Applications will be reviewed and scored with the following criteria.

• Academic Performance (40 Points)

Applicants are rated according to their academic performance as evidenced by transcripts and faculty evaluations. In cases where a particular applicant's school has a policy not to rank students academically, faculty members are asked to provide a personal judgment of the applicant's achievement. Preparatory, Pre-graduate and Health Professions applicants with a cumulative GPA below 2.0 are not eligible for award.

• Faculty/Employer Recommendations (30 Points)

Applicants are rated according to evaluations by faculty members, current and/or former employers and Tribal officials regarding the applicant's potential in the chosen health related professions.

• Stated Reasons for Asking for the Scholarship and Stated Career Goals Related to the Needs of the IHS (30 Points)

Applicants must provide a brief written explanation of reasons for asking for the scholarship and of their career goals. Applicants are considered for scholarship awards based on their desired career goals and how these goals relate to current Indian health personnel needs.

The applicant's narrative will be judged on how well it is written and its content.

Applications for each health career category are reviewed and ranked separately.

• Applicants who are closest to graduation or completion of training are awarded first. For example, senior and junior applicants under the Health Professions Pre-graduate Scholarship receive funding before freshmen and sophomores.

• Priority Categories

The following is a list of health professions that will be considered for funding in each scholarship program in FY 2014.

○ Indian Health Professions Preparatory Scholarships

A. Pre-Clinical Psychology (Jr. and Sr. undergraduate years only).
B. Pre-Nursing.
C. Pre-Pharmacy.
D. Pre-Social Work (Jr. and Sr. preparing for an MS in social work).

○ Indian Health Professions Pre-Graduate Scholarships

A. Pre-Dentistry.
B. Pre-Medicine.
C. Pre-Optometry.
D. Pre-Podiatry.

○ Indian Health Professionals Scholarship

A. Bio Medical Engineering—BS. (Jr. and Sr. undergraduate years only).
B. Bio Medical Technology—AAS.
C. Chemical Dependency Counseling—Master's Degrees.
D. Clinical Psychology—Ph.D. or Psy.D.
E. Coding Specialist—AAS degree.
F. Dentistry: DDS or DMD degrees.
G. Diagnostic Radiology Technology: Associates and B.S.
H. Environmental Health/Sanitarian: B.S. (Jr. and Sr. undergraduate years only).
I. Health Records Administration: R.H.I.T. (A.A.S.) and R.H.I.A (B.S.).
J. Medical Technology: B.S. (Jr. and Sr. undergraduate years only).
K. Medicine: Allopathic and Osteopathic.
L. Nurse: Associate and Bachelor Degrees and advanced degrees in Psychiatry, Geriatric, Women's Health, Pediatric Nursing, Midwifery, Nurse Anesthetist, and Nurse Practitioner. (Priority consideration will be given to Registered Nurses employed by the IHS; in a program conducted under a contract or compact entered into under the Indian Self-Determination Act and Education Assistance Act (Pub. L. 93–638) and its amendments; or in a program assisted under Title V of the IHCIA).
M. Optometry: O.D.
N. Pharmacy: Pharm.D.
O. Physician Assistant: PA–C.
P. Physical Therapy: M.S. and D.P.T.
Q. Podiatry: D.P.M.
R. Public Health Nutritionist: M.S.
S. Respiratory Therapy: B.S. Degree.
T. Social Work: Masters Level only (Direct Practice and Clinical concentrations).
U. Ultrasonography (Prerequisite: Diagnostic Radiology Technology degree/certificate).

2. Review and Selection Process

The applications will be reviewed and scored by the IHS Scholarship Program's Application Review Committee appointed by the IHS. Reviewers will not be allowed to review an application from his/her Area or his/her own Tribe. Each application will be reviewed by three reviewers. The average score of the three reviews provides the final Ranking Score for each applicant. To determine the ranking of each applicant, these scores are sorted from the highest to the lowest within each scholarship health discipline by date of graduation and score. If several students have the same date of graduation and score within the same discipline, computer ranking list will randomly sort and will not be sorted by alphabetical name. Selections are then made from the top of each ranking list to the extent that funds allocated by the IHS among the three scholarships are available for obligation.

VI. Award Administration Information

1. Award Notices

It is anticipated that recipients applying for extension of their scholarship funding will be notified in writing during the first week of June 2014 and new applicants will be notified in writing during the first week of July 2014. An Award Letter will be issued to successful applicants. Unsuccessful applicants will be notified in writing, which will include a brief explanation of the reason(s) the application was not successful and provide the name of the IHS official to contact if more information is desired.

2. Administrative and National Policy Requirements

Regulations at 42 CFR § 136.304 provide that the IHS shall, from time to time, publish a list of allied health professions eligible for consideration for the award of IHS Indian Health Professions Preparatory and Pre-graduate Scholarships and IHS Health Professions Scholarship. Section 104(b)(1) of the IHCIA, 25 U.S.C. 1613a(b)(1), authorizes the IHS to determine the distribution of scholarships among the health professions.

Awards for the Indian Health Professions Scholarships will be made in accordance 42 CFR 136.330–136.334. Awardees shall incur a service obligation prescribed under the IHCIA, Section 1613a(b), which shall be met by service, through full-time clinical practice:

(1) In the IHS;

(2) In a program conducted under a contract or compact entered into under the Indian Self-Determination Act and Education Assistance Act (Pub. L. 93–638) and its amendments;

(3) In a program assisted under Title V of the Indian Health Care Improvement Act (Pub. L. 94–437) and its amendments; or

(4) In a private practice option of his or her profession if the practice (a) is situated in a health professional shortage area, designated in regulations promulgated by the Secretary of Health and Human Services (Secretary) and (b) addresses the health care needs of a substantial number (75% of the total served) of Indians as determined by the Secretary in accordance with guidelines of the Service.

Pursuant to the IHCIA Section 1613a(b)(3)(C), an awardee of an IHS Health Professions Scholarship may, at the election of the awardee, meet his/her service obligation prescribed under IHCIA Section 1613a(b) by a program specified in options (1)–(4) above that:

(i) Is located on the reservation of the Tribe in which the awardee is enrolled; or

(ii) Serves the Tribe in which the awardee is enrolled, if there is an open vacancy available in the discipline for which the awardee was funded under the IHS Health Professions Scholarship during the required 90-day placement period.

In summary, all awardees of the Indian Health Professions Scholarship are reminded that acceptance of this scholarship will result in a service obligation required by both statute and contract, which must be performed, through full-time clinical practice, at an approved service payback facility. The Acting Director reserves the right to make final decisions regarding assignment of scholarship recipients to fulfill their service obligation.

Moreover, the Acting Director, IHS, has the authority to make the final determination, designating a facility, whether managed and operated by IHS, or one of its Tribal or Urban Indian partners, consistent with IHCIA, as approved for scholar obligated service payback.

3. Reporting

Scholarship Program Minimum Academic Requirements

It is the policy of the IHS that a scholarship awardee funded under the Health Professions Scholarship Program of the Indian Health Care Improvement Act must maintain a 2.0 cumulative GPA, remain in good academic standing each semester/trimester/quarter, maintain full-time student status (Institutional definition of 'minimum hours' constituting full-time enrollment applies) or part-time student status (Institutional definition of 'minimum and maximum' hours constituting part-time enrollment applies) for the entire academic year, as indicated on the scholarship application submitted for that academic year. The Health Professions awardee may not change his or her enrollment status between terms of enrollment, during the same academic year. New recipients may not request a Leave of Absence during the first year of their funding. In addition to these requirements, a Health Professions Scholarship awardee must be enrolled in an approved/accredited school for a Health Professions degree.

An awardee of a scholarship under the IHS Health Professions Preparatory and Health Professions Pre-Graduate Scholarship authority must maintain a minimum 2.0 cumulative GPA, remain in good standing each semester/trimester/quarter and be a full-time student (Institutional definition of 'minimum hours' constituting full-time enrollment applies, typically 12 credit hours per semester) or a part-time student (Institutional definition of 'minimum and maximum' hours constituting part-time enrollment applies, typically 6–11 credit hours). The Preparatory and Pre-graduate awardee may not change from part-time status to full-time status or vice versa in the same academic year. New recipients may not request a Leave of Absence during the first year of their funding.

The following reports must be sent to the IHSSP at the identified time frame. Each scholarship awardee will have access to an online Recipient Handbook and required program forms and instructions on when, how, and to whom these must be submitted, by logging into the IHSSP Web site at *www.ihs.gov/scholarship*. If a scholarship awardee fails to submit these forms and reports as required, they will be ineligible for continuation of scholarship support and scholarship award payments will be discontinued.

A. Recipient's Enrollment and Initial Progress Report

Within thirty (30) days from the beginning of each semester/trimester/quarter, scholarship awardees must submit a Recipient's Enrollment and Initial Progress Report (Form IHS–856–8; page 69 of the Student Handbook).

B. Transcripts

Within thirty (30) days from the end of each academic period, i.e., semester/trimester/quarter, or summer session, scholarship awardees must submit an Official Transcript showing the results of the classes taken during that period.

C. Notification of Academic Problem/Change

If at any time during the semester/trimester/quarter, scholarship awardees are advised to reduce the number of credit hours for which they are enrolled below the minimum of the 12 (or the number of hours considered by their school as full-time) for a full-time student or at least six hours for part-time students; or if they experience academic problems, they must submit this report (Form IHS–856–9, page 71 of the Student Handbook).

D. Change of Status

- Change of Academic Status

Scholarship awardees must immediately notify their Scholarship Program Analyst if they are placed on academic probation, dismissed from school, or voluntarily withdraw for any reason (personal or medical).

- Change of Health Discipline

Scholarship awardees may not change from the approved IHSSP health discipline during the school year. If an unapproved change is made, scholarship payments will be discontinued.

- Change in Graduation Date

Any time that a change occurs in a scholarship awardee's expected graduation date, they must notify their Scholarship Program Analyst immediately in writing. Justification must be attached from the school advisor.

VII. Agency Contacts

1. Questions on the application process may be directed to the appropriate IHS Area Scholarship Coordinator.

2. Questions on other programmatic matters may be addressed to: Dr. Dawn A. Kelly, Chief, Scholarship Program, 801 Thompson Avenue, TMP 450A, Rockville, Maryland 20852, Telephone: (301) 443–6197 (This is not a toll-free number).

3. Questions on payment information may be directed to: Mr. Craig Boswell, Grants Scholarship Coordinator, Division of Grants Management, Indian Health Service, 801 Thompson Avenue, TMP 360, Rockville, Maryland 20852, Telephone: (301) 443–0243 (This is not a toll-free number).

VIII. Other Information

The Public Health Service (PHS) is committed to achieving the health promotion and disease prevention objectives of *Healthy People 2020*, a PHS-led activity for setting priority areas. This program announcement is related to the priority area of Education and Community-Based Programs. Potential applicants may download a copy of *Healthy People 2020* from *http://www.healthypeople.gov*.

Interested individuals are reminded that the list of eligible health and allied professions is effective for applicants for the 2014–2015 academic year. These priorities will remain in effect until superseded. Applicants who apply for health career categories not listed as priorities during the current scholarship cycle will not be considered for a scholarship award.

Dated: December 13, 2013.

Yvette Roubideaux,

Acting Director, Indian Health Service.

National Institutes of Health

Center For Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel Member Conflict: AIDS and AIDS Related Research.

Date: January 6, 2014.

Time: 2:00 p.m. to 3:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Robert Freund, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5216, MSC 7852, Bethesda, MD 20892, 301–435–1050, *freundr@csr.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: Center for Scientific Review Special Emphasis Panel Cellular Neurosciences.

Date: January 6, 2014.

Time: 3:00 p.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Peter B Guthrie, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4142, MSC 7850, Bethesda, MD 20892, (301) 435–1239, *guthriep@csr.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: Center for Scientific Review Special Emphasis Panel Member Conflict: AIDS and AIDS Related Research.

Date: January 7–8, 2014.

Time: 10:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: Robert Freund, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5216, MSC 7852, Bethesda, MD 20892, 301–435–1050, *freundr@csr.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: Center for Scientific Review Special Emphasis Panel Member Conflict: AIDS and AIDS Related Research.

Date: January 8–9, 2014.

Time: 10:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: Robert Freund, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5216, MSC 7852, Bethesda, MD 20892, 301–435–1050, *freundr@csr.nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: Center for Scientific Review Special Emphasis Panel Member Conflict: Cell Biology.

Date: January 14, 2014.

Time: 2:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Rass M Shayiq, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institute of Health, 6701 Rockledge Drive, Room 2182, MSC 7818, Bethesda, MD 20892, (301) 435–2359, *shayiqr@csr.nih.gov.*

(Catalogue of Federal Domestic Assistance Program Nos. 93.306, Comparative Medicine; 93.333, Clinical Research, 93.306, 93.333, 93.337, 93.393–93.396, 93.837–93.844, 93.846–93.878, 93.892, 93.893, National Institutes of Health, HHS)

Dated: December 23, 2014.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Access to Recovery (ATR) Program (OMB No. 0930–0266)—Extension

The Center for Substance Abuse Treatment (CSAT) is charged with the Access to Recovery (ATR) program which will allow grantees (States, Territories, the District of Columbia and Tribal Organizations) a means to implement voucher programs for substance abuse clinical treatment and recovery support services. The ATR program is part of a Presidential initiative to: (1) Provide client choice among substance abuse clinical treatment and recovery support service providers, (2) expand access to a comprehensive array of clinical treatment and recovery support options (including faith-based programmatic options), and (3) increase substance abuse treatment capacity. Monitoring outcomes, tracking costs, and preventing waste, fraud and abuse to ensure accountability and effectiveness in the use of Federal funds are also important elements of the ATR program. Grantees, as a contingency of their

award, are responsible for collecting Voucher Information (VI) and Voucher Transaction (VT) data from their clients.

The primary purpose of this data collection activity is to meet the reporting requirements of the Government Performance and Results Act (GPRA) by allowing SAMHSA to quantify the effects and accomplishments of SAMHSA programs. The following table is an estimated annual response burden for this effort.

ESTIMATES OF ANNUALIZED HOUR BURDEN [1]

Center/form/respondent type	Number of respondent	Responses per respondent	Total responses	Hours per response	Total hour burden	Total wage cost	Total hour Cost/respondent [1]
Voucher information and transaction	53,333	1.5	80,000	.03	2,400	$18.40	$44,160

[1] This table represents the maximum additional burden if adult respondents for ATR provide responses/data at an estimated hourly wage (from 2010 Bureau of Labor Statistics).

Send comments to Summer King, SAMHSA Reports Clearance Officer, Room 2–1057, One Choke Cherry Road, Rockville, MD 20857 or email her a copy at *summer.king@samhsa.hhs.gov*. Written comments should be received by February 25, 2014.

Summer King,

Statistician.

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Project: Voluntary Customer Satisfaction Surveys to Implement Executive Order 12862 in the Substance Abuse and Mental Health Services Administration (SAMHSA)—(OMB No. 0930–0197)—Extension

Executive Order 12862 directs agencies that "provide significant services directly to the public" to "survey customers to determine the kind and quality of services they want and their level of satisfaction with existing services." SAMHSA provides significant services directly to the public, including treatment providers and State substance abuse and mental health agencies, through a range of mechanisms, including publications, training, meetings, technical assistance and Web sites. Many of these services are focused on information dissemination activities. The purpose of this submission is to extend the existing generic approval for such surveys.

The primary use for information gathered is to identify strengths and weaknesses in current service provisions by SAMHSA and to make improvements that are practical and feasible. Several of the customer satisfaction surveys expected to be implemented under this approval will provide data for measurement of program effectiveness under the Government Performance and Results Act (GPRA). Information from these customer surveys will be used to plan and redirect resources and efforts to improve or maintain a high quality of service to health care providers and members of the public. Focus groups may be used to develop the survey questionnaire in some instances.

The estimated annual hour burden is as follows:

Type of data collection	Number of Respondents	Responses/ Respondent	Hours/ Response	Total hours
Focus groups	250	1	2.50	625
Self-administered, mail, telephone and e-mail surveys	89,750	1	.250	22,438
Total	90,000			23,063

Written comments and recommendations concerning the proposed information collection should be sent by January 27, 2014 to: SAMHSA Desk Officer, Human Resources and Housing Branch, Office of Management and Budget, New Executive Office Building, Room 10235, Washington, DC 20503; due to potential delays in OMB's receipt and processing of mail sent through the U.S. Postal Service, respondents are encouraged to submit comments by fax to: 202–395–7285.

Summer King,

Statistician.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2013–0002]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final notice.

SUMMARY: New or modified Base (1% annual-chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard

Area (SFHA) boundaries or zone designations, and/or the regulatory floodway (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities. The flood hazard determinations modified by each LOMR will be used to calculate flood insurance premium rates for new buildings and their contents.

DATES: The effective date for each LOMR is indicated in the table below.

ADDRESSES: Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at *www.msc.fema.gov.*

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard determinations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

These new or modified flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities.

These new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings, and for the contents in those buildings. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each community or online through the FEMA Map Service Center at *www.msc.fema.gov.*

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2013–0002]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final Notice.

SUMMARY: New or modified Base (1% annual-chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, and/or the regulatory floodway (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities. The flood hazard determinations modified by each LOMR will be used to calculate flood insurance premium rates for new buildings and their contents.

DATES: The effective date for each LOMR is indicated in the table below.

ADDRESSES: Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at *www.msc.fema.gov.*

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering

Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard determinations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

These new or modified flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities.

These new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings, and for the contents in those buildings. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each community or online through the FEMA Map Service Center at *www.msc.fema.gov.*

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–3354–EM; Docket ID FEMA–2013–0001]

New Jersey; Amendment No. 5 to Notice of an Emergency Declaration

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice amends the notice of an emergency declaration for State of New Jersey (FEMA–3354–EM), dated October 28, 2012, and related determinations.

DATES: Effective December 13, 2013.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, William L. Vogel, of FEMA is appointed to act as the Federal Coordinating Officer for this emergency.

This action terminates the appointment of Gracia B. Szczech as Federal Coordinating Officer for this emergency.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant,

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

Proposed Flood Hazard Determinations for Plaquemines Parish, Louisiana and Incorporated Areas, and St. Charles Parish, Louisiana and Incorporated Areas

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice; withdrawal.

SUMMARY: The Federal Emergency Management Agency (FEMA) is withdrawing its proposed notice concerning proposed flood hazard determinations, which may include the addition or modification of any Base Flood Elevation, base flood depth, Special Flood Hazard Area boundary or

zone designation, or regulatory floodway on the Flood Insurance Rate Maps, and where applicable, in the supporting Flood Insurance Study reports for Plaquemines Parish, Louisiana, and Incorporated Areas, and St. Charles Parish, Louisiana, and Incorporated Areas.

DATES: This withdrawal is effective December 27, 2013.

ADDRESSES: You may submit comments, identified by Docket No. FEMA–B–1301, to Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov*.

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov*.

SUPPLEMENTARY INFORMATION: On April 4, 2013, FEMA published proposed notices at 78 FR 20340 and 78 FR 20341 proposing flood hazard determinations in Plaquemines Parish, and St. Charles Parish, Louisiana, respectively. FEMA is withdrawing both of the proposed notices.

Authority: 42 U.S.C. 4104; 44 CFR 67.4.

Dated: November 22, 2013.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2013–0002; Internal Agency Docket No. FEMA–B–1239]

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice; correction.

SUMMARY: On March 28, 2012, FEMA published in the **Federal Register** a proposed flood hazard determination notice that contained an erroneous table. This notice provides corrections to that table, to be used in lieu of the information published. The table provided here represents the proposed flood hazard determinations and communities affected for Cowlitz County, Washington, and Incorporated Areas.

DATES: Comments are to be submitted on or before March 27, 2014.

ADDRESSES: The Preliminary Flood Insurance Rate Map (FIRM), and where applicable, the Flood Insurance Study (FIS) report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *www.msc.fema.gov* for comparison.

You may submit comments, identified by Docket No. FEMA–B–1239, to Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov.*

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed in the table below, in accordance with Section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the table below. Any request for reconsideration of the revised flood hazard determinations shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations will also be considered before the FIRM and FIS report are made final.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP may only be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at *http://floodsrp.org/pdfs/srp_fact_sheet.pdf.*

The communities affected are listed in the table below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *www.msc.fema.gov* for comparison.

Correction

In the proposed flood hazard determination notice published at 77 FR 18844 in the March 28, 2012, issue of the **Federal Register**, FEMA published a table titled "Cowlitz County, Washington, and Incorporated Areas." The table contained inaccurate information as to the online location for the Preliminary FIRM and FIS report and the building name for the Community Map Repository address for the City of Woodland. In addition, revisions to the Preliminary FIRM have since been made and posted to the online location published as part of this notice. In this notice, FEMA is publishing a table containing the accurate information. The information provided below should be used in lieu of that previously published.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2013–0002; Internal Agency Docket No. FEMA–B–1348]

Proposed Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report, once effective, will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings.

DATES: Comments are to be submitted on or before March 27, 2014.

ADDRESSES: The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *www.msc.fema.gov* for comparison.

You may submit comments, identified by Docket No. FEMA–B–1348, to Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov.*

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) *Luis.Rodriguez3@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *www.floodmaps.fema.gov/fhm7/fmx_main.html.*

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at *http://floodsrp.org/pdfs/srp_fact_sheet.pdf.*

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *www.msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5684–N–08]

60-Day Notice of Proposed Information Collection: HUD Environmental Review Online System (HEROS)

AGENCY: Office of Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* February 25, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410–5000; telephone 202–402–3400

(this is not a toll-free number) or email at *Colette.Pollard@hud.gov* for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

FOR FURTHER INFORMATION CONTACT: Danielle Schopp, Director, Office of Environment and Energy, Department of Housing and Urban Development, 451 7th Street SW., Room 7250, Washington, DC 20410–7000. For telephone and email communication, contact Elizabeth Zepeda, Environmental Planning Division, (202) 402–3988 or email: *elizabeth.g.zepeda@hud.gov*. This phone number is not toll-free. Hearing or speech-impaired individuals may access this number via TTY by calling the toll-free Federal Information Relay Service at 1–800–877–8339. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: HUD Environmental Review Online System (HEROS).

OMB Approval Number: 2506-New.

Type of Request: New.

Description of the need for the information and proposed use: 224 CFR Part 58, "Environmental Review Procedures for Entities Assuming HUD Environmental Responsibilities" requires units of general local government receiving HUD assistance to maintain a written environmental review record for all projects receiving HUD funding documenting compliance with the National Environmental Policy Act (NEPA), the regulations of the Council on Environmental Quality, related federal environmental laws, executive orders, and authorities, and Part 58 procedure. Various laws that authorize this procedure are listed in 24 CFR 58.1(b).

In the past, HUD recipients were allowed to prepare their environmental review records using HUD recommended formats or equivalent formats. Now, HUD is developing a new online tool called the HUD Environmental Review Online System (HEROS), which will allow users to complete, store, and submit their environmental review records online. HUD's intention is HEROS will improve HUD's environmental reviews in a number of ways. First, it will replace HUD's many environmental review forms and requirements with one single format housed online with guidance integrated throughout to simplify the process and assist new employees in the preparation of their reviews. Second, HUD plans to increase transparency and overall compliance with NEPA by posting many environmental review records online for public review through HEROS. Finally, storing recipients' records in HEROS will allow HUD to collect data on environmental compliance for the first time. Once completed, HUD intends to make HEROS the only permitted format in most cases.

24 CFR Part 50, "Protection and Enhancement of Environmental Quality," implements procedures for HUD to perform environmental reviews for projects where Part 58 is not permitted by law. Under Part 50, HUD staff complete the environmental review records, but they may use any information supplied by an applicant or contractor, provided HUD independently evaluates the information and is responsible for its accuracy and prepares the environmental finding. There is no current format for applicants and contractors to submit required information, but HEROS would allow these parties to submit environmental information to HUD staff through the system as well. HUD staff will then use HEROS to complete the environmental review record.

Respondents (i.e. affected public): The respondents are state and local governments receiving HUD funding who are required to complete environmental reviews.

Estimation of the total number of hours to prepare the information collection including number of respondents, frequency of response and hours of response:

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
Total	2,500	5	12,500	1	12,500	30	$375,000

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: December 19, 2013.

Mark Johnston,

Deputy Assistant Secretary for Special Needs Program.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5690–N–19]

60-Day Notice of Proposed Information Collection: Consolidated Public Housing Certification of Completion

AGENCY: Office of the Assistant Secretary for Public and Indian Housing, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice

is to allow for 60 days of public comment.

DATES: *Comments Due Date:* February 25, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410–5000; telephone 202–402–3400 (this is not a toll-free number) or email at *Colette.Pollard@hud.gov* for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

FOR FURTHER INFORMATION CONTACT: Arlette Mussington, Office of Policy, Programs and Legislative Initiatives, PIH, Department of Housing and Urban Development, 451 7th Street SW., (L'Enfant Plaza, Room 2206), Washington, DC 20410; telephone 202–402–4109, (this is not a toll-free number). Persons with hearing or speech impairments may access this number via TTY by calling the Federal Information Relay Service at (800) 877–8339. Copies of available documents submitted to OMB may be obtained from Ms. Mussington.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Consolidated Public Housing Certification of Completion.

OMB Approval Number: 2577–0021.

Type of Request: extension of currently approved collection.

Form Number: N/A.

Description of the need for the information and proposed use: Public Housing Agencies (PHAs) certify to HUD that contract requirements and standards have been satisfied in a project development and HUD can allow the PHA to make payment to the development contractor. The Certification is submitted by a Public Housing Agency (PHA) to indicate to HUD that contract requirements have been satisfied for a specific project.

Respondents (i.e. affected public): Public Housing Authorities.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
Certification	58	1	58	1.0	58	$25	$1,450
Total	58	1	58	1.0	58	25	1,450

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: December 20, 2013.

Deb Gross,

Deputy Assistant Secretary, Office of Policy, Programs and Legislative Initiatives.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5681–N–50]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers

interested in any such property should send a written expression of interest to HHS, addressed to Theresa Ritta, Office of Enterprise Support Programs, Program Support Center, HHS, Room 12–07, 5600 Fishers Lane, Rockville, MD 20857; (301) 443–2265. (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (i.e., acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: *Agriculture:* Ms. Debra Kerr, Department of Agriculture, Reporters Building, 300 7th Street SW., Room 300, Washington, DC 20024, (202) 720–8873; *Air Force:* Ms. Connie Lotfi, Air Force Real Property Agency, 2261 Hughes Avenue, Suite 156, Lackland AFB, TX 78236–9852, (210) 395–9512; *Army:* Ms. Veronica Rines, Office of the Assistant Chief of Staff for Installation Management, Department of Army, Room 5A128, 600 Army Pentagon, Washington, DC 20310, (571) 256–8145; *Coast Guard:* Commandant, United States Coast Guard, Attn: Jennifer Stomber, 2100 Second St. SW., Stop 7901, Washington, DC 20593–0001; (202) 475–5609; *Energy:* Mr. David Steinau, Department of Energy, Real Estate Division (MA–651), Office of Property Management, 1000 Independence Ave. SW., Washington, DC 20585, (202) 287–1503; *GSA:* Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040, Washington, DC 20405, (202) 501–0084; *Interior:* Mr. Michael Wright, Acquisition & Property Management, Department of the Interior, MS–4262, 1849 C Street, Washington, DC 20240, (202) 513–0795; *Navy:* Mr. Steve Matteo, Department of the Navy, Asset Management Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685–9426 (There are not toll-free numbers).

Dated: December 19, 2013.

Mark Johnston,

Deputy Assistant Secretary for Special Needs.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[L61400000.ER0000/LLOR936000]

Renewal of Approved Information Collection

AGENCY: Bureau of Land Management, Interior.

ACTION: 30-day notice and request for comments.

SUMMARY: The Bureau of Land Management (BLM) has submitted an information collection request to the Office of Management and Budget (OMB) to continue the collection of information from private landowners in western Oregon who are authorized to transport timber over roads controlled by the BLM. The Office of Management and Budget (OMB) previously approved this information collection activity, and assigned it control number 1004–0168.

DATES: The OMB is required to respond to this information collection request within 60 days but may respond after 30 days. For maximum consideration, written comments should be received on or before January 27, 2014.

ADDRESSES: Please submit comments directly to the Desk Officer for the Department of the Interior (OMB #1004–0168), Office of Management and Budget, Office of Information and Regulatory Affairs, fax 202–395–5806, or by electronic mail at *OIRA_submission@omb.eop.gov*. Please provide a copy of your comments to the BLM. You may do so via mail, fax, or electronic mail.

Mail: U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

Fax: to Jean Sonneman at 202–245–0050.

Electronic mail: Jean_Sonneman@blm.gov.

Please indicate "Attn: 1004–0168" regardless of the form of your comments.

FOR FURTHER INFORMATION CONTACT: Dustin Wharton at 541–471–6659. Persons who use a telecommunication device for the deaf may call the Federal Information Relay Service at 1–800–877–8339, to leave a message for Mr. Wharton. You may also review the information collection request online at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: The Paperwork Reduction Act (44 U.S.C. 3501–3521) and OMB regulations at 5 CFR part 1320 provide that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond. In order to obtain and renew an OMB control number, Federal agencies are required to seek public comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d) and 1320.12(a)).

As required at 5 CFR 1320.8(d), the BLM published a 60-day notice in the **Federal Register** on September 16, 2013 (78 FR 56925), and the comment period ended November 15, 2013. The BLM received no public comments in response to this notice. The BLM now requests comments on the following subjects:

1. Whether the collection of information is necessary for the proper functioning of the BLM, including whether the information will have practical utility;
2. The accuracy of the BLM's estimate of the burden of collecting the information, including the validity of the methodology and assumptions used;
3. The quality, utility and clarity of the information to be collected; and
4. How to minimize the information collection burden on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other forms of information technology.

Please send comments as directed under **ADDRESSES** and **DATES**. Please refer to OMB control number 1004–1068 in your correspondence. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information is provided for the information collection:

Title: Tramroads and Logging Roads (43 CFR part 2810).

OMB Control Number: 1004–0168.

Summary: This collection pertains to rights-of-way on public lands in western Oregon that were returned to the United States after being conveyed for construction of the Oregon & California Railroad. The BLM Oregon State Office has authority under the Act of August 28, 1937 (43 U.S.C. 1181a and 1181b) and subchapter V of the Federal Land Policy and Management Act (43 U.C.C. 1761–1771) to grant rights-of-way to private landowners to transport their timber over roads controlled by the BLM. The information collected under this control number enables the BLM to calculate and collect appropriate fees for this use of public lands.

Frequency of Collection: Annually, biannually, quarterly, or monthly, depending on the terms of the pertinent right-of-way.

Forms: Form 2812–6, Report of Road Use.

Description of Respondents: Private landowners who hold rights-of-way for the use of BLM-controlled roads in western Oregon.

Estimated Annual Responses: 272.

Estimated Annual Burden Hours: 2,176.

Estimated Annual Non-Hour Costs: None.

The estimated annual burdens for respondents are itemized in the following table:

A. Type of response and 43 CFR Citation	B. Number of responses	C. Hours per response	D. Total hours (column B × column C)
Form OR–2812–6, Report of Road Use 43 CFR 2812.3 and 43 CFR 2812.5	272	8	2,176
Total	272	8	2,176

Jean Sonneman,
Bureau of Land Management, Information Collection Clearance Officer.

[LLWY9300000 L16100000.DP0000.LXSISGST0000]

Notice of Availability of the Wyoming Greater Sage-Grouse Draft Land Use Plan Amendments and Draft Environmental Impact Statement

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended, and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) and the US Forest Service (USFS) have prepared the Wyoming Greater Sage-Grouse Draft Land Use Plan (LUP) Amendments and Draft Environmental Impact Statement (EIS) for the BLM Casper, Kemmerer, Newcastle, Pinedale, Rawlins, and Rock Springs field offices and Bridger-Teton National Forest, Medicine Bow National Forest, and Thunder Basin National Grassland Planning Units and by this notice is announcing the opening of the comment period.

DATES: To ensure that comments will be considered, the BLM and USFS must receive written comments on the Draft LUP Amendments/Draft EIS within 90 days following the date the Environmental Protection Agency publishes notice of the Draft LUP Amendments/Draft EIS in the **Federal Register**. The BLM and USFS will announce future meetings or hearings and any other public participation activities at least 15 days in advance through public notices, media releases, and/or mailings.

ADDRESSES: You may submit comments related to the Wyoming Greater Sage-Grouse Draft LUP Amendments/Draft EIS by any of the following methods:

- *Web site: www.blm.gov/wy/st/en/programs/Planning/amendments/sage-grouse.html*
- *Email: Sagegrouse_Amendment_WY@blm.gov*
- *Fax:* 307–775–6129
- *Mail:* BLM Wyoming State Office, 5353 Yellowstone Road, Cheyenne, WY 82003.

Copies of the Wyoming Greater Sage-Grouse Draft LUP Amendments/Draft EIS are available at the BLM Wyoming State Office at the above address or on the Web site at: *www.blm.gov/wy/st/en/programs/Planning/amendments/sage-grouse.html*

FOR FURTHER INFORMATION CONTACT: Lisa Solberg Schwab, Wyoming Greater Sage-Grouse Amendment Project Manager, by telephone, 307–367–5340; at the address above; or by email, *lsolbergschwab@blm.gov.*

Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The BLM prepared the Wyoming Greater Sage-Grouse Draft LUP Amendments/Draft EIS to address a range of alternatives focused on specific conservation measures across the Wyoming range of the Greater Sage-grouse (GRSG). This Draft LUP Amendments/Draft EIS is one of 15 separate planning efforts that are being undertaken as part of the BLM and USFS National Greater Sage-grouse Planning Strategy. The Draft LUP Amendments/Draft EIS may amend the RMPs for the BLM Casper, Kemmerer, Newcastle, Pinedale, Rawlins and Rock Springs field offices, as well as the LRMPs for the Bridger-Teton and Medicine Bow National Forests and the Thunder Basin National Grassland. Current management decisions for resources are described in the following RMPs/LRMPs:

- Casper RMP (2007)
- Kemmerer RMP (2010)
- Newcastle RMP (2000)
- Pinedale RMP (2008)
- Rawlins RMP (2008)
- Green River RMP (1997) (being revised under the Rock Springs RMP)
- Bridger-Teton National Forest LRMP (1990)
- Medicine Bow National Forest LRMP (2003)
- Thunder Basin National Grassland LRMP (2002)

The EIS planning area includes approximately 40 million acres of BLM, National Park Service, USFS, U.S. Bureau of Reclamation, State, local, and private lands located in northwestern, southwestern, southeastern, and northeastern Wyoming in 11 counties (Albany, Carbon, Converse, Fremont, Lincoln, Natrona, Niobrara, Sublette, Sweetwater, Uinta and Weston). Within the EIS decision area, the BLM and the USFS administer approximately 16 million surface acres and 16 million acres of Federal oil and gas mineral (subsurface) estate. Surface management decisions made as a result of this Draft LUP Amendments/Draft EIS will apply only to the BLM- and the USFS-administered lands in the decision area. The decision area is defined as those BLM- and USFS-administered lands and Federal mineral estate within three categories of habitat identified by the Wyoming Game and Fish Department:

- Core Habitat—Areas identified as having the highest conservation value for maintaining sustainable GRSG populations, including breeding, late brood-rearing and winter concentration areas.
- General Habitat—Areas of seasonal or year-round habitat outside of priority habitat.
- Connectivity Habitat—Areas identified as broader regions of connectivity important to facilitating the movement of GRSG and maintain ecological processes.

The formal public scoping process for the LUP Amendments/EIS began on December 9, 2011, with the publication of a Notice of Intent in the **Federal Register** (76 FR 77008), and ended on March 23, 2012. The BLM held five scoping open houses in January and February 2011. The BLM used public scoping comments to help identify planning issues that directed the formulation of alternatives and framed the scope of analysis in the Draft LUP Amendments/Draft EIS. The scoping process was also used to introduce the public to preliminary planning criteria, which set limits on the scope of the Draft LUP Amendments/Draft EIS.

Major issues considered in the Draft LUP Amendments/Draft EIS include special status species management (GRSG specifically), energy and mineral development, lands and realty (including transmission), livestock grazing, fire, wild horses, vegetation management, special management areas (ACEC nominations), socioeconomics (particularly impacts to local communities) and invasive species.

The Draft LUP Amendments/Draft EIS evaluates five alternatives in detail, including the No Action Alternative (Alternative A) and four action alternatives (Alternatives B, C, D, and E). The BLM identified Alternative E as the preferred alternative. Identification of this alternative, however, does not represent final agency direction, and the Proposed LUP Amendments/Final EIS may reflect changes or adjustments based on information received during public comment, from other new information, or from changes in BLM policies or priorities. The Proposed LUP

Amendments/Final EIS may include objectives and actions described in the other analyzed alternatives or otherwise within the spectrum of the alternatives analyzed.

Alternative A would retain the current management goals, objectives, and direction specified in the current RMPs for each field office and the LRMPs for the Bridger-Teton, Medicine Bow, and Thunder Basin National Forests/Grasslands. Alternative B includes conservation measures from the Greater Sage-grouse National Technical Team Report. Alternative C includes conservation measures submitted by various conservation groups to the BLM. Alternative C also includes the proposed adoption of an Area of Critical Environmental Concern (ACEC). Alternatives D and E include conservation measures the BLM developed with the cooperating agencies.

Pursuant to 43 CFR 1610.7–2(b), this notice announces a concurrent public comment period on proposed ACECs. One ACEC is proposed in Alternative C. The Sage-grouse Habitat ACEC (approximately 9,876,565 acres) would include the following management prescriptions: Close to fluid mineral leasing; designate as a right-of-way exclusion area; close to livestock grazing; allow vegetation treatments only for the benefit of GRSG; and recommend withdrawal from mineral entry to the Secretary of the Interior.

Please note that public comments and information submitted including names, street addresses and email addresses of persons who submit comments will be available for public review and disclosure at the above address during regular business hours (8 a.m. to 4 p.m.), Monday through Friday, except holidays.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLMT926000–L13100000–EI0000]

Notice of Filing of Plats of Survey; North Dakota

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of filing of plats of survey.

SUMMARY: The Bureau of Land Management (BLM) will file the plat of survey of the lands described below in the BLM Montana State Office, Billings, Montana, on January 27, 2014.

DATES: Protests of the survey must be filed before January 27, 2014 to be considered.

ADDRESSES: Protests of the survey should be sent to the Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101–4669.

FOR FURTHER INFORMATION CONTACT: Blaise Lodermeier, Cadastral Surveyor, Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101–4669, telephone (406) 896–5128 or (406) 896–5009, *bloderme@blm.gov*. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: This survey was executed at the request of the BLM Montana State Office, Division of Resources, and was necessary to determine federal leasable mineral lands.

The lands we surveyed are:

Fifth Principal Meridian, North Dakota

T. 153 N., R. 93 W.

The plat, in three sheets, representing the supplemental plat of secs. 8, 18, 20, 26, 28, 33, and 35, showing the amended lottings, Township 153 North, Range 93 West, Fifth Principal Meridian, North Dakota, was accepted December 18, 2013.

T. 153 N., R. 98 W.

The plat, in four sheets, representing the supplemental plat of secs. 11, 12, 13, 14, 21, 22, 23, 24, 26, 27, 28, 29, 30, 31, and 32, showing the amended lottings, Township 153 North, Range 98 West, Fifth Principal Meridian, North Dakota, was accepted December 18, 2013.

T. 153 N., R. 100 W.

The plat, in four sheets, representing the supplemental plat of secs. 5, 6, 7, 8, 9, 27, 28, 29, 32, 33, 34, and 35, showing the amended lottings, Township 153 North, Range 100 West, Fifth Principal Meridian, North Dakota, was accepted December 20, 2013.

T. 154 N., R. 100 W.

The plat, in one sheet, representing the supplemental plat of sec. 31, showing the amended lottings, Township 154 North, Range 100 West, Fifth Principal Meridian, North Dakota, was accepted December 20, 2013.

T. 153 N., R. 101 W.

The plat, in four sheets, representing the supplemental plat of secs. 1, 6, 7, 17, 18, 19, 20, and 30, showing the amended lottings, Township 153 North, Range 101 West, Fifth Principal Meridian, North Dakota, was accepted December 23, 2013.

T. 154 N., R. 101 W.

The plat, in two sheets, representing the supplemental plat of secs. 25, 32, 33, 34, 35, and 36, showing the amended lottings, Township 154 North, Range 101 West, Fifth Principal Meridian, North Dakota, was accepted December 23, 2013.

We will place a copy of the plats, in 18 sheets, in the open files. They will be available to the public as a matter of information. If the BLM receives a protest against this survey, as shown on these plats, in 18 sheets, prior to the date of the official filing, we will stay the filing pending our consideration of the protest. We will not officially file these plats, in 18 sheets, until the day after we have accepted or dismissed all protests and they have become final, including decisions or appeals.

Authority: 43 U.S.C. Chap. 3.

Joshua F. Alexander,

Acting Chief Cadastral Surveyor, Division of Resources.

[FR Doc. 2013–31059 Filed 12–26–13; 8:45 am]

BILLING CODE 4310–DN–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–DPOL–14067; PPWODIREP0; PPMPSPD1Y.YM0000]

Charter Renewal for the National Park System Advisory Board

AGENCY: National Park Service, Interior.

ACTION: Charter renewal.

SUMMARY: The Secretary of the Interior intends to renew the charter for the National Park System Advisory Board, in accordance with section 14(b) of the Federal Advisory Committee Act. This action is necessary and in the public interest in connection with the performance of statutory duties imposed upon the Department of the Interior and the National Park Service.

FOR FURTHER INFORMATION CONTACT: Shirley Sears, 202–354–3955.

SUPPLEMENTARY INFORMATION: The Board was established initially by section 3 of the Act of August 21, 1935 (49 Stat. 667; 16 U.S.C. 463), and has been in existence almost continuously since then. Pursuant to Public Law 111–8, the legislative authorization for the Board expired January 1, 2010. However, due to the importance of the issues on which the Board advises, the Secretary of the Interior exercised the authority contained in Section 3 of Public Law 91–383 (16 U.S.C. 1a–2 (c) to re-establish and continue the Board as a discretionary committee from January 1, 2010, until such time as it may be legislatively reauthorized. If the Board is reauthorized legislatively within 2 years of the date of the renewal charter, the Board will revert to a legislative Board.

The advice and recommendations provided by the Board and its subcommittees fulfill an important need within the Department of the Interior and the National Park Service, and it is necessary to re-establish the Board to ensure its work is not disrupted. The Board's twelve members will be balanced to represent a cross-section of disciplines and expertise relevant to the National Park Service mission. The renewal of the Board comports with the requirements of the Federal Advisory Committee Act, as amended.

Certification: I hereby certify that the renewal of the National Park System Advisory Board is necessary and in the public interest in connection with the performance of duties imposed on the Department of the Interior by the National Park Service Organic Act (16 U.S.C. 1 et seq.), and other statutes relating to the administration of the National Park Service.

Dated: December 18, 2013.

Sally Jewell,

Secretary of the Interior.

BILLING CODE 4310–EE–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–863]

Certain Paper Shredders, Certain Processes for Manufacturing or Relating to Same and Certain Products Containing Same and Certain Parts Thereof; Commission Determination Not To Review an Initial Determination Terminating the Investigation Based on a Settlement Agreement, Consent Order, and Withdrawal of the Complaint; Termination of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination ("ID") (Order No. 6) issued by the presiding administrative law judge ("ALJ") on November 20, 2013, terminating the investigation based on a settlement agreement, a consent order, and the withdrawal of the complaint.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708–5468. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov*. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on January 25, 2013, based on a complaint filed by Fellowes, Inc., and Fellowes Office Products (Suzhou) Co. Ltd. 78 FR 5496–97. The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 ("section 337"), in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain shredders, by reason of the infringement of certain claims of U.S. Design Patent Nos. D583,859 and D598,048, and the misappropriation of certain trade secrets. The Commission's notice of investigation named as respondents New United Co. Group Ltd.; Jiangsu New United Office Equipments Co. Ltd.; Shenzhen Elite Business Office Equipment Co. Ltd.; Elite Business Machines Ltd.; New United Office Equipment USA, Inc.; Jiangsu Shinri Machinery Co. Ltd. (collectively, the "New United" respondents); and the individuals Zhou Licheng, Randall Graves, and "Jessica" Wang Chongge (collectively, the "Individual" respondents). The Office of Unfair Import Investigation ("OUII") was named a party to the investigation.

On November 7, 2013, all complainants and respondents ("the private parties") jointly moved to terminate the investigation. The private parties moved to terminate the investigation with respect to the New United respondents based on a settlement agreement and consent order, and to terminate the investigation with respect to the Individual respondents based on a withdrawal of the complaint. The private parties attached a Consent Order Stipulation, a Proposed Consent Order, and a Settlement Agreement to their motion, and represented that there are no other agreements, written or oral, express or implied between the parties concerning the subject matter of the investigation. On November 18, 2013, OUII filed a response supporting the motion.

On November 20, 2013, the ALJ issued the subject ID, granting the motion and terminating the investigation. The ALJ found that the motion complied with Commission rules, and that the public interest factors did not weigh against granting the motion.

The Commission has determined not to review the subject ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: December 20, 2013.

Lisa R. Barton,

Acting Secretary to the Commission.

[FR Doc. 2013–30959 Filed 12–26–13; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–895]

Certain Multiple Mode Outdoor Grills and Parts Thereof; Commission Determination Not To Review an Initial Determination Granting Complainant's Motion To Amend the Complaint and Notice of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review the presiding administrative law judge's ("ALJ") initial determination ("ID") (Order No. 12) granting the Complainant's motion to amend the Complaint and the Notice of Investigation.

FOR FURTHER INFORMATION CONTACT: Amanda Pitcher Fisherow, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2737. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov*. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov*. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on September 26, 2013, based on a complaint filed on behalf of A&J Manufacturing, LLC of St. Simons, Georgia and A&J Manufacturing, Inc. of Green Cove Springs, Florida. 78 FR 59373 (Sept. 26, 2013). The complaint alleged violations of Section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the sale for importation, importation, or sale within the United States after importation of certain multiple mode outdoor grills and parts thereof by reason of infringement of certain claims of U.S. Patent No. 8,381,712, U.S. Patent No. D660,646, and U.S. Patent No. D662,773 patent. The Commission's notice of investigation named as respondents Kamado Joe Company of Duluth, Georgia; Outdoor Leisure Products, Incorporated of Neosho, Missouri; Rankam Group of Gardena, California; Academy Ltd., d/b/a/Academy Sports + Outdoors of Katy, Texas; HEB Grocery Company, LP, d/b/a H–E–B of San Antonio, Texas; Kmart Corporation of Hoffman Estates, Illinois; Sears Brands Management Corporation, Sears Holdings Corporation, and Sears, Roebuck & Company, all of Hoffman Estates, Illinois; Tractor Supply Company of Brentwood, Tennessee; Guangdong Canbo Electrical Co., Ltd. of Foshan City, China; Chant Kitchen Equipment (HK), Ltd. of Jordan, Hong Kong; Dongguan Kingsun Enterprises Co., Ltd. of Dongguan City, China; Zhejiang Fudeer Electric Appliance Co., Ltd. of Taizhou Economic Development Zone, China; Ningbo Huige Outdoor Products Co., Ltd. of Fenghua City, China; Keesung Manufacturing Co., Ltd. of Panyu, China; Ningbo Spring Communication Technologies Co. Ltd. of Ningbo, China; Wuxi Joyray International Corporation of Wuxi, China; The Brinkmann Corporation of Dallas, Texas; W.C. Bradley Company of Columbus, Georgia; and GHP Group, Incorporated of Morton Grove, Illinois.

On November 19, 2013, Complainants filed an unopposed motion to amend the Complaint and Notice of Investigation. Complainants A&J sought to amend the Complaint and Notice of Investigation to (1) change the name of Respondent Kamado Joe Company to Premier Specialty Brands, LLC, (2) change the name of Respondent Rankam Group to Rankam Metal Products Manufactory Limited, USA, and (3) substitute Char-Broil, LLC for Respondent W.C. Bradley Co. A&J represented that Kamado Joe Company is a trade name for the legal entity Premier Specialty Brands, LLC; Rankam Metal Products Manufactory Limited, USA is the correct legal name for Rankam Group; and Char-Broil, LLC is a wholly owned subsidiary of W.C. Bradley Co.

On December 4, 2013, the ALJ granted the motion. The ALJ found that good cause exists to amend the Complaint and Notice of Investigation to correct the names of two of the Respondents and substitute Char-Broil, LLC for W.C. Bradley Co. to prevent confusion among the parties and the public by identifying the correct legal names of the parties in interest. The ALJ also found that the attorneys for the corrected parties were served in compliance with Commission Rule 210.14(b)(1). No petitions for review were filed.

The Commission has determined not to review the subject ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in section 210.42 of the Commission's Rules of Practice and Procedure (19 CFR 210.42).

By order of the Commission.

Issued: December 23, 2013.

Lisa R. Barton,

Acting Secretary to the Commission.

[FR Doc. 2013–31056 Filed 12–26–13; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–509 and 731–TA–1244 (Preliminary)]

1,1,1,2-Tetrafluoroethane From China

Determinations

On the basis of the record [1] developed in the subject investigations, the United States International Trade Commission (Commission) determines, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)) (the Act), that there is a reasonable indication that an industry in the United States is materially injured by reason of imports from China of 1,1,1,2-Tetrafluoroethane, provided for in subheadings 2903.39.20 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value ("LTFV"), and by reason of 1,1,1,2-Tetrafluoroethane that are allegedly subsidized by the Government of China.

Commencement of Final Phase Investigations

Pursuant to section 207.18 of the Commission's rules, the Commission also gives notice of the commencement of the final phase of its investigations. The Commission will issue a final phase notice of scheduling, which will be published in the **Federal Register** as provided in section 207.21 of the Commission's rules, upon notice from the Department of Commerce (Commerce) of affirmative preliminary determinations in the investigations under sections 703(b) or 733(b) of the Act, or, if the preliminary determinations are negative, upon notice of affirmative final determinations in those investigations

[1] The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

under sections 705(a) or 735(a) of the Act. Parties that filed entries of appearance in the preliminary phase of the investigations need not enter a separate appearance for the final phase of the investigations. Industrial users, and, if the merchandise under investigation is sold at the retail level, representative consumer organizations have the right to appear as parties in Commission antidumping and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to the investigations.

Background

On October 22, 2013, a petition was filed with the Commission and Commerce by Mexichem Fluor Inc., St. Gabriel, LA, alleging that an industry in the United States is materially injured or threatened with material injury by reason of LTFV and subsidized imports of 1,1,1,2-Tetrafluoroethane from China. Accordingly, effective October 22, 2013, the Commission instituted countervailing duty investigation No. 701–TA–509 and antidumping duty investigation No. 731–TA–1244 (Preliminary).

Notice of the institution of the Commission's investigations and of a public conference to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of October 28, 2013 (78 FR 64243). The conference was held in Washington, DC, on November 12, 2013, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission transmitted its determinations in these investigations to the Secretary of Commerce on December 13, 2013. The views of the Commission are contained in USITC Publication 4444 (December 2013), entitled *1,1,1,2-Tetrafluoroethane from China, Investigation Nos. 701–TA–509 and 731–TA–1244 (Preliminary).*

Issued: December 20, 2013.

By order of the Commission.

Lisa R. Barton,

Acting Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree under the Clean Water Act

On December 19, 2013, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the District of Connecticut in the lawsuit entitled *United States* v. *City of West Haven, Connecticut,* Civil Action No. 3:13–cv–01883–JCH.

In the Complaint the United States, on behalf of the U.S. Environmental Protection Agency (EPA), alleges that the defendant City of West Haven ("West Haven") violated the Clean Water Act ("CWA"), 33 U.S.C. 1251, et seq., and applicable regulations relating to West Haven's unauthorized discharges from the waste water collection system owned and operated by the City. Specifically, the United States alleges that on numerous occasions between January 1, 2007, and December 31, 2011, the collection system experienced sanitary sewer overflows ("SSOs"), resulting in the discharge of untreated municipal wastewater containing pollutants from unpermitted point sources to waters of the United States. The Consent Decree requires West Haven to pay a civil penalty of $125,000 in three installments, with interest, divided between the United States and the State of Connecticut, and to undertake various measures to study and correct the problems causing the SSOs in order to achieve compliance with the CWA and applicable regulations.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States* v. *City of West Haven, Connecticut,* D.J. Ref. No. 90–5–1–1–10543. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By e-mail	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department Web site: *http://www.usdoj.gov/enrd/Consent_Decrees.html.* We will provide a paper copy of the Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $13.00 (25 cents per page reproduction cost), not including Appendices, payable to the United States Treasury.

Maureen Katz,

Assistant Chief, Environmental Enforcement Section, Environment & Natural Resources Division.

BILLING CODE 4410–15–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[OMB Control No. 1219–0024]

Proposed Information Collection; Application for Waiver of Surface Sanitary Facilities' Requirements (Pertaining to Coal Mines)

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed collections of information in accordance with the Paperwork Reduction Act of 1995, 44 U.S.C. 3506(c)(2)(A). This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments on Application for Waiver of Surface Sanitary Facilities' Requirements (Pertaining to Coal Mines).

DATES: All comments must be postmarked or received by midnight Eastern Standard Time on February 25, 2014.

ADDRESSES: Comments concerning the information collection requirements of this notice may be sent by any of the methods listed below.

- *Federal E-Rulemaking Portal: http://www.regulations.gov.* Follow the

on-line instructions for submitting comments for docket number [MSHA–2013–0038].

• *Regular Mail:* Send comments to MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, VA 22209–3939

• *Hand Delivery:* MSHA, 1100 Wilson Boulevard, Room 2176, Arlington, VA.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Deputy Director, Office of Standards, Regulations, and Variances, MSHA, at MSHA.information.collections@dol.gov (email); 202–693–9440 (voice); or 202–693–9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813, authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners.

Title 30 CFR 71.400 through 71.402 and 75.1712–1 through 75.1712–3 require coal mine operators to provide bathing facilities, clothing change rooms, and sanitary flush toilet facilities in a location that is convenient for use of the miners. If the operator is unable to meet any or all of the requirements, he/she may apply for a waiver. Title 30 CFR 71.403, 71.404, 75.1712–4, and 75.1712–5 provide procedures by which an operator may apply for and be granted a waiver. Applications are filed with the District Manager for the district in which the mine is located and must contain the name and address of the mine operator, name and location of the mine, and a detailed statement of the grounds on which the waiver is requested.

Waivers for surface mines may be granted by the District Manager for a period not to exceed one year. If the waiver is granted, surface mine operators may apply for annual extensions of the approved waiver. Waivers for underground mines may be granted by the District Manager for the period of time requested by the underground mine operator as long as the circumstances that were used to justify granting the waiver remain in effect. Waivers are not transferable to a successor coal mine operator.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to the Application for Waiver of Surface Sanitary Facilities' Requirements (Pertaining to Coal Mines). MSHA is particularly interested in comments that:

• Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;

• Evaluate the accuracy of the MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

• Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This information collection request is available on *http://www.msha.gov/regs/fedreg/informationcollection/informationcollection.asp*. The information collection request will be available on MSHA's Web site and on *http://www.regulations.gov*. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on *www.regulations.gov* and *www.reginfo.gov*.

The public may also examine publicly available documents at MSHA, 1100 Wilson Boulevard, Room 2176, Arlington, VA 22209–3939.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

III. Current Actions

This request for collection of information contains provisions for the Application for Waiver of Surface Sanitary Facilities' Requirements (Pertaining to Coal Mines). MSHA has updated the data in respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219–0024.

Affected Public: Business or other for-profit.

Number of Respondents: 887.

Frequency: On occasion.

Number of Responses: 887.

Annual Burden Hours: 368 hours.

Annual Respondent or Recordkeeper Cost: $4,435.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: December 20, 2013.

George F. Triebsch,

Certifying Officer.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[OMB Control No. 1219–0003]

Proposed Information Collection; Radiation Sampling and Exposure Records (Pertains to Underground Metal and Nonmetal Mines)

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995, 44 U.S.C. 3506(c)(2)(A). This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the proposed information collection for updating Radiation Sampling and Exposure Records.

DATES: All comments must be postmarked or received by midnight Eastern Standard Time on February 25, 2014.

ADDRESSES: Comments concerning the information collection requirements of this notice may be sent by any of the methods listed below.

• *Federal E-Rulemaking Portal: http://www.regulations.gov*. Follow the on-line instructions for submitting comments for docket number [MSHA–2013–0003].

• *Regular Mail or Hand Delivery:* MSHA, Office of Standards,

Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, VA 22209–3939. Sign in at the receptionist's desk on the 21st floor.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Deputy Director, Office of Standards, Regulations, and Variances, MSHA, at *McConnell.Sheila.A@dol.gov* (email); 202–693–9440 (voice); or 202–693–9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

Under the authority of Section 103 of the Federal Mine Safety and Health Act of 1977, MSHA is required to issue regulations requiring operators to maintain accurate records of employee exposures to potentially toxic materials or harmful physical agents which are required to be monitored or measured under any applicable mandatory health or safety standard promulgated under this Act.

Airborne radon and radon daughters exist in every uranium mine and in several other underground mining commodities. Radon is radioactive gas. It diffuses into the underground mine atmosphere through the rock and the ground water. Radon decays in a series of steps into other radioactive elements, which are solids, called radon daughters. Radon and radon daughters are invisible and odorless. Decay of radon and its daughters results in emissions of alpha energy.

Medical doctors and scientists have associated high radon daughter exposures with lung cancer. The health hazard arises from breathing air contaminated with radon daughters which are in turn deposited in the lungs. The lung tissues are sensitive to alpha radioactivity.

The amounts of airborne radon daughters to which most miners can be exposed with no adverse effects have been established and are expressed as working levels (WL). The current MSHA standard is a maximum personal exposure of 4 working level months (WLM) per year.

Excess lung cancer in uranium miners, just as coal workers' pneumoconiosis, silicosis, and other debilitating occupational diseases, has been recognized for many years. Thus, an adequate base of accurate exposure level data is essential to control miners' exposures and permit an evaluation of the effectiveness of existing regulations.

The standard at 30 CFR 57.5037 established the procedures to be used by the mine operator in sampling mine air for the presence and concentrations of radon daughters. Operators are required to conduct weekly sampling where concentrations of radon daughters exceed 0.3 WL. Sampling is required bi-weekly where uranium mines have readings of 0.1 WL to 0.3 WL and every 3 months in non-uranium underground mines where the readings are 0.1 WL to 0.3 WL. Mine operators are required to keep records of all mandatory samplings. Records must include the sample date, location, and results, and must be retained at the mine site or nearest mine office for at least 2 years.

The standard at 30 CFR 57.5040 requires mine operators to calculate and record individual exposures to radon daughters on MSHA Form 4000–9 "Record of Individual Exposure to Radon Daughters". The calculations are based on the results of the weekly sampling required by 30 CFR 57.5037. Records must be maintained by the operator and submitted to MSHA annually.

II. Desired Focus of Comments

MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of the MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This information collection request is available on *http://www.msha.gov/regs/fedreg/informationcollection/informationcollection.asp*. The information collection request will be available on MSHA's Web site and on *http://www.regulations.gov*. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on *www.regulations.gov* and *www.reginfo.gov*.

The public may also examine publicly available documents at MSHA, 1100 Wilson Boulevard, Room 2176, Arlington, VA.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for the Proposed Information Collection Request, Radiation Sampling and Exposure Records. MSHA has updated the data in respect to the number of respondents and responses, as well as the total burden hours and burden costs supporting this information collection request.

Type of Review: Extension.
Agency: Mine Safety and Health Administration.
Title: Radiation Sampling and Exposure Records (pertains to underground metal and nonmetal mines).
OMB Number: 1219–0003.
Affected Public: Business or other for-profit.
Form: MSHA Form 4000–9.
Total Number of Respondents: 5.
Frequency: Various.
Total Number of Responses: 505.
Total Burden Hours: 502 hours.
Total Annual Respondent or Recordkeeper Cost Burden: $25.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: December 20, 2013.

George F. Triebsch,

Certifying Officer.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[Docket Number MSHA–2013–0037]

Criteria to Certify Coal Mine Rescue Teams

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Notice.

SUMMARY: This notice informs the public that the Mine Safety and Health Administration (MSHA) has updated the coal mine rescue team certification criteria. The Mine Improvement and New Emergency Response (MINER) Act of 2006 requires MSHA to update these criteria every five years. One of the criteria for a mine operator to certify the qualifications of a coal mine rescue team is that team members are properly

trained annually. MSHA has updated the prescribed instruction guides for annual training of coal mine rescue teams to provide improved advanced mine rescue training by including more hands-on skills training to enhance team performance when responding to an actual mine emergency.

FOR FURTHER INFORMATION CONTACT: George F. Triebsch, Director, Office of Standards, Regulations, and Variances, MSHA, at *triebsch.george@dol.gov* (email); 202–693–9440 (voice); or 202–693–9441 (facsimile). These are not toll-free numbers.

SUPPLEMENTARY INFORMATION:

I. Background

Under title 30 of the Code of Federal Regulations (30 CFR) part 49, underground coal mine operators must designate at least two mine rescue teams to provide mine rescue coverage at an underground coal mine at all times when miners are underground. Underground coal mine operators must annually certify the qualifications of these designated teams. MSHA provides the criteria for certifying the qualifications of coal mine rescue teams under 30 CFR 49.50.

Initial criteria to certify the qualifications of coal mine rescue teams under 30 CFR 49.50 are: (1) Team is available at all times when miners are underground; (2) Except where alternative compliance is permitted, team has five members and one alternate; (3) Members have experience working in an underground coal mine; (4) Team is available within 1-hour ground travel time from the mine rescue station to the mine; (5) Appropriate mine rescue equipment is provided, inspected, tested, and maintained; (6) Members are physically fit; and (7) Members have completed initial training.

The annual criteria to maintain mine rescue team certification under 30 CFR 49.50 are: (1) Members are properly trained annually; (2) Members are familiar with the operations of each covered mine; (3) Members participate in at least two local mine rescue contests annually; (4) Members participate in mine rescue training at each covered mine; and (5) Members are knowledgeable about the operations and ventilation of each covered mine.

The MINER Act requires MSHA to update the criteria to certify the qualifications of mine rescue teams every five years. The revised instruction guides do not change the certification criteria listed above, but rather update the prescribed training that team members need annually to be properly trained. The specific annual training requirements are listed at 30 CFR 49.18(b).

II. Revision of Instruction Guides

The annual training requirements for coal mine rescue teams include § 49.18(b)(4), which requires advanced mine rescue training and procedures as prescribed by MSHA's Office of Educational Policy and Development (EPD). Under this requirement, EPD currently prescribes Instruction Guide IG7, "Advanced Mine Rescue Training—Coal Mines," which includes best practices, handouts, visuals, and text materials for the classroom and activities or exercises for practice using equipment and developing teamwork.

To update this prescribed training, the existing lessons and exercises from the current Instruction Guide IG7 were reorganized and Instruction Guide IG7a, containing new practical exercises, was added. The materials for classroom training are retained as Instruction Guide IG7, "Advanced Mine Rescue Training—Coal Mines," and the practice exercises are moved to new Instruction Guide IG7a, "Advanced Skills Training—Activities for Coal Mine Rescue Teams." Instruction Guide IG7a also contains new exercises to assure practice on skills a team would need in a mine emergency, as well as expectations training.

MSHA published a notice in the **Federal Register** (78 FR 58567) announcing the availability of the revised instruction guides on the Agency's Web site and soliciting comments to assure that the revised instruction guides would improve the quality and effectiveness of instruction and skills training for coal mine rescue teams. The comment period closed on November 25, 2013.

MSHA received five comments from industry, state government, academia, and a mine rescue association. One commenter stated that IG7a provides a good basic format for mine rescue trainers to quickly develop training exercises for their mine rescue teams. This commenter stated that the expectations training in IG7a was important and recommended that MSHA add an expectation that team members can expect delays in movement and exploration in an actual emergency. MSHA recognizes that it is important for team members to expect delays when exploring in an actual emergency due to the time needed to coordinate their movements with the Command Center. MSHA added this expectation to IG7a.

A commenter stated that IG7a should include an exercise in the actual construction of ventilation controls. There are several different types of ventilation controls used in underground coal mining and they vary from mine to mine. In MSHA's experience, training in ventilation controls, already included in IG7, appropriately addresses how to construct a variety of ventilation controls, including temporary and permanent stoppings, air locks, and line brattice.

Another commenter stated that teams would be better trained if the training consisted of actually putting out a fire, being exposed to heat and dense smoke, and spending more time preparing for an actual emergency. MSHA believes that the exercises prescribed in IG7a will provide appropriate training in smoke, fire hose management, and firefighting.

A commenter stated that MSHA should revise IG7a to include a statement that all skills covered in Instruction Guide IG7a can be achieved by participating in a skills contest. Another commenter stated that its teams perform the exercises prescribed in IG7a through participation in a skills contest. MSHA does not require participation in a skills contest. MSHA believes, however, that skills contests provide a valuable training experience for mine rescue teams and encourages teams to participate in these contests. Participation in a skills contest can satisfy the training in IG7a, as long as an exercise is included for each skill area prescribed in IG7a.

A commenter stated that MSHA should revise IG7a to include a smoke tube exercise. This commenter also provided recommendations for additional materials that MSHA should list as needed for several exercises. MSHA revised IG7a to include a smoke tube exercise in which tubes filled with a visible chemical smoke are opened and the escaping smoke is carried away by any air flow. In the Agency's experience, smoke tube training will help prepare teams to determine the ventilation direction and measure speed in areas with low air velocity, which may be encountered in a mine emergency. Where appropriate, MSHA also revised the list of materials needed.

Another commenter stated that the fire hose management and firefighting exercises contained in IG7a are not practical for anthracite mine rescue teams because: (1) Of the coal seam's extreme pitch; (2) anthracite coal requires more heat to combust; (3) anthracite dust does not propagate an explosion; and (4) there are no anthracite mines with electrical face equipment.

MSHA recognizes that underground anthracite mines are unique. Revised IG7a does not include fire hose management or firefighting exercises for mine rescue teams for anthracite coal mines that have no electrical equipment at the face or working section. In MSHA's experience, a mine rescue team would use fire extinguishers, rather than hoses, to fight a fire in an underground anthracite mine due to the pitch of the entry. MSHA believes that appropriate training in the use of fire extinguishers is already provided through the Emergency Response Plans at anthracite mines.

Some commenters stated that the existing requirement that teams train at covered mines two times per year be revised to require training once per year. This requirement was a provision of the MINER Act and is outside the scope of this notice. Another commenter suggested that MSHA revise the guidelines for Mine Emergency Response Drills (MERD) to allow for rescue training in the MERD format without three total teams and a declared winner. Under the existing standard, a local mine rescue contest can be a MERD exercise or a practical simulation exercise. If a mine operator choses a MERD exercise to satisfy the requirements for a local mine rescue contest, the MERD exercise must have three teams and a winner.

In MSHA's experience, revised Instruction Guide IG7 and new Instruction Guide IG7a are resources that will assist coal mine rescue team trainers in providing team members with the necessary knowledge and skills to respond effectively in the event of an emergency. Changes in mine rescue team technologies and practices may necessitate changes in advance mine rescue skills training. When these changes become available, MSHA will provide the public an opportunity to comment.

Beginning in 2014, coal mine rescue teams must complete advanced skills training prescribed in IG7 and IG7a to be properly trained under the criteria for certification of coal mine rescue teams in 30 CFR 49.50.

The comments and the final instruction guides for advanced mine rescue training of coal mine rescue teams are posted on *www.regulations.gov* (docket number MSHA–2013–0037) and on MSHA's Web site at *http://www.msha.gov/MineRescue/Training/TeamTraining.asp.*

Authority: 30 U.S.C. 811, 825(e).

Dated: December 23, 2013.

Joseph A. Main,

Assistant Secretary of Labor for Mine Safety and Health.

BILLING CODE 4510–43–P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Comment Request

AGENCY: National Science Foundation.

ACTION: Submission for OMB Review; Comment Request.

SUMMARY: The National Science Foundation (NSF) has submitted the following information collection requirement to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. This is the second notice for public comment; the first was published in the **Federal Register** at 78 FR 22916, and one comment was received. NSF is forwarding the proposed renewal submission to the Office of Management and Budget (OMB) for clearance simultaneously with the publication of this second notice. The full submission (including comments) may be found at: *http://www.reginfo.gov/public/do/PRAMain.* Comments regarding (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for National Science Foundation, 725 17th Street NW., Room 10235, Washington, DC 20503, and to Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230 or send email to *splimpto@nsf.gov.* Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339, which is accessible 24 hours a day, 7 days a week, 365 days a year (including federal holidays).

Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling 703–292–7556.

NSF may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

SUPPLEMENTARY INFORMATION:

Comments: As required by 5 CFR 1320.8(d), comments on the information collection activities as part of this study were solicited through publication of a 60-Day Notice in the **Federal Register** on April 17, 2013, at 78 FR 22916. We received one comment, to which we here respond.

Commenter: The Council on Governmental Relations (COGR) raised a general concern that additional reporting requirements presented added burden on their members.

Response: The reporting requirements and estimates on the hourly burden were discussed with the management of the Centers. Center Directors and their management staff, the primary respondents to this data collection, were consulted for feedback on the availability of data, frequency of data collection, the clarity of instructions, and the data elements. Their feedback confirmed that the frequency of data collection was appropriate and that they did not provide these data in other data collections. After consideration of this comment, we are moving forward with our submission to OMB.

Title of Collection: Grantee Reporting Requirements for National user facilities managed by the NSF Division of Materials Research.

OMB Approval Number: 3145—NEW.

Type of Request: Intent to seek approval to establish an information collection.

Abstract: The NSF Division of Materials Research (DMR) supports a number of National user facilities that provide specialized capabilities and instrumentation to the scientific community on a competitive proposal basis. In addition to the user program, these facilities support in-house research, development of new instrumentation or techniques, education, and knowledge transfer.

The facilities integrate research and education for students and post-docs

involved in experiments, and support extensive K–12 outreach to foster an interest in Science Technology Engineering and Mathematics (STEM) and STEM careers. Facilities capitalize on diversity through participation in center activities and demonstrate leadership in the involvement of groups underrepresented in science and engineering. National User Facilities will be required to submit annual reports on progress and plans, which will be used as a basis for performance review and determining the level of continued funding. User facilities will be required to develop a set of management and performance indicators for submission annually to NSF via the Research Performance Project Reporting (RPPR) module in Research.gov. These indicators are both quantitative and descriptive and may include, for example, lists of successful proposal and users, the characteristics of facility personnel and students; sources of financial support and in-kind support; expenditures by operational component; research activities; education activities; knowledge transfer activities; patents, licenses; publications; degrees granted to students supported through the facility or users of the facility; descriptions of significant advances and other outcomes of this investment. Such reporting requirements are included in the cooperative agreement, which is binding between the academic institution and the NSF.

Each facility's annual report will address the following categories of activities: (1) Research, (2) education, (3) knowledge transfer, (4) partnerships, (5) diversity, (6) management, and (7) budget issues. For each of the categories the report will describe overall objectives and metrics for the reporting period, challenges or problems the facility has encountered in making progress towards goals, anticipated problems in the following year, and specific outputs and outcomes. Facilities are required to file a final report through the RPPR. Final reports contain similar information and metrics as annual reports, but are retrospective.

Use of the Information: NSF will use the information to continue funding of the DMR national user facilities, and to evaluate the progress of the program.

Estimate of Burden: 790 hours per facility for three national user facilities for a total of 2,370 hours.

Respondents: Non-profit institutions.

Estimated Number of Responses per Report: One from each of the DMR user facilities.

Dated: December 20, 2013.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

NATIONAL SCIENCE FOUNDATION

Advisory Committee for Computer and Information Science and Engineering Notice of Meeting

In accordance with Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation announces the following meeting:

NAME: Advisory Committee for Computer and Information Science and Engineering (1115)

DATE/TIME: January 14, 2014, 3:00 p.m. to 5:00 p.m.

PLACE: National Science Foundation, 4201 Wilson Boulevard, Room 375, Arlington, Virginia 22203

TYPE OF MEETING: Open

CONTACT PERSON: Carmen Whitson, National Science Foundation, 4201 Wilson Boulevard, Suite 1105, Arlington, Virginia 22203 703/292–8900

PURPOSE OF MEETING: To advise NSF on the impact of its policies, programs and activities on the CISE community. To provide advice to the Assistant Director for CISE on issues related to long-range planning, and to form ad hoc subcommittees and working groups to carry out needed studies and tasks.

AGENDA:

- CISE programmatic updates
- Update from Advisory Committee subcommittees
- Status of Fiscal Year 2014 activities
- Closing remarks and wrap up

Dated: December 20, 2013.

Susanne Bolton,

Committee Management Officer.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. NRC–2013–0167]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of pending NRC action to submit an information collection request to the Office of Management and Budget (OMB) and solicitation of public comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment about our intention to request the OMB's approval for renewal of an existing information collection that is summarized below. We are required to publish this notice in the **Federal Register** under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* DOE/NRC Form 741, Nuclear Material Transaction Report and NUREG/BR–0006, Revision 7, "Instructions for Completing Nuclear Material Transaction Reports."

2. *Current OMB approval number:* 3150–0003.

3. *How often the collection is required:* Form 741 is submitted when specified events occur (nuclear materials or source material transfers, receipts, or inventory changes).

4. *Who is required or asked to report:* Persons licensed to possess specified quantities of special nuclear material or source material. Any licensee who ships, receives, or otherwise undergoes an inventory change of special nuclear or source material is required to submit a Form 741 to document the change.

5. *The number of annual respondents: 340.*

6. *The number of hours needed annually to complete the requirement or request:* 12,500.

7. *Abstract:* NRC is required to collect nuclear material transaction information for domestic safeguards use and make it available to the International Atomic Energy Agency (IAEA). Licensees use Form 741 to make inventory and accounting reports for certain source or special nuclear material, or for transfer or receipt of 1 kilogram or more of course material. This form enables the NRC to collect, retrieve, analyze, and submit the data to IAEA to fulfill its reporting responsibilities.

Submit, by February 25, 2014 comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?

2. Is the burden estimate accurate?

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?

The public may examine and have copied for a fee publicly available documents, including the draft supporting statement, at the NRC's Public Document Room, Room O–1F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. The OMB clearance requests are available at the NRC's Web site: *http://www.nrc.gov/public-involve/doc-comment/omb/*. The document will be available on the NRC's home page site for 60 days after the signature date of this notice.

Comments submitted in writing or in electronic form will be made available for public inspection. Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed. Comments submitted should reference Docket No. NRC–2013–0167. You may submit your comments by any of the following methods: Electronic comments go to *http://www.regulations.gov* and search for Docket No. NRC–2013–0167. Mail comments to the NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

Questions about the information collection requirements may be directed to the NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone at 301–415–6258, or by email to *INFOCOLLECTS.Resource@NRC.GOV*.

Dated at Rockville, Maryland, this 20th day of December, 2013.

For the Nuclear Regulatory Commission.

Tremaine Donnell,

NRC Clearance Officer, Office of Information Services.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. NRC–2013–0206]

Agency Information Collection Activities: Submission for the Office of Management and Budget (OMB) Review; Comment Request

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of the OMB review of information collection and solicitation of public comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has recently submitted to OMB for review the following proposal for the collection of information under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35). The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on September 12, 2013 (78 FR 56247). No comments were received.

1. *Type of submission, new, revision, or extension:* Extension.

2. *The title of the information collection:* NRC Form 314, Certificate of Disposition of Materials.

3. *Current OMB approval number:* 3150–0028.

4. *The form number if applicable:* NRC Form 314.

5. *How often the collection is required:* This form is submitted once, when a licensee terminates its license.

6. *Who will be required or asked to report:* Persons holding an NRC license for the possession and use of radioactive byproduct, source, or special nuclear material who are ceasing licensed activities and terminating the license.

7. *An estimate of the number of annual responses:* 136.

8. *The estimated number of annual respondents:* 136.

9. *An estimate of the total number of hours needed annually to complete the requirement or request:* 68.

10. *Abstract:* NRC Form 314 furnishes information to the NRC regarding transfer or other disposition of radioactive material by licensees who wish to terminate their licenses. The information is used by the NRC as part of the basis for its determination that the facility has been cleared of radioactive material before the facility is released for unrestricted use.

The public may examine and have copied for a fee publicly available documents, including the final supporting statement, at the NRC's Public Document Room, Room O–1F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. The OMB clearance requests are available at the NRC's Web site: *http://www.nrc.gov/public-involve/doc-comment/omb/*. The document will be available on the NRC home page site for 60 days after the signature date of this notice.

Comments and questions should be directed to the OMB reviewer listed below by January 27, 2014. Comments received after this date will be considered if it is practical to do so, but assurance of consideration cannot be given to comments received after this date.

Chad Whiteman, Desk Officer, Office of Information and Regulatory Affairs (3150–0028), NEOB–10202, Office of Management and Budget, Washington, DC 20503.

Comments can also be emailed to *Chad_S_Whiteman@omb.eop.gov* or submitted by telephone at 202–395–4718.

The NRC Clearance Officer is Tremaine Donnell, telephone: 301–415–6258.

Dated at Rockville, Maryland, this 19th day of December, 2013.

For the Nuclear Regulatory Commission.

Tremaine Donnell,

NRC Clearance Officer, Office of Information Services.

[FR Doc. 2013–31031 Filed 12–26–13; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. NRC–2013–0166]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of pending NRC action to submit an information collection request to the Office of Management and Budget (OMB) and solicitation of public comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment about our intention to request the OMB's approval for renewal of an existing information collection that is summarized below. We are required to publish this notice in the **Federal Register** under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* DOE/NRC Form 740M, "Concise Note" and NUREG/BR–0006, Revision 7, "Instructions for Completing Nuclear Material Transaction Reports, (DOE/NRC Forms 741 and 740M)."

2. *Current OMB approval number:* 3150–0057.

3. *How often the collection is required:* DOE/NRC Form 740M is requested as necessary to inform the U.S. or the International Atomic Energy Agency (IAEA) of any qualifying statement or exception to any of the data contained in other reporting forms required under the U.S.—IAEA Safeguards Agreement.

4. *Who is required or asked to report:* Persons licensed to possess specified

quantities of special nuclear material or source material, and licensees of facilities on the U.S. Eligible Facilities List who have been notified in writing by the NRC that they are subject to Part 50 of Title 10 of the *Code of Federal Regulations* (10 CFR).

5. *The number of annual respondents:* 15.

6. *The number of hours needed annually to complete the requirement or request:* 113.

7. *Abstract:* Licensees affected by Part 75 and related sections of Parts 40, 50, 70, and 150 are required to submit DOE/NRC Form 740M to inform the U.S. or the IAEA of any qualifying statement or exception to any of the data contained in any of the other reporting forms required under the U.S.—IAEA Safeguards Agreement. The use of the Form 740M enables the NRC to collect, retrieve, analyze, and submit the data to IAEA to fulfill its reporting responsibilities.

Submit, by February 25, 2014, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?

2. Is the burden estimate accurate?

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?

The public may examine and have copied for a fee publicly available documents, including the draft supporting statement, at the NRC's Public Document Room, Room O–1F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. NRC–2013–0270]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of pending NRC action to submit an information collection request to the Office of Management and Budget (OMB) and solicitation of public comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment about our intention to request the OMB's approval for renewal of an existing information collection that is summarized below. We are required to publish this notice in the **Federal Register** under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* Comprehensive Decommissioning Program, Including Annual Data Collection.

2. *Current OMB approval number:* 3150–0206.

3. *How often the collection is required:* Annually.

4. *Who is required or asked to report:* All Agreement States who have signed Section 274(b) Agreements with the NRC.

5. *The number of annual respondents:* 37 (14 Agreement States respondents with sites of interest + 23 Agreement States respondents with no sites of interest).

6. *The number of hours needed annually to complete the requirement or request:* 469 (400 hours from Agreement States with sites of interest + 69 hours from Agreement States with no sites of interest).

7. *Abstract:* Agreement States will be asked to provide information about uranium recovery and complex sites undergoing decommissioning regulated by the Agreement States on an annual basis. The information request will allow the NRC to compile, in a centralized location, more complete information on the status of decommissioning and decontamination in the United States in order to provide a national perspective on decommissioning. The information will be made available to the public by the NRC in order to ensure openness and promote communication to enhance public knowledge of the national decommissioning program. This does not apply to information, such as trade secrets and commercial or financial information provided by the Agreement States, that is considered privileged or confidential. Information such as financial assurance and the status of decommissioning funding would need to be identified by the Agreement State as privileged or confidential, whereupon the NRC would withhold such information from public access and treat it as sensitive or non-sensitive, per the considerations in 10 CFR 2.390 and 9.17. This does not apply to financial assurance or decommissioning funding information that is already available to the public. Although specific details of the funding mechanisms are treated as confidential, beneficial lessons learned regarding the improvement of decommissioning-related funding will be shared with the Agreement States.

Submit, by February 25, 2014, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?

2. Is the burden estimate accurate?

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?

The public may examine and have copied for a fee publicly available documents, including the draft supporting statement, at the NRC's Public Document Room, Room O–1F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. The OMB clearance requests are available at

the NRC's Web site: *http://www.nrc.gov/public-involve/doc-comment/omb/*. The document will be available on the NRC's home page site for 60 days after the signature date of this notice.

Comments submitted in writing or in electronic form will be made available for public inspection. Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed. Comments submitted should reference Docket No. NRC–2013–0270. You may submit your comments by any of the following methods: Electronic comments go to *http://www.regulations.gov* and search for Docket No. NRC–2013–0270. Mail comments to the NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

Questions about the information collection requirements may be directed to the NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone at 301–415–6258, or by email to *INFOCOLLECTS.Resource@NRC.GOV*.

Dated at Rockville, Maryland, this 20th day of December, 2013.

For the Nuclear Regulatory Commission.

Tremaine Donnell,

NRC Clearance Officer, Office of Information Services.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–295 and 50–304; NRC–2011–0145]

Zion Solutions, LLC; Zion Nuclear Power Station, Units 1 and 2; Exemption From Certain Physical Security Requirements

1.0 Background

Zion Nuclear Power Station (ZNPS) Units 1 and 2 were permanently shut down in February 1998, for economic reasons. On February 13, 1998, ComEd, the licensee at that time, submitted a letter certifying the permanent cessation of operations at ZNPS, Units 1 and 2. On March 9, 1998, ComEd submitted a letter certifying the permanent removal of fuel from the reactor vessels at ZNPS. Pursuant to Title 10, *Code of Federal Regulations* (10 CFR) 50.82(a)(2), upon docketing of the certification for permanent cessation of operations and permanent removal of fuel from the reactor vessels, the 10 CFR part 50 license no longer authorizes operation of the reactor or emplacement or retention of fuel into the reactor vessel. Subsequently ZNPS was placed in SAFSTOR. SAFSTOR is an NRC approved method of decommissioning a nuclear facility where the nuclear facility is placed and maintained in such condition that the nuclear facility can be safely stored and subsequently decontaminated to safe levels. All irradiated fuel is currently stored in the spent fuel pool at ZNPS. In September 2010, ownership of the permanently shut down facility and responsibility for its decommissioning was transferred to Zion*Solutions* (ZS), a subsidiary of Energy*Solutions*. ZS was established solely for the purpose of acquiring and decommissioning the ZNPS for release for unrestricted use, while transferring the spent nuclear fuel and Greater-Than-Class C (GTCC) radioactive waste to the ZNPS Independent Spent Fuel Storage Installation (ISFSI). As part of the process ZS revised the ZNPS Physical Security Plan (PSP) for the protection of the nuclear material while in transit to, and while stored in, the ISFSI.

On December 2, 2010, ZNPS submitted a letter to the NRC (Document contains sensitive security related information and is not publically available) regarding compliance with the new physical security requirements in 10 CFR 73.55. The December 2, 2010, letter included exemption requests for portions of 10 CFR 73.55 which ZNPS believed no longer applied to their facility due to their permanently shut-down and defueled condition. On November 10, 2011, the NRC issued a letter to ZNPS (Agencywide Documents Access Management System (ADAMS) Accession Number ML112010331) providing the Commission's determination regarding the exemptions which ZNPS requested. During the technical review of the ZNPS exemption request, staff completed a Safety Evaluation Report (SER) (Document contains sensitive security related information and is not publically available). The staff concluded that exemptions from the following provisions should be granted: 10 CFR 73.55(c)(5); 10 CFR 73.55(h)(3)(ii); 10 CFR 73.55(i)(4)(i); 10 CFR 73.55(i)(4)(ii)(G); 10 CFR 73.55(k)(5)(ii); 10 CFR 73.55(k)(5)(iii); 10 CFR 73.55(n)(i); 10 CFR 73.55(n)(ii); 10 CFR 73.55(n)(iii); 10 CFR 73.55(p)(1)(i); and 10 CFR 73.55(p)(ii).

2.0 Request/Action

Section 50.54(p)(1) of 10 CFR states, "The licensee shall prepare and maintain safeguards contingency plan procedures in accordance with Appendix C of part 73 of this chapter for affecting the actions and decisions contained in the Responsibility Matrix of the safeguards contingency plan."

Part 73 of 10 CFR, "Physical Protection of Plant and Materials," provides, "This part prescribes requirements for the establishment and maintenance of a physical protection system which will have capabilities for the protection of special nuclear material at fixed sites and in transit and of plants in which special nuclear material is used." In section 73.55, entitled "Requirements for physical protection of licensed activities in nuclear power reactors against radiological sabotage," paragraph (b)(1) states, "The licensee shall establish and maintain a physical protection program, to include a security organization, which will have as its objective to provide high assurance that activities involving special nuclear material are not inimical to the common defense and security and do not constitute an unreasonable risk to the public health and safety."

By application dated June 18, 2012 (ADAMS Accession No. ML12179A498), as supplemented by letters dated June 5, 2013 (ADAMS Accession No. ML13157A308) and October 4, 2013 (ADAMS Accession No. ML13283A004), ZS submitted a proposed revision to the ZNPS PSP which included a transfer plan that described the ZNPS plan for moving spent fuel currently in wet spent fuel storage to dry cask storage at the ZNPS ISFSI Facility. ZS also submitted the proposed ZNPS ISFSI PSP. Associated with the submittal of the revised and new PSPs, ZS submitted exemption requests from 10 CFR 73.55(c)(5); 10 CFR 73.55(h)(3)(ii); 10 CFR 73.55(i)(4)(i); 10 CFR 73.55(i)(4)(ii)(G); 10 CFR 73.55(k)(5)(ii); and 10 CFR 73.55(k)(5)(iii) for the ZNPS facility and ISFSI.

3.0 Discussion

Pursuant to 10 CFR 73.5, "Specific exemptions," the Commission may grant exemptions from the regulations in this part either at the request of a licensee or on its own initiative as it determines are authorized by law and will not endanger life or property or the common defense and security, and are otherwise in the public interest.

The NRC evaluated the proposed exemptions and documented the review in a Safety Evaluation which contains safeguards information and has been withheld from public disclosure pursuant to 10 CFR 2.390(d)(1).

The NRC determined that the ZNPS ISFSI PSP is adequate, and consistent

with the reduced radiological risk and protective strategy for a decommissioning facility or a stand-alone ISFSI. As discussed in the SER, and consistent with the Commission's authority 10 CFR 73.5, the Commission is issuing exemptions from the following requirements:10 CFR 73.55(c)(5); 10 CFR 73.55(h)(3)(ii); 10 CFR(i)(2); 10 CFR 73.55(i)(4)(i); 10 CFR 73.55(i)(4)(ii)(G); 10 CFR 73.55(k)(5)(ii); 10 CFR 73.55(k)(5)(iii); 10 CFR 73.55(n)(i); 10 CFR 73.55(n)(ii); 10 CFR 73.55(n)(iii); 10 CFR 73.55(p)(1)(i); and 10 CFR 73.55(p)(ii).

In Enclosure 1 to ZNPS letter of October 4, 2013, ZNPS requested that NRC affirm that specific exemptions previously granted to ZNPS for the defueled reactor as also applicable for the ZNPS ISFSI PSP. Specifically, the licensee requested affirmation of the exemptions to the following requirements for the ISFSI PSP: 10 CFR 73.55(b)(3)(i); 10 CFR 73.55(b)(4); 10 CFR 73.55(b)(6); 10 CFR 73.55(b)(9); 10 CFR 73.55(c)(4); 10 CFR 73.55(d)(3)(i); 10 CFR 73.55(e)–(e)(1)(i); 10 CFR 73.55(e)(7)(i)–(ii); 10 CFR 73.55(e)(9)(1)–(vi); 10 CFR 73.55(e)(10)(ii); 10 CFR 73.55(f)(1)–(4); 10 CFR 73.55(h)(2); 10 CFR 73.55(i); 10 CFR 73.55(i)(2); and 10 CFR 73.55(k)(1).

The ZNPS ISFSI PSP is, however, a stand-alone security plan that has been evaluated against the requirements of 10 CFR part 73. No application of a previous exemption is necessary.

Based on the evaluation in the associated safety evaluation, which considered the permanently shut-down and defueled conditions at the ZNPS, and the new ZNPS ISFSI facility where the fuel will be located within the protected area of the dry storage facility, the NRC has concluded that: (1) there is reasonable assurance that the health and safety of the public will not be endangered by granting said exemptions; (2) such activities will be conducted in compliance with the Commission's regulations and orders; and (3) the approval of these exemptions will not be inimical to the common defense and security or the health and safety of the public and are otherwise in the public interest. These conclusions are discussed in greater detail in the staff's SER.

4.0 Conclusion

Accordingly, the Commission has determined that, pursuant to 10 CFR 73.5, an exemption is authorized by law, will not endanger life or property or the common defense and security, and is otherwise in the public interest based on permanently shut down and defueled conditions at the ZNPS. Therefore, the Commission hereby grants ZionSolutions an exemption from the requirements of 10 CFR part 73 as delineated above.

Pursuant to 10 CFR 51.22(c)(25), the Commission has determined the granting of these exemptions is categorically excluded and pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared. The exemption involves safeguard plans, as described in 10 CFR 51.22(c)(25)(vi)(F). Approval of this exemption request involves no significant hazards consideration; no significant change in the types or significant increase in the amounts of any effluents that may be released offsite; no significant increase in individual or cumulative public or occupational radiation exposure; no significant construction impact; and no significant increase in the potential for or consequences from radiological accidents.

These exemptions are effective upon issuance.

Dated at Rockville, Maryland, this 13th day of December 2013.

For the Nuclear Regulatory Commission.

Aby Mohseni,

Deputy Director, Environmental Protection and Performance Assessment Directorate, Division of Waste Management and Environmental Protection, Office of Federal and State Materials and Environmental Management Programs.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Request for a License To Export Deuterium

Pursuant to 10 CFR 110.70 (b) "Public Notice of Receipt of an Application," please take notice that the U.S. Nuclear Regulatory Commission (NRC) has received the following request for an export license. Copies of the request are available electronically through ADAMS and can be accessed through the Public Electronic Reading Room (PERR) link *http://www.nrc.gov/reading-rm.html* at the NRC Homepage.

A request for a hearing or petition for leave to intervene may be filed within thirty days after publication of this notice in the **Federal Register**. Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner upon the applicant, the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555; the Office of Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555; and the Executive Secretary, U.S. Department of State, Washington, DC 20520.

A request for a hearing or petition for leave to intervene may be filed with the NRC electronically in accordance with NRC's E-Filing rule promulgated in August 2007, 72 FR 49139 (Aug. 28, 2007). Information about filing electronically is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html*. To ensure timely electronic filing, at least 5 (five) days prior to the filing deadline, the petitioner/requestor should contact the Office of the Secretary by email at *HEARINGDOCKET@NRC.GOV*, or by calling (301) 415–1677, to request a digital ID certificate and allow for the creation of an electronic docket.

In addition to a request for hearing or petition for leave to intervene, written comments, in accordance with 10 CFR 110.81, should be submitted within thirty (30) days after publication of this notice in the **Federal Register** to Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Rulemaking and Adjudications.

The information concerning this export license application follows.

NRC EXPORT LICENSE APPLICATION

[Description of material]

Name of applicant, date of application, date received, application no., docket no.	Material type	Total quantity	End use	Recipient country
Concert Pharmaceuticals, Inc. ..... August 29, 2013 ..... December 5, 2013 ..... XMAT431 ..... 11006131	Heavy water (D_2O)	~20,000.0 kgs	Non-nuclear end-use in active pharmaceutical ingredient manufacturing..	Portugal, Austria

Dated this 20th day of December 2013 in Rockville, Maryland.

For the Nuclear Regulatory Commission.

Stephen Dembek,

Acting Deputy Director, Office of International Programs.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on Materials, Metallurgy & Reactor Fuels; Notice of Meeting

The ACRS Subcommittee on Materials, Metallurgy & Reactor Fuels will hold a meeting on January 14, 2014, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Tuesday, January 14, 2014—1:00 p.m. until 5:00 p.m.

The Subcommittee will discuss fuel research in support of the ACRS Biannual Review and Evaluation of Research Projects. The Subcommittee will hear presentations by and hold discussions with the NRC staff and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Zena Abdullahi (Telephone 301–415–8716 or Email: *Zena.Abdullahi@nrc.gov)* five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on November 8, 2013 (78 FR 67205–67206).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at *http://www.nrc.gov/reading-rm/doc-collections/acrs*. Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the Web site cited above or by contacting the identified DFO. Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

If attending this meeting, please enter through the One White Flint North building, 11555 Rockville Pike, Rockville, MD. After registering with security, please contact Mr. Theron Brown (Telephone 240–888–9835) to be escorted to the meeting room.

Dated: December 18, 2013.

Cayetano Santos,

Chief, Technical Support Branch, Advisory Committee on Reactor Safeguards.

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on Materials, Metallurgy & Reactor Fuels; Notice of Meeting

The ACRS Subcommittee on Materials, Metallurgy & Reactor Fuels will hold a meeting on January 14, 2014, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Tuesday, January 14, 2014–8:30 a.m. Until 12:00 p.m.

The Subcommittee will discuss the NRC's research activities in materials and metallurgy. The Subcommittee will hear presentations by and hold discussions with the NRC staff and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Christopher Brown (Telephone 301–415–7111 or Email: *Christopher.Brown@nrc.gov*) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting

that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on November 8, 2013 (78 CFR 67205–67206).

Advisory Committee on Reactor Safeguards (ACRS); Meeting of the ACRS Subcommittee on Reliability & PRA; Notice of Meeting

The ACRS Subcommittee on Reliability & PRA will hold a meeting on January 15, 2014, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, January 15, 2014—8:30 a.m. until 5:00 p.m.

The Subcommittee will be briefed on the progress of Human Reliability Analysis (HRA) methods. The Subcommittee will hear presentations by and hold discussions with the NRC staff and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), John Lai (Telephone 301–415–5197 or Email: *John.Lai@nrc.gov*) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. NUCLEAR REGULATORY COMMISSION

Request for a License To Export; Deuterium

Pursuant to 10 CFR 110.70 (b) "Public Notice of Receipt of an Application," please take notice that the Nuclear Regulatory Commission (NRC) has received the following request for an export license. Copies of the request are available electronically through ADAMS and can be accessed through the Public Electronic Reading Room (PERR) link *http://www.nrc.gov/reading-rm.html* at the NRC Homepage.

A request for a hearing or petition for leave to intervene may be filed within thirty days after publication of this notice in the **Federal Register**. Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner upon the applicant, the office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555; the Office of Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555; and the Executive Secretary, U.S. Department of State, Washington, DC 20520.

A request for a hearing or petition for leave to intervene may be filed with the NRC electronically in accordance with NRC's E-Filing rule promulgated in August 2007, 72 Fed. Reg 49139 (Aug. 28, 2007). Information about filing electronically is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* To ensure timely electronic filing, at least 5 (five) days prior to the filing deadline, the petitioner/requestor should contact the Office of the Secretary by email at *HEARINGDOCKET@NRC.GOV*, or by calling (301) 415–1677, to request a digital ID certificate and allow for the creation of an electronic docket.

In addition to a request for hearing or petition for leave to intervene, written comments, in accordance with 10 CFR 110.81, should be submitted within thirty (30) days after publication of this notice in the **Federal Register** to Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Rulemaking and Adjudications.

The information concerning this export license application follows.

NRC EXPORT LICENSE APPLICATION

[Description of material]

Name of applicant, date of application, date received, application no., docket No.	Material type	Total quantity	End use	Recipient country
Matheson Tri Gas, Inc., October 15,2013, November 12, 2013, XMAT430, 11006125.	Deuterium (Heavy Hydrogen).	14,000.0 kgs	Non-nuclear end-use for semiconductor devices.	Republic of Korea, Taiwan.

Dated this 16th day of December 2013 in Rockville, Maryland.

For the Nuclear Regulatory Commission.

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2014–12 and CP2014–16; Order No. 1919]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing requesting the addition of Priority Mail Express Contract 16 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* December 30, 2013.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov*. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*, the Postal Service filed a formal request and associated supporting information to add Priority Mail Express Contract 16 to the competitive product list.[1] The Postal Service asserts that Priority Mail Express Contract 16 is a competitive product "not of general applicability" within the meaning of 39 U.S.C. 3632(b)(3). *Id.* at 1. The Request has been assigned Docket No. MC2014–12.

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. *Id.* Attachment B. The instant contract has been assigned Docket No. CP2014–16.

Request. To support its Request, the Postal Service filed six attachments as follows:

- Attachment A—a redacted copy of Governors' Decision No. 11–6, authorizing the new product;
- Attachment B—a redacted copy of the contract;
- Attachment C—proposed changes to the Mail Classification Schedule competitive product list with the addition underlined;
- Attachment D—a Statement of Supporting Justification as required by 39 CFR 3020.32;
- Attachment E—a certification of compliance with 39 U.S.C. 3633(a); and
- Attachment F—an application for non-public treatment of materials to maintain redacted portions of the contract and related financial information under seal.

In the Statement of Supporting Justification, Dennis R. Nicoski, Manager, Field Sales Strategy and Contracts, asserts that the contract will cover its attributable costs, make a positive contribution to covering institutional costs, and increase contribution toward the requisite 5.5 percent of the Postal Service's total institutional costs. *Id.* Attachment D at 1. Mr. Nicoski contends that there will be no issue of market dominant products subsidizing competitive products as a result of this contract. *Id.*

Related contract. The Postal Service included a redacted version of the related contract with the Request. *Id.* Attachment B. The contract is scheduled to become effective one business day following the day that the Commission issues all necessary regulatory approval. *Id.* at 3. The contract will expire three years from the effective date unless, among other things, either party terminates the agreement upon 30 days' written notice to the other party or renewed by mutual written agreement. *Id.* at 4. The contract also allows two 90-day extensions of the agreement if the preparation of a successor agreement is active and the Commission is notified within at least seven days of the contract's expiration date. *Id.* The Postal Service represents that the contract is consistent with 39 U.S.C. 3633(a).[2]

The Postal Service filed much of the supporting materials, including the related contract, under seal. *Id.* Attachment F. It maintains that the redacted portions of the Governors' Decision, contract, customer-identifying information, and related financial information, should remain confidential. *Id.* at 3. This information includes the price structure, underlying costs and assumptions, pricing formulas, information relevant to the customer's mailing profile, and cost coverage projections. *Id.* The Postal Service asks the Commission to protect customer-identifying information from public disclosure indefinitely. *Id.* at 7.

II. Notice of Filings

The Commission establishes Docket Nos. MC2014–12 and CP2014–16 to consider the Request pertaining to the proposed Priority Mail Express Contract 16 product and the related contract, respectively.

Interested persons may submit comments on whether the Postal Service's filings in the captioned

[1] Request of the United States Postal Service to Add Priority Mail Express Contract 16 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data, December 19, 2013 (Request).

[2] Although the Request appears to state that the certification only pertains to paragraphs (1) and (3) of 39 U.S.C. 3633(a), the certification itself contains an assertion that the prices are in compliance with 39 U.S.C. 3633(a)(1), (2), and (3). *See* Request at 2; Attachment E.

dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than December 30, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Pamela A. Thompson to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2014–12 and CP2014–16 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Pamela A. Thompson is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. Comments by interested persons in these proceedings are due no later than December 30, 2013.

4. The Secretary shall arrange for publication of this order in the **Federal Register.**

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2014–11 and CP2014–15; Order No. 1918]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing requesting the addition of Priority Mail Contract 73 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* December 30, 2013.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov*. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*, the Postal Service filed a request and associated supporting information to add Priority Mail Contract 73 to the competitive product list.[1] The Postal Service asserts that Priority Mail Contract 73 is a competitive product "not of general applicability" within the meaning of 39 U.S.C. 3632(b)(3). Request at 1. The Request has been assigned Docket No. MC2014–11.

The Postal Service contemporaneously filed a redacted contract related to the proposed new product. *Id.* Attachment B. The instant contract has been assigned Docket No. CP2014–15.

Request. To support its Request, the Postal Service filed six attachments as follows:

- Attachment A—a redacted copy of Governors' Decision No. 11–6, authorizing the new product;
- Attachment B—a redacted copy of the contract;
- Attachment C—proposed changes to the Mail Classification Schedule competitive product list with the addition underlined;
- Attachment D—a Statement of Supporting Justification as required by 39 CFR 3020.32;
- Attachment E—a certification of compliance with 39 U.S.C. 3633(a); and
- Attachment F—an application for non-public treatment of materials to maintain redacted portions of the contract and related financial information under seal.

In the Statement of Supporting Justification, Dennis R. Nicoski, Manager, Field Sales Strategy and Contracts, asserts that the contract will cover its attributable costs and increase contribution toward the requisite 5.5 percent of the Postal Service's total institutional costs. *Id.* Attachment D at 1. Mr. Nicoski contends that there will be no issue of market dominant products subsidizing competitive products as a result of this contract. *Id.*

Related contract. The Postal Service included a redacted version of the related contract with the Request. *Id.* Attachment B. The contract is scheduled to become effective on "January 10, 2014, after the Commission issues all necessary regulatory approval." *Id.* at 3. The contract will expire two years from the effective date unless, among other things, either party terminates the agreement upon 90 days' written notice to the other party or the contract is renewed by mutual written agreement. *Id.* The contract also allows two 90-day extensions of the agreement if the preparation of a successor agreement is active and the Commission is notified within at least seven days of the contract's expiration date. *Id.* The Postal Service represents that the contract is consistent with 39 U.S.C. 3633(a).[2]

The Postal Service filed much of the supporting materials, including the related contract, under seal. *Id.* Attachment F. It maintains that the redacted portions of the Governors' Decision, contract, customer-identifying information, and related financial information should remain confidential. *Id.* at 3. This information includes the price structure, underlying costs and assumptions, pricing formulas, information relevant to the customer's mailing profile, and cost coverage projections. *Id.* The Postal Service asks the Commission to protect customer-identifying information from public disclosure indefinitely. *Id.* at 7.

II. Notice of Filings

The Commission establishes Docket Nos. MC2014–11 and CP2014–15 to consider the Request pertaining to the proposed Priority Mail Contract 73 product and the related contract, respectively.

Interested persons may submit comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than December 30, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Manon A. Boudreault to serve as Public Representative in these dockets.

III. Request for Supplemental Information

Section I.F. of the contract provides that the contract "will be measured and adjusted quarterly." Request, Attachment B at 2. The first contract

[1] Request of the United States Postal Service to Add Priority Mail Contract 73 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data, December 19, 2013 (Request).

[2] Although the Request appears to state that the certification only pertains to paragraphs (1) and (3) of 39 U.S.C. 3633(a), the certification itself contains an assertion that the prices are in compliance with 39 U.S.C. 3633(a)(1), (2), and (3). *See* Request at 2; Attachment E.

quarter begins on January 1. *Id.* Section I.H.2. of the contract appears to provide for an "annual" price adjustment "following the First Year End Date." *Id.* at 3. In section I.H.1., the First Year End Date is defined as February 1, 2015. *Id.* at 2. The Postal Service is requested to (1) specify whether contract prices will be adjusted on a quarterly basis or an annual basis; (2) provide the date(s) on which the contract prices will be adjusted; and (3) provide a written amendment to the contract, if necessary. The Postal Service response is due no later than December 27, 2013.

IV. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2014–11 and CP2014–15 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Manon A. Boudreault is appointed to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in these proceedings.

3. The response to the request for supplemental information is due no later than December 27, 2013.

4. Comments by interested persons in these proceedings are due no later than December 30, 2013.

5. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

On December 19, 2013, the Postal Service filed notice that it has agreed to an amendment to the existing Priority Mail Express Contract 11 subject to this docket.[1] The Postal Service includes two attachments in support of its Notice:

- Attachment A—a redacted copy of the amendment to the existing Priority Mail Express Contract 11, and
- Attachment B—a certification of compliance with 39 U.S.C. 3633(a).

The Postal Service also filed the unredacted amendment and supporting financial documentation under seal. The Postal Service seeks to incorporate by reference the Application for Non-Public Treatment originally filed in this docket for the protection of information that it has filed under seal. *Id.* at 1.

The amendment modifies the annual adjustment provision by annually adjusting the prices in Table A of Priority Mail Express Contract 11 by the most recent cell by cell increases/decreases in prices of general applicability for Priority Mail Express Commercial Base. *Id.* Attachment A at 1. In addition, the amendment modifies the annual adjustment of Table B, by adjusting the prices by the most recent cell by cell increases/decreases in prices of general applicability for Priority Mail Express Commercial Plus. *Id.* The amendment will become effective one business day following the day that the Commission issues all necessary regulatory approval. *Id.*

II. Notice of Filings

Interested persons may submit comments on whether the changes presented in the Postal Service's Notice are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than December 30, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

Lawrence Fenster, previously designated to serve as Public Representative in this proceeding, will continue in that capacity.[2]

III. Ordering Paragraphs

It is ordered:

1. The Commission reopens Docket No. CP2011–50 for consideration of matters raised by the Postal Service's Notice.

2. Lawrence Fenster, previously designated to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding, will continue in that capacity.

3. Comments are due no later than December 30, 2013.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*, the Postal Service filed a formal request and associated supporting information to add Priority Mail Express Contract 17 to the competitive product list.[1] The Postal Service asserts that Priority Mail Express Contract 17 is a competitive product "not of general applicability" within the meaning of 39 U.S.C. 3632(b)(3). *Id.* at 1. The Request has been assigned Docket No. MC2014–13.

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. *Id.* Attachment B. The instant contract has been assigned Docket No. CP2014–17.

Request. To support its Request, the Postal Service filed six attachments as follows:

- Attachment A—a redacted copy of Governors' Decision No. 11–6, authorizing the new product;
- Attachment B—a redacted copy of the contract;
- Attachment C—proposed changes to the Mail Classification Schedule competitive product list with the addition underlined;
- Attachment D—a Statement of Supporting Justification as required by 39 CFR 3020.32;
- Attachment E—a certification of compliance with 39 U.S.C. 3633(a); and
- Attachment F—an application for non-public treatment of materials to maintain redacted portions of the contract and related financial information under seal.

In the Statement of Supporting Justification, Dennis R. Nicoski, Manager, Field Sales Strategy and Contracts, asserts that the contract will cover its attributable costs, make a positive contribution to covering institutional costs, and increase contribution toward the requisite 5.5 percent of the Postal Service's total institutional costs. *Id.* Attachment D at 1. Mr. Nicoski contends that there will be no issue of market dominant products subsidizing competitive products as a result of this contract. *Id.*

Related contract. The Postal Service included a redacted version of the related contract with the Request. *Id.* Attachment B. The contract will expire three years from the effective date unless, among other things, the customer terminates the agreement, with or without cause and without penalty, upon 60 days' written notice to the other party or the agreement is renewed by mutual written agreement. *Id.* at 4. The contract also allows two 90-day extensions of the agreement if the preparation of a successor agreement is active and the Commission is notified within at least seven days of the contract's expiration date. *Id.* The Postal

[1] Request of the United States Postal Service to Add Priority Mail Express Contract 17 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data, December 19, 2013 (Request).

Service represents that the contract is consistent with 39 U.S.C. 3633(a).[2]

The Postal Service filed much of the supporting materials, including the related contract, under seal. *Id.* Attachment F. It maintains that the redacted portions of the Governors' Decision, contract, customer-identifying information, and related financial information, should remain confidential. *Id.* at 3. This information includes the price structure, underlying costs and assumptions, pricing formulas, information relevant to the customer's mailing profile, and cost coverage projections. *Id.* The Postal Service asks the Commission to protect customer-identifying information from public disclosure indefinitely. *Id.* at 7.

II. Notice of Filings

The Commission establishes Docket Nos. MC2014–13 and CP2014–17 to consider the Request pertaining to the proposed Priority Mail Express Contract 17 product and the related contract, respectively.

Interested persons may submit comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than December 30, 2013. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Curtis E. Kidd to serve as Public Representative in these dockets.

III. Request for Supplemental Information

Section I.B. of the contract defines the "Effective Date" as "the day following the date on which the Commission issues all necessary regulatory approval." Request, Attachment B at 1. Section III of the contract provides that the "Effective Date of this Contract shall be one business day following the day on which the Commission issues all necessary regulatory approval." *Id.* at 4. The Postal Service is requested to clarify which provision is controlling, and, if necessary, file an amendment to the contract. The Postal Service response is due no later than December 27, 2013.

IV. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2014–13 and CP2014–17 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Curtis E. Kidd is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. The response to the request for supplemental information is due no later than December 27, 2013.

4. Comments by interested persons in these proceedings are due no later than December 30, 2013.

5. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

BILLING CODE 7710–12–P

POSTAL SERVICE

Privacy Act of 1974; System of Records

AGENCY: Postal Service™.

ACTION: Notice of modification to existing systems of records.

SUMMARY: The United States Postal Service® (Postal Service) is proposing to modify a General Privacy Act System of Records. These updates will account for an additional data element that the Postal Service uses to identify applicants, as well as how employee and applicant information is retrieved after a complaint or inquiry is received by the Postal Service from an employee or applicant who is deaf or hard of hearing.

DATES: These revisions will become effective without further notice on January 27, 2014 unless comments received on or before that date result in a contrary determination.

ADDRESSES: Comments may be mailed or delivered to the Records Office, United States Postal Service, 475 L'Enfant Plaza SW., Room 9431, Washington, DC 20260–1101. Copies of all written comments will be available at this address for public inspection and photocopying between 8 a.m. and 4 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Matthew J. Connolly, Chief Privacy Officer, Privacy and Records Office, 202–268–8582.

SUPPLEMENTARY INFORMATION: This notice is in accordance with the Privacy Act requirement that agencies publish their amended systems of records in the **Federal Register** when there is a revision, change, or addition. The Postal Service™ has reviewed this system of records and has determined that this General Privacy Act System of Records should be revised to modify categories of records in the system and retrievability.

I. Background

The Postal Service has entered into a settlement to resolve all claims in a national employment discrimination class action lawsuit regarding deaf or hard of hearing employees and applicants. Among other things, the settlement requires the Postal Service to competitively select and enter into a contract with an independent ombudsperson. The ombudsperson will serve for a period of three (3) years, beginning October 29, 2013. In cooperation with the Postal Service Headquarters Disability Program Manager, the ombudsperson will monitor the Postal Service's compliance with the injunctive relief provisions of the settlement through the establishment of a call center and designed email address. Deaf and hard of hearing Postal Service employees will

be advised that they can register a comment or concern about communication accommodation issues via a designated email address and/or through a toll-free number or other device provided by the call center. Deaf and hard of hearing Postal Service employees will further be advised that use of the email address and toll-free number or device to register a comment or concern does not affect their rights to file a grievance or complaint in any other process, nor does it serve as initial contact for any other process such as a grievance or EEO pre-complaint processing pursuant to 29 CFR 1614.105. The Disability Program Manager will provide qualifying deaf and hard of hearing employees and applicants with information regarding how to contact the ombudsperson. Such individuals may register a comment or concern about communication and accommodation issues they have experienced in the workplace or during their employment application process with the Postal Service. To be able to identify and address specific comments and/or concerns, individuals will be asked to supply information specific to them, such as their name, residential addresses, and identification numbers such as their Employee Identification Number (EIN) or Applicant Identification Number (AIN). If necessary, the Ombudsperson will investigate the comments and/or concerns in order to make an independent assessment.

II. Rationale for Changes to USPS Privacy Act Systems of Records

Currently, Postal Service system of records 100.900 Employee Inquiry, Complaint, and Investigative Records does not explicitly permit the Postal Service to collect AINs or retrieve records by AINs or EINs. The system of records 100.900 is being modified to account for the collection of applicant identification numbers from applicants who file an inquiry or complaint with the ombudsperson via the call center or designated email address. Additionally, to facilitate the record location process, retrievability is being updated to include Employee Identification Numbers and Applicant Identification Numbers.

III. Description of Changes to Systems of Records

The Postal Service is modifying one system of records listed below. Pursuant to 5 U.S.C. 552a(e)(11), interested persons are invited to submit written data, views, or arguments on this proposal. A report of the proposed modifications has been sent to Congress and to the Office of Management and Budget for their evaluation. The Postal Service does not expect this amended notice to have any adverse effect on individual privacy rights. The affected systems are as follows:

USPS 100.900

PRESIDIO TRUST

Notice of Public Meeting

AGENCY: The Presidio Trust.

ACTION: Notice of Public Meeting.

SUMMARY: In accordance with § 103(c)(6) of the Presidio Trust Act, 16 U.S.C. 460bb appendix, and in accordance with the Presidio Trust's bylaws, notice is hereby given that a public meeting of the Presidio Trust Board of Directors will be held commencing 6:30 p.m. on Monday, January 27, 2014, at Herbst Hall, 385 Moraga Street, Presidio of San Francisco, California. The Presidio Trust was created by Congress in 1996 to manage approximately eighty percent of the former U.S. Army base known as the Presidio, in San Francisco, California.

The purposes of this meeting are to take action on the minutes of a previous Board meeting, to provide the Chairperson's report, to provide the Executive Director's report, to present revised proposals for the Mid-Crissy Field Site Project, and to receive public comment on the Mid-Crissy Field Site Project and on other matters in accordance with the Trust's Public Outreach Policy.

Individuals requiring special accommodation at this meeting, such as needing a sign language interpreter, should contact Mollie Matull at 415.561.5300 prior to January 20, 2014.

Time: The meeting will begin at 6:30 p.m. on Monday, January 27, 2017.

ADDRESSES: The meeting will be held at Herbst Hall, 385 Moraga Street, Presidio of San Francisco.

FOR FURTHER INFORMATION CONTACT: Karen Cook, General Counsel, the Presidio Trust, 103 Montgomery Street, P.O. Box 29052, San Francisco, California 94129–0052, Telephone: 415.561.5300.

Dated: December 20, 2013.

Karen A. Cook,

General Counsel.

BILLING CODE 4310–4R–P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Investor Education and Advocacy, Washington, DC 20549–0213.

Extension:

Rule 8c–1, SEC File No. 270–455, OMB Control No. 3235–0514.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the existing collection of information provided for in Rule 8c–1 (17 CFR 240.8c–1), under the Securities Exchange Act of 1934 ("Exchange Act") (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 8c–1 generally prohibits a broker-dealer from using its customers' securities as collateral to finance its own trading, speculating, or underwriting transactions. More specifically, Rule 8c–1 states three main principles: (1) A broker-dealer is prohibited from commingling the securities of different customers as collateral for a loan without the consent of each customer; (2) a broker-dealer cannot commingle customers' securities with its own securities under the same pledge; and (3) a broker-dealer can only pledge its customers' securities to the extent that customers are in debt to the broker-dealer.[1]

The information required by Rule 8c–1 is necessary for the execution of the Commission's mandate under the Exchange Act to prevent broker-dealers from hypothecating or arranging for the hypothecation of any securities carried for the account of any customer under certain circumstances. In addition, the information required by Rule 8c–1 provides important investor protections.

There are approximately 82 respondents as of year-end 2012 (*i.e.*, broker-dealers that conducted business with the public, filed Part II of the FOCUS Report, did not claim an exemption from the Reserve Formula computation, and reported that they had a bank loan during at least one quarter of the current year). Each respondent makes an estimated 45 annual responses, for an aggregate total of 3,690 responses per year.[2] Each response takes approximately 0.5 hours to complete. Therefore, the total third-party reporting burden per year is 1,845 burden hours.[3]

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or send an email to: *PRA_Mailbox@sec.gov*.

Dated: December 20, 2013.

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71156; File No. SR–NSCC–2013–13]

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing of Proposed Rule Change To Discontinue its Stock Borrow Program

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934

[1] *See* Exchange Act Release No. 2690 (November 15, 1940); Exchange Act Release No. 9428 (December 29, 1971).

[2] 82 respondents × 45 annual responses = 3,690 aggregate total of annual responses.

[3] 3,690 responses × 0.5 hours = 1,845 hours.

("Act") [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 10, 2013, National Securities Clearing Corporation ("NSCC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by NSCC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consist of amendments to the Rules & Procedures ("Rules") of NSCC to discontinue its Stock Borrow Program, as more fully described below.

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, NSCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. NSCC has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Over the past few years the use of NSCC's Stock Borrow Program, which allows NSCC Members to elect to loan their excess positions to NSCC's Continuous Net Settlement ("CNS") System in order to facilitate the completion of CNS long allocations, has declined. As such, NSCC is proposing to amend its Rules in order to discontinue the Stock Borrow Program.

One of NSCC's core services as a central counterparty is trade clearance and settlement through CNS, where compared and recorded transactions in eligible securities for a particular settlement date are netted by issue into one net long (buy) or net short (sell) position. As a continuous net settlement system, those positions are further netted with positions of the same issue that remain open after their originally scheduled settlement date (usually T+3), so that trades scheduled to settle on any day are netted with fail positions to result in a single deliver or receive obligation for each Member for each issue in which it has activity. Today, NSCC Members may elect to participate in the Stock Borrow Program by designating specific securities that are in their inventory at DTC to be available to be borrowed by CNS. If CNS cannot complete a delivery to a long Member because a short Member has not completed its delivery to CNS, NSCC looks to those designated securities and initiates deliveries from lenders to CNS if the lending Member has free excess positions at DTC. In turn, CNS delivers the position to a long Member and sets up a pending receive for the lending Member. If the position is not returned to the lender by the end of settlement day, i.e., the Member with the original obligation to deliver to CNS does not complete that delivery, the lender receives full market value for the securities through NSCC settlement.

In 2007, NSCC borrowed a daily average of approximately $1.85 billion in market value at the close of each day from the approximately 21 Members that participated in the Stock Borrow Program that year. Usage of the Stock Borrow Program has since dropped by almost 95%. In October 2013 only three Members participated in the Stock Borrow Program, and the average daily value borrowed at the close of day during that month was approximately $81 million. Usage of the program has continued to drop since the end of October 2013. Given this dramatic reduction in the use of the program, NSCC has determined that it is not economically efficient to maintain the service, and NSCC is proposing to amend its Rules in order to discontinue the Stock Borrow Program. NSCC has informed the Members using the Stock Borrow Program of its intent to discontinue the program.

Implementation Timeframe

Subject to approval of this filing, NSCC will implement the proposed rule changes on a date announced by Important Notice.

Proposed Rule Changes

NSCC will remove reference to the Stock Borrow Program from Section E of Procedure VII (CNS Accounting Operation), and will remove Addendum C (NSCC Automated Stock Borrow Program Program) from its Rules as reflected in Exhibit 5 hereto.[3] Addendum C will be designated as reserved for future use.

2. Statutory Basis

NSCC believes the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to NSCC, in particular Section 17A(b)(3)(F) of the Securities Exchange Act of 1934, as amended ("Act"), which requires that NSCC's Rules be designed to promote the prompt and accurate clearance and settlement of securities transactions. Given the dramatic reduction in the use of the Stock Borrow Program by NSCC's Members, NSCC has determined that it is not economically efficient to maintain the service, and, as such, its proposed rule change will promote its ability to perform the prompt and accurate clearance and settlement of securities transactions.

(B) Clearing Agency's Statement on Burden on Competition

NSCC does not believe that the proposed rule change will have any impact, or impose any burden on competition due to the dramatic reduction in use of the Stock Borrow Program by NSCC Members, as described above.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments relating to the proposed rule change have not yet been solicited or received. NSCC will notify the Commission of any written comments received by NSCC.

III. Date of Effectiveness of the Proposed Rule Change, [*sic*] and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such a proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing,

[1] 15 U.S.C. 78s(b)(1). Defined terms that are not defined in this notice are defined in Exhibit 5 of the proposed rule change filing, available at *http://www.sec.gov/rules/sro/nscc.shtml* under File No. SR–NSCC–2013–13, Additional Materials.

[2] 17 CFR 240.19b–4.

[3] The Commission notes that Exhibit 5 to the proposed rule change is available at *http://www.sec.gov/rules/sro/nscc.shtml* under File No. SR–NSCC–2013–13, Additional Materials.

including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File No. SR–NSCC–2013–13 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–NSCC–2013–13. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filings also will be available for inspection and copying at the principal office of NSCC and on NSCC's Web site at (*http://dtcc.com/legal/rule_filings/nscc/2013.php*).

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–NSCC–2013–13 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[4]

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71162; File No. SR–BATS–2013–066]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing of a Proposed Rule Change To Adopt Rules To Hold a Volatility Closing Auction

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 19, 2013, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Rule 11.23, which governs auctions conducted on the Exchange for Exchange listed-securities.

The text of the proposed rule change is available at the Exchange's Web site at *http://www.batstrading.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

[4] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Introduction

The Exchange proposes to add a new auction type to its rules, a Volatility Closing Auction, which will apply any time that an Exchange-listed security is halted between 3:50 p.m. and 4:00 p.m. E.T. In particular, the Exchange proposes to add the Volatility Closing Auction in preparation for the operation during the last 15 minutes of Regular Trading Hours [3] of the Plan to Address Extraordinary Market Volatility Pursuant to Rule 608 of Regulation NMS under the Act (the "Limit Up-Limit Down Plan" or "Plan"), as further described below.[4] The Plan is designed to prevent trades in individual NMS Stocks from occurring outside of specified Price Bands.[5] The requirements of the Plan are coupled with Trading Pauses, or halts, to accommodate more fundamental price moves (as opposed to erroneous trades or momentary gaps in liquidity).

Background

On May 31, 2012, the Commission approved the Plan, as amended, on a one-year pilot basis.[6] The Plan first became operational in April of 2013, with a staged rollout with respect to the portion of the trading day to which the Plan applies as well as the securities subject to the Plan. All trading centers in NMS Stocks, including both those operated by Participants and those operated by members of Participants, are required to establish, maintain, and enforce written policies and procedures that are reasonably designed to comply with the requirements specified in the Plan.[7] As set forth in more detail in the Plan, Price Bands consisting of a Lower Price Band and an Upper Price Band for each NMS Stock are calculated by the Processors.[8] When the National Best Bid (Offer) is below (above) the Lower (Upper) Price Band, the Processors disseminate the National Best Bid (Offer) with an appropriate flag

[3] Regular Trading Hours are defined in Exchange Rule 1.5(w) as the time between 9:30 a.m. to 4:00 p.m. E.T.

[4] *See* Securities Exchange Act Release No. 67091 (May 31, 2012), 77 FR 33498 (June 6, 2012) (File No. 4–631) (Order Approving, on a Pilot Basis, the National Market System Plan To Address Extraordinary Market Volatility).

[5] Unless otherwise specified, capitalized terms used in this rule filing are based on the defined terms of the Plan.

[6] *See supra* note 4.

[7] The Exchange is a Participant in the Plan.

[8] *See* Section (V)(A) of the Plan.

identifying it as non-executable. When the National Best Bid (Offer) is equal to the Upper (Lower) Price Band, the Processors distribute the National Best Bid (Offer) with an appropriate flag identifying it as a Limit State Quotation.[9]

Trading in an NMS Stock immediately enters a Limit State if the National Best Offer (Bid) equals but does not cross the Lower (Upper) Price Band.[10] Trading for an NMS stock exits a Limit State if, within 15 seconds of entering the Limit State, all Limit State Quotations were executed or canceled in their entirety. If the market does not exit a Limit State within 15 seconds, then the Primary Listing Exchange declares a five-minute Trading Pause pursuant to Section VII of the Limit Up-Limit Down Plan, which Trading Pause is applicable to all markets trading the security.[11] In addition, the Plan defines a Straddle State as when the National Best Bid (Offer) is below (above) the Lower (Upper) Price Band and the NMS Stock is not in a Limit State. For example, assume the Lower Price Band for an NMS Stock is $9.50 and the Upper Price Band is $10.50, such NMS stock would be in a Straddle State if the National Best Bid were below $9.50, and therefore non-executable, and the National Best Offer were above $9.50 (including a National Best Offer that could be above $10.50). If an NMS Stock is in a Straddle State and trading in that stock deviates from normal trading characteristics, the Primary Listing Exchange may declare a Trading Pause for that NMS Stock.

As currently implemented, the Limit Up-Limit Down Plan applies to securities between 9:30 a.m. and 3:45 p.m. E.T. each trading day. In the near future, the operation of the Plan will be extended to include the time between 3:45 p.m. and 4:00 p.m. E.T., which is the end of Regular Trading Hours on the Exchange and is when the Exchange typically conducts a Closing Auction for each of its listed securities. The Exchange proposes to adopt rules for a Volatility Closing Auction in connection with the extension of the Plan to the end of Regular Trading Hours. As described in additional detail below, the Volatility Closing Auction will operate in some ways like a Halt Auction, for which the Exchange's process is described in Rule 11.23(d), and in some ways like a Closing Auction, for which the Exchange's process is described in Rule 11.23(c).

Proposed Amendment to Rule 11.23

The Exchange proposes to add new paragraph (e) to Rule 11.23 to govern the operation of Volatility Closing Auctions on the Exchange, which will be auctions of Exchange-listed securities that are halted in the last 10 minutes of Regular Trading Hours. As noted above, a Volatility Closing Auction would operate in certain respects like an Exchange Halt Auction and in other respects like an Exchange Closing Auction.

Similar to a Halt Auction on the Exchange, a Volatility Closing Auction will have a period of time that orders are accepted for participation in such auction during which no trading is occurring on the Exchange (the "Quote-Only Period"). The Quote-Only Period with respect to a Volatility Closing Auction would commence at the time a security is halted between 3:50 p.m. and 4:00 p.m. and will end at 4:00 p.m. Thus, to the extent the Exchange halts a security after 3:55 p.m. but before 4:00 p.m., such security will be halted for less than five minutes prior to the Volatility Closing Auction. The Exchange believes this is appropriate because it will ensure that the final auction of the day in all Exchange-listed securities consistently occurs at 4:00 p.m. E.T.

During the Quote-Only Period of a Volatility Closing Auction the Exchange will accept all orders eligible to participate in both a Halt Auction and a Closing Auction in order to avoid participant confusion and to facilitate participation in the Volatility Closing Auction. This includes limit and market orders as well as any Eligible Auction Orders applicable to a Closing Auction on the Exchange. Thus, the Exchange will accept Regular Hours Only orders ("RHOs"), Limit-On-Close orders ("LOCs"), Late-Limit-On-Close orders ("LLOCs") and Market-On-Close orders ("MOCs") for participation in a Volatility Closing Auction, and the typical restrictions on such orders will apply. For instance, as with a Closing Auction, the Exchange will not accept any LOCs or MOCs after 3:55 p.m. E.T. Similarly, the Exchange will not accept any LLOCs before 3:55 p.m. E.T. The Exchange would like to note, however, that, while these restrictions remain in place, regular limit and market orders can be entered and cancelled without restriction at any time prior to execution. In contrast to a typical Closing Auction, however, because the Exchange is accepting Eligible Auction Orders only to facilitate participation in and avoid confusion during the Volatility Closing Auction and because a User could alternatively enter and cancel limit orders and market orders without restriction during the Quote-Only Period, Eligible Auction Orders associated with a Volatility Closing Auction may also be cancelled at any time prior to execution.[12]

The Exchange will disseminate the same information that it does for other auctions conducted on the Exchange. Thus, coinciding with the beginning of the Quote-Only Period for a security and updated every five seconds thereafter, the Reference Price, Indicative Price, Auction Only Price, and the lesser of Reference Buy Shares and Reference Sell Shares associated with the Volatility Closing Auction will be disseminated by the Exchange via electronic means.

As a general matter, the Exchange will not extend the Quote-Only Period associated with a Volatility Closing Auction, which is the same as with a Closing Auction. In contrast, the Exchange's rules related to Exchange Halt Auctions provide that the Quote-Only Period may be extended where there are unmatched market orders on the auction book associated with the auction and where the indicative price moves the greater of 10% or fifty (50) cents in the fifteen (15) seconds prior to the Halt Auction, both to ensure that there is sufficient interest and stability after a halt to reopen the security for trading. Halt Auctions, however, occur during Regular Trading Hours and the Exchange retains discretion to not extend the Quote-Only Period of a Halt Auction such that it would interfere with a Closing Auction. While the Exchange acknowledges that some of the same issues for which the ability to extend the Quote-Only Period of a Halt Auction may exist where there are unmatched market orders or dramatic price movements near the end of the Quote-Only Period of the Volatility Closing Auction, the Exchange believes that these concerns are outweighed by the importance of providing Members and the investing public with a definitive market close and a BATS Official Closing Price at 4:00 p.m. E.T. More specifically, the Exchange believes that the clarity that comes from requiring that a Volatility Closing Auction occurs at 4:00 p.m. E.T. will help reduce uncertainty for Members participating in the Volatility Closing

[9] See Section VI(A) of the Plan.

[10] See Section VI(B)(1) of the Plan.

[11] The primary listing market would declare a trading pause in an NMS Stock; upon notification by the primary listing market, the Processor would disseminate this information to the public. No trades in that NMS Stock could occur during the trading pause, but all bids and offers may be displayed. See Section VII(A) of the Plan.

[12] In a Closing Auction, LOC and MOC orders cannot be cancelled in the five minutes leading up to the auction.

Auction. Even where a halt is declared very near 4:00 p.m. E.T., the Exchange believes that it is in the interest of a fair and orderly market to hold the Volatility Closing Auction at 4:00 p.m. E.T. and has proposed that all Volatility Closing Auctions be required to close at a price level within the Collar Price Range in order to ensure that the Volatility Closing Auction price is based on rational and based on current market conditions. The Exchange further restricts the price of a Volatility Closing Auction by using the Final Last Sale Eligible Trade as the Volatility Closing Auction price where no limit orders from one or both sides would participate in the Volatility Closing Auction. This restriction ensures that there is crossed limit interest in the Volatility Closing Auction if the Volatility Closing Auction price is going to look to the entered limit interest to determine the price, which prevents a single limit order from interacting with market orders to determine the Volatility Closing Auction Price. Finally, the Exchange notes that it retains discretion under Rule 11.23(f) (re-numbered pursuant to this proposal, as described below) to adjust the timing of or suspend an auction with prior notice to Users where the interests of a fair and orderly market so require. In a situation where the Exchange deemed it necessary to adjust the timing of a Volatility Closing Auction in order to maintain a fair and orderly market, i.e., to a time later than 4:00 p.m. E.T., the Exchange would notify Exchange Users in advance of the time that the auction would occur and would provide for a Quote-Only period prior to such auction.

The Exchange will conduct a Volatility Closing Auction in a manner similar to a Halt Auction. Specifically, orders will be executed at the price that maximizes the number of shares executed in the auction. For ETPs, orders will be executed at the price level within the Collar Price Range that maximizes the number of shares executed in the auction. In the event of a volume based tie at multiple price levels, the price level closest to the Final Last Sale Eligible Trade will be used for Volatility Closing Auctions. Where no limit orders from one or both sides (the buy side, the sell side, or both the buy and sell side) would participate in a Volatility Closing Auction, the Volatility Closing Auction will occur at the price of the Final Last Sale Eligible Trade. The only differences between the processing of a Halt Auction and a Volatility Closing Auction are that: (1) The Volatility Closing Auction price will be used as the official closing price for dissemination to the consolidated tape (the "BATS Official Closing Price"), and (2) a Volatility Closing Auction will not be delayed due to a market order imbalance or due to a significant change in the Indicative Price, which can extend the Quote-Only Period of a Halt Auction, as explained above.

The Exchange also proposes to process a Volatility Closing Auction in a manner consistent with both all auctions conducted by the Exchange, in that, as proposed, market orders, including MOCs, will have higher priority than other Volatility Closing Auction Eligible Orders. To the extent there is executable contra side interest, such market orders will be executed at the BATS Official Closing Price according to time priority. After the execution of all market orders. the remaining orders priced at or more aggressively than the BATS Official Closing Price will be executed on the basis of price/time priority.

The Exchange will transition to the After Hours Trading Session [13] following a Volatility Closing Auction in much the way that it does for a Closing Auction. Thus, limit order shares that are not executed in the Volatility Closing Auction will remain on the Exchange's order book during the After Hours Trading Session, subject to a User's instructions and the fact that certain auction specific limit orders will be cancelled. RHO, LOC, LLOC, MOC and market order shares that are not executed in the Volatility Closing Auction will be cancelled at the conclusion of the Volatility Closing Auction. Thus, the only difference between this transition and a typical Closing Auction is that market orders are also cancelled, which differs only because such orders may enter the Volatility Closing Auction in the first place. Other than MOCs, which are specifically designated for a Closing Auction, market orders cannot participate in Closing Auctions because they do not post to the Continuous Book,[14] and thus the Exchange does not address their transition to the After Hours Trading Session in its Closing Auction transition process.

In addition to the changes described above, in order to correct a typographical error in the original filing that proposed Rule 11.23, the Exchange proposes to re-number paragraphs (g), (h) and (f) as (f), (g) and (h), respectively. Finally, the Exchange proposes to add a reference to the new auction type, a Volatility Closing Auction, to current paragraph (h) (to be re-numbered as (g)).

2. Statutory Basis

Approval of the rule changes proposed in this submission is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[15] In particular, the proposed change is consistent with Section 6(b)(5) of the Act,[16] because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest. The Exchange believes that operation of a Volatility Closing Auction for securities listed on the Exchange will assist in the price discovery process and help to ensure a fair and orderly market for securities listed on the Exchange that are halted at the end of the trading day. Specifically, the proposed Volatility Closing Auction will address situations where a security is halted in the last 10 minutes of the trading day in order to hold a single auction at the end of Regular Trading Hours. The Exchange believes this proposal is consistent with the Act and the Plan as it will ensure that market participants have a single closing price at the end of the trading day. Consistent with this belief, as discussed above, although the same conditions could occur with a Volatility Closing Auction that in certain circumstances cause the extension of the Quote-Only Period for a Halt Auction on the Exchange (i.e., a significant imbalance or price movement), the Exchange believes that concerns related to these conditions are outweighed by the importance of providing Members and the investing public with a definitive market close and a BATS Official Closing Price at 4:00 p.m. E.T. More specifically, the Exchange believes that the clarity that comes from requiring that a Volatility Closing Auction occurs at 4:00 p.m. E.T. will help reduce uncertainty for Members participating in the Volatility Closing Auction. As explained above, the Exchange has proposed various price and execution constraints for the

[13] The After Hours Trading Session is defined in Exchange Rule 1.5(c) and currently means the time between 4:00 p.m. to 5:00 p.m. E.T.

[14] Market orders received by the Exchange are executed or routed by the Exchange to other market centers but do not post to the Exchange's Continuous Book. *See* Rules 11.9(a)(2), 11.13(a)(1) and 11.13(a)(2). The Continuous Book is defined in Exchange Rule 11.23(a)(7) as all orders on the BATS Book that are not Eligible Auction Orders.

[15] 15 U.S.C. 78f(b).

[16] 15 U.S.C. 78f(b)(5).

Volatility Closing Auction to ensure that the auction occurs at a price that is based on rational and based on current market conditions. Finally, the Exchange reiterates that it retains discretion under Rule 11.23(f) to adjust the timing of or suspend an auction with prior notice to Users where the interests of a fair and orderly market so require. Without the proposal, the Exchange could potentially have a Halt Auction within minutes of the Closing Auction, which could cause unnecessary confusion. The Exchange reiterates that all aspects of the proposed Volatility Closing Auction are based upon existing processes built into both the Exchanges' Halt Auction and the Exchange's Closing Auction. The Exchange further believes that its proposal to allow participants to cancel orders specifically designated for a Closing Auction up to the time of the Volatility Closing Auction is appropriate because the halt in the last 10 minutes of the trading day necessitating a Volatility Closing Auction may be indicative of price dislocation in a security and because such orders may have been entered well before such halt occurred. The Exchange believes it is appropriate and in the best interests of investors and the public interest to allow orders to be cancelled in such an event. Finally, the Exchange notes that its existing Halt Auction process allows orders to be cancelled prior to such auction.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposal enhances cooperation among markets and other trading venues to promote fair and orderly markets and to protect the interests of the public and of investors. The Limit Up-Limit Down Plan is part of a coordinated effort amongst various parties including the Exchange and other self-regulatory organizations as well as other market participants. While the specific proposals to implement changes to Exchange functionality consistent with the Plan may differ in certain ways from the implementation adopted by other market centers, the Exchange believes its proposals are consistent with the requirements and purpose of the Plan. Specifically, the proposed Volatility Closing Auction will address situations where a security is halted in the last 10 minutes of the trading day in order to hold a single auction at the end of Regular Trading Hours.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–BATS–2013–066 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–BATS–2013–066. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BATS–2013–066, and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71167; File No. SR–NASDAQ–2013–160]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify the Definition of "System Securities" in NASDAQ Rule 4751

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 19, 2013, The NASDAQ Stock Market LLC ("NASDAQ" or "Exchange"), filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the definition of "System Securities" set forth in NASDAQ Rule 4751.

[17] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

The text of the proposed rule change is available from NASDAQ's Web site at *http://nasdaq.cchwallstreet.com/Filings/*, at NASDAQ's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the definition of "System Securities" set forth in NASDAQ Rule 4751(b) to clarify that while all securities covered by the Consolidated Tape Association Plan and Consolidated Quotation Plan ("CT/CQ Securities") are eligible to be traded on NASDAQ and NASDAQ intends to trade all CT/CQ Securities, NASDAQ will not trade certain securities within that class. By making both a "positive" and a "negative" designation, NASDAQ will clearly signal to its members and to investors that NASDAQ intends to trade certain CT/CQ Securities and not to trade others, and which securities fall into each category.

NASDAQ proposes to effectuate this designation by maintaining a list on the www.nasdaqtrader.com Web site of securities that are excluded from this designation and thus excluded from trading on NASDAQ. The NasdaqTrader Web site is the primary mechanism for NASDAQ to communicate with its members about trading on the exchange. NASDAQ members already receive daily information from the Web site including a daily list of active System Securities, as well as a list of corporate actions and other trading information. Adding a list of CT/CQ securities that are excluded from trading will be an effective complement to the daily information already provided. The rules of other exchanges also provide a designation process that clearly contemplates the trading of less than all eligible securities (*see, e.g.*, BATS Rule 11.2).

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[3] in general, and with Section 6(b)(5) of the Act,[4] in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transaction in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

NASDAQ believes that the proposal is consistent with the Act in that it provides for greater clarity about the securities traded on the Exchange and, thereby, enhances the Exchange and the national market system. The proposal does not permit unfair discrimination; rather all designated securities may be traded by all members in a free and open market. The proposal does not unfairly discriminate against securities that will not trade on NASDAQ. NASDAQ is not obligated by the Exchange Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on numerous other exchanges that have extended unlisted trading privileges to them.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The proposed change will simply clarify the manner by which NASDAQ extends unlisted trading privileges to CT/CQ Securities, a practice provided for under the Act and already exercised by NASDAQ. CT/CQ Securities will continue to be subject to meaningful competition because they will trade on their listing market and on numerous exchanges that have extended unlisted trading privileges to them.

[3] 15 U.S.C. 78f.

[4] 15 U.S.C. 78f(b)(5).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[5] and Rule 19b–4(f)(6) thereunder.[6] Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.[7]

A proposed rule change filed under Rule 19b–4(f)(6)[8] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[9] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become effective and operative immediately. According to the Exchange, the proposal is designed to provide clarity about securities traded on the Exchange. The Exchange noted that it is not obligated by the Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on other exchanges that have extended unlisted trading privileges to them. Based on the Exchange's statements, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission

[5] 15 U.S.C. 78s(b)(3)(A).

[6] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[7] 17 CFR 240.19b–4(f)(6).

[8] 17 CFR 240.19b–4(f)(6).

[9] 17 CFR 240.19b–4(f)(6)(iii).

designates the proposal as operative upon filing.[10]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[11] of the Act to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NASDAQ–2013–160 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number *SR–NASDAQ–2013–160*. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NASDAQ–2013–160 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[12]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71152; File No. SR–CBOE–2013–100]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change Relating to CBSX Trading Permit Holder Eligibility

December 20, 2013.

I. Introduction

On October 23, 2013, Chicago Board Options Exchange, Incorporated ("Exchange" or "CBOE") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change regarding eligibility for CBSX Trading Permit Holders. The proposed rule change was published for comment in the **Federal Register** on November 12, 2013.[3] The Commission received four comments on the proposal.[4]

Section 19(b)(2) of the Act[5] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day for this filing is December 27, 2013.

The Commission is hereby extending the 45-day period for Commission action on the proposed rule change. The Commission has determined that it is appropriate to designate a longer period within which to take action on the proposed rule change. In particular, the extension of time will ensure that the Commission has sufficient time to consider and take action on CBOE's proposal in light of, among other things, the comments received on the proposal and the Exchange's forthcoming response to the comments.

Accordingly, pursuant to Section 19(b)(2)(A)(ii)(I) of the Act[6] and for the reasons stated above, the Commission designates February 10, 2014, as the date by which the Commission should either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change File No. SR–CBOE–2013–100.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71155; File No. SR–NSCC–2013–14]

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Modify Its Fee Schedule

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 17, 2013, the National Securities Clearing Corporation ("NSCC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by NSCC. NSCC filed the proposed rule change pursuant to Section 19(b)(3)(A)(ii)[3] of the Act and Rule 19b–4(f)(2)[4] thereunder; the proposed rule change was effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consist [*sic*] of amendments to the Rules & Procedures ("Rules") of NSCC to modify its fee schedule, as more fully described below.

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, NSCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. NSCC has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

(i) Introduction

The purpose of the proposed rule change is to revise NSCC's fee schedule (as listed in Addendum A of the Rules) in connection with the recent approval of additional alternative investment products eligible for processing through the Alternative Investment Product Services ("AIP") of NSCC, as well as to eliminate the fee cap currently applicable to AIP Distributors[5] processing Registered Hedge Fund transactions through AIP. In general, AIP fees are grouped by volume—higher volume alternative investment products are charged reduced fees, while lower volume alternative investment products are charged higher fees. The newly approved additional alternative investment products eligible for AIP processing are being added to the higher volume category. Under the current AIP fee structure, AIP Distributors are eligible for a fee cap of $50,000 annually ("Fee Cap") on higher volume alternative investment products, such as Non-Traded REITs and Managed Futures. Currently, Registered Hedge Funds are included within the annual Fee Cap. NSCC is amending the existing fee structure to eliminate this Fee Cap as applicable to Registered Hedge Fund transactions and to include the newly added alternative investment products within the Fee Cap.

Additionally, NSCC is proposing to revise its fee schedule with respect to its trade clearance fees in order to align these fees with the costs of delivering services.

Implementation Timeframe

The proposed fee changes will take effect on January 1, 2014.

Proposed Rule Changes

These proposed rule changes are marked on Exhibit 5 to this proposed rule change. No other changes to the Rules are contemplated by this proposed rule change.

(ii) Statutory Basis

The proposed rule change will align NSCC's fees with the costs of delivering services, and will allocate those fees equitably among the NSCC members that use those services. Therefore, NSCC believes the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to NSCC, in particular Section 17A(b)(3)(D) of the Act, which requires that NSCC's Rules provide for the equitable allocation of reasonable dues, fees, and other charges among its participants.

(B) Clearing Agency's Statement on Burden on Competition

NSCC does not believe that the proposed rule change will have any impact, or impose any burden, on competition. As stated above, the proposed changes will align NSCC's fees with the costs of delivering services to its members, and will not disproportionally impact any NSCC members.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments relating to the proposed rule change have not yet been solicited or received. NSCC will notify the Commission of any written comments received by NSCC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The forgoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act[6] and Rule 19b–4(f)(2)[7] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File No. SR–NSCC–2013–14 on the subject line.

Paper Comments

- Send in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–NSCC–2013–14. This file number should be included on the subject line if email is used. To help the Commission process and review your

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71153; File No. SR–ISE–2013–67]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Make Non-Controversial Changes to ISE Rules

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on December 5, 2013, the International Securities Exchange, LLC (the "Exchange" or the "ISE") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to make a number of non-controversial changes and technical corrections to its rules. Examples of such corrections include updating ISE rule number citations and cross references, correcting typographical errors, deleting obsolete rule text, and updating the table of contents. The text of the proposed rule change is available on the Exchange's Internet Web site at *http://www.ise.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange is proposing to make a number of non-controversial and technical changes to its rules. Examples of such corrections include updating ISE rule number citations and cross-references, correcting typographical errors, and deleting obsolete rule text. Following is a narrative description of each of the corrections:

- The Table of Contents to the ISE Rules is being amended to correct a typo in the title of Rule 311 and to reflect the adoption of ISE Rule 703A (Trading During Limit Up-Limit Down States in Underlying Securities), since this rule was not added to the Table of Contents when this rule was initially adopted.[3]
- ISE Rule 413 (Exemptions from Position Limits) is being amended to update an incorrect rule cross-reference numbers in paragraphs (a), (a)(7)(A) and (a)(7)(F). The cross-references are incorrect due to amendments to the cross-referenced rules which changed the numbering and therefore made the cross-reference incorrect.
- ISE Rule 701 (Trading Rotations) is being amended to make a non-substantive change to correct a typographical error in paragraph (b)(2) and to remove the first sentence in paragraph (c), which states that trading in options will close 2 minutes after the primary market on which the underlying stock trades closes for trading. This reference to a 4:02 p.m. closing should have been removed when the hours of trading on the Exchange were amended,[4] but was inadvertently overlooked.
- ISE Rule 705 (Limitation of Liability) is being amended to change a non-substantive word to update the sentence structure of paragraph (a).
- ISE Rule 715 (Types of Orders) is being amended to delete the duplicate definition of "Minimum Quantity Orders" in paragraph (l) and replace it with the defined term of "Day Order." Paragraph (r) is being added to define the term "Good-Till-Cancelled Order (GTC Order)." The addition of these two order types qualify for non-controversial treatment as there is nothing new or novel with respect to these types of orders because they already exist on other exchanges, for example, the Chicago Board Options Exchange has identical order types.[5]
- Supplementary Material .08 to ISE Rule 716 (Block Trades) is being amended to make a non-substantive change to delete the term "Indications" and replace it with the term "Responses" for consistency throughout the rule.
- ISE Rule 802 (Appointment of Market Makers) is being amended to insert a non-substantive word to correct the sentence structure of paragraph (c)(3).
- ISE Rules 803, 810 and 811 are being amended to remove cross-references to Rule 803(c)(2) and replace them with the correct cross-references, where applicable.

[8] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 69148 (March 15, 2013), 78 FR 17462 (March 21, 2013) (SR–ISE–2013–20).

[4] *See* Securities Exchange Act Release No. 53248 (February 7, 2006), 71 FR 8015 (February 15, 2006) (SR–ISE–2005–58).

[5] *See* CBOE Rule 43.2(5) and (7).

These cross-references were inadvertently missed when paragraph 803(c)(2) was deleted from the rules.[6]

- ISE Rule 804(d)(3) is being deleted as this provision is obsolete and no longer applicable.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[7] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism for a free and open market and a national market system, and, in general, to protect investors and the public interest. The Exchange believes it is appropriate to make these technical corrections to its rules so that Exchange members and investors have a clear and accurate understanding of the meaning of the Exchange's rules. By removing obsolete rule text, the Exchange is eliminating any potential for confusion about how its systems operate, particularly since the Exchange had operated two trading systems while it migrated from its prior system to Optimise, its new trading system. By updating cross-references in its rules, the Exchange is eliminating any inaccuracies. The addition of a Day Order and a GTC Order qualifies for non-controversial treatment as there is nothing new or novel with respect to these order types. Day Orders and GTC Orders merely address the time-in-force of an order and are standard, generic orders. In addition, CBOE has both of these order types in its rules.[8] The Exchange further believes that the proposed rule change is not unfairly discriminatory because it treats all market participants equally and will not have an adverse impact on any market participant.

B. Self-Regulatory Organization's Statement on Burden on Competition

Most of the proposed rule changes are non-substantive corrections to the Exchange's rules and therefore do not implicate the competition analysis. The change proposing to adopt two new order types is non-controversial as they already exist on another exchange and merely address the time-in-force of an order, and will therefore not impact competition because these order types already exist. The proposed rule changes will serve to promote regulatory clarity and consistency, thereby reducing burdens on the marketplace and facilitating investor protection.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not significantly affect the protection of investors or the public interest, does not impose any significant burden on competition, and, by its terms, does not become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)[9] of the Act and Rule 19b–4(f)(6)[10] thereunder. The Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing the proposed rule change.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–ISE–2013–67 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2013–67. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2013–67 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71169; File No. SR–PHLX–2013–127]

Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Modify the Definition of "System Securities" in PSX Rule 3301(b)

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 19, 2013, NASDAQ OMX PHLX LLC ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the definition of "System Securities" set forth in PSX Rule 3301(b) which governs the operation of the trading system of the NASDAQ OMX PSX equities market.

The text of the proposed rule change is available on the Exchange's Web site at *http://nasdaqomxphlx.cchwallstreet.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the definition of "System Securities" set forth in PHLX Rule 3301(b) to clarify that while all securities covered by the Consolidated Tape Association Plan and Consolidated Quotation Plan ("CT/CQ Securities") are eligible to be traded on PSX and PHLX intends to trade all CT/CQ Securities, PHLX will not trade certain securities within that class. By making both a "positive" and a "negative" designation, PHLX will clearly signal to its members and to investors that PHLX intends to trade certain CT/CQ Securities and not to trade others, and which securities fall into each category.

PHLX proposes to effectuate this designation by maintaining a list on the *www.nasdaqtrader.com* Web site of securities that are excluded from this designation and thus excluded from trading on PSX. The NasdaqTrader Web site is the primary mechanism for PHLX to communicate with its members about trading on the exchange. PHLX members already receive daily information from the Web site including a daily list of active System Securities, as well as a list of corporate actions and other trading information. Adding a list of CT/CQ securities that are excluded from trading will be an effective complement to the daily information already provided. The rules of other exchanges also provide a designation process that clearly contemplates the trading of less than all eligible securities (*see, e.g.,* BATS Rule 11.2).

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[3] in general, and with Section 6(b)(5) of the Act,[4] in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transaction in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

PHLX believes that the proposal is consistent with the Act in that it provides for greater clarity about the securities traded on the Exchange and, thereby, enhances the Exchange and the national market system. The proposal does not permit unfair discrimination; rather all designated securities may be traded by all members in a free and open market. The proposal does not unfairly discriminate against securities that will not trade on PSX. PHLX is not obligated by the Exchange Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on numerous other exchanges that have extended unlisted trading privileges to them.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The proposed change will simply clarify the manner by which PHLX extends unlisted trading privileges to CT/CQ Securities, a practice provided for under the Act and already exercised by PHLX. CT/CQ Securities will continue to be subject to meaningful competition because they will trade on their listing market and on numerous exchanges that have extended unlisted trading privileges to them.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[5] and Rule 19b–4(f)(6) thereunder.[6] Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78f.

[4] 15 U.S.C. 78f(b)(5).

