Wyatt's Lawn Grasses- Fertilizers

Wyatts Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA mixture of lawn grass seeds is an improvement on all of the better mixtures offered heretofore, at comparative prices. Our constant experiments have taught us just what grasses are best suited to the Eastern and Southern states. The finest seeds of these varieties are carefully re-cleaned and blended into our Carolina mixture so as to give the very best results obtainable. Sow 5 lbs. per 1,000 sq. ft. Read the column "How to make a beautiful Lawn" on this page. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatts Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses have led us to prepare this Colonial mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher only a fraction of the quantity required of other grasses is required of the Colonial mixture, leaving very little if any difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 2 lbs. per 1,000 sq. ft. Prices: Lb. \$1.25; 2 lbs. \$2.25; 5 lbs. \$5.25; 10 lbs. \$10.00; 25 lbs. or more at 95c per lb., prepaid.

Wyatts Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY SOUTH MIXTURE. For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months Wyatt's Sunny South mixture of lawn grasses is recommended. The grass varieties used on golf greens over the entire south predominate this mixture. Only the purest stocks are used. Sow 5 lbs. per 1,000 sq. ft. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatts Shady Nook LAWN GRASS MIXTURE

F-61. WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 5 lbs. per 1,000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional applications of agricultural lime should be made at the rate of 5 to 6 pounds per 100 sq. ft. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

OTHER GRASSES AND CLOVER FOR LAWNS

F-40. KENTUCKY BLUE GRASS. Prefers slightly sweet soil and is best suited to semi-shade. Average soils should be limed for Kentucky Blue. In the South this variety should never be cut shorter than 2 inches. For lawn work we select and offer only the purest seeds obtainable. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.90; 25 lbs. \$7.00; 100 lbs. or more at 27c lb.

F-43. ITALIAN RYE GRASS. Generally referred to as "Winter Grass" in the south where it is grown extensively for winter lawns. It will grow in any soil from early September till June. Sow 10 lbs. per 1,000 sq. ft. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 25 lbs. \$2.50; 50 lbs. \$4.50; 100 lbs. or more at 8½c per lb.

F-52. RED TOP GRASS. A fine leaved grass, member of the bent family, excellent for lawns. Best adapted to moist, heavy soils but grows in all soils. Our extra fancy, heavily cleaned seeds are especially selected for lawns. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.20; 25 lbs. \$5.25; 100 lbs. or more at 19c lb.

F-49. HIGHLAND BENT GRASS. Finest of the bents for lawns where it withstands drought and abuse. Use 2 lbs. seeds thoroughly mixed into 5 to 10 lbs. of dried sand, and sow evenly over each 1,000 sq. ft. of lawn area. Prices: Lb. \$1.10; 5 lbs. \$5.00, postpaid. Write for quantity prices.

For other grasses see page 45.

F-80. WYATT'S FANCY WHITE DUTCH CLOVER. Our carefully grown Fancy White Dutch Clover is produced especially for lawns. It is extremely hardy to cold or heat and its even, dwarf habit of growth adds to its value in the lawn. Prices: Lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.50, postpaid. Write for quantity prices.

F-79. KENTISH WILD WHITE CLOVER. A dwarf spreading and unusually rugged clover especially adapted to lawns and athletic fields. Prices: Lb. \$1.75; 5 lbs. \$7.50, postpaid. Write for quantity prices.

Other clovers listed on page 43.

A D C O

Converts grass clippings, weeds, leaves and other non-woody matter into valuable compost. Prices: 7½ lb. box \$1.00; 25 lb. bag (enough for 20 wheelbarrows of debris) \$2.00; 150 lb. bag \$10.00.

ALUMINUM SULPHATE

Used 1 lb. to 25 sq. ft. make soils acid for acid loving plants. Mountain Laurel, Rhododendrons, Azaleas, etc. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, lb. 15c; 2 lbs. 25c; 5 lbs. 60c; 10 lbs. \$1.00.

COTTONSEED MEAL

A splendid fertilizer for all kinds of plants. One of the few plant foods that can be used successfully for Azaleas, Rhododendrons. Prices: 5 lbs. 25c; 10 lbs. 40c; 25 lbs. 75c; 50 lbs. \$1.50; 100 lbs. \$2.50. Not prepaid.

