number of light troops to aft againft the Scots. This had been dene; and fo effectually did thefe now annoy their enemies, that the earl of Douglas was obliged to take the field againft then. By dividing his men into finall parties, he repreffed the depredations of thefe invaders; and Thomas Haliburton, the commander of one of the Scottifh parties, made incurfions into England as far
off by the Enginh. as Bamborouglh, from whence he returned with a confiderable booty. This encourared another chieftain, Patrick Hepburn, to make a fimilar attempt : but being elated with his fuccefs, he remained too long in the enemy's country ; fo that the earl of March had time to fend a detachment to intercept him on his return. This produced a defperate encounter, in which Hepburn was killed ; the flower of the youth of Lothian, who had attended in this expedition, were cut off, and fcarce a fingle Scotfman remained unwounded.

On the news of this difatter, the earl of Douglas appied to the duke of Albany for affitance. He was
immediately furnifhed with a contilerable army, aceord: Scotland ing to fome, conlifting of 10,000 ; according to others of 13,000; and according to the Engliih hiitorians, of 26,000 men. Murdoc, the fon of the duke, attended the earl on this expedition, as did alfo the earl of Moray, Angus, Orkney, and many others of the chief nobility, with 80 knights. The Scots on this occafion conducted themfelves with the fame imprudence they had done before. Having penetrated too far into the Their de country, they were intercepted by the Englifh on their feat at Feturn, and obliged to engage at a place calicd Homel- Honeldon. don, under great difadvantages. The confequence was, that they were uttenly defeated, and alnoft the whole army either killed or taken.

Henry Hotfpur, to whom this victory was chiefly owing, refolving to purfue the advantage he had gained, : entered the fouthern parts of the kingdom, and laid fiege to a cafte called Cocklazuys, on the borders of T \(\because\)-Cocklawys viotdale. The calle was for forme time bravely defend cafle beed : but at latt the governor entered into a treaty, by fieve.en ho which it was agreed to deliver up the caftle, in cafe it was not relieved by the king or governor in fix weeks; during which tine no additional fortifications were to be made. But while the Enclifh were retiring, one of Percy's foldiers pretended that the Scots had broke the capitulation, by introducing a mattock into the place. The governor, hearing of this charge, offered to fight any Englifhman who fhould engage to make it good. A champion was accordingly fingled out, but was defeated by the Scotiman ; and the Englifh army retired according to agreement. The matter then being debated in the Scottifh council, it was refolved to fend relief to the caftle. Accordingly the duke of Albany, with a powerful army, fet out for the place; but before he came there, certain news were received of the defeat and death of Hotlpur, at Shrewbury, as related under the article England, \(\mathrm{n}^{\circ} 182\).

In the year 1404 , king Henry, exceedingly defirous of a peace with Scotland, renewed his neguciations for that purpofe.. Thefe, however, not being attended with fuccefs, hoftilities were flill continued, but without any remarkable tranfaction on either fide. In the mean time, king Robert was informed of the miferable fate of his eldeft fon the duke of Rothefay ; hut was unahle to refent it by executing juftice on fuch a pow. erful murderer. After giving himfelf up to grief, 276 therefure, for fome time, he refolved to provide for the till prince, fafety of his fecond fon James, by fending him into James, fent France. This fcheme was not communicated to the to France, duke of Albany; and the young prince took Thipping bythe Engwith all imaginable fecrecy at the Bafs, under the care lifh.
of the earl of Orkney. On his voyage he was taken by an Englith privateer uff Flamborough-head, and brought before Henry. The Englifh monarch having exanined the attendants of the prince, they told hina that they were carrying the prince to France for his education. "I underftand the French tonguc (replied Henry), and your countrymen ought to have been kiad enough to have trulted me with their prince's education." He then committed the prince and his attendants clofe prifoners to the tower of London. The news of this difafter arrived at the caffle of Rothefay in the ife of Bute (the place of Robert's refi. dence) while the king was at fupper. ' The news threw him into fuch an agony of grief, that he died in three

Seotland. dayss; thie 29th of March 1405, after haviuy reigned

278
The duke of tibany regen"。 near 15 years.
By the death of Robert, and the captivity of the prince, all the power devolved upon the duke of AIbany, wl.o was appointed regent by a convention of the fates alfembled at Scone. The allegiance of the yueople, however, to their captive prince cuuld not be thaken; fo that the regent was obligreil to raife an anny for the purpofe of refcuing him. Henry fummoned all his military temants, and made great preparations: but, having agreed to treat of a final peace with Irctand and the lord of the Illes, the regent laid hold of this as a petence for etitering into a new negociation with the Englilla monarch ; and a truce was concluded for a year, during which time all differences were to be fetthed. In confequence of this agreement, Rothefay, king at arns, was appointed commiflary-general for the king and kingdom of Scotland ; and in that quality repaired to the court of England. At the time when the prince of Scotland was taken, it feems that there had been a truce, however ill obferved on both fides, fublifing between the two nations. Rothefay produced the record of this truce, which provided that the Scots fhould have a free navigation; and in confequence of this, he demanded juftice of the captain and crew of the privateer who had taken the prince. Henry ordered the matter to be inquired into: but the Englih brought their complaints as well as the Scots; and the claims of both were fo intricate, that the examination fell to the ground, but. at the fame time the truce was prolonged.

In the end of the year 1409, or the beginning of 1410, the war was renewed with England, and Henry prepared to ftrike a fatal blow which he had long meditated arainft Scotland. He had, as we have feen, entered into a league with the lord of the Ifes, where a confiderable revolution then happened. Walter Lefley had fucceeded to the eftate and honours of the carl of Rofs, in tight of his wife, who was the heir. By that marriage, he had a fon named Alexander, who fucceeded him ; and a daughter, Margaret, who was married to the lord of the llles. This Alexander had married one of the resent's daughters; and dying young, he left behind him an only darghter, Euphane, who was deformed, and become a nun at North Berwick. Her grandfather, the regent, procured from her a refignation of the earldom of Rofs, to which the was undoubted heir, in favour of John earl of Buchan, but in prejudice of Donald lord of the Illes, who was the fon of Margaret, fifter to the earl Alesander, and confequently the neareft heir to the eftate after the num. Donald applied for redrefs; but his fuit being rejceted, he, with his brother John, fled into England, where he was mot gracioully received by king Henry. According to the influctions given him by the Englifh nonarch, Douald returned to his own dominions in the Ifes, where he raifed an army, and paffing over into Rofsthire, violently feized on the eftate in difpute. In a ihout time he found himfelf at the head of 10,000 Highhanders; with whom he marched into the province of Moray, and from thence to Strathbogie and Garioch, which he laid under contribution. Advancing towards Aberdeen, with a view to pay his troops with the plunder of that city, which was then a place of confiderable trade, he was met by the earl of Marr, whom the re-
gent had empioyed to command againt him, at a vil- Scollardlaje called Harluze, in the neighbourhood of - Hoer- 7280 deen. A fierce engagement enfued, in which great \({ }^{280}+{ }^{280}\) numbers were killet on hoth fides, and the victory re-htarlaw. mained uncertain : but Douald, finding hemfelf in the midt of an themy's country, where lie could raife no recmits, began to retreat nx: day; and the fiatiered thate of the royal army preventiog him from leeins phrfued, he efcaped to his own dominions, where in a fhort time be fubmitted, and fwore allegiance to the cro:m of Scotland.

In the mean time, Henry continued the war with Scotland, and refufed to renew the truce, though fre- 28 r quently folicited by the Scots. He had now, how-The earlo: ever, fatained a great. lefs by the defection of the earl March reof March, who had gone over to the Scots, though turns eo his the hittoriatis have not informed us of his quarrel with to scote siancs the Englifh monarch. On his return to Scotland, heland. had been fully reconciled to the Douglas family, and now ftrove to diltinguifh himielf in the caufe of his country. . This, with the countenance which was fhown the Scots by the court of France, a bull publihed by the pope in their favcur, and the vigorous behaviour of the regent himfelf, contributed to reduce Henry to reafon; and we hear of no more hofilities between the two nations till after the death of the Enghifh monarch, which happened in the year 1413 .

In 1415, the truce being either broken or expired the Scuts made great preparations for beffeging Berwick. The undertaking, however, ca:me to nothing; all that was done during the campaign being the burning of Penrith by the Scots, and of Dumfries by the Englifh. Next year a truce was agreed upon, and a treaty entered into for the ranfom of King James ; which was fo far adranced, that the Englifh king agreed to his wifiting Scotland, provided he engaged to forfeit 102,000 pounds Sterling in cafe of his failuee \(=82\) to return by a certain day. For reafons' now ua. Unfeccefeknown, this treaty was broken off, and vaft prepara- file of of tions were made for a new invation of Scotland; Heary. which, however, was executed with fo little fuccefs, that it became known anoong the common people of Scotland by the name of the fule raid, or the foolith expedition:

In 1+20, died Robert duke of Albany, regent of Scotland, at the age of 80 ; and fuch was the venerdtion which the Sents had for his memory, that his polt of regent was conferred upon his eldeft fon Mixidoch, though. a perfon no way qualified for that flation. The war with England was now difcontinued: but in France Fienry met with the greatell oppolition from the Scots auxiliaries, infomuch, that at laft he proclaimed all the Scots in the fervice of the Dauphin to bé rebels againft their lawful fovercign, and threatened 283 to treat them as fuch wherever he found then. It His cruct: 7 was not long before be had an opportunity of putting i, the sco:s. this menace in execution; for the town and calte of \({ }^{1}\) Melun being obliged through famine to capitulate, one of the articles of capitulation was, that all the Englift and Scots in the place thould be refigned to the abfolute difpolal of the king of E.ngland; and, in confequence of his refolution above-mentioned, cauled twenty Scots foldiers who were found in the place to be hanged as traitors. In 1 tir, henry returned to Engtand, and with him Jame the Scots king. On bis

Sentland. anival there, he was informed that the Scots, under the earl of Douglas, had made an irruption into England, where they had burned Newark, but had been lorced to return to their own country by a peftilenee, though a new invaion was daily expected. Inftead of refenting this infult, Henry invited the eart of Douglas to a conference at York; in which the latter agreed to ferve him during life, by fea and land, abroad or at home, againt all living, except his own liege-lord the king of Sectland, with 200 foot and as many horfe, at his own charges; the king of England, in the mean time, allowing an annual revenue of \(2 c 01\). for paying his expence in going to the army by fea or land.

At the fame time, a new negociation was fet on foot for the ranfom of king James; but he did not obtain his liberty till the year \(142+\). Henry V. was then dead: and none of his generals being able to fupply

Sceonaly, To demand that, before the faid king Scotans. fhall have his full liberty, the kingdom of Scotland flould pay to the Englifi government at leaf thirtyfix thoufand pounds as an equivalent, at two thoufand pounds a-year, for the entertaiament- of King James, who was maintained by the court of England, and not to abate any thing of that fum; but if poffible to get forty thoufand pounds.

I hirdly, Ihat if the Scots fhould arree to the payment of the faid fum, the Englifh commiffioners fhould take fufficient feeurity and hoftazes for the payment of the fame; and that if they fhould not (as there was great reafon for believing they would) be fo far mollified, by fuch eafy te:ms, as to offer to enter upon a negociation for a final and perpetual peace between the two people, that then the inglin fhould propofe the fame in the moft handfome manner they could. Farther, that if fueh difficulties fhould arife as might make it impracticable immediately to conclude fuch perpetual peace, that the Endlifh ambaffadors fhould, under pretence of paving a way for the fame, propofe a long truce.

Fourthly, That in cafe the Englifh commiffioners fhould fucceed in bringing the Scots to agree to the faid truee, they thould further urge, that they fhould not fend to Charles of France, or to any of the enemies of England, any fuccours by fea or land. Farther, that the faid Englifi commiffioners fhould employ their ntmolt endeavours to procure the recal of the troops already furmithed by the Scots to France. The EnJlifh are commanded to infift very ftrenuoully upon this point, but with difcretion.

Fifthly, If the Seots fhould, as a further bond of amity between the two nations, propofe a marriage between their king and fome noblewoman of England, the Englifh commiffioners are to make anfwer, "That the king of the Scots is well aequainted with many noblewomen, and even thofe of the blood-royal, in England; and that if the king of the Scots fhall pleare to open his mind more freely on that head, the Englifh commiffioners thall be very ready to enter upon conferences thereupon." But (continues the reeord) in cafe the Seotch commiffioners fhould make no mention of any fuch alliance by marriage, it will not appear deeent for the Englifh to mention the fame, becaufe the women of England, at lealt the noblewomen, are not ufed to offer themfelves in marriage to men.

Sixthly, If there fhould be any mention made concerning reparation of damages, that the eommiffioners fhould then proceed upon the fame as they fould think molt proper; and that they fhould have power to offer fafe-conduct to as many of the Scots as fhould be demanded, for to repair to the court of England. Thofe inftructions are dated at Weftminiter, July 6th 1423.

Nothing definitive was coneluded at this treaty, but that another meeting fhould be held at York inftead of Pomfret. This meeting accordingly took place. The Englifh commiffioners were, Thumas bihop of Durham, chancellor of England, Philip bifhop ot Wincleefter, Henry Percy earl of Northumberland, and Mr John Wodeham. Thofe for Scotland were, Willian bifhop of Glafgow, George earl of March, James Douglas of Balveny, his brother Patrick abhot of Cambufkenneth, John abbot of Balmerino, Sir Patrick Dun6

Scotland. har of Bele, Sir Robert Lauder of Edrington, Mr George Borthwic arehdeacon of Glafgow, and Patric Houfton canon of Glafyow. On the tenth of September, after their mecting, they came to the folluwing agreement :

Firft, That the king of Scotland and his heirs, as an equivalent for his entertainment while in England, Gould pay to the king of England and his heirs, at London, in the church of St Paul, by equal proportions, the fum of forty thoufand pounds Sterling.

Secondly, 'I'hat the firlt payment, amounting to the fum of ien thoufand merks, thould be made fix months after the king of Scotland's entering his own kingdom; that the like fum mould be paid the next year, and fo on during the face of fix years, when the whole fum would be cleared : unlefs, after payment of forty thoufand merks, the laft payment of ten thoufand fhould be remitted, at the intreaty of the molt illuftrious prince 'Thomas duke of Exeter.

