NEWSPAPERS in the United States follow the trial of Émile Zola, in France, with running comment which has many points of interest. Differences between the French methods of procedure and our ideas of the proper method to secure justice through the courts are emphasized, and yet there are intimations that we are not in a safe position to throw stones. It is pointed out that the French procedure is a survival of monarchical institutions, standing since the Revolution of 1789. On what we would call a charge of libel, the French Government prosecutes Zola and Editor Perreux of *l'Aurore*, which published Zola's letter of accusation against the War Department and others concerned in the court-martial that acquitted Count Esterhazy from the charge of being the real author of certain evidence upon which Dreyfus was exiled. The Court of Assizes, before which the trial is being held, has limited evidence, so far as it could, to the Esterhazy court-martial, but in spite of all obstacles a great deal of evidence bearing upon the Dreyfus affair has been brought before the jury. Our newspapers, besides giving attention to the current exhibition of the mysterious forces of antisemitism in France, insist that in reality Zola is fighting for the overthrow of a semi-military régime of irresponsibility which is out of date in a state where the theory of the sovereignty of the people is the ideal of government.

Time to Remodel Procedure.—"France is a republic, in name at least; but a judge in a criminal trial in that country has powers granted to no official in a similar capacity in any republic in the world. It has been seen in the trials recently how completely the judge dominates everything. He asks almost any questions he chooses, and rules out others that would be allowed in other countries as a means for getting at the truth. Trial by jury is the method of the Anglo-Saxon people, which, altho not perfect, has been found to work well among the English-speaking people the world over. Suppression of evidence, either in favor of the prisoner or against him, is contrary to the prevailing opinion in an age like this.

"The French system is a relic of older days, when military methods of procedure were in harmony with civilization as it then existed in that country. Outsiders recognize the difficulties that surround the Dreyfus case in the relation France stands to Germany and Russia, but the effect of suppressing evidence in a criminal case for political reasons on the people as a whole must give those entrusted with the making of the laws serious food for reflection. If anything is kept back that would tend to clear up one case, it might be kept back in any and all criminal cases, and no man charged with an offense, especially against the Government, would feel that he could be properly defended when brought to the bar.

"The republic in France has been a success in many particulars, but in others the stage of experiments has not been passed. This might be true in any other country where a change from a monarchy to a republic, always a more or less violent change, had been made with more or less suddenness. France is working out her destiny successfully as a republic, but the wise thing to do in any government is to make improvements when they are demanded, and the time seems at hand for the methods of criminal procedure in France to be remodeled."—*The American, Baltimore*.

Advertisement and Glass Houses.—"There has been nothing more irregular than the prosecution in the Zola case—excepting the defense. There has been nothing more one-sided and purely declamatory than the defense—except the prosecution. But be not deceived. Your Frenchman is a natural born fountain of advertisement. Neither Zola nor his friends nor his opponents nor the army nor 'journalism' over there can omit advertisement or would for one moment. They put it on before they assume their clothes, and then the spirit of it enwraps them as an atmosphere and warms them like a flame, clothes and all. There is a great ado in the court. But ado is the daily delight of the Parisians. Gunpowder is their only snuff, and sensation is to them the breath of life.

"Quite possibly, nearly as just results in final form will issue from the menagerie of noise which is called a trial, and which is going on over there, as would come from the icy inquisition of the subject in London or New York. Indeed, our new journalism is making some American trials very Frenchy in their froth and unfairness. It tried to make the Thorn and Nack trial Frenchy, but it ran up against two Long Island judges, Judge Smith and Judge Maddox, and they sat down on it very hard. It is trying to make the trial going on at Wilkesbarre Frenchy and frothy and unfair. But Judge Woodward is showing that he knows how to take care of himself, and the 'journalistic' offenders have to applaud his efforts to avoid pleading guilty to his indictment of them.

"We do not know that people in this country can just now, considering the glass houses in which many of them live, afford to throw stones at their French brethren. Nor should it be forgotten that behind his dramatic manner and his sensational methods the average Frenchman is a very fair being, chivalrous, considerate, upright, humane, and lovable. There is no nation in the world of which the real home life is more beautiful and affectionate, or in which respect for age, for learning, and for piety framed in character is more observable and sincere than is the case in France. To outside view a Frenchman is antic, interiorly he is very genuine."—*The Eagle, Brooklyn*.

Cases of the Same Sort in this Country.—"He [Zola] makes the most wholesale denunciations of various people in high places, and challenges the Government to bring him to trial. The Government, still determined to stand its ground and to keep its secrets, arraigns him upon certain counts included in the charges he made. He comes into court and attempts at the very start to prove things upon which he has not been arraigned. The court refuses to permit this. It is precisely what any court in England or America would have done in a libel or slander case; but forthwith he and his lawyers break out in complaints of injustice, and the whole British press, the American press echoing the latter, repeat their denunciations.

"Finally, it should be remembered that all our information on this whole subject comes through British channels, and these should always be suspected when dealing with Continental matters, and especially with French courts. We should bear in mind that this case has almost passed out of the range of jurisprudence and into that of the highest politics. We have had cases of the

same sort in our own country. We hanged Mrs. Surratt for complicity in the assassination of Lincoln. There was not a cool-headed lawyer in the country at the time that did not believe she was innocent. All reasonable people now concede that it was a judicial murder. Nothing has ever been even suggested to vindicate her memory or to console her relatives as would have been long ago done in France. We hanged several of the so-called Anarchists of Chicago, and sent others of them to prison. There is hardly a respectable lawyer in the country who followed the case who believes the judgment was a just one. The survivors were pardoned; but the stigma of guilt still rests upon them all. There is no means of vindication. We should be more modest in criticizing the institutions of other countries, especially when we do not quite understand them; and above all, we should remember that we are not entirely and at all times free from the influences of popular passion ourselves."—*The News, Detroit*.

Methods Abroad and at Home.—"It seems most probable, in the confused light of such partial evidence as this frantic trial has discovered, that Dreyfus was guilty, but that he was not fairly tried and was condemned summarily on evidence he and his counsel were not allowed to see and try to rebut or explain. This is the common practise in Russia, and is not unknown in Germany, but even impassioned appeal to protect the honor of the army and to save the only diplomatic alliance of the republic fails to reconcile the French people to it. Their impatience is due partly to racial light-headedness and partly to inherited impatience with Bourbon methods. They are unwilling to trust the Government of their own choice with a state secret, and insist that it be shared with the populace. They have outgrown the Continental habit of unquestioning submission and have not acquired the Anglo-Saxon habit of confidence in government. English or American public opinion in a similar case—an identical case can not be imagined—would be content with the solemn assurance of government that high public interests required it to adopt a policy of reserve."—*The Commercial Advertiser, New York*.

"There is probably no mystery of modern times more unsolvable than the average Parisian mind when it is overcome by abstinence and hysterics, unless it be a French court of justice during a period of popular excitement and governmental stupidity. An alien is at a loss to grasp a proper point of view from which adequately to scrutinize this mercurial race and its singular legal forms. Paris is nearly always intoxicated. Rarely is it blessed with the self-poise of perfect sobriety. If we had no judges who tyrannized by injunction and no mobs that burned beings at the stake, we might be tempted to call the Parisians unthinking and unfeeling barbarians. It is, perhaps, just as well to look at them as bitter with the gall of prejudice like the people of all countries, and merciless with the injustice of a populace blindly following a vicious political party."—*The World-Herald, Omaha*.

"It has been the fashion among a certain class of political agitators to speak disparagingly of the probity and effectiveness of American courts. They have not scrupled to cast innuendoes upon our judicial system, which pleases them no better than any other American institutions. It will be instructive for these disciples of unrest, as well as for the rest of us, to mark well the conduct of the Zola trial in Paris. Was there ever a more palpable muzzling of justice? We are too apt to forget how good a land we live in and to undervalue its blessings. Every time the European veil is lifted, as it is now being lifted in France, that realization comes home to us with increased force."—*The Journal, Minneapolis*.

"The manner in which the jury in the Zola case was secured and is managed is worthy of passing notice. Forty talesmen were called. One died, two fell ill, and two were excused because they had served on a jury last year. Of the remaining thirty-five, fourteen were chosen by lot. The prosecution had a right to challenge ten and the defense eleven. There are fourteen jurors, but only twelve will frame the verdict, the other two being supernumeraries, to serve only in case of a vacancy occurring in the box. . . . The verdict will be determined not by unanimous agreement, but by a mere majority vote of the twelve. And, finally, the jurors are not kept under guard, but are permitted to go to their homes or elsewhere, read all the papers, and discuss the case with friends as much as they please. Truly, a striking contrast to the American jury system."—*The Tribune, New York*.

COMMERCIALISM AND GOVERNMENT.

"MISGOVERNMENT in the United States is an incident in the history of commerce. It is part of the triumph of industrial progress. Its details are easier to understand if studied as a part of the commercial development of the country than if studied as a part of government, because many of the wheels and cranks in the complex machinery of government are now performing functions so perverted as to be unmeaning from the point of view of political theory, but which have become perfectly plain if looked at from the point of view of trade."

The statements quoted contain the theory which is elaborated in an able manner by John Jay Chapman, in *The Atlantic Monthly* for February. Governmental form, as the outward expression of economic character, is not a new idea among political economists, but the application of it to our own case is enlightening and provokes discussion.

Similar thought appears to be in the mind of Senator Marion Butler, who writes in *The Arena* for March on the trust problem. His analysis of conditions discovers that the strength of monopoly is in getting control of the instruments of commerce—money, transportation, and the transmission of intelligence. And Dr. Albert Shaw of *The American Monthly Review of Reviews*, discussing the progress of the world last month, fixed upon the money power as the determining factor in European strategy between governments as well as in our own Cuban and home policy.

Capture of Government by Commercialism.—"The growth and concentration of capital which the railroad and the telegraph made possible is the salient fact in the history of the last quarter century. That fact is at the bottom of our political troubles. It was inevitable that the enormous masses of wealth, springing out of new conditions and requiring new laws, should strive to control the legislation and the administration which touched them at every point. At the present time, we can not say just what changes were or were not required by enlightened theory. It is enough to see that such changes as came were inevitable; and nothing can blind us to the fact that the methods by which they were obtained were subversive of free government.

"Whatever form of government had been in force in America during this era would have run the risk of being controlled by capital, of being bought and run for revenue. It happened that the beginning of the period found the machinery of our Government in a particularly purchasable state. The war had left the people divided into two parties which were fanatically hostile to each other. The people were party mad. Party name and party symbols were of an almost religious importance.

"At the very moment when the enthusiasm of the nation had been exhausted in a heroic war which left the Republican Party managers in possession of the ark of the covenant, the best intellect of the country was withdrawn from public affairs and devoted to trade. During the period of expansion which followed, the industrial forces called in the ablest men of the nation to aid them in getting control of the machinery of government. The name of king was never freighted with more power than the name of party in the United States; whatever was done in that name was right. It is the old story; there has never been a despotism which did not rest upon superstition. The same spirit that made the Republican name all-powerful in the nation at large made the Democratic name valuable in Democratic districts.

"The situation as it existed was made to the hand of trade. Political power had been condensed and packed for delivery by the war; and in the natural course of things the political trademarks began to find their way into the coffers of the capitalist. The change of motive power behind the party organizations—from principles to money—was silently effected during the thirty years which followed the war. Like all organic change, it was unconscious. It was understood by no one. It is recorded only in a few names and phrases; as, for instance, that part of the organization which was purchased was called the 'machine,' and the general manager of it became known as the 'boss.' The external political history of the country continued as before. It is true that a steady degradation was to be seen in public life, a steady failure of character, a steady decline of decency. But questions continued to be discussed, and in form decided, on their merits,

because it was in the interest of commerce that they should in form be so decided. Only quite recently has the control of money become complete; and there are reasons for believing that the climax is past.

"We hear a great talk about the failure of our institutions as applied to cities, as if it were our incapacity to deal with masses of people and with the problems of city expansion that wrecked us. It is nothing of the sort. There is intellect and business capacity enough in the country to run the Chinese Empire like clockwork. Philosophers state broadly that our people 'prefer to live in towns,' and cite the rush to the cities during the last thirty years. The truth is that the exploitation of the continent could be done most conveniently by the assembling of business men in towns; and hence it is that the worst rings are found in the larger cities. But there are rings everywhere; and wherever you see one you will find a factory behind it. If the population had remained scattered, commerce would have pursued substantially the same course. We should have had the rings just the same. It is perfectly true that the wonderful and scientific concentration of business that we have seen in the past thirty years gave the chance for the wonderful and scientific concentration of its control over politics. The state machine could be constructed easily by consolidating local rings of the same party name.

"The boss *par excellence* is a state boss. He is a comparatively recent development. He could exist only in a society which had long been preparing for him. He could operate only in a society where almost every class and almost every individual was in a certain sense corrupted. The exact moment of his omnipotence in the State of New York, for instance, is recorded in the actions of the state legislature. Less than ten years ago, the bribing of the legislature was done piecemeal and at Albany; and the great corporations of the State were accustomed to keep separate attorneys in the Capitol, ready for any emergency. But the economy of having the legislature corrupted before election soon became apparent. If the party organizations could furnish a man with whom the corporation managers could contract directly, they and their directors could sleep at night. The boss sprang into existence to meet this need. He is a commercial agent, like his little local prototype; but the scope of his activities is so great and their directions are so various, the forces that he deals with are so complex and his mastery over them is so complete, that a kind of mystery envelops him.

"The government of a State is no more than a town government for a wide area. The methods of bribery which work certain general results in a town will work similar results in a State. But the scale of operations is vastly greater. The state-controlled businesses, such as banking, insurance, and the state public works, and the liquor traffic, involve the expenditure of enormous sums of money.

"The effect of commercialism on politics is best seen in the state system. The manner of nominating candidates shows how easily the major force in a community makes use of its old customs.

"The American plan of party government provides for primaries, caucuses, and town, county, and state conventions. It was devised on political principles, and was intended to be a means of working out the will of the majority, by a gradual delegation of power from bottom to top. The exigencies of commerce required that this machinery should be made to work backward—namely, from top to bottom. It was absolutely necessary for commerce to have a political dictator; and this was found to be perfectly easy. Every form and process of nomination is gravely gone through with, the dictator merely standing by and designating the officers and committeemen at every step. There is something positively Egyptian in the formalism that has been kept up in practise, and in the state of mind of men who are satisfied with the procedure.

"The reasons for believing that the boss system has reached its climax are manifold. Some of them have been stated, others may be noted. In the first place, the railroads are built. Business is growing more settled. The sacking of the country's natural resources goes on at a slower pace. . . . Bribery, like any other crime, may be explained by an emergency; but every one believes that bribery is not a permanent necessity in the running of a railroad, and this general belief will determine the practises of the future. Public opinion will not stand the abuses; and without the abuse where is the profit? In many places, the old system of bribery is still being continued out of habit, and at a

loss. The corporations can get what they want more cheaply by legal methods, and they are discovering this. In the second place, the boss system is now very generally understood. The people are no longer deceived. The ratio between party feeling and self-interest is changing rapidly, in the mind of the average man. It was the mania of party feeling that supported the boss system and rendered political progress impossible, and party feeling is dying out.

"Moreover, time fights for reform. The old voters die off, and the young men care little about party shibboleths. Hence these non-partizan movements. Every election, local or national, which causes a body of men to desert their party is a blow at the boss system. These movements multiply annually. They are emancipating the small towns throughout the Union, even as commerce was once disfranchising them. As party feeling dies out in a man's mind, it leaves him with a clearer vision. His consequence begins to affect his conduct very seriously, when he sees that a certain course is indefensible. It is from this source that the reform will come.

"The voter will see that it is wrong to support the subsidized boss, just as the capitalist has already begun to recoil from the monster which he created. He sees that it is wrong at the very moment when he is beginning to find it unprofitable. The old trade-mark has lost its value.

"The corruption that we used to denounce so fiercely and understand so little was a phase of the morality of an era which is already vanishing. It was as natural as the virtue which is replacing it; it will be a curiosity almost before we have done studying it. We see that our institutions were particularly susceptible to this disease of commercialism, and that the sickness was acute, but that it was not mortal. Our institutions survived." —*John Jay Chapman, in The Atlantic Monthly, February.*

Monopolistic Control of the Instruments of Commerce.—

"The so-called Democratic and Republican anti-trust laws now on the statute-book are ineffective; first, because the evil laws now in existence and in full force, which inevitably produce trusts, are not repealed; next, because the so-called anti-trust laws are not directed at any of the fundamental conditions that foster and promote the existence of trusts.

"A trust is a scheme or a device to establish a complete monopoly of any line of business. Whenever any number of individuals organize themselves into a corporation and get a complete monopoly of any line of business, so that they can crush out all kinds of competition and regulate absolutely the price of not only the manufactured articles sold to the public, but also the raw material bought from the producers to make the articles, then we have a typical modern trust. But the all-important question is: How can any corporation get a complete monopoly of any line of business? That is, how is it possible for such a monopoly—such a trust—to be organized and maintained? Are not the thousands of people in a certain line of business more powerful than one syndicate or corporation in the same business? Are not seventy millions of people more powerful than a half-dozen of that number? They are if they have equal opportunities. Then how is it possible for a very small number of men to drive out of business and crush their thousands of competitors, secure a complete monopoly, and maintain it in the face of the remainder of the nation? There is but one way in which it can possibly be done: the monopolists must first *get control of the instruments of commerce*. Those who control the instruments of commerce can of course control commerce itself, can destroy all competition, and can put any kind of business and every business into a trust at will.

"Now what are the instruments of commerce? They are three in number.

"The first is money—the measure of values, the medium of exchange—which is a vital element in every business transaction. Money is the life-blood of commerce, and business stagnates and congests when the supply is cornered, or when the quantity in circulation does not increase with the increase of population and business, just as the human body grows weak from congestion or loss of blood.

"The second great instrument of commerce is transportation. Cheap transportation that can be used on like terms by all is an essential factor of business in any country; but the larger the country the more important is transportation. In a country of the immense distances of ours the transportation question is of

equally vital importance with the money question. But the opportunity and the right to use this instrument of commerce to transport products from one end of the country to the other at the same prices and on the same terms that your competitor pays or enjoys is of even more importance in preventing the building up of trusts than the question of cheapness. Wherever there is discrimination in freight rates, no matter whether the freight charges are high or low, a powerful leverage is given to those who have the benefit of rebates and favoritisms to crush out competition.

"Do such discriminations exist? Yes, and necessarily so when a few great bankers and syndicates own and control this powerful instrument of commerce, and can therefore regulate rates and make discriminations in favor of monopolies and trusts with which they are allied. What do we see to-day? One man, J. Pierpont Morgan, representing a foreign gold syndicate composed of London Jews, owning and absolutely controlling, as the agent of that trust, eight of the biggest railroad systems in the nation. Which are they? The New York, New Haven, and Hartford, extending from New York to Boston and throughout New England; the Erie, with all its branches and feeders; the New York Central, extending from New York to Chicago, with all its ramifications; the Northern Pacific, extending from Chicago across the continent to the Pacific Ocean, with all its ramifications; the great Lehigh Valley system; the Big Four, covering the great fertile Central West between St. Louis, Philadelphia, and Chicago; the Chesapeake and Ohio, running from Baltimore out to Chicago and the great Northwest; and the Southern Railroad, extending from New York south to New Orleans, with all its ramifications in more than a dozen States.

"These powerful systems, with the tributaries which they dominate and control, comprising more than 55,000 miles, govern every means of modern transportation in all the great, populous, and important sections of the nation from Chicago east and south, except the Pennsylvania Railroad, the Baltimore and Ohio, the Seaboard Air Line, and the Atlantic Coast Line. Morgan and his gold backers have their greedy eyes on these. . . .

"The third great and vital instrument of commerce is the transmission of intelligence. As far as the business world can use the Post-office Department every one stands on a fair and equal footing; but the information that controls the markets and affects vitally the business world, from the Associated Press despatches to the daily newspapers, the stock reports, and so on, down, are transmitted by telegraph. The tremendous importance of this instrument of commerce is not generally realized. The actions of men are controlled by their opinions; their opinions are formed on the information they receive. Therefore the opinions and actions of the wisest and best men are sadly at fault if the truth has been kept from them, or if it has been colored or perverted. Those who can control what we read can control our thoughts; those who control our thoughts can control our votes; those who can control our votes can control our pocketbooks and the destinies of the nation.

"Here, then, are the three vital instruments of commerce—money, transportation, transmission of intelligence. How should they be used and by whom should they be controlled? Can agencies so powerful, and the proper use of which is absolutely essential to the welfare of all the people, be trusted in the hands of a part of the people to be used for their own private gain and power? Clearly not. Then how should they be used and controlled in order to give equal opportunities to all and to promote the general welfare? Clearly these instruments of commerce should be used as public functions at the lowest possible cost and without discrimination in favor of one person and against another. This must be done in order to put every industry and business enterprise on an equal footing. Has this been done? No. But instead we have permitted the reverse to be done. These vital instruments of commerce are to-day completely in the hands of private individuals and speculators, who therefore have the business world

at their mercy. Whenever a government permits the instruments of commerce to go into private hands it has surrendered its most important function of sovereignty. It has surrendered its power to 'establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty.' It is to secure these rights that governments are established among men.

"The instruments of commerce are natural monopolies—they are natural trusts. When they are used as public functions, open and free to the use of all on like terms and conditions, then there is healthy competition, with widespread industrial activity, and general prosperity and happiness. . . . It is true that Congress pretends to regulate these instruments of commerce; but the fact is that those who control the instruments of commerce control Congress, prevent the passage of effective laws to cure the evil, and secure the passage of other laws in their own interest which aggravate the evil. Congress made its fatal mistake when it put into the hands of private persons and syndicates these powerful vital and constitutional instruments of commerce, which make trusts and make them greater than Congress."—*Senator Marion Butler, Chairman of People's Party National Committee, in The Arena, March.*

Money Power and Recent History.—"The financial plan by which it is proposed that England should lend China a great sum of money is interesting on several accounts. The money of course will be supplied primarily by the great international banking houses of Europe, which will take up a new issue of British

consols at the ruling low rate of interest, presumably $2\frac{1}{2}$ per cent. England will take the proceeds of this issue off consols, and turn the amount over to China at, say, 4 per cent. With Chinese sources of revenue under the control of English officials like Sir Robert Hart, the regular payment of interest and of instalments on the loan will be reasonably certain, and the profit accruing to the British Government from the difference in the rate of interest would in any case form a sinking fund which in the course of a reasonable term of years would pay off the consols and leave the Chinese loan a matter of clear profit. The matter has peculiar interest from the fact that the arrangement is supposed to have been worked out chiefly by the great bankers who are neither English, French, nor German in their real allegiance, but must be regarded as a law unto themselves and a separate power, gradually but steadily strengthening their grip upon the destiny of nations.

"It was this huge, mysterious money power that enabled the continental governments, led by Russia, to circumvent England and place the Chinese loan at the close of the Japanese war. And now it is the same hidden but potent force that declines to allow the continental powers to make the present Chinese loan, but ordains that England shall make it. The issues of the recent Turco-Greek war were decided, unquestionably, by this coalition of European bankers, who improved the opportunity to gain a better hold upon the revenues both of Turkey and of Greece, and cleared up millions of profit out of the hideous conflict between Moslem and Christian. Their influence has slaughtered the Armenians and wrought the discomfiture of Greece. The hand of this coalition of European bankers has been constantly felt in the affairs of Spain and Cuba. Their method is to secure control of great issues of public securities at heavy discounts, bearing high rates of interest, and then so to manipulate diplomacy and the course of international politics as ultimately to make certain the payment in full of interest and principal. It is not pleasant to remember that these foreign gentlemen, with their finger in every diplomatic and international affair, were invited to come to the rescue of the United States Treasury under the last Administration. Our politicians, playing their game of party politics so desperately that they forgot their patriotism, had in times of peace and prosperity cut off the revenues of the United States Government until the business of the country was hopelessly deranged and the basis of the currency system seriously threatened. And then the European money power, at an immediate profit of some millions of dollars, sold us the gold that we ought not to have needed.

"Even now, the very men who were the strenuous critics of the policy pursued in the last Administration, having themselves come into power, refuse to admit the facts about the continued deficiency of public revenue. Not only do they decline to provide the money with which to pay off the debt incurred two years ago, but they also refuse to perceive the real danger that their conduct may in the early future compel them in their turn to bend the knee to the coalition of European money-lenders, in order again to buy the gold that our Treasury ought not to have lacked. There is probably not a Republican in either House of Congress to-day who will not admit in private conversation that an additional tax ought at once to be placed upon beer, for the sake of increasing the revenues. Yet no step is being taken in that direction. This is partly because the brewing interest is not to be offended. But, chiefly, it is because it is considered bad party politics to admit that the Dingley tariff is inadequate on the side of revenue production. In order to avoid the necessity of amending the law and increasing the sources of public income, an attempt is being made at Washington to resort to undignified and even ridiculous economies in expenditure. An instance of this is the proposed impairment of the postal service of the city of New York by reducing the daily deliveries."—*Albert Shaw, in The Review of Reviews, New York.*

SACRILEGIOUS MEN.—"Just listen to this!" he exclaimed, suddenly straightening up in his chair.

"What is it?" she demanded.

"An Eastern railroad has run its tracks right across the golf links of one the very best golf clubs."

"Horrible!" she cried. "Do you suppose they will hang the directors merely send them to jail for life?"—*The Evening Post, Chicago.*

DR. MIQUEL announces that bringing American apples to Berlin is carrying germs to Germany.—*The Mail and Express, New York.*

THE LATE FRANCES E. WILLARD.

FRANCES E. WILLARD, president of the World's Woman's Christian Temperance Union, died in New York City on February 17. She had been president of the National Woman's Christian Temperance Union since 1879 and a foremost figure in the woman's movements of the latter half of the nineteenth century. Miss Willard was born of New England parentage in Churchville, near Rochester, N. Y., in 1839. She was graduated from the Women's College, later absorbed by the Northwestern University, Evanston, Ill. After teaching in public schools and the university, she became president of the Women's College. She gave up that position for the work of the Woman's Christian Temperance Union following the woman's temperance crusade, and was elected first corresponding secretary of the national

FRANCES ELIZABETH WILLARD.

organization in 1874. In the course of her public career she visited all the States and Territories, and a number of Canadian provinces and European countries, holding conventions and establishing temperance organizations. Since 1884 Miss Willard had supported the Prohibition Party, having failed in that year to secure from the Republican Party a declaration against the liquor traffic asked by the Woman's Christian Temperance Union.

Miss Willard was editor-in-chief of *The Union Signal*, official organ of the Woman's Christian Temperance Union, at the time of her death. At one time she was editor of the *Chicago Evening Post*, and she frequently contributed to the press. Among her books are "How to Win," "Glimpses of Fifty Years," and "Nineteen Beautiful Years." She was very popular on the lecture platform, and helped to found the National and International Woman's Council, representing a federation of woman's organizations.

Of Such is the Hope of the World.—"It may be doubted whether there was a better-known woman in America than Miss Frances E. Willard, whose death occurred at an early hour this morning. Her methods were extreme, but her objects were always admirable, and as a social reformer and leader among the advocates of temperance she attained a reputation which entitles her memory to the sincerest reverence and affection. A woman

of liberal education, broad culture, and extensive travel, and with an insight into human nature that is rare in her sex, her mental faculties were not cultivated at the expense of the gentler side of her nature, and she inspired a following remarkable not only in numbers but in the intensity of the zeal which characterized it. Appealing to the intellect through reason, to the heart through the sympathies, and to the conscience through a sense of religion, as she saw the light, it still remains true that the desirability of her life and the usefulness of her life were exactly in proportion to the unreasonableness of her propositions.

"She wanted to bring about the millennium at a bound. Convinced that human nature is better than it really is and that it can be reconstructed along lines of momentary creation, she entered into her work with the ardor and devotion of an apostle inspired from on high; but she was not practical, and while we regret that such was the case, we should also rejoice thereat, for people like her are essential to the progress of morality and the uplifting of ideals in social and religious life. The best women live by ideals and the best men seek to approximate them, and while both, in attainment, may be disappointed, the fact that they exist makes for the happiness of mankind. The impossible minority are the hope of the world. They head us in the direction of education, of improved government, of cleaner and more wholesome habits of life than would presumably prevail, had we not the stimulus and impetus of the few, who, while striving for the unattainable, are nevertheless the advance guards of a higher civilization. Miss Willard obtained the signatures of seven millions of people in all parts of the world to a temperance petition, and it was presented to the heads of the different governments. No nation can accept officially petitions from other than its own subjects, and this destroyed the practical value of her work, but nevertheless its effect as a moral example was not lost nor will it be for years to come."—*The Eagle, Brooklyn.*

Captain in New Age of Organized Womanhood.—"Now that death has closed criticism and ended dispute, her life-work stands that of agitation rather than of construction. A vast number of women have been quickened, stimulated, and carried out of narrower horizons by her great influence. She drew together by counties, by states, by nations, a great host of women who wanted to do something, who did not know what to do, and who found themselves suddenly and conspicuously occupied in swaying and directing the emotional tides of their day. In a country ruled by opinion, the mere creation of a visible body of feminine public opinion is alone a great work.

"Its results are apparent in school-books which, in nearly all our States, early teach children the evils of alcohol and tobacco. Time, and it is to be hoped an increasing sobriety, will test the wisdom of this reform. The advance in the age of consent in many States was quickened, directed, and brought to legislative action by the efforts of the women Miss Willard led. To the cause of woman-suffrage she gave in many States leadership and organization. At certain critical junctures she gave Prohibition new political force; but it was never carried to the point at which it was more than a moral protest for whose purpose, principle, and aim all must have a profound respect.

"These are all important achievements, and for five years past there has been added to them a sense of international importance, for Miss Willard carried her work and influence around the world. She passes away at an age when years of work should have been before her worn down by the pressure of complex responsibilities, some of which seemed unnecessary, but all of which, even where they were pecuniary, were prompted by the great purpose of her life. This was pure, noble, and inspiring. She leaves organized what she found inchoate. She gave effective volition to what was before mere empty desire. In the great warfare for purity and sobriety she was a captain and leader in the new age of organized womanhood."—*The Press, Philadelphia.*

"**Her Works Do Follow Her.**"—"Frances Willard is greater in death than in life. 'Her works do follow her.' She had tugged and wrestled with her mighty task, she had pled and prayed, she had sacrificed and sanctified all that she had to the cause. She did not even spare her own life. She had no thought for the body. It grew more and more transparent, more ethereal. The bright flame of devotion consumed it even as the burning soul of Saint Francis of Assisi consumed his soul. At last the beautiful but frail tenement gave way and the still more beautiful soul leaped into immortality.

"Brave, devoted, heroic Frances Willard! Hail, but not farewell, for thine will continue to be the welding spirit which shall bind the ends of the earth together in a compact against evil stronger than death and the grave and as sacred as our vows to heaven; thine the transforming spirit which shall blend all differences, keep all hearts in unison, and which shall inspire and transfuse the organization with love as never before—love for the holy war, love for fallen humanity, and, above all, love to God, the Father of us all, to whom be glory and honor forevermore, that 'He giveth His beloved sleep,' and 'hath brought life and immortality to light.'"—*The Union Signal (W. C. T. U. Organ), Chicago.*

Leader and Teacher.—"It is a mistake to suppose that Miss Willard ever quit teaching school. She was to the last the principal of a female seminary. Its pupils were the women of two hemispheres, young and old. There were lessons in woman-suffrage, in Prohibition, in social purity, in Christian Socialism; but no one of these, nor all of them together, constituted the supreme purpose of the school. They were the means to an end, but never the end itself. The end, as we have already stated, was an educational, not a political one—to cause women to realize their own powers and to rest satisfied with nothing, whether in law or custom, in church or state, that put shackles upon even the least of these powers. And it was precisely because of this larger purpose that Miss Willard never degenerated as the reformer is always in danger of degenerating into a fanatic who has lost all sense of proportion. To her no one of these great reforms was the all in all, and she saw allies in those who cared nothing for any of them, but who were working in other fields to develop the race and ennoble its destiny. In short, every one who did a good deed or spoke a brave word for better things anywhere was looked upon by her as a friend. Her faith was boundless and her charity unmeasured. She modeled herself as a reformer, not upon John the Baptist, but upon Christ Jesus. She believed in the 'do-everything' policy for the Women's Christian Temperance Union, and under her leadership department after department has been added and every woman with a mission whom she could lay hold upon was attached as a part of the working force.

"She was a born leader as well as teacher. And such a leader!"—*The Voice (Proh.), New York.*

FINANCIAL.—"What's the difference between wages and boodle?" "Well, wages is money a man earns and sometimes doesn't get; but boodle is what a man gets and doesn't earn."—*The Free Press, Detroit.*

Death came out of the black night's deep,
And steered for a battle-ship's side;
But never a man of the sailor clan
Looked on the Deathman's ride.

The Kansan lad and the Hampshire boy,
And the boy from Tennessee,
With never a fear that death was near,
Swung into eternity.

Nor flag, nor shot, nor battle-cry,
Nor strain of the nation's air,
Broke into the gloom of the sailor's doom,
Nor yet a priestly prayer.

There looks a face from far-away home,
With eye bent on the sea,
For the Hampshire Jack who'll not come back,
Or the lad from Tennessee.

Not theirs was the glory of battle;
No victory crowned the day,
But a nation weeps, that the dark sea keeps
Her dead beneath the bay.

LETTERS AND ART.

WORDSWORTH'S DEBT TO HIS SISTER.

SOME day, when the writers who tell us about the wives of great men and the daughters of great men and the mothers of great men exhaust those particular fields of research, the sisters of great men may come in for the popular consideration that is their due. One of those sure to be included in such a series is Dorothy Wordsworth, whose "Journals," edited by Prof. William Knight, have just been published in two volumes. Not that Dorothy Wordsworth has been neglected entirely. De Quincey sketched her as he first saw her in 1807 at Grasmere:

"Her face was of Egyptian brown; rarely, in a woman of English birth, had I seen a more determinate gypsy tan. Her eyes were not soft, as Mrs. Wordsworth's, nor were they fierce or bold; but they were wild and startling, and hurried in their motion. Her manner was warm and even ardent; her sensibility seemed constitutionally deep; and some subtle fire of impassioned intellect apparently burned within her, which, being alternately pushed forward into a conspicuous expression by the irrepressible instincts of her temperament, and then immediately checked, . . . gave to her whole demeanor, and to her conversation, an air of embarrassment, and even of self-conflict, that was almost distressing to witness."

De Quincey tells us further that she became, "through a life of delightful wanderings," her brother's companion, pupil, and apprentice in poetical description. Under the circumstances, therefore, her "Journals" contain much to interest students of English literature, and especially to interest lovers of Wordsworth, "the most original and most meditative man of his own age." Reviewing the "Journals," *The Speaker* (London) expresses itself as follows:

"She was his [Wordsworth's] living note-book; she furnished him with subjects, handling, and mood, none of which, doubtless, would have come to Dorothy alone; yet, unless she had marked or suggested them, the world had wanted many a noble song. Her 'Journal' at Alfoxden is a brief and exquisite series of vignettes, as true to the hour and the season as Pierre Loti ever gave us, and we are all aware how splendidly the French artist renders again those flying moments of the sea and the sky. But Dorothy's pencil was better than a kodak and almost as swift. Wordsworth lived in the open air; he was not a man of much reading; but the enormity of pleasure which he and his sister derived from the common appearances of nature and their everlasting variety served them both instead of many libraries. The curious thing to remark now is the ground of prose, minute, exact, and real, upon which the inspired dalesman wove his sublime or tender arabesques. The process gave him trouble without end; he was resolute against drawing upon landscapes in the world of fantasy, neither would he devise pathetic incidents the like of which he had never seen; but his meditation mingled new and rare feelings with immediate experience, and other eyes would have overlooked the colors, or misconstrued the forms, which stirred him to the deepest. One there was who saw and felt in complete unison with him. And these are the daily records of a life so peculiarly interesting, in Somersetshire, among the Lakes, in Scotland, and in Switzerland or Italy."

"It was Dorothy who felt those bewitching impressions of 'The Highland Girl' and 'The Solitary Reaper' that afterward took an immortal shape and echo in poems now too well known for quotation. Her notes abound in sketches of the men and women whom they met in their travels; and the Scottish ways of old are still vividly brought home to us while we follow in the steps of our poetical pilgrims. On the Continent they examine churches and castles, see what paintings come in their line of excursion, and only fail to make friends because of their incurable British reserve or shyness. Yet the quality by which these 'Journals' will go down to other generations is not their human kindness, or pathos, or innocent dilettante criticism of the fine arts. They belong to our literature by a rarer title. They picture and immortalize the 'unsubstantial pageants' of the air, which, left

without record by common men, intent on their downward-looking business, would melt and dissolve as tho they had never been. But here a poet's eye has fixed them in clear transparency; and for all these lovely or majestic evenings and mornings, with their light and dark, their sunshine and their exhalations, time itself has been abolished."

D'ANNUNZIO'S DARING EXPERIMENT IN TRAGEDY.

THE most famous poet and novelist of modern Italy, Gabriele d'Annunzio, has made an audacious attempt to blend antiquity and modernity, to write a tragedy in which men and women of this prosaic age display the emotions and passions depicted by the classical poets of antiquity. His new play, "La Ville Morte" ("The Dead City"), produced at Sarah Bernhardt's theater at Paris, is a literary and dramatic sensation. There are critics who hail it as a sign of a romantic revival.

The plot of the tragedy, in brief, is thus summarized by the critic of the Paris *Aurore*:

The dead city is fatal to living people. It kills them. *Leonard*, a scientist, an ardent archeologist, and *Alexandre*, a poet, excavate the venerable and sacred soil of Mycenæ. They discover or rediscover the sepulchers in which the tragic heroes rest. They touch the illustrious dust and recognize under the gilded masks the traditional faces. But from their very graves the fatality buried with the victims, the Atrides, revives and strikes the sacrilegious investigators. After thousands of years the destiny of the Atrides is continued in their own fate. Incest and adultery come to their modern hearth as they did to the antique palace of Mycenæ. *Leonard* is consumed with an infamous passion for his young, chaste, and beautiful sister, *Blanche-Marie*, who is, in turn, hopelessly in love with *Alexandre*, who, in spite of his legal tie (for he has a wife, *Anne*, a blind, suffering woman), reciprocates her profound devotion. The blind *Anne*, by the light of her heart, sees all the shame and sin of the little group, bound by the closest relations. She cautiously reveals to the young girl her knowledge of the secret, and, for her own part, she is ready to sacrifice herself for the happiness of the lovers. *Marie* bravely tries to resist her love for the husband of the blind martyr, but nothing can prevent the inevitable catastrophe. *Anne* determines to die, but, before she can accomplish her purpose, *Leonard*, who has confessed his guilty love for his own sister to *Alexandre* and poured out to him his anguish, despair, and remorse, resolves upon the murder of *Blanche-Marie*. He regards her as the innocent cause of the unhappiness of the other three members of the intimate group, and sees no way to prevent sin except through crime. He strangles her and throws her into the Perseia fountain. Then he tells *Alexandre* of his crime and the motive for it, and *Blanche-Marie* is about to be secretly buried in the garden. The blind *Anne*, however, is guided by instinct to the place where the dead girl lies, and touches the body with her foot. Nothing being hidden from her, she divines the truth and cries out "I see! I see!" The hope of the rivals to be suffered to worship the memory of the beautiful victim is thus dashed.

Charles Martel, the critic of *L'Aurore*, writes as follows about the play:

"The tragedy is beautiful. The language, pure and delicious, the idea, imaginatively poetical, were ravishing to tender spirits. Still, one must fear that the average person in the audience found the development of the story neither prompt nor adroit enough, and more than one may have classed 'La Ville Morte' with those admirable works which do not gain from stage representation.

"The final act invests with dramatic significance a poem guarded from all that is banal and which is maintained throughout on the plan of the noblest art. Without any reserve whatever must be praised the quality of the thought and the fascination of the dramatist's images. One finds again the grace of Euripides and the coloring of Byron in this splendid treatment of Greek subjects. The felicity of expression charmed the public even when the action failed to move it. And all is so abundant, spontaneous, conceived in a high and large spirit, and showing a power truly astonishing beside such delicate sensibility.

"Mme. Sarah Bernhardt, the inimitable reciter of flowing and

gracious verse, rose without an effort to the sublime when her rôle required it. She found her special opportunity in the last act and used it triumphantly. We owe her gratitude for the occasion to applaud a writer who undertakes to reserve to the young Italian nation the rights of the antique mother of the arts."

The dramatic critic of the *Revue Bleue*, Du Tillet, writes as follows in his review of the tragedy:

"The first act comes near being a *chef-d'œuvre*. Nobility of thought, imagery of extraordinary novelty and splendor, admirable language, are the least of its qualities. It is lucid and significant; it creates with power and clearness a supernatural—or, at least, an extranatural—medium in which the drama is to develop. The rest is not of equal quality. Perhaps one does not sufficiently feel that 'possession' of the characters, that vengeance of profound mystery, which D'Annunzio so well shows in the first act. Perhaps the violence of the passions so absorbs our attention that we lose the capacity of recollecting the origin of it all. . . . On the whole, the impression is somewhat uncertain. If the beauty of the form bewitches us, the substance astonishes more than it moves us. The incestuous love of *Leonard* permits of no development. Once revealed to us, we have but to await the *dénouement*, which, however, is of savage grandeur—a very *Atridean*, if I may so express myself."

The great critic Lemaitre, who finds the style too lyrical for the stage, too rich and overflowing, praises the originality of the work. He points out that tho D'Annunzio means to be neopagan in his art, it is purely Christian in spite of himself. We find in the *Figaro* the translation of an article by Angelo Conti, a friend of D'Annunzio, who gives his own views as well as the substance of a conversation with the author about the tragedy. It seems that D'Annunzio holds that it is necessary to reintroduce the "fate" of the Greek drama in modern works, but no longer as a blind, external force controlling men's actions, but rather as an intimate, spontaneous necessity of our moral nature. Further, D'Annunzio believes that it is necessary to restore the Greek chorus, as representing a conscience greater and more profound than the individual conscience. Conti writes for his own part:

"In fact, the antique chorus reappears in *Anne*, the blind sufferer, who, having lost her sight, possesses so keen a power of mental vision that one can say that, like Cassandra in 'Agamemnon,' she makes us assist in the preparation of events coming from afar. It is she who, like the antique chorus, is the real protagonist of the drama, the conscience, the vigilant eye which discerns everything, sees the accomplished as well as the hidden, a grand spirit which reflects the sorrows of the other characters, but which is powerless before the force which draws them to a terrible end.

"D'Annunzio has given a new form to the Greek chorus and a more profound and human meaning to fate; he has continued the antique traditions of tragedy in restoring to dramatic work nobility, and beauty of form; and he has written a most important page on love, having uttered the loftiest words to lift the human spirit from the misery of sin and give it a truer and deeper revelation of life."

"After Goethe," concludes Conti, "'La Ville Morte' may be called *the* modern tragedy."—*Translations made for THE LITERARY DIGEST.*

When Campanini Made His Début.— Francesco Lamperti it was who trained Campanini and secured him his "send-off." The widow of Lamperti recently visited friends in New York City, and *The Herald* secured an interesting interview with her. Among other incidents, she related the following concerning the great tenor:

"Driven by an inward musical impulse, Campanini had already left his blacksmith's forge, taken some singing lessons, and secured a trial as second tenor in a small opera-house. But the manager thought him so inefficient that he was twice dismissed from rehearsal—the great tenor who became so famous!

"The baritone Collini, himself a pupil of Lamperti, chanced to hear Campanini at one of these rehearsals, and recognizing that

his marvelous voice had grand possibilities, told Lamperti of him. 'Bring him,' said the maestro. Lamperti heard Campanini, was delighted, and for a year and a half taught him, without payment, Campanini offering to settle the amount when he had made his way. Campanini then sang during a 'stagione difera' (at fair time) in Cento, *Il Duco* in 'Rigoletto' to the *Gilda* of Albani, who was also a pupil of Lamperti at that time. He made a hit in the part, but Cento was such a small place that his success did not carry much weight with the larger theaters. So he returned and took another course of lessons with Lamperti.

"This was in 1873. During that winter Tioernini, a tenor at La Scala, became ill. 'Faust' had been announced, and the impresario was at his wits' ends to secure a substitute for the indisposed tenor. In his dilemma he came to Lamperti. 'Have you a tenor?' he asked. Lamperti immediately suggested Campanini. The impresario almost laughed in his face, but at last was persuaded to give Lamperti's pupil a trial.

"Campanini had a hard time of it at the rehearsals, for both the conductor and the other singers in the cast did little or nothing to make things pleasant for him. Three days before the performance he complained of hoarseness. Lamperti at once sent for a physician. He knew it was nervousness, not hoarseness, from which the tenor was suffering. The physician indorsed Lamperti's diagnosis. 'If he doesn't sing now he never will,' was his comment, and so Lamperti fairly forced Campanini to go on with rehearsals. I was then a pupil of my future husband. Campanini was a lively young fellow. Every one liked him, and all we pupils were greatly excited over his coming début.

"At last the night of the performance arrived. Lamperti himself was so nervous that he was afraid to enter the house during the first act and paced the street in front of La Scala like a tiger. But in the very first act Campanini scored a success, and in the 'Salve Dimora,' which he had studied for months with Lamperti, the audience fairly rose at him."

Mme. Lamperti showed *The Herald* representative a broken baton which, she said, her husband had broken in pounding on the piano when angry with a pupil. The piano became scarred all over with such beatings, and sometimes even the pupils received the poundings, Campanini himself having been beaten more than once over the shoulders by the irate maestro.

ENGLAND'S NEW POET.

MR. STEPHEN PHILLIPS seems to have leaped at one bound into fame. We have already told of the awarding to him, by the London *Academy*, of its first prize for literary achievement in the year 1897. The new review published by the London *Times, Literature*, is even more enthusiastic than *The Academy* in its praise. "No such remarkable book of verse as this has appeared for several years," is the opening sentence of its review, January 15. Then it continues:

"Mr. Phillips boldly challenges comparison, both in style and subject, with the work of great masters; the writers whom he makes you think of range up to Milton and do not fall below Landor. He attempts nothing small, and his poetry brings with it that sensation of novelty and that suffusion of a strongly marked personality which stamps a genuine poet. The volume of his work is not great but it is considerable, about equal in length to the 'Georgics'; it contains abundant performance, and even when promise exceeds performance it is promise of the most interesting kind. Needless to say, he has not yet wholly emerged from the period of discipleship. The two most perfect of his poems are those which suggest a master; but even in them there is enough originality to justify all that we have said; and two of the other poems, tho less able to defy criticism, mark a new departure in the art.

"Unlike most modern poets, Mr. Phillips does not shine in the pure lyric; he has not the simplicities of song. His verse has a grave and stately music which lends itself to impassioned narrative and still more readily to the utterance of impassioned thought. Four of his poems—the four longest—stand out; two of them, 'Marpessa' and 'Christ in Hades,' are classical both in style and subject; the other two attempt a more difficult and more novel achievement, to harmonize in poetry the life of a modern

city, with its gas-lamps, its asphalt, and its crowd of trivial and tragic faces. 'Christ in Hades' is of the four the least interesting, because the least novel; it is also the most faultless, abounding in detached lines of extraordinary beauty. 'Marpessa' is a Greek idyll which tells how a maiden, having to choose between Idas and the god Apollo, preferred the mortal lover. The thought of the poem is beautiful; and tho Mr. Phillips does not escape the influence of Tennyson—why should he?—his blank verse is entirely his own, everywhere dignified, sonorous, and musical.

"He interests us more, however, with his two spiritual tragedies of modern life, where his problem is how to combine the sharpest realism with poetic style, than when he endeavors to introduce realism into matter made poetic already to his hand. One of these two poems, 'The Wife,' is the terrible story of a

poem, 'The Woman with a Dead Soul,' told like 'The Wife' in a modification of the heroic couplet. It is a singular enterprise. Mr. Phillips sets out to tell a tragedy in which nothing happened. He sees a woman sitting in a public-house, sipping gin as she sews, and he notes her eyes that had no inward scintillation, 'But stared like windows in the peer of day.' Then he proceeds to tell how that woman's soul had gradually died in her, and left her a body neatly dressed, well combed, mechanically performing the operations of life. There is the problem of his narrative; to make you feel the slow perishing of a soul and feel the haunting terror of this survival."

The following is the passage describing the death of the woman's soul—a passage considered by the reviewer one of "extraordinary beauty":

She felt it die a little every day,
Flutter less wildly, and more feebly pray.
Still it grew; at times she felt it pull,
Imploring thinly something beautiful,
And in the night was painfully awake
And struggled in the darkness till daybreak.
For not at once, not without any strife,
It died; at times it started back to life,
Now at some angel evening after rain
Built like early Paradise again.
Now at some flower, or human face, or sky,
With silent tremble of infinity;
Or at some watt of fields in midnight sweet,
Or soul of summer dawn in the dark street.

The following passage from "Marpessa" is given as one that shows Mr. Phillips "at the height of his technical achievement":

How wonderful in a bereavéd ear
The Northern Wind; how strange the summer night,
The exhaling earth to those who vainly love.
Out of our sadness have we made the world
So beautiful; the sea sighs in our brain,
And in our heart the yearning of the moon.
To all this sorrow was I born, and since
Out of a human womb I came, I am
Not eager to forego it; I would scorn
To elude the heaviness and take the joy,
For pain came with the sap, pangs with the bloom:
This is the sting, the wonder.

"No man in our generation," concludes the reviewer, "and few in any generation, have written better than this."

VOLTAIRE IN THE RÔLE NOW ASSUMED BY ZOLA.

A REMARKABLE parallel in literary history to the earnest protest made by Émile Zola on behalf of Captain Dreyfus is found in the heroic fight made by Voltaire against the judicial outrage known as "the case of the Calas family." It is not unlikely that it is the controversy over the guilt or innocence of Captain Dreyfus that suggested the publication in a recent issue of the *Revue de Paris* of a number of extracts from Voltaire's correspondence in regard to the noblest work of his life. But, aside from any contemporary interest, these letters are of great value, for they show the cynical novelist, the sneering skeptic, the pitiless critic, and the ribald dramatist in the part of a great-hearted, high-souled knight-errant, burning with indignation against a monstrous wrong.

Accompanying the letters is a brief summary of the facts relating to the famous Calas case. In this we are told that Jean Calas was a merchant of Toulouse who had for forty years carried on business in that city and was known as an upright citizen and a good husband and father. He and all his family except his son Louis, were Protestants. His eldest son, Marc-Antoine, was of a restless and melancholic temperament, which unfitted him for business and drove him to thoughts of suicide. Unable to make a living in trade he became addicted to gambling, and lost large sums of money given him by his father. On the evening of October 3, 1761, the family dined together as usual. Marc-Antoine Calas left the table immediately after dinner, and about two hours later was found hanging dead in a storeroom. An alarm was given and doctors and police summoned. On the

STEPHEN PHILLIPS.

woman who goes out to get bread in the one way she can for her sick husband, and returns with it to find him dead. The subject suggests Mr. John Davidson's work; what stamps it with the peculiar impress of Mr. Phillips is the passage describing how the storm of grief spent itself, and time and nature already began their soothing work—the tragic cure of forgetfulness; and so in the dawn beside the corpse—

Mother and child that food together ate.

The whole poem suffers from a kind of spasmodic energy; it is, perhaps inevitably, overstrung, and it jars the nerves—a thing which poetry should never do. But the description of the woman's parting with her child, who begs to be taken with her as she goes out into the night, is wonderful—

But at the door a moment did she quail,
Hearing her little son behind her wail;
Who, waking, stretched his arms out to her wide,
And softly, "Mother, take me with you," cried;
For he would run beside her, clasping tight
Her hand, and lag at every window bright,
Or near some stall beneath the wild gas-flare,
At the dim fruit in ghostly bloom would stare.
Toward him she turned, and felt her bosom swell
Wildly; he was so young, almost she fell,
Yet took him up; and, to allay his cries,
Smiled at him with her lips, not with her eyes.

"The last line is what you may call naked poetry—such a line as Dante might have written; and it more than redeems the indifferent end of the preceding couplet.

"The most original thing in the book, however, is the first

arrival of the chief magistrate, one David de Beaurigue, he declared that the Calas family had killed the young man, and ordered the arrest of the father, mother, a son Pierre, and a servant. Jean Calas was first examined by the magistrates and then tried before thirteen judges. The testimony at the trial consisted mainly of rumors, suspicions, inventions, and assumptions; but so excited was the public mind by the belief that a Protestant had strangled his son to prevent his becoming a Catholic, that on this flimsy basis of unverified and contradictory absurdities Jean Calas was convicted and sentenced to be first tortured and then put to death. Eight judges voted for conviction and five for the acquittal of the accused. The sentence was carried out on March 19, 1762, the unfortunate man asserting his innocence to the last, saying to a priest who persisted in urging him to confess: "What! you believe that a father could kill his son?"

The other members of the Calas family were released from prison, but the son Pierre was shut up in a monastery, while his two young sisters were sent to a convent.

A few days after the death by torture of Jean Calas, Voltaire's first letter concerning the case was written. On March 22 he wrote to his friend Le Bault:

"You may have heard of the good Huguenot who has been broken on the wheel at Toulouse for having strangled his son. It seems that this saint of the Reformed Church believed that he had done a good action. Fearing that his son was about to become a Catholic, and believing it his duty to prevent such apostasy, he sacrificed the young man to God, thinking himself superior to Abraham, because Abraham only offered to obey, while this Calvinist hanged his son to satisfy his conscience."

A day or two later Voltaire was astonished to learn from a traveler who had been in Toulouse at the time of the Calas trial that there was a grave doubt as to the justice of the conviction and sentence. Anxious to know the truth, he wrote to Fyot de la Marche:

"I am beside myself; I am interested as a man, a little even as a philosopher. I wish to know on which side is the horror of fanaticism. The intendant of Languedoc is in Paris. I pray you to speak to him and learn the truth in regard to this frightful affair. Be so good, I entreat you, as to let me know at once what I should think of the matter."

And on the same day he wrote to Cardinal de Bernis:

"May I entreat your eminence to tell me what you know of this horrible affair of Calas, broken on the wheel at Toulouse on a charge of having hanged his son? It is said here that he was not guilty, and that when dying of the torture he prayed God to witness that he was innocent. This pitiful mischance strikes to my heart; it saddens and taints all my pleasures. Either the court of Toulouse or the Protestants must be regarded with horror."

Getting little information in reply to his letters, Voltaire commenced an inquiry on his own account. Pierre Calas, the young son, having escaped from the monastery and taken refuge in Switzerland, Voltaire sent for him and talked at length with him. The result was to increase the doubt as to the guilt of Jean Calas. Further testimony to the same effect was secured from two Geneva merchants who had once lodged for some time at the Calas home.

Pursuing his investigations, Voltaire soon became convinced that the conviction and execution of Jean Calas were an iniquitous crime, but he saw the necessity for the fullest and clearest proof. Others who shared his views aided him—the merchant Debrus, the advocate Vagobre, the minister Moulton, the banker Cathala, and the lawyer Tronchin. To the task of getting evidence to show the innocence of the Calas, Voltaire gave all his time; he wrote everywhere, and traveled, looking for facts, documents, and testimony of all kinds. He appealed incessantly to every one who might be able to help him. Nearly all his friends urged him not to trouble himself, and warned him that he would make enemies by attacking the authorities. But he persisted and

increased his activity. Finding that the influential men of France took refuge in the plea that since the testimony on which Calas had been convicted had been kept secret there might be abundant evidence for the verdict of the court, he at once began his demand for the publication of the evidence. Writing to Debrus he says:

"The more I reflect on the frightful fate of Calas the more my mind is astonished and my heart bleeds. I see clearly that the investigation of the affair will be drawn to Paris, and there be entangled in innumerable delays. The Chancellor is old. The court is always indifferent to such matters. It needs powerful means to move men wholly occupied with their own selfish interests."

And again: "I have no hope but in the voice of the people. I believe that it is necessary that we should keep our cause ringing in the ears of the Chancellor, allowing him neither intermission nor repose: that this cry should continually go up: Calas! Calas!" A pamphlet containing a statement of the facts was scattered broadcast throughout France and to all his friends he sent this appeal: "Protest, I beg of you, and make others protest."

How great was the task before him Voltaire well knew. Writing on July 8, 1762, he says:

"I am much afraid that in Paris they think little about this horrible affair. One hundred innocent men might be broken on the wheel, but in Paris they would talk only of a new play, or think of a good supper. Nevertheless, we must raise our voices so as to be heard in the dumbest ears, and it must be that the cry of the unfortunate will reach to all human hearts."

Replying to the Cardinal de Bernis, he wrote with sublime simplicity: "You ask me why I have charged myself with the inquiry into this case. It is because no other person has undertaken it." Some time after these years of ceaseless struggle for a hearing he wrote: "While I was trying to secure justice for the Calas family I never once smiled without feeling guilty."

For a time official France remained in an attitude of obstinate stupidity, refusing to consider the appeals for a reversal of the Calas judgment, or to vindicate the living members of the family. But presently a half-hearted defense was put forward to the effect that Calas had been put to death for good reasons, and that the public had no right to any further information. But this was exactly what Voltaire would not admit. He said:

"What is it we demand? Nothing more than that justice should not be dumb as well as blind, but that she speak and say for what reason she condemned Calas. What a horror is a secret judgment; a condemnation without known motives! Is there a more execrable tyranny than to shed blood without giving the least reason? 'It is not the custom,' say the judges. Ah, monsters, it must become the custom; you must account to man for the shedding of man's blood. For my part I persist in demanding the public production of the proceedings in the Calas case."

And the public gradually echoed his demand, so that he could write: "At least the memory of Calas will be reestablished in the minds of the people, and that is the true vindication. The public will condemn the judges, and a decree of the people is far stronger than a decree of the Council of State." And again: "My God, my brothers, but the truth is strong! Judges may employ the arms of executioners; they may shut close their books of evidence; they may order silence, but the truth will rise on all sides against them and force them to blush for themselves."

In 1765 came Voltaire's triumph. Forced into action by the sentiment of awakened France, the Council of State issued a series of decrees acquitting the widow and children of Jean Calas of all complicity in his son's death, restoring as far as possible the memory of the man murdered under the forms of law, and ordering the Toulouse court to blot out from their registers the record of the conviction and sentence, and inscribe the act of vindication.

Thirteen years afterward Voltaire, then a very old man, was in Paris. As the crowds surrounded him on the street, a stranger asked a woman who was the man received with such demonstrations of affection and honor. Her reply was: "Do you not know that this is he who saved the Calas family?"—*Translated for THE LITERARY DIGEST.*

SCIENCE AND INVENTION.

THE ENEMIES OF THE OYSTER.

THE oyster industry is by far the most extensive of the fishery industries of the United States, yielding products three times as valuable as those of the cod-fishery and six times those of the whale-fishery, employing more than 50,000 persons and requiring a capital of about \$15,000,000. All these statistics can be found in the Fisheries division of the Census. That there should be such an enormous quantity of oysters to be caught and handled must be surprising to any one who knows how many enemies the creature has—enemies which are bent on its destruction. M. Henri Coupin, a French scientist, has devoted several years to the study of the oyster, and he gives an account of some of these enemies in *L'Illustration* (Paris, January 22), remarking, in passing, that it is hard to understand why the oyster should have so many foes, since it would be difficult to find in all creation an animal so good-natured and indisposed to do harm to anybody. A few of the adversaries of the succulent bivalve M. Coupin thus describes:

"There is a constant war going on between the oyster and a sort of marine snail, which has, unfortunately, all the advantages on its side. Creeping on its belly like all snails, it promenades on the surface of the oyster-beds, 'seeking whom it may devour.' When it finds an oyster which suits its purpose, it does not commit the blunder of trying to get in between the two shells of its opponent. That would soon make an end of the matter, for the oyster, in contracting, would quickly cut its enemy in two. The snail instals itself about the center of the upper shell, and thrusts forth a proboscis which is long in proportion to the size of its bearer. At the end of this proboscis is a rasp or grater, which is set to work to perforate the shell. This is, of course, not an easy operation, but it is accomplished more quickly than might be supposed from the hardness of the object to be perforated and the softness of the instrument. An oyster three years of age is perforated in eight hours, and it requires but an hour and a half to drill a hole in the shell of one a month old. When the shell is drilled through the snail inserts its proboscis in the aperture and sucks out the oyster.

"The young snails are most to be dreaded, for they attack all young oysters, and, having an enormous and insatiable appetite, cause great ravages.

"Many methods of destroying these snails have been tried, but so far without success. The only way in which they have been diminished somewhat in number is by picking them up at low tide and destroying them.

"Certain species of starfish are a formidable scourge for the oyster. It is not easy to comprehend how an animal with five arms and destitute of teeth can devour an oyster encased in its strong shell which we find difficult to separate even with the aid of a knife. Nature, however, is fertile in resources. The species of starfish alluded to have the singular power of turning their stomach inside out under the form of a fine membrane, a mere thread, which absorbs the animals by which the starfish are nourished, among which are oysters. The stomach of the starfish filters in between the two shells of the oyster and digests the animal within. This seems incredible, but scientific observation has completely established the fact.

"Still another foe of the oyster is the crab. Its claws are of remarkable strength and able to break the edge of the shell where the two valves come together. When a small breach has been made, the crab inserts either its claws or other paws and manages to get hold of a little bit of the oyster. Thus attacked the oyster soon dies and the shells yawn. Then the crab enters and devours its prey at leisure. Some crabs have sufficient cunning to wait until the oyster yawns naturally, when the adversary slips in at once and kills the animal. Why the oyster does not crush the shell of the crab is as yet a mystery.

"Certain species of worms and seaweeds, while not so murderous in their action as the foes already described, interfere with the growth and health and increase of the oyster, and may there-

fore be classed among its enemies. Among these, too, may be included certain maladies which at times attack the bivalve.

"One of them is a fungus which develops on the muscle which unites the two shells. This fungus hardens by degrees and interferes with their contraction. From this cause the shells are constantly yawning and the oyster is at the mercy of the enemies described above. This malady has been observed comparatively recently. But there is another malady which has been known for a long time, tho its true nature has not yet been determined. It is called typhus, and its first symptoms are on the exterior of the shell. The increase of the shells in breadth and thickness is arrested and the layers already formed take a yellowish color and crumble on contact with the finger. The internal surface of the valves, which is of a pearly color when the animal within is healthy, assumes first a clear blue tint and afterward a bluish-black. The oyster is thin, more or less gelatinous, and has a nauseous taste."—*Translated for THE LITERARY DIGEST.*

ARTIFICIAL DIAMONDS AGAIN.

AS our readers know, artificial diamonds have been made in great numbers, but they are mere curiosities, being almost microscopically small. Some recent efforts at making the diamond on a larger scale are described in *La Nature* (Paris, January 8) by Mr. Georges Claude. We translate his account below:

"As soon as chemists had proved that the diamond is only crystallized carbon, a problem was set that was destined in the future to trouble the tranquility of many people—that of producing artificially this remarkable body, all of whose wonderful qualities paled into insignificance, in the eyes of investigators, beside its commercial value.

"For a long time people have thrown themselves into this research in spite of prodigious difficulties, but the solution of the question made rapid progress after the electric furnace offered to experimenters its unheard-of resources. We may even

say that, scientifically speaking, the problem was solved on the day when M. Moissan showed, in the remarkable manner that we all remember, what conditions must have governed the formation of the diamond in the genesis of our globe.

"From the industrial point of view, however, things do not look so far advanced, and the official products of human industry do not yet resemble those of nature, except when they are so small that they can scarcely be seen except through a microscope. The era of research is therefore not yet at an end, and it may be interesting to note some ideas that have been recently thrown out and are susceptible of being put to good use in the solution of this question.

"First, the list of solvents of carbon, so interesting from the point of view that now occupies our attention, has been increased in recent times by the addition of a body that one would scarcely have expected to figure in such a rôle, and which is none other than—atmospheric air!

"Our readers know that, profiting by the results of the strange experiments of M. Villard, in which he has shown that solid bodies may be dissolved by gases, M. Ch. Ed. Guillaume has been able to explain the apparent diminution of brightness of an electric arc under increasing pressure in a tightly closed space. The surrounding gas dissolves a proportion of the carbon, that increases with the pressure; the opacity of the air increases in consequence more and more, and hence it absorbs more and more of the light, masking the increase of brightness that corresponds to the gradual raising of the boiling-point of carbon with the pressure. We know that this ingenious hypothesis has been confirmed in a manner as satisfactory as we could wish, by the ex-

MAJORANA'S METHOD OF MAKING DIAMONDS.

M, cannon; P, powder; C, projectile; D, anvil; E, cavity.

periments of Messrs. Wilson and Fitzgerald, who have proved that, when the pressure is suddenly decreased, a cloud of carbon forms around the arc. If the pressure were sufficient and its diminution very slow, perhaps the carbon would be deposited in the form of diamond, since the conditions indicated by M. Moissan for the formation of this body would have been realized. Altho this has not yet been tried, it will be tried some day, and this new and unexpected resource should be welcomed by experimenters.

"On the other hand, made impatient, doubtless, by the slight degree of success of previous attempts, an Italian chemist, M. Majorana, has resorted to a process that may be described as violent. His conception is original and is sufficiently far removed from the ordinary to merit a few lines of description. In a word, the principle of his method consists in raising a piece of carbon, *A*, to the highest possible temperature with the aid of the electric arc *B*, and then, when this point has been reached, in subjecting this carbon, in conformity with the ideas of M. Moissan, to a considerable pressure. But the means of obtaining this pressure! Here is where M. Majorana shows himself really Machiavellic! He practically fires off a cannon at his piece of carbon. Flattened between the projectile *C* and an anvil *D* that bears a cavity *E* in which the carbon lodges, it is first pulverized by the shock and then raised almost to the temperature of volatilization of carbon by the enormous quantity of heat resulting from the sudden stop of the projectile. Under the influence of this heat the particles separate, aggregate again, and fall into position. So when, at the end of the operation, the substance is treated by the usual processes—the action of nitric acid, potassium chlorate, hydrofluoric acid, etc.—we find at last a few crystalline particles whose density, refracting power, and other physical and chemical properties enable us to define them clearly: they are diamonds!

"To be sure, the diamonds obtained by M. Majorana have not yet attained much size, and the 'Regent' can be quite tranquil; to be sure, this new quality that has been discovered in the action of a cannon-ball can hardly count much against the disasters that it has already brought upon humanity—alas—on more than one occasion! But surely this unusual method of treating carbon should be awarded a prize for originality. Perhaps this is all M. Majorana asks for it."—*Translated for THE LITERARY DIGEST.*

An Electric Ice-Boat.—"A rather interesting and novel test was recently made on Chevy Chase Lake, near Washington, of an electric ice-boat," says *Electricity*. "This vehicle-sledge, as it might be termed, is the invention of Mr. Charles Steffgen, who entertains hopes of its proving of great commercial value in northern regions as a means of transportation.

"The model which was tried at Washington was but 36 inches in length and fitted with a one-tenth horse-power fan motor. Notwithstanding this fact, it is said to have successfully drawn a load of 940 pounds against a strong breeze. The floor of the car is mounted on two pairs of movable runners, which allows of the machine being guided in any desired direction. On the rear of this platform the motor is located. The propelling apparatus consists of a metal wheel, much resembling a circular saw in appearance, which passes down through the floor as does the center-board in a sailboat. By means of a set of bevel gears the speed of the motor is reduced and transmitted to a small sprocket wheel. The motion is again transferred by a link chain to a larger sprocket attached to the propelling wheel. In this way the machine may be geared to any desired speed. The teeth on the propelling wheel are pressed into the ice by the weight which they support, and it is thought that owing to this circumstance three or four feet of snow may easily be run over with a full-size machine.

"With $1\frac{1}{2}$ amperes of current at 110 volts a weight of 910 pounds was easily hauled by this little sledge at a moderate speed.

"It is proposed to equip the full-size machines with a 15 horse-power motor to be operated by means of storage-batteries. The propelling wheel will be ten feet in diameter and three quarters of an inch thick, made of some non-corrosive metal.

"From the results obtained with the working model the inventor confidently expects that with a full-size machine he will be able to attain a high speed, probably sixty to seventy miles an hour. Over an evenly frozen surface such as a lake, with just sufficient weight to give the teeth a good hold on the ice, it is by no means

improbable that a high rate of speed could be attained at times, but it is scarcely to be expected that such speed could be constantly maintained under working conditions.

"It is thought that some such device as this could be used to advantage on the Yukon River in Alaska during the winter season."

ELECTRIC CURRENTS AT LARGE.

A DISCOVERY has been made by George F. Durant, manager of the Bell Telephone Company of St. Louis, if we credit the sensational accounts in some of the daily papers, which amounts to a method for obtaining electricity in indefinitely large quantities from the earth, but which seems on soberer investigation to be merely a demonstration that the street-car companies in St. Louis are very wasteful of their current. During the installation of a new telephone system it was found that the ground was traversed by a strong electric current. To quote from an account in *Electricity* (February 2):

"A voltmeter installed at a relay station showed that an escape current from the street-car tracks was traveling along under the earth and entering the wires of the telephone company. This escape current was apparently acting in opposition to that supplied from the company's batteries and neutralizing the latter.

"Careful tests revealed the fact that the waste current was ten volts stronger than that generated by the company's batteries."

Mr. Durant, in an interview with a representative of *The Post-Dispatch*, St. Louis, is credited with the following statement:

"That the current from the street-car ground wires remains in the earth and travels underground we have demonstrated beyond a doubt. From experiments we have made and are making we are certain this force can be used again.

"We have been experimenting with lamps. We find that a single wire, with the simplest kind of a connection, will suffice to produce light from this earth current.

"I can see no reason why the current could not be carried through motors and dynamos in the same way. If the actual current as it comes from the earth were not sufficient, it could first be gathered into storage-batteries and thus intensified. The current can be handled exactly as if it were generated by a dynamo."

This statement seems to have very powerfully excited the imagination of another unnamed local paper quoted by *Electricity*. It says:

"What may prove the most wonderful electrical discovery of recent years has been made by operatives of the Bell Telephone Company. Electricity for light and power may be free as air. Anybody with a strand of copper wire may avail himself of the mighty force that propels the street-cars of St. Louis."

A decidedly saner view of the situation is taken by another St. Louis paper, whose remarks are quoted as follows in the article already alluded to:

"Manager Durant's discovery that the ground under St. Louis is a storage-battery for the electricity made by the electric street-car companies may be turned to the advantage of the St. Louis people. If Mr. Durant will tap the battery and draw off the electricity he will save the people whose water-pipes are being destroyed by electrolysis a great deal of annoyance and expense. He may also so reduce the operating expenses of his company that the telephone rates may be reduced without impairing its handsome dividends. But perhaps the street-car companies will object to supplying the Bell Telephone Company with electricity, and may discover that it would be a wise business move to put in a metallic circuit and save for their own use the electricity now wasted in the earth. In this event the street-car magnates may find it possible to save enough to reduce fares."

In its comments on the affair, *Electricity* says:

"Experience has shown that there is always some loss of current wherever trolley roads are run, but nothing like the amount that it is claimed seeks the earth as a return in St. Louis. The natural inference is that the return circuits on the street-railways are totally inadequate."

MIVART'S TRIBUTE TO HUXLEY.

A NOTABLE tribute to the memory of Thomas Henry Huxley, the great English biologist, is contributed by his pupil and friend, St. George Mivart. To those who remember Huxley chiefly as an agnostic, and as a strenuous opponent of orthodox Christianity, it will seem strange that a devout Roman Catholic and earnest controversial upholder of the Christian faith should speak in such glowing terms of his character; but this very contrast between Huxley and his eulogist must impress us with the loveliness of the spirit that could so influence an opponent. As Professor Mivart says (*Nineteenth Century*):

"It seems fitting that witness as to what manner of man he was should here be testified to, not only by entirely acquiescent friends, but also by opponents; not only by those to whom he was always kind, but also by some who have known the vigor of his enmity as well as his amity; the force of his blows in hostile encounter, as well as the firmness of his friendly grasp."

The writer accounts for Huxley's religious views first of all by his early training, which was largely influenced by the philosophy of Hamilton and Mansel. But as regards the pugnacity that he displayed in his later fights with numerous English divines, Professor Mivart admits "that the position he took up in opposing various theologians was largely due to his honest and vigorous moral sense." Says Huxley's friend:

"All injustice and insincerity were revolting to him, and he had a vivid perception of the duty incumbent upon all of us to make good use of our reason, and not to prostitute it by giving credence to propositions which are neither self-evident nor adequately proved."

"The extravagances in which some of his theological opponents indulged have been extreme. One even went so far as to affirm that a doctrine may be not only held, but insisted on, by a teacher who is, all the time, fully aware that science may ultimately prove it to be quite untenable."

"Nothing in our day could well be more prejudicial to the cause of religion than that any of its distinguished representatives should show hostility to the progress of science. But it is impossible to deny that not a few such persons have shown themselves so inimical, with the result (as I personally know) that some choice minds have been estranged from Christianity."

"Huxley knew not only from history, but from personal experience, how trying such opposition can be, and most of us who have striven for the more recently recognized scientific truths, or ethical intuitions, have also experienced the same short-sighted opposition. Who, then, can wonder that a nature so keen, vigorous, and combative as that of Professor Huxley should have been stirred to its depths, and that he should have hit out 'straight from the shoulder' in reply to violent or insidious attacks, the stupidity of which sometimes merited scorn as well as anger?"

But whatever Huxley may have said in the heat of controversy, he never obtruded his religious views in his teaching. After bearing witness to his lucidity and impressiveness as a lecturer, Professor Mivart goes on to say:

"To one point I desire specially to bear witness. There were persons who dreaded sending young men to him, fearing lest their young friends' religious beliefs should be upset by what they might hear said. For years I attended his lectures, but never once did I hear him make use of his position as a teacher to inculcate, or even hint at, his own theological views, or to depreciate or assail what might be supposed to be the religion of his hearers. No one could have behaved more loyally in that respect, and a proof that I thought so is that I subsequently sent my own son to be his pupil at South Kensington, where his experience confirmed what had previously been my own."

Of the difference that naturally arose between the two scientists on the question of the Darwinian theory, Professor Mivart speaks very feelingly. He tells of it in a passage that will bear quoting entire, for it contains a striking paragraph giving the great agnostic's opinion of toleration. Says the writer:

"After many painful days and much meditation and discussion

my mind was made up, and I felt it my duty first of all to go straight to Professor Huxley and tell him all my thoughts, feelings, and intentions in the matter without the slightest reserve, including what it seemed to me I must do as regarded the theological aspect of the question [Darwinism]. Never before or since have I had a more painful experience than fell to my lot in his room at the School of Mines on that 15th of June, 1869. As soon as I had made my meaning clear, his countenance became transformed as I had never seen it. Yet he looked more sad and surprised than anything else. He was kind and gentle as he said regretfully, but most firmly, that nothing so united or severed men as questions such as those I had spoken of.

"Nevertheless no positive breach took place, tho the following day, as we were driving homeward together, the conversation became rather sharply controversial. Yet family friendly relations continued, and we sometimes dined at each other's houses. On one such occasion I well recollect that, the ladies having gone, and Huxley being at my right hand, I began to speak about toleration, for which I have, and have always had, what is perhaps a weakness. Turning to Huxley for support, he astonished me by saying, 'Oh, you must not appeal to me to support toleration as a principle.' 'Indeed,' said I. 'No,' he continued, 'I think vice and error ought to be extirpated by force if it could be done.' 'You amaze me,' I rejoined; 'then you rehabilitate Torquemada and some others we have all been accustomed to blame.' 'I think,' he answered, 'they were quite right in principle, tho the way they carried the principle out was injurious to their cause.' 'Surely,' I exclaimed, 'burning alive is a strong measure.' 'Yes,' said he, 'especially the smell.' At this we all laughed, and the subject dropped. I give this anecdote only as an illustration of the earnestness of Huxley's character; but I am quite sure his bark was much worse than his bite, for tho I have known him to be very angry, I never knew him do a vindictive act, or one which, putting myself at his point of view, I could call unkind.

"But, as every one who knew him was well aware, he felt very strongly respecting questions of theology, and considered himself under a true moral obligation to oppose systems of belief which he deemed injurious to social welfare. During the last conversation I had with him on the subject (the 18th of June, 1870) he warmly affirmed that, in his opinion, antagonism and conflict as to such matters would and should increase."

We may close with the passage in which Professor Mivart describes Huxley as a teacher:

"I have heard many men lecture, but I never heard any one lecture as did Professor Huxley. He was my very ideal of a lecturer. Distinct in utterance, with an agreeable voice, lucid as it was possible to be in exposition, with admirably chosen language, sufficiently rapid, yet never hurried, often impressive in manner, yet never other than completely natural, and sometimes allowing his audience a glimpse of that rich fund of humor ever ready to well forth when occasion permitted, sometimes accompanied with an extra gleam in his bright dark eyes, sometimes expressed with a dryness and gravity of look which gave it a double zest.

"I shall never forget the first time I saw him enter his lecture-room. He came in rapidly, yet without bustle, and as the clock struck, a brief glance at his audience, and then at once to work. He had the excellent habit of beginning each lecture (save, of course, the first) with a recapitulation of the main points of the preceding one. The course was amply illustrated by excellent colored diagrams, which, I believe, he had made; but still more valuable were the chalk sketches he would draw on the blackboard with admirable facility, while he was talking, his rapid, dexterous strokes quickly building up an organism in our minds, simultaneously through ear and eye. The lecture over, he was ever ready to answer questions, and I often admired his patience in explaining points which there was no excuse for any one not having understood."

Edison's Tough Pig Iron.—The report that a run of pig-iron from Edison's New Jersey magnetic iron ore was unusually tough has already been noticed in these columns, together with the inventor's remarks about it. Further information from an interview with Mr. Edison is thus given in *The Engineering and Mining Journal*: "The account in the papers was distorted. It arises from the iron produced at Crane Iron Company from ore-briquettes being abnormally strong. It graded No. 1 X, yet re-

quired fifteen blows of a 15-pound sledge, when supported at the ends, to break it. Analysis shows cobalt in rich streaks in the deposit, but as nobody seems to know what cobalt does the toughness may be due to something else." Commenting on this, *The Industrial World* says: "The steel and iron experts give, as this letter says, nothing definite on the subject of cobalt in iron; but it seems not improbable that its effect in such an alloy would be similar to that of nickel. The Edison plant, it may be added, is not yet commercially in the field. The output to date has been limited to about 1,200 tons of ore-briquettes which were smelted at Catasauqua."

AN ELECTRIC FLOOR-SCRUBBER.

THIS device is the invention of a Cleveland man, who claims that it will do work in one fourth of the time required in the old way, at a saving of 75 per cent. of the cost. The scrubber is thus described in *The Electric World*:

"The machine is designed for use in government, state, and large office buildings, hotels, depots, hospitals, and halls, department-stores, etc. It is operated by an electric motor, which receives its current through a flexible cord connected to any convenient incandescent socket. The reel at the top of the trolley-pole takes up the slack cord and unwinds it in the operation of the machine.

ELECTRIC FLOOR-SCRUBBER.

"The frame carries three scrubbing-brushes, which are pressed against the floor with a spring pressure. The brushes are geared with the motor so as to revolve at a speed of about 400 turns a minute. The gearing between the motor and the brushes is by means of a sprocket chain, leading from the motor to the axle, on which the larger wheels loosely revolve, and from that axle by another sprocket chain to a shaft connected by bevel gears with vertical shafts to which the brushes are attached. This permits of the machine being used as a hand machine in case no electric current is available to operate it by electric power. For the scrubbing-brushes, sand-paper blocks or blocks of stone may be substituted, and thus the machine may be used to dress down wood floors or mosaic. The springs always keep the brushes in proper contact with the floor. A suitable rheostat or governing device is provided on the handle, and the motor is fully protected by fuses. The machine weighs about 300 pounds, and its frame is about 30 inches square.

"These machines have been in actual use in various buildings, in one instance doing work on eight floors in two and one-half hours, which previously required ten and one-half hours to perform by hand. The three brushes are so arranged in relation to one another that the short axis of the middle one is always parallel with the longer axis of the side brushes, and *vice versa*. Hence, in operation, the machine scrubs a path as wide as the distance between the outer ends of the side brushes, when they stand end to end, as shown in the illustration."

STERILIZED WINE FOR MUSSULMANS.

THE Koran forbids the faithful Mohammedan to drink wine, but there is no religious reason why he should not partake of unfermented grape-juice. *The Echo d'Oran*, an Algerian journal, suggests, therefore, that grape-juice, sterilized so that it will remain permanently unfermented, may become an article of

export from the French wine-producing regions to the Mohammedan colonies of France. *The Revue Viticole*, Paris, gives the following abstract of the proposition made by the Algerian paper:

"The hope of finding in the native population that surrounds us a market for our wines was yesterday a dream, but will perhaps be a reality in the future. Unlikely as this hypothesis may seem, science enables us to hope for its transformation into a fact.

"It is perhaps to the illustrious Pasteur that our colonists will owe the opportunity to sell the overplus of production that gives them anxiety. . . . A French chemist, M. Rosensteil, has devised a process of sterilizing the must, based on Pasteurization, and thus makes of the juice of the grape a drink that tastes and looks like wine, while, not being fermented, it can not fall under the prohibition of the Koran and can consequently be employed by the natives.

"We should say that the new drink has a fresh and very characteristic taste, and will find numerous applications among Europeans who object to alcohol—and they are many in Algeria. The temperance societies, too, can take no exception to a product which, all things considered, will sell as well as wine and lacks its injurious qualities."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

A POSSIBLE NEW ELEMENT.—"It is believed by G. G. Boucher," says *Merck's Report*, "that he has discovered a new element in cast iron to the extent of 0.0019 to 0.006 per cent. It was obtained in the form of a sulfid by precipitation from a solution of iron. The sulfid is dark brown, and soluble in alkalis, ammonia, alkaline sulfids, and nitric acid, but is insoluble in diluted hydrochloric or sulfuric acid. Upon heating in a current of air, it is converted into a yellow oxid which liquefies at a red heat. The metal itself is also insoluble in diluted hydrochloric or sulfuric acid, but is soluble in nitric acid, and when burned in the air yields a yellow, sublimable oxid. Spectroscopic investigations are now under way."

WHILE bicycle-makers are introducing chainless wheels, some other machinists are discarding other forms of gearing in favor of the chain. In *The American Machinist*, February 3, a correspondent, Harris Tabor, notes that "the Fox Machine Company, of Grand Rapids, Mich., has applied a bicycle chain to the movement of the knife carriage of their universal trimmer, the chain taking the place of rack and pinion, and with a very considerable improvement. We also know," he continues, "that the Morse Manufacturing Company, of Trumansburg, N. Y., are using their most excellent roller-joint chain very generally, and with most excellent results, in driving machinery. Here are two cases where the chain has driven out the form of gearing now being introduced by bicycle manufacturers. Are we to have a double revolution with the survival of the fittest in the distance?"

ONE of the best agents for extinguishing fires, according to *The National Druggist*, February, is aqua ammonia, without any addition whatever. "We have personally had experience with the almost marvelous power of this substance in this direction," says the editor of that journal. "In one instance, where fire had originated, probably from spontaneous combustion, in a pile containing several tons of cotton seed, and the interior of which was almost a solid body of live coal, a half gallon of ammonia completely smothered the fire. In another, which occurred at Savenay, France, the vapors of a tank containing fifty gallons of gasoline caught fire in the linen room of a laundry. The room was instantly a mass of living flames, but a gallon and a half of ammonia water thrown into it completely, and almost immediately, extinguished the fire. The ammonia was in a glass demijohn in an apothecary shop next door to the laundry, and was thrown into the room by the druggist as an experiment. To use his own words in reporting the circumstance (in the *Union Pharmaceutique*), M. Janneau, the pharmacist, says: 'The effect was instantaneous—torrents of black smoke rolled upward, in place of flames, and in a moment every trace of fire was gone. So completely was the fire extinguished that workmen were enabled to enter the room almost immediately, where they found the iron tank of gasoline intact.'

"THERE are few people, we think," says *The People's Health Journal*, Chicago, January 15, "who thoroughly realize the value of water as a beverage, or who know how to obtain the greatest advantage from it. The effects produced by the drinking of water . . . vary with the manner in which it is drunk. If, for instance, a pint of cold water be swallowed as a large draft, or if it be taken in two portions with a short interval between, certain definite results follow—effects which differ from those which would have resulted from the same quantity taken by sipping. Sipping is a powerful stimulant to the circulation, a thing which ordinary drinking is not. During the act of sipping the action of the nerve which slows the beats of the heart is abolished, and as a consequence that organ contracts much more rapidly, the pulse beats more quickly, and the circulation in various parts of the body is increased. In addition to this, we find that the pressure under which the bile is secreted is raised by the sipping of fluid. And here is a point which might well be noted by our readers: A glass of cold water, slowly sipped, will produce greater acceleration of the pulse for a time than will a glass of wine or spirits taken at a draft. In this connection it may not be out of place to mention that sipping cold water will often allay the craving for alcohol in those who have been in the habit of taking too much of it, and who may be endeavoring to reform, the effect being probably due to the stimulant action of the sipping."

THE RELIGIOUS WORLD.

RUSSIA'S PERSECUTION OF RELIGIOUS DISSENTERS.

IN marked contrast to the spirit of religious tolerance that characterizes the other leading nations of the world, the traditional policy of Russia has been to make all religious dissenters the object of the steady attacks of state and church. The Emperor Nicholas declared that it was the Russian program to realize the ideal "one language, one church, and one government." The Evangelical Alliance has sent committees to the Czar asking for a more liberal treatment of nonconformists, but to no avail. The Protestants of the three Baltic provinces and the Catholics of the Polish districts have alike in recent years been feeling the heavy hand of the Russian autocrat. Just what the reason may be for such policy is something of a mystery to outsiders. Dr. F. von Löwenthal, in the new religious journal called *Das Reich Christi* (No. 1) published in Berlin, has made a careful study of the subject and presents some new phases of the problem. In this connection it should be remembered that Russia is really a country of sects and sectlets, that the religious dissenters are credited with fully twelve million adherents, and that religious dissent is constantly spreading. The author gives the following line of thought:

The religious persecutions in Russia do not in principle differ from those practised by the fanatical followers of Mohammed and the heresy hunts of the Christian middle ages. In Russia a *Kulturkampf* on a grand scale is going on, only with this characteristic feature, that the persecuted minority represent culture and morality. It is really more than a religious persecution that we meet with here; it is an attack upon a type of civilization different from that expressed in the ecclesiastical world of Russia. The Russian Church serves the purposes of the Russian state. The unity of the state is to be established by the unity of the church.

Many millions of the adherents of the orthodox church have in recent years severed their connection with the official church of the country. Not only the Stundists, who number millions, have done so, but other and similar movements have spread with great rapidity, some independently of the Stundist movement and others in connection with it, and most of them of an ascetic and pietistic character, and morally superior to the state church type of religious life. The Stundist propaganda, however, is the most powerful agitation that is threatening the existence of the state church, and it is primarily against this movement that the Russian Government has directed its attacks. But all other dissenters are included in the general class of "heretics," no matter how pure a type of evangelical teaching and morals they may represent. But, singularly enough, all the machinery of state and church has in late years been able to accomplish practically nothing in this direction, and religious dissent has continued to spread with marked rapidity.

"The state church is in danger" has been the cry of Russian officials all along, and led, mainly under Alexander III., to bitter persecutions. Now it seems a new policy is to be inaugurated, as punishments and prisons have not been able to stem the tide of religious dissent. It has now been decided to convert the dissenters through missionaries sent out by the state church. Traveling missionaries have been sent among the Stundists, but the success was not what was expected, chiefly because the missionaries were not equal to their audience in biblical learning and in morals. The method, however, is to be continued on a grand scale. A mission congress was recently assembled in Kasan which adopted methods characteristic of Russian ideas of religious propaganda. There was a substantial agreement on the following as to the best methods to be pursued, altho they could not yet be practically enforced. They were put in the form of questions, as follows:

1. Would it be best to take from the sectarians and heretics their children and have them educated in special schools under the auspices of the orthodox church?

2. For the sake of the success of the mission work, should the property of sectarians and heretics be confiscated?

The second proposition came from one of the highest dignitaries of the Russian Church, the Archbishop Meleti of Rjason, who added the following:

"No reasonable amount of argument will convince a sectarian of the error of his way, so long as his rights to his property are unabridged, and the moneys are not confiscated which are used for the heretical propaganda. In general, the congregations of the dissenters and of the sects should not have the same civil rights that the orthodox enjoy. The heretics live in marriage relations not legalized by the state, and accordingly the children resulting from these marriages are illegitimate and not entitled to an inheritance. According to law the property held by such people is not their own, it belongs to the state and is to be used to strengthen the state and not to weaken it."

Not all Russians indorse this policy as the best method of advancing the interests of the state church. Among those who have publicly protested against this barbarism is Prince Meshtsheski, who criticized the conference deliberations very sharply in the press. Count Leo Tolstoi too protested, but also reported a number of cases of child-stealing of this kind that had come under his observation. In the greater portion, however, of the Russian press the matter has been discussed, but chiefly in reference to the question whether such laws could be or have been in practise in Russia.—*Translated for THE LITERARY DIGEST.*

ARE THERE GHOSTS?

THE *Catholic Review* makes this query the subject of a leading editorial and answers it in the affirmative. All modern writers hold, it is said, that the possibility of apparitions or spirits must be admitted by every one "who believes in the Deity and His superintending Omnipresence." Quotations are made from church writers in support of the reappearance on earth of disembodied spirits, and an instance in point is mentioned in the writings of St. Augustine, who, in his letter to Evodius, Bishop of Uzalis, makes mention of a young man who appeared to a great many persons after death, and by that means God permitted that they should be confirmed in the high opinion they had of his sanctity.

A passage is also quoted from More's "Catholici, or Ages of Faith," as follows: "The sister of St. Thomas of Aquin, abbess of St. Mary of Capua, appeared to him after her death and told him of her state in heaven, and of the condition of his two brothers, Andulph being still in purgatory and Rynald already in Paradise. Again, one night as the angelic doctor prayed in the church of St. Dominic at Naples, Father Romain, to whom he had ceded the chair of theology at Paris, appeared to him before the other heard of his death, and told him that he was among the blessed, and answered many questions of St. Thomas, and to his query respecting heaven, replied, 'Sicut audivimus sic vidimus' [as we have heard so we have seen]."

But the strongest proof and an infallible one in behalf of a belief in ghosts is found in the Holy Scriptures. Such passages as that relating to the appearance of Moses and Elias on the Mount of Transfiguration and the statement that at the Crucifixion the graves were opened and many that slept arose, are cited by way of verification. Proceeding from this *The Review* says:

"Since it is not only possible that persons can return from another world, but that there are well-authenticated accounts of persons who have done so, must we, then, believe all the current stories about spirits or ghosts? By no means, for there is not one of them out of a thousand worthy of the least credence, or could stand the test of examination. They all, in almost every case, can be explained in a natural way, even those of the reality of which there appears to be little doubt.

"Fear and an excited imagination will conjure up imaginary apparitions and specters. So will a gloomy and melancholy temperament. When the Puritans, of whom gloom and melancholy

were the characteristic qualities, became the dominant power in England in 1649, we read that there was a widespread fear of ghosts never known before in the land. Remorse of conscience, for great and unnatural crimes, will, too, bring up unreal specters threatening punishment or vengeance.

"The real ghosts, then, in the past, beyond what a deluded imagination painted, have been few and far between, and they promise to be so in the future. Nor is it necessary that there should be many ghosts, since we have 'Moses and the prophets' to direct and warn us, and do not need the spirit of a Lazarus to come from the 'bosom of Abraham' to do so.

"If, however, a genuine ghost should appear to any of us, which after all is possible, to ask, perhaps, the assistance of our prayers, or otherwise to warn us, we need not feel the least alarm, particularly so if our conscience be at peace with God, for no ghost, no spirit, no apparition, not even a fancy, can do us any harm or injury unless by God's permission."

PROFESSOR MCGIFFERT AND HIS THEOLOGY.

RUMORS of another notable trial for heresy in the Presbyterian Church have been making themselves heard during the last few weeks. These rumors take their rise from the publication of the fifth volume in the "International Theological Library," which is edited by Professor Briggs, of Union Theological Seminary, New York, and Prof. D. F. Salmond, of Free Church College, Aberdeen. This volume is entitled "A History of Christianity in the Apostolic Age," and the author, Arthur Cushman McGiffert, Ph.D., D.D., has been a pupil of Harnack's and is now Washburn professor of church history in the Union Theological Seminary. The book is characterized by Prof. Shailer Matthews, associate professor of New-Testament history and interpretation in the University of Chicago, as "on the whole the most notable addition to theological literature on the side of critical-church history and New-Testament criticism as yet made by any American," and other representatives of the liberal school, such as Drs. George P. Fisher, Benjamin W. Bacon, and Lyman Abbott, speak in terms of almost equally high praise of the work. The conservatives, on the other hand, such as Dr. Gray of *The Interior*, Dr. McPherson, and many others, are impressively earnest and emphatic in warning the church against the book as one destructive, not of Presbyterian theology alone, but of the fundamentals of Christianity itself, as interpreted by Catholic and Protestant alike.

The Independent, however, finds the book "wholly unaffected by rationalism, and in its implications opening no vistas of skeptical speculation or suggestion." It refers to Dr. McGiffert's outspoken conviction that the actors in the New-Testament story were more or less directly and constantly under "the influence of personal divine revelation." "It is," says, *The Independent*, "no more than simple justice to note this point at the beginning, for Professor McGiffert's remarkably free treatment of the materials of which the New Testament is composed might, standing alone, unmodified and unrelieved by this consideration, make a very different impression."

In the opening chapter of the book, Judaism is considered strictly with reference to the life and work of Christ, for adequate understanding of the rise and early development of Christianity. During the century, or century and a half, preceding the birth of Christ, the conception of a Messiah and the anticipation of His coming were growing more and more common. At the beginning of the Christian era, the belief was widespread that the long-expected consummation was at hand. Then came John the Baptist, "preaching in the wilderness," and with his apparition Dr. McGiffert begins to disclose certain conclusions to which he has been led that are likely to arouse sharp controversy. For example, John's thought respecting the Messiah and His work, we are told, moved wholly along traditional lines, and was not drawn from any personal knowledge that he had of Jesus. He

represented himself neither as the Messiah nor as His expected forerunner:

"Evidently he [John] conceived his connection with the coming kingdom not in any sense as official or peculiar, and his work as a work belonging to himself alone. He was convinced of the nearness of the great crisis, and he simply felt himself called to summon the people to prepare for it. He was in his own esteem a preacher merely, not a prophet, and he did not claim, as did the Old-Testament prophets, to be giving utterance to a divine revelation. He was doing what any one else might have done; he was, in fact, doing what, for aught he knew, many more might do, and do as well, or even better, than himself."

John's influence was confined, for the most part, to the common people, who flocked to him in great numbers. But the chief priests and the scribes and the elders held aloof. If the "kingdom" was at hand, it was well enough for the publicans and sinners to make ready, but the religious aristocracy of a chosen people need not concern themselves with the Baptist or his message. He was not the Messiah—the rest did not interest them; it was enough that he did not meddle in political or military affairs, for to the soldiers he had said, "Do violence to no man, neither exact anything wrongfully, and be content with your wages."

John had announced the coming of the "kingdom," and the people went out to hear what he had to say and to see what he had to show about it. But time passed, and the kingdom did not reveal itself, and all went on as before:

"That some were prepared by his preaching for the preaching of Jesus, there can be no doubt. Tho his work was not of a character to abide, some must have found it easier to understand Jesus because of the moral sentiments that John had succeeded in arousing. And this Jesus recognized, and because of it He was led to pay John the tribute and to show him the honor which alone have made him immortal."

On his way to the consideration and interpretation of the ministerial aspects of the Son of Man, the author does not tarry to inspect the stable at Bethlehem, or to salute the Virgin-Mother, but makes his way without ceremony to the "Court of the Gentiles," where the Babe of Bethlehem, now a schoolboy, is being taught in schools that were poorer and where rabbinical learning was rarer than in the south. In view of these local disadvantages, it is matter for admiration that at the age of twelve the carpenter's son is found in the Temple, astonishing the doctors with His critical knowledge of the law, as in the incident recorded by Luke:

"From that passage we learn that already, at the age of twelve years, Jesus had the conviction that God was His Father and that that conviction controlled Him to such extent that it seemed quite natural and right to Him, upon the occasion in question, to allow what He regarded as His filial duty to His divine Father to take precedence of His ordinary duty to His human parents. How and when this epoch-making conviction came upon Him, it would be idle to conjecture. Under the influence of Hebrew Scriptures with which He was very familiar, He might have been led to conceive of God as the Father of the Jewish nation, for that idea finds at least occasional expression in those writings which He most loved to quote; but the far more remarkable fact that God's Fatherhood was interpreted by Him as of individual and not simply national significance, that it meant to Him not merely Israel's divine sonship, but His own, can find its ultimate explanation only in His own unique religious personality."

To Dr. McGiffert, Jesus seems to have received for the first time the revelation of His own Messiahship on the occasion of His baptism by John. Then follows the temptation:

"What that temptation meant, if it was, as it must have been, a real temptation, we can hardly doubt. Our knowledge of Jesus's character forbids the supposition that he was tempted to use His Messianic calling and power for merely selfish purposes. . . . That Jesus had shared the common Messianic ideals of His people, the temptation itself seems to show, tho we can not believe that He had seen in improved earthly conditions the only,

or even the chief, blessing of the coming kingdom. But the Messianic call brought Him face to face with the question, not whether earthly prosperity and a life of conscious divine sonship are theoretically compatible, but whether He could, consistently with His own character and experience, devote Himself to the fulfilment of the common earthly hopes of His countrymen; whether He could be true to Himself and yet be the kind of Messiah they expected."

As to the return of our Lord, it seems clear to the author that He expected it to take place at an early day. "There are some passages, indeed, which, taken as they stand, represent Him as prophesying that the consummation would come even before the death of those to whom He spoke." But from such passages Dr. McGiffert finds it difficult to determine the truth with assurance:

"We can not be certain, therefore, that Jesus declared that the Son of Man would return within the lifetime of some of those whom He addressed. But the Evangelists, and with them the early Christians in general, believed that He did; and tho they may have misunderstood Him, they could hardly have done so unless He had given expression to His expectation at least of an early consummation, an expectation which was entirely in line with all we know of His conception of the kingdom."

Dr. McGiffert finds it significant that during the early part of the ministry of our Lord, according to the account of Mark, He said nothing of the necessity of coming into fellowship with Himself:

"Tho He already believed Himself to be the Christ, He began His ministry not with any reference to His own character or commission, but with the preaching of the Kingdom of God, and He systematically refrained for a considerable period from declaring Himself to be the Messiah, and even forbade others to proclaim Him as such. The incident at Cæsarea Philippi marked an epoch in His ministry, for it was then that He first distinctly acknowledged His Messianic calling to His disciples, and even then He charged them that they should tell no one else. His first public admission that He was the Messiah seems to have been made only at the very close of His life, upon the occasion of His final visit to Jerusalem. Evidently Jesus had a purpose in thus concealing His Messiahship for so long a time."

No explanation is given, in this connection, for ignoring the scene at the well of Sychar, in which Jesus is represented as plainly declaring to the Samaritan woman, at a comparatively early period in His ministry, that He was the expected Messiah.

In the paragraph that follows Dr. McGiffert says further:

"Jesus Christ has been thought of almost from the beginning as the incarnation of deity and as the perfect and ideal man. But it was not upon His deity, nor yet upon the perfection of His humanity, that His disciples founded the Christian Church. The men whom He gathered about Him regarded Him in neither of these aspects. They thought of Him only as the Messiah; and the fact that He left a church behind Him, instead of a mere name, and that He is known to history as the founder of a religion, and not as a mere sage or prophet, is historically due not so much to any uniqueness either in His character or in His nature, as to the conviction which He succeeded in imparting to His followers that He was the one who had been promised by the prophets and long awaited by the fathers."

On the subject of the Lord's Supper, as on that of baptism, the position taken by Professor McGiffert has already startled his own church and called forth the principal protests so far heard:

". . . The fact must be recognized that it was not absolutely certain that Jesus Himself actually instituted such a supper and directed His disciples to eat and drink in remembrance of Him (*εις την μνην ανάμνησιν*, as Paul says in 1 Cor. xi. 24, 25). Expecting as He did to return at an early day (*cf.* Mark xiv. 25), He can hardly have been solicitous to provide for the preservation of His memory; and it is a notable fact that neither Matthew nor Mark records such a command, while the passage in which it occurs in Luke is omitted in many of the oldest MSS., and is regarded as an interpolation by Westcott and Hort.

"It was apparently not the institution of a memorial feast that

He had in mind so much as the announcement of His impending death and the assurance that it would result not in evil but in good to His disciples. He had already told them that He must die, and that His death would be in reality a means of blessing to them. He now repeated that prophecy and promise in vivid and impressive symbol. As the bread was broken and the wine poured out so must His body be broken and His blood shed, but not in vain; it was for their sake, and not for theirs alone, but for the sake of many. To read into this simple and touching act—unpremeditated and yet summing up in itself the whole story of His life of service and of sacrifice—subtle and abstruse doctrines is to do Jesus a great injustice; for it takes from the scene all its beautiful naturalness, which is so characteristic of Him and so perfectly in keeping with His direct and unaffected thought and speech. He was not teaching theology, nor was He giving veiled utterance to any mysterious truth concerning His person and work."

It is in speaking of such passages as the above that the editor of the Chicago *Interior* says: "We have some theological differences here in the Middle West; but there is not a soul, minister, elder, or member, man or woman of our communion who will not deplore the precipitation of such issues." He continues:

"As I said above, a small section of the canvas is sufficient. I am sorry to occupy these white pages with so much of it—because it is painful and appalling to our gentle Christian readers. They will bear us witness, however, that we do not quote assaults upon the more sacred truths of our faith, even for the purpose of repelling them. Had Professor McGiffert withdrawn from our ministry before publishing his book it would not have been alluded to here."

The Rev. Dr. Simon J. McPherson, writing to Dr. Gray (editor of *The Interior*), relieves the (to him) depressing picture by turning upon it a side-light of facetious irony:

"Your instinct puts its finger at once upon the primary practical difficulty; the book's audacious handling of Jesus Christ. I hope to find in it, later on, some explicit intimation of a belief in His resurrection. The alleged 'mistakes of Moses' have been disturbing enough; but if our Lord had mistaken notions, what becomes of the citadel of evangelical, not to say Presbyterian, Christianity? . . . But the most naïve thing occurs at the beginning of the foot-note, already mentioned. Speaking of the gift of tongues, our modest doctor says: 'It is clear that the author of the Book of Acts had another conception of the phenomenon in question than that presented in the text.' Nobody with any sense of humor would dare say that this suggests Luke versus Arthur Cushman McGiffert, Ph.D., D.D. It is 'the author of the Book of Acts' versus the author of 'The Apostolic Age.' In point of authoritativeness, the advantage obviously is on the side of the very latest book! Union Seminary may perhaps be glad that Luke is not its Washburn professor of church history."

RELIGIOUS NOTES.

MAX MÜLLER, the distinguished Oxford linguist, in a recent interview in *The Christian World*, of London, is quoted as saying: "I have always held that it would be a miserable universe without eternal punishment. Every act, good or evil, must carry its consequences, and the fact that our punishment will go on forever seems to be proof of the everlasting love of God. For an evil deed to go unpunished would be to destroy the moral order of the universe."

MR. WALDRON, a city missionary, reports the result of a census of the Protestant church-goers in Boston. Making due allowance for those who are hindered by infancy, old age, sickness, and necessary occupations, it is estimated that there were one hundred and forty-four thousand persons in Boston on a pleasant Sunday who might have attended the services of Protestant churches. Of this number, less than one half were found at church, including all the services of the day. At the morning service in all the churches less than one third of the whole number were in attendance.

THE English Society for Promoting Christian Knowledge celebrates its two-hundredth anniversary this year, having been founded March 8, 1698. It was the first society, it is said, to care for the religious education of the poor, the first to send missionaries to India, the first to circulate wholesome literature at home and abroad, and the first to undertake the translation of the Bible and Prayer-Book into foreign languages. It largely assists the building of Sunday-schools and mission-rooms in England and Wales. It has helped liberally toward the permanent endowment of fifty-four colonial and missionary sees.

FOREIGN TOPICS.

HAWAIIAN HOPES AND FEARS.

FROM perfect confidence that the annexation of Hawaii will be an accomplished fact within a short time, the organs of the American element in Honolulu have changed to doubt, occasionally despondent doubt. It is feared that Congress, after due consideration, may conclude that the advantages which the Hawaiian Islands could give to the United States do not form a sufficient offset against such disadvantages as the necessity of a larger navy, the increase of our colored and Asiatic population, and the necessity of entering into the diplomatic intrigues of the great powers of Europe. *The Star*, Honolulu, asks: "If not annexation, what then?" and answers: "Ultimate absorption by Japan is inevitable." The paper, moreover, says:

"The annexation movement on these islands has been fostered by the United States. Both openly by the reciprocity treaty, whose main object, from the United States point of view, was 'closer political relations,' and privately by the encouragement of some of its foremost men, the cause of annexation has been urged. The result of this assistance to or urging of the cause has been the present situation. . . . Not only will the United States occupy the position of the dog in the manger, if she refuses to annex the islands, and then prevents the islands from seeking help elsewhere, lest they fall into Asiatic or semi-Asiatic hands, but the United States by her own previous acts is morally bound to give us annexation, her own policy having brought about the present condition of affairs."

The Hawaiian Gazette, Honolulu, fears that the mentioning of Hawaii as "an American Gibraltar" has had a very different effect from what had been intended. The paper says:

"The 'strategic' argument, unwisely forced to the front, has frightened conservative men in America. Those who pushed it, hardly realized that Captain Mahan's argument for the annexation of Hawaii called for, and he insisted on it, a vast navy to defend it. Now the Americans don't like that sort of talk, because they are no longer savages, and prefer peace to war. . . ."

"The one great unassailable argument in favor of annexation, from the American standpoint, is the need of possessing in the Pacific a great commercial exchange, like Hongkong, which is the third most important port in the world, if we are correct. Great Britain holds this spot directly in front of Chinese trade."

There seems to be no opposition, among the different countries in the world, to annexation, except in Japan; but the foreign press seem to think that Japan has a much greater right to the Hawaiian group than we. *The Kölnische Zeitung*, Cologne, expresses itself to the following effect:

Whenever the Japanese press discuss the possibility of an alliance between Japan and Great Britain, and sum up its advantages, the Hawaiian question receives much attention. There can be little doubt that Japan would insist upon England's support in preventing the annexation of the islands to the United States. As a nation, the Japanese are perfectly convinced that this annexation would rob them of their just rights, and the Americans are perfectly aware of this fact. They are also aware that the Japanese, if exasperated, will not be afraid even of a war with the great republic.

The *Independance Belge*, Brussels, does not believe that we are particularly anxious to fight for the possession of Hawaii. The American press, thinks the paper, is forced to admit that Japan is much better prepared, and altho the resources of the United States are acknowledged to be much greater, even the Americans know that "resources" do not decide the fortune of war. *The Hyogo News*, Kobe, Japan, believes it would be to the advantage of the United States if our press were a little more dignified, as the Japanese have no other means to judge us than by these representatives of public opinion. The paper quoted from an article in the *New York Herald* such sentences as: "Has

Japan got 'the swelled head'? Does she think she 'can lick all creation'? If we have to fight somebody, why not Japan? Japan's ports were opened to civilization by the United States navy. If Japan insists on fighting us, she will learn that the same key will serve to lock her up. If she should have any doubt about it, and attack Hawaii, our navy will be heard from, giving Japan an object-lesson."

To this *The News* remarks:

"It is 'Uncle Sam' himself that sets up to 'lick all creation'; the idea of a rival in this pretentious business is no doubt riling. . . . Japan knows very well, we may be sure, what is the strength of the American navy; and she is not unduly self-satisfied if she believes her own fleet able to do battle on equal terms. . . . Is it the part of a responsible editor to pen unreasoning taunts to a proud people whose humiliation must entail enormous losses to many of his own countrymen and could be only doubtfully productive of any good. . . . The unquestioning assent of every European power to the United States annexation of Hawaii is explicitly asserted. This is going a great deal too far, yet other assumptions most calmly made go a great deal further still. American jingoism is becoming pretty well understood, but it is not often flaunted quite so outrageously as in the case under notice."

The British press does not oppose annexation except on the grounds that it will add new fuel to the flame of "expansionism" in the United States. A writer in *The St. James's Gazette*, London, says:

"Monroeism can not tolerate a foreign flag in the Pacific 2,000 miles from the nearest American port; and therefore, so that the bones of Monroe may rest in peace, the American coast-line is to be pushed 2,000 miles west. To an English reader this may sound absurd; it might even be thought that it was written in a spirit of jest. I am indulging in no levity. In the East or the West, in North or South America, the Monroe doctrine can be stretched so as to cover everything; and when the Monroe doctrine is preached it is a jihad to which all the faithful must give heed and fight for the holy cause. Some of these days a particularly bellicose Secretary of State or President will construe the Monroe doctrine as applying to Canada, and will insist that the integrity of the United States demands that Great Britain abandons Canada and presents it with her compliments to her southern neighbors; and then, if by that time the United States has a navy powerful enough to cope with that of England, the supreme test of Monroeism will have come."—*Translations made for THE LITERARY DIGEST.*

ITALIAN BREAD RIOTS.

BREAD riots, during which the lives of innocent persons as well as of rioters and soldiers are lost, are continually reported from Italy. In the majority of cases the ignorant mob, driven to desperation by want, attack the municipal authorities, altho the municipal duties on wheat and flour have been abolished. It is the Government which now collects this duty, and this duty is very high. The price of bread has risen from 7 cents to 10 cents per pound, altho many laborers do not earn more than 25 to 35 cents per day. Hence large numbers of people are compelled to live exclusively on Indian corn, a diet which is considered very unhealthy in the long run. But even of this there is not enough, and many riots are caused by actual starvation. The *Frankfurter Zeitung*, Frankfurt, says:

"The bread riots have never altogether ceased in Italy during late years; but they have not been quite so serious. Formerly only men took part in them; to-day the men are joined by the women and children, as in Ancona, Senigallia, and Macerata. The official reports blame the Socialists and Anarchists; but that is only because the authorities are forced to hide the fact that the people are really in want. But the real Anarchists sit in the government offices. Italy is like a bottle on which the label has been changed. She has precisely the same corrupt sort of government that France has, the same exploitation which made her miserable before her disjointed parts united under one constitution. Italy

has plenty of politicians, able politicians; but that is not what she needs. She must have social economists and business men at the head of affairs. It is not yet too late for her statesmen to reform, to attend to the wants of the country. But they must not tarry too long. Do they not know who is most pleased with the growing misery? A federal republic with the Pope as protector is looming up in the distance."

Even the *Kölnische Zeitung*, which, as a semi-official German paper, treats the failings of the Italian ally very gingerly, acknowledges that it is not enough to "restore order." Better economic conditions must be created. The Roman correspondent of the *Handelsblad*, Amsterdam, says:

"The chronic revolts in Italy may be divided into three kinds. The first are rural, and incredibly numerous. Hardly a week passes in which the help of the military police is not asked to quell a riot in some out-of-the-way mountain village. Then there are the riots in the cities, in which the whole population does not take part, but only those interested in some minor grievance. Lastly the revolutionary riots.

"The rural revolts have generally one of three distinct causes, and always end in the same manner. Often the cause is mismanagement on the part of the village trustees. In that case the little town-hall is besieged, and perhaps burned down. Sometimes the revolt occurs because the neighboring estates are allowed to lie untilled, the owners finding that it does not pay to employ laborers for that purpose. This throws a lot of people out of employment; a mob gathers, takes possession of the land, and begins to cultivate the soil on its own account. Again the inland revenue on articles of food may cause a riot. In this case the offices of the tax-collectors are destroyed, and the officials themselves ill-treated.

"In the cities, anything may cause a riot, from a deficit in the municipal exchequer to the unpopularity of a professor. But while the rioters are quickly shot down in the country, they are treated very gently in the cities. Hence there is a contingent of 'revolutionary propagandists' in every city, who make the greatest noise, throw the first stone, and out of whose midst the only shots fired by the tumultants generally come. Any visitor of Italy knows them by their broad-brimmed hats, their theatrically loose-knotted ties, their clubs, and their shrieking whistles, called *sirenes* here. These chronic rioters are not much more dangerous to the state than the mob of other cities in Europe. But the riots of the country people, being generally founded upon some just complaint, form a serious menace.—*Translations made for* THE LITERARY DIGEST.

THE FRENCH ARMY AND THE REPUBLIC.

FEW people outside of France doubt to-day that that country is in imminent danger of a military *pronunciamento* after the most approved South American pattern. The army has full control of the press, and altho there is no proof of the accusation that the generals refuse to permit a revision of the Dreyfus trial because it would reveal unheard-of corruption in military circles, the army certainly has taken hold of the occasion to increase its power, and the Boulangist press, assisted by the Clericals, strengthens the hands of the military as much as possible. The old-time Boulangist papers, *Petit Journal*, *Libre Parole*, *Intransigéant*, *Jour*, *Presse*, *Patrie*, *Soir*, etc., fall back upon the ancient cry of "Revenge for Sedan," and abuse Germany. The German Minister for Foreign Affairs, v. Bülow, having once more declared officially that Germany had absolutely nothing to do with Dreyfus, the *Jour* immediately declared that this denial in itself is proof of Germany's complicity, a remark which reminds the Amsterdam *Handelsblad* of the trial in "Alice in Wonderland." The *Libre Parole* says:

"The declarations of v. Bülow are of course lies. His conduct solely proves that the German Government has instigated the Dreyfus movement in order to liberate its spy. It proves further that Dreyfus rendered excellent services to Dreyfus."

The *Petit Journal*, which claims over a million *bona-fide* circulation, goes still further:

"If Germany wanted to make the affair more poisonous, she could not do better. Even if we are willing to accept the most peaceful explanation, we can only believe that Germany does not chose to be told that she has spies. This declaration is not the result of an honest investigation on the part of the German Government, but an act of political defense and diplomatic attack. Germany has long since wished for war, and is even now treacherously making preparations to prevent being taken unawares. Germany would like to make use of this chance to crush France. What v. Bülow says can not possibly be true, for it could at best be only a Prussian truth, delivered in exasperating style."

The paper hints darkly that Zola is in v. Bülow's pay. Here and there, however, a paper is to be found courageous enough to print an article in opposition to the popular version. In the *Siccle* we find an open letter by Yves Guyot to M. Hanotaux, French Minister of Foreign Affairs, from which we take the following:

"Do you not realize, sir, what a ridiculous part France is playing while she treats one of her citizens as a German spy, altho the German Government declares that he never served Germany? You can not say that this declaration is valueless simply because it is a German who makes it. For you must be aware that no government, of any country, protects its spies. A spy acts upon his own responsibility. No minister of any country will risk being detected in an untruth by shielding a spy. . . . More than ever the civilized world will think that the French Government, with persistent fanaticism, persecutes an innocent man."

The fear expressed in the last sentence is not groundless. The *Independance Belge*, for instance, a paper whose sympathies are nearly always on the side of France, says:

"The communication of the German Minister robs M. Méline of his last argument. He has always spoken of the danger of war. Now that Germany declares that, from her side, no war threatens, we may well ask where the danger lies? The declaration of v. Bülow exposes the fallacy of the reasons offered by the French Government for refusing to shed light upon the affair, altho the sense of justice of the entire civilized world is shocked. It seems that the matter can not end without a Cabinet crisis. Another Minister may order a revision of the Dreyfus sentence; it is too late for Méline to do so. But the honor of France demands that the only proper course be taken soon."

The *Hamburger Nachrichten* is certain that the army is hankering after a genuine, strong, legitimate head, and thinks that the Duke of Orleans certainly made a lucky hit when he offered himself as "Defender of the honor of the army of France." A new Napoleon, thinks the paper, may arise at any moment, tho the Duke of Orleans will hardly be he. But if the leader be found, the republic will certainly be in danger. For it was not so much Napoleon who made use of the French army for his purposes, as the army which used Napoleon to further its own ambitious plans. *The Spectator*, London, says:

"The affair of the diamond necklace helped to destroy the Bourbon dynasty; the Praslin tragedy shook the hold of the house of Orleans on the middle class; the killing of Victor Noir by Pierre Bonaparte assisted in sapping the claim of the Napoleons to rule; the Wilson scandal cut down the prestige of the Presidency as an institution to a scarcely visible point; the Panama business weakened the general confidence in all Senators and Deputies; and it is by no means certain that this Dreyfus affair will not profoundly affect the view entertained by the whole army of France of their relation to the republic.

"Do we then expect a mutiny in France? Certainly not. The French army is incapable of mutiny, the contrary belief in this country arising from some misunderstood incidents in the beginning of the French Revolution. . . . But we take it to be evident from the history of France, and especially from the incidents of 1848, and those connected with the rise of General Boulanger, that the army regards all events in Paris with attentive eyes, and that when authority is discredited from any cause, or is supposed to have become unworthy of confidence, either for military or civil reasons, the soldiers do not heartily defend it. The buttress falls away from the wall, and at the first attack down goes the

fabric, as it would have gone down had General Boulanger ridden to occupy the Elysée. . . . Aided, no doubt, by accident, the managers of the republic have prevented the rise in France of any great military reputation—of any soldier, in fact, whom the whole people have learned to trust, either as campaigner, organizer, or administrator. That is well for the republic, but it is not so well for the army when it is dejected, or when it looks around for some one whose word, in a business like this Dreyfus affair, will for soldiers be final. In England if Lord Wolseley, or Lord Roberts, or Sir Evelyn Wood, or Lord Landsdowne said that he had carefully examined into the facts of a trial, and that the sentence had been just, it would be believed to be just, and there the matter would end; but in France no one occupies precisely that position. . . . We believe this danger to France to be a serious one, and rather wonder that, seeing it, the Government does not run any risk, or break through any etiquette, in order to bring on a thorough and public investigation."

However the Dreyfus affair may end, the danger that France would attack Germany, or take the initiative in a war with any nation, is regarded as very remote. *The Pester Lloyd*, Budapest, says:

"The Germans may rest undisturbed; no French invasion threatens them after this! The frightful degeneration which has been allowed to go on in France during the last twenty years has permeated the entire organism of the republic. . . . Whatever had been left of justice, freedom, and civilization in the erstwhile *grande nation* is gone. Destructive as the Cæsarism of the second Empire may have been, it could not show such dissolution as the third Republic."—*Translations made for THE LITERARY DIGEST.*

THE END OF THE ENGINEERS' STRIKE.

THE great engineers' strike in England, which has ended with a defeat of the trades-unions, was not begun inauspiciously. The employers had plenty of orders to fill, the coffers of the Amalgamated Society of Engineers were full when, in May last, it threatened to call out its members, over 100,000 strong in June, unless the eight-hour day was granted by the masters. Fortune at first seemed to favor the men. Over two hundred employers agreed to concede the demand. But these were not the owners of the big works, who, being themselves organized, replied to the strike with what was practically a lockout. But the men would not draw back, and a labor war lasting six months for the allied trades, and over eight months in the case of many of the engineers, was the result. Long before the end came the country was tired of the struggle, which caused much work to be given to Continental firms; for, altho this is a prosperous year in England, Englishmen are now keenly alive to the competition of the foreigner. One of the labor organs, *The Factory Times*, Huddersfield, says:

"The situation is not creditable to the British nation from an ethical point of view, however much we may be inclined to admire on abstract grounds the display of those pugnacious and tenacious qualities which we are fond of associating with the character of John Bull. . . . The iron-trade employees, the vast majority of whom have been forced into the struggle, have fought with splendid oneness and discipline; the solidarity of labor has proved to be an encouraging reality, and the capabilities of federation, even internationally, have been brought out in an astonishing way. Yet, who has not had a surfeit of the ruinous spectacle, except it be those who are robbing us of our trade?"

Yet many labor organs throughout the world believe that the engineers have not fought in vain, since they showed how formidable their organization was. *The Worker*, Sidney, says:

"It has always been a favorite argument with the capitalistic press—blanishments and bullying having failed to move the strikers—that strikes, even when won, do not repay the strikers the wages (not to speak of the suffering) lost during a period of voluntary idleness. The fact that wage-workers are asserting their right to be treated as something better than slaves, or even

feudal serfs, is not looked at; the matter is viewed from the cold-blooded pound-shillings-and-pence standpoint."

The strikers, who formed the *élite* of British workmen, behaved very well throughout. Yet it is feared that they have listened during their long idleness to arguments which may lead them to regard less peaceful conduct as advantageous on some future occasion. *The Chronicle*, Newcastle, says:

"There have been a few sporadic instances of assault and intimidation on the part of the men, but they were isolated cases. Considering the very large number of men involved, law and order have been wonderfully well preserved, and the engineers, during the time they have been fighting for their program, have admirably behaved themselves. . . . But young and old alike have been gravely misled. Socialism may be right or wrong; but there can not be much doubt that it is the element of Socialism which has crept into their ranks and policy that has upset the engineers' apple-cart."

"During the progress of the struggle some of the engineers have shown themselves singularly intolerant of honest and well-meant criticism, and have, in fact, resented any expression of opinion which was not favorable to the course their leaders persuaded them to adopt. But they will probably confess now that their best friends were certainly not those who on all occasions vociferously applauded all that they did."

The St. James's Gazette, too, thinks that Socialism had a finger in the pie:

"A handful of Socialistic and semi-Socialistic agitators has trapped the union into a ruinously costly fight in pursuit of certain political and social aims of its own. It has been able to do this by the support of the younger men, and at the expense of the elder men, who have been forced along by the knowledge that if they resisted they would be punished by the confiscation of what provision they had been able to make against old age and poverty. . . . So soon as 50,001 members can be got to vote for a strike, the 49,999 who are against one must yield. They may be the elderly men from whose pockets the whole accumulated funds of the union have come; while the 50,001 are the younger men who have given little, and whose heads are full of Socialist wind; but they must yield, or their painfully formed savings, the result of years of self-denial and self-control, will be confiscated by their expulsion from the union. That is without a shade of exaggeration the morality of the new unionism."

Justice, London, the organ of the Social-Democratic Federation, denies emphatically that the Socialists caused the strike. It claims, however, that Socialism has gained much by it. Foreign observers certainly notice that the men have submitted with an ill grace, and expect to renew the struggle. The correspondent of the *Temps*, Paris, who showed himself very well informed in the matter throughout the strike, says:

"A walk through the workmen's quarters of Southwark and Woolwich proves how deeply the men feel their defeat and how much they hope already to have their revenge. On the other hand, the representatives of the masters showed that they wish by-gones to be by-gones. When the secretary of the unions had read the acceptance of the terms offered by the masters—he was very pale and his voice shook—the president of the masters' union held out his hands to him. 'Some day,' he said, 'you will realize that what you asked of us was more than we could possibly grant. . . . Let me, however, tell you that we admired very much your spirit. You fought your battle nobly. We shall not forget this, and we will try to give you all the satisfaction you deserve as soon as work has once more begun.'

"Mr. Barnes received this speech rather coolly. 'We hope,' he replied, 'that it may be a long time ere we are again forced to battle so long and bitterly for our rights. I take this occasion to remind you that we have never ceased to suggest arbitration. You could have ended the struggle sooner, but you refused to arbitrate.'"

The majority of papers in Great and Greater Britain nevertheless side with the masters, on the ground that it is impossible to compete with the foreigner if the trades-unions are allowed to have their way.

The Liverpool Journal of Commerce, a very sober business

record which rarely takes sides in such disputes, expresses itself as follows:

"The foreigner is competing more keenly than ever with us, and the gain that the workman secures comes not even out of his own employer's profit, but actually out of the latter's capital funds. This process can not be continued forever. No man can live on capital. Capital is the employer's source of living, we grant; but it is also the buffer between the wage-earner and starvation. When capital is exhausted the wage-earner is done. And not only is the wage-earner now living on the capital he ought to look to for continued employment when trade is depressed, but he is also driving the trade which should feed him, and that capital, away to those who will beat him at his own work. Thus he is doubly sinning against the inexorable laws of political economy. Some persons may think the figures are satisfactory from a workman's point of view. We think that in every case they point to disaster to workmen and employers alike, unless these suicidal demands be abated, and truer theories about political economy learnt by labor leaders."

In the *Revue de Paris*, Sidney Webb explains that the British workman, as a matter of fact, prevents his employer from profiting by new machinery. Labor-saving appliances are the bugbear of English trades-unionism. Tho a new machine may be worked by a child, a skilled workman must be paid full wages to handle it, and its output must be reduced to a minimum "else it would take the bread out of another man's mouth." On the other hand, *The Spectator*, London, fears that capital, intoxicated by its victory, will be more tyrannical than the trades-unions have been. The *Frankfurter Zeitung*, Frankfort, like the *Freisinnige Zeitung*, the *Nation*, and a few others, the representatives of those German Radicals who demand a facsimile copy of English institutions for Germany, expresses itself in a long article to the following effect:

We are deeply shocked to see that a large and influential section of the British masters follow in the footsteps of our industrial employers. Is it possible that all England will follow suit? We can not believe it. The question is one of industrial absolutism or constitutionalism, and we will not believe that the most highly developed people can sink to the low intellectual level of the German. The British employer acknowledges, at least in principle, the right of trade-unions to regulate the work in factories. The German employer refuses to treat with a union as such. The British employer may restrict constitutionalism in his factory, but he is too enlightened to wish for absolutist rights.—*Translations made for THE LITERARY DIGEST.*

SOUTH AMERICAN VIEWS OF THE UNITED STATES.

DR. SAENZ-PEÑA, in the Buenos Ayres *Biblioteca*, has set forth a number of reasons why the South American republics should oppose Pan-Americanism as proposed by the United States. He believes that the people of the United States, giving a very elastic meaning to Monroe's doctrine that America should belong to the Americans, think that all America should belong to the Americans of the United States. Saenz-Peña does not find sufficient grounds for this assumption. He thinks we do not give a sufficient equivalent for the hegemony we claim. He expresses himself, in the main, as follows:

The commercial connections between the United States and South America have always been and are to this day very insignificant. On the other hand, the United States has always acted in a very arbitrary, not to say brutal, manner toward the weaker states of the Southern Hemisphere. The Argentine Federation still remembers that the United States occupied the Falkland Islands, which belonged to Argentina, until stronger England in turn drove the Americans out. Chile and Peru both have a tale to tell of the high-handed manner in which the big Northern federation pushes her claims. Yet the North Americans did nothing for the emancipation of the South. Germans, English-

men, Frenchmen, such as Cochrane, Miller, Brayer, Brown, Hollenberg, Rauch, Thorné, Bouchard, Salvigny, Wuit, Monroy, etc., distinguished themselves in the fight for independence against the Spaniards. Not a single American was among them. The Yankees were ready enough to make use of the services of foreign enthusiasts during their own War of Independence, but they did not think of rendering a like service to others. Last, but not least, the Latin and Anglo-Saxon races divide the mastery of the world between them, and can not unite. The Latin races may, for the moment, be slightly under a cloud, but the eclipse will pass off and they will once more show themselves in their old-time glory. Heroism, glory, exploration, invention, art, and science are not the patrimony of the Anglo-Saxon. They belong to the inventory of the Latin race. What is needed is a Latin-American League, able to hold its own against the North.

The *Vorwärts*, Buenos Ayres, mercilessly cuts up the arguments of the Argentine statesman. Our Socialist contemporary fears that, if the South American countries trust to their own strength, they will be at the mercy of Europe, and that would be much worse than if they were influenced by the free North American federation. We summarize as follows:

Dr. Roque Peña seems to forget that the rapid development of industries in the United States must necessarily change our commercial relations in a very short time. But that is typical in South Americans. They never look ahead. The Falkland Islands never properly belonged to Argentina, altho a German adventurer once took possession of them in the name of the La Plata Federation. At any rate, that affair is too old to mention now, when England has owned the islands such a long time. The brutal behavior of the Germans in dealing with poor little Haiti should prove to Spanish-Americans that the United States is a much pleasanter country to deal with than European powers. The United States Government never acted as roughly. The foreign "heroes" who assisted Argentina in her fight for independence did so to gain fortune and fame for themselves, not for the sake of the country. Moreover, if it had not been for the United States and the Monroe doctrine, Mexico would to-day be French, and Argentina would be another Egypt because she could not meet her obligations in 1891. Last, but not least, science has long since exploded the theory that one race is superior to another, hence that argument will not hold good. At any rate, the brutality of the Kaiser ought to prove to Latin-Americans that they can not do better than place themselves under the protection of the free, democratic republic of the North.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE failure of the Anglo-Indian army in its campaign against the Afri-dis is already making itself felt in Baluchistan. A British surveying expedition was attacked in the territory of a chief who acknowledges British suzerainty. The rebellion at present is pointed chiefly against the chief, the Khan of Khelat, who finds it difficult to hold his own and expects assistance.

RECENTLY the German-Austrians of Prague asked for compensation for the property destroyed and stolen during the Czech riots. The Czech mayor did not think compensation necessary, and the Austrian commissary, anxious to please both sides, declared that he would advocate a grant to the persons who had suffered loss under a law which permits assistance being given if property is lost "by the acts of God."

THE *Courant*, Haarlem, relates that the Chinese Minister of Education advocates the establishment of a university after the Western pattern, at which astronomy, geographic philosophy, political economy, foreign languages, and literature, the arts of war, agriculture, trade, and technology, are to be taught. Two Chinese and two foreign professors are to be equipped for each faculty.

THE Hongkong *China Mail* is a little alarmed at the strength of the garrisons established by Germany and Russia in China. The former country, says the paper, whose existence was hardly felt a few weeks ago, has sent already a garrison equal in strength to the troops stationed at Hongkong and Singapore. *The Mail* and the Singapore *Free Press* now invite the British colonies to do something for the defense of the empire.

IT is said that Evans, the famous American dentist, would have been made a duke of France, if events in the year 1870 had not led to the downfall of the second Empire. Evans was almost entirely without school education, but he was a skilful workman, possessed a great deal of tact, was of undoubted integrity and—knew how to keep a secret. If it had not been for him Empress Eugenie would have been unable to escape from Paris.

MISCELLANEOUS.

THE RIDDLE OF THE ROMMANY.

IN "Tales of the Real Gypsy" Paul Kester deals with that mysterious and fascinating vagabond as the author finds him in this new world, since the closing of the commons in England and the hankering of a nomadic race for fresh pastures drove him across the great water. But with only such slight modifications in his outfit and his ways as the new conditions have compelled, he is still the free Rommany of the English heaths and hedges. His tent is bigger and his van more showy, and the striking red cloak and broad beaver have been discarded by the women; but the men still cling to their corduroys, their gay waistcoats, and their gaudy buttons; and men and women alike have still the trick of making the most sordid garb seem picturesque. But the women can make themselves gorgeous for great occasions, with gowns of silk, and cloaks of sealskin, and costly shawls, and bright kerchiefs, brought out from the chests and hampers that they carry everywhere with them—jewels, too, fine corals, and strings of amber-beads and pearls, mixed with curious coins of gold.

And still they tinker, and peddle, and trade horses, and tell fortunes, as of yore, as when an Austrian monk wrote of them in 1122 that "they go about peddling through the wide world, having neither house nor home, cheating the people with their tricks, and deceiving mankind, but not openly." And so, to-day, they wander in America as in England, from town to town in the summer, in families and in communities, harboring in tents and vans, and practising the same arts by which they lived when they came out of Asia no one knows how many centuries ago.

By our country folk the crimes of the tramp are often laid at the door of the gypsy; but it should be understood that there is an impressive difference between them, to the moral advantage of the Rommany. The gypsy will beg, importunate; he will steal in a petty way; he will cheat with much dexterity and variety in a "dicker" or a "swop"; and he will lie to any strangers with the bland and childlike complacency of Ah Sin himself, but he rarely commits a grave crime. Mr. Kester writes:

"The tramp has no family, no home, no belongings, no laws or traditions, to check or control him, while the gypsy is most essentially a man with a family, a lover of his tent-home, ready to fight for his van and his horses, with a thousand unwritten laws and traditions hedging him in. The gypsy loves his wife and his children, and is contented and happy; the tramp, with none of these ties, knows but one check—fear of the law."

Mr. Kester has reached the same conclusion, from his observations of the gypsy in America, to which Borrow was led by his more intimate fellowship in England and Spain—that there is no more *virtuous* race in the world, no race so faithful in all domestic relations. "The gypsy is a good son, a good husband, a good father; there are seldom drunkards among them, and of an habitual drunkard I have never heard. . . . They are lavishly charitable to those who are poorer than themselves, and hospitable and polite."

When they can, they go into the towns and cities when the winter comes upon them, the men still trading horses, the women telling fortunes in museums and cheap theaters. "I dresses myself in Rommany fashion," says Mr. Kester's friend, "and I visits about with my friends and relations. To keep my hand in, and earn a few shillings, I advertises myself in the papers to tell the past, the present, and the future, by the planets, the features, and the lines in the hand. And I generally does a good business."

Now let us see who this is who is advertising for trade in American newspapers. The gypsy of New England, Ohio, Tennessee, Louisiana, is his own remote ancestor unchanged. Starting from

the banks of the Indus, two thousand years ago, not a slave, a renegade, a vagabond, as many suppose, but the scion of a stock of warrior kings, as Kester believes; broken and cast upon the world by conquest, subjugation, oppression; tramping through Persia and Greece in search of a foothold, and bringing away upon the sandals of his language, as it were, the dust of Greek and Persian speech; halting for a time by the Nile on his way to the Danube, the Rhine, the Guadalquivir, the Seine, the Thames, the Potomac, the Cumberland, he is the very sphynx of the human race. Separated by hundreds of years and by many leagues of space, yet speaking in the same tongue, living the same life; alike faithful by the sands of Sahara and by the shores of the Arctic Sea, by the flow of the Ganges or the Mississippi; always tellers of fortunes, always traders in horses, always tinkers and pedlers, always dealers in mystery, always stubborn and free—Egyptians, 'Gyptians, Gypsies, Secani at the gates of the German cities in 1417, Zingali in Spain to-day, Rommany by English streams and hedges. When they knocked at German gates in 1417 they were led by "a duke and a count, splendidly dressed, and leading, like nobles, dogs of the chase"; and they bore letters of safe-conduct from the Emperor Sigismund. When they approached the gates of Zurich in 1418, they were commanded by "Duke Michael, of Little Egypt"; and so at Basel in 1422, and at the gates of Paris in 1427, always with a duke and a count at their head, always trading horses and telling fortunes. To this day, and in this new land, one finds Pharaohs among the men, and a "Queen of Egypt" in the oldest woman of almost every camp.

Francis I. sent them to the galleys. They were hanged by Henry VIII. and Elizabeth, hanged by Frederick the Great, hanged and drowned in Scotland in 1624. Many years ago an old Rommany crone was burned at the stake in Tennessee, says Mr. Kester, for practising the "pokanni boro," the great trick of buried money; but when Matilda Stanley, queen of the gypsies, died in 1878, she was given a royal burial at Dayton, Ohio, gypsies coming great distances to do her honor. Stanleys and Lovells, Lees and Hearn—these are royal breeds, and in every camp you will find "roms" and "dyes" who proudly claim kindred with one or the other.

Of all their strange, mysterious customs, perhaps the strangest and most characteristically gypsy is the pateran. "I never can think of it," says Kester, "never can hear the word, without being impressed by the romance that it implies":

"A woodsman may blaze his way through the trackless forest, but he leaves the gash on the tree as a sign of his course, while the gypsy can travel a thousand miles and leave no sign that any eye but a gypsy's can see, and yet the route he has gone is perfectly plain to the laggard who follows a day's journey behind. Gypsy has followed gypsy hundreds of miles, day after day, guided only by the pateran—the mark at the cross-roads. The pateran is sometimes made of a handful of grass, sometimes of a heap of sticks placed with significance, sometimes of a pile of loose stones so arranged that they show the way the wanderers have taken. Different families have usually a different form of the pateran, but all know and rely upon it."

"What's the name for the leaf or tree, brother?" says Ursula to George Borrow in "The Rommany Rye"; and Borrow confesses that he does not know; nor has he ever found a Rommany who could tell him. "The name for a leaf is pateran," says Ursula; "there are only two persons in England who know that, and one of them is yourself."

The Rommany appears to have no religion, and tho he outwardly conforms to the observances of the land in which he sojourns, the faith of his neighbors rests lightly upon him. His irreligion is quite passive. His creed is the creed of the fox and the deer. "Life is sweet, brother," says the gypsy to Borrow. "There's night and day, brother, both sweet things; sun, moon, and stars, all sweet things. Life is very sweet, brother; who

would wish to die? A Rommany child would wish to live forever." "In sickness, Jasper?" "There's the sun and the stars, brother." "In blindness, Jasper?" "There's the wind on the heath, brother."

As for the Rommany jib, the gypsy language, there are but few who give it a second thought. "I wonder," says Mr. Kester, "how many know that the gypsy's is the only race that, without land, government, or religion, without history or writings of any sort, preserves a language of its own, while speaking, for hundreds of years, another with equal fluency?"

"No other race, unless a conquering race, was ever able to preserve its language in a foreign land, and no other race in the history of the world has habitually spoken two languages."

To one who has lived and loafed by the Ganges or the Jumna, how curiously, how impressively, suggestive are many of the words he may hear in gypsy tents by the Ohio or the Potomac—such words, for example, as *dye* (mother) for *dhye* (a nursing woman); *beabee* and *vawnee* (madam and lady); *yog* for *ag* (fire); *pawnee* (water); *boro* (big); *pansch* (five), and a hundred others almost identical in sound and sense with familiar vocables of India.

EDUCATION OF EPILEPTICS.

THE public is beginning to wake up to the fact, with which medical men have long been acquainted, that epilepsy is a very common disease, and that it is one in which care and special training are of great benefit. Hence the recent experiments with the "colonies" of epileptics, which are proving so successful. In *The Medical Record* (January 1) Dr. W. P. Spratling, the superintendent of the Craig Colony at Sonyea, N. Y., perhaps the best known of these "industrial farms" in this country, writes of the theory on which they are conducted. Says Dr. Spratling:

"When it is realized that one person in every five hundred of the population is an epileptic, and when we further realize the more important fact that seventy-five per cent. of all cases of epilepsy begin under twenty years of age, and that not more than six or eight persons in every hundred who have the disease get well, and that unless especial pains be taken to correct the tendencies of the disease in early life, progressive mental and physical failure is sure to follow—we can appreciate the great value of the proper education for this class, especially when it carries with it the potent influences that serve so materially to stay the ravages of the disease. Not only, therefore, do we educate, but through the same agencies we ameliorate and cure. For no other class of dependants is it possible to do these two things at the same time.

"In educating and training the epileptic it is well to bear constantly in mind the infrequency of the cure of the disease; and keeping that in mind, and understanding that he will always as an epileptic be an object of social and business distrust, and, if he remains uneducated and unimproved, an economic burden so far as the cost of his care is concerned, we can readily see that the kind of education he needs is one that will put, not complex algebraic formulæ and a mass of ill-defined and useless knowledge of the dead languages and ancient history into his brain, that can not be called into useful account through the ends of his fingers, but an education that puts an instrument into his hands that, wielded by him, will give him a practical result in the form of his daily bread."

This theory of the special value of industrial training has been found, in the experience of successful foreign colonies, such as that of Bielefeld, Germany, to be the true one. In describing the difficulties under which the newly established Craig Colony has labored, Dr. Spratling reminds us that the epileptics that were sent to it had for the most part been inmates of other institutions and were unaccustomed to work, if not too old for training. Of 230 admitted since the opening of the colony only 5 per cent. can yet perform any useful labor unaided, owing to the long standing of the disease in their cases and to their previous lack of training.

Long Life and Alcohol.—"The secretary of the Order of Rechabites, a total-abstinence workingmen's organization in England, has recently made a careful study of the vital statistics of the society as compared with other associations in which abstinence from alcohol is not a feature," says *The Medical Record*. "He finds that at the age of eighteen the expectation of life is, among the Foresters, 44.74 years; among the Rechabites the expectancy is 50.62 years—a difference in favor of the latter of 5.88 years. Compared with the Odd Fellows, the latter's advantage is even greater by 7.75 years. Applied to the whole population, the expectancy at eighteen among abstainers is better by 8.72 years. The mortality of the Foresters at the same age is 0.723 per cent. and of the Rechabites 0.589 per cent. The percentage of the Foresters' death-rate to that of the Rechabites at eighteen is as 123 to 100, and at thirty-eight as 189.3 to 100. The conclusions reached by the compiler of these statistics seem to be corroborated by the report of an English life-insurance company in which a distinction is made between the abstainers and the non-abstainers among the policy-holders. Among the abstainers the expected deaths were 744, while there were only 432, a percentage of 58.06. Among the non-abstainers, the number of deaths looked for was 1,399, and the actual number who died were 1,131, or 80.84 per cent. of the expectancy. These figures are suggestive, yet there is consolation even for the moderate drinkers to learn that nineteen of them out of every hundred live longer than the actuaries' table says they should."

