### Consequently American Pad and Paper Company Makes Assignment.

**Thomas W. Holley, Treasurer of the Concern, Is Charged with Being Short in His Accounts About \$35,000—The Company Is Said to Be Solvent—Notice of the Company to Its Creditors.**

Western Massachusetts Office  
THE PAPER TRADE JOURNAL,  
HOLYOKE, MASS., November 17, 1903.

Business men of Holyoke and vicinity were astounded yesterday by the double news of the assignment of the American Pad and Paper Company, of Holyoke, and of the misappropriation of funds belonging to that company by its president and treasurer, Thomas W. Holley, who has confessed to irregularities amounting to between \$35,000 and \$38,000. All his real and personal property known, together with his interest in the company, the latter amounting to about \$25,000, was attached before daybreak yesterday morning by Deputy Sheriff S. T. Miller in an action brought by the company for \$40,000 against him for the irregularities noted above. The assignment was filed at the city clerk's office about 9, and the assignees named are A. W. Esleeck, J. K. Judd and Lawyer A. L. Green, the latter named having the conduct of the legal side of the case in behalf of the company. The American Pad and Paper Company has the highest credit rating in the mercantile agencies, and in both Dun's and Bradstreet's was rated at from \$75,000 to \$125,000. The concern is doing \$250,000 worth of business each year, with profits of \$20,000, pays 6 per cent. dividends, and was supposed to have undivided profits on hand of about \$40,000. The plant is located at the corner of Winter and Appleton streets in Holyoke.

The amount of the assets and liabilities is not known, but it is learned on the highest authority that the concern, in spite of the issuing of irregular paper and misappropriation of funds, is perfectly solvent, and the step was taken mainly to protect the interests of those concerned when it should become known that these irregularities had taken place. While indications point to about \$35,000 or \$40,000 having been misappropriated, the exact truth cannot be known until an expert who has been placed upon the books shall have completed his work. It is learned that the affairs of the firm have not been managed in the best manner for some time, but proof of actual mismanagement and misappropriation did not come to light until recently. A circular letter was prepared yesterday and will be sent out today, in which the step of a temporary receivership is explained and the probable amount of shortage is estimated at \$38,000.

The following notice was sent out this morning to every creditor, so far as known, of the company:

To the Creditors of the American Pad and Paper Company:

You are hereby notified that the American Pad and Paper Company has made an assignment to us as trustees for the benefit of its creditors and that we have accepted the trust. The assignment is in usual form and conveys all the property of the company, both real and personal, wherever situated, whether within or without the Commonwealth. The assignment is without preference except so far as creditors who are entitled to priority under the insolvency laws of the Commonwealth. It is necessary in order that creditors may participate in the benefits of this assignment that they assent in writing to the provisions thereof.

It was discovered Saturday that Thomas W. Holley, for a long time the president and treasurer of this corporation, has misappropriated its funds. It is impossible now to say

just what the amount of shortage is; but it appears to be about \$35,000. While this amount ought not to cripple the corporation, yet the uncertainty which, under the circumstances, surrounds all the company's affairs made it seem desirable that the present step be taken to protect all interests while a thorough investigation of the company's affairs was being made. An expert accountant will forthwith be put upon the company's books, and a full statement be made to the creditors as soon as possible.

It will greatly facilitate matters if you will sign the subjoined assent, stating thereon the amount of the indebtedness of the American Pad and Paper Company to you as shown on your books, and mail the same forthwith to the trustees. Please address your correspondence to the Trustees of the American Pad and Paper Company, Holyoke, Mass.

Yours very truly,

J. K. JUDD,  
A. W. ESLEECK, } Trustees.  
A. L. GREEN,

HOLYOKE, MASS., November 16, 1903.

The irregularities cover a period of several years, and probably date back at least to the division of the firm, which was made about 1894, when H. F. Morrill, A. C. Pratt and J. H. Wylie, Jr., withdrew from the company. As to the exact methods employed there is some speculation at present, and more will be learned from the report of the expert. The company was originally formed about 1884 by Mr. Holley, and a number of men were interested in the proposition. The change noted came about ten years later, and the larger stockholders at present include C. H. Taber, J. N. Hubbard, J. K. Judd, T. W. Holley and A. W. Esleeck. The capital stock of the company was \$75,000, and it has paid 6 per cent. annually to the stockholders, and in addition had accumulated undivided profits, it was supposed, of about \$40,000. These seem to have been wiped away by the irregularities discovered, but unless something further develops along the line of irregular doings the company will yet be in splendid shape to continue business. The business will go on as at present, and its traveling men will remain on the road. Should the present outlook prove true as to its condition, the receivership will be later dissolved, and probably with some reorganization business continue as before. C. H. Taber has been elected president and G. W. Brainerd treasurer for the present.

Efforts to locate Mr. Holley yesterday were futile, and it was said at his Pearl street home that it was not known when he would return. In company with other Holyoke pad and paper men he had made plans to attend the annual convention of pad and tablet manufacturers at Buffalo, N. Y., and to leave last night. The discovery of the irregularities was made by G. W. Brainerd, secretary of the company, whose attention was called one morning last week to something which was not right about some of the firm's paper. He made a little investigation of his own, and then called in men interested in the company, and a quiet investigation followed, in which the facts relating to the treasurer were discovered. Mr. Holley's resignation followed as a matter of course. Mr. Holley was with the investigating committee a large share of the time, and admitted to irregular practices at an expense to the company of about \$38,000. The process, it was understood, was by discounting fictitious paper mainly, and the amounts were not very large at any one time.

A statement of the liabilities was not obtainable last evening, but will be ready in a few days in all likelihood. The list of creditors, however, include the American Writing Paper Company, Carter, Rice & Co., of Boston; Bulkley, Dunton & Co., of New York; the Springfield National Bank, of Springfield; Home National Bank, Hubbard & Taber, of Holyoke; W. G. Ridley Company, W. Ballantine, S. Ferris, Peckham, Little & Co., of New York; P. H. Glatfelter, of Spring Forge, Pa., and many smaller ones. The American Pad and Paper Company has on its books bills

(Continued on page 644.)

## NEW COMPANY STARTS.

### Paper Products Company Begins Business, Says Its Vice President.

**A Meeting at Buffalo—New Price List Outlined and Referred to a Committee to Prepare for Publication—Mr. Fleming Says No Prices Have Been Advanced, but on the Contrary Some Have Been Reduced.**

The Paper Products Company has already started in business, according to a statement made by Stephen B. Fleming, vice president of that company, on his return yesterday (Wednesday) from Buffalo, N. Y., where, on Monday and Tuesday, a meeting was held of the executive committee of the Paper Products Company and the advisory board of the Western Division of the sales department of that company.

Speaking of the results of the meeting, Mr. Fleming said to a representative of THE PAPER TRADE JOURNAL:

"At Buffalo we outlined a new price list and referred the matter to a committee to prepare the list for publication. No prices are advanced. On the contrary, many of them have been reduced, particularly in the combination boards, in which a material reduction has been made. The May 1 price list of the United Box Board and Paper Company is the basis of the prices agreed upon by the Paper Products Company. News board remains at \$45, as per the list referred to, and straw board at \$35. All prices are the same for the East and West, except on straw board, the discounts remaining 5 per cent. to dealers and 3 per cent. for cash. In quotations on orders from the territory outside the territory of the two divisions, the East and the West, there is a reduction of \$2 per ton from the list price, but such business is taken f.o.b. mill. The others are delivered prices. The plan we have adopted is one that we hope will successfully meet the views of the dealers and commission men. We have no disposition to antagonize anybody. We simply want to work in harmony with all branches of the trade. The company has for its object the maintenance of a uniform price list which will not be prohibitive, but will be as low as it can possibly be made and at the same time return a fair profit on the business. We are going to meet the trade on a fair basis and by close attention to its wants secure its good will. I believe that we have adopted a price list that will be endorsed by all. By the formation of the new company the general feeling is that the McEwan patent has been strengthened."

In conclusion Mr. Fleming said:

"The officers of the Paper Products Company feel that the company is organized on such broad lines, which are perfectly fair to all, and that it has as its object a uniform price, the said price to be just high enough to allow a fair percentage on its investment, that the few mills not now a part of the company will feel that they should join to assist in producing the result as outlined above."

The Beveridge Paper Company, of Indianapolis, Ind., and the Colin Gardner Paper Company, of Middletown, Ohio, have both joined the Paper Products Company. H. L. Beveridge has been elected one of the vice presidents of the company in place of Louis Newman, of the Tonawanda Board and Paper Company, of Tonawanda, N. Y. With the addition of these two mills the list of mills in the Paper Products Company printed in last week's PAPER TRADE JOURNAL is complete. The company has rented offices on the seventh floor of the Whitehall Building, Battery place. These offices will probably be ready for occupancy next week. The new price list will also be ready at that time.

## DEMAND AND PRICES.

**Manufacturers Continue to Be Busy and with Some the Volume of Business Is Increasing—Jobbing Trade Fairly Active.**

In the New York market the demand for paper is on a more conservative basis than it has been for the past few years. Instead of anticipating their wants for weeks or months ahead, consumers are now dividing their purchases into fractional parts of their old orders. The spirit of prudence manifested in this change reflects the greater caution with which general business is now being done. This return to the old order of things that prevailed previous to the boom of 1899 is not wholly to the liking of the sellers of paper. The absence of the big demand which characterized the trade of the past few years, especially during the fall months, is noticeable by contrast with the comparatively quiet demand this fall. Under the changed conditions of the market it is therefore no wonder that the impression should have been created that trade was dull. With many sellers of paper this amounts to more than an impression, as they have no hesitancy in saying that they find business quiet. There are many others, however, who, while acknowledging that the market is quiet for this season, say that with them trade is pretty good. Those who say that they are rushed with orders are few in number. Even of these there are some to be found in the New York paper trade. But although the complaint is general that the market is quiet, the volume of sales so far this year does not suffer in comparison with that of last year. As a rule the jobbing trade is not brisk. With the mills the quiet tone of the distributing trade is not felt as yet to any great extent, as nearly all of them have a few weeks' run ahead. This, with the orders that must come to them in the ordinary course of business, will no doubt suffice to keep them busy till after the first of the year. No material reductions in prices are looked for before that time. Whether they go off after the holidays depends, of course, on the state of the demand. At present all quotations are steady, if not firm. The cheaper grades of manilas are said to be a little weaker. The warm weather of this fall, which has checked general retail business, has cut down the consumption of manilas. Tissues, however, continue high and scarce. News paper is in good demand, especially with companies that supply the big daily newspapers. New business with some of the smaller mills is not so active as it has been. Book papers are moving steadily, but for them there is no very active demand. The same can be said of writings. Both of these kinds of paper are of course affected by the inactivity in the printing trade. In boards the demand is somewhat off, as the paper box makers are not as busy as they were a month ago. They, too, have felt the general curtailment in the volume of trade. The new price list of the Paper Products Company, agreed upon at Buffalo this week, is awaited by the boards trade.

**Brisk Trade at Holyoke.**

Western Massachusetts Office  
THE PAPER TRADE JOURNAL,  
HOLYOKE, MASS., November 17, 1903.

Trade continues to be brisk with the mills, and although some of the large manufacturers refuse to forecast the future, the general opinion among the mill men is that it will be fairly active during the winter. All of the Holyoke mills are keeping busy this week. In a majority of the mills there is no great rush. One or two mills are well crowded. It cannot be said that the shipment of paper from Holyoke this fall is much lower than last fall, although there has been a slight decline in tonnage.

The American Writing Paper Company reports a very good business, the demand being for all grades of paper. Books, writings and ledgers have sold well. The company has a considerable number of orders on hand.

The mills at Turners Falls report fine trade. The Esleek Manufacturing Company has orders on hand which will take some little time to fill. The demand for type-writer papers has been above the average.

The Whiting Paper Company has orders enough to keep all of its mills busy. Its correspondence papers have had a large sale, and the demand for ledgers has increased.

The Mittineague Paper Company is making large shipments. Its business this year compares favorably with last year, which was considered an excellent year.

The mills at Westfield, Dalton, Lee, Adams and Fairfield all make favorable reports.

The Parsons Paper Company is behind in filling its orders, and the Carew Paper Company and Hampshire Manufacturing Company at South Hadley Falls are very comfortably situated.

**Slight Improvement in Philadelphia.**

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, November 17, 1903.—The slight improvement in general business first noted a week ago after a long period of quiet continued during the week, but the

status of trade at the end of that period shows little improvement over the close seven days ago. The recently noted dearth of supercalendered papers has been in part supplied, sufficiently at least to meet the small demand. Book mills generally report a full order list and mills are running full time, but advance orders are not as heavy as the usual November list. The most noted improvement during the week was in wrapping papers, but trade is still behind what it should be. For the best qualities of book there is a steady demand, for the cheaper qualities a very quiet market. Building papers still continue in brisk sale, but the news market is featureless. Prices show no change from a week ago.

E. R. G.

**Better Business in Boston.**

Eastern Office THE PAPER TRADE JOURNAL,  
64 Federal Street,  
BOSTON, MASS., November 17, 1903.