Thirdly, That the king of Scotland, before entering his own kingdom, fhould give fufficient hoftages for performance on his part. But, in regard that the Scots plenipotentiaries had no inftructions concerning hoftages, it was agreed,

Fourthly, That the king of Scotland hould be at Branfpath, or Durham, by the firft of March next, where he fhould be attended by the nobles of his blood, and other fubjects, in order to fix the number and qua. lity of the hoftages.

Fifthly, That, to cement and perpetuate the amity of the two kingdoms, the governor of Scotland Should fend ambaffadors to Lonson, with power to conelude a contract of marriage between the king of Scotland and fome lady of the firft quality in England.

James, it is probable, had alrcady fixed his choice upon the lady Joan, daughter to the late earl of Somerfet, who was fon to John of Gaunt duke of Lancafter, by his fecond marriage; but he made his people the compliment, not only of confulting their opinion, but of concluding the match. The commifioners, after their a greement at York, proceeded towards L.ondon ; and Thomas Somerville of Carnwath, with Walter O. gilvy, were added to their number. Being arrived at that capital, they ratified the former articles, and undertook for their king, that he thould deliver his hoAtages to the king of England's officers, in the city of Durham. before the laft day of the enfuing month of March ; that he thould alfo deliver to the faid officers four obligatory letters, for the whole fum of 40,00 . 1. from the four burghs of Edinburgh, Perth, D:ındee, and Aberdeen; that he fhould give his obliyatory letter to the fame purpole, before removing from Durlam, and fould renew the fame four days after his arrival in his own kingdom; that the hoflages might be changed from time to time for others of the fame furtune and quality; that if any of them fhould die in England, others fhould be fent thither in their room ; and that while they continued to ftay in England, they fhould hive at their own charges.

The marriage of James with the lady Joan Beanfort was celebrated in the beginning of February 1424. The young. king of England prefented him with a fuit of cloth of gold for the ceremony; and the next day he received a legal difcharge of 10,000 pounds, to be deducted from the 40,000 at which his ranfom
was fixed, and which fum was given as the marriageportion of the lady. The ceremony being performed, the kiog and queen fet out for 1hurham, where the hoftages were waiting; and arrived at his own dominions, along with the earl of Nurthumberland and the chief of the northern nobility, who attended him with great pomp. On the 20th of April the fame year, he was crowned at Scone; after which ceremony, he followed the example practifed by other lovereigns at that time, of knighting feveral noblemen and genclemen.

During the dependence of the treaty for James's releafe, the Scots had emigrated to France in fuch numbers, that no fewer than 15,000 of them now appeared in arms under the duke of 'louraine; but as the linitory of the war in that country has already been given under the article France, we thall take no farther notice of it at prefent, but return to the affairs of Scotland.

Scotand. On his return James found himfelf in a difagreeable Hereforms fituation. The great maxim of the duke of Albany, feveral abywhen regent, had been to maintain himfelf in power laid. by exempting the lower clafs of people from taxes of every kind. This plan had been continued by his fon Murdoch ; but as the latter was deftitute of his father's ahilities, the prople abufed their happinefs, and Scotland became fuch a fcene of rapine, that no commoner could fay he had a property in his own eftate. 'The Stewart family, on their acceffion to the crown of Scotland, were poffeffed of a very confiderable patrimonial eftate, independent of the flanding revenues of the crown, which confifted chiefly of cuftoms, wards, and reliefs. The revenues of the paternal eftate belonring to James, had they been regularly tranfmitted to him, would have more than maintained him in a fplendour equal to his diqnity, while he was in England; nor would he in that cafe have had any occalion for an allowance from the king of England. But as the duke of Albany never intended that his nepliew fhould return, he parcelled out among his favourites the cflate of the Stewart family, in fuch a manner that James upon his return found all his patrimonial revenues gone, and many of them in the hands of his beft friends; fo that he liad nothing to depend on for the fupport of himfelf and his court but the crown-revenues abovementioned, and even fome of thefe had been mortgaged during the late regency. This circumftance, of itielf fufficiently difagreeable, was attended with two others, which tended to make it more fo The one was, that the hoftages which had been left for the king's ranfom in England, being all of them perfons of the firlt rank, were attended by their wives, families, children, and equipages, which rivalled thofe of the fame rank in England, and drew a great deal of ready money out of the nation. The other circumftance arofe from the charge of the Scots army in France; where Charles, who had never been in a condition to fuppert it, was now reduced to the utmoft neceffity : while the revenues of James himfelf were buth feanty and precarious. To remedy thefe inconveniences, therefore, the king obtain. ed from his parliament an ast obliging the fheritfs of the refpective counties toinquire what lands and eftates had belonged to his ancettors David II. Rubert II. and Robert III. ; and James formed a refolution of refuming thefe lands wherever they could be difcovered, without regard to perfuns or circumitances. On this occañor

\section*{\(S\) C O \(\left[\begin{array}{lll}784\end{array}\right] \quad\) S C O}
ecotiand. occafion mary of the mof illufrious perfonages in the kingdom were arrefted : the duke of Albany, his two fons, and the earl of Lennox the duke's father-in-law, were put to death, thoneh their crimes are not foecified by hillorians. Buchanan meritions a tradition,
that James batbarounly fent to the cometef of Lemos: the heads of her father, hufbund, and lons; for the following mose barbarous reafon, that in the bitternefs of her griff the might drop fome exprefloms tending to involve others in the fame catallrophe. 'tlee countefs, however, calmly faid, "'lhat, if the charges ngaintt the criminals were proved, they deferved their fate."

Jamcs now proceeded with great fpirit to reform the abufes which had pervaded. every department of the ftate, protected and encouraged learning and learned men, and cven kept a diary in which he wrotedown the names of all the learned men whom he thourht defurving of his encouragement. "James himfelf wrote fome. poetry; and in mufic was fuch an excellent conpofer, that he is with good reafon looked upon as the father of Scots mufic, which has been fo much admired for its elegant fimplicity. He introduced organs into his chapels, and a much better ftyle of architecture into all buildings whether civil ar religious. Neither did he confine his cares to the fine arts, hut encourared and protected thofe of all kinds which were ufeful to fociety; and, in fort; he did more towards the civilization of his people than had been done by any of his predeceffors.

In the mean time the truce continued with England. - James, however, feemed not to have any inclination to cater into a perpetual alliance with that kingdon. On the contrary, in 1428 , he entered into a treaty with France ; by which it was agreed, that a marriage fhoul-: be concluded between the dauphin of France, afterwards Louis XI. and the young princefs of Scotland; and fo great was the neceflity of king Charles for troops at that time, that he demanded only 6000 forces as a portion for the princefs.

The reft of the reign of James was fpent in reforming abufes, curbing the authority of the great barons, and recovering the royal eftates out of the hands of

288 The king murdered. ufurpers. In this, however, he ufed fo much feverity, that he was at laft murdered, in the year 1437 . The perpetrators of this murder were the earl of Athol; Robert Grahame, who was connected with the earl, and who was difcontented on account of his lofing the eftate of Strathern, which had been re-annexed to the crown ; and Robert, grandclild and heir to the earl of Athol, and one of the king's domeftics. The king had difmiffed his army, without even referving to himfelf a body-guard, and was at fupper in a Dominican convent in the neighbourhood of Pertl. Grahame had for fome time been at the head of a gang of outlaws, and is faid to have brought a party of them to Perth in the dead of the night, where he potted them near the convent. Walter Straton, one of the king's cupbearers, went to bring fome wine to the king while at fupper; but perceiving armed men ftanding in the paflage, he gave the alarm, and was immediately killed. Catlarine Douglas, one of the queen's maids of honour, ran 10 bolt the onter door; but the bar was taken away by Robort Stuart, in order to facilitate the entrance of the naderers. 'The bady duat her arm inso the Ia-
ple ; ber it was inftantly broken, and the confuirators ruthed in upon the king. Patric Dombar, biother to the eanl of March, was killed in attempting to defend his fovereign, and the queen received two wounds in attempting to interpofe herfelf betwixt her humband and the daggers of the aflafmes. Tames defended himfelf as lone as he could ; but at laft expired under the repeated ftrokes of his murderers, after having received 28 wounds.

Alter the murder of James I. the crown devolved suececd. upon his fon James II. at that time only feven years of age. A parliament was immediately called by the queen-mother, at which the molt cruel punifhments were decreed to the murderers of the late king. The crime, no douht, deferved an cxemplary punihment; but the harbarities inflicted on fome of chofe wretches are focking to relate. Within lefs than fix weeks after the death of the king, all the confpirators were brought to Edinburgh, arraigned, condenmed, and executed. The mcaner fort were hanged; but on the earl of Athol and Robert Graham the molt cruel torments were inficted, fuch as pinching with hot irons, diflocation of the joints, \&c. The earl of Athol, had, belides, a crown of red-hot iron put on his head; and was afterwards cut up alive, his heart taken out, and thrown into a fire. In hoort, fo dreadful were thefe punifhments, that Eneas Sylvius, the pope's nuncio, who beheld them, faid, that he was at a lofs to determine whether the crime committed by the regicides, or the punifhment inflicted upon them, was the greater.

As the late king liad preferibed no form of a regency in cafe of his death, the fettlement of the government became a matter of great, difficulty as well as importance. Archibald earl of Douglas, who lad been created Duke of Touraine in France, was by far the greatef fubject in the kingdom; but as he had not been a favourite in the preceding reign, and the people were now difgufted with regencies, he was not formally appointed to the adminiftration, though by his high rank he in fact enjoyed the fupreme power as long as he lived; whichs lowever, was but a fhort time. He died supreme \({ }^{290}\) the fame year ( 14.38 ) ; and Sir Alexander Livingftone power diof Callendar was appointed to fucceed him as governor vided beof the kingdom, that is, to have the executive power, \({ }^{\text {tween the }}\) while William Crichton, as chancellor, had the direc-and chan tion of the civil courts. This was a mon unfortunate cellor of the partition of power for the public. The governor and kingdom. chancellor quarrelled ; the latter took poffeffion of the king's perfon and the caftle of Edinburgh, to neitherof which he had any right ; but the former had on his fide the queen-mother, a woman ofsintrigue and fpirit. Her fon was fhut up in the cafle of Edinburgh ; and in a fhort time there was no appearance either of law or government in Scotland. 'The governor's edicts were counteracted by thofe of the chancellor under the king's name, and thofe who obeyed the clancellor were punifhed by the governor; while the young earl of Douglas, with his numerous followers and dependerts, was a declared enemy of both parties, whom he equally fought to deftroy.

The queen-mother demanded accefs to her fon, which The queeriCrichton could find no pretext for denying her ; and nother fete The was accordingly admitted with a fmall train into her fon a: the cafle of Edinburgh. She played her part fo well liberty.
sendaine and diffembied with fo much art, that the chancifor, imagining fhe had becone a convert to his caufe, treated her with unbounced confidence, and futfered her at all hours to have free accefs to her fon's perfon. Pretendin \(r\) that fhe had vowed a pilgrimare to the white chureh of Buchan, the recomneaded the care of her fon's perfon, till her return, to the chancellor, in the mott pathetic and affectionate terms: but, in the mean time, the fecret!y fent him to Leith, packed up in a clothescheff ; and both the and James were received at Stirlins by the govemor betore the efcape was known. As every thing had been managed in concert with Livington, he immediately called together his friends; and laying before them the tymancal behasiour of the chancellor, it was refolved to befiege him in the calte of Edinbiergh, the queen promifing to open her own granaries for the ufe of the anny. The chancellor forefaw the ftorn that was likely to fall upon him, and fought to prevent it by applying to the earl of Douglas. That haughty nobleman anfwered him in the terma already mentionel, and that he was preparing to exterminate both partics. The ficge of Edinburgh cathe being formed, the chancellor demanded a partey, :nd to have a perfonal interview with the governor; which the latter, who was no Atranger to the fentiments of Doughs, readily arreed to. Common danger unitid them in a common caufe; and the chancellor seligning to the wher the cuflody of the calle and the king's perfon, with the higheft profeflions of duty and lo alty, the two competitors fwore an inviolable friendthip for each other. Next day the king cemented their union, by corfuming both of them in their tefuective charges.

The lawlefs example of the earl of Doughas encouraged the other great landholders tor gratify their private animufities, fometimes at the expence of their honour as well as their humanity. A family-difference happened hetween Sir Allan Stuart of Daruley, and Thomas Doyd of Kilmarnock; but it was concluded that both parties thould come to a peaceable agrecment at Folmailthorn, between Liulithgow and Falkirk, where Stuart was treacheroufly murdered by his enemy. Stuat's death was revenged by his brother, Sir Alesander Stuart of Beilmouth, who challenged Buyd to a pitched hattle, the principals being attended by a retibue which carried the refemblance of finall armies. The conflict was fierce and bloody, each party retiring in its turn, and charging with freth fury ; but at latt rictory deelared itelt for Stmart, the bravell of Buyd's attendants being cut off in the field. About this time, the iflanders, under two of their cheftains, Lauchlan Málean and Murdoc Gibfon, notorious frecbouters, invaded Scotland, and ravaged the province of Lenox with fire and fword. They were oppofed by Jonn Colcuhoun of Lufs, whom they flew, fome fay treachercouly, and others, in an engagement at Lochlomond, near Inchmartin. After this, the robbers grew more outrageons than ever, not only filling all the neighburing country with rapine, but murdering the aged, infants, and the defencelels of both fexes. At lail, all the lubouring hands in the kingdom being engaged in domettic broils, none wete left for agriculture; and a dreadful famine erfned, which was attended, as ufual, ily a peffilence. Janes was now about ten jears of age; and the wiect part of the kingdom agreed, that

Vol. XVI. Part. II.
the public dittrefles were owing to a total silrefpeci as geotlant, the toyal authority. The young carl of Doughs newer had fewer than 1000, and fometimes 2000 horfe in his train: fo that nome was found hardy enough to controul him. He pretended to lee indepeadent of the king and his courts of lav: that he had a right of jidicature upon his own large eftates; and that he was entitled to the excreife of royal power. In confequence of this he iffued his orders, grave protections to thieves and inurderers, affected to brave the king, made knights, and, according to fome writers, even noblemen, of his own dependents, with a power of fitting in parliament.

