Asparagus in Field	3x1 ft.
Rhubarb	15x15 in.

Yellow Transparent, the queen of early Summer Apples. Orchards of this variety pay large dividends.

Apples

Prices All Apples: 2-year, 4 to 6 ft., \$1.00 each; 3-year, 6 to 8 ft., \$1.25 each.

Summer Varieties

- EARLY HARVEST.** Medium size, clear golden yellow; juicy, crisp and good flavor. Very early.
- POLLY EADES.** A new introduction from Henderson Co., Kentucky. This Apple, of a golden yellow, ripening about August 1st, is very highly recommended. A mild, sub-acid flavor makes this Apple a favorite with everybody who has given it a trial.
- RED ASTRACHAN.** Large, yellow, streaked with crimson; flesh tender, juicy and pleasant. The tree is a splendid grower.
- YELLOW TRANSPARENT.** A Russian Apple of great value. Large, round and clear pale yellow skin. An early bearer and very prolific. Tree vigorous and upright. Does well everywhere.

Fall Varieties

- MAIDEN BLUSH.** A beautiful Apple. It begins to ripen about the latter part of August and continues until late in October. Desirable for cooking or market, also one of the best for drying. Tree is handsome, a rapid grower, and bears large crops. Fruit very regular and beautifully marked with red and yellow. Flesh white, tender and pleasant.
- WEALTHY.** Comes into bearing as early as the Summer Apples, producing immense crops annually, the most valuable Apple today for the small or the large orchard. Fruit above medium to large; color, pale yellow, blushed and marked with stripes and splashes of red; very attractive. Flesh fine, crisp, tender and juicy, agreeably sub-acid; good to extra good. First hardiness.

Winter Varieties

- BALDWIN.** This Apple stands at the head of all New England Apples, and is unquestionably one of the best Apples cultivated. Tree vigorous, upright and spreading. An abundant and regular bearer. Does well in all sections of the country. Fruit large and roundish. Yellowish in the shade, but nearly covered with crimson, red and orange where exposed. Russet dots. Flesh yellowish white. Crisp and very highly flavored.
- DELICIOUS.** A remarkable variety rapidly taking first rank both for commercial and home orchards. No new variety has ever so quickly gained popularity in so many different Apple sections of the country. Fruit large, nearly covered with brilliant dark red; flesh fine grained, crisp and melting, juicy, with a delightful aroma; of very highest quality. A splendid keeper and shipper.
- GRIMES' GOLDEN PIPPIN.** A valuable American Apple of extreme hardiness, it withstands injury during severe Winters and never breaks in its limbs. An annual and productive fruiter. Tree vigorous, upright and spreading. Fruit medium size, yellowish, slightly russeted, fine grained, juicy, rich and spicy. Excellent for dessert. A long keeper. One of the most popular of the large golden yellow Apples.
- JONATHAN.** Originated in the state of New York. Succeeds wherever grown. Perfectly hardy, and is productive in all soils, which makes it one of the most desirable Apples. Fruit of medium size, very regularly formed. Skin thin and smooth. Yellow ground almost covered with lively red stripes deepening into dark red in the sun. Flesh white, very tender and juicy, with a vinous flavor. Very valuable for home use or market. It is a long keeper.
- STAYMAN'S WINESAP.** Medium to large; oblate conical, greenish yellow, mostly covered and indistinctly splashed and mixed with dull dark red with medium numerous gray spots; flesh yellow, firm, tender, juicy, mild sub-acid, aromatic; quality best. Another seedling of Winesap, originated in Kansas, is larger and more beautiful.
- WINESAP.** Medium to large, red nearly all over, firm, sub-acid, an excellent keeper. Tree is very healthy and an excellent grower. One of the best.

- WINTER BANANA.** Large to very large. One of the most beautiful Apples ever grown. Clear light yellow with cheeks of brilliant red. Flavor unexcelled. Fine for dessert or cooking.