Reports from city dealers are more encouraging this week than they have been for some time past, or rather it may be said that the reports of good business are more general than heretofore. There seems to be a diversity of opinion, however, as to whether the volume of business is as heavy at present as it was for the same period of time last year, although one prominent house stated that its business so far this fall has run considerably ahead of last season. One noticeable fact is, however, that nobody seems to be inclined to complain of business, from which it may be inferred that there is a very good volume of trade going on, even if a little quiet at times. So far as can be learned from interviews with the different trade representatives the tone of the market continues very firm. The paper manufacturers still report good business, with orders enough in sight to keep the mills going. There is no branch of the paper manufacturing business but what is in pretty fair condition, although many mills may be somewhat inconvenienced on account of low water. Mill representatives from Maine say that the water supply there is very low. Ground wood pulp is, in consequence, getting scarce, and many inquiries are being received by local mill supply firms for pulp. The shortage of ground wood will no doubt have a tendency to put low grade paper up a little.

DELESDERNIER.

**Chicago Trade Fair.**

Western Publication Office  
THE PAPER TRADE JOURNAL,  
936 Monadnock Building,  
CHICAGO, ILL., November 16, 1903.

According to the statement of a leading paper dealer, the prices recently obtained for wrappings have not been so satisfactory as they might have been. The margins have been rather too small to allow the jobber on some classes to pay the expense of handling the goods and leave anything for profit. It is hoped that this condition of affairs will soon be remedied to a certain extent.

Book papers are active and the prices are holding up pretty well. The mills are after the business, and it is still maintained that there are not so many orders, but that all that come can be handled well. No new developments have yet arisen in the selling agency situation. Another meeting may be held this week, at which something definite may be accomplished toward the active consummation of the project.

Nothing new has developed in the news paper market. Prices maintain a good level with a normal demand.

Writings are in good demand. The trade in all lines is seasonable, with no unusual features to comment upon.

In general the demand is said to be proportionately better from the country than it is from the city. All the country districts are prosperous, with no threat of labor troubles to mar the horizon. In Chicago the street car strike is having the effect of making merchants rather more cautious than usual.

M.

**Fairly Good Trade in Wisconsin.**

[FROM OUR REGULAR CORRESPONDENT.]

APPLETON, Wis., November 16, 1903.—There were no changes worth mentioning last week in the condition of the paper business in this region. Orders are coming in fairly well, though there is no surplus to brag of. This condition applies generally to all classes of papers. Manufacturers have rather given up hoping for any great change for the better in the demand this fall. Business everywhere seems to be conducted on a little more conservative line than in other years at this time, and while the mills have orders enough to keep them busy they are not overcrowded.

FOX RIVER.

**Miami Valley Not So Active.**

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 16, 1903.—Business conditions took a slight turn backward during the past few days. While local conditions may have had something to do with the change, it is intimated that the Miami Valley business suffered because of the unusual situation in Chicago. The book men found their orders somewhat decreased by reason of the strike in the printing shops, though some of the manufacturers report satisfactory orders and really have

no complaint to make. They readily admitted that business was not booming to the extent noticeable the previous week, when affairs seemed brighter. Even returning traveling men and officials of companies who had been off on a few days' jaunt reported trade on the ascendancy. The street car tieup in Chicago has strangely affected trade, the same as nearly all labor dissensions have done. The writing trade is somewhat lively, the demand for straw papers continues heavy, and in a general sense the other lines are moving satisfactorily.

"The trade need not be alarmed over a slight slump," remarked a well known East End paper maker. "We have had just such conditions on many previous occasions and have recovered within a fortnight. It looks to me as though we have had a pretty good year of it. Our firm has been liberally remembered this week. We are told that some have noticed a decided falling off, but we cannot believe that it is going to be permanent. In my opinion prices will remain about stationary until the first of the year."

M. V.

**FUNDS MISUSED.**

(Continued from page 643.)

receivable of about \$44,000, about \$90,000 worth of paper on hand, as well as \$8,000 or \$10,000 in cash, and the land, buildings and machinery that stand in its own name in Holyoke, including a four story building and lot. It has no water power, running entirely by steam.

Of the men affected by the affair, probably none feels worse than A. W. Esleek, who has always taken a strong interest in Mr. Holley, and who yesterday expressed himself as deeply moved by the discovery of Mr. Holley's doings. "He has had every chance; and I am deeply disappointed in the boy," said he. "Whom can we trust?" was the exclamation of another interested man. Others spoke in a similar vein, and it is evident that as much as those interested have suffered in a pecuniary way, they feel worse over the breach of trust than over the loss of the money, the greater part of which is likely to be restored to them. Originally Mr. Holley gave a bond as treasurer, but this had later been given up as a useless expense. It is feared that the irregularities in his accounts were covered up in part by the issuing of irregular paper, but the full extent of this can only be determined by the experts.

Thomas W. Holley, treasurer of the concern, who is charged with the irregularities that have resulted in a loss to the firm of about \$38,000, is a prominent member of the First Congregational Church in the Highlands, where he has been especially active in the Sunday school, of which he has been superintendent, and is a Republican member from the Seventh Ward of the board of aldermen, being also a candidate this year "at large." He was easily one of the most able and popular members of the board, and had friends without number among both Republicans and Democrats, active and inactive in city affairs. The news of his misdoings comes as the greatest surprise and shock to the great majority of Holyoke people. So far as known, Mr. Holley has not speculated. He had a salary of about \$3,600 a year, and his dividends on his personal investment amounted to \$1,200 or \$1,500 a year. He was a lover of good horses and spent much time driving, and has a large family. His income was supposed to be sufficient for these expenses. He has offered to turn over all of his property, and will be left penniless as a result, excepting what life insurance he may have to protect him. Criminal action is not likely to be brought against him at present at any rate, if at all.

No trace of T. W. Holley was to be found last evening. A late inquiry at his home revealed nothing as to his whereabouts, it being stated that the members of the family knew neither where he was nor when he would come back. One man interested in the matter stated it to be his belief that he had gone to some other place and would never come back to Holyoke. A. W. Esleek, one of the assignees, said last evening: "I haven't any idea where Mr. Holley is. I have not seen him since Saturday." Others seemed to be of the opinion that he could not face the disgrace and would strike for some faraway place. The theory that he might commit suicide did not seem to be held last evening. An attachment for \$25,000 filed yesterday against his brother, Henry Holley, is supposed to be due to his being on the missing man's paper.

The business men of Holyoke were dazed yesterday by the news of the troubles, and expressions of the keenest sympathy for his family were heard on every hand, as well as expressions of wonder and amazement that Mr. Holley could have become involved in such an affair. No case parallel to it in all its phases has ever been known in Holyoke. As one man said last evening, if asked to pick out six of the squarest and most honest and honorable men in Holyoke, few would have omitted putting T. W. Holley on the list. The case is considered to be inexplicable in many of its phases. Treasurer G. W. Brainerd was asked last evening what he believed Mr. Holley would be likely to do, and said that he did not know. "We, some of us, thought we knew him, but we now begin to think we were mistaken," said he.

## ALLEGED WATER POLLUTION.

**Dr. Lewis, President of the New York State Board of Health, Talks on the Subject—Has Been Misquoted by Daily Papers—Investigation Now Going On.**

Concerning the reported pollution of Lake Champlain by pulp mills, about which so much has appeared in the daily press, a representative of THE PAPER TRADE JOURNAL called on Dr. Daniel Lewis, president of the State Board of Health, at his office, 254 Madison avenue, New York city. The doctor, who returned last week from making a personal investigation of the alleged pollution, had been quoted as saying certain things in regard to his investigation. The doctor said that the published report of the interview put him in a wrong light, as the statements he did make were twisted so that they created a wrong impression. In regard to the alleged pollution of Lake Champlain by the pulp mills the doctor said: "The State Board of Health was asked a short time ago to investigate the complaints made. This investigation has been going on under officials of this department. Last week I joined in the investigation. My visit was not unexpected, as has been reported. On the contrary, the mill owners knew that we were coming. One of the mill superintendents, in fact, piloted us about his mill. We inspected the mills and took samples of the lake water and of the water of the rivers on which the mills are situated. A previous examination of these waters had been made by Prof. Olin P. Landreth, consulting engineer of the State Board of Health. The result of our examination of the samples taken will of course determine the kind of a report we will make on the complaints before us. It is, therefore, idle at the present time to predict what our report will be. If we find that the refuse from the mills is injurious and pollutes the water and is detrimental to the health of the neighborhood, we will say so. But if, on the contrary, we find that the waste from the mills is not harmful to such an extent as to be injurious to health, we will state that. Until our report is prepared we cannot state anything definitely in regard to the matter. Just when that will be ready we do not know. It may be ready in a number of weeks, but the chances are that it will not be finished for a few months. As Professor Landreth has at least fifty samples to examine, you can see that it will take some time."

Dr. Lewis, in speaking of the workings of his department, said that the State Board of Health began investigations either on a direct order from the Governor or on having a complaint referred to the board by the Governor. In the case now under investigation, he said, he did not know in which way the matter had been brought before his board, but in either event it was customary for the board to send a copy of its report to the Governor and to each one of the parties of whom complaint was made.

The doctor, while he did not say so outright, intimated that he thought it possible for the pulp mills to adopt disposal methods for their refuse that would put an end to the evil complained of.

### St. John Sulphite Pulp Company.

ST. JOHN, N. B., November 13, 1903.—The report of the directors of the St. John Sulphite Pulp Company, Limited, for the year ended May 31, 1903, states:

"From the combined balance sheet, prepared by Messrs. Chiene and Tait, it will be observed that there has been a loss on the year's working of £6,686 3s. 6d., and that after adding the debit balance as at May 31, 1902, of £1,189 10s. 5d., there is a balance of £7,875 13s. 11d. at the debit of profit and loss. The directors extremely regret this unfortunate result. The improvement which the directors expected toward the end of last year did not take place, and prices still remain unprecedentedly low, while the cost of the raw material has increased. At the date of the formation of the company the price per ton of pulp was £9 5s., while at the present time it is only £6 15s., or a difference of £2 10s. per ton. On the other hand, the cost of the raw material at the present time is higher by about £1 per ton than it was at the date of the formation of the company. While the directors had hoped for an improvement in the market, the company would at least be able to hold its own, and consequently resolved to continue the works during the year in preference to shutting down. They are much disappointed at the result of the year's trading, and propose, with the approval of the shareholders, to close the works for the present. The directors regret to report that Mr. Mooney, the company's manager at St. John, who is a shareholder to a large extent, has on account of failing health been obliged to tender his resignation. The directors have also to report that, in order to provide funds for the carrying on of the company's business, they arranged for an advance of £15,000 from the Royal Bank of Scotland on the security of a mortgage over the company's property, coupled with the personal obligation of three of their number as a collateral security.

The above advance has been exhausted, and it will be necessary to provide additional capital if the works are to be carried on. The directors hope that there will be a full attendance of shareholders at the general meeting, in order that the company's position may be fully discussed and arrangements made for the future. In terms of the articles of association, one of the directors must retire at each annual meeting. On this occasion Mr. Anderson is the retiring director, but in consequence of ill health he does not seek re-election."

### Southern Book Publishing Company.

ATLANTA, Ga., November 16, 1903.—H. H. Cabaniss, one of the owners and the manager of the Augusta Chronicle, was in the city last week in the interest of the Southern Book Publishing Company, of which he is president. This company has submitted bids to the school book commission of Georgia, under a recent act, and hopes to have many of its books adopted for use in the schools of the State. When asked about his interest in the matter, Mr. Cabaniss said: "For ten or fifteen years past I have been impressed with the absolute need of some school books written by Southern people for use in the Southern schools. I would not have anything of a sectional nature taught, but I would correct the false teachings of the books now in use.

"I am not contending for sectional books in our schools, but I do insist that the 'other fellows' should not force books upon Southern communities which do our people an injustice. We are for protection and on the defense, and it is necessary to be aggressive to win out.

"I am glad to state that we have interested some prominent capitalists who are experienced in the book manufacturing business, and who have ample capital, to agree to the building of a grand plant in Georgia. It is a matter of much moment to our people."

Robert O. Law, of the Robert O. Law Printing and Binding Company, of Chicago, has been in Atlanta for the past few days studying the situation in regard to the locating of a large printing and book manufacturing works in Atlanta for the Southern States. He came here at the instance of representative Southern men interested in the Southern Book Publishing Company. Mr. Law is so convinced of the great possibilities of the South, and of the printing and book manufacturing industry particularly, that he has concluded to co-operate with the Southern Book Publishing Company in the immediate establishment of this industry for the Southern States.

Mr. Law is one of the largest manufacturers of books in the United States, if not in the world, and his mature experience practically qualifies him as authority.

Mr. Law said: "I consider the possibilities of the South in the line of book manufacturing and advanced printing art as being almost limitless in their scope.

"In looking over the city of Atlanta I recognized it as a point for almost everything that the South needs and will need in the future. It has become the headquarters for a good many large manufacturing establishments. Atlanta has the Southern agency for nearly every large manufacturing company in the United States. I therefore think that to neglect the publishing business here would be to overlook one of the most inviting fields.

"The printing and book making plant proposed for the South, to be established in Atlanta, will be one of the largest in the world, certainly the most complete. The main building will be 350x450 feet, giving nearly 150,000 feet of floor space. Each department will be equipped with the latest modern models of every kind of machinery used in a thoroughly up to date establishment, and will be prepared to print and turn out any kind of work done in the United States. I except no city in the United States."

### Developing Water Power at Rothchild.

[FROM OUR REGULAR CORRESPONDENT.]

