The Burroughs Figuring & Listing Machines

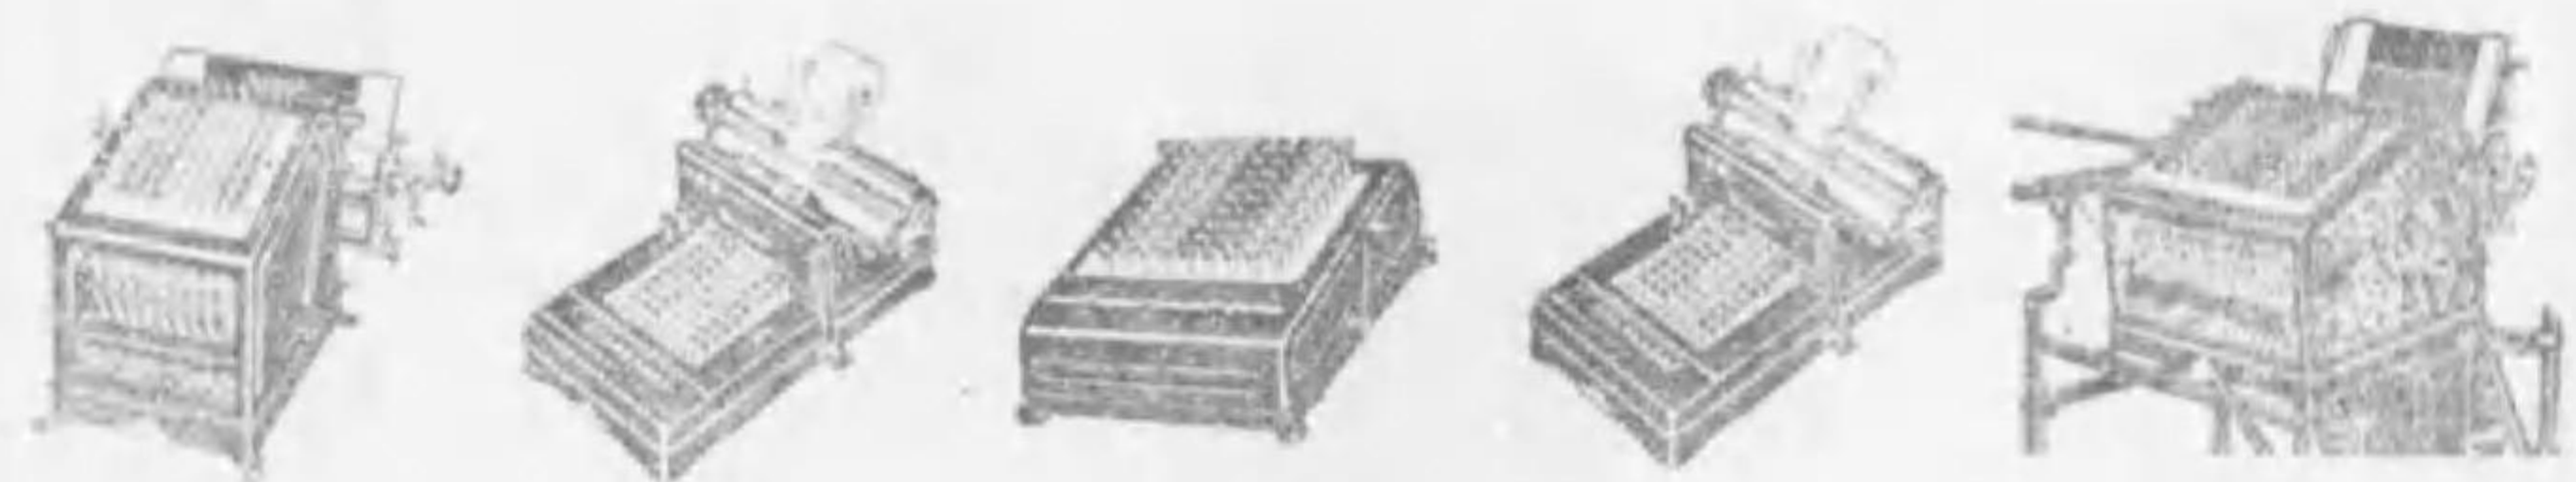

Accuracy - Durability - Simplicity  
 Three Dominant Burroughs Features

ABSOLUTE accuracy in all kinds of figure work, an unusual degree of durability permitting constant satisfactory service, marvellous simplicity in construction and of operation are the outstanding Burroughs features.

In many ways, the Burroughs Figuring and Listing machine is a remarkable invention. It will print and add figures in even less time than is required to write the items by hand, just as the typewriter writes quicker and more legible than to write by hand.

More remarkable still, the machine will list and add day in and day out without making a single error. In a lifetime of tireless operation it will not vary an unit.

As an investment, Burroughs Machine offers unusually attractive returns. By saving so much time and by preventing so many costly mistakes the machine will soon pay for itself; and still it will continue its earnings for so many more years by furnishing the figure informations essential to the successful conduct of an enterprise.

諸計算ノ絶對的正確激其ナル使用ニ對スル偉大ナル耐久力構造ノ驚嘆スベキ簡潔使用法ノ容易ハパーコース器ノ他ニ類例ナキ三大特徴ナリ

タイプライターガ筆記スルヨリモ迅速ニシテ明瞭ニ印刷スルガ如クパーコース計算作表器械ガ項目ヲ筆記スルニ要スル時ヨリモ僅少ナル時ヲ以テ之レヲ明瞭ニ印刷スルト同時ニ自動的ニ累計スル能力ハ既ニ顯著ナル發明ナルニ一層顯著ナル事實ハ此能力ヲ日々發揮シテ一ノ誤算ヲモ爲サザレニアリ而シテ其生命ノ有ラン限リ少シモ狂ヒテ生ズル事ナク能マズ飽カズ忠實ナル勤勞ヲ繼續スルノ事實ハ眞ニ特筆ニ價スベシ

The Burroughs Calculators

Faultless Figurings—Straight to the Answer

THE Burroughs Calculator is especially designed for high speed multiplication, division, addition and subtraction, and is adapted to any line of business where printed record of figure work is not needed.

The key action is so uniform that the fastest operator cannot possibly tax the speed capacity of this machine. The Model 525

here illustrated has 9 columns of keys with a totaling capacity of 10 columns. It is extremely light, weighing only 11 lbs., and can easily be carried about from one place to another. It is absolutely error-proof with mechanical devices which make it easy for even an inexperienced operator to do a rapid, and accurate figuring work.

High Speed Calculation with Unerring & Automatic Accuracy

THIS Model 555 Calculator is the same machine in every respect as the Model 525 except that it has four additional rows of keys giving the answer up to 999,999,999.99. This Model is especially designed for large figure work. Its time-saving speed with unerring and automatic accuracy, makes

it an important factor in modern business. Delightful key touch, uniform key action, one-motion cancelling device, locked adding wheel, low slanting keyboard with key-tops colored according to punctuation are some of big features which make tiresome figuring a pleasure instead of a burden.

The Burroughs Figuring & Listing Machines

There is a "Burroughs" for Every Business

FOR figure work which requires a printed record, the Burroughs Figuring and Listing Machine is especially desirable. The Visible Models No. 320 and No. 330 (No. 320, here illustrated) are designed for use on desk or counter and the stand is not necessary. The listing and totaling capacity of these models are given below. Each model is equipped with a narrow carriage for roll paper or slips not more than 3 1/2-inches wide.

The complete visibility afforded by the visible printing, visible adding dials and standard full keyboard makes this type of the Burroughs machine appeal strongly to the many users. Besides Total and Sub-total keys, it has a Repeat key which is useful in multiplying or in listing consecutive numbers. All kinds of figuring may be done quickly and accurately on this machine including adding, subtracting, multiplying and dividing.