Crab Apples

Succeed in all sections; valuable for cider, preserving, jelly or ornament, and some of the improved sorts are excellent for eating. Sent to the eastern markets they meet ready sale.

HYSLOP. Almost as large as Early Strawberry Apple; deep crimson; very popular on account of its large size, beauty and hardiness. 3-yr. trees, \$1.25 each.

Delicious Apple.

The above reproduction is made from a photograph of the genuine J. H. Hale Peach—the King of all Peaches.

Peaches

Prices All Peaches: 1-year, 3 to 4 ft., 60c each; 1-year, 4 to 5 ft., 75c each; 2-year, 5 to 7 ft., \$1.00 each.

The best soil for the Peach is moderately rich, somewhat sandy loam, but will succeed in almost any soil. The ground should be clean and mellow around the tree. Peach trees are easily cultivated and their freedom from disease, the short time it takes to come into bearing and the immense demand for the fruit makes them extremely profitable.

Careful examination should be made each season, and all borers removed with a knife. A half-peck of air-slacked lime or leached ashes placed around the trunk of the tree in May and allowed to remain until October, affords protection against depredations of this pest.

MAYFLOWER (Semi-cling). The earliest of all Peaches; red all over; medium size, slightly oblong and the beautiful solid red color makes it sell well on the market. Tree hardy, healthy and vigorous; a late bloomer, thus rarely getting killed by late Spring frosts. It should be in every orchard or fruit garden.

GREENSBORO (Freestone). One of the finest early Peaches yet introduced, far superior to the Alexander and nearly twice the size of that variety. Fruit large, looks very much like a yellow Peach, but flesh is white, fine flavor, very juicy when fully ripe; tough thin skin, peels without the least trouble. An excellent shipper.

HILEY (Freestone). Large size, with a delightful red cheek; flesh is white, tender and exceedingly juicy. It is one of the best shippers among the early Peaches, and invariably brings top prices.

Mid-Season Peaches

BELLE OF GEORGIA (Large Type Freestone). One of the most delicious Peaches grown; very large, skin white, with red cheek; flesh white, firm and of excellent flavor. Tree is quite hardy, a rapid grower, very prolific. A fine shipper.

CHAMPION (Freestone). This Peach is large, early and productive; creamy white, with red cheek; flesh white, sweet, and delicious. Notable for its regularity in bearing.

CARMAN (Freestone). Large, resembling the Elberta in shape; creamy white or pale yellow, with deep blush; skin very tough; flesh tender and of fine flavor; juicy. Prolific beauty, profitable market variety. Ripens in August.

CHINESE CLING. Large. Transparent skin of cream color with streaks of red toward sun. Flesh creamy white, juicy and melting.

CRAWFORD'S LATE. Freestone. Large, yellow with red cheek, fine quality. Very popular old variety for market and canning.

ELBERTA (Freestone). Originated in Georgia, and is being planted most largely in the North, where it is regarded as the best market variety. Fruit large, yellow, with red cheek; flesh yellow, firm, juicy, fine quality. Tree very hardy and exceedingly productive, and is one of the best general sorts for all sections.

J. H. HALE (Freestone). Tree very hardy and productive; growth similar to Elberta type. Fruit very large, globular. Color deep golden yellow overlaid with bright carmine. Flesh solid, deep yellow, excellent flavor. Skin smooth. Season can be prolonged by an extra early pickling, as the fruit colors up a week or ten days before ripening, and if picked early will mellow up and become good edible Peaches. Exceptionally fine variety.

HEATH CLING. Large oblong shape, creamy white slightly tinged red. Very tender, juicy and melting. Rich flavor.

SALWEY. A large late freestone. Brownish red cheek. Deep yellow flesh of fine flavor. Very productive.

STUMP THE WORLD (Freestone). Large, nearly round, colored blush red on creamy white ground. One of the finest of midsummer Peaches.