[5] 15 U.S.C. 78s(b)(3)(A).

[6] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.[7]

A proposed rule change filed under Rule 19b–4(f)(6)[8] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[9] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become effective and operative immediately. According to the Exchange, the proposal is designed to provide clarity about securities traded on the Exchange. The Exchange noted that it is not obligated by the Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on other exchanges that have extended unlisted trading privileges to them. Based on the Exchange's statements, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission designates the proposal as operative upon filing.[10]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[11] of the Act to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–PHLX–2013–127 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–PHLX–2013–127. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PHLX–2013–127 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[12]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71168; File No. SR–BX–2013–064]

Self-Regulatory Organizations; NASDAQ OMX BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Modify the Definition of "System Securities" in BX Rule 4751(b)

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 19, 2013, NASDAQ OMX BX, Inc. ("BX" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify the definition of "System Securities" set forth in BX Rule 4751(b). The text of the proposed rule change is available at *http://nasdaqomxbx.cchwallstreet.com/*, at the Exchange's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the definition of "System Securities" set forth in BX Rule 4751(b) to clarify that while all securities covered by the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

Consolidated Tape Association Plan and Consolidated Quotation Plan ("CT/CQ Securities") are eligible to be traded on BX and BX intends to trade all CT/CQ Securities, BX will not trade certain securities within that class. By making both a "positive" and a "negative" designation, BX will clearly signal to its members and to investors that BX intends to trade certain CT/CQ Securities and not to trade others, and which securities fall into each category.

BX proposes to effectuate this designation by maintaining a list on the *www.nasdaqtrader.com* Web site of securities that are excluded from this designation and thus excluded from trading on BX. The NasdaqTrader Web site is the primary mechanism for BX to communicate with its members about trading on the exchange. BX members already receive daily information from the Web site including a daily list of active System Securities, as well as a list of corporate actions and other trading information. Adding a list of CT/CQ securities that are excluded from trading will be an effective complement to the daily information already provided. The rules of other exchanges also provide a designation process that clearly contemplates the trading of less than all eligible securities (*see, e.g.*, BATS Rule 11.2).

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[3] in general, and with Section 6(b)(5) of the Act,[4] in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transaction in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

BX believes that the proposal is consistent with the Act in that it provides for greater clarity about the securities traded on the Exchange and, thereby, enhances the Exchange and the national market system. The proposal does not permit unfair discrimination; rather all designated securities may be traded by all members in a free and open market. The proposal does not unfairly discriminate against securities that will not trade on BX. BX is not obligated by the Exchange Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on numerous other exchanges that have extended unlisted trading privileges to them.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The proposed change will simply clarify the manner by which BX extends unlisted trading privileges to CT/CQ Securities, a practice provided for under the Act and already exercised by BX. CT/CQ Securities will continue to be subject to meaningful competition because they will trade on their listing market and on numerous exchanges that have extended unlisted trading privileges to them.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[5] and Rule 19b–4(f)(6) thereunder.[6] Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.[7]

A proposed rule change filed under Rule 19b–4(f)(6)[8] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[9] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become effective and operative immediately. According to the Exchange, the proposal is designed to provide clarity about securities traded on the Exchange. The Exchange noted that it is not obligated by the Act to extend unlisted trading privileges to all CT/CQ Securities. Additionally, all CT/CQ Securities will continue to trade on their listing market and on other exchanges that have extended unlisted trading privileges to them. Based on the Exchange's statements, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission designates the proposal as operative upon filing.[10]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[11] of the Act to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comment

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–BX–2013–064 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary,

[3] 15 U.S.C. 78f.

[4] 15 U.S.C. 78f(b)(5).

[5] 15 U.S.C. 78s(b)(3)(A).

[6] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71159; File No. SR–NYSEARCA–2013–145]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Proposes To Amend Commentary .02 to Exchange Rule 6.72 in Order To Extend the Penny Pilot in Options Classes In Certain Issues Previously Approved by the Securities and Exchange Commission Through June 30, 2014

December 20, 2013.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the "Act")[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on December 18, 2013, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Commentary .02 to Exchange Rule 6.72 in order to extend the Penny Pilot in options classes in certain issues ("Pilot Program") previously approved by the Securities and Exchange Commission ("Commission") through June 30, 2014. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange hereby proposes to amend Commentary .02 to Exchange Rule 6.72 to extend the time period of the Pilot Program,[4] which is currently scheduled to expire on December 31, 2013 through June 30, 2014. The Exchange also proposes that the dates to replace issues in the Pilot Program that have been delisted be revised to the second trading day following January 1, 2014.[5]

This filing does not propose any substantive changes to the Pilot Program: all classes currently participating will remain the same and all minimum increments will remain unchanged. The Exchange believes the benefits to public customers and other market participants who will be able to express their true prices to buy and sell options have been demonstrated to outweigh the increase in quote traffic.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b)[6] of the Securities Exchange Act of 1934 (the "Act"), in general, and furthers the objectives of Section 6(b)(5),[7] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanisms of a free and open market and a national market system. The Exchange believes that the Pilot Program promotes just and equitable principles of trade by enabling public customers and other market participants to express their true prices to buy and sell options. The proposal to extend the Pilot Program is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating

[4] *See* Securities Exchange Act Release No. 69106 (March 11, 2013), 78 FR 16552 (March 15, 2013) (SR–NYSEArca-2013–22).

[5] The month immediately preceding a replacement class's addition to the Pilot Program (i.e., December) would not be used for purposes of the analysis for determining the replacement class. Thus, a replacement class to be added on the second trading day following January 1, 2014 would be identified based on The Option Clearing Corporation's trading volume data from June 1, 2013 through November 30, 2013. The Exchange will announce the replacement issues to the Exchange's membership through a Trader Update.

[6] 15 U.S.C. 78f(b).

[7] 15 U.S.C. 78f(b)(5).

transactions in securities, and to remove impediments to and perfect the mechanisms of a free and open market and a national market system, by allowing the Exchange and the Commission additional time to analyze the impact of the Pilot Program while also allowing the Exchange to continue to compete for order flow with other exchanges in option issues trading as part of the Pilot Program.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Specifically, the Exchange believes that, by extending the expiration of the Pilot Program, the proposed rule change will allow for further analysis of the Pilot Program and a determination of how the Program should be structured in the future. In doing so, the proposed rule change will also serve to promote regulatory clarity and consistency, thereby reducing burdens on the marketplace and facilitating investor protection. The Pilot Program is an industry wide initiative supported by all other option exchanges. The Exchange believes that extending the Pilot Program will allow for continued competition between Exchange market participants trading similar products as their counterparts on other exchanges, while at the same time allowing the Exchange to continue to compete for order flow with other exchanges in option issues trading as part of the Pilot Program.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[8] and Rule 19b–4(f)(6) thereunder.[9] Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[10] and Rule 19b–4(f)(6)(iii) thereunder.[11]

A proposed rule change filed under Rule 19b–4(f)(6) normally does not become operative prior to 30 days after the date of the filing.[12] However, pursuant to Rule 19b–4(f)(6)(iii),[13] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because doing so will allow the Pilot Program to continue without interruption in a manner that is consistent with the Commission's prior approval of the extension and expansion of the Pilot Program and will allow the Exchange and the Commission additional time to analyze the impact of the Pilot Program.[14] Accordingly, the Commission designates the proposed rule change as operative upon filing with the Commission.[15]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[16] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEARCA–2013–145 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2013–145. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Section, 100 F Street NE., Washington, DC 20549–1090. Copies of the filing will also be available for inspection and copying at the NYSE's principal office and on its Internet Web site at *www.nyse.com*. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEARCA–2013–145 and should be submitted on or before January 17, 2014.

[8] 15 U.S.C. 78s(b)(3)(A).

[9] 17 CFR 240.19b–4(f)(6).

[10] 15 U.S.C. 78s(b)(3)(A).

[11] 17 CFR 240.19b–4(f)(6)(iii).

[12] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this pre-filing requirement.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71164; File No. SR–NYSE–2013–80]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Offer Risk Management Tools Designed to Allow Member Organizations to Monitor and Address Exposure to Risk

December 20, 2013.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the "Act")[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on December 12, 2013, New York Stock Exchange LLC ("NYSE" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to offer risk management tools designed to allow member organizations to monitor and address exposure to risk. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. *Purpose*

In order to assist member organizations' efforts to manage their risk level, the Exchange proposes to offer risk management tools designed to allow member organizations to monitor and address exposure to risk.

On October 2, 2012, the Commission conducted a roundtable entitled "Technology and Trading: Promoting Stability in Today's Markets" (the "Roundtable").[4] While a number of issues were discussed at the Roundtable, a large amount of time was devoted to discussing "kill-switches," a mechanism that would deactivate trading when certain thresholds were met. Panelists and commenters on the Roundtable's topics generally supported a kill-switch mechanism that would permit market centers to terminate a firm's trading activity if such activity was posing a threat to market integrity. But there was concern that firms would "be reluctant to systemically cut themselves off from the market"[5] and therefore, any kill-switch-triggering threshold would be set by the firm at a conservative level such that the automated disconnect would not occur when actually needed. At the same time though, the ability to detect unusual behavior would be invaluable to a firm in assessing whether an error was causing an unwanted buildup in risk.

To address the concerns raised during the Roundtable, the Exchange proposes to offer optional risk management tools for its member organizations that would facilitate, among other things, blocking of a member organization's orders if certain thresholds were met. As proposed, the risk management tools seek to balance the conflicting viewpoints raised during the Roundtable by providing risk monitoring services that grant discretion to the member organizations to define pre-set risk thresholds. The tools are designed to act as a backstop for member organizations' risk controls by providing them with the ability to take action to more effectively manage their risk levels with respect to orders at the Exchange.

The risk management tools will provide member organizations with the ability to segment activity into risk groups and to monitor exposure in real time as trades execute. Member organizations may also take certain actions in response to an unwanted buildup in risk levels, such as bulk blocking or bulk cancelling orders by risk group. Additionally, member organizations may define risk limits that may be adjusted intraday and elect to have the Exchange take action based on these pre-set limits, such as sending alerts as exposure limits are approached and breached or automatically blocking orders upon a breach. The tools are meant to be supplemental, acting as a backstop for a member organization's internal monitoring and procedures related to risk management. The Exchange does not guarantee that the tools will be sufficiently comprehensive to meet all of a member organization's needs, and the tools are not designed to be the sole means of risk control. Moreover, the use of the Exchange's risk management tools will not automatically constitute compliance with Exchange or federal rules.

As noted above, the proposed risk management tools will be optional for member organizations. The Exchange will not provide preferential treatment to member organizations using the Exchange-offered risk management tools and will not charge a fee for use of the risk management tools. Should the Exchange determine to charge a fee for use of the risk management tools, such fee will be proposed through a subsequent rule filing.

The Exchange will be phasing in its risk management tools as the technology supporting the functionality is being implemented and will announce by Trader Update when specific risk management tools will be available. The Exchange intends to make available the ability to segment activity into risk groups, define risk limits, and enter bulk block and bulk cancel messages during the first rollout.[6] Additional functionality, such as allowing member organizations to elect to have the Exchange take automated action based on pre-set limits, will be phased in over subsequent months.

2. *Statutory Basis*

The Exchange believes the proposed rule change is consistent with the

[17] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] *See* Securities Exchange Act Release No. 67802 (Sept. 7, 2012), 77 FR 56697 (Sept. 13, 2012) (File No. 4–652). A webcast of the Roundtable is available at *www.sec.gov/news/otherwebcasts/2012/ttr100212.shtml*.

[5] *See* Transcript of Roundtable, Sections 0151–0152 (Oct. 2, 2012) (remarks of Lou Steinberg, TD Ameritrade).

[6] The Exchange expects the first rollout to begin in the first quarter of 2014.

requirements of Section 6(b) of the Act,[7] in general, and Section 6(b)(5) of the Act,[8] in particular, in that it is designed to foster cooperation and coordination with persons facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and not to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposed rule change will foster cooperation and coordination with persons facilitating transactions in securities because the Exchange will provide alerts to member organizations when their trading reaches certain thresholds. As such, the Exchange will help member organizations monitor their risk levels and provide tools for the firms to take action. Additionally, the Exchange believes that the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system because the tools will provide member organizations with the ability to self-manage their levels of risk while providing an alert system that will help to ensure that member organizations are aware of developing issues. As such, the Exchange believes that the tools will provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

Further, the Exchange believes that the proposed rule change is designed to protect investors and the public interest because the tools are a form of impact mitigation that will aid member organizations in minimizing their risk exposure and reduce the potential for disruptive, market-wide events. The Exchange understands that firms test their trading systems in order to identify and mitigate latent defects. The proposed tools will serve as a back stop for member organizations to assist them in identifying any such issues. The Exchange believes the risk management tools will assist member organizations in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange's member organizations because use of the risk management tools is optional and is not a prerequisite for participation on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal will have a positive effect on competition because, by providing member organizations with additional means to monitor and control risk, the proposal will increase confidence in the proper functioning of the markets. The Exchange believes the risk management tools will assist member organizations in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system. As a result, the level of competition should increase as public confidence in the markets is solidified.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act[9] and Rule 19b–4(f)(6)[10] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSE–2013–80 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2013–80. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSE–2013–80 and should be submitted on or before January 17, 2014. SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71166; File No. SR–NYSEArca–2013–142]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Offer Risk Management Tools Designed To Allow ETP Holders To Monitor and Address Exposure to Risk

December 20, 2013.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the "Act")[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on December 12, 2013, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to offer risk management tools designed to allow ETP Holders to monitor and address exposure to risk. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In order to assist ETP Holders' efforts to manage their risk level, the Exchange proposes to offer risk management tools designed to allow ETP Holders to monitor and address exposure to risk.

On October 2, 2012, the Commission conducted a roundtable entitled "Technology and Trading: Promoting Stability in Today's Markets" (the "Roundtable").[4] While a number of issues were discussed at the Roundtable, a large amount of time was devoted to discussing "kill-switches," a mechanism that would deactivate trading when certain thresholds were met. Panelists and commenters on the Roundtable's topics generally supported a kill-switch mechanism that would permit market centers to terminate a firm's trading activity if such activity was posing a threat to market integrity. But there was concern that firms would "be reluctant to systemically cut themselves off from the market"[5] and therefore, any kill-switch-triggering threshold would be set by the firm at a conservative level such that the automated disconnect would not occur when actually needed. At the same time though, the ability to detect unusual behavior would be invaluable to a firm in assessing whether an error was causing an unwanted buildup in risk.

To address the concerns raised during the Roundtable, the Exchange proposes to offer optional risk management tools for its ETP Holders that would facilitate, among other things, blocking of an ETP Holder's orders if certain thresholds were met. As proposed, the risk management tools seek to balance the conflicting viewpoints raised during the Roundtable by providing risk monitoring services that grant discretion to the ETP Holder to define pre-set risk thresholds. The tools are designed to act as a backstop for ETP Holders' risk controls by providing them with the ability to take action to more effectively manage their risk levels with respect to orders at the Exchange.

The risk management tools will provide ETP Holders with the ability to segment activity into risk groups and to monitor exposure in real time as trades execute. ETP Holders may also take certain actions in response to an unwanted buildup in risk levels, such as bulk blocking or bulk cancelling orders by risk group. Additionally, ETP Holders may define risk limits that may be adjusted intraday and elect to have the Exchange take action based on these pre-set limits, such as sending alerts as exposure limits are approached and breached or automatically blocking orders upon a breach. The tools are meant to be supplemental, acting as a backstop for an ETP Holder's internal monitoring and procedures related to risk management. The Exchange does not guarantee that the tools will be sufficiently comprehensive to meet all of an ETP Holder's needs, and the tools are not designed to be the sole means of risk control. Moreover, the use of the Exchange's risk management tools will not automatically constitute compliance with Exchange or federal rules.

As noted above, the proposed risk management tools will be optional for ETP Holders. The Exchange will not provide preferential treatment to ETP Holders using the Exchange-offered risk management tools and will not charge a fee for use of the risk management tools. Should the Exchange determine to charge a fee for use of the risk management tools, such fee will be proposed through a subsequent rule filing.

The Exchange will be phasing in its risk management tools as the technology supporting the functionality is being implemented and will announce by Trader Update when specific risk management tools will be available. The Exchange intends to make available the ability to segment activity into risk groups, define risk limits, and enter bulk block and bulk cancel messages during the first rollout.[6] Additional functionality, such as allowing ETP Holders to elect to have the Exchange take automated action based on pre-set limits, will be phased in over subsequent months.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the requirements of Section 6(b) of the Act,[7] in general, and Section 6(b)(5) of the Act,[8] in particular, in that it is designed to foster cooperation and coordination

with persons facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and not to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposed rule change will foster cooperation and coordination with persons facilitating transactions in securities because the Exchange will provide alerts to ETP Holders when their trading reaches certain thresholds. As such, the Exchange will help ETP Holders monitor their risk levels and provide tools for the firms to take action. Additionally, the Exchange believes that the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system because the tools will provide ETP Holders with the ability to self-manage their levels of risk while providing an alert system that will help to ensure that ETP Holders are aware of developing issues. As such, the Exchange believes that the tools will provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

Further, the Exchange believes that the proposed rule change is designed to protect investors and the public interest because the tools are a form of impact mitigation that will aid ETP Holders in minimizing their risk exposure and reduce the potential for disruptive, market-wide events. The Exchange understands that firms test their trading systems in order to identify and mitigate latent defects. The proposed tools will serve as a back stop for ETP Holders to assist them in identifying any such issues. The Exchange believes the risk management tools will assist ETP Holders in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange's ETP Holders because use of the risk management tools is optional and is not a prerequisite for participation on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal will have a positive effect on competition because, by providing ETP Holders with additional means to monitor and control risk, the proposal will increase confidence in the proper functioning of the markets. The Exchange believes the risk management tools will assist ETP Holders in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system. As a result, the level of competition should increase as public confidence in the markets is solidified.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act[9] and Rule 19b–4(f)(6)[10] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comment

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email *to rule-comments@sec.gov*. Please include File Number SR–NYSEArca–2013–142 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2013–142. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2013–142 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71157; File No. SR–NYSEMKT–2013–88]

Self-Regulatory Organizations; NYSE MKT LLC; Order Approving Proposed Rule Change Amending Certain Rules That Address Wash Sales in Order To Harmonize the Exchange's Rules With the Rules of New York Stock Exchange LLC and the Financial Industry Regulatory Authority

December 20, 2013.

I. Introduction

On October 29, 2013, NYSE MKT LLC ("NYSE MKT" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend certain rules that address wash sales in order to harmonize the Exchange's rules with the rules of New York Stock Exchange LLC ("NYSE") and the Financial Industry Regulatory Authority ("FINRA"). The proposed rule change was published for comment in the **Federal Register** on November 14, 2013.[3] The Commission received no comments on the proposal. This order approves the proposed rule change.

II. Description of the Proposal

In the filing, the Exchange proposed to amend its wash sale rules to achieve a greater level of internal consistency as well as consistency with FINRA's and NYSE's rules. First, the Exchange proposed to eliminate Rule 476(a)(8), instead utilizing Rule 6140—Equities for wash sale disciplinary actions in its equities market, as the Exchange believes that the conduct described in that rule should not be treated as a wash sale violation in all instances. The Exchange stated that it believes that the scienter requirement in Exchange Rule 6140—Equities, NYSE Rule 6140 and FINRA Rule 6140 recognizes that in today's markets, there can be certain instances of trading activity that may inadvertently and unknowingly result in executions with no change in beneficial ownership, and that such conduct should not always be treated as a wash sale violation if the market participant did not act with purpose—for example, the Exchange noted that activity involving an off-floor market participant's algorithmic orders that inadvertently execute against themselves due to latency issues could be deemed a violation of the second prong of Rule 476(a)(8).

Second, so that there is no change in the scope of equity market participants subject to disciplinary action for wash sales, the Exchange proposed a conforming amendment to Rule 6140(a) and (b)—Equities to provide that the rule applies not only to members and member organizations, but also to principal executives, approved persons, registered or non-registered employees of a member or member organization or persons otherwise subject to the jurisdiction of the Exchange.[4]

The Exchange also proposed to delete Rule 4,[5] marking it "Reserved." Finally, the Exchange proposed to add substantially the same text of Rule 6140(a) and (b)—Equities to (options) Rule 995NY, in new subparagraphs (e) and (f). As such, the Exchange is extending the substance of the specific wash sale prohibitions in Rule 6140(a) and (b)—Equities to trading on the Exchange's options market.[6] The Exchange stated that locating these provisions in the options rules will give options market participants better notice of this prohibited conduct.[7]

III. Discussion and Commission Findings

The Commission has carefully reviewed the proposed rule change and finds that it is consistent with the requirements of Section 6 of the Act[8] and the rules and regulations thereunder applicable to a national securities exchange.[9] In particular, the Commission finds that the proposal is consistent with Section 6(b)(5) of the Act,[10] which requires, among other things, that the Exchange's rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange is deleting Rule 476(a)(8), a rule which the Exchange explained was originally adopted by the NYSE (and subsequently adopted by the Exchange) to address manual, floor-based trading activity. In its place, the Exchange proposes to use Rule 6140—Equities for wash sale disciplinary actions in its equities market. The Exchange stated that Rule 6140—Equities, which has a scienter standard that the second prong of Rule 476(a)(8) lacks, recognizes that certain inadvertent trading activity, such as algorithmic trading, that results unintended executions with no change in beneficial ownership should not always be treated as a wash sale violation. In addition, the Exchange is amending Exchange Rule 6140(a) and (b)—Equities to cover the same persons that Exchange Rule 476(a)(8) covered. Finally, the Exchange is proposing to delete Rule 4, and to add substantially the same text as Rule 6140(a) and (b)—Equities to Exchange Rule 995NY so that the substance of the wash sale prohibitions in Rule 6140(a) and (b)—Equities also applies to trading on the Exchange's options market.

The Commission understands that algorithmic trading can result in inadvertent executions with no change in beneficial ownership.[11] The Exchange has represented that the proposed rule change would not result in any material change in the surveillance of potentially violative activity nor any material diminution of the Exchange's enforcement authority as it may still bring a disciplinary action in cases where a market participant engages in a significant number of trades without a change of beneficial ownership, even if such activity does not per se violate Rule 6140(b)—Equities or proposed Rule 995NY(f)

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 70832 (November 7, 2013), 78 FR 68488 ("Notice").

[4] These persons were subject to Rule 476(a)(8).

[5] Rule 4 in Part 1 of the General Rules provides that "[n]o member or member organization shall execute or cause to be executed, or participate in an account for which there is executed on the Exchange, the purchase of any security at successively higher prices or the sale of any security at successively lower prices for the purpose of creating or inducing a false, misleading or artificial appearance of activity in such security or for the purpose of unduly or improperly influencing the market price of such security or for the purpose of making a price which does not reflect the true state of the market in such security." Rule 4 applies to both the Exchange's equities and options markets.

[6] The references to a "designated security" in the text of Rule 6140(a) and (b)—Equities would be replaced with "listed option" in proposed Rule 995NY and similarly references to a "member" or "member organization" would be replaced with "ATP Holder."

[7] The Exchange also proposed a technical amendment to move a definition of a term that is used in Rule 995NY(c) to that subparagraph of the rule. Specifically, the definition of the term "related instrument" currently appears at the end of the rule following the designation of subparagraph (d) and the text thereof, although that term is used in subparagraph (c). As such, the Exchange proposed to move the text of the definition of "related instrument" to Rule 995NY(c).

[8] 15 U.S.C. 78f.

[9] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[10] 15 U.S.C. 78f(b)(5).

[11] The Commission notes that algorithmic trading resulting in executions with no change in beneficial ownership, even if unintended, raises concerns.

because the participant did not act with "purpose." The Exchange further represented that such unintended activity could also give rise to other violations, such as a failure to supervise under Rule 342—Equities or Rule 922, or a violation of just and equitable principles of trade or could otherwise constitute unethical activity under Rule 476(a)(6) or Rule 2010—Equities. Accordingly, the Commission expects the Exchange to continue to surveil for potential wash sale activity and to take necessary action as appropriate.

The Commission believes that the proposed deletion of Rule 476(a)(8) and Rule 4 promotes harmonization, consistency and clarity with respect to the Exchange's rules [12] by resolving the current inconsistent scienter standards of Exchange Rule 476(a)(8) and Exchange Rule 4,[13] Exchange Rule 6140—Equities, NYSE Rule 6140 and FINRA Rule 6140, as well as extending the breadth of persons covered by Rule 6140—Equities to those persons covered by Rule 476(a)(8). The Commission also believes that the additions to Exchange Rule 995NY to apply the specific provisions of Rule 6140(a) and (b)—Equities to the Exchange's options market are appropriate because the Exchange's ATP Holders will be subject to a rule that prohibits wash sales that were designed to create or induce a false or misleading appearance of activity in a designated security. The change will provide clear notice to the ATP Holders of such prohibited activity, as well as make the prohibited activity consistent across both the Exchange's equities and options markets, as well as across NYSE and FINRA. The Commission believes that the proposed rule change should result in less burdensome and more efficient regulatory compliance for firms that are members of the Exchange, NYSE and FINRA. As such, the Exchange's rules would continue to protect investors and the public interest.

For the foregoing reasons, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act [14] and the rules and regulations thereunder applicable to a national securities exchange.

[12] The Exchange stated that it can bring disciplinary actions under Rule 476(a)(8) for conduct that occurred prior to the time the rule is deleted. Thus, the proposed rule change would have no impact on ongoing disciplinary actions involving violations of Rule 476(a)(8).

[13] The Exchange noted that Rule 4 is substantially the same as Rule 6140(a)—Equities.

[14] 15 U.S.C. 78f(b)(5).

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,[15] that the proposed rule change (SR–NYSEMKT–2013–88) be, and it hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71163; File No. SR–NYSEMKT–2013–104]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Proposes to Amend Commentary .02 to NYSE Amex Options Rule 960NY in order to Extend the Penny Pilot in Options Classes in Certain Issues Previously Approved by the Securities and Exchange Commission through June 30, 2014

December 20, 2013.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the "Act") [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on December 18, 2013, NYSE MKT LLC (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Commentary .02 to NYSE Amex Options Rule 960NY in order to extend the Penny Pilot in options classes in certain issues ("Pilot Program") previously approved by the Securities and Exchange Commission ("Commission") through June 30, 2014. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C.78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange hereby proposes to amend Commentary .02 to Exchange Rule 960NY to extend the time period of the Pilot Program,[4] which is currently scheduled to expire on December 31, 2013 through June 30, 2014. The Exchange also proposes that the dates to replace issues in the Pilot Program that have been delisted be revised to the second trading day following January 1, 2014.[5]

This filing does not propose any substantive changes to the Pilot Program: All classes currently participating will remain the same and all minimum increments will remain unchanged. The Exchange believes the benefits to public customers and other market participants who will be able to express their true prices to buy and sell options have been demonstrated to outweigh the increase in quote traffic.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b)[6] of the Securities Exchange Act of 1934 (the "Act"), in general, and furthers the objectives of Section 6(b)(5),[7] in

[4] *See* Securities Exchange Act Release No. 69105 (March 11, 2013), 78 FR 16554 (March 15, 2013) (SR–NYSEMKT–2013–17).

[5] The month immediately preceding a replacement class's addition to the Pilot Program (i.e., December) would not be used for purposes of the analysis for determining the replacement class. Thus, a replacement class to be added on the second trading day following January 1, 2014 would be identified based on The Option Clearing Corporation's trading volume data from June 1, 2013 through November 30, 2013. The Exchange will announce the replacement issues to the Exchange's membership through a Trader Update.

[6] 15 U.S.C. 78f(b).

[7] 15 U.S.C. 78f(b)(5).

particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanisms of a free and open market and a national market system. The Exchange believes that the Pilot Program promotes just and equitable principles of trade by enabling public customers and other market participants to express their true prices to buy and sell options. The proposal to extend the Pilot Program is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanisms of a free and open market and a national market system, by allowing the Exchange and the Commission additional time to analyze the impact of the Pilot Program while also allowing the Exchange to continue to compete for order flow with other exchanges in option issues trading as part of the Pilot Program.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Specifically, the Exchange believes that, by extending the expiration of the Pilot Program, the proposed rule change will allow for further analysis of the Pilot Program and a determination of how the Program should be structured in the future. In doing so, the proposed rule change will also serve to promote regulatory clarity and consistency, thereby reducing burdens on the marketplace and facilitating investor protection. The Pilot Program is an industry wide initiative supported by all other option exchanges. The Exchange believes that extending the Pilot Program will allow for continued competition between NYSE Amex Options market participants trading similar products as their counterparts on other exchanges, while at the same time allowing the Exchange to continue to compete for order flow with other exchanges in option issues trading as part of the Pilot Program.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[8] and Rule 19b–4(f)(6) thereunder.[9] Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[10] and Rule 19b–4(f)(6)(iii) thereunder.[11]

A proposed rule change filed under Rule 19b–4(f)(6) normally does not become operative prior to 30 days after the date of the filing.[12] However, pursuant to Rule 19b–4(f)(6)(iii),[13] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because doing so will allow the Pilot Program to continue without interruption in a manner that is consistent with the Commission's prior approval of the extension and expansion of the Pilot Program and will allow the Exchange and the Commission additional time to analyze the impact of the Pilot Program.[14] Accordingly, the Commission designates the proposed rule change as operative upon filing with the Commission.[15]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[16] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEMKT–2013–104 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEMKT–2013–104. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the

[8] 15 U.S.C. 78s(b)(3)(A).

[9] 17 CFR 240.19b–4(f)(6).

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71160; File No. SR–ISE–2013–60]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Rent Cabinet Space to Telecommunication Vendors in the Exchange's Backup Datacenter

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 13, 2013, the International Securities Exchange, LLC (the "Exchange" or the "ISE") filed with the Securities and Exchange Commission the proposed rule change, as described in Items I and II below, which items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The ISE proposes to provide cabinet space in its backup datacenter to telecommunication vendors to replace substantially similar services currently provided by the Exchange's third party datacenter operator in connection with the move of this datacenter to an ISE facility, and to adopt a corresponding disaster recovery network fee. The text of the proposed rule change is available on the Exchange's Web site (*http://www.ise.com*), at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

ISE is in the process of moving its backup datacenter from the current third-party site in New Jersey ("Telx") to the Exchange's headquarters in New York, and, in connection with this move, is proposing to allow telecommunication vendors to rent cabinet space in the ISE facility, and to adopt a corresponding disaster recovery network fee.

Currently, market participants, including members and non-members, may rent cabinet space in the backup datacenter run by Telx in order to maintain connectivity to the Exchange in the event that the ISE's primary datacenter is not operational. As the Exchange is moving its hardware to an ISE-run facility, the Exchange proposes to offer this service itself. In particular, the ISE proposes to facilitate connectivity to the backup datacenter by providing telecommunication vendors with cabinet space,[3] in either half cabinet or full cabinet options, along with power and cooling in a secure, controlled environment.[4] The proposed services are substantially the same as services currently provided through Telx to market participants that wish to connect to the ISE's backup datacenter. The Exchange believes that it is important that it continue to provide these services so that market participants may connect to the backup datacenter in the event that the ISE's primary datacenter is not operational.

Like the ISE's third party datacenter operator, the Exchange intends to charge a fee to telecommunication vendors that wish to rent cabinet space in the ISE's backup datacenter when it is moved to the new facility. Operating the backup datacenter takes a significant amount of ISE resources, and the proposed "disaster recovery network fee" will allow the Exchange to recoup associated expenses. As explained above, the proposed fee will entitle vendors to obtain cabinet space in the datacenter, along with power and cooling. The fees assessed will reflect the amount of cabinet space used by each vendor, and will be $2,300 per month for a half-cabinet and $2,800 per month for a full cabinet. The Exchange will not charge any installation or other fees to telecommunication vendors for connecting to the backup datacenter.

As proposed, firms that currently connect to the backup datacenter at Telx will be able to continue to do so through telecommunication vendors who have entered into a contractual agreement with the Exchange to provide these services, and who will be responsible for redistributing connectivity to market participants that desire access. This would include members that currently connect to Telx in order to maintain connectivity in the event that the Exchange must operate using its backup datacenter.[5] It would also include non-members (e.g., extranet providers) that currently connect to Telx in order to redistribute that connectivity to others.[6] For operational reasons, market participants will not be permitted to connect directly to the backup datacenter at the ISE facility, and must go through a telecommunication vendor. The Exchange believes that this provides a more efficient means of managing connectivity to the backup datacenter as the ISE would not need to set up and maintain many separate connections from market participants.

The Exchange expects that initially four telecommunication vendors will provide connectivity to the backup

[17] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Cabinet space will be provided in industry standard 19" open air racks, which will be secured in a caged meet-me-room that is controlled by 24x7 access based on a registration process for access.

[4] This service is being provided as a means of establishing connectivity to the backup datacenter. Renting cabinet space does not entitle telecommunications vendors to receive or redistribute market data.

[5] Members are not required to establish connectivity to the Exchange's backup datacenter, which is purely voluntary.

[6] An "extranet provider" is a technology provider that connects with ISE systems and in turn provides such connectivity to market participants that do not connect directly with the Exchange.

datacenter to market participants. Each of these vendors currently rents cabinet space in the Telx datacenter, and will continue to provide market participants with access to the backup datacenter when it is moved to the ISE facility. The ISE is not affiliated with any of these telecommunication vendors, and has no financial interest in, and will not be involved in billing or collecting, fees that the vendors may charge their customers to connect to the backup datacenter.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Securities Exchange Act of 1934 (the "Act"),[7] in general, and with Section 6(b)(5) of the Act,[8] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Exchange also believes that the proposed rule change furthers the objectives of Section 6(b)(4) of the Act,[9] in that it provides for the equitable allocation of reasonable dues, fees and other charges among Exchange members and other persons using its facilities.

The Exchange believes that it is necessary in the public interest that it facilitate connectivity to the backup datacenter in order to minimize any potential disruption and market impact that may otherwise occur if the ISE's primary datacenter is not operational. The proposed services will replace services currently provided by Telx in connection with the move of the Exchange's backup datacenter to an ISE-operated facility. The Exchange believes that it is important to continue to provide the proposed services, which will provide a robust, efficient, and, as discussed below, cost effective means of facilitating access to the ISE's backup datacenter.

Furthermore, the Exchange believes that the proposed disaster recovery network fee, which will replace fees currently charged by Telx, is fair and equitable as it compares favorably with the fees charged by other options exchanges that rent cabinet space in their datacenters. For example, NASDAQ OMX PHLX, LLC ("PHLX") charges members that rent space in its datacenter a fee of $3,000 per month for a half cabinet and between $4,000 per month to $13,000 per month for a full cabinet depending on the options that members of that exchange specify.[10] Moreover, telecommunication vendors are expected to recoup the cost of the proposed fee, plus a premium, by redistributing connectivity to market participants. Similarly, the Exchange expects that telecommunication vendors will spread the cost of this service among their clients, resulting in a lower overall fee to market participants that establish connectivity through such vendors. Since all market participants must connect through a telecommunications vendor rather than establishing a direct connection to the backup datacenter, the Exchange believes that its proposed fee will ultimately be spread among many parties, resulting in a significantly lower cost of connecting to the disaster recovery network. The Exchange also believes the proposed disaster recovery network fee is equitably allocated in that all telecommunication vendors will be charged the same amount to maintain a connection. Moreover, the Exchange believes the proposed fee is not unfairly discriminatory in that there is no differentiation among vendors with regard to the fees charged for connectivity to the Exchange's backup datacenter.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[11] the Exchange believes that the proposed rule change will not impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rule change will enhance intermarket competition by enabling the Exchange to continue to provide an important competitive service to market participants. The Exchange believes that it is important that market participants are able to connect to the backup datacenter in the event that the ISE's primary datacenter is not operational, and is proposing to offer services that would allow market participants to establish such connectivity. Facilitating this connectivity will not have any impact on intramarket competition as the services are substantially the same as services currently provided by the Exchange's third party datacenter operator for a fee that will now be replaced by an ISE fee. The Exchange notes that while, for operational reasons, it is only renting cabinet space to telecommunications vendors; this will have no impact on competition because these vendors are tasked with redistributing this connectivity to market participants as they currently do today. The Exchange believes that selecting multiple telecommunications vendors to provide connectivity to the backup datacenter will allow market participants to also benefit from competition between such vendors. The Exchange will not discriminate in contracting with telecommunication vendors to connect to the backup datacenter, and all contracted vendors will be charged the same fees and granted the same level of access to the backup datacenter at the ISE facility.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (1) Significantly affect the protection of investors or the public interest; (2) impose any significant burden on competition; and (3) by its terms does not become operative for 30 days after the date of this filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[12] and Rule 19b–4(f)(6) thereunder.[13]

A proposed rule change filed under Rule 19b–4(f)(6)[14] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[15] the Commission may designate a shorter

[7] 15 U.S.C. 78f.

[10] *See* PHLX Pricing Schedule, Co-Location Services, Cabinets; Securities Exchange Act Release No. 62395 (June 28, 2010), 75 FR 38584 (July 2, 2010) (PHLX–2010–18) (order approving initial cabinet fees). In addition to the monthly fee PHLX also charges an installation fee that ranges from $3,500 to $7,000 depending on the type of cabinet.

[11] 15 U.S.C. 78f(b)(8).

[12] 15 U.S.C. 78s(b)(3)(A).

[13] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to provide the Commission with written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change; or such shorter time as designated by the Commission. The Exchange has met this requirement.

[14] 17 CFR 240.19b–4(f)(6).

[15] 17 CFR 240.19b–4(f)(6)(iii).

time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing noting that it is in the public interest that the Exchange facilitate connectivity to the backup datacenter in order to minimize any potential disruption and market impact that may otherwise occur if the Exchange's primary datacenter is not operational. The Exchange further represents that the waiver is necessary to permit the Exchange to continue to facilitate access to its backup datacenter when it is moved over to an ISE-operated facility. The Exchange stated that it is vital that market participants be able to access the ISE through the Exchange's backup datacenter should the need arise. Moreover, the Exchange believes that its proposal, which will allow market participants to access the backup datacenter through one of multiple telecommunication vendors, provides a robust, efficient, and cost effective means of facilitating this access. For the above reasons, the Commission believes that waiving the 30 day operative delay is consistent with the protection of investors and the public interest in that the Exchange may immediately provide connectivity to the backup datacenter to minimize any disruption to the market in case ISE's primary datacenter is not operational. Accordingly, the Commission hereby grants the Exchange's request and designates the proposal operative upon filing.[16]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[17] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–ISE–2013–60 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2013–60. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2013–60 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–71165; File No. SR–NYSEMKT–2013–102]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Offer Risk Management Tools Designed To Allow Member Organizations To Monitor and Address Exposure to Risk

December 20, 2013.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the "Act")[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on December 12, 2013, NYSE MKT LLC (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to offer risk management tools designed to allow equity member organizations to monitor and address exposure to risk. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com*, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In order to assist equity member organizations' efforts to manage their risk level, the Exchange proposes to offer risk management tools designed to allow member organizations to monitor and address exposure to risk. These tools are designed for the Exchange's equity trading market and are identical to the tools that will be offered by the New York Stock Exchange LLC.

On October 2, 2012, the Commission conducted a roundtable entitled "Technology and Trading: Promoting Stability in Today's Markets" (the "Roundtable").[4] While a number of issues were discussed at the Roundtable, a large amount of time was devoted to discussing "kill-switches," a mechanism that would deactivate trading when certain thresholds were met. Panelists and commenters on the Roundtable's topics generally supported a kill-switch mechanism that would permit market centers to terminate a firm's trading activity if such activity was posing a threat to market integrity. But there was concern that firms would "be reluctant to systemically cut themselves off from the market" [5] and therefore, any kill-switch-triggering threshold would be set by the firm at a conservative level such that the automated disconnect would not occur when actually needed. At the same time though, the ability to detect unusual behavior would be invaluable to a firm in assessing whether an error was causing an unwanted buildup in risk.

To address the concerns raised during the Roundtable, the Exchange proposes to offer optional risk management tools for its member organizations that would facilitate, among other things, blocking of a member organization's orders if certain thresholds were met. As proposed, the risk management tools seek to balance the conflicting viewpoints raised during the Roundtable by providing risk monitoring services that grant discretion to the member organizations to define pre-set risk thresholds. The tools are designed to act as a backstop for member organizations' risk controls by providing them with the ability to take action to more effectively manage their risk levels with respect to orders at the Exchange.

The risk management tools will provide member organizations with the ability to segment activity into risk groups and to monitor exposure in real time as trades execute. Member organizations may also take certain actions in response to an unwanted buildup in risk levels, such as bulk blocking or bulk cancelling orders by risk group. Additionally, member organizations may define risk limits that may be adjusted intraday and elect to have the Exchange take action based on these pre-set limits, such as sending alerts as exposure limits are approached and breached or automatically blocking orders upon a breach. The tools are meant to be supplemental, acting as a backstop for a member organization's internal monitoring and procedures related to risk management. The Exchange does not guarantee that the tools will be sufficiently comprehensive to meet all of a member organization's needs, and the tools are not designed to be the sole means of risk control. Moreover, the use of the Exchange's risk management tools will not automatically constitute compliance with Exchange or federal rules.

As noted above, the proposed risk management tools will be optional for member organizations. The Exchange will not provide preferential treatment to member organizations using the Exchange-offered risk management tools and will not charge a fee for use of the risk management tools. Should the Exchange determine to charge a fee for use of the risk management tools, such fee will be proposed through a subsequent rule filing.

The Exchange will be phasing in its risk management tools as the technology supporting the functionality is being implemented and will announce by Trader Update when specific risk management tools will be available. The Exchange intends to make available the ability to segment activity into risk groups, define risk limits, and enter bulk block and bulk cancel messages during the first rollout.[6] Additional functionality, such as allowing member organizations to elect to have the Exchange take automated action based on pre-set limits, will be phased in over subsequent months.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the requirements of Section 6(b) of the Act,[7] in general, and Section 6(b)(5) of the Act,[8] in particular, in that it is designed to foster cooperation and coordination with persons facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and not to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposed rule change will foster cooperation and coordination with persons facilitating transactions in securities because the Exchange will provide alerts to member organizations when their trading reaches certain thresholds. As such, the Exchange will help member organizations monitor their risk levels and provide tools for the firms to take action. Additionally, the Exchange believes that the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system because the tools will provide member organizations with the ability to self-manage their levels of risk while providing an alert system that will help to ensure that member organizations are aware of developing issues. As such, the Exchange believes that the tools will provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

Further, the Exchange believes that the proposed rule change is designed to protect investors and the public interest because the tools are a form of impact mitigation that will aid member organizations in minimizing their risk exposure and reduce the potential for disruptive, market-wide events. The Exchange understands that firms test their trading systems in order to identify and mitigate latent defects. The proposed tools will serve as a back stop for member organizations to assist them in identifying any such issues. The Exchange believes the risk management tools will assist member organizations in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange's member organizations because use of the risk management tools is optional and is not a

[4] *See* Securities Exchange Act Release No. 67802 (Sept. 7, 2012), 77 FR 56697 (Sept. 13, 2012) (File No. 4–652). A webcast of the Roundtable is available at *www.sec.gov/news/otherwebcasts/2012/ttr100212.shtml.*

[5] *See* Transcript of Roundtable, Sections 0151–0152 (Oct. 2, 2012) (remarks of Lou Steinberg, TD Ameritrade).

[6] The Exchange expects the first rollout to begin in the first quarter of 2014.

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

prerequisite for participation on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal will have a positive effect on competition because, by providing member organizations with additional means to monitor and control risk, the proposal will increase confidence in the proper functioning of the markets. The Exchange believes the risk management tools will assist member organizations in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system. As a result, the level of competition should increase as public confidence in the markets is solidified.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act [9] and Rule 19b–4(f)(6) [10] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEMKT–2013–102 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEMKT–2013–102. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEMKT–2013–102 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 71158; File No. SR–NASDAQ–2013–158]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to Acceptable Trade Range

December 20, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 16, 2013, The NASDAQ Stock Market LLC ("NASDAQ" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II, below, which Items have been prepared by NASDAQ. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

NASDAQ proposes to delay the implementation of a recent proposed amendment to rule text related to Acceptable Trade Range.

The text of the proposed rule change is available on the Exchange's Web site at *http://www.nasdaq.cchwallstreet.com*, at the principal office of the Exchange, at the Commission's Public Reference Room, and on the Commission's Web site at *http://www.sec.gov*.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b-4.

forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to delay the implementation of a recent proposed amendment to rule text in Chapter VI, Section 10 entitled "Book Processing" to add additional rule text regarding Acceptable Trade Range. The Acceptable Trade Range enhancements would be implemented as of December 23, 2013.[3] At this time, the Exchange needs additional time to implement the applicable technology. Accordingly, the Exchange seeks to be able to implement the changes in January 2014. The Exchange will announce the specific date in advance through an Options Trader Alert.

The Acceptable Trade Range is a mechanism to prevent the system[4] [sic] from experiencing dramatic price swings by creating a level of protection that prevents the market from moving beyond set thresholds. The thresholds consist of a Reference Price plus (minus) set dollar amounts based on the nature of the option and the premium of the option.

With the rule amendment, the System will calculate an Acceptable Trade Range by taking the reference price, plus or minus a value to be determined by the Exchange. (i.e., the reference price—(x) for sell orders and the reference price + (x) for buy orders).[5] Upon receipt of a new order, the reference price is the National Best Bid (NBB) for sell orders and the National Best Offer (NBO) for buy orders or the last price at which the order is posted whichever is higher for a buy order or lower for a sell order. If an order reaches the outer limit of the Acceptable Trade Range (the "Threshold Price") without being fully executed, it will be posted at the Threshold Price for a brief period, not to exceed one second ("Posting Period"), to allow more liquidity to be collected. Upon posting, either the current Threshold Price of the order or an updated NBB for buy orders or the NBO for sell orders (whichever is higher for a buy order/lower for a sell order) then becomes the reference price for calculating a new Acceptable Trade Range. If the order remains unexecuted, a new Acceptable Trade Range will be calculated and the order will execute, route, or post up to the new Acceptable Trade Range Threshold Price. Today, this process will repeat until either (i) the order/quote is executed, cancelled, or posted at its limit price or (ii) the order has been subject to a configurable number of instances of the Acceptable Trade Range as determined by the Exchange.[6] Once the maximum number of instances has been reached, the order is returned.

The Exchange posts a maximum number of Acceptable Trade Range iterations, until the order is cancelled on its Trading System Settings page located on the NASDAQTrader.com Web site.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act[7] in general, and furthers the objectives of Section 6(b)(5) of the Act[8] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest by enhancing the ATR [sic] to make the Exchange's markets more efficient, to the benefit of the investing public. Although the Exchange needs additional time to finalize the enhancements, the delay is expected to be short and will involve advance notice to the Exchange membership.

B. Self-Regulatory Organization's Statement on Burden on Competition

The proposed rule change does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes this proposed rule change would provide NOM Participants greater certainty when transacting orders on the Exchange and continue to reduce the negative impacts of sudden, unanticipated volatility in and enhance the price-discovery process.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[9] and Rule 19b–4(f)(6) thereunder.[10] Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[11] and Rule 19b–4(f)(6)(iii) thereunder.[12]

A proposed rule change filed under Rule 19b–4(f)(6)[13] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[14] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission notes that waiver of the operative delay would permit the Exchange to delay the implementation of a recent proposed amendment to rule text related to Acceptable Trade Range.

Under the proposal, the Exchange would delay the implementation of the Acceptable Trade Range rule text changes from December 23, 2013, to January on a specific date to be announced in advance through an Options Trader Alert. The Exchange represents that a waiver of the 30-day operative delay is necessary and appropriate to ensure that the

[3] Securities Exchange Act Release No. 70985 (December 4, 2013), 78 FR 74206, (December 10, 2013) (SR–NASDAQ–2013–145).

[4] The term "System" shall mean the automated System for order execution and trade reporting owned and operated by The Nasdaq Options Market LLC. *See* NOM Rules at Chapter VI, Section 1(a).

[5] The Acceptable Trade Range settings are tied to the option premium.

[6] NOM Participants may elect to have their orders cancelled by the System after the first iteration.

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] 15 U.S.C. 78s(b)(3)(A)(iii).

[10] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[11] 15 U.S.C. 78s(b)(3)(A)

[12] 17 CFR 240.19b–4(f)(6)(iii).

[13] 17 CFR 240.19b–4(f)(6).

technology for the changes is ready for implementation. The Exchange further represents that the delay will be short and that it will provide advance notice of the implementation date to its membership. Based on the Exchange's representations, the Commission waives the 30-day operative delay requirement and designates the proposed rule change as operative upon filing.[15]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[16] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NASDAQ–2013–158 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number *SR–NASDAQ–2013–158*. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NASDAQ–2013–158 and should be submitted on or before January 17, 2014.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Kevin M. O'Neill,

Deputy Secretary.

Public Notice; Culturally Significant Objects Imported for Exhibition Determinations: "Treasures from Korea: Arts and Culture of the Joseon Dynasty, 1392–1910"

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition "Treasures from Korea: Arts and Culture of the Joseon Dynasty, 1392–1910," imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at the Philadelphia Museum of Art, Philadelphia, PA, from on or about March 2, 2014, until on or about May 26, 2014; the Los Angeles County Museum of Art, Los Angeles, CA, from on or about June 29, 2014, until on or about September 28, 2014; the Museum of Fine Arts, Houston, TX, from on or about November 11, 2014, until on or about January 11, 2015, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the exhibit objects, contact Julie Simpson, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6467). The mailing address is U.S. Department of State, SA–5, L/PD, Fifth Floor (Suite 5H03), Washington, DC 20522–0505.

Dated: December 20, 2013.

Office of the Secretary

[Docket No. DOT–OST–2013–0217]

Proposed Information Collection Request; Notice of New Requirements and Procedures for Grant Payment Request Submission

AGENCY: Department of Transportation (DOT).

ACTION: Notice with request for comments.

SUMMARY: The DOT invites the public and other Federal agencies to comment on a revision to a previously approved information collection concerning new requirements and procedures for grant payment request submission. DOT will submit the proposed renewal of information collection request to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506 (c)(2)(A)). This notice sets forth new requirements and procedures for grantees that submit and receive payments from DOT Operating Administrations (OAs).[1] DOT is updating systems that support grant payments and there will be changes to the way grantees complete and submit payment requests. Simplifying the DOT grant payment process will save both the grantee and the Federal Government time and expense that come with paper-based grant application and payment administration. Note: At this time, this requirement is not applicable to DOT grant recipients requesting payment electronically through the National Highway Traffic Safety Administration's Grant Tracking System (GTS), the Federal Highway Administration's Rapid Approval State Payment System (RASPS), or Federal Transit Administration (FTA) grant recipients requesting payment through the Electronic Clearing House Operation System (ECHO-Web).

DATES: Comments must be submitted on or before February 25, 2014.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to U.S. Department of Transportation, Office of Financial Management, B–30, Room W93–431, 1200 New Jersey Avenue SE., Washington, DC 20590–0001, (202) 366–1306, *DOTElectronicInvoicing@dot.gov.*

SUPPLEMENTARY INFORMATION:

Title: Notice of Requirements and Procedures for Grant Payment Request Submission.

OMB Control Number: 2105–0564.

Type of Request: Revision to previously approved information collection.

Background: This notice sets forth requirements and procedures for grantees that receive payments from DOT OAs, with the exception of DOT grant recipients requesting payment electronically through the NHTSA's GTS, the FHWA's RASPS, or FTA grant recipients requesting payment through the Electronic Clearing House Operation System (ECHO-Web). The proposed procedures provide that—

- Grantees will now be required to have electronic internet access to register in the Delphi eInvoicing system.
- Grantees will be required to submit payment requests electronically and DOT OAs must process payment requests electronically.
- The identities of system users must be verified prior to receiving access to the Delphi eInvoicing system. Users must complete a user request form and provide the following information: full name, work address, work phone number, work email address, home address and home phone number. Once completed, this form must be presented to a Notary Public for verification. Once notarized, the prospective grantee user will return the form to receive their login credentials.
- DOT Office of Financial Management officials may allow exceptions to the requirement that grantees register and submit payment requests through the Delphi eInvoicing system under limited circumstances. Recipients may apply for an exemption by submitting an electronic Waiver Request Form to the DOT Office of Financial Management. The exceptions will be considered on a case by case basis via Waiver Request Form.

Affected Public: DOT Grant Recipients.

Estimated Number of Respondents: 3,000.

[1] The DOT OAs are: Office of the Secretary of Transportation (OST), Federal Aviation Administration (FAA), Federal Highway Administration (FHWA), Federal Motor Carrier Safety Administration (FMCSA), Federal Railroad Administration (FRA), Federal Transit Administration (FTA), Maritime Administration (MARAD), National Highway Traffic Safety Administration (NHTSA), Office of Inspector General (OIG), Pipeline and Hazardous Materials Safety Administration (PHMSA), Research and Innovative Technology Administration (RITA), Saint Lawrence Seaway Development Corporation (SLSDC) and Surface Transportation Board (STB).

Estimated Number of Responses: 3,000.

Annual Estimated Total Annual Burden Hours: 6,000 (initial registration only).

Frequency of Collection: One time.

ADDRESSES: Send comments regarding the burden estimate, including suggestions for reducing the burden, to U.S. Department of Transportation, Office of Financial Management, B–30, Room W93–431, 1200 New Jersey Avenue SE., Washington, DC 20590–0001, (202) 366–1306, *DOTElectronicInvoicing@dot.gov.*

Comments: Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents.

Issued in Washington, DC on December 19, 2013

David Rivait,

Deputy Chief Financial Officer, Department of Transportation.

BILLING CODE 4910–9X–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Public Notice for Waiver of Aeronautical Land-Use Assurance

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent of waiver with respect to land; Wayne County Airport, Wooster, Ohio.

SUMMARY: The FAA is considering a proposal to change approximately 44.7 acres of airport land from aeronautical use to non-aeronautical use and to authorize the sale of airport property located at Wayne County Airport, Wooster, Ohio. The aforementioned land is not needed for aeronautical use.

The property is located near the southeast corner of Geyers Chapel Road (T.R. 68) and Hutton Road (C.R. 78). The property is currently being farmed and the proposed use after the sale would be farmland.

DATES: Comments must be received on or before January 27, 2014.

ADDRESSES: Documents are available for review by appointment at the FAA Airports District Office, Irene Porter, Program Manager, 11677 South Wayne Road, Suite 107, Romulus, Michigan 48174 Telephone: (734) 229–2900/Fax: (734) 229–2950 and Wayne County Commissioners, 428 West Liberty Street, Wooster, Ohio, (330) 287–5400.

Written comments on the Sponsor's request must be delivered or mailed to: Irene Porter, Program Manager, Federal Aviation Administration, Airports District Office, 11677 South Wayne Road, Suite 107, Romulus, Michigan 48174, Telephone Number: (734) 229–2900/FAX Number: (734) 229–2950.

FOR FURTHER INFORMATION CONTACT: Irene Porter, Program Manager, Federal Aviation Administration, Airports District Office, 11677 South Wayne Road, Suite 107, Romulus, Michigan 48174. Telephone Number: (734) 229–2900/FAX Number: (734) 229–2950.

SUPPLEMENTARY INFORMATION: In accordance with section 47107(h) of Title 49, *United States Code,* this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

The property was originally acquired by the County for the ultimate development of a cross-wind runway for the airport. The Federal Aviation Administration (FAA) participated in the acquisition of this property under Airport Improvement Program grant 3–39–0093–02. Current FAA standards do not require a cross-wind runway at this airport. The sponsor is now proposing to sell this parcel for Fair Market Value and utilize the proceeds to help improve the existing airport infrastructure and bring it up to FAA standards.

The disposition of proceeds from the sale of the airport property will be in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999 (64 FR 7696).

This notice announces that the FAA is considering the release of the subject airport property at the Wayne County Airport, Wooster, Ohio from federal land covenants, subject to a reservation for continuing right of flight as well as restrictions on the released property as required in FAA Order 5190.6B section 22.16. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA.

Situated in the State of Ohio, County of Wayne, Township of Wayne in the southwest quarter of Section 12, T–16N, R–13W and being part of the land described in deeds to The Board of County Commissioners, Wayne County, Ohio recorded in deed volume 426, page 153, volume 555, page 185 and volume 600, page 281 of Wayne County records.

Described as follows:

Commencing at a one inch diameter steel pin found in the intersection of Geyers Chapel Road (Township Road 68) and Hutton Road (County Road 78) marking northwest corner of the southwest quarter of Section 12.

Thence N 89°40′14″ E 430.52 feet, along the north line of the quarter section and in Hutton Road, to the Point of Beginning for the parcel herein described—witnessed by a capped reference pin set S 17°07′20″ W 28.90 feet.

Thence with the following SEVEN courses:

(1) N 89°40′14″ E 1214.67 feet, along the north line of the quarter section and in Hutton Road, to a 5/8 inch diameter steel pin found at the northwest corner of James E. and Janet E. Kasserman, Trustees as described in official record volume 684, page 1857—witnessed by a capped reference pin found S 00°22′01″ E 23.00 feet.

(2) S 00°22′01″ E 1304.74 feet, along the west line of Kasserman, to a 3/4 inch diameter steel pin found.

(3) S 89°32′39″ W 1624.85 feet to a point on the west line of the quarter section—witnessed by a capped reference pin set N 89°32′39″ E 13.98 feet.

(4) N 01°15′27″ W 721.03 feet, along the west line of the quarter section, to a point—witnessed by a capped reference pin set N 88°44′33″ E 10.26 feet.

(5) N 88°44′33″ E 151.46 feet to a capped pin set.

(6) N 39°48′02″ E 211.97 feet to a capped pin set.

(7) N 17°07′20″ E 443.27 feet to the Point of Beginning.

This parcel contains 44.713 acres.

Issued in Romulus, Michigan, on December 5, 2013.

John L. Mayfield, Jr.,

Manager, Detroit Airports District Office, Federal Aviation Administration, Great Lakes Region.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Public Notice for Waiver of Aeronautical Land-Use Assurance

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent of waiver with respect to land; DuPage Airport, West Chicago, Illinois.

SUMMARY: The FAA is considering a proposal to change a 1.771–acre portion

of airport land from aeronautical use to non-aeronautical use and to authorize the sale of airport property located at DuPage Airport, West Chicago, Illinois.

The subject portion of airport property considered for release from obligation to be maintained for aeronautical use and sale includes a 0.672-acre portion of Parcel 601 (83.62 total acres), a 0.298-acre portion of Parcel 8 (1.21 total acres), and a 0.795-acre portion of Tract A (136.95 total acres) that are located in the northeast quadrant of the airport along Illinois Route 64 (North Avenue) and currently not being used directly for aeronautical purposes. Currently, ownership of the property provides for protection of FAR Part 77 surfaces and compatible land use which would continue to be protected with deed restrictions required in the transfer of land ownership. The change from aeronautical to non-aeronautical use would allow for the widening of Route 64 which is directly adjacent to the airport. The aforementioned land is not needed for aeronautical use.

DATES: Comments must be received on or before January 27, 2014.

ADDRESSES: Documents are available for review by prior appointment at the FAA Airports District Office, Mr. Richard Pur, Airports Engineer, Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Des Plaines, Illinois 60018. Telephone: (847) 294–7527/Fax: (847) 294–7046, and DuPage Airport Authority, 2700 International Drive, Suite 200, West Chicago, Illinois 60185, and (630) 584–2211.

Written comments on the Sponsor's request must be delivered or mailed to: Mr. Richard Pur, Airports Engineer, Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Des Plaines, Illinois 60018. Telephone: (847) 294–7527/Fax: (847) 294–7046.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Pur, Airports Engineer, Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Des Plaines, Illinois 60018. Telephone: (847) 294–7527/Fax: (847) 294–7046.

SUPPLEMENTARY INFORMATION: In accordance with section 47107(h) of Title 49, United States Code, this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

The acquisition of Parcel 601 was originally funded under Federal ADAP Grant 8–17–0017–01 in June, 1972, with Parcel 8 acquisition funded with local funds. Tract A was acquired via a Quitclaim Deed from the US Government and Reconstruction Finance Corporation (War Assets Administration) in December, 1947. The subject portions of those parcels are currently used for FAR Part 77 protection and to ensure compatible land use. The DuPage Airport Authority plans to sell the subject property to the Illinois Department of Transportation—Division of Highways for the purpose of improvements to be made on Illinois Route 64 (North Avenue) adjacent to the airport. Fair Market Value will be obtained from the sale of the subject property.

This notice announces that the FAA is considering the release of the subject airport property at DuPage Airport, West Chicago, Illinois, from Federal land covenants, subject to a reservation for continuing right of flight as well as restrictions on the released property as required in FAA Order 5190.6B Section 22.16. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA. The use of the revenue generated from the sale of the airport property will be in accordance with FAA's Policy and Procedures concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999 (64 FR 7696).

Parcel 601–A—Subject Portion of Parcel 601 (Legal Description)

That part of the West Half of the West Half of Section 29, Township 40 North, Range 9 East of the Third Principal Meridian, Beginning at the intersection of the north right of way line of Illinois Route 64 (North Avenue and the west right of way of Powis Road per Document #95–67851; thence North 78 degrees 10 minutes 29 seconds West along said north right of way line a distance of 89.34 feet; thence North 51 degrees 30 minutes 35 seconds East a distance of 80.63 feet; thence North 00 degrees 33 minutes 42 seconds East a distance of 359.96 feet to the north line of the Southwest Quarter of said Section 29; thence South 89 degrees 25 minutes 44 seconds East a distance of 30.00 feet; thence South 02 degrees 17 minutes 34 seconds West a distance of 165.52 feet; thence South 00 degrees 33 minutes 42 seconds West a distance of 262.76 feet to the Point of Beginning.

Said parcel contains ± 13,037.99 square feet, ± 0.299 acres.

Parcel 601–B—Subject Portion of Parcel 601 (Legal Description)

That part of the West Half of the West Half of Section 29, Township 40 North, Range 9 East of the Third Principal Meridian, Commencing at the intersection of the north right of way line of Illinois Route 64 (North Avenue) and the west right of way line of Powis Road per Document #95–67851; thence North 78 degrees 10 minutes 29 seconds West along said north right of way line a distance of 89.34 feet; thence North 51 degrees 30 minutes 35 seconds East a distance of 80.63 feet; thence North 00 degrees 33 minutes 42 seconds East a distance of 359.96 feet to the Point of Beginning; thence North 00 degrees 30 minutes 50 seconds East a distance of 137.76 feet; thence South 89 degrees 29 minutes 10 seconds East a distance of 18.00 feet; thence North 00 degrees 30 minutes 50 seconds East a distance of 397.30 feet; thence South 89 degrees 29 minutes 10 seconds East a distance of 15.00 feet; thence North 00 degrees 30 minutes 50 seconds East a distance of 356.05 feet; thence South 89 degrees 29 minutes 10 seconds East a distance of 9.00 feet; thence South 00 degrees 30 minutes 50 seconds West a distance of 726.13 feet; thence North 89 degrees 29 minutes 10 seconds West a distance of 12.00 feet to a point on the west right of way line of Powis Road per Document #95–67851; thence South 00 degrees 30 minutes 50 seconds West along said right of way line a distance of 160.01 feet; thence North 89 degrees 25 minutes 44 seconds West a distance of 30.00 feet to the Point of Beginning.

Said parcel contains ± 16,485.33 square feet, ±0.378 acres.

Parcel 8–B—Subject Portion of Parcel 8 (Legal Description)

That Part of Tract 8 Lying within IDOT Parcel 1EA0006, described as follows.

That part of the Southwest Quarter of Section 29, Township 40 North, Range 9 East of the Third Principal Meridian, in DuPage County, State of Illinois, more particularly described as follows:

Beginning at the intersection of the South Right of Way line of North Avenue (Illinois Route 64) with the West Right of Way line of Powis Road per Document 95–67851; thence South 00 degrees 33 minutes 19 seconds West along the east line of IDOT Parcel 1EA 0006 a distance of 223.29 feet; thence continuing along said east line South 01 degrees 13 minutes 52 seconds East a distance of 111.18 feet to the south line of Tract 8; thence North 80 degrees 06 minutes 09 seconds West along said south line a distance of 30.91 feet to the west line of said IDOT Parcel 1EA0006; thence north along the west line of said IDOT Parcel, North 00 degrees 33 minutes 42 seconds East a

distance of 90.69 feet, thence North 89 degrees 26 minutes 18 seconds West a distance of 11.00 feet; thence North 00 degrees 33 minutes 42 seconds East a distance of 198.39 feet; thence North 37 degrees 33 minutes 19 seconds West a distance of 72.17 feet to the southerly right of way line of North Avenue (Illinois Route 64); thence South 78 degrees 10 minutes 29 seconds East along said southerly right of way line a distance of 84.17 feet to the Point of Beginning.

Said part of Tract 8 as described lying within IDOT Parcel 1EA0006 contains +/- 12,974.3 square feet, +/- 0.298 Acres.

Parcel A–E—Subject Portion of Tract A (Legal Description)

That Part of Tract A lying within IDOT Parcel 1EA0006, described as follows.

That part of the Southwest Quarter of Section 29, Township 40 North, Range 9 East of the Third Principal Meridian, in DuPage County, State of Illinois, more particularly described as follows:

Commencing at the intersection of the South Right of Way line of North Avenue (Illinois Route 64) with the West Right of Way line of Powis Road per Document 95–67851; thence South 78 degrees 10 minutes 29 seconds East along the southerly extension of North Avenue (Illinois Route 64) a distance of 51.06 feet to the east line of the west half of the Southwest Quarter (SW ¼) of Section 29, Township 40 North, Range 9 East of the Third Principal Meridian; thence South 00 degrees 33 minutes 42 seconds West along said east line of the west half of the Southwest Quarter of Section 29 a distance of 758.35 feet to the south line of Right of Way Document 95–67851; thence North 89 degrees 28 minutes 49 seconds West a distance of 33.00 feet to the Point of Beginning: thence South 00 degree 33 minutes 42 seconds West a distance of 539.03 feet; thence west and north along and following IDOT Parcel 1EA0006, North 89 degrees 18 minutes 55 seconds West a distance of 35.00 feet: thence North 00 degree 33 minutes 42 seconds East a distance of 583.11 feet; thence North 89 degrees 18 minutes 55 seconds West a distance of 9.00 feet; thence North 00 degrees 33 minutes 42 seconds East a distance of 394.67 feet to the south line of Tract 8; thence South 80 degrees 06 minutes 09 East seconds along said south line a distance of 30.91 feet to the west line of Right of Way Document 95–67851; thence south and east along said right of way, South 01 degrees 13 minutes 52 seconds East a distance of 434.12 feet to the Point of Beginning.

Said Part of Tract A as described lying within IDOT Parcel 1EA0006 contains +/- 34,635.8 square feet, +/- 0.795 Acres.

Issued in Des Plaines, Illinois, on December 18, 2013.

James G. Keefer,

Manager, Chicago Airports District Office, Federal Aviaition Administration, Great Lakes Region.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Noise Exposure Map Notice; Key West International Airport, Key West, FL

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice.

SUMMARY: The Federal Aviation Administration (FAA) announces its determination that the Noise Exposure Maps submitted by Monroe County for the Key West International Airport under the provisions of the Aviation Safety and Noise Abatement Act and FAA's regulations are in compliance with applicable requirements.

DATES: This notice is effective December 19, 2013, and is applicable beginning December 19, 2013.

FOR FURTHER INFORMATION CONTACT: Allan Nagy, Federal Aviation Administration, Orlando Airports District Office, 5950 Hazeltine National Drive Citadel International Building, Suite 400, Orlando, FL 32822, 407–812–6331.

SUPPLEMENTARY INFORMATION: This notice announces that the FAA finds that the Noise Exposure Maps submitted for the Key West International Airport are in compliance with applicable requirements of Title 14 Code of Federal Regulations (CFR) part 150, effective December 19, 2013. Under 49 U.S.C. section 47503 of the Aviation Safety and Noise Abatement Act (the Act), an airport operator may submit to the FAA Noise Exposure Maps which meet applicable regulations and which depict non-compatible land uses as of the date of submission of such maps, a description of projected aircraft operations, and the ways in which such operations will affect such maps. The Act requires such maps to be developed in consultation with interested and affected parties in the local community, government agencies, and persons using the airport. An airport operator who has submitted Noise Exposure Maps that are found by FAA to be in compliance with the requirements of 14 CFR part 150, promulgated pursuant to the Act, may submit a Noise Compatibility Program for FAA approval which sets forth the measures the airport operator has taken or proposes to take to reduce existing non-compatible uses and prevent the introduction of additional non-compatible uses.

The FAA has completed its review of the Noise Exposure Maps and accompanying documentation submitted by Monroe County. The documentation that constitutes the "Noise Exposure Maps" as defined in Section 150.7 of 14 CFR part 150 includes: Table 4–1, 2013 FAA ATADS and Part 150 Aircraft Operations; Table 4–2, Flight Track Utilization by Aircraft Category for East Flow Operations; Table 4–3, Flight Track Utilization by Aircraft Category for West Flow Operations; Table 4–4, 2013 Air Carrier Flight Operations; Table 4–5, 2013 Commuter and Air Taxi Flight Operations; Table 4–6, 2013 Average Daily Engine Run-Up Operations; Table 4–7, 2013 General Aviation Flight Operations; Table 4–8, 2013 Military Aircraft Flight Operations; Table 4–9, Summary of 2013 Flight Operations; Table 4–10, 2013 Existing Condition Noise Exposure Estimates; Table 5–1, 2018 FAA TAF and Part 150 Aircraft Operations; Table 5–2, 2018 Air Carrier Flight Operations; Table 5–3, 2018 Commuter and Air Taxi Flight Operations; Table 5–4, 2018 Average Daily Engine Run-Up Operations, Table 5–5, 2018 General Aviation Flight Operations; Table 5–6, 2018 Military Aircraft Operations; Table 5–7, Summary of 2018 Flight Operations; Table 5–8, 2018 Future Condition Noise Exposure Estimates; Figure 1–5, Designated Aircraft Warm-Up Circle Location; Figure 2–1, General Study Area; Figure 2–2, Existing Generalized Land Use; Figure 2–3, Community and Recreational Facilities; Figure 2–4, City of Key West Future Land Use and Zoning Map; Figure 3–1, Key West Airspace; Figure 3–2, Key West All Weather Wind Rose; Figure 4–1, Radar Flight Tracks—Arrivals; Figure 4–2, Radar Flight Tracks—Departures; Figure 4–3, East Flow Flight Tracks; Figure 4–4, West Flow Flight Tracks; Figure 4–5, Touch and Go and Helicopter Flight Tracks; Figure 4–6, Aircraft Run-Up and Spool-Up Locations; Figure 4–8, 2013 Existing Condition Noise Exposure Map; Figure 4–9, Noise Monitoring Locations; Figure 5–1, 2018 Future Condition Noise Exposure Map; Figure 5–2, Comparison of Existing Condition and Future Condition Noise Exposure Maps; Figure 6–1, Airport Transmittal Letter; Figure 6–2, Sponsor's Certification.

The FAA has determined that these Noise Exposure Maps and accompanying documentation are in compliance with applicable requirements. This determination is effective on December 19, 2013.

FAA's determination on the airport operator's Noise Exposure Maps is limited to a finding that the maps were developed in accordance with the procedures contained in Appendix A of 14 CFR part 150. Such determination does not constitute approval of the airport operator's data, information or

plans, or a commitment to approve a Noise Compatibility Program or to fund the implementation of that Program. If questions arise concerning the precise relationship of specific properties to noise exposure contours depicted on a Noise Exposure Map submitted under Section 47503 of the Act, it should be noted that the FAA is not involved in any way in determining the relative locations of specific properties with regard to the depicted noise exposure contours, or in interpreting the Noise Exposure Maps to resolve questions concerning, for example, which properties should be covered by the provisions of Section 47506 of the Act. These functions are inseparable from the ultimate land use control and planning responsibilities of local government. These local responsibilities are not changed in any way under 14 CFR part 150 or through FAA's review of Noise Exposure Maps. Therefore, the responsibility for the detailed overlaying of noise exposure contours onto the map depicting properties on the surface rests exclusively with the airport operator that submitted those maps, or with those public agencies and planning agencies with which consultation is required under Section 47503 of the Act. The FAA has relied on the certification by the airport operator, under Section 150.21 of 14 CFR part 150, that the statutorily required consultation has been accomplished.

Copies of the full Noise Exposure Maps documentation and of the FAA's evaluation of the maps are available for examination at the following locations:

(1) Key West International Airport Administrative Office

(2) Federal Aviation Administration, Orlando Airports District Office, 5950 Hazeltine National Drive, Citadel International Building, Suite 400, Orlando, FL 32822

Questions may be directed to the individual named above under the heading, **FOR FURTHER INFORMATION CONTACT.**

Issued in Orlando, FL on December 19, 2013.

Bart Vernace,

Manager, Orlando Airports District Office, Federal Aviation Administration.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2013–0193]

Qualification of Drivers; Exemption Applications; Diabetes Mellitus

AGENCY: Federal Motor Carrier Safety Administration (FMCSA).

ACTION: Notice of applications for exemption from the diabetes mellitus requirement; request for comments.

SUMMARY: FMCSA announces receipt of applications from 65 individuals for exemption from the prohibition against persons with insulin-treated diabetes mellitus (ITDM) operating commercial motor vehicles (CMVs) in interstate commerce. If granted, the exemptions would enable these individuals with ITDM to operate CMVs in interstate commerce.

DATES: Comments must be received on or before January 27, 2014.

ADDRESSES: You may submit comments bearing the Federal Docket Management System (FDMS) Docket No. FMCSA–2013–0193 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow theon-line instructions for submitting comments.
- *Mail:* Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.
- *Fax:* 1–202–493–2251.

Instructions: Each submission must include the Agency name and the docket numbers for this notice. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act heading below for further information.

Docket: For access to the docket to read background documents or comments, go to *http://www.regulations.gov* at any time or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Federal Docket Management System (FDMS) is available 24 hours each day, 365 days each year. If you want acknowledgment that we received your comments, please include a self-addressed, stamped envelope or postcard or print the acknowledgement page that appears after submitting comments on-line.

Privacy Act: Anyone may search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or of the person signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's Privacy Act Statement for the Federal Docket Management System (FDMS) published in the **Federal Register** on January 17, 2008 (73 FR 3316).

FOR FURTHER INFORMATION CONTACT: Elaine M. Papp, Chief, Medical Programs Division, (202) 366–4001, *fmcsamedical@dot.gov,* FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Background

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption from the Federal Motor Carrier Safety Regulations for a 2-year period if it finds "such exemption would likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption." The statute also allows the Agency to renew exemptions at the end of the 2-year period. The 65 individuals listed in this notice have recently requested such an exemption from the diabetes prohibition in 49 CFR 391.41(b)(3), which applies to drivers of CMVs in interstate commerce. Accordingly, the Agency will evaluate the qualifications of each applicant to determine whether granting the exemption will achieve the required level of safety mandated by statute.

Qualifications of Applicants

Bruce S. Allen

Mr. Allen, 52, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Allen understands diabetes management and monitoring,

has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Allen meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class B CDL from Maine.

David E. Ames

Mr. Ames, 48, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Ames understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Ames meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Illinois.

Michael R. Boland

Mr. Boland, 47, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Boland understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Boland meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Illinois.

Taylor D. Bruce

Mr. Bruce, 21, has had ITDM since 1994. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Bruce understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Bruce meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Missouri.

Christopher D. Burks

Mr. Burks, 51, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Burks understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Burks meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from Massachusetts.

Larry D. Burton

Mr. Burton, 53, has had ITDM since 1974. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Burton understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Burton meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from Illinois.

James B. Cameron

Mr. Cameron, 57, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Cameron understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Cameron meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from Pennsylvania.

Michael M. Canup

Mr. Canup, 58, has had ITDM since 1968. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Canup understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Canup meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from Alabama.

John M. Catron

Mr. Catron, 69, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Catron understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Catron meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Missouri.

Anthony D. Chrisley

Mr. Chrisley, 51, has had ITDM since 1980. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting

in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Chrisley understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Chrisley meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from California.

Henry Collins

Mr. Collins, 44, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Collins understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Collins meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from Missouri.

John B. Conway, Jr.

Mr. Conway, 60, has had ITDM since 2003. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Conway understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Conway meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he stable nonproliferative diabetic retinopathy. He holds an operator's license from North Carolina.

James V. Davidson, Jr.

Mr. Davidson, 49, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Davidson understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Davidson meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Utah.

Michael A. De La Torre

Mr. De La Torre, 55, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. De La Torre understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. De La Torre meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from California.

Corrado DePalma

Mr. DePalma, 59, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. DePalma understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. DePalma meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from New Jersey.

Eugene J. Dilley

Mr. Dilley, 67, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Dilley understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Dilley meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Wisconsin.

Scott T. Early

Mr. Early, 51, has had ITDM since 1995. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Early understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Early meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from New York.

Carl Ermentrout

Mr. Ermentrout, 65, has had ITDM since 1988. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Ermentrout understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Ermentrout meets the

requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Pennsylvania.

Douglas E. Erney

Mr. Erney, 52, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Erney understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Erney meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Indiana.

William C. Flom

Mr. Flom, 55, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Flom understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Flom meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Seth E. Frost

Mr. Frost, 33, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Frost understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Frost meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Oregon.

Donald R. Fuller, Jr.

Mr. Fuller, 59, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Fuller understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Fuller meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Minnesota.

Brian A. Griep

Mr. Griep, 54, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Griep understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Griep meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

George E. Hagey

Mr. Hagey, 62, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Hagey understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Hagey meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Illinois.

Ronnie L. Harrington

Mr. Harrington, 55, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Harrington understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Harrington meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Mississippi.

Andrew P. Hines

Mr. Hines, 48, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Hines understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Hines meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Ohio.

Arlyn D. Holtrop

Mr. Holtrop, 48, has had ITDM since 2007. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist

certifies that Mr. Holtrop understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Holtrop meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Stephan P. Hyre

Mr. Hyre, 55, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Hyre understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Hyre meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Ohio.

Delayne B. Irwin

Mr. Irwin, 76, has had ITDM since 1998. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Irwin understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Irwin meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from South Dakota.

Aaron C. Kaplan

Mr. Kaplan, 28, has had ITDM since 1987. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Kaplan understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Kaplan meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from California.

Sigmund E. Keller

Mr. Keller, 47, has had ITDM since 1998. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Keller understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Keller meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from New York.

Derl T. Martin

Mr. Martin, 50, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Martin understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Martin meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Missouri.

Waymond E. Mayfield, Jr.

Mr. Mayfield, 61, has had ITDM since 1980. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Mayfield understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Mayfield meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class B CDL from Missouri.

Senad Mehmedovic

Mr. Mehmedovic, 31, has had ITDM since 2001. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Mehmedovic understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Mehmedovic meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Kentucky.

Ronald E. Mullard

Mr. Mullard, 61, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Mullard understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Mullard meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable proliferative diabetic retinopathy. He holds a Class A CDL from Alabama.

Francis L. Novotny

Mr. Novotny, 65, has had ITDM since 1975. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting

in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Novotny understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Novotny meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Minnesota.

Justin C. Orr

Mr. Orr, 28, has had ITDM since 1999. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Orr understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Orr meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from California.

Kevin L. Otto

Mr. Otto, 55, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Otto understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Otto meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Ohio.

Larry H. Painter

Mr. Painter, 72, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Painter understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Painter meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Pennsylvania.

Robert K. Patterson

Mr. Patterson, 60, has had ITDM since 2008. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Patterson understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Patterson meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Alan A. Phillips

Mr. Phillips, 69, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Phillips understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Phillips meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from Wisconsin.

Randall D. Pierce

Mr. Pierce, 41, has had ITDM since 2012. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Pierce understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Pierce meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Florida.

Clyde R. Pitt

Mr. Pitt, 75, has had ITDM since 2007. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Pitt understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Pitt meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from New York.

Reynier Prieto

Mr. Prieto, 34, has had ITDM since 1982. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Prieto understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Prieto meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable

proliferative diabetic retinopathy. He holds an operator's license from Florida.

Albert R. Purdy

Mr. Purdy, 66, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Purdy understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Purdy meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Pennsylvania.

Adam Razny

Mr. Razny, 46, has had ITDM since 2001. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Razny understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Razny meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Missouri.

Thomas F. Scanlon

Mr. Scanlon, 50, has had ITDM since 1999. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Scanlon understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Scanlon meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from New Jersey.

Christopher J. Schmidt

Mr. Schmidt, 24, has had ITDM since 2000. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Schmidt understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Schmidt meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Pennsylvania.

Harrison G. Simmons

Mr. Simmons, 62, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Simmons understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Simmons meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Missouri.

Cleo W. Snyder

Mr. Snyder, 75, has had ITDM since 2008. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Snyder understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Snyder meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Illinois.

Daniel E. Staack

Mr. Staack, 48, has had ITDM since 1993. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Staack understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Staack meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Nebraska.

Scott A. Stout

Mr. Stout, 48, has had ITDM since 1990. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Stout understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Stout meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class C CDL from Florida.

Walter D. Strang, IV

Mr. Strang, 30, has had ITDM since 1998. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Strang understands diabetes management and monitoring,

has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Strang meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Connecticut.

Mark A. Torres

Mr. Torres, 48, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Torres understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Torres meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from Massachusetts.

Gerald L. Ulmer, Sr.

Mr. Ulmer, 48, has had ITDM since 1993. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Ulmer understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Ulmer meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Pennsylvania.

Eric A. Vernon

Mr. Vernon, 52, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Vernon understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Vernon meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Paul M. Vinacco

Mr. Vinacco, 54, has had ITDM since 2006. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Vinacco understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Vinacco meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from Rhode Island.

Marvin L. Vonk

Mr. Vonk, 69, has had ITDM since 2009. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Vonk understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Vonk meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Kelly J. Walstad

Mr. Walstad, 57, has had ITDM since 2011. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Walstad understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Walstad meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Minnesota.

John R. Wappes

Mr. Wappes, 63, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Wappes understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Wappes meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Ohio.

James W. Watson

Mr. Watson, 64, has had ITDM since 2007. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Watson understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Watson meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Missouri.

Gordon E. Williams, Jr.

Mr. Williams, 71, has had ITDM since 2006. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the

past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Williams understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Williams meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Pennsylvania.

Ray C. Williams

Mr. Williams, 50, has had ITDM since 2010. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Williams understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Williams meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2013 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator's license from Connecticut.

Ricky A. Wulf

Mr. Wulf, 55, has had ITDM since 2013. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Wulf understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Wulf meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

Brandon S. Yarbrough

Mr. Yarbrough, 29, has had ITDM since 2003. His endocrinologist examined him in 2013 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Yarbrough understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Yarbrough meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2013 and certified that he does not have diabetic retinopathy. He holds an operator's license from North Carolina.

Request for Comments

In accordance with 49 U.S.C. 31136(e) and 31315, FMCSA requests public comment from all interested persons on the exemption petitions described in this notice. We will consider all comments received before the close of business on the closing date indicated in the date section of the notice.

FMCSA notes that section 4129 of the Safe, Accountable, Flexible and Efficient Transportation Equity Act: A Legacy for Users requires the Secretary to revise its diabetes exemption program established on September 3, 2003 (68 FR 52441).[1] The revision must provide for individual assessment of drivers with diabetes mellitus, and be consistent with the criteria described in section 4018 of the Transportation Equity Act for the 21st Century (49 U.S.C. 31305).

Section 4129 requires: (1) elimination of the requirement for 3 years of experience operating CMVs while being treated with insulin; and (2) establishment of a specified minimum period of insulin use to demonstrate stable control of diabetes before being allowed to operate a CMV.

In response to section 4129, FMCSA made immediate revisions to the diabetes exemption program established by the September 3, 2003 notice. FMCSA discontinued use of the 3-year driving experience and fulfilled the requirements of section 4129 while continuing to ensure that operation of CMVs by drivers with ITDM will achieve the requisite level of safety required of all exemptions granted under 49 USC. 31136(e).

Section 4129(d) also directed FMCSA to ensure that drivers of CMVs with ITDM are not held to a higher standard than other drivers, with the exception of limited operating, monitoring and medical requirements that are deemed medically necessary.

The FMCSA concluded that all of the operating, monitoring and medical requirements set out in the September 3, 2003 notice, except as modified, were in compliance with section 4129(d). Therefore, all of the requirements set out in the September 3, 2003 notice, except as modified by the notice in the **Federal Register** on November 8, 2005 (70 FR 67777), remain in effect.

Submitting Comments

You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an e-mail address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *http://www.regulations.gov* and in the search box insert the docket number FMCSA–2013–0193 and click the search button. When the new screen appears, click on the blue "Comment Now!" button on the right hand side of the page. On the new page, enter information required including the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

We will consider all comments and material received during the comment period and may change this proposed rule based on your comments. FMCSA may issue a final rule at any time after the close of the comment period.

Viewing Comments and Documents

To view comments, as well as any documents mentioned in this preamble, To submit your comment online, go to *http://www.regulations.gov* and in the search box insert the docket number FMCSA–2013–0193 and click "Search." Next, click "Open Docket Folder" and you will find all documents and comments related to the proposed rulemaking.

[1] Section 4129(a) refers to the 2003 notice as a "final rule." However, the 2003 notice did not issue a "final rule" but did establish the procedures and standards for issuing exemptions for drivers with ITDM.

Issued on: December 17, 2013.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD–2013–0101]

National Maritime Strategy Symposium: Cargo Opportunities and Sealift Capacity

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice of public meeting.

SUMMARY: On October 28, 2013, the Maritime Administration (MARAD) published a notice in the **Federal Register** inviting the public and other Marine Transportation System stakeholders to participate in a discussion intended to develop a robust national maritime strategy. Stakeholders were asked to provide their ideas for improving the Nation's cargo opportunities and sealift capacity while ensuring future sustainability. After careful consideration of the views and ideas provided, this notice includes the public meeting agenda along with detailed information for those interested in attending the event in person, via phone, or by Internet connection.

DATES: The public meeting will be held from 9:00 a.m. to 4:30 p.m., on January 14th and 15th, and 9:00 a.m. to 12:00 p.m. on January 16th.

Key Date: The deadline to register to attend or speak at the meeting or to submit presentation materials is January 8, 2014.

The following are other important anticipated dates and deadlines:

Deadline to register to attend the public meeting in person	January 8, 2014.
Deadline to register to speak in person, speak by calling in, or to listen only by phone.	January 8, 2014.
Deadline to submit digital presentation materials	January 8, 2014.
Call-in and listen-only information distributed to registrants	January 10, 2014.
National Maritime Strategy Symposium-Public Meeting	January 14–15, 2014, 9:00 a.m. to 4:30 p.m. January 16, 2014, 9:00 a.m. to12:00 p.m.

ADDRESSES: The public meeting will be held in the U.S. Department of Transportation (DOT) West Atrium, located on the ground floor of 1200 New Jersey Avenue SE., Washington, DC 20590. Overflow seating will be available in adjacent conference rooms.

Note: MARAD has opened a docket to assist the public in obtaining information and in providing comments. For on-line access to the MARAD Docket to read background documents or comments received, go to *http://www.regulations.gov* and query "MARAD–2013–0101" at any time or visit our docket in person at Room W12–140 of the Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal Holidays. If you have questions on viewing the Docket, call Cheryl Collins, Program Manager, Docket Operations, telephone: (800) 647–5527.

[See also Submitting Your Comments and Ideas section.]

FOR FURTHER INFORMATION CONTACT: Christine S. Gurland, Assistant Chief Counsel for Legislation and Regulations, Office of Chief Counsel, MAR–225, Maritime Administration, 1200 New Jersey Avenue SE., Washington, DC 20590; (202) 366–5157; email: *Christine.Gurland@dot.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Marine Transportation System is a core component of the United States' economic and national security. While it has proven to be strong and resilient, there is a need to improve and grow the industry to ensure the availability and viability of a U.S. merchant marine in the future. The historic strength of the United States as a maritime Nation relies on its global, coastal, and inland commercial fleet, its ports and intermodal facilities, the national security establishment, and the maritime workforce that supports and operates U.S.-flagged vessels. The purpose of this initial public meeting is to generate ideas that will improve, strengthen, and sustain the cargo opportunities and sealift capacity of the U.S.-flagged fleet engaged in international commercial trade. Those ideas will necessarily be focused on the U. S. Marine Transportation System.

Public Meeting Agenda

NATIONAL MARITIME STRATEGY SYMPOSIUM #1—GROWING THE US-FLAG FLEET ENGAGED IN INTERNATIONAL TRADE

14–16 JANUARY 2014

Time	14 January 2014	15 January 2014	16 January 2014
0900–1030	PLENARY: Growing the International Fleet: Opportunities & Challenges.	PLENARY: Shipper's Perspective	PLENARY (1000–1200) Wrap Up & Next Steps
1030–1200	BREAKOUT SESSION #1 The Need for a US-Flag International Fleet-National Security- Economy & Jobs.	BREAKOUT SESSION #2C-Same as #2A	Wrap Up & Next Steps continued.
1200–1330	LUNCH/KEYNOTES	LUNCH/KEYNOTES	
1330–1500	BREAKOUT SESSIONS #2A —Creating Cargo Opportunities —Increasing Competiveness in International Trade. —Tax, Regulation & Finance Reform. —Training & Retaining the Maritime Workforce.	PRESENTATIONS —Open Session (Times will be allotted for individual presentations upon registration.).	

NATIONAL MARITIME STRATEGY SYMPOSIUM #1—GROWING THE US-FLAG FLEET ENGAGED IN INTERNATIONAL TRADE—Continued
14–16 JANUARY 2014

Time	14 January 2014	15 January 2014	16 January 2014
1500–1630	—International Issues and Agreements. BREAKOUT SESSIONS #2B-Same As #2A ..	BREAKOUT SESSION #3 Domestic Policies, Industry & Infrastructure Supporting the International Fleet.	

About the Public Meeting

1. The Acting Maritime Administrator will preside over the public meeting. Senior Department and MARAD officials will also attend this meeting to receive comments from the public. During the meeting, we may ask questions that will clarify statements or gather more information or data to help us understand the issues raised by commenters.

2. The meeting is designed to solicit public views and gather additional information, insights and experience to assist in the development of a National Maritime Strategy. Therefore, the meeting will be conducted in an informal and non-adversarial manner. To allow for more detailed discussion, this initial meeting will focus on the opportunities and challenges of growing the U.S.-flagged international fleet.

3. The public meeting will be broadcast live via web streaming and a listen-only telephone line. The public may access the live web streaming by a link from http://www.marad.dot.gov. Listen-only telephone line participants must register in order to obtain the telephone number.

4. Members of the public are invited to make comments in person at the venue, through a call-in number, or by entry in the MARAD Docket. When registering to speak in person or by telephone, please estimate the amount of time that you would like to use for your presentation; final times will be allotted to participants based on the time available and the issues raised.

5. Comments are welcome at the MARAD Docket leading up to the event as well as during the event or on conclusion of the symposium. If you would like to make a comment to the docket go to *http://www.regulations.gov* and type in the docket number (MARAD–2013–0101) in the "SEARCH" box and then click "SEARCH." Once you arrive at the National Maritime Strategy Symposium docket, click "Submit a Comment" and follow the guidance provided. [See also Submitting Your Comments and Ideas section.]

6. To ensure that comments are most useful in informing the development of the U.S.-flagged international fleet as part of a national maritime strategy, please include the docket number (MARAD–2013–0101), any specific citations, a detailed description of your concerns or ideas, and any supporting information that would assist MARAD in considering the issues raised. [See also Submitting Your Comments and Ideas section.]

7. Those who wish to speak during the meeting are requested to advise, at the time of registration, what topic or topics they would like to comment on; amplifying information will be welcome but is not required. For example, comments may focus on, but are not limited to, the following topics: Creating Cargo Opportunities; Increasing Competitiveness in International Trade; Tax, Regulation & Finance Reform; Training & Retaining the Maritime Workforce; International Issues and Agreements; and Domestic Policies, Industry & Infrastructure Supporting the International Fleet.

8. Any digital presentation materials for the meeting should be submitted to Mickalyn Valentine, Office of the Executive Director, MAR–120, Maritime Administration, 1200 New Jersey Avenue SE., Washington, DC 20590; (202) 366–3907; *mickalyn.valentine@dot.gov* no later than January 8, 2014. [See *Registration* section for contact information.]

9. We hope to be able to accommodate everyone who would like to speak at the meeting, but if there are more interested participants than time available, we will limit participants in order of date and time of registration. If available, time will be allotted to those attending the meeting in person to speak, even if they had not previously registered to speak. For those who wish to make comments, but for whom there is not time available or who do not wish to speak, it will be possible to post comments to the public docket. [See also Submitting Your Comments and Ideas section.]

10. A transcript of the public meeting will be made available on our Web site *http://www.marad.dot.gov* and posted to the docket at *http://www.regulations.gov*.

11. The recorded webcast video will remain available following the meeting via a link from our Web site at *http://www.marad.dot.gov*.

Arrival and Admission Information

1. In-person attendees are encouraged to arrive at least 45 minutes prior to the meeting for processing through building security. All in-person attendees must enter through the New Jersey Avenue entrance (West Building—at the corner of New Jersey Avenue SE. and M Street SE.). Anyone exiting the building for any reason will be required to re-enter through the security checkpoint at the New Jersey Avenue Entrance.

2. Due to security requirements, all in-person attendees must bring a Government-issued form of identification (e.g., driver's license) to ensure access to the building. In-person attendees who have Federal government identification are required to register to attend due to space constraints. Foreign National in-person attendees must bring their passports with them. To facilitate security screening, all in-person attendees are encouraged to limit bags and other items (e.g., mobile phones, laptops, cameras, etc.) they bring into the building.

3. Due to space limitations no outside videotaping will be allowed.

4. The Department of Transportation (DOT) and MARAD are not able to offer visitor parking; we suggest that attendees consider using alternative means of transportation to the building. DOT Headquarters/MARAD is served by Metrorail (Navy Yard station), Metrobus, DC Circulator, and taxi service. There are a number of private parking lots near the DOT building, but MARAD cannot guarantee the availability of parking spaces.

5. For information on facilities or services for persons with disabilities, or to request special assistance at the meeting, contact Mickalyn Valentine, Office of the Executive Director, MAR–120, Maritime Administration, 1200 New Jersey Avenue SE., Washington, DC 20590; (202) 366–3907 as soon as possible.

Registration

All in-person attendees, whether or not they are planning to provide their views to the participants, must register with Mickalyn Valentine, Office of the Executive Director, Maritime Administration, 1200 New Jersey Avenue SE., Washington, DC 20590; (202) 366–3907; mickalyn.valentine@dot.gov no later than January 8, 2014. You may locate the symposium registration form and agenda via a link from MARAD's Web site at *http://www.marad@dot.gov.*

Any person wishing to present an oral statement via telephone, or any person who would like to listen to the meeting over a listen-only telephone line must also register with Ms. Valentine by January 8, 2014. Call-in and listen-only telephone numbers will be distributed to registered participants on January 10, 2014. Foreign National registrants must provide full name, title, country of citizenship, date of birth, passport number, and passport expiration date when registering.

Because seating space is limited, we may have to limit the number of attendees in order of date and time of registration.

Submitting Your Comments and Ideas

To ensure that comments are most useful in informing the development of a national

maritime strategy, you should include the docket number (MARAD–2013–0101), any specific citations, a detailed description of your concerns or ideas, and any supporting information that would assist MARAD in considering the issues raised.

In order to provide the public with alternative means of providing feedback to MARAD in ways that may better suit their needs, we have provided a docket at *http://www.regulations.gov* to allow for submissions to MARAD in a less formal manner. The MARAD Docket provides members of the public who do not wish to make a presentation, cannot make a presentation, or who wish to add other comments an opportunity to submit their ideas.

Comments are welcome at the MARAD Docket leading up to the event as well as during the event or on conclusion of the symposium. If you would like to make a comment on-line, go to *http://www.regulations.gov* and type in the docket number (MARAD–2013–0101) in the "SEARCH" box and then click "SEARCH." Once you arrive at the National Maritime Strategy Symposium Docket, click "Submit a Comment" and follow the guidance provided.

If you submit a comment or idea on-line via www.regulations.gov, please know that comments submitted to www.regulations.gov are not immediately posted to the site. It may take several business days before your submission will be posted on the electronic docket. If you have questions on viewing the Docket, call Cheryl Collins, Program Manager, Docket Operations, telephone: (800) 647–5527.

In addition to providing comments on-line via *www.regulations.gov,* you may submit comments and ideas to DOT Docket Number MARAD–2013–0101 by any of the following methods as well: Fax, Mail or Hand Delivery. However, please use only one means for each submission. Specific instructions follow:

- For submission by facsimile/Fax, transmit your comment or idea to (202) 493–2251. Be sure to identify the submission by DOT Docket Number MARAD–2013–0101.
- Submissions by Mail or Hand Delivery should go to Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building, Room W12–140, Washington, DC 20590, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except on Federal holidays. If you submit your inputs by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

If you Fax, mail or hand deliver your input we recommend that you include your name and a mailing address, an email address or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission.

Note: All comments or ideas submitted for this purpose, including any personal information provided, will be posted without change to *http://www.regulations.gov.*

Follow-Up Action by MARAD

Your comments will provide meaningful and significant information for senior DOT and MARAD officials developing the national maritime strategy. Following the symposium, you will be able to access the event transcript on-line from our docket or from a link on our home page at *http://www.marad@dot.gov.* The transcript of the meeting will be a Maritime Administration posting entitled "National Maritime Strategy Symposium 2014 Transcript." To access the transcript on-line at *www.regulations.gov,* go to "SEARCH" and enter MARAD–2013–0101 and click enter. You will arrive at our docket and the transcript of the meeting will be a Maritime Administration posting entitled "National Maritime Strategy Symposium 2014 Transcript." Go to that posting and click on the attachment. MARAD will host or participate in future forums to discuss the domestic aspects of a national maritime strategy.

Privacy Act Statement

Anyone is able to search all comments entered into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19476, 04/11/2011) or at *http://www.dot.gov/privacy.html.*

Authority: 5 U.S.C. 610; E.O., 13563, 76 FR 3821, Jan. 21 2011; E.O. 12866, 58 FR51735, Oct. 4, 1993.

* * *

Dated: December 23, 2013.

By Order of the Maritime Administrator.

T. Mitchell Hudson, Jr.,

Acting Secretary, Maritime Administration.

BILLING CODE 4910–81–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. DOT–NHTSA–2013–0089]

Request for Comments on a New Information Collection

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Request (ICR) abstracted below is being forwarded to the Office of Management and Budget (OMB) for review and comments.

DATES: Comments must be submitted on or before January 27, 2014.

ADDRESSES: Send comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725–17th Street NW., Washington, DC 20503, Attention: NHTSA Desk Officer.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact James Bean, Office of Data Acquisitions (NVS–410), Room W53–489, 1200 New Jersey Avenue SE., Washington, DC 20590. Mr. Bean's telephone number is (202) 366–2837.

SUPPLEMENTARY INFORMATION: Before a Federal agency can collect certain information from the public, it must receive approval from the Office of Management and Budget (OMB). In compliance with these requirements, this notice announces that the following information collection request has been forwarded to OMB. A **Federal Register** Notice soliciting comments on the following information collection was published on September 6, 2013 (Volume 78, Number 173; Pages 54954–55). The agency received no comments in response to the **Federal Register** Notice.

Title: National Automotive Sampling System (NASS) Law Enforcement Information.

OMB Control Number: Not assigned.

Type of Request: New Information Collection.

Abstract: This collection of information is part of NHTSA's efforts to upgrade its crash data systems. NHTSA's National Automotive Sampling System (NASS) collects crash data on a nationally representative sample of police-reported traffic crashes and related injuries. NASS data are used by government, industry, and academia in the U.S. and around the world to make informed highway safety decisions.

Recognizing the importance as well as the limitations of the current NASS system, NHTSA is undertaking a modernization effort to upgrade its data systems by improving the information technology (IT) infrastructure, updating the data collected, and reexamining the NASS sample sites and sample size.

The current data system samples crashes through a clustered sample of law enforcement agencies that were selected decades ago. Using updated population and other auxiliary information, NHTSA has identified a new set of probabilistically selected geographic locations around the country that are expected to provide a more accurate traffic safety picture, more precise estimates, and greater insight into new and emerging data needs.

This collection of information will assist NHTSA with the next step in updating the NASS sample design, which is to select a fresh sample of law enforcement agencies within these primary sampling units (PSUs). This requires compiling basic crash count data from every law enforcement agency that responds to motor vehicle crashes in the PSUs. This data would be used to construct a measure of size in order to make informed and efficient choices in the probabilistic selection of the second stage sample units, the law enforcement agencies.

Affected Public: Law Enforcement Agencies.

Estimated Number of Respondents: 1,450 Law Enforcement Agencies.

Estimated Number of Responses: We estimate that 90 percent of the Law Enforcement Agencies will respond so approximately 1,305 responses.

Annual Estimated Total Annual Burden Hours: The annual burden is estimated to be 2,900 hours.

Frequency of Collection: This is a one-time collection.

Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.95.

Issued in Washington, DC, on December 23, 2013.

Terry T. Shelton,

Associate Administrator, National Center for Statistics and Analysis.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2013–0130]

Technical Report Evaluating Seat Belt Pretensioners and Load Limiters

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Request for comments on technical report.

SUMMARY: This notice announces NHTSA's publication of a technical report evaluating the effectiveness of pretensioners and load limiters for seat belts in the front seats of passenger cars and LTVs. The report's title is: *Effectiveness of Pretensioners and Load Limiters for Enhancing Fatality Reduction by Seat Belts.*

DATES: Comments must be received no later than April 22, 2014.

ADDRESSES:

Report: The technical report is available on the Internet for viewing in PDF format at *http://www-nrd.nhtsa.dot.gov/Pubs/811835.pdf.* You may obtain a copy of the report free of charge by sending a self-addressed mailing label to Charles J. Kahane (NVS–431), National Highway Traffic Safety Administration, Room W53–312, 1200 New Jersey Avenue SE., Washington, DC 20590.

Comments: You may submit comments [identified by Docket Number NHTSA–2013–0130] by any of the following methods:

- Internet: To submit comments electronically, go to the U.S. Government regulations Web site at *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- Fax: Written comments may be faxed to 202–493–2251.
- Mail: Send comments to Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590.
- Hand Delivery: If you plan to submit written comments by hand or courier, please do so at 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except federal holidays
- You may call Docket Management at 1–800–647–5527.

Instructions: For detailed instructions on submitting comments and additional information see the Comments heading of the Supplementary Information section of this document. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION.**

FOR FURTHER INFORMATION CONTACT: Charles J. Kahane, Chief, Evaluation Division, NVS–431, National Center for Statistics and Analysis, National Highway Traffic Safety Administration, Room W53–312, 1200 New Jersey Avenue SE., Washington, DC 20590. Telephone: 202–366–2560. Email: *chuck.kahane@dot.gov.*

SUPPLEMENTARY INFORMATION: Pretensioners and load limiters are

technologies designed to make seat belts more effective. Pretensioners retract the seat belt to remove excess slack almost instantly upon sensing the vehicle has crashed. Load limiters allow the belt to "give" or yield when forces on the belt rise above a predetermined level. NHTSA has long encouraged—but never required—installation of these technologies in the front seats of vehicles. By model year 2008, all new cars and LTVs sold in the United States were equipped with pretensioners and load limiters at the driver's and right-front passenger's seats. Double-pair comparison analyses of FARS data for 1986 to 2011 compare the fatality-reducing effectiveness of seat belts with and without pretensioners and load limiters at those seats. In passenger cars, CUVs, and minivans, a belted driver or right-front passenger has an estimated 12.8 percent lower fatality risk if the belt is equipped with a pretensioner and a load limiter than if it is not equipped with either (95% confidence bounds: 2.6% to 23.0%). By contrast, the analyses of the currently available data do not yet show a significant effect for pretensioners and load limiters in truck-based LTVs (pickup trucks, SUVs with body-and-frame construction, and full-sized vans); it may be advisable to rerun the analyses in about 4 or 5 years when more data will be available.

Comments:

How can I influence NHTSA's thinking on this subject?

NHTSA welcomes public review of the technical report. NHTSA will submit to the Docket a response to the comments and, if appropriate, will supplement or revise the report.

How do I prepare and submit comments?

Your comments must be written and in English. To ensure that your comments are correctly filed in the Docket, please include the Docket number of this document (NHTSA–2013–0130) in your comments.

Your primary comments must not be more than 15 pages long (49 CFR 553.21). However, you may attach additional documents to your primary comments. There is no limit on the length of the attachments.

Please submit one copy of your comments, including the attachments, to Docket Management at the address given above under **ADDRESSES**.

Please note that pursuant to the Data Quality Act, in order for substantive data to be relied upon and used by the agency, it must meet the information quality standards set forth in the OMB and DOT Data Quality Act guidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at *http://www.whitehouse.gov/omb/fedreg_reproducible*. DOT's guidelines may be accessed at *http://www.rita.dot.gov/bts/sites/rita.dot.gov.bts/files/subject_areas/statistical_policy_and_research/data_quality_guidelines/index.html*.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit *http://www.regulations.gov*.

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail. You may also periodically access *http://www.regulations.gov* and enter the number for this docket (NHTSA–2013–0130) to see if your comments are on line.

How do I submit confidential business information?

If you wish to submit any information under a claim of confidentiality, you should submit three copies of your complete submission, including the information you claim to be confidential business information, to the Chief Counsel, NHTSA, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590. In addition, you should submit a copy, from which you have deleted the claimed confidential business information, to Docket Management at the address given above under **ADDRESSES**. When you send a comment containing information claimed to be confidential business information, you should include a cover letter setting forth the information specified in our confidential business information regulation. (49 CFR Part 512.)

Will the agency consider late comments?

In our response, we will consider all comments that Docket Management receives before the close of business on the comment closing date indicated above under DATES. To the extent possible, we will also consider comments that Docket Management receives after that date.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address given above under **ADDRESSES**. The hours of the Docket are indicated above in the same location.

You may also see the comments on the Internet. To read the comments on the Internet, take the following steps:

(1) Go to the Federal Docket Management System (FDMS) at *http://www.regulations.gov*.

(2) FDMS provides two basic methods of searching to retrieve dockets and docket materials that are available in the system: (a) "Quick Search" to search using a full-text search engine, or (b) "Advanced Search," which displays various indexed fields such as the docket name, docket identification number, phase of the action, initiating office, date of issuance, document title, document identification number, type of document, **Federal Register** reference, CFR citation, etc. Each data field in the advanced search may be searched independently or in combination with other fields, as desired. Each search yields a simultaneous display of all available information found in FDMS that is relevant to the requested subject or topic.

(3) You may download the comments. However, since the comments are imaged documents, instead of word processing documents, the "pdf" versions of the documents are word searchable.

Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically check the Docket for new material.

Authority: 49 U.S.C. 30111, 30181–83 delegation of authority at 49 CFR 1.95 and 501.8.

Issued in Washington, DC, on December 23, 2013.

James F. Simons,

Director, Office of Regulatory Analysis and Evaluation.

BILLING CODE 4810–70–P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Currently Approved Information Collection: Comment Request for Generic Clearance for the Collection or Qualitative Feedback on Agency Service Delivery

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A). Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the Generic Clearance for the Collection or Qualitative Feedback on Agency Service Delivery.

DATES: Written comments should be received on or before February 27, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to Bureau of the Fiscal Service, Bruce A. Sharp, 200 Third Street A4–A, Parkersburg, WV 26106–1328, or *bruce.sharp@bpd.treas.gov*. The opportunity to make comments online is also available at *www.pracomment.gov*.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies should be directed to Bruce A. Sharp, Bureau of the Fiscal Service, 200 Third Street A4–A, Parkersburg, WV 26106–1328, (304) 480–8150.

SUPPLEMENTARY INFORMATION:

Title: Generic Clearance for the Collection or Qualitative Feedback on Agency Service Delivery.

OMB Number: 1535–0143.

Abstract: The Bureau of the Fiscal Service conducts various surveys, focus groups, and interviews to assess the effectiveness and efficiency of existing products and services; to obtain knowledge about the potential public audiences attracted to new products are introduced; and to measure awareness and appeal of efforts to reach audiences and customers.

Current Actions: None.

Type of Review: Extension.

Affected Public: Individuals or households; Business and other for-profit.

Estimated Number of Respondents: 10,000.

Estimated Time Per Respondent: 60 minutes.

Estimated Total Annual Burden Hours: 10,000.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: December 23, 2013.

Bruce A. Sharp,

Bureau Clearance Officer.

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

[Docket ID OCC–2013–0025]

Minority Depository Institutions Advisory Committee; Meeting

AGENCY: Office of the Comptroller of the Currency, Department of the Treasury.

ACTION: Notice of federal advisory committee meeting.

SUMMARY: The Office of the Comptroller of the Currency (OCC) announces a meeting of the Minority Depository Institutions Advisory Committee (MDIAC).

DATES: The OCC MDIAC will hold a public meeting on Tuesday, January 28, 2014, beginning at 8:30 a.m. Eastern Standard Time (EST).

ADDRESSES: The OCC will hold the January 28, 2014, meeting of the MDIAC at 400 7th Street SW., Washington, DC 20219.

FOR FURTHER INFORMATION CONTACT: Beverly Cole, Senior Advisor to the Senior Deputy Comptroller for Midsize and Community Bank Supervision, (202) 649–5420, Office of the

Comptroller of the Currency, Washington, DC 20219.

SUPPLEMENTARY INFORMATION: By this notice, the OCC is announcing that the OCC MDIAC will convene a meeting at 8:30 a.m. EST on Tuesday, January 28, 2014, at the OCC's headquarters at 400 7th Street SW., Washington, DC 20219. Agenda items include a discussion of the status of the minority depository institution industry and current topics of interest to the industry. The purpose of the meeting is for the MDIAC to advise the OCC on steps the OCC may be able to take to ensure the continued health and viability of minority depository institutions and other issues of concern to minority depository institutions. Members of the public may submit written statements to the MDIAC by any one of the following methods:

- Email to *MDIAC@occ.treas.gov;* or
- Mail in triplicate to: Beverly Cole, Designated Federal Official, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

The OCC must receive written statements no later than Friday, January 17, 2014. Members of the public who plan to attend the meeting and members of the public who require auxiliary aid should contact the OCC by 5:00 p.m. EST on Tuesday, January 21, 2014, to inform the OCC of their desire to attend the meeting and to provide the information that will be required to facilitate entry into the OCC building. Attendees should provide their full name, email address, and organization, if any. Members of the public may contact the OCC via email at *MDIAC@occ.treas.gov* or by telephone at 202–649–5420. On the day of the meeting, attendees will be required to present proof of identification (a driver's license or other government issued photo identification) upon arrival at the OCC in order to gain entrance to the meeting.

Dated: December 19, 2013.

Thomas J. Curry,

Comptroller of the Currency.

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Supplemental Identification Information for Four Individuals Designated Pursuant to Executive Order 13224

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control ("OFAC") is publishing supplemental information for the names of four individuals whose property and interests in property are blocked pursuant to Executive Order 13224 of September 23, 2001, "Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism."

DATES: The publishing of updated identification information by the Director of OFAC of the four individuals in this notice, pursuant to Executive Order 13224, is effective on December 18, 2013.

FOR FURTHER INFORMATION CONTACT: Assistant Director, Compliance Outreach & Implementation, Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, tel.: 202/622–2490.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (*www.treasury.gov/ofac*) or via facsimile through a 24-hour fax-on-demand service, tel.: 202/622–0077.

Background

On September 23, 2001, the President issued Executive Order 13224 (the "Order") pursuant to the International Emergency Economic Powers Act, 50 U.S.C. 1701–1706, and the United Nations Participation Act of 1945, 22 U.S.C. 287c. In the Order, the President declared a national emergency to address grave acts of terrorism and threats of terrorism committed by foreign terrorists, including the September 11, 2001 terrorist attacks in New York, Pennsylvania, and at the Pentagon. The Order imposes economic sanctions on persons who have committed, pose a significant risk of committing, or support acts of terrorism. The President identified in the Annex to the Order, as amended by Executive Order 13268 of July 2, 2002, 13 individuals and 16 entities as subject to the economic sanctions. The Order was further amended by Executive Order 13284 of January 23, 2003, to reflect the creation of the Department of Homeland Security.

Section 1 of the Order blocks, with certain exceptions, all property and interests in property that are in or hereafter come within the United States or the possession or control of United States persons, of: (1) Foreign persons listed in the Annex to the Order; (2) foreign persons determined by the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of the Department of Homeland Security and the Attorney General, to have committed, or to pose a significant risk of committing, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States; (3) persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to be owned or controlled by, or to act for or on behalf of those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order; and (4) except as provided in section 5 of the Order and after such consultation, if any, with foreign authorities as the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of the Department of Homeland Security and the Attorney General, deems appropriate in the exercise of his discretion, persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to assist in, sponsor, or provide financial, material, or technological support for, or financial or other services to or in support of, such acts of terrorism or those persons listed in the Annex to the Order or determined to be subject to the Order or to be otherwise associated with those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order.

On December 18, 2013 the Director of OFAC supplemented the identification information for four individuals whose property and interests in property are blocked pursuant to Executive Order 13224.

The supplemental identification information for the four individuals is as follows:

Individuals

1. UTHMAN, Omar Mahmoud (a.k.a. ABU UMAR, Abu Omar; a.k.a. AL–FILISTINI, Abu Qatada; a.k.a. TAKFIRI, Abu Umr; a.k.a. UMAR, Abu Umar; a.k.a. UTHMAN, Al-Samman; a.k.a. UTHMAN, Umar; a.k.a. "ABU ISMAIL"), London, United Kingdom; Jordan; DOB 30 Dec 1960; alt. DOB 13 Dec 1960; POB Bethlehem, West Bank, Palestinian Territories; nationality Jordan (individual) [SDGT].

2. ABD AL–KHALIQ, Adil Muhammad Mahmud (a.k.a. ABDUL KHALED, Adel Mohamed Mahmood; a.k.a. ABDUL KHALIQ, Adel Mohamed Mahmoud); DOB 02 Mar 1984; POB Bahrain; nationality Bahrain; Passport 1632207 (Bahrain) (individual) [SDGT].

3. KHALIL, Ibrahim Mohamed (a.k.a. AL ZAFIRI, Khalil Ibrahim; a.k.a. JASSEM,

Khalil Ibrahim; a.k.a. MOHAMMAD, Khalil Ibrahim), Refugee shelter Alte Ziegelei, Mainz 55128, Germany; DOB 02 Jul 1975; alt. DOB 02 May 1972; alt. DOB 03 Jul 1975; alt. DOB 1972; POB Dayr Az-Zawr, Syria; alt. POB Baghdad, Iraq; nationality Syria; Travel Document Number A0003900 (Germany); Temporary suspension of deportation No. T04338017, expired 08 May 2013, issued by Alien's Office of the city of Mainz (individual) [SDGT].

4. AL–SUBAIY, Khalifa Muhammad Turki (a.k.a. ALSUBAIE, Khalifa Mohd Turki; a.k.a. AL–SUBAIE, Khalifa Mohd Turki; a.k.a. AL–SUBAYI, Khalifa; a.k.a. BIN AL–SUAIY, Khalifa Turki bin Muhammad); DOB 01 Jan 1965; POB Doha, Qatar; citizen Qatar; Passport 00685868 (Qatar); National ID No. 26563400140 (Qatar) (individual) [SDGT].

Dated: December 18, 2013.

Barbara C. Hammerle,

Acting Director, Office of Foreign Assets Control.

[FR Doc. 2013–30808 Filed 12–26–13; 8:45 am]

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Unblocking of One Individual Pursuant to Executive Order 13224

AGENCY: Office of Foreign Assets Control, Treasury

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control ("OFAC") is removing the name of one individual, whose property and interests in property have been blocked pursuant to Executive Order 13224 of September 23, 2001, Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism, from the list of Specially Designated Nationals and Blocked Persons ("SDN List").

DATES: The removal of this individual from the SDN List is effective as of December 18, 2013.

FOR FURTHER INFORMATION CONTACT: Assistant Director, Compliance Outreach & Implementation, Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, tel.: 202/622–2490.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

The SDN List and additional information concerning OFAC are available from OFAC's Web site (*www.treasury.gov/ofac*). Certain general information pertaining to OFAC's sanctions programs also is available via facsimile through a 24-hour fax-on-demand service, tel.: 202/622–0077.

Background

On September 23, 2001, the President issued Executive Order 13224 (the "Order") pursuant to the International Emergency Economic Powers Act, 50 U.S.C. 1701–1706, and the United Nations Participation Act of 1945, 22 U.S.C. 287c, imposing economic sanctions on persons who commit, threaten to commit, or support acts of terrorism. The President identified in the Annex to the Order various individuals and entities as subject to the economic sanctions. The Order authorizes the Secretary of the Treasury, in consultation with the Secretary of State, the Attorney General, and (pursuant to Executive Order 13284) the Secretary of the Department of Homeland Security, to designate additional persons or entities determined to meet certain criteria set forth in Executive Order 13224.

The Department of the Treasury's Office of Foreign Assets Control has determined that this individual should be removed from the SDN List.

The following designation is removed from the SDN List:

Individual

1. ABDELHEDI, Mohamed Ben Mohamed (a.k.a. ABDELHEDI, Mohamed Ben Mohamed Ben Khalifa), via Catalani, n. 1, Varese, Italy; DOB 10 Aug 1965; POB Sfax, Tunisia; nationality Tunisia; Passport L965734 issued 06 Feb 1999 expires 05 Feb 2004; Italian Fiscal Code BDLMMD65M10Z352S (individual) [SDGT].

The removal of this individual name from the SDN List is effective as of December 18, 2013. All property and interests in property of the individual that are in or hereafter come within the United States or the possession or control of United States persons are now unblocked.

Dated: December 18, 2013.

Barbara C. Hammerle,

Acting Director, Office of Foreign Assets Control.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Designation of 2 individuals Pursuant to Executive Order 13224 of September 23, 2001, "Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism"

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control ("OFAC") is publishing the names of 2 individuals whose property and interests in property are blocked pursuant to Executive Order 13224 of September 23, 2001, "Blocking Property and Prohibiting Transactions with Persons Who Commit, Threaten to Commit, or Support Terrorism."

DATES: The designations by the Director of OFAC of the 2 individual(s) and 0 entit(ies) in this notice, pursuant to Executive Order 13224, are effective on December 18, 2013.

FOR FURTHER INFORMATION CONTACT: Assistant Director, Compliance Outreach & Implementation, Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, tel.: 202/622–2490.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (*www.treas.gov/ofac*) or via facsimile through a 24-hour fax-on-demand service, tel.: 202/622–0077.

Background

On September 23, 2001, the President issued Executive Order 13224 (the "Order") pursuant to the International Emergency Economic Powers Act, 50 U.S.C. 1701–1706, and the United Nations Participation Act of 1945, 22 U.S.C. 287c. In the Order, the President declared a national emergency to address grave acts of terrorism and threats of terrorism committed by foreign terrorists, including the September 11, 2001 terrorist attacks in New York, Pennsylvania, and at the Pentagon. The Order imposes economic sanctions on persons who have committed, pose a significant risk of committing, or support acts of terrorism. The President identified in the Annex to the Order, as amended by Executive Order 13268 of July 2, 2002, 13 individuals and 16 entities as subject to the economic sanctions. The Order was further amended by Executive Order 13284 of January 23, 2003, to reflect the creation of the Department of Homeland Security.

Section 1 of the Order blocks, with certain exceptions, all property and interests in property that are in or hereafter come within the United States or the possession or control of United States persons, of: (1) foreign persons listed in the Annex to the Order; (2) foreign persons determined by the Secretary of State, in consultation with the Secretary of the Treasury, the

Secretary of the Department of Homeland Security and the Attorney General, to have committed, or to pose a significant risk of committing, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States; (3) persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to be owned or controlled by, or to act for or on behalf of those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order; and (4) except as provided in section 5 of the Order and after such consultation, if any, with foreign authorities as the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of the Department of Homeland Security and the Attorney General, deems appropriate in the exercise of his discretion, persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to assist in, sponsor, or provide financial, material, or technological support for, or financial or other services to or in support of, such acts of terrorism or those persons listed in the Annex to the Order or determined to be subject to the Order or to be otherwise associated with those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order.

On December 18, 2013 the Director of OFAC, in consultation with the Departments of State, Homeland Security, Justice and other relevant agencies, designated, pursuant to one or more of the criteria set forth in subsections 1(b), 1(c) or 1(d) of the Order, 2 individuals whose property and interests in property are blocked pursuant to Executive Order 13224.

The listings for these individuals on OFAC's list of Specially Designated Nationals and Blocked Persons appear as follows:

Individuals

1. AL–HUMAYQANI, 'Abd al-Wahhab Muhammad 'Abd al-Rahman (a.k.a. AL–HAMAYQANI, 'Abd al-Wahab; a.k.a. AL–HAMAYQANI, 'Abd al-Wahab Muhammad 'Abd al-Rahman; a.k.a. AL–HAMIQANI, 'Abd al-Wahab; a.k.a. [OMB Control No. 2900–0764]

Agency Information Collection (Dental Patient Satisfaction Survey); Activities under OMB Review

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3521), this notice announces that the Veterans Health Administration, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and includes the actual data collection instrument.

DATES: Comments must be submitted on or before January 27, 2014.

ADDRESSES: Submit written comments on the collection of information through *www.Regulations.gov*, or to Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: VA Desk Officer; 725 17th St. NW., Washington, DC 20503 or sent through electronic mail to *oira_submission@omb.eop.gov*. Please refer to "OMB Control No. 2900–0764 (Dental Patient Satisfaction Survey)" in any correspondence.

FOR FURTHER INFORMATION CONTACT: Crystal Rennie, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420, (202) 632–7492 or email *crystal.rennie@va.gov*. Please refer to "OMB Control No. 2900–0764 (Dental Patient Satisfaction Survey)" in any correspondence).''

SUPPLEMENTARY INFORMATION:

Title: Survey of Healthcare Experiences, Dental Patient Satisfaction Survey, VA Form 10–10070.

Type of Review: Revision of a currently approved collection.

Abstract: VA Form 10–10070 will be used to systematically obtain information from patients that can be used to identify problems or complaints that need attention and to improve the quality of dental health care services delivered to Veterans. The goal of the Veterans Health Administration (VHA) is to provide high quality medical and dental care to eligible veterans.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published on (*Tuesday, August 28, 2013*), Vol. 78, No. 167, on page 53195.

Affected Public: Individuals or households.

Estimated Annual Burden: 36,585 burden hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 9,146.

Dated: December 23, 2013.

By direction of the Secretary.

Crystal Rennie,

VA Clearance Officer, U.S. Department of Veterans Affairs.

42 CFR Parts 403, 416, 418, 441, 460, 482, 483, 484, 485, 486, 491, and 494

[CMS–3178–P]

RIN 0938–AO91

Medicare and Medicaid Programs; Emergency Preparedness Requirements for Medicare and Medicaid Participating Providers and Suppliers

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This proposed rule would establish national emergency preparedness requirements for Medicare- and Medicaid-participating providers and suppliers to ensure that they adequately plan for both natural and man-made disasters, and coordinate with federal, state, tribal, regional, and local emergency preparedness systems. It would also ensure that these providers and suppliers are adequately prepared to meet the needs of patients, residents, clients, and participants during disasters and emergency situations.

We are proposing emergency preparedness requirements that 17 provider and supplier types must meet to participate in the Medicare and Medicaid programs. Since existing Medicare and Medicaid requirements vary across the types of providers and suppliers, we are also proposing variations in these requirements. These variations are based on existing statutory and regulatory policies and differing needs of each provider or supplier type and the individuals to whom they provide health care services. Despite these variations, our proposed regulations would provide generally consistent emergency preparedness requirements, enhance patient safety during emergencies for persons served by Medicare- and Medicaid-participating facilities, and establish a more coordinated and defined response to natural and man-made disasters.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on February 25, 2014.

ADDRESSES: In commenting, please refer to file code CMS–3178–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the "Submit a comment" instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–3178–P, P.O. Box 8013, Baltimore, MD 21244–8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* Alternatively, you may deliver (by hand or courier) your written comments ONLY to the following addresses prior to the close of the comment period: a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–7195 in advance to schedule your arrival with one of our staff members.

Comments erroneously mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:
Janice Graham, (410) 786–8020.
Mary Collins, (410) 786–3189.
Diane Corning, (410) 786–8486.
Ronisha Davis, (410) 786–6882.
Lisa Parker, (410) 786–4665.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

I. Overview

A. Executive Summary

1. Purpose

Over the past several years, the United States has been challenged by several natural and man-made disasters. As a result of the September 11, 2001 terrorist attacks, the subsequent anthrax attacks, the catastrophic hurricanes in the Gulf Coast states in 2005, flooding in the Midwestern states in 2008, tornadoes and floods in the spring of 2011, the 2009 H1N1 influenza pandemic, and Hurricane Sandy in 2012, readiness for public health emergencies has been put on the national agenda. For the purpose of this proposed regulation, "emergency" or "disaster" can be defined as an event affecting the overall target population or the community at large that precipitates the declaration of a state of emergency at a local, state, regional, or national level by an authorized public official such as a governor, the Secretary of the Department of Health and Human Services (HHS), or the President of the United States. (See Health Resources and Services Administration (HRSA) Policy Information notice entitled, "Health Center Emergency Management Program Expectations," (Document No. 2007–15, dated August 22, 2007, found at *http://www.hsdl.org/?view&did=478559*). Disasters can disrupt the environment of health care and change the demand for health care services. This makes it essential that health care providers and suppliers ensure that emergency management is integrated into their daily functions and values.

In preparing this proposed rule, we reviewed the guidance, developed by the Food and Drug Administration (FDA), the Centers for Disease Control and Prevention (CDC), the Health Resources and Services Administration (HRSA), and the Office of the Assistant Secretary for Preparedness and Response (ASPR). Additionally, we held regular meetings with these agencies and ASPR to collaborate on federal emergency preparedness requirements. To guide us in the development of this rule, we also reviewed several other sources to find the most current best practices in the health care industry. These sources included other federal agencies; The Joint Commission (TJC) standards for emergency preparedness; the American Osteopathic Association (AOA) standards for disaster preparedness (currently written for Critical Access Hospitals (CAHs) only); the National Fire Protection Association (NFPA) standards in NFPA 101 Life Safety Code and NFPA 1600: "Standard on Disaster/Emergency Management and Business Continuity Programs," 2007 Edition; state-level requirements for some states, including those for California and Maryland; and policy guidance from the American College of Healthcare Executives (ACHE), entitled the "Healthcare Executives' Role in Emergency Preparedness," which reinforces our position regarding the necessity of this proposed rule. Many of the resources we reviewed in the development of this proposed rule are listed in the APPENDIX—"Emergency Preparedness Resource Documents and Sites." We encourage providers and suppliers to use these resources to develop and maintain their emergency preparedness plans.

We also reviewed existing Medicare emergency preparedness requirements for both providers and suppliers. We concluded that current emergency preparedness regulatory requirements are not comprehensive enough to address the complexities of actual emergencies. Specifically, the requirements do not address the need for: (1) Communication to coordinate with other systems of care within local jurisdictions (for example. cities, counties) or states; (2) contingency planning; and (3) training of personnel.

Based on our analysis of the written reports, articles, and studies, as well as on our ongoing dialogue with representatives from the federal, state, and local levels and with various stakeholders, we believe that, currently, in the event of a disaster, health care providers and suppliers across the nation would not have the necessary emergency planning and preparation in place to adequately protect the health and safety of their patients. Underlying this problem is the pressing need for a more consistent regulatory approach that would ensure that providers and suppliers nationwide are required to plan for and respond to emergencies and disasters that directly impact patients, residents, clients, participants, and their communities. As we have learned from past events and disasters, the current regulatory patchwork of federal, state, and local laws and guidelines, combined with the various accrediting organization emergency preparedness standards, falls far short of what is needed to require that health care providers and suppliers be adequately prepared for a disaster. Thus, we are proposing these emergency preparedness requirements to establish a comprehensive, consistent, flexible, and dynamic regulatory approach to emergency preparedness and response that incorporates the lessons learned

from the past, combined with the proven best practices of the present. We recognize that central to this approach is to develop and guide emergency preparedness and response within the framework of our national health care system. To this end, these proposed regulations would also encourage providers and suppliers to coordinate their preparedness efforts within their own communities and states as well as across state lines, as necessary to achieve their goals. We are soliciting comments on whether certain requirements should be implemented on a staggered basis.

2. Summary of the Major Provisions

We are proposing emergency preparedness requirements that will be consistent and enforceable for all affected Medicare and Medicaid providers and suppliers. This proposed rule addresses the three key essentials needed to ensure that health care is available during emergencies: safeguarding human resources, ensuring business continuity, and protecting physical resources. Current regulations for Medicare and Medicaid providers and suppliers do not adequately address these key elements.

Based on our research and consultation with stakeholders, we have identified four core elements that are central to an effective and comprehensive framework of emergency preparedness requirements for the various Medicare and Medicaid participating providers and suppliers. The four elements of the emergency preparedness program are as follows:

- Risk assessment and planning: This proposed rule would propose that prior to establishing an emergency plan, a risk assessment would be performed based on utilizing an "all-hazards" approach. An all-hazards approach is an integrated approach to emergency preparedness planning that focuses on capacities and capabilities that are critical to preparedness for a full spectrum of emergencies or disasters. This approach is specific to the location of the provider and supplier considering the particular types of hazards which may most likely occur in their area.
- Policies and procedures: We are proposing that facilities be required to develop and implement policies and procedures based on the emergency plan and risk assessment.
- Communication plan: This proposed rule would require a facility to develop and maintain an emergency preparedness communication plan that complies with both federal and state law. Patient care must be well-coordinated within the facility, across health care providers, and with state and local public health departments and emergency systems to protect patient health and safety in the event of a disaster.
- Training and testing: We are proposing that a facility develop and maintain an emergency preparedness training and testing program. A well-organized, effective training program must include providing initial training in emergency preparedness policies and procedures. We propose that the facility ensure that staff can demonstrate knowledge of emergency procedures and provide this training at least annually. We would require that facilities conduct drills and exercises to test the emergency plan.

We are seeking public comments on when these CoPs should be implemented.

B. Current State of Emergency Preparedness

1. Federal Emergency Preparedness

In response to the September 11, 2001 terrorist attacks and the subsequent national need to refine the nation's strategy to handle emergency situations, there have been numerous efforts across federal agencies to establish a foundation for development and expansion of emergency preparedness systems. The following is a brief overview of some emergency preparedness activities at the federal level. Additional information is included in the appendix to this proposed rule.

a. Presidential Directives

Three Presidential Directives HSPD–5, HSPD–21 and PPD–8, require agencies to coordinate their emergency preparedness activities with each other and across federal, state, local, tribal, and territorial governments. Although these directives do not specifically require Medicare providers and suppliers to adopt such measures, they have set the stage for what we expect from our providers and suppliers in regard to their roles in a more unified emergency preparedness system. The Homeland Security Presidential Directive (HSPD–5), "Management of Domestic Incidents," was issued on February 28, 2003. This directive authorizes the Department of Homeland Security to develop and administer the National Incident Management System (NIMS). The NIMS provides a consistent national template that enables federal, state, local, and tribal governments, as well as private-sector and nongovernmental organizations, to work together effectively and efficiently to prepare for, prevent, respond to, and recover from domestic incidents, regardless of cause, size, or complexity, including acts of catastrophic terrorism. The Presidential Policy Directive (PPD–8 focuses on strengthening the security and resilience of the nation through systematic preparation for the full range of 21st century hazards that threaten the security of the nation, including acts of terrorism, cyber attacks, pandemics, and catastrophic natural disasters. The directive is founded by 3 key principles which include: (1) employ an all-of-nation/whole community approach, integrate efforts across federal, state, local, tribal and territorial governments; (2) build key capabilities to confront any challenge; and (3) utilize an assessment system focused on outcomes to measure and track progress. Finally, the Presidential directive published on October 18, 2007, entitled, "Homeland Security Presidential Directive/HSPD–21," addresses public health and medical preparedness. The directive, found at *http://www.dhs.gov/xabout/laws/gc_1219263961449.shtm*, establishes a National Strategy for Public Health and Medical Preparedness (Strategy), which aims to transform our national approach to protecting the health of the American people against all disasters. HSPD–21 summarizes implementation actions that are the four most critical components of public health and medical preparedness: biosurveillance, countermeasure stockpiling and distribution, mass casualty care, and community resilience. The directive states that these components will receive the highest priority in public health and medical preparedness efforts.

b. Assistant Secretary for Preparedness and Response

In December 2006, the President signed the Pandemic and All-Hazards Preparedness Act (PAHPA) (Pub. L. 109–417). The purpose of the Pandemic and All-Hazards Preparedness Act is "to improve the Nation's public health and medical preparedness and response capabilities for emergencies, whether deliberate, accidental, or natural." The Office of the Assistant Secretary for Preparedness and Response (ASPR) was created under the PAHPA Act in the wake of Katrina to lead the nation in preventing, preparing for, and responding to the adverse health effects of public health emergencies and disasters. The Secretary of HHS delegates to ASPR the leadership role for all health and medical services support functions in a health emergency or public health event. ASPR also serves as the senior advisor to the HHS

Secretary on public health and medical preparedness and provides, at a minimum, support for; building federal emergency medical operational response and recovery capabilities; countermeasures research, advance development, and procurement; and grants to strengthen the capabilities of healthcare preparedness at the state, regional, local and healthcare coalition levels for public health emergencies and medical disasters. The office provides federal support, including medical professionals through ASPR's National Disaster Medical System (NDMS), to augment state and local capabilities during an emergency or disaster. The purpose of the NDMS is to establish a single, integrated, and national medical response capability to assist state and local authorities in dealing with the medical impacts of major peacetime disasters and to provide support to the military and the Department of Veterans Affairs medical systems in caring for casualties evacuated back to the U.S. from overseas conflicts. The NDMS, as part of the HHS, led by ASPR, supports federal agencies in the management and coordination of the federal medical response to major emergencies and federally declared disasters including natural disasters, technological disasters, major transportation accidents, and acts of terrorism, including weapons of mass destruction events. Additional information can be found at: *http://www.phe.gov/preparedness/responders/ndms/Pages/default.aspx*.

ASPR also administers the Hospital Preparedness Program (HPP), which provides leadership and funding through grants and cooperative agreements to states, territories, and eligible municipalities to improve surge capacity and enhance community and hospital preparedness for public health emergencies. Through the work of its state partners, HPP has advanced the preparedness of hospitals and communities in numerous ways, including building healthcare coalitions, planning for all hazards, increasing surge capacity, tracking the availability of beds and other resources using electronic systems, and developing communication systems that are interoperable with other response partners.

The first response in a disaster is always local, and comprised of local government emergency services supplemented by state and volunteer organizations. This aspect of the "disaster response" is specifically coordinated by state and local authorities. When an incident overwhelms or is anticipated to overwhelm state resources, the Governor of a state or chief executive of a tribe may request federal assistance. In such cases, the affected local jurisdiction, tribe, state, and the federal government will collaborate to provide that necessary assistance. When it is clear that state capabilities will be exceeded, the Governor or the tribal executive can request federal assistance, including assistance under the *Robert Stafford Disaster Relief and Emergency Assistance Act (Stafford Act)*. The Stafford Act authorizes the President to provide financial and other assistance to state and local governments, certain private nonprofit organizations, and individuals to support response, recovery, and mitigation efforts following Presidential emergency or major disaster declarations.

The National Response Framework (NRF), a guide to how the nation should conduct all hazards responses, includes 15 Emergency Support Functions (ESFs), which are groupings of governmental and certain private sector capabilities into an organizational structure. The purpose of the ESFs is to provide support, resources, program implementation, and services that are most likely needed to save lives, protect property and the environment, restore essential services and critical infrastructure, and help victims and communities return to normal following domestic incidents. HHS is the primary agency responsible for ESF 8—Public Health and Medical Services.

The Secretary of HHS leads all federal public health and medical response to public health and medical emergencies and incidents that are covered by the Stafford Act, via NRF, or the Public Health Service Act. Under the NRF, ESF 8 is coordinated by the Secretary of HHS principally through the Assistant Secretary for Preparedness and Response (ASPR). ESF 8—Public Health and Medical Services provides the mechanism for coordinated federal assistance to supplement state, tribal, and local jurisdictional resources in response to a public health and medical disaster, potential or actual incidents requiring a coordinated federal response, or during a developing potential health and medical emergency.

c. Centers for Disease Control and Prevention

The Centers for Disease Control and Prevention (CDC) Office of Public Health Preparedness and Response (OPHPR) leads the agency's preparedness and response activities by providing strategic direction, support, and coordination for activities across CDC as well as with local, state, tribal, national, territorial, and international public health partners. CDC provides funding and technical assistance to states to build and strengthen public health capabilities. Ensuring that states can adequately respond to threats will result in greater health security; a critical component of overall U.S. national security. Additional information can be found at: *http://www.cdc.gov/phpr/*. The CDC Public Health Emergency Preparedness (PHEP) cooperative agreement, led by OPHPR, is a critical source of funding for state, local, tribal, and territorial public health departments. Since 2002, the PHEP cooperative agreement has provided nearly $9 billion to public health departments across the nation to upgrade their ability to effectively respond to a range of public health threats, including infectious diseases, natural disasters, and biological, chemical, nuclear, and radiological events. Preparedness activities funded by the PHEP cooperative agreement are targeted specifically for the development of emergency-ready public health departments that are flexible and adaptable. The Strategic National Stockpile (SNS), administered by the CDC, is a stockpile of pharmaceuticals and medical supplies. The SNS program was created to assist states and local communities in responding to public health emergencies, including those resulting from terrorist attacks and natural disasters. The SNS program ensures the availability of necessary medicines, antidotes, medical supplies, and medical equipment for states and local communities, to counter the effects of biological pathogens and chemical and nerve agents. (*http://www.cdc.gov/phpr/stockpile/stockpile.htm*).

The Cities Readiness Initiative (CRI), led by CDC, is a federally funded pilot program to help cities increase their capacity to deliver medicines and medical supplies within 48 hours after recognition of a large-scale public health emergency such as a bioterrorism attack or a nuclear accident. More information on this effort can be found at: *http://www.bt.cdc.gov/cri/*. An evaluative report of this program since its inception, requested by the CDC, performed by the RAND Corporation, and published in 2009, entitled, "Initial Evaluation of the Cities Readiness Initiative" can be found at *http://www.rand.org/pubs/technical_reports/2009/RAND_TR640.pdf*.

Given the heightened concern regarding the impact of various influenza outbreaks in recent years, the federal government has created a Web site with "one-step access to U.S.

Government H1N1, Avian, and Pandemic Flu Information" at *www.flu.gov*. The Web site provides links to influenza guidance and information from federal agencies, such as the CDC, as well as checklists for pandemic preparedness. The information and links are found at *http://www.flu.gov/professional/index.html*. This Web site includes information for hospitals, long term care facilities, outpatient facilities, home health agencies, other health care providers, and clinicians. For example, the "Hospital Pandemic Influenza Planning Checklist" provides guidance on structure for planning and decision making; development of a written pandemic influenza plan; and elements of an influenza pandemic plan. The checklist is comprehensive and lists everything a hospital should do to prepare for a pandemic, from planning for coordination with local and regional planning and response groups to infection control.

2. State and Local Preparedness

A review of studies and articles regarding readiness of state and local jurisdictions reveals that there is inconsistency in the level of emergency preparedness amongst states and need for improvement in certain areas. In a report by the Trust for America's Health (TFAH) (December 2012, *http://www.healthyamericans.org/report/101/*) entitled, "Ready or Not? Protecting the Public's Health from Diseases, Disasters, and Bioterrorism" the authors assessed state-by-state public health preparedness nearly 10 years after the September 11th and anthrax tragedies. Using 10 key indicators to rate levels of public health preparedness, some key findings included: (1) 29 states cut public health funding from fiscal years (FY) 2010 through 2012, with 2 of these states cutting funds for a second year in a row and 14 for 3 consecutive years, and that federal funds for state and local preparedness have decreased by 38 percent from FY 2005 through 2012 and (2) 35 states and Washington DC do not currently have complete climate change adaption plans, which include planning for health threats posed by extreme weather events.

An article entitled, "Public Health Response to Urgent Case Reports," published in Health Affairs (August 30, 2005), Dausey, D., Lurie, N., and Diamond, A.) evaluated the ability of local public health agencies (LPHAs) to adequately meet "a preparedness standard" set by the CDC. The standard was for the LPHAs "to receive and respond to urgent case reports of communicable diseases 24 hours a day, 7 days a week." Using 18 metropolitan area LPHAs that were roughly evenly distributed by agency size, structure, and region of the country, the goal of the test was to contact an "action officer" (that is, physician, nurse, epidemiologist, bioterrorism coordinator, or infection control practitioner) responsible for responding to urgent case reports.

During a 4-month period of time, each LPHA was contacted several times and asked questions regarding triage procedures, what questions would be asked in the event of an urgent case being filed, next steps taken after receiving such a report, and who would be contacted. Although the LPHAs had a substantial role in community public health through prevention and treatment efforts, the authors found significant variation in performance and the systems in place to respond to such reports.

We also reviewed an article published in June 2004 by Lurie, N., Wasserman, J., Stoto, M., Myers, S., Namkung, P., Fielding, J., and Valdez, R. B., entitled, "Local Variations in Public Health Preparedness: Lessons from California" found at *http://content.healthaffairs.org/cgi/content/full/hlthaff.w4.341/DC1*. The authors stated that "evidence-based measures to assess public health preparedness are lacking in California." Using an "expert-panel process," the researchers developed performance measures based on ten identified essential public health services. They performed site visits and tabletop exercises to evaluate preparedness across the state in geographic locations identified as urban, rural, and border status to detect and respond to a hypothetical smallpox outbreak based on the different measures of preparedness. Overall, the researchers found that there was a lack of consensus regarding what "emergency preparedness" encompassed and a wide variation in what various governmental agencies deemed to be adequate emergency preparedness "readiness" in California. They noted that gaps in the infrastructure were common.

Throughout the jurisdictions investigated, there were similarities noted in the shortage of nurses, the number of essential workers nearing retirement age, and the lack of epidemiologists, lab personnel, and public health nurses to meet potential needs. Such gaps in personnel infrastructure were found in many jurisdictions. In some jurisdictions, there was incomplete information regarding the demographics of persons who could be considered potentially vulnerable or part of an underserved population.

In one situation, there was also great variability in the length of time it took to bring three suspicious cases to public health officers' attention and for these officers to realize that these cases were related. There was great variation in the public health officers' ability to rapidly alert the physician and hospital community of an outbreak. There was a lack of consensus regarding when to report a potential outbreak to the public. There also was wide variation in knowledge of public health legal authority, specifically, in regard to quarantine and its enforcement. We believe these findings to be typical of most states.

3. Hospital Preparedness

Hospitals are the focal points for health care in their respective communities; thus, it is essential that hospitals have the capacity to respond in a timely and appropriate manner in the event of a natural or man-made disaster. Additionally, since Medicare-participating hospitals are required to evaluate and stabilize every patient seen in the emergency department and to evaluate every inpatient at discharge to determine his or her needs and to arrange for post-discharge care as needed, hospitals are in the best position to coordinate emergency preparedness planning with other providers and suppliers in their communities. We would expect hospitals to be prepared to provide care to the greatest number of disaster victims for which they have the capacity, while meeting at least minimal obligations for care to all who are in need.

In 2007, ASPR contracted with the Center for Biosecurity of the University of Pittsburgh Medical Center (UPMC) (the Center) to conduct an assessment of U.S. hospital preparedness and to develop recommendations for evaluating and improving future hospital preparedness efforts. The Center's assessment, entitled "Hospitals Rising to the Challenge: The First Five Years of the U.S. Hospital Preparedness Program and Priorities Going Forward" describes the most important components of preparedness for mass casualty response at the local and regional hospital and healthcare system levels. This evaluation report was based on extensive analyses of the published literature, government reports, and HPP program assessments, as well as on detailed conversations with 133 health officials and hospital professionals representing every state, the largest cities, and major territories of the U.S.

The authors stated that major disasters can severely challenge the ability of healthcare systems to adequately care for large numbers of patients (surge capacity) or victims with unusual or highly specialized medical needs (surge capability) such as occurred with Hurricane Katrina. The authors further stated that addressing medical surge and medical system resilience requires implementing systems that can effectively manage medical and health responses, as well as developing and maintaining preparedness programs. There were numerous findings and conclusions in the 2007 report. The researchers found that since the start of the HPP in 2002, individual hospitals' disaster preparedness has improved significantly. The report found that hospital senior leadership is actively supporting and participating in preparedness activities, and disaster coordinators within hospitals have given sustained attention to preparedness and response planning efforts. Hospital emergency operations plans (EOPs) have become more comprehensive and, in many locations, are coordinated with community emergency plans and local hazards. Disaster training has become more rigorous and standardized; hospitals have stockpiled emergency supplies and medicines; situational awareness and communications are improving; and exercises are more frequent and of higher quality. The researchers also found improved collaboration and networking among and between hospitals, public health departments, and emergency management and response agencies. These coalitions are believed to represent the beginning of a coordinated community-wide approach to medical disaster response.

However, ASPR Healthcare Preparedness Capabilities: National Guidance for Healthcare System Preparedness (2012) and CDC Public Health Preparedness Capabilities: National Standards for State and Local Planning (March 2011) notes numerous federal directives that recognize the need for a consistent approach to preparedness planning across the nation so as to ensure an effective response.. The 2010 IOM report also notes that direction at the federal level is essential in order to ensure a coordinated, interoperable disaster response. (IOM Medical Surge Capacity. 2009 Forum on Medical and Public Health Preparedness for Catastrophic Events, 2010)"

4. OIG and GAO Reports

Since Katrina, several studies regarding the preparedness of health care providers have been published. In general, these reports and studies point to a need for improved requirements to ensure that providers and suppliers are adequately prepared to meet the needs of patients, residents, clients, and participants during disasters and emergency situations.

In response to a request from the U.S. Senate Special Committee on Aging calling for an examination of nursing home emergency preparedness, the Office of the Inspector General (OIG) conducted a study during 2004 through 2005 entitled, "Nursing Home Emergency Preparedness and Responses During Recent Hurricanes," (OEI–06–06–00020) *http://oig.hhs.gov/oei/reports/oei-06-06-00020.pdf*). The OIG reviewed state survey data for emergency preparedness measures both for the nation in general and for the Gulf States (Alabama, Florida, Louisiana, Mississippi, and Texas). The study indicated that in 2004 through 2005, 94 percent of nursing homes nationwide met the limited federal regulations for emergency plans then in existence, while only 80 percent met the federal standards for emergency training. Similar compliance rates were noted in the Gulf states. However, the OIG found that nursing homes in the Gulf states experienced problems even though they were in compliance with federal interpretive guidelines. Further, they experienced problems whether they evacuated residents or sheltered them in place. The OIG listed the problems encountered by Gulf state nursing homes including, transportation contracts that were not honored; lengthy travel times for residents; insufficient food and water for residents and staff; complicated resident medication needs; host facilities that were unavailable or that were inadequately prepared, provisioned, or staffed for the transfer of residents; and difficulty re-entering their own facilities. As further detailed in the OIG report, the main reasons for these problems were lack of effective planning; failure to properly execute emergency plans; failure to anticipate the specific problems encountered; and failure to adjust decisions and actions to specific situations.

The OIG also found that some facility administrators deviated, many significantly, from their emergency plans or worked beyond the plans, either because the plans were not updated or plans did not include instructions for certain circumstances. The report goes on to note that many of the nursing home emergency preparedness plans did not consider the following factors: the need to evacuate residents to alternate sites as evidenced by a formal agreement with a host facility; criteria to determine whether to evacuate residents or shelter them in place; a means by which an individual resident's care needs would be identified and met; and re-entry into the facility following an evacuation.

Although some local communities were directly involved in the evacuation of their nursing home residents, other nursing homes received assistance with evacuation from resident and staff family members, parent corporations, and "sister facilities," according to the OIG report. A few nursing homes reported that problems with state and local government coordination during the hurricanes contributed to the problems they encountered.

Based on this study, the OIG had two recommendations for CMS: (1) Strengthen federal certification standards for nursing home emergency plans by including requirements for specific elements of emergency planning; and (2) encourage communication and collaboration between state and local emergency entities and nursing homes. As a result of the OIG's recommendations, the Secretary initiated an emergency preparedness improvement effort to be coordinated across all HHS agencies. Our development of this proposed rule is an important part of HHS-wide efforts to meet the Department's overall emergency preparedness goals and objectives by directly addressing the OIG recommendations. In April 2012, the OIG issued a subsequent report entitled, "Gaps Continue to Exist in Nursing Home Emergency Preparedness and response During Disasters: 2007–2010," (OEI–06–09–00270 *http://oig.hhs.gov/oei/reports/oei-06-09-00270.pdf*). This report notes that many of the gaps in nursing home preparedness and response identified in the 2006 report still exist.

We also reviewed several Government Accountability Office (GAO) reports on emergency preparedness. One such report is entitled, "Disaster Preparedness: Preliminary Observations on the Evacuation of Hospitals and Nursing Homes Due to Hurricanes" (GAO–06–443R), was published on February 16, 2006, and can be found at *http://www.gao.gov/new.items/d06443r.pdf*). This report discusses the GAO's findings regarding—(1) Responsibility for the decision to evacuate hospitals and nursing homes; (2) the issues administrators consider when deciding to evacuate hospitals and nursing homes; and (3) the federal response capabilities that support evacuation of hospitals and nursing homes.

The GAO found that "hospital and nursing home administrators are often responsible for deciding whether to evacuate patients from their facilities due to disasters, including hurricanes or other natural disasters. State and local governments can order evacuations of the population or segments of the population during emergencies, but health care facilities may be exempt from these orders." The GAO found that hospitals and nursing home administrators evacuate only as a last resort and that these facilities' emergency plans are designed primarily to shelter in place. The GAO also found that administrators considered the availability of adequate resources to shelter in place, the risks to patients in deciding when to evacuate, the availability of transportation to move patients, the availability of receiving facilities to accept patients, and the destruction of the facility's or community's infrastructure.

The GAO noted that nursing home administrators also must consider the fact that nursing home residents cannot care for themselves and generally have no home and no place to live other than the nursing home. Therefore, in the event of an evacuation, nursing homes also need to consider the necessity of locating facilities that can accommodate their residents for a long period of time.

A second report from the GAO about the hurricanes' impact entitled, "Disaster Preparedness: Limitations in Federal Evacuation Assistance for Health Facilities Should be Addressed," (GAO–06–826) July, 2006, *www.gao.gov/cgi-bin/getrpt?GAO–06–826*), supports the findings noted in the first GAO report on the disasters. In addition, the GAO noted that the evacuation issues that facilities faced during and after the hurricanes occurred due to their inability to secure transportation when needed. Despite previously established contracts with transportation companies, demand for this assistance overwhelmed the supply of vehicles in the community.

A third report, an after-event analysis entitled, "Hurricane Katrina: Status of Hospital Inpatient and Emergency Departments in the Greater New Orleans Area," (GAO–06–1003) September 29, 2006, *http://www.gao.gov/docdblite/details.php?rptno=GAO-06-1003*) revealed that, as of April 2006: (1) Emergency departments were experiencing overcrowding; but that (2) the number of staffed inpatient beds per 1,000 population was greater than that of the national average and expected to increase further. However, the study found that the number of staffed inpatient beds was not available in psychiatric care settings. In fact, some persons with mental health needs had to be transferred out of the area due to a lack of beds. Attracting and retaining nursing and support staff were two problems that were identified as hindering efforts to maintain an adequate supply of staffed beds for psychiatric patients.

