GEOGRAPHIC DISTRIBUTION OF RETAIL TRADE
IN
CHICAGO, ILLINOIS

Bureau of the Census
Library

This report was made possible through an allocation of funds to the Bureau of the Census by the Works Progress Administration.

FOREWORD

The increasing demand, since the first nationwide Census of Retail Trade (1929), for intra-city retail statistics for the larger cities, has resulted in a number of special tabulations by this Bureau, at private expense, for specified kinds of business in selected cities. In addition, comprehensive intra-city statistics have been tabulated and released by the Bureau of the Census for the Cities of Philadelphia and Buffalo, based on the reports secured in the 1935 Census of Business.

It is the purpose of this report to present retail trade statistics for the City of Chicago in as great geographic detail as possible, without illegal disclosure of the operations of individual establishments, with particular emphasis on affording a maximum flexibility in usage.

The cooperation and assistance of the Chicago Association of Commerce is acknowledged.

This report was prepared by Isaac Q. Lord and Ralph C. Janoschka.

CENSUS OF BUSINESS: 1935

GEOGRAPHIC DISTRIBUTION OF RETAIL TRADE

IN

CHICAGO, ILLINOIS

The city of Chicago is approximately twenty-six miles long and nine miles wide. The need for geographic detail of city data in a metropolis of this size is obvious. Presentation of data for the city should be made by definitely defined permanent units in order to permit intercensal comparisons; to facilitate future studies; and to afford correlation of related data in other fields.

Fortunately, Chicago has three such types of areal units; the census tract; the community, which is a combination of census tracts; and, since the city is sectionized, the square mile. A brief description of the tract and community plan, followed by an explanation of the physical plan of the city, is, therefore, presented.

Tract and Community Plan

For some years, much of the intra-city data for Chicago in various fields has been compiled on the basis of standardized census tracts. There were 935 tracts in this city in 1930. These are relatively small units of unequal size, definitely defined by street boundaries, railroads, the Chicago River, lakes and other recognizable physical features. Where streets are used, the center of the street is the boundary line. Each tract is assigned a permanent number for purposes of identification (Figure 1, page 95). These tracts have been combined to form 75 larger areas, which have been termed "communities". Each community has also been assigned a permanent number for means of identification. The communities, likewise, vary in area content. A community includes consecutively numbered tracts; e.g., Community 1 includes Tracts 1 to 8; Community 2 includes Tracts 9 to 17, etc. (Figure II, page 99).

Physical Plan of City

The map of Chicago presents a grid-system of streets running north and south, and east and west, traversed by a few diagonal thoroughfares (Figure III, page 103). The standard city block is one-eighth of a mile long, and is assigned 100 numbers. There are, therefore, 8 blocks and 800 numbers to each mile. (Note)

Madison is the base street from which all north and south streets are numbered, while State is the base street from which all east and west streets are numbered. For example, that part of Ashland Ave. which is north of Madison St. is designated, "Ashland Ave., N.", and is numbered from "1" at Madison St. to "7799" at the northern city limits; that part of Ashland Ave. which lies south of Madison St. is designated, "Ashland Ave., S.", and is numbered from "1" at Madison St. to "12299" at the southern limits of the city. East and west streets are similarly designated and numbered on either side of State St.

The diagonal streets are numbered in the same manner as north and south streets, with the exception of Fifth Ave., W. Grand Ave., Ogden Ave., and the west portion of Archer Ave., which are numbered like the east and west streets.

The odd numbers fall on the east and south sides of the streets throughout the city.

Those streets which are located at mile intervals from the baseline streets will be referred to hereinafter as "mile streets", and the streets which lie midway between the mile streets as "half-mile streets". The mile, half-mile, and diagonal streets are of particular importance in retail distribution since the great majority of surface car lines are located on them, and since important transfer points occur at their intersections.

Scope and Source

The statistics presented in this report relate to establishments engaged primarily in retail trade. Wholesalers, theatres, places of amusement, hotels, service establishments, banks and other classes of business establishments are not included. The catalogue business of the larger mail-order houses doing a nation-wide business from Chicago has been eliminated, since this report is designed primarily for research in the field of local retailing. On the other hand, the sales of these houses in their local retail stores are included.

(Note) - Exceptions: Madison St. to Roosevelt Rd. - 1200 numbers; Roosevelt Rd. to Cermak Rd. - 1000 numbers; Cermak Rd. to 31st St. - 900 numbers.

