MARCH 1942

This report on man-hour statistics for 1939 is the fourth of a series compiled by the Bureau of Labor Statistics, Department of Labor, in cooperation with the Bureau of the Census, Department of Commerce. Like its predecessors, this report is based on data collected in the Biennial Census of Manufactures. It was prepared by Arthur F. Beal, an employee of the Productivity and Technological Developments Division of the Bureau of Labor Statistics, serving as a special agent of the Bureau of the Census.

The first report on man-hour statistics, for 1933, covered 32 industries. An endeavor was made in subsequent years to expand the scope of the statistics and to extend the survey to additional industries and industry groups. Thus, 59 industries were represented in the 1935 report, and 105 in 1937. The present report, for 1939, embraces 171 industries.

Scope and Coverage

The statistics presented in this report are based on the returns of establishments employing 4,246,118 wage earners, or 89.7 percent of the total for the 171 industries. This group of wage earners, which is numerically greater than any considered in the earlier studies, comprised 53.8 percent of the 7,886,567 wage earners engaged in all manufacturing industries in 1939. The improvement in coverage over the earlier years has been steady. In 1933, only 28.3 percent of all manufacturing wage earners were represented. In 1935 the percentage was 37.7, and in 1937 it was 48.6.

The tabulations include only those establishments which reported satisfactory data for the man-hours worked by wage earners in each month in 1939. Returns which appeared inadequate were ignored. In general, the establishments submitting acceptable data may be presumed to give reliable indications of the monthly patterns, averages, and ratios of the industries in which they are classified. Coverage from industry to industry, however, is not uniform and must be taken into consideration when inter-industry comparisons are made. Even more caution is necessary when intra-industry comparisons are made---for example, to determine differentials between regions or plants of different size. The use of the figures for such purposes, moreover, may be hampered by the fact that statistics for States, or for plant-size or community-size classes, are often shown in combination to avoid disclosure, exactly or approximately, of data for individual establishments.

Arrangement of Tables

This report comprises eight tables. Tables 1 and 2 are summaries giving basic averages derived from the man-hour aggregates for each industry sample. Tables 3 and 4 present similar industry averages in some detail. Table 1A shows ratios for each State similar to those shown for each industry in table 1. Tables 5A, 5B, and 5C present the man-hour and other aggregates of the man-hour tabulation from which tables 1 and 2 were derived. The titles of the tables and the pages on which they may be found are as follows:

	Pages
Table 1.---Averages per Man-Hour, by Industries, for Selected Establishments	3 to 7
Table 1A---Averages per Man-Hour, by Geographic Districts and by States	8 to 9
Table 2.---Average Man-Hours per Wage Earner, by Months, by Industries, for Selected Establishments	10 to 13
Table 3.---Averages per Man-Hour by Districts and States and by Size Classes, for Selected Establishments	14 to 106
Table 4.---Average Man-Hours per Wage Earner, by Months, by Districts and States and by Size Classes, for Selected Industries	107 to 171
Table 5A---Number of Wage Earners, by Months, by Industries, for Selected Establishments	172 to 177
Table 5B---Aggregate Man-Hours, by Months, by Industries, for Selected Establishments .	178 to 183
Table 5C---Aggregates for "Dollar" Items, Electric Energy Consumed, and Horsepower, by Industries, for Selected Establishments	184 to 189

The arrangement of the industries within these tables is not alphabetical, but follows the industry classification scheme of the Bureau of the Census. It may be helpful to users of this report to know the order of the 17 Census industry groups represented by the 171 industries: Food and kindred products; Tobacco manufactures; Textile-mill products and other fiber manufactures; Apparel and other finished products made from fabrics and similar materials; Lumber and timber basic products; Furniture and finished lumber products; Paper and allied products; Chemicals and allied products; Products of petroleum and coal; Leather and leather products; Rubber products; Stone, clay, and glass products; Nonferrous metals and their products; Iron and steel and their products, except machinery; Electrical machinery; Machinery (except electrical); and Automobiles and automobile equipment.