While this study focused specifically on patient care issues in the New Orleans area, the same issues are common to hospitals in any major metropolitan area. Given the vulnerability of persons with mental illness and the tremendous stress a man-made or natural disaster can put on the entire general population, an increase in the number of persons who seek mental health services and require inpatient psychiatric care can be expected following any natural or man-made disaster.

In another report from the GAO, an after-event analysis entitled, "Disaster Recovery: Past Experiences Offer Recovery Lessons for Hurricane Ike and Gustav and Future Disasters," (GAO–09–437T March 3, 2009, *http://www.gao.gov/products/GAO-09-437T*) the GAO concluded that recovery from major disasters is a complex undertaking that involves the combined efforts of federal, state, and local government in order to succeed. The GAO stated that while the federal government provides a significant amount of financial and technical assistance for recovery, state and local jurisdictions should work closely with federal agencies to secure and make use of those resources.

In a report from the GAO, entitled, "Influenza Pandemic: Gaps in Pandemic Planning and Preparedness Need to be Addressed," (GAO–09–909T July 29, 2009; *http://www.gao.gov/new.items/d09909t.pdf*), the GAO expressed its concern that, despite a number of actions having been taken to plan for a pandemic, including developing a National Strategy and Implementation Plan, many gaps in pandemic planning and preparedness still existed in the presence of a potential pandemic influenza outbreak.

In November 2009, the GAO published an additional report entitled, "Influenza Pandemic: Monitoring and Assessing the Status of the National Pandemic Implementation Plan Needs Improvement," (GAO–10–73) (*http://www.gao.gov/new.items/d1073.pdf*). In this report, the GAO assessed the progress of the responsible federal agencies (including HHS) in implementing the action items set forth in the "National Strategy for Pandemic Influenza: Implementation Plan" (the Plan) (*http://georgewbush-whitehouse.archives.gov/homeland/pandemic-influenza-implementation.html*). Specifically, the researchers were interested in determining how the Homeland Security Council (HSC) and the responsible federal agencies were monitoring the progress and completion of the Plan's 342 action items, and assessing the extent to which selected action items were completed, whether activity had continued on the selected action items reported as complete, and the nature of that work. Having conducted an in-depth analysis of a random sample of 60 action items, the GAO found the status of selected action items considered complete was difficult to determine. Specifically, the GAO found that: (1) Measures of performance used to determine status did not always fully reflect the descriptions of the action items; (2) some selected action items were designated as complete despite requiring actions outside the authority of the responsible entities; and (3) additional work was conducted on some selected action items designated as complete. Ultimately, the GAO recommended that, in order to improve how progress is monitored and completion is assessed under the Plan and subsequent updates of the Plan, the HSC should instruct the White House National Security Staff (NSS) to work with responsible federal agencies to: (1) Develop a monitoring and reporting process for action items that are intended for nonfederal entities, such as state and local governments; (2) identify the types of information needed to decide whether to carry out the response-related action items; and (3) develop measures of performance that are more consistent with the descriptions of the action items.

C. Statutory and Regulatory Background

Various sections of the Social Security Act (the Act) define the terms Medicare uses for each provider and supplier type and list the requirements that each provider and supplier must meet to be eligible for Medicare and Medicaid participation. Each statutory provision also specifies that the Secretary may establish other requirements as the Secretary finds necessary in the interest of the health and safety of patients, although the exact wording of such authority may differ slightly between different provider and supplier types. These requirements are called the Conditions of Participation (CoPs) for providers and the Conditions for Coverage (CfCs) for suppliers. The CoPs and CfCs are intended to protect public health and safety and ensure that high

quality care is provided to all persons. Further, the Public Health Service (PHS) Act sets forth additional requirements that certain Medicare providers and suppliers must meet to participate.

The following are the statutory and regulatory citations for the providers and suppliers for which we intend to propose emergency preparedness regulations:

- Religious Nonmedical Health Care Institutions (RNHCIs)—section 1821 of the Act and 42 CFR 403.700 through 403.756.
- Ambulatory Surgical Centers (ASCs)—section 1832(a)(2)(F)(i) of the Act and 42 CFR 416.40 through 416.49.
- Hospices—section 1861(dd)(1) of the Act and 42 CFR 418.52 through 418.116.
- Inpatient Psychiatric Services for Individuals Under Age 21 in Psychiatric Facilities or Programs (PRTFs)—sections 1905(a) and 1905(h) of the Act and 42 CFR 441.150 through 441.182 and 42 CFR 483.350 through 483.376.
- Programs of All-Inclusive Care for the Elderly (PACE)—sections 1894, 1905(a), and 1934 of the Act and 42 CFR 460.2 through 460.210.
- Hospitals—section 1861(e)(9) of the Act and 42 CFR 482.1 through 482.66.
- Transplant Centers—sections 1861(e)(9) and 1881(b)(1) of the Act and 42 CFR 482.68 through 482.104.
- Long Term Care (LTC) Facilities –Skilled Nursing Facilities (SNFs) –under section 1819 of the Act, Nursing Facilities (NFs)—under section 1919 of the Act, and 42 CFR 483.1 through 483.180.
- Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID)—section 1905(d) of the Act and 42 CFR 483.400 through 483.480.
- Home Health Agencies (HHAs)—sections 1861(o), 1891 of the Act and 42 CFR 484.1 through 484.55.
- Comprehensive Outpatient Rehabilitation Facilities (CORFs)—section 1861(cc)(2) of the Act and 42 CFR 485.50 through 485.74.
- Critical Access Hospitals (CAHs)—sections 1820 and 1861(mm) of the Act and 42 CFR 485.601 through 485.647.
- Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services—section 1861(p) of the Act and 42 CFR 485.701 through 485.729.
- Community Mental Health Centers (CMHCs)—section 1861(ff)(3)(B)(i)(ii) of the Act, section 1913(c)(1) of the PHS Act, and 42 CFR 410.110.
- Organ Procurement Organizations (OPOs)—section 1138 of the Act and section 371 of the PHS Act and 42 CFR 486.301 through 486.348.
- Rural Health Clinics (RHCs)—section 1861(aa) of the Act and 42 CFR 491.1 through 491.11; Federally Qualified Health Centers (FQHCs)—section 1861(aa) of the Act and 42 CFR 491.1 through 491.11, except 491.3.
- End-Stage Renal Disease (ESRD) Facilities—sections 1881(b), 1881(c), 1881(f)(7) of the Act and 42 CFR 494.1 through 494.180.

We considered proposing these regulations for each provider and supplier type individually, as we updated their CoPs or CfCs over time. However, for the reasons we have already discussed, we believe the most prudent course of action is to publish emergency preparedness requirements for Medicare and Medicaid providers and suppliers in a single proposed rule. Thus, we are proposing regulatory language for 17 Medicare and Medicaid providers and suppliers to address the four main aspects of emergency preparedness: (1) Risk assessment and planning; (2) policies and procedures; (3) communication; and (4) training.

II. Provisions of the Proposed Regulations

This proposed rule responds to concerns from the Congress, the health care community, and the public regarding the ability of health care providers and suppliers to plan and execute appropriate emergency response procedures for disasters. We developed this proposed rule taking into consideration the extent of regulatory oversight that is currently in existence.

We are proposing requirements for facilities to ensure the continued provision of necessary care at the facility or, if needed, the evacuation and transfer of patients to a location that can supply necessary care. Regulations that address these functions too specifically may become outdated over time as technology and the nature of threats change. However, as our analysis of existing regulations, and the OIG and GAO reports discussed in section I. of this proposed rule, indicate regulations that are too broad may be ineffective. Our challenge is to develop core components that can be used across provider and supplier types as diverse as hospitals, organ procurement organizations, and home health agencies, while tailoring requirements for individual provider and supplier types to their specific needs and circumstances, as well as the needs of their patients, residents, clients, and participants.

We have identified four core elements that we believe are central to an effective emergency preparedness system and must be addressed to offer a more comprehensive framework of emergency preparedness requirements for the various Medicare- and Medicaid-participating providers and suppliers. The four elements are—(1) risk assessment and planning; (2) policies and procedures; (3) communication; and (4) training and testing. We have also proposed an additional requirement for OPOs entitled "Agreements with other OPOs and hospitals."

We believe many of the proposed elements of an emergency preparedness plan need to be conducted at the level of an individual facility. However, other elements may be addressed as effectively, and more efficiently, at a broader organizational level, for example, a system for preserving medical documentation. Our regulatory requirements for each provider and supplier type are based on the comprehensive emergency preparedness requirements that we are proposing for hospitals. Since we are aware that the application of the proposed regulatory language for hospitals may be inappropriate or overly burdensome for some providers and suppliers, we have used the proposed hospital requirements as a template for our proposed emergency preparedness regulations for other providers and suppliers but have specific proposed requirements tailored to each providers' and suppliers' unique needs. Any contracted services furnished to patients must be in compliance with all the facilities' CoPs and standards of this rule, and all services must be provided in a safe and effective manner.

All providers and suppliers would be required to establish an emergency preparedness plan that addressed the four core elements noted previously. The proposed requirements vary based on the type of provider. We discuss the hospital requirements in detail at the beginning of this section. The subsequent discussion of the proposed requirements for all remaining providers and suppliers focuses on how the requirements differ from those proposed for hospitals and why.

For example, because they are inpatient facilities, religious nonmedical health care institutions (RNHCIs), psychiatric residential treatment facilities (PRTFs), skilled nursing facilities and nursing homes (referred to in this document as long term care (LTC) facilities), intermediate care facilities individuals with intellectual disabilities (ICFs/IID), and critical access hospitals (CAHs) may have greater responsibility than outpatient facilities during an emergency for ensuring the health and safety of persons for whom they provide care,

their employees, and volunteers. Thus, proposed requirements for RNHCIs, PRTFs, ICFs/IID, LTC facilities, and CAHs are similar to those proposed for hospitals.

In the event of a natural or man-made disaster, providers and suppliers of outpatient services, such as ambulatory surgical centers (ASCs), programs of all-inclusive care for the elderly (PACE) organizations, home health agencies (HHAs), comprehensive outpatient rehabilitation facilities (CORFs), rural health clinics (RHCs), federally qualified health centers (FQHCs), and end stage renal disease (ESRD) facilities, may not open their facilities or may close them, sending patients and staff home or to a place where they can safely shelter in place. However, we recognize that outpatient facilities may find it necessary to shelter their patients until they can be evacuated or may be called upon to provide some level of care for community residents in the event of an emergency. For example, a CORF that is housed in a large building may open its doors to persons in the community who would otherwise have no place to go. The CORF may provide only shelter from the elements or may provide water, food, and basic self-care items, if available.

Finally, given that some hospice facilities provide both inpatient and home based services, and that transplant centers and OPOs are unique in their provision of health care, our proposed requirements are tailored even more specifically to address the circumstances of these entities. We believe lessons learned following the 2005 hurricanes and subsequent disasters, such as the flooding in the Midwest in 2008, and the tornadoes and flooding in 2011 and 2012, have provided us with an opportunity to work collaboratively with the health care community to ensure best practices in emergency preparedness across providers and suppliers.

It is important to point out that we expect that implementation of certain requirements that we propose for providers and suppliers would be different, based on the category of the provider or supplier. For example, we propose that nearly all providers and suppliers would be required to have policies and procedures to provide subsistence needs to staff and patients during an emergency. However, a small RHC's implementation of this requirement would be quite different from a large metropolitan hospital's implementation. Specifically, with respect the proposed requirement that hospitals, CAHs, inpatient hospice facilities, PRTFs, LTC facilities, ICFs/IID, and RNHCIs would be required to maintain various subsistence needs, we are requesting public comment regarding whether this should be a requirement and in what quantities and for what time period these subsistence needs would be maintained. Nevertheless, we expect that each facility would determine how to implement a requirement considering similar variables such as whether the provider might have the option of notifying staff and patients not to come to the facility due to an emergency; the number of staff and patients likely to be in the facility at the time of an emergency; whether the provider would have the capability of providing shelter, provisions, and health care to members of the community; and the amount of space within the facility available for storing provisions. Although various providers and suppliers utilize different nomenclature to describe the individuals for whom they provide care (patient, resident, client, or participant), unless otherwise indicated, we will use the term "patients" to refer to the individuals for whom the provider or supplier under discussion provides care.

Data regarding the number of providers cited in this proposed rule were obtained from a variety of different CMS databases. The number of providers and suppliers deemed by accrediting organizations to meet the Medicare conditions of participation are from CMS's second quarter fiscal year 2010 Accrediting Organization System for Storing User Recorded Experiences (ASSURE) database. Currently, there are accrediting organizations with Medicare deeming authority for hospitals, critical access hospitals, HHAs, hospices, and ASCs.

Data for CAHs that report having psychiatric and rehabilitation Distinct Part Units (DPUs) are from the Medicare Quality Improvement and Evaluation System (QIES)/Certification and the Survey Provider Enhanced Reporting (CASPER) system as of March 2013. Data for CAHs that do not have DPUs are from the Online Survey, Certification, and Reporting (OSCAR) data system as of March 2013. Data for the number of transplant centers are from the CMS Web site as of March 2013. Data for the total number of accredited and non-accredited hospitals, HHAs, ASCs, hospices, RHNCHIs, PRTFs, SNFs, ICFs/IID, CORFs, OPOs, and RHCs/FQHCs are from the OSCAR data system as of March 2013. We acquired the PACE data from CMS's Health Plan Management System (HPMS), which reports the number of PACE contracts. Given that PACE organizations may have more than one "center," we are using the number of PACE contracts as a reflection of the number of PACE centers under contract with the CMS.

Note that the CMS OSCAR data system is updated periodically by the individual states. Due to variations in the timeliness of the data submissions, all numbers are approximate, and the number of accredited and non-accredited facilities shown may not equal the total number of facilities.

Discussion of the proposed regulatory provisions for each type of provider and supplier follows the discussion in this section of the hospital requirements in the order in which they would appear in the Code of Federal Regulations (CFR). However, our discussion of the hospital requirements includes a general discussion of the differences between our proposed requirements, based on whether providers and suppliers provide outpatient services or inpatient services or both. Thus, we encourage all providers to read the discussion of the proposed hospital emergency preparedness requirements in section II.A. of this proposed rule.

This section also provides detailed discussion of each proposed hospital requirement, offers resources that providers and suppliers can use to meet these proposed requirements, offers a means to establish and maintain emergency preparedness for their facilities, and provides links to guidance materials and toolkits that can be used to help meet these requirements.

A. Emergency Preparedness Regulations for Hospitals (§ 482.15)

Section 1861(e) of the Act defines the term "hospital," and subsections (1) through (8) list requirements that a hospital must meet to be eligible for Medicare participation. Section 1861(e)(9) of the Act specifies that a hospital must also meet such other requirements as the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services in the institution. Under the authority of 1861(e) of the Act, the Secretary has established in regulations at 42 CFR part 482 the requirements that a hospital must meet to participate in the Medicare program.

Section 1905(a) of the Act provides that Medicaid payments may be applied to hospital services. Regulations at § 440.10(a)(3)(iii) require hospitals to meet the Medicare conditions of participation (CoPs) to qualify for participation in Medicaid. The hospital CoPs are found at § 482.1 through § 482.66.

As of September 2012, 4,928 hospitals participated in Medicare. CAHs that have distinct part units (DPUs) must comply with all of the hospital CoPs with respect to those units. There are 1,332 active CAHs. Of these CAHs, there are 95 CAHs with DPUs. The remainder of CAHs (the vast majority) are not subject to hospital CoPs, and must comply with CAH-specific CoPs. Proposed requirements for CAHs are laid out in § 485.625.

Services provided by hospitals encompass inpatient and outpatient care for persons with various acute or chronic medical or psychiatric conditions, including patient care services provided in the emergency department. Hospitals are the focal points for health care in their respective communities; thus, it is essential that hospitals have the capacity to respond in a timely and appropriate manner in the event of a natural or man-made disaster. Additionally, since Medicare-participating hospitals are required to evaluate and stabilize every patient seen in the emergency department and to evaluate every inpatient at discharge to determine his or her needs and to arrange for post-discharge care as needed, hospitals are in the best position to coordinate emergency preparedness planning with other providers and suppliers in their communities.

We are proposing a new requirement under 42 CFR 482.15 that would require that hospitals have both an emergency preparedness program and an emergency preparedness plan. Conceptually, an emergency preparedness program encompasses an approach to emergency preparedness that allows for continuous building of a comprehensive system of health care response to a natural or man-made emergency. We are also proposing that a hospital, and all other providers and suppliers, utilize an "all-hazards" approach in the preparation and delivery of emergency preparedness services in order to meet the health and safety needs of its patient population. The definition of "all hazards" is discussed later in this section under "Emergency Plan."

We would expect that during an emergency, injured and ill individuals would seek health care services at a hospital or CAH, rather than from another provider or supplier. For example, during a pandemic, individuals with influenza-like symptoms are more likely to visit a hospital or CAH emergency department than an ASC. Typically, in the event of a chemical spill, affected individuals would not expect to receive emergency health care services at an LTC facility but would seek health care services at the hospital or CAH in their community. However, we believe it is imperative that each provider think in broader terms than their own facility, and plan for how they would serve similar and other healthcare facilities, as well as the whole community during and surrounding an emergency event. We believe the first step in emergency management is to develop an emergency plan. An emergency plan sets forth the actions for emergency response based on a risk assessment that addresses an "all-hazards approach" to medical and non-medical emergency events. In keeping with the emergency management industry and with strong recommendation from the Department's Assistant Secretary for Preparedness and Response (ASPR), we are proposing that all providers utilize an all-hazards approach to emergency response. We do not specify the quantity or the expected level of detail in which each hazard would be addressed by each provider; however, we do believe it would encourage the adoption of a well thought out, cohesive system of response both within and across provider types.

Analysis of anticipated outcomes to the facility-based and community-based risk assessments would drive revision to the emergency preparedness program, the plan for response, or both. A facility-based risk assessment is contained within the actual facility and carried out by the facility. A community based risk assessment is carried out outside the organization within their defined community.

1. Emergency Plan

a. Emergency Planning Resources

To stimulate and foster improved emergency preparedness continuity of operations, the federal interagency community has developed fifteen all-hazards planning scenarios, entitled the "National Planning Scenarios" for use in federal, state, and local homeland security preparedness activities. These scenarios serve as planning tools for response to the range of man-made and natural disasters the nation could face. The scenarios are: nuclear detonation-improvised nuclear device; biological attack—aerosol anthrax; biological disease outbreak—pandemic influenza; biological attack—plague; chemical attack—blister agent; chemical attack—toxic industrial chemicals; chemical attack—nerve agent; chemical attack—chlorine tank explosion; natural disaster—major earthquake; and natural disaster—major hurricane; radiological attack—radiological dispersal devices; explosive attack—bombing using improvised explosive device; biological attack—food contamination; biological attack—foreign animal disease (foot and mouth disease); and cyber attack. Additional scenarios include volcano preparedness and severe winter weather (snow/ice). Additional information regarding the National Planning Scenarios and how they align to the National Preparedness Goal can be found at: *http://www.fema.gov/preparedness-1/learn-about-presidential-policy-directive-8#MajorElements.*

These planning tools along with other emergency management and business continuity information can be found on HRSA's Web site at: *http://www.hrsa.gov/emergency/* and also in HRSA's, Policy Information Notice entitled, "Health Center Emergency Management Program Expectations," (No. 2007–15), dated August 22, 2007, at: *http://bphc.hrsa.gov/policiesregulations/policies/pin200715expectations.html*). While these materials were developed for health centers, the content is relevant to all health providers. According to the notice emergency management planning is to ensure predictable staff behavior during a crisis, provide specific guidelines and procedures to follow and define specific roles. Also, emergency planning should address the four phases of emergency management that include: mitigation activities to lessen the severity and impact a potential disaster or emergency might have on a health center's operation; preparedness activities to build capacity and identify resources that may be used should a disaster or emergency occur; response to the actual emergency and controls the negative effects of emergency situations; and recovery that begin almost concurrently with response activities and are directed at restoring essential services and resuming normal operations to sustain the long-term viability of the health center. HRSA further states that for FQHCs, this means protecting staff and patients, as well as safeguarding the facility's ability to deliver health care. According to HRSA, the expectations outlined in their guidance are intended to be broad to ensure applicability to the diverse range of centers and to aid integration of the guidance into what centers already are doing related to emergency and risk management. While this guidance is targeted toward centers, we believe hospitals and all other providers and suppliers can use this guidance in the

development of their emergency preparedness plans.

The Agency for Healthcare Research and Quality (AHRQ) released a web-based interactive tool entitled, "Surge Tool Kit and Facility Checklist" (located at: *http://www.cdc.gov/phpr/healthcare/documents/shuttools.pdf* or at: *http://archive.ahrq.gov/research/shuttered/toolkitchecklist/*), which will allow hospitals and emergency planners to estimate the resources needed to treat a surge of patients resulting from a major disaster, such as an influenza pandemic or a terrorist attack. Designed to dovetail with the Homeland Security Council's 15 all-hazards National Planning Scenarios, previously discussed, the AHRQ Hospital Surge Model allows users to select a disaster scenario and estimate the number of patients needing medical attention by arrival condition and day; the number of casualties in the hospital by unit and day; and the cumulative number of both dead or discharged casualties by day. The tool also calculates the level of hospital resources, including personnel, equipment and supplies, needed to treat patients. The model estimates resources for biological, chemical, nuclear or radiological attacks. (For the development of emergency preparedness plans, providers and suppliers may also find the National Fire Protection Association's (NFPA) NFPA 1600: "Standard on Disaster/Emergency Management and Business Continuity Programs, 2013 Edition," particularly helpful. The NFPA document can be found at: *http://www.nfpa.org/aboutthecodes/AboutTheCodes.asp?DocNum=1600*. The standard sets forth the basic criteria for a comprehensive program that addresses disaster recovery, emergency management, and business continuity. Under most definitions, the NFPA 1600 is an industry standard for disaster management.

Also of concern when developing an emergency plan is the issue of the allocation of scarce resources during a potentially devastating event. Disasters can create situations where such resources must be distributed in a manner that is different from usual circumstances, but still appropriate to the situation. As discussed in "Providing Mass Medical Care with Scarce Resources: A Community Planning Guide, Publication No. 07–0001, Rockville, MD: Agency for Healthcare Research and Quality," (found at: *http://archive.ahrq.gov/research/mce/*), such resource considerations are part of the impact that natural or man-made disasters have on hospitals. This guide provides information on the circumstances that communities would likely face as a result of a mass casualty event (MCE); key constructs, principles, and structures to be incorporated into the planning for an MCE; approaches and strategies that could be used to provide the most appropriate standards of care possible under the circumstances; examples of tools and resources available to help states and communities in their planning processes; and illustrative examples of how some health systems, communities, or states have approached certain issues as part of their MCE-related planning efforts. Building on the work from 2008, the Institute of Medicine (IOM) released in 2012 a guidance report entitled "The Crisis Standards of Care (CSC): A Systems Framework for Catastrophic Disaster Response" available at: *http://www.iom.edu/Reports/2012/Crisis-Standards-of-Care-A-Systems-Framework-for-Catastrophic-Disaster-Response.aspx*. The guidance report expanding upon prior scarce resources reports and defined crisis standards of care as "the optimal level of health care that can be delivered during a catastrophic event, requiring a substantial change in usual health care operations." The report stated that CSC; provides a mechanism for responding to situations in which the demand on needed resources far exceeds the resource availability (that is, scarce resources); implementation of CSC involves a substantial shift in normal health care activities and reallocation of staff, facilities, and resources; and that to transition quickly and effectively, each organization and agency has a responsibility to plan and identify in advance the core functions it must carry out in a crisis and who will be responsible for each task.

Another resource that would be useful in helping planners address the issues associated with preparing for and responding to an MCE in the context of broader emergency planning processes is the document entitled, "Standing Together: An Emergency Planning Guide for America's Communities" (published by The Joint Commission (TJC), formerly known as the Joint Commission on the Accreditation of Healthcare Organizations, 2006). The document by TJC is a comprehensive resource that offers step-by-step guidance for development of an emergency preparedness plan that is applicable to small, rural, and suburban communities. This document can be found at: *http://www.jointcommission.org/Standing_Together__An_Emergency_Planning_Guide_for_Americas_Communities/*. This document may be particularly useful for small or rural facilities and agencies.

Rural communities face challenges in the delivery of health care that are often very different from those faced by urban and suburban communities. While rural communities depend on public health departments, hospitals, and emergency medical services (EMS) providers just as urban and suburban communities do, rural communities tend to have fewer health care resources overall. A report entitled, "Rural Communities and Emergency Preparedness," (published by the Health Resources and Services Administration's (HRSA) Office of Rural Health Policy, April 2002, found at: *ftp://ftp.hrsa.gov/ruralhealth/RuralPreparedness.pdf*) addresses the issues faced by rural communities with respect to emergency preparedness.

The authors report that there are many factors that limit the ability of rural providers and suppliers to deliver optimal health care services in the event of a natural or man-made disaster. The authors found that geographic isolation is a significant barrier to providing a coordinated emergency response. Rural areas are also more affected by variations in weather conditions and by seasonal variations in populations (for instance, tourism). As reported by the authors, these areas have fewer human and technical resources (that is, health care professionals, medical equipment, and communication systems).

For example, the study found that in 2002, only 20 percent of the 3,000 local public health departments in the United States had developed a plan to deal with a bioterrorism event. The researchers also found that the majority of rural public health agencies are closed evenings and weekends, and are not equipped to respond to an emergency situation on a 24-hour basis. While these factors may not affect a rural hospital directly, as an integral part of the larger system of health care delivery for its community, a hospital must be ready to manage the surge of persons who would seek care at the hospital during and after a disaster when many smaller health care entities may be non-operational.

b. Risk Assessment

To ensure that all hospitals operate as part of a coordinated emergency preparedness system, as outlined in the PPD–8, NIMS, NRF, HSPD–21, and PAHPA/PAHPRA, we are proposing at § 482.15 that all hospitals establish and maintain an emergency preparedness plan that complies with both federal and state requirements. Additionally,

we propose that a hospital would develop and maintain a comprehensive emergency preparedness program, utilizing an "all-hazards" approach. The emergency preparedness plan would have to be reviewed and updated at least annually.

In keeping with the focus of the emergency management field, we propose that prior to establishing an emergency preparedness plan, the hospital and all other providers would first perform a risk assessment based on utilizing an "all-hazards" approach. An all-hazards approach is an integrated approach to emergency preparedness planning. In the abstract of a November 2007 paper entitled, "Universal Design: The All-Hazards Approach to Vulnerable Populations Planning" by Charles K.T. Ishikawa, MSPH, Garrett W. Simonsen, MSPS, Barbara Ceconi, MSW, and Kurt Kuss, MSW, the researchers described an all-hazards planning approach as "a more efficient and effective way to prepare for emergencies. Rather than managing planning initiatives for a multitude of threat scenarios, all-hazards planning focuses on developing capacities and capabilities that are critical to preparedness for a full spectrum of emergencies or disasters." Thus, all-hazards planning does not specifically address every possible threat but ensures that hospitals and all other providers will have the capacity to address a broad range of related emergencies.

It is imperative that hospitals perform all-hazards risk assessment consistent with the concepts outlined in the National Preparedness Guidelines, the "Guidelines" published by the U.S. Department of Homeland Security that we described in section I.A.3 of this proposed rule. Additional guidance and resources for assistance with designing and performing a hazard vulnerability assessment include: the *Comprehensive Preparedness Guide 201: Threat and Hazard Identification and Risk Assessment Guide* (available at: *http://www.fema.gov/library/viewRecord.do?fromSearch=fromsearch&id=5823*), the *Use of Threat and Hazard Identification and Risk Assessment for Preparedness Grants* (available at: *http://www.fema.gov/library/viewRecord.do?fromSearch=fromsearch&id=5826*), the *Preparedness Guide 201 Supplement 1: Threat and Hazard Identification and Risk Assessment Guide Toolkit* (available at: *http://www.fema.gov/library/viewRecord.do?fromSearch=fromsearch&id=5825*), the *Hazard Risk Assessment Instrument Workbook* (available at: *http://www.cphd.ucla.edu/hrai.html*) and the *Understanding Your Risks: Identifying Hazards and Estimating Losses* document (available at: *http://www.fema.gov/library/viewRecord.do?id=1880*).

Additionally, AHRQ published two additional guides to help hospital planners and administrators make important decisions about how to protect patients and health care workers and assess the physical components of a hospital when a natural or manmade disaster, terrorist attack, or other catastrophic event threatens the soundness of a facility. The guides examine how hospital personnel have coped under emergency situations in the past to better understand what factors should be considered when making evacuation, shelter-in-place, and reoccupation decisions.

The guides entitled, "Hospital Evacuation Decision Guide" and "Hospital Assessment and Recovery Guide" are intended to supplement hospital emergency plans, augment guidance on determining how long a decision to evacuate may be safely deferred, and provide guidance on how to organize an initial assessment of a hospital to determine when it is safe to return after an evacuation.

The evacuation guide distinguishes between "pre-event evacuations" which are undertaken in advance of an impending disaster, such as a storm, when the hospital structure and surrounding environment are not yet significantly compromised and "post-event evacuations," which are carried out after a disaster has damaged a hospital or the surrounding community. It draws upon past events including: the Northridge, CA, earthquake of 1994; the Three Mile Island nuclear reactor incident of 1979; and Hurricanes Katrina and Rita in 2005. The guide offers advice regarding sequence of patient evacuation and factors to consider when a threat looms.

The assessment and recovery guide helps hospitals determine when to get back into a hospital after an evacuation. Comprised primarily of a 45-page checklist, the guide covers 11 separate areas of hospital infrastructure that should be evaluated before determining that it is safe to reoccupy a facility, such as security and fire safety, information technology and communication and biomedical engineering.

The "Hospital Evacuation Decision Guide" can be found at: *http://archive.ahrq.gov/prep/hospevacguide/*) (AHRQ Publication No. 10–0009), and the "Hospital Assessment and Recovery Guide" can be found at (*http://archive.ahrq.gov/prep/hosprecovery/*) (AHRQ Publication No. 10–0081).

Based on the guidance and information in these resources, we would expect a hospital's risk assessment, which we would require at § 482.15(a)(1), to be based on and include a documented, facility-based and community-based risk assessment, utilizing an all hazards approach. In order to meet this requirement, we would expect hospitals to consider, among other things, the following—(1) Identification of all business functions essential to the hospitals operations that should be continued during an emergency; (2) identification of all risks or emergencies that the hospital may reasonably expect to confront; (3) identification of all contingencies for which the hospital should plan; (4) consideration of the hospital's location, including all locations where the hospital delivers patient care or services or has business operations; (5) assessment of the extent to which natural or man-made emergencies may cause the hospital to cease or limit operations; and (6) determination of whether arrangements with other hospitals, other health care providers or suppliers, or other entities might be needed to ensure that essential services could be provided during an emergency.

We propose at § 482.15(a)(2) that the emergency plan include strategies for addressing emergency events identified by the risk assessment. For example, a hospital in a large metropolitan city may plan to utilize the support of other large community hospitals as alternate placement sites for its patients if the hospital needs to be evacuated. However, we would expect the hospital to have back-up evacuation plans for circumstances in which nearby hospitals also were affected by the emergency and were unable to receive patients. We would expect these plans to include consideration for how the hospital would work in collaboration with hospitals and other providers and suppliers across state lines, if applicable. Individuals who live near the border with an adjoining state could use the services of a hospital located in the adjoining state if the hospital was closer or provided more services than the nearest hospital in the state in which the individual resides. Therefore, we would encourage hospitals in adjoining states to work together to formulate plans to provide services across state lines in the event of a natural or man-made disaster to ensure continuity of care during a disaster.

c. Patient Population and Available Services

At § 482.15(a)(3), we propose that a hospital's emergency plan address its patient population, including, but not limited to, persons at-risk. As defined by the PAHPA, members of at-risk populations may have additional needs in one or more of the following functional areas: maintaining independence, communication, transportation, supervision, and medical care. In addition to those individuals specifically recognized as at-risk in the statute (children, senior citizens, and pregnant women), we are proposing to define "at-risk populations" as individuals who may need additional response assistance including those who have disabilities, live in institutionalized settings, are from diverse cultures, have limited English proficiency or are non-English speaking, lack transportation, have chronic medical disorders, or have pharmacological dependency. Also, as discussed in "Providing Mass Medical Care with Scarce Resources: A Community Planning Guide," (*http://archive.ahrq.gov/research/mce/*), at-risk populations would include, but are not limited to, the elderly, persons in hospitals and nursing homes, people with physical and mental disabilities, and infants, and children. Hospitals may find this resource helpful in establishing emergency plans that address the needs of such patients.

We also propose at § 482.15(a)(3) that a hospital's emergency plan address the types of services that the hospital would be able to provide in an emergency. The hospital should base these determinations on factors such as the number of staffed beds, whether the hospital has an emergency department or trauma center, availability of staffing and medical supplies, the hospital's location, and its ability to collaborate with other community resources during an emergency.

d. Succession Planning and Cooperative Efforts

In regard to emergency preparedness planning, we are also proposing at § 482.15(a)(3) that all hospitals include delegations and succession planning in their emergency plan to ensure that the lines of authority during an emergency are clear and that the plan is implemented promptly and appropriately.

Finally, at § 482.15(a)(4), we propose that a hospital have a process for ensuring cooperation and collaboration with local, tribal, regional, state, or federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the hospital's efforts to contact such officials and, when applicable, its participation in collaborative and cooperative planning efforts. We believe that planning with officials in advance of an emergency to determine how such collaborative and cooperative efforts will be achieved will foster a smoother, more effective, and more efficient response in the event of a disaster.

While we are aware that the responsibility for ensuring a coordinated disaster preparedness response lies upon the state and local emergency planning authorities, the hospital would need to document its efforts to contact these officials and inform them of the hospital's participation in the coordinated emergency response. Although we propose to require the same efforts for all providers and suppliers as we propose for hospitals, we realize that federal, state, and local officials may not elect to collaborate with some providers and suppliers due to their size and role in the community. For example, a RNHCI, by the limited nature of its service within the community, may not be called upon to participate in such collaborative and cooperative planning efforts. In this instance, we are proposing that such a provider or supplier would only need to provide documentation of its efforts to contact such officials and, when applicable, its participation.

Through the work of its state partners, the ASPR Hospital Preparedness Program (HPP) has advanced the preparedness of hospitals and communities in numerous ways, including building healthcare coalitions, planning for all hazards, increasing surge capacity, tracking the availability of beds and other resources using electronic systems, and developing communication systems that are interoperable with other response partners. Many more community healthcare facilities have equipment to protect healthcare workers and decontaminate patients in chemical, biological, radiological, or nuclear emergencies.

While the HPP program continues to encourage preparedness at the hospital level, evidence and real-world events have illustrated that hospitals cannot be successful in response without robust community healthcare coalition preparedness—engaging critical partners. Critical partners include emergency management, public health, mental/behavioral health providers, as well as community and faith-based partners. Together these partners make up a community's Healthcare Coalition (HCC). A key goal of HPP moving forward is to strengthen the capabilities of the HCC, not just the individual hospital. HCCs are a cornerstone for the HPP and an integral component for community-wide planning for healthcare resiliency.

We are aware that, among some emergency management leaders, healthcare coalitions are viewed as a valued and essential component of a coordinated system of response and that many providers now participate in such coalitions. While we are not requiring that providers participate in coalitions, we do recognize and support their value in the well-coordinated emergency response system and encourage providers of all types and sizes to engage in such collaborations, where possible, to ensure better coordination in planning, including the assessment of risk, surrounding an emergency event. The primary goal of health care coalitions is to foster collaboration amongst provider types in order to strengthen the overall health system by leveraging expertise, sharing resources, and increasing capacity to respond; thus reducing potential administrative burden for emergency preparedness, while similarly enabling easier emergency response integration and coordination during an emergency. Healthcare coalition activities provide, at a minimum, an optimal forum for: Leveraging leadership and operational expertise (health, public health, emergency management, public works, public safety, etc.) within a community; conducting mutual hazard vulnerability/risk assessments to identify community health gaps and develop plans and strategies to address them; developing standardized tools, emergency plans, processes and protocols, training and exercises to support the community and support ease of integration; and facilitating timely and/or shared resource management and coordination of communications and information during an emergency

2. Policies and Procedures

We are proposing at § 482.15(b) that a hospital be required to develop and implement emergency preparedness policies and procedures based on the emergency plan proposed at § 482.15(a), the risk assessment proposed at § 482.15(a)(1), and the communication plan proposed at § 482.15(c). These policies and procedures would be reviewed and updated at least annually. We are soliciting public comment on the timing of the updates.

We propose at § 482.15(b)(1) that a hospital's policies and procedures would have to address the provision of subsistence needs for staff and patients, whether they evacuated or sheltered in place, including, but not limited to, at (b)(1)(i), food, water, and medical supplies. Analysis of the disaster caused by the hurricanes in the Gulf states in 2005 revealed that hospitals were forced to meet basic subsistence needs for community evacuees, including visitors and volunteers who sheltered in place, resulting in the rapid depletion of subsistence items and considerable difficulty in meeting the subsistence needs of patients and staff. Therefore, we are proposing that a hospital's policies and procedures also address how the subsistence needs of patients and staff who were evacuated would be met during an emergency. For example, a hospital might arrange for storage of supplies outside the facility, have contracts with suppliers for the acquisition of supplies during an emergency, or address subsistence needs for evacuees in an agreement with a facility that was willing to accept the hospital's patients during an emergency.

Based on our experience with hospitals, most hospitals do maintain subsistence supplies in the event of an emergency. Thus, we believe it would be overly prescriptive to require hospitals to maintain a defined quantity of subsistence needs for a defined period of time. We believe hospitals and other inpatient providers should have the flexibility to determine what is adequate based on the location and individual characteristics of the facility. Although we propose requiring only that each hospital addresses subsistence needs for staff and patients, we recommend that hospitals keep in mind that volunteers, visitors, and individuals from the community may arrive at the hospital to offer assistance or seek shelter and consider whether the hospital needs to maintain a store of extra provisions. We are soliciting public comment on this proposed requirement.

As stated earlier, we also have learned from attendance in the Hurricane Katrina Sharing Information During Emergencies (SIDE) conference held in July of 2006, and from on-going participation in the CMS Survey & Certification (S&C) Emergency Preparedness Stakeholder Communication Forum, that many facilities placed back-up generators in basements that subsequently became inoperable due to water damage. In turn, this led to possible unsafe conditions for their patients and other persons sheltered in the facility. We note that existing regulations at § 482.41 require hospitals to have emergency power and lighting in certain areas (operating, recovery, intensive care, emergency rooms, and stairwells). Emergency lighting only in these areas will not assist staff if there is a requirement to continue operations for long periods of time with no power (for example, in the wards). Power outages lasted several days after Hurricane Sandy in some areas of the northeast. Similarly, should a large-scale evacuation be required, a lack of emergency lighting in general areas of the hospital such as wards and corridors would greatly hinder this process. This was of particular concern in impacted healthcare facilities during Hurricane Sandy (Redlener I, Reilly M, Lessons from Sandy—Preparing Health Systems for Future Disasters. N ENGL J MED. 367;24:2269–2271.) Thus, as previously stated, at § 482.15(b)(1)(ii) we also propose that the hospital have policies and procedures that address the provision of alternate sources of energy to maintain: (1) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions; (2) emergency lighting; (3) fire detection, extinguishing, and alarm systems. We are also proposing at § 482.15(b)(1)(ii)(D) that the hospital develop policies and procedures to address provision of sewage and waste disposal. We are proposing to define the term "waste" as including all wastes including solid waste, recyclables, chemical, biomedical waste and wastewater, including sewage. These proposed requirements concern assuring the continuity of the power source for the fire detection, extinguishing and alarm systems and are an essential prerequisite for successful implementation of existing requirements during emergencies that result in loss of regular power. These proposed requirements are more in line with best practice rather than mere sufficiency.

We are proposing at § 482.15(b)(2) that the hospital develop policies and procedures regarding a system to track the location of staff and patients in the hospital's care both during and after an emergency. We believe it is imperative that the hospital be able to track a patient's whereabouts, to ensure adequate sharing of patient information with other providers and to inform a patient's relatives and friends of the patient's location within the hospital, whether the patient has been transferred to another facility, or what is planned in respect to such actions. Therefore, we believe that hospitals must develop a means to track patients, which would include evacuees in the hospital's care during and after an emergency event. ASPR has developed tools, programs and resources to facilitate disaster preparedness planning at the local healthcare facility-level. One of these tools, The Joint Patient Assessment and Tracking System (JPATS), was developed through an interagency association between HHS/ASPR and DoD, and is available for providers at: *https://asprwebapps.hhs.gov/jpats/protected/home.do*.

Use of the JPATS is referenced in Health Preparedness Capabilities: National Guidance for Health System Preparedness (2012). This document provides guidance for healthcare systems, healthcare coalitions and healthcare organizations emergency preparedness efforts that is intended to serve as a planning resource. Broad guidance as to the requirement for bed and patient tracking is included.

Given the lessons learned, this requirement is being proposed for providers and suppliers who provide ongoing care to inpatients or outpatients. Such providers and suppliers would include RNHCIs, hospices, PRTFs, PACE organizations, LTC facilities, ICFs/IID, HHAs, CAHs, and ESRD facilities. Despite providing services on an outpatient basis, we would require hospices, HHAs, and ESRD facilities to assume this responsibility. These providers and suppliers maintain current patient census information and would be required to provide continuing patient care during the emergency. In addition, we would require ASCs to maintain responsibility for their staff and patients if patients were in the facility. Other outpatient providers, such as CORFs, FQHCs and clinics maintain patient information but they have the flexibility of cancelling appointments during an emergency thereby not needing to assume responsibility of the patients.

This requirement is not being proposed for transplant centers; CORFs; OPOs; clinics, rehabilitation agencies as providers of outpatient physical therapy and speech-language pathology services; and RHCs/FQHCs. Transplant centers' patients and OPOs' potential donors would be in hospitals, and, thus, would be the hospital's responsibility. We believe it is likely that outpatient providers and suppliers would close their facilities prior to or immediately after an emergency, sending staff and patients home.

We are not proposing a requirement for a specific type of tracking system. A hospital would have the flexibility to determine how best to track patients and staff, whether it used an electronic

database, hard copy documentation, or some other method. However, it is important that the information be readily available, accurate, and shareable among officials within and across the emergency response system as needed in the interest of the patient. A number of states already have such tracking systems in place or under development and the systems are available for use by health care providers and suppliers. Lessons learned from the hurricanes in the Gulf States revealed that some facilities, despite having patient-related information backed up to computer databases within or outside of the state in which the disaster occurred, could not access the information in a timely manner. Therefore, we would recommend that a hospital using an electronic database consider backing up its computer system with a secondary source.

Although we believe that it is important that a hospital, and other providers of critical care, be able to track a patient's whereabouts to ensure adequate sharing of patient information with other providers and to inform a patient's relatives of the patient's location after a disaster, we are specifically soliciting comments on the feasibility of this requirement for any outpatient facilities.

We propose at § 482.15(b)(3) that hospitals have policies and procedures in place to ensure the safe evacuation from the hospital, which would include standards addressing consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

We propose at § 482.15(b)(4) that a hospital must have policies and procedures to address a means to shelter in place for patients, staff, and volunteers who remain in the facility. We expect that hospitals would include in their policies and procedures both the criteria for selecting patients and staff that would be sheltered in place and a description of the means that they would use to ensure their safety.

During the Gulf Coast hurricanes, some hospitals were able to shelter their patients and staff in place. However, the physical structures of many other hospitals were so damaged that sheltering in place was impossible. Thus, when developing policies and procedures for sheltering in place, hospitals should consider the ability of their building(s) to survive a disaster and what proactive steps they could take prior to an emergency to facilitate sheltering in place or transferring of patients to alternate settings if their facilities were affected by the emergency.

We propose at § 482.15(b)(5) that a hospital have policies and procedures that would require a system of medical documentation that would preserve patient information, protect the confidentiality of patient information, and ensure that patient records were secure and readily available during an emergency. In addition to the current hospital requirements for medical records located at § 482.24(b), we are proposing that hospitals be required to ensure that patient records are secure and readily available during an emergency.

Such policies and procedures would have to be in compliance with Health Insurance Portability and Accountability Act (HIPAA) Privacy and Security Regulations at 45 CFR parts 160 and 164, which protect the privacy and security of individual's personal health information. Information on how HIPAA requirements can be met for purposes of emergency preparedness and response can be found at: *http://www.hhs.gov/ocr/privacy/hipaa/understanding/special/emergency/index.html*. The tornadoes that occurred in Joplin, Missouri in 2011, presented an example of the value of electronic health records during a disaster. There were primary care clinics and other providers that had electronic health records and because their records were not destroyed, they were able to find new locations, contact their patients and re-establish operations very quickly.

We propose at § 482.15(b)(6) that facilities would have to have policies and procedures in place to address the use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of state or federally designated health care professionals to address surge needs during an emergency.

Facilities may find it helpful to utilize assistance from the Medical Reserve Corps (MRC), a national network of community-based volunteer units that focus on improving the health, safety and resiliency of their local communities. MRC units organize and utilize public health, medical and other volunteers to support existing local agencies with public health activities throughout the year and with preparedness and response activities for times of need. One goal of the MRC is to ensure that members are identified, screened, trained and prepared prior to their participation in any activity. While MRC units are principally focused on their local communities, they have the potential to provide assistance in a statewide or national disaster as well.

Hospitals could use the Emergency System for Advance Registration of Volunteer Health Professionals (ESAR–VHP), found in section 107 of the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (Pub. L. 107–188), to verify the credentials of volunteer health care workers. The ESAR–VHP is a federal program to establish and implement guidelines and standards for the registration, credentialing, and deployment of medical professionals in the event of a large-scale national emergency. The program is administered by ASPR within the Department. All states must participate in ESAR–VHP.

The purpose of the program is to facilitate the use of volunteers at all tiers of response (local, regional, state, interstate, and federal). The ESAR–VHP program has been working to establish a national network of state-based programs that manage the information needed to effectively use health professional volunteers in an emergency. These state-based systems will provide up-to-date information regarding the volunteer's identity and credentials to hospitals and other health care facilities in need of the volunteer's services. Each state's ESAR–VHP system is built to standards that will allow quick and easy exchange of health professionals with other states. We propose at § 482.15(b)(7) that hospitals would have to have a process for the development of arrangements with other hospitals and other providers to receive patients in the event of limitations or cessation of operations at their facilities, to ensure the continuity of services to hospital patients.

We believe this requirement should apply only to providers and suppliers that provide continuous care and services for individual patients. Thus, we are not proposing this requirement for transplant centers; CORFs; OPOs; clinics, rehabilitation agencies, and public health agencies as providers of outpatient physical therapy and speech-language pathology services; and RHCs/FQHCs.

We also propose at § 482.15(b)(8) that hospital policies and procedures would have to address the role of the hospital under a waiver declared by the Secretary, in accordance with section 1135 of the Act, for the provision of care and treatment at an alternate care site (ACS) identified by emergency management officials. We propose this requirement for inpatient providers only. We would expect that state or

local emergency management officials might designate such alternate sites, and would plan jointly with local providers on issues related to staffing, equipment and supplies at such alternate sites. This requirement encourages providers to collaborate with their local emergency officials in such proactive planning to allow an organized and systematic response to assure continuity of care even when services at their facilities have been severely disrupted. Under section 1135 of the Act, the Secretary is authorized to temporarily waive or modify certain Medicare, Medicaid, and Children's Health Insurance Program (CHIP) requirements for health care providers to ensure that sufficient health care items and services are available to meet the needs of individuals enrolled in these programs in an emergency area (or portion of such an area) during any portion of an emergency period. Under an 1135 waiver, health care providers unable to comply with one or more waiver-eligible requirements may be reimbursed and exempted from sanctions (absent any determination of fraud or abuse). Requirements to which an 1135 waiver may apply include Medicare conditions of participation or conditions for coverage and requirements under the Emergency Medical Treatment and Labor Act (EMTALA). The 1135 waiver authority applies only to specific federal requirements and does not apply to any state requirements, including licensure.

In determining whether to invoke an 1135 waiver (once the conditions precedent to the authority's exercise have been met), the ASPR with input from relevant HHS operating divisions (OPDIVs) determines the need and scope for such modifications, considers information such as requests from Governor's offices, feedback from individual healthcare providers and associations, and requests from regional or field offices for assistance. Additional information regarding the 1135 waiver process is provided in the CMS Survey and Certification document entitled, "Requesting an 1135 Waiver", and located at: *http://www.cms.gov/About-CMS/Agency-Information/H1N1/downloads/requestingawaiver101.pdf.*

Providers must resume compliance with normal rules and regulations as soon as they are able to do so. Waivers or modifications permitted under an 1135 waiver are no longer available after the termination of the emergency period. Generally, federally certified or approved providers must operate under normal rules and regulations, unless they have sought and have been granted modifications under the waiver authority from specific requirements.

When a waiver has been issued under section 1135(b)(3) of the Act, EMTALA sanctions do not apply to a hospital with a dedicated emergency department, providing the conditions at § 489.24(a)(2)(i) are met. The EMTALA part of the 1135 waiver only applies for a 72-hour period, unless the emergency involves a pandemic infectious disease situation (see 42 CFR 489.24(a)(2)(ii)). Further information on the 1135 waiver process can be found at: *http://www.cms.hhs.gov/H1N1/.*

Once an 1135 waiver is authorized, health care providers and suppliers can submit requests to operate under that authority to the CMS Regional Office, with a copy to the State Survey Agency. The Regional Office or State Survey Agency may also be able to help providers and suppliers identify other relief that may be possible and which does not require an 1135 waiver.

This proposed requirement would be consistent with the ASPR's expectation that hospital grant awardees will continue to develop and improve their (ACS) plans and concept of operations for providing supplemental surge capacity within the health care system in their state. Further discussion of ASPR's expectation for ACSs can be found in the annual grant guidance on the web at: *http://www.phe.gov/Preparedness/planning/hpp/Pages/funding.aspx.*

With respect to states, ASPR stresses that effective planning and implementation would depend on close collaboration among state and local health departments (for example, state public health agencies, state Medicaid agencies, and state survey agencies), provider associations, community partners, and neighboring and regional health-care facilities. ASPR recommends that using existing buildings and infrastructure as ACSs would be the most practical solution if a surge medical care facility were needed. When identifying sites, states should consider how ACSs will interface with other state and federal assets. Federal assets may require what ASPR describes as an "environment of opportunity" for set up and operation and might not be available for as long as 72 hours. Therefore, ASPR believes it is critical that healthcare facilities, public health systems and emergency management agencies work with other emergency response partners when choosing a facility to use as an ACS. Many of the partners (for example, the American Red Cross) may have already identified sites that would be used during an event.

While our discussion is geared toward the state level response, we expect that hospitals would operationalize these efforts by working closely with the federal, state, tribal, regional, and local communities. According to AHRQ's "Providing Mass Medical Care with Scarce Resources: A Community Planning Guide," the impact of an MCE of any significant magnitude will likely overwhelm hospitals and other traditional venues for health care services. AHRQ believes an MCE may render such venues inoperable, necessitating the establishment of ACSs for the provision of care that normally would be provided in an inpatient facility. According to AHRQ, advance planning is critical to the establishment and operation of ACSs; this planning must be coordinated with existing health care facilities, as well as home care entities. Planners must delineate the specific medical functions and treatment objectives of the ACS. Finally, AHRQ asserts that the principle of managing patients under relatively austere conditions, with limited supplies, equipment, and access to pharmaceuticals and a minimal staffing arrangement, is the starting point for ACS planning.

Further discussion of the issues and challenges of establishing and operating ACSs during an MCE, as well as specific case study examples of ACSs in operation during the response to Hurricane Katrina, can be found in Chapter VI of the AHRQ publication. The chapter discusses issues surrounding non-federal, non-hospital-based ACSs. It describes different types of ACSs, including critical issues and decisions that will need to be made regarding these sites during an MCE; addresses potential barriers; and includes examples of case studies.

Subsequently, on October 1, 2009, AHRQ released two Disaster Alternate Care Facility Selection Tools, entitled the "Disaster Alternate Care Facility Selection Tool" and the "Alternate Care Facility Patient Selection Tool to help emergency planners and responders select and run alternate care facilities during disaster situations. These two tools can be found at: *http://archive.ahrq.gov/prep/acfselection/pselectmatrix/(S(fidfow2u5az1o155srb0h1nb))/default.aspx* and at: *http://archive.ahrq.gov/prep/acfselection/acftool/(S(o53i55e3v452tl550uxvm055))/default.aspx.* Under contract to AHRQ, Denver Health developed these new tools for AHRQ as an update to a previous alternate care site selection tool, entitled the Rocky Mountain

Regional Care Model for Bioterrorist Events, which it developed in 2004 and can be found at: *http://archive.ahrq.gov/research/altsites.htm#down*. AHRQ led development of the tools with funding from the ASPR National Hospital Preparedness Program (HPP), formerly the HRSA Bioterrorism Hospital Preparedness Program.

3. Communication Plan

For a hospital to operate effectively in an emergency situation, we propose at § 482.15(c) that the hospital be required to develop and maintain an emergency preparedness communication plan that complies with both federal and state law. The hospital would be required to review and update the communication plan at least annually.

As part of its communication plan, the hospital would be required at § 482.15(c)(1) to include in its plan, names and contact information for staff; entities providing services under arrangement; patients' physicians; other hospitals; and volunteers. During an emergency, it is critical that hospitals have a system to contact appropriate staff, patients' treating physicians, and other necessary persons in a timely manner to ensure continuation of patient care functions throughout the hospital and to ensure that these functions are carried out in a safe and effective manner. We propose at § 482.15(c)(2) requiring hospitals to have contact information for federal, state, tribal, regional, or local emergency preparedness staff and other sources of assistance. Patient care must be well-coordinated within the hospital, across health care providers, and with state and local public health departments and emergency systems to protect patient health and safety in the event of a disaster. Again, we support hospitals and other providers engaging in coalitions in their area for assistance in effectively meeting this requirement.

We propose to require at § 482.15(c)(3) that hospitals have primary and alternate means for communicating with the hospital's staff and federal, state, tribal, regional, or local emergency management agencies, because in an emergency, a hospital's landline telephone system may not be operable. While we do not propose specifying the type of alternate communication system that hospitals must have, we would expect that facilities would consider pagers, cellular telephones, radio transceivers (that is, walkie-talkies), and various other radio devices such as the NOAA Weather Radio and Amateur Radio Operators' (HAM Radio) systems, as well as satellite telephone communications systems. In areas where available, satellite telephone communication systems may be useful as well.

We recognize that some hospitals, especially in remote areas, have difficulty using some current communication systems, such as cellular phones, even in non-emergency situations. We would expect these hospitals to address such challenges when establishing and maintaining a well-designed communication system that will function during an emergency.

The National Communication System (NCS) offers a wide range of National Security and Emergency Preparedness (NS–EP) communications services that support qualifying federal, state, local, and tribal governments, industry, and non-profit organizations in the performance of their missions during emergencies. Hospitals may seek further information on the NCS' programs for Government Emergency Telecommunications Services (GETS), Telecommunications Service Priority (TSP) Program, Wireless Priority Service (WPS), and Shared Resources (SHARES) High Frequency Radio Program at: *www.ncs.gov*. (Click on "services").

Under this proposed rule, we would also require at § 482.15(c)(4) that hospitals have a method for sharing information and medical documentation for patients under the hospital's care, as necessary, with other health care providers to ensure continuity of care. Sharing of patient information and documentation was found to be a significant problem during the 2005 hurricanes and flooding in the Gulf Coast States. In some hospitals, patient care information in hard copy and electronic format was destroyed by flooding while, in others, patient information that was backed up to alternate sites was not always readily available. As a result, some patients were discharged or evacuated from facilities without adequate accompanying medical documentation of their conditions for other providers and suppliers to utilize. Other patients who sheltered in place were also left without proper medical documentation of their care while in the hospital.

We would expect hospitals to have a system of communication that would ensure that comprehensive patient care information would be disseminated across providers and suppliers in a timely manner, as needed. Such a system would ensure that information was sent with an evacuated patient to the next care provider or supplier, information would be readily available for patients being sheltered in place, and electronic information would be backed up both within and outside the geographic area where the hospital was located.

Health care providers, who were in attendance during the Emergency Preparedness Summit in New Orleans, Louisiana in March 2007, discussed the possibility of storing patient care information on flash drives, thumb devices, compact discs, or other portable devices that a patient could carry on his or her person for ready accessibility. We would expect hospitals to consider the range of options that are available to them, but we are not proposing that certain specific devices would be required because of the associated burden and the potential obsolescence of such devices.

We propose at § 482.15(c)(5) that hospitals have a means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510 of the HIPAA Privacy Regulations. Thus, hospitals would need to have a communication system in place capable of generating timely, accurate information that could be disseminated, as permitted, to family members and others. Section 164.510 "Uses and disclosures requiring an opportunity for the individual to agree to or to object," is part of the "Standards for Privacy of Individually Identifiable Health Information," commonly known as "The Privacy Rule."

This proposed requirement would not be applied to transplant centers; CORFs; OPOs; clinics rehabilitation agencies and public health agencies as providers of outpatient physical therapy and speech-language pathology services; or RHCs/FQHCs. We believe this requirement would best be applied only to providers and suppliers who provide continuous care to patients, as well as to those providers and suppliers that have responsibilities and oversight for care of patients who are homebound or receiving services at home.

We propose at § 482.15(c)(6) requiring hospitals to have a means of providing information about the general condition and location of patients under the facility's care, as permitted under 45 CFR 164.510(b)(4) of the HIPAA Privacy Regulations. Section 164.510(b)(4), "Use and disclosures for disaster relief purposes," establishes requirements for disclosing patient information to a public or private entity authorized by law or by its charter to assist in disaster relief efforts for purposes of notifying family members, personal representatives, or certain others of the patient's location or general condition. We are not proposing prescriptive requirements for how a hospital would comply with this requirement. Instead, we would allow hospitals the flexibility

to develop and maintain their own system.

We propose at § 482.15(c)(7) that a hospital have a means of providing information about the hospital's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee. We support hospitals and other providers engaging in coalitions in their area for assistance in effectively meeting this requirement.

4. Training and Testing

We propose at § 482.15(d) that a hospital develop and maintain an emergency preparedness training and testing program. We would require the hospital to review and update the training and testing program at least annually.

We believe a well organized, effective training program must include providing initial training in emergency preparedness policies and procedures. Therefore, we propose at § 482.15(d)(1) that hospitals provide such training to all new and existing staff, including any individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of such training. We propose that the hospital ensure that staff can demonstrate knowledge of emergency procedures, and that the hospital provides this training at least annually.

While some large hospitals may have staff that could provide such training, smaller and rural hospitals may need to find resources outside of the hospital to provide such training. Many state and local governments can provide emergency preparedness training upon request. Thus, small hospitals and rural hospitals may find it helpful to utilize the resources of their state and local governments in meeting this requirement. Again, we support hospitals and other providers participating in coalitions in their area for assistance in effectively meeting this requirement. Conducting exercises at the healthcare coalition level could help to reduce the administrative burden on individual healthcare facilities and demonstrate the value of connecting into the broader medical response community during disaster planning and response. Conducting integrated planning with state and local entities could identify potential gaps in state and local capabilities. Regional planning coalitions (multistate coalitions) meet and provide exercises on a regular basis to test protocols for state-to-state mutual aid. The members of the coalitions are often able to test command and control procedures and processes for sharing of assets that promote medical surge capacity.

Regarding testing, at § 482.15(d)(2), we would require hospitals to conduct drills and exercises to test the emergency plan. We propose at § 482.15(d)(2)(i) requiring hospitals to participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, we would require the hospital to conduct an individual, facility-based mock disaster drill at least annually. However, we propose at § 482.15(d)(2)(ii) that if a hospital experienced an actual natural or man-made emergency that required activation of the emergency plan, the hospital would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the actual event.

We propose at § 482.15(d)(2)(iii) requiring a hospital to conduct a paper-based, tabletop exercise at least annually. The tabletop exercise could be based on the same or a different disaster scenario from the scenario used in the mock disaster drill or the actual emergency. In the proposed regulations text, we would define a tabletop exercise as a "group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan."

Comprehensive emergency preparedness includes anticipating and adequately addressing the various natural and man-made disasters that could impact a given facility. We expect that hospitals would conduct both mock disaster drills and tabletop exercises, using various emergency scenarios, based on their risk analyses.

Generally, in a mock disaster drill, a hospital must consider how it will move persons within and outside of the building to designated "safe zones" to ensure the safety of both ambulatory patients and those who are wheelchair users, have mobility impairments or have other special needs. Moving patients or mock patients to "safe zones" in and outside of buildings during fire drills and other mock disaster drills is common industry practice. However, if it is not feasible to evacuate patients, hospitals could meet this requirement by moving its special needs patients to "safe zones" such as a foyer or other areas as designated by the hospital. To assist hospitals, other providers, and suppliers in conducting table-top exercises, we sought additional resources to further define the actions involved in a paper-based, tabletop exercise. One hospital system representative described a tabletop exercise as one where the staff conducts, on paper, a simulated public health emergency that would impact the hospital and surrounding health care facilities. For this hospital, the tabletop exercise is a half-day event for representatives of every critical response area in the hospital. It is designed to test the effectiveness of the response plan in guiding the leadership team's efforts to coordinate the response to an emergency event.

The hospital representative further explained that the exercise consists of a group discussion led by a facilitator, using a narrated, clinically-relevant scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan. Exercise facilitators introduce the scenario, keep the exercise on schedule, and inject timed challenges to stress specific disaster response systems. Following the tabletop exercise, a debriefing for hospital staff is held, and then the hospital staff provides written feedback and planning improvement suggestions to the hospital administration.

Some hospitals may be well-versed in performing mock drills and tabletop exercises. Other providers and suppliers, especially those that are small or remote, may not have any knowledge or hands-on experience in conducting such exercises. To this end, the Bureau of Communicable Disease in the New York City Department of Health and Mental Hygiene has produced a very detailed document entitled, "Bioevent Tabletop Exercise Toolkit for Hospitals and Primary Care Centers," (September 2005, found at: *http://www.nyc.gov/html/doh/downloads/pdf/bhpp/bhpp-train-hospital-toolkit-01.pdf*), which may help hospitals and other providers and suppliers that have limited or no emergency preparedness training experience. This document is designed to walk a facility through the process of performing a tabletop exercise and after-event analysis. The toolkit consists of things to consider before engaging in a tabletop exercise, the process of planning the exercise, running the exercise, evaluating the exercise and its impact, and public health emergency scenarios for tabletop exercises, including the plague, Sever Acute Respiratory Syndrome (SARS), anthrax, smallpox, and pandemic flu.

There are also other training resources that may prove useful for hospitals and other providers and suppliers to comply with as they attempt to meet this proposed emergency preparedness

requirement. In 2005, the RAND Corporation produced a technical report for ASPR entitled, "Bioterrorism Preparedness Training and Assessment Exercises for Local Public Health Agencies," by Dausey, D. J., Lurie, N., Alexis, D., Meade, B., Molander, R. C., Ricci, K. A., Stoto, M. A., and Wasserman, J. (*http://www.rand.org/pubs/technical_reports/2005/RAND_TR261.pdf*).

The report was intended as a resource to train public health workers to detect and respond to bioterrorism events and to assess local public health agencies' (LPHAs) levels of preparedness over time. The exercises were beta tested and refined in 13 LPHAs across the United States over 10 months. However, the report would be a useful resource for hospitals and other healthcare facilities to train their own healthcare workers.

RAND also developed a 2006 technical report entitled, "Tabletop Exercise for Pandemic Influenza Preparedness in Local Public Health Agencies," by Dausey, D.J., Aledort, J. E., and Lurie, N. (*http://www.rand.org/pubs/technical_reports/2006/RAND_TR319.pdf*). The report was designed to provide state and local public health agencies and their healthcare and governmental partners with exercises in training, building relationships, and evaluation. These exercises were pilot-tested at three metropolitan-area local public health agencies in three separate states from August through November 2005.

Finally, the Centers for Medicare & Medicaid Services (CMS), Survey and Certification Group has developed a document entitled, the Health Care Provider After Action Report/Improvement Plan (AAR/IP) template with the assistance of the U.S. Department of Health and Human Services (HHS), Office of the Assistant Secretary for Preparedness and Response, the U.S. Department of Homeland Security (DHS), and the CMS Survey and Certification Emergency Preparedness Stakeholder Communication Forum. The template can be accessed at *http://www.cms.gov/SurveyCertEmergPrep/03_HealthCareProviderGuidance.asp* and then scrolling down to click on the download entitled, the "Health Care Provider Voluntary After Action Report/Improvement Plan Template and Instructions for Completion." The AAR/IP was intended to be a voluntary, user-friendly tool for health care providers to use to document their performance during emergency planning exercises and real emergency events to make recommendations for improvements for future performance. We do not mandate use of this AAR/IP template; however thorough completion of the template complies with our requirements for provider exercise documentation.

The "Health Care Provider After Action Report/Improvement Plan" template also meets requirements for hospitals or other health care providers wishing to ensure their compliance with the Hospital Preparedness Program (HPP).

This AAR/IP template is based on the U.S. Department of Homeland and Security Exercise and Evaluation Program (HSEEP) Vol. III, issued in February 2007, which includes guidelines that are focused towards emergency management agencies and other governmental/non-governmental agencies. The HSEEP is a capabilities and performance-based exercise program that provides a standardized methodology and terminology for exercise design, development, conduct, evaluation, and improvement planning. Health care providers may also use the AAR/IP to document real life emergency events and can customize or personalize the CMS "Health Care Provider AAR/IP" template to best meet their needs.

There are seven types of exercises defined within HSEEP, each of which is either discussions-based or operations-based.

Discussions-based exercises familiarize participants with current plans, policies, agreements and procedures, or may be used to develop new plans, policies, agreements, and procedures.

Types of discussion-based exercises include the following:

- Seminar: A seminar is an informal discussion, designed to orient participants to new or updated plans, policies, or procedures (for example, a seminar to review a new Evacuation Standard Operating Procedure).
- Workshop: A workshop resembles a seminar, but is employed to build specific products, such as a draft plan or policy (for example, a Training and Exercise Plan Workshop is used to develop a Multiyear Training and Exercise Plan).
- Tabletop Exercise (TTX): A tabletop exercise involves key personnel discussing simulated scenarios in an informal setting. TTXs can be used to assess plans, policies, and procedures.
- Games: A game is a simulation of operations that often involves two or more teams, usually in a competitive environment, using rules, data, and procedure designed to depict an actual or assumed real-life situation.

Operations-based exercises validate plans, policies, agreements and procedures, clarify roles and responsibilities, and identify resource gaps in an operational environment. Types of operations-based exercises include the following:

- Drill: A drill is a coordinated, supervised activity usually employed to test a single, specific operation or function within a single entity (for example, a nursing home conducts an evacuation drill).
- Functional exercise (FE): A functional exercise examines or validates the coordination, command, and control between various multi-agency coordination centers (for example, emergency operation center, joint field office, etc.). A functional exercise does not involve any "boots on the ground" (that is, first responders or emergency officials responding to an incident in real time).
- Full-Scale Exercise (FSE): A full-scale exercise is a multi-agency, multi-jurisdictional, multi-discipline exercise involving functional (for example, joint field office, emergency operation centers, etc.) and "boots on the ground" response (for example, firefighters decontaminating mock victims). We expect hospitals to engage in such tabletop exercises to the extent possible in their communities. For example, we would expect a large hospital in a major metropolitan area to perform a comprehensive exercise with coordination, if possible, across the public health system and local geographic area.

We propose at § 482.15(d)(2)(iv) that hospitals analyze their response to and maintain documentation on all drills, tabletop exercises, and emergency events, and revise the hospital's emergency plan as needed. Resources discussed previously can be used to guide hospitals in this process.

Finally, we propose at § 482.15(e)(1)(i) that hospitals must store emergency fuel and associated equipment and systems as required by the 2000 edition of the Life Safety Code (LSC) of the National Fire Protection Association (NFPA). We intend to require compliance with future LSC updates as may be adopted by CMS. The current LSC states that the hospital's alternate source of power (for example, generator) and all connected distribution systems and ancillary equipment, must be designed to ensure continuity of electrical power to designated areas and functions of a health care facility. Also, the LSC (NFPA 110) states that the rooms, shelters, or separate buildings housing the emergency power supply shall be located to minimize the possible damage resulting from disasters such as storms, floods, earthquakes, tornadoes,

hurricanes, vandalism, sabotage and other material and equipment failures.

In addition to the emergency power system inspection and testing requirements found in NFPA 99 and NFPA 110 and NFPA 101, we propose that hospitals test their emergency and stand-by-power systems for a minimum of 4 continuous hours every 12 months at 100 percent of the power load the hospital anticipates it will require during an emergency. As a result of lessons learned from hurricane Sandy, we believe that this annual 4 hour test will more closely reflect the actual conditions that would be experienced during a disaster of the magnitude of hurricane Sandy.

We have also proposed the same emergency and standby power requirements for CAHs and LTC facilities. As such, we request information on this proposal and in particular on how we might better estimate costs in light of the existing LSC and other state and federal requirements.

We have included a table of requirements based on the 5 standards in the regulation text for each of the 17 providers and suppliers. The table includes both additional requirements and exemptions. This table can be used to provide guidance to the facilities in planning their emergency preparedness program and disaster planning.

TABLE 1—EMERGENCY PREPAREDNESS REQUIREMENTS BY PROVIDER TYPE

Provider type	Emergency plan	Policies and procedures	Communication plan	Training and testing	Additional requirements
Inpatient Providers					
Hospital	*Develop a plan based on a risk assessment using an "all hazards" approach, which is an integrated approach focusing on capacities and capabilities critical to preparedness for a full spectrum of emergencies and disasters. The plan must be updated annually.	*Develop and implement policies and procedures based on the emergency plan and risk assessment, which must be reviewed and updated at least annually.	*Develop and maintain an emergency preparedness communication plan that complies with both federal and state law. Patient care must be well-coordinated within the facility, across health care providers and with state and local public health departments and emergency systems.	*Develop and maintain training and testing programs, including initial training in policies and procedures and demonstrate knowledge of emergency procedures and provide training at least annually. Conduct drills and exercises to test the emergency plan.	Generators—Develop policies and procedures that address the provision of alternate sources of energy to maintain: (1) temperatures to protect patient health and safety and for the safe and sanitary storage of provisions; (2) emergency lighting; (3) fire detection, extinguishing, and alarm systems.
Critical Access Hospital.	*	*	*	*	Generators.
Long Term Care Facility.	Must account for missing residents (existing requirement).	*	Share with resident/family/representative appropriate information from emergency plan (additional requirement).	*	Generators.
PRTF	*	*	*	*	
ICF/IID	Must account for missing clients (existing requirement).	*	Share with client/family/representative appropriate information from emergency plan (additional requirement).	*	
RNHCI	*	*	*	No drills.	
Transplant Center	*	*	*	*	Maintain agreement with transplant center & OPO.
Outpatient Providers—Outpatient providers are not required to provide subsistence needs for staff and patients.					
Hospice	*	In home services—inform officials of patients in need of evacuation (additional requirement).	In home services—will not need to provide occupancy information.	*	
Ambulatory Surgical Center.	*	*	Will not need to provide occupancy information.	*	
PACE	*	Inform officials of patients in need of evacuation (additional requirement).	Will not need to provide occupancy information.	*	

TABLE 1—EMERGENCY PREPAREDNESS REQUIREMENTS BY PROVIDER TYPE—Continued

Provider type	Emergency plan	Policies and procedures	Communication plan	Training and testing	Additional requirements
Home Health Agency	*	Will not require shelter in place, provision of care at alternate care sites. Inform officials of patients in need of evacuation (additional requirement).	Will not need to provide occupancy information.	*	
CORF	Must develop emergency plan with assistance from fire, safety experts (existing requirement).	Will not need to provide transportation to evacuation locations, or have arrangements with other CORFs to receive patients.	Will not need to provide occupancy information.	Assign specific emergency preparedness tasks to new personnel. Provide instruction in location, use of alarm systems, signals & firefighting equip (existing requirements).	
CMHC	*	*	*	*	
OPO	Address type of hospitals OPO has agreement (additional requirement).	Needs to have system to track staff during & after emergency and maintain medical documentation (additional requirement).	Does not need to provide occupancy info, method of sharing pt. info, providing info on general condition & location of patients.	Only tabletop exercise.	Must maintain agreement with other OPOs & hospitals.
Clinics, Rehabilitation, and Therapy.	Must develop emergency plan with assistance from fire, safety experts. Address location, use of alarm systems and signals & methods of containing fire (existing requirements).	*	Does not need to provide occupancy information.	*	
RHC/FQHC	*	Appropriate placement of exit signs (existing requirement). Does not have to track patients, or have arrangements with other RHCs to receive patients or have alternate care sites.	Does not need to provide occupancy information.	*	

TABLE 1—EMERGENCY PREPAREDNESS REQUIREMENTS BY PROVIDER TYPE—Continued

Provider type	Emergency plan	Policies and procedures	Communication plan	Training and testing	Additional requirements
ESRD	Must contact local emergency preparedness agency annually to ensure dialysis facility's needs in an emergency (existing requirement).	Policies and procedures must include emergencies regarding fire equipment, power failures, care related emergencies, water supply interruption & natural disasters (existing requirement).	Does not need to provide occupancy information.	Ensure staff demonstrate knowledge of emergency procedures, informing patients what to do, where to go, whom to contact if emergency occurs while patient is not in facility (alternate emergency phone number), how to disconnect themselves from dialysis machine. Staff maintain current CPR certification, nursing staff trained in use of emergency equipment & emergency drugs, patient orientation (existing requirements).	

* Indicates that the requirements are the same as those proposed for hospitals.

B. Emergency Preparedness Regulations for Religious Nonmedical Health Care Institutions (RNHCIs) (§ 403.748)

Section 1861(ss)(1) of the Act defines the term "Religious Nonmedical Health Care Institution" (RNHCI) and lists the requirements that a RNHCI must meet to be eligible for Medicare participation.

We have implemented these provisions in 42 CFR part 403, Subpart G, "Religious Nonmedical Health Care Institutions' Benefits, Conditions of Participation, and Payment." As of March 2012, there were 16 Medicare-certified RNHCIs that were subject to the RNHCI regulations and were receiving payment for services provided to Medicare or Medicaid patients.

A RNHCI is a facility that is operated under all applicable federal, state, and local laws and regulations, which furnishes only non-medical items and services on a 24-hour basis to beneficiaries who choose to rely solely upon a religious method of healing and for whom the acceptance of medical services would be inconsistent with their religious beliefs. The religious non-medical care or religious method of healing means care provided under the established religious tenets that prohibit conventional or unconventional medical care for the treatment of the patient and exclusive reliance on the religious activity to fulfill a patient's total health care needs.

Thus, Medicare would cover the nonmedical, non-religious health care items and services in a RNHCI for beneficiaries who would qualify for hospital or skilled nursing facility care but for whom medical care is inconsistent with their religious beliefs. Medicare does not cover the religious aspects of care. Nonmedical items and services are furnished to inpatients exclusively through nonmedical nursing personnel. Such Medicare coverage would include both nonmedical items that do not require a doctor's order or prescription (such as wound dressings or use of a simple walker during a stay) and non-religious health care items and services (such as room and board).

The RNHCI does not furnish medical items and services (including any medical screening, examination, diagnosis, prognosis, treatment, or the administration of drugs or biologicals) to its patients. RNHCIs must not be owned by or under common ownership or affiliated with a provider of medical treatment or services.

This proposed rule would expand the current emergency preparedness requirements for RNHCIs, which are located within § 403.742, Condition of participation: Physical Environment, by requiring RNHCIs to meet the same proposed emergency preparedness requirements as we propose for hospitals, with several exceptions.

Our "Physical environment" CoP at § 403.742(a)(1) currently requires that the RNHCI provide emergency power for emergency lights, for fire detection and alarm systems, and for fire extinguishing systems. Section 403.742(a)(4) requires that the RNHCI have a written disaster plan that addresses loss of water, sewage, power and other emergencies. Section 403.742(a)(5) requires that a RNHCI have facilities for emergency gas and water supply. We propose relocating the pertinent portions of the existing requirements at § 403.742(a)(1), (4), and (5) at proposed § 403.748(a) and § 403.748(b)(1). However, we believe these current requirements do not provide a sufficient framework for ensuring the health and safety of a RNHCI's patients in the event of a natural or man-made disaster.

Proposed § 403.748(a)(1) would require RNHCIs to consider loss of power, water, sewage and waste disposal in their risk analysis. The proposed policies and procedures at § 403.748(b)(1) would require that RNHCIs provide for subsistence needs for staff and patients, whether they evacuate or shelter in place, including, but not limited to, food, water, sewage and waste disposal, non-medical supplies, alternate sources of energy for the provision of electrical power, the maintenance of temperatures to protect patient health and safety and for the safe and sanitary storage of such provisions, gas, emergency lights, and fire detection, extinguishing, and alarm systems.

The proposed hospital requirement at § 482.15(a)(1) would be modified for RNHCIs. At proposed § 403.748(a)(1),

unlike for other providers and suppliers whom we propose to have a community risk assessment that is based upon an all-hazards approach, including the loss of power, water, sewage and waste disposal. However, at proposed § 403.748(b)(1)(i) for RNHCIs, we have removed the terms "medical and nonmedical" to reflect typical RNHCI practice. RNHCIs do not provide most medical supplies. At § 482.15(b)(3), we would require hospitals to have policies and procedures for the safe evacuation from the hospital, which would include consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance. However, at § 403.748(b)(3), we propose to incorporate the hospital requirement but to remove the words "and treatment" from the hospital requirement, to more accurately reflect care provided in a RNHCI.

At proposed § 403.748(b)(5), we would remove the term "health" from the proposed hospital requirement for "health care documentation" to reflect the non-medical care provided by RNHCIs.

The proposed hospital requirements at § 482.15(b)(6) would require hospitals to have policies and procedures to address the use of volunteers in an emergency or other staffing strategies, including the process and role for integration of state or federally designated health care professionals to address surge needs during an emergency. For RNHCIs, at proposed § 403.748(b)(6), we propose to use the hospital provision, but remove the language, "including the process and role for integration of state or federally designated health care professionals" since it is not within the religious framework of a RNHCI to integrate care issues for their patients with health care professionals outside of the RNHCI industry.

The proposed hospital requirements at § 482.15(b)(7) would require that hospitals develop arrangements with other hospitals and other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to hospital patients. For RNHCIs, at § 403.748(b)(7) we added the term "non-medical" to accommodate the uniqueness of the RNHCI non-medical care.

The proposed hospital requirement at § 482.15(c)(1) would require hospitals to include in their communication plan: names and contact information for: staff; entities providing services under agreement; patients' physicians; other hospitals; and volunteers. For RNHCIs, we propose substituting "next of kin, guardian or custodian" for "patients' physicians" because RNHCI patients do not have physicians.

Finally, unlike proposed regulations for hospitals at § 482.15(c)(4), at proposed § 403.748(c)(4), we propose to require RNHCIs to have a method for sharing information and care documentation for patients under the RNHCIs' care, as necessary, with health care providers to ensure continuity of care, based on the written election statement made by the patient or his or her legal representative. Also, at proposed § 403.748(c)(4), we have removed the term "other" from the requirement for sharing information with "other health care providers" to more accurately reflect the care provided by RNHCIs.

At § 482.15(d)(2), "Testing," we propose that hospitals would conduct drills and exercises to test the emergency plan. Because RNHCIs have such a specific role and provide such a specific service in the community, we believe RNHCIs would not participate in performing such drills. We propose the RNHCI would be required to only conduct a tabletop exercise annually. Likewise, unlike that which we have proposed for hospitals at § 482.15(d)(2)(i), we do not propose that the RNHCI conduct a community mock disaster drill at least annually or to conduct an individual, facility-based mock disaster drill. Although we proposed for hospitals at § 482.15(d)(2)(ii) that if the hospital experienced an actual natural or man-made emergency, the hospital would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event, we are not proposing this requirement for RNHCIs.

At § 482.15(d)(2)(iv), we propose to require hospitals to maintain documentation of all drills, tabletop exercises, and emergency events, and revise the hospital's emergency plan, as needed. Again, at § 403.748(d)(2)(d)(ii), for RNHCIs, we propose to remove reference to drills.

Currently, at existing § 403.724(a), we require that an election form be made by the Medicare beneficiary or his or her legal representative and further requires that the election must be a written statement that the beneficiary: (1) is conscientiously opposed to accepting non-excepted medical treatment; (2) believes that non-excepted medical treatment is inconsistent with his or her sincere religious beliefs; (3) understands that acceptance of non-excepted medical treatment constitutes revocation of the election and possible limitation of receipt of further services in a RNHCI; (4) knows that he/she may revoke the election by submitting a written statement to CMS, and (5) knows that the election will not prevent or delay access to medical services available under Medicare Part A in facilities other than RNHCIs. Thus, at § 403.748(c)(4), we are proposing that election documentation be shared with other care providers to preserve continuity of care.

C. Emergency Preparedness Requirements for Ambulatory Surgical Centers (ASCs) (§ 416.54)

Section 416.2 defines an ambulatory surgical center (ASC) as any distinct entity that operates exclusively for the purpose of providing surgical services to patients not requiring hospitalization, and in which the expected duration of services would not exceed 24 hours following an admission.

Section 1833(i)(1)(A) of the Act authorizes the Secretary to specify those surgical procedures that can be performed safely in an ASC. The surgical services performed in ASCs generally are scheduled, elective, non-life-threatening procedures that can be safely performed in either a hospital setting (inpatient or outpatient) or in a Medicare-certified ASC.

Patients are examined immediately before surgery to evaluate the risk of anesthesia and of the procedure to be performed. Patients also are evaluated just prior to discharge from the ASC to ensure proper anesthesia recovery.

Currently, there are 5,354 Medicare certified ASCs in the U.S. The ASC Conditions for Coverage (CfCs) at 42 CFR part 416, Subpart C are the minimum health and safety standards a facility must meet to obtain Medicare certification. The existing ASC CfCs do not contain requirements that address emergency situations. However, existing § 416.41(c), which was adopted in November 2008, requires ASCs to have a disaster preparedness plan. This existing requirement states the ASC must—(1) have a written disaster plan that provides for the emergency care of its patients, staff and others in the facility; (2) coordinate the plan with state and local authorities; and (3) conduct drills, annually and complete a written evaluation of each drill, promptly implementing any correction to the plan. Since these proposed requirements are similar to and would be redundant with existing rules, we propose to remove existing § 416.41(c). Existing § 416.41(c)(1) would be incorporated into proposed § 416.54(a),

(a)(1), (a)(2), and (a)(4). Existing § 416.41(c)(2) would be incorporated into proposed § 416.54(a)(4) and (c)(2). Existing § 416.41(c)(3) would be incorporated into proposed § 416.54(d)(2)(i) and § 416.54(d)(2)(iv).

This proposed regulation would require the ASC to meet most of the same proposed emergency preparedness requirements as those we propose for hospitals, with two exceptions. At § 416.54(c)(7), we propose that ASCs would be required to have policies and procedures that include a means of providing information about the ASCs' needs and its ability to provide assistance (such as physical space and medical supplies) to the authority having jurisdiction (local, state agencies) or the Incident Command Center, or designee. However, we are not proposing that these facilities provide information regarding their occupancy, as we have proposed for hospitals, since the term "occupancy" usually refers to bed occupancy in an inpatient facility. We are not proposing that these facilities provide for subsistence needs for their patients and staff.

While a large ASC in a metropolitan area may find it relatively easy to perform a risk analysis and develop an emergency plan, policies and procedures, a communications plan, and train staff, we understand a small or rural ASC may find it more challenging to meet our proposed requirements. However, we believe these requirements are important and small or rural ASCs would be able to develop an appropriate emergency preparedness plan and meet our proposed requirements with the assistance of resources in their state and local community guidance.

D. Emergency Preparedness Regulations for Hospices (§ 418.113)

Section 122 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), Public Law 97–248, added section 1861(dd) to the Act to provide coverage for hospice care to terminally ill Medicare beneficiaries who elect to receive care from a Medicare-participating hospice. Under the authority of section 1861(dd) of the Act, the Secretary has established the CoPs that a hospice must meet in order to participate in Medicare and Medicaid. Under section 1861(dd) of the Act, the Secretary is responsible for ensuring that the CoPs and their enforcement are adequate to protect the health and safety of patients under hospice care. To implement this requirement, state survey agencies conduct surveys of hospices to assess their compliance with the CoPs. The CoPs found at part 418, Subparts C and D apply to a hospice, as well as to the services furnished to each patient under hospice care.

Hospice care provides palliative care rather than traditional medical care and curative treatment to terminally ill patients. Palliative care improves the quality of life of patients and their families facing the problems associated with terminal illness through the prevention and relief of suffering by means of early identification, assessment, and treatment of pain and other issues. Hospice care allows the patient to remain at home as long as possible by providing support to the patient and family and by keeping the patient as comfortable as possible while maintaining his or her dignity and quality of life. Hospices use an interdisciplinary approach to deliver medical, social, physical, emotional, and spiritual services through the use of a broad spectrum of caregivers.

Hospices are unique health care providers because they serve patients and their families in a wide variety of settings. Hospice patients may be served in their place of residence, whether that residence is a private home, a nursing home, an assisted living facility, or even a recreational vehicle, as long as such locations are determined to be the patient's place of residence. Hospice patients may also be served in inpatient facilities operated by the hospice.

As of March 2013, there were 3,773 hospice facilities nationally. Under the existing hospice regulations, hospice inpatient facilities are required to have a written disaster preparedness plan that is periodically rehearsed with hospice employees, with procedures to be followed in the event of an internal or external disaster, and procedures for the care of casualties (patients and staff) arising from such disasters. This requirement, which is limited in scope, is found at § 418.110(c)(1)(ii) under "Standard: Physical environment."

We believe that all hospices, even those without inpatient facilities, should have an emergency plan. Also, we believe that, given the diverse nature of hospice patients and the variety of locations where they receive hospice services, simply having a written plan that is "periodically" rehearsed with staff does not provide sufficient protection for hospice patients and hospice employees.

For hospices, we propose to retain existing regulations at § 418.110(c)(1)(i), which states that a hospice must address real or potential threats to the health and safety of the patients, others, and property. However, we propose incorporating the existing requirements at § 418.110(c)(1)(ii) into proposed § 418.113(a)(2) and proposed § 418.113(d)(1). We would require at § 418.113(a)(2) that the hospice have in effect an emergency preparedness plan for managing the consequences of power failures, natural disasters, and other emergencies that would affect the hospice's ability to provide care. In addition, we would require at § 418.113(d)(1) that the hospice must periodically review and rehearse its emergency preparedness plan with hospice employees with special emphasis placed on carrying out the procedures necessary to protect patients and others. Section 418.110(c)(1)(ii) and the designation for clause § 418.110(c)(1)(i) would be removed.

Otherwise, the proposed emergency preparedness requirements for hospice providers are very similar to those for hospitals. However, the average hospice (freestanding, not-for-profit, with far fewer annual admissions, and employees) is very different from an average hospital. Typically, hospice inpatient facilities are small buildings or a single unit in a larger medical complex, such as a hospital or long term care facility. Furthermore, hospice patients, given their terminally ill status, may be equally or more vulnerable in an emergency situation than their hospital counterparts. This may be due to the inherent severity of the hospice patient's illness or to the probability that the hospice patient's caregiver may not have the level of professional expertise, supplies, or equipment as that of the hospital-based clinician surrounding a natural or man-made emergency.

Despite these core differences, we believe the hospital emergency preparedness requirement, with some reorganization and revision, is appropriate for hospice providers. Thus, our discussion will focus on the requirements as they differ from the requirements for hospitals within the context of the hospice setting. Since hospices serve patients in both the community and within various types of facilities, we propose to re-organize the requirements for the hospice provider's policies and procedures differently from the proposed policies and procedures for hospitals. Specifically, we propose to group requirements that apply to all hospice providers at § 418.113(b)(1) through § 418.113(b)(5) followed by requirements at § 418.113(b)(6) that apply only to hospice inpatient care facilities.

Unlike our proposed hospital policies and procedures, we would require all hospices, regardless of whether or not they operate their own inpatient facilities, to have policies and

procedures to inform state and local officials about hospice patients in need of evacuation from their respective residences at any time due to an emergency situation based on the patient's medical and psychiatric condition and home environment. Such policies and procedures must be in accord with the HIPAA Privacy Rule, as appropriate. This proposed requirement recognizes that many of the frail hospice patients may be unable to evacuate from their homes without assistance during an emergency. This additional proposed requirement recognizes the responsibility of the hospice to support the safety of its patients that reside in the community.

We expect that hospices would be able to identify patients most in need of evacuation assistance (for example, patients residing alone and patients using certain types of durable medical equipment), safe and appropriate evacuation methods, and the appropriate state or local authorities to assist in such evacuations. We believe this requirement is necessary to ensure the safety of vulnerable hospice patients, who are likely not capable of evacuating without assistance.

We note that the proposed requirements for communication at § 418.113(c) are the same as for hospitals, with the exception of proposed § 418.113(c)(7). At § 418.113(c)(7), for hospice facilities, we are proposing to limit to inpatients the proposed requirement that the hospice have policies and procedures that would include a means of providing information about the hospice's occupancy and needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee. Since hospice facilities provide care to patients in the home or in an inpatient setting, we are proposing that only inpatient hospice facilities, including those under arrangement, be required to report the hospice facilities' inpatient occupancy. The proposed requirements for patients receiving care in their home would require only that hospices report their needs and ability to provide assistance. The proposed requirements for training and testing at § 418.113(d) are similar to those proposed for hospitals.

E. Emergency Preparedness Regulation for Inpatient Psychiatric Residential Treatment Facilities (PRTFs) (§ 441.184)

Sections 1905(a)(16) and (h) of the Act define the term "Psychiatric Residential Treatment Facility" (PRTF) and list the requirements that a PRTF must meet to be eligible for Medicaid participation. To qualify for Medicaid participation, a PRTF must be certified and comply with conditions of payment and conditions of participation (CoPs), at § 441.150 through § 441.182 and § 483.350 through § 483.376 respectively. As of March 2013, there were 387 PRTFs.

A PRTF provides inpatient psychiatric services for patients under age 21; services must be provided under the direction of a physician. Inpatient psychiatric services must involve active treatment which means implementation of a professionally developed and supervised individual plan of care. The patient's plan of care includes an integrated program of therapies, activities, and experiences designed to meet individual treatment objectives that have been developed by a team of professionals along with the patient, his or her parents, legal guardians, or others into whose care the patient will be released after discharge. The plan must also include post-discharge plans and coordination with community resources to ensure continued services for the patient, his or her family, school, and community.

The current PRTF requirements do not include any requirements for emergency preparedness. We propose requiring that PRTF facilities meet the same requirements we are proposing for hospitals. Because these facilities vary widely in size, we expect their risk analyses, emergency plans, emergency policies and procedures, emergency communication plans, and emergency preparedness training will vary widely as well. Nevertheless, we believe each of these providers/suppliers has the capability to comply fully with the requirements so that the health and safety of its patients are protected in the event of an emergency situation or disaster.

F. Emergency Preparedness Regulations for Programs of All-Inclusive Care for the Elderly (PACE) (§ 460.84)

The Balanced Budget Act (BBA) of 1997 established the Program of All-Inclusive Care for the Elderly (PACE) as a permanent Medicare and Medicaid provider type. Under sections 1894 and 1934 of the Act, a state participating in PACE must have a program agreement with CMS and a PACE organization. Regulations at § 460.2 describe the statutory authority that permits entities to establish and operate PACE programs under section 1894 and 1934 of the Act and § 460.6 defines a PACE organization as an entity that has in effect a PACE program agreement. Sections 1894(a)(3) and 1934(a)(3) of the Act define a "PACE provider." The PACE model of care was adopted from On Lok Senior Health Services, an organization that continues to serve seniors in San Francisco and surrounding areas of California. It is a unique model of managed care service delivery for the frail community-dwelling elderly. The PACE model of care includes the provision of adult day health care and interdisciplinary team care management as core services. Medical, therapeutic, ancillary, and social support services are furnished in the patient's residence or on-site at a PACE center. Hospital, nursing home, home health, and other specialized services are generally furnished under contract.

Generally, a PACE organization provides medical and other support services to patients predominately in a PACE adult day care center. Day center attendance is based on individual needs. The majority of PACE patients go to a PACE adult day health center on a regular basis. On average, a PACE patient attends the day center 3 times a week. As of March 2013, there are 91 PACE programs nationally.

Regulations for PACE organizations at part 460, subparts E through H, set out the minimum health and safety standards a facility must meet in order to obtain Medicare certification. The current CoPs for PACE organizations include some requirements for emergency preparedness. We propose to remove the current PACE organization requirements at § 460.72(c)(1) through (5) and incorporate these existing requirements into proposed § 460.84, Emergency preparedness requirements for Programs of All-Inclusive Care for the Elderly (PACE).

Existing § 460.72(c)(1), Emergency and disaster preparedness procedures, states that the PACE organization must establish, implement, and maintain documented procedures to manage medical and nonmedical emergencies and disasters that are likely to threaten the health or safety of the patients, staff, or the public. Existing § 460.72(c)(2) defines emergencies to include, but not be limited to: fire; equipment, water, or power failure; care-related emergencies; and natural disasters likely to occur in the organization's geographic area.

We propose incorporating the language from § 460.72(c)(1) into § 460.84(b). Existing § 460.72(c)(2), which defines the various emergencies, would be incorporated into § 460.84(b) as well. The statement in current § 460.72(c)(2), that "an organization is not required to develop emergency plans for natural disasters that typically do not affect its geographic location", would not be added to the proposed rule because we are proposing that PACE organizations utilize an "all

hazards" approach as proposed in § 460.84(a)(1).

Existing § 460.72(c)(3), which states that "a PACE organization must provide appropriate training and periodic orientation to all staff (employees and contractors) and patients to ensure that staff demonstrate a knowledge of emergency procedures, including informing patients what to do, where to go, and whom to contact in case of an emergency," would be incorporated into proposed § 460.84(d)(1). The existing requirements for having available emergency medical equipment, for having staff who know how to use the equipment, and having a documented plan to obtain emergency medical assistance from outside sources in current § 460.72(c)(4) would be relocated to proposed § 460.84(b)(9). Finally, current § 460.72(c)(5), which states that the PACE organization must test the emergency and disaster plan at least annually and evaluate and document its effectiveness would be addressed by proposed § 460.84(d)(2). The current version of § 460.72(c)(1) through (c)(5) would be removed.

We are proposing that PACE organizations would adhere to the same requirements for emergency preparedness as hospitals, with three exceptions.

The first difference between the proposed hospital emergency preparedness requirements and the proposed PACE emergency preparedness requirements is that we are not proposing that PACE organizations provide basic subsistence needs for staff and patients, whether they evacuate or shelter in place, including food, water, and medical supplies; alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions; emergency lighting; and fire detection, extinguishing, and alarm systems; and sewage and waste disposal as we are proposing for hospitals at § 482.15(b)(1).

The second difference between the proposed hospital emergency preparedness requirements and the proposed PACE emergency preparedness requirements is that we propose adding at § 460.84(b)(3), a requirement for a PACE organization to have policies and procedures to inform state and local officials about PACE patients in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric conditions and home environment. Such policies and procedures must be in accord with the HIPAA Privacy Rule, as appropriate. This proposed requirement recognizes that many of the frail PACE patients may be unable to evacuate from their homes without assistance during an emergency.

Finally, the third difference between the proposed requirements for hospitals and the proposed requirements for PACE organizations is that, at § 460.84(c)(7), we propose to require these organizations to have a communication plan that includes a means of providing information about their needs and their ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee. We do not propose requiring these organizations to provide information regarding their occupancy, as we propose for hospitals (§ 482.15(c)(7)), since the term occupancy usually refers to bed occupancy in an inpatient facility.

G. Emergency Preparedness Regulations for Transplant Centers (§ 482.78)

Transplant centers are located within hospitals that meet the requirements for Conditions of Participation (CoPs) in Medicare. Therefore, transplant centers must meet all hospital CoPs at § 482.1 through § 482.57. In addition, unless otherwise specified, heart, heart-lung, intestine, kidney, liver, lung, and pancreas centers must meet all requirements for transplant centers at § 482.72 through § 482.104.

Transplant centers are responsible for providing organ transplantation services from the time of the potential transplant candidate's initial evaluation through the recipient's post-transplant follow-up care. In addition, if a center performs living donor transplants, the center is responsible for the care of the living donor from the time of the initial evaluation through post-surgical follow-up care.

Organs are viable for transplantation for a limited time after organ recovery. Although kidneys may remain viable for transplantation for more than 24 hours, other organs remain viable for only a few hours. Thus, according to the Organ Procurement and Transplantation Network (OPTN) longstanding policy, if a transplant center must turn down an organ for one of its patients, the organ may go to the next patient on the waiting list at another transplant center (Organ Distribution: Organ Procurement, Distribution and Allocation, *http://optn.transplant.hrsa.gov/PoliciesandBylaws2/policies/pdfs/policy_6.pdf*) . In such a situation, the patient on the waiting list of the transplant center experiencing an emergency may die before an organ becomes available again. In fact, according to the OPTN, about 18 patients die every day waiting for an organ transplant. (*http://optn.transplant.hrsa.gov/*)

There are 770 Medicare-approved transplant centers. These centers provide specialized services that are not available at all hospitals. Thus, we believe that it is crucial for every transplant center to make arrangements with one or more other Medicare-approved transplant centers to provide transplantation services and other care to its patients during an emergency. Making such arrangements would increase the likelihood that if an organ became available for one of the transplant center's waiting list patients during an emergency, the patient would receive the transplant. Further, having such arrangements with other transplant centers would increase the odds that during an emergency, a transplant center's patients would receive critically important post-transplant care to prevent graft failure.

Our regulations at § 482.68 currently require that a transplant center that has a Medicare provider agreement meet the hospital CoPs specified in § 482.1 through § 482.57. Our proposed hospital CoP, "Emergency preparedness," at § 482.15, would apply to transplant centers. We also propose to add a new transplant center CoP at § 482.78, "Emergency preparedness". A transplant center would be required to comply with the proposed emergency preparedness hospital requirements at § 482.15, as well as the proposed CoP for emergency preparedness for transplant centers at § 482.78. We propose at § 482.78(a) that a transplant center have an agreement with at least one other Medicare-approved transplant center to provide transplantation services and other care for its patients during an emergency. Ideally, the Medicare-approved transplant center that agrees to provide care for a center's patients during an emergency would perform the same type of organ transplant as the center seeking the agreement. However, we recognize that this may not always be feasible. Under some circumstances, a transplant center may wish to establish an agreement for the provision of post-transplant care and follow-up for its patients with a center that is Medicare-approved for a different organ type.

We believe a transplant center entering into an agreement for the provision of services during an emergency would be in the best position to judge whether post-transplant care could be competently provided during an emergency by a Medicare-approved transplant center that transplanted a

different organ type. We expect that transplant centers establishing such agreements would consider the types of services the other center had the ability to provide during an emergency.

We also propose at § 482.78(a) that the agreement between the transplant center and another Medicare-approved transplant center that agreed to provide care during an emergency would have to address, at a minimum: (1) the circumstances under which the agreement would be activated; and (2) the types of services that would be provided during an emergency.

Currently, under the transplant center CoP at § 482.100, Organ procurement, a transplant center is required to ensure that the hospital in which it operates has a written agreement for the receipt of organs with the hospital's designated Organ Procurement Organization (OPO) that identifies specific responsibilities for the hospital and for the OPO with respect to organ recovery and organ allocation. We propose at § 482.78(b) to require transplant centers to ensure that the written agreement required under § 482.100 also addresses the duties and responsibilities of the hospital and the OPO during an emergency. We have included a similar requirement for OPOs at § 486.360(c) in this proposed rule. We would expect the transplant center, the hospital in which it is located, and the designated OPO to collaborate in identifying their specific duties and responsibilities during emergency situations and include them in the agreement.

We are not proposing to require transplant centers to provide basic subsistence needs for staff and patients, as we are proposing for hospitals at § 482.15(b)(1). Also, we are not proposing to require transplant centers to separately comply with the proposed hospital requirement at § 482.15(b)(8) regarding alternate care sites identified by emergency management officials. This requirement would be applicable to inpatient providers since the overnight provision of care could be challenged in an emergency. Transplant centers would have to meet this requirement since the transplant patient would be under the care and responsibility of the hospital.

H. Emergency Preparedness Requirements for Long Term Care (LTC) Facilities (§ 483.73)

Section 1819(a) of the Act defines a skilled nursing facility (SNF) for Medicare purposes as an institution or a distinct part of an institution that is primarily engaged in providing skilled nursing care and related services to patients that require medical or nursing care or rehabilitation services due to an injury, disability, or illness. Section 1919(a) of the Act defines a nursing facility (NF) for Medicaid purposes as an institution or a distinct part of an institution that is primarily engaged in providing to patients: skilled nursing care and related services for patients who require medical or nursing care; rehabilitation services due to an injury, disability, or illness; or, on a regular basis, health-related care and services to individuals who due to their mental or physical condition require care and services (above the level of room and board) that are available only through an institution.

To participate in the Medicare and Medicaid programs, long-term care (LTC) facilities must meet certain requirements located at part 483, Subpart B, Requirements for Long Term Care Facilities. SNFs must be certified as meeting the requirements of section 1819(a) through (d) of the Act. NFs must be certified as meeting section 1919(a) through (d) of the Act. A LTC facility may be both Medicare and Medicaid approved.

LTC facilities provide a substantial amount of care to Medicare and Medicaid beneficiaries, as well as "dual eligible individuals" who qualify for both Medicare and Medicaid. As of March 1, 2013, there were 15,157 LTC facilities and these facilities provided care for about 1.7 million patients.

The current requirements for LTC facilities contain specific requirements for emergency preparedness set out at 42 CFR 483.75(m)(1) and (2). Section 483.75(m)(1) states that a "facility must have detailed written plans and procedures to meet all potential emergencies and disasters, such as fire, severe weather, and missing residents." We are proposing that this language be incorporated into proposed § 483.73(a)(1). Existing § 483.75(m)(2) states that a "facility must train all employees in emergency procedures when they begin to work in the facility, periodically review the procedures with existing staff, and carry out unannounced staff drills using those procedures." These requirements would be incorporated into proposed § 483.73(d)(1)and (d)(2). Sections § 483.75(m)(1) and (2) would be removed.

These requirements are not sufficient to ensure that facilities are prepared for more widespread disasters that may affect most or all of the other health care facilities in their area and that may tax the ability of local, state, and federal emergency management officials to provide assistance. For example, current LTC facility requirements do not require facilities to conduct a risk assessment or to have a plan, policies, or procedures to ensure continuity of facility operations during emergencies. We believe the additional requirements in this proposed rule would ensure facilities would be prepared for the emergencies they may face now and in the future. Thus, our proposed emergency preparedness requirements for LTC facilities are identical to those we are proposing for hospitals at § 482.15, with two exceptions. Specifically, at § 483.73(a)(1), we propose that LTC facilities would establish emergency plans utilizing an "all-hazards" approach, which in an emergency situation, would include a directive to account for missing residents.

In addition, long term care facilities are unlike many of the inpatient care providers. Many of the residents can be expected to have long term or extended stays in these facilities. Due to the long term nature of their stays, these facilities essentially become the residents' residences or homes. We believe this changes the nature of the relationship and duty to the residents and their families or representatives. Section § 483.73(c) requires these facilities to develop an emergency preparedness communication plan, which includes, among other things, a means of providing information about the general condition and location of residents under the facility's care. We also believe that the residents and their families or representatives require more information about the facility's emergency plan. Specifically, long term care facilities should be required to determine what information in their emergency plan is appropriate to share with its residents and their families or representatives and that the facility have a means by which that information is disseminated to those individuals. The facility should also determine the appropriate time for that information to be disseminated. We are not indicating what information from the emergency plan should be shared or the timing or manner in which it should be disseminated. We believe that each facility should have the flexibility to determine the information that is most appropriate to be shared with its residents and their families or representatives and the most efficient manner in which to share that information. Therefore, we propose to add an additional requirement at § 483.73(c)(8) that reads, "A method for sharing information from the emergency plan that the facility has determined is

appropriate with residents and their families or representatives."

Also, as discussed in section II.A.4 of the preamble we are proposing at § 483.73(e)(1)(i) that LTC facilities must store emergency fuel and associated equipment and systems as required by the 2000 edition of the Life Safety Code (LSC) of the National Fire Protection Association (NFPA). In addition to the emergency power system inspection and testing requirements found in NFPA 99 and NFPA 110 and NFPA 101, we propose that LTC facilities test their emergency and stand-by-power systems for a minimum of 4 continuous hours every 12 months at 100 percent of the power load the LTC facility anticipates it will require during an emergency.

In addition to the emergency energy requirements discussed earlier, we also believe that LTC facilities should consider their individual residents' power needs. For example, some residents could have motorized wheelchairs that they need for mobility or require a continuous positive airway pressure or CPAP machine due to sleep apnea. In § 483.73(a)(1) and (3), we propose that the LTC facility address, among other things, its resident population and continuity of operations in its emergency plan. The LTC facility must also base its emergency plan on a risk assessment, utilizing an all-hazards approach. We believe that the currently proposed requirements encompass consideration of individual residents' power needs and should be included in LTC facilities' risk assessments and emergency plans. However, we are also soliciting comments on whether there should be a specific requirement for "residents' power needs" in the LTC requirements.

I. Emergency Preparedness Regulations for Intermediate Care Facilities for Individuals With Intellectual Disabilities (ICFs/IID) (§ 483.475)

Section 1905(d) of the Act created the ICF/IID benefit to fund "institutions" with four or more beds to serve people with [intellectual disability] or other related conditions. To qualify for Medicaid reimbursement, ICFs/IID must be certified and comply with CoPs at 42 CFR part 483, Subpart I, § 483.400 through § 483.480. As of March 2013, there were 6,442 ICFs/IID, serving approximately 129,000 patients, and all patients receiving ICF/IID services must qualify financially for Medicaid assistance. Patients with intellectual disabilities who receive care provided by ICFs/IID may have additional emergency planning and preparedness requirements. For example, some care recipients are non-ambulatory, or may experience additional mobility or sensory disabilities or impairments, seizure disorders, behavioral challenges, or mental health challenges.

Some ICFs/IID are small and serve only a few patients. However, we do not believe small ICFs/IID or ICFs/IID in general would have difficulty meeting the proposed requirements. In fact, small facilities might find it easier than large facilities to develop an emergency preparedness plan and emergency preparedness policies and procedures. As an example, an ICF/IID with only four patients is likely to have a sufficient number of its own vehicles available during an emergency to evacuate patients and staff, eliminating the need to contract with an outside entity to provide transportation during an emergency situation or disaster.

Because ICFs/IID vary widely in size and the services they provide, we expect that the risk analyses, emergency plans, emergency policies and procedures, emergency communication plans, and emergency preparedness training will vary widely as well. Nevertheless, we believe each of them has the capability to comply fully with the requirements so that the health and safety of its patients are protected in the event of an emergency situation or disaster.

Thus, we propose requiring that ICFs/IID meet the same requirements we are proposing for hospitals, with two exceptions. At § 483.475(a)(1), we propose that ICFs/IID utilize an all hazards approach, including consideration for missing clients. We believe that in the event of a natural or man-made disaster, ICFs/IID would maintain responsibility for care of their own patient population but would not receive patients from the community. Also, because we recognize that all ICFs/IID patients have special needs, we propose requiring ICFs/IID to "address the special needs of its client population . . ." at § 483.475(a)(3).

In addressing the special needs of its client population, we believe that ICFs/IID should consider their individual residents' power needs. For example, some residents could have motorized wheelchairs that they need for mobility or require a continuous positive airway pressure or CPAP machine due to sleep apnea. We believe that the currently proposed requirements at § 483.475(a) (a risk assessment utilizing an all-hazards approach and that the facility address the special needs of its client population) encompass consideration of individual residents' power needs and should be included in ICFs/IID's risk assessments and emergency plans. However, we are also soliciting comments on whether there should be a specific requirement for "residents' power needs" in the ICFs/IID CoPs.

As we stated earlier, the purpose of this proposed rule is to establish requirements to ensure that Medicare/Medicaid providers and suppliers are prepared to protect the health and safety of patients in their care during more widespread local, state, and national emergencies. We do not believe the existing requirements for ICFs/IID are sufficiently comprehensive to protect patients during an emergency that impacts the larger community. For example, they do not require facilities to plan for sheltering in place. However, in developing this proposed rule, we have been careful not to remove emergency preparedness requirements that are more rigorous than those we are proposing.

The current regulations for ICFs/IID include requirements for emergency preparedness. Specifically, § 483.430(c)(2) and (c)(3) contain specific requirements to ensure that direct care givers are available at all times to respond to illness, injury, fire, and other emergencies. However, we do not propose to relocate these existing facility staffing requirements at § 483.430(c)(2) and § 483.430(c)(3) because they address staffing issues based on the number of patients per building and patient behaviors, such as aggression. Such requirements, while related to emergency preparedness tangentially, are not within the scope of our proposed emergency preparedness requirements for ICFs/IID.

Current § 483.470, Physical environment, includes a standard for emergency plan and procedures at § 483.470(h) and a standard for evacuation drills at § 483.470(i). The standard for emergency plan and procedures at current § 483.470(h)(1) requires facilities to develop and implement detailed written plans and procedures to meet all potential emergencies and disasters, such as fire, severe weather, and missing clients. This requirement would be relocated to proposed § 483.475(a)(1). Existing § 483.470(h)(1) would be removed.

Currently § 483.470(h)(2) states, with regard to a facility's emergency plan, that the facility must communicate, periodically review the plan, make the plan available, and provide training to the staff. These requirements are covered in proposed § 483.475(d). Current § 483.470(h)(2) would be removed.

ICFs/IID are unlike many of the inpatient care providers. Many of the clients can be expected to have long term or extended stays in these facilities. Due to the long term nature of

their stays, these facilities essentially become the clients' residences or homes. We believe this changes the nature of the relationship and duty to the clients and their families or representatives. Section 483.475(c) requires these facilities to develop an emergency preparedness communication plan, which includes, among other things, a means of providing information about the general condition and location of clients under the facility's care. We also believe that the clients and their families or representatives require more information about the facility's emergency plan. Specifically, ICFs/IID should be required to determine what information in their emergency plan is appropriate to share with its clients and their families or representatives and that facilities have a means by which that information is disseminated to those individuals. The facility should also determine the appropriate time for that information to be disseminated. We are not indicating what information from the emergency plan should be shared or the timing or manner in which it should be disseminated. We believe that each facility should have the flexibility to determine the information that is most appropriate to be shared with its clients and their families or representatives and the most efficient manner in which to share that information. Therefore, we propose to add an additional requirement at § 483.475(c)(8) that reads, "A method for sharing information from the emergency plan that the facility has determined is appropriate with clients and their families or representatives."

The standard for disaster drills set forth at existing § 483.470(i)(1) specifies that facilities must hold evacuation drills at least quarterly for each shift of personnel under varied conditions to ensure that all personnel on all shifts are trained to perform assigned tasks; ensure that all personnel on all shifts are familiar with the use of the facility's fire protection features; and evaluate the effectiveness of their emergency and disaster plans and procedures. Currently § 483.470(i)(2) further specifies that facilities must evacuate patients during at least one drill each year on each shift; make special provisions for the evacuation of patients with physical disabilities; file a report and evaluation on each evacuation drill; and investigate all problems with evacuation drills, including accidents, and take corrective action. Further, during fire drills, facilities may evacuate patients to a safe area in facilities certified under the Health Care Occupancies Chapter of the Life Safety Code. Finally, at existing § 483.470(i)(3), facilities must meet the requirements of paragraphs § 483.470(i)(1) and (2) for any live-in and relief staff they utilize. Because these existing requirements are so extensive, we propose cross referencing § 483.470(i) (redesignated as § 483.470(h)) at proposed § 483.475(d).

J. Emergency Preparedness Regulations for Home Health Agencies (HHAs) (§ 484.22)

Under the authority of sections 1861(m), 1861(o), and 1891 of the Act, the Secretary has established in regulations the requirements that a home health agency (HHA) must meet to participate in the Medicare program. Home health services are covered for qualifying elderly and people with disabilities who are beneficiaries under the Hospital Insurance (Part A) and Supplemental Medical Insurance (Part B) benefits of the Medicare program. These services include skilled nursing care, physical, occupational, and speech therapy, medical social work and home health aide services which must be furnished by, or under arrangement with, an HHA that participates in the Medicare program and must be provided in the beneficiary's home.

As of March 1, 2013, there were 12,349 HHAs participating in the Medicare program. The majority of HHAs are for-profit, privately owned agencies. The effective delivery of quality home health services is essential to the care of illnesses and prevention of hospitalizations.

With so many patients depending on the services of HHAs nationwide, it is imperative that HHAs have processes in place to address the safety of patients and staff and the continued provision of services in the event of a disaster or emergency. However, there are no existing emergency preparedness requirements contained under the HHA Medicare regulations at part 484, Subparts B and C.

Thus, we propose to add emergency preparedness requirements at § 484.22, pursuant to which HHAs would be required to comply with some of the requirements that we propose to require for hospitals. We are proposing additional requirements under the HHA policies and procedures that would apply to HHAs but not to hospitals to address the unique circumstances under which HHAs provide services.

First, because HHAs provide health care in patients' homes, we propose at § 484.22(b)(1) that an HHA have policies and procedures that include plans for its patients during a natural or man-made disaster. We propose that the HHA include individual emergency preparedness plans for each patient as part of the comprehensive patient assessment at § 484.55.

Second, because we learned from the experience of Hurricane Katrina that many medically compromised people were unable to escape their homes to seek safe shelter, at § 484.22(b)(2), we propose requiring an HHA to have policies and procedures to inform state and local emergency preparedness officials about HHA patients in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric condition and home environment. Such policies and procedures must be in accord with the HIPAA Privacy Regulations, as appropriate. Although we do not propose how such notification would take place. we expect that maintaining an accurate list of HHA patients would be necessary. However, we believe the potential need for assistance with such factors as transportation or evacuation, for example, could be addressed as an ongoing process of evaluating the patient's medical and psychiatric condition and home environment.

We are not proposing to require that HHAs meet all of the same requirements that we are proposing for hospitals. Since HHAs provide health care services only in patients' homes, we are not including proposed requirements for policies and procedures for the provision of subsistence needs (§ 482.15(b)(1)); safe evacuation (§ 482.15(b)(3)); and a means to shelter in place (§ 482.15(b)(4)). We would not expect an HHA to be responsible for sheltering HHA patients in their homes or sheltering staff at an HHA main or branch offices. We do not propose to require that HHAs comply with the proposed hospital requirement at § 482.15(b)(8) regarding the provision of care and treatment at alternate care sites identified by emergency management officials. This proposed requirement would be applicable only to inpatient providers. With respect to communication, we have not included proposed requirements for HHAs to have a means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510 as we are proposing for hospitals at § 482.15(c)(5). We have also modified the proposed requirement for hospitals at § 482.15(c)(7) by eliminating the reference to providing information regarding the facility's occupancy. The term occupancy usually refers to bed occupancy in an inpatient facility. Instead, at § 484.22(c)(6), we would require HHAs to provide information

about the HHA's needs and its ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee.

In developing its policies and procedures, we would expect an HHA to consider whether it would accept new referrals during a disaster or emergency situation, and how it would care for new patients. We also would urge HHAs to include a method for providing information to all new patients and their families about the role the HHA would play in the event of an emergency.

Overall, our expectation for HHAs is that they would work closely with other HHAs and with the hospitals in their referral areas to plan for disasters and emergency situations.

K. Emergency Preparedness Regulations for Comprehensive Outpatient Rehabilitation Facilities (CORFs) (§ 485.68)

Section 1861(cc) of the Act defines the term "comprehensive outpatient rehabilitation facility" (CORF) and lists the requirements that a CORF must meet to be eligible for Medicare participation. By definition, a CORF is a non-residential facility that is established and operated exclusively for the purpose of providing diagnostic, therapeutic, and restorative services to outpatients for the rehabilitation of injured, sick, and persons with disabilities, at a single fixed location, by or under the supervision of a physician. As of March 2013, there were 272 Medicare-certified CORFs in the U.S.

Section 1861(cc)(2)(J) of the Act also states that the CORF must meet other requirements that the Secretary finds necessary in the interest of the health and safety of a CORF's patients. Under this authority, the Secretary has established in regulations, at part 485, Subpart B, requirements that a CORF must meet to participate in the Medicare program.

Currently § 485.64 "Conditions of Participation: Disaster procedures" includes emergency preparedness requirements CORFs must meet. The regulations state that the CORF must have written policies and procedures that specifically define the handling of patients, personnel, records, and the public during disasters. The regulation requires that all personnel be knowledgeable with respect to these procedures, be trained in their application, and be assigned specific responsibilities.

Currently § 485.64(a) requires a CORF to have a written disaster plan that is developed and maintained with the assistance of qualified fire, safety, and other appropriate experts. The other elements under § 485.64(a) require that CORFs have: (1) procedures for prompt transfer of casualties and records; (2) procedures for notifying community emergency personnel; (3) instructions regarding the location and use of alarm systems and signals and firefighting equipment; and (4) specification of evacuation routes and procedures for leaving the facility.

Currently § 485.64(b) requires each CORF to: (1) provide ongoing training and drills for all personnel associated with the CORF in all aspects of disaster preparedness; and (2) orient and assign specific responsibilities regarding the facility's disaster plan to all new personnel within 2 weeks of their first workday.

Although these requirements are important, they do not address the coordination across providers and suppliers and across the various federal, state, and local emergency response systems necessary to ensure the health and safety of CORF patients during an emergency.

Despite CORFs being non-residential treatment facilities, we believe they should comply with the same requirements that would be required for hospitals, with appropriate exceptions.

At § 485.68(a)(5), we propose that CORFs develop and maintain the emergency preparedness plan with assistance from fire, safety, and other appropriate experts. We do not propose to require CORFs to provide basic subsistence needs for staff and patients as we are proposing for hospitals at § 482.15(b)(1). Because CORFs are outpatient facilities, we are not proposing that CORFs have a system to track the location of staff and patients under the CORF's care both during and after the emergency as we propose to require for hospitals at § 482.15(b)(2).

At § 482.15(b)(3), we propose that hospitals have policies and procedures for safe evacuation from the hospital, which would include consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance. We do not believe all of these requirements are appropriate for CORFs, which serve only outpatients. Therefore, at § 485.68(b)(1), we are proposing to require that CORFs have policies and procedures for evacuation from the CORF, including staff responsibilities and needs of the patients.

Because CORFs are outpatient facilities that provide specific, limited services to patients, we are not proposing that CORFS have arrangements with other CORFs or other providers to receive patients in the event of limitations or cessation of operations. Finally, we do not propose to require CORFs to comply with the proposed hospital requirement at § 482.15(b)(8) regarding alternate care sites identified by emergency management officials.

With respect to communication, we would not require CORFs to comply with the proposed requirement for hospitals at § 482.15(c)(5) that would require a hospital to have a means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510. In addition, CORFs would not be required to comply with the proposed requirement at § 482.15(c)(6), which would state that a hospital must have a means of providing information about the general condition and location of patients as permitted under 45 CFR 164.510(b)(4).

We propose including in the CORF emergency preparedness provisions a requirement for CORFs to have a method for sharing information and medical documentation for patients under the CORF's care with other health care providers, as necessary, to ensure continuity of care (see proposed § 485.68(c)(4)). However, we would expect CORFs to implement this requirement only for patients receiving care at the facility at the time of the disaster or emergency situation. Given that CORFs are primarily providers of a limited range of outpatient services, we do not expect a CORF to know the whereabouts of its patients who are living in the community, as we would expect of hospices, HHAs, and PACE facilities. An additional modification from what has been proposed for hospitals at § 482.15(c)(7), at § 485.68(c)(5), we propose to require CORFs to have a communication plan that include a means of providing information about the CORF's needs and its ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee. We do not propose requiring CORFs to provide information regarding their occupancy, as we propose for hospitals, since the term occupancy usually refers to bed occupancy in an inpatient facility.

Our goal is to ensure that we incorporate existing CORF disaster preparedness requirements into our proposed emergency preparedness rule. Although we believe the current CORF disaster preparedness requirements are largely reflected in the language we propose for other providers and suppliers, there are specific instances in which the existing CORF requirements

are more stringent, such as the requirement to assign specific disaster preparedness tasks to new personnel within two weeks of their first work day. This existing requirement at § 485.64(b)(2) would be relocated to proposed § 485.68(d)(1).

Currently § 485.64 requires a CORF to develop and maintain its disaster plan with assistance from fire, safety, and other appropriate experts. We have incorporated this requirement at proposed § 485.68(a)(5). Currently § 485.64(a)(3) would require that the training program include instruction in the location and use of alarm systems and signals and firefighting equipment. We have incorporated these requirements at proposed § 485.68(d)(1). We propose to remove current § 485.64.

L. Emergency Preparedness Regulations for Critical Access Hospitals (CAHs) (§ 485.625)

Sections 1820 and 1861(mm) of the Act provide that critical access hospitals participating in Medicare and Medicaid meet certain specified requirements. We have implemented these provisions in 42 CFR part 485, Subpart F, Conditions of Participation for Critical Access Hospitals (CAHs). As of March 1, 2013, there are 1,332 CAHs that must meet the CAH CoPs and 95 CAHs with psychiatric or rehabilitation distinct part units (DPUs) that must meet the hospital CoPs in order to receive payment for services provided to Medicare or Medicaid patients in the DPU.

CAHs are small, generally rural, limited-service facilities with low patient volume. The intent of designating facilities as "critical access hospitals" is to preserve access to primary care and emergency services that meet community needs.

A CAH is not required to be staffed if there are no inpatients in the facility. However, in the event of an emergency, existing requirements state there must be a doctor of medicine or osteopathy, a physician assistant, a nurse practitioner, or a clinical nurse specialist, with training or experience in emergency care, on call and immediately available by telephone or radio contact and available onsite within 30 minutes on a 24-hour basis or, under certain circumstances, within 60 minutes. CAHs currently are required to coordinate with emergency response systems in the area to provide 24-hour emergency coverage. We believe the existing requirements provide only a limited framework for protecting the health and safety of CAH patients in the event of a major disaster. They do not include the requirements we propose that we believe will ensure a well-coordinated emergency preparedness system of care.

CAHs are required at existing § 485.623(c), "Standard: Emergency procedures," to assure the safety of patients in non-medical emergencies by training staff in handling emergencies, including prompt reporting of fires; extinguishing of fires; protection and, where necessary, evacuation of patients, personnel, and guests; and cooperation with firefighting and disaster authorities. CAHs must provide for emergency power and lighting in the emergency room and for battery lamps and flashlights in other areas; provide for fuel and water supply; and take other appropriate measures that are consistent with the particular conditions of the area in which the CAH is located. Since CAHs are required to provide emergency services on a 24-hour a day basis, they must keep equipment, supplies, and medication used to treat emergency cases readily available.

We propose to remove the current standard at § 485.623(c) and relocate these requirements into the appropriate sections of a new CoP entitled, "Condition of Participation: Emergency Preparedness" at § 485.625, which would include the same requirements that we propose for hospitals. Since CAHs function as acute care providers in rural and remote communities, we believe that they should be prepared in the event of a disaster to provide critical care to individuals in their communities. Although CAHs are much smaller than most Medicare- and Medicaid-participating hospitals, we do not expect them to have difficulty meeting the same requirements we propose for hospitals. CAHs can draw upon a large number of resources at the federal, state, and local level for assistance in meeting the requirements.

We propose to relocate current § 485.623(c)(1) to proposed § 485.625(d)(1). We propose to incorporate current § 485.623(c)(2) into § 485.625(b)(1). Current § 485.623(c)(3) would be included in proposed § 485.625(b)(1). Current § 485.623(c)(4) would be reflected by the use of the term "all-hazards" in proposed § 485.625(a)(1). Section 485.623(d) would be redesignated as § 485.623 (c).

Also, as discussed in section II.A.4 of the preamble we are proposing at § 485.625(e)(1)(i) that CAHs must store emergency fuel and associated equipment and systems as required by the 2000 edition of the Life Safety Code (LSC) of the National Fire Protection Association (NFPA). In addition to the emergency power system inspection and testing requirements found in NFPA 99 and NFPA 110 and NFPA 101, we propose that CAHs test their emergency and stand-by-power systems for a minimum of 4 continuous hours every 12 months at 100 percent of the power load the CAH anticipates it will require during an emergency.

M. Emergency Preparedness Regulation for Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services (§ 485.727)

Under the authority of section 1861(p) of the Act, the Secretary has established CoPs that clinics, rehabilitation agencies, and public health agencies must meet when they provide outpatient physical therapy (OPT) and speech-language pathology (SLP) services. Under section 1861(p) of the Act, the Secretary is responsible for ensuring that the CoPs and their enforcement are adequate to protect the health and safety of individuals receiving OPT and SLP services from these entities. The CoPs are set forth at part 485, Subpart H.

Section 1861(p) of the Act describes "outpatient physical therapy services" to mean physical therapy services furnished by a provider of services, a clinic, rehabilitation agency, or a public health agency, or by others under an arrangement with, and under the supervision of, such provider, clinic, rehabilitation agency, or public health agency to an individual as an outpatient. The patient must be under the care of a physician.

The term "outpatient physical therapy services" also includes physical therapy services furnished to an individual by a physical therapist (in the physical therapist's office or the patient's home) who meets licensing and other standards prescribed by the Secretary in regulations, other than under arrangement with and under the supervision of a provider of services, clinic, rehabilitation agency, or public health agency, if the furnishing of such services meets such conditions relating to health and safety as the Secretary may find necessary. The term also includes SLP services furnished by a provider of services, a clinic, rehabilitation agency, or by a public health agency, or by others under an arrangement.

As of March 1, 2013, there are 2,256 clinics, rehabilitation agencies, and public health agencies that provide outpatient physical therapy and speech-language pathology services. In the remainder of this proposed rule and throughout the requirements, we use the

term "organizations" instead of "clinics, rehabilitation agencies, and public health agencies as providers of outpatient physical therapy and speech-language pathology services" for consistency with current regulatory language. Most of these providers are small facilities operated by a group of three or more physicians, as required at § 485.703 under the definition of "clinic", practicing medicine together, as well as various other rehabilitation professionals.

At § 485.727(b)(1), we are proposing to require that organizations have policies and procedures for evacuation from the organization, including staff responsibilities and needs of the patients.

We believe these organizations comply with a provision similar to our proposed requirement for hospitals at § 482.15(c)(7) which states that a communication plan must include a means of providing information about the hospital's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee. At § 485.727(c)(5), we propose to require that these organizations to have a communication plan that include a means of providing information about their needs and their ability to provide assistance to the authority having jurisdiction (local and state agencies) or the Incident Command Center, or designee. We do not propose to require these organizations to provide information regarding their occupancy, as we proposed for hospitals, since the term "occupancy" usually refers to bed occupancy in an inpatient facility.

The current regulations at § 485.727, "Disaster preparedness," require these organization to have a disaster plan. The plan must be periodically rehearsed, with procedures to be followed in the event of an internal or external disaster and for the care of casualties (patients and personnel) arising from a disaster. Additionally, current § 485.727(a) requires that the facility have a plan in operation with procedures to be followed in the event of fire, explosion, or other disaster. We believe these requirements are addressed throughout the proposed CoP, and we do not propose including the specific language in our proposed rule.

However, existing § 485.727(a) also requires that the plan be developed and maintained with the assistance of qualified fire, safety, and other appropriate experts. Because this existing requirement is specific to existing disaster preparedness requirements for these organizations, we have relocated the language to proposed § 485.727(a)(6).

Existing requirements at § 485.727(a) also state that the disaster plan must include: (1) transfer of casualties and records; (2) the location and use of alarm systems and signals; (3) methods of containing fire; (4) notification of appropriate persons, and (5) evacuation routes and procedures. Because transfer of casualties and records, notification of appropriate persons, and evacuation routes are addressed under policies and procedures in our proposed language, we do not propose to relocate these requirements. However, because the requirements for location and use of alarm systems and signals and methods of containing fire are specific for these organizations, we propose relocating these requirements to § 485.727(a)(4).

Currently § 485.727(b) specifies requirements for staff training and drills. This requirement states that all employees must be trained, as part of their employment orientation, in all aspects of preparedness for any disaster. This disaster program must include orientation and ongoing training and drills for all personnel in all procedures so that each employee promptly and correctly carries out his or her assigned role in case of a disaster. Because these requirements are addressed in proposed § 485.727(d), we do not propose to relocate them but merely to address them in that paragraph. Current § 485.727, "Disaster preparedness," would be removed.

N. Emergency Preparedness Regulations for Community Mental Health Centers (CMHCs) (§ 485.920)

A Community Mental Health Center (CMHC) as defined in section 1861(ff)(3)(B) of the Act, is an entity that meets applicable licensing or certification requirements in the state in which it is located and provides the set of services specified in section 1913(c)(1) of the Public Health Service Act. Section 4162 of Public Law 101–508 (OBRA 1990), which amended section 1861(ff)(3)(A) and 1832(a)(2)(J) of the Act, includes CMHCs as entities that are authorized to provide partial hospitalization services under Part B of the Medicare program, effective for services provided on or after October 1, 1991. Section 1866(e)(2) of the Act and 42 CFR part 489.2(c)(2) recognize CMHCs as providers of services for purposes of provider agreement requirements but only with respect to providing partial hospitalization services. In 2010 there were 207 Medicare-certified CMHCs serving approximately 27,738 Medicare beneficiaries.

Pursuant to 42 CFR 410.2 and 410.110, a CMHC may receive Medicare payment for partial hospitalization services only if it demonstrates that it provides the following core services:

- Outpatient services, including specialized outpatient services for children, the elderly, individuals who are chronically mentally ill, and residents of the CMHC's service area who have been discharged from inpatient treatment at a mental health facility.
- 24 hour-a-day emergency care services.
- Day treatment, or other partial hospitalization services, or psychosocial rehabilitation services.
- Screening for clients being considered for admission to state mental health facilities to determine the appropriateness of such admission. However, effective March 1, 2001, the Medicare, Medicaid, and State Children's Health Insurance Program Benefits Improvement and Protection Act of 2000 allows CMHCs to provide these services by contract if state law precludes the entity from providing the screening services.
- Meets applicable licensing or certification requirements for CMHCs in the state in which it is located.
- Provides at least 40 percent of its services to individuals who are not eligible for benefits under Title XVIII of the Act.

To qualify for Medicare reimbursement, CMHCs must comply with requirements for coverage of partial hospitalization services at § 410.110 and conditions for Medicare payment of partial hospitalization services at § 424.24(e). We will soon finalize the first health and safety CoPs for CMHCs, and while CMS is cognizant of the overall burden, we believe it is appropriate to also require CMHCs to meet the same emergency preparedness requirements as other outpatient facilities. Consistent with our proposed requirements for other Medicare and Medicaid participating providers and suppliers, we would require that CMHCs comply with emergency preparedness requirements to ensure a well-coordinated emergency response in the event of a disaster or emergency situation. We are proposing that CMHCs meet the same emergency preparedness requirements we propose for hospitals, with a few exceptions.

Since CMHCs are outpatient facilities, we would expect that in an emergency, the CMHC would instruct clients and staff not to report to the facility. In the event that clients and staff were in the facility when a disaster or emergency situation occurred, we would expect the

CMHC to encourage clients and staff to leave the facility to seek safe shelter in the community. We would expect most clients and staff to return to their homes.

Additionally, at § 485.920(c)(7), we propose to require these CMHCs to have a communication plan that include a means of providing information about the CMHCs needs and its ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee.

Some CMHCs are small facilities with just a few clients and may be located in rural areas. These CMHCs could find it challenging to develop a well-coordinated emergency preparedness plan. However, we believe even small CMHCs would be able to develop an appropriate emergency preparedness plan with the assistance of federal, state, and local community resources.

O. Emergency Preparedness Regulations for Organ Procurement Organizations (OPOs) (§ 486.360)

Section 1138(b) of the Act and 42 CFR part 486, subpart G establish that OPOs must be certified by the Secretary as meeting the requirements to be an OPO and designated by the Secretary for a specific Donation Service Area (DSA). The current OPO CfCs do not contain any emergency preparedness requirements.

There are currently 58 Medicare certified OPOs that are responsible for identifying potential organ donors in hospitals, assessing their suitability for donation, obtaining consent from next-of-kin, managing potential donors to maintain organ viability, coordinating recovery of organs, and arranging for transport of organs to transplant centers. If an emergency affects an OPO's ability to provide its services, organ procurement services to its entire DSA may be affected.

Our proposed requirements for OPOs to develop and maintain an emergency preparedness plan, are similar to those proposed for hospitals, with some exceptions.

Since potential donors generally are located within hospitals, at proposed § 486.360(a)(3), instead of addressing the patient population as proposed for hospitals at § 482.15(a)(3), we propose that the OPO address the type of hospitals with which the OPO has agreements; the type of services the OPO has the capacity to provide in an emergency; and continuity of operations, including delegations of authority and succession plans. That is, we would expect an OPO to consider the type of hospitals it serves when it develops its emergency plan, for example, a large hospital with a trauma center located in a major metropolitan area or a small rural hospital lacking an operating room.

Because the services provided by OPOs are so different from the services provided by a hospital and because potential donors generally are located within hospitals, we propose only two requirements for OPOs at § 486.360(b): (1) a system to track the location of staff during and after an emergency; and (2) a system of medical documentation that preserves potential and actual donor information, protects confidentiality of potential and actual donor information, and ensures records are secure and readily available.

Since OPOs' potential donors generally are located within hospitals and since OPOs do not have physical structures in which to house patients, OPOs would not be expected to have policies and procedures to address the provision of subsistence needs for staff and patients. Instead, we believe these responsibilities would rest upon the hospital.

In addition, at § 486.360(c), we are proposing only three requirements for an OPO's communication plan. An OPO's communication plan would include: (1) names and contact information for staff; entities providing services under arrangement; volunteers; other OPOs; and transplant and donor hospitals in the OPO's DSA; (2) contact information for federal, state, tribal, regional, or local emergency preparedness staff and other sources of assistance; and (3) primary and alternate means for communicating with the OPO's staff, federal, state, tribal, regional, or local emergency management agencies. We believe the additional proposed requirements regarding communication would specifically be a hospital's responsibility in caring for its patient population.

Unlike the requirement we have proposed for hospitals at § 482.15(d)(2)(i) and (iii), which would be required to conduct both a mock disaster drill and a tabletop exercise, we propose at § 486.360(d)(2)(i) that an OPO would be required only to conduct a tabletop exercise. Since the OPO's patients reside in the hospital, we expect the OPO to show due consideration for its emergency response efforts by engaging in such a tabletop exercise. However, the OPO typically does not have physical possession of patients to fully engage in a mock disaster drill as proposed for hospitals. Since an OPO does not deal directly with patients, a mock disaster drill would be unnecessary.

Finally, at § 486.360(e), we propose that each OPO have agreement(s) with one or more other OPOs to provide essential organ procurement services to all or a portion of the OPO's DSA in the event that the OPO cannot provide such services due to an emergency. We also propose that the OPO include within its agreements with hospitals required under § 486.322(a) and in the protocols with transplant programs required under § 486.344(d), the duties and responsibilities of the hospital, transplant program, and the OPO in the event of an emergency.

P. Emergency Preparedness Regulations for Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (§ 491.12)

Section 1861(aa) sets forth the Rural Health Clinic and Federally Qualified Health Center services covered by the Medicare and Medicaid program. "RHCs" must be located in an area that is both rural and underserved.

Conditions for Certification for RHCs and Conditions of Coverage for FQHCs are found at 42 CFR part 491, Subpart A. Current emergency preparedness requirements are found at § 491.6.

Currently, an RHC is staffed with personnel that are required to provide medical emergency procedures as a first response to common life threatening injuries and acute illnesses and to have available the drugs and biologicals commonly used in life-saving procedures. The definition of a "first response" is a service that is commonly provided in a physician's office. FQHCs are required to provide emergency care either on site or through clearly defined arrangements for access to health care for medical emergencies during and after the FQHC's regularly scheduled hours. Therefore, FQHCs must provide for access to emergency care at all times. Clinics and centers have varying hours and days of operation based on staff and anticipated patient load.

We are aware of the difficulties that rural communities have attracting and retaining a variety of professionals, including health care professionals. However, there is a present and growing need for all providers and suppliers to develop plans to care for their staff and patients during a disaster. We propose that the RHCs' and FQHCs' emergency preparedness plans must address the type of services the facility has the capacity to provide in an emergency. We expect that they would evaluate their ability to provide services based on, but not limited to, the facility's size, available human and material resources, geographic location, and ability to coordinate with community resources.

Thus, while Medicare providers or suppliers in a large metropolitan community may be better able to provide the majority of its services during an emergency event, rural, providers and suppliers, especially those in frontier areas, may find it far more challenging to provide similar services during an emergency.

We believe many RHCs and FQHCs would be able to develop a comprehensive emergency plan that addresses "all-hazards" policies and procedures, a communication plan, and training and testing by drawing upon a variety of resources that can provide technical assistance. For example, HRSA's Office of Rural Health Policy (ORHP), guide entitled, "Rural Health Communities and Emergency Preparedness," that is available on HRSA's Web site at: *ftp://ftp.hrsa.gov/ruralhealth/RuralPreparedness.pdf* is a good source.

Although RHCs and FQHCs currently do not have specific requirements for emergency preparedness, they have requirements for "Emergency Procedures" found at § 491.6, under "Physical plant and environment." At § 491.6(c)(1), the RHC or FQHC must train staff in handling non-medical emergencies. This requirement would be addressed at proposed § 491.12(d)(1). At § 491.6(c)(2), the RHC or FQHC must place exit signs in appropriate locations. This requirement would be incorporated into our proposed requirement at § 491.12(b)(1), which would require RHCs and FQHCs to have policies and procedures for safe evacuation from the facility which includes appropriate placement of exit signs. Finally, at § 491.6(c)(3), the RHC or FQHC must take other appropriate measures that are consistent with the particular conditions of the area in which the facility is located. This requirement would be addressed throughout the proposed CoP for RHCs and FQHCs, particularly proposed § 491.12(a)(1), which requires the RHCs and FQHCs to perform a risk assessment based on an "all-hazards" approach. Current § 491.6(c) would be removed.

We are proposing emergency preparedness requirements based on the requirements that we are proposing for hospitals, modified to address the specific characteristics of RHCs and FQHCs. We do not propose to require RHC/FQHCs to provide basic subsistence needs for staff and patients. Also, unlike that proposed for hospitals at § 482.15(b)(2), we are not proposing that RHCs/FQHCs have a system to track the location of staff and patients in the facility's care both during and after the emergency.

At § 482.15(b)(3), we propose that hospitals have policies and procedures for safe evacuation from the hospital, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance. We do not believe all of these requirements are appropriate for RHCs/FQHCs, which serve only outpatients. Therefore, at § 491.12(b)(1), we are proposing to require that RHCs/FQHCs have policies and procedures for evacuation from the RHC/FQHC, including appropriate placement of exit signs, staff responsibilities, and needs of the patients.

Unlike the requirement that is being proposed for hospitals at § 482.15(b)(7), we are not proposing that RHCs/FQHCs have arrangements with other RHCs/FQHCs or other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to RHC/FQHC patients. We do not propose to require RHC/FQHCs to comply with the proposed hospital requirement at § 482.15(b)(8) regarding alternate care sites.

In addition, we would not require RHCs/FQHCs to comply with the proposed requirement for hospitals found at § 482.15(c)(5), which would require that a hospital have a means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510. Modified from what has been proposed for hospitals at § 482.15(c)(7), at § 491.12(c)(5), we propose to require RHCs/FCHCs to have a communication plan that would include a means of providing information about the RHCs/FQHCs needs and their ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee. We do not propose requiring RHCs/FQHCs to provide information regarding their occupancy, as we propose for hospitals, since the term occupancy usually refers to bed occupancy in an inpatient facility.

Q. Emergency Preparedness Regulation for End-Stage Renal Disease (ESRD) Facilities (§ 494.62)

Sections 1881(b), 1881(c), and 1881(f)(7) of the Act establish requirements for End-Stage Renal Disease (ESRD) facilities. ESRD is a kidney impairment that is irreversible and permanent and requires either a regular course of dialysis or kidney transplantation to maintain life. Dialysis is the process of cleaning the blood and removing excess fluid artificially with special equipment when the kidneys have failed. There are 5,923 Medicare-participating ESRD facilities in the U.S.

We addressed emergency preparedness requirements for ESRD facilities in the April 15, 2008 final rule (73 FR 20370) entitled, "Conditions for Coverage for End-Stage Renal Disease Facilities; Final Rule". Emergency preparedness requirements are located at § 494.60(d), Condition: Physical environment, Standard: Emergency preparedness. We propose to relocate these existing requirements to proposed § 494.62, Emergency preparedness.

Current regulations include the requirement that dialysis facilities be organized into ESRD Network areas. Our regulations describe these networks at § 405.2110 as "CMS-designated ESRD Networks in which the approved ESRD facilities collectively provide the necessary care for ESRD patients." The ESRD Networks have an important role in an ESRD facility's response to emergencies, as they often arrange for alternate dialysis locations for patients and provide information and resources during emergency situations. As noted earlier, we do not propose incorporating the ESRD Network requirements into this proposed rule. We do not propose to require ESRD facilities to provide basic subsistence needs for staff and patients, whether they evacuate or shelter in place, including food, water, and medical supplies; alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions; emergency lighting; and fire detection, extinguishing, and alarm systems; and sewage and waste disposal as we are proposing for hospitals at § 482.15(b)(1).

At § 494.62(b), we propose to require facilities to address in their policies and procedures, fire, equipment or power failures, care-related emergencies, water supply interruption, and natural disasters in the facility's geographic area.

At § 482.15(b)(3), we propose that hospitals have policies and procedures for the safe evacuation from the hospital, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance. We do not believe all of these requirements are appropriate for ESRD facilities, which serve only outpatients. Therefore, at § 494.62(b)(2), we are proposing to require that ESRD facilities have policies and procedures for evacuation from the facility,

including staff responsibilities and needs of the patients.

At § 494.62(b)(6), we are proposing to require ESRD facilities to develop arrangements with other dialysis facilities or other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to dialysis facility patients. Experience has shown that ESRD facilities tend to use hospitals as back-up when hospital space and personnel need to be used to care for the sickest patients in the community during such emergencies. Thus, we want to emphasize that an organized system of patient care among ESRD facilities during and surrounding emergency events encompasses having a robust system for back-up care available at the various dialysis centers.

At § 494.62(c)(7), dialysis facilities would be required to comply with the proposed requirement for hospitals at § 482.15(c)(7), with one exception. At § 494.62(c)(7), we propose to require dialysis facilities to have a communication plan that include a means of providing information about their needs and their ability to provide assistance to the authority having jurisdiction or the Incident Command Center, or designee. We do not propose to require dialysis facilities to provide information regarding their occupancy, as we proposed for hospitals, since the term occupancy usually refers to bed occupancy in an inpatient facility.

At § 494.62(d)(1)(i), we propose to require ESRD facilities to ensure that staff can demonstrate knowledge of various emergency procedures, including: informing patients of what to do; where to go, including instructions for occasions when the geographic area of the dialysis facility must be evacuated; whom to contact if an emergency occurs while the patient is not in the dialysis facility. This contact information must include an alternate emergency phone number for the facility for instances when the dialysis facility is unable to receive phone calls due to an emergency situation (unless the facility has the ability to forward calls to a working phone number under such emergency conditions); and how to disconnect themselves from the dialysis machine if an emergency occurs.

We would relocate existing requirements for patient training from § 494.60(d)(2) to proposed § 494.62(d)(3), patient orientation. In addition, the facility would have to ensure that, at a minimum, patient care staff maintained current CPR certification and ensure that nursing staff were properly trained in the use of emergency equipment and emergency drugs. With respect to emergency preparedness, the relevance of these requirements has already been established, and since they are existing regulations, they are standard business practice in ESRD facilities.

Current § 494.60(d) would be redesignated. Current requirements for emergency plans at § 494.60 are captured within proposed § 494.62(a). Current language that defines an emergency for dialysis facilities found at § 494.60(d) would be incorporated into proposed § 494.62(b). We would relocate existing requirements for emergency equipment and emergency drugs found at existing § 494.60(d)(3) to § 494.62(b)(9). We would relocate the existing requirement at § 494.60(d)(4)(i) that requires the facility to have a plan to obtain emergency medical system assistance when needed to proposed § 494.62(b)(8). We would relocate the current requirements at § 494.60(d)(4)(iii) for contacting the local emergency preparedness agency at least annually to ensure that the agency is aware of dialysis facility's needs in the event of an emergency to proposed § 494.62(a)(4). We would also redesignate the current § 494.60(e) as § 494.60(d).

III. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

A. Factors Influencing ICR Burden Estimates

Please note that under this proposed rule, a hospital's ICRs would differ from the ICRs of other Medicare or Medicaid provider and supplier types. A significant factor in the burden for each provider or supplier type would be whether the type of facility provides inpatient services, outpatient services, or both. Moreover, even where the proposed regulatory requirements are the same, certain factors would greatly affect the burden for different providers and suppliers. Current Medicare or Medicaid regulations for some providers and suppliers include requirements similar to those in this proposed regulation. For example, existing regulations for RNHCIs and dialysis facilities require both types of facilities to have written disaster plans that address emergencies (42 CFR 403.742(a)(4) and 42 CFR 494.60(d)(4), respectively).

Further, some accrediting organizations (AOs) that have deeming authority for Medicare providers and suppliers have emergency preparedness standards. Those organizations are: The Joint Commission (TJC), the American Osteopathic Association (AOA), the Accreditation Association for Ambulatory Health Care, Inc. (AAAHC), the American Association for Accreditation for Ambulatory Surgery Facilities, Inc. (AAAASF), and Det Norske Veritas Healthcare, Inc. (DNVHC). Each of these AOs has deeming authority for different types of facilities; for example, TJC has comprehensive emergency preparedness requirements for hospitals. Thus, as noted in the hospital discussion later in this section, we anticipate that TJC-accredited hospitals would have a smaller burden associated with this proposed rule than many other providers or suppliers.

In addition, many facilities already have begun preparing for emergencies. According to a study by Niska and Burt, virtually all hospitals already have plans to respond to natural disasters (Niska, R.W. and Burt, C.W. "Bioterrorism and Mass Casualty Preparedness in Hospitals: United States, 2003," CDC, Advance Data, September 27, 2005 found at *http://www.cdc.gov/nchs/data/ad/ad364.pdf*).

Hospitals, as well as other health care providers, also receive grant funding for disaster or emergency preparedness from the federal and state governments, as well as other private and non-profit entities. However, we were unable to determine the amount of funding that has been granted to hospitals, the number of hospitals that received funding, or whether that funding would continue in a predictable manner. We also do not know how the hospitals spent this funding. Therefore, in

determining the burden for this proposed rule, we did not take into account any funding a hospital or other health care provider might have received from sources other than Medicare or Medicaid.

B. Sources of Data Used in Estimates of Burden Hours and Cost Estimates

We obtained the data used in this discussion on the number of the various Medicare and Medicaid providers and suppliers from Medicare's Certification and Survey Provider Enhanced Reporting (CASPER) as of March 1, 2013. We have not included data for health care facilities that are not Medicare or Medicaid certified.

Unless otherwise indicated, we obtained all salary information for the different positions identified in the following assessments from the May 2011 National Occupational Employment and Wage Estimates, United States by the Bureau of Labor Statistics at *http://www.bls.gov/oes/current/oes_nat.htm*. We calculated the estimated hourly rates based upon the national median salary for that particular position, including benefits. Where we were able to identify positions linked to specific providers or suppliers, we used that compensation information. However, in some instances, we used a general position description, such as director of nursing, or we used information for comparable positions. For example, we were not able to locate specific information for physicians who practice in hospices. However, since hospices provide palliative care, we used the compensation information for physicians who work in specialty hospitals.

Based on our experience, certain providers and suppliers typically pay less than the median salary, in which case, we used a salary from a lower percentile. Salary may also be affected by the rural versus urban locations. For example, based on our experience with CAHs, they usually pay their administrators less than the mean hourly wage for Health Service Managers in general medical and surgical hospitals. Thus, we considered the impact of the rural nature of CAHs to estimate the hourly wage for CAH administrators and calculated total compensation by adding in an amount for fringe benefits. According to the Bureau of Labor Statistics, wages and salaries accounted for about 70 percent of total employee compensation. (Bureau of Labor Statistics News Release, "Employer Cost Index—December 2011", retrieved from *www.bls.gov/news.release/pdf/eci.pdf*). Thus, we calculated total compensation using the assumption that salary accounts for 70 percent of total compensation. We would welcome any comments on the accuracy of our compensation estimates. Many health care providers and suppliers could reduce their burden by partnering or collaborating with other facilities to develop their emergency management plans or programs. In estimating the burden associated with this proposed rule, we also took into consideration the many free or low cost emergency management resources health care facilities have available to them. We will discuss the burden for each provider and supplier type included in this proposed rule in the order in which they appear in the CFR.

C. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 403.748)

Proposed § 403.748(a) would require Religious Nonmedical Health Care Institutions (RNHCIs) to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. We propose that the plan must meet the requirements specified at § 403.748(a)(1) through (4). We will discuss the burden for these activities individually beginning with the risk assessment requirement in § 403.748(a)(1).

The current RNHCI CoPs already require RNHCIs to have a written disaster plan that addresses "loss of power, water, sewage, and other emergencies" (42 CFR 403.742(a)(4)). In addition, the CoPs also require RNHCIs' to include measures to evaluate facility safety issues, including physical environment, in their quality assessment and performance improvement (QAPI) program (42 CFR 403.732(a)(1)(vi)). We expect that all RNHCIs have considered some of the risks likely to happen in their facility. However, we expect that all RNHCIs would need to review any existing risk assessment and perform the tasks necessary to ensure their assessment is documented and utilize a facility-based and community based all-hazards approach.

We have not designated any specific process or format for RNHCIs to use in conducting their risk assessment because we believe they need the flexibility to determine how best to accomplish this task. However, we expect that they would obtain input from all of their major departments in the process of developing their risk assessments.

Based on our experience with RNHCIs, we expect that complying with this requirement would require the involvement of an administrator, the

director of nursing, and the head of maintenance. It is important to note that RNHCIs do not provide medical care to their patients. Depending upon the state in which they are located, RNHCIs may not be licensed and may not have licensed or certified staff. RNHCIs generally do not compensate their staff at the same level we have used to determine the burden for other health care providers and suppliers. Therefore, for the purpose of estimating the burden, we have used lower hourly wages for the RNHCI staff than for other providers and suppliers whose staff must comply with licensing and certification standards.

We expect that to perform a risk assessment, the RNHCI's administrator, the director of nursing, and the head of maintenance would attend an initial meeting; review relevant sections of the current risk assessment; prepare comments; attend a follow-up meeting; perform a final review, and approve the risk assessment. We expect that the director of nursing would coordinate the meetings, review and critique the current risk assessment, coordinate comments, develop the new risk assessment, and ensure that it is approved.

