Guarantee of Genuineness.

WE guarantee our stock to be true to name. We exercise the greatest care to have our stock true to label. Should it occur, however, by accident or mistake, that some trees or plants prove untrue, we will cheerfully replace all such stock, or refund the money paid, after receiving proper proof thereof. It is mutually agreed, however, between the purchaser and ourselves, that we shall not be held liable for damages in such case further than the replacing of such stock, or refunding the money paid.

.....ANNOUNCEMENT.....

INDEXED.

TO OUR TRADE:—We have been engaged for many years in the Nursery business. The CEDAR HILL NURSERY COMPANY carries on a general Nursery business. The stock assortment is large, first-class and very complete, comprising the leading varieties in every department. These Nurseries are near the city of Winchester, Tenn., and the plantings cover several hundred acres. The land is particularly adapted to the growing of Nursery Stock, and all stock sent out may be depended on as thrifty and healthy.

We have the experience, ability and judgment to handle all business entrusted to the Company in a manner that will be found intelligent and satisfactory.

There is but one way to build up and hold a business—and this is by the fair and honest treatment of customers. We are thoroughly equipped for handling stock in the most satisfactory manner, and all orders will receive our careful attention.

We beg to call your attention to the accompanying Wholesale Price-List, and ask that you give us your careful consideration when you make out your list of wants.

Yours very truly,

J. W. SHADOW, Manager,**CEDAR HILL NURSERY CO.**

REMARKS.

EACH order is handled separately. After lifting the trees are sent immediately to our large cellar, where they are **Graded and Bunched under cover**, exposure is reduced to a minimum and customers may depend upon receiving stock fresh, sound and in perfect condition.

Early Orders respectfully solicited. The forwarding season for Fruit trees and Deciduous plants commences by the 15th of October and lasts until the middle of March.

The prices quoted in this List are expected to apply only where the specified quantities are taken, except as follows, strictly: Where the order amounts to \$10 or over, 500 will be supplied at 1,000 rate; 50 at the 100 rate.

Cash, or satisfactory security before shipment of stock. To parties well known to us to be prompt paying, we will give short time on part payment. Unknown correspondents are expected to remit with order, or before shipment.

The art of Packing has, through years of experience, by a member of our firm, been mastered. Our packing house is under his personal supervision during the shipping season. Your goods will be properly packed in moss and will open to your satisfaction. First cost of materials charged only. Boxes 8x2 feet, \$2.00; 8 feet by 16 inches, \$1.75; smaller sizes in proportion.

It is not our ambition to be a low-priced house, but we strive to grow stock that is **FIRST-CLASS**, to **GRADE ACCURATELY**, to have the handling and packing as **GOOD AS THE BEST**, and sell at prices that will justify the production of first-class Stock.

NUMBER OF TREES ON AN ACRE

30 ft. apart each way,	50	18 ft. apart each way,	135
25 " " " "	70	15 " " " "	205
20 " " " "	110	12 " " " "	300

RULE.—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of feet in an acre (43,560), will give the number of trees to the acre.

APPLES.==Leading Varieties.

The following varieties are the best of the older and well known sorts. We can furnish good, healthy trees, first-class in quality, at the following prices. E for Early, S for Summer, A for Autumn, W for Winter.

CRAB APPLES.

Hyslop,	Red Siberian,
Kentucky Red,	Transcendent,
Martha,	Whitney's No. 20,

SELECT LIST OF APPLES.

Yellow Transparent. It ripens fully ten days in advance of Early Harvest. Size, medium; light, transparent lemon-yellow; smooth, waxen surface; flesh white, melting, juicy and excellent quality, and for an early apple an exceptionally good keeper and shipper. May and June.

May Yellow. Small, nearly round; pale yellow; pleasant sub-acid; very prolific and hardy, and very popular on account of its being the earliest apple. May.

Carolina Red June. Medium to large; oblong; conical; dark red, entire; flesh tender, with a mild sub-acid flavor; commencing to ripen early in June and continues six weeks. It is one of the best market varieties of all the early apples. For a table ornament and to please the children it has no equal.

Red Astrachan. Size medium to large; bright crimson, covered with white bloom; an Apple of great beauty and good quality; flesh tender, rich sub-acid, fine flavor; tree a good grower and productive. Ripens early in June.