Definition of Terms

The man-hour figures refer only to the hours worked by wage earners, both part-time and full-time, employed in the various establishments; they do not cover the hours worked by salaried employees or other classes of personnel. As a result of a change in the method of classifying employees in the 1939 Census of Manufactures, the ratios for this year may not be precisely comparable with those for earlier years.

The "Wages" item represents the total compensation of all wage earners (not including salaried persons) employed in the plant, including piece-rate workers. The "Salaries" item covers the salaries of corporation officers (presidents, vice presidents, secretaries, etc.) and of managers, superintendents, technical employees, clerks, etc.---in general, of office employees as distinguished from factory employees. The compensation of employees in central administrative offices, especially those located apart from the plants, is not covered.

In tables 1, 1A, and 3, the "Wages per man-hour" item refers to average hourly compensation of the wage earners. On the other hand, "Salary costs per man-hour" is not the average hourly compensation of the salaried employees, but is the average amount paid out as salaries or administrative and supervisory expenses for each man-hour worked by a wage earner.

"Cost of materials" covers not only the cost of materials actually used in manufacture but also the cost of fuel, containers for products, purchased electric energy, and, if present, the cost of contract work (work done outside the establishment reporting on materials owned by it). The "Value of products" is the total selling value, at the factory, of all products manufactured during the census year, whether sold or in stock.

The "Value added by manufacture" is the difference between the value of products and the cost of materials, etc. It represents the increment created by the manufacturing processes, and is superior to the value of products as a measure of the importance of an industry.

"Prime cost" is the sum of wages, salaries, and cost of materials, etc. "Value of products minus prime cost" is equivalent to the value added by manufacture minus salaries and wages; it is the closest approximation to operating revenue obtainable from data collected in the Census of Manufactures.

"Electric energy used" is the number of kilowatt-hours of electric energy consumed, either purchased or generated in the plant. The "Horsepower" item, as referred to in this report, is the combined rated capacity of prime movers in use and of electric motors driven by purchased energy.

TABLE 1.—AVERAGES PER MAN-HOUR, BY INDUSTRIES, FOR SELECTED ESTABLISHMENTS IN 171 INDUSTRIES: 1939

[Averages by States, size of plant, and size of city, for each of the following industries (in the order listed below) are given in Table 3, pages 14 to 106. Aggregates for each item as obtained in the man-hour tabulation (selected establishments) of each industry are given in Table 5, pages 172 to 189. The man-hour tabulations generally do not cover all establishments of an industry; the total number of establishments and wage earners reporting in the Biennial Census are shown for the respective industries in footnotes on Table 3.]

1/ Biennial-census totals for the 171 industries: Establishments, 59,349; wage earners, 4,732,877; wages \$5,490,828,907.

2/ Not included in group totals or averages above. For further details, see footnote 1 under "Regular factories" in Table 3.

3/ This industry appears out of its proper order in tables 3 and 4, being on pages 48 and 130 in those tables, just following the industry "Plywood mills".

4/ The horsepower data used in these tabulations for the paper and pulp industries are those originally reported by the manufacturer for each industry, even though occasionally a manufacturer reported for one of these industries at a specified location the total horsepower data for both industries at that location.

5/ Cannot be given for each industry, because some of the manufacturers did not report horsepower data separately for the "Blast-furnace products" and "Steel works and rolling mills" industries. The average for these two industries combined is 23.58 horsepower per wage earner; additional details are given in footnote 2 under each of these two industries in table 3, on page 78.

1/ Biennial-census totals for the 171 selected industries are: Establishments, 59,349; wage earners, 4,732,877; wages, \$5,490,828,907. The portion of the total census for the 171 selected industries covered by the selected man-hour sample of 4,246,118 wage earners, receiving the wage total of \$5,033,113,313, is, therefore, as follows: Wage earners, 89.7 percent; wages, 91.7 percent. The corresponding percentages for the man-hour samples in earlier censuses, based upon wage earners only, are: For 1937, covering 105 selected industries, 91.6 percent; for 1935, covering 59 selected industries, 91.3 percent; and for 1933, covering 32 selected industries, 83.2 percent.