We estimate that it would require 9 burden hours for each RNHCI to complete the risk assessment at a cost of $265. There are 16 RNHCIs. Therefore, it would require an estimated 144 annual burden hours (9 burden hours for each RNHCI × 16 RNHCIs = 144 burden hours) for all 16 RNHCIs to comply with this requirement at a cost of $4,240 ($265 estimated cost for each RNHCI × 16 RNHCIs = $4,240 estimated cost).

After conducting a risk assessment, RNHCIs would need to review, revise, and, if necessary, develop new sections for their emergency plans. The current RNHCI CoPs require RNHCIs to have a written disaster plan for emergencies (42 CFR § 403.742(a)(4)). However, based on our experience with RNHCIs, their plans likely would address only evacuation from their facilities. We expect that all RNHCIs would need to review, revise, and develop new sections for their plans.

We expect that the same individuals who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we expect that it would require substantially more time to complete the plan than to complete the risk assessment. We estimate that complying with this requirement would require 12 burden hours for each RNHCI at a cost of $348. Therefore, for all 16 RNHCIs to comply with these requirements would require an estimated 192 burden hours (12 burden hours for each RNHCI × 16 RNHCIs = 192 burden hours) at a cost of $5,568 ($348 estimated cost for each RNHCI × 16 RNHCIs = $5,568 estimated cost).

Under this proposed rule, RNHCIs would be required to review and update their emergency preparedness plans at least annually. For the purpose of determining the burden associated with this requirement, we would expect that RNHCIs already review their plans annually. Based on our experience with Medicare providers and suppliers, health care facilities generally have a compliance officer or other staff member who periodically reviews the facility's program to ensure that it complies with all relevant federal, state, and local laws, regulations, and ordinances. While this requirement is subject to the PRA, we expect that complying with the requirement for an annual review of the emergency preparedness plan would constitute a usual and customary business practice as defined at 5 CFR 1320.3(b)(2). Therefore, we have not assigned a burden.

Proposed § 403.748(b) would require RNHCIs to develop and implement emergency preparedness policies and procedures in accordance with their emergency plan based on the emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. These policies and procedures would have to be reviewed and updated at least annually. At a minimum, we propose that the policies and procedures be required to address the requirements specified in § 403.748(b)(1) through (8). The RNHCIs would need to review their policies and procedures and compare them to their emergency plan, risk assessment, and communication plan. Most RNHCIs would need to revise their existing policies and procedures or develop new policies and procedures.

The current RNHCI CoPs require them to have written policies concerning their services (42 CFR § 403.738). Thus, some RNHCIs may have some emergency preparedness policies and procedures. However, based on our experience with RNHCIs, most of their emergency preparedness policies address only evacuation from the facility.

We expect that these tasks would involve the administrator, the director of nursing, and the head of maintenance. All three would need to review and comment on the RNHCI's current policies and procedures. The director of nursing would revise or develop new policies and procedures, as needed, ensure that they are approved, and compile and disseminate them to the appropriate parties. We estimate that it would require 6 burden hours for each RNHCI to comply with this requirement at a cost of $164. Thus, it would require 96 burden hours (6 burden hours for each RNHCI × 16 RNHCIs = 96 burden hours) for all 16 RNHCIs to comply with the requirements in § 403.748(b)(1) through (8) at a cost of $2,624 ($164 estimated cost for each RNHCI × 16 RNHCIs = $2,624 estimated cost).

Proposed § 403.748(c) would require RNHCIs to develop and maintain an emergency preparedness communication plan that complies with both federal and state law and must be reviewed and updated at least annually. We propose that the communication plan include the information specified at § 403.748(c)(1) through (7). The burden associated with complying with this requirement would be the resources required to review and, if necessary, revise an existing communication plan or develop a new plan. Based on our experience with RNHCIs, we expect that these activities would require the involvement of the RNHCI's administrator, the director of nursing, and the head of maintenance. We estimate that complying with this requirement would require 4 burden hours for each RNCHI at a cost of $116. Thus, it would require an estimated 64 burden hours (4 burden hours for each RNHCI × 16 RNHCIs = 64 burden hours) at a cost of $1,856 ($116 estimated cost for each RNHCI × 16 RNHCIs = $1,856 estimated cost).

We propose that RNHCIs would also have to review and update their emergency preparedness communication plan at least annually. We believe that RNHCIs already review their emergency preparedness communication plans periodically. Thus, complying with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2). Therefore, we have not assigned a burden.

Proposed § 403.748(d) would require RNHCIs to develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually. We are proposing that a RNHCI meet the requirements specified at § 403.748(d)(1) and (2). Section 403.748(d)(1) would require RNHCIs to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain

documentation of the training. Thereafter, the RNHCI would have to provide training at least annually. Based on our experience, all RNHCIs have some type of emergency preparedness training program. However, all RNHCIs would need to compare their current emergency preparedness training programs to their risk assessments and updated emergency preparedness plans, policies and procedures, and communication plans and revise or, if necessary, develop new sections for their training programs.

We expect that complying with these requirements would require the involvement of the RNHCI administrator and the director of nursing. We estimate that it would require 7 burden hours for each RNHCI to develop an emergency training program at a cost of $218. Thus, it would require an estimated 112 burden hours (7 burden hours for each RNHCI × 16 RNHCIs = 112 burden hours) at a cost of $3,488 ($218 estimated cost for each RNHCI × 16 RNHCI = $3,488 estimated cost).

We are proposing that RNHCIs also review and update their emergency preparedness training and testing programs at least annually. Based on our experience with Medicare providers and suppliers, health care facilities generally have a compliance officer or other staff member who periodically reviews the facility's program to ensure that it complies with all relevant federal, state, and local laws, regulations, and ordinances. While this requirement is subject to the PRA, we expect that complying with this requirement would constitute a usual and customary business practice as defined at 5 CFR 1320.3(b)(2). Therefore, we have not calculated an estimate of the burden.

Proposed § 403.748(d)(2) would require RNHCIs to conduct a paper-based, tabletop exercise at least annually. The RNHCI must also analyze its response to and maintain documentation of all tabletop exercises and emergency events, and revise its emergency plan, as needed.

The burden associated with complying with this requirement would be the resources RNHCIs would need to develop the scenarios for the exercises and the necessary documentation. Based on our experience with RNHCIs, RNHCIs already conduct some type of exercise periodically to test their emergency preparedness plans. However, we expect that RNHCIs would not be fully compliant with our proposed requirements. We expect that the director of nursing would develop the scenarios and required documentation. We estimate that these tasks would require 3 burden hours at a cost of $72 for each RNCHI. Based on this estimate, for all 16 RNHCIs to comply with these requirements would require 48 burden hours (3 burden hours for each RNHCI × 16 RNHCIs = 48 burden hours) at a cost of $1,152 ($72 estimated cost for each RNHCI × 16 RNHCI = $1,152 estimated cost).

TABLE 2—BURDEN HOURS AND COST ESTIMATES FOR ALL 16 RNHCIS TO COMPLY WITH THE ICRS CONTAINED IN § 403.748 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)
§ 403.748(a)(1)	0938—New	16	16	9	144	**	4,240	0	4,240
§ 403.748(a)(1)—(4)	0938—New	16	16	12	192	**	5,568	0	5,568
§ 403.748(b)	0938—New	16	16	6	96	**	2,624	0	2,624
§ 403.748(c)	0938—New	16	16	4	64	**	1,856	0	1,856
§ 403.748(d)(1)	0938—New	16	16	7	112	**	3,488	0	3,488
§ 403.748(d)(2)	0938—New	16	16	3	48	**	1,152	0	1,152
Totals		16	108	41	656				18,928

** The hourly labor cost is blended between the wages for multiple staffing levels.

D. ICRs Regarding Condition for Coverage: Emergency Preparedness (§ 416.54)

Proposed § 416.54(a) would require Ambulatory Surgical Centers (ASCs) to develop and maintain an emergency preparedness plan and review and update that plan at least annually. We propose that the plan must meet the requirements contained in § 416.54(a)(1) through (4).

We will discuss the burden for these activities individually below beginning with the risk assessment requirement in § 416.54(a)(1). We expect that each ASC would conduct a thorough risk assessment. This would require the ASC to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. We expect that an ASC would consider its location and geographical area; patient population, including those with special needs; and the type of services the ASC has the ability to provide in an emergency. The ASC also would need to identify the measures it must take to ensure continuity of its operation, including delegations and succession plans.

The burden associated with this requirement would be the time and effort necessary to perform a thorough risk assessment. There are 5,354 ASCs. The current regulations covering ASCs include some emergency preparedness requirements; however, those requirements primarily are related to internal emergencies, such as a fire.

A significant factor in determining the burden is the accreditation status of an ASC. Of the 5,354 ASCs, 3,786 are non-accredited and 1,568 are accredited. Of the 1,568 accredited ASCs, we estimate that 350 are accredited by The Joint Commission (TJC), 876 by the AAAHC, and additional facilities are accredited by the AOA or the AAAASF. The accreditation standards for these organizations vary in their requirements related to emergency preparedness. The AOA's standards are very similar to the current ASC regulations. AAAASF does have some emergency preparedness requirements, such as requirements for responses or written protocols for security emergencies, for example, intruders and other threats to staff or patients; power failures; transferring patients; and emergency evacuation of the facility. However, the accreditation standards for both the AOA and AAAASF would not significantly satisfy the ICRs contained in this proposed rule. Therefore, for the purpose of determining the burden imposed on ASCs by this proposed rule, we will include the ASCs that are accredited by both the AOA and AAAASF with the non-accredited ASCs.

TJC and AAAHC's accreditation standards contain more extensive emergency preparedness requirements than the accreditation standards of either AOA or AAAASF. For example, TJC standards contain requirements for risk assessments and an emergency management plan. AAAHC's standards include requirements for both internal and external emergencies and drills for the facility's internal emergency plan.

Therefore, in discussing the individual burden requirements in this proposed rule, we will discuss the burden for the estimated 1,226 accredited ASCs by either the AAHC or TJC (876 AAAHC-accredited ASCs + 350 TJC-accredited ASCs = 1,226 ASCs accredited by TJC or AAAHC) separately from the remaining 4,128 (ASCs that are not accredited by an accrediting organization or accredited by the AOA and AAAASF). For some requirements, only the TJC accreditation standards are significantly like those in the proposed rule. For those requirements, we will analyze the 350 TJC-accredited ASCs separately from the 5,004 non TJC-accredited ASCs (5,354 ASCs—350 TJC-accredited ASCs = 5,004 non TJC-accredited ASCs).

For the purpose of determining the burden for the TJC-accredited ASCs, we used TJC's Comprehensive Accreditation Manual for Ambulatory Care: The Official Handbook 2008 (CAMAC). Concerning the requirement for a risk assessment in proposed § 416.54(a)(1), in the chapter entitled "Management of the Environment of Care" (EC), ASCs are required to conduct comprehensive, proactive risk assessments (CAMAC, CAMAC Refreshed Core, January 2007, (CAMAC), TJC Standard EC.1.10, EP 4, p. EC–9). In addition, ASCs must conduct a hazard vulnerability analysis (HVA) (CAMAC, Standard EC.4.10, EP 1, p. EC–12). The HVA requires the identification of potential emergencies and the effects those emergencies could have on the ASC's operations and the demand for its services (CAMAC, p. EC–12). We expect that TJC-accredited ASCs already conduct a risk assessment that complies with these requirements. If there are any tasks these ASCs need to complete to satisfy the requirement for a risk assessment, we expect that the burden imposed by this proposed requirement would be negligible. For the 350 TJC-accredited ASCs, the risk assessment requirement would constitute a usual and customary business practice. While this requirement is subject to the PRA, we expect that complying with this requirement would constitute a usual and customary business practice as defined at 5 CFR 1320.3(b)(2). Therefore, we have not estimated the amount of regulatory burden.

For the purpose of determining the burden for the 876 AAAHC-accredited ASCs, we used the Accreditation Handbook for Ambulatory Health Care 2008 (AHAHC). The AAAHC standards do not contain a specific requirement for the ASC to perform a risk assessment. However, in discussing the requirement for drills, the AAAHC notes that such drills should be appropriate to the facility's activities and environment (AHAHC, Accreditation Association for Ambulatory Health Care, Inc., Core Standards, Chapter 8. Facilities and Environment, Element E, p. 37). Therefore, we expect that in fulfilling this core standard that the 876 AAAHC-accredited ASCs have performed some type of risk assessment. However, we do not expect that this would satisfy the requirement for a documented, facility-based and community-based risk assessment that addressed the elements required for the emergency plan. Therefore, the 876 AAAHC-accredited ASCs would be included in the burden analysis with the ASCs that are non-accredited or are accredited by AOA and AAAASF for the risk assessment requirement for 5,004 non TJC-accredited ASCs (5,354 total ASCs–350 TJC-accredited ASCs = 5,004 non TJC-accredited ASCs).

We expect that all ASCs have already performed at least some of the work needed for a risk assessment. However, many probably have not performed a thorough risk assessment. Therefore, we expect that all non TJC-accredited ASCs would perform thorough reviews of their current risk assessments, if they have them, and revise them to ensure they have updated the assessments and that they have included all of the requirements in proposed § 416.54(a).

We have not designated any specific process or format for ASCs to use in conducting their risk assessments because we believe that ASCs, as well as other health care providers and suppliers, need maximum flexibility in determining the best way for their facilities to accomplish this task. However, we expect health care facilities to, at a minimum, include input from all of their major departments in the process of developing their risk assessments. Based on our experience working with ASCs, we expect that conducting the risk assessment would require the involvement of an administrator and a quality improvement nurse. We expect that to comply with the requirements of this subsection, both of these individuals would need to attend an initial meeting, review the current assessment, prepare their comments, attend a follow-up meeting, perform a final review, and approve the risk assessment. In addition, we expect that the quality improvement nurse would coordinate the meetings; perform an initial review of the current risk assessment; provide suggestions or a critique of the risk assessment; coordinate comments; revise the original risk assessment; develop any necessary sections for the risk assessment; and ensure that the appropriate parties approve the new risk assessment. We estimate that complying with this risk assessment requirement would require 8 burden hours for each ASC at a cost of $477. Based on that estimate, it would require 40,032 burden hours (8 burden hours for each ASC × 5,004 non TJC-accredited ASCs = 40,032 burden hours) for all non TJC-accredited ASCs to comply with this risk assessment requirement at a cost of $2,386,908 ($477 estimated cost for each ASC × 5,004 ASCs = $2,386,908 estimated cost).

After conducting the risk assessment, ASCs would be required to develop and maintain emergency preparedness plans in accordance with § 416.54(a)(1) through (4). All TJC-accredited ASCs must already comply with many of the requirements in proposed § 416.54(a). All TJC-accredited ASCs are already required to develop and maintain a "written emergency management plan describing the process for disaster readiness and emergency management" (CAMAC, Standard EC.4.10, EP 3, EC–13). We expect that the TJC-accredited ASCs already have emergency preparedness plans that comply with these requirements. If there are any activities required to comply with these requirements, we expect that the burden would be negligible. Thus, for 350 TJC-accredited ASCs, this requirement would constitute a usual and customary business practice for these ASCs in accordance with 5 CFR 1320.3(b)(2). Therefore, we will not include this activity in the burden analysis for those ASCs.

AAAHC-accredited ASCs are required to have a "comprehensive emergency plan to address internal and external emergencies" (AHAC, Chapter 8. Facilities and Environment, Element D, p. 37). However, we do not believe that this requirement ensures compliance with all of the requirements for an emergency plan. We will include the 876 AAAAHC-accredited ASCs in the burden analysis for this requirement.

We expect that the 5,004 non TJC-accredited ASCs have developed some type of emergency preparedness plan. However, under this proposed rule, all of these ASCs would have to review their current plans and compare them to the risk assessments they performed in accordance with proposed § 416.54(a)(1). The ASCs would then need to update, revise, and in some cases, develop new sections to ensure that their plans incorporate their risk assessments and address all of the proposed requirements. The ASC would also need to review, revise, and, in some

cases, develop the delegations of authority and succession plans that ASCs determine are necessary for the appropriate initiation and management of their emergency preparedness plans.

The burden associated with this requirement would be the time and effort necessary to develop an emergency preparedness plan that complies with all of the requirements in proposed § 416.54(a)(1) through (4). Based upon our experience with ASCs, we expect that the administrator and the quality improvement nurse who would be involved in the risk assessment would also be involved in developing the emergency preparedness plan. We estimate that complying with this requirement would require 11 burden hours for each ASC at a cost of $653. Therefore, based on that estimate, for the 5,004 non TJC-accredited ASCs to comply with the requirements in this section would require burden hours (11 burden hours for each non TJC-accredited ASC × 5,004 non TJC-accredited ASCs = 55,044 burden hours) at a cost of $3,267,612 ($653 estimated cost for each non TJC-accredited ASC × 5,004 non TJC-accredited ASCs = $3,267,612).

All of the ASCs would also be required to review and update their emergency preparedness plans at least annually. For the purpose of determining the burden for this requirement, we would expect that ASCs would review their plans annually. All ASCs have a professional staff person, generally a quality improvement nurse, whose responsibility entails ensuring that the ASC is delivering quality patient care and that the ASC is complying with regulations concerning patient care. We expect that the quality improvement nurse would be primarily responsible for the annual review of the ASC's emergency preparedness plan. We expect that complying with this requirement would constitute a usual and customary business practice for ASCs in accordance with 5 CFR 1320.3(b)(2). Therefore, we will not include this activity in the burden analysis.

Section 416.54(b) proposes that each ASC be required to develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan set forth in paragraphs (c) of this section. We would require ASCs to review and update these policies and procedures at least annually. These policies and procedures would be required to include, at a minimum, the requirements listed at § 416.54(b)(1) through (7). We expect that ASCs would develop emergency preparedness policies and procedures based upon their risk assessments, emergency preparedness plans, and communication plans. Therefore, ASCs would need to thoroughly review their emergency preparedness policies and procedures and compare them to all of the information previously noted. The ASCs would then need to revise, or in some cases, develop new policies and procedures that would ensure that the ASCs' emergency preparedness plans address the specific proposed elements.

The TJC accreditation standards already require many of the specific elements that are required in this subsection. For example, in the chapter entitled "Leadership" (LD), TJC-accredited ASCs are required to "develop policies and procedures that guide and support patient care, treatment, and services" (CAMAC, Standard LD.3.90, EP 1, p. LD–12a). In addition, TJC-accredited ASCs must already address or perform a HVA; processes for communicating with and assigning staff under emergency conditions; provision of subsistence or critical needs; evacuation of the facility; and alternate sources for fuel, water, electricity, etc. (CAMAC, Standard EC.4.10, EPs 1, 7–10, 12, and 20, pp. EC–12–13). They must also critique their drills and modify their emergency management plans in response to the critiques (CAMAC, Standard EC.4.20, EPs 12–16, pp. EC–14–14a). In the chapter entitled, "Management of Information" (IM), they are required to protect and preserve the privacy and confidentiality of sensitive data (CAMAC, Standard IM.2.10, EPs 1 and 9, p. IM–6). If TJC-accredited ASCs have any tasks required to satisfy these requirements, we expect they would constitute only a negligible burden. For the 350 TJC-accredited ASCs, the requirement for emergency preparedness policies and procedures would constitute a usual and customary business practice in accordance with 5 CFR 1320.3(b)(2). Therefore, we will not include this activity in the burden analysis for these 350 TJC-accredited ASCs.

AAAHC standards require ASCs to have "the necessary personnel, equipment and procedures to handle medical and other emergencies that may arise in connection with services sought or provided" (AHAHC, Chapter 8. Facilities and Environment, Element B, p. 37). Although, we expect that AAAHC-accredited ASCs probably already have policies and procedures that address at least some of the requirements, we expect that they will sustain a considerable burden in satisfying all of the requirements. We will include the AAAHC-accredited ASCs with the non-accredited ASCs in determining the burden for the requirements in proposed § 416.54(b).

We expect that all of the 5,004 non TJC-accredited ASCs have some emergency preparedness policies and procedures. However, we expect that all of these ASCs would need to review their policies and procedures and revise their policies and procedures to ensure that they address all of the proposed requirements. We expect that the quality improvement nurse would initially review the ASC's emergency preparedness policies and procedures. The quality improvement nurse would send any recommendations for changes or additional policies or procedures to the ASC's administrator. The administrator and quality improvement nurse would need to make the necessary revisions and draft any necessary policies and procedures. We estimate that for each non TJC-accredited ASC to comply with this proposed requirement would require 9 burden hours at a cost of $505. For all 5,004 ASCs to comply with this requirement would require an estimated 45,036 burden hours (9 burden hours for each non TJC-accredited ASC × 5,004 non TJC-accredited ASCs = 45,036) at a cost of $2,527,020. ($505 estimated cost for each non TJC-accredited ASC × 5,004 ASCs = $2,527,020 estimated cost).

Proposed § 416.54(c) would require each ASC to develop and maintain an emergency preparedness communication plan that complies with both federal and state law. We also propose that ASCs would have to review and update these plans at least annually. These communication plans would have to include the information listed in § 416.54(c)(1) through (7). The burden associated with developing and maintaining an emergency preparedness communication plan would be the time and effort necessary to review, revise, and, if necessary, develop new sections for the ASC's emergency preparedness communications plan to ensure that it satisfied these requirements.

The TJC-accredited ASCs are required to have a plan that "identifies backup internal and external communication systems in the event of failure during emergencies" (CAMAC, Standard EC.4.10, EP 18, p. EC–13). There are also requirements for identifying, notifying, and assigning staff, as well as notifying external authorities (CAMAC, Standard EC.4.10, EPs 7–9, p. EC–13). In addition, the facility's plan must provide for controlling information about patients

(CAMAC, Standard EC.4.10, EP 10, p. EC–13). If any revisions or additions are necessary to satisfy the proposed requirements, we expect the revisions or additions would be those incurred during the course of normal business and thereby impose no additional burden. Thus, for the TJC-accredited ASCs, the proposed requirements for the emergency preparedness communication plan would constitute a usual and customary business practice for ASCs as stated in 5 CFR 1320.3(b)(2). Thus, we will not include this activity by these TJC-accredited ASCs in the burden analysis.

The AAAHC standards do not have a specific requirement for a communication plan for emergencies. However, AAAHC-accredited ASCs are required to have the "necessary personnel, equipment and procedures to handle medical and other emergencies that may arise in connection with services sought or provided (AAAHC, 8. Facilities and Environment, Element B, p. 37) and "a comprehensive emergency plan to address internal and external emergencies" (AAAHC, 8. Facilities and Environment, Element D, p. 37). Since communication is vital to any ASC's operations, we expect that communications would be included in the AAAHC-accredited ASC's plans and procedures. However, we do not believe that these requirements ensure that the AAAHC-accredited ASCs are already fully satisfying all of the requirements. Therefore, we will include the AAAHC-accredited ASCs in with the non-accredited ASCs in determining the burden for these requirements for a total of 5,004 non TJC-accredited ASCs (5,354 total ASCs—350 TJC-accredited ASCs).

We expect that all non TJC-accredited ASCs currently have some type of emergency preparedness communication plan. It is standard practice in the health care industry to have and maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility, such as cell phones; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. We expect that all ASCs already satisfy the requirements in proposed § 416.54(c)(1) through (4). However, for the requirements in proposed § 416.54(c)(5) through (7), all ASCs would need to review, revise, and, if necessary, develop new sections for their plans to ensure that they include all of the proposed requirements. We expect that this would require the involvement of the ASC's administrator and a quality improvement nurse. We estimate that complying with this proposed requirement would require 4 burden hours at a cost of $227. Therefore, for all non TJC-accredited ASCs to comply with the requirements in this section would require an estimated 20,016 burden hours (4 hours for each non TJC-accredited ASC × 5,004 non TJC-accredited ASCs = 20,016 burden hours) at a cost of $1,135,908 ($227 estimated cost for each non TJC-accredited ASC × 5,004 non TJC-accredited ASCs = $1,135,908 estimated cost).

We also propose that ASCs must review and update their emergency preparedness communication plans at least annually. We believe that ASCs already review their emergency preparedness communication plans periodically. Therefore, complying with this requirement would constitute a usual and customary business practice for ASCs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 416.54(d) would require ASCs to develop and maintain emergency preparedness training and testing programs that ASCs must review and update at least annually. Specifically, ASCs must meet the requirements listed at proposed § 416.54(d)(1) and (2).

The burden associated with complying with these requirements would be the time and effort necessary for an ASC to review, update, and, in some cases, develop new sections for its emergency preparedness training program. We expect that all ASCs already provide training on their emergency preparedness policies and procedures. However, all ASCs would need to review their current training and testing programs and compare their contents to their risk assessments, emergency preparedness plans, policies and procedures, and communication plans.

Proposed § 416.54(d)(1) would require ASCs to provide initial training in their emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. ASCs would have to ensure that their staff can demonstrate knowledge of emergency procedures. Thereafter, ASCs would have to provide the training at least annually. TJC-accredited ASCs must provide an initial orientation to their staff and independent practitioners (CAMAC, Standard 2.10, HR–8). They must also provide "on-going education, including in-services, training, and other activities" to maintain and improve staff competence (CAMAC, Standard 2.30, HR–9). We expect that these TJC-accredited ASCs include some training on their facilities' emergency preparedness policies and procedures in their current training programs. However, these requirements do not contain any requirements for training volunteers. Thus, TJC accreditation standards do not ensure that TJC-accredited ASCs are already fulfilling all of the proposed requirements, and we expect that the TJC-accredited ASCs will incur a burden complying with these requirements. Therefore, we will include these TJC-accredited ASCs in determining the burden for these requirements.

The AAAHC-accredited ASCs are already required to ensure that "all health care professionals have the necessary and appropriate training and skills to deliver the services provided by the organization" (AAAHC, Chapter 4. Quality of Care Provided, Element A, p. 28). Since these ASCs are required to have an emergency plan that addresses internal and external emergencies, we expect that all of the AAAHC-accredited ASCs already are providing some training on their emergency preparedness policies and procedures. However, this requirement does not include any requirement for annual training or for any training for staff that are not health care professionals. This AAAHC-accredited requirement does not ensure that these ASCs are already complying with the proposed requirements. Therefore, we will include these AAAHC-accredited ASCs in determining the information collection burden for these requirements.

Based upon our experience with ASCs, we expect that all 5,354 ASCs have some type of emergency preparedness training program. We also expect that these ASCs would need to review their training programs and compare them to their risk assessments, emergency preparedness plans, policies and procedures, and communication plans. The ASCs would then need to make any necessary revisions to their training programs to ensure they comply with these requirements. We expect that complying with this requirement would require the involvement of an administrator and a quality improvement nurse. We estimate that for each ASC to develop a comprehensive emergency training program would require 6 burden hours at a cost of $329. Therefore, the estimated annual burden for all 5,354 ASCs to comply with these requirements is 32,124 burden hours (6

burden hours × 5,354 ASCs =32,124 burden hours) at a cost of $1,761,466 ($329 estimated cost for each ASC × 5,354 ASCs = $1,761,466 estimated cost).

We propose that ASCs would also have to review and update their emergency preparedness training programs at least annually. For the purpose of determining the burden for this requirement, we would expect that ASCs would review their emergency preparedness training program annually. We expect that all ASCs have a quality improvement nurse responsible for ensuring that the ASC is delivering quality patient care and that the ASC is complying with patient care regulations. We expect that the quality improvement nurse would be primarily responsible for the annual review of the ASC's emergency preparedness training program. Thus, complying with this requirement would constitute a usual and customary business practice for ASCs in accordance with 5 CFR 1320.3(b)(2). Thus, we will not include this activity in this burden analysis.

Proposed § 416.54(d)(2) would require ASCs to participate in a community mock disaster drill and, if one was not available, conduct an individual, facility-based mock disaster drill, at least annually. ASCs would also have to conduct a paper-based, tabletop exercise at least annually. If the ASC experiences an actual natural or man-made emergency that requires activation of their emergency plan, the ASC would be exempt from the requirement for a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. ASCs would also be required to analyze their response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. To comply with this requirement, ASCs would need to develop a scenario for each drill and exercise. ASCs would also need to develop the documentation necessary for recording what happened during drills, exercises, and emergency events and analyze their responses to these events.

TJC-accredited ASCs are required to regularly test their emergency management plans at least twice a year, critique each exercise, and modify their emergency management plans in response to those critiques (CAMAC, Standard EC.4.20, EP 1 and 12–16, p. EC–14–14a). In addition, the scenarios for these drills should be realistic and related to the priority emergencies the ASC identified in its HVA (CAMAC, Standard EC.4.20, EP 5, p. EC–14). However, the EPs for this standard do not contain any requirements for the drills to be community-based; for there to be a paper-based, tabletop exercise; or for the ASCs to maintain documentation of these drills, exercises, or emergency events. These TJC accreditation requirements do not ensure that TJC-accredited ASCs are already complying with these requirements. Therefore, the TJC-accredited ASCs will be included in the burden estimate.

The AAAHC-accredited ASCs already are required to perform at least four drills annually of their internal emergency plans (AAAHC, Chapter 8. Facilities and Environment, Element E, p. 37). However, there is no requirement for a paper-based, tabletop exercise; for a community-based drill; or for the ASCs to maintain documentation of their drills, exercises, or emergency events. This AAAHC accreditation requirement does not ensure that AAAHC-accredited ASCs are already complying with these requirements. Therefore, the AAAHC-accredited ASCs will be included in the burden estimate.

Based on our experience with ASCs, we expect that all of the 5,354 ASCs would be required to develop scenarios for a mock disaster drill and a paper-based, tabletop exercise and the documentation necessary to record and analyze these events, as well as any emergency events. Although we believe many ASCs may have developed scenarios and documentation for whatever type of drills or exercises they had previously performed, we expect all ASCs would need to ensure that the testing of their emergency preparedness plans comply with these requirements. Based upon our experience with ASCs, we expect that complying with this requirement would require the involvement of an administrator and a quality improvement nurse. We estimate that for each ASC to comply would require 5 burden hours at a cost of $278. Therefore, for all 5,354 ASCs to comply with this requirement would require an estimated 26,770 burden hours (5 burden hours for each ASC × 5,354 ASCs = 26,770 burden hours) at a cost of $1,488,412 ($278 estimated cost for each ASC × 5,354 ASCs = $1,488,412 estimated cost).

TABLE 3—BURDEN HOURS AND COST ESTIMATES FOR ALL 5,354 ASCS TO COMPLY WITH THE ICRS CONTAINED IN § 416.54 CONDITION: EMERGENCY PREPAREDNESS

** The hourly labor cost is blended between the wages for multiple staffing levels.

E. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 418.113)

Proposed § 418.113(a) would require hospices to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. We propose that the plan meet the criteria listed in proposed § 418.113(a)(1) through (4).

Although proposed § 418.113(a) is entitled "Emergency Plan" and the requirement for the plan is stated first, the emergency plan must include and be based upon a risk assessment. Therefore, since hospices must perform their risk assessments before beginning, or at least before they complete, their plans, we will discuss the burden related to performing the risk assessment first.

Proposed § 113(a)(1) would require all hospices to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. We expect that in performing a risk assessment, a hospice would need to consider its physical location, the geographic area in which it is located, and its patient population.

The burden associated with this requirement would be the time and effort necessary to perform a thorough

risk assessment. There are 3,773 hospices. There are 2,584 hospices that provide care only to patients in their homes and 1,189 hospices that offer inpatient care directly (inpatient hospices). When we use the term "inpatient hospice," we are referring to a hospice that operates its own inpatient care facility; that is, the hospice provides the inpatient care itself. By "outpatient hospices", we are referring to hospices that only provide in-home care, and contract with other facilities to provide inpatient care. The current requirements for hospices contain emergency preparedness requirements for inpatient hospices only (42 CFR 418.110). Inpatient hospices must have "a written disaster preparedness plan in effect for managing the consequences of power failures, natural disasters, and other emergencies that would affect the hospice's ability to provide care," as stated in 42 CFR 418.110(c)(1)(ii). Thus, we expect inpatient hospices already have performed some type of risk assessment during the process of developing their disaster preparedness plan. However, these risk assessments may not be documented or may not address all of the requirements under proposed § 418.113(a). Therefore, we believe that all inpatient hospices would have to conduct a thorough review of their current risk assessments and then perform the necessary tasks to ensure that their facilities' risk assessments comply with these requirements.

We have not designated any specific process or format for hospices to use in conducting their risk assessments because we believe hospices need maximum flexibility in determining the best way for their facilities to accomplish this task. However, we believe that in the process of developing a risk assessment, health care institutions should include representatives from or obtain input from all of their major departments. Based on our experience with hospices, we expect that conducting the risk assessment would require the involvement of the hospice's administrator and an interdisciplinary group (IDG). The current Hospice CoPs require every hospice to have an IDG that includes a physician, registered nurse, social worker, and pastoral or other counselor. The responsibilities of one of a hospice's IDGs, if they have more than one, include the establishment of "policies governing the day-to-day provision of hospice care and services" (42 CFR 418.56(a)(2)). Thus, we believe the IDG would be involved in performing the risk assessment.

We expect that members of the IDG would attend an initial meeting; review any existing risk assessment; develop comments and recommendations for changes to the assessment; attend a follow-up meeting; perform a final review; and approve the risk assessment. We expect that the administrator would coordinate the meetings, perform an initial review of the current risk assessment, provide a critique of the risk assessment, offer suggested revisions, coordinate comments, develop the new risk assessment, and ensure that the necessary staff approves the new risk assessment. We believe it is likely that the administrator would spend more time reviewing and working on the risk assessment than the other individuals in the IDG. We estimate it would require 10 burden hours to review and update the risk assessment at a cost of $496. There are 1,189 inpatient hospices. Therefore, based on that estimates, it would require 11,890 burden hours (10 burden hours for each inpatient hospice × 1,189 inpatient hospices 11,890 burden hours) for all inpatient hospices to comply with this requirement at a cost of $589,744 ($496 estimated cost for each inpatient hospice × 1,189 inpatient hospices = $589,744 estimated cost).

There are no emergency preparedness requirements in the current hospice CoPs for hospices that provide care to patients in their homes. However, it is standard practice for health care facilities to plan and prepare for common emergencies, such as fires, power outages, and storms. Although we expect that these hospices have considered at least some of the risks they might experience, we anticipate that these facilities would require more time than an inpatient hospice to perform a risk assessment. We estimate that each hospice that provides care to patients in their homes would require 12 burden hours to develop its risk assessment at a cost of $593. Therefore, based on that estimate, for all 2,584 hospices that provide care to patients in their homes, it would require 31,008 burden hours (12 burden hours for each hospice × 2,584 hospices = 31,008 burden hours) to comply with this requirement at a cost of $1,532,312 ($593 estimated cost for each hospice × 2,584 hospices = $1,532,312 estimated cost). Based on the previous calculations, we estimate that for all 3,773 hospices to develop a risk assessment would require 42,898 burden hours at a cost of $2,122,056.

After conducting the risk assessments, hospices would have to develop and maintain emergency preparedness plans that they would have to review and update at least annually. We expect all hospices to compare their current emergency plans, if they have them, to the risk assessments they performed in accordance with proposed § 418.113(a)(1). In addition, hospices would have to comply with the requirements in § 418.113(a)(1) through (4). They would then need to review, revise, and, if necessary, develop new sections of their plans to ensure they comply with these requirements.

The current hospice CoPs require inpatient hospices to have "a written disaster preparedness plan in effect for managing the consequences of power failures, natural disasters, and other emergencies that would affect the hospice's ability to provide care" (42 CFR 418.110(c)(1)(ii)). We believe that all inpatient hospices already have some type of emergency preparedness or disaster plan. However, their plans may not address all likely medical and non-medical emergency events identified by the risk assessment. Further, their plans may not include strategies for addressing likely emergency events or address their patient population; the type of services they have the ability to provide in an emergency; or continuity of operations, including delegations of authority and succession plans. We expect that an inpatient hospice would have to review its current plan and compare it to its risk assessment, as well as to the other requirements we propose. We expect that most inpatient hospices would need to update and revise their existing emergency plans, and, in some cases, develop new sections to comply with our proposed requirements.

The burden associated with this proposed requirement would be the time and effort necessary to develop an emergency preparedness plan or to review, revise, and develop new sections for an existing emergency plan. Based upon our experience with inpatient hospices, we expect that these activities would require the involvement of the hospice's administrator and an IDG, that is, a physician, registered nurse, social worker, and counselor. We believe that developing the plan would require more time to complete than the risk assessment.

We expect that these individuals would have to attend an initial meeting, review relevant sections of the facility's current emergency preparedness or disaster plan(s), develop comments and recommendations for changes to the facility's plan, attend a follow-up meeting, perform a final review, and approve the emergency plan. We expect

that the administrator would probably coordinate the meetings, perform an initial review of the current emergency plan, provide a critique of the emergency plan, offer suggested revisions, coordinate comments, develop the new emergency plan, and ensure that the necessary parties approve the new emergency plan. We expect the administrator would probably spend more time reviewing and working on the emergency plan than the other individuals. We estimate that it would require 14 burden hours for each inpatient hospice to develop its emergency preparedness plan at a cost of $742. Based on this estimate, it would require 16,646 burden hours (14 burden hours for each inpatient hospice × 1,189 inpatient hospices = 16,646 burden hours) for all inpatient hospices to complete their plans at a cost of $882,238 ($742 estimated cost for each inpatient hospice × 1,189 inpatient hospices = $882,238 estimated cost).

As discussed earlier, we have no current regulatory requirement for hospices that provide care to patients in their homes to have emergency preparedness plans. However, it is standard practice for health care providers to plan for common emergencies, such as fires, power outages, and storms. Although we expect that these hospices already have some type of emergency or disaster plan, each hospice would need to review its emergency plan to ensure that it addressed the risks identified in its risk assessment and complied with the proposed requirements. We expect that an administrator and the individuals from the hospice's IDG would be involved in reviewing, revising, and developing a facility's emergency plan. However, since there are no current requirements for hospices that provide care to patients in their homes have emergency plans, we believe it would require more time for each of these hospices than for inpatient hospices to complete an emergency plan. We estimate that for each hospice that provides care to patients in their homes to comply with this proposed requirement would require 20 burden hours at an estimated cost of $1,046. Based on that estimate, for all 2,584 of these hospices to comply with this requirement would require 51,680 burden hours (20 burden hours for each hospice × 2,584 hospices = 51,680 burden hours) at a cost of $2,702,864 ($1,046 estimated cost for each hospice × 2,584 hospices = $2,702,864 estimated cost). We estimate that for all 3,773 hospices to develop an emergency preparedness plan would require 68,326 burden hours at a cost of $3,585,102.

Hospices would also be required to review and update their emergency preparedness plans at least annually. The current hospice CoPs require inpatient hospices to periodically review and rehearse their disaster preparedness plan with their staff, including non-employee staff (42 CFR 418.110(c)(1)(ii)). For purposes of this burden estimate, we would expect that under this proposed rule, inpatient hospices would review their emergency plans prior to reviewing them with all of their employees and that this review would occur annually.

We expect that all hospices, both inpatient and those that provide care to patients in their homes, have an administrator who is responsible for the day-to-day operation of the hospice. Day-to-day operations would include ensuring that all of the hospice's plans are up-to-date and in compliance with relevant federal, state, and local laws, regulations, and ordinances. In addition, it is standard practice in health care organizations to have a professional employee, generally an administrator, who periodically reviews their plans and procedures. We expect that complying with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2). Thus, we will not include this activity in the burden analysis.

Proposed § 418.113(b) would require each hospice to develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. It would also require hospices to review and update these policies and procedures at least annually. At a minimum, the hospice's policies and procedures would be required to address the requirements listed at § 418.113((b)(1) through (6).

We expect that all hospices have some emergency preparedness policies and procedures because the current hospice CoPs for inpatient hospices already require them to have "a written disaster preparedness plan in effect for managing the consequences of power failures, natural disasters, and other emergencies that would affect the hospice's ability to provide care" (42 CFR 418.110(c)(1)(ii)). In addition, the responsibilities for at least one of a hospice's IDGs, if they have more than one, include the establishment of "policies governing the day-to-day provision of hospice care and services" (42 CFR 418.56(a)(2)). However, we also expect that all inpatient hospices would need to review their current policies and procedures, assess whether they contain everything required by their facilities' emergency preparedness plans, and revise and update them as necessary.

The burden associated with reviewing, revising, and updating a hospice's emergency policies and procedures would be the resources needed to ensure they comply with these requirements. Since at least one of a hospice's IDGs would be responsible for developing policies that govern the daily care and services for hospice patients (42 CFR 418.56(a)(2)), we expect that an IDG would be involved with reviewing and revising a hospice's existing policies and procedures and developing any necessary new policies and procedures. We estimate that an inpatient hospice's compliance with this requirement would require 8 burden hours at a cost of $399. Therefore, based on that estimate, all 1,189 inpatient hospices' compliance with this requirement would require 9,512 burden hours (8 burden hours for each inpatient hospice × 1,189 inpatient hospices = 9,512 burden hours) at a cost of $474,411 ($399 estimated cost for each inpatient hospice × 1,189 inpatient hospices = $474,411 estimated cost).

Although there are no existing regulatory requirements for hospices that provide care to patients in their homes to have emergency preparedness policies and procedures, it is standard practice for health care organizations to prepare for common emergencies, such as fires, power outages, and storms. We expect that these hospices already have some emergency preparedness policies and procedures. However, under this proposed rule, the IDG for these hospices would need to accomplish the same tasks as described earlier for inpatient hospices to ensure that these policies and procedures comply with the proposed requirements.

We estimate that each hospice's compliance with this requirement would require 9 burden hours at a cost of $454. Therefore, based on that estimate, all 2,584 hospices' that provide care to patients in their homes to comply with this requirement would require 23,256 burden hours (9 burden hours for each hospice × 2,584 hospices = 23,256 burden hours) at a cost of $1,173,136 ($454 estimated cost for each hospice × 2,584 hospices = $1,173,136 estimated cost).

Thus, we estimate that development of emergency preparedness policies and procedures for all 3,773 hospices would

require 32,768 burden hours at a cost of $1,647,547.

Proposed § 418.113(c) would require a hospice to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. Hospices would also have to review and update their plans at least annually. The communication plan would have to include the requirements listed at § 418.113(c)(1) through (7).

We believe that all hospices already have some type of emergency preparedness communication plan. Although only inpatient hospices have a current requirement for disaster preparedness (42 CFR 418.110(c)), it is standard practice for health care organizations to maintain contact information for their staff and for outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the organization (for example, cell phones); and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. However, many hospices, both inpatient hospices and hospices that provide care to patients in their homes, may not have formal, written emergency preparedness communication plans. We expect that all hospices would need to review, update, and in some cases, develop new sections for their plans to ensure that those plans include all of the elements we propose requiring for hospice communication plans.

The burden associated with complying with this requirement would be the resources required to ensure that the hospice's emergency communication plan complied with these requirements. Based upon our experience with hospices, we anticipate that satisfying these requirements would require only the involvement of the hospice's administrator. Thus, for each hospice, we estimate that complying with this requirement would require 3 burden hours at a cost of $165. Therefore, based on that estimate, compliance with this requirement for all 3,773 hospices would require 11,319 burden hours (3 burden hours for each hospice × 3,773 hospices = 11,319 burden hours) at a cost of $622,545 ($165 estimated cost for each hospice × 3,773 hospices = $622,545 estimated cost).

We are proposing that a hospice review and update its emergency preparedness communication plan at least annually. We believe that all hospices already review their emergency preparedness communication plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for hospices and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 418.113(d) would require each hospice to develop and maintain an emergency preparedness training and testing program that would be reviewed and updated at least annually. Proposed § 418.113(d)(1) would require hospices to provide initial training in emergency preparedness policies and procedures to all hospice employees, consistent with their expected roles, and maintain documentation of the training. The hospice would also have to ensure that their employees could demonstrate knowledge of their emergency procedures. Thereafter, the hospice would have to provide emergency preparedness training at least annually. Hospices would also be required to periodically review and rehearse their emergency preparedness plans with their employees, with special emphasis placed on carrying out the procedures necessary to protect patients and others.

Under current regulations, all hospices are required to provide an initial orientation and in-service training and educational programs, as necessary, to each employee (§ 418.100(g)(2) and (3)). They must also provide employee orientation and training consistent with hospice industry standards (42 CFR 418.78(a)). In addition, inpatient hospices must periodically review and rehearse their disaster preparedness plans with their staff, including non-employee staff (42 CFR 418.110(c)(1)(ii)). We expect that all hospices already provide training to their employees on the facility's existing disaster plans, policies, and procedures. However, under this proposed rule, all hospices would need to review their current training programs and compare their contents to their updated emergency preparedness plans, policies and procedures, and communications plans. Hospices would then need to review, revise, and in some cases, develop new material for their training programs so that they complied with these requirements.

The burden associated with the aforementioned requirements would be the time and effort necessary for a hospice to bring itself into compliance with the requirements in this section. We expect that compliance with this requirement would require the involvement of a registered nurse. We expect that the registered nurse would compare the hospice's current training program with the facility's emergency preparedness plan, policies and procedures, and communication plan, and then make any necessary revisions, including the development of new training material, as needed. We estimate that these tasks would require 6 burden hours at a cost of $252. Based on this estimate, compliance by all 3,773 hospices would require 22,638 burden hours (6 burden hours for each hospice × 3,773 hospices = 22,638 burden hours) at a cost of $950,796 ($252 estimated cost for each hospice × 3,773 hospices = $950,796 estimated cost).

We are proposing that hospices also be required to review and update their emergency preparedness training programs at least annually. We believe that hospices already review their emergency preparedness training programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for hospices and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 418.113(d)(2) would require hospices to participate in a community mock disaster drill, and if one were not available, conduct an individual, facility-based mock disaster drill, and a paper-based, tabletop exercise at least annually. Hospices would also be required to analyze their responses to and maintain documentation of all their drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. To comply with this requirement, a hospice would need to develop scenarios for their drills and exercises. A hospice also would have to develop the required documentation.

Hospices would also have to periodically review and rehearse their emergency preparedness plans with their staff (including nonemployee staff), with special emphasis on carrying out the procedures necessary to protect patients and others (§ 418.110(c)(1)(ii)). However, this periodic rehearsal requirement does not ensure that hospices are performing any type of drill or exercise annually or that they are documenting their responses. In addition, there is no requirement in the current CoPs for outpatient hospices to have an emergency plan or for these hospices to test any emergency procedures they may currently have. We believe that developing the scenarios for these drills and exercises and the documentation necessary to record the events during drills, exercises, and emergency events would be new requirements for all hospices.

The associated burden would be the time and effort necessary for a hospice to comply with these requirements. We expect that complying with these

requirements would require the involvement of a registered nurse. We expect that the registered nurse would develop the necessary documentation and the scenarios for the drills and exercises. We estimate that these tasks would require 4 burden hours at an estimated cost of $168. Based on this estimate, in order for all 3,773 hospices to comply with these requirements, it would require 15,092 burden hours (4 burden hours for each hospice × 3,773 hospices = 15,092 burden hours) at a cost of $633,864 ($168 estimated cost for each hospice × 3,773 hospices = $633,864 estimated cost).

Thus, for all 3,773 hospices to comply with all of the requirements in § 418.113, it would require an estimated 193,041 burden hours at a cost of $10,444,148.

TABLE 4—BURDEN HOURS AND COST ESTIMATES FOR ALL 3,773 HOSPICES TO COMPLY WITH THE ICRS IN § 418.113 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)
§ 418.113(a)(1) (inpatient)	0938—New	1,189	1,189	10	11,890		589,744		589,744

Totals		3,773	22,638		193,041				10,444,148

**The hourly labor cost is blended between the wages for multiple staffing levels.

F. ICRs Regarding Emergency Preparedness (§ 441.184)

Proposed § 441.184(a) would require Psychiatric Residential Treatment Facilities (PRTFs) to develop and maintain emergency preparedness plans and review and update those plans at least annually. We propose that these plans meet the requirements listed at § 441.184(a)(1) through (4).

Section § 441.184(a)(1) would require each PRTF to develop a documented, facility-based and community-based risk assessment that would utilize an all-hazards approach. We expect that all PRTFs have already performed some of the work needed for a risk assessment because it is standard practice for health care facilities to prepare for common hazards, such as fires and power outages, and disasters or emergencies common in their geographic area, such as snowstorms or hurricanes. However, many PRTFs may not have documented their risk assessments or performed one that would comply with all of our proposed requirements. Therefore, we expect that all PRTFs would have to review and revise their current risk assessments.

We have not designated any specific process or format for PRTFs to use in conducting their risk assessments because we believe that PRTFs need maximum flexibility to determine the best way to accomplish this task. However, we expect that PRTFs would include representation from or seek input from all of their major departments. Based on our experience with PRTFs, we expect that conducting the risk assessment would require the involvement of the PRTF's administrator, a psychiatric registered nurse, and a clinical social worker. We expect that all of these individuals would attend an initial meeting, review their current assessment, develop comments and recommendations for changes, attend a follow-up meeting, perform a final review, and approve the new risk assessment. We expect that the psychiatric registered nurse would coordinate the meetings, perform an initial review, offer suggested revisions, coordinate comments, develop a new risk assessment, and ensure that the necessary parties approve the new risk assessment. We also expect that the psychiatric registered nurse would spend more time reviewing and working on the risk assessment than the other individuals. We estimate that in order for each PRTF to comply, it would require 8 burden hours at a cost of $394. There are currently 387 PRTFs. Therefore, based on that estimate, compliance by all PRTFs would require 3,096 burden hours (8 burden hours for each PRTF × 387 PRTFs = 3,096 burden hours) at a cost of $152,478 ($394 estimated cost for each PRTF × 387 PRTFs = $152,478 estimated cost).

After conducting the risk assessment, § 441.184(a)(1) through (4) would require PRTFs to develop and maintain an emergency preparedness plan. Although it is standard practice for health care facilities to have some type of emergency preparedness plan, all PRTFs would need to review their current plans and compare them to their risk assessments. Each PRTF would need to update, revise, and, in some cases, develop new sections to complete its emergency preparedness plan.

Based upon our experience with PRTFs, we expect that the administrator and psychiatric registered nurse who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we expect it would require substantially more time to complete the plan than the risk assessment. We expect that the psychiatric nurse would be the most heavily involved in reviewing and developing the PRTF's emergency preparedness plan. We also expect that a clinical social worker would review the drafts of the plan and provide comments on it to the psychiatric registered nurse. We estimate that for each PRTF to comply with this requirement would require 12 burden hours at a cost of $634. Thus, we estimate that it would require 4,644 burden hours (12 burden hours for each PRTF × 387 PRTFs = 4,644 burden hours) for all PRTFs to comply with this requirement at a cost of $245,358 ($634 estimated cost per PRTF × 387 PRTFs = $245,358 estimated cost).

PRTFs also would be required to review and update their emergency preparedness plans at least annually. We believe that PRTFs are already reviewing their emergency preparedness plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for PRTFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 441.184(b) would require each PRTF to develop and implement emergency preparedness policies and procedures, based on their emergency plan set forth in paragraph (a) of this

section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. We also propose requiring PRTFs to review and update these policies and procedures at least annually. At a minimum, we would require that the PRTF's policies and procedures address the requirements listed at § 441.184(b)(1) through (8).

Since we expect that all PRTFs already have some type of emergency plan, we also expect that all PRTFs have some emergency preparedness policies and procedures. However, we expect that all PRTFs would need to review their policies and procedures; compare them to their risk assessments, emergency preparedness plans, and communication plans they developed in accordance with § 441.183(a)(1), (a) and (c), respectively; and then revise their policies and procedures accordingly.

We expect that the administrator and a psychiatric registered nurse would be involved in reviewing and revising the policies and procedures and, if needed, developing new policies and procedures. We estimate that it would require 9 burden hours at a cost of $498 for each PRTF to comply with this requirement. Based on this estimate, it would require 3,483 burden hours (9 burden hours for each PRTF × 387 PRTFs = 3,483 burden hours) for all PRTFs to comply with this requirement at a cost of $192,726 ($498 estimated cost per PRTF × 387 PRTFs = $192,726 estimated cost).

We are also proposing that PRTFs review and update their emergency preparedness policies and procedures at least annually. We believe that PRTFs are already reviewing their emergency preparedness policies and procedures periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for PRTFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 441.184(c) would require each PRTF to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. PRTFs also would have to review and update these plans at least annually. The communication plan would have to include the information set out in § 441.184(c)(1) through (7).

We expect that all PRTFs have some type of emergency preparedness communication plan. It is standard practice for health care facilities to maintain contact information for both staff and outside sources of assistance; alternate means of communication in case there is an interruption in phone service to the facility; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their residents. However, most PRTFs may not have formal, written emergency preparedness communication plans. Therefore, we expect that all PRTFs would need to review and, if needed, revise their plans.

Based on our experience with PRTFs, we anticipate that satisfying these requirements would require the involvement of the PRTF's administrator and a psychiatric registered nurse to review, revise, and if needed, develop new sections for the PRTF's emergency preparedness communication plan. We estimate that for each PRTF to comply would require 5 burden hours at a cost of $286. Based on that estimate, for all PRTFs to comply would require 1,935 burden hours (5 burden hours for each PRTF × 387 PRTFs = 1,935 burden hours) at a cost of $110,682 ($286 estimated cost for each PRTF × 387 PRTFs = $110,682 estimated cost).

PRTFs must also review and update their emergency preparedness communication plans at least annually. We believe that PRTFs are already reviewing their emergency preparedness communication plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for PRTFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 441.184(d) would require PRTFs to develop and maintain emergency preparedness training programs and review and update those programs at least annually. Proposed § 441.184(d)(1) would require PRTFs to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. The PRTF would also have to ensure that their staff could demonstrate knowledge of the emergency procedures. Thereafter, the PRTF would have to provide emergency preparedness training at least annually.

Based on our experience with PRTFs, we expect that all PRTFs have some type of emergency preparedness training program. However, PRTFs would need to review their current training programs and compare them to their risk assessments and emergency preparedness plans, policies and procedures, and communication plans and update and, in some cases, develop new sections for their training programs.

We expect that complying with this requirement would require the involvement of a psychiatric registered nurse. We expect that the psychiatric registered nurse would review the PRTF's current training program; determine what tasks would need to be performed and what materials would need to be developed; and develop the necessary materials. We estimate that for each PRTF to comply with the requirements in this section would require 10 burden hours at a cost of $460. Based on this estimate, for all PRTFs to comply with this requirement would require 3,870 burden hours (10 burden hours for each PRTF × 387 PRTFs = 3,870 burden hours) at a cost of $178,020 ($460 estimated cost for each PRTF × 387 PRTFs = $178,020 estimated cost).

PRTFs would also be required to review and update their emergency preparedness training program at least annually. We believe that PRTFs are already reviewing their emergency preparedness training programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for PRTFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 441.184(d)(2) would require PRTFs to participate in a community mock disaster drill, and if one were not available, conduct an individual, facility-based mock disaster drill, and a paper-based, tabletop exercise at least annually. PRTFs would also have to analyze their responses to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. However, if a PRTF experienced an actual natural or man-made emergency that required activation of its emergency plan, that PRTF would be exempt from engaging in a community or an individual, facility-based mock disaster drill for 1 year following the onset of the actual emergency event. To comply with this requirement, PRTFs would need to develop scenarios for each drill and exercise and the documentation necessary to record and analyze drills, exercises, and actual emergency events.

Based on our experience with PRTFs, we expect that all PRTFs have some type of emergency preparedness testing program and most, if not all, PRTFs already conduct some type of drill or exercise to test their emergency preparedness plans. We also expect that they have already developed some type of documentation for drills, exercises,

and emergency events. However, we do not expect that all PRTFs are conducting both a drill and a paper-based, tabletop exercise annually or have developed the appropriate documentation. Thus, we will analyze the burden of these requirements for all PRTFs.

Based on our experience with PRTFs, we expect that the same individual who developed the emergency preparedness training program would develop the scenarios for the drill and the exercise and the accompanying documentation. We estimate that for each PRTF to comply with the requirements in this section would require 3 burden hours at a cost of $138. We estimate that for all PRTFs to comply would require 1,161 burden hours (3 burden hours for each PRTF × 387 PRTFs = 1,161 burden hours) at a cost of $53,406 ($138 estimated cost for each PRTF × 387 PRTFs = $53,406 estimated cost).

Based on the previous analysis, for all 387 PRTFs to comply with the ICRs in this proposed rule would require 18,189 burden hours at a cost of $932,670.

TABLE 5—BURDEN HOURS AND COST ESTIMATES FOR ALL 387 PRTFS TO COMPLY WITH THE ICRS CONTAINED IN § 441.184 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)

G. ICRs Regarding Emergency Preparedness (§ 460.84)

Proposed § 460.84(a) would require the Program for the All-Inclusive Care for the Elderly (PACE) organizations to develop and maintain emergency preparedness plans and review and update those plans at least annually. We propose that each plan must meet the requirements listed at § 460.84(a)(1) through (4).

Section § 460.84(a)(1) would require PACE organizations to develop documented, facility-based and community-based risk assessments utilizing an all-hazards approach. We believe that the performance of a risk assessment is a standard practice, and that all of the PACE organizations have already conducted some sort of risk assessment based on common emergencies the organization might encounter, such as fires, loss of power, loss of communications, etc. Therefore, we believe that each PACE organization should have already performed some sort of risk assessment.

Under the current regulations, PACE organizations are required to establish, implement, and maintain procedures for managing medical and non-medical emergencies and disasters that are likely to threaten the health or safety of the participants, staff, or the public (§ 460.72(c)(1)). The definition of "emergencies" includes natural disasters that are likely to occur in the PACE organization's area (§ 460.72(c)(2)). PACE organizations are required to plan for emergencies involving participants who are in their center(s) at the time of an emergency, as well as participants receiving services in their homes.

For the purpose of determining the burden, we will assume that a PACE organization's risk assessment, emergency plan, policies and procedures, communication plan, and training and testing program would apply to all of a PACE organization's centers. Based on the existing PACE regulations, we expect that they already assess their physical structure(s), the areas in which they are located, and the location(s) of their participants. However, these risk assessments may not be documented or address all of our proposed requirements. Therefore, we expect that all 91 PACE organizations would have to review, revise, and update their current risk assessments.

We have not designated any specific process or format for PACE organizations to use in conducting their risk assessments because we believe that they would be able to determine the best way for their facilities to accomplish this task. However, we expect that they would include representation or input from all of their major departments. Based on our experience with PACE organizations, we expect that conducting the risk assessment would require the involvement of the PACE organization's program director, medical director, home care coordinator, quality improvement nurse, social worker, and a driver. We expect that these individuals would either attend an initial meeting or be asked to individually review relevant sections of the current risk assessment and prepare and forward their comments to the quality assurance nurse. After initial comments are received, some would attend a follow-up meeting, perform a final review, and ensure the new risk assessment was approved by the appropriate individuals. We expect that the quality improvement nurse would coordinate the meetings, review the current risk assessment, suggest revisions, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approve it. We expect that the quality improvement nurse and the home care coordinator would spend more time reviewing and developing the risk assessment than the other individuals.

We estimate that complying with the requirement to conduct a risk assessment would require 14 burden hours at a cost of $761. For all 91 PACE organizations to comply with this requirement would require an estimated 1,274 burden hours (14 burden hours for each PACE organization × 91 PACE organizations = 1,274 burden hours) at a cost of $69,251 ($761 estimated cost for each PACE organization × 91 PACE organizations = $69,251 estimated cost).

After conducting a risk assessment, PACE organizations would have to develop and maintain emergency preparedness plans that satisfied all of the requirements in § 460.84(a)(1) through (4). In addition to the requirement to establish, implement, and maintain procedures for managing emergencies and disasters, current regulations require PACE organizations to have a governing body or designated person responsible for developing policies on participant health and safety, including a comprehensive, systemic operational plan to ensure the health and safety of the PACE organization's participants (§ 460.62(a)(6)). We expect that an emergency preparedness plan would be

an essential component of such a comprehensive, systemic operational plan. However, this regulatory requirement does not guarantee that all PACE organizations have developed a plan that complies with our proposed requirements.

Thus, we expect that all PACE organizations would need to review their current plans and compare them to their risk assessments. PACE organizations would need to update, revise, and, in some cases, develop new sections to complete their emergency preparedness plans.

Based upon our experience with PACE organizations, we expect that the same individuals who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we expect that it would require more time to complete the plan. We expect that the quality improvement nurse would have primary responsibility for reviewing and developing the PACE organization's emergency preparedness plan. We expect that the program director, home care coordinator, and social worker would review the current plan, provide comments, and assist the quality improvement nurse in developing the final plan. Other staff members would work only on the sections of the plan that would be relevant to their areas of responsibility.

We estimate that for each PACE organization to comply with the requirement for an emergency preparedness plan would require 23 burden hours at a cost of $1,239. We estimate that for all PACE organizations to comply would require 2,093 burden hours (23 burden hours for each PACE Organization × 91 PACE organizations = 2,093 burden hours) at a cost of $112,749 ($1,239 estimated cost for each PACE organization × 91 PACE organizations = $112,749 estimated cost).

PACE organizations would also be required to review and update their emergency preparedness plans at least annually. We believe that PACE organizations are already reviewing their emergency preparedness plans periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for PACE organizations and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 460.84(b) would require each PACE organization to develop and implement emergency preparedness policies and procedures based on the emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at (c) of this section. It would also require PACE organizations to review and update these policies and procedures at least annually. At a minimum, we would require that a PACE organization's policies and procedures address the requirements listed at § 460.84(b)(1) through (9).

Current regulations already require that PACE organizations establish, implement, and maintain procedures for managing emergencies and disasters (§ 460.72(c)). The definition of "emergencies" includes medical and nonmedical emergencies, such as natural disasters likely to occur in a PACE organization's area (42 CFR 460.72(c)(2)). In addition, all PACE organizations must have a governing body or a designated person who functions as the governing body responsible for developing policies on participant health and safety (§ 460.62(a)(6)). Thus, we expect that all PACE organizations have some emergency preparedness policies and procedures. However, these requirements do not ensure that all PACE organizations have policies and procedures that would comply with our proposed requirements.

The burden associated with the proposed requirements would be the resources needed to review, revise, and, if needed, develop new emergency preparedness policies and procedures. We expect that the program director, home care coordinator, and quality improvement nurse would be primarily responsible for reviewing, revising, and if needed, developing any new policies and procedures needed to comply with our proposed requirements. We estimate that for each PACE organization to comply with our proposed requirements would require 12 burden hours at a cost of $598. Therefore, based on this estimate, for all PACE organizations to comply would require 1,092 burden hours (12 burden hours for each PACE organization × 91 PACE organizations = 1,092 burden hours) at a cost of $54,418 ($598 estimated cost for each PACE organization × 91 PACE organizations = $54,418 estimated cost).

We propose that each PACE organization must also review and update its emergency preparedness policies and procedures at least annually. We believe that PACE organizations are already reviewing their emergency preparedness policies and procedures periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 460.84(c) would require each PACE organization to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. Each PACE organization would also have to review and update this plan at least annually. The communication plan must include the information set out at § 460.84(c)(1) through (7).

All PACE organizations must have a governing body (or a designated person who functions as the governing body) that is responsible for developing policies on participant health and safety, including a comprehensive, systemic operational plan to ensure the health and safety of the PACE organization's participants (§ 460.62(a)(6)). We expect that the PACE organizations' comprehensive, systemic operational plans would include at least some of our proposed requirements. In addition, it is standard practice in the health care industry to maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for patients. Thus, we expect that all PACE organizations have some type of emergency preparedness communication plan. However, each PACE organization would need to review its current plan and revise or, in some cases, develop new sections to comply with our proposed requirements.

Based on our experience with PACE organizations, we expect that the home care coordinator and the quality assurance nurse would be primarily responsible for reviewing, and if needed, revising, and developing new sections for the communication plan. We estimate that for each PACE organization to comply with the proposed requirements would require 7 burden hours at a cost of $315. Therefore, based on this estimate, for all PACE organizations to comply with this requirement would require 637 burden hours (7 burden hours for each PACE organization × 91 PACE organizations = 637 burden hours) at a cost of $28,665 ($315 estimated cost for each PACE organization × 91 PACE organizations = $28,665 estimated cost).

Each PACE organization must also review and update its emergency preparedness communication plan at least annually. We believe that PACE organizations are already reviewing and updating their emergency preparedness communication plans periodically.

Thus, compliance with this requirement would constitute a usual and customary business practice for PACE organizations and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 460.84(d) would require PACE organizations to develop and maintain emergency preparedness training and testing programs and review and update those programs at least annually. We propose that each PACE organization would have to meet the requirements listed at § 460.84(d)(1) and (2).

Proposed § 460.84(d)(1) would require PACE organizations to provide initial training on their emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, contractors, participants, and volunteers, consistent with their expected roles and maintain documentation of this training. PACE organizations would also have to ensure that their staff could demonstrate knowledge of the emergency procedures. Thereafter, PACE organizations would be required to provide this training annually.

Current regulations require PACE organizations to provide periodic orientation and appropriate training to their staffs and participants in emergency procedures (§ 460.72(c)(3)). However, these requirements do not ensure that all PACE organizations would be in compliance with our proposed requirements. Thus, each PACE organization would need to review its current training program and compare the training program to its risk assessment, emergency preparedness plan, policies and procedures, and communication plan. The PACE organization would also need to revise and, in some cases, develop new sections to ensure that its emergency preparedness training program complied with our proposed requirements. We expect that the quality assurance nurse would review all elements of the PACE organization's training program and determine what tasks would need to be performed and what materials would need to be developed to comply with our proposed requirements. We expect that the home care coordinator would work with the quality assurance nurse to develop the revised and updated training program. We estimate that for each PACE organization to comply with the proposed requirements would require 12 burden hours at a cost of $540. Therefore, it would require an estimated 1,092 burden hours (12 burden hours for each PACE organization × 91 PACE organizations = 1,092 burden hours) to comply with this requirement at a cost of $49,140 ($540 estimated cost for each PACE organization × 91 PACE organizations = $49,140 estimated cost).

PACE organizations would also be required to review and update their emergency preparedness training program at least annually. We believe that PACE organizations are already reviewing and updating their emergency preparedness training programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for PACE organizations and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 460.84(d)(2) would require PACE organizations to participate in a community mock disaster drill at least annually. If a community mock disaster drill was not available, the PACE organization would have to conduct an individual, facility-based mock disaster drill. They would also be required to conduct a paper-based, tabletop exercise at least annually. PACE organizations would also be required to analyze their responses to, and maintain documentation of, all drills, exercises, and any emergency events they experienced. If a PACE organization experienced an actual natural or man-made emergency that required activation of its emergency plan, it would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. To comply with these requirements, PACE organizations would need to develop a specific scenario for each drill and exercise. The PACE organizations would also have to develop the documentation necessary for recording and analyzing their response to all drills, exercises, and emergency events.

Current regulations require each PACE organization to conduct a test of its emergency and disaster plan at least annually (42 CFR 460.72(c)(5)). They also must evaluate and document the effectiveness of their emergency and disaster plans. Thus, PACE organizations already conduct at least one test annually of their plans. We expect that as part of testing their emergency plans annually, PACE organizations would develop a scenario for and document the testing. However, this does not ensure that all PACE organizations would be in compliance with all of our proposed requirements, especially the proposed requirement for conducting a paper-based, tabletop exercise; performing a community-based mock disaster drill; and using different scenarios for the drill and the exercise.

The 91 PACE organizations would be required to develop scenarios for a mock disaster drill and a paper-based, tabletop exercise and the documentation necessary to record and analyze their response to all drills, exercises, and any emergency events. Based on our experience with PACE organizations, we expect that the same individuals who developed their emergency preparedness training programs would develop the required documentation. We expect the quality improvement nurse would spend more time on these activities than the health care coordinator. We estimate that this activity would require 5 burden hours for each PACE organization at a cost of $225. We estimate that for all PACE organizations to comply with these requirements would require 455 burden hours (5 burden hours for each PACE organization × 91 PACE organizations = 455 burden hours) at a cost of $20,475 ($225 estimated cost for each PACE organization × 91 PACE organizations = $20,475 estimated cost).

TABLE 6—BURDEN HOURS AND COST ESTIMATES FOR ALL 91 PACE ORGANIZATIONS TO COMPLY WITH THE ICRS CONTAINED IN § 460.84 EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of eporting ($)	Total capital/ maintenance costs ($)	Total cost ($)

** The hourly labor cost is blended between the wages for multiple staffing levels.

H. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 482.15)

Proposed § 482.15(a) would require hospitals to develop and maintain emergency preparedness plans. We propose that hospitals be required to review and update their emergency preparedness plans at least annually and meet the requirements set out at § 482.15(a)(1) through (4).

Note that we obtain data on the number of hospitals, both accredited and non-accredited, from the CMS CASPER data system, which are updated periodically by the individual states. Due to variations in the timeliness of the data submissions, all numbers are approximate, and the number of accredited and non-accredited hospitals shown may not equal the number of hospitals at the time of this proposed rule's publication. In addition, some hospitals may have chosen to be accredited by more than one accrediting organization.

There are approximately 4,928 Medicare-certified hospitals. This includes 107 critical access hospitals (CAHs) that have rehabilitation or psychiatric distinct part units (DPUs) as of March 27, 2013. The services provided by CAH psychiatric or rehabilitation DPUs must comply with the hospital Conditions of Participation (CoPs) (42 CFR 485.647(a)). RNHCIs and CAHs that do not have DPUs have been excluded from this number and are addressed separately in this analysis. Of the 4,928 hospitals reported in CMS' CASPER data system, approximately 4,587 are accredited hospitals and the remainder is non-accredited hospitals. Three organizations have accrediting authority for these hospitals: TJC, formerly known as the Joint Commission on the Accreditation of Healthcare Organizations (JCAHO), the AOA, and DNVHC.

Accreditation can substantially affect the burden a hospital would sustain under this proposed rule. The Joint Commission accredits 3,410 hospitals. Many of our proposed requirements are similar or virtually identical to the standards, rationales, and elements of performance (EPs) required for TJC accreditation. The TJC standards, rationales, and elements of performance (EPs) are on the TJC Web site at *http://www.jointcommission.org/*.

The other two accrediting organizations, AOA and DNVHC, accredit 185 and 176 hospitals, respectively. The AOA hospital accreditation requirements do not emphasize emergency preparedness. In addition, these hospitals account for less than 5 percent of all of the hospitals. Thus, for purposes of determining the burden, we have included the 185 AOA-accredited hospitals and the 176 DNVHC-accredited hospitals in with the hospitals that are not accredited. Therefore, unless indicated otherwise, we have analyzed the burden for the 3,410 TJC-accredited hospitals separately from the remaining 1,518 non TJC-accredited hospitals (4,928 hospitals—3,410 TJC-accredited hospitals = 1,518 non TJC-accredited hospitals).

We have used TJC's "Comprehensive Accreditation Manual for Hospitals: The Official Handbook 2008 (CAMH)" to determine the burden for TJC-accredited hospitals. In the chapter entitled, "Management of the Environment of Care" (EC), hospitals are required to plan for managing the consequences of emergencies (CAMH, Standard EC.4.11, CAMH Refreshed Core, January 2008, p. EC–13a). Individual standards have EPs, which provide the detailed and specific performance expectations, structures, and processes for each standard (CAMH, CAMH Refreshed Core, January 2008, p. HM–6). The EPs for Standard EC.4.11 require, among other things, that hospitals conduct a hazard vulnerability analysis (HVA) (CAMH, Standard EC.4.11, EP 2, CAMH Refreshed Core, January 2008, p. EC–13a). Performing an HVA would require a hospital to identify the events that could possibly affect demand for the hospital's services or the hospital's ability to provide services. A TJC-accredited hospital also must determine the likeliness of the identified risks occurring, as well as their consequences. Thus, we expect that TJC-accredited hospitals already conduct an HVA that complies with our proposed requirements and that any additional tasks necessary to comply would be minimal. Therefore, for TJC-accredited hospitals, the risk assessment requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 482.15(a)(1) would require that hospitals perform a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach. We expect that most non TJC-accredited hospitals have already performed at least some of the work needed for a risk assessment. The Niska and Burt article indicated that most hospitals already have plans for natural disasters. However, many may not have thoroughly documented this activity or performed as thorough a risk assessment as needed to comply with our proposed requirements.

We have not designated any specific process or format for hospitals to use in conducting a risk assessment because we believe that hospitals need the flexibility to determine how best to accomplish this task. However, we expect that hospitals would obtain input from all of their major departments when performing a risk assessment. Based on our experience, we expect that conducting a risk assessment would require the involvement of at least a hospital administrator, the risk management director, the chief medical officer, the chief of surgery, the director of nursing, the pharmacy director, the facilities director, the health information services director, the safety director, the security manager, the community relations manager, the food services director, and administrative support staff. We expect that most of these individuals would attend an initial meeting, review relevant sections of their current risk assessment, prepare and send their comments to the risk management director, attend a follow-up meeting, perform a final review, and approve the new risk assessment.

We expect that the risk management director would coordinate the meetings, review and comment on the current risk assessment, suggest revisions, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approve it. We expect that the hospital administrator would spend more time reviewing the risk assessment than most of the other individuals.

We estimate that the risk assessment would require 36 burden hours to complete at a cost of $2,923 for each non-TJC accredited hospital. There are approximately 1,518 non TJC-accredited hospitals. Therefore, it would require an estimated 54,648 burden hours (36 burden hours for each non TJC-accredited hospitals × 1,518 non TJC-accredited hospitals = 54,648 burden hours) for all non TJC-accredited hospitals to comply at a cost of $4,437,114 ($2,923 estimated cost for each non TJC-hospital × 1,518 non TJC-accredited hospitals = $4,437,114 estimated cost).

Proposed § 482.15(a)(1) through (4) would require hospitals to develop and maintain emergency preparedness plans. We expect that all hospitals would compare their risk assessments to their emergency plans and revise and, if necessary, develop new sections for their plans. TJC-accredited hospitals must develop and maintain written Emergency Operations Plans (EOPs) (CAMH, Standard EC.4.12, EP 1, CAMH Refreshed Care, January 2008, p. EC–13b). The EOP should describe an "all-

hazards" approach to coordinating six critical areas: communications, resources and assets, safety and security, staff roles and responsibilities, utilities, and patient clinical and support activities during emergencies (CAMH, Standard EC.4.13—EC.4.18, CAMH Refreshed Core, January 2008, pp. EC–13b—EC–13g). Hospitals also must include in their EOP "[r]esponse strategies and actions to be activated during the emergency" and "[r]ecovery strategies and actions designed to help restore the systems that are critical to resuming normal care, treatment and services" (CAMH, Standard EC.4.11, EPs 7 and 8, p. EC–13a). In addition, hospitals are required to have plans to manage "clinical services for vulnerable populations served by the hospital, including patients who are pediatric, geriatric, disabled or have serious chronic conditions or addictions" (CAMH, Standard EC.4.18, EP 2, p. EC–13g). Hospitals also must plan how to manage the mental health needs of their patients (CAMH, Standard EC.4.18, EP 4, EC–13g). Thus, we expect that TJC-accredited hospitals have already developed and are maintaining EOPs that comply with the requirement for an emergency plan in this proposed rule. If a TJC-accredited hospital needed to complete additional tasks to comply with the proposed requirement, we believe that the burden would be negligible. Therefore, for TJC-accredited hospitals, this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

We expect that most, if not all, non TJC-accredited hospitals already have some type of emergency preparedness plan. The Niska and Burt article noted that the majority of hospitals have plans for natural disasters; incendiary incidents; and biological, chemical, and radiological terrorism. In addition, all hospitals must already meet the requirements set out at 42 CFR 482.41, including emergency power, lighting, gas and water supply requirements as well as specified Life Safety Code provisions. However, those existing plans may not be fully compliant with our proposed requirements. Thus, it would be necessary for non TJC-accredited hospitals to review their current plans and compare them to their risk assessments and revise, update, or, in some cases, develop new sections for their emergency plans.

Based on our experience with hospitals, we expect that the same individuals who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we estimate that it would require substantially more time to complete an emergency preparedness plan. We estimate that complying with this requirement would require 62 burden hours at a cost of $5,085 for each non TJC-accredited hospital. There are approximately 1,518 non TJC-accredited hospitals. Therefore, based on this estimate, it would require 94,116 burden hours for all non TJC-accredited hospitals (62 burden hours for each non TJC-accredited hospitals × 1,518 non TJC-accredited hospitals = 94,116 burden hours) to complete an emergency preparedness plan at a cost of $7,719,030 ($5,085 estimated cost for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = $7,719,030 estimated cost).

Under this proposed rule, a hospital also would be required to review and update its emergency preparedness plan at least annually. We believe that hospitals already review their emergency preparedness plans periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for hospitals and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Under proposed § 482.15(b), we would require each hospital to develop and implement emergency preparedness policies and procedures based on its emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. We would also require hospitals to review and update these policies and procedures at least annually. At a minimum, we would require that the policies and procedures address the requirements at § 482.15(b)(1) through (8).

We would expect all hospitals to review their emergency preparedness policies and procedures and compare them to their emergency plans, risk assessments, and communication plans. We expect that hospitals would then review, revise, and, if necessary, develop new policies and procedures that comply with our proposed requirements.

The CAMH's chapter entitled, "Leadership" (LD), requires TJC-accredited hospital leaders to "develop policies and procedures that guide and support patient care, treatment, and services" (CAMH, Standard LC.3.90, EP 1, CAMH Refreshed Core, January 2008, p. LD–15). Thus, we expect that TJC-accredited hospitals already have some policies and procedures related to our proposed requirements. As discussed later, many of the requirements in proposed § 482.15(b) has a corresponding requirement in the TJC hospital accreditation standards. Hence, we will discuss each proposed section individually.

Proposed § 482.15(b)(1) would require hospitals to have policies and procedures for the provision of subsistence needs for staff and patients, whether they evacuate or shelter in place. TJC-accredited hospitals are required to make plans for obtaining and replenishing medical and non-medical supplies, including food, water, and fuel for generators and transportation vehicles (CAMH, Standard EC.4.14, EPs 1–8 and 10–11, p. EC–13d). In addition, hospitals must identify alternative means of providing electricity, water, fuel, and other essential utility needs in cases when their usual supply is disrupted or compromised (CAMH, Standard EC.4.17, EPs 1–5, p. EC–13f). Thus, we expect that TJC-accredited hospitals would be in compliance with our proposed provision of subsistence requirements in proposed § 482.15(b)(1).

Proposed § 482.15(b)(2) would require hospitals to have policies and procedures to track the location of staff and patients in the hospital's care both during and after an emergency. TJC-accredited hospitals must plan for communicating with patients and their families at the beginning of and during an emergency (CAMH, Standard EC.4.13, EPs 1, 2, and 5, p. EC–13c). We expect that TJC-accredited hospitals would be in compliance with proposed § 482.15(b)(2).

Proposed § 482.15(b)(3) would require hospitals to have policies and procedures for a plan for the safe evacuation from the hospital. TJC-accredited hospitals are required to make plans to evacuate patients as part of managing their clinical activities (CAMH, Standard EC.4.18, EP 1, p. EC–13g). They also must plan for the evacuation and transport of patients, as well as their information, medications, supplies, and equipment, to alternative care sites (ACSs) when the hospital cannot provide care, treatment, and services in their facility (CAMH, Standard EC.4.14, EPs 9–11, p. EC–13d). Proposed § 482.15(b)(3) also would require hospitals to have "primary and alternate means of communication with external sources of assistance." TJC-accredited hospitals must plan for communicating with external authorities once the hospital initiates its emergency response measures (CAMH, Standard EC.4.13, EP 4, p. EC–13c). Thus, TJC-accredited hospitals would be in compliance with most of the

requirements in proposed § 482.15(b)(3). However, we do not believe these requirements would ensure compliance with the proposed requirement that the hospital establish policies and procedures for staff responsibilities.

Proposed § 482.15(b)(4) would require hospitals to have policies and procedures that address a means to shelter in place for patients, staff, and volunteers who remain at the facility. The rationale for CAMH Standard EC.4.18 states, "a catastrophic emergency may result in the decision to keep all patients on the premises in the interest of safety" (CAMH, Standard EC.4.18, p. EC–13f). We expect that TJC-accredited hospitals would be in compliance with our proposed shelter in place requirement in § 482.15(b)(4).

Proposed § 482.15(b)(5) would require hospitals to have policies and procedures that address a system of medical documentation that preserves patient information, protects the confidentiality of patient information, and ensures that records are secure and readily available. The CAMH chapter entitled "Management of Information" requires TJC-accredited hospitals to have storage and retrieval systems for their clinical/service and hospital-specific information (CAMH, Standard IM.3.10, EP 5, CAMH Refreshed Core, January 2008, p. IM–10) and to ensure the continuity of their critical information "needs for patient care, treatment, and services (CAMH, Standard IM.2.30, Rationale for IM.2.30, CAMH Refreshed Core, January 2008, p. IM–8). They also must ensure the privacy and confidentiality of patient information (CAMH, Standard IM.2.10, CAMH Refreshed Core, January 2008, p. IM–7) and have plans for transporting and tracking patients' clinical information, including transferring information to ACSs (CAMH Standard EC.4.14, EP 11, p. EC–13d and Standard EC.4.18, EP 6, pp. EC–13d and EC–13g, respectively). Therefore, we expect that TJC-accredited hospitals would be in compliance with the requirements we propose in § 482.15(b)(5).

Proposed § 482.15(b)(6) would require hospitals to have policies and procedures that address the use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of state and federally-designated health care professionals to address surge needs during an emergency. TJC-accredited hospitals must already define staff roles and responsibilities in their EOPs and ensure that they train their staffs for their assigned roles (CAMH, Standard EC.4.16, EPs 1 and 2, p. EC–13e). The rationale for Standard EC.4.15 indicates that the "hospital determines the type of access and movement to be allowed by . . . emergency volunteers . . . when emergency measures are initiated." In addition, in the chapter entitled "Medical Staff" (MS), hospitals "may grant disaster privileges to volunteers that are eligible to be licensed independent practitioners" (CAMH, Standard MS.4.110, CAMH Refreshed Care, January 2008, p. MS–27). Finally, in the chapter entitled "Management of Human Resources" (HR), hospitals "may assign disaster responsibilities to volunteer practitioners" (CAMH, Standard HR.1.25, CAMH Refreshed Core, January 2008, p. HR–5). Although TJC accreditation requirements partially address our proposed requirements, we do not believe these requirements would ensure compliance with all requirements in proposed in § 482.15(b)(6).

Proposed § 482.15(b)(7) would require hospitals to have policies and procedures that would address the development of arrangements with other hospitals or other providers to receive patients in the event of limitations or cessation of operations to ensure continuity of services to hospital patients. TJC-accredited hospitals must plan for the sharing of resources and assets with other health care organizations (CAMH, Standard EC.4.14, EPs 7 and 8, p. EC–13d). However, we would not expect TJC-accredited hospitals to be substantially in compliance with the requirements we propose in § 482.15(b)(7) based on compliance with TJC accreditation standards alone.

Proposed § 482.15(b)(8) would require hospitals to have policies and procedures that address the hospital's role under an "1135 waiver" (that is, a waiver of some federal rules pursuant to § 1135 of the Social Security Act) in the provision of care and treatment at an ACS identified by emergency management officials. TJC-accredited hospitals must already have plans for transporting patients, as well as their associated information, medications, equipment, and staff to ACSs when the hospital cannot support their care, treatment, and services on site (CAMH, Standard EC.4.14, EPs 10 and 11, p. EC–13d). We expect that TJC-accredited hospitals would be in compliance with the requirements we propose in § 482.15(b)(8).

In summary, we expect that TJC-accredited hospitals have developed and are maintaining policies and procedures that would comply with the requirements in proposed § 482.15(b), except for proposed §§ 482.15(b)(3), (6), and (7). Later we will discuss the burden on TJC-accredited hospitals with respect to these provisions. We expect that any modifications that TJC-accredited hospitals would need to make to comply with the remaining proposed requirements would not impose a burden above that incurred as part of usual and customary business practices. Thus, with the exception of the proposed requirements set out at § 482.15(b)(3), (b)(6), and (b)(7), the proposed requirements would constitute usual and customary business practices and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

The burden associated with proposed § 482.15(b)(3), (b)(6), and (b)(7) would be the resources required to develop written policies and procedures that comply with the proposed requirements. We expect that the risk management director would review the hospital's policies and procedures initially and make recommendations for revisions and development of additional policies or procedures. We expect that representatives from the hospital's major departments would make revisions or draft new policies and procedures based on the administrator's recommendation. The appropriate parties would then need to compile and disseminate these new policies and procedures.

We estimate that complying with these requirements would require 17 burden hours for each TJC-accredited hospital at a cost of $1,423. For all 3,410 TJC-accredited hospitals to comply with these requirements would require an estimated 57,970 burden hours (17 burden hours for each TJC-accredited hospital × 3,410 TJC-accredited hospitals = 57,970 burden hours) at a cost of $4,852,430 (1,423 estimated cost for each TJC-accredited hospital × 3,410 TJC-accredited hospitals = $4,852,430 estimated cost).

The 1,518 non TJC-accredited hospitals would need to review their policies and procedures, ensure that their policies and procedures accurately reflect their risk assessments, emergency preparedness plans, and communication plans, and incorporate any of our proposed requirements into their policies and procedures. We expect that the risk management director would coordinate the meetings, review and comment on the current policies and procedures, suggest revisions, coordinate comments, develop the policies and procedures, and ensure that the necessary parties approve it. We expect that the hospital administrator would spend more time reviewing the policies and procedures than most of the other individuals.

We estimate that complying with this requirement would require 33 burden hours for each non TJC-accredited hospital at an estimated cost of $2,623. Based on this estimate, for all 1,518 non TJC-accredited hospitals to comply with these requirements would require 50,094 burden hours (33 burden hours for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = . 50,094 burden hours) at a cost of $3,981,714 ($2,623 estimated cost for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = $3,981,714 estimated cost).

In addition, we expect that there would be a burden as a result of proposed § 482.15(b)(7). Proposed § 482.15(b)(7) would require hospitals to develop and maintain policies and procedures that address a hospital's development of arrangements with other hospitals and other providers to receive patients in the event of limitations or cessation of operations to ensure continuity of services to hospital patients. We expect that hospitals would base those arrangements on written agreements between the hospital and other hospitals and other providers. Thus, in addition to the burden related to developing the policies and procedures, hospitals would also sustain a burden related to developing the written agreements related to those arrangements.

All 4,928 hospitals would need to identify other hospitals and other providers with which they could have agreements, negotiate and draft the agreements, and obtain all necessary authorizations for the agreements. For the purpose of determining the burden, we will assume that hospitals would have written agreements with two other hospitals and other providers. Based on our experience with hospitals, we expect that complying with this requirement would primarily require the involvement of the hospital's administrator and risk management director. We also expect that a hospital attorney would assist with drafting the agreements and reviewing those documents for any legal implications. We estimate that complying with this requirement would require 8 burden hours for each hospital at an estimated cost of $719. Thus, it would require an estimated 39,424 burden hours (8 burden hours for each hospital × 4,928 hospitals = 39,512 burden hours) for all hospitals to comply with this requirement at a cost of $3,543,232 ($719 estimated cost for each hospital × 4,928 hospitals = $3,543,232 estimated cost).

Based upon the previous estimates, for all hospitals to be in compliance with all of the requirements in § 482.15(b) it would require 147,488 burden hours at a cost of $12,377,376.

Proposed § 482.15(b) would also require hospitals to review and update their emergency preparedness policies and procedures at least annually. We believe hospitals are already reviewing and updating their emergency preparedness policies and procedures periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for both TJC-accredited and non TJC-accredited hospitals and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 482.15(c) would require each hospital to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. The plan would have to be reviewed and updated at least annually. The communication plan would have to include the information listed at § 482.15(c)(1) through (7).

We expect that all hospitals currently have some type of emergency preparedness communication plan. We expect that under this proposed rule, hospitals would review their current communication plans, compare them to their emergency preparedness plans and emergency policies and procedures, and revise their communication plans, as necessary.

It is standard practice for health care facilities to maintain contact information for staff and outside sources of assistance; have alternate means of communication in case there is an interruption in phone service to the facility; and have a method for sharing information and medical documentation with other health care providers to ensure continuity of care for patients. However, under this proposed rule, all hospitals would need to review and update their plans to ensure compliance with our proposed requirements.

The TJC-accredited hospitals are required to establish emergency communication strategies (CAMH, Standard EC.4.13, p. EC–13b). In addition, TJC-accredited hospitals are specifically required to ensure communication with staff, external authorities, patients, and their families (CAMH, Standard EC.4.13, EPs 1–5, p. EC–13c). TJC-accredited hospitals also are required to establish "back-up communications systems and technologies" for such activities (CAMH, Standard EC.4.13, EP 14, p. EC–13c). Moreover, TJC-accredited hospitals are required specifically to define "the circumstances and plans for communicating information about patients to third parties (such as other health care organizations) . . . " (CAMH, Standard EC.4.13, EP 12, p. EC–13c). Thus, we expect that that TJC-accredited hospitals would be in compliance with proposed § 482.15(c)(1) through (c)(4). In addition, the rationale for EC.4.13 states, "the hospital maintains reliable surveillance and communications capability to detect emergencies and communicate response efforts to hospital response personnel, patient and their families, and external agencies (CAMH, Standard EC.4.13, pp. EC–13b—13c). We expect that most, if not all, TJC-accredited hospitals would be in compliance with proposed § 482.15(c)(5) through (c)(7). Therefore, we expect that TJC-accredited hospitals already have developed and are currently maintaining emergency communication plans that would satisfy the requirements contained in proposed § 482.15(c). Therefore, compliance with this requirement would constitute a usual and customary business practice and would not be subject to PRA in accordance with 5 CFR 1320.3(b)(2).

Most, if not all, non TJC-accredited hospitals would be substantially in compliance with proposed § 482.15(c)(1) through (c)(4). Nevertheless, non TJC-accredited hospitals would need to review, update, and in some cases, develop new sections for their emergency communication plans to ensure they are in compliance with all of the proposed requirements in this subsection. We expect that this activity would require the involvement of the hospital's administrator, the risk management director, the facilities director, the health information services director, the security manager, and administrative support staff. We estimate that complying with this requirement would require 10 burden hours at a cost of $757 for each of the 1,518 non TJC-accredited hospitals. Therefore, based on this estimate, for non TJC-accredited hospitals to comply with this requirement would require 15,180 burden hours (10 burden hours for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals =15,180 burden hours) at a cost of $1,149,126 ($757 estimated cost for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = $1,149,126 estimated cost).

Proposed § 482.15(c) also would require hospitals to review and update their emergency preparedness communication plans at least annually. We believe that hospitals are already reviewing and updating their emergency preparedness communication plans

periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 482.15(d) would require hospitals to develop and maintain emergency preparedness training and testing programs and review and update those plans at least annually. The hospital would be required to meet the requirements in § 482.15(d)(1) and (2).

Proposed § 482.15(d)(1) would require hospitals to provide initial and thereafter annual training on their emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles. Hospitals must also maintain documentation of all of this training.

The burden for proposed § 482.15(d)(1) would be the time and effort necessary to develop a training program and the materials needed for the required initial and annual training. We expect that all hospitals would review their current training programs and compare them to their risk assessments, emergency plans, policies and procedures, and communication plans as set forth in § 482.15(a)(1), (a), (b), and (c), respectively. Hospitals would need to revise and, if necessary, develop new sections or material to ensure that their training programs comply with our proposed requirements.

The TJC-accredited hospitals are required to define staff roles and responsibilities in their EOP and train their staff for their assigned roles during emergencies (CAMH, EC.4.16, EPs 1–2, p. EC–13e). In addition, the TJC-accredited hospitals are required to provide an initial orientation, which includes information that the hospital has determined are key elements the staff need before they provide care, treatment, or services to patients (CAMH, Standard HR.2.10, EPs 1–2, CAMH Refreshed Core, January 2008. p. HR–10). We would expect that an orientation to the hospital's EOP would be part of this initial training. TJC-accredited hospitals also must provide on-going training to their staff, including training on specific job-related safety (CAMH, Standard HR–2.30, EP 4, CAMH Refreshed Core, January 2008, p. HR–11), and we expect that emergency preparedness is part of such on-going training.

Although TJC requirements do not specifically address training for individuals providing services under arrangement or training for volunteers consistent with their expected roles, it is standard practice for health care facilities to provide some type of training to all personnel, including those providing services under contract or arrangement and volunteers. If a hospital does not already provide such training, we would expect the additional burden to be negligible. Thus, for the TJC-accredited hospitals, the proposed requirements would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Based on our experience with non TJC-accredited hospitals, we expect that the non TJC-accredited hospitals have some type of emergency preparedness training program and provide training to their staff regarding their duties and responsibilities under their emergency plans. However, under this proposed rule, non TJC-accredited hospitals would need to compare their existing training programs with their risk assessments, emergency preparedness plans, policies and procedures, and communication plans. They also would need to revise, update, and, if necessary, develop new sections and new material for their training programs.

To develop their training programs, hospitals could draw upon the resources of federal, state, and local emergency preparedness agencies, as well as state and national health care associations and organizations. In addition, hospitals could develop partnerships with other hospitals and health care facilities to develop the necessary training. Some hospitals might also choose to purchase off-the-shelf emergency training programs or hire consultants to develop the programs for them. However, for purposes of estimating a burden for these requirements, we will assume that hospitals would use their own staff.

Based on our experience with hospitals, we expect that complying with this requirement would require the involvement of the hospital administrator, the risk management director, a health care trainer, and administrative support staff. We estimate that it would require 40 burden hours for each hospital to develop an emergency preparedness training program at a cost of $2,094 for each non TJC-accredited hospital. We estimate that it would require 60,720 burden hours (40 burden hours for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = 60,720 burden hours) to comply with this requirement at a cost of $3,178,692 ($2,094 estimated cost for each hospital × 1,518 non TJC-accredited hospitals = $3,178,692 estimated cost).

Proposed § 482.15(d) would also require hospitals to review and update their emergency preparedness training program at least annually. We believe that hospitals are already reviewing and updating their emergency preparedness training programs periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Hospitals also would be required to maintain documentation of their training. Based on our experience, we believe it is standard practice for hospitals to document the training they provide to their staff, individuals providing services under arrangement, and volunteers. Therefore, compliance with this requirement would constitute a usual and customary business practice for the hospitals and not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 482.15(d)(2) would also require hospitals to participate in a community mock disaster drill and a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, hospitals would have to conduct an individual, facility-based mock disaster drill. Hospitals also would be required to analyze their responses to, and maintain documentation of, all drills, exercises, and emergency events. If a hospital experienced an actual emergency which required activation of its emergency plan, it would be exempt from the requirement for a community or individual, facility-based disaster drill for 1 year following the onset of the emergency (proposed § 482.15(d)(2)(ii)). Thus, to satisfy the burden for these requirements, hospitals would need to develop a scenario for each drill and exercise, as well as the documentation necessary for recording what happened. If a hospital participated in a community mock disaster drill, it probably would not need to develop a scenario for that drill. However, for the purpose of determining the burden, we will assume that hospitals would need to develop at least two scenarios annually, one for a drill and one for an exercise.

The TJC-accredited hospitals are required to test their EOP twice a year (CAMH, Standard EC.4.20, EP 1, p. EC–14a). In addition, TJC-accredited hospitals must analyze all drills and exercises, identify deficiencies and areas for improvement, and modify their EOPs in response to the analysis of those tests (CAMH, Standard EC.4.20, EPs 15–17, p. EC–14b). Therefore, we expect that TJC-accredited hospitals have already developed scenarios for drills and have the documentation needed for the analysis of their

responses. Since tabletop exercises generally do not require as much preparation as drills and do not require different documentation than drills, we expect that any change a hospital needed to make to conduct a tabletop exercise would be minimal.

We expect that it would be a usual and customary business practice for the TJC-accredited hospitals to comply with the proposed requirement to prepare scenarios for emergency preparedness drills and exercises and to develop the necessary documentation. Thus, compliance with this requirement would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Based on our experience with non TJC-accredited hospitals, we expect that the remaining non TJC-accredited hospitals have some type of emergency preparedness training program and that most, if not all, of them already conduct some type of drill or exercise to test their emergency preparedness plans. In addition, many hospitals participate in mock drills and exercises held by their communities, counties, and states. We also expect that many of these hospitals have already developed the required documentation for recording the events, and analyzing their responses to, their drills, exercises, and emergency events. However, we do not believe that all non-TJC accredited hospitals would be in compliance with our proposed requirements. Thus, we will analyze the burden for non TJC-accredited hospitals.

The non TJC-accredited hospitals would be required to develop scenarios for a drill and an exercise and the documentation necessary to record and analyze their responses to drills, exercises, and emergency events. Based on our experience with hospitals, we expect that the same individuals who developed the emergency preparedness training program would develop the scenarios for the drills and exercises and the accompanying documentation. We expect that the health care trainer would spend more time developing the scenarios and documentation. Thus, for each of the 1,518 non TJC-accredited hospitals to comply with these requirements, we estimate that it would require 9 burden hours at a cost of $523. Based on this estimate, for all 1,518 non TJC-accredited hospitals to comply would require 13,662 burden hours (9 burden hours for each non TJC-accredited hospital × 1,518 non TJC-accredited hospitals =13,662 burden hours) at a cost of $793,914 ($523 estimated cost for each non TJC-accredited hospital × 1,518 non TJC-accredited hospital = $793,914 estimated cost).

TABLE 7—BURDEN HOURS AND COST ESTIMATES FOR ALL 4,928 HOSPITALS TO COMPLY WITH THE ICRS CONTAINED IN § 482.15 CONDITION: EMERGENCY PREPAREDNESS

1800141075	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/maintenance costs ($)	Total cost ($)
§ 482.15(a)(1)	0938—New	1,518	1,518	36	54,648	**	4,437,114	0	4,437,114
§ 482.15(a)(1)–(4)	0938—New	1,518	1,518	62	94,116	**	7,719,030	0	7,719,030

I. ICRs Regarding Condition of Participation: Emergency Preparedness for Transplant Centers (§ 482.78)

Proposed § 482.78 would require transplant centers to have policies and procedures that address emergency preparedness. Proposed § 482.78(a) would require transplant centers or the hospitals in which they operate to have an agreement with at least one other Medicare-approved transplant center to provide transplantation services and related care for its patients during an emergency. We propose that the agreements must address, at a minimum, the circumstances under which the agreement would be activated and the types of services that would be provided during an emergency.

"Transplantation services and related care" would include all of a center's transplant-related activities, ranging from the evaluation of potential transplant recipients and living donors through post-operative care of transplant recipients and living donors. If the agreement does not include all services normally provided by the receiving transplant center, the agreement should state precisely what services the receiving transplant center would provide during an emergency.

We would also expect each transplant center to ensure that its agreement with another transplant center is sufficient to provide its patients with the care they would need during any period in which the transplant center could not provide its services due to an emergency. If not, we would expect the transplant center to make additional agreements, when possible, to ensure all services are available for its patients during an emergency.

For the purpose of determining a burden for this requirement, we expect that each transplant center would develop an agreement with one other transplant center to provide transplantation services and related care to its patients and living donors in an emergency.

Based on our experience with transplant centers, we expect that developing this agreement would require the involvement of an administrator, the transplant center medical director, the clinical transplant coordinator, and a hospital attorney. We believe the clinical transplant coordinator would be primarily responsible for initially identifying what types of services the center's patients would need to have provided by another transplant center during an emergency, as well as which transplant center(s) could provide such services. We expect that all of the individuals we have identified would have to attend an initial meeting to approve the list of services needed by the center's patients and the transplant center(s) to contact. The hospital attorney would be primarily responsible for drafting an agreement with input from the transplant center medical director. We estimate that it would require 15 burden hours for each transplant center to develop an agreement with another transplant center to provide services for its patients and living donors during an emergency, if applicable; at a cost of $1,388.

According to CMS' Center for Medicaid, Children's Health Insurance Program (CHIP), and Survey and Certification (CMCS), there are currently

770 transplant programs or transplant centers. CMS uses the terms transplant centers and transplant programs interchangeably (70 FR 6145 and 72 FR 15210). Therefore, based on the previous estimate, for all 770 transplant centers to comply with the requirement for an agreement, it would require 11,550 burden hours (15 burden hours for each transplant center × 770 transplant centers = 11,550 burden hours) at a cost of $1,068,760 ($1,388 estimated cost for each transplant center × 770 transplant centers = $1,068,760 estimated cost).

Proposed § 482.78(b) would require a transplant center to ensure that the written agreement between the hospital in which it is located and the hospital's designated OPO as required under § 482.100 addresses the duties and responsibilities of the hospital and the OPO during an emergency. We expect that transplant centers would propose language; review any language proposed by the hospital, the OPO, or both; and approve the final agreement.

The burden associated with ensuring that the duties and responsibilities of the hospital and OPO during an emergency are addressed in the agreement would be the resources needed to draft, review, revise, and approve the language. Based on our experience with transplant centers, we expect that accomplishing these tasks would require the involvement of an administrator, the transplant center medical director, the clinical transplant coordinator, and a hospital attorney. We expect that the medical director and the clinical transplant coordinator would be primarily responsible for drafting, reviewing, revising, and approving the language of the agreement. A hospital attorney would be primarily responsible for drafting and reviewing any proposed language before the agreement was approved. The attorney would also brief the administrator and the administrator would approve the language. Thus, we estimate that it would require 15 burden hours for each transplant center to comply with the requirement to ensure that the duties and responsibilities of the hospital and OPO are identified in these agreements at a cost of $1,388. A hospital can have multiple transplant centers, but the agreement is between the hospital and the OPO. Therefore, we will use 238 hospitals for this burden analysis. This is the number of hospitals, according to CASPER, that have transplant programs. Based on this estimate, for 238 hospitals to comply with this requirement would require 3,570 burden hours (15 burden hours for each hospital × 238 hospitals= 3,570 burden hours) at a cost of $330,344 ($1,388 estimated cost for each hospital × 238 hospitals = $330,344 estimated cost).

TABLE 8—BURDEN HOURS AND COST ESTIMATES FOR ALL 770 TRANSPLANT CENTERS TO COMPLY WITH THE ICRS CONTAINED IN § 482.78 CONDITION: EMERGENCY PREPAREDNESS FOR TRANSPLANT CENTERS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total Labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)

Totals		770	1008		15,120				1,399,104

** The hourly labor cost is blended between the wages for multiple staffing levels.

J. ICRs Regarding Emergency Preparedness (§ 483.73)

Proposed § 483.73 sets forth the emergency preparedness requirements for long term care (LTC) facilities. LTC facilities would be required to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually (§ 483.73(a)). The emergency plan would have to include and be based upon a documented, facility-based and community based risk assessment that utilizes an all-hazards approach and must address missing residents (§ 483.73(a)(1)). LTC facilities would be required to develop and maintain emergency preparedness policies and procedures based on their emergency preparedness plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan that is required in paragraph (c) of this section (§ 483.73(b)). Proposed § 483.73(d) would require LTC facilities to develop and maintain emergency preparedness training and testing programs.

We would usually be required to estimate the information collection requirements (ICRs) for these proposed requirements in accordance with chapter 35 of title 44, United States Code. However, sections 4204(b) and 4214(d), which cover skilled nursing facilities (SNFs) and nursing facilities (NFs), respectively, of the Omnibus Budget Reconciliation Act of 1987 (OBRA '87) provide for a waiver of Paperwork Reduction Act (PRA) requirements for the regulations that implement the OBRA '87 requirements. Section 1819(d), as implemented by section 4201 of OBRA '87, requires that SNFs "be administered in a manner that enables it to use its resources effectively and efficiently to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident (consistent with requirements established under subsection (f)(5))." Section 1819(f)(5)(C) of the Act, requires the Secretary to establish criteria for assessing a SNF's compliance with the requirement in subsection (d) with respect for disaster preparedness. Nursing facilities have the same requirement in sections 1919(d) and (f)(5)(C), as implemented by OBRA '87.

All of the proposed requirements in this rule relate to disaster preparedness. We believe this waiver still applies to those revisions we have proposed to existing requirements in part 483 subpart B. Thus, the ICRs for the proposed requirements in § 483.73 are not subject to the PRA.

K. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 483.475)

Proposed § 483.475(a) would require Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID) to develop and maintain an emergency preparedness plan that would have to be reviewed and updated at least annually. We propose that the plan would include the elements set out at § 483.475(a)(1) through (4). We will discuss the burden for these activities individually beginning with the risk assessment.

Proposed § 483.475(a)(1) would require each ICFs/IID to develop a documented, facility-based and community-based risk assessment utilizing an all-hazard approach, including missing clients. We expect an ICF/IID to identify the medical and non-medical emergency events it could experience in the facility and the community in which it is located and determine the likelihood of the facility experiencing an emergency due to the identified hazards. In performing the

risk assessment, we expect that an ICF/IID would need to consider its physical location, the geographical area in which it is located, and its client population.

The burden associated with this requirement would be the time and effort necessary to perform a thorough risk assessment. The current CoPs for ICFs/IID already require ICFs/IID to "develop and implement detailed written plans and procedures to meet all potential emergencies and disasters such as fires, severe weather, and missing clients" (42 CFR 483.470(h)(1)). During the process of developing these detailed written plans and procedures, we expect that all ICFs/IID have already performed some type of risk assessment. However, as discussed earlier in the preamble, the current requirement is primarily designed to ensure the health and safety of the ICF/IID clients during emergencies that are within the facility or in the facility's local area. We do not expect that this requirement would be sufficient to protect the health and safety of clients during more widespread local, state, or national emergencies. In addition, an ICF/IID current risk assessment may not address all of the elements required in proposed § 483.475(a). Therefore, all ICFs/IID would have to conduct a thorough review of their current risk assessments, if they have them, and then perform the necessary tasks to ensure that their risk assessments comply with the requirements of this section.

We have not designated any specific process or format for ICFs/IID to use in conducting their risk assessments because we expect ICFs/IID would need maximum flexibility in determining the best way for their facilities to accomplish this task. However, we expect that in the process of developing a risk assessment, an ICF/IID would include representatives from, or obtain input from, all of the major departments in their facilities. Based on our experience with ICFs/IID, we expect that conducting the risk assessment would require the involvement of the ICF/IID administrator and a professional staff person, such as a registered nurse. We expect that both individuals would attend an initial meeting, review relevant sections of the current assessment, develop comments and recommendations for changes to the assessment, attend a follow-up meeting, perform a final review, and approve the risk assessment. We expect that the administrator would coordinate the meetings, perform an initial review of the current risk assessment, critique the risk assessment, offer suggested revisions, coordinate comments, develop the new risk assessment, and assure that the necessary parties approve the new risk assessment. We also expect that the administrator would spend more time reviewing and working on the risk assessment. Thus, we estimate that complying with this requirement would require 10 burden hours to complete at a cost of $461. There are currently 6,442 ICFs/IID. Therefore, it would require an estimated 51,536 burden hours (8 burden hours for each ICF/IID × 6,442 ICFs/IID = 51,536 burden hours) for all ICFs/IID to comply with this requirement at a cost of $2,969,762 ($461 estimated cost for each ICF/IID × 6,442 ICFs/IID = $2,969,762 estimated cost).

Under this proposed rule, ICFs/IID would be required to develop emergency preparedness plans that addressed the emergency events that could affect not only their facilities but also the communities in which they are located. An ICF/IID current disaster plan might not address all of the medical and non-medical emergency events identified by its risk assessment, include strategies for addressing those emergency events, or address its patient population. It may not specify the type of services the ICF/IID has the ability to provide in an emergency, or continuity of operations, including delegation of authority and succession plans. Thus, we expect that each ICFs/IID would have to review its current plans and compare them to its risk assessments. Each ICF/IID would then need to update, revise, and, in some cases, develop new sections to comply with our proposed requirements.

The burden associated with this requirement would be the resources needed to review, revise, and develop new sections for an existing emergency plan. Based upon our experience with ICFs/IID, we expect that the same individuals who were involved in the risk assessment would be involved in developing the facility's new emergency preparedness plan. We also expect that developing the plan would require more time to complete than the risk assessment. We estimate that it would require 9 burden hours at a cost of $525 for each ICF/IID to develop an emergency plan that complied with the requirements in this section. Based on this estimate, it would require 57,978 burden hours (9 burden hours for each ICF/IID × 6,442 ICFs/IID = 57,978 burden hours) to complete the plan at a cost of $3,382,050 ($525 estimated cost for each ICF/IID × 6,442 ICFs/IID = $3,382,050 estimated cost).

The ICF/IID also would be required to review and update its emergency preparedness plan at least annually. We believe that ICFs/IID already review their emergency preparedness plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 483.475(b) would require each ICF/IID to develop and implement emergency preparedness policies and procedures, based on its emergency plan set forth in paragraph (a) of this section, the risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. We would also require the ICF/IID to review and update these policies and procedures at least annually. At a minimum, the ICF/IID policies and procedures would be required to address the requirements listed at § 483.475(b)(1) through (8).

We expect all ICFs/IID to compare their current emergency preparedness policies and procedures to their emergency preparedness plans, risk assessments, and communication plans. They would then need to revise and, if necessary, develop new policies and procedures to ensure they comply with the requirements in this section.

We expect that all ICFs/II already have some emergency preparedness policies and procedures. As discussed earlier, the current CoPs for ICFs/IID require them to have "written . . . procedures to meet all potential emergencies and disasters" (§ 483.470(h)(1)). In addition, we expect that all ICFs/IID already have procedures that comply with some of the other proposed requirements in this section. For example, as will be discussed later, current regulations require ICFs/IID to perform drills, evaluate the effectiveness of those drills, and take corrective action for any problems they detect (§ 483.470(i)). We expect that all ICFs/IID have developed procedures for safe evacuation from and return to the ICF/IID (§ 483.475(b)(4)) and a process to document and analyze drills and revise their emergency plan when they detect problems.

We expect that each ICF/IID would need to review its current disaster policies and procedures and assess whether they incorporate all of the elements we are proposing. Each ICF/IID also would need to revise, and, if needed, develop new policies and procedures.

The burden incurred by reviewing, revising, updating and, if necessary, developing new emergency policies and procedures would be the resources needed to ensure that the ICF/IID policies and procedures complied with the proposed requirements of this subsection. We expect that these tasks

would involve the ICF/IID administrator and a registered nurse. We estimate that for each ICF/IID to comply would require 9 burden hours at a cost of $525. Based on this estimate, for all 6,442 ICFs/IID to comply with this requirement would require 57,978 burden hours (9 burden hours for each ICF/IID × 6,442 ICFs/IID = 57,978 burden hours) at a cost of $3,382,050 ($525 estimated cost for each ICF/IID × 6,442 ICFs/IID = $3,382,050 estimated cost).

We expect ICFs/IID to review and update their emergency preparedness policies and procedures at least annually. We believe that ICFs/IID already review their policies and procedures periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 483.475(c) would require each ICF/IID to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. The ICF/IID would also have to review and update the plan at least annually. The communication plan must include the information set out at § 483.475(c)(1) through (7).

We expect all ICFs/IID to compare their current emergency preparedness communications plans, if they have them, to the requirements in this section. ICFs/IID also would need to perform any tasks necessary to ensure that they document their communication plans and that those plans comply with the proposed requirements of this subsection.

We expect that all ICFs/IID have some type of emergency preparedness communication plan. The current CoPs require ICFs/IID to have written disaster plans and procedures for all potential emergencies (§ 483.470(h)(1)). We expect that an integral part of these plans and procedures would include communication. Further, it is standard practice for health care organizations to maintain contact information for both staff and outside sources of assistance; have alternate means of communication in case there is an interruption in phone service to the facility (for example, cell phones); and have a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their clients. However, many ICFs/IID may not have a formal, written emergency preparedness communication plan, or their plan may not comply with all the elements we are requiring.

The burden associated with complying with this requirement would be the resources required to ensure that the ICF/IID emergency communication plan complied with the proposed requirements. Based upon our experience with ICFs/IID, we anticipate that meeting the requirements in this section would primarily require the involvement of the ICF/IID administrator and a registered nurse. We estimate that for each ICF/IID to comply with the proposed requirement would require 6 burden hours at a cost of $350. Therefore, for all 6,442 ICFs/IID to comply with this requirement would require an estimated 38,652 burden hours (6 burden hours for each ICF/IID × 6,442 ICFs/IID = 38,652 burden hours) at a cost of $2,254,700 ($350 estimated cost for each ICF/IID × 6,442 ICFs/IID = $2,254,700 estimated cost).

ICFs/IID would also have to review and update their emergency preparedness communication plans at least annually. We believe that ICFs/IID already review their plans, policies, and procedures periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 483.475(d) would require ICFs/IID to develop and maintain emergency preparedness training and testing programs that would have to be reviewed and updated at least annually. Each ICF/IID would also have to meet the requirements for evacuation drills and training at § 483.470(i).

To comply with the requirements at § 483.475(d)(1), an ICF/IID would have to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, the ICF/IID would have to provide emergency preparedness training at least annually.

The ICFs/IID would need to compare their current emergency preparedness training programs' contents to their risk assessments and updated emergency preparedness plans, policies and procedures, and communication plans and then revise and, if necessary, develop new sections for their training programs to ensure they complied with the proposed requirements. The current ICFs/IID CoPs require ICFs/IID to periodically review and provide training to their staff on the facility's emergency plan (§ 483.470(h)(2)). In addition, staff on all shifts must be trained to perform the tasks to which they are assigned for evacuations (§ 483.470(i)(1)(i)). We expect that all ICFs/IID have emergency preparedness training programs for their staff. However, under this proposed rule, each ICF/IID would need to review its current training program and compare its contents to its updated emergency preparedness plan, policies and procedures, and communications plan. Each ICF/IID also would need to revise and, if necessary, develop new sections for their training program to ensure it complied with the proposed requirements.

The burden would be the time and effort necessary to comply with the proposed requirements. We expect that a registered nurse would be primarily involved in reviewing the ICF/IID current training program and the ICF/IID updated emergency preparedness plan, policies and procedures, and communication plan; determining what tasks would need to be performed to comply with the proposed requirements of this subsection; accomplishing those tasks, and developing an updated training program. We expect the administrator would work with the registered nurse to update the training program. We estimate that it would require 7 burden hours for each ICF/IID to develop an emergency training program at a cost of $363. Therefore, it would require an estimated 45,094 burden hours (7 burden hours for each ICF/IID × 6,442 ICFs/IID = 45,094 burden hours) to comply with this requirement at a cost of $2,338,446 ($363 estimated cost for each ICF/IID × 6,442 ICFs/IID = $2,338,446 estimated cost).

ICFs/IID would have to review and update their emergency preparedness training program at least annually. We believe that ICFs/IID already review their emergency preparedness training programs periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 483.475(d)(2) would require ICFs/IID to participate in a community mock disaster drill and a paper-based, tabletop exercise at least annually. The ICFs/IID would also be required to analyze their responses to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. If an ICF/IID experienced an actual natural or man-made emergency that required activation of its emergency plan, the ICF/IID would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year

following the onset of the actual event. To comply with this requirement, an ICF/IID would need to develop scenarios for each drill and exercise. An ICF/IID also would have to develop the required documentation.

The current ICF/IID CoPs require them to "hold evacuation drills at least quarterly for each shift and under varied conditions to . . . evaluate the effectiveness of emergency and disaster plans and procedures" (§ 483.470(i)(1)). In addition, ICFs/IID must "actually evacuate clients during at least one drill each year on each shift . . . file a report and evaluation on each evacuation drill . . . and investigate all problems with evacuation drills, including accidents, and take corrective action" (42 CFR 483.470(i)(2)). Thus, all 6,450 ICFs/IID already conduct quarterly drills. However, the current CoPs do not indicate the type of drills ICFs/IID must perform. In addition, although the CoPs require that a report and evaluation be filed, this requirement does not ensure that ICFs/IID have developed the type of paperwork we propose requiring or that scenarios are used for each drill or table top exercise. For the purpose of determining a burden for these requirements, all ICFs/IID would have to develop scenarios, one for the drill and one for the table top exercise, and all ICFs/IID would have to develop the necessary documentation.

The burden associated with these requirements would be the resources the ICF/IID would need to comply with the proposed requirements. We expect that complying with these requirements would likely require the involvement of a registered nurse. We expect that the registered nurse would develop the required documentation. We also expect that the registered nurse would develop the scenarios for the drill and exercise. We estimate that these tasks would require 4 burden hours at a cost of $188. Based on this estimate, for all 6,442 ICFs/IID to comply, it would require 25,768 burden hours (4 burden hours for each ICF/IID × 6,442 ICFs/IID = 25,768 burden hours) at a cost of $1,211,096 ($188 estimated cost for each ICF/IID × 6,442 ICFs/IID = $1,211,096 estimated cost).

TABLE 9—BURDEN HOURS AND COST ESTIMATES FOR ALL 6,442 ICFS/IID TO COMPLY WITH THE ICRS CONTAINED IN § 485.475 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)
§ 483.475(a)(1)		6,442	6,442	8	51,536	**	2,969,762	0	2,969,762
§ 483.475(a)(1)–(4)		6,442	6,442	9	57,978	**	3,382,050	0	3,382,050

** The hourly labor cost is blended between the wages for multiple staffing levels.

L. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 484.22)

Proposed § 484.22(a) would require home health agencies (HHAs) to develop and maintain emergency preparedness plans. Each HHA also would be required to review and update the plan at least annually. Specifically, we propose that the plan meet the requirements listed at § 484.22(a)(1) through (4). We will discuss the burden for these activities individually, beginning with the risk assessment.

Accreditation may substantially affect the burden a HHA would experience under this proposed rule. HHAs are accredited by three different accrediting organizations (AOs): The Joint Commission (TJC), The Community Health Accreditation Program (CHAP), and the Accreditation Commission for Health Care, Inc. (ACHC). After reviewing the accreditation standards for all three AOs, neither the standards for CHAP nor the ones for ACHC appeared to ensure substantial compliance with our proposed requirements in this rule. Therefore, the HHAs accredited by CHAP and ACHC will be included with the non-accredited HHAs for the purposed of determining the burden for this proposed rule.

There are currently 12,349 HHAs. There are 1,734 TJC-accredited HHAs. A review of TJC deeming standards indicates that the 1,734 TJC-accredited HHAs already perform certain tasks or activities that would partially or completely satisfy our proposed requirements. Therefore, since TJC accreditation is a significant factor in determining the burden, we will analyze the burden for the 1,734 TJC-accredited HHAs separately from the 10,615 non TJC-accredited HHAs (12,349 HHAs—1,734 TJC-accredited HHAs = 10,615 non TJC-accredited HHAs), as appropriate. Note that we obtain data on the number of HHAs, both accredited and non-accredited, from the CMS CASPER data system, which is updated periodically by the individual states. Due to variations in the timeliness of the data submissions, all numbers are approximate, and the number of accredited and non-accredited HHAs may not equal the total number of HHAs.

Section 484.22(a)(1) would require that HHAs develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. To perform this risk assessment, an HHA would need to identify the medical and non-medical emergency events the HHA could experience and how the HHA's essential business functions and ability to provide services could be impacted by those emergency events based on the risks to the facility itself and the community in which it is located. We would expect HHAs to consider the extent of their service area, including the location of any branch offices. An HHA with an existing risk assessment would need to review, revise and update it to comply with our proposed requirements.

For TJC accreditation standards, we used TJC's CAMHC Refreshed Core, January 2008 pages from the Comprehensive Accreditation Manual for Home Care 2008 (CAMHC). In the chapter entitled, "Environmental Safety and Equipment Management" (EC), TJC accreditation standards require HHAs to conduct proactive risk assessments to "evaluate the potential adverse impact of the external environment and the services provided on the security of patients, staff, and other people coming to the organization's facilities" (CAMHC, Standard EC.2.10, EP 3, p. EC–7). These proactive risk assessments should evaluate the risk to the entire organization, and the HHA should conduct one of these assessments whenever it identifies any new external risk factors or begins a new service

(CAMHC, Standard EC.2.10, p. EC–7). Moreover, TJC-accredited HHAs are required to develop and maintain "a written emergency management plan describing the process for disaster readiness and emergency management . . . " (CAMHC, Standard EC.4.10, EP 3, p. EC–9). In addition, TJC requires that these plans provide for "processes for managing . . . activities related to care, treatment, and services (for example, scheduling, modifying, or discontinuing services; controlling information about patients; referrals; transporting patients) . . . logistics relating to critical supplies . . . communicating with patient" during an emergency (CAMHC, Standard EC.4.10, EP 10, p. EC–9–10). We expect that any HHA that has conducted a proactive risk assessment and developed an emergency management plan that satisfies the previously described TJC accreditation requirements has already conducted a risk assessment that would satisfy our proposed requirements. Any tasks needed to comply with our proposed requirements would not result in any additional burden. Thus, for the 1,734 TJC-accredited HHAs, the risk assessment requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

It is standard practice for health care facilities to prepare for common internal and external medical and non-medical emergencies, based on their location, structure, and the services they provide. We believe that the 10,615 non TJC-accredited HHAs have conducted some type of risk assessment. However, those risk assessments are unlikely to satisfy all of our proposed requirements. Therefore, we will analyze the burden for the 10,615 non TJC-accredited HHAs to comply.

We have not designated any specific process or format for HHAs to use in conducting their risk assessments because we believe that HHAs need the flexibility to determine the best way to accomplish this task. However, we expect that HHAs would include representatives from or input from all of their major departments. Based on our experience working with HHAs, we expect that conducting the risk assessment would require the involvement of an HHA administrator, the director of nursing, director of rehabilitation, and the office manager. We expect that these individuals would attend an initial meeting, review relevant sections of the current assessment, prepare and forward their comments to the administrator and the director of nursing, attend a follow-up meeting, perform a final review, and approve the new risk assessment. We expect that the director of nursing would coordinate the meetings, review the current risk assessment, provide suggestions, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approve it. We expect that the director of nursing would spend more time developing the facility's new risk assessment than the other individuals. We estimate that the risk assessment would require 11 burden hours for each non TJC-accredited HHA to complete at a cost of $605. There are currently about 10,615 non TJC-accredited HHAs. We estimate that for all non TJC-accredited HHAs to comply with this requirement would require 116,765 burden hours (11 burden hours for each non TJC-accredited HHA × 10,615 non TJC-accredited HHAs = 116,765 burden hours) at a cost of $6,422,075 ($605 estimated cost for each non TJC-accredited HHA × 10,615 non TJC-accredited HHAs = $6,422,075 estimated cost).

After conducting a risk assessment, HHAs would have to develop an emergency preparedness plan that complied with § 484.22(a)(1) through (4). As discussed earlier, TJC already has accreditation standards similar to the requirements we propose at § 484.22(a). Thus, we expect that TJC-accredited HHAs have an emergency preparedness plan that would satisfy most of our proposed requirements. Although the current HHA CoPs require that there be a qualified person who "is authorized in writing to act in the absence of the administrator" (§ 484.14(c)), the TJC standards do not specifically address delegations of authority or succession plans. Furthermore, TJC standards do not address persons-at-risk. Therefore, we expect that the 1,734 TJC-accredited HHAs would incur some burden due to reviewing, revising, and in some cases, developing new sections for their emergency preparedness plans. However, we will analyze the burden for TJC-accredited HHAs separately from the 10,615 non TJC-accredited HHAs because we expect the burden for TJC-accredited HHAs to be substantially less.

We expect that the 10,615 non TJC-accredited HHAs already have some type of emergency preparedness plan, as well as delegations of authority and succession plans. However, we also expect that their plans do not comply with all of our proposed requirements. Thus, all non TJC-accredited HHAs would need to review their current plans and compare them to their risk assessments. They also would need to update, revise, and, in some cases, develop new sections for their emergency plans.

Based on our experience with HHAs, we expect that the same individuals who were involved in the risk assessment would be involved in developing the emergency preparedness plan. We estimate that complying with this requirement would require 10 burden hours for each TJC-accredited HHA at a cost of $546. Therefore, for all 1,734 TJC-accredited HHAs to comply would require an estimated 17,340 burden hours (10 burden hours for each TJC-accredited HHA × 1,734 TJC-accredited HHAs = 17,340 burden hours) at a cost of $946,764 ($546 estimated cost for each HHA × 1,734 TJC-accredited HHAs = $946,764 estimated cost).

We estimate that complying with this requirement would require 15 burden hours for each of the 10,615 non TJC-accredited HHAs at a cost of $819. Therefore, for all 10,615 non TJC-accredited HHAs to comply would require an estimated 159,225 burden hours (15 burden hours for each non TJC-accredited HHA × 10,615 non TJC-accredited HHAs = 159,225 burden hours) at a cost of $8,693,685 ($819 estimated cost for each non TJC-accredited HHA × 10,615 non TJC-accredited HHAs = $8,693,685 estimated cost).

Based on these estimates, for all 12,349 HHAs to develop an emergency preparedness plan that complies with our proposed requirements would require 176,565 burden hours at a cost of $9,640,449.

We would also require HHAs to review and update their emergency preparedness plans at least annually. We believe that HHAs are already reviewing and updating their emergency preparedness plans periodically. Hence, compliance with this requirement would constitute a usual and customary business practice for HHAs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 484.22(b) would require each HHA to develop and implement emergency preparedness policies and procedures based on the emergency plan, risk assessment, communication plan as set forth in § 484.22(a), (a)(1), and (c), respectively. The HHA would also have to review and update its policies and procedures at least annually. We would require that, at a minimum, these policies and procedures address the requirements listed at § 484.22(b)(1) through (6).

We expect that HHAs would review their emergency preparedness policies

and procedures and compare them to their risk assessments, emergency preparedness plans, and emergency communication plans. HHAs would need to revise or, in some cases, develop new policies and procedures to ensure they complied with all of the proposed requirements.

In the chapter entitled, "Leadership," TJC accreditation standards require that each HHA's "leaders develop policies and procedures that guide and support patient care, treatment, and services" (CAMHC, Standard LD.3.90, EP 1, p. LD–13). In addition, TJC accreditation standards and EPs specifically require each HHA to develop and maintain an emergency management plan that provides processes for managing activities related to care, treatment, and services, including scheduling, modifying, or discontinuing services (CAMHC, Standard EC.4.10, EP 10, EC–9); identify backup communication systems in the event of failure due to an emergency event (CAMHC, Standard EC.4.10, EP 18, EC–10); and develop processes for critiquing tests of its emergency preparedness plan and modifying the plan in response to those critiques (CAMHC, Standard EC.4.20, EPs 15–17, p. EC–11).

We expect that the 1,734 TJC-accredited HHAs already have emergency preparedness policies and procedures that address some of the proposed requirements at § 484.22(b). However, we do not believe that TJC accreditation requirements ensure that TJC-accredited HHAs' policies and procedures address all of our proposed requirements for emergency policies and procedures. Thus, we will include the 1,734 TJC-accredited HHAs with the 10,615 non TJC-accredited HHAs in our analysis of the burden for proposed § 484.22(b).

Under proposed § 484.22(b)(1), the HHA's individual plans for patients during a natural or man-made disaster would be included as part of the comprehensive patient assessment, which would be conducted according to the provisions at § 484.55. We expect that HHAs already collect data during the comprehensive patient assessment that they would need to develop for each patient's emergency plan. At § 484.22(b)(2), we propose requiring each HHA to have procedures to inform state and local emergency preparedness officials about HHA patients in need of evacuation from their residences at any time due to an emergency situation based on the patients' medical and psychiatric condition and home environment.

Existing HHA regulations already address some aspects of proposed § 484.22(b)(1) and (b)(2). For example, regulations at § 484.18 make it clear that HHAs are expected to accept patients only on the basis of a reasonable expectation that they can provide for the patients' medical, nursing, and social needs in the patients' home. Moreover, the plan of care for each patient must cover any safety measures necessary to protect the patient from injury § 484.18(a). Thus, the activities necessary to be in compliance with § 484.22(b)(1) and (2) would constitute usual and customary business practices for HHA and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

We expect that all 12,349 HHAs (1,734 TJC-accredited HHAs + 10,615 non TJC-accredited HHAs = 12,349 HHAs) have some emergency preparedness policies and procedures. However, we also expect that all HHAs would need to review their policies and procedures and revise and, if necessary, develop new policies and procedures that complied with our proposed requirements set out at § 484.22(3) through (6). We expect that a professional staff person, most likely the director of nursing, would review the HHA's policies and procedures and make recommendations for changes or development of additional policies and procedures. The administrator or director of nursing would brief representatives of most of the HHA's major departments and assign staff to make necessary revisions and draft any new policies and procedures. We estimate that complying with this requirement would require 18 burden hours for each HHA at a cost of $996. Thus, for all 12,349 HHAs to comply with all of our proposed requirements would require an estimated 222,282 burden hours (18 burden hours for each HHA × 12,349 HHAs = 222,282 burden hours) at a cost of $12,299,604 ($996 estimated cost for each HHA × 12,349 HHAs = $12,299,604 estimated cost).

We are also proposing that HHAs review and update their emergency preparedness policies and procedures at least annually. The current HHA CoPs already require that "a group of professional personnel . . . reviews the agency's policies governing scope of services offered" (42 CFR 484.16). Thus, we believe that complying with this requirement would constitute a usual and customary business practice for HHAs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

In proposed § 484.22(c), each HHA would be required to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. We propose that each HHA review and update its communication plan at least annually. We would require that the emergency communication plan include the information listed at § 484.22(c)(1) through (6).

It is standard practice for health care facilities to maintain contact information for both staff and outside sources of assistance; alternate means of communication in case there is an interruption in phone service to the facility; and a method of sharing information and medical documentation with other health care providers to ensure continuity of care for patients.

All TJC-accredited HHAs are required to identify backup communication systems for both internal and external communication in case of failure due to an emergency (CAMHC, Standard EC.4.10, EP 18, p. EC–10). They are required to have processes for notifying their staff when the HHA initiates its emergency plan (CAMHC, Standard EC.4.10, EP 7, p. EC–9); identifying and assigning staff to ensure that essential functions are covered during emergencies (CAMHC, Standard EC.4.10, EP 9, p. EC–9); and activities related to care, treatment, and services, such as controlling information about their patients (CAMHC, Standard EC.4.10, EP 10, p. EC–9). However, we do not believe these requirements ensure that all TJC-accredited HHAs are already in compliance with our proposed requirements. Thus, we will include the 1,734 TJC-accredited HHAs with the 10,615 non TJC-accredited HHAs in assessing the burden for this requirement.

We expect that all 12,349 HHAs maintain some contact information, an alternate means of communication, and a method for sharing information with other health care facilities. However, this would not ensure that all HHAs would be in compliance with our proposed requirements for communication plans. Thus, we will analyze the burden for this requirement for all 12,349 HHAs.

The burden associated with complying with this requirement would be the time and effort necessary for each HHA to review its existing communication plan, if any, and revise it; and, if necessary, to develop new sections for the emergency preparedness communication plan to ensure that it complied with our proposed requirements. Based on our experience with HHAs, we expect that these activities would require the involvement of the HHA's administrator, director of nursing, director of rehabilitation, and office

manager. We estimate that complying with this requirement would require 10 burden hours for each HHA at a cost of $520. Thus, for all 12,349 HHAs to comply with these requirements would require an estimated 123,490 burden hours (10 burden hours for each HHA × 12,349 HHAs = 123,490 burden hours) at a cost of $6,421,480 ($520 estimated cost for each HHA × 12,349 HHAs = $6,421,480 estimated cost).

We propose requiring HHAs to review and update their emergency preparedness communication plans at least annually. We believe that HHAs already review their emergency preparedness plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for HHAs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Section 484.22(d) would require each HHA to develop and maintain an emergency preparedness training and testing program. Each HHA would also have to review and update its training and testing program at least annually. We propose requiring that each HHA meet the requirements listed at § 484.22(d)(1) and (2).

Proposed § 484.22(d)(1) states that each HHA would have to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, the HHA would have to provide emergency preparedness training at least annually. Each HHA would also have to ensure that their staff could demonstrate knowledge of their emergency procedures.

Based on our experience with HHAs, we expect that all 12,349 HHAs have some type of emergency preparedness training program. The 1,734 TJC-accredited HHAs are already required to provide both an initial orientation to their staff before they can provide care, treatment, or services (CAMHC, Standard HR.2.10, EP 2, p. HR–6) and "ongoing in-services, training or other staff activities [that] emphasize job-related aspects of safety . . ." (CAMHC, Standard HR.2.30, EP 4, p. HR–8). Since emergency preparedness is a critical aspect of job-related safety, we expect that TJC-accredited HHAs would ensure that their orientations and ongoing staff training would include the facility's emergency preparedness policies and procedures.

However, we expect that under proposed § 484.22(d), all HHAs would need to compare their training and testing programs with their risk assessments, emergency preparedness plans, emergency policies and procedures, and emergency communication plans. We expect that most HHAs would need to revise and, in some cases, develop new sections for their training programs to ensure that they complied with our proposed requirements. In addition, HHAs would need to provide an orientation and annual training in their facilities' emergency preparedness policies and procedures to individuals providing services under arrangement and volunteers, consistent with their expected roles. Hence, we will analyze the burden of these proposed requirements for all 12,349 HHAs.

Based on our experience with HHAs, we expect that complying with this requirement would require the involvement of an administrator, the director of training, director of nursing, director of rehabilitation, and the office manager. We expect that the director of training would spend more time reviewing, revising or developing new sections for the training program than the other individuals. We estimate that it would require 16 burden hours for each HHA to develop an emergency preparedness training and testing program at a cost of $756. Thus, for all 12,349 HHAs to comply would require an estimated 197,584 burden hours (16 burden hours for each HHA × 12,349 HHAs = 197,584 burden hours) at a cost of $9,335,844 ($756 estimated cost for each HHA × 12,349 HHAs = $9,335,844 estimated cost).

We also propose requiring HHAs to review and update their emergency preparedness training programs at least annually. We believe that HHAs already review their training and testing programs periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for HHAs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 484.22(d)(2) would require each HHA to conduct drills and exercises to test its emergency plan. Each HHA would have to participate in a community mock disaster drill and conduct a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, each HHA would have to conduct an individual, facility-based mock disaster drill at least annually. If an HHA experienced an actual natural or man-made emergency that required activation of the emergency plan, it would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. Each HHA would also be required to analyze its responses to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise its emergency plan as needed. For the purposes of determining the burden for these requirements, we expect that all HHAs would have to comply with all of the proposed requirements.

The burden associated with complying with this requirement would be the time and effort necessary to develop the scenarios for the drill and the exercise and the required documentation. All TJC-accredited HHAs are required to test their emergency management plan once a year; the test cannot be a tabletop exercise (CAMHC, Standard EC.4.20, EP 1 and Note 1, p. EC–11). The TJC also requires HHAs to critique the drills and modify their emergency management plans in response to those critiques (CAMHC, Standard EC.4.20, EPs 15–17, p. EC–11). Therefore, TJC-accredited HHAs already prepare scenarios for drills, develop documentation to record the events during drills, critique them, and modify their emergency preparedness plans in response. However, TJC standards do not describe what type of drill HHAs must conduct or require a tabletop exercise annually. Thus, TJC accreditation standards would not ensure that TJC-accredited HHAs would be in compliance with our proposed requirements. Therefore, we will include the 1,734 TJC-accredited HHAs with the 10,615 non TJC-accredited HHAs in our analysis of the burden for these requirements.

Based on our experience with HHAs, we expect that the same individuals who are responsible for developing the HHA's training and testing program would develop the scenarios for the drills and exercises and the accompanying documentation. We expect that the director of nursing would spend more time on these activities than would the other individuals. We estimate that it would require 8 burden hours for each HHA to comply with the proposed requirements at an estimated cost of $373. Thus, for all 12,349 HHAs to comply with the requirements in this section would require an estimated 98,792 burden hours (8 burden hours for each HHA x 12,349 HHAs = 98,792 burden hours) at a cost of $4,606,177 ($373 estimated cost for each HHA x 12,349 HHAs = $4,606,177 estimated cost).

Based upon the previous analysis, we estimate that it would require 909,855 burden hours for all HHAs to comply with the ICRs contained in this proposed rule at a cost of $51,034,965.

TABLE 10—BURDEN HOURS AND COST ESTIMATES FOR ALL 12,349 HHAS TO COMPLY WITH THE ICRS CONTAINED IN § 484.22 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)
§ 484.22(a)(1)	0938—New	10,615	10,615	11	116,765	**	6,422,075	0	6,422,075
§ 484.22(a)(1)–(4) (TJC-accredited)	0938—New	1,734	1,734	10	17,340	**	946,764	0	946,764
§ 484.22(a)(1)–(4) (Non TJC-accredited)	0938—New	10,615	10,615	18	159,225	**	8,693,685	0	8,693,685
§ 484.22(b)	0938—New	12,349	12,349	18	222,282	**	12,299,604	0	12,299,604
§ 484.22(c)	0938—New	12,349	12,349	10	123,490	**	6,421,480	0	6,421,480
§ 484.22(d)(1)	0938—New	12,349	12,349	16	197,584	**	9,335,844	0	9,335,844
§ 484.22(d)(2)	0938—New	12,349	12,349	8	98,792	**	4,606,177	0	4,606,177
Total					935,478				48,725,629

** The hourly labor cost is blended between the wages for multiple staffing levels.

M. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 485.68)

Proposed § 485.68(a) would require all Comprehensive Outpatient Rehabilitation Facilities (CORFs) to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. We propose that the plan meet the requirements listed at § 485.68(a)(1) through (5).

Proposed § 485.68(a)(1) would require a CORF to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. The CORFs would need to identify the medical and non-medical emergency events they could experience. The current CoPs for CORFs already require CORFs to have "written policies and procedures that specifically define the handling of patients, personnel, records, and the public during disasters" (§ 485.64). We expect that all CORFs have performed some type of risk assessment during the process of developing their disaster policies and procedures. However, their risk assessments may not meet our proposed requirements. Therefore, we expect that all CORFs would need to review their existing risk assessments and perform the tasks necessary to ensure that those assessments meet our proposed requirements.

We have not designated any specific process or format for CORFs to use in conducting their risk assessments because we believe they need the flexibility to determine how best to accomplish this task. However, we expect that CORFs would obtain input from all of their major departments.

Based on our experience with CORFs, we expect that conducting the risk assessment would require the involvement of the CORF's administrator and a therapist. The type of therapists at each CORF varies, depending upon the services offered by the facility. For the purposes of determining the burden, we will assume that the therapist is a physical therapist. We expect that both the administrator and the therapist would attend an initial meeting, review relevant sections of the current assessment, develop comments and recommendations for changes, attend a follow-up meeting, perform a final review, and approve the new risk assessment. We expect that the administrator would coordinate the meetings, review and critique the risk assessment, coordinate comments, develop the new risk assessment, and ensure that it was approved.

We estimate that complying with this requirement would require 8 burden hours at a cost of $485. There are currently 272 CORFs. Therefore, it would require an estimated 2,176 burden hours (8 burden hours for each CORF × 272 CORFs = 2,176 burden hours) for all CORFs to comply at a cost of $131,920 ($485 estimated cost for each CORF × 272 CORFs = $131,920 estimated cost).

After conducting the risk assessment, each CORF would need to review, revise, and, if necessary, develop new sections for its emergency plan so that it complied with our proposed requirements. The current CoPs for CORFs require them to have a written disaster plan (§ 485.64) that must be developed and maintained with the assistance of appropriate experts and address, among other things, procedures concerning the transfer of casualties and records, notification of outside emergency personnel, and evacuation routes (§ 485.64(a)). Thus, we expect that all CORFs have some type of emergency preparedness plan. However, we also expect that all CORFs would need to review, revise, and develop new sections for their plans to ensure that their plans complied with all of our proposed requirements.

Based on our experience with CORFs, we expect that the administrator and physical therapist who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we expect that it would require more time to complete the emergency plan than to complete the risk assessment. We estimate that complying with this requirement would require 11 burden hours at a cost of $677 for each CORF. Therefore, it would require an estimated 2,992 burden hours (11 burden hours for each CORF × 272 CORFs = 2,992 burden hours) for all CORFs to complete an emergency preparedness plan at a cost of $184,144 ($677 estimated cost for each CORF × 272 CORFs = $184,144 estimated cost).

The CORF also would be required to review and update its emergency preparedness plan at least annually. We believe that CORFs already review their plans periodically. Therefore, compliance with the requirement for an annual review of the emergency preparedness plan would constitute a usual and customary business practice for CORFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.68(b) would require CORFs to develop and implement emergency preparedness policies and procedures based on their emergency plans, risk assessments, and communication plans as set forth in § 485.68(a), (a)(1), and (c), respectively. We would also require CORFs to review and update these policies and procedures at least annually. We would require that a CORF's policies and procedures address, at a minimum, the requirements listed at § 485.68(b)(1) through (4).

We expect that all CORFs have some emergency preparedness policies and procedures. As discussed earlier, the current CoPs for CORFs already require CORFs to have "written policies and procedures that specifically define the handling of patients, personnel, records, and the public during disasters" (42 CFR 485.64). However, all CORFs would need to review their policies and procedures and compare them to their risk assessments, emergency

preparedness plans, and communication plans. Most CORFs would need to revise their existing policies and procedures or develop new policies and procedures to ensure they complied with all of our proposed requirements.

We expect that both the administrator and the therapist would attend an initial meeting, review relevant policies and procedures, make recommendations for changes, attend a follow-up meeting, perform a final review, and approve the policies and procedures. We expect that the administrator would coordinate the meetings, coordinate the comments, and ensure that they are approved.

We estimate that it would take 9 burden hours for each CORF to comply with this requirement at a cost of $549. Therefore, it would take all CORFs 2,448 burden hours (9 burden hours for each CORF × 272 CORFs = 2,448 burden hours) to comply with this requirement at a cost of $149,328 ($549 estimated cost for each CORF × 272 CORFs = $149,328 estimated cost).

Proposed § 485.68(b) also proposes that CORFs review and update their emergency preparedness policies and procedures at least annually. We believe that CORFs already review their policies and procedures periodically. Therefore, we believe that complying with this requirement would constitute a usual and customary business practice for CORFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.68(c) would require CORFs to develop and maintain emergency preparedness communication plans that complied with both federal and state law and that would be reviewed and updated at least annually. We propose that a CORF's communication plan include the information listed in § 485.68(c)(1) through (5). Current CoPs require CORFs to have a written disaster plan that must include, among other things, "procedures for notifying community emergency personnel" (§ 486.64(a)(2)). In addition, it is standard practice in the health care industry to maintain contact information for staff and outside sources of assistance; alternate means of communication in case there is an interruption in phone service to the facility; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. However, many CORFs may not have formal, written emergency preparedness communication plans. Therefore, we expect that all CORFs would need to review, update, and in some cases, develop new sections for their plans to ensure they complied with all of our proposed requirements.

Based on our experience with CORFs, we anticipate that satisfying the requirements in this section would primarily require the involvement of the CORF's administrator with the assistance of a physical therapist to review, revise, and, if needed, develop new sections for the CORF's emergency preparedness communication plan. We estimate that it would take 8 burden hours for each CORF to comply with this requirement at a cost of $485. Therefore, it would take 2,176 burden hours (8 burden hours for each CORF × 272 CORFs = 2,176 burden hours) for all CORFs to comply at a cost of $131,920 ($485 estimated cost for each CORF × 272 CORFs = $131,920 estimated cost).

We propose that each CORF would also have to review and update its emergency preparedness communication plan at least annually. We believe that compliance with this requirement would constitute a usual and customary business practice for CORFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.68(d) would require CORFs to develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually. We propose that each CORF would have to satisfy the requirements listed at § 485.68(d)(1) and (2).

Proposed § 485.68(d)(1) would require that each CORF provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, each CORF would have to provide emergency preparedness training at least annually. Each CORF would also have to ensure that its staff could demonstrate knowledge of its emergency procedures. All new personnel would have to be oriented and assigned specific responsibilities regarding the CORF's emergency plan within two weeks of their first workday. In addition, the training program would have to include instruction in the location and use of alarm systems and signals and firefighting equipment.

The current CORF CoPs at § 485.64 require CORFs to ensure that all personnel are knowledgeable, trained, and assigned specific responsibilities regarding the facility's disaster procedures. Section § 485.64(b)(1) specifies that CORFs must also "provide ongoing training . . . for all personnel associated with the facility in all aspects of disaster preparedness". In addition, § 485.64(b)(2) specifies that "all new personnel must be oriented and assigned specific responsibilities regarding the facility's disaster plan within 2 weeks of their first workday".

In evaluating the requirement for proposed § 485.68(d)(1), we expect that all CORFs have an emergency preparedness training program for new employees, as well as ongoing training for all staff. However, under this proposed rule, all CORFs would need to compare their current training programs to their risk assessments, emergency preparedness plans, policies and procedures, and communication plans. CORFs would then need to revise, and in some cases, develop new material for their training programs.

We expect that these tasks would require the involvement of an administrator and a physical therapist. We expect that the administrator would review the CORF's current training program to identify necessary changes and additions to the program. We expect that the physical therapist would work with the administrator to develop the revised and updated training program. We estimate it would require 8 burden hours for each CORF to develop an emergency training program at a cost of $485. Therefore, for all CORFs to comply would require an estimated 2,176 burden hours (8 burden hours for each CORF × 272 CORFs = 2,176 burden hours) at a cost of $131,920 ($485 estimated cost for each CORF × 272 CORFs = $131,920 estimated cost).

We also propose that each CORF review and update its emergency preparedness training program at least annually. We believe that CORFs already review their training programs periodically. Thus, complying with the requirement for an annual review of the emergency preparedness training program would constitute a usual and customary business practice for CORFs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.68(d)(2) would require CORFs to participate in a community mock disaster drill and a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, the CORF would have to conduct an individual, facility-based mock disaster drill at least annually. If a CORF experienced an actual natural or man-made emergency that required activation of its emergency plan, it would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. CORFs would also be required to analyze their responses to and maintain

documentation of all drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. To comply with this requirement, a CORF would need to develop scenarios for these drills and exercises. The current CoPs at § 485.64(b)(1) require CORFs to "provide ongoing . . . drills for all personnel associated with the facility in all aspects of disaster preparedness". However, the current CoPs do not specify the type of drill, how often the CORF must conduct drills, or that a CORF must use scenarios for their drills and tabletop exercises.

Based on our experience with CORFs, we expect that the same individuals who develop the emergency preparedness training program would develop the scenarios for the drills and exercises, as well as the accompanying documentation. We expect that the administrator would spend more time on these tasks than the physical therapist. We estimate that for each CORF to comply with the proposed requirements would require 6 burden hours at a cost of $366. Therefore, for all 272 CORFs to comply would require an estimated 1,632 burden hours (6 burden hours for each CORF × 272 CORFs = 1,632 burden hours) at a cost of $99,552 ($366 estimated cost for each CORF × 272 CORFs = $99,552 estimated cost).

Based on the previous analysis, for all 272 CORFs to comply with the ICRs contained in this proposed rule would require 13,600 total burden hours at a total cost of $828,784.

TABLE 11—BURDEN HOURS AND COST ESTIMATES FOR ALL 272 CORFS TO COMPLY WITH THE ICRS CONTAINED IN § 485.68 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)
§ 485.68(a)(1)	0938—New	272	272	8	2,176	**	131,920	0	131,920
§ 485.68(a)(2–(4)	0938—New	272	272	11	2,992	**	184,144	0	184,144
§ 485.68(b)	0938—New	272	272	9	2,448	**	149,328	0	149,328
§ 485.68(c)	0938—New	272	272	8	2,176	**	131,920	0	131,920
§ 485.68(d)(1)	0938—New	272	272	8	2,176	**	131,920	0	131,920
§ 485.68(d)(2)	0938—New	272	272	6	1,632	**	99,552	0	99,552
Totals		272	1,632		13,600				828,784

** The hourly labor cost is blended between the wages for multiple staffing levels.

N. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 485.625)

Proposed § 485.625(a) would require critical access hospitals (CAHs) to develop and maintain a comprehensive emergency preparedness program that utilizes an all-hazards approach and would have to be reviewed and updated at least annually. Each CAH's emergency plan would have to include the elements listed at § 485.625(a)(1) through (4).

Proposed § 485.625(a)(1) would require each CAH to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. CAHs would need to review their existing risk assessments and perform any tasks necessary to ensure that it complied with our proposed requirements.

There are approximately 1,322 CAHs. CAHs with distinct part units were included in the hospital burden analysis. Approximately 402 CAHs are accredited either by TJC (370) or by the AOA (32); the remainder are non-accredited CAHs. Many of the TJC and AOA accreditation standards for CAHs are similar to the requirements in this proposed rule. For purposes of determining the burden, we have analyzed the burden for the 370 TJC-accredited and 32 AOA-accredited CAHs separately from the non-accredited CAHs. Note that we obtain data on the number of CAHs, both accredited and non-accredited, from the CMS CASPER database, which is updated periodically by the individual states. Due to variations in the timeliness of the data submissions, all numbers are approximate, and the number of accredited and non-accredited CAHs may not equal the total number of CAHs.

For purposes of determining the burden for TJC-accredited CAHs, we used TJC's Comprehensive Accreditation Manual for Critical Access Hospitals: The Official Handbook 2008 (CAMCAH). In the chapter entitled, "Management of the Environment of Care" (EC), Standard EC.4.11 requires CAHs to plan for managing the consequences of emergency events (CAMCAH, Standard EC.4.11, CAMCAH Refreshed Care, January 2008, pp. EC–10—EC–11). CAHs are required to perform a hazard vulnerability analysis (HVA), which requires each CAH to, among other things, "identify events that could affect demand for its services or its ability to provide those services, the likelihood of those events occurring, and the consequences of those events" (Standard EC.4.11, EP 2, p. EC–10a). The HVA "should identify potential hazards, threats, and adverse events, and assess their impact on the care, treatment, and services [the CAH] must sustain during an emergency," and the HVA "is designed to assist [CAHs] in gaining a realistic understanding of their vulnerabilities, and to help focus their resources and planning efforts" (CAMCAH, Emergency Management, Introduction, p. EC–10). Thus, we expect that TJC-accredited CAHs already conduct a risk assessment that would comply with the requirements we propose. Thus, for the 370 TJC-accredited CAHs, the risk assessment requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

For purposes of determining the burden for AOA-accredited CAHs, we used the AOA's Healthcare Facilities Accreditation Program: Accreditation Requirements for Critical Access CAHs 2007 (ARCAH). In Chapter 11 entitled, "Physical Environment," CAHs are required to have disaster plans, external disaster plans that include triaging victims, and weapons of mass destruction response plans (ARCAH, Standards 11.07.01, 11.07.02, and 11.07.05–6, pp. 11–38 through 11–41, respectively). In addition, AOA-accredited CAHs must "coordinate with federal, state, and local emergency preparedness and health authorities to identify likely risks for their area . . . and to develop appropriate responses" (ARCAH, Standard 11.02.02, p. 11–5). Thus, we believe that to develop their plans, AOA-accredited CAHs already perform some type of risk assessment. However, the AOA standards do not require a documented facility-based and community-based risk assessment, as we propose. Therefore, we will include the 32 AOA-accredited CAHs with non-

accredited CAHs in determining the burden for our proposed risk assessment requirement.

The CAH CoPs currently require CAHs to assure the safety of their patients in non-medical emergencies (§ 485.623) and to take appropriate measures that are consistent with the particular conditions in the area in which the CAH is located (42 CFR 485.623(c)(4)). To satisfy this requirement in the CoPs, we expect that CAHs have already conducted some type of risk assessment. However, that requirement does not ensure that CAHs have conducted a documented, facility-based, and community-based risk assessment that would satisfy our proposed requirements.

We believe that under this proposed rule, the 952 non TJC-accredited CAHs (1,322 CAHs − 370 TJC-accredited CAHs = 952 non TJC-accredited CAHs) would need to review, revise, and, in some cases, develop new sections for their current risk assessments to ensure compliance with all of our requirements.

We have not designated any specific process or format for CAHs to use in conducting their risk assessments because we believe that CAHs need the flexibility to determine the best way to accomplish this task. However, we expect that CAHs would include representatives from or obtain input from all of their major departments in the process of developing their risk assessments.