WONDERFUL. Large. Color rich yellow with bright blush. Best quality.

Cherries

Price of All Cherry Trees: Sour Varieties, 2-year, \$1.00 each;
Sweet Varieties, 2-year, \$1.25 each.

There are few more desirable fruits than the Cherry. They are being planted more and more each year and there is always a brisk demand on the market for good fruit. Aside from their fruit value, they make very ornamental trees for the lawn, especially the Heart and Biggareau varieties, which are strong, vigorous growers, with large glossy leaves, and open, spreading heads. Cherries thrive in most any dry or well-drained soil; the fruit is delicious whether eaten out of hand or preserved. No home garden is complete without a few Cherry trees.

BLACK TARTARIAN (Sweet). Very large, purplish black, half tender, mild flavor and pleasant. One of the most popular varieties in all parts of the country. Last of June and beginning of July.

DYEHOUSE (Sour). A sure bearer, largely planted for early market; ripening a week before Early Richmond, which it closely resembles. June.

EARLY RICHMOND (Early May or Donna Maria) (Sour). Medium size, dark red, flesh tender, juicy, rich, somewhat acid. Tree vigorous profuse bearer, one of the best of its class, unsurpassed for cooking and preserving, the great Cherry of the West. Last of May to first of July.

GOVERNOR WOOD (Sweet). Fruit large, roundish, heart-shaped, light yellow, shaded with bright red, tender, juicy, rich and delicious. Tree vigorous and productive. One of the best sweet Cherries, and entitled to a place in every collection. End of June.

Montmorency Cherries.

MONTMORENCY (Sour). Large, red, rich acid. Very hardy and productive. A week or ten days later than Early Richmond. A Cherry of Richmond class, but larger and more solid. Strong, upright grower. Very valuable.

WINDSOR (Sweet). New; introduced from Canada. Fruit large, liver colored, resembling the Black Heart, but quite distinct; ripens a few days earlier than that variety; flesh remarkably firm and of fine quality. Tree hardy and very prolific.

Black Tartarian Cherries.

Apricots

The Apricot is one of the most delicious of our dessert fruits. It ripens between cherries and plums. The tree may be trained on walls, but a northern or western exposure is better. They grow in most any climate and are excellent for canning.

EARLY GOLDEN. Fruit small, roundish oval, pale orange color, flesh yellow, moderately rich and sweet. Tree vigorous with long slender branches. Middle of July. 2-year, \$1.25 each.

Early Golden Apricots.

catalog of Shrubs, Perennials, Trees, etc.
Mailed free on request.

Plums

Prices All Plums:

2-year, \$1.25 each; 3-year, \$1.50 each.

ABUNDANCE (Botan). Large to very large, oblong, amber, nearly covered with bright red and overspread with a thick bloom; flesh orange-yellow, juicy, melting and of delicious sweetness, stone small and flesh parts readily from it. This variety has attracted much attention throughout the country and is very highly recommended.

BRADSHAW. A very large and fine early Plum, dark violet-red, juicy and good. Tree vigorous, erect and productive. A valuable market variety. One of the best. Middle of August.

BURBANK. The Burbank Plum stands at the head of the celebrated Japanese varieties. It is proving remarkably successful the country over. No other Plum ever became so popular in so short a time. This is because it is practically curculio proof, and is perfectly hardy. Will keep fully two weeks in perfect condition after ripening.

SHROPSHIRE DAMSON. An improvement on the common Damson, being of the largest size of its class; dark purple; highly esteemed for preserving; tree vigorous and enormously productive. September.

Burbank Plums.

LOMBARD. Medium size, oval, violet-red; flesh yellow, juicy and pleasant. A great bearer, and particularly adapted to light soils. Tree vigorous and hardy; succeeds when most other varieties fail. The most popular and profitable Plum under general cultivation. Last of August.