Visible Model with Wide Paper Carriage

THE Wide Carriage on this Model distinguishes it from the Model described on the preceding page, but in every other respect it is the same. The paper carriage is very similar to that of a typewriter permitting use either sheets of 12-inches wide or roll paper of 3 1/2-inches. There are seven permanent stops for the carriage whose width is an especial advantage in handling analysis sheets and other wide records. The standard

full visible keyboard includes, as already described, Total, Sub-total and Repeat keys. Total key may be used as General Correction key which permits changing an item before printing merely by depressing the desired keys. Another useful feature is the bell which may be used as an item counter, paper return lock, or, as a warning when a desired number of items have been listed or when the bottom of the paper has been reached.

Non-Add, Non-Print, Column Correction Keys—Feature of This Model

THIS particular Model distinguishes itself on account of a greater usefulness by having the Non-add and the Non-print Keys.

The Non-add key prints items but does not add them into totals. This key is useful in designating Numbers or Dates. The Non-print key adds the items but does not print them. This key converts the machine into a calculator, and is useful in multiplying,

dividing or subtracting operations. The Column Correction key permits changing the depressed key in a column without disturbing the other keys set on the keyboard.

Another useful feature of this Model is printing in red Totals, Sub-totals, Non-add items and Symbols.

The Model 334 here illustrated is equipped with 12-inch carriage.

The Burroughs Figuring & Listing Machines — Continued

Accuracy—the Outstanding Characteristic of All Burroughs Machines

THE Model No. 334-W is illustrated here with extra wide carriage which handles the paper up to 20 inches wide. The greatly added capacity of this Model makes it valuable for large figure works.

Accuracy is the outstanding characteristic of all Burroughs Machines, and this unfailing accuracy is due in part to the Standard Full Keyboard found on all Burroughs Models.

All keys are in plain sight, and distin-

guished in black and white by punctuations. The amount is set in plain sight on the key-board before printed and added, so that you see the item just as it will appear on paper.

Ciphers, punctuations and symbols are printed automatically, eliminating needless motions and saving time. The full keyboard makes it possible to depress two or three keys at once, thus adding greatly to the operators' speed.

The Burroughs Figuring & Listing Machines — Continued

Almost Human with the Brain of Steel

THIS Model is a refinement of the original Burroughs Machine with improvements added to year by year. It was first placed on the market more than a quarter century ago; many of them have since been in constant satisfactory use. It has made the name "Burroughs" famous for the Adding Machine.

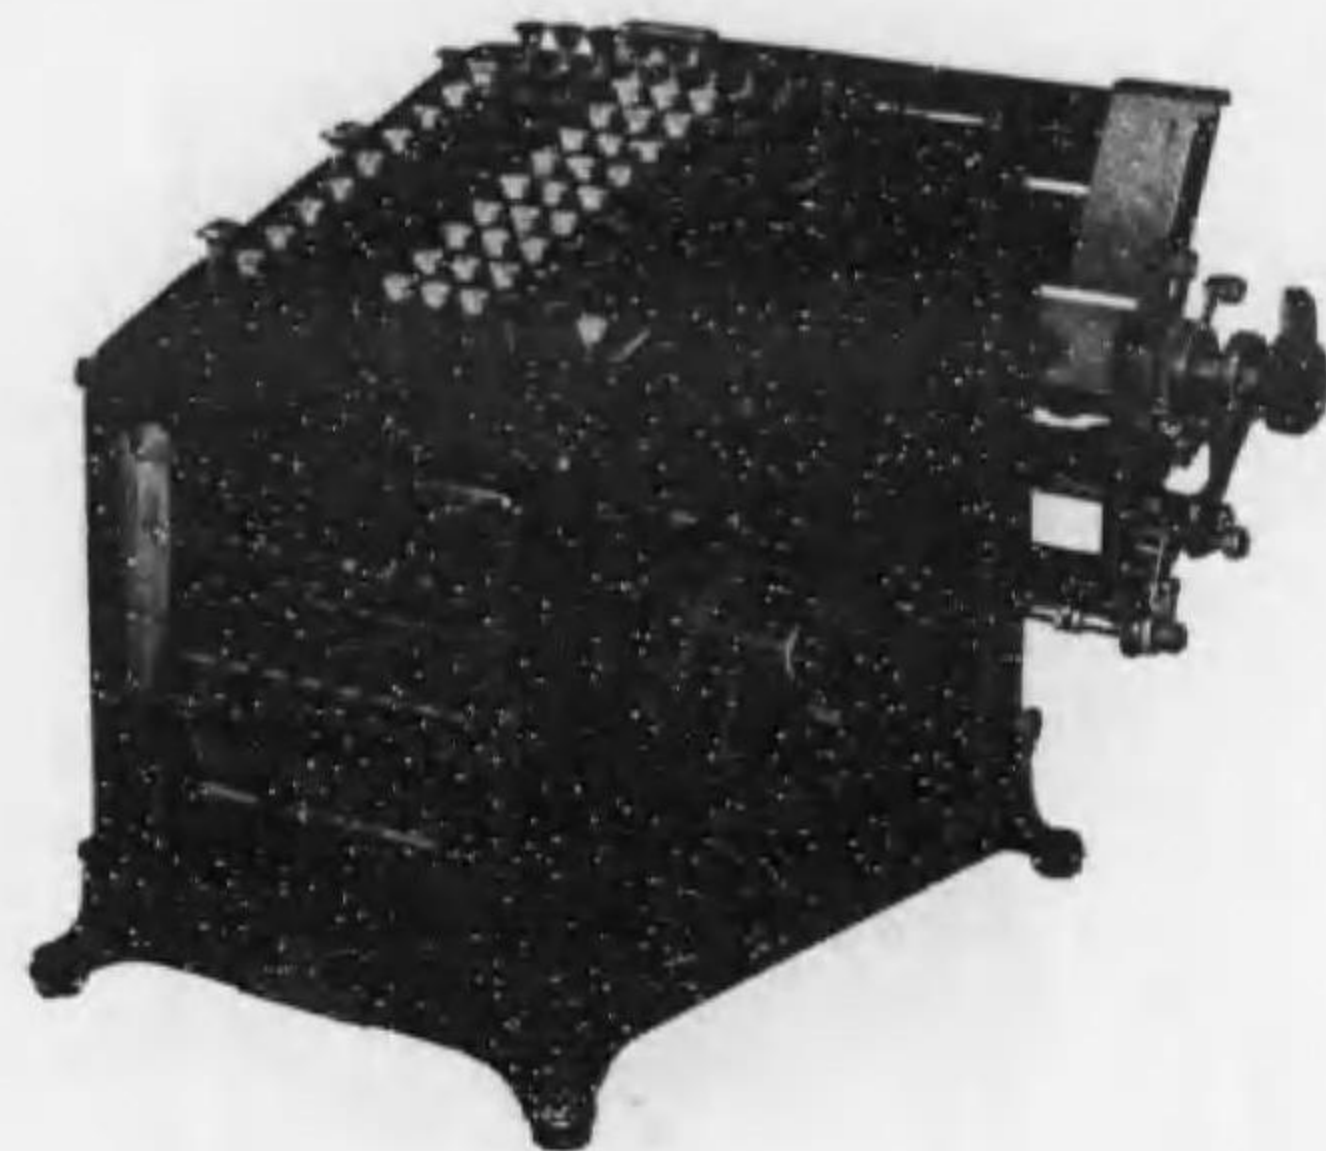

This Model is equipped with the most efficient paper carriage of 12¼-inches wide for handling both roll paper and wide sheets.