Based on our experience with CAHs, we expect that these activities would require the involvement of a CAH's administrator, medical director, director of nursing, facilities director, and food services director. We expect that these individuals would attend an initial meeting, review relevant sections of the current risk assessment, provide comments, attend a follow-up meeting, perform a final review, and approve the new or updated risk assessment. We expect the administrator would coordinate the meetings, perform an initial review of the current risk assessment, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approved it.

We estimate that the risk assessment requirement would require 15 burden hours to complete at a cost of $949. We estimate that for the 952 non TJC-accredited CAHs to comply with the proposed risk assessment requirement would require 14,280 burden hours (15 burden hours for each CAH × 952 non TJC-accredited CAHs = 14,280 burden hours) at a cost of $903,448 ($949 estimated cost for each non TJC-accredited CAH × 952 non TJC-accredited CAHs = $903,448 estimated cost).

After conducting the risk assessment, CAHs would have to develop and maintain emergency preparedness plans that complied with proposed § 485.625(a)(1) through (4). We would expect all CAHs to compare their emergency plans to their risk assessments and then revise and, if necessary, develop new sections for their emergency plans to ensure that they complied with our proposed requirements.

The TJC-accredited CAHs must develop and maintain an Emergency Operations Plan (EOP) (CAMCAH Standard EC.4.12, p. EC–10a). The EOP must cover the management of six critical areas during emergencies: communications, resources and assets, safety and security, staff roles and responsibilities, utilities, and patient clinical and support activities (CAMCAH, Standards EC.4.12 through 4.18, pp. EC–10a–EC–10g). In addition, as discussed earlier, TJC-accredited CAHs also are required to conduct an HVA (CAMCAH, Standard EC.4.11, EP 2, p. EC–10a). Therefore, we expect that the 370 TJC-accredited CAHs already have emergency preparedness plans that would satisfy our proposed requirements. If a CAH needed to complete additional tasks to comply with the proposed requirement, the burden would be negligible. Thus, for the 370 TJC-accredited CAHs, this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

The AOA-accredited CAHs must work with federal, state, and local emergency preparedness authorities to identify the likely risks for their location and geographical area and develop appropriate responses to assure the safety of their patients (ARCAH, Standard 11.02.02, p. 11–5). Among the elements that AOA-accredited CAHs must specifically consider are the special needs of their patient population, availability of medical and non-medical supplies, both internal and external communications, and the transfer of patients to home or other health care settings (ARCAH, Standard 11.02.02, p. 11–5). In addition, there are requirements for disaster and disaster response plans (ARCAH, Standards 11.07.01, 11.07.02, and 11.07.06, pp. 11–38 through 11–40). There also are specific requirements for plans for responses to weapons of mass destruction, including chemical, nuclear, and biological weapons; communicable diseases, and chemical exposures (ARCAH, Standards 11.07.02 and 11.07.05–11.07.06, pp. 11–39 through 11–41). However, the AOA accreditation requirements require only that CAHs assess their most likely risks (ARCAH, Standard 11–02.02, p. 11–5), and we are proposing that CAHs be required to conduct a risk assessment utilizing an all-hazards approach. Thus, we expect that AOA-accredited CAHs would have to compare their risk assessments they conducted in accordance with proposed § 485.625(a)(1) to their current plans and then revise, and in some cases develop new sections for, their plans. Therefore, we will assess the burden for these 32 AOA-accredited CAHs with the non-accredited CAHs.

The CAH CoPs require all CAHs to ensure the safety of their patients during non-medical emergencies (§ 485.623). They are also required to provide, among other things, for evacuation of patients, cooperation with disaster authorities, emergency power and lighting in their emergency rooms and for flashlights and battery lamps in other areas, an emergency water and fuel supply, and any other appropriate measures that are consistent with their particular location (§ 485.623). Thus, we believe that all CAHs have developed some type of emergency preparedness plan. However, we also expect that the 920 non-accredited CAHs would have to review their current plans and compare them to their risk assessments and revise and, in some cases, develop new sections for their current plans to ensure that their plans would satisfy our proposed requirements.

Based on our experience with CAHs, we expect that the same individuals who were involved in conducting the risk assessment would be involved in developing the emergency preparedness plan. We expect that these individuals would attend an initial meeting, review relevant sections of the current emergency preparedness plan(s), prepare and send their comments to the administrator, attend a follow-up meeting, perform a final review, and approve the new plan. We expect that the administrator would coordinate the meetings, perform an initial review, coordinate comments, revise the plan, and ensure that the necessary parties approve the new plan. We estimate that complying with this requirement would require 26 burden hours at a cost of $1,620. Therefore, we estimate that for all 952 non TJC-accredited CAHs (920 non-accredited CAHs + 32 AOA-accredited CAHs = 952 non TJC-accredited CAHs) to comply with this requirement would require 24,752 burden hours (26 burden hours for each

non TJC-accredited CAH × 952 non TJC-accredited CAHs = 24,752 burden hours) at a cost of $1,542,240 ($1,620 estimated cost for each non TJC-accredited CAH × 952 non TJC-accredited CAHs = $1,542,240 estimated cost).

Under this proposed rule, CAHs also would be required to review and update their emergency preparedness plans at least annually. The CAH CoPs already require CAHs to perform a periodic evaluation of their total program at least once a year (§ 485.641(a)(1)). Hence, all CAHs should already have an individual or team responsible that is for the periodic review of their total program. Therefore, we believe that this requirement would constitute a usual and customary business practice for CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Under proposed § 485.625(b), we would require CAHs to develop and maintain emergency preparedness policies and procedures based on their emergency plans, risk assessments, and communication plans as set forth in § 485.625(a), (a)(1), and (c), respectively. We would also require CAHs to review and update these policies and procedures at least annually. These policies and procedures would have to address, at a minimum, the requirements listed at § 485.625(b)(1) through (8).

We expect that all CAHs would review their policies and procedures and compare them to their risk assessments, emergency preparedness plans, and emergency communication plans. The CAHs would need to revise, and, in some cases, develop new policies and procedures to incorporate all of the provisions previously noted and address all of our proposed requirements.

The CAMCAH chapter entitled, "Leadership" (LD), requires TJC-accredited CAH leaders to "develop policies and procedures that guide and support patient care, treatment, and services" (CAMCAH, Standard LC.3.90, EP 1, CAMCAH Refreshed Core, January 2008, p. LD–11). Thus, we expect that TJC-accredited CAHs already have some policies and procedures for the activities and processes required for accreditation, including their EOP. As discussed later, many of the required elements we propose have a corresponding requirement in the CAH TJC accreditation standards.

We propose at § 485.625(b)(1) that CAHs have policies and procedures that address the provision of subsistence needs for staff and patients, whether they evacuate or shelter in place. TJC-accredited CAHs must make plans for obtaining and replenishing medical and non-medical supplies, including food, water, and fuel for generators and transportation vehicles (CAMCAH, Standard EC.4.14, EPs 1–4, p. EC–10d). In addition, they must identify alternative means of providing electricity, water, fuel, and other essential utility needs in cases where their usual supply is disrupted or compromised (CAMCAH, Standard EC.4.17, EPs 1–5, p. EC–10f). We expect that TJC-accredited CAHs that comply with these requirements would be in compliance with our proposed requirement concerning subsistence needs at § 485.625(b)(1).

We are proposing at § 485.625(b)(2) that CAHs have policies and procedures for a system to track the location of staff and patients in the CAH's care both during and after an emergency. TJC-accredited CAHs must plan for communicating with their staff, as well as patients and their families, at the beginning of and during an emergency (CAMCAH, Standard EC.4.13, EPs 1, 2, and 5, p. EC–10c). We expect that TJC-accredited CAHs that comply with these requirements would be in compliance with our proposed requirement.

Proposed § 485.625(b)(3) would require CAHs to have a plan for the safe evacuation from the CAH. TJC-accredited CAHs are required to make plans to evacuate patients as part of managing their clinical activities (CAMCAH, Standard EC.4.18, EP 1, p. EC–10g). They also must plan for the evacuation and transport of patients, their information, medications, supplies, and equipment to alternative care sites (ACSs) when the CAH cannot provide care, treatment, and services in its facility (CAMCAH, Standard EC.4.14, EPs 9–11, p. EC–10d). We expect that TJC-accredited CAHs that comply with these requirements would be in compliance with our proposed requirement.

We are proposing at § 485.625(b)(4) that CAHs have policies and procedures for a means to shelter in place for patients, staff, and volunteers who remain in the facility. The rationale for CAMCAH Standard EC.4.18 states, "[a] catastrophic emergency may result in the decision to keep all patients on the premises in the interest of safety" (CAMCAH, Standard EC.4.18, p. EC–10f). Therefore, we expect that TJC-accredited CAHs would be substantially in compliance with our proposed requirement.

Proposed § 485.625(b)(5) would require CAHs to have policies and procedures that address a system of medical documentation that preserves patient information, protects the confidentiality of patient information, and ensures that records are secure and readily available. The CAMCAH chapter entitled "Management of Information" (IM), requires TJC-accredited CAHs to have storage and retrieval systems for their clinical/service and CAH-specific information (CAMCAH, Standard IM.3.10, EP 5, CAMCAH Refreshed Core, January 2008, p. IM–11), as well as to ensure the continuity of their critical information for patient care, treatment, and services (CAMCAH, Standard IM.2.30, CAMCAH Refreshed Core, January 2008, p. IM–9). They also must ensure the privacy and confidentiality of patient information (CAMCAH, Standard IM.2.10, CAMCAH Refreshed Core, January 2008, p. IM–7). In addition, TJC-accredited CAHs must have plans for transporting patients and their clinical information, including transferring information to ACSs (CAMCAH Standard EC.4.14, EP 10 and 11, p. EC–10d and Standard EC.4.18, EP 6, pp. EC–10g, respectively). Therefore, we expect that TJC-accredited CAHs would be substantially in compliance with proposed § 485.625(b)(5).

Proposed § 485.625(b)(6) would require CAHs to have policies and procedures that addressed the use of volunteers in an emergency or other emergency staffing strategies. TJC-accredited CAHs must define staff roles and responsibilities in their EOP and ensure that they train their staff for their assigned roles (CAMCAH, Standard EC.4.16, EPs 1 and 2, p. EC–10e). Also, the rationale for Standard EC.4.15 indicates that the CAH "determines the type of access and movement to be allowed by . . . emergency volunteers . . . when emergency measures are initiated" (CAMCAH, Standard EC.4.15, Rationale, p. EC–10d). In addition, in the chapter entitled "Medical Staff" (MS), CAHs "may grant disaster privileges to volunteers that are eligible to be licensed independent practitioners" (CAMCAH, Standard MS.4.110, CAMCAH Refreshed Care, January 2008, p. MS–20). Finally, in the chapter entitled "Management of Human Resources" (HR), CAHs "may assign disaster responsibilities to volunteer practitioners" (CAMCAH, Standard HR.1.25, CAMCAH Refreshed Core, January 2008, p. HR–6). Although the TJC accreditation requirements address some of our proposed requirements, we do not believe TJC-accredited CAHs would be in compliance with all requirements in proposed § 485.625(b)(6).

Based upon the previous discussion, we expect that the activities required for compliance by TJC-accredited CAHs

with § 485.625(b)(1) through (b)(5) constitutes usual and customary business practices for PRAs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

However, we do not believe TJC-accredited CAHs would be substantially in compliance with proposed § 485.625(b)(6) through (8). We will discuss the burden for TJC-accredited CAHs to comply with these requirements later in this section.

The AOA accreditation standards also contain requirements for policies and procedures related to safety and disaster preparedness. The AOA-accredited CAHs are required to maintain plans and performance standards for disaster preparedness (ARCAH, Standard 11.00.02 Required Plans and Performance Standards, p. 11–2). They also must have "written procedures for possible situations to be followed by each department and service within the CAH and for each building used for patient treatment or housing" (ARCAH, Standard 11.07.01 Disaster Plans, Explanation, p.11–38). AOA-accredited CAHs also are required to have a safety team or committee that is responsible for all issues related to safety within the CAH (ARCAH, Standard 11.02.03, p. 11–7). The individuals or team would be responsible for all policies and procedures related to safety in the CAH (ARCAH, Standard 11.02.03, Explanation, p. 11–7). We expect that these performance standards and procedures are similar to some of our proposed requirements for policies and procedures.

In regard to proposed § 485.625(b)(1), AOA-accredited CAHs are required to consider "pharmaceuticals, food, other supplies and equipment that may be needed during emergency/disaster situations" and "provisions if gas, water, electricity supply is shut off to the community" when they are developing their emergency plans (ARCAH, Standard 11.02.02 Building Safety, Elements 5 and 11, pp. 11–5 and 11–6, respectively). In addition, CAHs are required "to provide emergency gas and water as needed to provide care to inpatients and other persons who may come to the CAH in need of care" (ARCAH, Standard 11.03.22 Emergency Gas and Water, p. 11–22 through 11–23). However, these standards do not specifically address all of the proposed requirements in this subsection.

In regard to proposed § 485.625(b)(2), AOA-accredited CAHs are required to consider how they will communicate with their staff within the CAH when developing their emergency plans (ARCAH, Standard 11.02.02 Building Safety, Element 7, p. 11–6). They also are required to have a "call tree" in their external disaster plan that must be updated at least annually (ARCAH, Standard 11.07.04 Staff Call Tree, p. 11–40). However, these requirements do not sufficiently cover the requirements to track the location of staff and patients during and after an emergency.

In regard to proposed § 485.625(b)(3), which requires policies and procedures regarding the safe evacuation from the facility, AOA-accredited CAHs are required to consider the "transfer or discharge of patients to home, other healthcare settings, or other CAHs" and the "transfer of patients with CAH equipment to another CAH or healthcare setting" (ARCAH, Standard 11.02.02 Building Safety, Elements 12 and 13, p. 11–6). AOA-accredited CAHs also are required to consider in their emergency plans how to maintain communication with external entities should their telephones and computers either cease to operate or become overloaded (ARCAH, Standard 11.02.02, Element 6, p. 11–6). AOA-accredited CAHs must also "develop and implement a comprehensive plan to ensure that the safety and well being of patients are assured during emergency situations" (ARCAH, Standard 11.02.02 Building Safety, pp. 11–4 through 11–7). However, we do not believe these requirements are detailed enough to ensure that AOA-accredited CAHs are compliant with our proposed requirements.

In regard to proposed § 485.625(b)(4), AOA-accredited CAHs are required to consider the special needs of their patient population and the security of those patients and others that come to them for care when they develop their emergency plans (ARCAH, Standard 11.02.02 Building Safety, Elements 2 and 3, p. 11–5). In addition, as described earlier, they also must consider the food, pharmaceuticals, and other supplies and equipment they may need during an emergency in developing their emergency plan (ARCAH, Standard 11.02.02, Element 5, p. 11–5). However, these requirements do not specifically mention volunteers and CAHs are required only to consider these elements in developing their plans.

Therefore, we believe that AOA-accredited CAHs have likely already incorporated many of the elements necessary to satisfy the requirements in proposed § 485.625(b); however, they would need to thoroughly review their current policies and procedures and perform whatever tasks are necessary to ensure that they complied with all of our proposed requirements for emergency policies and procedures. Because we expect that AOA-accredited CAHs already comply with many of our proposed requirements, we will include the AOA-accredited CAHs with the TJC-accredited CAHs in determining the burden.

The burden for the 32 AOA-accredited CAHs and the 370 TJC-accredited CAHs to comply with all of the requirements in proposed § 485.625(b) would be the resources required to develop written policies and procedures that comply with all of our proposed requirements for emergency policies and procedures. Based on our experience working with CAHs, we expect that accomplishing these activities would require the involvement of an administrator, the medical director, director of nursing, facilities director, and food services director. We expect that the administrator would review the policies and procedures and make recommendations for necessary changes or additional policies or procedures. The CAH administrator would brief other staff and assign staff to make necessary revisions or draft new policies and procedures and disseminate them to the appropriate parties. We estimate that complying with this requirement would require 10 burden hours for each TJC and AOA-accredited CAH at a cost of $624. For all 402 TJC and AOA-accredited CAHs to comply with these requirements would require an estimated 4,020 burden hours (10 burden hours for each TJC or AOA-accredited CAH × 402 TJC and AOA-accredited CAHs = 4,020 burden hours) at a cost of $327,228 ($814 estimated cost for each TJC or AOA-accredited CAH × 402 TJC and AOA-accredited CAHs = $327,228 estimated cost).

We expect that the 920 non-accredited CAHs already have developed some emergency preparedness policies and procedures. The current CAH CoPs require CAHs to develop, maintain, and review policies to ensure quality care and a safe environment for their patients (§ 485.627(a), § 485.635(a), and § 485.641(a)(1)(iii)). In addition, certain activities associated with our proposed requirements are addressed in the current CAH CoPs. For example, all CAHs are required to have agreements or arrangements with one or more providers or suppliers, as appropriate, to provide services to their patients (§ 485.635(c)).

The burden associated with the development of emergency policies and procedures would be the resources needed to review, revise, and if needed, develop emergency preparedness policies and procedures that include our proposed requirements. We believe the

individuals and tasks would be the same as described earlier for the TJC and AOA-accredited CAHs. However, the non-accredited CAHs would require more time to accomplish these activities. We estimate that a non-accredited CAH's compliance would require 14 burden hours at a cost of $860. For all 920 unaccredited CAHs to comply with this requirement would require an estimated 12,880 burden hours (14 burden hours for each non-accredited CAHs × 920 non-accredited CAHs = 12,880 burden hours) at a cost of $791,200 ($860 estimated cost for each non-accredited CAH × 920 non-accredited CAHs = $791,200 estimated cost).

Thus, for all 1,322 CAH to comply with the requirements in proposed § 485.625(b) would require 16,900 burden hours at a cost of $1,118,428.

Proposed § 485.625(b) would also require CAHs to review and update their emergency preparedness policies and procedures at least annually. As discussed earlier, TJC and AOA-accredited CAHs already periodically review their policies and procedures. In addition, the existing CAH CoPs require periodic reviews of the CAH's health care policies (§ 485.627(a), § 485.635(a), and § 485.641(a)(1)(iii)). Thus, compliance with this requirement would constitute a usual and customary business practice for all CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.625(c) would require CAHs to develop and maintain emergency preparedness communication plans that complied with both federal and state law. We propose that CAHs review and update these plans at least annually. We propose that these communication plans include the information listed at § 485.625(c)(1) through (7).

We expect that all CAHs would review their emergency preparedness communication plans and compare them to their risk assessments and emergency plans. We also expect that CAHs would revise and, if necessary, develop new sections that would comply with our proposed requirements. Based on our experience with CAHs, they generally have some type of emergency preparedness communication plan. Further, it is standard practice for health care facilities to maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. Thus, we believe that most, if not all, CAHs are already in compliance with proposed § 485.625(c)(1) through (3).

However, all CAHs would need to review and, if needed, revise and update their plans to ensure compliance with proposed § 485.625(c)(4) through (7). The TJC-accredited CAHs are required to establish strategies or plans for emergency communications (CAMCAH, Standard 4.13, p. EC–10b–10c). These plans must cover both internal and external communications and include back-up technologies and communication systems (CAMCAH, Standard 4.13, and EPs 1–14, p. EC–10b–EC–10c). However, we do not believe that these standards would ensure compliance with proposed § 485.625(c)(4) through (7). Thus, we will include the 365 TJC-accredited CAHs in the burden below.

The AOA-accredited CAHs must develop and implement communication plans to ensure the safety of their patients during emergencies (AOA Standard 11.02.02). These plans must specifically include both internal and external communications (AOA Standard 11.02.02, Elements 6, 7, and 10). Based on these standards, we do not believe they ensure compliance with proposed § 485.625(c)(4) through (7). Thus, we will include these 32 AOA-accredited CAHs in the burden below.

The burden associated with complying with this requirement would be the resources required to develop a communication plan that complied with the requirements of this section. Based on our experience with CAHs, we expect that accomplishing these activities would require the involvement of an administrator, director of nursing, and the facilities director. We expect that the administrator would review the communication plan and make recommendations for necessary changes or additions. The director of nursing and the facilities director would meet with the administrator to discuss and revise or draft new sections for the CAH's existing emergency communication plan. We estimate that complying with this requirement would require 9 burden hours for each CAH at a cost of $519. We estimate that for all 1,322 CAHs to comply with the requirements for an emergency preparedness communication plan would require 11,898 burden hours (9 burden hours for each CAH × 1,322 CAHs = 11,898 burden hours) at a cost of $686,118 ($519 estimated cost for each CAH × 1,322 CAHs = $686,118 estimated cost).

Proposed § 485.625(c) also would require CAHs to review and update their emergency preparedness communication plans at least annually. All CAHs are required to evaluate their entire program at least annually (§ 485.641(a)). Therefore, compliance with this requirement would constitute a usual and customary business practice for CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.625(d) would require CAHs to develop and maintain emergency preparedness training and testing programs. We would also require CAHs to review and update their training and testing programs at least annually. We propose that a CAH comply with the requirements listed at § 485.625(d)(1) and (2).

Regarding § 485.625(d)(1), CAHs would have to provide initial training in emergency preparedness policies and procedures, including prompt reporting and extinguishing fires, protection, and where necessary, evacuation of patients, personnel, and guests, fire prevention, and cooperation with firefighting and disaster authorities, to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, the CAH would have to provide emergency preparedness training at least annually.

We expect that all CAHs would review their current training programs and compare them to their risk assessments and emergency preparedness plans, emergency policies and procedures, and emergency communication plans. The CAHs would need to revise and, if necessary, develop new sections or materials to ensure their training and testing programs complied with our proposed requirements.

Current CoPs require CAHs to train their staffs on how to handle emergencies (§ 485.623(c)(1)). However, this training primarily addresses internal emergencies, such as a fire inside the facility. In addition, both TJC and AOA require CAHs to provide their staff with training. TJC-accredited CAHs are required to provide their staff with both an initial orientation and on-going training (CAMCAH, Standards HR.2.10 and 2.30, pp. HR–8 and HR–9, respectively). On-going training must also be documented (CAMCAH, Standard HR.2.30, EP 8, p. HR–10). The AOA-accredited CAHs are required to provide an education program for their staff and physicians for the CAH's emergency response preparedness (AOA Standard 11.07.01). Each CAH also must

provide an education program specifically for the CAH's response plan for weapons of mass destruction (AOA Standard 11.07.07).

Thus, we expect that all CAHs provide some emergency preparedness training for their staff. However, neither the current CoPs nor the TJC and AOA accreditation standards ensure compliance with all our proposed requirements. All CAHs would need to review their risk assessments, emergency preparedness plans, policies and procedures, and communication plans and then revise or, in some cases, develop new sections for their training programs to ensure compliance with our proposed requirements. They also would need to revise, update, or, in some cases, develop new materials for the initial and ongoing training.

Based on our experience with CAHs, we expect that complying with our proposed requirement would require the involvement of an administrator, the director of nursing, and the facilities director. We expect that the director of nursing would perform the initial review of the training program, brief the administrator and the director of facilities, and revise or develop new sections for the training program, based on the group's decisions. We estimate that each CAH would require 14 burden hours to develop an emergency preparedness training program at a cost of $834. Therefore, for all 1,322 CAHs to comply with this requirement would require an estimated 18,508 burden hours (14 burden hours for each CAH × 1,322 CAHs = 18,508 burden hours) at a cost of $1,102,548 ($834 estimated cost for each CAH × 1,322 CAHs = $1,102,548 estimated cost).

Proposed § 485.625(d)(1) also would require CAHs to review and update their emergency preparedness training programs at least annually. Existing regulations require all CAHs to evaluate their entire program at least annually (§ 485.641(a)). Therefore, compliance with this proposed requirement would constitute a usual and customary business practice for CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

The CAHs also would be required to maintain documentation of their training. Based on our experience with CAHs, it is standard practice for them to document the training they provide to staff and other individuals. If a CAH needed to make any changes to their normal business practices to comply with this requirement, the burden would be negligible. Thus, compliance with this requirement would constitute a usual and customary business practice for CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.625(d)(2) would require CAHs to participate in a community mock disaster drill and a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, the CAH would have to conduct an individual, facility-based mock disaster drill at least annually. CAHs also would be required to analyze the CAH's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the CAH's emergency plan, as needed. If a CAH experienced an actual natural or man-made emergency that required activation of the emergency plan, it would be exempt from the proposed requirement for an annual community or individual, facility-based mock disaster drill for 1 year following the onset of the emergency (proposed § 485.625(d)(2)(ii)). Thus, to meet these requirements, CAHs would need to develop scenarios for each drill and exercise and develop the required documentation.

If a CAH participated in a community mock disaster drill, it would likely not need to develop the scenario for that drill. However, for the purpose of determining the burden, we will assume that CAHs need to develop scenarios for both the drill and the exercise annually.

The TJC-accredited CAHs are required to test their EOP twice a year, either as a planned exercise or in response to an emergency (CAMCAH, Standard EC.4.20, EP 1, p. EC–12). These tests must be monitored, documented, and analyzed (CAMCAH, Standard EC.4.20, EPs 8–19, pp. EC–12—EC–13). Thus, we believe that TJC-accredited CAHs already develop scenarios for these tests. We also expect that they also have developed the documentation necessary to record and analyze their tests and responses to actual emergency events. Therefore, compliance with this requirement would constitute a usual and customary business practice for TJC-accredited CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

The AOA-accredited CAHs are required to conduct two disaster drills annually (AOA Standard 11.07.03). In addition, AOA-accredited CAHs are required to participate in weapons of mass destruction drills, as appropriate (AOA Standard 11.07.09). We expect that since AOA-accredited CAHs already conduct disaster drills, they also develop scenarios for the drills. In addition, it is standard practice in the health care industry to document and analyze tests that a facility conducts. Thus, compliance with this requirement would constitute a usual and customary business practice for AOA-accredited CAHs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Based on our experience with CAHs, we expect that the 831 non-accredited CAHs already have some type of emergency preparedness training program and conduct some type of drills or exercises to test their emergency preparedness plans. However, this does not ensure that most CAHs already perform the activities needed to comply with our proposed requirements. Thus, we will analyze the burden for these requirements for the 920 non-accredited CAHs.

The 920 non-accredited CAHs would be required to develop scenarios for a mock disaster drill and a paper-based, tabletop exercise and the documentation necessary to record and later analyze the events that occurred during these tests and actual emergency events. Based on our experience with CAHs, we believe that the same individuals who developed the emergency preparedness training program would develop the scenarios for the tests and the accompanying documentation. We expect that the director of nursing would spend more time than would the other individuals developing the scenarios and the accompanying documentation. We estimate that it would require 8 burden hours for the 920 non-accredited CAHs to comply with these proposed requirements at a cost of $488. Therefore, for all 920 non-accredited CAHs to comply with these requirements would require an estimated 7,360 burden hours (8 burden hours for each non-accredited CAH × 920 non-accredited CAHs = 7,360 burden hours) at a cost of $448,960 ($488 estimated cost for each non-accredited CAH × 920 non-accredited CAHs = $448,960 estimated cost).

TABLE 12—BURDEN HOURS AND COST ESTIMATES FOR ALL 1,322 CAHS TO COMPLY WITH THE ICRS CONTAINED IN § 485.625 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/maintenance costs ($)	Total cost ($)
§ 485.625(a)(1)	0938—New	952	952	15	14,280	**	903,448	0	903,448
§ 485.625(a)(2)–(4)	0938—New	952	952	26	24,752	**	1,542,240	0	1,542,240

Total			6,790		93,698				5,801,742

** The hourly labor cost is blended between the wages for multiple staffing levels.

O. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 485.727)

Proposed § 485.727(a) would require clinics, rehabilitation agencies, and public health agencies as providers of outpatient physical therapy and speech-language pathology services (organizations) to develop and maintain emergency preparedness plans and review and update the plan at least annually. We are proposing that the plan comply with the requirements listed at § 485.727(a)(1) through (6).

Proposed § 485.727(a)(1) would require organizations to develop documented, facility-based and community-based risk assessment utilizing an all-hazards approach. Organizations would need to identify the medical and non-medical emergency events they could experience both at their facilities and in the surrounding area.

The current CoPs for Organizations require these providers to have "a written plan in operation, with procedures to be followed in the event of fire, explosion, or other disaster" (§ 485.727(a)). To comply with this CoP, we expect that all of these providers have already performed some type of risk assessment during the process of developing their disaster plans and policies and procedures. However, these providers would need to review their current risk assessments and make any revisions to ensure they complied with our proposed requirements.

We have not designated any specific process or format for these providers to use in conducting their risk assessments because we believe that they need the flexibility to determine the best way to accomplish this task. Providers of physical therapy and speech therapy services should include input from all of their major departments in the process of developing their risk assessments. Based on our experience with these providers, we expect that conducting the risk assessment would require the involvement of the organization's administrator and a therapist. The types of therapists at each Organization vary depending upon the services offered by the facility. For the purposes of determining the PRA burden, we will assume that the therapist is a physical therapist. We expect that both the administrator and the therapist would attend an initial meeting, review the current assessment, develop comments and recommendations for changes to the assessment, attend a follow-up meeting, perform a final review, and approve the new risk assessment. We expect that the administrator would coordinate the meetings, review and critique the current risk assessment initially, offer suggested revisions, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approve it. We also expect that the administrator would spend more time reviewing and working on the risk assessment than the physical therapist. We estimate that complying with this requirement would require 9 burden hours at a cost of $549. We estimate that it would require 20,034 burden hours (9 burden hours for each organization × 2,256 organizations = 20,304 burden hours) for all organizations to comply with this requirement at a cost of $1,238,544 ($549 estimated cost for each organization × 2,256 organizations = $1,238,544 estimated cost).

After conducting the risk assessment, each organization would need to develop and maintain an emergency preparedness plan and review and update it at least annually. Current CoPs require these providers to have a written disaster plan with accompanying procedures for fires, explosions, and other disasters (§ 485.727(a)). The plan must include or address the transfer of casualties and records, the location and use of alarm systems and signals, methods of containing fire, notification of appropriate persons, and evacuation routes and procedures (§ 485.727(a)). Thus, we expect that all of these organizations have some type of emergency preparedness plan and that these plans address many of our proposed requirements. However, all organizations would need to review their current plans and compare them to their risk assessments. Each organization would need to revise, update, and, in some cases, develop new sections to complete a comprehensive emergency preparedness plan that complied with our proposed requirements.

Based on our experience with these organizations, we expect that the administrator and physical therapist who were involved in developing the risk assessment would be involved in developing the emergency preparedness plan. However, we expect it would require more time to complete the plan and that the administrator would be the most heavily involved in reviewing and developing the organization's emergency preparedness plan. We estimate that for each organization to comply would require 12 burden hours at a cost of $741. We estimate that it would require 27,072 burden hours (12 burden hours for each organization × 2,256 organizations = 27,072 burden hours) to complete the plan at a cost of $1,671,696 ($741 estimated cost for each organization × 2,256 organizations = $1,671,696 estimated cost).

Each organization would also be required to review and update its emergency preparedness plan at least annually. We believe that these organizations already review their plans periodically. Thus, complying with this requirement would constitute a usual and customary business practice for organizations and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.727(b) would require organizations to develop and implement emergency preparedness policies and procedures based on their risk assessments, emergency plans, communication plans as set forth in

§ 485.727(a)(1), (a), and (c), respectively. It would also require organizations to review and update these policies and procedures at least annually. At a minimum, we would require that an organization's policies and procedures address the requirements listed at § 485.727(b)(1) through (4).

We expect that all organizations have emergency preparedness policies and procedures. As discussed earlier, the current CoPs require organizations to have procedures within their written disaster plan to be followed for fires, explosions, or other disasters (§ 485.727(a)). In addition, we expect that those procedures already address some of the specific elements required in this section. For example, the current requirements at § 485.727(a)(1) through (4) are similar to our proposed requirements at § 485.727(a)(1) through (5). However, all organizations would need to review their policies and procedures, assess whether their policies and procedures incorporate all of the necessary elements of their emergency preparedness program, and, if necessary, take the appropriate steps to ensure that their policies and procedures are in compliance with our proposed requirements.

We expect that the administrator and the physical therapist would be primarily involved with reviewing and revising the current policies and procedures and, if needed, developing new policies and procedures. We estimate that it would require 10 burden hours for each organization to comply at a cost of $613. We estimate that for all organizations to comply would require 22,560 burden hours (10 burden hours for each organization × 2,256 organizations = 23,550 burden hours) at a cost of $1,382,928 ($622 estimated cost for each organization × 2,256 organizations = $1,382,928 estimated cost).

We would require organizations to review and update their emergency preparedness policies and procedures at least annually. We believe that these providers already review their emergency preparedness policies and procedures periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.727(c) would require organizations to develop and maintain emergency preparedness communication plans that complied with both federal and state law and would be reviewed and updated at least annually. The communication plan would have to include the information listed at § 485.727(c)(1) through (5).

We expect that all organizations have some type of emergency preparedness communication plan. Current CoPs for these organizations already require them to have a written disaster plan with procedures that must include, among other things, "notification of appropriate persons" (§ 485.727(a)(4)). Thus, we expect that each organization has the contact information they would need to comply with this proposed requirement. In addition, it is standard practice for health care facilities to maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. However, many organizations may not have formal, written emergency preparedness communication plans or their plans may not be fully compliant with our proposed requirements. Therefore, we expect that all organizations would need to review, update, and, in some cases, develop new sections for their plans.

Based on our experience with these organizations, we anticipate that satisfying the requirements in this section would primarily require the involvement of the organization's administrator with the assistance of a physical therapist. We estimate that for each organization to comply would require 8 burden hours at a cost of $494. We estimate that for all 2,256 organizations to comply would require 18,048 burden hours (8 burden hours for each organizations × 2,256 organizations = 18,048 burden hours) at a cost of $1,114,464 ($494 estimated cost for each organization × 2,256 organizations = $1,114,464 estimated cost).

We are proposing that organizations must review and update their emergency preparedness communication plans at least annually. We believe that these organizations already review their emergency communication plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.727(d) would require organizations to develop and maintain emergency preparedness training and testing programs and review and update these programs at least annually. Specifically, we are proposing that organizations comply with the requirements listed at § 485.727(d)(1) and (2).

With respect to § 485.727(d)(1), organizations would have to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, the CAH would have to provide emergency preparedness training at least annually.

Current CoPs require organizations to ensure that "all employees are trained, as part of their employment orientation, in all aspects of preparedness for any disaster. The disaster program includes orientation and ongoing training and drills for all personnel in all procedures . . ."(42 CFR 485.727(b)). Thus, we expect that organizations already have an emergency preparedness training program for new employees, as well as ongoing training for all staff. However, organizations would need to review their current training programs and compare them to their risk assessments and emergency preparedness plans, policies and procedures, and communication plans. Organizations would need to review, revise, and, in some cases, develop new material for their training programs so that they comply with our proposed requirements.

We expect that complying with this requirement would require the involvement of an administrator and a physical therapist. We expect that the administrator would primarily be involved in reviewing the organization's current training program and the current emergency preparedness program; determining what tasks would need to be performed and what materials would need to be developed to comply with our proposed requirements; and developing the materials for the training program. We expect that the physical therapist would work with the administrator to develop the revised and updated training program. We estimate that it would require 8 burden hours for each organization to develop a comprehensive emergency training program at a cost of $494. Therefore, it would require an estimated 18,048 burden hours (8 burden hours for each organization × 2,256 organizations = 18,048 burden hours) to comply with this requirement at a cost of $1,114,464 ($494 estimated cost for each organization × 2,256 organizations = $1,114,464 estimated cost).

In § 485.727(d)(1), we also propose requiring that an organization must review and update its emergency

preparedness training program at least annually. We believe that these providers already review their emergency preparedness training programs periodically. Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 485.727(d)(2) would require organizations to participate in a community mock disaster drill and a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, the organization would have to conduct an individual, facility-based mock disaster drill at least annually. If an organization experienced an actual natural or man-made emergency that required activation of its emergency plan, it would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. Organizations also would be required to analyze their response to and maintain documentation of all the drills, tabletop exercises, and emergency events, and revise their emergency plan, as needed. To comply with this requirement, an organization would need to develop scenarios for their drills and exercises. An organization also would have to develop the documentation necessary for recording and analyzing their responses to drills, exercises, and actual emergency events.

The current CoPs require organizations to have a written disaster plan that is "periodically rehearsed" and have "ongoing . . . drills" (§ 485.727(a) and (b)). Thus, we expect that all 2,256 organizations currently conduct some type of drill or exercise of their disaster plan. However, the current organizations CoPs do not specify the type of drill, how they are to conduct the drills, or whether the drills should be community-based. In addition, there is no requirement for a paper-based, tabletop exercise. Thus, these requirements do not ensure that organizations would be in compliance with our proposed requirements. Therefore, we will analyze the burden from these requirements for all organizations.

The 2,256 organizations would be required to develop scenarios for a mock disaster drill and a paper-based, tabletop exercise and the necessary documentation. Based on our experience with organizations, we expect that the same individuals who develop the emergency preparedness training program would develop the scenarios for the drills and exercises and the accompanying documentation. We expect that the administrator would spend more time than the physical therapist developing the scenarios and the documentation. We estimate that for each organization to comply would require 3 burden hours at a cost of $183. Based on that estimate, it would require 6,768 burden hours (3 burden hours for each organization × 2,256 organizations = 6,768 burden hours) at a cost of $417,360 ($183 estimated cost for each organization × 2,256 organizations = $417,360 estimate cost).

TABLE 13—BURDEN HOURS AND COST ESTIMATES FOR ALL 2,256 ORGANIZATIONS TO COMPLY WITH THE ICRS CONTAINED IN § 485.727 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ maintenance costs ($)	Total cost ($)

P. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 485.920)

Proposed § 485.920(a) would require Community Mental Health Centers (CMHCs) to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. Specifically, we propose that the plan must meet the requirements listed at § 485.920(a)(1) through (4).

We expect all CMHCs to identify the likely medical and non-medical emergency events they could experience within the facility and the community in which it is located and determine the likelihood of the facility experiencing an emergency due to the identified hazards. We expect that in performing the risk assessment, a CMHC would need to consider its physical location, the geographical area in which it is located and its patient population.

The burden associated with this proposed requirement would be the time and effort necessary to perform a thorough risk assessment. We expect that most, if not all, CMHCs have already performed at least some of the work needed for a risk assessment because it is standard practice for health care organizations to prepare for common emergencies, such as fires, interruptions in communication and power, and storms. However, many CMHCs may not have performed a risk assessment that complies with the proposed requirements. Therefore, we expect that most, if not all, CMHCs would have to perform a thorough review of their current risk assessment and perform the tasks necessary to ensure that the facility's risk assessment complies with the proposed requirements.

We do not propose designating any specific process or format for CMHCs to use in conducting their risk assessments because we believe CMHCs need maximum flexibility in determining the best way for their facilities to accomplish this task. However, we expect that in the process of developing a risk assessment, health care organizations would include representatives from or obtain input from all major departments. Based on our experience with CMHCs, we expect that conducting the risk assessment would require the involvement of the CMHC administrator, a psychiatric registered nurse, and a clinical social worker or mental health counselor. We expect that most of these individuals would attend an initial meeting, review relevant sections of the current assessment, prepare and forward their comments to the administrator, attend a follow-up meeting, perform a final review, and approve the risk assessment. We expect that the administrator would coordinate the meetings, do an initial review of the current risk assessment, critique the risk assessment, offer suggested revisions,

coordinate comments, develop the new risk assessment, and assure that the necessary parties approve the new risk assessment. It is likely that the CMHC administrator would spend more time reviewing and working on the risk assessment than the other individuals. We estimate that complying with the proposed requirement to conduct a risk assessment would require 10 burden hours for a cost of $470. There are currently 207 CMHCs. Therefore, it would require an estimated 2,070 burden hours (10 burden hours for each CMHC × 207 CMHCs = 2,070 burden hours) for all CMHCs to comply with this requirement at a cost of $97,290 ($470 estimated cost for each CMHC × 207 CMHCs = $97,290 estimated cost).

After conducting the risk assessment, CMHCs would need to develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. CMHCs would need to compare their current emergency plan, if they have one, to their risk assessment. They would then need to revise and, if necessary, develop new sections of their plan to ensure it complies with the proposed requirements.

It is standard practice for health care organizations to make plans for common disasters they may confront, such as fires, interruptions in communication and power, and storms. Thus, we expect that all CMHCs have some type of emergency preparedness plan. However, their plan may not address all likely medical and non-medical emergency events identified by the risk assessment. Further, their plans may not include strategies for addressing likely emergency events or address their patient population, the type of services they have the ability to provide in an emergency, or continuity of operation, including delegations of authority and succession plans. We expect that CMHCs would have to review their current plan and compare it to their risk assessment, as well as to the other requirements in proposed § 485.920(a). We expect that most CMHCs would need to update and revise their existing emergency plan and, in some cases, develop new sections to comply with our proposed requirements.

The burden associated with this requirement would be due to the resources needed to develop an emergency preparedness plan or to review, revise, and develop new sections for an existing emergency plan. Based upon our experience with CMHCs, we expect that the same individuals who were involved in the risk assessment would be involved in developing the emergency preparedness plan. We also expect that developing the plan would require more time to complete than the risk assessment. We expect that the administrator and a psychiatric nurse would spend more time reviewing and developing the CMHC's emergency preparedness plan. We expect that the clinical social worker or mental health counselor would review the plan and provide comments on it to the administrator. We estimate that it would require 15 burden hours for a CMHC to develop its emergency plan at a cost of $750. Based on this estimate, it would require 3,105 burden hours (15 burden hours for each CMHC × 207 CMHCs = 3,105 burden hours) for all CMHCs to complete their plans at a cost of $155,250 ($750 estimated cost for each CMHC × 207 CMHCs = $155,250 estimated cost).

The CMHC would be required to review and update its emergency preparedness plan at least annually. For the purpose of determining the burden for this proposed requirement, we expect that the CMHCs will review and update their plans annually.

We expect that all CMHCs have an administrator that is responsible for the day-to-day operation of the CMHC. This would include ensuring that all of the CMHC's plans are up-to-date and comply with the relevant federal, state, and local laws, regulations, and ordinances. In addition, it is standard practice in the health care industry for facilities to have a professional staff person, generally an administrator, who periodically reviews their plans and procedures. We expect that complying with the requirement for an annual review of the emergency preparedness plan would constitute a usual and customary business practice for CMHCs. As stated in 5 CFR 1320.3(b)(2), the time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons in the normal course of their activities are not subject to the PRA.

Proposed § 485.920(b) would require CMHCs to develop and maintain emergency preparedness policies and procedures based on the emergency plan, the communication plan, and the risk assessment. We also propose requiring CMHCs to review and update these policies and procedures at least annually. The CMHC's policies and procedures would be required to address, at a minimum, the requirements listed at § 485.920(b)(1) through (7).

We expect that all CMHCs would compare their current emergency preparedness policies and procedures to their emergency preparedness plan, communication plan, and their training and testing program. They would need to review, revise and, if necessary, develop new policies and procedure to ensure they comply with the proposed requirements. The burden associated with reviewing, revising, and updating the CMHC's emergency policies and procedures would be due to the resources needed to ensure they comply with the proposed requirements. We expect that the administrator and the psychiatric registered nurse would be involved with reviewing, revising and, if needed, developing any new policies and procedures. We estimate that for a CMHC to comply with this proposed requirement would require 12 burden hours at a cost of $630. Therefore, for all 207 CMHCs to comply with this proposed requirement would require an estimated 2,484 burden hours (12 burden hours for each CMHC × 207 CMHCs = 2,484 burden hours) at a cost of $130,410 ($630 estimated cost for each CMHC × 207 CMHCs = $130,410 estimated cost).

The CMHCs would be required to review and update their emergency preparedness policies and procedures at least annually. For the purpose of determining the burden for this requirement, we expect that CMHCs would review their policies and procedures annually. We expect that all CMHCs have an administrator who is responsible for the day-to-day operation of the CMHC, which includes ensuring that all of the CMHC's policies and procedures are up-to-date and comply with the relevant federal, state, and local laws, regulations, and ordinances. We also expect that the administrator is responsible for periodically reviewing the emergency preparedness policies and procedures as part of his or her responsibilities. We expect that complying with the requirement for an annual review of the emergency preparedness policies and procedures would constitute a usual and customary business practice for CMHCs. As stated in 5 CFR 1320.3(b)(2), the time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons in the normal course of their activities are not subject to the PRA.

Proposed § 485.920(c) would require CMHCs to develop and maintain an emergency preparedness communications plan that complies with both federal and state law. The CMHC also would have to review and update this plan at least annually. The communication plan must include the information listed in § 485.920(c)(1) through (7).

We expect that all CMHCs would compare their current emergency

preparedness communications plan, if they have one, to the proposed requirements. CMHCs would need to perform any tasks necessary to ensure that their communication plans were documented and in compliance with the proposed requirements.

We expect that all CMHCs have some type of emergency preparedness communications plan. However, their emergency communications plan may not be thoroughly documented or comply with all of the elements we are requiring. It is standard practice for health care organizations to maintain contact information for their staff and for outside sources of assistance; alternate means of communication in case there is a disruption in phone service to the facility (for example, cell phones); and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. However, we expect that all CMHCs would need to review, update, and in some cases, develop new sections for their plans to ensure that those plans include all of the elements we are requiring for CMHC communications plans.

The burden associated with complying with this proposed requirement would be due to the resources required to ensure that the CMHC's emergency communication plan complies with the requirements. Based upon our experience with CMHCs, we expect the involvement of the CMHC's administrator and the psychiatric registered nurse. For each CMHC, we estimate that complying with this requirement would require 8 burden hours at a cost of $415. Therefore, for all of the CMHCs to comply with this proposed requirement would require an estimated 1,656 burden hours (8 burden hours for each CMHC × 207 CMHCs = 1,656 burden hours) at a cost of $85,905 ($415 estimated cost for each CMHC × 207 CMHCs = $85,905 estimated cost).

We expect that CMHCs must also review and update their emergency preparedness communication plan at least annually. For the purpose of determining the burden for this proposed requirement, we expect that CMHCs would review their policies and procedures annually. We expect that all CMHCs have an administrator who is responsible for the day-to-day operation of the CMHC. This includes ensuring that all of the CMHC's policies and procedures are up-to-date and comply with the relevant federal, state, and local laws, regulations, and ordinances. We expect that the administrator is responsible for periodically reviewing the CMHC's plans, policies, and procedures as part of his or her responsibilities. In addition, we expect that an annual review of the communication plan would require only a negligible burden. Complying with the proposed requirement for an annual review of the emergency preparedness communications plan constitutes a usual and customary business practice for CMHCs. As stated in 5 CFR 1320.3(b)(2), the time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons in the normal course of their activities are not subject to the PRA.

Proposed § 485.920(d) would require CMHCs to develop and maintain an emergency preparedness training program that must be reviewed and updated at least annually. We would require the CMHC to meet the requirements contained in § 485.920(d)(1) and (2).

We expect that CMHCs would develop a comprehensive emergency preparedness training program. The CMHCs would need to compare their current emergency preparedness training program and compare its contents to the risk assessment and updated emergency preparedness plan, policies and procedures, and communications plan and review, revise, and, if necessary, develop new sections for their training program to ensure it complies with the proposed requirements.

The burden would be due to the resources the CMHC would need to comply with the proposed requirements. We expect that complying with this requirement would include the involvement of a psychiatric registered nurse. We expect that the psychiatric registered nurse would be primarily involved in reviewing the CMHC's current training program, determining what tasks need to be performed or what materials need to be developed, and developing the materials for the training program. We estimate that it would require 10 burden hours for each CMHC to develop a comprehensive emergency training program at a cost of $414. Therefore, it would require an estimated 2,070 burden hours (10 burden hours for each CMHC × 207 CMHCs = 2,070 burden hours) to comply with this proposed requirement at a cost of $85,698 ($414 estimated cost for each CMHC × 207 CMHCs = $85,698 estimated cost).

Proposed § 485.920(d)(1) would also require the CMHCs to review and update their emergency preparedness training program at least annually. For the purpose of determining the burden for this proposed requirement, we will expect that CMHCs would review their emergency preparedness training program annually. We expect that all CMHCs have a professional staff person, probably a psychiatric registered nurse, who is responsible for periodically reviewing their training program to ensure that it is up-to-date and complies with the relevant federal, state, and local laws, regulations, and ordinances. In addition, we expect that an annual review of the CMHC's emergency preparedness training program would require only a negligible burden. Thus, we expect that complying with the proposed requirement for an annual review of the emergency preparedness training program constitutes a usual and customary business practice for CMHCs. As stated in 5 CFR 1320.3(b)(2), the time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons in the normal course of their activities are not subject to the PRA.

Proposed § 485.920(d)(2) would require CMHCs to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually. CMHCs would be required to document the drills and the exercises. To comply with this proposed requirement, a CMHC would need to develop a specific scenario for each drill and exercise. A CMHC would have to develop the documentation necessary to record what happened during the drills and exercises.

Based on our experience with CMHCs, we expect that all 207 CMHCs have some type of emergency preparedness training program and most, if not all, of these CMHCs already conduct some type of drill or exercise to test their emergency preparedness plans. However, we do not know what type of drills or exercises they typically conduct or how often they are performed. We also do not know how, or if, they are documenting and analyzing their responses to these drills and tests. For the purpose of determining a burden for these proposed requirements, we will expect that all CMHCs need to develop two scenarios, one for the drill and one for the exercise, and develop the documentation necessary to record the facility's responses.

The associated burden would be the time and effort necessary to comply with the requirement. We expect that complying with this proposed requirement would likely require the involvement of a psychiatric registered nurse. We expect that the psychiatric registered nurse would develop the documentation necessary for both

during the drill and the exercise and for the subsequent analysis of the CMHC's response. The psychiatric registered nurse would also develop the two scenarios for the drill and exercise. We estimate that these tasks would require 4 burden hours at a cost of $166. For all 207 CMHCs to comply with this proposed requirement would require an estimated 828 burden hours (4 burden hours for each CMHC × 207 CMHCs = 828 burden hours) at a cost of $34,362 ($166 estimated cost for each CMHC × 207 CMHCs = $34,362 estimated cost).

TABLE 14—BURDEN HOURS AND COST ESTIMATES FOR ALL 207 CMHCS TO COMPLY WITH THE ICRS CONTAINED IN § 485.920 EMERGENCY PREPAREDNESS

Q. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 486.360)

Proposed § 486.360(a) would require Organ Procurement Organizations (OPOs) to develop and maintain emergency preparedness plans that would have to be reviewed and updated at least annually. These plans would have to comply with the requirements listed in § 486.360(a)(1) through (4).

The current OPO Conditions for Coverage (CfCs) are located at 42 CFR 486.301 through 486.348. These CfCs do not contain any specific emergency preparedness requirements. Thus, for the purpose of determining the burden, we have analyzed the burden for all 58 OPOs for all of the ICRs contained in this proposed rule.

Proposed § 486.360(a)(1) would require OPOs to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. OPOs would need to identify the medical and non-medical emergency events they could experience both at their facilities and in the surrounding area, including branch offices and hospitals in their donation services areas.

The burden associated with this requirement would be the time and effort necessary to perform a thorough risk assessment. Based on our experience with OPOs, we believe that all 58 OPOs have already performed at least some of the work needed for their risk assessments. However, these risk assessments may not be documented or may not address all of the elements required under proposed § 486.360(a). Therefore, we expect that all 58 OPOs would have to perform a thorough review of their current risk assessments and perform the necessary tasks to ensure that their risk assessment complied with the requirements of this proposed rule. Based on our experience with OPOs, we believe that conducting a risk assessment would require the involvement of the OPO's director, medical director, quality assessment and performance improvement (QAPI) director, and an organ procurement coordinator (OPC). We expect that these individuals would attend an initial meeting; review relevant sections of the current assessment, prepare and send their comments to the QAPI director; attend a follow-up meeting; perform a final review; and approve the new risk assessment. We estimate that the QAPI Director probably would coordinate the meetings, review the current risk assessment, critique the risk assessment, coordinate comments, develop the new risk assessment, and assure that the necessary parties approved it. We estimate that it would require 10 burden hours for each OPO to conduct a risk assessment at a cost of $822. Therefore, for all 58 OPOs to comply with the risk assessment requirement in this section would require an estimated 580 burden hours (10 burden hours for each OPO × 58 OPOs = 580 burden hours) at a cost of $47,676 ($822 estimated cost for each OPO × 58 OPOs = $47,676 estimated cost).

After conducting the risk assessment, OPOs would then have to develop emergency preparedness plans. The burden associated with this requirement would be the resources needed to develop an emergency preparedness plan that complied with the requirements in proposed § 486.360(a)(1) through (4). We expect that all OPOs have some type of emergency preparedness plan because it is standard practice in the health care industry to have a plan to address common emergencies, such as fires. In addition, based on our experience with OPOs (including the performance of the Louisiana OPO during the Katrina disaster), OPOs already have plans to ensure that services will continue to be provided in their donation service areas (DSAs) during an emergency. However, we do not expect that all OPOs would have emergency preparedness plans that would satisfy the requirements of this section. Therefore, we expect that all OPOs would need to review their current emergency preparedness plans and compare their plans to their risk assessments. Most OPOs would need to revise, and in some cases develop, new sections to ensure their plan satisfied the proposed requirements.

We expect that the same individuals who were involved in the risk assessment would be involved in developing the emergency preparedness plan. We expect that these individuals would attend an initial meeting, review relevant sections of the OPO's current emergency preparedness plan, prepare and send their comments to the QAPI director, attend a follow-up meeting, perform a final review, and approve the new plan. We expect that the QAPI Director would coordinate the meetings, perform an initial review of the current emergency preparedness plan, critique the emergency preparedness plan, coordinate comments, ensure that the appropriate individuals revise the plan, and ensure that the necessary parties approve the new plan.

Thus, we estimate that it would require 22 burden hours for each OPO to develop an emergency preparedness plan that complied with the requirements of this section at a cost of $1,772. Therefore, for all 58 OPOs to comply with this requirement would require an estimated 1,276 burden hours (22 burden hours for each OPO × 58 OPOs = 1,276 burden hours) at a cost of $102,776 ($1,772 estimated cost for each

OPO × 58 OPOs = $102,776 estimated cost).

OPOs would also be required to review and update their emergency preparedness plans at least annually. We believe that all of the OPOs already review their emergency preparedness plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for OPOs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 486.360(b) would require OPOs to develop and maintain emergency preparedness policies and procedures based on their risk assessments, emergency preparedness plans, emergency communication plan as set forth in proposed § 486.360(a)(1), (a), and (c), respectively. It would also require OPOs to review and update these policies and procedures at least annually. The OPO's policies and procedures must address the requirements listed at § 486.360(b)(1) and (2).

The OPO CfCs already require the OPOs' governing boards to "develop and oversee implementation of policies and procedures considered necessary for the effective administration of the OPO, including . . . the OPO's quality assessment and performance improvement (QAPI) program, and services furnished under contract or arrangement, including agreements for those services" (§ 486.324(e)). Thus, we expect that OPOs already have developed and implemented policies and procedures for their effective administration. However, since the current CfCs have no specific requirement that these policies and procedures address emergency preparedness, we do not believe that the OPOs have developed or implemented all of the policies and procedures that would be needed to comply with the requirements of this section.

The burden associated with the development of the emergency preparedness policies and procedures would be the resources needed to develop emergency preparedness policies and procedures that would include, but would not be limited to, the specific elements identified in this requirement. We expect that all OPOs would need to review their current policies and procedures and compare them to their risk assessments, emergency preparedness plans, emergency communication plans, and agreements and protocols, they have developed as required by this proposed rule. Following their reviews, OPOs would need to develop and implement the policies and procedures necessary to ensure that they initiate and maintain their emergency preparedness plans, agreements, and protocols.

Based on our experience with OPOs, we expect that accomplishing these activities would require the involvement of the OPO's director, medical director, QAPI director, and an Organ Procurement Coordinator (OPC). We expect that all of these individuals would review the OPO's current policies and procedures; compare them to the risk assessment, emergency preparedness plan, agreements and protocols they have established with hospitals, other OPOs, and transplant programs; provide an analysis or comments; and participate in developing the final version of the policies and procedures.

We expect that the QAPI director would likely coordinate the meetings; coordinate and incorporate comments; draft the revised or new policies and procedures; and obtain the necessary signatures for final approval. We estimate that it would require 20 burden hours for each OPO to comply with the requirement to develop emergency preparedness policies and procedures at a cost of $1,482. Therefore, for all 58 OPOs to comply with this requirement would require an estimated 1,160 burden hours (20 burden hours for each OPO × 58 OPOs = 1,160 burden hours) at a cost of $85,956 (estimated cost for each OPO of $1,482 × 58 OPOs = $85,956 estimated cost).

OPOs also would be required to review and update their emergency preparedness policies and procedures at least annually. We believe that OPOs already review their emergency preparedness policies and procedures periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 486.360(c) would require OPOs to develop and maintain emergency preparedness communication plans that complied with both federal and state law. The OPOs would have to review and update their plans at least annually. The communication plans would have to include the information listed in § 486.360(c)(1) through (3).

OPOs must operate 24 hours a day, seven days a week. OPOs conduct much of their work away from their office(s) at various hospitals within their DSAs. To function effectively, OPOs must ensure that they and their staff at these multiple locations can communicate with the OPO's office(s), other OPO staff members, transplant and donor hospitals, transplant programs, the Organ Procurement and Transplantation Network (OPTN), other healthcare providers, other OPOs, and potential and actual donors' next-of-kin.

Thus, we expect that the nature of their work would ensure that all OPOs have already addressed at least some of the elements that would be required by this section. For example, due to the necessity of communication with so many other entities, we expect that all OPOs would have compiled names and contact information for staff, other OPOs, and transplant programs.

We also expect that all OPOs would have alternate means of communication for their staffs. However, we do not believe that all OPOs have developed formal plans that include all of the proposed elements contained in this requirement. The burden would be the resources needed to develop an emergency preparedness communications plan that would include, but not be limited to, the specific elements identified in this section. We expect that this would require the involvement of the OPO director, medical director, QAPI director, and OPC. We expect that all of these individuals would need to review the OPO's current plans, policies, and procedures related to communications and compare them to the OPO's risk assessment, emergency plan, and the agreements and protocols the OPO developed in accordance with proposed § 486.360(e), and the OPO's emergency preparedness policies and procedures. We expect that these individuals would review the materials described earlier, submit comments to the QAPI director, review revisions and additions, and give a final recommendation or approval for the new emergency preparedness communication plan. We also expect that the QAPI director would coordinate the meetings; compile comments; incorporate comments into a new communications plan, as appropriate; and ensure that the necessary individuals review and approve the new plan.

We estimate that it would require 14 burden hours to develop an emergency preparedness communication plan at a cost of $1,078. Therefore, it would require an estimated 812 burden hours (14 burden hours for each OPO × 58 OPOs = 812 burden hours) at a cost of $62,524 ($1,078 estimated cost for each OPO × 58 OPOs = $62,524 estimated cost).

We propose that OPOs must review and update their emergency preparedness communication plans at least annually. We believe that all of the OPOs already review their emergency preparedness communication plans

periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for OPOs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 486.360(d) would require OPOs to develop and maintain emergency preparedness training and testing programs. OPOs also would be required to review and update these programs at least annually. In addition, OPOs must meet the requirements listed in § 486.360(d)(1) and (2).

In § 486.360(d)(1), we are proposing that OPOs be required to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of that training. OPOs must also ensure that their staff can demonstrate knowledge of their emergency procedures. Thereafter, OPOs would have to provide emergency preparedness training at least annually.

Under existing regulations, OPOs are required to provide their staffs with the training and education necessary for them to furnish the services the OPO is required to provide, including applicable organizational policies and procedures and QAPI activities (§ 486.326(c)). However, since there are no specific emergency preparedness requirements in the current OPO CfCs, we do not believe that the content of their existing training would comply with the proposed requirements.

We expect that OPOs would develop a comprehensive emergency preparedness training program for their staffs. Based upon our experience with OPOs, we expect that complying with this proposed requirement would require the OPO director, medical director, the QAPI director, an OPC, and the education coordinator. We expect that the QAPI director and the education coordinator would review the OPO's risk assessment, emergency preparedness plan, policies and procedures, and communication plan and make recommendations regarding revisions or new sections necessary to ensure that all appropriate information is included in the OPO's emergency preparedness training. We believe that the OPO director, medical director, and OPC would meet with the QAPI director and education coordinator and assist in the review, provide comments, and approve the new emergency preparedness training program.

We estimate that it would require 40 burden hours for each OPO to develop an emergency preparedness training program that complied with these requirements at a cost of $2,406. Therefore, we estimate that for all 58 OPOs to comply with this requirement would require 2,320 burden hours (40 burden hours for each OPO × 58 OPOs = 2,320 burden hours) at a cost of $139,548 ($2,406 estimated cost for each OPO × 58 OPOs = $139,548 estimated cost).

We propose that OPOs must review and update their emergency preparedness training programs at least annually. We believe that all of the OPOs already review their emergency preparedness training programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for OPOs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 486.360(d)(2) would require OPOs to conduct a paper-based, tabletop exercise at least annually. OPOs also would be required to analyze their responses to and maintain documentation of all tabletop exercises and actual emergency events, and revise their emergency plans, as needed. To comply with this requirement, OPOs would have to develop scenarios for each tabletop exercise and the necessary documentation.

The OPO CfCs do not currently contain a requirement for OPOs to conduct a paper-based, tabletop exercise. However, OPOs are required to evaluate their staffs' performance and provide training to improve individual and overall staff performance and effectiveness (42 CFR 486.326(c)). Therefore, we expect that OPOs periodically conduct some type of exercise to test their plans, policies, and procedures, which would include developing a scenario for and documenting the exercise. Thus, compliance with these requirements would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

We expect that the QAPI director and the education coordinator would work together to develop the scenario for the exercise and the necessary documentation. We expect that the QAPI director would likely spend more time on these activities. We estimate that these tasks would require 5 burden hours for each OPO at a cost of $278. For all 58 OPOs to comply with these requirements would require an estimated 290 burden hours (5 burden hours for each OPO × 58 OPOs = 290 burden hours) at a cost of $16,124 ($278 estimated cost for each OPO × 58 OPOs = $16,124 estimated cost).

Proposed § 486.360(e) would require each OPO to have an agreement(s) with one or more other OPOs to provide essential organ procurement services to all or a portion of the OPO's DSA in the event that the OPO cannot provide such services due to an emergency. This section would also require each OPO to include in the hospital agreements required under § 486.322(a), and in the protocols with transplant programs required under § 486.344(d), the duties and responsibilities of the hospital, transplant program, and the OPO in the event of an emergency.

The burden associated with the development of an agreement with another OPO and with the hospitals in the OPO's DSA would be the resources needed to negotiate, draft, and approve the agreement. For the purpose of determining a burden for this requirement, we will assume that each OPO would need to develop an agreement with one other OPO.

We expect that the OPO director, medical director, QAPI director, OPC, and an attorney would be involved in completing the tasks necessary to develop these agreements. We expect that all of these individuals would be involved in assessing the OPO's need for coverage of its DSA during emergencies and deciding with which OPO to negotiate an agreement. We also expect that the OPO director, QAPI director, and an attorney would be involved in negotiating the agreements and ensuring that the appropriate parties sign the agreements. The attorney would be responsible for drafting the agreement and making any necessary revisions.

We estimate that it would require 22 burden hours for each OPO to develop an agreement with another OPO to provide essential organ procurement services to all or a portion of its DSA during an emergency at a cost of $1,658. Therefore, it would require an estimated 1,276 burden hours (22 burden hours for each OPO × 58 OPOs = 1,276 burden hours) for all 58 OPOs to comply with this requirement at a cost of $96,164 ($1,658 estimated cost for each OPO × 58 OPOs = $96,164 estimated cost).

Proposed § 486.360(e) would also require OPOs to include in the agreements with hospitals required under § 486.322(a), and in the protocols with transplant programs required under § 486.344(d), the duties and responsibilities of the hospital, transplant center, and the OPO in the event of an emergency. The current OPO CfCs do not contain a requirement for emergency preparedness to be covered in these agreements and protocols. However, based on our experience with

OPOs, hospitals, and transplant centers, we expect that most, if not all of these agreements and protocols already address roles and responsibilities during an emergency.

Thus, for the purpose of determining an ICR burden for these requirements, we will assume that all 58 OPOs would need to draft a limited amount of new language for their agreements with hospitals and the protocols with transplant centers. We expect that an attorney would be primarily responsible for drafting the language for these agreements and protocols and making any necessary revisions required by the parties. The number of hospitals and transplant programs in each DSA would vary widely between the OPOs. However, we expect that the attorney would draft standard language for both types of documents. In addition, we expect that the OPO director, medical director, QAPI director, and OPC would work with the attorney in developing this standard language.

We estimate that it would require 13 burden hours for each OPO to comply with these requirements at a cost of $969. Therefore, it would require 754 burden hours (13 burden hours for each OPO × 58 OPOs = 754 burden hours) at a cost of $56,202 ($969 estimated cost for each OPO × 58 OPOs = $56,202 estimated cost).

Based on the previous analysis, for all 58 OPOs to comply with all of the ICRs in proposed § 486.360 would require 8,468 burden hours at a cost of $606,970.

TABLE 15—BURDEN HOURS AND COST ESTIMATES FOR ALL 58 OPOS TO COMPLY WITH THE ICRS CONTAINED IN § 486.360 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total Capital/ Maintenance Costs ($)	Total cost ($)
§ 486.360(a)(1)	0938—New	58	58	10	580	**	47,676	0	47,676

R. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 491.12)

Proposed § 491.12(a) would require Rural Health Clinics (RHCs) and Federally Qualified Health Clinics (FQHCs) to develop and maintain emergency preparedness plans. The RHCs and FQHCs would also have to review and update their plans at least annually. We propose that the plan must meet the requirements listed at § 491.12(a)(1) through (4).

Proposed § 491.12(a)(1) would require RHCs/FQHCs to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. RHCs/FQHCs would need to identify the medical and non-medical emergency events they could experience both at their facilities and in the surrounding area. RHCs/FQHCs would need to review any existing risk assessments and then update and revise those assessments or develop new sections for them so that those assessments complied with our proposed requirements.

We obtained the total number of RHCs and FQHCs used in this burden analysis from the CMS CASPER data system, which the states update periodically. Due to variations in the timeliness of the data submission, all numbers in this analysis are approximate. There are currently 4,013 RHCs and 5,534 FQHCs. Thus, there are 9,547 RHC/FQHCs (4,013 RHCs + 5,534 FQHCs = 9,547 RHCs/FQHCs). Unlike RHCs, FQHCs are grantees under Section 330 of the Public Health Service Act. In 2007, the Health Resources and Services Administration (HRSA) issued a Policy Information Notice (PIN) entitled "Health Center Emergency Management Program Expectations," that detailed the expectations HRSA has for section 330 grantees related to emergency management ("Health Center Emergency Management Program Expectations," Policy Information Notice (PIN), Document Number 2007–15, HRSA, August 22, 2007) (Emergency Management PIN). A review of the Emergency Management PIN indicates that some of its expectations are very similar to the requirements in this proposed rule. Therefore, since the expectations in the Emergency Management PIN are a significant factor in determining the burden for FQHCs, we will analyze the burden for the 5,534 FQHCs separately from the 4,013 RHCs where the burden would be significantly different.

Based on our experience with RHCs, we expect that all 4,013 RHCs have already performed at least some of the work needed to conduct a risk assessment. It is standard practice for health care facilities to prepare for common emergencies, such as fires, power outages, and storms. In addition, the current Rural Health Clinic Conditions for Certification and the FQHC Conditions for Coverage (RHC/FQHC CfCs) already require each RHC and FQHC to assure "the safety of patients in case of non-medical emergencies by . . . taking other appropriate measures that are consistent with the particular conditions of the area in which the clinic or center is located" (§ 491.6(c)(3)).

Further, in accordance with the Emergency Management PIN, FQHCs should have initiated their "emergency management planning by conducting a risk assessment such as a Hazard Vulnerability Analysis" (HVA) (Emergency Management PIN, p. 5). The HVA should identify potential emergencies or risks and potential direct and indirect effects on the facility's operations and demands on their services and prioritize the risks based on the likelihood of each risk occurring and the impact or severity the facility would experience if the risk occurs (Emergency Management PIN, p. 5). FQHCs are also "encouraged to participate in community level risk assessments and integrate their own risk assessment with the local community" (Emergency Management PIN, p. 5).

Despite these expectations and the existing Medicare regulations for RHCs/FQHCs, some RHC/FQHC risk assessments may not comply with all proposed requirements. For example, the expectations for FQHCs do not specifically address our proposed requirement to address likely medical and non-medical emergencies. In addition, participation in a community-based risk assessment is only

encouraged, not required. We expect that all 4,013 RHCs and 5,534 FQHCs will need to compare their current risk assessments with our proposed requirements and accomplish the tasks necessary to ensure their risk assessments comply with our proposed requirements. However, we expect that FQHCs would not be subject to as many burden hours as RHCs.

We have not designated any specific process or format for RHCs or FQHCs to use in conducting their risk assessments because we believe that RHCs and FQHCs need flexibility to determine the best way to accomplish this task. However, we expect that these health care facilities would include input from all of their major departments. Based on our experience with RHCs/FQHCs, we expect that conducting the risk assessment would require the involvement of the RHC/FQHC's administrator, a physician, a nurse practitioner or physician assistant, and a registered nurse. We expect that these individuals would attend an initial meeting, review the current risk assessment, prepare and forward their comments to the administrator, attend a follow-up meeting, perform a final review, and approve the new risk assessment. We expect that the administrator would coordinate the meetings, review the current risk assessment, provide an analysis of the risk assessment, offer suggested revisions, coordinate comments, develop the new risk assessment, and ensure that the necessary parties approve it. We also expect that the administrator would spend more time reviewing the risk assessment than the other individuals.

We estimate that it would require 10 burden hours for each RHC to conduct a risk assessment that complied with the requirements in this section at a cost of $712. We estimate that for all RHCs to comply with our proposed requirements would require 40,130 burden hours (10 burden hours for each RHC × 4,013 RHCs = 39,410 burden hours) at a cost of $2,857,256 ($712 estimated cost for each RHC × 4,013 RHCs = $2,857,256 estimated cost).

We estimate that it would require 5 burden hours for each FQHC to conduct a risk assessment that complied with our proposed requirements at a cost of $356. We estimate that for all 5,534 FQHCs to comply would require 27,670 burden hours (5 burden hours for each FQHC × 5,534 FQHCs = 27,670 burden hours) at a cost of $1,970,104 ($356 estimated cost for each FQHC × 5,534 FQHCs = $1,970,104 estimated cost).

Based on those estimates, compliance with this proposed requirement for all RHCs and FQHCs would require 67,800 burden hours at a cost of $4,827,360.

After conducting the risk assessment, RHCs/FQHCs would have to develop and maintain emergency preparedness plans that complied with proposed § 491.12(a)(1) through (4) and review and update them annually. It is standard practice for healthcare facilities to plan for common emergencies, such as fires, hurricanes, and snowstorms. In addition, as discussed earlier, we require all RHCs/FQHCs to take appropriate measures to ensure the safety of their patients in non-medical emergencies, based on the particular conditions present in the area in which they are located (§ 491.6(c)(3)). Thus, we expect that all RHCs/FQHCs have developed some type of emergency preparedness plan. However, under this proposed rule, all RHCs/FQHCs would have to review their current plans and compare them to their risk assessments. The RHCs/FQHCs would need to update, revise, and, in some cases, develop new sections to complete their emergency preparedness plans that meet our proposed requirements.

The Emergency Management PIN contains many expectations for an FQHC's emergency management plan (EMP). For example, it states that the FQHC's EMP "is necessary to ensure the continuity of patient care" during an emergency (Emergency Management PIN, p. 6) and should contain plans for "assuring access for special populations (Emergency Management PIN, p. 7). The FQHC's EMP also should address continuity of operations, as appropriate (Emergency Management PIN, p. 6). In addition, FQHCs should use an "all-hazards approach" so that these facilities can respond to all of the risks they identified in their risk assessment (Emergency Management PIN, p. 6). Based on the expectations in the Emergency Management PIN, we expect that FQHCs likely have developed emergency preparedness plans that comply with many, if not all, of the elements with which their plans would need to comply under this proposed rule. However, we expect that FQHCs would need to compare their current EMP to our proposed requirements and, if necessary, revise or develop new sections for their EMP to bring it into compliance. We expect that FQHCs would have less of a burden than RHCs.

Based on our experience with RHCs/FQHCs, we expect that the same individuals who were involved in developing the risk assessments would be involved in developing the emergency preparedness plans. However, we expect that it would require more time to complete the plans than the risk assessments. We expect that the administrator would have primary responsibility for reviewing and developing the RHC/FQHC's EMP. We expect that the physician, nurse practitioner, and registered nurse would review the draft plan and provide comments to the administrator. We estimate that for each RHC to comply with this requirement would require 14 burden hours at a cost of $949. Therefore, it would require an estimated 56,182 burden hours (14 burden hours for each RHC × 4,013 RHCs = 56,182 burden hours) to complete the plan at a cost of $3,808,337 ($949 estimated cost for each RHC × 4,013 RHCs = $3,808,337 estimated cost).

We estimate that it would require 8 burden hours for each FQHC to comply with our proposed requirements at a cost of $530. Based on that estimate, it would require 44,272 burden hours (8 burden hours for each FQHC × 5,534 FQHCs = 44,272 burden hours) to complete the plan at a cost of $2,933,020 ($530 estimated cost for each FQHC × 5,534 FQHCs = $2,933,020 estimated cost).

Based on the previous estimates, for all RHCs and FQHCs to develop an emergency preparedness plan that complies with our proposed requirements would require 100,454 burden hours at a cost of $6,741,357.

Each RHC/FQHC also would be required to review and update its emergency preparedness plan at least annually. We believe that RHCs and FQHCs already review their emergency preparedness plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for RHCs and FQHCs and would not subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 491.12(b) would require RHCs/FQHCs to develop and implement emergency preparedness policies and procedures based on their emergency plans, risk assessments, and communication plans as set forth in § 491.12(a), (a)(1), and (c), respectively. We would also require RHCs/FQHCs to review and update these policies and procedures at least annually. At a minimum, we would require that the RHC/FQHC's policies and procedures address the requirements listed at § 491.12(b)(1) through (4).

We expect that all RHCs/FQHCs have some emergency preparedness policies and procedures. All RHCs and FQHCs are required to have emergency procedures related to the safety of their patients in non-medical emergencies (§ 491.6(c)). They also must set forth in writing their organization's policies (§ 491.7(a)(2)). In addition, current

regulations require that a physician, in conjunction with a nurse practitioner or physician's assistant, develop the facility's written policies (§ 491.8(b)(ii) and (c)(i)). However, we expect that all RHCs/FQHCs would need to review their policies and procedures, assess whether their policies and procedures incorporate their risk assessments and emergency preparedness plans and make any changes necessary to comply with our proposed requirements.

We expect that FQHCs already have policies and procedures that would comply with some of our proposed requirements. Several of the expectations of the Emergency Management PIN address specific elements in proposed § 491.12(b). For example, the PIN states that FQHCs should address, as appropriate, continuity of operations, staffing, surge patients, medical and non-medical supplies, evacuation, power supply, water and sanitation, communications, transportation, and the access to and security of medical records (Emergency Management PIN, p. 6). In addition, FQHCs should also continually evaluate their EMPs and make changes to their EMPs as necessary (Emergency Management PIN, p. 7). These expectations also indicate that FQHCs should be working with and integrating their planning with their state and local communities' plans, as well as other key organizations and other relationships (Emergency Management PIN, p. 8). Thus, we expect that burden for FQHCs from the requirement for emergency preparedness policies and procedures would be less than the burden for RHCs.

The burden associated with our proposed requirements would be reviewing, revising, and, if needed, developing new emergency preparedness policies and procedures. We expect that a physician and a nurse practitioner would primarily be involved with these tasks and that an administrator would assist them. We estimate that for each RHC to comply with our proposed requirements would require 12 burden hours at a cost of $968. Based on that estimate, for all 4,013 RHCs to comply with these requirements would require 48,156 burden hours (12 burden hours for each RHC × 4,013 RHCs = 48,156 burden hours) at a cost of $3,884,584 ($968 estimated cost for each RHC × 4,013 RHCs = $3,884,584 estimated cost).

As discussed earlier, we expect that FQHCs would have less of a burden from developing their emergency preparedness policies and procedures due to the expectations set out in the Emergency Management PIN. Thus, we estimate that for each FQHC to comply with the proposed requirements would require 8 burden hours at a cost of $608. Based on that estimate, for all 5,534 FQHCs to comply with these requirements would require 44,272 burden hours (8 burden hours for each FQHC × 5,534 FQHCs = 44,272 burden hours) at a cost of $3,364,672 ($608 estimated cost for each FQHC × 5,534 FQHCs = $3,364,672 estimated cost).

Based on the previous estimates, for all RHCs and FQHCs to develop emergency preparedness policies and procedures that comply with our proposed requirements would require 92,428 burden hours at a cost of $7,249,256.

We propose that RHCs/FQHCs review and update their emergency preparedness policies and procedures at least annually. We believe that RHCs and FQHCs already review their emergency preparedness policies and procedures periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for RHCs/FQHCs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 491.12(c) would require RHCs/FQHCs to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. RHCs/FQHCs would also have to review and update these plans at least annually. We propose that the communication plan must include the information listed in § 491.12(c)(1) through (5).

We expect that all RHCs/FQHCs have some type of emergency preparedness communication plan. It is standard practice for health care facilities to maintain contact information for staff and outside sources of assistance; alternate means of communication in case there is an interruption in the facility's phone services; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for patients. As discussed earlier, RHCs and FQHCs are required to take appropriate measures to ensure the safety of their patients during non-medical emergencies (§ 491.6(c)). We expect that an emergency preparedness communication plan would be an essential element in any emergency preparedness preparations. However, some RHCs/FQHCs may not have a formal, written emergency preparedness communication plan or their plan may not include all the requirements we propose.

The Emergency Management PIN contains specific expectations for communications and information sharing (Emergency Management PIN, pp. 8–9). "A well-defined communication plan is an important component of an effective EMP" (Emergency Management PIN, p. 8). In addition, FQHCs are expected to have policies and procedures for communicating with both internal stakeholders (such as patients and staff) and external stakeholders (such as federal, tribal, state, and local agencies), and for identifying who will do the communicating and what type of information will be communicated (Emergency Management PIN, p. 8). FQHCs should also identify alternate communications systems in the event that their standard communications systems become unavailable, and the FQHC should identify these alternate systems in their EMP (Emergency Management PIN, p. 9). Thus, we expect that all FQHCs would have a formal communication plan for emergencies and that those plans would contain some of our proposed requirements. However, we expect that all FQHCs would need to review, revise, and, if needed, develop new sections for their emergency preparedness communication plans to ensure that their plans are in compliance. We expect that these tasks will require less of a burden for FQHCs than for the RHCs.

The burden associated with complying with this requirement would be the resources required to review, revise, and, if needed, develop new sections for the RHC/FQHC's emergency preparedness communication plan. Based on our experience with RHCs/FQHCs, as well as the requirements in current regulations for a physician to work in conjunction with a nurse practitioner or a physician assistant to develop policies, we anticipate that satisfying the requirements in this section would require the involvement of the RHC/FQHC's administrator, a physician, and a nurse practitioner or physician assistant. We expect that the administrator and the nurse practitioner or physician assistant would be primarily involved in reviewing, revising, and if needed, developing new sections for the RHC/FQHC's emergency preparedness communication plan.

We estimate that for each RHC to comply with the proposed requirements would require 10 burden hours at a cost of $734. Based on that estimate, for all 4,013 RHCs to comply would require 40,130 burden hours (10 burden hours for each RHC × 4,013 RHCs = 40,130 burden hours) at a cost of $3,443,154 ($734 estimated cost for each RHC × 4,013 RHCs = $3,443,154 estimated cost).

We estimate that for a FQHC to comply with the proposed requirements would require 5 burden hours at a cost of $367. Based on this estimate, for all 5,534 FQHCs to comply would require 27,670 burden hours (5 burden hours for each FQHC × 5,534 FQHCs = 27,670 burden hours) at a cost of $2,030,978 ($367 estimated cost for each FQHC × 5,534 FQHCs = $2,030,978 estimated cost).

We propose that RHCs/FQHCs also review and update their emergency preparedness communication plans at least annually. We believe that RHCs/FQHCs already review their emergency preparedness communication plans periodically. Thus, compliance with this requirement would constitute a usual and customary business practice for RHCs/FQHCs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 491.12(d) would require RHCs/FQHCs to develop and maintain emergency preparedness training and testing programs and review and update these programs at least annually. We propose that an RHC/FQHC would have to comply with the requirements listed in § 491.12(d)(1) and (2).

Proposed § 491.12(d)(1) would require each RHC and FQHC to provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of that training. Each RHC and FQHC would also have to ensure that its staff could demonstrate knowledge of those emergency procedures. Thereafter, each RHC and FQHC would be required to provide emergency preparedness training annually.

Based on our experience with RHCs and FQHCs, we expect that all 9,045 RHC/FQHCs already have some type of emergency preparedness training program. The current RHC/FQHC regulations require RHCs and FQHCs to provide training to their staffs on handling emergencies (§ 491.6(c)(1)). In addition, FQHCs are expected to provide ongoing training in emergency management and their facilities' EMP to all of their employees (Emergency Management PIN, p. 7). However, neither the current regulations nor the PIN's expectations for FQHCs address initial training and ongoing training, frequency of training, or requirements that individuals providing services under arrangement and volunteers be included in the training. RHCs/FQHCs would need to review their current training programs; compare their contents to their risk assessments, emergency preparedness plans, policies and procedures, and communication plans and then take the necessary steps to ensure that their training programs comply with our proposed requirements.

We expect that each RHC and FQHC has a professional staff person who is responsible for ensuring that the facility's training program is up-to-date and complies with all federal, state, and local laws and regulations. This individual would likely be an administrator. We expect that the administrator would be primarily involved in reviewing the RHC/FQHC's emergency preparedness program; determining what tasks need to be performed and what materials need to be developed to bring the training program into compliance with our proposed requirements; and making changes to current training materials and developing new training materials. We expect that the administrator would work with a registered nurse to develop the revised and updated training program. We estimate that it would require 10 burden hours for each RHC or FQHC to develop a comprehensive emergency training program at a cost of $526. Therefore, it would require an estimated 95,470 burden hours (10 burden hours for each RHC/FQHC × 9,547 RHCs/FQHCs = 95,470 burden hours) to comply with this requirement at a cost of $5,021,722 ($526 estimated cost for each RHC/FQHC × 9,547 RHCs/FQHCs = $5,021,722 estimated cost).

Proposed § 491.12(d) would also require that RHCs/FQHCs develop and maintain emergency preparedness training and testing programs that would be reviewed and updated at least annually. We believe that RHCs/FQHCs already review their emergency preparedness programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice for RHCs/FQHCs and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 491.12(d)(2) would require RHCs/FQHCs to participate in a community mock disaster drill and conduct a paper-based, tabletop exercise at least annually. If a community mock disaster drill was not available, RHCs/FQHCs would have to conduct an individual, facility-based mock disaster drill at least annually. RHCs/FQHCs would also be required to analyze their responses to and maintain documentation of drills, tabletop exercises, and emergency events, and revise their emergency plans, as needed. If an RHC or FQHC experienced an actual natural or man-made emergency that required activation of its emergency plan, it would be exempt from the requirement for a community or individual, facility-based mock drill for 1 year following the onset of the actual event. However, for purposes of determining the burden for these requirements, we will assume that all RHCs/FQHCs would have to comply with all of these proposed requirements.

The burden associated with complying with these requirements would be the resources the RHC or FQHC would need to develop the scenarios for the drill and exercise and the documentation necessary for analyzing and documenting their drills, tabletop exercises, as well as any emergency events.

Based on our experience with RHCs/FQHCs, we expect that most of the 9,547 RHCs/FQHCs already conduct some type of testing of their emergency preparedness plans and develop scenarios and documentation for their testing and emergency events. For example, FQHCs are expected to conduct some type of testing of their EMP at least annually (Emergency Management PIN, p. 7). However, we do not believe that all RHCs/FQHCs have the appropriate documentation for drills, exercises, and emergency events or that they conduct both a drill and a tabletop exercise annually. Thus, we will analyze the burden associated with these requirements for all 9,547 RHCs/FQHCs.

Based on our experience with RHCs/FQHCs, we expect that the same individuals who are responsible for developing the RHC/FQHC's training and testing program would develop the scenarios for the drills and exercises and the accompanying documentation. We expect that the administrator and a registered nurse would be primarily involved in accomplishing these tasks. We estimate that for each RHC/FQHC to comply with the requirements in this section would require 5 burden hours at a cost of $276. Based on this estimate, for all 9,547 RHCs/FQHCs to comply with the requirements in this section would require 47,735 burden hours (5 burden hours for each RHC/FQHC × 9,547 RHCs/FQHCs = 47,735 burden hours) at a cost of $2,634,972 ($276 estimated cost for each RHC/FQHC × 9,547 RHC/FQHCs = $2,634,972 estimated cost).

TABLE 16—BURDEN HOURS AND COST ESTIMATES FOR ALL 9,547 RHC/FQHCS TO COMPLY WITH THE ICRS CONTAINED IN § 491.12 CONDITION: EMERGENCY PREPAREDNESS

S. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 494.62)

Proposed § 494.62(a) would require dialysis facilities to develop and maintain emergency preparedness plans that would have to reviewed and updated at least annually. Proposed § 494.62 would require that the plan include the elements set out at § 494.62(a)(1) through (4).

Proposed § 494.62(a)(1) would require dialysis facilities to develop a documented, facility-based and community-based risk assessment utilizing an all-hazards approach. The risk assessment should address the medical and non-medical emergency events the facility could experience both within the facility and within the surrounding area. The dialysis facility would have to consider its location and geographical area; patient population, including, but not limited to, persons-at-risk; and the types of services the dialysis facility has the ability to provide in an emergency. The dialysis facility also would need to identify the measures it would need to take to ensure the continuity of its operations, including delegations of authority and succession plans.

The burden associated with this requirement would be the resources needed to perform a thorough risk assessment. The current CfCs already require dialysis facilities to "implement processes and procedures to manage medical and nonmedical emergencies that are likely to threaten the health or safety of the patients, the staff, or the public. These emergencies include, but are not limited to, fire, equipment or power failure, care-related emergencies, water supply interruption, and natural disasters likely to occur in the facility's geographic area" (§ 494.60(d)). Thus, to be in compliance with this CfC, we believe that all dialysis facilities would have already performed some type of risk assessment during the process of developing their emergency preparedness processes and procedures. However, these risk assessments may not be as thorough or address all of the elements required in proposed § 494.62(a). For example, the current CfCs do not require dialysis facilities to plan for man-made disasters. Therefore, we believe that all dialysis facilities would have to conduct a thorough review of their current risk assessments and then perform the necessary tasks to ensure that their facilities' risk assessments complied with the requirements of this section.

Based on our experience with dialysis facilities, we expect that conducting the risk assessment would require the involvement of the dialysis facility's chief executive officer or administrator, medical director, nurse manager, social worker, and a PCT. We believe that all of these individuals would attend an initial meeting, review relevant sections of the current assessment, develop comments and recommendations for changes to the assessment, attend a follow-up meeting, perform a final review and approve the risk assessment. We believe that the administrator would probably coordinate the meetings, do an initial review of the current risk assessment, provide a critique of the risk assessment, offer suggested revisions, coordinate comments, develop the new risk assessment, and assure that the necessary parties approve the new risk assessment. We also believe that the administrator would probably spend more time reviewing and working on the risk assessment than the other individuals involved in performing the risk assessment. Thus, we estimate that complying with this requirement to conduct and develop a risk assessment would require 12 burden hours at a cost of $838. There are currently 5,923 dialysis facilities. Therefore, it would require an estimated 71,076 burden hours (12 burden hours for each dialysis facility × 5,923 dialysis facilities = 71,076 burden hours) for all dialysis facilities to comply with this requirement at a cost of $4,963,474 ($838 estimated cost for each dialysis facility × 5,923 dialysis facilities = $4,963,474 estimated cost).

After conducting the risk assessment, each dialysis facility would then have to develop and maintain an emergency preparedness plan that the facility must evaluate and update at least annually. This emergency plan would have to comply with the requirements at proposed § 494.62(a)(1) through (4).

Current CfCs already require dialysis facilities to "have a plan to obtain emergency medical system assistance when needed . . . " and "evaluate at least annually the effectiveness of emergency and disaster plans and update them as necessary" (§ 494.60(d)(4)). Thus, we expect that all dialysis facilities have some type of emergency preparedness or disaster plan. In addition, dialysis facilities must also "implement processes and procedures to manage medical and nonmedical emergencies that are likely to threaten the health or safety of the patients, the staff, or the public. These emergencies include, but are not limited to, fire, equipment or power failures, care-related emergencies, water supply interruption, and natural disasters likely to occur in the facility's geographic area" (§ 494.60(d)). We expect that the facility would incorporate many, if not all, of these processes and procedures into its emergency preparedness plan. We expect that each dialysis facility has some type of emergency preparedness plan and that plan should already address many of these requirements. However, all of the dialysis facilities would have to review their current plans and compare them to the risk assessment they performed pursuant to

proposed § 494.62(a)(1). The dialysis facility would then need to update, revise, and, in some cases, develop new sections to complete an emergency preparedness plan that addressed the risks identified in their risk assessment and the specific requirements contained in this subsection. The plan would also address how the dialysis facility would continue providing its essential services, which are the services that the dialysis facility would continue to provide despite an emergency. The dialysis facility would also need to review, revise, and, in some cases, develop delegations of authority or succession plans that the dialysis facility determined were necessary for the appropriate initiation and management of their emergency preparedness plan.

The burden associated with this requirement would be the time and effort necessary to develop the emergency preparedness plan. Based upon our experience with dialysis facilities, we expect that developing the emergency preparedness plan would require the involvement of the dialysis facility's chief executive officer or administrator, medical director, nurse manager, social worker, and a PCT. We believe that all of these individuals would probably have to attend an initial meeting, review relevant sections of the facility's current emergency preparedness or disaster plan(s), develop comments and recommendations for changes to the assessment, attend a follow-up meeting, and then perform a final review and approve the risk assessment. We believe that the administrator would probably coordinate the meetings, do an initial review of the current risk assessment, provide a critique of the risk assessment, offer suggested revisions, coordinate comments, develop the new risk assessment, and assure that the necessary parties approved the new risk assessment. We also believe that the administrator, medical director, and nurse manager would probably spend more time reviewing and working on the risk assessment than the other individuals involved in developing the plan. The social worker and PCT would likely just review the plan or relevant sections of it. In addition, since the medical director's responsibilities include participation in the development of patient care policies and procedures (42 CFR 494.150(c)), we expect that the medical director would be involved in the development of the emergency preparedness plan. We estimate that complying with this requirement would require 10 burden hours at a cost of $776 for each dialysis facility. There are 5,923 dialysis facilities. Therefore, it would require an estimated 59,230 burden hours (10 burden hours for each dialysis facility × 5,923 dialysis facilities = 59,230 burden hours) to complete the plan at a cost of $4,596,248 ($776 estimated cost for each dialysis facility × 5,923 dialysis facilities = $4,596,248 estimated cost).

Each dialysis facility would also be required to review and update its emergency preparedness plan at least annually. We believe that dialysis facilities already review their emergency preparedness plans periodically. The current CfCs already requires dialysis facilities to evaluate the effectiveness of their emergency and disaster plans and update them as necessary (42 CFR 494.60(d)(4)(ii)). Thus, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 494.62(b) would require dialysis facilities to develop and implement emergency preparedness policies and procedures based on the emergency plan, the risk assessment, and communication plan as set forth in § 494.62(a), (a)(1), and (c), respectively. These emergencies would include, but would not be limited to, fire, equipment or power failures, care-related emergencies, water supply interruptions, and natural and man-made disasters that are likely to occur in the facility's geographical area. Dialysis facilities would also have to review and update these policies and procedures at least annually. The policies and procedures would be required to address, at a minimum, the requirements listed at § 494.62(b)(1) through (9).

We expect that all dialysis facilities have some emergency preparedness policies and procedures. The current CfCs at 42 CFR 494.60(d) already require dialysis facilities to have and "implement processes and procedures to manage medical and nonmedical emergencies . . . [that] include, but not limited to, fire, equipment or power failures, care-related emergencies, water supply interruption, and natural disasters likely to occur in the facility's geographic area". In addition, we expect that dialysis facilities already have procedures that would satisfy some of the requirements in this section. For example, each dialysis facility is already required at 42 CFR 494.60(d)(4)(iii) to "contact its local disaster management agency at least annually to ensure that such agency is aware of dialysis facility needs in the event of an emergency". However, all dialysis facilities would need to review their policies and procedures, assess whether their policies and procedures incorporated all of the necessary elements of their emergency preparedness program, and then, if necessary, take the appropriate steps to ensure that their policies and procedures encompassed these requirements.

The burden associated with the development of these emergency policies and procedures would be the time and effort necessary to comply with these requirements. We expect the administrator, medical director, and the nurse manager would be primarily involved with reviewing, revising, and if needed, developing any new policies and procedures that were needed. The remaining individuals would likely review the sections of the policies and procedures that directly affect their areas of expertise. Therefore, we estimate that complying with this requirement would require 10 burden hours at a cost of $776 for each dialysis facility. There are 5,923 dialysis facilities. Therefore, it would require an estimated 59,230 burden hours (10 burden hours for each dialysis facility × 5,923 dialysis facilities = 59,230 burden hours) to complete the plan at a cost of $4,596,248 ($768 estimated cost for each dialysis facility × 5,923 dialysis facilities = $4,596,248 estimated cost).

The dialysis facility must also review and update its emergency preparedness policies and procedures at least annually. We believe that dialysis facilities already review their emergency preparedness policies and procedures periodically. In addition, the current CfCs already require (at 42 CFR 494.150(c)(1)) the medical director to participate in a periodic review of patient care policies and procedures. Thus, compliance with this requirement would constitute a usual and customary business practice for dialysis facilities and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 494.62(c) would require dialysis facilities to develop and maintain an emergency preparedness communication plan that complied with both federal and state law. The dialysis facility must also review and update this plan at least annually. The communication plan must include the information listed at § 494.62(c)(1) through (7).

We expect that all dialysis facilities have some type of emergency preparedness communication plan. A communication plan would be an integral part of any emergency preparedness plan. Current CfCs already require dialysis facilities to have a written disaster plan (42 CFR

494.60(d)(4)). Thus, each dialysis facility should already have some of the contact information they would need to have in order to comply with this section. In addition, we expect that it is standard practice in the healthcare industry to have and maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility, such as cell phones or text-messaging devices; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients. However, many dialysis facilities may not have formal, written emergency preparedness communication plans. Therefore, we expect that all dialysis facilities would need to review, update, and in some cases, develop new sections for their plans to ensure that those plans included all of the previously-described required elements in their emergency preparedness communication plan.

The burden associated with complying with this requirement would be the resources required to review and revise the dialysis facility's emergency preparedness communication plan to ensure that it complied with these requirements. Based upon our experience with dialysis facilities, we anticipate that satisfying these requirements would primarily require the involvement of the dialysis facility's administrator, medical director, and nurse manager. For each dialysis facility, we estimate that complying with this requirement would require 4 burden hours at a cost of $357. Therefore, for all of the dialysis facilities to comply with this requirement would require an estimated 23,692 burden hours (4 burden hours for each dialysis facility × 5,923 dialysis facilities = 23,692 burden hours) at a cost of $2,114,511 ($357 estimated cost for each dialysis facility × 5,923 dialysis facilities = $2,114,511 estimated cost).

Each dialysis facility would also have to review and update its emergency preparedness communication plan at least annually. For the purpose of determining the burden for this requirement, we would expect that dialysis facilities would review their emergency preparedness communication plans annually. We believe that all dialysis facilities have an administrator that would be primarily responsible for the day-to-day operation of the dialysis facility. This would include ensuring that all of the dialysis facility's policies, procedures, and plans were up-to-date and complied with the relevant federal, state, and local laws, regulations, and ordinances. We expect that the administrator would be responsible for periodically reviewing the dialysis facility's plans, policies, and procedures as part of his or her work responsibilities. Therefore, we expect that complying with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 494.62(d) would require dialysis facilities to develop and maintain emergency preparedness training, testing and patient orientation programs that would have to be evaluated and updated at least annually. The dialysis facility would have to comply with the requirements located at § 494.62(d)(1) through (3).

Proposed § 494.62(d)(1) would require that dialysis facilities provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. Thereafter, the dialysis facility would have to provide emergency preparedness training at least annually.

Current CfCs already require dialysis facilities to "provide training and orientation in emergency preparedness to the staff" (42 CFR 494.60(d)(1)) and "provide appropriate orientation and training to patients . . ." in emergency preparedness (42 CFR 494.60(d)(2)). In addition, the dialysis facility's patient instruction would have to include the same matters that are specified in the current CfCs (42 CFR 494.60(d)(2)). Thus, dialysis facilities should already have an emergency preparedness training program for new employees, as well as ongoing training for all their staff and patients. However, all dialysis facilities would need to review their current training programs and compare their contents to their updated emergency preparedness programs, that is, the risk assessment, emergency preparedness plan, policies and procedures, and communications plans that they developed pursuant to proposed § 494.62(a) through (c). Dialysis facilities would then need to review, revise, and in some cases, develop new material for their training programs so that they complied with these requirements.

The burden associated with complying with this requirement would be the time and effort necessary to develop the required training program. We expect that complying with this requirement would require the involvement of the administrator, medical director, and the nurse manager. In fact, the medical director's responsibilities include, among other things, staff education and training (42 CFR 494.150(b)). We estimate that it would require 7 burden hours for each dialysis facility to develop an emergency training program at a cost of $559. Therefore, it would require an estimated 41,461 burden hours (7 burden hours for each dialysis facility × 5,923 dialysis facilities = 41,461 burden hours) to comply with this requirement at a cost of ($559 estimated cost for each dialysis facility × 5,923 dialysis facilities = $3,310,957 estimated cost).

The dialysis facility must also review and update its emergency preparedness training program at least annually. We believe that dialysis facilities already review their emergency preparedness training programs periodically. Therefore, compliance with this requirement would constitute a usual and customary business practice and would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 494.62(d)(2) requires dialysis facilities to participate in a mock disaster drill and conduct a paper-based; tabletop exercise at least annually. If a community mock disaster drill was not available, the dialysis facility would have to conduct an individual, facility-based mock disaster drill at least annually. If the dialysis facility experienced an actual natural or man-made emergency that required activation of their emergency plan, the dialysis facility would be exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event. Dialysis facilities would also be required to analyze their responses to and maintain document of all drills, tabletop exercises, and emergency events. To comply with this requirement, a dialysis facility would need to develop scenarios for each drill and exercise. A dialysis facility would also have to develop the documentation necessary for recording and analyzing the drills, tabletop exercises, and emergency events.

The current CfCs already require dialysis facilities to evaluate their emergency preparedness plan at least annually (42 CFR 494.60(d)(4)(ii)). Thus, we expect that all dialysis facilities are already conducting some type of tests to evaluate their emergency plans. Although the current CfCs do not specify the type of drill or test, dialysis facilities should have already been developing scenarios for testing their plans. Thus, complying with this requirement would constitute a usual and customary business practice and

would not be subject to the PRA in accordance with 5 CFR 1320.3(b)(2).

Proposed § 494.62(d)(3) would require dialysis facilities to provide appropriate orientation and training to patients, including the areas specified in proposed § 494.62(d)(1). Proposed § 494.62(d)(1) specifically would require that staff demonstrate knowledge of emergency procedures including the emergency information they must give to their patients. Thus, the burden associated with this section would already be included in the burden estimate for § 494.62(d)(1).

TABLE 17—BURDEN HOURS AND COST ESTIMATES FOR ALL 5,923 DIALYSIS FACILITIES TO COMPLY WITH THE ICRS CONTAINED IN § 494.62 CONDITION: EMERGENCY PREPAREDNESS

Regulation section(s)	OMB control no.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total labor cost of reporting ($)	Total capital/ mintenance costs ($)	Total cost ($)

Totals		5,923	29,615		254,689				19,581,438

** The hourly labor cost is blended between the wages for multiple staffing levels.

T. Summary of Information Collection Burden

Based on the previous analysis, the first year's burden for complying with all of the requirements in this proposed rule would be 3,018,124 burden hours at a cost of $185,908,673. For subsequent years, if there is any additional burden, it would be negligible.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced earlier, access CMS' Web site at *http://www.cms.gov/PaperworkReductionActof1995/PRAL/list.asp#TopOfPage* or email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov, or call the Reports Clearance Office at 410–786–1326.

If you comment on these information collection and recordkeeping requirements, please mail copies directly to the following:

Centers for Medicare & Medicaid Services, Office of Strategic Operations and Regulatory Affairs, Regulations Development Group, Attn.: William Parham, (CMS–3178–P), Room C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850; and Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, Attn: CMS Desk Officer, CMS–3178–P, Fax (202) 395–6974.

IV. Regulatory Impact Analysis

A. Statement of Need

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity).

In response to past terrorist attacks, natural disasters, and the subsequent national need to refine the nation's strategy to handle emergency situations, there continues to be a coordinated effort across federal agencies to establish a foundation for development and expansion of emergency preparedness systems. There are two Presidential Directives, HSPD–5 and HSPD–21, instructing agencies to coordinate their emergency preparedness activities with each other. Although these directives do not specifically require Medicare providers and suppliers to adopt measures, they have set the stage for what we expect from our providers and suppliers in regard to their roles in a more unified emergency preparedness system.

Homeland Security Presidential Directive (HSPD–5): Management of Domestic Incidents authorizes the Department of Homeland to develop and administer the National Incident Management System (NIMS).

Homeland Security Presidential Directive (HSPD–21) addresses public health and medical preparedness. The directive establishes a National Strategy for Public Health and Medical Preparedness (Strategy), which builds upon principles set forth in "Biodefense for the 21st Century (April 2004), "National Strategy for Homeland Security" (October 2007), and the "National Strategy to Combat Weapons of Mass Destruction" (December 2002). The directive aims to transform our national approach to protecting the health of the American people against all disasters.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995 Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S. C. 804(2)).

Executive Orders 12866 and 13563 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more annually). The total projected cost of this rule would be $225 million in the first year, and the subsequent projected annual cost would be approximately $ 41 million.

Published reports after Hurricane Katrina reported that the Louisiana Attorney General investigated approximately 215 deaths that occurred in hospitals and nursing homes following Katrina. Since nearly all hospitals and nursing homes are certified to participate in the Medicare program, we estimate that at least a small percentage of these lives could be saved as a result of emergency preparedness measures in a single disaster of equal magnitude. Katrina is an extreme example of a natural

disaster, so we also considered other more common disasters. The United States experiences numerous natural disasters annually, including, in particular, tornadoes and flooding. Based on data from the National Oceanic and Atmospheric Administration, the United States experiences an annual average of 56 fatalities as a result of tornadoes (*http://www.spc.noaa.gov/wcm/ustormaps/1981–2010-stateavgfatals.png*). On average, floods kill about 140 people each year (United States Department of the Interior, United States Geological Survey Fact Sheet "Flood Hazards—A National Threat" January, 2006, at *Http://pubs.usgs.gov/fs/2006/3026/2006–3026.pdf*). Floods may be caused by both natural and manmade processes, including hurricanes, severe storms, snowmelt, and dam or levee failure. According to the National Weather Service, in 2010 there were a cumulative 490 deaths and 2,369 injuries and in 2011 there were a cumulative 1,096 deaths and 8,830 injuries as a result of severe weather events such as tornadoes, floods, winter storms, and others. Although we are unable to specifically quantify the number of lives saved as a result of this proposed rule, all of the data we have read regarding emergency preparedness indicate that implementing the requirements in this proposed rule could have a significant impact on protecting the health and safety of individuals served by providers and suppliers that participate in the Medicare and Medicaid programs. We believe it is crucial for all providers and suppliers to have an emergency disaster plan that is integrated with other local, state and federal agencies to effectively address both natural and manmade disasters. Therefore, we believe that it is essential to require providers and suppliers to conduct a risk assessment, to develop an emergency preparedness plan based on the assessment, and to comply with the other requirements we propose to minimize the disruption of services for the community and ensure continuity of care in the event of a disaster.

We believe that this proposed rule would be an economically significant regulatory action under section 3(f)(1) of Executive Order 12866, since it may lead to impacts of greater than $100 million in the first year following the rule's effective date.

This proposed rule would establish a regulatory framework with which Medicare- and Medicaid-participating providers and suppliers would have to comply to ensure that the varied providers and suppliers of healthcare are adequately prepared to respond to natural and man-made disasters.

Several factors influenced our estimates of the economic impact to the providers and suppliers covered by this proposed rule. These factors are discussed under section III. of this proposed rule (Collection of Information Requirements). In addition, we have used the same data source for the RIA that we used to develop the PRA burden estimates, that is, the CMS Online Survey, Certification, and Reporting System (OSCAR).

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.) (RFA) requires agencies that issue a regulation to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. The Act generally defines a "small entity" as: (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA); (2) a not-for-profit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000. States and individuals are not included in the definition of "small entity.") HHS uses as its measure of significant economic impact on a substantial number of small entities a change in revenues of more than 3 to 5 percent.

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of less than $35.5 million in any 1 year. For purposes of the RFA, a majority of hospitals are considered small entities due to their non-profit status. Individuals and states are not included in the definition of a small entity. Since the cost associated with this proposed rule is less than $46,000 for hospitals and $4,000 for other entities, the Secretary has determined that this proposed will not have a significant economic impact on a substantial number of small entities."

In addition, section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. Since the cost associated with this proposed rule is less than $46,000 for hospitals, this this proposed will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits before issuing any rule that includes a federal mandate that could result in expenditure in any 1 year by state, local or tribal governments, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. In 2013, that threshold level is approximately $141 million. This omnibus proposed rule contains mandates that would impose a one-time cost of approximately $225 million. Thus, we have assessed the various costs and benefits of this proposed rule. It is clear that a number of providers and suppliers would be affected by the implementation of this proposed rule and that a substantial number of those entities would be required to make changes in their operations. This proposed rule would not mandate any new requirements for state, local or tribal governments. For the private sector facilities, this regulatory impact section constitutes the analysis required under UMRA.

Executive Order 13132 establishes certain requirements that an agency must meet when it develops a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. This proposed rule will not impose substantial direct requirement costs on state or local governments, preempt state law, or otherwise implicate federalism.

This proposed regulation is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 et seq.) and has been transmitted to the Congress and the Comptroller General for review.

C. Anticipated Effects on Providers and Suppliers: General Provisions

This proposed rule would require each of the Medicare- and Medicaid-participating providers and suppliers discussed in previous sections to perform a risk analysis; establish an emergency preparedness plan, emergency preparedness policies and procedures, and an emergency preparedness communication plan; train staff in emergency preparedness, and test the emergency plan. The economic impact would differ between hospitals

and the various other providers and suppliers, depending upon a variety of factors, including existing regulatory requirements and accreditation standards.

We discuss the economic impact for each provider and supplier type included in this proposed rule in the order in which they appear in the CFR. Most of the economic impact of this proposed rule would be due to the cost for providers and suppliers to comply with the information collection requirements. Thus, we discuss most of the economic impact under the Collection of Information Requirements section of this proposed rule. We provide a chart at the end of the RIA section of the total regulatory impact for each provider/supplier.

As stated in the ICR section, we obtained all salary information from the May 2011 National Occupational Employment and Wage Estimates, United States by the Bureau of Labor Statistics (BLS) at *http://www.bls.gov/oes/current/oes_nat.htm* and calculated the added value of benefits using the estimation that salary accounts for 70 percent of compensation, based on BLS information (Bureau of Labor Statistics News Release, "Employer Cost Index—December 2011, retrieved from *www.bls.gov/news.release/pdf/eci.pdf*).

1. Subsistence Requirement

This proposed rule would require all inpatient providers to meet the subsistence needs of staff and patients, whether they evacuate or shelter in place, including, but not limited to, food, water, and supplies, alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of such provisions.

Based on our experience, we expect inpatient providers to currently have food, water, and supplies, alternate sources of energy to provide electrical power, and the maintenance of temperatures for the safe and sanitary storage of such provisions as a routine measure to ensure against weather related and non-disaster power failures. Thus, we believe that this requirement is a usual and customary business practice for inpatient providers and we have not assigned any impact for this requirement.

Further, we expect that most providers have agreements with their vendors to receive supplies within 24 to 48 hours in the event of an emergency, as well as arrangements with back-up vendors in the event that the disaster affects the primary vendor. We considered proposing a requirement that providers must keep a larger quantity of food and water on hand in the event of a disaster. However, we believe that a provider should have the flexibility to determine what is adequate based on the location and individual characteristics of the facility. While some providers may have the storage capacity to stockpile supplies that would last for a longer duration, other may not. Thus, we believe that to require such stockpiling would create an unnecessary economic impact on some health care providers.

We expect that when inpatient providers determine their supply needs, they would consider the possibility that volunteers, visitors, and individuals from the community may arrive at the facility to offer assistance or seek shelter.

Based on the previous factors, we have not estimated a cost for a stockpile of food and water.

2. Generator Location and Testing

This proposed rule would require hospitals, CAHs, and LTC facilities to test and maintain their emergency and standby power systems in such a way to ensure proper operation in the event they are needed. The 2000 edition of the Life Safety Code (LSC) of the National Fire Protection Association (NFPA) states that the alternate source of power (for example, generator) must be located in an appropriate area to minimize the possible damage resulting from disasters such as storms, floods, earthquakes, tornadoes, hurricanes, vandalism, sabotage and other material and equipment failures. Since hospitals, CAHs and LTC facilities are currently required to comply with the referenced LSC, we have not assigned any additional burden for this requirement.

In addition to the emergency power system inspection and testing requirements found in NFPA 99 and NFPA 110 and NFPA 101, we propose that hospitals test their emergency and stand-by-power systems for a minimum of 4 continuous hours every 12 months at 100 percent of the power load the hospital anticipates it will require during an emergency. As a result of lessons learned from hurricane Sandy, we believe that this annual 4 hour test will more closely reflect the actual conditions that would be experienced during a disaster of the magnitude of hurricane Sandy. Also, later editions of NFPA 110 require 4 hours of continuous generator testing every 36 months to provide reasonable assurance emergency power systems are capable of running under load during an emergency. In order to provide further assurance that generators will be capable of operating during an emergency, 4 hours of continuous generator testing will be required every 12 months. We have also proposed the same emergency and standby power requirements for CAHs and LTC facilities.

We have estimated the cost in this section for these additional testing requirements. Based on information from the U.S. Bureau of Labor Statistics and the U.S. Energy Information Administration, we have calculated the cost for the generator testing as follows:

- Labor: 6 hours (1-hour preparation, 4 hour run-time, 1 hour restoration) × $25.45 an hour =$152.70
- Fuel: Diesel cost of $3.85 per gallon × 72 gallon per hour × 4 hour of testing=$1,108.80

Therefore, we estimate the total cost to each hospital, CAH and LTC facility to comply with this requirement would be $1,262. However, we request information on this proposal and in particular on how we might better estimate costs in light of the existing LSC and other state and federal requirements.

D. Condition of Participation: Emergency Preparedness for Religious Nonmedical Health Care Institutions (RNHCIs)

1. Training and Testing (§ 403.748(d))

We discuss the majority of the economic impact for this requirement in the ICR section, which is estimated at $18,928.

2. Testing (§ 403.748(d)(2))

Proposed § 403.748(d)(2) would require RHNCIs to conduct a paper-based, tabletop exercise at least annually. RHNCIs must analyze their response and maintain documentation of all tabletop exercises, and emergency events, and revise their emergency plan as needed.

We expect that the cost associated with this requirement would be limited to the staff time needed to participate in the tabletop exercises. We estimate that approximately 4 hours of staff time would be required of the administrator and director of nursing, and 2 hours of staff time for the head of maintenance to coordinate facility evacuations and protocols for transporting residents to alternate sites. We believe that other staff members would be required to spend a minimal amount of time during these exercises and such staff time would be considered a part of regular on-going training for RHNCI staff. We estimate that it would require 10 hours of staff time for each of the 16 RNHCIs to conduct exercises at a cost of $330. Therefore, it would require an estimated

total impact of $5,280 each year after the initial year for all RNHCIs to comply with proposed § 403.748(d)(2). For the initial year, we estimate $24,208 as the total economic impact and cost estimates for all 16 RNHCIs to comply with the requirements in this proposed rule.

E. Condition for Coverage: Emergency Preparedness for Ambulatory Surgical Centers (ASCs)—Testing (§ 416.54(d)(2))

Proposed § 416.54(d)(2) would require ASCs to participate in a community mock disaster drill at least annually. If a community mock disaster drill were not available, the ASC would be required to conduct a facility-based mock disaster drill at least annually and maintain documentation of all mock disaster drills. ASCs also would be required to conduct a paper-based, tabletop exercise at least annually. ASCs also would be required to maintain documentation of the exercise.

State, Tribal, Territorial, and local public health and medical systems comprise a critical infrastructure that is integral to providing the early recognition and response necessary for minimizing the effects of catastrophic public health and medical emergencies. Educating and training these clinical, laboratory, and public health professionals has been, and continues to be, a top priority for the federal Government. There are currently three programs at HHS addressing education and training in the area of public health emergency preparedness and response: the Centers for Public Health Preparedness (CPHP), the Bioterrorism Training and Curriculum Development Program (BTCDP), and National Laboratory Training Network (NLTN).

As discussed earlier in this preamble, ASCs can use these and other resources, such as tools offered by the Department of Homeland Security, to assist them in complying with this proposed requirement. Thus, we believe that the cost associated with this requirement would be limited to the staff time to participate in the community-wide and facility-wide trainings, and tabletop exercises. We believe that appreciable staff time would be required of the administrator and risk assurance nurse. We believe that other staff members would be required to spend a minimal amount of time during these exercises and the training would be considered as part of regular on-going training for ASC staff. We estimate that the administrator and quality assurance nurse would spend about 4 hours each on an annual basis to participate in the disaster drills (3 hours to participate in a community or facility-wide drill and 1 hour to participate in a table-top drill). Thus, we anticipate that complying with this requirement would require 8 hours for an estimated cost of $500 for each of the 5,354 ASCs and a total cost estimate of $2,677,000 for all ASCs ($500 × 5,354 ASCs) each year after the first year. We estimate $15,241,036 ($2,677,000 impact cost + $12,564,036 ICR burden) as the total economic impact and cost estimates for all ASCs to comply with the requirements in this proposed rule.

F. Condition of Participation: Emergency Preparedness for Hospices—Testing (§ 418.113(d)(2))

Proposed § 418.113(d)(2)(i) through (iii) would require hospices to participate in mock drills and tabletop exercises at least annually. In addition, hospices are to conduct a paper-based, tabletop exercise at least annually. We believe that the administrator would be responsible for participating in community-wide disaster drills and would be the primary person to organize a facility-wide drill and tabletop exercise with the assistance of one member of the IDG. We believe that the registered nurse would most likely represent the IDG on the drills and exercises. While we expect that all staff would be involved in the drills and exercises, we would consider their involvement as part of their regular staff training. However, for the purpose of this analysis we assume that the administrator would spend approximately 3 hours annually to participate in a community or facility-wide drill and 1 hour to participate in a tabletop exercise above their regular and ongoing training. We also assume that the registered nurse would spend 3 hours to participate in an annual drill and 1 hour to participate in a tabletop exercise. Thus, we estimate that each hospice would spend $388. The total estimate for all hospices to comply with this requirement after the initial year would total $1,463,924 ($388 × 3,773 hospices). We estimate the total economic impact and cost estimates for all 3,773 hospices to comply with the requirements in this proposed rule for the initial year would be $11,908,072 ($1,463,924 impact cost + $10,444,148 ICR burden).

G. Emergency Preparedness for Psychiatric Residential Treatment Facilities (PRTFs)—Training and Testing (§ 441.184(d))

Proposed § 441.184(d)(2)(i) through (iii) would require PRTFs to participate in a community or facility-based mock disaster drill and a tabletop exercise annually. We propose that if a community drill is not available, the PRTF would be required to conduct a facility-based mock disaster drill. We estimate that the cost associated with this requirement is the time that it would take key personnel to participate in the mock drill and tabletop exercise. We further estimate that the drill and exercise would involve the administrator and registered nurse to spend about 4 hours each on an annual basis to participate (3 hours to participate in a community or facility-wide drill and 1 hour to participate in a table-top drill). Thus, we anticipate that complying with this requirement would require 4 hours for the administrator and 4 hours for the registered nurse at a combined estimated cost of $360 per facility. The total annual cost for all 387 PRTFs would be $139,320. The total cost for the first year to comply with the requirement would be $1,071,990 ($139,320 impact cost + $932,670 ICR burden).

H. Emergency Preparedness for Program for the All-Inclusive Care for the Elderly (PACE) Organizations—Training and Testing (§ 460.84(d))

Proposed § 460.84(d)(2)(i) through (iii) would require PACE organizations to conduct a mock community or facility-wide drill and a paper-based, tabletop exercise annually. Since PACE organizations are currently required to conduct a facility-wide drill annually, we are only estimating economic impact for the annual tabletop drill. We expect that both the home-care coordinator and the quality-improvement nurse would each spend 1 hour to conduct the tabletop exercise. Thus, we estimate the economic impact hours to be 2 hours for each PACE organization (total impact hours = 182) at an estimated cost of $90 for each organization. The total annual cost for all PACE organizations is $8,190 ($90 × 91 providers). The total cost for all PACE organizations to comply with the requirements in the first year would be $342,888 ($8,190 impact cost + $334,698 ICR burden).

I. Condition of Participation: Emergency Preparedness for Hospitals

1. Medical Supplies (§ 482.15(b)(1))

We propose that hospitals must maintain medical supplies. The American Hospital Association (AHA) recommends that individual hospitals have a 24-hour supply of pharmaceuticals and that they develop a list of required medical and surgical equipment and supplies. TJC standards require a hospital to have a 48 to 72 hour stockpile of medication and supplies.

The Department of Homeland Security (DHS) Act of 2002 established the Strategic National Stockpile (SNS) Program to work with governmental and non-governmental partners to upgrade the nation's public health capacity to respond to a national emergency. The SNS is a national repository of antibiotics, chemical antidotes, antitoxins, life-support medications and medical supplies.

The SNS, and other federal agencies, *http://emergency.cdc.gov/stockpile/index.asp*, have plans to address the medical needs of an affected population in the event of a disaster. The SNS has large quantities of medicine and medical supplies to protect the American public if there is a public health emergency (for example, a terrorist attack, flu outbreak, or earthquake) severe enough to cause local supplies to run out. After federal and local authorities agree that the SNS is needed, medicines can be delivered to any state in the U.S. within 12 hours. Each state has plans to receive and distribute SNS medicine and medical supplies to local communities as quickly as possible. States have the discretion to decide where to distribute the supplies in the event of multiple events.

However, prudent emergency planning requires that some supplies be maintained in-hospital for immediate needs. The Federal Metropolitan Medical Response System (MMRS) guidelines call for MMRS communities to be self-sufficient for 48 hours. We encourage hospitals to work with stakeholders (state boards of pharmacy, pharmacy organizations, and public health organizations) for guidance and assistance in identifying medications they may need. Based on our experience with hospitals; we believe that they would have on hand a 2 to 3 day supply of medical supplies at the onset of a disaster. After such time, supplies could be replenished from the SNS and other federal agencies. Therefore, based on the previous information, we are not assessing additional burden for medical supplies.

2. Training Program (§ 482.15(d)(1))

Proposed § 482.15(d)(1) would require hospitals to develop and maintain an emergency preparedness training program and review and update it at least annually. Based on our experience with health care facilities, we expect that all health care facilities provide some type of training to all personnel, including those providing services under contract or arrangement and volunteers. Since such training is required for the TJC-accredited hospitals, the proposed requirements for developing an emergency preparedness-training program and the materials they plan to use in providing initial and on-going annual training would constitute a usual and customary business practice for TJC-accredited hospitals.

However, under this proposed rule, non TJC-accredited hospitals would need to review their existing training program and appropriately revise, update, or develop new sections and new material for their training program. The economic impact associated with this requirement is the staff time required for non-TJC accredited hospitals to review, update or develop a training program. We discuss the economic impact for this requirement in the ICR section.

3. Testing (§ 482.15(d)(2)(i) through (iii))

Proposed § 482.15(d)(2)(i) through (iii) would require hospitals to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually.

State, tribal, territorial, and local public health and medical systems comprise a critical infrastructure that is integral in providing early recognition and response necessary for minimizing the effects of catastrophic public health and medical emergencies. Educating and training these clinical, laboratory, and public health professionals has been, and continues to be, a top priority for the federal government. There are currently four programs at HHS addressing education and training in the area of public health emergency preparedness and response. The programs are the Centers for Public Health Preparedness (CPHP), The Bioterrorism Training and Curriculum Development Program (BTCDP), and National Laboratory Training Network (NLTN). As discussed earlier in this preamble, hospitals can use these and other resources, such as tools offered by the DHS, to assist them in complying with this proposed requirement. Thus, for non-TJC accredited hospitals, the costs associated with this requirement would be primarily due to the staff time needed to participate in the community-wide and facility-based disaster drills, and the tabletop exercises. We believe that appreciable staff time would be required of the risk management director, facilities director, safety director, and security manager. We expect that other staff members would be required to spend a minimal amount of time during these exercises, which would be considered a part of regular on-going training for hospital staff. We estimate that the risk management director, facilities director, safety director and security manager would spend about 12 hours each (8 hours for a disaster drill and 4 hours for a tabletop exercise) on an annual basis to meet the proposed requirement.

Thus, we have estimated the economic impact for the 1,518 non-TJC accredited hospitals. We anticipate that complying with this requirement would require 48 hours for an estimate of $3,360 for each non TJC-accredited hospital. Therefore, for all non TJC-accredited hospitals to comply with this requirement would require 72,864 total economic impact hours (48 economic impact hours per non TJC-accredited hospital × 1,518 non TJC-accredited hospitals = 72,864 total economic impact hours) at an estimated total cost of $5,100,480 ($3,360 per non TJC-accredited hospital × 1,518 hospitals = $5,100,480).

Based on TJC's standards, the TJC-accredited hospitals are currently required to test their emergency operations plan twice a year. Therefore, for TJC-accredited hospitals to conduct disaster drills and tabletop exercises would constitute a usual and customary business practice and we will not include this activity in the economic impact analysis.

4. Generator Testing (§ 482.15(e))

Section § 482.15(e) would require hospitals to test each emergency generator and any associated essential electric systems for a minimum of 4 continuous hours at least once every 12 months under a full electrical load anticipated to be required during an emergency. The intent of this requirement is to provide an increased assurance that a generator and associated essential electrical systems will function during an emergency and are capable of running under a full electrical load required during an emergency for an extended period of time. AO's, including TJC, DNV, and HFAP; currently require accredited hospitals to test their generators/emergency power supply system once for 4 continuous hours every 36 months. Therefore, the cost of the existing testing requirement was deducted from the cost calculation for accredited hospitals. However, under this proposed rule, non-accredited hospitals would be required to run their emergency generators an additional 4 hours, with an additional 1 hour for preparation, and an additional 1 hour for restoration.

For non-accredited hospitals, we estimate labor cost to be $132,696 (6 hours × $25.45/hr ($152.70) × 869 non-accredited hospitals). We estimate fuel cost to be $963,547 (72 gallon/hr × $3.85/gallon × 4 hours ($1,108.80) × 869

non-accredited hospitals) for non-accredited hospitals. Thus for non-accredited hospitals, we estimate the total cost to comply with this requirement to be $1,096,243.

For accredited hospitals, we estimate labor cost to be $413,206 (2 (6 hours × $25.45/hr)/3 ($101.80)) × 4,059 accredited hospitals). We estimate fuel cost to be $3,000,413 (2 (72 gallon/hr × $3.85/gallon × 4 hours)/3 ($739.2)) × 4,059 accredited hospitals) for accredited hospitals. Thus for accredited hospitals, we estimate the total cost to comply with this requirement to be $3,413,619.

Therefore, the total economic impact of this rule on hospitals would be $39,265,594 ($5,100,480 disaster drills impact cost + $4,509,862 generator impact cost + $29,655,252 ICR burden).

J. Condition of Participation: Emergency Preparedness for Transplant Centers

There is no additional economic impact to discuss in this section for transplant centers. All transplant centers are located within a hospital and, thus, would not have to stockpile supplies in an emergency or conduct a mock disaster drill or a tabletop exercise.

K. Emergency Preparedness Long Term Care (LTC) Facilities

1. Subsistence (§ 483.73(b)(1))

Section § 483.73(b)(1) would require LTC facilities to provide subsistence needs for staff and residents, whether they evacuate or shelter in place, including, but not limited to, food, water, and medical supplies alternate sources of energy for the provision of electrical power, and maintenance of temperatures for the safe and sanitary storage of such provisions.

As stated earlier in this section, each state has plans to receive and distribute SNS medicine and medical supplies to local communities as quickly as possible. The federal responsibility ceases at the delivery of the push-packs to state-designated airports. It is then the responsibility of the state to break down and transport the components of the push-pack to the affected community. It is also at the state's discretion where to deliver push-pack material in the event of multiple events.

We expect that a 1- to 2-day supply would be sufficient because various national agencies with stockpiles of medicine, medical supplies, food and water can be mobilized within 12 hours and supplies can be replenished or provided within 48 hours. Thus, for the sake of this impact analysis, we assume that, at a minimum, a LTC facility would have a 2-day supply of food and potable water for the patients and staff at the onset of a disaster and will not assign a cost to this requirement.

We encourage LTC facilities to work with stakeholders (State Boards of Pharmacy, pharmacy organizations, and public health organizations) for guidance and assistance in identifying medications that may be needed and plan to provide access to all healthcare partners during an event.

2. Training and Testing (§ 483.73(d))

Section § 483.73(d)(2)(i) through (iii) would require LTC facilities to participate in or conduct a mock disaster drill and a tabletop exercise at least annually. The current requirements for LTC facilities already mandate that these facilities periodically review their procedures with existing staff, and carry out unannounced staff drills (42 CFR 483.75(m)(2)). Thus, we expect that complying with the requirement for an annual community or facility-wide mock disaster drill and tabletop would constitute a minimal economic impact, if any, after the first year.

3. Generator Testing (§ 483.73(e))

Proposed § 483.73(e) would require LTC facilities to test each emergency generator for a minimum of 4 continuous hours at least once every 12 months. We estimate labor cost to be $2,314,474 (6 hours × $25.45/hr ($152.70) × 15,157 LTC facilities). We estimate fuel cost to be $16,806,082 (72 gallon/hr × $3.85/gallon × 4 hours ($1,108.80) × 15,157 facilities). Therefore, we anticipate that complying with this requirement would cost an estimated $19,120,556.

L. Condition of Participation: Emergency Preparedness for Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICFs/IID)

1. Testing (§ 483.475(d)(2))

Proposed § 483.475(d)(2)(i) through (iii) would require ICFs/IID to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually. The current ICF/IID CoPs require them to conduct evacuation drills at least quarterly for each shift and under varied conditions to evaluate the effectiveness of emergency and disaster plans and procedures" (42 CFR 483.470(i) and (i)(iii)). In addition, ICFs/IID must evacuate clients during at least one drill each year on each shift, file a report and evaluation on each evacuation drill and investigate all problems with evacuation drills, including accidents, and take corrective action (42 CFR 483.470(i)(2)). Thus, all 6,450 ICFs/IID already conduct quarterly drills. We estimate that any additional economic impact for an ICF/IID to conduct both a drill and an exercise would be minimal, if any. Therefore, the cost of this proposed rule for all ICFs/IID would be limited to the ICR burden of $15,538,104 as discussed in the COI section.

M. § 484.22 Condition of Participation: Emergency Preparedness for Home Health Agencies (HHAs)—Training and Testing (§ 484.22(d))

We discuss the majority of the economic impact for this requirement in the COI section which is estimated to be $48,725,629.

Proposed § 484.22(d)(2)(i) through (iii) would require HHAs to participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, we would require the HHA to conduct an individual, facility-based mock disaster drill at least annually and maintain documentation of all mock disaster drills. We would also require the HHA to maintain documentation of the exercises.

There are currently two programs at HHS addressing education and training in the area of public health emergency preparedness and response: the Centers for Public Health Preparedness (CPHP), and National Laboratory Training Network (NLTN).

As discussed earlier in this preamble, HHAs can use these and other resources, such as tools offered by the Department of Homeland Security, to assist them in complying with this requirement. Thus, we believe that the cost associated with this requirement would be limited to the staff time to participate in the community-wide and facility-wide trainings, and tabletop exercises. We believe that appreciable staff time would be required of the administrator and director of training. We believe that other staff members would be required to spend a minimal amount of time during these exercises and the training would be considered as part of regular on-going training for HHA staff. We estimate that the administrator would spend about 1 hour on the community-wide disaster drill and 1 hour on the tabletop drill (a total of 2 hours to participate in drills). We also estimate that the director of training would spend a total of 3 hours on an annual basis to participate in the disaster drills (2 hours to participate in a community or facility-wide drill and 1 hour to participate in a tabletop drill). All TJC accredited HHAs are required annually to test their emergency

management program by conducting drills and documenting their results. Thus, we anticipate that only non-TJC accredited HHAs would need to comply with this requirement. We anticipate that it would require 5 hours for each of the 10,615 non-JC-accredited HHAs, with an estimated cost of $2,897,895. Therefore, the total economic impact of this rule on HHAs would be $51,623,524 ($2,897,895 impact cost + $48,725,629 ICR burden).

N. Conditions of Participation: Comprehensive Outpatient Rehabilitation Facilities (CORFs)—Testing (§ 485.68(d)(2)(i) through (iii))

Proposed § 485.68(d)(2)(i) through (iii) would require CORFs to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually and document the drills and exercises. To comply with this requirement, a CORF would need to develop a specific scenario for each drill and exercise.

The current CoPs require CORFs to provide ongoing drills for all personnel associated with the facility in all aspects of disaster preparedness (42 CFR 485.64(b)(1)). Thus, for the purpose of this analysis, we believe that CORFs would incur minimal or no additional cost to comply with this requirement. Thus, we estimate the cost for all 272 CORFs to comply with this requirement would be limited to the ICR burden of $828,784 discussed in the COI section.

O. Condition of Participation: Emergency Preparedness for Critical Access Hospitals (CAHs)

1. Testing (§ 485.625(d)(2))

Proposed § 485.625(d)(2)(i) through (iii) would require CAHs to conduct annual community or facility-based drills and tabletop exercises. Accredited CAHs are currently required to conduct such drills and exercises. Although we believe that non-accredited CAHs are currently participating in such drills and exercises, we are not convinced that it is at the level that would be required under this proposed rule. Thus, we will analyze the economic impact for these requirements for the 920 non-accredited CAHs. As discussed earlier in this preamble, CAHs would have access to various training resources and emergency preparedness initiatives to use in complying with this requirement. Thus, we believe that the cost associated with this requirement would be limited to staff time to participate in the community-wide and facility-wide trainings, and tabletop exercises. We believe that appreciable staff time would be required of the administrator, facilities director, director of nursing and nursing education coordinator. We believe that other staff members would be required to spend a minimal amount of time during these exercises that would be considered as part of regular on-going training for hospital staff. We estimate that the administrator, facilities director, and the director of nursing would spend approximately a total of 20 hours on an annual basis to participate in the disaster drills. Thus, we anticipate that complying with this requirement would require 20 hours for an estimated cost of $1,132 for each of the 920 non-accredited CAHs. Therefore, for all non-accredited CAHs to comply with this requirement, it would require 18,400 total economic impact hours (20 economic impact hours per non-accredited CAH × 920 non-accredited CAH) at an estimated total cost of $1,041,440 ($1,132 × 920).

2. Generator Testing (§ 485.625(e))

Proposed § 485.625(e) would require CAHs to test each emergency generator for a minimum of 4 continuous hours at least once every 12 months. AO's, including TJC, DNV, and HFAP; currently require accredited CAHs to test their generators/emergency power supply system once for 4 continuous hours every 36 months. Therefore, the cost of the existing testing requirement was deducted from the cost calculation for accredited CAHs. However, under this proposed rule, non-accredited CAHs would be required to run their emergency generators an additional 4 hours, with an additional 1 hour for preparation, and an additional 1 hour for restoration.

For non-accredited CAHs, we estimate labor cost to be $139,721 (6 hours × $25.45/hr ($152.70) × 915 non-accredited CAHs). We estimate fuel cost to be $1,014,552 (72 gallon/hr × $3.85/gallon × 4 hours ($1,108.80) × 915 non-accredited CAHs) for non-accredited CAHs. Thus for non-accredited CAHs, we estimate the total cost to comply with this requirement to be $1,154,273.

For accredited CAHs, we estimate labor cost to be $41,433 (2 (6 hours × $25.45/hr)/3 ($101.80)) × 407 accredited CAHs). We estimate fuel cost to be $300,854 (2 (72 gallon/hr × $3.85/gallon × 4 hours)/3 ($739.2)) × 407 accredited CAHs) for accredited CAHs. Thus for accredited CAHs, we estimate the total cost to comply with this requirement to be $342,287.

Therefore, the total economic impact of this rule on CAHs would be $8,339,742 ($1,041,440 disaster drills impact cost + $1,496,560 generator impact cost + $5,801,742 ICR burden).

P. Condition of Participation: Emergency Preparedness for Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology ("Organizations")—Testing (§ 485.727(d)(2)(i) through (iii))

Current CoPs require these organizations to ensure that employees are trained in all aspects of preparedness for any disaster. They are also required to have ongoing drills and exercises to test their disaster plan. Rehabilitation Agencies would need to review their current activities and make minor adjustment to ensure that they comply with the new requirement. Therefore, we expect that the economic impact to comply with this requirement would be minimal, if any. Therefore, the total economic impact of this rule on these organizations would be limited to the estimated ICR burden of $6,939,456.

Q. Condition of Participation: Emergency Preparedness for Community Mental Health Centers (CMHCs)—Training and Testing (§ 485.920(d))

Proposed § 485.920(d)(2) would require CMHCs to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually. We estimate that to comply with the requirement to participate in a community mock disaster drill or to conduct an individual facility-based mock drill and a tabletop exercise annually would primarily require the involvement of the administrator and a registered nurse. We estimate that the administrator would spend approximately 4 hours to participate in a community or facility-wide drill and 1 hour to participate in a tabletop drill. We also estimate that a nurse would spend about 3 hours on an annual basis to participate in the disaster drills (2 hours to participate in a community or facility-wide drill and 1 hour to participate in a tabletop drill). Thus, we anticipate that complying with this requirement would require 8 hours for each CMHC at an estimated cost of $415 for each facility. The economic impact for all 207 CMHCs would be 1656 (8 impact hours × 207 CMHCs) total economic impact hours at a total estimated cost of $85,905 ($415 × 207 CMHCs). Therefore, the total economic impact of this rule on CMHCs would be $674,820 ($85,905 impact cost + $588,915 ICR burden).

R. Conditions of Participation: Emergency Preparedness for Organ Procurement Organizations (OPOs)—Training and Testing (§ 486.360(d)(2)(i) through (iii))

The OPO CfCs do not currently contain a requirement for OPOs to conduct mock disaster drills or paper-based, tabletop exercises. We estimate that these tasks would require the quality assessment and performance improvement (QAPI) director and the education coordinator to each spend 1 hour to participate in the tabletop exercise. Thus, the total annual economic impact hours for each OPO would be 2 hours. The total cost would be $107 for a (QAPI coordinator hourly salary and the Education Coordinator to participate in the tabletop exercise. The economic impact for all OPOs would be 116 (2 impact hours × 58 OPOs) total economic impact hours at an estimated cost of $6,206 ($107 × 58 OPOs). Therefore, the total economic impact of this rule on OPOs would be $613,176 ($6,206 impact cost + $606,970 ICR burden).

S. Emergency Preparedness: Conditions for Certification for Rural Health Clinics (RHCs) and Conditions for Coverage for Federally Qualified Health Clinics (FQHCs)

1. Training and Testing (§ 491.12(d))

We expect RHCs and FQHCs to participate in their local and state emergency plans and training drills to identify local and regional disaster centers that could provide shelter during an emergency.

We propose that an RHC/FQHC must review and update its emergency preparedness policies and procedures at least annually. For purposes of determining the economic impact for this requirement, we expect that RHCs/FQHCs would review their emergency preparedness policies and procedures annually. Based on our experience with Medicare providers and suppliers, health care facilities generally have a compliance officer or other staff member who reviews the facility's program periodically to ensure that it complies with all relevant federal, state, and local laws, regulations, and ordinances. We believe that complying with the requirement for an annual review of the emergency preparedness policies and procedures would constitute a minimal economic impact, if any.

2. Testing (§ 491.12(d)(2)(i) through (iii))

Proposed § 491.12(d)(2)(i) through (iii) would require RHCs/FQHCs to participate in a community or facility-wide mock disaster drill and a tabletop exercise at least annually. We have stated previously that FQHCs are currently required to conduct annual drills. We believe that for FQHCs to comply with these requirements would constitute a minimal economic impact, if any. Thus, we are estimating the economic impact for RHCs to comply with these requirements to conduct mock drills and tabletop exercises. We estimate that a RHCs administrator would spend 4 hours annually to participate in the disaster drills. Also, we estimate that a nurse coordinator (registered nurse) would each spend 4 hours on an annual basis to participate in the disaster drills (3 hours to participate in a community or facility-wide drill and 1 hour to participate in a table-top drill). Thus, we anticipate that complying with this requirement would require 8 hours for each RHC for an estimated cost of $452 per facility. The total annual cost for 4,013 RHCs would be $1,813,876. Therefore, the total economic impact of this rule on RHCs/FQHCs would be $33,762,675 ($1,813,876 impact cost + $31,948,799 ICR burden).

T. Condition of Participation: Emergency Preparedness for End-Stage Renal Disease Facilities (Dialysis Facilities)—Testing (§ 494.62(d)(2)(i) through (iv))

Proposed § 494.62(d)(2) would require dialysis facilities to participate in or conduct a mock disaster drill and a paper-based, tabletop exercise at least annually. The current CfCs already require dialysis facilities to evaluate their emergency preparedness plan at least annually (§ 494.60(d)(4)(ii)). Thus, we expect that all dialysis facilities are already conducting some type of tests to evaluate their emergency plans. Although the current CfCs do not specify the type of drill or test, we believe that dialysis facilities are currently participating in community or facility-wide drills. Therefore, for the purpose of this impact analysis, we estimate that dialysis facilities would need to add the tabletop exercise to their emergency preparedness activities. We estimate that it would require 1 hour each for the administrator (hourly wage of $74.00) and the nurse manager (hourly wage of $64.00) to conduct the annual tabletop exercise. Thus, for the 5,923 dialysis facilities to comply with the proposed requirements for conducting tabletop exercises, we estimate 11,846 economic impact hours. We estimate the total cost to be $138 for each facility, with a total economic impact of $817,374 ($138 × 5,923 facilities). Therefore, the total economic impact of this rule on ESRD facilities would be $20,398,812 ($817,374 impact cost + $19,581,438 ICR burden).

U. Summary of the Total Costs

The following is a summary of the total providers and the annual cost estimates for all providers to comply with the requirements in this rule.

TABLE 18—TOTAL ANNUAL COST TO PARTICIPATE IN DISASTER DRILLS AND TEST GENERATORS ACROSS THE PROVIDERS

Facility	Number of participants	Total cost (in $)
RNHCI	16	5,280
ASC	5,354	2,677,000
Hospices	3,773	1,463,924
PRTFs	387	139,320
PACE	91	8,190
Hospital	4,928	9,769,771
LTC	15,157	19,128,134
HHAs	12,349	2,897,895
CAHs	1,322	2,541,639
CMHCs	207	85,905
OPOs	58	6,206
RHCs & FQHCs	9,547	1,813,876
ESRD	5,923	817,374
Total	83,802	41,354,514

Based upon the ICR and RIA analyses, it would require all 83,802 providers and suppliers covered by this emergency preparedness proposed rule to comply with all of its requirements an estimated total first-year cost of $225,268,957.

TABLE 19—TOTAL ESTIMATED COST FROM ICR AND RIA TO COMPLY WITH THE REQUIREMENTS CONTAINED IN THIS PROPOSED RULE

Facility	Number of participants	Total cost in year 1 (in $)	Total cost in year 2 and thereafter (in $)
RNHCI	16	24,208	5,280
ASC	5,354	15,241,036	2,677,000
Hospices	3,773	10,076,910	1,463,924
PRTFs	387	1,071,990	139,320
PACE	91	342,888	8,190
Hospital	4,928	39,265,594	9,769,771
Transplant Center	770	1,399,104	0
LTC	15,157	19,128,134	19,128,134
ICF/IID	6,442	15,538,104	0
HHAs	12,349	51,623,524	2,897,895
CORFs	272	828,784	0
CAHs	1,322	8,339,742	2,541,639
Organizations	2,256	6,939,456	0
CMHCs	207	674,820	85,905
OPOs	58	613,176	6,206
RHCs & FQHCs	9,547	33,762,675	1,813,876
ESRD Facilities	5,923	20,398,812	817,374
Total	68,852	225,268,957	$41,354,514

The previous summaries include only the upfront and routine costs associated with emergency risk assessment, development and updating of policies and procedures, development and maintenance of communication plans, disaster training and testing, and generator testing (as specified). If these preparations are effective, they will lead to increased amounts of life-saving and morbidity-reducing activities during emergency events. These activities impose cost on society; for example, if complying with this proposed rule's requirements allows an ESRD facility to remain open during and immediately after a natural disaster, there would be associated increases in provision of dialysis services, thus entailing labor, material and other costs. As discussed in the next section ("Benefits of the Proposed Rule"), it is difficult to predict how disaster responses would be different in the presence of this proposed rule than in its absence, so we have been unable to quantify the portion of costs that will be incurred during emergencies. We request comments and data regarding this issue.

Moreover, we have not estimated any costs for generator backup, on the assumption that such backup is already required for virtually all inpatient and many outpatient facilities, either for TJC or other accreditation, or under state or local codes. We request information on this assumption and in particular on any situations or provider types for which this could turn out to be unnecessarily costly.

V. Benefits of the Proposed Rule

The U.S. Department of Health and Human Services, in its Program Guidance for emergency preparedness grants, stated, "as frontline entities in response to mass casualty incidents, hospitals and other healthcare providers such as health centers, rural hospitals and private physicians will be looked to for minimizing the loss of life and permanent disabilities. Hospitals and other healthcare provider organizations must be able to work not only inside their own walls, but also as a team during an emergency to respond efficiently. Hospitals currently, either through experience or empirical evidence, gain knowledge that causes them to become very adept at flexing their systems to respond in an emergency. Because we live under the threat of mass casualties occurring at anytime and anywhere with consequences that may be different than the day-to-day occurrences, the healthcare system must be prepared to respond to these events by working as a team or community system."

This proposed rule is intended to help ensure the safety of individuals by requiring providers and suppliers to adequately plan for and respond to both natural and man-made disasters. The devastation of the Gulf Coast by Hurricane Katrina is one of the most horrific disasters in our nation's history. In those chaotic early days following the disaster in the greater New Orleans area, hundreds of thousands of people were adversely impacted, and health care services were not available for many who needed them. The recent disaster caused by hurricane Sandy has shown that additional safeguards should be in place to secure lifesaving equipment, such as generators. There is no reason to think that future disasters might not be as large or larger, as illustrated by the tsunami that hit Japan in 2011.

In the event of such disasters, vulnerable populations are at greatest risk for negative consequences from healthcare disruptions. According to one study, children and adolescents with chronic conditions are at increased risk of adverse outcomes following a natural disaster (Rath, Barbara, et. al. "Adverse Health Outcomes after Hurricane Katrina among Children and Adolescents with Chronic Conditions" Journal of Health Care for the Poor and Underserved 18:2, May 2007 pp. 405–417). Another study reports that more than 200,000 people with chronic medical conditions were displaced by Hurricane Katrina (Kopp, Jeffrey, et.al. "Kidney Patient Care in Disasters: Lessons from the Hurricanes and Earthquake of 2005" Clin J Am Soc Nephrol 2:814–824, 2007.) Individuals requiring mental health treatments are another at-risk population that can be adversely impacted by health care

disruptions following an emergency or disaster. A 2008 study concluded that many Hurricane Katrina survivors with mental disorders experienced unmet treatment needs, including frequent disruptions of existing care and widespread failure to initiate treatment for new-onset disorders (Wang, P.S., et.al. "Disruption of Existing Mental Health Treatments and Failure to Initiate New Treatment After Hurricane Katrina. American Journal of Psychiatry, 165(1), 34–41)" (2006).

Hospital closures during Sandy resulted in up to a 25 percent increase in emergency department visits at numerous centers in New York and a 70-percent increase in ambulance traffic. A proportion of this increase was due to populations being unable to receive routine care. Not only do vulnerable populations experience disruptions in care, they may also incur increased costs for care, especially when those who require ongoing medical treatment during disasters are required to visit emergency departments for treatment and/or hospitalization. Emergency department visits incur a copay for most beneficiaries. Similar costs are also incurred by patients for hospitalizations. The literature shows that natural catastrophes disproportionately affect ill and socioeconomically disadvantaged populations that are most at risk (Abdel-Kader K, Unrah ML. Disaster and end-stage renal disease: targeting vulnerable patients for improved outcomes. Kidney Int. 2009;75:1131–1133; Zoraster R, Vanholder R, Sever MS. Disaster management of chronic dialysis patients. Am J Disaster Med. 2007;2(2):96–106; and Redlener I, Reilly M. Lessons from Sandy—Preparing Health Systems for Future Disasters. N ENGL J MED. 367;24:2269–2271).

We know that advance planning improves disaster response. In 2007, *Modern Healthcare* reported on a healthcare system's response to encroaching wildfires in California. Staff from a San Diego hospital and adjacent nursing facility transported 202 patients and ensured all patients were out of harm's way. The facilities were ready because of protocols and evacuation drills instituted after a prior event that allowed them to be prepared (Vesely, R. (2007). Wildfires worry hospitals. Modern Healthcare, 37(43), 16).

Therefore, we believe that it is essential to require providers and suppliers to conduct a risk assessment, to develop an emergency preparedness plan based on the assessment, and to comply with the other requirements we propose to minimize the disruption of services for the community and ensure continuity of care in the event of a disaster. As noted previously, we have varied our requirements by provider type and understand that the degree of vulnerability of patients in a disaster will vary according to provider type. For example, patients with scheduled outpatient appointments such as someone coming in for speech therapy or routine clinic services is likely more self-reliant in a disaster than someone in a hospital ICU or someone who is homebound and receiving services from an HHA.

Overall, we believe that rule would reduce the risk of mortality and morbidity associated with disasters. We believe it very likely that some kind of disaster will occur in coming decades in which substantial numbers of lives will be saved by current emergency preparedness as supplemented by the additional measures we propose here. In New Orleans it seems very likely that dozens of lives could have been saved by competent emergency planning and execution. While New Orleans has a unique location below sea level, everywhere in the United States is vulnerable to weather emergencies and other potential natural or manmade disasters. We have not prepared an estimate in either quantitative or dollar terms of the potential life-saving benefits of this proposed rule. There are several reasons for this, most notably the difficulty of estimating how many additional lives would be saved from emergency preparedness contingency planning and training. While we are unable to estimate the number of lives that could be saved by emergency planning and execution, Table 20 provides the number of Medicare FFS beneficiaries receiving services from some of the provider types affected by this proposed rule during the month of July 2013. We are unable to provide volume data for those patients in Medicare Advantage plans or the Medicaid population. However, one could assume the July 2013 summary is representative of an average month during the year. In the event of a disaster, the fee-for-service patients represented in Table 20 could be at risk and therefore, we could assume that they could benefit from the additional emergency preparedness measures proposed in this rule.

TABLE 20—NUMBER OF MEDICARE FFS PATIENTS WHO RECEIVED SERVICES IN JULY 2013

Provider type	Number of FFS patients
Hospitals	6,910,496
Community Mental Health Center	84,959
Comprehensive Outpatient Rehabilitation Facility	4,045
Critical Access Hospital	655,757
HHA	1,033,909
Hospice	312,799
Hospital based chronic renal disease facility	10,239
Non hospital renal disease treatment center	274,638
Religious Nonmedical Health Care Institution	44
Renal disease treatment center	8,261
Rural health clinic (free standing)	261,067
Rural health clinic (provider based)	291,180
Skilled Nursing Facility	538,189

NOTE: In July 2013 there were 8,949,161 distinct patients.

Benefits from effective disaster planning would not only accrue to individuals requiring health care services. Health care facilities themselves may benefit from improved ability to maintain or resume delivering services. After Hurricane Katrina, 94 dialysis facilities closed for at least one week. Almost 2 years later, in June, 2007, 17 dialysis facilities remained closed (Kopp et al, 2007). Following hurricane Sandy, $180 million of the $810 million damages reported by the New York City Health and Hospitals Corporation was due to lost revenue. Lost revenue from Long Beach Medical Center hospital and nursing home was estimated at $1.85 million a week after closing due to damage from hurricane Sandy (*http://www.modernhealthcare.com/article/20121208/MAGAZINE/312089991#ixzz2adUDjFIE?trk=tynt*).

Finally, taxpayers and insurance companies may benefit from effective emergency preparedness. After Hurricane Ike, it was estimated that the cost to Medicare for ESRD patients presenting to the ED for dialysis instead of their usual facility was, on average, $6,997 per visit. Those ESRD patients who did not require dialysis were billed $482 on average (McGinley et al, 2012). The usual cost for these patients as reimbursed through Medicare is in the order of $250 to 300 per visit. Many of these costs or lost revenues may be mitigated by effective emergency preparedness planning. For a non-ESRD individual who cannot receive care from

his or her office-based physician but must instead go to an emergency room, not only are the individual's costs increased, but reimbursement through Medicare, Medicaid or private insurance is also increased. AHRQ's Medical Expenditure Panel Survey from 2008 notes that the average expense for an office based visit was $199 versus $922 for an emergency room visit (Machlin, S., and Chowdhury, S. "Expenses and Characteristics of Physician Visits in Different Ambulatory Care Settings, 2008." Statistical Brief #318. March 2011. Agency for Healthcare Research and Quality, Rockville, MD. *http://www.meps.ahrq.gov/mepsweb/data_files/publications/st318/stat318.pdf*).

With the annualized costs of the rule's emergency preparedness requirements estimated to be approximately $80 million depending on the discount rate used (see the accounting statement table that follows) and the rule generating additional, unquantified costs associated with the life-saving activities that become implementable as a result of the preparedness requirements, this proposed rule would have to result in at least $80 million in average yearly benefits, principally derived from reductions in morbidity and mortality, for the benefits to equal or exceed costs. ASPR and CMS conducted an analysis of the impact of Superstorm Sandy on ESRD patients using Medicare claims. Preliminary results have identified increases in ESRD treatment disruptions, emergency department visits, hospitalizations, and 30-day mortality for ESRD patients living in the areas affected by the storm. This analysis supports other research and experience that clearly demonstrates a relationship between dialysis disruptions and higher rates of adverse events. Adoption of the requirements in this proposed rule would better enable individual facilities to: Anticipate threats; rapidly activate plans, processes and protocols; quickly communicate with their patients, other facilities and state or local officials to ensure continuity of care for these life maintaining services; and reduce healthcare system stress by remaining open or re-opening quickly following closure. This would decrease the rate of interrupted dialysis, thereby reducing preventable ED visits, hospitalizations, and mortality during and following disasters. We welcome comments that may help us quantify potential morbidity reductions, lives saved, and other benefits of the proposed rule.

