6 June 1945

## MEMORANDUM TO THE COMMANDER, AIR GROUP TWELVE.

Subject: Okinawa Support Missions - Comments on.

- 1. During the period from 14 April 1945 to 20 May 1945, this squadron participated in twenty-two missions in support of our troops on Okinawa in addition to making strikes on other nearby islands and the Japanese mainland as long range support. Prior to this period this squadron had received only limited training in close support missions, having received very little training in California and having participated in only five missions over Iwo Jima. It is believed that more intensive training on the West Coast in support missions, especially in picking out pin-point targets, would have increased the effectiveness of our strikes considerably. Regardless of the limited training, no great difficulties were encountered, and most strikes were reasonably successful.
- In view of improving future operations of this nature, the following suggestions and recommendations are made:-
  - (a) Grid area charts should be accompanied by photographs of the same area. If possible it would be very helpful to superimpose the grid area over the photograph. This squadron feels that the charts used during the Iwo Jima invasion were superior to those used at Okinawa.
  - The Air-Coordinators job should be a permanent job (b) held by an aviator thoroughly familiar with the terrain and the front lines. It is felt that strike leaders are not fully qualified for the obvious reason that they are not able to obtain all of the necessary information concerning targets. Things just don't look the same from the air as they do from the ground. The Air Coordinator should be able to make trips to the front lines and discuss prospective targets with CASCU and ground officers. There is nothing more discouraging to the strike leader than to place a bomb on what he thinks' is the target, and when he asks for verification, to be told by CASCU or the Air Coordinator that they don't know, but that it is in that area.
  - of the day for target designation is recommended.
    Toward the latter part of the Okinawa operation,
    the enemy "caught on" to our use of white phosphorous
    shells and littered the entire country side with
    them, resulting in confusion to the pilots and endangering our own troops.

3. Because of its bomb carrying capabilities, this squadron feels that the TBM far surpasses all other planes for support missions. In general, it is believed that four 500 lb. bombs is the best loading. Considerable use was made of the 4-5 sec. delay fuse with very good results. It enabled of the 4-5 sec. delay fuse with very good results. It enabled pilots to go very low in their dives, thus giving them a better view of the target. They were especially helpful on the many view of the target was down to around 1500 or 2000 feet.

THOMAS B. ELLISON Lt-Comdr., USNavy, Commanding.

(o) RESULTS: (For all hits claimed on ship targets and for land targets of special interest, draw diagram, top or side view or both, as appropriate, showing type and location of hits. For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary).

Target coordinator reported that four bombs fell directly on the concealed gun position and that 23 fell in the immediate area. Since the position was well screened by trees and fellage it was impossible to evaluate the amount of damage done.

Seven torpedo planes of VT-12 with Lieut. Curtis
Hemilton as Flight Leader took off from the RANDOLPH
to give support to the advanced of the 24th Army corps
in Souther Okinawa. Reporting to Approach Point 2, east
of the island, they were instructed by CASCU to proceed
inland and orbit over the central part of the island.
From this orbitting point they were directed by the Target
Coordinator to drop their bombs in one run over the target
area designated, which was a heavy gun position in woods,
in grid area 7874. Runs were made singly, in column, and
after completion the planes rendezvoused and returned to
the ship.

and four were reported by the target coordinator to be directly on the gan position. The one bomb that failed to hit the target area hung up and was later jettisoned.

It is recommended, when time permits, the Air Support Group be allowed to drop single bombs instead of salve, so that pin point bombing may be practiced. In this way errors in range or deflection may be corrected. In most all cases of air support, the aircraft have been ordered to release all bombs on first run for reasons not obvious to pilots. Delayed fusing up to 15 seconds seems effective among heavy emplacements.
