TO OUR CUSTOMERS.

TERMS OF BUSINESS, &c.

All orders from unknown Correspondents must be accompanied by a sufficient Remittance or satisfactory References; and to save cost and trouble of Booking, a Remittance should in all cases be sent with Orders under 10s. in value.

ACCOUNTS—DISCOUNTS.—All accounts are due net in three months, we however allow a discount of 1s. in the pound on all orders of 20s. and upwards when accompanied by a remittance, or when paid within fourteen days of date of invoice.

CHEQUES, MONEY ORDERS, AND POSTAL ORDERS.—Please make payable to DANIELS BROS., and cross "GURNEY & Co.," Norwich.

POSTAGE-STAMPS AND COIN.—All letters containing postage stamps should be registered before being posted. The registration fee is now only 2d., and this ensures a safe delivery. Letters containing coin *must* be registered.

BULBS PACKAGE AND CARRIAGE FREE.—We make no charge for packages, and in consequence of the great facilities now offered by the Parcel Post, and the cheaper rates of carriage by many of the Railway Companies, we are pleased to state that we have made arrangements for sending **all** Bulbs Post or Carriage free to any address in the United Kingdom; this will prove an especial boon to our customers residing in Scotland, Ireland, and distant parts of England and Wales.

CARRIAGE OF ROSES, FRUIT TREES, MUSHROOM SPAWN, &c.—We do not undertake to pay carriage on general orders for Roses, Fruit Trees, Ornamental Shrubs and Plants, but continue to enclose extra plants free of charge to compensate for carriage; nor can we undertake to pay carriage of such horticultural requisites as Mushroom Spawn, Silver Sand, &c. All plants, trees, shrubs, &c., will be so packed as to stand a journey of a week or ten days without injury. Should the packages arrive at their destination during a severe frost, it will be advisable not to unpack them, but keep them cool and moist out of the reach of the frost, until a change of weather takes place.

CHANGE OF RESIDENCE.—We shall esteem it a favour if our customers, on changing their residence, will kindly favour us with their new address, that we may be able to send them our Catalogues as usual.

RECOMMENDATIONS.—The many kind recommendations to new customers with which we have been honoured during the past season have been very gratifying. Should any of our customers have friends requiring Bulbs, &c., and to whom a copy of our *Illustrated Catalogue* would be acceptable, we shall feel much obliged for intimation of the fact.

NEW & RARE BULBS, PLANTS, &c.

THE BERMUDA BUTTERCUP OXALIS.

An Unrivalled Winter Flowering Pot Plant. Of the Easiest Culture, Succeeding with Everybody.

THIS is one of the finest Winter-flowering plants for pot culture that we have ever seen; it is such a strong luxuriant grower that one bulb will be sufficient for a six or eight inch pot. Place in a dark, cool position for a few weeks to root thoroughly, and remove to a sunny situation in the window or conservatory, in a temperature of about 60 fahr., and the great profusion of bloom produced in uninterrupted abundance for weeks will astonish and delight you. The flowers are of the purest bright buttercup yellow. Well grown plants have produced as high as seventy flower stems at one time, and over 1,000 flowers

THE BERMUDA BUTTERCUP OXALIS. Each 6d.; per doz. 5s.

in one season. The flowers and frequently the leaves fold up at night and open again the next morning, but when grown in a partially shaded situation the flowers remain open all the time. Properly treated the plants will flower in six weeks from the time the bulbs are planted.

We do not claim the Bermuda Buttercup Oxalis to be strictly a new plant, but a greatly improved selection from Oxalis cernua grown in the congenial soil and climate of Bermuda until the bulbs have attained great strength, producing bulbs, plants and flowers larger and more luxuriant in all parts than the type.

NEW AZALEA—Mollis X Sinensis.

ANTHONY KOSTER. A splendid, perfectly hardy hybrid of *Azalea Mollis* and *Azalea Sinensis*. The flowers are individually large, the petals broad, robust, and of a brilliant orange-yellow shade, shot with rose. It is a useful plant for flowering early under glass, and is altogether a superb type, brilliant in colour, and remarkably free, simply covering itself with blooms. It is one of the handsomest Azaleas in cultivation, and should be included in every collection. Each 5s.

SCABIOSA CAUCASICA ALBA (New).

A pure white variety of the beautiful *Scabiosa Caucasica*. It is perfectly hardy, a thorough perennial, and grows with the greatest freedom in almost any soil or situation, excepting a wet shady spot, and produces its flowers most abundantly from June to November. The blooms are pure white, three to four inches in diameter, and are borne on stout erect stems, and will remain in good condition for a week or longer. The plant grows about 2½ feet high, and has a very light and graceful appearance. This will be of especial value for cutting, and a valuable acquisition to all lovers of choice hardy flowers. Each 5s.

ANEMONE JAPONICA—Lady Ardilaun.

This is unquestionably one of the finest Novelties in Hardy Plants that has been introduced for many years. It is a variety of the old white Anemone Japonica Honorine Johert, distinct in foliage and growth, producing flowers considerably larger, petals broad and of great substance, like wax, and overlapping almost to the points, forming the most symmetrical flower imaginable, and of the purest white; it is distinct in every way from the old white variety, and will become exceedingly popular when better known. Each 2s. 6d.

GRAND NEW CROCUS.

MARGOT. An exceedingly fine variety, with large beautifully formed flowers of a charming heliotrope or pale lavender colour; quite distinct. Per 100, 4s. 6d.; per doz., 8d.

VICTOR HUGO. A distinct and very fine variety; the corms are larger than those of most other varieties, and throw up an abundance of very large, rich dark purple flowers. Per 100, 4s. 6d.; per doz. 8d.

BULBS FOR EARLY FORCING.

The following are specially recommended to the notice of those desiring a supply of flowers at Christmas and early in the New Year.

EARLY WHITE ROMAN.

Early White Roman Hyacinths.

Deliciously fragrant and very early-flowering variety. By planting early in September and gently forcing, the Early White Roman may be had in bloom in November, and a few successive plantings at intervals of about a fortnight will ensure a continuance of bloom till after Christmas.

		per doz.	per 100.	per 1000.

DOUBLE ROMAN.	Double flowers, white with orange nectary, very fragrant ...	1 6	10 6

LILY OF THE VALLEY.

For early forcing, single crowns of these should be planted about twelve in a five-inch pot, with the buds well above the surface. Cover the crowns with a little moss or an inverted flower pot and place them in a good heat of say 85 or 90 degrees; water frequently with tepid water, and if judiciously looked after they will bloom in four or five weeks from time of potting. Good German single crowns are much the best for this purpose.

LILIUM HARRISII (THE BERMUDA EASTER LILY).

A magnificent variety of the Longiflorum type but more floriferous, and the flowers are larger and of greater substance. The blooms are pure white, four to five inches in length, and deliciously fragrant. A splendid variety for pots and first-class for forcing. Potted up in September may be had in bloom at Christmas and the New Year, and by a few successive pottings and gentle forcing a supply of charming flowers may be kept up throughout the Winter. Having made large purchases of this superb Lily, direct from Bermuda, we are enabled to offer at the following low rates:—

Good Flowering Bulbs ... each 5d.; per doz. 4s. 6d.; per 100, 31s. 6d.
Extra fine Bulbs, 7 to 9 inches in circumference ... 9d.; " 7s. 6d.; " 55s. 0d.
Very fine Bulbs, 9 to 12 inches in circumference... 1s.; " 10s. 6d.; " 80s. 0d.

FREESIA REFRACTA ALBA.

Beautiful pure white deliciously-scented flowers; invaluable for cutting. Potted in September, six or eight in a five-inch pot, and forced in a gentle heat, may be had in bloom early in the New Year.

Strong flowering Bulbs ... per doz. 1s.; per 100, 7s. 6d.

DANIELS BROTHERS, SEED GROWERS AND NURSERYMEN, NORWICH.

NEW HYBRID BOURBON ROSE—MRS. PAUL.

A splendid and very distinct variety. The flowers are very large and open, with beautiful reflexed petals, resembling those of the Camellia, being large, thick, and perfectly arranged. The colour is a bluish white, tinted with rosy peach, whilst the foliage is bold, broad, and of a rich dark green, and the plants are very robust.

Strong Dwarfs or Bushes, 2s. each;
Standards, 3s. 6d. each.

HYBRID BOURBON ROSE—MRS. PAUL.

NEW POLYANTHA ROSE— Turner's Crimson Rambler.

This remarkable Rose was originally received from Japan. The plant is of very vigorous growth, making shoots from eight to ten feet in height during a season, and is consequently a most desirable climbing variety, and when pegged down or grown as a bush, a marvellous head of bloom is the result, the two year old wood producing trusses of flower on every growth. It is also exceedingly hardy, having successfully withstood the test in exposed situations of two very severe winters in England. The bright green glossy foliage with which the plant is covered very early in the Spring, forms a pleasing and striking contrast to the flowers which are produced in large trusses of pyramidal form, and of the brightest crimson colour, the blooms remaining on the plant for a great length of time, without falling or losing their brightness. The foliage is also retained to a great extent during the winter, making the plant almost an evergreen.

Three Gold Medals, as well as numerous First Class Certificates, have been awarded to this Rose.

Strong Plants, 3s. 6d. and 5s. each.

LORD PENZANCE'S HYBRID SWEET BRIARS.

A NEW AND CHARMING CLASS WHICH WILL BECOME HIGHLY POPULAR.

- AMY ROBSART.** Lovely deep rose, robust and free.
ANNE OF GIERSTEIN. Dark crimson, followed by an abundance of pretty clustered bunches of hips; graceful habit.
BRENDA. Maiden's blush or peach, dainty in colour and shade.
FLORA McIVOR. Pure white blushed with rose, perfect for cutting.
LADY PENZANCE. Beautiful soft tint of copper, with a peculiar metallic lustre; delightfully scented.

LORD PENZANCE. Soft shade of fawn or cream passing to a lovely lemon-yellow, sometimes toned with a most delicate pink.

LUCY ASHTON. Pretty white blooms with pink edges, free flowering; foliage very sweet.

MEG MERRILIES. Gorgeous crimson, very free flowering; seeds abundantly.

ROSE BRADWARDINE. Beautiful clear rose, perfect in shape; very profuse, strong, robust habit.

PAUL'S NEW CARMINE PILLAR ROSE.

Large single flowers $3\frac{1}{2}$ to 4 inches across, and of the brightest possible rosy-carmine, which are produced so abundantly that the last year's shoots, some ten to twelve feet long, were covered from base to top with large bunches of flowers breaking from every eye, the flowers in the bunches opening in succession. It seems absolutely hardy, and in every way admirably suited for planting in shrubberies and rosaries for effect. It is a great acquisition to Climbing Roses on account of its colour, its free, bold growth, and the sweet scent of its bloom.

CHINA ROSE—DUKE OF YORK.

The flowers are variable in colour between rosy-pink and white; sometimes pale with deep red centres, sometimes white edged and tipped with deep rosy-pink, in the way of *Homer*, but the pink shade deeper than in that variety, and the contrast of colour therefore more striking; always beautiful, and quite distinct from any other Rose; it is of vigorous growth and good habit; a splendid constantly flowering decorative rose.

GRAND NEW STRAWBERRY—ROYAL SOVEREIGN (Laxton).

This fine variety, the result of a cross between *Noble* and *King of the Earlies*, possesses all the qualities required in a really good Strawberry. The fruit is of the largest size, conical, and sometimes flattened in shape; the colour all over is a glossy bright scarlet, the flesh exceedingly firm and white, the seeds set in shallow basins projecting beyond the surface, enabling the fruit to carry well, the flavour is rich and vinous and quite equal to that of *British Queen*. It ripens a few days after *King of the Earlies*, and in the open air the first fruits are ready with *Noble*. The plant is very prolific, carrying several trusses of large fruits which ripen well to the extremity; it is also vigorous, hardy, and a good grower, the foliage very bold, and on good footstalks. **ROYAL SOVEREIGN** may be fairly looked upon as the long sought early, highly-flavoured, and improved *Sir Joseph Paxton*, and just the fruit wanted to precede that popular variety. As a forcing variety, *Royal Sovereign* is unequalled for early work. **Plants 20s. per 100; 3s. per dozen.** *Awarded First Class Certificate Royal Horticultural Society, 22nd June, 1892, and the only Strawberry certificated by the Society in 1893, after trial at Chiswick; also First Class Certificate, Gardening and Forestry Exhibition, Earl's Court, 14th May, 1893.*

CULTIVATION OF HYACINTHS.

THE Hyacinth is as conspicuous amongst early Spring flowers as is the Rose amongst our Summer favourites. It is pre-eminently "The Flower of Spring," and richly does it merit this high distinction, for few classes of plants, if any, embrace at once so wide a range of beautiful and distinctive variety of colouring with such delicious fragrance as is common to them all. No plant can be grown to so high a state of perfection with so little trouble, or will adapt itself so readily to almost any system of what may be termed artificial culture; grown in-doors in pots, pans, boxes, and glasses, jardinettes, baskets, in soil, cocoa-nut refuse, or damp moss, or out of doors on the open border, it appears equally at home, and will bloom "free and fragrant," as if grateful for the small amount of attention it receives. The Hyacinth forces well, and by judicious treatment may be had in bloom by Christmas, but "forced" spikes of bloom are not generally so fine as those which develop more slowly in the cool house, pit, or frame. Pot culture is by far the most important and successful of the many ways adopted in growing Hyacinths, and cultivated in this way no plant will produce more splendid effects in the greenhouse or conservatory in the Spring months, or is so indispensable as a window plant. Single, or double, they are all exceedingly beautiful, but if there is any excuse for distinction, the single-flowered varieties must bear away the palm for elegance and brilliancy, and perhaps for fragrance, although the individual bells are not always so large.

In selecting Hyacinth bulbs, it should be borne in mind that the largest and finest-formed are not always those which produce the finest spikes of bloom; for, although some are possessed of both these qualities, many of the finest varieties have rough, and in some instances, small and ill-shaped bulbs; all must, however, be well-ripened, firm, and solid, to produce really good flowers.

Cultivation in Pots.—Although the Hyacinth will ordinarily thrive in any good, light, rich soil, a long experience has taught us that the best possible mixture for growing Hyacinths in pots consists of about one-third each of good fibrous loam and well-decayed cow-dung, and the remainder of about equal parts of coarse gritty sand and leaf-mould. Thoroughly mix these at least a month before potting, keeping the mixture in a cool shed, or where it is not exposed to the weather. Forty-eight sized pots (five-inch) are generally preferred, but we have seen magnificent Hyacinths grown in much smaller, some indeed preferring three-and-a-half-inch pots for ordinary decorative purposes; where fine selected bulbs, however, are grown for exhibition, thirty-two sized (six-inch) are not considered too large. In potting, the soil should be in a moderately moist condition, and great care should be taken to ensure perfect drainage. Prepare the pots by placing a large hollow crock at the bottom, and a few smaller round it, and on these a little rough rich manure, or a few pieces of charcoal. Use the soil in its rough state as mixed, filling the pots quite full; take each bulb firmly in hand and press it well down into the soil, and finish off by firmly pressing down the soil round the bulb and filling up level, leaving the crown of the bulb just visible. After potting select for them a cool, sheltered position out of doors, and place them on a layer of coal ashes, cocoa-nut fibre, tan, or any similar light material, covering the pots with the same to the depth of five or six inches, and placing over them a few boards or slates to keep

off excessive rains. In about four or five weeks they will be found on examination to be nicely rooted, and those required for earliest blooming may be removed to the cool pit or frame preparatory to forcing, or their removal to the greenhouse; or they may remain in the plunging material and be brought forward as required in succession for later blooming; all should, however, be removed before they push their way through, and be gradually introduced to light and air, keeping them in a cool shady position till the leaves have fairly acquired their proper greenness. It may be here remarked, that a slow and steady development is at all times preferable for the production of really fine spikes of bloom; and that although the Hyacinth forces well, it should never be subjected to a higher temperature than seventy degrees, and should be removed from this to a cooler atmosphere as soon as the flower-spikes are formed, or a weakly growth of plant with a poor colour of flower will be the probable result. Hyacinths delight in an abundance of root moisture when growing, and are much improved by frequent manure waterings, and keeping the surface soil of pots loose by occasional stirring. Keep near the glass, give plenty of air, and tie to neat stakes if the spikes become too tall. A slight shading when in flower will assist in lengthening the time of blooming.