APPLETON, Wis., November 16, 1903.—A movement is on foot to develop the water power on the Wisconsin River at Rothchild, near Wausau. A similar movement was started about three years ago, but was blocked by the attitude of property owners along the river whose lands would be overflowed, who refused to accept a reasonable price for their ownings. Since that time a law has been passed permitting such lands to be condemned and it will not now be possible to block the scheme. Surveyors have been at work upon the property, and the outlines of the improvement have been pretty well determined. Just what enterprises would be established is not at present determined, but the power is an ample one and it is right in the paper manufacturing district, so that the opportunity would seem to be an especially good one for a paper mill.

FOX RIVER.

### "Soo" Pulp Mill Started.

SAULT STE. MARIE, Canada, November 16, 1903.—After considerable delay in making the arrangements the pulp mill of the Consolidated Lake Superior Company started November 11 with a big force of men. It is anticipated that the mill will run continuously from now on.

## NEW YORK JOTTINGS.

Local paper men are never free for any length of time from the begging letter fiend. Last week the aforesaid fiend again broke loose. This time his wife fell down stairs and injured herself severely. He, poor man, was called home from the mill. On his arrival he found a bushel of trouble. But, mind you, he did not ask for aid while he had hopes of a roof over his head—for it was only the threat of the landlord to oust them the next day that forced his unwilling pen to tell the story of distress. The landlord will not wait longer than tomorrow—he says. Five dollars will do for the present. But it must come in a hurry, else his wife will have a relapse through worry. "Hoping your kindness of heart will prompt your sympathy toward us," writes the "Yours truly." "A funny thing about this fellow," said the recipient of the letter, "is that, unlike the celebrated Baron von Manteuffel, now or recently on the Island, the number of his children is commensurate with the size of the 'touch.' Of one thing he is never forgetful—the perpetual sickness of his wife."

Another scheme to do up the poor, unsuspecting paper man is again being worked from this city. The Easy Marks are the come ons for whom the bait is out. For the benefit of those guileless souls it is here disclosed that an order for cases of goods from a mercantile company that deals perhaps in druggists' sundries or does a general export and import business does not necessarily carry with it any guarantee that the goods will be paid for. One of these "fake" concerns was recently located on Duane street. Now it has a sign on a loft door on Fulton street. As it has no rating and is not mentioned in Lockwood's Directory any wise man would refuse to ship the paper without a guarantee that the goods ordered will be paid for, even if the new customer is particular about the regular 2 or 3 per cent. off for cash. This word of warning is not for the wise men of the trade.

The New York and Pennsylvania Company and D. S. Walton & Co., of this city, late last week filed a petition in bankruptcy against the Garrett-Boyce Paper Exchange, of Syracuse. The petitioning creditors have claims amounting to \$5,000. Nothing is known as to assets and liabilities.

The following marriage announcement will interest the many friends in the trade of the happy bridegroom:

BEEBE—TIPPLE.—On Thursday, November 19, by the Rev. E. S. Tipple and Rev. B. M. Tipple, Clarence Beebe, of New York, to Helen M. Tipple.

After the ceremony there was a reception, followed by a wedding breakfast, at the home of the bride's brother, 300 West Eighty-fifth street. Mr. and Mrs. Beebe will make their home in Philadelphia, in which city Mr. Beebe is the representative of the Philadelphia Clay Manufacturing Company.

A George H. Simpson dropped dead on the street in this city on Wednesday of last week. Within a few hours afterward William G. Willmann, of 16 Spruce street, who recently succeeded to the business of Geo. H. Simpson & Co., began to get busy assuring callers in person and by phone that the dead man was not the George H. Simpson whom he succeeded, and who is now a special partner in his business. Mr. Willmann is pleased with notwithstanding the annoyance, as he was forced to hear many compliments in regard to his Mr. Simpson from solicitous friends, who would not be shut off until they had their say.

A letter in last week's PAPER TRADE JOURNAL, under the caption "Hall Comes to the Assistance of the Mills," was read with a great deal of interest by the local trade. In the letter Mr. Hall practically takes the stand that the manufacturers should not do business with the jobbers. That he made out a strong case is evidenced by the fact that the jobbers held a meeting of their association within an hour after the issue of THE PAPER TRADE JOURNAL appeared. At that meeting the letter was discussed, and as a result it was voted to draw up a new communication to paper manufacturers in which the elimination of the commission man will be insisted on at once. As one big jobber expressed it, "We must cut off Hall's base of supplies or we are 'goners.'"

A judgment for \$9,362 was entered on Tuesday of this week by default against the Helios Photographic Paper Company, of 154 East Twenty-third street, in favor of Gustav Cimiotti, formerly president of the company, for money loaned to the company between June 15, 1902, and September 30, 1903.

J. Bennett Southard, of 155 Broadway, has been appointed receiver in bankruptcy of the assets of Charles E. and Winfield J. Garvin, individually, and as partners in the Garvin Paper Company, of Moodna, N. Y.

**WALL PAPER MATTERS.**

**The Imperial Factory at Sandy Hill, N. Y., Leased by a Syndicate—Purchase May Follow—Talk of a Combination.**

[SPECIAL CORRESPONDENCE OF THE PAPER TRADE JOURNAL.]

SANDY HILL, N. Y., November 16, 1903.—The Imperial Wall Paper Company, of Sandy Hill, N. Y., was last week leased for a period of ten years to George R. Finch, who represents a syndicate composed, it is said, of the following named gentlemen: George R. Finch, Glens Falls, in whose name the lease was executed; Jere D. Finch, Glens Falls; L. W. and J. A. Emerson, Warrensburg; Edward F. Murray, Troy; Howard H. Pruyn, Glens Falls; George Tait, who is the first vice president of the Ithaca Wall Paper Company, and John J. McCabe, who is secretary of the same company. The mills at Sandy Hill, which were shut down for two days for the taking of an inventory, were reopened on Thursday of last week under the management of Messrs. Tait and McCabe. These are the men that took hold of the Ithaca wall paper plant a few years ago and brought it to a paying basis. It is probable that the Imperial and Ithaca companies will be merged and that a consolidation with the Schroon River Pulp and Paper Company will follow, the new corporation to be headed by George R. Finch as president.

It is understood that the syndicate represented by Mr. Finch made a proposition to purchase the plant. This

proposition will be presented to the stockholders. The Imperial was organized in 1901. During the three years of its existence there have been many changes in the management, the directorate and the officers of the company. The original stock of the company was \$200,000 and was fully paid in. At the end of its second year the company issued an additional \$100,000 worth of cumulative preferred stock. Of this amount it was reported that \$70,000 worth was taken by Mr. Finch, Howard H. Pruyn and their associates. Besides the outstanding stock there is a mortgage on the plant and other indebtedness which is said to represent a total of \$400,000.

Last winter the Imperial was asked to enter the combination which resulted in the new Standard Wall Paper Company. This course was urged by J. E. Howland, who held a large amount of the stock. The proposition was declined. Mr. Finch is said to be interested in the Standard Company, and it is believed that the Imperial factory will eventually come under Standard management. By the delay in not entering the combination some say a net loss of 30 per cent. was made for the stockholders. The Standard is a very large producer of wall paper. With the addition of the Imperial it would be a still more important factor in the trade. It is now considered as among the possibilities of the future that the Imperial and the Schroon River Pulp and Paper Company may become parts of the Standard combination. The Schroon River Pulp and Paper Company was organized two years ago and built a pulp and paper mill at Warrensburg, N. Y. At the beginning it manufactured hanging paper for the

Imperial Company. Stock in the Schroon River Company has been held by those interested in the Imperial. M.

The name of George F. Underwood, manager of the woodlands department of the International Paper Company, has been mentioned in connection with the reported proposed merger of the up-State wall paper companies. When seen by a representative of THE PAPER TRADE JOURNAL Mr. Underwood said: "There is no plan that I know of for a combination or merger of the companies referred to. All there is to the matter is that the Imperial Company has been leased to a number of gentlemen, who are going to try to put it on a paying basis. Up to date the Imperial has not made money. The fact that the same men own stock in both the Schroon River Pulp and Paper Company is perhaps responsible for the talk of a merger. There is, however, no such plan on foot."

**Receiver for Henneberry Company.**

[SPECIAL CORRESPONDENCE OF THE PAPER TRADE JOURNAL.]

CHICAGO, November 16, 1903.—As the result of bankruptcy proceedings in the United States District Court, the Equitable Trust Company was appointed receiver for the Henneberry Company, publisher, today. The liabilities are not stated, but the assets are put at \$150,000. Among the creditors are Gane Brothers & Co., \$4,607.83; Empire Paper Company, \$1,723.57; Moody & Birmingham, \$13,019.41.

**Water Powers.**

The following are the large water powers awaiting development on the Wisconsin River, Wisconsin:

The Grandfather Falls, Estimated 20,000 H.P.	
The Mesinee, " " " 3,000 "	
The Consolidated Centralia, " " " 6,000 "	

Besides over thirty smaller ones.

There are now nine large paper mills on the Wisconsin River. The water of this river has proved exceptionally excellent for paper making. The location is advantageous in relation to easily reaching the great consuming and distributing centres.

The Chicago, Milwaukee & St. Paul Railway Company gives unremitting attention to the development of local traffic along its lines, and, with this in view, seeks to increase the number of manufacturing plants along its system, either through their creation by local enterprise or the influx of manufacturers from the East.

It has all its territory districted in relation to resources, adaptability and advantages for manufacturing. Specific information furnished manufacturers in regard to suitable locations. \* Address

**W. B. DAVENPORT,**

Industrial Com'r Chicago, Milwaukee & St. Paul Ry., 60 Old Colony Building, Chicago, Ill.

**NOTES OF THE TRADE.**

Young Brothers, dealers in wall paper, Quincy, Ill., were burned out November 10. Loss, \$10,000; insurance, \$7,000.

Frank G. Beaman's paper box factory, Laconia, N. H., was burned out November 12. Loss, \$12,000; insurance, \$6,500.

The plant of the Blauvelt-Wiley Paper Manufacturing Company, Paterson, N. J., was damaged by fire November 12.

The Burt Manufacturing Company, Akron, Ohio, recently filled an order for four Cross oil filters from Buenos Ayres, Argentine Republic.

D. J. Carpenter and W. F. Carpenter have sold their book and stationery store, Los Angeles, Cal., to Rice & Devine, of Santa Barbara.

Irving H. Reynolds will shortly retire from the Allis-Chalmers Company, Chicago, and the duties of the chief engineer will be assumed by the engineers in charge of the various departments, these engineers availing themselves of the advice of Edwin Reynolds, consulting engineer of the company.

Henry E. Juengling, whose paper box factory has been located on the Terrace, Buffalo, N. Y., for a great many years, has purchased through J. E. Keller, No. 22 Erie County Bank Building, the large three story factory building, Nos. 506 to 512 Genesee street, where he will remove

his works. The property was owned by Witkop & Holmes. The consideration was about \$20,000.

The sheds and trestles at the plant of the New York Lime Company, near Natural Bridge, N. Y., were burned on the evening of November 11. The damage done will not interfere with the operation of the plant, though it causes some inconvenience. There was no insurance on the property burned. The loss was about \$2,000.

H. Merian Allen, trustee in the matter of the Franklin Machine Works, Philadelphia, having filed his final account and report, the final meeting of creditors, for the purpose of declaring a final dividend and closing the affairs of the estate, will be held before the referee at his office, 710 Penn Square Building, 1416 and 1418 South Penn square, Philadelphia, on Thursday, November 26, at 10:30 o'clock a. m.

Frank Tyler, an employee of the Sandy Creek (N. Y.) Wood Manufacturing Company, was found dead at the foot of a cliff near his home on Thursday of last week. Tyler attended a party Tuesday night, and evidently walked off the cliff in the darkness. Supposing that he had gone to a neighboring town, his family did not become alarmed about his absence until Thursday morning, when a search was made and his body found. His neck had been broken by the fall.

George B. Cox, of Cincinnati, Ohio, has been elected president of the Cincinnati Trust Company, succeeding G. W. Mallon. It was thought that C. C. Richardson, the Lockland paper manufacturer, would be elected, but that gentleman nominated Mr. Cox at the meeting of the board

of directors. Mr. Richardson is a member of the executive committee and will devote considerable attention to the management of the large corporation in conjunction with Mr. Cox.

The endorsement of Uncle Sam is a flattering tribute to genuine merits and is only to be gained by deserving it. That the virtue of Albany grease is fully appreciated by the United States Government authorities is evidenced in a letter recently received by Messrs. Adam Cook's Sons, 313 West street, New York city, the only makers of Albany grease, from S. W. Stratton, Director of the Bureau of Standards, Washington, D. C. Under date of November 30, 1903, Mr. Stratton writes: "We are using Albany grease in all instances where such compound can be used to advantage, and consequently are fully aware of its merits."

**Insolvency of Francis P. Robertson.**

HARTFORD, Conn., November 16, 1903.—Francis P. Robertson, the Quaker Hill paper manufacturer, has declared himself insolvent, and a petition in bankruptcy will be filed in the United States District Court. Several attachments were placed on the mill property a few days ago to cover claims of Mr. Robertson's mother and E. J. Hempstead. Another attachment was placed on the property, Deputy Sheriff J. H. Tubbs serving the papers. This attachment is for \$1,700 to cover a claim of \$1,400 for stock furnished to the mill by Darmstadt, Scott & Courtney, of New York.

**Receivers Authorized to Issue Certificates to Complete Purchase of Kennett Mill—Company's Books Not Yet Produced—List of Claims Filed.**

CONCORD, N. H., November 16, 1903.—In the United States Supreme Court last week Judge Aldrich issued an order authorizing the receivers of the White Mountain Paper Company to issue certificates to the amount of \$70,000 to complete payments for the Kennett Mill and lumber property at North Conway.