Like all other "Burroughs" of this class, it has the Total, Sub-total, Repeat, Non-add, Separate Column Release and General Correction Keys. Distinguishing symbols or characters are printed to indicate Total, Sub-total and Non-add items. Ciphers and punctuations are printed automatically. The Repeat key is used in multiplication and division, the Non-Add key enables the operator to indicate Numbers or Dates without adding them into the total.

The Burroughs Figuring & Listing Machines — Continued

"Burroughs" Stands for Accuracy and Reliability

THE 11-Columns of keys on this Model gives a listing and totaling capacity of 999,999,999.99. With the exception of this increased capacity, this Model is exactly the same as Model 126 described on the preceding page.

The "Burroughs" stands for accuracy and reliability. Figures obtained on the Burroughs are right the first time and wasting time in hunting mistakes is saved. Still further saving of time in handling figures is

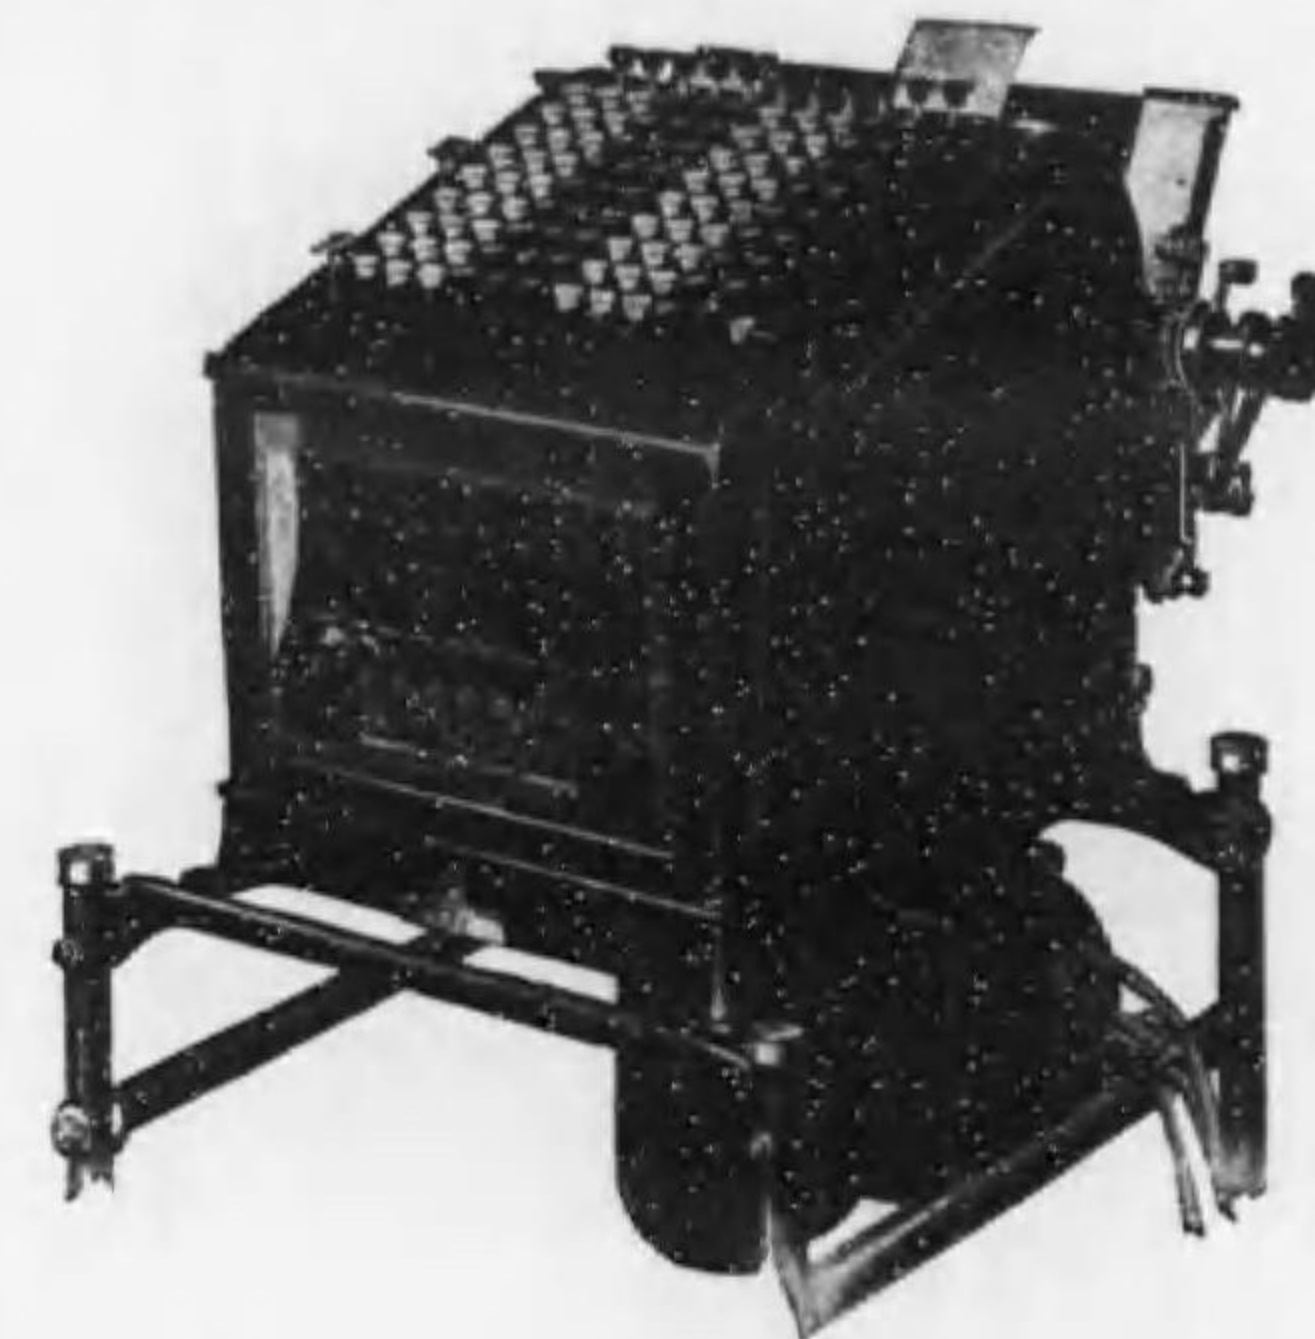

made possible by printing automatically all ciphers and punctuations.

In saving time and relieving the mental strain of the accountants and eliminating costly mistakes, the "Burroughs" will pay for itself in a short time. It is a common expression among the thousands of the satisfied users that "If I couldn't get another, I wouldn't sell my Burroughs for thousands of dollars."

The Burroughs Figuring & Listing Machines — Continued

Other Calculations, Besides Addition, Easily Accomplished

THE Model 156 here illustrated has 13-columns of keys capable of listing up to 99,999,999.999.99.—greatly increased totaling capacity over the two Models previously described.

All of these "Class 100" Models are designed to be used on a Tubular Stand provided for the machine at a small extra cost, and this equipment is partly illustrated.