GREEN GAGE. Medium size, roundish oval; skin greenish yellow marked with red in sun; flesh yellow, juicy and of excellent flavor. Tree a good grower and productive.

GERMAN PRUNE. Fair quality for dessert but most esteemed for drying and preserving. Large long, oval, purple with a thick blue bloom. Flesh firm, sweet and pleasant and separates from stone readily.

Lombard Plums.

Pears

The cultivation of this fruit is rapidly extending as its value is appreciated and the demand is increasing every year, making it one of the most profitable to plant. The melting, juicy texture, the refined flavor and the delicate aroma of the Pear give it rank with all other fruits. One of the most important points about the management of Pears is the gathering at the proper time. Summer Pears should be gathered at least ten days before they are ripe, and autumn Pears at least two weeks. Winter varieties may hang on until the leaves begin to fall; then place in a cool, dry cellar.

KIEFFER. A large, late variety. Very vigorous and prolific. Fruit yellow with crimson cheek. Flesh fair quality; good for canning. 2-year, 75c each.

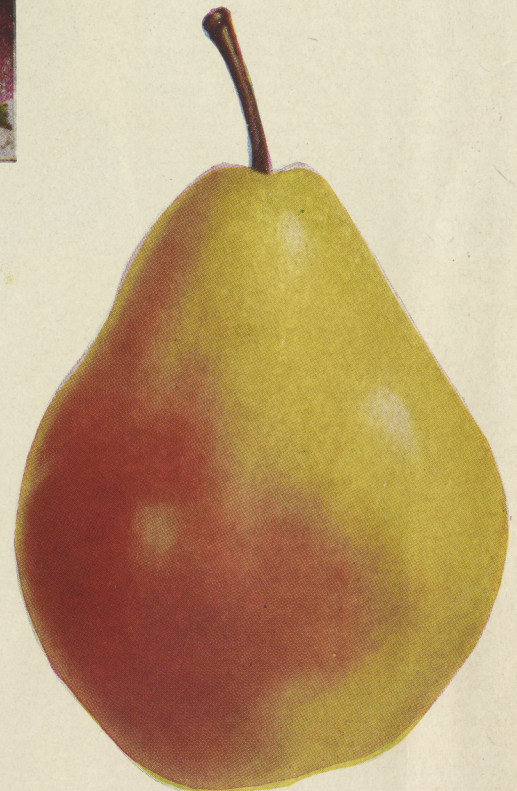

BARTLETT. The finest quality. Fruit very large and beautifully colored. Tree moderately vigorous. An old favorite. 2-year, \$1.25 each.

SECKEL. Small fruit of the highest quality and flavor. Also known as Sugar Pear. Unexcelled for home orchard. 2-year, \$1.25 each.

Quinces

When put up in the proportion of one quart of Quinces to about four quarts of other fruit, it imparts a delicious flavor. Quinces command a high price in the market. The tree is hardy and compact in growth and requires little space. It is productive, bears regular crops, and comes in bearing early. Will grow in any good garden soil, which should be kept mellow and well enriched. Fruit should be thinned out if it bears too freely.

CHAMPION. Large to very large, oblong, skin russeted about the stem, and of a bright yellow color, flesh tender and of good quality. Tree an early bearer and very prolific. Ripens about two weeks after the Orange Quince. Each, \$1.50.

Kieffer Pear.