Leading counsel in the case from New Hampshire, New York and Massachusetts were at the hearing. Julien T. Davies, of New York, appeared in behalf of the North American Trust Company as trustee.

He filed a petition asking that the court authorize the consummation of a trade with Crosby Kennett, of Conway, for the acquirement of his mill property and considerable timber land. The petition provided also for an arrangement after its acquirement by the receiver of the White Mountain Paper Company for the benefit of either the mortgage bondholders of the general creditors, according as it should be ultimately determined which of the parties were entitled to the benefit of the property.

There was much discussion among the various counsel and the court in regard to whether this order should be made. There was also discussion concerning an application by Davies to withdraw from the original bill all allegations which set forth the insolvency of the company.

The receivers were finally granted authority to carry out a trade with Mr. Kennett and to issue receivers' certificates to the amount of \$70,000 to be paid to Kennett, Judge Aldrich stating that this proceeding was allowed for the purpose of preventing a forfeiture under the agreement with the North American Trust Company.

Authority was given the receivers to bring suit against the J. H. Horne & Sons Company, machine manufacturer, of Lawrence, Mass., for the recovery of certain machinery belonging to the company which it had regained possession of.

Judge Remick, one of the receivers of the company, said that efforts had been repeatedly made to secure the books

of the company now in the hands of the promoters in New York, but that the results of their efforts were a travesty on justice. Mr. Davies in reply said that the books would be secured within ten days. Judge Aldrich authorized the receivers to take whatever steps are necessary to gain possession of the books now in New York.

**List of Claims Filed.**

CONCORD, N. H., November 16, 1903.—The claims filed here up to date against the White Mountain Paper Company are as follows:

Johnson & Co., Boston, Mass.....	\$75.00

**Boston Bowlers at Candle Pins.**

Eastern Office THE PAPER TRADE JOURNAL, }  
64 Federal Street, }  
BOSTON, MASS., November 17, 1903. }

Several of the paper jobbing firms of Boston are engaged in a candle pin tournament, the various teams meeting on Saturday afternoons. The games were started November 7 and will be continued until January 16. Each firm represented contributed \$10 to its team, and each team put up \$10, making a pot of \$140, which will be distributed in prizes for the best team work, the best individual score, for a consolation prize, &c. There are seven teams, made up as follows, with this score to date:

<b>TEAM NO. 1.</b>	<b>TEAM NO. 4.</b>
CARTER, RICE & CO.	JOHN CARTER & CO.
Young, Captain.	Daly, Captain.
Field.	Hall.
Leitch.	Proudfoot.
Prior.	Goodman.
Dudley.	Kelch.
Won 3, lost 3.	Won 0, lost 3.
<b>TEAM NO. 2.</b>	<b>TEAM NO. 5.</b>
A. STORRS & BEMENT.	STONE & FORSYTHE.
Lyons, Captain.	Karnhein, Captain.
Rourke.	Reed.
Leahy.	Taylor.
Gibbs.	Binford.
Bott.	Sheridan.
Won 1, lost 2.	Won 3, lost 0.
<b>TEAM NO. 3.</b>	<b>TEAM NO. 6.</b>
COOK, VIVIAN COMPANY.	W. H. CLAFLIN & CO.
Nowell, Captain.	Beatty, Captain.
Paine.	Harnden.

## Cylinder and Fourdrinier Paper Machines.

### The Shortt Patent Combined Chipper and Crusher.

THESE machines are now in successful operation in a number of mills, demonstrating that they will do more work, much better and with less power than any device manufactured for chipping and crushing.

The West Virginia Pulp and Paper Co. have purchased three of these machines, and under date of April 29 sent us the following letter in attest of the complete satisfaction had with the machine:

"We have yours of the 27th, and beg to advise you the Combined Chipper and Crusher we are using here is making chips for our Soda Plant. The one in use at our Davis Plant is used in making chips for our Sulphite Plant there.

"We are very glad to advise you that the Chipper and Crusher is doing most excellent work, and we can unhesitatingly recommend it to anyone in the market for a first-class machine of this kind.

"Very truly yours,  
"WEST VIRGINIA PULP AND PAPER CO.  
"D. L. LUKE"

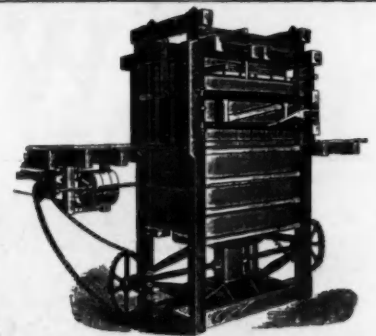

We will be glad to correspond with interested parties and to give reference enabling parties to correspond directly with the users.

**Low Water Continues at Holyoke.**

Western Massachusetts Office  
THE PAPER TRADE JOURNAL  
HOLYOKE, MASS., November 17, 1903.

Restrictions as to the use of water which the mills have been compelled to contend with for the past few weeks will be in force again this week unless there are rains to the north. The Water Power Company has removed the restrictions today temporarily, but the outlook for water

is no more favorable than last week except that "rain or snow" is predicted.

The mills are beginning to fear trouble from low water this winter. The present month should be fairly wet in order that the streams may be full when freezing weather strikes them. The mills have not thus far been seriously affected, but the run of the river is falling lower each week, and without rain the 50 per cent. restrictions in force now will be cut down to allow only the use of water contracted for.

**Jobbers in Wrappings Meet.**

Western Publication Office  
THE PAPER TRADE JOURNAL  
936 Monadnock Building,  
CHICAGO, ILL., November 16, 1903.

It is reported that the dealers in wrapping papers have been discussing the question of how to get more money for their goods so that after paying cartage and store expenses there might be something left for the jobber himself. A meeting was recently held at the Briggs House at which this matter was discussed at some length. It is said that the jobbers are tired of having to pay \$1.15 for some goods and selling them at \$1.20. It is said, furthermore, that while there is no association nor any prospect of one, the remarks made at the meeting will take hold, in all probability, and result in a more satisfactory price arrangement on certain goods.

**Shut Down for Lack of Wood.**

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 17, 1903.—For the first time in many years the American Envelope factory at West Carrollton and the paper and pulp mills of the Geo. H. Friend Paper and Tablet Company were closed last Friday evening and remained idle until today, when a new supply of wood arrived. A short time before it was necessary to close certain portions of the plant, owing to the lack of stock; but this is the first time for years that the entire plant suspended operations.

**Tacoma Paper House Burned Out.**

TACOMA, Wash., November 16, 1903.—Fire yesterday destroyed the buildings occupied by the H. N. Richmond Paper Company.

**New Paper Mill at Boney Falls.**

[FROM OUR REGULAR CORRESPONDENT.]

APPLETON, Wis., November 16, 1903.—J. W. Wells, manager of the Isaac Stephenson Company, of Menominee, Mich., which already has large paper manufacturing interests, is authority for the statement that his company is considering the matter of building a new paper mill next year on the Escanaba River at Boney Falls. The power is at present undeveloped. It is expected that the building of a dam will be begun in the spring. In addition to the paper mill an electric power transmission plant will be put in which will furnish power for mining operations in the neighborhood and also for the city of Escanaba.

**New Pulp Company in Quebec.**

QUEBEC, Que., November 16, 1903.—Another important manufacturing enterprise is shortly to be in active operation in the province, backed by American capital. Part of the extensive Ordway limits on the Metapedia River have been purchased by a syndicate of wealthy Americans, headed by Frank D. Wilsey, of New York. The new company has been incorporated at Ottawa, under the name of the Mill Stream Lumber Company. A site has been chosen and the necessary arrangements made for the construction of an extensive plant. Although the limits already purchased are not extensive, the Metapedia district is rich in limits of the nature required. It is expected that the construction of the plant will be proceeded with in early spring.

**The Southern Paper Mills.**

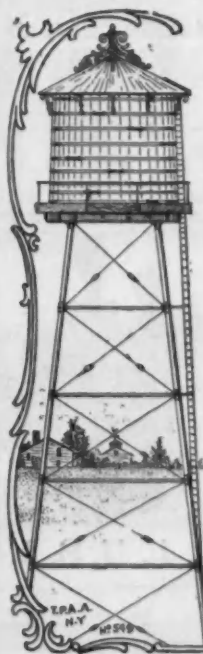

ATLANTA, Ga., November 16, 1903.—The Southern Paper Mills, one of the late additions to Atlanta's list of industries, is the only concern of its kind south of the Ohio River.

The plant, of which E. H. Peck is proprietor and manager, will have a capacity of 4 tons of binders boards per day. A paper expert from New England is in charge of the plant and a high standard of excellence is maintained in the manufacture of the goods. It is announced that the manufacture of box boards will be begun within the next sixty days. The concern is utilizing to some extent material that has heretofore been waste.

**You Need a Filter!**  
to help you save money. You can run your waste oil through a  
**CROSS OIL FILTER**  
and save 50 per cent. of your oil bills.  
Send for one on trial 30 days; if not satisfactory you may return it.

**Smith's Improved Screen and Plate**

**THE SMITH SCREEN**, while embodying all of the essential features of the best Screens in the market, has several very important improvements that no other Screen possesses.

- 1st. The quick and easy manner in which the plates can be taken out and replaced.
- 2d. The improvement in the plates themselves.
- 3d. The simplicity of construction in the parts and connections that give motion to the diaphragms.

No special foundation is required, as it runs at a low speed and is perfectly balanced. As there are no screw holes in the plates they are much stronger and are less liable to crack.

The construction of the parts that give motion to the diaphragms is so simple that there is less liability of breakage or derangement, there being no piston rod working in bearings to wear and become loose. The spring that holds the connection in contact with the cam is made of wood, reinforced by an elliptical steel spring that is adjustable. The lignum vitae blocks can be set up to the cam as they wear by means of a wedge key that can be adjusted while the Screen is running.

We can furnish this Screen in either eight, ten or twelve plate sizes, to take plates, 12x40, 12x42, 12x43, and are able to quote on any odd size plate that may be required. We guarantee perfect satisfaction in every instance to our customers.

The cut shows the method of removing the plates, which is done by raising the cam handle and allowing the door to drop, then taking hold of end of plate and inserting fingers in holes that are made for that purpose and pulling out the plate.

The plate is fitted in a dovetail groove and is tapering, so that as soon as it is started it is free to slide out. But when it is locked in position it is tight and solid, as the door is provided with set screws that come in contact with the end of the plate and hold it firm in its place.

The plates fit in metal grooves and are supported in such a manner that it is impossible for them to work loose.

These Screens are furnished with either the new style top, allowing the plates to slide in, or with the ordinary top, where the plates are screwed in.

## LOGGING IN MAINE.

**Men Now at Work Getting Out Wood—There Is No Decline of the Industry—Some Figures as to the Cut, Wages, Etc.**

BANGOR, Me., November 16, 1903.—If all the logging crews now at work in the woods of Maine were working for one man, that man would need at least \$3,000,000 to meet his pay roll next spring, for there are now chopping and hauling, swamping and yarding, scaling and cooking, and doing other woods work, about 20,000 men, and they will get in about five months each, at an average of \$30 a month. When this army of loggers shall have finished its campaign against the spruces and pines, poplars and hemlocks, there will be piled upon the landings and in the yards about 800,000,000 feet of timber, waiting for another army, less numerous but more agile, to come and navigate the sticks down stream to the booms, where still a third army, the rafters, will sort out the different marks of logs and send them along to the mills of the respective owners.

People who don't know much about the business talk of the "decline" of Maine's lumber industry. These people will probably be surprised to learn that more logs will be cut in Maine this coming winter than ever were cut in a single season before, and that a spruce log is worth more money today than in the best of the so called flush times. Twenty years ago, when many other kinds of business were dull, Maine's logging industry seemed to have fallen into a decline, but just then along came the pulp makers, and at once the prospect brightened. At first the mills for grinding pulp were small, and only small trees were cut for their supply, but bigger and bigger mills were built, and soon the pulp men began to take logs as large as any that went to the saw mills. After a few years of buying logs the pulp men began to buy great tracts of timberlands, paying therefor the highest prices ever known in Maine. They sent in crews and cut their own logs, and gradually extended the scope of their operations, until now they rank about even with the sawmill men in the quantity of timber cut and consumed.

In Maine last season, out of a total cut of 750,000,000 feet over 300,000,000 feet of logs went to the pulp mills, while of a total cut in New England and the Maritime Provinces of 2,175,000,000 feet the pulp mills took 575,000,000 feet; sawmills, 1,575,000,000 feet, and 25,000,000 feet was shipped as piling.

Just as the oldtime teamsters and stage drivers cursed the first railroads as a damage to the country, so have some of the oldfashioned loggers declared that the pulp mills would be the ruination of Maine. But, although there is an inevitable and continual conflict between the saw mill and pulp mill interests, both industries seem to be getting along all right, and the pulp mill is regarded as a blessing by many thousands. Men who owned timber lands and sold to the pulp companies got higher prices than they ever dreamed of getting, while those who retain their lands are getting a much higher rate of stumpage than ever before. More loggers are employed; competition between the two interests has sent the price of labor up, and the demand for logs to make into pulp has increased the price of spruce at Bangor from \$11 to \$13 per 1,000 feet twenty years ago to \$14 and \$17 today. The pulp industry has revived sleepy and decaying sawmill villages, built up brand new towns in the depths of the wilderness, and made valuable a hundred water power privileges that were idle and comparatively worthless twenty years ago.