The Burroughs machine is commonly used for addition, but it will quickly and accurately

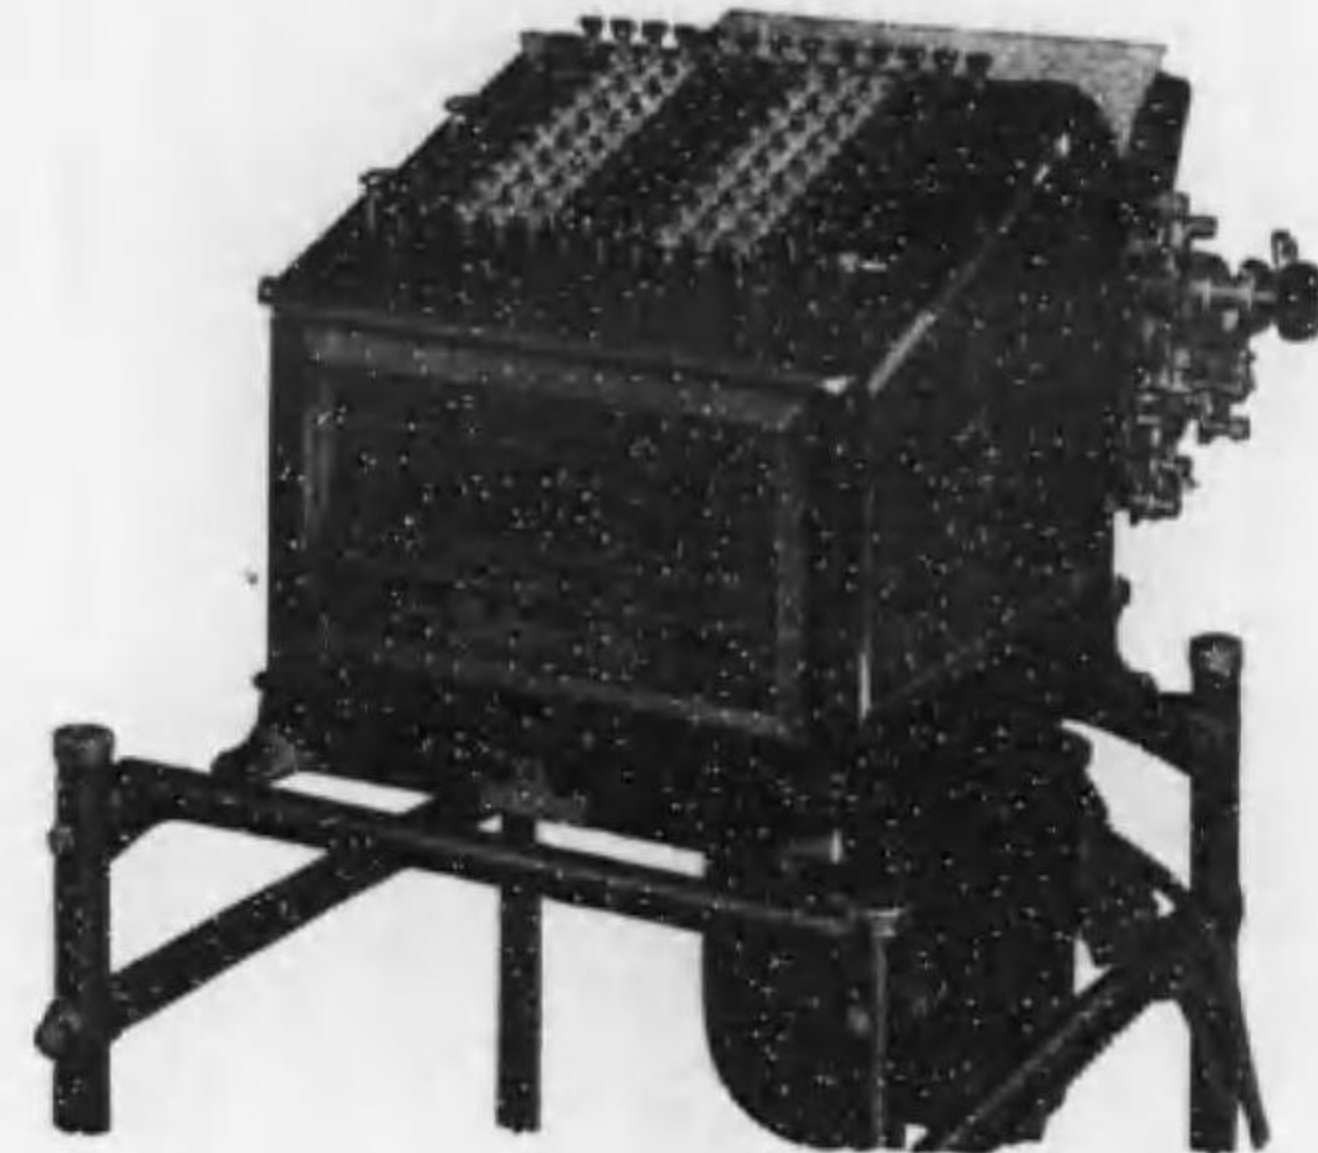

perform other calculations.

Multiplication is made very simple by using the Repeat key. This feature is a big asset in proving invoices, extending balances and in figuring discount or interest. Division is also a simple process, and subtraction is easily accomplished by using complementary numbers. These exclusive features of the Burroughs wonderfully broaden the field of its usefulness.

The Burroughs Figuring & Listing Machines — Continued

The Machine that remembers the Totals

THE Burroughs Duplex Models have two sets of adding wheels or accumulators within the same case, so that separate sets of items may be accumulated, and separate totals obtained at the same time. The Transfer Total Key makes it possible to transfer totals from the upper set of adding wheels to the lower set. This feature has resulted in this "Burroughs" being called,

"The machine that remembers the totals." Separate totals can also be taken at any time from either set of adding wheels.

The regular equipment of the Duplex Model consists of the Total, Sub-total, Transfer-total, Non-add, Repeat, General Correction, Separate Column Correction keys together with the 12¼-inch carriage for either wide sheets or roll paper.

The Burroughs Figuring & Listing Machines — Continued

Accumulators may be used Independently or in Conjunction

THE two additional rows of columns distinguish this Model from one described on the preceding page. This Duplex Model has a listing and totaling capacity of 999,999,999.99 in each of two accumulators giving a total working capacity of 22 columns. These accumulators, in any of the Duplex Models, may be used independently or in conjunction. When used independently, amounts may be added and totals obtained in both

accumulators. When used jointly, totals obtained in the upper accumulator may be transferred, by using the Transfer Key, to the lower accumulator where they remain stored to be later printed as a grand total. The electrically driven Model with Tubular Stand is here illustrated. The hand operated Model may be obtained if the electric drive is not desired.

The Burroughs Figuring & Listing Machines — Continued

The Most Versatile Machine in the Burroughs Line

COMBINING many useful features in one machine, the 17-column Burroughs Duplex Model is perhaps the most versatile machine in the whole Burroughs line. Its listing and totaling capacity of 999,999,999,999.99 in each of two accumulators, gives a total working capacity of 34 columns. It is designed to handle the large amounts frequently encountered in the business and statistical figure works.

This Duplex Model 276 can be, and often is, built with the *Unlimited Split Device* which permits "splitting" the keyboard at will and the handling of several sets of figures in each accumulator at once. This will permit accumulation of two, four, six or eight totals at one time.

The Electric Drive with Tubular Stand is the Standard Equipment for this Model.

Supplies for the Burroughs Machine

Burroughs Tubular Stands

THE Tubular Stands are made for the *Class 100, 200 and 300 Machines*. They are built with steel tubing, highly finished, and are adjustable to rest on rigid feet or on swivel casters. A wooden table 14" x 17-1/2" is attached to each stand. When ordering the Stand, please specify the Model Number of the machine.