Time of Planting.—Those intended for early forcing should be planted in September, but October is decidedly the best month to plant for a general display in the greenhouse, etc. For later Spring-blooming a planting may be made about the second week in November, but late flowers may always be had by keeping back a few of the earlier-planted in a cool frame.

Cultivation in Glasses.—The single-flowered varieties are at all times to be preferred for this purpose. Fill the glasses with pure river or rain water so as to almost touch the base of the bulb, and place a small piece or two of charcoal in each to keep the water pure, after which place them in a cool dark closet for a few weeks, or till their roots have nearly reached the bottom, when they should be gradually brought to the light. As growth advances they should be kept as close as possible to the glass, have plenty of air and the benefit of wire supports before the spikes become top-heavy, replenishing the glasses from time to time as the water becomes absorbed. As Hyacinths in glasses will not thrive in rooms that are at times excessively heated by gas, etc., they should be removed at such times as occasion may require, but should never be subjected to great or sudden heat or cold.

Cultivation in the Open Ground.—Few objects are more beautiful in Spring than beds of choice Hyacinths, either in distinct colours or mixed. They succeed well in any good garden soil, but have a decided preference for that which is well-drained, light, and rich. Fork up the ground to the depth of eighteen inches, adding a liberal quantity of well-decayed manure, and if the ground is heavy a good portion of coarse sand. Plant the bulbs as early as convenient in October, about six inches apart, and with their crowns at least four inches below the surface; no protection will be necessary unless in very exposed situations, and then only in extremely severe weather. When blooming is over, and the leaves show signs of decay, the bulbs may be lifted to make way for the Summer bedding plants, and stored in a cool, dry place for future planting.

EARLY ROMAN HYACINTHS.

This deliciously fragrant and very early flowering variety should be much more extensively grown than it is at present. By planting early in September and gently forcing, the Early White Roman may be had in bloom in November, and a few successive plantings at intervals of about a fortnight will ensure a continuance of bloom till after Christmas. Both in bulb and flower they are smaller than the ordinary Hyacinth, and should consequently be planted five or six in a pot. The delicately scented pure white flowers, which are produced in great profusion, are exceedingly valuable to cut for bouquets, &c., coming at a season when there is usually a great scarcity.

From **Mr. L. TOLMIE**, Stronsay, Orkney.

Nov. 11th.

"The Hyacinths I had from you last year flowered splendidly. One White variety was exceedingly good."

From **Mr. W. J. YOUNG**, Rathfriland, Co. Down.

Oct. 29th.

"The Bulbs sent formerly were very fine indeed, especially the Hyacinths and Ranunculus, which produced some remarkably fine flowers."

From **Miss S. A. JONES**, Beaumaris.

Mar. 30th.

"The Hyacinths I had from you last year were the finest I ever had, and were much admired."

Daniels' Superb Named Hyacinths

For Exhibition.

Specially arranged Collections for Amateurs and Exhibitors, containing only the most distinct and beautiful varieties, selected from the choicest prize groups of the past season's exhibitions, or specially noted by us for their superior excellence.

Daniels' 12 Finest Exhibition Hyacinths.

Price 9s. 6d. Carriage Free.

From C. STEELE, Esq., Torquay.

Feb 20th.
 "The Hyacinths you sent me last December are nearly all on flower, and are very fine indeed."

From Mr. W. LIDDELL, North Road, Durham.

April 26th.
 "The Bulbs I have had from you are very good indeed."

From Mrs. MORTON, 20 Summer Hill, Nenagh.

"Mrs. Morton encloses P.O. to Messrs. Daniels Bros. for Collection of Choice Flower Roots, with which she is very much pleased."

From Dr. HOWLIN, Woking.

Nov. 17th.
 "The Tulipe I had from you last year turned out very fine."

Daniels' Choice Named Hyacinths.

The following list, which has been carefully revised, includes all the finest sorts noted by us during our last visit to the Dutch Bulb Grounds, besides the best of the fine Varieties shown at the Royal Horticultural Society's and other great Exhibitions during the last Spring, and we have much confidence in recommending them as the best that can be grown for Exhibition and decorative purposes.

EXHIBITION HYACINTH.

* It is supposed by many of the inexperienced that the best Hyacinths are those which produce double flowers; this is by no means correct, there being many more of the single varieties producing fine, free, and brilliant spikes of bloom than of the double.

D denotes double, S single flowered varieties.

GENERAL LIST.—Section I.

SCARLET, RED, ROSE, CRIMSON, CARMINE, ETC.

	each—s.	d.
Alida Catharina (D). Fine deep rose	per doz. 5s.	0 6
Amy (S). Scarlet, handsome truss	per doz. 3s. 6d.	0 4
Bouquet Royale (D). Pink, good	per doz. 5s.	0 6
Caviagnac (S). Fine rose, splendid form	...	1 0
Cardinal Wiseman (S). Dark pink, largo flower	...	1 6
Charles Dickens (S). Creamy rose, with pale carmine stripes, fine long spike, superb	...	0 9
City of London (D). Delicate rose, fine truss	...	1 3
Countess of Rosebery (S). New. Dark red, largo truss, fine	...	1 0
D'Israeli (D). Fino red, good spike, much superior to Waterloo	...	0 8
Duchess of Albany (S). Dark red, large compact spike	...	0 8
Duke of Albany (D). New. Rich crimson, centre black, handsome compact spike	...	1 6
Duke of Avondale (S). Bright red, crimson shaded; splendid	...	1 0
Etna (S). Brilliant rose, carmine-striped, very fine	...	1 0
Fabiola (S). Light rose, with deep red stripes, magnificent spiko	per doz. 5s.	0 6
Garibaldi (S) Glowing carmine, magnificent spike	...	0 9
General Pellisier (S). Deep crimson, fine spiko	...	0 6
George Peabody (D). Semi-double, clear bright rosy crimson, very fine	...	0 10
Gertrude (S). Light red, good truss	per doz. 5s.	0 6
Grand Concurrent (D). Light rose, shaded pink	...	0 7
Incomparable (S). Scarlet, fine dark	...	0 8
King of the Reds (S). New. Brilliant carmine, with white eye, magnificent variety. First Class Certificate, Royal Horticultural Society	...	1 6
King of Scarlets (S). New. Very deep scarlet	...	1 6
Koh-i-noor (D). Semi-double bright salmon pink; distinct and splendid	...	1 0
La Belle (S). Delicate pink, enormous large spike	...	3 0
Lady Palmerston (S). Beautiful bright rose, with distinct white eye	...	1 3
Linnæus (S). Dark red, fine truss, beautiful	...	0 10
Lord Percy (S). Deep rose pink, fine truss	...	0 9
Macaulay (S). Rose and carmine, splendid	...	0 6
Madame Hodson (S). Fine red	per doz. 5s.	0 6
Maria Cornelia (S). Bright rose, magnificent spiko	...	0 6
Moreno (S). Rosy blush, immense spike, superb	...	0 9
Mr. Stanley (S). Dark carmine red, fine spike	...	1 0
Mrs. Beecher Stowe (S). Delicate rose, superb	per doz. 6s.	0 7
Noble par Merite (D). Dark rose, striped, extra fine spiko	per doz. 3s. 6d.	0 4
Ornament Rose (S). Delicate rose, immense large spike	...	1 3
Prince Albert Victor (S). Crimson scarlet, fine truss	...	0 9
Prince of Orange (D). Bright red, fine	...	0 7
Prince of Wales (S). Bright rosy crimson with carmine stripe	...	0 9
Princess Alexandra (D). Delicate pink, large spike, and beautiful bells	...	0 6
Princess Charlotte (S). Beautiful bright red, good spike	per doz. 6s.	0 7
Princess Helene (S). Light rose, tinged white, large truss, splendid	...	0 9

Hyacinths (Section I.) (continued).

	each—s. d.		each—s. d.

HYACINTHS GROWING IN HOLLAND.

Daniels' Choice Named Hyacinths.

IN DISTINCT AND BEAUTIFUL COLOURS, WITH NAMES, FOR BEDDING.

Specially selected for simultaneous blooming.

These when planted judiciously in large or small beds, are very striking and effective. The single-flowered varieties being the most distinct in colour, and the best for beds, we invariably send these in preference to the double.

Early White Roman Hyacinths.

THIS deliciously fragrant and very early flowering variety should be much more extensively grown than it is at present. By planting early in September and gently forcing, the Early White Roman may be had in bloom in November, and successive plantings at intervals of about a fortnight will ensure a continuance of bloom from that time till April. Both in bulb and flower they are smaller than the ordinary Hyacinth, and should consequently be planted five or six in a pot. The delicately scented pure white flowers, which are produced in great profusion, are exceedingly valuable to cut for bouquets, &c., coming at a season when there is usually a great scarcity; they are always in demand where cut flowers are in request.

CULTIVATION OF TULIPS.

NOTHING can surpass the brilliant and charming effect produced by the judicious planting of these in beds of well selected colours and varieties, and grown in this way or planted in clumps or lines of distinct colours, in association with Narcissi and other Spring flowers, or as broad marginal lines in front of shrubby borders, their effect when in bloom is strikingly beautiful. Tulips are perfectly hardy and are easily cultivated, and will grow to perfection out of doors in almost any soil that is fairly rich and open and not too wet; a light rich sandy soil is, however, the best, and if possible an open sunny position should be selected for them, where they are sheltered from cutting east winds in Spring. The best time for outdoor planting is in October or November, and the bulbs should be planted at a depth of four or five inches and about six inches apart. No after culture is necessary, beyond a slight stirring and regulating of the surface of the beds with the point of a trowel or anything similar, when the plants are fairly above the ground. When blooming is over and the leaves show signs of decay, they may, if necessary, be carefully taken up and stored, to make room for the Summer bedding plants. When grown in pots they should be potted firmly three to five or seven bulbs in a pot, according to size, and the soil used and their after treatment may be precisely like that adopted for Hyacinths. For forcing purposes the Van Thols are the earliest, and by early potting and gentle forcing these may be had well in bloom at Christmas. The Pottebakkers, from their earliness and dwarfness of habit also rank high for this purpose; but all the early single-flowered varieties are almost equally suitable, as are also many of the earlier double-flowered section, notably the Tournesols, Blanche Hative, Imperator Rubrorum, and Due van Thol. Planted closely in shallow trays or boxes of light rich soil or well-decayed manure and leaf-mould, and placed in a gentle heat, early Tulips are exceedingly useful to transfer, when coming into bloom, to jardinottes, hanging-baskets, &c., filled with cocoa-nut refuse or soil. Generally speaking the single-flowered varieties are by far the most brilliant and showy for outdoor planting, although perhaps individually not so massive and rich in appearance or so durable as the double-flowered sorts. The old species "Gesneriana," with its dazzling crimson flowers, is the best of all the late varieties: it is somewhat tall, but grown in large beds or masses is grandly effective; it also possesses the merit of being very cheap.

Choice Single Tulips for Bedding.

All blooming about the same time. Specially effective for planting in beds or masses of distinct colours.

New Darwin Tulips.

A grand new strain of uni-coloured varieties that bid fair to attain to great popularity. The very large flowers are borne on tall stems in the way of the Late or Florists' Tulips, and are of the most surpassing beauty. The colours range from white through all the shades of rose, carmine, scarlet, purple, violet, cerise, &c.; the stout erect petals having a peculiar metallic lustre that is very striking. They are late blooming and come into flower at a most welcome period,—between the bulbs and bedding plants,—and last for a much longer time than the earlier flowering varieties. The bulbs should be planted in October or November, about four inches deep and five or six inches apart; they will thrive in any good garden soil.

Late English, or Florists' Single Tulips.

BLOOM IN MAY.

This fine old class of Florists' Flowers, good collections of which have become scarce of late years, was formerly held in high estimation amongst the English and Continental Florists, who at times paid enormous prices for particular varieties when adding to their collections. But although not now so much grown as formerly, late Tulips are well worthy of cultivation, and any one having space for a Tulip bed, would be amply repaid for their small trouble by a display of rare and peculiar beauty.

October is the best month for planting, and to grow them to perfection the bulbs should be planted four or five inches deep, in well-prepared beds of at least a foot deep of sandy loam, leaf-mould, and well-decayed cow-dung, with the addition of a little sharp sea-sand, giving a slight protection to the beds in severe weather in Winter by a covering of litter or other light material, and if intended for exhibition, the blooms should be protected from the weather by a covering of canvas or glass. Grown in this way these fine Tulips will often attain a height of from three to four feet, bearing noble flowers, the markings and featherings of which are in many instances exquisitely beautiful. Late Tulips will, however, bloom finely with a much more easy process of culture, and are admirably suited for planting in groups on mixed beds or borders, in front of shrubs, and as they bloom later than other Tulips, they generally afford a fine display at a time when our flower beds are but poorly filled.

The Late or Florists' Tulips, although not perhaps so neat in their habit of growth as the early single-flowered varieties, are well worthy of a place in every garden. They will thrive in any good ordinary garden soil, and when in bloom afford a rich treat in the rare and peculiar beauty of their flowers.

- Bouton d'Or.** Deep golden yellow; very showy
per doz. 1s. 6d.
- Bridesmaid.** Brilliant scarlet, striped with white
per doz. 1s. 6d.

- White Ground Varieties.** Very choice, equal to named sorts ... per doz. 1s. 6d.
- Extra choice mixed.** From named sorts, Bybløemens, Bizards, Roses, &c. ... per 100. 6s. 6d.; per doz. 1s.

TULIPA GREIGI.

Tulips—Distinct Species.

- GREIGI.** A grand species from Turkestan, with beautiful striped or spotted leaves and brilliant orange crimson flowers, the base of each petal conspicuously marked with black. It is perfectly hardy, and planted in a sheltered spot in the garden where it is not disturbed, it will come up and bloom finely every Spring. A highly effective and interesting variety ... per doz. 7s. 6d.; each 9d.
- Clusiana.** White, striped red, with violet centre; beautiful ... per doz. 3s. 6d.
- Cornuta (The Chinese Parrot Tulip).** Long twisted petals; very distinct ... per doz. 2s. 6d.
- Elegans.** Rich carmine, handsomely reflexed ... 1s. 6d.
- Gesneriana (Gesner's Superb Tulip).** Intense crimson scarlet, flowers large; a fine and effective species ... per 100, 5s.; per doz. 9d.
- Oculus Solis (Sun's-eye Tulip).** An exceedingly brilliant species ... per doz. 2s. 6d.
- Persica (syn. Breyniana).** An exceedingly interesting species, of a dwarf habit of growth, and with yellow and brown flowers, very fragrant ... per doz. 1s. 6d.
- Sweet-scented Florentine.** Flowers yellow, deliciously fragrant ... per doz. 1s. 6d.
- Viridiflora.** Green, very distinct ... 1s. 6d.

From Mrs. TAYLOR, All Cannings.

May 2nd.

"The Tulips supplied by Messrs. Daniels are now in full bloom, and are much admired by every one who sees them; they are certainly most lovely."

From Mr. R. BACKHOUSE, Skipton.

March 24th.

"The Bulbs I have had from your establishment have bloomed exceedingly well."

Parrot, or Dragon Tulips.

Singularly grotesque and handsome varieties, having large showy flowers curiously marked with various beautiful colours. Afford a striking effect planted in lines or groups in front of shrubs, and should always be grown by way of contrast with other varieties.

Narcissi or Daffodils.

THE prominence given to these beautiful hardy flowers at many of our Spring Flower Shows in recent years, and the many choice and extremely beautiful varieties lately introduced and exhibited, have led to a wonderful increase in their popularity amongst the horticultural public; and it may be fairly assumed that no one having a garden can dispense with at least some few of the many choice sorts, now procurable at a moderate price. The Narcissi are extremely hardy, easy of cultivation, suitable alike for the greenhouse or the open garden, and especially valuable as cut flowers for Church or Home decoration, in which it must be admitted they are possessed of a charm and beauty beyond almost any other Spring flower, imparting an air of finish and refinement unattainable by any other hardy plant in existence.