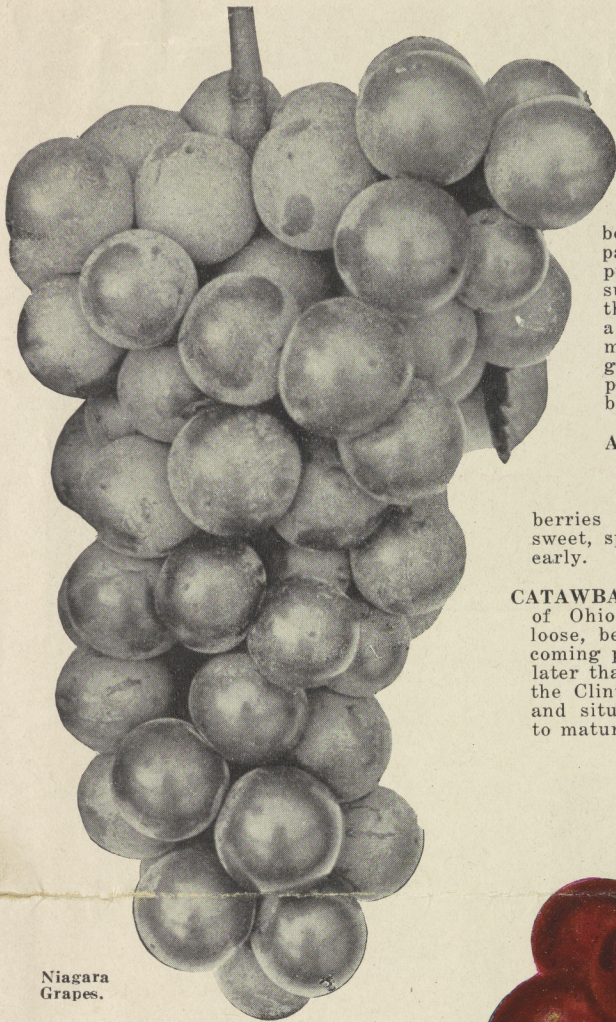

Grapes

Prices All Grapes: 2-yr., 30c each; 3-yr., 40c each; 4-yr., 50c each.

The culture of the Grape within the past few years has attracted a great deal of attention throughout the United States. Many vineyards of large extent have been and are still being planted in various parts of the country, and are proving a great pecuniary success. While some make this branch of horticulture a specialty from pecuniary motives, everyone owning a garden spot should devote a portion of it to a few of the best varieties.

AGAWAM. A dark red Grape of the Hamburg cross. Bunches large, compact, frequently shouldered; berries large, with a thick skin, pulp soft, sweet, sprightly; vine very vigorous. Ripens early.

CATAWBA. Well known as the great wine Grape of Ohio, Kentucky, etc. Bunches large and loose, berries large, of coppery red color, becoming purplish when well ripened; two weeks later than the Isabella, and a month later than the Clinton. Requires the most favorable soils and situation, good culture and warm seasons to mature.

Niagara Grapes.

CONCORD. One of the best, well tried, native Grapes. It is of very large size, both of bunch and berry, quality good, color black, covered with a thick, bluish bloom, flesh moderately juicy, rather buttery, very sweet. It is perfectly hardy, very vigorous in its habits of growth, very healthy and very productive. Ripens two weeks earlier than the Isabella. We think there is no Grape which has given so universal satisfaction as this, and it is constantly increasing in public favor as the variety grows older.

DELAWARE. A small Grape of exceedingly fine flavor. Dark wine colored berries in small compact bunches. Very prolific. The peculiar sweet flavor makes it in great demand both as a table Grape and for wine.