WHAT Tom Mann, the English labor leader, in vain tried to accomplish in Great Britain—a union of all labor organizations—has been accomplished in Denmark. There is a strong probability that this will lead to a combination of all Scandinavian unions in Norway, Sweden, and Denmark.

CORRESPONDENTS' CORNER.

Individual Communion-Cups Again.

Editor of THE LITERARY DIGEST:

I am very much interested in an item which appeared in *THE DIGEST* recently concerning individual communion-cups. Some years ago, at considerable expense, I carefully investigated this subject, and published my conclusions in medical journals. I received letters from many distinguished physicians and surgeons of this country and Europe. No one has yet been able to furnish one case where any disease has been contracted from contact with the communion-chalice.

Generally speaking, if such danger exists, it would be most likely to operate upon the clergyman officiating, for he consumes the remaining liquid in the chalice after all the communicants have partaken. From reports received from a large number of clergymen no such case has ever been suspected.

I was present in the wards of the Edinburgh Infirmary when Lister was beginning his great antiseptic method, and in the Continental hospitals. I have made a study of antiseptics. Diseases resulting from contact with impure cups are extremely rare; no case has been reported of which I have any knowledge, up to the present date, where contamination has taken place from the communion-chalice.

It goes without saying that it is extremely rare to find people of this class suffering from venereal diseases. I believe this is the bugaboo which has been held up to frighten the timid.

W. THORNTON PARKER, M.D.
GROVELAND, MASS.

Misinformation about Japan.

Editor of THE LITERARY DIGEST:

A local news sheet that frequently draws its pabulum from your pages had two paragraphs lately that I venture to ask attention regarding. I have not a file of yours to refer to and can not give date; probably in the fall. Grant Allen's article in October *Strand Magazine*: "Nature is rich in tragedies . . . A clever artist devised a cover," etc. [*THE LITERARY DIGEST*, October 30, 1897].

This is a familiar Japanese motive, based on a Buddhist doctrine, that is a favorite idea with the "Zen" (Sanskrit "Dhyana") sect, founded in China by Bodhi-dharma, who arrived from Central Asia in A.D. 520, the Quietists, contemplative (or meditative) School. In the Anderson collection of Japanese Art purchased by the British Museum there is an elaborate colored drawing, exhibited for more than a season in the White Gallery, shortly after the purchase, that I suspect is the original.

Again, the extract from *Revue Scientifique*, of the *communiqué* to the Paris Geographical Society ["A Country Without Domestic Animals," *THE LITERARY DIGEST*, October 30, 1897].

It would be difficult to compress into the space a greater number of misstatements, which, however approximating a superficial view of Japan a generation ago, is inaccurate in every detail almost, perhaps excepting about mules and asses (quadrupeds).

These are about the average of the mass of "stuff" that gets circulated; and it is about time that educated readers were given authentic particulars.

I found, as a lecturer in America and Europe, that there was ground for the complaints, as to geographical knowledge among all classes being deficient.

C. PFOUNDEN.
KOBE (HIOGO), JAPAN, 13th December, 1897.

BUSINESS SITUATION.

Steadiness of prices has been the feature of the general business situation during the past week, altho the New York stock market declined and is still sensitive and nervous over the *Maine* disaster. Marked activity in nearly all branches of the iron and steel trade, particularly in the Central West, is indicated by the reports that over 90 per cent. of the pig iron furnace capacity is in blast. The bicycle trade is opening up briskly. Bank clearings were rather smaller than the previous week, but cereal exports still tend to increase.

The Iron Output.—"The iron output February 1, with reports of stocks on hand not held by the great steel companies, indicates consumption at least 3,000 tons per week greater in January than the previous maximum attained in November, 1895. The production is at present greater than consumption, stocks having increased 9,016 tons weekly in January outside the steel companies, whose stocks presumably decreased. Some weakness in pig would naturally result, but while Grey Forge has declined at Pittsburgh to \$8.90, with Southern iron offered at Chicago at concessions, no changes appear in products. Tho new business has been somewhat disappointing, the works are mainly supplied for months ahead. In building of steel cars, in black sheets for tinning, in rods, wire, and wire nails, increased demand and heavy business appear. tho bar and pipe are weaker, and structural orders seasonably slow. Minor metals have advanced, tin to 14.2 cents on considerable consuming demand, copper to 11¼ for lake on heavy exports, and lead to 3.8 and spelter to 4.1 cents on speculation, but failure to organize the tin pool causes weakness, American selling at \$3 and lower at the West."—*Dun's Review, February 19.*

Cereal Exports Tend to Increase.—"Exports of wheat, flour included, for the week aggregate 3,932,744 bushels as against 3,419,000 bushels last week, 2,120,000 bushels last year, 3,149,000 bushels in 1896, and 1,808,000 bushels in 1895. The bulk of this increase over last week is chargeable to large flour exports. Indian-corn exports for the week are also larger, reflecting the turning of attention toward the lower-priced cereals in a total amounting to 5,056,000 bushels as compared with 4,508,000 bushels last week, 6,441,000 bushels in this week a year ago, 2,925,000 bushels in 1896, and 592,000 bushels in 1895."—*Bradstreet's, February 19.*

The Prudential Insurance Company of America.

Shoes and Leather.—"Shipments of boots and shoes from Boston in February have been the largest ever known at this season, exceeding those of 1896 by 4½ per cent., and those of 1892 by 16 per cent., and heavy buying is reported in women's light shoes, greater than in any previous year. Some makers have sold half the annual product in men's shoes, tho others have done little or nothing, unable to get prices they desire. The range of prices for men's boots and shoes has advanced an average of about 2½ cents per pair. Leather is practically unchanged, and hides change very little at Chicago, with Colorado and buff a shade lower."—*Dun's Review, February 19.*

The Stock Market Nervous.—"Liquidation and declines were caused in the New York stock market by the *Maine* disaster, and speculation is very nervous and sensitive, altho support from large interests and London checked extreme demoralization on Wednesday and Thursday. The tone of the market is heavy, and there is a disposition to await further developments in view of their bearing on our relations with Spain. Local traction securities have been a feature, Metropolitan breaking and Brooklyn Rapid Transit advancing. The market has paid little speculative attention to the increase of Burlington's dividends to 5 per cent. per annum or the compromise by which the Union Pacific syndicate bought in the Kansas Pacific for the face of the government bonds. Sugar has been sold on the prospective trade war between the American Sugar Company and its prospective competitors both in sugar and coffee. The bonds market has been relatively steadier than stocks, support appearing in active issues. Foreign exchange is easier at 4.85¼ for demand sterling, the investment buying of long bills having slackened."—*Bradstreet's, February 19.*

Bank Clearings.—"Bank clearings show the effect of a holiday in five important States in a total aggregating \$1,356,000,000, 5.5 per cent. smaller than last week, but 52 per cent. larger than last year, 24 per cent. larger than this week two years ago, 63 per cent. larger than in 1895, and 67 per cent. larger than 1894. The falling-off as compared with 1892, a year of large bank clearings, was 2 per cent. The tendency toward enlarged clearings, as compared with one year ago, is almost unanimous, only six cities showing decreases. The gains made are almost uniformly very large, thus reflecting a much

larger movement of general business as compared with 1897."—*Bradstreet's, February 19.*

Canadian Trade.—"Canadian trade reports are quite favorable. Toronto reports wholesale houses as working night and day shipping spring goods, woolen and cotton mills are behind on orders, and large sales of American printed goods are being made to fill deficiencies. Failures are less numerous, and inquiries are reported from many American cities for supplies suitable for Klondike trade.

Prices of wheat are above the export basis. American corn is selling largely for feeding purposes. No material change is reported from Montreal. Steady business is reported in groceries. Canned goods are active and dry-goods orders are larger than last year. Business failures in the Dominion of Canada this week number 38, against 51 last week, 58 in this week of 1897, 58 in 1896, and 38 in 1895. Canadian bank clearings amount to \$28,408,000, 1.3 per cent. larger than last week and 55 per cent. larger than in this week a year ago."—*Bradstreet's, February 19.*

Current Events.

Monday, February 14.

The Russian Government has placed an order with the Carnegie Steel Company for sufficient Harveyized armor for two battle-ships, at \$500 per ton. . . . The Democratic Congressional campaign committee in Washington elects officers and adopts a declaration in favor of fusion of free-silver forces. . . . A movement has been started to organize hospital stations at all the chief settlements in Alaska. . . . The trial of Sheriff Martin and his deputies is continued at Wilkesbarre. . . . Congress—Senate: A resolution calling for information on the situation in Cuba is adopted; in executive session debate on the Hawaiian treaty is resumed. The nominations of George M. Bowers, of West Virginia, to be Fish Commissioner, and Commodore F. M. Bunce, to be Rear Admiral, are confirmed. House: A resolution calling for information on the condition of the reconcentrados and the progress toward autonomy in Cuba is adopted.

The Spanish Cabinet decides to appoint Señor Louis Polo Bernabe to succeed Senor Dupuy de Lome as Minister to the United States; Minister Woodford hands to the Spanish Government a note from the Washington Government referring to the meaning of certain paragraphs in the De Lome letter. . . . The Dutch Minister at Peking is trying to arrange a Chinese 5 per cent. loan of £4,000,000. . . . The trial of M. Zola is continued, the testimony being generally favorable to the case of the defendant.

Tuesday, February 15.

Ex-Spanish Minister De Lome leaves Washington for New York en route for Madrid; there are no new developments in the relations between Spain and this country. . . . The leaders of the Democratic, Populist, and Silver Republican parties issue addresses to the people. . . . Congress—Senate: A resolution of inquiry as to the sale of the Kansas Pacific Railroad is adopted after a long debate. House: Several bills are passed, including one to amend the navigation laws for the protection of United States vessels in the Alaskan trade.

An explosion, from an unknown cause, wrecks the United States battle-ship *Maine* in the harbor of Havana; a number of seamen are killed. . . . In the Zola trial the greater part of the day is spent in an attempt to prove that the handwriting of the *bordereau* was that of Major Esterhazy. . . . Edhem Pasha has been sent by Turkey to inquire into the outrages complained of by Bulgaria. . . . A despatch from Madrid to London says that the populace is greatly excited over a belief that the Spanish Government has apologized to the United States.

Wednesday, February 16.

The steamer *Clara Nevada*, bound from Seattle for Alaska, is wrecked in the North Pacific; all lives lost. . . . The destruction of the *Maine* in Havana Harbor causes the greatest excitement in Washington, where the disaster is regarded as inflicting an almost crippling blow on the navy; prompt action is taken to care for the wounded sailors; President McKinley sends a despatch of condolence to Captain Sigsbee. . . . The Kansas Pacific Railroad is sold at Topeka to the reorganization committee for \$6,303,000, there being but one bid. . . . Congress—Senate: The fortifications bill is passed; Mr. Morrill speaks against Hawaiian annexation. House: A resolution of sorrow for the loss of the *Maine* is adopted; the bankruptcy bill is discussed.

The cause of the disaster to the *Maine* is still a mystery; the number of men lost was 258, the number saved 96. . . . The Zola trial is continued in Paris; General Pellieux makes a speech against Zola. . . . The French steamer *Flachat* is wrecked off the Canary Islands, and 87 lives are lost.

Thursday, February 17.

A board of inquiry into the *Maine* disaster

Portrait Copyrighted by Rockwood, 1897.

THE WARNER LIBRARY COMPLETED THIS MONTH.

The Special Introductory Price To Be Immediately Advanced.

AFTER more than two years of constant labor, the Library of the World's Best Literature, under the editorial direction of Charles Dudley Warner, is nearly finished. Its completion will be a distinct literary event. The special introductory price under the arrangement made by Harper's Weekly Club will positively be withdrawn when the last volumes (which are now on the press) are issued.

Readers will do well to make note of this fact, since by joining the Club now they will obtain the work at nearly one-half the price at which it will hereafter be sold. We have no hesitation in advising our readers to take advantage of this opportunity. We believe the Warner Library is a work of such extraordinary character that it will sooner or later find its way into every home of culture and refinement.

The fact that such a marvelous survey of the literature of the world, with the exposition and criticism of the foremost living men of letters, can be had for a sum less than the cost of the simplest collection of single volumes, makes this a work which from the mere standpoint of economy no lover of books can afford to be without.

The Library is not only an immense saving of time and study, but of money as well. A postal card sent to the Harper's Weekly Club, 91 Fifth Avenue, New York, will secure full particulars regarding the favorable terms upon which it is now being offered to Club members. We believe there are few of our readers who will not feel we have done them a special service in calling their attention to this monumental work, and giving timely notice of the withdrawal of the low Club price.

Provident Savings Life Assurance Society OF NEW YORK.

Edward W. Scott, President.

INVESTIGATE ITS SPECIAL BOND POLICY.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

is appointed, with orders to make a rigid investigation. . . . The State Department announces that the De Lome incident is satisfactorily closed, the Spanish Government having disavowed the ex-minister's reflections on President McKinley. . . . Miss Frances E. Willard, President of the National and World's W. C. T. U., dies in New York. . . . The supreme court of Illinois refuses to entertain a motion for a rehearing of the anti-ticket scalping law of the State; in 1894 the court gave a decision upholding the constitutionality of the law. . . . Congress—Senate: The Turpie resolution in regard to the Kansas Pacific Railroad sale is passed. House: The bankruptcy bill is passed. Preparations for the burial of the dead victims of the battle-ship *Maine* are being made in Havana; the bodies lie in the city hall. . . . A decree accepting the resignation of Minister Dupuy de Lome is gazetted in Madrid. . . . A Russian cruiser with two thousand men for the East passes through the Bosphorus. . . . An explosion of fire-damp in a Belgian colliery causes a heavy loss of life.

Friday, February 18.

The bodies of 135 sailors of the wrecked battle-ship *Maine* have been recovered at Havana; precautions are taken to keep irresponsible divers away from the wreck; another sailor dies in the hospital in Havana; the deaths from the explosion, according to latest information, number 248. . . . The Government at Washington receives an appeal from Governor Brady, of Alaska, for troops to afford protection at Dyea and Skaguay. . . . The prosecution in the Lattimer shooting case nearly completes the presentation of evidence. . . . The Spanish cruiser *Vizcaya* anchors off the bar, this city; police measures were taken to insure her safety while in port. . . . Congress—A resolution appropriating \$200,000 for saving as much as possible from the wreck of the *Maine* is passed by both branches. Senate: a resolution providing for a Congressional investigation of the *Maine* disaster provokes an exciting debate, in which Senators Mason, Wolcott, Lodge, and Hale take the principal part. House: Debate on the bankruptcy bill is continued. . . . A bill appropriating \$4,000,000 to provide a battle-ship to replace the *Maine* is introduced by Mr. Foote, of New York.

Bodies of the *Maine* victims are buried with ceremony at Havana. . . . Major Esterhazy goes on the stand in the Zola trial. . . . A protest is entered in the French Chamber of Deputies against the importation of American

DANGER IN SODA.

Serious Results Sometimes Follow Its Excessive Use.

Common soda is all right in its place and indispensable in the kitchen and for cooking and washing purposes, but it was never intended for a medicine, and people who use it as such will some day regret it.

We refer to the common use of soda to relieve heartburn or sour stomach, a habit which thousands of people practise almost daily, and one which is fraught with danger; moreover the soda only gives temporary relief and in the end the stomach trouble gets worse and worse.

The soda acts as a mechanical irritant to the walls of the stomach and bowels, and cases are on record where it accumulated in the intestines, causing death by inflammation or peritonitis.

Dr. Harlandson recommends as the safest and surest cure for sour stomach (acid dyspepsia) an excellent preparation sold by druggists under the name of Stuart's Dyspepsia Tablets. These tablets are large 20-grain lozenges, very pleasant to taste and contain the natural acids, peptones, and digestive elements essential to good digestion, and when taken after meals they digest the food perfectly and promptly before it has time to ferment, sour, and poison the blood and nervous system.

Dr. Wuerth states that he invariably uses Stuart's Dyspepsia Tablets in all cases of stomach derangements and finds them a certain cure not only for sour stomach, but by promptly digesting the food they create a healthy appetite, increase flesh, and strengthen the action of the heart and liver. They are not a cathartic, but intended only for stomach diseases and weakness and will be found reliable in any stomach trouble except cancer of the stomach. All druggists sell Stuart's Dyspepsia Tablets at 50 cts. per package.

A little book describing all forms of stomach weakness and their cure mailed free by addressing the Stuart Co. of Marshall, Mich.

horses. . . . The Russian Government appoints Count Cassini to be ambassador to the United States instead of minister. . . . The British battle-ship *Victorious* has been floated. . . . So far 110 bodies have been recovered from the colliery at Hamme, Prussia, which was destroyed by an explosion on Thursday.

Saturday, February 19.

The government rejects the proposal of the Spanish officials at Havana for a joint investigation of the *Maine* disaster. . . . Acting Secretary of War Meiklejohn says that present activity in work on the coast defenses has no connection with the destruction of the *Maine*. . . . The Spanish cruiser *Vizcaya* anchors off Sandy Hook. . . . Howard Gould's yacht *Niagara*, said to be the largest steam yacht ever built in the United States, is launched at Wilmington, Del. . . . Congress—The Senate was not in session. House: The bankruptcy bill is passed by a vote of 159 to 129.

Divers continue work on the wreck of the *Maine* in Havana Harbor. . . . Little new testimony is given in the Zola trial, most of the time being taken up in controversies between the presiding judge and M. Labori. . . . Thirty-six British officers, with immense quantities of munitions of war, leave London for West Africa.

Sunday, February 20.

The Navy Department receives word from Admiral Sicard that the *Maine* court of inquiry will assemble in Havana to-day; the coast Survey steamer *Bache*, with wrecking apparatus and divers, arrives at the scene of the disaster. . . . The Spanish cruiser *Vizcaya* anchors off Tompkinsville, and a formal visit is paid to her commander by a representative of Admiral Bunce, commandant of the Navy Yard; the officers have decided not to take part in social functions here. . . . Funeral services over the body of Miss Frances E. Willard are held at the Broadway Tabernacle. . . . A French force advances on Sakoto, a town in West Africa within territory claimed by the British. . . . A requiem service for the victims of the *Maine* disaster is held in Berlin. . . . Henri Rochefort is escorted to his prison by a mob which the police have difficulty in dispersing.

PERSONALS.

COUNT GUSTAV SIEGMUND KALNOKY DE KOROSPATAK, the former Austro-Hungarian Minister of Foreign Affairs, who died at Brunn, February 13, was born at Lettowitz, Moravia, December 29, 1832. He entered the diplomatic service of Austria in 1850. From 1860 to 1870 he was Councillor of Legation at the Austrian Embassy in London. In 1874 he was Minister at Copenhagen; in 1880 he was sent as Ambassador to St. Petersburg, and in 1881 he was appointed Austro-Hungarian Minister of Foreign Affairs, a post he held with distinction until May 16, 1895, when he was succeeded by the present Austro-Hungarian Foreign Minister, Count Goluchowski.

The cause of Count Kalnoky's resignation was his action in reference to the denunciation of ecclesiastical laws by the Papal Nuncio at Vienna, Mgr. Agliardi, who was charged by Baron Banffy, the Hungarian Prime Minister, with having made statements at Budapest which amounted to interference in Hungarian affairs. Baron Banffy addressed a note to Count Kalnoky informing him that an interpellation was about to be put forward in the Hungarian Parliament concerning the utterances of the Nuncio, which had appeared in the Hungarian newspapers and had never been disclaimed by their author. Count Kalnoky replied that the Nuncio had displayed tactlessness, overstepped the limits prescribed for foreign diplomatic representatives, and deserved that a Foreign Office note be sent to the Vatican to complain of his conduct. He went so far as to sketch a communication to the Vatican, and the Hungarian Premier telegraphed his approval of it. A few days after Baron Banffy said in the Hungarian Parliament that the Papal Nuncio's acts were not approved in Vienna. As soon as this speech was recited to Count Kalnoky he telegraphed to Budapest that only part of his letter to Baron Banffy was for public knowledge; that the rest was confidential, and that the protest to the Vatican had not been sent. Efforts were made to reconcile the two Ministers, but these were unavailing. The Hungarian House approved Baron Banffy's attitude unreservedly, and Count Kalnoky resigned.

PRESIDENT DIAZ, of Mexico, several years ago interviewed a famous bandit who was in prison. The robber informed the President that his lawless life was the result of having no work to do. The President liberated him, made him Chief of Police of his native district, which was one of the worst in the country, and informed him that he would be held strictly accountable for all robberies in his district. From that day to this not one has occurred.

C. R. Oldham and the Rev. E. C. Haskell were successful with 256 and 257. W. S. Weeks, W. F. Baker, and J. M. Edmunds got 257. Otto Supe, Sault Ste. Marie, Mich., got 256.

The Correspondence Tourney.

ERRATA.

Our "Judge" evidently had an attack of Chess-blindness when he wrote note (p) of the 44th game. As he says, P—B 4 would "enliven things," but it would not have got rid of that "dangerous P," for White plays Q—Kt 8 ch, winning the R. Also, in note (r) he analyzed the position without seeing the P on Q 5. One of our correspondents thinks that if Black had played (41) Q—B 4 ch, he would have "made things hot."

FORTY-SIXTH GAME.

Petroff's Defense.

- E. E. ARMSTRONG, Parry Sound, Ont. Notes by One of the Judges.

- (a) Kt x P is the move usually made. The text-move, however, seems quite satisfactory. It was used by Mr. Steinitz in his game with Pillsbury in the St. Petersburg Tournament. (b) It were better to play B—Kt 5 ch. Kt—B 4 confines the B, and retards development, while White is getting his guns in position. (c) We don't like this play, as it cuts off the sweep of the B. (d) As it is evident that White intends to Castle on the Q's side, Black should develop on that side, so that, in the event of White's K's side attack, he has a counter attack on Q's side. (e) A bad move. Better play P—Q 5, followed by P—B 4, and Kt—B 3. (f) There are very few cases where Kt—Q 2 is not a bad move, when Q and Q B have not been moved; it gets in the way of both of them. (g) B x P would prevent the White Kt from reaching K 5. (h) Kt x Kt looks better, altho the text-move is good enough, but he does not follow it up properly. (i) P—R 4 is the proper continuation, and would give Black the better game. This is a lost move. (j) Now he gets in the way of his Kts. The four Ps on the Q side are very powerful if handled efficiently. (k) Should play Q—Q 3. (l) Why Q R? It is best posted where it is. P—Q Kt 4 is surely good enough. (m) Nothing more need be said, except that Black played the ending badly.

FORTY-SEVENTH GAME.

Ruy Lopez.

Notes by One of the Judges.

- (a) Mr. Lasker says that while this move is the one that most naturally suggests itself, yet it is not the best move. He recommends P—Q 4, by which, he says, "we develop and attack at the same time." (b) By this exchange White virtually gives up the attack. He should play Kt—Q B 3. If Black (6) Kt x B, then (7) Kt x P, and Black is in a bad way. (c) A very questionable move. Castles is indicated, and he has a perfectly safe game. The text-move does not dislodge the R from his position, while it does materially weaken Black's defense. (d) The move selected is inferior to B—R 4 for several reasons: he blocks his Q P; the B may be posted on Kt 3, etc. (e) Too late to Castle now. Black has a bad position. (f) Should play P—Q 5 followed by P—Q B 4. (g) Kt—B 3 seems very much better, then, if 17 P x P. B x P, 18 B—Kt 2, P—Q 5, etc. (h) Not only a lost move, but gets the Q on the wrong side. (i) Bad, as it weakens the B P, and accomplishes nothing. (j) This move reminds us of the advice: "If you haven't anything else, give check." (k) Good play. Can't take Kt, for 27 R—Kt 3 ch, etc. (l) How this Kt jumps around, and jumps back to where he came from. (m) A coup de repos. Not much coup in it, but he waits in repose to see what Black will do. (n) Cute play this. Black, however, could have prevented it if he had played correctly on his 33d move. (o) Better give up a P than the exchange. (p) If 42 ... P x P, 43 P—B 4, and White gets a good passed P.

WHOLE NUMBER, 411

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

INTERNATIONAL LAW AND THE MAINE DISASTER.

NO case exactly parallel to the *Maine* disaster has been cited by those who invoke precedents of international law to cover it. Indeed, one new precedent is held to have been already established by our Government in this case, in conducting an investigation of the wreck independently of the Spanish Government's jurisdiction over the harbor. Barring the possibility of proving Spanish design, in which case the disaster would be a plain cause for war, and barring also the probability of an accident for which the ship's men themselves were responsible, the question of Spain's responsibility in the matter is much mooted, pending a report from the naval board of inquiry.

An Associated Press interview represented Robert T. Lincoln, ex-Secretary of War, as saying:

"Assuming a mine exploded by a fanatic or by accident, that would be the end of the affair. Giving international law the widest latitude and stretching precedents to their limit, there would be no liability against the Government of Spain. It is an elementary principle of international law that a government is in no way responsible for the acts of private citizens. If it were not so, complications would be arising continually which would keep nations in a turmoil and arbitrating continually. It is another primary principle that no nation is responsible for accidents.

"As to the right of a nation to fortify its harbor as it sees fit, there can not be the slightest doubt. This right is a conceded one, and is exercised by all nations. Whenever a vessel, therefore, enters the harbor of a foreign power it is with notice of such defenses and with an assumption of the chances they involve. It would not do to say that one nation is bound to give the ship of another nation information as to where and how its harbor defenses are arranged, and the result of such a rule would be obvious. In entering the harbor of Havana the *Maine* did so with full knowledge that it was a fortified harbor, and took all the chances of accident or the acts which might be done by those for whom Spain is not responsible."

Prof. H. E. Von Holst, of the University of Chicago, an authority on international law, takes exception to this view. He holds that in any case supposable Spain is responsible and liable for damages. We quote from an interview in the *Chicago Times-Herald*:

"If it is really an individual crime, Spain would certainly not be responsible for it, for it is a well-understood principle of international law that nations are not responsible for the acts of individuals. Essentially different, however, seems to me to be the situation in case the investigation should prove that there is culpable negligence on the part of Spain.

"If it be true that, as it is asserted, the harbor of Havana is provided with torpedoes and submarine mines, and if it be further true that the place of anchorage was assigned to the *Maine* by Spanish officials, and the disaster has befallen the *Maine* through those mines or torpedoes, Spain, in my opinion, would have to pay damages for the loss of the ship, besides indemnities for the sailors, dead or wounded. I am of the same opinion in case those mines or torpedoes have not exploded by accident, but through the criminal act of some individual Spaniard, whether official or not, and, for this reason, if the Spanish Government laid those mines and torpedoes it is in duty bound to watch them in such a way that no harm could be done by them, except in legitimate warfare.

"I am inclined to go even one step further. I think the liability of Spain could not be denied if neither the place of anchorage was assigned to the *Maine* by Spanish officials nor the explosion was due to the criminal act of some individual, but simply to some unaccountable accident. For while Spain had unquestionably the right to provide her harbor with submarine mines and torpedoes, she was morally bound to warn any ship of a friendly nation—not only a man-of-war, but the same holds true of any merchantman—of the danger that would be incurred by anchoring in that harbor except in a safe position consigned to her. Any power that allows a ship of a friendly nation to enter her harbor thereby implicitly declares that it is safe to do so, fortified or not. So in all these cases there seems to be a clear case of responsibility on the part of Spain.

"But I think it highly in the interest of the United States that in contending for this opinion all papers not dealing in sensationalism or jingoism should strongly emphasize that this is only a liability for damages—that is to say, a purely pecuniary question. For pecuniary questions, however, nations do not rush at once into war. Supposing that the official inquiry should establish such a pecuniary obligation on the part of Spain, in our opinion, and Spain should deny it, it would still, I hold, be much too early to speak of war. We have had many a controversy of this character with Spain, and some of them have been of an exceedingly aggravating character. Still we never have gone to war about them. Diplomatic means have been employed, and they have ultimately attained the end in view. Such a course should be pursued now. Nor does this mean advocating a half-hearted and dilly-dallying policy. Diplomatic means can be resorted to in a very energetic manner and with nine out of ten chances of success. Even after all diplomatic resources were exhausted there would still be one course open, short of war—that of reprisals in one way or another.

"The honor of the United States would not suffer in the least by such a course, but, on the contrary, in the opinion of the whole world, the reputation of the United States for a circumspect and dignified, while at the same time firm, policy would thereby only be increased."

Due Diligence and International Responsibility.—"A good deal of nice reasoning from precedents is just now finding its way into print in connection with the *Maine* disaster.

"As a broad general principle no government is responsible

when a miscreant assails a citizen or subject of another government. But, on the other hand, every government has sole power to keep order within its own dominions, and if it so far neglects to exercise that power as to permit damage to the subjects or citizens of other countries it is responsible. On this principle we have ourselves paid heavy damages in the New Orleans case and in the case of the massacre of Chinamen at Rock Springs, and, on the other hand, we have exacted damages of Chile for the massacre of our sailors by a mob.

"Rigidly interpreted the principle is this: No government is responsible for individual crime which it can not prevent by due diligence, but where due diligence is lacking it is responsible.

"But the case of the *Maine* lies wholly out of this category. The war-ship went to Havana on a mission of peace and threw herself absolutely upon the hospitality of the Spanish authorities. They selected her anchorage without leaving her officers any choice whatever. If that anchorage was over a mine they knew it. If that mine was exploded whether by government authority or by some miscreant whose access to the means of blowing it up might have been prevented, then unquestionably Spain is responsible.

"The whole case turns upon this question of fact.

"One other point is worth mentioning. International law is not a binding statutory code. There is nowhere in the world any authority that can enforce it. It is a mere comity of nations, and any nation strong enough may disregard its technicalities where in that nation's judgment those technicalities work injustice. This is precisely what both Germany and Japan are at this moment doing as to China.

"Ordinarily nations obey international law, but when the occasion is great enough and the guns big enough they rise above it and compel justice with the high hand of might."—*The World, New York.*

Spain Could Disavow.—"If the ship were blown up by some Spaniard, or even a number of Spaniards, that ought not, and probably would not, create trouble. The facts would be promptly represented to Spain, and she would as promptly, and probably in all sincerity, disavow the act with honor, and make all the amends in her power. Parallel cases have occurred in abundance in nearly all of the countries of Europe, and in more than one instance on the American continent. Foreigners have assassinated, or have attempted to assassinate, the heads of governments, but in no instance has an effort been made to hold responsible the countries of which these assassins were citizens. War is not carried on in that way. Civilization is reasonable, and does not expect a government to do an impossibility. Assassinating the head of a state is a more serious offense than blowing up a battleship, but either one of them can be done by an irresponsible villain or villains, in spite of the state's utmost vigilance."—*The American, Baltimore.*

What Due Diligence Is.—"What due diligence is may be readily learned by any curious and unauthorized person who seeks to approach the Spanish cruiser *Vizcaya* now at anchor in our harbor and under our effective protection. If she should be destroyed while here we should be able to show that we really exercised due care.

"There were no such precautions taken in Havana harbor; there was no patrol on guard, no protection, but a complacent trust in the goodness and forbearance of its people on the part of the Spanish Government.

"Before a tribunal of law Spain would doubtless be held legally and morally responsible if it should be proved that the *Maine* was destroyed by any govern-

ment appliance in the hands of a Spanish officer, even tho he were acting without authorization; she would be held to the payment of an indemnity if the act were perpetrated by a private miscreant, were the loyal Spaniard or Cuban rebel; and she would be held free of all blame if the *Maine* were shown to have been destroyed by an accident on board."—*The Times, New York.*

Jurisdiction over the Wreck.—"All authorities on international law agree that a war-ship while afloat retains the territorial status of its own Government, and that even when in foreign waters she is to be regarded as exempt from local jurisdiction. War-ships, says Professor Wolsey, may be considered 'floating barracks, a part of the public organism that represent the national dignity, and on this account even in foreign waters are exempt from local jurisdiction. It is on account of the crew rather than the ship itself that it has any territorial quality. Take the crew away and let the abandoned hulk be met at sea, and it now becomes public property and nothing more.' The vessel having ceased to be a part of the sovereignty of the United States, the relation of this Government to the wreck is that of an owner. We have proprietary but no jurisdictional rights over the wreck. The jurisdiction of Spain over Havana harbor, however, can not be gainsaid, nor can this Government deny the right of the Spanish local authorities to conduct an investigation of the bottom of a territorial water of Spain with a view to discovering the cause of the explosion. The circumstances of the case might have raised an irritating controversy but for the waiver by Spain of all jurisdictional questions, and her voluntary offer to regard the wreck of the *Maine* as extraterritorial and as part of the sovereignty of the United States.

"No case is on record presenting exactly the same legal questions as to the status of war-ships in foreign waters as are presented by the case of the *Maine*. The acquiescence of Spain in the contention of this Government that a national vessel retains her extraterritorial status under all circumstances may therefore be considered as having established a precedent that will be incorporated as a general principle into the law of nations."—*The Record, Philadelphia.*

CUBAN SITUATION IN CARTOONS.

No Joint Investigation.—"The Spanish Government requested that a joint investigation be made, but it was decided at Washington to proceed on a different basis, as is shown by the following despatch from Assistant Secretary Day to Consul-General Lee:

"The Government of the United States has already begun an investigation as to the causes of the disaster to the *Maine*, through officers of the navy specially appointed for that purpose, which will proceed independently. This Government will afford every facility it can to the Spanish authorities in whatever investigation they may see fit to make upon their part."

This despatch is destined to figure in future chapters on international law. It insists on the right of independent inquiry by the Government owning the submerged war-ship, but also it concedes that the Government within whose marine jurisdiction the vessel lies the right to investigate the abnormal situation created by the disaster.

"Here we have two concessions, both of which form interesting precedents, and both of which are apparently well founded in reason and justice. The submerged ship is still a part of the sovereignty of the United States, but, inasmuch as in her present condition she is a menace to safe navigation in Havana harbor and was blown up under extraordinary circumstances tending to cast suspicion upon the good faith of the local government's hospitality, she is also a proper and legitimate subject for official inquiry by that local government. It does not follow, however, that the two governments must conduct their inquiries jointly; at least, such is our Government's contention, and this is not the least interesting phase of the situation. There might be room for controversy at this point by Spain—she insisting that the extraterritoriality of our ship did not confer upon us the right of making an independent investigation in advance of her own, or other than joint—and how Spain will act on this question is yet to be determined.

"As these are fine points in embryonic international law, it were somewhat presumptuous, perhaps, for any one to express a hasty opinion upon them, yet the position assumed by our Government certainly seems to be logically sound. It is a condition of two rights, conceded by both sides; each side can exercise its right unhindered by the other, but neither is compelled to work with the other."—*The Republican, Springfield.*

NEGRO MURDER AND POLITICS.

THE most atrocious case of mob murder this year is reported from Lake City, Williamsburg county, S. C. An account of the outrage as developed at the coroner's inquest shows that Fraser B. Baker, the negro postmaster of the town, was awakened after midnight, February 22, to find his house burning up. With his family he attempted to escape from the burning building and was shot dead at his door. Other shots killed his baby boy in the arms of his mother and wounded her. Two daughters and a son were also wounded and two of them may die. The charred bodies of Baker and the baby were found in the ashes of his home (the post-office) next morning.

Baker had been recently appointed postmaster of the town, and protests against the appointment had been made to the President by citizens of the town and by Senators and Representatives of the State. He had been threatened more than once, and not more than a week before the massacre his house had been the target for bullets from a concealed mob. It will likewise be remembered that Postmaster Loftin, a negro who still holds office at Hogansville, Ga., was seriously wounded last year by a mob (see THE LITERARY DIGEST, October 9). The Lake City affair is universally condemned by the press, altho the policy of appointing negroes to office is questioned, not alone in the South. Several mass-meetings in the State have passed resolutions condemning the outrage. We confine quotations on the subject to Southern journals.

Lynched the Wrong Parties.—"There is no negro postmaster at Lake City now. His appointment was a serious mistake and the manner of his removal most deplorable. We agreed with the people of Lake City and vicinity in their protest to Washington

concerning the appointment of an ignorant negro to an official position from which he could give more offense than from almost any other, but we must part company right here. We can not approve the lynching which put aside the objectionable official. In the cause of justice and humanity we must condemn it.

"The intention of the mob was not the massacre that really ensued. It was Baker alone that it was intended to murder, and the killing of his child and maiming of the balance of his family were incident thereto, but are serious crimes just the same. It is for the reason that a mob is not only merciless, but senseless that we oppose lynch law. Too often the innocent suffer and the guilty escape.

"There are others than Carolinians, however, who are in a measure responsible for this dirty business. Mark Hanna and those who made McKinley President by negro voters in the St. Louis convention can take the matter home to themselves. What right have these disreputable political prostitutes to inflict negroes on the white communities of the South when they do not act in a similar manner in the North? We hear of no such insults being offered in Ohio to white people. In our opinion, the people of Lake City lynched the wrong parties. If they could have laid hands on Hanna and the others who are responsible for the attempt to elevate a negro above a race that the Almighty made superior, there might have been some justification for a killing.

"The negro Baker, however, only acted on a most common principle of human nature—he saw a position and grasped it, directed by the same spirit of ambition and gain that moves the actions of all white people as well.

"The punishment meted out was not only undeserved and brutal, but is a reflection on our civilization that no amount of apology or explanation can wipe out."—*The Register, Columbia, S. C.*

Federal Punishment Called For.—"The lynching of the postmaster at Lake City was unquestionably the result of a conspiracy to prevent the negro Baker from holding the office of postmaster. His murderers can, at least, be prosecuted and punished for this offense even if they can not be prosecuted and punished for the graver crimes of arson and murder; and we believe that the court would hold, in the circumstances, that they could also be punished for murder. The jurisdiction of the United States in this case is clear and undeniable, and in the interest of justice we urge upon the federal authorities their duty and obligation in the premises.

"We accept the governor's offer of a reward of \$500 for the members of the Lake City mob as indicating in some measure the degree of the offense in his eyes. It is inadequate to the purpose in view. The reports agree that there were several hundred men in the mob, and the governor's offer amounts to something over a dollar a head, and we doubt that the reward would be worth the risk. And even if all the members of the mob should be apprehended it would be idle to look for their conviction in the state courts. The only hope of the outraged law in this case is in the United States courts where the trial would be free from local political influences; and that is where the mob should be tried."—*The News and Courier, Charleston, S. C.*

Negro Rule Can Not be Admitted.—"The placing of a negro in official position over white men of the South is a criminal outrage of the most flagrant type, in the light of the sentiments and traditions of the people and in view of all the conditions known to exist. It is an insult vicious and brutal. It is well known that the Southern people will never allow the negro to dominate or control their affairs, nor to reach a plane of social equality with them. This is a final and immutable resolve, and it will be maintained against every effort, and to the last extremity. The history of reconstruction of the Southern States shows what our people will do to maintain white supremacy, and the half that they are prepared to do has not been shown. The people of the South may be exterminated, but they will never be ruled by negroes, nor will they admit the negro to an equality with them.

"These things are known. As well might the national Administration try to whiten the negro's skin as to attempt to bring him to a plane with the sovereign race of the South. Yet appointment to office, placing in position of authority of the negro, is an attempt to accomplish or to approach an accomplishment of this impossible result. It is useless, wanton, and brutal. Better accept the verdict once for all, recognize the inevitable, and admin-

ister in justice, than to goad, insult, and outrage a people, with no prospect of worthy result.

"Murder can never be condoned. Lynch law is barbarous. The killing of Baker and the wounding of his defenseless wife and his innocent children were fearful and savage acts. The perpetrators of the crime should be sought out and punished. But what of those who gave opportunity to the crime? What of the high officials of the national Government, who sent Baker to his fate? Shall they go unpunished?"—*The Post, Charleston, S. C.*

Heads Bowed Under the Lash of Scorn.—"The race pride of these men, it seems, was wounded by the appointment of a negro postmaster; so to blazon to the world their high resentment and prove the injustice of thus giving office to an inferior, they place themselves on the moral and religious level of the aboriginal African, they attack at midnight under cover of darkness—the many against the few, the strong against the weak and helpless—and they assassinate indiscriminately man, woman, and child! Where are the white man's characteristics in this deed? Where is his superiority shown? Where do we find the fruits of his thousands of years of civilization and self-control and cultivated conscience?"

"A negro postmaster! Is that something to resent with assassination? Who are these people in Williamsburg county that they can not endure that which the most refined, the most sensitive citizenship of the State has endured with patience and dignity in years gone by? Columbia had a negro postmaster for eight years. Charleston had a negro postmaster for eight years. Dozens of South Carolina towns have had negro postmasters. It was offensive—necessarily so—but who was hurt by it? None but the party that appointed them.

"But, even if the affront and the injury were unbearable, who should be held responsible for it? Not the poor negro, who in taking office accepted what it was his right to accept; not his wife, his children, his helpless babe. Rather the white man, the state boss, who had him appointed; still rather the President, who made the appointment, or the national boss, who made the bargain for votes at St. Louis, which has resulted in the choice of negroes for federal offices.

"We are ashamed and sickened. For the sake of South Carolina, her good name, her pride, and her manhood, we would have preferred to see her lose a thousand sons in battle than have to record such a coward's crime as that which stains her to-day. All of us have to bear the disgrace of it—the million innocent alike with the mob. For years and decades it will be a taunt in the mouths of our enemies, and we must bow our heads under the lash of their scorn."—*The State, Columbia, S. C.*

"When the line of the law and its reverential observance is once broken down, all restraint is thrown to the winds and the spirit of anarchy is let loose.

"This time it was a negro and his whole family of six who were either killed or wounded, because he was disagreeable as a postmaster—the next time it may be some objectionable white person who may be easier settled with by a mob than in court.

"We think it best, if mob law is to prevail, that it should be so announced, and let every man take care of himself as best he can; but it is unfair and even cowardly to lull persons into a sense of security with the idea that the law will protect them when it is only a sham, and when the lawless spirit is as effective as if anarchy were the avowed principle of society. One side or the other should be taken; either is preferable to the deceptive and treacherous middle ground."—*The Times, Richmond, Va.*

SALE OF THE KANSAS PACIFIC RAILROAD.

FOLLOWING the sale of the Union Pacific Railroad last November, the Government has sold the Kansas Pacific Railroad and has only its interest in the Central Pacific system yet to dispose of. The Kansas Pacific was bought at foreclosure in the court at Topeka, Kans., on February 16, by the same reorganization committee which bought the Government's claim on the Union Pacific. There was but one bidder, the Government having de-

cidated that it would not be a bidder since the reorganization committee raised its guaranty of a minimum bid from about \$2,500,000 to \$6,303,000, the figure at which the road was purchased and which covers the principal of the Government's claim. Opposition to this disposal of the Kansas Pacific appeared in Congress in the shape of resolutions in the Senate opposing confirmation of the sale and inquiring by what right the Government permitted this transaction to be effected, at a loss of interest amounting to over \$325,000 more than the sum of the principal. Attorney-General Griggs replied that the Government was complying with the decree of the court; that if the sale were postponed there existed no assurance that there would be any bid equal to the principal of the Government's debt; the chief difficulty in bidding in the property for the Government would be that the Government was not authorized to operate the railroad in its own name or through its agencies, serious doubt existing as to whether the court would, after such a sale, appoint and continue receivers for the mere purpose of operating the road on behalf of the Government. Hence the sale would proceed, open to any bidder under the terms of the court's decree, the Government having only agreed to ask for no postponement of the sale upon the guaranty of a minimum covering the principal of the debt.

Inexcusable Government Loss.—"If the Kansas Pacific was not worth the Government's claim plus the first mortgage, why did it permit a divided sale of the Union Pacific and Kansas Pacific last fall, when it was possible to compel the reorganization syndicate to stand to a joint bid for the Government's interest in both properties, and so make the Government's stronger claim in Union Pacific carry through the weaker claim in Kansas Pacific? Attorney-General McKenna justified the Administration's course then by declaring and undertaking to prove that the Kansas Pacific was worth more than enough to cover the whole Government claim of nearly \$13,000,000. But now the Administration says the Kansas Pacific is not worth more than enough to cover \$6,303,000 of the public claim, and prepares to surrender the remaining \$6,600,000 to the syndicate. If it had deliberately set out to trick the public, could it have done much more?"

"Much is made of the fact that the Government is to get the principal of the debt from the Kansas Pacific in full. The President, in his annual message, placed emphasis on the desirability of enforcing at least the payment of the principal of \$6,303,000. The impression obviously sought to be made by this talk is that the Government will really lose nothing. Its loan to Kansas Pacific is likened by implication to an ordinary investment which did not yield the expected or promised interest, but the principal of which was recovered by the investor.

"But the case is quite different. The Government has actually paid out the interest money which remains unpaid by the Kansas Pacific to the amount of \$6,600,000. It would be not a constructive but an actual loss. The Government issued the subsidy bonds which were sold by the railroad company to private investors, and it has paid the interest on those bonds to the amount specified, without compensation from the road, and must now pay the principal of the bonds.

"How absurd, therefore, to distinguish between the principal and the interest in the settlement of the claim, as if the interest loss would be constructive and not actual. It smacks of an effort to throw dust in the eyes of the people, and make the bargain appear to be what it is not. The simple fact is that preparations have been made to hand over \$6,600,000 of public money or property to the Union Pacific syndicate."—*The Republican (Ind.), Springfield.*

Government the Gainer.—"The wise and conservative action of the Union Pacific reorganization committee has defeated this project [government control and management, 'the worst form of paternalism'], for the present at least, tho we presume another effort in the same direction will be made when a crisis in the affairs of the Central Pacific is reached.

"As for the Government—people have forgotten about it—instead of being loser or sufferer in any way, it was immeasurably the gainer at every point [in transactions with projectors of the Pacific roads]. Its profits have been incalculable. In 1862, and

for five years previous, the average annual cost of transporting the mails, troops and munitions of war from the Atlantic to the Pacific coast was more than \$7,000,000. Between the Missouri River and the Pacific coast was a vast stretch of uninhabited country, roamed over by Indian tribes, constant wars with whom entailed large expenditures. In this state of affairs the Government said, in effect, to the enterprising and adventurous men who undertook the work: 'Build a railroad for us from the Missouri River to the Pacific coast. You shall have government aid in the form of \$60,000,000 in 6-per-cent. bonds and half the bonds brought into market by the enterprise. One-half the present cost of transportation of mails, army supplies, munitions of war, etc., will cover the interest, and the enhanced value of land brought into market will give us additional profit.' The road was built. Instead of paying for mail carriage, in accordance with the contract, the Post-office Department made its own price and compelled acceptance. The transportation charges failed to meet the interest as it accrued, and arrears began to accumulate under the charter provision postponing interest payments to the maturity of the bonds, except as they should be provided for by transportation accounts and 5 per cent. of the net earnings. Then there was trouble. Congress began a policy of unfriendly legislation and petty interference that has continued to this day. Since the completion of the roads Congress has never done a thing in their interest, and has never failed to embrace every opportunity to hamper and cripple them.

"Meantime an end has been made of costly Indian wars; the vast unoccupied spaces between the Missouri River and the Pacific coast have been peopled and made enormously productive, and the profit to the Government from the sale of lands brought into the market has been almost incalculable. It is in the face of facts like these, or perhaps through ignorance of them, that sensational newspapers and demagogues in Congress are talking about the sale of the Kansas Pacific to the reorganization committee at a sum which railroad experts agree is a fair valuation of the property as 'a steal.' Nonsense! If the Government had never recovered a penny of its advances, it would still have been the gainer in the transaction by an enormous sum. As it is, it gets back nearly the whole of the debts due it from the Union and Kansas Pacific, in addition to all the profits it has been reaping from their construction for the last thirty years."—*The Tribune (Rep.)*, *New York*.

Gain by the Sale.—"The terms on which the Government disposes of its interest in the Kansas Pacific are not as advantageous as those it managed to secure on the Union Pacific transaction. In that transaction it lost nothing, whereas in the present one it loses all the accrued and unpaid interest, amounting to \$6,624,107. The officials realize, however, that the amount secured, added to the amount of the first liens which it would have been compelled to lift, represents the full value of the road at the present time. It is to be remembered, too, that the amount brought by the two sales so far effected is about \$20,000,000 in excess of that which the Government was willing to accept less than two years ago. What it is worth to the nation, politically and financially, to escape government operation and management of a railroad can not easily be computed. When the Government disposes of its interest in the Central Pacific hearty congratulations will be in order. The subsidized Pacific lines are an object-lesson against government aid to private enterprises, against a policy which might force industrial functions on the Government."—*The Evening Post (Ind.)*, *Chicago*.

What Reorganizers Will Get.—"Two weeks ago it was currently reported that the reorganization committee, for fear of governmental interference, had raised its bid to an amount equivalent to the principal and one half of the interest. This would have benefited the Treasury \$9,481,636. But it was asserted at that time, and assurances to the same effect were given to Congress, that the Administration did not consider this sufficient and would take steps to postpone the sale, in the full confidence of securing a bidder who would give enough to clear off the full incumbrance. Thus, and thus only, was congressional action averted. Now it appears that this movement on the part of the Executive was not inconsistent with the probability that a different and final arrangement had been reached several weeks earlier.

"It is significant that the Government, the second-mortgage claimant, loses about \$7,000,000 on its claim, while the first-mortgage creditors, under the reorganization, will receive in cash and securities, based on Saturday's Wall-Street prices, 128 per cent. of their claim, and the holders of the third mortgage will get 115 per cent. of theirs."—*The Times (Ind. Dem.)*, *Washington*.

EX-PRESIDENT HARRISON ON THE OBLIGATIONS OF WEALTH.

EX-PRESIDENT BENJAMIN HARRISON, speaking at the Union League Club's celebration of Washington's Birthday in Chicago, took the ground that evasion of taxes by wealth is at the root of evils in this republic, and he urged just taxation on personal property, with supplementary succession or inheritance taxes, as a remedy. He pointed to the life of Washington as teaching "no lesson more strongly than that the citizen is under obligation to serve the state; never to shirk his full share of burden and labor and sacrifice, but rather to do more." He proclaimed that the leaders of needed reforms in tax laws ought to be our men of wealth and the managers of great corporations; they ought to show not only a willingness, but a zeal, to bear their full proportionate share of all public burden. "If they do not," said he, "the sense of injury is so strong that ways will be found to exact more than is equal. To do justice is the best safeguard against injustice."

The ex-President emphasized the prevalence of agitation which goes beneath the surface of conditions. There is a feeling that equality of opportunity and of right has been submerged. Accumulated property and corporate power are more bitterly attacked than ever before. It seems to many that the pursuit of cheapness has reached a stage where only enormous combinations of capital doing enormous business are sure of returns. "The word 'wealth,'" said he, "in its modern use has suffered a limitation if not a perversion. Originally and strictly it means weal or welfare, external happiness. When Paul admonished the Corinthian Christians, 'Let no man seek his own, but every man another's wealth,' he was not anticipating the modern law of the wheat pit and the stock exchange." He contended that wealth should be neither the object of our enmity nor the basis of our consideration; men must get together and use facts, not rhetoric. "Equality, not of conditions, not of natural endowment, but of rights, is the foundation stone of our governmental structure. And as a corollary, necessary and imperative, to this doctrine of an equality of right is the doctrine of a proportionate and ratable contribution to the cost of administering the Government. The duty of the state to protect life, liberty, and property is conditioned upon a fair contribution to the cost of government. A full and conscientious discharge of that duty by the citizen is one of the tests of good citizenship. To evade that duty is a moral delinquency, an unpatriotic act. If we do not hold by this rule of proportion, which I think is an essential part of the definition of taxes, then everything becomes subject to the whim of the legislature."

Mr. Harrison directed his remarks particularly to the prosperous, well-to-do people, especially of the great cities, suggesting that "one of the conditions of the security of wealth is a proportionate and full contribution to the expenses of the state and local governments. It is not only wrong, but it is unsafe, to make a show in our homes and on the street that is not made in the tax returns." To quote further:

"For very many years an opinion has been prevalent that the great bulk of the personal property of the States, especially of the class denominated 'securities,' including stocks, bonds, notes, mortgages, and such like, has escaped taxation. With a very few exceptions the great fortunes in this country are invested in such securities. The delinquency appears to be located largely in our great cities. Recent investigations of students of political science, and recent tables prepared by state officials, have disclosed an appalling condition of things. The evil seems to have been progressing until, in some of our great centers of population and wealth, these forms of personal property seem to have been almost eliminated from the tax list. In New York State the proportion of personal property assessed for taxation is only about 12 per cent. of the total amount of property taxed. Yet Controller Roberts, of that State, expressed the opinion that the taxable

personal property owned in the State is at least equal to the amount of real estate. Illinois and many other States present the same condition, differing only in degree.

"It is easy to see how this offense against patriotism has grown to such proportions. The very sense that inequality is injustice has promoted it. One man sees that his neighbor is not making a conscientious tax return, and that if he returns his property honestly he will pay disproportionately. The result is that his conscience finds a salve in the saying, 'Everybody does it.' It is probably also true that under the tax laws of many of our States double taxation results, and taxpayers take it upon themselves to remedy this defect in the law—not by the methods prescribed in the Constitution, but by leaving off from their tax returns such stocks and securities as they supposed to be taxed in other States.

"The most serious aspect of this state of things is the injury which results to those who practise these fraudulent evasions. The man who is robbed has not lost his character or self-respect, but the other man has lost both. Taxes are a debt of the highest obligation, and no casuist can draw a sound moral distinction between the man who hides his property or makes a false return, in order to escape the payment of his debt to the State, and the man who conceals his property from his private creditors. Nor should it be more difficult to follow the defaulter in the one case than in the other. If our taxes were farmed out to an individual or to a corporation, they would be collected as fully as private debts are now collected. There would be a vigilant and unrelenting pursuit. The civil and criminal processes of the law would be invoked with effect, just as they were against fraudulent debtors under the bankrupt law.

"When to this enormous and crying evil is added the corruption which, it is alleged, has characterized the appraisements of real estate, we have a condition of things with which we dare not palter. We must inaugurate, and at once, a system that shall equalize tax burdens. The men of wealth in our great communities should lead the movement. This great club, organized as a rallying center for loyalty and patriotic citizenship, should hear a call as loud and imperative as that which came to it during the years of the Civil War.

"Mr. Lincoln's startling declaration that this country could not continue to exist half slave and half free may be paraphrased today by saying that this country can not continue to exist half-taxed and half-free. This sense of inequality breathes a fierce and unmeasuring anger—creates classes, intensifies social differences, and makes men willing to pay their debts in half dollars. The just sacredness of these money obligations, the rights of the holders to be paid in money of full value, will be clearer to these angry men if they see that these securities are paying fully their lawful taxes.

"Where is the moral distinction between the act of putting one's hand in his neighbor's pocket and clandestinely abstracting his pocket-book, and the fraudulent shifting of a debt that I owe to another?

"If there is not enough public virtue left in our communities to make tax frauds discreditable, if there is not virility enough left in our laws and the administration of justice in our courts to bring to punishment those who defraud the State and their neighbors, if crimes of fraud may stalk unrebuked and unpunished in our streets, how long will it be until crimes of violence make insecure the fortunes that have refused to contribute ratably to the cost of maintaining social order? The failures which have accompanied, in an increased ratio, the attempt to collect the personal property tax have led many tax-reformers to favor its total abolition and the substitution of other forms of taxation. The failure of the wealthy holders of these intangible securities to pay their just proportion of the cost of government has stimulated a demand for special forms of taxation and for progressive taxation, with a view in some measure to recoup to the community the losses which are inflicted by evasive or fraudulent tax returns. These efforts should serve as a warning. The people will not consent that this state of things shall be accepted as a permanent condition. If we are to leave no taxes save such as in their nature necessarily exclude concealment and bribery, what tax will remain? If we admit the disgraceful conclusion that the state of public and private morals has become such in our country that the wealthy may not be brought under the law and compelled to yield it reverence and obedience, have we not confessed the failure of republican institutions?"

The tax upon imports was confided wholly to the federal Government by the Constitution, since experience had shown that the separate States in competition practically nullified the power to levy imports. State tax laws suffer similarly by reason of real or simulated changes of residence; yet federal control would not easily be secured from the States. A convention of state tax commissioners to discuss the problem is as far as Mr. Harrison goes by way of suggestion in this line. But he says:

"I do not believe that it is impossible so to stir the consciences of our people, so to stimulate the independence and courage of our assessors and of our courts and prosecutors as to secure a fairly general enforcement of the personal property tax. I know that men hesitate to call a neighbor to judgment in this matter. We have too much treated the matter of a man's tax return as a personal matter. We have put his transactions with the State on much the same level with his transactions with his bank, but that is not the true basis. Each citizen has a personal interest, a pecuniary interest, in the tax return of his neighbor. We are members of a great partnership, and it is the right of each to know what every other member is contributing to the partnership and what he is taking from it. It is not a private affair; it is a public concern of the first importance.

"Perhaps there should be a general proclamation of amnesty and a fresh start. We should discard these old notions, and, wiping the slate off, proclaim a tax renaissance. Every agency that deals with public and social questions should lend its help. The grand jury should be charged to investigate and to indict the delinquents. Returns and assessments must be honest. If there are inequalities in the law they must be remedied by legislation, and not by the usurpation of the individual. I think we must assume that there are very few, if any, of our States prepared to consent to the abolition of our personal-property tax.

"As a supplemental tax, levied within the requirements of equality and uniformity, a succession or inheritance tax may be well enough, if the state constitution permits it; but the principle of progression, a higher rate for larger estates, seems to me to be inconsistent with that rule of proportion and equality which should characterize all taxation. The practical question, the one our people must solve, and solve speedily, is the enforcement of the personal-property tax and the equalization of real-estate assessments. Perhaps the State might declare and maintain an estoppel against the claim of any man or his heirs to property, the ownership of which had been disclaimed in the tax returns."

Degrees of Patriotism.—"Ex-President Harrison has earned a reputation for saying the thing that should be said so well that it can not easily be improved upon. His address of yesterday will not detract from that reputation.

"There are various degrees of patriotism, as every one knows. There are people who are anxious to fight for their country with or without provocation, people who are willing to fight when they are needed, others who would only go slowly to war through a sense of duty, and some who would serve only under compulsion. In war times it is not difficult to measure the varying types of patriotic ardor. In times of peace it is.

"But that class described by the ex-President exemplifies the antithesis of all patriotism, the rich men who use every artifice to dodge their share of taxation. Taxation is often higher than it should be, and it is then a patriotic duty to make every effort to reduce it to the necessities of economic government. In that the rich and poor may join as they might in any holy cause. Yet whatever the rate of taxation may be it represents the burden of public protection and administration. It is the duty of every man to bear his share of it—the duty as much of the rich man to pay a proportion of his great wealth as for the poor man to give from his poverty. The one who tries to evade that duty is a moral coward, a traitor, and a bad citizen."—*The Dispatch (Ind. Rep.), Pittsburg.*

Mischievous Untruths.—"Our own opinion is strong—tho it is necessarily not capable of exact demonstration—that, taking the country as a whole, giving due weight to the extent of the population and the great variety of interests existing, there is less that is bitter and threatening in men's minds than at any previous period.

"Whatever counsel the ex-President has to offer to the rich, or to the 'well-to-do,' as he expresses it, we think it must be consid-

ered quite apart from this statement of the condition of the public mind. The sum of that counsel is that they ought to pay fair taxes on all that they possess and not shirk the part that is levied on personal property, and so can easily be evaded. That is good advice for any one, rich or not. Mr. Harrison is quite right when he says that taxation is a debt which can not honestly be dodged. Unfortunately, the average citizen, whether rich or poor, does not act on this principle, and all efforts to compel him to do so have so far failed. Legislatures have ignored that fact in laying taxes, and have insisted on collecting what can be evaded. So long as they continue doing so, Mr. Harrison will but waste his breath in denouncing the dishonesty of tax evasion. Could he suggest a tax that can not be evaded—and such a one is entirely feasible—he would be doing greater service.”—*The Times (Ind.)*, *New York*.

Harrison's Opportunity.—“The nearest approach to a direct and practical suggestion was thrown out in a casual way. ‘Perhaps,’ he said, ‘the State might declare and maintain an estoppel against the claim of any man or his heirs to property the ownership of which had been disclaimed in the tax returns.’ Considering the high standing of General Harrison as a constitutional lawyer, such a suggestion as this from his lips means a great deal. He is not the man to drop a remark of such gravity, however casually, without having carefully considered the matter. In the recent argument before the Supreme Court of the United States on the inheritance tax Harrison was retained to oppose the tax. If his suggestion should be carried out it would be much more drastic than the inheritance tax of this or any other State.

“If General Harrison will allow himself to be elected to the legislature of Indiana and make a specialty of framing a revenue bill he might do the whole country a great and highly patriotic service. During his six years in the Senate and four years in the White House he was confronted with no more difficult and fundamental problem than this of state revenue reform. If he could lead in a genuine ‘tax renaissance’ he would rival John Quincy Adams in the achievement of a great post-Presidential reputation.”—*The Inter Ocean (Rep.)*, *Chicago*.

Tariff and Income Tax.—“The ex-President, for obvious reasons, confined his attack to state and local tax systems. But all that he said of them is doubly true when applied to the national taxes. A more unequal scheme of taxation than that of a high tariff has yet to be devised. It not only taxes men with no regard to their means, to benefits received, or ability to pay, but in addition it increases the cost of most of the necessaries of life. It licenses a privileged class of tax-collectors, and the bounties they exact go not into the national treasury but into their own pockets. Its burdens, direct and indirect, fall with especial hardship upon the poor, because a tax upon consumption is hard to escape and is based upon necessity rather than upon property.

“General Harrison says: ‘We must inaugurate, and at once, a system that shall equalize tax burdens,’ and adds that ‘men of wealth in our great communities should lead the movement.’ It is a wise and timely warning. Yet when, a few years ago, the Democrats passed a law to secure a small measure of justice—the income tax—‘men of wealth’ combined to secure its nullification by the Supreme Court. They forgot or defied the truth expressed by the ex-President, that ‘one of the conditions of the security of wealth is a proportionate and full contribution to the expenses of the Government.’”—*The World (Ind. Dem.)*, *New York*.

Honesty and Equality.—“There is, however, one point which, while it does not constitute a justification for the tax-dodger, ought not to be left out of account. If people could only feel that they were getting value received for their taxes they would be much more ready to pay them. Unfortunately, they can not feel this. American city governments are notoriously inefficient and corrupt. There are shining exceptions, but the rule is as we have said. What incentive is there to pour money into the treasury of a city to be squandered for corrupt purposes? So it will be seen that it is a large question that Mr. Harrison raises, involving many considerations. That it is serious will be admitted by all.

“The remedy is in the hands of the people. They can have honest government if they really want it badly enough to work to get it, and we believe that in time the appeal to the conscience of the American people, and if not that, certainly the appeal to their fears, will have a marked effect in decreasing the tax frauds. General Harrison spoke a much-needed word. His speech ought

to mark the beginning of an agitation for better things. The end to be sought is not simply honest payment of taxes, but a real equality of all men before the law.”—*The News (Ind.)*, *Indianapolis*.

Waiting on Conscience Ineffectual.—“The same sort of appeal has been made a hundred times without the least effect, and there is not the smallest reason to suppose that it will be more effective when uttered by Mr. Harrison than when proposed by John Smith or Adam Smith. . . . If we wait till the consciences of the owners are aroused to the point of spurring them to walk into the assessor's office and make true declarations, we shall wait forever. Some method must be devised in lieu of this—some method that presents itself to the eye of the assessor and that can not be escaped. One such, and the most promising of all, is that proposed by the Massachusetts Tax Commission, of taking the rental value of his dwelling as an approximate index of the value of a man's wealth and making that the basis of the tax he shall pay on personal property. This plan was recommended by the New York commission of which David A. Wells was chairman, thirty-six years ago. It has been in force for half a century in France. The indorsement which it has now received by the Massachusetts commission ought to be heeded not only by that commonwealth, but by all the States of the Union.”—*The Evening Post (Ind.)*, *New York*.

GERMAN-AMERICAN NEWSPAPERS ON WAR AND “YELLOW JOURNALISM.”

GERMAN-AMERICAN newspapers publish conservative accounts of the *Maine* disaster, refuse to advocate war, and have faith that the Administration will furnish reliable news as soon as reliable information can be had. They assert that 99 per cent. of the news furnished by papers professing to spend money on special correspondents, divers, etc., at Havana, is pure fabrication. The practise of New York journals, which call a tug that is paid to display their name as their “special” or “very own,” amuses the German-American press. The *New York Morgen Journal*, the German edition of W. R. Hearst's *Journal*, is the only German-American paper at hand that refuses to defer judgment and asserts that the *Maine* was destroyed intentionally. This paper said, on the strength of early despatches:

“The latest revelations thoroughly shake the theory that an accident only is the cause of the ship's loss. The divers found a hole, eight inches in diameter, which had been caused by a missile, in the bottom of the ship. The question now is only, who is the criminal, for torpedoes do not drift about aimlessly in Havana harbor. . . . Our Administration seems to be perfectly at sea. True, a commission of naval officers has been appointed, but since the above discovery has been made the Spanish police surround the wreck, so that nothing disagreeable to the Spaniards can be discovered.”

We condense the following from the *Staats-Zeitung*, *New York*:

Who would profit by a war? These same “typically” American papers. They could sell “extras” to their hearts' content. Yet it is not impossible that the present incident may cause a revulsion of feeling against “yellow journalism.” Its servants are such very barefaced liars, and so absolutely ignorant of the subjects they write about, that we can not think so intelligent a people as the Americans believe them. Look at the picture of the *Vizcaya* firing twenty bombs at once into the sky. Has the man who put that in ever seen a gun fired off? The opinions of naval officers are counted as nothing; but Congressmen who never saw a ship are quoted as high authorities. “Regulars and militia are being concentrated in Florida.” Who says so? And what in the world are they to do there? Send all our defenders to Cuba, we suppose. There is a hole made by a torpedo in the *Maine*. Is there? What a pity the Government does not know it! “Modern journalism” they call it. It may be modern, but it is just as much “journalism” as the business of the “green-goods” man is that of

a banker. It is insulting to the American people in general and to New York in particular that the *Vizcaya* has to be guarded by the police. The people of New York have to thank themselves for this slap in the face, because they support "modern" journalism.

The *Wächter und Anzeiger*, Cleveland, Ohio, fears for the future of the United States. It cites the case of France before the war of 1870, thinks our "jingoes" behave, if possible, even worse, and remarks that only a nation which is unfit and unprepared to go to war has the temerity to despise a possible enemy as much as the "jingoes" profess to despise Spain. The paper says:

"Spain buys war-ships, fits merchant steamers as cruisers, and prepares in every way to sell her life as dearly as possible. . . . We would not hesitate a moment to urge war ourselves if our jingoes were moved by the same noble, unselfish impulses which caused Lafayette and his French friends to help us. But the jingoes themselves only wish for war 'because it would,' as they say, 'stimulate business.' And, tho we would not value their character more, we would be willing to acknowledge that they are at least courageous if we did not know that the very men who are yelling for war do not for a moment intend to do any fighting themselves. Every one of those howlers in the editorial chairs has still to prove he has courage. They ought to be pressed into the navy."

The *Wächter und Anzeiger* further remarks that, as the people who have provided Uncle Sam with his navy are not patriots but "business" men, and as they seem to think that it is not wise to do good work because repairs stimulate "business," it would be well for the American people to examine whether their country could make war upon any other or not. The *Volksblatt*, Cincinnati, says:

"In European papers we often read that such and such an item has not been published 'because publication would unnecessarily hurt the feelings of the persons concerned.' Still oftener we read that the paper 'does not publish particulars or rumors concerning the question out of consideration for the welfare of the people.' Self-restraint of this kind is regarded as want of enterprise by the 'American' journalist. The greater misery an item of the kind they call news may cause, the more it is sensational and 'businesslike.' . . . We will suppose, for the moment, that the *Maine* really was sunk by criminals. Would that be a cause for war? Over a hundred people were killed when the American insurance swindler Thomas's infernal machine exploded among the cargo in Bremerhaven ere the ship had left the port. Yet Germany would not have been justified in declaring war."

The *Volksblatt* is sorry that the *Maine* was sent to Havana to please the "jingoes" and irritate the Spaniards. If the American ship had not gone there, so argues the paper, Spain would not have been forced to return the compliment, and we would have been spared the disgrace of having to guard the stranger as if the whole population of New York were bloodthirsty criminals. The *Volks Zeitung*, New York, a Socialist paper, points out that the organs edited for the benefit of the wealthy classes do not assist in the "jingo" demonstrations, "while the miserable sheets which grow fat on the penny of the poor man try to rush the country to war, altho it is just the workingman who suffers most in times of war."

The *Westliche Post*, St. Louis, and the *Seebote*, Milwaukee, point out that we are not ready to go to war, and think we should be glad that nobody wants to fight with us. The latter paper says:

"War would be all the more disagreeable to the United States as we are very badly prepared for it. The occasion may arise which forces a civilized people to declare war, but that is not the case with us just now. It is rumored in Washington that the Navy Department keeps the public in the dark with regard to the state of our fleet. The many accidents which happen to our ships certainly seem to indicate that the discipline is somewhat lax and that the value of the ships is rather doubtful. We have no dry-dock for our battle-ships, and our stock of war material would be exhausted in a few weeks. A few of our ports possess defenses,

but in case of war an enemy's squadron would easily find our weakest spots."

The *Freie Press*, Chicago, says:

"Suppose the investigation proves that the *Maine* went down because the coal in her bunkers caught fire, as did the coal on board the *Cincinnati*. Where will the people of the United States be with their foolish howl that 'Spain must explain'? Is it for Spain to explain why our ships are badly constructed? If we had the universal military service system, and all those shouters had to carry their own skins to market in case of war, there would be less noise and more dignity and common sense."—*Translations made for THE LITERARY DIGEST.*

TOPICS IN BRIEF.

OUR PRESENT FOREIGN POLICY.

UNCLE SAM: "Say, Mac, where are we at now? MCKINLEY: "We're still at sea; but pull away. I think we're on the right track." —*The Post, Cincinnati.*

ACCORDING to later dictionaries, patriotism is inability to wait for the facts.—*The News, Detroit.*

LET'S send another war-ship to Havana and see if the same sort of accident happens to it.—*The Journal, Chicago.*

WITH proper support from the voters, Governor Pingree believes he can induce the railroads to grant some measure of autonomy to Michigan.—*The News, Detroit.*

GENERAL FROG—"Tell ze truth! Mon Dieu! Nevaire!" Maître Champagne—"Upon what do you base your refusal, Monsieur le Général?" General Frog:—"Sacre! Ze honaire of ze French armée is at stake, monsieur!"—*The North American, Philadelphia.*

LETTERS AND ART.

TOLSTOÏ ON THE RELATION BETWEEN
MORALS AND FICTION.

WHAT is the most important factor in the creation of a work of literary art? What are the conditions, moral and esthetic, which writers of fiction must observe if they would invest their work with value and significance? These are the main questions answered by Count Leo Tolstoï in an elaborate review of the literary career of Guy de Maupassant in an article written for *Chapman's Magazine* (London, February). The French novelist is used to illustrate and enforce the principles of the art of fiction held by Tolstoï. He finds that Maupassant was truer to art in the early stages of his development than in the later, but even of the earlier works Tolstoï says:

"He was unfortunately defective in the three chief endowments which, in addition to talent, are indispensable to a true work of art. These are, first, a correct, that is to say, a moral relation of the author to his subject; second, clearness or beauty (they are one and the same) of expression; third, sincerity, that is, an unfeigned sense of love or hatred regarding the object which the artist depicts.

"Of these qualities De Maupassant possessed traces only of the two last, and was utterly deficient in the first. He had no correct or moral relation to the subjects he described. Judging by what I had read, I came to the conclusion that De Maupassant possessed talent, that is, an attitude of attention to the facts and events of life, which disclosed to him properties unperceived by other men; that he had acquired also an excellent style, expressing clearly, simply, and prettily what he had to say; and that he could be accredited also with that merit without which a work of art can produce no effect—sincerity. He made no pretense of love or hate, but did indeed so regard the things as he described them.

"But, unhappily, being without what is perhaps the most important factor in the creation of a work of art—a correct moral relation to his subject, which includes a knowledge of the difference between good and evil—he loved and described what was not worthy of affection nor of description, and neither cared for nor related that which was worthy of both."

After analyzing some early novels and a few late ones, Tolstoï proceeds to show the difference between them and the cause of the difference. He says:

"Whatever the artist may depict—saints, robbers, kings, footmen—we seek and we see only the soul of the artist himself. And if he be a writer with whose work we are acquainted, then the question is no longer, 'Who are you?' but, 'Well, what more can you tell me that is new? From what fresh standpoint will you illuminate life?' Hence no writer who has not a clear, defined, novel view of existence, and still more none who considers such a view unnecessary, can produce a work of art. He may write much and beautifully, but he will not produce a work of art.

"Such was the case with De Maupassant. In his first two novels, more especially in 'Une Vie,' there was a clear, novel, definite attitude toward life, and hence there was a work of art; but after he had bowed to the fashionable theory that such an attitude to life is needless, and began to write in order merely *faire quelque chose de beau*, his novels ceased to be works of art. In 'Une Vie' and 'Bel Ami' the author realizes whom he should love and whom he should hate, and the reader agrees with and believes him; and believes also in the persons and events he has described.

"But in 'Notre Cœur' and 'Yvette' the author does not know whom to love or hate, and neither does the reader. And being thus in ignorance, the reader does not believe in the events described, and is not interested in them. Hence with the exception of the first two novels, and strictly with the exception only of the first, all De Maupassant's novels are feeble things, and if the author had left us only his novels, he would have been merely a remarkable illustration of how a brilliant capacity may perish

from the abnormal society in which it has developed, and of false theories of art invented by people who do not love it, and in consequence do not understand it."

It is in Maupassant's short stories that Tolstoï finds evidence of a reaction from indifferentism and a longing for moral truth and beauty. To quote again:

"But, fortunately, De Maupassant wrote short stories, in which he did not cramp himself by the false theory he had accepted, and in which he wrote, not *quelque chose de beau*, but of something which touched or revolted his moral sentiment.

"And in these stories—not in all, but in the best of them—one perceives how this moral sentiment grew in the author.

"In this growth lies precisely the astonishing capacity of every real talent, if only its possessor do no violence to himself under the influence of a false theory; for his talent instructs him, leads him forward on the road of moral development, makes him love what should be loved, and hate what should be hated.

"An artist is only an artist because he sees things, not as he wishes to see them, but as they are. The man, the possessor of talent, may fall into error; but talent, if only it be left free, as it was by De Maupassant in his tales, will disclose, undrape the object, and will compel love if it should be loved, and hate if it should be hated.

"When any true artist, under the influence of his circle, begins to describe what he should not, he shares the fate of Balaam, who, intending to bless, cursed that which should be cursed, and, desiring to curse, blessed what was ordained for blessing. So the artist will involuntarily do, not what he wishes, but what must be done. And this happened with Maupassant."

No man believed more intensely in love than Maupassant, says Tolstoï, yet no man has shown with such clearness "the awful aspects of love—its awful consequences and its more awful substance." On the whole, Maupassant failed, and here is the cause of his failure, according to Tolstoï:

"Living in a society at once monstrous and immoral, by the force of his talent and of the extraordinary light that was in him he struggled out of the ideals of that circle, and was already on the verge of deliverance, already breathed the air of freedom, when his powers, spent in this last effort, failed him, and he perished in prison.

"The tragic character of his failure is enforced by the fact that it is but a sample of the culture of our time."

Literature by the Wholesale.—Literature in "job lots" is to be expected as the natural outgrowth of modern commercialism. This method of writing has appeared in England in full bloom, if we may judge from the first number of *The Authors' Circular*, the official organ of the new English school of journalism. Until recently, in the number of "authors' bureaus," "literary syndicates," etc., America has been near the band in the literary procession, but apparently we have been outstripped. *The Tribune*, New York, comments thus upon the new publication and its school of wholesale fiction:

"Notice the literary want column, and see if Pegasus hasn't 'caught onto' the times and harnessed himself to a delivery wagon. Here is Beatrice Blank, who can furnish 'love stories and novelettes' with as much regularity as any other woman ever furnished table board. A young man who offers 'adventure stories and travel sketches' makes goods 'to order only,' an advertisement which suggest an established trade or a need that somebody supply raw material. Another person offers 'short stories or articles,' and has evidently adopted the ready-made clothier's ideas. He can fit any size, and it is no trouble to show goods. He has them 'on hand or to order' and of various lengths. Another desirable offer is 'sea stories, good, any length, by writer well acquainted with modern seafaring on steam cargo boats. Terms, two guineas a thousand words.' What are our magazines filling up with Kipling for, in the face of such an offer? Haven't they any business sense? Hotspur wants 'snap-shot photos of every-day life at sea on screw-colliers.' He evidently sells a chromo with each pound of tea. A playsmith has a 'plot and

scenario of a strong drama,' but he is too busy to finish it up, and will dispose of the raw material to another manufacturer for £10. Then there are the wholesalers who wish to restock. One who deals 'chiefly among the artisan classes,' wants a 'good, exciting story with feminine interest and well worked-up situations.' No second-hand goods or shoddy will do. Another will take 100,000 words of exciting matter of interest to boys, provided that it can be cut in short lengths and not ravel."

DISEASE IN THE MODERN NOVEL.

THE discussion over the details of hospital life in "The Christian" have set physicians to overhauling other novels for medical details, and the conclusion has very generally been reached that very few novelists know much about these subjects, and that modern novelists know least of all. In *The Medical Record* (New York, January 22) appears a leading editorial on the subject, from which we quote the following paragraphs:

"Erroneous statements on medical subjects are very frequent in the modern novel, and appear to be becoming more so. Impossible and contradictory descriptions of the symptoms and course of a disease, together with a display of ignorance of medical matters in general, are a feature of up-to-date fiction. One would imagine in this age of realism that writers would try to be fairly accurate, or at least not make glaring mistakes."

After a criticism of Hall Caine's last work along lines already familiar to our readers, the editor goes on to say:

"The writer of fiction of the present day does not appear to advantage with many of the novelists of the past generation in his acquaintance and handling of medical subjects, altho it must be confessed that even among the dead giants of romance there were but few whose description of a disease was absolutely correct. George Eliot is without doubt entitled to first place in this list; her sketches of doctors and her statements in regard to the diseases of which she treats are drawn with a masterly hand, and are as accurate as if written for a medical text-book. Charles Kingsley, again, in 'Two Years Ago,' traces the history of a cholera epidemic with the utmost attention to technical minutiae. Thackeray also described the course of a malady as correctly as he did the treatment pursued by the physicians of his time. Of modern novelists, Besant, in the 'Ivory Gate,' gives an interesting study of an obscure brain disease, and as he informs us in the preface that he procured his medical information from a competent doctor it may be taken for granted that his statements are correct. Putting on one side, however, the comparatively few instances in which the diseases dealt with by novelists are to be depended upon as being correctly described, the majority of the medical statements in fiction can be divided into two classes: those in which the accounts of diseases given are false in every respect; and those in which the author, not being *au fait* with his subject, is careful not to commit himself, and therefore wisely confines himself to vague generalities.

"Another point worthy of notice is the small number of diseases brought into the service of the novelist. At one time brain fever was the universal favorite, with typhoid a good second, and altho within recent years neurosis has to a certain extent banished brain fever from its proud position, yet the latter disease still holds its own in fiction. That nervous prostration is much more likely to attack the hero or heroine suffering from the storm and stress of life, as depicted in the ordinary modern novel, than is brain fever, can not be denied. Nevertheless, there are occasions when an author, in order to extricate himself from a complicated situation, is compelled to fall back upon a disease of an acute nature; and in such a predicament, what so suitable as brain fever or what so convenient as its delirious ravings? The fact has been more than once pointed out that there is a disease which has been strangely overlooked, and which certainly deserves to find more favor in the eyes of the novelist than has hitherto been the case. This complaint is pneumonia, for, while it fulfils all the conditions required by the novelist, and to a fuller extent than brain fever, it has none of the disagreeable associations connected with typhoid. Pneumonia may be termed an aristocratic disease, while typhoid, tho no respecter of persons, still has a certain

plebeian flavor savoring of foul-smelling drains and tainted water. In novels acute diseases invariably end suddenly. Pneumonia terminates by crisis; the onset of the attack is sudden, the temperature is always high; delirium, stupor, or complete unconsciousness is a feature in its progress. Thus in this disease there is a choice of dramatic climax found in no other malady. A wicked man can be cut off in the midst of his sins, or a good one can be made to provide an edifying death-bed scene. Pneumonia may be recommended to authors as a disease whose merits as an aid to fiction have not as yet received the appreciation from them which is undoubtedly its due. Consumption is a disease of such a nature that most novelists fight shy of it and are very chary of relating its tedious course. William D. Howells, in his latest work, has been bold enough to introduce a family all of whose members but one are afflicted with phthisis; and Gilbert Parker, in an interesting book he has lately written, has succeeded in rendering his consumptive hero a most fascinating and attractive personality. In connection with consumption in fiction, it is instructive under the present circumstances to note that Smollett, more than one hundred and fifty years ago, draws attention in 'The Expedition of Humphry Clinker' to the prevailing opinion then existing that consumption was contagious. Heart disease is naturally a favorite with writers of romance when a character gets rather too obtrusive and it is deemed advisable to remove her or him from the scene. Marion Crawford, in a 'Rose of Yesterday,' has drawn a graphic picture of the life and death of a fast man; but the most powerful sketch of the stages of syphilis was that of Samuel Warren, entitled 'Man about Town,' included in his 'Diary of a Late Physician.' In present and past fiction too many examples have been afforded of the manner in which eminent writers can err when they enter upon descriptions of technical matters without taking the trouble to verify their statements. It can not be expected of a novelist, however talented he may be, that he should be conversant with a disease by mere intuition, and if he trusts to his imagination and to some superficial observation he will surely fall into grievous errors. When an author is distrustful of his medical knowledge, he should follow in the footsteps of the great masters of his craft, and either, like Dickens, touch upon such matters vaguely, or, better still, like Thackeray or George Eliot, obtain his information at first hand."

AN ITALIAN VIEW OF DAUDET.

IN our issue of January 22 our readers will find an article on "Daudet's Latest Story," and, immediately following, M. Zola's account of his latest years. From the *Nuova Antologia* (Rome, January 1) we take the following extracts from a critical article entitled "Daudet" by Sr. Giuseppe Balfico:

"With the decline of naturalism its masters are also disappearing: first Guy de Maupassant; then Edmond de Goncourt, always faithful to the forms and dogmas of his art; and now Alphonse Daudet, who, purified by his long suffering, has taken his flight on high.

"All were attacked in the principal instrument of their success and their glory; their nervous organizations were subjected to too intense vibration.

"Maupassant was prostrated by a gradual paralysis; Edmond de Goncourt, like his brother, perished of exhaustion; and Daudet, like Heine, had a spinal disease and finally perished in the arms of his friends.

"It would be well to study this phenomenon, since a careful statistician might be able to find out if there are many, like these writers, afflicted with modern nervousness, like these impressionists with an excessive sensibility, who fall victims to their art, prostrate from their too fatiguing and assiduous study, from the *insomnia* of their ever-wakeful senses.

"These were victims of a sort of cerebral alcoholism—if I may be permitted the expression. Profound sensations are received from reading their works, which, first of all and more deeply, these writers must have experienced in the moments of penetrating observation, in those hours of creative intoxication in which are sometimes condensed the best energies of a life. Always ready to receive and to give impressions and sensations, they sharpen, refine, and excite their sensibility; and it seems as if they even lay bare their nerves that they may the more easily

vibrate, as a sonorous cord is exposed to every movement of the air.

"Goncourt called this 'a high fever of hallucination'; and all of his works, as those of his companions, have in them something really feverish. The men and events of these writers are true, but they are observed with the dilated pupil of an invalid on whom the fever has conferred a sad clearness of sight: *they see too much; they feel too much.*

"When Alphonse Daudet, at the age of seventeen, abandoned his sunny South and entered into the mists of Paris with a heart palpitating with hope, he did not seem destined to become a romancer of the refinement and amiable corruption of the second Empire.

"His young mind was filled with light, and the fancies which crossed it were all youthful. He had but one ambition—to become the poet of his country, the warm South, with its beautiful balconies, its white casements full of dazzling sunlight; with its climbing vines covering the walls and wreathing the windows; with its love; with its songs, which, in the vibrating light air, ascended to find distant echoes; with its dances on the fields, the sound of its tambours; with the shrill note of the grasshopper and the ceaseless prattle of its gossips. Daudet, like his famous Tamburino, wished to conquer the soul of Paris with music, with elocution, with the songs of his country bubbling over with smiles.

"And the influence which the life of Paris exerted on him did not succeed in making him lose the desire and power to laugh; and thus his genius acquired a variety of expression which is rarely found in other naturalists.

"This contrast between his original tendency to laugh and the sad and subtle power of observation of things and men which he acquired later made of Alphonse Daudet a true humorist. He is happily detached from the group of his school. While in the colossal works of Zola the observation is registered with the scrupulousness and gravity of a missionary, somewhat fatiguing to the reader, while the romances of Goncourt, insistent in precision, exhaustive in research, reveal the mania of a fanatical collector, and occasionally appear fatiguing and mannered, the romance of Daudet, even when it is most sad and bitter, even when it fills our ears with lamentations, has a continual vivacity, inexhaustible in movement. The style has figures and irregularities and digressions and explanations and a restlessness truly Southern. Sometimes it has the dominating virtue of a narrative made extemporaneously, accompanied with the gestures, the smiles, the laughs of the one speaking; and the most diverse sensations follow and the most varying types pass before us with their characteristic gestures, with their unforgettable grimaces.

"While the formula of naturalism imposes on all those who adopt it—with the exception of Daudet, who is admirably free from it—a sort of strength, like the gait of a giant rich in blood and muscles, but somewhat slow in movement from its own weight and his own power, Daudet has kept a marvelous flexibility.

"Bruyère says that every good writer should be an excellent painter; and Daudet possesses the pictorial faculty to a wonderful degree. He does not need lengthy enumeration to introduce an atmosphere, in order to make one perceive it; a few essential touches, given rapidly, are enough. They give an immediate impression, almost enabling one to touch the object described; you are even dazzled by the light of his landscapes. They seem to assure you that the thing observed had hypnotized him.

"But sometimes his pictures suggest mannerism, and this is when he uses the pencil with exceeding grace, but with too much disdain. Sometimes he seeks effects of contrast, of *chiaro oscuro*, which show a love of effect. This is shown in a curious manner in some of his romances. For instance, he knows that the nervous flexibility of his style contrasts forcibly with mournful subjects, and therefore he delights to multiply descriptions of funerals."

In these descriptions, says the critic further, "are found all the elements of truth, but the artifice with which they are put together is only an exaggeration of truth, which is Daudet's principal defect." He abuses his powers of observation by a certain ostentation, and has, in fact, the Southerner's too strong love of color. The critic divides Daudet's work into three parts: the trilogy of "Tartarin"; the romances of custom, such as "Fromont

jeune et 'Risler aîné," "Nabab," "Les Rois en exil," "L'Immortel," and "Jack"; and the analytical romances, such as "Sapho," "L'Évangéliste," and "La petite paroisse." "Sapho" he thinks the most perfect, and the heroine of this book, according to Lemaître, is the Manon Lescaut of our century. To the accusation of plagiarism with which Daudet was often attacked for his similarity in some respects to Dickens, Sr. Ballico says that "to this accusation Daudet remained serenely scornful. When a writer observes with his own eyes and with his own conscience he has nothing to say to such an accusation; for certain relationships of the mind no one is responsible."—*Translated for THE LITERARY DIGEST.*

WILLIAM WATSON'S NEW VOLUME.

WILLIAM WATSON'S latest volume of verse, "The Hope of the World, and Other Poems," adds new laurels to those won by his previously published work, and makes more secure his position in the front rank of living poets. The modern fashion of publishing thin volumes of poetry written in the same key has been abandoned in this instance, the collection including poems on widely differing subjects. Those who have known Mr. Watson only through his earlier nature-poetry, or his recent denunciations of the Armenian atrocities, will find in this book new evidences of his insight and power when dealing with the fundamental questions of man's origin and destiny. Here, too, are songs and odes which show their author to be a lyric poet of rare delicacy and beauty.

"The Hope of the World," the poem from which the volume takes its title, is a protest against the anthropomorphic idea that the earth was created with a special regard for the service and glory of man. It is also an assertion of the Stoic doctrine that the promise of a heavenly paradise after death should not be necessary as an incentive to a life of virtue and manly fortitude. To HOPE, who

—tells me, whispering low:
 "Wherefore and whence thou wast,
 Thou shalt behold and know
 When the great bridge is crossed.
 For not in mockery He
 Thy gift of wondering gave,
 Nor bade thine answer be
 The blank stare of the grave.
 Thou shalt behold and know: and find again thy lost."

the poet replies:

Such are the tales she tells;
 Who trusts, the happier he;
 But naught of *virtue* dwells
 In that felicity!
 think the harder feat
 Were his who should *withstand*
 A voice so passing sweet,
 And so profuse a hand.
 Hope, I forego the wealth thou fling'st abroad so free!

Carry thy largesse hence,
 Light Giver! Let me learn
 To abjure the opulence
 I have done naught to earn;
 And on this world no more
 To cast ignoble slight.
 Counting it but the door
 Of other worlds more bright.
 Here, where I fail or conquer, here is my concern:

Here, where perhaps alone
 I conquer or I fail.
 Here, o'er the dark Deep blown,
 I ask no perfumed gale;
 I ask the unpampering breath
 That fits me to endure
 Chance, and victorious Death,
 Life, and my doom obscure,
 Who know not whence I am sped, nor to what port I sail.

In the same strain is "The Unknown God" (see THE LITERARY DIGEST, September 25, 1897), in which is expressed the highest thought of modern Pantheism. Of the "Ode in May," and of other songs, a reviewer in *The Spectator* says:

"Mr. Watson has power in two fields of verse, and in two fields

which are generally thought to have little in common. He is equally at home in elegiac and in lyric verse. As a song-writer he has the true lyric cry, as had the Elizabethans. He does not, of course, imitate their special manner, for if he did so his songs must want that spontaneous note which is the essence of a true song, but sings rather, as they did, from the full heart. His elegiac verse, again, is as full of thought and of the criticism of life as is Gray's 'Elegy.' As proof that Mr. Watson can write a true song we have only to quote his exquisite 'April':

April, April,
Laugh thy girlish laughter;
Then, the moment after,
Weep thy girlish tears!
April, that mine ears
Like a lover greetest,
If I tell thee, sweetest,
All my hopes and fears,
April, April,
Laugh thy golden laughter,
But, the moment after,
Weep thy golden tears!

Here there is not one word too much, nor one word that is not the right word in the right place. The 'Ode in May,' tho it does not make the same absolutely simple appeal that does the enchanting little song just quoted, is full of the lyric cry. It sings with a passion of delight those joys of the awakening earth which have been so universally the theme of all poets in all ages, that one sometimes wonders whether poetry could exist without the spring, or if a lyric would be possible on the line—where the 'budding, fading, faded flowers' never know the death of winter and so never know the consummate hour of resurrection:

Let me go forth and share
The overflowing Sun
With one wise friend, or one
Better than wise, being fair,
Where the pewit wheels and dips
On heights of bracken and ling,
And Earth, unto her leaflet tips,
Tingles with the Spring.
What is so sweet and dear
As a prosperous morn in May,
The confident prime of the day,
And the dauntless youth of the year,
When nothing that asks for bliss,
Asking aright, is denied,
And half of the world a bridegroom is,
And half of the world a bride?
The Song of Mingling flows,
Grave, ceremonial, pure,
As once, from lips that endure,
The cosmic descant rose.
When the temporal lord of life,
Going his golden way,
Had taken a wondrous maid to wife
That long had said him nay.
For of old the Sun, our sire,
Came wooing the mother of men,
Earth, that was virginal then,
Vestal fire to his fire.
And the triumph of him that begot,
And the travail of her that bore,
Behold they are evermore
As warp and weft in our lot.
We are children of splendor and flame,
Of shuddering, also, and tears;
Magnificent out of the dust we came,
And abject from the Spheres.

Those two lines—

And half of the world a bridegroom is,
And half of the world a bride?

would be enough, were the rest of Mr. Watson's poetry to perish in a barbarian invasion, to prove that he was a true poet."

The "Miscellaneous Poems" in the volume include half a dozen short poems which approach perfection both in feeling and workmanship. Of these we give two examples:

INVENTION.

I envy not the Lark his song divine,
Nor thee, O Maid, thy beauty's faultless mould.
Perhaps the chief felicity is mine,
Who hearken and behold.
The joy of the Artificer Unknown
Whose genius could devise the Lark and thee—
This, or a kindred rapture, let me own,
I covet ceaselessly!

THEY AND WE.

With stormy joy, from height on height,
The thundering torrents leap.
The mountain tops, with still delight,
Their great inaction keep.
Man only, irked by calm, and rent
By each emotion's throes,
Neither in passion finds content,
Nor finds it in repose.

"SUBTERRANEAN" LITERATURE.

THE novels that cover the newstands and are shouted in our ears and thrust in our faces on the trains receive less attention from the reviewers than their circulation would seem to warrant. If the train-boy stops and rests his pile of yellow- and blue-covered books on the arm of the seat, the passenger is confronted by a list of titles and authors never seen in the literary reviews. Yet the circulation of this literature is enormous. It is independent of the reviews, because the people who buy it never read the reviews and seldom meet people who do. The only notice the reviews take of this "subterranean" literature is in an occasional article expressing wonder at its extent or curiosity to find the cause of it.

For example, *The Daily News*, London, says:

"The most popular novelists are those who are least known to literary people. Who has heard of Emma Jane Worboise, or of the late Mr. Smith of *Family Herald* fame? And among French novelists Zola and Daudet and Ohnet we know, but very few have heard of Richebourg, whose death was announced yesterday. Yet Richebourg—the king of the feuilletonists, as he was called—had probably more readers than any novelist, alive or dead, and made as much money by one novel as any other novelist by two. He wrote exclusively for the *Petit Journal*. He had, it was calculated, 4,000,000 readers for every story he wrote, and he used to receive £4,000 for the serial rights alone."

An interesting speculative article, written, we presume, by Mr. F. E. Regal, appears in *The Republican* (Springfield, Mass.), dealing with the same subject as it appears in this country:

"R. L. Stevenson always had a feeling of the liveliest curiosity, of which we find many expressions in his essays, in regard to that mysterious yet pervasive nether world of books, which is never criticized, seldom reviewed, not often advertised, and which nevertheless seems to be read by the million. It is natural that to an author struggling for the ear of the great, hydra-headed public this mysterious and ever-recurring phenomenon should have a peculiar fascination—if one could but master the secret of it and apply it to real books, his fortune would be made. Yet this is a new phenomenon, the birth of our own day of cheap reading-matter. Augusta, Me., sends out magazines by the million, dwarfing by comparison the circulation of *The Century*, *Harper's*, even *Munsey's* and *The Ladies' Home Journal*. Yet who ever heard of the Augusta periodicals? What is the mysterious chemical or spiritual affinity by which these subterranean magazines find their congenial bit of brain matter, whether in Maine or New Mexico, without advertising, without the knowledge of the rest of the world? It is a mystery which the literary reader can never solve. He never sees the periodicals in question, never hears of them, never sees them mentioned, is not even aware of their names, and his acquaintances are no wiser. If he takes the trouble to hunt up a specimen copy the mystery only grows the deeper, for he can find absolutely nothing in the contents which seems to him capable of interesting any human mind, and yet these popular magazines are constantly being sent out by the ton, addressing an audience compared with which the readers of Stevenson, Kipling, or Hall Caine are a mere coterie, as select as Artemus Ward's family circle, 'which I am principally it myself.'

"In the field of fiction the mystery is equally profound. It is likely that there are many readers who rather pride themselves on keeping up with contemporary letters who have never heard of the 'Albatross' novels, or of the author who signed himself Albert Ross. Yet these novels have already sold over a million copies, and before his death the author had accumulated so large

a fortune that he was able to engage in charity on a magnificent scale. Deep is the veil of mystery wrapped about the 'Bertha M. Clay.' Was there ever such a person? At all events, of late years the name has been merely a trade-mark for goods manufactured on the sweat-shop principle by mediocre penny-a-liners. Yet the popularity of the novels seems unabated. Who can solve the riddle?

"Another name that is reputed to carry with it fabulous popularity is that of Mrs. Mary J. Holmes, who numbers her novels by the score and her readers by the legion. Yet why so many thousands of people should care to read her books is a conundrum to which those who do not read them can not hope to find the answer. Take, for instance, her last novel, 'Paul Ralston,' published by the G. W. Dillingham Company. Why do people read it? For style? It has none. For character or its portrayal of life? It is as accurate a picture as the sketch which the school-boy draws with a staggering slate pencil, appending the legend: 'This is a house,' to make sure of its identification. For plot, then? The plot is as mediocre as the rest of the book—perfectly obvious, perfectly banal, with no such ingenuity as made 'The Leavenworth Case' a masterpiece of its kind. It is not especially exciting, it contains absolutely nothing that is improper or capable of appealing to a depraved taste, it is even rather dull and colorless reading. Indeed, it would seem that mediocrity is the golden rule of successful authorship. To hit the taste of the million it is necessary to adopt the taste of the million. . . ."

After a *résumé* of the plot, the writer comes at the reason for the popularity of the novel in question, and makes a guess at the cause of the popularity of the whole "subterranean" class of fiction:

"Now this story is not in itself of thrilling interest, and the manner in which it is told is in nowise remarkable, unless it may be for such singular English as 'Here he had lain Paul.' The characters are as unreal as comic-opera peasants, and those who indulge in dialect speak the most eccentric patois that was ever evolved from the inner consciousness of a writer immured in a study. The one thing that could possibly be expected to awaken interest is the love story, the winning of the heart of a rich and fashionable young man by a virtuous and amiable young woman far removed from his social sphere. And perhaps an analysis of underground fiction would show that this is the most popular of all themes. It is the old Cinderella fairy-story over again, the poor girl who breaks her chrysalis of ashes and marries the prince. It looks like a secure recipe for riches, but we can not recommend authors to attempt it for the sake of increased circulation unless they are called. They would be likely to spoil the recipe by an infusion of ideas, or to miss the mark by a mistaken effort at simplicity, which is not appreciated in the subterranean world of letters. Finery is required, but it must not be the real thing, but a sham. And above all, anything like realism must be shunned in addressing this particular audience, which likes in its reading to get as far as possible from the realities of existence. But these are only conjectures. The secret of the popularity of these books can never be comprehended by those to whom it is not revealed."

Favorite Hymns of Great Men.—*The Times*, New York, gives an interesting summary of the opinions of a number of prominent men upon hymns that are helpful:

'Being a man with no doubts of his own competency to decide any conceivable question, W. T. Stead had an answer ready the other day when somebody—perhaps himself—asked him what hymn, of all that have been written in the English language, is at once the most helpful and the most popular. Mr. Stead's verdict was that 'Rock of Ages,' written by the Calvinistic vicar of a parish in Devonshire, merited this description. His decision has started a wide controversy on the subject, and opinions have been collected from many eminent divines. Washington Gladden, who differs from Mr. Stead by more than the distance from London to Columbus, Ohio, declares that the problem is insoluble. 'I have no means,' he writes, 'of knowing which is the most helpful and popular hymn. The most helpful might not be the most popular; some that are very popular are hurtful rather than helpful. My own favorites are many; on the whole, however, I think I value most and use most frequently Charles Wesley's "Love

divine, all love excelling.'" Dwight L. Moody is of the opinion that 'Just as I am' has done the most good to the greatest number. Edward Everett Hale cautiously says that "'Nearer, my God, to Thee" is now most used in public services.' Robert Collyer tells this anecdote: I well remember one day when this subject was the object of a discussion between Ralph Waldo Emerson and Dr. Oliver Wendell Holmes. The latter said that many of the so-called hymns were mere pieces of cabinetwork. Then his voice deepened, his eyes shone, as we remember him in his noblest moments, as he said: 'One hymn I think supreme.' Emerson threw his head back, as he always did when his attention was arrested, and waited. Dr. Holmes repeated the first verse:

Thou hidden Love of God, whose height,
Whose depth, unfathomed, no man knows,
I see from far Thy beauteous light;
Inly I sigh for Thy repose.
My heart is pained, nor can it be
At rest till it find rest in Thee.

'I know—I know,' exclaimed Emerson. 'That is the supreme hymn.'

NOTES.

It is reported that unless about \$14,000 can be immediately added to the funds already secured by the Lowell Memorial Committee, raising the aggregate to \$35,000, it is probable that the plan for turning a part of the Elmwood estate at Cambridge into a memorial park will come to nothing.

"A WELL-KNOWN French writer," says *Humanitarian*, "has recently been discussing the question of literature as a disease. In his opinion France is suffering from a new and insidious disease—*litteraturitis*. Among the educated classes there is a positive craze for decadent literature, and the demand only creates the supply. The result is that the minds of both writers and readers are poisoned by unwholesome mental food, and the men who write are, as a rule, the reverse of manly, and are given to effeminacy, drunkenness, immorality, and vice generally. In point of fact, writing appears, if we may believe this authority, to be an occupation only pursued by the diseased in body and of mind."

It is refreshing to find that the British are being compelled to revise their idea of the American traveler. Many stories have been published about Tennyson's having been constantly pestered by Americans, "many of whom flattened their noses against the windows of the Laureate's dining-room." Mr. J. F. Fasham, who was a neighbor of the poet at Freshwater, describes these stories in *Eureka* as "arrant nonsense." As a matter of fact, not once in a month would an American tourist be seen in the neighborhood of Farringford House, and Mr. Fasham affirms that his experience of such tourists in that part does not justify the notion that Americans on tour are in the habit of behaving less decorously than other people.

THE first number of *St. George*—a quarterly journal to be issued by the Ruskin Society of Birmingham—publishes a letter from Brantwood giving the following account of Mr. Ruskin's present state of health: "I am glad to say that Mr. Ruskin's health is much as it has been during these later years. He still takes his daily walks, sees his personal friends, and spends much time in reading. But it does not seem to be understood by the public that this comparative health depends upon his being kept from all unnecessary work. He directs his own business, but is obliged to decline correspondence, and can not reply to the many letters which still come, asking for his intervention in public matters or for private advice or assistance."

THE most striking success in English journalism of late years is that of the London *Daily Mail*, which was founded in May, 1896, and in less than two years has attained a circulation of 380,000. It is the property and the idea of Alfred Harmsworth, who is thirty-two years old, a millionaire (in pounds) and one of six brothers who among them own eighteen weekly papers, a monthly, and four dailies. *The Bookman* asked Mr. Harmsworth for his journalistic creed, and in the course of his reply he said: "I believe that half the journalistic notions of what the public wants to read are wrong; I believe the public is a far better critic than is usually imagined; I believe the public does not care an iota about size—if anything a small journal is preferred to a big one; I believe that price has very little to do with the success of a publication; I believe the attractions of illustrated journalism are enormously overrated; I believe party journalism to be practically dead; I believe in independence."

"THERE is one man among modern painters," says E. J. Poynter, president of the Royal Academy, "who may, perhaps, be classed with Velasquez in the complete mastery of his method of painting, and that is a man whose views by instinct and training are as far removed from those of the great Spaniard as Velasquez's own are from those of Perugino and Raphael, who was probably unconscious of any attempt to rival him in this respect. I speak of the French painter Ingres, to my mind the one painter of this century who approaches nearly to the great masters of past times. In spite of a want of the color sense, which frequently jars painfully where he is not content with being neutral in tint, you will find in Ingres's noble work that command of the full brush, whose gratifying qualities of painting in the subtle suffusion of the tints and the unseizable gradations of modeling, and that profound insight into the character of the model, which in complete mastery over his material bring his work very close to the work of the great Spanish painter."

SCIENCE AND INVENTION.

LIQUEFIED AIR BY THE GALLON.

THE processes for liquefying air employed in England by Professor Dewar, the first scientific man to accomplish this feat, having been slow and expensive, and it has therefore been the good fortune of comparatively few to witness the remarkable experiments that can be performed with this substance. It has been reserved to an inventive American, Charles E. Tripler, of New York, to perfect a simple and inexpensive process for liquefying great quantities at a time, so that he now literally makes it by the gallon. We quote from *The American Machinist* a description of his process and of some of the things that can be done with liquid air:

"In the process employed for liquefying the air it is compressed to a pressure of 2,000 pounds and cooled by passing through a copper coil to normal temperature. It is discharged through a very minute opening, when it expands, and its temperature falls, and, coming in contact with a second coil, cools that and its contained air at 2,000 pounds pressure. This cooled air is discharged also upon a third coil, also containing air at the high pressure, and in this coil the cold produced is so intense that the air runs out in a liquid stream a quarter of an inch or so in diameter.

"The liquid air remains liquid, just as water does, until its temperature rises to the boiling-point, and then, as the operation of evaporation requires heat for its maintenance, the evaporation proceeds slowly or rapidly, according to the rate of heat supply. The intensely low temperature must, of course, not be forgotten. Ice dropped into the liquid causes it to boil until the ice is cooled. The boiling-point at ordinary atmospheric pressure is -191° Centigrade or -320° Fahr. As the boiling-point of nitrogen is more than 10° below that of oxygen, it is found that it boils out first, and by a careful control of the evaporation the liquid oxygen may be retained separate; this process, therefore, affording a means of obtaining oxygen for the many purposes for which it is required in the arts.

"The refrigerative phenomena exhibited were numerous and interesting. An egg placed in a tumbler of the liquid caused it to boil furiously. When the egg was finally 'cooked,' or cooled to the temperature of the air, it was taken out and struck with a hammer, flying into the finest fragments! Tin became as brittle as glass, while copper and platinum were not affected in this way. Mercury was frozen so that it was used to drive a nail in a board. Cotton saturated with the liquid oxygen exploded and burned brilliantly. These phenomena and others exhibited too numerous to be rehearsed here suggest great possibilities of usefulness for liquid air in the future."

COLORED LIGHT AND PLANT GROWTH.

SOME recent interesting experiments on the effects of different colored light on the growth of plants and on the colors and shapes of their leaves, flowers, and fruit, are described by a contributor to *Der Stein der Weisen* (Vienna, February 27). We translate and abstract below a large part of the article:

"All the rays that come from the sun pass through space in the form of ether-waves of great speed, which vary in intensity and characteristics. These ether-vibrations that produce the sensation of red when they strike our eyes are the slowest, and the ether-waves that correspond to them are longer than those that correspond to violet, altho, for example, the ether-waves of red make 395,000,000,000 vibrations in a second, yet this enormous number is increased in the case of the violet

to 756,000,000,000 and for the ultra-violet to 764,000,000,000. . . . The red rays of the solar spectrum are also the chief heat-giving rays, and they are sometimes called specially the calorific rays, while the violet and ultra-violet rays, known as the chemical or actinic rays, have a noteworthy influence on chemical substances, such as those on the sensitive plates used in photography. But nowhere can this special chemical influence be better seen than in the growth of plants—the vegetative process.

"The learned Camille Flammarion, who, besides his well-known astronomical work, has also added some interesting facts to our knowledge of plant

INFLUENCE OF COLORED LIGHT ON PLANTS (*Strobilanthes Dycranus*).

biology, . . . has recently undertaken some interesting investigations on the influence of the sun's rays on the colors of plants."

To answer the question: "Which rays of the spectrum have the greatest effect on plant growth?" Flammarion threw on the

EFFECT OF COLORED LIGHT ON GROWTH AND APPEARANCE OF GERANIUM LEAVES.

ground a solar spectrum a yard long, and placed a growing plant in each of the seven so-called rainbow colors; but this experiment had no certain results, owing to the difficulties attending the method. An experiment under colored glass was more succes.

ful. Red, green, blue, and white (or uncolored) glasses were used with the result shown in the illustration. The growth was far greater under the red, while the development of woody fiber was greatest under the clear glass, that is, in normal conditions. It will be seen that the "blue-glass" theories of twenty years ago are decidedly negated. Says the author:

"In relation to these results of his investigations, Flammarion directs our attention particularly to two circumstances. First, the intensity of the light as an illuminating agent was not in all cases the same, for the clear glass has of course the highest power in this direction and the blue glass the least. Secondly, the temperature is not the same throughout, for here again the clear glass lets through most heat rays and the blue the fewest. There is, now, for all plants a maximum temperature up to which they grow best, and also doubtless a degree of light-intensity under

We all know that green herbs become white in dark cellars, and a French observer, M. Duchartre, changed colored lilies to white by keeping them in the cold. M. Flammarion did a similar thing by shifting flowers from one colored light to another; lilies, for instance, that were pink in clear light becoming dead white under green. Similar changes in shape and color-distribution in geranium and coleus leaves are shown in the illustrations. Analogous experiments were tried with fruits and vegetables, which showed that in all cases the intensity and color of the sunlight affected their colors powerfully.—*Translated for THE LITERARY DIGEST.*

A POSSIBLE ORIGINAL OF THE SEA-SERPENT.

IT has more than once been suggested that the stories of sea-serpents may have arisen from glimpses of rare serpent-like sea-monsters. Such a monster is the eel-shaped frilled shark, called by zoologists *Chlamydoselache*, which lives only in very deep water. Professor Collett, of Christiania, Norway, who possesses the largest-known specimens of the fish, caught in Varanger Fjord at a depth of 900 feet, thinks that very large individuals of the species may well have given rise to "snake stories." Says *Natural Science*, February:

"At any rate, an unusually large specimen of this shark would serve very well for a so-called sea-serpent which was captured and, unfortunately, thrown away by an American fishing-boat on the coast of Maine in 1880. The strange animal in question is described as having been a long, eel-like fish, about twenty-five feet in length, with a flattened head, round body, and roughened skin like that of a shark. It had one dorsal fin, and several gill-clefts on each side of its head. Unfortunately it was thrown away as of no commercial value to the fishermen, and a subsequent search for the dead monster proved in vain."

This strange creature was unknown till about fourteen years ago. To quote again from *Natural Science*:

"When this remarkable shark was first discovered by Dr. Samuel Garman in 1884 among some fishes from the seas off Japan, it was at once recognized by him as a very ancient form of life which must have survived by taking refuge in the deep waters. The discovery thus led to a long and animated discussion as to its nearest extinct representatives; and so far as the teeth were concerned, nothing more similar could be found than the well-known fossils from the carboniferous rocks named *Cladodus* and *Diplodus*. Shortly afterward three more specimens of the same strange animal were received by the British Museum from Japan, and these enabled Dr. Günther to give some further account of its anatomy in his well-known 'Challenger' volume on deep-sea fishes in 1887. . . . Until 1890, however, the genus was known only from the neighborhood of Japan, and in that year zoologists welcomed the interesting news of the discovery of a young specimen by the Prince of Monaco in the seas off Madeira. Finally, in 1896 came the new and comparatively gigantic individual now described by Professor Collett; and this is particularly interesting as having been obtained in a sea so far north as latitude 69° 45'. Fossil teeth, it may be added, proved that the shark lived in the Mediterranean area in Pliocene times, but hitherto it has not been found surviving in that region.

"The specimen of *Chlamydoselache* from northern Norway is much larger than any of those from Japan, being indeed nearly two meters [6½ feet] in length. But it is a very rare circumstance to be able to capture so large a fish at so great a depth; and as it scarcely differs from the Japanese specimen except in size, Professor Collett concludes that it is merely a more mature individual of the same species. It is a female specimen, with immature eggs in course of development in the oviduct, and thus apparently full grown; but that is, nevertheless, no reason why it should not attain still larger dimensions."

The writer notes that the creature's occurrence in such widely separated localities is but another instance of the wide and uniform distribution of deep-sea fishes.

EFFECT OF THE INTENSITY OF LIGHT ON THE GROWTH AND APPEARANCE OF COLEUS LEAVES.

which they flourish to the best advantage. So the chief factors in plant growth are color, light-intensity, and temperature, which all work together in the same direction."

Later investigations, however, showed that temperature has very little influence, for when it was so carefully regulated as to be the same for each color, the striking differences under the various colors still remained. M. Flammarion's investigations also brought out interesting effects of light on the colors of leaves and flowers. To quote again:

"All plants may be divided into three principal groups: first, those in which the influence of light on the nutritive processes in the cell causes the colors of leaf and flower; second, those in which the color is influenced by the direct effects of the sunlight; third, those in which the coloring of certain parts is not dependent upon light."

THE DANGER OF FRICTION.

A RECENT accident in London has called attention to a hitherto little suspected source of danger—that attending friction or rubbing of any kind in the neighborhood of an inflammable vapor. Rubbing often generates electricity, and the minutest of electric sparks, too small to be seen or even to betray itself by the slightest snapping or crackling, may set fire to a vapor. In the case alluded to, a spark from the friction of a hair-dresser's hand on his patron's head set fire to the vapors of a hair-wash containing kerosene. Lord Kelvin, referring to the subject in the *London Times* shortly after the accident, "spoke warningly," says *Cassier's Magazine* (February), "of the readiness with which combustible gas and air mixtures are ignited by even very faint electric sparks." He said:

"This readiness to ignite is illustrated in elementary lectures on electricity by Volta's cannon—a little varnished brass gun, mounted on a glass pillar, and having a wide touch-hole plugged with sealing-wax, in the center of which is mounted a brass wire carrying a little brass knob outside, and projecting inside to within one twentieth of an inch of the end of another brass wire fixed to the metal of the gun. The gun is filled with an explosive mixture of oxygen and hydrogen, and its muzzle is plugged with a cork. The varnished outside is struck with a piece of catskin, and, thus electrified, the gun is left insulated on its glass pillar. To fire it, all that is necessary is to touch the projecting knob with the finger. This causes discharge of the electricity by two exceedingly faint sparks, one barely, if at all, perceptible by the finger before contact with the knob outside, the other in the one twentieth of an inch air space within the explosive mixture inside. A loud explosion is heard, and the cork is projected with sufficient violence to tear a canvas picture if it chances to touch one."

To quote again from *Cassier's*:

"Ignition of vapor of benzine by an electric spark, Lord Kelvin went on to say, is well known to dyers in their process for cleaning silks and other fabrics by boiling in large caldrons of liquid benzine. When the goods are taken out of the caldron and spread out to dry on a table, explosions have often taken place, and there can be little question that an electric spark, caused by some slight friction between dried or partially dried portions of the fabrics, is the incendiary."

All of which goes to show that friction of any kind should be avoided when inflammable liquids are about.

A New Form of Incandescent Lamp.—"An incandescent lamp of unique design is one of the novelties in the English electric-lighting trade," says *The Electrical World*. "The

ELECTRIC LIGHT BULB.
From *Electrical World*.

accompanying illustration represents it to be nearly ellipsoidal in shape, with its shortest axis on the vertical line. The upper half of the bulb is silvered, for the purpose of reflecting the light in a downward direction, thus increasing the luminosity of the

lamp. It is stated that this lamp has a downward lighting efficiency 100 per cent. greater than that of the ordinary form of lamp. Dr. John Hopkinson made some tests upon it, comparing it with the common pear-shape lamp. He found that the average candle-power over the lower half of the globe of the new lamp was 38.6, while in the ordinary Edison lamp, with equal current, it was only 12.3. The relative consumption of current per candle was also determined. Along the axis of the new lamp he found the consumption to be 0.9 watts per candle, and in the Edison lamp it was 3.65. From a little calculation it appears that the comparative cost of lighting for 1,000 hours between the two styles of lamps, the improved lamp being of eight candle-power and the ordinary lamp of sixteen candle-power, is greatly in favor of the former."

STRUCTURE OF A GOLD NUGGET.

PROF. A. LIVERSIDGE, the gold expert of New South Wales, Australia, has for some time been engaged in testing the theory that gold nuggets are formed by the deposition of gold around a nucleus, from solution. His conclusions have been decidedly against this theory, and in a paper read recently

OUTSIDE OF NUGGET FROM COOLGARDIE, WEST AUSTRALIA.

before the Royal Society of his colony, and quoted in full in *The Engineering and Mining Journal* (February 19), he gives his reasons. Says Professor Liversidge:

"I obtained specimens of gold nuggets, which were ground down or sliced through so as to obtain sections; these sections were then polished and etched by means of suitable solvents, such as chlorine water, aqua regia, a solution of potassium cyanid, or by a mixture of sodium chlorid solution and nitric acid; the last was found to be the most convenient because the strong solution of salt dissolved off the coating of silver chlorid which was usually formed, and which prevented the action of the solvent from being properly watched. As a result of this treatment it was invariably found that the nugget did not present any traces of concentric coatings, but that the gold was always more or less crystallized, and in some cases the crystals were very large and with well-defined boundaries; in fact the etched surfaces closely resembled those obtained from sections of many metallic meteorites, except in the form of the crystals. Some of the nuggets also showed cavities and enclosures of quartz, ferric hydroxid, and argillaceous matter, altho in many cases none was visible on the rolled surface of the nugget, the non-appearance of the impurities on the surface being due to the soft gold having been usually beaten down, by rolling and attrition, in such a way as to cover over and hide the enclosures or render them less conspicuous.

"It was found also that many nuggets when heated strongly in a Bunsen burner became blistered, and that these blisters burst

with a sharp report sometimes accompanied by the projection of small pieces of gold; they also gave off gases or vapors, which issued under considerable pressure and forced out the Bunsen flame into little blowpipe-like jets. It was thought that these phenomena might be due to the presence of enclosed gases under

ETCHED SECTION OF SAME NUGGET, SHOWING CRYSTALS.

pressure, but when the nuggets showing these blisters or blebs were immersed in a solvent and the walls of the blebs slowly dissolved away, there was no escape of gas.

"Subsequent investigations showed that the nuggets yielded but very small quantities of permanent gas, when examined at a high temperature in vacuo for occluded gases, and it was found that the vapor given off was mainly that of water mixed with some sulfur dioxide and air. The water vapor was probably derived from the hydrous oxide of iron and argillaceous matter enclosed in the nuggets, and the sulfur dioxide from pyrites or other sulfur-containing minerals.

"Attempts were made to prepare artificial nuggets by electrolytic deposition; around wires, fairly thick masses were obtained, the sections of these showing well-defined rings and traces of crystalline structure; the rings or successive coats were clearly due to changes in the strength of the current and of the solution. Masses of fused gold were also cut, polished, and etched, and in all cases a strongly marked crystalline structure was visible.

"A plate of copper was thickly coated with gold electrolytically and etched, but only a minute crystalline structure was obtained. A fillet of nominally pure silver presented a minutely crystalline structure, quite unlike the gold fillets. For comparison an ingot of tin was etched by nitrohydrochloric acid; the ingot weighed about 20 pounds. The well-known 'moire-metallique' structure became visible immediately on moistening with the acid; the etching was continued until about $\frac{1}{4}$ inch in depth had been dissolved away; the outlines of the crystals apparently underwent no change, and the surface remained quite smooth; none of the crystals were dissolved away more quickly than the others, and no grooves were eaten along their edges. The gold nuggets, ingots, and fillets behaved quite differently, that is, grooves were eaten out at the junctions of the gold crystals, and some were sunken below the others so that the etched surfaces of the gold could be printed from, and the differences of level seen and felt; nothing of the kind happened with the tin ingot.

"A great deal requires to be done to complete this investigation, but as far as it goes it proves that gold nuggets do not show that they have been built up of concentric coatings round a nucleus, but that they possess a well-marked internal crystalline structure and that they usually enclose foreign substances, also that a similar crystalline structure is shown by gold which has been fused; I do not, however, think that native gold has necessarily been in a fused condition; on the contrary, I think it has been deposited from solution and usually within veins or pockets in rocks, altho if it had been deposited round nuclei it might still have possessed the crystalline structure which has been described and figured."

DUSTLESS BUILDINGS.

IT is one of the disadvantages of our modern methods of heating and ventilating large buildings that the air forced into them from without for either or both of these purposes distributes large amounts of dust, especially in a city where soft coal is burned. A successful method of straining out this dust before the air enters the building is described by C. J. H. Woodbury in a paper read before the American Society of Mechanical Engineers and published in *Cassier's Magazine* (January). In the building experimented on by the author, 26,000 cubic feet a minute were forced in from without at a velocity of 700 feet per minute. Says Mr. Woodbury:

"The means taken to remove the foreign substances from the air were the use of cotton-cloth filters so arranged that the air should approach the fabric at an acute angle, by which the momentum would carry these particles beyond a point where the element of air under consideration would pass through the filter, and the particles of dust would be carried by the place, and, striking the cloth at a lesser angle, tend to glance off and be carried to the bottom of the filter, rather than to clog the interstices in the fabric. The area of the filters being larger than that of the flue, the rate of filtration was inversely slower than the velocity of the air down the flue.

"The means by which this was accomplished were very simple. A timber frame, divided by partitions into fine rectangular openings, was placed at the top of the flue, and under each opening was placed a bag whose top was attached to a light wood frame slightly larger than the opening, making a tight fit, so that the air entering the flue must pass downward into these bags, which were over thirty feet in height. An arrangement of guides, ropes, and pulleys enabled the bags to be raised and lowered by a person at the bottom of the flue. The bottoms of the bags were made open, and closed with a drawing-string, and hoops kept the lower portion distended. An arrangement of lines extending along the sides from end to end facilitated turning inside out and back again when they were being cleaned.

"The area of the flue was $3\frac{3}{4}$ per cent. of that of the bags, and while the air passed down the flue at a velocity of 700 feet per minute, it passed through the fabric at 26 feet per minute. From half a peck to a peck per month of fine dust was gathered from the bags.

"The efficiency of the device was tested by placing freshly painted boards at the bottom of the flue before the installation of the apparatus, and then giving another coat of paint after the apparatus was in service. In the first instance the fresh paint collected fine dust until it resembled fine sand-paper, and in the second the paint dried with a smooth surface."

SCIENCE BREVITIES.

REASONS FOR BEING A CANNIBAL.—According to a French writer named Petrie, whose conclusions are quoted in *The Medical News*, twenty per cent. of all cannibals eat the dead in order to glorify them; nineteen per cent. eat great warriors in order that they may inherit their courage, and eat dead children in order to renew their youth; ten per cent. partake of their near relatives from religious motives, either in connection with initiatory rites or to glorify deities, and five per cent. feast for hatred in order to avenge themselves upon their enemies. Those who devour human flesh because of famine are reckoned as eighteen per cent. In short, deducting all these there remains only a proportion of twenty-four per cent. who partake of human flesh because they prefer it to other means of alimentation."

"CURIOUS things occur in the operation of underground trolley systems," says *Electricity*. "When the electric current was first turned on the downtown section of the Madison Avenue line in New York to test it, the night before the cars were to start running, the current breaker for that section popped out with a bang, denoting a short circuit somewhere along the line. As there was nothing in the vicinity to account for this, it was finally decided to follow the slot along from the power-house and find the trouble. This was done, and after some hours the trouble was located at the curve where the line turns from Fourth Avenue into Astor Place. There some laborer, extra careful of his shovel, which was his own property, had stowed it away for the night handle down and with the blade carefully pressed up diagonally between the two current-bearing conductors. When the men tried to remove it they found it was firmly welded to each rail and had subsequently to be cut away with chisels. It was a fortunate thing for the laborer that the current was not turned on when he stowed the shovel away so carefully."

THE RELIGIOUS WORLD.

A CHURCH WAR CLAIM.

NOT a little feeling has been stirred up in Methodist circles, North and South, over the action of our national Congress in voting an appropriation of \$288,000 to indemnify the Methodist Church South for "the use, occupation, consumption, and destruction of property" of its publishing house at Nashville, Tenn., at the time of the occupation of that city by the Union forces during the war. In behalf of the claim for damages it is argued that the Southern Methodist Publishing House was a neutral institution, that it is charitable in its objects, its profits going to superannuated ministers, and that it is asking only what has already been granted to some churches and educational institutions in the South.

But the claim is strongly opposed by several Methodist and other religious journals in the North. *The Northwestern Christian Advocate* (Chicago), which has taken the lead in opposition, is very determined and emphatic. It says:

"One of the worst features in the issue is the fact that this gift, if consummated, will be like the memorable bursting of the Johnstown reservoir, which fatally flooded the whole region. It has required over a third of a century to formulate the specious arguments in whose absence even Democratic and Southern congressmen have not dared to vote a dollar of 'damages' to reward this astonishing claim. The floods of application have hitherto been withstood almost successfully. Any future claim (and thousands will follow) however large and absurdly swollen, can not be resisted as this Methodist claim has been resisted for more than thirty years. Here and there smaller sums have been given to Roman Catholics, and some interested parties are now pleading that, therefore, the Protestant claims should be awarded. It now is possible for Romanists to renew their applications and seek to intimidate any timid congressman by declaring that the great Roman Catholic Church must not be ignored or discriminated against, and shall not be so disregarded with impunity. This Southern Methodist claim has lingered for all these years in part because its denial has been a bulwark against exhausting floods of like constructive claims. We hold that no plea of fraternity has the right to break a padlock from a treasury door by force of any such argument. If Methodists in the North wish to prove their generosity, let them appeal to Methodists to contribute Methodist money. It is easy to pay debts or assumed obligations with other people's money. We earnestly believe with President Grant that no such claims should be paid, even to those whose loyalty is undoubted."

The Michigan *Christian Advocate* (Detroit) also speaks its mind forcibly in regard to the claim for damages. It says:

"Our Southern Methodist friends are congratulating themselves because the lower house of our national Congress has passed a bill indemnifying their church for alleged damages to their book concern by Union troops in war times. It seems that the federal army took possession of the Southern Methodist Publishing House; piled up its wares in a corner, and turned its spacious rooms into a hospital for the sick and wounded. The actual damage to the building could not have been great, and the business was badly demoralized anyway, yet, under the plea of 'loyalty,' our friends have long claimed damages to the extent of a half-million dollars, and have finally actually captured a verdict from the queer-headed Congressmen who voted for the measure of \$288,000. Happily the bill is not yet law. It must pass the Senate and gain the signature of a man whose loyalty to the Union cause is less in question than that of the Southern Methodists. In view of the action of the House, *The Epworth Era* says, 'Let us love one another.' So we will. And let us all love justice and cherish honor. And let us protest to our Senators that they will do well to shove that bill on sight into the deepest pigeonhole of the Senate archives to remain until the crack of doom."

For a view of the matter from another denominational quarter,

we have this from *The Journal and Messenger* (Baptist, Cincinnati):

"It is one of the most barefaced impositions ever perpetrated upon the people, and ought to be decried by every loyal citizen. Not only is the sum named exorbitant, but it is fraudulently obtained; for every one ought to know that the Methodist Church South was built upon slavery, and that the war was for the perpetuation of slavery, and that it is merely a play upon words when it is said that the Methodist Church South was not neutral. Its members were, almost to a man, in sympathy with the Confederacy just as truly as were any other of the Southern people; and while it can not be said that 'the church,' as an organization, was hostile to the Government, it ought to be enough to say that the majority of its members were hostile. The institution itself was hostile, having slavery at the root of its organization."

DR. HEPWORTH'S INVESTIGATION IN ARMENIA.

REV. DR. GEORGE H. HEPWORTH, who was sent to Armenia several months ago by the *New York Herald* to investigate the massacres of two years ago and report thereon, has concluded his mission and returned to this country. When Dr. Hepworth went out the fear was expressed in many quarters,

REV. DR. GEORGE H. HEPWORTH.

and especially among the religious journals (see *LITERARY DIGEST*, December 4, 1897), that the investigation would be one-sided and of little value, since Dr. Hepworth went out in the employ of a journal that had apparently committed itself to the defense of the Sultan under all circumstances. But Dr. Hepworth's letters from Armenia, and especially his later ones in which he summed up the situation as he found it, have materially changed the views of those who had pronounced his mission a failure from the start. It is conceded by most that Dr. Hepworth did creditable service in getting at the truth of the situation in Armenia, that he brought to light some valuable facts, and that his conclusions, on the whole, are entitled to grave consideration.

These conclusions are, in brief, that the Armenian massacres were caused by the Armenian revolutionists. These men, it is

said, stirred up the villages of the interior with the hope of autonomy, declaring that the powers were ready to rush to their aid and make them into a sort of Bulgaria. England and Russia are arraigned for sympathizing with the Armenians, the former for sentimental and the latter for political reasons. England is responsible, it is said, for a great deal that has taken place, encouraging the Armenian refugees and reformers and "inciting them to do work which has already involved their countrymen in almost irretrievable ruin."

Dr. Hepworth speaks in the highest terms of the character of the Christian missionaries and of the value of their work. He exonerates them from the charges of being breeders of mischief, and commends them for their wisdom, tact, firmness, and courage in the face of many dangers and sore trials.

In an editorial review of Dr. Hepworth's report on Armenia, the *New York Observer* finds some things to commend and some to criticize. In the latter direction it says:

"Instead of getting at the main points at issue, Dr. Hepworth has shown a discouraging tendency to emphasize side issues. He has not lifted the whole of the question, but has here and there grasped an outlying fact. The great incontrovertible overshadowing matter is the wretched misgovernment and cruel oppression of the Turk. That a few Armenian agitators or foreign sentimentalists complicated matters was a mere incident. The fact was that if the time was not, indeed, ripe for revolution, the Armenian mind, strained to the limit of endurance, was ripe for some determined, if desperate, attempt at protest. An Armenian will stand a great deal, but no man will stand everything. Of course, the Armenians were too poor, too few, too scattered, and too defenseless to revolt successfully, and that the Turks were really afraid of them we do not believe. The motive in the massacres was not so much a 'mental aberration,' to use Dr. Hepworth's phrase, the result in a general Turkish panic, as it was a racial hatred to a degree, but a bitter fanaticism for the most part."

After giving a summary of Dr. Hepworth's finding, *The Independent* says:

"Readers of *The Independent* know very well that we have never defended the harebrained schemes and atrocious plans of revolutionists, but they also know that we do not believe that the responsibility for the massacres rests primarily upon them, except in a few cases. In most there was not even the pretext of revolutionism, and where there was it rested on such slight foundation as to be absurd. That the Turkish Government was panic-stricken or that it suffered from temporary aberration we do not believe. In Bitlis, which Dr. Hepworth visited, in Diarbekir and elsewhere the massacres were threatened days in advance, and, when the time came, commenced and closed with the signal of the bugle. That does not betoken panic or fright. We believe that the verdict of history will be that these, in some respects the most atrocious massacres the world has ever known, were deliberately carried out for purposes of political influence and private pillage. They were Islam's defiance to Christendom."

The Northwestern Christian Advocate (Methodist Episcopal) is not pleased nor satisfied with the outcome of Dr. Hepworth's investigation. It says:

"During the most of his journey it seemed as if Dr. Hepworth was the chief item discovered by himself, but from the mass of words sent back are a few notable elements. It seems incredible that the Armenians massacred themselves, but so it is, according to the discoverer, who says that the massacres were caused by Armenian revolutionists, and that if these 'had been quiet there would have been no massacres.' The chief value in this conclusion is that it relieves the Turk, who surely has needed some sort of an acquittal. When 100,000 people have been murdered it would seem that any reasonable Armenian, be he revolutionist or not, certainly ought to have taken that bloodily broad hint and have 'kept quiet.' There are many 'quiet' Armenians. One hundred thousand surely are very quiet and permanently quiet. How much more does the Turk require? We have such

confidence in merciful people, outside of Turkey and the Hepworth party, that we doubt not that they will refuse to believe this discoverer and his verdict. He says that the Congregational Church has mission interests in Armenia to the extent of \$2,000,000. Some of it has been destroyed. Were the missionaries not 'quiet'?"

Neither is *The Standard* (Baptist, Chicago) inclined to take a favorable view of the investigation. It says:

"He [Dr. Hepworth] does not, as some expected he would, whitewash the Turkish administration or belittle the horror of the massacres, but he does attempt to support the utterly inadequate conclusion that the plots of a few hundred Armenian revolutionists were the sole cause of the difficulties, and that if the revolutionists had kept quiet there would have been no massacres. Thus, while he holds the Turkish Government responsible for the atrocities, he believes that the Sultan did not deliberately plan the destruction of his troublesome Armenian subjects. We fail to see what has been accomplished by this much-advertised journey of Dr. Hepworth."

An editorial note in *The Advance* (Congregational, Chicago) reads as follows:

"Dr. George H. Hepworth's investigation of the Armenian massacres for the *New York Herald* has added little to what is known concerning them, and in most points confirms the original accounts. The chief peculiarity of his report is the importance which it attributes to the Huntchagist Armenian revolutionary societies as a cause of the massacres. This is merely an opinion of Dr. Hepworth, and it is an opinion discredited by the best authorities. The Sultan used this as an excuse, but it is a palpable pretext. There never has been the slightest evidence that any but a pitiful few were connected with the societies, and to make this an excuse for the wholesale slaughter of a race is worse than no reason at all. The massacres were deliberately planned, they were not uncontrollable outbreaks either of fear or frenzy. The Sultan stopped them as readily as he began them, when policy dictated the step."

GRANT ALLEN'S "EVOLUTION OF THE IDEA OF GOD."

GRANT ALLEN has frequently complained that the reading public's lack of appreciation for purely scientific literature has forced him to devote his talents to the production of fiction. Those who have grieved over this diversion of Mr. Allen's talents from the realm of science may be partially consoled by reading "The Evolution of the Idea of God," a volume of 450 pages, in which Mr. Allen has given what purports to be a scientific explanation of the growth of the idea of God, and the evolution of Christianity from the religious beliefs of primitive man. The author has been engaged for twenty years in the collection and comparison of materials for this work, and has devoted a part of his time for ten years in writing it.

Beginning with the question, "How did we arrive at our knowledge of God?" Mr. Allen has undertaken to trace out the idea of God from its earliest and crudest dawns in the savage mind, up to the abstract form which it assumes in modern theological and philosophical thinking. Regarding the problem thus presented as essentially a question of the processes by which the human mind has reached its present position, the consideration of the validity of the various religious beliefs is put aside as a matter which does not concern the present inquiry. The real question to be answered is: Why did men ever come to believe that there were gods; and why from many gods did they arrive at a belief in one?

To aid in explaining the development of early religious cults Mr. Allen gives first a brief examination of Christianity, and discusses how far it can be used as a standard of reference in studying other religions. Following a summary of the facts in regard to the origin of Christianity, as to which there is a general agree-

ment, the features in which it may be accepted as a typical religion are thus stated:

"In the first place, Christianity is thoroughly typical in the fact that beyond all doubt its most central divine figure was at first, by common consent of orthodox and heterodox alike, nothing other than a particular deified Man. All else that has been asserted about this particular Man—that He was the Son of God, that He was the incarnation of the Logos, that He existed previously from all eternity, that He sits now on the right hand of the Father—all the rest of these theological stories do nothing in any way to obscure the plain and universally admitted historical fact that this divine Person, the very God of very God, being of one substance with the Father, begotten of the Father before all worlds, was yet, at the moment when we first catch a glimpse of Him in the writings of His followers, a Man recently deceased, respected, revered, and perhaps worshiped by a little group of fellow peasants who had once known Him as Jesus, the son of the carpenter. On that unassailable rock of solid historical fact we may well be content to found our argument in this volume.

"In the second place, Christianity is thoroughly typical in all that concerns its subsequent course of evolution: the gradual elevation of its central venerated Man into a God of the highest might and power; the multiplication of secondary deities or saints by worship or adoration of other dead men and women; the growth of a graduated and duly subordinated hierarchy of divine personages; the rise of a legend, with its miracles and other supernatural adjuncts; the formation of a divine theology, philosophy, and systematic dogmatism; the development of special artistic forms, and the growth or adoption of appropriate symbolism; the production of sacred books, rituals, and formularies; the rise of ceremonies, mysteries, initiations, and sacraments; the reverence paid to relics, sacred sites, tombs, and dead bodies; and the close connection of the religion as a whole with the ideas of death, the soul, the ghost, the spirit, the resurrection of the body, the last judgment, hell, heaven, the life everlasting, and all the other vast groups of concepts which surround the simple fact of death in the primitive human mind generally."

The points wherein Christianity to a small extent fails to be typical, or at least to solve the fundamental problem of religion, are given:

"It fails to be typical because it borrows largely a whole ready-made theology, and above all a single supreme God, from a pre-existent religion. In so far as it takes certain minor features from other cults, we can hardly say with truth that it does not represent the average run of religious systems; for almost every particular new creed so bases itself upon elements of still earlier faiths; and it is perhaps impossible for us at the present day to get back to anything like a really primitive or original form of cult. But Christianity is very far removed indeed from all primitive cults in that it accepts ready-made the monotheistic conception, the high-water mark, so to speak, of religious philosophizing. While in the frankness with which it exhibits to us what is practically one half of its supreme deity as a Galilean peasant of undoubted humanity, subsequently deified and etherealized, it allows us to get down at a single step to the very origin of Godhead; yet in the strength with which it asserts for the other half of its supreme deity (the Father, with His shadowy satellite the Holy Ghost) an immemorial antiquity and a complete severance from human life, it is the least anthropomorphic and the most abstract of creeds.

"Furthermore, Christianity fails to be typical in that it borrows also from preexisting religions to a great extent the ideas of priesthood, sacrifice, the temple, the altar, which, owing to the curious disappearance or at least unrecognizability of the body of its founder (or, rather, its central object of worship), have a less natural place in our Christian system than in any other known form of religious practise. It is quite true that magnificent churches, a highly evolved sacerdotalism, the sacrifice of the mass, the altar, and the relics, have all been imported in their fullest shape into developed Christianity, especially in its central or Roman form. But every one of these things is partly borrowed, almost as a survival or even as an alien feature, from earlier religions, and partly grew up about the secondary worship of saints and martyrs, their bones, their tombs, their catacombs, and their reliquaries."

Proceeding to the study of religious origins, Mr. Allen defines the words "god" and "religion." After a reference to the fear-created monsters of mythology, such as the Hebrew Satan or the Etruscan devils, he says:

"None of these, however, is a god or anything like one. They have no more to do with religion, properly so called, than the unicorn of the royal arms has to do with British Christianity. A god, as I understand the word, and as the vast mass of mankind has always understood it, is a supernatural being *to be revered and worshiped*. He stands to his votaries, on the whole, as Dr. Robertson Smith has well pointed out, in a kindly and protecting relation. He may be angry with them at times, to be sure; but his anger is temporary and paternal alone; his permanent attitude toward his people is one of friendly concern; he is worshiped as a beneficent and generous Father. It is the origin of gods in this strictest sense that concerns us here, not the origin of those vague and formless creatures which are dreaded, not worshiped, by primitive humanity.

"Bearing this distinction carefully in mind, let us proceed to consider the essentials of religion. If you were to ask almost any intelligent and unsophisticated child, 'What is religion?' he would answer offhand, with the clear vision of youth, 'Oh, it's saying your prayers, and reading your Bible, and singing hymns, and going to church or to chapel on Sundays.' If you were to ask any intelligent and unsophisticated Hindu peasant the same question, he would answer in almost the self-same spirit, 'Oh, it is doing poojah regularly, and paying your dues every day to Mahadeo.' If you were to ask any simple-minded African savage, he would similarly reply: 'It is giving the gods flour, and oil, and native beer, and goat-mutton.' And finally if you were to ask a devout Italian contadino, he would instantly say, 'It is offering up candles and prayers to the Madonna, attending mass, and remembering the saints on every feast.'

"And they would all be quite right. This, in its essence, is precisely what we call religion. Apart from the special refinements of the higher minds in particular creeds, which strive to import into it all, according to their special tastes or fancies, a larger or smaller dose of philosophy, or of metaphysics, or of ethics, or of mysticism, this is just what religion means and has always meant to the vast majority of the human species. What is common to it throughout is custom or practise; a certain set of more or less similar observances: propitiation, prayer, praise, offerings; the request for divine favors, the deprecation of divine anger or other misfortunes; and as the outward and visible adjuncts of all these, the altar, the sacrifice, the temple, the church; priesthood, services, vestments, ceremonial."

Having thus laid down the principle that religion is essentially a matter of practise and not of faith, Mr. Allen finds the basis and root of all religions in the familiar theory, elaborated by Herbert Spencer, of ancestor-worship, or acts of deference by the living to the corpses or ghosts of the dead. This theory is supported by quotations from the Rev. Duff Macdonald, a Presbyterian missionary to Central Africa, showing the prevalence among the lowest existing savages of something like spirit-worship, with the continual creation of new gods. From the worship of mummies and ghosts Mr. Allen considers that of tombs, shrines, and temples covering graves; tombstones, altars, images or statues representing the ghosts of the dead; the stakes, idols or household gods; and the sacred trees growing above burial-mounds. His theories on the growth and relation of these various forms of ancestor-worship are largely based on the writings of Herbert Spencer, Prof. Robertson Smith, J. G. Fraser, author of "The Golden Bough," Dr. E. B. Tylor, William Simpson, Dr. Mommsen, Edward Clodd, Sidney Hartland, and Prof. John Rhys, and of other travelers, missionaries, and historians, to whom he acknowledges his indebtedness.