The pulp men have built dams and made other costly improvements on the driving streams, and are planning now, notably on the west branch of the Penobscot, for the storage of vast bodies of water that now run to waste in the spring freshets, causing great damage to property. Held in the lakes that feed the rivers, this water will be sufficient to keep up the driving pitch in dry weather, and provide continuous power for many mills that are now often shut down in midsummer because of drought. Thirty millions of dollars have been invested in the pulp and paper industry in Maine, and the business is yet expanding. One mill—that of the Great Northern Paper Company, at Millinocket, on the west branch of the Penobscot—represents an investment of about \$4,000,000, and about it has grown up a village of 2,300 people, where five years ago the only building was a 10x12 flag station on the Bangor and Aroostook road.

In the sawmills, too, progress is the order of the times. The old fashioned rotary and muly have been superseded by the bandsaw and the resaw. The head sawyer is a man of genius, who gets out of a log every possible inch of lumber. In olden times the slabs were large and thick and overboard they went, as so much worthless waste. Now the slabs are few and very thin, and all waste that cannot be made into short lumber of some kind goes to the pulp mills. Some of the sawmills have pulp mills in connection for the utilization of this waste. Even the sawdust is used now.

## Colonel Mead May Be Adjutant General.

DAYTON, Ohio, November 17, 1903.—It is reported on fairly good authority that Col. H. E. Mead, of the Mead Paper Company of this city and Chillicothe, will be appointed Adjutant General of the State by Governor-elect Herrick. They have been close friends for years, and as colonel of the Third Regiment Mr. Mead has frequently come in contact with Mr. Herrick in an official capacity. It is stated that Governor Herrick met Colonel Mead in Pittsburg last week and made the tender, though the latter is undecided whether he shall accept. It is reported that Governor Herrick will make up his staff from the colonels of the State regiments.

**Alleged Water Pollution.**

There has been a great cry in the daily papers about the pollution of Lake Champlain by two pulp mills, one making soda fibre and the other sulphite fibre. It has been represented that the shores of the lake were covered with slime, that the water was unfit for use, that it gave off offensive odors, that even animals refused to drink it and that fish had died in quantities, all because the two mills in question discharged their refuse into streams that emptied into the lake.

The entire campaign in the matter seems to have been engineered and the agitation kept up by a New York dry goods man who has property on the lake, but up to date there has not been a single word of official utterance on the subject, nor has there been anything at all except the opinions of the dry goods man and his forecast of what the opinions of officials now carrying on an investigation are to be, and his opinions and his forecasts have been furnished to the daily papers in a quantity sufficient to justify the suspicion that he has a publicity bureau in full working order.

The mills in question are operating under permits issued by the State Board of Health, and, of course, they carry on their operations, just as does everyone else, subject to a liability enforceable through the courts, for any actual damage that they do, either by polluting water or injuring persons or property in any way.

Complaint has been made to the State Board of Health that these mills are polluting sources of water supply. The Board of Health has taken the matter up and is now investigating it. Professor Landreth, accompanied by the dry goods man in question, visited the mills, took some fifty samples of the water, and will make his report in due time. No one has seen his report, and it is officially declared that there is not any report in existence, Professor Landreth being yet engaged in analyzing the water and preparing his data for that report. Yet immediately after Professor Landreth's visit to the mills there appeared simultaneously in many New York papers interviews with the dry goods man in question, in which that gentleman told that Professor Landreth had found evidence strongly corroborating the allegations made in the complaint. Even were the dry goods man a mind reader or more, so that he were able to know what Professor Landreth had found and what he would report even before the professor himself knew what he had found or would report, it would seem as though common courtesy would dictate that he should keep such advance information to himself. He has already discredited Professor Landreth's report by stating that that gentleman had found a condition of affairs similar to that set forth by the complainant. Professor Landreth is acting in an official capacity, his report is an official matter and it is fair to assume that it will be made through the regular official channels and to the proper officials before it is given out for publication. Most assuredly the dry goods man in question does not know what that report is to be, or if he does, the report, whatever it may be, will be absolutely useless as a scientific and official document.

Again Dr. Lewis, president of the State Board of Health, who has personally inspected the mills, has been represented as saying that there was pollution, due to the pulp mills, and that further, Onondaga Lake was polluted to an extreme degree by the pulp mills in its vicinity. Dr. Lewis denies making any such statements as are attributed to him and says that his words have been distorted and that he himself has been put in a false light by the statements made.

Again Dr. Wiltse, State Chemist of Vermont, is reported to have stated that the charge against the pulp mills was true, and that Burlington water had an offensive odor and contained dead fish, both due to contamination by refuse from pulp mills. Dr. Wiltse denies that he said any such thing, or that Burlington water is so contaminated, and, putting the case mildly and courteously, says that the dry goods man must have "misunderstood him."

The fishing in Lake Champlain is admitted poorer each year, but this fact is undoubtedly due to the seining that is allowed in its waters and not to pulp mill refuse. The lake is a very considerable body of water and it does not

seem at all possible, even were the complainants' story well founded, that it could be polluted by the mill discharges in question.

The whole campaign against the pulp mill men has been unfair. Instead of making complaint and awaiting official investigation and determination of it, the complainant has carried on a newspaper war, while the pulp men have simply awaited results. If the complainant has been damaged, he has his remedy through the courts, but this is not the plan that he favors. He would rather have the State of New York "pull the chestnuts out of the fire for him" and pay the bills and suffer the damages incidental thereto.

The maker of pulp and paper is a power for good in the community and all he asks is fair play and the privilege of carrying on his business in a lawful way. He is fully aware of his responsibilities and does not seek to avoid them. On the other hand, he believes that he has some rights and that those rights, like those of other citizens of the State, should be protected.

**Mild Form of Blackmail.**

The members of that branch of trade that sells raw material, wires, felts, and other supplies to paper manufacturers have been pestered for years by begging letters, particularly from one man, who, according to his own statements, has been employed in New England and Middle States mills. He always pleads his own or his family's sickness, or says that he is out of employment, but is offered employment at another mill, of which opportunity, however, he is unable to avail himself because he does not possess the money with which to pay the railroad fare. Such being the case he asks the recipient of the letter to send him the fare—eight, ten, twelve, or whatever number of dollars it may be. One particular point in his letter is that he has used the felts, or wires, or pulp of the man to whom the letter is addressed, and the plain inference to be drawn is that he should be pecuniarily rewarded for so doing, or in case he is not, he will see that the other fellow's felts, wires and pulp are used. In other words, the scheme is one of mild blackmail, known in these modern days as "graft."

In this special case the man has kept up his appeal through a long series of years, and THE PAPER TRADE JOURNAL has possession of many of his letters. Of late he had not been heard of much, but last week some new epistles reached New York and were turned over to us.

No industry or trade comprises in its membership more charitably inclined men than are to be found in the paper line. They are always willing to help worthy but less fortunate ones, but they object seriously to being held up by threats such as are made in letters of the character of the one quoted. They more than object to it. They simply will not be so held up, and we advise the writers of such letters to cease their work before trouble overtakes them.

When the Government published the results of the 1900 census it reported that there were 763 paper making "establishments" in the United States, an "establishment" being one or more mills located in one place and owned by the same person, firm or corporation. At the time we pointed out that the announcement of the Government would lead to error, and that readers of the census returns would infer—and not improperly—that there were only 763 paper and pulp mills in the country. The facts have justified our remarks, and in its issue of November 14 the Scientific American states that there are "763 paper making plants in the United States." That is not a correct statement. There are 1,149 mills owned by 768 individuals, firms and corporations, and the details as to all these plants are recorded in the twenty-ninth annual edition of Lockwood's Directory of the Paper, Stationery and Allied Trades. It is a pity that the Government should publish misleading statements, and it is more of a pity that such a paper as the Scientific American should republish them without calling attention to their inaccuracies.

The Paper Products Company, the new box board selling agency, has begun business, and will shortly issue a new price list. The list has been outlined and is now in the hands of a committee. It will probably not show many changes.

THE PAPER TRADE JOURNAL is the great want medium of the paper trade field, both for employers and employees. On Monday of this week twenty answers and on Tuesday twenty-seven answers to "Want ads" were received.

## NEWS FROM THE MILLS.

John Meyer, employed in the mill of the Menasha Paper Company at Menasha, Wis., lost one of his fingers in the gearing of a pump last week.

The Jefferson Power Company has just completed a storehouse 50x100 feet at its mill, in Dexter, N. Y. The building will be used for the storage of finished paper.

A new digester having a capacity of 12 tons per day is being set up for the Carthage (N. Y.) Sulphite Pulp Company by the Manitowoc (Wis.) Steam Boiler Works.

Eugene Warren, of Troy, N. Y., has acquired a proprietary interest in the firm of Manning & Peckham, paper manufacturers, of Troy. The copartnership is formed of the members of the family of the late John A. Manning, W. M. Peckham and Eugene Warren.

A carload of sulphur shipped by the International Paper Company from New York city to its mills at Corinth, N. Y., caught fire from locomotive sparks in the Delaware and Hudson Railroad yard at Saratoga, N. Y., on November 13. Despite the fumes, the flames were brought under subjection by the fire department.

Superintendent E. E. Emigh, of the Orange Paper Mills, Orange, Tex., returned last week from an extended business trip to Wilmington, Del., Boston and other points. A complete sulphite system has been purchased to replace the present soda system used in the mill here, and this is expected to be in readiness for the mill to resume operations by the end of this month.

Lawyer T. J. O'Connor, trustee in the case of the Excelsior Paper Company, Holyoke, Mass., has filed a petition with Referee C. W. Bosworth, of the bankruptcy court, asking for leave to sell, either at private or public sale, the property, with the legal incumbrances. This week there will be a hearing upon the petition, and the creditors interested have been notified of the petition and the hearing. This marks another attempt to straighten out the mill tangle, and the result is yet in doubt.

The favorable weather has been taken advantage of to the largest extent by the Consolidated Water Power and Paper Company, at Grand Rapids, Wis. Three trainloads of filling material a day are being used in the construction of the 1,700 foot dam. All the cofferdams have been

completed and will permit of water power being used before the main dam is finished. The work on the tail-race has progressed to the point where the race joins the river. The work of installing the turbine wheels in the power house is going on.

D. F. Sprague, of Harrisville, N. Y., has bought of the United States Leather Company the tannery property in that village, which has not been in use for some years. The property purchased is one of the best water powers on the west branch of the Oswegatchie River. Included with it are fifteen dwellings, a store and all the machinery in the tannery plant. The plans of Mr. Sprague are not made public, but it is probable that the power bought will be used for a new industry allied with the paper trade.

Alexander Fuller, fireman at the Oglesby Paper Mill, at Middletown, Ohio, this week saved a man from drowning in the hydraulic which runs alongside the mill property, while at work in the mill he heard a cry for help and running out beheld James Freeman struggling for life. The drowning man was rescued by Fuller and mill men who hurried to his assistance, and the almost drowned man was taken to the furnace room and resuscitated. While crossing the bridge near the mill Freeman made a mistake and fell into the hydraulic.

The work of laying rails on the new electric trolley line between Green Bay and Kaukauna was begun this week at the Green Bay end of the line. This line will be in operation about the first of next May, and when it is done it will be possible for a person to travel by trolley from Fond du Lac, at the upper end of Lake Winnebago, down through the whole Fox River Valley to Green Bay, passing through the cities and villages of Oshkosh, Neenah, Menasha, Appleton, Kimberly, Little Chute, Combined Locks, Kaukauna and De Pere. The equipment of the new road will permit of cars being run at a speed of 50 miles an hour.

## Pulp Mill for St. Johns.

[SPECIAL CORRESPONDENCE OF THE PAPER TRADE JOURNAL.]

St. Johns, N. F., November 14, 1903.—Cornelius Shields, president of the Lake Superior Consolidated, at Sault Ste. Marie, Ont., is now here arranging with the company headed by Henry M. Whitney for the establishment of a large pulp enterprise in Newfoundland.

## New Jersey Paper Tube Company.

HACKENSACK, N. J., November 16, 1903.—J. H. and E. L. White, trading as the New Jersey Paper Tube Company, of Englewood, have been perfecting and building their own machines for making paper tubes of all kinds.

No satisfactory work could be obtained outside, so they equipped their own machine shop with the latest and best types of tools, &c., and are now about to complete the first lot of sixteen machines for making paper drinking straws under their own patents. These machines will have a capacity of 1,000,000 straws a day.

To handle this vast output additional room is needed and the firm will shortly erect an addition of three stories to its present building, the dimensions to be 36x30 feet, giving an additional floor space of some 3,000 square feet. Excavation for this structure has already begun.

The New Jersey Paper Tube Company has in view the acquisition of a paper mill where it will manufacture its own paper during the next year. This will become a necessity, it is understood, if the concern enters upon the manufacture of cop tubes for use in cotton and silk mills, spinning and knitting machines, &c., of which many millions are annually used. When machines for this purpose are complete the company contemplates adding to its present structure a building of 25 feet front and 125 feet on West street, three stories high.

## Watertown Beats Carthage.

[FROM OUR REGULAR CORRESPONDENT.]