The queen-muther was not wholly guiltefs of thofe abuies. She had fatlen in love with and married Sir James Stuart, who was commonly called the Biarle Kniplit of Loorn, brother to the kord of that title, and a dxccudant of the houle of Darsiey. Affection for her hufband cauled her to renew her political intigues ; and not finding a ready compliance in the go*emor, her intreft inclued towards the paty of the Donglafics. The governor fought to Atrengthen his authority hy refturing the excreife of the civil power, and the reverence due to the perfon of the fovercign.

The conduct of the latd Callendar was in many re. The queenfpects not fo defenfible, either as to prudence or policy. mother and When the queen expreted her inclination that ber hufband misht be admitted to fome part ot the adminiAtation, the governor threw both him and his brother the lord Lorm intu prifon, on a charge of tindutiful practices ag.in! the ftate, and abetting the earl of 1)orglas in lis enormitics. The queen, taking fre at her hußand's imprifonment, was herfelf connined in a mean apartment within the cattle of Stirlins; and a convention of the flates was called, to judre in what manner the was to be proceeded agantt. The cafe was unpreccdented and difficule; nor can we believe the governor would have carried matters to fush extremity, had he not had ftrong evidences of her illegal behatriour. She was even obliged to diffemlle her refentment, by making an open profeffion hefore the tlates, that the had always been entirely iunocent of her hufband's practica, and that the would for the future behave as a peaceable and dutiful lubject to the laws and the fovercign. Upon making this putgation (as fif are reo Lindfay calls it), the was releafed, as aifo her lufflafed. band and his brother, being bailed by the chancellor and the lord Gordon, who became dureties for their gond behaviour in the penalty of 4000 merks. The governor was alterwards accuted of many aroitidry and partial acts of power: and indecd, if we condider his fituation, and the violence of the parties which then divided Scotland, it was almof impofithe, confitently with his own fafety, to have exerted the virtues either of patriotim or moderation.

The chancellor was exceedingly vexed at the finall regard which the governor paid to his perfon and digbity, and Cecretly conneeted himfelf with the quectrmother ; but in the mean time he remained at Edin. bursh. 'Ihe king and his mother contin:ted all this time at Stirling ; where the governor, on pretence of convining the public fafety, and that of the king's perfon, inantained a florg guare, part of which attonded Janes in his juvenile excreifes and diverfons. The queea-mother did not fail to reprefent this to her 5 G foa

Scotland. fon as a reftraint upon his libetty; and obtained his confent to put himfelf into the chancellor's hands. 'The

The chancellor ge:s the king's perfon into his hands.

206
Rebell ous behaviou: of the earl of Deuglas
latter, who was a man of activity and courage, knew well how to avail himfelf of this permiffion; and croffing the Forth in the dark with a throng body of horle, they furrounded the king as he was hunting next morning by break of day. It was eafy to perceive from the behaviour of James, that he was no flranger to the chancellor's attempt ; but fome of the king's guard offering to difpute the poffeffion of his perfon, Sir William Livingfon, the governor's eldeit fon, reftrained them, and fuffered the king to depart quietly. This furprifal happened on a day when the goven nor was abfent from Stirling; and the chancellor, to make fure of his royal acquifition, entered Edinburgh at the head of 4000 horfe, where the king and he were received by the citizens with loud acclamations of joy.

The governor howed no emotion at what had happened; on the contrary, he invited the chancellor to an interview, and fettled all differences with him in an amicahle manner. The young lord Donglas, however, continued to brave both parties. As if he had been a fovereign prince, he demanded by his ambaffadors, Malcolm Fleming of Cumbernauld, and Allan Lawder, the inveftiture of the Covereignty of Touraine from Charles the feventh of France; which being readily granted him, ferved to increafe his pride and infolence. The firll-fruits of the accommodation between the two great officers of fate was the helding of a parliament at Edinburgh, for redreffing the public diforders occafioned by the earl of Douglas; and encouragement was given to all perfons who had been injured to make their complaints. The numbers which on that occafion reforted to Edinburgh were incredible; parents, children, and women, demanding vengeance for the murder of their relations, or the plunder of their eftates; till, by the inultiplicity of their complaints, they became without remedy, none being found bold enough to enconnter the earl of Douglas, or to endeavour to bring luin to a fair trial. The parties therefore were difmiffed without relief, and it was refolved to proceed with the haughty earl in a different manner. Letters were written to him by the governor and chancellor, and in the name of the ftates, requetting him to appear with his friends in parliament, and to take that lead in public affairs to which they were intitled by their hifrh rank and great poffeftions. The manner in which thofe letters were penned made the thoughtlefs earl confider them as a tribute due to his greatnefs, and as proceeding from the inability of the government to continuc the adminiftration of public affairs without his countenance and direction. Without dreaming that any man in Scotland would be fo bold as to attack him, even fi: gle or unarmed, he aufwered the letters of the chancellor and governor, by affuring them that he iniended to fet out for Edinburgh : the chancellor, on prctence of doing him honour, but in reality to quiet his fufpicions, met him while he was on his journey; and inviting him to his caftle of Crichton, he there entertained him for fone days with the greateft magnificence and appearance of hofpitality. The earl of Dourlas believed all the chancellor's profeffions of fricndhip, and even fharply checked the wifett of his followers, who counfelled him not to depend too much on appearances, or to trutt his brother and himfelf at
the fame time in any place where the chancellor had Scoland. power. The latter liad not only removed the earl's fufpicion, but had made him a kind of convert to patriotifm, by painting to him the miferies of his country, and the glory that mult redound to him and his friends in removing them. It was in vain for his attendants to remind him of his father's maxim, never to rikk himfelf and his brother at the fane time : he withont helitation attended the chancellor to Edinhurgh; and being admittcd into the caftle, they dined at the fane table with the king. Towards the end of the entertaiunent, a bull's head, the certain prelude of immediate death, was ferved up. The earl and his brother is put to 297 flarted to their feet, and endeavoured to make their death with efcape: but armed men rufhing in, overpowered them, his lrothers and tying their hands and thofe of Sir Matcolm Fleming with cords, they were carried to the hill and beheaded. The young king endeavoured with tears to procure their pardon; for which he was feverely check. ed by his unrelenting chancellor.

In 1443, the king being arrived at the age of 14 , declared himfelf out of the years of minority, and took upon himfelf the adminiftration of affairs. He appears to have been a prince of great fpirit and refolution; and he had occafion for it. He had appointed one Robert Sempil of Fulwood to be chief governor of the cattle of Dumbarton; but he was killed by one Galbraeth (a noted partizan of the earl of Douglas), who feized upon the government of the caftle. The popularity of the fanily of Douglas having fomewhat fubfided, and the young carl finding himfelf not fupported by the chief branches of his family, he began to think, now that the king was grown up, his fafeft courfe would be to return to his duty. He accordingly re-The \({ }^{298}\) paired to the king at Stirling; and voluntarily throw- carl fubmits ing himfelf at his majelty's feet, implored his pardon to the king, for all his tranfgreffions, and folemnly promifed that and is rehe would ever after fet a pattern of duty and loyalty favour. to all the relt of his fubjects. The king, finding that he infifted on no terms but that of pardon, and that he had unconditionally put himfelf into his power, not only granted his requeft, but made him the partner of his inmolt councils.

James had always dinliked the murder of the earl of Doughas and his brother; and the chancellor, perceiving the afcendency which this earl was daily gaining at court, thought it high time to provide for his own fafety. He therefore refigned the great feal, and retired to the cattle of Edinburgh, the cuftody of which he pretended had been granted to him by the late king during his life, or till the prefent king fhould arrive at the age of 21 ; and prepared it for a fiege. The lord Great 299 Callendar, who knew himfelf equally obnoxious as furbances Crichton was to the earl of Donglas, and that he could in scotnot maintain his footing by himfelf, refigned likewife land. all his polts, and retired to one of his own houles, but kept poffeffion of the caltle of Stirling. As both that and the caftle of Edinburgh were royal forts, the two lords were fummoned to furrender them; but inftead of complying, they juttified their conduct by the great power of their enemies, who fought their deftruction, and who had been fo latcly at the head of robbers and ourlaws; but promifed to furrender themfelves to the king as foon as he was of lawful age, (meaning, we fuppofe, either 18 or 21 ). This anfwer being deemed

S C O
Scotland. with his tous, fins Sir Alewor and the late governor, fon, were proclained traitors in a parliament which was funmoned on purpofe a be held at Stirling. In another pailiament held at Perth the fame year, an act paffed. that all the lands and goods which had belonged to the late king fhould be poffeffed by the prefent king to the time of his lawful age, which is not fpecified. This act was levelled againf the late governor and chancellor, who were accurfed of having alienated to their own ufes, or to thole of their friends, a great part of the royal effets and jewels ; and their eltates being confifcated, the execution of the fentence was committed to Jolin Forrefter of Corltorphin, and other ad. herents of the earl of Douglas.

This fentence threw all the nation into a flame. The cafle of Crichton was befieged; and being furrendered upon the king's fummons and the difplay of the royal banner, it was levelled with the ground. It foon appeared that the governor and chancellor, the latter efpecially, had many friends; and in particular Kenuedy bihhop of St Andrew's, nephew to James the firt, who fided with them from the dread and hatred they bore to the earl of Donglas and his family. Crichton thns foon found himfelf at the head of a body of men ; and while Forrefter was carrying fire and £word into his eltates and thofe of the late governor, his own lands and thofe of the Douglaffes were overrun. Corthorphin, Abercern, Blacknefs, and orher places, were plundered; and Crichton carried off from them more booty than he and his adherents had lott. Particolar mention is made of a fine breed of mares which Douglas had loft on this occation. That nobleman was fo much exaifperated by the great damages he had futtained, that he engaged his friends the earl of Crawford and Alexander Ogivy of Innerquarity, to lay wafte the lands of the bilhop of St Andrew's, whom he confidered as the chief fupport of the two minifters. This prelate was not more confiderable by his high birth, than he was venerable by his sirtue and fanctity ; and had, from a principle of confcience, oppofed the earl of Douglas and his party. Being coinfious he had done nothing that was illegal, he firt admonified the carl of Crawford and his coadjutor to defift from deltroying his lands; but fnding his admonitions ineffectual, he laid the carl under an cxcommunication.
That nobleman was almof as formidable in the northern, as the earl of Douglas had been in the fouthern, parts of Scotland. The bencdictine monks of Aberbrothwic, who were poffeffed of great property, had chofen Alexander Lindiay, his eldect ion, to be the judge or bailiff of their temporalities; as they themfelves, by their profeffion, could not fit in civil or criminal courts. Lindfay proved fo chargeable, by the great nunber of his attendants, and his ligh manner of living, to the monks, that their clapter removed him from this poft, and fubllituted in his place Alexander Qgivy of Innerquharity, guardian to his nephew Jolun Ogivy of Airley, who had an hereditary clain upon thic bailiwick. This, notwithfanding their former intimacy, created an irrèconcileable difference between the two familics. Each competitor ffreng thened himfelf by calling in the affitance of his friends; and the Lord Gordon taking part with the Ogivies, to whom he was
then paying a vifit, both parties immediately nuftered Scotland. in the neighbourhooi of Aberbrothwic. The carl of \(\rightarrow\) Crawford, whe was then at Dundee, immediatcly pofted to Aberbrothwic, and placing himfelf between the two armies, he demanded to Ipeak with Ogilvy; but, be fore his requeft \(c\) uld be gronted, he was iilled by a common foldier, who was iunarant of his quality. His death exafperated his friends, who immedia'ely rufhed on their enemies; and a bloody conflict e:fued, which ended to the advantage of the Lindfays, that is, the earl of Crawford's party. On that of the Ogilvics were killed Sir John Oliphant of Aherdagy, John Forbes a Pitni yo, Alexander Barclay of Gartley, Robert Maxwel of Teling, Duncan Campbell ot Campbelfether, William Gordon of Burrowfeld, and others. With thofe gentlemen, abont 500 of their followers are faid to have fallen; but fome accounts diminifh that num. ber. Innerquharity himfelf, in flying, was taken prifoner, and carried to the earl of Crawford's houte at Fin. haven, where he died of his wounds; but the Lord Gordou (or, as others call him, the earl of Huntley) efcaped by the fiviftnefs of his horfe.

This battle feems to have let loofe the fury of civil difcord all over the kingdom. No regard was paid to magilfracy, nor to any defcription of men but that of clergy. The moft numerous, fierceft, and beft allied family, wreaked its vengeance on its foes, either by force or treachery; and the enmity that actuated the parties, fiffled every fentiment of honour, and every feeling of humanity. The Lindfays, fecretly abetted and Arengthened by the earl of Donglas, made no other ufe of their victory than cainying Ere and fword through the eftates of their enemies ; and thus all the north of Scotland prefented feenes of murder and devaftation. In the weft, Robert Boyd of Duchal, governor of Dumbarton, treacheroufly furpiifed Sir James Stuart of Achmynto, and treated his wife with fuch inhumanity, that ihe expired in three days under her confinement in Dumbarion cattle. The catlle of Dunbar was taken by Patrick Hepburn of Hales. Alexander Eunbar difpoffeflied the latter of his caftle of Hales ; but it was retaken by the partifans of the earl of Douglas, whofe tenants, particularly thofe of Annandale, are faid to lave behaved at that time with peculiar fiercenefs and cruelty. At laft, the gentlemen of the country, who were unconnected with thofe robbers and murderers, which happened to be the cale with nany, fhut themfelves up in their feveral houfes; each of which, in thole days, was a petty fortrets, which they victualled, and provided in the beft manner they could for their own defence. This wife refolution feems to have been the firtt meafure that compofed the public commotions.