His preliminary survey of the nature and origin of gods in general having convinced him that all the sacred objects of the world are either dead men, or something representing them, Mr. Allen next takes up the question—How from the belief in many gods did men progress to the belief in one single God, creator and upholder of all things? In answering this question he first

considers the deities of Egypt as having influenced the development of the gods of Israel. Of the latter he says:

"The only people who ever invented or evolved a pure monotheism at first hand were the Jews. Individual thinkers elsewhere approached or aimed at that ideal goal, like the Egyptian priests and the Greek philosophers; entire races elsewhere borrowed monotheism from the Hebrews, like the Arabs under Mohammed, or, to a less extent, the Romans and the modern European nations, when they adopted Christianity in its trinitarian form; but no other race ever succeeded as a whole in attaining by their own exertions the pure monotheistic platform, however near certain persons among them might have arrived to such attainment in esoteric or mystical philosophizing. It is the peculiar glory of Israel to have *evolved God*. And the evolution of God from the diffuse gods of the earlier Semitic religion is Israel's great contribution to the world's thought.

"The sacred books of the Jews, as we possess them in garbled forms to-day, assign this peculiar belief to the very earliest ages of their race; they assume that Abraham, the mythical common father of all the Semitic tribes, was already a monotheist; and they even treat monotheism as at a still remoter date the universal religion of the entire world, from which all polytheistic cults were but a corruption and a falling-away. Such a belief is nowadays, of course, wholly untenable. So also is the crude notion that monotheism was smitten out at a single blow by the genius of one individual man, Moses, at the moment of the Hebrew exodus from Egypt. The bare idea that one particular thinker, just escaped from the midst of ardent polytheists, whose religion embraced an endless pantheon and a low form of animal-worship, could possibly have invented a pure monotheistic cult, is totally opposed to every known psychological law of human nature. The real stages by which monotheism was evolved out of a preceding polytheism in a single small group of Semitic tribes have already been well investigated by Dutch and German scholars; all that I propose to do in the present volume is to reconsider the subject from our broader anthropological standpoint, and show how in the great Jewish god himself we may still discern, as in a glass, darkly, the vague but constant lineaments of an ancestral ghost-deity."

The conclusions drawn from a study of Jewish evolution from polytheism to monotheism are thus summarized:

"Among many Hebrews gods Jahweh (Jehovah) was originally but a single one, a tribal ancestor-god, worshiped in the form of a cylindrical stone, perhaps at first a gravestone, and regarded as essentially a god of increase, a special object of veneration by childless women.

"From this rude ethnical divinity, the mere sacred pillar of a barbarous tribe, was gradually developed the Lord God of later Judaism and of Christianity—a power eternal, omniscient, almighty, holy; the most ethereal, the most sublime, the most superhuman deity that the brain of man has ever conceived."

As might be expected from the nature of his conclusions, Mr. Allen's book has stirred up the critics. Among others, a reviewer in *The Academy* says:

"Mr. Grant Allen begins his book with Mr. Herbert Spencer's assertion that all religious ideas took their rise in the worship of dead men. But he does not seem to know, or at any rate gives us no hint, that this theory has been so signally refuted by Prof. Albert Réville and others, that no writer of authority on the history of religions now thinks it worth while even to refer to it. Mr. Herbert Spencer's position really carries its own refutation along with it; for in setting it up he has to avow his disbelief in the existence of animism, or the mental stage in which primitive folk believe every object in animate or inanimate nature to be possessed of a volition and passions like their own. And not only are savage races known who are confirmed animists, without in any way worshiping their dead, but we see the phenomenon of animism repeated in the strictly analogous case of our own children. The first baby who beats the table against which he has knocked his head demolishes Mr. Herbert Spencer's theory at one blow."

BUDDHISTS IN AMERICA.

THE Christian Literature Society for India, London, and Madras, have sent out a pamphlet on "Swami Vivekananda and His Guru," which contains matters of general interest to American readers. The first of these will be found in certain quotations of statements made by Swami Vivekananda, which we quote here in full:

"The great Sri Ramakrishna to-day is worshiped literally by thousands in Europe and America, and to-morrow will be worshiped by thousands more."

"Before ten years elapse a vast majority of the English people will be Vedantists."

"I helped on the tide of Vedanta which is flooding the world."

"In the United States scarcely is there a happy home. There may be some, but the number of unhappy homes and marriages is so large that it passes all description."

"Scarcely could I go to a meeting or a society but I found three quarters of the women present had turned out their husbands and children. It is so here, there, and everywhere."

The Outlook quotes these utterances of Vivekananda and says in regard to them:

"We did not attend Swami Vivekananda's meetings in this country, and it is possible that three quarters of the women who flocked to hear him had turned out their husbands and children, tho we had not supposed that his audiences were quite so bad as that. But the notion that the great Sri Ramakrishna is worshiped by thousands in America, and to-morrow will be worshiped by thousands more, scarcely needs any refutation.

"The refutation is, however, afforded by the replies which the editor of this pamphlet has obtained from a great number of leading Americans of different faiths and localities. A few of these utterances may serve as samples of the forty-five letters published. Dr. Angell, of the University of Michigan: 'The question which you ask about the possibility of Americans adopting Hinduism or Mohammedanism strikes every one in this country as simply preposterous. It is difficult to treat it with soberness.' Dr. Boardman, of Philadelphia: 'My impression is that if he [Swami Vivekananda] has made any converts at all, they have come either from the ranks of those who already were or thought themselves to be theosophists, or from people of restless, vague, adjustable unbelief.' President Eliot, of Harvard University (and it is in Boston, if anywhere, that theosophy has flourished): 'The report circulated in India that Swami Vivekananda has made converts in America from Christianity to Hinduism is, to the best of my knowledge and belief, absolutely without foundation. I have never heard in this country of a single convert from Christianity to either Hinduism or Mohammedanism.' Judge Grosscup, of the District Court of the United States, Chicago: 'I have heard of but one American who is devoting herself to Hinduism, and I do not think the Christian Church will be much shattered by her going over.' Archbishop Ireland, of St. Paul, Minn: 'I know America well, and I have never heard of any followers of this gentleman or of his doctrine.' These quotations indicate the judgment of men well informed, broad-minded, not afraid to look facts in the face, and cognizant of the conditions in their several sections and circles."

In a later issue of *The Outlook*, Lewis G. Janes, president of the Brooklyn Society for Ethical Culture, takes issue with the editor and professes to see considerable advance made by Buddhism in America.

RELIGIOUS NOTES.

The Baptist, of London, declares that that denomination is not advancing in England, but is losing ground. The writer points to various possible causes of decay. One is the prevalence of open communion, and the practical lowering of the denominational banner. But he adds: "Of course there are other open secrets of our failure to record a higher membership of *bona-fide* and baptized believers. The absence of pronounced and distinctive gospel preaching in certain quarters must ultimately issue in the death of Baptist principles."

SOME young men in looking out into life fear to enter the ministry, says *The Herald and Presbyterian*, because it is represented to be overcrowded. "Yet last year there were only about 8,000 young men studying for the ministry in all the theological seminaries of the country, while there were 23,000 studying medicine and more than this number studying law. All the professions are crowded for those who do not strive constantly to excel. Numbers of men will be unsuccessful in every calling in life. This means that every one should put forth all his efforts with all intelligence and tact. The ministry will have room always for thousands of the best young men to be found, and these need not fear to enter it."

FOREIGN TOPICS.

GERMANY AND THE SAN JOSÉ BUG.

THERE seems to be little doubt that the partial exclusion of American fruit from Germany is intended as a hint that the German Government is quite as willing to protect its farmers against our competition as we are ready to assist our manufacturer against the competition of the German. On the other hand, the San José bug really has frightened the authorities of the Fatherland. The Conservative papers suggest that Americans should study their own tariff and that of Germany ere they utter complaints.

The *Kreuz-Zeitung*, Berlin, thinks "the Americans show that they lack all sense of fairness." The *Neuesten Nachrichten*, Berlin, says:

"The people who to-day, in America, make a row because American fruit is not admitted without scrutiny are the very ones who caused the violation of our treaty with the United States by a differential duty on our sugar. It is quite probable that the Government is glad of a chance to reciprocate; only, the import of American fruit should have been prohibited altogether. The present regulation costs a lot of money and causes a lot of bother."

Bismarck's paper, the *Hamburger Nachrichten*, asserts that "the Americans have a bad conscience in the matter, that is why they are insolent about it." The *Boersen Courier* does not think we have just cause for complaint. The *Tages Zeitung* points out that we ourselves take good care to keep out infectious when it suits us. It says:

"It should be remembered that agricultural produce is as much protected in the United States as manufactured articles. The importation of cattle, for instance, is prohibited outright. Special permission must be obtained for it, and the Treasury Department may withdraw this permission at any time, or order a quarantine for cattle, which is long enough to make importation impossible. There is not yet a federal law against the importation of fruit and plants, but California has such a law, and many plants intended for import are destroyed in San Francisco."

The *Reichs Anzeiger* says:

"It is in consequence of the report of the American Bureau for Agriculture that the inspection was ordered. This report admits that there is hardly an insect so dangerous to the cultivation of fruit in the United States and in the world in general as this San José bug. The plants attacked by it soon show its effects and are gradually destroyed altogether. The bug increases very fast: a single female is calculated to have three thousand in one summer. The different States of the Union protect themselves as best they can against this plague, and we must follow suit. Mere prohibition of the importation of fruit and plants infected will not suffice. The agricultural population must be instructed how to combat the evil."

But, however just the partial exclusion may be as a protection against the San José bug, there is little doubt that the German Government regards our differential tariff as unjust and thinks of reprisals. Secretary of State v. Pasadowsky, in answer to a parliamentary interpellation, expressed himself to the following effect:

If the Americans do not like to see their produce excluded from competition with our own, they should do to others as they would be done by. We must defend ourselves. We can not alter existing treaties, and must wait until they run out. But in the mean time we must have a new tariff, which will enable us to make better terms in new treaties. We intend to be prudent, and will not unnecessarily cause a tariff war. The time may come, however, when we will be forced to give up our policy of passive resistance. It will require some skill to determine the right moment, and the Government must be allowed to determine when it has arrived.

The *Nation*, Berlin, which follows faithfully the tactics of the

British Manchester school, expresses itself, in the main, as follows:

If the bug is really dangerous, the Government must, of course, be permitted to defend the farmer against its importation. But we fear its importance has been exaggerated. The Agrarians evidently aim at protection for their own produce. That, however, can not be granted in a country whose population increases by three quarters of a million annually, and which has an export trade of nearly \$1,000,000,000. We do not believe that the Government inclines toward protection in principle, and circumstances will prevent the Agrarian trees from growing into heaven. Yet it is easy to see that, if the coming election furnish an Agrarian-Conservative majority, the Government will be forced to do its will to some extent."—*Translations made for THE LITERARY DIGEST.*

BRITAIN'S THREATS AND ISOLATION.

FOR some months past the British press has not ceased to assert that England has an inalienable right to trade in Chinese ports, whatever nation may hold them, and that she will use this right to make every port in the Celestial Empire equally free to all comers. Mr. Chamberlain asserted that England must do this "unless she was willing to be reduced to a fifth-rate power," and Sir Michael Hicks-Beach declared that England would fight in support of this doctrine. The majority of British papers surmise that such a threat to invoke the decision of arms is based upon the willingness and readiness of the Government to fight, and even the sober financial papers take up the cry. Thus we find in *Money*, London, the following:

"Altho the country as a whole has not quite grasped the fact, this Chinese question is of vital importance to commercial England. The leaders of commerce in this country understand the question full well, and as the importance of it filters down to the masses the Government will have their hands strengthened by the knowledge that in this instance the country is behind them. . . . The world is England's oyster, and if need be she will use the sword to open it. When the shell has been forced open let who will search for pearl; the oyster will suffice for us. The issue before us is plain enough. To give way now would only be to place ourselves at a greater disadvantage in any future conflict. If the struggle for existence is to take place let it come at once, when the nature of the conflict, if not the odds, are in our favor."

The report that Russia had ceased to oppose Great Britain found ready credence. "The case is very simple," said *The St. James's Gazette*; "even with the armed support of France and Germany, Russia would have a hard task in the Eastern seas. Without that support she is helpless, and she knows it. That is why she is so gracefully backing out." The colonial papers also have taken up the cry. *The Witness*, Montreal, says:

" . . . the word war has now been spoken, and the nation is jubilant. . . . It is a very serious matter, however, that the word war has been said, for it is a word from which there is no going back. The leaders of the Liberals have hastened to confirm it, and the only question with even the Radicals is whether the Government means it or not. It will now be for other nations to retire, for Britain can not. The other nations can, for with all their fleets and libations and mailed fists they have taken no position as yet which Britain disputes. The positions from which Russia in Manchuria and Germany in China must retire are only the logical outcome of those they have taken. The same is to be said of France's supposed invasions of the Upper Nile."

The *Montreal Herald* says:

"The significance of the situation as it has been thus defined by the British Minister lies in the fact that Great Britain makes allies of her real rivals. . . . China has, in fact, been one of the very best customers for a line of cheap cotton goods, which England has been able to produce at a lower price than any other nation in the world. Singularly enough, it is the United States,

more than any other country, that has of late years begun an actual competition with Great Britain. Japan, too, as every one knows, aims at holding for herself in the East a position like that of Great Britain in the West, and has come to regard the Chinese Empire as peculiarly the field for Japanese exploitation. Cotton-making has become already almost a national industry in Japan, and the building of mills and buying of improved machinery is still going on.

"We are therefore the more called upon to admire the unfaltering challenge of Great Britain to the powers, inasmuch as, by going to actual war, Britain would be protecting those interests which might be looked upon as more opposed to her own than would be those of the powers she would have to fight."

In view of these almost unanimous threats of warlike intervention the *Vossische Zeitung*, Berlin, remarks: "We can now be assured that peace is nowise threatened. The fact that the British say they will make war proves it." A promise on the part of Russia that Talien-Wan shall be made a treaty port when Russia has extended the Transsiberian railway to it, seems now be to all that Lord Salisbury requires, and calmer moods already begin to prevail in England. *The Westminster Gazette* even warns its readers that they must not be disappointed if England fails to get the Chinese loan, and says:

"We advise our readers not to place too much reliance on the loan, which may easily miscarry, but to fix their attention mainly upon the treaty right, which, whether the loan fails or succeeds, will still be the pivot of our Chinese policy. . . . As a writer in *The Fortnightly* puts it in an excellent phrase, we claim to apply a Monroe doctrine to China. Here is matter serious enough in all conscience, and if any crisis threatening hostilities arises in the far East, it will be from our Chinese Monroe doctrine and not from the loan-treaty. . . . What if Russia and France stand together to deny our treaty rights, at least as regards Port Arthur, or if they obstruct the conversion of Talien-Wan into a treaty port? There lies the point of danger, not immediate, but a little ahead of us in the future. Let us think it out very carefully."

This is regarded as excellent advice by many papers, especially since Russia has not yet "backed out," gracefully or otherwise. *The Novosti*, St. Petersburg, says:

"Russia has no intention to permit the establishment of a free port either in Talien-Wan or in Port Arthur. In conjunction with Germany and France, she will oppose all attempts to encroach upon the interests of the three powers under the guise of commercial freedom. Moreover, it will not be long ere the British authorities must cease to bother about China. They will

have more important business to attend nearer home. England must concentrate her energies in India, where a rebellion much worse than the revolt of the Sepoys is fomenting. Russia would be able to make herself felt there if she chose. We could place 100,000 men on the Afghan frontier in a very short time."

The assumption that Kiao-Chou will be made a free port after the manner of the treaty ports, is based upon an erroneous interpretation of the intentions of the German Government. The German Minister for Foreign Affairs, v. Bülow, officially declares that Germany, anxious to open up the trade of Shantung, will make Kiao-Chou as free as the British possession of Hongkong. *The Kölnische Zeitung*, Cologne, says:

"Kiao-Chou is German territory, and will be treated as such. If it is violated, the Emperor will have as much right to declare war even without the advice of the *Bundesrath*, as if Germany proper had been invaded. Treaties concluded with China by other powers have no force there, and concessions such as for the exploitation of mines will, of course, be given to Germans only."

The Journal des Débats, Paris, thinks this is perfectly satisfactory, and that England certainly has no right to complain since she acts in precisely the same way wherever she is mistress. *The Handelsblad*, Amsterdam, wants to know how England will explain her present demand for absolute international freedom to trade with the endeavors of Mr. Chamberlain to close the colonial markets to foreign competition. Everywhere on the continent the check suffered by England causes expressions of pleasure, and this is explained by the freedom of the British press in casting insults upon other nations and their governments. *The Nachrichten Hamburger* quotes Bismarck's saying that "every nation must sooner or later pay for the windows its press has smashed," and asserts that "England, the country least able to go to war, pays for the conduct of the press by her helpless isolation." A similar feeling seems to gain strength in England itself. *Cosmopolis*, London, says:

"Meanwhile, this seems a good opportunity to make a remark called for by the language of a section of the English press. It is becoming the fashion to attach comparatively little importance to the plans and utterances of the German Emperor. . . . In fact, to put it bluntly, we, as a people, are getting into the habit of laughing at him. There could hardly be a more foolish or a more dangerous mistake. Not even a German would deny that His Majesty speaks impulsively, and that his enthusiasms succeed each other with almost startling rapidity. But this is part of the superficial manifestations of genius. For the German Emperor is a man of genius. . . . It may well be that he will yet make history. We should hope that this will not be at our expense. Our press and people have often treated him both unfairly and vulgarly."—*Translations made for THE LITERARY DIGEST.*

THE FAMINE IN RUSSIA AND ITS CAUSES.

THE Russian peasants on the Don and the Volga are threatened again with a serious famine. Some fifteen to eighteen millions of people, according to official computation, are in danger of serious want. This is all the worse as they have not yet recovered from the terrible drought in 1891. There are districts on the "black soil" where 20 per cent. of the peasants are without horses and can not properly turn the soil. As usual, drought, accompanied by a plague of insects, increase of field mice, and inundations are mentioned as causes of the famine. An article in the *Tägliche Rundschau*, Berlin, nevertheless, goes to show that the "acts of God" are not solely the cause of the Russian peasants' misery. We quote as follows:

"There is no doubt that the Russian peasants, who possess almost incredible ability to bear hardships of this kind, will again get over the worst of the famine without a great catastrophe. The inherent power of resistance in the Russian people has always enabled them to do so without serious loss to their national strength. This power is so great that the nation as well as the

SEE-SAWING.—*The Herald, New York.*

individuals of which it is composed can bear misfortunes which would be fatal to others. Our own military authorities know this fact well enough, they have not forgotten the lessons which were taught Prussia as early as the times of Frederick the Great.

"But this can not remove the fact that Russia is now threatened with chronic evils which imperil its economic life. The causes may be described as follows: 1. The increase of the peasant population, which does not have a corresponding increase of agricultural produce to offset it. 2. Ruthless exploitation of the arable soil crust. 3. The present system of municipal ownership. 4. A change for the worse in the climatic conditions of the country, as a consequence of the systematic destruction of the forests. With regard to the first point it must be remembered that when, in 1861, serfdom was abolished in Russia, the soil was divided between the owners and the now liberated peasants. The share of the latter was not too large even then. Since then their number has increased very much, and the acres now given to each householder are not sufficient to provide for the wants of his family. This would not matter if the peasants could emigrate; but there is no longer any unoccupied land in European Russia.

"Moreover, the methods employed in farming have gone from bad to worse. As the peasant can not own the land he tills, but has a new plot assigned to him every three years, he has no interest in the improvement of the soil. Communal supervision does not appear to be a success. Every one tries to get as much as possible out of the land, which, for the time being, is under his care. It must, however, be acknowledged that the great landowners, tempted by easy means of transportation furnished by the railroads, have also ruthlessly exploited the soil. Lastly, the destruction of the forests. Enough has been written in 1891 and 1892—during the great famine—to show that the cutting down of all the trees without planting new ones causes inundations in the spring and droughts in summer."—*Translated for THE LITERARY DIGEST.*

THE JEW AND THE BRITON.

ANTISEMITISM is censured a good deal lately in papers which can not be said to take their inspiration from the Jews. The *Kölnische Zeitung*, Cologne, points out that French antisemitism has no very great justification, since the Jews in France number less than 60,000, and many of the wealthy ones brought their fortunes with them from Germany and Austria. An English magazine, *The Contemporary Review*, gives space to an article by John A. Dyche, who endeavors to show that in England, too, there is little cause to oppose Jewish emigration. The writer, himself a Hebrew and a tailor by trade (a continental contemporary remarks humorously that if he handles his needle as ably as his pen he is wise to make his living with the former), makes a comparison between English and immigrant Jewish working men, which we condense as follows:

There are many popular fallacies regarding the Jews. First of all, the public regard them as much more numerous than they really are. Next comes the idea that the Jews work for less than the native English, and that they oust English workmen from their places. As a matter of fact the Jew earns larger wages than his English competitor. Thus at Leeds the members of the Tailors' Union earn 5 pence per hour. Smart Jewish tailors earn seldom less than 6 and often more than 8 pence. Under these circumstances it seems rather ridiculous to say that the Jew takes the bread out of an Englishman's mouth. That Jewish employers can fill contracts cheaper than English ones is true enough, but it is *not* because they grind down their workmen, but because they are satisfied with less profit themselves. In the workshops of Jewish employers, the men are much less exploited than in establishments owned by Englishmen. Nor have the Jews forced any establishment to close on account of their competition. They have opened new factories.

But what causes this superiority of the Jews. Firstly because they have more brain than Englishmen, and secondly because their character is better. A Jewish workingman is, to a certain extent, an artist. His work may not always be as solid and lasting as could be wished, but it is well finished and tasteful. The Englishman, on the other hand, is merely a laborer. His work

is like his temperament, his food, his drink; it is strong, lasting, solid, but also uncouth, unrefined, tasteless. In fashion and taste the English are compelled to follow the foreigner. The Jews, now, have introduced a style of manufacture with which the English, on account of their slowness, can not keep pace. It is due to the Jews that a workingman may nowadays buy a well-fitting, new suit of clothes for the price he formerly paid for second-hand things, and the very trades-unionists who grumble so much about Jewish and foreign competition avail themselves of these advantages.

In character the Jew is much superior. He has greater respect for women, and is never known to send his wife to a factory to earn money, as Englishmen will do. He takes greater care of his children, and loses less of them. New York statistics show this better than anything else. There were, in 1890, 180,000 Jews in New York. During the six preceding years the death-rate among them was only 6.2 per thousand as against 28 per thousand among the Irish, 23 per thousand colored, 20.6 per thousand English, 17 per thousand German, and 16 per thousand Americans.

Lastly, the Jews lead more moral lives than the English. This is well known among people who are competent to judge. In the East End of London some of the worst places have been improved since the Jewish emigrants settled there. Such quarters as Flower Street, Dean Street, Brady Street have become safe and quiet. In Whitechapel the difference between streets inhabited by the English and those occupied by foreigners is very marked. In the former, filth, drunken persons of both sexes, and crime. In the latter, order and quiet and an absence of obscene and disgusting language.

The *Handelsblad*, Amsterdam, remarks that this article is very timely. "It would be a good thing," says our contemporary, "to place it before the jingoistic antisemite howlers and writers in Paris, if only they knew enough to read anything not written in their own language."—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

Is Turkey beginning to reform? Forty-six Armenians, including two Protestant ministers, have been released at Bitlis. The courts found that the charge of high treason could not be supported. On the other hand four Kurdish chieftains have been found guilty of robbery and deported under long-term sentences.

THE Portuguese have received with unbounded enthusiasm Monsignore de Albuquerque, Royal Commissioner for Mozambique. De Albuquerque opposes all advances of the British Government in the Delagoa Bay question, and the Portuguese people seem determined to hold on to all colonies still possessed by them. Hence it is unlikely that the Portuguese Government will accept British offers, however advantageous, even if France and Germany did not interfere; especially as Mozambique is a paying colony.

MAJOR V. HANNEKEN, formerly in the service of the Chinese Government, confirms the report that Shantung is an excessively poor province. He does not think the trade of Kiao-Chou will be worth more than six or seven million dollars annually for many years. He asserts however, that the Germans are better off in Shantung than they would have been elsewhere in China. The people of Shantung are the most energetic and physically the most able race in China. The province can not export tea or silk, but it has immense coal-fields, and a European nation willing to work can make it an industrial center. All that is necessary to make the natives loyal is to treat them justly.

It has often been noticed that the Prussian Government regards every man who makes his living in Germany as valuable to the country so long as he does not actually defy the authorities. This is shown specially in the case of the Polish immigrants. Nearly 100,000 of them have settled during the past few years in the industrial districts of Rhenish Prussia and Westphalia. They bring their Polish habits with them, preserve their nationality as much as possible, and take advantage of the regulations which permit them to have Polish schools with subsidized teachers. They do not even pretend to be loyal German citizens. But so long as they do not actually revolt, the Government does not interfere, confident that the descendants of these immigrants will be all the authorities desire.

TOTTENHAM COURT ROAD is a quiet London street, but it has an international reputation, for an Anarchist club meets there whose members were badly frightened last Christmas. A tenant of the house in which the club holds its meetings had bought a plum-pudding, which he forgetfully left on the doorstep upon entering. A foreign Anarchist came along, noticed the suspicious-looking vessel, and rushed up-stairs to warn his friends. There was no doubt of it! Some vile slave of the powers that be had placed a bomb to destroy the friends of freedom. Shouts for the police rent the air, and a heavy-footed London "cop" was commissioned to remove the dangerous object. His language is said to have been more expressive than classical when he discovered the true nature of the package, especially as the wife of the owner of the "bomb" appeared to claim it for her dinner.

MISCELLANEOUS.

LAFAYETTE IN COURT AND CAMP.

ON a foundation of biography a new writer, handling a familiar theme (Edith Sichel's "The Household of the Lafayette"), has erected a structure of history which at once engages the attention and compels the admiration of the reader. Hers is an *esprit* most appropriately Gallic—vivacious, epigrammatic, satirical, keen, yet quick to adjust itself to situations of sentiment, pathos, and tragedy. She is at home in the salon, happy in the cottage, and brave in the prison; as a critic in *The Speaker* aptly puts it, she just misses creating a work of genius by transforming her story of the Revolution into a novel without a hero.

"We expect [says this critic] fine things of Lafayette—the Grandison-Cromwell whom Mirabeau summed up in two words and flung off his path in disdain—but we get only a noble sort of schoolboy, immature, sanguine, gullible, soft-hearted, and domestic, the most absurd antithesis to Napoleon that ever was. . . . Mme. Lafayette was the hero, not her husband; he was nothing else than a hat and feathers, with a tricolor cockade. Yet this strange political scarecrow did some notable feats in his time. In America, where he seemed to have a breath of life in him, the Marquis helped to beat Cornwallis and take him at Yorktown; he uttered the magic dissolving word, 'States-General'; he saved the King and Queen at Versailles on October 6, 1789; he presided, as we may say, at the second abdication of Napoleon; and he floated with his plumes over the three days of July, and made Louis Philippe King of the French. An active scarecrow! unless we bear in mind that he neither called out, nor directed, nor could really master, the forces by which he was moved. The man was a sign, not a sovereign—a formula, an empty case, a French Washington (that is to say, not an American one), and a Cromwell, who began and ended, like Sir Charles Grandison, bowing over the hand of his mistress, the Revolution, in an attitude of chivalrous imbecility."

A "scarecrow," but not in politics only; for in the salons to which beauty, grace, and wit had *entrée*, the idealistic and quixotic young noble was to be found, "lean, red-haired, hook-nosed, awkward," with his retreating forehead, his prominent eyes, his expression full of vague inquiry, his invincible oddness, which seemed grotesque even in circles where oddness was cultivated as a charm. And this was the "Impossible"—the pure and brave enthusiast, strangely joining integrity, goodness, devotion, dignity with an incredible vanity, dulness, and obstinacy—whom we presently find the accepted lover and husband of Adrienne de Noailles, daughter of the saintly Duchess d'Ayen, sister of the martyred Vicomtesse de Noailles, and of Mme. de Grammont and Mme. de Montagu.

Of this family *The Speaker* thus speaks:

"They filled the court; they occupied the foremost places in the camp and in the church. They had a tradition of piety, goodness, and benevolence, which expanded as the new era came on into a spirit of boundless self-sacrifice. There were four daughters, trained by their mother, the Duchesse d'Ayen, to all high courtesies, to religion, to simplicity, on a method which savored, perhaps, of 'Emile,' but which proved to be intensely Christian. It is not surprising, therefore, that on one day (July 22, 1794) three generations of the Noailles perished on the scaffold in a quarter of an hour; Mme. la Maréchale; her daughter-in-law, the Duchesse d'Ayen; and her granddaughter, the Vicomtesse de Noailles. 'They were accused,' says Miss Sichel, 'of conspiring with a person unknown to them, and dead at the time of the alleged plot, to assassinate the Committee of Public Safety.'"

And these were the flowers of simplicity, devotion, and self-abnegation that survive to us, to smell sweet and blossom in the gold dust and the face-powder of the *ancien régime*, with its enchanted vice and its sensational starvation; its Cupids and

groveling slaves; its curtsies, its minuets, and its insolent high hats; its wax candles and its intrigues; its ladies in patches and powder, playing at *les Graces* with gentlemen in three-cornered hats and pink satin waistcoats—"gentlemen who occasionally hunted peasants instead of stags."

In the Paris of that day there was a restricted circle which was omnipotent. The ruler of this coterie and the tyrant of good tone was the famous Maréchale de Luxembourg, who, in spite of a naughty youth, became in her old age a martinet about behavior. Once she overheard somebody remark that God was no respecter of persons and would take no note of good or bad tone. "You are mistaken, madame!" was all she replied, more in sorrow than in anger.

Very delightful in her amusing oddness was Mme. de Tessé, an aunt of Mme. Lafayette—a warm-hearted free-thinker, who had been a staunch friend of Voltaire. While she regarded the priests as peculiarly liable to error, she made them the ministers of her charity, and poured her bounty, with a free hand, upon such of them as were in distress. She lived in the world of wits and scholars, where dulness was the only sin, and thought, however daring, could never be impious. Her strongly marked features were full of character, but she had no beauty except her abundant black hair, and her face was marked with smallpox. Eccentric in all that she said, thought, or did, she gave herself away, in manners as in everything else, with the vehement generosity that animated her.

"Perhaps Mme. de Tessé inherited her eccentricity, tho not her intellect, from her far less notable mother. The Maréchale was the exception to the Noailles law of saintliness. She presents an erratic contrast of family pride, stately childishness, and conventional vagaries. Devout she was, but her piety took the dubious form of religious kleptomania. She could not keep her hands off sacred relics, and on one occasion it required all the Noailles' influence to rescue her from excommunication; she had stolen the arm of Ste. Genevieve from the chapel of some nuns, pounded it and dissolved it in some medicine to cure the Duc d'Ayen, her eldest son, of scarlet fever. With some difficulty, they extricated her from her dilemma, only to learn a few days afterward that a precious eucharistic chalice had disappeared from another church in like manner. She had other habits, equally innocent, impious, and inconvenient. For instance, she kept up a constant correspondence with the Virgin Mary, posted her letters in a dovecote, and never suspected that it was her priest who answered them. 'What familiarity!' she once exclaimed; 'this little *bourgeoise* of Nazareth addresses me as "Dear Maréchale de la Troisième-ligne"—but I must remember that she is my Savior's mother' (here she bowed her head), 'and, after all, she *does* come of the royal house of David.'"

"Even while we laugh," writes her biographer, "there rises before our eyes a vision of this same lady borne in a tumbril, with uncomplaining dignity, to the scaffold. Her aberrations are not the part of her by which she will be best remembered."

One night, in 1776, the old Marshal de Broglie, commander of the forces at Strassburg, gave a dinner in honor of the Duke of Gloucester, who was in disgrace with his royal brother, George III. Being lighthearted and malicious, he regaled the company, at the King's expense, by a humorous account of the smashing of the tea-chests in Boston harbor. This was the first that Paris had heard of American independence, and among the audience—officers in blue and silver, Strassburg grandees in gold lace and velvet, laughing, exclaiming, gesticulating—was one silent, serious young soldier, who might have seemed insignificant but for his eager eyes, and indifferent but for his intent attitude and expression. Nobody noticed him. After dinner he strode over to the Duke and spoke for the first time: "I will join the Americans—I will help them in the fight for freedom. Tell me how to set about it."

"This was the Marquis de Lafayette, now nineteen years old, the adoring husband of a lady who returned his attachment;

already the father of one child, and now expecting another. The anecdote is an epitome of the man. He was ruled by two passions—the one for his wife, the other for freedom; and the latter was the stronger of the two. In his amorous pursuit of liberty under all her Protean forms—a pursuit sometimes stern, always sanguine, and maintained through a long life—he has never been rivaled, unless it be by Mr. Gladstone in our day."

The d'Ayens stormed; Adrienne prayed for guidance; but Lafayette went to London, and boldly aired there his sympathy for the rebels, laughed in his sleeve when he was presented to the King, danced at the house of the Secretary for the Colonies, and went to the opera to meet General Clinton, whom he afterward encountered at the battle of Monmouth.

"Benjamin Franklin was then in Paris, receiving such ovations in his marten-fur cap and fustian suit as the old Spartan had never dreamed of. Parties were given in his honor, at which the most beautiful women were chosen to embrace him in turn, and place wreaths upon his head. A medal, with his portrait and an Olympian motto, was struck and even shown to the King. No man of quality was complete without a ring or a snuff-box with his medallion. 'These,' he wrote to his daughter, 'have made your father's face as well known as that of the moon, so that he durst not do anything that would oblige him to run away, as his phiz would discover him wherever he should venture to show it.'"

Presently we find Lafayette in the American camp. Washington took to the new recruit at first sight; "he was attracted by his modesty," and accompanied him to the camp at Annapolis. To his wife, Lafayette wrote: "This noble man, whose gifts and goodness I admire, whom the more I know the more I revere, wishes to be my friend. His tender interest in me has won my heart. I am established in his house; we live in mutual intimacy and confidence." To quote Miss Sichel again:

"We are apt to look upon Washington rather as a national institution than a man; he has grown to be an abstract of liberty, or a type, like Moses and Daniel. But his friend makes him a human creature, with a heart that beat quickly enough, as well as soul that soared high. The Washington that Lafayette shows us is a dignified mixture of courage, sense, honor, and minute kindness. When, nearly fifty years later, Lafayette revisited the whitewashed walls of Mount Vernon, it seemed to him a shrine for solitary pilgrimage—a shrine of familiar recollections, grave and gay, and the fitting expression of its owner's simple, unchanging character.

"Presently we find the two wintering together at Valley Forge, while the commander was training his troops in the face of every hardship. There was freezing cold without; stupidity and ignorance within."

In 1779 the Marquis, after a sharp attack of fever, decided to return to France. He made for Paris, passing through Versailles—was congratulated, questioned, introduced to the ministers, and arrested; but his prison was the beloved Hotel de Noailles. All the ladies in Paris came post-haste to embrace him—all the Ministers to consult him. The King summoned him to Versailles, reprimanded, embraced him, set him free. Then came his popular vogue; at the theater, the remotest allusion to his career was greeted with outbursts of applause. It was all delightfully French.

In 1780 he returned to America, accompanied by the Vicomte de Noailles, Messrs. de Luzerne, de Chastellux, de Montesquieu, and others.

When Cornwallis capitulated, there was panic in England. Lord George Germain was asked how the Premier, Lord North, had taken the news. "As he would have taken a ball in the breast; for he spread his arms, exclaiming wildly, as he paced up and down the apartment, 'O God, it is all over!'" in the greatest agitation and distress.

"And then the Deluge"—and "the Terror." It has all been told, again and again, but never with more ghastly vividness and tragic irony than in these pages.

And thus the case of this noble but "impossible" enthusiast is summed up by the critic of *The Speaker*:

"Lafayette, a soldier at nineteen, without education in politics, or an eye for experience, or the slightest tincture of practical wisdom, ought never to have meddled with affairs of state. Excellent is the saying which we find in our author's judgment of him: 'Lafayette had the density which belongs to all minds nourished on a fixed idea'—density marks his features, an impenetrable dulness to the realities that lie in front and that solicit, nay, importune, his gaze. But he will never see them. He is looking over them at the horizon, far away. His integrity was a part of his dulness. When Napoleon, by the treaty of Campo Formio, shattered his prison-doors, and let him go free, in company with the noble wife who had shared his cell, and who was to die of the blood-poisoning contracted there, Grandison-Cromwell—tho the Cromwellian part of his rôle had not become impossible—dreamt of the Constitution of '91, of an American President, and a Bonaparte that should emulate Washington. He could not be undeceived till 'the tyrant,' as Miss Sichel briefly calls him, was crowned with the circlet of Charlemagne. Then he woke up, protested silently, was the one man, as Napoleon said in his wrath, who would not bend where all the world worshiped, and so remained, pure and obstinate, till the bad dream vanished again."

"But it is the Lafayettes, even more than the Robespierres, who make revolutions tragic; for, had he shown himself acquainted with the secret of his admired Washington, there never could have arisen a Robespierre to send his wife to the Luxembourg and her family to the guillotine. He could not 'swallow his formula,' and his formula came very near swallowing him."

INJURIOUS FUNERAL USAGES.

APROPOS of the recent movement by pastors of churches in the West for the discouragement or suppression of useless and expensive funeral customs, *The Examiner* (Baptist, New York) expresses its own views on the desirability of such a reform. To begin with, it cites a number of recent well-known cases when men have contracted a fatal illness while standing exposed in inclement weather at the graves of friends. One of these was Sir Frank Lockwood, an eminent member of the English Parliament, who died recently from the effects of such an exposure. Proceeding from these instances, *The Examiner* says:

"A kindred sacrifice of the living to the dead is seen in the expectation, especially at rural funerals, that the pall-bearers shall personally lift and carry the casket, perhaps from the house to the church, perhaps from the house to the hearse, and again from that to the church. In this there is a historical impropriety. The 'pall' was the black cloth which anciently covered the coffin; the pall-bearers, as an expression of respect and affection, bore the corners of the pall. The pall-bearers usually are persons not used to lifting heavy burdens; and they have to act at every disadvantage in carrying a great weight, perhaps upstairs, through narrow aisles, or lifting it over pews. We have known instances where the bearers have been seriously injured by the strain to which they have been subjected. The coffin should be carried by men employed for that purpose, who, by reason of strength and practise, can discharge this service without hardship to themselves.

"It is sometimes thought a mark of respect to the deceased to delay the funeral. This practise often involves great hardship, especially to the poor and those who live within very narrow space, and it is attended with grave sanitary dangers. In one instance within our knowledge a family of five were living in a single room, and when a child died the body remained in the room for, perhaps, three days. Such practises should be forbidden by law.

"The viewing of the remains' is another practise harrowing to the family and often leading to most painful expressions of grief, and sometimes tending to perpetuate and spread disease. Was ever anything more repulsive than the spectacle presented, when the body of the Czar was carried from town to town and kissed by tens of thousands?"

BUSINESS SITUATION.

The feature of the week affecting trade in general has been, of course, the *Maine* disaster, and the growing conviction, as the work of the board of inquiry progresses, that the "accident" theory will be disproved. This has caused hesitation in some large business operations and may account, in part, for a check in the rapid advance in the price of wheat. On Monday the price reached 108 75, but almost immediately declined 3 1/2 cents. There was a sharp decline also in Standard Oil and some other speculative securities. New business, however, is unprecedented for the dull season. Payments through clearing-houses for the week have been 57.5 per cent. greater than last year.

Wheat and Corn.—"Wheat continued its progress upward until 108.75 was reached on Monday but declined 3 1/4 cents later, as if there were fear that Spain would somehow stop British vessels from taking wheat across the water. Any yielding based on foreign possibilities deserves little notice, but the price has advanced about 10 cents since Chicago speculators last took occasion to shake off weak followers, and the opportunity for a reaction was inviting. There is no abatement of foreign demand. Atlantic exports were 1,968,814 bushels, flour included, for the week, against 1,326,444 last year, and Pacific exports 1,576,376 against 136,464 last year, and in view of current excitement these figures are more important than the aggregate for four weeks, 10,496,912 bushels, against 6,588,415 last year from Atlantic ports, and 4,053,028 against 1,611,246 from Pacific ports. Corn exports for the week were 14.5 per cent. less than last year, but the cash price declined but slightly. The spot price of cotton was not affected."—*Dun's Review, February 26.*

Iron and Steel Products.—"The demand for iron and steel at the West still continues large and prices are firm. A feature of Chicago trade has been the placing of an order for 5,000 tons of steel rails for a railroad in Alaska. Almost equally good reports come from the Northwest, where trade is reported either fully equal to or ahead of last year. Among the advances of the week might be mentioned Bessemer pig, with a slight gain, sugar, lard, and Lake Superior copper, which latter product is reported in a very favorable position statistically. The decreases, largely speculative, or due in some measure to uncertainty as to the political outlook, include wheat, corn, and pork."—*Bradstreet's, February 26.*

Cotton, Wool, and Other Textiles.—"It is not the season for much improvement in textile manufacture, but the cotton branch has gained by the closing of the strike in one Fall River mill, and by addition of some works at the South. The woolen manufacture meets many cancellations, especially in goods sold early without definite price, but is doing more than ever at this season, tho new business in the higher grades of worsteds and woolens is not particularly encouraging. Sales of wool are slow, with weakness in clothing, amounting to about two cents decline from the highest point, indicating that mills have at present abundant stocks, but some are selling foreign wool in order to take supplies of other qualities. In goods of medium and low grades the demand continues large. The silk manufacture shows a remarkable increase during the last six months, having imported raw material far in excess of consumption in any previous year, and at a rate 120 per cent. above the imports in the last census year."—*Dun's Review, February 26.*

The Money Market.—"The money market has been stronger, with a net outgo of \$2,500,000 cur-

rency from New York, interior banks preparing for spring settlements. An important statement shows that seventeen banks are now loaning 42 per cent. on commercial paper, after the extensive liquidation, against 64 per cent. in April, 1896; 77 per cent. in April, 1895, when customers were largely carried by the banks, and 72 per cent. in the panic period of 1893. Failures for three weeks have been \$7,293,439 against \$10,619,784 last year, and \$10,889,986 in 1896. Manufacturing were \$3,266,280 against \$5,498,042 last year, and \$4,480,577 in 1896, and trading \$3,784,351 against \$4,763,034 last year, and \$5,478,105 in 1896. Failures for the week have been 283 in the United States against 296 last year, and 30 in Canada against 50 last year."—*Dun's Review, February 26.*

Canadian Trade.—"Stormy weather and Lenten observances have checked the volume of demand and distribution in the Dominion of Canada. Demand from the country has been heavily reduced, except where lowered railway rates in special cases made for large traffic at some towns. The rate war between the two great Canadian roads is reported giving both all they can do to handle business offering, and locomotives are being borrowed to help move traffic. The Klondike trade is active at both Montreal and Toronto, and it is estimated that \$2,000,000 will be spent this spring at these two cities in outfittings. A large spring business is anticipated when the roads improve. In the maritime provinces business is checked by bad weather. The coast of Newfoundland is blocked with ice, and shipping business is consequently interfered with. From the Pacific coast of the Dominion come reports of activity in Klondike trade. Up-country trade is rather slow. Business failures in the Dominion of Canada this week number 45, against 38 last week, 50 in this week a year ago, 52 in 1896 and 44 in 1895. Bank clearings at six Canadian cities aggregate \$27,533,463, a falling-off of 3 per cent. from last week, but a gain of 35.7 per cent. over last year."—*Bradstreet's, February 26.*

PERSONALS.

CARROLL D. WRIGHT, United States Commissioner of Labor, is receiving many congratulations over his recent election as a member of the Institute of France and of the Imperial Russian Academy of Sciences.

A CORRESPONDENT of the London *Spectator* tells this story to illustrate the biting humor of the late Charles Pelham Villiers: "The anecdote," he says,

THE TIN LINING OF THE.....

Brown Bros.' Cold Drawn Seamless Copper House Range Boiler

Absolutely insures against rust, and gives you

CLEAN HOT WATER

THE spiral rib guarantees against collapse. No seams: No rivets: No leaks. For sale by all plumbers, Boiler booklet tells the whole story. Yours for the asking.

RANDOLPH & CLOWES

Box 19, Waterbury, Conn.

WE have recently made some exquisite Spring Dresses for leading New York society ladies and prominent actresses, who are famed for the good taste which they display in the selection of their toilettes. Photographs of these ladies and the garments which we made for them are shown in our new Spring Catalogue, which is now ready. To the lady who wishes to dress well at moderate cost, we will mail free this attractive Catalogue and a complete line of samples of new materials to select from.

Our Catalogue Illustrates:

Tailor-Made Suits, \$5 up. Outing and Blazer Suits, \$4 up. Separate Skirts, \$4 up. Bicycle Suits, \$4.50 up. Bicycle Skirts, \$3 up. Capes and Jackets.

Our new designs in Bicycle Skirts are recognized everywhere as the most practical skirts for wheeling that have yet been produced.

We Pay Express Charges Everywhere.

Our line of samples includes the newest materials for Spring and Summer wear, many of them being exclusive novelties not shown elsewhere. Write to-day for Catalogue and samples; you will get them by return mail.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"must be reproduced with unorthographic exactness. Half its point would be lost if it were translated into the Queen's English. Mr. Villiers had been asking a Radical elector to support him. 'Yes, I'll support you. But, Willars, we must have a diwision of property!' 'Certainly,' replied the diplomatic candidate; 'I should be quite in favor of such a measure. But I am afraid that if property is divided there will not be enough for you and me and the rest of us.' After a momentary embarrassment the cheerful and resourceful Socialist hit on a remedy: 'Why, then, Willars, we must diwide again!'"

SPEAKING of ex-President Frey, of Switzerland, Dr. Leroy Dibble, of Kansas City, says: "I lived in Switzerland nearly two years, and had the pleasure of talking over old war days with the President of the republic. When a young man he came to this country, in 1857, and settled in Illinois. When the war broke out young Frey enlisted in an Illinois regiment as a private, and he served with distinction, being promoted to lieutenant. Frey was captured and was confined for a long time in Andersonville Prison, and was one of the three men who escaped. Soon after this his father died, and he returned to Switzerland to manage the property. He afterward became President of the republic."

THE following, according to the Buffalo Commercial, is a complete list of the maiden names of the mothers of the Presidents of the United States: Washington, Mary Ball; John Adams, Susanna Boylston; Jefferson, Jane Randolph; Madison, Nellie Conway; Monroe, Eliza Jones; J. Q. Adams, Abigail Smith; Andrew Jackson, Elizabeth Hutchinson; Van Buren, Maria Hoes; Harrison, Elizabeth Bassett; Tyler, Mary Armistead; Polk, Jane Knox; Taylor, Sarah Strother; Fillmore, Phoebe Millard; Pierce, Anna Kendrick; Buchanan, Elizabeth Speer; Lincoln, Nancy Hanks; Johnson, Mary McDonough; Grant, Hannah Simpson; Hayes, Sophia Birchard; Garfield, Eliza Ballou; Arthur, Malvina Stone; Cleveland, Annie Neal; Harrison; Elizabeth Irwin; McKinley, Nancy Campbell Allison.

A READER OF THE LITERARY DIGEST writes to make a correction of fact. In speaking of our note (in this column in our issue of February 12), relative to the appointment of Captain W. W. Rich, formerly Chief Engineer of the Wisconsin Central, and later connected in the same capacity with the Canadian Pacific to be Director General

of Railways in China, our correspondent (who is connected with the staff of The Railroad Gazette, of this city) writes: "It will be impossible for Mr. Rich to be appointed to this office as it is already occupied by a Chinese official. At the time this rumor became current, I telegraphed to people likely to know about this appointment, and also wrote to the Chinese Consulate in New York City, who reported that he knew nothing of the appointment and did not believe that it could be made. Captain Rich, as I understand it, is on a three months' leave of absence from his duties as Chief Engineer of the Minneapolis, St. Paul, and Sault Ste. Marie Railway, and is merely looking for an opening on government railways."

Current Events.

Monday, February 21.
The Maine disaster investigation begins. . . . The case for the defense in the Lattimer shooting case of Sheriff Martin and his deputies is opened. . . . Captain Eulate, of the Spanish cruiser Vizcaya, in New York harbor, calls on Admiral Bunce at the Navy Yard, General Merritt at Governor's Island, and Mayor Van Wyck at the City Hall. . . . Congress—Senate: A resolution instructing the committee on naval affairs to investigate the Maine disaster is passed, and an appropriation of \$200,000 for an examination of the wreck is voted; the census bill is discussed. House: The day is spent in consideration of private bills.
The Maine court of inquiry reaches Havana and holds its first session, with Captain Sigsbee as a witness; a conference is held with the Spanish officers who are likewise conducting an investigation; in Madrid Premier Sagasta announces that the reports of divers, since confirmed, prove the disaster to have resulted from accident. . . . Summing up in the Zola trial in Paris, an address to the jury is delivered by the advocate-general, and sensational addresses are made by MM. Zola and Labori. . . . The Swiss referendum has resulted in popular approval of the proposed state purchase of the railroads of Switzerland.

Tuesday, February 22.
A contract for work on the hull of the Maine is signed by the Navy Department and the wrecking companies. . . . President McKinley delivers an oration before the faculty and students of the University of Pennsylvania. . . . Ex-President Harrison makes an address on "The Obligations of Wealth" at the Washington Birthday celebration in Chicago. . . . Rear-Admiral Bunce, Major-General Merritt, and Consul-General Baldasano return the official call of Captain Eulate, of the Spanish cruiser Vizcaya; the Vizcaya takes on coal. . . . There are a number of flag-raising and other patriotic celebrations of Washington's Birthday. . . . Congress—Senate: A bill providing for two more additional regiments of artillery is passed by a vote of 52 to 4. House: The sundry civil appropriation bill is under consideration; the feature of the debate is a speech by Mr. Johnson, of Indiana, against annexation of Hawaii.
The Maine court of inquiry begins taking testimony at Havana. . . . The Marquis of Salisbury reads a telegram from the British Ambassador at Paris, in which it said that France disclaims all intention of usurping British territory in Africa. . . . M. Labori makes a strong speech continuing the defense in the Zola trial. . . . The report of an Anglo-German loan to China is confirmed, and China makes important trade concessions to foreign countries.

Wednesday, February 23.
Latest information in regard to the Maine disaster received in Washington shows that a boiler explosion could not have been the cause; two of the wrecking boats leave this city for Havana. . . . Postmaster-General Gary and the governor of South Carolina offer rewards for the arrest and conviction of the murderers of Baker, the negro postmaster at Lake City, S. C. . . . Marine insurance companies raise their rates on vessels in Klondike regions. . . . Governor Black, of New York, signs canal investigation bill. . . . Congress—Senate: Mr. Allen's Cuban belligerency rider to the diplomatic appropriation bill is laid on the table. House: The sundry civil appropriation bill is considered.
The Maine court of inquiry examines several officers of the lost battle-ship at its session in

A PECULIAR FACT.

Thousands of People Have Dyspepsia in its Worst Form and Do Not Know It.

A weak stomach is the cause of about nine-tenths of all disease, yet in most cases the wrong thing is treated and the true cause overlooked.

This is because a weak digestion produces symptoms resembling nearly every disease, because it weakens and disturbs the action of every nerve and organ in the body; poor digestion causes heart trouble, kidney troubles, lung weakness and especially nervous break down or nervous prostration; the nerves cannot stand the wear and tear unless generously fed by well digested, wholesome food.

Keep the digestion good and no one need fear the approach of disease.

Mrs. H. M. Lee, of Rochester, N. Y., writes: For the sake of suffering humanity I want to say that from a child I had a very weak stomach, threw up my food very often after eating, and after a few years nervous dyspepsia resulted and for more than twenty years I have suffered inexpressibly.

I tried many physicians and advertised remedies, with only temporary relief, for nervous dyspepsia, and not until I commenced taking Stuart's Dyspepsia Tablets last September, six months ago, have I been free from suffering caused by the condition of my nerves and stomach; in short, chronic nervous dyspepsia.

I have recommended Stuart's Dyspepsia Tablets to many of my friends, and now I want, in a public way, to say that they are the safest, pleasantest, and, I believe, surest cure for stomach and nerve troubles. I write my honest opinion, and I will gladly answer any letter of inquiry at any time and feel that I am, in my small way, helping on a good cause.

Stuart's Dyspepsia Tablets is not a patent medicine, but they contain only the fruit salts, digestive acids and peptones necessary to help the weak stomach to promptly and thoroughly digest food.

All druggists sell Stuart's Dyspepsia Tablets at 50 cents for full-sized package, and any one suffering from nervous dyspepsia, sour stomach, headaches, acidity, gases, belching, etc., will find them not only a quick relief but a radical cure.

Send to Stuart Co., Marshall, Mich., for little book describing cause and cure of stomach troubles, giving symptoms and treatment of the various forms of indigestion.

All Filters Are Dangerous.

The disease germs are smaller than the pores and work through. Kill them. The only absolutely pure water aerated with sterilized air is made by

The Sanitary Still.

Disease germs can not survive the process of distillation. The Sanitary Still fits any stove and the same fire which cooks the meal distills the water in abundance. Easy to manage as a tea kettle. Write for booklet.

WRITE TO-DAY. W. ATLEE BURPEE & CO., PHILADELPHIA.

Havana harbor; it is said that every survivor of the *Maine* will be examined. . . . MM. Zola and Perreux are found guilty by a Paris jury and sentenced to be imprisoned and fined; the novelist's sentence being one year in prison and 3,000 francs fine, the maximum penalty. . . . The squadron of Prince Henry of Germany and two Russian war-ships arrive at Singapore. . . . Canon Wilderforce addresses a service in memory of Frances E. Willard in London.

Thursday, February 24.

Secretary Long denies that any information regarding the *Maine* disaster has been suppressed, and advises the public to suspend judgment until the court of inquiry reports. . . . There is much activity among naval vessels; the monitor *Terror* leaves the Norfolk Navy Yard under sealed orders. . . . The Portland (Ore.) Chamber of Commerce passes resolutions urging Congress to withdraw the bonding privilege from the Canadian Pacific Railroad. . . . A meeting of Cubans to celebrate the third anniversary of the beginning of the struggle for independence is held in this city. . . . Francis M. Bunce, commandant of the Brooklyn Navy Yard, is commissioned rear-admiral. . . . Congress—Senate: Mr. Allen withdraws his Cuban resolution. House: A bill for the relief of the families of the victims and the survivors of the *Maine* disaster is introduced.

The *Maine* court of inquiry holds another session in Havana harbor. . . . Premier Méline replies strongly in the French Chamber of Deputies to the interpellations regarding Zola's trial; the Chamber votes confidence in the Government, 416 ayes to 41 noes; counsel for MM. Zola and Perreux file notices of appeal in behalf of the two convicted defendants. . . . Prince Henry of Germany lands at Singapore from the cruiser *Deutschland*. . . . The pledge of Russia to Great Britain to keep the ports of China free is quoted *verbatim* in Parliament; one half of the Chinese loan is underwritten in London, the amount, \$40,000,000, being oversubscribed. . . . Mr. Gladstone will undergo operation for necrosis of the nose.

Friday, February 25.

The *Maine* disaster is informally discussed by the Cabinet, but no new information is received; Secretary Long has taken a brief vacation. . . . The Interstate Commerce Commission grants a further suspension of the long-and-short-haul clause to enable American railroads to meet the Canadian Pacific rates. . . . The Spanish cruiser *Viscaya* leaves New York harbor for Havana. . . . Thirty hay shippers, representing the Middle-Western States, meet at Detroit to organize a trust to be known as the American Hay Shippers' Association, to be capitalized at \$5,000,000. . . . The Kentucky house passes a bill which absolutely prohibits the sale, barter, loan, or use of cigarettes or cigarette material, or even to have these things in

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 45th Street, New York.

A New Shrub that Cures Kidney and Bladder Diseases, Rheumatism, etc.—Free.

DISORDERS of the Kidneys and Bladder cause Bright's Disease, Rheumatism, Gravel, Pain in the Back, Female Complaints, Urinary Disorders, Dropsy, etc. For these diseases a Positive Specific Cure is found in a new botanical discovery, the wonderful KAVA-KAVA

SHRUB, called by botanists (*Piper Methysticum*) the *piper methysticum*, from the Ganges River, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. W. B. Moore, D.D., of Washington, D. C., testifies in the *Christian Advocate*, that it completely cured him of Kidney and Bladder Disease of many years' standing. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlet, Vt., gives similar testimony. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this *Great Specific* for yourself, we will send you one Large Case by Mail, FREE, only asking that when cured yourself, you will recommend it to others. It is a *Sure Specific and can not fail*. Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

Key-move Q-R 3.

Correct solution received from M. W. H., H. W. B., the Rev. I. W. B., C. F. P., W. G. D., F. H. J., J. C. E., A. S., C. Q. De F., J. E. S., C. C. D., C. E. S., Dr. R. J. M., C. R. O., Dr. W. S. F., D. S. R., R.; W. K. Greely, Boston; C. C. Marshall, Battle

Creek, Mich.; F. S. Ferguson, Birmingham, Ala.; F. B. Osgood, North Conway, N. H.; G. Patterson, Winnipeg, Man.; G. L. Reeves, John Jewell, Columbus, Ind.; W. F. Baker, Tiffin, Ohio.

Comments: "Quite ingenious, but easy"—M. W. H. "Has a good key"—H. W. B. "A gem"—I. W. B. "A splendid key-move, and otherwise good"—C. F. P. "Fine, indeed"—W. G. D. "Construction admirable; key-move well hidden"—F. H. J. "Exceptionally brilliant and instructive"—J. C. E. "As fine as a sunbeam"—Dr. R. J. M. "The proffered sacrifice of the Queen ranks 261 as a brilliant illustration of Chess-harmonies"—W. K. G. "Ingenious, but safe for the most apoplectic"—C. C. M.

It is strange that so many of our solvers who got the difficult 260 went astray when they tackled 261. The three traps into which they fell are R-K 7, P x Q, and R x P. The first of these, R-K 7, has the promising move, Kt-R 5, mate, so that those who tried this gave 1 R-K 7, Q any; 2 Kt-R 5, mate. But suppose Black answers Q x B P, where is the mate? The next most hopeful way is P x Q. The answer is Kt x P, for R-B 7 is not mate, K-K 4. The other "try," K R x P, is "cooked" by Q-B sq ch.

Chas. W. Cooper was successful with 258 and 259; C. J. M. Gröntis, Elm, Iowa, F. L. Hitchcock, Scranton, Pa., and Matt. H. Ellis, Philadelphia, got 258.

ERRATA.

In problem 263 the White K is on Q R 8, and White has eight pieces instead of seven.

The International Cable-Match.

The British Team has been selected, and it is, probably, the strongest that can be found in Great Britain. The redoubtable Blackburne leads the host; then comes Amos Burn, one of the best the Britishers have; E. M. Jackson, who won both his games in the other cable-matches; C. D. Locock, who ranks among the first non-professionals; D. Y. Mills, the Scotch champion; H. E. Atkins, the London crack; C. E. H. Bellingham, only twenty-three years of age, but a tournament-winner in 1896; Herbert Jacobs, a fine amateur player; two new men—M. L. Caro, who made a record at Berlin, losing only four out of the nineteen games; and H. W. Trenchard, a veteran who will give a good account of himself.

The Team to represent the United States has also been chosen. Pillsbury and Showalter need no introduction; Barry, the Boston crack, won both his games in '96 and '97; Ed. Hymes held his own in the other matches; Delmar, the veteran, is known everywhere as a brilliant player; Hodges always gives a good account of himself. The other four are Franklin K. Young, of Boston, specially recommended by Pillsbury and Barry; John A. Galbreath, of New Orleans, who is ranked as one of the strongest players of the South; D. G. Baird, one of Greater New York's experts; and Alfred K. Robinson, of the Franklin Chess-Club, Philadelphia, who excels in careful, accurate play. The two substitutes are Major Hanham and Louis Schmidt, both of New York City. The general impression, among those able to give an opinion, is that the British Team is slightly stronger than the American, or, at least, that the chances are in favor of the Englishmen.

The record of the previous matches:

Table showing chess match records for 1896 and 1897, listing players like Pillsbury, Showalter, Blackburne, and others with their respective scores.

The Correspondence Tourney.

FORTY-EIGHTH GAME.

French Defense.

Chess game notation for the 48th game, French Defense, between V. Brent and H. Ketcham, showing moves for White and Black.

Notes by One of the Judges.

(a) Lasker says this move is against the rules of development, and that the better play is P-K 5.

(b) Kt x P is the accepted move, but it does well enough in this instance as Black does not make the proper reply.

(c) Should take with P, and Black had a good game. The doubling of Ps in this position is not, as many players think, unfavorable to Black. It is well to notice the fact that when White's Q B is gone White's K Kt P is not so essential for the defense. While White has his Q B, which can reach K R 6, then the K Kt P should be kept intact. The text-move is, at least, a lost move.

(d) We have, more than once, spoken of this move, which Lasker calls "a sickly move." It gets in the way of two pieces, Q and B. There is, with very few exceptions, no better first move for the Kts than to B 3, for on that point they command more squares.

(e) The spot that should be defended is Black's K 4, and White should occupy it at once.

(f) P-Q Kt 3, followed by B-Kt 2, is best. The B should get on Kt 2 as soon as possible.

(g) Castles is better, followed by Kt-Q 4.

(h) Playing White's game.

(i) Bottling up his B. The B lies dormant for twenty-five moves.

(j) If 17 ... Q x B P, 18 R x R ch, K x R; 19 R-K B sq, and Black loses.

(k) Probably Castles is the best he has.

(l) Nothing the matter with this move.

(m) Gets in the way of his Kt P. He should have tried to get a counter attack with his Ps backed by Q and R.

(n) If R x R, White could hardly do better than draw, if Black defended properly.

(o) Forcing things.

(p) Black takes all the defense from the K side, as if the Ps would take care of themselves.

(r) And, now, the Ps go.

(s) There is no way to stop the Ps.

United States Championship Game.

The match between H. N. Pillsbury and J. W. Showalter, for the Championship of the United States and \$1,000 a side began on February 25, in the Postal-Telegraph Building, New York City. The first game, Pillsbury having the White pieces, was a French Defence, and was won by Showalter in 61 moves, each player consuming nearly five hours. The second game, a Ruy Lopez, played Monday, February 28, was won by Pillsbury in 32 moves.

Answers to Correspondents.

H. H. B., Pittsfield, Mass.—You can procure the book on the Rice Gambit by writing to S. Lipschutz, Manhattan Chess-Club, New York City.

A Beginner.—The pronunciation and meaning of the French words are as follows: En prise, ähng preze (English, "In danger of capture"); en passant, ähng passong (English, "in passing"); j'adoube, jädube (English, "I adjust"). To capture a P en passant, the P must be taken the next move after it was advanced. It is not customary now to say "Guard your Q." Some players of the ancien régime, especially Frenchmen, call attention to the Q being checked by the words "Garde la reine," having the above meaning, but only when playing with an inferior player or learner.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

RELATIONS BETWEEN THE UNITED STATES AND SPAIN AND CUBA.

PENDING a formal report by our Naval Board of Inquiry concerning the loss of the *Maine*, newspaper discussion of the relations between the United States, Spain, and Cuba covers a multitude of phases. The consequences of a report exonerating the officers and men of the *Maine* from blame for its destruction and at the same time attributing the disaster to outside agencies operated by persons unknown, are most discussed. In the absence of any official declarations, absolutely conflicting reports regarding the plans of the Administration find their way into the public prints. The personal opinion, casually expressed by Secretary Long of the Navy Department, to the effect that the element of Spanish official responsibility for the *Maine* explosion might be considered eliminated, was exploited, condemned, or considered equivalent to an official declaration for the Administration, according to the point of view. A large portion of the press of the country takes the position that circumstances place upon Spain the burden of proving herself innocent of complicity, or lack of diligence. On the other hand, the difficulty of ever fixing responsibility is dwelt upon. With a report from our Board of Inquiry exonerating our own men and with a report from the Spanish Board of Inquiry exonerating Spain, the employment of a third nation as arbitrator is prophesied. Arbitration in any form might be expected to reduce the matter to a question of indemnity. Concerning diplomacy and indemnity, war and reparation, and intervention in Cuba regardless of considerations other than humanity, all shades of opinion are expressed. Some representative utterances are appended:

Indemnity Versus War.—"Let us suppose, then, for the sake of argument, that the *Maine* will be adjudged to have been blown up by some person or persons unknown. In that event, Spain must be regarded, not certainly as an accomplice, but as chargeable, at worst, with contributory negligence. Assuredly our

practise in such cases is not to declare war forthwith, but to put forward a demand for an indemnity. Such was the course pursued by President Benjamin Harrison, when sailors from an American war-ship were attacked in the streets of Valparaiso. Even where the responsibility of a foreign government for an act of aggression was direct and unmistakable, we have refrained from a precipitate resort to hostilities. In the case of the *Virginia*, it was a Spanish man-of-war which captured on the high seas a vessel flying the American flag and took her into the port of Santiago de Cuba, where a large number of her crew and passengers, including many American citizens, were summarily shot. It was afterward alleged, indeed, that the papers of the *Virginia* were fictitious, but, of course, the Spanish war-ship was not justified in deciding arbitrarily that this was the case. The point to which we would draw attention is that this was an example, not of contributory negligence and of constructive responsibility, but of positive and flagrant guilt, the Spanish war-ship being the official agent of the Madrid Government. Nevertheless, we did not go to war about the *Virginia*, but, after negotiations had been prolonged about two years, accepted an apology from Spain, together with the return of the captured vessel and a small pecuniary indemnity.

"This was not the only memorable instance, when we have accepted an indemnity in place of making war. During the first decade of this century, when the United States and Great Britain were at peace, the captain of a British frigate insisted upon searching the American frigate *Chesapeake* on the ground that certain British subjects were among the latter's seamen. The demand being repelled, the British frigate fired on the American, which was entirely unprepared, and kept on firing until a great loss of life was incurred on the defenseless vessel, and the Stars and Stripes were pulled down. If ever an immediate outbreak of hostilities were justified by public wrong, unquestionably it would have been justified by the treatment of the *Chesapeake*. Nevertheless, our Government did not resort to war, but bore the outrage with meekness, as it did many other injuries and insults received from England in the years preceding 1812.

"But few Americans will desire their Government to bear again what it bore from England in the case of the *Chesapeake*, nor are there many, we imagine, who regard with complacency the outcome of the *Virginia* affair. We have mentioned those incidents, because in them the responsibility of a foreign government for the wrong experienced was direct, gross, and undeniable. Of a different kind and weight in the ethical scale, and in the forum of international law, is the responsibility imposed by contributory negligence, the only kind of responsibility which could attach to Spain, should the Court of Inquiry fail to connect the destruction of our battle-ship with the Spanish authorities at Havana."—*The Sun (Rep.)*, New York.

Spain Must be Held to Account.—"Spain is responsible even for the acts of the insurgents, so long as it does not recognize them as belligerents. All American property destroyed thus far by either side in Cuba must be paid for by Spain.

"It is the duty of a nation to protect life and property. If lawlessness prevails, such as is the case in Cuba now, the Government is technically remiss and stands accountable for damages. Even if the *Maine* explosion was due to the accidental discharge of Spanish submarine mines, Spain is to blame for placing our war-ship in so dangerous a position. This point has been insisted upon in every case where neutral vessels have had occasion to visit harbors so fortified. The responsibility has never been denied.

"The responsibility alluded to is, of course, civil rather than criminal. If the *Maine* explosion is shown to be of external origin, Spain becomes subject to a claim for heavy damages, and refusal to pay is a ground for war. But it is not settled that this is the limit of our action. Of course, if Spain were a really

the bill. But those who object to a demand for indemnity are neither reasonable nor wise, nor are they proceeding in accordance with the law of nations."—*The Journal (Rep.)*, *Detroit*.

"But suppose 'the destruction of the *Maine* to be due to Spanish treachery' of high or low degree, in what respect would the 'exaction of freedom for Cuba' atone to us for our losses? What would we gain? Cuba libre would not rebuild our battle-ship, nor indemnify the families of the drowned sailors. The freedom of Cuba is not involved in the question that would arise between the United States and Spain, supposing it to be true that the *Maine* was destroyed by 'Spanish treachery.' What our Government would demand would be apology and indemnity, and if these were not rendered war would follow."—*The Times-Herald (McKin. Ind.)*, *Chicago*.

"The fate of this island and its people is a question with which we have to deal. Sooner or later, if Spain can not govern Cuba, we must intervene. We shall be compelled to intervene. There is no other way to end the hideous business, and we have said that it must be ended. We can not go back on that. The American people dislike war as much as any people on earth, but we think they may as well make up their minds to whatever action may be necessary to restore peace and order in Cuba."—*The Times (Ind.)*, *New York*.

"All that the United States is required to do is to give the Cubans a fair show and then let them fight it out with their oppressors. The success they have heretofore attained without such recognition is a pretty good assurance that they might be successful in the next year's campaign with it."—*The Tribune (Rep.)*, *Minneapolis*.

ANTI-TRUST DECISIONS.

A DECISION by the United States court of appeals, sixth circuit, last month, against the cast-iron pipe trust, made the most sweeping application to the federal anti-trust law of 1890 on record in the inferior federal courts. Six pipe companies in four States were perpetually enjoined from doing business under their trust contract. The contract divided territory for the defendants into two classes "free" and "pay." In free territory the associated companies could sell pipe at any price they deemed proper. In pay territory, including States where the companies controlled about 60 per cent. of the aggregate product, all orders were submitted to a central board. The board fixed the price and gave the contract to the member offering the highest bonus. Certain cities were thus assigned to particular members. The United States district court at Chattanooga decided against the prosecution of the trust under the law of 1890, mainly on the ground that interstate commerce was only affected incidentally [the sugar-trust cases are a familiar precedent]. The circuit court of appeals reverses this decision, holding that the contract is both an illegal monopoly and restraint of interstate commerce. The important significance of this decision is explained by the *New York Journal of Commerce* as follows:

"The contention urged on behalf of the defendants was that their association would have been valid at common law, and that the federal anti-trust law was not intended to reach any agreements that are not void and unenforceable at common law. In reply to this the court pointed out that it was held in the *Trans-Missouri Freight Association* case that contracts in restraint of interstate transportation were within the statute whether the restraints would be regarded as unreasonable at common law or not. But the fact was recognized that this being a case involving quasi-public employment, necessarily under public control and affecting public interests, a less stringent rule of construction might apply to contracts restraining sales of merchandise, which is purely a private business. It was however, declared to be certain that if the contract of association which bound the defendants was void and unenforceable at the common law, because in restraint of trade, it is within the inhibition of the statute if the trade restrained was interstate.

"Here the opinion touches the vital point of a most elusive and apparently endless legal controversy. The dictum in regard to

the change in the law brought about by the Act of 1890 is, therefore, an exceedingly important one. The court holds that contracts which were in unreasonable restraint of trade at common law were not unlawful, in the sense of being criminal, or giving rise to a civil action for damages in favor of one prejudicially affected thereby, but were simply void and were not enforceable by the courts before the passage of the anti-trust law. The effect of this Act is to render such contracts unlawful in an affirmative or positive sense, to make them punishable as a misdemeanor, and to create a right of civil action for damages in favor of those injured thereby, and a civil remedy by injunction in favor of both private persons and the public against the execution of such contracts and the maintenance of such trade restraints. Having thus cleared the ground for the application of the law, the court took up the argument for the defendants that the contract binding the various parties to the agreement in question was not and could not be a monopoly, because their aggregate output did not exceed 30 per cent. of the total tonnage capacity of the country, and that the association only modified and restrained the risks of ruinous competition, while the public had all the benefit from competition which public policy demanded. On this plea the court declares itself as follows, after a long and careful review of the law and the authorities bearing on the subject: 'We can have no doubt that the association of the defendants, however reasonable the prices they fix, however great the competition they had to encounter, and however great the necessity for curbing themselves by joint agreement from committing financial suicide by ill-advised competition, was void at common law, because in restraint of trade and tending to a monopoly.'

"The defendants controlled two mills in Alabama, two in Tennessee, one in Kentucky, and one in Ohio, and it was shown that they were able by combination to deprive the public in a large territory of the advantages otherwise accruing from the proximity of defendants' pipe factories. They were further able by keeping prices just low enough to prevent competition by Eastern manufacturers, to compel the public to pay an increase over what the price would have been if fixed by competition between the defendants themselves, nearly equal to the advantage in freight rates enjoyed by them over Eastern manufacturers. The court asks, 'Can it be doubted that this was a direct restraint upon interstate commerce in these goods?' and answers its own question by granting a decree perpetually enjoining the defendants from carrying on their business under the agreement which formed the subject of complaint."

It will be remembered that the Supreme Court of the United States in the case of the *Trans-Missouri Freight Association* decided against the contract, refusing to enter into the question of reasonableness of rates. It remains to be seen whether that court will go into the question of reasonableness in the similar case of the joint traffic association which is now before it. The merits of the exceptionally stringent anti-trust law of Texas were not entered into by the Supreme Court of the United States in a decision last month. Nevertheless, one point of considerable importance appears in that decision. To quote the *Chicago Evening Post*:

"It relates to the jurisdiction of federal courts and to the propriety of arresting proceedings in state courts and transferring cases to federal tribunals. It appears that two agents of an alleged trust had been convicted in the lower courts of Texas, and that the verdict had been reversed on technical grounds by the appellate court. Pending a second trial the defendants had been surrendered to the sheriff by the bondsmen, and they had applied for a writ of habeas corpus to federal Judge Swayne. He granted it, and on trial set them free on the ground that the anti-trust law was opposed to the federal Constitution. His decision was lucid and logical and commanded general approval.

"But the Supreme Court now says that the application for the habeas-corpus writ ought to have been refused. The case, it says, 'is nothing but an attempt to obtain the interference of the United States when no extraordinary or peculiar circumstance existed in favor of such interference.' The defendants should have been left to be dealt with by the state courts. If the writ had been granted after trial and conviction the situation would have been different. The mere fact that the highest state court did not consider the constitutional question in its reversal of the

verdict did not justify federal interference, because 'state courts are not bound to consider constitutional questions when there are other grounds for reversal.'

"The court distinctly says that, following an undeviating rule, it does not pass upon the trust law of Texas, nor does it express any opinion in regard thereto. The defendants are to be remanded to the custody of the sheriff and tried again under the indictment. After the state courts shall have finally disposed of the case an appeal to the federal court on constitutional grounds may lie."

THE COTTON-MILL TROUBLE IN NEW ENGLAND.

A STRIKE, still unsettled, followed the reduction of wages in New England cotton-mills in January. The cause for the reduction, 6 to 15 per cent., given by representatives of the employers, is the Southern competition in the industry (see LITERARY DIGEST, December 25). Chief among the elements of Southern competition are the conditions of labor, including longer hours of work, the employment of child labor, and the absence of labor organizations. A report of the Arkwright Club, Boston, placed the difference in favor of Southern labor on these points at about 40 per cent. *The Textile World* finds from the same figures that in the North the total labor cost per pound of cloth is 6 cents; in the South, 4 cents. But it has also been pointed out, among other things, that the legal hours of labor in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut are not uniform, altho the movement for reduction of wages is general throughout the region. There is, moreover, a factor of difference between sections North and South, in the practise of permitting localities to exempt manufacturing enterprises from taxation in all but two or three of the Southern States.

The labor organizations which inaugurated the strike centering at New Bedford, Mass., sought to secure a temporary shutdown of mills, instead of the reductions in the rate of wages. The manufacturers' committee, however, declared that they had no alternative except to meet Southern labor conditions by reducing wages. Differences of opinion have cropped out among mill men, some prominent operators declaring that the present condition of the industry was plainly foreseen last year, and that the shutdown should have been inaugurated then, in order to avoid trouble with an overstocked market at this time. At some of the mills minor grievances, such as the system of fines, are given as part cause of the strike, and it is asserted that the Fall River mills, for example, had not ceased to pay dividends up to the present year.

A notable feature of the situation consists of counter-investigations of Northern and Southern mills by special newspaper representatives. In the one case Southern child labor is listed as a prevailing evil; in the other Northern operatives, largely Poles, French Canadians, and other foreigners, are said to be working for wages averaging less than \$4.50 per week. A Massachusetts legislative committee is conducting a special investigation of the strike. The strike as yet has not become general in New England, the proportion of actual strikers being about 15,000 to 50,000 who have accepted reductions. On the part of the manufacturers a curtailment of production appears to be not unwelcome in the present state of the market. Bills have been introduced in the Massachusetts legislature to increase the legal limit of the working day, and in Congress a Massachusetts Representative has proposed federal legislation to secure uniform hours of labor throughout the country. At a recent meeting of the Massachusetts Cotton Mills Company, which owns mills both at Lowell and in Georgia, it was stated, in substance, that the mills operated in Georgia are making a "fair profit" on the same class of goods at the same selling prices, while at the mills at Lowell the goods cost more than the selling price, and it was resolved to "consider the possibility of an extension of the business in Georgia."

Partizan newspapers have had considerable to say about the

political significance of this New England trouble, and the trade press reveals interesting differences of opinion regarding the real cause of the crisis and the remedies for it.

The South's Advantage Permanent.—"The natural factors in the problem would seem to be three: First, distance from raw material—not from the cotton only, but from coal for fuel, iron for machinery, clay and timber for building; second, available water power, and fuel supply for steam or electric power; third, climate, not only in its relation to manufacturing processes, but also in its direct bearing upon the cost of living and consequently upon the wage rate.

"These natural factors are constant, their influence is permanent and inevitable; it is known of all men that they are overwhelmingly in favor of the Southern States; and in so far as they have contributed to the present discomfiture of the industry in New England, that discomfiture is final. Perhaps consciousness of those facts, quite as much as an optimistic spirit, impels the authorities quoted and others of equal standing to lay as little stress as possible upon the natural factors, and to treat two artificial, transitory factors—wages and special legislation—as the main causes of successful Southern competition.

Granted that disparity in wages, favorable laws in the Southern States, and burdensome legislative restrictions in the Northern States are the chief causes of the present condition, it is manifest that New England can make little headway against them, for this great disparity in wages is not due in any degree to labor competition between the two sections of the country, nor to the presence or pressure of Northern labor in Southern shops, but almost wholly to the many advantages of the Southern climate. Thus based on a natural, permanent condition, disparity in wages bids fair to remain, within narrow limits of variation, a constant factor in favor of the Southern mills, and it would seem that the Northern mill-owners can hardly do more than keep on cutting wages, already cut to the danger point, and wait for an advance in Southern wages that is neither needed nor sought by the Southern workers; with perhaps a futile attempt at federal limitation of a state's right to waive or remit its own taxes within its own discretion, and perhaps a successful effort to establish uniform hours of labor, and to eliminate child labor—which last should and will be done, both by North and South, without much affecting their relative status, to judge from the census figures of 1890 for the cotton industry in four States, showing

Tennessee—20 factories, 354 children employed.
North Carolina—91 factories, 2,038 children employed.
Rhode Island—94 factories, 3,139 children employed.
Massachusetts—187 factories, 3,954 children employed.

" . . . An unendurable Northern wage cut of 20 per cent., plus an unattainable Southern wage advance of 20 per cent., would exactly equalize wages, relieve the situation in New England, and leave to the South all her natural advantages. And it is of the utmost significance that to-day the intelligent native white Southern mill hand lives in content and comfort upon his earnings, while a 10-per-cent. reduction in New England wages has closed mills, sent men on strike, and rehabilitated the trades-unions.

"Not that the Southern workman is feverishly industrious and wilfully tractable; simply that the comforts and necessities of life are cheaper, the conditions of life are easier, wages go further, and winter is shorter, South than North."—*The Tradesman (Industrial)*, Chattanooga, Tenn.

New England Advantages and Labor.—"It is not to be presumed that New England is to lose her cotton-manufacturing industry, due to any competition that is likely to come from the South. The North has advantages in manufacture which the South does not possess, a most potent one being its climate, for intense and continued exertion on the part of employees. As to climatic influences upon the working of cotton, these can be regulated now to a very fine degree, by artificial methods of moistening the atmosphere. The climate of the South is more or less enervating, even in the most favorable parts of it, affecting all persons in any line of occupation, inside or outside of the factory, by producing a languidness that is noticeable, when compared with the physical energy observed in the people of the New England States. This is so patent to every one who is familiar with the people in the North and South that it needs nothing more than mentioning. The North, also, has the advantage of generations

of training, on the part of its mill population. It has, and probably will long retain, in its mills the most successful and best trained help. It has the advantage of capital, comparatively low rates of interest, good credit, concentration of mills and shops, and proximity to markets.

"There are two sources of relief: in giving more attention to specialties, which means the production of finer and a larger variety of yarns; and the building up of a larger export trade. . . .

"Should the factories of the South ever lose their hold upon the native population for their help, they will have the negro population to fall back upon, which will be much more desirable for factory employees, ten or twenty years hence, than it is to-day. The Southern factory population may pass through similar phases as has been experienced in New England, where thirty years ago the factory population was made up principally of the sons and daughters of New England farmers, but now their places are taken by foreigners, first, mostly, by Irish, and later by French Canadians, while in some of our manufacturing centers there has grown up a considerable population of Poles and some of the least desirable people from Central and Southern Europe."—*The Textile World (Industrial), Boston.*

Advantages of Southern Mills.—"The investigations of our correspondent among Southern cotton-mills show that there is a greater difference in wages between Georgia and North Carolina than between Georgia and Massachusetts. Differences in cost of fuel cut but a trifling figure in the problem, because steam-mills and water-power mills compete in the same markets, and some Southern mills get coal very cheap, while others pay about the same price as the mills of Fall River. In freight the Southern mills have no advantage at all; some of them have no advantage in freight on raw cotton except for the lowest numbers of yarn, while all are at a disadvantage in competition with Northern mills in freights on the finished product. The Southern mills employ a larger proportion of child labor, but the mill managers do not regard this as an advantage, for they do not find child labor economical. In this respect their experience is the same as that of mill managers in New England and in the Manchester region.

"There is a small difference in wages in favor of the Southern mill-owner. He has also a considerable advantage in the hours of labor, the value of which, however, is not determined, and he has the substantial advantage of new machinery. . . . The older mills in some parts of New England contain a great deal of machinery put in years ago and not so efficient as it once was, or as machinery more recently invented. The Southern mills have been equipped within a few years, and generally have the most efficient and most economical machinery that is made. Builders of machinery find their owners much easier customers than the mill-owners of the North. In the use of the automatic loom the Southern mill has a decided lead over the Northern mill. Here probably we have an important secret of the success of Southern mills. . . .

"If, as one of the Southern mill-owners told our correspondent, the financial statements of Southern mills do not make proper allowances for depreciation, it will be found in a few years that the conditions of production North and South are more nearly equal than at present appears."—*The Journal of Commerce (Fin.), New York.*

Menacing the Country's Peace.—"One of the measures most dangerous to the peace of the country ever introduced into Congress is now being considered by the judiciary committee of the House of Representatives. It is a resolution providing for the submission of a constitutional amendment authorizing Congress to regulate the hours of labor in the United States. It is confessedly an attempt to repair the artificial power of New England to compete industrially against the natural ability of other parts of the country. In that it is an effort to turn economical conditions into a lever for the stirring up of political sectionalism. . . .

"The injection of the subject into a political campaign can not fail to intensify whatever antagonism between labor and capital has been sedulously cultivated by demagogues for fifty years. That is a point for earnest consideration on the part of all conservative men, whether they are employers or employees; whether they live North, South, East, or West. And the same conservatives will not take long to decide the fate of politicians who not only dare to inaugurate such a useless upheaval of business and industrial enterprises, but who also deliberately seek to commit the

country to the theory of the right of the general government to override the right of private contract. The principle is the same, whether it prevents a laborer from taking employment upon his own terms or authorizes a man to pay a debt in a depreciated currency."—*The Record (Ind.), Baltimore.*

Look Out for the New England Sleeve.—"There was a great deal of this sort of talk about four years ago. 'The exodus of the mills to the cotton-fields' was the poetic way in which it was expressed in those days. Possibly the same genius coined the caption under which the editorials upon this subject are now being written. It must be pleasing to the New England manufacturer to have his decapitation discussed under these pleasing titles. His executioners are doing their best to lend sentiment to a disagreeable necessity, and he is no doubt grateful for their generous consideration.

"Possibly the Southern editors have made a wrong diagnosis. Maybe the New Englander has an ace up his sleeve. Richelieu feigned a serious illness and scared his king into abject submission. Now it is just possible that the desire for favorable legislation, or the fear of objectionable legislation, inspired the frank confession, recently made by the Arkwright Club, regarding Southern competition. Maybe the Arkwright Club has assumed the rôle of Richelieu in the hope that Massachusetts' legislature would essay the character of Louis XIII. 'The play's the thing' nowadays, and we must be on guard. We must bear in mind that the 'exodus of the mills to the cotton-fields' didn't 'exodus' to any great extent. Let us attend strictly to our own affairs and do the best we can to make cotton manufacturing in the South profitable and satisfactory."—*Dixie (Industrial), Atlanta, Ga.*

An Overpampered Industry.—"It used to be a familiar point in the tariff controversy that high protective duties dulled the enterprise of the protected manufacturer and fostered careless and antiquated business methods, since it relieved him of outside competition. The Manchester (N. H.) *Union* now raises this point in connection with the New England cotton-manufacturing crisis, saying that 'for years New England cotton-spinners have hidden behind a protective tariff and by its aid have been able to make large profits out of poor goods, poor work, and antiquated, wasteful methods of business,' and now that Southern competition has sprung up it finds the New England mills unprepared.

"*The American Wool and Cotton Reporter* reviews the situation at great length, and presents considerations tending to bear out this claim of the Manchester paper. It is inclined to belittle the factor of Southern competition and emphasize that of an unprogressive policy on the part of many Northern mills, tho it is not intimated that the tariff is responsible in any degree. After going over the whole list of larger New England cotton-mills and noting the financial condition of each and kind of fabrics made, *The Reporter* says:

"An analysis of the foregoing tabulations will show conclusively, we think, that the mills which have been able to maintain dividend payments have been those who have departed from antiquated methods of doing business, who have accepted mercantile conditions as they exist, and have conformed their product to the needs of the market, correctly gaging the relation of the supply to the demand. There is unquestionably an overproduction of certain lines of goods. Those manufacturers who have continued exclusively on these, have suffered.'

"Those also who have clung to old methods of selling goods, and who have neglected economies of various kinds in mill operation, have also suffered, and their number is not small. Nepotism has crept into the high-salaried offices of the mill treasurer, and the selling agencies have been permitted to neglect the interests of the concern. *The Reporter* says on this point:

"The commission-houses connected with the old school of manufacturers hampered by the traditions of a past generation, and honeycombed with the nepotism of the treasurers' offices, not only receive their percentages upon amount of goods sold, without regard to profit or loss of stockholders, but have also become so careless of modern changes in trade and fashion that they are no longer in touch with their customers. Hence there have arisen in New York numerous "converting-houses," which do the work that ought to be done by the commission-houses, and leave to the latter only the duty of absorbing commissions from the dividendless stockholders. Under the circumstances, the cry of "Southern competition" is very convenient as an excuse for losses which are really due to the inefficiency of treasurers and directors.'

"All of which brings into a view an industry suffering from its own neglect and want of enterprise quite as much as from any other cause. Protected from without and having little to fear from competition within the country, the New England cotton industry enjoyed for years a prosperity singularly uniform and

affected more lightly than almost any other by the great commercial depressions which have periodically occurred. It now wakes up to find a competition established in the home field more to be feared than that warded off so long by ample tariff, and its first feeling appears to be one of panic. But this is to be indulged only by the infants in the enterprise. The industry has had too easy a time. It must now get down to business."—*The Republican (Ind.)*, *Springfield, Mass.*

A Triumph of Protection.—"The breakdown of the cotton industry in New England under pressure of Southern competition seems the beginning of another triumph of protection, like that in the steel industry a few years ago, when the steel trust broke down under pressure of domestic competition and prices fell so low, without preventing a fair profit on manufacture, that American goods could be sold in London and Glasgow. That is to say, protection had so built up the American iron industry that it could dispense with protection. It is doing the same thing for the cotton-industry.

"What is the object of protection if not to support infant industries during their growth to full stature, and what marks full growth so well as power to dispense with protection and enter unsupported into free and equal competition with other national industries in the world's market? The whole theory of the friends of protection is that it will stimulate industrial growth in this country until domestic competition shall press down the price of product so that consumers can supply their wants more cheaply in the home than in the foreign market. It is only the enemies of protection who assert that it is a permanent tax on the domestic consumer, a permanent bounty to the American manufacturer. It is a tax in the early stages, but it never is a bounty for long. Whenever the addition it makes to the price of goods ceases to be absorbed in higher wages and more costly methods; whenever cost of production is reduced by better organization of capital and labor and use of improved machinery, so that profits of manufacture rise, the eagerness of more persons to enjoy them results in overproduction and pressing down of price by domestic competition. Combination can delay this result for a short time, but not for long. When price falls to that of the foreign product, with transit costs added, the tariff becomes ineffective, and the industry may be considered full grown. When price falls still lower, the American product commands the market of the world. It may be exported freely for sale, and nothing but world overproduction or improvement somewhere in organization of industry or methods of production can menace it with competition at home or bring the protective duty into action again."—*The Commercial Advertiser (Rep.)*, *New York.*

STATE POWER OVER RAILWAY RATES.

UNDER police power inherent in the State, a Detroit judge holds that the Michigan Central Railroad must obey a state law prescribing rates of fare. The state law calls for the issuance of 1,000-mile books good for any member of the purchaser's family for \$20, and Governor Pingree applied for such a book only to be refused. Proceedings to compel the railway company to issue the books have resulted in a mandamus from Judge Donovan of the circuit court. The railroad company claimed that its special charter granted the privilege of fixing its own rates of fare. The counter-claim was, in substance, that the charter gave an indefinite privilege, that of power to fix fares by by-laws, and that, under police power of the State, only reasonable rates could be fixed. Judge Donovan's interesting decision is epitomized in press despatches as follows:

The Michigan Central Company acquired control of other lines, but whether by lease or otherwise does not appear clear in its reports to the State Railroad Commissioner. Such control of minor lines by a main line means consolidation. The State must have the benefit of the doubt, if any, in such cases. The law is clearly established that when a company holding a special charter consolidates with other lines it must abide by all the provisions of the general railroad laws of the State.

The police power to control the Michigan Central as it controls toll-roads, the liquor traffic, etc., was not surrendered when the special charter was given to the Central, and it can not be sur-

rendered. Its whole system is under the general statutes and should be so controlled.

Changed conditions exist, where, by largely increased holdings in other roads, the Central has placed the State in a powerless condition to alter its bargain by way of purchasing back the company and to pay damages therefor. The Michigan Central is either becoming greater than the State with a perpetual charter, or it must come under general state control, with other like corporations.

The conclusion from all the authorities is irresistible that the company can collect only such charges as are allowed by the general laws of the State—in other words—a straight two-cent fare on its main line.

The case is to be carried to the Supreme Court of the United States. We quote editorials from the Detroit newspapers:

The News-Tribune says:

"The opinion which Judge Donovan has written is not a model of clarity; but in his reasoning he follows quite closely that of the state supreme court in its recent decision in the case of *Smith vs. The Lake Shore*, an action in which the points involved were practically the same as those raised by the governor in the action under consideration.

"Briefly, Judge Donovan holds that the police power of the State includes power to regulate rates, and that the legislature has no authority to surrender that power in a special charter, and that, by its combination, if not consolidations with other roads, the Michigan Central has so altered the conditions existing at the time of the agreement between the corporation and the State as to nullify the contract under which the State was to pay damages to the other contracting party for any injurious amendments of its charter. The railroad must then come under the general laws of the State so far as those laws are intended for the enforcement of general police powers.

"In view of the state supreme court's decision in the *Smith* case, it is difficult to imagine that it will fail to sustain the Donovan view of the present action. In that event, an appeal to the federal courts is certain, and it will be a long time before the end of the litigation is reached. In the mean time there can be no doubt that the decision will greatly strengthen the governor with many elements in the State, and especially with some who have been inclined to look upon his suit as a piece of buncombe, or, at most, an ill-considered bluff with no shadow of law behind its contentions."

The Free Press predicts a fierce legal contest over the question of vested rights:

"It is not to be expected that the railroad company, which has relied upon its charter as an impregnable bulwark against the encroachments of legislation, will tamely submit to a decision which very greatly weakens, if it does not destroy, that instrument. The case will unquestionably go to the higher courts for final decision, and be fiercely contested to the end.

"The main point of difference between this suit and the *Lake Shore* case, recently decided by the state supreme court adversely to that road, is that the Michigan Central charter contained a special contract, giving the company power to fix tolls and rates for passengers. Judge Donovan argues that a change in the state constitution, and in the conditions now prevailing, together with the fact that the police power under which rates are regulated is inherent in the State, practically nullifies this special privilege granted in the charter.

"This is an important principle, touching, as it does, questions of vested rights and the supremacy of the State over corporations.

"The decision, coming so soon after the similar decision in the case of *Smith vs. the Lake Shore Railroad Company*, will be looked upon by the friends of anti-railroad legislation as an important victory."

The Journal says:

"The point decided in the case is that the railway company is subject to the police power of the State, and that its business, notwithstanding its special charter, may be regulated by statute, the same as may be regulated the business of a hackman, a miller, or a ginseller. The judge argues that the by-laws of the company have run counter to and in conflict with the statutes of the State, and that the thing to be determined is which shall be master. He

is of the opinion that the State should not be the servant of the corporation.

"If the railway company had any purpose to accept the decision of Judge Donovan as conclusive, the only difference from the existing order of things that the public would know anything about would be the extension of the use of the 1,000-mile tickets to the members of the purchaser's family and the redemption of the unused parts at the end of two years from the date of purchase. The company already sells 1,000-mile tickets for \$20, but they are irredeemable and confined exclusively to the use of the purchaser.

"The case will go to the higher court."

CARNEGIE ON AMERICAN SHIP-BUILDING.

ANDREW CARNEGIE advocates the building of a shipyard near New York City, and asserts that every needed element is present for regaining, by such establishments, our supremacy as the principal ship-building country of the world. His views appear in a letter written from Cannes, France, and published in *The Iron Trade Review* last week. He says:

"The prices paid for steel by British and German shipyards are so much higher than ship-builders in New York would be required to pay that the difference would make in itself an excellent profit. Plates are worth about \$22 or \$23 per ton in New York. The quoted price at Glasgow is nearly \$30. Other prices are in proportion, and all the woodwork of ships is also much cheaper with us. If a yard were built to-day with the newest appliances, the total cost of labor, even at much higher wages, would be less than in any shipyard I know of, either in Great Britain or in Germany."

New York is considered the best location for a shipyard, because repair work would be obtainable, and a dry-dock could be made part of the equipment, both of which would be profitable. He further declares that two years hence the cost of transportation of steel delivered at a shipyard in New York from Pittsburg will not exceed \$1 per ton, via Conneaut and the deepened Erie Canal. Indeed, it will be less, he says, since it will cost nothing to send steel to Conneaut in cars which otherwise must return empty to Lake Erie for ore. As to the present ship-building conditions, and the possibilities of the future, Mr. Carnegie says:

"The present seaboard shipyards are so usefully occupied with domestic business that they can not give foreign business proper attention. The New York yard should be constructed on a larger scale and with special reference to the foreign demand.

"I am satisfied that the United States can gain the supremacy in ship-building it had when wooden ships were in vogue. It only needs an enterprising Western ship-building concern to establish a yard near New York and manage it with the skill and energy which have characterized those on the lakes. This is the only prominent department of manufacturing in which our country is behind, and it is one in which it easily can obtain front rank. It would justify steel manufacturers to guaranty to such a ship-building concern a continuance of the present extremely low rates upon steel for a term of years, and also that steel of all kinds and armor and guns should always be furnished at the lowest price paid by European ship-builders. But there is nothing to fear from the prices of steel, for these henceforth are to rule lower in our country than in any country of Europe. It will not be long before a large portion of the steel supply must be drawn by Europe from the United States."

Mr. Carnegie's views were certain to attract attention, and his statements were promptly indorsed by the president of the Cleveland Ship-building Company, and the treasurer of the Globe Ship-building Company, two of the largest concerns of the kind in this country. Mr. Allen, of the latter company, asserts that there is but little doubt that sea-going vessels could be constructed near New York at less cost than is possible in Europe, "even taking into consideration the pauper wages paid European workmen." He adds:

"If we can sell steel rail and other products to Europe, such as is now being done at a profit, there is no good reason why we can not successfully compete with Europe in ship-building. The vessels of the merchant marine of many countries, however, are granted subsidies, and until our Government extend a paternal hand in the same direction for American-built ships the industry will labor under a disadvantage."

The *New York Times* says:

"There is no getting around the plain facts which Mr. Andrew

Carnegie states as to the advantages to be enjoyed by a ship-building business in the harbor of New York. They are perfectly well known and have been so for some time. But men of brains and capital do not wait to improve such opportunities as Mr. Carnegie points out until they are proclaimed in the newspapers. Mr. Carnegie explains why he does not go into this enterprise—he is too old and his money is locked up in other business. Good reasons, doubtless, but there are younger men with available resources. Why do they stand aloof? Has Mr. Carnegie told the whole truth? Is he as comprehensive as no doubt he is sincere? These are interesting questions, which we should be glad to see answered by experts."

TOPICS IN BRIEF.

SECRETARY SHERMAN appears to be incomunicado.—*The Herald, Salt Lake City.*

CONGRESS may return to its peaceful function of sending out garden seeds.—*The Times, Pittsburg.*

LET us have peace with honor until we can no longer have honor with peace.—*The Ledger, Philadelphia.*

SPAIN now has a financial question in comparison with which the 16 to 1 problem pales into utter insignificance.—*The Star, Washington.*

IF it be true that stock-jobbing Senators are about to load up with Cuban bonds, Cuba will soon be free—from Spain.—*The Journal, Chicago.*

THE masses of the people find it difficult to believe that Uncle Sam is merely reaching for his hip-pocket to pull out a handkerchief.—*The Herald, Baltimore.*

WHAT PUZZLES THE TRUSTS.—"I wonder," quoth one president of a trust to another, "I wonder where the people get all the money we take from them."—*The News, Detroit.*

WOULD BE EAGER TO GO.—"Julius, if we have war with Spain, will you go and leave me?"

"Yes, dear; I'll start at once for the Klondike."—*The Record, Chicago.*

SECRETARY LONG declares that there is not a mine marked on the government's map of Havana harbor. There are people who claim it is time for Uncle Sam to get a map that has "mine" marked on the whole island of Cuba.—*The Globe, St. Paul.*

THE indemnity proposition is a good deal like having a man arrested and fined for hitting you in the back. It is more law-abiding and orderly, but you feel better if you turn around and give him the worst trouncing he ever had in his life.—*The Journal, Minneapolis.*

NOT YET SENTENCED.—"I thought the verdict of the jury in his case was 'guilty.'"

"It was."

"Then why hasn't he been sentenced?"

"Oh, that was because the judge asked him if there was anything he wished to say before sentence was passed upon him."

"Well, that's customary, isn't it?"

"Oh yes, it's customary, but you see he is a Populist, and consequently he is talking yet."—*The Evening Post, Chicago.*

THE VICTIM: "Here's another one after me!"

—*The Record, Chicago.*

LETTERS AND ART.

THE FIRST PAINTER IN AMERICA.

THE pioneer of American painting was not John Watson nor John Smibert, as has heretofore been supposed; but a Swede, Gustavus Hesselius by name, who preceded Watson to this country by about four years. Newly discovered records of an old church in Maryland, "the insignificant country parish church, of St. Barnabas," in Queen Anne county, started an inquiry, the results of which are set forth by Charles Henry Hart in *Harper's Magazine* (March).

Hesselius was born in Folkarna Dalarne, Sweden, in 1682, and came to Wilmington (then Christina), Del., with his elder brother, a preacher, in May, 1711. "Mons. Gustaff Hesselius," as the old record states, "after a few weeks flyted, on account of his business, to Philadelphia." Some time between the years 1719 and 1723 he went to Maryland, and this is the entry in the records of the church above mentioned:

"June ye 7th, 1720: The Vestry agree to have ye Church Painted and ordd. yt Mr. Hessilius ye painter have notice to attend ye Vestry at their next meeting in ordr. to agree wth. ym. for ye same.

"Augt. ye 2nd, 1720: The Vestry agree with Mr. Gustavus Hessilius to paint ye Altar piece and Coñunion Table and write such sentences of Scripture as shall be thought proper thereon and wn. finished to lay his acct. of charge before ye Vestry for wch. they are to allow in their discretion not exceeding £8 curry. to wch. agreement he subscribed his name Gustavus Hesselius.

"Tuesday 7ber 5th, 1721: The Vestry agrees with Mr. Gustavus Hessilius to draw ye History of our Blessed Saviour and ye Twelve Apostles at ye last supper. ye institution of ye Blessed Sacrament of his body and blood, Proportionable to ye space over the Altar piece, to find ye cloth and all other necessaries for ye same (the frame and golde leaf excepted wch. Mr. Henderson engages to procure and bestow on ye Church) Mr. Hessilius to paint ye frame for all wch. ye Vestry is to pay him wn. finished £17. currt. mony. And Mr. Henderson further engages to have it fixed up over ye Altar at his own cost.

"November 26, 1722: Order'd yt Mr. Jacob Henderson pay to Mr. Gustavus Hessilius £17 currt. the sum agreed on for ye Altar piece and yt ye sd Hessilius attend ye Vestry at ye next meeting to adjust ye value of ye other work.

"July ye 6th, 1725: The Vestry agree to allow Mr. Hesselius £6 curry. for painting the Altar and Railes of ye Coñunion Table as before agreed for, as left to their judgmt and order Mr. Henderson to pay the same."

On this record, and especially on the part printed in italics, Mr. Hart comments as follows:

"This record is certainly a very remarkable one. That a century and three quarters ago, more than seven years prior to the arrival in this country, in company with Bishop Berkeley, of John Smibert, who is commonly regarded as the father of painting in the colonies, an elaborate altar-piece of the 'Last Supper,' with thirteen figures—Christ and the twelve disciples—should have been commissioned to be drawn by a resident artist for a public building, and completed in a year and paid for, surely marks an epoch to receive more than passing consideration. It is the public patronage of art for legitimate purposes nearly two centuries ago, and yet from that time up to almost the present such patronage has been a dead letter, and no one until now even knew that it had ever existed here.

"Unfortunately, the old church edifice in which the altar-piece was placed made way for the present edifice in 1773, and thus the painting by Gustavus Hesselius disappeared with the old building."

Hesselius was back in Philadelphia by the year 1735, purchasing a house and lot on the north side of High Street, below Fourth, where he died May 25, 1755. He was also, we are told, the first

organ-builder in America, having built for the brethren at Bethlehem, in 1746, an organ for which he received £25.

Several of his portraits are now in the possession of the Historical Society of Pennsylvania. Of them Mr. Hart speaks in these words:

"They show that Gustavus Hesselius was a painter of no mean ability for his time, and easily the superior of either Watson or Smibert. The individuality of his subjects is nicely characterized, and his color scheme refined and treatment skilful. He was doubtless the painter of many early American portraits whose authorship is unknown. One already has been identified as from his easel, that of Robert Morris, the father of the 'Financier of the Revolution,' which belongs also to the Philadelphia institution."

"THE MOST INTERESTING INTELLIGENCE IN THE WORLD OF LETTERS."

TWO great critics of different nationalities, and neither of them a fellow countryman of the writer to whom they give such high praise, have recently written critical reviews of the works, and particularly the two latest publications, of M. Anatole France, the French critic, novelist, poet, and Academician. In

M. ANATOLE FRANCE.

the December number of *Cosmopolis* Edmund Gosse commenced his article on French literature of the year just past by saying:

"If we are asked what is the most interesting intelligence at this moment working in the world of letters, I do not see that we can escape from replying that of M. Anatole France. Nor is it merely that he is supremely amusing in himself. He is much more than that. He indicates a direction of European feeling; he expresses a mode of European thought. Excessively weary of all the moral effect which was applied to literature in the eighties, of the searching into theories and proclaiming of gospels, . . . that the better kind of reader should make a *volte face* was inevitable. This general consequence might have been foreseen, but hardly that M. Anatole France, in his quiet beginnings, was preparing to take the position of a leader in letters. He is taking advantage of his growing popularity to be more and more courageously himself. . . . After a period of enthusiasm we expect a great suspension of enthusiasm to set in. M. France is

what they used to call a Pyrrhonist in the seventeenth century, a skeptic, one who doubts whether it is worth while to struggle insanely against the trend of things."

The praise given to the same writer by Senator Gaetano Negri in *Nuova Antologia* (Rome, January) is scarcely less enthusiastic. From an extended article we translate the following:

"If the readers of *Nuova Antologia* are not yet acquainted with the books of Anatole France, I do not hesitate to say that they are to be envied, because one of the most exquisite intellectual pleasures is waiting for them which the modern literary world has to offer. There is perhaps no more exquisite pleasure than to find oneself, for the first time, face to face with a profound and acute mind, with an original and creative genius, with a writer in whom the vivacity of imagination is united with boldness of invention and elegantly paradoxical unfolding of thought.

"Such a one is Anatole France, who seems to me perhaps the most conspicuous and interesting of the French writers in these last years of the century, since the disappearance of Taine and Renan. It is true that the literary collection of Anatole France is not so serious as that of the two writers whom I have just named. He has not produced any work which may be compared with 'The History of the Semitic Language' or with 'The Origin of Contemporaneous France.' He is not a scientist, but an artist. Yet he has many points of contact with these, because, under the apparent lightness of his fantastic divagations, runs a philosophical and critical thought, like that of his predecessors, and his wandering inventions might almost be called the last flower blooming from a common root of ideas and culture.

"Anatole France professes, as is seen by his discourse to the French Academy, and still more from all of his writings, a profound and affectionate admiration for Renan, of whom he seems a disciple. In fact, he recalls the idea which Renan had in his later days, of giving to philosophy, by means of transparent symbols, the plastic representation of the drama or the tale. But the great scholar, who was without a rival in the art of giving life to a historical scene and in the management of abstract conceptions, which he handled with incomparable grace and dexterity, had not the easy fecundity of invention. Hence he did not succeed in giving to the symbol the speaking reality of life, and his philosophical dramas are, to speak truthfully, worth very little. Now, the narrations of Anatole France are, after all, the symbols of a philosophic thought. Behind these bizarre representations there is an entire philosophy, well determined and strictly rational. But the author has mingled with his creations so much acuteness, such exuberance of spirit and movement, has reproduced his figures and copied them from life with an observation so fine, so tenacious, and so wonderful that the symbol disappears and nothing remains but the reality; or, better, the symbol and the reality are bound in an inseparable union, and thus imprinted in the mind of the reader.

"But there is more than this. The philosophic thought of Anatole France is, so it seems to me, more exact and definite than that of Renan. It may seem a curious and pedantic idea to insist on the philosophical base of these wandering tales, which, by the lightness of touch and the brilliancy of spirit, recall the narratives of Voltaire. But in these also there was a profound intention, and if their spirit lives, it lives exactly through the intention which animates them.

"The philosophy of Renan was, at base, a philosophical skepticism which had no precise limitations, but lost itself, by infinite gradations, in the systems which it encountered. And as in the depths of the thought of Renan there always lived a dualistic conception, there always lived in it a ghost of deism. Hence there was a continuous vacillation, sometimes gracefully paradoxical, sometimes fatiguing, because it compelled the reader to follow the illusions of a phantasy. Now, it seems to me that the disciple has gone beyond the master, and has touched this point so that the look which searches the world sees every trace of transcendental realism, and sees the absolute enter into the same world where he stood confused and mixed up with the products of his own idealization, which is necessarily relative. Arrived at this point, the observer discovers that the existence of an ideal truth, detached from the world and which he should seek to connect with it, is nothing but an optical illusion, and understands that all things and all phenomena have their reason for being in an immanent necessity. Then he becomes perfectly impartial

and is able to look upon all events, all convictions, and all human passions with the same serene objectivity with which he observes and classifies natural things and phenomena.

"Anatole France is too much an artist to have followed his philosophic thought systematically. But this thought is the key which opens the building of his imagination and is the inspiration of all his invention."

Having arrived at this point, Senator Negri proceeds with a careful and exhaustive analysis of several of M. France's books. From "Le Jardin d'Epicure" he draws his conclusions as to the author's philosophy, which, briefly, is that there is no intellectual world apart from the material one, and that what are called abstract ideas have their roots only in concrete facts. In passing, Signor Negri simply calls attention to the "Crime de Sylvestre Bonnard," "Le Livre de mon Ami," etc., and goes on to the last two publications by the same author, "L'Orme du Mail" and "Le Mannequin d'Osier." The scene of these two stories is a provincial town, and in the first the little intrigue for the nomination of a bishop is developed, and in the latter the disastrous marriage of a poor professor. After several quotations from these, Senator Negri compares the cause of the Italian writer Leopardi's somber pessimism with the good-humored pessimism of Anatole France. He says:

"Leopardi was properly a despairing rebel, because he imagined, outside of the world, an omnipotent and wicked God, against whom he threw the thunders of his scorn and the protests of his grief. Anatole France, however, sees no God on whom he can throw the responsibility of the evil which is in the world, so that he no longer either scorns or grieves, but observes, describes, and smiles. He has passed over the line where men prostrate themselves before God; but he has also passed across the line where man rebels and imprecates. The world is what it is because it is impossible for it to be otherwise, and there is no responsible being who, able to do otherwise, would have made it what it is. Having reached this point, the observer is able to watch all things, great and small, with a mind undisturbed by prejudice, by desires, or ephemeral hopes; in other words, he is disturbed by no illusions. . . . We must seek for the origin of these illusions in the natural tendency of man to believe in the existence of an ideal reality, . . . and as every one forms this ideal according to his habits, human illusions are varied and opposed, according to the variety and contrast of habit by which each one forms the world and life. Now observation, which has for its foundation these illusory premises, may be the source of sublime poetry, fascinating eloquence, profound sentiment, and finally of a broad and majestic current of systematic thought; it is able, finally, to produce Manzoni and Leopardi, Bossuet and Voltaire, Rosmini and Schopenhauer. . . . Now, all these observers, these poets, these philosophers, make use of thought for the justification of a certain premise of sentiment and belief. They are necessarily exclusive, partial, unilateral in their judgment; they can not nor do they wish to turn the questions so as to observe them on all sides; but they keep toward them that side only according to which they form the imperious mark of a preconceived ideal. Now, the observation of Anatole France is pre-eminently a circular observation, which proves nothing until it has exhausted all the points of view, and then concludes that each of these points is only able to give a partial aspect of the truth, an aspect which may respond to the impassioned necessity of the observer, but can not satisfy a serenely investigating reason."

In connection with the political and religious discussions of the characters in these books, the Italian critic goes on to say that:

"The most difficult of all problems is the religious one. The solution which each one gives to this problem is the surest indication of the essence of his thought. . . . It is not religion which precedes and settles the moral question, but the moral which precedes and determines the religion. . . . The moral is the sum of the prejudices of society at a given moment. . . . The world and life are the externalization of truth, too often obscured and hidden under the mask of our intelligence, fruitful in prejudice and illusive appearances. Human partnership is indeed only supported on the sentiment of mercy. Every other foundation

is artificial and shifting as sand. The only force which can keep man from doing wrong is the sympathy which he feels for the man who suffers. Well did the profound Schopenhauer say that mercy is the foundation of morality. Ancient society, altho believing, was cruel and iniquitous, because mercy was an isolated phenomenon which flourished as a flower in a desert. Human progress is only the rational organization of a social system formed in an orderly manner upon the foundation of mercy."—*Translated for THE LITERARY DIGEST.*

ENGLISH AS AGAINST FRENCH LITERATURE.

FRENCH literature has had its innings here in America—Flaubert the high aspiring, Maupassant the cunning craftsman, Bourget the puppet-shifter, Zola the zealot, and the rest. "Their side is out; the fiery bowling of Mr. Kipling has taken their last wicket, and those of us who have been born and bred in prejudice and provincialism may return to our English-American ways with a fair measure of jauntiness."

Such are the sentiments to which Henry D. Sedgwick, Jr., gives expression in *The Atlantic Monthly* (March) with a vigor that is suggestive of feelings long bottled-up. Here is a comparison he goes on to draw between English and French literature:

"The heart of all literature is poetry. The vitality of play, story, sermon, essay, of whatever there is best in prose, is the poetic essence in it. English prose is better than French prose, because of the poetry in it. We do not mean prose as a vehicle for useful information, but prose put to use in literature. English prose gets emotional capacity from English poetry, not only from the spirit of it, but also by adopting its words. English prose has thus a great poetical vocabulary open to it, and a large and generous freedom from conventional grammar. It draws its nourishment from English blank verse, and thus strengthened strides onward like a bridegroom. If you are a physician inditing a prescription, or a lawyer drawing a will, or a civil engineer putting down logarithmic matter, write in French prose; your patient will die, his testament be sustained, or an Eiffel Tower be erected to his memory in the correctest and clearest manner possible. But when you write a prayer, or exhort a forlorn hope, or put into words any of those emotions that give life its dignity, let your speech be English, that your reader shall feel emotional elevation, his heart lifted up within him, while his intellect peers at what is beyond his reach."

"What English-speaking person," Mr. Sedgwick further asks, "in his heart thinks that any French poet is worthy to loose one shoe-latchet in the poets' corner of English shoes?" He proceeds then to consider the two chief qualities that have combined to make English literature so great: "they are common sense and audacity, and their combined work is commonly called, for lack of a better name, romance." The inspiration for Mr. Sedgwick's article is then revealed: he has been reading "The Principal Navigations, Voyages, Traffiques, and Discoveries of the English Nation, made by Sea or Overland, compiled by Richard Hakluyt, Preacher." The old chronicles display, Mr. Sedgwick thinks, the two constituent qualities referred to, showing how the British Empire has planted its feet of clay upon the love of gain and combined romance, greed, idealism, and curiosity. After spending some time upon Hakluyt and upon the characteristics of English trade, the writer draws a parallel as follows:

"The spirit of romance has flung its boldness into English literature. It plunders what it can from Greek, Latin, Italian, French, and Spanish. It ramps over the world; it dashes to Venice, to Malta, to Constantinople, to the Garden of Eden, to the Valley of the Shadow of Death, to Liliput, to desert islands, to Norman baron and Burgundian noble, to Virginia, to Florence, to India, to the South Sea, to Africa, and fetches home to England foreign wealth by land and sea. How boldly it sails east, west, south, and north, and by its shining wake shows that it is the same spirit of romance that has voyaged from Arthurian legend to Mr. Kipling!

"French men of letters have not had enough of this audacious

spirit. They troop to Paris, where they have been accustomed to sit on their classical benches since Paris became the center of France. The romance of Villon is the romance of a Parisian thief; the romance of Ronsard is the romance of the Parisian salon. Montaigne strolls about his seigniorly while England is topsy-turvy with excitement of new knowledge and new feeling. Corneille has the nobleness of a *jeune fille*. You can measure them all by their inability to plant a colony. Wreck them on a desert island, Villon will pick blackberries, Ronsard will skip stones, Montaigne whittle, Corneille look like a gentleman, and the empire of France will not increase by a hand's-breadth. Take a handful of Elizabethan poets, and Sidney chops, Shakespeare cooks, Jonson digs, Bacon snares, Marlowe catches a wild ass; in twenty-four hours they have a log fort, a score of savage slaves, a windmill, a pinnace, and the cross of St. George flying from the tallest tree.

"It is the adventurous capacity in English men of letters that has outdone the French. They lay hold of words and sentences and beat them to their needs. They busy themselves with thoughts and sentiments as if they were boarding pirates, going the nearest way. They do not stop to put on uniforms; whereas in France the three famous literary periods of the Pléiade, the Classicists, and the Romanticists have been three struggles over form—quarrels to expel or admit some few score words, questions of rubric and vestments. . . . English courage owes its success to its union with common sense. The French could send forty Light Brigades to instant death; French guards are wont to die as if they went a-wooing; but the French have not the versatile absorption in the business at hand of the English. The same distinction shows in the two literatures. Nothing could be more brilliant than Victor Hugo in 1830. His verse flashes like the white plume of Navarre. His was the most famous charge in literature. Hernani and Ruy Blas have prodigious brilliancy and courage, but they lack common sense. They conquer, win deafening applause, bewilder men with excitement; but, victory won, they have not the aptitude for settling down. They are like soldiers who knew not how to go back to plow and smithy. The great French literature of the Romantic period did not dig foundation, slap on mortar, or lay arches in the cellar of its house after the English fashion."

Wherefore, concludes Mr. Sedgwick, while we Americans love Mr. Matthew Arnold because he is an English poet, we must disregard his entreaties for cosmopolitan standards. "Let us open wide the doors of our minds and give hospitable reception to foreign literature whencesoever it may come, but let us not forget that it only comes as a friend to our intelligence, and can never be own brother to our affections."

An Adverse View of Kipling.—Kipling has been praised so indiscriminately that an adverse view of his work seems almost refreshing. W. L. Phelps, assistant professor of English literature in Yale, is the critic who refuses to fall down and worship. He expressed himself, in a recent lecture, as follows:

"But Kipling is the last man to whom we can award praise indiscriminately. He is awfully uneven and full of errors. When he is dull he is perfectly horrible. I never read anything so dull as are some of his pages. He is a barbarian, slowly coming up to civilized standards. He has little if any taste, and he shows no proper balance in his work. He is lacking in art. His tragedy often becomes melodrama, his comedy buffoonery, his characterization caricature. His style is utterly bad. He strives for effect and to say smart things, and sometimes he says them, but often he is ludicrous. It would not do for a young writer to copy him. It would wreck his future.

"And Kipling is not well read. His books impress me as those of a man who reads little and has studied less. He does not understand sentence construction, to use a rhetorical term. But he is a master and supreme in his knowledge of words. Here he is a king of writers. It is the one great reason for his effectiveness. He always knows just the word to use—the power of the specific word. He is a far greater success in the short story than in the novel. He can not draw character, as a novel demands. Perhaps he has not the patience, perhaps he can not do it. Mulvaney

is the only living creature in his pages. He is an addition to literature.

"Kipling delights in drunkenness. We laugh at drunkenness nowadays, as the Elizabethans laughed at insanity, and Kipling uses it as a trump card all the time. I hope civilization will advance beyond the point where we may laugh at drunkenness, but we have not reached it yet. An extensive fondness for profanity is seen in his work. Profanity rightly used is very effective in strong talking, especially when it comes from the mouth of an otherwise silent and non-talkative man. But as Kipling uses it, and smears it all over his pages, it becomes boresome in the extreme. Smells also occupy a large part of his attention; take the 'Strange Ride' as an example. Beastly details never escape him. His treatment of women is horrible, pagan, uncivilized, and above all his occasional cynicism strikes us as very bad. A woman reading some of Kipling's tales seems as much out of place as she would in the office of a cheap hotel, with the stale tobacco, oaths, and bad air."

FITZGERALD'S STORIES OF FAMOUS SONGS.

SAID Fletcher of Saltoun to the Earl of Montrose in 1703: "We find that most of the ancient legislators thought they could not well reform the manners of any city without the help of a lyric, and sometimes of a dramatic, poet. . . . The poorer sorts of both sexes are daily tempted to all manner of wickedness by infamous ballads, sung in every corner of the streets." Chaucer's knight "could songs make, and well indite"; and that fat rascal, Falstaff, exclaimed, "I had rather than forty shillings I had my Book of Songs and Sonnets here." For hundreds of years, England, Scotland, Ireland, have been rich in ballads and madrigals—songs of May Day and Christmas, Easter and Whitsun, catches, roundels, glees, lyrics of high and lowly life, songs of loving and fighting, of carousing and of fierce encounter; "and tho few seek to know the origin of the songs that please them, the telling of the tale always adds to their attraction."

It is with the object of supplying this attraction that Mr. Fitzgerald, in his "Stories of Famous Songs," displays the results of fifteen years of labor in his peculiar field, and recounts brief histories, generally accurate and always entertaining, of the world's most famous or most popular songs and ballads, gathered from all sorts of available sources—books, magazines, newspapers, and the notes of living friends and representatives of the singers whose harps are long since mute. "Many of the particulars, as to the origin, authorship, and outcome of several of the ballads and pieces, here appear in print for the first time." The author has restricted himself to the pleasing task of relating the stories of such lays and lyrics as were written under romantic, pathetic, or entertaining circumstances; and he is confident that no notable effusion "with which any history is associated, as to its inception and birth," has been omitted.

He begins with "Home, Sweet Home," and ends with "God Save the King"; between these are included many an entertaining story or anecdote of the famous songs of England and Scotland, Ireland and Wales; of French and Italian songs; Prussian, Austrian, Hungarian, Swedish, and American songs; and of many a lay of love or war that, in its time, has "held children from play and old men from the chimney-corner."

Of "Home, Sweet Home," Dr. Mackay wrote: "It has done more than statesmanship or legislation to keep alive in the hearts of the people the virtues that flourish at the fireside, and to recall to its hallowed circle the wanderers who stray from it." But round both words and music of this evergreen song controversy has raged for years. Of the claims of Planche and O'Sullivan, Mr. Fitzgerald disposes in summary and convincing fashion:

"Mr. Planche allows Payne to have the full right and honor of the authorship of the words all his life, and not till twenty years after his death does he come forward with his claim. But long before this Michael John O'Sullivan, a journalist and writer of

plays, gave it out that he not only wrote the song, but also the opera of 'Clari'! Of course, it would be quite logical for a theatrical manager to pay an author two hundred and fifty pounds for a work he did not write!—the sum that Kemble paid Payne for a piece that was written, according to their version, by Mr. Planche and Mr. O'Sullivan—not in collaboration, but separately! And not only that. They allowed Payne's name to appear nightly in the bills and to be advertised on the song, and advertised on the book of the words, as published by Lacy in the Strand. Here is the title-page: 'Clari, the Maid of Milan! A musical drama, in two acts, by John Howard Payne, Author of "Brutus," "The Lancers," "Love in Humble Life," "Charles the Second," "Ali Pasha," etc. I think that should settle the matter."

The story of the melody, that Sir Henry Bishop adapted it from a Sicilian air—a story that, having once secured a footing in newspapers and magazines, has held on with phenomenal tenacity—is shown to be another imposture, begotten of piracy and opportunity. Dr. Charles Mackay, engaged with Sir Henry in the work of revising "The Melodies of England," learned from him the history of the air. He (Sir Henry) had been engaged by a firm of publishers of music to edit a collection of national melodies of all countries. In the course of this work he found that he had no Sicilian air, and he proceeded to invent one:

"The result was the now well-known air of 'Home, Sweet Home,' which he arranged to the verses of Howard Payne. Pirates were in the field as now, and, believing the air to be Sicilian and non-copyright, they commenced issuing the song in a cheaper form; but Messrs. Goulding, D'Almaine & Co. brought action against the offenders and won the day on the sworn evidence of Sir Henry Bishop, who declared himself to be the inventor of the same. This should decide the matter for all time."

Very lively and entertaining is the story of "Robin Adair," the impulsive and impecunious young Irishman, and his love-lorn sweetheart, Lady Caroline Keppel, who wrote the song to the tune of "Eileen Aroon," and afterward married him, advancing him, by her family influence, to the posts of King's sergeant, surgeon, and surgeon-general. And that other romantic and heartrending story of "The Mistletoe Bough"—the lovely bride who was buried alive in the old oak chest. Miss Mitford says the story belongs to Bramshill, Sir John Cope's house in Hampshire, altho the same tragic incident is associated with four other houses—the house of the Hartopps in Leicestershire; Marwell Old Hall, near Winchester; Exton Hall, the seat of the Noels; and the Lovell house, at Bawdrip. The name of Haynes Bayly, who wrote the song, is associated in the memory of the passing generation with those other dear old household ditties, "I'd Be a Butterfly" and "She Wore a Wreath of Roses." Novelists have appropriated the title of Bayly's famous song, and in 1834 Charles Somerset produced at the Garrick Theater, Whitechapel, a melodrama, "The Mistletoe Bough, or the Fatal Chest."

Of "Auld Lang Syne," our author remarks that, like many another ballad that lives in the hearts of the people, this essentially human song was made by an unknown hand, that perhaps produced nothing else worth remembering; for, contrary to the prevailing notion, "which, it must be acknowledged, editors of Burns have done their best to foster," "Auld Lang Syne" was not written by the author of "Tam O'Shanter"; and, as matter of history, Burns never claimed it. The phrase, "Auld Lang Syne," is of the heather born, and even the quaint lexicographer, old Jamieson, could not help growing sentimental over the soothing words in his "Scottish Dictionary":

"To a native of the country,' he says, 'it conveys a soothing idea to the mind, as recalling the memory of joys that are passed.' It 'compresses into small and euphonious measure much of the tender recollection of one's youth, which, even to middle-aged men, seems to be brought from a very distant but very dear past.' 'Auld Lang Syne,' be it remembered, was a phrase in use in very early times, and it can be traced to the days of Elizabeth in connection with the social feelings and the social gatherings of the Scot; as a convivial and friendly song it existed in broadsides

prior to the close of the seventeenth century. An early version of the song is to be found in James Watson's collection of Scottish songs published in 1711."

On the 17th of December, 1788, Mrs. Dunlop of Dunlop, daughter of Sir Thomas Wallace of Craigie, received a letter from Burns in which he writes:

"Apropos, is not the Scot's phrase, 'Auld Lang Syne,' exceedingly expressive? There is an old song and tune which has often thrilled through my soul. You know I am an enthusiast on old Scot songs. I shall give you the verses.' And he enclosed the words of 'Auld Lang Syne' as we know them, and unless Burns was wilfully concealing fact, he only trimmed the lines and did not originate or write the lyric. He continues somewhat extravagantly: 'Light lie the turf on the breast of the heaven-inspired poet who composed this glorious fragment! There is more of the fire of native genius in it than half a dozen modern English bacchanals.' Burns would hardly write like this about himself and his work, so we take it that he only preserved it from forgetfulness."

Three years later, Burns writes to his publisher, Thompson:

"One song more, and I am done—'Auld Lang Syne.' The air is but mediocre, but the following song, the old song of the olden times, and which has never been in print, nor even in manuscript, until I took it down from an old man's singing, is enough to recommend any air."

It is well known that Burns contributed more than sixty songs, "begged, borrowed, or stolen," as he frankly acknowledged, to make up the "Museum." One of his editors, Skipsey, attributes "Comin' through the Rye" to Burns, and another declares that he wrote "Could Aught of Song," altho both were anonymous long before the "plowman-poet's" time. The melody of "Auld Lang Syne" is attributed by Fitzgerald, on authority which seems conclusive, to William Shield, who wrote the music for "Old Towler," "The Wolf," "The Heaving of the Lead," and "The Post Captain." "Auld Lang Syne" was introduced into an adaptation of Scott's "Rob Roy," and sung before George IV. in 1822.

(To be concluded.)

ARE PUBLIC LIBRARIES DEMORALIZING?

THIS is rather a startling question, and it appears at first sight rather absurd; but James Buckman maintains, with some show of justice, in *The Interior* (Chicago), that it must be answered in the affirmative. Mr. Buckman says:

"For ten years or more I have not bought, I dare say, a dozen books, my excuse being that I have access to two of the largest and best-equipped public libraries in the country. I find the resources of these libraries adequate to all my professional needs; and, so far as mental pleasure is concerned, they are inexhaustible sources of entertainment. Yet, when I look at my own slenderly furnished book-shelves, and recall the days when, as a college boy, I used to count it a month's delight to save for, and buy, and devour, and pencil, and reread some volume of my especial desire, I can not help feeling that something good and helpful, something morally and intellectually stimulating, has gone out of my life.

"Is it not true that there is some ethical significance in the right ownership of books? I say the right ownership, because to possess them as mere chattels, or furniture, or ornaments, is neither a moral nor an intellectual benefit. The young person who has a strong desire to make a book his legal property will not exhaust this desire until the book has become his mental and spiritual property also. One of my old teachers used to say that boys are naturally misers, and if they put a penny into a thing, they will be sure to take two pennies' worth of satisfaction out of it. As I look back upon my own experience, I am convinced that this is true, at least of books. I am willing to confess that I have never got at the real, inmost soul and essence of a book since I quit buying them.

"If the public library deprives a person of the real moral helpfulness that comes from the ownership of books, it is, negatively at least, and in so far, a demoralizing institution. Anything that

abates moral vigor and vitality is demoralizing. No matter how negative or indirect the influence may be, it counts just as positively on the wrong side."

But this is not all. Mr. Buckman is convinced that the libraries are open to still "more positive and serious charges," as follows:

"The influence of the public library is distinctly demoralizing, it seems to me, in the license it affords, to young people especially, of unlimited indulgence in books of light and ephemeral character—chiefly, of course, fiction. Nine tenths of all the books taken from public libraries, by readers between the ages of fifteen and thirty, are stories. The very opportunity for so much light reading—which would be obtainable in no other way—is immoral in its effect. It may be objected, and rightly, that it is outside the province and authority of a public library to regulate the reading habits of its patrons. I admit this, of course; but my charge lies back of it, namely, in the fact that the library provides the opportunity for excessive, and therefore mentally and morally debilitating, light reading. The fault lies in the library idea, not the library method. It is wrong in essence to allow young people to have unrestricted access to a great mass of romantic, fictitious reading. They never would have this license were it not for the public library. And the absorbing extent to which they avail themselves of it is acknowledged by the majority of parents and teachers. 'I can scarcely keep my pupils' minds fixed upon their studies,' says a teacher in one of our large cities, 'so taken up are they with the fad-books of the day, which they draw out of the public library, and pass from hand to hand, devouring them greedily even during study hours.'

"Aside from the time wasted in this profitless devouring of fiction, the mental and moral enervation of reading to excess that which leaves no real intellectual furnishing is very great. It is like a diet composed solely of liquid stimulants. What little quickening the mind gets is through direct absorption. There is no substance to be digested and gradually assimilated into new and healthful tissue.

"Once more, and finally, I am inclined to think that the public library has a demoralizing effect upon the community by reason of the method of reading which it encourages. Any one who for any length of time patronizes a public library almost invariably falls into the library habit of reading—the superficial, skimming, skipping habit, that incapacitates the mind for really incorporating what it reads, but permits it to gratify a temporary curiosity by tasting a little here and a little there, sipping like a butterfly from every blossom, but never once, like the honest bee, getting down into the flower, and draining its honey, and rubbing eager thighs in its pollen. The reader of library books never retains any of their vitality.

"Now, this superficial, careless, non-appropriate, non-perceptive habit of mind encouraged by the library method of reading has a moral tendency, just like any other habit. It tends to make a person superficial, slipshod, and lacking in thoroughness in other relations of life. The skimmer, the jack-of-all-books, the non-appropriate reader, is apt to be a student lacking in grasp and thoroughness. Whatever his work may be, wrong habits of reading will have a tendency to make him botch it."

NOTES.

The Transcript, Boston, gives the following set of rules for the benefit of art critics: "If he paints the sky gray and the grass brown, he belongs to the Old School. If he paints the sky blue and the grass green, he belongs to the Realistic School. If he paints the sky green and the grass blue, he belongs to the Impressionist School. If he paints the sky yellow and the grass purple, he is a Colorist. If he paints the sky black and the grass red, he is an artist of great decorative talents—great enough to make posters."

TENNYSON'S use of "s" is the cause of continued discussion. Tennyson, it will be remembered, said that he never put two "s's" together. Mr. W. W. Ward, after a careful search, found several apparent exceptions to this statement; only to be corrected in turn by W. T. Malleson, who pointed out the fact that the exceptions noted were not real ones, one "s" having a sound different from the other. "As she," for example, would phonetically be written "Az she." Now *The Fordham Monthly* rises to remark that Tennyson included even these apparent exceptions in his statement, for the very misquotation he objected to was, "And freedom broadens slowly down," which contains the "z" and "s" combination. Mr. Ward has evidently proved his point; but in doing so has also proved that Tennyson did not allow his thought to be hampered to an unreasonable degree by the machinery of versification.

SCIENCE AND INVENTION.

EVOLUTION OUTSIDE THE BODY.

IN a very suggestive letter to *Science* (February 25), Arthur Allin, of the University of Colorado, notes that all the great advances of man during the past century are what he calls "extra-organic"; that is, they have been made outside the body or organism; they are improvements in machinery and mechanical devices that supplement and extend the action of our sense-organs. Says Mr. Allin:

"Progress has marched with colossal strides during the last fifty and even twenty years. Nevertheless, we see no corresponding advances made organically which may be deemed adequate to such progress. As far as our congenital or blastogenic qualities are concerned, we are probably little if any better than our forefathers of fifty or a thousand years ago. The progress actually made is out of all proportion to the advances made in our organisms.

"Our sense- and motor-organs are essentially instruments and tools. So also, for that matter, is the brain. They are sifters, sentinels, receivers, transmitters, etc., all pressed into the service of the organism or some of its parts. The eye is manifestly an optical instrument, tho a poor one, when compared with that additional eye or sense-organ, the microscope or telescope. It is a well-known fact that it suffers from every defect that can be found in an optical instrument. It was useful in its time, and is so, I presume, to-day. Civilization, however, has taken its gigantic strides guided by extraorganic eyes.

"Most, if not all the three hundred or more mechanical movements known to mechanics to-day are found exemplified in the human body. From an evolutionary standpoint it is still more important to note that all the machinery in the world, all the bars, levers, joints, pulleys, pumps, girders, wheels, axles, ball-and-socket movements, etc., are but variations, extensions, adaptations of the accumulated advantageous variations and adaptations of the human organism.

"Thus our sense-organs are indefinitely multiplied and extended by such extraorganic sense-organs as the microscope, telescope, resonator, telephone, telegraph, thermometer, etc. Our motor-organs are multiplied by such agencies as steam and electrical machines, etc., in the same manner. The printing-press is an extraorganic memory far more lasting and durable than the plastic but fickle brain. Fire provides man with a second digestive apparatus by means of which hard and stringy roots and other materials for food are rendered digestible and poisonous roots and herbs rendered innocuous. Tools, traps, weapons, etc., are but extensions of bodily contrivances. Clothing, unlike the fur or layer of blubber of the lower animal, becomes a part of the organism at will. One becomes more or less independent of seasons, climates, and geographical restrictions. Thousands of extraorganic adaptations are being invented (most of them really accidental variations) every day."

Mr. Allin extends the meaning of Prof. J. Mark Baldwin's term, "social heredity," to cover the transmission from generation to generation of this improved environment, or of variations outside the organism. This means, of course, the transmission and development in the human brain of the power of adapting oneself quickly to the inherited environment. In other words, it must not take the modern students more than a few months to grasp the principles, say, of the steam-engine, which the human race was ages in devising. Says the author:

"Adaptability to one's new environment is always the mark of high intellectual development. Such adaptability is rendered possible by the nature and growth of the brain. Of the 800,000,000 to 1,000,000,000 nerve-cells present in the human cortex, all are formed before birth. But all are not developed. Cell elements are present but immature, mere granules, nuclei which do not form a functional part of the tissue. Under certain conditions, however, they are capable of further development. With further growth and exercise nerve-fibers appear and form functional systems.

"It seems, therefore, that in addition to the cells and fibers connected at birth (and sometimes later), as in instincts, there is a mass of latent or potential nerve-cells and fibers which *await connection*. These form probably the physical basis of our acquired (mental) characteristics.

"Thus there is rendered possible the speedy acquisition of knowledge of the past and new arrangements and adaptations to meet the requirements of a more exacting environment. The latent cells become functional, and new associational paths are formed which become, or may become, by the law of habit, just as fixed and, ontogenetically considered, as reflex, and organic as the most definite inherited reflex action and instinct.

"Some such theory as the above seems to be necessary to explain the wonderful advance of modern civilization. It is certainly not explained by any one or all of the three processes mentioned above, namely, those of organic, intraorganic, and germinal selection. It may, however, be considered as a continuation of the same fundamental process. If the organism were forced to evolve within itself, by the slow process of organic selection, all the adaptations necessary for such a civilization as we have to-day, it is obvious that after millions of years it would finally produce a world-colossus, or impossible gigantic monstrosity."

PHOTOGRAPHY OF SO-CALLED VITAL EMANATIONS.

THE experiments made recently in France, which seemed to the experimenters to prove that some subtle emanation from the living body can affect a sensitive photographic plate, have already been mentioned in these columns, as well as some of the explanations that have been given of the phenomena.

1. POSITIVE CONTACT IMAGE PRODUCED BY THE COLD HAND OF A CORPSE ON A SENSITIVE PLATE IN A WARM DEVELOPER.

2. CONTACT IMAGE PRODUCED ON A SENSITIVE PLATE BY THE HAND OF A CORPSE, ARTIFICIALLY WARMED, IN A COLD DEVELOPER.

That these phenomena are not "vital," at any rate—that is, that they are not produced by living any more than by dead matter—has just been conclusively proved by another French experimenter, M. P. Yvon. He has succeeded in producing exactly the same effects with a dead hand as with a living hand, the only necessary condition being that it should be sufficiently warm. This seems to show that the effect is produced by heat and not by life. Similar effects are produced even by warm inanimate objects. In *La Nature* (Paris, February 19) we find an article by M. L. Dubartin, describing M. Yvon's work.

It is well known, says M. Dubartin, that the gelatin-bromid plates that are used in these experiments are so extremely sensitive that when they are plunged into a developer in total darkness the surface becomes "veiled," altho they have not been previously exposed to light. Sensitive plates are sensitive not alone to light; other agents or exterior forces, such as heat, electricity, and mechanical actions, can also impress them. These are sometimes, in the absence of light, sufficient to produce negatives of considerable intensity.

The effects supposed to be due to vital emanations or aura are then, according to M. Yvon, due to this spontaneous "veil," which he calls the "latent veil," and to the action of heat, to which may be added that of red light—if a red lantern is used in the laboratory, as was the case with some of the experiments. M. Yvon's crucial test was performed as follows:

"The facts announced by Messrs. Luys and David are real ones, but they can be explained without any new hypothesis, and a single experiment is sufficient to test them; we can reproduce them by using a hand detached from a dead body—not embalmed, so as to remove any possibility of chemical action.

"The dead hand and the living hand were placed near each other on the same plate plunged in the developer; the length of contact was fifteen minutes. . . . To prevent cooling from taking place too rapidly, the upper side of the hand was kept in contact with a reservoir of acetate of soda heated to 50° [122° F.].

"The experiment showed what it would be easy to foresee: in general, all the impressions obtained with the living hand were more accentuated, since it alone has within itself an active element—heat."

M. Yvon reversed the conditions of his experiment by cooling the object in contact with the plate and heating his developer. In this case he obtained a figure resembling those obtained by the other method, but positive instead of negative. His results are shown plainly by the accompanying photographs.—*Translated for THE LITERARY DIGEST.*

Brain Fatigue in School Work.—A question of interest to teachers is raised by a recent paper by Dr. Kemsies, the headmaster of a large German school, who gives his personal experience of the conditions which influence the working capacity of his pupils. We quote from an abstract of his article in *The Hospital*: "The best work, he says, is done at the beginning of the week, after the Sunday holiday; and by Tuesday afternoon it has already begun to deteriorate. Again, the mornings produce the best work, and the midday rest, during which the midday meal is taken, does not produce the same recuperation as the night's rest. If these results are to be taken as correct, it would seem as if many of our educational customs might be reformed with considerable advantage. We have long thought that a reversion to the two half-holidays would be a great advantage to the children, however much the teachers might dislike it, and these investigations only tend to confirm our idea. Young ladies, again, used to go to school in the morning and the afternoon, with a two hours' interval between the two sessions. But now it is thought desirable, we suppose, that they should be free to pay calls with their mothers in the afternoons, and everything is crowded into one long grind of four hours in the morning. Moreover, a modern blackboard lesson is a very different thing from the work that used to be done in school hours, much of which would now be called preparation; and, altho as a means of teaching facts its value is obvious, so also is its power of producing fatigue. Curiously enough, the German experience is that gymnastics, which we are apt to class with play, produce the greatest fatigue of all, rendering the work done after it practically useless. But, then, the gymnastics are probably done in a class, each pupil having to do as he is told. This is practically another lesson, and is not to be put into the same category with half an hour in a fives-court, or at football. It must not be forgotten that the effort to make teaching interesting, which is its great characteristic in modern times, does not really lighten the burden on the child. It makes learning easier, but it makes him learn more; it keeps him always at it, and it steals from him those moments of torpor and stupidity, of dreams and vacancy, in which his little brain used to take furtive snatches of repose."

HOW FAR CAN WE TRUST OUR SENSES?

EVERY one knows that our senses occasionally deceive us, but few realize that in normal condition they habitually give wrong indications, in one respect at least: they do not indicate accurately the intensity of the force, whatever it may be, that excites the sense-organ. That is to say, of two lights, one that is of double intensity does not seem twice as bright; of two sounds, one that is twice as loud as the other does not appear so to the ear. Scientists have long known this, and many efforts have been made to determine what the exact relation is between

the intensity of the exciting agent and that of the resulting sensation. An account of recent experiments in this direction is given in the *Revue Scientifique* (Paris, February 5) by M. Casslant.