L I M E

Finely ground agricultural limestone. Use 10 lbs. per 100 sq. ft. to sweeten acid soils. 100 lb. bag 75c. Write for quantity prices.

PEAT MOSS

For new lawns 1 bale should be thoroughly pulverized and mixed in each 300 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Vigoro or Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold 10 to 15 times its own weight in water. Price: Large bale (approximately 20 bu.) \$3.85

RAW BONE MEAL

Excellent for rose beds, flower beds, garden and field crops, and for top-dressing lawns. Prices: 5 lbs. 25c; 10 lbs. 50c; 25 lbs. \$1.00; 100 lbs. \$3.25; 200 lbs. \$6.00. Not prepaid.

S L A G

Ground Basic Slag, while costing only slightly more than lime, is high in Phosphoric Acid in addition to its soil sweetening property. We highly recommend Slag for the building and maintenance of lawns especially for the various Blue grasses and clovers. Slag should be used liberally on all pasture, grain, lespedeza and clover lands. 100 lb. bag \$1.00. Ask for low ton and carlot delivered prices.

SHEEP MANURE

Best of all natural manures, highly concentrated, free from straw and rubbish, with all weed seeds killed. It puts new life into worn out soils.

For lawns use 6 to 10 lbs. to every 100 square feet. For vegetable or flower gardens use 10 to 15 lbs. to every 100 square feet. Prices: 5 lbs. 35c; 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.50; 100 lbs. \$2.75; 500 lbs. \$13.00; Ton \$47.50.

TOBACCO DUST

Supplies organic potash and nitrogen. It will increase the value of any chemical fertilizer when used in equal parts. Price: 100 lb. bag \$2.50.

How to make a BEAUTIFUL LAWN

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture-holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they become very dry too often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes much preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus diminishes it must be replaced from a compost heap made of leaves from trees or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn or anything else is solved.

After the soil has been thoroughly broken apply 4 lbs. of Vigoro per 100 sq. ft. Prepare a fine seed bed and allow to settle. The seeds may be sown on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled, but instead soaked once a week.

Established lawns should be fed regularly. 100 lbs. Vigoro or 100 lbs. Sheep Manure thoroughly mixed in 1 bale of peat should be applied as a top dressing to each 2,000 sq. ft. 3 to 4 times each summer followed by an application of 6 lbs. of bono meal per 100 sq. ft. each fall.

"TESTED SEEDS"

VEGETABLE PLANTING CALENDAR

The term "tested seeds" as used in this catalog, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

PRICES

Prices shown on all Seeds, Bulbs, Plants, supplies and materials in this catalog are subject to change at any time. Our catalog must be compiled during the fall months at which time it is impossible to establish prices on all items accurately.

NON WARRANTY

The Job P. Wyatt and Sons Co., give no warranty, express or implied, as to description, quality, productiveness, or other matter of any seeds, bulbs or plants they send out, and they will not be in any way responsible for the crop.

The chart below lists the more popular vegetables showing approximate dates, space for sowing, depth, etc. The dates for sowing and maturing would, of course, vary with the locality and the depth for sowing varies with soil consistency. The chart should be used as a general guide. We invite correspondence at all times relative to gardening or farming activities and are always glad to furnish any information that may be in our possession.

Food for AMERICA food for VICTORY!

Every patriotic American is anxious to do all that he can to speed the VICTORY program. Planting a garden might appear so simple, so easy that its true importance is overlooked.

It is at once recognized, however, that increased production in the pastures, fields and gardens of America is as important as increased production along the armament assembly lines and ship yards.

If you have a plot of soil, regardless of how small it is, put it into the production of food . . . fresh, wholesome, vegetables.

Look through the following pages . . . select the varieties most liked by your family and buy early and liberally of the seeds you need. Produce enough for a bountiful supply of fresh vegetables for the table and a surplus for preserving.