The data are compiled from reports submitted voluntarily by retailers for the 1935 Census of Business. This census was taken by special enumerators who personally contacted each retail establishment.

Plan of Presentation

The data for the city are presented by three methods: first, by tracts; second, by communities; and third, by an alphabetical listing of mile, half-mile, diagonal, and a few important intermediate streets, by half-mile segments.

1. Tract Presentation - Table I presents number of stores and sales for all kinds of business combined, for each of the 935 tracts. The relative importance of each tract within its community is shown by percentages. Since the tract is a relatively small unit, this affords wide latitude in building larger areas to meet individual needs.

2. Community Presentation - First, a kind-of-business analysis of stores and sales for each community is given in Tables II, III and IV. This is followed by a geographic distribution of stores and sales on all principal business streets in each community, by half-mile street segments. The same data are also given for selected street segments which show a large concentration of retail trade; termed hereafter as "business districts" (Table V). Table VI is a kind-of-business analysis of business districts which lie wholly within the respective communities, while Table VII gives similar data for business districts which fall partly in two communities. Table VIII is a more detailed kind-of-business analysis for Community 32, the "Greater Loop District", for which no street segment distribution is given in Table V. (Note.)

3. Alphabetical Street Presentation - Table IX is designed to take advantage of the sectionized plan of the city, and with it may be compiled a significant (though not complete) total of stores and sales for any important square mile bounded by mile or half-mile streets. Mile, half-mile, diagonal, and important intermediate streets are shown by half-mile segments. The segments are presented in sequence from the base streets or from their point of origin.

(Note) - Omitted to avoid illegal disclosure of individual operations.

Comparability of Data

The only important difference between the total retail trade figures for Chicago in this report and those previously published (Census of Business: 1935, Retail Distribution, Volumes I-VI), is caused by the exclusion of the catalogue business of the larger mail-order houses. Except for this exclusion, the number of stores is 1.9% and the sales 1.0% less than the totals in the above mentioned publications. The reasons for these differences are as follows.

- (a) Some of the establishments reporting their locations within the corporate limits of the city were found to be outside these limits.
- (b) Some of the reports, when sorted by street address, were found to be duplicates.
- (c) Where two part-year reports were received for the same establishment, due to change in ownership, they were consolidated and included herein as one establishment.

It has been possible, in a detailed study of this nature, to make a number of refinements which lack of time did not permit in the original compilations.

The only kinds of business which are affected appreciably, other than the general merchandise group (mail-order catalogue business excluded), are "other apparel stores", with sales of 3.6% less; and "fuel and ice dealers", with sales of 4.5% less than previously published.

TABLE I . NUMBER OF STORES AND SALES
BY COMMUNITIES AND CENSUS
TRACTS

This table presents, for all kinds of business combined, the number of stores and amount of sales for each of the 75 communities by census tracts, of which there are 935. Percentages show the relative importance of each tract in the community in which it is located, from the standpoint of number of stores and volume of sales.

Figure I, page 95 indicates the boundary of each tract. It was not thought feasible or necessary to reprint tract boundary descriptions in this report, since they are available from the Bureau upon special request.

Kind-of-business data cannot be given for tracts since illegal disclosure of the operations of individual establishments would result, due to the limited number of stores in such small units.

The nature of this presentation makes possible the rearrangement of stores and sales data for desired areas other than communities, on the basis of groups of census tracts.

TABLE II - NUMBER OF STORES AND SALES
FOR 75 COMMUNITIES, BY 38
KINDS OF BUSINESS

This table shows stores and sales for 38 kinds of business for the entire city, and for each of the 75 communities. It, therefore, provides a dollar comparison and an indication of store size, by kind-of-business, between communities. It should be noted that it includes all stores within the boundaries of the community, while Table V includes only those stores within a community which are located on the designated streets.

Community 32, the "Greater Loop", is shown in greater kind-of-business detail in Table VIII, page 75.

The description of the boundary of each community is given on pages 91-93.

CHICAGO, ILLINOIS

TABLE II.--NUMBER OF STORES AND SALES FOR 75 COMMUNITIES BY 38 KINDS OF BUSINESS

(Sales expressed in thousands of dollars)

TABLE V . STORES AND SALES IN COMMUNITIES,
BY HALF-MILE SEGMENTS OF
PRINCIPAL BUSINESS STREETS

This table is planned to give a detailed geographic distribution of retail trade within each community. It shows the stores and sales for each business district, or part of a business district, which falls within the respective communities. The districts are alphabetized within each community. Where these districts are described by names of intersecting streets, street names are used in the following order: east-west streets; diagonal streets; and north-south streets.