The question, we are told, has been taken up recently anew by M. Charles Henry, who has endeavored to solve it by trying a series of experiments for each sensation, representing their results graphically by drawing a curve, such as those that are used to show varying heights of barometer or thermometer for a series of days, and then deducing a mathematical law by a study of these curves. The method followed consisted in determining the intensity of the excitant corresponding to the smallest sensation perceived, then to increase this intensity, and to determine the degrees of sensation produced. The principle difficulty in the experiments consisted in measuring the intensity of the excitant with sufficient exactitude. We give M. Henry's method for the sensation of sight, as a type of all his experiments. Says M. Casslant:

"This depends on the well-known principle that the intensity

of the light passing through a screen is proportional to the area of the opening; in this way the measure of the luminous intensity depends on the measure of a surface—an elementary problem. . . .

"To make the experiment practically, we observe the source of light, such as a candle or a lamp, with the aid of the photometer, a sort of telescope devised by Radiguet, having a diaphragm with a variable opening.

"As we have said, the intensity of the light is caused to increase from the least perceptible amount, and at each new degree of sensation the corresponding intensity is measured. To obtain all the intensities within sufficiently wide limits, the source of light is moved or its intensity is varied, the diaphragm serving to determine intermediate degrees only. Usually the experiments were made between 0 and 60 candle-meters [a candle-meter is the intensity of a standard candle at the distance of one meter], but much greater intensities are to be tried.

"Once in possession of the necessary values, the curve is drawn, as represented by the annexed figure, in which the distances of points on the curve from the base-line are intensities of illumination, and the corresponding distances from the side-line represent the corresponding degrees of sensation."

It only remains to deduce from this curve the mathematical formula that expresses the general relation between intensity and sensation in the case of light. This, altho difficult, has been accomplished by M. Henry, but his result will interest mathematicians alone. From a general study of the curve we see that sensation does not increase proportionally to intensity. At first it is nearly so, but afterward its increase is much slower. Thus the degree of sensation for an intensity of 250 is 6, while for 500 it is not 12 but only 8, and for 1,000 it is only a little over 12. It does not reach 24 till the intensity goes up to above 12,000. The results for the sense of hearing and for that of heat and cold are very similar. The shape of the curve depends of course somewhat on the person; in mathematical terms, the formula contains "parameters" that depend on the individual and on the previous state of his sense-organ, but its characteristics remain the same. Passing now to practical applications, we quote M. Casslant's closing paragraphs:

"The formulas of M. Charles Henry have led to numerous practical applications. In particular, the psychophysical law has enabled M. Bourdelles, inspector-general of roads and bridges, to improve our lighthouse system by the use of flashlights. For the fixed illumination are substituted flashes that occur every five seconds and last for the time necessary to produce the full luminous sensation—a time given by M. Charles Henry's formula for a given distance. The result is that by this new arrangement the material is simplified, and without altering the character of the light it answers better the requirements of navigation, its intensity is increased, it is clearly defined for a given distance, and the result is a notable degree of economy. M. Henry's studies of the psychophysical law in the case of colored light will doubtless enable us to make new progress in the use of such light.

"These facts show that altho serious progress has been made during the past few years in our knowledge of the psychophysical law, there yet remains much to be accomplished in this direction, and it is probable that in the near future we shall have new results to announce."—*Translated for THE LITERARY DIGEST.*

Shall We Live on Fruit?—The advice of those modern dietetic reformers who tell us to subsist largely on fruits does not commend itself to *The Alienist and Neurologist* (St. Louis), which has the following to say on the subject:

"The fruit-eating craze is possibly the most degenerate of the many recent fads. The fruit-eating and pot-bellied natives of the tropics and their next lower relatives, the apes, are truly inspiring objects of imitation by civilized man; not even their outdoor and arboreal lives save them from the consequences of a meager and irritating regimen. It is truly pitiful to see the army of neurasthenics, dyspeptics, rheumatics, starving their tissues and acidulating their blood at the beck of a few, to put it charitably, harebrained enthusiasts. It is fair to suppose that a troop of rickety children will later rise up and call them anything but

blessed, a fate from which the ape saves himself by abundant potatoes of river water.

"The fact with regard to fruit is, that altho it contains little nourishment it agrees well with many people endowed with a vigorous gastric mucosa and fairly alkaline blood. To them it brings looseness and joy. In many dyspeptic states, it is the first food-stuff to disagree, and to the ill-nourished neurasthenic it is a miserable substitute for the better tissue-builders.

"An appeal to the facts of evolution gives little comfort to the cranks of one dietary idea. Primitive man has as hunter and herdsman thriven on an animal dietary. Nuts and fruits have served his turn as well, and encouraged him to the cultivation of the cereals. There is no evidence to show that the people of any nation have become longer-lived or shorter-lived on account of an exclusively vegetable dietary, or that any association of cranks has increased the longevity of its members by any exclusive system whatever."

RÔLE OF IRON IN THE LIVING BODY.

WE all know that iron is a valuable tonic, but few understand that it is an element absolutely necessary to life, and that it plays an important physiological rôle in the system. The results of recent investigations on the subject are popularly set forth in the *Revue des Deux Mondes* (Paris, February 1) by M. A. Dastre, from whose article we translate some of the most interesting paragraphs. Says M. Dastre:

"The substances most universally disseminated in the mineral world are also the ones most widely found in living beings. The same simple bodies that enter into the composition of the earth's crust and into that of the atmosphere enter also into the constitution of animal and vegetable organisms. Living matter is not, as Buffon believed, a substance dependent on choice, and chemically distinct from dead matter, being of superior and immortal essence; it is a compound of the humblest and commonest materials of mineral nature. Among the seventy-two elements that chemistry furnishes us, scarcely twenty are found in organisms, and among them at most a dozen may be regarded as essential constituents. These twelve simple substances are the most common in the world; iron is the last and the heaviest of them all.

"If we seek a reason for the fact that the living world is made up only of the most universally disseminated elements, the general reason is not difficult to see. It is a consequence of the universal laws of nutrition and increase. Life is kept up only by continual exchanges with the physical world; under the form of food or stimulant, it gets from that world its substance and its energies, and restores them faithfully. As living beings arise from germs that are always extremely small, the mass of transmitted matter is always small, often infinitesimally so, compared with those that are acquired, that is to say, of course, taken from the soil or the atmosphere.

"It is probable that at the first appearance of the earlier living forms, these beings had a simpler chemical constitution than present organisms. The extremest degree of simplicity that we can imagine still requires four elements: carbon, oxygen, hydrogen, and nitrogen, which are necessary to form the fundamental organic molecule. The other elements, iron one of the last among them, were doubtless added successively by a sort of chemical adaptation of the living creature to the environment that constantly offered them. To speak in the language of the chemists, this faculty of accommodation or adaptation depends on the aptitude of the fundamental organic molecule to join to itself successively the atomic groups that are of widest occurrence around it and that correspond best to its functions. In simpler terms, the circulation of matter between living and inanimate nature and the necessary accommodation of these two, one to another, require that animals and plants should be formed of the same clay as the earth on which they live."

Iron, then, the author tells us, is present in plants and animals simply because it abounds in nature. Most of the brightly colored red or yellow rocks owe their coloration to it, and recent experiments show that the brilliant colors of many plants are also due to it. In animals, too, it colors the blood purple and the bile green, and gives brilliant tints to fur and plumage. It seems,

then, to be nature's great colorist. "When nature takes up her brush," said Haiiy, "the father of mineralogy," "it is always iron that supplies her palette."

The great weight of the iron atom necessitates its linkage with a vast number of lighter atoms in the organic molecule. Thus, says the author :

"We find molecular edifices of gigantic dimensions, of which the organic compounds of iron offer a remarkable example. In particular, the molecule of the red matter of the blood of higher animals contains, for one atom of iron, 712 of carbon, 1,130 of hydrogen, 214 of nitrogen, 245 of oxygen, and 2 of sulfur—in all 2,303."

"Thus iron enters into organic matter in the midst of an immense cortège of elements that it carries along with it, which sustain it and float it, as it were, in their substance. It is natural that its atoms, each of which has such a multitudinous escort, should be found in living bodies only in small numbers."

The principle rôle of iron in living beings, we are told by the author, is to aid in combustion, that is, in the assimilation of oxygen within the body. This it does by acting as a carrier of oxygen, which it furnishes to the tissues from its higher or ferric compounds, taking on the lower or ferrous state of oxidation in the act. It has recently been discovered that the liver is the principal seat of this action. Says M. Dastre :

"It [the liver] contains iron, and this iron exists in forms analogous to the ferrous and ferric compounds; on the other hand, it is filled with blood which carries the oxygen necessary for combustion, both in the state of simple solution and in loose chemical combination in its globules. All the conditions necessary to the production of slow combustion are thus found here together. It can not, therefore, be doubted that it really takes place. This is the new function that we must assign to the liver."

This being the case, it is evident that without iron we should die, and it is therefore providential that the metal should occur almost everywhere in the plant world.—*Translated for THE LITERARY DIGEST.*

EDUCATION OF ANIMALS.

IN an article on this subject in the *Revue de l'École d'Anthropologie*, M. Charles Letourneau tells us that nearly every living creature is more or less capable of education. In many this education is latent and inherited, and manifests its effects in the course of individual development, so that the parents may turn off their young to shift for themselves as soon as they are able to do so. But in other cases preliminary training is necessary. Says M. Letourneau (our quotations are from a translation in *Appleton's Popular Science Monthly*, February) :

"Some species take care for the future of their offspring, and before sending them away teach them to fly, or swim, or hunt, or fish. Dureau de la Malle saw falcons, high up in the air, drop dead mice and swallows in order to teach their young to spring upon their prey when in rapid flight, and to estimate distances; and when the little hawklets were somewhat larger, they dropped living birds instead of dead game. American crested ducks teach their young to find seeds and to snap at flies and aquatic insects.

"It is generally the female that exercises this care for her offspring, while the male concerns himself little about the matter. The female wild duck leads her brood to the water, and takes care to choose places of no very great depth for this first lesson, and trains the little ones to hunt flies, mosquitoes, and beetles. The female of the eider duck gently carries her ducklings one by one in her beak, escorts them to the deep water, and teaches them to dive for fish. When they are tired she glides under them, takes them on her back, and carefully carries them to the shore. It is undoubtedly very largely by virtue of instinct and ancestral education that birds swim or fly, and the mother has only to invite them to the act by her example; but, for a more complete training, the lessons are very useful, if not necessary."

After giving examples of many other cases of parental training

by birds, beasts, and even by insects, M. Letourneau goes on to say :

"All this is because, notwithstanding morphological differences, all living beings have something in common at the bottom; so that the physiological psychology of one species may illustrate that of others, and even of man. In short, we have good grounds for saying that all animals, whether vertebrates or not, but possessing nervous centers, however little developed, are susceptible of education; with all a suitable training long enough continued can to a certain extent derange the hereditary tendencies which we call instinctive, and even create new ones. These perturbations, these metamorphoses of native tendencies, are observable with special ease in domestic animals. We have a right to be surprised that, after having so successfully adapted the few animals with which we are acquainted to his service and use, man has not tamed many others. We may suppose theoretically, and it is made probable by numerous experiments, that there are few among the superior species that would resist a methodical and persistent training."

In the case of the more intelligent animals, like the dog, the process of education is made easier by centuries of association with man. There are other animals that might now be educated and utilized to great advantage if they had only the start that is given by such an inheritance. The author gives the case of the monkey as an example. He says of it :

"If the larger monkeys had been domesticated by man, and associated with him for thousands of years as the dog has been, it would not be unreasonable to suppose that they would have been still more modified, morally and physically, than that animal. They would probably have made a closer approach to the inferior human races; for the dog, different as he is from man, has been remarkably humanized by his contact. This mental humanization of the dog is an extremely important fact, as showing how powerful education may be; how, if time enough is taken, it may modify the organization. The domestic dog is evidently descended from one or several canidian ancestors similar to the wolf, very wild and not very intelligent, but endowed with a social instinct. Many centuries have been required to change it into the devoted companion and worshiper of man that it is, to acquire its expressive bark instead of the wolf's howling, and to assimilate the many qualities and capacities it exhibits so foreign to its nature. Its civilization has not taken place all at once. We still find half-wild dogs among the Australian hordes and other lower races, that do not know how to bark, that have no affectionate relations with their masters, and are nothing more than selfish auxiliaries in hunting or fierce sentries of the camp or village."

SCIENCE BREVITIES.

"PROF. F. E. NIPHER has recently measured the frictional effect of moving trains upon the air near them," says *The Scientific American*. "His apparatus consisted of a hemispherical cup, which he could fix at distances up to thirty inches from the window of a railway carriage. The mouth of this collector was turned toward the direction in which the train was moving at the time of observation; and the pressure due to the motion was conveyed to a pressure-gage by means of an india-rubber tube attached to the back of the collecting-cup. The results obtained showed that a large amount of air is dragged along with a rapidly moving train, the motion being also communicated to air many feet away. Most people believe that it is dangerous to stand near a train going at full speed, and Prof. Nipher has now proved that the moving air is a real source of danger. The air not only possesses sufficient power to cause one to topple over, but it also communicates a spinning motion tending to roll a person under the train, if the nature of the ground does not prevent such a result."

ENGLISH AND AMERICAN WORKMEN.—"*The London Times*, in a recent issue," says *The Industrial World*, "publishes the report of a conversation between an English engineer and an American manufacturing engineer upon the relative industrial conditions of the two countries, and comments at some length upon the facts revealed. The American, as was to have been expected, dwelt upon the superiority of the American workman and machinery and on what an economic writer of ability characterized as the 'cheapness of high wages.' He alleged that the American workman receives higher wages, but the labor-saving machinery makes possible a profitable export trade. As a matter of fact, the high wages, more than any other factor in the industrial life of the country, makes the profitable export trade possible. The high wages command the services of the best mechanics in the world, and the greater the skill of the artisan the larger the product of his labor and the less the waste from his work. The superior labor-saving machinery in this country has a good deal to do with the growing exports of manufactured products, but the most important agency of all is the higher wages."

THE RELIGIOUS WORLD.

AN AMERICAN CATHOLIC ABROAD.

ARCHBISHOP JOHN J. KEANE, formerly the head of the American Catholic University in Washington, finds it very difficult to make the European mind comprehend American ideas and appreciate the American spirit. The people abroad he finds puzzled by our political system, incapable of understanding the processes by which the diverse elements of our population become fused into homogeneity, and, most of all, at a total loss to understand the relations existing here between state and church. "A condition in which the church neither seeks patronage nor fears persecution seems to them almost inconceivable." The relation between Catholics and non-Catholics in America is equally a stumbling-block abroad. On this, and on the view with which the Chicago Parliament of Religions is regarded by European Catholics, the Archbishop discourses as follows (*The Catholic World*, March):

"They have for centuries, and with very good reason, been used to regarding Protestants as assailants of the church, to be met, as it were, at the point of the bayonet. When the American assures them that, with the exception of a small minority of fanatics, such is not at all the attitude of our non-Catholics; that they are Protestants simply by force of heredity, and mostly in perfectly good faith; that we regard them as fellow-Christians who, through the fault of their ancestors, have lost part of the Christian teaching and are in a false position as to the church and the channels of grace; and that we, in the spirit of fraternal charity, are striving to lead them up to the fulness of truth and grace; again he will seem to them more than ever a dreamer, and more probably than ever tainted in his orthodoxy.

"Hence their almost insuperable difficulty, for instance, in understanding and doing justice to the part taken by Catholics in the Parliament of Religions at Chicago. To them it seems treasonable collusion with the enemies of the Catholic Church and the Christian religion. Our American may show them that it was neither meant to be nor understood to be anything of the kind; he argues in vain. He may show them the printed record of the Catholic discourses pronounced day after day, demonstrating that not in a single instance was there any minimizing of Catholic belief; but it is of no use. He may tell them of the missionary work done from morning till night every day in the Catholic hall; of the enormous amount of Catholic literature distributed to eager inquirers; of the general impression produced that only the Catholic Church could stand up among all the religions of the world, in the calm majestic dignity and tender pitying charity coming from her consciousness of alone possessing the fulness of the truth, and from her consciousness too that it is still and ever her right and her duty to teach that fulness to the whole world; they only look on him in wonder, and go away staggered but not convinced. Occasionally, indeed, he will meet with more open minds, more capable of understanding and appreciating. Thus, when the plain facts of the case were stated to the Catholic Scientific Congress at Brussels, three years ago, the audience, not to be matched in Europe for intelligence and judiciousness, showed their sympathy and their approval in an outburst of enthusiasm not soon to be forgotten. Yet, once again, our Holy Father, knowing full well how totally different are the religious conditions and mental tendencies of Europe, has most wisely decreed that a parliament of the kind would there be unadvisable."

The Archbishop is generally regarded as one of the leaders of the "Liberals" in the Catholic Church of America. Apparently he has found the term Liberal associated, in the minds of European Catholics, with all sorts of objectionable views. They regard modern ideas and the spirit of the age, he tells us, as "essentially and hopelessly Voltairean, infidel, anti-Christian." Reference is made to the spirit, still existing, that filled the last days of Bishop Dupanloup with bitterness, because of his "magnificent commentary" on the Syllabus, demonstrating that it was not incompatible with modern life and civilization. The bishop

and all who sympathized with him, says Dr. Keane, "were denounced as traitors selling out the Christian faith to modern infidelity," and were branded as "Liberals." "Since that day Liberals and Liberalism are terms far more awful and condemnatory than heretics and heresy. And so our American, altho laudably ready to thrash any man who would accuse him of deviating in the least from the church's teachings, has but a poor chance for a reputation of orthodoxy, since the survivors of this school have pinned on to him the label of Liberalism."

Nothing has for a long time done more, the Archbishop says, to enlighten European Catholics on the true nature of Americanism than the publication, in French, of "The Life of Father Hecker." The book has not received much attention here, but it has been a revelation abroad and has run through four editions there in a few months.

EVANGELISTS AND THE METHODISTS.

THERE seems to be a divergence of views among the editors of some of the Methodist Episcopal journals of the country in regard to the usefulness of evangelists, or of what are known as evangelistic services in the churches of that denomination. As the Methodist Episcopal Church has been specially known in the past for its frequent resort to these methods in awakening religious interest, the discussion of their utility in Methodist journals has more than ordinary interest and significance. Thus the *Pittsburg Christian Advocate* raises the point whether the conditions are not such to-day as to require a change of procedure in the conduct of religious services and the possible employment of new agencies. It says that the time was when the work of the ministers in the Methodist Church was largely evangelistic, this rather than anything else. But there is now, it adds, not a little well-founded opposition to the employment of the old-time methods. This opposition comes, in part, from the feeling that the professional evangelists come into the churches as strangers, and that it is difficult to learn their true character oftentimes, and whether they always teach sound doctrine and are to be trusted in all respects. To give a concrete case on which to base its conclusions as to the value of evangelistic work in general *The Advocate* refers to the special meetings recently held in Pittsburg by Mr. Moody and Dr. Wilbur Chapman, and says:

"As to actual practical results, the general evangelistic movements, such as those of Mr. Moody, or those of Dr. Chapman, lately held in this city, are of doubtful utility in themselves. If the efforts end with them, as is too often the case, but little good follows. One faithful pastor leading an earnest church will often in a comparatively quiet way reap a much larger harvest than is gathered as the result of all the noise and show of one of these great public demonstrations. Nevertheless, there is a place for such movements as these. If the pastors of a community purpose a forward movement in all their churches—as it would be well that they should frequently—then let them arrange for one week of preparation in a union meeting, call to the leadership some godly, devoted, wise man of experience; and after the churches and Sunday-schools have thus been enlisted and public attention attracted, let each pastor take the battle into his own particular field, and wage a hand-to-hand conflict. Thus the best results might be secured."

For a view of a different sort from the same denominational source, we have an article in *The Northern Christian Advocate* (Syracuse), in which the writer contends that "evangelism is the crying need of Methodism" to-day. The writer deplors the decline of spirituality in the Methodist Church, and charges it, in part, to a lack of spiritual depth and fervor in the preaching of Methodist pulpits. He proceeds to say:

"Revivals appear to be more and more superficial; conversions not deep; character not changed; converts, tho entering and remaining in the church, speedily returning to their former associates and practises. Nor do revivals take hold of intelligent and

strong character as formerly. The 'formerly' of Dr. Buckley was the time of evangelistic power in Methodist history. Ministers felt and knew they were called of God to preach the unsearchable riches of Christ to a lost world, and they had the holy boldness to obey the commission with all that it involved. To them sin was a most ghastly fact, a horrifying reality, an outrage upon God, eternal damnation to the sinner, and the purpose to save men from its guilt and consequences aroused an earnestness and gave to their sermons such effectiveness that sinners were induced to 'flee from the wrath to come.' This passion for souls was not confined to the itinerant, but shared by the laity as well, until Methodism came to be known as 'Christianity in earnest.' The most noticeable weakness in the Methodist pulpit of to-day is the absence of a mighty conviction of the awfulness of sin, the necessity of regeneration, and an abiding, Scriptural faith in the power of the Holy Spirit. There is a ruinous tendency in many quarters to make of the church a religious club, and far too many pulpits are discussing current reforms, philosophical theories, higher criticisms, scientific speculations, together with the multiplying 'ologies' and 'isms' of the present-day 'faddists,' instead of the law and the Gospel. Preaching that creates uneasiness in the hearts of the well-dressed, highly respectable, wealthy, influential, and cultured has never received a warm welcome, but it is the only kind to convict of sin and lead to God. Dr. T. L. Cuyler has said truly, 'The minister who blunts the sword of the Spirit, and fails to preach a blood-heat Gospel every Sunday, is hindering a revival.' A downpouring from on high upon our pulpits will infuse moral courage to declare the whole counsel of God, withstand the strongest opposition from the unconverted or back-slidden members within the church, and materially aid in renewing the spirit of true evangelism."

The Central Christian Advocate thinks the old-time methods of conducting a religious revival are practically obsolete, and it finds that the Methodist Church is in a critical position in reference to this matter. Says the editor:

"In stating the facts as we see them we have not the remotest thought of reflecting upon the type of revivalist and revival methods in vogue in earlier days. They were honored and blessed of God in an extraordinary way. But for them there would be no Methodism in the world. We owe to them, under God, our very existence as a denomination.

"Nor have we any idea in mind that it is possible now to galvanize old revival machinery with new power. The men who fancy that what we most need is the 'old-time class-meeting,' and that the general use of 'the mourners' bench' would revivify the church, have not yet begun to study the problem of our current needs. What we need is a spirit of consecrated ingenuity, of zealous inquiry, of holy zeal, which will devise fresh methods of securing conversions; modern revival helps and appliances, adapted to the spirit and life of to-day."

Secretary Stanton's Religious Faith.—In the course of his war reminiscences, now running in *McClure's Magazine*, Charles A. Dana, who, it will be remembered, was Assistant Secretary of War when Edwin M. Stanton was Secretary, has this to say of his chief:

"Mr. Stanton was a short, thick, dark man, with a very large head and a mass of black hair. His nature was intense, and he was one of the most eloquent men that I ever met. Stanton was entirely absorbed in his duties, and his energy in prosecuting them was something almost superhuman. When he took hold of the War Department the armies seemed to grow, and they certainly gained in force and vim and thoroughness.

"One of the first things which struck me in Mr. Stanton was his deep religious feeling and his familiarity with the Bible. He must have studied the Bible a great deal when he was a boy. He had the firmest conviction that the Lord directed our armies. Over and over again have I heard him express the same opinion which he wrote to *The Tribune* after Donelson: 'Much has recently been said of military combinations and organizing victory. I hear such phrases with apprehension. They commenced in infidel France with the Italian campaign, and resulted in Waterloo. Who can organize victory? Who can combine the elements of

success on the battle-field? We owe our recent victories to the spirit of the Lord, that moved our soldiers to rush into battle, and filled the hearts of our enemies with dismay. The inspiration that conquered in battle was in the hearts of the soldiers and from on high; and wherever there is the same inspiration there will be the same results.' There was never any cant in Stanton's religious feeling. It was the straightforward expression of what he believed and lived, and was as simple and genuine and real to him as the principles of his business."

TRIBUTES TO MISS WILLARD FROM THE RELIGIOUS PRESS.

THE tributes to Miss Willard in the religious press of the country have been earnest, strong, and heartily sympathetic. *The Outlook* has its leading editorial on Miss Willard, and begins it by saying that the death of no woman in the world, with the possible exception of Queen Victoria, would have caused such deep and widespread sorrow. After speaking of her special work for temperance, *The Outlook* continues:

"But even this does not seem to us to have been her chief service. She saw clearly, what other women also have seen, that many of her sisters were letting their activities rust from disuse, and others were frittering them away by misuse in trivialities. More perhaps than any other one person has she opened to her sisters the vision of that large activity in Christian and philanthropic work upon which woman has been entering during the last quarter-century. The rush of women into industrial pursuits may be looked upon by the conservative with suspicion and distrust, and certainly it is not unaccompanied with some industrial evils. But only good has come from the enlarged activity of woman in spheres of unpurchased and unpaid industry devoted to beneficent service in schools, hospitals, asylums, and churches. Of this movement we know of no apostle who has been more eloquent in speech, or in those deeds which speak louder than words, than Miss Willard."

Of her personal influence and power, *The Watchman* (Baptist, Boston) says:

"Her presence and her appeals energized the work throughout the entire country. It is said that for ten years she averaged one public meeting a day, writing letters, planning articles, and arranging work while in transit between the towns in which she spoke. The World's Woman's Christian Union was the child of her brain."

From an editorial in *The Evangelical Messenger* (Evangelical Association, Cleveland) we take this paragraph:

"Miss Willard's gifts and calling were peculiar. Her mind combined masculine strength with real womanly intuition. She possessed in an unusual degree the genius for organization, and her social and business tact, her gift of oratory, her poetic temperament, her deep insight into the profounder problems of society, her affection for humanity, her high ideal of the mission of her own sex in the elevation of mankind, her intense devotion to the cause with which she stood identified, her broad sympathies, her high-toned morality, her lofty exemplification of womanly virtue, her strength of character, her unfaltering faith in God, her unflinching confidence in the ultimate triumph of right, her genius for practically applying her ideas of reform, and, above all, her profoundly religious life, together formed a combination of elements seldom found in one woman."

The United Presbyterian (Pittsburg) concludes an editorial review of Miss Willard's life and work with the following words:

"Miss Willard was a woman of strong intellectual powers, remarkable energy, and great usefulness, and was by nature and education fitted to be a leader. The success of the Woman's Christian Temperance Union is largely due to her capable management. As yet there is no one in sight who seems to be able to fill her place. While some of her plans may be criticized, on the whole they were wise and prudent. All who love the cause

of temperance and social purity will be sincere mourners at her death. It can be said of her, 'She hath done what she could.'

The Christian Intelligencer (Dutch Reformed, New York) says:

"The death of Miss Frances Elizabeth Willard has cast a shadow as far as her name is known and as wide as her influence was felt. She will be mourned the world over, for in every land her name is a household word, and with her name is associated in the thoughts of millions the great principles of temperance and purity and justice to which her splendid gifts of mind and heart were consecrated. What wonder, when the extent of her philanthropic and self-sacrificing work is considered, that the announcement of her death brought cable despatches, telegrams, and other messages from men and women of all social conditions in all parts of the world? But few women have pursued a noble life-work with a more unflinching purpose and unabated energy, and left a deeper and more abiding impress upon mankind."

The Interior (Presbyterian, Chicago) speaks of Miss Willard as "the most famous woman of her day," and says further:

"Miss Willard was a Christian idealist. She was a woman of ideas; she loved what scholars and thinkers delight in; but most of all she was possessed and swayed, sustained and borne on by force of the loftiest ideals. Seldom does one appear among us whose faculty of imagination serves them to such high purpose. It gave reality to her most spiritual conceptions; it gave wings to her reason; it gave vision as of certainties to her faith. It opened to the horizon of her daily life a heaven-wide scope of outlook. How much it has been worth to the women, and to the men too, of our time to have such a personality among them, it would take strong words to say."

In the course of a highly eulogistic editorial, *The Congregationalist* says:

"Miss Willard has sought to realize the ideal for mankind with a chivalry and devotion which knew no limit till they exhausted her vital powers. On the platform, in the pulpit, in the editor's chair, in political campaigns, in organizing and leading new movements against intemperance, impurity, poverty—all human sins and ills—no knight of olden or modern times ever more deserved to be called 'without fear and without reproach' than Frances Willard. Her enemies often, her friends sometimes, have questioned the wisdom of the plans and methods she proposed, but none who knew her have ever questioned the purity of her motives. If her sympathies sometimes controlled her judgment it was because they were always putting forth supreme effort in behalf of needy, suffering, oppressed humanity. She sometimes failed where no one has yet succeeded, but it was in the spirit and with the purpose of Him who was crucified to save the world."

The Living Church (Protestant Episcopal, Chicago) makes this reference to the fallen leader:

"In the generation to which her life and work were given, most encouraging advance has been made in the cause of temperance, and no small part of it may be ascribed to her heroic efforts. There seems to have been in her a rare combination of power and gentleness. The sense of high position had not brought with it any of that personal isolation which so often attends it. She retained her womanly feelings and won the devoted affection of those with whom she was closely connected. In such respects she certainly stands in favorable contrast to many of her own sex who have become prominent as leaders in the various reforms and other 'causes' which form so marked a characteristic of these times."

In the course of a full-page editorial on Miss Willard, the *New York Christian Advocate* (Methodist Episcopal) says:

"There was more sweetness and less bitterness in what she said to and about others in public than is common in the answers of the tongue furnished by those who spend most of their lives in the glare of publicity. Her tact amounted to genius. She was prolific in suggestions, and if one failed could substitute another for it with such rapidity as to obliterate the memory of the first. Her spirit was adventurous; hope springing eternal in her breast. She possessed the power of magnifying the objects in which she

was interested, until they filled temporarily the horizon. All things related themselves to her. In glorifying Mme. Willard she carried all with her, and while wreathing that venerable brow with flowers, unconsciously she covered her own."

In *The Advance* (Congregational, Chicago) Miss Willard is characterized in these words:

"Miss Willard had rare powers as a speaker. As a poet Mrs. Browning has been called Shakespeare's daughter, and as a speaker Miss Willard might be called Gladstone's daughter. She had a clear, strong, logical mind; she could easily grasp a great variety of facts and arrange them in effective order; and then without a scrap of paper she could stand before an audience and speak for an hour or more as tho she could not but speak the thoughts which came from her lips clothed with all the graces of effective elocution and forceful and elegant diction."

CREDULITY OF SKEPTICS.

DISBELIEF of one proposition generally implies belief in another opposing proposition. Rev. Dr. E. Fitch Burr, author of "Ecce Cœlum," takes advantage of this fact to analyze, in *The Homiletic Review* (February), the beliefs of those who deny the Christian theory of the universe. He takes Pyrrho of Elis as the first skeptic known to history, who not only doubted the reality of God but the reality of everything. Hume was the Pyrrho of the last century. Hume admitted, however, the reality of chains of ideas, but held that we had no evidence of the reality of anything else, and he tried to prove this paradox, and professed to believe it. Pantheism, or Transcendentalism, is a later form of skepticism, which only a large-mouthed credulity can swallow. Its postulates are taken for granted. Dr. Burr says:

"Does the totality of the material Cosmos deserve to be called God? Certainly, viewed as vast and mysterious and seething with mighty forces, and essentially eternal, it is a sublime thing. But there are other features that are very far from being sublime. Innumerable low, shameful, distressing, and abominable things belong to the Cosmos. Material Pantheism makes all these part and parcel of God: all the mistakes and follies, all the pains and diseases, all the vices and falsehoods and crimes, all the cruelties and wrongs and wars that disfigure history, even the atrocities and outrages of the unspeakable Turk, belong as vitally to God as do all high and desirable things. Stones, and worms, and monkeys, and beasts of prey, and fiends in the shape of men, and all refuse and loathsome things are as much parts of Him as are saints and heroes and geniuses. There is nothing so vile in character and conduct and experience but has God for its source and substance, and is a wave of the one Divine Ocean.

"A being largely made up of impostures and self-contradictions and all the deeps of wickedness—does such a being deserve to be called God?—to be respected, trusted in, worshiped? The Pantheist, in affirming this, believes on very small capital indeed."

August Comte is taken as the next illustration of credulous skepticism. He taught that the only proper object of worship is collective humanity, especially as represented by women, more especially as represented by his mistress. His scheme "seems to aim at reducing the liberty of the many to a minimum, and at exalting the power of a few, and especially of one, to a maximum. Nothing is left to the judgment or the conscience of the individual; every disciple, with his belongings, is delivered up, bound hand and foot, into the hands of the hierarchy—and of August Comte." And he actually believed such a scheme would have a brilliant future and immense adoption!

"The largest example of credulity on the part of skeptics is found in connection with the doctrine of *natural* evolution." We quote again from Dr. Burr:

"Here is the doctrine of natural evolution. All that exist in the heavens and the earth—including systems of worlds, organic structures, living beings, minds with their wondrous products in inventions, discoveries, literatures, sciences, virtues, religions, histories—all have come from eternal elementary matter by

means merely of such inherent forces and laws as natural science recognizes as belonging to matter. Skeptics of late affirm, not that the existing universe *may* have come in this way, but that this is the way in which, as a matter of fact, it actually did come. And this is the affirmation which they have to prove.

"While there is not a man, the world over, who is not able to see at a glance the sufficiency of a Scriptural God to explain nature in all its depths and heights, there is not one skeptic in a hundred who is able to judge for himself of the sufficiency of the evolution hypothesis to do as much. Nearly all rely, and are obliged to rely, on the testimony, contradicted and paradoxical, of a few leaders of whose merits as guides they are as little competent to judge as they are of their arguments. Certainly, the men who have no better ground for confidently believing in natural evolution than the bare word of a few leaders can properly be considered credulous."

Dr. Burr dwells upon the details of the evolutionary hypothesis. That eternal matter produced, from the inorganic, miracles of organization infinitely superior to anything made by man; produced the living from the non-living, the intelligent from the non-intelligent; generated free-will and a responsible human history; that species of plants and animals began by spontaneous generation,—these and many other similar propositions are *affirmed*, and they demand enormous credulity. Dr. Burr concludes:

"In short, credulity is the common law of skepticism. The whole scheme has credulity for veins and arteries. It appears in its grossest form among the Nihilists and Communists and Anarchists and Free Lovers of our time, who are, to a man, skeptics, and who affirm their monstrosities to be nothing less than eternal truth. In its mildest form it appears in the readiness with which unbelievers have ever accepted baseless stories to the discredit of Christians and their Master. Ancient unbelievers pronounced Him a glutton and wine-bibber and conspirator, with the scantiest possible color for the charge. Modern unbelievers, met with too often by most pastors in their parish visitations, require very little foundation in fact for accepting and passing on stories to the disadvantage of the professing Christians about them. They catch at them. They make the most of them. A straw is enough to support an accusation. A conjecture is made into a certainty. A hint of misconduct sends a man into the limbo of rascals and hypocrites. Charitable judgments of Christians are almost unknown among unbelievers. What is credulity if not believing on insufficient grounds—say, no grounds at all?"

ZIONISM AS VIEWED FROM JERUSALEM.

IT is probably something in the nature of a surprise that the thirty thousand or more Jews who now live in Jerusalem do not look with favor upon the agitation of the Zionists in Europe looking toward a restoration of the kingdom of Israel in the land of their fathers. They rather "view with alarm" the project of Zionism. A recent issue of the *Bote aus Zion*, a German mission journal published in Jerusalem, brings the following intelligence on this matter:

However much the Jews of Jerusalem, both from a religious and a national point of view, put forth effort to make their individuality in the community felt, and however much their rapidly increasing numbers and their activity in commercial and business life have been making them a noticeable factor in the city of their ancestors, they nevertheless will have nothing to do with the national movement of the Zionists as this found its expression in the convention at Basel. The writer recently asked an old influential Jew of Jerusalem in regard to this matter. He stated that the whole agitation was a swindle, the real purpose of the leaders being to make money; and that this was the reason why the great majority of the rabbis would have nothing to do with the project. He declared that the Jews had never sold Palestine, and that accordingly it was not necessary to buy that country back; the only way to reacquire it is by conquest, and this would be hard, if not impossible.

Every intelligent observer who is in a condition to judge will

acknowledge that the effort to establish a Jewish state in Palestine, in view of the surrounding difficulties, not all of which would be caused by the Turkish Government, would be a matter of extraordinary difficulty. It really seems phenomenal that the Zionist Society has seriously thought of carrying out such a plan and to do so with the aid of money. Even the Jews in the sacred city are so surprised at the method proposed that they almost spontaneously have come to the conclusion that a financial speculation is at the bottom of the whole enterprise.

The object sought by the Zionists is something entirely different from the way by which they are trying to attain it. The old orthodox Jew, while in full agreement with the former on account of his interpretation of prophetic prediction, protests most decidedly against the latter. That Palestine is actually the property of the Jews is, on the basis of the Holy Scriptures, acknowledged not only by the Jews and the Christians, but even by the Mohammedans. The latter have it as an article of their faith, which they too are perfectly willing to acknowledge, that the time will come when they themselves will again return to their southern homes and the Jews will take their place in the Promised Land. It is quite natural that the Jew is not allowed openly to speak of his hopes of realizing this idea, and it has concurred more than once that a public reference to the uprising of the Israelites under the Maccabees, as an example of what should take place again, has been punished by the authorities. But the vast immigration of Jews into the land of their ancestors in recent decades is founded on this hope, as also the establishment of Jewish agricultural colonies throughout the length and breadth of the land, upon which much money and enthusiasm have been spent and some of which are in a flourishing condition. The fact that in a comparatively short time the greater portion of the trade of the country has fallen into the hands of Jews who have permanently settled in Palestine, was something to be expected. Then, too, that all branches of artisan work, such as masonry and stone-cutting, are now being practised by the Jews of Palestine, can probably be explained on the ground that the Jewish immigrants from southern Russia and southeastern Europe in general were accustomed to such work. But that the Jews have founded agricultural colonies and are zealously working them, is remarkable; yet there are more than twenty of these now in Palestine, especially along the coast districts and in the upper Jordan valley, all controlled and worked by Jews. They have been thriving to a notable degree, having learned what crops can be successfully raised. An important factor in the prosperity of these colonies is the fact that they are liberally supported by wealthy Jews in Europe, especially the Rothschilds.

It must be confessed that the success of these enterprises is a credit to Jewish perseverance and intelligence. They have demonstrated the fact practically that national farming, especially on the sea-coast districts, can satisfy even the demands of European agriculturists, and more than this would not be asked in case a Jewish state were reestablished in Palestine. These colonies show that the Jews can live and thrive in their ancestral patri-mony, even if the Zionist methods do not find their approval.
—*Translation made for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

THE London *Methodist Times* proposes a universal Methodist hymn-book, one and the same throughout the English-speaking world, and suggests the subject as a very legitimate one for discussion at the next Ecumenical Conference.

PRINCIPAL FAIRBAIRN, of Mansfield College, Oxford, has accepted the invitation to deliver the Haskell lectures in India this year. The Haskell lectureship has been founded by a Chicago woman for the purpose of making English-speaking Hindus acquainted with the leading features and doctrines of Christianity. The first series was delivered by Rev. J. H. Barrows, D.D.

A NEW hymnal has been introduced into the Jewish synagogues in this country. Some of the hymns have excited criticism because of alleged verbal infelicities. Here is one verse:

"Yet died he not, as men who sink
Before our eyes to soulless clay,
But changed to spirit like a wink
Of summer lightning passed away."

And another couplet runs as follows:

"All is echo sent from Thee,
God of gladness, God of glee!"

To those who criticize the use of the words "wink" and "glee" the compilers reply by informing their critics that Thomas Moore is responsible for the first, and John Stuart Blackie for the second.

FOREIGN TOPICS.

GREAT BRITAIN IN AN INTROSPECTIVE MOOD.

THE British press, while it is rarely in doubt of the superiority of the Anglo-Saxon race and of its world-wide destiny, does not let this consciousness of power blind it to defects that may be remedied. The status of the army has given much concern of late, and with a view to attracting into the ranks a better class of men, certain features of the continental system for the employment of reserve soldiers have been adopted. Hitherto the duty of finding employment for these men in time of peace has been left to philanthropic societies; but the Government has now set aside for time-expired soldiers one thousand positions in the post-office department and one thousand positions for laborers in the war department. In addition, officers have been appointed to furnish, on demand, a certificate of character to all discharged soldiers deserving it, and Lord Lansdowne, Secretary of State for War, has appealed directly to the Lord Mayor of London, and probably to others, asking them to appeal to the patriotism of private employers in behalf of these men, since their employment "has become a matter of national importance," "in order to maintain a better supply of recruits."

Great Britain is undoubtedly still mistress of the sea and supreme in the field of trade and industry. Yet the warnings lately given of the rise of other nations have not fallen upon deaf ears, and some searching self-examinations are the consequence. A writer in *The Investors' Review* expresses himself in the main as follows:

The success of the foreigner is due to his push, to the high finish he bestows upon inferior goods, and to the easy terms of payment granted by him to buyers. The British manufacturer, who has turned up his nose at orders for cheap goods, must remember that people have not always the money to purchase the best. He must be prepared to compete with the foreigner, for a market once lost is not easily regained. The very fact that the machinery of the Continental manufacturer allows him to give a superior finish to cheap goods should convince us that he can produce the higher grades quite as well as, if not better than, we can, if he is given an order for better class goods. Moreover, the British workingman must look the fact in the face that his halcyon days are over. If his foreign competitor is willing to work harder in order to win new markets, he must work harder himself to preserve what has already been gained. The British employer has learned the lesson already, for he works much longer hours than his men.

Turning to the question of colonial administration we find that here also the demand for reform is getting stronger. At a meeting of Anglo-Indians in London, Mr. Ray, a retired Indian official, made a strong speech which would in ordinary times have been greatly censured, but has now been received with remarks of assent in many quarters. He said in effect:

British rule stood out as a dismal failure. The fact had been demonstrated by the events of the past few months in famine, plague, and war. . . . A policy unworthy of England was being pursued. Selfishness and suspicion were at its root. If the system was not altered Indians who were at present friendly to British rule would be turned into bitter and unbending enemies, and the end would be a terrible catastrophe. Sedition was fermenting on all sides.

In the field of foreign politics there is a strong demand for moderation, if not in the daily papers, at least in the weeklies. *The Spectator*, London, warns its countrymen to abstain from further annexation of territory as follows:

"We have already so much to do that we see signs of exhaustion not only in our recruiting arrangements, but in the mental caliber of the classes from which we draw our statesmen. . . .

We are going to have ten years at least of strain and difficulty in India; after a quarter of a century we have not legalized our position on the Nile; we have not thoroughly digested one morsel of the immense and hurried swallowings we have made in Africa; and to begin a new meal, even if the diet is appetizing, in Asia would be to the last degree unwise.

"We do not suppose anybody will mistake our meaning, but still we will boil it down into an index line. This country is full for to-day. Let it eat no more till to-morrow, unless it is prepared for blood-letting by a doctor who calls his lancet 'the prescription.'"

There is also a faction in England which makes it its business to soften the tone generally adopted by Britons when commenting upon the actions of other nations. We summarize the following from the *London Echo*:

England is the greatest "expansionist" of all; why should she be envious of others? We have subjected 200,000,000 Asiatics to our rule by force of arms. We regard to this day India as the brightest jewel of the British crown. Yet we have obtained and hold India by force, not by right. Germany and Russia have as great a right to annex and conquer as we have. Let us remember that, if their power is equal to their wish, they will do what they please, whatever we may say. England has enemies enough throughout the world. This enmity became specially great when we occupied Egypt and refused to leave it, and when we undertook that shameful attack upon the Transvaal. The former incident estranged France and led to the Franco-Russian alliance; the latter made Germany, our greatest competitor, an enemy. We are now isolated, and will need all our energy to preserve what we have. Our statesmen must be as wise as serpents and as harmless as doves, else they will bring misfortune over us.

If we add to this that such men as Lord Charles Beresford call upon the "upper ten thousand" to worship less at the shrine of the golden calf, and that colonial papers urge British merchants to send a more polished and better educated class of men as commercial travelers, it will readily be understood that a large percentage of the British people know that it is no time for Great Britain to fold her hands, but for her to call forth all the dormant energies of the race.

THE DEFENSE OF CANADA.

THE Dominion every now and then is aroused to the fact that its provisions for defense in case of war are quite inadequate. Beside a small force of British regulars, Canada has only her militia, which, from a military point of view, is hardly superior to our own, and numerically so weak that it could easily be overpowered. *The Gazette*, St. Johns, N. B., quotes Sir Charles Diblee as follows:

"There is a war party or a jingo party in the United States which openly avows the intention to humiliate and weaken us and ultimately to drive us into war. Canada has not sufficient arms for war, and if she wishes under all circumstances (as her recent trade action seems to show) to stand apart from the United States and to remain a portion, and an increasingly important portion, of the British Empire, she is bound to raise the numbers of her active militia and improve their training, and to supply them with proper transport and fitting reserve of arms. . . . Canada as a military power is altogether behind not only Rumania or Switzerland but even Bulgaria, and is not in a position to defend her territory west of the Great Lakes. If she is to be defended under present circumstances, she will call on us to play a leading part in her defense."

But a prominent Minneapolis lawyer, Judson N. Cross, in a communication to the Senators of his State, declares that Canada will have the support of the United States rather than her enmity. His letter has been extensively noticed in Canada, and we quote from it as follows:

"If rightly interpret the principles of the Monroe doctrine, the United States would not stand by and permit any European or other non-American power, by force, purchase, or treaty, to

acquire any territory from any other European power now holding the same on the American continent, any sooner than it would permit such acquisition from any American State. . . .

"If the above premise and conclusion are correct and properly state the attitude of this people, through the principles of the Monroe doctrine, in their broader and more general scope, why should not the United States propose to Great Britain that in case of war by England with any other power this nation would protect Canada from invasion or attack; that is, do just what our Monroe doctrine would require that we should do in order to uphold it, and in order that we should be consistent?"

The Globe, Toronto, does not think such an agreement is necessary, and says:

"If such a danger should become real we can very well believe that the United States would intervene for their own sake, because they would certainly find Germany or Russia a much more troublesome neighbor than Great Britain. A European power which was aggressive enough to seize Canada would not be likely to stop there. The Emperor William, with 50,000 of his soldiers in Canada, might cast longing eyes at New York, Michigan, and Dakota. The possibility is remote, but the danger is just as great for the United States as for Canada, and self-interest would certainly prompt them to prevent others from invading Canada. No bargain is necessary to bring about that alliance should the occasion ever arise. If it were quite certain that the great body of Americans were as friendly to Canada as Mr. Cross there would be no war talk on this continent."

The London *Navy League Journal*, speaking of the subject of Anglo-American reunion, fears that the Canadians prefer to trust to Britain's strength alone. The paper says:

"If we can have the sincere friendship of the United States without alienating Canada we should not hesitate to make the sacrifice, but we are not the absolute possessors, but only the trustees of our empire. Such surrenders as that of our rights in Tunis are acts of treason to posterity. They may 'give peace in our time,' but the peace is a great interest it is not our only one."

That these views are not altogether groundless is shown by an article in the Montreal *Witness*, which says:

"It is a little hard to see wherein Mr. Cross's proposition differs from a demand that Great Britain on her part should hand over Canada to the protectorate of the United States or consent to accept a joint protectorate, and that Canada should so value such a joint protectorate as to be willing to accept vassalage. The assumption is somewhat ludicrous that both Great Britain and Canada would hail such a proposition. . . . As for protection, we mean to do what we can best to defend ourselves. We know of no power that wants to attack us, and only of one that so much as thinks it could. Even should the British navy lose command of the sea, and a foreign army make its way to our coast, Britons would meet it on the shore. We are only a million men, but we are not of the sort that is cheaply subdued. The only country that has any chance to attack us at all is the United States itself. . . . Canada reciprocates warmly every kindly feeling toward her on the part of her neighbors. She does want closer relations with them—that is, closer commercial relations. In these she has at all times shown herself ready to reciprocate to the utmost. Canada has at all times welcomed the closest social relations with the United States. But if that country wants closer political relations with Canada she must find them in an Anglo-Saxon federation, including the United Kingdom, Australia, South Africa, and the rest of the world-wide empire of which Canada is proud to be a part."

The Manitoba *Free Press*, Winnipeg, also thinks that closer political relation with the United States is by no means desirable. What the United States needs, says the paper, is not so much greater expansion and more military power, as better manners. We quote as follows:

"If the United States will hold to the traditions which have come down from the fathers of the country, its geographical position alone will be protection enough, without army or navy. No European power has any thought of attacking the republic. There is nothing to be gained by it. . . . If the country would

but mind its own business, there is no reason why its people should be taxed to make it either a military or a naval power. It is thought that the United States may intervene in Cuba, and that would, of course, render the creation of a strong army and navy necessary. The worst enemies of the United States could not desire anything better than to see it load itself down with these expensive and exhausting accessories. But even its friends might extract some comfort from the situation. . . . There is no disputing that the United States as a nation is rude and even insolent. That is because it does not know any better, and it does not know any better because it has been tied up in itself, and only rarely has it come into close relationship with other countries. Indeed, it has had little to say or do with any country but Great Britain, and by right of descent, we suppose, it has presumed to bully her without intermission. It has thus cultivated very bad diplomatic manners, manners of the coarse, shirt-sleeves variety. When it gets possession of Hawaii, and perhaps Cuba, and builds a big navy and creates a big army, and for the first time becomes one of the family of nations, it will require to improve its manners."

THE DE LOME INCIDENT.

THE abstraction of the letter addressed by Sr. Dupuy de Lome to Sr. Canalejas has excited a good deal of unfavorable notice abroad. In most cases the text of the letter is ignored, and the manner in which it was published is alone commented on.

The *Imparcial*, Madrid, says:

"The Yankees, whose diplomats are in the habit of committing the most flagrant indiscretions, have no right at all to go wild over the text of this letter. It was altogether private and confidential, and was got hold of in a criminal and villainous manner."

The *Heraldo*, Madrid, after dilating upon the manner in which the letter was obtained, goes on to say:

"If we had done such a despicable thing when Hannis Taylor was here, goodness knows what we would have seen! We would not have been forced to make use of a private and confidential letter to get rid of him. His official opinions bristle with attacks upon our people, our generals, our Government, and even the highest representative of our country. . . . Sr. Dupuy has certainly acquitted himself with exquisite tact in the matter. He could, of course, have pointed to the private character of the letter. But he preferred to hand in his resignation, enabling the Government to change its Washington representative without the appearance of having given way to the influence of the American Government. But it does seem hard that we should lose the services of so excellent a man on account of a private letter, while we are subjected to official attacks."

The *Nacional* wants to know how long the Spanish Government will let the Americans "boss" them. The *Correo Español* thinks a crisis is near. "Here in Spain we are certainly at the end of any respect we may have felt for the United States," says the paper. The *Handelsblad*, Amsterdam, asks if respect for the correspondence of other people is to vanish in future. The *Journal des Débats*, Paris, says:

"Since this letter was not only private, but was obtained by fraudulent means, the United States Government need not regard it as official Spanish opinion. Certain American journals demand that Spain offer excuses, and even claim that she has done so. But if they mean that a disavowal of Sr. Dupuy's opinions amounts to that much, they stretch the point considerably, and one could not but blame the United States if, from an excess of jingoism, they demand more than the satisfaction already obtained."

The London *Times* is sorry that Señor Dupuy de Lome has been compelled to resign, as he is undoubtedly a man of great ability. It adds:

"The relations between the two governments during that period have always been delicate and have sometimes been strained almost to breaking point. That they have never reached that point must be ascribed in great measure to the personal qualities and exertions of Señor Dupuy de Lome, whose services to the

United States and to the peace of the world are hardly less important than those he has rendered to his own country. It is from every point of view deplorable and lamentable that so useful a career should have been terminated by an act of the basest treachery."

The Daily Telegraph, London, says:

"No doubt the letter the Spanish Minister wrote to Señor Canalejas was a private one; but a public man in a foreign capital must often deny himself the luxury of making even personal communications to a friend. The letter found its way into the papers, as such things have a knack of doing, and, forthwith, the position of the Spanish Minister became untenable. . . . President McKinley was referred to as 'a low politician,' a man 'weak and catering to the rabble,' who, with 'natural and inevitable coarseness,' repeated all the current gossip of Madrid. This is hardly the language which, even in the pages of a private letter, is consonant with the tenure of a high diplomatic post."

United Ireland, Dublin, is jubilant because Señor Dupuy expressed the same opinion which has been expressed by our Home-Rule contemporary all along, and is sorry that the Spanish Ambassador had to resign "because his position became untenable, tho the infamy of the trick revolts every honest man." It adds:

"One of the objects of the Yankee-negro intrigue is to secure Cuba for an extensive migration of the American negroes from the Southern States, in order to remove the growing danger to white supremacy in that region. . . . A more important side of the negro rising in the great Spanish colony is to be found in the active participation of English agents in the work of the raiders, the great object of the English being at the same time to embarrass Spain and to occupy the Washington politicians. If Spain were free to act, she would certainly help France against England in the Mediterranean, while if the United States are embroiled in hostilities with a non-English nation *so much the better for the tyrants of Ireland*. That is the Anglo-Yankee situation in Cuba in a nutshell."

Saturday Night, Toronto, is certain that an apology ought to be rendered. It says:

"De Lome entrusted his letter to the mails of a country that boasts of its freedom—*not* to the mails of a country where spies abound and correspondence is carefully watched by the agents of a despot, but to the mails of a country that boasts itself the home of freedom; and the letter is stolen and made public. Is it Spain or the United States that owes the apology? . . . McKinley's Government is in the same position as a host who holds in his hand the stolen letter of his guest."

Speaking of the pride with which some American papers mentioned the fact that foreign ambassadors are so often compelled to resign at Washington, the same paper says:

"No other nation has found it necessary to bundle so many ambassadors out of the country for failing to show proper respect. We submit that nations, like individuals, win respect by deserving it, and the United States does not improve its claims to the respect of the nations by availing itself of a sealed letter that was entrusted to its care. Why does not the United States Government trace the movements of that letter and clear its postal service of suspicion, if that can be done?"

The *Montreal Witness*, the great Prohibition organ, says:

"A press despatch from Washington thus reads: 'Actuated by a sense of honor and a strict idea of justice, the State Department has taken steps to place in the hands of Señor Canalejas, to whom the letter was addressed, the epistle written by Señor De Lome which led to the resignation of the Minister.' The above appears to have been written in good faith, and without any suspicion on the part of the author of the fine irony pervading the statement. . . . To say that the course of the United States Government has been undignified fails to express the utter meanness characterizing the whole business. . . . It is safe to assume that indiscretions of the kind attributed to Señor De Lome are not strictly confined to foreign representatives at Washington, yet how rarely is publicity given to incidents of the kind occurring at other capitals? . . . It may be also that the stealing of private letters is

not a practise with which foreign governments are anxious to be openly identified, and certainly it is one that reflects small credit upon either governments or individuals—one utterly opposed to 'a sense of honor and a strict idea of justice.'"

The German papers regard the incident as perfectly in keeping with the whole Cuban business, and express no astonishment.—*Translations made for THE LITERARY DIGEST.*

PRESIDENT KRÜGER AND THE BRITISH PRESS.

PRESIDENT PAUL KRÜGER has been reelected to the chief magistracy of the South African Republic. This is his fourth term, and his majority is larger than ever. He received 13,000, Burgers 4,000, Joubert 2,000 votes. Even in Johannesburg he polled nearly 800 votes as against 333 for Burger and 52 for Joubert. Moreover, a colossal statue is being erected in his honor. What this means can only be appreciated if we remember that the Boers have an almost Mohammedan objection to "idolatrous images." Many English papers are very much dissatisfied with the result of the election. They first predicted that the President would be elected by a very narrow majority, obtained by juggling with the returns. Then they hinted that a panic in South African stocks would be the result of his reelection. It did not come. At present they confine themselves to expressions of a decidedly personal character. Henry M. Stanley writes as follows in *South Africa*:

"I do not suppose there are any people in the world so well represented by a single prominent man as the Boers of South Africa are represented by Mr. Krüger. He is preeminently the Boer of Boers in character, in intellect, and in disposition, and that is one reason why he has such absolute control over his people. His obstinacy—and no man with a face like his could be otherwise than obstinate—his people call strength. Age and its infirmities have intensified it. His reserve—born of self-pride, consciousness of force—limited ambitions, and self-reliance, they call a diplomatic gift. . . . The real Krüger is a Boer Machiavelli, astute and bigoted, obstinate as a mule, and remarkably opinionated, vain, and puffed up with the power conferred on him, vindictive, covetous, and always a Boer, which means a narrow-minded and obtuse provincial of the illiterate type. . . . Far from deserving the title of great which some English visitors have bestowed upon Mr. Krüger, it seems to be that the most fitting title would be 'little.'"

Not all Englishmen are willing to concede the justice of Mr. Stanley's remarks. *The Saturday Review*, London, which can not be called a "Little England" organ, openly confesses its admiration for the sturdy Boer President. It says:

"We would not judge Mr. Stanley as he has judged Paul Krüger, but we do say that, whether the measure be just or unjust, men of action are always judged by their achievements, by the immediate results of their enterprises. We have heard African explorers say that Mr. Stanley had no merit except good fortune, but at the same time Mr. Stanley could point triumphantly to the fact that he had never undertaken any feat that he had not accomplished. He is confessedly, therefore, in the first rank of African explorers. And yet he has never done anything to be compared in difficulty with Paul Krüger's daily task. Take Krüger's ignorance into account if you will, it only adds to the wonder of his achievements. He was the first to fight for the independence of his country, and he has now preserved its freedom, in bad times and good times, against force of gold and hand for nearly twenty years. He fights with a daring and resolution that even his enemies honor, and he treats the conquered with a magnanimity that has never been outdone. And this is the man Mr. Stanley calls 'little.' He might call Cromwell 'little' with as good reason."

But the great majority of the English papers have begun another crusade against the Transvaal similar to the one which ended in the Jameson raid. *The Globe*, London, declares that

the Boers are preparing to attack the British possessions. The demand for reforms according to English views is again put forward, while the demand of the Transvaal Government for reparation is ridiculed. *The St. James's Gazette* asks: "Is it too much to hope that Mr. Krüger will turn over a new leaf, now that he has his majority?" and declares that his claim against England is not likely to be settled "unless he climbs down a bit." For moral and intellectual damage England will pay nothing. The paper continues:

"As to the item for material damage, he [Mr. Chamberlain] would be glad to know how it is made up, for £617,938 3s. 3d. seems a large sum, seeing how short a time Dr. Jim was at large in Oom Paul's country. It will be interesting to know what the three and threepence is for; but Mr. Chamberlain's curiosity is not yet satisfied by a reply from Pretoria."

Mr. Chamberlain will not consent to arbitration. So he has informed President Krüger. He further reiterates the claim that H. B. Majesty is really the sovereign ruler of the Transvaal. The *Volkstem*, Pretoria, nevertheless, says:

"The South African Republic can nowadays afford to receive Mr. Chamberlain's telegrams and lay them on the table, however arrogant and unjust such messages may be. The time is past when English ministers could enforce their narrow-minded dictates in South Africa. The only effect of Mr. Chamberlain's telegraphings will be that President Krüger's influence is enormously increased."

The Continental press speak in very different terms of Mr. Krüger. The *Vossische Zeitung*, Berlin, admits that the continual defeat which British arms and diplomacy have suffered at the hands of the Boers is very provoking, but thinks that, for their own sakes, the English should show greater courtesy to a nation which proves itself so much their intellectual and physical superior. Concerning the demand for reform the paper says:

"That the Boer Government does not favor the mining industry as much as could be desired will be readily admitted. Progressive reforms are undoubtedly necessary in the Transvaal, and the Boers, their chief included, no doubt know it. But they can not, as matters stand, extend greater privileges to the foreign element, for self-preservation is the first law in nature. The manner in which *The Times* and other English journals behave to President Krüger can not but arouse his antagonism and that of his supporters."

The *Kölnische Zeitung* remarks that President Krüger has no reason to deviate from his course, for his reelection proves that the people wish him to manage the affairs of the country as heretofore. The *Hamburger Nachrichten* does not believe that the mining population could easily be led to support another raid, as the fortifications around Johannesburg completely command the city.—*Translations made for THE LITERARY DIGEST.*

FILIBUSTERING IN MOROCCO.

AN incident not dissimilar to the Jameson raid has created some excitement in Europe. An English filibustering steamer, the *Tourmaline*, landed arms and ammunition for the Riff pirates on the coast of Morocco. The Riffians, who give the Sultan of Morocco no end of trouble, had but recently robbed some French and Italian ships, and the Sultan had to pay the indemnities. He sent an expedition to punish them, and the Globe Venture Company decided to supply the pirates with war material. But the Moroccan Government steamer *Hassani* caught the *Tourmaline* in the act, exchanged some shots with her, and took three of her crew prisoners. The Riffians were defeated at the same time ashore, and their villages burnt. The British press almost unanimously condemn the action of the Globe Venture Company, and regret that Englishmen should be mixed up in the affair. *The Saturday Review*, London, says:

"We have neither the space nor the inclination for a critical inquiry into the whole sordid tissue of lies framed for the hoodwinking of the British shareholder. We care not to examine the syndicate's transparent pretense of Christianizing the people of Sus (with a trifling perquisite of cent. per cent. on rifles). . . . General Sir Luther Vaughan, also a director, declares, presumably on his word as an English gentleman, that the *Tourmaline* was not attempting to land arms, and that their trading with the natives had been in 'Manchester goods and tea.' Comment is unnecessary, as we are left to infer either that 4,000 rifles and nearly half a million of cartridges are, in the estimation of a British officer, no more than sufficient for the self-defense of fifteen men, or that they are included in his privately compiled catalog of 'Manchester goods.'"

"We protest against this hazarding of imperial prestige in foreign waters for the benefit of a band of needy adventurers; our hands are all too full in the East. We protest against this vulgar introduction of the proselytizing 'gag' to befog the shareholders, and to enlist suburban sympathy. We hold that the interests of honest imperial expansion can not be worse served than by these bogus enterprises of unpicturesque freebooters. . . . We regret the raid, not the failure. Nay, we should be unable to repress our satisfaction were the Sultan of Morocco to bring and win a claim for damages against the syndicate for this most flagrant breach of international faith. Both he and his forbears have had experiences innumerable of such claims made and enforced on the treasury, and it would be a pity were a British jury to miss the opportunity of inducing these commercial missionaries to set his Shereefian Majesty a holy example of Christian resignation, even with the dignity and savings of ex-diplomatists and officers at stake."

FOREIGN NOTES.

THE ancient republic of Andorra has just remodeled its law court. This changes the character of one of the most ancient legal institutions in the world. The court was established by royal charter under Louis the Pious, son of Charlemagne, in the ninth century. Since then there has been no change in its rules, formulas, and privileges.

THE horse will probably find its occupation gone in Germany sooner than anywhere else. The Berlin Omnibus Company has now electric motors on nearly all its vehicles, and the number of electric cabs is daily increasing in that city. Moreover, the good roads enable farmers to use motor wagons, and they are already used to a great extent for transportation purposes.

IT is rumored that Persia is in a state of ferment because the Shah is endeavoring to introduce Western reforms. The mullahs, who in Mohammedan countries take the place of the Western politician, think that what was good enough for their fathers is good enough for them, and they fear that the importation of foreigners from Europe will destroy good old Persian morals.

TROJAN, the editor of the *Kladderadatsch*, who was sentenced to two months' "fortress" for publishing a cartoon considered insulting to the Emperor, has been pardoned immediately at the instance of the crown. His appeal, therefore, has been withdrawn. "Fortress" means that the person thus disciplined has to live within the confines of a walled town, be at his lodgings at a certain hour, and report to the authorities.

HERE is a curious lawsuit: A Vienna specialist received \$35 for ridding a man of a tapeworm. Afterward the patient thought he had paid too much, and demanded \$20 back. The doctor demurred and was sued. He could not, he argued, put the tapeworm back where he took it from, and if he could he was not sure that either the patient or the law would let him. Besides, the tapeworm was dead. The patient complained that it was only a short one. The doctor said he could not find any precedent for removing tapeworms at so much per yard. Finally the doctor gave the patient back \$2.50!

THAT English papers are occasionally guilty of "faking" news may be gathered from the following note in *The Saturday Review*, London: "We have received a letter from Mr. Robert Sherard, the well-known English journalist in Paris, in which the following passage occurs: 'I am authorized to state most emphatically by M. Émile Zola that he has granted interviews to no single journalist for more than two months—with the exception of myself—that consequently the alleged interviews which have appeared in various English papers to bolster up the cause which is popular there are the inventions of their writers, and that notably a much-quoted interview in *The Daily Chronicle* was a "fake" from beginning to end.'"

The St. James's Gazette thinks the Japanese have yet to learn a great deal in Western statesmanship. If the Japanese Government needs the telegraph lines, or wishes to keep news from leaving the country, private telegrams are brutally handed back to the intending sender. Now, this is the unrefined way in which such business is managed in Russia. They manage these things better in England. In Britain, says the paper, when there is reason to think that public messages may suffer delay, no matter what the cause, a post-office notification warns the intending user of the lines that his message may be hung up somewhere for a few hours. But in Japan the more drastic method is pursued of preventing any one "wiring" until the crisis is past.

MISCELLANEOUS.

LINCOLN AS A LAWYER.

JUDGE ABRAM BERGEN, an attorney of Topeka, was a citizen of Cass county, Ill., when Lincoln was a practising attorney there, and had many opportunities of studying him before he achieved fame. James L. King, state librarian of Topeka, has taken the pains to get from Judge Bergen some reminiscences regarding Lincoln's skill as a lawyer, and to contribute them to *The North American Review* (February):

"I have read all the descriptions of Lincoln's remarkable face [said Judge Bergen], and examined all his portraits as they have appeared in magazines and elsewhere, but to my mind none of them conveys a perfect idea of the irregularity of his features. Studying his face directly from the side, the lowest part of his forehead projected beyond the eyes to a greater distance than I have ever observed in any other person. In the court-room, while waiting for the celebrated Armstrong case to be called for trial, I looked at him closely for full two hours, and was so struck by this peculiarity of his profile that I remember to have estimated that his forehead protruded more than two inches, and then retreated about twenty-five degrees from the perpendicular until it reached the usual height in a straight line above his eyes."

Lincoln's most prominent characteristic as a lawyer, we are told, was his rare faculty for detecting and disclosing the controlling point in a legal battle. After he had summed up the facts in a case, so fair and so clear was he that it was often said he left nothing more to be said on *either* side.

Judge Bergen narrates the following incident in Lincoln's practise at the bar in a case in which he defended a wealthy Democrat, Colonel Dunlap, for administering a cowhiding to an abolitionist editor:

"I ran off from my recitations for the sole purpose of hearing Lincoln. Edwards [the editor's lawyer] used all the arts of the orator and advocate. He pictured, until it could almost be felt, the odium and disgrace to the editor, which he declared were worse than death. He wept, and made the jury and spectators weep. The feelings of those in the court-house was roused to the highest pitch of indignation against the perpetrator of such an outrage. It was felt that all the colonel's fortune could not compensate for the lawless indignity, and that the editor would in all probability recover the full \$10,000. No possible defense or palliation existed.

"Before all eyes were dried, it was Lincoln's turn to speak. He dragged his feet off the table, on the top of which they had been resting, set them on the floor, gradually lifted up and straightened out his great length of legs and body, and took off his coat. While removing his coat it was noticed by all present that his eyes were intently fixed upon something on the table before him. He picked up the object, a paper, scrutinized it closely, and, without uttering a word, indulged in a long, loud laugh, accompanied by his most wonderfully grotesque facial expression. There was never anything like the laugh or the expression. It was magnetic. The whole audience grinned. Then he laid the paper down slowly, took off his cravat, again picked up the paper, reexamined it, and repeated the laugh. It was contagious. He then deliberately removed his vest, showing his one yarn suspender, took up the paper, again looked at it curiously, and again indulged in his peculiar laugh. Its effect was absolutely irresistible. The usually solemn and dignified Judge Woodson, members of the jury, and the whole audience joined in the merriment, and all this before Lincoln had spoken a single word.

"When the laughter had subsided, he apologized to the court for his seemingly rude behavior, and explained that the amount of damages claimed by the editor was at first written \$1,000. He supposed the plaintiff afterward had taken a second look at the colonel's pile, and concluded that the wounds to his honor were worth an additional \$9,000. The result was at once to destroy the effect of Edwards's tears, pathos, towering indignation, and high-wrought eloquence, and to render improbable a verdict for

more than \$1,000. Lincoln immediately and fully admitted that the plaintiff was entitled to a judgment for some amount, argued in mitigation of damages, told a funny story applicable to the peculiar nature of the case, and specially urged the jury to agree upon some amount. The verdict was for a few hundred dollars, and was entirely satisfactory to Lincoln's client."

Judge Bergen disposes of the story that has found wide acceptance that Lincoln in 1858 got one of his clients, Duff Armstrong, acquitted of murder by using a doctored almanac in court. The almanac, the judge declares, was not doctored and was just what it was represented to be, and the point Lincoln made is borne out by the almanacs (for 1857) now in historical libraries. And the judge adds:

"It is the judgment of every man who has written or spoken of Lincoln that the most pervading and dominant element of his character was his love of truth; not merely the moral avoidance of a falsehood, but truth in its most comprehensive sense; correctness and accuracy in fact, in science, in law, in business, in personal intercourse, and in every field."

A WOMAN'S NEWSPAPER IN FRANCE.

THE new Paris daily paper, *La Fronde*, edited, written, printed, and published by women for women, is attracting a good deal of attention. Of it *The Home Journal*, New York, recently said:

"To realize the importance of the present movement, it should be remembered that the women of France have hitherto refrained from joining in any organized association to attain, by steady, systematic perseverance, the degree of freedom enjoyed by their English-speaking sisters. There has been plenty of individual energy and disconnected effort—a great deal of guerilla warfare—but this is the first time that *féminisme* has been marshaled and united under one banner with one common object in view. This centralization is due to Mme. Marguerite Durand de Valfère, who at the Woman's Congress, at Brussels, was made a high commissioner, instructed with the task of collecting and classifying the most urgent needs of modern woman, and bringing them in the most effective manner before the proper authorities."

Mme. Durand, who edits *La Fronde*, was formerly an actress at the Théâtre Français, but gave up the stage to enter the "feminist" movement. Of her new enterprise she speaks as follows in an interview with a correspondent of *The Tribune*, New York:

"I hope that the present movement will not be misunderstood in America. It is not at all a revolution, as some people seem to suppose, but an evolution, which we are resolved to carry out with untiring perseverance and with that ceaseless vigilance which can be most effectively insured by a daily newspaper. It is by combined action that we shall succeed. French women have now attained an intellectual position far in advance of the degree and independence accorded them by law and custom. Public opinion is already alive to this; but the legislature in France, as in most other countries, is essentially an automatic instrument, and, like an eight-day clock, has to be wound up; otherwise it comes to a standstill. This winding up will be done by *La Fronde* whenever necessary, and the senators and deputies will not be allowed to forget that the women of France have their eyes upon them, and expect them to act."

CORRESPONDENTS' CORNER.

Voodooism among Southern Negroes.

Editor of THE LITERARY DIGEST:

In your issue of February 12 T. J. B. Neely denies that the Southern negroes believe in voodooism. I was among the negroes in our late Civil War in Louisiana, and belief in voodooism was very common. It was a frequent threat of one negro to another, "If you do that, I'll put voodoo on you." I never heard, however, of any serpent myth in connection with it. While it was difficult to get negroes to talk of it, it was manifestly connected with fetichism. Hair, blood, and feathers were most commonly connected with voodoo spells.

H. L. BOLTAND,
EVANSTON, ILL.

Chaplain in a negro regiment.

BUSINESS SITUATION.

The business situation for the week, according to *Bradstreet's*, has been remarked by "aggressive strength of prices, record-breaking bank clearings, continued large exports, and a very heavy volume of business in iron and steel and kindred lines." The possibility of war with Spain still makes the market in speculative stocks nervous, and "aggressions" of the Canadian Pacific Railroad (in cutting transcontinental rates) have been the subject of protesting resolutions to Congress on the part of a number of chambers of commerce. Business failures footed up 232 as against 262 in the same week of last year. The Treasury Department has issued a circular which shows a small net decrease of \$3,614,569 in the volume of currency in circulation for the month of February. The total amount of all kinds of money in circulation on March 1 was \$1,726,376,659, which represents an increase of over \$50,600,000 as compared with the corresponding date last year. The circulation per capita is put by the Treasury experts, on the basis of an estimated population of 73,990,000 on March 1, at \$23.33. This represents a decrease of 9 cents for the month.

Heavy Bank Clearings.—"Tho showing a decrease from January's record-breaking totals, this appears to have been the case only for the reason that February was a short month, and also because two holidays curtailed the time available for business transactions at most cities, inasmuch as the average daily clearings during the month of February were considerably larger than were those for January, and with the same number of business days the grand total would have far surpassed that of the opening month of the year. The aggregate clearings of seventy-seven cities during the month just closed amounted to \$5,533,645,112, a decrease of 7 per cent. from January, but an increase over February last year 51 per cent., over February, 1896, of 35 per cent., and over February, 1894, the low-water mark in bank clearings since the panic, of 73 per cent. Compared with 1892, the heaviest February on record, there is a gain

EVERYBODY who knows anything about painting knows that Pure White Lead and Pure Linseed Oil make the best paint; but there is a difference in White Lead. The kind you want is made by the "old Dutch process." It is the best. Let the other fellow who wants to experiment use the quick process "sold-for-less-money," sorts.

See list of brands which are genuine.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing pictures of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

shown of more than 6 per cent. Additional features of interest are that the percentage of gain shown in February was the largest on record, even exceeding some months last fall, when gains were very heavy, and further, that only two cities out of the seventy-nine, comparing with February last year, show decreases. For two months of the calendar year clearings aggregate \$11,257,225,315, an increase of 41 per cent. over last year, 59 per cent. over 1894, and nearly 5 per cent. over 1893. Bank clearings for the current week break all weekly records in a total amounting to \$1,541,855,208, an increase over last week of 28 per cent., a gain over last year of 69 per cent., over 1894 of 65 per cent., over 1893 of 13 per cent., and larger than the previous heaviest week's total, that of December, 1892, by nearly 2 per cent."—*Bradstreet's*, March 5.

Large Production of Pig Iron.—"Production of pig iron is the greatest ever known, some furnaces having started in the past month, but Bessemer billets are so scarce at Chicago that some works are embarrassed, and heavy purchases at Pittsburgh, including one of 25,000 tons, have stiffened the price so that Bessemer pig and local coke at Chicago are stronger than since November 1, with gray forge unchanged at Pittsburgh. Foundry at the East is slightly lower, basic pig having been offered in a sharp competition at about \$10, the Southern makers in Alabama and Tennessee, excepting two, have agreed upon a plan of sales through a commission. The demand for finished products covers work far ahead in plates, structural forms, sheets in pipe since the advance in oil, and in rails with a Chicago sale for a Canada road to Alaska, but bar is weak with increasing use of steel, and tin plates are quoted at \$2.85, against \$4 for the same quality of foreign. Tin is stronger at 14.2 cents, and Lake copper at 11.87 cents."—*Dun's Review*, March 5.

Exports of Wheat and Corn.—"A further shrinkage in wheat exports, but a corresponding enlargement of the shipments of corn and the lower-priced cereals, is indicated this week. The total exports of wheat, flour included, from the United States and Canada aggregate 3,252,000 bushels, against 3,722,000 bushels last week, 2,075,000 bushels in this week a year ago, 2,407,000 bushels in 1896, and 3,272,000 bushels in 1895. Corn exports amount to 5,054,694 bushels, as against 3,692,000 bushels last week, 5,255,000 bushels in this week a year ago, 2,775,000 bushels in 1896, and 498,000 bushels in 1895."—*Bradstreet's*, March 5.

Boots, Shoes, Cottons, and Woolens.—"The moderate concession made by boot and shoe manufacturers, averaging less than 2 per cent., as quotations given this week show, were largely in contracts for payment within thirty days after

The Railway Train of the Twentieth Century

Is indicated by the New Pennsylvania Limited. Stenographer, stock reports, library, barber shop, bath room, and a ladies' maid are some of its novel features. Leaves New York every morning for the West.—Adv.

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 45th Street, New York.

delivery, thus getting rid of a graver danger to the trade. They have secured orders far larger than at this time in any previous year, while sales in February were 11 per cent. larger than last year and 28 per cent. larger than 1892. Leather has yielded slightly, and also hides, both being yet relatively higher than boots and shoes. The strike in cotton-mills does not spread, but helps to a slightly better demand for some goods, while in woollens the business is slow in some of the finer qualities, which have been much advanced in prices, and in these and other grades as well cancellations have often exceeded reorders, indicating less distribution than was expected at the advanced prices. Wool has yielded a little, the average of 100 quotations by Coates Brothers for domestic being 20.23 cents, against 20.83 cents February 1, and while yielding is thus far mainly in inferior qualities, stocks at least three years old are pressed for sale."—*Dun's Review, March 5.*

Canadian Trade.—"Favorable trade reports come from the Dominion of Canada. Spring business is reported opening well and stimulated by reduced railroad passenger rates to leading markets. Toronto reports an increased business in dry-goods and millinery, with knitted goods higher in price. What is described as a butter famine exists there, and quotations have been marked up. Good roads make for enlarged grain deliveries and prices of wheat are lower, as are also those of hides. Cut railroad rates have helped business at Montreal. The millinery trade opened well. Trade is light in the maritime provinces, partly because of bad roads, and collections are complained of. Trade at Victoria and Vancouver reflects the Klondike activity in a considerable increase in business, with collections good at coast cities, but slow at the interior. Business failures in Canada for the week number 27, as against 45 last week, 51 in this week of 1897, 66 in 1896, and 53 in 1895. Canadian bank clearings

for February aggregate \$110,396,000, a gain of 44 per cent. over a year ago, while for the two-months' period of 1898 the increase is fully 36 per cent. Weekly clearings aggregate \$26,420,000, a decrease from last week of 4 per cent., but a gain over last year of 53 per cent."—*Bradstreet's, March 5.*

SIMPLICITY ITSELF.

A SIMPLE, HARMLESS REMEDY.

Yet it Cures the Worst Cases of Dyspepsia and Indigestion.

Dr. Jennison, who has made a life study of stomach troubles, says: All forms of indigestion really amount to the same thing, that is, *failure to completely digest the food eaten*; no matter whether the trouble is acid dyspepsia or sour stomach, belching of wind, nervous dyspepsia or loss of flesh and appetite, a person will not have any of them if the stomach can be induced by any natural, harmless way to thoroughly *digest* what is eaten, and this can be done by a simple remedy which I have tested in hundreds of aggravated cases with complete success. The remedy is a combination of fruit and vegetable essences, pure aseptic pepsin and golden seal put up in the form of pleasant-tasting tablets and sold by druggists under the name of Stuart's Dyspepsia Tablets. One or two of these tablets should be taken after meals and allowed to *dissolve* in the mouth, and, mingling with the food in the stomach, digests it completely before it has time to ferment, decay, and sour.

On actual experiment one grain of Stuart's Dyspepsia Tablets will digest three thousand grains of meat, eggs, and similar wholesome foods.

It is safe to say if this wholesome remedy was better known by people generally, it would be a national blessing, as we are a nation of dyspeptics and nine-tenths of all diseases owe their origin to imperfect digestion and nutrition.

Stuart's Dyspepsia Tablets are not a secret patent medicine, but a fifty cent package will do more real good for a weak stomach than fifty dollars' worth of patent medicines, and a person has the satisfaction of knowing just what he is putting into his stomach, which he does not know when widely advertised patent medicines are used.

All druggists sell Stuart's Dyspepsia Tablets, full-sized packages, 50 cents.

A little book on cause and cure of stomach troubles mailed free by addressing The Stuart Co., Marshall, Mich.

Current Events.

Monday, February 28.

The Navy Department receives its first official information from the *Maine* court of inquiry in a letter from Captain Sampson; nothing definite is stated. . . . The operations of the **National Treasury for February** show a surplus for the first time in six years for that month. . . . It is reported from Guthrie, Okla., that **evidence has been found that both the Indians burned to death by the mob at Mound, Indian Territory, were innocent of the crime with which they were charged.** . . . A **10-per-cent. reduction in wages** goes into effect in all departments of Boston Manufacturing Company's cotton-mills, at Waltham, Mass. . . . Congress—Senate: The **claim of Henry W. Corbett** to the vacant seat from Oregon is rejected by a vote of 50 to 19. House: The **sundry civil bill** is passed with the appropriation for the Paris Exposition stricken out; two bills providing for the increase of the navy are introduced.

Cloudy weather adds to the difficulty in securing bodies in the wrecked battle-ship *Maine*, at Havana. . . . **One of the men who attempted to assassinate King George of Greece is arrested.** . . . Sixty-three passengers of the disabled French line steamer *La Champagne* start from Halifax for New York by rail. . . . The **claim of Italy against Haiti** has been settled by the payment of the full amount.

Tuesday, March 1.

Secretary Long says that in his judgment the element of Spanish official participation in the *Maine* disaster has been practically eliminated. . . . The War Department decides to abandon the Klondike relief expedition. . . . Sheriff **Martin** is a witness for the defense in the Lattimer shooting trial at Wilkesbarre. . . . The cabin passengers of the steamer *La Champagne* arrive overland from Halifax. . . . Congress—Senate: A **resolution providing for the erection in the Capitol of a bronze tablet** to the memory of the victims of the *Maine* disaster is adopted. House: Consideration of the Loud bill, amending the law in relation to second-class mail matter, is begun.

The divers succeed in entering the after-torpedo compartment of the wreck of the *Maine*

A New Cure for Kidney and Bladder Diseases, Rheumatism, etc.—Free to our Readers.

Mr. R. C. Wood, Lowell, Ind. 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. A. C. Darling, of North Constantia, New York, testifies in the *Christian Witness* that it cured him of Kidney disease after sixteen years' suffering. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlet, Vt., gives similar testimony. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this *Great Specific* for yourself, we will send you one Large Case by Mail **FREE**, only asking that when cured yourself you will recommend it to others. **It is a Sure Specific and cannot fail.** Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

in Havana harbor . . . A hurricane at New Caledonia sinks a French gunboat and does great damage to shipping. . . . An accomplice of Karditza, who attempted to assassinate King George of Greece, has been arrested. . . . The Spanish cruiser *Vizcaya* arrives at Havana and is given an enthusiastic reception.

Wednesday, March 2.

The Navy Department decides to send two war-ships to Cuba with supplies for relief of the reconcentrados. . . . The *Maine* court of inquiry holds another session at Key West and examines survivors of the crew of the battle-ship. . . . The Democrats gain in nine counties of this State in elections (covering eighteen counties), while the Republicans gain in two. . . . A bill providing for reorganization of the Baltimore and Ohio Railroad is introduced in the Maryland legislature. . . . Congress—The Senate debates the "aggressions" of the Canadian Pacific Railroad.

The wrecking tug *J. Merritt* arrives at Havana from New York and begins work on the wreck of the *Maine*. . . . Senor Campossalles is elected president and Senor Rosasilva vice-president of Brazil. . . . The anniversary of the coronation of Pope Leo XIII. is celebrated in Rome. . . . The Bohemian Diet is closed by an imperial order. . . . Prince Albert of Belgium sails on the *Kaiser Wilhelm der Grosse* from Southampton for New York.

Thursday, March 3.

Secretary Long denies reports that the *Maine* court of inquiry has indicated that the destruction of the battle-ship was caused by an external explosion; the unidentified body of one of the victims is buried with naval honors at Key West. . . . The presentation of testimony for the defense is finished in the trial of Sheriff Martin and his deputies. . . . Skaguay is reported to be under martial law, and troops are enforcing order. . . . Congress—Senate: A resolution providing for an investigation of the murder of the negro postmaster at Lake City, S. C., is introduced and referred to committee; the Alaska homestead bill is debated. House: The Loud bill, amending the laws relating to second-class mail matter, is laid on the table.

One body is recovered by divers from the wreck of the *Maine*. . . . An epidemic of "black blister" is reported in India. . . . The Pope receives congratulations upon the opening of the twenty-first year of his Pontificate. . . . The University of Budapest confers the degree of Doctor of Letters upon "Carmen Sylva," the Queen of Rumania.

Friday, March 4.

The *Maine* court of inquiry sails from Key West for Havana, where the sessions will be renewed; the court reports to Secretary Long that it can not fix even an approximate date for the presentation of its report. . . . Congress—Senate: The Alaska homestead and right of way bill is passed, with a section proposing an extension of the bonding privilege in return for concessions from Canada to the United States fishermen. House: The final conference reports on the pension and consular and diplomatic appropriations bills are adopted; a number of private bills are passed.

It is reported that Spain has bought two war-ships building in England for Brazil, and is negotiating for two more, and also large quantities of war supplies; a war fleet is assembling at Cadiz preparatory to sailing for Cuba. . . . Japan has demanded of Russia an immediate and explicit statement regarding the continued occupation of Port Arthur. . . . The jubilee anniversary of the Italian constitution is

Problem 267.

BY J. JESPERSON.

Third Prize Italian Chess-Clubs' International Tournament.

Black—Eight Pieces.

White—Ten Pieces.

White mates in three moves.

Solution of Problems.

No. 262.

Table with 3 columns and 4 rows of chess moves and solutions for No. 262.

Correct solution received from M. W. H., University of Virginia; "Spifficator," New York City; the Rev. I. W. Bieber, Bethlehem, Pa.; Dr. R. J. Moore, Riverton, Ala.; A. B. Coats, Beverly, Mass.; J. G. O'Callaghan, Low Moor, Va.; the Rev. W. W. Faris, Miami, Fla.; Matt. H. Ellis, Philadelphia; E. L. Antony and R. M. Campbell, Cameron, Tex.; C. J. M. G., Elon, Iowa; J. Jewell, Columbus, Ind.; D. S. Rubino, Glen Lyon, Pa.; G. Patterson, Winnipeg, Man.; N. W. G., Carbondale, Ill.; C. R. Oldham, Moundsville, W. Va.; W. G. Donnan, Independence, Iowa; J. C. Eppens, Canal Dover, Ohio.

Comments: "An elegant composition, the key is obvious"—M. W. H. "A classic"—S. "A Lemon soon squeezed"—I. W. B. "A Lemon hard to squeeze"—R. J. M. "There is something beside the key"—A. B. C. "A fine composition, but easily solved"—J. G. O'C. "A deep hole in the second move"—W. W. F. "Neat, but not perfect"—J. C. E.

No. 263.

Table with 3 columns and 4 rows of chess moves and solutions for No. 263.

Correct solution received from M. W. H., S., I. W. B., J. G. O'C., D. S. R., C. R. O., F. S. Ferguson, Birmingham, Ala.

Comments: "Exceedingly subtle. White's 2d is the hardest to find that I have ever encountered in

a 3-er"—M. W. H. "One of the grandest conceptions I ever saw; the key-move is rather apparent, but the 2d move!"—S. "A handsome, artistic Valentine"—I. W. B. "The king of problems"—D. S. R. "Very fine"—J. G. O'C. "Worthy of the prize"—C. R. O. "A remarkably difficult problem"—F. S. F.

Several of our solvers got tangled by Q-K 5. The reply is R-R 5. They give as White's 2d Kt-B 4, mating with Kt-K 2; but Black's 2d is Kt P x R, stopping the mate. It is probable that the error in making the White K on R 8 a Black one accounts for the few names of those who sent correct solution.

Correct solution of 258 and 259 have been received from Ad. F. Reim, New Ulm, Minn. He says that in these problems there are many snares for the unwary. N. W. G. and T. H. Varner, Des Moines, got 260, and Matt. H. Ellis 261.

The United States Championship Match.

At the time of going to press the score is: Pillsbury, 2; Showalter, 1; draws, 0.

FIRST GAME.

French Defense.

Chess game notation for the first game, French Defense, between Pillsbury and Showalter.

Notes by Emil Kemyen in The Ledger, Philadelphia.

- (a) Had Black played B x P, or Kt x B P then P-Q Kt 4 and eventually P-Q Kt 5 would have followed, somewhat compromising the Queen's wing. The text-move prevents this.
(b) He might have delayed this move and played Kt-R 4 or Kt-Q Kt 5 first, so as to avoid the doubling of the Q B P. However, White will obtain a King's side attack.
(c) A powerful move, which threatens Kt x R P, followed by R x P ch and R x B, with a winning game. Black is obliged to weaken his King's side by moving P-K Kt 3.
(d) More promising was P-Q B 4, followed by Kt-K 4 should Black capture the Pawn. White then threatens R x P ch, as well as Kt-B 6 ch or Kt-Q 6 and Kt x Kt P.
(e) Inferior play, which endangers the game. White should have moved Kt-Q 4. Black then had no other reply but R-B sq, for if R-B 2, White continues P-B 5, followed eventually by P-K 6.
(f) P-B 5 could not be played now, for K P x P would be the reply; if then P-K 6, Black plays B x P.
(g) Which enables Black to continue B-Kt 4, obtaining the superior game. White should have played R x P or R-Q 4, both resulting in an even game.
(h) Better perhaps was R (Kt 3)-K B 3, giving up the Q Kt P. Black then would have the preferable position, yet he had hardly any winning chances.
(i) The text-move in connection with R-Kt 8 gives White a chance to bring both Rooks in action, which, however, does not prove satisfactory, as Black's correct continuation shows.
(k) After this move White surrenders. He cannot stop the K Kt P.

Chess-Publications.

Nearly every week we receive inquiries concerning Chess-literature. We have received from E. B. Escott, Sheboygan, Wis., a catalog which is very complete, and he writes us that he will send the catalog to any one who may desire it.

The Correspondence Tourney.

FORTY-NINTH GAME.

King's Bishop's Gambit.

Chess game notation for the 49th game, King's Bishop's Gambit, between W. R. Van de Grint and W. R. Van de Taylor.

Notes by One of the Judges, and Mr. Van De Grint.

- (a) A move which should have resulted disastrously for White. P-Q 4, Kt-Q B 3, or Kt-K B 3 was far superior.—Mr. V. Kt-K B 3 is the move.
(b) Kt-K B 3, followed by B-Kt 2, was stronger every way.—Mr. V.
(c) A lost move, giving White a cramped position.—Mr. V.
(d) This can hardly be called Chess. There is nothing whatever accomplished by this move. Black should not have cut off his B by Kt-Q 2. At that point he should have forced the fight, with all the chances of a win in his favor. So long as White delayed the development of his minor pieces, and got rid of his splendid K B, Black had every encouragement to go in and win.
(e) When we read (12) P-Q 5 we said: "Now, Black has him by Kt-K 4"; but he takes his Kt out of the fight.
(f) The best move on the board.
(g) The sooner he got his Kt on K 4 the better.
(h) Kt-Q 2, followed by Kt-K 4, is much stronger.—Mr. V.
(i) No necessity to give up the exchange. P-R 3 is good enough.
(j) If there is a worse move on the board it is hard to find. Why not P-K R 3?
(k) P-K R 4 first, or, P-Q R 4. He ought to get his R into play.
(l) The only way to keep Black from winning.—Mr. V.
(m) White is evidently satisfied with a Draw. Possibly there is nothing else in it, but most folks would have tried R-B sq ch first, then R-Q sq ch, for Black must play K-Q 5.

HOW TO TREAT RHEUMATISM

In an article contributed to the London Lancet, a Philadelphia physician says: "Tartarlitine has given me results beyond all comparison superior to any preparation which I have tried. It is markedly diuretic, and in some cases laxative, in its action. The latter is especially the case when the drug is taken before breakfast. The promptness of its action is in many cases astonishing, a subsidence of distressing symptoms quickly following the administration of three doses of five grains each, taken four hours apart in a half pint of water on a reasonably empty stomach. The use of the preparation in the quantities named has sufficed in all cases so far treated, about twenty in number, to practically cure the disorder, temporarily at least."

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

MEASURES OF NATIONAL DEFENSE.

THE spectacular features of present relations between Spain and the United States consist of warlike preparations in both countries. Such preparations are the more notable in this country because unusual. Last week Congress, without a dissenting vote in either the Senate or the House of Representatives, appropriated a lump sum of \$50,000,000 to be used at the discretion of President McKinley for national defense. This amount was made available until January 1, 1899, in addition to appropriations for urgent deficiencies in the naval establishment aggregating nearly \$120,000.

The House of Representatives gave four hours to the discussion of this appropriation bill. In that time *The Congressional Record* shows that no less than seventy-three separate speeches were made in its favor, a large number of them under the five-minute rule of the last hour, but none the less contributing to an impressive spectacle. Every part of the Union was represented in the speech-making, and we note that the speakers included 40 Democrats, 37 Republicans, 5 Populists, and 1 Silver Party representative. Speaker Reed announced the vote, including his own, as yeas, 311; nays, 0. The Senate promptly passed the appropriation bill, without debate, by the unanimous vote of 76 to 0.

Congress has also authorized the creation of two artillery regiments to augment the five already existing, and the Secretary of War, Russell A. Alger, under date of March 11, has ordered a redistricting of military departments, the important changes being indicated by the new names, "Department of the [Great] Lakes" and "Department of the Gulf."

Pending the official report of the Naval Board of Inquiry into the *Maine* disaster (newspaper forecasts are practically unanimous at this date in predicting that the report will declare that the *Maine* was destroyed by an explosion outside the ship), it is to be noted that Spanish criticism of Consul-General Lee's con-

duct at Havana has been withdrawn, and that the President has decided, in order to avoid wounding Spanish susceptibilities, to send relief supplies to Cuba in other than strictly war-vessels.

The American cruiser *Montgomery* is now anchored in the harbor at Havana.

"One Country."—"It has been said, and we believe it to be true, that the Spanish Government is really desirous of war with the United States in order that the revolutionary spirit at home may be allayed, and that the contending factions in that country may be united and rallied to the support of the Government. Much as we dread war, and much as it is to be deplored, and in horror to be avoided, yet we do not overlook the fact that there would be in a foreign conflict some benefit to this country in the same direction.

"We have been as a nation torn into political factions, and a spirit of antagonism has sprung up which at some times has been scarcely less than revolutionary. There has been a determined effort, and with a measure of success we regret to say, to array class against class in this country, with the result that there have come strife and bitterness of feeling. Not only has section been arrayed against section, but the sections themselves have been split into contending factions.

"It is not necessary to go into details. Every man who reads these lines understands full well what we mean, and realizes that we have not overdrawn the picture. We do not mean to say that war is necessary to us, as it appears to be to Spain, and it is our earnest wish that the differences between this country and Spain may be honorably and satisfactorily adjusted without resort to arms. But we do say that as there is some good in everything, so a war at this time with a foreign power would undoubtedly have a wholesome effect in knitting the bonds of the Union closer together, and in allaying the sectional and class strife that has torn the people of the United States during the past several years.

"There is, in our opinion, no occasion for strife in this land, and our troubles have grown largely out of a misunderstanding. We are brethren, and that which tends to allay strife and to promote brotherhood, even tho it be war, will, to that extent, be a national blessing. We sincerely hope that there will be no war; but whether war shall come or not, we trust that out of this crisis will come a closer brotherhood."—*The Times (Dem.)*, Richmond, Va.

Patriotism in a Crisis.—"Congress is as thoroughly united, as eager, and as unselfish as the people for whom it legislates.

"And the temper of the people is admirable. No excitement, no 'war scare,' no feminine fears for the outcome. War is inevitable; it has been inevitable for months. The people await its coming with equanimity. They are even good-natured over it.

"Contrast their calm with the nervous fever of the peace-at-any-price patriots. The only panic to be observed anywhere exists among these curious, futile, witless beings, who may be seen running around the streets or the commercial exchanges, pale with terror, protesting against the publication of the facts, pleading against the logic of circumstances, hoping against fear that some of their own weakness will seize the President and lead him to betray the people into the hands of their enemies.

"Fortunately, they are few in number and inconspicuous in influence. The people, the real people, the flesh and blood and brains people, whether rich or poor, are one in the determination to support the Government as long as it stands by an American policy. If war be necessary for the complete vindication of that policy they will accept the inevitable, not entirely without sorrow, but not without something like a revival of the ancient love of battle.

"It is this feeling that is so splendidly reflected by Congress today. There are no parties in Washington, or rather there is but one party, and that party has for its platform the mem-

orable declaration of Stephen Decatur: 'Our country, right or wrong.'

"The sickness of a peace dependent upon the exigencies of business disappears at such times as these. An undivided nation awaits the signal from the President."—*The Journal (Ind.)*, Chicago.

President Supported by Americans.—"A lesson comforting to the nation is afforded by the exhibition of unanimity. It shows that when the country is face to face with a crisis our Congressmen can forget the party differences that divide them into hostile camps and come together, not as Republicans, Democrats, and Populists, but as Americans, willing to support the Executive in a course and cause that commend themselves to the moral sense of the nation. That is a revelation full of encouragement to those who cherish the belief that the Government most capable of great vigor in a great crisis is that which is nearest to the people and can feel or inspire those impulses that give unity of purpose to an entire population.

"The President, with the always great authority of his office immeasurably increased by the special mandate just given him, stands before the world clothed with a greater power than any constitutional monarch wields, and drawn from a purer source than that any despot exercises. It is additionally fortunate not alone for us but for popular institutions everywhere that our President is one who stands for peace, so long as peace can be preserved consistently with our honor and our rights. A soldier of approved courage and skill, he has nothing in him of that militarism that looks upon the world as made solely for strategists; a statesman tried in a great crisis and found firm, he is capable of using the very authority given him by the people to check popular passions and give reason a chance to be heard. If we have war, it will not be for failure on his part to work for peace; and if peace can not be kept, the country will be all the stronger for the moral will power of the President."—*The Transcript (Ind. Rep.)*, Boston.

Four Hours of Patriotic Rot.—"There was a fearful waste of high explosives in the four hours' discussion of the national defense bill in Congress on Tuesday. All sorts and sizes of statesmen seized the opportunity to relieve themselves of an accumulation of patriotic gas. The bill would have passed without one word of debate. There was nothing in the situation that required discussion, and there was neither courage nor dignity in what was said. The most sensible speech was made by Mr. Bingham, a Republican Representative from Pennsylvania, who had the nerve to say that while he favored the appropriation he condemned 'the utterance of any declaration that the relations of this country with Spain are otherwise than they have been for years past—friendly, reasonable, international relations.' Mr. Bingham was hissed for his sentiments, but he told the simple truth and told it like a man.

"The defense bill was passed by the Senate yesterday. There were no spread-eagle speeches, no fireworks, no hisalutin references to the altar of our country, no stupid platitudes, no hysterics, but a plain, simple, dignified, unanimous indorsement of the President's request for means with which to strengthen the defenses of the country. The House behaved like a mob; the Senate acquitted itself with credit. Not a single vote was influenced by anything that was said in the House in the so-called debate on this bill. Speaker Reed should have put the snuffers on his unruly crowd. Battles are not won by Congressional blather-skites."—*The News and Courier (Dem.)*, Charleston, S. C.

Prospect of War.—"The President of the United States laid down the law in his annual message, to the effect that there was a time coming for 'intervening with force.' Time was given for the Blanco humanity and autonomy experiment. That is a plain failure. Its success never was within the range of possibility. It must be cast aside, and the next step is the one that crosses the line Spain thinks she has drawn on us. Right there are matters of moment.

"We are not able to believe that the finding of the Court of Inquiry in the case of the *Maine* will make for peace. We apprehend the contrary will be the result. The President must know what the finding is to be, and he is keeping it to himself.

"Time is needed for us to put our resources into shape to meet emergencies. The dullest and most optimistic observers can not fail to see that no time is lost; not a day passes now but a full day's work is done—in plain terms, getting ready for war.

"There are two shocks coming. The one when the President does what he has described as 'intervening with force,' and the other the shock of the demand, whatever it is—and it must be one that will ring—that is to be made respecting the massacre of our seamen on the *Maine*.

"The chances seem to be that these shocks will come together, and that the Spanish Government will be irresistibly driven by a stupid, vindictive, and desperate public opinion into an attitude of irreconcilable and intolerable defiance that can be dealt with by force alone. We do not need to say this is war, for the logic of events makes proclamation of that fact."—*The Standard-Union (Rep.)*, Brooklyn.

President McKinley and Peace.—"The President has not made the mistake on the one hand of treating the members of his Cabinet as so many clerical subordinates, or on the other of sinking his own individuality and unloading his personal responsibility upon the shoulders of his advisers. Every measure which comes before the Administration will be considered by nine able men, tho only one of these will finally pass judgment. The sum placed at their disposal is large, but so are

the interests to be safeguarded. *The Post*, which from the outset has advocated the use of every honorable means to avoid war, is quite as firm in its belief that whatever preparations for defense are made should be made on a scale commensurate with the great stakes involved.

"The next sixty days will probably bring matters to a head, and show us precisely what to look for in our future relations with Spain. We have every reason still to hope for peace, and peace will undoubtedly be maintained as long as we have only the Spanish Government to reckon with. The danger for both nations rests not in the liability of the rulers of either to commit an act of hostility toward the other, but in the sudden freak of some fanatic or the outbreak of a mob."—*The Post (Rep.)*, Hartford, Conn.

No Threat.—"The rapidity and unanimity with which the bill appropriating \$50,000,000 for the national defense was made a law this week were most impressive, tho its true significance is likely to be overlooked at a time when so much is being done in some quarters to excite the public mind. The measure is in reality a precautionary one, such as in a time of possible emergency careful administrators charged with the defense of national interests feel constrained to take. As was well explained by the chairman of the House Committee on Appropriations in urging the passage of the bill, it is in no sense a threat, but while intended to meet untoward possibilities it is hoped that its passage will tend to in-

CAPT. CHARLES D. SIGSBEE, OF THE LOST "MAINE."

sure the maintenance of peace. The firmness of the people, unswayed by hysterical impulse, and their patient temper have, on the whole, been well represented by the responsible authorities at Washington, both legislative and executive, and while the course thus far followed continues to be pursued, there need be no apprehension as to the light in which the United States will stand before the world under the conditions which render its foreign relations at present more than usually delicate."—*Bradstreet's (Fin.)*, *New York*.

"The Real Hero of the Occasion."—"If Mr. Cleveland had not borrowed that money [by bond issues in 1896], there would be none in the Treasury to-day except what has been received from the Pacific railroads. The vote of \$50,000,000 for national defense would have been a *brutum fulmen*, unless the President had been authorized to borrow it by the sale of bonds. The silly boasting about it as 'surplus' is purely mendacious. It is borrowed money left over from Mr. Cleveland's Administration. It is right and proper to use it, as it is being used, for purposes of national defense; it is right and proper to give the President discretion in spending it, but it is wrong to lie about it.

"Mr. Cannon of Illinois, chairman of the committee on appropriations, joined the ignoble herd of falsifiers and perverters as follows:

"Now, a word in conclusion. We have got the money in the Treasury to meet this appropriation if it is expended, and that, too, without resorting, in our opinion, to further taxation. Therefore there is no coupling with this a proposition that would probably be made in most countries in the world under similar circumstances to levy additional taxes to meet the expenditure. I say again, we are satisfied that revenues to be yielded from present revenue laws will afford sufficient money to meet this expenditure and, in addition thereto, the ordinary expenditures of the Government.' [Applause.]

"Almost every line of this statement contains an attempt to deceive. The suggestion that we have got this money in the Treasury, and, therefore, shall not need, if it is expended, to resort to 'further taxation,' is an undoubted *suggestio falsi*. First, he tries to make it appear that this money is the product of taxation. It is not. It is the product of a loan made by Mr. Cleveland, as Mr. Cannon well knows. Second, he tries to make it appear that if other countries had this amount of borrowed money in the Treasury, they would not spend it, but would levy fresh taxes. This is untrue on its face. Third, he tries to make it appear that the present revenue law has produced or will produce this amount of surplus, when he knows well that the revenue has, since June 30, fallen short of ordinary expenditures by \$52,254,617. There is, therefore, a deficit, not a surplus, of that amount in the Treasury, and but for Mr. Cleveland's loan the Government would be now borrowing money, not only for national defense, but for ordinary expenses. Mr. Cannon knows all this very well.

"It is shocking to the moral sense that at such a moment, when we are all supposed to be more than usually impressed with a sense of public duty, when one of the most solemn problems which can arise in the life of a nation is pressing on us for solution, the leading men of a great party, and its leading journals, should fall to lying like clockwork about the national finances. It is still worse that their lying should be that unusual, base kind which involves the slander and depreciation of a great citizen, whose silence in the presence of it all reflects far more credit on us than our readiness to hand over the money with which he has provided us to President McKinley without restriction. That we have among us one man who, after having done his duty, and deserved well of the republic, can bear being lied about without a sign even of amusement, is worth more to us than half a dozen battle-ships."—*The Evening Post (Ind.)*, *New York*.

Intervention for Political Purposes.—"Intervention in Cuba, peacefully if we can, forcibly if we must, is immediately inevitable. Our own internal political conditions will not permit its postponement. Who that has marked the signs of the times does not see that 'war for Cuban liberty' looms before us as the only rallying standard of the legions of our own national discontent.

"To-day the forces of national honor and honesty present a solid front to the disintegrating masses of repudiation and dishonor. All other questions between Republicans and Democrats are insignificant alongside of the currency question. On this the Republicans are united with the conservative element of the people behind them.

"Within the Democratic Party there is dissension and open mu-

tiny over silver. The party leaders are at sea and the camp followers clamor for a party shibboleth.

"Let President McKinley hesitate to rise to the just expectation of the American people in regard to Cuba, and who dare doubt that 'war for Cuban liberty' will be the crown of thorns the free-silver Democrats and Populists will adopt at the elections this fall?

"And who can doubt that by that sign, held aloft and proclaimed by such magnetic orators as William J. Bryan, they will sweep this country like a cyclone?

"In such a campaign, organized under such a leadership, the war spirit would be inflamed to such a degree that all other issues would be ignored. Congress in both its branches would fall into the hands of the free-silver Democracy. The President would be powerless to stay any legislation, however ruinous to every sober, honest interest of the country.

"Cold imagination can not picture the possibilities for national dishonor that lie in the triumph of the Democracy through such a campaign of passion and convulsion.

"No, the United States can not afford to let the settlement of the Cuban question wait a single day after the Court of Inquiry has made its report to the President. The possibilities of further delay are too momentous to justify further consideration of the rights of Spain. Our duty to ourselves transcends our consideration for a nation that has been tried and found both barbarous and impotent."—*The Times-Herald (McKin. Ind.)*, *Chicago*.

THE NEBRASKA FREIGHT-RATE CASE.

THE Supreme Court of the United States has decided the Nebraska maximum freight-rate case on the principle that while a State has power to regulate the rates charged by a railroad, such rates must be reasonable. The reasonableness of rates is subject to determination by the courts; and they are competent to determine whether the rates sought to be imposed take property without due process of law, a proceeding which the Fourteenth Amendment of the Constitution forbids.

The case involved the validity of a law passed by the Nebraska legislature in 1893, prescribing the maximum rates for the transportation of freight within the State only. The railroads asked the federal courts to prevent the enforcement of this law, and the circuit court of appeals decided in their favor, holding that the maximum fixed was ruinous to the roads. Justice Brewer computed that the reduction called for amounted to an average of 29.5 per cent., which he held to be excessive. The Supreme Court, in affirming the decision of the lower court, covered a large number of points besides this one, and, while holding that the law of 1893 was unreasonable and unconstitutional, as applied to conditions then existing, also declared that:

"If the circuit court finds that the present condition of business is such as to admit of the application of the statute to the railroad companies in question, without depriving them of just compensation, it will be its duty to discharge the injunction heretofore granted and to make whatever order is necessary to remove any obstruction placed by the decree in these cases in the way of the enforcement of the statute."

The case was argued twice before the Supreme Court. W. J. Bryan appeared as one of the counsel for the State at one hearing. It was contended that since the law applied only to rates within the State, the federal courts were without jurisdiction. But the Supreme Court maintains federal jurisdiction on the ground that ownership of the property is vested in parties outside as well as inside the State, and also because the act was attacked as contrary to provisions of the federal Constitution.

Justice Harlan, who wrote the opinion of the court, laid down the following principles to be regarded as settled:

"(1) A railroad corporation is a person within the meaning of the Fourteenth Amendment, declaring that no State shall deprive any person of property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"(2) A state enactment, or regulation made under the author-

ity of a state enactment, establishing such rates for the transportation of persons or property by railroad as will not admit of the carrier earning such compensation as under all the circumstances is just to it and to the public, would deprive such carrier of its property without due process of law, and deny to it the equal protection of the laws, and would therefore be repugnant to the Fourteenth Amendment of the Constitution of the United States.

"(3) While rates for the transportation of persons and property within the limits of a State are primarily for its determination, the question whether they are so unreasonably low as to deprive the carrier of its property without such compensation as the Constitution secures, and therefore without due process of law, can not be so conclusively determined by the legislature of the State or by regulations adopted under its authority, that the matter may not become the subject of judicial inquiry."

The questions of reasonableness of rates, and the considerations to which courts must give weight when seeking to ascertain the compensation which a railroad company is entitled to receive, and a prohibition upon the receiving of which may be fairly deemed a deprivation by legislative decree of property without due process of law, are covered, in substance, by the following paragraphs from Justice Harlan's opinion:

"Undoubtedly that question [just compensation] could be more easily determined by a commission composed of persons whose special skill, observation, and experience qualifies them to so handle great problems of transportation as to do justice to the public as well as to those whose money has been used to construct and maintain highways for the convenience and benefit of the people. But despite the difficulties that confessedly attend the proper solution of such questions, the court can not shrink from the duty to determine whether it be true, as alleged, that the Nebraska statute invades or destroys rights secured by the supreme law of the land. No one, we take it, will contend that a state enactment is in harmony with that law simply because the legislature of the State has declared such to be the case; for that would make the state legislature the final judge of the validity of its enactment, altho the Constitution of the United States and the laws made in pursuance thereof are the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding.

"The idea that any legislature, state or federal, can conclusively determine for the people and for the courts that what it enacts in the form of law, or what it authorizes its agents to do, is consistent with the fundamental law, is in opposition to the theory of our institutions. The duty rests upon all courts, federal and state, when their jurisdiction is properly invoked, to see to it that no right should by the supreme law of the land be impaired or destroyed by legislation.

"We hold that the basis of all calculations as to reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public. And in order to ascertain that value the original cost of construction, the amount expended in improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under any rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration, and to be given such weight as may be just and right in the particular case.

"What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of a public highway than the services rendered by it are reasonably worth. But, even upon this basis, we perceive no ground on the record for reversing the decree of the circuit court. On the contrary, we are of opinion that as to most of the companies in question there would have been under the rates established by the act of 1893 an actual loss in each of the years ending June 30, 1891, 1892, and 1893, and substantially no compensation earned for the services rendered, and that in the exceptional cases above stated the receipts for gains above operating expenses of some of the companies would have been too small to affect the general conclusion that the act, if enforced, would have deprived each of the railroad companies involved in these suits of the just compensation secured to them by the Constitution. Under the evidence there is no ground for saying that the operating expenses of any of them were greater than necessary."

"The Great Railway Decision."—"The railways are very much in the position of a man who has been shot at and escaped, but sees his foe preparing to reload.

"The summary of the court's opinion . . . is of vital interest. Its chief points seem to be that a railway is a person and is covered by the Fourteenth Amendment to the Constitution, and that enforcement of unfairly low rates is a violation of this by depriving

the carrier of its property without due process of law. It is asserted that a State can primarily fix railway rates, but their reasonableness is subject to judicial inquiry.

"This is affirming the decision of the circuit court in the same case. Judge Harlan, who delivered yesterday's opinion, adds that traffic has probably so much improved that the rates prescribed by the Nebraska law in 1893 may, after all, be reasonable to the roads now, and says that if the circuit court finds this to be true it will be its duty to remove any obstructions in the way of the state authorities enforcing their law.

"As Cap'n Cuttle would say: 'If so be as how, why then avast!'"—*The Herald (Ind.)*, *New York*.

Just and Fair Rates.—"The Supreme Court did not deny that Nebraska had a right to fix rates. It only did not possess the privilege of establishing a schedule which was not based on the fair judgment of some proper judicial tribunal. In seeking a remedy the railroads involved were not capable of finding one on law, but must receive one in equity. The decision of the court, therefore, affirms in essence, without doubt and unequivocally, the right of a legislature to establish rates for local traffic. But the State must not declare just what the rates shall be. It must allow the roads to have their situation as regards business discussed in court. The Nebraska legislature permitted the companies to go to the judiciary, but said that the highest rates possible could not be above those charged on a day in 1893. The maximum element in the law, then, is singled out for destruction by the Supreme Court. The railroads must be permitted to have a margin, unlimited in reality, for the exigencies of their affairs. Justice Brewer said the same thing when he heard the case, sitting in the federal circuit court of appeals.

"In one direction the railroad companies failed to justify their case. They sought for a remedy for the statute in law. There was and there is none to protect such as them. They asserted that the Nebraska legislature had enacted class legislation to their harm. The Supreme Court does not grant that they could stand on that claim. Neither the laws of the United States nor those of Nebraska empowered the courts to say that railroads should not be subjected to rate-fixing legislation. The companies were not to be assured of protection in operating their roads for their own benefit, either exclusively or mainly. Primarily they must be devoted to the interests of the public. Yet the opinion of Justice Harlan plainly stated that the adjudication of any important question of rates must always prove embarrassing. That is so far obviously true under the court's judgment that it is possible to foresee that the Nebraska maximum-rate case will embroil railroads in trouble in the future, especially in the States where the corporations do not stand high in public favor. But, on the whole, it should be hoped that the decision will convince reasonable men generally that railroad rates everywhere must, under the Constitution, be just and fair."—*The Journal (Ind.)*, *Providence*.

Overcapitalization.—"It is notorious that the people of the West have long complained of the fact that the railroads were compelled, or insisted that they were compelled, to charge exorbitant rates because of the necessity of making a profit on their extravagant capitalization. And it will be observed that the Supreme Court included the market value of the stock and bonds issued by railroads, thus holding that the people must pay interest and dividends on a vast amount of water.

"There can, of course, be no doubt that the railroads must be allowed to make a fair profit on the actual investment, after paying all operating expenses. But the people are weary of the juggling of our railroad financiers and 'reorganizers,' and are beginning to think that they ought not to be deprived of cheap rates because of the operations of these gentlemen. So far as the court may be deemed to sustain the theory that the people ought to be taxed to pay interest and dividends on inflated issues, it is to be regretted. In the present case some extremely foolish claims were made by those defending the statute. It was urged, for example, that the State would have the power to compel the railroads to do business within the State at a loss, provided they could earn enough in their interstate business to yield them a profit on their whole line, including both domestic and interstate business. The court made short work of this theory, holding that the reasonableness of domestic rates must be determined solely with reference to domestic business."—*The News (Ind.)*, *Indianapolis*.

THE ACQUITTAL OF SHERIFF MARTIN.

AFTER a five-weeks' trial Sheriff Martin, of Luzerne County, Pa., and his deputies have been acquitted of the charge of murdering a striker named Michael Cezlak, during the anthracite coal-miners' strike last September. This charge of murder was one of nineteen indictments for murder and double that number of indictments for felonious wounding, which had been returned by a grand jury against the sheriff and sixty-eight deputies who killed nineteen men and wounded thirty-eight others near Lattimer on September 10.

Much attention has been directed to the progress of the trial, because of prevalent doubt concerning the actual facts upon which the shooting could be justified. It will be remembered that state troops were ordered to the scene after the shooting had taken place, and, under what was practically martial law, local justices of the peace were not permitted to serve warrants for homicide upon the sheriff and deputies. Bench warrants, however, were later issued by judges of the county courts, and a trial ensued in the court of quarter sessions about four months later. Prosecution of the sheriff and his deputies devolved upon the state authorities, whose power, theoretically, the sheriff and his deputies were engaged in upholding when they killed the strikers. The trial was held before Judge Woodward, who has been twenty years on the bench, and who was elected by both Republicans and Democrats to his present position, altho nominally a Democrat in politics. The jury was selected within two days and was composed of Americans from the ordinary walks of life. Their decision in the first test case is obviously important.

In view of the interests involved in this case, some review of the evidence brought out at the trial is necessary to an understanding of the mass of newspaper comment upon it. The strikers (mostly Hungarians) claimed that they were acting within their rights when proceeding peaceably along a public highway, to make a demonstration before men who were still working at Lattimer mines for the purpose of inducing them to join the strike. They claimed that they held a meeting before the march and decided to carry no weapons, and that there was no justification for the deputies to open fire upon them. Scores of witnesses testified concerning the actual occurrences when the sheriff tried to stop them. It was declared that they were unarmed, that they were marching with an American flag at the head of their column, that the sheriff himself first tried to shoot when the marchers attempted to pass by him, and that the deputies continued to fire upon the defenseless men as they fled and dispersed in every direction.

On the other hand, Sheriff Martin related, in his story of defense, how he had been called home to Luzerne county by representatives of the coal companies, and told that he would be held responsible for damages that might result from a continuance of the violence which had characterized the proceedings of the strikers in the region. He testified that he depended upon a Mr. Hall to gather a large number of deputies with arms, and they were sworn in and properly instructed by him in his official capacity. Sheriff Martin detailed the circumstances of his first meeting with the crowd, which obeyed his order to disperse for the moment but took up their march again. The sheriff had issued a proclamation regarding the preservation of the peace, including reference to the state statute against riots, and it appears that these orders had been proclaimed in different parts of the county in various ways. When the strikers started on their march once more the sheriff and his deputies posted themselves on the road ahead of them, and, when they came up, Sheriff Martin alone went out to meet them again. He testified that the leaders refused to obey his order; that several of the men rushed upon him, some of them armed, one threatening him with a knife; that after he had been struck by one of them he tried to fire

his revolver, but it failed to go off, and the deputies, exercising their own judgment, then fired a volley into the crowd with fatal effect. The deputies further testified that the strikers actually opened fire, and that a number of them charged upon the line of deputies before the volley was fired. The deputies explained that the wounds of strikers in the back were due to their crowding about the sheriff in their attack. On the stand one deputy, it is said, admitted knowledge of a shot that he fired. Nobody told who gave the order to fire, if such an order was given.

The defense pleaded justification for the extreme measures taken by reason of the extraordinary conditions prevailing in the region on account of riotous strikers, and the testimony evidently convinced the jury that a reign of lawlessness and terror prevailed at the time. Of the points of law applicable to the case, the defense laid special stress upon the necessity of proving that some particular deputy fired the particular shot which killed Michael Cezlak, in order that a charge of murder should be substantiated.

Judge Woodward in charging the jury, said in part:

"The office of sheriff is recognized in the earliest annals of the English law. It is much older than Magna Charta, and the exact time of its creation is involved in much obscurity. But the place and function of the sheriff is easily determined. He has been for all times the chief peace officer of his bailiwick. Under all the systems of government which have recognized the law as the supreme rule of action it has been found absolutely necessary to vest in some one person the ultimate power to preserve the peace, to quell disorder, and to suppress riot. And this person is the sheriff, and his power is largely a discretionary one. In a time of great emergency, or in a crisis of unusual danger, the limits under which his discretion may be exercised have been held by the courts to be without fixed limits.

"As the employer has no right to compel a man to work who does not wish to work, so also is it true that the employee has no right to compel his fellow workman to quit work if he wishes to work. The distinction between the right to strike and the right to compel others to strike is a natural and palpable one, and is approved by the instinctive law of right and wrong as well as by the statutes and the decisions of the courts, and the compulsion denounced by the law is not alone that which consists in actual physical force applied by one set of men upon another. It may consist in a course of action tending to overawe or frighten or stampede a body of men who are anxious to work, as well as in laying a violent hand upon the individual workmen and forcing them by main strength to abandon their employment and unite in a strike.

"Leaving out of view all the facts on this branch of the case which are controverted and in reference to which the witnesses differ, it is certainly true that both at West Hazleton and Lattimer the great body of the strikers failed to obey the sheriff when he ordered them to disperse and insisted in pushing on. Nor can it be doubted that the sheriff had the right in the exercise of the discretion vested in him by the law to issue the order. And if it was the right of the sheriff to command the crowd to disperse, then it was the duty of the crowd to obey his command. The right to give the order implies the duty of obedience to the order, and disobedience of it is evidence of a riotous purpose. If I push on when the sheriff orders me to stop I do so at my own peril.

"Of course this obligation of obedience to the authority of the peace officer of the county is not confined to laboring men. It extends to and embraces all the inhabitants of the county, rich and poor, high and low. A company composed of the most wealthy and most prominent men of a community, if marching upon a public highway at a time or under circumstances which, in the judgment and discretion of the sheriff, make such a demonstration dangerous to the public peace, would be bound to disperse if ordered so to do. And compliance with the order should be prompt and complete.

"If you are satisfied, gentlemen, from the evidence that the purpose of the sheriff and of the posse was to preserve order and prevent riot, then it would follow that their intent and object was not a criminal or unlawful one, and the rule of the law which makes the act of one the act of all has no application to the facts of the case. If on the contrary, you are convinced by the evidence that the sheriff was not actuated by a desire and intention

to preserve the peace, but that he summoned his posse with the idea of inflicting upon the body of men known in the case as strikers wanton and unnecessary outrage and injury without reference to their action and conduct; if, in short, his purpose was a base, malicious, and wicked one, then so far as he was concerned and so far as the deputies were concerned, if they understood his motive and acted with the same intent, the fact of a criminal and unlawful combination would be established, and then all the defendants might be convicted, altho the shot which took the life of the deceased was fired by a single one of the defendants. The act of any one would in that event be the act of all.

"If under all the evidence in the case you are not satisfied beyond a reasonable doubt that the sheriff and his posse were impelled by a criminal or unlawful purpose, then the doctrine of the law which the Commonwealth invokes, that where there are many defendants the criminal act of one of them is under certain circumstances to be regarded as the criminal act of all, has, as we have already said, no place in this case."

It Was Not Murder.—"There never has been much doubt in the minds of unprejudiced persons that the shooting of the strikers at Lattimer last September by the posse under the control of Sheriff Martin, of Luzerne county, was a precipitate act, not justified by actual bodily danger; but there was no such appearance of vindictiveness and premeditation as to warrant a charge of intended murder. At the trial, when time enough had elapsed to collect and sift the evidence of the participants in the terrible occurrence, the crime of murder was not established. There was such reasonable doubt that the jury were bound to acquit, as they did, unanimously and without hesitation.

"But while Sheriff Martin and the deputies on trial with him stand acquitted of deliberate murder, they can not escape the imputation of unnecessary slaughter. Whether as a result of fright, panic, or misapprehension can never perhaps be certainly known, the riotous strikers were shot down without degree of provocation which should immediately precede and make necessary a resort to force.

"The trial at Wilkesbarre was conducted with great fairness. The charge of Judge Woodward was admirably clear and impartial. Notwithstanding this, however, the result will leave, we fear, unhealed animosities which only the lapse of time can soften or obliterate."—*The Record (Ind.), Philadelphia.*

Lawful Decision.—"The question whether or not the sheriff and his deputies were justified in firing upon the strikers at Lattimer has been decided in the way prescribed by law.

"After an apparently fair trial, with the ablest counsel conducting the case on either side, a jury of American citizens has acquitted the sheriff and his deputies of the crime of murder.

"The jury seems to have been one of unusually good composition. So far as appears, there was upon the panel no man who could reasonably be suspected of subserviency to the mine-owners or of prejudice in their favor. All were men who work for their living in honorable ways. The jury consisted of:

"One laborer, three carpenters, one brickmaker, one clerk, three farmers, one tinsmith, one contractor, and one carriage-maker.

"Its members represented all parts of the county in which the trial was held. Surely it would be difficult to make up a better jury than this list suggests for the trial of such an issue.

"The case is ended in the American way. A trial has been held before a judge elected by the people and a jury impaneled from them. The unanimous verdict must be accepted as in accordance with the law and the facts, unless we are ready to discredit the courts and the law and the jury system itself."—*The World (Ind. Dem.), New York.*

Unfortunate "Massacre."—"That the miners had just grievances was undeniable; they were underpaid and their economic condition was about the lowest ever reached by workingmen in America. Therefore, they had public sympathy on their side from the outset, and we have no doubt that many good citizens, who would never defy the law on their own account, were ready to wink at the operations of the strikers, even when they antagonized the public peace and used violence and coercion in order to gain a victory over their employers and thus better their material condition. For when the law is constantly and deliberately violated and overridden by great combinations of capital to serve selfish interests, we must expect an increasing popular sympathy

with these petty physical force attacks by half-starved strikers upon law and order. Both are criminal and deplorable, but the lawless rich will surely find imitators among the lawless poor, and the fact must be taken into account in trying to understand a large body of popular feeling toward Sheriff Martin and his deputies.

"We have conceded that the verdict of acquittal was a just one under the law, yet, at the same time, we are afflicted by a terrible doubt that the slaughter at Lattimer was necessary or justifiable. Might not the tragedy have been avoided? It is not clear that the miners should have been prevented from marching on the highway; it is not clear that they should have been denied the opportunity to show themselves within sight of the miners at work; it is not clear that the deputies should have fired as soon as they did. Hence the fear that the affair was an awful mistake that will inflame still more the antagonism between employer and employed. No doubt Sheriff Martin used his best judgment, yet the Lattimer 'massacre' must be considered as highly unfortunate for the American people."—*The Republican (Ind.), Springfield.*

A Necessary Lesson.—"If these men had conducted themselves in the outskirts of Prague or Naples as they did here practically in the outskirts of New York and Philadelphia, they would have been shot down at the end of the first day of their revolt, and not, as was the case, at the end of the first week. And there would have been no trial whatever, not even a court of inquiry into the conduct of the captain of gendarmes responsible for the act. Logically, even under our code, of which a basic maxim is that 'ignorance of the law excuses no man,' the foreign system is the better. And to this system we should undoubtedly have been driven had this jury set the ax to the root of local authority by convicting these defendants. No sheriff's posse might, after such a happening, attempt to maintain order, and the inevitable result would be the appeal to the military arm, state and federal, which, after due proclamation, is amenable to no trial by jury. But practically the advantage is with the old and, fortunately, unbroken American procedure. As long as it is admitted, as it is outside of European absolutisms to-day, that government exists by the consent of the governed, government's permanence is further assured every time that it is able to go before twelve men and reasonable and successfully justify its extraordinary acts for its own preservation. In this case, for instance, a great and, we regret to say, a necessary lesson of the sovereign power of life and death which a free people commits to its peace officers has been learned by thousands of common-schooled Americans, as well as by the ignorant survivors of the Lattimer riots."—*The Press (Rep.), New York.*

Greed to Blame.—"This trial as to the killing of strikers at Lattimer, in Pennsylvania, brings to light again a most unfortunate affair, which, however it is looked at, is a disgrace to the region where it occurred. The strikers, according to unprejudiced accounts, were of the most ignorant sort. They had been told that nobody not in uniform had the power to arrest them, and also that, if they carried no deadly weapons, they could do as they pleased. The sheriff's posse was made up of clerks and such men in their ordinary dress. The strikers had no idea of what such a force meant, and went ahead accordingly. They were accustomed to see armed and uniformed men when they saw the representatives of the law. A half-dozen soldiers would have scattered them all. So they went ahead and stirred up the row that ended just as such a disturbance must end. The deputies were human and did not care to be knocked about and perhaps killed without resistance.

"But how came such an ignorant gang to be there? Ask what their wages were, and you get the answer. The mine-owners get the poorest and least American laborers, and leave society to keep them in order. No crowd of intelligent men would have given the provocation that these gave to the officers. The persons who brought these fellows into the country, so as to save a few dollars and crowd out a better sort of workers, can now see what their parsimony has resulted in. But it is a great thing to save a dollar and greater to save more."—*The Courant (Rep.), Hartford.*

Martin's Defense Dangerous to Liberty.—"Practically, all the evidence that was produced at Wilkesbarre to justify Sheriff Martin and his men in firing upon the procession of workingmen

at Lattimer was directed to proving that mob violence was threatened or was liable to happen later on. If there was ground for a plea of self-defense it was due to resistance to an interference justified only by something which the sheriff assumed that the strikers intended to do somewhere else and at some other time, and not by anything that they were doing then and there.

"What might have happened, or the results of an unexecuted intention, is something that can never be proved or disproved in a court of law; and the doctrine that an officer of the law may arrest persons or disperse peaceful assemblies because he believes, or assumes, that they may do something unlawful is dangerous to liberty, and consequently to the peace and safety of the community. Citizens are to be interfered with by the agents of their government only when they do something in violation of law, and not when somebody guesses that they mean to do something of the kind.

"The whole Russian system of espionage and repression, of arbitrary arrest and 'political' trial, rests upon this doctrine that people may be punished for their intentions and for the crimes

they may commit if left at liberty. Sheriff Martin's defense for the murder of the men ruthlessly shot at Lattimer rested wholly upon the assumption that he had a right to deal with them as a mob, because he suspected that they might become a mob if allowed to go their way peaceably.

"And this doctrine has been adopted by an American jury."—*The Journal (Dem.), New York.*

"The law is for all men, and against all men who are not obedient to it. There is no question of the right of men to strike. The strike is often the only weapon. But when the striker learns to keep within the law, to be fair to others, and to respect property rights, he will have made the greatest advances in the direction of public sympathy. An illustration is the case of the Pittsburg miners a year ago. The determined efforts to keep within the law won the friendship of the people, and also saved any serious clash with the law. The law is the defense of the individual and the salvation of the nation. Violence toward it can not win."—*The Times (Rep.), Pittsburg.*

CURRENT CARTOONS.

VALIDITY OF UTAH'S EIGHT-HOUR LAW.

THE Supreme Court of the United States has affirmed the validity of an eight-hour law in Utah on the ground of police power inherent in the State. Justice Brown, in giving the opinion of the court, expressly stated that, without passing upon the constitutionality of eight-hour laws in general, it was plain that the state legislature had power to restrict the hours of labor in unwholesome employments. The Utah statute provides for an eight-hour day in underground mines, smelters, and all other works for the reduction of ore, and violators of the statute are deemed guilty of misdemeanor. The *Chicago Record* speaks of the significance of this decision to the industrial and labor interests of the country as follows:

"It is contrary to the reasoning of most of the state supreme courts upon cases involving similar points of constitutional law. The Illinois supreme court, more than others perhaps, has freely nullified labor legislation on the ground of its interference with the provision of the Constitution, which stipulates that no person shall be deprived of life, liberty, or property without due process of law. So strict have been some of the state courts in holding that the legislature could not interfere with a person's right to contract for the disposition of his labor that workingmen had begun to despair of relief from certain grievous evils. The decision of the federal Supreme Court in the Utah case will revive hope again in the efficacy of legislation as a means for improving conditions under which workingmen labor. It must have a liberalizing effect upon the rulings of lower courts."

"The position of the Illinois supreme court upon such legislation is succinctly stated in the following excerpt from the opinion in the case of *Ritchie vs. the People*:

"The police powers of the State can only be permitted to limit or abridge such a fundamental right as the right to make contracts when the exercise of such power is necessary to promote the health, comfort, welfare, or safety of society or the public; and it is questionable whether it can be exercised to prevent injury to the individual engaged in a particular calling."

"This extract is from the opinion in the case brought to test the validity of the act of 1893, the object of which was to limit the hours of women in factories and workshops to eight a day. In declaring invalid this statute the Illinois supreme court went further than was necessary to establish the precise point in question, and to a position the reverse of that now enunciated by the federal court. It cited from the New York courts a decision relating to an act forbidding the making of cigars in tenement-houses, in which occurs the following:

"To justify this law it would not be sufficient that the use of tobacco may be injurious to some persons, or that its manufacture may be injurious to those who are engaged in its preparation and manufacture; but it would have to be injurious to the public health."

"A quotation by the Illinois supreme court from Tiedeman on 'Limitations of Police Powers' is still more in point:

"There can be no more justification for the prohibition of the prosecution of certain callings by women, because the employment will prove hurtful to themselves, than it would be for the State to prohibit men from working in the manufacture of white lead because they are apt to contract lead-poisoning, or to prohibit occupation in certain parts of iron-smelting works because the lives of the men so engaged are materially shortened."

"The reasoning which leads to the conclusion that the State has no right to interfere for the protection of life and health of workingmen who may be practically forced to accept such terms of employment as are offered them seems brutal. It is gratifying that the highest court in the land holds otherwise. This decision means the starting of the pendulum in the other direction."

The *Brooklyn Eagle* points out that "as a matter of fact there is not a State in New England engaged in cotton manufactures which has not enacted the same kind of laws. In some of these States the total number of hours is fifty-eight per week, in others sixty. No one has ever questioned the right of these States to enact such legislation." But that paper thinks that the danger in such legislation is in going too far:

"In this State a contractor was arrested for working his men more than eight hours a day, when it was shown that he did so with the consent of the men, that their occupation was healthful, and that they were paid extra for over-time. Under these circumstances his course was held to be justified by the court of ap-

peals. The court of appeals, in passing decision, laid particular emphasis on the healthfulness or unhealthfulness of an occupation and sustained the right of the State to limit the hours of a given employment in the exercise of its police and sanitary power. Look at it on a larger scale. The United States Government established a national quarantine, altho there is not a word about quarantine in the Constitution. Article 3 of section 8, however, gives to Congress the power to regulate commerce with foreign nations and among the several States and with the Indian tribes. Quarantine is a matter affected by commerce, or commerce a matter affected by quarantine. Therefore the right to establish a national quarantine and a national board of health was assumed, altho the assumption appalled the strict constructionists. Isham G. Harris of Tennessee, who was such a strict constructionist that he wanted his State to secede from the Confederacy, was the father of the law. He explained it on the ground that there was yellow fever in the country and that there was no way of dealing with it in the southern portions of our territory. Quarantine went into effect, and the principle then established has never been abandoned.

"In deciding, then, that the State of Utah has the right to limit the hours of labor in an industry affected by sanitary and police regulations the Supreme Court cuts no new cloth. The decision is in line with previous ones to the same effect. It is of interest to those who make a hobby of constitutional interpretation and the rights of the States under the Constitution, and while establishing no new precedent serves only to bring old ones into conspicuous relief."

In view of cotton-mill conditions and propositions for national regulation of working hours, the *Providence Journal* finds broad meaning in the supreme court's affirmation that the State has a paramount police power which it can use essentially as it will:

"This Utah law has now illustrated in a new way the final legislative capabilities of the States within their defined rights. It is not only a constitutional piece of legislation, but it is a sign of the existing rights still held by the States. Each State is shown to be supreme in its power in this direction under the conditions imposed by the federal Constitution. Altho some vagueness attaches to the decision of the supreme court, it is apparent that States will have this right to legislative as well as executive police authority even if Congress should adopt a law fixing the hours of labor on a uniform standard in all parts of the country. To acquire supreme and exclusive privilege the federal Government in this province of its authority must act upon the conditions which an amendment alone to the Constitution can give it. Either that, or the right to regulate commerce between the States must be construed to include the power to fix the hours of labor. That suggestion should induce some cotton manufacturers to study the hours of labor bill now before Congress."

LETTERS AND ART.

JOSEF HOFMANN AT TWENTY.

THE musical prodigy who ten years ago set musical circles in America in a whirl of excitement has reappeared at the age of twenty; and with his return has reappeared the enthusiasm that greeted the little lad in knee-breeches.

Critics are apt to "view with distrust" all youthful prodigies; but it is agreed on all hands that Hofmann at twenty bears out the rich promise of Hofmann at ten. There is some difference of opinion as to the stage of development he has reached, some regarding him as being as yet but a "pianistic genius," while

JOSEF HOFMANN.

others use the broader term "musical genius" and hail him as a second Mozart. Mr. W. J. Henderson, of *The Times*, is one of the more conservative. He has this to say:

"The promise of the genius of the little boy of ten has been fulfilled as far as it could possibly be in the young man of twenty. The development of this remarkable boy is apparently perfectly normal. His temperament and his intellect are healthy, and are growing naturally. There is nothing weird or unusual about the present state of the young man's inner life, so far as can be judged from his piano-playing; and this fact leads to a proper estimate of his limitations.

"At the age of twenty Josef Hofmann is a true pianoforte genius, but he does not play like one who had sounded the depths of human experience. Intelligence, insight, feeling, passion, are all present in his work, but the artistic conception is still lacking in that calm survey, that broadened view, that all-embracing sympathy combined with completed measure of proportions which are the fruit of artistic maturity as much in the heaven-born genius as in the plodding talent. Beethoven did not write the fifth symphony, nor Mozart his 'Don Giovanni,' nor Mendelssohn his 'Elijah,' in boyhood.

"But the elements of the ability to express all that can now be expressed through the medium of the piano are in this boy, and

in such compositions as adapt themselves to the present state of his artistic conceptions he reveals himself as a master."

The critic of *The Evening Post* does not rein in his enthusiasm quite as tightly as Mr. Henderson does. He writes:

"Paderewski is not playing in America this year, but his *Doppelgänger* is—his double in two respects—in being a prince among pianists, and in having the divine spark—a soul electrified by genius. Josef Hofmann proved at his *début* with the Thomas orchestra a few days ago that his spark was not a mere *ignis fatuus*, as it is with most infant prodigies, but the true Promethean fire, which, instead of dying out, grows brighter and warmer with years.

"Yesterday afternoon, at Carnegie Hall, Josef Hofmann gave his first recital. He began with Bach's Prelude and Fugue in D-minor, and he played in a manner which no pianist, be his name Liszt, or Rubinstein, or Paderewski, could have surpassed. This is saying a great deal, but it is not written in a moment of enthusiasm, but after the sobering effect of a night's sleep. If all pianists played Bach as Josef Hofmann does, the old Leipsic cantor, usually reputed dry and learned, would be voted as entertaining as Chopin, as dramatic as Wagner. If polyphonic music were always played as this great work was yesterday, the public would realize that music in which several melodies are fugally intertwined is grander than music which has only one melody. The clearness with which the pianist brought out the complicated web of these melodies was startling; it was like looking at the finest lace under a magnifying glass. But even that was not the most remarkable thing about his interpretation; what made it so deeply impressive, so thrilling, almost beyond comparison, was the elemental power that animated the young pianist. A cathedral organ can not produce a more stupendous volume of tone, or a complete operatic *ensemble* a more dramatic effect than young Hofmann did with this Bach Prelude and Fugue. It was a performance to be remembered a life-time."

The Mail and Express also recognizes the "elemental power" spoken of above:

"Josef Hofmann, by his performance of the Rubinstein concerto, proved himself one of the best pianists that America has yet heard. The first twenty bars of the piano part of the extremely difficult Rubinstein work demonstrated young Hofmann's technical mastery over his instrument. The second movement showed his deep appreciation of the beautiful in what he played. The third movement simply dazzled the audience. The young pianist has a temperament that becomes a perfect whirlwind on occasion. He seems to feel with the intensity and depth of a grown man whom life has taught the meaning of things. He expresses what he feels with a variety of tone color and a facility and power of execution that are almost marvelous. The Rubinstein concerto quite carried one away. The flawless technical perfection of his execution left him free to set forth the ideas in the composition, and he showed that he recognized the ideas and their relation to one another in convincing fashion."

The Tribune sees in Hofmann "a pianoforte-player of the very first rank," but thinks him still undeveloped "in the matter of emotional depth, of conception of the poetical contents of the music which he plays," and "therefore he must be set down as more pianist than musician."

ART, GENIUS, AND MORALITY.

THE question of idealism versus impressionism in art, discussed by Tolstoï with reference to fiction and literature, is canvassed in relation to painting by the American novelist and art critic F. Marion Crawford in a series of lectures on early Italian art and artists. He seeks to solve modern problems by examining the beginnings of Italian art and the ideas and inspiration of the first painters. In an article in *Book Reviews*, the Macmillan monthly, extracts from these lectures are published.

Art, Mr. Crawford notes, is not dependent on genius alone; it is also the result of developing manual skill to the highest degree.

Art grew out of handicraft. Many of the earliest Italian painters were goldsmiths, goldsmithing having been the highest of the crafts. As to the philosophy of their art, Mr. Crawford says:

"It is very hard to get at an idea of what men thought about art in those times. Perhaps it would be near the truth to say that it was looked upon as a universal means of expression. What strikes one most in the great pictures of that time is their earnestness, not in the sense of religious faith but in the determination to do nothing without a perfectly clear and definite meaning, which any cultivated person could understand, and at which even a child might guess. Nothing was done for effect, nothing was done merely for beauty's sake. It was as if the idea of usefulness, risen with art from the hand-crafts, underlay the intentions of beauty, or of devotion, or of history which produced the picture. In those times, when the artist put in any accessory he

Copyright 1897, by B. T. Falk, New York.