The carl of Douglas, whofe power and influence at court fill continued, was fenfible that the clergy, with the wifer and more difinterelted part of the kingdom, confidered him as the fource of the dreadful calamities which the nation fuffered; and that James himfelf, when better informed, would be of the fame opinion. He therefore fought to avail hinffelf of tie juncture, by forming fecert but ftrong connections with the earls of Crawford, Rofs, and oiher great noblemen, who wanted to fee their foudal powers reflored to their full vigour. The quecu-dowager and her hufband made litele or no figure during this feafon of public confufion: the \({ }_{5}\) G 2

Ecethan?. had retired to the caftle of Dunbar, while it was in Hepburn's poffeffion, where fhe died foon after. She Jeft by her fecond hufoand three fons; Juhn, who in \({ }^{1} 455\) was made earl of Athol, by his uterine brother the king; James, who under the next reign, in \(1+69\), svas created earl of Buchan ; and Andrew, who afterwards became bifhop of Murray. As the earl of Duu glas was an enemy to the queen-dowager's hufband, the latter retired to England, where he obtained a pals to go abroad, with 20 in his train; but being taken at fea by the Flemifh pirates, he died in lis confinement.

The great point between the king and Sir William, Cichton, whether the latter thould give up the cafle to his majefty, remained thll undecided; and by the advice and dircction of the earl of Dunglas, who had been created lord-lieutenant of the kingdom, it had now fuffered a nine months fiege. Either the frengeth of the cafte, or an opinion entertained by Douslas that Crichtou would be a valuable acquifition to his party, procured better terms for the latter than he could otherwile have expected; for he and his followers were offered a full indemnity for all paft offences, and a promife was made that he fhouid be reftored not only' to the king's favour, but to his former polt of chancellor. He accepted of the corditions; but refuled to act in any public capacity till they were confirmed by a parliament, which was foon after held at Perth, and in which he was reftored to his eftate and honours. By this reconciliation between Douglas and Crichton, the former was left at full liberty to prolecute his vengeance againft the Lord Callendar, the late governor, his friends and family. That vengeance was execcilcd with rigour. The governor himfllf, Sir James Dundas of Dundas, and Sir Robert Bruce of Clackmannan, were forced to fave their lives by the lofs of their eftates; but even that could not pieferve their liberty, for they were fent prifoness to the cattle of Dumbarton. The fate of Alexander, the goveruor's eldeft fon, and of two other gentlemen of his name and fanily, was Aill more lamentable; for they were condemned to lofe their heads. Thofe feverities being inficted after the king had in a manner readmitted the fufferers into his favour, fwelled the public outcry againft the eand of Douglas. We bave in Lindfay an extract of the fpeech which Alexander Livington, one of the moft accomplifhed gentlemen of his time, made upon the fcaffold, in which he complained, with sreat bitternefs, of the cruel treatment his father, himfelf, and his friends, had undergone: and that he fuffered by a packed jury of his enemies.

The king being now about 18 years of age, it was thought proper that a fuitable confort mould be provided tor him; and, after various confultations, Mary, the dauglter of Anold duke of Gueldres, was chofen, at the recommendation of Charles king of France,

Invation of after. This produced an immediate rupture with Eng. scutlard land. The earls of Salifbury and Northumberland enthe Eng- tered Scotiand at the head of two feparate bodies. The tifl.
on uncer the earl of Northumberland, who had along with l:im a lieutenant, whom the Scots of thofe days, from the bufhinefs and colour of his beard, called Mornus zuilb the red mant. He was a follier of fortune, but an excellent officer, having been trained in the Fiench wars; and he is lai 1 to have demanded no other recompenfe for his fervices from the Englifh court, but that he fhould enjor all he could conquer in Scotland. The Scots, in the inean time, had raifed an army commanded by George Donglas earl of Ormond, and under him by Wallace of Craigie, with the Lords Maxwell and Juhnfton. 'The Englith baving pated Sulway Frith, ravaged all that patt of the country which belonged to the Scots; but hearing that the earl of Ormond's army was approaching; called in their parties, and fixed their eamp on the banks of the river Sark. Their advanced guard was commanded by Magnus; their centre by the earl of Northumberland; and the rear, which was compofed of Welch, by Sir John Pennington, an officer of courage and experience.

The Scots drew up in three divifons likewife. Their right wing was commanded by Wallace, the centre by of sark the earl of Ormond, and their left wing by the Lorus Maxwell and Johniton. Before the battle joined, the earl of Ormond harangued his men, and infpired them with very high refentment againft the Enylith, who, he faid, had treacherouly broken the truce. The lignal for battle being given, the Sects under Wallace rufhed forward upon their enemies: but, as ufual, were reecived by fo terrible a difcharge from the Englifh arehers, that their impetuofity mult have been flopped, had not their brave leader Wallace put them in mind, that their furefathers lad always been defeated in dittant fights. by the Englifh, and that they ought to truft to their fwords and fpears; commanding them at the fance time to fullow his example. They obeyed, and broke in upon the Englifh commanded by Magnus, with fuch fury, as foon fixed the fortune of the day on the fide of the Scots, their valour being fuitably feconded by their othes two divilions. The flaughter (which was the more confiderable as both parties fought with the utmolt animofity) fell chiehy upon the divifion com. manded by Magnus, who was killed, performing the pait of a brave officer; and all his body guard, confilting of picked foldiers, were cut in pieces.

Ihe battle then became general: Sir John Penning. The Eng. ton's divilion, with that under the earl of Northumber- lith entrelg land, was likewife routed; and the whole Englifh army, ftruck by the lofs of their champion, fled towards the Solway, where, the river being fwelled by the tid:, numbers of them were drowned. The lofs of the Englih in flain amounted to at icalt 3000 men. Amons; the prifoners were Sir John Peanington, Sir Robert Harrington, and thee earl of Northumberland's eldelt fon the Lord Perey, who loit his own liberty in torwarding his father's efeape. Of the Scuts about 600 were killed; but none of note, excepting the brave Wallace, who died three months atter of the wounds he had received in this battle. The booty that was made on this oceafion is faid to have been greater thas any that has fallen to the Scots fince the baitle of Bannockburn

The reft of the hiftory of this reign confifts almotentirely of a relation of the cabals and confiracies of the great men. The earl of Douglas had entered into a

Scotland. confederacy with the earls of Crawford, Moray, and Rofs, and appeared on all occalions with fuch a train of followers as bade defiance to royal power itelf. This infolence was detelted by the wifer part of the nation; and one Maclellan, who is called the Titor of Bomly, and was nephew to Sir Parrick Gray, captain of the king's guard, refufed to give any attendance upon the carl, or to concur in his mealures, bur remained at home as a quiet fubject. This inoffentere hehaviour was by the canl confedered as treafun againdt himlelf; and solently feizing upon Maclellan s houle and perfon, he fut hirn clofe prifoner to the calte of Douglas. As IJackellan was a gertleman of great worth and reputation, his uncle (iray epplied earneßly to Janes in his favour; and fuch was that prince's regard for Maclel. lan, that he wrute and figned a letter for his releale, addrefitd to the carl of Douglas. Upun Gray's delivering this letter to Douglas at his cattle, the latter Seemed to receive it with the lighell refpect, and to ereat Gray with the greatef hofpitality, by inviting him to dinner; but, in the mean time, lie gare private orders that Macledilan's head thould be ftruck off, and his budy expufed upon the green before the cattle covered with a linen cloth. After dinner, the earl told Gray, that he was ready to obey the king's :-ommands; and conducting him to the green, he howed him the lifelefs trunk, which he faid Coy might difpofe of as he pleafed. Upun this, Gray monnted his horfe, and trufted to his fwiftuefs for his own fafety; for he was purfued by the earl's attendants to the gates of Edinburgh.

The confpiracy againft James's gorernment was now no longer a fecret. 'The Lords Balveny and Hamilton, with fach a number of other barons and gentlemen, had acceded to it, that it was thonk ht to be more puwerful than all the farce the ling could bring inso the field. Even Cifchton advifed James to diffemble. . The confederates entered into a folemn bund and oath never to tefert one another during life; and, to make ufe of Diummond's words, "That injuries done to any one of them fhould be done to them all, and be a common quarrel ; neither fhould they delift, to their beft abilities, to revenge them: that they fhould concur indifferently againt whatfoever perfons withen or without the realm, and fpend their lives, lands, gooess, and fortunes, in defence of their debates and differences whatfuever." All who did not enter into this aflociation were treated as enemies to the public; their lands were deftroved, their effects plundeied, and they thenfelves impuifoned or murdered. Drummond fays, that Douglas was then able to bring \(4 \approx\), os men into the lield; and that his irtention was ro have placed the crown of Scotland upon his own head. How far he miglit have been influenced by a foene of the fame nature that was then paffing between the houfes of York and Lancatter in Eingland, we frall not pretend to determine; though it does not appear that his intention was to wear the crown himfelf, but to render it defpicable upon his sovereign's heaf. It is rather evident, from his behaviour, that he did not affect royalty; ior when James invited hira to a conference in the caftle of Stirling, he ofered to comply provided he had a lafe conduct. This condition plainly implied, that he had no reliance upon the late act of parliament, which declared the Eroclamation of the king's peace to be a fufficien: fe-
cunty for iife and fortune to a!! !:is fubjecs; an! there Scaiant is no denying that the fafe conduet was expedited in the form and mamer required.
'Ihis being obtaireel, the earl began lis march towaids Stirling with his ufudl gteat retinue; and arrived there on Shrowc-Tudday." He was reccived br- \(30_{4}\) the kins as if his hal been the belt of his friund:, as between well as the greate? of his fubjects, and admitted to fup kins Jimes with his majefty in tle cattle, while his attentants were antricend difperfed in the tow F , little fufpecting the cataltruphe of Do.
that followed. the entertainment being over, the hin told the earl with an air of Iranhnefs, " That as he wa; now of age, he was refulved to be the father of all his people, and to take the government into his own hands; that his lordthip, thereture, had no reafon to be under any apprehenfions from his old enemies Callendar and Crichion; that there was no occation to form any confedetaces, as the law wai ready to protect him; and that he was uelcome to the principal direction of afo fairs under the crown, and to the firt place in the roval contence ; nay, that all former offences done by hisifelf and his friends mould be pardoned and torgot."

This fpeech was the very reverfe of what the carl of Douglas aimed it. It rendered him, indeed, the firt fubject of the kiusdom; but itill he was controulatle by the civil law. "In fhort, upon the king's peremptorily purtirg the queftion to him, he not only refufed to difiolve the confederacy, but upbraided the king for his goverument. This pioduced a paffionaic rejoinder on the part of James ; but the earl repielented that he "as under a lafe conduct, and that the nature of his confederacy was fuch, that it could not be broken but by the common confent of all concerned. The king in. The kir filted upor his letting the example; and the earl con- The kirg fom tinuing more and more obllinate, James ftabbed himw:h his with his dagger ; and amed men rufling into the roam, own hard. fnithed the flaughter.

Atter the death of the earl of Dounlas, the confederacy came to nothing. The infurgents excufed themfelves as being too weak for fuch an enterprife; and wese contented with trailing the fafe conduct at a horfe's tail, and proclaiming, by trumpets and loons, the kins a perjured trator. 'Ther procecied so farther; and each departel to his own habitation, atter agreeing to allemble with frefly torces about the beginning of April. James lof no time in improving this thort refpite; and found the nation in general much better dipofed in his favoar than he had ieafon to expeet. The intole:able opprefions of the great barons made his fubeets titeem the civil, far preferable to the feudal, fubjection : and even the Douglates were divided among thenfelves; for the eail of Angus and Sir John Douslas of Dalket:h were among the mot forward of the rovalills. James at the lame time wrote letters to the earl of Huntley, ard to all the noblemen of bis kingdom who were nor parties in the confederacy, betides the eeclefialtics, who remained frmly attached to his prerogative. Before the wfect of thofe letters could be known, the infugents had reurned to Stirling (where James thill wifely kept humfelf upon the defenfive); repeated their infoleaces, and the opprobsious treatment of his fafe conduct ; and at lat? thero phondered the town, and laid it in afhes. Beiag still unable to take the caftle, partly through their ow dr vifions, and partly through the diverfity of the opesa.

\section*{S C O \(\quad[790] \quad\) § C O}
scotand tions they were obliged to fupply, they left Stirling, and deftroyed the eftate of Sir John Douglas of Dalkeith, whom they confidered as a double traitor, becaufe he was a Douglas and a good fubject. They then befieged his caftle: but it was fo bravely defended by Patrick Cockburn, a gentleman of the family of Lang. ton, that they raifed the fiege; which gave the royal party farther leifure for humbling them.

All this time the unhappy courtry was fuffering the moft cruel devaftations; for matters were now come to fuch extrenity, that it was neceflary for every man to be a royalift or a rebel. The king was obliged to keep on the defenfive'; and though he had vertured to leave the cattle of Stirling, he was in no cordition to face the rebels in the field. They were in poffeffion of all the ftrong paffes by which his friends were to march to his affiftance; and he even confulted with his attendants on the means of efeaping to France, where be was fure of an hofpitable reception. He was diverted from that refolution by bifhop Kennedy and the earl of Angus, who was himfelf a Douglas, and prevailed upon to wait for the event of the earl of Huntley's attempts for his fervice. This robleman, who was defeended from the Seatons, but by marria; inherited the great eftates of the Gordons in the north, had raifed an army for James, to whofe family he and his anceftors, by the Gcrdons as well as the Seatons, had been always remarkably devoted. James was not miftaken in the high opinion he had of Huntley; and in the mean time he iflued circular letters to the chief ecclefiaftice and bodies-politie of his kingdom, fetting forth the neceffity he was under to proceed as he had done, and his readine!s to protect all his loyal fubjects in their rights and privileg es againft the power of the Douglafes and their rebellious adherents. Before thofe letters could have any effect, the rebels had plundered the defencelefs houfes and eftates of all who were not in their confederacy, and had proceeded with a fury that turned to the prejudice of their caufe.