PLANT A GARDEN

27 Bush Bean, Plentiful Bronze Medal winner in the 1938 All-America selections. PLENTIFUL is a green, flat-podded bush bean—an improved and very productive variety of the Bountiful type. The plants bear long, straight, medium deep green pods somewhat larger than those of Bountiful. The attractive pods are well filled, brittle, stringless and uniformly straight. PLENTIFUL shows a definite resistance to wilt. Prices: Pkt. 10c; ½ lb. 20c; lb. 35c; 2 lbs. 55c; 5 lbs. \$1.05, postpaid. Not prepaid, 15 lbs. (peck) \$2.40; 60 lbs. (bu.) \$9.00; 100 lbs. or more at 14c lb.

24 Bush Bean, Tendergreen This variety introduced in 1933 was awarded the Gold Medal in All-America selections. Since that time it has more than justified that honor. It is widely acclaimed by home gardeners and commercial growers alike for its productivity, flavor and market acceptance. Plants are erect, medium large with stringless, nearly straight 6 to 6½ inch round, meaty pods. We strongly recommend TENDERGREEN to our most critical growers. Prices: Pkt. 10c; ½ lb. 20c; lb. 35c; 2 lbs. 55c; 5 lbs. \$1.05, postpaid. Not prepaid, 15 lbs. (peck) \$2.45; 60 lbs. (bu.) \$9.30; 100 lbs. or more at 14½c lb.

182 Carrot, Imperator Especially adapted to Southeastern soil and climate, this excellent Carrot offers the gardener and trucker many characteristics of superiority: strong tops for bunching, roots smooth, deep rich orange, uniformly tapered to semi-blunt end. The rich orange color extends to the center of the fine-grained tender root. Listed on page 10. Prices: Pkt. 10c; oz. 30c; ¼ lb. \$1.05; lb. \$3.75; 2 lbs. \$7.00, postpaid.

252 Corn, Wyatt's Silver King This variety has been grown extensively in the Southern part of this state during the past several years. Silver King is a money maker where it is grown for the market because the large white ears are ready 5 to 10 days before Trucker's Favorite. 60 days. Prices: Pkt. 10c; ½ lb. 15c; lb. 25c; 2 lbs. 40c; 5 lbs. 70c, postpaid. Not prepaid, 14 lbs. (peck) \$1.35; 56 lbs. (bu.) \$4.75; 100 lbs. or more at 7½c lb.

287 Cucumber, A. & C. This fine market and table cucumber is rapidly supplanting many of the commercially grown varieties throughout the

592 Pepper, Wyatt's California Wonder Here's a Pepper of real merit. It's nearly as large as, and earlier than Chinese Giant, but is blocky or square ended. It will sit upright and is ideal to stuff and bake, or to serve whole with salad. Its walls are exceptionally thick, heavier and firmer than any other sort, and the flesh is deliciously sweet and spicy, with no bite to it. Some specimens measure 4½ inches across and 5 inches long. The bright, attractive green changes to a brilliant light crimson. 112 days. Prices: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.25; lb. \$4.00; 2 lbs. \$7.50; 5 lbs. \$17.50, postpaid.

714 Squash, Early Prolific Straight-neck A new delicious small yellow squash for the table. The Silver Medal was awarded this excellent variety during 1938, because it is earlier, smaller, more productive, brighter yellow and more uniform than other similar varieties. Whether you grow squashes only for the table or for the market be sure to grow a crop of EARLY PROLIFIC STRAIGHTNECK. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$3.75, postpaid.

736 Tomato, Stokesdale (Stokes', in original containers.) Combining earliness, extremely heavy yields, wilt-resistance and all round usefulness of fruit STOKESDALE is a tomato of great utility. The vigorous plants, excellent flavor, color and quality of the fruit increase the value of this fine variety. 112 days. Prices: ¼ lb. \$1.50; lb. \$5.00, postpaid.

757 Tomato, Scarlet Dawn The earliest of all wilt-resistant tomatoes. Ripens 65 to 70 days from time plants are set. The fruits are globe shaped, scarlet, heavy and meaty. Adaptable to the home garden or market. SCARLET DAWN earned the Gold Medal Award in the All-America selections for 1935. Prices: Pkt. 5c; ½ oz. 25c; oz. 45c; ¼ lb. \$1.50; lb. \$5.00, postpaid.