Cultivation Out of Doors.—The cultivation of Narcissi in the open garden is extremely simple, indeed, where the soil is fairly rich, and the position favourable, they merely require to be planted and left undisturbed for several years, to ensure the most pleasing results. Planted in partially shaded positions under trees, or in front of shrubs, they are equally at home; but never appear to greater advantage than when growing in substantial clumps of six or eight roots in a clump, in association with other Spring-flowering plants, and where their elegance and beauty is most attractive. Planting in the open ground should take place as early as convenient in Autumn, and the bulbs should be planted six or eight inches apart, with their crowns three or four inches below the surface, selecting if possible a partially shaded position, where the bulbs are not likely to be disturbed for a few years. Should the soil be poor, it may be enriched by the addition of some well-decayed cow dung, the best that can be used for this purpose, and a top-dressing to the beds in Winter of some short well-decayed manure will greatly add to their vigour in early Spring, and some grand flowers for exhibition may be had.

Every third or fourth year in July or August the bulbs should be carefully taken up, the clumps divided and replanted in the manner suggested.

Cultivation in Pots.—All the varieties contained in the following list are suitable for pot culture, and grown in this way may be had in bloom much earlier. Use a light rich soil, and pot firmly three or five, according to size, in a six-inch pot. Plunge the pots in some light material in the way recommended for Hyacinths, and when the roots are formed and growth has commenced at the top, remove for a few days to a cool pit, after which transfer to the greenhouse, keeping them close as convenient to the glass. After being in the greenhouse for a week or ten days, those required for early blooming may be plunged in a good bottom-heat, and if kept well supplied with tepid water, may be had in bloom in a very short time, whilst those remaining in the greenhouse or cool pit will afford a later succession. The beautiful little white *N. triandrus* and the miniatures *juncifolius* and *cyclamineus*, having very small bulbs, should be planted eight to twelve in a six-inch pot, and have a very pretty effect when in bloom. Blooms required for decoration are best cut just before they expand, and placed with their stems in water in a cool room: they will soon open to their fullest extent, and will retain their freshness and beauty for a much longer time than if remaining on the plant.

Choice Narcissi in Collections.

From a horticultural point of view, nothing can be more interesting than a well-grown collection of these beautiful hardy flowers. We have therefore much pleasure in recommending the following choice collections of Narcissi, which are carefully made up to ensure the best variety, and according to price, will include such fine varieties as Horsfieldi, Emperor, Pallidus præcox, Sir Watkin, Johnstoni, Queen of Spain, Rugilohus, Moschatus, Barri conspicuus, Empress, Countess of Annesley, Princess Mary, Princeps, Obvallaris, Bulhocodium, Poeticus ornatus, and other fine sorts, from the Leedsi, Incomparabilis, and Trumpet sections.

Narcissi or Daffodils.

The following list, which has been carefully revised, and to which we have made several important additions, contains what we consider the cream of the Narcissi, and includes all the finest of those exhibited at the Great London and other shows.

Division I.—Magni-Coronatæ.

The flowers of this section have the trumpet as long, or rather longer than the divisions of the perianth.

	per doz.	each.
	s. d.	s. d.
Ard Righ (Yellow King). One of the finest of the yellows; immense bright golden yellow flowers, very early	3 0	0 4
BICOLOR, "EMPRESS" (The Queen of Daffodils). The finest of the bicolor section; immense flowers, bright golden yellow trumpet, white perianth; a grand variety for cutting	8 0	0 9
" HORSFIELDI. Similar to "Empress," but earlier; one of the largest and most beautiful in cultivation; splendid for cutting; very free flowering	5 6	0 6
" GRANDEE (<i>marimus</i>). A splendid variety, with flowers of same colour and as large as "Empress," but blooming about ten days later	5 6	0 6
" MICHAEL FOSTER. Large yellow trumpet, and sulphury perianth, distinct and beautiful	7 0	0 8
BULBOCODIUM (The Hoop Petticoat Narcissus). Beautiful golden-yellow, with large expanded trumpet; splendid for pots or clumps on the border; fine selected roots	per 100, 12s. 6d.	1 9 0 2
" citrina. A beautiful sulphur-coloured variety of the preceding, but a little earlier	10s. 6d.	1 6 0 2
" monophyllus (<i>elusi</i>). (The White Hoop Petticoat Narcissus). Pure white small Eucharis-like blooms, requires a slight protection in Winter and blooms under glass in February	2 6	0 3
CAPAX PLENUS (Queen Anne's Double Daffodil). Pale lemon star-shaped double flowers; very distinct and beautiful; fine for button-holes or dress	10 6	1 0
CAPTAIN NELSON. A very large handsome trumpet Daffodil; large rich yellow petals, and long broad spreading trumpet	—	6 0
COUNTESS OF ANNESLEY. Large, rich, full, yellow trumpet, with large sulphur-yellow hooded perianth	5 6	0 6
Cyclamineus major. A charming and distinct little variety, with elegant trumpet and gracefully reflexed petals; a deep yellow. F.C.C.	2 9	0 3
EMPEROR. The grandest of all the yellow Daffodils; flowers of an immense size and great substance, with clear golden yellow trumpet and broad primrose-coloured perianth; magnificent and indispensable variety (scarce)	10 6	1 0
Golden Spur. A very fine form, immense golden trumpet, with spreading yellow perianth	5 0	0 6
HENRY IRVING. A magnificent and striking variety of immense size and fine substance, rich golden-yellow trumpet and broad clear yellow perianth	5 0	0 6
Hume's Giant. A very large and remarkable hybrid Daffodil, very large expanded yellow trumpet	5 0	0 6
JOHNSTONI, QUEEN OF SPAIN (new 1890). A most lovely Daffodil of distinct colouring and form. To any other known variety; the trumpet is of elegant outline, while the petals are reflexed like a Cyclamen, both are of uniform colour, a soft clear delicate yellow. It is of robust constitution and a free bloomer	4 6	0 6
LADY GROSVENOR. Perianth white, trumpet sulphur white, elegantly recurved, beautiful	—	1 6
MAXIMUS (true). Immense flowers, trumpet and perianth deep golden yellow; one of the finest	5 0	0 6
Minimus (Smallest Daffodil). Dwarf, early, golden yellow; a gem for pots, rockeries, &c.	2 6	0 3
MOSCHATUS of Haworth. A beautiful dwarf species growing only six inches high, trumpet and perianth pure white, the perianth elegantly twisted	2 6	0 3
" Albicans (The Great Spanish Daffodil). Large hold primrose trumpet and perianth, changing to white as the flowers become fully expanded	5 6	0 6
" CERNUUS. Trumpet and divisions of the same length; pale lemon changing to silvery white; beautiful variety	7 0	0 8
" William Goldring. Pale lemon-coloured trumpet, with very long silvery white divisions; one of the most distinct	—	1 0
Mrs. J. B. M. Camm. White perianth, trumpet sulphur white; a large and exceedingly handsome flower. F.C.C.	—	4 6
OBVALLARIS (The Tenhy Daffodil). Divisions and trumpet bright golden yellow; well-expanded, handsome flowers; very early and forces well; a gem for cutting	per 100, 10s. 6d.	1 6 0 2
Pallidus præcox. Very early, a distinct and chaste variety with beautifully formed flowers, trumpet and perianth of a delicate sulphury-yellow	per 100, 10s. 6d.	1 6 0 2
Princeps. Immense pale yellow trumpet with sulphury divisions; a very fine and distinct variety; excellent for forcing or cutting	1 6	0 2
Pseudo-Narcissus (Single Daffodil or Lent Lily)	per 100, 3s.	0 6 —
Rugilobus. Flowers same form and colour as "Emperor," but smaller and earlier; a fine variety	2 6	0 3
SANTA MARIA. A remarkably handsome and distinct early Spanish Daffodil. Flowers of similar form and size to those of "Leda," but of the richest deep orange colour; very beautiful	7 6	0 8
TELAMONIUS PLENUS (Double Daffodil). Large double golden yellow trumpets; fine for massing	per 100, 7s. 6d.	1 0 0 2
W. P. MILNER. Perianth and trumpet sulphur, a neat and dwarf plant with beautiful distinct flowers	5 6	0 6

Division II.—Medii-Coronatæ.

In the flowers of this section the crown is only about half the length of the divisions of the perianth.

	per doz.	each.
	s. d.	s. d.
BARRI CONSPICUUS. Deep primrose with orange yellow cup, richly stained and edged with orange-scarlet; remarkably handsome variety; indispensable in every collection	per 100, 45s.	5 0 0 6
" MAURICE VILMORIN (true). Broad creamy white perianth, cup heavily stained with orange; very chaste	10 6	1 0
" ORPHEE. Primrose cup, beautifully edged with orange scarlet	6 6	0 8
" SENSATION. Large pure white petals, cup canary yellow conspicuously edged with orange scarlet; very beautiful	—	3 0
INCOMPARABILIS, SIR WATKIN (The Great Welsh Chalice-flower). A gigantic variety, the finest of all the Incomparabilis section; large yellow cup, tinged with orange, sulphury perianth; splendid	7 6	0 9
" Stella. Large white spreading perianth, with yellow cup; first-rate for cutting	2 6	0 3

The Silver Jonquil (<i>N. tenuior</i>). Silvery white flowers, elegant plant	4 6	0 6

From Mrs. TAYLER, Prospect House, All Cannings.

Feb. 4th.
"The Sacred Narcissus were a success, and now look most lovely, more than half turning out double, with ten and eleven blooms on one spike."

From Mrs. J. BROOKING, Eastney, Kingswear.

Feb. 26th.
"You will be glad to hear that all the Bulbs you sent me last Autumn are blooming splendidly, not one of them has missed."

Polyanthus Narcissus

(Bunch-flowering or Tazetta).

A BEAUTIFUL free-flowering class of easy cultivation, deliciously scented, and admirably suited for growing in pots or in water. They produce handsome trusses of elegantly-formed flowers varying in colour from deep orange and primrose to the purest white. With the exception of the Double Roman and Paper White varieties, they will succeed well planted out of doors, but thrive best where partially shaded from strong sunshine. Generally speaking, they will thrive under the same treatment as that recommended for Hyacinths. For pot culture a light and rich soil is the best, and they should be potted as early as convenient in the season, if intended for blooming before Christmas. Pot the bulbs singly, according to size, into pots of four or five inches diameter, or three in a pot of seven inches diameter; pot firmly, and bury the bulbs well up to the crown. The pots should now be plunged six or eight inches deep in some light plunging material out of doors, and, in a few weeks, when the pots are filled with roots and top growth has commenced, they may be removed from the plunging material and placed in a cool pit or frame. Any required for early blooming may, in a few days, be removed to a gentle heat and gradually forced into bloom. The very early varieties, Paper White and Double Roman, are, however, the best for this purpose, and may easily be had in bloom in November, and with these and a few successive pottings of the other sorts a beautiful succession of bloom may be had up to March or April. The Polyanthus Narcissus submits readily to being grown in water, and if started in darkness and treated precisely in the way recommended for Hyacinths, will grow capitally and give the most pleasing results.

CHINESE SACRED NARCISSUS.

Chinese Sacred Narcissus

Oriental Lily or "Joss Flower."

THIS beautiful variety is grown by the Chinese, according to the ancient custom, to bloom at the advent of their new year; it is highly prized and called by them "Joss Flower" or Flower of the Gods. The bulbs are specially grown, by a method known only to themselves, whereby they attain great size and strength, insuring luxuriant growth and a remarkable profusion of bloom in a very short period; they are generally flowered in shallow ornamental bowls containing water, the bulbs being surrounded by bright colored pebbles, to prevent them from toppling over when in bloom; the flowers which are borne in clusters on tall spikes are white with a golden yellow centre, and deliciously fragrant; the bulbs will bloom in from six to eight weeks' time after planting, and with a few bulbs started at intervals of about four weeks, a succession of flowers may be had throughout the winter.

Each 9d.; per doz. 7s. 6d.

Gladioli—Early-flowering Varieties.

THE early-flowering section of Gladioli—blooming in June and July—are amongst the most graceful in growth and beautiful in colouring of any plants we possess. They are not only admirably suited for garden decoration, but grown in pots and gently forced, form charming subjects in the greenhouse in April and May, whilst their blooms are almost invaluable where an abundance of cut flowers is desired. The plants, which are very free-flowering, are of a somewhat dwarf branching habit of growth, and the blooms vary in colour from intense crimson through all the shades of rose, scarlet, carmine, purple, pink, to the pure white "Bride." The lower petals of most sorts are marked by a distinct and conspicuous blotch surrounded by a band of a different colour, giving the flowers a strikingly handsome appearance. They will thrive in almost any soil or situation, but out of doors should for preference be planted in a warm sunny position. October and November are the best months for planting, and the bulbs should be planted in clumps or patches of six or eight, and at a depth of four or five inches, covering them over in Winter with some short manure to prevent injury from frost. For growing in pots, they should be potted five in a six-inch pot, using a light rich compost and covering the crowns about half an inch deep. Place the pots on a cool shelf or under the stage in the greenhouse, and give but little water till they start into growth, when they should be placed on the stage, or as near the light as convenient. Here, with a fair supply of water, and ventilation on fine warm days, they will soon grow on into beautiful flowers.

Ixias.

THESE beautiful free-flowering Cape bulbs are deserving of much greater attention than they have hitherto received from the horticultural public, as they afford with but very little cultural skill, an abundance of strikingly brilliant and richly coloured flowers, which apart from their elegance of form, are exceedingly valuable to cut for the decoration of the drawing-room, bouquets, &c. In the south and western districts of England they may fairly be considered as hardy, but in most other parts of the British Isles they require to be planted deeply so as to be out of reach of severe frosts, or to have the protection of a cool pit or frame in Winter. They delight in a deep, rich, sandy soil, and when planted out of doors, a warm, sunny, well-sheltered border should always be selected. They thrive well in pots of light rich, sandy soil, planted five or six in a five-inch pot, placing the pots in a cool pit or frame, and giving plenty of air on all favourable occasions. Ixias do not require so much water when growing as most plants of a similar class, and watering may be discontinued when the plants have done flowering. If planted in six or seven-inch pots, several in a pot, they may be bloomed a second year without re-potting.

Crown Imperials

(Fritillaria imperialis).

THESE stately growing hardy plants thrive best in a deep, rich, and moist soil, and in a position where they obtain a fair amount of sunshine, and at the same time sheltered from high winds; they will, however, grow well in any good garden soil, and if allowed to remain undisturbed for several years, will form huge picturesque groups of rare beauty. The pendent bell-shaped flowers vary in colour from deep chocolate red to reddish buff, orange and pure yellow, and are surmounted by a tuft of beautiful green foliage, giving the plants a fine appearance. The gold-striped, with its lovely variegated foliage, is especially handsome. The bulbs should be planted with their crowns four or five inches below the surface, and eight inches to a foot apart.

Crocus—Superb New and Choice Varieties.

FOR POT CULTURE, SMALL BEDS, &c.

THE following select varieties produce large handsome flowers of distinct and beautiful colours, and in consequence of their brightness and purity of colour, are unrivalled for striking effects on large or small beds, marginal lines, &c., and also for growing in pots, window-boxes, hanging-baskets, jardinettes, &c.

CHOICE NAMED CROCUS.

Cultivation.—As foremost amongst the harbingers of early Spring, this beautiful class of the genus Iridaceæ is at once the most lovely and hardy of our vernal favourites, and we may also add the most permanent. Almost every kind of soil or situation seems congenial to their development; but soil which is fairly light and rich, and an open sunny aspect, are requisite to grow them to their fullest perfection of size and brilliancy. Planted in clumps or lines on mixed beds or borders, the pure whites, golden yellows, rich purples, soft blues, or the beautifully pencilled "La Majestense" are all and each very handsome; but beds of purples or blues, edged with golden yellow or pure white, or a trio of colours planted in lines in front of shrubbery borders, &c., are exceedingly charming, and when expanding in the sunshine, form a sight not soon to be forgotten. Their culture is simple in the extreme. In planting out of doors, the bulbs, or more properly speaking corms, merely require to be dibbled in about three inches deep, and two or three inches apart, and left to themselves; and if they can remain where planted for two or three years all the better, as they will then be found to have made a good increase, and may, after blooming, be taken up, divided, and replanted. The Crocus is admirably suited for cultivation in pots, pans, window boxes, &c., and when so grown the roots should be planted closely together to produce a good effect. When in pots, six or eight roots should be planted in a pot of about five inches diameter, filled with light rich soil, and the pot plunged or buried to a depth of two or three inches in some kind of light porous soil or material, till the corms begin to show signs of pushing through, when they should be placed near the glass and kept well supplied with water. The fine named varieties are the best for this purpose. A few planted in shallow boxes of rich soil will be found very useful to lift, when coming into bloom, for planting in hanging-baskets, &c. The bulbs may be planted any time during September, October, or November; early planting is, however, much to be preferred, as those planted towards the end of the year never bloom so satisfactorily as those planted earlier in Autumn.

