PREFACE

The mission of the National Institutes of Health is to protect and improve the health of the American people. To achieve this goal, NIH conducts biomedical research in its own laboratories; provides grants to nonprofit organizations and academic institutions for research; provides grants for the training of research investigators; supports biomedical communications through programs and activities of the National Library of Medicine; and provides grants for facilities and other resources required for cancer research. In addition, the research contract mechanism is used under appropriate circumstances.

Listings of NIH grants and research and development contracts are prepared annually by the Division of Research Grants. This book presents a listing of the research grants (including the research career development awards) awarded by NIH from fiscal year 1977 funds. Research grants awarded by other constituent agencies of the Public Health Service are not included in this volume.

TECHNICAL NOTE

Organization Identification

In the presentation of grants made from fiscal year 1977 funds, emphasis is placed on listing the organizations in the city and State of the unit in which professional responsibility of the principal investigator lies. Study of the structure of grantee organizations in the United States (primarily universities and colleges, and State Departments of Mental Health or their equivalents) has led to the following qualifications in the listing of their names:

1. Within a given city, if an institution of higher education is comprised of two or more campuses reporting directly to the central administration, each campus is listed separately.
2. In the listing of governmental organizations, Federal as well as non-Federal, the name of the parent department precedes that of the individual component, and the organization is listed as many times within a given city as there are components of the organization receiving grants.
3. If a foundation has been established for the purpose of receiving and administering funds for grants, the name and location of the organization having professional responsibility for the grant are shown rather than the name and location of the foundation. The name of the foundation is indicated in the Appendix if it differs materially from the name of the organization.
4. If an association receiving a grant has a fixed national headquarters, the grants are listed at the headquarters location. If however, the association does not have a fixed headquarters, the grants are listed in the city shown for this organization in either the Encyclopedia of Associations (1) or the Research Centers Directory (2).

These qualifications do not apply to foreign institutions or to some domestic organizations, because a systematic study of their organizational structure has not been made. Organizations which require a clarifying comment, or which appear in more than one geographical location are listed alphabetically in the Appendix.

Supplemental Awards

In this publication, supplemental awards are combined with the parent grant, or with other supplements, when both awards are made from the same fiscal year funds. Supplemental grants awarded in fiscal year 1977 to parent grants awarded in a previous fiscal year are

shown separately; if two or more such supplements were made during fiscal year 1977, these supplements are combined.

ABBREVIATIONS

The NIH component supporting a grant is indicated by the code letters in the left-hand column. These code letters form part of the identification of the grant number.

Notes on Selected Organizations

Organizations appearing in more than one geographical location or requiring a clarifying comment are listed below in alphabetical sequence. Comments on certain foundations or on organizations whose names have changed since last year appear after the name of the organization. The tables in which the organizations may be found are shown in parentheses following their locations.

DISCRIMINATION PROHIBITED: Under provisions of applicable public laws enacted by Congress since 1964, no person in the United States shall, on the ground of race, color, national origin, sex, or handicap, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. In addition, Executive Order 11141 prohibits discrimination on the basis of age by contractors and subcontractors in the performance of Federal contracts. Therefore, the National Institutes of Health grants and awards program, like every program or activity receiving financial assistance from the Department of Health, Education, and Welfare, must be operated in compliance with these laws and executive order.

PREFACE

The mission of the National Institutes of Health is to protect and improve the health of the American people. To achieve this goal, NIH conducts biomedical research in its own laboratories; provides grants to nonprofit organizations and academic institutions for research; provides grants for the training of research investigators; supports biomedical communications through programs and activities of the National Library of Medicine; and provides grants for facilities and other resources required for cancer research. In addition, the contract mechanism is used under appropriate circumstances.

Listings of NIH grants and research and development contracts are prepared annually by the Division of Research Grants. This book presents the fellowships, training grants, cancer research facilities construction, and medical library grants awarded by the National Institutes of Health from fiscal year 1977 funds. Awards for training and construction made by other constituent agencies of the Public Health Service are not included in this volume.

TECHNICAL NOTE

Organization Identification

In the presentation of grants made from fiscal year 1977 funds, emphasis is placed on listing the organizations in the city and State of the unit in which professional responsibility of the principal investigator lies. Study of the structure of grantee organizations in the United States (primarily universities and colleges, and State Departments of Mental Health or their equivalents) has led to the following qualifications in the listing of their names:

1. Within a given city, if an institution of higher education is comprised of two or more campuses reporting directly to the central administration, each campus is listed separately.
2. In the listing of governmental organizations, Federal as well as non-Federal, the name of the parent department precedes that of the individual component, and the organization is listed as many times within a given city as there are components of the organization receiving grants.
3. If a foundation has been established for the purpose of receiving and administering funds for grants, the name and location of the organization having professional responsibility for the grant are shown rather than the name and location of the foundation. The name of the foundation is indicated in the Appendix if it differs materially from the name of the organization.
4. If an association receiving a grant has a fixed national headquarters, the grants are listed at the headquarters location. If however, the association does not have a fixed headquarters, the grants are listed in the city shown for this organization in either the Encyclopedia of Associations (1) or the Research Centers Directory (2).