730 Tomato, Rutgers This is a vigorous grower and high tonnage producer. The fruits are globular, bright red, smooth with thick walls and small seed cavities. Rutgers is strongly wilt-resistant and well adapted to canning, green wrap, market or home garden industries. Prices: Pkt. 10c; ½ oz. 15c; oz. 25c; ¼ lb. 75c; lb. \$2.50, postpaid.

447 Watermelon, Florida Giant A really good quality large melon. A very large dark green variety with sweet, crisp, bright red flesh. Black seeded. Vines are vigorous growers and productive. Prices: Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.00; 2 lbs. \$1.75; 5 lbs. \$5.00, postpaid.

When the central head is cut, numerous sprouts develop from the leaf axis, each sprout terminating in small green separate heads. These are cut in lengths of 10 to 12 inches and tied in bunches of 2 or 3 for a second crop. Served in the same way as asparagus, they form a very tasty and nourishing dish. 90 days. WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

CULTURE: Plants started in a seed-bed, should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

Plantings may be made from early spring until mid-June and again in the early fall.

WYATT'S FAR WESTERN GROWN CANTALOUPE

CULTURE: The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woods-mold and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

WYATT'S PEPPERS

One Ounce of Seed Produces About 1,000 Plants

CULTURE: Sow the seed in hotbed or a window box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plant is set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure hoed into the surface soil will also increase plant growth and fruiting qualities.

1809 Morning Glory, Heavenly Blue

MORNING GLORIES

1808 Scarlett O'Hara This introduction brings us an entirely new color in this popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 15c; 2 pkts. 25c.

1809 HEAVENLY BLUE. A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; 1/4 oz. 25c; oz. 75c.

1810 JAPANESE MIXED. The flowers are quite a bit larger than those of the ordinary Morning Glories and their colors are unusually rich and showy. Pkt. 10c; 1/2 oz. 20c; oz. 30c.

1799 ROSE MARIE. This is a new and attractive double Morning Glory that blooms early with deep rose flowers. Pkt. 10c; 1/4 oz. 25c.

1807 CORNELL. These brightly colored carnelian red, white bordered trumpet-shaped flowers are an excellent foil for Clark's Heavenly Blue Ipomea. Cornell is an early bloomer and its blossoms remain open well past mid day. Pkt. 15c; 2 pkts. 25c.

MOONFLOWERS

1798 HEAVENLY BLUE. Beautiful, large, skyblue flowers. Pkt. 10c; 1/4 oz. 25c.

1797 WHITE. Large, pure white, fragrant flowers. Pkt. 10c; 1/2 oz. 25c.

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

LINUM (Scarlet Flax)

1738 GRANDIFLORUM RUBRUM. Very showy annuals of long duration, having fine foliage and brilliant scarlet-crimson, cup-shaped flowers. Seed can be sown outside in May. Height 12 inches. Pkt. 10c; 1/2 oz. 25c.

MATRICARIA (Feverfew)

Really a half-hardy perennial, they will bloom the first year from seed. They have fern-like foliage and heads of small double, button-like flowers on long stems for cutting.

1781 DOUBLE WHITE. Height 2 feet. Pkt. 10c; 1/8 oz. 50c.

1782 GOLDEN BALL. Small, golden yellow double flowers. Very attractive as a border or planted in pots. Pkt. 10c; 1/8 oz. 50c.

Wyatt's Super Giant Pansies are borne in profusion on large vigorous plants supporting long strong stems. 1920 Petunia, Wyatt's Giant Fringed Mixed

PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

1912 Salmon Supreme

(1938 Silver Medal winner in the All-America selections.) A new petunia of considerable importance to amateur gardeners and commercial growers alike, SALMON SUPREME brings a new and lively color into an already richly endowed family of plants. The flowers are a light salmon, 1½ to 2 inches across produced in abundance on a neat compact plant 10 to 12 inches tall, over an unusually long season. Pkt. 25c.