F. MARION CRAWFORD.

asked himself: 'Does it mean anything?' whereas most painters of to-day, in the same case, ask themselves: 'Will it look well?' The difference between the two points of view is the difference between jesting and being in earnest, between an art that compares itself with an ideal feature, and the art of to-day that measures itself with an ideal past.

"The great painters of the Renaissance appealed to men and to men's selves, whereas the great painters of to-day appeal chiefly to men's eyes and to that much of men which can be stirred through the eye only.

"It was not that those artists were religious enthusiasts, moved by a spiritual faith such as that which inspired Fra Angelico and one or two others. Few of them were religious men; several of them, like Perugino, were atheists. It was not, I think, because they looked upon art itself as a very sacred matter, not to be jested with, since they used their art against their enemies for purposes of revenge and ridicule. It was rather because every one was in earnest then, and was forced to be by the nature of the times; whereas people now are only relatively in earnest, and stake their money only where men once staked their lives. That was one reason. Another may be that the greatest painters of those times were practically men of universal genius and were always men of vast reading and cultivation, the equals and often the superiors of the learned in all other branches of science, liter-

ature, and art. They were not only great painters, but great men and great thinkers, and far above doing anything solely 'for effect.'"

Art is a product of civilization, but as "civilization has nothing to do with morality," art need not be moral. What made the Italian artists great was their love of beauty and of nature, and their understanding of the relation between nature and beauty. Elaborating this idea, Mr. Crawford says:

"The early Christians were looked upon as a very uncivilized people by the Romans of their time, and the meanest descendants of the Greeks secretly called the Romans themselves barbarians. In point of civilization and what we call cultivation, Alcibiades was immeasurably superior to St. Paul, St. Bernard, or Abraham Lincoln, tho Alcibiades had no morality to speak of and not much conscience. Moreover, it is a fact that great reformers of morals have often been great enemies of art and destroyers of the beautiful. Fra Bartolommeo, who is thought by many to have equaled Raphael in the latter's early days, became a follower of Savonarola, burned all his wonderful drawings and studies, and shut himself up in a monastery to lead a religious life; and tho he yielded, after several years, to the command of his superiors, and began painting again, he confined himself altogether to devotional subjects as long as he lived, and fell far behind Raphael, who was certainly not an exemplary character, even in those days."

It was not immorality which ended the great artistic cycle of Italy, but the hampering of individuality, the degeneration of the love of beauty into love of effect, and the exhaustion of material. Genius requires certain conditions, and they are not the conditions demanded by the general welfare. The Italian artists were the product of a period in which all the ideas of mankind tended in a direction opposite to that taken by modern theories and practices. The condition under which art flourished was that "most favorable to genius," because "everything except genius and brute strength had been reduced to slavery in the social scale." Mr. Crawford's philosophy of art is thus seen to be diametrically opposed to that of Tolstoi, who holds that there is no art without morality.

HOWELLS AS A SOCIALIST.

WILLIAM DEAN HOWELLS is warmly hailed as a brother Socialist by the editor of *The American Fabian* (New York, February), who has this to say of the services that Mr. Howells has rendered to the Socialist movement:

"He has made his art the instrument of a great purpose. His 'Annie Kilburn'; his 'A Hazard of New Fortunes'; his 'The World of Chance,' wherein the alleged 'laws of business' are considered to be merely accidental and undeterminable sequences; his 'A Traveler from Altruria,' the most definite and comprehensive expression of his social ideals; and his 'Letters of an Altrurian Traveler,' describing from the view-point of a Socialist the characteristics of the plutocratic city of New York, have set many thousands of minds forward on the right path.

"A realist in fiction, he has not, like one branch of the school of realism, descended to the depicting of the darker and more vicious attributes of certain abnormal types of humankind, nor, like another branch of that school, painted merely the superficial emotions and activities of better types; he has pictured for us our own time, the struggle of mankind one against another and against all others, in the fierce battle for bread; he has urged the obligation of brotherhood upon all of us, and has shown us the goal of a practicable, attainable Utopia. At the head of American *litterateurs*, he has not temporized with, nor glossed over, nor praised the false sentiments and beliefs which pass current for wisdom and morality among the selfish and unthinking, tho he well may have known that acquiescence therein would be to his material advantage; he has, on the contrary, used his tremendous power toward the shattering of these entrenched falsities, and has striven to awaken in his readers the spirit of the new ideals. Particular abuses were sought to be corrected by Dickens, Thackeray, and George Eliot. But the social purpose of these

writers is far below the splendid aim of Howells, who attacks the whole economic framework of modern society."

Concerning Mr. Howells's conversion to Socialistic views and the degree to which he now holds them, the editor of *The Fabian* gives the following account:

"It was ten years ago," said Mr. Howells the other day, "that I first became interested in the creed of Socialism. I was in Buffalo when Laurence Gronlund lectured there before the Fort-nightly Club. Through this address I was led to read his book, "The Cooperative Commonwealth," and Kirkup's article in the *Encyclopedia Britannica*. Afterward I read the "Fabian Essays"; I was greatly influenced also by a number of William Morris's tracts. The greatest influence, however, came to me through reading Tolstoï. Both as an artist and as a moralist I must acknowledge my deep indebtedness to him."

"But you do not recognize a close affinity between Tolstoï's doctrine and that of modern Socialism?" was asked. "For instance, in "A Traveler from Altruria," you deny the right of a man to do wrong to others with what is his own, and would use repression to prevent it."

"Tolstoï's influence is on the moral side," he replied. "I recognize the impracticability of much of his ethics. Yet he has the logic of the situation. As has been said of another, "he is logical, but not reasonable." The idea of force is repellent to me. I would not use it when it can be avoided. The extreme to which Tolstoï would carry non-resistance to violence, I can not, of course, share in. Yet there have been, and are, cases of those who, either as individuals or sects, have held to non-resistance and have not been exterminated. Think of the persecution of the Quakers. Yet, despite it, they have thrived."

"True, but should not one recognize that, temporary persecutions in the earlier days excepted, the Quakers have always been protected by force? The individual Quaker living in England or America is protected from invasion of his rights by the whole force, civil and military, of the government under which he lives. Supposing a community of Quakers were placed in a neutral strip of ground between three powerful nations hungry for their expropriation. What would become of them?"

"Oh, yes, their case would be different. They would doubtless lose their independence (which they might not mind), and probably also they would be cruelly exploited. As I said, the idea of force and compulsory obedience is repellent to me; still, the weak must be protected and justice to all be assured. It may be said that with so much existent use of force—cruel, extra-legal, and ill-regulated—it becomes necessary to oppose it with a beneficent, altruistic, corrective force."

"What are the prospects for Socialism in America?" was asked.

"As to that, who can say? One sees the movement advancing all about him, and yet it may be years before its ascendancy. On the other hand, it may be but a short time. A slight episode may change history. A turn here or a turn there, and we may find our nation headlong on the road to the ideal commonwealth."

A FRENCH DISCOVERY OF SIDNEY LANIER.

UNDER the title "A Poet Musician," in the *Revue des Deux Mondes* (January 15), M. Th. Bentzon (Mme. Blanc) introduces Sidney Lanier to the Parisian public, and, through Paris, as a matter of course, to Europe.

"There are two geniuses," she writes, "who hover over the charming city of Baltimore, slumbering all rosy red beneath what is almost a Southern sun: the one more celebrated among foreigners than in his own country, the other almost absolutely unknown in Europe. Their names: Edgar Allan Poe and Sidney Lanier, the Ahriman and the Ormuzd of the place; the demon of perversity and the angel of light; the former carried away by morbid passions that conducted him to an ignominious end, the latter faithful to the purest ideal in his life as in his work; both marked by fate for the victims of a frightful poverty; both doomed to die young, at almost the same age, after having long suffered from a hopeless malady. In different degrees, with their

contrasts and analogies, these two poets are the glory of the South, which can not boast of a literature so rich as the North."

It was some years ago, in New Orleans, during a visit to this country, Mme. Blanc informs us, that she first made the acquaintance of Sidney Lanier. She was induced by an admirer of the poet to read the "Hymns of the Marshes." The book made an extraordinary impression upon her. She had recently traveled through the region that had been Lanier's inspiration, and it taught her to appreciate and understand more truly those immense marshes open to all the influences of the sky and ocean, and the verdurous glories of the gigantic oaks, festooned with disheveled moss, that bordered them. "In my astonishment and admiration," she writes, "the poet and the enchanting nature he de-

SIDNEY LANIER.

From Sidney Lanier's Poems, courtesy of Charles Scribner's Sons.

scribes became so blended in my mind that I could scarcely distinguish the one from the other."

On returning to Europe, persuaded that only a poet should be the sponsor of Sidney Lanier, she made known her discovery to "his brothers, the Symbolists," hoping so to awaken their sympathy and curiosity that they would be induced to write his biography. These gentlemen, however, remained indifferent; and finding that none seemed inclined to undertake the task, she accepted it as her own, and, returning to America, went to Baltimore, the city of Lanier's adoption, that she might have every opportunity of studying the author and his works to the best advantage.

Mme. Blanc tells the sad story of Lanier's life with simplicity and pathos, and pays more than one splendid tribute to his exalted character. For instance:

"To pronounce a eulogy upon poetry is indirectly to speak of Sidney Lanier, for, whatever may be thought of his work, he was *par excellence* a poet, in the superhuman acceptation of that ideal term; that is to say, not merely a skilful chiseler of rimes, but an exceptional being, penetrated with the worship of the beautiful, whose every act was an utterance of the music of his soul. . . . Never was a nobler song wafted to heaven than the life of Lanier: it showed, a rare example at the present day, the combat of an invincible will, sovereign, sure of itself, against the most terrible obstacles, poverty, sickness, death, all held

in check by a superior power that yielded not until at God's command."

The critic is equally generous in her appreciation of Lanier's genius. In the delicate and impassioned love of nature, and in the exquisite taste with which he clothed his thoughts in the most choice and harmonious words, Lanier is declared the rival of Wordsworth, tho it would be a manifest exaggeration to compare him with Tennyson or Keats. Lanier's communion with nature is his own, unlike that either of Wordsworth or Tennyson or Keats; and it is precisely here that he strikes a new note. His intimate, conscious, heartfelt brotherhood with all nature's impersonal forms—there is nothing that is quite like it in the whole range of literature. Wounded and unappreciated in the godless, trade-racked world of man, he turned to the great mother, and was healed and comforted. The trees were his brothers, the sun his friend; the marshes, the ocean, the dawn, confided to him their most intimate secrets. He reposed upon nature's breast, and the Eternal Spirit by which she is animated bended over him in divine intercourse. It is this intense, passionate pantheism of Lanier, not vague and mystical, "but solidly doubled by individualism," that constitutes his originality—this, and his insistent claim that the highest art can exist only when it has a firm and solid moral foundation.

It goes without saying that the French critic is not in close sympathy with this theory of Lanier's, which is in contradiction to the accepted traditions and beliefs of modern France. After discussing that charming little poem, "The Chattahoochee," she adds:

"Here the adepts of art for art's sake will cry out, I suppose, What, morality even in music! And it must be acknowledged that his desire to render art elevating and inspiring is one of Lanier's faults. This *all-beauty-lover* sees the good, *par excellence*, in the beautiful; and can not help singing it. He has always maintained that a moral aim does not injure the esthetic value of a work of art; that art should be allied to a lofty ethical system; and that far from being in opposition, they would concur in leading to the same end. He even adds that when there is a struggle between the two kinds of beauty, moral loveliness ought absolutely to assert its supremacy. . . . Whatever may be thought of this view, it is at least original; the contrary having been so often repeated, with or without conviction."

Sidney Lanier was not a poet merely, but a critic as well, a musician also, and an ardent student of science. His biographer does justice to every aspect of his genius, dwelling especially upon the high order of critical ability that he displayed in his lectures at the Johns Hopkins University. "It is marvelous," she writes, "that a poet so ready to be caught up and absorbed in a rapt communion with nature should be at the same time a critic so fine and penetrating."

With the poet's style she was fascinated from the first, and she translates many of his favorite poems with a skill that can not be too highly commended. She calls Lanier a precursor and leader of the French Symbolists:

"To translate verses is always very nearly impossible, but it is almost a profanation to touch these, which are really a series of melodies, suggestive, delicate, exquisitely colored melodies, tho with certain mannerisms that should forbid Sidney Lanier being compared with Beethoven, as many have compared him. He is, nevertheless, a great virtuoso, and those seekers of novelty who have endeavored after him to awaken musical emotions ought to recognize the superiority of one who was the most astonishing flute-player of his day. His poems are naturally saturated with melody, and it is this that distinguishes him from his *confrères* who make a great effort to introduce the methods of music into poetry. . . ."

"M. Stephane Mallarmé certainly had a precursor in America, and also Verlaine, and all those who write in verse symphonies, variations, scales, and romances without words. Sidney Lanier was one of the first creators of that art of rhythms and syllables which is occupied with both arts at once, and with him it is al-

ways music that dominates. He recognized this himself, and referred to it frequently: 'Whatever gift I have is the gift of music, poetry being for me a mere tangent through which I would occasionally escape from myself. I played upon several instruments before being able to write a legible hand; and since then, what is most profound in my life has ever been filled by music.'"

Mme. Blanc speaks as follows of Lanier's famous poem, "Sunrise," the last that he wrote:

"The inspiration is unequal, no doubt, disconnected variations on a floating theme; but what breadth, and sometimes, often indeed, what precision in the images! How we recognize the attentive and scrupulous observer of nature! Let me add that the thought of this symbolist, altho expressed in English, is never unintelligible for French readers, as so often is that of his brothers of France. And what a bold flight to the heights which most of them never ascend!—without speaking of that which can not be rendered, the intrinsic beauty of words, which the most skilful polishers of jewels of this kind—and we have among us those of the first order—might well envy him."—*Translated for THE LITERARY DIGEST.*

FITZGERALD'S STORIES OF FAMOUS SONGS.

(*Second Article.*)

The story of "Kathleen Mavourneen" includes a pathetic recital of the picturesque vicissitudes and ill luck that marked the career of its composer. The words were written by Mrs. Crawford, an Irish lady, contemporary with Mrs. Hemans and Sheridan Knowles. The very beautiful and famous melody was composed by Frederick Nicholls Crouch, F.R.S., who, at nine years old, played bass at the Royal Coburg Theater, and afterward played a violoncello solo before Rossini. He was appointed a "gentleman" in Queen Adelaide's band and became principal violoncellist at Drury Lane Theater, where he wrote songs for Anna Tree and Mme. Malibran. He parted with the manuscript of "Kathleen Mavourneen" to a London publisher for £10. It is but a few years since the copyright was sold for £109. "Ah, where was the spell that once hung on its numbers?" Crouch was at one time musical reviewer on *The Metropolitan Magazine*, edited by Captain Marryat, the famous author of "Peter Simple," and here he worked in company with Dickens, Mrs. Crawford, the Countess of Blessington, Douglas Jerrold, Thackeray, and Poole. He left England for America in 1849, and was for a time associated with Max Maretzek; he sang in church choirs, taught and lectured, at first in New York, and afterward in Washington and Richmond. When the war broke out, he promptly enlisted in the Confederate army, relinquishing an income of \$4,000 for the private's twelve dollars a month, "which he never got." Until the surrender of Lee, Crouch was always at his post, never "on leave" nor on the sick list, obstinately refusing a furlough:

"From the last battle-field he made his way, with three broken ribs and his right hand badly smashed, to Buckingham Court-House. Here he entered into service as a gardener and farm hand—an occupation he followed until the hostilities of the terrible civil struggle died down. Then he went to Richmond, and ultimately to Baltimore, where, at the age of seventy-five, he found his home, books, manuscripts, reduced to ashes."

In one of his later letters, Crouch writes: "I went to hear my 'Green and Gold' played by a military orchestra yesterday. I am to conduct it on Monday night, and also to sing, at eighty-nine, 'Kathleen Mavourneen,' in public."

A boy named James Marion Roche, born at New Ross, Kilkenny, grew up with the music of "Kathleen Mavourneen" forever on his lips:

"He went to America, joined the navy, and fought, all unconsciously, against the author of his favorite song. In 1883 he visited Baltimore, and learned accidentally that Frederick Nicholls Crouch resided there, finding it a hard task to make both ends meet. Roche's love of 'Kathleen Mavourneen' was as great as ever, and his one desire was to aid its composer. To attain this

end he, with rare delicacy and tact, persuaded the old gentleman to adopt him as a son. As James Roche Crouch he lived in Florida, and nobly did what he could to make life a little easier for his 'father.'"

Writing of "The Last Rose of Summer," Fitzgerald argues that, wherever Moore got the melody, it is certain that he could not have known it in its original form, as played by the traveling bards and harpers of Ireland; for he has considerably altered the character of the music, and has not improved upon even the "Groves of Blarney" version as a national melody. "Altho the composer and author are unknown, the title of the tune may be ascribed to about 1660; so that, from a musical point of view, Flotow was well within the calendar in using it for his 'Martha,' as the basis of the well-known air existed long prior to the reign of Queen Anne."

Moore called the tune "The Groves of Blarney," evidently not knowing its origin, for that delicious *morceau* of Irish satirical burlesque was written by Richard Alfred Milliken about 1796—a chaffing ballad that everybody in London sang or quoted. Lockhart attributed the clever squib to "the poetical Dean of Cork," and Lord Brougham mentioned it in one of his great speeches in Parliament.

Mr. Fitzgerald is by no means disposed to waste panegyrics upon Moore, as a modern Irish bard:

"Lovers of Ireland and its national songs and music have always regretted that Thomas Moore, in undertaking to rescue the Irish melodies, did not preserve the spirit and nature of the country whence they sprang in the lyrics that he fitted and dove-tailed to them. For the chief characteristic of Moore's Irish melodies, that is to say, the lyrics, is their lack of Irish characteristics. To be candid, tho here and there an Irish town, or vale, or waterfall, or lake is mentioned, all the Irish songs are absolutely English in form, meter, and sentiment. Erin comes in nowhere; and Hibernia is only scantily and half shamefully referred to as a sort of apology for the music which is so essentially Irish."

That touching Irish song, "The Exile of Erin," was written by a Scotchman, Thomas Campbell, to whom the British navy is indebted for "the finest sea-song ever written," "Ye Mariners of England," which shares a warm place in the heart of the British tar along with Cherry's "The Bay of Biscay" and Dibdin's "Tom Bowling."

Edward Fitz-Ball's famous song, "My Pretty Jane," so intimately associated with the names of Alexander Lee and Sims Reeves, was at first tossed by Sir Henry Bishop into his wastebasket; it was rescued by Fitz-Ball and the manager of Vauxhall Gardens, and has been described as "one of the most profitable of popular songs."

That delightful ballad, "Sally in Our Alley," was written and composed by an erratic genius, Henry Carey, whose granddaughter was the mother of Edmund Kean; Carey is said to have been a natural son of George Savile, Marquis of Halifax, and the evidence seems conclusive that he was the author of "God Save the King."

In musical history the year 1740 is remarkable for having produced "Rule Britannia," by James Thompson, "The Roast Beef of Old England," by Fielding, and "God Save the King," by Carey. That veteran song-writer, Henry Russell, composed and sang the famous "Cheer, Boys, Cheer," and introduced it to an unbounded popularity. He was paid £3 for the copyright; when, afterward, he asked the publishers how it was going, he was told that nineteen presses could not print it fast enough; then they sent him £10, "conscience money." "Cheer, Boys, Cheer" was written by Dr. Mackay, who also wrote for Russell "There's a Good Time Coming," as, later, Epes Sargent wrote for him that rollicking "chantey," "A Life on the Ocean Wave."

"Old Hundred" was originally composed to the 134th Psalm in the Geneva Psalter, but was afterward (about 1562) used to the

100th Psalm, by the English Protestants. The name of the composer has never been satisfactorily ascertained. On the word of Handel, it was ascribed to Luther:

"Berlioz, after hearing it performed at St. Paul's Cathedral by some six thousand charity children, wrote: 'It would be useless to attempt to give an idea of such a musical effect. It was more powerful, more beautiful, than all the exultant vocal masses you ever heard, in the same proportion that St. Paul is larger than a village church, and even a hundred times more than that. I may add that this choral, of long notes and of noble character, is sustained by superb harmony, which the organ inundated, without submerging it.' For some time it was known as the 'Savoy.'"

Who will ever discover the origin of "Where Are You Going, My Pretty Maid?" It is certain, says Mr. Fitzgerald, that it dates back to a period long anterior to the times when the art of music was generally cultivated, except orally; our author invokes a blessing upon the singer who first "took down" so charming a gem of old English minstrelsy.

Very pleasant is the chat we find here about Gay's "Black-eyed Susan," and Hood's "Song of the Shirt," and Sullivan's "The Lost Chord"—"perhaps the most successful song of modern times." Mme. Poitrine, the wife of a Picardy farmer, used to sing "Malbrouck s'en va-t-en guerre" to Marie Antoinette's baby; now we know the song as "We Won't Go Home till Morning."

In taking leave of the dear old songs, it is hard to part without tossing a tribute of fond remembrance and association to the Welsh "Men of Harlech," dating from 1468, and still sung "with a rouse" in the public schools; and the Scottish "Bonnie Dundee," "John Anderson, My Jo," "Jessie, the Flower o' Dunblane," and "There's Nae Luck about the House"; "Annie Laurie," "Comin' Through the Rye," and "Bonnie Doon"; and the Irish "St. Patrick's Day," "The Girl I Left Behind Me," "The Cruiskeen Lawn," "The Night Before Larry Was Stretched," "The Groves of Blarney," "Rory O'Moore," "The Low-Backed Car," and "The Pretty Girl Milking Her Cow"—"a very ancient and divinely plaintive melody"; and the American "Ben Bolt," "The Old Oaken Bucket," "Uncle Ned," "Swanee River," "My Old Kentucky Home," "Wait for the Wagon," and "Woodman, Spare That Tree":

"Haydn declares: 'It is the air which is *the charm* of music, and it is that which is most difficult to produce; patience and study are sufficient for the composition of agreeable sonnets, but the invention of a fine melody is the work of genius.' And yet some of the world's finest melodies are the production of the unknown and, in many cases, entirely simple and humble folk devoid of musical training."

NOTES.

MME. SARAH BERNHARDT, who has been ill in Paris, is now rapidly improving and is already making preparations for her next theatrical venture. This, it is announced, will be a four-act comedy, entitled "L'Attentat," from the pen of M. Romain Coolus.

ALFRED AUSTIN'S retirement from *The Standard*, London, has been made the subject of several misleading statements. The real facts are extremely simple. For reasons of health, and because he wishes to pass his winters in Italy, Mr. Austin some weeks ago expressed the desire to take his pension, and to be placed on the "retired list" of *The Standard*. The request was received with the greatest regret, but as Mr. Austin has been writing leading articles for *The Standard* for more than thirty years, there could of course be no hesitation in acceding to it.

MADAME MELBA, in a conversation recently, gave an interesting account of her first public appearance. "I was quite a young girl in Australia," she said, "when, notwithstanding the persistent discouragement of my father, who was averse to the idea of a singer's career for me, I engaged a hall, and sent round a notice to all my friends, saying that I proposed to give an entertainment which I hoped they would patronize. However, unfortunately for me, somebody mentioned the little scheme to my father, and he, furious at my clandestine enterprise, begged every one of his acquaintances to uphold his parental authority by ignoring the performance. But even then I wasn't disheartened, and when the day came I drove off to the hall, and at the hour announced for the commencement of my concert stepped on to the platform—to find myself face to face with an audience of two. And nobody else came."

SCIENCE AND INVENTION.

NATURAL GAS IN THE PAST, THE PRESENT,
AND THE FUTURE.

IN an article on "Natural Gas in the United States," Hosea Webster tells us of the rise and decline of this substance as a source of heat and light, and predicts that even after the supply has given out its present users will never go back to coal, but will use artificial fuel-gas in its place. Probably no useful substance was ever so shockingly wasted as natural gas. Says Mr. Webster (in *Cassier's Magazine*, February):

"When the industrial history of the last quarter of the present century is written, one of the most interesting chapters will be on the discovery and development of the few large accumulations of natural gas in the United States and Canada, and the almost criminal waste which, in spite of repeated warnings, continues to-day, and apparently will continue until, within probably a few years, these reservoirs of energy will be exhausted, and communities now hustling with energy and full of the hum of industry will be silent and perhaps deserted.

"The accumulation of natural gas is analogous to that of the water supplying artesian wells, but in an inverse relation. Every richly productive gas pool is a dome or inverted trough, of porous or coarse-grained sand or limestone geologically called an 'anticline,' and covered always by deposit or stratum of impervious shale or similar formation. These anticlinals vary in area from a few square miles in most cases to over five thousand square miles in the case of the great Cincinnati arch which covers the Indiana and Ohio gas belts in the United States. The thickness of the strata varies in like proportion. The gas-reservoirs are in no sense cavernous, but merely more or less porous rock, impregnated with gas, often under enormous pressures, the more porous rocks when pierced by the drill being exhausted much more quickly than those of closer texture.

"Many ingenious and interesting theories have been advanced regarding the generation and origin of the gas and designed to account for the great pressures under which it is stored. The distribution and intimate relation of the carbon compounds all favor the theory of their generation by the decomposition of vegetable and animal organic matter under widely different variations and surroundings of temperature, pressure, and other forces and chemical influences, from the earliest developments of organic life to the present time. The gas is probably the product of slow primary decomposition, at low temperatures, of animal and vegetable organic matter contained in natural sediments. Its production may be seen in the shallow, undisturbed portions of fresh-water lakes.

"The deposits of oil and gas in the peculiar geological formations from which they are being drawn for commercial uses are due to the accidental disposition of the anticlinals and synclinals which act as reservoirs, and do not necessarily indicate the restriction of their generation to any particular geological periods."

The writer gives some striking statistics that show how great an industry the mere piping of this gas from well to consumer has become. Statistics from the reports of the United States Geological Survey show that in 1893 and 1894 alone two hundred and four companies, reporting from Ohio, Pennsylvania, and Indiana, laid 39,127,510 feet of all sizes of pipe. Leakages are always serious matters, requiring prompt attention. A leak in an underground main will destroy all vegetation within a radius of several yards, and, when unchecked, will, in some fields, form a deposit in the soil beneath the joint, which, when exposed to the air, will ignite spontaneously and can be put out often only with great difficulty. Some of the vicissitudes of gas transportation and some of its unexpected accidents are set forth in the accompanying paragraphs:

"Most of the companies lease from farmers in the gas belt the privilege of boring wells, paying usually an annual rental and furnishing, free of cost, such gas as is wanted for fuel, light, and for pumping, either by using the gas under pressure to drive the ordinary type of vertical or deep-well pump or by application of

a crude arrangement working the same as the well-known Pohlé air-lift. The distribution and service-pipes in the farming districts are seldom laid underground, except at road-crossings, and are usually one-half-inch or three-fourths-inch pipes, now running along the roadside, now hanging on the fences.

"An occasional small pile of stones, covering one of these pipes, shows where some tramp, having cracked a pipe or a joint, has built a cheerful fire which needs no replenishment and makes of the weary pilgrim a veritable fire-worshiper.

"The maintenance of the system of collecting and distributing mains, gathering the gas from wells scattered over several square miles and distributing it again to perhaps thousands of consumers in some city, thirty or forty miles away, requires the most careful and systematic attention and inspection. Each well has its individual idiosyncrasies, and no two are alike in volume of flow, pressure or presence or absence of water, oil or dust.

"An unrestricted flow from one well might, by raising the pressure in the receiving mains above that available from some other well, lessen or reverse the flow of that one, and frequent gagings are necessary to insure the most efficient service from the system."

Mr. Webster's account closes with the prediction that the days of natural gas will shortly be at an end, but he thinks that artificial fuel-gas will take its place. For six or seven years the decreasing pressure has forced nearly all the companies that supply large cities to put in pumping-plants for driving the gas through their pipes. The article ends with the following paragraphs:

"The rapid decrease of the supply of natural gas has forced the consideration of means of artificially producing a gas which can eventually take its place, or supply the greatly increased demand during severely cold weather, and so keep in use the extensive distributing pipes already installed. Such a gas must be a fixed gas, must readily mix with natural gas, and must be high in heat units and readily combustible.

"Most of those who have experienced the comfort and convenience of natural gas, both for domestic and industrial purposes, will, undoubtedly, gladly pay more for artificial substitutes rather than return to the use of coal, and the near future is likely to see a rapid development of methods of generating a high grade of fuel gas. The day is not far distant that will witness the establishment of enormous fuel-gas plants in the coal regions to utilize what are now becoming almost mountains of waste material. Huge compressors will force the gas through miles of mains to the distributing-pipe systems, and, coupled with the luxury of electric light, will come the cleanly, convenient, and no less luxurious use of fuel gas for all purposes."

ARE BRUNETTES STRONGER THAN
BLONDES?

THERE is a general impression that the powerful light-haired and blue-eyed type of man represents the acme of physical perfection. But Prof. William Z. Ripley, in the final article of his interesting series on "The Racial Geography of Europe" (*Appleton's Popular Science Monthly*), gives us good reason to believe that there is really more energy and staying power in the dark or brunette type. After noting that this darker type is found in larger proportion in the cities of Europe than in the rural districts, Professor Ripley goes on to say:

"It is not improbable that there is in brunetteness, in the dark hair and eye, some indication of vital superiority. If this were so, it would serve as a partial explanation for the social phenomenon which we have been at so much pains to describe. If in the same community there were a slight vital advantage in brunetteness, we should expect to find that type slowly aggregating in the cities; for it requires energy and courage, physical as well as mental, not only to break the ties of home and migrate, but also to maintain oneself afterward under the stress of urban life. Selection thus would be doubly operative. It would determine the character both of the urban immigrants and, to coin a phrase, of the urban *persistents* as well. The idea is worth developing a bit.

"Eminent authority stands sponsor for the theorem that pig-

mentation in the lower animals is an important factor in the great struggle for survival. One proof of this is that albinos in all species are apt to be defective in keenness of sense, thereby being placed at a great disadvantage in the competition for existence with their fellows. Pigmentation, especially in the organs of sense, seems to be essential to their full development. As a result, with the coincident disadvantage due to their conspicuous color, such albinos are ruthlessly weeded out by the processes of natural selection; their non-existence in a state of nature is noticeable. Darwin and others cite numerous examples of the defective senses of such non-pigmented animals. Thus, in Virginia, the white pigs of the colonists perished miserably by partaking of certain poisonous roots which the dark-colored hogs avoided by reason of keener sense discrimination. In Italy, the same exemption of black sheep from accidental poisoning, to which their white companions were subject, has been noted. Animals so far removed from one another as the horse and the rhinoceros are said to suffer from a defective sense of smell when they are of the albino type. It is a fact of common observation that white cats with blue eyes are quite often deaf.

"Other examples might be cited of similar import. They all tend to justify Alfred Russel Wallace's conclusion that pigmentation, if not absolutely necessary, at least conduces to acuteness of sense; and that where abundantly present it is often an index of vitality. This eminent naturalist even ventures to connect the aggressiveness of the male sex among the lower animals with its brilliancy of coloring.

"Applying these considerations to man, evidence is not entirely wanting to support De Candolle's (1887) thesis that 'pigmentation is an index of force.' Disease often produces a change in the direction of blondness, as Dr. Beddoe has observed; asserting, as he does, that this trait in general is due to a defect of secretion. The case of the negro, cited by Ogle, whose depigmentation was accompanied by a loss of the sense of smell, is a pertinent one. The phenomenon of light-haired childhood and of gray-haired senility points to the same conclusion. A million soldiers observed during our Civil War afforded data for Baxter's assertion that the brunette type, on the whole, opposed a greater resistance to disease, and offered more hope of recovery from injuries in the field. Dr. Beddoe finds in Bristol that the dark-haired children are more tenacious of life, and asserts a distinct superiority of the brunette type in the severe competitions induced by urban life. It is not for us to settle the matter here and now. The solution belongs to the physiologist. As statisticians it behooves us to note facts, leaving choice of explanations to others more competent to judge. It must be said in conclusion, however, that present tendencies certainly point in the direction of some relation between pigmentation and general physiological and mental vigor."

FOOD VALUE OF MUSHROOMS.

WE have been told a good deal recently about the great store of valuable food that is daily going to waste in the shape of edible mushrooms, and we have been urged to make more use than we do of these fungi. But it appears from some recent investigations that the nutritive value of the mushroom is not very high after all. The researches were made by Prof. L. B. Mendel, of Yale, and described by him at Ithaca, N. Y., at the tenth annual meeting of the American Physiological Society. Professor Mendel's investigations were made in pursuance of a plan inaugurated by a commission organized a year ago by the society, at the suggestion of Dr. Weir Mitchell, to investigate the physiological properties of the edible and poisonous fungi. This commission now consists of Professors Chittenden (Yale), chairman, Abel (Johns Hopkins), Pfaff (Harvard), and Bowditch (Harvard). *Science*, February 18, in a report of the meeting, describes Professor Mendel's experiments as follows:

"Chemical analyses were combined with experiments in artificial digestion, and special attention was given to the amount of available (digestible) proteid present. The latter was found to be not over two or three per cent. in fresh mushrooms, which shows that the prevailing idea of the great nutritive value of mushrooms is not yet justified. They may be valuable as dietetic

accessories, but they do not deserve the term 'vegetable beef-steak.' Their nitrogen is largely in the form of non-proteid bodies. The amount of fat, cholesterin, soluble carbohydrates, crude fiber, and inorganic substances contained in them corresponds in general with that found in other vegetable foods, such as peas, corn, and potatoes. Professor Chittenden reported the results of some preliminary experiments upon the toxicity of some species of poisonous mushrooms, made by Dr. W. S. Carter (University of Texas). In view of the great interest now shown in the edibility of mushrooms, the investigations of the commission, which are being actively continued, will prove of immediate practical value."

THE SAVING OF INFANT LIFE.

WE gave a few weeks ago a brief notice of Dr. Lion's incubators, and we are now able to present our readers with a more detailed account of the use and results of this method, by which the lives of so many feeble babes have been saved. The article from which we quote is taken from the editorial pages of

AN INCUBATOR AND ITS PRECIOUS CONTENTS.

The Health Magazine (New York, January). The impulse that led to the perfection of the incubator system is explained by the author to be the much-discussed decrease of population in France. He says:

"The vital statistics of France show an appalling mortality among infants. One hundred and fifty thousand premature births occur annually, ranging, according to place and condition, from 15 to 30 per cent. of the birth-rate, and this estimate does not comprise the entire number of weakly children, who are almost doomed to death from their birth. French specialists assert that of the number of infants born at a normal stage, over 50,000 are unendowed with sufficient vitality to live beyond the earliest days of babyhood.

"He who devises measures to overcome the decimating of the population from excessive infant mortality arising out of the ravages of disease, unfavorable environment, or existing social evils, is truly a benefactor of his race. The infant-incubator is the outgrowth of a loyal impulse on the part of Mr. Alexander Lion to save his nation from threatening depopulation. Ruminating

one day on the perilous condition of his country from a demographic point of view, it struck this patriotic and humane person that the holocaust among prematurely-born infants would be largely diminished if the helpless atoms could only be kept sufficiently warm. Accordingly, in 1891, he invented his *couveruse*, or modified incubator. The success attending this new departure in infant-life preservation has been surprising.

"Formerly, as the London *Lancet* remarks, no very serious efforts were made to prolong the ephemeral existence of these unwelcome little strangers. They were rather hopelessly allowed to pine away and die, under the impression that they could not possibly survive; but human life has of late become so valuable in France that no breathing waif need now be abandoned as an irretrievable derelict."

The pictures that accompany the article show the workings of the system in New York, where it has been very successful. Of the incubator itself the editor says:

"The Lion incubator is composed of a parallelopiped of metal, standing upon iron supports. It can be disinfected without de-

ENTRANCE TO THE LION INSTITUTE, NEW YORK CITY

terioration by means of a steam-stove under pressure. Ventilation is obtained by means of a tube of about three inches in diameter, with a chimney of the same size. A screw placed on the top indicates by its rotation the strength of the current of air. The front of the incubator is fitted with a glass window, through which the child may be seen, while on the left is another glass window, which enables the mother or nurse to attend to the wants of the infant and, if necessary, to remove it. The baby is laid in a metallic hammock, placed in the center of the incubator, thus enabling the warm air to circulate freely about it. A thermometer placed at the level of the infant's head regulates the working of the apparatus. The heating is effected by means of a siphon through which the hot water circulates and which communicates with a reservoir at its side. A special system of pipes allows the air to pass directly from the exterior into the apparatus. In these pipes the air is filtered before it enters the incubator. The temperature is automatically regulated by a very ingenious device, and the current of heat is increased or diminished as required and without variation.

"The incubators are placed gratuitously at the disposal of the poor, without distinction of creed or nationality, but those who can afford to pay are expected to do so. They are under the permanent supervision of competent doctors. Other hospitals in the different cities, such as Washington, Baltimore, Chicago, and elsewhere, will be opened, and in all probability a regular service

will be organized for the rearing of infants at the dwellings of the parents, so as to avoid as much as possible the separation of the mother from the child and to be able to make use of the *couveruse*, or incubator, immediately."

Some of the results of the work are as follows:

"A prematurely-born child, if exempt from hereditary disease, rarely dies in the Institute, provided it weighs not less than two and one-quarter pounds—that is, about one third of the normal standard—and provided, also, that its installation in the *couveruse* is accomplished with the least possible delay and exposure. At this stage of the untimely bud's frail existence a chill is almost certainly fatal, so the transfer from the lying-in bed can not take place too soon or be carried out too carefully.

"When one considers the astonishing results attained by the use of the incubators in foreign cities, in their valuable service to the cause of hygiene, the utility of establishing in every city an infant asylum or maternity with baby-incubators can not be doubted. A report made from the records of the Paris Institute shows that of 185 prematurely-born infants received, weighing from one and three-quarter pounds to six pounds six ounces, 133 left the institution healthy and in good condition, 48 died, and 4 were still under treatment and progressing favorably.

"Experience in Paris and the larger cities of the Old World has demonstrated that the annual death-rate of baby 'prematures' and 'weaklings' for three years prior to the discovery and introduction of the Lion incubators averaged 800 in every 1,000, and that during the three years of their employment the death-rate from this cause has fallen to 150 per 1,000 in each year. Therefore, Parisians now send all of this class of new-born babes to the local Lion Institute, which is sustained financially by municipal and private contributions. In both London and Paris philanthropic women have formed 'Ladies' Infant-Saving Associations,' and our American women will doubtless emulate their example."

SENSE OF FEELING IN A LOST LIMB.

WE refer a sensation at once to its source in the finger-tips or the ear or the nose, or wherever it may be, and so expert have we become in recognizing the source that we localize the sensation itself there, thinking of the sensation of touch as being in the skin of the finger instead of in the brain, where it actually is. Hence he who has lost a finger refers directly to the absent member any irritation of the nerve that formerly connected with it, and can scarcely believe that it is not in its old place. This phenomenon is familiar enough and many are the superstitions to which it has given rise, but it is only of late that it has received serious scientific study. A recent work on the subject is that of M. Abbatucci, published in Paris, which has called forth a paper by Professor Pitres, contributed to the *Annales Medico-Psychologiques* of that city. We quote below part of an abstract from *The National Druggist* (March). Says that paper:

"M. Pitres shows that the illusion of the existence of a limb (in place of one which had been amputated) may go so far as to cause many accidents. In the majority of cases the illusion is so perfect and vivacious that it constantly deceives the intelligence of the individual, so imperiously does it force itself upon him. Some of those who had lost a limb, questioned by M. Pitres, declared that they felt the amputated limb frequently more really and substantially than they did the one still attached to the body. Sometimes they get to believing more firmly upon the existence of the phantom limb than upon those members that remain, as in the case of a patient of Dr. S. Weir Mitchell, who declared: 'I state only the truth when I say that I am more conscious of the existence *in place* of the limb that I lost, than of the one that I saved.'

"Many of Professor Pitres's patients made analogous declarations. 'Parbleu!' said one, 'I know mighty well that I have no right leg—yet, when I try to analyze my sensations, I feel that leg there. Why, I feel the foot this minute more distinctly than I do the left one, which is there before my eyes. It (the phantom) hurts me, while the other does not. If I could not assure

myself by the touch and sight of the stump, nothing could convince me that the right leg was gone. I am having constantly to reason with myself in order to convince myself of the unrealness of my sensations.'

"When the illusion is as clear as in these cases, the person is constantly unconsciously inclined to attempt to use the phantom limb. Dr. Weir Mitchell tells of a horseman who had lost an arm, and thinking to take the reins in the amputated hand, dropped them on the neck of the horse, which was high-spirited, and leaping to one side, threw the rider, badly injuring him. Another party who had lost his right hand always tried to pick up his work with that hand, which invariably caused him a fit of exasperation.

"As might be imagined, such unfortunates are constantly meeting with accidents which might have easily been avoided but for the unconscious confidence had in the existence of the phantom limb. Dr. Pitres tells of a heavy man who had lost an arm, and who, in dressing one morning, lost his equilibrium, and, starting to fall, put out *the phantom arm* to steady himself, and, as a consequence, had a severe fall.

"We remember an old soldier who had lost half of both feet, and the injury had been partially repaired by a maker of artificial limbs. This man would sit for a half hour at a time rubbing the ends of his shoes, where his corns formerly were, and swearing at the pain the phantom corns were giving him. He would frequently declare, 'There's going to be a change of the weather—my corns are hurting me.' On being reminded that he had no corns, he would say, 'Never mind! I feel 'em all the same.'

"Now that the results of investigations have proven the realness of the sensations caused by these hallucinations, and the suffering produced by them, we may hope that science will discover some means of preventing them."

The Healing of a Wound.—The following experiments on cicatrization, or the formation of scars, performed by M. L. Ranvier, are described in the *Revue Scientifique* (Paris, February 19): "If we make in the eyeball of a rabbit two parallel cuts, one simple, taking up a third or a half of the thickness of the membrane, and the other penetrating to the interior, the latter will heal more quickly than the former. To observe with greater ease this paradoxical phenomenon, we must make the two incisions of nearly the same length and at the centre of the cornea, about a millimeter apart. The scars being so near, they may be observed at the same time under the microscope, . . . and compared. If no complication supervenes, toward the fifteenth day the scar of the deep cut has formed while that of the partial one is yet in process of formation. In the shallow cut the epithelium which originally filled it has been pushed up by a new formation of conjunctival tissue that occupies the deeper part of the wound, but this action has been only partial, and there remains a considerable part, that forms an evident channel. In the complete cut, on the other hand, the scar is, so to speak, linear, and the epithelium has been pushed up in such manner that it has nearly resumed its normal level. Such are the phenomena that are always seen in the two wounds. As they are not alike, it was evident that the mechanism of healing was different in the two cases. The new researches of M. Ranvier show that this is the case."—*Translated for THE LITERARY DIGEST.*

Origin of American Indians.—This ever interesting subject is considered by Major John W. Powell (formerly in charge of the Government's Geological Survey) in *The Forum* (February). The conclusions he reaches are negative. After an examination of the claim that the Indian tribes are of Oriental origin, based on the similarity of their myths and customs and arts, Major Powell concludes as follows:

"There is no evidence that the tribes of the Occident have ever commingled with the tribes of the Orient. Thus we are forced to conclude that the occupancy of America by mankind was anterior to the development of arts, industries, institutions, languages, and opinions; that the primordial occupancy of the continent antedates present geographical conditions, and points to a remote time, which can be discovered only by geological and biological

investigation. In the demotic characteristics of the American Indians, all that is common to tribes of the Orient is universal, all that distinguishes one group of tribes from another in America distinguishes them from all the other tribes of the world. Mankind was dispersed over the habitable earth anterior to the development of demotic characteristics."

The Measurement of Very High Temperatures.

—It is announced by *La Nature* (February 12), in its report of a recent session of the Paris Academy of Sciences, that M. Daniel Berthelot has obtained some interesting results with a device of his invention for measuring high temperatures by means of the interference of light. The details of the mechanism are not given. Says the report: "He [M. Berthelot] has fixed with precision and certainty the melting-points of metals, up to 1100° [2012° F.]. These temperatures serve in practise to obtain the scale of pyrometers [high-temperature thermometers] and furnish the means of obtaining a scientific evaluation of the temperatures attained in the manufacture of glass, porcelain, steel, etc. By means of his apparatus, M. Berthelot proves that the melting-point of silver is 962° [1763° F.] and that of gold 1064° [1947° F.]. The difference between the melting-points of the two metals is thus 102° [184° F.]. Now we knew by previous experiments that were made, not to obtain the melting-points of these two metals, but the difference of temperature of these two points, that this difference was between 100° and 105°. The exactitude of the results obtained by M. Berthelot's method is hence confirmed by these experiments."—*Translated for THE LITERARY DIGEST.*

Solidified Petroleum.—A process for utilizing the waste residue of petroleum by solidifying it for use as a fuel has been invented by Joseph Kohlendorfer, a German chemist. *Gluckauf* is quoted thus in the *Revue Scientifique* as giving a recipe for the preparation: Heat, without contact with the air, or in superheated steam, 10 parts of soda, 10 parts of fatty matter, as palm oil, and 80 parts of petroleum. Boil for an hour at a temperature below the boiling-point of petroleum. Large quantities of volatile oil are thus fixed by saponification, and when cool the mass is solid. There may also be mixed with it charcoal powder or dust. If less solid products are required the grease is replaced by resin or resinous acids. Thus are obtained products containing more than 90 per cent. of combustible material and less than 5 per cent. of fixed residue."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

THE New York Institute of Osteopathy has begun the publication of a monthly organ, entitled *The New York Osteopath*.

A FAMOUS FRENCH SURGEON DEAD.—Dr. Jules Emile Péan, a distinguished French surgeon, died in Paris on January 30. He was born in 1830, and was the son of a miller, but rose to the very top of his profession. *The British Medical Journal* says of him: "He was unquestionably the foremost operator in France, and one of the leading surgeons in Europe. His fees were often large, but so was his heart, and if he levied tribute from the rich, he was prodigal of his skill to the poor. He is said to have made a large fortune, and his wife was one of the leaders of Parisian society."

A CHINESE typewriter has been invented by the Rev. Mr. Sheffield, a Presbyterian missionary at Tung Chow. "It is said," says *The Industrial World*, "to be a very remarkable machine, and is exciting a great deal of comment over there. As near as can be understood from the description published in the Chinese papers, the characters, about 4,000 in number, are on the edges of wheels about one foot in diameter. It requires twenty or thirty wheels to carry all the letters, and the operator must strike two keys to make an impression. The first key turns the wheel and the second stops it at the letter wanted, which is brought down upon the paper by an ingenious device."

"FROM out of Prentice's red sandstone quarries at Houghton Point, Wis.," says *Industries and Iron*, "was wrought some time since a monolith measuring 115 feet high by 10 feet square at the base, and 4 feet square at the top. It was originally intended to send it to the Chicago Exposition as a Wisconsin exhibit. Engineering and financial reasons, however, intervened to prevent this, and the monolith has lain at the quarries ever since. A movement is now on foot to ship it by water to Milwaukee, and to set it up on the lake to mark the coming semicentennial of statehood. It is claimed that this stone is higher than any recorded single quarried stone in the world. The granite obelisk at Karnac, however, comes very near to it, being 108 feet high."

THE RELIGIOUS WORLD.

THAT SOUTHERN CHURCH WAR CLAIM.

THE opinions of the Methodist journals of the country, even in the North, are not all one way in regard to the claim which the Southern Methodist Publishing House at Nashville has made for damages inflicted upon its property during the war (see LITERARY DIGEST, March 5). In addition to the Richmond *Christian Advocate*, and the Nashville *Christian Advocate*, representing the Methodist Church South, we find *The Central Christian Advocate* (St. Louis), of the Methodist Church North, as outspoken in defense of the claim as *The Northwestern Christian Advocate* (quoted week before last) is against it. Says the editor of *The Central Christian Advocate*:

"We have had before us the documents in the case, and given them careful examination; it seems to us that both in law and in equity this claim is just, and that the bill should be passed by the Senate. The attitude of the individual members and ministers of the denomination involved, during the Civil War, does not now, it appears to us, enter into the case; no one doubts that while the Confederacy lasted the membership of the Methodist Episcopal Church South were loyal to the cause of the South; but it appears unreasonable to claim that this book concern (which was taken for government use, with the distinct agreement that private property used for public purposes should be paid for, and which the United States district court in due time declared could not be rightfully confiscated) was a 'disloyal' institution, and not entitled to compensation.

"The claim originally amounted to \$458,000, which was perhaps an inordinate sum; it has been, by compromise, reduced to \$288,000, and has been indorsed by some of the leading citizens of Nashville, among them a number of the staunchest Union men of the city; petitioners from twenty-five States have united in the request that the claim be settled; about a dozen of the bishops of our own denomination have joined their requests with others in furtherance of the movement. Is it not time to settle the bill and be done with it?"

"One of the plausible arguments against this measure is the plea that if it passes it will open the way for a multitude of similar claims. It may briefly suffice to say in reply to this suggestion that of all claims presented to Congress or to the Court of Claims on account of damages to ecclesiastical, educational, and charitable institutions occasioned by the Union armies in the South during the war (the one under discussion excepted) there remains unpaid only a little over half a million dollars. It is too late now for further claims to be exhumed; and it would seem that in view of all the circumstances of the case it would be a most gracious and equitable act were a Republican Congress and President to unite in recognizing the validity of this long-standing claim."

The Nashville *Christian Advocate* can understand how "an honest but prejudiced man" could take the position that no claims whatever of this kind should be paid (tho Order No. 100, approved by President Lincoln in 1863, exempted from the hostilities of war "the property belonging to churches," etc.); but the editor of *The Northwestern* has, it is charged, gone to the extent of "a disregard for exact facts." The items of the claim are given by the Nashville editor, who says that the charge that the amounts given are fraudulent is a direct assault upon the character of a number of gentleman of the highest reputation, among them Col. A. W. Wills (postmaster of Nashville under President Harrison), Judge E. H. East, Judge James Whitworth, Dr. W. H. Morgan (all three having been Union men), and Hon. George U. Tillman, recently Republican nominee for governor of Tennessee. All these investigated the claim of \$288,000 and either declared it "not excessive" or "a good deal less" than it should be. "Half a dozen times" committees of Congress have approved it. The Nashville paper concludes:

"It gives us the most pleasure to say that Dr. Edwards [editor

of the *Northwestern Christian Advocate*] does not present the great church to which he belongs. All the bishops of that church, with one or two exceptions, have shown the most fraternal spirit in the premises. To Bishop John Fletcher Hurst, in particular, a man who is worthy of his name, we owe a debt of gratitude that we can not easily cancel. Mr. Dolliver, the brilliant young Congressman from Iowa, whose great speech on the subject made so profound an impression, is the son of a Methodist minister. He is to be the fraternal delegate to our General Conference in May next, and we promise him in advance such a reception as will set every drop of blood in his veins to dancing. We are not informed as to whether General Grosvenor, of Ohio, is a Methodist or not; but he has acted throughout with such noteworthy courage and magnanimity that we can not forbear to mention his name."

IN WHAT THE EVOLUTION OF RELIGION CONSISTS.

IT is a good while since the theory of evolution was first applied to religion. The application has not been made without protest. Worthy persons have maintained and still maintain that to speak of the Christian religion, such as we know it, as the result of an evolution, is not far removed from blasphemy and not to be tolerated. Those who take this view are likely to be interested in a series of lectures delivered by Professor Tièle of the University of Leyden, which have just appeared in book form. The volume is highly praised for its acuteness, perspicuity, and learning by the *Revue des Religions* (Paris, December), which gives a minute analysis of the contents. The professor defends the evolution of religion in general and of Christianity in particular. On this point he says:

"When you say evolution, it is the same thing as saying development, which means simply growth. The flower is developed from the bud, the oak is developed from the acorn, the man from the infant. It is absurd to think of a religion falling from heaven in a solid block and destined to remain unchangeable all along the centuries. Christ showed us this when He uttered the parable of the grain of mustard-seed. By this was meant, not only that Christianity would spread over the earth, but that it would develop internally."

The arguments put forth in support of this proposition are too many and too long to be summarized here, but it requires less space to give what is said in answer to an important and interesting question, which is thus put and responded to:

"To prove the fact of an evolution is one thing, to determine the essence of such evolution is quite another. In what then does religious evolution essentially consist? Those who believe in the evolution of religion have given various answers to this question.

"For some, the progress of religion is the same thing as progress in morality; religion makes progress only in proportion as it becomes more ethical. Assuredly there is a near relationship between religion and morality. Nevertheless, they have two distinct spheres of action. It is true that all the principal religions have started with a moral movement. It is, however, illogical to confound the motor with the result of the movement. There have been other kinds of progress, for example, in science, in art, in philosophy, which have had great influence over religion, but religion is not identified with any of them.

"For others, religious progress consists in raising constantly what is spiritual in man above what is perceived by the senses. There is certainly in this point of view something worthy of serious consideration. This, however, can not be all the truth. We are not pure spirits. Perfect religion ought rather to end in harmonizing the senses and the spirit. To isolate from religion in itself all representative notions of the divine Being, all acts essentially religious and consequently every species of worship, would be equivalent, we very much fear, to bidding good-by to religion altogether.

"Still others think that religious progress consists in a constantly increasing domination of religion over entire humanity and of that which constitutes its life. It is easy to comprehend

that this absolute domination does not necessarily include the progress of religion itself. This theory is founded upon the idea that religion is a fixed and invariable quantity in which there is no evolution. There are religions which have extended enormously the area of their domination. It would be difficult to say that this extension has been favorable to the progress of humanity or even to the progress of religion. These impressive conquests have regularly ended in a traditional superstition, in an enslaving sacerdotalism, to the extinction of spirituality. Pure religion ought to liberate, not enslave.

"There are, besides, those who say that religious progress consists in a growing power to awaken religious emotions, and they who take this view try to fortify their theory by pointing out that since antiquity the importance of music in religious worship in comparison with other arts has been constantly increasing. Reflection will show that this means simply that there are a larger number of lovers of music in the world. The emotional power of religion is no greater to-day than it was in the soul of a Jewish psalmist or a pious Christian pilgrim of the Middle Ages.

"Let us try to find a more satisfactory solution.

"If we study carefully the phases and directions of religious evolution we find that invariably it starts with uniformity, and advances constantly to increasing difference. That was the case when man's religion lay in worship of the appearances of nature. The ethical religions, however, even when they have the same Bible, present differences more numerous and sharply defined. There are more differences between the various Christian sects than between Homer and the Vedas. Of all religions, Christianity is the most divided; and of the two great rival churches, Roman Catholic and Protestant, which share between them Western Europe and the New World, the one which we consider the most advanced is also the most divided. Religious evolution advances then from unity to plurality. Differentiation is essential to it.

"Observe that the human mind follows the same course in the other spheres of activity in which it displays itself: in science, in art, in social life. Primitively everything in these spheres of life is confounded and confused. Then each of these branches of the life of the mind constitutes for itself an independent field. Each is emancipated from religion, even as religion must refuse to identify itself with any one of them. For example, religion is emancipated from the state, after having for a long time leaned on the latter for support, or, rather, affirmed that without the state it could not live. The broken unity is reconstituted on a better basis when it is comprehended that religion, art, science, the state, are intended to render mutual services one to another, by each respecting the autonomy of the others. To unite them without subjecting one to any of the others, there is a principle which contains them all, the principle of the mind itself, which enjoys a complete life, only on condition of cultivating all the fields of activity which it was intended to cultivate. Those who, from different motives, regret the times when religion, or, rather, their religion, was sovereign over entire society and all the manifestations of public and private life, will end by recognizing that, if religion is debased when it is the slave of another power, it owes its liberty to something which is not itself.

"In what, then, consists essentially religious development? Why does not man remain satisfied with existing religious forms? To this question there can be but one answer. It is because man grows in religious knowledge."—*Translated for THE LITERARY DIGEST.*

Arraignment of the Epworth League.—The net gain of communicants in the Methodist Episcopal Church for 1897 is given as but 19,500—an unparalleled low figure. In casting about for the reason of this, *Zion's Herald* (Meth. Episc., Boston) fixes at least a considerable portion of the responsibility upon the Young People's Society of that denomination, known as the Epworth League. It says editorially (February 23):

"Some of the reasons that force us to this conclusion are:

"1. It is the era of the Epworth League in the church. The League has been given the right of way everywhere, and what it has stood for has very largely dominated the church. The international convention at Toronto last year filled the thought and life of the church as perhaps no other gathering of recent years has done. Is it unfair or unreasonable, therefore, to hold the

Epworth League in some measure responsible for the present condition of our Methodism and its fruit or lack thereof? If the year had been one of large spiritual ingathering, gladly would we have accredited the League with having large part in the result. Now that the reverse is so lamentably true, must we not with equal justice lay the actual consequences at its door?

"2. The work of the League, tho not so intended, has diverted the purpose of the church from its own historic and characteristic mission of soul-winning, and has dissipated its energies into other channels. While the motives of the League have been worthy, they have not been on that high plane of spiritual activity for which the church has always been distinguished.

"3. The separate Epworth-League meeting has drawn a line of demarcation between this organization and the church, and the multitudes have magnified the League above the church and made it a substitute for it. In many churches the League is only a social club, and therefore lacking in spiritual aspiration, grip, and power. The effect of the League upon thousands of churches has been to tone down its spiritual and revival power."

THE STUDENT VOLUNTEER CONVENTION.

ACCORDING to all reports, the third convention of the International Student Volunteer Movement at Cleveland, February 23-27, was a notable gathering in point of numbers, in the character and purpose of the delegates present, and in the spirit that pervaded the proceedings. There were present some 2,300 student delegates, 74 secretaries and representatives of foreign missionary boards, more than 100 presidents and professors of theological seminaries, several fraternal delegates from foreign countries, and more than 100 returned missionaries. Practically all the denominations were represented by the students and all the foreign missionary boards of the United States and Canada. Among those who addressed the convention were such well-known men as Rev. F. B. Meyer of London, ex-Governor Beaver of Pennsylvania, Bishop Dudley of Kentucky, President Charles Cuthbert Hall of Union Theological Seminary, Rev. F. E. Clark, D.D., Mr. John R. Mott, Mr. Robert E. Speer, and Bishop Ninde. Reports were presented showing that the movement has been a great success and has gathered into its ranks a large number of students in all parts of the civilized world. Some interesting facts are contained in the report presented at the convention by Secretary John R. Mott, of which the following is an extract:

"The purpose of the Student Volunteer Movement for foreign missions is to enlist students for foreign mission service, to help prepare them for their life-work, and to lay an equal burden of responsibility for the world's evangelization on students who are to remain at home. The field of the movement is the thousands of institutions of higher learning of the United States and Canada. It has on its rolls the names of about four thousand volunteers. Already over one thousand have sailed to mission-fields under the regular mission-boards. Over three thousand students are making a thorough study of missions in over two hundred colleges and seminaries.

"Students have been led to give \$40,000 a year to missions, and are seeking to stir up the churches and millions of members of Christian societies of young people to enlarge their giving, so that all the volunteers may be sent.

"The Volunteer Movement is in no sense a missionary board. It has never sent out a missionary. It is simply a recruiting agency. It does not usurp or encroach upon the functions of any missionary organization. A somewhat extended investigation on the foreign field shows that a very large proportion of the missionaries now at work were directly influenced to decide for foreign missions by this movement. All but two of the boards bear testimony that it has also improved the average quality of missionary applicants.

"We have the names of 1,173 volunteers who prior to the 1st of January had gone to the mission-field. They have gone out under forty-six missionary societies, and are distributed through fifty-three countries in all parts of the world."

Following are comments from some of the religious papers on

the Cleveland convention. *The Standard* (Baptist, Chicago) says:

"The spectacle of hundreds of eager, hopeful young men and women gathering in convention at Cleveland to consider the cause of foreign missions is one that should touch the heart of the church. Here is an army, enlisted for the war, trained or training in the best schools, ready to carry reinforcement to the weary regiments on distant fields. The call comes from abroad, 'Send us more men, more women, or we must give up. Send us more men, or we can not repair the gaps in our walls. Send us more men, or when the enemy weakens, we can not pursue. Send us more men, or we must turn our camps into hospitals.' Why do the volunteers stand on the home shores, looking anxiously across the waters to the land where they would be? Because the church has said 'Wait.' Because the church has taken her Lord's great commission and indorsed upon it 'Execution postponed for lack of funds. Under waiting orders. By order of commissary department.'"

A writer in *The Outlook* records some of his impressions as follows:

"A thoughtful and even critical witness might well be impressed, first, by the intense seriousness, the deep earnestness, of the convention, the absence of any sign of shallowness or inconsideration, the biblical, prayerful spirit apparent; next, by the apologetic value of it. The facts there conspicuous pulverize all the stuff printed about Christianity losing its hold, etc. Next, the reflex influence of this movement on the churches is obvious. Whether more or fewer volunteers sail—tho this is not in doubt—there will at any rate be a far stronger base of operations in a wider, warmer, and wiser interest of the churches and pastors, a better appreciation of Phillips Brooks's saying that foreign missions are the necessary fulfilment of the Christian life, a better comprehension of the cosmopolitanism of normal Christianity."

The Evangelical Messenger (Cleveland, Ohio) says of the conference:

"The long looked-for event has come and gone, and Cleveland has undoubtedly witnessed the most inspiring and pregnant student missionary gathering of history, and the last one of the kind in this century. After all that has been said, the people of Cleveland were not prepared for such a stupendous gathering. Nearly three thousand students from over three hundred institutions of learning on this continent gathered in one place, at one time, and with one accord, in the name of Christ, with the sole purpose of promoting the evangelization of the world in this generation, presents a spectacle too splendid to be forgotten, too big with possibility, too palpitant with inspiration to be without lasting effect. Facing these, on the platform, were several hundred missionary leaders and missionary workers from many lands, ready to pour out the wealth of their wisdom and experience and spiritual energy for the rousing, directing, and sifting of this eager throng of youthful Christians who are getting ready for the grandest campaign of spiritual conquest the world has ever seen."

PROGRESS OF THE INDIVIDUAL COMMUNION-CUP.

ABOUT a year ago the First Congregational Church, Woburn, Mass., appointed a committee to investigate the individual communion-cup idea. The chairman accumulated facts from nearly fifty Congregational churches which at the time were using the small cups. The results of his inquiries have been placed in the possession of *The Congregationalist*, and that journal, in turn, gives its readers a summary of the views obtained and the conclusions arrived at. Those responding to the invitation of the church at Woburn were located in all parts of the country, from New England to the Pacific, and they vary in size from the metropolitan church of over one thousand members to the village church of twenty-four. As to the general effect of the innovation in the churches, *The Congregationalist* reports:

"Many answers remark upon an increase of impressiveness, dignity, and solemnity; some announce an increase of attendance

at the service; a large number declare that nothing would induce a return to the old custom, while not one expresses a regret at the new order. The pastors remark: 'I was previously an ardent opponent to the individual cup, but since seeing it I am converted'; 'I am personally enthusiastic in my indorsement of the better and purer way'; 'the artificiality expected has never appeared'; 'the communicants now *commune*'; 'unqualified success'; 'there were objections previous to the first use, but not after'; 'the whole is decorous and quiet and requires no more, probably less, time than the old method; by all means adopt the new'; 'the movement was originated by a physician and we trusted him'; 'our sacramental occasions seem to have a deeper prayer current'; 'several of our members said of the first occasion we used them that it was the most solemn and impressive communion they ever witnessed'; 'it is a pleasure to me to recommend them'; 'our service was presented in memory of a beloved deacon, which may account for any lack of opposition; but we would not return to the old style'; 'I have an increasing belief that individual cups are exceedingly desirable'; 'I presented the matter to my people in such a way that they all saw the desirability'; 'growing in favor'; 'with the exception of a fractional minority all our people are agreed that the individual cups are from the standpoint of health, fitness, time for meditation and impressiveness of service, incomparably superior to the older system'; 'I strongly advise the change'; 'we are delighted'; 'the movement began with the people'; 'the method is so much neater'; 'adds greatly to the attendance'; 'we were the first in ——— to adopt this innovation, and several churches have since adopted it, some of them the strongest on our coast.'

"To our knowledge individual cups are used to-day in over seventy of our churches, nearly one third of them in Massachusetts, the others being in thirteen other States and one Territory."

IS THE SUNDAY-SCHOOL DECAYING?

MR. EDWARD W. BOK answers this question in the affirmative in an editorial article in the March number of *The Ladies' Home Journal*. Mr. Bok is very positive in his views on the matter, and his charges are strong and specific. He says that he has been a Sunday-school superintendent himself, and his conclusions are the result of long observation and close study of the subject. He opens his editorial with the following sentences:

"Even the most zealous advocates of the Sunday-school concede the fact that its strength is on the wane. Attendance is on the decrease, and those who do attend are lukewarm in their interest. It is a common experience with parents nowadays to have their boys and girls beg off from going. A careful study of over two hundred Sunday-schools reveals this condition in nearly every case, and inquiry among parents and Sunday-school workers only serves to corroborate the self-evident facts."

In the next paragraph he uses this language:

"Certainly no strong glasses are needed to convince any one that of all stupid, dull, and almost lifeless institutions the average Sunday-school of to-day stands preeminently at the head. Whatever spirit it had seems to have entirely left it, and if, as an institution, it rests to-day on embers instead of living coals, the fault is its own. It is leagues behind any other phase of the church in all that appertains to a live interest; it seems years removed from the progressive spirit of the outer world. Everything has passed and left it behind. And yet the Sunday-school is supposed to be an institution with special aims of application to the young, who, if they crave anything, demand freshness of interest and progress of idea to attract them."

Mr. Bok lays particular stress upon the superintendency of the Sunday-schools generally as a source of weakness and decay. Speaking of the typical superintendent, he asks: "Where in all Christendom will you find men who, as a rule, are more distinctly lacking in personality and magnetism?" He says that he knows of not less than twelve different men who are acting as superintendents of Sunday-schools none of whom "has even a suggestion of force; not a spark of personal magnetism, not a personal

possession which goes to draw children to him or to the school over which he presides." Mr. Bok then proceeds to specify some of the qualifications which he thinks a superintendent ought to have to be successful in such work. He ought to have the instincts of leadership; he ought to be a strong attractive personality; he ought to be resourceful, "fertile in mind and infinite in capacity"; he ought to have that manliness, that mastery of the situation, that strength of character which will command obedience, respect, and affection. In brief, the first and most essential feature of a successful Sunday-school, in Mr. Bok's opinion, is a strong and winning personality at the superintendent's desk.

From this Mr. Bok takes up the question of Sunday-school teachers, and on this point also he has some decided views to express. He favors women teachers rather than men, chiefly because the latter understand child nature better than men, are more tender, sympathetic, and generally more spiritual. But he insists that no woman who is occupied in business during the week should be asked or should allow herself to engage in Sunday-school work. "Sunday should be her day of rest." This point and others are touched upon in the following extract:

"The influence of a little higher order of intelligence is vitally necessary in our Sunday-school classes. We demand this of our teachers in our secular schools, and parents have a right to ask it of the Sunday-school. It is not enough that the Sunday-school teacher should be spiritual; she must have intelligence wherewith to apply her spirituality to the very best advantage, and by the most attractive methods. Young girls are to-day teachers who should be in classes. To bring home a spiritual lesson to the mind of a child is not play; it is an art, and calls for experience with children, a knowledge of human nature, an understanding of the very highest and deepest truths of life. Experience is authority. I have only admiration for the beautiful picture presented by a young girl teaching a class of Sunday-school children, and I yield to no one in an honest appreciation of the spirit and motive of such a duty. But when I consider the practical good accomplished, I can not say that I am quite so enthusiastic. Young girls in their formative years are not the ones to form the minds of our children. 'But,' says some one, 'you are narrowing things down very closely. Our teachers should not be men; they must not be business women, nor young girls lacking experience. Whom shall we get then?' Whom? My dear friend, there are scores, yes, hundreds of women in every community in this land who would be better off in every way if they had some special work to do; a specific object given them. Such women there are in plenty; warm-hearted, sympathetic, godly women whose hearts are filled with unexpended love. Women, perhaps, deprived or bereaved of children; others among that army whom man, in his peculiar blind search for happiness, has overlooked and left as unclaimed blessings; other women simply waiting and longing for some work to do. There are such; hundreds of them. But it is for the churches to draw them or find them and give them their life-work, and then properly support them in the Sunday-school room. There is no lack of material, tho the general cry is to the contrary. The real trouble is that not enough pains are taken, not enough actual hard work done, to find these women. The question for the church to ask itself is whether it is close enough to the people to know them. A gentlewoman is naturally timid; slow to come forward; her very nature rebels at thrusting herself to the fore, no matter what the impulse or the work in sight. But she never rebels at being discovered in the right way. And the gentlewoman—the woman of birth, of refinement, of fine mental attributes, who is in sympathy with the highest truths in life, who knows these truths from having lived them and can tell them to others—that is the type of woman the Sunday-school needs to-day. That is the only kind of a woman who can efficiently teach a child, and teach it the highest truths from the right standpoint. The point of view is just as important as the lesson; sometimes more so."

Mr. Bok concludes his observations by saying:

"There is such a thing as satisfying the heart and teaching the mind at the same time. And that is what the Sunday-school should do. It is its work, and a work which it is not doing. In-

stead, the average Sunday-school of to-day is a rebuke to intelligence and a discredit to the church."

The religious papers which have commented on Mr. Bok's article are inclined to think that he takes an extreme view, and that his strictures are too sweeping. Thus *The Central Presbyterian* (Richmond) says:

"It is not difficult to picture the ideal superintendent, and the ideal pastor; but it is not given to the churches to have perfect models either in ministers, superintendents, or teachers. Perfection of character and perfection of work belong alone to the perfect man Christ Jesus, who alone can look upon all His life and work on earth and say, 'It is finished.' The churches can only have imperfection in workers. A great number of earnest Christian men are serving Christ as superintendents of Sunday-schools, confessing imperfection, yet striving all the time to do their best work in the responsibilities of their office. We know a large number of them, and know them to be Christian men of intelligence, sympathy with the young, untiring effort, and spiritually minded. Many of our churches are greatly blessed by their faithful and fruitful service."

The Richmond *Christian Advocate* (Richmond, Va.) has the following view of the matter:

"To much that he [Mr. Bok] says of the miserable failure that is made in Sunday-school work in many communities, we must say amen with all the heartiness that we can summon over a matter so distressing. But when Mr. Bok affirms that the Sunday-school is decaying, he reckons without—well, without years. If he were older, he would have known better. He would have known that, so far from the Sunday-school dying out, it is just coming in. There was a time when the only qualification required of a Sunday-school teacher was a willingness, and not a very cheerful willingness either, to take a class. To-day some of the best brain in America and in the highest walks of life, including the Supreme Court Bench of the United States, is enlisted in the Sunday-school work. There was a time when the Sunday-school in many communities meant a Sunday hour devoted to teaching children to spell words of one syllable in Webster's Blueback and to read a little in the state almanac. To-day there are classes in our Sunday-schools engaged in a systematic study of the Bible after the same methods used in our modern universities. The Sunday-school may be half dead, as it appears to Mr. Bok, but we prefer to believe that it is half alive—with a promising outlook."

RELIGIOUS NOTES.

AN effort is being made in London to raise money to build a mission railway carriage for Joseph Rabinowitz, in which he may go from place to place in Russia preaching the word of God to the Jews.

ACCORDING to *The Lutheran World* the report of the missions to the lepers in India and the East shows that over two hundred lepers have been converted and baptized during the past year. "More than a thousand lepers in China, India, Burmah, Ceylon, and Japan are professing Christians."

"Now that so much archeological evidence is turning up in Egypt and Babylonia," observes *The Watchman*, of Boston, "it is well to remember that some of the writers who lived two or three thousand years before our era were just as great liars as any that modern times have produced. You must not believe all you read on a clay cylinder."

PRELIMINARY steps are being taken by the different denominations represented in Pittsburg, Allegheny and vicinity, toward effecting a federation of all the churches for the purpose of methodical and united action in Christian work and civic and moral reform. The general idea of the work proposed is similar to that outlined by the "Federation of Churches" in New York City.

AN antispiritualist society has just been formed in Ohio with the purpose of exposing the frauds that are constantly being perpetrated under the guise of spiritualistic phenomena. The Antispiritualist Association of America hopes to bring to its support a large number of people who would naturally be interested in putting a stop to the practise of gulling the public by alleged materializations.

ARCHBISHOP JOHN J. KAIN, of the Roman Catholic Church, St. Louis, was one of the vice-presidents at the public meeting in that city recently to welcome General Booth. He wrote to the Salvation Army officers: "My Dear Friends:—I cheerfully authorize you to place my name among the vice-presidents of the public reception to be tendered General Booth on his arrival in our city, and I take this occasion to wish a godspeed to the efforts of your Army in relieving and uplifting the fallen and distressed of our common humanity."

FOREIGN TOPICS.

VIEWS OF THE MAINE CATASTROPHE.

FOREIGN comments on our relations with Spain are of two distinctly different types just now—those bearing upon the frightful calamity in Havana harbor and those touching upon the possibility of war on account of Cuba. The *Maine* disaster has enabled the Spanish press to express as much good-will toward this country as the strained relations between the two nations permit. The *Epoca*, Madrid, declares that "tho the relations between the two countries are not such as to further the cause of humanity and Christianity, the spectacle of such a large number of souls being suddenly launched into eternity must excite compassion." The *Heraldo* says:

"Altho the Americans continually try to make us appear as a people without public virtue, we can not but manifest the most sincere compassion and condolences in the face of this terrible misfortune. In the presence of Americans who provoke us, we will remain a high-minded people; in the presence of men who are unfortunate, whatever their nationality, we are unable to close our hearts to commiseration."

The *Dia* acknowledges that Spain profits by the loss of the ship, but declares that no Spaniard can wish for advantages of this kind. The *Liberal* says:

"Such a catastrophe must alleviate the rancors of political strife, for it reminds us that, whatever our rivalries and animosities, we belong to the same great human family. For the moment our nation must generously forget its differences with the United States. To-morrow we will again defend our rights, to-day we can only offer our most loyal and sincere condolences. Happy indeed are the Spanish sailors who could assist in saving the life of a survivor from the *Maine*. They had an opportunity to demonstrate Spanish sentiment. To-morrow we are prepared for anything; to-day we extend our right hand—not to those who insult us, but to those who mourn."

With few exceptions, the Spanish papers commented upon the catastrophe in this strain. The *Nacional*, however, says it is useless to waste pity on the Yankee sailors when Spain mourns the loss of one hundred and twenty-seven men killed by the rebels after having been taken prisoners, especially as the dynamite which blew up the *Maine* came from the same factory as that which is used by the Cubans.

The theory that the *Maine* went down in consequence of the criminal explosion of a mine or a torpedo does not find much support abroad. It is pointed out that a torpedo could not do such frightful damage. It is known, moreover, that the ship went to Havana to be present in that port in case of trouble with Spain, and very few people profess to believe that a ship officered by Americans could be approached without the knowledge of the crew. But as this theory exists, it is reported by the *Diario del Ejercito*, Havana, that the Spanish Government will not permit the wreckage to be removed from Havana until the cause of the explosion has been cleared up. Nor will Spain be satisfied with the verdict of the American committee of investigation. If, says the *Correspondencia*, Madrid, the Americans attribute the explosion to external causes, our own commission still has to be heard from. Eventually a mixed commission may have to be appointed. The *Vossische Zeitung*, Berlin, thinks the accident should bring about better relations between the United States and Spain. One of the most conservatively worded comments is the following in the *London Speaker*:

"Happily, the American people has suspended its judgment on the cause of the calamity; but it seems to be ascribable with most probability to the decomposition of some new and as yet imperfectly tested explosive—Americans being remarkable for daring rather than caution, especially in dealing with new applications of science. For a time, however, the explosion seemed

likely further to complicate a situation already rendered dangerous by the peculiar methods favored in American diplomacy. But it may be hoped that the sympathy shown by the Spanish officers and people will have a contrary effect."

The *Journal des Débats*, Paris, reminds its readers that a French vessel escaped almost by a miracle a similar accident about two years ago. The paper attributes the explosion to the fact that our navy has only recently adopted smokeless powder, and fears that the explosives which the *Maine* took with her when she was fitted out for warlike duty may not have been sufficiently inspected.

While the civilized world on the whole follows Captain Sigsbee's advice to suspend judgment, some of our Canadian contemporaries furnish editorial comments as irritating to patriotic Americans as the tone of certain American papers must be to the Spaniard. We mention the *Toronto Evening Telegram*, the *Victoria, B. C., Times*, the *St. Johns, N. B., Gazette*, and the *Winnipeg Daily Tribune* as instances, and quote the following sample from the last-named paper:

"To one section of Americans this accident will appear as a confirmation of their view that the United States, strong in her unique position, has no business to dabble with an immense navy, while to the other it means the dashing of their dearest hopes to the ground. . . . The cold, cruel irony of the event, blasting in a moment the work of a great department for years and laughing at the nation, is one that appals, creating the feeling that even the stars in their courses are against them. . . . After all the care and money spent on these giant ships has the nation no guaranty of efficiency? Must her naval experts confess themselves so incapable that any ship now in commission is in danger of being blown to atoms by that very powder intended to protect the nation's ports and shipping? Is there a destiny that shapes our ends, and must the United States admit that she can never acquire the art of navy-building, and must be content to remain forever within her coasts? These and a hundred more are the sad questions which the people of the sorrowing nation are asking themselves to-day."—*Translations made for THE LITERARY DIGEST.*

ON THE CHANCES OF WAR.

ALTHO it is thought that the great majority of our people repudiate the idea that the *Maine* was sent to the bottom by an act of treachery, our foreign contemporaries believe that we, as a people, intend to intervene in the Cuban strife, and the gradual strengthening of this disposition by the religious papers is cited as proof. In the island itself this is well recognized. The *Discussion*, Havana, the organ of the Radical Autonomists, publishes an interview with Señor Dolz, Secretary for Public Works in the Cuban cabinet, who said:

"Altho the country is not yet at peace, we must endeavor to restore order by administrative measures without failing to continue vigorously the military campaign necessary to inspire confidence in the arms of Spain. The political situation is plain enough: the Cubans must be brought under the autonomous government unless the entire island with its riches is to pass under the power of the United States."

The *Lucha*, Havana, suggests, as the first and most practical step to prevent further fomenting of warlike spirit, the expulsion of the American newspaper correspondents. In Spain it is feared that it is too late now to escape war, and the papers urge the Government to continue its war preparations. The *Imparcial*, Madrid, says:

"However much President McKinley may reiterate his protestations of friendship and his peaceful intentions, his actions certainly belie his words. While he entertains us with suave phrases, he is preparing to strike a blow. While he talks of concord, work goes on all Sunday in the docks, and the sailors are recalled from their leave of absence. Have we a right to trust those who, while they demand the pacification of the island, foment rebellion, send filibustering expeditions and armed ships

under pretext of a 'friendly visit'? Let us prepare for war by sending our ships to Cuba."

'The *Correspondencia Militar* is pretty certain that the war will begin in April. The *Pais* is "tired of all this talk of a future war when the war is already in progress." "The United States already is fighting us through the insurgents, and we won't have peace until we have sent an army to the American continent," says the paper.

There does not seem to be much chance of interference on the part of any power. The *Temps*, Paris, which generally voices French official opinion, is so far silent on the subject of French protection for Spanish colonies. Yet the paper advises us, for our own sakes, to think twice ere we go to war. It says:

"The American people are intoxicated by their feeling of strength; they believe that Monroeism is the alpha and omega of international law, and they see in Cuba a right tempting morsel. Yet it is to be hoped that the more conservative elements will stop short of a war which would not only have grave international consequences, but may also at home produce a revolution and lead to the development of Cæsarism, an evil which gnaws the vitals of every democracy."

Expressions of sympathy with the United States are somewhat few and far between. The *Fremdenblatt*, Vienna, says:

"We can only hope that the warlike agitation in the United States will subside. A struggle with Spain would be all the more criminal, as only an infinitesimal minority of the Cubans are in favor of annexation. Moreover, the tranquil adjustment of the affairs of Cuba is at hand. The reforms introduced do not fail to make a favorable impression; the insurgent chiefs are beginning to see that peace is better than war, and, if there is no interference, the insurrection will soon be ended."

The *Kölnische Zeitung*, Cologne, criticizes sharply the action of a New York paper, which offered a large sum for the detection of the criminals who sunk the *Maine*. The *Kölnische* is astonished that the people should continue to believe the assertions of the "jingo" papers, especially as the American administration is much opposed to these sensational reports.

Most of our sympathizers are in England. The *Spectator*, London, says:

"We have no antipathy to Spain, but rather wish her well. But she can not regain her health as a state so long as she is wasting her blood and treasure on Cuba. Unless the amputation of the Cuban limb takes place, and takes place speedily, the whole body of Spain will be poisoned. But tho we wish to see Cuba separated from Spain for the sake of Spain, this is not our strongest reason for desiring American intervention to put an end to the insurrection, and to give Cuba her freedom. The condition of the island is at this moment so terrible, and has been so appallingly miserable for the last three or four years, that as one reads even moderate and well-balanced accounts such as that in this month's *Blackwood*, one wonders whether even in the Thirty Years' War itself 'the negation of God' was ever more effectually carried out by human beings. . . . No doubt things are a little better under Marshal Blanco than they were under General Weyler, but even he is powerless to stop the Cuban horror. The only hope is in the United States sternly declaring that the Spanish troops must leave the island, and that then the Cubans must be allowed to settle their own fate, and to decide whether they will have autonomy or independence. That the United States would be morally justified in saying that the war must now end, and Cuba be given peace, we do not doubt for a moment."

The *Westminster Gazette* fears that we are not as ready for war as we might wish to be, but neither are the Spaniards, hence the chances are not so very uneven. The *Saturday Review* says:

"Senator Sherman having been silenced by the simple process of not allowing him to know anything, the American executive have kept their secrets admirably of late, but it is shrewdly suspected that the pacific disposition of Mr. McKinley is largely

owing to reports from his naval advisers to the effect that America is not in a condition to go to war with Spain with any certainty of immediate and overwhelming success. The Spanish fleet is not to be despised, and the South American republics have not displayed that love and affection for their Northern sister which Mr. Blaine once tried to instil into them. But all that will not prevent the jingoes from forcing the President's hand if the smallest scrap of evidence implicating the Cuban authorities were to become public."

A remarkable phase of the Cuban question is that our neighbor Canada does not, on the whole, think the Cubans can be congratulated upon the prospect of becoming Americans. The general impression seems to be that Uncle Sam's little finger would be heavier than the Don's thigh. We find this sentiment expressed in the most outspoken manner in *Secular Thought*, Toronto, which says:

"To pass from the control of Spain to that of Wall Street, for that is what it means, would be to fall out of the frying-pan into the fire. Rebellion against Spanish tyranny always meets with sympathy and substantial help; revolt against Wall Street would be put down remorselessly by all the power of the Government that Wall Street controls. What the Cubans want is freedom and independence, but as J. J. Astor, voicing the sentiment of his class, said after signing his name to the program of the Cuban League, 'We don't want Cuba to be free; we want to annex it.' Poor Cuba!"—*Translations made for THE LITERARY DIGEST.*

ENGLAND AND FRANCE AS PROTECTORS OF THE CZAR.

THE Central Criminal Court at London has sentenced editor Bourtzeff, of the *Norodovoletz*, London, to eighteen months' hard labor, and his assistant Wierzbicki to two months' hard labor, for inciting their readers to assassinate the Czar. The revolutionary papers are very wroth about it. *Justice*, the organ of the Social Democratic Federation, says:

"This punishment, inflicted by Mr. Justice Lawrence—let his name be long remembered!—is what is given to thieves and rogues, and villains of all kinds. Yet Bourtzeff, an honorable, self-sacrificing political revolutionist, shares the same fate. Only in England or Spain is such political blackguardism still possible. Even in Russia political prisoners are now treated as political prisoners, and their punishment, if brutal, is, at any rate, not socially degrading. It is we 'free' Englishmen who allow justifiable revolutionists like Davitt to be driven like dogs, and a high-minded refugee like Bourtzeff to be made a common convict of!"

But, on the whole, Englishmen argue that a foreigner must not abuse the liberty granted him on British soil to make preparations for criminal actions abroad. The case of John Most is cited as a precedent, for the editor of the Buffalo (formerly New York) *Freiheit* was punished in a similar manner in England sixteen years ago, when he editorially asked who would kill a few princes for him. The *Speaker*, London, says:

"Most Englishmen will regret that it should have been necessary to hold this trial, but at the same time it can not be doubted that incitements to murder, whether they are directed against foreigners or Englishmen, are a distinct breach of the law, and that it is the duty of the authorities to take steps to prevent them."

It is thought that the action of the English court will be appreciated in Russia. France gained the friendship of Czar Alexander III. when she proved that preparations for his destruction could not be safely carried on within her dominions. M. Goron, formerly chief of the Paris criminal detectives, tells the story as follows in his just published memoirs:

It was in the year 1889. The number of Russian students was suddenly increasing, and they seemed specially interested in the experiments carried on in the laboratories. In the beginning of 1890 a police commissioner named Schnab told Lozé, the Chief of Police, that a student who was very poorly dressed offered a

handsome tip to a salesman if he could get him certain glass tubes, made in a very unusual manner. The order was filled, but the owner of the store informed M. Schnab that the tubes were perhaps intended for explosives. M. Lozé now had the students watched, and two of them were seen trying the effect of the bombs on the trees of the Bois de Raincy. M. Lozé now informed the chief of the Russian foreign detectives of his discovery, and asked his help. It did not take long to find out that Nachatchize, Orlow, and other students were dangerous Nihilists, who were preparing to murder the Czar. M. Lozé now consulted the Government as to the advisability of making arrests. Freycinet was then Premier, and Ribot Foreign Minister. They did not like the discovery, and feared a repetition of the Hartmann case. [The Nihilist Hartmann had to be released to appease public opinion.] But Lozé knew a way out of the difficulty. He suggested that the students should be arrested, not because they were Nihilists, but simply because they were secretly manufacturing explosives. This advice was taken, the students were arrested, and much of their correspondence was found. Alexander III. was very much pleased with the Third Republic. The energy of its officials had most likely preserved him from great danger. Freycinet received the Grand Cordon of the Alexander Newski Order; the Chief of Police, who already possessed the Order of Stanislaus, was rewarded with an art treasure; and the commissioners were also decorated. The closer relation between France and Russia was the immediate effect of this incident, for the Czar said: "At last France has something like a government."—*Translation made for THE LITERARY DIGEST.*

THE CONVICTION OF ZOLA.

EMILE ZOLA, the "champion of justice" in France, has been sentenced to one year's imprisonment and a fine of 3,000 francs, besides costs, because he could not substantiate his charge that the French Ministry refused to demand a new trial for Dreyfus because men in high position would be implicated thereby. Zola declared that he did not care what the *law* was, he wanted *justice* done to Dreyfus; and the whole world seems to regard it as proved that France will not change the punishment of Dreyfus, since the people supported the army in its claim that the secret trial shall not be reopened. The court refused to allow the guilt or innocence of Dreyfus to enter into the Zola trial.

The immediate result of the conviction of Zola is a decline in the interest shown abroad for the coming Paris Exhibition. The *Nieuws van den Dag*, Amsterdam, says France must "hurry up and show that she can be just, else she will be her only guest at the Exhibition"; and the German papers relate that many German industrials and artists will withdraw their promise to participate, as a country which is unjust to its own citizens will not be likely to protect foreign property and foreign lives. The *Journal des Débats*, Paris, says in effect:

M. Zola and his friends no doubt meant well, and that he is talented, spirited, intellectual, he has proven. It is understood that M. Zola said, in answer to a question: "No, I do not know the law, and I don't care to know it," and his entire defense was carried on in keeping with this expression. The jury has replied by showing that it is impossible to obtain, by means of calumnies, the illegal reopening of an adjudged case before men who are altogether incompetent to judge the merits of it. Not without just cause can a question be mooted before a French jury which touches the innermost susceptibilities of the nation. Not with impunity may the army and society be attacked in France. If abroad we are not understood, we are sorry, but we can not help it. It must suffice us to know that the verdict against Zola expresses public opinion with us in France.

The *Temps* is thankful that the trial is over, and would fain believe that no further demands for justice will be made. The great majority of Frenchmen are very much displeased that the world abroad should have expressed an opinion in the matter. Even so moderate a publication as the *Correspondant*, in its political review, tells the foreigner to mind his own business, and

intimates that Germany especially, being a party to Dreyfus's treason, should be silent. The *Handelsblad*, Amsterdam, replies by quoting Elizabeth Barrett Browning:

"They who from the distance watched Mount Athos as it was being transformed into the image of a man by order of Xerxes saw the profile appear. The woodmen who performed the work saw nothing but wood and stones. Great, indeed, is the number of French Liberals who have diligently worked away to destroy the supports of freedom and justice, yet they do not see what their work is leading up to!"

There is no doubt that even the best friends of France, the Russians, fear a revolution. The *Novoye Vremya* declares that the very pseudo-antisemites who to-day yell "*Mort aux juifs! Vive l'armée!*" will shout "Down with the army!" as soon as they have shown the people that the Government and the army defend injustice. The *Grashdanin* says:

"Despite their late exertions the Ministry can not hold its own, and it is very doubtful that serious riots can be prevented. Of all the 'antisemites' probably the students of the Quartier Latin are the only honest ones. The rest of the mob are not sincere in their defense of the army. They are under the influence of the Anarchist leaders, who will plunder any capitalist, Jew or Christian."

The army would, of course, put the riot down, but this must lead, in the opinion of most of our contemporaries, to military dictatorship. The only thing wanting just now is a man strong enough to become dictator. The *Spectator*, London, does not believe that the soldiers would fail to obey their officers. It adds:

"'France,' our readers will say, 'under a military *régime* once more? It is impossible.' Well, what do those who think so call the *régime* under which in a trial for libel great military officers appear in court in full uniform to threaten jurymen with the military consequences of a verdict of acquittal?"

It is, however, admitted that Zola was rather hasty. He thought to compel the very men whom he accused to produce proofs of his accusation. He should have provided some proofs himself. Moreover, the French people fear the Germans as much as they hate them, and they see in the army their only protection against an invasion. Many of our British contemporaries think this a justification for the verdict against Zola. The *Clarion*, London, says:

"Gentlemen of England who sit at home at ease and regard 'invasion' as a purely foreign thing to be read about, but by no means experienced, can not even form an idea of the meaning represented by the word to French men and women who beheld and endured the Prussian conqueror's ruthless violence in the terrible year 1870-71."

The *St. James's Gazette* says:

"A German writer, commenting on the part taken by French officers in the Zola trial, said, 'Thank God we have a king!' and he said well. Germany and some other countries have political institutions which are above the army, and can keep the soldier in his place of armed but obedient servant. But what did her blessed Revolution leave France? It made a clean sweep of her institutions (a very different thing from the machinery of administration, tho there are people who confound the two) and has given her nothing which a Frenchman can regard as the German does his king or an American his Constitution. What, then, is left except the army which can represent the nation? If Frenchmen cling to it, they have good cause."

United Ireland, Dublin, thinks this sudden comprehension of French character on the part of our English cousins is not altogether disinterested, and, indeed, many English papers think the French army may wish to enter into a foreign war, for which the present Anglo-French complications in Africa seem to furnish an excuse. *Life*, London, says:

"It really looks as if it were just possible that the 'attack of nerves' from which the French are at this moment suffering over the Dreyfus affair might expend itself upon England, thanks to

the ill-advised fashion in which modern journalism takes upon itself to exaggerate the smallest international misunderstandings. There is a little trouble over a disputed frontier question in the heart of Africa. . . . There is a consolation to be derived, however, from the knowledge that the French in disputes of this nature retain sufficient *sang froid* to realize that they can ill afford to waste their national energies on any other enemy than their hereditary foe, the Germans."

The Germans admit that war threatens them, but say they are used to it, and do not fail to express their sympathy with Zola, irrespective of party lines. The *Tageblatt*, Berlin, says:

"We must give up the hope of honest peace with France. They hit Zola, but they mean us. They have refused to grant a revision of the Dreyfus case. What they want is a revision of the Peace of Frankfurt. Will they be more successful than Zola?"

The *National Zeitung* does not doubt that the French army will now look for new advantages. The *Vossische Zeitung* says:

"It is not the dozen frightened middle-class men who sacrificed the best man of France. Not they are responsible for this *débâcle* of justice, but the Government, whose only aim is to maintain itself in power; the judge, who cynically crushed every attempt to bring the truth to light; the generals Pellieux and Boisdeffre, who frightened the jury; and the officers, who not only tolerate a man like Esterhazy, but even honor him."

The *Freie Presse*, Vienna, points out that, according to the French system, the jury need not be unanimous. The majority decides the verdict, and the proportion of dissentients is not made public.—*Translations made for THE LITERARY DIGEST.*

CANADIAN VIEWS OF MISS FRANCES E. WILLARD.

IT is conceded almost unanimously by the Canadian press, even by those not in sympathy with Miss Willard's work, that she deserves to be remembered as a shining example of one who follows unflinchingly in the path of righteousness. Not a few recognize her peculiar American characteristics, and point out that she could not have shown her powers so clearly in other lands.

The *Evening Banner* (Chatham, Ont.) says:

"Save England's Queen, what other woman could be so missed as she? She was one of the strongest personalities of the present day, one of the most influential of the many brave and faithful women who are doing battle for the purity of home and native land. Those who differed most from her recognized her singleness of aim and sincerity of motive. . . . The power which the world's W. C. T. U. wields to-day is a tribute to Miss Willard's executive ability. . . . She was above all a good woman. Her goodness had in it that quality of greatness that can bear with the mistakes of the ignorant and the censures of the malignant. Her life was a revelation of the good that one true spirit can accomplish. This is not the place to speak of the many sacrifices she made for the cause she loved or to wonder who will take up the work she made especially her own. She has died in harness, while it seemed yet noonday."

The *Montreal Witness* has a little poem, in which the writer compares Miss Willard to the Prophet Elijah, and hopes that "her spirit may with her mantle fall" in the right direction.

The *Western Advertiser* (London, Ont.) says:

"Miss Frances Willard was one of the best known, best beloved, most potent women of the world. Miss Willard was but fifty-nine years of age, yet her intensity of application to her world-wide duties was such that she had already compressed into her life and career more than any other woman in the public eye, except Queen Victoria, had ever achieved in threescore years and ten. It is doubtless true that Miss Willard might have lived longer had she burned the oil of life more sparingly, but that was not her disposition, and in accordance with her intensity of purpose she has completed a fully-rounded career of usefulness in a comparatively short life."

The *Victoria Daily Times* says:

"American civilization has produced some very queer types, judged by European standards. By far the greater number of those types have been of a highly objectionable kind in the eyes of people accustomed to the older, more sedate, and conservative models. Yet it is an indisputable fact that amid the rush and confusion of new things, crude conceptions, and unassimilated ideas there have risen from among the masses of America men and women of character and intellect so lofty and serene; so truly in accord with the ideas and the culture of the best European patterns that they have won early the warm approval and acceptance of those severe critics."

"Miss Frances E. Willard was a type which is scarcely yet possible in Europe, where the emancipation of women from the grossly unjust restrictions and inequalities imposed by centuries of semibarbarism has not even in the nineteenth century made that progress which has distinguished the movement in America. The female reformer in Europe is a plant of very feeble growth yet; the curse of 'respectability,' which a brilliant thinker, Mr. Geoffrey Mortimer, has lately shown to be one of the most hideous of the social diseases under which Great Britain is struggling, still debars timid woman from public speaking."

"It will be impossible to replace her out of the ranks, and unless some worthy successor arises soon to undertake the vast work which Miss Willard was doing so nobly, the organization may suffer seriously. In that she labored for the common good; for the uplifting of the people; for purity among all classes, for greater kindness between man and man, and for the spread of what Dean Swift aptly called 'sweetness and light,' even those who differed from Miss Willard utterly on matters of religious belief may feel as keenly as any that the world is much poorer since she passed away."

The *St. Thomas Journal* thinks that, tho others will take up the work of temperance she has left, few can rival her in the esteem she enjoyed even from those who differed with her in opinion. The *Globe*, Toronto, says:

"The fact that the W. C. T. U. held its last general meeting in this city causes Miss Willard's name to be particularly fresh in the memory of Canadians. Many of us then became better acquainted with the personality of the gentle lady who bore it, and, like all coming within the circle of her influence, received fresh revelations of the heights to which human character can attain. Altho a woman of deep purpose, firm resolves, and great force of character, it was apparent to the most superficial observer that her maintenance of undisputed leadership in the aggressive organization to which she belonged was due perhaps more to the qualities of love and sympathy than to those first named."

"Such a career and such a character give relief from many of the distressing and depressing facts of life. They reestablish faith in a divinely ordered world and in the truth and beauty of the Gospel of Nazareth, and are a reminder that tho the same combination of qualities could hardly be expected to be common among the members of Miss Willard's own sex, we are nevertheless compelled to look there for those great reservoirs of moral feeling, of purity, self-sacrifice, tenderness, patience, and forgiveness that are the saving salt of the earth."

FOREIGN NOTES.

THE Chinese, who punished their war-god after his failure to protect them against the Japanese, have decided to give him another trial. He has been reinstated in his old rank, which corresponds with that of Buddha.

No reputation is sacred to the men who publish and edit "yellow journals"! One of these papers recently published what was supposed to be a "special cable message" from Rome, announcing that an American sculptor had wounded a modeler during a row, and had been sentenced to fifteen months' imprisonment. The whole story was an invention. In order to fill up one or two inches of space the "enterprising" editor had endangered the prospects of a quiet, gentlemanly man.

ACCORDINGLY to the *Temps*, Paris, the natives of the island Madagascar fare much worse since their barbarous and effete monarchy has been replaced by a government carried on by the freedom-loving citizens of France. French politicians and subaltern officers appointed as district magistrates do what they please. One of these gentry decapitated a native servant and nailed his head and hands to the door because a gun entrusted to him was taken by the rebels. Madagases are forced to sell their land to Frenchmen under compulsion, being told that they will be denounced as enemies of the glorious French Republic if they refuse.

MISCELLANEOUS.

THE YOUTH OF NAPOLEON BONAPARTE.

AN enormous library of books, in various languages, has been published about the first Napoleon. In this great mass of publications, however, there has heretofore been very little on which any reliance can be placed relating to his youth. It is true there has been a great quantity of stories told about the future Emperor, but by far the greater portion of these stories are pure inventions by those who either loved or hated him, and as to what sort of a boy and youth he was we may be said to have known next to nothing. Struck by this defect in the biography of Napoleon, M. Arthur Chuquet, a French historian of repute, undertook the laborious task of collecting everything which could aid in correcting this defect, and has given the world the result of his labors in a just-issued work entitled "The Youth of Napoleon." He has admitted nothing of which he has not unimpeachable proof, and the authority for each statement and anecdote is furnished. The result is that a host of anecdotes are shown to be without foundation, and we have for the first time a reliable account of Napoleon from his birth until he reached the age of twenty-one. Of that account a summary by M. Emile Faguet appears in the *Revue Bleue* (Paris, January 22), and some of the points established by M. Chuquet are thus set forth:

"Are there any traces of genius in the true, historic adolescence of Napoleon? No. He was an intelligent and studious boy, and that was all. The three respects in which he differed a little from his comrades, from an intellectual point of view, were his passion for reading, his quickness in assimilating what he read, and his incomparable memory. In places where he stopped he frequented the libraries and devoured greedily their books. Some one remarking this trait offered to get him a place as librarian. The offer Napoleon declined, remarking that when any one likes to read he is not fitted to be a librarian. Such a person may be called a book-eater.

"What did he read? Most of all history. Of general literature he read very little. There was nothing artistic in his education. He read no poet either ancient or modern. Nevertheless, he once made some verses, written in the geometry of Bezout, the text-book he studied. Wretched verses they were.

"As to his facility of assimilation, without being prodigious, it was remarkable. He was a backward boy when he entered the military school at Brienne in 1779; yet six years afterward, at the age of seventeen, he received a commission as lieutenant of artillery, without having passed through the grade of 'pupil officer,' which other pupils in military schools had to pass through, and which sometimes lasted two years. The alertness of his mind was recognized by all his masters, save one, who declared that Napoleon was an 'imbecile.'

"As to his memory, it was always prodigious even in his boyhood. When he as Emperor presided at the Council which framed the Civil Code, the eminent lawyer Treilhard, a member of the Council, was astounded at the citations from the Digest with which the Emperor riddled the deliberations, and asked where Bonaparte had learned the Digest. Malefactors learn the Code—or some part of it at least—in prison. Bonaparte was like them. He was put under arrest at Auxonne, when eighteen years old, and confined in a room in which there was a copy of the Digest, the only book in it. His imprisonment lasted but twenty-four hours. Out of the book, however, he got enough to astonish Treilhard twelve years afterward.

"It is proved that all the time he was at school at Brienne he was constantly melancholy. It is not surprising. Pale, with a yellow complexion, short, thin, an insignificant-looking creature, with a big, sharp-featured head and gray eyes, knowing hardly any French, he was the butt of his companions, who ridiculed him as a Corsican, as an admirer of Paoli, as the bearer of a ridiculous Christian name. Thus he became morose, kept by himself, and mixed as little as possible with the other boys, showed himself haughty, given to sharp answers. He was seventeen years old before he knew anything like gayety.

"These youthful experiences were enough to harden the heart

of any man. Yet M. Chuquet has been able to prove that, altho Napoleon was considered in his after-life the greatest egotist in the world, without a grain of tenderness, he had qualities of heart which are far from common. Recall what an amount of rancor and ill will he must have amassed at Brienne and at the military school at Paris, where he was very badly treated. Recall how this Corsican, who did not yet consider himself a Frenchman, and who was a follower of Paoli to the marrow of his bones, must have detested his comrades, his professors, and even his first companions in arms. The career of all these comrades and professors and companions in arms has been traced by M. Chuquet, who demonstrates that all of them, without exception, were admirably treated by Napoleon at the height of his power, even beyond their merits. As to those few persons who were kind to him in his boyhood and youth, he could never do too much for them. He heaped on them benefits of every sort."—*Translated for THE LITERARY DIGEST.*

CORRESPONDENTS' CORNER.

Vedantism in America.

Editor of THE LITERARY DIGEST:

The concluding paragraph of your article on "Buddhists in America" (THE LITERARY DIGEST, March 5, 1898) is misleading. In my communication to *The Outlook*, only a portion of which was published, I did not "profess to see considerable advance made by Buddhism in America." On the contrary, I called attention to the fact that the Swâmi Vivekânanda is not a Buddhist at all, that there are no Buddhists at the present day in India, and that so far as I knew, the Swâmi Vivekânanda and his *confrères* in this country have made no attempt to "convert" people from Christianity to Vedantism. On the contrary, the Vedanta had been taught as a system of philosophy which might underlie Christianity as well as the religion of the Hindus. In the Brooklyn Ethical Association, the Monsalvat School of Comparative Religion, and the Cambridge Conferences, the Vedanta, as taught by the Swâmi Vivekânanda and the Swâmi Sâradânanda, has been presented as one element in a wide field of comparative study. There has been no attempt at propagandism; on the contrary, this has been explicitly excluded from the work in these courses of lectures.

That the Vedanta has excited interest, and proved attractive to many students, can not be questioned by any one conversant with the facts. Nor can it be doubted that the teachers of this philosophy have made many warm personal friends in this country. That their work should be misunderstood and misrepresented in some quarters is perhaps not to be wondered at. It is to be regretted, however, that these misrepresentations should be perpetuated and disseminated by reputable journals. In the account of "Vivekânanda's Return to India," in your issue of January 1, a fair abstract of his teaching to his own people is presented, which should be read as an antidote to the extravagant and untrustworthy paragraphs now going the rounds of the press.

LEWIS G. JAMES,

Director Cambridge Conference.

CAMBRIDGE, MASS., March 7, 1898.

Communion-Cups and Disease.

Editor of THE LITERARY DIGEST:

The Dr. W. Thornton Parker, in THE DIGEST of February 26, says that diseases resulting from contact with impure cups (communion) are extremely rare, and would therefore seem to find no necessity of individual communion-cups, it strikes me that one case of proved disease would be reason enough for the innovation. Personally, the thought of putting my lips to the same spot touched by the lips of from two to ten people immediately preceding is highly offensive, and would be reason enough without the additional possibility of disease. To trace a given disease to this cause, however, would be exceedingly difficult. In my own mouth, for instance, there habitually resides the diplococcus pneumoniae, or the organism that is believed to cause ninety per cent. of the cases of croupous pneumonia. This microbe seems to be innocuous to me, but if I inject under the skin of a rabbit, guinea-pig, or mouse a minute quantity of my sputum, the animal invariably dies within a day or two of what might be called blood-poisoning, that is to say, these parasites develop in the animal's blood by the millions and elaborate a poison so powerful that the animal is killed. This is the same poison that kills human beings in fatal cases of pneumonia. Experiments have shown that an average of one person in five habitually carries this microbe in his mouth. Just why an individual should be susceptible at one time to this microbe and not at another, we do not know; but we do know that this is a fact. Now it may easily happen that Mr. A. leaves on the communion-cup the diplococcus pneumoniae and that Mr. B., or Miss C., his neighbor, takes the organism off into his or her mouth. From there the parasite may easily enter the lungs, and, if the individual is in a susceptible condition, set up pneumonia. Yet no one could ever prove that pneumonia had such an origin. Again, the pus-making bacteria are also in some mouths and may, when transferred to susceptible soil, manifest their dangerous virulence. To use my own mouth for another illustration, I injected under the skin of a small dog a week since about a half thimbleful of sputum. The animal developed in a few days an abscess nearly half as large as my fist, and almost died from the effects. The pus in the abscess showed the pus-making microbe known as the staphylococcus pyogenes aureus. This organism, entering a minute abrasion in some other person's mouth, if susceptible at that time, might easily set up a painful or dangerous pus process, yet, as in the former case, no one could ever prove such an etiology.

ERNEST B. SANGREE, M.D.

NASHVILLE, TENN.

BUSINESS SITUATION.

Increased activity in distributive trade in the West, South, and far Northwest, and steadiness in general business all over the country, despite the "war scare," which has not lessened during the past week, have been the features of the commercial situation. The shoe and leather markets are booming, and the foreign demand for wheat and flour is heavier. On the other hand, sales of wool have been the smallest since August, 1896, and the number of failures is slightly in excess of the week before. We are now getting more gold from Europe than we need.

Iron, Copper, Tin, and Lead.—"The weekly output of pig iron was 228,338 tons February 1, but 234,430 tons March 1, and the increase of unsold stocks in February was only 5,852 tons weekly, leaving 225,532 tons weekly for export or consumption, against 218,457 tons in January and 215,249 tons in November, 1895, the month of greatest consumption before this year. For four months production has gained a little, but consumption still more, and if preparations for war last only a few weeks they will add much to the demand. Other consumption for railroad cars, of which two roads have ordered 2,300; for vessels on the lakes and for elevators and for oil-pipe lines, for agricultural implement works, and for sheets, is beyond precedent, and structural and rail works are crowded with orders, the now receiving few. Iron-bar works are depressing prices because some are not fully employed, while the steel-bar mills at Milwaukee have to put on three eight-hour turns daily to keep up with orders. Prices are very strong except for wire nails, which dropped because the great wire combination fell through, the

WE have recently made some exquisite Spring Dresses for leading New York society ladies and prominent actresses, who are famed for the good taste which they display in the selection of their toilettes. Photographs of these ladies and the garments which we made for them are shown in our new Spring Catalogue, which is now ready. To the lady who wishes to dress well at moderate cost we will mail free this attractive Catalogue and a complete line of samples of new materials to select from.

Our Catalogue Illustrates:

- Tailor-Made Suits, \$5 up.
- Outing & Blazer Suits, \$4 up.
- Separate Skirts, \$4 up.
- Bicycle Suits, \$4.50 up.
- Bicycle Skirts, \$3 up.
- Capes and Jackets.

Our new designs in Bicycle Skirts are recognized everywhere as the most practical skirts for wheeling that have yet been produced.

We Pay Express Charges Everywhere.

Our line of samples includes the newest materials for Spring and Summer wear, many of them being exclusive novelties not shown elsewhere. Write to day for Catalogue and samples; you will get them by return mail.

a smaller agreement is now expected, and in some Western despatches is said to have been formed. The minor metals are generally in stronger demand, a sale of 4,000,000 pounds of copper being reported at 12 cents, tho the usual quotation is 11 8/7 cents, and the product last year was 305,021 tons, against 219,970 tons consumed in this country. Tin is strong at 14.25 cents, and spelter at 4.2 cents, but lead is weaker at 3.77 1/2 cents, and tin plates at \$2.85 for the best, against \$4 for foreign."—*Dun's Review, March 12.*

Increase of Railroad Earnings.—"February railroad earnings reflect a larger movement of grain and cotton to market and considerably increased activity in the Northwest and on the Pacific railroads as a result of the Klondike excitement. The shortness of the month and the further curtailment of it by means of holidays is sufficient, however, to reduce the percentage of gain shown, as compared with one year ago, below that reported for the preceding month. The total earnings of 106 railroad companies for the month aggregate \$38,806,000, an increase of 13.2 per cent. over February a year ago, and compare with a gain in January, on a considerably larger total of earnings, of 15 per cent. The Pacific railroads make relatively the best showing, with a gain of 33 per cent., the Southwestern and the granger roads coming next in the order named. A feature of the exhibit is the gain of 11 per cent. reported by the Southern railroads, as against only 5.8 per cent. in January. Only 13 of the 106 roads reporting show decreases from a year ago, and the number of large gains is fully up to recent records. The total earnings of 106 roads for the two months' period of the year aggregate \$80,853,000, a gain over last year of 18.4 per cent."—*Bradstreet's, March 12.*

Wool Sales Small.—"Sales of wool for the week have been the smallest since the week of greatest alarm, in August, 1896, but not because any mills have stopped work. Cancellations are frequent, and jobbers have evidently failed to sell as much as they expected at the advanced prices asked, but even those would not be possible had wool cost the millers current market prices. Little wool can be moved, with a new clip near, and heavy stocks

The Cereal Market.—"Larger wheat and flour, but smaller corn shipments are a feature of export trade this week. The total exports of wheat, flour included, from the United States and Canada this week aggregated 4,484,761 bushels, against 3,252,003 bushels last week; 1,599,482 bushels in the corresponding week of 1897, 2,451,209 bushels in 1896, 2,791,160 bushels in 1895, and 3,258,050 bushels in 1894. Corn exports are smaller, amounting to only 3,285,056 bushels, against 5,054,000 bushels last week, 5,310,514 bushels in this week of 1897, 1,708,000 bushels in 1896, and 882,000 bushels in 1895."—*Bradstreet's, March 12.*

Boots and Shoes.—"Shipments of boots and shoes from the East have been for two weeks 18 per cent. and for the year 14.5 per cent. larger than last year, much the largest heretofore for this month, and purchases have been the largest ever known, in several branches covering five to six months' production, prices being generally conceded below original demands. Open quotations for boots and shoes are more than 1 per cent. lower than a year ago, with leather 4 per cent. higher, notwithstanding some decline this week, but it is not unlikely that concessions to large buyers have made up the difference. Hides are a shade lower at Chicago, and Western slaughtering in two months has been 12.46 per cent. greater

THEY RIDICULE IT.

MANY PEOPLE RIDICULE THE IDEA OF AN ABSOLUTE CURE FOR DYSPEPSIA AND STOMACH TROUELES.

Ridicule, However, is Not Argument, and Facts are Stubborn Things.

Stomach troubles are so common and in many cases so obstinate to cure that people are apt to look with suspicion on any remedy claiming to be a radical, permanent cure for dyspepsia and indigestion. Many such pride themselves on never being humbugged especially on medicines.

This fear of being humbugged may be carried too far; so far, in fact, that many persons suffer for years with weak digestion, rather than risk a little time and money in faithfully testing the claims of a preparation so reliable and universally used as Stuart's Dyspepsia Tablets.

Now Stuart's Dyspepsia Tablets are vastly different in one important respect from ordinary proprietary medicines for the reason that they are not a secret patent medicine, no secret is made of their ingredients, but analysis shows them to contain the natural digestive ferments, pure aseptic pepsin, the digestive acids, Golden Seal, bismuth, hydrastis and nux. They are not cathartic, neither do they act powerfully on any organ, but they cure indigestion on the common-sense plan of digesting the food eaten promptly, thoroughly before it has time to ferment, sour and cause the mischief. This is the only secret of their success.

Cathartic pills never have and never can cure indigestion and stomach troubles, because they act entirely upon the bowels, whereas the whole trouble is really in the stomach.

Stuart's Dyspepsia Tablets, taken after meals, digest the food. That is all there is to it. Food not digested or half digested is poison, as it creates gas, acidity, headaches, palpitation of the heart, loss of flesh and appetite, and many other troubles which are often called by some other name.

They are sold by druggists everywhere at 50 cents per package. Address Stuart Co., Marshall, Mich., for book on stomach diseases or ask your druggist for it.

than last year, which does not support expectations of scarcity."—*Dun's Review, March 12.*

Canadian Trade.—"Advantage is being taken by inferior buyers of cut-rates on Canadian railways, and a heavy business is doing at leading cities. Shadings in cotton-goods quotations are largely to avert American competition and because of fear of tariff revisions. Green hides are lower, but still above an export basis at Toronto. Canned goods are higher at Montreal, and that market is said to be practically cornered. Country roads are now breaking up, and collections, at present good, are reported likely to be interfered with. Transportation facilities at Victoria are reported taxed to their utmost capacity. There is more demand for spring goods at Halifax, where obligations maturing early in the month appear to have been satisfactorily met. Stocks of fish in the maritime provinces are light and prices are advancing. Business failures in the Canadian Dominion this week number 31, against 27 last week, 56 in 1897, and 58 in 1896. Canadian bank clearings aggregate \$27,991,000, 5.7 per cent. larger than last week and 41 per cent. larger than in this week a year ago."—*Bradstreet's, March 12.*

Current Events.

Monday, March 7.

The Spanish Government withdraws its request for the recall of Consul-General Lee from Havana; six victims of the *Maine* disaster are buried at Key West. . . . The United States Supreme Court decides the Nebraska maximum freight-rate case favorably to the railroads, holding the state law to be unconstitutional. . . . The Association for the Advancement of the Interests of the Port of New York is formed by business men. . . . Congress—Senate: The District of Columbia appropriation bill is discussed. House: Chairman Cannon of the appropriation committee introduces a resolution empowering the President to expend \$50,000,000 for purposes of national defense; the bill creating two new regiments of artillery is passed.

The Court of Inquiry continues its session at Havana. . . . China has agreed to the demands made by Russia to lease Port Arthur and Talien-Wan for ninety-nine years. . . . The Korean Cabinet resigns because the Foreign Minister granted the concession of Deer Island to Russia. . . . A despatch to London from Hongkong says that a fresh rebellion has broken out in the Philippines, and that fifty-three Spanish soldiers have been killed.

Tuesday, March 8.

Preparations to meet an emergency are actively continued in Washington. . . . William J. Calhoun, of Illinois, is nominated for interstate commerce commissioner by President McKinley. . . . A report upon Alaskan gold regions has been published in Washington. . . . Prince Albert, heir-presumptive to the throne of Belgium, arrives on a visit. . . . Congress—Senate: The District of Columbia appropriation bill is passed; the emergency defense bill is received from the House and referred to the appropriations committee. House: The bill appropriating \$50,000,000 for national defense is passed without a dissenting vote after four hours of debate.

The *Montgomery* is expected to-day at Havana from Key West. . . . Russia has agreed to open to foreign trade Port Arthur and Talien-Wan, but under Russian laws and administra-

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 45th Street, New York.

tion. . . . English newspapers confirm reports of the purchase of ships by Spain. . . . The British naval estimates provide for the building of three battle-ships, four armored cruisers, and four sloops-of-war. . . . The comment of English newspapers on the attitude of the United States toward Spain is remarkably friendly.

Wednesday, March 9.

The Administration has sounded the European powers as to their attitude in case of hostilities with Spain, and satisfactory replies have been received from all except Germany and Austria. . . . President McKinley signs the bill appropriating \$50,000,000 for national defense. . . . John Wanamaker has written a letter accepting the nomination of the Business Men's Republican League for governor of Pennsylvania. . . . The Lattimer shooting trial results in a verdict of not guilty for Sheriff Martin and his deputies. . . . Señor Don Luis Polo de Bernabé, the new Spanish Minister, arrives on the Kaiser Wilhelm II. . . . Five survivors of the Maine disaster reach port from Key West, and the steamship City of Washington, whose officers also witnessed the catastrophe, arrives. . . . Congress—Senate: The bill appropriating \$50,000,000 for national defense is passed by a unanimous vote without debate; the Hawaiian annexation treaty is considered in executive session. House: The day is occupied in the transaction of routine business.

The United States war-ship *Montgomery* arrives at Havana from Key West: Senator Proctor leaves Havana for Key West. . . . Two swift Spanish torpedo-boat destroyers, fully manned and armed, leave the Clyde-bank for Spain. . . . A fierce plague riot breaks out in Bombay; two soldiers are stoned to death and several of the mob are killed; the riot is suppressed by the military. . . . Two Russian war-ships belonging to the Black Sea fleet arrive at Hongkong; China has appealed to the Czar to withdraw the ultimatum in regard to Port Arthur and Talien-Wan. . . . The English Liberals win a seat in the London elections.

Thursday, March 10.

The passage of the \$50,000,000 defense bill and

Muscular Food.

The peasantry of Europe in general, prefer their bread made from the whole meal, because of its nutritive value. The nutritive salts of meat and of wheat are phosphates. These phosphates are indispensable to the nutrition of all higher organizations. They enter into and constitute a part of, not only the bones, but every muscle, every nerve tissue; and in each secretory organ there seems to be a special accumulation.

Fine Flour of the Entire Wheat, as ground by the Franklin Mills Co., is exceptionally rich in nitrogenous and phosphatic elements necessary as the sustaining force in all labor.

If your grocer does not keep it, send us his name and your order—we will see that you are supplied.

The genuine made only by the FRANKLIN MILLS CO., LOCKPORT, N. Y.

the assurances given by foreign governments have served to allay excitement in Washington. . . . Charges of bribery in connection with the Schuylkill Valley water bill is made by a member of the Philadelphia common council. . . . A new combination of wire interests is formed with a capital of \$24,000,000. . . . Congress—Senate: Only routine business is transacted in the open session; in executive session it is decided to postpone debate on the Hawaiian treaty until next week; the nomination of W. F. Calhoun, of Illinois, to be interstate commerce commissioner is confirmed. House: The Senate amendments to the Indian bill are non-concurred in.

A Russian imperial ukase orders the disbursement of 90,000,000 roubles [about \$70,000,000] for war-ships; it was denied in the House of Commons that Russia had demanded sovereign rights over Port Arthur and Talien-Wan. . . . The officials of Havana are pushing work on the defenses of that city. . . . Queen Victoria leaves Windsor for the South of France. . . . The Prince of Wales lays the cornerstone of a new pier at Cannes, France.

Friday, March 11.

The House committee on naval affairs provides for the construction of three new battle-ships, to cost about \$5,000,000 each, one to be named the *Maine*. . . . The report of the Maine Court of Inquiry is expected in Washington next week. . . . Secretary Long says that negotiations for the purchase of the two Brazilian cruisers building in England are nearly completed. . . . Señor Polo de Bernabé, the new Spanish Minister in Washington, says that his government would do everything honorable in its power to avert war with the United States. . . . The United States despatch-boat *Fern* sails from Key West for Matanzas and Sagua la Grande, with provisions for the reconcentrados. . . . General W. S. Rosecrans dies at his home, near Los Angeles. . . . Congress (Senate not in session)—House: Payment of Southern war claims under the Bowman act is discussed.

The American line steamer *Paris* is three days overdue at Southampton from this city. . . . There has been a financial panic in Spain owing to the critical nature of the Cuban question. . . . Great Britain protests to China against the cession of Port Arthur to Russia; the Chinese officials declare their inability to withstand Russia's demands. . . . Hindus and Mohammedans are closing their shops in Bombay as a protest against the plague measures. . . . The Bank of France raises the price of gold, compelling buyers for America to transfer their operations to London.

Saturday, March 12.

It is authoritatively announced in Washington that the administration has no knowledge of the conclusions reached by the Maine Court of Inquiry. . . . Señor Polo de Bernabé, the new Spanish Minister, presents his credentials to President McKinley. . . . The House committee on naval affairs decides that the cost of the three battle-ships proposed to be built shall be \$6,000,000 each.

A statement in the Madrid *Imparcial* urging the Spanish Government to prepare for war causes a further decline in Spanish securities on the European exchanges; Spanish preparation for war goes on actively in European arsenals and shipyards. . . . General Sung, of the Chinese army, declares that he will defend Port Arthur even against the Russians. . . . The overdue American line steamer *Paris* passes Scilly.

Sunday, March 13.

No word from the Court of Inquiry is received at Washington. . . . Orders are received by the master mechanics of all railroads centering at Atlanta to have engines with steam up ready for use at a moment's notice.

Queen Victoria arrives at Cimiez, in the South of France. . . . Zacharie Tonelius, the Swedish poet and historian, dies at Helsingfors, Finland.

Blindness Prevented

The Absorption Method a Success

in treating all forms of diseased eyes without Knife or Kisk. Over 75,000 treatments given at our institution in '97. Representative people from all parts of United States and Canada endorse this institution. Do not wait to be blind. Thousands have everything to gain and nothing to lose. Pamphlet Free, describing home treatment and institution, the largest, most successful in America. BEMIS SANITARIUM, Glens Falls, N. Y.

A specialist who has tested this new and wonderful medicine says: "But for the ethics of the medical profession, which forbid the recommending of proprietary remedies, I would publicly advise every dyspeptic to use MI-O-NA. I believe it is a CERTAINTY for all forms of indigestion."

Mi-o-na is a certainty because it is not a palliative nor an artificial digestive, but is a HEALER. It heals the inflamed stomach, congested liver, the overworked kidneys and constipated bowels.

MI-O-NA ABSOLUTELY PREVENTS UNNATURAL FERMENTATION.

One small tabloid before eating and you cannot have a furred tongue, foul breath, sour stomach, gas or belching; neither can you have the dizziness and languor that accompany a torpid liver; nor the sallow complexion, that outward sign of the inward disease.

An interesting booklet on HOW TO GET WELL AND STAY WELL, together with full information of Mr. Booth's great discovery, relating to HEIGHT, WEIGHT and PERFECT HEALTH, sent FREE on application; also, a trial sample of Mi-o-na.

A box of Mi-o-na tabloids at your drug-gist's or by mail, 50 cents. Address

A Strange New Shrub that Cures Kidney and Bladder Diseases, Rheumatism, etc.—Free.

DISORDERS of the Kidneys and Bladder cause Bright's Disease, Rheumatism, Gravel, Pain in the Back, Female Complaints, Urinary Disorders, Dropsy, etc. For these diseases a Positive Specific Cure is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the *piper methysticum*, from the Ganges River, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. W. B. Moore, D. D., of Washington, D. C., testifies in the *Christian Advocate*, that it completely cured him of Kidney and Bladder disease of many years' standing. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing. Many ladies, including Mrs. James Young, of Kent, Ohio, and Mrs. Alice Evans, of Baltimore, Md., testify to its wonderful curative powers in Kidney and other disorders peculiar to womanhood.

That you may judge of the value of this Great Specific for yourself, we will send you one Large Case by Mail, FREE, only asking that when cured yourself you will recommend it to others. It is a Sure Specific and can not fail. Address The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

Hitchcock, Scranton, Pa.; W. S. and Mrs. Weeks, Litchfield, Minn.; L. Hesselroth, Chicago; S. Rubineau, Glen Lyon, Pa.; A. B. Coats, Beverly, Mass.; W. R. Coumbe, Lakeland, Fla.; the Rev. W. W. Faris, Miami, Fla.; Dr. and Mrs. W. B. Boyd, Eagle Rock, Va.; N. W. G., Carbondale, Ill.

Comments: "A clever and charming composition"—M. W. H. "Very interesting"—H. W. B. "A genuine Pulitzer"—I. W. B. "Worthy of its author"—F. S. F. "Very beautiful"—F. H. J. "Not difficult, but very good"—W. G. D. "A gem without a flaw"—C. Q. De F. "A reminder of 249"—J. C. E. "As full of harmony as a poet's brain"—R. J. M. "Neat, but not difficult"—T. H. V. "A poetical and ideal two-mover"—S. S. "Interesting to figure out where the ten variations come in"—H. V. F.

No. 265.

Chess move list for No. 265 with columns for White and Black moves and their consequences.

Correct solution received from M. W. H., H. W. B., I. W. B., F. S. F., F. H. J., W. G. D., C. Q. De F., J. G. E., R. J. M., T. H. V., A. S., H. V. F., M. H. E., J. G. O' C., C. W. C., E. L. A. and R. M. C., R., J. J., D. W. W., G. P., C. R. O., F. B. Z., S. B. Daboll, St. Johns, Mich., D. S. Rubino, Glen Lyon, Pa.

Comments: "A good problem, but simpler than most of the Doctor's"—M. W. H. "Containing a strong idea"—H. W. B. "The product of a fertile brain"—I. W. B. "Most skilfully arranged; a composition of the first class"—F. S. F. "Shows constructive ability and good taste"—F. H. J. "Good because of tempting key-moves"—W. G. D. "Hardly up to the Doctor's standard"—C. Q. De F. "Unworthy of its author"—J. C. E. "Its charm consists in doing it"—R. J. M. "I congratulate the author on the conception"—T. H. V. "Laborious and uninteresting"—A. S. "Full of brilliancy and duals"—H. V. F. "Exceedingly interesting"—M. H. E. "Not up to the Doctor's standard"—J. G. O' C. "Not a good problem"—E. L. H. and R. M. C. "All very simple and easy"—G. P.

Three incorrect key-moves have been received; two only need notice: R—Q 4, answered by B—K 3; B x B (Kt 5) answered by K—B 5. The proposed solution will not do:

Chess move list for the incorrect solution.

No mate next move.

H. W. Barry and C. F. Putney got 263. F. L. Hitchcock and Dr. and Mrs. Boyd got 262.

In noticing the incorrect key-moves of 261, we made an error in giving the reply to P x Q. We gave Kt x P, which will not do, for Kt—K 5 mate. The correct answer is Kt—B 2. If Q—B 3 ch, K x R; Kt—K 5 or R 5 ch, K—Kt 2, etc.

The Correspondence Tourney.

FIFTIETH GAME.

Queen's Gambit Declined.

O. E. WIGGERS, THE REV. J. S. SMITH, N. Shville, Tenn. LINNEUS, Mo. O. E. WIGGERS, THE REV. J. S. SMITH.

Chess move list for the 50th game of the Correspondence Tourney.

Notes by One of the Judges.

(a) The usual move is P—K 3. The text-move is Tschigorin's way of declining the gambit; but it is questionable whether it is as strong as P—K 3, as the defense needs this Kt on Q 2 at a certain stage of the game. It also gets in the way of the B P, and the proper play demands (8) P—B 3.

(b) Here B—Kt 5 would have neutralized any advantage White might have had.

(c) Loss of time, and time is a very important factor in Chess.

(d) This move costs a P, without any compensation. Indeed, it strengthens White's center.

(e) A very poor move. It accomplishes nothing, and weakens the K P.

(f) Hardly to be commended. The position at this stage is worth some consideration. We find that White has a strong center, every point guarded. Black, however, has two very weak Ps, and is already a P behind. If we are to get benefit from this, then we must answer the question: How and when did Black make his blunder or blunders?

(g) Now Black realizes the weakness of his unsupported K P.

- (h) This play is better than taking the P at once. (i) Nothing is good. R x R is not as good as the move selected, for obvious reasons. (j) White has quite easy sailing. (k) Kt x Kt was good enough, but the text-move is better, as it gets the K out of the fight. (l) Should have allowed Black to do the taking, altho most anything would do. However, Black should have tried to do something with his Q Ps.

The United States Championship Match.

At the time of going to press the score is: Pillsbury, 3; Showalter, 1; draws, 2.

SECOND GAME.

Ruy Lopez.

Chess move list for the second game of the United States Championship Match.

Notes by Emil Kemyeny.

(a) The usual condition is: 6 B x Kt, Q P x B; 7 P x P, Kt—B 4; 8 Q x Q ch, K x Q, leading to a pretty even game. The move selected was played by Pillsbury against Lasker in the sixth round of the St. Petersburg tourney.

(b) Pillsbury's continuation in his game with Lasker was: 7 B x Kt, B x B; 8 P x P, Q P x B; 9 Kt x B, Q x Kt; 10 P x Kt, P x P; 11 R—K sq ch, B—K 3; 12 Q x P, R—Q sq; 13 Q—R 3, and the game terminated in a draw. The text-play would prove satisfactory if followed up by B x Kt and P x P.

(c) The safest play for White was (8) B x B, followed by P x P, leading to an even game.

(d) Better perhaps was Kt x Kt. White, however, could not regain his Pawn.

(e) White might have played P—Kt 6, followed eventually by Kt—Kt 5, which would have given him some chances of escape.

(f) White could not play P—B 4 followed by Kt x P on account of Kt—Kt 5 and Q—K 6 ch winning the exchange.

(g) Which prevents White from P—B 6. This practically ends the attack.

(i) White, it seems, pays but little attention to Black's doubling of Rooks on the King's file. He should have played Q—R 4.

(k) The winning move.

The Literary Digest Problem Tourney.

We have decided to begin a Problem Tourney, under the following conditions:

- 1. Only two-movers and three-movers will be accepted. 2. Problems must be sent addressed to "Problem Editor," Chess-Department, THE LITERARY DIGEST. 3. Any subscriber of THE DIGEST is eligible to enter this contest. 4. This Tourney is not open to well-known and experienced problematists, as we desire not to get problems but to test the ability and show the talent of those who take an interest in, and support, the work which we have been trying to accomplish. 5. Send each problem on separate sheet, with name and address clearly given. 6. There will be offered two prizes for two-movers, and two prizes for three-movers.

Answers to Correspondents.

T. H. V. (1) When a P reaches 8th square you can take any piece you desire. You can have all the Qs you can get.

(2) In Castling on Q's side, move the K exactly as you do when Castling on K's side, that is, two squares.

(3) A sui-mate is where you compel your adversary to mate you. A stale-mate is where you can't move.

We have received a communication from one of our old solvers, Mr. Nelson Hald, Donnebrog, Neb., informing us that the Chess-enthusiasts of Nebraska are trying to organize a State Chess-Association, and desiring us to say that any reader of THE DIGEST living in Nebraska, and interested in Chess, is requested to address T. N. Hartzell, Kearney, or Nelson Hald.

NEW YORK, MARCH 26, 1898.

WHOLE NUMBER, 414

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

SENATOR PROCTOR ON CUBA'S DESOLATION.

WITH very few exceptions, the most conservative of newspapers now express the opinion that Senator Proctor's careful statement of conditions in Cuba (in the Senate, March 17) makes intervention the plain duty of the United States on the simple ground of humanity. Senator Proctor is a conservative Republican of Vermont, an ex-Secretary of War in President Harrison's Cabinet, and he went to Cuba to make a personal investigation of conditions which he believed had been exaggerated in the public press. The facts which he gives have appeared from time to time in various newspapers; people knew that our State Department had appealed twice for contributions to aid the sufferers, that Clara Barton of the Red Cross Society had taken up relief work there, and they were more or less familiar with estimates of the number of thousands of Cubans who have starved and perished within the past three years. But Senator Proctor's deliberate and comprehensive statement in the Senate Chamber seems to have made conviction general that the situation in Cuba is actually intolerable.

"Outside Havana," says Mr. Proctor, "the condition is not peace nor is it war. It is desolation and distress, misery and starvation." About four hundred thousand people in the four western provinces, remaining outside the fortified towns when Captain-General Weyler's order of concentration was made, were driven into these towns, and these are the reconcentrados. By the order they were compelled to get inside the line of fortifications within eight days, after which period any one found in the uninhabited parts was to be considered a rebel, and tried as such. The transportation of provisions from one town to another was prohibited without permission of the military authority, and the execution of the order of concentration was left largely to guerrillas. The reconcentrados were peasantry, farmers, some land-

owners, and others whose living was comfortable, judged according to the prevailing standard. From Senator Proctor's description of their present condition, we quote the following paragraphs:

"Every town and village is surrounded by a trocha (trench), a sort of rifle-pit, but constructed on a plan new to me, the dirt being thrown up on the inside and a barbed-wire fence on the outer side of the trench. These trochas have, at every corner and at frequent intervals along the sides, what are there called forts, but which are really small blockhouses, many of them more like a large sentry-box, loop-holed for musketry, and with a guard of from two to ten soldiers in each. The purpose of these trochas is to keep the reconcentrados in as well as to keep the insurgents out.

"From all the surrounding country the people have been driven into these fortified towns, and held there to subsist as they can. They are virtually prison yards and not unlike one in general appearance, except the walls are not so high and strong, but they suffice, where every point is in range of a soldier's rifle, to keep in the poor reconcentrado women and children. Every railroad station is within one of these trochas and has an armed guard. Every train has an armored freight-car, loop-holed for musketry and filled with soldiers, and with, as I observed usually and was informed is always the case, a pilot engine a mile or so in advance. There are frequent blockhouses enclosed by a trocha, and with a guard along the railroad track.

"With this exception there is no human life or habitation between these fortified towns and villages, and throughout the whole of the four western provinces, except to a very limited extent among the hills, where the Spaniards have not been able to go and drive the people to the towns and burn their dwellings. I saw no house or hut in the 400 miles of railroad rides from Pinar del Rio province in the west across the full width of Havana and Matanzas provinces and to Sagua la Grande on the north shore, and to Cienfuegos on the south shore of Santa Clara, except within the Spanish trochas. There are no domestic animals or crops on the rich fields and pastures except such as are under guard in the immediate vicinity of the towns. In other words, the Spaniards hold in these four western provinces just what their army sits on. Every man, woman, and child, and every domestic animal, wherever their columns have reached, is under guard and within their so-called fortifications.

"To describe one place is to describe all. To repeat, it is neither peace nor war. It is concentration and desolation. This is the 'pacified' condition of the four western provinces. . . .

"When they reached the town they were allowed to build huts of palm-leaves in the suburbs and vacant places within the trochas, and left to live if they could. Their huts are about 10 by 15 feet in size, and for want of space are usually crowded together very closely. They have no floor but the ground and no furniture, and after a year's wear but little clothing except such stray substitutes as they can extemporize.

"With large families or with more than one in this little space, the commonest sanitary provisions are impossible. Conditions are unmentionable in this respect. Torn from their homes, with foul earth, foul air, foul water,

THE LIVING DEATH.
Courtesy of *The Christian Herald*.

and foul food or none, what wonder that one half have died and that one quarter of the living are so diseased that they can not be saved. A form of dropsy is a common disorder resulting from these conditions. Little children are still walking about with arms and chests terribly emaciated, eyes swollen, and abdomen bloated to three times the natural size. The physicians say these cases are hopeless. Deaths in the streets have not been uncommon.

"I went to Cuba with the strong conviction that the picture had been overdrawn, that a few cases of starvation and suffering had inspired and stimulated the press correspondents, and they had given free play to a strong, natural, and highly cultivated imagination. Before starting I received through the mail a leaflet, published by *The Christian Herald*, with cuts of some of the sick and starving reconcentrados, and took it with me, thinking these were rare specimens got up to make the worst possible showing. [Two of these cuts are reproduced herewith.—*Editor LITERARY DIGEST.*] I saw plenty as bad and worse; many that should not be photographed and shown. I could not believe that out of a population of 1,600,000 200,000 had died within these Spanish forts, practically prison walls, within a few months past from actual starvation and diseases caused by insufficient and improper food.

"My inquiries were entirely outside of sensational sources. They were made of our medical officers, of our consuls, of city alcaldes (mayors), of relief committees, of leading merchants and bankers, physicians and lawyers. Several of my informants were Spanish-born, but every time the answer was that the case had not been overstated. What I saw I can not tell so that others can see it. It must be seen with one's own eyes to be realized. The Los Pasos Hospital, in Havana, has been recently described by one of my colleagues, Senator Gallinger, and I can not say that his picture was overdrawn, for even his fertile pen could not do that. He visited it after Dr. Lesser, one of Miss Barton's very able and efficient associates, had renovated it and put in cots. I saw it when four hundred women and children were lying on the stone floors in an indescribable state of emaciation and disease, many with the scantiest covering of rags, and such rags, and sick children, naked as they came into the world. And the conditions in the other cities are even worse.

"General Blanco's order of November 13 last somewhat modifies the Weyler order, but is of little or no practical benefit. Its application is limited to farms 'properly defended,' and the owners are obliged to build 'centers of defense.' Its execution is completely in the discretion of the local military authorities, and they know the terrible military efficiency of Weyler's order is stripping the country of all possible shelter, food, or source of information for an insurgent, and will be slow to surrender this advantage. In fact, tho the order was issued four months ago, I saw no beneficent results from it worth mentioning. I do not impugn General Blanco's motives and believe him to be an amiable gentleman, and that he would be glad to relieve the condition of reconcentrados if he could do so without loss of any military advantage, but he knows that all Cubans are insurgents at heart, and none now under military control will be allowed to go from under it."

Senator Proctor examined the military situation, and discovered about sixty thousand Spanish soldiers now in Cuba fit for duty out of over two hundred thousand that have been sent there. They are conscripts, many of them very young, and generally small men. "If well-drilled and led they would fight fairly well, but not at all equal to our men," and their life in Cuba has not been that of strict drill or regulation. Mr. Proctor learned that the Cubans have about thirty thousand men now in the field, some in every province, but mostly in the two eastern provinces, and eastern Santa Clara.

Mr. Proctor could not learn that the Spanish residents of the island had contributed largely in blood or treasure to suppress this insurrection. The percentage of colored people to white in Cuba has been steadily diminishing

for more than fifty years, and is not now over 25 per cent. of the total. The colored people, he thought, were equal mentally and physically to the race in this country, and he described the Cuban farmer and laborer as peaceable, kindly, gay, hospitable, light-hearted, and improvident. He mentions the fact that many Cubans whom he met spoke strongly against bull-fights, and he was surprised to learn the superiority of the well-to-do-Cuban over the Spaniard in the matter of education. He found that the substantial men in Cuba believe that the Blanco plan of autonomy comes "too late":

"The dividing lines between parties are the most straight and clear-cut that have ever come to my knowledge. The division in our war was by no means so clearly defined. It is Cuban against Spaniard. It is practically the entire Cuban population on one side and the Spanish army and the Spanish citizens on the other. I do not count the autonomists in this division, as they are so far too inconsiderable in numbers to be worth counting. General Blanco filled the civil offices with men who had been autonomists and were still classed as such. But the march of events had satisfied most of them that the chance of autonomy came too late. It falls as talk of compromise would have fallen the last year or two of our war. If it succeeds it can only be by armed force, by the triumph of the Spanish army, and the success of Spanish arms would be easier by Weyler's policy and method, for in that the Spanish army and people believe.

"There is no doubt that General Blanco is acting in entire good faith; that he desires to give the Cubans a fair measure of autonomy as Campos did at the close of the ten-years war. He has, of course, a few personal followers, but the army and Spanish citizens do not want genuine autonomy, for that means government by the Cuban people. And it is not strange that the Cubans say it comes too late. I have never had any communication, direct or indirect, with the Cuban Junta in this country or any of its members, nor did I have with any of the junta, which exists in every city and large town of Cuba. None of the calls I made were upon parties of whose sympathies I had the least knowledge, except that I knew some of them were classed as autonomists. Most of my informants were business men who had no sides and rarely expressed themselves. I had no means of guessing in advance what their answers would be, and was in most cases greatly surprised at their frankness. I inquired in regard to autonomy of men of wealth and men as prominent in business as any in the cities of Havana, Matanzas, and Sagua, bankers, merchants, lawyers, and autonomist officials, some of them Spanish-born, but Cuban-bred, one prominent Englishman, several of them known as autonomists, and several of them telling me they were still believers in autonomy, if practicable, but without exception they replied that it was 'too late' for that. Some favored a United States protectorate, some annexation, some free Cuba; not one has been counted favoring the insurrection at first. They were business men and wanted peace, but said it was too late for peace under Spanish sovereignty. They characterized Weyler's order

TWO VICTIMS OF THE FAMINE WHO DIED SIDE BY SIDE.

Courtesy of *The Christian Herald*.

in far stronger terms than I can. I could not but conclude that you do not have to scratch an autonomist very deep to find a Cuban. There is soon to be an election, but every polling-place must be inside a fortified town. Such elections ought to be safe for the 'ins.'

Mr. Proctor concluded his speech in the following language :

"I have endeavored to state in not intemperate mood what I saw and heard and to make no argument thereon, but leave every one to draw his own conclusions. To me the strongest appeal is not the barbarity practised by Weyler nor the loss of the *Maine*, if our worst fears should prove true, terrible as are both these incidents, but the spectacle of 1,500,000 people, the entire native population of Cuba, struggling for freedom and deliverance from the worst misgovernment of which I ever had knowledge. But whether our action ought to be influenced by any one or all these things and if so, how far, is another question. I am not in favor of annexation, not because I would apprehend any particular trouble from it, but because it is not wise policy to take in any people of foreign tongue and training and without any strong guiding American element.