Early Harvest. Medium to large, roundish, oblate; pale yellow, with a rich, sprightly flavor. A valuable old variety, quite a favorite with many. June.

Summer Queen. Large, oblate conical; pale yellow, with dull red stripes; rich, juicy and fine. July and August.

Horse. Large; yellow, occasional blush next to sun; sub-acid and good. A very popular old variety for cooking, drying and cider. July and August.

Buckingham. Very large; oblate conical; covered with red stripes and blotches on a greenish-yellow ground. The finest of the large Autumn Apples. August and September.

Carter. Medium, oblate; skin yellow, shaded and striped with red; flesh yellow, very tender, crisp and juicy, rich and aromatic; tree very prolific, luxuriant and a compact grower. September.

Shockley. Medium; conical; skin yellow, overspread with bright crimson; flesh crisp, juicy, sweet and slightly vinous; tree very rapid and compact grower and early bearer, often bearing fruit the second year after transplanting; bears regular and abundant crops, and keeps until June; a very profitable market variety. October to June.

Yates. A Georgia variety. Small size; dark red and dotted with white dots; flesh firm, juicy, aromatic; a great bearer and good keeper.

Grimes' Golden. Medium to large; rich golden yellow; flesh tender, mild sub-acid; tree hardy, vigorous; an early and abundant bearer. October to February.

Wine Sap. Medium; roundish conical form; mostly covered with red, on yellow ground; flesh fine, crisp, with a rich, high flavor. One of the best for cider, the dessert, or for general winter use. November to March.

Arkansas Black. Fruit medium to large; fine flavor; beautiful dark color, almost black flesh, yellowish, slightly sub acid, crisp; one of the best cooking apples; vigorous. November to March

Ben Davis. Originated in Kentucky. Tree remarkably healthy, vigorous and an abundant bearer; fruit large, handsome, striped; flesh whitish, tender, juicy, sub-acid. A very profitable market variety; should be in every orchard. Keeps till mid-summer or later.

Longfield. One of the imported Russian varieties; a free, upright grower, early and abundant bearer, fruit medium to large, yellowish green, thickly covered with red stripes; a decided blush on the sunny side; rich, sprightly, sub-acid. December to March.

Kinnard's Choice. Fruit medium to large, roundish oblate; skin yellow; almost covered with dark red or crimson; flesh yellow, fine grained, tender, rich juicy, almost aromatic; most excellent. No apple grown is of better quality. Tree vigorous and bears young; is thought to be a seedling of Wine Sap.

Red Siberian Crab. Quite small, a little over an inch in diameter; nearly round, with a brilliant scarlet cheek on a pale, clear, waxen-yellow ground; stalk very long and slender; tree very productive and bears when very young; quite ornamental. September to October

Transcendent Crab. Fruit large for its class; golden yellow, with a beautiful, rich crimson cheek; when ripe the red or crimson nearly covers the fruit; flesh creamy yellow, crisp, sub-acid, pleasant and agreeable. This is truly a beautiful fruit; tree a rapid grower and productive. September.

PEACHES.

ONE YEAR OLD, ON NATIVE PEACH ROOTS.

Notice.—All of our Peach Stock is grown from wild pits, procured in the mountains of Tennessee, where Yellows, Rosetta, Root Knot or any disease incident to the Peach is unknown. The trees will be stocky and well branched, with smooth bodies. "C" for Clingstone, "F" for Freestone, "S" for Semi-Clingstone

HALF SIZE.

THE GOLD MINE PEACH.

Few people, in planting an orchard, look beyond the original cost of the tree. The experience of the older orchardists is that the man who plants a good new variety when first introduced always receives from 25 to 50 per cent. more for that variety during a period of from three to five years than he does for other fruit of more common notice. Look at the **Elberta**, of '98, 50 per cent. above all competitors; the **Gold Drop** of '95; the **Kalamazoo**, of '97—these years when they were not in every orchard the grower received 25 to 50 per cent. in advance of his other varieties. **THIS, THE MOST REMARKABLE PEACH** of the present age, was produced by crossing the **Barnard** and **Late Crawford**, giving size in one, hardiness in the other, and quality and beauty in both. The world has longed for a **PARDY LATE CRAWFORD**; you have it in the **GOLD MINE**.

We offer them in June Buds 2 to 3 ft., 50c. each; \$25.00 per 100.

EVERBEARING PEACH.