1907 Petunia Dainty Lady

1911 Martha Washington

Silver Medal winner in the 1935 All-America selections. While this excellent petunia is not so recent as some, it is deserving of prominent space in every garden. Its growth is only 8 to 10 inches high, the plants producing a ball effect. The very large flowers are ruffled or frilled. The unusual coloring includes blush pink at the frilled edge, changing through orchid to wine red toward the center and into dark violet at the throat. Pkt. 25c.

1909 Burgundy Burgundy is one of those rugged individualists of the garden, a strong growing type, with very showy flowers in a shade of deep red which is rather difficult to combine with other colors. Since, however, its own color is so showy in itself, it is well worth growing as an accent or specimen group. Pkt. 25c; 2 pkts. 40c.

1907 Wyatt's Dainty Lady

(See Illustration.) An exquisitely fringed graceful flower that introduces an entirely new color in Petunias. Dainty Lady is a delicate golden yellow. Besides being an All-America selection, Dainty Lady has also won an Award of Merit by the Royal Horticultural Society of England. Pkt. 25c.

WYATT'S GIANT ORCHID FLOWERING SPENCER SWEET PEAS

WYATT'S SPENCER SWEET PEAS are produced for us under almost perfect growing conditions in the fertile Lompoc Valley in California. As is true of all other Wyatt's seeds, our special strain of Sweet Peas is the very best. Four tremendous ruffled flowers on long stems often 14 inches, clear refined colors and vigorous, long blooming plants are characteristics of all varieties of Wyatt's Sweet Peas.

CULTURE: One ounce will sow from 15 to 20 feet. Sow from November to March. For spring plantings we recommend the sowing of Sweet Pea seeds slightly below the ground level in a bed thoroughly pulverized 2 feet wide by 12 to 18 inches deep. Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Vigoro at 4- to 6-week intervals should be made.

FANTASY ZINNIAS

2246 MIXED. The colors are rich and full; bright yellow, reds and pink shades predominating the well blended mixture. The medium sized well rounded, quilled, shaggy flowers lend themselves admirably to flower arrangement and are yet large enough to satisfy the desire for a mass of color. Pkt. 10c; 1/8 oz. 35c; oz. \$2.25.

2245 WILDFIRE. The fantasy type of Zinnia with its friendly informality is certainly maintaining its place as a reigning favorite in the Zinnia family. WILDFIRE adds a distinct note of cheerfulness to the garden and will enliven any home when used in flower arrangements. The plants are neat in habit, strong growing and very free blooming, 2 1/2 to 3 ft. in height and come into flower 45 to 50 days after the seeds are sown. In growing this or any other zinnia we strongly recommend sowing the seeds where the plants are to bloom if it is at all possible. WILDFIRE is a rich dazzling scarlet, a truly beautiful flower possessing a color and texture rarely found except in zinnias. Pkt. 10c; 3 pkts. 25c.

2249 ORANGE LADY. A worthy companion to the other members of this fine group Orange Lady adds a rich shade of deep bright orange. Otherwise this variety has the same qualities, plant and flower size and gay informality that is typical of the Fantasy group. Pkt. 10c; 3 pkts. 25c.

2247 STAR DUST. Another brilliant member of the popular Fantasy group. STAR DUST received the Award of Merit in the 1937 All-America Selections. This lovely golden yellow variety has the characteristic informal, shaggy-petaled, medium-sized flowers on stems of good length for cutting. Plants are 2 1/2 to 3 feet high, bloom in 45 to 50 days. Pkt. 10c; 3 pkts. 25c.

2248 ROSALIE. This is an intense rose variety of the Fantasy type embodying all of the attractive features of plant habit, size, blooms and stems. For flower arrangement the type is superbly adapted to the ordinary home and keeping qualities are excellent. Pkt. 10c; 3 pkts. 25c.

2250 WHITE LIGHT. The free blooming habit, characteristic of Fantasy Zinnias is well represented in this fine pure white variety. Valuable for garden and home, WHITE LIGHT is especially desirable for blending other colors. Pkt. 10c; 3 pkts. 25c.