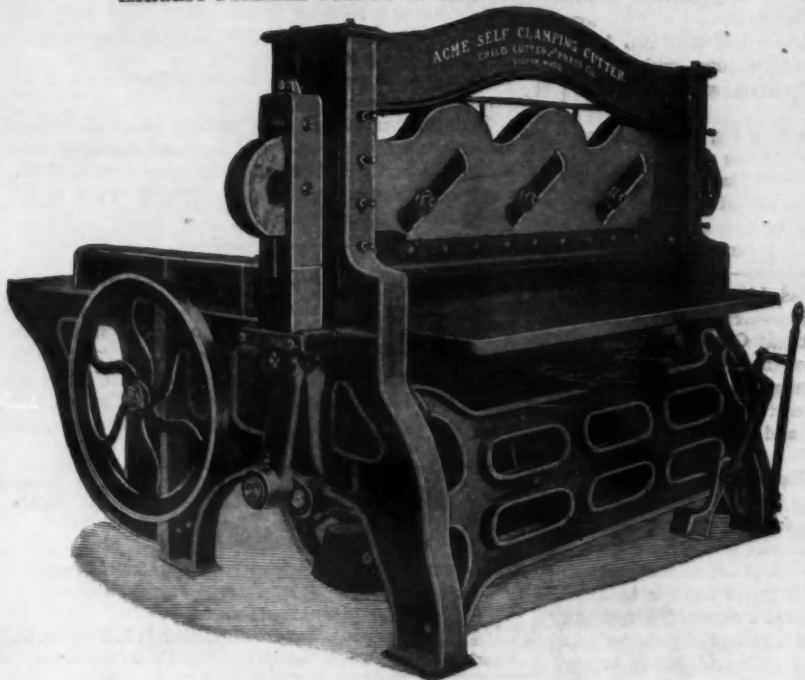

WATERTOWN, N. Y., November 17, 1903.—The much talked of football game between Watertown and Carthage was played here this afternoon and Watertown won by a score of 21 to 5. Over 3,000 people saw the game and the crowd at the Yale-Princeton game last Saturday could not beat it for enthusiasm. Hon. "Jim" Outterson and other Carthage football enthusiasts took their defeat gracefully and paid their little bets without a murmur. The Hon. "Jim" Wise, of this city, who snapped up Mr. Outterson's \$500, is willing to give the "up river" footballists another chance to get an all star team together, but it will not be done. Carthage has given up the idea of winning the championship of the State.

The appropriation for advertising should keep pace with the growth of the business.—Printers' Ink.

## NAVAL STORES.

**Receipts of All Kinds Decreasing—This Has Resulted in Advances in Prices—Remarkable Changes in Rosin Values.**

Naval stores are attracting to themselves a great deal of attention, not only from consumers but from disinterested students of the whole commercial situation, says the Boston Commercial Bulletin. While so many other commodities have either been settling in price or threatening to do so, turpentine, rosins, tar and pitch, like petroleum and its products, have been almost constantly advancing. Within a few weeks indeed a loftier level of values has been reached on the market for naval stores than any before recorded in twenty years, and the end is not yet, in the opinion of many competent observers.

Of the startling progress already made by turpentine in its upward career an estimate may easily be formed from some figures recently compiled by Mr. C. L. Ches-

THE GOVERNMENT CANAL, WITH GLIMPSES OF THE MILLS OF THE UNION BAG AND PAPER COMPANY AND THILMANY PULP AND PAPER COMPANY.

WATER POWER AT KAUKAUNA, WIS.

nutt, superintendent of the board of trade at Savannah. These statistics show that from September, 1902, to the last day of August, 1903, the price of spirits of turpentine in the primary market ranged from the high price of 65 cents in February and March to a price of 44 $\frac{3}{4}$  cents in September, 1902, whereas for the corresponding twelve months—September 1 to August 31 in the years 1902-1901—the prices ranged from the highest mark of 53 cents in March to the lowest point in September, 1901, of 33 $\frac{1}{2}$  cents.

The changes in rosin prices have been equally remarkable. On October 23 of this year water white was quoted in Savannah at \$4.25, an advance of 10 cents as compared with the corresponding date in 1902, and a gain of 65 cents over the price ruling just two years previous. A comparative statement of the quotations for the lower grades at Savannah on October 23 for three years shows changes of still greater importance. On that day this year, for instance, grade E was quoted at \$2.35 as against \$1.40 in 1902 and \$1.10 in 1901. Tar and pitch have kept pace with the advance in allied products.

By all of the many consumers of naval stores the situation is viewed with concern and by some of them with suspicion. There are buyers who feel as though some trick had been played upon them, who think that of the advance the major portion may be traced rather to the concentration of stocks in a few strong hands than to the relation of supply to demand. They have heard of course of the ever decreasing territory covered by the hard pine forests of the South, but they suspect exaggeration, and are either openly resentful or hint darkly as to the oppression of trusts, so characteristic of these competition stifling times. It is, however, an unquestionable fact, abundantly testified to by all recent travelers through Georgia and the Carolinas, that the long leaf yellow pine, whose sap is the raw material for all naval stores, is being thinned out with astonishing rapidity, which must be attributed in large measure, but not altogether of course, to the wasteful methods of the lumbermen. It is well worthy of note, too, that boxing privileges, that is permission to tap the trees, are always very much more difficult to obtain from the owners of woods than they were a few years ago, it being now believed that extracting the sap injures the wood for the sawmill.

For some reason, certainly, the production of naval stores is being materially reduced. This is proved by a

comparison of figures for the entire turpentine crop for the last three years. The receipts for the year, April to March, 1900-1901, aggregated 617,000 barrels, for the same period in 1901-1902 593,000 barrels and for like time this year 561,000 barrels. These figures, it will be noted, show a continuous shrinkage notwithstanding the active demand from domestic sources and the high prices. The production of rosins during 1903-4 was 1,060,865 barrels, as against 1,174,477 barrels the preceding year, and 1,196,102 barrels in 1901-2.

Conservative local authorities, who have been studying the situation with care for some years, are of the opinion that the facts and figures given above are quite sufficient to account for the altered aspect of the market for naval stores. They do not attach much if any importance to the stories of the market control, and say that simply because of the outlook for a continually diminishing production from this time forward they are steeling themselves to expect even greater advances than those already experienced. They do not mean of course that occasional halts in the demand will not be followed by corresponding depressions

## B. F. T. Jenney Surprised.

SOUTH MANCHESTER, Conn., November 16, 1903.—B. F. T. Jenney, of Manchester Green, was pleasantly surprised at his home last Thursday evening, when a delegation of Manchester Lodge, No. 73, A. F. and A. M., of which he has been a member for twenty-six years, called upon him, the occasion being his eighty-second birthday. About twenty of the brethren assembled, and after being invited into Mr. Jenney's home congratulations were in order and Mr. Jenney was presented with a handsome gold headed cane, the presentation speech being made by Worshipful Master Thomas Gray. Mr. Jenney responded feelingly. The inscription on the cane was as follows: "B. F. T. Jenney, from his Masonic friends, November 12, 1903."

Benjamin Franklin Taber Jenney was born at New Bedford, Mass., November 12, 1821. He comes of virile stock, being the youngest of a family of eight children, all of whom attained the age of seventy-five years, and of which hardy group he is now the sole survivor. Mr. Jenney's father attained the age of ninety years. Mr. Jenney's parents were of the religious denomination called Friends, and at the age of eleven years Mr. Jenney was sent to the Friends Boarding School at Providence, R. I., and one of the prized memoirs of his boyhood days was a visit to the school by Andrew Jackson, President of the United States, and his Cabinet. After leaving school he was apprenticed to a merchant tailor in New Bedford, Mass. In 1861 he went from New Bedford to Lowell, Mass., where he worked at his trade. His next move was to Taunton, Mass., where he opened a custom tailoring establishment. Believing he saw a good opening in Manchester he abandoned the tailoring business and engaged in the manufacture of paper. The venture prospered from the outset and he continued in paper manufacturing until 1893, when he retired from active business.

## Photographing Drawings Without a Camera.

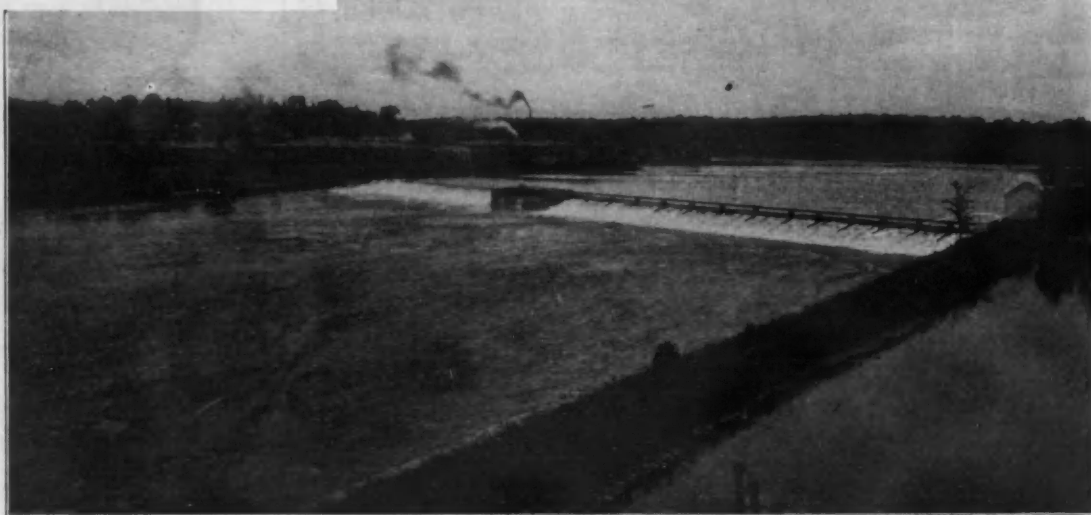

For copying small but elaborate drawings like Patent Office drawings, says "W. H. S." in the American Machinist, there is probably no method so quick, accurate and cheap as the following:

Procure a photographic dry plate of the size required (8x10 is usually large enough for Patent Office drawings, the rest of the sheet being taken up by margins, title and signatures). Place the drawing and plate in a printing frame, the drawing with the back side out, so that the lines will be in contact with the film on the plate. This must be done in a dark room. Expose the frame to dim daylight for a period of, say, five seconds at a distance of about 10 feet from a north window or one through which the sun is not shining. Develop with the following:

No. 1. Hydrochinon Solution.—(a) Water, 13 ounces; sulphite soda crystals, 1 ounce. (b) Water, 2 ounces; sulphurous acid, one-half ounce (not sulphuric).

Add solution (a) to (b) slowly, then add: Hydrochinon, 100 grains; bromide potassium, 30 grains.

THE UPPER DAM. CAR SHOPS IN THE DISTANCE.

WATER POWER AT KAUKAUNA, WIS.

plies of our American turpentine so much as they have been doing, not because they will not want to do so, but because the price will prohibit them. Already there is a change, our exports of turpentine to the United Kingdom for the first five months of the crop year, April to August inclusive, being but 2,994,682 gallons, as compared with 3,787,344 gallons in the same months of 1902, and 6,312,270 gallons in 1901. In other words, our exports this year have been less than one-half what they were in 1901.

No. 2. Alkali Solution.—Water, 5 ounces; carbonate soda (dried), one-half ounce; carbonate potassium (dried), one-half ounce.

To develop, mix 3 ounces No. 1 with 1 ounce No. 2. If the exposure has been correct the development will proceed slowly until the background is as black as ink, the lines remaining clear white in the negative. Fix and wash as usual. Brilliant blueprints may be made from these negatives, showing sharp blue lines on a white ground,

## GROWTH OF THE INDUSTRY.

The Volume of Raw Materials and the Finished Product in These Lines Shown in Graphic Way—Some Interesting Figures.

Under the title of "A Graphical Comparison of Raw and Finished Products in the Printing and Paper-Making Trades" the Scientific American in its issue of November 14 prints the following:

When figures get beyond a certain point they lose their concrete value, and it is necessary to resort to some other means if we wish to make comparisons involving figures that run up into millions and billions. Therefore, we adopt the method of representing these figures by comparisons of bulk and form. The basis for the comparison which we have worked out is the Twelfth United States Census.

The manufactures of paper and wood pulp have become so closely related that they are now usually treated as a single industry. Over 1,986,000 cords of wood were used in 1900 in the production of paper pulp. This would make a cube 634 feet high, and is a pretty large wood pile when compared with Trinity Church, New York. Straw comes next, 367,305 tons being consumed annually, and making a pile of bales 607 by 405 by 270 feet. We have not considered the subject of chemical fibre, owing to the diverse forms in which it is consumed, although the bulk is very great, amounting to 644,006 tons. The old or waste paper consumed annually amounted to 356,193 tons. This would make a solid 499x348x254 feet. Two hundred and thirty-four thousand five hundred and fourteen tons of rags were consumed; this would make a pile of bales 436x284x207

made by the Jerome Paper Company, which runs a small plant with the water which comes from a little stream running into the river. Evidence was offered to show that the company needed the water to run its plant and that if there was any reduction in the supply of water the company could not continue. It was shown that the company's business was not of sufficient volume to warrant it using steam. The expense for coal and cartage would be too great. The strong force of water made it possible for the company to run at a profit in this location. There was considerable evidence offered to show the amount of water which flowed down this stream every day. There are a number of parties interested in the water controversy. Questions of water rights are involved and legal points are raised which are likely to take the case to the Supreme Court before it is settled. Stoddard, Marsh & Boardman appear for the water company, DeForest & Klein for the paper company, and Hurlburt & Davis, of Norwalk, for other interested parties. The members of the committee are Charles S. Canfield, of this city; Henry C. White, of New Haven, and John S. Sanford, of Redding.