Price of Trees, Delivery after Nov. 1st, 1899, 50c Each, \$25 per 100.

This is one of the most remarkable of Peaches, as it combines many desirable qualities which make it of great value for family use.

Its Long Continued Bearing Period. The first ripening begins about July 1, and successive crops are produced until the beginning of September. Fruit in all stages of development—ripe and half-grown—may be seen upon the tree at the same time. Our two-year-old trees are fruiting this year.

2. As the tree blossoms during a long period, a complete failure of fruit has never happened since the original tree first began to bear 10 years ago.

3. The fruit is creamy white, mottled and striped with light purple and with pink veins; oblong in shape, and tapering to the apex; flesh white, with red veins near the skin; very juicy, vinous, and of excellent flavor; quality very good to best. Freestone, of the Indian type.

SELECT PEACHES FOR COMMERCIAL ORCHARDS.

Alexander. Above medium; highly colored in clay soils, less in light soils; flesh greenish white, very juicy, vinous, and of good quality; adheres to the stone. Matures from May 25th. to June 15th. Trees are remarkably prolific, and bear very young; a most valuable market fruit. The following are either synonyms, or resemble Alexander closely: Alpha, Amsden, Arkansas Traveler, Brice's Early, Briggs' May, Cumberland, Gov Garland, Honeywell, Hynes' Surprise, Mussor, Saunders, Waterloo, Wilder, etc.

Chair's Choice. Large size; yellow; freestone; ripens five days earlier than Smock. Very promising. September.

Champion. Very large, white freestone, with red cheek; ripe about first of July; has a fine flavor and is said to be frost-proof and hence a sure cropper.

Crosby. Medium size; bright orange-yellow, streaked with carmine. On account of its beautiful color and fine quality it commands a ready sale in competition with the best standard market sorts. Claimed to be the hardiest of all peaches, fruiting regularly when all other kinds fail. Follows Alberta.

Crawford's Early. Large; yellow, with red cheek; flesh yellow, juicy and rich; a standard market variety. Ripe from 10th to 20th of July.

Crawford's Late. Similar to the above, but usually larger and two weeks later.

Early Louise. Large; very thin skin and delicate aroma. Matures June 10 to 20.

Early Rivers. Large to very large; pale, greenish white; flesh white, sub-acid, very vinous and juicy; of exceedingly delicate flavor; skin very thin. Matures June 15 to 25.

Early Tillotson. Medium; white, covered with red; melting, good; very prolific; a favorite market variety; stands shipping well. Ripe June 20 to 25.

Elberta. Large; yellow, with red cheeks; juicy and high flavor; flesh yellow; supposed to be a seedling of Chinese Cling. Ripe middle to last of July; an excellent shipping variety. No other Peach has made such a name for shipping, and none is cultivated more extensively for the supply of Northern and Western markets. Orchards containing from 25,000 to 80,000 trees of this variety alone are now planted; this is sufficient evidence of its value.

Emma. Large, yellow, with red cheek; flesh yellow, firm, juicy; best quality. Ripe July 25 to August 5. Follows Elberta; an excellent market sort.

Kalamazoo. Medium size; yellow, shaded with red; juicy, rich, melting; highly esteemed in Michigan. Middle of Sept.

Fleitas or Yellow St. John. (May beauty.) Large, roundish; orange-yellow, with a deep red cheek; juicy, sweet and highly flavored; flesh yellow. Ripens end of June to July 10.

Greensboro. Origin, N. C. A new variety, which has been extensively grown in North Carolina, and is claimed to be earlier and larger than Alexander.

Golden Drop. Large, good quality, hardy, profitable market sort; follows Crawford's Late.

Lemon Free. Almost lemon shape, pointed at the apex; color a pale lemon-yellow when ripe. It is of large size, of excellent quality. Ripens after Late Crawford.

Lewis. Medium size, melting and rich, hardy and productive; white with red cheek. Last of August. Worthy of extensive planting.

Lady Ingold. Resembles Early Crawford, but of better quality, and a few days earlier; superior for canning. Ripens 5 to 15 July.

Mathew's Beauty. A large, yellow Peach of the Smock strain, but of good quality; very showy and a valuable shipper. August 5 to 10.

Mountain Rose. Large; white, washed with carmine; flesh tinged pink, juicy, vinous, sub-acid and good flavor; very good. Ripens June 25, or immediately after Early Tillotson; an excellent early market variety.