バーロース鋼管製置臺

本置臺ハ第一〇〇號級、第二〇〇號級及ビ第三〇〇號級ノ各種用トシテ夫々製作セラレ鋼管製ニシテ仕上ガ美麗ナリ据置及ビ移動共ニ自在ニシテ木製置板ヲ附屬セリ。御注文ノ節ハ器械ノ型式御明記ヲ要ス

Burroughs Ribbons

They are especially made for the *Burroughs*, and are furnished as follows:

バーロースリボン

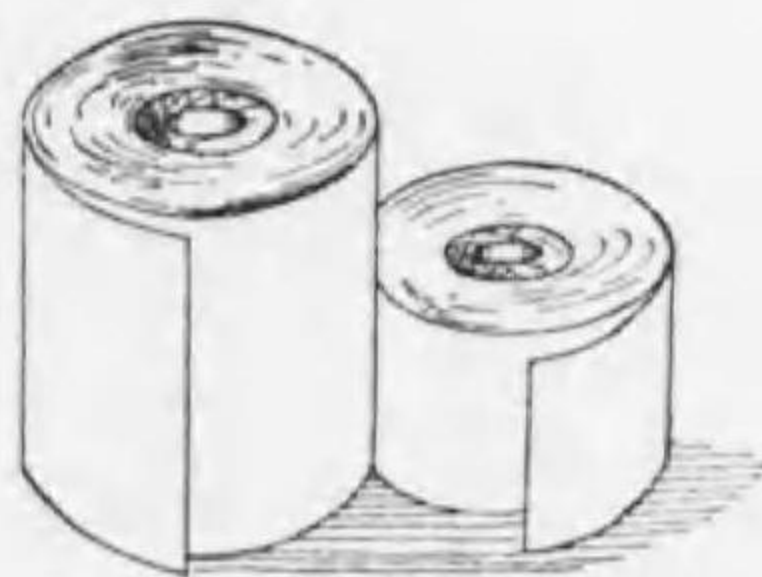

バーロース器用リボンノ幅員、色等右表ノ如ク供給ス、御注文ノ節ハ器械ノ型式、桁數及ビ色等御明記ヲ要ス

	Column capacity 桁數	Width in Inch 幅(吋)	Colors 色

巻紙 大 Roll Paper, Wide	3-1/4"	250'

"Safety" Library Perforator

Perforated Marks cannot be Removed or Changed

ALTHOUGH primarily designed for the libraries to mark the ownership of books and other library properties, this perforator is also widely used for commercial purposes, — from receipting and cancelling

checks, bills and all sorts of business papers to identifying every descriptions of commercial literatures. The prices, as it differs according to the number of letters and designs, will be given upon application.

“Safety” Postage Stamp Perforator

Prevent Undesirable Loss of Postage Stamps

TO identify the ownership and thereby to prevent the loss, the marking of the postage stamps is permitted by the postal authority. The best known way of such marking is the perforation of stamps with initial letters and other designs, and for this purpose no other device can excel the “Safety” Postage Stamp Perforator. It is

handy and rapid. Ordinary daily output of stamps can be perforated in a few minutes. The perforator can be made to perforate from one letter up to five letters which are maximum number to be permitted by the postal authority. The special designs can also be made as shown on the opposite page.