W. Alternatives Considered

1. No Regulatory Action

As previously discussed, the status quo is not a desirable alternative because the current regulatory requirements for Medicare and Medicaid providers and suppliers addressing emergency and disaster preparedness are insufficient to protect beneficiaries and other patients during a disaster.

2. Defer to Federal, State, and Local Laws

Another alternative we considered would be to propose a regulation that would require Medicare providers and suppliers to comply with local, state and federal laws regarding emergency/disaster planning. Various federal, state and local entities (FEMA, the National Response Plan (NRP), CDC, the Assistant Secretary for Preparedness and Response (ASPR), et al) have disaster management plans that provide an integrated process that involves all local and regional emergency responders. We also considered allowing health care providers to voluntarily implement a comprehensive emergency preparedness program utilizing grant funding from the Office of the Assistant Secretary for Preparedness and Response, (ASPR). Based on a 2010 survey of the American College of Healthcare Executives (ACHE), less than 1 percent of hospital CEOs identified "disaster preparedness" as a top priority. Also, a 2012 survey of 1,202 community hospital CEOs (found at: *http://www.ache.org/Pubs/Releases/2013/Top-Issues-Confronting-Hospitals-2012.cfm*) of ASPR's Hospital Preparedness Program (HPP) showed that disaster preparedness was not identified as a top issue. We believe that absent conditions of participation/certification/coverage, providers and suppliers would not consistently adhere to the various local, state and federal emergency preparedness requirements. Moreover, many such instructions are unclear as to what is mandatory or only strongly recommended, and written in ways that leave compliance difficult or impossible to determine consistently across providers. Such inconsistent application of local, state, and federal requirements could compound the problems faced by governments, health care organizations, and citizens during a disaster. In addition, CMS regulations would enable CMS to survey and enforce the emergency preparedness requirements using standard processes and criteria.

3. Back-Up Power for Outpatient Facilities

A potential regulatory alternative would involve requiring a power backup of some kind for outpatient facilities such as FQHCs and ESRD clinics. Some state codes, for example, require power backup, not generator backup, in such facilities. There are a number of ramifications of such options including, for example, preservation of refrigerated drugs and biologics, and the potential costs of replacing such items if power is not maintained for the duration of the emergency. For example, the current backup power would normally be expected to last for hours, not days.

4. Outpatient Tracking Systems

Under another regulatory alternative, we would require facilities to have systems in place to keep track of outpatients; the benefits of this alternative would depend on whether such systems would have any chance of success in any emergency that led to substantial numbers of refugees before, during, or after the event. As an illustrative example, most southern states have hurricane evacuation systems in place. It is not uncommon for a million people or more to evacuate before a major hurricane arrives. In this or other situations, would it even be possible, and if so using what methods, for a hospital outpatient facility, an ESRD clinic, a Community Mental Health Center, or an FQHC to attempt to track patients? We would appreciate comments that focus on both costs and benefits of such efforts.

5. Request for Comments on Alternative Approaches to Implementation

We request information and comments on the following issues:

- Targeted approaches to emergency preparedness—covering one or a subset of provider classes to learn from implementation prior to extending the rule to all groups.
- A phase in approach—implementing the requirements over a longer time horizon, or differential time horizons for the respective provider classes. We are proposing to implement all of the requirements 1 year after the final rule is published.
- Variations of the primary requirements—for example, we have proposed requiring two annual training exercises—it would be instructive to receive public feedback on whether both should be required annually, semiannually, or if training should be an annual or semiannual requirement.
- Integration with current requirements—we are soliciting

comment on how the proposed requirements will be integrated with/ satisfied by existing policies and procedures which regulated entities may have already adopted.

6. Conclusion

We currently have regulations for Medicare and Medicaid providers and suppliers to protect the health and safety of Medicare beneficiaries and others. We revise these regulations on an as-needed basis to address changes in clinical practice, patient needs, and public health issues. The responses to the various past disasters demonstrated that our current regulations are in need of improvement in order to protect patients, residents, and clients during an emergency and that emergency preparedness for health care providers and suppliers is an urgent public health issue.

Therefore, we are promulgating emergency preparedness requirements that will be consistent and enforceable for all Medicare and Medicaid providers and suppliers. This proposed rule addresses the three key elements needed to ensure that health care is available during emergencies: safeguarding human resources, ensuring business continuity, and protecting physical resources. Current regulations for Medicare and Medicaid providers and suppliers do not adequately address these key elements.

X. Accounting Statement

As required by OMB Circular A–4 (available at *http://www.whitehouse.gov/omb/circular/a004/a-4.pdf*), we have prepared an accounting statement. As previously explained, achieving the full scope of potential savings will depend on the number of lives affected or saved as a result of this regulation.

TABLE 21—ACCOUNTING STATEMENT

Category	Estimates	Units		
		Year dollar	Discount rate	Period covered
Benefits				
Qualitative	Help ensure the safety of individuals by requiring providers and suppliers to adequately plan for and respond to both natural and man-made disasters.			
Costs *				
Annualized Monetized ($million/year)	86 83	2013 2013	7% 3%	2014–2018 2014–2018
Qualitative	Costs of performing life-saving and morbidity-reducing activities during emergency events.			

* The cost estimation is adjusted from 2011 to 2013 year dollars using the CPI–W published by Bureau of Labor Statistics in June 2013.

In accordance with the provisions of Executive Order 12866, this proposed rule was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 441

Aged, Family planning, Grant programs—health, Infants and children, Medicaid, Penalties, Reporting and recordkeeping requirements.

42 CFR Part 460

Aged, Health care, Health records, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 482

Grant programs—health, Hospitals, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 483

Grant programs—health, Health facilities, Health professions, Health records, Medicaid, Medicare, Nursing homes, Nutrition, Reporting and recordkeeping requirements, Safety.

42 CFR Part 484

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 486

Grant programs—health, Health facilities, Medicare, Reporting and recordkeeping requirements, X-rays.

42 CFR Part 491

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements, Rural areas.

42 CFR Part 494

Health facilities, Incorporation by reference, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services proposes to amend 42 CFR Chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1395b–3 and Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 403.742 [Amended]

■ 2. Amend § 403.742 by:
■ A. Removing paragraphs (a)(1), (4), and (5).
■ B. Redesignating paragraphs (a)(2) and (3) as paragraphs (a)(1) and (2), respectively.
■ C. Redesignating paragraphs (a)(6) through (8) as paragraphs (a)(3) through (5), respectively.
■ 3. Add § 403.748 to subpart G to read as follows:

§ 403.748 Condition of participation: Emergency preparedness.

The Religious Nonmedical Health Care Institution (RNHCI) must comply with all applicable Federal and State emergency preparedness requirements. The RNHCI must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The RNHCI must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, persons at-risk; the type of services the RNHCI has the ability to provide in an emergency; and, continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the RNHCI's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The RNHCI must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and patients, whether they evacuate or shelter in place, include, but are not limited to the following:

(i) Food, water, and supplies.

(ii) Alternate sources of energy to maintain the following:

(A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions.

(B) Emergency lighting.

(C) Fire detection, extinguishing, and alarm systems.

(D) Sewage and waste disposal.

(2) A system to track the location of staff and patients in the RNHCI's care both during and after the emergency.

(3) Safe evacuation from the RNHCI, which includes the following:

(i) Consideration of care needs of evacuees.

(ii) Staff responsibilities.

(iii) Transportation.

(iv) Identification of evacuation location(s).

(v) Primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(5) A system of care documentation that does the following:

(i) Preserves patient information.

(ii) Protects confidentiality of patient information.

(iii) Ensures records are secure and readily available.

(6) The use of volunteers in an emergency and other emergency staffing strategies to address surge needs during an emergency.

(7) The development of arrangements with other RNHCIs and other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of nonmedical services to RNHCI patients.

(8) The role of the RNHCI under a waiver declared by the Secretary, in accordance with section 1135 of Act, in the provision of care at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The RNHCI must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under agreement.

(iii) Next of kin, guardian or custodian.

(iv) Other RNHCIs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) RNHCI's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and care documentation for patients under the RNHCI's care, as necessary, with care providers to ensure continuity of care, based on the written election statement made by the patient or his or her legal representative.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the RNHCI's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The RNHCI must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The RNHCI must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of all emergency preparedness training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The RNHCI must conduct exercises to test the emergency plan. The RNHCI must do the following:

(i) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(ii) Analyze the RNHCI's response to and maintain documentation of all tabletop exercises, and emergency events, and revise the RNHCI's emergency plan, as needed.

PART 416—AMBULATORY SURGICAL SERVICES

■ 4. The authority citation for part 416 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 416.41 [Amended]

■ 5. Amend § 416.41 by removing paragraph (c).

■ 6. Add § 416.54 to subpart C to read as follows:

§ 416.54 Condition for coverage: Emergency preparedness.

The Ambulatory Surgical Center (ASC) must comply with all applicable Federal and State emergency preparedness requirements. The ASC must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The ASC must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, the type of services the ASC has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the ASC's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The ASC must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of staff and patients in the ASC's care both during and after the emergency.

(2) Safe evacuation from the ASC, which includes the following:

(i) Consideration of care and treatment needs of evacuees.

(ii) Staff responsibilities.

(iii) Transportation.

(iv) Identification of evacuation location(s).

(v) Primary and alternate means of communication with external sources of assistance.

(3) A means to shelter in place for patients, staff, and volunteers who remain in the ASC.

(4) A system of medical documentation that does the following:

(i) Preserves patient information.

(ii) Protects confidentiality of patient information.

(iii) Ensures records are secure and readily available.

(5) The use of volunteers in an emergency and other staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(6) The development of arrangements with other ASCs and other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to ASC patients.

(7) The role of the ASC under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The ASC must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other ASCs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) ASC's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the ASC's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the ASC's needs, and its ability to provide assistance, to the authority having jurisdiction the Incident Command Center, or designee.

(d) *Training and testing.* The ASC must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The ASC must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of all emergency preparedness training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The ASC must conduct exercises to test the emergency plan. The ASC must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the ASC experiences an actual natural or man-made emergency that requires activation of the emergency plan, the ASC is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the ASC's response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the ASC's emergency plan, as needed.

PART 418—HOSPICE CARE

■ 7. The authority citation for part 418 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), unless otherwise noted.

§ 418.110 [Amended]

■ 8. Amend § 418.110 by removing paragraph (c)(1)(ii) and by removing the paragraph designation (i) from paragraph (c)(1)(i).

■ 9. Add § 418.113 to subpart D to read as follows:

§ 418.113 Condition of participation: Emergency preparedness.

The hospice must comply with all applicable Federal and State emergency preparedness requirements. The hospice must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The hospice must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment, including the management of the consequences of power failures, natural disasters, and other emergencies that would affect the hospice's ability to provide care.

(3) Address patient population, including, but not limited to, the type of services the hospice has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, or Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the hospice's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The hospice must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of hospice employees and patients in the hospice's care both during and after the emergency.

(2) Procedures to inform State and local officials about hospice patients in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric condition and home environment.

(3) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(4) The use of hospice employees in an emergency and other emergency staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(5) The development of arrangements with other hospices and other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to hospice patients.

(6) The following are additional requirements for hospice-operated inpatient care facilities only. The policies and procedures must address the following:

(i) A means to shelter in place for patients, hospice employees who remain in the hospice.

(ii) Safe evacuation from the hospice, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s). and primary and alternate means of communication with external sources of assistance.

(iii) The provision of subsistence needs for hospice employees and patients, whether they evacuate or shelter in place, include, but are not limited to the following:

(A) Food, water, and medical supplies.

(B) Alternate sources of energy to maintain the following:

(*1*) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions.

(*2*) Emergency lighting.

(*3*) Fire detection, extinguishing, and alarm systems.

(C) Sewage and waste disposal.

(iv) The role of the hospice under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The hospice must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Hospice employees.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians,

(iv) Other hospices.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) Hospice's employees.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the hospice's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the hospice's inpatient occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The hospice must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The hospice must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing hospice employees, and individuals providing services under arrangement, consistent with their expected roles.

(ii) Ensure that hospice employees can demonstrate knowledge of emergency procedures.

(iii) Provide emergency preparedness training at least annually.

(iv) Periodically review and rehearse its emergency preparedness plan with hospice employees (including nonemployee staff), with special

emphasis placed on carrying out the procedures necessary to protect patients and others.

(v) Maintain documentation of all emergency preparedness training.

(2) *Testing.* The hospice must conduct exercises to test the emergency plan. The hospice must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the hospice experiences an actual natural or man-made emergency that requires activation of the emergency plan, the hospice is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the hospice's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the hospice's emergency plan, as needed.

PART 441—SERVICES: REQUIREMENTS AND LIMITS APPLICABLE TO SPECIFIC SERVICES

■ 10. The authority citation for Part 441 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

■ 11. Add § 441.184 to subpart D to read as follows:

§ 441.184 Emergency preparedness.

The Psychiatric Residential Treatment Facility (PRTF) must comply with all applicable Federal and State emergency preparedness requirements. The PRTF must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The PRTF must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address resident population, including, but not limited to, persons at-risk; the type of services the PRTF has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the PRTF's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The PRTF must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and residents, whether they evacuate or shelter in place, include, but are not limited to the following:

(i) Food, water, and medical supplies.

(ii) Alternate sources of energy to maintain the following:

(A) Temperatures to protect resident health and safety and for the safe and sanitary storage of provisions.

(B) Emergency lighting.

(C) Fire detection, extinguishing, and alarm systems.

(D) Sewage and waste disposal.

(2) A system to track the location of staff and residents in the PRTF's care both during and after the emergency.

(3) Safe evacuation from the PRTF, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for residents, staff, and volunteers who remain in the facility.

(5) A system of medical documentation that preserves resident information, protects confidentiality of resident information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other PRTFs and other providers to receive residents in the event of limitations or cessation of operations to ensure the continuity of services to PRTF residents.

(8) The role of the PRTF under a waiver declared by the Secretary, in accordance with section 1135 of Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The PRTF must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Residents' physicians.

(iv) Other PRTFs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the PRTF's staff, Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for residents under the PRTF's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release resident information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of residents under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the PRTF's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The PRTF must develop and maintain an emergency preparedness training program that must be reviewed and updated at least annually.

(1) *Training program.* The PRTF must do all of the following:

(i) Provide initial training in emergency preparedness policies and

procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) After initial training, provide emergency preparedness training at least annually.

(iii) Ensure that staff can demonstrate knowledge of emergency procedures.

(iv) Maintain documentation of all emergency preparedness training.

(2) *Testing.* The PRTF must conduct exercises to test the emergency plan. The PRTF must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the PRTF experiences an actual natural or man-made emergency that requires activation of the emergency plan, the PRTF is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv)(A) Analyze the PRTF's response to and maintain documentation of all drills, tabletop exercises, and emergency events.

(B) Revise the PRTF's emergency plan, as needed.

PART 460—PROGRAMS OF ALL-INCLUSIVE CARE FOR THE ELDERLY (PACE)

■ 12. The authority citation for part 460 continues to read as follows:

Authority: Secs: 1102, 1871, 1894(f), and 1934(f) of the Social Security Act (42 U.S.C. 1302, 1395, 1395eee(f), and 1396u–4(f)).

§ 460.72 [Amended]

■ 13. Amend § 460.72 by removing paragraph (c).

■ 14. Add § 460.84 to subpart E to read as follows:

§ 460.84 Emergency preparedness.

The Program for the All-Inclusive Care for the Elderly (PACE) organization must comply with all applicable Federal and State emergency preparedness requirements. The PACE organization must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The PACE organization must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address participant population, including, but not limited to, the type of services the PACE organization has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the PACE's efforts to contact such officials and, when applicable, of its participation in organization's collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The PACE organization must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must address management of medical and nonmedical emergencies, including, but not limited to: Fire; equipment, power, or water failure; care-related emergencies; and natural disasters likely to threaten the health or safety of the participants, staff, or the public. Policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of staff and participants under the PACE center(s) care both during and after the emergency.

(2) Safe evacuation from the PACE center, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(3) The procedures to inform State and local emergency preparedness officials about PACE participants in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric conditions and home environment.

(4) A means to shelter in place for participants, staff, and volunteers who remain in the facility.

(5) A system of medical documentation that preserves participant information, protects confidentiality of patient information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other PACE organizations, PACE centers, or other providers to receive participants in the event of limitations or cessation of operations to ensure the continuity of services to PACE participants.

(8) The role of the PACE organization under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(9)(i) Emergency equipment, including easily portable oxygen, airways, suction, and emergency drugs.

(ii) Staff who know how to use the equipment must be on the premises of every center at all times and be immediately available.

(iii) A documented plan to obtain emergency medical assistance from outside sources when needed.

(c) *Communication plan.* The PACE organization must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for staff; entities providing services under arrangement; participants' physicians; other PACE organizations; and volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) PACE organization's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for participants under the organization's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release participant information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of participants under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the PACE organization's needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The PACE organization must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The PACE organization must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, contractors, participants, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Ensure that staff demonstrate a knowledge of emergency procedures, including informing participants of what to do, where to go, and whom to contact in case of an emergency.

(iv) Maintain documentation of all training.

(2) *Testing.* The PACE organization must conduct exercises to test the emergency plan. The PACE organization must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the PACE organization experiences an actual natural or man-made emergency that requires activation of the emergency plan, the PACE organization is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the PACE's response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the PACE's emergency plan, as needed.

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS

■ 15. The authority citation for part 482 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881 of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr), unless otherwise noted.

■ 16. Add § 482.15 to subpart B to read as follows:

§ 482.15 Condition of participation: Emergency preparedness.

The hospital must comply with all applicable Federal and State emergency preparedness requirements. The hospital must develop and maintain a comprehensive emergency preparedness program that meets the requirements of this section, utilizing an all-hazards approach. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The hospital must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, persons at-risk; the type of services the hospital has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the hospital's efforts to contact such officials and, when applicable, its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The hospital must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and patients, whether they evacuate or shelter in place, include, but are not limited to the following:

(i) Food, water, and medical supplies.

(ii) Alternate sources of energy to maintain the following:

(A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions.

(B) Emergency lighting.

(C) Fire detection, extinguishing, and alarm systems.

(D) Sewage and waste disposal.

(2) A system to track the location of staff and patients in the hospital's care both during and after the emergency.

(3) Safe evacuation from the hospital, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(5) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency and other emergency staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other hospitals and other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to hospital patients.

(8) The role of the hospital under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The hospital must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.
(iii) Patients' physicians.
(iv) Other hospitals
(v) Volunteers.
(2) Contact information for the following:
(i) Federal, State, tribal, regional, and local emergency preparedness staff.
(ii) Other sources of assistance.
(3) Primary and alternate means for communicating with the following:
(i) Hospital's staff.
(ii) Federal, State, tribal, regional, and local emergency management agencies.
(4) A method for sharing information and medical documentation for patients under the hospital's care, as necessary, with other health care providers to ensure continuity of care.
(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.
(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).
(7) A means of providing information about the hospital's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.
(d) *Training and testing.* The hospital must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.
(1) *Training program.* The hospital must do all of the following:
(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected role.
(ii) Provide emergency preparedness training at least annually.
(iii) Maintain documentation of the training.
(iv) Ensure that staff can demonstrate knowledge of emergency procedures.
(2) *Testing.* The hospital must conduct drills and exercises to test the emergency plan. The hospital must do all of the following:
(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.
(ii) If the hospital experiences an actual natural or man-made emergency that requires activation of the emergency plan, the hospital is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.
(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.
(iv) Analyze the hospital's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the hospital's emergency plan, as needed.
(e) *Emergency and standby power systems.* The hospital must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section and in the policies and procedures plan set forth in paragraphs (b)(2)(i) and (ii) of this section.
(1) *Emergency generator location.* (i) The generator must be located in accordance with the location requirements found in NFPA 99, NFPA 101, and NFPA 110.
(2) *Emergency generator inspection and testing.* In addition to the emergency power system inspection and testing requirements found in NFPA 99—Health Care Facilities and NFPA 110—Standard for Emergency and Standby Power systems, as referenced by NFPA 101—Life Safety Code (as required by 42 CFR 482.41(b)), the hospital must:
(i) At least once every 12 months, test each emergency generator for a minimum of 4 continuous hours. The emergency generator test load must be 100 percent of the load the hospital anticipates it will require during an emergency.
(ii) Maintain a written record, which is available upon request, of generator inspections, tests, exercising, operation and repairs.
(3) *Emergency generator fuel.* Hospitals that maintain an onsite fuel source to power emergency generators must maintain a quantity of fuel capable of sustaining emergency power for the duration of the emergency or until likely resupply.

■ 17. Add § 482.78 to subpart E to read as follows:

§ 482.78 Condition of participation: Emergency preparedness for transplant centers.

A transplant center must have policies and procedures that address emergency preparedness.
(a) *Standard:* Agreement with at least one Medicare approved transplant center. A transplant center or the hospital in which it operates must have an agreement with at least one other Medicare-approved transplant center to provide transplantation services and related care for its patients during an emergency. The agreement must address the following, at a minimum:
(1) Circumstances under which the agreement will be activated.
(2) Types of services that will be provided during an emergency.
(b) *Standard:* Agreement with the Organ Procurement Organization (OPO) designated by the Secretary. The transplant center must ensure that the written agreement required under § 482.100 addresses the duties and responsibilities of the hospital and the OPO during an emergency.

PART 483—REQUIREMENTS FOR STATES AND LONG TERM CARE FACILITIES

■ 18. The authority citation for part 483 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 19. Add § 483.73 to subpart B to read as follows:

§ 483.73 Emergency preparedness.

The LTC facility must comply with all applicable Federal and State emergency preparedness requirements. The LTC facility must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:
(a) *Emergency plan.* The LTC facility must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must:
(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach, including missing residents;
(2) Include strategies for addressing emergency events identified by the risk assessment;
(3) Address resident population, including, but not limited to, persons at-risk; the type of services the LTC facility has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.
(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, or Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the LTC facility's efforts to contact such officials and, when applicable, of its

participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The LTC facility must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and residents, whether they evacuate or shelter in place, include, but are not limited to:

(i) Food, water, and medical supplies;

(ii) Alternate sources of energy to maintain:

(A) Temperatures to protect resident health and safety and for the safe and sanitary storage of provisions;

(B) Emergency lighting;

(C) Fire detection, extinguishing, and alarm systems, and;

(D) Sewage and waste disposal.

(2) A system to track the location of staff and residents in the LTC facility's care both during and after the emergency.

(3) Safe evacuation from the LTC facility, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for residents, staff, and volunteers who remain in the LTC facility.

(5) A system of medical documentation that preserves resident information, protects confidentiality of resident information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other LTC facilities and other providers to receive residents in the event of limitations or cessation of operations to ensure the continuity of services to LTC residents.

(8) The role of the LTC facility under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The LTC facility must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Residents' physicians.

(iv) Other LTC facilities.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, or local emergency preparedness staff.

(ii) The State Licensing and Certification Agency.

(iii) The Office of the State Long-Term Care Ombudsman.

(iv) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) LTC facility's staff.

(ii) Federal, State, tribal, regional, or local emergency management agencies.

(4) A method for sharing information and medical documentation for residents under the LTC facility's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release resident information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of residents under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the LTC facility's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(8) A method for sharing information from the emergency plan that the facility has determined is appropriate with residents and their families or representatives.

(d) *Training and testing.* The LTC facility must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The LTC facility must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The LTC facility must conduct drills and exercises to test the emergency plan, including unannounced staff drills using the emergency procedures. The LTC facility must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the LTC facility experiences an actual natural or man-made emergency that requires activation of the emergency plan, the LTC facility is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the LTC facility's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the LTC facility's emergency plan, as needed.

(e) *Emergency and standby power systems.* The LTC facility must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section.

(1) *Emergency generator location.* (i) The generator must be located in accordance with the location requirements found in NFPA 99 and NFPA 100.

(2) *Emergency generator inspection and testing.* In addition to the emergency power system inspection and testing requirements found in NFPA 99—Health Care Facilities and NFPA 110—Standard for Emergency and Standby Power Systems, as referenced by NFPA 101—Life Safety Code as required under paragraph (a) of this section, the LTC facility must do the following:

(i) At least once every 12 months test each emergency generator for a minimum of 4 continuous hours. The emergency generator test load must be 100 percent of the load the LTC facility anticipates it will require during an emergency.

(ii) Maintain a written record, which is available upon request, of generator

inspections, tests, exercising, operation and repairs.

(3) *Emergency generator fuel.* LTC facilities that maintain an onsite fuel source to power emergency generators must maintain a quantity of fuel capable of sustaining emergency power for the duration of the emergency or until likely resupply.

§ 483.75 [Amended]

■ 20. Amend § 483.75 by removing and reserving paragraph (m).

§ 483.470 [Amended]

■ 21. Amend § 483.470 by—

■ A. Removing paragraph (h).

■ B. Redesignating paragraphs (i) through (l) as paragraphs (h) through (k), respectively.

■ C. Newly redesginated paragraph (h)(3) is amended by removing the reference "paragraphs (i)(1) and (2)" and adding in its place the reference "paragraphs (h)(1) and (2)".

■ 22. Add § 483.475 to subpart I to read as follows:

§ 483.475 Condition of participation: Emergency preparedness.

The Intermediate Care Facility for Individuals with Intellectual Disabilities (ICF/IID) must comply with all applicable Federal and State emergency preparedness requirements. The ICF/IID must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The ICF/IID must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach, including missing clients.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address the special needs of its client population, including, but not limited to, persons at-risk; the type of services the ICF/IID has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the ICF/IID efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The ICF/IID must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and residents, whether they evacuate or shelter in place, include, but are not limited to the following:

(i) Food, water, and medical supplies.

(ii) Alternate sources of energy to maintain the following:

(A) Temperatures to protect resident health and safety and for the safe and sanitary storage of provisions.

(B) Emergency lighting.

(C) Fire detection, extinguishing, and alarm systems.

(D) Sewage and waste disposal.

(2) A system to track the location of staff and residents in the ICF/IID's care both during and after the emergency.

(3) Safe evacuation from the ICF/IID, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for clients, staff, and volunteers who remain in the facility.

(5) A system of medical documentation that preserves client information, protects confidentiality of client information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other ICF/IIDs or other providers to receive clients in the event of limitations or cessation of operations to ensure the continuity of services to ICF/IID clients.

(8) The role of the ICF/IID under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The ICF/IID must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Clients' physicians.

(iv) Other ICF/IIDs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(iii) The State Licensing and Certification Agency.

(iv) The State Protection and Advocacy Agency.

(3) Primary and alternate means for communicating with the ICF/IID's staff, Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for clients under the ICF/IID's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release client information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of clients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the ICF/IID's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(8) A method for sharing information from the emergency plan that the facility has determined is appropriate with clients and their families or representatives.

(d) *Training and testing.* The ICF/IID must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually. The ICF/IID must meet the requirements for evacuation drills and training at § 483.470(h).

(1) *Training program.* The ICF/IID must do all the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The ICF/IID must conduct exercises to test the emergency plan. The ICF/IID must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the ICF/IID experiences an actual natural or man-made emergency that requires activation of the emergency plan, the ICF/IID is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the ICF/IID's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the ICF/IID's emergency plan, as needed.

PART 484—HOME HEALTH SERVICES

■ 23. The authority citation for part 484 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)) unless otherwise indicated.

■ 24. Add § 484.22 to subpart B to read as follows:

§ 484.22 Condition of participation: Emergency preparedness.

The Home Health Agency (HHA) must comply with all applicable Federal and State emergency preparedness requirements. The HHA must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The HHA must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach;

(2) Include strategies for addressing emergency events identified by the risk assessment;

(3) Address patient population, including, but not limited to, the type of services the HHA has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the HHA's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The HHA must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The plans for the HHA's patients during a natural or man-made disaster. Individual plans for each patient must be included as part of the comprehensive patient assessment, which must be conducted according to the provisions at § 484.55.

(2) The procedures to inform State and local emergency preparedness officials about HHA patients in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric condition and home environment.

(3) A system to track the location of staff and patients in the HHA's care both during and after the emergency.

(4) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(5) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(6) The development of arrangements with other HHAs or other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to HHA patients.

(c) *Communication plan.* The HHA must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other HHAs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, or local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the HHA's staff, Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the HHA's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(6) A means of providing information about the HHA's needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The HHA must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The HHA must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(ii) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The HHA must conduct drills and exercises to test the emergency plan. The HHA must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the HHA experiences an actual natural or man-made emergency that requires activation of the emergency

plan, the HHA is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the HHA's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the HHA's emergency plan, as needed.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 25. The authority citation for part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

§ 485.64 [Removed]

■ 26. Remove § 485.64.

■ 27. Add § 485.68 to subpart B to read as follows:

§ 485.68 Condition of participation: Emergency preparedness.

The Comprehensive Outpatient Rehabilitation Facility (CORF) must comply with all applicable Federal and State emergency preparedness requirements. The CORF must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The CORF must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach;

(2) Include strategies for addressing emergency events identified by the risk assessment;

(3) Address patient population, including, but not limited to, the type of services the CORF has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the CORF's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts;

(5) Be developed and maintained with assistance from fire, safety, and other appropriate experts.

(b) *Policies and procedures.* The CORF must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) Safe evacuation from the CORF, which includes staff responsibilities, and needs of the patients.

(2) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(3) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(4) The use of volunteers in an emergency and other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(c) *Communication plan.* The CORF must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other CORFs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the CORF's staff, Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the CORF's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means of providing information about the CORF's needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training and testing.* The CORF must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The CORF must do all of the following:

(i) Provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) The CORF must ensure that staff can demonstrate knowledge of emergency procedures. All new personnel must be oriented and assigned specific responsibilities regarding the CORF's emergency plan within two weeks of their first workday. The training program must include instruction in the location and use of alarm systems and signals and fire fighting equipment.

(2) *Testing.* The CORF must conduct drills and exercises to test the emergency plan. The CORF must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the CORF experiences an actual natural or man-made emergency that requires activation of the emergency plan, the CORF is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the CORF's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the CORF's emergency plan, as needed.

§ 485.623 [Amended]

■ 28. Amend § 485.623 by removing paragraph (c) and redesignating paragraph (d) as paragraph (c).

■ 29. Add § 485.625 to subpart F to read as follows:

§ 485.625 Condition of participation: Emergency preparedness.

The Critical Access Hospital (CAH) must comply with all applicable Federal and State emergency preparedness requirements. The CAH must develop and maintain a comprehensive emergency preparedness program, utilizing an all-hazards approach. The emergency preparedness plan must include, but not be limited to, the following elements:

(a) *Emergency plan.* The CAH must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach;

(2) Include strategies for addressing emergency events identified by the risk assessment;

(3) Address patient population, including, but not limited to, persons at-risk; the type of services the CAH has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the CAH's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The CAH must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and patients, whether they evacuate or shelter in place, include, but are not limited to:

(i) Food, water, and medical supplies;

(ii) Alternate sources of energy to maintain:

(A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions;

(B) Emergency lighting;

(C) Fire detection, extinguishing, and alarm systems; and

(D) Sewage and waste disposal.

(2) A system to track the location of staff and patients in the CAH's care both during and after the emergency.

(3) Safe evacuation from the CAH, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(5) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(6) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(7) The development of arrangements with other CAHs or other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to CAH patients.

(8) The role of the CAH under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The CAH must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other CAHs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) CAH's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the CAH's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the CAH's occupancy, needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training and testing.* The CAH must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The CAH must do all of the following:

(i) Initial training in emergency preparedness policies and procedures, including prompt reporting and extinguishing of fires, protection, and where necessary, evacuation of patients, personnel, and guests, fire prevention, and cooperation with fire fighting and disaster authorities, to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The CAH must conduct exercises to test the emergency plan. The CAH must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the CAH experiences an actual natural or man-made emergency that requires activation of the emergency plan, the CAH is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions

designed to challenge an emergency plan.

(iv) Analyze the CAH's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the CAH's emergency plan, as needed.

(e) *Emergency and standby power systems.* The CAH must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section.

(1) *Emergency generator location.* (i) The generator must be located in accordance with the location requirements found in NFPA 99 and NFPA 100.

(2) *Emergency generator inspection and testing.* In addition to the emergency power system inspection and testing requirements found in NFPA 99—Health Care Facilities and NFPA 110—Standard for Emergency and Standby Power Systems, as referenced by NFPA 101—Life Safety Code (as required by 42 CFR 485.623(d)), the CAH must do all of the following:

(i) At least once every 12 months test each emergency generator for a minimum of 4 continuous hours. The emergency generator test load must be 100 percent of the load the CAH anticipates it will require during an emergency.

(ii) Maintain a written record, which is available upon request, of generator inspections, tests, exercising, operation, and repairs.

(3) *Emergency generator fuel.* Hospitals that maintain an onsite fuel source to power emergency generators must maintain a quantity of fuel capable of sustaining emergency power for the duration of the emergency or until likely resupply.

■ 30. Revise § 485.727 to read as follows:

§ 485.727 Condition of participation: Emergency preparedness.

The Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services ("Organizations") must comply with all applicable Federal and State emergency preparedness requirements. The Organizations must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The Organizations must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, the type of services the Organizations have the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Address the location and use of alarm systems and signals; and methods of containing fire.

(5) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation.

(6) Be developed and maintained with assistance from fire, safety, and other appropriate experts.

(b) *Policies and procedures.* The Organizations must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) Safe evacuation from the Organizations, which includes staff responsibilities, and needs of the patients.

(2) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(3) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(4) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(c) *Communication plan.* The Organizations must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other Organizations.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, state, tribal, regional and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) Organizations' staff.

(ii) Federal, state, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the Organizations' care, as necessary, with other health care providers to ensure continuity of care.

(5) A means of providing information about the Organizations' needs, and their ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training and testing.* The Organizations must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The Organizations must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) The Organizations must ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The Organizations must conduct drills and exercises to test the emergency plan. The Organizations must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the Organizations experience an actual natural or man-made emergency that requires activation of the emergency plan, they are exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop

exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the Organization's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise their emergency plan, as needed.

■ 31. Section 485.920 is added to subpart J (as added on October 29, 2013, at 78 FR 64630 and effective on October 29, 2014) to read as follows::

§ 485.920 Condition of participation: Emergency preparedness.

The Community Mental Health Center (CMHC) must comply with all applicable federal and state emergency preparedness requirements. The CMHC must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The CMHC must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address client population, including, but not limited to, the type of services the CMHC has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the CMHC's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The CMHC must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of staff and clients in the CMHC's care both during and after the emergency.

(2) Safe evacuation from the CMHC, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.

(3) A means to shelter in place for clients, staff, and volunteers who remain in the facility.

(4) A system of medical documentation that preserves client information, protects confidentiality of client information, and ensures records are secure and readily available.

(5) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of state or federally designated health care professionals to address surge needs during an emergency.

(6) The development of arrangements with other CMHCs or other providers to receive clients in the event of limitations or cessation of operations to ensure the continuity of services to CMHC clients.

(7) The role of the CMHC under a waiver declared by the Secretary of Health and Human Services, in accordance with section 1135 of the Social Security Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The CMHC must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Clients' physicians.

(iv) Other CMHCs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) CMHC's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for clients under the CMHC's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release client information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of clients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the CMHC's needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training and testing.* The CMHC must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training.* The CMHC must provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. The CMHC must ensure that staff can demonstrate knowledge of emergency procedures. Thereafter, the CMHC must provide emergency preparedness training at least annually.

(2) *Testing.* The CMHC must conduct drills and exercises to test the emergency plan. The CMHC must:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the CMHC experiences an actual natural or man-made emergency that requires activation of the emergency plan, the CMHC is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the CMHC's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the CMHC's emergency plan, as needed.

PART 486—CONDITIONS FOR COVERAGE OF SPECIALIZED SERVICES FURNISHED BY SUPPLIERS

■ 32. The authority citation for part 486 continues to read as follows:

Authority: Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b-8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C 273).

■ 33. Add § 486.360 to subpart G to read as follows:

§ 486.360 Condition of participation: Emergency preparedness.

The Organ Procurement Organization (OPO) must comply with all applicable Federal and State emergency preparedness requirements. The OPO must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The OPO must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address the type of hospitals with which the OPO has agreements; the type of services the OPO has the capacity to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the OPO's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The OPO must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and, the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of staff during and after an emergency.

(2) A system of medical documentation that preserves potential and actual donor information, protects confidentiality of potential and actual donor information, and ensures records are secure and readily available.

(c) *Communication plan.* The OPO must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Volunteers.

(iv) Other OPOs.

(v) Transplant and donor hospitals in the OPO's Donation Service Area (DSA).

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) OPO's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(d) *Training and testing.* The OPO must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training.* The OPO must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) The OPO must ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The OPO must conduct exercises to test the emergency plan. The OPO must do the following:

(i) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(ii) Analyze the OPO's response to and maintain documentation of all tabletop exercises, and emergency events, and revise the OPO's emergency plan, as needed.

(e) *Agreements with other OPOs and hospitals.* Each OPO must have an agreement(s) with one or more other OPOs to provide essential organ procurement services to all or a portion of the OPO's Donation Service Area in the event that the OPO cannot provide such services due to an emergency. Each OPO must include within the hospital agreements required under § 486.322(a) and in the protocols with transplant programs required under § 486.344(d), the duties and responsibilities of the hospital, transplant program, and the OPO in the event of an emergency.

PART 491—CERTIFICATION OF CERTAIN HEALTH FACILITIES

■ 34. The authority citation for part 491 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302); and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

§ 491.6 [Amended]

■ 35. Amend § 491.6 by removing paragraph (c).

■ 36. Add § 491.12 to read as follows:

§ 491.12 Condition of participation: Emergency preparedness.

The Rural Health Clinic/Federally Qualified Health Center (RHC/FQHC) must comply with all applicable Federal and State emergency preparedness requirements. The RHC/FQHC must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The RHC/FQHC must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach;

(2) Include strategies for addressing emergency events identified by the risk assessment;

(3) Address patient population, including, but not limited to, the type of services the RHC/FQHC has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response

during a disaster or emergency situation, including documentation of the RHC/FQHC's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The RHC/FQHC must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) Safe evacuation from the RHC/FQHC, which includes appropriate placement of exit signs; staff responsibilities and needs of the patients.

(2) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(3) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(4) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State and Federally designated health care professionals to address surge needs during an emergency.

(c) *Communication plan.* The RHC/FQHC must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other RHCs/FQHCs.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) RHC/FQHC's staff.

(ii) Federal, State, tribal, regional, and local emergency management agencies.

(4) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(5) A means of providing information about the RHC/FQHC's needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training and testing.* The RHC/FQHC must develop and maintain an emergency preparedness training and testing program that must be reviewed and updated at least annually.

(1) *Training program.* The RHC/FQHC must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles,

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(iv) Ensure that staff can demonstrate knowledge of emergency procedures.

(2) *Testing.* The RHC/FQHC must conduct exercises to test the emergency plan. The RHC/FQHC must do the following:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the RHC/FQHC experiences an actual natural or man-made emergency that requires activation of the emergency plan, the RHC/FQHC is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the RHC/FQHC's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the RHC/FQHC's emergency plan, as needed.

PART 494—CONDITIONS FOR COVERAGE FOR END-STAGE RENAL DISEASE FACILITIES

■ 37. The authority citation for part 494 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 494.60 [Amended]

■ 38. Amend § 494.60 by—

■ A. Removing paragraph (d).

■ B. Redesignating paragraph (e) is as paragraph (d).

■ 39. Add § 494.62 to subpart B to read as follows:

§ 494.62 Condition of participation: Emergency preparedness.

The dialysis facility must comply with all applicable Federal and State emergency preparedness requirements. These emergencies include, but are not limited to, fire, equipment or power failures, care-related emergencies, water supply interruption, and natural disasters likely to occur in the facility's geographic area. The dialysis facility must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The dialysis facility must develop and maintain an emergency preparedness plan that must be evaluated and updated at least annually. The plan must:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach;

(2) Include strategies for addressing emergency events identified by the risk assessment;

(3) Address patient population, including, but not limited to, the type of services the dialysis facility has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation, including documentation of the dialysis facility's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts. The dialysis facility must contact the local emergency preparedness agency at least annually to ensure that the agency is aware of the dialysis facility's needs in the event of an emergency.

(b) *Policies and procedures.* The dialysis facility must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. These

emergencies include, but are not limited to, fire, equipment or power failures, care-related emergencies, water supply interruption, and natural disasters likely to occur in the facility's geographic area. At a minimum, the policies and procedures must address the following:

(1) A system to track the location of staff and patients in the dialysis facility's care both during and after the emergency.

(2) Safe evacuation from the dialysis facility, which includes staff responsibilities, and needs of the patients.

(3) A means to shelter in place for patients, staff, and volunteers who remain in the facility.

(4) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and ensures records are secure and readily available.

(5) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(6) The development of arrangements with other dialysis facilities or other providers to receive patients in the event of limitations or cessation of operations to ensure the continuity of services to dialysis facility patients.

(7) The role of the dialysis facility under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(8) A process to ensure that emergency medical system assistance can be obtained when needed.

(9) A process ensuring that emergency equipment, including, but not limited to, oxygen, airways, suction, defibrillator or automated external defibrillator, artificial resuscitator, and emergency drugs, are on the premises at all times and immediately available.

(c) *Communication plan.* The dialysis facility must develop and maintain an emergency preparedness communication plan that complies with both Federal and State law and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Other dialysis facilities.

(v) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional or local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) Dialysis facility's staff.

(ii) Federal, State, tribal, regional, or local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the dialysis facility's care, as necessary, with other health care providers to ensure continuity of care.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510.

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the dialysis facility's needs, and its ability to provide assistance, to the authority having jurisdiction or the Incident Command Center, or designee.

(d) *Training, testing, and orientation.* The dialysis facility must develop and maintain an emergency preparedness training, testing and patient orientation program that must be evaluated and updated at least annually.

(1) *Training program.* The dialysis facility must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually. Staff training must:

(A) Ensure that staff can demonstrate knowledge of emergency procedures, including informing patients of—

(*1*) What to do;

(*2*) Where to go, including instructions for occasions when the geographic area of the dialysis facility must be evacuated;

(*3*) Whom to contact if an emergency occurs while the patient is not in the dialysis facility. This contact information must include an alternate emergency phone number for the facility for instances when the dialysis facility is unable to receive phone calls due to an emergency situation (unless the facility has the ability to forward calls to a working phone number under such emergency conditions); and

(*4*) How to disconnect themselves from the dialysis machine if an emergency occurs.

(B) Ensure that, at a minimum, patient care staff maintain current CPR certification; and

(C) Ensure that nursing staff are properly trained in the use of emergency equipment and emergency drugs.

(D) Maintain documentation of the training.

(2) *Testing.* The dialysis facility must conduct drills and exercises to test the emergency plan. The dialysis facility must:

(i) Participate in a community mock disaster drill at least annually. If a community mock disaster drill is not available, conduct an individual, facility-based mock disaster drill at least annually.

(ii) If the dialysis facility experiences an actual natural or man-made emergency that requires activation of the emergency plan, the dialysis facility is exempt from engaging in a community or individual, facility-based mock disaster drill for 1 year following the onset of the actual event.

(iii) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iv) Analyze the dialysis facility's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the dialysis facility's emergency plan, as needed.

(3) *Patient orientation.* Emergency preparedness patient training. The facility must provide appropriate orientation and training to patients, including the areas specified in paragraph (d)(1) of this section.

Appendix—Emergency Preparedness Resource Documents and Sites

Presidential Directives

- *Hameland Security Presidential Directive (HSPD–5): "Management of Damestic Incidents"* authorized the Department of Homeland Security to develop and administer the National Incident Management System (NIMS). NIMS consists of federal, state, local, tribal governments, private-sector and nongovernmental organizations to work together to prevent, respond to and recover from domestic incidents. The directive can be found at *http://www.gpa.gav/fdsys/pkg/PPP-2003-book1/pdf/PPP-2003-book1-doc-pg229.pdf.*
- The elements of NIMS can be found at *http://www.fema.gov/emergency/nims/index.shtin.*
- The National Response Framework (NRF) is a guide to how the nation should conduct all-hazards responses. Further information can be found at *http://www.fema.gov/NRF.*
- The National Strategy for Pandemic Influenza and Implementation Plan is a comprehensive approach to addressing the threat of pandemic influenza and can be found at *http://www.flu.gav/prafessianal/federal/pandemic-influenza.pdf.*
- The World Health Organization (WHO) maintains a relatively up-to-date human case count of reported cases and death related to pandemic influenzas. The document can be found at *http://www.wha.int/csr/disease/avian_influenza/cauntry/en/index.html.*
- The National Strategy for Pandemic Influenza Implementation Plan was established to ensure that the Federal government's efforts and resources would occur in a coordinated manner, the Federal government's response, international efforts, transportation and borders, protecting human and animal health, law enforcement, public safety, and security, protection of personnel and insurance of continuity of operations. This document can be found at *http://www.fao.org/docs/eims/upload/221561/national_plan_ai_usa_en.pdf.*
- *Homeland Security Presidential Directive (HSPD–21)* addresses public health and medical preparedness. It establishes a National Strategy for Public Health and Medical Preparedness. The key principles are: preparedness for all potential catastrophic health events, vertical and horizontal coordination across levels of government, regional approach to health preparedness, engagement of the private sector, academia and other non-governmental entities, and the roles of individual families and communities. It discusses integrated biosurveillance capability, countermeasure stockpiling and rapid distribution of medical countermeasures, mass casualty care in coordinating existing resources, and community resilience with oversight of this effort led by ASPR. The directive can be found at *http://www.dhs.gav/xabout/laws/gc_1219263961449.shtm.*
- "National Preparedness Guidelines" adopt an all-hazards and risk-based approach to preparedness. It provides a set of national planning scenarios that represent a range of threats that warrant national attention. For further information, this document can be found at *http://www.dhs.gav/xlibrary/assets/Natianal_Preparedness_Guidelines.pdf.*
- *Presidential Directive (PPD–8): National Preparedness.* It is aimed at facilitating an integrated, all-of-nation, flexible, capabilities-based approach to preparedness. It requires the development of a National Preparedness Goal, a national system description, a national planning system that features the 5 integrated national planning frameworks for prevention, protection, response, recovery and mitigation and federal interagency operational plans (FIOPS). This directive can be found at *http://www.dhs.gov/presidential-policy-directive-8-national-preparedness* and at *http://www.phe.gav/Preparedness/legal/policies/Pages/ppd8.aspx.*

Office of Inspector General (OIG), Government Accountability Office (GAO) and Additional Reports and Their Recommendations

- OIG study entitled, "Nursing Home Emergency Preparedness and Responses During Recent Hurricanes" (OEI–06–06–00020) conducted in response to a request from the U. S. Senate Special Committee on Aging asking for an examination of nursing home emergency preparedness. Based on the study, the OIG had two recommendations for CMS: (1) strengthen federal certification standards for nursing home emergency plans; and (2) encourage communication and collaboration between State and local emergency entities and nursing homes. As a result of the OIG's recommendations, the Secretary initiated an emergency preparedness improvement effort coordinated across all HHS agencies. This study can be found at *http://oig.hhs.gov/oei/reports/oei-06-06-00020.pdf.*
- The National Hurricane Center report entitled, "Tropical Cyclone Report, Hurricane Katrina, 23–30 August 2005" provided data on the effect that the 2005 hurricanes had on the community. This report can be found at *http://www.nhc.naaa.gov/pdf/TCR-AL122005_Katrina.pdf.*
- GAO report entitled, "Disaster Preparedness: Preliminary Observations on the Evacuation of Hospitals and Nursing Homes Due to Hurricanes" (GAO–06–443R) discusses the GAO's findings regarding (1) responsibility for the decision to evacuate hospitals and nursing homes; (2) issues administrators consider when deciding to evacuate hospitals and nursing homes; and (3) the federal response capabilities that support evacuation of hospitals and nursing homes. This can be found at *http://www.gao.gov/new.items/d06443r.pdf.*
- GAO report entitled, "Disaster Preparedness: Limitations in Federal Evacuation Assistance for Health Facilities Should be Addressed" (GAO–06–826) supports the findings noted in the first GAO report. In addition, the GAO noted that the evacuation issues that facilities faced during and after the hurricanes occurred due to their inability to secure transportation when needed. This report can be found at *www.gaa.gav/cgi-bin/getrpt?GAO-06-826.*
- GAO report, an after-event analysis, entitled, "Hurricane Katrina: Status of Hospital Inpatient and Emergency Departments in the Greater New Orleans Area" (GAO–06–1003) revealed that: (1) Emergency departments were experiencing overcrowding and (2) the number of staffed inpatient beds per 1,000 population was greater than that of the national average and expected to increase further and the number of staffed inpatient beds was not available in psychiatric care settings. While this study focused specifically on patient care issues in the New Orleans area, the same issues are common to hospitals in any major metropolitan area. This report can be found at *http://www.gao.gav/dacdblite/details.php?rptna=GAO-06-1003.*
- GAO report, an after-event analysis entitled, "Disaster Recovery: Past Experiences Offer Recovery Lessons for Hurricane Ike and Gustav and Future Disasters" (GAO–09–437T) concluded that recovery from major disasters involves the combined efforts of federal, state and local governments. This report can be found at *http://www.gaa.gav/products/GAO-09-437T.*
- OIG study entitled, "Gaps Continue to Exist in Nursing Home Emergency Preparedness and Response During Disasters: 2007–2010, OEI–06–09–00270. The report noted 6 areas of concern that nursing homes did not include in their plans but could affect residents during an emergency which are: Staffing, resident care, resident identification, information and tracking, sheltering in place, evacuation and communication and collaboration.

GAO Recommendations for Response to Influenza Pandemics

- GAO report entitled, "Influenza Pandemic: Gaps in Pandemic Planning and Preparedness Need to be Addressed" (GAO–09–909T July 29,2009 expressed concern that many gaps in pandemic planning and preparedness still existed in the presence of a potential pandemic influenza outbreak. This report can be located at *http://www.gao.gov/new.items/d09909t.pdf.*
- GAO report entitled, "Influenza Pandemic: Monitoring and Assessing the Status of the National Pandemic Implementation Plan Needs Improvement" (GAO–10–73). The GAO assessed the progress of the responsible federal agencies in implementing the plans 342 action items set forth in the "National Strategy for Pandemic Influenza: Implementation Plan. These reports can be found at *http://www.gao.gav/new.items/d1073.pdf* and *http://geargewbush-whitehause.archives.gav/hameland/pandemic-influenza-implementatian.htm.* Resources for Healthcare Providers and Suppliers for Responding to Pandemic Influenza:
- "One-step access to U. S. Government h1N1, Avian, and Pandemic Flu Information" Web site provides links to influenza guidance and information from federal agencies. This can be found at *www.flu.gav* More information can be found at *http://www.flu.gov/prafessianal/index.html* that provides information for hospitals, long term care facilities, outpatient facilities, home health agencies, other health care providers and clinicians.
- "HHS Pandemic Influenza Plan Supplement 3: Healthcare Planning"

provides planning guidance for the provision of care in hospitals. This can be located at *http://www.hhs.gov/pandemicflu/plan/sup3.html.*

• "Best Practices in Preparing for Pandemic Influenza: A Primer for Governors and Senior State Officials (2006) written by the National Governors Association (NGA) provides both current and historical perspective on potential disease outbreaks in communities. This report can be found at *http://www.nga.org/Files/pdf/0607PANDEMICPRIMER.PDF.*

• The Public Readiness and Preparedness Act of 2005 establishes liability protections for program planners and qualified persons who prescribe, administer, or dispense covered counter measures in the event of a credible risk of a future public health emergency. Public Health Emergency Preparedness

• HRSA Policy Information notice entitled, "Health Center Emergency Management Program Expectations" (Document No. 2007–15 dated August 22, 2007, can be found at *http://www.hsdl.org/?view&did=478559* describes the declaration of a state of emergency at a local, state, regional, or national level by an authorized public official such as a governor, the Secretary of the Department of Health and Human Services or the President of the United States.

• CDC report describes natural disasters and man-made disasters. To access this list, go to *http://emergency.cdc.gov/disasters/* under "emergency preparedness and response" and click on "specific hazards".

• RAND Corporation 2006 report stated that since 2001, the challenge has been the need to define public health emergency preparedness and the key elements that characterize a well-prepared community. This report can be found at *http://www.rand.org/publications/randreview/issues/summer2006/pubhealth.html.* The RAND Corporation convened a diverse panel of experts to propose a public health emergency preparedness definition. According to this expert panel, in an article by Nelson, Lurie, Wasserman and Zakowski, titled "Conceptualizing and Defining Public Health Emergency Preparedness", published in the American Journal of Public Health, Supplement 1, 2007, Volume 97, No S9–S11 defined public health emergency preparedness as the capability of the public health and health care systems, communities, and individuals to prevent, protect against, quickly respond to and recover from health emergencies. This report can be found at *http://ajph.aphapublications.org/doi/full/10.2105/AJPH.2007.114496*

• Trust for America's Health (TFAH) report published in December 2012 entitled, "Ready or Not? Protecting the Public's Health from Diseases, Disasters, and Bioterrorism". This report can be found at *http://www.healthyamericans.org/report/101/.*

• The HHS, 2011 Hospital Preparedness Program (HPP) report, entitled "From Hospitals to Healthcare Coalitions: Transforming Health Preparedness and Response in Our Communities", describes how the HPP has become a critical component of community resilience and enhancing the healthcare system's response capabilities, preparedness measures, and best practices across the country. The report can be found at: *http://www.phe.gov/Preparedness/planning/hpp/Documents/hpp-healthcare-coalitions.pdf.*

• A 2008 ASPR published document entitled, "Pandemic and All-Hazards Preparedness Act: Progress Report on the Implementation of Provisions Addressing At Risk Individuals," describes the activities undertaken since the passage of the PAPHA to address needs of at-risk populations and describes some of the activities planned to work toward preparedness for at-risk populations. The report can be found at: *http://www.phe.gov/Preparedness/legal/pahpa/Documents/pahpa-at-risk-report0901.pdf.*

• An August 30, 2005 article in the *Health Affairs* publication by Dausey, D., Lurie, N., and Diamond, A, entitled, "Public Health Response to Urgent Case Reports," evaluated the ability of local public health agencies (LPHAs) to adequately meet "a preparedness standard" set by the CDC. The standard was for the LPHAs to receive and respond to urgent case reports of communicable diseases 24 hours a day, 7 days a week. The goal of the test was to contact an "action officer" (that is, physician, nurse, epidemiologist, bioterrorism coordinator, or infection control practitioner) responsible for responding to urgent case reports.

• A June 2004 article published by Lurie, N., Wasserman, J., Stoto, M., Myers, S., Namkung, P., Fielding, J., and Valdez, R. B., entitled, "Local Variations in Public Health Preparedness: Lessons from California", provides information on performance measures that were developed based on identified essential public health services. The article can be found at: *http://content.healthaffairs.org/cgi/content/full/hlthaff.w4.341/DC1.*

Development of Plans and Responses

• Distributed nationally in FY 2012, ASPR's publication (distributed nationally in FY 2012), "Healthcare Preparedness Capabilities: National Guidance for Healthcare System Preparedness", takes an innovative capability approach to assist state and territory grant awardee planning that focuses on a jurisdiction's capacity to take a course of action. Additional information can be found at: *http://www.phe.gov/preparedness/responders/ndms/Pages/default.aspx.*

A different ASFR guidance provides information, guidance and resources to support planners in preparing for mass casualty incidents and medical surges. The document includes a total of (8) healthcare preparedness capabilities that are: (1) Healthcare system preparedness (for example. information regarding healthcare coalitions); (2) healthcare system recovery; (3) emergency operations coordination, (4) fatality management; (5) information sharing; (6) medical surge; (7) responder safety and health; and (8) volunteer management. This information can be found at: *http://www.phe.gov/Preparedness/planning/hpp/reports/Documents/capabilities.pdf.*

• Center for Health Policy, Columbia University School of Nursing, policy paper, March 2008 entitled, "Adapting Standards of Care Under Extreme Conditions: Guidance for Professionals During Disasters, Pandemics, and Other Extreme Emergencies". This paper, aimed at the nursing population, discusses the challenges to meeting the usual standards of care during natural or man-made disasters and makes recommendations for effectively providing care during emergency events. The paper can be found at: *http://www.nursingworld.org/MainMenuCategories/HealthcareandPolicyIssues/DPR/TheLawEthicsofDisasterResponse/AdaptingStandardsofCare.aspx.*

• Institute of Medicine (IOM) September 2009 report to the HHS entitled, "Guidelines for Establishing Crisis Standards of Care for Use in Disaster Situations. The report provides guidance for State and local health agencies and health care facilities regarding the standards of care that should apply during disaster situations. This report covers guidance on conserving, substituting, adapting, and doing without resources. Further information on this report can be found at *http://www.nap.edu/catalog.php?record_id=12749#.*

• CMS published two guidance documents dated September 30, 2007 and October 24, 2007. The first document entitled, "Provider Survey and Certification Frequently Asked Questions: Declared Public Health Emergencies—All Hazards, Health Standards and Quality Issues", answers questions for all providers and suppliers regarding the lessons that were learned during and after the 2005 hurricanes and can be found at: *http://www.cms.hhs.gov/SurveyCertEmergPrep/Downloads/AllHazardsFAQs.pdf.* The second document entitled, "Survey and Certification Emergency Preparedness Initiative: Provider Survey & Certification Declared Public Health Emergency FAQs—All Hazards," provides web address for emergency preparedness information. It provides links to various resources and to other federal emergency preparedness Web sites and can be found at: (*http://www.nhha.org/WhatsNewFiles/S&C-08-01.01.AllHazardsFAQsmemo.pdf*). In addition, the Web site entitled, "Emergency Preparedness for Every Emergency," can be found at *http://www.cms.HHS.gov/SurveyCertEmergPrep/.*

Emergency Preparedness Related to People With Disabilities

The National Council on Disability's Web site has a page entitled, "Emergency Management," that can be found at *http://www.ncd.gov/policy/emergency_management.* There are various reports/papers that contain specific information on emergency planning for people with disabilities and on how important it is to include people with disabilities in emergency planning, such as:

- Effective Emergency Management: Making Improvements for Communities and People with Disabilities (2009)
- The Impact of Hurricanes Katrina and Rita on People with Disabilities: A Look Back and Remaining Challenges (2006)

- Saving Lives: Including People with Disabilities in Emergency Planning (2005)

FEDERAL REGISTER

Vol. 78 Friday,
No. 249 December 27, 2013

Part III

Department of Health and Human Services

Office of Inspector General

42 CFR Part 1001

Medicare and State Health Care Programs: Fraud and Abuse; Electronic Health Records Safe Harbor Under the Anti-Kickback Statute; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Inspector General

42 CFR Part 1001

RIN 0991–AB33

Medicare and State Health Care Programs: Fraud and Abuse; Electronic Health Records Safe Harbor Under the Anti-Kickback Statute

AGENCY: Office of Inspector General (OIG), HHS.

ACTION: Final rule.

SUMMARY: In this final rule, the Office of Inspector General (OIG) amends the safe harbor regulation concerning electronic health records items and services, which defines certain conduct that is protected from liability under the Federal anti-kickback statute, section 1128B(b) of the Social Security Act (the Act). Amendments include updating the provision under which electronic health records software is deemed interoperable; removing the electronic prescribing capability requirement; extending the sunset provision until December 31, 2021; limiting the scope of protected donors to exclude laboratory companies; and clarifying the condition that prohibits a donor from taking any action to limit or restrict the use, compatibility, or interoperability of the donated items or services.

DATES: *Effective Date:* With the exception of the revision of 42 CFR 1001.952(y)(13), this regulation is effective on March 27, 2014. The revision of 42 CFR 1001.952(y)(13) is effective on December 31, 2013.

FOR FURTHER INFORMATION CONTACT: James A. Cannatti III, Heather L. Westphal, or Andrew VanLandingham, Office of Counsel to the Inspector General, (202) 619–0335.

Executive Summary

A. Purpose of the Regulatory Action

Pursuant to section 14 of the Medicare and Medicaid Patient and Program Protection Act of 1987 and its legislative history, Congress required the Secretary of Health and Human Services (the Secretary) to promulgate regulations setting forth various "safe harbors" to the anti-kickback statute, which would be evolving rules that would be periodically updated to reflect changing business practices and technologies in the health care industry. In accordance with this authority, OIG published a safe harbor to protect certain arrangements involving the provision of interoperable electronic health records software or information technology and training services. The final rule for this safe harbor was published on August 8, 2006 (71 FR 45110) and is scheduled to sunset on December 31, 2013 (42 CFR 1001.952(y)(13)). OIG published a notice of proposed rulemaking on April 10, 2013 (78 FR 21314), proposing to update certain aspects of the electronic health records safe harbor and to extend the sunset date. The purpose of this final rule is to address comments received on the proposed rule and to finalize certain aspects of the proposed rule.

B. Summary of the Final Rule

In this final rule, we amend the current safe harbor in several ways. First, we update the provision under which electronic health records software is deemed interoperable. Second, we remove the requirement related to electronic prescribing capability from the safe harbor. Third, we extend the sunset date of the safe harbor to December 31, 2021. Fourth, we limit the scope of protected donors to exclude laboratory companies. And fifth, we revise the text to clarify the condition that prohibits a donor from taking any action to limit or restrict the use, compatibility, or interoperability of the donated items or services.

C. Costs and Benefits

This final rule modifies an existing safe harbor to the anti-kickback statute. This safe harbor permits certain entities to provide certain items and services in the form of software and information technology and training services necessary and used predominantly to create, maintain, transmit, or receive electronic health records to certain parties. Parties may voluntarily seek to comply with safe harbors so that they have assurance that their conduct will not subject them to any enforcement actions under the anti-kickback statute, the civil monetary penalty (CMP) provision for anti-kickback statute violations, or the program exclusion authority related to kickbacks, but safe harbors do not impose new requirements on any party.

This is not a major rule, as defined at 5 U.S.C. 804(2). It is also not economically significant, because it will not have a significant effect on program expenditures, and there are no additional substantive costs to implement the resulting provisions. We expect the safe harbor, as modified by this final rule, to continue to facilitate the adoption of electronic health records technology.

I. Background

A. Anti-Kickback Statute and Safe Harbors

Section 1128B(b) of the Act (42 U.S.C. 1320a–7b(b), the anti-kickback statute) provides criminal penalties for individuals or entities that knowingly and willfully offer, pay, solicit, or receive remuneration in order to induce or reward the referral of business reimbursable under any of the Federal health care programs, as defined in section 1128B(f) of the Act. The offense is classified as a felony and is punishable by fines of up to $25,000 and imprisonment for up to 5 years. Violations of the anti-kickback statute may also result in the imposition of CMPs under section 1128A(a)(7) of the Act (42 U.S.C. 1320a–7a(a)(7)), program exclusion under section 1128(b)(7) of the Act (42 U.S.C. 1320a–7(b)(7)), and liability under the False Claims Act (31 U.S.C. 3729–33).

The types of remuneration covered specifically include, without limitation, kickbacks, bribes, and rebates, whether made directly or indirectly, overtly or covertly, in cash or in kind. In addition, prohibited conduct includes not only the payment of remuneration intended to induce or reward referrals of patients, but also the payment of remuneration intended to induce or reward the purchasing, leasing, or ordering of, or arranging for or recommending the purchasing, leasing, or ordering of, any good, facility, service, or item reimbursable by any Federal health care program.

Because of the broad reach of the statute, concern was expressed that some relatively innocuous commercial arrangements were covered by the statute and, therefore, potentially subject to criminal prosecution. In response, Congress enacted section 14 of the Medicare and Medicaid Patient and Program Protection Act of 1987, Public Law 100–93 (section 1128B(b)(3)(E) of the Act; 42 U.S.C. 1320a–7b(B)(3)(E)), which specifically required the development and promulgation of regulations, the so-called "safe harbor" provisions, that would specify various payment and business practices that would not be subject to sanctions under the anti-kickback statute, even though they may potentially be capable of inducing referrals of business under the Federal health care programs. Since July 29, 1991, we have published in the **Federal Register** a series of final regulations establishing "safe harbors"

in various areas. These OIG safe harbor provisions have been developed "to limit the reach of the statute somewhat by permitting certain non-abusive arrangements, while encouraging beneficial or innocuous arrangements." 56 FR 35952, 35958 (July 29, 1991).

Health care providers, suppliers, and others may voluntarily seek to comply with safe harbors so that they have the assurance that their business practices will not be subject to any enforcement action under the anti-kickback statute, the CMP provision for anti-kickback violations, or the program exclusion authority related to kickbacks. In giving the Department of Health and Human Services (Department or HHS) the authority to protect certain arrangements and payment practices under the anti-kickback statute, Congress intended the safe harbor regulations to be updated periodically to reflect changing business practices and technologies in the health care industry.

B. The Electronic Health Records Safe Harbor

Using our authority at section 1128B(b)(3)(E) of the Act, we published a notice of proposed rulemaking (the 2005 Proposed Rule) that would promulgate two safe harbors to address donations of certain electronic health records software and directly related training services. 70 FR 59015, 59021 (Oct. 11, 2005). One proposed safe harbor would have protected certain arrangements involving donations of electronic health records items and services made before the adoption of certification criteria. The other proposed safe harbor would have protected certain arrangements involving nonmonetary remuneration in the form of interoperable electronic health records software certified in accordance with criteria adopted by the Secretary and directly related training services. In the same issue of the **Federal Register**, the Centers for Medicare & Medicaid Services (CMS) proposed similar exceptions to the physician self-referral law. 70 FR 59182 (Oct. 11, 2005).

On August 8, 2006 (71 FR 45110), we published a final rule (the 2006 Final Rule) that, among other things, finalized a safe harbor at 42 CFR 1001.952(y) (the electronic health records safe harbor) for protecting certain arrangements involving interoperable electronic health records software or information technology and training services. In the same issue of the **Federal Register**, CMS published similar final regulations pertaining to the physician self-referral law at 42 CFR 411.357(w). 71 FR 45140 (Aug. 8, 2006). The electronic health records safe harbor is scheduled to sunset on December 31, 2013. 42 CFR 1001.952(y)(13).

C. Summary of the 2013 Proposed Rulemaking

On April 10, 2013 (78 FR 21314), we published a proposed rule (the 2013 Proposed Rule) setting forth certain proposed changes to the electronic health records safe harbor. In the 2013 Proposed Rule, we proposed to amend the current safe harbor in several ways. First, we proposed to update the provision under which electronic health records software is deemed interoperable. Second, we proposed to remove the requirement related to electronic prescribing capability from the safe harbor. Third, we proposed to extend the sunset date of the safe harbor. In addition to these proposals, we solicited public comment on other proposals and possible amendments to the safe harbor, including limiting the scope of protected donors and adding or modifying conditions to limit the risk of data and referral lock-in. CMS proposed almost identical changes to the physician self-referral law electronic health records exception elsewhere in the same issue of the **Federal Register**. 78 FR 21308 (Apr. 10, 2013). We attempted to ensure as much consistency as possible between our proposed safe harbor changes and CMS's proposed exception changes, within the limitations imposed by the differences in the underlying statutes. We noted in the 2013 Proposed Rule that, due to the close nexus between the 2013 Proposed Rule and CMS's proposed rule, we may consider comments submitted in response to CMS's proposed rule when crafting our final rule. Similarly, CMS stated that it may consider comments submitted in response to the 2013 Proposed Rule in crafting its final rule.

D. Summary of the Final Rulemaking

In this final rulemaking, we amend the electronic health records safe harbor at 42 CFR 1001.952(y) in several ways. First, we update the provision under which electronic health records software is deemed interoperable. Second, we remove the requirement related to electronic prescribing capability from the safe harbor. Third, we extend the sunset date of the safe harbor to December 31, 2021. Fourth, we limit the scope of protected donors to exclude laboratory companies. And fifth, we revise the text to clarify the condition that prohibits a donor from taking any action to limit or restrict the use, compatibility, or interoperability of the donated items or services.

As we observed in the 2006 Final Rule,

> OIG has a longstanding concern about the provision of free or reduced price goods or services to an existing or potential referral source. There is a substantial risk that free or reduced-price goods or services may be used as a vehicle to disguise or confer an unlawful payment for referrals of Federal health care program business. Financial incentives offered, paid, solicited, or received to induce or in exchange for generating Federal health care business increase the risks of, among other problems: (i) [o]verutilization of health care items or services; (ii) increased Federal program costs; (iii) corruption of medical decision making; and (iv) unfair competition.

71 FR 45110, 45111 (Aug. 8, 2006). We further stated that,

> consistent with the structure and purpose of the anti-kickback statute and the regulatory authority at section 1128B(b)(3)(E) of the Act, we believe any safe harbor for electronic health records arrangements should protect beneficial arrangements that would eliminate perceived barriers to the adoption of electronic health records without creating undue risk that the arrangements might be used to induce or reward the generation of Federal health care program business.

Id.

We believe that the safe harbor, as amended by this final rule, achieves this goal.

Elsewhere in this issue of the **Federal Register**, CMS is finalizing almost identical changes to the electronic health records exception [1] under the physician self-referral law. We attempted to ensure as much consistency as possible between our changes to the electronic health records safe harbor and CMS's exception changes, within the limitations imposed by the differences in the underlying statutes. As indicated in the 2013 Proposed Rule, we have considered and responded to the timely comments we received as well as those CMS received. Similarly, CMS considered comments submitted in response to our 2013 Proposed Rule in crafting its final rule. For purposes of this final rule, we treat comments that were made with respect to the physician self-referral law as if they had been made with respect to the anti-kickback statute, except where they relate to differences in the underlying statutes.

II. Summary of Public Comments and OIG Responses

OIG received approximately 109 timely filed comments from a variety of entities and individuals. CMS received a similar number of timely filed comments. Overall, the commenters (including in comments submitted to

[1] 42 CFR 411.357(w).

CMS) supported the proposed amendments to the electronic health records safe harbor. However, we received many specific comments about various aspects of the proposed amendments. We have divided the summaries of the public comments and our responses into five parts: A. The Deeming Provision, B. The Electronic Prescribing Provision, C. The Sunset Provision, D. Additional Proposals and Considerations, and E. Comments Outside the Scope of Rulemaking.

A. The Deeming Provision

Our current electronic health records safe harbor requires at 42 CFR 1001.952(y)(2) that the donated software must be "interoperable" (as defined at Note to Paragraph (y) in 42 CFR 1001.952(y)). This condition further provides that software is deemed to be interoperable if a certifying body recognized by the Secretary has certified the software within no more than 12 months prior to the date it is provided to the recipient. We proposed two modifications to this provision in 1001.952(y)(2), which is known as the "deeming provision." Both modifications to the deeming provision were proposed to reflect recent developments in the Office of the National Coordinator for Health Information Technology (ONC) certification program.

The first proposed modification would reflect ONC's responsibility for authorizing certifying bodies. The second proposal would modify the time frame during which donated software must be certified. Currently, to meet the deeming provision, the safe harbor requires software to be certified within no more than 12 months prior to the date of donation.

Subsequent to the issuance of the 2006 Final Rule, ONC developed a regulatory process for adopting certification criteria and standards, which is anticipated to occur on a cyclical basis. (For more information, see ONC's September 4, 2012 Final Rule entitled "Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology" (77 FR 54163).) Our proposal would modify the deeming provision to track ONC's anticipated regulatory cycle. As a result, software would be eligible for deeming if, on the date it is provided to the recipient, it has been certified to any edition of the electronic health record certification criteria that is identified in the then-applicable definition of Certified EHR Technology in 45 CFR part 170. For example, for 2013, the applicable definition of Certified EHR Technology includes both the 2011 and the 2014 editions of the electronic health record certification criteria. Therefore, in 2013, software certified to meet either the 2011 edition or the 2014 edition could satisfy the safe harbor provision as we proposed.

Additionally, we solicited comments on whether removing the current 12-month certification requirement would impact donations and whether to retain the 12-month certification period as an additional means of determining eligibility under the deeming provision.

After consideration of the public comments, we are finalizing the proposed revisions to subparagraph (y)(2) with one clarification to our proposed regulatory text to ensure the deeming provision closely tracks ONC's certification program. We are revising 42 CFR 1001.952(y)(2) to state that software is deemed to be interoperable if, on the date it is provided to the recipient, it has been certified by a certifying body authorized by the National Coordinator for Health Information Technology to an edition of the electronic health record certification criteria identified in the then-applicable version of 45 CFR part 170. As we stated in the 2006 Final Rule, we understand that

> the ability of software to be interoperable is evolving as technology develops. In assessing whether software is interoperable, we believe the appropriate inquiry is whether the software is as interoperable as feasible given the prevailing state of technology at the time the items or services are provided to the recipient.
>
> 71 FR 45110, 45126 (Aug. 8, 2006).

We believe our final rule with respect to this condition is consistent with that understanding and our objective of ensuring that software is certified to the current required standard of interoperability when it is donated.

ONC as Agency To Recognize Certifying Bodies

Comment: All commenters addressing the subject supported the proposed modification that would amend the safe harbor to recognize ONC as the agency responsible for authorizing certifying bodies on behalf of the Secretary, with one commenter requesting that we clarify that software need not be certified to ONC standards to be eligible for donation.

Response: We appreciate the commenters' support for this modification. With respect to the request for clarification, the commenter is correct that 42 CFR 1001.952(y)(2) does not require software to be certified to ONC standards in order to be eligible for donation. As we discussed in the 2006 Final Rule (71 FR 45110, 45127 (Aug. 8, 2006)), the deeming provision offers parties one way to be certain that the interoperability condition of subparagraph (y)(2) is met at the time of donation. Even if donated software is not deemed to be interoperable, the donation would satisfy the interoperability condition of subparagraph (y)(2) if it meets the definition of "interoperable" in the Note to Paragraph (y) in 42 CFR 1001.952(y).

Comment: One commenter expressed concerns about linking the interoperability requirement of the safe harbor to ONC's certification criteria and standards because they do not, in the commenter's assessment, reflect contemporary views of interoperability. The commenter suggested that we instead implement a broad definition of interoperability adopted by the International Organization for Standardization or, alternatively, that we adopt interoperability functional definitions developed by the American National Standards Institute.

Response: While we are mindful that other non-governmental organizations may be developing their own standards to encourage the adoption of interoperable electronic health records technology, the ONC certification criteria and standards are the core policies the Department is utilizing to accelerate and advance interoperability and health information exchange. ONC and CMS jointly published a Request for Information (78 FR 14793 (Mar. 7, 2013)) to solicit public feedback on a set of possible policies "that would encourage providers to routinely exchange health information through interoperable systems in support of care coordination across health care settings." 78 FR 14793, 14794 (Mar. 7, 2013). The process by which ONC considers the implementation of new certification criteria and standards is a public, transparent effort that allows the Department's electronic health records technology experts to appropriately consider the comments submitted in light of the goal "to accelerate the existing progress and enhance a market environment that will accelerate [health information exchange] across providers. . . ." 78 FR 14793, 14795 (Mar. 7, 2013).

We believe it is reasonable and appropriate to link the deeming provision to the ONC certification criteria and standards because of ONC's expertise and its public process for considering and implementing the criteria and standards. ONC is the

Department agency with expertise in determining the relevant criteria and standards to ensure that software is as interoperable as feasible given the prevailing state of technology. ONC expects to revise and expand such criteria and standards incrementally over time to support greater electronic health record technology interoperability. *See* 77 FR 54163, 54269 (Sept. 4, 2012). Additionally, utilizing the ONC certification criteria and standards that are implemented through a public process affords the best opportunity for interested parties to comment on, understand, and ultimately implement those criteria and standards. Therefore, we are not adopting the commenter's suggestion.

Comment: One commenter stated that many electronic health records systems lack the capabilities to function within a patient-centered medical home. The commenter suggested that we finalize policies that further strengthen the use of core electronic health records features.

Response: As discussed, ONC is the Department agency with expertise in determining the relevant criteria and standards for electronic health records technology, including those related to the use of core features. ONC certification criteria and standards that are implemented through a public process afford the best opportunity for interested parties to comment on, understand, and ultimately implement those criteria and standards. Therefore, we are not adopting the commenter's suggestion.

Time Frame for Certification

Comment: Of the commenters that addressed the issue, most supported our proposal to modify the time frame within which donated software must have been certified to more closely track the current ONC certification program. Commenters asserted that aligning with ONC's certification program will provide donors and recipients more certainty about the deemed status of donated software because the software must be certified to meet only one set of standards on the same certification cycle to comply with both the ONC certification criteria and the deeming provision of the safe harbor. One commenter supported the modification, but suggested that the 12-month certification time frame also be retained or, alternatively, that we allow software to be deemed to be interoperable if it has been certified to any edition of the ONC electronic health record certification criteria.

Response: We appreciate the commenters' support for our proposal to modify the safe harbor certification time frame to align with ONC's certification program. We believe, as the commenters suggest, that such a modification will support our dual goals of the deeming provision: (1) To ensure that donated software is as interoperable as feasible given the prevailing state of technology at the time it is provided to the recipient and (2) to provide donors and recipients a means to have certainty that donated software satisfies the interoperability condition of the safe harbor.

We are not persuaded to adopt the commenter's suggestion to retain the 12-month certification time frame; this would not ensure that software is certified to the current required standard of interoperability. In the course of evaluating the commenter's alternative proposal, however, we realized that our proposed regulatory text may be too narrow to satisfy the dual goals of the deeming provision. Under our proposed regulatory text from the 2013 Proposed Rule, software would be deemed interoperable if it was certified to an edition [2] of certification criteria referenced in the then-applicable definition of "Certified EHR Technology" at 45 CFR 170.102. That definition applies only to the Medicare and Medicaid Electronic Health Record Incentive Programs (the EHR Incentive Programs). *See generally* 42 CFR part 495. However, ONC also has the authority to adopt certification criteria for health information technology, including electronic health records, into other regulations at 45 CFR part 170 that may not be referenced in the definition of "Certified EHR Technology" because they are not related to the EHR Incentive Programs. If we retained our proposed regulatory text, software certified to criteria in editions not included in the definition "Certified EHR Technology" would not be eligible for deeming under the safe harbor, which was not our intent. The safe harbor described in this rule is not limited to donations to individuals and entities eligible to participate in the EHR Incentive Programs. Individuals and entities such as long-term/post-acute care providers and non-physician behavioral health practitioners, while not eligible to participate in the EHR Incentive Programs, may receive donations that are protected by this safe harbor, if the donations meet the conditions of the safe harbor. Further, we have recently learned that ONC intends to retire outdated editions of certification criteria by removing them from the regulatory text at 45 CFR part 170. Accordingly, software certified to an edition identified in the regulations in effect on the date of the donation would be certified to a then-applicable edition, regardless of whether the particular edition was also referenced in the then-applicable definition of Certified EHR Technology.

Thus, we are finalizing our policy to more closely track ONC's certification program in the deeming provision. We are adopting modified regulatory text to provide that software is deemed to be interoperable if, on the date it is provided to the recipient, it has been certified by a certifying body authorized by the National Coordinator for Health Information Technology to an edition of the electronic health record certification criteria identified in the then-applicable version of 45 CFR part 170. We believe that this modified regulatory text is consistent with the intent we articulated in the 2013 Proposed Rule to modify the deeming provision by removing the 12-month timeframe and substituting a provision that more closely tracks ONC's certification program. Further, we believe that the regulatory text, as modified, will support our dual goals of the deeming provision, which we discussed above.

New Certification/Deeming Requirements

Comment: One commenter suggested that, for deeming purposes, we should require that software be certified to the *latest* edition of electronic health record certification criteria rather than any edition then-applicable. This commenter also suggested that the electronic directory of service (e-DOS) standard should be a certification requirement for donated software, and asserted that both recommendations would help ensure electronic health records software is interoperable.

Response: We decline to adopt the commenter's suggested requirements for the safe harbor at 42 CFR 1001.952(y). We believe that requiring that donated software be certified to editions that are adopted and not yet retired by ONC through its certification program ensures that the software is certified to interoperability standards updated regularly by the Department agency with the relevant expertise. Further, adding requirements to the ONC certification criteria and standards is outside the scope of this rule. Therefore, we are not implementing the commenter's suggestions.

B. The Electronic Prescribing Provision

At 42 CFR 1001.952(y)(10), our current electronic health records safe harbor specifies that the donated

[2] ONC has recently begun characterizing sets of adopted certification criteria as "editions."

software must "contain[ ] electronic prescribing capability, either through an electronic prescribing component or the ability to interface with the recipient's existing electronic prescribing system that meets the applicable standards under Medicare Part D at the time the items and services are provided." In the preamble to the 2006 Final Rule (71 FR 45110, 45125 (Aug. 8, 2006)), we stated that we included "this requirement, in part, because of the critical importance of electronic prescribing in producing the overall benefits of health information technology, as evidenced by section 101 of the [Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), Pub. L. 108–173]." We also noted that it was "our understanding that most electronic health records systems already include an electronic prescribing component." *Id.*

We understand the critical importance of electronic prescribing. However, in light of developments since the 2006 Final Rule, we proposed to delete from the safe harbor the condition at 42 CFR 1001.952(y)(10). Based on our review of the public comments and for the reasons stated in the 2013 Proposed Rule, we are finalizing our proposal to eliminate the requirement that electronic health records software contain electronic prescribing capability in order to qualify for protection under the safe harbor at 42 CFR 1001.952(y).

Comment: Two commenters disagreed that it is no longer necessary to require the inclusion of electronic prescribing capability in donated electronic health records software. One of the commenters stated that it was encouraged by the growth in the number of physicians using electronic prescribing between 2008 and 2012, but believed that the requirement should remain for patient safety reasons because electronic prescribing is critical to lowering the incidences of preventable medication errors.

Response: Like the commenters, and as we stated in the 2013 Proposed Rule (78 FR 21314, 21317 (Apr. 10, 2013)), we believe in the importance of electronic prescribing. However, as discussed in the 2013 Proposed Rule, we are persuaded that other existing policy drivers, many of which did not exist in August 2006 when the safe harbor was promulgated, sufficiently support the adoption of electronic prescribing capabilities. We do not want to undermine important public policy goals by requiring redundant and sometimes expensive software capabilities that may not contribute to the interoperability of a given system. As we discussed in the 2013 Proposed Rule, electronic prescribing technology would remain eligible for donation under the electronic health records or under the electronic prescribing safe harbor at 42 CFR 1001.952(x). We do not believe that removing this condition would increase the risk of fraud or abuse posed by donations made pursuant to the safe harbor.

Comment: Many commenters supported our proposal to eliminate the requirement that donated software include electronic prescribing capability at the time it is provided to the recipient, agreeing that developments since the promulgation of the safe harbor make it unnecessary to retain this requirement. One of the commenters asserted that the goal of the requirement for the inclusion of electronic prescribing technology in donated electronic health records software—that is, increasing the use of electronic prescribing—had been achieved through the electronic prescribing incentive program authorized by the Medicare Improvements for Patients and Providers Act of 2008.

Response: We appreciate the commenters' support and, for reasons explained in more detail previously in this final rule, we are eliminating the requirement in 42 CFR 1001.952(y)(10) that donated electronic health records software contain electronic prescribing capability, either through an electronic prescribing component or the ability to interface with the recipient's existing electronic prescribing system that meets the applicable standards under Medicare Part D, at the time the items and services are provided.

C. The Sunset Provision

Protected donations under the current electronic health records safe harbor must be made on or before December 31, 2013. In adopting this condition of the electronic health records safe harbor, we stated that "the need for a safe harbor for donations of electronic health records technology should diminish substantially over time as the use of such technology becomes a standard and expected part of medical practice." 71 FR 45110, 45133 (Aug. 8, 2006).

As we discussed in the 2013 Proposed Rule, although the industry has made great progress in the adoption and meaningful use of electronic health records technology, the use of such technology has not yet been adopted nationwide. Continued use and further adoption of electronic health records technology remains an important goal of the Department. We continue to believe that as progress on this goal is achieved, the need for a safe harbor for donations should continue to diminish over time. Accordingly, we proposed to extend the sunset date of the safe harbor to December 31, 2016, selecting this date for the reasons described in the 2013 Proposed Rule. We also specifically sought comment on whether we should, as an alternative, select a later sunset date and what that date should be. For example, we stated that we were considering establishing a sunset date of December 31, 2021. 78 FR 21314, 21318 (Apr. 10, 2013). In response to comments, we are extending the sunset date of the safe harbor to December 31, 2021.

Comment: Numerous commenters urged us to make permanent the safe harbor at 42 CFR 1001.952(y). According to these commenters, a permanent safe harbor could (1) provide certainty with respect to the cost of electronic health records items and services for recipients, (2) encourage adoption by physicians who are new entrants into medical practice or have postponed adoption based on financial concerns regarding the ongoing costs of maintaining and supporting an electronic health records system, (3) encourage adoption by providers and suppliers that are not eligible for incentive payments through the Medicare and Medicaid programs, and (4) preserve the gains already made in the adoption of interoperable electronic health records technology, especially where hospitals have invested in health information technology infrastructure through protected donations of such technology. According to some commenters, although the safe harbor was implemented to encourage the adoption of health information technology, it is now a necessity for the creation of new health care delivery and payment models. Some commenters also stated their support for a permanent safe harbor because electronic health record technology adoption has been slower than expected and allowing the safe harbor to expire in 2016 would adversely affect the rate of adoption. Some of these commenters requested that if we are not inclined to make the safe harbor permanent, we extend the availability of the safe harbor through the latest date noted in the 2013 Proposed Rule—December 31, 2021.

Response: We agree with the commenters that the continued availability of the safe harbor plays a part in achieving the Department's goal of promoting electronic health record technology adoption. However, we do not believe that making the safe harbor permanent is required or appropriate at this time. The permanent availability of

the safe harbor could serve as a disincentive to adopting interoperable electronic health record technology in the near-term. Moreover, as described in the 2013 Proposed Rule and elsewhere in this final rule, we are concerned about inappropriate donations of electronic health records items and services that lock in data and referrals between a donor and recipient, among other risks. A permanent safe harbor might exacerbate these risks over the longer term without significantly improving adoption rates. Instead, we believe that a reasonable extension of the safe harbor strikes an appropriate balance between furthering the Department's electronic health record adoption goals and safeguarding against undue risks of abuse. In light of other modifications we are making in this final rule to mitigate ongoing risks, including removing laboratory companies from the scope of protected donors, we are persuaded to permit the use of the safe harbor for more than the additional 3-year period that we proposed.

The adoption of interoperable electronic health records technology remains a challenge for some providers and suppliers, despite progress in its implementation and meaningful use since the August 2006 promulgation of the safe harbor. *See ONC's Report to Congress on Health IT Adoption*, (June 2013) at *http://www.healthit.gov/sites/default/files/rtc_adoption_of_healthit_and_relatedefforts.pdf* and the *U.S. Department of Health and Human Services Assistant Secretary for Planning and Evaluation's EHR Payment Incentives for Providers Ineligible for Payment Incentives and Other Funding Study*, (June 2013) at *http://aspe.hhs.gov/daltcp/reports/2013/ehrpi.shtml*. Although we believe that the protection afforded by the safe harbor encourages the adoption of such technology, its permanence is not essential to the achievement of widespread adoption. It is only one of a number of ways that providers and suppliers are incented to adopt electronic health records technology, including the incentives offered by the EHR Incentive Programs and the movement in the health care industry toward the electronic exchange of patient health information as a means to improve patient care quality and outcomes. Balancing the desire to encourage further adoption of interoperable electronic health records technology against concerns about potential disincentives to adoption and the misuse of the safe harbor to lock in referral streams, we are establishing a December 31, 2021 sunset date for the safe harbor. We believe this sunset date will support adoption, provide a timeframe that aligns with the financial incentives for electronic health records adoption currently offered by the Federal government, and safeguard against foreseeable future fraud risks.

Comment: Two commenters suggested that the sunset date should be extended, but not beyond December 31, 2016. One asserted that a shorter extension of the sunset date for the safe harbor would allow a wider range of people to obtain access to health information technology services while not diminishing the incentive for providers and suppliers to acquire, implement, and standardize the necessary electronic health records systems. Another commenter supported our proposal to extend the availability of the safe harbor through December 31, 2016, and encouraged us to consider an additional extension as that date approaches. One commenter suggested that we extend the availability of the safe harbor for at least 6 years, although a shorter or longer time period could be established after review of adoption rates across the range of providers and suppliers who may or may not be eligible for incentives under the EHR Incentive Programs. Other commenters supported our alternative proposal to extend the availability of the safe harbor through December 31, 2021, which corresponds to the statutory end of the Medicaid EHR Incentive Program. These commenters noted that more remains to be done to promote electronic health records technology adoption, and suggested that maintaining the safe harbor through this date will help maximize the incentives for eligible physicians to adopt electronic health records technology and thereby increase greater use of electronic health records. Two other commenters suggested tying the sunset of the safe harbor to the corresponding date for assessing "penalties" under the Medicare EHR Incentive Program in order to align Federal regulation of electronic health records technology adoption and use.

Response: After considering all of the comments on this issue, we believe that an extension of the safe harbor to December 31, 2021 (which corresponds to the end of incentive payments under the Medicaid Incentive Program), would (1) support adoption, (2) provide a timeframe that aligns with the financial incentives for electronic health records adoption currently offered by the Federal government, and (3) safeguard against foreseeable future fraud risks. We note that the two commenters that suggested tying the sunset date to the corresponding date for assessing "penalties" under the Medicare EHR Incentive Program appear to misunderstand the duration of the downward payment adjustment under the EHR Incentive Programs, which will continue until an eligible participant adopts and meaningfully uses appropriate electronic health record technology. For additional information, see the July 28, 2010 final rule entitled "Medicare and Medicaid Programs; Electronic Health Record Incentive Program (75 FR 44448). The practical effect of the commenters' suggestion would be to extend permanently the electronic health records safe harbor. For the reasons stated elsewhere in this final rule, we do not believe that making the safe harbor permanent is required or appropriate at this time and we are not adopting the commenters' suggestion. We believe the date we selected better serves the goals of the safe harbor. Therefore, we are extending the availability of the safe harbor at 42 CFR 1001.952(y) through December 31, 2021. We also note that there are several types of Medicare and Medicaid providers and suppliers that are not eligible for incentives under the EHR Incentive Programs (*e.g.*, long-term/post-acute care providers and non-physician behavioral health practitioners). This rule applies to donations to any individual or entity engaged in the delivery of health care, regardless of whether the recipient of the donation is eligible for incentives under the EHR Incentive Programs.

Comment: A few commenters expressed general support for extending the sunset date, but did not specify whether the extension should be for 3 years, 8 years, or some other length of time. Commenters noted that failure to extend the sunset of the safe harbor would negatively impact the adoption of electronic health records technology, as well as its continued use.

Response: As described previously, we are finalizing our alternative proposal to extend the availability of the safe harbor through December 31, 2021.

Comment: A number of commenters urged us to let the safe harbor expire on December 31, 2013. Some asserted that the safe harbor permits the exact behavior the law was intended to stop. Other commenters asserted that the safe harbor permits "legalized extortion" or provides "legal sanction to trample the competition." Another commenter asserted that the inclusion of "non-market factors" (that is, the influence of donors, rather than end users) in the decision to adopt electronic health record technology may result in lower quality products or services and higher costs, often with an adverse impact on

technology adoption and innovation. Still others asserted that, given the financial incentives that the Federal government itself has provided, it is no longer necessary to spur the adoption of electronic health record technology through the underwriting of the cost of electronic health record technology by outside entities.

Response: Although we appreciate the commenters' concerns, on balance we continue to believe that the safe harbor serves to advance the adoption and use of interoperable electronic health records. However, we caution that a donation arrangement is not protected under the anti-kickback statute unless it satisfies each condition of the safe harbor at 42 CFR 1001.952(y). Arrangements that disguise the "purchase" or lock-in of referrals and donations that are solicited by the recipient in exchange for referrals would fail to satisfy the conditions of the safe harbor.

Comment: Numerous commenters suggested that the safe harbor sunset as scheduled on December 31, 2013, but only with respect to laboratories and pathology practices, "ancillary service providers," entities not listed in section 101 of the MMA (directing the creation of a safe harbor for certain donations of electronic prescribing items and services), or entities that are not part of an accountable care organization or not integrated in a meaningful manner.

Response: We consider these comments to be related to "protected donors" and address them later in section II.D.1.

D. Additional Proposals and Considerations

1. Protected Donors

As we discussed in the 2013 Proposed Rule, while broad safe harbor protection may significantly further the important public policy goal of promoting electronic health records, we continue to have concerns, which we originally articulated in the 2006 Final Rule, about the potential for fraud and abuse by certain donors. 78 FR 21314, 21318 (Apr. 10, 2013). We also noted that we had received comments suggesting that abusive donations are being made under the electronic health records safe harbor. *Id.*

In order to address these concerns, we proposed to limit the scope of protected donors under the electronic health records safe harbor. In the 2013 Proposed Rule, we stated that we were considering revising the safe harbor to cover only the MMA-mandated donors we originally proposed when the safe harbor was first established: hospitals, group practices, prescription drug plan (PDP) sponsors, and Medicare Advantage (MA) organizations. We stated that we were also considering whether other individuals or entities with front-line patient care responsibilities across health care settings, such as safety net providers, should be included, and, if so, which ones. Alternatively, we stated that we were considering retaining the current broad scope of protected donors, but excluding specific types of donors—providers and suppliers of ancillary services associated with a high risk of fraud and abuse—because donations by such providers and suppliers may be more likely to be motivated by a purpose of securing future business than by a purpose of better coordinating care for beneficiaries across health care settings. In particular, we discussed excluding laboratory companies from the scope of protected donors as their donations have been the subject of complaints of abuse. We also discussed excluding other high-risk categories, such as durable medical equipment (DME) suppliers and independent home health agencies. We sought comment on the alternatives under consideration, including comments (with supporting reasons) regarding particular types of providers or suppliers that should or should not be protected donors, given the goals of the safe harbor.

Many commenters raised concerns about donations of electronic health records items and services by laboratory companies and strongly urged us to adopt our proposal to eliminate from the safe harbor protection for such donations, either by excluding laboratory companies from the scope of protected donors (if we extend the availability of the safe harbor), or by letting the safe harbor sunset altogether (for more detailed discussion of comments concerning the sunset provision, please see section II.C. of this final rule). Other commenters raised similar concerns, but did not suggest a particular approach to address them. We summarize the relevant comments and provide our responses below. We have carefully considered the comments that we received on this proposal and, based on the concerns articulated by commenters and the wide-ranging support from the entire spectrum of the laboratory industry (from small, pathologist-owned laboratory companies to a national laboratory trade association that represents the industry's largest laboratory companies), we are finalizing our proposal to remove laboratory companies from the scope of protected donors under the safe harbor. We believe this decision is consistent with and furthers the goal of promoting the adoption of interoperable electronic health record technology that benefits patient care while reducing the likelihood that the safe harbor will be misused by donors to secure referrals. We also believe that our decision will address potential abuse identified by some of the commenters involving potential recipients conditioning referrals for laboratory services on the receipt of, or redirecting referrals for laboratory services following, donations from laboratory companies.

Protected Donors: Comments and Suggestions Regarding Laboratory Companies

Comment: Many commenters raised concerns that, notwithstanding a clear prohibition in the safe harbor, laboratory companies are, explicitly or implicitly, conditioning donations of electronic health records items and services on the receipt of referrals from the recipients of those donations or establishing referral quotas and threatening to require the recipient to repay the cost of the donated items or services if the quotas are not reached. Some commenters suggested that such *quid pro quo* donations, and donations by laboratory companies generally, are having a negative effect on competition within the laboratory services industry (including increased prices for laboratory services) and impacting patient care as referral decisions are being made based on whether a laboratory company donated electronic health records items or services, not whether that company offers the best quality services or turnaround time. A few commenters also raised concerns that laboratory companies were targeting possible recipients based on the volume or value of their potential referrals.

Response: The current safe harbor provision at 42 CFR 1001.952(y)(5) prohibits determining the eligibility of a recipient or the amount or nature of the items or services to be donated in a manner that directly takes into account the volume or value of referrals or other business generated between the parties. Accordingly, the *quid pro quo* arrangements and targeted donations described by the commenters would not qualify for safe harbor protection. Such arrangements are not consistent with the purpose of the safe harbor and can result in the precise types of harm the anti-kickback statute is designed to prevent, such as corruption of medical decision making. We urge those with information about such arrangements to contact our fraud hotline at 1–800–

HHS–TIPS or visit *https://forms.oig.hhs.gov/hotlineoperations/* to report fraud.

We appreciate the commenters sharing their concerns about arrangements involving laboratory company donations. As previously discussed, we have decided to exclude laboratory companies from the scope of protected donors. We believe that our decision will continue to support the Department's electronic health record adoption policies, while addressing the risk of fraud and abuse. By excluding laboratory companies from the scope of protected donors, parties to such donations will not be able to assert safe harbor protection for such arrangements. The effect will be a reduction in the risk that parties will enter into arrangements like the *quid pro quo* and targeted donation arrangements described by the commenters.

Comment: Several commenters raised concerns about laboratory company arrangements with electronic health record technology vendors. The commenters described arrangements involving laboratory companies and vendors that result in the vendor charging other laboratory companies high fees to interface with the donated technology or prohibiting other laboratory companies from purchasing the technology for donation to their own clients. One of the commenters also raised the concern that volume discount arrangements between laboratory companies and vendors of electronic health record technology are resulting in donations of electronic health record technology that may not best suit the needs of the recipient. The commenter asserted that donor laboratory companies are pushing a particular vendor's specific electronic health record system onto recipients because of a donor's close business relationship with the vendor.

Response: Excluding potential competitors of the donors from interfacing with the donated items or services described by the commenters can result in data and referral lock-in. We discuss the issue of lock-in elsewhere in this final rule in more detail. We believe that our determination to exclude laboratory companies from the scope of protected donors will help address the data and referral lock-in risks posed by arrangements such as those described by the commenters. We also believe that the changes we are finalizing to the scope of protected donors will help address the commenter's concern about the negative impact of relationships between laboratory companies and vendors on the selection of electronic health records technology by providers and suppliers. We stated in the 2006 Final Rule that, although physicians and other recipients remain free to choose any electronic health record technology that suits their needs, we do not require donors to facilitate that choice for purposes of the safe harbor. However, donors must offer interoperable products and must not impede the interoperability of any electronic health record software they decide to offer. 71 FR 45110, 45128–9 (Aug. 8, 2006). Agreements between a donor and a vendor that preclude or limit the ability of competitors to interface with the donated software would cause the donation to fail to meet the condition at 42 CFR 1001.952(y)(3), and thus preclude protection under the electronic health records safe harbor.

Comment: Many commenters noted that several States—including Missouri, New Jersey, New York, Pennsylvania, Tennessee, Washington, and West Virginia—have prohibited or restricted donations of electronic health record technology by laboratory companies to address fraud and abuse concerns. Some of the commenters urged us to effectuate a similar prohibition or restriction by removing safe harbor protection from laboratory company donations. One of these commenters, referencing an earlier discussion of "the need for [electronic health record technology] subsidies to compete for business," went on to state that "[laboratory companies] that are licensed in states that strictly prohibit [laboratory companies] from donating all or part of the costs of [electronic health record technology] to referring physicians are put at a considerable disadvantage in the marketplace."

Response: We appreciate the commenters providing this information and we believe that our determination to exclude laboratory companies from the scope of protected donors will address the fraud and abuse concerns the commenters referenced. With respect to the commenter's concern about being disadvantaged, we note that our decision to remove laboratory companies from the scope of protected donors under the electronic health records safe harbor applies equally to all laboratory companies, regardless of their location.

Comment: Several commenters, including a national laboratory trade association that represents the industry's largest laboratory companies, took exception to what it perceived as a characterization that laboratory companies are solely responsible for problematic donations. Some of these commenters asserted that electronic health record vendors are encouraging physicians to seek or demand donations from laboratory companies, and that physicians are threatening to withhold referrals or send laboratory business elsewhere if donations are not made. According to one commenter, because physicians are not paying for a significant portion of the cost of these items and services, electronic health record technology vendors are able to charge high prices and the size of donations (in dollars) in recent years has increased exponentially. The commenter also suggested that vendors may be manipulating pricing to maximize the amount a laboratory company pays for donated items and services while minimizing or eliminating any physician responsibility. Another commenter raised a related concern that electronic health records technology vendors have increased the costs of their products because they know that laboratory companies are paying for them. Generally, commenters raising concerns about the conduct of electronic health record technology vendors and physicians recommended that we remove safe harbor protection for laboratory company donations.

One commenter asserted that electronic health records items and services are no longer being chosen by physicians based on which system is most appropriate, but rather based on which will produce the largest donation. Another commenter claimed that many physicians will change laboratory companies and seek a new donation once an existing donor laboratory company ceases to subsidize the physicians' electronic health records items and services costs. This commenter stated that such conversions are not only inefficient, but undermine the spirit of the regulatory requirement that recipients do not possess the same or equivalent items or services as those being donated.

Response: Our proposed modification related to the scope of protected donors and, thus, the focus of our discussion in the 2013 Proposed Rule was on donor conduct. Some of the comments we describe in this final rule also raise concerns about the conduct of recipients. We are clarifying that we do not believe that problematic donations involving laboratory companies are solely the result of questionable conduct by laboratory companies. Our decision to exclude laboratory companies from the scope of protected donors is the best way to reduce the risk of misuse of donations by both donors and recipients and address the concerns identified by the commenters.

The safe harbor at 42 CFR 1001.952(y)(4) contains a condition that prohibits the donation recipient, the recipient's practice, or any affiliated individual or entity, from making the receipt, amount or nature of the donated items or services a condition of doing business with the donor. This condition recognizes the risk of fraud and abuse posed by a potential recipient demanding a donation in exchange for referrals. This type of *quid pro quo* arrangement is no less troubling than *quid pro quo* arrangements that originate with the donor and would not be subject to safe harbor protection. Whether a *quid pro quo* donation is for an initial installation of a donated item or service or a conversion to a different donated item or service would not change our analysis. Additionally, we caution those engaging in conversion arrangements to be mindful of the limitations in the safe harbor at 42 CFR 1001.952(y)(7) concerning the donation of equivalent items or services.

Comment: Several commenters suggested that laboratory companies should be prohibited from making donations to physicians or that physicians should pay for their own electronic health records technology. Other commenters asserted that laboratory companies do not share an essential interest in their referring clients having electronic health records technology. Still other commenters stated simply that laboratory companies represent a high risk of fraud and abuse.

Response: We are excluding laboratories from the scope of protected donors.

Comment: A few commenters noted that laboratory companies typically use a laboratory information system (LIS), anatomic pathologist information system and/or blood banking system to store and share patients' laboratory results, and that these systems should not be confused with an electronic health record that includes a patient's full medical record composed of information from many medical specialties, including pathology. One of these commenters asserted that laboratories already bear the cost of establishing LIS interfaces that they provide in order to exchange laboratory services data electronically, and that clinical and anatomic laboratories could continue to do so legally even if they were no longer protected donors under the safe harbor. One commenter expressed concern about the costs associated with interfaces, other commenters asked us to clarify our position on the donation of interfaces by laboratory companies, and one commenter stated that interfaces were not closely analogous to facsimile machines.

Response: We appreciate the information provided by the commenters. We take this opportunity to note that our decision to exclude laboratory companies from the scope of protected donors under the safe harbor does not affect our position concerning the provision of free access to certain limited-use interfaces. We have long distinguished between free items and services that are integrally related to the offering provider's or supplier's services and those that are not. For instance, we have stated that a free computer provided to a physician by a laboratory company would have no independent value to the physician if the computer could be used only, for example, to print out test results produced by the laboratory company. In contrast, a free personal computer that the physician could use for a variety of purposes would have independent value and could constitute an illegal inducement. 56 FR 35952, 35978 (July 29, 1991) (preamble to the 1991 safe harbor regulations). The donation of free access to an interface used only to transmit orders for the donor's services to the donor and to receive the results of those services from the donor would be integrally related to the donor's services. As such, the free access would have no independent value to the recipient apart from the services the donor provides and, therefore, would not implicate the anti-kickback statute. *See, e.g.*, OIG Ad. Op. 12–20 (2012). Accordingly, safe harbor protection for such donations would not be necessary.

We disagree with the commenter that asserted that interfaces are not sufficiently analogous to facsimile machines. We believe that a limited-use interface (as described in the preceding paragraph) is the contemporary analog to the limited-use computer described in the example from the 1991 preamble to the safe harbor regulations. A similarly limited-use facsimile machine would not materially differ from the limited-use computer and, thus, would be analogous to the access to the limited-use interface. It is the lack of independent value to the recipient that takes the donation outside the scope of the anti-kickback statute's prohibition, not the mode of technology. Finally, in the circumstances presented above, the free access to a limited-use interface would not require safe harbor protection, and thus the costs of the interface are outside the scope of this rulemaking.

Comment: Several commenters inquired whether our proposal to remove laboratory companies from the scope of protected donors applied to suppliers of both anatomic and clinical pathology services, and suggested that our proposal should apply to both. Commenters also inquired about the application of this proposal to hospitals that operate laboratory companies for non-hospital affiliated customers. Raising concerns about an uneven playing field, some of these commenters urged us to exclude such hospitals from the scope of protected donors if we determined to exclude laboratory companies. One commenter suggested that we effectuate this limitation by restricting protected hospital donations to those made to the hospital's employed physicians and the hospital's wholly-owned physician practices.

Response: Our proposal applied to "laboratory companies" and did not distinguish between those that provide anatomic pathology services and those that provide clinical pathology services. We intend that references to "laboratory company" or "laboratory companies" include entities that furnish either type of service. With respect to the commenters' suggestion to limit or prohibit hospital donations, we appreciate the commenters' concerns, but are not adopting their suggestion at this time. We continue to believe that hospitals have a substantial and central stake in patients' electronic health records. Further, the types and prevalence of the concerns that have been brought to our attention and discussed elsewhere in this final rule in the context of laboratory company donations have not arisen, to our knowledge, in the hospital-donation context.

We are clarifying that if a hospital furnishes laboratory services through a laboratory that is a department of the hospital for Medicare purposes (including cost reporting) and that bills for the services through the hospital's provider number, then the hospital would not be considered a "laboratory company" for purposes of this safe harbor and would continue to qualify as a protected donor under the modified safe harbor. However, if a hospital-affiliated or hospital-owned company with its own supplier number furnishes laboratory services that are billed using a billing number assigned to the company and not the hospital, the company would be considered a "laboratory company" for purposes of this safe harbor and would no longer qualify as a protected donor. The ability of the affiliated hospital to avail itself of the safe harbor would be unaffected. We remind readers that it is the substance, not the form, of an arrangement that governs under the anti-kickback statute.

A donation purported to be by an affiliate of a laboratory company could, depending on the facts and circumstances, be attributed to the affiliated laboratory company, and thus not be subject to safe harbor protection.

Comment: One commenter requested that, if we finalize our proposal to exclude laboratory companies from the scope of protected donors, we specifically clarify that "[laboratory companies] are prohibited from providing [] software to physicians unless they comply with another one of the existing safe harbors." The commenter went on to cite examples of software leases and sales at fair market value.

Response: We cannot make the statement requested. Safe harbors set forth specific conditions that, if met, assure the parties involved of not being subject to any enforcement actions under the anti-kickback statute, the CMP provision for anti-kickback violations, or the program exclusion authority related to kickbacks for the arrangement qualifying for the safe harbor. However, safe harbor protection is afforded only to those arrangements that precisely meet all of the conditions set forth in the safe harbor. The failure of an arrangement to fit in a safe harbor does not mean that the arrangement is illegal. That an arrangement does not meet a safe harbor only means that the arrangement must be evaluated on a case-by-case basis. Arrangements regarding the lease or sale of software are outside the scope of this rulemaking.

Comment: One commenter shared its concerns about a practice that it described as "post donation in-sourcing." The commenter stated that it is aware of situations in which laboratory companies are donating to ordering physicians only to have those physicians in-source their laboratory services shortly after the donation. The commenter suggested that "[t]he donation enables [] ordering physicians to avoid bearing the full cost of the [electronic health records items and services] when they discontinue use of an outside laboratory and bring the specimen testing into their own in-house self-referral arrangement just after receiving the donation."

Response: The safe harbor does not require the donation recipient to make referrals to the donor. To the contrary, subparagraph (y)(4) prohibits the donation recipient, the recipient's practice, or any affiliated individual or entity, from making the receipt, amount or nature of the donated items or services a condition of doing business with the donor. Moreover, subparagraph (y)(5) prohibits determining the eligibility of a recipient or the amount or nature of the items or services to be donated in a manner that directly takes into account the volume or value of referrals or other business generated between the parties. Whether safe harbor protection is afforded to the types of arrangements described by the commenter will depend on whether all conditions of the safe harbor are satisfied.

Comment: Two commenters raised issues regarding the type of remuneration permissible under the safe harbor at 42 CFR 1001.952(y). One commenter characterized the safe harbor in terms of allowing laboratory companies to donate funds to recipients to help them implement electronic health records technology. Another commenter noted that some donations from laboratory companies have included hardware.

Response: We remind stakeholders that the electronic health records safe harbor applies only to the donation of nonmonetary remuneration (consisting of items and services in the form of software or information technology and training services) necessary and used predominantly to create, maintain, transmit, or receive electronic health records. As stated in the preamble to the 2006 Final Rule, reimbursement for previously incurred expenses is not protected, as it poses a substantial risk of fraud and abuse. 71 FR 45110, 45134 (Aug. 8, 2006). We also remind stakeholders that the safe harbor does not protect the donation of hardware.

Scope of Protected Donors: Other Comments and Suggestions

Although the majority of commenters recommended removing safe harbor protection for donations by laboratory companies, including by excluding laboratory companies from the scope of protected donors, some commenters had alternate or additional recommendations.

Comment: A number of commenters recommended that we maintain our current scope of protected donors. Some of these commenters stated that limiting the scope of protected donors could have an impact on specialists, who, according to the commenters, still have relatively low rates of electronic health records adoption. Along the same lines, one commenter stated that limiting the categories of donors that may seek protection under the safe harbor will negatively impact recipients by preventing certain entities from helping move the entire healthcare system towards more interoperable electronic health records systems. Others cautioned that restricting the scope of protected donors will stymie innovation and restrict learning from the technology. Finally, some commenters contended that laboratory companies and other ancillary service providers and suppliers have a legitimate clinical interest in donating electronic health record items and services, and that many physician practices depend on it.

Some commenters, while acknowledging our concerns regarding abusive donation practices, suggested alternative means to address the concerns we articulated in the 2013 Proposed Rule. These commenters variously recommended that we strengthen interoperation requirements, provide education materials, or adopt enforcement policies to prevent abuses rather than limiting the scope of potential donors.

Response: We agree with many of the reasons articulated by the commenters that support maintaining our current broad scope of protected donors. We recognize that limiting the scope of potential donors could constrain the ability of many providers and suppliers to adopt electronic health record technology. Other than with respect to laboratory companies, the scope of protected donors will remain the same. We will continue to monitor and may, prior to 2021, reconsider in a future rulemaking the risk of fraud or abuse relating to the use of the safe harbor by other donors or categories of donors.

We appreciate the suggestions from commenters regarding alternative means of addressing abusive donation practices. The purpose of safe harbors is to permit certain non-abusive arrangements that, in the absence of the safe harbor, potentially would be prohibited by the anti-kickback statute. Compliance with safe harbors is voluntary, and safe harbor protection is afforded only to those arrangements that precisely meet all of the conditions set forth in the safe harbor. Thus, any individual or entity engaging in an arrangement that does not meet all conditions of the safe harbor could be subject to an enforcement action unless the arrangement otherwise complies with the law. In response to the suggestion that we provide additional education materials, we would like to highlight our efforts to educate the industry about compliance with the anti-kickback statute and other fraud and abuse laws generally. Our Web site (*www.oig.hhs.gov*) has a "Compliance" tab with many compliance-related materials. These include Compliance Education for Physicians, Compliance Program Guidance documents for various segments of the industry (including hospitals, nursing facilities,

and others), Special Fraud Alerts, advisory opinions, and more. We believe that the information we include in this final rule sufficiently sets forth donors' and recipients' requirements under the safe harbor with respect to donations. If an individual or entity desires guidance about a specific arrangement involving the donation of electronic health records items or services under the safe harbor, our advisory opinion process remains available. Finally, we address the issue of interoperation requirements elsewhere in this final rule.

Comment: We received a number of comments requesting that we retain certain categories of providers and suppliers within the scope of protected donors under the safe harbor at 42 CFR 1001.952(y). For example, commenters that provide dialysis services specifically requested that they remain protected donors. One of the dialysis provider commenters noted that excluding this specialty would have a chilling effect on the development and availability of the specialized electronic health records systems used by nephrologists. A few commenters requested that we continue to include hospitals and health systems as protected donors in order for them to retain the ability to assist physicians in adopting electronic health records technology. Other commenters requested that we explicitly retain home health agencies as protected donors. In support of retaining home health agencies, one commenter stated that the depth, breadth, and frequency of communications between home health agencies and other direct care providers makes the use of interoperable electronic health record technology essential to improving clinical outcomes and financial efficiencies. We also received comments in support of retaining safety-net providers and pharmacies as protected donors.

Response: We agree generally with the thrust of these comments. We recognize the value of permitting individuals and entities that participate directly in the provision of health care to patients and that have a need to coordinate with care providers and suppliers to donate electronic health record items or services to facilitate those interactions. Based on the information we have available at this time, we intend to continue to protect donors, other than laboratory companies, that provide patients with health care items or services covered by a Federal health care program and submit claims or requests for payment to those programs directly or through reassignment. Thus, whether a particular donation is eligible for safe harbor protection will hinge, in part, on whether the particular individual or entity making the donation meets this standard. For example, a hospital (whether stand-alone or within a health system) is an entity that typically provides health care services and submits claims or requests for payment to Federal health care programs and, therefore, could be a protected donor under this safe harbor.

Comment: Some commenters agreed with the option we presented in the 2013 Proposed Rule to retain the current scope of protected donors but exclude providers and suppliers of ancillary services associated with a high risk of fraud and abuse. A few of these commenters suggested that taking a targeted approach minimizes the risk of unintended consequences. One of these commenters asserted that we should exclude the particular individuals or entities that have been the subject of complaints. Another of these commenters specifically recommended that we target categories of providers and suppliers with a history or pattern of abusive behavior. Other commenters variously recommended excluding laboratory companies, DME suppliers, home health agencies, or safety-net providers from the scope of protected donors. One commenter asserted that entities like laboratory companies and DME suppliers do not have an overarching and essential interest in having physicians use electronic health records, nor do they coordinate a patient's care. In contrast, one commenter objected to singling out a provider or supplier type to exclude from the scope of protected donors. This commenter stated that such an action unjustly (1) penalizes a whole category of providers or suppliers when most, in the commenter's assessment, are law-abiding, and (2) supports other providers or suppliers that may have similar motivations.

Response: We respond earlier to the commenters who recommended removing only laboratory companies from the scope of protected donors. With respect to the other comments, we note that, in the 2013 Proposed Rule, we specifically requested comments with supporting reasons regarding whether particular provider or supplier types should not be protected. 78 FR 21314, 21318 (Apr. 10, 2013). Some commenters generally suggested that we remove additional provider or supplier types from the scope of protected donors, but their comments did not provide specific examples of abusive practices with respect to donations by other donors, nor did the comments contain indicia of problems comparable to those that are arising in the laboratory context. We have not heard the same concerns or received similar complaints about other categories of donors or types of donation arrangements, and therefore believe it is premature to exclude potential donors (other than laboratory companies). We also decline to identify particular individuals or organizations in the regulation.

Comment: A few commenters recommended restricting the scope of protected donors under the safe harbor to those types listed in the MMA. These commenters also made suggestions regarding how to restrict donations from these limited categories of donors. For example, one commenter recommended limiting the protected donors to hospitals and providers and suppliers operating in an integrated setting and to MA plans and providers and suppliers under contract with them. Another commenter suggested limiting the application of the safe harbor to a similar integrated model, and to hospitals that donate to their employed physicians and the physician groups that they own. In contrast, one commenter suggested that limiting the protected donor types to the original MMA list is too restrictive because some provider and supplier types not listed in the MMA (*e.g.*, ambulatory surgical centers that now perform many procedures previously performed only in hospitals) should have the opportunity to make donations.

Response: We agree that providers and suppliers operating in an integrated environment need interoperable electronic health records. However, we do not believe that the need for this technology is limited to individuals and entities in an integrated care setting. Patients may receive care from providers and suppliers that are not in the same integrated system, and the patient's medical records need to be shared with those providers and suppliers who care for a patient. The Department's goal continues to be fostering broad adoption of interoperable electronic health records technology. At this time, we believe that excluding laboratory companies from the scope of protected donors, rather than limiting the scope to the original MMA list of donors (or some other subset of protected donors) strikes the right balance between furthering that goal and preventing fraud and abuse.

2. Data Lock-In and Exchange

We solicited comments on what new or modified conditions could be added to the electronic health records safe harbor to achieve the two goals of (1) preventing misuse of the safe harbor

that results in data and referral lock-in and (2) encouraging the free exchange of data (in accordance with protections for privacy). Additionally, we requested comments on whether those conditions, if any, should be in addition to, or in lieu of, our proposal to limit the scope of protected donors. We also solicited comments on possible modifications to 42 CFR 1001.952(y)(3), which is a condition of the safe harbor requiring that "[t]he donor (or any person on the donor's behalf) does not take any action to limit or restrict the use, compatibility, or interoperability of the items or services with other electronic prescribing or electronic health records systems."

Data Lock-In: Comments on Current Conditions

Comment: Many commenters asserted that the current conditions of the safe harbor provide adequate safeguards to prevent donations that result in data or referral lock-in between the donor and recipient. These commenters expressed general support for enforcement when arrangements do not comply with the conditions of the safe harbor. Several of these commenters were also concerned that adding or modifying conditions of the safe harbor may increase the burden of compliance and, therefore, lead to fewer entities willing to make appropriate donations.

Response: We are not persuaded to adopt significant new requirements or modifications to the safe harbor to address the issue of data and referral lock-in at this time. However, as described below, we are making limited clarifications to current conditions to reflect our intended meaning.

We remain committed to investigating potentially abusive arrangements that purport to meet the conditions of the safe harbor, but, in fact, do not. Donations that do not meet the conditions of the safe harbor—because they are used to lock in referrals—are suspect under the law.

Comment: Several commenters expressed concerns about donations that lead to data lock-in. As described elsewhere in this final rule, some commenters suggested that, although some donated items or services have the ability to be interoperable, vendors may charge providers and suppliers who do not use the same donated software high fees to interface with it. The commenters contended that these business practices result in electronic health records software that is not practically interoperable because non-donor providers and suppliers cannot afford to connect to it. Other commenters expressed general concerns that donated items or services are capable of interoperation, but that recipients implicitly agree to send referrals only to the donor. These commenters did not provide specific recommendations to modify the data lock-in conditions of the safe harbor, but generally supported our efforts to prevent data lock-in.

Two commenters representing laboratory companies expressed specific concerns about a feature of donated software that may lead to data lock-in. They explained that some software is designed to limit the accessibility of data that is received from an electronic health records system that is different than the donated software. Most often, data sent from the non-donated electronic health records system cannot populate automatically in a patient's electronic health record or other limits are placed on the portability of data sent from the non-donated electronic health records system. According to these commenters, the limited accessibility of the data makes it harder for the recipient to access and use it for clinical purposes. As a result, a physician or other recipient is more likely to use only the donor's services to make sure that necessary data is easily accessible. These commenters asserted that there are no technical solutions to reducing the possibility of data lock-in; rather, the only solution is to remove laboratory companies from the scope of protected donors.

Several other commenters endorsed generally our efforts to prevent referral and data lock-in. These commenters evidenced strong support of the free exchange of health information across different provider and supplier types to better coordinate care for patients. However, apart from supporting our efforts to ensure that electronic health records systems are interoperable, the commenters made no specific recommendations regarding modifications to the exception.

Response: We share the commenters' concerns about the interoperability of donated software. While any definitive conclusion regarding the existence of an anti-kickback violation requires a case-by-case determination of the parties' intent, we note that donations of items or services that have limited or restricted interoperability due to action taken by the donor or by any person on the donor's behalf (which could include the recipient acting on the donor's behalf) would fail to meet the condition at 42 CFR 1001.952(y)(3) and is inconsistent with the intent of the safe harbor to promote the use of technology that is able to communicate with products from other vendors. Resulting donations would be suspect under the law as they would appear to be motivated, at least in part, by a purpose of securing Federal health care program business. For example, arrangements in which a donor takes an action to limit the use, communication, or interoperability of donated items or services by entering into an agreement with a recipient to preclude or inhibit any competitor from interfacing with the donated items or services would not satisfy the requirement of 42 CFR 1001.952(y)(3). Other donation arrangements described by the commenters in which electronic health records technology vendors agree with donors to charge high interface fees to non-recipient providers or suppliers or to competitors may also fail to satisfy the conditions of 42 CFR 1001.952(y)(3). We believe that any action taken by a donor (or any person on behalf of the donor, including the electronic health record vendor or the recipient) to limit the use of the donated items or services by charging fees to deter non-recipient providers and suppliers and the donor's competitors from interfacing with the donated items or services would pose legitimate concerns that parties were improperly locking-in data and referrals and that the arrangement in question would not qualify for safe harbor protection.

However, whether a donation actually satisfies the conditions of the safe harbor depends on the specific facts of each donation arrangement. We encourage the reporting of instances of data lock-in, as we believe that investigation may establish that where such lock-in has occurred, existing conditions of the safe harbor have not been met. Moreover, any action taken to achieve such a result could be evidence of intent to violate the anti-kickback statute. In regard to the specific recommendation to remove laboratories from the scope of protected donors, we note that we are excluding laboratory companies from the scope of protected donors as discussed earlier in this final rule.

Data Lock-In: Recommendations Outside the Scope of the Rulemaking

Comment: One commenter expressed concern regarding data lock-in and supported ensuring that donations are transparent and free of any attempts to steer future business. Although the commenter denied knowledge of any specific abuse of the safe harbor, the commenter requested that we allow individuals or entities to remedy a donation that may not be protected by the safe harbor. The commenter suggested that the remedy for failure to

satisfy the conditions of the safe harbor as modified by this final rule should be to make recipients pay the fair market value of any costs for ongoing support of the donated items or services and provide 3 years for the recipient to either pay full value for the donation or make a transition to a new system.

Response: We appreciate the commenter's concern and recommendation; however we decline to make the suggested modification. Even if we were inclined to do so, implementing the commenter's suggestions would be outside the scope of this rulemaking.

Data Lock-in: Recommendations for Additions or Modifications to the Safe Harbor Conditions

Comment: A few commenters urged us to amend the safe harbor to require that the recipient or the donor participate in actual health information exchange with an electronic health records system that is different from the donated item. One commenter specifically suggested that the recipient should have to demonstrate exchange with at least one other electronic health record system within a certain time frame after receipt of the donation. Another commenter suggested that the donor should have to—upon request—enable the donation recipients to engage in bi-directional exchange of data with competitors not using the same electronic health record system.

Response: We appreciate the commenters' recommendations; however, we are not modifying the conditions of the safe harbor that require the parties to a donation arrangement to demonstrate interoperation. We question whether adequate demonstration of interoperation could occur only after the donation has been made, which would create uncertainty about whether the donation meets the conditions for protection under the safe harbor at the time of the donation. This uncertainty would undermine the Department's goal to support widespread adoption of interoperable electronic health record technology. It is our intent and expectation that interoperation will, in fact, occur, and we believe the safe harbor conditions, in their entirety, promote such interoperation. Moreover, routine interoperation with systems other than those of the donor may be evidence that neither the donor nor any person on the donor's behalf has taken any action to limit or restrict the use, compatibility, or interoperability of the items or services with other electronic prescribing or electronic health records systems. *See* 42 CFR 1001.952(y)(3).

Further, we note that the Department is considering a number of policies to accelerate and advance interoperability and health information exchange. As part of this process, ONC and CMS requested input from the public on possible policies and programmatic changes to accelerate electronic health information exchange among individuals and entities that furnish health care items and services, as well as new ideas that would be both effective and feasible to implement. 78 FR 14793, 14794 (Mar. 7, 2013). We believe that the process initiated by ONC and CMS is better suited than this anti-kickback statute safe harbor to consider and respond to evolving functionality related to the interoperability of electronic health record technology.[3]

Comment: In response to our solicitation of comments, some commenters provided suggestions as to how we could broaden the current safe harbor conditions related to data lock-in. Two commenters suggested broadening 42 CFR 1001.952(y)(3), which imposes the condition that the donor (or any person on the donor's behalf) does not take any action to limit or restrict the use, compatibility, or interoperability of the items or services with other electronic prescribing or electronic health records systems. Specifically, one of the commenters suggested that we replace the reference to "electronic prescribing or electronic health records systems" with "health information technology platforms or other health care providers." The commenters asserted that this proposed change reflects the development of health information technology that may not be classified as an electronic health record system, but supports the free exchange of health information. These two commenters also suggested that we modify the condition at 42 CFR 1001.952(y)(3) to state that neither the donor nor the recipient may take any action to limit the interoperability of donated items or services and require that the modified condition be included as part of the written agreement condition at 42 CFR 1001.952(y)(6).

Another commenter suggested amending 42 CFR 1001.952(y)(3) by providing a non-exhaustive list of actions that would cause a donation not to satisfy this condition and by establishing a process for entities to provide the Department with information about potential abuses of the safe harbor. A representative of several health plans suggested modifying the safe harbor conditions to ensure that, in the context of health information exchange, the interoperability condition requires that all key stakeholders, including health insurance plans, have access to the health information exchange. The commenter suggested that we modify the interoperability condition at 42 CFR 1001.952(y)(2) to prohibit restrictions on the communication and exchange of data with any "covered entity" as defined 45 CFR 160.103.

Response: The current language in the regulatory text prohibits donors (or persons on the donor's behalf) from taking any action to limit or restrict the use, compatibility, or interoperability of donated items or services with other "electronic prescribing or electronic health records systems." The term "electronic prescribing or electronic health records systems" was intended to be broad in order to account for developments in the health information technology industry. Based on the commenters' suggestions it appears, however, that some have read this term more narrowly. This narrow reading is inconsistent with our intended meaning. We have always believed and continue to believe that an action taken by a donor (or on behalf of the donor) that limits the use, compatibility, or interoperability of donated items or services with any other health information technology may impede the free exchange of data and limit the ability of providers and suppliers to coordinate care, which is inconsistent with one of the goals of the safe harbor. Therefore, we are clarifying 42 CFR 1001.952(y)(3) by adding a parenthetical that includes a non-exhaustive list of some of the forms of technologies we believe are included within the meaning of the current regulatory language. We are not adopting the commenters' suggested edit as we do not believe that it is necessary in light of the clarification we have made. We also decline to modify 42 CFR 1001.952(y)(2) to prohibit restrictions on the communication and exchange of data with any covered entity as defined at 45 CFR 160.103. We believe that the existing condition at 42 CFR 1001.952(y)(3), which we have clarified in this final rule as including health information technology applications, products, or services, promotes interoperability with a variety of providers and suppliers, as well as other health care entities that may play a role in the coordination of care, including health plans that operate health

[3] ONC and CMS have subsequently published a "Strategy and Principles to Accelerate HIE" document. *http://www.healthit.gov/policy-researchers-implementers/accelerating-health-information-exchange-hie.*

information technology applications, products, or services.

We are not adopting the commenters' suggestion to modify the safe harbor to state that neither the donor nor the recipient may take any actions to limit the interoperability of the donated item or service. The condition at 42 CFR 1001.952(y)(3) requires the donor (or any person on behalf of the donor) to refrain from taking any action that limits or restricts the use, compatibility, or interoperability of the donated items or services. To the extent that a recipient takes an action on the donor's behalf to limit the use, compatibility, or interoperability of donated items or services, that donation would fail to qualify for protection under the safe harbor. Because we see no obvious reason for a recipient to take action to limit the use, compatibility, or interoperability of donated items or services other than at a donor's behest or as a condition of the donation, we believe that any action of this type by a recipient would be suspect. We are not making the suggested modification because the concern articulated by the commenters is already addressed by the existing regulatory language and the policies we are adopting in this final rule. Because we are not adopting the commenters' suggestion, we are not making any corresponding revisions to require that the recommended provision be incorporated into the written agreement condition at 42 CFR 1001.952(y)(6).

We are not implementing the suggestion that we provide in regulation text examples of actions that may cause a donation not to meet the condition of 42 CFR 1001.952(y)(3). Whether a donation meets the precise conditions of the safe harbor requires a case-by-case analysis and depends on the specific facts of the donation. We encourage the reporting of instances when the donor (or any other person on behalf of the donor) takes action to limit the interoperability of donated items or services, as we believe that investigation may establish that, when such lock-in has occurred, existing conditions of the safe harbor not have been met. Moreover, any action taken to achieve such a result could be evidence of intent to violate the anti-kickback statute.

Data Lock-in: Other Comments and Suggestions

Comment: One commenter objected to the use of the safe harbor to address the issue of data lock-in. The commenter contended that data lock-in may arise in response to legitimate concerns, such as Health Insurance Portability and Accountability Act of 1996 (HIPAA) privacy and security rules, liability issues, licensing requirements, and anti-trust issues. Further, according to the commenter, data lock-in conditions may cause uncertainty for donors because parties may not be able to determine whether a donation met these conditions until after donation.

Response: Nothing in this final rule is intended to prohibit legitimate actions taken to ensure that donated items and services appropriately protect data, including measures to ensure the privacy and security of health information data. We recognize that there may be appropriate security, privacy, and other business reasons to protect data. This final rule addresses only actions that inappropriately lock in data, for example locking in data to secure future referrals.

Comment: One commenter expressed support for preventing electronic health records data lock-in and the free exchange of data. However, the commenter did not agree that additional conditions designed to promote these goals would be effective. Instead, the commenter suggested that CMS adopt payment models that continue to foster care coordination activities.

Response: We appreciate the commenter's suggestion; however, changes to CMS payment models are outside the scope of this OIG rulemaking. We note that ONC and CMS in their Request for Information solicited input on options for improving several different CMS payment models to support better the adoption of interoperable electronic health record technology. 78 FR 14793, 14797 (Mar. 7, 2013).

Comment: Two commenters suggested data lock-in could be limited by requiring electronic health record software to be open or "open source." Both commenters asserted that open source software would limit data lock-in due to the transparent nature of open source software. In addition, it would lead to greater interoperability of electronic health record systems. One commenter also suggested that we require mandatory advance disclosure of the operational and business policies and practices associated with the electronic health record technologies. One commenter suggested that we adopt the e-DOS standard as certification criteria for electronic health records.

Response: We generally share the commenters' support for free exchange of health information, provided that there are appropriate protections for privacy and security. However, we are not adopting the commenters' recommendations because software certification criteria and standards are determined by ONC and are, therefore, outside the scope of this rulemaking.

3. Covered Technology

In the 2013 Proposed Rule, we noted that "we received questions concerning whether certain items or services . . . fall within the scope of covered technology under the electronic health records safe harbor." 78 FR 21314, 21319 (Apr. 10, 2013). There, we stated that "[t]he answer to such questions depends on the exact items or services that are being donated." *Id.* We referenced the discussion of our interpretation of the term "software, information technology and training services necessary and used predominantly" in the 2006 Final Rule. *Id.* We stated that "[w]e believe that the current regulatory text, when read in light of the preamble discussion, is sufficiently clear concerning the scope of covered technology . . . ." *Id.* Nonetheless, because we have received suggestions from stakeholders to modify the regulatory text of the electronic health records safe harbor to reflect explicitly this interpretation, we sought comments from the public regarding this issue. After considering the public comments with respect to this issue, we determined not to make any changes to the regulation text to address the scope of covered technology.

Comment: Several commenters stated that the regulatory text describing the scope of technology covered by the safe harbor, when read in light of the 2006 Final Rule preamble, is sufficiently clear. One of these commenters urged us not to revise the regulation in any way that might limit the scope of covered technology, limit the ability of donors and recipients in the design and selection of items and services, or create barriers to achieving interoperability. Other commenters agreed that the current definition of covered technology is appropriate, with two of these commenters suggesting that we revisit the definition in the future as health information technology evolves. Still other commenters asserted that the existing regulatory language can be interpreted to include "services that enable the interoperable exchange of electronic health records data;" thus, no revisions to the regulatory text are required. In contrast, one commenter suggested that we incorporate into the regulatory text the preamble language from the 2006 Final Rule where we discussed examples of items and services that would qualify for coverage under the safe harbor. Another commenter suggested that we revise the regulatory text to include as many examples of covered "software,"

information technology and training services" as possible while emphasizing that the list is not exhaustive.

Response: We agree that maintaining flexibility is important, particularly as health information technology evolves. We endeavor to avoid revisions to the regulation text that could inadvertently narrow the safe harbor, which is intended to promote the adoption of interoperable electronic health record technology. Moreover, our interpretation of what is covered by the safe harbor has not changed. As we stated in the 2013 Proposed Rule, whether specific items or services fall within the scope of covered technology under the safe harbor depends on the exact items or services that are being donated. 78 FR 21314, 21319 (Apr. 10, 2013). If the "services that enable the interoperable exchange of electronic health records data" are of the type that do not meet the requirements for covered technology (for example, because they include hardware, storage devices, or have core functionality other than electronic health records), they would not be eligible for protection under the safe harbor at 42 CFR 1001.952(y).

For these reasons, we are not revising the regulation text at 42 CFR 1001.952(y) to identify any specific types of items or services that may be donated if the other conditions of the safe harbor are satisfied. We are also not modifying the examples identified in the preamble discussion in the 2006 Final Rule. 71 FR 45110, 45151–2 (Aug. 8, 2006). The safe harbor continues to protect nonmonetary remuneration in the form of software, information technology and training services necessary and used predominantly to create, maintain, transmit, or receive electronic health records.

Comment: A few commenters requested clarification regarding whether third-party fees related to the exchange of health information, such as health information exchange (HIE) service charges for interconnectivity, are "covered technologies" under the safe harbor.

Response: The safe harbor protects only nonmonetary remuneration. Whether particular items or services, like interconnectivity services, can be donated under the safe harbor depends on the exact item or service that is being donated and whether the item or service is: (1) In the form of software, information technology and training services; and (2) necessary and used predominantly to create, maintain, transmit, or receive electronic health records. We caution, however, that the donation of items or services, including interconnectivity services that are eligible for donation, would not be protected if the recipient, the recipient's practice, or any affiliated individual or entity makes the receipt, amount or nature of the donated items or services a condition of doing business with the donor or if the donor determines the eligibility of a recipient or the amount or nature of the items or services to be donated in a manner that directly takes into account the volume or value of referrals or other business generated between the parties. *See* 42 CFR 1001.952(y)(4) and (5).

Comment: One commenter suggested that, in addition to maintaining as much flexibility as possible, we broaden the scope of the technology covered by the safe harbor to include software and services used for care coordination, quality measurement, improving population health, or improving the quality or efficiency of health care delivery among parties. The commenter noted that some of these items may be covered by the waivers issued in connection with the Medicare Shared Savings Program (MSSP); however, because those waivers extend only to parties participating in that program, protection for the donation of items or services that advance the Department's goal of encouraging the adoption of health information technology that supports public policy objectives is not available to other health care industry stakeholders. To advance these goals in a broader way, the commenter suggested that the safe harbor be expanded to include items potentially covered by the MSSP pre-participation waiver, such as electronic health information exchanges that allow for electronic data exchange across multiple platforms, data reporting systems (including all-payer claims data reporting systems), and data analytics (including staff and systems, such as software tools, to perform analytic functions). Another commenter suggested that we broaden the scope of technology covered by the safe harbor to include software separate from the certified electronic health record software as long as it is interoperable with the electronic health record software. The commenter gave as examples of such electronic health-records-associated components "patient portals that support patient engagement, direct and other standards-compliant means for secure patient information exchange between providers, solutions to support transition care, and tools that may assist in inter- and intra-patient matching." A third commenter urged us to consider a broader array of covered technologies, provided that they support policy goals such as reducing hospital readmissions and coordinated care across settings outside of traditional office settings, including telemonitoring and telemedicine. Another commenter suggested that we expand the protection of the safe harbor to cover "any additional items or services that will be required or helpful in meeting Stage 2 or Stage 3 requirements for [the EHR Incentive Programs]."

Response: As stated previously, whether specific items or services fall within the scope of covered technology under the safe harbor depends on the exact items or services that are being donated. Some of the particular items and services that may be included within the broad categories identified by the commenters may be eligible for donation. For example, if a particular software product related to transitions of care was necessary and used predominantly to create, maintain, transmit, or receive electronic health records, then it would be eligible for donation, provided that the donation met all of the other safe harbor conditions. As noted previously in this final rule, software is not required to be certified to ONC certification criteria in order to be donated under the electronic health records safe harbor. Thus, software that is separate from certified software may still be eligible for donation if it satisfies the definition of "interoperable" in the Note to paragraph (y) in 42 CFR 1001.952(y). To the extent that the commenters suggest that we expand the scope of the safe harbor to protect items or services that are not already eligible for donation, we note that revision of the safe harbor to include such items or services would be outside the scope of this rulemaking. In the 2013 Proposed Rule, with respect to the scope of technology potentially covered by the safe harbor, we sought input from the public regarding the singular issue of "whether the current regulatory text, when read in light of the preamble discussion, is sufficiently clear concerning the scope of covered technology." 78 FR 21314, 21319 (Apr. 10, 2013). With regard to whether the scope of the covered technology should be broadened, as opposed to clarified, we are mindful of the important issues raised by the commenters and may consider them in the future. We further note that, depending on the circumstances, some of the arrangements described by the commenters may fit in other safe harbors or may not implicate the anti-kickback statute.

Comment: One commenter suggested that we define "equivalent technology" for purposes of the condition in the safe

harbor that the donor of electronic health record technology may not have actual knowledge of, or act in reckless disregard or deliberate ignorance of, the fact that the recipient possesses or has obtained items or services equivalent to those being donated. This commenter also suggested that we prohibit a provider or supplier from seeking or accepting a donation before a certain period of time has elapsed since the receipt of a previous donation. Another commenter urged us to eliminate maintenance and service agreements from the scope of potentially protected donations under the safe harbor. In the alternative, the commenter suggested that we impose a restriction on the time period that donations of such services would be permitted. The commenter noted concerns that donors may use ongoing donations of maintenance and service agreements to lock in referrals from recipients. A commenter that urged us not to extend the availability of the safe harbor suggested that we prohibit the donation of all technology except interfaces for reporting of laboratory results.

Response: Although we appreciate the commenters' suggestions, we are not making the requested changes. We believe that the modifications to and clarifications of 42 CFR 1001.952(y) adopted in this final rule and the clarifications offered in this preamble address the concerns raised by these commenters.

Comment: One commenter asserted that the prohibition on donating equivalent technology currently included in the safe harbor locks physician practices into a vendor, even if they are dissatisfied with the technology, because the recipient must choose between paying the full amount for a new system and continuing to pay 15 percent of the cost of the substandard system. The commenter asserts that the cost difference between these two options is too high and effectively locks physician practices into electronic health record technology vendors.

Response: Although we appreciate the commenter's concern, we continue to believe that items and services are not "necessary" if the recipient already possesses the equivalent items or services. 71 FR 45110, 45123 (Aug. 8, 2006). As stated in the 2006 Final Rule, "the provision of equivalent items and services poses a heightened risk of abuse, [because] such arrangements potentially confer independent value on the recipient (*i.e.*, the value of the existing items and services that might be put to other uses) unrelated to the need for electronic health records technology." *Id.* Thus, we retain our policy to preclude safe harbor protection in instances when the donor has actual knowledge of, or acts in reckless disregard or deliberate ignorance of, the fact that the recipient possesses or has obtained equivalent items or services. We expect physicians would not select or continue to use a substandard system if it posed a threat to patient safety.

Comment: One commenter referenced the 2013 Proposed Rule's statement that "software or information technology and training services necessary and used predominantly for electronic health records purposes" included "information services related to patient care (but not separate research or marketing support services." 78 FR 21314, 21319 (Apr. 10, 2013). The commenter requested that we retract that statement and clarify that it is appropriate for health researchers to use data in electronic health records for research that is related to, for example, evidence-based medicine, population management, or other research, provided that the use complies with applicable Federal, State, and institutional requirements.

Response: We decline to retract our statement in the 2013 Proposed Rule. To promote adoption of electronic health records while minimizing the risk of abuse, the scope of items and services permitted to be donated under the safe harbor is limited to items and services in the form of software and information technology and training services that are "necessary and used predominantly to create, maintain, transmit, or receive electronic health records." Donations of software for research that is separate from clinical support and information services related to patient care are not consistent with the primary goals of the safe harbor.

The electronic health records safe harbor addresses only the donation of electronic health records items and services, not the use of data. Thus, the portion of the comment related to data use is outside the scope of this rulemaking. We note, however, that nothing in the safe harbor prohibits the use of data in electronic health record systems for research purposes (assuming the parties comply with all other applicable laws, including HIPAA privacy and security rules).

Comment: One commenter asked us to confirm that patient portals are within the scope of the technology potentially protected by the safe harbor.

Response: We are not certain what the commenter precisely means by "patient portals." Patient portals come in a variety of forms; the key to the safe harbor analysis is whether the specific item or service donated is: (1) In the form of software, information technology and training services; and (2) necessary and used predominantly to create, maintain, transmit, or receive electronic health records. As we stated in the 2006 Final Rule in response to a commenter's recommendation that the safe harbor specifically protect the provision of patient portal software that enables patients to maintain online personal medical records, including scheduling functions (71 FR 45110, 45125 (Aug. 8, 2006)), nothing in the safe harbor precludes protection for patient portal software if it satisfies all of the safe harbor conditions.

E. Comments Outside the Scope of Rulemaking

In addition to some of the comments noted above, we received several comments from stakeholders, including suggestions on policy changes, that are outside the scope of this rulemaking. For example, one commenter raised concerns about a private insurer's proposed fee schedule for laboratory services. Another commenter expressed a concern about "outrageous bills" the commenter received from a laboratory company. While we appreciate the commenters taking time to raise these concerns, we will not be addressing them as they are outside the scope of this rulemaking.

III. Provisions of the Final Regulations

For the most part, this final rule incorporates the proposed revisions from the 2013 Proposed Rule. Specifically, we update the provision under which electronic health records software is deemed interoperable by revising 42 CFR 1001.952(y)(2) to remove the phrase "recognized by the Secretary" and replace it with the phrase "authorized by the National Coordinator for Health Information Technology" and to replace the 12-month time frame for certification of electronic health records software with a requirement that the software be certified to an edition of the electronic health record certification criteria identified in the then-applicable version of 45 CFR part 170 (ONC's certification program). Second, we remove from the safe harbor the requirement at 42 CFR 1001.952(y)(10) related to electronic prescribing capability. Third, we extend the sunset date of the safe harbor to December 31, 2021 by modifying 42 CFR 1001.952(y)(13). Fourth, we limit the scope of protected donors to exclude laboratory companies. We are modifying 42 CFR 1001.952(y)(1)(i) to effectuate this change. And fifth, we are clarifying the condition at 42 CFR 1001.952(y)(3)

that prohibits a donor from taking any action to limit or restrict the use, compatibility, or interoperability of the donated items or services.

IV. Waiver of the Delay in the Effective Date

Ordinarily we provide a delay of at least 30 days in the effective date of a final rule after the date that the rule is issued. However, the 30-day delay in effective date can be waived if the rule grants or recognizes an exemption or relieves a restriction. We believe that it is appropriate to waive the 30-day delay in effective date for 42 CFR 1001.952(y)(13), which relieves a restriction on donations of electronic health records items and services. Specifically, this final rule amends 42 CFR 1001.952(y)(13) to extend the sunset date of the existing safe harbor from December 31, 2013 to December 31, 2021. Without a waiver of the requirement for a delayed effective date, the entire safe harbor will expire on December 31, 2013 and will not be available to protect any ongoing donation arrangements or new donations of electronic health records items and services made after December 31, 2013. By waiving the 30-day delay in effective date, the safe harbor will not expire, thereby allowing parties to continue utilizing the safe harbor to protect donations of electronic health records items and services. We stress, however, that donations of electronic health records items and services that occur between January 1, 2014 and the effective date of the remaining provisions of this final rule (March 27, 2014) will need to comply with all the conditions of the existing safe harbor. The waiver of the 30-day delay in effective date simply serves to maintain the status quo until the rest of this final rule becomes effective.

The 30-day delay in effective date can also be waived if the agency finds for good cause that the delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and reasons in the rule issued. We find that it is unnecessary to provide a 30-day delay in effective date for 42 CFR 1001.952(y)(13) because an earlier effective date simply allows parties to continue making donations under the existing electronic health records safe harbor; it does not impose any new requirements or restrictions on potentially affected parties. Moreover, we find that a 30-day delayed effective date for 42 CFR 1001.952(y)(13) is impracticable because it would cause the entire safe harbor to expire, thereby nullifying this final rule.

V. Regulatory Impact Statement

We have examined the impact of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (Sept. 30, 1993); Executive Order 13563 on Improving Regulation and Regulatory Review (Jan. 18, 2011); the Regulatory Flexibility Act (RFA) (Sept. 19, 1980, Pub. L. 96–354, codified at 5 U.S.C. 601 et seq.); section 1102(b) of the Act; section 202 of the Unfunded Mandates Reform Act of 1995 (Mar. 22, 1995; Pub. L. 104–4); Executive Order 13132 on Federalism (August 4, 1999); and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We believe this final rule does not reach the economic threshold for being considered economically significant and thus is not considered a major rule. It is not economically significant because it will not have a significant effect on program expenditures, and there are no additional substantive costs to implement the resulting provisions. The rule modifies an existing safe harbor, and the modifications would not impose significant additional costs on those seeking to use the safe harbor. Further, the donation of electronic health records items or services and the use of the safe harbor to protect such donations are entirely voluntary. In section II, we provide a detailed discussion and analysis of the alternatives considered in this final rule, including those considered for extending the sunset date of the electronic health records safe harbor, limiting the scope of protected donors, and tying the timeframe for the deeming provision to ONC's certification program. Finally, we received no public comments specific to the RIA set forth in the 2013 Proposed Rule.

This final rule updates (1) the provision under which electronic health records software is deemed interoperable; (2) removes the requirement related to electronic prescribing capability; (3) extends the safe harbor's sunset date to December 31, 2021; (4) limits the scope of protected donors to exclude laboratory companies; and (5) clarifies the condition that prohibits a donor from taking any action to limit or restrict the use, compatibility, or interoperability of the items or services. Neither this final rule nor the regulations it amends requires any entity to donate electronic health records items and services, but we expect these changes to continue to facilitate the adoption of electronic health record technology by eliminating perceived barriers rather than by creating the primary means by which this technology will be adopted.

The summation of the economic impact analysis regarding the effects of electronic health records in the ambulatory setting that is presented in the 2006 Final Rule still pertains to this final rule. 71 FR 45110 (Aug. 8, 2006). However, since the 2006 Final Rule, several developments have occurred to make us conclude that it is no longer necessary to retain a requirement related to electronic prescribing capability in the electronic health records safe harbor. These developments include the passage of two laws encouraging adoption of electronic prescribing and electronic health-records technology: (1) In 2008, Congress passed the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA), Public Law 110–275; (2) in 2009, Congress passed the Health Information Technology for Economic and Clinical Health (HITECH) Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Public Law 111–5. In addition, there has been an increase over the past few years in the rate of electronic health record-based electronic prescribing capabilities. *See, e.g.,* State Variation in E-Prescribing Trends in the United States—available at: *http://www.healthit.gov/sites/default/files/us_e-prescribingtrends_onc_brief_4_nov2012.pdf.*

As discussed in more detail in the preamble to the 2013 Proposed Rule, section 132 of MIPPA authorized an electronic prescribing incentive program (starting in 2009) for certain types of eligible professionals. The HITECH Act authorized CMS to establish the EHR Incentive Programs for certain eligible professionals, eligible hospitals, and critical access hospitals. Also, the HITECH Act required that eligible professionals under the EHR Incentive Programs demonstrate meaningful use of certified electronic health record technology, including the use of electronic prescribing. Specifically, the final rule for Stage 2 EHR Incentive Programs (77 FR 53968 (Sept. 4, 2012)) includes more demanding requirements for electronic prescribing and identifies

electronic prescribing as a required core measure. As a result, beginning in calendar year 2015, an eligible professional risks a reduction in the Medicare Physician Fee Schedule payment amount that will otherwise apply for covered professional services if they are not a meaningful electronic health record technology user for a reporting period during that year. Our intent is to withhold safe harbor protection from the donation of items or services that a potential recipient already owns, while protecting donation of items and services that advance the adoption and use of electronic health records. Lastly, according to ONC, electronic prescribing by physicians using electronic health record technology has increased from 7 percent in December 2008 to approximately 48 percent in June 2012. Furthermore, the rules recently published to implement Stage 2 of the EHR Incentive Programs continue to encourage physicians' use of electronic prescribing technology. *See* 77 FR 53968, 53989 (Sept. 4, 2012); 77 FR 54163, 54198 (Sept. 4, 2012). However, due to data limitations, we are unable to accurately estimate how much the electronic health records safe harbor has contributed to the increase in electronic prescribing. We believe, as a result of these legislative and regulatory developments advancing in parallel, the increase in the adoption of electronic prescribing using electronic health record technology will continue without making it necessary to retain the electronic prescribing capability requirement in the electronic health records safe harbor.

The RFA generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, certain non-profit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues below specific limits that range from $7.0 million to $35.5 million (depending on the type of entity in question) in any 1 year. Individuals and States are not included in the definition of a small entity. The Secretary has determined that this final rule would not have a significant economic impact on a substantial number of small entities. Therefore, the undersigned certifies that this rule will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, CMS defines a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. The Secretary has determined that this final rule would not have a significant economic impact on the operations of a substantial number of small rural hospitals.

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (codified at 2 U.S.C. 1531–1538) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under UMRA, agencies must assess a rule's anticipated costs and benefits before issuing any rule that may result in aggregate costs to State, local, or tribal governments, or the private sector, of greater than $100 million in 1995 dollars (currently adjusted to $141 million). This final rule imposes no mandates and, as a result, will have no consequential effect on State, local, or tribal government or on the private sector of $141 million or more.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a final rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. For the reasons stated earlier, this final rule will not have a substantial effect on State or local governments, nor does it preempt State law or have Federalism implications.

In accordance with Executive Order 12866, this final rule was reviewed by the Office of Management and Budget.

VI. Paperwork Reduction Act

The provisions in this final rule will not impose any new or revised information collection, recordkeeping, or disclosure requirements. Consequently, this rule does not need additional Office of Management and Budget review under the authority of the Paperwork Reduction Act of 1995.

List of Subjects in 42 CFR Part 1001

Administrative practice and procedure, Fraud, Grant programs—health, Health facilities, Health professions, Maternal and child health, Medicaid, Medicare, Social Security.

Accordingly, 42 CFR part 1001 is amended as set forth below:

PART 1001—[AMENDED]

■ 1. The authority citation for part 1001 continues to read as follows:

Authority: 42 U.S.C. 1302, 1320a–7, 1320a–7b, 1395u(j), 1395u(k), 1395w–104(e)(6), 1395y(d), 1395y(e), 1395cc(b)(2)(D), (E) and (F), and 1395hh; and sec. 2455, Pub. L. 103–355, 108 Stat. 3327 (31 U.S.C. 6101 note).

■ 2. Section 1001.952 is amended by revising paragraphs (y)(1)(i), (y)(2), (y)(3), and (y)(13), and removing and reserving paragraph (y)(10), to read as follows:

§ 1001.952 Exceptions.