The indignation which the public had conceived againft the king, for the violation of his fafe conduct, began now to fubfide; and the belaviour of his enemies in fome meafure juftified what had happened, or at leaft made the people fufpect that James would not have proceeded as he did withont the flrongeft provocation. The forces he had affembled being unable, as yet, to act offenfively, he refolved to wait for the earl of Huntley, who by this time was at the head of a conflderable army, and had begun his march fouthwards. He had becn joined by the Forbefes, Ogilvies, Lenies, Grants, Irviugs, and other relations and dependents of

306 Batile of Brechin, where the sebels are defeated. his family ; but laving advanced as far as Brechin, he was oppofed by the earl of Crawford, the chief ally of the eal of Douglas, who commanded the people of Angus, and all the adherents of the rebcls in the neighbouring counties, headed by foreign officers. The two armies joining battle on the 18 th of May, victory was for fome time in fufpence; till one Colofs of Bonnymoon, on whom Crawford had great dependence, but whom he had imprudently difobliged, came over to the royalifts with the divifion he commanded, which was the beft armed part of Crawford's army, confifting of battle-axes, broad-fwords, and long fpears. His defection gave the fortune of the day to the earl of Huntley, as it left the centre flank of Crawford's army en-
tirely expofed to the royalits. He himfelf loft one of Scotland. his brothers; and fled with another, Sir John Lindfay, to his houle at Finhaven, where it is reported that he broke out into the fullowing ejaculation: "That he would be content to remain feven years in hell, to have in fo timely a feafon done the king his mafter that fervice the carl of Huntly had performed, and carry that applaufe and thanks he was to receive from him."

No author informs us of the lofs of men on either fide, though all agree that it was very confiderable upon the whole. The earl of Huntley, particularly, loit two brothers, William and Henry; and we are told, that, to indemnify him for his good fervices, as well as for the rewards and prefents he had made in lands and privileges to his faithful followers, the king beftowed upon him the lands of Badenoch and Lochaber.

The battle o? Brechin was not immediately decifive The rebe\& in favour of the king, but proved fo in its confequences, hin fupThe earl of Moray, a Douglas likewife, took advantage preffed. of Huntley's abrence to harafs and ravage the eftates of all the royalills in the north; but Huntley return. ing from Brechin with his vietorious army, drove his enemy into his own county of Moray, and afterwards expelled him even from thence. James was now encouraged, by the advice of his kinfman Kennedy bifhop of St Andrew's, to whofe firmnefs and prudence he was under great obligations, to proceed againt the rebels in a legal manner, by holding a parliament at Edinburgh, to which the confedcrated lords were fummoned; and upon their non-compearance, they were folemnly declared traitors. This proceeding feemed to afociation make the rebellion rage more fiercely than ever; and :raint the at laft, the confederates, in fact, difowned their alle- king by the giance to James. The earls of Douglas, Crawfurd, Or-Douglas, mond, Moray, the Lord Balveny, Sir James Hamilton, Cruwfurd and others, ligned with thein own hands public mani-scc. feftoes, which were patted on the doors of the principal chutches, importingi:" "That they were refolved never to obey cemfland or gharge, nor anfwer citation for the time coming: becaufe the king, fo far from being a juft mafter, was a bloodfucker, a murderer, a tranfgreffor of hofpitality, and a furprifer of the innocent." It does not appear that thofe and the like atrocious proceedings did any fervice to the caufe of the confederates. The earl of Huntley continued victorious in the north; where he and his followers, in revenge for the earl of Moray's having burnt his caftle of Huntley, feized or ravaged all that nobleman's great eftate north of the Spey. When he came to the town of Forres, he burnt one fide of the town, becaufe it belonged to the earl, and fpared the other, beeaufe it was the property of his own friends. James thought himfelf, from the behaviour of the earl of Douglas and his adherents, now warranted to come to extremities; and marehing into Annandale, he carried fire and fword through all the eftates of the Douglaffes there. The earl of Crawiord, on the other land, having now recruited his ffrength, deftroyed the lands of all the people of Angus and of all others who had abandoned hin at the batte of Brechin; though there is reafon to believe, that he had already fecretly refolved to throw himfelf upon the king's mercy.

Nothing but the moft obifinate pride and itfentment could have prevented the earl of Douglas, at this time, from taking the advice of his friends, by returning to

Scolland. his duty; in which eafe, James had given fufficient intimations that he might expect pardon. He coloured hi contumacy with the fpecious pretext, that his brother's fate, and thofe of bis two kinfmen, fufficiently inftructed him never to trult to James or his minifters; that he had gone too far to think now of receding; and that kings, when once offended, as James had been, never pardoned in good earnett. Such were the chief reafons, with others of lefs confegrence, which Drummond has put into the month of \(D\) euglas at this time. James, after his expedition into Annandule, found the feafor too far advanced to continue his operations; and returning to Edinburgh, he marehed northwards to Angus, to reduce the eart of Crawford. who was the fecond rebel of power in the king dom. That nobleman had hitherto deferred throwing himfelf at the king's feet, and had refumed his arms, in the manner related, only in hopes that better terms might be obtained from James for himfelf and his party. Perceiving that the earl of Donglas's obftinacy had cooled fome other lords of the confederacy, and had put an end to all hopes of a treaty, he refolved to make a merit of breaking the confederacy, by being the fint to fubmit. James having arrived in Angus, was continuing his march through the country, when the earl and fome of his chief followers fell on their knees before him ont the road, bareheaded and barefooted. Their dreary looks, their fuppliant poftures, and the tears which freamed abundant1y. from the earl, were expreflive of the mof abject con. trition; which was followed by a penitential fpeech made by the earl, acknowledging his crimes, and imploring forgivent \(\mathrm{f}_{3}\).

James was then attended by his chief counfellors, particularly bifhop Kennedy, who, he refolved, fhould have fome fhare in the farour he meant to extend to the earl. He afked their adviee; which proving to be on the merciful fide, James promifed to the earl and his followers reftitution of all their eftates and honours, and full pardon for all that had paffed. The earl, as a grateful retribution for this favour, before the king left Angus, joined him with a noble troop of his friends and followers; and, attending him to the nosth, was extremely active in feppreffing all the remains of the rebellion there.

The fubmiffion of the earl of Crawford was followed by that of the earl of Douglas; which, however, continued only for a fhort time. 'This powerful nobleman foon refumed his rebellious practices; and, in the year I 45 4, raifed an army to fight againf the king. The king erceted his ftandard at St Andrew's; marched from thence to Falkland; and ordered all the forces of Fife, Angus, and Strathern, with thofe of the northern parts, to rendezwous by a certain day at Stirling; which they did to the number of \(3=, 000\). Douglas affembled his forces, which amounted to 40,000 , fome fay 60,000 men, on the fouth fide of the river Carron, about half way between Stirling and Abercorn. However, notwithtanding this fuperiority of force, the earl and not think it proper to fight his fovereign. Bihop Kennedy, the prelate of St Andrew's, had advifed the king to divide his enemies by offering them pardon feparately; and fo good an effect had this, that in a few days the earl found himfelf deferted by all his numerous army, excepting about 100 of his nearell friends and domeltics, with whom he retired towards England. His
friends lyd indeed advifed him to come to a battle im. Sentiand: mediately; but the carl, for reafons now unknown, refuled. However, in his journey fouthward, he railed a confiderable body of forces, confitius of his own tenants, of outlaws, robbers, and borderers, with whom he renewed his depredations on the loyal fubjects of the king. He was oppoled by the earl of Angus, who, though of the name of Douglas, continued firm in the royal caufe. An engagement enfued at Aneram-muir ; He is ent where Douglas was entirely deteated, and he himfelf tirely dewith great difficulty efeaped to an adjacent wood. fated. What his fate was after this battle does not appear; but it is certain that his eftates wele afterwards forfeit. ed to the king.

The seft of the reisn of James II. was fpent in ma- Kine \({ }^{3} \mathrm{Jz}\) king proper regulations for the good of his penple. In kulled by t +60 he was killed at the fiege of Roxburgh caltle, by accident. the burting of a cannon, to which he was tou near when it was difcharged. This fiege he had undertaken in fa. vour of the queen of England, who, ater lolin f feveral battles, and being reduced to dittrefs, was obliged to apply to J mes for relief. The nobility who were prefent conceated his death, for far of difcouraging the foldiers ; and in a few hours after, the queen appeared in the camp, and prefented her young fon, Janues III. as their king.

James III. was not quite feven years of age at his ac- James \({ }^{311}\) II, ceffion to the crown. The adminitration naturally devolved on his mother; who pulhed the fiege of Roxburgh caftle with fo much vigour, that the garrifon was obliged to capitulate in a few days; after which the army ravaged the country, and took and difmantled the catte of Wark. - In 1456, negociations were begun for a marriage between the young king and Margaret prin. vreaty wecefs of Denmark; and, in \(1+68\), the following condi- the princefs tions were ftipulated. I. That the annual rent hither-mark.
to paid for the northern Ines of Orkney and Shelod to paid for the northern Ines of Orkney and Shetland Thou'd be for ever remitted and extinguihed. 2. That king Chritiern, then king of Dennark, fhould give 60,000 florins of gold for his daushter's portion, whereof 10,000 hould be paid berore her departure from Denmark ; and that the inlands of Orkney fhould be made over to the crown of Scotland, by way of pledige for the remainder; with this exprefs provifo, that they fhould return to that of Norway after complete payment of the whele fum. 3. That king James Ahould, in cafe of his cying before the faid Margaret his foufe, leave her in poffeffion of the palace of Linlithgow and cafte of Down in Menteith, with all their appurtenances, and the third part of the ordinary revenues of the crown, to be enjoyed by her during lie, in cale the thould choofe to refide in Scotland 4 . But if the rather chofe to return to Denmark, that ia lieu of the faid licerent, palace, and calle, fhe thould accept of 125,500 florins of the Rhine; from which fum the 50,00 due for the remainder of her portion being deduced and allowed, the iflands of Orkney thould be reanmexed to the crown of Norway as beforc.

When thefe articles were agreed upon, Chriftiern found himfif unable to fulfil his part of them. Being at that time enga, ed in an unfuccelsful war with Sweden, he could not advance the 10,000 florins which he had promiled to pay duwn as part of his dau rhter's fortune. He was therefore obliged to apply to the ple. nipotentiaries to accept of 2000 , and to take a farther

317
Begining of Jamcos nusfos. cunes. able practices alleged to have been committed long before, and for which he produced a parliamentary indernnity to no purpofe : the carl himfelf was divorced from lis wite the king's fitter, and obliged to live in perpetual exile, while the countefs was married to another.
In 1476 , thofe misfortunes heran to come on James which alterwards terminated in his ruin. IIe bad made his brother, the duke of Albany, governor of Berwick; and had entrulted him with very extenfive powers upun the borders, where a violent propenfity for the feudal lave ftill contimued. The Hume's and the Hepburns, then the molt powerful fubjects in thofe parts, could not brook the duke of Albany's greatnefs, efpecially after he had forced them, by virtue of a late act, to part with forne of the eftates which had been incontiThe pretended fcience of judicial aftrology, by which James happened to be incredibly infatuated, was the eafieft as well as molt cffectual engine that could work their purpofes. One Andrew, an infamous impaftor in that art, had heen brouglit over from Flanders by James; and lie and Schevez, then archbithop of St Andrew's, concurred in perfuadiag James that the Scotch lion was to be devoured by his own whelps; a prediction that, to a prince of James's turn, amounted to a certainty.

The condition to which James reduced himfelf hy his belief in judicial aftrology, was truly deplorable. The princes upon the continent were fmitten with the fame infatuation; and the wretches who befieged his perfon had no fafety but by continuing the delufion in his mind. According to Lindfay, Cochrant, who had fome knowledge of architecture, and had been in. troduced to James as a mafter-mafon, privately procured an old woman, who pretended to be a witch, and who heirgtened his terrors by declaring that his brothers intended to inurder him. James believed her; and the unguarded manner in which the earl of Mar treated his weaknefs, exafperated hin so much, that the earl giving a farther loofe to his tongue in railing againlt his brother's unworthy favourites, was arrefted, and committed to the caltle of Craig Miller; from whence he was brought to the Canongate, a fuburb of

Albany ar refled, hut efiajes.

\section*{320 \\ Edinburgh, where he fufiered death.}

The duke of Albany was at the cafle of Dunbar when his brother the eanl of Mar's trapedy was actod; and James could not be eafy without having him like. wife in his piwer. In hupes of furprifing him, he marched to Dunbar: but the duke, being apprized of his coming, fled to Berwick, and ordercd his cattle of Dunbar to be furrendered to the lord Evendale, though not before the girrifon had provided themfelves with boats and fluall veffets, in which they efcaped to England. Fe ventured to come to Edinburgh; where James was fo well ferved with fpies, that he was feized,
and committel slofe prifoner to the cafte, with orcisug- Scontand that he thould fpeak with none but in the prefence of his keepers. The duke had probably fufpected and provided againtt this difagrecable event; for we are told that he had agents, who every day repaired to the cafle, as if they liad come from court, and reported the tlate of matters between him and the king, while his keepers were prefent, in fo favourable a light, that they made no doubt of his foon regaining his liberty, and being readmitted to his brother's favoitr. The feeming negeciation, at laft, went fo profperoufly on, that the duke gave his keepers a kind of a farewell entertainment, previous to his ohtaining a formal deliverance; and they drank fo immoderatelv, that being intoxicated, they gave him an opportunity of efcaping over the cafte wall, by converting the fheets of his bed into a rope. Whoever knuws the fituation of that tortrefs, mult be amazed at the boldnefs of this attempt; and we are told that the duke's valct, the only domeltic he was allowed to have, making the experiment before his mafter, broke his neck: upon which the duke, lengthering the rope, Gid down unhurt; and carrying his fervant on his back to a place of f: fety, he went on board a fhip which his friends had provided, and efeaped to France.