These qualifications do not apply to foreign institutions or to some domestic organizations, because a systematic study of their organizational structure has not been made. Organizations which require a clarifying comment, or which appear in more than one geographical location are listed alphabetically in the Appendix.

Supplemental Awards

In this publication, supplemental awards are combined with the parent grant, or with other supplements, when both awards are made from the same fiscal year funds. Supplemental grants awarded in fiscal year 1977 to parent grants awarded in a previous fiscal year are

shown separately; if two or more such supplements were made during fiscal year 1977, these supplements are combined.

ABBREVIATIONS

The NIH component supporting a grant is indicated by the code letters in the left-hand column. These code letters form part of the identification of the grant number.

DISCRIMINATION PROHIBITED: Under provisions of applicable public laws enacted by Congress since 1964, no person in the United States shall, on the ground of race, color, national origin, sex, or handicap, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. In addition, Executive Order 11141 prohibits discrimination on the basis of age by contractors and subcontractors in the performance of Federal contracts. Therefore, the National Institutes of Health grants and awards program, like every program or activity receiving financial assistance from the Department of Health, Education, and Welfare, must be operated in compliance with these laws and executive order.

PREFACE

The mission of the National Institutes of Health is to protect and improve the health of the American people. To achieve this goal, NIH conducts biomedical research in its own laboratories; provides grants to nonprofit organizations and academic institutions for research; provides grants for the training of research investigators; supports biomedical communications through programs and activities of the National Library of Medicine; and provides grants for facilities and other resources required for cancer research. In addition, the research contract mechanism is used under appropriate circumstances.

Listings of NIH grants and research and development contracts are prepared annually by the Division of Research Grants. This book presents a list of the contracts awarded by NIH from fiscal year 1977 funds and which were reported to the NIH central record system (IMPAC) as of December 28, 1977. Contracts reported in other systems at NIH are excluded from the report.

TECHNICAL NOTE

Explanation of the Contract Mechanism

The increasing importance of research contracts in the NIH extramural research programs has generated considerable analysis and discussion covering, among other aspects, the development of criteria for use of the contract mechanism. These criteria as listed in the NIH Guide for Grants and Contracts, Vol. 6, No. 13, July 1, 1977 are as follows:

BASIC CRITERIA Contracts are used for procurement of research and development when the following considerations obtain:

- a. the NIH procures a specific service or defined end product, including research, development, and related activities for identified NIH program needs, e. g., evaluation studies, technical assistance, surveys, consulting services, training projects where NIH selects the individuals or specifies the content of the program, planning for NIH use, production of publications or audiovisual materials (other than as results of R & D (research and development) projects or as proceedings of scientific conferences which are not being procured for use by the Government); and
- b. the NIH exercises direction or control under terms of the agreement by specifying the scope of the work and manner of performance and requires responsiveness by the performer in the event a change in direction of the effort is necessitated by program developments; and
- c. NIH staff closely monitors technical and administrative performance during the course of the activity to ensure that work on the project is accomplished in accordance with terms of the agreement.

MANDATORY USE OF CONTRACTS Notwithstanding any of the foregoing, selection of contracts is mandatory whenever:

- a. an award is made to a commercial, i.e., profit-making, organization; or
- b. material having a security classification is involved.

Organization Identification

In this presentation of research contracts, emphasis is placed on listing the organizations in the city and State of the unit in which professional responsibility of the project director lies. The major part of contractual activities are conducted by universities, research foundations, and commercial and industrial organizations across the Nation. Study of grantee organizations in the United States has led to the following qualifications in the listing of their names:

1. Within a given city, if an institution of higher education belonging to a system of higher education is comprised of two or more components, and each component has equal standing in the system, the name of the component is shown after the name of the institution.
2. If a foundation has been established for the purpose of receiving and administering funds, the name and location of the organization having professional responsibility for the contract are shown rather than the name and location of the foundation. The name of the foundation is indicated in the Appendix if it differs materially from the name of the organization.
3. In the listing of governmental organizations, Federal as well as non-Federal, the name of the parent department precedes that of the individual component, and there are as many listings within a given city as there are components of the organization receiving contracts.

In the case of industrial organizations and associations, professional responsibility is assumed to reside at the address of the contractor and not necessarily at the "site of performance." Divisions of parent organizations are shown if they are indicated on the contract, and subsidiaries are linked to parent organizations when the relationship is known.

These qualifications do not apply to foreign organizations or in all cases to organizations in the United States, either because of insufficient information or because of an organizational structure unique to a particular organization.

Organizations appearing in more than one geographical location or requiring a clarifying comment are listed in the Appendix in alphabetic sequence.

ABBREVIATIONS

The component of NIH supporting a contract is indicated by the code letters in the left-hand column. These code letters form part of the identification of the research contract number in Table 2.