WINTER ACONITE. (Natural Size.)

Winter Aconite.

THE little Aconite, which blooms earlier than the Snowdrop, is invariably the first flower in the garden to greet us in the New Year, and should always be grown freely in sunny positions near the house, or walks, for the pretty and ever welcome display they make with their golden yellow flowers so early in the season. They are extremely hardy, seem to thrive in any soil or position, and planted in large permanent clumps or patches, they will grow freely under overhanging shrubs or trees, and may be left in the ground for years without injury.

Superb Double-flowered Anemones.

PRODUCING large, handsome, double flowers of various beautiful colours; some of the varieties are strikingly brilliant and attractive. These are admirably suited for pot culture, and planted in patches of three or five form charming groups for the flower border.

DOUBLE-FLOWERED ANEMONES. 271

Cultivation.—The Anemone, or “Windflower,” forms by far the most splendid and interesting group of our tuberous-rooted flora, and although, perhaps, not quite so chaste and elegant in the form of its individual flowers as the Ranunculus, it certainly surpasses it in its fine effectiveness as a decorative plant. Grown in large or small beds, in patches, clumps of one colour, or mixed, they make charming groups amongst, and contrast finely with, most other plants, whilst the brilliant scarlets and fiery reds are exceedingly telling, when planted in double lines as an edging to large or small beds, shrubby borders, &c. The Anemone is also invaluable as a pot plant for the decoration of the greenhouse or conservatory in early Spring, and is very useful as a cut-flower, besides being extremely hardy and easy of cultivation. The Anemone prefers a light rich loamy soil with a fair amount of moisture, and out of doors will succeed well with the same kind of treatment and soil as recommended for the Ranunculus, but any good garden soil that is not too heavy or wet will grow them well, and with but a small amount of trouble. For early Spring blooming plant from September to November inclusive, and for Summer and Autumn flowering plant in February, March, and April. The tubers may be planted at a depth of about three inches, and at a distance of about five or six inches between the plants. For greenhouse or conservatory decoration, the tubers should be potted in October, and placed in a cool pit or frame till February, when they should be brought into the cool greenhouse, placed near the glass, and gradually brought into bloom. When it is desirable to take up roots from the open ground after flowering, they should, if possible, be allowed to remain till the leaves show signs of decay, when they may be carefully lifted, and gradually dried or ripened for replanting at some future date.

Tuberoses.

THESE deliciously fragrant and exceedingly useful flowers are much more easily grown than is generally supposed, and will well repay the little trouble that is necessary to have them in perfection. For early forcing pot singly into five or six-inch pots, as early in the season as the bulbs can be obtained (African-grown are the soonest procurable), and plunge in a good moist heat, withholding water till the foliage makes its appearance, when water may be given abundantly till the flower-buds are formed, when they may be removed to the greenhouse or conservatory and less water given. For Autumn blooming, pot singly into five or six-inch pots in March or April, using a light rich compost, and plunge the pots about six inches above their rims in cocoa-nut fibre, coal ashes, or any light material, under the stage of a greenhouse or in a cool pit or frame; when the foliage of these makes its appearance they should be removed and plunged under a south wall, removing them to the greenhouse or indoors as the flower-buds are formed. Dry roots may also be planted in sheltered places in the open ground, from the middle of April to the latter part of May, and will produce beautiful flowers in Autumn if taken up and potted when coming into flower, and will furnish a supply of valuable bloom in the greenhouse almost up to Christmas.

Double, "American Pearl." Fine new dwarf variety from the United States; deliciously fragrant, with large double flowers, pure white	Selected roots, per doz.	2s. 6d.	0 3
Double, African grown. Very fine, roots ready in October	per 100,	21s.; per doz.	3s. 0 4

Chionodoxa.

THIS is undoubtedly one of the most beautiful hardy Spring-flowering bulbs in cultivation, and at the same time one of the very easiest to grow. In form of flower and habit of growth it resembles the well-known and highly prized *Scilla Sibirica*, but its flowers are larger, more open, and of the most beautiful sky blue colour, the centres of the flowers being of a pure white, giving the plants a striking and charming appearance. It is extremely hardy, will thrive in any fair garden soil, and is admirably suited for planting in large clumps or patches on the border, as an edging to beds, rockeries, &c., and the bulbs, if left in the ground for several years, will thrive wonderfully. It is also well suited for pot culture, and planted six or eight in a five-inch pot, has a very pretty effect in the greenhouse. When the bulbs are planted out of doors, they should be placed not less than four inches deep, and about three inches apart, and to be effective, not less than ten to twelve should be planted in a patch.

Lucilæ (Glory of the Snow). One of the most beautiful Spring-flowering plants in cultivation, it is quite hardy, will thrive in any soil, and produces an abundance of its brilliant sky-blue, white-centred flowers, which are rather larger than those of <i>Scilla sibirica</i> , the plant being about the same height	Extra strong home-grown roots, per 100,	2s. 6d.	0 6
Sardensis. Beautiful deep blue flowers with a small white centre; charming variety	„	3s. 0d.	0 8
Gigantea (new). Quite distinct. Flowers very large and of a soft grey-blue with white centre. A most valuable addition to our hardy spring flowers	per 100,	7s. 6d.	1 0

Ranunculi—Scotch and Persian Varieties.

GIANT FRENCH RANUNCULI.

ALTHOUGH it is somewhat difficult to grow a large collection of choice named Ranunculi to perfection, there are many beautiful varieties of the edged, spotted, and self-coloured classes, the principal of which are contained in our list, that are easily grown, and will bloom freely in any light rich soil with a fair amount of moisture; and, considering their chaste and elegant forms, equalling the most perfect Rose or Camellia, their brilliant and attractive colours, ranging through the various shades of crimson, scarlet, purple, yellow, and even black, to the purest white, their exquisite markings or edgings, and in some instances delicious fragrance, it is a matter of surprise that these inexpensive luxuries should not be found in every English garden. The first essential conditions in the cultivation of Ranunculi are a fresh rich soil, and an open and sunny situation. If the soil where it is intended to plant Ranunculi is too heavy, give a good dressing of sharp sand or road silt; if too light, add a fair proportion of sandy loam. For early flowering, plant the tubers (claws downwards) in November or December in drills about six inches apart, two inches deep, with about three or four inches between the tubers in the row; to complete the operation the tubers merely require covering with fine soil and the bed to be raked level. When the plants come up in Spring they must be kept free of weeds, and the surface of the bed occasionally stirred; and as soon as large enough a rich mulching of well-decayed manure should be placed on the bed between the rows, and liberal waterings should be given in dry weather, especially about the blooming period. If not convenient to plant in Autumn, February, March, or April will do very well, but as these will bloom later, particular attention must be paid to keeping well supplied with moisture, &c. The Turban varieties, which succeed with a somewhat rougher treatment, are admirably suited for planting in clumps or miscellaneous beds or borders in association with other plants, or as edgings, &c., and are very floriferous and telling. As the tubers are liable to injury from rain, if left in the ground after blooming, they should be taken up when the foliage turns yellow or ripe, and after being gradually dried, stored away for future planting.

Snowdrops—Single and Double.

BOTH the single and double flowered varieties of these ever popular and charming little "Heralds of Spring" are too well known to need any description. Snowdrops will thrive in almost any soil or situation, and best when planted in clumps and left to take care of themselves for several years in succession, when they will form handsome and increasingly large groups, which on warm, sunny banks or borders, will push forth their numerous beautiful pure white flowers early in the new year. October is the best month to plant, and the bulbs should be placed three or four inches deep, and about two inches apart. We have seen some pretty effects produced in Spring by planting Snowdrops in various designs on lawns, grass plots, &c. The Giant Snowdrop (*Galanthus Elwesi*), a fine variety, growing to the height of a foot, is undoubtedly the finest of all the Snowdrops. It is quite hardy, as easily grown as the common variety, and so cheap as now to be within the reach of all.

From Mrs. TAYLER, Prospect House, All Cannings, Devizes.

April 20th.

"The Tulips you supplied me with were most lovely, they have been in bloom for some time, and have been greatly admired by all who saw them."

From Mr. G. MARSHALL, Market Hill, Co. Armagh.

Sept. 18th.

"The Bulbs I had from you last year gave me very great satisfaction."

Scillas.

THE dwarf-growing early-flowering varieties of this beautiful class, as *S. sibirica*, *præcox*, and *bifolia*, are extremely beautiful, and should be grown freely in every garden. In height they do not exceed four or five inches, and their lovely bending sprays of rich ultramarine blue flowers appear in the greatest profusion during the month of March. They are quite hardy, grow freely in almost any soil or position, and make charmingly effective edgings to beds of Snowdrops, &c., and if planted three or four inches deep and allowed to remain undisturbed, they will come up and bloom every Spring with increasing vigour and beauty. Planted eight or ten in a six-inch pot and treated as recommended for Hyacinths, they succeed equally well, and have a pretty effect in the greenhouse. The varieties of *S. peruviana* and *S. campanulata* bloom in May and June. These are of stronger growth than the preceding, and suited to the rougher parts of the garden.

Lilies (Lilium).

In their far distant native habitats Lilies are generally found growing in such sheltered spots as margins of woods or plantations, rocky ravines, amongst long grass, shrubs, &c., and mostly where for a long period of the year their bulbs are in a comparatively dry state. This fact points out the necessity of good drainage, and partial shade or shelter, and shows at a glance the great suitability of Lilies for planting in such places as on mixed beds or borders in front of shrubs, or amongst evergreens and roses, on Rhododendron beds, &c., and where indeed, when planted in groups of three or five, such fine varieties as *Auratum*, *Chalcedonicum*, *Speciosum*, &c., are matchless in their beauty, and produce a splendid and imposing effect. Planting out may take place any time during the Autumn, Winter, or Spring, when the bulbs are in a dormant state, or growth has but just commenced; but generally speaking, Autumn is the best time; and the bulbs should be planted at a depth of from six to eight inches according to size, so as to admit of their remaining in the ground for several years, if possible without being disturbed. Lilies generally are fond of a rich soil, mulchings, &c., and whether grown in-doors, in pots, or on the open border, will amply repay with an abundance of fine flowers for a plentiful supply of liquid manure once or twice a week during the growing period, and before the plants come into bloom.

LILIUM AURATUM RUBRO-VITTATUM.

Cultivation in Pots.—For growing Lilies in pots, &c., a compost of about equal parts of sandy loam, leaf-mould, and peat, will generally answer admirably; but we have seen some of the finest *Auratum*s ever exhibited grown in pure leaf-mould. It is also worthy of note that this fine variety will succeed equally well out of doors in peat, loam, or indeed any good light soil, and is consequently unrivalled for planting on Rhododendron beds, &c. Single specimens in pots of about six inches diameter form beautiful objects for the drawing-room, &c., but pots of eight or ten inches diameter, with five or seven bulbs in each, are truly magnificent when in bloom, and produce an effect of "flower and fragrance" that is not soon forgotten. In potting provide ample drainage and pot firmly, placing the bulbs about two inches below the surface; after which, plunge the pots with their rims about six inches below the surface in cocoa-nut refuse, ashes, or any light material, in the way recommended for Hyacinths. Here they should remain till the stems have pushed their way some eight or ten inches through the plunging material, when they may be removed to the cool pit or vinery till the flower-buds begin to expand, and then removed to the corridor, drawing-room, or conservatory; or the plants may remain in the plunging material till coming into bloom, before removal to the window, &c., should there be no convenience of a forwarding place as suggested. To prevent breakage a neat stake should be placed to each stem when taken up from where plunged; and if extra fine blooms are required, a few of the weaker buds should be pinched out in such varieties as will admit of this being done. When the blooms are off, the bulbs should be gradually ripened by giving less and less water; and when the stem is quite withered, they should be stored in some cool, dry place, for future potting or planting. Lily blooms, if cut and placed in water when just expanding, will last a considerable time, and are very beautiful for table and other decorations, the pure white varieties being especially valuable for this purpose.

We have many other species and varieties of choice Lilies in stock, which from want of space we are unable to enumerate.

Lilies in Collections—our own selection.

Carefully arranged Collections of Lilies, 6s., 9s., 12s., 18s., 24s., and 30s. per dozen.

Iris.

ALL the varieties of these beautiful flowers are perfectly hardy, and with the exception of the varieties of *Kæmpferi*, which require a damp soil to grow them well, will thrive in almost any soil or situation with little or no attention. The flowers are of especial value to cut for home decoration, and for which purpose they are becoming very fashionable. If the heads of bloom are cut and the stems placed in water when the first flowers are beginning to expand, all the succeeding buds will open in succession, and placed in specimen glasses will form charming objects for table and other decorations.

Cyclamens.

THIS beautiful class of Alpine plants is most admirably suited for Winter and Spring decoration of the greenhouse, conservatory, or drawing-room, and should certainly be grown wherever a cool pit, frame, or greenhouse, or even a suitable window exists. The foliage of most of the varieties is beautifully marbled, the blooms of some are deliciously fragrant, whilst all are chaste and beautiful in form and habit of growth. The corms should be potted in September or as early as convenient in October, using pots of five inches in diameter, and a soil composed of rough sandy loam two parts, leaf-mould one part, and one part of well-decayed cow manure; use the soil in a moderately moist condition, place the pots in a cool shady frame, and give but little water till growth commences; give an abundance of air and light on all favourable occasions during the Spring growth, but with as little fluctuation of temperature as possible. While the blooms are forming, water more freely—occasionally with weak liquid manure—and keep the foliage clean by syringing or washing with a soft brush. By placing a few in a gentle heat they will bloom earlier and the display may be prolonged. As soon as they have done blooming, remove them to a cool shady frame for the rest of the Summer, keeping them uniformly and moderately moist. Early in August, or sooner if they are seen to be forming young growths, let them be at once potted, and still maintain them in a mean temperature of about fifty-five degrees, affording gradually all the light possible, eventually, as the season merges into Autumn, removing them to a warm shelf and somewhat elevated in the greenhouse. The varieties of *C. Europæum* and *C. hederæfolium* are comparatively hardy, and will succeed well, planted in shady nooks of rock-work under overhanging evergreen shrubs, &c., but where planted in more exposed positions should have some slight protection in Winter.

Lily of the Valley (Convallaria majalis).

THIS beautiful and fragrant little gem is much too well known and highly popular to need any comment of ours. Planted out of doors it will succeed admirably on any shady border or spot, under or among trees, woodland walks, &c. A light rich loamy soil is the best; the roots should be planted about three inches deep. When grown in pots for forcing, pot them in thirty-two-sized pots filled to within about three and a half inches of the rim with rich loamy soil, upon which place the shoots or crowns closely, and then cover with about two inches of leaf-mould and sand, and give a good watering; place on a shelf near the glass in a moist stove or forcing house, keep well supplied with moisture, and soon as the plants begin to show their flower-heads, remove to a warm greenhouse, keeping near the glass till the flowers begin to expand, when they should be gradually removed to a more shady place before removal to the drawing-room, &c.

From Mr. J. SELDEN, Gardener to Sir Guy Campbell, Bart., Kingston-on-Thames.

June 27th. "The Bulbs of *Lilium Auratum* you sent me have done remarkably well, all the 270 are showing well for flowers, many of the Bulbs producing two stalks of fine heads."

From Mr. I. J. PURDON, Gifford Down.

Jan. 10th. The *Harrisiæ* Lilies you sent a year ago were an exceptional success, I have never seen larger flowers, and rarely as many on one stem. The *Tuberosæ* were also lovely."

From JAMES COWAN, Esq., Milton Bridge, N.B.
Feb. 16th. "I am very much pleased with my *Roses*, they are fine, healthy, fresh, hot, and I am sure will do well. The *Lapageria alba* also is a good plant."
From THOMAS J. STATTER, Esq., Fresham.
Mar. 17th. "It is only fair to tell you that the *Cyclamens*, both *Persicum* and *Giant* Prize have proved a grand success. I have had a very fine show of them continually, since early in November last."

For early forcing single crowns of these should be planted about twelve in a five-inch pot, with the buds well above the surface. Cover the crowns with a little moss or an inverted flower pot and place them in a good heat of say 85 or 90 degrees; water frequently with tepid water, and if judiciously looked after they will bloom in four or five weeks from time of potting. Good single crowns are much the best for this purpose ... Selected single crowns for forcing, per doz. 1s.; per 100, 6s.