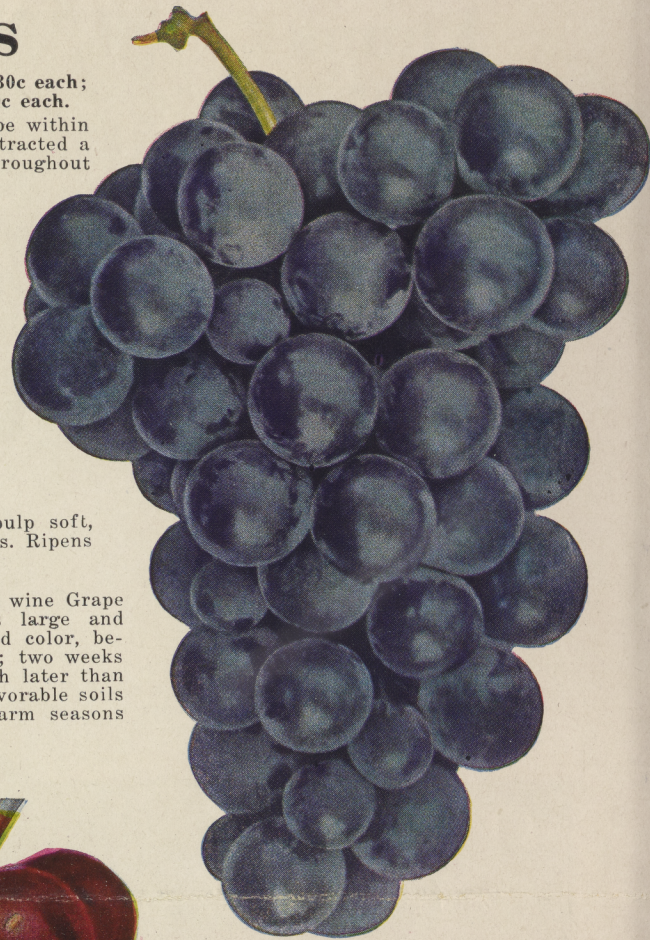

MOORE'S EARLY. Clusters of medium size; berries large, round, black with heavy blue bloom. Desirable for market on account of its earliness; well suited to Canada and northern portions of the United States by its hardiness, but succeeds admirably in the South also.

NIAGARA. This white Grape has attracted the most attention of any new fruit recently introduced. The vine is a strong grower, healthy and prolific, bunches large, uniform and compact; berry large, skin greenish white, slightly ambered in the sun; quality good. Ripens with Concord. Skin tough, making it a good shipper and market Grape.

WYOMING. Bunch and berry small but perfect. A hardy, productive variety of excellent quality. We grow more of this than any other red Grape.

Catawba Grapes.

Concord Grapes.

Gentlemen:

I was greatly pleased with the trees you sent me and got them set out well. Remember, I want peach trees in the spring.

Yours truly,
T. S. TINSLEY,
Altwood Station,
Anchorage, Ky.

Gentlemen:

Your stock reached my client, Mrs. C. B. McGowan, Steubenville, Ohio, in first class condition. She was much pleased with the stock you sent. I am more than thankful for your promptness and good shipment.

Yours truly,
ALFRED DAY, Jr.,
2610 Union Central Bldg.,
Cincinnati, Ohio.

Gentlemen:

The bill of trees and shrubs came in good condition and we are very much pleased with them.

Very truly yours,
THE PEOPLES BANK,
Adairville, Ky.

Gentlemen:

Inclosed you will find check. My plants all seem to be doing nicely, and I feel that I cannot speak too highly of all the plants and shrubbery that I have bought from you.

Yours very truly,
MRS. G. W. WERKEL.

Eldorado Blackberries.

Blackberries

Prices Blackberries: \$1.00 per doz.; \$7.00 per 100.

ELDORADO. Large, sweet and a general favorite. Extremely hardy. A late variety.
EARLY HARVEST. The standard early sort. Ripe before raspberries are gone.

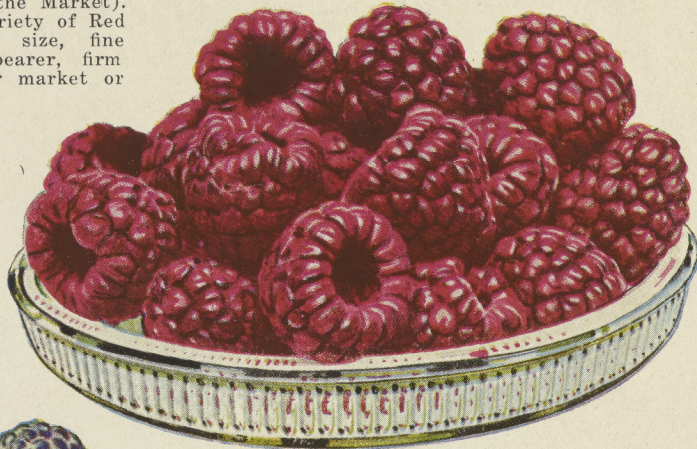

Raspberries

Prices All Raspberries: \$1.00 per doz.; \$7.00 per 100.

