For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary).

This was area rather than pin point bombing and it was impossible in the early morning haze to tell whether any of the revetments were occupied either before or after releasing bombs. All planes had good bombing runs and placed all bombs dropped in areas aimed at. These bombs were seen to explode in and among revetments.

Ie Shima is an island in the Okinawa Gunto, in the Nansei Shoto about half way between Formosa and Kyushu, Japan.

This strike was made in conjunction with planes from the U.S.S. LANGLEY. The LANGLEY planeswere assigned the revetment areas surrounding the western runway and the SAN JACINTO planes to revetments surrounding the eastern runway. The various concentrations of revetments were assigned to specific planes and all revetment areas surrounding the eastern runway were thoroughly bombed.

The seven VT-45 planes, piloted by Lieutenants Piegari, Riley and Bertoglio, Lieut.(j.g.) Robinson, and Ensigns Dysert, Laughlin and Sharp, made their approach at 9,500 feet and bombs were dropped at an average altitude of 3,000 feet with pull out at 2,000 feet. The average glide angle was 30° and the average speed during the glide was 290 knots.

No anti-aircraft fire was observed in the target area.

REPORT PREPARED BY:

Six pilots dropped their bombs select on this strike. Of the 60 bombs in these planes, 59 dropped promptly and only 1 hung up. One pilot dropped by intervalometer with 25 foot setting. Of the 10 bombs in this plane only 5 dropped on the first run, and only 4 of the remaining 5 dropped on a second run. This result is consistent with the previously observed and reported fact that 100# G.P. bombs do not release properly on automatic release with intervalometer setting. On all strikes where 100# G.P. bombs have been used, superior dropping results have been achieved when they were dropped select.