"The fear that if free the people of Cuba would be revolutionary is not so well founded as has been supposed, and the conditions for good self-government are far more favorable. The large number of educated and patriotic men, the great sacrifices they have endured, the peaceable temperament of the people, whites and blacks, the wonderful prosperity, that would surely come with peace and good home rule, the large influx of American and English immigration and money, would all be strong factors for stable institutions.

"But it is not my purpose at this time, nor do I consider it my province, to suggest any plan. I merely speak of the symptoms as I saw them, but do not undertake to prescribe. Such remedial steps as may be required may safely be left to an American President and the American people."

IS AMERICA A FALLEN NATION?

THIS rather striking question receives an affirmative answer from Rev. William Bayard Hale, LL.D., in *The Arena* (March); but Dr. Hale is not wholly pessimistic in his view of our case. We are "fallen," "apostate," "enslaved"; but we have traits which will yet put us in our appointed place. We quote from his article entitled "The Epic Opportunity":

"Beloved America, child of the world's old age, she has come—clad in the splendor of her youth, magnificent in her colossal materialism; but unfurnished in the serious, nobler, and more necessary things—to the days when the burden of life must rest upon her, and her people arise and face the tremendous issues in whose midst nations meet their destiny. A people of great mental keenness, energetic, swift; undeniably a vulgar people, with sordid, mercenary, contemptible ways of living, but as undeniably brave, *capable* of great deeds of nobleness—God has given us this great continent, and He has brought here upon it to its present stage, this vast society and life, intricate, complex, full of wrong and full of promise, and He has led us to this wonderful hour of crisis.

"No man can describe this people or measure its characteristics, as no man (yet manifest among us) can interpret the significance or guess the end of the mighty movement which is passing before our eyes. That we are at this moment a fallen nation, an apostate people, enslaved by a gluttonous materialism, and a disappointment to our God, an awakening conscience among us bears witness. On the other hand, there are not wanting evidences that we possess (the gift of Providence) traits which when aroused will restore us to our appointed place; nor altogether, evidences that there is arising in the heart of the people a yearning for better things, and emerging from within her an inarticulate resolution to be something besides commercial—to be a servant of progress and honor. There have begun to be spoken, among a few, new words, symbols of a swift-gathering movement. There has begun to move before young men a new standard, a new ideal, white with a virgin beauty never before seen on earth, or sought by the sons of men. Suddenly there has been fashioned a new language, which talks of the unity (the essential, unescapable

unity, in interests and destiny) of men, of the joy of sacrifice, of the vulgarity of success; which scorns the things men hitherto have striven for, despising all but honor and freedom and truth; which speaks of an aristocracy of simple men who work for love, but will not work for pay. There are beginning to be sung songs of plainness and contentment, and of an almost vagabond joy in nature (sign of reaction against old conventions concerning happiness).

"One thing I do not discern, that must appear if this people is to rise to its destiny—the man who shall lead us. Among the murmured songs and the whispered words, I hear no tones firm and authoritative and assuring. In the world there are more echoes than voices. The crisis upon our nation waits the coming of the man whose gaze shall sweep the past and apprehend the present as its fruit and evolution, appointed in its turn to pass into (he will see what) other forms; the man in whose heart shall dwell vision of a world redeemed, and the divine passion to redeem it."

RAILROADS AND THE POSTAL SERVICE.

A THREE-DAYS' debate in the House of Representatives, which ended in tabling the Loud postal bill (March 3), secured comparatively little attention in the daily press, but it brought out considerable information on alleged abuses by the railroads in connection with the postal service. Mr. Loud's bill, which has been before the public and Congress in substance for many years, was directed against certain abuses by publishers of the privileges accorded to second-class matter under postal regulations. Successive postmaster-generals have pointed out the abuses in this part of the postal service as the source of annual deficit, and have urged the necessity of a remedy for them.

M. Loud's bill sought to limit the number of sample copies entitled to second-class rates, and attempted to define classes of publications which should be excluded from the second-rate classification. Besides declaring the necessity of wiping out the annual deficit in the postal department, Mr. Loud insisted that the present practise constitutes a practical subsidy to the press of the country amounting to \$40,000,000 a year, and that, in reality, while benefiting 25,000 men engaged in the publishing business, it taxed everybody else for their benefit.

The bill was vigorously attacked, and most effectually, it appears, not on the ground that the abuses at which it aimed should not be corrected, but on the ground that the real trouble in the postal service is to be found in exorbitant charges which the Government pays to railroads for transporting the mail. Mr. Loud admitted that the Government was paying too much for the railroad service, altho he failed to give definite figures and denied the accuracy of the figures quoted by the opponents of the bill. He insisted that the question of railroad transportation, if wiped out, would not remove the inequality that exists between the great mass of the people and the publishers who take advantage of the second-class rate privileges; and he cited the estimate that his bill would take 100,000,000 pounds out of the mails, and hence reduce the amount of railroad mail pay, to refute the accusation that his measure was in the interest of railroad and express companies. Mr. Loud said, in presenting the bill, that if a private corporation or an individual were to operate the Post-Office Department, or if the department were to be operated by any one who had a financial interest in it, he would not fear even the present law. In the report of the post-office committee (of which he is chairman) which accompanied the bill he expressed the opinion that private means could transmit the mail much more cheaply, with quicker despatch and better satisfaction to the people, than the present system, adding: "There is not a sane business man in the country who has given the matter any thought but what knows that the Post-Office Department could be operated by private individuals on our present appropriations, and return a net profit of from thirty to forty million dollars per year."

The opposition to the Loud bill argued that its provisions were

calculated to hamper the country newspapers, and hence a blow at the education of the masses of the people. But the debate turned chiefly on the question of railroad profits. It was repeatedly asserted that while the Government is paying about 8 cents a pound for the transmission of mail matter, over an average distance of 448 miles, express companies have contracts with railroads whereby they pay but two fifths of a cent a pound for the transmission of similar matter for a distance of 500 miles. A concise statement of this feature of the postal problem was made by Mr. Lloyd, of Missouri, as follows:

"I learn from the report of the Postmaster-General for 1897 that there was expended for the transportation of the mails by the railroads \$30,171,542.69; that there was paid for what is known as the 'star-route service' \$5,363,903.41. The star-route service is that where mails are carried by conveyance other than railway. From the same report we learn that the length of mail route by railway is 173,475 miles, with an annual travel in carrying the mails of 273,190,356 miles; that the cost for each mile traveled in carrying mail by this method is 11.04 cents; that the annual rate per mile of length of route is \$173.35.

"Now, I wish you to observe the comparison between these and the cost of carrying the mails by the ordinary methods other than railway. The length of star-routes is 265,598 miles; the annual travel is 124,123,415 miles; the cost of carrying for each mile traveled is 4.32 cents; annual cost per mile of length of route is \$20.19. Now, I wish to inquire, why this difference? Railroads cheapen transportation in every other respect, why is it that they should not cheapen transportation of the mails? Yet it will be observed that we are paying nearly nine times as much per mile for carrying the mails by rail as by other conveyance. It may be asserted in response that there are more miles traveled in carrying the mails by rail than by star route.

"This I concede. Slightly over twice as many miles are traveled by railway as by other conveyance. But if the same rate per mile were paid for carrying the mails by railway as by star route the annual expenditure to the railroads would be the sum of \$11,802,823.37, instead of the \$30,171,542.69 which we now pay, and there would be a saving to the Government of \$18,368,719.32. If this could be effected, the whole revenue question, so far as the Post-Office Department is concerned, would be settled, for there would be a surplus of over \$6,000,000 annually in the receipts of the department.

"The average haul of mail matter, as shown by the report of the Postmaster-General for 1896, is 448 miles.

"The express companies for a distance of 500 miles will carry that which is delivered them at the rate of 1 cent per pound, if expressed in large quantities. Now, if the Government would ship its mail by express at the same rate large business companies are paying, the total expenditure for carrying the mail would not exceed \$6,100,000, and there would be saved to the taxpayers of this country at least \$24,000,000. You inquire how I make this estimate. The total weight of all the mail of every class that is transmitted is 610,000,000 pounds, and this at one cent per pound would be \$6,100,000. We pay now, as shown by the reports, over \$30,100,000 to the railroads for this service, and by comparison you can see that \$24,000,000 would be saved.

"Another fact, it seems to be understood that the railways get two fifths of the gross receipts of the express companies for carrying their traffic, so that for a like number of pounds as our total mail the railroads receive from the express companies \$2,440,000. How does this compare with the \$30,000,000 the Government pays? Can not any one see where the great abuse is in the postal service? Why not strike at the root of the evil and stop this extortion on the people? No wonder many people in this nation are in favor of government ownership of railroads! Unless Congress awakes to its duty in the protection of the people from this inexcusable abuse of power there will be many more in favor of such ownership in the future."

In the course of the debate it was contended that it was unfair to make the railroads responsible for the whole item of transportation, and, altho it was stated that exact figures concerning the handling of second-class matter had not been obtainable from the department, it was pointed out that such calculations as that above showing a government payment of 11.04 cents on railroads and 4.32 cents on star routes per mile are not figures showing the railroad charge per pound per mile.

Several months ago Frank Parsons contributed an article to *The Arena* setting forth, in comparative form, the charges for haulage which railroads make to the Government, to freight-shippers, and to express companies, concluding that an average rate of \$1 per hundred weight for haulage, plus 15 cents a car mile on railway, post-office, and apartment cars, plus 10 per cent.

on the value of the cars, would be very liberal compensation to railroads for carrying mails, "the second item alone being more than enough to cover the transportation of the cars and all there is in them over lines having postal-car or apartment service." The account for railway service would then be \$18,000,000 instead of \$34,840,000, the Government saving \$16,840,000, or a surplus about equal to current deficits.

The Springfield *Republican* has repeatedly criticized railway mail "conspiracy" and "extortion" in this connection, and an article by James L. Cowles, contributed to *The Outlook*, New York (February 19), was used almost bodily in the congressional debate as evidence against the railroads. Mr. Cowles quoted Senator Gorman's answer to the question, Why a cent-a-pound rate is not unprofitable to express companies while it is unprofitable to the post-office, as follows:

"The fact is, Mr. President, that the great power of these corporations, who control everything, who are so powerful that they make and unmake public men, is so omnipotent that no executive officer has been found in the last twelve years, except in the single case of Postmaster-General Vilas, who has attempted to reduce the compensation for mail transportation, and within six months after he had left the department every economy which he had introduced was wiped away, and they received not only what they had received before, but their compensation was increased. And never, during his long service in this body, the United States Senate,' said the Senator, 'except in this one instance, did he know of a postmaster-general who made a *bona-fide* effort to control this railroad extortion which every one knows to exist.'"

Following up the subject of railroad abuses in the postal service, *The Outlook* reprints evidence of frauds in the weighing of mails in order to secure heavy compensation, points out the economy of government ownership of postal cars, and insists that railroad charges to the Government should be reduced in correspondence to reductions that have taken place in general freight charges. We quote at length:

"Evidence submitted [by Representative S. W. Smith, of Michigan, having reports of ex-Postmaster-General Wilson and the post-office inspector for authority] was briefly as follows:

"Once in four years the mails transported over one fourth of the various railroads of the United States are weighed during a period of thirty days. Upon the average weight thus obtained the compensation of each road is determined for the next four years. During the quadrennial weighing upon the Seaboard Air Line in March, 1869, says the inspector's report, 'about 300 sacks of documents, franked by United States Senator J. B. Gordon, of Georgia, and Representative A. C. Latimer, of South Carolina, were sent to the various agents of this company in Virginia, North Carolina, South Carolina, and Georgia. Two, three, four, or five of these sacks, each weighing 100 to 125 pounds, were sent to an agent [who], in railroad mail, received envelopes containing slips of paper or labels, franked by Senator Gordon and addressed to various offices in Georgia and South Carolina, a large portion of the addresses being to railroad employees or postmasters.

"The division superintendent and roadmasters gave oral instructions to the agents under them as to pasting on labels or writing addresses on the books which were not previously addressed. The books were then remailed and again transported over the route of this company, to be again weighed. *Fifteen sacks were delivered at Portsmouth, Va., addressed in bulk to General Superintendent V. E. McBee. That night the books were addressed in the railroad building by his secretary (Williams) and a division superintendent (Wishnaut) and remailed the following morning to various addresses along their route.*

"This padding of the mails having been detected, the Postal Department ordered another weighing in April. 'The railroad then resorted to a new scheme by contracting with publishers for a large number of papers to be sent daily over their line to addresses furnished by the company.

"At Portsmouth, Va., General Superintendent McBee arranged with *The Star* to send 6,800 copies daily for ten days, and after that 2,400 daily, in bundles of 25 to each address to parties in South Carolina and Georgia on the Seaboard Air Line. At

Raleigh, N. C., the private secretary of McBee arranged to have 6,000 copies the first week, 8,000 copies a week afterward, of *The North Carolinian* sent in bundles of 45 to each address, over the Seaboard Air Line to stations in South Carolina, Georgia, and a few in North Carolina. At Atlanta, Ga., the private secretary of Division Superintendent Berkley arranged with the *Atlanta Journal* for 2,000 copies daily, to be sent over the Seaboard Air Line Railroad to Norfolk and Portsmouth, Va., 1,000 addressed as to regular subscribers, the other 1,000 as sample copies. The *Atlanta Constitution* was to send 5,600 of each Sunday issue to addresses in Norfolk and Portsmouth, Va., this amount to be divided up and 800 copies to be sent each day, 400 by morning and 400 by night train. A copy of Sunday's paper weighs a little over half a pound. Norfolk and Portsmouth directories were furnished *The Journal* and *The Constitution* to print labels for mailing papers to parties in those cities.

"The total weight of the public documents sent over the Seaboard Air Line by the direction of its officials, and, it is believed, without the collusion of Senator Gordon or Congressman Latimer, was sixteen tons, and the weight of newspapers sent during the second attempt to defraud the Postal Department was ten tons.

"Even here, however, the scandal did not end. 'When the Postmaster-General complained,' said Senator Pettigrew, of South Dakota, 'they asked him what he was going to do about it, and Mr. McBee, the manager of the road, asked the Postmaster-General why the Seaboard Air Line had been singled out for criticism for stuffing the mails when it was well known that *all railroads practised the same fraud upon the Government.*' . . .

When the Postmaster-General learned of these frauds, and also the frauds connected with the second weighing, he found himself unable to punish as a criminal the railway official who took charge of this abominable work for his company. In a letter dated March 2, 1897, Postmaster-General Wilson says, 'I beg leave to call attention to the fact that the Attorney-General, in his letter of December 22, 1896, holds that the only criminal statute under which prosecution can be attempted for such offenses as these is the statute against conspiracies to defraud the United States, and that it was impossible under that statute to bring to justice the chief offender in this case.' In short, the Postmaster-General was unable to do anything more about it than the railway officials thought. [On March 18, Chairman Loud, on recommendation of the second Assistant Postmaster-General, presented to the House an amendment, which was agreed to, making it a misdemeanor to 'pad' the mails, punishable by a fine of from \$500 to \$20,000, and imprisonment from thirty days to five years.—EDITOR LITERARY DIGEST.] Whether General Superintendent McBee was

equally correct in stating that all the railroads practised the same fraud can not be determined.

"But the case against the railroads for excessive charges does not stop with excessive charges for mails actually carried, nor with fraudulent charges for mails carried only during the thirty-day weighing period. One of the most serious elements in the extortion practised upon the Government relates to the rent of the postal cars used by the department where the mails are heavy. Of these cars there are now nearly seven hundred in use, and the Government pays for them an average rental of \$5,700 each. Yet when ex-Senator Vilas was Postmaster-General during Mr. Cleveland's first term he investigated the cost of such cars, and reported that they could be built for less than the annual rental paid by the Government. 'Careful inquiry,' said Mr. Vilas in the United States Senate, 'discloses that very many of these cars, such as they are, would not cost to build \$3,000 each, and that, taking together all the post-office cars in the United States, their average value does not probably exceed \$3,500.' In support of this estimate Senator Vilas cited Senator Brice, of Ohio, a railroad man whom no one ever suspected of anti-monopoly leanings. The average life of these cars, says Representative Smith, of Michigan, is at least twenty years, so that an annual rental of \$700, or 20 per cent. upon the cost of these cars, would seem to be an exorbitant charge; yet the Government goes on, year after year, paying the railroads an annual rental of \$5,700, or more than 150 per cent. of their probable cost. When a few of these cars were first tried as an experiment, this rental may not have been so preposterous, but these cars have become an established part of the postal system, and their number increases every year. The annual payment for them is now very nearly \$4,000,000. This outlay could, by the Government's purchase of the cars, be reduced to far below \$1,000,000 a year. Postmaster-General Vilas recommended this course, and his recommendation has been before the country for years, commanding approval wherever it has been studied, yet in the absence of a strenuous demand from the general public the abuse goes on unrectified."

The Outlook concludes that the question of railroad charges is not to be settled offhand, but that since the present charges are practically those of 1873, and no reduction has been made since 1878, while the roads claim that general freight rates during this period have been reduced more than 40 per cent., a like reduction in charges to the Government ought to be made. Further, the Government should pay the railroads as much as the express companies pay them for similar services, but not more. At present they are said to be paid at least three times as much by the Government as by the express companies.

TERENCE V. POWDERLY, OF PENNSYLVANIA,
Commissioner of Immigration.

WM. J. CALHOUN, OF ILLINOIS,
Interstate Commerce Commissioner.

PRESIDENTIAL APPOINTEES.

SIX CARTOONS ON THE CUBAN SITUATION.

NEWSPAPER WAR OVER "YELLOW JOURNALISM."

ONE of the diversions which has tempered the strain of public feeling over Cuban complications has appeared in a rabid newspaper controversy about "yellow journalism." This term came into use several years ago as a designation for sensational journalism, having its origin, apparently, in the rival claims of two newspapers in New York to the use of a comic figure called "the yellow kid." A somewhat similar use of this word "yellow," as applied to certain sports, especially baseball, is given in the Standard Dictionary. When the term is applied to any particular journal, the answer is usually made that as a matter of fact "yellow journalism" is synonymous with enterprise, and that those papers that intend to cast a slur by using the term in reality only seek thus to discredit information which they are not able to get for themselves.

Among the newspapers of New York City this controversy over "yellow journalism" has been notably active. *The Evening Post*, for example, accuses the "yellow journals" of deliberate lying for the purely commercial purpose of selling great quantities of papers and so fomenting popular passions instead of contributing to calm and sober consideration of facts. That paper laments the state of morality among the mass of the people who support these journals as well as among the proprietors who are in a moral sense responsible for the conduct of their publications. Without attempting to propose an antidote for this condition of things, *The Post* says:

"As we see to-day, in spite of all the ridicule that has been lavished on the 'yellow journals,' in spite of the daily exposure of their lying, in spite of the general acknowledgment of the mischief they do, in spite of the general belief in the baseness and corruption and satanism of their proprietors, their circulation is apparently as large as ever. The Government and decent people are still obliged, as much as ever, to keep contradicting their 'fake' stories and to keep reassuring the public against their alarms. There is a widespread belief that one of them is 'short of stocks'; that another has, just as if he were the devil himself, laid a large wager that he will bring on a war within a certain period. None of these things seems to produce much if any effect. We made inquiries the other day about their sales of a newsdealer in a small suburban village. He told us he sold 150 of the yellowest, 110 of the next yellowest, 10 of the most blackguardly and unscrupulous, only 2 of *The Tribune*, and 1 of *The Times*; this after the yellows had been notoriously lying and trying to bring on a war for over two weeks. There was probably hardly one of these purchasers who, if questioned individually, would not confess that he did not believe a word he read in his paper. Yet it would be found on further talk about Cuba and the war, and the duty of our nation, and the conduct of the Spaniards, that his opinions on all these subjects, or on nearly all, had acquired a distinctly yellow tinge. You would not come across, in any of them, any signs that he had been seeking light at any of the sources from which civilized and Christian men are usually supposed to ask guidance about either public or private affairs, under trying circumstances."

The New York *Journal* (which assumed the responsibility of rescuing Evangelina Cisneros from a Spanish prison, sending congressional delegations to investigate Cuban conditions, etc.) replies:

"Apparently the candid newsdealer is not selling any *Posts* at all. *The Post* seems not to realize that, and the very facts it recites are the severest reflection upon its own veracity since they prove that the people believe the journals it condemns and do not believe *The Post*. Evidently the reason why so many of the new journals and so few of the old are sold is that the new journals try to discover the truth; and when they discover it tell it, while the old ones try not to discover it, and when it is forced upon them suppress it."

In further defense of its policy, *The Journal* says that the

month which has elapsed since the *Maine* disaster has been notable for—

"The most copious, vehement, and unabashed lying on the part of the so-called 'conservative' press of New York that the history of American journalism can show. The headlines of any one of these organs of respectability for the past four weeks, if assembled in one view, would give even their seasoned authors a shock. Every fact that has been brought to light during that time has had to make its way to the surface against the desperate efforts of 'conservative' journalism to keep it down, and if possible to lie it out of existence. The readers of *The Journal* knew immediately after the destruction of the *Maine* that she was blown up by a Spanish mine; the readers of *The Evening Post* are just finding it out now. It is little over a week since the readers of the Tory press were first allowed to know that the war preparations on foot were anything more than 'routine industry.' As the readers of these papers are the kind that frequent Wall Street, the financial havoc wrought among them by this sort of misinformation has been distressing.

"*The Journal* can look back upon this exciting month with just pride. As it has had no sinister financial interests to serve, it has not, like its mortgaged 'conservative' contemporaries, found the truth an unattainable luxury. It has told the facts as fast as they have come to light, and has had the satisfaction of seeing them first denied and then copied three weeks later.

"Having had nothing but truth and right to consider, *The Journal* has been able to have a consistent policy, in which it has never wavered. From the first it has treated the disaster to the *Maine*, not as a subject for a damage suit, nor as a matter for a savage revenge, but as the last and crowning item in the score of Spanish misgovernment in Cuba, and the final proof that the further continuance of that misgovernment has become intolerable to the United States. It has held that the dignified, the just, the humane, and the expedient answer to the Spanish mine that destroyed the *Maine* is Cuba Libre."

The Boston *Transcript* is one of the conservative newspapers which considers that the conduct of the sensationalists is nothing less than a peril to the press itself:

"A free press is essential to free institutions, but if the time ever comes in this country when a government can command the press to speak or be silent, as the French Government now muzzles the Dreyfus discussion by ministerial decree, 'yellow journalism' will be answerable for the enslavement. A community which finds or thinks it finds its peace and property imperiled by newspapers whose managers, inspired by the meanest commercialism, imperil those interests for the purpose of 'selling more papers,' will no more hesitate to punish newspaper men than men of any other profession or calling so sinning against the public. Then the good, the bad, and the indifferent will come in for indiscriminate punishment of the sins of the guilty. The liberty of the press was never meant to be license, and neither law nor common sense gives immunity to license."

In jocular mood over the latest phase of newspaper warfare the New York *Tribune* concludes an editorial on "The Power of the Press" as follows:

"The newspaper publisher who goes forth to this war panoplied in self-reliance and cheered by the vociferations of ten thousand newsboys has the assurance of victory before he starts, whether there is a war or not. The American people will be to him the Spartan mother who sent her son to the war, bidding him come back 'with his shield or on it.' They will insist, however, that he shall not come back 'on it.' There are too many folks 'on it' now.

"We repeat the expression of our regret that there should be any criticism of the conduct of the war now in progress in Printing-House Square or of the motives of the enterprising publishers who are so valiantly and vigorously prosecuting it. Except in the case of the comparatively few persons who go to bed early and do not like to be disturbed by the cry of 'Extra!' we do not believe that these newspapers have aroused any 'warlike passions.' Up to this point the war has been a glorious success, as will be seen by the billboard announcements of the increased circulation of the newspapers which have carried it on. If, as now seems probable, its ravages can be confined to Printing-House Square, and Spain is 'licked' right here with blood-red extras without

resorting to shot and shell, it will be the greatest triumph ever achieved by large type and a liberty-loving press."

Newspaper readers who find these charges of being envious green or sensational yellow a trifle confusing, may welcome some sensible hints given by the Philadelphia *Ledger* regarding the reading of war news:

"This may be an eventful week in the history of the country, and the advice still remains good to 'keep cool and wait for the facts.' Because of the great interest taken in the preparations for defense, the news-gatherers in all parts of the country are seizing upon every hint and rumor, and spreading them broadcast. Some of them enlarge upon the grain of truth they have found, and turn it into a pound of fiction. The only way the news editors of papers with a reputation for truth and accuracy can guard against the publication of false stories is to reject despatches from correspondents known to be unreliable. Even then they will be misled into the publication of some false stories, for honest correspondents may be misinformed, or may feel obliged to send out unverified rumors because of the reticence of government officers. If one will look over the despatches sent out by the most reliable news associations since the *Maine* disaster, he will find that a large number of them, and usually those of the greatest importance, have been denied almost as soon as published. It is generally an easy matter, however, to identify the reliable news as distinguished from that which requires verification. When the source of information is vaguely given or is ascribed to rumor or to the 'general opinion' of naval officers or members of Congress, the news contained therein should be accepted with a reservation. When a news agency or correspondent of good reputation gives the name of his informant and quotes his exact language, there is every reason to believe his despatch, for men of good reputation in the newspaper business do not invent such things.

"It seems to be necessary to give this caution, because in the next few days we may expect many disquieting rumors of war, which have to be given for what they are worth, as they can not in the nature of things be fully verified and are too important, if true, to be ignored.

"The reader should also keep in mind, as influencing the character of news started by rumor, that unscrupulous speculators stand ready to depress values by startling announcements, which have their effect on the bond market before they can be denied. An instance of this was shown in Wall Street on Saturday, when United States bonds and American securities generally were depressed by the mere statement that London operators took a gloomy view of the prospects for peace. The stock market is extremely sensitive, and some of the rumors published in good faith are set afloat no doubt to rig the market for the benefit of speculators. Everybody who keeps a cool head can help to create a conservative influence that will at least prevent the nation from being stampeded by false reports. We should all await in patience official reports and official action."

TOPICS IN BRIEF.

A NEW island discovered near Borneo! All hands around? Grab!—*The Republican, Springfield.*

IN any event, Congressman Dingley must be thankful for the diversion.—*The Tribune, Detroit.*

REASONABLE.—"Say, paw," asked little Oscar, "were there ever really Slaves of the Lamp?"

"Shouldn't wonder," said Gobang, "There are slaves of the gas companies now."—*The Journal, New York.*

IT seems that Spain has not bought any war cruisers. What Spain most needs is a lifeboat.—*The Herald, Baltimore.*

GOVERNOR BUSHNELL wants to build a monument on the ruins of Morro Castle. This is the same Governor Bushnell who tried to build a senatorial boom on the ruins of Mark Hanna. First get your ruins.—*The Post, Washington.*

REACHED ITS DESTINATION.—It is significant that a postal card addressed "To the Congress of United States, Washington, D. C.," was delivered at once to Speaker Reed. The Washington post-office people know a thing or two.—*The Globe, Boston.*

WE might as well do it as somebody else:

For President:

GEN. FITZHUGH LEE,

At Present of Havana.

—*The Journal, Milwaukee.*

THE two Seminoles who were burned at the stake by a mob in Indian Territory have had alibis proved for them by their friends. Some day a wide-awake official will start a Gatling gun spitting at a mob, and lynch law will become unfashionable. The sooner the better.—*The Journal, Minneapolis.*

"I AM tired of these constant suspicions," exclaimed the politician. "I'm going to demand an investigation." "But," replied the confidential friend, "are you sure an investigation would really vindicate you?" "I don't know about that; but it will show these people, once for all, that they can't prove anything."—*The Star, Washington.*

A SAILOR'S DESCRIPTION.—A well-known naval officer, now stationed at Key West, writes to *The Electrical Review* as follows: "The *Bache* brought over to the quarantine hospital here a number of the survivors of the *Maine*. One of these wounded jackies, when asked to tell what he knew of the frightful explosion, said: 'Well, sir, I was a-corkin' it off in me hammick, sir, when I hears a hell of a noise. Then, sir, the nurse says, "Sit up an' take this." That's all I know, sir.'"

COLONEL HUNT says that a private in the First Regiment, Ohio, refuses to go to war because he stutters.

"You don't go to talk, but to fight," said the Colonel.

"But they'll p-p-put me on g-g-guard, and a man may go ha-ha-half a mile before I can say, 'Who-who-who goes there?'"

"Oh, that's no objection, for there will be another sentry placed along with you, and he can challenge if you can fire."

"Well," stammered the private, "b-b-but I may be t-taken and run through the g-g-gizzard before I can c-c-cry qu-qu-quarter."—*The Enquirer, Cincinnati.*

LETTERS AND ART.

GROWING INFLUENCE OF AN AMERICAN PAINTER.

TEN years ago, Mr. Claud Phillips, one of the ablest art-critics of England, declared that, so far as it was possible to foretell the future, it would be from the influence of James Whistler and the contemporary French painters that the next developments of English art would be derived. Recalling that prediction, a writer in *The Quarterly Review* (London, January), in reviewing English art in the Victorian age, says: "That prophecy has

JAMES ABBOTT MCNEILL WHISTLER.

been literally fulfilled." The writer then goes on to speak of the remarkable hold that French methods and ideas in art have gained in England in the last ten years, and finds the chief reason for it in Mr. Whistler's influence:

"But the master who has brought French influence to bear the most powerfully upon contemporary English art, and whose own style finds more imitators every year among the rising generation of painters, is Mr. Whistler. Altho neither English by birth nor yet by education, since he was born at Baltimore in 1834, and after spending his boyhood in Russia and America came to study painting under Gleyre in Paris, Mr. Whistler has spent many years of his life in London, and most of his finest works are in the hands of English collectors. We may, therefore, justly claim a share in this most cosmopolitan of artists, who is equally at home in Venice and Paris, in London and New York. His art, like his personality, is made up of many foreign elements. Velasquez and the Japanese, Manet and Degas, have all helped to form a style which is, none the less, singularly personal and unique. Mr. Whistler, we all know, stands before the world as the representative of art without ideas and the determined opponent of the literary element in painting which had found supporters in Mr. Ruskin and the pre-Raphaelites. *'More than*

any other man,' writes his fervent admirer, Mr. George Moore, *'Mr. Whistler has helped to purge art of the vice of subject and belief that the mission of the artist is to copy nature.'* But however much we may differ from Mr. Whistler in his theory of art, critics and painters of every school must agree in admiration of the superb craftsmanship and skill in the actual handling of paint, which has already done so much to raise the standard of technical attainment in this country. And if he refuses to recognize the presence of ideas in art, he is an equally resolute foe to the prosaic realism and photographic reproduction of the naturalist school. Selection, not imitation, is the keynote of his art. As he has told us in a pamphlet on the subject:

"Nature, indeed, contains the elements in color and form of all pictures, as the keyboard contains the notes of all music. But the artist is born to pick and choose, and group with science these elements, that the result may be beautiful, as the musician gathers his notes, and forms chords, until he brings forth from chaos glorious harmony."

"And he goes on, in words which recall Corot's rhapsodies of the twilight hour:

"And when the evening mist clothes the riverside with poetry, as with a veil, and the poor buildings lose themselves in the dim sky, and the tall chimneys become campanili, and the warehouses are palaces in the night, and the whole city hangs in the heavens, and fairyland is before us—then the wayfarer hastens home; the workingman and the cultured one, the wise man and the one of pleasure, cease to understand, as they have ceased to see, and Nature, who for once has sung in tune, sings her exquisite song to the artist alone, her son and her master, her son in that he loves her, her master in that he knows her. To him her secrets are unfolded, to him her lessons have become gradually clear. He looks at the flower, not with the enlarging lens, that he may gather facts for the botanist, but with the light of one who sees in her choice selection of brilliant tones and delicate tints suggestions of future harmonies."

"Like *'le Père Corot,'* that poetic painter of early morning and evening effects, it is less nature herself than his love of nature that Mr. Whistler seeks to represent. And like the great English landscape-painter, whose genius Mr. Ruskin first revealed to his countrymen fifty years ago, he subordinates details to the general impression, and aims rather at effects of tone and color than at the delineation of form. Thus, in his riverside landscapes, the lines of the banks and the shapes of the barges are often hardly definable, and even in his portraits, the figures, however admirably drawn and modeled they may be, seem like phantoms whose outlines melt away in the mysterious shadows of the background. Mr. Whistler is, above all others, the painter of the night and of the sea. No one has succeeded better in making us feel the poetry of the midnight sky with its depths of blue, and hosts of 'uncountable, infinite stars, showering sorrow and light,' or long lines of twinkling lamps gleaming along the riverside, where the barges are floating slowly down the stream. Like some of the French Impressionists he is fond of introducing fireworks in his pictures, and lights up his 'nocturnes' with sudden bursts of rockets shooting up into the blackness of the night, or falling in a golden shower over the dusky roofs and tall shipping in the harbor. The ocean again, with its sense of boundless space and changeable tints, attracted his imagination from his earliest youth, and long before Henry Moore became known to fame, Mr. Whistler painted his 'Breaking Wave,' and that lovely picture of the blue-green waters sleeping in the sunny bay of Valparaiso, of which Mr. Graham-Robertson is the fortunate possessor. All of these landscapes are described by the painter as nocturnes or harmonies. The picture of a rocket exploding in the night air is a nocturne in black and gold; another of the Thames at Battersea is described as a nocturne in blue and silver, and a wide sea-view with a spray of brown leaves in the foreground, and the white foam breaking at the prow of a bark in the left-hand corner, is called a harmony in gray and green. The smaller works in which a single color predominates are entitled a note in orange or white or red, as the case may be, while larger compositions in which two or more tints are introduced are called arrangements or symphonies. Thus, for instance, the Rossetti-looking girl with the dreamy eyes and flowing hair, which appeared at the Salon des Refusés in 1863 is called a symphony in white, and his different groups of Japanese maidens reclining on divans, under an Eastern sky in the courtyard, are described as a variation in flesh color and green, or a caprice in gold and purple. These titles, it must be remembered, are not the result of an idle freak of fancy, but are deliberately chosen by the painter to express his deeply rooted conviction that the subject itself is utterly insignificant, and that the artistic arrangement of color and tones is the chief and primary consideration in the making of a picture. With him

the arrangement of color has been a life-long study, and since musical terms correspond the best with the impression that he would convey, he has intentionally adopted this phraseology. Unfortunately, these names, when first applied to pictures, sounded ridiculous in the ears of the British public, and, together with the notoriety acquired by the artist in his lawsuit with Mr. Ruskin, contributed to damage Mr. Whistler's reputation in England. For many years we refused to take him seriously, and it is only quite recently that his high artistic merits have been recognized in this country."

Of all the other artists in England who derive their inspiration frankly from French sources, *The Quarterly* writer goes on to say, the one who comes nearest to Mr. Whistler in sureness of hand and mastery of means is Mr. John Sargent—another American, now at work on decorations for the Boston Library.

GREATEST WOMEN NOVELISTS.

ONE of the Chicago newspapers (*Times-Herald*) has been devoting considerable space to various quartettes of "greatest" people—actresses, statesmen, etc. Coming to the four "greatest women novelists" of the English language, it names them as follows: Mrs. Humphry Ward, Mrs. Phelps-Ward, Mrs.

JOHN OLIVER HOBBS.

Courtesy of Frederick A. Stokes Co., New York.

Burnett, and Ouida. *The Chap-Book* takes up the subject in the course of a review of John Oliver Hobbes's (Mrs. Craigie's) latest work, "The School for Saints," and expresses its opinion as follows:

"Had popularity been the basis—and Mrs. Burnett and Mrs. Phelps-Ward could hardly have been selected on other grounds—then surely Miss Marie Corelli was deserving of a place. But the newspaper must have known, in that case, that it would not be taken seriously. On the other hand, if brilliancy, intelligence, and real innate gifts count for anything, if fidelity to nature, art, and romance have any place, Miss Wilkins is infinitely superior to Mrs. Burnett. And if genius—buoyant, brilliant, and undeniable—is to be thought of in association with any woman now writing English fiction, the name of Mrs. Craigie—John Oliver Hobbes—is the sole possibility. Indeed, it is safe to say, without

any desire to exaggerate, that Mrs. Craigie has shown qualities far beyond any of the four persons named as the greatest women novelists. Yet she was not included—perhaps not even thought of—as one of the quartet."

The Chap-Book thinks "The School for Saints" "comes very near being a great book," and in it "once or twice she [the author] has shown the utmost strength and ability." The two great faults that conceal its greatness are incoherence and the occasional obtrusion of a religious purpose. The concluding paragraph of the critique is as follows:

"Yet, all in all, incoherence and ethics considered, 'The School for Saints' is by far the biggest book written by a woman in many years. It is one of the biggest books written by any one. It is full of promise, and promise not only of better work than other people have done, but of really great work. We are informed the continuance of the story will shortly be published. It can only be awaited with impatience."

The London journal, *Woman at Home*, recently gave an interesting sketch of Mrs. Craigie (her full name is Mrs. Pearl Mary Teresa Craigie). She is a Bostonian by birth, but she and her little boy make their home with her parents at Lancaster Gate, England. She is a Daughter of the Revolution, and proud of her ancestry of Puritan divines. She was educated in Rome, Paris, and London. At the age of nineteen she was married to Mr. Reginald Walpole Craigie, from whom she later obtained a divorce. About five years ago she embraced the Roman Catholic faith, and the rules of that church forbid a second marriage which, the gossips said a while ago, she was contemplating.

DAUDET'S GREATEST GIFT AND GREATEST DEFECT.

TAKING Daudet's work as a whole, says Virginia M. Crawford (*Contemporary Review*, February), "I am inclined to say that his greatest gift was his gift of pleasing, of all literary qualities at once the most impalpable and real. At his best he was so charming a writer that he almost became a great one. The most sordid subjects are invested by him with a certain grace; the most unworthy character depicted by his pen retains an irresistible claim upon our affections." And yet Daudet did not, consciously at least, play to the gallery. He did not degrade his art at the demand of his audience:

"In his early garret days in Paris, with starvation held barely at arm's length, he persistently refused to earn an easy competence by prostituting his pen to boulevard journalism, nor would he ever risk deterioration in the literary form of the 'Contes' that de Villemessant gladly accepted for the *Figaro* by recklessly multiplying their production. The charm reflected in his works lay in the man himself, and earned for him a host of friends and an unclouded domestic life—it lay in his open, sunny, inconsequent, Southern nature, with his quick sympathies, his irony at once forcible and delicate, his ready tears. It lay in the spontaneousness of his talent, in his Provençal gift of improvisation. One seems to feel, at least in his earlier work, that he wrote from the very necessities of his nature, as the lark sings, unencumbered by theories concerning his art or by doctrinaire views on methods of composition. And it lay, too, in what was an essential characteristic of his nature, his rapid alternation of mood. Take even the slightest of his 'Contes,' 'La Chèvre de M. Seguin,' or 'Les Vieux' in the 'Lettres de mon Moulin,' or any of his sketches of the Franco-Prussian war. Within a few pages he is in turn sad, gay, sentimental, ironical, pathetic, and one mood glides into the next without jar or friction. And so he seldom wearies his readers, their attention is always kept on the alert; one reads with a constant pleasing sense of the unexpected in thought or phrase."

So much for his greatest gift. What was his chief defect? The same writer finds it in the fact that "all his work is on the surface." We quote again:

"He sees all the color, none of the mystery of life. He never

once penetrates to its hidden meanings. Take his pathos, perhaps with the ordinary public the most popular of all his attributes. It is the pathos of a facile, emotional temperament quickly stirred to sorrow by those obvious calamities in life which appeal to even the least imaginative of onlookers. To Daudet his pathos was true and real, and it was invariably expressed with a charming ingenuousness; but it would be idle to pretend that he ever penetrated to—indeed, that he was conscious of—the intimate tragedy of life. A facile brilliancy of style is hardly compatible with a divining sense of '*le dessous des choses*.' If the eye is attracted and retained by external features, it stands to reason that it can not also pierce beneath the surface.

"Daudet lives entirely in the present. His subjects are all chosen from contemporary French life. There is no trace in his writing of classic culture, or even of a general acquaintance with the literature of his own or of any other country. He relies for his material entirely upon his eyes. He notes what he sees and he constructs his novels from the stories he has accumulated. The result is to give a curiously scattered, detached impression of life seen entirely from the outside. All his characters are constructed on the same principle. Their outer characteristics, their appearance, their attitudes, their gestures are painted with vivid realism; every personage has his distinguishing trait; we are shown their actions at certain moments in their lives; we are familiar with their talk, their colloquialisms, their *patois*; but of their hidden life, of the motives which impel their conduct, of their spiritual consciousness we know literally nothing. The marvelous growth of the human soul swayed this way and that by intangible ever-contending influences is as a closed book to Daudet."

GABRIELE D'ANNUNZIO.

GABRIELE D'ANNUNZIO is one of the abnormal literary phenomena of the *fin de siècle* that require analysis and explanation to be made comprehensible to the normal reading public. This task has been performed by M. François Carry, in the pages of the *Correspondant*, conscientiously and with great ability. The Italian's defective character and displeasing traits his critic makes no attempt to disguise; but he does not, upon that account, undervalue his literary merit. He judges man and author impartially. Altho disapproving of the former, he does full justice to his genius; and yet at the same time admits, by implication at least, that the value of his works is vitiated by their immoral and corrupting tendencies. "D'Annunzio's beverage," he says, "is drawn from the most disturbed and impure sources, but he presents it in a classical goblet, splendid in form, and carved with the most consummate art." If our own poet, Sidney Lanier, is correct in his assertion that only those masterpieces that ennoble and benefit mankind either deserve or achieve permanent immortality, it is certain that the author in question will in due time be assigned to oblivion. His dramas and novels are appreciated, *quoté*, by the age that produced him—one of decadence and corruption. In an age of noble enthusiasm and virile endeavor his Circe's wine would be rejected with loathing.

In Italy, D'Annunzio is regarded with cold aversion and antipathy. Seldom, M. Carry remarks, has the proverb that a prophet is without honor in his own country been more strikingly exemplified than in his case. It was not until Paris greeted with enthusiasm one of his translated novels, "L'Innocents," that he emerged from comparative obscurity. Various causes, his critic declares, have contributed to his unpopularity in his native land. Italy, at present, is too distracted by politics to have formed a solid, discriminating, literary public. The cities of the peninsula have no community of feeling, they have no intellectual center among them that can be compared with Paris. Nevertheless, it must not be forgotten that Italy, half a century ago, when far less advanced in moral unity, greeted with enthusiasm the "Promessi Sposi" of Manzoni, pronouncing it a *chef d'œuvre* without a dissenting voice; so that these reasons are not sufficient to account for their frigid indifference to D'Annunzio.

M. Carry explains this rather curious condition of things as follows:

"The man himself, to begin with, neither attracts nor can retain sympathy. It would appear as tho D'Annunzio had undertaken to imitate certain poets of the romantic school, Byron and Musset especially, in their mania for inviting scandal, their affectations, dandyism, and immorality. The disciple of Nietzsche, he poses as the *superhomme*, and considers himself superior to all human laws and conventions. In his private life he bids defiance to the most elementary rules of morality, and it is not merely in situation that his paganism finds expression. The result has been a cold antipathy to the man and distaste of his conduct, that has reacted upon his works. Seen and known too familiarly, his personality has injured his romances; and the ground they have taken is really to the credit of the Italians: they are not so devoid of prejudices as the French public. M. D'Annunzio, moreover, is surrounded by a little court of disciples and adulators, who, by exaggerating his faults and bringing them into prominence, have rendered them doubly insupportable. These grotesque followers, 'foolish cattle,' as La Fontaine would very justly have called them, take no pains to imitate the talent of the master, but they reproduce all his most reprehensible motives of conduct, and in literature his eccentricities of form and style, until they have succeeded in rendering him positively unendurable to a great number of his compatriots."

In his choice of words, and even in his orthography, D'Annunzio is full of affectation. It pleases him to revamp obsolete phrases and old spellings, for the sole purpose of posing and appearing singular—his continual preoccupation. These are the "eccentricities of form and style" to which his critic refers. They disappear naturally in his translated works, but to the Italians they are a great annoyance, interfering seriously with their enjoyment of his otherwise noble diction. M. Carry, after thus admitting frankly that the repugnance of D'Annunzio's countrymen is in many respects deserved, lets the question rest, and devotes himself to the consideration of his genius and works. He writes of the author as follows:

"M. D'Annunzio is a typical example of the intellectual cosmopolitanism of our epoch, and the interpenetration of European contemporaneous literatures. His form is Latin, tempered and renewed at antique sources; for his ideas, for the substratum of his romances and of his dramas, M. D'Annunzio has exacted tribute from all the multiple literary influences which in Europe are continually intersecting each other, in passing from one nation to the other.

"In his first romance, 'Le Piacere' ('L'Enfant de Volupté'), the influence of the masters of French romance, Flaubert and Bourget, above all is distinctly visible. The hero of this novel is that well-known personage, a dilettante of pleasure and sensation, who gives free rein to the fantasies of a sensual and depraved imagination. What belongs peculiarly to the author is a power of psychology that has never ceased to develop, his nobility of style, and the subtlety with which he associates the emotions of the soul with his pictures of natural scenery. Much has been written about Rome in this age; but there are few authors, nevertheless, who have felt and been able to render, like D'Annunzio in this romance, the charm at once intimate and profound which detaches itself from the aspects of the Eternal City. . . .

"Dostojewski and Tolstoi were his real sources of inspiration; and he imbued himself thoroughly with their spirit and tendencies. 'L'Innocent,' 'Giovanni Episcopo,' and 'Il Triomfo della Morte' ('The Triumph of Death'), belong to this period. It should be said, however, that the Italian author is not a servile imitator. He passes the nebulosities of the Slavs through a Roman filter; translates into language of incomparable richness and splendor the sentiments at once violent and troubled which he borrows from these Northern masters. . . . Almost all of M. d'Annunzio's heroes belong to the class of those unhappy wretches stricken with degeneracy who have been designated by modern science as born criminals and impulsives. M. D'Annunzio's marked preference for characters of this description must be attributed, however, not merely to his profound study of the Russian romance, but also to influences nearer at home. The effect that has been exerted upon the imaginative literature of Italy by

M. Lombroso's theories has been universally remarked; and no where is it exhibited more strongly than in the works of D'Annunzio. The questions of atavism and heredity play in his novels an all-important part. George Surispa, in 'The Triumph of Death,' kills himself because, his uncle having committed the same act, he is pursued by the obsession of suicide. The heroes of 'Giovanni Episcopo' and 'L'Innocent' are types of *nevrosés* and impulsives who would be the delight of a criminologist. They have in the highest degree all the marks that M. Lombroso points out as belonging to those whom he terms *delinquenti nati*. They have no conception of a moral law, and are governed exclusively by a sort of blind physiological fatalism. If M. Lombroso should write a novel in support of his materialistic theories, his characters would be those conceived by M. D'Annunzio. The new literature of Italy, taken as a whole, seems to have no other aim than to confirm and justify the doctrines of this indigenous school; but it was M. D'Annunzio who began the movement and gave it impetus.

"M. D'Annunzio is not an original genius in the proper sense of the word. He is rather what might be called a composite genius. His originality consists precisely in uniting in himself distinct elements and qualities which, for the most part, are separated. Thus it is seldom that professional analysts are at the same time painters and poets. But it must be admitted of the Italian author that he is a powerful and refined psychologist, a lyrical master, and a great colorist. We find in him at once the minute and methodic method of a Stendhal, the splendid and imaginative style of Gautier, or Flaubert, and the keen and morbid sensibility of Dostojewski. There is nothing original in either quality taken by itself, but the result of their combination is surely original; and this, unless we are mistaken, is the distinctive mark of the talent of M. D'Annunzio."

M. Carry insists strongly upon the fact that D'Annunzio always takes his direction from external sources; the initiative of his various works comes invariably from without. For each period of his career, he says, there is a corresponding, special exotic influence, and these influences appear in his works like a series of geographical layers, superimposed the one upon the other. When he had exhausted France, he turned to Russia, and finally freed himself from his Slavonic masters, only to be completely dominated by the philosophy and personal tendencies of Nietzsche. This characteristic evolution of D'Annunzio's talent finds expression in his latest novel, "Les Vierges aux Rochers." The hero of this singular work, Claude Cantilmo, is merely the incarnation of Nietzsche's *superhomme*, the being who wishes to enjoy through all his pores, to experience all sensations, to manifest all energies. He is thus described by the author's able critic:

"Cantilmo is the *superhomme* of Nietzsche. He is wholly absorbed in the culture of his ego. He aspires to all ideal perfections; pretends that he holds within himself the future dictator, the King of Rome, the veritable chief of the Latin race. Nature reveals to his keen senses all his splendors, and he celebrates the glory of his ancestors, who in former ages knew how to enjoy the multiple beauty of the world. He praises them for the *beautiful* wounds which they have given, the *beautiful* conflagrations they have kindled, the *beautiful* cups they have emptied, the *beautiful* palfreys they have caressed, and the *beautiful* women whom they have loved; for all their massacres, all their intoxications, all their magnificences, and all their luxuries."

D'Annunzio, according to his critic, in being too exclusively preoccupied with the external forms of his work, has entered a path that is full of snares and pitfalls. He is hypnotized by his dream of beauty; and this incessant Don Juan pursuit of a merely esthetic perfection conducts him fatally to symbolism—that is to say, to the creation of artificial phantoms, void of action, mere representatives of his dream and his ideal. In the "Virgins of the Rock" we see this tendency fully manifested. M. D'Annunzio has produced nothing more finished and superb. As to its moral aspect, we have the following from M. Carry:

"In a review like the *Correspondant*, it appears superfluous to insist upon the profound immorality of these Nietzschean theories. Unhappily, no one was better prepared than M. D'Annunzio to

submit to their dissolving influences. We will not say of the Italian author that he is naturally immoral; it would be more exact to affirm that he is unmoral. He appears to be absolutely ignorant of the existence of a moral law. Christianity for him is naught—it has never come. If we can judge from the characters that he creates, and from his theories, he believes that man exists merely to develop and manifest his esthetic and sensual dream, to expand all his energies and propensities, good and bad. The paganism of M. D'Annunzio's earliest and latest works is carried to such an extent that we are stupefied and disarmed."—*Translated for THE LITERARY DIGEST.*

MR. GLADSTONE ON A FAMOUS ITALIAN AUTHOR.

AMONG the Italian writers of the last hundred years, there is no one who is considered in Italy greater than Giacomo Leopardi, whose centenary will be celebrated next June in Italy. He is eminent both as a poet and a prose-writer. His lyrical poems are regarded by the best critics of his country second to those of Petrarch alone, while his prose is valued as much for the excellence of the thought as for its admirable style. He wrote a great deal, and his life was a short one, filled with sickness and suffering. Born on the 29th of June, 1798, at Recanati, a town a few miles from that Loreto to which have gone so many pilgrims to see and pray at what is called the Santa Casa, he died at Naples on the 14th of June, 1837, thus not having completed his thirty-ninth year. His remains are at the latter city in the humble little church of San Vitale.

In view of the approaching celebration, the *Nuova Antologia* (Rome, January 16) has a paper on the various portraits of him, reproducing some of these portraits and giving a view of the church in which he is interred. It gives also estimates of the powers of Leopardi by others than Italians, and translates among these the estimate of Mr. Gladstone contained in an article in *The Quarterly Review* (London). The opinion of Mr. Gladstone, not only interesting in itself, but valuable as showing that the writings of Leopardi ought to be better known than they are both in England and the United States, runs thus:

"Rapidly surveying the character of Leopardi as a writer, we can not hesitate to say that in almost every branch of mental exertion, this extraordinary man seems to have had the capacity for attaining, and generally at a single bound, the very highest excellence. Whatever he does, he does in a manner that makes it his own; not with a forced or affected, but a true originality, stamping upon his work, like other masters, a type that defies all counterfeit. He recalls others as we read him, but always the most remarkable and accomplished in their kind; always by conformity, not by imitation. In the Dorian march of his *terza rima* the image of Dante comes before us; in his blank verse we think of Milton (whom probably he never read); in his lighter letters, and in the extreme elegance of touch with which he describes mental gloom and oppression, we are reminded of the grace of Cowper; when he touches learned research or criticism, he is as copious as Warburton, sagacious and acute as Bentley. The impassioned melancholy of his poems recalls his less, tho scarcely less, deeply unhappy contemporary Shelley. To translation (we speak, however, of his pure versions) he brings the lofty conception of his work which enabled Coleridge to produce *his* Wallenstein; among his 'Thoughts' there are some worthy of a place beside the 'Pensées of Pascal' or the 'Moral Essays of Bacon'; and with the style of his philosophic 'Dialogues,' neither Hume nor Berkeley need resent a comparison. We know that some of his countrymen regard him as a follower and as a rival, too, of Tasso and Galileo in the respective excellency of verse and prose. Some of his editors go further, and pronounce him to be a discoverer of fundamental truth; an error, in our view, alike gross, mischievous, and inexcusable. Yet there are many things in which Christians would do well to follow him: in the warmth of his attachments, in the moderation of his wants, in his noble freedom from the love of money, in his all-conquering assiduity. Nor let us, of inferior and more sluggish clay, omit to learn, as

we seem to stand by his tomb beside the Bay of Naples in the lowly church of San Vitale, yet another lesson from his career—the lesson of compassion, chastening admiration, toward him; and, for ourselves, of humility and self-mistrust.”

The *Autologia* mentions that the mayor of Recanati has asked Mr. Gladstone to act as an honorary member of the committee which has in charge the arrangements for the centenary, but that Mr. Gladstone has declined on account of his advanced age.—*Translated for THE LITERARY DIGEST.*

THE DRAMATIC SUCCESS OF THE YEAR.

A BRILLIANT dramatic work, full of poetry, pathos, and romance, has taken Paris by storm and is on the way to capture England and America. A new and young French poet, Edmond Rostand, has created a rôle in which Coquelin has made a sensation, and which Henry Irving is to assume in England and Richard Mansfield in this country. The rôle is that of *Cyrano de Bergerac*, in the drama of that title, which is the success of the present Paris season. Its author has been made famous by it and honors have been showered on him. The play is heroic and tender, and the lesson it enforces is affecting and ennobling. It is in verse, and all critics agree that the versification is pure, beautiful, and simple. The dialog is said to be sparkling, and the humor of the piece spontaneous and elevated.

The plot of this extraordinary success we condense from an account in the *Paris Revue Bleue*; but first a word or two about the realistic basis of the play:

Cyrano de Bergerac was famous in Paris in the middle of the seventeenth century. He was a poet, soldier, musician, and swaggerer. He was a duelist, but a man of generous passions. He was brave and fond of adventure. His great misfortune was a gigantic nose. It kept him perpetually fighting, for no one could look at it without smiling or manifesting astonishment—a fatal offense in the possessor's eyes. He was in love with a noted beauty, but dared not avow his passion, knowing how he would be scornfully laughed at.

On these facts the following plot is ingeniously built:

Cyrano attends a performance at the Hotel de Bourgoyne to insult the celebrated actor *Montfleury*, because he had made love to *Roxane*, the beauty *Cyrano* secretly worships. He interrupts the performance, and orders the actor off the stage. He is insulted by several gallants in the audience, and he puts them all to flight. *Roxane*, his cousin, a witness of the scene, admires his courage without suspecting his devotion to her. She is in love with a young gentleman, *Christian de Neuvilette*, and as he is about to enter *Cyrano's* regiment, she implores her brave cousin to protect *Christian* from a dangerous rival, *De Guiche*, who is vindictive and jealous because he can not win *Roxane*.

Cyrano is pained and distressed to find that *Roxane* loves some one, but he self-sacrificingly promises her to shield and protect *Christian*, and he nobly adheres to his promise. *Christian*, knowing nothing of this, insults *Cyrano*, and all his comrades expect a tragic outcome of the quarrel. But to their amazement *Cyrano* ignores the insult and asks *Christian* to accept him as a brother. *Christian* is an indifferent writer, and he soon confides his love affair with *Roxane* to *Cyrano*, who writes love-letters and verses for him to his sweetheart. So beautiful are the letters and the poetry that *Roxane's* love for *Christian* is intensified. In the third act she listens from her balcony to his ardent vows—delivered for him by *Cyrano* in disguised voice—and allows him to enter her chamber, where a monk performs a marriage ceremony. *De Guiche*, who is *Christian's* colonel, no sooner learns of this marriage than he sends the young husband off to Arras, which is besieged by Spaniards. Passionate letters, written by *Cyrano* for *Christian* without his knowledge even, reach *Roxane*, and she braves every danger to reach his camp and bring him and his comrades provisions. She manages to pass the Spanish lines. But *Christian* discovers that his wife's love for him had been won for him by the beauty and nobility of *Cyrano's* verses, and love-letters. It then dawns upon him that *Cyrano* himself loves *Roxane* passionately. In despair and anguish, he rushes

off to find death in battle, and he returns wounded to expire in *Roxane's* arms.

Roxane retires to a convent to mourn her husband's death, and fourteen years elapse. *Cyrano* visits her regularly. One day he arrives at a late hour, having been wounded by one of his enemies. He asks to read *Christian's* last letter to *Roxane*, and during his reading *Roxane*, impressed by his manner as well as by the fact that he reads in spite of the darkness enveloping them, discovers the imposture so long and so heroically practised upon her by *Cyrano*. He gradually grows weaker from the effect of his wound, but only with his last breath does he allow his secret to escape him. *Roxane* falls at his feet while he, drawing his sword, leans against a tree to die standing, sword in hand.

In *Cyrano Coquelin* has apparently found one of his greatest rôles. His versatility finds ample scope and opportunity. The critics are unanimous and enthusiastic in their laudation of the dramatist and the interpreter-in-chief. Without multiplying quotations, it is sufficient to give the estimate of the leading dramatic critic, Jules Lemaitre, whose high praise is tempered by philosophical considerations. He writes in his theatrical review in the *Revue des Deux Mondes*:

“I have the ungrateful courage to hold that *Cyrano*, while certainly a marvelous event, is not a preternatural one. M. Rostand's piece is not merely exquisite, it has the sense to come *à propos*. There appear to me to be two reasons for its enormous success. One, the stronger of the two, is the excellence of the work; the other the weariness of the public and relief consequently found in the play after so many psychological studies, after such tales of Parisian adultery and such *feministe*, socialist, and Scandinavian plays—plays against which I have nothing *a priori*, and some of which may indeed contain as much intellectual and moral substance as the radiant *Cyrano*, but which were not quite so detestable, certainly, and of which we have had a surfeit. . . . But I hasten to add that the opportunity of the moment would but moderately have served M. Rostand were not his play intrinsically so surprisingly meritorious. But what kind of merit does it possess? Is it true that it ‘opens a century,’ or that, more modestly, ‘inaugurates something’? Rather should I be inclined to think that the merit of this ravishing comedy lies in the fact that it prolongs, unifies, and blends, without effort and with great brilliancy, three centuries of comic fantasy and moral grace—fantasy and grace, too, that are peculiarly ours. . . .

“Everything in *Cyrano* is retrospective; everything, even the modern romanticism, which adjusted itself so readily to the imaginations of the romanticism of 1630. Nothing belongs to the author except the grand and enlightened love of the past visions, except that voluptuous melancholy with which he touches here and there the things of olden times,—except, in fine, that by virtue of which he is so capable a dramatist and so rare a poet.”

Lemaitre goes on to examine the beauty of the plot and the nobility of the sentiments, but he does not admit that the play is epoch-making.—*Translated for THE LITERARY DIGEST.*

NOTES.

THIS year marks the tricentenary of Shakespeare's “Merchant of Venice.” Sir Henry Irving will celebrate this appropriately by including it in the program of his plays for the coming season.

“THE tables have been turned upon Mr. Rudyard Kipling with a vengeance,” remarks *The St. James's Gazette*, London. “He, of course, received a warm welcome when he arrived the other day with his family at Cape Town; but he also got a greeting that he scarcely expected. This took the form of a set of verses addressed to himself by a private in the ranks, and entitled ‘An Experiment in Imitation.’ We quote two stanzas:

“You 'ave met us in the tropics, you 'ave met us in the snows;
But mostly in the Punjab and the 'ills.
You 'ave seen us in Mauritius, where the naughty cyclone blows,
You 'ave met us underneath a sun that kills,
An' we grills!
An' I ask you, do we fill the bloomin' bills?”

“But you're *our* partic'lar author, you're our patron an' our friend,
You're the poet of the cuss-word an' the swear,
You're the poet of the people, where the red-mapped lands extend,
You're the poet of the jungle an' the lair,
An' compare,
To the ever-speaking voice of everywhere!”

SCIENCE AND INVENTION.

SUBMARINE MINES AND ELECTRICITY.

IN these days when the defense of our great seaports against a possible foreign enemy has become vitally important, and when the destruction of an American battle-ship by explosion is believed by so many to have been caused by a submarine mine, the mode of operation of such mines becomes a matter of common interest. We quote from a leading editorial article in *Electricity* (New York, March 2) a concise description of the principal varieties of submarine mines, as follows:

"Submarine mines have been extensively used in modern warfare, notably during the Civil War in this country and during the Franco-Prussian conflict. The last decade, however, has seen extensive improvements in the method of firing mines due to the rapid development of electricity.

"Probably the simplest form of mine, and the one most extensively used until electricity came into general use, was that known as the contact mine, which consisted of an iron case containing an explosive attached to a cable, the latter having its lower extremity fastened to an anchor of some sort. The iron case was provided with a number of firing-pins, any one of which being brought in contact with the hull of a ship fired a percussion-cap and exploded the charge. As will readily be seen, these contact mines are not in any way under control, and were equally dangerous to friend and foe. With a view to remedying this evil, what is known as the electro-contact mine was invented. In this device the firing-pins on the case containing the explosive, instead of exploding a percussion-cap when brought in contact with an object, act as a switch by closing one opening in an electric circuit. Another switch is located in this same circuit at a station on shore, so that in order to fire the mine it is necessary to close the land switch at the same time that one of the pins has been driven in by the hull of a vessel. If this is not done no explosion takes place, which enables friendly vessels to pass in and out without fear of accidentally running foul of a mine and being blown up, as would be the case with the ordinary form of contact mine.

"Numerous electrical inventions have been patented from time to time for controlling and firing submarine mines. One of these inventions consists in an ingenious arrangement for holding a mine down near the bed of a bay or other body of water, to enable friendly vessels to pass over it in safety. The device consists in a loop fastened to the anchor and to a point on the cable near the mine. In a hollow opening in this loop a small charge of an explosive is placed which can be fired from the shore by means of a spark from an electric battery. In bursting, the loop is destroyed and the mine immediately rises the full length of its cable and to within a few feet of the surface. The mine itself may then be fired from the shore in the ordinary manner.

"In deep water, or where a strong current exists, recourse is had to what is known as ground mines. These consist of large charges of gun-cotton or other high explosive held in or near the ground by means of mushroom anchors. Mines of this character being too far below the surface to be fired by coming in contact with the hulls of vessels, arrangement has to be made to ascertain exactly when a vessel is over a mine in order to know when to fire it. This is accomplished by a very simple method, altho an extremely ingenious one. An electric circuit extends from the mine to two stations on land at no great distance from one another. At each of these stations a break occurs in the electric circuit, and in order to explode the mine both of these breaks must be closed simultaneously. A telescope is mounted at each station on a pivot, which permits of its being swung in a horizontal direction, and so arranged that when pointed at the mine it closes the circuit at that station. Thus all that is necessary to do is to keep both telescopes pointed at an enemy's vessel as it advances, and when the latter passes over the mine both switches will be closed, the circuit completed, and the mine exploded.

"Innumerable other devices have been brought out, in which electricity invariably plays an important part, for carrying on warfare of this nature. What is known as the observation-mine, an improvement over the electro-contact mine, is one of these.

In a mine of this character the firing mechanism and the explosive are in two distinct and separate receptacles, placed one above the other on a cable. The contact-buoy which contains the firing-pins floats a few feet below the surface of the water, the mine itself being located several feet below it. With mines of this description there are always two separate and distinct electrical circuits leading to the shore. One is known as the firing circuit, while the other, in circuit with the firing-pins on the upper receptacle, rings a bell at the shore station whenever one of the pins is driven in by coming in contact with an object. Mines of this description are usually placed in groups, all the wires being brought together at a switchboard at the firing-station. An operator stands ready at hand, and as soon as a bell rings the switch corresponding to that bell is closed and the mine exploded.

"The advantage of the observation-mine is that, contrary to what its name implies, no observations have to be taken to locate the position of an enemy. The operator, in a bombproof chamber underground, simply watches the switchboard and awaits a signal.

"It is the aim and ambition of inventors to devise some means of exploding a torpedo charge or a mine at a considerable distance by electricity without any intermediate connection such as wires. Possibly an arrangement of this nature will be forthcoming in the future, worked on somewhat the same principle as Marconi's wireless telegraphy, by means of Hertzian waves."

HOW THE TRUFFLE GERMINATES.

THE following interesting information regarding the mode of germination of the Perigord truffle, which has just been discovered by a French botanist, is contributed to *La Nature* (Paris, February 12) by M. A. Acloque:

"It is well known that hitherto the attempts that have been made to cultivate mushrooms have succeeded only in a limited

FERTILIZATION OF TRUFFLE SPORES, ACCORDING TO M. DE GRAMONT DE LESPARRE.

degree. Only a small number of species have given up the secret of their germination, and the very ones that it is specially desirable to propagate from an alimentary point of view have not lent themselves freely to investigation. This is because the reproductive germs, or spores, of these plants develop in conditions that are either difficult to reproduce artificially or that chance alone can reveal.

"Nevertheless, little by little, altho with extreme slowness, light dawns on the problem. A very important fact relative to this subject has just been communicated to the Academy of Sciences; it has to do with the mode of germination of the spores of the truffle—a process that has been discovered by M. Gramont de Lesparre, who has made special investigation of the Perigord truffle, *Tuber melanosporum*. These studies show that the cycle of vegetation of the truffle is completed by an alternation of states, each having to do with a different substratum or host. This alternation is very similar to that which takes place in the case

alternation is very similar to that which takes place in the case of the Accidiums, which, as is known, develop on a different species of plant from that which bears them during the earliest period of their existence. An instance is the wheat-rust, which grows successively on wheat and on the thorn.

"That the truffle spores may germinate, they must be carried, by insects or other agencies, to the leaves of an appropriate plant, such as the oak, the walnut, or the pine. The roughness of their surface enables them to stick to these leaves.

"The spores are of different sexes. In favorable conditions, and after rupture of the envelope of the mother-cell that encloses them, the male spores emit a thin, translucent filament, terminated by a spore of secondary formation, or pseudospore, in which the fertilizing plasma is contained.

"This pseudospore, whether it remains on the surface or is formed under the epidermis, is impelled, as by a mysterious instinct, to move out toward a female spore, which it reaches either directly or by putting forth a new sprout.

"The fertilization, which may begin a week after the spores have been set free, ordinarily takes one or two days. When it has been accomplished, the female spore gives out what are called telentospores, which, falling to the ground, give rise to the mycelium or thread-like vegetation, more or less temporary, which in its turn produces the tubercles.

"This new contribution to the study of mushroom-germination is very important; it may open a way to the discovery of analogous phenomena in species that we should be glad to be able to cultivate, such as the morille, which we can not now propagate because we have too little knowledge about the earliest phases of its development."—*Translated for THE LITERARY DIGEST.*

THE LATEST ARITHMETICAL PRODIGY.

THE most recent among the tribe of "lightning calculators" is a Greek named Diamandi, now living at Paris. His feats and peculiarities, which have recently been made the subject of scientific investigation, are described in *La Nature* (Paris, January 19) by M. Henri Coupin. Says this writer:

M. DIAMANDI.

"I saw recently a calculating prodigy, M. Diamandi, who has been in Paris for three or four years, but who has just begun to appear in public.

"Among other feats, M. Diamandi performs the following:

"1. An assistant is requested to dictate a table of twenty-five figures, for instance:

7	9	8	4	6
2	1	0	7	8
3	2	5	4	9
1	6	8	0	7
5	4	9	6	8

"These figures, being written by an assistant on a blackboard, M. Diamandi looks at them steadily for an instant

and then, turning toward the audience, he recites them, first in vertical columns and then spirally. He then asks that certain parts of the table be designated, and he names at once the figures that occupy these places. His answers are made unhesitatingly. We feel that he has the table before his eyes; we have only to see his performance to realize that he is a 'visual,' as will be explained further on.

"2. He is asked [for instance] how many seconds there are in eighty-seven centuries, taking leap-years into account. He answers almost at once, and without writing a single figure, 274,551,120,000, which is the correct answer.

"3. He extracts mentally the square root of 542,350 and the cube root of 493,989.

"4. He is given simultaneously the five following operations:

$$\begin{aligned}
 &4.875,328,540 - 3,097,160,781 \\
 &986 \times 986 \\
 &28 \times 28 \times 28 \\
 &2^{27} \times 8 \\
 &28,493 \div 976
 \end{aligned}$$

"At the end of 4 minutes 30 seconds M. Diamandi gives the exact results, that is, much before the calculator who was performing the operations on paper has reached his results.

DIAMANDI'S "NUMERICAL SCHEME."

"5. M. Diamandi repeats 133 figures, written on a board, in the exact order in which they have been put down. And when he is asked for a certain figure, its place being designated, he names it at once. We have seen M. Diamandi, two days after his exhibition, write out the list of figures from memory.

"This series of operations seems to class M. Diamandi among the best of arithmetical prodigies, not only by his memory for figures but also by the speed with which he solves the problems given him. He will thus fill the place of the celebrated Inaudi, who has left us for distant climes. M. Diamandi was born in 1868 at Pylaros, Ionian Isles, and was noted at school for his aptness at mathematics. He showed nothing, however, of his special aptitude till one day when, having no paper, he was obliged to perform a multiplication mentally; he did it with a facility that astonished him. M. Diamandi was one of a numerous family—he has had fourteen brothers and sisters—and was by occupation a grain merchant. Now he writes novels and poetry, and from time to time gives exhibitions of his skill in calculation. He is a good-looking young man, and to see him one would not think him better endowed with mathematical powers than the ordinary person.

"M. Binet, the learned director of the laboratory of experimental psychology at the Sorbonne, has made some interesting observations on M. Diamandi. He has specially investigated whether the calculator has a 'numeral scheme.' But perhaps the reader does not know what this means. It is very simple. When we think of the series of natural numbers as occupying horizontal or vertical lines, zig-zags, etc., the form and direction of these lines constitute what is called the numeral scheme. With M. Diamandi it has the accompanying form (see illustration); it may be remarked, among other facts, that the first figures of the series occupy a large space relatively to the last. With him, also, all these mental images appear in the midst of masses of grayish color.

"It may be remembered that Inaudi had to speak or hear the numbers before he could remember them—he was a calculator with *auditive memory*. M. Diamandi has *visual memory*. It is indispensable for him to *see* the figures that he is to remember. In general he does his work in two periods. First, he gazes at the figures; then he meditates, his eyes shut and his hands on his brow, like a scholar learning a difficult lesson. When he thinks he knows the numbers he looks up anew, seeming to verify his knowledge. After this he repeats them unhesitatingly out loud, or, oftener, he writes them on a board. The figures appear to him mentally, not as they were written, but as he himself is accustomed to write them.

"The time that M. Diamandi takes to learn series of numbers varies with the day, with the condition of his nerves, the tranquillity of his surroundings, etc.

"The recollection of the figures is easier when they are written.

not in line, but in a square. But errors, which are very rare, always occur at the end of the series; almost never at the beginning."

M. Coupin gives, in conclusion, some ingenious methods of multiplication used by M. Diamandi, but adds that while they may be useful to a lightning calculator, they are scarcely to be recommended to scholars. — *Translated for THE LITERARY DIGEST.*

MOST FAVORABLE CONDITIONS FOR MUSCULAR WORK.

RECENT experiments on the power of the human muscles, according to the reports of papers read before the Paris Academy of Sciences, show that within certain limits the faster a muscle moves the better work it does, and that it works to better advantage when lifting a heavy weight, within the limits of its ability, than a light one. We translate below the abstract that appears in *Cosmos* (Paris, February 29):

"Messrs. André Broca and Charles Richet have shown that regular muscular work, at the maximum power, may be kept up for an hour or two, if regulated according to the degree of fatigue that may be borne.

"Eliminating the causes of accidental variations, they ended by formulating the following experimental laws:

"1. The muscular power increases with the frequency of the contractions.

"2. This augmentation, in the case of average frequencies, is very slight, and the power below these limits is nearly constant.

"The experiments, which can not be described in detail, necessarily show that for an equal amount of work it is better to make numerous slight contractions than greater ones less frequently. This conclusion is implicitly contained in the facts brought out by earlier experimenters, but it is none the less interesting to have it shown by direct experiment.

"With great frequencies and great weights the complete exhaustion of the muscle is very quickly observed. Finally, these scientists think they have shown that (for the muscle that bends the forefinger) the muscular power increases with the frequency and the weight, in such wise that the most favorable conditions of work for this muscle under normal circumstances would require a weight of 750 to 1,000 grams [1.6 to 2.2 pounds] and a frequency of 200 to 250 contractions a minute." — *Translated for THE LITERARY DIGEST.*

AN ARTIFICIAL MOON.

THE great "artificial moon," or spherical white reflector, by which the rotunda of the new library building of Columbia University, New York, is illuminated, is described by Prof. William Hallock in an article published in *The Progressive Age*. The following quotations are from an abstract in *The Electrical World*, New York:

"There has been ever since the world emerged from the dim light of the tallow dip a desire for more and more brilliant illumination, until of late there has arisen a demand for a mild diffused illumination, without color, without shadows, and yet with abundance of light. This light, for best effects, should come from as many directions above the line of sight as possible. In interior illumination the floors and side walls should, therefore, be dark, the ceiling as light as possible, and the illumination should come from as many sources as practicable. If one direction only is available, then the opposite wall should be kept light to give reflection. Few people realize that a 'dead white' surface reflects about 80 per cent. of the light which falls upon it, and therefore that a white wall or ceiling is an excellent reflector, and in fact absorbs much less light than does any transmissive diffusion apparatus, such as ground glass globes, etc., which often absorb 40 to 60 per cent. of the light impinging upon them.

"A desire for diffused illumination, for bringing out the architectural effects of the new Columbia University library, led to the following design for this purpose. A white opaque sphere, 7 feet in diameter, was suspended from the middle of the dome, 85 feet

above the floor, by one-quarter-inch steel rope, the latter being entirely invisible from below. To all appearances the sphere floats in the air. This globe is a framework of wood covered with veneering and coated with a white matt surface wash, its general appearance being that of a ground-glass surface. This is illuminated to an intrinsic brilliancy of from 75 to 300-foot candles by rays from eight Colt projection lanterns placed in eight equidistant corners of the four upper balconies. These lights are boxed in, so that only the projecting lens is visible. Each of them throws a disk of light 6 feet 6 inches in diameter upon the sphere. The eight disks overlap so that the whole sphere seems to glow with a pale diffused light. The effect is beautiful in the extreme. The surface seems translucent and the light seems to come from a certain depth within and to bathe the whole globe with a warm light. As the globe floats below the ceiling it is difficult to locate it; whether it is near by or a moon in the clear blue sky miles away is left to the imagination. This is not intended as a light by which to read, the tables all having reading-lamps, but it is possible to read with considerable ease on the floor of the reading-room by the light of the sphere alone. A crude test gives the approximate candle-power as about 500, but the light is so white and so agreeable that it gives one the impression of greater power. The eight lamps take about 150 amperes, the whole lighting of the main reading-room taking about 300 amperes, while the central room of the Congressional Library at Washington (about 10 per cent. larger) requires nearly 900 amperes."

MODERN VIEWS ON PURE WATER-SUPPLIES.

THAT expert opinion on the required degree of purity of our city water is not only far more exacting than it was twenty years ago, but has changed radically on some important points, may be seen from a recent address on "The Establishment and Conservation of the Purity of Public Water-Supplies," delivered by Prof. W. T. Sedgwick, of the Massachusetts Institute of Technology, before the New York Pathological Society on February 28. We quote parts of a report published in *The Engineering News*, New York, March 10. Says that paper:

"A large part of the water flowing in many of our streams is fed to them from the ground after having been highly purified by a long process of natural filtration in which the bacteria of the soil play an important part. The polluted water coming to the streams directly from the surface of the ground is much diluted in this way. On steep drainage areas this natural filtration has less opportunity to exert its beneficial influence, and hence water from such sources is liable to be badly polluted.

"The strange fact that a few years ago engineers and sanitarians not only tolerated, but even recommended sewage-polluted streams as sources of water-supply is to be explained by their belief in the so-called self-purification of rivers. Chemically, a purification does appear to be effected after a flow of a few miles, but this is largely due to dilution by pure ground water. Some pathogenic bacteria disappear as the water flows along, due largely to unfavorable environment. But on the whole there is not so great a bacterial improvement as is to be desired. Still water really gives a better opportunity for bacterial purification than does flowing water. No river water used directly, is safe, unless it comes from a sparsely settled drainage area. Philadelphia is anachronistic in using such a supply as it does."

The truth of this somewhat startling dictum, that still water is purer than running water, was illustrated by the speaker by referring to the case of Burlington, Vt., as one where the value of quiescence, or sedimentation, has been proved to be very great. He said:

"Burlington is the only city in New England taking its water-supply from and discharging its sewage into the same body of water, but there are plenty of cities elsewhere that do so. For many years the sewer outlet and water intake at Burlington were within one-half mile of each other. Altho there were many cases of diarrhoea there, especially among strangers, the number of cases of typhoid fever was not so very large. In 1885 the sewer outlet was moved one-half mile farther away from the water intake. In 1892 Professor Sedgwick found, on examining many

samples of water from the lake, that at a point only 100 feet away from the sewer outlet 90 per cent. of the number of sewage bacteria had disappeared; at 1,000 feet, scarcely any were to be found; and a mile away none could be discovered. For three years the water from the intake was examined and no evidence of sewage found. Here was a case where dilution did much and quiescence more. The sewage discharged into a natural basin and was small in amount. There were no regular currents in this part of the bay, but some wind currents. Burlington has since extended its intake to a point three miles out in the lake.

"In such cases as the above some of the bacteria are killed by cold water; some sink to the bottom; others are devoured by predatory infusoria; some hardy ones remain, but multiply little or none and are probably harmless.

"Besides the benefits from storage, the quality of water when stored may be conserved by stripping reservoir sites of organic matter, thus lessening or preventing the growth of organisms giving rise to offensive tastes and odors. Of the \$9,000,000 now being expended by Boston and twenty-eight other municipalities for the Metropolitan water-supply about one third will be used to strip the site. In this supply purity is secured in four ways: (1) By selecting the purest natural source that could be found; (2) by stripping the reservoir site; (3) by preventing pollution; (4) by quiescence in the huge storage reservoir.

"The ideal water-supply would be drawn from an uninhabited drainage area. Where this is impossible a thorough sanitary patrol should be maintained. This is good work for young sanitary engineers. . . .

"A great source of danger to water-supplies is their pollution by workmen during construction of wells of reservoirs. Several instances of this sort, followed by typhoid epidemics, were cited. . . . Picnic grounds and summer resorts are other sources of pollution requiring much care of late. Sewage from such sources, as well as from villages in drainage areas, must either be diverted or purified.

"At the close of the address the speaker said that but few American cities take proper scientific care of their water-supplies. All surface waters should be stored. An ancient author said: 'Old wine to drink, old books to read, old wood to burn.' He might have added, old water to drink. Where storage is not sufficient, filtration should be employed. Storage, both before and after filtration, is desirable. The watchword must ever be, 'Continued expert scientific supervision.' Until then 'public water-supplies will be public dangers.'"

Did Jules Verne Invent the Enclosed Arc Lamp?—The recent form of electric arc lamp in which the arc itself is enclosed in an exhausted space was apparently described years ago by Jules Verne, long before it was thought of by electricians. Says *Industries and Iron*, London: "An American journalist, Mr. Charles G. Armstrong, in a recent article, referred to the interesting fact that the enclosed arc lamp was apparently anticipated by M. Jules Verne in his 'Twenty Thousand Leagues under the Sea,' a book which also foreshadowed the submarine boat and other modern actualities. As quoted by Mr. Armstrong the French writer mentioned that 'that wonderful ship was lighted by an arc lamp. The electric lamp was combined in such a way as to give its most powerful light—indeed, it was produced in vacuo, which insures both its steadiness and intensity. This vacuum economized the graphite (carbon) points, between which the luminous arc was developed—an important point of economy,' etc. . . . 'Under these conditions the waste (the carbon) was imperceptible.' Mr. Armstrong comments as follows: 'Had he said their waste was very gradual he would have exactly portrayed the present operating condition of the enclosed arc lamp. While there is no evidence that he knew anything about electricity, he certainly made a fair guess as to what would be a good commercial article in 1897. If he were to ape the methods of some of our prominent electrical inventors he would undoubtedly come forward at this time and claim priority of invention.'"

The Audibility of Thunder.—"While lightning," says *Industries and Iron*, London, "may be seen and its illumination of clouds and mist may be recognized when it is even two hundred miles distant, thunder is rarely audible more than ten miles.

The thunder from very distant storms, therefore, seldom reaches the ear. The reason of the great uncertainty in the audibility of thunder is not difficult to understand. It depends, not merely on the initial intensity of the crash, but quite as much on the surroundings of the observer, even as in the quiet country one will observe feeble sounds that escape the ear in a noisy city. Perhaps the most curious and important condition of audibility is that the thunder wave of sound shall not be refracted or reflected by the layers of warm and cold air between the observer and the lightning or by the layers of wind, swift above and slow below, so as entirely to pass over or around the observer. Sound, in its wave-like progress obliquely through layers of air of different densities, is subject to refraction, and this refraction may occur at any time and place. Thus, observers at the topmast of a ship frequently hear fog whistles that are inaudible at sea level; those on hilltops hear thunder that can not be heard in the valley; those in front of an obstacle hear sounds inaudible to those behind it. The rolling of thunder, like that of a distant cannonade, may be largely due to special reflections and refractions of sound. Again, the greater velocity of the air at considerable altitude above the ground distorts the sound-wave and shortens the limit of audibility to the leeward, while increasing it to the windward."

SCIENCE BREVITIES.

"THE hair of the dog to cure the bite finds recent exemplification in the invention of a new kind of paint for ships' bottoms," says *The Pharmaceutical Era*, New York. "Its principal and protective constituent is seaweed. It is said to prevent shells and weeds from adhering to the vessel, and also to discourage worms from boring into any submerged wooden construction. Seaweed, green and wet, is ground in oil and then mixed in proper proportions with litharge, lead acetate, turpentine, and linseed oil previously well boiled together. If this paint proves effective, as claimed, it is the solution of a long-standing and vexatious problem."

"THE resistance of nickel steel to the attack of water increases with the nickel contents. The least expanding alloys, containing about 36 per cent. of nickel, are sufficiently unassailable, and can be exposed for months to air saturated with moisture without being tainted by rust. With a view of testing the expansion of nickel steel, experiments have been carried out by allowing measuring-rods to remain in warm water for some hours," according to *The Iron and Coal Trades Review*, as quoted in *The Scientific American Supplement*. "They were not wiped off when taken out, but were exposed for a longer period to hot steam, but the lines traced on the polished surfaces were not altered. The rough surfaces, when exposed to steam, were covered after several days with a continuous, but little adhesive, coat of rust."

LIGHTING A BUOY BY WAVE-POWER.—"An English syndicate is developing an electrically lighted buoy in which the current for the lamp is generated by a dynamo within the buoy driven by a wave-power hydraulic engine," says *The Railway and Engineering Review*. "Practical trials have been conducted and tests have been made with the device in the open sea. The buoy itself is an ordinary pear-shaped steel shell, having in its center a vertical steel tube forming the stuffing-box of a heavy plunger, the lower end of which is fastened to the anchorage. An arm attached to the top of the plunger drives the piston-rod of a double-acting pump which forces water into an air-tight reservoir, from which it is delivered to a Pelton wheel coupled to a small dynamo in the upper portion of the buoy. The buoy is six feet in diameter and will develop about five horse-power on ordinary wave motion. The lamp is fifty-candle power."

"THE tractive power of elephants, horses, and men was lately tested at Barnum & Bailey's Circus, in London," says *Engineering*. "An instrument capable of recording a tractive force up to thirty tons was anchored to the floor. Two powerful horses were first attached to it, capable of drawing a load of 8 to 9 tons on an ordinary road. Their pulling record on the dynamometer was 1.2 tons. The largest elephant was next yoked to the instrument and gave a record of 1.85 tons and then 2.5 tons. But a smaller elephant with more spirit gave a pull of 5.5 tons. In the further trial it was shown that 83 men were about equal to one elephant, their combined pull registering 5.6 tons. In the case of both the horses and the men, however, the collective maximum force was probably not reached, as training is required to this end. The elephant, by throwing its weight suddenly against the instrument, might also produce a tension far in excess of any steady pressure it could exert."

THE common habit of crossing the legs at the knees when sitting is earnestly protested against, by a writer quoted in *The Health Magazine*. It is claimed that this habit "is at least one cause of cold feet, headache, varicose veins, ulcers, and other troubles due to poor circulation in the lower limbs. The reason of this lies in the fact that just under the knee, where the greatest pressure comes in this position, there are large veins, arteries, and nerves, whose walls are pressed together, thus interfering more or less with the circulation and the sensation. It is said that women are more liable to acquire the habit than men, and it may be added that doubtless one reason for this is the height of ordinary chair seats. Will not some one please invent a chair—a common chair—with an adjustable seat, so that, whatever the height of the person, the chair can be made comfortable? For what is more uncomfortable than to be obliged to sit for an hour or more in a straight-backed chair with a seat so high that the toes can barely touch the floor? Small wonder that some relief is sought by crossing the legs. It is noticeable that when low chairs, adapted to the height of the person, are furnished, the legs usually remain straight and the feet firmly on the floor."

boasted of having annihilated, suppressed, made ridiculous, all mysteries. 'Voltaireism' flourished and developed; its profession was a proof of refinement. . . . If there are honest infidels who are in no way like the libertines of other times, and there are some such . . . who can give and do give daily an example of virtue, we are beginning to see that Christianity dwells in them without their knowing it and continues to produce its effects. Happily one can not put away, in a few years, all the refined morality which eighteen centuries of Christianity have given us. The absolute which we deny with our lips is found in our hearts at the moment of action, and that unyielding or underlying something which we impute to education or heredity is Christianity."

The orator concluded by claiming that the interests of France and of Catholicism are identical, and that the glory of France, aside from all question of party, requires that all Frenchmen recognize this truth.—*Translated for THE LITERARY DIGEST.*

BELIEF IN GOD A SCIENTIFIC NECESSITY.

THE chair in Edinburgh University (Logic and Metaphysics) once held by the illustrious Sir William Hamilton, has for forty-one years been held by Alexander Campbell Fraser, LL.D., D.C.L., Oxford. Professor Fraser has recently published two volumes of lectures on "Philosophy of Theism," which, in the opinion of *The Quarterly Review* (January), "form a notable and a very timely contribution to philosophical and religious thought," being especially valuable in this, that they lift the argument "out of the technicalities of the schools into a larger and more intensely human atmosphere." From *The Quarterly's* elaborate review, we extract a portion describing Professor Fraser's "central contention," as follows:

"In describing his position as theistic *faith*, the author indicates that, in his opinion, the conditions of the problem do not admit of demonstration or absolutely coercive proof. In a sense, the solution to be hoped for is moral rather than intellectual. Nevertheless, belief in God is not reduced to the level of a subjective emotion or desire. It is, on the contrary, Professor Fraser contends, the only hypothesis which stands between us and skepticism in which the very idea of truth or knowledge would disappear. For proof of this, we need go no farther than the procedure of science itself. The postulate which underlies every scientific induction is the intelligibility of nature, the belief, in other words, that we are living in a cosmos, not a chaos—the belief that the power at work in the universe will not put us to permanent intellectual confusion. Science (as well as our most every-day knowledge and action) thus reposes upon an ultimate trust, which is not susceptible of demonstration. We may rightly speak of this trust as progressively verified or justified by every step we take in the intellectual conquest of the world; but, however legitimate our confidence, at no conceivable point in that progress, or in any future progress, can the thesis be said to be, in a scientific sense, *proved*. The parallel in this respect between scientific procedure and the moral and religious life of man is pressed home by Professor Fraser with great force and felicity. The postulate of science is to be regarded as itself a theistic postulate, so far as it goes; but it seems to recognize only the attribute of intellectual consistency. This trust in the uniformity of nature is ultimately, however, a belief in a morally trustworthy universe, that is to say, in a Being who will not capriciously or wantonly deceive those who put their trust in Him. The inductive faith thus rests on a deeper ethical faith. This faith, more fully developed, forms the presupposition of the moral and spiritual life. The presupposition is again, precisely as in the case of the scientific postulate, progressively verified in ethical and religious experience, but is never lifted into the region of scientific demonstration. In either case, to demand proof as the preliminary to action would be to be cut off from the possibility of verification, and indeed, to be condemned to absolute inaction and skeptical despair."

This same thought of the scientific necessity of a theistic conception of the universe is further described by the reviewer:

"In pressing home the theistic implication of scientific pro-

cedure, Professor Fraser's argument offers many undesigned, and on that account all the more interesting, points of coincidence with Mr. Balfour's reasoning in the 'Foundations of Belief.' Both argue that all scientific reasoning as to the causation of events rests on a fundamental presupposition which is not itself proved, and is not susceptible of proof, inasmuch as all proof takes it for granted. The belief in natural law—the conviction that we are living in a cosmos and not in a chaos—is essentially an act of faith or trust. It can not be proved by any accumulation of inductions, for the very intention of making an induction presupposes it, and each individual induction depends for whatever cogency it possesses upon this assumption. Mill's labored confusion of logic and psychology, in his futile struggle to remain true to the principles of a pure empiricism, served only to bring to light the manifest circle in which attempts at empirical proof involve themselves. We bring the belief with us to the facts, and when we do so we find that we are able to interpret the facts in the light of the belief; in that sense, and in that sense alone, may the progress of science be regarded as accumulative proof or justification of the soundness of the trust by which the whole advance has been inspired. This immovable belief in cosmical law, or the intelligibility of the universe, is rightly regarded both by Professor Fraser and Mr. Balfour as, *pro tanto*, a belief in God; for it treats nature as a rational system, and therefore the product of an intelligence akin to our own."

MR. BOK AND THE SUNDAY-SCHOOL.

MR. EDWARD BOK'S article alleging that the Sunday-school is a moribund institution (see LITERARY DIGEST, March 19) is still calling forth emphatic and vigorous notes of dissent from religious papers. Among these dissidents is *The Standard* (Baptist, Chicago), which says that Mr. Bok's statements about the Sunday-school's being a "lifeless" institution and "in a state of moldering decay" are so conspicuously false that it seems hardly necessary to deny them. *The Standard* then proceeds as follows:

"During the three years preceding the eighth international Sunday-school convention of 1896 there were organized in the United States and Canada 10,229 Sunday-schools, with 1,339,520 officers, teachers, and scholars; a gain of 3,409 schools and 446,506 members each year; and when it is stated that these are merely the figures reported to state and territorial secretaries, which are of course incomplete, it is evident that 500,000 a year is not too large a figure to give as the average gain. As the total reported membership in 1896 was 13,034,728, the annual gain is not far from 4 per cent. Whether this is equal to the increase in population and church-membership, everybody can judge for himself.

"But figures, tho they effectually dispose of Mr. Bok's first charge, are not the most striking proof of the remarkable progress of Sunday-school work. A tree is known by its fruits. The success of an institution like the Sunday-school is not judged by a few casual visits to schools or inquiries from one's acquaintances. What is to be said of the 'decay' of an institution which demands a paper like *The Sunday-School Times*, with its splendid corps of editors and contributors and its immense circulation? How about the denominational lesson helps, whose combined circulation can hardly be less than 10,000,000 copies, many of which are edited and published with an ability not exceeded by any of the best religious journals? Does it look as if the Sunday-school were in need of antiseptics when we read the great World's Sunday-school convention to be held in London this summer, with representatives from almost every country on the globe? Is it correct to say that nothing is being done to improve the quality of Sunday-school teaching when normal institutes for teachers are being held by the thousand every year, and the interdenominational teachers' classes in the larger cities, held in addition to local meetings, are growing in numbers and in excellence every year?"

The Baptist Outlook (Indianapolis) also comes to the defense of the Sunday-school. It says:

"That the Sunday-school has not yet been brought to an ideal condition of efficiency is readily admitted, but that is a very different thing from rating it down as a failure and asserting it to

be 'in a state of mouldering decay.' Schools that may be accurately described as such are the exceptions even as are, on the other hand, such schools as that presided over by Mr. Wanamaker in Philadelphia. The fact, as we view it, is that there has been for years a steady improvement in Sunday-school methods and a growing recognition of the value of its work. Some of the ablest men in the country are actively identified with it and are carefully studying the problems which it presents with a view of making it more and more nearly what it ought to be."

The Congregationalist enters a demurrer to Mr. Bok's indictment. It says as to the charge of decay:

"We do not presume to speak for all the denominations, but as to the Congregationalists we may, perhaps, be permitted to offer a few facts. 'The attendance is on the decrease.' In the last ten years the increase in our Sunday-school membership has been 237,500. It will take some time at this rate to effect a complete disappearance. 'Boys and girls beg off from going.' So they do from day-school and everything which requires regularity and effort; that is, some of them do from almost everything but the circus. So this some have always done, but outside of the 'two hundred Sunday-schools' which 'reveal this condition,' and doubtless others, our observation leads us to think this some is growing less.

"Mr. Bok, or his editorial writer, wants a man of Napoleonic force and Websterian intellect for superintendent of every school. That would be fine, doubtless, but we have not run against such men at all the street-corners lately. We venture to say that the Sunday-school superintendents in our cities and larger towns will prove to be as bright and enterprising men as you will find in an equal number of men gathered in other organizations, but they are not all born geniuses or generals. More thought, more study, more ingenuity, and more self-criticism is being put into this work than ever since the day of Robert Raikes."

The editor of the Pittsburg *Christian Advocate* also rises to remark that he does not agree with Mr. Bok in this matter. He says that the article in *The Ladies' Home Journal* is "lugubrious and pessimistic," but deserves careful reading and thoughtful consideration.

The International Evangel (St. Louis), published chiefly in the interests of international and interdenominational Sunday-school work, and claiming to be the only Sunday-school newspaper on the continent, assails Mr. Bok with statistics:

"Mr. Bok's editorial opens thus: 'Even the most zealous advocates of the Sunday-school concede the fact that its strength is on the wane.'

"Any one who in the light of the present marvelous growth of the Sunday-school could make such a concession is certainly more zealous than intelligent. Another point from the article is, 'Attendance is on the decrease.'

"Here are some facts and figures, part of which we have tabulated for our readers. The table gives the reports presented to the triennial international Sunday-school conventions from 1875 to 1896, and which cover the United States and British American Provinces:

Year.	No. of Schools.	No. of Teachers.	No. of Scholars.
1875	74,272	788,805	6,062,064
1878	83,441	894,793	6,843,997
1881	90,370	975,195	7,177,165
1884	103,508	1,099,225	8,056,799
1887	106,182	1,160,533	8,475,400
1890	115,959	1,209,426	9,146,244
1893	131,918	1,377,735	10,317,472
1896	142,089	1,476,369	11,556,806

The increase, *The Evangel* goes on to say, in Sunday-school attendance since 1887 has been 36 per cent., while the increase in population has been but 30 per cent. Concerning a portion of Mr. Bok's advice, it has this to say:

"The host of American Sunday-school workers will not agree with Mr. Bok that neither men nor business women should be Sunday-school teachers; nor would they act on his suggestion to particularly seek as teachers unmarried women and bereaved women who have nothing to do. The unmarried women, the

'unclaimed blessings,' who are fitted for teaching have long since found and are doing a noble work. None of those who are fitted are idle. We beg also to be excused from filling up our corps of teachers with bereaved and sorrowing ones. There is a holy ministry for them to perform, but it is not in teaching a class in the Sunday-school as a rule.

"If a business woman must not be a teacher, then a business man must not be, for the same reason; and if not a teacher, then not a superintendent. Then the superintendents must be women, too. A sorry spectacle we would have if we limited the teaching to those who are idle and at rest all week."

PRESENT AND FUTURE OF MORMONISM.

THE effect that statehood for Utah would have upon the Mormon Church was a subject of much anxious consideration beforehand among the church people of other States; and there are many signs that the solicitude of the enemies of Mormonism is increasing rather than diminishing as the actual results of statehood are examined. A symposium on the subject of "The Mormon Question"—embracing the political power of the church, the methods of Mormon missionaries, and the alleged resumption of polygamous relations—appears in *The Independent* (March 3).

Of the nine persons participating, there is but one representative of the Church of Latter Day Saints, and that is the president, Wilford Woodruff. His contribution is very brief. He quotes from his manifesto suspending the practise of polygamy as follows:

"Inasmuch as laws have been enacted by Congress forbidding plural marriages, which laws have been pronounced constitutional by the court of last resort, I hereby declare my intention to submit to those laws, and to use my influence with the members of the church over which I preside to have them do likewise."

Of the observance of this, President Woodruff writes:

"This promise has been faithfully kept, and no one has entered into plural marriage by my permission since the manifesto was issued.

"There never were laws, of such a character, affecting relations which had existed nearly half a century, obeyed so implicitly and dutifully as those relating to plural marriage have been; but I can not say that every one who lived in plural marriage before the issuance of the manifesto has since then strictly refrained from such associations. There is a state law, however, framed in almost the precise language of the Edmunds-Tucker law, to which all are amenable."

Prof. Marcus E. Jones, of Salt Lake City, writes at considerable length giving the results of a systematic effort to get the facts by submitting a series of questions to people in various parts of Utah, concerning present practises and conditions of the Mormons. Answers received from 20 out of 311 post-offices in the State from "the most reliable people" (they are not further designated) indicate that about 2,500 men and 5,500 women are now living in polygamous relations in the State, and that polygamy is still being preached. Professor Jones thinks the only remedies that will avail are a national divorce law and a law of the State disfranchising all Mormons, monogamists as well as polygamists.

Rev. N. E. Clemenson, of Logan, Utah, quotes the passage quoted above from President Woodruff's manifesto, but gives one additional sentence which he calls the "vital clause" of it. This sentence is:

"And I now publicly declare that my advice to the Latter-Day Saints is to refrain from contracting any marriage forbidden by the law of the land."

Thus the manifesto did not command but merely *advised* against *new* polygamous marriages. Mr. Clemenson thinks polygamy must live while Mormonism does, quoting from the "revelation" that established polygamy to show that it was made an "everlasting covenant"; that it is the celestial order of marriage; that it is necessary to the deification of men; and that upon its

practise depends the incarnation of the more noble spirits that are anxiously waiting above to receive human bodies.

According to Rev. William R. Campbell, editor of *The Kinsman*, Salt Lake City, the Mormons have increased 60,000, or nearly 33 per cent., in the last year. He describes the methods of the Mormon missionaries and the doctrines they preach, and concludes that the church "grows neither because of its merits as a system of moral or religious truth, nor does it grow alone by its appeal to the depraved nature of man."

Rev. Dr. T. C. Iliff, superintendent of the Methodist missions in Utah, and Rev. W. S. Hawkes, superintendent of the Congregational missions, also express the conviction that there has been a general return to polygamous relations. Rev. Dr. R. G. McNiece, president of the Sheldon Jackson College, Salt Lake City, says that the elders in denying these relations quibble over the term polygamy, affirming that in plural marriages "the woman is sealed to the man, not the man to the woman." He adduces a series of facts to show that the pledge that the priests should not interfere in civil matters has been broken, and that the church is not only directly interfering with the legislature and with executive officials, but issued a manifesto last April "requiring official members of the church to secure the sanction of their ecclesiastical superiors before accepting a nomination to any political office." "It must be remembered," adds Dr. McNiece, "that almost every adult male member of the church holds an official position." His hope of remedy lies in immigration and the generous maintenance of Christian education.

An article that we find in a Mormon journal edited by George Q. Cannon (*The Juvenile Instructor*) indicates that the Mormons themselves are viewing with some apprehension the spirit of political independence that seems to have entered the church. This article, written by Mr. Cannon himself, whom many regard as the real head of the church in Utah, runs as follows:

"Never since the organization of the church have the Latter-Day Saints been exposed to such contending influences as they have during the past few years. The conditions surrounding them have in that time entirely changed. They have been placed in new and trying circumstances. The Lord has assured His people from the beginning that all would be tested, and, if they could be shaken, they would be. Certainly these predictions have been fulfilled to a very great extent of late. It has been surprising how men, who for long years have exhibited the utmost fidelity to the truth and to the priesthood, have manifested a want of faith and a disposition to reject the counsels of the priesthood. A spirit has seized them that has prompted them to indulge in strange expressions and feelings.

"The division on party lines in political matters has been one of the chief causes, if not itself the chief cause, of this change. It is a strange thing to have to say about Latter-Day Saints that the love of party and the zeal for party has arisen above every other consideration; and this feeling has been carried to such an extent at some times and in some places as to cause great pain to those who have loved the union of the Saints and the welfare of Zion.

"No one of experience and observation can very well question the propriety of the Latter-Day Saints being divided on national party lines. We had reached a point in our career where unless this had been done there would have been arrayed against us forces which would have been difficult to cope with. It was, therefore, the highest prudence that there should be such a division. But it did not necessarily follow because it was proper to have a division in political matters that the people should yield to a spirit of division and strife. Yet this spirit has been quite evident, and in some cases actual animosity has been all too plainly exhibited."

The writer goes on to observe that those believers "who have displayed the most intense partizan feeling, and who seemed in many instances to have thrown aside all sense of obligation to that influence and that authority which they had esteemed more than life itself," had gone astray through not reading their church papers.

EVANGELICAL MOVEMENT IN CATHOLIC FRANCE.

MENTION has been made in our columns (December 25, 1897) of the beginnings of an evangelical agitation in France among certain circles of Catholic priests. The movement seems to be growing beyond national confines. In Rome itself a new journal has made its appearance, called *La nuova Roma*, which has become the organ of complaints on the part of the clergy against the hierarchy. One department of the paper has the standing heading: "Let Us Free Ourselves from the Papacy." In each number letters of commendation are published as coming from the Catholic clergy and laity of Italy.

The center of the movement is France. The organ of the agitation there is *Le Chrétien français*, with the subtitle: "Bulletin mensuel de la réforme évangélique dans le Catholicisme. Rédigé par un groupe de Prêtres et d'anciens Prêtres" (Monthly Bulletin of evangelical reform in Catholicism. Conducted by a group of priests and ex-priests). This journal is edited by the late Abbé Bourrier, formerly a Catholic priest, but recently ordained as a minister of the Reformed Church at Paris. This journal makes claims as follows:

"We have adherents in nearly every diocese of the Church of France, among the clergy of every rank, in different cloisters and communions. We have received even from a high member of the hierarchy testimonials of sympathy. More than twenty monks and priests have broken their fetters that have chained them to the Church of Rome in order to be able to preach the Gospel in its purity. Other and a greater number believe that they can continue to remain in the bosom of the church and that a reformation can be effected from within Catholicism."

A number of the priests who have joined this movement have entered the Protestant Theological Seminary in Paris as students, and several have been ordained. An organization has been effected by a large majority of the Protestant clergy of the French capital, the purpose being to encourage in every way possible this new agitation.

Among those prominent in the movement is the former university preacher of Marseilles, Dr. Meliss, who has been consecrated as an evangelical preacher. The agitation has attracted attention also in political circles. An address on the subject was delivered by M. Delpéch, the senator of Ariège. The organs of the church do not ignore this propaganda, altho they judge it in different ways. In several articles the fear has been expressed that the agitation is more serious than the Catholic authorities are inclined to believe. In *La Vérité*, Arthur Loth acknowledges that there are some reasons for the demands of the reformers, but thinks that the whole matter is at bottom revolutionary and "democratic effervescence" and not so much the outcome of evangelical zeal.

In the mean while the religious journals of other lands are watching developments carefully. The *Chronik* of Leipsic has repeatedly (Nos. 47 and 48 of last volume, and No. 6 of the current) given detailed information on the matter. It says recently:

"This movement is progressing steadily, and signifies for the Catholic Church a loss of many excellent men, whose acquisition is a great gain for the Protestants. We can only rejoice at this, and not allow national or political reasons to prevent extending our full sympathy."

The Living Church tells of the manager of an opera-house in a Western town who has made an attack upon the religious societies of the place in a vigorous protest and memorial to the city council. He claims that the churches and the halls connected with them are ruining his business by giving entertainments and concerts of the same description as those for which he has to pay \$100 annually into the city treasury. They, on the other hand, are exempt from this tax. He asks that either his license shall be rebated, or that the churches be subject to the same charge, threatening at the same time to put in variety shows Sunday afternoon and evening, if his petition is not granted.

FOREIGN TOPICS.

ENGLAND AND FRANCE.

A LIVELY newspaper crusade is being carried on by the British press against French exploration and annexation in West Africa. The cause of England's dissatisfaction seems to be rather a general distrust of the purposes of the French in the Niger region than any definite action as yet taken by the latter. In the latter part of February a report that the French had occupied Sokoto—which is acknowledged to lie within the British sphere of influence—was circulated, but it was promptly denied by the French Government. Nevertheless, the apprehensions of the British have not been set at rest. *The Spectator*, London, says:

“‘At the cost of great sacrifices of men and money,’ says the [Paris] *Temps*, ‘we have succeeded in linking our Dahomey possessions with those of the Sudan, and in insuring them access to the navigable reach of the Lower Niger. Our neighbors must at last perceive that they will not make us give up these results merely to oblige them. *Beati possidentes*.’

“Needless to say, that is an attitude which, if persisted in, can only end in a conflict. Will France persist in it? We regret to say that it looks for the moment, at any rate, as if France would. . . . The only way of undeceiving them will, we fear, be the presentation of some definite demand to which there can only be the answer of war or of assent. But it does not need pointing out that an ultimatum presented to a people like the French would almost certainly produce war. When things had gone so far their pride would prevent any yielding to what they would call a threat.”

The London *Times* says that “they (the French) argue that no great nation, unless it were mad, would enter upon a violent conflict for pretensions such as ours, and ‘in these conditions,’ the *Temps* acknowledges with charming candor, ‘intimidation is without effect upon us.’ It is impossible to ignore the peril of such an attitude.” Remarks in *The Standard* imply that the whole of the Niger country, as the “Hinterland” of the British West African possessions, ought to be ceded to England, whether the French were there first or not. *The Daily Graphic* declares that “neither in the Transvaal, nor in China, nor in Afghanistan, nor in West Africa, will Great Britain sacrifice one iota of the rights she has acquired, no matter how brilliant the audacity with which they may be assailed,” but suggests arbitration, since the question hinges upon treaties supposed to have been concluded by British agents and traders ere the French took possession. The German papers, satisfied with the readiness of England to come to terms with Germany, endeavor to soothe the British. The *Vossische Zeitung* points out that, for some years, British diplomacy has experienced little success, and that the English want to see something brilliant achieved, an opinion which is heartily indorsed by *The Spectator*. The *National Zeitung* is glad to hear that England has evacuated the Salaga district, and supposes that this has been done to give England a free hand with France. The French papers maintain an attitude of composure. The *Journal des Débats*, Paris, says:

“In themselves the affairs of the Niger do not seem dangerous, but the British press has excited British opinion about them, and may, in the end, arouse some excitement on this side of the Channel. Singularly enough, the French journals are reproached for their very calmness. *The Times*, after claiming traditional phlegm for its country, accuses the French papers of not attaching enough importance to Niger affairs. A little more, and it would accuse them of not making the same stir as their English contemporaries. This reserve is, however, the most reassuring feature of the case. Our contemporaries across the Channel continually speak of English opinion. They must learn that French opinion also must be reckoned with.”

The *Matin* is assured that the two governments will settle

everything satisfactorily. “Therefore, *Messieurs les Anglais*,” it says, “have a little more calm and patience.” The *Temps* says it is only a newspaper war, but fears that it may create ill-feeling in both countries. In the *Revue des Deux Mondes* Francis Charmes expresses himself to the following effect:

Englishmen are, as a rule, quite ready to laugh at our Chauvinism when they do not make it a subject of bitter complaint. But when they have an attack of the same disease themselves, it surpasses everything of the kind in violence. The man of the hour in Great Britain is undoubtedly Mr. Chamberlain, who finds it to his advantage to create and keep at their height these jingoistic fits, one of which seems to have arrived at the height of paroxysm. Mr. Chamberlain will never admit that our attitude has been perfectly correct and loyal, for, if he did, he could not account for the continual despatch of troops to Africa. And what would become of the interests of the Royal Niger Company at the no distant period of its liquidation? We need the solid common sense of Lord Salisbury to reassure us.—*Translations made for THE LITERARY DIGEST.*

THE TEMPER OF SPAIN.

THE tone of the Spanish press is very quiet just now, but it is more the quiet of a people who are getting ready to fight than to make concessions. So far the Spanish Government has not done anything to precipitate the conflict; but the Spanish fleet in Cuban waters continually receives important additions, regiments which before were not risked in the swamps of Cuba have been sent to Havana, and the supply of war material is being augmented rapidly. The Spanish Government would like to increase its fleet, but there are hardly any ships to be purchased anywhere. It seems, however, that Spain has a chance to obtain the fine battle-ship *O'Higgins*, which has nearly been completed in England for the Chilean Government.

The *Globo*, Madrid, says:

“The Government is fully alive to the gravity of the situation, and is silently preparing for the worst. The authorities are, nevertheless, too sensible to tell every one what they are doing to prepare for emergencies. Fortunately, we will be ready when the time comes, and the public, watching Señor Sagasta's calmness, are calm themselves, realizing that the time for bandying words is past and the time for action has come.”

The above seems to be recognized as a very fair description of the temper of Spain. The Madrid correspondent of the *Nieuws van den Dag*, Amsterdam, in a long letter explains that the Spaniards, as a people, have indeed begun to harbor resentment against the United States. We condense in the following his views. It should be remembered that the Dutch, whose rebellion against Philip II. was the first blow against Spain's predominance on sea and land, have not yet forgotten entirely their former hatred of the Dons. The correspondent expresses himself to the following effect:

Tho their Government is badly organized, the Spaniards are still energetic, as their long struggle in Cuba, which has ended in all but the complete pacification of the island, has shown. Autonomy has, of course, much to do with the fact that Spain has been successful; but the struggle would doubtless have been of much shorter duration had not the United States almost openly assisted the rebels. Yet even in the face of this assistance Spain has succeeded! But that is not what the intriguing clique in New York, Chicago, and Washington want, and, in order to inflame the dying embers of the insurrection, they have procured the despatch of a squadron to Cuban waters. No wonder that the Spaniards can not be really sorry for the mishap which destroyed the *Maine*.

Very little now is needed to bring about hostilities. Mr. Woodford, the American Ambassador here, occupies no pleasant position. He is completely boycotted by the Spanish ladies. Whenever “Mr. and Mrs. Woodford” send out invitations the wives of the Ministers are suddenly ill, to recover as mysteriously the day

after. It is thus that the Spanish ladies show their appreciation of the fact that the United States continually advertises how much stronger a power she is than Spain. No doubt Spain would, in the end, be beaten; but not until she had done as much damage as possible. The national honor is a thing which the Spaniards, and most of all the Spanish women, regard as sacred. Whenever the women of a nation make a war their business, the enemy has always reason to be sorry that matters went so far.

The *Journal des Débats*, Paris, declares that the Cuban question constitutes undoubtedly the greatest present danger to the peace of the world, because the quarrel between the United States and Spain has its sources to some extent in sentiment, and says:

“No doubt the ‘yellow clan,’ who want to make a little money out of their ‘extras,’ act after a manner which is approved in the United States, and are void of all sense of responsibility; but the character of the situation renders the admixture of this element extremely dangerous. For three years the two nations have been face to face with a question which they view from totally different standpoints. The majority of the citizens of the United States, applying to Cuba a false analogy with the history of their own country, look upon the Cubans as successors of Washington and his companions. It would certainly be a grave error to fancy that this sentiment is with the jingoes only. By itself, however, this sentiment need not be dangerous; it is made so by the manner in which it is exploited. By exciting the populace, a continual series of insults against Spain are caused, while the Spaniards, on their part, see in the Cubans only rebels who have no cause for complaint, and they make up their minds to preserve, at any cost, their last American possession. If we regard the sentiments of the Americans as respectable, we must admit that those of the Spaniards are no less so, and that everything possible has been done in the United States to exasperate Spain. Not only that the United States Government—as the boasts of the American papers show—has done nothing to fulfil its promise regarding the arrest of filibustering expeditions, but the two chambers of Congress resound continually with insults hurled at Spain, and the United States has certainly been arming. Spain, on the other hand, has done everything to satisfy the Americans, has even given to Cuba an autonomy such as satisfies Anglo-Saxon colonies. More she can not be expected to do.”

We can not find in Spanish journals any confirmation of the report that Spain has tried to force matters by requesting the recall of General Lee, our consul in Havana. On the contrary, the *Correo Español*, a very reliable paper, relates that the autonomist government in Cuba complained of General Lee’s conduct, but that the home Government did not intend to ask for his recall. On the other hand, the story that Spain is willing to make any kind of concessions to the United States is, according to the official Spanish papers, utterly without foundation. Our armaments and the movements of our fleet are discussed very calmly in the Spanish press. The despatch of American warships to Europe and Asia is regarded as rather daring, since the United States has no supply-stations there, while Spain has her West Indian possessions as a base for operations in American waters. So, at least, thinks the *Imparcial*. The *Diario* says the people who in the United States enthusiastically speak of war evidently do not know what war is, an opinion which is shared by many people throughout the world, and which is expressed by *The Globe*, Toronto, a paper by no means ill-disposed toward us, in the following terms:

“The present generation in the United States do not know the meaning of war. They think it something to be enacted on a stage or sketched in colors for the illustrated press. Men who are too tender-hearted to wring the neck of a chicken or assist at a surgical operation talk with complacency, and even with enthusiasm, of the slaughtering of armies, the sinking of ships, and the blowing up of forts. The fact is that they know nothing of war. It is to their minds an abstraction with spectacular attractiveness, and the danger is that they will advance with the proverbial courage of the fool. . . . A railway wreck, with the crushed and mangled bodies of dead and dying, is contemplated with horror,

because all know what it means. But the thousandfold greater destruction of war is regarded as if it were a coming theatrical performance. The younger generation are in a fit condition to listen to the jingoes and to commit the greatest of all national follies and the greatest of all national crimes. The long interval of peace, with the consequent ignorance of the meaning of war, is a real source of danger, and it may be that the present-day Americans will learn, like their fathers, in the school of experience.”—*Translations made for THE LITERARY DIGEST.*

THE ANGLO-GERMAN LOAN TO CHINA.

JAPAN has refused to wait for the payment of the little bill still owing to her by China. The latter country has, therefore, accepted a loan from the Hongkong and Shanghai Bank, a British concern, and the German-Asiatic Bank, to the amount of \$80,000,000 at 4½ per cent. It is secured by the unpledged balance of the customs and specified provincial duties. The inspector-general of customs is to be British as long as England does more trade with China at the treaty ports than any other power. The internal waterways are to be opened, the valley of the Yang-tse-Kiang is not to be ceded to any power in any form, and a treaty port is to be opened in Hunan. The trade of the whole world will profit by this arrangement, and, as Great Britain has the lion’s share of China’s trade, she will profit more than others. Yet the British papers are not altogether satisfied over the failure of an all-British loan and the admission of Germany.

Money, London, thinks “the pity is, that it is not an all-British loan,” but comforts itself with the thought that it is “the next best thing,” and says:

“The first reflection which the landing of the loan, after its long and adventurous voyaging, suggests is disappointment that the British Government did not succeed in securing it. . . .

“But regrets are vain. And, after all, Great Britain does not come out so badly. Next to an imperial British loan, a financial arrangement in which a British bank has the leading hand is perhaps the best that could be made. . . .

“The Hongkong and Shanghai Bank is a wealthy and influential British institution, and represents British financial interests throughout the far East. Half of the loan, at least, is to be raised in England, and British prestige and credit are thereby saved. Moreover, the association of a German syndicate with the Hongkong and Shanghai Bank is satisfactory from several points of view. It unites German and English financial interests in the East; and it will be a token to the world that the two powers are acting together and not against each other.”

The Saturday Review thinks that England will profit almost as much as if she had the loan all to herself, and that the absence of international jealousies in the present case rewards her for her unselfishness.

The Economist expresses itself, in the main, as follows:

What there is left of the import duties—they are already heavily mortgaged—does not amount to much. But the salt and provincial duties will amply cover the new liabilities of China, if the provincial authorities are prevented from meddling. It may be assumed as certain that the two banks have obtained sufficient guaranties. The most pleasing result of the negotiations is that international jealousies have been allayed by them. The material advantages obtained are, however, very great. The opening of the rivers must lead to greater extension of trade, and the stipulation that the vale of the Yang-tse-Kiang is not to be ceded to any power is of special advantage to Great Britain, since she has the lion’s share of trade there.

The Financial News says:

“It is not a disadvantage that German capital cooperates in the loan; for the more widely spread is interest in the maintenance and expansion of Chinese revenues the less is the risk of intrigue against the open-trade policy of this country in China. . . . The virtues of a purely commercial policy were never more plainly exemplified. Everybody concerned in the transactions for the re-

demption of Wei-hai-Wei obtains some advantage—China a cheap loan, Japan a speedy payment, Great Britain a wider market, Germany the credit of being associated with us in a beneficial operation; while the rest of the world is permitted to share in the wider trade privileges we have secured."

The tone of the German press is, on the whole, a little more friendly to England in consequence of this joint transaction. The *Hamburger Nachrichten* dryly remarks that England will find she can get along swimmingly if she does not play the part of a grab-all. The *National Zeitung*, Berlin, says:

"The question now is what compensation Russia and France will claim. France will probably take Hanoi and Russia is pretty certain to take hold in Liau-Tung. Why should she not? Germany's interests are not affected thereby, or by other 'compensation' given to foreign powers. On the contrary, some of the concessions made to England will benefit Germany."

The *Kieler Zeitung* points out that Germany in this question of the Chinese loan has acted without asking Russia's or any other power's advice. As in the occupation of Kiau-Chou, Germany acted for herself, preventing failure not so much by the consent of others as by careful calculation of what could really be accomplished. The *Vossische Zeitung* says:

"The form under which the loan has been transacted renders it easier for the British Government to renounce demands which were, perhaps, made only to prove a willingness to give away. The chief of these is the opening of Ta-lien-Wan, which Russia opposed very strongly, as she desires to include it in her own sphere. The port is really of little importance to England or to Germany. Owing to the success of British policy, the opening of Yuchou as a treaty port, and the prolongation of the Burmese railway through Yunnan to the Yang-tse-Kiang, the trade of all civilized states will assume larger dimensions."

The French papers see no cause for complaint in the arrangement. The *République Française* remarks that French trade must benefit proportionally as much as that of other nations.—*Translations made for THE LITERARY DIGEST.*

THE ATTACK UPON KING GEORGE OF GREECE AND THE CRETAN QUESTION.

AN attempt was made on February 26 to assassinate the King of Greece. His coolness probably saved his life, for he stood up in the carriage and shook his cane at the would-be assassins, which so disconcerted them that they fired very wildly. King George's chief aim was to protect the Princess Marie, who was with him in the carriage. The criminals, one of whom held a small appointment under the municipal government of Athens, are under arrest.

The *Proia*, Athens, says:

"The entire nation must feel contempt for the men who committed this deed. They are not worthy to be called Greeks. The deed is as much an attack upon Greece as upon her king. It is the outcome of the seed sown by an unscrupulous press, which has poisoned the minds of the people until they believe in the existence of a dark plot for the destruction of Greece, a plot in which her king, too, participates."

The *Asty* praises the coolness of the king, and declares that surely these two men are the only Greeks capable of such a deed, and describes the possible motive as follows:

"It has been known for two months that a secret club was meeting in different parts of the city. The resolutions of the club, which was formed of members of the lower orders, were often sent to the king, who, however, took no notice of them, tho they threatened his life. The king continued to ride and walk out with Princess Marie. Hysterical youths, ruined men, and unemployed laborers joined the club, which regarded the king and the members of the Cabinet as being in the pay of foreign powers."

The *Times*, London, thinks the death of a brother of the Princess of Wales by the bullet of an assassin would have been felt as a domestic calamity in England. The *Birmingham Post* remarks

that "King George has now received the 'baptism of fire' to which all crowned heads are sooner or later subjected by the cranks and fanatics who have persuaded themselves that regicide is the best cure for all national ills." The *Spectator*, London, says:

"King George, it is clear, showed self-command, as kings usually do, and the mob in every country adores courage—cynics say because it has none itself, but more probably because, of all the virtues, bravery is the one which the vulgar most easily understand. They often misread benevolence, and hardly comprehend self-devotion, but about pluck they have an instinct which seems never to desert them, and to be almost incapable of error."

The *Speaker* says:

"The attempt on the life of the King of Greece has been made—and happily has failed—at a most fortunate moment for the interests of the dynasty and the nation. Its feebleness and futility is a satisfactory proof that the public order of Greece is not seriously compromised by the effects of her terrible sufferings. The secret societies can not themselves be very formidable if they can get no better instruments than the miserable creatures who fired six shots at a carriage and a pair at a range of a dozen yards without doing serious damage; and the courage shown by the king and his daughter will go far to rehabilitate him."

The *Saturday Review* had some doubt that the attempt to assassinate the king was genuine, and the central organ of the German Socialists, the *Vorwärts*, even wanted the bullets to be produced in evidence—bullets fired out of a modern rifle in the open field! The *Vossische Zeitung*, Berlin, says:

"Since the war with Turkey, the abolition of the Ethnike Hetaira and the revelations regarding the incapacity of the Greek commanders, the king has not been very popular. But surely it was neither necessary nor wise to make an attempt upon the life of a man whose share of the mistakes committed was so small. The Greek people once before have told a king to go about his business when they did not want him, and they could have done the same again, without an attempt at murder."

The *Journal des Débats*, Paris, is quite willing to believe that the majority do not approve the attempt at assassination, but adds that "it is quite conceivable that a press whose license is not restrained in any way excited the imagination of the assassins." The *Journal de St. Petersburg* says:

"The feeling of gratitude for the safe escape of the king is specially strong in Russia, in view of the ties of relationship uniting the Russian imperial family with the Greek royal house, and the common faith of the two countries. It is to be hoped that the event will subdue party passions, and that it will teach the Hellenes the wholesome lesson that their welfare and happiness are bound up with the dynasty, and can be secured only by loyalty to the dynasty."

It seems now possible that Thessaly will soon be evacuated by the Turks. Russia, France, and Great Britain will guaranty the Greek loan which is to be raised to pay the war indemnity to Turkey. After that the Turks must withdraw. There is some talk that the Sultan will hold Thessaly until the Cretan question is settled, but he evidently does not meet with much encouragement to do so. The *Frankfurter Zeitung* says:

"Such plans on the part of the Sultan should be nipped in the bud. The evacuation of Thessaly has nothing to do with Crete. When the indemnity is paid the Turks must go, or the Sultan becomes the one who is hopelessly in the wrong, for he then acknowledges that Greece has a right to interfere in the pacification of Crete. This pacification will, however, be attended to by the powers. It is to be hoped that the Sultan's European friends explain this to him."

The *Viedomosti*, St. Petersburg, says:

"While Russia is very anxious to be on the best possible terms with Turkey, especially as the powers side with Russia, she can not allow the Turkish Government to exercise pressure in Thessaly in order to retard the satisfactory settlement of the Cretan question. The appointment and installation of a Turkish governor, and the increase of the Turkish garrisons can not be permitted. The Cretans have waited long, too long for the solution of the difficulties which beset them, and some consideration is now due them."

The *Handelsblad*, Amsterdam, nevertheless, asks: "Suppose the Sultan won't go, *who* is to throw him out?"—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

KOREA AS SEEN BY AN ENGLISHWOMAN.

TO Mrs. Isabella Bird Bishop, Fellow of the Royal Geographical Society, and already so favorably known by her memorable description of "Unbeaten Tracks in Japan," we are now indebted for a narrative, as vivid and trustworthy as it is timely, of her four visits to Korea, between January, 1894, and March, 1897. Mr. Walter Hillier, who was until recently British consul-general to Korea, in an introductory preface, commends the work for its sagacious observation, its accurate record, and its correct inferences, and expresses himself as happy in being afforded an opportunity to indorse the conclusions Mrs. Bishop has reached "after long and intimate study of a people whose isolation during many centuries renders a description of their character, institutions, and peculiarities especially interesting in the present state of their history."

Encouraged by credentials so substantial, the reader embarks, with confidence in a guide so well equipped, to explore a strange country and penetrate the secrets, social, political, and religious, of a people who are unwittingly making history in which our Western world may be gravely concerned.

Here is a race whose language is mixed, whose educated classes affect the speech of China in their conversation, and whose scholars cultivate Chinese letters, while the Korean is the only language of Eastern Asia that has an alphabet; a people without a national religion, but accepting Confucianism as the official cult, and morally walking by Confucian texts and precepts; a people dominated by spirit-worship, the unlettered classes and the women of all classes forever placating the "demons" with passionate persistence; a people who, in spite of a most convincing war, still turn to China for ideas, traditions, doctrines. "Their literature, superstitions, system of education, ancestral worship, culture, and modes of thinking, are all Chinese. . . . Korea is but a feeble reflection of her powerful neighbor."

"It is into this archaic condition of things [writes Mrs. Bishop], this unspeakable grooviness, this irredeemable, unreformed Orientalism, this parody of China without the robustness of race, which helps to hold China together, that the ferment of the Western leaven has fallen, and this feeblest of independent kingdoms, rudely shaken out of her sleep of centuries, half frightened and wholly dazed, finds herself confronted with an array of powerful, ambitious, aggressive, and not always overscrupulous powers, bent, it may be, on overreaching her and each other, forcing her into new paths, ringing with new hands the knell of time-honored custom, clamoring for concessions, bewildering her with reforms, suggestions, panaceas, of which she sees neither the meaning nor the necessity."

Yet the Koreans, Mrs. Bishop tells us, are strikingly unlike both the Chinese and the Japanese. They show a notable variety of physiognomy, in straight or aquiline as well as broad or snub noses, with distended nostrils; eyes varying from dark brown to hazel; the cheek-bones high, the ears small and well set, the brow often lofty and intellectual; the usual expression cheerful, "with a dash of wonderment"—a physiognomy indicating in its best aspect alert intelligence rather than force, or strength of will. Reared in a wholesome and invigorating climate, where for nine months in the year the skies are commonly bright, and where the winters are glorious, with extreme dryness, and crisp frosty nights, the race is of good physique, strong and healthy, walking well, and easily carrying heavy burdens; and while the women are without grace, "broad and squat," their natural ungainliness exaggerated by "the ugliest dress on earth," the hands and feet of both sexes and all classes are small, white, and delicately formed, and the finger-nails tapering, almond-shaped, and carefully kept.

The Oriental vices of suspicion, cunning, and deceit are conspicuous among them. "Trust between man and man is unknown," and the women are held in rigorous subjection and seclusion. Nevertheless, Mrs. Bishop, who seems to have entered upon her investigations with most discouraging prejudice, emerges with enthusiasm:

"My first journey produced the impression that Korea is the most uninteresting country I ever traveled in, but during and since the war, its political perturbations, rapid changes, and possible destinies have given me an intense interest in it; while Korean character and industry, as I saw both under Russian rule in Siberia, have enlightened me as to the better possibilities which may await the nation in the future. Korea takes a similarly strong grip on all who reside in it sufficiently long to overcome the feeling of distaste which at first it undoubtedly inspires."

In Seoul, Mrs. Bishop had the good fortune to witness the *Kur-dong*, a remarkable spectacle which she supposes was then seen in its splendor for the last time, as the events which have since occurred and the compulsions of economy "must put an end to much of the scenic display." It is a striking picture that she presents of the picturesque monotony of Seoul: Brown mountains "picked out" in black, brown mud walls, brown roofs, brown roadways, and the dismal procession of humanity always in black and white:

"Always the same bundled-up women clutching their green coats under their eyes, always the same surge of yang-bans and their familiar swinging along South Street, the same strings of squealing ponies 'spoiling for a fight,' the same processions of majestic red bulls under towering loads of brushwood, the same coolies in dirty white, forever carrying burdens, the same joyless dirty children getting through life on the gutter's edge, and the same brownish dogs, feebly wrangling over offal. On such monotony and colorlessness, the *Kur-dong* bursts like the sun. Alas for this mean but fascinating capital, that the most recent steps toward civilization should involve the abolition of its one spectacle!"

A limp and apathetic crowd, quietly pleased, but without jollity or excitement; no flags, no popular demonstrations, scarcely a hum from the concourse of 200,000 citizens and country-folks. "Squalid and mean is the ordinary Korean life, and the king is a myth for most of the year. No wonder the people turn out to see as splendid a spectacle as the world has to show, its splendor centering round their usually secluded sovereign":

"Waves of color and Korean grandeur rolled by, official processions, palace attendants, bannermen, with large silk banners trailing on the stiff breeze, each flagstaff crested with a tuft of pheasant's feathers, the king's chief cook, with an enormous retinue, more palace servants smoking long pipes, drummers, fifers, couriers at a gallop, with arrows stuck into the necks of their coats, holding on to their saddles and rope bridles, mixed up with dishevelled ponies with ragged pack-saddles, carrying cushions, lacquer boxes, eatables, cooking utensils, and smoking apparatus, led caparisoned ponies, bowmen, soldiers straggling loosely, armed with matchlock guns, . . . more grandees, more soldiers, more musical instruments, and then come the royal chairs, the first, which was canopied with red silk, being empty, the theory being that was the more likely to receive an assassin's blow. A huge trident was carried in front of it. After this, borne high aloft by forty bearers clothed in red, in a superb chair of red lacquer, richly tasseled and canopied, and with wings to keep off the sun, came the king, whose pale, languid face never changed its expression as he passed with all the dignity and splendor of his kingdom through the silent crowd."

Mrs. Bishop's account, by no means extravagant or vainglorious, of her experiences as a wayfarer on Korean roads, impresses the reader with hearty admiration for her genius, pluck, and endurance. She is harbored in inns which differ in nothing from the common hovels of the country people, except that they may boast of a yard with troughs, and can offer entertainment for beast as well as man. The "regular" inn of the towns and large

villages is but little more than a filthy courtyard, "full of holes and heaps," and entered from the road by a tumbledown gateway. Gaunt black pigs tethered by the ears, big yellow dogs scratching in garbage, fowls, boys, bulls, ponies, travelers' luggage, and hangers-on, complete the scene:

"My quarters were opposite to the ponies, on the other side of the foul and crowded courtyard. There were two rooms, with a space under the roof as large as either between them, on which the dripping baggage was deposited, and Wong established himself with his cooking-stove and utensils, tho there was nothing to cook except two eggs obtained with difficulty, and a little rice left over from the boat stores. My room had three paper doors. The unwallled space at once filled up with a crowd of men, women, and children. All the paper was torn off the doors, and a crowd of dirty Mongolian faces took its place. I hung up cambric curtains, but long sticks were produced, and my curtains were poked into the middle of the room. The crowd broke in the doors, and filled the small space not occupied by myself and my gear. The women and children sat on my bed in heaps, examined my clothing, took out my hairpins and pulled down my hair, took off my slippers, drew my sleeves up to the elbow and pinched my arms to see if they were of the same flesh and blood as their own; they investigated my few possessions minutely, trying on my hat and gloves, and after being turned out by Wong three times, returned in fuller force, accompanied by unmarried youths, the only good-looking 'girls' ever seen in Korea, with abundant hair divided in the middle, and hanging in long plaits down their backs. The pushing and crushing, the odious familiarity, the babel of voices, and the odors of dirty clothing in a temperature of 80°, were intolerable."

In Mukden, the old capital of Manchuria, Mrs. Bishop found Chinese troops "on the march"—that is, straggling along in any fashion. There were regiments of sturdy, active fellows, without a rifle among them. Some had gingals, carried by pairs of men; others were armed with antiquated muzzle-loading muskets, very rusty, or with long matchlocks; and some carried only spears, or bayonets fixed on long poles. All were equipped with such umbrellas and fans as were afterward found in the ditches of the bloody field of Phyong-Yang:

"It was nothing but murder to send thousands of men so armed to meet the Japanese with their deadly Murata rifles, and the men knew it, for when they happened to see a foreigner they made such remarks as, 'This is one of the devils for whom we are going to be shot,' and when a large party of them, in attempting to make a forcible entry into the governor-general's palace, were threatened by the guard with being shot, the reply was, 'We are going to be shot in Korea, we may as well be shot here.'"

Mr. Hillier, in commending Mrs. Bishop to the respect and confidence of her readers, assures us that she has been honored with the friendship of the king and the late queen "in a degree that has never before been accorded to any foreign traveler." In view of these exceptional privileges, her description of the royal pair, as they appeared at a private audience to which she was invited in Seoul, is interesting and memorable:

"Her majesty, who was then past forty, was a very nice-looking, slender woman, with glossy raven-black hair, and a very pale skin, the pallor enhanced by the use of pearl powder. The eyes were cold and keen, and the general expression one of brilliant intelligence. She wore a very handsome, very full, and very long skirt of mazarine blue brocade, heavily plaited, with the waist under the arms, and a full-sleeved bodice of crimson and blue brocade, clasped at the throat by a coral rosette, and girdled by six crimson and blue cords, each one clasped with a coral rosette, with a crimson silk tassel hanging from it. Her head-dress was a crownless black silk cap edged with fur, pointed over the brow, with a coral rose and full red tassel in front, and jeweled aigrettes on either side. Her shoes were of the same brocade as her dress. As soon as she began to speak, and especially when she became interested in conversation, her face lighted up into something very like beauty.

"The king is short and sallow, certainly a plain man, wearing a thin mustache and a tuft on the chin. He is nervous and twitches his hands, but his pose and manner are not without dignity. His face is pleasing, and his kindness of nature is well

known. In conversation the queen prompted him a good deal. He and the crown prince were dressed alike, in white leather shoes, wadded silk socks, and voluminous wadded white trousers. Over these they wore first, white silk tunics, next pale green ones, and over all sleeveless dresses of mazarine blue brocade. The whole costume, being exquisitely fresh, was pleasing. On their heads they wore hats and mang-huns of very fine horsehair gauze, with black silk hoods bordered with fur, for the mercury stood 5° below zero."

To Colonel Cockerill's graphic account of the tragic death of the queen at the hands of Japanese assassins, Mrs. Bishop contributes intimate details, which she presents with dramatic simplicity and directness:

"The whole affair did not occupy much more than an hour. The crown prince saw his mother rush down a passage followed by a Japanese with a sword, and there was a general rush of assassins for her sleeping-apartments. In the upper story the crown princess was found with several ladies, and she was dragged by the hair, cut with a sword, beaten, and thrown downstairs. Yi Kyong-jik, minister of the royal household, seems to have given the alarm, for the queen was dressed and was preparing to run and hide herself. When the murderers rushed in, he stood with outstretched arms in front of her majesty, trying to protect her, furnishing them with the clew they wanted. They slashed off both his hands, and inflicted other wounds, but he contrived to drag himself along the veranda into the king's presence, where he bled to death.

"The queen, flying from the assassins, was overtaken and stabbed, falling down as if dead; but one account says that, recovering a little, she asked if the crown prince, her idol, was safe, on which a Japanese jumped on her breast and stabbed her through and through with his sword. Even then, tho the nurse whom I formerly saw in attendance on her covered her face, it is not certain that she was dead; but the Japanese laid her on a plank, wrapped a silk quilt round her, and she was carried to a grove of pines in the adjacent deer park, where kerosene oil was poured over her body, which was surrounded by faggots and burned, only a few small bones escaping destruction.

"Thus perished, at the age of forty-four, by the hands of foreign assassins, instigated to their bloody work by the minister of a friendly power, the clever, ambitious, intriguing, fascinating, and in many respects lovable Queen of Korea. In her lifetime Count Inonye, whose verdict for many reasons may be accepted, said: 'Her majesty has few equals among her countrymen for shrewdness and sagacity. In the act of conciliating her enemies and winning the confidence of her servants she has no equals.'"

Speaking of the absolute seclusion of the women, Mrs. Bishop tells us that the murdered queen once assured her, in allusion to her visitor's Korean journeys, that *she* knew nothing of Korea, or even of the capital, except in the route of the Kur-dong:

"Daughters have been put to death by their fathers, wives by their husbands, and women have even committed suicide, according to Dallet, when strange men, whether by accident or design, have even touched their hands, and quite lately a serving-woman gave as her reason for remissness in attempting to save her mistress, who perished in a fire, that in the confusion a man had touched the lady, making her not worth saving!

"The law may not enter the women's apartments. A noble hiding himself in his wife's rooms can not be seized for any crime except that of rebellion. A man wishing to repair his roof must notify his neighbors, lest by any chance he should see any of their women. After the age of seven, boys and girls part company, and the girls are rigidly secluded, seeing none of the male sex except their fathers and brothers until the date of marriage, after which they can only see their own and their husband's near male relations. Girl children, even among the very poor, are so successfully hidden away that in somewhat extensive Korean journeys I never saw one girl who looked above the age of six, except hanging listlessly about in the women's rooms, and the brightness which girl life contributes to social existence is unknown in the country."

CORRESPONDENTS' CORNER.

Swinburne and Albert Pike.

Editor of THE LITERARY DIGEST:

In your issue of February 19 Mr. C. Alphonso Smith, unwittingly no doubt, does a great injustice to the memory of General Pike by accusing him, by implication, of plagiarism in his immortal poem, "Every Year." Before me lies a bound volume of the poems of General Pike, privately printed, and proof-read by himself, with an autograph inscription to the donee, and I give you a copy of the poem, complete, as there contained, with punctuation and make-up. No such stanza as quoted appears, and was undoubtedly added by some other person, less tenacious than General Pike of the literary rights of others. He was not parsimonious, even in the use of quotation marks.

M. W. WOOD.

BOISE BARRACKS, IDAHO.

BUSINESS SITUATION.

The state of trade last week was characterized by a steady increase. The war-scare influence was lessened somewhat, and the volume of business compared favorably with the same period in previous years. Exports were greater than in February, and gold in large lots is coming from Europe. In two weeks of March exports have been 16 per cent larger than last year, and imports have gained but 8.7 per cent., altho especially swelled by receipts of india-rubber, sugar, and hides.

Cotton, Wool, Boots, and Shoes.—"Little encouragement appears in the market for cotton goods, with print cloths a sixteenth lower than a week ago, and standard grades undersold by many of less note. The demand is large, but not large enough. In woolen goods, on the contrary, the material advance in prices has raised the only obstacle to increased transactions, and somewhat frequent cancellations indicate that dealers have been disappointed in their distribution. The small yielding in wool may result in a greater decline if this tendency in the manufacture continues. The boot and shoe manufacture, having chosen the opposite policy, has secured by far the largest orders ever known at this season through concessions which leave scarcely any profit for the works, but insure active operations for a half year or more to the establishments producing most heavily. Leather is slightly weaker, and hides at Chicago average a little lower in price."—*Dun's Review, March 19.*

Iron and Steel.—"The movement of iron and steel is especially large, but without effect on prices, which are generally very firmly held. Some slight advances in pig iron, in fact, have been a feature of the week at some markets. St. Louis reports general trade larger than at any corresponding time in recent years, with fewer cancellations of orders already filed, and with purchases tending nearer to a cash basis than ever before. Business is good at Kansas City, and dealers in hardware, building materials, and implements can not get goods fast enough to supply current demand. Better weather has improved retail trade at the South, while wholesale business is maintained at a satisfactory volume. New Orleans reports trade in excess of last year and the outlook encouraging. Southern iron manufacturers are active, and fruit and vegetable shipments promise alike to be early and heavy. Distributive trade is reported increasing at the Northwest, navigation is practically open on the lakes, and the 1st of April will witness a general movement of craft."—*Bradstreet's, March 19.*

The Cereal Market.—"Wheat exports are smaller than last week, but considerably larger than in corresponding periods of preceding years, aggregating 3,625,584 bushels, against 4,484,000 bushels last week, 1,629,000 bushels last year, 1,592,000 bushels in 1896, and 2,998,000 bushels in 1895. Corn exports exceed those of last week, aggregating 3,918,000 bushels, against 3,285,000 bushels in the preceding week, 5,939,000 bushels last year, 1,802,000 bushels in 1896,

and 486,000 bushels in 1895."—*Bradstreet's, March 19.*

The Money Market.—"The New York banks lost about \$1,000,000 this week by transfers to the interior, but gained much more largely by receipts of gold from Europe. Orders for imports of gold amounted during the week to \$16,225,000, besides \$275,000 from Australia. There was some improvement in takings of commercial loans, which were offered with comparative freedom by houses engaged in textile manufacture and dry-goods importing. The stock market was affected all the week by anxieties regarding foreign affairs, and at one time railroad stocks averaged \$1.49 per share lower than a week ago, but recovered all the loss. Railroad earnings continue 7.9 per cent. larger than last year, and 7 per cent. larger than in 1892, while Chicago East-bound tonnage is very much the largest ever recorded, and bank clearings for the month were 42.8 per cent. larger than last year. Failures for two weeks of March have been \$1,205,425 in amount against \$1,997,301 last year, manufacturing \$1,849,058 against \$2,126,279 last year, and trading \$2,172,530 against \$3,717,165 last year. Failures for the week have been 208 in the United States against 216 last year, and 27 in Canada against 50 last year."—*Dun's Review, March 19.*

Canadian Trade.—"Good weather helps Canadian trade distribution, which might otherwise have been very perceptibly reduced by the breaking up of the roads throughout the country districts. Toronto reports travelers sending in orders freely, Canadian woolen mills filled with orders, Canadian cotton goods steady at the recent decline, bankers not inclined to increase the volume of money now on call, and smuggling complained of

A POPULAR MISTAKE

Regarding Remedies for Dyspepsia and Indigestion.