Miscellaneous Bulbs, Plants, &c.

Achimenes. When well grown there are few more singular or pleasing plants than are the Achimenes. They require a very free open soil, consisting of two parts moderately decayed leaf-mould, one part peat soil, and a very slight addition of sandy particles. A high moist heat of seventy-five to eighty-five degrees suits them best, though they may be grown moderately well in ten or fifteen degrees less heat, if kept close and damp. They are particularly well adapted for hanging-baskets and all similar situations.

Twelve in six choice named sorts, 3s. 6d.
Very choice mixed, from our beautiful collection. Per doz. 2s. 6d.

Allium. A beautiful class of hardy showy plants that are deserving of extensive cultivation.

Azureum. Large umbels of deep azure-blue coloured flowers, borne on spikes two to three feet high. Per doz. 5s.; each 6d.

Moly (luteum). Bright yellow flowers in umbels. Per doz. 1s.; each 2d.

Neapolitanum. Pure white, excellent for bouquets. Per doz. 1s.; each 2d.

Pendulinum. A fine variety; each bulb will produce eight or nine spikes, with five to ten white bell-shaped pendulous flowers, each petal having a green line down the centre; excellent for forcing. Per 100, 5s.; per doz. 9d.

Alstroemerias. Choice mixed. Showy plants for a warm dry border. Planted nine inches deep they may remain undisturbed for years, and will bloom abundantly. Per doz. 2s. 6d.

Amaryllis. Formosissima (The Jacobea Lily). Rich crimson. Per doz. 5s.; each 6d.

Lutea (*syn. Sternbergia lutea*). Yellow, fine dwarf Autumn bloomer. Per doz. 2s.; each 3d.

Purpurea (Tallota) (The Scarboro' Lily). Bright scarlet crimson. Each 1s., 1s. 6d., and 2s. 6d.

Hybrids of Vittata. A magnificent class of hardy bulbous-rooted plants, with large Lily-like, brilliantly coloured flowers, admirably suited for pot culture in the greenhouse, forcing-house, &c.; very splendid.

Choice named varieties, our own selection. Each 5s., 7s. 6d., and 10s. 6d. to 200s.
Very fine mixed; beautiful large-flowered varieties. Per doz. 25s. and 30s.

Babianas. Charming spikes of brilliant variously coloured flowers, somewhat like Ixias. They require thorough drainage, when planted in the open border, where they should be placed six or seven inches deep, and covered so as to protect them from injury by very severe frosts and wet weather. Dry them off as soon as first symptoms of ripening take place (when growing in pots), and do not water them in the Spring until growth actively commences. Choicest mixed, per 100, 10s. 6d.; per doz. 1s. 6d.

Brodiaea coccinea. Long tubular flowers, rich crimson and green, beautiful for pot culture. Each 6d.

Begonias. Tuberos-rooted Hybrids. We have many thousands of our superb strain of these now growing at our Nurseries, and of which dry roots can be supplied in November or December at the following low rates:—

Single mixed. Very choice varieties and most beautiful colours. Per 100, 40s. and 68s.; per doz. 6s. and 9s.

Double mixed. Very choice varieties, selected flowers. Per doz. 9s. and 12s.

Clivia (Imantophyllum) miniatum. Valuable greenhouse plant, producing large corymbs of delicate reddish orange Lily-shaped flowers, most effective and beautiful. Each 5s. and 7s. 6d.

Calochortus (Californian Butterfly Tulips, or Mariposa Lilies). An exceedingly brilliant genus of half-hardy bulbous-rooted plants, the flowers somewhat resembling Tulips in form, and the colours ranging from pure white through all the most beautiful shades of lilac, blue, crimson, yellow, &c. Will succeed well planted on a warm dry border, if the roots have some slight protection in winter, or they will bloom freely in pots in a cool pit or greenhouse.

Albus. Pure white per doz. 7s. 6d.; each 9d.
Cæruleus. Rich blue " 7s. 6d.; " 9d.
Pulchellus. Golden yellow " 7s. 6d.; " 9d.
Splendens. White, spotted crimson " 7s. 6d.; " 9d.
Venustus. White and crimson " 7s. 6d.; " 9d.
Very choice mixed. ... per 100, 40s.; per doz. 6s.

Colchicum speciosum. Beautiful large-flowered hardy plant from Asia Minor, producing noble, Crocus-like, bright rosy purple flowers in Autumn and having handsome foliage in Spring. Will thrive in any soil where undisturbed; splendid for clumps on the mixed border. Per doz. 6s.; each 7d.

Dahlias. Show and Fancy. Pot roots. All the newest and choicest sorts; a very fine collection. Per doz. 6s., 9s., and 12s.

Erythronium Dens Canis (Dog's-tooth Violets). Beautiful plants for clumps or edgings on the mixed border. Large, heavily marbled and spotted leaves; the flowers, which are very handsome, somewhat resemble the Cyclamen.

White, purple, or mixed. Per 100, 7s. 6d. per doz. 1s.

Eucharis. Amazonica. Large pure white flowers; splendidly scented. Each 1s. 6d., 2s. 6d., and 3s. 6d.

Candida. An extremely beautiful species from British Columbia, flowers smaller than those of the preceding; invaluable for bouquets. Each 1s. 6d. and 2s. 6d.

Sanderi. Very fine new variety. " 2s. 6d. and 3s. 6d.

Eucomis punctata. A fine and strikingly singular Autumn blooming hardy plant, throwing up long spikes of waxy greenish white flowers, surmounted by a tuft of leaves. Per doz. 5s.; each 6d.

Freesia. Beautiful half-hardy plants, elegant in habit of growth and deliciously scented; invaluable for bouquets, the blooms lasting in perfection for a long time after being cut; splendid for the cool pit or greenhouse. Potted six or eight bulbs in a five-inch pot of rich turfy loam, at intervals from September to the end of the year, and placed in a warm greenhouse, they may be had in bloom from January to May. Liberal waterings should be given when growing.

Leichtlini. Yellow and orange; deliciously scented. Per doz. 1s. 6d.

" **major.** A very fine variety of the preceding. Per doz. 2s.

Refracta alba. Pure white, deliciously fragrant; a gem for cutting. Per 100, 7s. 6d.; per doz. 1s.

Fritillaria meleagris (Varieties mixed). Beautiful hardy border plants, throwing up slender stems about two feet high with bell-shaped flowers, beautifully chequered and curiously marked.

Choicest mixed, per 100, 7s. 6d.; per doz. 1s.

Armena. A charming species from Asia Minor, with soft yellow flowers; easily cultivated. Per doz. 2s. 6d.; each 3d.

Aurea. Most lovely species, flowering from the middle of March to the end of April; colour a rich golden yellow inside and out. Quite hardy and excellent for pots. Per doz. 3s. 6d.; each 4d.

Miscellaneous Bulbs, Plants, &c. (continued).

- Habranthus fulgens pratensis.** Certainly the most brilliant amongst rare hardy bulbs that has been introduced to our gardens for many years. Its gorgeous Amaryllis-like flowers are borne in clusters of five to seven on a stem, and are each four to five inches across, of a shining bright scarlet with a yellow base. Each 5s.
- Hyacinthus candicans.** A noble plant, perfectly hardy, magnificent when grown for greenhouse or conservatory decoration, sending up splendid spikes, three to four feet in length, of white bell-shaped flowers, blooming in Autumn. Per doz. 2s. 6d.; each 3d.
- Ixolirion Tartaricum.** A beautiful hardy bulbous plant from Asia Minor, growing about eighteen inches high, and bearing numerous flowers of a rich purplish blue colour, on long stalks. First class for cutting, and will last a long time. Per doz. 6s.; each 8d.
- Lachenalia Nelsoni.** Deep golden yellow tubular flowers; very beautiful. A gem for pots in the cool greenhouse. Per doz. 12s.
- Choice mixed.** Very pretty for pots in the cool greenhouse. Per doz. 5s.
- Leucojum vernum (Snowflake).** The individual flowers are like the Single Snowdrop, though borne several together upon tall spikes about fourteen inches high. They are very pretty in beds or borders, blooming generally during the month of May. Quite hardy. Per doz. 1s. 6d.; each 3d.
- Lily of the Valley (Convallaria majalis).**
Single Shoots, German. Produce splendid heads of bloom, much superior to the Dutch. Per 100 6s.; per doz. 1s.
- Milla laxa.** Umbels of rich purple flowers; very hardy. Capital decorative plant. Per doz. 5s.; each 6d.
- (Triteleia) uniflora.** This has fine, substantial, and lasting flowers of beautiful whitish-lilac colour; makes a fine edging, and when a score or more bulbs are grown in a large pot, forms a most striking and desirable object for the decoration of either greenhouse or conservatory. Per 100, 2s. 6d.; per doz. 6d.
- Muscari (Hyacinthus).** Excellent Spring-flowering plants for pots or border-culture. The Feathered Hyacinth has large, handsome, feathery plumes of flowers. The Grape Hyacinth has its bells compactly arranged, so as to somewhat resemble the fruit from which it takes its name; whilst the Mnsk Hyacinth is esteemed for its peculiar and delicious scent.
- Botryoides cærulea** (Blue Grape Hyacinth). Dark blue. Per 100, 2s. 6d.; per doz. 6d.
- „ pallida.** Pale blue. Per doz. 2s. 6d.
- „ alba (White).** Very pretty. 3s. 6d.
- „ Moschatum major** (The Mnsk Hyacinth). Purplish brown. Per doz. 7s. 6d.; each 9d.
- Plumosum monstrosum** (The Feathered Hyacinth). Purple. Per 100, 7s. 6d.; per doz. 1s.
- Nerine. Fothergilli.** Requires protection of a frame, or is quite at home in any corner of greenhouse; its beautiful vermilion scarlet flowers render it valuable for conservatory decoration. Each 2s. 6d.
- Ornithogalum. Arabicum.** Beautiful large white flowers, with black centre. Per doz. 2s. 6d.
- Umbellatum** (Star of Bethlehem). Well known, showy, dwarf plant blooming in May. Per 100, 4s. 6d.; per doz. 8d.
- Oxalis.** A beautiful and showy class of hardy plants admirably suited for pot culture.
- Bowel.** A fine large-flowered variety, bearing a profusion of bright rosy flowers. Per doz. 1s. 6d.; each 3d.
- Floribunda rosea.** Bright rosy pink, exceedingly free-flowering. Per doz. 2s.; each 3d.
- Oxalis.** A beautiful and showy class of hardy plants admirably suited for pot culture.
- Floribunda alba.** Pure white, exceedingly free-flowering and fine variety. Per doz. 2s.; each 3d.
- Rubella.** Bright crimson, very showy. Per doz. 2s.; each 3d.
- Superfine Mixed.** Per doz. 1s.
- Pansies and Violas.** Autumn is the best time for planting Pansies and Violas where a really good effect is desired in the Spring. September is the best month, but any time up to the middle of November will do.
- Blue King.** Magnificent variety, producing an abundance of large deep ultramarine blue flowers, which continue from early Spring till late in Autumn; should be in every garden. Per 100, 16s.; per doz. 3s.
- Clivedon Purple.** Fine large flowers of a rich bright purple colour, a constant bloomer. Per 100, 15s.; per doz. 2s. 6d.
- Cloth of Gold.** Beautiful bright yellow, with dark centre, very effective for Spring gardening. Per 100, 16s.; per doz. 3s.
- Dean's White Bedder.** Very fine. Per 100, 25s.; per doz. 4s.
- Pilrig Park.** Large, pure white, pencilled violet. Fine, per doz. 6s.; each 9d.
- Puschkinia libanotica.** Flowers white, shaded blue. A dwarf-growing, charming little bulbous-rooted plant, somewhat resembling the Scilla. Per doz. 2s. 6d.
- Schizostylis coccinea.** A remarkably handsome, perfectly hardy, evergreen bulbous plant, producing occasional spikes of the most lovely crimson flowers, and it can be potted up in the Autumn for house decoration similarly to the Chrysanthemum, and with equal success. Per 100, 7s. 6d.; per doz. 1s. 6d.
- Sparaxis.** A section resembling Ixias, but with very fine large blooms, and is most effective in regard to a rare combination of parti-coloured hues. Choicest mixed, per 100, 5s.; per doz. 9d.
- Spiræa Japonica (Astilbe barbata).** Perhaps the most elegant and useful of all plants for early forcing. Lovely and chaste spikes of elegant white inflorescence, and is singularly adapted for pot display, table or hand bouquets, &c., and by judicious forcing may be had in abundance at Easter. It will last well in almost any situation when in bloom. It is besides perfectly hardy, and as such can be grown on the open border. Fine strong clumps, per doz. 6s.; each 9d.
- Multiflora compacta.** A fine free-flowering dwarf-growing variety; splendid as a pot plant or for cutting. Per doz. 6s.; each 9d.
- Tigridias, or Tiger Flowers.** These gorgeously beautiful Autumn-blooming plants, which are well worth a place in every garden, are quite hardy when grown in light rich soil or on a warm sunny border. They merely require to be planted four or five inches deep in clumps of six or eight roots, to ensure the most pleasing results.
- Canariensis.** Yellow, spotted with scarlet. Per doz. 3s.; each 4d.
- Conchiflora.** Brilliant yellow, spotted with scarlet. Per doz. 2s. 6d.; each 3d.
- Pavonia.** Scarlet and orange. Per doz. 1s. 6d.; each 3d.
- Grandiflora alba.** Creamy white, spotted with red, and having a violet centre; a fine and beautiful novelty. Per doz. 4s.; each 6d.
- Tritonia aurea (crocasmia).** One of the strongest and most showy of its class, forming a beautiful associate with *Lilium speciosum*. It but needs to be treated as an evergreen to insure perfect success in its culture. It is well suited besides for the out-door border. Per 100, 5s.; per doz. 9d.

Hardy Perennial Flowering Plants.

We have a fine collection of these popular, interesting, and beautiful plants, which are daily coming more and more into favour with the Gardening Public. All the varieties are perennial, extremely hardy, and many of them produce flowers of the most exquisite beauty, which are very valuable for cutting, whilst the dwarfier growing sorts are admirably suited for rockeries, or edgings. No special soil or position is necessary, as with but very few exceptions, they will thrive almost anywhere, and with a moderate collection, a charming variety and succession of bloom may be had throughout the Spring and Summer. The plants we offer are all grown in pots, and may be removed at any time or season.

CHRYSANTHEMUM MAXIMUM.

Achillæa mongolica. Height about 18 inches, pure white flowers in May and June; splendid for cutting each 9d.
 " **millefolia rosea.** Very useful ... each 9d.
 " **ptarmica—The Pearl (new).** Largo double, pure white flowers, similar to *A. ptarmica fl. pl.*, but more than double the size; fine for cutting ... each 9d.

Adonis vernalis. This is a beautiful, early, Spring-blooming plant, with clear golden yellow flowers, known as the "God of Love." The individual blooms are very large comparative to the size of the many-times divided foliage, its general height being six inches. It will thrive in any kind of soil and most situations, and is perfectly hardy per doz. 4s. 6d.; each 6d.

Anemone—Japonica alba. One of the very best Autumn-blooming plants we have. Flowers produced in great profusion, and of a beautiful pure white per doz. 5s.; each 6d.

" " **rosea.** Similar to preceding, but flowers of a beautiful rose colour ... per doz. 7s. 6d.; each 9d.

Anthemis tinctoria pallida. An exceedingly beautiful Marguerite, with pale sulphury yellow flowers. The blooms are very useful for cutting, and last a long time in water. Grows 2½ to 3 feet high ... per doz. 5s.; each 6d.

Asters (Michaelmas Daisies). In variety ... per doz. 4s. 6d.

Anthericum. Beautiful hardy border plants, bearing elegant spikes of pure white flowers in Spring; height about eighteen inches. These are exceedingly useful for cut flowers and should be found in every garden.

" **Liliago (St. Bernard's Lily)** per doz. 5s.; each 6d.

" **Liliastrum (St. Bruno's Lily)** per doz. 7s. 6d.; each 9d.

" " **major.** Very fine; pure white; splendid for bouquets ... per doz. 10s. 6d.; each 1s.

Armeria grandiflora (The Giant Thrift). A distinct and splendid plant, forming tufts of deep green foliage, and throwing up for a long time, on stems eighteen inches high, heads of brilliant rosy-crimson flowers ... each 9d.