2196 Haageana Double Mixed

A mixture of dwarf double Mexican Hybrid Zinnias embracing a wide range of colors including flowers of solid color and combinations of yellow, orange, scarlet, gold, maroon and many other rich shades. This is an unusually attractive subject for mass planting or cutting. Pkt. 10c; 3 pkts. 25c; 1/8 oz. 45c.

2198 Super Crown O'Gold Pastel Tints

The flowers are large and showy, combining the ruggedness of the Dahlia Flowered with the soft effect of the California Giants. It is strictly a mixture of pastel tints containing a wide range of pastel shades. Delightfully soft, yet colorful for garden decoration, it is unexcelled for cutting. The plants are strong and robust and the flowers are borne profusely through the season. Pkt. 10c; 1/8 oz. 50c.

2270 Early Wonder Mixed

An entirely new race of dwarf, early flowering zinnias, producing masses of double flowers on long nearly leafless stems. The plants are 12 to 15 inches high, basal branching and should be planted close together. Blooms appear 30 to 40 days after seeding and embrace a wide range of rich colors predominated by the typical zinnia reds, oranges and yellows. Pkt. 10c; 3 pkts. 25c.

ZINNIA LINEARIS

2197 Linearis The most unusual of the new Zinnias is the dwarf variety, Linearis. The single flowers are a lovely shade of golden orange, with a delicate lemon yellow stripe through each petal. It will start flowering about 6 weeks after seeds are sown. Pkt. 10c; 3 pkts. 25c.

2245 Zinnia Fantasy Wildfire

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

Grow Your Own Perennials
From Seeds

Everybody wants Perennials — and wants them in generous measure to secure the desired effects in color and charm. If you delay and finally buy plants, the cost mounts high; an attractive perennial border may require several hundred dollars worth of plants. Exactly the same results can be secured with \$3.00 or \$4.00 worth of seeds! Aside from the money saved it is very fascinating to grow your own plants from seed.

WYATT'S GLADIOLUS FOR 1942

Twenty-nine Unrivalled Large-flowering Varieties

CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs). As cut flowers they are very decorative and last a long time. They are equally attractive in the garden.

Soil requirements are not very exacting. Any good garden soil is ideal. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures, Vigoro, and 5-7-5. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free. Unless otherwise stated all corms are number 1—(1½" up). All are flowering size.

Early—70-80 days. Midseason—85-90 days. Late—100 days or more.

CLOVERS

F78 ALYCE CLOVER

SENSATIONAL NEW FORAGE CROP

Best Southern Summer Legume for Hay, Pasture, Soil-Improvement or Quail Feed; Heat and Drought Resistant

U. S. Department of Agriculture: "Alyce Clover, like soybeans and lespedeza, was introduced from Southern Asia (in 1910), and seems well adapted to the South. Has made a good growth in Louisiana, Mississippi, Texas, Georgia, and Florida. It makes excellent hay, pasture and cover crops. A low spreading, branched, leafy plant, 3 feet tall in thick stands. Cattle are fond of it both green and dry. It is a summer annual, maturing seed in October, and volunteers a good stand the following year. When cut early for hay a second growth will produce a seed crop, 350 to 600 lbs. per acre. Cut hay in early bloom. Rake as soon as drying permits. Dries readily and can be baled the day following harvest. Prefers sandy loams, but has done well on all better grades of general farming lands except very light or wet. Use 200 to 400 lbs. of superphosphate on poor soils. Not sensitive to lime. Plant from spring to July, May or June preferred. Broadcast 10 lbs. of bulled seed per acre on well prepared ground and cover lightly. It is not seriously damaged by any disease or insect." Prices: Lb. 35c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$2.25; 25 lbs. \$5.25; 100 lbs. or more at 20c lb.

F97 Alfalfa, Kansas Grown

We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99 per cent or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 40 lbs. to the acre. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18c lb.

F86 Alsike Clover

One of the best for mixing with timothy; it is perfectly hardy in every climate. Sow early in the spring or late summer. Sow 10 to 15 lbs. per acre alone, or 8 lbs. per acre with timothy. Prices: Lb. 45c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$2.75; 25 lbs. \$6.75; 100 lbs. or more at 26c lb.