ST. REGIS. The Everbearing Red Raspberry. Large, brilliant crimson, juicy and of high quality. Produces a heavy main crop and continues to produce until late August. A very profitable sort and the only successful everbearer.

CUTHBERT (Queen of the Market). The leading market variety of Red Raspberries. Large size, fine flavor, enormous bearer, firm and best for either market or shipping.

KANSAS. An old standard black variety. Vigorous canes. Good yielder.

Cuthbert Raspberries.

Gooseberries

Prices All Gooseberries: 3-yr., 40c each.

This fruit is very useful for cooking either green or ripe and is used for canning extensively. Requires the same cultivation and treatment as currants.

DOWNING. A seedling of the Houghton. An upright, vigorous-growing plant; fruit larger than its parent; color whitish green; flesh rather soft, juicy, very good; productive; valuable market sort.

HOUGHTON'S SEEDLING. Rather small; pale red; flesh tender, juicy, sweet and pleasant; produces enormous crops; free from mildew; most profitable market variety.

JOSSELYN (Red Jacket). A new red berry of the largest size, smooth quality of the best, very prolific and hardy. Said to be absolutely free from mildew in leaf and fruit. Promises to be the variety we have long been waiting for; equal to the best English sorts, and capable of producing large crops under ordinary cultivation, wherever Gooseberries can be grown.

Kansas Raspberries.

Currants

Prices All Currants: 3-yr., 40c each.

The Currant, although a small fruit, is so very easily raised, is so very hardy and abundantly productive under almost any care, and can be easily applied to so many uses, that no family should be without a few varieties, ripening in succession. The old wood should be cut out and the plants kept well manured. An easy method of destroying the Currant worm is by the use of powdered white hellebore. One or two applications are generally sufficient.

FAY'S PROLIFIC. Color rich red; as compared with the Cherry Currant, Fay's Prolific is equal in size, better in flavor, containing less acid, and five times as prolific and from its long, peculiar stem, less expensive to pick.

PERFECTION. Created by crossing Fay's Prolific with White Grape Currant and combines the best qualities of both. Beautiful bright red, larger than Fay's, clusters average longer. One of the most productive Currants. Superior in quality to anything in the market today.

Josselyn Gooseberries.

Increase the Joy of Living by Planting Flowering Shrubs

Around Your Homes

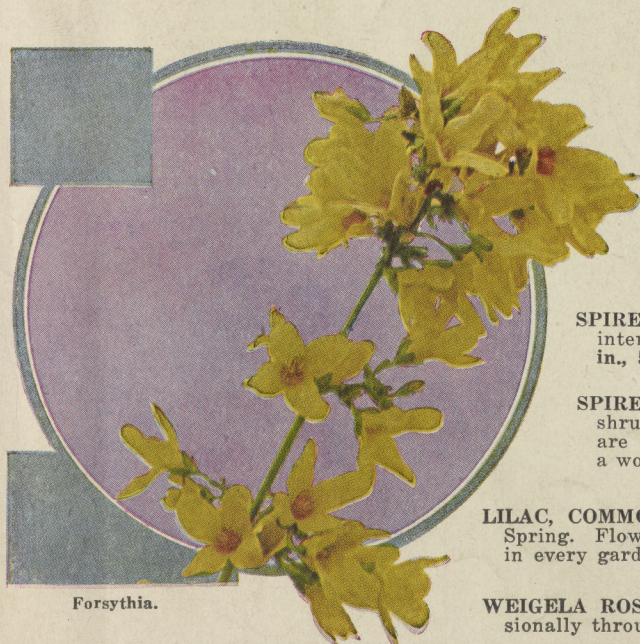

Buddleia—Butterfly Bush.

shrubs in Spring, before leaves are out. Bloom literally covers the stems. Bright golden yellow color. 3 to 4 ft., 50c each.