The national disease of Americans is indigestion or in its chronic form, dyspepsia, and for the very reason that it is so common many people neglect taking proper treatment for what they consider trifling stomach trouble, when, as a matter of fact, indigestion lays the foundation for many incurable diseases. No person with a vigorous, healthy stomach will fall a victim to consumption. Many kidney diseases and heart troubles date their beginning from poor digestion; thin, nervous people are really so because their stomachs are out of gear; weary, languid, faded out women owe their condition to imperfect digestion.

When nearly every person you meet is afflicted with weak digestion it is not surprising that nearly every secret patent medicine on the market claims to be a cure for dyspepsia, as well as a score of other troubles, when in fact, as Dr. Werthier says, there is but one *genuine* dyspepsia cure which is perfectly *safe* and *reliable*, and moreover, this remedy is not a patent medicine, but it is a scientific combination of pure pepsin (free from animal matter), vegetable essences, fruit salts, and bismuth. It is sold by druggists under name of Stuart's Dyspepsia Tablets. No extravagant claims are made for them, but for indigestion or any stomach trouble, Stuart's Dyspepsia Tablets are far ahead of any remedy yet discovered. They act on the *food* eaten, not dieting is necessary, simply eat all the wholesome food you want and these tablets *will digest* it. A cure results, because all the stomach needs is a *rest*, which Stuart's Dyspepsia Tablets give by doing the work of digestion.

Druggists sell these tablets at 50 cts. per package. Little book on stomach diseases and testimonials sent free by addressing Stuart Co., chemists, Marshall, Mich.

A Solid Gold Fountain Pen. Hard Rubber, Engraved Holder, simply constructed, always ready to write, never blots, no better pen made. Mailed complete with filler for \$1.00. Lincoln Fountain Pen Co., R. 9, 108 Fulton Street, N. Y.

as aided by cheap railroad fares. Montreal reports some damage done by floods in the province of Quebec and bad roads reducing the volume of distribution below an average. Groceries as a rule are dull, but molasses and dried fruits are active and higher in price. The implement market is dull on local demand, but a good business is reported on export account. Business failures in the Dominion number 23 against 31 last week, 36 in this week of 1897, 40 in 1896 and 1895, and 41 in 1894. Bank clearings in Canada aggregate \$25,806,000, a decrease of 7 per cent. from last week but a gain of 47 per cent. over last year."—*Bradstreet's, March 19.*

Current Events.

Monday, March 14.

The Navy Department successfully negotiates the purchase of the two Brazilian cruisers, *Amazonas* and *Almirante D'Abreu*, built by the Armstrongs in England. . . . The Democrats of Rhode Island nominate Daniel L. Church, of Tiverton, for governor. . . . The board of inspection at this city appointed to examine the merchant vessels offered to the Government as auxiliary cruisers organizes and begins work. . . . It is reported that the Stikien River route to the Klondike is snowbound and that many people are returning. . . . Congress—Senate: The proposed Senatorial investigation into the Maine disaster is discussed. House: Most of the day is voted to District of Columbia business.

Another unidentified body has been taken from the wreck of the *Maine*. . . . The Marquis of Salisbury has been compelled by illness to turn over the business of the British Foreign Office to A. J. Balfour, government leader in the House of Commons. . . . Woolf Joel, nephew and executor of Barney Barnato, is shot and killed at Johannesburg, South Africa, by a former soldier named Feldthein, whose demand for money Mr. Joel had refused. . . . In the House of Commons Michael Davitt asks questions of the Government regarding the relations of the United States and Great Britain.

Tuesday, March 15.

The House committee on naval affairs votes to build five new drydocks and will probably authorize the construction of several torpedo-boats and torpedo-boat destroyers. . . . Arrangements are made for the government geological survey of Alaska authorized by Congress. . . . Congress—Senate: The bill providing for a national quarantine system is discussed. House: Action on the Maine relief bill is postponed; debate on the post-office appropriation bill is begun.

It is reported that a second squadron for Cuba will soon sail from Spain. . . . Spanish 4s fall in London and Madrid; their closing price in Paris remains the same as on the previous day. . . . The cruiser *San Francisco* sails from Lisbon; it is believed on a voyage to England to bring the *Amazonas* to this country. . . . French workmen assault two German customs officers who had crossed the French frontier into France. . . . The rebellion in the Philippines is growing.

Wednesday, March 16.

The Maine Court of Inquiry arrives at Key West, and its members consult with Admiral Sicard. . . . The Spanish Cabinet has addressed a friendly remonstrance to the State Department against the presence of a great fleet at Key West and other emergency measures taken by the Administration. . . . The Senate committee on foreign relations decides to abandon the Hawaiian treaty and resort to annexation by legislation. . . . John Wanamaker opens his campaign for governor of Pennsylvania. . . . General Nelson A. Miles visits and inspects the fortifications and defenses in Long Island Sound. . . . The yacht *Mayflower*, built for the late Ogden Golet, is purchased by the Government for use as a torpedo-boat destroyer. . . . Congress—Senate: Mr. Davis (Rep., Minn.) introduces a joint resolution providing for the annexation of Hawaii; in executive session the nomination of T. V. Powderly to be commissioner of immigration is confirmed. House: The post-office appropriation bill is under consideration, but debate takes a wide range, Cuba, Hawaii, and many other topics being discussed.

The cruiser *Montgomery* is recalled to Key West; the contracts for the purchase of the two Brazilian cruisers are signed in London. . . . The French fleet is being mobilized with a view to making a naval demonstration in the far East.

More light from your lamp, whatever lamp you use; and almost no chimney expense, no breaking. Use the chimney we make for it. Index.

Write Macbeth Pittsburgh Pa

The treatment for throat and lung diseases, which to-day is the most popular remedy on the market, was discovered and given to the world by R. T. Booth. He now offers to the public his latest and most wonderful discovery—MI-O-NA—a CURE for indigestion and dyspepsia.

Mr. Booth's position in the scientific and commercial world is a guarantee that what he offers to the public will be exactly as represented.

R. T. Booth's MI-O-NA is not a palliative, laxative, or an artificial digestive; it is a HEALER, and CURES by removing all congestion and inflammation, and putting the entire digestive system in a sound, healthy condition.

MI-O-NA, the HAWAIIAN CURE, is the only medicine that acts directly upon the digestive organs and NOT UPON THEIR CONTENTS. In this respect it differs from all other remedies prescribed for indigestion.

Soda, pepsin, pancreatin and all the other palliatives never have and never can CURE a single case of dyspepsia.

MI-O-NA ABSOLUTELY PREVENTS UNNATURAL FERMENTATION.

The native race of Hawaii represents a grand trinity—height, standard weight and perfect health. Their fine physique and splendid health are due entirely to a perfect digestion.

But they owe their perfect digestion to the Taro, a plant indigenous to Hawaii, which is used as a vegetable.

Mr. Booth found in the root, the part used for food, medicinal properties that have an extraordinary effect upon the mucous membrane of the alimentary canal. They destroy irritation, remove congestion and allay inflammation. The active principle also causes the digestive fluids to flow in a natural abundance; the lymphatics are kept up to the proper activity during assimilation, and thus is created a perfect digestion.

It was Mr. Booth who made the very important discovery that in 95 cases out of every 100 where the weight is normal there is PERFECT DIGESTION AND PERFECT HEALTH.

An interesting booklet on HOW TO GET WELL AND STAY WELL, together with full information of Mr. Booth's great discovery relating to HEIGHT, WEIGHT, and PERFECT HEALTH, sent on application. Also a trial sample of MI-O-NA free. Box of MI-O-NA at your druggist's or by mail, 50 cents. Address

Congress—Senate not in session. House: The post-office appropriation bill is passed.

A meeting in furtherance of a millenary commemoration of King Alfred the Great is held in London; letters from President McKinley, Queen Victoria, and others were read. . . . Sixty lives are reported lost by an earthquake which destroyed the town of Amboyna in the Spice Islands.

Sunday, March 20.

Work is advancing rapidly on the Trans-Mississippi Exposition at Omaha; the demand for space from exhibitors is large. . . . No report has as yet been received from the Maine Court of Inquiry.

The rebellion on the northwest frontier of India is thought to be ended, the rebels having given the required seventy hostages. . . . English newspapers publish a statement from an alleged survivor of the Maine saying that the battle-ship was blown up by an outside agency; British newspapers deny that they are lacking in sympathy for America as against Spain.

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 43th Street, New York.

SHORT-HAND

MR. YOUNG'S COURSE

Free—A Wonderful Shrub.—Cures Kidney and Bladder Diseases, Rheumatism, etc.

Mr. Jos. W. Whitten, Wolfboro, New Hampshire.

DISORDERS of the Kidneys and Bladder cause BRIGHT'S DISEASE, RHEUMATISM, GRAVEL, PAIN IN THE BACK, FEMALE COMPLAINTS, URINARY DISORDERS, DROPSY, etc. For these diseases a POSITIVE SPECIFIC CURE is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the piper methysticum, from the Ganges river, East India. It has the extraordinary record of 1200 hospital cures in 30

days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. John H. Watson, testifies in the New York World, that it saved him from the edge of the grave when dying of Kidney disease. The venerable Mr. Jos. Whitten, of Wolfboro, New Hampshire, at the age of eighty-five, gratefully writes of his cure of Dropsy, swelling of the feet, and Kidney and Bladder disease by the Kava-Kava Shrub. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this Great Specific for yourself, we will send you one Large Case by Mail FREE, only asking that when cured yourself you will recommend it to others. It is a Sure Specific and cannot fail. Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

WASHINGTON.

Personally Conducted Tour via Pennsylvania Railroad.

The next three-day personally conducted tour to Washington via Pennsylvania Railroad will leave New York and Philadelphia on Thursday, March 31. Opportunity will be afforded to visit, under the intelligent direction of an experienced Tourist Agent, all the principal points of interest, the Capitol, Executive Mansion, Congressional Library, the Monument, National Museum, etc. An experienced Chaperon will also accompany the party as a companion for the unescorted lady tourists.

The rate, \$14.50 from New York, \$11.50 from Philadelphia, and proportionate rates from other points, includes all necessary expenses during the entire trip—transportation, hotel accommodations, and guides.

Persons desiring to return via Gettysburg may do so by purchasing tickets at \$2.00 extra, which include this privilege. An opportunity will also be afforded to visit Mt. Vernon and Arlington at a slight additional expense.

For itineraries, tickets, and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; or address Geo. V. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

CHESSE.

Problem 270.

By J. SVEJDA.

First Prize Neue Illustrirte Blatt Tourney. Black—Ten Pieces.

White—Seven Pieces.

White mates in three moves.

Solution of Problems.

No. 266.

Key-move Q—K Kt 3.

Correct solution received from M. W. H., University of Virginia; F. H. Johnston, Elizabeth City, N. C.; F. S. Ferguson, Birmingham, Ala.; G. G. O'Callaghan, Low Moor, Va.; Dr. R. J. Moore, Riverton, Ala.; W. W. F., Miami, Fla.; George Patterson, Winnipeg, Man.; C. Q. De France, Lincoln, Neb.; H. V. Fitch, Omaha; C. W. C., Allegheny, Pa.; T. H. Varner, Des Moines; "Zed Fray," Findlay, Ohio; H. W. Barry, Boston; "Ramus," Carbondale, Ill.; C. R. Oldham, Moundsville, W. Va.; W. R. Coumbe, Lakeland, Fla.; D. S. Rubino, Glen Lyon, Pa.; Prof. J. Dewey, Wanamie, Pa.; J. Jewell, Columbus, Ind.; R. M. Campbell and C. L. Antony, Cameron, Tex.; Dr. B. M. Cromwell, Eckhart Mines, Md.; W. F. Baker, Tiffin, Ohio; E. E. Whitford, Factoryville, Pa.; M. F. Mullan, Pomeroy, Iowa; W. S. Weeks, Litchfield, Minn.; L. Hasselroth, Chicago; N. Hald, Donnebrog, Neb.; "Medicus," Philadelphia; C. C. Marshall, Battle Creek, Mich.; Albert Shepherd, Bloomington, Ill.

Comments: "A composition of considerable ingenuity"—M. W. H. "Rather easy, still shows cleverness"—F. H. J. "Not difficult until one has to manipulate the Kts"—F. S. F. "Key-move well concealed"—J. G. O'C. "Simplicity is its chief claim to merit"—R. J. M. "Not so easy as it looks"—W. W. F. "Very easy"—G. P. "Not a difficult two-er; the variations produced by Black moving either Kt are very fine"—C. Q. De F. "Not equal to some two-movers you have given us"—H. V. F. "Key-move at first sight seems to be easily overcome"—C. W. C. "Quite neat, but easy"—T. H. V. "As easy to solve as for Columbus to make his egg set"—Z. F. "This is the most impenetrable two-mover I ever tried"—C. C. M. "A two-er of primeval simplicity"—A. S.

Several of our solvers have tried to do this by Q—Q R 3, and Q—Kt 4; each stopped by B—B 4.

W. S. Weeks got 265. R. M. Campbell and C. L. Antony were successful with 263. W. F. B. got 264. C. W. C. solved 262 and 263.

Chess by Collegians.

The proposed Cable-Match between representatives of American and English Colleges is arousing considerable interest. A formal challenge has been sent by C. H. Hathaway, President of the Manhattan Club, acting for the four American Universities—Columbia, Harvard, Yale and Princeton—to the Secretaries of Cambridge and Oxford. In this challenge the status of the players is defined as follows: "Any player to be eligible must be an undergraduate, taking the full academic course, or else to be in the law, medical, or theological schools, or taking a post-graduate

course, and also have taken previously the regular degree of Bachelor of Arts, or Bachelor of Sciences, provided that no graduate can be eligible for more than three years after taking his degree."

The United States Championship Match.

At the time of going to press the score is: Pillsbury, 3; Showalter, 1; draws, 2.

THIRD GAME.

French Defense.

Table with 4 columns: Pillsbury White, Showalter Black, Pillsbury White, Showalter Black. Lists chess moves from 1 to 22.

Notes by Emil Kemeny, in The Ledger, Philadelphia.

(a) This move attacks the Q B P and delays Black's P—Q B 4 continuation. The play has another advantage, inasmuch as it enables White to guard his Q P with P—Q B 3. Black can not well reply Kt—R 3, for then it would be difficult to dislodge the White Kt. Black may play Kt—Kt 3 or Kt—B sq. The former move somewhat displaces the K Kt, and White obtains some advantage by P—Q R 4 and P—Q R 5. The Kt—B sq is perhaps better, tho the development is a rather slow one. Mr. Albin adopted this defense against Showalter, the latter coming out victorious. The move adopted in the present game, Q—Q sq, seems more satisfactory.

(b) Q—Kt 3 at once was perhaps more aggressive; the text-move, however, develops the Bishop.

(c) A powerful move. White is obliged to capture the Pawn, for otherwise Black would continue P x P and White's K P would become weak. Black thus obtains some attacking possibilities on the King's side.

(d) Better, perhaps, was K—R sq, followed by Kt x Kt and Kt—Q 4. The text-play renders the Q B P weak.

(e) Black had the doubling of Rooks on the K B file in view, which followed up by P—K Kt 4 or P—Kt 4 looked quite promising. White's P—Q Kt 4 play, however, gave his opponent excellent chances on the Queen's wing. Kt—R 5, followed by R—Q B sq, was the proper continuation; the Kt x B move relieves White's game, which was in danger to become compromised.

(f) R—Q B sq, followed by B x Kt and P—Q 5, was hardly any better. White's reply would have been R—Q B sq, Q x B, and R (K 2)—Q B 2.

(g) This move looks somewhat hazardous, yet it is quite sound. White can not well answer Q—Kt 4, on account of Q x Q B P, followed by R—Kt 3, should White play Q x P ch.

(h) Had Black played R x P, then White might have answered Q—Kt 2 ch, followed by R x P. The continuation then was: 31 Q—Kt 2 ch, K—R sq; 32 R x P, Q x R; 33 R x Q, R—B 8 ch; 34 Q x R, R x Q ch; 35 K—Kt 2, followed by R x R P. Or if 32—R—B 8 ch; 33 R x R, R x R ch; 34 Q x R, Q x R; 35 Q—B 8 ch, with at least a draw. Besides this White might have continued: 31 Q—Kt 3 ch, K—R sq; 32 R—Kt sq, Q—Kt 2; 33 R (K 2)—K Kt 2, Q—K B 2. This would leave Black a Pawn ahead, with a pretty safe position, yet White had some chances by continuing Q—Kt 5, and, eventually, Q—R 6. At any rate, Black acted wisely in not taking the Pawn.

(i) Black once more had the chance of capturing the K B P, but, like on the previous move, he used good judgment in avoiding it. The continuation then was likely to be: 32 Q—Kt 2, R (B 5)—B 2; 33 Q—Kt 5, with good chances for a winning attack; or if 32 Q—Kt 2, Q—Kt 2; 33 R x P, and White has the preferable game. Another play for Black was: 32 Q x R ch, followed by R—B 8, or R—K Kt sq, according to White's Q x R or K x R. White, however, at least equalizes the game by the subsequent capture of the K P.

(k) Not good. The Queen was well placed, and should have been kept at Q Kt 2. Black should have played R—Q B sq, threatening R x P, followed by P—Q 5. If White answers R (K 2)—Kt 2, then P—K 4 may be played, and if R—Kt 7, then R x K B P. If, however, White answers 33 Q—Kt 2 or K—Kt sq, then Q—K B 2, followed eventually by R—Kt 3, would give Black the preferable game. The move selected gives White the opportunity to play Q—K 3, threatening Q—K 5, and Black is forced to the defense.

(l) A grave oversight, which causes the loss of the game, as the continuation proves. Black

should have played R—Kt sq, which was quite certain to lead to an even game.

(m) He could not play Q—B 3 on account of R x R, if then Q x Q, White answers R x R ch and R x Q, with a Rook ahead.

(n) P—K R 3 was not any better. White's answer would be R (Kt 4)—B 4, and if K—Kt 2 then R x R, winning easily.

(o) If K—Kt 2, then R x R followed by R x Q wins easily. The play selected gives up the Rook, and it requires but a few moves for White to force a win.

The Correspondence Tourney.

FIFTY-FIRST GAME.

Scotch Game.

Table with 4 columns: O.E. WIGGERS, Nashville; E.B. ESCOTT, Sheboygan, Mich.; O.E. WIGGERS; E.B. ESCOTT. Lists chess moves from 1 to 38.

Notes by One of the Judges.

(a) B—B 4 is usually played. It is a stronger move than the one selected.

(b) P—K 5, followed by Castles, gives opportunity for a lively game. The text-move enables Black to undouble his Ps and with the B posted on Kt 2 he would have a good game.

(c) Why not to Q 3? The B on this square has no attacking power.

(d) Almost anything is better. He has Castles or P—B 4, but he elects to present White with a valuable P, with no compensation whatever.

(e) P—K R 4 is better. If 14 P—K R 3, P—R 5; 15 Q—B 3, Kt—K 4, with a fine attack.

(f) White anticipates Black's design and obtains the advantage in position by this move.

(g) K—R sq and P—Kt 4 seem the only prospect for an attack, besides affording the Kt a chance of entering on K 5 via B 3.

(h) The Kt is badly placed and does not get into the fight for several moves.

(i) Drives the Q right where she ought to go.

(j) Begins operations on Q side with telling results.

(k) P—Q 5 was Black's only chance.

(l) P—Q 5 still best.

(m) No reason to give the exchange. Q—Kt 3 was good enough.

(n) Reckless play, apparently without any object.

(o) After this very poor move, further comment is unnecessary.

The International Cable Match.

GREAT BRITAIN WINS THE MATCH.

The third match between the United States and Great Britain was played on March 18th and 19th, the American team playing in the Academy of Music, Brooklyn, the Britishers making their moves in the Hotel Cecil, London. The match was finished on Saturday evening. The British team won by the odd game, this being their second victory, the score being the same as last year. A gallant uphill fight was made by the Americans, but the advantage gained by their opponents was too great to be overcome, and when, at 6.30 o'clock in the evening, the Britishers offered to draw the two unfinished games, the Americans accepted. As the former then had a lead of one game, this gave the match to them. Pillsbury and Baird were the last to finish, as both had been striving hard to win drawn games. The result of the match was:

Table with 2 columns: United States and Great Britain. Lists player names and scores for 10 games and totals.

The Literary Digest

VOL. XVI., No. 14

NEW YORK, APRIL 2, 1898.

WHOLE NUMBER, 415

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE RIGHT OF INTERVENTION.

STRESS has been laid upon the right of the United States to intervene in Cuba on humanitarian grounds, since Senator Proctor's described the present conditions there [see THE LITERARY DIGEST last week]. Senators Gallinger of New Hampshire and Thurston of Nebraska subsequently corroborated the truth of Senator Proctor's statements in separate speeches on the floor of the Senate. Having returned from personal investigations, both vehemently declared that it is our duty and our right to put an end to barbarities practised in the name of Spanish sovereignty. In view of the interests involved there has been much consultation of authorities and presentation of theories concerning the right of intervention. The law of intervention is sharply distinguished from the policy of intervention by some writers, yet there is an evident disposition in the press to maintain that practically the two phases of the subject can not be dissociated. We find the most exhaustive review of the law of intervention in the New York *Times*, which says:

"The legality of intervention is treated by the leading writers as one of the difficult subjects of international law on account of the widely varying practise of nations and the conflicting principles that at different times have been proclaimed. Brentano and Sorel dodge the question neatly by affirming that there can be no right against right, and the right of sovereignty is opposed to the right of intervention; therefore the exceptional cases where intervention is commanded by necessity are not within the domain of law or right, but are simply the practise of states, so that if a government finds that a revolt in a neighboring state is a menace to its independence or security the act of intervention to which it resorts in self-defense belongs to the law of nations in time of war and not to the law of nations in time of peace. Probably no law-writer ever made a more unscientific statement than that. Most of the writers are able to deduce sure precepts from universally admitted principles. Heffter states the case with perfect precision when he declares that 'non-intervention is the rule, in-

tervention the exception.' But every writer justifies intervention in those exceptional cases where self-preservation demands it, and some have been able to formulate the rule of law with reasonable precision."

Among a number of modern writers of greatest authority the following are quoted:

"Heffter ('Das Europäische Völkerrecht') holds intervention to be justified in four cases: (1) When it is permitted or requested by the state interested or is in pursuance of treaty guaranties; (2) to protect reversionary rights, as the right of succession to the throne vested in the intervening sovereign, and (3)

"It is an established privilege, by common consent, to employ forcible interference in order to set bounds to an aimless state of war that may exist within a country or between different powers, in order thereby to re-establish disturbed national relations and to afford protection against continuing causes of disquietude; naturally, also, so far as possible, to preclude such purposeless conditions of warfare."

(4) To prevent a state from meddling with the affairs of another State or destroying its independence. The third of Heffter's reasons is applicable to the case of Cuba.

"Fiore ('Dritto Publico Internazionale'), while declaring that non-intervention is the rule, instances as a case of justifiable intervention 'when measures have to be taken to stay a revolution that has passed beyond the limits of the territory of the nation and may become a cause of disorder in neighboring states.' . . .

"Woolsey ('Introduction to the Study of International Law') says: 'Whatever be the interference, it can be justified only as an extreme measure and on one of the two following grounds: (1) That it is demanded by self-preservation; (2) that some extraordinary state of things is brought about by the crime of a government against its subjects.'

"Phillimore ('Commentaries upon International Law'), the great English author on the subject, lays down the following as the just grounds of intervention: (1) Self-defense, when the domestic institutions of a state are inconsistent with the peace and safety of other nations; (2) the rights and duties of a guaranty; (3) the interest of the belligerent parties in a civil war.'

"The intervention of France and England at the time of the Crimean war he declares to have been 'justified by the open, notorious, and admitted insecurity of life and property of French and English subjects commorant or resident in Greece.' Of intervention to stay the shedding of blood caused by a protracted and desolating war in another state Phillimore says:

"This ground has been frequently put forward, and especially in our own times, but rarely if ever without others of greater and more legitimate weight to support it; such, for instance, as the danger accruing to other states from the continuance of such a state of things or the right to accede to an application from one of the contending parties. As an accessory to others this ground may be defensible, but as a substantive and solitary justification of intervention in the affairs of another country it can scarcely be admitted into the code of international law, since it is manifestly open to abuses tending to the destruction of the vital principles of that system of jurisprudence."

"T. J. Lawrence ('Principles of International Law') has written the latest and one of the most useful treatises on the law of nations. We present somewhat fully the views he entertains:

"Intervention to ward off imminent danger is justifiable. But we must note carefully that the danger must be direct and immediate, not contingent and remote, and, moreover, it must be sufficiently important to justify the expenditure of blood and treasure in order to repel it. . . . Further, the cause which justifies intervention must be important enough to justify war. . . . Intervention in pursuance of a right to intervene given by treaty is technically justifiable. . . . Intervention to prevent or terminate the illegal intervention of another state is justifiable. . . . The rules we have just laid down cover every case in which intervention is legal. With regard to the second and third of them, the justification is little more than technical. It is only when a state intervenes to save itself from some grave and imminent danger that we can regard its action as beyond the scope of criticism. In the opinion of some writers interventions undertaken on the ground of humanity and interventions for the purpose of putting a stop to religious persecutions are also legal. But we can not venture to

bring them within the ordinary rules of international law. . . . At the same time, it will not condemn such interventions if they are undertaken with a single eye to the object in view and without ulterior considerations of self-interest and ambition. Should the cruelty be so long continued and so revolting that the best instincts of human nature are outraged by it, and should an opportunity arise for bringing it to an end and removing its cause without adding fuel to the flame of the contest, there is nothing in the law of nations which will condemn as a wrongdoer the state which steps forward and undertakes the necessary intervention. Each case must be judged on its own merits. There is a great difference between declaring a national act to be legal, and therefore a part of the order under which states have consented to live, and allowing it to be morally blameless as an exception to ordinary rules."

The Times, New York, believes that intervention in Cuba is legal, in order to put a stop to conditions which threaten our peace, and is justified on the grounds of humanity:

"We have never put considerations of humanity among the legal grounds of intervention. On that ground alone we might or might not interfere. But when the continuance of the conditions that appeal to our humanity provokes unrest among our people, stirs them to deep sympathy with the starving Cubans, and fires them with a just and burning indignation against Spain, a state of things exists that is dangerous to our peace and safety. We must, so far as we are able, prevent violations of our neutrality laws. But it will presently come to such a pass that we can not repress the impulses of our people to go to the assistance of the Cubans without the sternest measures. When things have come to such a pitch that we must constantly arrest and imprison our own citizens in order that the Spaniard may continue his cruel oppressions unmolested, the situation is no longer one to be prudently borne."

Theodore S. Woolsey, professor of international law in Yale University, reviewed the Cuban situation in a recent issue of the *New York Independent*, saying:

"These are the three justifying reasons, then, for intervention—for the attempt, by national action, to heal this open sore: the burden of neutrality; the dictates of our commercial interests; the call of humanity. Any one of these is strong; together they are very nearly convincing. And if our Government should act upon them, I believe the opinion of jurists would incline to be that such action was warranted. This, at least, was the conviction of the present Administration early in the year. Because of its remonstrances and wishes, there was made a change of Spanish policy in Cuba. Weyler was recalled, trade was made freer, and a system of autonomous government for the island was set up.

"So far as its effect upon the insurrection goes, this change of policy has been futile. Whether the condition of the non-combatant population has been bettered is an open question which our consuls must answer. But it is clear that the trouble remains; that the real question is not materially altered. And I repeat the opinion that some form of intervention by our Government is near at hand, and would be justifiable."

Professor Woolsey asserts, however, that it does not follow

that, because legal, intervention would be good policy. And the *New York Evening Post* enlarges on the question of policy:

"Does this pitiful condition [described by Senator Proctor] concern us in any other way than as it appeals to us as a Christian people to relieve human distress by furnishing food to the hungry and clothing to the naked? In other words, does it warrant us in declaring war against Spain? Perhaps this question may be answered best by asking whether we should think of interfering in case Cuba were a colony of France? Of course not, but why not? Because France would be able to prevent us from doing so by force. If the same condition of affairs were found in the island of Martinique that exists in Cuba to-day, we should never think of interfering. Such a condition, or a worse one, did exist at one time in the island of Haiti when she was a French colony, but nobody in America thought of interfering, nor would anybody think of it to-day if it were repeated under like conditions of ownership. If we would not interfere with a French possession, because France is our equal in power, why should we interfere with a Spanish possession? Because Spain is weak? Is that a reason which we can reconcile to our consciences?"

"But supposing that we have a legal reason for intervention, the question whether it is good policy to intervene is still the one of overwhelming importance. Ought we to spill American blood because Spaniards and Cubans are spilling their own blood at a short distance from our shores? What are the probable consequences of intervention? A series of questions arise under this head which are enumerated by Professor Woolsey:

"Shall it [intervention] threaten armed enforcement of its terms, or be diplomatic?"

"Is it likely to be resisted by Spain, and to lead to war?"

"Are we prepared to carry on a war creditably, even with so weak a power as Spain?"

"Would the damage to our

trade through a war be balanced by the future gain of getting rid of this Cuban incubus?"

"Would not the expenses of a war be heavy and offer a dangerous temptation to the issue of paper money?"

"If a war were successful, would it not be likely to result in the annexation of Cuba?"

"Would not the annexation of Cuba be a serious strain upon our institutions and methods of government?"

"Is there no way of uniting other powers with our own in securing the pacification of Cuba?"

"On the other hand, is Spain likely to find allies in case of war with the United States?"

"More important than any of these is the question, What will be the effect upon our national character and destiny of a war undertaken for other purposes than self-defense? When will the sword be sheathed if we assume the character of a regulator of wrongs on the American continent? What will be the remoter consequences of the taste of blood? When a war is once begun nobody can tell how it will end, and for this reason, if for no other, ought we to restrict ourselves to defending our own soil and our own honor, leaving the consequences of other people's wars and rebellions to rest on their own heads."

Intervention on Humanitarian Grounds.—"If a nation is inde-

WILLIAM R. DAY, OF OHIO, ASSISTANT SECRETARY OF STATE.

pendent and sovereign it follows that it may conduct its internal affairs as it chooses without interference by outside powers. Interference, therefore, or intervention, is meddling with the domestic concerns of a nation which is bound to recognize the superior authority of no other power on earth. Hence intervention may always be resented and opposed in arms by the nation interfered with. Such is the abstract principle upon which international law is based, and the workaday necessity for some such principle is apparent so far as the ordinary relations of civilized nations are concerned.

"But in practise no principle of international law has been oftener disregarded and violated. One of the latest standard writers on this subject of intervention is constrained to say :

"Not only have states acted on different principles, but the action of the same state at one time has been irreconcilable with its action at another. On this subject history speaks with a medley of discordant voices, and the facts of international intercourse give no clew to the rules of international law."

"That is, it would be impossible to establish the principle of non-intervention by an inductive process, or by a simple study of

grounds, must first decide whether the case is extreme enough to morally justify such an act. If it be morally justified, international law will also justify it.

"It is our opinion that, given certain conditions in Cuba, an intervention based on humanitarian grounds alone would, at the proper time, be both morally and legally justifiable."—*The Republican, Springfield.*

Civilization and Self-Government.—"The first principle [justifying intervention] is that which makes it the right and the duty of every civilized nation to preserve the peace of the world, to prevent outrages on humanity and civilization, useless and unjustifiable wars and the like, within its sphere of influence. It need hardly be said that this right is constantly exercised by European nations. If the inhabitants of the Val d'Andorra, arrayed in hostile factions, should begin cutting each other's throats, laying waste their little country, practising all sorts of barbarities, Spain and France need cite no special doctrine to justify them in forcibly intervening to put a stop to the disturbance; no nation would question their right to interfere, indeed the world

JOHN M. THURSTON,
United States Senator from Nebraska.

REDFIELD PROCTOR,
United States Senator from Vermont.

JACOB H. GALLINGER,
United States Senator from New Hampshire.

the facts in the past intercourse of nations. The truth is that this first principle has been beautiful in theory but unworkable in practise. It is often found to conflict with the law of self-preservation. A nation may sometimes find it necessary to interfere in the domestic affairs of its neighbor, just as a householder may feel compelled under certain conditions to enter by force the adjoining door to prevent a general conflagration in the vicinity. Things may happen within a state that really menace the stability, peace, or prosperity of another state so seriously as to call for interference to obtain security. But history is full of interventions on baser grounds than actual self-preservation. England, France, and Spain interfered in Mexico in 1861 ostensibly to secure the payment of debts; and England intervened in Egypt in the early '80's for reasons purely financial or selfish. Now international law theoretically has not justified most of these interventions, yet precedent is so powerful that the fundamental principle of non-intervention has been surrounded by many exceptions which the law of nations is compelled to recognize. . . .

"Citations are sufficiently numerous, and cover a sufficient period of time, to warrant the following conclusions:

"1. International law, while unable to bring intervention on humanitarian grounds within ordinary rules, does not disapprove of it in certain cases, which must be judged each by itself and on its own merits.

"2. The power interfered with has, of course, a perfect right to meet such intervention with war.

"3. So far as the Cuban question is concerned, the United States, if it contemplates an intervention on humanitarian

would expect them to interfere and blame them for refraining from interference. The principle that justifies the United States in intervening to put a stop to the useless and barbarous struggle maintained by Spain in Cuba is exactly the same principle that, in the case imagined, would justify France and Spain, or either of these nations, in interfering to put a stop to a useless and barbarous civil war in the Republic of Andorra. Of course certain conditions precedent must exist before, under this principle, the United States could be justified in interfering to put a stop to the struggle in Cuba. The mere fact that the Cubans had risen in arms against Spain, and that Spain was employing the usual means to crush an armed rebellion, would not be enough to bring the struggle within the scope of this principle. The nation capable of putting an end to this struggle, within the sphere of whose influence the struggle takes place, is bound to allow Spain an opportunity to demonstrate her ability to restore order and subdue her rebels by methods of warfare internationally recognized as 'civilized.' But when, after such opportunity is given, Spain has demonstrated her inability to do this, and has acknowledged it by resorting to barbarity, savagery, and treachery, the war has become manifestly useless and barbarous, a crime against civilization and humanity, and the principle applies.

"The second principle is that which recognizes the right to independence and self-government of a people eager for freedom and fit for freedom. Every great republic is bound to uphold this principle. Republican France has upheld it more than once with arms. The time having come when Cuba, in the natural order of events, is fit for and entitled to independence, the United

States, unless it would convict itself of hypocrisy and insincerity, of being merely a blustering humbug instead of the mighty champion of liberty it is so fond of proclaiming itself, must see to it that the right of these Americans of Cuba to freedom, to self-government, is not overridden by mere brute force, without even a pretense of right or justice to back it.

"It is on these principles, not on the Monroe doctrine or any other doctrine peculiar to the United States, that the United States rests its unassailable right to end the struggle in Cuba, to secure to Cuba freedom and peace."—*The Democrat and Chronicle, Rochester, N. Y.*

GERMAN-AMERICAN COMMENT ON THE ACQUITTAL OF SHERIFF MARTIN.

MORE important than the fate of Cuba and the war which threatens on account of that island seems to the German-American press the case of the Pennsylvania miners who were shot by Sheriff Martin's posse. Without distinction of party lines, German-American papers declare that the verdict which freed the sheriff and his deputies will seriously affect the future of this country. Each of these papers has commented upon the case in numerous editorials, and, altho there were no Germans among the victims, it is assumed that the deputies would have proceeded in the same spirit against any men whose mother tongue is not English, and against such only. The remarks about "ignorant foreigners," "foreign curs," "low-bred Huns," etc., supposed to have been made by the deputies before and after the shooting are regarded as proof that the deputies looked upon themselves as members of a superior race, a belief which the German-American press declare themselves unable to adopt. One and all they assert that faith in the integrity of the American juries and judges is very much shaken. *The Westliche Post, St. Louis*, says:

"The acquittal of this gang of hired assassins looks like a declaration of complete bankruptcy on the part of our demoralized administration of justice. Sympathy for the 'crushed people of desolated Cuba' is nothing but low-class hypocrisy when expressed by the many papers which had not a word of censure for the murderers of Lattimer, nor for the rascally judge or the venal jury and the paid-for witnesses. More impudent lies have never been told in court than in the Wilkesbarre trial. Yet even the most shameless lying could not hide the fact that the strikers, who solely agitated against starvation wages, neither intended nor threatened violence to the sheriff and his murderous crew. . . . It is impossible for thinking men to look into the future without misgivings. Too often such lawlessness and violation of the rights of man have preceded great catastrophes, as the history of the world abundantly shows."

The Illinois Staats-Zeitung, Chicago, remarks that, while the German-American papers thus sharply criticize the Wilkesbarre proceedings, not a few English-American papers applauded the verdict, and others had at least no word of censure. "The reason for this," thinks the paper, "is that in the breast of the Germans the sense of justice and humanity is much better developed." *The Anzeiger des Westens, St. Louis*, says:

"The question was: Had the workmen the right to travel along a public road or not. They certainly *had*, the same as everybody else. The judge, however, declared that the sheriff had a right to order them back. . . . The judge, who was supposed to stand above the parties, instituted himself the advocate and defender of this enormous iniquity, this cool-blooded butchery of peaceful human beings. For human beings were they, whose blood still cries to heaven unavenged, tho they were only starving strikers and 'ignorant foreigners.'"

The Freie Presse, Chicago, points out that such a case could not possibly happen in Germany. There the strikers would not have been met by plain citizens of their own type, tho speaking a different language, but by a disciplined force, kept well in hand by men accustomed and able to command. If the strikers committed an unlawful act, the officer would order them three times,

at the roll of the drum, to disperse. After that a volley would be fired over their heads, and only if these means failed the rifles would be leveled in deadly earnest. *The Wächter und Anzeiger, Cleveland, Ohio*, says:

"The Wilkesbarre prostitution of justice is excused on the grounds of legality. The workmen did nothing unlawful, but for the sake of argument we will suppose they did. . . . Deterioration of justice has ever been a sign of a country's approaching dissolution. We do not mean that the people of such a state did not respect the *law*, but that the law no longer protected them. The greatest mistake a nation possibly could make is to fancy that what is *legal* also is *just*. . . . The American people, in whose public state the prostitution of justice by the law is to-day much more flagrant than in any monarchical country, should remember this. . . . It was the '*legal*' injustice of the British kings and parliament against which the American colonies arose. . . . And history repeats itself."

The *St. Louis Tribune* calls the verdict "a verdict against the institutions of the American republic." *The Abendpost, Detroit*, thinks every such verdict is a nail in the coffin of our institutions. *The Deutsche Zeitung, New Orleans*, says:

"The outcome of this judicial farce was a foregone conclusion, *not* because the case of the defendants was just, but because the jury were all native-born Americans. Every one of them admitted that he had a 'prejudice' against 'foreigners,' yet every one was accepted. The victims of the sheriff and his crew all were foreigners, and, indeed, the most hated foreigners, Huns, Slavs, and Poles. In the presence of such a jury no justice was to be had for them. . . . The victims were only Huns and Slavs, not human beings. Justice is not to be had for such as they in Pennsylvania."

Of other papers which expressed themselves equally strongly we mention the *Freie Presse, Cincinnati*, *Volksblatt, Cincinnati*, *Staats-Zeitung, New York*, *Gross New Yorker Zeitung*—every German-American paper, in fact, that we have seen. All the papers quoted are conservative in their ideas, denounced by the German Socialists and Anarchists as Bourgeois, mild Liberals, and even Junkers. Of Socialist papers we quote the *Volks-Zeitung, New York*, which says:

"We are not surprised. We *knew* that there are two kinds of law in this country, one for the rich and one for the poor. We did not for a moment expect justice to be done. . . . We knew that not even such a small concession to public opinion would be made as to let the jury disagree. . . . Will the workmen of America now learn that society is formed of two classes, between whom there is a deadly feud? . . . Will they learn that they must put themselves positively in power before an improvement may be expected?"

SPEAK!—*The Journal, Chicago.*

All these papers are taken seriously by their readers, and have a large circulation abroad. For the sake of completeness we also quote Most's *Freiheit*, Buffalo, which, tho its financial position has never been very brilliant, is yet the most vigorous of Anarchist organs. It says:

"The judicial eunuchs in the pay of the governments and of the ruling classes have committed the most crying injustice in every country when the aim was to whitewash a rascal or to imprison or execute the innocent. But such bestial frivolity and assurance in the prostitution of justice as is practised in America can not easily be pointed out anywhere else. . . . Tyrants and capitalist exploiters are tyrants everywhere. But the American ones are a crossing between tigers and hyenas of such an atrocious type that the world has never seen their equals, either in number or bestiality."—*Translations made for THE LITERARY DIGEST.*

MANEUVERS IN THE CURRENCY FIGHT.

THE money question still looms up as the divisive party issue in home politics. Leaders of the Democratic, Populist, and Silver party organizations have assumed the aggressive in simultaneously issuing addresses to the people advocating political cooperation against the gold-standard forces. Secretary Gage, of the Treasury Department, in a number of recent speeches before commercial organizations, has taken issue with these addresses, and presented arguments for the maintenance of the gold standard until international bimetallism shall be attainable. An idea of the nature of these political maneuvers may be obtained by representative quotations appended:

To Democrats.—"The surrender of the Republican Party to the advocates of the gold standard and monopoly is at last complete. The present Administration, called to power upon the solemn pledge of the Republican national convention at St. Louis to promote bimetallism, has formulated and sent to Congress a bill, the leading purpose of which the honorable Secretary of the Treasury avows is 'to commit the country more thoroughly to the gold standard.' The country has already for twenty-four years been so thoroughly committed to this standard, partly by law and partly by the usurpations of the executive branch of the Government, that its effects are seen and felt on every hand; wages are reduced and work is harder to get; the weight of debt is doubled; the value of land and other property is reduced one half or more, until the lives of the people are 'made bitter with hard bondage.' It is certainly not in the interest of humanity to have this condition of things more thoroughly established.

"The continued rise in the value of gold, or, which is the same thing, the continued fall of prices, must inevitably transfer the property of all those engaged in active business—the actual creators of wealth, whether by hand, brain, or capital—to those who, avoiding the risk and effort of active business, only draw interest.

"The increase of 1.45 per cent. in the value of money caused by its increasing scarcity from 1809 to 1849, as admitted by leading advocates of the gold standard, found expression at that time in extremely low prices and conditions of unparalleled distress. The discovery of gold and silver in extraordinary quantities, and the great increase in the volume of metallic money resulting therefrom, relieved this distress, and brought in its stead wonderful prosperity. Prices rose, business flourished, producers prospered, all were happy. Substantially this condition would have continued if both the precious metals had been allowed to remain in use as money, because they were being found in nearly sufficient quantities to increase the volume of money in proportion to the developments of business.

"A wicked conspiracy, however, deprived one of them of the money function. This was done with the deliberate purpose of raising the value of the other by rendering the supply of metallic money relatively scarcer as compared with the demand. From the hour of the consummation of this crime mankind has suffered commercial disaster and social distress in almost constantly increasing measure. Just in proportion to the growth of arts and civilization and the expansion of commerce, business, and indus-

try, the inadequacy of the volume of gold is felt, its scarcity is emphasized, its value increased.

"The repression of life and happiness which is inseparable from a long course of declining prices has now checked development, and if continued will ultimately stifle civilization. An eminent American, President Andrews of Brown University, some years ago said: 'Our national debt on September 1, 1865, was two and three-quarter billions; it could then have been paid off with eighteen million bales of cotton or twenty-five million tons of bar iron. When it had been reduced to a billion and a quarter, thirty million bales of cotton or thirty-two million tons of iron would have been required to pay it. In other words, while a nominal shrinkage of about 55 per cent. had taken place in the debt, it had, as measured in either of these two world's staples, actually been enlarged by some 50 per cent.'

"Unless a government 'of the people, by the people, and for the people' has perished from the earth, surely the present boldly avowed scheme, not only to continue but to increase these evils, will not be permitted."—*From the Address Signed by James K. Jones, Chairman Democratic National Committee.*

To Populists.—"In the pursuit of this purpose of committing the country more thoroughly to the gold standard, the plan of this Administration, as of the last, is to retire the greenbacks and other non-interest-bearing paper-money of the Government, to issue interest-burdened gold bonds, and to increase the powers, privileges, and profits of national banks. This achievement would turn over the duty of supplying the people's money—the very life of business—to a selfish, heartless, and irresponsible foreign gold syndicate and its American agents and allies.

"It must be remembered also that this foreign gold syndicate and its allies have, with the connivance if not the assistance of our Government, captured and to-day control every instrument of commerce in the nation.

"In framing the Constitution our patriotic forefathers, with zealous care and with prophetic wisdom, provided that commerce should be regulated by Congress; but this tremendous power has been abdicated by Congress in favor of the gold trust and the banking ring. Money is the first great instrument of commerce; but the gold ring, not satisfied with controlling our financial system, has captured the other instruments of commerce to enable it to keep the gold-standard yoke upon our necks and 'to more thoroughly' subjugate our people and dominate our Government.

"All history teaches that those who have controlled the instruments of commerce in any country have not only controlled the commerce of that nation, but have also controlled and dominated that government. Thus, the gold syndicate and its allied monopolies in our country, having seized the great instruments of commerce, have used this tremendous power to discriminate against sections and individuals, to destroy competition, to breed business stagnation, and to create 'hard times' in the midst of plenty. Thus the organization and maintenance of great industrial trusts have been promoted which operate to aggravate the evil conditions which gave them birth. Thus they are making millions of paupers to create a few millionaires. The inevitable result must be to convert our Government into an oligarchy of sordid wealth.

"In the accomplishment of this end these evil influences must shackle opinion and muzzle discussion. They not only subsidize the press and attempt to seat their well-paid attorneys in our legislative halls, on our benches of justice, and in all other departments of government, but wherever college faculties are susceptible to pretended generosity or inverted philanthropy they carefully maneuver for either service or silence.

"The divine right of kings is to be succeeded by the divine right of millionaires who propose to run everything, not only the instruments of commerce and our industrial system, but also as far as possible the pen of the editor and the voice, if not the intellect, of the university professor. Having succeeded in this, the conspirators will not only completely dominate the legislative, executive, and judicial branches of our Government, but will be solidly entrenched against resistance and retribution.

"Briefly stated, this is a part of the outrageous scheme. We do not arraign any political party on partizan grounds. We arraign a system and denounce a conspiracy. We condemn individuals and organizations that support this system and aid the conspiracy. A party that is the mouthpiece and agent of this

conspiracy is just as dangerous under one name as under another.—*From the Address Signed by Marion Butler and Twenty-five Senators and Representatives of the Populist Party.*

To Silver Republicans.—"The cunning plans of the beneficiaries of the gold standard and the advocates of monopoly are fast nearing completion. They need but to win one more victory to become supreme, and to be able to defy the sovereignty of the people for generations. The policy of the Republican Administration is a plain confession that the secret authors of the St. Louis platform of 1896 are in absolute control of that party. Power thus secured by false pretenses is to be ruthlessly used to carry out the ulterior designs of the conspirators. The slow processes of the twenty-five years are rapidly advancing to their goal, the near approach to which now seems to warrant dispensing with the caution and deceit that have hitherto been the necessary preliminaries of success.

"But this openness of purpose is the opportunity of patriotism. Honest men should hesitate no longer if opposed to the establishment of the government currency, if opposed to the erection of a great association of banks of issue, as the all-dominating power in the nation, if opposed to every kind of trust and monopoly, the offspring and adjunct of the money power.

"Before this awful and imminent peril to the institutions of our country every personal ambition must melt away, and every merely partizan contention must be stilled. While this issue remains unsettled, Democrat, Populist, and Silver Republican must stand shoulder to shoulder in a common cause. United we can save the republic, the last refuge of self-government, the one remaining hope of liberty, to succeeding centuries.

"The policy of our foes is to divide us, that they may conquer us. Let not self-interest, pride, carelessness, or folly afford them hope that we shall furnish arms against ourselves. In every State and congressional district in the Union the closest cooperation should be our watchword. After full counsel together, we should, wherever there is a contest, choose a strong champion of the common cause, and to him should be given the true allegiance and earnest support of every opponent of the party of gold and monopoly.

"The man or organization that in this grave crisis becomes responsible for discordant councils or divided energies does not deserve the blessings we are all striving to preserve."—*From the Address Signed by Charles A. Towne, Chairman National Committee of the Silver Republican Party, Eight Silver-Republican Senators and Representatives, and Fred T. Dubois.*

Ruinous Remedy Proposed.—"I do not know any gold syndicate, either foreign or domestic, and I do not believe Mr. Butler nor any one else does; but he says, 'with the connivance, if not the assistance, of our Government,' they (the foreign gold syndicate and its allies) have 'captured, and to-day control, every instrument of commerce in the nation.' What are the instruments of commerce about which he speaks with such glib eloquence? I know that a warehouse receipt, a ship's bill of lading, a railroad receipt for a carload of farm products, a draft drawn by the seller of products upon a distant buyer, a note of hand for \$100 given in exchange for goods, a simple credit on a merchant's books—gold, silver, bank-notes, bank-checks—these are all, in a proper sense, instruments of commerce, and without their use commerce would cease.

"If he means by 'instruments of commerce' these things, or any of them, his statement refutes itself, for the most ignorant know that these instruments pass freely back and forth among the people as trade and traffic are carried on. Perhaps he means by 'instruments of commerce' railroads and ships, through the agency of which, in modern days, commerce is moved. Does he mean that these instruments have been seized by the 'conspiracy of gold and monopoly' to 'breed business stagnation and to create hard times in the midst of plenty'? Let us point him and his readers to the evident lack of success in this wicked 'conspiracy,' if conspiracy, indeed, there be. During the last twenty-five years these agencies of transportation have been obliged to make easier instead of harder conditions to the people.

"The figures of one great transportation line controlling nine thousand miles of road show that during the period named the average net profit for carrying freight has fallen from 1 cent per ton per mile to $1\frac{1}{7}$ mills per ton per mile. Take transportation service as a whole, and it is clearly shown that, were the rates

of twenty-five years ago now in vogue, the producers would be paying \$1,000,000,000 more a year than they are actually paying for transporting their goods and wares over the railroads in the United States. Within the same period of time the cost of carrying wheat from Chicago to Buffalo has been reduced from an average of 12 cents a bushel to 1 cent a bushel. If these are the results of a conspiracy to 'create hard times in the midst of plenty,' let the conspiracy proceed. It is useless here to follow further the ingenious tissue of half-truths and no truths which clothed in language that appeals to ignorance, prejudice, and passion, carry the evil germs of hatred, disaffection, and revolution.

"It is a noticeable fact that the political leaders to whom I have referred offer, in their present address, no curative recommendations. By fair implication, their advice is: Break down! Destroy! We will name the remedies later. But we know in advance what their alleged remedies are; they are substantially found in the Chicago platform of 1896, and prominent among these is the free coinage of silver at the ratio of 16 to 1. The ruinous character of the remedy has been again and again fully exposed, and I shall not now attempt to describe the shock and ruin to our commercial and industrial life which the inauguration of this remedy would bring.

"Let me pass all this. Let us assume that the suicidal policy had prevailed, that the wrecks of domestic disaster had been cleared away, that a new generation had succeeded to their rich legacy of a fruitful land, with its boundless possibilities of productivity and commerce; would it then be to the economic advantage of the people to possess silver as the measure of value, instead of gold, as now? To answer the question, and to comprehend that the answer is true and correct, we are forced to consider the use that money serves. Money—I mean real money, metallic money—possesses three functions or qualities: It is a medium of exchange, a measure of values, a standard for deferred payments. By reason of its action as the ruling medium of exchange, it becomes the measure of value, since all things exchanged come to be stated in terms or quantities of money. It must also be held in mind that all legitimate business is simply an exchange of products or labor, money being the medium by which the exchange is effected.

"We do not want money for money's sake, but we want it for that which it will buy; thus, in the exchange of products for products, or of products for labor, or of labor for products, two steps are necessary: First, to exchange products or services for money, then exchange money for desired products or desired services. Now, in process of time, things become related to each other in terms of money; that is to say, while the exchangeable value of a bushel of wheat to a bushel of oats may be, say, one bushel of wheat for two bushels of oats, yet, if this be the true fact of their relationship, it is never thus expressed. Both are measured by price stated in money, but the price of wheat will then be twice the price of oats per bushel, and thus their ultimate relationship as to value is indirectly expressed. It is, however, this relation to each other that is important.

"A change in the money, whether that change be to one of higher or lower commercial value than the one previously in use, would cause a universal derangement in prices and a perfect dislocation in the relation of things to each other. Things enjoying a foreign market would quickly find a new price in the new money, and this price would be determined by the commercial value of the new money itself in the foreign market. Things limited in use and consumption to our domestic market, and labor-paid services of every kind, including wages, would find no such avenue to a speedy readjustment. Slowly the economic laws would operate to reestablish things in normal relationships; but the process would be slow, painful, and full of injustice to those unskilled in the arts of trade.

"Those skilled in commerce, educated and far-sighted in speculative methods, would secure great gains; general wealth would not be increased. The real gains of society must come, not by exploiting each other or by manipulating fifty-cent pieces, but by developing the power of man over the resources of nature. Assuming, again, however, that this course and these consequences had become history, and that our country had established a currency or money standard different from, and with no fixed relation to, the international standard, how would we stand affected? The foreign buyer of our commodities would compute the value of our currency in gold, and thus arrive at the sum in currency which he could give for what we had to sell. But, inasmuch as the relation of our currency to the standard would be constantly fluctuating, there would be a constant risk between sale and de-

livery, which somebody would have to bear. And, inasmuch as no foreigner would bear it, if he could buy where he did not have to bear it, the charge would fall on our producers as part of the necessary expense of getting our goods to a competitive market.

"There would be one more fluctuation, one more element of uncertainty, one more chasm over which toll must be paid between our producer and his foreign customer, and between our consumer and the foreign producer. It would be a ruinous handicap upon our growing export trade in manufactured goods, for no American manufacturer could know what the price agreed upon in terms of foreign money would net him in our money when delivery should be made months hence. He would have to buy a gold option to have any certain basis of calculation.

"It is at this point that the radical difference appears between international bimetalism and the Democratic scheme for the free coinage of silver without the aid or consent of any other nation. International bimetalism means the same measuring-rod over values, both at home and abroad. It involves a use of the world's money, and a resultant harmony of the exchanges. Local 'bimetalism' means a dislocation between the United States and the rest of the commercial world in a money standard. Besides all the other losses and derangements always pointed out, it means a position of continuous disadvantage in the competition for the world's trade and commerce. Nothing but the blindest disregard for the economic laws which govern us more surely than do statutory enactments can lead us into such a folly. For international bimetalism the Republican Party stands pledged. To secure it, all honorable and proper efforts will be put forth; but, until it can be secured, it is manifestly for the interest of our people to preserve, by all proper means, the present gold standard. Through it we measure by the same rule with which our competitors measure, and by it we contend in the struggle for commercial supremacy with weapons evenly matched to those of our well-armed antagonists."—*From the Address of Secretary Gage to the Chamber of Commerce, Cleveland, Ohio, March 18.*

WANAMAKER AND PENNSYLVANIA POLITICS.

JOHN WANAMAKER, ex-Postmaster-General, merchant, and candidate for United States Senate last year, is a candidate for the Republican nomination for governor of Pennsylvania this year. His attacks on the Quay machine in the Keystone State are attracting considerable attention. In his letter accepting the nomination of the Business Men's League of Philadelphia, Mr. Wanamaker said in part:

"Let there be no misunderstanding as to where the responsibility rests, and let the Republican voter demand a strict accounting. With school funds long past due, and personal property taxes withheld from counties to allow the state treasurer to farm out millions of dollars to favorite banks; with a Capitol commission breaking down the restrictive barriers erected by popular sentiment, and planning a building that will cost millions when completed; with the knowledge that indemnity bonds, padded pay-rolls, Lexow bills, legislative junketings, and mileage-grabbers will be paid out of the state treasury, if the machine elects its governor; I am convinced from proofs in my hands from all parts of the State that the people are ready to unite with you in driving back the bosses and reentering upon their rightful inheritance."

In the course of the canvass for delegates to the Republican state convention, Mr. Wanamaker spoke at Lancaster, saying, among other things:

"Patriotically speaking, comparing the State with what she once was and what she might have been in the place she deserved in the galaxy of States, she has fallen to the rear and only a few memories of her glory are left. In olden times our statesmen were golden priests, who carried chalices of wood, but in these days we have wooden priests of statesmen, who carry chalices of gold and pockets full of places to bless and unbless their retainers.

"Corruption is at its worst, and the commercialism of politics is the chief characteristic of Pennsylvania. . . . In the fourth century of Rome in the time of the Emperor Theodosius, Hellebichus was master of the forces and Cæsarius was count of the offices. In the nineteenth century M. S. Quay is count of the offices and W. H. Andrews, prince of Lexow, is the master of forces in Pennsylvania, and we have come through the iron age and the silver age to the worst of all ages, the degraded evil age of con-

scienceless debauched politics. You and I need not go away from home to be convinced of this."

Among specific instances of Quay corruption in the State, Mr. Wanamaker gave the following:

"For fifteen years the control of the office of state treasurer has been the citadel of Senator Quay's power; it is believed to have yielded annually a campaign fund of not less than \$100,000, mortgaging influential bankers and affording unlimited credit to borrow vast sums for personal campaigns, and exhibiting incumbents entering upon the office of state treasurer poor and on a \$5,000 salary in two years retire with a competency.

"To give a better conception of the great loss sustained by the State, the state treasurer's official monthly statement bearing date of July 1, 1893, during the money panic, shows at that time a balance of \$8,123,747.69 in favored state banks paying no interest to the State. From a representative of a leading business concern of the State I learn that on the same date he was obliged to pay a premium of 3 per cent. for cash with which to pay wages. To show to what extent the fund is manipulated for political purposes, a Philadelphia bank capitalized at \$150,000, a private institution whose President is Quay's old lieutenant, has continuously carried a deposit ranging from \$300,000 to \$1,200,000, while school districts are waiting in vain for school money long past due."

Mr. Wanamaker said his fight was against ring rule; that he had accepted the call of Republicans and no other:

"There is a growing belief that a large part of the nearly 6,000,000 of Pennsylvanians are tired of the ring rule and unwilling to submit tamely to the surrender of state affairs to Quay and W. H. Andrews; that the State is too young to go out of business altogether for herself; that we are ready for another Declaration of Independence.

"This does not mean that we take down our Republican flag and put up an independent flag. It is only the cacklers of the spacklers that say that, to befog and mystify the unthinking. We must get out of a kitchen horizon, and see large things through large hearts and clear eyes. I am a Republican of Republicans, and from my boyhood to this day I have never voted any other ticket. Neither have I scratched it or bolted it.

"Leiter and Armour have cornered the wheat market of the United States and the king of Pennsylvania has cornered the office and the political power, and these with the legislature are busheled and barreled for spring and winter deliveries at conventions and to corporations as if all were wheat and oats.

"One Senator owns another Senator, and these control twenty-six Congressmen, who, in a solid body, train with the captain, or if any one fail the combination turns in against that man's reelection to Congress.

"That old war-horse of the party, the veteran, Congressman-at-large, Galusha A. Grow, unwilling to take orders, must give place to a new man whom it is said the orders have gone out to elect. This tightly bound up political ring in Pennsylvania is just as possible in other States. Take three such States and see where we are. It is a triumvirate next to omnipotent.

"National politics are ruled with an iron rod, and the bills are all paid by contractors and legislatively benefited interests.

"Is Pennsylvania too blind to see the drift of the times and too dull to see her large responsibility in bringing on this condition that well may make many people nervous and fearful?

"I have faith in the masses of the people. There are times to listen to the quiet voter; sometimes he is only a tenth man, this time he is the every third man.

"The old man, tired and disgusted with bossism, must step out and take up the war-cry again. The young man who has concluded politics is a hopeless task must reenter the ranks and do his best. Professional men and those who have stood aloof from politics, pronouncing the system as steeped in mud, must make it to their liking by association and service.

"If party spectacles are too narrow let us broaden them at least enough to see the public good.

"The thing to be cared for above personal consideration is the right. With this conviction I enter for the war, not for one summer or one autumn or one winter or one year, but for all the years until Pennsylvania is redeemed, and true to the traditions of Lincoln and Grant who died for Republicanism and the country."

The Lancaster county primaries, however, resulted in the de-

feat of state Senator Kaufmann, the Wanamaker leader in the legislature, by a large majority, and Mr. Quay controls the delegation.

Meanwhile Philadelphia is concerned about revelations and admissions of bribery in the city councils in connection with the recent attempt to contract with a private company for the filtration of the city water-supply. And the independent candidacy of Dr. S. C. Swallow for governor (who polled 119,000 votes for the state treasurer on the Prohibition ticket last year) on the platform "Thou Shalt Not Steal," is assuming some importance in the press.

Wanamaker Questioned.—"We can scarcely credit our own senses when they tell us upon the testimony of hard facts that Mr. Wanamaker, the author of this passage [indictment of Quay corruption in letter of acceptance quoted above] is the same man who collected upward of \$200,000 as a campaign fund in 1888, and put the money in the hands of Quay, the author of all this mischief. It was Mr. Wanamaker who declared then he had received the Postmaster-Generalship as a reward for this work. It was the same man who looted the railway mail service and permitted the removal of 30,000 postmasters. What wrong and suffering was inflicted in that one act! It was Mr. Wanamaker who used his official position to secure the attendance of the representatives of the South American republics at the Grand Depot, and then made a plea to them for his own commercial advantage. He it was of whom Thomas Dolan said:

"Not only did Mr. Wanamaker use his influence to have Mr. Quay's friends appointed in this city, but he likewise interested himself in the appointments made throughout the State, and he was untiring in his efforts."

"Why should Mr. Wanamaker shudder at the Frankenstein for whose creation and endowment with life he is partly responsible? If every county in the State is, as he depicts, a Quay stronghold, why did he, by aiding Quay appointments, help to make it so? If he is ready to go forward in the battle for political emancipation, why did he join Mr. Thomas Dolan in helping to bind on Philadelphia the odious gas monopoly, asserting that it would be a public benefit, and hiding the fact, until it was revealed by the question of a bystander, that he had a financial interest in promoting the sale of this rich monopoly? What have the workmen of this city to say as to the part Mr. Wanamaker played in the settlement of the trolley-car strike? And what have the small storekeepers, here and throughout the State, to say regarding his influence on their trade? Is he in relation to these things truly a people's representative? If Mr. Wanamaker is the representative champion of purity in an election canvass, why, when he ran for the Senate, did he or his agents purchase editorials as tho they were advertisements? This certainly is one of the most pernicious forms of corruption to which the press can be subjected. Why did he permit Edmund Dunn, of Connellsville, to buy a promise to vote for him from T. Clarke Baldwin at a cost of \$500? Why did Mr. Wanamaker compromise the suit for bribery against his agent Van Valkenburg, instead of fighting it to the uttermost, and so proving that gentleman's innocence—if he was innocent? These are but examples of many equally pertinent and searching questions which have stared Mr. Wanamaker for months, and some of them for years, unanswered, and, as we are forced to believe, unanswerable."—*City and State (Municipal League Organ), Philadelphia.*

Strength of the Boss.—"It will not be the first time the Business Men's League and Mr. Quay have measured swords. Several previous attempts have been made by the former to overthrow the boss of the Republican machine in the Keystone State, but the machine was either too strong or the league too weak, and the efforts put forth merely resulted in entrenching Quay more firmly in power.

"The business men hold to the view that their defeat was accomplished by corrupt methods, while the other side claims to have the support of a majority of the voters. Unless we concede popular government to be a failure in Pennsylvania, it must be assumed that the Business Men's League has not yet succeeded in gaining that confidence or in impressing the masses with that belief in its ability to give them good government which is essential to victory at the polls.

"Whether the league shall be more successful this year remains to be seen. The results of some recent reform movements have not been such as to create an overwhelming desire for a continuance of the experiment. In New York, Tammany, after having been out of power for several years, was reinstated by an overwhelming majority, altho it does not profess to be affiliated with reformers. Evidently the people were unable to see that any advantage had accrued to them from the change.

"Mr. Quay also stands closer to the public than most members of the Business Men's League. He knows what the masses want better than his opponents. Herein lies the secret of his strength. To this advantage he adds ability to make the most of his resources."—*The Herald (Ind.), Baltimore.*

"That there is ample occasion for revolt is undeniable, altho it could be wished that another time had been taken when there was no danger of involving the sound-money cause. The attack, led as it is by a Republican of national prominence, is a serious one for Quay, altho he may feel secure in his entrenchments behind the machine. He will not answer. That is not his way. Addition, division, and silence is his policy. The people of Pennsylvania, however, have smashed the machine before, and they may do it again."—*The Advertiser (Rep.), Portland, Me.*

The Monkeys and the Asses—A Parable.—Mr. Bolton Hall, prominent for years as an exponent of the single tax, has just published a little book of social-reform fables entitled "Even As You and I." The aim of the book is rather to shame us into a sense of responsibility for unjust conditions than to urge any particular remedy for such conditions, tho the latter purpose is not entirely absent. As a sample of Mr. Hall's method we give his parable, "Because They Were Asses":

"The Monkeys, being as lazy as you and I, began to ride the Donkeys. A big Monkey would ride in front of the herd; this he called 'being their leader'; altho, since the Donkeys were strong, he had in the end to go the way the Donkeys wished.

"Sometimes the Donkeys kicked. Then the Monkeys called them 'Anarchists.'

"The Monkeys grew so fat and heavy that the Asses had no strength remaining to get their own food.

"They began to complain, and to seek for causes and cures. A sweet girl Monkey said: 'I will take them some flowers to allay their discontent—we will establish a Flower Mission.' The Monkeys subscribed liberally.

"A dear little Monkey added: 'I will hold a Charity Fair, which will raise enough from the Benevolent Apes to send some of the young Asses' Colts to the fields for a week.' The Monkeys called that 'Enlightened Charity.' A long-eared Monkey cried: 'No, preach temperance; those Beasts of Asses drink so much that they have no time to eat and nothing to eat in the time if they had it.' The Monkeys restricted the sale of drink—to Asses.

"A Big Ass said: 'What we need is a high wall around so as to keep out pauper hay—then the Monkeys will give us employment cultivating hay fields, and pay us with some of the hay.' The Monkeys made a wall so close that the Asses could not see through it. Said a small Donkey: 'We need cheaper money so that we can buy some leisure time from the Monkeys who make the money.' The Monkeys did not like this—they were only Monkeys.

"Now," said an Ecclesiastical Ape, 'sin is at the bottom of all this. These Monkeys are on top of you because your hearts are corrupt.' So he preached to the Monkeys about the depravity of Donkeys.

"I have discovered," said a Mule, 'that it is because lower-class animals are lazy—too lazy to graze—that all this want and suffering exists.' (The Monkeys made that Mule a Professor.)

"Still the Asses kicked.

"Have we not done all that we could for you?" said the Monkeys. 'What you really need is a strong Government, to provide formidable Arms for us, and to insure the stability of the Social Order.' Then the Asses voted additional appropriations for all these things, and many enlisted in the 'National Guard.'

"The Monkeys had the spending of the Money."

"Yes," replied the intrepid traveler, "a great many."

"What is the most important one?"

"Getting back."—*The Star, Washington.*

LETTERS AND ART.

BRUNETIÈRE ON ART AND MORALITY.

THAT the great Russian moralist and artist, Tolstoï, and the leading French literary critic, Brunetière, should independently and almost simultaneously formulate substantially similar views on the relation between art and morality, is a curious coincidence. Tolstoï's emphatic rejection of beauty as the ultimate object of art is, in fact, reenforced by rather novel, if not startling, arguments of Brunetière. He recently delivered a lecture on the subject of art, and from a report in the *Journal des Débats* we translate freely the following *résumé* of Brunetière's leading ideas:

"The doctrine which treats art as some divine power in humanity, a doctrine finding expression in poetic hymns to the eternal beauty of art, M. Brunetière held to be false and pernicious. He was very far from bowing to the claims of beauty. It is not true, he insisted, that art, even the art of genius, ennobled and elevated everything it touched, as artists and their theoretical defenders would have the world believe. The supposed purity and innocence of Greek plastic art was, if not deliberate hypocrisy, then at least an impertinent jest. It was pagan art, and paganism was unquestionably the 'wild adoration of the energy of nature.'

"At the basis of every form of art there lies, according to Brunetière, the seed and germ of immorality, which require only a favoring condition to blossom forth into full flower. To prove this, three important considerations were presented. In the first place art in every form appeals to us solely by means of pleasure or sensual gratification. Where there is no beauty there is no emotional gratification, and it is therefore natural and unavoidable that art should aim at the excitation of pleasurable emotions and make it its only end and object. The art of the eighteenth century was passed in review to substantiate this thesis. Even the elegies of André Chenier were a perpetual incitement to intoxication and delight, the more dangerous because of their exquisite elegance.

"In the second place, what is, at bottom, the principle of all art? The answer is—imitation of nature. But nature is not always beautiful. Indeed, she is often ugly and repulsive. So immoral is nature, so repugnant to our ideals of ethical beauty, that all morality is really a protest against the cosmic process. Nor is nature truthful, being full of illusions and deceptions and exceptions to apparent rules. Hence to imitate nature is to fall into a course condemned by human morality.

"In the third place, art is demoralizing in its effect on its devotees. The artist, in consequence of the legitimate necessity of cultivating that susceptibility, that originality and responsiveness to stimuli and impressions, which constitute the very springs of his talent, is led into excessive, abnormal individualism, into contempt of reality and men, into scornful indifference to human cares and interests and healthy feelings. In other words, the true artist too often becomes an egoist, an anti-social being. It is sufficient to refer to the intensely anti-social doctrines of Flaubert and the De Goncourts."

Developing these ideas, Brunetière explained the present neglect of Raphael, so long universally popular, and the revival of general interest in the Italian artists of the fifteenth century. Modern lovers of art, he said, are guided in their estimates solely by the test of emotional gratification, and the colors and subject are everything to them. No other criterion is present to their mind, hence the doctrine of art for art's sake, which really means art for pleasure's sake.

What, then, is Brunetière's positive idea about the place and function of art? It differs little from that of Tolstoï, it appears. The report concludes as follows:

"Art must be subordinated to a higher end than pleasure. Art has a social function, and morality is that social conscience the dictates of which art must follow if it would discharge its mission. But as our ideas are relative, and everything must be judged with reference to other truths and facts, the social mission of art must be determined by other social factors—religion, custom,

science. In the hegemony of any one of these forces there is danger. The hegemony of religion produces theocracy; it was the cause of the decline of the papacy. The hegemony of tradition has led to the moral death of China; the hegemony of art is responsible for the decadence of the Italy of the sixteenth century and of Greece of the time of Alexander.

"What is essential, therefore, is that, while neither of these forces should trench upon the proper domain of any other, due balance among them should be preserved. This condition existed in the most glorious epochs of the history of civilization—in the age of Louis XIV., for instance. But does it depend on human will to establish or restore the needful equilibrium? Yes, answers Brunetière, it does; and since the equilibrium is to-day disturbed in favor of art and science, it is our duty to assert and secure the recognition of the claims of the neglected factors—religion and custom and social morality."—*Translated for THE LITERARY DIGEST.*

JOHN THE BAPTIST ON THE STAGE.

IT may be that the pen is mightier than the sword; but, in countries where the censor reigns, the blue pencil seems to be, temporarily at least, mightier than the pen. Herrmann Sudermann is counted one of the four greatest living dramatists of Europe, the other three being Ibsen, Hauptmann, and Maeterlinck; but this fact has not preserved his latest play, "Johannes," from a delay of many weeks in publication because the dramatic censor of Germany could not sooner make up his mind to let the play be produced. Nor did the censor remove his ban, so report says, until the Emperor himself was appealed to and the prohibition removed by imperial command. The play was finally enacted in Berlin, January 15, and in book form several editions were exhausted in a few days. The "Johannes" of Sudermann is John the Baptist, and it is presumed that the use of a biblical character was the cause of the censor's objection. *The Speaker* (London), in reviewing the play, describes it briefly in the following words:

"The story of John the Baptist is one of the few biblical subjects that seem to possess a perennial fascination for the dramatic poet. Sudermann is, however, the first essentially realistic writer—we need hardly make an exception in favor of Flaubert's *conte* 'Hérodiade'—who has made the theme his own; and it must be admitted that he has brought the old story into the sphere of modern sympathies with no small ingenuity. He is more faithful to the historical and legendary basis of the story than we should have expected from a modern writer, who naturally lays most stress on the psychological side of the drama. Herr Sudermann is an inveterate ideologist; some years ago, when 'realism' and 'idealism' were still the battle-cries which divided the literary world into opposite camps, Sudermann's method of building up dramas and novels round abstract ideas made him a bone of contention between the two parties in Germany; it was no easy matter to decide to which he belonged. Like his former plays, 'Johannes,' too, is built round an idea; just as 'Die Ehre' was a kind of Socratic exposition of ideas of honor, so 'Johannes' has, as its ethical background, the Christian doctrine of love. The tragedy of John the Baptist's life in Sudermann's play is that love, the *charitas* which had always appeared to him either weakness or sin, should be the corner-stone of the faith of the Master whose forerunner he is. One of the most impressive scenes of the play is where *John* learns from the Galileans at the gate of the temple that Jesus of Nazareth teaches His followers to love their enemies; it is this new gospel of love that stays his hand when, at the crucial moment of his life, he raises it to stone the sinning Tetrarch.

"Sudermann has preserved with the utmost care the tone of the New Testament in his play; his language, when he is not quoting the exact words of the Testament, is closely molded upon it. And yet something essential is missing. This quasi-realism, which clings so rigidly to the letter, gives an impression of baldness and leaves us unsatisfied; there is a lack of poetry. . . . We see nothing of the wilderness, and the pomp of Herod's court is little more than an opera background. 'Johannes' comes at times dangerously near being a modern play in historical costume. We

do not look to Sudermann for the lyric beauty of Grillparzer, but we at least expect something of the 'historical sense' that marks Ibsen's 'Emperor and Galilean.' With all respect for the change that has come over artistic canons since the decay of Romanticism, we feel, after reading a play like 'Johannes,' that there is after all a good deal of truth in Goethe's axiom that verse is the only possible medium for the higher drama."

AN HISTORIC ART CONTROVERSY.

THE recent death of William J. Linton, the engraver, revives memories of a very lively controversy that raged in America a generation ago and of which he was the initiator and chief figure. Mr. Linton's theories of the art of engraving were finally overborne, but he never surrendered, and he died, as one may

Your always

say, asserting that the supplanting of wood-engraving in the present day by mechanical processes of reproduction has been due to the rejection of his theories.

Aside also from this controversy, Mr. Linton was an interesting personage. The brother of Mrs. E. Lynn Linton, the novelist, he himself had a strong literary bent, filling at one time an editorial position on the London *Spectator*, achieving considerable fame as poet, essayist, and critic, and collaborating with Mr. Richard Henry Stoddard in an elaborate compilation of "English Verse" in five volumes. He was also, before leaving England, something of a revolutionist, editing a Chartist paper, being one of the enthusiastic supporters of the movement for a republic in France, of Italian unity, of the freedom of Poland, an intimate friend of Mazzini, and a translator of Lamennais's book on "Modern Slavery."

As an engraver, Linton was one of the Bewick school, and one of the most strenuous upholders of the idea that the wood-engraver must himself be an artist, and not the mere slavish mechanical reproducer of other artists' lines. When he came to America artistic affairs were at a low ebb here, and he was hailed with enthusiasm as the most distinguished engraver who had ever visited our shores. A dinner was given in his honor by New York engravers, and his work soon became apparent in such volumes as "Picturesque America" and "The Aldine." He was for a short time teacher of engraving in the Cooper Institute School of Design.

For the facts above stated, we are indebted to Miss Caroline A. Powell, one of Linton's best pupils, who writes in *The Art Interchange* (March); and the portrait here given is from a wood-engraving made by one of Linton's personal friends, W. Biscombe Gardner, of England.

Of the controversy to which reference has already been made, Miss Powell writes as follows:

"Dr. Holland and Roswell Smith, seeing that the time was ripe for a magazine which should show enterprise and originality in artistic matters as well as literary, projected *Scribner's Monthly*, now *The Century*. Their aim was to get the best artists to make their illustrations, but these artists were not willing to give their pictures to be reproduced, if the personal character of them was to be eliminated by the engraver. This was at issue with Linton's teachings, for he held that the engraver should be at liberty to improve at will. The new school of engraving, of which Mr. Timothy Cole is the foremost representative, held that the engraver's aim should be to give the artist's work, faults and all. And so it was that in *The Atlantic Monthly* appeared an article from Linton's pen, with a scathing attack on the new school.

"The discussion was taken up by other periodicals, and Dr. Holland made a heated reply. It is not often that a discussion of this kind, mainly concerning technique, will be found interesting to the general public, but the fact that it was so shows what a hold pictorial illustration has on the popular mind. Mr. Linton was equal to a contest of this sort, and it is characteristic of him that while attending to the main battle he carried on a side skirmish with the then editor of the magazine in which his first broadside appeared—Mr. William D. Howells. The point at issue here was that Mr. Howells conceived it to be his duty to strike out or alter expressions not up to the standard. Mr. Linton strongly objected to the changes, and addressed a fiery letter to the editor of *The Atlantic*. This was followed by a reply from Mr. Howells, and a letter from the publishers intimating that an apology from Mr. Linton would be in order. Mr. Linton replied, defending his position with much earnestness, and reminded Mr. Howells that he had presumed to correct the English of a man who had been an editor either before he was born or at least when he was a child. The correspondence was collected in a pamphlet and printed by Mr. Linton. Meanwhile the discussion concerning engraving was going on in the various periodicals. Many opinions were expressed, and artists and engravers were interviewed on the subject. Amid all the discussion about the use of white line, cross line, texture, etc., the main question was a matter of reproduction or translation—which does the artist or author of the work prefer? If the player of a Beethoven sonata, be he Paderewski or Rubinstein, does not give us Beethoven but a beautiful arrangement of his own with Beethoven's work as a substructure, the musical public will object, however much they may admire the ingenuity or genius of the pianist. Artists admired Linton's work, but they would prefer not to be translated by him or by those who practised his teachings, especially when, as Mr. W. Hamilton Gibson showed in the case of one of his own drawings, Linton went so far as to turn what he had drawn for a flowering meadow into a rushing stream. And yet Linton's engravings were so admirable that the engravers of the new school found nothing better to study. Mr. Cole, against whom the criticisms were mainly directed, was a student and admirer of his work, and acknowledged his indebtedness to Linton, and when the discussion was at its height made a friendly call to assure him that there was no irritation on his side. The criticisms on the young engravers, moreover, were of advantage to them, and thereafter they made efforts to translate in a broader way, without slavishly copying defects or preserving unessential details. The truth seems to be that Linton was too great a man to be simply the interpreter of the thoughts of others. His individuality was so pronounced that it overbalanced the personality of the artist he sought to translate; and while we can recall a number of glorious cuts he made from the drawings of others, many of them perhaps better than the originals, he is seen to more complete satisfaction in his engravings from his own designs."

POVERTY OF ITALIAN LITERATURE.

ITALIAN literature of the year 1897 has recently been discussed by two prominent critics, one French, the other Italian. The former, M. T. de Wyzewa, in the *Revue des Deux Mondes* (December) refers to a journey made some two years ago by an Italian journalist, Señor Ugo Ojetti, for the purpose of discovering the writers of his country and of finding out whether there really was the then much-talked-of Latin renaissance. "The responses which he received," says M. de Wyzewa,

"did not, unhappily, put him at his ease. The greater part of the Italian writers readily admitted that a future awakening of Latin genius would be the most desirable thing in the world, and several of them knew the exact form, the only form, under which it would be possible to produce it. . . . Some said that Italian literature must first create a language; others, that they would have to extricate themselves from foreign influence, and—a strange phenomenon—the great majority of these gentlemen wished to exclude in any case from all right of participation in a Latin renaissance those of their *confrères* who alone, by the splendor of their works, had drawn upon Italian literature the eyes of the world. For instance, Gabriele D'Annunzio, who had given the impression of a sudden renewal of Latin genius, was criticized by Italian judges of incontestable authority as, if not wanting talent, at least of having a talent foreign to the spirit of the race. They compared him with Fogazzaro, with Verga, with Manzoni, and even Petrarch."

"But the interesting search of the Italian explorer gave us the impression that a change was in progress on the other side of the mountains. . . . A profound uneasiness existed in all minds, and the literary battle became stronger from year to year.

"Two years have passed since then, and the change which was awaited has been produced. But alas! that change has in it nothing of a renaissance. The number of books has increased and the number of writers. But not only has the old Latin genius not reawakened, but one might even say that nothing should be more delayed than to hope for its reawakening. . . . Italian literature has neither become more plastic nor more philosophic, nor more cosmopolitan, nor even more *Italian*."

M. de Wyzewa then speaks of the ascendancy which D'Annunzio has now obtained over his Italian contemporaries, and then proceeds:

"But the influence of D'Annunzio is not the only one to which they submit, nor . . . the most to be regretted. They show themselves very much occupied with new theories, or rather hypotheses of science, and in particular those which are invented every day with a remarkable fecundity and an imperturbable assurance by the anthropologists, criminologists, psychophysiologists of the school of Signor Lombroso. It is very well known how active and clamorous that school is, and the insistence with which it sets itself to transform into general laws the inconsiderable facts observed in passing. But perhaps it is not known what an enormous importance they have gained in Italy, and the truly extraordinary rebound which they have produced in the most diverse domains of intellectual life. Out of twenty books which have appeared, at least ten are manifestly inspired by the Lombrosist doctrines. The greatest literary success of the year is conceded to a work by Signor Niceforo, 'The Criminality in Sardinia.' Another criminologist, Signor Sighelo, appears in a new work, 'Sectarian Criminality.' The criminal chronicles of Ferrero and Sighele find more readers than the most pathetic romances. All this naturally gives to the new Italian literature a special character. The influence of D'Annunzio and Lombroso have rendered it at the same time Nietzschean, pre-Raphaelite, and criminological."

M. de Wyzewa concludes his article by a brief review of what he considers the three principal Italian romances of the year: "L'Incantesimo," by E. A. Butti; "Roberta," by Luciano Zucoli; and "L'Invisibile," by Domenico Ciampoli.

In the *Nuova Antologia* (January 15) Domenico Oliva comments on the same subject and the same writers. He says in part:

"The profits of the year are not pleasing; a scarce harvest and one of little value.' There are some exceptions . . . but the gen-

eral result reveals weakness, little originality, hasty work, business preoccupations, and no, or very few, preoccupations of art. I had hoped that the year 1897 would be a year of fulfilment, not of decadence; but the best writers have concluded to rest and grant to the critics a vacation period. . . . If this, however, is the critic's vacation, it is not a pleasing one. . . . When there remain but two or three great writers of a literary period, what does it matter that there are other smaller ones? It is certain that, if we contemplate the poverty of the year 1897 only, it will be necessary to affirm that Italy has no literature. And why? Precisely because the greater ones have kept silence. No great or strong work has been published this year as a witness to our energy and vitality. Fogazzaro is silent. . . . Another of our great writers is Giovanni Verga, and he also is silent."—*Translated for THE LITERARY DIGEST.*

ROMANCE OF THE IRISH STAGE.

DUBLIN before the Union, with its Parliament, its state processions, and its courtly festivities, its dueling and abductions, its reckless gambling, its roystering, and its mad extravagance, its playhouses, the "Aungier" and the "Smock Alley"—this is the stirring stuff that goes to the making of Fitzgerald

PEG WOFFINGTON.

Molloy's "Romance of the Irish Stage: With Pictures of the Irish Capital in the Eighteenth Century"; and verily the tale he tells is "as good as a play."

In setting the records of the town beside the stories of the stage, the one being but a reflection of the other, the author has consulted innumerable histories, biographies, news-sheets, playbills, manuscripts, "as a hundred exposures of the camera may be necessary to the production of a single animated photograph"; and the result is a kaleidoscopic show of fantastic or grotesque aspects of life, such as the writers of that time called "humors"—humors of the castle or the court, of the club or the coffee-house, of the playhouse or the booth, of the gambling-den, of the dueling-field, of the college or the streets, of gown and town.

The author contemplates the Irish stage in the eighteenth century as the central object in a picture of the Irish capital; and that is a picture of brightness and bustle, of thoroughfares

thronged by crowds that were strangely picturesque. All day long, and far into the night, the party-colored procession streamed along; in the forenoon, the hawkers crying their wares; sober citizens in plum-colored suits, with long flaps to the waistcoat, full periwigs, and worsted stockings rolled at the knees; physicians, in solemn black, with lace ruffles; officers and privates, always in uniform; dandies, in green or blue "cabinet" coats, with gold or silver brandenburghs; lawyers, in great wigs and long cravats; running footmen, in white jackets, colored sashes, and black velvet caps, bearing tall staffs surmounted by the crests of their masters; and last, but by no means least, in their vociferous self-assertion, university students, in black gowns.

From midday till three of the clock, the fashionable dinner hour, and from eight in the evening, the time for routs and assemblies, until early next morning, the thoroughfares were blocked by the chairs of women of quality, who seldom walked abroad:

"Convenient and, in days of ease and leisure, delightful conveyances, gold-mounted, lined with brocade, and emblazoned with armorial bearings; while coaches, big as state beds, with outriders and footmen in gorgeous liveries, drove their occupants to the castle levees, to the balls given by the nobility, or to Parliament House, where sat 249 temporal and 22 spiritual peers, with 300 commoners."

When the Aungier Theater was opened on May 19, 1734, the Lord Lieutenant, the Duke of Dorset, came with his duchess to grace the event; in a coach-and-six they came with outriders and liveried footmen with wands, and escorted by a clattering company of dragoons. Following the ducal equipage came a string of coaches that emptied the castle of its guests, its suite of attendants, and its officers:

"Then, under the soft light of wax candles in their brass sconces, what a sight was to be seen! Fair women in patches and feathers, with diamonds galore on their white necks; brave men in laced coats, of all colors of the rainbow; stars and ribbons on many a breast, and a wig on every head. What a waving of fans, and rattling of swords, and interchange of courtesies, before they settled down to hear Griffith speak the prologue."

The drama of the streets affords a picturesque, if not an edifying, contrast to this engaging scene: pilloried offenders, called by the crowd the "Babes in the Wood"; an occasional amusing procession, headed by a miscreant who had been imprisoned for stealing bodies from St. Andrew's churchyard, and made up of idlers and street boys, cheering, mocking, cruelly taunting, the wretched women who were being whipped through the town for keeping disorderly houses; prisoners for debt in the City Marshalsea, stretching their hands through the iron bars, and imploring the charity of the passing crowd:

"Those who, at night, passed this same place, which received debtors and malefactors alike, occasionally heard stranger and sadder sounds—the sound of ribald songs, the oaths of card-players, the laughter of drunkards, when some convict, doomed to be executed in the morning, was being 'waked' by his friends, who had probably robbed, begged, or pawned, that they might get admittance to the prison by bribing the jailer, and bring whisky that the criminal's last night be a merry one."

In the club-houses, men of social or military distinction sought excitement in gaming or dueling; and in the taverns and coffee-houses wits, lampooners, pamphleteers, lovers of the play gathered to exchange or invent news. The players' tavern was the "House of Lords." "Jack's" coffee-house was the resort of writers—Dean Swift, for example, who was worshiped by the people and Thomas Parnell, wit and poet, who had a living at Finglass. Young bloods and men-about-town made Lucas's coffee-house their own, and fought pretty duels in the yard, while the rest of the company watched the play from the windows, and laid wagers on the result. Lord Rosse was the amiable founder of the "Hellfire Club," which met in San's Court, and was distinguished for "indulgence in all that the Devil would do if he ran stark mad."

In 1736 the Theater Royal in Aungier Street was doing a good business with the dancing of Boreau and Delemaine and Peg Woffington; for it was not until February of the next year that the delectable Peggy was given a speaking part, and then she played *Ophelia* in "Hamlet." All Dublin was stirred when Peggy appeared, for she was a daughter of the town, and "a neighbor's child." Her mother was a laundress, and the lassie had sold oranges in the theater. When she rushed in "where angels fear to tread," and showed herself as the "beautified *Ophelia*," a friendly and generous audience met her with hearty good-will, and did not laugh even when some player, in the pause of a tragic soliloquy, stopped to snuff the tallow-candles that were stuck in iron sconces over the stage. But when afterward she appeared in "a breeches part" as *Phillis* in "The Conscious Lovers," or as the *Female Officer*, in the farce of that name, she brought down the house. And when, in April, 1739, she challenged comparison with several famous actors by personating that generous, reckless, frolicsome spark, *Sir Harry Wildair* in "The Constant Couple," she scored a memorable dramatic triumph in the face of a fashionable and critical audience.

Then came Quin, questionable offspring of a queer Irish marriage, heavy of figure, coarsely featured, pompous, affected, obsequious for turtle and venison at the tables of the great, often offensive and irascible—but with a notable reputation as an actor at a time when his fustian declamation was in vogue; hero of a duel in which he had killed his man, and, above all, a funny teller of Irish stories. People loved to hear him roll out his cumbrous speeches in Cato and Juba, and at his benefit he took £126, a great sum at that time.

(To be concluded.)

NOTES.

MR. WALTER PULTZER, in a recent letter in the *Newark Call* [see THE LITERARY DIGEST, February 12, 1898], disparaged Sir Arthur Sullivan in comparing him with DeKoven. Mr. D. E. Hervey, of Newark, immediately wrote a reply, in the course of which he said: "It is always unfortunate when one composer has to be bolstered up by depreciating another. Certainly in one thing Smith and DeKoven might well imitate Gilbert and Sullivan. It was among their principles never to allow a woman to appear on the stage in men's clothes, nor to permit one to appear in an indecent or unnecessarily abbreviated costume, nor to allow any character to give utterance to any word or phrase which would not be permitted in an assemblage of ladies and gentlemen. These good principles went far to help the success of their operettas."

A FEAT in rapid writing is reported by the London correspondent of the *Liverpool Post*, of which the hero is Mr. J. M. Barrie. The one-act play, "Platonic Friendship," which he has just presented to Miss Winifred Emery and Mr. Cyril Maude, the hero and heroine of the dramatic version of "The Little Minister," was begun and finished within a few hours. Mr. Barrie has already received from the Haymarket Theater, says the London correspondent of the *Bradford Observer*, £6,000 in author's fees for his dramatic version of "The Little Minister," and has a good deal more to receive before it is withdrawn. Mr. E. Rose and Mr. Stanley Weyman drew £10,000 in fees for the "Red Robe," and Mr. Rose and Mr. Anthony Hope each received £7,000 for "The Prisoner of Zenda." These amounts, however, are small compared with the vast sum pocketed by Mr. Brandon Thomas for "Charley's Aunt."

SINCE President Andrews retreated from the educational scheme projected by *The Cosmopolitan*, it has not had so prominent a place among newspaper topics; but it seems that the work is being carried forward with no little success. *The Cosmopolitan* for February says: "More than twelve thousand students were on the roll of applicants for admission to the Cosmopolitan University a little more than four months after the plan had been first given to the public. This demonstration is complete as to the work to be done. Nothing could better illustrate its necessity. A brief consideration of the figures will show that in point of numbers it exceeds any movement known to educational annals, the entering class embracing a larger number of students than are on the rolls of both entering and graduating classes of all the universities of our country. During the last six weeks President Potter has gathered a corps of able young assistants, and preliminary organization has been completed. Before the issue of this magazine the regular instruction of students will have been begun: Entering upon new paths, with few precedents to guide, the work of the University will not in the beginning approximate that degree of excellence which will come as the result of experience and perfected organization. But it starts with an educational staff who feel an enthusiasm for their field and will devote to it their most earnest efforts." The unexpectedly large proportions the work has assumed makes it clear that the \$150,000 given by the magazine will be insufficient. The editor expresses confidence, however, that generous and appreciative friends will appear and assure the success of the undertaking.

SCIENCE AND INVENTION.

THE PROBABLE FATE OF ANDREE.

IT is very easy to prophesy after the event; so people are now telling us that Andrée never had any chance of success, that his equipment was bad, his plan foolish, and his whole aim unscientific. In short, they say, any sensible man might have known beforehand what the result would be. A leading article in *Gaea* (Leipsic, April), takes very much this tone, as will be seen from the appended translation; but however much the candid reader may regret that the explorer is not here to defend himself, he can not but think that the criticisms contain a good deal of common sense. Says the writer of the article:

"After a long silence on the subject of Andrée's balloon, the attention of the public has been again called to the subject by a communication made by Professor Nordenskjöld to the Swedish Academy of Sciences. Nordenskjöld reported that news had come to the Ministry of Foreign Affairs that between the 4th and 7th of August, 1897, a balloon was seen by several persons in British Columbia near the headwaters of the Fraser River, in latitude 50° 20' north and longitude 121° 30' west. This news has been widely commented on in the daily press, since such a man as Nordenskjöld has thought it of sufficient importance to be communicated to the Stockholm academy. Unfortunately a sober consideration of it reveals nothing especially worthy of belief.

"Professor von Richthofen criticized the news most severely as follows in an interview with a reporter:

"To show on what slender foundations this latest story rests, we may note the fact that in the neighborhood of the place mentioned in the despatch, where the balloon was said to have been seen, is a railroad. As the locality, therefore, was almost in direct communication with civilization, it is quite inexplicable why five months should have elapsed before the news of such an event should have reached us. Last autumn the Berlin Geographical Society received a letter from the same region of which the last telegram speaks, containing news of the same import as that in the Stockholm despatch. In this circle of distinguished local scientists so little importance was attributed to it that the outside world is just beginning to be informed of it. The similarity of the origin and contents of the news received three months ago in Berlin and that just announced in Sweden leave no room for doubt that we have to deal with one and the same piece of information.'

"It seems that we must reconcile ourselves to the idea of the destruction of Andrée and his companions. The undertaking was, so to speak, a doubtful one from its very outset, for the basis of the entire plan, which rested on a knowledge of the air-currents in the north-polar regions, was mistaken. We know absolutely nothing of the currents north of Siberia and Franz-Josef Land, with the exception of those that Nansen has told us about. It was, therefore, a groundless assumption of Andrée's that the wind would carry him from Spitzbergen over the Pole, or at least in its neighborhood, toward the northern coast of America. The fact that a year previous Andrée had waited in vain for a wind favorable to his undertaking should have taught him that such a wind did not exist for practical purposes. For the prevalence and therefore the force of a current is in ordinary circumstances proportional to its frequency. Thus it would be, altho a venturesome feat, not at all a doubtful one, to undertake a balloon journey from the eastern coast of the United States to Europe; for over the Atlantic Ocean we know by experience that the air moves generally east or northeast.

"Recently, too, from competent authorities there has come severe criticism of the equipment of Andrée's balloon. In this particular the expedition was not fitted out with the necessary professional and technical knowledge. It is much to be regretted that these criticisms were not made public before the departure of the expedition, for the manner and material of the outfit were known long in advance. We can not, of course, go into the technical details here, but we must raise another point whose discussion is quite proper. In the daily papers, Andrée's balloon expedition has always been treated as of the greatest scientific

importance. This assumption can not be denied too strenuously. A journey to the Pole in a balloon has nothing to do with scientific objects and is in itself calculated to add nothing to scientific fact. It should be said that Andrée himself was perfectly clear on this point. The only observations of value that could be made in a balloon are meteorological. But their value depends on an exact knowledge of the location and height of the balloon. Finally, the place where the balloon landed, by comparison with its starting-point, would give the prevailing direction of the wind. That is all. Whether the route of the balloon led over the Pole, or what its path was, could never be known even if the expedition should be successful; indeed, we may safely say that if Andrée's balloon itself passed directly over the Pole, the passengers never could prove the fact.

"The question, where the final catastrophe took place, can not be answered with certainty. According to what may be inferred from the news bought by the last carrier-pigeon, we may hope to find the remains of the balloon in the vicinity of Franz-Josef Land, and perhaps parts of it may be recovered. It is extremely improbable that the balloon ever reached America. The result of the expedition is, as might have been foreseen, that new expeditions are being sent out to look for traces of the balloon: so it would have been better if this attempt to sail over the Pole in a balloon had never been made."—*Translated for THE LITERARY DIGEST.*

IS THE GREAT AGE OF THE ELEPHANT
A MYTH?

"WHAT is the length of an elephant's life?" asks the *Revue Scientifique* (Paris, February 26): and it goes on to say: "This is a point that has often been discussed. The current idea has always been that the animal normally reaches the advanced age of about 150 years. It would seem that it should be easy enough to prove this, as the animal has been domesticated in India for a very long time. Mr. Nuttall, who has been for several years at the head of the military elephant service in British India, has given very good reasons for regarding with distrust the figures furnished by official documents. It often happens, in fact, that the same name is given to several elephants of different ages. For instance, they may be called Pobun (which means 'The Wind'), and to distinguish them they are given numbers in order—1, 2, 3, 4, etc. When Number One dies, Number Two becomes Number One, and each of the others changes its number to correspond.

"If new elephants, younger than 20, 30, or 40 years, had been joined in bands and received the same generic name, we may easily understand how Pobun I. might appear to have lived 150 or 200 years, when in reality this same name had been applied to three or four elephants successively. If the registers had been preserved where these changes of civil status had been noted, we might be able to arrive at exact conclusions; but they have been destroyed. Now they are preserved, but it will be a long time before the present system will have been long enough in existence to have any power to solve the question. There remain the mahouts, whose fathers, grandfathers, and great-grandfathers have been mahouts also; they have been attached to the same stables, father and son, and their testimony is not favorable to the idea that the elephant normally reaches any such age as 150 years. Some individuals have occasionally reached it, but their cases are rare. The elephant is in maturity at 35 or 40 years, and can work until he is 70 or 80, after which he declines. It is only exceptionally, doubtless, that he reaches the age of 150 years, and no authentic and indisputable examples are known of even so long a life as this.

"It is a curious fact, but well known, that skeletons of dead elephants are never found, and this has given rise to the belief of an indefinite longevity. Since no skeletons are found, it has been said the elephant can never die. This conclusion—to say the least, an imprudent one—has been opposed by another opinion according to which elephants, when they feel ill, go to die in hidden places, in retreats known only to themselves. This idea rests, manifestly, only on negative evidence. In any case, the rarity of the remains of the elephant is a curious fact, for its skeleton is not a thing that ought to disappear easily. In various cases the history of the skeletons of elephants killed in the chase in known localities has been followed, and it has been found that,

in spite of annual fires, in spite of rain, even floods, these skeletons persisted and were not destroyed. It seems that there must be some mystery here; unless, as seems the most probable conclusion, we have simply to do with a case of insufficient observation."—*Translated for THE LITERARY DIGEST.*

HOW THE REPORT OF A CANNON TRAVELS.

ONE of the first scientific men to photograph successfully the flight of a moving projectile was Prof. Ernst Mach, the Austrian physicist. He contributes to *The Open Court* (Chicago, March) an account of some of his experiments, from which we quote a few paragraphs that assert and illustrate a very curious fact, namely, that the report of a gun—or part of it—is actually pushed along in front of the ball, and travels with it. This phenomenon occurs only when the ball travels faster than sound. Says Professor Mach:

"Just as a slowly moving boat produces no bow-wave, but the bow-wave is seen only when the boat moves with a speed which is greater than the velocity of propagation of surface-waves in water, so, in like manner, no wave of compression is visible in front of a projectile so long as the speed of the projectile is less than the velocity of sound. But if the speed of the projectile reaches and exceeds the velocity of sound, then the head-wave, as we shall call it, augments noticeably in power, and is more and more extended, . . . just as when the speed of a boat is increased a similar phenomenon is noticed in connection with the bow-wave. In fact, we can from an instantaneous photograph so taken approximately estimate the speed with which the projectile is traveling."

FIG. 1.—Photograph of a Blunted Projectile.

The "head-wave" and its analogy with the bow-wave of a boat are seen plainly in Fig. 1, which reproduces one of Professor Mach's photographs. To quote again:

"The physicist who examines the head-wave and recognizes its sound-wave character also sees that the wave in question is of the same kind with the short sharp waves produced by electric sparks, that it is a *noise-wave*. Hence, whenever any portion of the head-wave strikes the ear it will be heard as a report. Appearances point to the conclusion that the projectile carries this report along with it. In addition to this report, which advances with the velocity of the projectile and so usually travels at a speed greater than the velocity of sound, there is also to be heard the report of the exploding powder which travels forward with the ordinary velocity of sound. Hence two explosions will be heard, each distinct in time. The circumstance that this fact was long misconstrued by practical observers, but when actually noticed frequently received grotesque explanations, and that ultimately my view was accepted as the correct one, appears to me in itself a sufficient justification that researches such as we are here speaking of are not utterly superfluous even in practical directions. That the flashes and sounds of discharging artillery are used for estimating the distances of batteries is well known, and it stands to reason that any unclear theoretical conception of the facts here involved will seriously affect the correctness of practical calculations.

"It may appear astonishing to a person hearing it for the first time that a single shot has a double report due to two different

velocities of propagation. But the reflection that projectiles whose velocity is less than the velocity of sound produce no head-waves (because every impulse imparted to the air travels forward, that is, ahead, with exactly the velocity of sound), throws full light when logically developed upon the peculiar circumstance above mentioned. If the projectile moves faster than sound, the air ahead of it can not recede from it quickly enough. The air is condensed and warmed, and thereupon, as all know, the velocity

of sound is augmented until the head-wave travels forward as rapidly as the projectile itself, so that there is no need whatever of any additional augmentation of the velocity of propagation. If such a wave were left entirely to itself, it would increase in length and soon pass into an ordinary sound-wave, traveling with less velocity. But the projectile is always behind it and so maintains it at its proper density and velocity. Even if the projectile penetrates a piece of

FIG. 2.—Bullets Passing Through Cardboard.

cardboard or board of wood, which catches and obstructs the head-wave, there will, as Fig. 2 shows, immediately appear at the emerging apex a newly formed, not to say newly born, head-wave. We may observe on the cardboard the reflection and diffraction of the head-wave, and by means of a flame its refraction, so that no doubt as to its nature can remain.

"Permit me, now, to illustrate the most essential of the points

FIG. 3.—Bullet Issuing from Gun.

that I have just adduced by means of a few rough drawings taken from older and less perfect photographs.

"In the sketch of Fig. 3 you see the projectile, which has just left the barrel of the rifle, touch a wire and disengage the illuminating spark. At the apex of the projectile you already see the beginnings of a powerful head-wave, and in front of the wave a transparent fungiform cluster. This latter is the air which has been forced out of the barrel by the projectile. Circular sound-waves, noise-waves, which are soon overtaken by the projectile, also issue from the barrel. But behind the projectile opaque puffs of powder-gas rush forth. It is scarcely necessary to add that many other questions in ballistics may be studied by this method, as, for example, the movement of the gun-carriage."

New Armor-Plate Processes.—"Some mention has been made lately in foreign papers," says *The Engineering and Mining Journal*, New York, "of a new process for making armor-plate, which is said to produce a harder and better plate than the nickel-steel treated by the Harvey process, which has heretofore given the best results. The French Government has bought the

right to use this process from the inventor, but the details have been carefully kept secret. It is also known that Krupp, the great German steel-maker, has a new process, which is either the same or a very similar one, to the French. Enough is known of the process to say that it requires the use in making the steel of some of the rare metals, molybdenum, uranium, and vanadium, which take the place of nickel in the alloy used. We are informed by a correspondent, who has made many researches into the rare elements, that agents believed to be acting for the French Government are now in this country in search of deposits from which these metals can be obtained. French agents have also bought uranium ores in the West. The iron ores on which Mr. Edison has been at work with his concentrating-plant at Edison, N. J., are understood to contain some molybdenite, and the other metals may be found also when it is known that a demand for them exists."

A GREAT ENGLISH INVENTOR DEAD.

BY the death of Sir Henry Bessemer, which occurred on March 15 last, the world loses one of the group of inventors to whom the industrial progress of the past half century is due. Sir Henry, who is known from one end of the world to the other by his process of making steel, was born in Charlton, Hertfordshire, in January, 1813, and hence was eighty-five years old at the time of his death. Of these eighty-five years, seventy had been passed in hard work, physical and mental. We quote below from a sketch of Bessemer's life, published in *The Engineering and Mining Journal*, March 19. Says that paper:

"Altho born in England and altho his whole life was passed in that country he was partly of French descent. His father, Anthony Bessemer, was educated in Holland and Paris, and was a metal-worker, being employed as a type-founder and subsequently in the mint at Paris. In 1793 he went to England and there established a type-foundry at Charlton in Hertfordshire, and at that place his son Henry was born in January, 1813. When still a boy he was interested in his father's business and developed a notable mechanical talent. In the type-foundry, subsequently in the manufacture of stamps and dies, and in other directions he conducted investigations and secured patents which are now on record. When the construction of railroads began in England his attention was naturally at-

tracted, and he devised several improvements in railroad-building and rolling-stock, some of which came into use. The variety of fields which he explored is shown by the fact that at the first international exposition at London in 1861 he exhibited a centrifugal pump, a separator for sugar factories, and a machine for polishing plate glass, all of which were at the time in successful operation.

"His attention was first specially turned to iron-making at the time of the Crimean war in 1854, when he engaged in the construction of guns and projectiles. His work there soon showed him that cast iron as ordinarily used was not satisfactory as a material for the heavier guns which were at that date beginning to be in demand, and he commenced experiments in the refining of iron. . . . We can not here follow the details further than to say that the first Bessemer converter was made and the patent taken out in 1855, and shortly afterward he announced his invention to the world and put up an experimental plant in London."

Bessemer's process, as our readers will remember, consists essentially in burning out the carbon from cast iron by blowing air through it while it is molten hot in a great vessel called a "converter," and then adding to it exactly the right quantity of an ore known as "spiegeleisen." To quote further:

"The discovery excited a great deal of attention at once, and several licenses were taken out under the patents. Many failures and some discouragements followed, however, chiefly because the importance of the material to be used was not at that time realized, and no one appears to have understood the effect which iron high in phosphorus, or with other deleterious ingredients, would have upon the result. Henry Bessemer did not give up his work,

however, but continued his experiments with the aid of a competent chemist, and finally, in 1859, he again brought forward his process as perfected by the aid of improved machinery and appliances, and by the use of spiegeleisen as a recarburizer for the iron which the blast deprived of too great a proportion of its original carbon.

"The difficulties encountered by his original licensees as well as the inherent conservatism of the trade delayed the full introduction of the process, but it gradually made its way as its advantages were fully realized. Probably this end was not attained until at the second international exhibition in London in 1862. A magnificent display was made of articles manufactured from Bessemer steel. From that date the process came rapidly into use, numerous licenses being granted in Great Britain and other countries

"The use of the

SIR HENRY BESSEMER.

By permission of the Cassier Magazine Company. Copyrighted.

process extended rapidly, and to-day the United States is the greatest manufacturer of Bessemer steel in the world, the production of our converters having reached a total of 5,475,315 long tons in 1897.

"It was quite natural that Sir Henry Bessemer's claim as an inventor of a process of such very great importance should not pass altogether unchallenged. Mr. William Kelly in this country, Mr. G. F. Groansson in Sweden, and Mr. Robert F. Mushet in England all advanced such claims, the only one seriously pressed, however, being that of Mr. Kelly, who found some advocates for his claim in this country. The truth of the matter appears to be, as is frequently the case, that several investigators were at the time working on parallel lines, and naturally there was some similarity in their discoveries. It is beyond question, however, that Bessemer's investigations were conducted on entirely independent lines, and there is also no doubt whatever that he was the first, and indeed the only one, to reduce his discoveries to practical form and so present them to the world; and that he was fully entitled to the credit and to the other rewards which he received. He took very little notice of the attacks made upon him, and in his published accounts of his discovery above referred to we find only the briefest references to them.

"Sir Henry Bessemer did not give up work with the completion of his great invention, but continued to devise improvements of different kinds. The machinery for handling the converter was perfected; the system of compressing the fluid ingot to insure its soundness—which was afterward perfected by Joseph Whitworth; other devices for improving the quality and the physical condition of castings and ingots, and many minor devices were all his work. He found time also to investigate other departments of metallurgy and mechanics, and took out a number of patents of more or less importance. His main time was, however, absorbed in steel manufacture, and the present perfection of the Bessemer process is almost entirely the work of the original inventor."

Of the benefits that Bessemer conferred on mankind by inventing this new and easier method of making steel *The Railroad Gazette*, New York, speaks as follows:

"Bessemer's name will go down through the ages along with the names of Watt and Stephenson, as an epoch-making benefactor of mankind.

"In 1854 Bessemer began the series of experiments which led to the discovery of the pneumatic process for making steel, and in 1858 he converted cast iron into cast steel, and thus made an imperishable mark on the record of the history of mankind. In 1890, when Mr. Abram S. Hewitt received from the British Iron and Steel Institute the Bessemer gold medal, he took occasion to say that 'the invention of printing, the construction of the magnetic compass, the discovery of America, and the introduction of the steam-engine are the only capital events in modern history which belong to the same category as the Bessemer process.' The reduction in the cost of producing steel led to a great reduction in the cost of the machinery which carries on the operations of society, and especially in the cost of transportation. Mr. Hewitt estimated that in the one element of comfort the working-classes of our day can earn and expend at least double the amount which was at their command in any previous age of the world, and this result appeared to him to be due very largely to the economies introduced directly by cheap steel and indirectly by other inventions which naturally followed the reduction of the cost of steel. Thus Sir Henry Bessemer became the great apostle of democracy.

"Bessemer earned and merited all that he got. His immortal contribution to the welfare of humanity was the result of no accident, but of toil, self-sacrifice, devotion, and fortitude. He became very rich, but his personal fortune compared with the addition that he made to the wealth of the world was but as a grain of sand on the beach or one star in the sky."

Tandem Moths.—This name is given by Henry Webster in *Popular Science News* (New York, March) to monstrosities produced by grafting together parts of two insects in the cocoon, in the same manner as that used in making the combinations of tadpoles and other larvæ, described some time ago in these columns. Says Mr. Webster: "To one who is not aware that the

Germans, for some years, have experimented in grafting parts of tadpoles, or insects, etc., on other parts, it must seem a new and incredible marvel that two moths can be united as in the illustration. The species here given (*Sesia thisbe*) may not have been operated on, but is selected to illustrate one of the combinations effected. It is one of the 'clear-winged moth,' the central part

SEsia DOUBLED.

of the wings transparent, and having the general appearance of a very large bee, as the moth hovers over flowers. The method is to take two pupæ, cut off parts, join, and close the junction by pressing paraffin on, warmed slightly so as to be plastic. In this way the pupæ of two moths or butterflies can be united tandem-wise, or back to back, breast to breast, or otherwise. Some of them emerge alive, but how far they may come forth with healthy expansion and development does not appear in the many alcoholic specimens in the biological laboratory of Columbia University, where Dr. Crampton has been experimenting on various species and combinations. The results have a crumpled look, and one would not expect that many, if any, of the grafted insects could lead an active life. The two-headed might possibly, but certainly not the tandem or the Siamese-twin combinations. The scientific interest in the subject is various, e.g., the coloring where different species are united with each other."

SCIENCE BREVITIES.

"THE Signal Office of the War Department at Washington is said to be deluged these days with suggestions and plans, with balloon, flying-machine, and other warlike devices, all of which appear to have some fatal defect," says *Electricity*, New York. "One genius is positive he has solved the problem of aerial navigation, and thinks his airship would be of inestimable value to the Government in case of war. His machine is in the form of a fish-shaped balloon, with electrically operated propellers. Another would-be inventor suggests putting a powerful magnet in a torpedo which would lie along the shore. A steel ship passing in the neighborhood would, in the opinion of this genius, draw the torpedo up to its side, to be immediately followed by an explosion and the sinking of the vessel. There is certainly nothing like having a vivid imagination.

"ARTIFICIAL silk," says *Merck's Report*, New York, "is obtained from nitrocellulose by passing collodion through very minute apertures and drying, and is naturally an extremely combustible material. Before it can be employed for textile purposes this dangerous property is modified by means of a reducing-agent, after treatment with which it loses its properties of deflagration and combustibility. The presence of this body in the fiber enables the admixture of artificial silk with the natural product to be easily detected. Artificial silk dissolved in strong sulfuric acid gives a deep yellow liquid, which, on the addition of a solution of diphenylamine sulfate, gives a deep blue color. The test may be applied directly to the fabric, a piece of which plunged in the reagent will become blue if containing artificial silk, but remains colorless with the natural article."

"ATTENTION has been called," says *The Pharmaceutical Era*, February 24, "to the enormous waste of valuable material which is going on continually in the great copper furnaces of Western mining-towns. It is estimated that in the burning of ores in the furnaces of one town only, which is named, some 350 tons of volatilized sulfur are poured into the atmosphere daily. The effect of this great quantity of poisonous vapor is the almost total destruction of all vegetation in and around the city. Taking the amount named as a basis of computation, we are told that the annual waste of sulfur reaches the great total of 128,000 tons, which at the ruling price for sulfur amounts to a most respectable sum. We are not in a position to verify these assertions, nor to estimate even approximately the total waste of sulfur in all the mining operations of the country, nor, what is a far greater task, of computing the waste in all other sorts of industrial operations. We do know, however, that manufacturers are continually striving by all means to prevent such waste of by-products, and to save them as a material source of profit. The question always to be considered is whether this can be done at a profit. We are not surprised, therefore, to learn that managers of the reduction-works of the West are investigating with a view to saving this enormous amount of sulfur through some financially profitable operation."

THE RELIGIOUS WORLD.

LIFE AND WORK OF GEORGE MÜLLER.

THE death of Rev. George Müller, the founder of the famous orphanage at Bristol, England, has called forth many warm tributes to his memory from the religious press. Mr. Müller was born in Halberstadt, Prussia, September 27, 1805, and received his education at Halle. He came to England in 1829 to labor among the Jews, but failing to conform to the disciplinary conditions of the Jews' Society, he became minister of a church at Bristol, where he remained to the end of his life. The striking feature of his work lay in the fact that altho he organized and carried to great success a number of important religious and charitable enterprises, he never asked for any financial support, believing that all his needs in this direction would be supplied in answer to prayer. His faith was apparently fully justified. His five orphanage homes at Bristol cost, it is said, for construction and maintenance, not much less than \$6,000,000, all of which was paid into Mr. Müller's hands, without a word of solicitation, by Christian men and women throughout the world. It is calculated that he cared for and educated more than 40,000 orphan children in these homes, besides supporting numerous foreign and home missionaries, and circulating vast numbers of copies of the Scriptures and religious tracts. He was highly regarded by men of all faiths and respected by those who had no religious faith. Two years ago, Mr. Müller, then in his ninety-first year, told his experience to a large audience in Bristol, in an

address fifty minutes in length. Writing six months later, in *The Missionary Review of the World* (New York, August, 1896), Rev. Dr. A. T. Pierson said of the address:

"After thirty years, during which I have been attending great missionary convocations and hearing great missionary advocates on occasions of absorbing interest, I can deliberately say that, for simple, unpretending eloquence—the eloquence of experience extending through seventy years of daily walk with God—that address far surpassed any I have ever heard, as also for awe inspiring and faith-incentive power."

Mr. Müller stated that the total amount expended by him up to that time was £1,394,800 (\$6,974,000), and he challenged any person living to tell of a case in which pecuniary help had been sought by him from man. He had established schools for 123,000 pupils in various countries, distributed 1,426,000 New Testaments, 275,000 Bibles, and 106,500,000 tracts, pamphlets and other kinds of Christian literature. His orphanage consists of five massive buildings on Ashley Down, costing £115,000, having a total of 500 rooms, and accommodations for 2,050 orphans and 112 teachers and helpers. The average sum expended yearly for maintenance is £26,000 (\$130,000).

Commenting further on this address, Dr. Pierson wrote:

"All this colossal work, the like of which no one man in our generation has ever wrought, is all to be traced to *believing prayer*. Here is the unique spectacle of a solitary man, himself entirely without money, poor to this day so far as independent means are concerned, undertaking, in simple reliance on the promises of a prayer-hearing God, to support hundreds of missionaries, distribute millions of Bibles and other books and tracts, build five huge orphan houses and support 2,000 or-

GEORGE MÜLLER.

From his last photograph presented to Rev. Dr. Arthur T. Pierson, March 30, 1896.

THE MÜLLER ORPHANAGE.

No. 1, for 300 children, opened 1849. No. 2, for 400 children, opened 1857. No. 3, for 450 children, opened 1862. No. 4, for 450 children, opened 1868. No. 5, for 450 children.

phans, himself traveling over forty-two countries, from the rising to the setting sun, and in all of these lands preaching the Gospel and bearing his witness to the faithfulness of God, and yet he has never had any property in lands or money in banks, wherewith to meet these immense daily costs. Thousands of times he has not had enough in hand to provide one day's meals, or even the *next meal*; and has had prayer-meetings between breakfast and dinner, or between supper and breakfast, to ask supplies for the immediate need; and yet in fifty-five years he has never known one instance in which the prayer has not been answered and the need met, tho sometimes literally only from meal to meal, with no adequate surplus for the next! And let it be noted that Mr. Müller, in order not to weaken his testimony to a prayer-hearing God, has enjoined on all his helpers never to make known the exigencies of the work to any one outside the institution, but to unite with him in spreading all such wants before God alone; and lest his annual reports might be thought to be indirect appeals, for some three years no report was published, and yet the supplies continued to come with as little interruption and in as great abundance as before."

In an editorial on "Wonderful George Müller," *The Northwestern Christian Advocate* (Chicago, Meth. Episc.) says:

"One sturdy saint like George Müller refutes and neutralizes an army of unbelievers, so far as virtue is concerned. A bad man's life survives him, but the value of the examples of those who labor for God increases in a geometrical ratio. Gerald Massey was not the first man to ask 'why God does not kill the devil,' or suddenly extirpate the children of the slums. The King of the universe is not a hysterical workman who childishly smashes machinery that goes wrong. He raises up the Müllers for angelic service. His infinite patience leads men to mend things and to teach the world that He with whom a thousand years is as one day is not in a hurry. Men seem to forget great providential events, but He who rules men does not allow His holy agencies to fail out of human regard. George Müller's record, which covered almost a century—ninety-three years—will outlive that of many marshals and admirals of Great Britain."

DOES CRITICISM ENDANGER FAITH?

IN the present conflict between critical and conservative theology, which has assumed international proportions, it has been steadily charged that the application of modern scientific methods to biblical and theological problems has proved to be a danger to the faith of the Christian church, and, consistently carried out, must undermine this faith. This has been denied by those who see in modern critical theology only a reformation and restoration of original truths. In view of this controversy an article on this subject in the *Theologische Literaturzeitung*, of Leipsic, is of special interest, especially as this journal is the recognized organ of the Ritschlian or new theological school in Germany, and the author of the article, Professor Herrmann, of Marburg, is the leading dogmatician of that school. He writes substantially as follows:

As soon as theology becomes a science it must become dangerous to faith. It is very much to be desired that this fact be properly appreciated in the Protestant Church. We would then all see ourselves placed before the simple problem, whether we, for the sake of faith, would be willing to curtail scientific research, or would be willing to face the perplexities the latter would of a necessity put in our way. In the evangelical church the decision of this question has always been in favor of the latter alternative, as soon as it became apparent that such a choice was an absolute necessity. Any church that would for the sake of salvation shut out research for the truth does indeed establish itself on a deep principle of human nature, but not on Jesus Christ. Such a communion is in reality no church at all.

But easy as the decision of this question is in general, equally difficult is it to apply the solution in particular. For tradition, which it is our purpose to submit to scientific investigation for examination, has come to be for us the Word of God, from which we learn Him most readily. He who, from his religious experience, looks back upon tradition, sees in it the power that binds him to his God. The contests of tradition, as he has understood

them, have exhibited this power. The Christian, accordingly, of necessity gains the impression that he lets go the hand which God has stretched out to him if he consents to adopt a different conception than the traditional one. And historical criticism is constantly demanding of us to discard that which had come to be for us a divine revelation, because it asks of us to modify our traditional views. As is well known, all Christians can not in this respect go to the same lengths. For this reason it happens that each of us may upbraid other Christians for the timidity and fear of truth, and at the same time we may be charged with the same fault.

It is well known what perplexities have been developed for Protestant theology from this condition of affairs. It is accordingly easily understood why young theologians, who want to see their way clearly, try to solve this difficulty. In the first instance, however, it is a question if these perplexities, which are to be removed, do not essentially condition our lives. Possibly we must content ourselves with having shown that the situation offers an ethically clear, but immeasurable problem. The status of a really living faith is certainly not one of absolutely unshaken certainty, but rather a contest with defeats and victories. In this contest it is necessary to regain again and again the foundation of faith. In the nature of the case it must be so. For not that which is self-evident helps us, but only that which we experience every moment as a miraculous gift. Therefore it is indeed a danger to faith that the person of Jesus Christ is constantly being veiled for us anew.

An especially acute form of this danger lies in the fact that the historical investigation of the appearance of Jesus on the stage of history is placed in the domain of the relative and the uncertain. But faith lives by the ever-recurring experience that the personal life of Jesus breaks through all manifestations (*Hüllen*), and through its own power helps us over all such dangers. Accordingly, then, a certainty freed from all doubt and hesitancy does not exist for that Christian faith that attaches itself to what has been developed historically. But if we seek in tradition nothing further than the personal life of Jesus and His saints, we shall constantly find in the historically changeable also that which is eternally fixed. In this way religious confidence in the traditional becomes ethically possible for us. On the other hand, it is always a secret or open hostility to the laws of morality, if this confidence is based not on the personal but on the material contents of tradition.

It is a matter of importance to determine clearly just what the two elements are that stand out in such a contrast to each other in evangelical or Protestant Christianity. Some think these are scientific knowledge on the one hand, and the needs of the church on the other. In reality the antagonism lies in the unavoidable opposition (*Gegensatz*) of scientific research and the experience of the Christian religion.—*Translated for THE LITERARY DIGEST.*

RAMAKRISHNA AND HIS SAYINGS.

THE lectures of the Hindu Swamis in this country since Vivekananda visited the World's Parliament of Religions at Chicago have created more or less interest in the religion and philosophy of India. There has, it appears, been a recrudescence of India's best philosophy, the Vedanta, in the life of one of her most remarkable saints and sages of modern times, Ramakrishna. This man died a few years since, after having left his imprint upon the whole life of India. A religious renaissance is reported to be springing up, and the Hindus are for the first time in their long history sending representative thinkers abroad.

Ramakrishna gathered about him a number of young men as disciples and pupils from the universities of Calcutta and Madras, the most prominent of these young scholars being Vivekananda, who has established a magazine in English, called the *Bramavadin*. We summarize from a late number of this magazine some facts about Ramakrishna and his teachings.

The sage was born in 1835 in a village near Jahanabad in the province of Bengal. His chief place of residence was at the celebrated Rani Rashmoni's garden on the bank of the Ganges in the northern suburbs of Calcutta. He died in 1886. As evidence of

his marvelous influence on other men, it is said his teachings are chiefly responsible for the asceticism of that great Hindu reformer, Keshub Chunder Sen. This man, from a reformer and Christian man of the world, became a mystic and ecstatic saint toward the end of his life, to the surprise of a great many of his friends, especially of those in England.

But Ramakrishna was not in the ordinary sense a man of the world. He was a great spiritual yogi, teaching the highest spiritual methods of how to acquire the superconscious state of the mind. By caste he was a Brahmin, and well formed in body; but the great austerities through which he passed greatly reduced his form and features, for the time being. But his face retained a fulness and childlike tenderness, a profound visible humbleness, an unspeakable sweetness of expression, and a smile seen in no other face. He was singularly devoid of any claims to superiority to other men. His dress and diet were like those of other men. He daily broke the laws of caste. He repudiated the title of a *guru* or teacher. He showed displeasure at every exceptional honor that people tried to pay him.

Ramakrishna worshiped no particular Hindu deity, neither Vishna, nor Siva, nor the Saktis. He accepted all the doctrines, embodiments, and usages of all the religious cult. His religion, unlike the religion of the ordinary Hindu Sâdhus with their flowers and incense, was without ceremonies; it meant ecstasy; his worship meant transcendental insight; his conversation was a ceaseless breaking forth of inward fires and lasted for hours. In these superconscious states, he would become unconscious to the outer world; but, as he communed with the inner world, a sweet smile would play over his face. Soon he would burst into a flood of tears, and break forth in prayers and songs and utterances the force and pathos of which would pierce the hardest hearts of those around him.

But these utterances were no senseless hypnotic jabberings, but a spontaneous outburst of profound wisdom, clothed in beautiful, poetical language. His mind seemed like a kaleidoscope of pearls, diamonds, and sapphires shaken together at random, but always producing precious thoughts in regular, beautiful outlines. Everything seemed to become purified in his mind.

Ramakrishna had a wife, but he never associated with her. She is now living. She is so simple, pure, and highly advanced in spirituality that people regard her as the personified divine Motherhood and the embodiment of chastity, purity, and spirituality.

Ramakrishna's broad catholicity in religion made him one of the most extraordinary of religious men. Once he let his beard grow and fed himself on Moslem diet and repeated sentences from the Koran in his devotion to what is best in Mohammedanism. He bowed his head at the name of Jesus and often went to church. There was something in every form of religion that awakened his enthusiasm, and he showed, in fact, how it was possible to unify all religions. He left no writings and would not consent to be the master or founder of a new sect.

The following are some of his sayings collected from his conversations and published since his death. Max Müller has paid a high tribute to the beauty and wisdom of these precepts:

Like unto a miser that longeth after gold, let thy heart pant after Him.

How to get rid of the lower self. The blossom vanishes of itself as the fruit grows, so will your lower self vanish as the divine grows in you.

There is always a shadow under the lamp while its light illumines the surrounding objects. So the men in the immediate proximity of a prophet do not understand him, while those who lie far off are charmed by his spirit and extraordinary powers.

So long as the heavenly expanse of the heart is troubled and disturbed by the gusts of desire there is little chance of our beholding therein the luminary God. The beatified, godly vision occurs only in the heart which is calm and wrapped in divine communion.

So long as the bee is outside the petals of the lotus, it buzzes and emits sounds. But when it is inside the flower, the sweetness thereof has silenced and overpowered the bee. Forgetful of sounds and of itself, it drinks the nectar in quiet. Men of learning, you too are making a noise in the world; but know the moment you get the slightest enjoyment of the love of God, you will be like the bee in the flower, inebriated with the nectar of divine love.

The soiled mirror never reflects the rays of the sun, so the impure and unclean in heart that are subject to the bondage of ignorance never perceive the glory of the Holy One. But the pure in heart see the Lord as the clear mirror reflects the sun. So be holy.

As the light of the lamp dispels for a moment the darkness that has reigned for a hundred years in a room, so a single ray of divine light from the throne of mercy illumines our hearts and frees it from the darkness of a life-long sin.

As one and the same material, viz., water, is called by different names by different peoples, one calling it water, another *vâni*, a third *aquâ*, and another *pâni*, so the One that is precious and full of bliss is invoked by some as God, by some Allah, by some as *Hâri*, and by others as Brahman.

When the Jews saw the body of Jesus nailed on the cross, how was it that Jesus, in spite of so much pain and suffering, prayed that they should be forgiven? When an ordinary coconut is pierced through, the nail enters the kernel of the nut; but in the case of the dry nut, the kernel becomes separate from the shell, and when the shell is pierced the kernel is not touched. Jesus was like the dry nut; that is, His inner soul was separate from His inner shell, consequently the sufferings of the body did not affect Him. Tho the nails were driven through and through, He could pray with calm tranquillity for the good of His enemies.

As one can ascend the top of a house by means of a ladder or a bamboo or a staircase or a rope, so divers are the ways and means to approach God, and every religion in the world shows one of these ways.

You see many stars at night in the sky, but find them not when the sun rises. Can you say there are no stars in the heavens of day? So, O man, because you behold not God in the day of your ignorance, say not there is no God.

In the play of hide and seek, if the player succeeds in touching the grand dame, he is no longer liable to be made a thief of by the seeker. Similarly, once seeing God, man is no longer bound down by the fetters of the world.

If a single dive into the sea does not bring you any pearl, do not conclude that the sea is without pearls. Dive again and again, and you are sure to be rewarded in the end. So if your first attempt to see God proves fruitless, do not lose heart. Persevere in the attempt, and you are sure to obtain divine grace at last.

Where does the strength of an aspirant lie? It lies in his tears. As a mother gives her consent to fulfil the desire of her importunately weeping child, so God vouchsafes to His weeping son whatever he is crying for.

If you can detect and find out the magical and illusive nature of *môya* [ignorance] it will fly away from you just as a thief runs away when found out.

The pearl oyster that contains the precious pearl is of itself of very little value, but it is essential for the growth of the pearl. The shell itself may prove to be of no use to the man who has got the pearl. So ceremonies and rites may not be necessary for him who has attained to the highest truth—God.

As, when fishes are caught, some do not struggle at all but remain calm in the net, some again struggle hard to come out of the net, while a few are very happy in effecting their escape by rending the net, so there are three sorts of men, viz.: fettered [*baddha*], struggling [*mumusku*], released [*mukta*].

A boat may stay in the water, but the water should not stay in the boat. An aspirant may live in the world, but the world should not live in him.

A mother has several children. To one she has given a bit of coral, to another a doll, to a third some sweets; and thus they all forget their mother, absorbed in their playthings, and she in the mean time goes on with her household work. But among them is a child that throws away its plaything and cries after the mother, "Mamma, dear mamma!" She runs back quickly to him and caresses him. So, O man, you have forgotten your divine Mother, absorbed in the vanities of the world; but when you,

throwing them off, cry after her, she will come at once and take you up in her arms.

It is true that God is even in the tiger; but we must not go and face the animal. So it is true that God dwells with the most wicked; but it is not meet that we should go and associate with the wicked.

He who tries to give one an idea of God by mere book-learning, is like the man who tries to give one an idea of a great city by means of a map or picture.

PROFESSOR MCGIFFERT'S VIEW OF JESUS.

PROFESSOR MCGIFFERT'S book, "A History of Christianity in the Apostolic Age" (see LITERARY DIGEST, February 26), continues to receive many hard raps from the editors and writers of the evangelical press. Rev. Dr. Theodore L. Cuyler expresses himself very strongly on the subject in a letter which he writes to *The Christian Work*. He speaks of the book as "mischievous," and concludes his letter by saying that: "Professor McGiffert will not be 'tried for heresy' by a presbytery, but he is already condemned in the open court of wise and reverent believers in Jesus Christ and evangelical religion and the essential veracity of the New Testament."

It is the view which Professor McGiffert takes of Jesus Christ which seems to be the chief cause of offense, and to afford the chief ground of dissent. It is this feature of the book which comes under review in an article contributed by Prof. F. D. Estes, of Hamilton Theological Seminary, to *The Watchman* (Baptist, Boston). Professor Estes concedes that the book in question is learned and able. It is also said to be an unusually positive book. "One would be at a loss to mention any other book in English which conveys such an assurance of absolute, cock-sure certainty as does this." Professor Estes then proceeds to specify what he considers to be some of the more erroneous teachings of the book. He says that it gives a purely humanitarian view of Jesus, and that it makes nothing of the supernatural in His life. It is also declared that there is in the book "an utter absence of any suggestion that the teaching of Jesus was unique in its helpfulness, to say nothing of authority." Professor Estes can not see that Professor McGiffert exalts Jesus above the place which the creed of Islam gives its founder. It is complained that the miraculous conception is unmentioned, and the descent of the Spirit at Jordan is passed by with equal silence. In conclusion, Professor Estes says:

"In short, out of the oldest creed of Christendom, McGiffert, by silence or assertion, seems to cut away faith in the unique Sonship and in the Lordship of Jesus, in the conception by the Holy Ghost, and birth of the Virgin Mary, in descent into Hades and resurrection from the dead, in any real ascension into heaven or sitting at the right hand of God, and in any return to judgment of any kind. We have left as our creed, so far as Christ is concerned, only this, 'I believe in Jesus Christ, who suffered under Pontius Pilate, died, and was buried.'"

Williston Walker, writing in the *Hartford Seminary Record* (February), characterizes Professor McGiffert's book as "the most revolutionary that has appeared on this side of the Atlantic." The passage in which these words are used is as follows:

"One feature or another of Christian doctrine or history has been treated in as radical a spirit by a few among us within the past ten years; but, considering the range of history covered and the fundamental character of the questions discussed, Professor McGiffert's volume is the most revolutionary that has yet appeared on this side of the Atlantic. It involves an attempt to reconstruct many vital features of the narrative; and, on the whole, the result, to our thinking, is as unsatisfactory and as essentially untrue as it is radical."

Professor McGiffert's view of the Acts is thus summarized by the same writer:

"Professor McGiffert's task is made at once more easy and more difficult by his acceptance of the theory that the Acts is a composition drawn by some now unknown author, probably in the reign of Domitian, from sources of very unequal value, and designed in large measure to show the harmlessness of Christianity from the standpoint of the Roman Government. Any thought of supernatural guidance in the composition of the New-Testament writings is foreign to the conceptions of Professor McGiffert. The author of Acts was simply an honest, tho often mistaken, man, writing a partial sketch of apostolic history, sometimes on the basis of earlier documents of high value and sometimes under the coloring which the growing traditions of his time gave to the events of half a century before. Hence, he falls into abundant errors, mistaking, so Professor McGiffert tells us, the significance of Pentecost and the nature of its spiritual manifestations; erring as to the position of the apostles in the early church; failing to ascribe the true motive to the Sadducees for their opposition; misrepresenting, under the influence of later beliefs, the circumstances of the reception of the gift of the spirit by the converts of Samaria; misunderstanding the relations of the church at Jerusalem to the Christian activities at Antioch; and so proceeding in more or less trustworthy fashion till he closes his narrative with Paul's residence at Rome."

Regarding the newspaper reports that Professor McGiffert, who is a member of the Presbyterian Church and fills a chair in Union Theological Seminary, would be tried for heresy, *The Independent* (undenom.) has had the following to say:

"We recommend very careful consideration before any one brings a prosecution against Professor McGiffert for heresy. We see that some papers have already tried him, and decided that he must leave the Presbyterian Church, as the only honest course he can pursue. Thus far the chief count against him appears to be that he thinks the account in the Gospel seems to indicate that our Lord, in His last supper, wished rather to direct the thought of His disciples to His approaching death than to the establishing of a commemorative sacrament. Of course, the real ground of dissatisfaction is toward Professor McGiffert's general critical treatment of the historical sources contained in the New Testament; but this is something difficult to formulate into a charge of heresy. These things are better settled in the forum of scholarship. The Presbyterian Church needs no more trials for heresy just now."

The editor of *The Outlook* (undenom.), writing on the same report, defends Professor McGiffert as follows:

"Dr. McGiffert is writing, not as a theologian, but as a historian. He is describing how the Lord's Supper was originally instituted, and how it was at first observed. In doing this he gives some information respecting its origin which any student may easily verify for himself—this, namely, that neither in Matthew nor in Mark is Christ reported as bidding His disciples 'Do this in remembrance of me'; that this command—if it is to be regarded as a command—is found only in Paul's Epistles to the Corinthians and in Luke, which Gospel an ancient and well-authenticated tradition reports as influenced largely by Paul, and that the command in Luke is omitted in many of the best manuscripts, and is regarded as an interpolation by Westcott and Hort, whose text, we may add, is by universal consent regarded as the best text we have of the New Testament. From these facts one scholar, Dr. McGiffert tells his readers, has conceived the notion that the idea of observing the Lord's Supper originated with Paul. Against this notion Dr. McGiffert argues with considerable force. 'It is inconceivable,' he says, 'that the Jewish wing of the church would have taken it up had it originated with him [Paul]. Its general prevalence at an early day in all parts of the church can be accounted for only on the assumption that it was pre-Pauline. At the same time, the fact must be recognized that it is not absolutely certain that Jesus Himself actually instituted such a supper and directed His disciples to eat and drink in remembrance of Him.' Can any one say that this is *absolutely certain*, in view of the facts that John, the beloved disciple, does not refer to the Supper at all, that neither Matthew nor Mark refers to any command or suggestion of its future observance, that the reference in Luke is regarded by the best textual scholars as an interpolation, and that thus our only real authority for the

command is Paul, who was not present, and only reports what had been reported to him?"

The Outlook editor (Dr. Lyman Abbott) argues against the expediency of a heresy trial, concluding as follows:

"Who would think of expelling Niebuhr or Arnold from a university for throwing new light on ancient Roman history? Who would think of driving Stephens from Cornell because he has unearthed neglected pamphlets which throw light on the earlier years of the French Revolution? or of condemning John Fiske for making the public acquainted with some of the darker phases of partizanship and corruption in the early history of the American republic? An attack on Dr. McGiffert for bringing to light facts respecting the early history of the Apostolic Church which either the theologians of the seventeenth century did not know or did not sufficiently consider, can have no other effect than that of adding to his honor and of bringing dishonor upon those who assail him. If he is mistaken in his facts, they should be restated; if in his deductions, they should be answered. To turn him out of the church for such statements and such deductions would prove nothing concerning the correctness of either; it would only demonstrate the unwillingness of a majority in the Presbyterian Church to have their faiths subjected to a scholarly scrutiny, and their folly in substituting therefor a popular agitation—partizan, heated, and unscholarly."

THE "DEAD LINE" AGAIN.

THE recent retirement from the pastoral relation of several men prominent in the churches furnishes occasion to *Christian Work* (New York) to return briefly to a discussion of the question of the pastoral term and when it should end. It says:

"We have said there is no dead line in the pulpit. What we mean is that there is no dead line save such as every man makes for himself. Some men reach their limit early, some late. The case of the minister, however, is different from that of most others. For his faculties go out in different directions—that of the pastorate and the pulpit, besides which he is often the executive head of his church. When a minister fails in either direction, the downward tendency is pretty sure to be seen by others, tho often not perceived by himself; or if perceived it is not acknowledged; in such a case some part of the congregation is apt to become disaffected. When this conviction of the inadequacy of the minister to meet the demands made upon him forces itself on the minds of a number in the congregation, its suppression becomes difficult, with the result that eventually the minister sees the necessity either for retiring from active service as pastor emeritus—if happily the opportunity be given him—or of seeking some other and generally smaller field."

In continuation of the subject *Christian Work* expresses the view that as a rule the pastor with even a small part of his congregation opposed to him will show his wisdom by retiring from the field. But on the other hand, a congregation ought to have the golden rule constantly before their eyes in their dealings with their pastor; they ought not to cast him off because of some non-essential differences. And further:

"And when he has served them the better part of a lifetime and grown gray in their service; when he has faithfully preached to them for a long series of years, counseled at their sick-beds, married them, and buried their dead, he is not to be turned out like a worn-out beast to starve or to grub as best he may. Furthermore, if his church can—when the years have told against him and his services elsewhere are not apt to be required—if the church can retire him as emeritus on a salary sufficient to maintain him in the comforts if not the luxuries of life, it is bound to do so; that much the law of Christ requires; and if to do it calls for sacrifice, all the better; such a spirit given exercise will react in a baptism of blessing."

In a discussion of the same general subject *The Advance* (Chicago) makes the point that the dead line is not drawn in other professions. The world is in no hurry, it says, to side-track old physicians, old lawyers, or old authors. It continues:

"If then there is for the ministry a certain fatality in the half-century line, it must be due to some temptation peculiar to the profession rather than to a compulsion of time. Perhaps, for one thing, ministers are peculiarly tempted to lean upon the past. Every man who has made a reputation is tempted to let that reputation displace the work and the care which made it. But when a public speaker begins to think that because he says a thing it has force he is in danger of losing power. For a reputation, like a glass show-case, is not a thing to lean upon. As a rule, the message of a preacher has as much force as there is in it, and no more. No doubt many pulpits have been lost because their occupants became back numbers in the literal sense of the term. With both elbows on the past they ceased to be interesting.