Old Mixon. Large; white, with red cheek; juicy, vinous, and excellent. Follows Mountain Rose, or end of July to Aug 5.

Picquet's Late. Very large; yellow, with red cheek; flesh yellow, buttery, rich, sweet and of the highest flavor. Maturity from end of August to middle of September. Originated by Antoine Piquet, Esq., Belair, Ga. This seldom fails to produce a crop of fruit, and after thirty-five years' test is considered one of the most profitable late yellow Peaches South and West.

Reeves' Favorite. Large, oblong; skin deep yellow, with orange cheek; flesh juicy and buttery; very sweet; good. Ripens July 15 to 20.

Stephens' Rareripe. A vigorous grower, comes into bearing very young, and yields immense crops. The fruit in appearance resembles an enlarged, high-colored Old Mixon Free. It begins to ripen with the last of the Late Crawfords, and continues about three weeks. Freestone, white-fleshed, juicy and high flavored. Follows Elberta.

Stump the World. Very large; white, with bright cheek; flesh white, juicy, and of good flavor; stands carriage well, and is a fine market variety. Ripens July 20 to 25, and lasts three weeks.

Susquehanna. Very large; yellow, with red cheek; flesh yellow, rich, juicy, and of high flavor. Unsurpassed for canning. Ripens end of July.

Snee¹. Medium; creamy white, with carmine blush and mottling; flesh greenish white, fine-grained, juicy, sprightly, vinous, and adheres slightly to the stone. This Peach has been cultivated in Tennessee and Mississippi for several years past, and proved remarkably free from decay. It is considered the best of the very early varieties; tree of thrifty growth and luxuriant foliage. Ripens May 20 to June 1st.

Salway. Large, roundish; skin creamy yellow, with crimson red cheek in the sun; flesh deep yellow, juicy, melting, rich, sweet, slightly vinous; one of the best late peaches. September.

Snow's Orange. Medium to large size; yellow flesh, melting and juicy. Is being planted large'y in Michigan for a market variety: its hardiness, productiveness, fine appearance etc, combining to make it a profitable sort. September, North, August, South

Triumph. Above medium; skin downy, dark orange yellow, nearly covered with dark carmine; flesh yellow half way to the stone, where it changes to greenish white, and adheres to the stone like Alexander; juicy, melting, and slightly sub-acid; quality good. Matures with Alexander. The great value of this Peach for shipping purposes is its yellow color and attractive appearance, it being the earliest yellow Peach so far known, and has brought very high prices

Thurber. Large to very large, skin white, with light crimson mottlings; flesh very juicy, vinous, and of delicate aroma; of exceedingly fine texture. Matures middle to end of July. A seedling of Chinese Cling, which it resembles in size and beauty but perfectly free. This variety has seldom failed to yield a crop of fruit when other varieties failed, and is highly prized as a market sort by Western growers.

Amelia. Very large, conical; white, nearly covered with crimson; juicy, melting, vinous, sweet, and of high flavor. Too tender to stand long carriage, but excellent for home consumption. July 1 to 10.

Bilyeu's Late. Large; white, with blush cheek. End of August to September.

Columbia. (Pace, Yellow Indian, Tinley, etc.) Large; dingy yellow and red stripes; flesh yellow, buttery, rich and sweet; quality best. End of July to middle of August. Reproduces from the stone with slight variations.

Chinese Cling. Size large; creamy white, a blush cheek and crimson mottlings at base; flesh white, slightly red near the stone, melting, juicy, vinous, and of the highest flavor. It surpasses any of the varieties of same parentage maturing at the same season. Matures middle of July, and immediately follows Thurber, of which it is a fit companion.

General Lee. Above medium, oblong; creamy white, with carmine wash; flesh very finely grained, melting, very juicy and

WHOLESALE PRICE LIST.

of high flavor; quality best. July 1 to 10. Improved Chinese
Cling.

Indian Blood. Large; dark claret, with deep red veins;
downy; flesh deep red, very juicy, vinous and refreshing. Middle
of August.

Ringgold. A form of Heath Cling, but larger and a little later.

SELECT LIST OF PEARS.

Standard Pears.

The cultivation of this noble fruit is extending as its value is appreciated. The range of varieties is such that, like apples, they can be had in good eating condition from June till early spring.