HYDRANGEA ARBORESCENS, SNOWBALL HYDRANGEA. Also called Hills of Snow. A very popular shrub with large, handsome foliage and immense snowball-like clusters of flowers from Summer to Fall. Medium height. 18 to 24 inches, each, 50c.

HYDRANGEA PANICULATA. Immense terminal panicles of bloom from midsummer through Fall. Blooms last a long while. White flowers becoming tinged pink and lavender as they grow older. Should be pruned severely to secure large blooms. 2 to 3 ft., 75c each.

PRIVET, CALIFORNIA. The most popular shrub for hedges. Stands shearing well and makes a beautiful dense hedge of dark green color. 18-24 in., \$7.50 per 100; 2-3 ft., \$9.00 per 100.

Forsythia.

ALTHEA OR ROSE OF SHARON. Tall, symmetrical shrub blooming from mid-summer till frost. Large, camellia-like double flowers. A most beautiful and ornamental shrub. We have them in 3 colors: white, pink and red. 2 to 3 ft., 40c each.

BARBERRY, JAPANESE. Low growing, spreading shrub of fine character. Small dense foliage and red berries in Fall which hang on most all Winter. Excellent for hedges and mass planting. Widely used. 12 to 18 inches, 30c each.

BUTTERFLY BUSH. Rapid growing shrub attaining height of 4 to 5 feet. Beautiful, lilac colored panicles of bloom at each terminal. Blooms all Summer and Fall. This shrub attracts many butterflies to its fragrant blooms. 3 to 4 ft., 50c each.

CALYCANTHUS OR SWEET-SCENTED SHRUB. The wood of this shrub has a peculiar fragrance. Foliage very rich. Blooms are of a rare and beautiful chocolate color and appear in June and at intervals afterward. 2 to 3 ft., 50c each.

CYDONIA OR JAPAN QUINCE. A valuable shrub of medium height which is covered in Spring with myriads of scarlet blossoms. Often used for hedges. 18 to 24 inches, 75c each.

DEUTZIA, PRIDE OF ROCHESTER. Medium height, vigorous shrub blooming in June. Flowers are white, double and appear in large clusters which make a magnificent sight. The finest sort of Deutzia and deservedly popular. 3 to 4 ft., 50c each.

FORSYTHIA OR GOLDEN BELL. A charming shrub of medium height blooming first of all

Weigela Rosea.

PHILADELPHUS OR MOCK ORANGE. Large spreading shrub with pleasing foliage. Covered with large waxy white flowers in early Summer which are very fragrant. 3 to 4 ft., 50c each.

SPIREA, ANTHONY WATERER. Low growing shrub with flat, crimson heads of interesting bloom from midsummer to Fall. Very persistent bloomer. 12 to 18 in., 50c each.

SPIREA VAN HOUTTEI, OR BRIDAL WREATH. By all odds, the most popular shrub grown. Medium height, very vigorous, graceful drooping branches which are covered in Spring with innumerable small clusters of white bloom. Makes a wonderful flowering hedge. 2 to 3 ft., 40c each; 3 to 4 ft., 65c each.

LILAC, COMMON PURPLE. Tall growing shrub with attractive foliage. Blooms in late Spring. Flowers large and delightfully fragrant. An old favorite which should be found in every garden. 3 to 4 ft., 75c each.

WEIGELA ROSEA. Spreading shrub of medium height. Blooms in late Spring and occasionally through the Summer. Flowers rose-pink and trumpet-shaped. 2 to 3 ft., 50c each.

Spirea Anthony Waterer.