In 1482 , the king began to feel the bad confequen. ces of taking into his favour men of worthlefs characters, which leems to have been one of this prince's per. nicious foibles. His great favourite at this time was Cochran Cochran, whom he had raifed to the dignity of earl of he king \({ }^{2}\) Mar. All hiftorians agree that this man made a moft geeat fainfamous ufe of his power. He obtained at latt a li. vurite. berty of coinage, which he abufed fo much as to endanger an infurrection among the foor pernple; for he iffued a bafe coiu, called bluck money by the common people, which they relufed to take in payments. This favourite's flitl in architeeture had firlt introduced him to James; but he maintained his porer by other auts: for, knowing that his malter's predominant palfion was the love of money, he procured it by the meaneft and molt oppreflive methods. James, however, was inclined to have reliect his people by calling in Cochran's money; but he was diverted from that refolution, by confidering that it would be agrecable to his old nobility. Defides Cochran, James had other favourites whofe profeffions rendered them till lefs worthy of the royal conntenance; Janes Hommil a taylor, Leonard a black [mith, 'l'orfitan a dancing-1nafter, and fome others. The favour hown to thefe men gave fo much offence to the nobility, that, after fome deliberation, they refolved to remove the king, wish fome of his reat exceptionable donnelices (hut without offering any siolence to his perfon) to the caltle of Edinburgh ; but to haug all his sorthlefs favourites over Lawdewbidege, the common place of execution. Their deliberation was not kept lo feeret as not tucume to the ears of the favourites; who fufpecting the worlt, wakened James before day-break, and informed him of the meeting. He ordered Cochran to reoair to \(i\) :, and to bring hime an account of its proceedin, \((\mathrm{L})\). Accordiag to Lind-
fay,
(L) Lindfay's defeription of this uphart's marnigeence is very jarticular, and may ferve to give the reader an idea of the finery of that age. "Cochran (lays he), the easl of Mar, came from the king to the council

Scotland. (ay, who feems to have had very minute information as to this event, Cochran rudely knocked at the door of He is feized the church, juft after the affembly had finifhed their and put to confultation; and upon Sir Robert Douglas of Loch. death leven (who was appointed to watch the door) informing them that the earl of Mar demanded adnittance, the earl of Angus ordeted the door to be thrown open; and rufhing upon Cochran, he pulled a mafty gold chain from his neck, faying, that a rope would become him better; while Sir Robert Douzlas ftripped him of a collly blowing horn he wore by his fide, as was the manner of the times, telling him he had been too long the hunter of mifchief. Cochran, with afonifhment, afked them whcther they were in jeft or earneft ; but they foon convinced him they were in earneft, by pinioning down his arms with a common halter till he fhould be carried to execution.
Withothers The earl of Angus, with fome of the chief lords, atfftheking'stended by a detachment of troops, then repaired to the king's tent, where they feized his other favourites, Thomas Pretton, Sir William Rogers, James Hommil, William Torffan, and Leonard: and upbraided James himfelf, in very rude terms, with his mifconduct in government, and even in private life, in not only being counfelled by the above minions, but for keeping company with a lady who was called the Daifr. We know of no reliftance made by James. He only interceded for the fafety of a young gentleman, one John Ramfay of Balmain. Cochran, with his other worthlefs favourites, were hanged over Lawder-bridge bcfore his eyes; and he himfelf was conducted, under an eafy reftraint, Edinburgh. and even refufed to pardon thofe who had confined him, 325

\section*{Relieved}
by the duke
of Albany. or who had any hand in the execution at Lawder. At elaft, however, he was relieved by the duke of Albany; who, at the queen's defire, undertook to deliver her huband from confinement. This he accomplifhed, as fome fay, by furprifing the caftle of Edinburgh; though, according to others, the gates were opened, upon a formal requifition made for that purpofe by two heralds at arms. After he had obtained his liberty, the king repaired to the abbcy of Holyroodhoule with his brother, who now acted as his firt minitter. All the lords who were near the capital came to pay him their compliments; but James was fo much exafperated at what had happened, that he committed 16 of them prifoners to the caftle of Edinburgh. After his releafe, James granted a patent to the citizens of Edinburgh, and enlarged their privileges.

In 1487, James finifhed fome fecret negociations in which he had engaged with Henry king of England fome time. The principal articles agreed on between the two monarchs were, That king James's fecond fon

Vol. XVI. Part II.
nould marry Catherine the third daughter of Ed. Scotians. ward IV. and filter to the princels Elizabeth, now queen of England ; and that James himfelf, who was now a widower, fhould marry queen Elizabeth. A third marriage was alfo to be concluded betreen the duke of Rothefay and another daughter of Edward IV. That in order to thefe treaties, and for ending all controverfies concerning the town of Berwick, which the king of Scotland defired fo minch to poliefs, a congrefs fhould be held the enfuing year.

But in the mean time a moll powerful confederacy A powerwas formed againd the king; the origin. ot which was tul confese as follows. James was a great patron of architecture; redy formand being pleafed with the fituation of Stirling caftle, che a king. he refolved to give it all the embellifhments which that art could beltow; and about this time he made it the chicf place of his refidence. He raifed within it a hall, which at that time was deemed a noble fructure; and a college, which he called the chapel-royal. 'I'his college was endowed with an archdean who was a bifhop, a fubdean, a treafurer, a chanter and fubchanter, with a double fet of other officers ufually belunging to fuch inftitutions. The expences neceffary for maintaining thefe were confiderable, and the king liad refolved to affign the revenues of the rich priory of Coldingham for that purpofe. This priory had been generally held by one of the name of Hume; and that family, through length of time, confidered it as their property: they therefore Atrongly oppoled the \(\mathrm{kin}_{\mathrm{y}} \mathrm{s}^{\prime} \mathrm{s}\) intention. The difpute fecms to have lafted fome ycars: for the former parliament had paffed a vote, annexing the priory to the king's chapel royal ; and the parliament of this jear had paffed a flatute, ftrictly prohibiting all perfons, fpiri- 327 tual and temporal, to attempt any thing, directly or a quing to indircetly, contrary or prejudicial to the faid union and wi:h the anncxation. The Humes refented their being ftripped family of of fo grinful a revenue, the lofs of which affected mort Hunc. of the gentlemen of that name; and they united themfelves with the Hepburns, another powerful clan in that neighbourhood, under the lord Hales. An affociation was foon formed; by which both families engaged to ftand by each other, and not to fuffer any prior to be received for Coldingham, if he was not of one of their furnanes. The lords Gray and Drummond foon joined the affociation; as did many cther noblensen and gentlemen, who had their particular caufes of difcontent. Their agents gave out, that the king was gralping at arbitrary power; that he had accuired his populanity by deep hypocrify; and that he was refolved to be fignally revenged upois all who had any hand in the execution at Lawder. The earl of Anyus, who was the foul of the confederacy, advifed the confpirators to apply to the old carl of Donglas to head them : but that nobleman was now dead to all ambition, and inflead 5 H
(which council was holden in.the kirk of Lawder for the time), who was well acconipanied with a band of men of war, to the number of 300 light axes, all clad in white lirery, and black beuds thereon, that they might be known for Cochran the earl of Mar's men. Himfelf was clad in a riding-pie of black velvet, with a great chain of gold about his neck, to the value of 500 crowns; and four blowing horns, with both the ends of gold and filk, fet with precious ftones. His hom was tipped with fine gold at every end, and a precious flone, called a beryl, hanging in the midf. This Cochran had his heumont borne before him, overgilt with gol: ; fu wete all the rett of his horns; and all his pallions (pavilions or tents) were of fine canvas of fill, and the cords thereof ane twined filk; and the chains upon his pallions were double overgilt with rold."

Scolland of encouraging the confpirators, he pathetically exhurted them to break off all their rebellious connections, and return to their duty; exprefling the moft fincere contrition for his own paft conduct. Finding he could not prevail with them, he wrote to all the numerous friends and defcendants of liis family, and particularly to Douglas of Cavers, 隹估f of Teviotdale, diffuading them from entering into the cinfpiracy; and fome of his original letters to that effect are faid to be ftill extant. That great man furvived this application but a fhort tine; for he died without iffue at Lindores, on the 15 th of April 1488 ; and in him ended the firit branch of that noble and illuftrious houfe. He was reinarkable for being the moft learned of all the Scots nobility, and for the comelinefs of his perfor.

James appears to have been no ftranger to the proceedings of the confpirators: but though he dreaded them, he depended upon the protection of the law, as they did upon his pufillanimity. His degeneracy in this refpect is remarkable. Defcended from a race of heroes, he was the firt of bis family who liad been branded with cowardice. But his conduct at this time fully juftifies the charge. Inftead of vigoroufly fupporting the execution of the laws in his own perfon, he fhut himfelf up in his beloved cafte of Stirling, and raifed a body guard; the command of which he gave to the lerd Bothwel, mafter of his houfehold. He likewife iffued a proclamation, forbidding any perfon in arms to approach the court ; and Botholvel had a warrant to fee the fame put into execution. Though the king's proceedings in all this were perfectly agreeable tu law, yet they were given out by his enemies as fo many indications of his averfion to the nobility, and ferved only to induce them to parade, armed, about the country in more numerous bodies.

The connections entered into by James with Henry alarmed the confpirators, and made them refolve to ftrike the great blow before James could avail himfelf of an alliance that feemed to place him above all oppofition either abroad or at home. The acquifition of Berwick to the crown of Sentland, which was looked upon to be as good as concluded; the marriage of the duke of Rothefay with the daughter of the dowager and fifter to the confort-queen of England ; and, above all, the ftrict harmony which reigned between Janies and the thates of his kingdom, rendered the confpirators in a manner defperate. Befides the earl of Angus, the earls of Argyie and Lenox favoured the confpirators; for when the whole of James's convention with England is confidered, and conapared with after-events, nothing can be more plaia, than that the fuccefs of the confpirators was owing to his Englifh connections; and that they made ufe of them to affirm, that Scotland was foon to become a proviuce of England, and that Janes intended to govern his fubjeets by an Englifh force. Thofe fpecious allegations did the confpirators great fervice, and inclined many, even of the moderate party, to their caufc. They foon took the field, appointed their rendezvoufes, and all the fouth of Scotland was in arms. James continued to rely upon the authority of his parliament; and funmoned, in the terms of law, 330 the infurgents to anfwer at the proper tribunals for their I. fet at de-repeated breaches of the peace. The confpirators, far fiance by. the cunfyiT36us.
from paying any regard to his citations, tore them in pitece, buffeted and otherwife maltreated the meffen-
rers, and fet the laws of their country at open defiance. Scotland. Even no:th of the Forth, the heads of the houfes of Gray and Drummond fpread the fpirit of difaffection through the populous counties of Fife and Angus; but the counties north of the Grampians continucd firm in their duty.

The duke of Rothefay was then a promifing youth about fifteen years of age ; and the fubjecting the kingdon of Scotland to that of England being the chicf, if not the only caufe urged by the rebels for their appearing in arms, they naturally threw their eyes upon that prince, as his appearance at their head would give ftrength and vigour to their caufe; and in this they were not deceived. James, in the mean time, finding the inhabitants of the fouthern provinces were either engaged in the rebellion, or at beft obferved a cold nentrality, embarked on board of a veffel which was then lying in the frith of Forth, and paffed to the nortly of that river, not finding it fafe to go by land to Stisling. Arriving at the cafte, he gave orders that the duke of Rothefay (as forefeeing what afterwards hap- of Rothere pened) fhould be put under the care of one Schaw of put into Sauchic, whom he had made its governor, charging him confinenot to fuffer the prince upon any account to depart out ment. of the fort. The rebels giving out that James had fled to Flanders plundered his equipages and baggage before thicy paffed the Forth; and they there found a large fum of money, which proved to be of the utmoft confequence to their affairs. They then furprifed the caf-succefs of tle of Dunbar, and plundered the houfes of every man the rebelso to the fouth of the Forth whom they fufpected to be a royalift.
James was all this time making a progrefs, and holding courts of juftice, in the north, where the great families were entirely devoted to his fervice, particularly the earls of Huntley, Errol, and Marfhal.Every day bronght him frcfh alarms from the fouth, which left him no farther room either for delay or deliberation. The confpirators, notwithttanding the promifing appearance of their affairs, found, that in a fhort time their canle muft languifh, and their numbers dwindle, unlefs they were furnithed with frefh pretexts, and headed by a perfon of the greatelt authority. While they were deliberating who that perfon fhould be, the earl of Angus boldly propofed the duke of Rotheray; and an immediate application was made to Schaw, the young prince's governor, who feeretly favoured their caufe, and was prevailed upon by a confiderable fum of rhey are money to put the prince into their hands, and to de headed by clare for the rebely.

James haviny ordered all the force in the noth to affemble, hurried to Perth (then called St John's town), where he appointed the rendezvous of his army, which amounted to 30,000 men. Among the other noblemen who attended him was the famons lord David Lindfay of the Byres (an officer of great courage and experience, having long ferved in foreign countries), who headed 3000 foot and ro0s horfe, mofly raifed in Fifefhire. Upon his approaching the king's perfon, he prefented him with a horfe of remarkable firit and beauty, and inforined his majefty, that he might truit his life to his agility and fure-footednefs. The lord Ruthven, who was theriff of Strathern, and anceltor (if we miftake not) to the unfortunate earls of Gowry, joined James at the head of 3000 well armed neen.-

Janes affentles his aray,

Stirling ; but he was allonifhed, when he was not only denied entrance into the caltle, but faw the guna point. ed againtt his perfon, and underfood, for the firf time, that his fon was at the head of the rebels. Schaw pretended that the duke of Rothefay had been carried off againf his will: but the king's anfwer was, "Fye, traitor, thou hatt deceived me; and if I live I faall be revenged on thee, and thou falt be rewarded as thou hat ferved." James lay that night in the town of Stirling, where he was joined by all his army; and underftanding that the rebels were advancing, he formed his line of battle. The earl of Athol his uncle, who was irufled by both parties, propofed an accominedation; v.hich was accordingly effected, it we are to believe Abercromby and other hittorians; but we know not the terms, for none are mentioned on either fide. James is faid to have failed on his part ; hut had there been any grounds for fuch a charge againlt him, there can farcely be a doubt but that the rebels would have publithed them. That a treaty was entered into is patt difpute; and the earl of Athol furrendered himfelf as shoitage into the hands of the rebels.