### Duty on Memorandum Books.

United States General Appraiser Fischer handed down a decision last Friday on the classification of pocket memorandum books, slate books, memorandum books with a small mirror and pencil attached, and lithographically printed religious pictures in metal frames.

The goods were assessed as follows: The memorandum books and slate books at 35 per cent. as manufactures of paper, the mirror and pencil books at 25 per cent. on the books and 25 per cent. ad valorem and 45 cents a gross on

### C. J. Kemper Resigns.

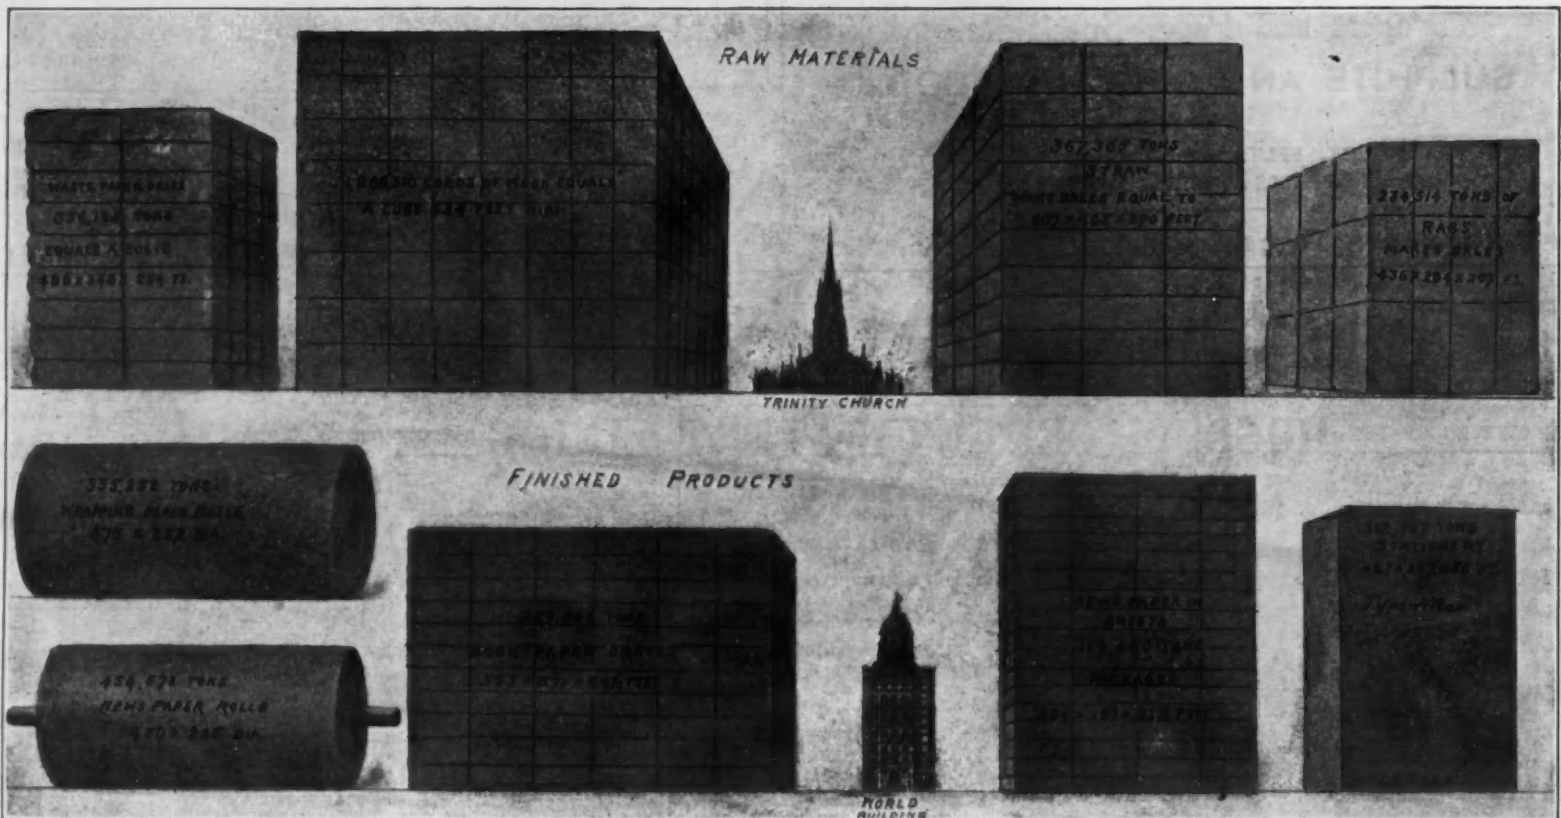

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 16, 1903.—C. J. Kemper, vice president and general manager of the Kemper-Thomas Paper Company, of Norwood, located in the extreme southern end of the Miami Valley, has resigned. It is reported that difference arose between Mr. Kemper and the members of the board of directors over his administration of affairs. Two years ago when the company removed to its enlarged plant, where 200 are employed, Mr. Kemper assumed the reins of management. It is said that W. C. Proctor, who is interested in various enterprises in this section, and who has also interests in other paper mills, became dissatisfied with Mr. Kemper's methods. Mr. Kemper has been prominent in village affairs in Norwood for years, and was some time ago the president of the water works commission. He is well known throughout the trade. M. V.

### Pulp, Paper and Paper Bag Project.

BIDDEFORD, Me., November 16, 1903.—J. T. Lord, general manager of a self closing paper bag manufactory, located at Nashua, N. H., has been in the city trying to interest citizens with money to invest in a scheme of considerable magnitude, which embraces the buying of wild lands in Canada, the establishing of pulp mills there and the manufacture of paper and paper bags.

Mr. Lord is full of confidence that his scheme can be made a big money maker for those who invest their money in it, and he is anxious to dispose of some of his stock in Biddeford. He has other Maine towns, including Lewiston, on his list, and he expects to interest Maine citizens

RAW MATERIALS AND FINISHED PRODUCT IN THE PAPER INDUSTRY.

feet. Ninety-nine thousand three hundred and one tons of manila stock, including jute bagging, were also used.

Now, having dealt with the vast proportions of the raw materials, we come to the finished products. Our comparisons show "news" paper in two forms: first, in the roll, 454,572 tons, making a roll 450 feet long and 225 feet in diameter. News paper in sheets amounted to 114,640 tons, and the flat packages in which it is put up would measure 484x187x33 1/2 feet; this pile is compared with the World Building, New York. Five hundred and thirty-five thousand two hundred and fifty-two tons of wrapping paper would make a roll 475 feet long and 237 feet in diameter. Book paper follows, the product being 351,702 tons. This would make a pile of crates 563 feet long by 371 by 44 1/2 feet. Stationery is another considerable item. One hundred and twelve thousand seven hundred and seven tons would make a box of stationery 427 feet long by 267 feet wide by 56 feet thick.

### A Question of Water Rights.

BRIDGEPORT, Conn., November 16, 1903.—There was a further hearing last week before the committee appointed by the Superior Court to hear the application of the Bridgeport Hydraulic Company for the right to take water from the Five Mile River for the Trap Rock reservoir. The principal opposition to the company's application is

the pencils, and the pictures at 45 per cent. as manufactures of metal. The importers claimed admission for all the books at 25 per cent. as "books," and for the pictures at 35 per cent. as "toys." Mr. Fischer sustained their protest on the books, but overruled it on the pictures.

Mr. Fischer also overruled a protest by Gustave Kahn, of Chicago, claiming admission for lithographically printed "wall pockets" at 35 per cent. as manufactures of paper. He ruled that they were dutiable as lithographic prints at 6 cents a pound.

### Wisconsin Weather Conditions.

[FROM OUR REGULAR CORRESPONDENT.]

APPLETON, Wis., November 16, 1903.—The weather in Wisconsin last week was rather more indicative of the approach of winter. Quite a little rain came down, together with several small furies of snow, the thermometer going as low as 20° Fahr. Navigation on the river and lake remains open and it is expected that the season will be rather later than usual, the close not coming much before December 1 unless freezing weather should set in. Although the water in the lake has fallen considerably during the last month, it is still higher than usual for this time of the year, and the mills are still drawing the full normal flow of the river for power. New 8 inch flashboards have been placed on the Menasha dam. FOX RIVER.

in the business sufficiently to dispose of about \$90,000 worth of stock here.

Mr. Lord came to this country from Three Rivers, Province of Quebec, and his family is well known to many of the French speaking citizens of Biddeford, his father having been quite a prominent politician in the Province of Quebec at one time.

Mr. Lord's enterprise, as it is understood, embraces the purchase of a large tract of land along the banks of the St. Maurice River, about 70 miles from Three Rivers, Province of Quebec. These lands are owned by the Government and it is represented that they can be bought for a low figure. There is splendid water power along the St. Maurice River where the lands in question are located, and it is the scheme to put up mills there, manufacture pulp and ship it to this country, where the paper and paper bags will be manufactured.

The location of the paper mill in the States has not yet been decided upon, but it is said that Nashua is likely to be selected, although, if a more desirable place is found, it will be built there.

Some of the citizens of Biddeford with whom Mr. Lord has talked are said to think favorably of his scheme and have expressed a willingness to invest in some of the stock of the company that is to be formed, provided an investigation bears out the claims made by the promoter.

### BOOKS FOR PAPER MAKERS

**THE DYEING OF PAPER PULP.** By Julius Erfurt. Translated into English by Julius Hübner.....\$7.50

In Chapter I the behavior of the paper fibres during the process of dyeing and the theory of the mordant are treated, while Chapter II is devoted entirely to mordants. The influence of the water used is discussed in Chapter III, while in Chapter IV artificial and natural mineral colors are the subjects written about. Chapter V is exclusively on organic colors, it being in two divisions, the first being of colors of vegetable and animal origin and the second of artificial organic (coal tar) coloring matters. Chapter VI treats of the practical application of the coal tar colors according to their properties and their behavior toward the different paper fibres. Chapter VII is the most extensive, and contains the leading feature of the book. It contains 157 samples of paper dyed in the pulp, each of the samples being accompanied by the formula for stock and color. Included in the samples are those of placards, wrapping, cartridge, blotting, wall and packing papers, while much space and attention are given to mottled papers made of various classes of stock.

**PRACTICAL PAPER MAKING.** By George Clapperton .....\$2.50

A general treatise, and includes chapters on the chemical and physical characteristics of fibres, cutting and boiling rags, washing, breaking and bleaching, antichlor, mechanical wood, esparto, straw, beating, loading, coloring, resin and animal sizing, the Fourdrinier machine and its management, glazing and burnishing, cutting and finishing, microscopical examination of paper, tests for ingredients of paper, recovery of soda, tests of chemicals, tables of sizes, weights, &c. It is illustrated and contains a general review of the manufacture of paper that is serviceable and of value.

**THE ART OF PAPER MAKING.** By Alex. Watt....\$3.00

Its various chapters relate to cellulose, materials used in paper making, treatment of rags, esparto, wood and various other fibres, bleaching, beating, refining, loading, sizing, coloring, hand and machine paper making, calendering, cutting and finishing, colored papers, machines used in paper making, recovery of soda from spent liquors, determination of real value of commercial sodas, chloride of lime, &c., and useful tables and notes.

**A TEXT BOOK OF PAPER MAKING.** By C. F. Cross and E. J. Bevan. (Second edition.) .....\$5.00

This book treats of the chemical and physical characteristics of paper making fibres, their treatment, cellulose, beating, sizing, loading, coloring, the paper machine, hand made paper, calendering, cutting, caustic soda, recovery of soda, testing, site for paper mill, water supply, statistics, &c.

Any of these books will be sent postpaid, on receipt of the price stated, by the

## PAPER MILL MANAGERS AND EVERYONE ELSE

interested in the purchase or sale of PAPER MILL MACHINERY to get our Monthly Revised List of Second-hand Paper Mill Machinery. Mailed regularly to address of interested parties upon request.

**SHARTLE BROS. MACHINE COMPANY,**  
MIDDLETOWN, OHIO.

**WANTED**—One 48 inch, 56 inch or 62 inch three cylinder paper machine, complete from screen to cutter. Address Tillie, care Paper Trade Journal.

**SUPERINTENDENT**—Open for position in No. 1 book mill; thoroughly understands the handling of rags, soda and paper stock; best references. Address Book, care Paper Trade Journal.

### FOR SALE.

Dryers, press rolls, chilled calender rolls of various sizes, Fourdrinier machines.

- 1 48" cylinder paper machine.
- 1 108", 1 84", 1 66", 1 58", 1 62" stacks of chilled calender rolls.
- 2 85", 2 72", 1 66", 2 50" face brass molds.
- 2 1,500 lb double lighter, 1 1,000 lb. d. l. iron tub, 1 1,700 lb iron tub.
- 2 800 lb. Horne d. l., 3 800 lb. Jones d. l. beaters.
- 1 20x60, 1 18x42, 1 12x36 Corliss engines.
- 5 72x18" H. R. T. boilers.
- 1 86" M. & W. cutter, late style.
- 1 42" Finlay cutter, 1 44" Seybold, 1 56" Sheridan and 1 92" Cranston cutters, 1 64" Diagonal cutter.
- 1 set 21 iron dryers, 28x72", complete.
- 2 1,000 lb. Umpherston beating engines equipped with washers.