* * * * *

(y) * * *

(1) * * *

(i) An individual or entity, other than a laboratory company, that provides services covered by a Federal health care program and submits claims or requests for payment, either directly or through reassignment, to the Federal health care program; or

* * * * *

(2) The software is interoperable at the time it is provided to the recipient. For purposes of this subparagraph, software is deemed to be interoperable if, on the date it is provided to the recipient, it has been certified by a certifying body authorized by the National Coordinator for Health Information Technology to an edition of the electronic health record certification criteria identified in the then-applicable version of 45 CFR part 170.

(3) The donor (or any person on the donor's behalf) does not take any action to limit or restrict the use, compatibility, or interoperability of the items or services with other electronic prescribing or electronic health records systems (including, but not limited to, health information technology applications, products, or services).

* * * * *

(10) [Reserved]

* * * * *

(13) The transfer of the items and services occurs, and all conditions in this paragraph (y) have been satisfied, on or before December 31, 2021.

* * * * *

Dated: September 10, 2013.

Daniel R. Levinson,

Inspector General.

Approved: November 14, 2013.

Kathleen Sebelius,

Secretary.

Part IV

Department of Education

34 CFR Part 200
Title I—Improving the Academic Achievement of the Disadvantaged; Migrant Education Program; Proposed Rule

DEPARTMENT OF EDUCATION

34 CFR Part 200

RIN 1810–AA99

[Docket ID ED–2013–OESE–0119]

Title I—Improving the Academic Achievement of the Disadvantaged; Migrant Education Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Secretary proposes regulations to implement the Migrant Student Information Exchange (MSIX), a nationwide, electronic records exchange mechanism mandated under title I, part C, of the Elementary and Secondary Education Act of 1965, as amended (ESEA). As a condition of receiving a grant of funds under the Migrant Education Program (MEP), each State educational agency (SEA) would be required to collect, maintain, and submit minimum health and educational information to MSIX within established time frames. The proposed regulations would facilitate timely school enrollment, placement, and accrual of secondary course credits for migratory children and help the Department determine accurate migratory child counts and meet other MEP reporting requirements.

DATES: We must receive your comments on or before February 25, 2014.

ADDRESSES: Submit your comments through the Federal eRulemaking Portal or via postal mail, commercial delivery, or hand delivery. We will not accept comments by fax or by email. To ensure that we do not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

- *Federal eRulemaking Portal:* Go to *www.regulations.gov* to submit your comments electronically. Information on using Regulations.gov, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under "Are you new to the site?"
- *Postal Mail, Commercial Delivery, or Hand Delivery:* If you mail or deliver your comments about these proposed regulations, address them to Lisa C. Gillette, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E313, Washington, DC 20202–6135.

Privacy Note: The Department's policy is to make all comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at *www.regulations.gov*. Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Lisa C. Gillette, U.S. Department of Education, 400 Maryland Avenue SW., Room 3E313, Washington, DC 20202–6135. Telephone: (202) 260–1426 or by email: *lisa.gillette@ed.gov*.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Invitation to Comment: We invite you to submit comments regarding these proposed regulations. To ensure that your comments have maximum effect in developing the final regulations, we urge you to identify clearly the specific section or sections of the proposed regulations that each of your comments addresses and to arrange your comments in the same order as the proposed regulations. We specifically request public comment on issues raised in our discussion of records of secondary school-aged migratory children in proposed section 200.85(b)(3)(i)(B) and procedures for MSIX data correction in proposed section 200.85(e).

We invite you to assist us in complying with the specific requirements of Executive Orders 12866 and 13563 and their overall requirement of reducing regulatory burden that might result from these proposed regulations. Please let us know of any further ways we could reduce potential costs or increase potential benefits while preserving the effective and efficient administration of the Department's programs and activities.

During and after the comment period, you may inspect all public comments about these proposed regulations by accessing Regulations.gov. You may also inspect the comments in person in Room 3E315, 400 Maryland Avenue SW., Washington, DC, between 8:30 a.m. and 4:00 p.m., Washington, DC time, Monday through Friday of each week except Federal holidays. Please contact the person listed under **FOR FURTHER INFORMATION CONTACT.**

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for these proposed regulations. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT.**

Background

The educational needs of children of migratory agricultural workers and migratory fishers present unique challenges for educators and our Nation's schools. Migratory workers travel from community to community in search of temporary and seasonal work. Given the nature of their employment, migratory workers and their families often settle in a single community for a short period of time. One consequence of this lifestyle and mobility is that the children of migratory workers frequently enroll in new schools and school districts without adequate, and in many cases any, documentation of their educational and health history.

In section 1308(b)(2) of the ESEA, Congress directed the Secretary, in consultation with the States, to "ensure the linkage of migrant student record systems for the purpose of electronically exchanging, among the States, health and educational information regarding all migratory students." The statute specifies that the linkage of migrant student records shall occur in a cost-effective manner, utilizing those systems that States used before or developed after enactment of the latest reauthorization of the ESEA in the No Child Left Behind Act in January 2002. Congress further directed the Secretary, in section 1308(b)(2) of the ESEA, to seek public comment on (1) the "minimum data elements" (MDEs) that each State receiving MEP funds would be required to collect for purposes of the electronic transfer of migratory student information, and (2) the requirements that States must meet for immediate electronic access to this information.

In addition to these specific directives, section 1304(b)(3) of the ESEA requires each State that applies for a grant of MEP funds to include in its application a description of how it will use MEP funds to promote interstate and intrastate coordination of services for migratory children. The description must include how the State will provide for educational continuity through the timely transfer of pertinent school records when children move from one school to another either during or outside of the regular school year. All States that receive MEP funds do so on the basis of consolidated State applications authorized in section 9302 of the ESEA. However, the Department requires all SEAs to implement the statutory provisions governing program design and operation that otherwise

would be required of their individual program applications. See 67 FR 35967, 35970–71 (May 22, 2002).

In early 2000, the Department began consulting extensively with migrant education stakeholders to identify what information is essential to the continuity of services for migratory children. These consultations included State officials, migrant program administrators and educators, guidance counselors, registrars, and other school district officials, migrant health officials, and other users of student data.

On May 28, 2002, the Department published for public comment in the **Federal Register** (67 FR 36862–69) a notice of proposed requirements and minimum data elements for the electronic transfer of this information. Since then, we have spent considerable time and attention consulting with migrant education stakeholders and addressing their suggestions and concerns about the proposed MDEs and how MSIX would operate. (Summaries of the Department's consultative activities are contained in question and answer number 8 of the supporting statements for the 2007 and 2011 MDE Paperwork Reduction Act submissions.)

The Department has learned through this extensive consultative process that the lack of health and educational information for migratory children may cause delays in student enrollment, lead to inappropriate classroom and course placements, complicate or hinder the accrual of course credits needed for high school graduation, and result in duplicate services, such as multiple assessments and immunizations. As such, we determined that the primary purpose of MSIX should be to provide migrant education and other school personnel with the data essential to facilitate—

(1) The timely enrollment of all school-aged migrant children;

(2) The placement of migratory students in the appropriate grade level and courses of instruction; and

(3) For secondary students, the accrual of course credits needed to graduate from high school.

Further background on the Department's early consultation with migrant education stakeholders may be found in the Office of Migrant Education's full report to Congress in 2003, *Education of Migratory Children: Maintenance and Transfer of Health and Educational Information for Migrant Students by the States*, which is available at *www2.ed.gov/admins/lead/account/reporttocongress.pdf*.

School staff at all levels need basic enrollment data, and typically need proof of immunizations, to place students in the correct grade or course in a timely manner. Migrant educators have stressed, however, that students in secondary grades have the greatest need for the timely exchange of records because they have much less time to make up for mistakes made when school officials lack information needed for proper grade placement, course selection, and accrual of course credits required for high school graduation. As such, educators suggested that the migrant record-linking mechanism have a "special focus" on exchanging information needed for full and partial credit accrual for mobile secondary students.

We also learned through consultations that gaining access to student records in a timely manner generally is more of a concern for students who make interstate, rather than intrastate, moves. This is because the new school district in another State is much less likely than a new school district in the same State to have ready access to information in the former district's records, and thus the new district in another State is far less able to avoid critical delays in the transfer of necessary information. In many cases, however, the same problem exists when students make an intrastate move because district officials do not always have ready access to student-level data from another district within the State. In both cases, the problem is exacerbated for students who move during the summer, when many migrant education programs are conducted, because many of the schools that those students last attended, and from which student records would need to be gathered and transmitted, are closed.

Through our continued consultations with migrant education stakeholders, we have also identified MDEs that would facilitate enrollment, grade and course placement, and accrual of secondary school course credits for migratory students. We published a notice of proposed information collection requests relating to the MDEs in the **Federal Register** on May 30, 2007 (72 FR 29994), and the Office of Management and Budget (OMB) approved the collection of 66 MDEs on November 27, 2007, under OMB Approval Number 1810–0683.

On August 20, 2010, we published in the **Federal Register** (75 FR 51449) a second notice of proposed information collection requests to add five new data elements to the set of MDEs collected and exchanged through MSIX. On January 30, 2011, OMB approved the revision and extended the expiration date of this information collection to January 31, 2014. After additional public comments, on March 30, 2011, OMB approved minor, non-substantive modifications to the collection, which now contains 71 MDEs. As discussed elsewhere in the Paperwork Reduction Act section of this notice, we are publishing a third notice of proposed information collection requests for MSIX with these proposed regulations.

MSIX is a system in which SEAs upload the required MDEs from their own State student record systems into a single data repository where information on each migrant student is maintained, organized, and compiled. MSIX uses a Web-based application that allows stakeholders with the appropriate security clearance to access the system via a Web browser. Using the required MDEs, MSIX generates a "Consolidated Migrant Student Record." It is used to promote proper enrollment, grade and course placement, and accrual of secondary school course credits for any identified migratory child by SEAs, their local operating agencies—that is, local educational agencies (LEAs) and other public or nonprofit private agencies that receive a subgrant of MEP funds—and those LEAs, sometimes known as "non-project LEAs," that do not receive subgrants of MEP funds.

The Department started collecting data from participating SEAs on September 28, 2007, and MSIX is now fully operational. At present, State use of MSIX is voluntary. As of April 2013, 46 of the 47 States participating in the MEP, as well as the contractor that operates the program through a bypass arrangement under section 1307 of the ESEA for eligible migratory children in the three States that do not participate in the MEP, have voluntarily executed both the MSIX Interconnection Agreement and MSIX Interconnection Security Agreement, which is a precondition for using MSIX under the Computer Security Act of 1987 (Pub. L. 100–235), the Information Technology Management Reform Act of 1996 (Pub. L. 104–106), OMB Circular A–130 Appendix III, and National Institute of Standards and Technology Special Publication 800–47. These States are now using MSIX to electronically transfer and receive migrant student data that apply to 99 percent of the Nation's migrant children found eligible for the MEP.

Under these proposed regulations, and consistent with sections 1304(b)(3) and 1308(b)(2) of the ESEA, as a condition of receiving a grant of MEP funds, an SEA would be required to collect, maintain, and submit to MSIX the MDEs approved by the Secretary within the timeframes established in final regulations. In addition, each SEA

receiving MEP funds would be required to obtain the MDEs both from their MEP local operating agencies and from their non-project LEAs.

We note finally that, in addition to its role in exchanging information among States and creating Consolidated Migrant Student Records for enrollment, placement, and credit accrual purposes, MSIX may also be used to produce national data on the migrant population. For further information, see the description of MSIX objectives at *www2.ed.gov/admins/lead/account/recordstransfer.html*. In particular, the Department plans to use MSIX to provide stakeholders with census data and statistics on the national migrant population and to generate accurate child counts under section 1303(e)(1) of the ESEA. After all phases of MSIX data submission have been completed, we also plan to use statistical data from MSIX to help meet reporting requirements related to the national migrant child population.

Summary of Proposed Changes

These proposed regulations would help ensure that health and educational records of migratory children are available promptly for school enrollment, grade and course placement, and credit accrual purposes, and for producing national statistical data on the migrant population, by requiring each SEA that receives a grant of MEP funds to—

- Collect, maintain, and submit current and updated MDEs for eligible migratory children to MSIX within established timeframes;
- Ensure that all data submitted to MSIX are accurate and complete and that appropriate safeguards are in place to protect the integrity, security, and confidentiality of Consolidated Migrant Student Records in MSIX;
- Establish procedures for using, and requiring each of its subgrantees to use, Consolidated Migrant Student Records in MSIX; and
- Establish procedures for MSIX data correction by parents, guardians, and migratory children.

Significant Proposed Regulations

We discuss substantive issues under the sections of the proposed regulations to which they pertain. Generally, we do not address proposed regulatory changes that are technical or otherwise minor in effect.

Section 200.81 Program definitions

Statute: The statute does not define "Consolidated Migrant Student Record," "Migrant Student Information Exchange (MSIX)," "Minimum Data Elements (MDEs)," "MSIX Interconnection Agreement," or "MSIX Interconnection Security Agreement."

Current Regulations: The current regulations do not define "Consolidated Migrant Student Record," "Migrant Student Information Exchange (MSIX)," "Minimum Data Elements (MDEs)," "MSIX Interconnection Agreement," or "MSIX Interconnection Security Agreement."

Proposed Regulations: The proposed regulations would define "Consolidated Migrant Student Record" as the MDEs for a migratory child that have been submitted by one or more SEAs and consolidated into a single, uniquely identified record available through MSIX. The proposed regulations would define "Migrant Student Information Exchange (MSIX)" as the nationwide system for linking and exchanging specified health and educational information for all migratory children in accordance with section 1308(b)(2) of the ESEA. The proposed regulations would define "Minimum Data Elements (MDEs)" to mean the health and educational information for migratory children that the Secretary requires each SEA that receives an MEP grant to collect, maintain, submit to MSIX, and use. The proposed regulations would define "MSIX Interconnection Agreement" to mean the agreement between the Department and an SEA that governs the interconnection between the State student records system and MSIX. The proposed regulations would define "MSIX Interconnection Security Agreement" to mean the agreement between the Department and an SEA that specifies the technical and security requirements for establishing, maintaining, and operating the interconnection between the State student records system and MSIX.

Reasons: These definitions are needed to clarify the meanings of basic terms used in these proposed regulations for implementing the nationwide system for the linkage and exchange of migrant student records established under section 1308(b)(2) of the ESEA.

Section 200.84 Responsibilities for Evaluating the Effectiveness of the MEP and Using Evaluations To Improve Services to Migratory Children

Statute: Section 1304 of the ESEA requires each grantee to evaluate the effectiveness of MEP projects using measurable program goals and outcomes.

Current Regulations: Current § 200.84 specifies the responsibilities of SEAs for evaluating the effectiveness of the MEP. Current § 200.85 identifies the responsibilities of SEAs and local operating agencies for improving services to migratory children.

Proposed Regulations: The proposed regulations would revise the heading for § 200.84 as set forth above and make technical changes to this proposed section. We would designate the current text of § 200.84 (concerning the responsibilities of SEAs for evaluating the effectiveness of the MEP) as § 200.84(a) and redesignate the current text of § 200.85 (concerning the responsibilities of SEAs and local operating agencies for improving services to migratory children) as new § 200.84(b). We would not make any substantive changes to the text of current § 200.84 and § 200.85; we would make technical changes to the text of current § 200.85 by deleting the introductory phrase and clarifying in proposed § 200.84(b) that the evaluation under paragraph (a) is carried out by the SEA. The redesignation of current §§ 200.84 and 200.85 is needed to create space for the proposed MSIX regulations in 34 CFR part 200, subpart C.

Section 200.85 Responsibilities of SEAs for the Electronic Exchange Through MSIX of Specified Health and Educational Information of Migratory Children

Statute: Section 1308(b)(2) of the ESEA requires the Secretary, in consultation with the States, to ensure the linkage of migrant student records systems for the purpose of States exchanging health and educational information about all migratory students and to determine the MDEs that each State receiving MEP funds shall collect and maintain for this purpose.

Current Regulations: Current § 200.85 clarifies the statutory responsibilities of an SEA receiving MEP funds to use evaluation results to improve services provided to migratory children.

Proposed Regulations: As described in our discussion of proposed § 200.84, we would move the text of current § 200.85 ("Responsibilities of SEAs and operating agencies for improving services to migratory children") to new § 200.84(b). We would replace current § 200.85 with a new § 200.85, "Responsibilities of SEAs for the electronic exchange through MSIX of specified health and educational information of migratory children," and the new regulations would address the following:

MSIX State record system and data exchange requirements. Proposed § 200.85(a) provides that as a condition of receiving a grant of MEP funds, an SEA would be required to collect, maintain, and submit to MSIX the

MDEs, and otherwise exchange and use information on, migratory children in accordance with all of the data submission and other requirements in proposed § 200.85. Failure of an SEA to do so would constitute a failure under section 454 of the General Education Provisions Act, 20 U.S.C. 1234c, to comply substantially with a requirement of law applicable to the funds made available under the MEP.

Reasons: We recognize that at this time the various State student-information systems do not uniformly contain all the information that the Department has determined is needed to support the purposes and goals of MSIX. Likewise, although MSIX has been operational since 2007 and nearly all States currently participate, SEAs still do not uniformly submit and use MSIX data in a manner that would most benefit migratory children. Proposed § 200.85(a) would ensure that SEAs participate fully in MSIX so that it can fulfill its principal statutory purpose—to enable school personnel throughout the Nation to quickly access data needed to make proper educational decisions about any migratory child who enrolls in school. It would also clarify that the Secretary may take appropriate enforcement action if an SEA fails to comply with any of these proposed requirements.

We note that under the proposed regulations, a State would not be required to maintain a separate migrant student records system and could use any statewide or local system that contains the necessary information on migratory children. While the proposed regulations would require an SEA to collect, maintain, and submit to MSIX the MDEs required by the Secretary and use Consolidated Migrant Student Records, they would not otherwise require any change in an SEA's approach to student data systems.

MSIX data submission requirements. Proposed § 200.85(b) sets forth requirements for the content and timing of an SEA's start-up and subsequent data submissions to MSIX.

General. Under proposed § 200.85(b)(1), an SEA that receives a grant of MEP funds would be required to submit to MSIX, within the timelines for start-up and subsequent data submissions contained in proposed § 200.85(b)(2) and (b)(3), the MDEs applicable to a migratory child's age and grade level that the Secretary has determined are needed to implement MSIX. We note that these proposed data submission requirements would apply to any migratory child whom the SEA considered eligible for MEP services in accordance with § 200.89(c). This would include not only pre-school and K–12 migratory children enrolled in public schools, but also those who are home-schooled or enrolled in non-public schools because, as they migrate, these home-schooled or non-public school children may move into and out of public schools, where their private school or home-school records would be needed for enrollment and placement purposes. The proposed data submission requirements would apply also to secondary school-aged children who are not enrolled in school at all, known as out-of-school youth or "OSY," whom the SEA had determined to be eligible for MEP services. Applying these proposed requirements to all of these migratory children will ensure that demographic, educational, health, and other information will be available promptly upon initial or subsequent school enrollments.

Reasons: Proposed § 200.85(b)(1) would establish a requirement that SEAs must submit electronically to MSIX those MDEs that the Secretary designates. For the convenience of the reader, we have appended to this notice a list of the 71 MDEs currently collected by the Secretary under OMB Control Nos. 1875–0240, 1810–0662, and 1810–0683, as well as one new MDE identified in the Paperwork Reduction Act section of this notice. As discussed in the Background and Paperwork Reduction Act sections of this notice, we have consulted extensively with MEP stakeholders and believe that these MDEs reflect the minimal information needed to ensure the proper enrollment, grade and course placement, and accrual of secondary course credits (including credit for any courses taken for college credit) for migratory children. The Secretary would continue to consult with MEP stakeholders in connection with any future changes to the MDEs collected for submission to MSIX.

While the majority of MDEs, such as name, date of birth, qualifying arrival date, etc., apply to all migratory children, some of the required MDEs apply only after a child reaches a certain age or grade level. For example, depending on their grade level, primary and middle school children may not have certain assessments, nor will the course title and type of information that is required for secondary school students apply to them. Because State policies vary regarding the ages and grade levels at which these requirements come into play, we are not proposing to regulate precisely which MDEs an SEA must submit to MSIX for a migratory child. Rather, under the proposed regulations, SEAs would need to determine which MDEs are applicable to the child's age and grade level in accordance with State policy and submit those MDEs to MSIX as required under this section. The Department would issue non-regulatory guidance on this issue as needed.

Start-up data submissions. Under proposed § 200.85(b)(2), no later than 90 calendar days after the effective date of the final regulations, an SEA would be required to collect and submit to MSIX each of the MDEs required by the Secretary, as described in paragraph (b)(1) of this section, applicable to the child's age and grade level. An SEA would do so for every migratory child whom the SEA considered eligible for the MEP under § 200.89(c) within one year preceding the effective date of the final regulations. An SEA would have to collect and submit MDEs for a migratory child whether or not the child has a current Certificate of Eligibility under § 200.89(c) at the time the SEA makes its start-up data submission.

Reasons: Proposed § 200.85(b)(2) would ensure that by a specified date MSIX is fully populated with MDEs for migratory children whom SEAs have already determined are eligible for the MEP. The section would specify the group of migratory children covered under an SEA's start-up data submission as well as the content and timeframe of those submissions. We believe that 90 days is a reasonable period of time for SEAs to locate and submit the required MDEs to MSIX given that the proposed requirement applies only to those children considered eligible for the MEP within the preceding year, and that many SEAs would have already submitted some or all of the required MDEs by the time the final regulations would take effect. With regard to the administrative effort required for this proposed requirement, we note that the SEA would not have to ascertain whether the child is still resident in the State or otherwise eligible for the program at the time of this data submission.

As noted in the Background section of this notice, MSIX has been operational since 2007 and, accordingly, many SEAs have already submitted most of the MDEs approved under the Department's information collection (OMB Approval Number 1810–0683) for their States' migratory children. For purposes of the start-up data submissions required under these proposed regulations, SEAs would not be required to resubmit to MSIX any MDEs they have already submitted. However, a small number of SEAs have not yet submitted any data to MSIX, and those that have done so may not have submitted all of the

required data, particularly the additional MDEs added in 2011. (Of course, none of the SEAs has submitted the new MDE identified in the Paperwork Reduction Act section and appendix of this notice.).

We note also that the Department initially collected MDEs in three phases, covering demographic data collected in Certificates of Eligibility, assessments, and course history for secondary students. However, MSIX has since eliminated the phased submission of MDEs, and there is no provision for phased submission of MDEs under the start-up or subsequent data submissions required under these proposed regulations.

This means, for example, that SEAs would be required to collect and submit to MSIX in their start-up submissions the assessment and course history data (applicable to the child's age and grade level) located in the State for children for whom the SEA may have previously submitted only demographic data. We propose to limit the start-up submission requirement to data for children considered eligible within the year preceding the effective date of the final regulations because of the added burden some SEAs would incur if they had to go back beyond one year in order to locate and collect assessment and course history data for these children from LEAs and non-migrant databases in the State.

Subsequent data submissions.

Newly documented migratory children. For every migratory child for whom an SEA documents eligibility for the MEP on or after the effective date of these regulations, proposed § 200.85(b)(3)(i)(A) would require the SEA to collect and submit to MSIX the MDEs required under paragraph (b)(1) within ten working days of documenting the child's eligibility for the MEP under § 200.89(c). This requirement would apply when an SEA determines that a migratory child has made a qualifying move and documents the child's eligibility on a Certificate of Eligibility; it would not apply when an SEA subsequently verifies that a previously identified migratory child is still a resident in the State. Unless a child is secondary school-aged, an SEA would not be required under proposed § 200.85(b)(3)(i)(A) to collect and submit MDEs in existence before the SEA's documentation of the child's eligibility for the MEP.

If the newly documented migratory child is secondary school-aged (whether or not the child is currently enrolled in school), proposed § 200.85(b)(3)(i)(B) would require an SEA to collect and submit to MSIX MDEs from the most recent secondary school in that State attended previously by the child, if any, and also to notify MSIX within 30 calendar days if one of its local operating agencies obtains records from a secondary school attended previously by the student in another State.

End of term submissions. Proposed § 200.85(b)(3)(ii) provides that within 30 calendar days of the end of the fall, spring, summer, and intersession terms, an SEA must collect and submit to MSIX all updates to MDEs and all newly available MDEs for migratory children who were eligible for the MEP during the term and for whom the SEA previously submitted data to MSIX. (If the SEA has not previously submitted data to MSIX for a particular migratory child to be included in an end of term submission, then the submission would fall under the timeframes and other specific requiremenis of paragraph (b)(2)(start-up data submissions) or (b)(3)(i) (newly documented migratory children).) Note that this proposed end of term submission requirement would apply even if the migratory child is no longer enrolled in school at the end of the term so long as the child was eligible for the MEP sometime during the term.

In addition, when a migratory child's MEP eligibility expires before the end of a school year, the proposed regulations would require an SEA to submit to MSIX all MDE updates and newly available MDEs for the child through the end of the school year in which the child is enrolled. Likewise, an SEA would be required to submit all MDE updates and newly available MDEs for any child who continues to receive MEP-funded services under section 1304(e) of the ESEA (continuation of services) after expiration of the child's eligibility for the MEP.

Change of residence submissions. Proposed § 200.85(b)(3)(iii) would require that within four working days of the date that MSIX notifies an SEA that a migratory child has changed residence to a new school district within the State or is newly documented as a migratory child in another State, the SEA must submit to MSIX all MDE updates and all MDEs that have become newly available to the SEA or one of its local operating agencies since the SEA's last data submission to MSIX for the child. If the MDEs are not available to the SEA or local operating agency when the SEA receives a change of residence notice from MSIX, the SEA would need to submit the MDEs to MSIX within four working days of the date that the SEA or its local operating agency has the MDE.

Proposed § 200.85(b)(3) would require an SEA to comply with specified timelines for subsequent data submissions throughout the entire calendar year whether or not local operating agencies or LEAs in the State are closed for summer or intersession periods.

Reasons: Proposed § 200.85(b)(3) is needed to establish reasonable and definite timeframes within which SEAs must submit MDEs to MSIX after their start-up data submissions. MSIX will transmit a migratory child's Consolidated Migrant Student Record immediately upon request of a local operating agency or non-project LEA. However, MSIX can meet its intended purpose of facilitating proper enrollment, grade and course placement, and credit accrual for migratory children only if the information in MSIX is complete, accurate, and current. This means that SEAs must submit new, updated, and newly available MDEs, including certain prior secondary school records, for migratory children within these timeframes.

We note, however, that these proposed timeframes represent the maximum amount of time that an SEA may take to submit MDEs to MSIX, not an ideal practice. For example, most States that have large migrant populations currently upload data to MSIX nightly; others have organized their systems to update MSIX whenever the value for an MDE has changed. We encourage SEAs to follow these practices and submit available data as promptly as possible so that school officials will have access to the most up-to-date information for enrolling, placing, and accruing credits for migratory children.

Newly documented migratory children. Section 200.89(c)(1) of the current regulations requires an SEA and its local operating agencies to use the Certificate of Eligibility form established by the Secretary to document the State's determination of the eligibility of migratory children for the MEP. A consensus was reached during the Department's MSIX consultations with SEAs and other MEP stakeholders that an SEA could be expected to submit a migratory child's MDEs to MSIX within ten working days of the date that the SEA documents under § 200.89(c)(1) that the child is eligible for the program. We believe that this timeframe appropriately balances the need for local operating agencies and non-project LEAs to have access to data as quickly as possible for enrollment, grade and course placement, and credit accrual purposes with fiscal and administrative

constraints faced by SEAs and local operating agencies that would have to respond to requests for such data.

In particular, experience suggests that although migratory children could move at any time, newly documented migratory children are unlikely to move again within ten working days. We recognize that the ten working-day starting point will vary depending on an SEA's process for approving and accepting a child's Certificate of Eligibility. Regardless of the process an SEA uses to make this determination, however, we agree with MEP stakeholders that ten working days from the date that an SEA documents a child's eligibility for the MEP should allow sufficient time for the SEA to gather and submit the necessary MDEs to MSIX. We take this position because, except for secondary school-aged individuals, proposed § 200.85(b)(3)(i)(A) would require an SEA to collect and submit to MSIX only MDEs that exist at the time the SEA documents the child's eligibility for the MEP.

We agree with the MEP stakeholders who have advised us consistently over the years that it is secondary school-aged students who are most adversely affected when information about their prior coursework and assessments is not available promptly after they migrate to a new area. In order to address this problem, we propose to require an SEA to collect and submit to MSIX those MDEs that were gathered prior to documentation of MEP eligibility for migratory children who previously attended secondary school in the same State.

In these cases, proposed § 200.85(b)(3)(i)(B) would require an SEA to collect and submit MDEs from the most recent secondary school in that State attended previously by the newly documented migratory child, if any. We are proposing this requirement so that when the migratory child makes a qualifying move, the new State or school district will have more complete data on the student's high school record for enrollment, course placement, and credit accrual purposes than it would have if the SEA submitted only data that came into existence in the State after the date it documented the child as eligible for the MEP.

We specifically invite public comment on our expectation that MDEs from the student's most recent secondary school in the State would contain MDEs from any secondary school in the same State in which the student previously enrolled.

For a migratory child who was not previously documented as eligible for the MEP in that State, the proposed regulations do not require an SEA to submit MDEs for the period prior to the new documentation. As such, a State that newly documents the eligibility of a child who previously attended secondary school in another State, but who was never identified as eligible for the MEP in that other State, would not be able to obtain the child's previous secondary school records from MSIX.

In these circumstances, we are proposing in § 200.85(b)(3)(i)(B)(2) to require an SEA (in State A) to notify MSIX within 30 calendar days if one of its local operating agencies obtains secondary school records from another State (State B) so that when the migratory child moves again, the new district can use MSIX to quickly locate the child's prior coursework and other secondary school records. We are not proposing to require the SEA of State B to transfer a student's previous secondary school records to State A because of the added administrative burden that would be associated with students who were never identified as migratory in State B, particularly as we understand that many of these transfers occur in summer or intercession months when school districts are closed. We also believe that, provided a student remains enrolled for an adequate period, the LEA in State A where a student transfers will eventually incorporate any prior secondary school course placements from State B into the student's records in State A, and that the SEA in State A will submit those MDEs to MSIX under the end of term submissions, described below.

We specifically ask for public comment as to whether these proposed regulations address adequately the problem of obtaining course placement records of secondary school-aged migratory children in a timely manner without overly burdening MEP participants.

End of term submissions. MEP stakeholders also generally agreed that, for children already identified in MSIX, 30 calendar days from the end of a school term (including summer and intersession terms) was a reasonable timeframe for an SEA to update a child's MSIX record and provide any newly available MDEs, such as State assessment data. Here again, we realize that a child could move at any time before or after the end of the term. However, the proposed regulations in § 200.85(b)(3)(iii) would call for a much faster, four-working day timeframe for submitting MDEs when MSIX notifies an SEA that a child has been identified in another location that seeks information from MSIX. As such, we believe that the 30-day timeframe for end of term submissions in proposed § 200.85(b)(3)(ii) reflects an appropriate balance between the need for MSIX to be able to provide current and accurate records and the need for SEAs, local operating agencies, and non-project LEAs to manage their staff-time and workloads.

By proposing to require SEAs to update and provide newly available MDEs to MSIX at the end of each term even when a migratory child's MEP eligibility expires before the term or school year has ended, the proposed regulations would help ensure that MSIX has available the most complete and up-to-date information should the child again become eligible for the MEP based on a subsequent move to a new location. Without these requirements, there would be a gap in MSIX data for the period between expiration of the child's eligibility and the submission of updated data to MSIX if the child is documented as eligible again in a new location. We believe that this approach is more efficient than relying solely on the SEA's responsibility under proposed § 200.85(b)(3)(iii) to submit MDEs within four working days of learning from MSIX that the child has been identified as migratory in another location. For similar reasons, the proposed regulations would require an SEA to update MDEs during any period of time in which a migratory child whose eligibility has expired continues to receive MEP services under section 1304(e) of the ESEA.

Change of residence submissions. Once an SEA has documented the MEP eligibility of a migratory child and submitted the MDEs to MSIX, MSIX thereafter may notify the SEA when that child has been newly documented as eligible for the MEP in another State or has changed residence to a new local operating agency within the same State. In these circumstances, proposed § 200.85(b)(3)(iii)(A) would require the SEA to submit to MSIX, within four working days of receipt of a change of residence notification from MSIX, updated MDEs that have become available to the SEA or its local operating agencies since the SEA's last submission of MDEs for the child. While we recognize that this is a very short timeframe, MEP and school personnel in the new State or district need critical information on the most mobile migratory children as soon as possible to allow them to make appropriate decisions regarding enrollment, grade and course placement, and accrual of secondary course credits.

We note that an SEA would be required under proposed

§ 200.85(b)(3)(ii) to submit updated and newly available MDEs to MSIX within 30 days of the end of the most recent school term in which the child was enrolled. While this provision would help keep MSIX up to date for migratory children who have not yet moved again, it would not meet the needs of children who have already migrated to a new school district, where school officials and staff need records from the former school district as quickly as possible.

Proposed § 200.85(b)(3)(iii)(B) recognizes that an SEA or local operating agency may not be able to submit new or updated MDEs for a child at the time the SEA receives a change of residence notification from MSIX because the information is not yet available. For example, a State or local operating agency may not have a child's scores for State reading and mathematics assessments for some time after the child has already migrated to a new State or school district. In these cases, the proposed regulation would require an SEA to submit the new or updated MDEs to MSIX within four working days of the date that the SEA or one of its local operating agencies obtains the MDEs. By this we mean that the information has been processed by the local school district, other local operating agency, or other responsible party, such as a contractor for the SEA, and could be collected by the SEA. Without such a provision, SEAs would be under no obligation to submit to MSIX those MDEs that an SEA or one of its local operating agencies obtains after the standard, four-day submission period has lapsed.

Under proposed § 200.85(b)(3), the fact that a school district or other local operating agency is closed for the summer (or other vacation period) would not relieve an SEA of its obligation to collect and submit MDEs to MSIX that are available to one of its local operating agencies. Allowing an SEA to defer submission of MDEs until after the child's district or other local operating agency reopens after a vacation period would defeat the purpose of the proposed subsequent data submission requirements. We note that consistent with sections 1304(b)(3) and 1308(b)(2) of the ESEA, an SEA's costs of making arrangements with its local operating agencies and non-project districts to secure needed MDE information, including under the subsequent data submission requirements in proposed § 200.85(b)(3), would be allowable costs of the MEP.

Use of Consolidated Migrant Student Records. Proposed § 200.85(c)(1) would require SEAs to use, and to require each of their local operating agencies to use, Consolidated Migrant Student Records to help ensure proper participation in the MEP, school enrollment, grade and course placement, and accrual of high school credits, for all migratory children who have changed residence to a new school district within the State or in another State. Under proposed § 200.85(c)(2), SEAs also would be required to encourage non-project LEAs to use Consolidated Migrant Student Records for these same purposes. Proposed § 200.85(c)(3) would require SEAs to establish procedures, develop and disseminate guidance, and provide training to SEA, local operating agency, and non-project LEA personnel who have been designated by the SEA as authorized MSIX users under proposed § 200.85(f)(2) to ensure that Consolidated Migrant Student Records are used for the purposes provided in proposed § 200.85(c)(1).

Reasons: Migratory children will benefit from the expedited availability of records in MSIX only if school registrars, counselors, MEP specialists, and other local and State officials and staff use the system for its intended purposes—ensuring that migratory students receive proper enrollment, grade and course placement, and accrual of high school credits. Because staff may be inclined to opt for the familiarity of existing systems and methods that do not include or provide for a nationwide data exchange, proposed § 200.85(c)(1) is needed to ensure that SEAs and local operating agencies actually use Consolidated Migrant Student Records from MSIX, and that MSIX therefore fulfills its intended purposes.

No similar requirement is proposed for non-project LEAs because they do not receive MEP funds. However, proposed § 200.85(c)(2) and (c)(3) would ensure that these LEAs are familiar with the added benefits for migratory children of using a student's Consolidated Migrant Student Record. Proposed § 200.85(c)(3) is needed also to ensure that SEAs properly train authorized users in the appropriate use of the MSIX online system as well as the information contained in the Consolidated Migrant Student Record.

MSIX data quality. Proposed § 200.85(d)(1) would require SEAs to use reasonable and appropriate methods to ensure that all data submitted to MSIX are accurate and complete, and to require each of their local operating agencies to do the same.

Proposed § 200.85(d)(2) would require SEAs to respond promptly, and ensure that each of their local operating agencies responds promptly, to any request by the Department for information needed to meet the Department's responsibility for the accuracy and completeness of MSIX data under the Privacy Act of 1974, as amended (Privacy Act).

Reasons: The data in MSIX will help school officials make correct decisions about enrollment, grade and course placement, and accrual of high school credits for migratory children only if SEAs take reasonable steps to ensure that records of migratory children submitted to MSIX are accurate and complete. If the information that SEAs submit to MSIX is not accurate and complete, then Consolidated Migrant Student Records from MSIX cannot and will not be used as intended under section 1308(b)(2) of the ESEA. (Proposed regulations requiring SEAs also to respond to requests to correct data in MSIX are discussed later in this notice in connection with proposed § 200.85(e).)

In addition, MSIX is a "system of records" under the Privacy Act. See the system of records notice published in the **Federal Register** at 72 FR 68572, 68576 (Dec. 5, 2007). The MSIX is implemented through a Department contract, and therefore the Department and its contractor are responsible for complying with applicable Privacy Act requirements in the maintenance and operation of MSIX. In particular, 5 U.S.C. 552a(e)(6) requires the Department and its contractor to make reasonable efforts to assure that MSIX records are accurate, complete, timely, and relevant.

These proposed regulations are needed to help the Department meet its responsibility under this provision of the Privacy Act. The requirement that MSIX records be accurate and complete is addressed by proposed § 200.85(d) (along with proposed § 200.85(e), which addresses requests to correct the records); the timeliness requirement is addressed in proposed § 200.85(b); and the relevance requirement is addressed through the MDEs required by the Secretary. Proposed § 200.85(d) helps to ensure that migrant students have accurate and complete records; in particular, proposed § 200.85(d)(2) would ensure that SEAs and local operating agencies help the Department carry out its responsibility to engage in reasonable efforts to maintain accurate and complete records in MSIX, and to respond to any civil action that might be brought under the Privacy Act (5 U.S.C. 552a(g)(1)(C) or (D)) alleging failure to maintain accurate and complete records in MSIX.

Finally, as noted above in the Background section of this notice, the Department plans to use MSIX to

generate MEP child counts for State funding purposes and to meet reporting requirements related to the national migrant child population. Proposed § 200.85(d) is thus also needed to ensure that the Department has the most accurate, complete, and timely data that is reasonably possible for these purposes.

Procedures for MSIX data correction by parents, guardians, and migratory children. Proposed § 200.85(e) would require each SEA that receives a grant of MEP funds to establish and implement written procedures to allow a parent or guardian of a migratory child, or a migratory child, to ask an SEA to correct or determine the correctness of MSIX data.

These written procedures would need to meet the following minimum regulatory requirements. Under proposed § 200.85(e)(1)(i), within 30 calendar days of receipt of a data correction request from a parent, guardian, or migratory child an SEA would need to (A) send a written or electronic acknowledgement to the requester; (B) investigate the request; (C) decide whether to revise the data as requested; and (D) send the requester a written or electronic notice of the SEA's decision. This process would occur outside of MSIX.

Under proposed § 200.85(e)(1)(ii), an SEA would have to submit any revised data to MSIX within four working days of its decision to revise the data; an SEA would not need to notify MSIX if it decided not to revise data as requested. Under proposed § 200.85(e)(1)(iii), if a parent, guardian, or migratory child asks an SEA to correct or determine the correctness of data that was submitted to MSIX by another SEA, the SEA would be required to send the data correction request to the SEA that had submitted the data to MSIX within four working days of its receipt. This process also would occur outside of MSIX. An SEA that receives an MSIX data correction request from another SEA under this provision would need to respond as if it had received the request directly from the parent, guardian, or migratory child.

Under proposed § 200.85(e)(2), an SEA would need to respond, and ensure that its local operating agencies respond, within ten working days to a request by the SEA of another State for information needed by that SEA to respond to a data correction request by a parent, guardian, or migratory child under proposed § 200.85(e)(1). This process, too, would occur outside of MSIX. (Note that procedures for SEAs to respond to requests by MSIX itself to resolve data matching and other data integrity issues internal to MSIX are discussed in connection with proposed § 200.85(f)(1).)

Proposed § 200.85(e)(3) would require an SEA to respond within ten working days to a request from the Department for information it needs to respond to an individual's request to correct or amend a Consolidated Migrant Student Record under the Privacy Act, 5 U.S.C. 552a(d)(2), and 34 CFR 5b.7. This process would occur outside of MSIX as well.

Reasons: MSIX is a system of records under the Privacy Act, 5 U.S.C. 552a. As such, subject individuals have a right under paragraph (d)(2) of the statute and Department regulations codified at 34 CFR § 5b.7(a) to ask the responsible Department official to correct or amend a Consolidated Migrant Student Record that the individual believes is not accurate, timely, complete, or relevant or necessary to accomplish a Department function. Our purpose for proposing § 200.85(e) is not to duplicate or supplant these rights under the Privacy Act but to provide a more limited and accessible procedure for individuals who want only to correct an inaccurate record and who would be more likely to do so if given an opportunity at the State or local level. These proposed regulations, and § 200.85(e)(3) in particular, are also needed because the Department cannot respond to a request to correct or amend an MSIX record under the Privacy Act without the intervention of SEAs because MSIX contains only records submitted by the SEAs.

Parents and guardians of migratory children and those children themselves often have the most accurate information about a migratory child and his or her family, such as whether a child attended a particular school or already completed a specific course, and they have a strong interest in ensuring that MSIX data are accurate. These proposed regulations advance that interest by requiring SEAs to develop and implement written procedures, within established timeframes, for (1) receiving and responding to requests by these individuals to correct or determine the correctness of records that have been or would be submitted to MSIX, and (2) sending any revised and corrected data to MSIX.

Moreover, the proposed regulations would facilitate MSIX data correction by allowing SEAs to establish their own procedures in the most efficient and effective possible manner (within specified timeframes). We anticipate, for example, that most SEAs would require parents, guardians, and migratory children to submit their MSIX data correction requests to a local operating agency and would delegate to these agencies most of the SEA's responsibilities under these proposed regulations for investigating requests and communicating with requesters, other SEAs and local operating agencies, and the Department. The proposed requirement in § 200.85(e)(1)(iii) would also provide parents, guardians, and migratory children with a single, local point where they could request MSIX data correction, even when the questionable data had been submitted to MSIX by the SEA of another State.

We believe that the proposed timeframes for these MSIX data correction procedures will help to ensure that incorrect data are removed from MSIX as quickly as possible, while providing sufficient time for SEAs to seek further information and resolve any conflicts. We note that, while an SEA would have 30 calendar days overall to respond to an individual's request and four working days from the date of its decision to submit any revised data to MSIX, under § 200.85(e)(2) we propose that an SEA or local operating agency would have nearly one-half of that time (i.e., ten working days) to provide information that an SEA in another State needs to respond to a request it has received from a parent, guardian, or migratory child to correct MSIX information. Similarly, in § 200.85(e)(3) we propose that an SEA or local operating agency would have the same ten working-day time period in which to respond to a request from the Department for information the Department needs to respond to a request to correct or amend records under the Privacy Act.

We specifically seek public comment on whether these are reasonable timeframes for SEAs and local operating agencies to complete their work and respond to the requester.

MSIX data protection. Under proposed § 200.85(f)(1), each SEA that receives a grant of MEP funds would enter into and carry out its responsibilities under an MSIX Interconnection Agreement, an MSIX Interconnection Security Agreement, and other information technology (IT) agreements required by the Secretary in accordance with applicable Federal requirements.

SEAs would be required under proposed § 200.85(f)(2) to establish and implement written procedures to protect the integrity, security, and confidentiality of Consolidated Migrant Student Records, whether in electronic or print format, through appropriate administrative, technical, and physical safeguards established in accordance

with the MSIX Interconnection Agreement and MSIX Interconnection Security Agreement. An SEA's written procedures would have to include, at a minimum, reasonable methods to ensure that (i) the SEA permits access to MSIX only by authorized users at the SEA, its local operating agencies, and LEAs in the State that are not MEP local operating agencies but where a migratory child has enrolled; and (ii) the SEA's authorized users obtain access to and use MSIX records only for authorized purposes as described in proposed § 200.85(c)(1).

Under proposed § 200.85(f)(3), before providing authorized users with access to MSIX an SEA would require that they complete the User Application Form approved by the Secretary, which is available currently at *https://msix.ed.gov*. An SEA would also be permitted to develop its own documentation for approving user access to MSIX provided that it contains the same information as the User Application Form approved by the Secretary. Proposed § 200.85(f)(4) would require SEAs to retain the documentation required for approving user access to MSIX for three years after the SEA terminates the user's access.

Reasons: The proposed regulations are needed to ensure that, in connecting to MSIX and allowing individuals to obtain access to the electronic student records system, SEAs protect the integrity, security, and confidentiality of Consolidated Migrant Student Records through appropriate administrative, technical, and physical safeguards.

Currently, this is accomplished through specific provisions in the MSIX Interconnection Agreement and MSIX Interconnection Security Agreement that SEAs, in accordance with various Federal requirements, must enter into before they may participate in MSIX. In particular, OMB Circular A–130 Appendix III and National Institute of Standards and Technology Special Publication 800–47, which implement requirements of the Computer Security Act of 1987 and the Information Technology Management Reform Act of 1996, require Federal agencies to obtain written management authorization before connecting their IT systems to other systems based on an acceptable level of risk. Similarly, the MSIX Interconnection Agreement and MSIX Interconnection Security Agreement are part of the means by which the Department meets its responsibilities under the Privacy Act, 5 U.S.C. 552a(e)(10), for establishing appropriate safeguards to ensure the security and confidentiality of records, and to protect against any anticipated threats or hazards to their security or integrity that could result in substantial harm, embarrassment, inconvenience, or unfairness to any individual on whom information is maintained in MSIX. As such, proposed § 200.85(f) is needed to help the Department meet its IT data security responsibilities under the Privacy Act.

The proposed regulations would help to ensure that SEAs comply with all Federal information security requirements applicable to MSIX by requiring that they execute and implement satisfactory IT agreements with the Department as a condition of receiving a grant of MEP funds and of connecting to and accessing the MSIX system. We note that the Department's MSIX IT agreements with participating States also include provisions related to various internal processing requirements applicable to SEAs that help ensure the integrity of Consolidated Migrant Student Records. For example, there are MSIX work rules that require SEAs to resolve data match and other data discrepancy issues within specified timeframes. An SEA's failure to comply with these internal MSIX work rules is a breach of its IT agreements and would constitute a violation of proposed § 200.85(f)(1).

Because Consolidated Migrant Student Records contain personally identifiable information (PII) on all migratory children, the proposed regulations are needed to ensure that SEAs limit access to authorized users and for authorized purposes. However, while the number of users in each SEA, local operating agency, or non-project LEA would likely be limited, we anticipate that, consistent with their MSIX data protection procedures, SEAs will promote the maximum use of Consolidated Migrant Student Records at State and local levels in order to meet the needs of migratory children who have moved to a new LEA or State.

In terms of the data protection procedures that SEAs would be required to implement under these proposed regulations, we note that the restrictions on redisclosure of PII from education records in the Family Educational Rights and Privacy Act (FERPA), 20 U.S.C. 1232g(b)(3) and 34 CFR part 99.35(c)(2), do not apply to FERPA-protected PII that is disclosed to and by MSIX because Federal law (section 1308(b)(2) of the ESEA) specifically authorizes and requires the redisclosure of MDEs to the Department (i.e., FERPA-protected PII). However, FERPA's restrictions on redisclosure still apply to PII from education records that LEAs and SEAs obtain from MSIX and subsequently maintain in their own data systems.

In order to ensure that MSIX users are aware of the Department's rules of behavior governing the use of MSIX and that the Department can effectively monitor use of MSIX, as well as promptly respond to any actual or potential security breaches, the proposed regulations in § 200.85(f)(3) and (f)(4) would require SEAs to collect and maintain minimum documentation identifying MSIX users and their authorizing supervisors. The OMB-approved User Application Form (OMB Approval No. 1810–0686) contains the minimum information that the Department needs for this purpose, including a certification signed by the proposed user to abide by the MSIX rules of behavior issued by the Department. Under proposed § 200.85(f)(3), an SEA may use either this OMB-approved form or another document that the SEA has developed that contains the information required by the OMB-approved form. By requiring SEAs to retain their records authorizing access to MSIX for a minimum of three years, the Department may gain access to these records when needed consistent with the general three-year record retention period in 34 CFR 80.42.

Executive Orders 12866 and 13563

Regulatory Impact Analysis

Under Executive Order 12866, the Secretary must determine whether this regulatory action is "significant" and, therefore, subject to the requirements of the Executive order and subject to review by the Office of Management and Budget (OMB). Section 3(f) of Executive Order 12866 defines a "significant regulatory action" as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of $100 million or more, or adversely affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities in a material way (also referred to as an "economically significant" rule);

(2) Create serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive order.

This proposed regulatory action is a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866.

We have also reviewed these regulations under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency "to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible." The Office of Information and Regulatory Affairs of OMB has emphasized that these techniques may include "identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes."

We are issuing these proposed regulations only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that maximize net benefits. Based on the analysis that follows, the Department believes that these proposed regulations are consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and tribal governments in the exercise of their governmental functions.

In accordance with both Executive Orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs associated with this regulatory action are those resulting from statutory requirements and those we have determined as necessary for administering the Department's programs and activities.

The Secretary believes that the proposed regulations are necessary in order for the Department to implement effectively the requirement in section 1308(b) of the ESEA that the Secretary ensure the linkage of migrant student record systems and for the effective implementation of the MEP by States and local agencies serving migrant children. The Secretary also believes that the requirements contained in these proposed regulations represent a careful balance between placing burden on States and other agencies providing services to migrant children and meeting the need for collecting and maintaining updated, accurate information about this mobile population in order to ensure timely transfer of pertinent school records when migrant children move from one school to another.

The Secretary also believes that the proposed regulations are necessary because implementation of a statutorily required system for transferring migrant student records will not be completely successful if the system does not contain complete, updated, and accurate student records and if not all States use the system as the official mechanism for transferring migrant student records. Although MSIX has been operational since 2007 and most States now submit data on their migrant children to the system voluntarily, not all States submit data on all the migrant children they have documented as eligible or submit all the required data elements. These data elements (known as "minimum data elements," or "MDEs") encompass three types of information: Basic information on migrant children (including their eligibility for migrant services and school enrollment information, if any), also known as core data elements; information pertaining to State assessments; and information about high school credits and grades, which pertains only to secondary students.

As described in the following paragraphs, the Department estimates that the total cost to participating SEAs of implementing these proposed regulations is approximately $18,516,444 for the first year, and $15,986,441 annually thereafter. The estimated burden per eligible child, amortized over three years, is approximately one hour and 10 minutes, at an approximate cost of $38.54 per year. These estimates cover all proposed regulatory requirements, including the costs of information collection activities, which are discussed separately under the heading *Paperwork Reduction Act of 1995*. As of September 2012, 22 States have provided complete start-up submissions for all MDEs; an additional 27 States have provided partial start-up submissions; and only one State has not provided any data to MSIX. Thus, the first-year estimate excludes start-up costs that have already been incurred by participating SEAs since MSIX began operating in 2007, as well as costs for using records, data quality, data protection, and data correction (activities required under § 200.85(c)–(f)) for those 22 States that have provided complete start-up submissions.

These costs will not all be borne by the States and their local operating agencies; the Department provides resources to States, both monetary and non-monetary, to assist them in implementing MSIX activities successfully. For example, in 2007 the Department paid for contractors to work with States to develop system interfaces that allow State data systems housing migrant student data to connect to MSIX directly, avoiding the need to enter information into MSIX manually if it already exists in a data system. In 2008 and 2010 the Department provided modest funding to States under the MSIX Data Quality program that could be used for developing these interfaces, improving the quality of migrant student data, and submitting data to MSIX, and the Department expects to provide such funding in the future. In addition, the Department has provided extensive technical assistance to States on issues of data quality and security not only through the MEP, but also through the State Longitudinal Data System program and as part of the implementation of the Education Data Exchange Network and other data collections that are part of the ED*Facts* system. Each of these activities will result in reduced costs of implementing these proposed regulations. Further, and most importantly, States may use MEP funds to cover the costs associated with implementing the proposed regulations (albeit with the result that less MEP funding is then available for direct services). A more detailed discussion of

the costs of each regulatory requirement follows.

In order to help calculate the time estimates associated with the various proposed data submission requirements, the Department surveyed State officials in nine States with varying numbers of migrant children regarding the time it takes them to collect and enter these data in their State data systems; the Department used for its estimates the median number of minutes that States provided in their responses. Estimates of the numbers of migrant children for whom States will submit information to MSIX were derived from Consolidated State Performance Reports (CSPRs) for the 2010–2011 program year and include the number of migrant children ages 0–21 that States reported as eligible for MEP services in program year 2010–2011 (418,643), the number of eligible K–12 children enrolled in school (298,159), the number of eligible secondary students (83,838), and the number of migrant students reported as having taken State assessments (125,293). The hourly cost used for these estimates was $33.02, the mean hourly earnings for State and local government management, professional, and related occupations reported by the U.S. Bureau of Labor Statistics in its National Compensation Survey: Occupational Earnings in the United States, 2010.

The Secretary estimates that the one-time cost for providing start-up submissions to MSIX under proposed § 200.85(b)(2), excluding costs that were incurred by States before these proposed regulations, is approximately $2,077,537.

That figure assumes that State and local officials take approximately 53 minutes per student to collect, enter into the State data system, and submit to MSIX general demographic and enrollment data elements that pertain to all migrant children who have been documented as eligible for the program; approximately 5 minutes per student for the data elements pertaining to students who participate in State assessments; and approximately 55 minutes per student for the course history data elements pertaining only to eligible secondary students.

The Secretary estimates that the annual costs for complying with proposed § 200.85(b)(3), which covers subsequent submissions to MSIX of data on newly documented migrant children, updates to MSIX at the end of every school term, and updates to MSIX if a receiving State or local agency notifies a sending State or local agency that a migrant child has moved, will be approximately $15,338,820. Within that estimate, the Department estimates the annual costs of implementing the requirements under proposed § 200.85(b)(3)(i), covering collection and submission of data to MSIX for newly documented migratory children, at $5,681,377. The Department estimates the annual number of newly documented migrant children to be 121,602 based on the number of qualifying moves for migrant children that States reported to the Department in section 2.3.1.5 of the CSPR for program year 2010–2011. The number of newly documented migrant children for whom there will be data elements pertaining to assessment data (36,394) and secondary schooling (22,855) is based on the proportion of those students in the population of migrant students enrolled in grades K–12 during school year 2010–2011. The Department assumes the same time estimates used for calculating burden for collecting and submitting data for start-up submissions as are assumed for the calculations of other proposed data submission requirements under proposed § 200.85(b)(2). Based on responses to the Department's survey of States discussed above, the Department also estimates an additional effort of 1 hour and 10 minutes per student to collect data elements for a secondary student who previously attended another secondary school in the same State (proposed § 200.85(b)(3)(i)(B)(*1*)) and another 40 minutes to determine if, and notify MSIX when, a local agency has received secondary school records from out of State for a newly documented secondary student (proposed § 200.85(b)(3)(i)(B)(*2*)).

The cost estimate for implementing the requirements under proposed § 200.85(b)(3)(ii), end of term submissions, is $9,618,004. The estimate assumes that States must provide updated data for every migrant child once over the course of each year for most, but not all, of the data elements pertaining to all children, and that that effort will take approximately 42 minutes per migrant child. The time burden, which the Department estimated based on the experience of Department staff who have worked on migrant programs at the State level, also assumes a smaller burden for this effort than that for start-up data submissions because some States have developed automated processes for collecting this information and providing these updates to MSIX.

MSIX is structured so that many of the data elements in a student's record must be updated every year; for example, when a student finishes a grade level the student must be marked as "withdrawn" from that grade, and when the student enters the following grade the next school year the student is then marked as "enrolled" in the new grade. Thus, updates may happen throughout the school year, but will likely only occur once a year, for a subset of the data elements required for start-up submissions. There are a smaller number of data elements, such as birth city, that would not require an update. In addition, the estimate assumes that States will need five minutes per student for the data elements pertaining to those who participate in State assessments, the same effort as for start-up submissions, as those assessments are administered only once a year. The Department's estimate also assumes 55 minutes per student for the data elements pertaining only to secondary students, the same effort as for start-up submissions, as the Department's previously discussed survey asked States to report their estimated average burden for data elements for secondary students regardless of the number of courses in which secondary students were enrolled.

The estimate for the annual costs of implementing the requirements under proposed § 200.85(b)(3)(iii), change of residence submissions, is approximately $39,438. This estimate is based on the 637 requests that receiving States or local agencies (i.e., States or local agencies where migrant students moved) made through MSIX in the 2010–2011 school year to request records from sending States or local agencies (i.e., a student's previous location of enrollment). This number is low because, apart from the proposed end of term data submission requirements, the proposed regulations require a sending State to update a student record only if it receives notification from a receiving State or local agency (through MSIX) that it has enrolled a student formerly enrolled in the sending State. However, the proposed regulations do not require receiving States (or their local agencies) to notify the student's former location that the student has changed residence. This allows a State or local agency enrolling a student the flexibility to determine if there are data missing from a student's MSIX record, and send a notification (through MSIX) to a student's former location requesting an updated student record only if needed.

In addition, the Department expects that, as implementation of these regulations takes effect, MSIX records will be updated regularly and data elements will not likely be missing, thus reducing the need for a State or local

agency to request data elements from another location upon a student's change of residence. Furthermore, proposed § 200.85(b)(3)(ii) requires SEAs to update MSIX records at the end of each term; therefore, States and local agencies are most likely to use MSIX to request records from a previous location under § 200.85(b)(3)(iii) only for students moving in the middle of the term. An analysis of MSIX data on the timing of student moves during school year 2010–2011 showed that approximately 52 percent of the moves occurred during the summer months, after the end of the school year; that proportion is 63 percent if the moves that occurred in January are included, all of which should further reduce the number of data submissions under the proposed change of residence provision in § 200.85(b)(3)(iii).

The estimate for the total costs of implementing the proposed requirements under § 200.85(c), using consolidated migrant student records contained in MSIX; § 200.85(d), establishing rules pertaining to the quality of data submitted to MSIX; and § 200.85(f), establishing rules pertaining to the protection of data submitted to MSIX, is approximately $1,099,180. The Department estimates that the main costs for implementing these requirements are associated with the time that will be needed to establish policies and procedures to address the use of MSIX, data quality, and data protection; develop and disseminate the guidance and procedures to SEA and local personnel; and provide training to State and local personnel who have access to MSIX.

In order to minimize the burden on States of complying with these proposed requirements, the Department developed a template for a State manual to assist the States in developing policies and procedures for using MSIX, ensuring data quality, and protecting the data; the Department also developed a training kit for State officials to use in carrying out training within their States. Based on the experience of Department staff who have worked on migrant programs at the State level, the Department estimates that each State will spend approximately 120 hours developing policies and procedures with the aid of the template; using the same cost per hour used for the proposed data submission requirements, the one-time cost of establishing policies and procedures will be an estimated $198,120. To calculate the costs of training State and local personnel in the use of MSIX and associated policies and procedures, the Department estimates 10 person-hours per State for developing training sessions using the training kit and 2-hour training sessions for approximately 3,577 users of MSIX. (This estimate is based on 2,365 current active users, which is expected to increase by 25 percent during the first year these proposed regulations are implemented and 10 percent for each of the following two years.) Based on the same cost per hour used for the proposed data submission requirements, the total training cost is an estimated $252,735.

In addition, State personnel will likely need the assistance of an information technology professional at the State level to run reports and monitor the data collected and submitted to MSIX, to review system security, and to work with other State or local personnel to remedy any concerns or problems with the data. The Department estimates that it will take 32 hours per month for one computer support specialist per State to accomplish this work, at a salary of $23.60 an hour (the mean hourly earnings for computer support specialists in State and local government reported by the U.S. Bureau of Labor Statistics in its National Compensation Survey: Occupational Earnings in the United States, 2010), for a total of $344,371. The estimate also includes an additional $301,895 for complying with proposed § 200.85(c), using consolidated records in MSIX, to meet costs associated with development of electronic interfaces and communications between State data systems and MSIX. The Department provided resources for this work, as discussed earlier, and estimates that the burden associated with doing this work is approximately 241 hours per State using the same methodology as that used to estimate the time needed for start-up submissions. The estimate further includes an additional $49,607 for complying with the requirement in proposed § 200.85(f) that MSIX users fill out user application forms, which the Department estimates at 5 minutes, and for a supervisor to review a user application form and other documentation in order to determine whether to grant access to MSIX to an applicant, which the Department estimates at 20 minutes, for a total of 25 minutes to grant access to a user. This cost is based on 3,577 users (as discussed previously) and the same labor cost as that used to calculate the proposed data submission requirements.

The estimate for implementing the proposed requirements under § 200.85(e), procedures for MSIX data correction by parents, guardians, and migratory children, is approximately $908. Based on responses to the Department's survey of States discussed above, the Department estimates the number of requests to States to correct data to be one per State per year and that each request will take approximately 38 minutes to acknowledge, review, make any necessary corrections to the data, and notify the requester of the resolution to the request. In addition, the Department, based on its experience in implementing MSIX to date, estimates receiving six requests per year nationally for data correction from parents, guardians, or migrant children, and anticipates that States will similarly require an average of 38 minutes to address any requests from the Department on this matter. The cost per hour used is the same as that used to estimate start-up data submissions.

While it is difficult to quantify the benefits of these proposed regulations, we believe that they will provide important benefits to migrant children and their families and to States and local agencies, particularly for the approximately 26 percent of migrant students who move across school district boundaries each year (based on data States reported for school year 2010–2011). Overall, one of the major benefits of these proposed regulations is that instantaneous access to records of children who have previously been identified as migrant will reduce the time it takes to enroll a student in a new school and the time needed for placing a student in appropriate classes. Prompt placement is necessary not only to ensure continuity of schooling and other services, but also to ensure that students receive the maximum benefits they are entitled to under MEP, as the program limits the amount of time that migrant children may receive services. Prompt access to records also reduces the likelihood of duplication of services and helps ensure that students are placed in the right classes, reducing the likelihood that a student will repeat classes or be placed in an inappropriate class, actions that adversely affect students academically and emotionally. For secondary school students, the benefits will also include having a record documenting credit accrual, thus increasing the likelihood that a student will graduate from high school on a timely basis.

As MSIX incorporates information about inoculation records, it also helps prevent duplication of vaccinations, an unnecessary additional expense for families and community health systems. Most States require students to be vaccinated, at a minimum, for polio, diphtheria, tetanus, pertussis, measles,

mumps, rubella, hepatitis B, and varicella. The combined cost per dose as of July 2012 for these vaccinations under the Center for Disease Control vaccine contracts (established for the purchase of vaccines by immunization programs that receive CDC immunization grant funds, such as State health departments) was approximately $144, and the average cost of the same vaccine to the private sector was approximately $210. Reducing duplicate vaccinations also preserves the vaccine supply for others in the community. In addition, MSIX incorporates a flag for students with acute or chronic medical conditions, thus instantly alerting school personnel enrolling a migrant student to the fact that the student may need additional support services and referrals to medical care.

We further note that these proposed regulations were informed by the Department's and the States' previous experience in implementing a migrant student record transfer service in the 1970s through the 1990s. The Migrant Student Record Transfer System (MSRTS) was a national, computer-based system for records collection and transfer established in response to a 1969 congressional mandate requiring the creation of a service for transmitting educational and health records for migrant students. MSRTS was terminated in 1995 due both to concerns about the accuracy and usefulness of the data in the system and to the lack of uniformity in the data reported to the system. In addition, many users considered MSRTS too slow and burdensome, as the computer technology used still relied largely on a paper-based system for collecting and reporting information that did not incorporate technological advancements efficiently, making it an inefficient mechanism for meeting its mission. These proposed regulations have been designed to ensure that MSIX users have ready access to complete, up-to-date records that they may trust, and to ensure that the transfer of those records through MSIX occurs efficiently.

The proposed requirement that agencies serving migrant children use MSIX and the Consolidated Migrant Student Records MSIX generates would ensure not only that information in MSIX is used, but also that the agencies acquire an interest in ensuring the quality and timeliness of the data they provide to and obtain from the system. Other benefits would include access to migrant records that are current, accurate, secure, and complete, and that contain data that may be currently maintained in different systems within States; for example, data from State assessments may not be maintained in the same system where student health records are maintained. States' current voluntary participation in MSIX reflects the fact that this service is valuable to them and enables them to better serve one of their most vulnerable populations.

For these reasons, the Department believes that the benefits of these proposed regulations would significantly exceed the somewhat minor estimated costs, much of which would be met with Federal resources.

Elsewhere in this section under *Paperwork Reduction Act of 1995*, we identify and explain burdens specifically associated with information collection requirements.

Clarity of the Regulations

Executive Order 12866 and the Presidential memorandum "Plain Language in Government Writing" require each agency to write regulations that are easy to understand.

The Secretary invites comments on how to make these proposed regulations easier to understand, including answers to questions such as the following:

- Are the requirements in the proposed regulations clearly stated?
- Do the proposed regulations contain technical terms or other wording that interferes with their clarity?
- Does the format of the proposed regulations (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce their clarity?
- Would the proposed regulations be easier to understand if we divided them into more (but shorter) sections? (A "section" is preceded by the symbol "§" and numbered heading; for example, § 200.85.)
- Could the description of the proposed regulations in the **SUPPLEMENTARY INFORMATION** section of this preamble be more helpful in making the proposed regulations easier to understand? If so, how?
- What else could we do to make the proposed regulations easier to understand?

To send any comments that concern how the Department could make these proposed regulations easier to understand, see the instructions in the **ADDRESSES** section.

Regulatory Flexibility Act Certification

The Secretary certifies that these proposed regulations would not have a significant economic impact on a substantial number of small entities because these proposed regulations affect primarily SEAs. SEAs are not defined as "small entities" in the Regulatory Flexibility Act. The only small entities that could be affected by the proposed regulations would be small local operating agencies that receive MEP subgrants from an SEA or entities that contract with SEAs to provide various services in connection with MSIX activities. Local operating agencies would be required to submit data on migratory children to a State's data system under timeframes identified in the proposed regulations. However, the costs of doing so would likely be financed through the State's MEP award and would not impose a significant financial burden that small entities would have to meet from non-Federal resources.

Paperwork Reduction Act of 1995

As part of its continuing effort to reduce paperwork and respondent burden, the Department provides the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This helps ensure that: The public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

Section 200.85 contains information collection requirements. Under the PRA the Department has submitted a copy of this section to OMB for its review.

A Federal agency may not conduct or sponsor a collection of information unless OMB approves the collection under the PRA and the corresponding information collection instrument displays a currently valid OMB control number. Notwithstanding any other provision of law, no person is required to comply with, or is subject to penalty for failure to comply with, a collection of information if the collection instrument does not display a currently valid OMB control number.

Minimum data elements (MDEs) consist of 72 data elements that reflect the minimal information needed to ensure proper enrollment, grade and course placement, and accrual of secondary course credits for migratory children. The MDEs, and the various information sources through which they are currently obtained, would not change as a result of the proposed regulations except for the collection of one new MDE related to the records of secondary school-aged children.

Thirty of the MDEs are collected and entered into State data systems through

the information collection requests (ICRs) for the Department's Education Data Exchange Network (EDEN) (OMB Control Number 1875–0240) and for the Migrant Education Program (MEP) Certificate of Eligibility (COE) and related regulations (OMB Control Number 1810–0662). There is no need to account here for the burden of collecting, maintaining, and submitting to MSIX these 30 MDEs because these MDEs are already collected and maintained for other purposes, and we have assumed that submission of these MDEs to MSIX would occur automatically once a State's electronic interface with MSIX has been established.

Forty-one of the remaining 42 MDEs are collected and entered into the State data systems under the existing MSIX ICR (OMB Control Number 1810–0683). In addition to creating a new MDE, the proposed regulations would change the parties to whom the collection applies as well as the content, timing, and circumstances of submissions of data under the existing ICR. As a result, we propose to amend and restate the MSIX ICR to reflect, among other things, a new burden analysis and supporting statement. In the final regulations we will display the existing MSIX ICR OMB control number 1810–0683 on all information collection requirements in these proposed regulations and adopted in the final regulations.

Section 200.85—Responsibilities of SEAs for the Electronic Exchange Through MSIX of Specified Health and Educational Information of Migratory Children

Proposed § 200.85 would require SEAs to collect, maintain, and submit to MSIX educational and health information on migrant children who move from one State or district to another. This information would enable SEAs to reduce educational disruptions for migrant children, make timely and accurate school placements, ensure academic credit for school work completed, streamline academic progression toward graduation requirements, and provide complete academic records as needed for postsecondary education and employment opportunities. The exchange of health information through MSIX would also help reduce unnecessary immunizations of migrant children because of a lack of timely, accurate health information.

Estimates of Annualized Burden to SEA Respondents

For the 42 MDEs not covered by other information collections, the total burden for all SEA respondents in the first three years after the effective date of the proposed regulations is estimated at 465,866 hours per year. This amounts to an average of 9,317 hours per year for each of the 50 participating SEAs. Because eligibility for MEP services varies greatly among the States, we have also estimated the overall burden as 1,113 hours annually per 1,000 eligible children to enable individual SEAs to assess the burden of the information collection.

These estimates were developed by program and contract staff with experience in the State-level administration of the MEP based upon consultation with States, analysis of the information reported by each State in its 2010–2011 CSPR (OMB Number 1810–0614), and State data submitted previously to MSIX. Note, the estimated burden to collect the MDE information includes the effort to enter the data in the appropriate State information systems for electronic transmission to MSIX.

In calculating the burden of this information collection, we have not included the burden associated with start-up submissions previously made to MSIX in whole or in part. In calculating the burden associated with subsequent data submissions, our estimates quantify the total annualized burden to SEAs, and do not specify the incremental burden to those SEAs that have previously collected, maintained, and submitted to MSIX any or all the MDEs covered by the MSIX ICR relating to subsequent data submissions.

See the discussion below for a further explanation of the burden related to specific regulatory provisions. Additional information about the basis of the burden estimates in this document is available at *www.reginfo.gov*. Click on Information Collection Review. The proposed collection is identified as proposed collection [1810–0683 ED–2013–ICCD–0154].

Start-Up Data Submissions (§ 200.85(b)(2)(i))

As of September 2012, twenty-two States had already met the requirement to collect and submit to MSIX MDEs for every migrant child considered eligible in the State within the preceding year; an additional 27 States had provided partial start-up submissions; and only one State has not provided any data to MSIX. We used these figures for our start-up data submissions calculations. Start-up data is a one-time requirement for each SEA; submissions are required to be completed no later than 90 calendar days after the effective date of the final regulations. Amortized over three years, the annualized burden of the requirement for the remaining 28 States is estimated to be 21,651 hours per year in total and 773 hours per year per SEA. All subsequent data submission requirements are covered by the other information collection activities described below.

Newly Documented Migratory Children (§ 200.85(b)(3)(i)(A))

The annualized burden of the requirement for 50 States to collect and submit the MSIX MDEs within 10 days of documenting the eligibility of each new migratory child is estimated at 109,435 hours per year in total and 2,189 hours per SEA. Documenting the eligibility of migratory children is an ongoing process, and we estimate the burden would remain at a constant level in each of the three years that this information collection covers.

Newly Documented Migratory Children With Prior Secondary School Records in the Same State (§ 200.85(b)(3)(i)(B)(1))

The annualized burden of the requirement for SEAs to collect and submit to MSIX MDEs from the most recent secondary school attended previously within the State is estimated at 26,664 hours per year in total and 533 hours per year for each SEA. Collecting and submitting secondary school information for newly documented migratory children is an ongoing process, and we estimate the burden would remain at a constant level in each of the three years that this information collection covers.

Newly Documented Migratory Children With Secondary School Records From Another State (§ 200.85(b)(3)(i)(B)(2))

The annualized burden of the requirement for SEAs to notify MSIX within 30 days of obtaining out-of-state secondary school records for a newly documented migratory child is estimated at 15,609 hours per year in total and 312 hours per year for each SEA. Our burden estimate includes a one-time effort for each State to modify its State data system and MSIX interface to collect and submit a new MDE to indicate whether or not out-of-state school records are present at an LEA for a migrant student (this one-year effort is amortized over the three years of the collection). Documenting migratory children is an ongoing process, and the burden remains at a constant level in each of the three years that this information collection covers.

End of Term Submissions (§ 200.85(b)(3)(ii))

The annualized burden of the requirement to collect and submit updated and newly available MDEs to MSIX within 30 days after the end of each educational term for all eligible MEP children is estimated at 291,278 hours per year in total and 5,826 hours per year per SEA. This is an ongoing process, and the burden remains at a constant level in each of the three years that this information collection covers.

Notice of Change of Residence Submissions (§ 200.85(b)(3)(iii))

The annualized burden of the requirement to collect and submit to MSIX all new and updated MDEs within four working days of receiving notification from MSIX that a migratory child has changed residence is estimated at 1,194 hours per year in total and 24 hours per year per SEA. This is an ongoing process, and we estimate the burden would remain at a constant level in each of the three years that this information collection covers.

Parental Request to SEAs for MSIX Data Correction (§ 200.85(e)(1)(ii))

The annualized burden for SEAs to submit revised data to MSIX within four working days of the decision to correct previously submitted data following a request from a parent, guardian, or student is estimated at 31 hours per year in total and .06 hours per year per SEA. This is an ongoing process, and we estimate the burden would remain at a constant level in each of the three years that this information collection covers.

Parental Request to the Department for MSIX Data Correction (§ 200.85(e)(3))

The annualized burden for SEAs to respond within 10 working days to a request from the Department for information needed by the Department to respond to an individual's request to correct or amend a Consolidated Migrant Student Record under the Federal Privacy Act is estimated at four hours per year in total and 0.1 hour per year per SEA. This is an ongoing process, and we estimate the burden would remain at a constant level in each of the three years that the information collection covers.

COLLECTION OF INFORMATION

Reporting activity	Description	Total burden
1. Start-up Data Submission § 200.85(b)(2)(i)	Collect and submit to MSIX MDEs (applicable to child's age and grade level) for every migrant child whom the SEA considered eligible for MEP services within one year preceding the effective date of the regulations.	21,651
2. Newly Documented Migratory Children § 200.85(b)(3)(i)(A)	Collect and submit to MSIX all MDEs (applicable to child's age and grade level) for newly documented migrant students.	109,435
3. Newly Documented Migratory Children with Secondary School Records in the Same State § 200.85(b)(3)(i)(B)(1).	Collect and submit all applicable MDEs from the most recent secondary school previously attended by the student within the same State.	26,664
4. Newly Documented Migratory Children with Secondary School Records from Another State § 200.85(b)(3)(i)(B)(2).	Notify MSIX if one of its local operating agencies obtains records from a secondary school previously attended by the migrant student in another State.	15,609
5. End of Term Submissions § 200.85(b)(3)(ii)	Collect and submit to MSIX all MDE updates and newly available MDEs for migratory children who were eligible for the MEP during the term and for whom the SEA previously submitted data.	291,278
6. Change of Residence Submissions § 200.85(b)(3)(iii)	Collect and submit to MSIX all newly available MDEs and MDE updates that have become available to the SEA or one of its local operating agencies.	1,194
7. Parental Request for MSIX Data Correction § 200.85(e)(1)(ii).	If an SEA determines that data previously submitted to MSIX should be corrected as the result of a request from a parent, guardian, or migrant student, the SEA must submit revised data.	31
8. Response to the Department § 200.85(e)(3)	Submit information requested by the Department needed to respond to an individual's request to amend a record under the Privacy Act.	4

If you want to comment on the proposed information collection requirements, please send your comments to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for U.S. Department of Education. Send these comments by email to *OIRA_DOCKET@omb.eop.gov* or by fax to (202) 395–6974. You may also send a copy of these comments to the Department contact named in the **ADDRESSES** section of this preamble or submit them electronically through the Federal eRulemaking Portal at *www.regulations.gov* by selecting Docket ID number ED–2013–ICCD–0154.

We have prepared an ICR for this collection. In preparing your comments you may want to review the ICR, which is available at *www.reginfo.gov*. Click on Information Collection Review. This proposed collection is identified as proposed collection [1810–0683 ED–2013–ICCD–0154].

We consider your comments on this proposed collection of information in—

- Deciding whether the proposed collection is necessary for the proper performance of our functions, including whether the information will have practical use;
- Evaluating the accuracy of our estimate of the burden of the proposed collection, including the validity of our methodology and assumptions;
- Enhancing the quality, usefulness, and clarity of the information we collect; and
- Minimizing the burden on those who must respond. This includes exploring the use of appropriate automated, electronic, mechanical, or other technological collection techniques.

OMB is required to make a decision concerning the collection of information contained in these proposed regulations between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, to ensure that OMB gives your comments full

consideration, it is important that OMB receives your comments by January 27, 2014. This does not affect the deadline for your comments to us on the proposed regulations.

Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Assessment of Educational Impact

In accordance with section 411 of the General Education Provisions Act, 20 U.S.C. 1221e–4, the Secretary particularly requests comments on whether these proposed regulations would require transmission of information that any other agency or authority of the United States gathers or makes available.

Federalism

Executive Order 13132 requires us to ensure meaningful and timely input by State and local elected officials in the development of regulatory policies that have federalism implications. "Federalism implications" means substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. The proposed regulations in § 200.85 may have federalism implications. We encourage State and local elected officials to review and provide comments on these proposed regulations.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT.**

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register.** Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register,** in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department. List of Subjects in 34 CFR Part 200

Education of disadvantaged, Elementary and secondary education, Grant programs-education, Indians-education, Infants and children, Juvenile delinquency, Migrant labor, Private schools, Reporting and recordkeeping requirements.

Dated: December 13, 2013.

Arne Duncan,

Secretary of Education.

For the reasons discussed in the preamble, the Secretary of Education proposes to amend part 200 of title 34 of the Code of Federal Regulations as follows:

PART 200—TITLE I—IMPROVING THE ACADEMIC ACHIEVEMENT OF THE DISADVANTAGED

■ 1. The authority citation for part 200 continues to read as follows:

Authority: 20 U.S.C 6301 through 6578, unless otherwise noted.

■ 2. Section 200.81 is amended by:

■ A. Redesignating paragraphs (h) through (k) as paragraphs (m) through (p).

■ B. Redesignating paragraph (g) as paragraph (j).

■ C. Redesignating paragraphs (d) through (f) as paragraphs (f) through (h).

■ D. Redesignating paragraphs (b) and (c) as paragraphs (c) and (d), respectively.

■ E. Adding new paragraphs (b), (e), (i), (k), and (l).

The additions read as follows:

§ 200.81 Program definitions

* * * * *

(b) *Consolidated Migrant Student Record* means the MDEs for a migratory child that have been submitted by one or more SEAs and consolidated into a single, uniquely identified record available through MSIX.

* * * * *

(e) *Migrant Student Information Exchange (MSIX)* means the nationwide system administered by the Department for linking and exchanging specified health and educational information for all migratory children.

* * * * *

(i) *Minimum Data Elements (MDEs)* means the health and educational information for migratory children that the Secretary requires each SEA that receives a grant of MEP funds to collect, maintain, and submit to MSIX, and use under this part. MDEs may include—

(1) Immunization records and other health information;

(2) Academic history (including partial credit, credit accrual, and results from State assessments required under the Elementary and Secondary Education Act);

(3) Other academic information essential to ensuring that migratory children achieve to high academic standards; and

(4) Information regarding eligibility for services under the Individuals with Disabilities Education Act.

* * * * *

(k) *MSIX Interconnection Agreement* means the agreement between the Department and a State educational agency that governs the interconnection of the State student records system and MSIX, including the terms under which the agency will abide by the agreement based upon its review of all relevant technical, security, and administrative issues.

(l) *MSIX Interconnection Security Agreement* means the agreement between the Department and a State educational agency that specifies the technical and security requirements for establishing, maintaining, and operating the interconnection between the State student records system and MSIX. The MSIX Interconnection Security Agreement supports the MSIX Interconnection Agreement and documents the requirements for connecting the two information technology systems, describes the security controls to be used to protect the systems and data, and contains a topological drawing of the interconnection.

* * * * *

■ 3. Section 200.84 is revised to read as follows:

§ 200.84 Responsibilities for evaluating the effectiveness of the MEP and using evaluations to improve services to migratory children.

(a) Each SEA must determine the effectiveness of its MEP through a written evaluation that measures the implementation and results achieved by the program against the State's performance targets in § 200.83(a)(1), particularly for those students who have

priority for service as defined in section 1304(d) of the ESEA.

(b) SEAs and local operating agencies receiving MEP funds must use the results of the evaluation carried out by an SEA under paragraph (a) of this section to improve the services provided to migratory children.

(Authority: 20 U.S.C. 6394)

■ 4. Section 200.85 is revised to read as follows:

§ 200.85 Responsibilities of SEAs for the electronic exchange through MSIX of specified health and educational information of migratory children.

(a) *MSIX State record system and data exchange requirements.* In order to receive a grant of MEP funds, an SEA must collect, maintain, and submit to MSIX MDEs and otherwise exchange and use information on migratory children in accordance with the requirements of this section. Failure of an SEA to do so constitutes a failure under section 454 of the General Education Provisions Act, 20 U.S.C. 1234c, to comply substantially with a requirement of law applicable to the funds made available under the MEP.

(b) *MSIX data submission requirements*—(1) *General.* In order to satisfy the requirements of paragraphs (b)(2) and (3) of this section, an SEA that receives a grant of MEP funds must submit electronically to MSIX the MDEs applicable to the child's age and grade level that the Secretary has determined are needed to implement section 1308(b)(2) of the ESEA.

(2) *Start-up data submissions.* (i) No later than 90 calendar days after [EFFECTIVE DATE OF FINAL RULE], an SEA must collect and submit to MSIX each of the MDEs described in paragraph (b)(1) of this section applicable to the child's age and grade level for every migratory child whom the SEA considered eligible for MEP services in accordance with § 200.89(c) within one year preceding the effective date of the final regulations.

(ii) An SEA must make start-up data submissions to MSIX for a migratory child whether or not the SEA has a current Certificate of Eligibility under § 200.89(c) for the child at the time the SEA submits the data to MSIX under this paragraph (b)(2).

(3) *Subsequent data submissions.* An SEA must comply with the following timelines for subsequent data submissions throughout the entire calendar year whether or not local operating agencies or LEAs in the State are closed for summer or intersession periods.

(i) *Newly documented migratory children.* For every migratory child for whom an SEA documents eligibility for the MEP under § 200.89(c) on or after the effective date of these regulations—

(A) An SEA must collect and submit to MSIX the MDEs described in paragraph (b)(1) of this section within ten working days of documenting the child's eligibility. The SEA is not required to collect and submit MDEs in existence before its documentation of the child's eligibility for the MEP except as provided in paragraph (b)(3)(i)(B) of this section; and

(B) An SEA that documents the eligibility of a secondary school-aged migratory child must also—

(*1*) Collect and submit to MSIX MDEs from the most recent secondary school in that State attended previously by the newly documented migratory child; and

(*2*) Notify MSIX within 30 calendar days if one of its local operating agencies obtains records from a secondary school attended previously by the newly documented migratory child in another State.

(ii) *End of term submissions.* (A) Within 30 calendar days of the end of an LEA's or local operating agency's fall, spring, summer, or intersession terms, an SEA must collect and submit to MSIX all MDE updates and newly available MDEs for migratory children who were eligible for the MEP during the term and for whom the SEA submitted data previously under paragraph (b)(2) or (b)(3)(i) of this section.

(B) When a migratory child's MEP eligibility expires before the end of a school year, an SEA must submit all MDE updates and newly available MDEs for the child through the end of the school year in which the child is enrolled. This submission includes all MDE updates and newly available MDEs for any child who continues to receive MEP services under section 1304(e) of the ESEA after expiration of MEP eligibility.

(iii) *Change of residence submissions.* (A) Within four working days of receiving notification from MSIX that a migratory child in its State has changed residence to a new local operating agency within the State or has been newly documented as a migratory child in another State, an SEA must collect and submit to MSIX all new MDEs and MDE updates that have become available to the SEA or one of its local operating agencies since the SEA's last submission of MDEs to MSIX for the child.

(B) An SEA or local operating agency that does not have a new MDE or MDE update for a migratory child when it receives a change of residence notification from MSIX must submit the MDE to MSIX within four working days of the date that the SEA or one of its local operating agencies obtains the MDE.

(c) *Use of Consolidated Migrant Student Records.* In order to help ensure proper participation in the MEP, school enrollment, grade and course placement, and accrual of all appropriate high school credits, each SEA that receives a grant of MEP funds must—

(1) Use, and require each of its local operating agencies to use, the Consolidated Migrant Student Record for all migratory children who have changed residence to a new school district within the State or in another State;

(2) Encourage LEAs that are not local operating agencies receiving MEP funds to use the Consolidated Migrant Student Record for all migratory children described in paragraph (c)(1) of this section; and

(3) Establish procedures, develop and disseminate guidance, and provide training in the use of Consolidated Migrant Student Records to SEA, local operating agency, and LEA personnel who have been designated by the SEA as authorized MSIX users under paragraph (f)(2) of this section.

(d) *MSIX data quality.* Each SEA that receives a grant of MEP funds must—

(1) Use, and require each of its local operating agencies to use, reasonable and appropriate methods to ensure that all data submitted to MSIX are accurate and complete; and

(2) Respond promptly, and ensure that each of its local operating agencies responds promptly, to any request by the Department for information needed to meet the Department's responsibility for the accuracy and completeness of data in MSIX in accordance with the Privacy Act of 1974, as amended, 5 U.S.C. 552a(e)(6) and (g)(1)(C) or (D).

(e) *Procedures for MSIX data correction by parents, guardians, and migratory children.* Each SEA that receives a grant of MEP funds must establish and implement written procedures that allow a parent or guardian of a migratory child, or a migratory child, to ask the SEA to correct or determine the correctness of MSIX data. An SEA's written procedures must meet the following minimum requirements:

(1) *Response to parents, guardians, and migratory children.* (i) Within 30 calendar days of receipt of a data correction request from a parent, guardian, or migratory child, an SEA must—

(A) Send a written or electronic acknowledgement to the requester;

(B) Investigate the request;

(C) Decide whether to revise the data as requested; and

(D) Send the requester a written or electronic notice of the SEA's decision.

(ii) If an SEA determines that data it submitted previously to MSIX should be corrected, the SEA must submit the revised data to MSIX within four working days of its decision to correct the data. An SEA is not required to notify MSIX if it decides not to revise the data as requested.

(iii)(A) If a parent, guardian, or migratory child asks an SEA to correct or determine the correctness of data that was submitted to MSIX by another SEA, within four working days of receipt of the request, the SEA must send the data correction request to the SEA that submitted the data to MSIX.

(B) An SEA that receives an MSIX data correction request from another SEA under this paragraph must respond as if it received the data correction request directly from the parent, guardian, or migratory child.

(2) *Response to SEAs.* An SEA or local operating agency that receives a request for information from an SEA that is responding to a parent's, guardian's, or migratory child's data correction request under paragraph (e)(1) of this section must respond in writing within ten working days of receipt of the request.

(3) *Response to the Department.* An SEA must respond in writing within ten working days to a request from the Department for information needed by the Department to respond to an individual's request to correct or amend a Consolidated Migrant Student Record under the Privacy Act of 1974, as amended, 5 U.S.C. 552a(d)(2) and 34 CFR 5b.7.

(f) *MSIX data protection.* Each SEA that receives a grant of MEP funds must—

(1) Enter into and carry out its responsibilities in accordance with an MSIX Interconnection Agreement, an MSIX Interconnection Security Agreement, and other information technology agreements required by the Secretary in accordance with applicable Federal requirements;

(2) Establish and implement written procedures to protect the integrity, security, and confidentiality of Consolidated Migrant Student Records, whether in electronic or print format, through appropriate administrative, technical, and physical safeguards established in accordance with the MSIX Interconnection Agreement and MSIX Interconnection Security Agreement. An SEA's written procedures must include, at a minimum, reasonable methods to ensure that—

(i) The SEA permits access to MSIX only by authorized users at the SEA, its local operating agencies, and LEAs in the State that are not local operating agencies but where a migratory child has enrolled; and

(ii) The SEA's authorized users obtain access to and use MSIX records solely for authorized purposes as described in paragraph (c) of this section;

(3) Require all authorized users to complete the User Application Form approved by the Secretary before providing them access to MSIX. An SEA may also develop its own documentation for approving user access to MSIX provided that it contains the same information as the User Application Form approved by the Secretary; and

(4) Retain the documentation required for approving user access to MSIX for three years after the date the SEA terminates the user's access.

(Approved by the Office of Management and Budget under control number 1810–0683)

Assessment Framework and Organizational Restatement Regarding Preemption for Certain Regulations Issued by the Coast Guard; Proposed Rule

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 1

[Docket No. USCG–2008–1259]

RIN 1625–AB32

Assessment Framework and Organizational Restatement Regarding Preemption for Certain Regulations Issued by the Coast Guard

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to issue a rule containing its assessment framework for, and restating its position regarding, the federalism implications of regulations issued under the authority of various statutes within Titles 33 and 46 of the United States Code. This notice requests comments on the proposal and, pursuant to Executive Order 13132, invites State and local governments to consult during its development.

DATES: Comments and related material must either be submitted to our online docket via *http://www.regulations.gov* on or before March 27, 2014, or reach the Docket Management Facility by that date.

ADDRESSES: You may submit comments, identified by Coast Guard docket number USCG–2008–1259, using any one of the following methods:

(1) *Federal eRulemaking Portal: http://www.regulations.gov.*

(2) *Fax:* 202–493–2251.

(3) *Mail:* Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001.

(4) *Hand delivery:* Same as mail address above, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202–366–9329.

To avoid duplication, please use only one of these methods. For instructions on submitting comments, see the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section below.

FOR FURTHER INFORMATION CONTACT: If you have questions on this proposed rule, call Lieutenant Commander Lineka Quijano, Office of Maritime and International Law, Coast Guard, telephone 202–372–3865. If you have questions on viewing or submitting material to the docket, call Ms. Barbara Hairston, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Table of Contents for Preamble

I. Public Participation and Request for Comments

We encourage you to participate in this rulemaking by submitting comments and related materials. All comments received will be posted, without change, to *http://www.regulations.gov* and will include any personal information you have provided.

A. Submitting Comments

If you submit a comment, please include the docket number for this rulemaking (USCG–2008–1259), indicate the specific section of this document to which each comment applies, and provide the reason for each suggestion or recommendation. You may submit your comments and material online, or by fax, mail, or hand delivery, but please use only one of these means. We recommend that you include your name and a mailing address, an email address, or a phone number in the body of your document so that we can contact you if we have questions regarding your submission.

To submit your comment online, go to *http://www.regulations.gov*, select the Advanced Docket Search option on the right side of the screen, insert "USCG–2008–1259" in the Docket ID box, press Enter, and then click on the balloon shape in the Actions column. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit them by mail and would like to know that they reached the Facility, please enclose a stamped, self-addressed postcard or envelope.

We will consider all comments and material received during the comment period. We may change this proposed rule in view of them.

B. Viewing Comments and Documents

To view comments, as well as documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov* at any time, click on "Search for Dockets," insert the docket number for this rulemaking (USCG–2008–1259) in the Docket ID box, press Enter, and then click on the item in the Docket ID column. If you do not have access to the Internet, you may view the docket online by visiting the Docket Management Facility in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. We have an agreement with the Department of Transportation to use the Docket Management Facility.

C. Privacy Act

Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review a Privacy Act notice regarding our public dockets in the January 17, 2008, issue of the **Federal Register** (73 FR 3316).

D. Public Meeting

We do not now plan to hold a public meeting. However, you may submit a request for a public meeting to the Docket Management Facility at the address under **ADDRESSES**, explaining why one would be beneficial. If we determine that a public meeting would aid this rulemaking, we will hold one at a time and place announced by a later notice in the **Federal Register**.

III. Background and Purpose

A. Background

Courts have consistently upheld and reinforced the preemptive effect of Federal regulations for maritime vessels. See, *e.g., Gibbons* v. *Ogden*, 22 U.S. (9 Wheat.) 1 (1824); *Sinnot* v. *Davenport*, 63 U.S. (22 How.) 227 (1859); *Moran* v. *New Orleans*, 112 U.S. 69 (1884); *Kelly* v. *Washington ex rel Foss Co.*, 302 U.S. 1 (1937); *Ray* v. *Atlantic Richfield Co.*, 435 U.S. 151 (1978); *U.S.* v. *Locke*, 529 U.S. 89 (2000). As the U.S. Supreme Court recently explained, the "authority of Congress to regulate interstate navigation, without embarrassment from intervention of the separate States and resulting difficulties with foreign nations, was cited in the Federalist Papers as one of the reasons for adopting the Constitution. *E.g.*, The Federalist Nos. 44, 12, 64. In 1789, the First Congress enacted a law by which vessels with a federal certificate were entitled to 'the benefits granted by any law of the United States.' Act of Sept. 1, 1789, ch. 11, § 1, 1 Stat. 55." *Locke*, 529 U.S. at 99.

The Coast Guard is one of the primary Federal agencies responsible for the promulgation, implementation, and enforcement of Federal maritime regulations, including the implementation of international shipping treaties to which the United States is a party. The Coast Guard has asserted in the past and believes today that consistent standards of universal application and enforcement, coupled with Federal initiatives to meet unique regional concerns, best meet local and national safety and environmental goals with the least disruption to maritime commerce. To that end, the Coast Guard in the past has relied on development of case law and compliance with Congressional intent to ensure that, where appropriate, the preemptive impact of Federal vessel regulations is preserved.

In light of recent Federal cases and the Presidential Memorandum on Preemption issued on May 20, 2009, the Coast Guard believes that a clear agency statement of the preemptive impact of our regulations, particularly those regulations issued prior to the promulgation of Executive Order 13132, Federalism, can be of great benefit to State and local governments, the public, and regulated entities. Therefore, the Coast Guard intends to revise its assessment framework and issue a general restatement of preemption, coupled with specific statements regarding regulations issued under the authority of statutes with preemptive effect, including, among others, the Ports and Waterways Safety Act (PWSA) of 1972, as amended (33 U.S.C. 1223 *et. seq.)*. The Coast Guard proposes to add subpart 1.06 to Title 33 of the Code of Federal Regulations to allow easy access to this assessment framework and organizational restatement by interested persons and parties.

B. General Preemption Principles

Preemption of State law has its basis in the Supremacy Clause of the U.S. Constitution, Article VI, clause 2. The U.S. Supreme Court has determined that three general theories of preemption apply in the context of the regulation of vessels. First, express preemption applies when Congress, by an express statement, specifically precludes State regulation in a given area. The prohibition against State pilotage regulations for coastwise vessels found at 46 U.S.C. 8501 is an example of express preemption, as is the prohibition against State regulation of Great Lakes pilotage found at 46 U.S.C. 9306.

Second, field preemption applies when the Federal regulatory regime pervades a specific area of regulation to the extent that courts conclude that Congress has left no room for State regulation. Even in the absence of an express statement by the Coast Guard or the promulgation of regulations, State rules are preempted where Congress has intended to occupy the field. Thus, a State may not regulate in areas found to be field preemptive. For example, 46 U.S.C. 3703 lists several fields of regulation, including the design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning of tank vessels, for which State action is preempted, regardless of whether the Coast Guard has issued particular regulations in that field.

Third, conflict preemption, which in the maritime regulation context is somewhat different from traditional conflict analysis jurisprudence, applies in cases where the Coast Guard has regulated, or affirmatively decided not to regulate, on a particular subject and a State attempts to regulate on the same subject. Factors to consider in determining whether the regulations are within the same subject include whether the State regulation conflicts with Federal law, whether compliance with both the State law and Federal law is impossible, and whether State law stands as an obstacle to the accomplishment of the full purpose of the Federal law. The Coast Guard believes that nearly all regulations currently issued under the authority of 33 U.S.C. 1231 have preemptive effect under a conflict preemption analysis.

Pursuant to Executive Order 13132, the Coast Guard must, to the extent practicable, publish federalism summary impact statements regarding any regulation that has federalism implications and that preempts State law. In the past, the Coast Guard issued federalism statements indicating that certain preemptive regulations had no federalism implications. Although these regulations were based on authorities that clearly expressed Congress' preemptive intent, the Coast Guard did not describe as clearly as it could have the full nature of the preemption. This practice was consistent with the Coast Guard's view that the regulations did not have any new federalism implications; rather they simply reflected a long standing federalism position in regard to maritime regulation. This proposed regulation seeks to make the Coast Guard's view of the preemptive impact of certain regulations more obvious. The Coast Guard's view is that the intent of Congress to preempt is so clear in express preemption and numerous PWSA situations that the Coast Guard has no discretion in the matter; the

agency was merely fulfilling the direction of Congress consistent with the Supremacy Clause of the U.S. Constitution and therefore did not believe that more particular federalism statements were required. However, in light of recent Federal cases signaling that more explicit preemption statements are instructive and helpful, and in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009, the Coast Guard proposes to clarify and restate the preemptive impact of its regulations. We welcome comments from the public on this proposal.

IV. Discussion of Proposed Rule

A. Preemption Analysis for the PWSA

As amended by the Port and Tanker Safety Act of 1978 (PTSA), the PWSA contains two Titles. Title I authorizes the Coast Guard to promulgate regulations to implement measures for controlling vessel traffic or for protecting navigation and the marine environment. 33 U.S.C. 1223(a)(1). Title II requires the Coast Guard to promulgate regulations addressing the design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification and manning of vessels. 46 U.S.C. 3703(a). With the enactment of 46 U.S.C. Chapter 37 into positive law (Pub. L. 98–89, 97 Stat. 521 (1983)), the distinction between the two titles has legally disappeared. However, reference to Title I and II makes a convenient analytical tool still used by both the courts and the Coast Guard to conduct preemption analyses of regulations issued under these authorities. The Coast Guard will continue to refer to both Titles I and II in this rulemaking and future federalism statements implicating the PWSA.

B. Preemption Restatement for PWSA Title I

In the *Ray* and *Locke* cases cited in section III.A. of this preamble, the U.S. Supreme Court held that the relevant inquiry under Title I of the PWSA, with respect to a State's power to impose navigational operating rules, is whether the Coast Guard has promulgated its own requirement on the subject or has decided that no such requirement should be imposed at all. *Ray,* 431 U.S. 171–172; *Locke,* 529 U.S. 108–110. In such cases, the Coast Guard's regulation, or decision that no regulation should be promulgated, must be given preemptive effect over State laws addressing the same or similar subject matter, even when those State laws are not otherwise inconsistent with Federal law. Where the Coast Guard has neither promulgated its own regulation nor made a determination that no regulation should be promulgated, a State may regulate, so long as the regulation is based on the peculiarities of local waters that call for special precautionary measures.

With these conflict preemption principles in mind, the Coast Guard reiterates its position that any regulations issued under the authority of PWSA Title I are intended to have preemptive impact over State law covering the same subject matter in the same geographic area (as delimited in the Federal regulation), unless the Coast Guard states otherwise in the preamble to the final rule in question.

One exception to the general preemption restatement articulated above is for the enforcement of Coast Guard safety and security zones promulgated under the authority of PWSA Title I by State or local officers. In 46 U.S.C. 70118, Congress specifically authorized State law enforcement officers to enforce Coast Guard safety and security zones. This statute is implemented by the Coast Guard through memoranda of agreement with State and local law enforcement agencies. As such, the Coast Guard's view is that enforcement by State or local officers operating in accordance with a memorandum of agreement between the Coast Guard and the officer's parent agency of safety and security zones promulgated pursuant to PWSA Title I is not preempted.

Another exception to the general preemption restatement articulated above is for State maritime facility regulations that are more stringent than the Coast Guard maritime facility regulations in 33 CFR part 105. State maritime facility regulations will not be preempted so long as these State laws or regulations are more stringent than what is required by 33 CFR part 105 and no actual conflict or frustration of an overriding need for national uniformity exists.

For currently existing rules issued under the authority of PWSA Title I, a listing of Coast Guard determinations regarding preemptive impact is contained in section E, below, and in proposed section 2.1 of the appendix to subpart 1.06. For rules issued after publication of this restatement and assessment framework, the general intentions, presumptions, and policies described above apply, and this rulemaking will be referred to in the Federalism section of the preamble to each final rule published in the **Federal Register**, along with the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard intends to preempt State law (if applicable) will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

C. Preemption Restatement for PWSA Title II

The *Locke* case reaffirmed the ruling announced in *Ray*. It held that regulations issued pursuant to PWSA Title II concern subjects that are reserved exclusively to the Federal government, as implemented by the Coast Guard. Thus State regulation in the field described in 46 U.S.C. 3703(a) is preempted at all times. This field contains categories regarding the design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning of tank vessels. In accordance with these rulings, and to meet the intent of Congress, the Coast Guard's view is that State regulation relating to the aforementioned aspects of tank vessels is field preempted, regardless of whether the Coast Guard has made any regulatory determinations on the subject in question. A listing of regulations already issued under the authority of PWSA Title II, including the applicable Title II category, is provided in section E, below, and in proposed section 2.2 of the appendix to subpart 1.06. For regulations issued under this authority in the future, the preemption restatement and assessment framework described in this paragraph will apply, and this policy will be referred to in the Federalism section of the preamble to each final rule issued under this authority, along with the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard intends to preempt State law will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

D. Preemption Restatement for PWSA Title I/Title II "Overlap" Regulations

Both the *Locke* and *Ray* Courts recognized that some regulations may not fit cleanly into either Title I of Title II of the PWSA. *Locke,* 529 U.S. at 111–12. For example, a State prohibition on the transit of large tankers through State waters might be subject to a Title I analysis if the prohibition were based on local peculiarities, or a Title II analysis if it were based on a State judgment that large tankers are generally unsafe. In *Locke,* several factors were developed to aid in determining the title in which a particular State regulation should be categorized. *Id.* The Coast Guard also recognizes this potential

ambiguity as to its own regulations and will conduct what the *Locke* Court described as an "overlap analysis" in the promulgation and application of its regulations. While the *Locke* Court used the overlap analysis as a means of categorizing a particular State regulation as either falling under a Title I (generally controlled by conflict preemption principles) or a Title II category (controlled by field preemption principles), the Coast Guard believes the overlap analysis factors described by the *Locke* Court are equally useful in categorizing a particular Federal regulation. In conducting an overlap analysis the following factors, derived from *Locke,* are considered: (1) The type of regulations the Coast Guard has actually promulgated under the applicable Title II specific category, as this may aid in determining the scope of the Title II field, and indicates that State regulation of this specific category is field preempted; (2) whether an identical State regulation would be based on conditions unique to a particular port or waterway (*e.g.*, a Title I regulation is one based on water depth or other local peculiarities); (3) whether an identical State regulation would be of limited extraterritorial effect, not requiring the tank vessel to modify its primary conduct outside the specific body of water purported to justify the local rule; and (4) whether an identical State regulation would pose a minimal risk of innocent noncompliance, would not affect vessel operations outside the jurisdiction, would not require adjustment of systemic aspects of the vessel, and would not impose a substantial burden on the vessel's operation within the local jurisdiction itself. Factors 2 through 4 are indicators that, in the absence of a Federal determination on the subject, an identical State regulation might not be field preempted by Title II, and therefore appropriate for conflict preemption analysis under Title I.

After considering all these factors, the Coast Guard will determine whether the regulation is categorized under Title I or Title II. The Coast Guard determinations as to its existing regulations which may be subject to an "overlap analysis," are listed in section E, below, and in proposed section 2.3 of the appendix to subpart 1.06. Where the Coast Guard has determined that the regulation falls under PWSA Title II, the applicable category is also listed. For regulations issued in the future, this section will apply, and the determinations will be stated in the preamble to the final rule, along with the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard intends to preempt State law will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

E. Listing of Current Regulations With Preemptive Impact Pursuant to the PWSA

After applying the principles described above, the Coast Guard has determined that by operation of the PWSA, current and future State law is preempted with respect to the following Coast Guard regulations issued under the authorities of Titles I and II of the PWSA:

Title I—33 CFR parts 64, 101, 103, 104, 105 (for State maritime facility laws that are either less stringent or actually conflict with or frustrate an overriding need for national uniformity), 120, 128, 161, 166, 167, 169 and 401.

Title II—with respect to tank vessels only—33 CFR parts 157, 163, and 168. 46 CFR parts 2, 8, 13, 15, 30, 31, 32, 34, 35, 36, 38, 39, 50, 52, 53, 54, 56, 57, 58, 59, 61, 62, 63, 64, 98, 105, 110, 111, 112, 113, 150, 151, 153, 154, 159, 160, 161, 162, 163, 164, 170, 172, 174, 175, 178, 179, and 199.

Some Coast Guard regulations are grounded in, and issued under the authority of, both titles of the PWSA. Using the overlap analysis described above, the Coast Guard has made the following determinations:

In 33 CFR part 155, the following sections are grounded in Title II authority, and cover fields that are foreclosed from regulation by a State: 155.100 through 155.1030, 155.1055 through 155.1060, 155.1110 through 155.1120, and 155.1135 through 155.1150.

In 33 CFR part 156, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 156.118, 156.215, 156.220, 156.230, 156.300 and 156.310. In 33 CFR part 156, the following sections are grounded in Title II authority, and cover fields that are foreclosed from regulation by a State: 156.100 through 156.115, 156.120 through 156.210, 156.225, and 156.320 through 156.330.

In 33 CFR part 160, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 160.1 through 160.7, 160.105 through 160.107, and 160.115 through 160.215. In 33 CFR part 160, the following regulations as applied to tank vessel operations are grounded in Title II, and cover fields that are foreclosed from regulation by a State: 160.101, 160.103, 160.109, 160.111 and 160.113.

In 33 CFR part 162, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 33 CFR 162.1 through 162.40, 162.65 through 162.65(b)(3), 162.65(b)(4)(ii) through 162.65(b)(6), 162.75 through 162.75(b)(5)(iv), 162.75(b)(6) through 162.80(a)(1), 162.80(a)(3) through 162.90(b)(2)(iii), 162.90(b)(2)(vi) through 162.90(b)(3)(iv), 162.90(b)(4)(ii) through 162.117(h)(2), 162.120 through 162.125(a), 162.125(b)(3) through (5).

In 33 CFR part 162, the following sections are promulgated pursuant to Title II, and cover fields that are foreclosed from regulation by a State: 162.65(b)(4)(i) operation and equipping, 162.75(b)(5)(v) operation and equipping, 162.75(b)(5)(vi) operation, 162.80(a)(2) operation and equipping, 162.90(b)(2)(iv) manning, 162.90(b)(2)(v) operation, 162.90(b)(4)(i) operation and equipping, 162.117(h)(3) and (4) operation, 162.255(e)(1) and (2) operation and equipping, and 162.255(e)(3) operation.

In 33 CFR part 164, the following sections are promulgated under Title I and therefore preempt any similar, identical or contrary State regulation: 33 CFR 164.01, 164.02, 164.03, 164.11(c), 164.11(e), 164.11(f)–(i), 164.11(k)–(n), 164.11(p), 164.11(q), 164.19(b), 164.19(c), 164.51, 164.53, 164.55, 164.61, 164.70, 164.78(a)(3)–(8) and 164.82(c). The following sections are grounded in Title II authority, and cover fields that are foreclosed from regulation by a State: 33 CFR 164.11(b), 164.11(d), 164.11(j), 164.11(o), 164.11(r) through 164.19(a), 164.25 through 164.46, 164.72 through 164.78(a)(2), and 164.78(b) through 164.82(b).

In 33 CFR part 165, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 165.1 through 165.150(b)(4), 165.150(b)(6) through 165.501(d)(2), 165.501(d)(4) through 165.501(d)(5), 165.501(d)(7) through 165.510(d), 165.510(f)(1) through 165.510(f)(3), 165.510(f)(9) through 165.540(f)(6), 165.540(f)(9) through 165.803(e)(2), 165.803(g) through 165.810(e), 165.810(f)(2), 165.811(a) through 165.811(c), 165.811(e) through 165.923(b)(2)(ii)(D), 165.923(b)(2)(ii)(F) through 165.1152(d)(1), 165.1152(d)(3) through 165.1181(d)(1), 165.1181(d)(3) through 165.1704(c)(1), 165.1704(c)(3) through 165.1704(c)(5), and 165.1706 through 165.2030.

The following sections in 33 CFR part 165 are grounded in Title II, and cover

fields that are foreclosed from regulation by a State: 165.150(b)(5) manning, 165.501(d)(3)(i)–(ii) and (6) equipping, 165.510(e) operation, 165.510(f)(4) operation, 165.510(f)(5) manning, 165.510(f)(6) operation, 165.510(f)(7) and (8) equipping, 165.540(f)(7) and (8) equipping, 165.803(e)(3) and (4) equipping, 165.803(f)(1)–(3) equipping, 165.810(f)(1) manning, 165.810(f)(3) equipping, 165.811(d) equipping, 165.923(b)(2)(ii)(E) equipping, 165.1152(d)(2) operation, 165.1181(d)(2) operation, and 165.1704(c)(2) and (6) equipping.

F. Preemption Restatement and Assessment Framework for Regulations Issued Under the Authority of 46 U.S.C. Chapter 32

Chapter 32 of Title 46, U.S. Code, describes the regime of regulation for certain vessels that must comply with the International Safety Management Code that is found in Chapter IX of the Annex to the International Convention for the Safety of Life at Sea, 1974, as amended (SOLAS). This regime requires that certain vessels create and implement a Safety Management System (SMS) and carry onboard and maintain a proper certificate issued by the Coast Guard reflecting a current SMS. 46 U.S.C. 3203 requires the Coast Guard to issue regulations which mandate the implementation of an SMS to which the Chapter applies which identifies: (1) A safety and environmental protection policy; (2) instructions and procedures to ensure the safe operation of those vessels and protection of the environment in compliance with international and United States law; (3) defined level of authority and lines of communications between, and along, personnel on shore and on the vessel; (4) procedures for reporting accidents and nonconformities with 46 U.S.C. Chapter 32; (5) procedures for preparing for and responding to emergency situations; and (6) procedures for internal audits and management reviews of the system. This describes a pervasive scheme of safety management for those vessels to which 46 U.S.C. Chapter 32 applies. Such a pervasive scheme, coupled with the strong mandate that the Coast Guard "shall prescribe regulations," considered in light of the significant Congressional interest to create a uniform maritime regulatory regime, suggests that Congress intended to fill the field related to SMS on all vessels to which 46 U.S.C. Chapter 32 applies, and to any other vessels Congress has made subject to Coast Guard SMS regulation. *See Locke*, 529 U.S. 113–116.

Therefore, the Coast Guard's view is that the field of vessel safety management is foreclosed from State regulation by 46 U.S.C. Chapter 32, regardless of whether the Coast Guard has issued regulations on the subject or not, and regardless of the existence of conflict between the State and Coast Guard regulation. A listing of current Coast Guard regulations issued pursuant to this authority is provided in section G, below, and in proposed section 3 of the appendix to subpart 1.06. For future regulations issued under this authority, the Coast Guard will cite to this rulemaking in the preamble to the final rule, and will conduct the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard regulations are in a field foreclosed from State regulation will also be included in the codified regulation in accordance with the Presidential Memorandum on preemption issued on May 20, 2009.

G. Regulations Issued Pursuant to 46 U.S.C. Chapter 32

All of the regulations in 33 CFR part 96 have been prescribed under the authority of 46 U.S.C. Chapter 32, and cover fields that are foreclosed from regulation by a State.

H. Preemption Restatement and Assessment Framework for Regulations Issued Under the Authority of 46 U.S.C. Chapter 33

Chapter 33 of Title 46, U.S. Code, describes the regime of regulation for vessels "subject to inspection" by the U.S. Coast Guard. Vessels "subject to inspection" is a term of art developed by Congress. It refers to various types of vessels listed in 46 U.S.C. 3301 subject to a comprehensive, pervasive regime of Federal regulation. By contrast, "uninspected vessels," such as most commercial fishing vessels and recreational vessels, are subject to Coast Guard regulation, but under a much less comprehensive and prescriptive scheme of Federal regulation. The U.S. Supreme Court has long recognized the field preemptive impact of the Federal regulatory regime for inspected vessels. See, *e.g.*, *Kelly* v. *Washington ex rel Foss*, 302 U.S. 1 (1937) and *Locke*, 529 U.S. 113–116. Therefore the Coast Guard's view is that the regulatory regime created by 46 U.S.C. 3306 in the areas of design, construction, alteration, repair, operation, superstructures, hulls, fittings, equipment, appliances, propulsion machinery, auxiliary machinery, boilers, unfired pressure vessels, piping, electric installations, accommodations for passengers and crew, sailing school instructors, sailing school students, lifesaving equipment and its use, firefighting equipment, its use and precautionary measures to guard against fire, inspections and tests related to these areas and the use of vessel stores and other supplies of a dangerous nature covers fields that are foreclosed from regulation by a State. These fields are foreclosed from State regulation regardless of whether the Coast Guard has issued a particular regulation on the subject or not, and regardless of the existence of conflict between the State and Coast Guard regulation. A listing of current Coast Guard regulations issued pursuant to this authority is provided in section I, below, and in proposed section 4 of the appendix to subpart 1.06. For future regulations issued under this authority, the Coast Guard will cite to this preemption statement in the preamble to the final rule, and will conduct the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard regulations are in a field foreclosed from State regulation will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

I. Regulations Issued Pursuant to 46 U.S.C. Chapter 33

The following regulations issued pursuant to 46 U.S.C. Chapter 33 cover fields that are foreclosed from regulation by a State: 46 CFR parts 70, 71, 76, 78, 90–93, 95–98, 105, 107–108, 110–122, 125–134, 147, 147A, 148, 150–151, 153–154, 159–164, 166–169, 170–174, 175–185, 188–190, 193–196, and 199.

J. Preemption Restatement and Assessment Framework for Regulations Issued Under the Authority of 46 U.S.C. 3717 and 6101

Section 5 of the PTSA provides that "the Secretary shall establish a marine safety information system" for tank vessels. 46 U.S.C. 3717 requires that, among other data, the marine safety information system shall include the name of each person with an ownership interest in the vessel, details of compliance with financial responsibility requirements of applicable laws or regulations, registration information (including all changes in the name of the vessel), and a record of all inspections and examinations conducted under 46 U.S.C. 3714.

46 U.S.C. 6101 states that "The Secretary shall prescribe regulations on the marine casualties to be reported and the manner of reporting." The statute requires, among other things, the reporting of the death of an individual, serious injury to an individual, material

loss of property, material damage affecting the seaworthiness or efficiency of the vessel, and significant harm to the environment.

The Supreme Court has held that "Congress intended that the Coast Guard regulations be the sole source of a vessel's reporting obligations . . . ." and that Coast Guard regulations promulgated pursuant to the authority of 46 U.S.C. 3717 and 6101 were not intended by Congress "to be cumulative to those enacted by each political subdivision whose jurisdiction a vessel enters." *Locke*, 529 U.S. 115–116. Therefore, the Coast Guard's view is that regulations issued under the authority of 46 U.S.C. 3717 as part of a marine safety information system and under 46 U.S.C. 6101 for marine casualty reporting requirements cover fields foreclosed from regulation by a State. These fields are foreclosed from State regulation regardless of whether the Coast Guard has issued regulations on the subject or not, and regardless of the existence of conflict between the State and Coast Guard regulation. A listing of current Coast Guard regulations issued pursuant to this authority is provided in section K, below, and in proposed section 5 of the appendix to subpart 1.06. For future regulations issued under this authority, the Coast Guard will cite to this preemption statement in the preamble to the final rule, and will conduct the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard regulations are in a field foreclosed from State regulation will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

K. Regulations Issued Pursuant to 46 U.S.C. 3717 and 6101

The following regulations issued pursuant to 46 U.S.C. 3717 and 6101 cover fields that are foreclosed from regulation by a State: 33 CFR 151.15, 151.26(b)(3), 153.203, 155.1035(b), 164.61, part 173 subpart C; 46 CFR 4.05–1 through 4.05–10, 35.15–1, 197.484 through 197.488, and 401.260.

L. Preemption Restatement and Assessment Framework for Regulations Issued Under the Act To Prevent Pollution From Ships, 33 U.S.C. 1901–1912

The Act to Prevent Pollution from Ships (APPS) is the domestic law implementing the "International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 relating thereto," otherwise referred to as MARPOL 73/78 or MARPOL. To the extent an international agreement creates a standard that is embodied in Coast Guard regulations or is formally recognized by the Coast Guard as applicable pursuant to domestic law (in this case, APPS), that standard will also preempt a contrary State law. Under international law, an international treaty or agreement is binding on all political subdivisions of the ratifying nation, and a party would not be excused from compliance because of the actions of a political subdivision. Because international agreements reflect the intentions of nation-states, the Supreme Court has emphasized that any concurrent power held by States in fields that are the subject of international agreements is "restricted to the narrowest of limits." *Hines* v. *Davidowitz*, 312 U.S. 52, 68 (1941). Accordingly, whether viewed through the lens of preemption by treaty or interference with the Federal government's exclusive authority to conduct the foreign affairs of the United States, the Supreme Court has repeatedly struck down State laws that conflict with duly promulgated Federal law touching on matters of international concern. See, *e.g.*, *Zschernig* v. *Miller*, 389 U.S. 429 (1968); *United States* v. *Pink*, 315 U.S. 203 (1942); *United States* v. *Belmont*, 301 U.S. 324 (1937). This foreign affairs based preemption analysis is also buttressed by the traditional Congressional recognition of a uniform and consistent pattern of Federal regulation of shipping. The Coast Guard recognizes there are certain and limited express statements of non-preemption related to APPS such as in Section 2003 of Public Law 100–220, among others, which will be considered in any related preemption analysis. A listing of current Coast Guard regulations issued pursuant to this authority is provided in section M, below, and in proposed section 6 of the appendix to subpart 1.06. For future regulations issued under this authority, the Coast Guard will cite to this preemption restatement in the preamble to the final rule, and will conduct the federalism analysis required pursuant to Executive Order 13132. A statement that the Coast Guard intends to preempt State law (if applicable) will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009.

M. Regulations Issued Pursuant to 33 U.S.C. 1901–1912

The following regulations issued pursuant to 33 U.S.C. 1901–1912 preempt conflicting, similar, or identical State or local laws or regulations with the exception of State or local laws or regulations specifically permitted by Section 2003 of Public Law 100–220 or other similar express statutory authority: 33 CFR part 151, Subpart A; 33 CFR 155.100 through 155.130, 155.350 through 155.400, 155.430, 155.440, 155.470, 155.1030(j) and (k), 155.1065(g), and all the regulations in 33 CFR part 157.

N. Preemption Restatement and Assessment Framework for Regulations Issued Under Authorities Not Described Above

Other regulations issued by the Coast Guard after the effective date of the final rule may have preemptive impact. In such cases, the Coast Guard's view is that such regulations, in order to more fully address the requirements of Executive Order 13132, will also in their preamble contain a preemption analysis that states the legal rationale for concluding whether the regulation has preemptive impact. A statement that the Coast Guard intends to preempt State law (if applicable) will also be included in the codified regulation in accordance with the Presidential Memorandum on Preemption issued on May 20, 2009. For regulations that are currently issued and not specifically addressed in this proposed Assessment Framework and Organization Restatement of Preemption, the preemptive analysis and principles recited herein will be used to determine any preemptive effect, unless there are specific preemption exceptions applicable to the particular statute or regulations in question. The absence of an express preemptive statement in a regulation or rule preamble is not determinative of the preemptive impact of the regulation, considering that the true preemptive intent of the regulation is reflected in the underlying Congressional authority and intent.

O. Preemption Restatement and Assessment Framework for Certain Coast Guard Determinations That No Regulations Should Issue

In some cases, the Coast Guard makes a determination that no regulations are needed on certain subjects or in a certain geographic area. These determinations can have preemptive impact over a contrary State determination. For example, this was true in cases of negative determinations made under Title I of the PWSA or pursuant to the preemption provisions of the Federal Motorboat Safety Act of 1971, 46 U.S.C. 4301 *et seq.* *See, e.g., Locke*, 529 U.S. at 109 and *Ray*, 435 U.S. at 171–172, Cf. *Spreitsma* v. *Mercury Marine*. 537 U.S. 51, 66 (2002). These

negative determinations can be made in several ways, including, but not limited to: Formal decisions in response to the recommendations of advisory committees, correspondence in response to Congressional inquiries regarding an area of regulation, or in response to requests or actions by State and local governments, the marine industry, or the public where the USCG's decision is intended to have preemptive effect. Negative determinations may or may not be published in the **Federal Register**, so long as they are published in a medium likely to reach the affected audience as the decision of the Coast Guard on the question of preemption. Regardless of the method used to record and publish a Coast Guard preemptive determination not to regulate, negative determinations made after the effective date of the final rule in this matter should contain a statement of the preemptive impact of such negative determinations, although the mere absence of such a statement of preemptive impact does not necessarily indicate that the determination is not preemptive.

V. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below, we summarize our analyses based on 13 of these statutes or executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 ("Regulatory Planning and Review") and 13563 ("Improving Regulation and Regulatory Review") direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

This proposed rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review. The Office of Management and Budget has not reviewed it under that Order. This proposed rule would only clarify, not change, the preemptive status of Coast Guard regulations. We expect this proposed rule would not result in additional impacts on the U.S. economy.

This proposed rule is intended to clarify the preemptive effect of Federal regulatory regimes, and articulate the assessment framework used by the Coast Guard for evaluating the preemptive impact of future Coast Guard regulations based on their underlying statutory schemes. The assessment framework is based on the federalism analysis pursuant to Executive Order 13132. The Coast Guard currently performs federalism analyses under Executive Order 13132, if applicable. The Coast Guard would not require additional resources to implement this proposed rule.

By clarifying the preemption framework, the Coast Guard hopes to avoid or reduce confusion related to States and local governments' attempts to regulate in preempted areas. This action does not alter the preemptive effect of any Federal statute or regulation, and does not affect the relationship between the national government and the State and local governments.

We expect no additional cost impacts to State and local governments or industry from this proposed rule because it only restates and clarifies the status of Federal and State laws as it exists. This proposed rule does not alter in any way the rights of States. However, we expect this proposed rule to be beneficial to the maritime industry because it avoids potential conflicts between State and Federal regulations.

B. Small Entities

The Regulatory Flexibility Act (5 U.S.C. 601–612) requires agencies to consider whether regulatory actions would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

As previously discussed, we estimate this proposed rule would not impose additional costs and would have no additional impact on small entities because it does not alter the preemptive impact of any particular regulation or impose any direct costs on small entities, but rather clarifies the preemptive status of certain regulations, as presented in section IV—Discussion of Proposed Rule.

Therefore, the Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment to the Docket Management Facility at the addresses under **ADDRESSES**. In your comment, explain why you think it qualifies and how and to what degree this proposed rule would economically affect it.

C. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule so that they can better evaluate its effects on them and participate in the rulemaking. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please consult Lieutenant Commander Lineka Quijano, Office of Maritime and International Law, Coast Guard, telephone 202–372–3865. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

D. Collection of Information

This proposed rule would not require a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

E. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this proposed rule under that Order. This regulation, in and of itself, does not change or alter the Coast Guard's view on the law of preemption, or the preemptive impact of our existing regulatory regime. Likewise, it does not serve to prospectively give preemptive impact to any future regulatory effort. As we make clear below, many of the statutes we administer, and many of our regulations, have preemptive impact. In keeping with the intent of Congress, and the spirit of Executive Order 13132 and the Presidential Memorandum on Preemption issued on May 20, 2009, the purpose of this rulemaking is to identify those statutes and regulations the Coast Guard considers to be preemptive. We also clarify and restate the principles and procedures by which the Coast Guard identifies and promulgates regulatory determinations with preemptive impact. This proposed rule discusses existing law on preemption; it identifies the laws and regulations that have preemptive effect. It clarifies (but

does not alter) the Coast Guard's view on the preemptive effect of its regulations. Nonetheless, the Coast Guard recognizes the key role State and local governments may have in making regulatory determinations. Accordingly, the Coast Guard encourages State and local governments to participate in the development of this rulemaking, and will, if we receive comments from States, consult with the States pursuant to Executive Order 13132. We will also make available to the Director of the Office of Management and Budget any written communications submitted by State and local officials. Any future rulemaking covering an area the Coast Guard considers to have preemptive impact pursuant to this proposed policy will also be promulgated in accordance with E.O. 13132 or its successors.

F. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector, of $100,000,000 [adjusted for inflation] or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

G. Taking of Private Property

This proposed rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

H. Civil Justice Reform

This proposed rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

I. Protection of Children

We have analyzed this proposed rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

J. Indian Tribal Governments

This proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Nevertheless, the Coast Guard welcomes input from Federally recognized Indian tribes.

K. Energy Effects

We have analyzed this proposed rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

L. Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This proposed rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

M. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. A preliminary environmental analysis checklist supporting this determination is available in the docket where indicated under the "Public Participation and Request for Comments" section of this preamble. This rule involves regulations that are editorial or procedural and regulations concerning internal agency functions. This rule falls under paragraphs 34(a) and (b) of the Instruction. We seek any comments or information that may lead to discovery of a significant environmental impact from this proposed rule.

List of Subjects in 33 CFR Part 1

Administrative practice and procedure, Authority delegations (Government agencies), Freedom of information, and Penalties.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 1 as follows:

PART 1—GENERAL PROVISIONS

■ 1. Add subpart 1.06 to read as follows:

Subpart 1.06—Assessment Framework and Organizational Restatement Regarding Preemption for Certain Regulations Issued by the Coast Guard

Sec.

Subpart 1.06—Assessment Framework and Organizational Restatement Regarding Preemption for Certain Regulations Issued by the Coast Guard

Authority: 14 U.S.C. 2 and 91; 33 U.S.C. 1223, 1231, 1903(b); 46 U.S.C. 3203, 3306, 3703, 3717, 4302, & 6101; Dept. of Homeland Security Delegation No. 0170.1.

§ 1.06–1 General Restatement Regarding Preemption and Preemption Assessment Framework.

(a) Preemption of State law has its basis in Article VI, clause 2, the Supremacy Clause of the U.S. Constitution. The Coast Guard follows the three general theories of preemption that the U.S. Supreme Court has determined apply in the context of the regulation of vessels.

(1) *Express preemption* applies when Congress, by an express statement, specifically precludes State regulation in a given area.

(2) *Field preemption* applies when the Federal regulatory regime pervades a specific area of regulation to the extent that courts conclude that Congress has left no room for State regulation. Even in the absence of an express statement by the Coast Guard or the promulgation of regulations, State rules are preempted where Congress has intended to occupy the field. Thus, a State may not regulate in areas found to be field preempted.

(3) *Conflict preemption* applies in cases where courts find that the State regulation conflicts with a Federal statute or regulation, where compliance with both the State law and Federal law or regulation is impossible, or where State law stands as an obstacle to the accomplishment of the full Federal purpose.

Note to paragraph (a): General Policy. Since the founding of the Republic, the Federal government has historically exercised the preeminent and preemptive role in regulating interstate and international shipping. Courts have consistently upheld and reinforced the preemptive effect of the Federal regulatory regime for vessels. See, *e.g.*, *Kelly* v. *Washington ex rel Foss Co.*, 302 U.S. 1 (1937); *Ray* v. *Atlantic Richfield Co.*, 435 U.S. 151 (1978); *U.S.* v. *Locke*, 529 U.S. 89 (2000). The Coast Guard is one of the primary Federal agencies responsible for the promulgation, implementation and enforcement of Federal shipping regulations, including the implementation of international shipping treaties to which the United States is a party. The Coast Guard's policy position is that consistent standards of universal application and enforcement, coupled with Federal initiatives to meet unique regional concerns, best meet local and national safety and environmental goals with the least disruption to maritime commerce. Thus, in many cases, the Coast Guard regulations preempt non-federal regulatory or enforcement actions, consistent with the principles described in paragraph (a) of this section. The Coast Guard does not intend, through the publication of this policy, to affect any regulation promulgated pursuant to authority under which Congress has expressed an intention not to preempt State or local law or regulation.

(b) *Procedures.* In cases where a Coast Guard regulatory determination has preemptive impact, the Coast Guard will use the following procedures to identify and communicate that impact:

(1) For regulations promulgated under the authority of a statute that is discussed in this subpart, but issued prior to [EFFECTIVE DATE OF FINAL RULE], the Coast Guard has published a listing of the preemptive impacts in the appendix to subpart 1.06 of this part, although that listing is not intended to be exclusive.

(2) For regulations promulgated under the authority of a statute that is discussed in this subpart, issued after [EFFECTIVE DATE OF FINAL RULE], those final rules will contain a reference to and a statement of the applicability of the preemption policies in this subpart. The preambles of those rules will also contain a report of the results of the consultative process with State and local governments required by Executive Order 13132.

(3) For regulations promulgated under the authority of a statute that is not discussed in this subpart, issued prior to [EFFECTIVE DATE OF FINAL RULE], the Coast Guard will issue preemption analyses and determinations on a case by case basis, ~~as~~ necessary. Any such determination will include a report on the results of the consultative process required under Executive Order 13132, if applicable. Any party seeking a Coast Guard preemption determination for a regulation covered by this paragraph may do so by writing to the Commandant (CG–0941), Attn: Office of Maritime and International Law, U.S. Coast Guard Stop 7213, 2703 Martin Luther King Jr Avenue SE., Washington, DC 20593–7213.

(4) For regulations promulgated under the authority of a statute not discussed in this subpart, issued after [EFFECTIVE DATE OF FINAL RULE], those final rules will contain a reference to the applicability of the general preemption policy in this subpart, as well as a statement of the preemptive impact of the specific statutes and regulations in question. The preambles of those rules will also contain an analysis of the preemptive impact and a report of the results of the consultative process with State and local governments required by Executive Order 13132, if applicable.

(5) In cases where the Coast Guard has made a determination not to regulate on a certain subject or in a certain geographic area, the procedures for identifying and communicating the preemptive impact of such negative determinations are:

(i) For negative determinations issued prior to [EFFECTIVE DATE OF FINAL RULE], the Coast Guard will issue preemption analyses and determinations on a case by case basis, as necessary. Any such determination will include a report on the results of the consultative process required under Executive Order 13132, if applicable. Any party seeking a Coast Guard preemption determination for a negative determination covered by this paragraph may do so by writing to the Commandant (CG–0941), Attn: Office of Maritime and International Law, U.S. Coast Guard Stop 7213, 2703 Martin Luther King Jr. Avenue SE., Washington, DC 20593–7213.

(ii) For negative determinations issued after [EFFECTIVE DATE OF FINAL RULE], the Coast Guard negative determination will contain a reference to the applicability of the preemption principles in this subpart, as appropriate, as well as a statement of the preemptive impact of the negative determination. The negative determination will also contain a report of the results of the consultative process with State and local governments required by Executive Order 13132, if applicable.

§ 1.06–10 Restatement Regarding Preemption and Assessment Framework for the Ports and Waterways Safety Act and Regulations Issued Under Its Authority.

(a) *General.* The Ports and Waterways Safety Act of 1972 (Pub. L. 92–340, 86 Stat. 424), as amended by the Port and Tanker Safety Act of 1978 (Pub. L. 95–474, 92 Stat. 1471) (collectively the "PWSA") contained two titles. Title I is codified at 33 U.S.C. 1221–1232. Title II is codified at 46 U.S.C. Chapter 37. This subpart refers to the PWSA by title, not section.

(b) *PWSA Title I* (1)—*Preemptive effect.* Conflict preemption principles apply to PWSA Title I. Any regulations or negative determinations issued by the U.S. Coast Guard under the authority of PWSA Title I are intended to have preemptive impact over State law covering the same subject matter in the same geographic area (as delimited in the Federal regulation), unless the Coast Guard states otherwise in the preamble to the final rule or the negative determination in question. This does not include enforcement of Coast Guard safety and security zones created under the authority of Title I of the PWSA when done by State or local officers, pursuant to 46 U.S.C. 70118 and a memorandum of agreement between the Coast Guard and the State or local

enforcement agency in question. Also, this does not include State maritime facility regulations that are more stringent than the Coast Guard maritime facility regulations in 33 CFR part 105. State maritime facility regulations will not be preempted so long as these State laws or regulations are more stringent than what is required by 33 CFR part 105 and no actual conflict or frustration of an overriding need for national uniformity exists.

(2) *Procedures.* For rules or negative determinations issued under the authority of PWSA Title I and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) and (b)(5)(i) of this subpart apply. For rules or negative determinations issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) and (b)(5)(ii) of this subpart apply.

(c) *PWSA Title II*—(1) *Preemptive effect.* Field preemption principles apply to PWSA Title II. State regulations relating to the design, construction, alteration, repair, maintenance, operation, equipping, personnel qualification, and manning of tank vessels are preempted, regardless of whether the Coast Guard has made any regulatory determinations on the subject in question.

(2) *Procedures.* For rules issued under the authority of PWSA Title II and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) of this subpart apply. For rules issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) of this subpart apply. In addition, the preambles to those final rules will contain a determination as to which PWSA Title II category or categories are applicable.

(d) *PWSA Title I/Title II Overlap.* In cases where a regulation could be classified as either Title I or Title II, the Coast Guard conducts the "overlap analysis" described in the U.S. Supreme Court decision in *United States* v. *Locke*, 529 U.S. 89, 111–112 (2000). For regulations issued prior to [EFFECTIVE DATE OF FINAL RULE], the Coast Guard has published a listing of our overlap analyses in the appendix to subpart 1.06 of this part. For regulations issued after [EFFECTIVE DATE OF FINAL RULE], the result of the overlap analysis will be contained in both the preamble and the text of those final rules.

§ 1.06–20 Restatement Regarding Preemption and Assessment Framework for 46 U.S.C. Chapter 32 and Regulations Issued Under Its Authority.

(a) *Preemptive effect.* Field preemption principles apply to 46 U.S.C. Chapter 32. Regulations issued by the Coast Guard under the authority of 46 U.S.C. Chapter 32 in the field of vessel safety management cover a field foreclosed from regulation by a State, regardless of the existence of conflict between the State and Coast Guard regulation.

(b) *Procedures.* For rules issued under the authority of 46 U.S.C. Chapter 32 and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) of this subpart apply. For rules issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) of this subpart apply. In addition, the preambles to those final rules will contain a determination as to which 46 U.S.C. Chapter 32 category or categories are applicable.

§ 1.06–30 Restatement Regarding Preemption and Assessment Framework for 46 U.S.C. Chapter 33 and Regulations Issued Under Its Authority.

(a) *Preemptive effect.* Field preemption principles apply to 46 U.S.C. Chapter 33. Regulations issued by the Coast Guard under the authority of 46 U.S.C. 3306 in the fields of design, construction, alteration, repair, operation, superstructures, hulls, fittings, equipment, appliances, propulsion machinery, auxiliary machinery, boilers, unfired pressure vessels, piping, electric installations, accommodations for passengers and crew, sailing school instructors, sailing school students, lifesaving equipment and its use, firefighting equipment, its use and precautionary measure to guard against fire, inspections and tests related to these fields, and the use of vessel stores and other supplies of a dangerous nature cover fields that are foreclosed from regulation by a State. These fields are foreclosed from State regulation regardless of the existence of conflict between the State and Coast Guard regulation.

(b) *Procedures.* For rules issued under the authority of 46 U.S.C. 3306 and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) of this subpart apply. For rules issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) of this subpart apply. In addition, the preambles to those final rules will contain a determination as to which 46 U.S.C. 3306 category or categories are applicable.

§ 1.06–40 Restatement Regarding Preemption and Assessment Framework for 46 U.S.C. 3717 and 6101 and Regulations Issued Under Their Authority.

(a) *Preemptive effect.* Field preemption principles apply to 46 U.S.C. 3717 and 6101. Any regulation issued by the Coast Guard under the authority of 46 U.S.C. 3717 or 46 U.S.C. 6101 covers fields that are foreclosed from State regulation. These fields are foreclosed from State regulation regardless of the existence of conflict between the State and Coast Guard regulation.

(b) *Procedures.* For rules issued under the authority of 46 U.S.C. 3717 or 6101 and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) and (b)(5)(i) of this subpart apply. For rules issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) and (b)(5)(ii) of this subpart apply.

§ 1.06–50 Restatement Regarding Preemption and Assessment Framework for The Act To Prevent Pollution From Ships, Codified at 33 U.S.C. 1901 to 1912 and Regulations Issued Under Its Authority.

(a) *Preemptive effect.* Conflict preemption principles apply to 33 U.S.C. 1901–1912. With the exception of State or local laws or regulations specifically permitted by section 2003 of Public Law 100–220 or other similar express statutory authority, any regulation issued by the Coast Guard under the authority of 33 U.S.C. 1901–1912 has preemptive impact over similar, identical, or contrary State law.

(b) *Procedures.* For rules or negative determinations issued under the authority of 33 U.S.C. 1901–1912 and promulgated prior to [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(1) and (b)(5)(i) of this subpart apply. For rules or negative determinations issued after [EFFECTIVE DATE OF FINAL RULE], the procedures in § 1.06–1(b)(2) and (b)(5)(ii) of this subpart apply.

Appendix to Subpart 1.06—Regulations With Preemptive Effect

1. *Scope.* This Appendix sets out the preemptive effect of certain Coast Guard regulations as they existed on [EFFECTIVE DATE OF FINAL RULE]. It amplifies the assessment framework set out in subpart 1.06 by providing examples, taken from existing law, of the different preemption analyses described in subpart 1.06. It also provides information on the Coast Guard's analytical approach to the listed regulations. This appendix does not list all regulations that may have preemptive effect, nor does it describe in totality the preemptive effect of all Federal statutes governing every Coast Guard activity. This appendix does not account for developments occurring after

[EFFECTIVE DATE OF FINAL RULE]. For regulations not listed in this appendix, refer to the preemption assessment framework in 33 CFR 1.06–1.

2. *Regulations with Preemptive Impact Pursuant to the Ports and Waterways Safety Act.*

2.1 *Regulations in effect an [EFFECTIVE DATE OF FINAL RULE] and having the preemptive effect described in 33 CFR 1.06–10(b) pursuant to Title I of the Ports and Waterways Safety Act.* 33 CFR parts 64, 101, 103, 104, 105 (for State maritime facility security laws that are either less stringent or that actually conflict with or frustrate an overriding need for national uniformity), 120, 128, 161, 166, 167, 169 and 401.

2.2 *Regulations in effect an [EFFECTIVE DATE OF FINAL RULE] covering fields foreclosed from State regulation as described in 33 CFR 1.06–10(c) pursuant to Title II of the Ports and Waterways Safety Act.* With respect to tank vessels only: 33 CFR parts 157, 163, and 168; 46 CFR parts 2, 8, 13, 15, 30, 31, 32, 34, 35, 36, 38, 39, 50, 52, 53, 54, 56, 57, 58, 59, 61, 62, 63, 64, 98, 105, 110, 111, 112, 113, 150, 151, 153, 154, 159, 160, 161, 162, 163, 164, 170, 172, 174, 175, 178, 179, and 199.

2.3 *Regulations in effect an [EFFECTIVE DATE OF FINAL RULE] and appropriate for analysis under the "overlap analysis" described in 33 CFR 1.06–10(d).*

Using the overlap analysis described in 33 CFR 1.06–10(d), the Coast Guard has made the following determinations:

(a) In 33 CFR part 155, the following sections are grounded in Title II authority, and therefore cover fields foreclosed from State regulation: 155.100 through 155.1030, 155.1055 through 155.1060, 155.1110 through 155.1120, and 155.1135 through 155.1150.

(b) In 33 CFR part 156, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 156.118, 156.215, 156.220, 156.230, 156.300 and 156.310.

(c) In 33 CFR part 156, the following sections are grounded in Title II authority, and therefore cover fields foreclosed from State regulation: 156.100 through 156.115, 156.120 through 156.210, 156.225, and 156.320 through 156.330.

(d) In 33 CFR part 160, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 160.1 through 160.7, 160.105 through 160.107, and 160.115 through 160.215.

(e) In 33 CFR part 160, the following regulations as applied to tank vessel operations are grounded in Title II, and therefore cover fields foreclosed from State regulation: 160.101, 160.103, 160.109, 160.111 and 160.113.

(f) In 33 CFR part 162, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 33 CFR 162.1 through 162.40, 162.65 through 162.65(b)(3), 162.65(b)(4)(ii) through 162.65(b)(6), 162.75 through 162.75(b)(5)(iv), 162.75(b)(6) through 162.80(a)(1), 162.80(a)(3) through 162.90(b)(2)(iii), 162.90(b)(2)(vi) through 162.90(b)(3)(iv), 162.90(b)(4)(ii) through 162.117(h)(2), 162.120 through 162.125(a), 162.125(b)(3) through (5).

(g) In 33 CFR part 162, the following regulations are promulgated pursuant to Title II, and therefore cover fields foreclosed from State regulation: 162.65(b)(4)(i) operation and equipping, 162.75(b)(5)(v) operation and equipping, 162.75(b)(5)(vi) operation, 162.80(a)(2) operation and equipping, 162.90(b)(2)(iv) manning, 162.90(b)(2)(v) operation, 162.90(b)(4)(i) operation and equipping, 162.117(h)(3) and (4) operation, 162.255(e)(1) and (2) operation and equipping, and 162.255(e)(3) operation.

(h) In 33 CFR part 164, the following regulations are promulgated under Title I and therefore preempt any similar, identical or contrary State regulation: 33 CFR 164.01, 164.02, 164.03, 164.11(c), 164.11(e), 164.11(f)–(i), 164.11(k)–(n), 164.11(p), 164.11(q), 164.19(b), 164.19(c), 164.51, 164.53, 164.55, 164.61, 164.70, 164.78(a)(3)–(8) and 164.82(c).

(i) In 33 CFR part 164, the following sections are grounded in Title II authority, and therefore cover fields foreclosed from State regulation: 33 CFR 164.11(b), 164.11(d), 164.11(j), 164.11(o), 164.11(r) through 164.19(a), 164.25 through 164.46, 164.72 through 164.78(a)(2), and 164.78(b) through 164.82(b).

(j) In 33 CFR 165, the following sections are grounded in Title I authority, and therefore preempt any similar, identical or contrary State regulation: 33 CFR 165.1 through 165.150(b)(4), 165.150(b)(6) through 165.501(d)(2), 165.501(d)(4) through 165.501(d)(5), 165.501(d)(7) through 165.510(d), 165.510(f)(1) through 165.510(f)(3), 165.510(f)(9) through 165.540(f)(6), 165.540(f)(9) through 165.803(e)(2), 165.803(g) through 165.810(e), 165.810(f)(2), 165.811(a) through 165.811(c), 165.811(e) through 165.923(b)(2)(ii)(D), 165.923(b)(2)(ii)(F) (through 165.1152(d)(1), 165.1152(d)(3) through 165.1181(d)(1), 165.1181(d)(3) through 165.1704(c)(1), 165.1704(c)(3) through 165.1704(c)(5), and 165.1706 through 165.2030.

(k) In 33 CFR part 165, the following sections are grounded in Title II, and therefore cover fields foreclosed from State regulation: 165.150(b)(5) manning, 165.501(d)(3)(i)–(ii) and (6) equipping, 165.510(e) operation, 165.510(f)(4) operation, 165.510(f)(5) manning, 165.510(f)(6) operation, 165.510(f)(7) and (8) equipping, 165.540(f)(7) and (8) equipping, 165.803(e)(3) and (4) equipping, 165.803(f)(1)–(3) equipping, 165.810(f)(1) manning, 165.810(f)(3) equipping, 165.811(d) equipping, 165.923(b)(2)(ii)(E) equipping, 165.1152(d)(2) operation, 165.1181(d)(2) operation, and 165.1704(c)(2) and (6) equipping.

3. *Regulations in effect an [EFFECTIVE DATE OF FINAL RULE] and covering fields foreclosed from State regulation as described in 33 CFR 1.06–20.*

All of the regulations in 33 CFR part 96 have been prescribed under the authority of 46 U.S.C. Chapter 32, and therefore cover fields foreclosed from State regulation.

4. *Regulations in effect an [EFFECTIVE DATE OF FINAL RULE] and covering fields foreclosed from State regulation as described in 33 CFR 1.06–30.*

The following regulations issued pursuant to 46 U.S.C. Chapter 33 cover fields foreclosed from State regulation: 46 CFR parts 70, 71, 76, 78, 90–93, 95–98, 105, 107–108, 110–122, 125–134, 147, 147A, 148, 150–151, 153–154, 159–164, 166–169, 170–174, 175–185, 188–190, 193–196, and 199.

5. *Regulations in effect an [EFFECTIVE DATE OF PUBLICATION OF FINAL RULE] and covering fields foreclosed from State regulation as described in 33 CFR 1.06–40.*

The following regulations issued pursuant to 46 U.S.C. 3717 and 6101 cover fields foreclosed from State regulation: 33 CFR 151.15, 151.26(b)(3), 153.203, 155.1035(b), 164.61, part 173 subpart C; 46 CFR 4.05–1 through 4.05–10, 35.15–1, 197.484 through 197.488, 401.260.

6. *Regulations in effect on [EFFECTIVE DATE OF FINAL RULE] and having the preemptive effect described in 33 CFR 1.06–50.*

The following regulations issued pursuant to 33 U.S.C. 1901 through 1912 preempt similar, identical, or contrary State or local laws or regulations with the exception of State or local laws or regulations specifically permitted by Section 2003 of Public Law 100–220 or other similar express statutory authority: 33 CFR part 151, subpart A; 33 CFR 155.100 through 155.130, 155.350 through 155.400, 155.430, 155.440, 155.470, 155.1030(j) and (k), 155.1065(g), and all the regulations in 33 CFR part 157.

Dated: December 5, 2013.

F.J. Kenney,

Rear Admiral, U.S. Coast Guard, Judge Advocate General.

Commodity Credit Corporation

7 CFR Part 1493
CCC Export Credit Guarantee (GSM–102) Program and Facility Guarantee Program (FGP); Proposed Rule

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1493

RIN 0551–AA74

CCC Export Credit Guarantee (GSM–102) Program and Facility Guarantee Program (FGP)

AGENCY: Foreign Agricultural Service and Commodity Credit Corporation (CCC), USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise and amend the regulations that administer the Export Credit Guarantee (GSM–102) Program. Changes in this proposed rule incorporate program operational changes and information from press releases and notices to participants that have been implemented since the publication of the current rule, and include other administrative revisions to enhance clarity and program integrity. This proposed rule also incorporates certain changes as suggested in comments received in response to the initial publication of the proposed rule on July 27, 2011. These changes should increase program availability to all program participants and enhance access and encourage sales for smaller U.S. exporters. Changes are also intended to improve CCC's financial management of the program. The proposed rule would eliminate provisions for the Intermediate Export Credit Guarantee (GSM–103) Program, consistent with the repeal of authority to operate this program in the Food, Conservation, and Energy Act of 2008 (2008 Act).

DATES: Comments concerning this proposed rule must be received by January 27, 2014 to be assured consideration.

ADDRESSES: Comments may be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the online instructions to submit comments.
- *EMail: GSMregs@fas.usda.gov.*
- *Fax:* (202) 720–2495, Attention: "GSM102 Proposed Rule Comments".
- *Hand Delivery, Courier, or U.S. Postal delivery:* Amy Slusher, Deputy Director, Credit Programs Division, Foreign Agricultural Service, U.S. Department of Agriculture, 1400 Independence Ave. SW., Stop 1025, Room 5509, Washington, DC 20250–1025.

Comments may be inspected at 1400 Independence Avenue SW., Washington, DC, between 8:00 a.m. and 4:30 p.m., Monday through Friday, except holidays. A copy of this proposed rule is available through the Foreign Agricultural Service (FAS) homepage at: *http://www.fas.usda.gov/excredits/exp-cred-guar-new.asp*.

FOR FURTHER INFORMATION CONTACT: Amy Slusher, Deputy Director, Credit Programs Division; by phone at (202) 720–6211; or by email at: *Amy.Slusher@fas.usda.gov*.

SUPPLEMENTARY INFORMATION:

Background

The Commodity Credit Corporation's (CCC) Export Credit Guarantee (GSM–102) Program is administered by the Foreign Agricultural Service (FAS) of the U.S. Department of Agriculture (USDA) on behalf of CCC, pursuant to program regulations codified at 7 CFR part 1493 and through the issuance of "Program Announcements" and "Notices to Participants" that are consistent with this program regulation. The current regulations became effective on November 18, 1994. Since that time, CCC has implemented numerous operational changes to improve the efficiency of the program, including an automated, Internet-based system for participants and revised program controls to improve program quality, reduce costs, and protect against waste and fraud. Also since that time, agricultural trade and finance practices have evolved. This proposed rule is intended to reflect these changes and to enhance the overall clarity and integrity of the program. In addition, the 2008 Act repealed the authority to operate the GSM–103 Program, and this change is reflected in the proposed rule.

On July 27, 2011, CCC published a Proposed Rule in the **Federal Register** (Vol. 76, No. 144, pages 44836–44855) revising and amending the regulations that administer the Export Credit Guarantee (GSM–102) Program. Changes in this proposed rule incorporated program operational changes and information from press releases and notices to participants that have been implemented since the publication of the current rule, and included other revisions to enhance clarity and program integrity. The deadline for comments on the proposed rule was October 26, 2011 (extended from the initial deadline of September 26, 2011, at the request of interested commenters). CCC received comments on the proposed rule from 20 parties, including U.S. exporters, U.S. cooperator groups, U.S. banks, foreign banks, foreign importer associations, and individuals (including one set of comments submitted jointly by a group of 12 interested parties).

Reason for Reissuing a Proposed Rule

CCC is reissuing this rule as a proposed rule instead of a final rule because, based on comments received on the initial proposed rule, it has made several significant changes and is providing the public with an additional opportunity for comment. Comments received and changes made by CCC are discussed below in the Section-by-Section Analysis. CCC is publishing this proposed rule with a comment period of 30 days from date of publication.

General Comments

Ten respondents provided general comments on the proposed rule. Three commenters indicated that there were a number of improvements to the proposed rule and that the proposed changes reflect the evolution of agricultural trade and finance practices and will enhance program clarity and integrity.

Three respondents expressed general concerns regarding the potential negative impact of the proposed changes on the GSM–102 program. One commenter suggested that the proposed rules on fees and tightened requirements for exporters would increase the cost of the program to exporters, who will pass on these costs to importers, negatively impacting the ability of the program to promote trade. One respondent expressed the need for modifications to ensure the program reflects commercial realities and facilitates trade. One respondent expressed concern that under the proposed rule, U.S. financial institutions could be caught in a situation where a guarantee is withdrawn without the assignee's knowledge.

Comments received from two respondents indicated that the proposed changes would render the GSM–102 program inoperable because: (1) The changes are inconsistent with international banking practices and procedures for letters of credit, making it less likely banks will participate; and (2) the program would become more cumbersome and costly for participants and discourage small business participation. These results would contradict the requirements of Section 202(k)(2) of the Agricultural Trade Act of 1978, specifically the requirements to maximize the export guarantees made available and used each year and to maximize the export sales of agricultural commodities.

