Introduction.

The favor with which previous editions of the REGISTER OF WATER MARKS AND TRADE MARKS were received has encouraged the publisher to take unusual pains to achieve the highest degree of accuracy and completeness possible in this, the fourth edition. To this end personal letters were written to all known owners of such marks in the country, and on their replies the book has been based. There has been no attempt at padding, and all marks disclaimed by those to whom they had been accredited have been rigorously excluded. As a result this book contains no dead wood and every title in it may be regarded as authentic. In some instances where one title was claimed by two or more firms it was thought best to credit it to both, for the compiler was not in a position to award exclusive control to either. In some instances the name of a jobber appears in connection with a well-known brand of which he is not the owner, but in such case he is a recognized sales agent and the owners of the brand have acquiesced in its being credited to him also. While a book like the REGISTRY must from its nature be always more or less incomplete it is thought that this edition is a vast improvement on its predecessors, and that it will prove of great value to the trade. Owners of new water marks and trade marks and those who have such which have been omitted from this edition, are invited to send them in for the next edition.

Acme ^{Self-Clamping} Cutting Machines.

WHEN about to purchase, the buyer of machinery sometimes has two machines in mind—the best and the one he can use as a substitute. Now we make the best cutting machine on the market and leave the doubtful honor of building substitutes to others. The buyer who decides, after due investigation, that the best machine obtainable is the one for him, is the man we sell to. That there is a great many of this man who “will have the best” is evidenced by our large and increasing trade in Acme Cutters.

Nearly thirty years ago the Acme Self-Clamping Cutter was offered to the trade. It was the first self-clamping cutter manufactured, and though there have been many imitators, it is the First Self-Clamping Cutter to-day. In other words, thirty years ago it was the Pioneer, now it is the Leader. We unhesitatingly guarantee the Acme to do perfectly accurate cutting on all classes of work; to be free from breakage; that it is noiseless, runs with very little power and is extremely fast. “In a nut-shell,” it will turn out better work and more of it, with less fuss and bother, than any other cutter made. We are cutter specialists, having manufactured cutters exclusively for a number of years. The specialist is the man to deal with, for he must have his product right or go out of business. The Acme is just what its name stands for, and we stand for the Acme. Built in sizes from 32 in. to 72 in.

All Acme machines are now double-gearred, all shafts are of steel, and all gears are cut gears.