James was fenfible of the advantage which public clamour gave to his enemies; and lee applied to the kings :of France and England, and the pope, for their interpofition. His holinefs named Adrian de Cattello tor his nunciu on that ocealion; and the two kings threatened to raife troops for the fervice of James. He, by a fatelity not turommon to weak princes, left the ftrong caltle of Edinburgh, where he might have been in fafcty till his friends, who had difperfed themdelves upon the faith of the late negociation, could be reaffembled; and croffing the Forth, he made another attempt to be admitted into the caltle of Stirling ; but was difappointed, and informed that the rebels were at Torwood in the neighbourhood, and ready to give him battle. He was in poffeftion of the caltle of Blackuefs; his admiral, Wrood, commanded the Forth; and his loyal fubjects in the north were upon their march to join hinn. Hawthornden fays, that the rebels had made a thow of difmifing their troops, that they might draw James into the field: and that whe the remained at Blacknefs, he was attended by the earls of Montrofe, Glencairn, and the lords Maxwell and Ruthven. To give his northern troops time to join him, he propofed Fs required a negociation ; but that was foon at an end, upon the fir she re- rebels peremptorily requiring him to relign his crown to bels zo reo his fon, that is, to themfelves.

Egn his crown,

The rebels had been inured to war. They confifted chiefly of borderers, well armed and difciplined; in which they had the advantage of the king's Lowland fubjects, who had not been accuftomed to arns, What the numbers on both fides were does not clearly appear; but it is probable that the forces of James were fuperior to the rebels. They were then at Falkirk; but they foon paffed the Carron, encamped above the bridge near Torwood, and made fuch difpotitions as rendered a battle unavoidable, unlefs James would have difperfed his arnyy, and gone on board Wood's thips: but he did not know limfelf, and refolved on a battle. He was encamped at a fmall brook
battle with named Sauchic-burn, near the fame fpot of ground where therm. the grcat Bruce had defeated the Englifh under Ed- ward the fecond. The earl of Menteith, the lords

\section*{\(997 \quad 3 \mathrm{C} 0\)}

Lifnine, Grahom, Ruthven, and Maxwell, command. Se pland. ed the firt line of the king's army. "Ihe fecond was commarded by the earl of Glencairn, who was at the head of the Wettland and Highland men. The eart of Crawford, with the lord Boyd and Lindfay of Byres, commanded the rear, wherein the king's main ftrength confilted, and where he himfelf appeared in perfon, completely armed, and mounted upon the fine horfe which had been prefented to him by Lindfay.

The firft line of the royalits obliged that of the rebels to give way; but the latter being fupported by the Amandale men and borderers, the firt and fecond line of the king's army were beat hack to the third. The little courare James pofecfed had forfaken him at the A:3ndon firtt onfet ; and he had put fpurs to his horfe, intending his army, to gain the banks of the Forth, and to go on bnard one \({ }^{\text {tid }}\) fieso of Wood's fhips. In paffing through the village of Bannoekburn, a woman who was filling lier pitcher at the brook, frightened at the fight of a man in armour galloping full fpeed, Ieft it behind her ; and the horfe ts throw taking fright, the king was thrown to the ground, and frem his carried, hruifed and maimed, by a miller and his wife, hirurdereded. into their hovel. He immediatcly called for a prieft to make his confeffion; and the ruftics demanding his name and rank, " I was (faid he incautioufy) your king this morning." 'The woman, overcome with allonifhment, clapped her hands, and running to the door called for a pricit to confefs the king. "I am a prie? (faid one paffing by), lead me to his majelty." Be-* ing introduced into the hovel, he faw the king covered with a coarfe cluth; and kneeling by him, he afked James whether he thought he could recuver, if prosperly attended by phyficians? James anfwering in the affirmative, the villain pulled out a dagger, and ftabbed him to the heart. Sueh is the dark account we are able to give of this prince's unhappy end. The name of the perfon who murdered him is faid to have bect. Sir Andrev: Borthwick, a prieth, one of the prope's knights. Some pretend that the lord Gray, and others that Robert Stinling of Keir, was the regicide; and even Buchanan (the tenor of whofe hittory is a jufitication of this murder), is uncertain as to the ranne of the perfon whogave hin the fatal blow:

It is probable that the royalifs fout the battle thres' the cowardice of James. Even after his flight his troops fought bravely; but they were damped on re. ceiving the certaiu accounts of his death. The prince. young as he was, had an idea of the unnatural part he was acting, and before the battle he had given a trnet charge for the fafety of lis tather's perfon. Upon hearing that he had retired from the field, he fent ur ders that none fhould purfue him : biet they were inetfeetual, the rehels being fenfible that they could have no fafety but in the king's daath. When that was certinied, hoffilities feemed to ccale; hor were the ros. alifts purfued. The number of tha: on both lides is uncertain ; but it muit have been couiderable, as the earl of Glencairn, the Lerds Senipil, Erfkine, and Ruthen, and other gentlemen of great eminence, ate 529 mentioned. As to the duke of Rothefay, who was Grief if his now king, he appeared inconfolable when he heard of on for his his father's death ; but the rebls endeavoured to efliace death. his father's death; but the rebels endeavoured to eflace his griti, by the profufion of howours they paid him when he was recognized as king.

The remorfe and anguifh of the young king, on re-

\section*{S C O}

Seot'and. fiecting upon the unnatural part he had acted, was inexpreffible; and the noblemen who had been engared in the rebellion became apprehenfive for their own fafety. The cataltrophe of the unfortunate James III. however, was not yet become public; and it was thought by many that he had gene aboard fome of the Thips belonging to the Scottilh admiral Sir Andrew Wood. James, willing to indulge hope as long as it was poffible, defired an interview with the admiral; but the latter refufed to come on flore, unlefs he had 340 fufficient hoftages for his fafety: Thefe being delivered, Noble behaviour of Sir Andrew Wood. Sir Andrew waited upon the kinz at Leith. He had again and again, by meffages, afured him that he knew nothing of the late king; and he had even offered to allow his fhips to be fearched: yet fuch was the anxiety of the new king, that he could not be fatisfied till he had examined him in perfon. Young James had been lorig a ftranger to his father, fo that he could not have diftinguifhed him eafly from others. When Wood, therefore, entcred the room, being ftruck with his noble appearance, he afked him, "Are you my father ?" "I an not," replied Wood, burfting into tears; " but I was your father's true fervant, and while I live I thall be the determined enemy of his murderers." This did not fatisfy the lords, who demanded whether he knew where the king was. The admiral replied, that he knew not ; and upon their queftioning him concerning his manœuvres on the day of battle, when his boats were feen plying backwards and forwards, he told them, that he and his blother had determined to affift the king in perfon; but all they could do was to fave fome of the royalifts in their fhips. "I would to God, (fays he), my king was there fafely, for I would defend and keep him fkaitllefs from all the traitors who have cruelly murdered him: for I think to fee the day to behold them hanged and drawn for their demerits." This Spirited declaration, and the freedom with which it was delivered, Atruck the guilty part of the council with difmay; but the fear of facrificing the hoftages procured Wood his freedom, and he was fuffered to depart to his Chips. When he came on board, he found his brother preparing to hang the two lords who had been left as hottages; which would certainly liave been their fate, had the admiral been longer detained.

Wood had fearcely reached his thips, when the lords, calling the inhabitants of Leith together, offered them a large premium if they would fit out a fufficient force to deftroy that bold pirate and his crew, as they called Wood; but the townfmen, who, it feems, did not much care for the fervice, replied, that Wood's fhips were a match for any ten fhips that could be fitted out in Scotland. The council then removed to Edinburgh, where James IV. was crowned on the 2ath of June 1487.

In the month of October this year, the nobility and others who had been prefent at the king's coronation, converted themfelves into a parliament, and paffed an act by which they were indemnified for their rebellion againft their late fovereign; after which, they ordered the act to be exemplified minder the great feal of Scotland, that it might be producible in their juftification if called for by any foreign prince. They next proceeded to the arduous talk of vindicating their rebellion in the cyes of the public; and fo far did they gain upon the king by the force of flattery, that he confented to fum-
mon the lords who had taken part with his father, before Scotland. the panliament, to anfwer for their conduct. In confequence of this, no fewer than 28 lords were cited to appear at Ediuburgh in the fpace of 40 days. The Trial of firt apon the lift was the lord David Lindlay, whofe wird Daform of armignment was as follows. "Lord David vid lindLindfay of the Byres, anfiver for the cruel coming byy res. againft the king at Bannockburn with his father, giving lim countel to have devoured the king's grace here prefent; and, to that effect, gave him a fword and a good horfe, to fortify him againft his fon, Your anfwer hereto." Lord Lindfay was remarkable for the bluntnefs of his converfation and the freedom of his fentiments; and being irritated by this charge, he delivered hinfelf in fuch a manner concerning the treafon of the rebellious lords, as abafhed the boldeft of his accufers. As they were unable to anfwer him, all they could do was to prefs him to throw himfelf upon the king's clemency; which he refufed, as being guilty of no crime. His brother, Patrick Lindfay, undertook to be his advocate, and apologized upon his knees for the roughnefs of his behaviour, and at laft obferved an informality in the proceedings of the court ; in confequence of which Lindfay was releafed, upon entering into recognizance to appear again at an appointed day : however, who is he was afterwards fent prifoner by the king's order, for prifoned. a whole twelvemonth, to the caftle of Rothefay in the Ine of Bute.

The regicides now endeavoured to gain the public favour by affecting a ftrict adminiftration of juftice. The king was adviled to make a progrefs round the The new kingdom, attended by his council and judges; while, parliamene in the mean time, certain noblemen and gentlemen were affects poo appointed to exercife juitice, and to fupprefs all kinds of pularity. diforders in their own lands and in thofe adjoining to them, till the king came to the age of 2 I . The memory of the late king was branded in the moft opprobrious manner. All jultices, theriffs, and ftewards, who were poffifed of heritable offices, but who had taken up arms for the late king, were either deprived of them for three years, or rendered incapable of enjoying them for ever after. All the young nobility who had been difinherited by their fathers for taking arms againft the late king, were, by act of parliament, reftored to their feveral fucceffions in the moft ample manner. At laft, in order to give a kind of proof to the world that they intended only to refettle the ftate of the nation, without prejudice to the lower ranks of fubjects, who did no more than follow the examples of their fuperiors, it was enacted, "That all goods and. effects taken from burgeffes, merchants, and thofe who had ouly perfonal eitates, or, as they are called, unlanded men, fince the battle of Stirling, were not only to be reftored, but the owners were to be indernuified for their loffes; and their perfons, if in cuftody, were to be fet at liberty. Churchmen, who were taken in arms, were to be delivered over to their ordinances, to be dealt with by them according to the law." The caftle of Dunbar was ordered to be demolifhed; and fome ftatutes were enacted in favour of commeree, and for the exclufion of foreigners.
Thefe laft acts were paffed with a view to recompence the boroughs, who had been very active in their oppofition to the late king. However, the lords, before they diflolved their parliament, thought it neceffa.
s:otiand. 5 :o give fome public teitimony of their difapproving the late king's connection with England. It was therefore enacted, "That as the king was now of an A ิิ relative on the age to marry a noble princels, born ant defended of a king's mar-noble and workiofal buufe, an honourahle enibafy fhould siage. be fent to the realms of France, Brittany, Spain, and o:ber places, in order to conclude the matter." "This embaffy was to be very fplendid. It was to confilt of a bifhop, an earl, or lord of parliament, a fecretary, who was generally a clergyman, and a knight. 'Ihey were to be attended by 50 horfemen; 5-00l. was to be allowed them for the dilcharge of their embafly, and they were empowered to renew the ancient league be\(t\) ween France and Scotland; and, in the mean time, a herald, or, as he was called, a trufy fquire, was fent abroad to vifit the feveral courts of Europe, in order to find out a proper match for the king. One confiderable obitacle, however, lay in the way of this embaffy. The pope bad laid under an interdict all thofe who had appeared in arms againft the late kins ; and the party who now governed Scotland were looked upon by all the powers of Europe as rebels and murderers. The embally was therefore fufpended for a confiderable time; for it was not till the year 149 t that the pope could be grevailed upon to take off the interdict, upon the molt humble fubmiffons and profeffions of repentance made by the guilty parties.

In the mean time, the many good qualities which difcovered themfelves in the young king began to conciliate the affections of bis people to him. Being confidered, however, as little better than a prifoner in the hands of his father's murderers, feveral of the nobility made ufe of that as a pretence for taking arms. The moft forward of thefe was the earl of Lenox, who with 2000 men attempted to furprife the town of Stirling; but, being betrayed by one of his own men, he was defeated, taken unawares, and the catte of Dumbarton, of which he was the keeper, taken by the oppofite party. In the north, the earls of Huntley and Marfhal, with the Lord Forbes, comolained that they had been deceived, and declared their refolution to reverge the late king's death. Lord Forbes having procured the bloody fhirt of the murdered prince, difplayed it on the point of a lance, as a banner under which all loyal fubjects thould lift themfelves. However, after the defeat of Lenox, the northern chieftains found themfelves incapable of marchins fonthwards, and were therefore obliged to atandon their etterprife. The caule of the murdered kiog was next undertaken by Henry VII. of England, who made an offer to Sir Andrew Wood of tive thips to revenge it. The admiral accepted the propofal ; but the Ençlinh beha. ving as pirates, and plundering indiforminately all who came in their way, he thought proptr to feparate

\section*{349}

Whnact piratically, taken b;
Sir Andrew
Wood. moplf from them, yet without ons g attack or oppofe them. Upon this, James was advifed to fend for the admiral, to offer him a pardon, and a commiffion to act againt the Englith freebooters. Woud accepted of the king's ofier; and being well provided with ammunition and artillery, he, with two thips only, attacked the five Englifh veffels, all of which he took, and brought their crews prifoners to Leith, for which he was nobly rewarded by his majeity.

This conduct of Wood was highly refented by the king of England, who immadiately rowed revenge.