CCC recognizes the validity of these concerns and is proposing changes to

make the rule more consistent with standard international finance practices and to reduce the burden on participants. These changes are discussed in detail in the Section-by-Section Analysis and are open for additional public comment to ensure CCC has met these objectives. As CCC noted in the initial proposed rule; however, many of the proposed changes are designed to protect the integrity of the program—specifically to increase program controls, mitigate against waste and fraud, and improve CCC's chances of recoveries in cases of default (which will benefit not only the program by reducing costs in the long term, but also benefit CCC's risk share partners and U.S. taxpayers). CCC is attempting to balance program integrity concerns with maintaining a viable program that supports U.S. agricultural exports, recognizing that the result may be certain program modifications that increase the burden on both participants and CCC.

One respondent indicated that the GSM–102 program is losing competitiveness versus commercial financing because: (1) Shifts have occurred in long- and short-term interest rates; (2) companies are penalized if they repay a loan midway through the repayment period; and (3) program fees are too high. This respondent also commented that the country risk classification for South Korea is too high (i.e., risky), and questioned whether the purpose of the proposed changes was to make the program more attractive to small and medium-sized enterprises (SMEs) at the expense of major exporters.

CCC does not control interest rates or the repayment arrangements between the importer and the foreign financial institution. With respect to program fees, CCC is subject to both statutory and trade policy requirements. While CCC acknowledges that program fees have increased since 2009, program use has remained strong (and consistent with historical use) during those years. However, CCC is open to receiving specific comments on how fees can be adjusted, within current program confines, to better promote program utilization. Country risk classifications are based on a U.S. Government interagency country risk assessment system and are updated every one to three years. CCC notes that participants continue utilizing the program to support sales to South Korea despite the current country rating and fee rates. While certain proposed changes are designed to improve the access of SMEs to the program, CCC does not intend for this improved access to be at the expense of major exporters. CCC's goal is a set of program rules that attempt to provide equity to all participants.

One commenter expressed concern that the proposed rule does not permit U.S. financial institutions to apply directly for GSM–102 payment guarantees, a practice that would allow the GSM–102 program to support additional U.S. exports. The commenter noted that other export credit agencies allow both exporters and banks to apply for coverage under their programs. CCC agrees that allowing U.S. financial institutions to apply for coverage is a change that should be considered for the GSM–102 program. It is also a significant change that would have numerous operational ramifications and would impact other program participants. As such, it needs to be carefully considered, and CCC was not prepared to implement this change in this proposed rule. CCC will continue to consider this idea going forward in the context of future regulatory changes.

One respondent asked if the proposed rule would go into effect during fiscal year 2012. The timing of implementation is uncertain until comments are received on the reissued proposed rule and additional comments considered.

Section-by-Section Analysis

The section-by-section discussions below include a summary of comments received on the proposed rule, CCC's responses to those comments, and a discussion of any additional changes made by CCC. In some instances, the numbering systems differ between the new and initial proposed rules. For purposes of this discussion, the numbering system of the new proposed rule will be used, except where otherwise indicated.

No comments were received on Subpart A, Restrictions and Criteria for Export Credit Guarantee Programs. CCC added § 1493.3(a)(3) to reflect that, in addition to consideration of country risk, CCC will not issue guarantees in connection with sales financed by foreign financial institutions that CCC determines cannot adequately service the debt.

Subpart B—CCC Export Credit Guarantee (GSM–102) Program Operations

Section 1493.10 General Statement

One commenter asked, with respect to language in paragraph (a) that GSM–102 guarantees are issued for terms up to three years, whether CCC envisions extending maximum tenor to three years for better risk countries within the near future. CCC cannot predict whether tenor will be extended to three years in the future, as maximum tenor is a function of both risk and policy considerations. CCC has eliminated the specific reference to three years in this paragraph.

Section 1493.20 Definition of Terms

CCC made a number of proposed revisions to this section based on comments received, and also removed the numbering within this section to allow it to be governed by alphabetical order. All defined terms have been capitalized throughout the proposed rule.

Affiliate

No comments were received on this definition. However, CCC revised this term to reflect its varied usage within the proposed rule. The term "affiliate" refers to: (1) An entity's organizational structure; and (2) related entities to which certain required certifications apply, specifically related to government-wide suspension and debarment. The original definition, taken from government-wide suspension and debarment regulations at 2 CFR Part 180, was too detailed with respect to general questions of organizational structure. Therefore, CCC has more generically defined "affiliate" for purposes of collecting organizational information. In cases where the term "affiliate" relates to suspension and debarment certifications, the reference to 2 CFR 180.905 has been added to clarify the definition that applies.

Definitions of Incoterms (Cost and Freight (CFR), Cost, Insurance and Freight (CIF), Free Alongside Ship (FAS), Free Carrier (FCA), Free on Board (FOB))

CCC received several comments related to Incoterms definitions in the proposed rule. Two respondents noted that the definitions did not reflect the 2010 version of Incoterms, effective January 1, 2011. One respondent indicated that the trading terms CFR, CIF, FAS, and FOB cover only the movement of goods by sea and inland waterway transport, and that the proposed rule contained no terms related to air, rail or truck shipments.

CCC agrees with these comments and has updated these definitions to reflect that all terms are as defined by Incoterms 2010, or as superseded. The definitions for CFR, CIF, FAS, and FOB have been updated to reflect that they apply only to sea and inland waterway transport, and Free Carrier (FCA) has been added for air, rail and truck shipments. Throughout the proposed

rule, references to Incoterms have been amended to include FCA. Additionally, CCC included a definition of "Incoterms" for clarity.

One respondent requested that CCC include a provision that requires all sales contracts to be subject to Incoterms. The definition of "Firm Export Sales Contract" in this section includes a requirement for delivery terms (FOB, C&F, FCA, etc.). CCC does not believe any changes are necessary in response to this comment.

Eligible Export Sale

This definition has been added to the proposed rule. CCC believes that a practice for some exporters has become to identify export transactions that occur outside of the GSM–102 program but nevertheless to register such exports under a GSM–102 payment guarantee. Under such practice, there is no expansion of U.S. exports, because the goods covered by the payment guarantee are shipped and paid for wholly apart from the benefit of the CCC guarantee. CCC believes this practice is inconsistent with the purpose of the GSM–102 program to increase exports of U.S. agricultural commodities. In these cases, there is no increase in U.S. agricultural exports, because the export sale would have occurred without the GSM–102 program. These sales improperly utilize program allocation that otherwise could be used to support exports that would not occur in the absence of the payment guarantee. Furthermore, these transactions create a liability for CCC for which there is no corresponding benefit to U.S. agricultural exports. In response to these concerns, which have been echoed by some program participants, CCC has added a definition of "eligible export sale" with the intent of prohibiting these types of transactions. CCC believes that this will help ensure that financing is coupled with an actual exporter movement of a U.S. agricultural commodity.

FAS Web Site

Although no comments were received, this definition has been deleted from the proposed rule because the Web site location is subject to change. The current Web site is *http://www.fas.usda.gov/excredits/ecgp.asp.* To avoid confusion with the term "Free Alongside Ship (FAS)," references to the FAS Web site were changed to "USDA Web site."

Final Date To Export

CCC received two comments on the definition of "final date to export." Because these comments relate specifically to § 1493.100 (*Terms and requirements of the Payment Guarantee*), these comments are discussed in that section. This definition was unnecessary and has been deleted.

Firm Export Sales Contract

One comment was received on the "Firm Export Sales Contract" definition, indicating that allowing an export sale to be contingent upon the CCC guarantee is contradictory to having a firm contract.

No changes were made to this definition. CCC does not believe there is any inconsistency between a "firm" contract and one that is contingent upon CCC's approval of a payment guarantee. The purpose of the GSM–102 program, as specified in § 1493.10(a), is to "expand U.S. Agricultural Commodity exports." An agricultural sale that will occur only with the presence of a GSM–102 payment guarantee is consistent with this goal and also allows flexibility for U.S. exporters. This definition specifies that the exporter and importer must be in agreement regarding the terms and conditions of the sale, thus requiring the details of the sales contract to have been worked out in advance of the exporter's application for the payment guarantee.

Foreign Financial Institution

Although no comments were received, CCC determined that the original definition unintentionally excluded multilateral and sovereign institutions. CCC revised it to specifically include these institutions as eligible, and also added a clarification that this definition encompasses foreign branches of U.S. financial institutions.

Foreign Financial Institution Letter of Credit (or Letter of Credit)

Two comments were received on this definition, which was not modified in the initial proposed rule. One commenter indicated that it is unclear whether the current definition covers the standard GSM–102 repayment mechanism, the sight letter of credit. The commenter suggested the definition be re-written to specifically cover the sight letter of credit and exclude the reference to a related obligation. A second commenter asked whether "related obligation" refers to a bank-to-bank agreement outside of the letter of credit.

CCC revised this definition, moving a portion of it to § 1493.90 (*Special requirements of the Foreign Financial Institution Letter of Credit and Terms and Conditions Document, if applicable*), and modifying the two options listed in the prior definition in an attempt to add clarity. The term "related obligation" has been changed to "Repayment Obligation" as noted below and refers to a commitment of the foreign financial institution to pay the exporter or the U.S. financial institution on deferred payment terms. Section 1493.90(a) specifies acceptable methods for documenting the repayment obligation. CCC believes these changes will clarify this term.

Holder of the Payment Guarantee

This definition has been added to the new proposed rule. Although no comments were received, CCC was concerned about potential confusion regarding the phrase "exporter or exporter's assignee" that appeared throughout the rule. This phrase typically is used to indicate CCC's risk-share partner in the transaction and the party responsible for filing notices of default and claims. To clarify in certain instances that CCC is referring to one specific party, CCC created the term "Holder of the Payment Guarantee." The new proposed rule has been updated throughout with this term where applicable.

Importer and Importer's Representative

Three comments were received on the definition of an importer, which required the importer to be physically located in the country or region of destination specified on the payment guarantee. One commenter explained that this may not always be possible due to unique local transit trade regulations, loan regulations, or tax consequences, and recommended instead that CCC add the term "presence of business" with defined requirements. A second commenter noted that requiring the importer to be physically located in the country is counter to free trade practices. The importer's location should not be of concern to CCC provided the goods arrive at the intended destination. Three commenters felt this change would have a negative impact on program utilization.

CCC agrees with these comments and modified the definition of "Importer" accordingly. The term "Importer's Representative" was added to the new proposed rule (in lieu of the term "presence of business"), along with additional requirements that are explained in the relevant section(s).

Intervening Purchaser

CCC received one comment asking if an intervening purchaser can be located in the United States. CCC does permit the intervening purchaser to be located

in the United States. No change is necessary to this definition.

Letter of Credit Account Party

One respondent suggested the term of "Letter of Credit Account Party" be changed to "Letter of Credit Applicant" and that the term "entity" in the definition be changed to "party" to be consistent with international banking practice and the Uniform Customs and Practice for Documentary Credits (UCP 600). CCC agrees that this term should be defined consistently with UCP 600; however, because it is used only once in the proposed rule, it has been deleted from the *Definitions of Terms* section. The UCP 600 definition is now referenced in § 1493.70(a)(4).

Notice to Participants

No comments were received on this definition, but it was deleted because the concept is explained in § 1493.10(b).

Principal

One respondent suggested the definition of "Principal" is too broad and requested that it be limited to the entity providing the relevant certifications, rather than applying to an array of individuals within the participating entity.

The term "principal" is used throughout the proposed rule to refer to: (1) Individuals who must submit documents under the program; and (2) individuals to whom certain required certifications apply, specifically related to government-wide suspension and debarment rules. Although CCC does not agree with the suggestion to apply this term only to the entity making the certifications, CCC acknowledges that the original definition, taken from government-wide suspension and debarment regulations at 2 C.F.R Part 180, was too detailed with respect to submission of documents under the program. Therefore, CCC more generically defined "Principal" for purposes of document submission. In cases where the term "principal" relates to the certifications for suspension and debarment, the reference to 2 CFR 180.995 was added to clarify the definition that applies.

Repayment Obligation

Although no comments were received on this definition, CCC changed the term "related obligation" to "Repayment Obligation." CCC believes the new terminology more accurately reflects that this term refers to a contractual commitment, rather than a particular document. Although the definition did not change, CCC added clarification that the repayment obligation must be documented using one of the methods described in § 1493.90.

System for Award Management (SAM)

Since publication of the initial proposed rule, the U.S. Government implemented the System for Award Management (SAM), a combined federal procurement and federal domestic assistance system. The Excluded Parties List System (EPLS) that participants must check for suspension and debarment purposes has been included in SAM; therefore, participants will now be required to check SAM. All references to EPLS in the new proposed rule were replaced with SAM. The current Web site is *www.sam.gov*. Any future updates will be provided on the USDA Web site.

Terms and Conditions Document

CCC added this definition to the proposed rule in response to comments received on § 1493.90 indicating that certain requirements were inappropriate for the letter of credit. CCC added flexibility for participants to use a separate document linked to the foreign financial institution letter of credit and stating the terms and conditions required by CCC. This concept is addressed in more detail in the discussion of § 1493.90.

U.S. Financial Institution

Although no comments were received on this definition, CCC determined that it may have unintentionally excluded U.S. branches of foreign financial institutions. CCC revised the definition to specifically include these institutions as eligible U.S. financial institutions.

Weighted Average Export Date

This term was added to the new proposed rule. CCC received requests from participants to allow the holder of the payment guarantee to bundle certain exports and utilize a credit period starting point other than the date of export of each individual shipment. CCC agrees with these requests and included this concept in § 1493.100(b). This option is described in further detail in the discussion of changes to § 1493.100.

Section 1493.30 Information Required for Exporter Participation

CCC received two comments on this section. One respondent asked how a determination of exporter ineligibility (paragraph (d)) would affect existing guarantees with that exporter. The commenter noted there is no specific provision for CCC to notify the assignee if an exporter is deemed ineligible. A second respondent suggested that currently qualified exporters be required to submit a description of their business activities and related information to prove that the exporter is a "true" exporter, even if the exporter has submitted an application within the past two years.

CCC made no changes in response to these comments. CCC determines at the time of application for the payment guarantee whether an exporter is currently eligible. If the exporter is ineligible at that time, no guarantee is issued. However, if a guarantee is issued and the exporter is subsequently deemed ineligible, there is no impact on the existing guarantee; therefore, there is no need for CCC to notify the assignee in this case.

In response to the second comment, CCC notes that the commenter provided no definition of "true" exporter. CCC has authority to collect the new information in § 1493.30 from current exporters based on paragraph (d), which states that an applicant may be deemed ineligible if the applicant cannot provide the information required in § 1493.30. Following publication of the final rule, CCC will determine whether, when and how to collect this information from currently approved exporters.

Section 1493.40 Information Required for U.S. Financial Institution Participation

CCC received one comment requesting clarification of whether submission of an annual report or 10–K is acceptable to meet the requirement for year-end audited financial statements in paragraph (a)(4). CCC confirms that the10–K annual report submitted to the Securities and Exchange Commission is acceptable to meet CCC's requirement for year-end audited financial statements. The "annual report to shareholders" (sent to shareholders prior to annual shareholders' meetings) can be submitted for informational purposes but does not meet the requirement for year-end audited financial statements, as the report generally does not include sufficient financial detail. No changes were needed in response to this comment.

Section 1493.50 Information Required for Foreign Financial Institution Participation

CCC received one comment requesting clarification of the impact on existing guarantees if CCC reduces or cancels a foreign financial institution's (FFI) participation limit (per paragraph (c) or (d)) or if the FFI is otherwise

deemed ineligible for participation (per paragraph (e)) after a guarantee has been assigned to a U.S. financial institution. The respondent also asked whether the U.S. financial institution would be notified whether the FFI is within its participation limit at the time a guarantee is assigned.

CCC determines prior to issuing a payment guarantee whether the foreign financial institution is eligible and has a sufficient participation limit for that guarantee. Except in cases of default as provided in § 1493.160(c), a change in the eligibility or participation limit of an FFI has no impact on existing payment guarantees. CCC will not notify a U.S. financial institution regarding changes in an FFI's participation limit, as there is no impact of such changes on existing guarantees. CCC considers an FFI's participation limit confidential; any questions regarding that limit should be directed to the FFI.

Although CCC deems that no changes are needed in response to these comments, two modifications were made to this section in the new proposed rule. In paragraph (a)(2), CCC clarified that applicants must provide year-end, audited financial statements in English, in accordance with the accounting standards established by the applicant's regulators. CCC does not have the resources to translate such information for review. Multilateral institutions not subject to local regulations in their country of domicile must provide financial statements in accordance with prevailing accounting standards. Paragraph (d) was modified to clarify that CCC has the right to cancel a foreign financial institution's limit if the FFI does not participate in the GSM–102 program for two consecutive fiscal years. CCC must review all foreign financial institutions annually to ensure their continued ability to repay debt guaranteed by CCC. Given the number of FFIs in the program, CCC must focus its limited resources on those institutions that participate. Those that choose not to participate for this length of time may be removed from eligibility, but may resubmit all information required under § 1493.50 for reconsideration. CCC also added requirements for annual year-end financial statements consistent with the changes made in paragraph (a)(2) of this section.

Section 1493.60 Certifications Required for Program Participation

Three comments were received related to this section. One respondent requested clarity on how U.S. and foreign financial institutions should document they are in compliance with all regulatory requirements and U.S. anti-money laundering and terrorist financing statutes.

CCC does not require that evidence of compliance be provided when submitting an application. As part of the application review process, CCC contacts the U.S. bank's regulator to verify compliance with regulatory requirements and can conduct follow up reviews at any time. CCC can verify compliance with U.S. anti-money laundering and terrorist financing statutes with the Office of Foreign Assets Control (OFAC).

A second respondent requested CCC limit the certifications to the U.S. financial institution and exclude company principals or, if not possible, then limit the term "principals" to bank shareholders. This respondent also requested that the regulation allow the Director to permit qualifications to the certifications, and requested the wording in paragraph (b) be changed from "are in compliance with" to "comply with." The commenter noted that the state of being in compliance with the regulation is a broader and more absolute concept than the act of complying with the regulation. The act of complying generally carries with it a good faith standard of knowing what the rules are on having mechanisms in place to ensure, to the extent possible, that the bank complies with them.

As noted in the discussion on *Definition of Terms* (§ 1493.20), the terms "principal" and "affiliate" have multiple uses in the program. With respect to the certifications found in § 1493.60(a), these terms have the specific meaning found in government-wide suspension and debarment regulations. Therefore, CCC has revised § 1493.60(a) to clarify that these certifications employ "principal" and "affiliate" as defined in 2 CFR 180.995 and 2 CFR 180.905, respectively. Because the GSM–102 program must comply with government-wide suspension and debarment rules, CCC made no changes to narrow the definition of "principal" and made no changes specifically in response to this comment. All applicants for participation must make the certifications required in § 1493.60 with respect to both the applicant and its principals, where required. For the same reason, CCC does not include a provision to allow the Director flexibility to change the certifications. However, in accordance with § 1493.40(a)(9), a U.S. financial institution must provide an explanation or documentation if it cannot include the certifications in its application. Further, paragraph (b) of § 1493.40 permits the Director to consider additional information from the applicant if the applicant fails to qualify.

CCC does not agree with the request to change the wording in the certifications in paragraph (b)(1) from "are in compliance with" to "comply with." The phrase "are in compliance with" means that the applicant is certifying to these statements at the time the certification is made. This is CCC's intent, and therefore, this wording remains.

A third respondent asked if CCC would provide specific wording for the certification statements. CCC notes that required wording has already been provided in § 1493.40(a)(9) and § 1493.50(a)(6) for U.S. and foreign financial institutions, respectively. These are general certification statements that, when made on a qualification application, encompass all of the certifications in § 1493.60. No changes were needed in response to this comment.

CCC modified § 1493.60(b)(2) in the new proposed rule, adding to this certification a requirement that relevant applicants be in compliance with the Foreign Corrupt Practices Act of 1977. CCC has previously reminded all program participants in a notice to participants that they are required to be in compliance with this Act. Exporters are required to certify that each GSM–102 transaction is compliant with this Act, and because it also applies to financial institutions doing business in foreign markets, CCC determined it was appropriate for financial institutions to make this certification as well.

Section 1493.70 Application for Payment Guarantee

CCC received three comments related to the requirement in paragraph (a)(16) that, upon request by CCC, the exporter must provide written evidence that the foreign financial institution specified in the application for payment guarantee has agreed to issue the letter of credit. Two commenters requested more detail about the type of written evidence CCC will require, the timeframe for providing it to CCC, and the consequence to the exporter if the information is not provided or the foreign financial institution letter of credit is never issued. Two respondents noted that it could be difficult and time-consuming to obtain such documentation, and therefore, one respondent requested that it only be required in cases where multiple exporters register under the same foreign financial institution's available line of credit. One respondent requested this provision be deleted or

that CCC obtain such evidence directly when needed.

CCC made no revisions in response to these comments. In certain country and regional allocations, multiple exporters register under a single, limited foreign financial institution (FFI) participation limit. This situation delays issuance of payment guarantees. CCC made past attempts to contact exporters and FFIs to determine which application is acceptable to the FFI. Different situations required different methods to obtain this information most efficiently. For this reason, CCC has chosen not to set a specific requirement, but instead will request documentation on a case-by-case basis to minimize burden. Under certain circumstances, CCC agrees that it may be appropriate for CCC to obtain this information independently of the exporter. In these cases, CCC will obtain the information; otherwise, it will be the exporter's responsibility.

CCC agrees that documentation is needed only under limited circumstances and intends to utilize this provision specifically in those circumstances. CCC will provide the exporter with a reasonable timeframe to obtain this information. If CCC determines, based on the documentation received, that an exporter has registered against an FFI's limit without the bank's knowledge or approval, that exporter will be required to modify or cancel its application for payment guarantee. However, there will be no consequence to the exporter if an FFI later determines not to issue the letter of credit, as CCC acknowledges that this situation can legitimately occur.

CCC made several changes to this section in the new proposed rule. In paragraph (a), CCC clarified that a firm export sales contract for an "Eligible Export Sale" must exist before an exporter submits an application for a payment guarantee. This change is consistent with the new prohibition in § 1493.100(f)(7) on transactions not meeting the definition of "Eligible Export Sale." A definition of this term was added to § 1493.20.

In paragraph (a)(1), CCC added that if the export sale is being registered under a regional allocation, the exporter must indicate the country or countries within the region to which the commodities will be exported. This will permit CCC to better track the destination of commodities under the program, although CCC recognizes that such information may not be final until reported in the evidence of export report.

In paragraph (a)(2), CCC proposes additional requirements if the importer is not located in the country or region of destination, but is instead utilizing an "Importer's Representative" in the country or region. As noted in the *Definition of Terms* discussion, allowance of this concept is in response to comments received to the initial proposed rule. Specifically, CCC proposes to require the name and address of the importer's representative that will be taking receipt of the commodities exported under the payment guarantee. CCC will routinely check these entities against the SAM and OFAC lists to ensure unauthorized parties are not serving this function in GSM-guaranteed export sales. CCC also modified the required statement regarding direct shipment of the registered commodities to the importer to allow for direct shipment to the importer's representative. This statement was previously found in paragraph (a)(5), but was moved to paragraph (a)(3) to clarify that it is required on all applications for payment guarantees, not simply those utilizing an intervening purchaser.

In paragraph (a)(4) of this section, CCC deleted the term "letter of credit account party" in response to the comment received on the definition in § 1493.20 and instead utilizes the definition of "applicant" directly from the UCP 600.

In paragraph (a)(9) of this section, CCC added that the commodity grade and quality specified in the application for the payment guarantee must be consistent with that specified in the firm export sales contract and foreign financial institution letter of credit. As noted in the discussion below on § 1493.90(a), CCC agrees with comments that this requirement should not be contained in the letter of credit and that the exporter should be responsible for ensuring this requirement is met. Therefore, this language has been added to the application for payment guarantee section. The exporter may be held liable if CCC pays a claim for default and determines that the cause of the default was a discrepancy, specifically related to this requirement, between the firm export sales contract and the foreign financial institution letter of credit.

Section 1493.80 Certification Requirements for Obtaining Payment Guarantee

Three comments were received regarding the practicality of having the exporter confirm that the importer is excluded from participation by the Excluded Parties List System (EPLS) or Office of Foreign Assets Control (OFAC) lists as required by paragraph (d) of this section. The respondents noted that both of these lists have standard disclaimers regarding potential errors and omissions. Because of these disclaimers, exporters can only certify that the importer or intervening purchaser is not on the list at the time of application. They cannot certify that the importer is not suspended, debarred or otherwise precluded. CCC agrees with these comments and modified the language in § 1493.80(d) to require the exporter to certify that neither the importer nor the intervening purchaser are present on these lists at the time of application for the payment guarantee. As discussed in the *Definition of Terms* section, references to EPLS were changed to SAM.

CCC made several additional changes to the certifications in the new proposed rule. A reference to the Foreign Corrupt Practices Act of 1977 was added to paragraph (b), consistent with this addition to the certification found at 1493.60(b). CCC also added a new certification in paragraph (f) of this section. The exporter will be required to certify that it is in compliance with the requirements for submitting evidence of export (EOE) reports for all existing payment guarantees. CCC faces continual issues with exporters not submitting these reports in a timely manner. In response, a new provision was added at 1493.130(c) in the initial proposed rule that will preclude acceptance of new payment guarantee applications if an exporter is not in compliance with EOE submission timelines. CCC determined it is appropriate to require exporters to certify in each application for payment guarantee that they are compliant with this requirement with respect to other existing payment guarantees. CCC hopes this certification will prompt exporters to be more vigilant about meeting EOE requirements.

Section 1493.90 Special Requirements of the Foreign Financial Institution Letter of Credit and the Terms and Conditions Document, if Applicable

Thirteen respondents submitted comments on § 1493.90. Overall, respondents indicated that many of the changes proposed by CCC are inconsistent with international banking practices and accepted guidelines for letters of credit as found in the Uniform Customs and Practice for Documentary Credits (UCP 600). They noted that requiring specific language will increase the time, costs, and risks associated with issuing the letter of credit and jeopardize the willingness of both U.S. and foreign financial institutions to participate. Several respondents suggested CCC provide a standardized

template for the letter of credit requirements to ensure participants comply with the provisions of this section, and allow such requirements to be contained in the special instructions of the letter of credit or in a separate document, such as a loan agreement. One respondent commented that CCC should enter a framework agreement with each approved foreign financial institution to cover the terms and conditions of this section so they are not required in every letter of credit.

In response to these comments CCC modified § 1493.90 and removed the requirement that the specified terms and conditions be contained in the foreign financial institution letter of credit. Instead, CCC added the concept of a "Terms and Conditions Document" that may accompany the letter of credit. This change will allow participants the flexibility of having the required language in either the letter of credit or a separate document. CCC also clarified in § 1493.90(a) that such terms and conditions may be contained in the letter of credit as a special instruction, but eliminated the option of a promissory note because of lack of use of this mechanism. Although CCC considered the option of developing a framework agreement for each approved foreign financial institution, some institutions preferred that the required terms be contained in the letter of credit or related document rather than a separate framework agreement.

Paragraphs (a) and (b) of this section were re-ordered in the new proposed rule: Paragraph (a) describes the option to use either the letter of credit or terms and conditions document to contain the special requirements found in paragraph (b). CCC added a proposed requirement in paragraph (a) that the letter of credit stipulate presentation of at least one original clean on-board bill of lading as a required document. A number of program participants have suggested this provision as a means of preventing non-eligible export sales. CCC would not require an original bill of lading be submitted at time of a claim, but would ensure that the letter of credit contained this provision.

Section 1493.90(b) now includes a listing of requirements of the letter of credit or terms and conditions document, which CCC believes eliminates the need for a standardized template. As noted in the *Definition of Terms* discussion, "related obligation" has been replaced with the term "Repayment Obligation." Two new requirements were added: Jurisdictional language in case of legal action (§ 1493.90(b)(2)) and a requirement to specify post-default interest terms (§ 1493.90(b)(4)). The language specifying legal jurisdiction was added to protect the interests of both CCC and its risk share partner in case of default, in hopes of increasing chances of recoveries if CCC takes legal action. CCC does not require a specific post default interest rate under the letter of credit, and this information is often omitted. Requiring the letter of credit to specify such interest terms (even if the rate is zero) will add clarity in cases where CCC has been subrogated the rights to recovery.

Seven comments were received on the requirement that the letter of credit specify the transaction is a bona fide trade transaction (§ 1493.90(a)(1) in the initial proposed rule). Three respondents indicated this language is not applicable to all GSM–102 transactions; therefore, in certain cases participants would be unable to comply. Two respondents suggested revised wording they believe would cover all GSM–102 guaranteed transactions. Three respondents requested that CCC define the terms "bona fide trade transaction" and "trade finance debt," while one respondent indicated this language may be confusing to foreign financial institutions because the documentary letter of credit is the internationally accepted mechanism for financing "bona fide" trade. One respondent pointed to the need for CCC to allow the Director to approve modifications to this language on a case-by-case basis to respond to an issuing bank's interpretation of the wording. One respondent requested that CCC permit refunds of guarantee fees if the foreign financial institution is unable to comply with this requirement, and another suggested this requirement be included as part of the foreign financial institution's initial qualification for the program. CCC agrees with the concerns expressed by participants and eliminated this requirement in the new proposed rule.

Five respondents provided comments on the requirement that the letter of credit contain an acceleration clause (§ 1493.90(b)(3)). One commenter indicated that acceleration clauses are not normally contained in letters of credit, and two commenters suggested this language be included in a framework agreement between the U.S. and foreign financial institution or in the special instructions in the letter of credit. Three commenters requested that CCC provide specific language to meet this requirement to ensure compliance, with one respondent requesting that the Director have the flexibility to allow modifications to this language.

As previously noted, CCC modified § 1493.90 to permit the requirements of this section, including the acceleration clause, to be contained in the special instructions of the letter of credit or in a separate terms and conditions document. CCC did not add specific required language for this clause, as CCC believes the requirement described in the regulation is sufficient. Past experience indicates that such clauses are not uncommon in letters of credit and that exporters and financial institutions have utilized them in the past; therefore, specific language is not necessary, nor is flexibility for the Director to allow language modifications.

Six respondents provided comments on the requirement that the commodity grade and quality specified in the sales contract be consistent with the commodity grade and quality in the letter of credit (§ 1493.90(a)(3) in the initial proposed rule). Most commenters indicated that this requirement is inconsistent with international banking standards found in the UCP 600. The letter of credit is a separate transaction from the sales contract and the payment obligation under the letter of credit is based on meeting documentary conditions, not upon performance of the underlying contract. Two respondents requested this provision be deleted. One respondent indicated that adding the commodity quality and grade to the letter of credit should not be problematic because this information is contained in the bill of lading and invoice, and another commenter suggested attaching the invoice to the letter of credit to convey this information. One commenter stated that it should be the responsibility of the exporter to certify this requirement.

CCC agrees with the comments that this language should not be part of the letter of credit and that the U.S. financial institution should not be responsible for verification and removed this language from § 1493.90 in the new proposed rule. However, CCC continues to believe this requirement is important to avoid defaults based on failure to comply with the underlying terms of the sale; therefore, changes in § 1493.70 (*Application for Payment Guarantee*) clarify that the exporter is responsible for ensuring this requirement is met.

Section 1493.100 Terms and Requirements of the Payment Guarantee

Although CCC received no formal comments on § 1493.100(b), *Period of guarantee coverage*, CCC is proposing modifications in this section in an attempt to facilitate container shipments under the program. The small dollar

value of individual container shipments often make the use of separate letters of credit for each shipment too costly, and the extended delivery period over which these shipments occur may require a long validity period for the letter of credit, increasing its costs. CCC hopes to mitigate these factors by giving participants the option to utilize either the date of export or a weighted average export date as the start of the credit period. By using a weighted average export date, the exporter and assignee can "bundle" all shipments having dates of export within a 30 calendar day period and have the credit period begin on the average date of these shipments, weighted by the guaranteed portion of the exported value of each shipment. Participants would be permitted to bundle all shipments within a 30 calendar day period, with the first 30 calendar day period beginning on the first date of export under the payment guarantee, the second 30 calendar day period beginning 31 calendar days after the first date of export, and so on until the final date to export specified on the payment guarantee.

For example, assume an exporter has three shipments as follows within a 30 calendar day period:

March 1 (first) shipment: $500,000 in guaranteed value

March 10 (second) shipment: $400,000 in guaranteed value.

March 25 (third) shipment: $800,000 in guaranteed value

The weighted average export date would be calculated as follows:

[Σ (day of the month) × (guaranteed value for that day)]/[Σ (total guaranteed value)]

In this example, the first shipment date would be the first day of the month; therefore, March 1 would be "1." The calculation is:

[(1 × 500,000) + (10 × 400,000) + (25 × 800,000)]/(500,000 + 400,000 + 800,000) = 24,500,000/1,700,000 = 14.4, or March 14.

If the exporter chooses to bundle these shipments, the weighted average export date would be March 14. The credit period for this bundle of shipments would, therefore, commence on March 14.

CCC also included the option for payment guarantee coverage to begin when ordinary interest begins to accrue, if such interest begins to accrue prior to the first date of export. This provision is found in the current regulation, but was inadvertently deleted in the initial proposed rule. It is CCC's policy to permit coverage of interest accrued prior to the date of export, although the payment guarantee does not become effective until the date of export. Interest may begin to accrue prior to the date of export in export sales made on the basis of FOB, U.S. interior points of loading, such as sales to Mexico shipped in trucks or railcars. The provisions of § 1493.100(b) indicate that the credit period can begin either upon the date of export or on the date that interest begins to accrue, whichever is earlier. A provision has been added to allow for the weighted average date when interest begins to accrue at the option of the holder of the payment guarantee.

Seven respondents submitted comments on § 1493.100. Three respondents disagreed with the elimination of the 30-day grace period found in the current regulation at § 1493.60(d). Two commenters noted that issues outside of the exporter's control, such as transportation delays, lack of container availability, and weather problems, may delay shipments. One commenter noted that the elimination of the grace period will impact both small and large businesses and is counter to the goals of the National Export Initiative, the Paperwork Reduction Act, and the intent of the proposed rule. One respondent commented that with a new cotton crop becoming available each August and September, the grace period provides the exporter additional time to work out shipping problems. During 2009/2010, the grace period was particularly helpful due to the transportation congestion and backlogs that occurred. One commenter stated that the 30-day grace period should be reinstated to match commercial realities, and that otherwise CCC should allow for guarantee fee refunds in cases where the exporter cannot make shipments within the designated time period. CCC agrees with these concerns and reinstated the 30-day grace period in § 1493.100(d) of the new proposed rule.

Three respondents provided comments on CCC's proposed changes to § 1493.100(e), *Reserve coverage for loading tolerances.* Two commenters noted that the most common tolerance in bulk agricultural contracts is plus or minus 10 percent and that CCC's guarantee should reflect that reality. CCC agrees and revised the proposed rule to allow for an upward loading tolerance of 10 percent. CCC will require exporters to pay the guarantee fee based on the mean loading tolerance (instead of the lower loading tolerance). Because reserve coverage ties up both country and foreign bank limits, CCC hopes that requiring exporters to pay the fee based on the mean loading tolerance will ensure that exporters are serious about the need for such coverage at time of application. One respondent asked if an exporter was entitled to a refund of the fee paid for reserve coverage if this coverage is not utilized. Although an exporter is not *entitled to* a fee refund for unutilized reserve coverage, CCC will consider such requests from exporters on a case-by-case basis if the exporter's inability to utilize such coverage was outside of the exporter's control. Exporters may be required to submit documentation to CCC to support such a request.

One comment was received on the requirement that the exporter file for a payment guarantee amendment within 15 calendar days of the final export date or CCC will cancel the exporter's reserve coverage. With bulk agricultural shipments, the exporter may be unable to determine the allocation of the shipped commodity across multiple registrations until the vessel reaches its final destination, which could be 30 to 40 days from the loading date. The respondent requested CCC allow the exporter 45 days from the date of export to file the amendment to utilize reserve coverage.

CCC does not agree with the suggestion to allow the exporter 45 days to file an amendment for reserve coverage. Reserve coverage allows exporters to hold program allocation that may not be utilized and could be made available to other exporters. However, CCC recognizes that exporters may need time past the final date to export to compile relevant documents and determine the final amount of coverage. Therefore, CCC increased this timeframe to 21 calendar days after the final export date. This timeframe is consistent with the evidence of export (EOE) reporting requirements, because the exporter will know by the submission of the final EOE what level of reserve coverage is needed.

CCC received four comments on § 1493.100(f), now titled *Certain export sales are ineligible for GSM–102 Payment Guarantees.* One commenter noted that the U.S. financial institution may be unable to determine at the time of taking assignment of a payment guarantee whether a transaction is prohibited. This respondent requested clarification on whether a prohibited transaction could be deemed ineligible for coverage after assignment. Two respondents requested similar clarification with respect to § 1493.100(f)(6), which prohibits coverage of a transaction that has been guaranteed by CCC under another payment guarantee. Specifically, these respondents requested assurance that CCG would not revoke coverage or take action against the assignee in this case.

CCC agrees that an assignee may not know that a transaction registered under the GSM–102 program is prohibited. Section 1493.180(e), *Action against the assignee,* states in part that CCC will not "hold the assignee responsible or take any action or raise any defense against the assignee for any action, omission, or statement by the exporter of which the assignee has no knowledge." If a prohibited transaction were registered under a payment guarantee, CCC would take action against the exporter, if warranted, but not against the assignee, provided the assignee had no knowledge that the transaction was prohibited. CCC believes that § 1493.180(e) protects the assignee in such cases and that no additional changes are needed in the proposed rule.

Two commenters proposed methods by which CCC could determine which individual or entity is the valid exporter if a transaction is registered under multiple payment guarantees, which is prohibited by § 1493.100(f)(6). One respondent noted that an exporter is unlikely to know if a second entity acquires its bills of lading and uses them to register export transactions under another guarantee. This commenter suggested that CCC detail in the regulations that the "valid" registrant should be either (1) the actual shipper of the goods (i.e., the exporter who arranges and pays to have the goods loaded onto the vessel); or (2) the exporter whose contract with its supplier indicates that neither the supplier, its affiliates, nor any third party has registered the goods under any U.S. government program. A second respondent suggested that the exporter of record should determine which entity holds the valid payment guarantee. A third respondent recommended that CCC require the exporter to make a certification with respect to § 1493.100(f)(6) in both its application for payment guarantee and evidence of export report.

CCC made no changes in response to these comments. Based on CCC's recent experience, there is not a single, most appropriate method for determining which exporter has the eligible export sale when an export sale is registered under more than one payment guarantee. By definition, only one eligible export sale can exist. This determination could involve contacting both exporters who registered the export sale; requesting and reviewing documents, such as bills of lading and/or bank and payment records; and contacting suppliers, importers or agents associated with the export sale. It is not possible for CCC to dictate in the rule all possible methods of making this determination. It also is unclear what is meant by "exporter of record" or how CCC could be assured that this entity validly holds a payment guarantee. Finally, CCC does not believe an exporter could certify that a transaction has not been registered by another entity under another payment guarantee, as the exporter may not know this was occurring. Therefore, CCC will review these transactions on a case-by-case basis to determine when a specific transaction is prohibited.

To further clarify this requirement, CCC added a prohibition on any transaction that is not an "Eligible Export Sale" in § 1493.100(f)(7). An explanation is found in the discussion of this term's definition in § 1493.20.

Three respondents commented on the proposed prohibition on coverage where the issuance of the foreign financial institution letter of credit is more than 30 calendar days after the date of export. Two respondents noted that the timing of letter of credit issuance is often outside of the exporter's control and legitimate factors exist that could delay issuance beyond 30 days, including delays in receiving bills of lading and approvals required by the foreign financial institution. Additionally, the exporter, foreign financial institution and applicant for the letter of credit may not develop the exact requirements of the letter of credit until after the exporter registers the sale with CCC. A third respondent noted that although most letters of credit meet the 30-day criteria, this requirement will negatively impact small- and medium-sized exporters, whose customers and issuing banks are slow in issuing letters of credit.

Although the proposed rule would allow the Director to make exceptions to this provision on a case-by-case basis, one commenter noted that such extension requests will add paperwork and delays and will, therefore, reduce the advantages of the GSM–102 program. One commenter stated that U.S. financial institutions would require proof that CCC had granted such an extension, which could delay payment to the exporter. One respondent noted that U.S. financial institutions would be required to implement a procedure at the time of examination of documents to verify the letter of credit issuance date. Such a process is not covered by the UCP 600, nor is it a standard international banking practice for the examination of documents. Further, the foreign financial institution would not know at the time of receiving the letter of credit application whether the letter of credit will be eligible, because the date of export is unknown at that time. One of the commenters indicated that CCC's transaction risk begins at the bill of lading date and that the letter of credit issuance should not affect CCC's risk profile. Two of the commenters requested this provision be deleted because it is inconsistent with standard banking practice and will hurt program utilization.

CCC made no changes in response to these comments. In the preamble to the initial proposed rule, CCC noted that it is increasingly common for exporters to obtain a payment guarantee and not have the required foreign financial institution letter of credit in place for an extended period of time after the export date. In some cases, the letter of credit is never issued and the transaction is cancelled by the exporter. The "cost" of such cancellations is that other exporters who may have utilized the allocation are unable to do so. This provision is not related to CCC's risk profile, nor is it intended to reduce CCC's risk. It is intended to ensure that exporters who register sales have legitimately worked with the importer (or other letter of credit applicant) and the foreign financial institution prior to registering for coverage and are not simply "rushing in" to garner a portion of the announced allocation, a practice that negatively affects other exporters (including small- and medium-sized exporters) by reducing their access to the program. Given that exporters typically have 90 days from the date of registration to export, a 30-day shipment grace period (which as noted previously, is being reinstated by CCC), and 30 days from shipment to issue the letter credit, participants have up to 150 days, or five months, to accomplish issuance of the letter of credit after the sale is registered with CCC. CCC believes this timeframe should be sufficient. CCC has, however, modified this provision to allow for issuance of the letter of credit up to 30 days after the weighted average export date, if this is the date utilized by the holder of the payment guarantee for the starting point of the credit term.

CCC acknowledges there may be an additional burden in requesting extensions to this provision, but will develop internal procedures for handling these requests to minimize paperwork and delays, including notifying assignees. CCC also acknowledges that verification of the issuance date of the letter of credit may not be a standard practice covered by UCP 600. However, the letter of credit issuance date is required in all letters of credit, and CCC does not consider comparison of this date against a bill of

lading date to be an undue burden on assignees.

Three respondents commented on the proposal to allow CCC to charge a fee for payment guarantee amendments (§ 1493.100(i)). One respondent noted that fees are intended to offset the transaction risk undertaken by CCC, and that fees for amendments could make a transaction unviable and are inconsistent with other export credit agency programs. Further, it would be time-consuming for CCC and the exporter to track these additional fees. This respondent requested the provision be eliminated. A second respondent asked for clarification on the elements of the payment guarantee that can be amended and the cost for each type of amendment. A third respondent suggested that exporters be permitted one free amendment with a $500 fee assessed thereafter.

CCC made no changes in response to these comments. Under the statute governing the program, CCC must work to ensure "to the maximum extent practicable, that risk-based fees associated with the guarantees cover, but do not exceed, the operating costs and losses over the long term." Processing payment guarantees and amendments incurs a cost that should be offset by fee revenue. CCC is routinely faced with a large number of amendment requests and views such fees as an option to offset the costs associated with amendments. Additionally, the proposed rule does not implement such a fee but simply gives CCC the right to charge a fee. No such fee rates have been developed, and CCC does not intend to modify the types of amendments that exporters can currently request. If CCC determines that such fees should be implemented, comments received from participants will be considered in developing these fees, and they will be posted on the USDA Web site.

Section 1493.110 Guarantee Fees

Five respondents commented on the provision in the proposed rule to determine guarantee fees through a competitive bidding process. Three respondents stated that an auction process would benefit larger exporters with the most information and financial resources to the detriment of small- and medium-sized exporters—counter to CCC's intent to increase program access for all U.S. exporters. One respondent noted that an auction process would create uncertainty in prices (as fees are often included in the exporter's sales quote), which could cause exporters to lose sales. Two respondents noted that the proposed rule did not contain specific parameters of an auction. One commenter stated that an auction would require establishment of minimum base fees, but in some cases current fees already exceed the market, making utilization cost-prohibitive. For an auction to work, these fees would need to be reduced. One respondent did not support the concept of an auction if it is intended only to garner increased fees for oversubscribed allocations. However, if CCC were willing to accept lower fees for underutilized allocations, the auction process could prompt program activity in underutilized markets and demonstrate that prices are truly market-based.

No changes were made in response to these comments. CCC has not determined whether to implement a competitive bidding process for fees and acknowledges that additional research is needed before this step could be taken. The proposed rule does not dictate such a process, but simply allows for it. As noted, any information or instructions under a competitive bidding process would be made public on the USDA Web site. However, CCC will consider these comments in deciding whether to utilize an auction process in the future.

Four respondents commented on paragraph (d), *Refunds of fees.* One commenter agreed that CCC should not refund fees under an auction scenario, as this would allow exporters to overbid with no consequence. This respondent also agreed that refunds should not be permitted when programs are over-subscribed, as otherwise, exporters can "over-apply" with no consequence. Because unutilized amounts are generally not returned to the allocations, this practice can prohibit full program use. However, two respondents noted that, given the changes in the proposed rule, CCC should permit fee refunds when circumstances outside of the exporter's control prohibit the exporter from utilizing the guarantee—particularly if the inability to get a letter of credit in place is outside of the exporter's control. If CCC cancels a guarantee, CCC should not be paid for risks not assumed. One respondent suggested that if an exporter receives anything less than 90 percent of its requested registration, CCC should refund the fee because any lesser amount prohibits the exporter from exercising the firm sales contract.

CCC made no changes in response to these comments. Given the myriad of potential scenarios, it is impossible to specify in the regulation all circumstances in which CCC would grant a fee refund. The general rule is that fees are non-refundable. However, CCC retained the caveat that the Director may grant a refund that he/she determines is in the best interest of CCC. CCC acknowledges that there will be cases when an exporter is unable to utilize a guarantee, including instances where a letter of credit is not issued, that will be outside an exporter's control. CCC will consider requests for refunds on a case-by-case basis. However, CCC fully expects that all parties to the transaction are familiar with the program regulations and have discussed a given transaction prior to the exporter's submission of an application for payment guarantee. Therefore, CCC expects fee refunds to be granted only on an exceptional basis. Participants are reminded that guarantee fees, in accordance with the program statute, are intended to cover not only CCC's risk but also its administrative costs. An application that is subsequently canceled by the exporter incurs an administrative cost.

One respondent asked for clarification regarding the types of refunds CCC has permitted in recent years. This respondent also requested that CCC return to its previous system of letting an exporter pay the guarantee fee after CCC accepts the exporter's application, as requiring the fee with the application has not solved oversubscription problems.

CCC allows refunds of fees only in exceptional circumstances. For example, if an importer decides post-shipment not to utilize the payment guarantee, CCC may refund the fee if the exporter submits relevant shipping documents with an explanation. Additionally, CCC has granted fee refunds post-shipment when the importing country implemented sanitary-phytosanitary restrictions prohibiting entry of the goods. CCC does not agree with the suggestion to allow submission of the guarantee fee after CCC accepts the exporter's application. CCC has had past problems with exporters not submitting guarantee fees in a timely manner. This creates a burden on CCC to repeatedly contact exporters to collect fees and ties up allocations that could be utilized by another exporter. Therefore, CCC is maintaining the requirement that fees be submitted with the exporter's application.

Section 1493.120 Assignment of the Payment Guarantee

One respondent commented on this section, stating that although the bank will complete required OFAC checks prior to engaging in a GSM–102 transaction, it should be CCC's responsibility to determine whether the foreign financial institution is excluded

from participation via the EPLS (now SAM) prior to issuing the payment guarantee.

CCC made no changes in response to this comment (although consistent with the previously described definition change, EPLS has been changed to SAM). Prior to issuance of a payment guarantee, CCC checks all participants in the transaction against both OFAC and SAM. However, USDA suspension and debarment regulations at 2 CFR 417.215(b) require primary tier participants under the export credit guarantee programs to check the EPLS (SAM) prior to entering a transaction at the first lower tier. The regulations at 2 CFR 417.222(a) state that "a transaction at the first lower tier might be a payment obligation of a foreign bank under an instrument, such as a loan agreement or letter of credit, to the U.S. financial institution assigned the guarantee . . . " The U.S. financial institution is a primary tier participant under the GSM–102 program and is, therefore, required to make this check against SAM.

In paragraph (b) of this section, CCC added that notices of assignment should be received by CCC within 30 calendar days of the date of assignment. It is important for CCC to know who the holder of the payment guarantee is for each guarantee, particularly when a default occurs. Some U.S. financial institutions delay submitting notices of assignment to CCC. This provision is a reminder that these notices should be submitted timely.

In response to comments discussed in § 1493.80, CCC modified the language in § 1493.120(c)(i) to require the U.S. financial institution to certify that the foreign financial institution is not present on the SAM or OFAC lists at time of acceptance of the notice of assignment. CCC made a similar change in paragraph (f) of this section, and also incorporated the newly defined terms "Holder of the Payment Guarantee" and "Terms and Conditions Document" where applicable.

No comments were received regarding § 1493.120(f); however, CCC made several clarifications to this language in the new proposed rule. Additionally, CCC determined that the required clauses in paragraph (f)(1)(iii) and (f)(1)(v) of this section in the initial proposed rule were unnecessary; both have been deleted.

Section 1493.130 Evidence of Export

Four respondents commented on this section. Two respondents requested that CCC reinstate the 30-day timeframe for filing the evidence of export report (EOE). Three commenters noted that it will be difficult for exporters to submit EOEs within ten days. An exporter may not receive bills of lading until well after loading and; therefore, may be unable to determine within ten days which shipment parcels apply to certain guarantees. One commenter explained that the 10-day timeframe will be problematic for container shipments of high value products. Hundreds of such containers can comprise a GSM–102 guaranteed sale and associated letter of credit, and the bills of lading for these shipments are often bundled over several months. A 10-day submission requirement for EOEs would, therefore, stop container shipments of high-value products under the program.

CCC acknowledges these concerns and increased the timeframe for EOE submission to 21 calendar days in the new proposed rule. The proposed rule permits requests for extension of this timeframe, which CCC will consider on a case-by-case basis. Further, the proposed rule does not call for cancelation of a guarantee where the exporter is unable to meet this timeframe. Instead, pursuant to paragraph (c) of this section, failure to meet the timeframe or receive an approved extension means that the exporter will be unable to submit applications for new payment guarantees until EOE submissions are current. CCC does not believe this consequence is tantamount to stopping an entire category of shipments under the program.

Two commenters stated that the current 30-day EOE submission requirement historically has not been enforced by CCC and that exporters have been instructed not to submit extension requests due to the burden this creates on CCC. Further, one respondent suggested that the budget and policy issues requiring timely EOEs only correspond to the middle and end of the fiscal year; therefore, CCC should consider enforcing this deadline only at those times, or at other critical dates as determined by CCC. Another commenter stated that the 10-day requirement places a priority on CCC's internal process over commercial realities.

CCC acknowledges that the 30-day submission requirement has not been enforced. This is because, under § 1493.80(b) of the current rule, CCC's recourse for late EOEs is to nullify the guarantee. This can only be done if CCC can demonstrate one of the consequences specified in § 1493.80(b). CCC has determined that, in most cases, late EOEs do not cause sufficient harm to CCC to warrant nullifying the associated guarantees. As a result, there effectively has been no recourse available to CCC for late EOEs and no purpose to requiring requests for extensions to the filing deadline.

Proposed changes to this section are specifically intended to provide CCC such recourse, and CCC fully intends to enforce the new requirement, including responding to requests for extensions. CCC does not agree that this requirement should only be enforced at the middle and end of a program (fiscal) year. Lack of timely EOEs negatively affects CCC's ability to accurately report on the GSM–102 program in its financial statements. Additionally, receipt of EOEs allows CCC to reduce usage against foreign bank and country limits to the extent that exporters do not export the full value of the guarantee. Absent EOEs, exporters may unnecessarily restrict utilization of foreign bank and country limits. Program availability is an issue throughout the year, not only at the middle and end of the fiscal year.

One respondent asked what CCC would consider a "legitimate circumstance" warranting a request for an EOE filing extension. There could be multiple reasons why CCC would permit an extension to the filing deadline. CCC cannot predict in advance what these circumstances will be. Approvals will be granted case-by-case, based on the explanation (and corresponding documentation, if any) provided by the exporter at the time of request.

One respondent stated that U.S. financial institutions are unable to determine whether an exporter has submitted an EOE on time, as CCC's on-line system does not contain an EOE submission date. Further, if CCC implements the shortened timeframe, assignees will require evidence that EOEs for assigned guarantees are submitted within the required timeframe.

CCC does not agree that the U.S. financial institution must be advised whether EOEs are submitted within the required timeframe or if CCC has granted an extension to this timeframe. The consequence of failure to comply with this requirement is that the exporter cannot submit applications for new payment guarantees per § 1493.130(c). There is no impact on the relevant guarantee if the EOE is late, no consideration of the timeliness of the EOE at the time of claim and, therefore, no impact on the assignee. However, CCC is willing to share this information with assignees upon request. CCC will consider adding this information to the GSM web-based system so that it is readily available to assignees.

Section 1493.140 Certification Requirements for the Evidence of Export

CCC received one comment on this section, with the respondent agreeing with CCC's proposal to remove the certification found at § 1493.90(c) in the current rule (which requires the exporter to certify that the letter of credit has been opened). No changes were needed in response to this comment. Consistent with changes made with respect to the SAM and OFAC certifications, CCC modified the certification at § 1493.140(d).

CCC added two certifications to the new proposed rule. In § 1493.140(b), CCC proposes to require the exporter to certify that the commodities under the payment guarantee were shipped directly to the importer (or to the importer's representative) in the destination country or region. This certification is intended to enhance compliance with the new requirements related to the importer's representative and to ensure the goods are shipped consistent with the information provided in the exporter's application for payment guarantee. When making this certification, an exporter is certifying that either the importer on the payment guarantee or the importer's representative, as specified in the application for the payment guarantee, is taking receipt of the goods in the destination country or region. If CCC determines that the agricultural commodities exported under a payment guarantee are shipped to an entity other than the importer or the importer's representative, the exporter will be in violation of the requirements of this sub-part and the certification statement made on the EOE. At § 1493.140(e), CCC added a certification that the transaction reported in the EOE is an "Eligible Export Sale." The meaning of this term is found in the discussion of § 1493.20. Because CCC will prohibit coverage of any transaction that does not meet the definition of "Eligible Export Sale," CCC will require exporters to certify that the transaction reported under the evidence of export report meets this requirement.

Section 1493.150 Proof of Entry

CCC received one comment on this section, noting that requiring proof of entry documentation with a claim for default (found in § 1493.170) would slow payments from the U.S. financial institution and negatively affect exporters' cash flows, as the proof of entry document is often outside of the exporter's control. Further, these cash flow problems will most notably affect small businesses.

CCC agrees with this comment, as well as additional comments received on this issue under § 1493.170. In response, CCC removed the requirement to provide proof of entry as a claims document. CCC added a statement to § 1493.150(b)(1) reminding exporters they must submit proof of entry documentation to CCC at the Director's request. Exporters are advised that CCC may request this documentation following submission of a claim for default by the holder of the payment guarantee. Assignees are reminded that pursuant to § 1493.191(d), *Misstatements or noncompliance by Exporter may lead to rescission of Payment Guarantee,* the assignee is held harmless for the exporter's failure to comply with proof of entry requirements provided that the assignee had no knowledge of the exporter's noncompliance at the time of taking assignment of the payment guarantee.

Section 1493.160 Notice of Default

Three respondents commented on CCC's proposal to change the notice of default submission timeframe from ten calendar days to five business days after the date payment is due from the foreign financial institution. Two respondents requested CCC retain the current timeframe, noting that the reduced timeframe poses an operational risk to the exporter or assignee and a reputational risk to the foreign financial institution. Specifically, the shorter time period does not allow sufficient time to resolve operational errors and oversights or to detect or reconcile missed payments. One respondent requested that the timeframe be extended to 60 days, due to possible discrepancies in presentation of documents under the letter of credit.

No changes were made in response to these comments. It is CCC's responsibility in a default to avoid jeopardizing additional taxpayer resources. CCC can only uphold this responsibility if it is notified immediately of a default and prevents issuance of additional guarantees with the defaulting institution. CCC does not believe this change poses undue risk upon the exporter or assignee. The timeframe is clear; if the holder of the payment guarantee knows that a payment has not been made, or cannot verify whether the payment has been made, the holder should submit the notice of default within the prescribed timeframe to protect its rights under the guarantee. CCC acknowledges the possibility of "technical" defaults that are due to oversight and quickly resolved. As the notice of default requires a reason for refusal to pay, this possibility will be conveyed to CCC on the notice of default. CCC will work with all parties to minimize any reputational risk to the foreign financial institution.

One respondent requested clarification on the meaning of the due date of the payment and what CCC considers to be a payment default. These clarifications can be found in paragraph (a) of this section. The "due date" is "the date that payment was due from the Foreign Financial Institution." A default is any case where "the Foreign Financial Institution issuing the Letter of Credit fails to make payment pursuant to the terms of the Letter of Credit or the Terms and Conditions Document."

CCC received comments from five respondents on paragraph (c) of this section regarding the impact of a default on other existing payment guarantees. One commenter noted several issues with this provision: (1) the guarantee may have been the basis for the exporter to enter the sale with the importer; (2) the exporter may not have a line of credit with another approved foreign financial institution; and (3) if the letter of credit has already been issued and confirmed, under UCP 600 rules it cannot be cancelled without the consent of all parties. The respondent also noted that when CCC issues a guarantee, it does so based on its assessment that the foreign financial institution is creditworthy throughout the 120-day maximum shipping period. If a default occurs, CCC should notify the exporter and continue to honor guarantees, provided the letter of credit is issued not later than 30 days following the final shipment date. The respondent noted that all parties would likely make a good faith effort not to ship additional product, but this may not be possible if the letter of credit has been issued and documents have been presented to the U.S. financial institution.

Three respondents noted that this change will make CCC's guarantee conditional. In contrast, the required payment mechanism (the letter of credit) would remain irrevocable. This situation would create significant additional risk to the U.S. financial institution and would require it to carry more capital and charge higher lending margins, thereby making financing under the program more costly. This cost would in turn be passed on to the exporters, making the program less attractive to all participants. Respondents requested this provision be revised or removed. One respondent requested that CCC allow the foreign financial institution time to resolve

technical payment issues without affecting existing payment guarantees.

In response to these comments, CCC revised paragraph (c) to reflect that CCC will only withdraw guarantee coverage of the defaulting foreign financial institution where the letter of credit has not yet been issued for the export sale. CCC agrees that once the letter of credit is issued and documents presented, the U.S. financial institution is obligated to make payment and the letter of credit cannot be canceled without consent of all parties. It is not appropriate for CCC to revoke its guarantee at this time. If a default occurs, CCC will provide written notice (likely via email) to all exporters and assignees with payment guarantees involving the defaulting foreign financial institution. CCC will not provide coverage for any letters of credit that are issued by the defaulting foreign financial institution on or after the date the exporter and assignee receive this notice from CCC. If CCC withdraws coverage of that foreign financial institution, the exporter will have the option of finding an alternate foreign financial institution within 30 calendar days or cancelling the guarantee (with a refund of the fee corresponding to any cancelled guarantee amount). CCC will also consider other requests for amendments from the exporter if needed to facilitate completion of the export sale. If the holder of the payment guarantee subsequently files a claim, CCC will confirm during the claim review process that the letter of credit was issued prior to CCC's notification. Although CCC recognizes that this policy creates risk for the exporter, which may have conditioned the sale upon the guarantee, CCC has a responsibility to protect against additional losses. If a default is technical in nature, this fact will be indicated on the notice of default and CCC will work with all parties to try to resolve the default without affecting existing payment guarantees.

Section 1493.170 Claims for Default

Three respondents commented on the requirement to submit proof of entry documentation at the time of claim under § 1493.170(a)(5)(iii) of the initial proposed rule. Two respondents noted that the U.S. financial institution does not typically receive this document because it is the exporter's responsibility. The U.S. financial institution has no assurance the exporter would provide it at time of claim or that it would be satisfactory to CCC. One respondent commented that with this requirement, the exporter would be paid when the goods arrived at destination rather than at export. This change would have a significant negative effect on the exporter's cash flow, especially for smaller exporters. In addition, the exporter must rely on the importer for this document and letters of credit would have to be issued for longer periods to accommodate the time needed to obtain the document, all of which would increase risk and costs to the exporter. There are no rules for determining the acceptability of these documents, which would increase review time and operational risks to U.S. financial institutions.

CCC agrees with these comments and eliminated the requirement to provide proof of entry at time of claim. CCC clarified in § 1493.150 that the exporter must provide this documentation to CCC at the request of the Director.

One respondent asked what CCC will accept as evidence of the repayment schedule required in paragraph (a)(3)(i). Although there is no specific document CCC requires to meet this provision, U.S. financial institutions typically submit a copy of the loan notification to the foreign financial institution, which contains the information required by paragraph (a)(3)(i). If the loan notification is not available, the U.S. financial institution may contact CCC with any questions regarding an alternate document.

One commenter suggested CCC move paragraph (d), *Alternative satisfaction of Payment Guarantees*, to § 1493.190. CCC does not agree because paragraph (d) is often invoked in response to a claim for default. Therefore, this paragraph remains in § 1493.170.

CCC made additional changes to this section in the new proposed rule. Paragraph (a), which describes the documents and information required in a claim for default, has been reorganized to group like requirements together, such as certifications, to make this section easier to follow. In paragraph (a)(1)(iii), a new certification was added requiring the holder of the payment guarantee to certify that conforming documents required by the letter of credit have been submitted to the negotiating bank or directly to the foreign financial institution (if the payment guarantee has not been assigned). This was added as part of CCC's effort to avoid claims for default due to document discrepancies. Paragraph (a)(3)(v) was modified to reflect that the evidence of export (EOE) report provided with the claim must be in conformity with the regulatory requirements for EOEs. A requirement was also added for the holder of the payment guarantee to provide written evidence of a repurchase if the defaulted amount was part of a transaction executed under a repurchase agreement. Receipt of this documentation will allow CCC to confirm that the repurchase occurred as required by § 1493.120(f)(1)(ii). CCC also updated this section with the new terms "Holder of the Payment Guarantee" and "Terms and Conditions Document" as relevant, and added additional detail to some of the requirements to clarify the information that must be provided.

Section 1493.180 Payment for Default

CCC received two comments on this section. One respondent requested that, with respect to the provision for accelerated payments in paragraph (d), CCC pay claims for accelerated amounts if payments under the letter of credit are required to be accelerated.

It is CCC's intent to pay claims for defaults on an accelerated basis if CCC requires the holder of the payment guarantee to invoke the acceleration provision in § 1493.90(b)(3). The purpose of paragraph (d) is to make clear that CCC will not make accelerated payments if the holder of the payment guarantee determined unilaterally to invoke the acceleration clause.

One respondent commented that under paragraph (e)(1), the assignee may not know if the exporter has complied with the reporting requirements under § 1493.130 and § 1493.140, and therefore requested this requirement be excluded from the limitation on the assignee's liability. CCC does not agree with this suggestion. The evidence of export report (EOE) is a required claim document under § 1493.170(a)(3)(v); therefore, the assignee should ensure that it receives this document from the exporter. Further, the assignee can review the program regulation to determine whether the EOE conforms with the requirements of § 1493.130 and § 1493.140. CCC acknowledges that the assignee may not know if the exporter includes inaccurate or false data or certifications in the EOE, but in such circumstances CCC would hold the assignee harmless provided the requirements of paragraph (e) are met. CCC has modified this provision to more broadly require that in order to be held harmless, the assignee must submit all required claims documents such that they "appear on their face" to conform with all requirements of § 1493.170. With this change CCC believes sub-paragraphs (1) and (2) of this provision are no longer needed.

Section 1493.190 Recovery of Defaulted Payments

CCC received no comments on this section. In the new proposed rule, CCC updated this section with the term

"Holder of the Payment Guarantee" as discussed in § 1493.20. Paragraph (e) from the initial proposed rule has been moved to the new section 1493.191 (see discussion below). In paragraph (c), *Allocation of recoveries,* CCC clarified that the "respective interest of each party" in a recovery is based on the date the claim is paid by CCC. In the paragraph *Cooperation in recoveries* (now paragraph (e)), CCC added that the exporter, whether or not the holder of the payment guarantee, is also required to cooperate with CCC to effect recoveries. In some instances, the exporter may have information or be able to take some action that would increase the likelihood of recoveries following a default.

Section 1493.191 Additional Obligations and Requirements

This section was added to the new proposed rule but is a compilation of existing provisions previously found in other sections, including § 1493.195, *Miscellaneous provisions.* CCC believes these provisions represent important obligations on participants and risked being overlooked; they have therefore been consolidated in this new section.

One respondent commented on paragraph (a) of this new section, previously found in § 1493.195, *Miscellaneous provisions,* noting that pursuant to privacy laws, USDA may be required to obtain a subpoena to review GSM–102 related documents unless the customer has provided prior written consent. CCC does not agree with this comment. Section 402(a)(1) of the Agricultural Trade Act of 1978, as amended, requires "each exporter or other participant under the program to maintain all records concerning a program transaction for a period of not to exceed 5 years after completion of the program transaction, and to permit the Secretary to have full and complete access, for such 5-year period, to such records." This statutory provision does not require USDA to obtain a subpoena for access to documents covered by this regulatory provision.

In the revised proposed rule, CCC modified paragraph (a) to clarify that the requirement for records maintenance and access to premises applies both to the exporter and the assignee. CCC also made changes to remind participants that they are expected to respond fully to any inquiries from CCC related to their program participation and any GSM–102 transactions. CCC felt it was necessary to clarify that participants must respond to verbal and written inquiries that do not specifically involve submission of documents. The title of this paragraph has been changed to reflect this addition. Paragraph (d), previously titled "Good faith," has been renamed "Misstatements or noncompliance by Exporter may lead to rescission of Payment Guarantee."

Section 1493.192 Dispute Resolution and Appeals

No comments were received on this section and no changes were made in the proposed rule.

Section 1493.195 Miscellaneous Provisions

Several of the provisions previously found in this section have been moved to the new § 1493.191, *Additional obligations and requirements.* No comments were received on paragraphs (a) and (b) of this section and CCC made no changes in the new proposed rule.

Executive Order 12866

This proposed rule is issued in conformance with Executive Order 12866. It has been determined to be not significant for the purposes of Executive Order 12866 and was not reviewed by OMB. A cost-benefit assessment of this rule was not completed.

Executive Order 12988

This rule has been reviewed in accordance with Executive Order 12988. This rule would not preempt State or local laws, regulations, or policies unless they present an irreconcilable conflict with this rule. Before any judicial action may be brought concerning the provisions of this rule, the appeal provisions of 7 CFR part 1493.192 would need to be exhausted. This rule would not be retroactive.

Executive Order 12372

This program is not subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. See the notice related to 7 CFR part 3015, subpart V, published at 48 FR 29115 (June 24, 1983).

Executive Order 13132

This proposed rule has been reviewed under Executive Order 13132, "Federalism." The policies contained in this proposed rule do not have any substantial direct effect on States, on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government, nor does this proposed rule impose substantial direct compliance costs on State and local governments. Therefore, consultation with the States is not required.

Executive Order 13175

The United States has a unique relationship with Indian Tribes as provided in the Constitution of the United States, treaties, and Federal statutes. On November 5, 2009, President Obama signed a Memorandum emphasizing his commitment to "regular and meaningful consultation and collaboration with tribal officials in policy decisions that have tribal implications including, as an initial step, through complete and consistent implementation of Executive Order 13175." This proposed rule has been reviewed for compliance with E.O. 13175 and CCC worked directly with the Office of Tribal Relations in the rule's development. The policies contained in this proposed rule do not have tribal implications that preempt tribal law.

Regulatory Flexibility Act

The Regulatory Flexibility Act does not apply to this rule because CCC is not required by 5 U.S.C. 553 or any other law to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Environmental Assessment

CCC has determined that this proposed rule does not constitute a major State or Federal action that would significantly affect the human or natural environment. Consistent with the National Environmental Policy Act (NEPA), 40 CFR part 1502.4, "Major Federal Actions Requiring the Preparation of Environmental Impact Statements" and the regulations of the Council on Environmental Quality, 40 CFR parts 1500–1508, no environmental assessment or environmental impact statement will be prepared.

Unfunded Mandates

This proposed rule does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA). Therefore, this rule is not subject to the requirements of sections 202 and 205 of UMRA.

Paperwork Reduction Act of 1995

In accordance with the Paperwork Reduction Act of 1995, CCC is requesting comments from all interested individuals and organizations on a proposed revision to the currently approved information collection for this program. This revision includes proposed changes in information collection activities related to the regulatory changes in this proposed rule.

Title: CCC Export Credit Guarantee Program (GSM–102).

OMB Control Number: 0551–0004.

Type of Request: Revision of a currently approved information collection.

Abstract: This information collection is required to support the existing regulations and proposed changes to 7 CFR Part 1493, subpart B, "CCC Export Credit Guarantee (GSM–102) Program Operations," which establishes the requirements for participation in CCC's GSM–102 program. This revision reflects an expected increase in program participation due to the new proposed rule, and also incorporates the additional estimated burden to program participants as a result of certain new requirements in this proposed rule for exporters, U.S. and foreign financial institution qualification; applications for payment guarantees; notices of assignment; repurchase agreements; evidence of export reports; submission of claims for default; and appeals. This information collection is necessary for CCC to manage, plan and evaluate the program and to ensure the proper and judicious use of government resources.

Estimate of Burden: The public reporting burden for this collection of information is estimated to average 0.51 hours per response.

Respondents: U.S. exporters, U.S. financial institutions, and foreign financial institutions.

Estimated Number of Respondents: 96 per year.

Estimated Number of Responses per Respondent: 66 per year.

Estimated Total Annual Burden on Respondents: 3,224 hours.

Comments on this information collection must be received by February 25, 2014 to be assured consideration. Comments may be submitted to CCC in accordance with any of the methods specified for submitting comments to this proposed rule. All comments received in response to this notice will be a matter of public record.

E-Government Act Compliance

CCC is committed to complying with the E-Government Act to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services and for other purposes. The forms, regulations, and other information collection activities required to be utilized by a person subject to this rule are available at: *http://www.fas.usda.gov.*

Title 7—Agriculture

List of Subjects in 7 CFR Part 1493

Agricultural commodities, Exports.

For the reasons stated in the preamble, CCC proposes to amend 7 CFR part 1493 as follows:

PART 1493—CCC EXPORT CREDIT GUARANTEE PROGRAMS

■ 1. The authority citation for 7 CFR part 1493 continues to read as follows:

Authority: 7 U.S.C. 5602, 5622, 5661, 5662, 5663, 5664, 5676; 15 U.S.C. 714b(d), 714c(f)

■ 2. Subpart A is revised to read as follows:

Subpart A—Restrictions and Criteria for Export Credit Guarantee Program

Sec.

Subpart A—Restrictions and Criteria for Export Credit Guarantee Programs

§ 1493.1 General statement.

This subpart sets forth the restrictions that apply to the issuance and use of Payment Guarantees under the Commodity Credit Corporation (CCC) Export Credit Guarantee (GSM–102) Program and Facility Guarantee Program (FGP), the criteria considered by CCC in determining the annual allocations of Payment Guarantees to be made available with respect to each participating country and region, and the criteria considered by CCC in the review and approval of proposed allocation levels for specific U.S. Agricultural Commodities to these countries and regions.

§ 1493.2 Purposes of programs.

CCC is authorized to issue Payment Guarantees:

(a) To increase exports of U.S. Agricultural Commodities and expand access to trade finance;

(b) To assist countries, particularly developing countries and emerging markets, in meeting their food and fiber needs;

(c) To establish or improve facilities and infrastructure in emerging markets to expand exports of U.S. Agricultural Commodities; or

(d) For such other purposes as the Secretary of Agriculture determines appropriate.

§ 1493.3 Restrictions on programs and cargo preference statement.

(a) *Restrictions on use of Payment Guarantees.* (1) Payment Guarantees authorized under these regulations shall not be used for foreign aid, foreign policy, or debt rescheduling purposes.

(2) CCC shall not make Payment Guarantees available in connection with sales of U.S. Agricultural Commodities to any country that the Secretary determines cannot adequately service the debt associated with such sale.

(3) CCC shall not make Payment Guarantees available in connection with sales of U.S. Agricultural Commodities financed by any Foreign Financial Institution that CCC determines cannot adequately service the debt associated with such sale.

(b) *Cargo preference laws.* The provisions of the cargo preference laws do not apply to export sales with respect to which Payment Guarantees are issued under these programs.

§ 1493.4 Criteria for country and regional allocations.

The criteria considered by CCC in reviewing proposals for country and regional allocations will include, but not be limited to, the following:

(a) Potential benefits that the extension of Payment Guarantees would provide for the development, expansion, or maintenance of the market for particular U.S. Agricultural Commodities in the importing country;

(b) Financial and economic ability and/or willingness of the country of obligation to adequately service CCC guaranteed debt ("country of obligation" is the country whose Foreign Financial Institution obligation is guaranteed by CCC);

(c) Financial status of participating Foreign Financial Institutions in the country of obligation as it would affect their ability to adequately service CCC guaranteed debt;

(d) Political stability of the country of obligation as it would affect its ability and/or willingness to adequately service CCC guaranteed debt; and

(e) Current status of debt either owed by the country of obligation or by the participating Foreign Financial Institutions to CCC or to lenders protected by CCC's Payment Guarantees.

§ 1493.5 Criteria for agricultural commodity allocations.

The criteria considered by CCC in determining U.S. Agricultural Commodity allocations within a specific country or regional allocation will include, but not be limited to, the following:

(a) Potential benefits that the extension of Payment Guarantees would

provide for the development, expansion or maintenance of the market in the importing country for the particular U.S. Agricultural Commodity under consideration;

(b) The best use to be made of the Payment Guarantees in assisting the importing country in meeting its particular needs for food and fiber, as may be determined through consultations with private buyers and/or representatives of the government of the importing country; and

(c) Evaluation, in terms of program purposes, of the relative benefits of providing Payment Guarantee coverage for sales of the U.S. Agricultural Commodity under consideration compared to providing coverage for sales of other U.S. Agricultural Commodities.

3. Subpart B is revised to read as follows:

Subpart B—CCC Export Credit Guarantee (GSM–102) Program Operations.

Sec.

Subpart B—CCC Export Credit Guarantee Program (GSM–102) Operations

§ 1493.10 General statement.

(a) *Overview.* The Export Credit Guarantee (GSM–102) Program of the Commodity Credit Corporation (CCC) was developed to expand U.S. Agricultural Commodity exports by making available Payment Guarantees to encourage U.S. private sector financing of foreign purchases of U.S. Agricultural Commodities on credit terms. The Payment Guarantee issued under GSM–102 is an agreement by CCC to pay the Exporter, or the U.S. Financial Institution that may take assignment of the Payment Guarantee, specified amounts of principal and interest in case of default by the Foreign Financial Institution that issued the Letter of Credit for the export sale covered by the Payment Guarantee. Under the GSM–102 program, maximum repayment terms vary based on risk of default, as determined by CCC. The program operates in a manner intended not to interfere with markets for cash sales and is targeted toward those countries that have sufficient financial strength so that foreign exchange will be available for scheduled payments. In providing this program, CCC seeks to expand and/or maintain market opportunities for U.S. agricultural exporters and assist long-term market development for U.S. Agricultural Commodities.

(b) *Program administration.* The GSM–102 program is administered under the direction of the General Sales Manager and Vice President of CCC, pursuant to this subpart, subpart A, and any Program Announcements issued by CCC. From time to time, CCC may issue a notice to participants on the USDA Web site to remind participants of the requirements of the GSM–102 program or to clarify the program requirements contained in these regulations in a manner not inconsistent with this subpart and subpart A.

(c) *Country and regional program announcements.* From time to time, CCC will issue a Program Announcement on the USDA Web site to announce a GSM–102 program for a specific country or region. The Program Announcement for a country or region will designate specific U.S. Agricultural Commodities or products thereof, or designate that all eligible U.S. Agricultural Commodities are available under the announcement. The Program Announcement will contain any requirements applicable to that country or region as determined by CCC.

§ 1493.20 Definition of terms.

Terms set forth in this subpart, on the USDA Web site (including in Program Announcements and notices to participants), and in any CCC-originated documents pertaining to the GSM–102 Program will have the following meanings:

Affiliate. Entities are affiliates of each other if, directly or indirectly, either one controls or has the power to control the other or a third person controls or has the power to control both. Control may include, but is not limited to: Interlocking management or ownership; identity of interests among family members; shared facilities and equipment; or common use of employees.

Assignee. A U.S. Financial Institution that has obtained the legal right to make a claim and receive the payment of proceeds under the Payment Guarantee.

Business Day. A day during which employees of the U.S. Department of Agriculture in the Washington, DC metropolitan area are on official duty during normal business hours.

CCC. The Commodity Credit Corporation, an agency and instrumentality of the United States within the Department of Agriculture, authorized pursuant to the Commodity Credit Corporation Charter Act (15 U.S.C. 714 *et seq.*).

CCC Late Interest. Interest payable by CCC pursuant to § 1493.180(c).

Cost and Freight (CFR). A customary trade term for sea and inland waterway transport only, as defined by the International Chamber of Commerce, Incoterms 2010 (or as superseded).

Cost Insurance and Freight (CIF). A customary trade term for sea and inland waterway transport only, as defined by the International Chamber of Commerce, Incoterms 2010 (or as superseded).

Date of Export. One of the following dates, depending upon the method of shipment: The on-board date of an ocean bill of lading or the on-board ocean carrier date of an intermodal bill of lading; the on-board date of an airway bill; or, if exported by rail or truck, the date of entry shown on an entry certificate or similar document issued and signed by an official of the government of the importing country.

Date of Sale. The earliest date on which a Firm Export Sales Contract exists between the Exporter, or an Intervening Purchaser, if applicable, and the Importer.

Director. The Director, Credit Programs Division, Office of Trade Programs, Foreign Agricultural Service, or the Director's designee.

Discounts and Allowances. Any consideration provided directly or indirectly, by or on behalf of the Exporter or an Intervening Purchaser, to the Importer in connection with an Eligible Export Sale, above and beyond the commodity's value, stated on the appropriate FOB, FAS, FCA, CFR or CIF basis (or other basis specified in Incoterms 2010, or as superseded), which includes, but is not limited to, the provision of additional goods, services or benefits; the promise to

provide additional goods, services or benefits in the future; financial rebates; the assumption of any financial or contractual obligations; commissions where the buyer requires the Exporter to employ and compensate a specified agent as a condition of concluding the Eligible Export Sale; the whole or partial release of the Importer from any financial or contractual obligations; or settlements made in favor of the Importer for quality or weight.

Eligible Export Sale. An export sale of U.S. Agricultural Commodities in which the obligation of payment for the portion registered under the GSM–102 program arises solely and exclusively from a Foreign Financial Institution Letter of Credit or Terms and Conditions Document issued in connection with a Payment Guarantee.

Eligible Interest. The amount of interest that CCC agrees to pay the Holder of the Payment Guarantee in the event that CCC pays a claim for default of Ordinary Interest. Eligible Interest shall be the lesser of:

(1) The amount calculated using the interest rate specified between the Holder of the Payment Guarantee and the Foreign Financial Institution; or

(2) The amount calculated using the specified percentage of the Treasury bill investment rate set forth on the face of the Payment Guarantee.

Exported Value. (1) Where CCC announces Payment Guarantee coverage on a FAS, FCA, or FOB basis and:

(i) Where the U.S. Agricultural Commodity is sold on a FAS, FCA, or FOB basis, the value, FAS, FCA, or FOB basis, port of shipment, of the export sale, reduced by the value of any Discounts and Allowances granted to the Importer in connection with such sale; or

(ii) Where the U.S. Agricultural Commodity was sold on a CFR or CIF basis, point of entry, the value of the export sale, FAS, FCA or FOB, port of shipment, is measured by the CFR or CIF value of the U.S. Agricultural Commodity less the cost of ocean freight, as determined at the time of application and, in the case of CIF sales, less the cost of marine and war risk insurance, as determined at the time of application, reduced by the value of any Discounts and Allowances granted to the Importer in connection with the sale of the commodity; or

(2) Where CCC announces coverage on a CFR or CIF basis, and where the U.S. Agricultural Commodity is sold on a CFR or CIF basis, port of destination, the total value of the export sale, CFR or CIF basis, port of destination, reduced by the value of any Discounts and Allowances granted to the Importer in connection with the sale of the commodity; or

(3) When a CFR or CIF U.S. Agricultural Commodity export sale involves the performance of non-freight services to be performed outside the United States (e.g., services such as bagging bulk cargo) which are not normally included in ocean freight contracts, the value of such services and any related materials not exported from the U.S. with the commodity must also be deducted from the CFR or CIF sales price in determining the Exported Value.

Exporter. A seller of U.S. Agricultural Commodities that is both qualified in accordance with the provisions of § 1493.30 and the applicant for the Payment Guarantee.

Firm Export Sales Contract. The written sales contract entered into between the Exporter and the Importer (or, if applicable, the written sales contracts between the Exporter and the Intervening Purchaser and the Intervening Purchaser and the Importer) which sets forth the terms and conditions of an Eligible Export Sale of the eligible U.S. Agricultural Commodity from the Exporter to the Importer (or, if applicable, the sale of the eligible U.S. Agricultural Commodity from the Exporter to the Intervening Purchaser and from the Intervening Purchaser to the Importer). Written evidence of a sale may be in the form of a signed sales contract, a written offer and acceptance between parties, or other documentary evidence of sale. The written evidence of sale for the purposes of the GSM–102 program must, at a minimum, document the following information: The eligible U.S. Agricultural Commodity, quantity, quality specifications, delivery terms (FOB, C&F, FCA, etc.) to the eligible country or region, delivery period, unit price, payment terms, Date of Sale, and evidence of agreement between buyer and seller. The Firm Export Sales Contract between the Exporter and the Importer (or, if applicable, between the Exporter and the Intervening Purchaser and between the Intervening Purchaser and the Importer) may be conditioned upon CCC's approval of the Exporter's application for a Payment Guarantee.

Foreign Financial Institution. A financial institution (including foreign branches of U.S. financial institutions):

(1) Organized and licensed under the laws of a jurisdiction outside the United States;

(2) Not domiciled in the United States; and

(3) Subject to the banking or other financial regulatory authority of a foreign jurisdiction (except for multilateral and sovereign institutions).

Foreign Financial Institution Letter of Credit or *Letter of Credit.* An irrevocable documentary letter of credit, subject to the current revision of the Uniform Customs and Practices for Documentary Credits (International Chamber of Commerce Publication No. 600, or latest revision), providing for payment in U.S. dollars against stipulated documents and issued in favor of the Exporter by a CCC-approved Foreign Financial Institution.

Free Alongside Ship (FAS). A customary trade term for sea and inland waterway transport only, as defined by the International Chamber of Commerce, Incoterms 2010 (or as superseded).

Free Carrier (FCA). A customary trade term for all modes of transportation, as defined by the International Chamber of Commerce, Incoterms 2010 (or as superseded).

Free on Board (FOB). A customary trade term for sea and inland waterway transport only, as defined by the International Chamber of Commerce, Incoterms 2010 (or as superseded).

GSM. The General Sales Manager, Foreign Agricultural Service, USDA, acting in his or her capacity as Vice President, CCC, or designee.

Guaranteed Value. The maximum amount indicated on the face of the Payment Guarantee, exclusive of interest, that CCC agrees to pay the Holder of the Payment Guarantee.

Holder of the Payment Guarantee. The Exporter or the Assignee of the Payment Guarantee with the legal right to make a claim and receive the payment of proceeds from CCC under the Payment Guarantee in case of default by the Foreign Financial Institution.

Importer. A foreign buyer that enters into a Firm Export Sales Contract with an Exporter or with an Intervening Purchaser for the sale of U.S. Agricultural Commodities to be shipped from the United States to the foreign buyer.

Importer's Representative. An entity having a physical office and registered to do business in the destination country or region specified in the Payment Guarantee and that is authorized to act on the Importer's behalf with respect to the sale described in the Firm Export Sales Contract.

Incoterms. Trade terms developed by the International Chamber of Commerce in Incoterms 2010 (or latest revision) which define the respective obligations of the buyer and seller in a sales contract.

Intervening Purchaser. A party that is not located in the country or region of

destination specified in the Payment Guarantee and that enters into a Firm Export Sales Contract to purchase U.S. Agricultural Commodities from an Exporter and sell the same U.S. Agricultural Commodities to an Importer.

OFAC. The Office of Foreign Assets Control of the U.S. Department of Treasury, which administers and enforces economic sanctions programs primarily against countries and groups of individuals such as terrorists and narcotics traffickers.

Ordinary Interest. Interest (other than Post Default Interest) charged on the principal amount identified in the Foreign Financial Institution Letter of Credit or, if applicable, the Terms and Conditions Document.

Payment Guarantee. An agreement under the GSM–102 program by which CCC, in consideration of a fee paid, and in reliance upon the statements and declarations of the Exporter, subject to the terms set forth in the written guarantee, this subpart, and any applicable Program Announcements, agrees to pay the Holder of the Payment Guarantee in the event of a default by a Foreign Financial Institution on its Repayment Obligation under the Foreign Financial Institution Letter of Credit issued in connection with a guaranteed sale or, if applicable, under the Terms and Conditions Document.

Port Value. (1) Where CCC announces coverage on a FAS, FCA, or FOB basis and:

(i) Where the U.S. Agricultural Commodity is sold on a FAS, FCA, or FOB basis, port of shipment, the value, FAS, FCA, or FOB basis, port of shipment, of the export sale, including the upward loading tolerance, if any, as provided by the Firm Export Sales Contract, reduced by the value of any Discounts and Allowances granted to the Importer in connection with such sale; or

(ii) Where the U.S. Agricultural Commodity was sold on a CFR or CIF basis, port of destination, the value of the export sale, FAS, FCA, or FOB, port of shipment, including the upward loading tolerance, if any, as provided by the Firm Export Sales Contract, is measured by the CFR or CIF value of the U.S. Agricultural Commodity less the value of ocean freight and, in the case of CIF sales, less the value of marine and war risk insurance, reduced by the value of any Discounts and Allowances granted to the Importer in connection with the sale of the commodity.

(2) Where CCC announces coverage on a CFR or CIF basis and where the U.S. Agricultural Commodity was sold on CFR or CIF basis, port of destination, the total value of the export sale, CFR or CIF basis, port of destination, including the upward loading tolerance, if any, as provided by the Firm Export Sales Contract, reduced by the value of any Discounts and Allowances granted to the Importer in connection with the sale of the commodity.

(3) When a CFR or CIF U.S. Agricultural Commodity export sale involves the performance of non-freight services to be performed outside the United States (e.g., services such as bagging bulk cargo), which are not normally included in ocean freight contracts, the value of such services and any related materials not exported from the U.S. with the commodity must also be deducted from the CFR or CIF sales price in determining the Port Value.

Post Default Interest. Interest charged on amounts in default that begins to accrue upon default of payment, as specified in the Foreign Financial Institution Letter of Credit or, if applicable, in the Terms and Conditions Document.

Principal. A principal of a corporation or other legal entity is an individual serving as an officer, director, owner, partner, or other individual with management or supervisory responsibilities for such corporation or legal entity.

Program Announcement. An announcement issued by CCC on the USDA Web site that provides information on specific country and regional programs and may identify eligible U.S. Agricultural Commodities and countries, length of credit periods which may be covered, and other information.

Repayment Obligation. A contractual commitment by the Foreign Financial Institution issuing the Letter of Credit in connection with an Eligible Export Sale to make payment(s) on principal amount(s), plus any Ordinary Interest and Post Default Interest, in U.S. dollars, to an Exporter or U.S. Financial Institution on deferred payment terms consistent with those permitted under CCC's Payment Guarantee. The Repayment Obligation must be documented using one of the methods specified in § 1493.90.

Repurchase Agreement. A written agreement under which the Holder of the Payment Guarantee may from time to time enter into transactions in which the Holder of the Payment Guarantee agrees to sell to another party Foreign Financial Institution Letter(s) of Credit and, if applicable, Terms and Conditions Document(s), secured by the Payment Guarantee, and repurchase the same Foreign Financial Institution Letter(s) of Credit and Terms and Conditions Documents secured by the Payment Guarantee, on demand or date certain at an agreed upon price.

SAM (System for Award Management). A Federal Government owned and operated free Web site that contains information on parties excluded from receiving Federal contracts or certain subcontracts and excluded from certain types of Federal financial and nonfinancial assistance and benefits.

Terms and Conditions Document. A document specifically identified and referred to in the Foreign Financial Institution Letter of Credit which may contain the Repayment Obligation and other special requirements specified in § 1493.90.

United States or *U.S.* Each of the States of the United States, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

U.S. Agricultural Commodity or *U.S. Agricultural Commodities.* (1)(i) An agricultural commodity or product entirely produced in the United States; or

(ii) A product of an agricultural commodity—

(A) 90 percent or more of the agricultural components of which by weight, excluding packaging and added water, is entirely produced in the United States; and

(B) That the Secretary determines to be a high value agricultural product.

(2) For purposes of this definition, fish entirely produced in the United States include fish harvested by a documented fishing vessel as defined in title 46, United States Code, in waters that are not waters (including the territorial sea) of a foreign country.

USDA. United States Department of Agriculture.

U.S. Financial Institution. A financial institution (including U.S. branches of Foreign Financial Institutions):

(1) Organized and licensed under the laws of a jurisdiction within the United States;

(2) Domiciled in the United States; and

(3) Subject to the banking or other financial regulatory authority jurisdiction within the United States.

Weighted Average Export Date. The mean Date of Export for all exports within a 30 calendar day period, weighted by the guaranteed portion of the Exported Value of each export.

§ 1493.30 Information required for Exporter participation.

Exporters must apply and be approved by CCC to be eligible to participate in the GSM–102 Program.

(a) *Qualification requirements.* To qualify for participation in the GSM–102 program, an applicant must submit the following information to CCC in the manner specified on the USDA Web site:

(1) For the applicant:

(i) The name and full U.S. address (including the full 9-digit zip code) of the applicant's office, along with an indication of whether the address is a business or private residence. A post office box is not an acceptable address. If the applicant has multiple offices, the address included in the information should be that which is pertinent to the GSM–102 export sales contemplated by the applicant;

(ii) Dun and Bradstreet (DUNS) number;

(iii) Employer Identification Number (EIN—also known as a Federal Tax Identification Number);

(iv) Telephone and fax numbers;

(v) Email address (if applicable);

(vi) Business Web site (if applicable);

(vii) Contact name;

(viii) Statement indicating whether the applicant is a U.S. domestic entity or a foreign entity domiciled in the United States; and

(ix) The form of business entity of the applicant (e.g., sole proprietorship, partnership, corporation, etc.) and the U.S. jurisdiction under which such entity is organized and authorized to conduct business. Such jurisdictions are a U.S. State, the District of Columbia, Puerto Rico, and the territories and possessions of the United States. Upon request by CCC, the applicant must provide written evidence that such entity has been organized in a U.S. State, the District of Columbia, Puerto Rico, or a territory or possession of the United States.

(2) For the applicant's headquarters office:

(i) The name and full address of the applicant's headquarters office. A post office box is not an acceptable address; and

(ii) Telephone and fax numbers.

(3) For the applicant's agent for the service of process:

(i) The name and full U.S. address of the applicant's agent's office, along with an indication of whether the address is a business or private residence;

(ii) Telephone and fax numbers;

(iii) Email address (if applicable); and

(iv) Contact name.

(4) A description of the applicant's business. Applicants must provide the following information:

(i) Nature of the applicant's business (e.g., agricultural producer, commodity trader, consulting firm, etc.);

(ii) Explanation of the applicant's experience/history with U.S. Agricultural Commodities for the preceding three years, including a description of such commodities;

(iii) Explanation of the applicant's experience/history exporting U.S. Agricultural Commodities, including number of years involved in exporting, types of products exported, and destination of exports for the preceding three years; and

(iv) Whether or not the applicant is a "small or medium enterprise" (SME) as defined on the USDA Web site;

(5) A listing of any related companies (e.g., Affiliates, subsidiaries, or companies otherwise related through common ownership) currently qualified to participate in CCC export programs;

(6) A statement describing the applicant's participation, if any, during the past three years in U.S. Government programs, contracts or agreements; and

(7) A statement that: "All certifications set forth in 7 CFR 1493.60(a) are hereby made in this application" which, when included in the application, will constitute a certification that the applicant is in compliance with all of the requirements set forth in § 1493.60(a). The applicant will be required to provide further explanation or documentation if not in compliance with these requirements or if the application does not include this statement.

(b) *Qualification notification.* CCC will promptly notify applicants that have submitted information required by this section whether they have qualified to participate in the program or whether further information is required by CCC. Any applicant failing to qualify will be given an opportunity to provide additional information for consideration by the Director.

(c) *Previous qualification.* Any Exporter not submitting an application to CCC for a Payment Guarantee for two consecutive U.S. Government fiscal years must resubmit a qualification application containing the information specified in § 1493.30(a) to CCC to participate in the GSM–102 program. If at any time the information required by paragraph (a) of this section changes, the Exporter must promptly contact CCC to update this information and certify that the remainder of the information previously provided pursuant to paragraph (a) has not changed.

(d) *Ineligibility for program participation.* An applicant may be ineligible to participate in the GSM–102 program if such applicant cannot provide all of the information and certifications required by § 1493.30(a).

§ 1493.40 Information required for U.S. Financial Institution participation.

U.S. Financial Institutions must apply and be approved by CCC to be eligible to participate in the GSM–102 Program.

(a) *Qualification requirements.* To qualify for participation in the GSM–102 Program, a U.S. Financial Institution must submit the following information to CCC in the manner specified on the USDA Web site:

(1) Legal name and address of the applicant;

(2) Dun and Bradstreet (DUNS) number;

(3) Employer Identification Number (EIN—also known as a Federal Tax Identification Number);

(4) Year-end audited financial statements for the applicant's most recent fiscal year;

(5) Breakdown of the applicant's ownership as follows:

(i) Ten largest individual shareholders and ownership percentages;

(ii) Percentage of government ownership, if any; and

(iii) Identity of the legal entity or person with ultimate control or decision making authority, if other than the majority shareholder.

(6) Organizational structure (independent, or a subsidiary, Affiliate, or branch of another financial institution);

(7) Documentation from the applicable United States Federal or State agency demonstrating that the applicant is either licensed or chartered to do business in the United States;

(8) Name of the agency that regulates the applicant and the name and telephone number of the primary contact for such regulator; and

(9) A statement that: "All certifications set forth in 7 CFR § 1493.60 are hereby made in this application" which, when included in the application, will constitute a certification that the applicant is in compliance with all of the requirements set forth in § 1493.60. The applicant will be required to provide further explanation or documentation if not in compliance with these requirements or if the application does not include this statement.

(b) *Qualification notification.* CCC will notify applicants that have submitted information required by this section whether they have qualified to participate in the program or whether further information is required by CCC. Any applicant failing to qualify will be given an opportunity to provide additional information for consideration by the Director.

(c) *Previous qualification.* Any U.S. Financial Institution not participating in

the GSM–102 program for two consecutive U.S. Government fiscal years must resubmit a qualification application containing the information specified in § 1493.40(a) to CCC to participate in the GSM–102 program. If at any time the information required by paragraph (a) of this section changes, the U.S. Financial Institution must promptly contact CCC to update this information and certify that the remainder of the information previously provided pursuant to paragraph (a) has not changed.

(d) *Ineligibility for program participation.* A U.S. Financial Institution may be deemed ineligible to participate in the GSM–102 Program if such applicant cannot provide all of the information and certifications required by § 1493.40(a).

§ 1493.50 Information required for Foreign Financial Institution participation.

Foreign Financial Institutions must apply and be approved by CCC to be eligible to participate in the GSM–102 Program.

(a) *Qualification requirements.* To qualify for participation in the GSM–102 program, a Foreign Financial Institution must submit the following information to CCC in the manner specified on the USDA Web site:

(1) Legal name and address of the applicant;

(2) Year end, audited financial statements in accordance with the accounting standards established by the applicant's regulators, in English, for the applicant's three most recent fiscal years. If the applicant is not subject to a banking or other financial regulatory authority, year-end, audited financial statements in accordance with prevailing accounting standards, in English, for the applicant's three most recent fiscal years;

(3) Breakdown of applicant's ownership as follows:

(i) Ten largest individual shareholders and ownership percentages;

(ii) Percentage of government ownership, if any; and

(iii) Identity of the legal entity or person with ultimate control or decision making authority, if other than the majority shareholder.

(4) Organizational structure (independent, or a subsidiary, Affiliate, or branch of another legal entity);

(5) Name of foreign government agency that regulates the applicant; and

(6) A statement that: "All certifications set forth in 7 CFR 1493.60 are hereby made in this application" which, when included in the application, will constitute a certification that the applicant is in compliance with all of the requirements set forth in § 1493.60. The applicant will be required to provide further explanation or documentation if not in compliance with these requirements or if the application does not include this statement.

(b) *Qualification notification.* CCC will notify applicants that have submitted information required by this section whether they have qualified to participate in the program or whether further information is required by CCC. Any applicant failing to qualify will be given an opportunity to provide additional information for consideration by the Director.

(c) *Participation limit.* If, after review of the information submitted and other publicly available information, CCC determines that the Foreign Financial Institution is eligible for participation, CCC will establish a dollar participation limit for the institution. This limit will be the maximum amount of exposure CCC agrees to undertake with respect to this Foreign Financial Institution at any point in time. CCC may change or cancel this dollar participation limit at any time based on any information submitted or any publicly available information.

(d) *Previous qualification and submission of annual financial statements.* Each qualified Foreign Financial Institution shall submit annually to CCC its audited fiscal year-end financial statements in accordance with the accounting standards established by the applicant's regulators, in English, so that CCC may determine the continued ability of the Foreign Financial Institution to adequately service CCC guaranteed debt. If the Foreign Financial Institution is not subject to a banking or other financial regulatory authority, it should submit year-end, audited financial statements in accordance with prevailing accounting standards, in English, for the applicant's most recent fiscal year. Failure to submit this information annually may cause CCC to decrease or cancel the Foreign Financial Institution's dollar participation limit. Any Foreign Financial Institution not participating in the GSM–102 program for two consecutive U.S. Government fiscal years may have its dollar participation limit cancelled. If this participation limit is cancelled, the Foreign Financial Institution must resubmit the information and certifications requested in paragraph (a) of this section to CCC when reapplying for participation. Additionally, if at any time the information required by paragraph (a) of this section changes, the Foreign Financial Institution must promptly contact CCC to update this information and certify that the remainder of the information previously provided under paragraph (a) has not changed.

(e) *Ineligibility for program participation.* A Foreign Financial Institution may be deemed ineligible to participate in the GSM–102 program if:

(1) Such applicant cannot provide all of the information and certifications required in § 1493.50(a); or

(2) Based upon information submitted by the applicant or other publicly available sources, CCC determines that the applicant cannot adequately service the debt associated with the Payment Guarantees issued by CCC.

§ 1493.60 Certifications required for program participation.

(a) When making the statement required by §§ 1493.30(a)(7), 1493.40(a)(9), or 1493.50(a)(6), each Exporter, U.S. Financial Institution and Foreign Financial Institution applicant for program participation is certifying that, to the best of its knowledge and belief:

(1) The applicant and any of its principals (as defined in 2 CFR 180.995) or affiliates (as defined in 2 CFR 180.905) are not presently debarred, suspended, proposed for debarment, declared ineligible, or excluded from covered transactions by any U.S. Federal department or agency;

(2) The applicant and any of its principals (as defined in 2 CFR 180.995) or affiliates (as defined in 2 CFR 180.905) have not within a three-year period preceding this application been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) transaction or contract under a public transaction; violation of Federal or State antitrust statues or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(3) The applicant and any of its principals (as defined in 2 CFR 180.995) or affiliates (as defined in 2 CFR 180.905) are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (a)(2) of this section;

(4) The applicant and any of its principals (as defined in 2 CFR 180.995) or affiliates (as defined in 2 CFR 180.905) have not within a three-year period preceding this application had

one or more public transactions (Federal, State or local) terminated for cause or default;

(5) The applicant does not have any outstanding nontax debt to the United States that is in delinquent status as provided in 31 CFR 285.13;

(6) The applicant is not controlled by a person owing an outstanding nontax debt to the United States that is in delinquent status as provided in 31 CFR 285.13 (e.g., a corporation is not controlled by an officer, director, or shareholder who owes a debt); and

(7) The applicant does not control a person owing an outstanding nontax debt to the United States that is in delinquent status as provided in 31 CFR 285.13 (e.g., a corporation does not control a wholly-owned or partially-owned subsidiary which owes a debt).

(b) *Additional certifications for U.S. and Foreign Financial Institution applicants.* When making the statement required by § 1493.40(a)(9) or § 1493.50(a)(6), each U.S. and Foreign Financial Institution applicant for program participation is certifying that, to the best of its knowledge and belief:

(1) The applicant and its Principals are in compliance with all requirements, restrictions and guidelines as established by the applicant's regulators; and

(2) All U.S. operations of the applicant and its U.S. Principals are in compliance with U.S. anti-money laundering and terrorist financing statutes including, but not limited to, the USA Patriot Act of 2001, and the Foreign Corrupt Practices Act of 1977.

§ 1493.70 Application for Payment Guarantee.

(a) A Firm Export Sales Contract for an Eligible Export Sale must exist before an Exporter may submit an application for a Payment Guarantee. Upon request by CCC, the Exporter must provide evidence of a Firm Export Sales Contract. An application for a Payment Guarantee must be submitted in writing to CCC in the manner specified on the USDA Web site. An application must identify the name and address of the Exporter and include the following information:

(1) Name of the destination country or region. If the destination is a region, indicate the country or countries within the region to which the U.S. Agricultural Commodity will be exported.

(2) Name and address of the Importer. If the Importer is not physically located in the country or region of destination, it must have an Importer's Representative in the country or region of destination taking receipt of the U.S. Agricultural Commodities exported under the Payment Guarantee. If applicable, provide the name and address of the Importer's Representative.

(3) A statement that the U.S. Agricultural Commodity will be shipped directly to the Importer (or to the Importer's Representative, if applicable) in the destination country or region.

(4) Name and address of the party on whose request the Letter of Credit is issued, if other than the Importer.

(5) Name and address of the Intervening Purchaser, if any.

(6) Date of Sale.

(7) Exporter's sale number.

(8) Delivery period as agreed between the Exporter and the Importer.

(9) A full description of the U.S. Agricultural Commodity (including packaging, if any). The commodity grade and quality specified in the Exporter's application for the Payment Guarantee must be consistent with the commodity grade and quality specified in the Firm Export Sales Contract and the Foreign Financial Institution Letter of Credit.

(10) Mean quantity, contract loading tolerance and, if necessary, a request for CCC to reserve coverage up to the maximum quantity permitted.

(11) Unit sales price of the U.S. Agricultural Commodity, or a mechanism to establish the price, as agreed between the Exporter and the Importer. If the commodity was sold on the basis of CFR or CIF, the actual (if known at the time of application) or estimated value of freight and, in the case of sales made on a CIF basis, the actual (if known at the time of application) or estimated value of marine and war risk insurance, must be specified.

(12) Description and value of Discounts and Allowances, if any.

(13) Port Value (includes upward loading tolerance, if any).

(14) Guaranteed Value.

(15) Guarantee fee, either as announced on the Web site per § 1493.110(a)(1), or the competitive fee bid per § 1493.110(a)(2), depending on the type of fee charged by CCC for the country or region.

(16) Name and location of the Foreign Financial Institution issuing the Letter of Credit and, upon request by CCC, written evidence that the Foreign Financial Institution has agreed to issue the Letter of Credit.

(17) The term length for the credit being extended and the intervals between principal payments for each shipment to be made under the export sale.

(18) A statement indicating whether any portion of the export sale for which the Exporter is applying for a Payment Guarantee is also being used as the basis for an application for participation in USDA's Dairy Export Incentive Program (DEIP). The number of the Agreement assigned by USDA under the DEIP should be included, as applicable.

(19) The Exporter's statement, "All certifications set forth in 7 CFR 1493.80 are hereby being made by the Exporter in this application." which, when included in the application by the Exporter, will constitute a certification that it is in compliance with all the requirements set forth in § 1493.80.

(b) An application for a Payment Guarantee may be approved as submitted, approved with modifications agreed to by the Exporter, or rejected by the Director. In the event that the application is approved, the Director will cause a Payment Guarantee to be issued in favor of the Exporter. Such Payment Guarantee will become effective at the time specified in § 1493.100(b). If, based upon a price review, the unit sales price of the commodity does not fall within the prevailing commercial market level ranges, as determined by CCC, the application will not be approved.

§ 1493.80 Certification requirements for obtaining Payment Guarantee.

By providing the statement in § 1493.70(a)(19), the Exporter is certifying that the information provided in the application is true and correct and, further, that all requirements set forth in this section have been met. The Exporter will be required to provide further explanation or documentation with regard to applications that do not include this statement. If the Exporter makes false certifications with respect to a Payment Guarantee, CCC will have the right, in addition to any other rights provided under this subpart or otherwise as a matter of law, to revoke guarantee coverage for any commodities not yet exported and/or to commence legal action and/or administrative proceedings against the Exporter. The Exporter, in submitting an application for a Payment Guarantee and providing the statement set forth in § 1493.70(a)(19), certifies that:

(a) The commodity or product covered by the Payment Guarantee is a U.S. Agricultural Commodity;

(b) There have not been any corrupt payments or extra sales services or other items extraneous to the transaction provided, financed, or guaranteed in connection with the transaction, and the transaction complies with applicable United States law, including the Foreign

Corrupt Practices Act of 1977 and other anti-bribery measures;

(c) If the U.S. Agricultural Commodity is vegetable oil or a vegetable oil product, that none of the agricultural commodity or product has been or will be used as a basis for a claim of a refund, as drawback, pursuant to section 313 of the Tariff Act of 1930, 19 U.S.C. 1313, of any duty, tax or fee imposed under Federal law on an imported commodity or product;

(d) At the time of submission of the application for Payment Guarantee, neither the Importer nor the Intervening Purchaser, if applicable, is present on either the SAM or the OFAC Specially Designated Nationals (SDN) lists;

(e) The Exporter is fully in compliance with the requirements of § 1493.130(b) for all existing Payment Guarantees issued to the Exporter or has requested and been granted an extension per § 1493.130(b)(3); and

(f) The information provided pursuant to § 1493.30 has not changed and the Exporter still meets all of the qualification requirements of § 1493.30.

§ 1493.90 Special requirements of the Foreign Financial Institution Letter of Credit and the Terms and Conditions Document, if applicable.

(a) *Permitted mechanisms to document special requirements.* (1) A Foreign Financial Institution Letter of Credit is required in connection with the export sale to which CCC's Payment Guarantee pertains. The Letter of Credit must stipulate presentation of at least one original clean on board bill of lading as a required document.

(2) The use of a Terms and Conditions Document is optional. The Terms and Conditions Document, if any, must be specifically identified and referred to in the Foreign Financial Institution Letter of Credit.

(3) The special requirements in paragraph (b) of this section must be documented in one of the two following ways:

(i) The special requirements may be set forth in the Foreign Financial Institution Letter of Credit as a special instruction from the Foreign Financial Institution; or

(ii) The special requirements may be set forth in a separate Terms and Conditions Document.

(b) *Special requirements.* The following provisions are required and must be documented in accordance with paragraph (a) of this section:

(1) The terms of the Repayment Obligation, including a specific promise by the Foreign Financial Institution issuing the Letter of Credit to pay the Repayment Obligation;

(2) The following language: "In the event that the Commodity Credit Corporation ("CCC") is subrogated to the position of the obligee hereunder, this instrument shall be governed by and construed in accordance with the laws of the State of New York, excluding its conflict of laws principles. In such case, any legal action or proceeding arising under this instrument will be brought exclusively in the U.S. District Court for the Southern District of New York or the U.S. District Court for the District of Columbia, as determined by CCC, and such parties hereby irrevocably consent to the personal jurisdiction and venue therein.";

(3) A provision permitting the Holder of the Payment Guarantee to declare all or any part of the Repayment Obligation, including accrued interest, immediately due and payable, in the event a payment default occurs under the Letter of Credit or, if applicable, the Terms and Conditions Document; and

(4) Post Default Interest terms.

§ 1493.100 Terms and requirements of the Payment Guarantee.

(a) *CCC's obligation.* The Payment Guarantee will provide that CCC agrees to pay the Holder of the Payment Guarantee an amount not to exceed the Guaranteed Value, plus Eligible Interest, in the event that the Foreign Financial Institution fails to pay under the Foreign Financial Institution Letter of Credit and, if applicable, the Terms and Conditions Document. Payment by CCC will be in U.S. dollars.

(b) *Period of guarantee coverage.* (1) The Holder of the Payment Guarantee may, with respect to a series of shipments made within a 30 calendar day period, elect to have the Payment Guarantee coverage being on the Weighted Average Export Date for such shipments. The first allowable 30 calendar day period for bundling of shipments to compute the Weighted Average Export Date for such shipments begins on the first Date of Export for transactions covered by the Payment Guarantee. Shipments within each subsequent 30 calendar day period may be bundled with other shipments made within the same 30 calendar period to determine the Weighted Average Export Date for such shipments.

(2)(i) The period of coverage under the Payment Guarantee begins on the earlier of the following dates and will continue during the credit term specified on the Payment Guarantee or any amendments thereto:

(A) the Date(s) of Export or the Weighted Average Export Date(s), as selected by the Holder of the Payment Guarantee consistent with paragraph (b)(1) of this section; or

(B) the date when Ordinary Interest begins to accrue, or the weighted average date when interest begins to accrue.

(ii) However, the Payment Guarantee becomes effective on the Date(s) of Export of the U.S. Agricultural Commodities specified in the Exporter's application for the Payment Guarantee.

(c) *Terms of the CCC Payment Guarantee.* The terms of CCC's coverage will be set forth in the Payment Guarantee, as approved by CCC, and will include the provisions of this subpart, which may be supplemented by any Program Announcements and notices to participants in effect at the time the Payment Guarantee is approved by CCC.

(d) *Final date to export.* The final date to export shown on the Payment Guarantee will be one month, as determined by CCC, after the contractual deadline for shipping.

(e) *Reserve coverage for loading tolerances.* The Exporter may apply for a Payment Guarantee and, if coverage is available, pay the guarantee fee, based on the mean of the lower and upper loading tolerances of the Firm Export Sales Contract; however, the Exporter may also request that CCC reserve additional guarantee coverage to accommodate up to the amount of the upward loading tolerance specified in the Firm Export Sales Contract. The amount of coverage that can be reserved to accommodate the upward loading tolerance is limited to ten (10) percent of the Port Value of the sale. If such additional guarantee coverage is available at the time of application and the Director determines to make such reservation, CCC will so indicate to the Exporter. In the event that the Exporter ships a quantity greater than the amount on which the guarantee fee was paid (i.e., the mean of the upper and lower loading tolerances), it may obtain the additional coverage from CCC, up to the amount of the upward loading tolerance, by filing for an application for amendment to the Payment Guarantee, and by paying the additional amount of fee applicable. If such application for an amendment to the Payment Guarantee is not filed with CCC by the Exporter and the additional fee not received by CCC within 21 calendar days after the date of the last export against the Payment Guarantee, CCC will cancel the reserve coverage originally set aside for the Exporter.

(f) *Certain export sales are ineligible for GSM–102 Payment Guarantees.* (1) An export sale (or any portion thereof) is ineligible for Payment Guarantee

coverage if at any time CCC determines that:

(1) The commodity is not a U.S. Agricultural Commodity;

(2) The export sale includes corrupt payments or extra sales or services or other items extraneous to the transactions provided, financed, or guaranteed in connection with the export sale;

(3) The export sale does not comply with applicable U.S. law, including the Foreign Corrupt Practices Act of 1977 and other anti-bribery measures;

(4) If the U.S. Agricultural Commodity is vegetable oil or a vegetable oil product, any of the agricultural commodity or product has been or will be used as a basis for a claim of a refund, as drawback, pursuant to section 313 of the Tariff Act of 1930, 19 U.S.C. 1313, of any duty, tax or fee imposed under Federal law on an imported commodity or product;

(5) Either the Importer or the Intervening Purchaser, if any, is excluded or disqualified from participation in U.S. government programs;

(6) The export sale has been guaranteed by CCC under another Payment Guarantee; or

(7) The sale is not an Eligible Export Sale.

(g) *Certain exports of U.S. Agricultural Commodities are ineligible for Payment Guarantee coverage.* The following exports are ineligible for coverage under a GSM–102 Payment Guarantee except where it is determined by the Director to be in the best interest of CCC to provide guarantee coverage on such exports:

(1) Exports of U.S. Agricultural Commodities with a Date of Export prior to the date of receipt by CCC of the Exporter's written application for a Payment Guarantee;

(2) Exports of U.S. Agricultural Commodities with a Date of Export later than the final date to export shown on the Payment Guarantee or any amendments thereof; or

(3) Exports of U.S. Agricultural Commodities where the date of issuance of a Foreign Financial Institution Letter of Credit is later than 30 calendar days after:

(i) The Date of Export, or

(ii) The Weighted Average Export Date, if the Holder of the Payment Guarantee has elected to have the Payment Guarantee coverage begin on the Weighted Average Export Date.

(h) *Additional requirements.* The Payment Guarantee may contain such additional terms, conditions, and limitations as deemed necessary or desirable by the Director. Such additional terms, conditions or qualifications as stated in the Payment Guarantee are binding on the Exporter and the Assignee.

(i) *Amendments.* A request for an amendment of a Payment Guarantee may be submitted only by the Exporter, with the written concurrence of the Assignee, if any. The Director will consider such a request only if the amendment sought is consistent with this subpart and any applicable Program Announcements and sufficient budget authority exists. Any amendment to the Payment Guarantee, particularly those that result in an increase in CCC's liability under the Payment Guarantee, may result in an increase in the guarantee fee. CCC reserves the right to request additional information from the Exporter to justify the request and to charge a fee for amendments. Such fees will be announced and available on the USDA Web site. Any request to amend the Foreign Financial Institution on the Payment Guarantee will require that the Holder of the Payment Guarantee resubmit to CCC the certifications in § 1493.120(c)(1)(i) or § 1493.140(d).

§ 1493.110 Guarantee fees.

(a) *Guarantee fee rates.* Payment Guarantee fee rates charged may be one of the following two types:

(1) Those that are announced on the USDA Web site and are based upon the length of the payment terms provided for in the Firm Export Sales Contract, the degree of risk that CCC assumes, as determined by CCC, and any other factors which CCC determines appropriate for consideration.

(2) Those where Exporters are invited to submit a competitive bid for coverage. If CCC determines to offer coverage on a competitive fee bid basis, instructions for bidding, and minimum fee rates, if applicable, will be made available on the USDA Web site. Under a competitive bidding process, the final guarantee fee rate will be determined by CCC and will be advised to the Exporter.

(b) *Calculation of fee.* The guarantee fee will be computed by multiplying the Guaranteed Value by the guarantee fee rate.

(c) *Payment of fee.* The Exporter shall remit, with his application, the full amount of the guarantee fee. Applications will not be accepted until the guarantee fee has been received by CCC. The Exporter's wire transfer or check for the guarantee fee shall be made payable to CCC and be submitted in the manner specified on the USDA Web site.

(d) *Refunds of fee.* Guarantee fees paid in connection with applications that are accepted by CCC will ordinarily not be refundable. Once CCC notifies an Exporter of acceptance of an application, the fee for that application will not be refunded unless the Director determines that such refund will be in the best interest of CCC, even if the Exporter withdraws the application prior to CCC's issuance of the Payment Guarantee. If CCC does not accept an application for a Payment Guarantee or accepts only part of the guarantee coverage requested, a full or pro rata refund of the fee will be made.

§ 1493.120 Assignment of the Payment Guarantee.

(a) *Requirements for assignment.* The Exporter may assign the Payment Guarantee only to a U.S. Financial Institution approved for participation by CCC. The assignment must cover all amounts payable under the Payment Guarantee not already paid, may not be made to more than one party, and may not, unless approved in advance by CCC, be:

(1) Made to one party acting for two or more parties, or

(2) Subject to further assignment.

(b) *CCC to receive notice of assignment of payment guarantee.* A notice of assignment signed by the parties thereto must be filed with CCC by the Assignee in the manner specified on the USDA Web site. The name and address of the Assignee must be included on the written notice of assignment. The notice of assignment should be received by CCC within 30 calendar days of the date of assignment.

(c) *Required certifications.* (1) The U.S. Financial Institution must include the following certification on the notice of assignment: "I certify that:

(i) [Name of Assignee] has verified that the Foreign Financial Institution, at the time of submission of the notice of assignment, is not present on either the SAM or OFAC Specially Designated Nationals (SDN) lists; and

(ii) To the best of my knowledge and belief, the information provided pursuant to § 1493.40 has not changed and [name of Assignee] still meets all of the qualification requirements of § 1493.40."

(2) If the Assignee makes a false certification with respect to a Payment Guarantee, CCC may, in its sole discretion, in addition to any other action available as a matter of law, rescind and cancel the Payment Guarantee, reject the assignment of the Payment Guarantee, and/or commence legal action and/or administrative proceedings against the Assignee.

(d) *Notice of eligibility to receive assignment.* In cases where a U.S. Financial Institution is determined to be

ineligible to receive an assignment, in accordance with paragraph (e) of this section, CCC will provide notice thereof to the U.S. Financial Institution and to the Exporter issued the Payment Guarantee.

(e) *Ineligibility of U.S. Financial Institutions to receive an assignment and proceeds.* A U.S. Financial Institution will be ineligible to receive an assignment of a Payment Guarantee or the proceeds payable under a Payment Guarantee if such U.S. Financial Institution:

(1) At the time of assignment of a Payment Guarantee, is not in compliance with all requirements of 1493.40(a); or

(2) Is the branch, agency, or subsidiary of the Foreign Financial Institution issuing the Letter of Credit; or

(3) Is owned or controlled by an entity that owns or controls the Foreign Financial Institution issuing the Letter of Credit; or

(4) Is the U.S. parent of the Foreign Financial Institution issuing the Foreign Financial Institution Letter of Credit; or

(5) Is owned or controlled by the government of a foreign country and the Payment Guarantee has been issued in connection with export sales of U.S. Agricultural Commodities to Importers located in such foreign country.

(f) *Repurchase agreements.* (1) The Holder of the Payment Guarantee may enter into a Repurchase Agreement, to which the following requirements apply:

(i) Any repurchase under a Repurchase Agreement by the Holder of the Payment Guarantee must be for the entirety of the outstanding balance under the associated Repayment Obligation;

(ii) In the event of a default with respect to the Repayment Obligation subject to a Repurchase Agreement, the Holder of the Payment Guarantee must immediately effect such repurchase; and

(iii) The Holder of the Payment Guarantee must file all documentation required by §§ 1493.160 and 1493.170 in case of a default by the Foreign Financial Institution under the Payment Guarantee.

(2) The Holder of the Payment Guarantee shall, within five Business Days of execution of a transaction under the Repurchase Agreement, notify CCC of the transaction in writing in the manner specified on the USDA Web site. Such notification must include the following information:

(i) Name and address of the other party to the Repurchase Agreement;

(ii) A statement indicating whether the transaction executed under the Repurchase Agreement is for a fixed term or if it is terminable upon demand by either party. If fixed, provide the purchase date and the agreed upon date for repurchase. If terminable on demand, provide the purchase date only; and

(iii) The following written certification: "[Name of Holder of the Payment Guarantee] has entered into a Repurchase Agreement that meets the provisions of 7 CFR 1493.120(f)(1) and, prior to entering into this agreement, verified that [name of other party to the Repurchase Agreement] is not present on either the SAM or OFAC Specially Designated Nationals (SDN) lists."

(3) Failure of the Holder of the Payment Guarantee to comply with any of the provisions of § 1493.120(f) will result in CCC annulling coverage on the Foreign Financial Institution Letter of Credit and Terms and Conditions Document, if applicable, covered by the Payment Guarantee.

§ 1493.130 Evidence of export.

(a) *Report of export.* The Exporter is required to provide CCC an evidence of export report for each shipment made under the Payment Guarantee. This report must include the following information:

(1) Payment Guarantee number;

(2) Evidence of export report number (e.g., Report 1, Report 2) reflecting the report's chronological order of submission under the particular Payment Guarantee;

(3) Date of Export;

(4) Destination country or region. If the sale was registered under a regional program, the Exporter must indicate the specific country or countries within the region to which the goods were shipped;

(5) Exporter's sale number;

(6) Exported Value;

(7) Quantity;

(8) A full description of the commodity exported;

(9) Unit sales price received for the commodity exported and the Incoterms 2010 basis (e.g., FOB, CFR, CIF). Where the unit sales price at export differs from the unit sales price indicated in the Exporter's application for a Payment Guarantee, the Exporter is also required to submit a statement explaining the reason for the difference;

(10) Description and value of Discounts and Allowances, if any;

(11) Number of the agreement assigned by USDA under the Dairy Export Incentive Program (DEIP) if any portion of the export sale was also approved for participation in the DEIP;

(12) The Exporter's statement, "All certifications set forth in 7 CFR 1493.140 are hereby being made by the Exporter in this Evidence of Export." which, when included in the evidence of export by the Exporter, will constitute a certification that it is in compliance with all the requirements set forth in § 1493.140; and

(13) In addition to all of the above information, the final evidence of export report for the Payment Guarantee must include the following:

(i) The statement "Exports under the Payment Guarantee have been completed."

(ii) A statement summarizing the total quantity and value of the commodity exported under the Payment Guarantee (i.e., the cumulative totals on all numbered evidence of export reports).

(b) *Time limit for submission of evidence of export.* (1) The Exporter must provide a written report to the CCC in the manner specified on the USDA Web site within 21 calendar days of the Date of Export.

(2) If at any time the Exporter determines that no shipments are to be made under a Payment Guarantee, the Exporter is required to notify CCC in writing no later than the final date to export specified on the Payment Guarantee by furnishing the Payment Guarantee number and stating "no exports will be made under the Payment Guarantee."

(3) Requests for an extension of the time limit for submitting an evidence of export report must be submitted in writing by the Exporter to the Director and must include an explanation of why the extension is needed. An extension of the time limit may be granted only if such extension is requested prior to the expiration of the time limit for filing and is determined by the Director to be in the best interests of CCC.

(c) *Failure to comply with time limits for submission.* CCC will not accept any new applications for Payment Guarantees from an Exporter under § 1493.70 until the Exporter is fully in compliance with the requirements of § 1493.130(b) for all existing Payment Guarantees issued to the Exporter or has requested and been granted an extension per § 1493.130(b)(3).

(d) *Export sales reporting.* Exporters have a mandatory reporting responsibility under Section 602 of the Agricultural Trade Act of 1978 (7 U.S.C. 5712), for exports of certain agricultural commodities and products thereof.

§ 1493.140 Certification requirements for the evidence of export.

By providing the statement contained in § 1493.130(a)(12), the Exporter is certifying that the information provided in the evidence of export report is true and correct and, further, that all

requirements set forth in this section have been met. The Exporter will be required to provide further explanation or documentation with regard to reports that do not include this statement. If the Exporter makes false certifications with respect to a Payment Guarantee, CCC, will have the right, in addition to any other rights provided under this subpart or otherwise as a matter of law, to annul guarantee coverage for any commodities not yet exported and/or to commence legal action and/or administrative proceedings against the Exporter. The Exporter, in submitting the evidence of export and providing the statement set forth in § 1493.130(a)(12), certifies that:

(a) The agricultural commodity or product exported under the Payment Guarantee is a U.S. Agricultural Commodity;

(b) The U.S. Agricultural Commodity was shipped to the Importer (or to the Importer's Representative, if applicable) in the country or region specified on the Payment Guarantee;

(c) There have not been any corrupt payments or extra sales services or other items extraneous to the transaction provided, financed, or guaranteed in connection with the export sale, and that the export sale complies with applicable United States law, including the Foreign Corrupt Practices Act of 1977 and other anti-bribery measures;

(d) If the Exporter has not assigned the Payment Guarantee to a U.S. Financial Institution, the Exporter has verified that the Foreign Financial Institution, at the time of submission of the evidence of export report, is not present on either the SAM or OFAC Specially Designated Nationals (SDN) lists;

(e) The transaction is an Eligible Export Sale; and

(f) The information provided pursuant to §§ 1493.30 and 1493.70 has not changed (except as agreed to and amended by CCC) and the Exporter still meets all of the qualification requirements of § 1493.30.

§ 1493.150 Proof of entry.

(a) *Diversion.* The diversion of U.S. Agricultural Commodities covered by a Payment Guarantee to a country or region other than that shown on the Payment Guarantee is prohibited, unless expressly authorized in writing by the Director.

(b) *Records of proof of entry.* (1) Exporters must obtain and maintain records of an official or customary commercial nature that demonstrate the arrival of the U.S. Agricultural Commodities exported in connection with the GSM–102 program in the country or region that was the intended country or region of destination of such commodities. At the Director's request, the Exporter must submit to CCC records demonstrating proof of entry. Records demonstrating proof of entry must be in English or be accompanied by a certified or other translation acceptable to CCC. Records acceptable to meet this requirement include an original certification of entry signed by a duly authorized customs or port official of the importing country, by an agent or representative of the vessel or shipline that delivered the U.S. Agricultural Commodity to the importing country, or by a private surveyor in the importing country, or other documentation deemed acceptable by the Director showing:

(i) That the U.S. Agricultural Commodity entered the importing country or region;

(ii) The identification of the export carrier;

(iii) The quantity of the U.S. Agricultural Commodity;

(iv) The kind, type, grade and/or class of the U.S. Agricultural Commodity; and

(v) The date(s) and place(s) of unloading of the U.S. Agricultural Commodity in the importing country or region.

(2) Where shipping documents (e.g., bills of lading) clearly demonstrate that the U.S. Agricultural Commodities were shipped to the destination country or region, proof of entry verification may be provided by the Importer.

§ 1493.160 Notice of default.

(a) *Notice of default.* If the Foreign Financial Institution issuing the Letter of Credit fails to make payment pursuant to the terms of the Letter of Credit or the Terms and Conditions Document, the Holder of the Payment Guarantee must submit a notice of default to CCC as soon as possible, but not later than 5 Business Days after the date that payment was due from the Foreign Financial Institution (the due date). A notice of default must be submitted in writing to CCC in the manner specified on the USDA Web site and must include the following information:

(1) Payment Guarantee number;

(2) Name of the country or region as shown on the Payment Guarantee;

(3) Name of the defaulting Foreign Financial Institution;

(4) Payment due date;

(5) Total amount of the defaulted payment due, indicating separately the amounts for principal and Ordinary Interest, and including a copy of the repayment schedule with due dates, principal amounts and Ordinary Interest rates for each installment;

(6) Date of the Foreign Financial Institution's refusal to pay, if applicable;

(7) Reason for the Foreign Financial Institution's refusal to pay. if known, and copies of any correspondence with the Foreign Financial Institution regarding the default.

(b) *Failure to comply with time limit for submission.* If the Holder of the Payment Guarantee fails to notify CCC of a default within 5 Business Days, CCC may deny the claim for that default.

(c) *Impact of a default on other existing Payment Guarantees.* (1) In the event that a Foreign Financial Institution defaults under a Repayment Obligation, CCC may declare that such Foreign Financial Institution is no longer eligible to provide additional Letters of Credit under the GSM–102 Program. If CCC determines that such defaulting Foreign Financial Institution is no longer eligible for the GSM–102 Program, CCC shall provide written notice of such ineligibility to all Exporters and Assignees, if any, having Payment Guarantees covering transactions with respect to which the defaulting Foreign Financial Institution is expected to issue a Letter of Credit. Receipt of written notice from CCC that a defaulting Foreign Financial Institution is no longer eligible to provide additional Letters of Credit under the GSM–102 Program shall constitute withdrawal of coverage of that Foreign Financial Institution under all Payment Guarantees with respect to any Letter of Credit issued on or after the date of receipt of such written notice. CCC will not withdraw coverage of the defaulting Foreign Financial Institution under any Payment Guarantee with respect to any Letter of Credit issued before the date of receipt of such written notice.

(2) If CCC withdraws coverage of the defaulting Foreign Financial Institution, CCC will permit the Exporter (with concurrence of the Assignee, if any) to utilize another approved Foreign Financial Institution, and will consider other requested amendments to the Payment Guarantee, for the balance of the export sale covered by the Payment Guarantee. If no alternate Foreign Financial Institution is identified to issue the Letter of Credit within 30 calendar days, CCC will cancel the Payment Guarantee and refund the Exporter's guarantee fees corresponding to any unutilized portion of the Payment Guarantee.

§ 1493.170 Claims for default.

(a) *Filing a claim.* A claim by the Holder of the Payment Guarantee for a defaulted payment will not be paid if it

is made later than 180 calendar days from the due date of the defaulted payment. A claim must be submitted in writing to CCC in the manner specified on the USDA Web site. The claim must include the following documents and information:

(1) An original cover document signed by the Holder of the Payment Guarantee and containing the following information:

(i) Payment Guarantee number;

(ii) A description of:

(A) Any payments from or on behalf of the defaulting party or otherwise related to the defaulted payment that were received by the Exporter or the Assignee prior to submission of the claim; and

(B) Any security, insurance, or collateral arrangements, whether or not any payment has been realized from such security, insurance, or collateral arrangement as of the time of claim, from or on behalf of the defaulting party or otherwise related to the defaulted payment.

(iii) The following certifications:

(A) A certification that the scheduled payment has not been received, listing separately scheduled principal and Ordinary Interest;

(B) A certification of the amount of the defaulted payment, indicating separately the amounts for defaulted principal and Ordinary Interest;

(C) A certification that all documents submitted under paragraph (3) of this section are true and correct copies; and

(D) A certification that all documents conforming with the requirements for payment under the Foreign Financial Institution Letter of Credit have been submitted to the negotiating bank or directly to the Foreign Financial Institution under such Letter of Credit.

(2) An original instrument, in form and substance satisfactory to CCC, subrogating to CCC the respective rights of the Holder of the Payment Guarantee to the amount of payment in default under the applicable export sale. The instrument must reference the applicable Foreign Financial Institution Letter of Credit and, if applicable, the Terms and Conditions Document; and

(3) A copy of each of the following documents:

(i) The repayment schedule with due dates, principal amounts and Ordinary Interest rates for each installment (if the Ordinary Interest rates for future payments are unknown at the time the claim for default is submitted, provide estimates of such rates);

(ii)(A) The Foreign Financial Institution Letter of Credit securing the export sale; and

(B) if applicable, the Terms and Conditions Document;

(iii) Depending upon the method of shipment, the negotiable ocean carrier or intermodal bill(s) of lading signed by the shipping company with the onboard ocean carrier date for each shipment, the airway bill, or, if shipped by rail or truck, the bill of lading and the entry certificate or similar document signed by an official of the importing country;

(iv)(A) The Exporter's invoice showing, as applicable, the FAS, FCA, FOB, CFR or CIF values; or

(B) If there was an Intervening Purchaser, both the Exporter's invoice to the Intervening Purchaser and the Intervening Purchaser's invoice to the Importer;

(v) The evidence of export report(s) previously submitted by the Exporter to CCC in conformity with the requirements of § 1493.130(a); and

(vi) If the defaulted payment was part of a transaction executed under a Repurchase Agreement, written evidence that the repurchase occurred as required under § 1493.120(f)(1)(ii).

(b) *Additional documents.* If a claim is denied by CCC, the Holder of the Payment Guarantee may provide further documentation to CCC to establish that the claim is in good order.

(c) *Subsequent claims for defaults on installments.* If the initial claim is found in good order, the Holder of the Payment Guarantee need only provide all of the required claims documents with the initial claim relating to a covered transaction. For subsequent claims relating to failure of the Foreign Financial Institution to make scheduled installments on the same export shipment, the Holder of the Payment Guarantee need only submit to CCC a notice of such failure containing the information stated in paragraph (a)(1)(i) and (ii) and (a)(1)(iii)(A) and (B) of this section; an instrument of subrogation as per paragraph (a)(2) of this section; and the date the original claim was filed with CCC.

(d) *Alternative satisfaction of Payment Guarantees.* CCC may establish procedures, terms and/or conditions for the satisfaction of CCC's obligations under a Payment Guarantee other than those provided for in this subpart if CCC determines that those alternative procedures, terms, and/or conditions are appropriate in rescheduling the debts arising out of any transaction covered by the Payment Guarantee and would not result in CCC paying more than the amount of CCC's obligation.

§ 1493.180 Payment for default.

(a) *Determination of CCC's liability.* Upon receipt in good order of the information and documents required under § 1493.170, CCC will determine whether or not a default has occurred for which CCC is liable under the applicable Payment Guarantee. Such determination shall include, but not be limited to, CCC's determination that all documentation conforms to the specific requirements contained in this subpart, and that all documents submitted for payment conform to the requirements of the Letter of Credit and, if applicable, the Terms and Conditions Document. If CCC determines that it is liable to the Holder of the Payment Guarantee, CCC will pay the Holder of the Payment Guarantee in accordance with paragraphs (b) and (c) of this section.

(b) *Amount of CCC's liability.* CCC's maximum liability for any claims submitted with respect to any Payment Guarantee, not including any CCC Late Interest payments due in accordance with paragraph (c) of this section, will be limited to the lesser of:

(1) The Guaranteed Value as stated in the Payment Guarantee, plus Eligible Interest, less any payments received or funds realized from insurance, security or collateral arrangements prior to claim by the Exporter or the Assignee from or on behalf of the defaulting party or otherwise related to the obligation in default (other than payments between CCC, the Exporter or the Assignee); or

(2) The guaranteed percentage (as indicated in the Payment Guarantee) of the Exported Value indicated in the evidence of export, plus Eligible Interest, less any payments received or funds realized from insurance, security or collateral arrangements prior to claim by the Exporter or the Assignee from or on behalf of the defaulting party or otherwise related to the obligation in default (other than payments between CCC, the Exporter or the Assignee).

(c) *CCC Late Interest.* If CCC does not pay a claim within 15 Business Days of receiving the claim in good order, CCC Late Interest will accrue in favor of the Holder of the Payment Guarantee beginning with the sixteenth Business Day after the day of receipt of a complete and valid claim found by CCC to be in good order and continuing until and including the date that payment is made by CCC. CCC Late Interest will be paid on the guaranteed amount, as determined by paragraphs (b)(1) and (2) of this section, and will be calculated at a rate equal to the average investment rate of the most recent Treasury 91-day bill auction as announced by the Department of Treasury as of the due date. If there has been no 91-day auction within 90 calendar days of the date CCC Late Interest begins to accrue, CCC will

apply an alternative rate in a manner to be described on the USDA Web site.

(d) *Accelerated payments.* CCC will pay claims only on amounts not paid as scheduled. CCC will not pay claims for amounts due under an accelerated payment clause in the Firm Export Sales Contract, the Foreign Financial Institution Letter of Credit, the Terms and Conditions Document (if applicable), or any obligation owed by the Foreign Financial Institution to the Holder of the Payment Guarantee that is related to the Letter of Credit issued in favor of the Exporter, unless it is determined to be in the best interests of CCC. Notwithstanding the foregoing, CCC at its option may declare up to the entire amount of the unpaid balance, plus accrued Ordinary Interest, in default, require the Holder of the Payment Guarantee to invoke the acceleration provision in the Foreign Financial Institution Letter of Credit or, if applicable, in the Terms and Conditions Document, require submission of all claims documents specified in § 1493.170, and make payment to the Holder of the Payment Guarantee in addition to such other claimed amount as may be due from CCC.

(e) *Action against the Assignee.* If an Assignee submits a claim for default pursuant to Section 1493.170 and all documents submitted appear on their face to conform with the requirements of such section, CCC will not hold the Assignee responsible or take any action or raise any defense against the Assignee for any action, omission, or statement by the Exporter of which the Assignee has no knowledge.

§ 1493.190 Recovery of defaulted payments.

(a) *Notification.* Upon claim payment to the Holder of the Payment Guarantee, CCC will notify the Foreign Financial Institution of CCC's rights under the subrogation agreement to recover all monies in default.

(b) *Receipt of monies.* (1) In the event that monies related to the obligation in default are recovered by the Exporter or the Assignee from or on behalf of the defaulting party, the Importer, or any source whatsoever (excluding payments among CCC, the Exporter, and the Assignee), such monies shall be immediately paid to CCC. Any monies derived from insurance or through the liquidation of any security or collateral after the claim is filed with CCC shall be deemed recoveries that must be paid to CCC. If such monies are not received by CCC within 15 Business Days from the date of recovery by the Exporter or the Assignee, such party will owe to CCC interest from the date of recovery to the date of receipt by CCC. This interest will be calculated at a rate equal to the latest average investment rate of the most recent Treasury 91-day bill auction, as announced by the Department of Treasury, in effect on the date of recovery and will accrue from such date to the date of payment by the Exporter or the Assignee to CCC. Such interest will be charged only on CCC's share of the recovery. If there has been no 91-day auction within 90 calendar days of the date interest begins to accrue, CCC will apply an alternative rate in a manner to be described on the USDA Web site.

(2) If CCC recovers monies that should be applied to a Payment Guarantee for which a claim has been paid by CCC, CCC will pay the Holder of the Payment Guarantee its pro rata share, if any, provided that the required information necessary for determining pro rata distribution has been furnished. If a required payment is not made by CCC within 15 Business Days from the date of recovery or 15 business days from receiving the required information for determining pro rata distribution, whichever is later, CCC will pay interest calculated at a rate equal to the latest average investment rate of the most recent Treasury 91-day bill auction, as announced by the Department of Treasury, in effect on the date of recovery and interest will accrue from such date to the date of payment by CCC. The interest will apply only to the portion of the recovery payable to the Holder of the Payment Guarantee.

(c) *Allocation of recoveries.* Recoveries received by CCC from any source whatsoever that are related to the obligation in default will be allocated by CCC to the Holder of the Payment Guarantee and to CCC on a pro rata basis determined by their respective interests in such recoveries. The respective interest of each party will be determined on a pro rata basis, based on the combined amount of principal and interest in default on the date the claim is paid by CCC. Once CCC has paid a particular claim under a Payment Guarantee, CCC pro-rates any collections it receives and shares these collections proportionately with the Holder of the Payment Guarantee until both CCC and the Holder of the Payment Guarantee have been reimbursed in full.

(d) *Liabilities to CCC.* Notwithstanding any other terms of the Payment Guarantee, under the following circumstances the Exporter or the Assignee will be liable to CCC for any amounts paid by CCC under the Payment Guarantee:

(1) The Exporter will be liable to CCC when and if it is determined by CCC that the Exporter has engaged in fraud, or has been or is in material breach of any contractual obligation, certification or warranty made by the Exporter for the purpose of obtaining the Payment Guarantee or for fulfilling obligations under the GSM–102 program; and

(2) The Assignee will be liable to CCC when and if it is determined by CCC that the Assignee has engaged in fraud or otherwise violated program requirements.

(e) *Cooperation in recoveries.* Upon payment by CCC of a claim to the Holder of the Payment Guarantee, the Holder of the Payment Guarantee and the Exporter will cooperate with CCC to effect recoveries from the Foreign Financial Institution and/or the Importer. Cooperation may include, but is not limited to, submission of documents to the Foreign Financial Institution (or its representative) to establish a claim; participation in discussions with CCC regarding the appropriate course of action with respect to a default; actions related to accelerated payments as specified in § 1493.180(d); and other actions that do not increase the obligation of the Holder of the Payment Guarantee or the Exporter under the Payment Guarantee.

§ 1493.191 Additional obligations and requirements.

(a) *Maintenance of records, access to premises, and responding to CCC inquiries.* For a period of five years after the date of expiration of the coverage of a Payment Guarantee, the Exporter and the Assignee, if applicable, must maintain and make available all records and respond completely to all inquiries pertaining to sales and deliveries of and extension of credit for U.S. Agricultural Commodities exported in connection with a Payment Guarantee, including those records generated and maintained by agents, Intervening Purchasers, and related companies involved in special arrangements with the Exporter. The Secretary of Agriculture and the Comptroller General of the United States, through their authorized representatives, must be given full and complete access to the premises of the Exporter and the Assignee, as applicable, during regular business hours from the effective date of the Payment Guarantee until the expiration of such five-year period to inspect, examine, audit, and make copies of the Exporter's, Assignee's, agent's, Intervening Purchaser's or related company's books, records and accounts concerning transactions relating to the Payment Guarantee, including, but not

limited to, financial records and accounts pertaining to sales, inventory, processing, and administrative and incidental costs, both normal and unforeseen. During such period, the Exporter and the Assignee may be required to make available to the Secretary of Agriculture or the Comptroller General of the United States, through their authorized representatives, records that pertain to transactions conducted outside the program, if, in the opinion of the Director, such records would pertain directly to the review of transactions undertaken by the Exporter in connection with the Payment Guarantee.

(b) *Responsibility of program participants.* It is the responsibility of all Exporters and U.S. and Foreign Financial Institutions to review, and fully acquaint themselves with, all regulations, Program Announcements, and notices to participants relating to the GSM–102 program, as applicable. All Exporters and U.S. and Foreign Financial Institutions participating in the GSM–102 program are hereby on notice that they will be bound by this subpart and any terms contained in the Payment Guarantee and in applicable Program Announcements.

(c) *Submission of documents by Principals.* All required submissions, including certifications, applications, reports, or requests (i.e., requests for amendments) by Exporters or Assignees under this subpart must be signed by a Principal of the Exporter or Assignee or their authorized designee(s). In cases where the designee is acting on behalf of the Principal, the signature must be accompanied by: wording indicating the delegation of authority or, in the alternative, by a certified copy of the delegation of authority; and the name and title of the authorized person or officer. Further, the Exporter or Assignee must ensure that all information and reports required under these regulations are timely submitted.

(d) *Misstatements or noncompliance by Exporter may lead to rescission of Payment Guarantee.* CCC may cancel a Payment Guarantee in the event that an Exporter makes a willful misstatement in the certifications in §§ 1493.80(b) and 1493.140(c) or if the Exporter fails to comply with the provisions of § 1493.150 or § 1493.191(a). However, notwithstanding the foregoing, CCC will not cancel its Payment Guarantee, if it determines, in its sole discretion, that an Assignee had no knowledge of the Exporter's misstatement or noncompliance at the time of assignment of the Payment Guarantee.

§ 1493.192 Dispute resolution and appeals.

(a) *Dispute resolution.* (1) The Director and the Exporter or the Assignee will attempt to resolve any disputes, including any adverse determinations made by CCC, arising under the GSM–102 program, this subpart, the applicable Program Announcements and notices to participants, or the Payment Guarantee.

(2) The Exporter or the Assignee may seek reconsideration of a determination made by the Director by submitting a letter requesting reconsideration to the Director within 30 calendar days of the date of the determination. For the purposes of this section, the date of a determination will be the date of the letter or other means of notification to the Exporter or the Assignee of the determination. The Exporter or the Assignee may include with the letter requesting reconsideration any additional information that it wishes the Director to consider in reviewing its request. The Director will respond to the request for reconsideration within 30 calendar days of the date on which the request or the final documentary evidence submitted by the Exporter or the Assignee is received by the Director, whichever is later, unless the Director extends the time permitted for response. If the Exporter or the Assignee fails to request reconsideration of a determination by the Director, then the determination of the Director will be deemed final.

(3) If the Exporter or the Assignee requests reconsideration of a determination by the Director pursuant to subparagraph (a)(2) of this section, and the Director upholds the original determination, then the Exporter or the Assignee may appeal the Director's final determination to the GSM in accordance with the procedures set forth in paragraph (b) of this section. If the Exporter or the Assignee fails to appeal the Director's final determination within 30 calendar days as provided in section 1493.192(b)(1), then the Director's decision becomes the final determination of CCC.

(b) *Appeal procedures.* (1) An Exporter or Assignee that has exhausted the procedures set forth in paragraph (a) of this section may appeal to the GSM for a determination of the Director. An appeal to the GSM must be made in writing and filed with the office of the GSM no later than 30 calendar days following the date of the final determination by the Director. If the Exporter or Assignee requests an administrative hearing in its appeal letter, it shall be entitled to a hearing before the GSM or the GSM's designee.

(2) If the Exporter or Assignee does not request an administrative hearing, the Exporter or Assignee must indicate in its appeal letter whether or not it will submit any additional written information or documentation for the GSM to consider in acting upon its appeal. This information or documentation must be submitted to the GSM within 30 calendar days of the date of the appeal letter to the GSM. The GSM will make a decision regarding the appeal based upon the information contained in the administrative record. The GSM will issue his or her written decision within 60 calendar days of the latter of the date on which the GSM receives the appeal or the date that final documentary evidence is submitted by the Exporter or Assignee to the GSM.

(3) If the Exporter or the Assignee has requested an administrative hearing, the GSM will set a date and time for the hearing that is mutually convenient for the GSM and the Exporter or Assignee. This date will ordinarily be within 60 calendar days of the date on which the GSM receives the request for a hearing. The hearing will be an informal procedure. The Exporter or Assignee and/or its counsel may present any relevant testimony or documentary evidence to the GSM. A transcript of the hearing will not ordinarily be prepared unless the Exporter or Assignee bears the costs involved in preparing the transcript, although the GSM may decide to have a transcript prepared at the expense of the Government. The GSM will make a decision regarding the appeal based upon the information contained in the administrative record. The GSM will issue his or her written decision within 60 calendar days of the latter of the date of the hearing or the date of receipt of the transcript, if one is to be prepared.

(4) The decision of the GSM will be the final determination of CCC. The Exporter or Assignee will be entitled to no further administrative appellate rights.

(c) *Failure to comply with determination.* If the Exporter or Assignee has violated the terms of this subpart or the Payment Guarantee by failing to comply with a determination made under this section, and the Exporter or Assignee has exhausted its rights under this section or has failed to exercise such rights, then CCC will have the right to take any measures available to CCC under applicable law.

(d) *Exporter's obligation to perform.* The Exporter will continue to have an obligation to perform pursuant to the provisions of these regulations and the terms of the Payment Guarantee

pending the conclusion of all procedures under this section.

§ 1493.195 Miscellaneous provisions.

(a) *Officials not to benefit.* No member of or delegate to Congress, or Resident Commissioner, shall be admitted to any share or part of the Payment Guarantee or to any benefit that may arise therefrom, but this provision shall not be construed to extend to the Payment Guarantee if made with a corporation for its general benefit.

(b) *OMB control number assigned pursuant to the Paperwork Reduction Act.* The information collection requirements contained in this part (7 CFR part 1493) have been approved by the Office of Management and Budget (OMB) in accordance with the provisions of 44 U.S.C. Chapter 35 and have been assigned OMB Control Number 0551–0004.

Dated: October 22, 2013.

Philip C. Karsting,

Administrator, Foreign Agricultural Service, and Vice President, Commodity Credit Corporation.

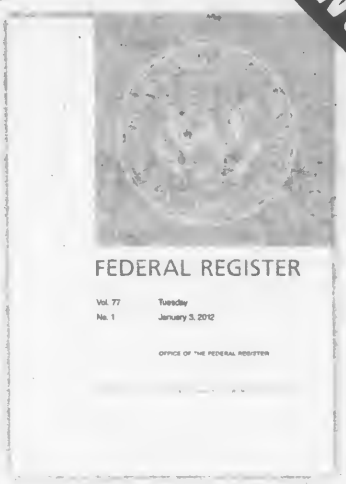
- **Official and authentic legal citations of Federal regulations**
- **Quick retrieval of specific regulations**
- **Invaluable research and reference tools**



The **Federal Register (FR)** is the official daily publication for rules, proposed rules, and notices of Federal agencies and organizations, as well as executive orders and other presidential documents. It is updated daily by 6 a.m. and published Monday through Friday, except Federal holidays.

The Unified Agenda (also known as the Semiannual Regulatory Agenda), published twice a year (usually in April and October) in the **FR**, summarizes the rules and proposed rules that each Federal agency expects to issue during the next year.

The **FR** has two companion publications. **The List of CFR Sections Affected (LSA)** lists proposed, new, and amended Federal regulations published in the **FR** since the most recent revision date of a **CFR** title. Each monthly **LSA** issue is cumulative and contains the **CFR** part and section numbers, a description of its status (e.g., amended, confirmed, revised), and the **FR** page number for the change. **The Federal Register Index (FRI)** is a monthly itemization of material published in the daily FR.

The FR is available as an annual subscription, which also includes the **LSA** and the **FRI**. To subscribe, use the order form below or go to the U.S. Government Online Bookstore:

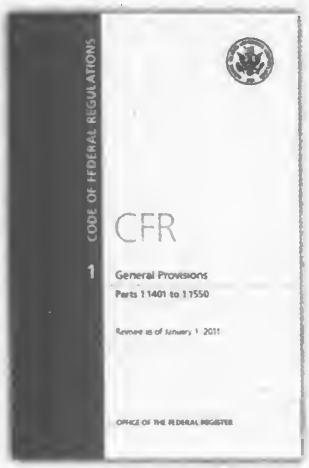
Find the Information You Need in the Code of Federal Regulations

ORDER NOW!



The Code of Federal Regulations (CFR) is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government. It is divided into 50 titles representing broad areas subject to Federal regulation. Each volume of the **CFR** is updated once each calendar year on a quarterly basis.

Each title is divided into chapters, which are further subdivided into parts that cover specific regulatory areas. Large parts may be subdivided into subparts. All parts are organized in sections and most **CFR** citations are provided at the section level.

Each year's **CFR** covers are printed in a different color for quick identification. **NOTE:** When a particular volume's content does not change from year-to year, only a cover is printed and sent to **CFR** subscribers.

The **CFR** is available as an annual calendar year subscription. All subscribers receive all back issues of the **CFR** whenever they subscribe during the calendar year.

To subscribe, use the order form below or go to the U.S. Government Online Bookstore:

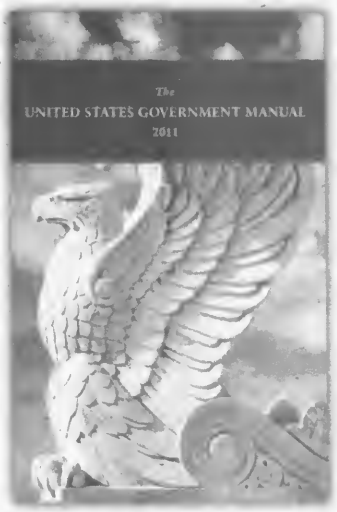
United States Government Manual 2011

The Ultimate Guide to all Federal Government Agencies and Services



The United States Government Manual 2011
SN: 069-000-00194-7
ISBN: 9780169874703
Domestic Price: $30.00
International Price: $42.00

As the official handbook of the Federal Government, the ***United States Government Manual*** is the best source of information on the activities, functions, organization, and principal officials of the agencies of the Legislative, Judicial, and Executive branches. It also includes information on quasi-official agencies and international organizations in which the United States participates.

Particularly helpful for those interested in where to go and who to contact about a subject of concern is each agency's "Sources of Information" section, which provides addresses and telephone numbers for use in obtaining specifics on consumer activities, contracts and grants, employment, publications and films, and many other areas of citizen interest. The Manual also includes a comprehensive name index for key agency officials.

Of significant interest is the History of Agency Organizational Changes, which lists the agencies and functions of the Federal Government abolished, transferred, or renamed subsequent to March 4, 1933.

The Manual is published by the Office of the Federal Register, National Archives and Records Administration.