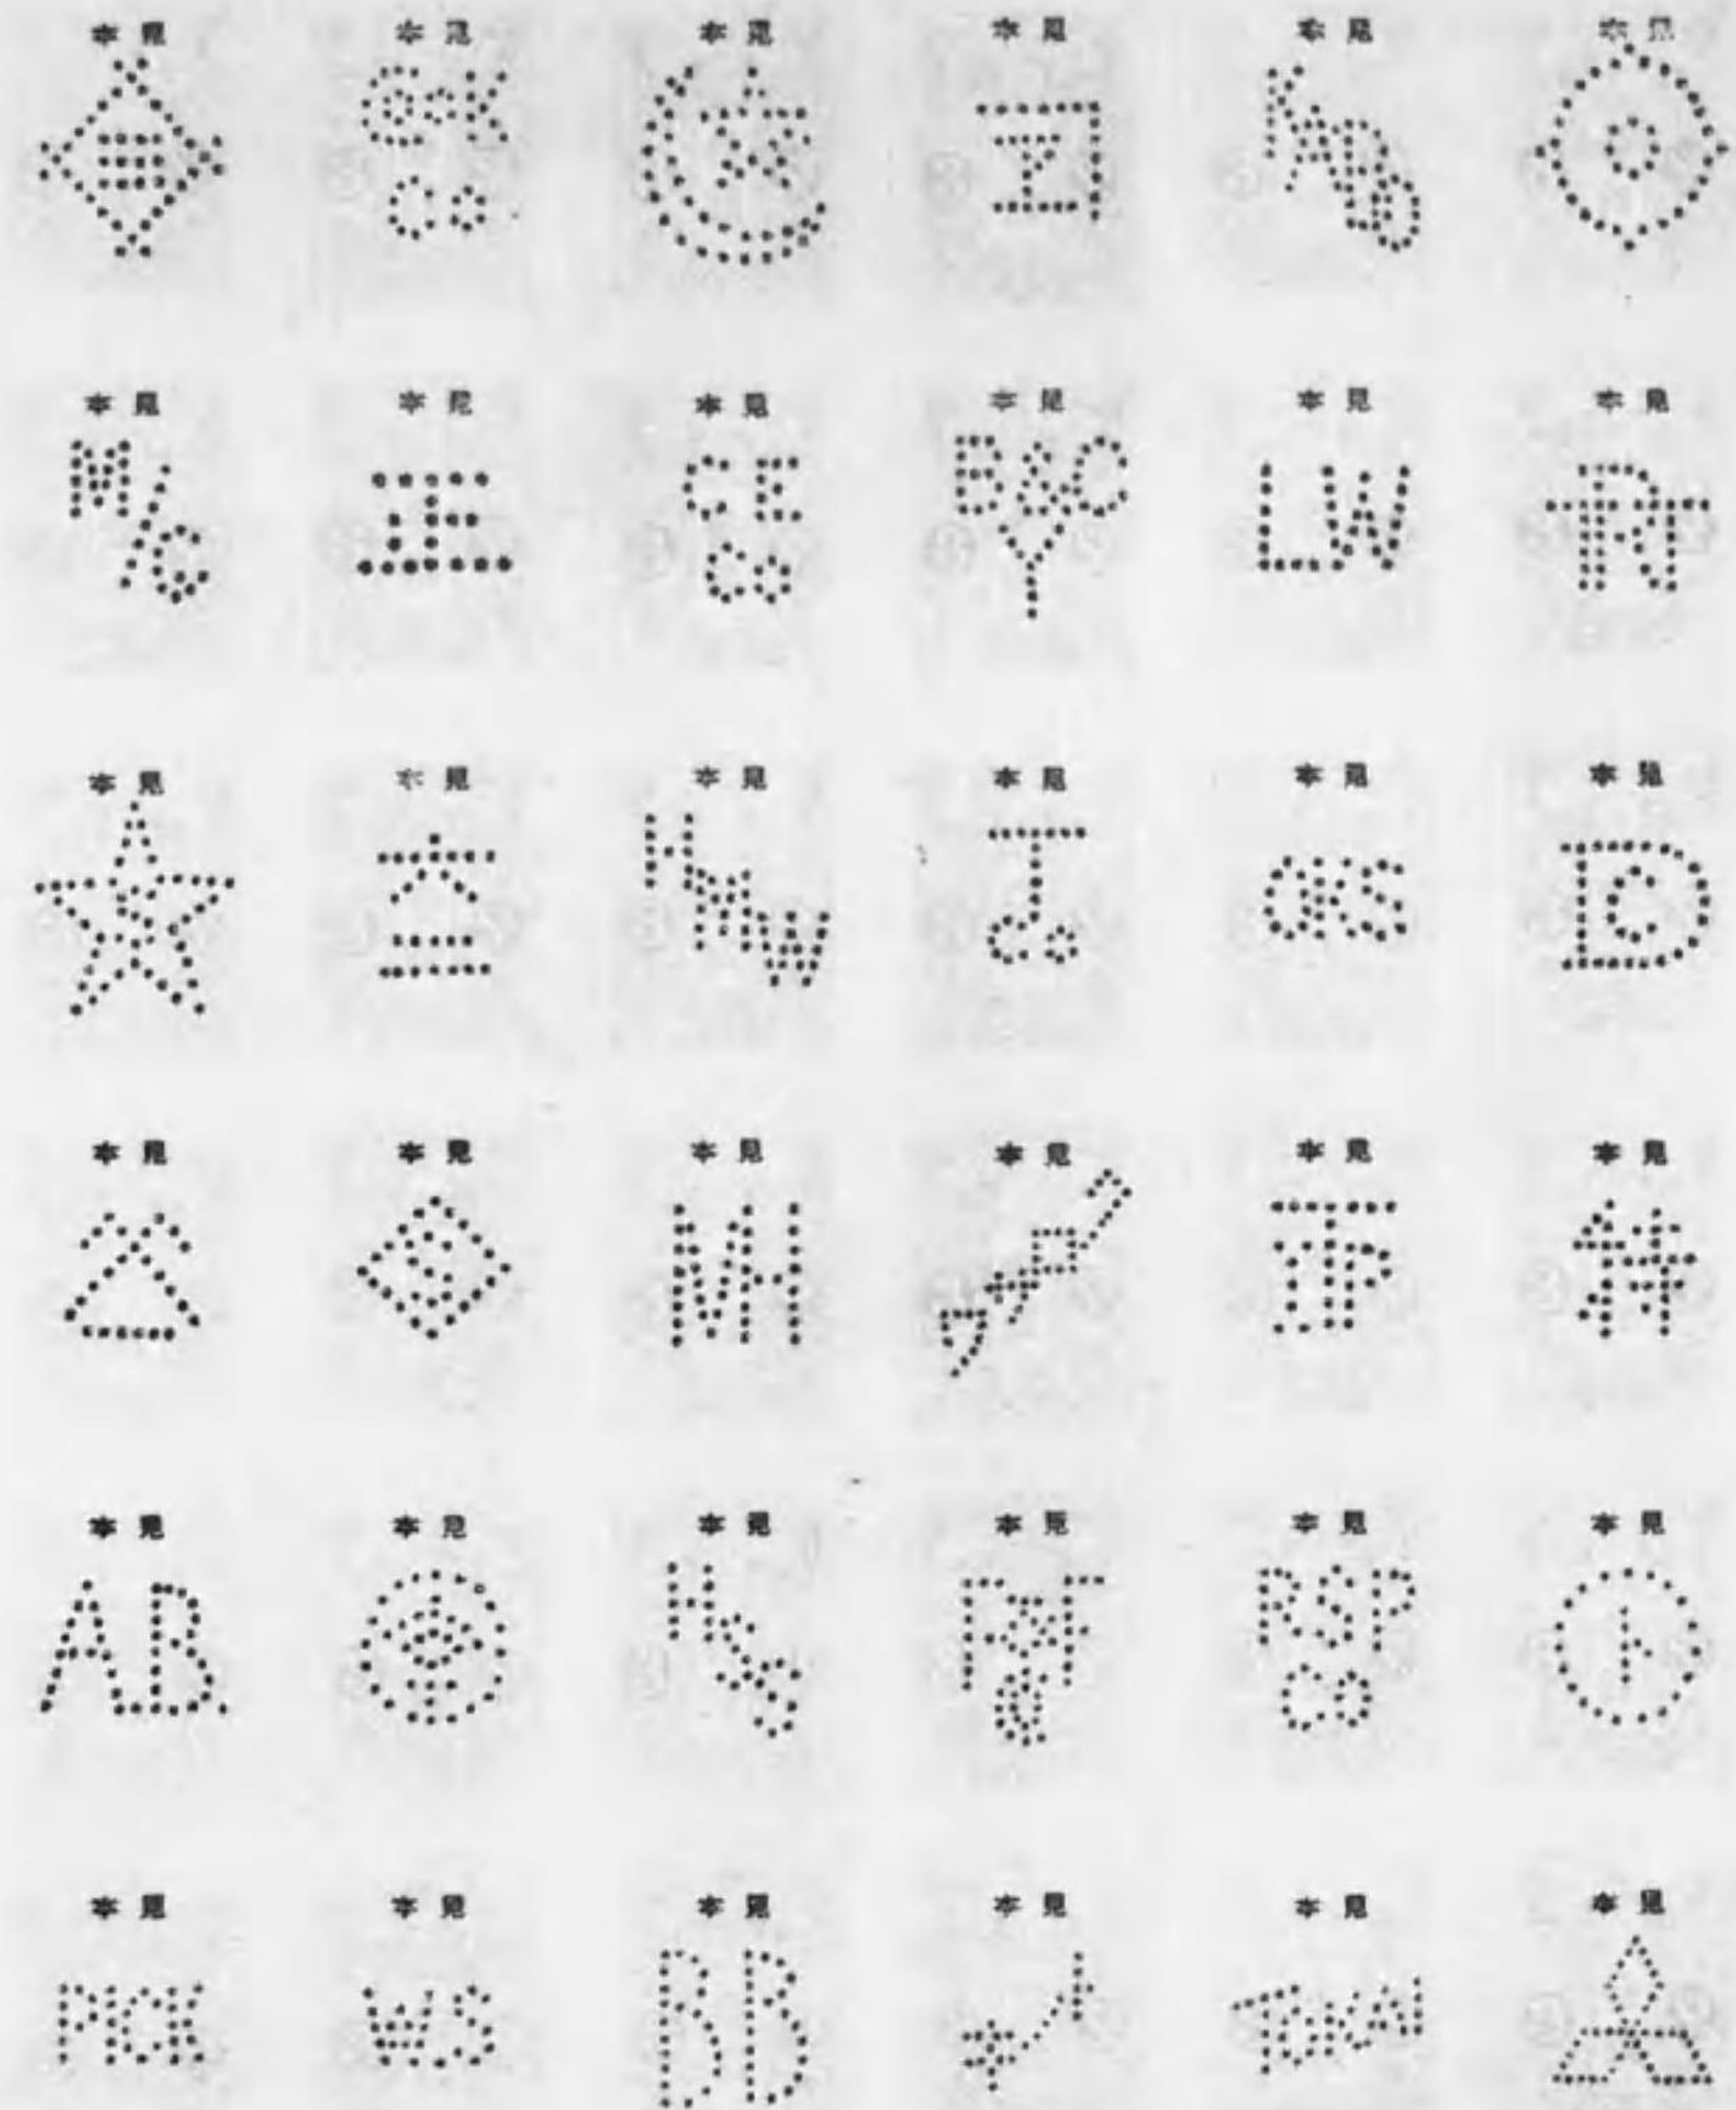

郵便切手ノ所有者ヲ保護シ同時ニ他人ヲシテ濫リニ使用シ得ザラシムベク之ニ自家ノ記號ヲ施スコトハ郵便局ノ許可スル所ニシテ郵便切手ニ記號ヲ施ス最良ノ方法ハ之レニ頭字、紋章又ハ商標等ヲ穿孔スルコトナリ

"Safety" No. 1 Dating Perforator

Compact, Durable Machine—Made also to Perforate Numbers

THIS is a popular machine for dating and numbering purposes. It is speedy, compact and built to withstand hard usages. Its capacity is 10 sheets of papers at one stroke. An ideal machine for Banks, Rail-

ways and Bottlers. Can be furnished with any desired wording at extra cost as shown on pp. 24.—B. For numbering purposes, we make 4, 5 and 6 wheel machines.

"Safety" No. 2 Dating Perforator

Adapted for Heavy Works

IN design and the purpose intended for, this is similar to No. 1 Machine illustrated on the foregoing page, but greatly stronger in general construction, having a perforating capacity of 20 sheets at one stroke. As shown the diameter of each

punch is larger and consequently the figures are larger in size than No. 1 Machine. It is used where the work is too heavy for the smaller machine. Perforations with special wording shown on pp. 24—B.