Aubrietia Leichtlini. A beautiful dwarf-growing plant, with numerous bright purplish crimson flowers; a gem for dry rockeries, &c. ... per doz. 5s.; each 6d.

Auriculas, Alpine. Choice seedling, self-coloured, and laced varieties; our inimitable strain of these contains a vast variety of pleasing colours. Universal favourites for the open border ... per doz. 3s. 6d.

Campanula isophylla. Beautiful dwarf trailing species, bearing large lilac blue salver-shaped flowers; a gem for pots ... per doz. 5s.; each 6d.

" " **alba.** A white form of the preceding per doz. 5s.; each 6d.

" **persicifolia alba grandiflora.** A fine upright growing variety, with large pure white flowers each 1s.

" **Trachelium alba plena.** A very showy, free-flowering, and useful plant ... each 1s.

" **turbinata pallida.** A beautiful dwarf compact-growing variety, producing a profusion of beautiful silvery lilac-coloured bells that continue for a long time strong clumps, per doz. 10s. 6d.; each 1s.

Centaurea macrocephala. A fine ornamental plant, with fine massive foliage produced from the base to the point where the large rich golden flowers issue; very useful for cutting each 1s.

Chrysanthemum latifolium. A very showy Marguerite, its bold pure white flowers, with yellow centre, are two to three inches across; splendid for cutting, and invaluable for Autumn decoration ... each 9d.

" **leucanthemum semi-duplex.** A fine novelty, with large pure white semi-double flowers per doz. 10s. 6d.; each 1s.

" **maximum (true).** A beautiful free-growing plant, only two feet high, and covered with a profusion of large pure white Marguerite-like flowers, that continue for a long period; splendid for cutting per doz. 10s. 6d.; each 1s.

" **uliginosum.** Strong-growing Autumn-flowering species, with pure white Marguerite flowers each 9d.

Cheiranthus alpinus. Dwarf neat-growing species; flowers lemon-yellow, borne in great profusion in Spring; very effective, ought to be in every garden per doz. 3s.; each 4d.

Coreopsis lanceolata. The best of the family, and one of the most showy hardy perennials in cultivation. The flowers are large, of a bright golden yellow colour, and produced in the greatest profusion per doz. 7s. 6d.; each 9d.

" **grandiflora.** It is totally distinct from *C. lanceolata*, and a far superior plant. It grows about three feet in height, the stems are erect and rigid, flowers 2½ to 3 inches across, of a bright golden yellow; flowers from June until September ... each 1s.

Delphiniums. Single and Double-flowered. These fine hardy plants are deserving a place in every garden; they continue in bloom for a long time in Summer, many of the varieties producing spikes of bloom one foot to two feet in length, and of the most intense and delicate colours.

Choice named sorts, our selection per doz. 6s. and 9s.

Hardy Perennial Flowering Plants (continued).

- Dielytra spectabilis.** A beautiful and indispensable plant, with lovely bending sprays of deep rose-coloured flowers and handsomely divided foliage. First-class for shady borders, pots in the greenhouse, &c. It is perfectly hardy and forces well ... strong plants, per doz. 6s.; each 8d.
- Dodecatheon Jeffreyanum.** A beautiful hardy perennial, a native of the Rocky Mountains, producing large umbels of Cyclamen-like blossoms, rose-coloured, with a yellow ring at the orifice of the reflexed corolla each 2s. 6d.
- " **meadia** (American Cowslip). From the rich woodlands of North America; an elegant Spring-flowering plant worthy of more extended cultivation; flowers purple, inclining to colour of the peach-blossom, in a loose umbel, each blossom drooping elegantly per doz. 5s.; each 6d.
- Doronicum austriacum.** Bright golden yellow flowers in Spring; very showy ... per doz. 7s. 6d.; each 9d.
- " **plantagineum excelsum** (*syn. Harpur Creue*). Height 18 inches, large golden yellow flowers, 4 inches in diameter; splendid for cutting per doz. 7s. 6d.; each 9d.
- Echinops ritro.** A fine perennial, growing three to four feet high, bearing numerous globular heads of blue flowers each 9d.
- Erica. Herbacea (carnea).** A procumbent little shrubby evergreen plant; flowers deep flesh-coloured with black anthers, produced in wreath-like spikes, from middle of January to end of March. The prettiest hardy out-door plant we have in bloom at this season of the year per doz. 7s. 6d.; each 9d.
- " **Carnea alba.** A pure white-flowered variety of the preceding, very fine ... per doz. 10s. 6d.; each 1s.
- Erigeron aurantiacus.** A fine new variety, growing about nine inches high and bearing bright orange-coloured flowers as large as a crownpiece per doz. 7s. 6d.; each 9d.
- " **(Stenactis) speciosa superba.** Beautiful border perennial, growing about three feet high, covered for a long time with beautiful large bright purple flowers with yellow centre; very fine ... per doz. 7s. 6d.; each 9d.
- Funkia, or Plantain Lily.** Fine hardy border plants, the flowers of *F. subcordata grandiflora* almost equalling those of the Eucharis. The leaves are large, heart-shaped, and are finely effective for clumps on mixed borders, as edgings to large beds of sub-tropical plants, etc.; is also excellent for pot culture in the greenhouse.
- " **lanceolata.** Dwarf-growing; lilac purple flowers per doz. 5s.; each 6d.
- " **marginata.** A form of the preceding, with beautifully variegated leaves per doz. 5s.; each 6d.
- " **Sieboldi.** Glaucous foliage and pink Lily-like flowers; very beautiful ... each 9d.
- " **subcordata grandiflora.** A beautiful variety with bright green foliage ... per doz. 5s.; each 6d.
- Gaillardias** (*Gaillardia hybrida grandiflora*). Splendid hardy perennials. The very large and beautiful flowers are almost unique in their charming blendings of the many rich shades of brown, maroon, and golden yellow, and being of good substance are first-class to cut for indoor decoration, as the blooms will last a week in water.
- Choice named varieties, our selection per doz. 12s. and 18s.
- Choice mixed seedlings, will produce some beautiful flowers ... per doz. 4s. 6d.; 6 for 2s. 6d.
- Gentiana acaulis.** Intense blue, very fine per doz. 7s. 6d.; each 9d.
- " **verna.** One of the most brilliant of all Alpine flowers; one to three inches high, forming dense tufts of intense blue flowers, each an inch or more across, frequently with a white centre per doz. 10s. 6d.; each 1s.
- Geum coccineum plenum.** Height about two feet, bearing a profusion of double, bright scarlet flowers; first-rate for cutting ... per doz. 8s.; each 9d.
- Harpalum rigidum.** Rich golden yellow flowers with a black disc, resembling a small Sunflower per doz. 5s.; each 6d.
- Helianthus multiflorus plenus** (*Perennial Sunflower*). Height three to four feet, beautiful golden yellow double flowers in Autumn ... per doz. 8s.; each 9d.
- " **Soleil d'Or.** A fine variety, with deep orange yellow double flowers ... per doz. 7s. 6d.; each 9d.
- Helenium pumilum.** Beautiful Autumn-blooming plant, eighteen inches high, bearing a profusion of bright yellow flowers ... per doz. 7s. 6d.; 3 for 2s.; each 9d.
- " **grandicephalum striatum.** Height four feet, very robust erect habit; flowers on large branching heads deep orange, irregularly striped, and blotched with crimson each 1s.
- Helleborus (Christmas Rose).** *H. niger* and *H. niger maximus* are undoubtedly the finest hardy Winter-flowering plants in cultivation, producing beautiful white flowers through the Winter; useful for potting for greenhouse decoration, and are worthy of extensive cultivation. The flowers are much improved in their purity of whiteness and size, if hand-lights or bell-glasses are placed over them just prior to and during the blooming season.
- " **Niger (Christmas Rose).** Fine pure white, abundant bloomer ... per doz. 10s. 6d.; each 1s.
- " **maximus.** A fine variety, large pure white flowers, splendid per doz. 24s.; each 2s. 6d.
- " **atrorubens.** Flowers purplish red, very numerous in clusters; blooms in Mid-Winter per doz. 15s.; each 1s. 6d.
- Hemerocallis flava.** A beautiful hardy border plant, producing in June and July large umbels of beautiful Lily-like flowers, of a bright yellow colour, and finely scented ... per doz. 4s. 6d.; each 6d.
- " **fulva.** Bronzy orange, shading to crimson per doz. 3s. 6d.; each 4d.
- " **disticha fl. pl.** Large, double, bronzy yellow flowers; very fine ... each 1s.
- " **Kwanso fl. pl. variegata.** One of the most beautiful hardy variegated plants in cultivation; is admirably suited as a decorative plant for the greenhouse or conservatory ... per doz. 7s. 6d.; each 9d.
- Hepaticas.** These are amongst the most charming Spring-blooming plants we possess, and should certainly be found in every garden.
- " **angulosa.** Sky blue; beautiful per doz. 7s. 6d.; each 9d.
- " **triloba alba.** Single, white ... each 0s. 9d.
- " **cærulea.** Single, blue ... 0s. 6d.
- " **fl. pl.** Double, blue ... 1s. 6d.
- " **rubra.** Single, red ... 0s. 9d.
- " **fl. pl.** Double, red ... 1s. 0d.
- Heuchera sanguinea.** It forms a neat compact tuft of deep cordate leaves, of a light green colour and slightly hairy. The flower stems are slender and much branched, from twelve to eighteen inches in height, covered with bright crimson tubular flowers, and lasts in bloom the whole of the Summer ... per doz. 10s.; each 1s.
- Inula glandulosa.** A fine hardy plant, growing about two feet high, and bearing large, single, Helianthus-like yellow flowers ... each 9d.
- Lathyrus latifolius albus** (*The White Everlasting Pea*). Beautiful clusters of pure white flowers; exceedingly useful hardy climber ... per doz. 10s. 6d.; each 1s.
- Lychnis dioica rubra fl. pl.** A plant of great beauty, exceedingly useful for cutting; large double crimson flowers; a first-class border plant ... each 9d.
- " **viscaria splendens plena.** A distinct and splendid variety, growing about eighteen inches high and bearing a profusion of large, double, brilliant rose-coloured flowers ... each 9d.
- Oenothera acaulis vera.** A beautiful dwarf-growing species, with large white flowers; very distinct per doz. 7s. 6d.; each 9d.
- " **macrocarpa.** A fine hardy perennial, forming a trailing mass of foliage covered with large soft yellow flowers ... each 6d.
- " **Youngi.** Height two feet, with deep golden yellow flowers; a first-class hardy plant per doz. 7s. 6d.; each 9d.

Hardy Perennial Flowering Plants (continued).

Papaver nudicaule (*Iceland Poppies*). Most useful and beautiful hardy flowers. Grown in masses, on beds, or borders, or planted on the rockery, they are equally at home, and will furnish a long continuance of their brilliantly-coloured blooms. They are very graceful in habit of growth, having attractive bright green foliage formed in tufts, the flowers rising on slender stems about one foot high, and are charming as cut flowers.

“ **nudicaule**. Bright pale yellow per doz. 5s.; each 6d.

“ **alba**. Pure white „ 5s.; „ 6d.

“ **miniatum**. Brilliant orange scarlet per doz. 5s.; each 6d.

• “ **bracteata** (true). A charming species, with immense deep blood-crimson flowers... each 1s.

• “ **Royal Scarlet**. The flowers are unequalled for size and brilliancy, measuring when fully expanded 12 inches in diameter, and are of a glowing scarlet colour each 1s. 6d.

* *Large-flowered Perennial Poppies, very showy and splendid flowers, first-class for mixed or shrubbery borders.*

Pæonies, Herbaceous. Double-flowered. Well-known, magnificent, hardy, herbaceous plants for the shrubbery border, &c.; will thrive in almost any soil or situation, but to be grown well should be planted in an open position and not disturbed for several years.

Choice named varieties, our own selection per doz. 12s., 15s., 18s., 21s., and 24s.

Fine varieties, mixed, without names per doz. 9s.

Phloxes, Perennial. Magnificent hardy plants, in bloom from July to November.

Choice named sorts ... per doz. 4s. 6d., 6s., and 9s.

Phlox subulata. (Dwarf Spring-flowering Phloxes). Beautiful compact-growing varieties, forming dense cushions of lovely flowers, that continue in bloom for a long time; splendid for rockeries, edgings, or massing.

“ **frondosa**. Dense evergreen foliage, lovely pink flowers, dark centre ... per doz. 4s.; each 6d.

“ **verna**. A very beautiful trailing species; flowers large, deep rose colour per doz. 4s.; each 6d.

Phyteuma orbiculare. A pretty border plant with eriously composed round heads of blooms of a lovely blue colour; very floriferous ... each 9d.

Polemonium Richardsoni. Beautiful hardy perennial, blooming in June, height eighteen inches, flowers sky blue with golden yellow anthers; very pretty each 9d.

“ **Himalaicum**. Vigorous habit of growth, with large branching spikes of azure blue flowers each 1s.

Polyanthus, Gold-laced. Fine seedlings, all good flowers per 100, 21s.; per doz. 3s. 6d.

Polygala chamæbuseus purpurea. A very pretty dwarf growing plant. Flowers purple with yellow spots, in shape resembling those of the Pea ... each 9d.

Potentillas. Double and Single-flowered. Very free-flowering and useful hardy perennials, growing about two feet high. The flowers are of a rich velvety texture, and vary in colour from crimson and maroon to orange and golden yellow.

12 in 6 choice varieties, our selection 9s.; 6 for 5s.

Pyrethrums. These fine plants produce a great variety of beautiful flowers in all the shades of crimson, carmine, rose, to pure white. The individual blooms are as double and finished as those of good Asters which they resemble, and are extremely useful for cutting.

Double-flowered. Strong established plants in choice named variety, our selection ... per doz. 6s. and 9s.

Single-flowered, in brilliant variety to name per doz. 6s.

Primroses. A beautiful and indispensable class of brilliant Spring-flowering plants, blooming at the same time as Narcissi and many other bulbs; many of the single-flowered varieties are exceedingly handsome.

Double White ... per doz. 6s.; each 8d.

“ **Lilac** ... „ 6s.; „ 8d.

“ **Yellow** ... „ 6s.; „ 8d.

“ **Purplish-crimson** ... 10s.; „ 1s.

Single “Harbinger.” A superb large-flowered, early blooming variety, with lovely white flowers with an orange centre. Strong plants in pots per doz. 10s. 6d.; each 1s.

“ **mixed hybrids**. Very fine and brilliant per 100, 17s. 6d.; per doz. 2s. 6d.

Rudbeckia Newmanni. A splendid hardy free-flowering plant, height about two feet; flowers golden yellow with black centres ... per doz. 5s.; each 6d.

Scabiosa caucasica. Large, handsome, pale lilac-blue flowers, four to six inches across, fine for cutting, one of the best perennials grown; good flowering plants ... each 1s.

“ **elata**. A noble growing species, attaining the height of five to six feet, a grand plant for the shrubbery; the flowers are sulphury yellow, and very beautiful each 9d.

Senecio pulcher. A very fine hardy perennial, flowers large, purplish crimson with yellow centre; three feet high; a fine Autumn bloomer ... each 9d.

Sidalcea candida. A pretty plant, growing about 2½ feet high, and bearing in great abundance pure white flowers of about one inch in diameter ... each 6d.

Silphium perfoliatum. A tall stout growing plant with flowers of a lovely clear lemon-yellow; excellent for cutting and decorative purposes, and for massing against a tall background ... each 1s.

Spiræa aruncus. A handsome, stately-growing, border plant, from three to five feet high, with magnificent plumes of creamy white flowers ... each 1s.

“ **flipendula fl. pl.** Numerous corymbs of double white flowers and pretty fern-like foliage, very hardy and desirable ... per doz. 7s. 6d.; each 9d.

“ **palmata** (*Crimson Meadow Sweet*). A very fine border plant, flowers rich crimson. Is well described by its popular name ... each 9d.

Thalictrum adiantifolium (*The Maiden-hair Thalictrum*). A beautiful plant rivalling the Maiden-hair Fern in the delicacy of its foliage, but hardy and easily grown in any ordinary border, and an invaluable plant for bouquets each 1s.

Tradescantia virginica alba major. A very showy plant, producing its charming white flowers during most of the Summer ... Stroug flowering plants, each 9d.