In similar manner, biennial-census totals for 1939 for all manufacturing industries, comprising the totals for the United States, are: Establishments, 184,230; wage earners, 7,886,567; wages, \$9,089,940,916. The portion of the total census for all manufacturing industries covered by the man-hour sample of selected establishments in only 171 selected industries (4,246,118 wage earners receiving wages of \$5,033,113,313) is, therefore, as follows: Wage earners, 53.8 percent; wages, 55.4 percent. Corresponding percentages for the man-hour samples in earlier censuses, based upon wage earners only, are: For 1937, covering 105 selected industries, 48.6 percent; for 1935, covering 59 selected industries, 37.7 percent; and for 1933, covering 32 selected industries, 28.3 percent.

TABLE 2.--AVERAGE MAN-HOURS PER WAGE EARNER, BY MONTHS, BY INDUSTRIES, FOR SELECTED ESTABLISHMENTS IN 171 INDUSTRIES: 1939

[Averages by States and by size of plant for each of the following industries (in the order listed below) are given in Tables 4, pages 107 to 171. Aggregates for each item as obtained in the man-hour tabulation (selected establishments) of each industry are given in Table 5, pages 172 to 189. The man-hour tabulations generally do not cover all establishments of an industry; the total number of establishments and wage earners reporting in the Biennial Census are shown for the respective industries in footnotes on Table 3.]

1/ Biennial-census totals for this industry, which covers not only regular or inside factories but also jobbers engaging contractors, are: Establishments, 449; wage earners, 57,082; wages, \$37,322,688. This tabulation of regular factories given above does not cover jobber shops, in which the amount paid for contract work done outside the shop exceeded wages paid for work done inside the establishment. Certain results for 31 such jobber shops which reported satisfactory man-hours for wage earners working inside the shops are as follows:

1/ Biennial-census totals for the industry, which covers not only regular or inside factories but also jobbers engaging contractors, are: Establishments, 1,371; wage earners, 89,031; wages, \$96,044,275. This tabulation of regular factories given above does not cover jobber shops, in which the amount paid for contract work done outside the shop exceeded wages paid for work done inside the establishment. Certain results for 208 such jobber shops which reported satisfactory man-hours for wage earners working inside the shops are as follows:

District, State, and class	Estab-lish-ments	Wage earners (average for year)	Annual totals				Monthly hours per W. E.	Wages per man-hour (cents)

1/ Biennial-census totals for the industry: Establishments, 253; wage earners, 368,904; wages, \$569,724,280.
2/ Because some of the manufacturers did not report horsepower data separately for the industries "Blast furnace products" and "Steel works and rolling mills", the average horsepower per wage earner for each industry cannot be given. The average for both industries combined, as shown by the selected man-hour establishments of the two industries, is as follows: For the United States, 23.58 horsepower per wage earner; for the North, 23.89; for the South, 22.25; and for the West, 18.27.

1/ Number of wage earners for each group of industries is the total of the accepted averages for the respective industries covered.

2/ Biennial-census totals for the 171 industries: Establishments, 59,349; wage earners, 4,732,877; wages, \$5,490,828,907.

3/ This industry appears out of its proper order in tables 3 and 4, being on pages 48 and 130 in those tables, just following the industry "plywood mills".

1/ Biennial-census totals for the 171 industries: Establishments, 59,349; wage earners, 4,732,877; wages, \$5,490,628,007.
 2/ This industry appears out of its proper order in tables 3 and 4, being on pages 48 and 130 in those tables, just following the industry "Plywood mills".
 3/ The horsepower data used in these tabulations for the paper and pulp industries are those originally reported by the manufacturers for each industry, even though occasionally a manufacturer reported for one of these industries at a specified location the total horsepower data for both industries of the company at that location.
 4/ Included with the "Steel works and rolling mills" industry.
 5/ Including that for the "Elast Durumac products" industry; because some of the manufacturers did not report horsepower data separately for the "Elast Durumac products" and "Steel works and rolling mills" industries, the horsepower for each industry cannot be given.