**F. H. DAVID & COMPANY,**  
53 State St., BOSTON, MASS.

### FOR SALE.

Six 5 feet Carthage Machine Company's latest Barkers; three are new, never having been set up; three have been run about three months; will sell cheap.

**J. E. HENRY & SONS,**  
Lincoln, N. H.

### LOCATIONS FOR PAPER MILLS

We wish to call attention to the excellent locations for Paper and Pulp Mills along the lines of the

**Southern Railway and  
Mobile & Ohio Railroad.**

The pulp wood resources of the South are attracting the attention of manufacturers. In addition to large tracts of balsam (spruce) and hemlock, there exist also large tracts of poplar, cottonwood, red and sweet gum, Tupelo gum and second growth pine. We also offer desirable locations for Straw Board Mills.

Correspondence solicited. Address

**M. V. RICHARDS,**  
*Land and Industrial Agent,*  
WASHINGTON, D. C.

## H. C. CLARK & SON MACHINE COMPANY,

Successors to CLARK & SPENCER,  
**PAPER MILL MACHINERY,**  
LEE, MASS.

- Revolving Paper Cutters,
- Rag Cutters,
- Cylinder Paper Machines,
- Washing and Beating Engines,
- Chilled Iron and Paper Calenders

Paper Makers as Canal Boat Men.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 16, 1903.—Becoming weary of the effort of the Miami and Erie Canal Transportation Company to furnish the proper facilities, a number of paper tradesmen and other manufacturers have joined in the formation of the Ohio Boat Company. Most of the men are Daytonians. Unfortunately they were unable to secure a charter at first, as Attorney-General Sheets objected to the articles of incorporation on the ground of uncertain purposes being set forth. In accordance with the Attorney-General's opinion, the chief clerk in the Secretary of State's office advised the projectors of the new company the first of this week that the papers would not be accepted until they were made clearer. It is said that when the purposes appear less ambiguous the charter will be granted. It is contended that by the articles submitted the company would be in a position to do almost anything with the canal bank, or the canal property, if they secured control of it. While the incorporation of the company would not give the new company certain rights along the canal, the Miami and Erie Transportation Company, which is now in the hands of receivers after having ex-

pended thousands upon thousands of dollars, is fighting the paper men at every step.

The Ohio Boat Company was organized for the purpose of running a line of canal boats on the Miami and Erie in competition with the electric mule under the theory that the Miami and Erie had secured valuable rights merely to transform the bank into a railway and turn it over to some company. Most of those who wish to incorporate the Ohio Boat Company are interested in paper mills. Among the number are J. H. Friend, of the Geo. H. Friend Paper and Tablet Company, of West Carrollton; W. P. Callahan, of the Ohio Paper Company, and the Levis mill in Miamisburg and Dayton, respectively; E. J. Barney, the multi-millionaire car manufacturer; R. R. Dickey, of the Dayton Globe Iron Works; Col. W. P. Orr, of the American Straw Board Company, of Piqua; J. T. McHugh and E. P. Harrison, of Cincinnati.

It is claimed that the Miami and Erie Transportation Company has already ruined a strip of the canal, and that various manufacturers who heretofore secured transportation by water have had such poor facilities since the various canal carrying lines were absorbed by the "electric mule" company that conditions are worse than before.

It is the intention of the Ohio Boat Company to restore the canal to its original condition and use it for shipping purposes. It is said that the "mule" will again appear on the towpath until the new company can determine upon a more modern motive power, which may be steam. It was expected that the company would incorporate a last week, but it is manifest that the Attorney-General will investigate before granting the charter.

**J. M. Cox Owns Dayton News.**

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 16, 1903.—An important deal was consummated in local newspaper circles this week when James M. Cox, president of the Daily News Publishing Company, acquired all of the stock of that corporation, purchasing the same from Dayton and Middletown men. He thus became the sole owner of the paper. A little more than five years ago Mr. Cox bought the paper with limited capital, but succeeding in entirely re-equipping the plant and issuing a metropolitan paper which attracted attention in the newspaper world. When the News became a 1 cent paper its circulation was assured, and the paper has forged ahead in remarkably short time. Recently Mr. Cox paid \$26,000 for a building site, and the paper will some day be in a home of its own.

**Paper Makers in Trolley Collision.**

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, November 16, 1903.—Two Cincinnati, Dayton and Toledo Traction cars collided last night at West Carrollton with disastrous results and many persons were injured, while one man, George Weidle, was instantly killed. Among the injured were Arthur Floyd, aged twenty-five, a paper maker, who sustained a fracture of the right leg, and Ralph Snyder, a paper maker, who was bruised and cut about the body. Two cars were running close together, and either from slippery tracks or carelessness the second car crashed into the rear of the first car. Edward Holderfield, a driver, of West Carrollton, was perhaps fatally injured, also. He was brought to this city and his right leg was amputated at the Deaconess Hospital. Most of those who were hurt were employed in various capacities in the paper mills of that village.

MARKET REVIEW.

Office of THE PAPER TRADE JOURNAL, WEDNESDAY, November 18, 1903.

FINANCIAL.—Money on call during the week ruled at 4 1/2 @ 6 per cent. On Monday it ruled at 4 1/2 @ 6, closing at 5 per cent. with the majority of the day's loans at 5 per cent. On Tuesday it ruled 4 3/4 @ 6 per cent., closing at 5 per cent., with the majority of the day's loans at 5 per cent. Time money, 6 per cent. for all dates from thirty days to six months. Mercantile paper, 6 per cent. for sixty to ninety days' endorsed bills receivable, 6 per cent. for choice four to six months' single names and 6 @ 6 1/2 per cent. for others. Latest quotations on trade securities are as follows:

Table with columns for company names and bid/ask prices. Includes American Straw Board Company, American Writing Paper Company, etc.

PAPER.—The demand so far this month is not up to the expectations of the dealers and manufacturers. The latter, however, have not as yet felt the effects of the curtailed buying in the same proportion as the jobbers. From the reports received it would seem as if all the mills had a fairly good supply of orders ahead. For this reason there are no indications of any lowering of the quotations. But should the depression of the past few weeks continue the chances are that the market conditions will be reflected in the asking prices of the manufacturers. The fact, however, that the consumption of paper for the six weeks previous to the first of the year is always heavy is counted on to offset any temporary weakness in the distributing trade. Because of the heavy advertising at this season the demand for News paper is quite strong. All the large News manufacturing companies report a big demand. Some of the agents of the smaller companies, on the other hand, say that the market on News is a little softer this week. The quotation on News ranges from 2.40 @ 2 1/2 c. Manilas are moving, but are not as active as they should be in November. The mild weather and restricted buying in many lines of business have combined to reduce the consumption of Manilas. In Manilas the unfavorable market situation is reflected to a greater extent in the other grades. Some buyers report that the manufacturers of the cheaper grades of Manilas are quietly offering concessions. Tissues continue very scarce and high. Book papers are fairly steady, but are not considered strong. The reports from the sellers of Book papers represent the two extremes of great activity or extreme dullness, according to the volume of their sales. Many of those who sell Book papers complain that their customers are not placing big orders, but are buying as needed instead. In Writings the regular trade is of more moderate proportions, as printers, lithographers and manufacturing stationers are not as busy as they should be at this time. Special orders help to bring up the sales to somewhere near the average. In Boards the market is rather quiet, partly because of the lessened demand for paper boxes, due to the depression in general business and partly because of the organization of the Paper Products Company. A new price list on Boards is expected this week. We quote:

Table listing various paper products like Bonds, Ledgers, Writing, Superfine, etc. with their respective prices.

WOOD FIBRES.—In fibres there is this week no variation from the good report that has been repeated week after week for a number of months. Imported fibres still continue scarce and high. For them the sellers insist upon advanced prices. All high class domestic stock is also bringing very good prices because of the strong demand and the scarceness. Domestic Unbleached Sulphite is in very fair demand at from 1.70c. up. Soda is unchanged. We quote as follows:

Table listing Sulphite, Soda, Bleached, Unbleached, etc. with prices.

WOOD PULP.—Speaking of the situation in the ground wood market a prominent middleman said this week: "I have nothing to offer and, on the other hand, I am not

pressed with inquiries for pulp. So you see that things are in statu quo. The fact that offerings are few go to show that manufacturers are not anxious to unload at present prices." The slowness of the inquiry can be accounted for only on the assumption of that paper man.

BAGGING, ETC.—With the exception of Gunny Bagging the stocks in this list are featureless. Gunny happens to be of interest simply because it is scarce and is advancing in price. This week the importers say that they cannot sell Gunny for less than 85c. Rope is dull and weak. The other stocks are very quiet. We quote:

Table listing Gunny, Manila Rope, Foreign, Domestic, etc. with prices.

FOREIGN RAGS.—The market generally speaking seems quiet. Some of the leading importers, however, report that their sales are ahead of those for the fall months of last year. Desirable new stock is said to be in good demand. In Old Rags there is no strong demand because buyers refuse to pay the asking prices of the packers. The market abroad continues firm. We quote:

Table listing German Blue Cottons, Dutch Blues, Light Print, etc. with prices.

DOMESTIC RAGS.—There is an even, steady movement in rags, although there is no special activity to the buying. No. 1 Whites and Soiled Whites, both Street and House, are in very fair demand. Thirds and Blues and Street Seconds are said to be quiet. Satinettes, both straight and mixed, Tailors' Clips and Hard Back Carpets are in quite active demand. We quote:

Table listing No. 1 Whites, Soiled Whites, Street, etc. with prices.

OLD PAPERS.—The demand for old papers continues quite satisfactory. A good feature of the situation is the fact that there is no accumulation of any of the various grades of stock. No. 1 White Shavings, Solid Ledgers, Ledgers and Writings, Straw Clippings, Straw Boxes and Flat Stock are all in active demand. Overissues, Folded News and Crumpled News are all moving freely. Manila Cuttings are a little off. We quote:

Table listing No. 1 Hard White Shavings, No. 2 Hard White Shavings, etc. with prices.

TWINES.—The houses that carry twines report a fair demand, which the dealers say would be a great deal better if we had more favorable weather for the movement of the winter stocks in the hands of the retailers. Manila papers and twines are both in somewhat reduced consumption because of the warm weather. We quote:

Table listing Sisal Hay, Sisal Lath Yarn, Jute Rope, etc. with prices.

ULTRAMARINE.—A steady demand continues and prices are regular.

CHINA CLAY.—Imported goods are in small supply on spot. Prices are firm on steady demands and the range is \$11 @ 17. Domestic is in fair call at \$8.50 @ 10.

ALKALI.—There has been a larger outward movement, owing to increased deliveries under contracts. Prompt has been selling freely at 72 1/2 c. for Light and 77 1/2 c. for Dense in bulk, f. o. b. works.

CAUSTIC SODA.—There are reports that the price of Caustic will be advanced soon as makers are well sold up over next year. This has stimulated business for next year's contracts, which have been sold at 1.75 @ 1.80c. f. o. b. works.

SAL SODA.—Contract business is satisfactory, but new trade is rather light. Prices are unchanged.

BLEACHING POWDER.—There has been business done in next year's contracts at 1 1/4 c. and upward for English and Domestic for seaboard deliveries and 1.20c. and

up for German. Spot is quiet and the quotation is 1.20c. and upward.

ALUM.—Deliveries continue heavy. Lump is quoted at 1.75 @ 1.80c. and Ground at 1.85 @ 1.90c.

BRIMSTONE.—A few resales are reported from steamer due at \$23. Shipments are held at \$22 @ 22.25, and thirds 50c. per ton less, but buyers only take such lots as current wants require, unless concessions are made.

ROSINS.—The market here is very firm and there was an advance of 10c. on all grades in Savannah on Tuesday. Pale grades were marked up here. We quote: Common to Good Strained, \$2.95 @ 3; E, \$3 @ 3.10; F, \$3.10 @ 3.15; G, \$3.20 @ 3.25; H, \$3.30; I, \$3.45; K, \$3.70; M, \$3.85; N, \$4.10 @ 4.15; W G, \$4.25; W W, \$4.50.

COLORS.—We quote colors, dyes and mordants as follows:

Table listing Mineral and Vegetable Colors, Anilines, Mordants, etc. with prices.

Philadelphia Markets.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA, November 17, 1903.—The past week, following the example of many preceding ones, brought no change, even of the slightest character, to the conditions—very quiet ones they are—in the paper stock market. Prices continue unchanged only because the sluggish demand is equalized by small supplies. Quotations are as follows:

Table listing Bonds, Ledgers, Writing, Superfine, etc. with prices.

Table listing Gunny, No. 1, Foreign, Domestic, etc. with prices.

Table listing Shavings, No. 1 Hard, No. 1 Soft White, etc. with prices.

Table listing Bonds, Ledgers, Writing, Superfine, etc. with prices.

Table listing Bonds, Ledgers, Writing, Superfine, etc. with prices.

Table listing Shavings, No. 1 Hard, No. 1 Soft White, etc. with prices.

# THE REEVES

## VARIABLE SPEED TRANSMISSION

*Mister Progressive*  
*Paper Manufacturer:*

The difference between the use of the REEVES device and the ancient cone method for changing the speed of your Paper Machines is increased output and improved quality.

Have you figured out just how much time you lost last month in shifting belts, etc., to change the speed of your machine?  
Have you ever considered the effect of that lost time upon your profits?  
We would like to tell you how much time and profit is being saved by paper manufacturers who are using the REEVES device.

# THE REEVES PULLEY CO. COLUMBUS IND.