The xcottith admiral's hips had been fitted ou: for 5:0\%13.e. commerce as well as war, and Henry commanded his belt fea-officer, Sir Stephen Bull, to intercept him on sir Sere hen his return from Flanders, whither he had gone upon a Dull fert commercial voyage. Wond had no more than two ajpan? the fhips with him: the Englin admiral had three; and ic ein ad. thofe much larger, and carrying a greater weight of miral. metal, than the Scottifh veffels. The Erigifh took their ftation at the illand of May, in the mouth of the Frith of Forth, and, having come unarvares upon their enemies, fired two guns as a fignal for their furrendering themfelves. '1he Scotiin commander encouraged his men as well as he could; and finding them determined to itand by him to the lat, began the engagement in fight of nuniberlefs fpectators who appeared on both fides of the frith. The fight continued all that day, and was renewed with redoubled fury in the morning; but, in the meas time, the ebb-tide and a fouth xind had carried both fquadrons to the mouth of the Tay. Here the Englith fought under great difadvantages, by reafon of the fand-banks; and before they could ger clear of them, all the three were obliged to fubmit to the Scots, who carried them to Dunder. Wood treated his prifoners with great humanity; and having after- Bu: is cam wards prefented them to King Jamer, the latter difnifon migs. fed them not only without ranfom, but with prefents to the officers and crews, and a letter to King Henry. To this Henry returned a polite anfwer, a trice was concluded, and all differences for the prefent were accommodated.

James all this time had continued to difplay fuch moderation in his government, and appeared to hase the advantage of his fubjects fo much at heart, tha: they became gradually well affected to his government, and in 1490 all parties were fully reconciled. We may from thence date the commencement of the reign of James IV.; and the next year the happiners of hir kingdom was completed, by taking off the pope's interdict, and giving the king absolution for the hand he had in his father's death.

Tranquillity being thus reftored, the negociations concerning the king's marriage began to take place, but met with feveral interruptions. In 1493, Henry VII. prooofed a natch between the king of Scotland and his coutin the princefs Catharine. James was too much attached to France to be fond of Englifh comections, and probably thought this match below his dignity ; in confequence of which the propofal was treated with contempt. Howerer, notwithitanding this ill fuc- Marr age cefs, Henry made another offer of alliance with James; te: \(\mathrm{H}^{\mathrm{\rho}}\) with and, in \(1+95\), propofed a maniase betwist hino and his Eng and. eldeft daughier Margaret. This propofal was aceepted : but the match feems not to have been at all agreeable to James; for, at the very time in which he was negociating the marriage, he not only proteited Perkin Warbeck, the avowed enemy and pretender to the crown of Henry, but invaded England on his account. This conduce was highly refented by the Er. lifh parliament ; but Henry bimelf foreave even this srofs infult, and the marriage negociations were once more refumed. The bride was no more than ten years and fix months old; and being only the fourth desree of blood from James, it was necetfary to precure a difpenfation from the pope. This beipy obtained, a treaty of perpetual peace was concluded bceween the two

Sovland. nationa, on the if of July 1 gos drente the frat that had \({ }^{353}\) peryetuaiton, concluded lietween Kobert I. and Lidward III. taken place for 170 ycars, buce the peace of Noulhampa feace with One of the sreat ends which Henry had ieview in that nation promoting this marriage, was to ettuch james from the Iremeh interelt: no foore:: Lercore, was the treaty figned, then le wrote to his fon in law to this pur-

354 Mynifio cence of the rimal luptide pofe; sho, however, politely dechined to break with his ancient ally. On the 1 th of ane, the royal bride lit ont from Richmond in Surry, in company with her father, who gave her the convoy as far as Collewelton, the refidence of his mother the commefs of Richmond. After pafing fome days there, the king religned his dauglter to the care of the carls of Surry and Northumberland, when proceeded with her to the borders of Scutland. Fere a number of the company were permitted to rake their leave ; but thofe who remained litll made a royal appearance. At Lamberton-churcts they were met by James, attended by a numerous train of his nobility and officers of itate. From Lambetton they proceeded to Dalkeith, and nest day to Edinburgh; where the nuptials were celehrated with the greatelt iplendor. On this occafion, it is faid that the Scots ferpaffed all their guefts in extravagance and luxury: which mut lave been owing to the great intercomre and comncree which James and his fubjects maintained with foreign courts and countrico.

After the celebration of the nuptials, James appears
355 to have enjoyed a ranquillity unknown almoft to any of his predeceffors; and began to make a confiderable figure among the European potentates. But the masnificence of his court and embaffies, his liberality to ftrangers and to learned men, his coftly edifices, and, above all, the large fums he laid out in fhip-building, had now brought him into fome difficulties ; and he fo far attended to the advice and example of his father-inlaw, that he fupplied his neceffities by reviving dor mant penal laws, particularly with regard to wardfhips and old titles of eftates, by which he raifed large fums. 'Though he did this without affembling his parliament,
yet he fornd apento who funtifed thofe proceedinga, in sontent, the fame mamer as Epton and Dualley did thafe of Heary, under the fanction of law. At lalt, however, touched with the fufferings of: his fubjects, he ordered all profecutions to be fopped. He even went farther: for, fenlille of the deteflation into which his fathere in-law's avarice had brought himifelf and his adminititra. tion, be orelered the minithers who had advifed him io thofe fhameful courfes to be imprifoned ; and fome of them, who prolably had exceeded their commithon, acwally died in their confinement.

About this time, Jame's upplied himfelf, with incre- a \({ }^{356}\) dible atfidnity, to the building of mips; wne of which, the himperf es St Michael, is fuppoled to have been the largelt then marisinie in the world (M). He worked with his own hands in affars. building it; and it is plain, from his conduct, that he was afpiring to he a maritime power, in which he was encouraged by the excellent feamen which Scotland then produced. The firlt effay of hisame by fea was in favour of his kinfman Joha king of Densnark. 'I'his prince was brother to Margaret queen of Scotland: and had partly been called to the throne of Sweden, and partly poffefied it by force. He was oppoled by the adminiffrator, Sture, whom he pardoned alter he wus crowned. Sture, however, renewing lis rebetlion, and the Norwegians revolting at the fame time, John found himfelf under fuch difficulties, that he was forced to return to Demmark; hut he left his queen in poffection of the cafle of Stockholin, which the bravely defended againtt Sture and the Swedes. This heroic princefs became a great favourite with James; and fe. veral letters that paffed between them are fill extaut. The king of Denmark, next to the French monarch, was the favourite ally of James; who, early in his reign, had compromifed fome differences between them. It likewife appears, from the hiftories of the north, that both James and his father had given great affiftance to his Danih majefty in reducing the Norwegians; end he refolved to become a party in the war againf the Swedes, and the Lubeckers who affifted them, if the
(m) Of this mip we have the following account by Lindfay of Pitfcottie. "In the fame year, the king of Scotland bigged a great hip, called the Great Michael, which was the greateft fhip, and of moft Atrength, that ever failed in England or France. For this fhip was of fo great ttature, and took fo much timber, that, except Falkland, the wafted all the woods in Fife, which was oak-wood, by all timber that was gotten out of Norway; for fhe was fo ftrong, and of fo great length and breadth (all the wrights of Scotland, yea, and many other ftrangers, were at her device, by the king's commandment, who wrouglit very bufly in her: but it was a year and day ere (he was complete) ; to wit, the was twelve fcore foot of length, and thirty-fix foot within the fides. She was ten foot thick in the wall, outted jefts of oak in het wall, and boards on every fide, fo tark and fo thick, that uo cannon could go through her. This great thip cunbered Scotland to get her to the fat. From that time that fhe was afloat, and her mafts and fails complete, with tows and anchors effeiring thereto, the was connted to the ling to be thirty thoufand pound of expences, by her artillery, which was very great and collty to the king, by all the reft of her orders; to wit, she bare tnany cannona, fix on every fide, with three great baffils, two behind in her dock, and one before, with three lundred fhot of fmall artillery, that is to lay, myand and battret-fatcon, and quarter-falcon, llings, peftelent ferpetens, and double-dogb, with hagtor and culvering, cors-bows and hand-bows. She had three hundred mariners to fail her; fhe had fix foore of gumers to ufe her artillery; and had a thoufand men of war, by her cuptain, fipu pers, and quarter-malters.
"When this fhip paft to the feas and was lying in the road, the king gart ?hoot a cannon at her, to effay her if fhe was wight ; but I heard fay, it deared leer not, and did her little ikaith. And if any man believe that this defcription of the mip be not of verity, as we have written, kt him pafs to the gate of Tillibardin, and there, atore the fame, ge will fee the length and breadth of her, planted with liawthorn, ty the wright that helped to make her. As for other properties of her, Sir Andrew Wood is my author, who was guarcer-mater of her ; and Robert Bartyne, who was mafter-fhipper."
scoslacd. former continucd in their revolt. Previous to this, he fent an ambaffador to offer his mediation between John and lis fubjects. The mediation was accordingly accepted of, and the nerociations were opened at Calmar. The deputies of Sweden not attending, John prevailed with thofe of Denmark and Norway to pronounce fentence of forfeiture againt Sture and all his adherents. In the mean time, the fiege of the caftle of Stochholm was fo warmly preffed, that the garrifon was diminithed to a handful, and thofe deftitute of all kind of provifions; fo that the brave queen was forced to capitulate, and to firrender up the fortrefs, on condition that the would be fuffered to depart. for Denmark ; but the capitulation was perfidioully broken by Sture, and the was confined in a monaftery.

It was on this occafion that James refolved to employ his maritime power. He wrote a letter, conceived in the ftrongeft terms, to the archbihop of Upfal, the primate of Sweden, exhorting him to employ all his authority in farour of the king; and another letter to the Lubeckers, threatening to declare war againit theri, as well as the Sweder, if they jointly continued to affit the rebels. According to Hollinthed, James, in confequence of king John's application, gave the command of an army of 10,000 inen to the earl of Arran, who replaced John upon his throne. Tlough this does not Atrictly appear to be truth, yet it is certain, that, had it not been for James, John mult have funk under the weight of his enemies. Sturc, whole arms had made great progrels, hearing that a corfiderable armament was fitting out in Scotland, and knowing that James had prevailed with the Erench king to affit John likewife, agreed to releafe the queen, and to conduct her to the frontiers of Denmarix ; where he died. By this time, James's armament, which was commanded by the earl of Arran, had fet fail ; but per. ceiving that all matters were adjuited between join aud the Swedes, the fhips resurned fooner than James expeeted, " which (fays he, in a very polite letter he wrote to the queen upon the occation) they durit not have done, lad they not brought me an account that her Danifh majetty was in perfect lealch and fafety." The feverity of Joha having occafoned a freth revolt, James again [emt a fquadton to his affifance, which appeared before Stockholm, and obliged the Lubeckers to conelude a new treaty.

James, having thus honourably difcharged his enga sements with his uncle the king of Denmark, turned his attention towards the Flemings and Hollanders, who had infulted his flag, on account of the afritance he had afforded the duke of Gueldres, as well as frem motives of rapacioufnefs, which dillirguithed thafe traders, who are faid not only to have plandered the Scots fhips, but to have thrown their crews overboard to conceal their villany. James geve the command of a fquadron to Barton; who put to fea, and, without any ceremony, treated all the Dutch and Flemith tracers who fell into lis hands as pirates, and fent their heads in hogfheads to James. Soon after, Bartun returred to Scotland, and brought with him a number of rich prizes, which rendered lis reputation as a feaman famous all over Europe.- Jaines was then fo much refpected upon the continent, that we know of no refentment fhown

either by the court of Spain, whofe fubjects thofe Ne. Scotiand. therlanders were, or of any other power in Firurope, for this virorous proceeding.

The peace with Elland 359 Henry VIl nor did hey Vin nor did han Fenry VIII. though lie quarel had not the fame reafon as his father to kecp well with Eng. with the Scots, for fune time how any difpolition to break with them. A breach, however, did very foun take place, which was never afterwards thoroughly made up.

About 30 years before, one John Barton (a rela. tion, probahly, to the famnoss Barion) commanded a trading veffel, which was taken by two Portuguefe feacaptains in the port of Sluys; and the captain, with feveral Scotchmen, were killed in endeavouring to defend their property. The action was efleemed cowardly as well as piratical, becaufe it was done under the protection of a large Portuguele \{quadron. The thip and the remainisg part of the crew, with the cargo, were carried to Portugal, from whence no redreis could be obtained; and Janies III. granted letters of marque to John and Robert Bartons, heirs to the Barton who had been murdered. Upon the acceltion of James IV. to the crown of Scotland, the letters of marque were recalled, and a friendly correfpondence was entered into between James and his Purtuguele majelty. No redrefe, however, was to be had from the latter ; and Ro. bert Barton being made a prifoner, and his hip a prize, be was detained in Zcaland, till James procured liss celiverance, by applying in his favour to the emperor Maximilian. Sir Andrew Barton took part in to e cuarel ; and having obtained a like letter of marque, he made dreadful depredations on the Portuguele trade, and, according to Englifh authors, he plundered many Englif Thips, on pretence of their carrying Porti. guefe property, and made the navigation of the narrow feas dangerous to Englifmen. The court of Loindon received daily complaints of Barton's depredations; but Henry being at this time very averfe to quarrel with James, thefe complaints were heard with great coldnefs at his council-board. The earl of Surry had then two fons, gallant noblemen; and he declared to Henry's face, that while he had an eftate that could furnifh out a fhip, or a fon who was capable of communding one, the narrow feas fhould not be infetled. Henry conld not difcourage this generous offer; and letters of marque were accurdinsly granted to the two young noblemen, Sir Thomas and sir Edward How. ard. The prizes that Barton had taken had rendered his ohips immenfely rich, confequently they were hear: laden, and unfit for fighting; while we may eafily fuppole, that the fhips of the Howar is were clean, and of a fuperior furce in every refpect to thole of Larton. After encountering a great ceal of foul weather, Sis Thomas Howard came up with tbe Lyon, which wa: commanded by Sir Andrew Barton in perfon ; and Dis Edward fell in with the Unicorn, Barton's other fhip. The event was fuch as miohe be expected from tile inequality of the match. Sir Andrew Barton was killed, while he was animating, with lais whitle, his bit: to hold out to the lalt; and buth the =cotch thips bei \(5^{-}\) taken, were carried in tifunph to Iondon, witt sly crews prifoners.