構造用途共ニ前頁ニ圖示セル第一號器ト同一ナレトモ

"Safety" Coupon Canceler

A Powerful Coupon Canceler on the Market

WITH this machine from 50 to 100 coupons can be perforated at one stroke. The cancelation mark is a round hole of 1/4 inch in diameter. If desired, the same machine can be made to perforate two or three holes. Its high arch and long reach makes it possible to perforate at any desired

point of large documents. There is a drawer provided for in the base of the machine to receive the clippings. For cancelation of coupons or marking of securities in large numbers, no machine is more adaptable than the "Safety" Coupon Canceler.

### The Bates Numbering Machines

Seven Movements in One

**N**UMERICAL system of filing, indexing, accounting, recording, as extensively employed in modern offices to-day will best be accomplished by the use of the Bates Numbering Machine. It combines the regular automatic actions with four added move-

ments, Consecutive, Duplicate, Triplicate, Quadruplicate, Sextuplicate, Twelve Times and Repeat, — seven movements in one machine by just turning the pointer. A mechanical wonder that the test of time stamped upon it "the best".

The Standard Time Stamp

MODEL "A" MACHINE

THE source of power of the Standard is an accurate clock movement which actuates its time recording wheels. Minute by minute the recorder automatically advances, and thus the hour, the day, the month even February of leap year. It requires no attention other than to wind

the clock once a week. All offices should use the time stamp to give the exact time of receipt of letters and telegrams, receipt and execution of orders, payment of bills, filing of important papers, etc. When so used it is a positive protection against mistakes, disputes and impositions.

International Card Time Recorders

AN ACCURATE TIME METER

THERE is nothing so fatal to the discipline of an office as to have a body of men irregular in their appearance, who come late and go out at odd times, nor so disastrous to the profitable working of a factory as to be uncertain of the time spent on job. In either case an accurate time-keeping device will solve the difficult problem.

Every office or manufacturing plant in which the labor plays an important part for its working efficiency or determining the cost of production, the *Time Meter* should be used for exactly the same reason that every merchant has a scale, and the best known Time Meter is the International Card Time Recorder. It measures the working time of the employees by accurately recording their arrival and departure. It measures, when applied to the cost finding system, the time consumed on jobs by recording its starting and finishing time. Illustration on the opposite page shows the Recorder with a pair of Card Racks for 100 persons and the manner of recording the arrival of the workers.