F85 Burr Clover

Is an annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Burr clover at the rate of 20 to 25 lbs. per acre of hulled, recleaned seed to the acre broadcast, or if sown in the burr 60 to 80 lbs. per acre. Prices: Lb. 40c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.70; 25 lbs. \$6.50; 100 lbs. or more at 25c lb.

F83 Crimson Clover

Should be sown from August to December. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Prices: Lb. 35c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$1.75; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

F82 Red Clover

99½ per cent pure, dodder free. A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring. September and March being the best months. 15 lbs. per acre. Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$7.00; 100 lbs. or more at 27c lb.

F821 Disease Resistant Red Clover

Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.10; 25 lbs. \$7.25; 100 lbs. or more at 28c lb.

F87 White Blossom Sweet Clover

Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 pounds per acre. Prices: Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$1.75; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

F92 Korean Lespedeza

F80 White Dutch Clover

Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: Lb. 95c; 5 lbs. \$4.25; 10 lbs. \$8.25, postpaid.

F95 Lespedeza, Sericea

Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Write for prices.

F93 Kobe Lespedeza

A variety particularly adapted to lowlands. Kobe is only about 10 days later than Common and grows fully as tall as Tennessee 76. The leaves and stems are slightly coarser making a heavier hay crop. This variety is being highly recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 25 to 30 lbs. per acre. Write for prices.

F92 Korean Lespedeza

Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed, or wait until seed have formed on bottom branches, which seed shatters to the ground for reseeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 25 to 30 pounds of seed per acre. Write for prices.

F91 Common Lespedeza or Japan Clover

It grows on galled hillsides and on all soils, even on the poorest, and being a legume for later crops. Its abundant long taproots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 to 30 lbs. per acre. Write for prices.

Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. HOW TO ORDER. To avoid any delay, use the order blank. Orders are filled in turn, so book your's in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

They not only save hard labor, but enable you to cultivate double the acreage in the same time, and thus add over 100 per cent to your crop yield. Invented by a practical farmer and manufacturer—the result of fifty years' experience. Strong lasting construction. Fully guaranteed.

As a Hill and Drill Seeder it opens the furrow, deposits the seed, covers it and rolls it, either in drills or hills. Holds 2½ quarts. Price, \$21.00.

NO. 220—PLANET JR. FERTILIZER DRILL

The No. 220 will distribute fertilizer in the middles of three rows 12 to 14 inches apart; it will side-dress one side each of two rows up to 36 inches apart (one complete row; and corn in wider rows). You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right band handle. The shut-off rod is operated from the same point.

Price, \$31.50

NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.
Price, \$15.50

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price, \$13.75.

NO. 4-D—PLANET JR. PLAIN CULTIVATOR

Weight 49 lbs.
Price, \$9.50

NO. 100-D—PLANET JR. PLAIN CULTIVATOR

We offer this Cultivator with the object of filling a definite need where lands are light or where farming is done on a modest scale. It weighs but 42 pounds. It will stand hard usage and do excellent work. A steady running tool and easy to handle and adjust.

OLIVER FARM EQUIPMENT

OLIVER TRACTOR DISC HARROW

OLIVER TRACTOR DISC HARROW in 20-disc size is made for use with the small size tractor. It is controlled by the operator of the tractor and in this way requires only one man to operate both tractor and harrow. Built especially durable at each wearing point, easily operated and doing the best possible job of discing—that, in short, is the story of the construction, the operation and the work of the Oliver NTDH Harrow.

OLIVER STALK CUTTER

OLIVER STALK CUTTER is steel built throughout with heavy angle steel frame and equipped with latest type steel wheel with dust-proof boxing, which makes it one of the strongest and most durable machines on the market, one that has had a thorough test under the most exacting conditions, thereby proving its worth.

Oliver 8 Foot, 24 Tooth Rake

OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting.

The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an unraked strip next to the windrow.

The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction.

The wheels are unusually strong. The concave tires are 1 3/4 inches wide and 54 inches in diameter.

Oliver 9 Blade Stalk Cutter

OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides.