Trillium grandiflorum (*Large-flowered White Wood Lily*). A very pleasing plant for moist shady nooks, flowers snowy-white on stems about one foot high ... each 9d.

Tritoma uvaria grandiflora. Crimson and orange flowers, very fine spikes of bloom per doz. 10s. 6d.; each 1s.

Trollius Europæus. Beautiful Spring-flowering plant, with large, globular, lemon-coloured and delicately scented flowers ... per doz. 7s. 6d.; each 9d.

“ **Fortunei fl. pl.** A superb variety, flowers large, semi-double, and of the richest deep bright orange colour; splendid for cutting ... each 1s. 6d.

Wallflowers. Old Double yellow. A fine plant for Spring decoration, or for pots in a cool frame or greenhouse ... per doz. 7s. 6d.; each 9d.

“ **Old Double dark red or purple**. Very useful and fine old sort ... per doz. 7s. 6d.; each 9d.

Herbaceous and Alpine Plants in Collections.

WE have a fine collection of these which from want of space we are unable to catalogue. The following collections, which are offered at a very cheap rate, include the most beautiful and useful sorts for border and rockery decoration, and if our customers when ordering will kindly say for which purpose they are required, they may rely on having the very best selection that can be given for the prices quoted.

Carefully selected collections of the most useful and interesting kinds, our own selection.

HYBRID PERPETUAL ROSES.

1 MERVEILLE DE LYON. 2 A. K. WILLIAMS. 3 MRS. JOHN LAING.
4 SILVER QUEEN. 5 LA FRANCE.

Hybrid Perpetual Roses.

This magnificent and beautiful class of Roses is better than any other adapted for exhibition and pot culture. They continue in flower from the early part of June to the end of October, and are by far the most desirable for general cultivation. Our stock of these, grown at our Nurseries, comprises many thousands of the newest and choicest varieties in standards and dwarfs, and the past season having been very favourable to their growth, the plants we offer will be found unusually well grown and vigorous, and may be expected to produce a fine display of bloom next season. Our standards and half-standards are all worked on the Dog Brier, dwarfs on Manetti stocks.

HINTS ON CULTIVATION.

Situation.—In planting Roses select, if possible, an open situation, where they get the full benefit of sun and air, and at the same time are sheltered from strong winds. If really fine Roses are desired they should be planted a fair distance apart and have the ground all to themselves. An abundance of beautiful Roses may, however, be grown by planting in almost any convenient place in the flower garden where not too much shaded, if moderate attention is given to pruning, insects, &c.

Soil and Planting.—Generally speaking, Roses will thrive in any good garden soil, but as they have a decided preference for that which inclines to the clayey or loamy, it is advisable in planting, where the soil is not of a suitable nature, to work in a good portion of well-decayed manure, and good rough fibrous loam; where the soil is heavy, a moderate dressing of coal ashes will improve it, and if too wet drainage must be provided. November is the best month for planting, but this may be done in any favourable weather during the Winter months. In planting, open a good-sized hole and fill with freshly prepared and suitable soil, taking care to plant firmly; dwarfs should be planted with the juncture of their stems below the surface, and standards should be firmly staked and tied to prevent their disturbance by the wind.

Pruning.—To ensure a vigorous growth and fine blooms, freshly planted, and indeed all hybrid perpetual and other outdoor Roses, should be closely pruned about the early part of March, or later according to season. When the leaf-buds begin to expand carefully thin out all weak-growing shoots or wood from the middle of the plant, and prune down the main stems to two or three eyes or buds on each stem. An occasional slight pruning and thinning-out during the Summer, when the first lot of bloom is going off, will greatly prolong the time of flowering and improve the quality of the late blooms.

Manuring and Watering.—Roses are gross feeders and will absorb almost any quantity of manure. A good top-dressing of well-decayed manure should be laid on the beds in Autumn, and may be lightly dug in in Spring, or, if appearances are not of much consequence, a rich mulching of short manure may be placed about the roots in Spring, and will stimulate the plants into splendid growth and flower. If the weather is dry when the plants are coming into bloom, they should have liberal waterings two or three times a week, and if fine blooms are desired for exhibition the buds should be thinned out, and liquid manure may be given freely once or twice a week, this, with frequent stirrings of the surface of the beds will keep the plants in good growth and vigour.

Insects.—Early in the season, when growth has fairly commenced, caterpillars should be carefully looked after and picked off by hand, and if the plants later on are attacked by green-fly, they should be syringed at night, or early morning, with tobacco-water, fir-tree oil, or some other cleanser. One of the best remedies for green fly is a solution of quassia chips and soft soap. Boil four ounces of the chips fifteen minutes in a gallon of soft water, then strain, and whilst cooling add four ounces of soft soap, which will readily dissolve, add to this, when cool, another two gallons of soft water, when it will be strong enough to apply with a brush or syringe, and is very effective.

Hybrid Perpetual Roses in Collections.

These collections are carefully made up to ensure a fine variety, and customers ordering may depend on their giving the most unqualified satisfaction. In all cases good healthy plants will be sent, and in the best variety of colour, &c., that can be included in the number given, but in all instances the selection must be left to ourselves.

CARRIAGE FREE. IMPORTANT NOTICE.

To meet the requirements of many of our numerous customers, we send all these collections Carriage Free to any part of the British Isles at prices quoted, and we make no charge for packing.

			White Baroness. Purest white; very large	—	1 0
			Xavier Olibo. Velvety black	—	1 0

Roses—Tea-scented and Noisette.

This beautiful class is distinguished by the peculiar and delightful fragrance of the flowers, and the many charming tints and shades of yellow, rose and salmon colour, not to be found amongst the hybrid perpetuals. The individual blooms are of exquisite form, and invaluable for button-holes or bouquets. They are especially suited for pot culture in the conservatory, and planted outside on slightly raised beds in a sheltered position, and given a slight protection in Winter, they will furnish some beautiful flowers throughout the Summer and Autumn.

Our own selection, in choice variety, plants mostly established in pots, per doz. 15s., 18s., and 2ls.

MADAME LAMBARD.

	Dwarfs—s. d.
Adam. Rose, shaded salmon, large, globular, and very sweet	1 6
Amazon. Deep lemon yellow; a very useful sort for cutting	1 6

Climbing Roses, Hardy and others.

The following list of Climbing Roses includes the most useful and beautiful varieties in cultivation. For pillars, walls, or arches in exposed positions the fine old varieties of Ayrshire, Evergreen, Banksia, Boursault, Cheshunt Hybrid, Gloire de Dijon, and Aimee Vibert are the most desirable; whilst for greenhouse work the beautiful Marechal Niel, Climbing Niphetos, and Climbing Devoniensis are the best.

TURNER'S CRIMSON RAMBLER.

From T. R. RICHARDSON, Esq., Croydon.

Mar. 4th.
"We were very pleased with the Dwarf Roses you sent us last year, although put in late they bloomed well."

[From W. E. GWILLAUME, Esq., Botley.

Jan. 15th.
"The Rose Trees you sent me last season did remarkably well, some magnificent blooms, and kept cutting all the summer up to the beginning of October, in fact some in November."

From Mr. S. E. EVANS, Holyhead.

April 27th.
"I cut 400 Roses off the two Gloire de Dijon received from you about two years ago."

From Mrs. GRIFFIS, Bath.

July 20th.
"Mrs. Griffis' Roses are splendid this year, admired by all who see them."

Miscellaneous Fruit Trees, &c.

Our Nursery Grounds are especially favourable for the cultivation of Fruit Trees, and to meet the constantly increasing demand amongst our customers, we annually rear many thousands of Apples, Pears, Plums, Cherries, Peaches, Apricots, &c. All are grown hardily, and the plants lift with abundance of fibrous roots, a very essential requirement for their successful transplantation, after-growth, and fruitfulness. A glance at our list will show that we offer a very fine selection of the choicest varieties, and we respectfully invite all who have not yet favoured us with their orders for Fruit Trees to give us a trial, as we feel sure they will be highly pleased with the quality of the plants we send.

The prices quoted per dozen for Apples, Pears, Gooseberries, Currants, &c., are for our own selection of kinds, and are governed principally by the size and strength of the plants supplied.

NEW APPLE—VICAR OF BEIGHTON.

NEW APPLE—Vicar of Beighton.

WE have much pleasure in introducing this fine Apple to the horticultural public, who, we feel sure, will highly appreciate its many good qualities. A seedling raised in the Vicarage Gardens at Beighton, Norfolk, it has proved itself one of the handsomest, most prolific, and best keeping apples in cultivation. The fruit is large and roundish, and when ripe of a deep bright crimson colour, mottled, and striped with yellow and green, giving it the most beautiful appearance, which, if well kept, it retains till April or May; whilst its pale yellow flesh is of fine flavour, juicy, and all that can be desired in a first-class kitchen Apple. Will prove a most valuable sort for market growers on account of its very handsome appearance and excellent keeping qualities.

Dwarf Bushes or Maidens, each 2s. 6d. Standards, each 3s.

NEW APPLE—Chelmsford Wonder.

A VERY fine late keeping culinary variety. Fruit large, skin smooth, deep yellow shaded with brilliant crimson on the side exposed to the sun, and marked with small irregular streaks of deeper crimson. Flesh yellow, tender, rich, and pleasantly brisk, with a delicate aroma.

Strong Maidens, each 2s. 6d. Standards, each 3s. 6d.

SELECT APPLES.

Our Apples are mostly worked on the ordinary or crab stock, we can, however, supply several of the best varieties in dwarfs on the paradise stock, and shall be happy to furnish a list of these if requested.

Dwarfs or Bushes in fine variety	per 100, 80s.; per doz. 10s. 6d.; each 1s.
Dwarf Trained	each 3s. 6d. to 5s.
Pyramids, our own selection of varieties	per doz. 21s. to 54s.; each 2s. to 5s
Standards, our own selection of choice varieties	per doz. 18s., 21s., 24s.; each 1s. 6d. to 2s. 6d.

Special Quotations for Larger Quantities.

BEAUTY OF BATH (new).

This fine new early Dessert Apple, on account of its earliness, extremely handsome appearance, good flavour, and free cropping qualities, will, eventually, both for market purposes and private use, take the leading place among first early Apples.

The "BEAUTY OF BATH" is fit for use at the end of July and early part of August. It immediately follows the Juneating, and is earlier than the Irish Peach, from which it is quite distinct. The fruit is of medium size, round and flattened, the ground colour a yellowish green, beautifully striped and spotted with crimson toward the sun; the flesh is firm and pale yellow, and it has a brisk, sub-acid flavour far superior to that of other early Apples. It is a certain and free cropper. Our stock trees have not failed once during the last seven years, and it will on this account be a valuable market variety.

Dwarfs, each 1s. 6d. Standards, each 2s. 6d.

General List.

D denotes dessert, K kitchen.

APPLE. PEASGOOD'S NONSUCH.

- Ashmead's Kernel (D.)** A first-class dessert Apple; flesh yellowish, crisp, and juicy; highly aromatic. Nov. to May.

And others.

Grape Vines.

Our stock of these is a very fine one; the canes have been grown from eyes without bottom-heat, and are remarkably well ripened, short-jointed, and the buds are thoroughly matured and plump.

The fruiting canes we offer are strong and stout, from eight to ten feet in length; and if cultivated in pots will bear from eight to twelve bunches each next season.

H denotes those varieties that require to be grown in a heated vinery.

C denotes those suitable for growing in a cool vinery.

Strong planting canes, in pots each 7s. 6d.
Fruiting canes, in pots, very fine each 10s. 6d.

“THE MOST PRODUCTIVE GOOSEBERRY IN CULTIVATION.”**“WHINHAM'S INDUSTRY” GOOSEBERRY.**

THIS superb variety has fairly established its reputation as one of the finest and most profitable Gooseberries in existence. The fruit are of enormous size, and when ripe, of a dark, dusky red colour; it is of fine quality, and cannot be surpassed for preserving. The plant is of robust growth, and, as shown in our illustration, is marvellously prolific. Upwards of three tons of splendid fruit have been gathered from half-an-acre, and as much as twenty-six tons of this fine Gooseberry have been grown on $3\frac{1}{2}$ acres.

“Whinham's Industry” Gooseberry attains a marketable size quite three weeks in advance of any other variety of Gooseberry at present in cultivation, and in consequence commands the highest prices obtainable in the market. It is undoubtedly the heaviest cropping variety in cultivation, and has never been known to fail in producing a splendid crop even in seasons when other varieties were a failure. It possesses a peculiar advantage over other kinds by coming into leaf some time before it flowers, consequently the foliage protects the bloom from destructive Spring frosts. Another property is that it succeeds better than any other variety under the shade of trees.

Strong bushes, per 100, 40s.; per doz. 6s.; each 8d.

CHERRY, MAY DUKE.

Nuts and Filberts.

We have a very fine stock of these in good strong plants, comprising such fine varieties as Cosford, Kentish Cob, Filbert, white, red, purple-leaved and frizzled, Norwich Prolific, &c.

Bigarreau. Large and of first-rate quality; a capital bearer. July.
Bigarreau Napoleon. Large, rich, and good; a most abundant bearer, very late. August.
Bedford Prolific. Large, black, hardy and prolific.
Black Bigarreau. Fruit large and good; an excellent variety.
Black Eagle. Fruit of good size and flavour; an excellent black cherry. July.
Black Heart. A capital early black cherry of good quality, and a free bearer.
Black Tartarian. Large, juicy, sweet, and rich; great bearer; handsome and good. July.
Early Rivers. Large, black, early and rich flavoured, hardy and a capital bearer; one of the finest early cherries.
Elton. Large, rich and excellent. July.
Frogmore Early Prolific. A capital early sort, very prolific.
Governor Wood. Large, yellow, mottled with red, sweet and rich; a good bearer, excellent. July.
Imperatrice Eugenie. Large, flesh red, tender, and juicy; a variety of *May Duke*, and ripens ten days earlier. July.
Knight's Early Black. Flesh deep purple, tender, rich, and juicy; a delicious early cherry. End of June.
May Duke. Large, juicy, rich, and excellent; an abundant bearer as a standard or a bush. July.
Morello. Large, acid fruit, very useful for the kitchen; a prolific bearer. July and August.
Ohio Beauty. Large, an American sort of excellent quality. July.
Reine Hortense. Very large; colour dark red; fruit handsome, juicy, and sweet.
White Heart. Flesh firm, sweet and pleasant flavoured. End of July.

Gooseberries.

WHINHAM'S "INDUSTRY." A superb variety, bearing a wonderful profusion of large handsome fruit, which are of a dull red colour when ripe. This is one of the best and most prolific gooseberries in cultivation, and has proved itself invaluable for culinary and market purposes.

Strong bushes, per 100, 40s.; per doz. 6s.; each 8d.

Keepsake. A very large straw-coloured variety of excellent flavour, and one of the best and earliest for gathering green.
 Strong bushes, per doz. 6s.; each 8d.

A good collection of the best Lancashire Prize and other varieties.

Strong Bushes per 100, 21s. to 35s.; per doz. 3s., 4s. 6d., and 6s.

Walnuts—

Fine Standards each 2s. 6d. to 7s. 6d.

Fruit Trees Received in Winter during Frost.

The Trees closely packed as received, should be placed in a cellar, or some place where the frost cannot penetrate, and remain there till a thaw takes place, and then be unpacked and planted. With this treatment, even if they are frozen through when received, they will not sustain the least injury.

PROPER DISTANCES FOR PLANTING FRUIT TREES.

			Feet apart.			Feet apart
Apples.	Pyramids or bushes	6 to 12	12 to 15
„	Espaliers	12	12 to 15
Apricots.	Against walls	12 to 15	6
Cherries.	Ditto, or espaliers	12 to 15	12
„	Pyramids	6	12 to 15
Currants	4 to 6	6
Figs.	Against walls	12 to 15	12 to 15
Gooseberries	4 to 6	12 to 15
Nectarines.	Against walls	12 to 15	12 to 15
Peaches.	Ditto	12 to 15	6

per doz. 4s. 6d.

Crimson Clove. The fine old spice-scented variety
per doz. 5s.; each 6d.

White Clove. Pure white, deliciously scented
per doz. 5s.; each 6d.

Strawberry Plants—Prepared Runners.

Strawberries when well-grown are wonderfully prolific, and constitute one of the most profitable crops, really good fruit always meeting with a ready sale at high prices. These delicious and wholesome fruit should be grown freely in every garden where there is room for them. As will be seen, our collection of choice Strawberries, a select list of which we offer below, contains all the finest varieties in cultivation.