International Electric Time System

基本時計  
Master Clock

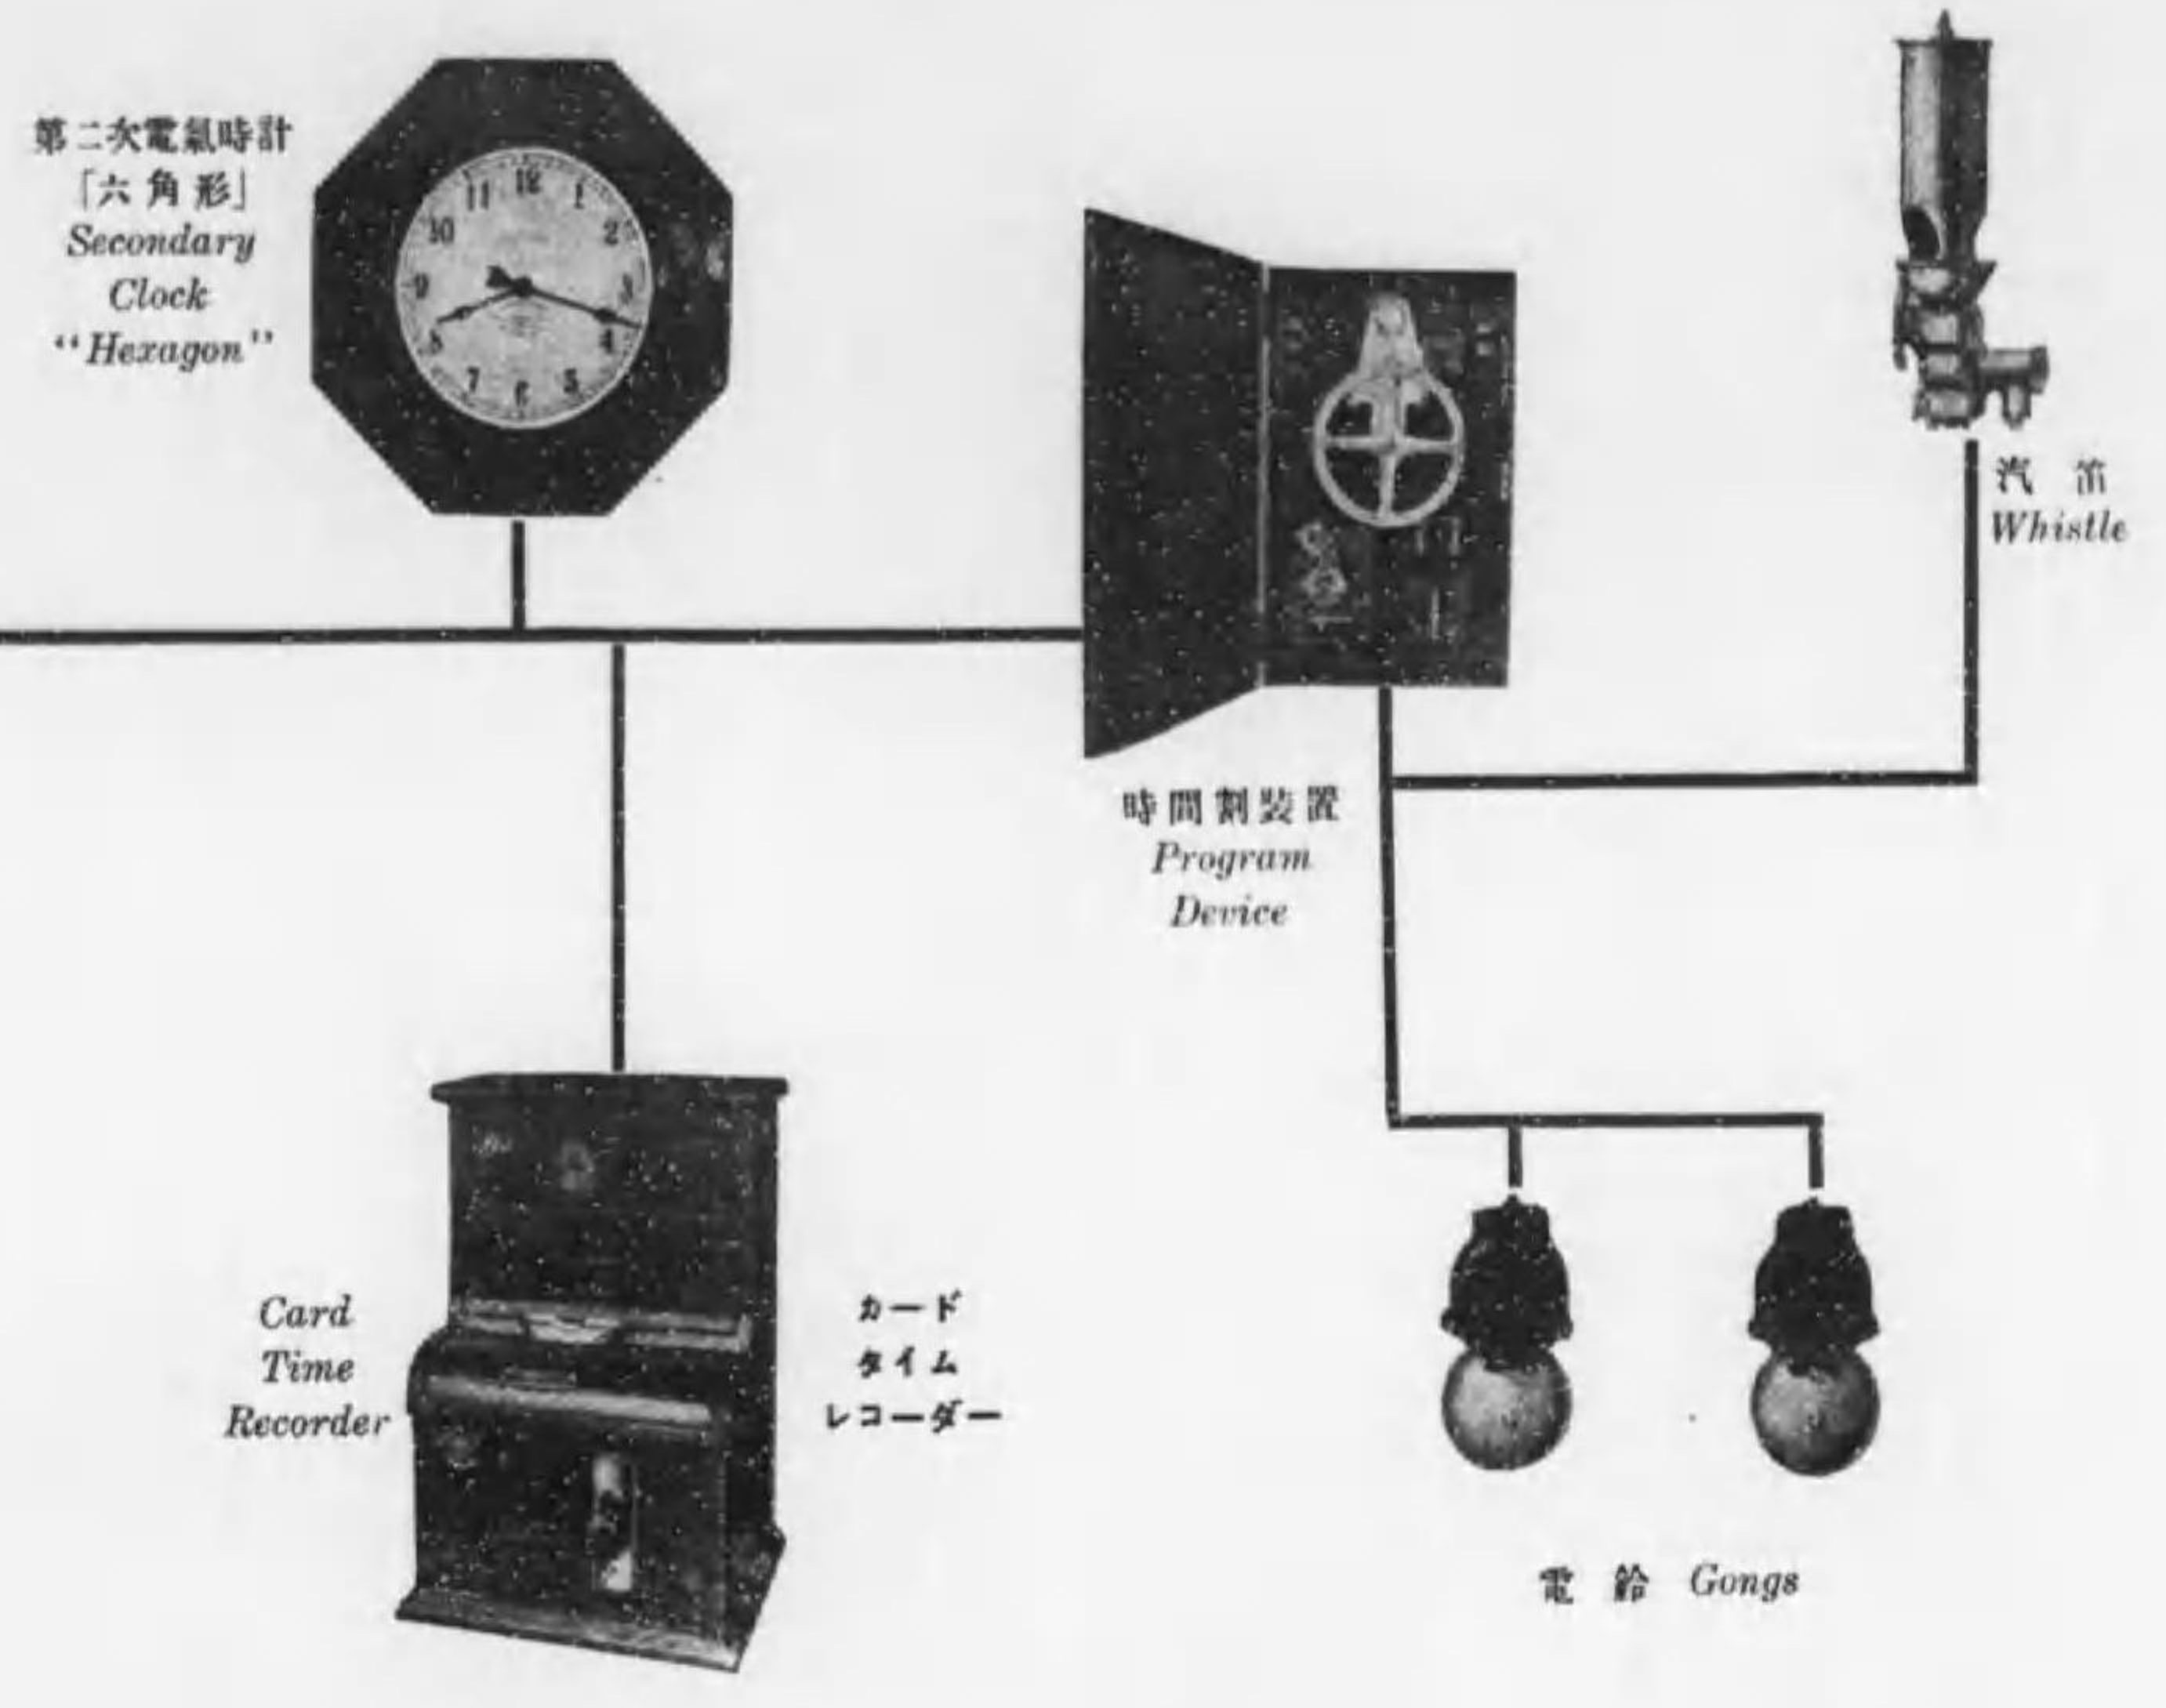

THE International Electric Time System is centrally controlled by a single master clock. The master clock will operate simultaneously any number of card recorders, dial recorders, job time recorders, time stamps and secondary clocks, will operate whistles, signal horns, gongs, etc., at any time desired. The devices shown on these two pages comprise a typical electrical installation.

Everything is controlled electrically by

the master clock. The entire equipment is thoroughly automatic, requiring no general attention. It is equally efficient with any number of subsidiary units. The International Electric System is adaptable to any business, institution, or school, and will serve the user as a time system especially designed for his own needs.

OUR SERVICE DEPARTMENT

THE Burroughs Machine is extremely easy to operate and there is nothing difficult about its use. After a few minutes' practice, any one can handle figures on a Burroughs far more speedily than by any other way, and with absolute accuracy.

If, however, our customers so desire, lessons for operating and caring of the Burroughs Machines will be given, free of charge, at an Instruction Room provided in our building, to those who are sent by its purchaser. A limited number of persons seeking employment as Burroughs operators will also be admitted.