Table V also gives stores and sales by half-mile segments or fractions thereof for all mile and half-mile streets within the community. In addition, important segments of diagonal streets and intermediate streets are included. In the selection of the latter, no minimum standard of stores and sales has been set for city-wide application in determining whether a street is included or excluded. Since this table is a community presentation, the relative importance within the individual community has been the determining factor. It is believed that this method not only gives a better picture of the less concentrated communities but also avoids listing a large number of relatively unimportant streets in the highly concentrated communities.

Named streets are alphabetized within each community and are followed by numbered streets in numerical order.

Street segments, as designated, include all assigned numbers of each block mentioned in the description, unless shown otherwise; e. g., Ashland Ave., N. (1-300) includes all assigned numbers in the first four blocks of Ashland Ave. north of Madison St., or from 1-399.

TABLE VI - STORES AND SALES FOR BUSINESS DISTRICTS,
BY KINDS OF BUSINESS, WITH COMPARATIVE
DATA FOR COMMUNITIES IN WHICH BUSINESS
DISTRICTS ARE LOCATED

Table VI is a kind-of-business analysis, by communities, of important concentrations of retail business which lie wholly within a community. It is recognized that the limits of these individual districts are debatable, and they should not be considered as established "shopping centers". In this report, they are only consecutive blocks of streets having an important degree of retail concentration, which permit a usable method of presenting more detailed geographic distribution of kind-of-business information. In most cases, however, they are approximately the same as the recognized major and minor shopping districts.

A detailed outline of the 20 kinds of business into which all retail stores of the city were classified in Tables VI and VII, is given on pages 107 and 108.

TABLE VII - STORES AND SALES FOR BUSINESS
DISTRICTS WHICH ARE DIVIDED
BETWEEN TWO COMMUNITIES,
BY KINDS OF BUSINESS

Table VII presents stores and sales by kind-of-business for districts which do not lie wholly within a single community.

TABLE VIII - STORES AND SALES FOR
COMMUNITY 32 (THE LOOP), BY
52 KINDS OF BUSINESS

Table VIII is a detailed presentation of stores and sales, by 52 kinds of business, for Community 32 ("The Greater Loop"). It was not found feasible to present "The Loop" by street segments, since it occupies such a small area and would result in the disclosure of individual operations.

It is significant that 9% of the stores doing only 2.3% of the sales in this community are located on and south of Harrison St.

* Does not include 5 mail-order houses (one of which was classified as a department store in 1935) whose sales amount to \$141,802,000.

** Does not include 1 mail-order house which was classified as a department store in 1935.

TABLE IX . STORES AND SALES ON PRINCIPAL BUSINESS
STREETS, BY HALF-MILE SEGMENTS

This table gives stores and sales for mile, half-mile, diagonal, and important intermediate streets, by segments, without regard for community boundaries.

Mile and half-mile streets are shown in consecutive half-mile segments starting from the base streets and running to the city limits. The entire length of such streets is accounted for, and wherever they are interrupted, a proper notation such as, "no thoroughfare" or "not in city limits", is shown. Diagonal and intermediate streets, in general, are shown only in those segments which have a significant concentration of retail trade. They are shown in segments which lie between the half-mile streets.

Named streets are listed alphabetically. Numbered streets follow the named streets in numerical order.

Table IX has two major purposes:

1. For use as a ready reference in finding number of stores and sales for a selected segment of a given street.
2. To provide a method of compiling stores and sales for areas of uniform size, in square mile units or multiples thereof, for the needs of users who find the data for tracts and communities unsuitable because of their variation in size. In establishing such areas, it appears that in most cases, the half-mile streets should be used as boundaries since the heaviest retail concentration is usually on the mile streets. In this manner, a lesser volume is involved in approximating the amount of business to be allocated to the area on either side of the center lines of boundary streets.

Obviously, a total of all business within a square mile area cannot be obtained from the data presented in this table. However, when it is considered that 75% of the stores and 83% of sales for the city, exclusive of those in "The Loop" are included, it is believed that a strongly indicative total may be computed for most square mile areas.

A large part of the sales volume not included is accounted for by lumber and building supply houses, coal and fuel dealers, and milk dealers, which are usually found in isolated locations where low rent and railroad facilities are available, rather than on principal streets. On the other hand, a very great majority of the stores not included are little neighborhood shops doing only one or two thousand dollars of business a year, which are a small factor in the city's retail distribution.