The best system of culture for the production of really fine and richly-coloured fruit is to plant in good deep rich soil, in rows 2½ feet apart and 18 inches apart in the row; keep the plants free of runners and give a liberal top dressing of well-decayed manure in Winter.

GRAND VARIETIES OF RECENT INTRODUCTION.

ROYAL SOVEREIGN (Laxton). This fine variety ripens a few days after *King of the Earlies*, and in the open air the first fruits are ready with *Noble*. It may be fairly looked upon as the long sought early, highly-flavoured, and improved *Sir Joseph Paxton*, and just the fruit wanted to precede that popular variety. Per 100, 20s.; per doz. 3s. 6d.

SENSATION (Laxton). An enormous second early or mid-season variety of good flavour, and probably the largest Strawberry ever introduced. *First Class Certificate, Gardening and Forestry Exhibition, 10th May, 1893.* Per 100, 10s.; per doz. 1s. 6d.

COMPETITOR (Laxton.) A very large, handsome, and luscious early fruit. A good doer in every respect, and will probably displace *Nicaise* for forcing purposes. Per 100, 7s. 6d.; per doz. 1s. 6d.

LAXTON'S No. 1. The Earliest of all Strawberries. This precocious Strawberry is a seedling from *Noble*, fertilized by *May Queen*, and is unquestionably the earliest in the market. Per 100, 20s.; per doz. 3s. 6d.

NEW AND VALUABLE STRAWBERRIES

Raised by Mr. William Allan, gardener to the Right Hon. Lord Suffield, and known as the GUNTON PARK STRAWBERRIES.

ALL have received FIRST-CLASS CERTIFICATES from the Royal Horticultural Society; also the Highest Awards at Edinburgh, Wolverhampton, Earl's Court, and Norwich.

LORD SUFFIELD. Plant of good habit and foliage, very prolific, fruit large and handsome, inclining to cockscomb shape, dark crimson flesh, firm and richly flavoured, ripening after *President* and *Paxton*. Per 100, 10s. 6d.; per doz. 1s. 6d.

GUNTON PARK. Fruit extra large, varying in shape from cockscomb to obtusely conical, dark crimson scarlet, and of a pleasant brisk flavour, flesh firm and light coloured, a fine early kind, very useful for forcing, and bearing in long succession. Strong runners, per 100, 10s. 6d.; per doz. 1s. 6d.

EMPRESS OF INDIA. Plant of compact habit and a fine bearer, fruit obtusely conical, bright scarlet, flavour approaching that of *British Queen*, an excellent free setting variety, and one of the best for forcing. Strong runners, per 100, 10s. 6d.; per doz. 1s. 6d.

Clematises.

These magnificent hardy climbers are highly popular amongst amateur growers, and considering their great beauty, freedom of blooming, and the facility with which they may be trained on any kind of wall, trellis, verandah, or pillar, and in almost any aspect, it is surprising that Clematises are not found in abundance in every garden. The plants we offer are established in pots, and can be removed at any time of the year. The sorts blooming after June are the best for bedding purposes; they flower on the young wood, and therefore require before growth commences in Spring, to be cut down to within six or twelve inches of the ground, as likewise do all the late-flowering kinds; and early sorts, flowering from May to July on the old wood, should be pruned similarly to Roses. When the selection of sorts is left to ourselves, customers may rely on our sending a really good variety.

Choice named varieties from the above list, our own selection, per doz. 18s., 21s., and 24s.

Clematis indivisa lobata.

WE offer five plants of this beautiful evergreen greenhouse species. The foliage is of a dark olive green and of great substance; the flowers are of the purest white, very fragrant, and produced in wonderful profusion. Highly recommended as a greenhouse climber. The flowers are very neat and exceedingly useful for cutting. Fine strong plants, each 2s. 6d.

Clematis montana.

A BEAUTIFUL early, free-flowering variety, blooming in May and June, and producing a profusion of small, pure white starry flowers, somewhat resembling those of the white wood Anemone. Splendid for covering trellises, porches, &c. Very hardy and highly recommended. Each 1s.

Greenhouse and Stove Plants.

Adiantum cuneatum. Maiden-hair Fern
6d., 1s., and 2s. 6d.

Adiantum Farleyense. Very fine variety
1s. 6d., 2s. 6d., and 3s. 6d.

Allamanda Hendersoni. Beautiful stove plant
each 2s. 6d. and 3s. 6d.

Allamanda Williamsi. A beautiful shrubby growing variety, flowers $3\frac{1}{2}$ to $4\frac{1}{2}$ inches in diameter, of a rich yet delicate yellow, and blooms freely at every point each 7s. 6d.

Aralia Sieboldi variegata. Beautiful plant
each 3s. 6d. and 5s.

Aralia Veitchi. Very graceful each 5s.

Araucaria excelsa (Norfolk Island Pine.) A fine plant for the conservatory each 3s. 6d., and 5s.

Asparagus plumosus each 1s. 6d. and 2s. 6d.

Aspidistra lurida variegata. A very beautiful and distinct plant, with handsomely variegated foliage
each 3s. 6d. and 5s.

Azalea Indica. We offer a choice collection, finest varieties, all in good healthy flowering plants, varying in height from about ten inches to sixteen inches from the pots. Our own selection, per doz. 24s., 30s., 40s., 50s., and 60s., according to size and variety; each 2s., 2s. 6d., 3s. 6d., 5s., and 7s. 6d.

Azalea Mollis. Fine healthy plants well set with flower-buds each 1s. 6d., 2s. 6d., and 3s. 6d.; per doz. 18s. to 30s.

Begonias, Rex varieties. Well-known beautiful foliage plants, for the greenhouse or conservatory
each 1s. 6d. and 2s. 6d.

Begonias, tuberous-rooted. Fine varieties
per doz. 9s. and 12s.

Bougainvillea glabra Sanderiana. First Class Certificate, Royal Horticultural Society, 1894. The most useful and brilliant flowering plant known, either for conservatory or stove; magnificent rosy crimson bracts and yellow blossoms in great abundance each 5s.

Caladiums. The most beautiful varieties
each 2s. 6d. and 3s. 6d.

Camellia Japonica. Our collection of these includes all the finest of the English and continental varieties, and our plants are amongst the healthiest and best budded we have ever seen. The height of plants from the pots varies from about a foot to eighteen inches. Our own selection, per doz. 30s., 40s., 50s., and 60s.; each 2s. 6d., 3s. 6d., 5s., and 7s. 6d.

Carnations, Perpetual or Tree. Established plants in pots per doz. 18s., 21s., 24s., and 30s.

Clerodendron Balfouri. Useful climber
each 2s. 6d.

Cobæa scandens variegata. Useful climber for the greenhouse
each 1s. 6d. and 2s. 6d.

Coprosma Baueriana variegata. Beautiful greenhouse plant, with handsomely variegated foliage
each 1s. 6d. and 2s. 6d.

Cœlogyne cristata. Some fine plants
each 10s. 6d. to 42s.

Crotons. A fine collection of choice sorts in nice young plants
each 2s. 6d. and 3s. 6d.

Crassula jasminioides. Pure white flowers, similar in form to those of Jasmine or Bonvardia; capital greenhouse plant, good for cutting each 9d.; 3 for 2s.

Daphne Indica alba. Pure white, deliciously scented variety
each 2s. 6d., 3s. 6d., and 5s.

Daphne Indica rubra. Very sweet
each 2s. 6d. and 3s. 6d.

Eucalyptus citriodora. Deliciously scented
each 1s.

Eulalia zebrina. Very handsome each 2s. 6d. and 3s. 6d.

Ficus elastica variegata. Beautifully variegated with yellow, grand novelty
each 3s. 6d. and 5s.

Ficus elastica (India-rubber Plant)
each 1s. 6d. and 2s. 6d.

Gardenia intermedia. Well-known stove plant, beautiful pure white, deliciously scented, double flowers
each 2s. 6d., 3s. 6d., and 5s.

Gloxinias, grandiflora erecta vars.
per doz. 9s. and 12s.

Greenhouse Ferns. A fine selection
per doz. 6s., 9s., 12s., and 18s.

Hoya carnosia. A very charming stove climbing plant, producing thick wax-like flowers, which last for a long time
each 2s. 6d.

Kentia Belmoreana
" **Fosteriana**
" **Canterburyana** } Beautiful Palms
each 2s. 6d. and 3s. 6d.

Lapageria rosea. Beautiful greenhouse climber
each 2s. 6d., 3s. 6d., and 5s.

Lapageria alba. Lovely pure white, wax-like flowers
each 7s. 6d. and 10s. 6d.

Palms. A nice assortment of choice plants, suitable for the dinner table
each 2s. 6d., 3s. 6d., and 5s.

Pandanus Veitchi variegata
each 1s. 6d. and 2s. 6d.

Panocratium Zeylanicum. Beautiful dwarf growing species, flowers large, pure white, very fragrant
each 2s. 6d.

Passiflora princeps. Lovely stove climber, with large, scarlet flowers
each 2s. 6d. and 3s. 6d.

Primula obconica. Pretty evergreen species, bearing numerous umbels of pale lilac flowers; makes an excellent pot plant for the greenhouse or cool pit, and is in bloom throughout the Winter
each 6d. and 1s.

Schubertia grandiflora. The best sweet-scented white-flowered plant for cutting, larger flower than Stephanotis, equally sweet and lasts longer cut, nice plants
each 3s. 6d.

Stephanotis floribunda. Well-known beautiful climber
each 2s. 6d. and 3s. 6d.

Swainsona galegifolia alba. Lovely clusters of pure white pea-like flowers
each 1s. to 2s. 6d.

Tacsonia van Volxemi. Brilliant climber for the greenhouse
each 1s. 6d. and 2s. 6d.

Greenhouse Plants in choice variety, our selection, per doz. 18s., 24s., 30s., and 40s.

Hardy Evergreen Shrubs & Coniferous Plants.

We have a fine collection of these in sturdy, healthy young plants, all of which were transplanted during the past season, and are in splendid condition for removal.

Our own selection of sorts, { ... height 1 to 1½ ft., per doz. 9s.; per 50, 30s.; per 100, 55s.
 in good variety { ... „ 1½ to 2 ft., „ 12s.; „ 40s.; „ 75s.
 { ... „ 2 to 3 ft., „ 18s.; „ 65s.; „ 110s.

RHODODENDRONS—Garden Hybrids.

THE cultivation of these beautiful hardy evergreen flowering shrubs has been greatly on the increase since the discovery that peat soil is not absolutely necessary for their successful growth. Sandy peat free from stagnant moisture probably suits them best, but they will do well in sandy loam or even clayey loam, if free from calcareous matter, whilst we have seen many beautiful specimens growing in ordinary light garden soil. The colours of the flowers range from the richest and most intense crimson to the most delicate shades of rose and pure white, the masses of beautiful bloom having a charming appearance with the rich dark green foliage.

Choice named varieties. Our own selection, according to size each 2s. 6d., 3s. 6d., and 5s.; per doz. 24s., 30s., and 40s. Standards and half-standards

each 7s. 6d. to 21s.
Unnamed Hybrids. Good kinds, producing a beautiful variety per doz. 12s., 18s., 24s., and 30s.

Rhubarb.

Strong plants of the following, each 9d.; per doz. 7s. 6d.

Myatt's Linnæus Royal Albert
 Scarlet Defiance Myatt's Victoria

Paragon (Kershaw). The most wonderfully prolific kind known; as much as £240 has been made off a single acre for market purposes ... each 1s.; per doz. 10s. 6d.
Scarlet Queen. The stems are red inside and out, retains its colour when cooked, and is of a rich cherry flavour each 2s. 6d.

Sea Kale.

Our forcing Sea Kale this season is remarkably fine.

Strong planting roots ... per 100, 7s. 6d.
Good strong roots, for forcing per doz. 1s. 6d.; per 100, 10s. 6d.
Extra strong roots, for forcing per doz. 2s.; per 100, 15s.

Violets—Sweet-scented.

THESE deliciously-scented and ever welcome favourites, so extremely useful as cut flowers for bouquets, button-holes, &c., may, with a little management, be had in abundant bloom throughout the Winter and Spring months—a time when they are especially valuable. The stock Plants should be divided in April or early in May and planted out in rich soil in a partially shaded position, the doubles in rows one foot apart, and nine inches apart in the rows, the singles one foot apart each way. As growth commences, the young shoots or runners should be removed and the plants should be watered in the evening in dry weather, whilst if extra fine plants are required, they should have a mulching of well-decayed manure from an old mushroom bed or cucumber frame. Towards the end of September the plants may be lifted and planted into specially prepared frames placed in a south aspect, and partially filled with stable litter, leaves, &c., with about six or eight inches of soil on the top. The plants should be placed sufficiently close together to fairly fill the space without crowding, and should be as near the glass as the foliage will admit. When planted, give a thorough watering and keep close for a few days, after which admit air freely at every opportunity through the Winter. The glass may be entirely removed in sunny weather when there is no frost, and in all mild weather plenty of ventilation should be given. *Marie Louise*, *Count Brazza's*, and *Neapolitan* are the best of the doubles to be grown in this way, and when treated as recommended above will produce some grand flowers.

VIOLETS—COUNT BRAZZA'S WHITE AND MARIE LOUISE.

DOUBLE-FLOWERED VARS.

	each—s.	d.
<i>Belle de Chatenay White</i> . New double; pure white, tipped with bluish purple; very double ...	per doz.	6s. 0 9

Vegetable Seeds for Autumn Sowing.

DANIELS' DEFIANCE CABBAGE.

ONION—DANIELS' GOLDEN ROCCA.

Peas.

DANIELS' NEW PEA—GEM OF THE SEASON.

The earliest Pea in cultivation, height three feet, and very prolific. This early Pea is the most valuable for general use ever sent out; is always the earliest, whether sown in Autumn, Winter, or Spring; is also the hardiest, resisting frost better than any other kind; and is not affected by mildew. Being very prolific, and of a most delicious flavour, will be found most desirable for marketing, and invaluable for the private garden.

Price 2s. per quart.

Sangster's No. 1 Improved. Extra select stock. Fine early sort per qt. 1s. 0d.
 WILLIAM I. Selected stock „ 1s. 4d.
 Earliest of All „ 1s. 4d.

MUSHROOMS ALL THE YEAR ROUND MAY BE HAD BY USING DANIELS' BEST MILLTRACK SPAWN.

In Bricks, each 6d., 4 bricks 1s. 6d., 16 bricks or one bushel 5s.

COMPLETE INSTRUCTIONS FOR CULTIVATION WILL BE SENT WITH EVERY ORDER.

EVIDENCE OF QUALITY.

"Your Mushroom Spawn is the most prolific I have ever used, and I have tried a good many. It is with difficulty my employer's household has been able to dispose of the produce for some time past, the bed from your Spawn having been so fruitful."—HERBERT G. BAKER, Gardener to W. H. Haekbloek, Esq., Coltishall, Norwich.

I planted your Mushroom Spawn as directed, only putting it in long boxes in my small vinery. It certainly took its own chance, as very little attention has been given it, and this morning, to my surprise, there are at this moment more than to repay all the cost of Spawn. Your other Seeds have simply turned out splendid, and I can recommend them for any garden."—Capt. M. M. FESTING, Holly Cottage, Batcombe, Somerset.

FINE CUT RED SPIDER,

The most effectual in the market.

1s. 6d. per lb.

TESTIMONIALS.

From **Mr. GOLDING**, Tredegar.

"The Wreath arrived on Saturday morning and in good condition; it was highly satisfactory."

From **Miss HARVEY**, South Lowestoft.

Sept. 3rd.
"Miss Harvey begs to inform MESSRS. DANIELS she is quite satisfied with the Cross, in fact it is simply perfect, and it arrived most beautifully fresh. Mr. R. H. Reeve is also very pleased with the Wreath sent him."

From **Mrs. PENISTON**, Doncaster.

"Mrs. Peniston begs to thank MESSRS. DANIELS BROTHERS for their attention. The Wreath arrived safely. It was very beautiful, and gave great satisfaction."

From **W. S. LONG, Esq.**, Windsor.

April 7th.
"The Bride's and Bridesmaids' Bouquets were duly delivered at Saxlingham, and gave the highest satisfaction. Enclosed is cheque in payment."