"Again, a minister is tempted not only to lean upon his past attainments as a speaker but also upon his past experience as a Christian. But he of all men needs to keep up a full, fresh inner life. For this constant giving out of ideas and spiritual energies is to some extent an emptying process. Ministers have blue Mondays partly because on Sunday they pour their own spiritual supports and life into the minds of the multitude."

The Borderland of Creeds.—It is an entirely hopeful and optimistic view of the religious future which *The Jewish Messenger* (New York) takes in an editorial article. It says:

"It is beginning to be understood that the universals of honesty, virtue, purity, unite men more firmly and kindly than the particulars of doctrine and litany, however sacred and venerable. Instead of drawing men together, unfortunately these appear to drive them apart, and produce a vast number of meeting-houses for the misinterpretation of the Bible and the caricature of the divine.

"It is a joyous sign of the times that the sectarian sky, so to speak, is breaking. There are rifts in the clouds, and the spiritual fog, which too many mistake for profound inspiration, is fast clearing away. Manly preachers and workers in every denomination find the basis for common action broadening. People are beginning to recognize that the kinship of humanity is a real phrase, whatever the canons and councils may say. It is because men and women *are* men and women that they at heart must distrust teachings which would formulate caste and bigotry and any 'holier-than-thou' doctrine in our latter age.

"May this borderland widen year by year until the religious shrine becomes less and less an exponent of its own necessarily narrow and imperfect conceptions, and more and more a representative of that broader, uncanonized religion which is the Hebrew prophet's constant refrain!"

RELIGIOUS NOTES.

THE world's third Sunday-School convention will be held in London, England, July 11 to 15, 1898.

TIBET is closed to Europeans, not by Chinese exclusiveness, but by the power of the Lamas, the spiritual and temporal head of the government.

"THE bishops of the African M. E. Zion Church have decided," says the *Richmond Advocate*, "to wear robes on special occasions when the ritual is used."

THE prayer-cylinders, or wheels, of Tibet are about two feet high and revolve on a pivot. The prayer is either painted on the outside or is written on a piece of paper and thrust into a cavity. As the monks pass these prayer-wheels they set them in motion.

IN Kucheng, China, where occurred the awful massacres in 1895, at a recent communion service in the city church 150 persons partook of the sacrament, 12 babies were baptized, and 16 persons received baptism and were taken into the church.

CARDINAL GIBBONS, in *The Catholic Mirror*, reports 1,500,000 as being educated in the Catholic schools of the United States at the present time; that "Missionary Bands" are carrying on work among non-Catholics in seventeen different dioceses, and that "30,000 persons are annually received into the Catholic Church in the United States" through conversion.

AT a recent meeting of the Pastors' Conference of Grand Rapids the ministers united in an effort to promote reform in the conduct of funerals, and adopted a series of resolutions to be read in their respective churches. The resolutions recommended that no Sunday funerals be held; that the customary mourning attire be discarded; that funerals be more private; that public display be avoided; that expenditure be carefully limited to the ability of the people; and that the custom of preaching extended sermons on such occasions is not wise.

FOREIGN TOPICS.

DECLINE OF BRITISH JINGOISM OVER
RUSSIA'S EASTERN DEMANDS.

DURING the last few weeks the cable has more than once informed us that Great Britain, conscious of her loss of prestige in the far East, is arming and will precipitate a conflict with Russia. The tone of the press in England, which more faithfully represents all phases of public opinion than in any other country, does not bear out the above-mentioned alarmist reports. That England has lost some influence in the far East is true enough. "If Great Britain," says the Osaka, Japan, *Asahi*, "has explained away her watchfulness at Port Arthur without getting anything definite in Talién-Wan, she has deliberately forfeited her preponderating influence in the East"; and the Shanghai *Mercury* relates with much bitterness that, for the first time since the opening of China, the united address of the ambassadors in Peking was presented in French—an innovation which can not but influence the Chinese materially. But the agitation against the long-expected occupation of Port Arthur and Talién-Wan by Russia has been confined to *The Times*, and a few other lesser papers. Many British journals object very strongly to the practise of describing Great Britain as mistress of the world when the facts do not bear out this assertion. *The Spectator*, which can not be accused of want of patriotism, says:

"We have not the smallest intention of minimizing the importance of the acquisition to Russia, or the loss it inflicts on China; but in what way do that gain and that loss concern us?"

"The real truth is that we are jealous, so jealous that we are inclined to play the part of dog in the manger, and to forbid Russia having a province which we ourselves neither desire nor can seize. This is clearly proved by the alternative which is pressed upon the public attention. Russia having claimed Manchuria, we are to claim the valley of the Yangtse, a vast region stretching from the North Pacific to Burmah, and occupied by at least a hundred and twenty millions of industrious and contented people. Because it is immoral of Russia to seize Manchuria, we are to seize six times as much. . . . We say deliberately that the enterprise is beyond our strength, and that it would be better to let Russia conquer all China, and thenceforward to trade with the kingdoms of the far East as Russian provinces, than to make so ruinous an addition to our already unwieldy domain. . . . If we are prepared to say that nobody shall have any, that, in fact, the black world and the brown world and the yellow world shall remain independent, well and good. That might be a lofty policy, if we gave up our own prizes, which as yet are beyond compare the biggest. But if we agree, as most of us do agree, that Asia and Africa need two hundred years of guidance and peace under European tutelage, then we must suffer Europe to do the preliminary work, and not be so madly jealous because it is not all left to us."

The Saturday Review, another paper not wanting in patriotic pride, advises the "cultivation of friendly relations with Russia." The only power safe to attack, thinks this paper, is Germany, as England would find it profitable to destroy German trade with the help of other anti-German nations. *The Illustrated Weekly News*, Edinburgh, says:

"Experience is a good schoolmaster, says Carlyle, but the fees are sometimes heavy. Experience will cure this country of its jingoism, but not till much suffering has been gone through. Nature has plainly intended Great Britain for an industrial career; but, allured by notions of prestige, we are continually looking with eager eye to the military ideal. . . . We have undertaken to maintain the integrity and independence of the Chinese empire. We undertook to maintain the independence and integrity of the Turkish empire. And a pretty mess we made of it. Why? For the simple reason that with the rise of great military empires we have sunk from a military point of view to the position of a third-rate power. The truth must be faced that without conscription this country can not pose as dictator

either in Turkey or China. Lord Wolseley is quite alive to this fact—hence his hints at conscription. But if conscription is adopted in this country, jingoism will get its death-blow. . . . Mr. Chamberlain is under a great delusion if he thinks that the people will enthusiastically back him in fighting for new markets. The effects of a war at first would be felt by the middle classes and the working classes in the shape of taxation and depressed trade—results which would drive the people to hurl from power a government which was trying to benefit posterity at the expense of the people who are struggling to make both ends meet."

The inability to find suitable recruits for the army and the increasing difficulty experienced in manning an enormous navy with a purely British crew have done much to silence British jingoism. *The Westminster Gazette*, which has always opposed war-shouting, says "we lose nothing by Russia's gains." *The St. James's Gazette*, closely connected with the Government, says the people will uphold the Government, but it does not think war necessary. Even *The Times*, tho it says "we can not allow our prestige to be whittled away," does not repeat its most deliberate threats of war. Neither do *The Daily Graphic*, *The Telegraph*, or *The Globe*. These papers only suggest that England should seek compensation by cutting another slice of the Chinese pie. Lord Roberts, in the House of Lords, only suggests the strengthening of the Indian frontier by a further advance. Even to this Lord Salisbury's cabinet is opposed. Sir William Des Voeux, ex-governor of Hongkong, thinks England can protect her trade interests in China without war. Of some importance also is a recent debate in the Royal United Service Institution, at which Sir J. Colomb, M.P., asserted that England, in the face of Russia's steady advance, must follow Russia's methods and combine her great resources if she would come out triumphant. Admiral Sir Nowell Salmon declared England could not well stop Russia north of the Gulf of Pechili. Colonel Man put the frontier as far south as the Yang-tse-Kiang.

But all this censure of jingoism did not prevent a Parliament from voting \$120,000,000 for an increase of the navy, an increase which is in itself more formidable than the entire United States naval forces at the present moment.

AMERICAN INTERESTS IN THE FAR EAST.

IF the United States takes a notion to attend to matters in the far East, Germany, for one, will not be surprised. The Germans are assured that very soon this country will make a bold attempt to reap some of the rich harvest of trade in China. According to the *Hamburger Nachrichten*, Hamburg, the Germans must prepare to meet the new competitor by increased energy and a desire to please the customer. This paper says:

"Until very recently, the United States regarded the Pacific Ocean as a kind of back door, and looked out chiefly upon the Atlantic. To-day it has been discovered that the general progress of the world demands greater attention to the development of Asia. It is well known that the far East is the most populous center, the greatest storehouse of the world's wealth, the least developed field for trade, and that America is very near to it. In less than twelve days the voyage from San Francisco to Yokohama may be accomplished. The largest trading interests of the United States are in the countries on the other side of the Pacific. The power of production in the American industries has passed the point at which it was sufficient only to satisfy the home markets, and the American manufacturer must look abroad. American locomotives have begun to cross the plains of Russia and Argentina, American engineers work in European factories, American rails lie in the mountains of India, American woollens are as well made as those of other countries. The export trade is necessary for the Americans to-day; they know it, and do their best to foster that trade. Meanwhile the Chinese have been shaken out of their slumbers by Japan, railroads are being built, schools are organized, and the Chinaman begins to adopt some of

the things which give strength to the despised West. Already voices are heard in the Union which demand that the Pacific become a sea on which the United States rule as paramount power. The influence of the United States, so say the Americans, must be felt as strongly in the lands of the far East as in South America, and they realize that this must be accomplished soon, ere the European powers have fully established themselves. By the time railroads are in active operation all over China, the market for American goods must be established.

"Hence the United States has every reason to see to it that the trade with China remains open to the whole world, that no tariff for the exclusion of American goods is enacted, and that the interests of American citizens in China are carefully guarded by the authorities in Washington. Meanwhile England and Germany have the advantage through their older established relations with China. Europe may not care to worry itself about American competition, especially as it is well known how ready the Americans are to bluster. Yet we would like to warn the German merchants. They must not despise the new competitor, but must act with unceasing energy if they would continue successful in their battle for the markets of the far East."—*Translated for THE LITERARY DIGEST.*

WAR TALK AND WAR PREPARATIONS.

THERE is a marked change in the attitude of the Spanish press of late. It is much more warlike, bitter, and confident of success. Quotations from our own "yellow journals" find their way oftener into the columns of our Spanish contemporaries, altho some, like the *Imparcial*, still print the notice: "We have received some very inflammatory telegrams from America, but refrain from giving their text." In Cuba the *Diario de la Marina*, *Union Constitutionnel*, and *Comercio* endeavor to collect funds for a war-ship to be presented to the mother country by the loyal Cubans. The *Heraldo*, Madrid, is informed that the United States would not be unwilling to preclude further trouble by a purchase of Cuba, but the paper thinks that no Spanish ministry willing to consider such a proposition could live an hour. Otherwise the *Nacional*, said to be strongly influenced by the Weylerites: it declares that a sale of Cuba could be considered if the United States will guaranty to keep order there, to protect the Cubans who sympathize with Spain, to make concessions to Spanish trade, and to pay Cuba's debt. "But that is not what the Americans want," adds the paper; "they think they can get Cuba for nothing." The *Globo*, referring to the pretended information regarding the *Maine* commission with which certain American journals fill their columns, says:

"As a matter of fact the United States is at present very much like an immense *Maine*, floating between the Atlantic and the Pacific; and some of her crew have evidently lost their heads. They try to force the door of the magazine to blow up the ship.* President McKinley, the commander, does his best to restore order among his undisciplined crew. The real *Maine* was lost in consequence of the slipshod manner in which enormous quantities of explosives were stored, and to the undue haste which caused these war preparations to be made on board a vessel manned by a badly disciplined crew. The ruin of the United States will probably also be caused by an explosion; in this case, however, it will really be 'external.'"

In the presence of the war-cloud, internal dissensions seem to have vanished in Spain. In an interview with Emilio Castelar, which has been extensively quoted, the ex-President of Republican Spain declares that Spain has given the Cubans greater liberties than the Spaniards enjoy, and can not make further concessions. He concludes as follows:

"I am told that it is now impossible for us to escape a conflict with the United States. If that is true, the aggression of the Americans is as criminal as that of Napoleon I. in 1808. We have

done nothing to provoke them. We can receive their threats with the contempt born of a clear conscience. We will still do what we can to prevent a conflict, but we can not humble ourselves before superior force. If the United States declares war, we will defend our good rights to the last."

Our chances are regarded as less good for an immediate victory over the Spanish forces, now that our preparations and the state of our defenses are being reported day by day abroad. It is remarked that the naval authorities seem to encounter some difficulty in manning the ships. In connection with this *The Witness*, Montreal, says:

"The United States consul who took the names of men in Canada anxious to serve in the United States navy, and forwarded the roll to Washington, ought to be aware that in doing so he has laid himself open to the charge of having violated the foreign enlistment act. During the Crimean war the Washington Government took strong action against those who were accused of accepting such offers of service from United States citizens who wanted to serve in the British army. The late Hon. Joseph Howe was concerned in the affair, and had a lively time defending himself. This precedent should not be forgotten."

The manner in which some of our papers speak of the \$50,000,000 appropriation for defenses also excites comment, as that sum is hardly five per cent. of what great nations usually have to expend in a war. The *Nieuws van den Dag*, Amsterdam, contrasts the matter-of-fact way in which the British grant enough money for an *increase* of their navy which is superior in tonnage to the *whole* American navy, with the supposed excitement accompanying a very ordinary grant in the United States. Senator Mason's belief that "the United States will not have war, but merely chase the Spaniards from Cuba as a policeman drives a newsboy from his beat," is also commented upon, and Chaplain Bradford's prayer in the Illinois legislature creates some astonishment. Yet there are not wanting signs of sympathy and encouragement. *The Daily News*, London, says:

"For our part we find it impossible not to sympathize with American feeling on the subject of Cuba. The cruelties committed in that unfortunate island, and the misery inflicted upon its inhabitants, would move a heart of stone. They have resulted not so much from deliberate intention as from hopeless incompetence. . . . The plain fact is that Spain can not manage Cuba, and that her failure, which may be no fault of hers, inflicts apparently endless suffering upon the native population. Americans would be more than human, or less, if they could look with

DOES JONATHAN WANT THE WEED?

JONATHAN (To King Alfonso of Spain): You'll be a good deal sicker, young feller, if you don't drop that purty darn quick.—*The World, Toronto.*

* To fully understand this allusion it is necessary to remember that the crews of American men-of-war have a firmly established reputation for inebriety among Spaniards and Spanish-Americans.—*Editor of THE LITERARY DIGEST.*

equanimity upon such a mass of constant wretchedness within so short a distance of their own Southern States. This is no case of indefinitely extending the Monroe doctrine, with which Mr. Canning had quite as much to do as President Monroe. It is a question of common humanity."

The Montreal *Star* quotes at length the opinion of a Canadian railroad official, who is confident that the war would be "a good thing"—for Canada. New York, Baltimore, Boston, Philadelphia, and other American ports would be blockaded, and trade with Europe would go *via* Montreal. "Yes, there is no doubt about it. If there must be war, let it come after navigation opens here, and it will be a great thing for us financially," concluded the railway official who spoke. The Winnipeg *Tribune* thinks now is the time to form a triple alliance between Great Britain, the United States, and Japan, in which case the rest of the world would have to accept the dictates of the English-speaking nations.

But the vast majority of comment is rather unfavorable to us. The *Handelsblad*, Amsterdam, says:

"If the war between Spain and the United States really comes, the fault is certainly not with the former country, for the Spanish Government has shown an amount of self-abnegation and willingness to please which can hardly be carried further. While the jingo press is doing its best to find fresh ground for complications, while a war credit is granted in Congress, the Spanish authorities leave no stone unturned to prove that the quarrel is not of their seeking."

The *Journal des Débats*, Paris, says:

"The American papers talk of war, and take no notice of the official denials that war is imminent, and their recital of the war preparations naturally drives the populace wild with expectation. . . . Thus, unfortunately, the nation has been prepared to look upon intervention as imminent, Spain is continually denounced, and the latent pan-Americanism of the people blinds them alike to the profound injustice of their proceedings and to their own dangers. In the United States nobody realizes what enormous sacrifices are needed to bring to its knees a nation as stubborn as the Spaniards, and nobody seems to see that this intervention in Cuban affairs is purely an act of international piracy. There is not a shadow of justice about it. It is quite true that American business men lose by the rebellion, but do they lose more than Spanish business men?"

The *Saturday Review*, London, is not quite sure that the people of the Southern States would remain true to the Union if their lands were subjected to a Spanish invasion. The St. Thomas, Ontario, *Journal* remarks: "'Spain,' says the Chicago *Tribune*, 'must be humbled in the dust. It has shed too much innocent blood. It has burned Jews. It has massacred Hollanders.' . . . The Chicago paper's righteous rage reminds one of the Irishman who thumped a poor Jew because it was the Jews who killed Jesus Christ." The *Scotsman*, Edinburgh, says:

"It is not for a moment to be supposed that a proud race like the Spaniards will be bullied out of what is almost the last important fragment of a once great colonial empire without striking a blow in self-defense; and altho there need be no doubt as to how a conflict would end in the long run, it is just possible that Spain's resistance might at the first prove much more effective than the American Government is prepared for. The United States navy is notoriously undermanned; and an early reverse at sea would expose a vast unprotected coast line and much merchant traffic to harassment."

Our newspapers come in for a good deal of adverse criticism, which may well be summarized in the words of Henry Norman, who writes in *Cosmopolis*, London, as follows:

"To the universal good-will shown on the occasion of the *Maine* catastrophe the action of the so-called 'yellow press' of America has been an unedifying exception. Apart altogether from good taste and truth, neither of which have had any relation to what these journals have published about the loss of the *Maine*, what is chiefly striking is the utter want of patriotism characterizing them. Not only do they bring their country into contempt abroad, but they are positively prepared to use their whole in-

fluence, which is very great upon the masses of the people, to provoke war by the dissemination of flagrant falsehoods. No evidence of any kind has yet been forthcoming. The idea of photographing the submerged battle-ship is, of course, ludicrous; yet these papers have published despatch after despatch declaring that the *Maine* was blown up by a mine in Havana harbor connected by wires with the Spanish fortress, and by elaborate illustrations have professed to show exactly how this was done."—*Translations made for THE LITERARY DIGEST.*

CANADA, THE UNITED STATES, AND THE YUKON.

A BILL passed by the United States Senate provides that the Canadian Government can enjoy the right of transshipment at Fort Wrangel upon the following terms:

"1. The abrogation of the monopoly provision of the contract, so that railways with their ocean termini in Alaska may penetrate into Canadian territory.

"2. That the customs laws shall be changed so as to allow miners outfitting in the United States to bring into Canadian territory tools, utensils, and provisions to the extent of a thousand pounds per head.

"3. That Parliament's control over Canadian territory shall be surrendered to the extent that it will be out of its power to make any distinction between aliens and British subjects in the granting of miners' licenses.

"4. That on the Atlantic coast United States fishermen shall be given the same privileges in Canadian ports as Canadian fishermen enjoy."

These provisions have raised a perfect storm in Canada. The opposition accuse the Government of having decided upon a railway route to the Klondike before ascertaining the attitude of the United States. The Liberals blame the opposition for drawing attention to the value of the rights held by the United States. Both call each other's proceedings un-Canadian, and both unite in abusing Uncle Sam in the most hearty manner.

The Montreal *Herald*, taking into consideration the tone of our press on the subject, remarks that the United States, "like the small boy who struck back first, has begun to retaliate in advance," and sketches the Canadian argument in a long leader to the following effect:

The demands made by the United States Senate in anticipation of the Canadian Government's request for lightering privileges at Wrangel is framed in the spirit of those residents of that country who believe the earth to be theirs and the fulness thereof. First, we are asked to give up the privilege of securing as far as possible a monopoly of the transportation to our own gold-fields. Next comes the demand to abandon the chief purpose for which the Stickeen Teslin railroad is to be built at all, by the admission, free of duty, of half a ton of miners' equipments, when taken in by United States citizens. Then we must remove certain restrictions on miners' licenses. After that it is our duty to abandon our fishery rights—rights which we have maintained a hundred years. After that, if we are good, we may perhaps be allowed to take what advantage we can of the fact that the Klondike gold-fields are in Canadian territory. It seems surprising that a responsible body like the United States Senate should feel called upon to demand that an independent Parliament shall forthwith stultify itself in such a fashion. But Canada will do what she thinks best with her own. If the United States obstructs the navigation of the Stickeen River, Canada must extend the railway southward to Observatory Inlet. It will mean the building of two hundred miles of railway, but that is not a task from which the country that built the Canadian Pacific Railroad will be likely to shrink. The best thing about this Senate legislation is that it has come in good time, so that we may know what to look forward to, and may govern ourselves accordingly.

The *Colonist*, Victoria, suggests the enactment of mining regulations on the American plan. Aliens should be prohibited from holding rights in the gold-mines of Canada, and the importation of goods into the mining country by any other than an all-Cana-

dian route should also be prohibited. *The Monetary Times*, Toronto, says:

"That Canada would permit American miners to bring large supplies of goods into our country without paying the duties which all other foreigners must pay is a demand for which we can imagine no acceptable equivalent, even if equivalents were offered in a reasonable or liberal spirit. That we should grant to Americans licenses to work our mines on conditions which, as a rule, they refuse to all foreigners, is a curious exemplification of reciprocity; and if some reciprocity has been offered to us in Alaska mining, the privilege was not asked for by, and is of no value to, Canada."

"On the general subject of the reciprocal bonding privilege between Canada and the United States, this country may now make itself easy; the menace of abolishing the system is not likely to be much heard in the future. So long as the notion prevailed that the bonding system existed principally for the benefit of Canada, threats to abolish it were heard from time to time. It is now shown that abolition would mean a severe, not to say a deadly, blow to the commerce of the republic."

The *Ottawa Free Press* expresses the wish that American editors would inform themselves on the subject of which they write, and prevent their readers from being misled. The American public, thinks the paper, should be reminded that, while the laws of the United States prevent a Canadian from holding a mining claim in the republic, in Canada an American has equal terms with the Britisher, for the present at least. *The Banner*, Chatham, Ontario, says:

"Since the American Senate are hinting that they may possibly block our rights as to shipping, etc., at Fort Wrangel, the Dominion Government would be justified if they accepted Mr. McMullen's bill regarding 'alien miners,' and refused to allow entrance to the gold-bearing districts to others than those who are subjects of the empire. When a railway has been completed in Canadian soil, then possibly the Americans would see the futility of their objections, and citizens of that country could be admitted on terms to be arranged."

Principal Grant says that the United States Senate represents very much the influence of the small and the Western States. He hopes for better things from the House of Representatives and the President. At any rate, Canada need not cry before she is hurt. *The Manitoba Free Press* says:

"The United States Senate is unhappily capable of this or any other enormity that will for the moment appeal to the passions of the noisier elements of the American people. . . . However, unless we are poltroons we shall refuse to surrender our rights to a foreign and unfriendly Congress. We shall refuse under any and all circumstances; but to surrender without striking a blow would stamp us as a degenerate people. . . . For purposes of navigation the Stikeen is as much Canadian as American. For thirty miles up from its mouth its banks are American, and we would have no right to land merchandise within that distance. . . . The American Government may police the river to prevent this, but they can not do more without violating the treaty. If transshipment at the mouth is necessary to free navigation, we are not to be denied the privilege, but can demand it as a right. The Americans have the free use of the St. Lawrence on the same terms. Canada would be equally entitled to impose regulations that would practically void this right, unless the United States would consent to the free admission of Canadian agricultural products. That would be preposterous, and the other is not less so."

The Evening Telegram, Toronto, says:

"The United States Senate bill, which places such an enormous price on Canada's treaty rights at Fort Wrangel, gives the Premier a chance to put himself at the head of the patriotic sentiment of the country. All he has to do is to withdraw the McKenzie-Mann bargain and bring forward a plan for a genuine all-Canadian route. . . . Canada does not want either Uncle Sam or Dan Mann to own the Yukon. The United States Senators at Washington seem anxious to grab the Klondike for Uncle Sam. The Canadian Government at Ottawa seem just as anxious to give the Klondike to Messrs. McKenzie and Mann."

INTERNATIONAL ESPIONAGE.

OUTSIDE France nearly every comment on the Dreyfus-Zola case is favorable to the prisoner on the Devil's Isle and to the writer who sought to procure a reopening of his case. Here and there, however, a voice is heard in defense of the French Government and the French army. A writer in the *Deutsche Revue*, Stuttgart, who is simply described as an ex-statesman, explains that France can not really allow a reopening of the now famous *chose jugée*. M. Zola may be honest in his love for justice, but he has not shown much forethought and discretion. The writer describes the system of international espionage in his article, and we summarize his sentences as follows:

Espionage is carried on by all states, civilized and uncivilized. It is in our times regulated by a central bureau which does its best to keep from contact with the spies and their agents. The secret political police alone have direct dealings with them. The spies, or rather the agents, of political espionage are not people with whom an honest man would like to associate as soon as he knows their character, but they are generally very able, bright, tho unscrupulous men, whose wits have been sharpened by continual danger. They do not, as a rule, obtain their information in person, but use criminals of a lower type as their tools. The work of these agents is very often international, and it is not rare that one and the same person is in the pay of different countries. Sometimes they are attached to an embassy, in which case they can carry on their work pretty openly, relying upon their personal powers to obtain the desired information. Only the most charming and accomplished persons are chosen in this case. France has, with much success, made use of refined women in this way. But in the majority of cases espionage is carried on by persons who are not generally known to desire information.

In view of the character of the persons employed, the information received and, often enough, highly paid for, is utterly unreliable in most cases. Yet no nation can afford to give up the system, for a single reliable and important piece of information may be worth more than all the money spent on espionage for years.

German papers have demanded an open trial for Dreyfus. That is, however, impossible to grant. The French military authorities would be forced to make known an important part of their organization for counter-espionage, which would lead to endless complication in and out of the country. Dreyfus *may* be innocent, but if he were declared such by a trial in which everything is laid bare, much more than the fall of a ministry would follow. Great changes would take place in France, and it is to be questioned whether we in Germany can wish for them.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

JAMES GORDON BENNETT, the proprietor of the New York *Herald*, is said to have offered to the Prince of Monaco a higher sum for the gambling establishment in his principality than the company which at present holds it. *The General Anzeiger*, Frankfurt, dryly remarks that Mr. Bennett evidently thinks *non olet*.

THE customers of the German Government telephone, who now pay \$37.50 per year, will only pay \$12.50 in future. An additional charge of one quarter of a cent will be made every time the wire is used in private houses, one half of a cent for offices, and three quarters of a cent for hotels and clubs. A small extra charge also secures the privilege of having the contents of telegrams immediately telephoned to one's house.

PANSLAVISM is evidently on the decline. The Russian clubs which for years tried to unite all Slav nations into one irresistible union find that this is as difficult to accomplish as a union of all German- or all English-speaking races. Count Ignatieff, the head of the movement in Russia, complains that the St. Petersburg Pan Slavist Club, which a few years ago numbered 2,000 members, has only 700 now, and these are very platonic.

GENERAL SAUSSIER, who has just been retired from the command-in-chief of the French army, enjoys the distinction of an excellent reputation in Germany. Being taken prisoner, he refused to give his word of honor not to fight during the war that was then going on—the war of 1870-71. He escaped the danger of breaking his word, as did many Frenchmen whose patriotism got the better of their sense of honor. Saussier was sent to the fortress of Graudenz as a prisoner of war. He escaped across the Russian frontier, though specially guarded, with the help of his servant, a French soldier. The latter received a sentence of fourteen days' bread and water for his temerity, but was amply rewarded by his commander after the war.

MISCELLANEOUS.

THE AMERICAN HERO OF THE YALU.

THE Chinese battle-ship *Chen Yuen*, in the fight at Yalu with the Japanese, September 17, 1894, was commanded by Captain Philo Norton McGiffin—"the only man of American or European blood who ever commanded a modern war-ship in battle." Captain McGiffin was an American, having been born in Washington county, Pa., December 30, 1860, where also, not long ago, he was laid to rest. He was therefore but thirty-four when the battle occurred; but his ship was the only one of the Chinese squadron, according to a writer in *The Home Magazine* (March), that came out of the fight with credit, and "competent authority" is quoted to the effect that his daring, as shown in that battle, "has possibly never been surpassed in the history of the world."

McGiffin, at the age of seventeen, entered the Naval Academy at Annapolis. While there, he saved two children from a burning house and received for this deed the thanks of the Secretary of the Navy. He was graduated in 1882, and after a two years' cruise passed the final examination; but under an act of Congress for the reduction of the naval force, he was honorably discharged with a year's pay. It was a heavy blow to him, and at the beginning of the Franco-Chinese war he set out for China with letters of introduction. Captain Mannix, who had organized the Chinese marine corps, spoke about him to Viceroy Li Hung Chang, who expressed a desire to see him. McGiffin presented himself at the palace, and, being challenged by the sentries and not knowing their language, he flung them aside and forced his way to the Viceroy. He was put in command of a gunboat and captured the only gunboat lost by the French in that war. At the conclusion of hostilities he entered the naval college at Tien Tsin as a teacher, and in 1887 was placed at the head of a naval academy at Wei-Hai-Wei. When war was threatened between China and Japan he had obtained leave of absence and was about to return to America; but he returned his papers and was made captain of the *Chen Yuen*.

We quote now directly from the account in *The Home Magazine* written by Calvin Dill Wilson:

"Before he went into the battle of the Yalu, he wrote to his brother: 'You know it is four killed to one wounded, since the new ammunition came in. It is better so. I don't want to be wounded; and hate to think of being dreadfully mangled, and then patched up, with half my limbs and sense gone, yet "a triumph of surgical skill." No! I prefer to step down or up, and out of this world.'

"The great battle of the Yalu River took place on September 17, 1894. When this fight had scarcely opened, McGiffin saw the navigating lieutenant disappear from his position, looking very pale. Soon after, something went wrong with the training engine of one of the turrets, and the captain was obliged to go down to the armored place below to set it to rights. As he was getting down, some one caught him by the leg, calling out, 'There's no room for any more here. You must hide somewhere else.' He looked down, and saw the navigating lieutenant, and a dozen more terrified men, in hiding. McGiffin was so angry that he used physical force upon the cowardly lieutenant to get him out of his way; after that they let him fix the engine.

"During the fight three of the enemy's ships, one on the port side, and one on the starboard, and one right ahead, were concentrating their fire on the *Chen Yuen*. As the one on the port side was doing the most mischief, the men at the two starboard guns were ordered to turn the guns around, and try to silence the ship that was doing so much damage on the other side. To do this they had to fire across the fore-castle.

"At this juncture a fire broke out in the superstructure over the fore-castle. McGiffin ordered a line of hose to be run out, but the

men refused to go unless an officer led them; this the captain offered to do, and a number of men volunteered to follow. But before they started to put out the fire, he ordered the head-gunner at the starboard battery to quit firing on the port side, and turn his guns right ahead; otherwise they would fire upon their own men. When they reached the fore-castle, the shot of the enemy's guns struck one man after another. The captain was bending over, pulling up a hose, when a shot passed between his legs, burning both wrists, and cutting away the tail of his coat; a shell hit the tower, and as it burst a piece struck him. Shortly after he had gone toward the fore-castle, the head-gunner to whom he had given the order to shift the guns, was killed; and the man who took his place, not knowing that the captain and his men had gone forward, kept the guns directed to port, and fired one. The explosion blew them all off their legs, and killed several. McGiffin at the same time was gashed by a shot from the enemy, that rendered him unconscious; he fell upon a hose that had been cut by a ball, and the spurting water revived him.

"When he looked up, he saw that he was directly in front of the other starboard gun, with his head in line of the fire; he watched the turning of the gun for a second or two, and realizing his danger, threw himself over the side of the superstructure to the deck below, a depth of eight feet. He fell upon his chest, with blood gushing from his mouth; he managed to get around into the superstructure, and asked two of the men to carry him farther aft, as he could not walk. Afterward in relating this experience, he said that when he recovered consciousness, and saw the big gun pointed toward him, and about to be fired, he said to himself: 'What an ass I am to sit here and be blown to pieces.' He claimed for himself no heroic thought or bombastic reminiscence of historic battles, but simply that he realized that he would be a fool to stay where he was when he could get out of the way.

"To have seen McGiffin on his ship during that fight of the Yalu, would have been a sight to remember forever; that dauntless spirit rode the forces of battle as if they were a steed. He was the soul of his ship, the spirit of the storm, the Prospero with his magic wand. His body was shattered, but his mind kept awake. He was so near the first gun when it exploded that his clothing was set on fire, his eyebrows and hair burned, his eyes injured, and altho his ears were rammed as tightly as possible with cotton, the drums of both ears were permanently injured by the explosion. He was unconscious for a time, but as quickly as he regained his senses, he was on his feet and giving orders. He received forty wounds, many of them caused by splinters of wood; he with his own hands extracted a large splinter from his hip, and, *holding his eyelids open with his finger, this heroic man navigated his ship, which had been struck four hundred times, safely to its dock, skilfully evading capture, the Chen Yuen being the only one of the Chinese vessels that came out of that fight with credit.* A competent authority has declared that the daring of McGiffin, as shown in the battle of the Yalu, has possibly never been surpassed in the history of the world.

"The Japanese offered five thousand dollars for his capture; but did not have the satisfaction of taking him. But what he dreaded had happened; his nerves, limbs, and senses were shattered. After the battle of the Yalu, he went into a hospital in China for a time; but finding himself with little promise of complete recovery he came to America. Unfortunately he was indisposed to submit to treatment; he insisted on dressing his own wounds. His body had the appearance of a checker-board, with its many bruises; there were still in him bullets and splinters; he was compelled to walk with two canes; his pain was so great that he spent hours hobbling back and forth across the floor, saying that he was more comfortable thus than in a sitting or reclining posture. His use of language was superb, and the accounts he gave of his experiences to his friends, when they could induce him to talk, were most graphic.

"The battle of the Yalu gave young McGiffin the proud distinction of being the only man of European blood who had commanded a modern war-ship in actual battle. He said of himself in a jesting way, after he came to this country, 'I am still in the Chinese navy; but I am not in good standing. You know it is customary there for a naval officer, when he loses a battle, to commit suicide; and they wanted me to follow the custom, but I declined with thanks.'"

CAPT. PHILO NORTON MCGIFFIN.

BUSINESS SITUATION.

The strained international relations have resulted in a great boom in the iron and steel trade. Plants all over the country are reported rushed with orders, and consumers' demands more than keep up with deliveries. Bar iron and steel are selling 50 per cent. ahead of last year. Business in the West is opening up very encouragingly. Chicago reports the best week's general trade for many years past. The cotton and woolen industries, however, have not improved, and there has been a sensible quieting down of the Klondike trade activity. Cereals and flour are rather unsatisfactory. Bank clearings were normal and stock speculations dull.

Flour and Corn.—"Flour and corn exports are larger this week, but those of wheat are smaller. The total exports of wheat, including flour, aggregate 3,896,318 bushels, against 3,679,056 bushels last week, 1,749,000 bushels in this week a year ago, 1,744,000 bushels in 1896, 2,562,000 bushels in 1895, and 2,966,000 bushels in 1894. Corn exports aggregate 4,496,000 bushels, against 3,941,874 bushels last week, 5,862,687 bushels in this week a year ago, 1,727,000 bushels in 1896, and 672,000 bushels in 1895."—*Bradstreet's*, March 26.

Wool and Cotton.—"Sales of wool have been only 11,411,600 pounds in three weeks at the three chief markets, against 46,605,300 last year, and prices are yielding, with sales of old wool 1/2 to 1 cent below current quotations for clothing, and no indication that manufacturers are nearing the end of their stocks. Cancellations are numerous, but in proportion to orders smaller than for five years past, and find natural explanation in an advance of prices greater in some lines than distribution seems to warrant. Yet the mills are nearly all full of orders for some months to come, and rather more demand for goods is seen since colder weather appeared. Cotton mills at Fall River still increase their accumulated stocks, about 2,000,000 pieces, and print cloths have declined to 2.06 cents, the lowest quotation on record. Some prints have also weakened, but gingham are firm, and the better grades of dress-goods are sold well ahead."—*Dun's Review*, March 26.

Bank Clearings.—"Bank clearings in the United States reflect reduced speculative interest, chiefly at New York, in a total for the week aggregating \$1,084,000,000, 16 per cent. smaller than last week, but 22 per cent. larger than in this week a year ago, 21 per cent. larger than in 1896, 22 per cent. larger than in 1895, 46 per cent. larger than in 1894, but 12 per cent. smaller than 1893 and 6 per cent. smaller than 1892. Only four cities in the United States show decreases this week from the corresponding week a year ago, namely, Richmond, Hartford, Norfolk, and Houston. The decreases are generally of small extent, however. Gains, on the other hand, are less pronounced than of late. Business failures in the United States this week are 215, against 233 last week, 221 in this week a year ago, 276 in 1896 and 232 in 1895."—*Bradstreet's*, March 26.

ago, 21 per cent. larger than in 1896, 22 per cent. larger than in 1895, 46 per cent. larger than in 1894, but 12 per cent. smaller than 1893 and 6 per cent. smaller than 1892. Only four cities in the United States show decreases this week from the corresponding week a year ago, namely, Richmond, Hartford, Norfolk, and Houston. The decreases are generally of small extent, however. Gains, on the other hand, are less pronounced than of late. Business failures in the United States this week are 215, against 233 last week, 221 in this week a year ago, 276 in 1896 and 232 in 1895."—*Bradstreet's*, March 26.

Iron and Steel.—"The iron and steel industry is more fully employed than ever before in its history, and altho production of Bessemer pig is beyond all precedent, the price advances, and billets are still bought in open market by some of the largest producers. Other pig is steady in price, and no decline appears in finished products excepting steel plates at the East, but for these the demand at Chicago is enormous, as for cars and agricultural implements, pending orders for cars covering 500 to 2,000 each. The structural demand during the first quarter has been 80 per cent. larger than in the same quarter of any previous year, it is said, and the demand for pipe is swelled by pending contracts for 126 miles. Minor metals are comparatively quiet, tin at 14.3 cents, lake copper at 12 cents, lead firmer at 3.7 cents, and nickel in heavy demand at 34 cents."—*Dun's Review*, March 26.

Stocks and Exchange.—"Stock speculation has been dull, professional, and weak. The continued uncertainty regarding the outcome of the Cuban situation has stopped public or foreign participation and left the New York market in the hands of traders. Liquidation by speculative holders is apparently exhausted, but there has been continuous selling for short account, and the bear interest, based on expectations of a further break in prices, is extremely large. Sugar has been a particularly weak feature. Bonds have shared in the depression in stock values and governments have declined. Foreign exchange, after a rally, declined in consequence of a hardening of time-loan rates, and \$2,165,000 additional gold has been engaged, principally in Paris, for import. Demand sterling is heavy at 4.83 1/2."—*Bradstreet's*, March 26.

Canadian Trade.—"The breaking up of the country roads affects distribution throughout the Dominion of Canada, but manufacturers and jobbers report the trade coming in to be of an encouraging volume. Ocean navigation will open earlier this year than for twenty-five years past. Toronto reports an active demand for Canadian cattle for export in bond through the United States, but the prospect for this industry is clouded by expected large shipments this year from the Argentine. Seeds are being imported from the United States. At Montreal jobbers and manufacturers are satisfied with the trade that is being done and regard the outlook as encouraging. While general trade is dull at Halifax, the early spring has developed a better business in dry-goods. The Newfoundland coast is reported clear of ice, and sealers are at work earlier than usual. In the maritime prov-

Tailor-Made Suits,

\$ 5

OUR New Spring Catalogue of Styles is a mirror of fashion for dressy women. We show in it all the newest Parisian ideas in Suits, and will mail it *free*, together with samples of materials to select from, and a perfect measurement diagram to the lady who wishes to dress well at a moderate cost. All of our gowns are made to order, giving that touch of individuality and exclusiveness so dear to the feminine heart.

Our Catalogue illustrates:

Tailor-made Gowns, \$5 up.
Exclusive designs and refined styles.

Crash and Linen Suits, \$4 up.
Moderate in price and extremely fashionable.

Separate Skirts, \$4 up.
Paris models in Cloth, Silk and Satin.

Bicycle Suits, \$4.50 up.

Bicycle Skirts, \$3 up.

Our line of samples includes the newest materials for Dresses and Suits, many of them being imported novelties. We also make up your own material if you wish. No matter where you live we pay the express charges. Write today for Catalogue and samples.

inces stocks of fish are small and prices are firm. The lumber cut in New Brunswick is the smallest known for years past. Mild weather in Alaska, putting the passes in a poor condition, is credited with checking the outfitting trade in British Columbia. Failures in the Dominion of Canada this week number 29 as against 23 last week, 40 in the corresponding week of last year, 44 in 1896, and 49 in 1895. Canadian bank clearings this week aggregate \$25,635,000, a decrease of six tenths of 1 per cent. from last week, but an increase of 45 per cent. over last year."—*Bradstreet's*, March 26.

Current Events.

Monday, March 21.

Secretary Long names the two Brazilian cruisers recently purchased the *New Orleans* and the *Albany*. . . . Governor Black, of New York, signs the bill setting aside 5 per cent. of New York City liquor-tax receipts for the school teachers' pension fund. . . . The Jersey City station of the Pennsylvania railroad is burned; loss, \$100,000. . . . Congress—House: The *Maine* relief bill is passed unanimously.

An official Chinese statement denies that a compact between the viceroys has been made to direct affairs in the Yang-tse-Kiang valley. . . . Commander Brownson has started for France to inspect vessels being built at La Sayne for Brazil. . . . The Austrian Reichsrath reassembles at Vienna, and Herr Fuchs is elected president.

Tuesday, March 22.

The Cuban question and the report of the *Maine* court are discussed by the Cabinet. . . . The bark *Almy*, bound for Alaska, is found a wreck off San Francisco, and it is thought that forty passengers and sailors lost their lives. . . . Congress—Senate: The national quarantine bill is discussed. House: The naval appropriation bill is reported from committee.

The divers at the wreck of the *Maine* succeed in getting out two 6-inch guns and some ammunition from the after-magazine. . . . The Chinese loan is largely oversubscribed in Berlin, but there is little demand for shares in London. . . . Mr. Curzon in the House of Commons says that there is no truth in the allegations of the Senate committee in regard to England's attitude toward Hawaii. . . . Six officers and one hundred men of a French expedition in Madagascar are said to have been killed by natives.

Wednesday, March 23.

Lieutenant-Commander Marix, bearing the report of the *Maine* Court of Inquiry, leaves

Miami, Fla., by rail for Washington. . . . The Navy Department orders the monitors *Terror* and *Puritan* to join Admiral Sicard's fleet at Key West; the old monitors and a number of revenue cutters are to be put into active service. . . . Congress—Senate: Mr. Gallinger tells of the conditions in Cuba as he saw them on his recent visit; the *Maine* relief bill is passed. House: The contested election case of Thorp against Epes from the Fourth Virginia District is decided in favor of Mr. Thorp.

Lord Salisbury has intimated a wish to resign both the Premiership and the Foreign Secretaryship. . . . The United States cruiser *New Orleans* (formerly the *Amazonas*) goes from Gravesend, England, to Hole Haven, to take on ammunition. . . . Miss Clara Barton leaves Havana for Key West and this city; she hopes soon to return to Cuba; another body is found in the wreck of the *Maine*. . . . The Austrian Government is interpellated as to its attitude toward the killing of Austrian subjects at Lattimer, Pa., and the acquittal of Sheriff Martin. . . . Fighting between the Anglo-Egyptian forces and the Dervishes is reported from the Upper Nile.

Thursday, March 24.

Lieutenant-Commander Marix and his companions arrive in Washington with the report of the *Maine* Court of Inquiry. . . . The sailing of Spain's torpedo-boat flotilla from the Canaries for Porto Rico is considered in Washington as the most serious incident that has occurred since the *Maine* disaster. . . . Admiral Sicard is relieved from command of the Key West fleet on account of ill-health, and Captain Sampson is ordered to succeed him. . . . The battle-ships *Kearsarge* and *Kentucky* are launched at Newport News, Va. . . . Miss Clara Barton denies the report of dissensions in the Red Cross Society in Cuba, and of her own health being bad. . . . The auxiliary naval board at this port examines a number of merchant and private vessels available for use by the Government. . . . Congress—Senate: Mr. Thurston tells what he saw in Cuba and advocates armed intervention by the United States. House: The naval appropriation bill is considered.

In an interview General Maximo Gomez says he hopes there will be no war between the United States and Spain; he is still of the opinion that Cuba could pay \$200,000,000 for its independence. . . . The request of contractors to use dynamite on the wreck of the *Maine* in Havana harbor is denied by both the American and Spanish governments; the body of Lieutenant Jenkins is recovered from the wrecked battle-ship. . . . The Bank of Spain is to lend the Spanish Government 200,000,000 pesetas [\$40,000,000], guaranteed by new treasury bonds. . . . China has agreed to all the Russian demands, being practically the cession of Port Arthur and Talien-Wan and the right to construct a railway to these points.

Friday, March 25.

The report of the *Maine* Court of Inquiry is discussed all day by the President and Cabinet; it is announced, altho not officially, that the battle-ship was destroyed by an outside explosion. . . . The lighthouse tender *Mangrove* leaves Key West under orders to proceed to Havana and bring back all American officials except Consul-General Lee. . . . The battle-ship *Texas* sails from Hampton Roads for New York. . . . Preparations for either offensive or defensive operations are continued with the greatest energy by both the War and Navy departments. . . . Commodore W. S. Schley is ordered to

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 45th Street, New York.

DUMB-BELL BUTTONS, FREE.

We only ask you to pay the postage and get a pair of latest style Dumb-bell Cuff Buttons ABSOLUTELY FREE! Guaranteed value, 25c. Either silver or gold, heaviest plate. Will wear six months. Sent, with 128-page catalogue of 3,000 bargains, FREE, if you send 3 two-cent stamps for postage.

R. H. INGERSOLL & BRO., 65 Cortlandt St., Dept. 17 N. Y.

This is what the great orator and reformer, Francis Murphy, says:

Pittsburg, Pa., Dec. 23, 1897.
I have used your Hawaiian cure, and with all my heart and my renewed strength I thank you for it. I will gladly recommend MI-O-NA to all whom I meet suffering from indigestion or dyspepsia.

FRANCIS MURPHY.

MI-O-NA ABSOLUTELY PREVENTS UNNATURAL FERMENTATION.

Take no more laxatives or artificial digestives. Take Mi-o-na Tabloids; the food will then pass NATURALLY through the body, will be naturally digested and assimilated, and your blood will be rich and pure. In this way nature manufactures strength and restores vitality; and in no other way can it be done.

A LITTLE TABLOID—A BIG CURE.

Mr. Booth discovered and gave the world the greatest treatment for throat and lung diseases ever known, and his position in the scientific and commercial world is a guarantee that what he offers the public will be exactly as represented.

An interesting booklet on HOW TO GET WELL AND STAY WELL, together with full information of Mr. Booth's great discovery, relating to HEIGHT, WEIGHT, and PERFECT HEALTH, sent FREE on application; also a trial sample of Mi-o-na. A box of Mi-o-na Tabloids at your druggist's, or by mail, 50 cts.

Asheville and Hot Springs, N. C.

These two charming resorts, located in the mountains of Western North Carolina, are now being rapidly filled with winter tourists from the North. A more delightful place cannot be found to avoid the disagreeable March winds. They are easily reached from New York, via Pennsylvania and Southern Railway, by the Washington and Southwestern Limited, which leaves New York daily at 4:20 P. M., making the trip within twenty-two hours in through Pullman drawing-room sleeping cars. For full particulars, etc., call on or address, Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.

command the flying squadron at Hampton Roads. . . . Congress—Senate not in session. House: The naval appropriation bill is considered.

The Spanish report of the cause of the *Maine* disaster is received by the Madrid Government; it is, in effect, that the cause was an internal explosion. . . . Sharp fighting between the Spanish and the insurgents is reported in Cuba. . . . Lieutenant-Commander Colwell has purchased for the United States Navy a first-class torpedo-boat built in Germany.

Saturday, March 26.

President McKinley announces his purpose to ask an appropriation of \$300,000 from Congress for relief of the Cuban reconcentrados. . . . The verdict of the *Maine* Court of Inquiry is communicated to the Spanish Government. . . . Defense preparations are continued with vigor. . . . Congress—Senate not in session. House: Debate on naval appropriation bill is continued.

M. Hanotaux, the French Foreign Minister, makes a statement in the French Chamber of Deputies regarding the attitude of France toward the United States and Spain. . . . Orders for the mobilization of the British fleet at Hongkong have been issued; twenty-nine French cruisers have gone north in the Yellow Sea.

THE PROBLEM SOLVED.

THE NEW MEDICAL DISCOVERY TESTED.

Results of the Test in Various Forms of Dyspepsia.

Chronic indigestion or dyspepsia, while a very common trouble, has for some time been looked upon by able physicians as a serious thing, and that no time should be lost in treating it properly at the start, because recent researches have shown that the most serious, fatal, and incurable diseases have their origin in simple dyspepsia or indigestion.

Diabetes is simply one form of indigestion, the sugar and starchy food not being assimilated by the digestive organs. In Bright's disease the albumen is not properly assimilated.

While consumption and dyspepsia are twin diseases, and it is beyond question that dyspepsia makes a fertile soil for the seeds of consumption.

But the trouble has been to find a remedy that could be depended upon to cure dyspepsia, as it is notoriously obstinate and difficult to cure.

This has been the question which has puzzled physicians and dyspeptics alike, until the question was solved three years ago by the appearance of a new dyspepsia cure in the medical world known as Stuart's Dyspepsia Tablets, which it was claimed was a certain, reliable cure for every form of stomach trouble.

Physicians, however, would not accept such statements without first giving the new remedy many tests and carefully observing results.

For three years the remedy has been thoroughly tested in every section of the country and with surprising and satisfactory results.

Stuart's Dyspepsia Tablets can be honestly claimed to be a specific, a radical lasting cure for indigestion in the various forms of acid dyspepsia or sour stomach, gas or wind on stomach, too much bile, undue fulness or pressure after eating and similiar symptoms resulting from disordered digestion. Stuart's Dyspepsia Tablets were not placed before the public until this three years' trial left no doubt as to their value, and they have recently been placed in the trade and can be found on sale at all druggists at the nominal price of 50 cents per package.

No extravagant claims are made for the remedy. It will not cure rheumatism, pneumonia, typhoid fever, nor anything but just what it is claimed to cure, and that is every form of stomach trouble.

No dieting is necessary, good wholesome food and plenty of it and you may rest assured that Stuart's Dyspepsia Tablets will digest it.

Druggists claim for it that it is a pleasure to recommend it to dyspeptics, because it gives such universal satisfaction.

Little book on stomach diseases sent free by addressing Stuart Co., Marshall, Mich.

CHILTON MANUFACTURING CO., 69 Cortlandt Street, New York.

Sunday, March 27.

It is expected that the report of the *Maine* Court of Inquiry will be sent to Congress tomorrow; an unofficial outline of the report says it assigns the cause to an outside explosion on the port side of the vessel, exonerates Captain Sigsbee and the crew from any blame, but fails to fix the responsibility for the disaster. . . . Captain Sigsbee leaves Havana for Washington. . . . The Democrats and Populists have fused in Oregon, the latter naming the candidate for governor.

The elections in Spain for the lower house of the Cortes passed off quietly; the indications are that the Sagasta ministry will have 300 of the 432 seats. . . . The Russian representative at Peking signs the agreement with China regarding the lease of Port Arthur and Talienswan, and the railway concession. . . . Mrs. Delia T. S. Parnell, mother of Charles Stewart Parnell, dies in Ireland.

Health in Flour.

It makes a vast difference in your health and brain power what kind of bread you eat.

White flour contains little brain food—it has been largely taken out to make the flour white. Franklin Mills Fine Flour of the Entire Wheat is a perfect brain, muscle and nerve food, all in the right proportion. Your entire system quickly responds to the nutriment furnished by this flour.

The genuine made only by the FRANKLIN MILLS CO., Lockport, N. Y.

If your grocer does not keep it, send us his name and your order—we will see that you are supplied.

Decoration-Day Tour to Gettysburg, Luray, and Washington.

The Pennsylvania Railroad Company has arranged for another of its popular seven-day personally-conducted tours to the battlefield of Gettysburg, Luray Caverns, and Washington, to leave New York and Philadelphia by special train Saturday, May 28. Rate, \$27.00 from New York; \$24.00 from Philadelphia, covers all necessary expenses. Proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; 789 Broad Street, Newark, N. J.; or Geo. W. Boyd, Assistant General Passenger Agent, Philadelphia.

Morning, Noon, and Night

you may leave Grand Central Station for the West on one of the great through trains of the New York Central—justly styled "America's Greatest Railroad."

SARGENT

THEIR ADOPTION IN THE NEW BUILDING FOR THE LIBRARY FOR CONGRESS IS THE HIGHEST ENDORSEMENT OF THEIR MERITS.

They revolve on a metal roller-bearing turn-table, which is not only perfect in principle but is everlasting.

They are a brain-worker's best tool, a labor economizer and a time saver.

All kinds for all needs.

We make, also, all sorts of appliances for the convenience of book men, such as book and Dictionary stands, adjustable reading desks, etc. Write for catalogue D, postage 2c.

Our line of Library and Reclining Chairs is the largest and the best in quality in the world. Catalogue C free. Postage 3c. Quote DIGEST.

Address GEO. F. SARGENT COMPANY 289d Fourth Avenue (next 23d Street) NEW YORK

Always Boil Drinking Water.

Sophisticans say. Boiled water is pure, but is flat and insipid. Always drink distilled water aerated with sterilized air, made by

The Sanitary Still.

This water is fresh and sparkling as from a bubbling spring. The Sanitary Still fits any stove and is handled as easily as a tea kettle. Four sizes, from \$10.00 up. Write for booklet.

THE CUPRIGRAPH CO., 114 N. Green St., CHICAGO, ILL.

BURPEE'S FARM ANNUAL 1898 FOR THE LEADING AMERICAN SEED CATALOGUE.

The best seeds that grow, at lowest prices. Twenty-one Grand, New Novelties for 1898, which cannot be had elsewhere. This handsome new book of 144 pages is mailed free to planters everywhere. WRITE TO-DAY. W. ATLEE BURPEE & CO., PHILADELPHIA.

CHESS.

Problem 271.

BY JAN DOBRUSKY. Black—Six Pieces.

White—Nine Pieces.

White mates in three moves.

CONCERNING NO. 269.

It seems that Pradignat's Prize-Winner, No. 269, has two solutions. If, on more thorough investigation, we find this to be the fact, solvers will be credited with either solution. We would like to know how many can get both solutions.

Solution of Problems.

- No. 267. B-R 8, B-Q 3 ch, Q-Q 4, mate. K x Kt, K x B, Q-K 5, mate. K-Q 4, B-B 5 ch, Q-K 5, mate. K x P, K x B, Q-Q 4, mate. K-Q 4, Q-Kt 7, mate. K-B 2, Q-Q 4 ch, P-Q 8 (Kt), mate. B-B 8, K x P must, Q-B 5, mate. R-Kt sq or Ksq, K x P, Kt-Q 6, Q-K 5, mate. R x P, K x Kt or P, Q-Kt 3, mate. R x Kt.

Correct solution received from M. W. H., University of Virginia; H. W. Barry, Boston; the Rev. I. W. Bieber, Bethlehem, Pa.; C. F. Putney, and W. G. Donnan, Independence, Iowa; C. Q. De France, Lincoln, Neb.; A. Shepherd, Bloomington, Ill.; C. R. Oldham, Moundsville, W. Va.; J. C. Eppens, Canal Dover, Ohio; R. M. Campbell and E. L. Antony, Cameron, Tex.; C. W. C., Pittsburg; Drs. G. A. Humpert, Pittsfield, Ill., and W. S. Frick, Philadelphia; F. H. Johnston, Elizabeth City, N. C.; Dr. R. J. Moore, Riverton, Ala.; D. W. Wilcox, New Orleans.

Comments: "A very good problem, but not one of his best"—M. W. H. "If such a beautiful composition took only third prize, I would like to see the problem that won the first"—H. W. B.; "Constructed on magnificent lines"—I. W. B. "Another good one from start to finish"—C. F. P. "Deserves a prize"—W. G. D. "One of the best you have published lately"—C. Q. De F. "Brilliant and puzzling"—A. S. "A most interesting problem"—C. R. O. "Sehr schön"—J. C. E. "Key-move absolutely in the dark"—R. M. C. and E. L. A. "A splendid problem: deserves better than third prize"—F. H. J. "One of the most difficult problems I have seen"—R. J. M. "A beautiful composition"—D. W. W.

J. C. Eppens and J. H. Pengelly, Durango City, Mex., were successful with 266. "Ramus," Car-

bondale, Ill., should have received credit for solving 261 and 265; and H. W. Barry for finding the way to do 262. F. H. Johnston sent solution of 262 and 263.

The reply to B x B (Kt 5), No. 265, is P-Kt 3 and not K-B 5.

The Correspondence Tourney.

FIFTY-SECOND GAME. Evans Gambit.

- CAPT. O. J. BOND, JR., Charleston, White. E. A. MORE, JR., Denver, Black. 1 P-K 4, P-K 4. 2 Kt-K B 3, Kt-Q B 3. 3 B-B 4, B-B 4. 4 P-Q Kt 4, B x P. 5 P-B 3, B-R 4. 6 P-Q 4 (a), P-Q 3 (b). 7 P-Q 5 (c), Q Kt-K 2. 8 Q-R 4 ch, P-B 3. 9 P x P, Kt x P. 10 Q-Kt 3, Q-B 2. 11 Kt-Kt 5, Kt-R 3. 12 Castles, B-Kt 3 (d). 13 QKt-R 3 (e), P-R 3. 14 B-K 3 (f), B x B. 15 P x B, Castles. 16 B-Q 5 (g), Q-K 2. 17 P-R 4 (h), Kt-Q sq. 18 Kt-B 4, Kt-K 3 (i). 19 Kt-Kt 6, Kt x Kt. 20 P x Kt, Q x P (j). 21 Kt x R, Q x P (K 3) ch. 22 K-R sq, Kt-Kt 5. 23 B x P ch, K-R sq. 24 B-R 5 (k), Kt-B 7 ch. 25 K-R 2, R-B 5. 26 B-B 3, R-R 5 ch. and announced mate as follows: If 27 K-Kt sq, R-R 8 mate. If 27 K-Kt 3, Kt x P (K 4) ch. 28 K x R must, Q-Kt 4 mate.

Notes by One of the Judges.

- (a) Tschigorin, the "Master of the Evans," believes that Castles is best, and Lasker holds that Castles is "more in keeping with the original idea of the gambit." (b) The better play is P x P. (c) This is the Evans with Evans left out. White gave up his Kt P for the attack. Now he cuts off his attack and Black is just a P ahead. There are several continuations here of the real Evans: P x P, Q-Kt 3, etc. (d) At this early stage Black has the best of it. (e) A strange move. Why doesn't he get this Kt into play? On the R's file the Kt reaches very few squares, and on this square, at this time, the Kt might as well be off the board. (f) Another bad move growing out of 13. If 13 Kt-Q 2, followed by Kt-B 3, White's condition would have some vitality, but now? (g) Ah! he is going to get his Kt into play. (h) A very weak move. White doesn't want to move his Kt, but this move, while it postpones the moving, also causes a hole into which Black gets, to White's ruin. (i) Bound to dislodge the Kt, or to do something worse. (j) Totally oblivious to the fact that Kt x R! Let him take it! and of course he will, instead of R-B 3. If B-Kt 5, Q-R-K B sq. He must give up the exchange or the game; he elects to do the latter. (k) Rather hard to find a worse move. He should try R-B 3, Kt-B 7 ch; K-R 2, Q-R 3 ch; K-Kt sq, Kt x P, etc.

FIFTY-THIRD GAME.

Queen's Gambit.

- ROBERT MUN-FORD, Macon, Ga, White. DR. H. W. FAN-NIN, Hackett, Ark., Black. 1 P-Q 4, P-Q 4. 2 P-Q B 4, P x P. 3 Kt-K B 3, Kt-K B 3. 4 P-K 3, P-K 3. 5 B x P, Kt-Q B 3. 6 Castles, B-Q 3. 7 Kt-Q B 3, Castles. 8 P-K 4, P-K 4. 9 P-K R 3, P x P. 10 Kt x P, Kt x Kt. 11 Resigns.

White, being a piece behind, gives up the fight.

FIFTY-FOURTH GAME.

Philidor Defense.

- A. L. JONES, Montgomery, Ala., White. F. M. OSTERHOUT, Factoryville, Pa., Black. 1 P-K 4, P-K 4. 2 Kt-K B 3, P-Q 3 (a). 3 P-Q 4 (b), P x P (c). 4 Kt x P, Kt-K B 3. 5 Kt-Q B 3, B-K 2. 6 B-Q 3, Castles (d). 7 Castles, B-Q 2. 8 P-B 4, P-Q 4 (e). 9 P-K 5, Kt-Kt 5 (f). 10 P-K 6 (g), B-Q B 4. 11 B x P ch, K x B. 12 P x B, Q x P. 13 P-B 5, Kt-K B 3. 14 P-Kt 4 (h), R-K sq. 15 P-Kt 5, Kt-Q B 3. 16 P x Kt, B x Kt ch. 17 K-R sq, B x P. 18 Q-R 5 ch, K-Kt sq. 19 B-R 6, P-Q 5. 20 B x Kt P (i), K x B. 21 R-Ktsq ch, K-B sq. 22 Q-R 6 ch, K-K 2. 23 Kt-K 4 (j), B-K 4. 24 Q-R 4 ch, Resigns.

Notes by One of the Judges.

- (a) This move constitutes the Philidor Defense. (b) B-B 4 is usually played here, followed by P B 3; P-Q 4. (c) Unnecessary. It weakens Black's center, and strengthens White's. Kt-Q 2 is evidently the move. Altho Kt-Q 2 is usually a weak move it seems to be best here. If B-Q Kt 5, P-Q B 3, etc. (d) We think he is in a hurry to get his K in the corner. B-Q 2, followed by Kt-B 3, is better. The evident intention of White's 6th is to mobilize his forces on the K's wing. Black's 6th enables him to carry out his plan. (e) But White did not take the offered bait; he dislodges the Kt,—hence, this move is just what White wanted.

- (f) Better go back. (g) A beauty. (h) Crowding the mourners. (i) There is no satisfactory answer to this. (j) Better than Q R-K sq ch.

White played a very dashing game, but Black did not make a strong defense. We can not commend White's game against a player of equal or superior strength.

The United States Championship Match.

At the time of going to press the score is: Pillsbury, 6; Showalter, 2; draws, 2.

FOURTH GAME.

Queen's Pawn's Opening.

- SHOWALTER, White. PILLSBURY, Black. 1 P-Q 4, P-Q 4. 2 P-K 3, Kt-B 3. 3 B-Q 3, Kt-B 3 (a). 4 P-K B 4, Kt-Q Kt 5. 5 Kt-K B 3, Kt x B ch. 6 P x Kt, P-K 3. 7 Kt-B 3, P-B 4. 8 P x P, B x P. 9 P-Q 4, B-K 2. 10 Q-Q 3, P-Q R 3. 11 Castles, P-Q Kt 4. 12 Kt-K 5, Q-Kt 3 (b). 13 B-Q 2, B-Kt 2. 14 P-B 5, Castles. 15 B-K sq, Q-R-Q sq. 16 B-R 4, B-B sq. 17 P x P (c), Q x P. 18 Kt-K 2, Kt-Kt 5 (d). 19 B-Kt 3, B-Kt 4 (e). 20 B-B 4, B-B 3. 21 Kt x Kt, Q x Kt. 22 B-B 7, R-Q 2. 23 Q-R-B sq, R-K sq. 24 R-K B 3, Q-Kt 3. 25 Q-Q 2, B-Kt 4. 26 B-B 4, B-B 3. 27 R-Kt 3, Q-B 4. 28 R-K B sq, Q-K 3. 29 Kt-B sq, B-K 2. 30 Kt-Q 3, P-B 3. 31 Kt-B 5 (f), B x Kt. 32 P x B, B-Kt 2. 33 Q-Q 4, R-K B 2. 34 P-K R 4, Q-K 5. 35 R-Q sq, Q x Q. 36 R x Q, R (B 2)-K 2. 37 P-R 5, K-B 2. 38 K-B 2, R-K 5. 39 B-Q 6, P-Q R 4. 40 R-B 3, B-B 3. 41 R x R, R x R. 42 R-B 4, R-Q B 5. 43 R x R, Q P x R (g). 44 B-B 7, P-R 5. 45 B-R 5, P-R 3. 46 P-K Kt 4, K-K 3. 47 B-B 3, K-Q 4. 48 P-Kt 5 (h), R P x P. 49 B x P, B-K sq. 50 B x P (Kt 2), B x P. 51 P-Q R 3, K x P. 52 B-B 6, K-Q 4. 53 B x P, P-Kt 5 (i). 54 P x P, P-B 6. 55 P x P, K-B 5. 56 P-K 4, B-K sq (j). 57 Drawn game.

Notes from The Press, Philadelphia.

- (a) The usual play is P-K 3 or P-Kt 4. The text-play, however, is quite satisfactory. He will be enabled to continue Kt-Kt 5 and Kt x B or P-K 4, both leading to a good development. (b) He could not play B-Kt 2 on account of Kt x Kt P, followed eventually by Q x Kt P (ch) and Q x B. (c) Much better was P-K Kt 4, which would have given White pretty good chances for a King's side attack. The text-move enables Black to equalize the game. (d) An excellent move, which completely breaks the adverse attack. White now can not well play Kt-K B 4 on account of Kt x Kt and Kt x Q. Similar would be Black's answer, should White play B x B. Perhaps the best play White has on hand is B-Kt 3, which, however, leaves him without any advantage. (e) Better, perhaps, was Kt x Kt. (f) Had White played B-R 6, then B-Q 3 might have been answered, and White loses time in re-treating the Bishop. The text-play leads to an exchange of Kt against Bishop, after which there is hardly any winning chance for either side. (g) This exchange leaves a Bishop and 6 Pawns on either side. The Bishops being of opposite colors the legitimate outcome would be a drawn game. The contestants, however, continued playing and some pretty combinations are made. By proper play, however, either side can easily hold his own. (h) A pretty move. If Black plays R P x P, then White answers B x P, and Black can not capture the Bishop since P-R 6 would win. If, however, Black captures with B P, then B x Kt P and B x R P would follow. (i) Now Black attempts to win. The sacrifice of the Kt P and B P gives him the passed Q R P, which, however, can be stopped by the Bishop. (j) This virtually ends the battle. White can not win, since he can not guard the Q Kt and Q B P, for if he moves B-B 6 or B-Q 2, Black would answer P-R 6. Nor has Black any winning chances. White's Bishop easily stops the adverse Pawn.

Chess-Nuts.

Marshall, another young player, is Champion of the Brooklyn Chess-Club. He beat Napier, last year's Champion, in the tie match.

The Netherland Chess-Association proposes to celebrate the 25th anniversary of its organization by a Tournament in Gravenhagen, Holland. Queen Emma and the Queen Regent offer three prizes.

Ajeeb, the famous automaton Chess-player, ran against Napier the other night, and the Turk found more than his match in the Brooklyn lad. The humiliation of defeat was averted, however, by turning out the lights.

The Literary Digest

VOL. XVI., No. 15

NEW YORK, APRIL 9, 1898.

WHOLE NUMBER, 416

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

REPORT ON THE MAINE DISASTER.

THE report of the United States Naval Court of Inquiry into the loss of the battle-ship *Maine* was transmitted to Congress, together with a brief message from President McKinley, on March 28. The court spent twenty-three days in the work of investigation, and concluded that the primary cause of the destruction was a submarine mine. The court reported, first, that the *Maine* was taken to buoy No. 4, in from five and one-half to six fathoms of water, by the regular government pilot. Secondly, that the state of discipline on board the *Maine* was excellent, and everything had been reported secure at 8 o'clock on the night of the explosion. The ammunition, explosives, combustibles, medical stores, etc., had been properly stored, the temperature of the magazines, the state of the coal-bunkers and of the boilers precluded the possibility that the destruction could have been caused by them. The report then proceeds:

"The destruction of the *Maine* occurred at forty minutes past nine in the evening, on the 15th day of February, eighteen hundred and ninety-eight, in the harbor of Havana, Cuba, she being at the time moored to the same buoy to which she had been taken upon her arrival. There were two explosions of a distinctly different character, with a very short but distinct interval between them, and the forward part of the ship was lifted to a marked degree at the time of the first explosion. The first explosion was more in the nature of a report, like that of a gun; while the second explosion was more open, prolonged, and of greater volume. This second explosion was, in the opinion of the court, caused by the partial explosion of two or more of the forward magazines of the *Maine*.

"The evidence bearing upon this, being principally obtained from divers, did not enable the court to form a definite conclusion as to the condition of the wreck, altho it was established that the after-part of the ship was practically intact and sank in that condition a very few minutes after the destruction of the forward part.

The following facts in regard to the forward part of the ship are, however, established by the testimony:

"That portion of the port side of the protective deck which extends from about frame 30 to about frame 41 was blown up aft and over to port. The main deck from about frame 30 to about frame 41 was blown up aft and slightly over to starboard, folding the forward part of the middle superstructure over and on top of the after-part. This was, in the opinion of the court, caused by the partial explosion of two or more of the forward magazines of the *Maine*.

"At frame 17 the outer shell of the ship from a point eleven and one-half feet from the middle line of the ship, and six feet above the keel when in its normal position, has been forced up so as to be now about four feet above the surface of the water; therefore, about thirty-four feet above where it would be had the ship sunk uninjured. The outside bottom-plating is bent into a reversed V-shape, the after wing of which, about fifteen feet broad and thirty feet in length (from frame 17 to frame 25), is doubled back upon itself against the continuation of the same plating extending forward.

"At frame 18 the vertical keel is broken in two, and the flat keel bent into an angle similar to the angle formed by the outside bottom plating. This break is now about six feet below the surface of the water, and about thirty feet above its normal position.

"In the opinion of the court, this effect could have been produced only by the explosion of a mine situated under the bottom of the ship at about frame 18, and somewhat on the port side of the ship.

"The court finds that the loss of the *Maine*, on the occasion named, was not in any respect due to fault or negligence on the part of any of the officers or members of the crew of said vessel.

"In the opinion of the court the *Maine* was destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines.

"The court has been unable to obtain evidence fixing the responsibility for the destruction of the *Maine* upon any person or persons."

Captain W. T. Sampson, of the *Iowa*, president of the Naval Court of Inquiry, has, since making this report, been appointed commander of the fleet known as the North Atlantic Squadron (off Key West) to succeed Rear-Admiral Sicard, who has been retired on account of ill health.

The President's message accompanying the report of the Naval Court of Inquiry did little more than review its findings. He detailed the circumstances under which the *Maine* was sent to Havana, by way of a resumption of friendly naval visits, and he referred to the aid promptly given by Spanish sailors after the explosion, and by the authorities of Havana in caring for the dead and wounded. He further said:

"The appalling calamity fell upon the people of our country with crushing force, and for a brief time an intense excitement prevailed which, in a community less just and self-controlled than ours, might have led to hasty acts of blind resentment. This spirit, however, soon gave way to the calm processes of reason, and to the resolve to investigate the facts and await material proof before forming a judgment as to the cause, the responsibility and the facts warranted, the remedy due. This course necessarily recommended itself from the outset to the executive, for only in the light of a dispassionately ascertained certainty could it determine the nature and measure of its full duty in the matter."

The President asserted that the court employed every available

means for the impartial and exact determination of the causes of the explosion, adding:

"Its operations have been conducted with the utmost deliberation and judgment, and, while independently pursued, no source of information was neglected, and the fullest opportunity was allowed for a simultaneous investigation by the Spanish authorities."

The message concluded in the following words:

"I have directed that the finding of the Court of Inquiry, and the views of this Government thereon, be communicated to the Government of Her Majesty the Queen Regent, and I do not permit myself to doubt that the sense of justice of the Spanish nation will dictate a course of action suggested by honor and the friendly relations of the two governments. It will be the duty of the executive to advise the Congress of the result, and in the mean time deliberate consideration is invoked."

On the same date, March 28, the following [cabled] synopsis of the expected report of the Spanish naval commission, Captain Peral, president, was made public in Washington:

"The [Spanish] report contains declarations made by ocular witnesses and experts. From these statements it clearly deduces and proves the absence of all those attendant circumstances which are invariably present on the occasion of the explosion of a torpedo.

"The evidence of witnesses comparatively close to the *Maine* at the moment is to the effect that only one explosion occurred; that no column of water was thrown in the air; that no shock to the side of the nearest vessel was felt, nor on land was any vibration noticed, and that no dead fish were found.

"The evidence of the senior pilot of the harbor states that there is abundance of fish in the harbor, and this is corroborated by other witnesses. The Assistant Engineer of Works states that after explosions made during the execution of works in the harbor he has always found dead fish.

"The divers were unable to examine the bottom of the *Maine*, which was buried in the mud, but a careful examination of the sides of the vessel, the rents and breaks in which all point outward, shows without a doubt that the explosion was from the inside.

"A minute examination of the bottom of the harbor around the vessel shows absolutely no sign of the action of a torpedo, and the fiscal (judge advocate) of the commission can find no precedent for the explosion of the storage magazine of a vessel by a torpedo.

"The report makes clear that, owing to the special nature of the proceedings following and the absolute respect shown for the extraterritorial rights of the *Maine*, the commission has been prevented from making such an examination of the inside of the vessel as would determine even the hypothesis of the internal origin of the accident. This is to be attributed to the regrettable refusal to permit of the necessary cooperation of the Spanish commission both with the commander and crew of the *Maine* and the different American officers commissioned to investigate the causes of the accident, and later on with those employed in salvage work.

"The report finishes by stating that an examination of the inside and outside of the *Maine* as soon as such examination may be possible, as also of the bottom where the vessel rests, will prove that, supposing the remains (of the wreck) be not totally or partially altered in the process of extraction, the explosion was undoubtedly due to some interior cause."

The report of the United States court and the voluminous testimony upon which its findings rest were referred without debate to the committees on foreign affairs in the Senate and House of Representatives, and diplomatic negotiations regarding the whole Cuban question have, at this writing, assumed the most critical phase in their history. Meantime active preparations for war continue on the part of both Spain and the United States.

Convincing Report.—"The evidence marshaled by the court in its report is convincing. In a technical problem of this difficult and intricate character it would have been easy to confuse the chief issue with subordinate details. With skill and precision the court presents two facts which decide the occurrence of an external and internal explosion. The bottom of the boat was bent in and thrown up, the keel plates being lifted thirty-eight feet above their original position. The upper deck plating and main deck to port and starboard are folded back on each other in an irregular V.

"Only two causes could have worked this double reversal of the normal place of keel and deck plates—first, the explosion of a mine without the vessel, bending in the bottom, and, second, the explosion of magazines within the *Maine* doubling up her decks. Every other source of accident is carefully eliminated. The discipline of the vessel is proved to have been above reproach. Its magazines, its coal-bunkers, and the numerous sources and causes of spontaneous combustion and accidental explosion on a modern war-vessel are accounted for. With brevity, with simplicity, by indirect and direct proof, by demonstrating that no other cause existed, and by showing that only an explosion, both without and within, could have worked the ruin wrought, the Court of Inquiry has presented an unanswerable argument which will decide the verdict of to-day and settle the ultimate findings of history. . . .

"Whatever the answer of Spain, the United States can wait in the significant silence of the President, shared with equal dignity by Congress, making no charges and uttering no threats, aware that time and justice work together in a world where no life is sacrificed in vain and no duty done goes unrewarded in the arbitrament of fate. Those still entombed in the wreck,

those buried in a soil alien—but not long to be under the shadow of an alien flag—and those laid to rest at home, all the dead and the living, all met death and duty with unshaken courage and discipline as unshaken. No cloud rests on them. Their record is clear. The land waits in armed silence and silent resolution to take whatever next step the act or utterance of Spain may render necessary to sustain the nation's honor and discharge its duty to brave men who died bravely in its service."—*The Press (Rep.)*, Philadelphia.

Spain Responsible.—"It could have been only a submarine mine, the naval court solemnly declares, which dealt the *Maine* her first and fatal injury. It must have been a mine of tremendous power to rend through and through the double-steel plating of one of the strongest war-ships in the world. No novices could have planted an engine like that; no mere adventurers could have controlled and fired it. That mine must have been laid by trained Spanish hands. It must have come originally from the arsenals of the Spanish Government. These terrific weapons are not for sale off-hand. Only a few chosen agents understand their fabrication and their use; these are jealously guarded military secrets, infinitely less likely to be betrayed to public knowledge than the details of a contemplated campaign or the plans of an important fortification.

"For all practical effect Spain is as directly, immediately responsible for the destruction of the *Maine* and the fearful murder

CAPT. WM. T. SAMPSON,

Commander of the North Atlantic Squadron.

of her 266 brave men as if the names and the rank of the unspeakable assassins who wrought this Satanic work were blazoned on the angry heavens."—*The Journal (Rep.)*, Boston.

"What Honor Dictates."—"In the chilly message which achieved the paradox of making Congress and the country instantly hot, President McKinley expressed his belief that 'the sense of justice of the Spanish nation will dictate a course of action suggested by honor.'

"More amazing than his childlike trust in the justice and honor of the nation that produced and glorified Pizarro, Alva, Cortez, Velasquez, and Weyler, was the President's obliviousness to the course of action dictated by *our* sense of justice and honor.

"It is now forty-five days since the *Maine* was treacherously blown up, and 266 of her brave seamen murdered in their sleep. And yet *no demand has been made upon Spain or upon the authorities at Havana for the discovery and punishment of the miscreants who did the deed*, or for apology for the unparalleled insult and reparation for the criminal wrong. Neither has Spain's 'sense of justice and honor,' in which Mr. McKinley trusted, dictated even an expression of regret from that Government. Señor Sagasta even makes the astonishing statement that the question of the loss of the *Maine* was not touched upon in the conference with Minister Woodford.

"Tardy tho the action will now be, our national honor dictates that this demand be made upon Spain without further delay. The *Maine* report, accepted as correct and final by our executive and Congress and by our people, brings this issue to the front. It is not merely a 'lamentable incident'; it is the chief count in the case against Spain. *It is in itself a cause of war* if not atoned for.

"A nation that will consent to have its ships blown up by submarine mines without demanding and enforcing instant repara-

tion has no business with a navy. It should confine itself to growing crops, building railroads, gambling in stocks, and running Sunday-schools.

"Regardless of the question of Cuban independence, unless it be the crowning reason for interference, the *destruction of the Maine by foul play* should be made the occasion of ordering our fleet to Havana and *demanding proper amends within forty-eight hours, under a threat of bombardment*. If Spain will not punish her miscreants, we must punish Spain.

"This is what any other great nation would have done weeks ago. It is the dictate of honor and justice. And every hour that it is delayed adds to the disgrace and the humiliation of the United States."—*The World (Ind.)*, New York.

"The 'Money Plank.'"—"Have you noticed how one word appears and reappears in the discussion of the situation by friends of the Administration? It is the word *buy*. We must *buy* independence for Cuba. We must *buy* the Cuban bonds. We must *buy* Spain's withdrawal from the island. Spain must *buy* exemption from the consequences of her crime.

"Listen to the sordid, cramped souls! Not a thought or a word above the greasy dollar. Not a sentiment that is detached from the lust for gold. Not an aspiration that can not be measured in dollars and cents. Not an injury that can not be bribed into silence. The money plank is the only plank in their platform.

"*Buy* did you say? Then *buy* something worth *buying*."

"*Buy back our dead*. *Buy back* the men whom you, Mr. McKinley, sent to Havana to be murdered in their sleep. *Buy* them out of the mud of the harbor where their bodies lie rotting. *Buy* them out of the trenches of a foreign graveyard. *Buy* life for them. *Buy* solace for their mothers, who weep for the boys who will never return. *Buy back our dead*."

"*Buy back* your courage and your patriotism, Mr. McKinley."

"*Buy back* the power to defend the right. *Buy back* the Christian sentiments you learned at your mother's knee."

"*Buy back* honor for the flag."

"*Buy back* the national freedom that has been pawned to a tribe of leeches and usurers."

"*Buy back* the confidence of the people in their President. *Buy* the things that are worth buying."

"Can you do it? In your mind money is omnipotent. Can it, then, arouse the dead from their sleep? Can it make the murdered stand again under the flag? Can it do anything more than elect cowards to office and heal the wounds of money-changers?"

"No, unfortunately. You may still stand on the money plank of your platform, Mr. McKinley. But the people of the United States will be neither bought nor sold. Their dead cry for vengeance. They heed no other call."—*The Journal (Ind.)*, Chicago.

Foul Assailants of McKinley.—"There are those who had fondly expected that the President would recommend that upon the findings of the court war be declared against Spain instantly. They are disappointed. The President accepted the findings as the deliberate judgment of a board composed of patriots. If that board could find no *casus belli* in the wrecking of the *Maine*, how could he? Morally convinced that Spain was party to the dastard act, he would be nevertheless restrained from putting that conviction into form in history to be rebutted by future developments.

"The President went as far as any President would dare to go in communicating to Congress on such a delicate subject. Even so impulsive a President as Jackson would pause before provoking a war on a report which explicitly declares that the patriots making it could not fix the responsibility upon any person or persons. What would the jingoes have the chief executive of this country say? Would they have him set aside and discredit the solemn report of a board of their own naval officers to precipitate war upon no defined or supportable provocation?"

"Wherein is the weakness or cowardice of the message? Does it not cover in full and in like spirit all the facts covered by the Board of Inquiry? Where in the report or in the evidence accompanying it may be found any slightest warrant for the use of threatening or belligerent language? Conscious of his responsibility, not alone to the present but to the future, the President sagaciously, but none the less patriotically, said all that any patriot could say to make our history consistent.

"That he is animated by lofty patriotism alone is attested by his voluntary statement that he would rather see his party go to irretrievable defeat than to be the agency through which irre-

Commanding the United States Army.

sponsible war would come without justifiable provocation. The jingoes pounce upon the President much as the Cuban vultures descended upon the *debris* of the wrecked *Maine*. Their acts are not more inspiring than were the acts of those foul birds which hung in expectancy above the bloated and festering corpses of our brave sailors as they rose from the dank depths of their ill-fated war-ship."—*The Journal (Rep.)*, *Detroit*.

McKinley the Pilot. — "President McKinley, standing up modestly, but firmly and courageously, with self-poise, without self-assertion, in the midst of similar clamor and perhaps grosser misrepresentation and personal abuse, may not to his contemporaries and to-day seem so heroic a figure as that of Lincoln, justified by the event, established in history and idealized by the whole human race. But the conditions are notably similar and the resemblance is marked. Lincoln was not a fool, and was not drifting, tho the greatest orator of his time so denounced him, and evoked thereby the applause of an audience of earnest and sincere patriots. He was a pilot, and he steered. His hand was on the tiller all the time. President McKinley, whose amiability is such an offense to some people, and whose patience is decried as procrastination, is not drifting, either. His hand, too, is on the helm; he has not lost his reckoning, and he is not befogged. His course is definitely marked out, and he is manifesting neither weakness nor weariness in pursuing it. And he, too, may well answer the clamorous impatient who are shouting for immediate and decisive action: 'Stand still and see the salvation of the Lord.' If it be so ordered by Providence that war must come, and that this people must be used as the flail wherewith to beat down oppression and tyranny and broaden the area of freedom and civilization, we may be sure that, so far as the executive action is concerned, it will be entered upon without unseemly haste, but with thoughtful deliberation; not out of passionate impulse, but from solemn sense of duty.

"The American people have great cause for thankfulness that in such a crisis as the present, when the danger is that hasty impulse may direct action, and the supreme need is of patience and cool deliberation, we have in the executive chair a man of such patient spirit, clear foresight, and undoubted courage as William McKinley. On the morning after the election in November, 1896, *The Tribune* said the people had reason devoutly to thank God for the triumph of honesty and law. To-day they may well thank God that the result of that election was to install at the head of affairs not only an honest and law-loving chief magistrate, but a man of patient spirit and saving common sense."—*The Tribune (Rep.)*, *New York*.

"If the *Maine* incident stood by itself the report of the Board of Inquiry would furnish ample basis for enforcing tremendous demands upon Spain and for a declaration of war to that end if necessary. But profoundly sensational as it is, the report now transmitted to Congress can hardly be said to affect the current of events more significantly than to fix beyond question the course of this Government, which was so plainly defined before its publication that the whole world has accurately anticipated it and we believe approved it. Intervention for Cuban independence had already become a fixed purpose of the Government of the United States, and the execution of this purpose will carry with it satisfaction for the destruction of an American battle-ship and the slaughter of American sailors."—*The Commercial (Rep.)*, *Louisville*.

"If the United States does not make the most prompt and rigid demands on Spain for redress of this grievance and enforce a speedy compliance with those demands, then in the future this country will not be respected among the nations of the earth, and any straggling freebooter that so desires may make our navy the butt of his insults. We must have the value of our ship and we must see the men hanged who caused its destruction. Spain can find these men if she so desires. They are in Havana and probably in authority there; they must be found and properly punished before American honor will feel itself appeased."—*The American (Dem.)*, *Nashville*.

"Spaniards can not conceive that such a board as that sent by our Naval Department to Havana could have found that the *Maine* was destroyed by an internal explosion. This is unfortunate for the reception of the report of American officers, which convinces American readers but only excites the sneers and contradiction of Spanish authorities. If possible the Spanish Government will seek to use a dispute over the destruction of the *Maine* to delay the settlement of the whole Cuban question. The American people look with confidence to President McKinley to press the whole matter to immediate and final settlement."—*The Evening Post (Ind.)*, *Chicago*.

EX-MINISTER PHELPS ON INTERVENTION.

HON. E. J. PHELPS, formerly Minister to Great Britain, and one of the counsel for the United States in the seal controversy before the Paris tribunal in 1893, asserts that intervention by the United States in Cuba would be nothing less than a crime. He opposes intervention as a violation of international law and bad policy as well. His views, in the form of a letter containing about four thousand words written to ex-Governor Levi P. Morton of New York, were published in full in the *New York Herald*, March 29. His statements have attracted much attention because of the writer's professional standing, and by reason of the fact that most authorities previously quoted on the subject seem to be contradicted by him (see THE LITERARY DIGEST, March 5 and April 2).

Mr. Phelps dismisses the *Maine* disaster from the problem, now that the Board of Inquiry has made its report, "as no complicity on the part of Spain in that calamity is found to exist." If a claim for reparation on the ground of negligence should arise, it would be a proper subject for arbitration and, in his judgment, almost the only case in which international arbitration is likely to be useful. Mr. Phelps avers that international law is something more than what a nation chooses to make it on any particular question. He says:

"There seems to be an impression among unreflecting people that what is called international law is merely a scholastic science, of no practical importance, and to which Americans are quite superior. They do not perceive that it is as impossible for a nation to make a law for itself in its relations with other countries as it is for an individual to do so in respect to his own conduct in the community in which he lives.

"The fundamental principles of international law have been established by the general concurrence of civilized and Christian nations, because found by long experience to be both just and indispensable. Hence they derive even a higher sanction than always attends the law that is enacted by legislatures or promulgated by judges.

"Every government is alike bound by these principles, for the sake of its own protection as well as for that of others, and the general peace, and is under an implied covenant with mankind to observe them. If a nation departs from them, it violates this agreement, sets itself against the enlightened opinion of the world, does what is universally conceded to be wrong, and establishes the dangerous precedent which, sooner or later, with unfailing certainty, will come home to itself. No nation can afford to take such a course.

"It is the general agreement of mankind, instructed by experience, which the world can not afford to see rejected, that has established the proposition that no cause whatever, except the necessary self-defense of a nation's material interests, or of the national honor, which is its highest interest, can justify forcible interference in the affairs of another country with which it is at peace.

"The proffer of mediation or of friendly assistance may always be made. It may be accepted, or declined, by the government to which it is addressed. But when declined, the attempt to intervene by force of arms is a crime, the sad and bitter consequences of which have been demonstrated on many a page of history. And especially, and above all, does this apply to the case of interference in aid of an armed rebellion against another government by its citizens.

"The idea that this country, or any other, is justified in undertaking a moral or political supervision over the affairs of its neighbors, and in correcting by armed invasion the faults of their institutions or the mistakes of their administration, or administering charity to them by force, is absolutely inadmissible and infinitely mischievous."

Turning to the examination of what intervention will mean, and upon what grounds it is claimed that we ought to intervene, Mr. Phelps asserts that "Spain is a friendly nation and always has been." He insists that the efforts of this Government to suppress filibustering expeditions have been always ineffectual, and that "a twentieth part of the naval force which we are now ran-

sacking the world to collect for what are called 'purposes of national defense,' would have put an end to the only source from which the rebellion has been kept alive." Regarding the matter of liability he asks: "If Spain must guarantee the safety of our ships in her ports, whether herself in fault or not, we must equally guarantee to her that armed expeditions to subvert her Government shall not be fitted out and despatched in ours. And if negligence in the one case is the criterion of liability, it must be equally so in the other." Contrary to other authorities on the facts and the consequent position of this Government, Mr. Phelps declares that self-defense is not involved:

"In this quarrel between Spain and her rebel subjects, without reference to its merits, and conceding to the insurgents all the virtues which are supposed to attend rebellion against constituted government except when it attacks our own, have we in the first place any interest of our own that justifies interference, under the right of self-defense?

"That claim was at first put forth on the score of the interruption of our commerce, but it has been abandoned. It is too well settled to admit of dispute that the inconvenience and loss suffered by the commerce of neutral States when war exists, tho often considerable, constitute no ground for intervention, but must be borne. The loss of Great Britain in this respect is much greater than ours.

"When in our Civil War the Southern ports were blockaded by the federal fleets very great loss to the commerce of other nations ensued, especially in the important staple of cotton. Yet no suggestion of interference by those nations on that account arose or would have been tolerated. It must be conceded then, and except by interested newspapers is conceded, that we are under no necessity of self-defense against Spain in any definition of the word, nor have we any right to vindicate or wrong to redress that entitles us to interpose by arms in support of the Cuban rebellion."

Mr. Phelps then takes up the question of intervention on the ground of humanity. We quote this part of his letter in full:

"The final ground on which the preachers of aggression plant themselves is, that we must go to war for humanity's sake. It has generally been supposed that it was for humanity's sake that war is chiefly to be avoided, and that the cause of humanity can be in no other way so well served.

"It is true that international law recognizes as the sole and rare exception to the rule above stated in respect to intervention, that a nation may interfere where to prevent unjustifiable slaughter and outrage in another country it becomes absolutely necessary. But this exception, which has very rarely been acted on, applies only in extreme and very clear cases, and has no application whatever to this case.

"It is worth a moment's consideration to understand distinctly what the demands of 'humanity' in the present case are, and what they are likely to bring to pass if complied with. Are they a reason, or an excuse? a motive, or the pretense that conceals a motive?

"The suffering that it is said we are called upon to redress by fire and sword is the destitution that has overtaken a part of the Cuban people, with which has been depicted in the most inflammatory colors. They are those who are called the reconcentrados—people whose homes, plantations, and industries have been destroyed in the course of the rebellion, and who are now gathered in temporary shelters provided by the Spanish Government.

"How came these people in that condition, and who wrought the destruction that brought them to it? They are represented to us as a body of patriots who are 'struggling for freedom,' and whose property and livelihood have been destroyed in that struggle. If this is true, then the reason for our interference in behalf of rebels against their government is, that they have not succeeded, are getting the worst of the contest, and are thus reduced to distress.

"No one pretends that Spain had not the right to put down the rebellion. The complaint is that she has not put it down. If these people are to be regarded as rebels and their condition is truly depicted, it would seem that it results from their own fault, and that the contest, so far as they are concerned, has come to an end. Nor can it be maintained that any cruelty or outrage is visited upon them by the Spanish Government, or that their destitution results from any other cause than the poverty that the civil war has occasioned, as it generally does, and the inability of the Government to relieve it fully.

"But this statement of the attitude of these people in great part

is true. While it is difficult to ascertain the exact facts in a case where all the evidence comes from one side, and the advocates of that side are their own witnesses, enough appears to show that their claim must be taken without much allowance.

"It can not be pretended that the reconcentrados have been generally engaged in the rebellion, or that a large part of them have ever taken the field, or fired a shot in its support. They are not now prisoners of war, as they would be had such been the case, but refugees from the ravages of the real insurgents, thrown upon the protection of the Spanish Government, under whose orders they are thereby brought.

"It is a notorious fact, that throughout the war the devastation of the homes and plantations of these inhabitants has been perpetrated by the rebels who are in arms, and who have levied contributions in the way of blackmail upon the people so long as they had anything to respond with. If they had been brothers in arms of the rebels, the rebellion might, perhaps, with their assistance have succeeded. They would at least have escaped the persecution they have suffered, whatever they might have encountered from the Government.

"It is undoubtedly true that the Spanish Government has likewise destroyed houses and plantations, and driven inhabitants from their homes, in pursuit of what it deemed a military necessity, just as in our own Civil War Sheridan ravaged the valley of the Shenandoah and Sherman laid waste Georgia. Such measures are the unhappy accompaniment of war, and especially of civil war; and those who engage in it must expect its natural consequences. If the distress caused by these means is a ground for intervention, we would feel called upon to interfere in every rebellion that occurs and does not immediately succeed. Tho the question would still remain. On which side?

"The distinction between armed intervention and charity is clear enough to be better understood than it is. The one is the assertion of a belligerent right; the other, the voluntary offer of kindness and humanity.

"Who, then, are the real insurgents? They are a body of men of uncertain number, who keep out of sight, who have no capital, or abiding-place, or attempt at organized government (unless in a Junta in the city of New York), mere guerillas and bandits, who have been carrying on what they call warfare by crimes not recognized as war in any civilized country; by destroying the homes and industries of the people of the island not in arms, until it has become a desolation; by blowing up with dynamite trains which contained only peaceable travelers, and murdering in cold blood a Spanish officer bearing under a flag of truce the offer of autonomy.

"Their force is made up of Cubans, negroes, renegades, and adventurers of all sorts from the United States and elsewhere. Is theirs the cause we are to take up? Can it be claimed to be the office of humanity to drive out the established government of the island, the only government there is there, and to turn over the population to the tender mercies of such a band as this.

"What would become in such an event of the reconcentrados? If their voice could be heard, is it conceivable that they would desire the establishment of a government in the hands of those who have already destroyed their substance? Had that been their desire they would long ago have joined the rebels.

"If these people are suffering, as no doubt they are, whether from their misfortune or their fault, by being thus ground between the upper and the nether millstone, let us continue to relieve them as we have begun to do; as we sent relief to famine-stricken Ireland, and charity to Armenia. If that is what is meant by intervention, we shall not differ about its propriety. But whatever their necessity, it is not to be assuaged by bloodshed, or by carrying fresh calamity to them at the expense of a greater calamity to ourselves.

"A single million, or a few millions, out of the many hundreds that war would cost us, would amply answer the purpose, and would gladly be received by Spain, as well as by those who need it. Let us put a stop also to the expeditions from our country on which the rebellion is fed. Let it be understood that we shall not fraternize with the banditti who have made Cuba a desolation, and the conflict and the crime that have exhausted it will soon come to an end. The humanity of peace is better and more fruitful than the humanity of war."

Referring to intervention as a national policy, Mr. Phelps condemns it on numerous grounds. He calls attention to "the cow-

ardly character of an unnecessary attack by this great and powerful Government upon a comparatively weak and impoverished nation"; to "a derangement of business now just beginning to emerge from a long and ruinous depression; to a probable debauching of the currency of the country by throwing it on a silver basis." "Is the success so hardly obtained in the last Presidential election now to be needlessly thrown away?"

"An enormous expenditure from a treasury whose expenses already exceed its income by more than fifty millions a year; indefinite millions a year to be added to the pension list, already, in its saturnalia of fraud and extravagance, the curse and the shame of the country.

"Can we afford all this? What taxation is to pay for it? And what have we to gain for it in return? The injury that could be inflicted upon us by Spain would be trifling in comparison with that which we should inflict upon ourselves. In the present condition of our affairs do we owe no duty to our own people? Are there not reconcentrados in our own cities, that numberless army of unemployed because business is checked and paralyzed by these continual alarms?"

"If the infinite calamity of war and the unspeakable crime of unjustifiable war are to be averted, it must be through the self-assertion and patriotic effort in this crisis of the best class of American people, in the best sense of that term—men who are not afraid to be opposed to any war which is wrong; who will not listen to the suggestion that the fortunes of any political party are to be furthered in the next election by drawing the country into such a war; who are not frightened by clamor nor by apparent majorities which would speedily turn out to be minorities if they were resolutely faced."

The considerations set forth in Mr. Phelps's letter have been heartily commended to the public in general terms by the *New York Evening Post*, the *Boston Herald*, and several other conservative newspapers; but the letter has been more generally criticized than commended in the press. The critics insist that even if Mr. Phelps is sound in his exposition of international law, he is mistaken about the facts in this case.

The *New York Tribune* commends study of Mr. Phelps's "conscientious and cogent contribution to the great debate," but insists that this Government's efforts to keep obligations of neutrality have been creditably efficient. It refers to the *Virginus* affair to refute the statement that cause for quarrel has never existed, and suggests that the question whether he would justify the inevitable consequences of a refusal on the part of Spain to permit work of mercy. The *New York Times* argues that the danger of internal tumult in this country if freedom be not given to Cuba warrants intervention as a matter of self-protection. The *Springfield Republican* says: "Mr. Phelps strikes the real question at issue when he comes to consider the present war in Cuba on its humanitarian side."

"Mr. Phelps admits, then, that even under international law, of which he is a professor, there may be intervention in the internal affairs of another state if the conditions are extreme enough to justify it. This is a very important concession for him to make, and it reduces the whole controversy to a simple one of fact.

"Realizing this, Mr. Phelps thereupon sets out to show that no condition of affairs has existed in Cuba, or to-day exists, justifying the application of the law of intervention on humanitarian grounds. . . . We have great respect for Mr. Phelps, yet his statement of the condition of the reconcentrados does not tally with the simple facts, as we understand them. These people are not refugees from the 'real insurgents,' and they were not 'thrown upon the protection of the Spanish Government.' They were forced into the fortified towns by Weyler's inhuman decree and there penned up like criminals by the hundred thousand. It was Spain's duty to feed them, after having placed them in the towns, and not let them die like rats from famine. Mr. Phelps is woefully wrong in his statement. The destitution of the reconcentrados is not the necessary result of civil war. Had they been fed by the Spanish Government they would not have died by the scores of thousands, and if they had been left on their lands they would have eked out an existence of some sort, even if harried by the opposing armies. Suffering there would have been if they had not been concentrated, yet when Spain assumed the responsibility of herding them in the fortified towns she also assumed the obligation of feeding them. But she left them to starve, and hundreds of thousands have died under 'the protection of the Spanish Government.'

"Regarding the insurgents Mr. Phelps is very scornful, and upon this part of his letter no comment is necessary. He should

be corrected, however, as to the death of Colonel Ruiz. That emissary of General Blanco did not offer autonomy to Gen. Victor Aranguren, under a 'flag of truce.' Mr. Phelps calls the insurgents 'mere guerillas and bandits who have been carrying on what they call warfare by crimes not recognized as war in any civilized country'; their force consists of 'Cubans, negroes, renegades, and adventurers.' Again he describes them as the 'banditti who have made Cuba a desolation.' For Weyler, for the Spanish guerillas and Spanish atrocities of any description Mr. Phelps has no word of condemnation.

"Then he takes the position that the United States has only to stop filibustering and the insurrection would cease. Mr. Phelps has only to read what a brother professor in Yale, Theodore S. Woolsey, has to say on this point. Professor Woolsey has declared that our Government has fulfilled all its obligations to suppress violations of our neutrality laws with fidelity to its treaties and to international law. And more than that no government could do.

"Mr. Phelps's opinion that no intervention would be justified is based evidently upon the facts as he understands them, and we are free to say that we should entirely agree with him if we understood the facts in the same way. Altogether, Mr. Phelps's letter is amazing in its ignorance of the actual conditions in Cuba, its intense bias against the insurgents and in favor of the Spaniards, and its pitiful lack of breadth in discussing a question which has been in our politics for about eighty years."

THE NEBRASKA FREIGHT-RATE DECISION AGAIN.

THE scope of the decision of the Supreme Court of the United States in the Nebraska freight-rate case seems to have been misapprehended in many instances because of a misleading abstract given through the press. Principal points of this decision were given in THE LITERARY DIGEST, March 19. Publication of the full text of the opinion has induced much comment on the far-reaching principles involved, and very radical differences of opinion have been expressed. The *Indianapolis News*, which we quoted March 19, in criticism of the apparent dictum of the court that the people must pay interest and dividends on a vast amount of watered stock, now declares that it did the court a great injustice. "On consulting a full report of the decision," says *The News*, "we find that the court decided no such thing."

"The court expressly said:

"If a railroad corporation has bonded its property for an amount that exceeds its fair value, or if its capitalization is largely fictitious, it may not impose upon the public the burden of such increased rates as may be required for the purpose of realizing profits upon such excessive valuation or fictitious capitalization; and the apparent value of the property and franchises used by the corporation, as represented by its stocks, bonds, and obligations, is not alone to be considered when determining the rates that may reasonably be charged. . . . Stockholders are not the only persons whose rights are to be considered. The rights of the public are not to be ignored. . . . The public can not properly be subjected to unreasonable rates in order simply that stockholders may earn dividends. If a corporation can not maintain such a highway and earn dividends for stockholders, it is a misfortune for it and them which the constitution does not require to be remedied by imposing unjust burdens upon the public."

"This language is explicit, and it destroys entirely the point to our criticism—a criticism which was based on insufficient information. There can be no question as to the soundness of the court's ruling on the main question, and we are glad to know that the rule which it laid down to be applied in such cases is so entirely unobjectionable. The court is in line with the best thought of the day on this subject."

Shortly after the decision was handed down, Governor Leedy, of Kansas, issued an interview, said to have been approved by Chief Justice Doster of that State, criticizing the Supreme Court savagely, and denying the soundness of the court's construction of the word "person." He said in part:

"But I deny the soundness of the basis upon which the decision of the court rests. That basis is the construction given to the word 'person' in the Fourteenth Amendment to the United States Constitution. Justice Harlan says that a railway corporation is a 'person' within the meaning of that word as there used, and upon that assumption he builds up his theory that railways are within the protection of its term.

"I deny it, and so will everybody but a corporation lawyer or a subservient judicial tool of corporate interests. What is the Fourteenth Amendment? I want to quote it for the benefit of the clackers and lickspittles who have never read it, but who will

nevertheless now shout their approval of this monstrous perversion of its meaning.

"Everybody outside the asylum and off the federal judicial bench knows them to be—and to only be—natural persons. They are those who, besides the capacity to hold property and enjoy legal protection, also have life, and can enjoy liberty, and that means human beings. They are those spoken of in the first sentence of the amendment as 'persons born or naturalized in the United States.'

"The Fourteenth Amendment was born of the war, and had for its object the protection of the recently emancipated negroes, and the white people of the South who had remained loyal to the Union. All the lawyers, excepting those engaged in the business of making law for corporations say this.

"Nobody but a slave or a knave will yield assent to the hideous distortion of meaning which Judge Harlan gives to the word 'person' as used in the Fourteenth Amendment, and upon which he bottoms his infamous decision, and which shows to what depths of iniquity the Supreme Court of the United States has descended."

It is to be noted also that *The Railroad Gazette*, New York, offers the following criticism :

"If the court has meant to say that this statute was unconstitutional in 1893, but may be constitutional in 1898, we have met with a decision in the Nebraska case that we have never met with in any other. If the court has meant to say that the statute is not unconstitutional, but can not be enforced under the facts as they existed in 1893, yet may be enforced some time in the future when circumstances change, we have a proposition equally novel, to wit, that a law may be enforceable to-day, but not to-morrow, enforceable to-morrow but not next day, enforceable perhaps one year, but not the next year, and so forth, forever. If we once depart from the principle that a law unconstitutional when it is passed remains unconstitutional forever, we are landed into a condition of things that no man can understand, provide for, or provide against."

The Review of Reviews and the *Springfield Republican* quote the following letter from a distinguished Western man, showing the nature of widespread dissent from the doctrines laid down in Justice Harlan's opinion :

"I wonder if I am mistaken in regarding the recent decision of the Supreme Court, written by Judge Harlan, on the Nebraska maximum-rate law, as a more dangerous one than either the Dred-Scott decision or that on the income tax? The Dartmouth-College decision attempted to take corporations out from under the police (regulative) power of the State by construing franchises as contracts. This decision seems to me to rule that frauds, like watering stock, and extortions like excessive charges, committed under those charters, are also contracts. The Austrian Government made reductions in the adoption of the zone system on the state railroads of Hungary, with the result of an increase in traffic and in the economic and therefore social, and even spiritual, happiness of the people. Had these roads been owned by private corporations, and had there been on the bench a judge so ignorant of economic law as not to know that a reduction of rates may mean an increase of revenue, this great step forward could have been prevented. When the State of Iowa passed laws reducing the railroad rates, it was frantically predicted by all the railway experts that the result would be not merely a decrease of revenue, but the absolute ruin of the roads. Governor Larabee has shown that the roads were made more prosperous by the reduction in rates. This is, indeed, in harmony with a law of railroad economy. Judge Harlan's decision would have prevented this reduction of rates and the benefits which have flowed from it to the people of Iowa and the corporations themselves.

"But something more serious still remains to be considered. Under this decision of Judge Harlan's the public authorities can be prevented from regulating the charges of any gas company, street railroad company, or any other corporation or person doing public service, if it has a stockholder in another State, as, of course, all these corporations always do. There is, then, absolutely no help for the people through the exercise of their reserved powers of regulation and the inalienable right of 'police regulation.' The corporations have only to place upon the bench a man who is fool enough or servile enough to believe anything a corporation lawyer says about the effect of legislation or ordinance on the revenues of his concern to defy any interference with them whatever. This decision applies not only, of course, to attempted regulation of rates, but to any other regulation which has a finan-

cial effect. When, in a government of coordinate departments, did a court get the right to say of the act of the legislature that it was not 'due process of law'?

"The Supreme Court rules that corporations are persons under the meaning of the Fourteenth Amendment. The corporations have added to them what must be almost the last privilege they could hope for—that of having all the privileges of personality but none of the responsibilities. They are persons in the eyes of our corporation-controlled courts who can have every possible privilege, but are never to be punished like ordinary persons. The income-tax decision seems to me a trifle by the side of this. This is a Dred-Scott decision which says that white men have no right that any corporation is bound to respect."

The Evening Post, New York, says that practically the most important point about the decision is that it makes the law plain and makes railway property more secure from legislative attacks. Concerning the theoretical basis of the decision *The Post* says in part :

"Down to the period of the Granger agitation it had always been assumed that railway property in the United States was protected against invasion by state authority, through the clause in the Constitution which prohibits interference with the 'obligation of contracts' (Art. I, Sec. 10). This was owing to the authority of the Dartmouth-College case (4 Wheat., 518), according to which charters were contracts with which the States could not tamper. In the Granger cases, however, while this principle was neither overruled nor avowedly qualified, a new principle was resorted to which was adapted to impair most seriously the defenses of property against legislative attack. Under this ruling all property was held subject to a right of legislative supervision and regulation, provided it was 'affected with a public interest.' Many people suppose that the Supreme Court applied this only to railroads, on the ground that railroads were 'monopolies,' and had an arbitrary power over rates; but in reality they made it cover all property, whether in the nature of an exclusive legislative franchise or not, in which the public had an interest that the exactions of the property-owner should be reasonable. *Munn vs. Illinois* itself was not the case of a railroad, but of property invested in private grain-elevators.

"The idea underlying the opinion in *Munn vs. Illinois* was that only such property was affected by a public interest as required an invitation to the public to put it to use, *e.g.*, a railroad charter, a ferry franchise, anything from which a toll is taken; but the fact is that the public has to be called in whenever a price for any property or its proceeds is to be got. The right to sell labor, or service of any kind, or food, or books, or newspapers, or to get rent from the use of land, is what gives the 'property' its life, and hence the logical deduction from the decision was that of a general legislative power to fix prices, or at least maximum prices, in all cases. That in this decision lay some of the seeds of the later development of 'Populism' there can be little doubt.

"It became very soon obvious that if the constitutional guaranties which protect the cities against the legislature were to be of any avail, and the position of the federal courts in our system was to be upheld, some way must be found to qualify the control over property conceded to it by the Granger cases. A long line of decisions, culminating in the Nebraska case, have been rendered which have gradually established the doctrine that while the legislature may regulate the charges to be exacted by the owners of railroads, elevators, ferries, and other property 'affected by a public interest,' they derive this right from the supreme 'police power' of the State, and must exercise it reasonably, so as not to violate those provisions of the Constitution which guard the citizen against being deprived of his property by a State without due process of law (Constitution United States, Fourteenth Amendment).

"Applying this principle to railroads, it follows that while a State can by legislation and through legislative commissions fix the rates at which persons and property shall be transported, if it fixes these rates at such an unreasonable figure as to operate as destruction or confiscation or deprivation of capital invested, the regulation is void and of no effect, and that this is wholly a judicial and not a legislative question; and, further, that such unjust regulation can be prevented by injunction.

"The importance of this conclusion can hardly be overstated. In the Nebraska case, tho the action was nominally against cer-

tain officers of the State, the decision was in effect to uphold an injunction against the State itself, absolutely forbidding the enforcement of its whole freight tariff, on the ground of its injustice. It is true that the case leaves it open to the State to remodel its tariff and then apply to the court again; but if this is done, the final decision will still rest with the court. In other words, the state legislature can never in any case decide the question what it is reasonable for railroads to charge, so as to preclude a judicial examination of its action by the federal courts. It can not even leave the matter to its own courts, for in almost every conceivable case (as in this) some circumstance, such as a difference of citizenship in the parties, will arise, to give federal jurisdiction."

The Post, asking how the court will undertake to determine what are and what are not reasonable rates, answers, "by the same means that a perfectly just and omnipotent ruler would decide such a question." But *The Review of Reviews* questions the decision at this point:

"Under existing circumstances it is probable that the courts have taken a sound and a necessary position. But surely it is not a position of stable equilibrium. For upon a moment's reflection it appears that the federal courts have begun to take upon themselves not simply the question of deciding principles of law, but the practical business of regulating in detail from time to time all the rates of all the railroads of the United States. And under the same principle they must in like manner undertake the regulation of the practical business of street-railroad plants, gas companies, and all other enterprises of a quasi-public nature. It has been fully established that all such enterprises are subject to the public regulation of their charges and to a general public control and oversight. The authorities of the States may reduce charges under this principle of public control; but the courts now say that such action, whether on the part of legislatures, of state railroad commissions, or of the Interstate Commerce Commission, is not to be deemed conclusive in itself, and that all questions of fact and expert opinion, as well as of law, are properly subject to judicial review.

"There seems to be a fallacy somewhere in this position. It is certainly the business of the courts to say whether or not a law regulating railroad rates is valid and constitutional. But it does not seem to be the proper business of a court of law virtually to make and apply the regulations in detail. The opinion of a judge as to what is reasonable in a matter of that kind is not likely to be as good as the opinion of an expert body like the Interstate Commerce Commission."

SUFFRAGE IN LOUISIANA.

THE constitutional convention in Louisiana, called chiefly for the purpose of limiting suffrage so as to overcome alleged evils arising from the negro vote, has adopted a clause containing, besides educational and property qualifications, a provision for hereditary suffrage. This provision, known as Section 5, was declared to be unconstitutional by United States Senators and Representatives from the State, and was opposed on this ground by leading newspapers in the State; but it seems to have been finally adopted as the best compromise measure between conflicting factions. A summary of the new suffrage clause appears in the newspapers as follows:

"It admits to the suffrage those who can read and write and who demonstrate their ability to do so by making written application for registration in the English language or in their mother tongue in the presence of the proper officials. It also admits illiterate persons who own property assessed at not less than \$300. The much-controverted section 5 provides that suffrage shall not be denied to male citizens having neither education nor property if they were entitled to vote in any State prior to January 1, 1867, or if they are sons or grandsons of such persons twenty-one years of age at the date of the adoption of the new constitution, or if they are persons of foreign birth who were naturalized prior to January 1, 1898, provided that, in all cases, they shall have resided in Louisiana for five years next preceding the date at which they apply for registration, and provided also that they register before September 1, 1898. The poll-tax qualification provides

that no one less than sixty years of age shall be permitted to vote, unless, in addition to the other qualifications, he shall have paid on or before December 31 in each year, for the two years preceding the year in which he offers to vote, a poll-tax of \$1 per annum; but this section will not become operative until after the general state election in 1900, and power is given to the legislature to be chosen in 1908 to repeal or modify it. A further provision makes age and residence the only qualifications of taxpayers as voters upon all questions submitted to the taxpayers, as such, of any municipal or other political subdivision of the State, and permits women taxpayers to vote, in person or by authorized agents, at such elections without registration. Except as otherwise provided, the provisions of the suffrage clause will become operative on December 31, 1898."

Acceptable Louisiana Product.—*The Picayune* is convinced that this suffrage clause perpetrates no discrimination upon the negroes, or persons of any other race and color, and in no way conflicts with the Constitution of the United States. These important provisions were adopted by a large majority of the convention, very nearly a two-thirds' vote having been given for the much-denounced section 5.

"The suffrage clause adopted yesterday by the Louisiana convention is essentially a Louisiana product. It is modeled after the constitution neither of Mississippi nor of South Carolina; but contains provisions distinctively peculiar and unique. There is no reason to believe that it is open to attack either in Congress or in the Supreme Court of the United States, but that, on the contrary, it is in harmony with the federal Constitution. It is honest; it countenances and encourages no fraud, and creates no officials who are expected to perform questionable or dishonorable acts. This is one of the particular qualities that makes the suffrage clause acceptable to the great body of the people of Louisiana, and should commend it to good people everywhere."—*The Picayune (Dem.)*, *New Orleans*.

Fatal Defects.—"The objections raised by the Shreveport papers to the suffrage ordinance we have already commented on at various times, but it is time to give succinctly the reasons given by them for refusing to accept the plan:

- "1. It is undemocratic.
- "2. It is un-American.
- "3. It is unconstitutional.
- "4. It is an insult to the native voter of the State, as it grants special privileges to foreign-born citizens denied to natives.
- "5. It will divide the white vote and bring disaster to the Democratic Party of Louisiana
- "6. It will inaugurate a new movement for the repeal of this unwise suffrage.
- "7. It will breed discord, discontent, and revolution and encourage strife and turmoil.
- "8. It is an insult to the people, having been adopted in defiance of their wishes as expressed at mass-meetings and through the press
- "9. It is an insult to our Senators and to all our Democratic friends in the Senate, who were unanimously of opinion that the ordinance is unconstitutional, and who advised us against adopting it.
- "10. It will bring the Louisiana question again before Congress and the courts, and stir up anew the troubles we escaped from in 1868-77.
- "11. It may reduce our congressional and electoral representation.
- "12. It buries the poll-tax, leaving it behind as a mere humbug with which to trick the people.
- "13. It is framed against the interest of the people and for the benefit of the politicians, to entrench the city bosses in power and help the country politicians.
- "14. It brings in as voters the hoodlums, hobos, vagabonds, and criminal classes, granting special privileges to the undesirable masses, who ought to be ostracised instead of enfranchised.
- "15. It is, as the Shreveport papers declare, 'ill-advised,' 'objectionable,' 'offensive'—'a Pandora-box that will bring all manner of ills to Louisiana.'

"These are a few of the fatal defects in the suffrage ordinance to which the Shreveport papers call attention. There are many others that could be added to the list, and there are still others that will come to light should the ordinance ever go into effect; but the simple facts that it may involve Louisiana in another struggle with the United States Government, that it will divide the whites and split up the Democratic Party, and that it will breed 'discord, discontent, and revolution,' as one of our Shreveport contemporaries suggest, are ample reasons for its repudiation."—*The Times-Democrat (Dem.)*, *New Orleans*.

MR. BRYAN'S PROPAGANDA.

WILLIAM J. BRYAN is foremost among the advocates of the plan of political cooperation by Democrats, Populists, and Silver Republicans, which has been formally adopted as a working plan of campaign by the respective national organizations. Before the "addresses to the people" were given to the press (see *THE LITERARY DIGEST* last week), Mr. Bryan outlined a platform for the campaign of 1898 (the *New York Journal*, February 13), in a signed article which read in part:

"Cooperation does not contemplate the abandonment of party organization or the surrender of any political principles; nor is cooperation defended on the ground that the platforms of the three parties are identical. Campaigns generally turn upon a few issues, sometimes upon one, and events do much to determine which issue shall most absorb public attention.

"If the Democrats, Populists, and Silver Republicans were agreed upon but one question, that question might be important enough to justify cooperation, altho the parties differed on all other subjects; but those who advocate the union of the principal reform forces against the common enemy can point not to one, but to a number of reforms which are demanded with equal emphasis by Democrats, Populists, and Silver Republicans.

"First—They are unalterably opposed to gold monometalism.

"Second—They demand the immediate restoration of bimetalism at the present ratio by the independent action of this country.

"Third—They oppose the retirement of the greenbacks.

"Fourth—They oppose the issue of paper money by national banks.

"Fifth—They oppose the issue of interest-bearing bonds in time of peace.

"Sixth—They favor the income tax as a means of raising a part of the revenue necessary to administer the federal Government.

"Seventh—They favor the abolition of trusts.

"Eighth—They are opposed to government by injunction.

"Ninth—They are in favor of arbitration as a means of settling disputes between labor and capital.

"Here are nine issues which are not only important in themselves, but are now prominently before the people. Are not these reforms worth securing? These questions were submitted to the people at the last election, but they were not settled, and will not be settled until they are settled right."

For months past Mr. Bryan has been addressing large audiences in Western cities, and latterly in the South. In the course of a speech in New Orleans, he took occasion to refer to the income-tax decision, maintaining that when the bill was passed it was not unconstitutional, for a similar tax had been declared constitutional without dissent years ago, and the proposed law was not unconstitutional the first time it came before the Supreme Court. "It did not become unconstitutional until one judge changed his mind," said Mr. Bryan, "and we ought not to be compelled to know when a judge changes his mind." He asserted that Democrats have always been respectful to the courts, being careful, even in the last campaign, to say nothing so strong as the language contained in some of the opinions handed down by dissenting justices. Then, with the Spanish-Cuban complications in mind, Mr. Bryan made this turn:

"A Republican judge, Justice Brown of Michigan, was one of the dissenters. He wrote a dissenting opinion, in which he expressed the hope that the decision might not prove the first step toward the loss of our liberties in a despotism of wealth. He said that he feared that in some hour of national danger that decision might arise to paralyze the arm of Government, just at the time when the Government needed

larger revenues for the protection of the nation's life. I wonder if Justice Brown could have had in mind such a condition as that which may confront the American people in the near future. Suppose for the sake of argument that this nation should become involved in a war with any foreign nation, what would be the result? Why, our imports would fall off, and as our imports fell off the Government's income would decrease just at the time when the Government needed it. What would be the result? In the hour of danger, the Government could lay its strong right arm upon every able-bodied citizen; the Government could call the son from his mother, and the husband from his wife; the Government could march its citizens out, and place them in front of the enemy's cannon, but it would be powerless to make an increase in its revenues. According to that decision, the nation would be powerless to subject wealth to its share of public expense. My friends, I know you will pardon the digression. I have simply cited this illustration to show you how justice can be done by law, and to give renewed emphasis to the declaration, to the principle which I first announced that in the making of a constitution of a state or nation, the Government shall have power to collect taxes with justice and that the greatest and the strongest and the richest shall be compelled to bear his share or leave the state."

LETTERS AND ART.

IBSEN AND BJÖRNSEN—A CONTRAST.

WILLIAM HENRY SCHOFIELD has been paying a visit to Norway, where he made the acquaintance of Björnsterne Björnson and of Henrik Ibsen. His personal impressions of the two men are recorded in *The Atlantic Monthly* (April) at some length. The first part of the article is devoted to Björnson, who is portrayed as a many-sided, sympathetic, imaginative, and truly poetic nature, with a wonderful power of concentration, frank and open-minded in dealing with strangers as well as friends. The second part of the article is devoted to Ibsen, and in the beginning of it a contrast is drawn between the two men. We quote the first few paragraphs:

"Could two men be more unlike than Björnson and Ibsen? Björnson, as we have seen, friendly, enthusiastic, outspoken, exuberant, fond of his family, interested in his fellows. Ibsen, reserved, cold, cautious, taciturn, never caught off his guard, always alone. Björnson has been called the heart of Norway, Ibsen its head. Björnson delights in being the center of an admiring gathering. Ibsen abhors the curious crowd. Björnson has always a word for every one; an opinion on every question, an eloquent speech for every occasion. Ibsen is one of the most uncommunicative of men: he has almost never been induced to address a meeting; he avoids expressing his opinion on any subject whatever. Björnson fills columns of the radical newspapers at a moment's notice. Ibsen keeps his ideas to himself, broods over them, and produces only one book every two years, but that as regularly as the seasons return. Björnson tells you all about his plans in advance. As for Ibsen, no one (not even his most intimate friends, if he may be said to have such) has the remotest idea what a forthcoming drama is to be about. He absolutely refuses to give the slightest hint as to the nature of the work before it is in the hands of the booksellers, tho the day on which it is to be obtained is announced a month ahead. Even the actors who are to play the piece almost immediately have to await its publication.

"So great has been the secrecy of the 'buttoned-up' old man (if I may be allowed to translate literally the expressive Norwegian word *tilknappet*, which is so often applied to him) that the inhabitants of the far-off Norwegian capital, who have, as a rule, but little to disturb their peaceful serenity, are wrought up to an unusual pitch of curiosity on that day during the Christmas-tide when Ibsen's latest work is expected from the Copenhagen printers. Orders have been placed with the booksellers long in advance, and invariably the first edition is sold before it appears. The book then becomes the one topic of conversation for days and weeks afterward. 'What does it mean?' is the question on every lip; and frequently no answer comes.

"'Why not ask Ibsen himself?' the foreigner suggests. A sympathetic smile comes over the Norwegian he addresses, who replies, 'You haven't been here long; but try it—there he comes now.' And in the distance I saw (for I was the innocent foreigner who, not having then seen Ibsen, ventured to make this thoughtless remark) a thick-set man, rather under medium height, wearing a silk hat and frock coat, his gloves in one hand, a closely wrapped umbrella in the other, approach slowly with short, gingerly steps. When he came opposite us, no impulse stirred me to ask the question, and instead I watched him, then as often afterward, make his way slowly down Carl Johans Gade, the main thoroughfare of Christiania, to the Grand Hotel, where at a fixed hour every day he drinks his coffee in a little room reserved for him, and reads all the Scandinavian and German papers to be had. Ibsen, I felt, was unapproachable.

"His unwillingness to speak of his own works is proverbial in Norway. No man ever was so loath to say anything regarding what he himself had written. It is thus he shields himself from the importunities of curious travelers and interviewers who plague him beyond endurance. Once I had the pleasure of attending a ball at the royal palace, at which Ibsen also was present; for, curiously enough, he seems to take delight in such festivities, where he is not expected to talk at length with any one, and where he can move about from one to another, greet his acquaintances,

and gather impressions. Even at court balls, however, he is not rid of the importunate; and on this occasion it was a German lady who received one of those quiet rebukes to impertinence which have given him a well-merited reputation for silent reserve. Hardly had she been presented to him before she broke out into expressions of enthusiastic admiration, and finally wound up with the question which Ibsen has heard so often that he is now tired of it: 'Do you mind telling me, Dr. Ibsen, what you meant by Peer Gynt?'

"A dead silence reigned for a moment in the little group surrounding the old man, and I expected him to change the subject without answering the query. But no; he finally raised his head, threw back his shock of white hair, adjusted his glasses, looked quizzically into the woman's eyes, and then slowly drawled out: 'Oh, my dear madam, when I wrote "Peer Gynt" only our Lord and I knew what I meant; and as for me, I have entirely forgotten.'"

Ibsen knows nothing of French and English literature, nothing or practically nothing even of Shakespeare. The only language besides his own that he can read is German, and he will not praise the literature that he finds in that. "Yes, I have tried always to live my own life," he remarked to Mr. Schofield, after a long reverie, and *apropos* of nothing but his own thoughts, "and I think I have been right."

A PATRIOTIC AMERICAN PLAY.

MR. NAT GOODWIN, says *The Chap Book*, Chicago, has done an admirable and distinguished thing, referring, not to his recent marriage, but to his production of Mr. Clyde Fitch's new play, "Nathan Hale." "He has made for himself a

position as an actor and an actor-manager which whole years of appearance in such pieces as 'An American Citizen' could not have brought about."

Of the play itself, *The Chap Book* proceeds to speak with hearty but discriminating praise:

"The play is the best thing Mr. Fitch has done since 'Beau Brummell,' his earliest. At no time since then has he come so near to pleasing critics and public alike—the play has been an unmistakable popular success. 'Nathan Hale' has unquestionable faults. It is not the heroic play one might have hoped for; it is frankly melodramatic comedy. Yet, on the whole, it is the most satisfactory American historical play we have had yet. 'The Devil's Disciple,' Mr. Bernard Shaw's curious, satirical revolutionary play, is, perhaps, more interesting to the few, but for the public it is only baffling and tantalizing.

NAT GOODWIN AS "NATHAN HALE."

Mr. Fitch's effects are broad and, fortunately, never vulgar.

"No character in our national romance has had more charm or interest for the mass of people than Nathan Hale, and, basing his

story on the few facts known in his life, Mr. Fitch has built up an exciting plot. He has added a love-story which becomes the main feature of his play, and which—in the stage version—is the real cause of Hale's capture. *Alice Adams* is at first one of *Hale's* pupils in the school he taught after his graduation from Yale—afterward she is his sweetheart.

"The first act, which is a mere prologue, shows their love-making in the schoolroom in a very pretty, light vein of comedy. In Act II., when every one else refuses to be a spy, *Hale* offers to aid Washington at this crisis by undertaking to penetrate the British lines and learn the plans for the attack on New York. Earlier, in a moment of enthusiasm, he had promised *Alice* never to risk his life unnecessarily. Hidden behind curtains, she has heard his offer, and she comes out of her concealment to hold him to his pledge. 'You could not love a coward,' says *Hale*. 'Yes,' replies *Alice*, 'if he were a coward for my sake.' *Hale* persists, and they part unreconciled.

"In the third act he is in the enemy's lines, disguised as school-teacher. One of the officers suspects him and plays a trick. He

MAXINE ELLIOTT AS "ALICE."

sends for *Alice*, saying *Hale* is wounded in the British camp and wishes to see her before he dies. He proposes to confront the suspected man with his sweetheart. Any recognition on her part means *Hale's* immediate arrest. She comes. *Hale* has tried to warn her of the trick. The audience is left in suspense. The girl comes on the stage—the soldiers are watching her face and *Hale's*. There is a moment of dreadful suspense. She stares at one after the other, and never changes countenance.

"It is an excellent scene—the supreme feature of the play—and a sigh of relief goes through the house. It lasts but a second, however, for *Hale*, crazy with passion, shows himself at the first opportunity, and is promptly arrested by the soldiers who have been watching him from the house. For the moment the audience is allowed to think he has escaped, for he knocks down two soldiers and clatters away on his horse with *Alice*.

"But the last act shows that they were captured by the second

line of pickets. The scene is first in the tent where *Hale* is awaiting execution, then the orchard where he is hanged. The setting of the final scene is, perhaps, the most beautiful we have ever seen, and never did scenery more really play a part in a

play. There are but two speeches in the last act, and the whole effect is produced by the contrast of the sunlit orchard and the grim scene for which it is to be a setting."

ROMANCE OF THE IRISH STAGE.

(Second Article.)

When Kitty Clive came to the "Aungier" there was sensation in the circles of "the quality," and elation in the box-office. That voracious and delightful but "capricious minx" knew well how, at one time, to capture the women, in the cap and feather of a page, "bursting into song in season and out of season"—at another, to turn the heads of the rakes and dandies, as a singing chambermaid, or a bewitching widow:

"But tho living in an age when licentiousness was rife, and belonging to a profession which was the butt of scandal, her reputation remained unstained, and she was, as Henry Fielding expressed it, the best daughter, the best sister, the best friend imaginable. . . . Not only did her circle number Henry Fielding and George Farquhar, but it included Horace Walpole, Oliver Goldsmith, and Dr. Johnson. 'Clive, sir,' the Doctor would say, 'is a good thing to sit by; she always understands what you say.' And Kitty, smiling archly at the ponderous philosopher, would remark, 'I love to sit by Dr. Johnson; he always entertains me.' At times her temper was quick, and her tongue sharp, and she was wont to exchange violent passages at arms with her fellow players—with Quin, among the rest, whom she called her 'great bear,' and, later, with Garrick, of whom she spoke as 'Little Davy'; but her gusts of passion were soon over, and she delighted to remain good friends with all."

Dean Swift was a prominent figure in Dublin society at this period—only a few years before "the tree began to wither at the top." While he was, by his wit, the delight of polite circles, he

was worshiped by the poor for his unstinted charities. Half his income, says Molloy, was devoted to the helping of needy families, and he reserved "five hundred a year," to lend to mechanics and laborers at the rate of five pounds at a time, which they were supposed to repay by instalments of two shillings; this was for the purchase of tools and materials for their work. Once he ran home from a fine party, through the rain, that he might give his cab-fare to a beggar he knew. Mrs. Delany describes him as "a very odd companion; he talks a great deal, and does not require many answers; he has infinite spirits, and says an abundance of good things in the common way of discourse."

While Quin and Susannah Cibber were mouthing and spouting and see-sawing at the "Aungier," Garrick came to Smock Alley with Peg Woffington; and on the 15th of June, 1742, Peggy (famous president of the Beefsteak Club) gave her brilliant impersonation of *Sir Harry Wildair*. "When this daughter of the

KITTY CLIVE.

people appeared, such a roar went up as made her heart beat, and brought tears to her eyes, so that she could not recover herself for some time."

Garrick played "Richard the Third" and "Hamlet," with Woffington as *Lady Anne* and *Ophelia*. The enthusiasm ran mad; women were carried out in hysterics, or stayed to shriek in their seats. A fever broke out in Dublin which was long known as "the Garrick fever," and the praises of Peg Woffington were sung on the streets by the ballad-mongers.

This was at the Smock Alley house in the summer of 1742. On the 7th of December the playbill at the same house announced an entertainment of rope-dancing, tumbling, vaulting, and ground-dancing:

"Mme. German performs on the rope with stilts (never done here). M. Dominique is drawn up forty feet high by the head, fires off two pistols, and is let down again in the same position. He also tumbles through an hogshead of fire in the middle, and a lighted torch in each hand."

When Tom Sheridan was at Smock Alley he came to blows with Theophilus Cibber, who seems to have been a most disreputable person. The quarrel assumed the dimensions of war between

town and gown, the students of Trinity espousing the cause of Sheridan.

The students were a formidable body who delighted in riot and whose normal condition was disorder. The slightest interference offered to one of them sufficed to provoke the vengeance of all. The watch fled before them; "those who resisted were stabbed with swords or felled with the keys of the college, rooms which, being tied to the sleeves or tails of their gowns, the students used with terrible effect."

In 1744, a star of great brightness and beauty appeared in the dramatic firmament of Smock Alley. This was Spranger Barry—"tall, well-shaped, full of grace and dignity." For mere human beauty he was said never to have been surpassed. But his peculiar charm was in his voice. Arthur Murphy, the playwright, declared that Barry could wheedle a bird off the bush. "All exquisitely tender or touching writing came mended from his mouth."

We read of the beautiful Miss Bellamy, daughter of an Irish peer, and heroine of a hundred intrigues and escapades, arrested by bailiffs in her gilded sedan-chair; and of Dorothy Jordan, milliner's apprentice, who took the town by storm and made a dramatic romance of herself; and Dick Daly, "the young gentleman from Galway," who fought sixteen duels in three years, and lived to introduce Mrs. Siddons to an Irish audience.

Mr. Molloy's account of the condition of the stage, and of the social status of players in the middle of the eighteenth century, seems incredible to the British or American playgoer of to-day. The players displayed a sorrowful indifference to rehearsals; for those in the leading parts to attend at all was regarded as a condescension. The young men of the town came freely to the rehearsals; every wild, dissolute fellow, every licentious student, had the *entrée*, because none was so bold as to deny them. Victor relates that he has seen "actors and actresses rehearsing in a circle of forty to fifty of these young gentlemen." One poor canvas scene did duty in many plays of widely different periods; and it was not uncommon to see several of the personages of a Shakespearian tragedy in medieval costume, while others wore the dress of the time.

According to Sheridan, the theater itself was regarded as a common, and the players as cattle. One part of the house was a bear-garden, and the other a brothel:

"'Men of quality,' bloods, students, and coffee-house critics invaded the stage, actually mingling with the players, lounging at the wings, exchanging greetings with their friends in the boxes—in the midst of a performance. Every idler with a laced coat and a sword, every stripling who claimed acquaintance with actors or could afford a bribe, any bully who could rip out an oath and flourish a sapling, was sure to get admission behind the scenes."

When Sheridan was on trial for beating one of these gentry, the opposing counsel, squaring himself, told the court that he was waiting to see a curiosity. "I have often seen a gentleman soldier, a gentleman sailor, but never have I laid eyes on a gentleman player." "Then, sir," said Sheridan, "you see one now"; and the court applauded.

Says *The Speaker*:

"Mr. Molloy's extremely interesting 'Romance of the Irish Stage' confirms our impression that the brilliance of the Irish capital during the latter half of the eighteenth century was, like the light on graves, an unwholesome exhalation from the desolation and decay of the unhappy country. The immense sums spent in Dublin in wild and wicked dissipation were wrung out of the sweat and blood of a starving peasantry, and only the intervention of England saved the insolent aristocrats from the fate of the French *noblesse*. It is hard to say which was the more pitiable spectacle—that of the abject misery of the people from whom the money was wrung, or that of the bestial dissipation on which it was spent. 'Eight thousand tons of claret were imported yearly,

the bottles that held it being estimated at the value of £67,000; and drunkenness was so universal and so reputable that 'judges felt no shame and received no censure for being on the bench in a state of intoxication.' Yet more revolting was the insolent ruffianism of members of the ruling caste toward every one on whom they could trample with impunity; while they showed a dastardly 'discretion' when they met their match. The poor players especially were as helplessly at the tender mercies of these young bloods as their starving tenants."

IS LITERARY GENIUS OPPOSED TO NATIONAL PROGRESS?

THE "evident decadence of France," from a commercial and political point of view, and her conceded preeminence in art and letters, are made the text of an interesting article by Charles Bastide, under the suggestive title of "Cacoethes Literarum." The literary training that the French leading classes receive, so the writer states, is calculated to render them unfit for active life. The fate of French democracy is still in the balance. Political changes occur with bewildering rapidity. "Out of all the institutions of old monarchic France, the French Academy alone has survived and proved stronger than many a popular rising or revolutionary outbreak." The genius for literary art and the genius for commerce and politics are, the writer maintains, antagonistic, and he develops this thought as follows (*Fortnightly Review*):

"Leaving aside for some moments the benefits that culture can be said to have conferred on the French nation, let us try to show the terrible disadvantages that it involves. Literature is like a strong medicine. Taken in small doses it is most beneficial; but when immoderately used, it has the effect of a most powerful alcohol. Let England with her wonderful idealist poetry and her commercial prosperity, paid for by the lack of artistic taste among the people, illustrate the truth of this proposition. France, on the contrary, distils in enormous quantities the potent drug, quaffs it with relish, and then offers it to all nations as an evident token that she deems it indispensable to their happiness. It would be a mistake to suppose that the providers of this poison are those writers of naturalistic romances and authors of erotic pictures who are constantly violating the ordinary canons of decorous morality; the drug that they offer is almost inoffensive in France, since it partakes very little of that artistic quality that makes a work dangerous to Frenchmen. Moreover, there is no necessary opposition between the political greatness of a nation and a literature devoid of a minimum cleanliness of thought.

"Pascal will help us to specify the general literary intoxication to which the governing classes are addicted. In his *Pensées*, he draws a distinction between what he rather fantastically terms *esprit de finesse* and *esprit géométrique*. There is a similar distinction between a literary and a scientific mind; while the latter has regard but for well-authenticated facts and always reasons on clear principles, the former loves to trace the remote consequences of a principle, or discover and appreciate the slight differences between facts. The one seems more analytic, the other more intuitive. If two such minds are supposed in the world of action, while the one clearly divines the one road that leads him to the end that he has in view, the other thinks he discerns at the same time many a by-path and turning, and, losing precious time before choosing his way, or even allowing himself to be overwhelmed with a mass of contradiction or detail, may ultimately decline to come to a decision.

"It is the prevalence of this *esprit de finesse* in France that prevents her from carrying out in the manner they would wish the program of the reformers. It is not before Notre-Dame de Lourdes or Sainte-Geneviève de Paris that the enlightened Frenchman bends his knee, it is not red-bonneted Liberté that he venerates, nor is it even, in spite of too recent and exaggerated scandals, at the shrine of the golden calf that he worships. The cherished omnipotent idol, to-day as sixty years ago, is literature."

The reason for this "strange national perversion," says Mr. Bastide further, is found mainly in the French educational sys-

tem. Now as in 1830 French boys are taught above all how to write a good French style. Every fortnight for five or six years they have to write out a Latin and a French essay on a literary subject. When they proceed to the universities the preeminence of literature is impressed upon them more and more. The well-known critic draws crowds to his lectures in the great amphitheater, while the scholar of European fame lectures to half a dozen disciples, and one half of these are foreigners. Pasteur labored on for twenty years without recognition beyond a small circle of specialists, while Berthelot, thanks to his talent as a lecturer and writer as well as scientist, leaped immediately into fame and won the highest honors. To quote again:

"When the same ingenuous young student opens a daily paper, he finds that a large space is allotted to news about popular actors, and that the reopening of a theater under the management of M. Antoine is considered a more important event than a ministerial crisis abroad. As in his own tiny provincial town, the papers are full of local information, so in Paris, only a large provincial town at most, the papers give the Paris news and neglect the outside world. If, by some chance, the student further compares a French and an English newspaper, he may see that the French paper is especially literary. Next to a purely literary article—the *chronique*—signed by such men as Sarcey, Lemaitre, or France, comes now a short skit by some humorist like Alphonse Allais, now a short story or a sonnet or two; and away down in the page the reader's eyes are sure to alight upon the *feuilleton*, which is a review of a new book or a new play, or more often a simple serial story."

Until a political party in France produces fine orators, it does not count for much. The Socialists never endangered the Ministry until M. Jaures became a Socialist. When a new cabinet is formed the literary merits of its members are first inquired into by the populace. Men who have learned to turn a sonnet and to follow the intricacies of a metaphor conclude that they are thereby rendered capable of leading and governing a nation.

The first stage of this French malady, this *litteraturitis*, as the writer calls it, was poetry, which ruled the French mind in the early days of the present century. Then the second stage was reached—romanticism. Now the third stage prevails—criticism, the most destructive of the three. To-day the critic is omnipotent. A minister is not more courted, and the critic's antechamber is the scene of intrigues more Machiavellian, than those in the lobbies of the Palais-Bourbon.

NOTES.

A LETTER from Stevenson to Barrie is published in the latest volume of the "Edinburgh Stevenson," in which he tells the author of "The Little Minister" that the story is "frightfully unconscientious," and that the story ought to have ended badly. "We all know it *did*, and we are infinitely grateful for the grace and feeling with which you have lied about it."

THOSE who share with a correspondent of *The Chap-Book* the idea that American authors are not successful in giving public readings from their own works will learn an interesting truth from J. B. Pond's reply, in which he says: "'Certain American authors' are giving public readings and have been at it since I can remember. As incredible as it may appear, his [*The Chap-Book* writer's] friend, F. Hopkinson Smith, has been for the past ten years one of the most successful 'readers from his own works' in the American lyceum. Ask in any city, North, South, East, or West, who is the most successful author-reader in America and who 'draws the largest audiences that have assembled in these cities,' and if they don't say 'F. Hopkinson Smith,' I do not ask you to ever believe me again. 'Mark Twain' and George W. Cable raked in a great haul in 1883-84,—thousands and thousands of dollars. Kate Douglas Wiggin made over \$70,000 for kindergarten associations in about six years, reading her charming stories. John Kendrick Bangs and 'Chimmie Fadden' are now reaping double prices for their 'stuff,' first from the publisher and then from reading it 'out loud' to audiences who pay fifty cents, seventy-five cents, and one dollar. The above are a few of the American 'readers from their own works' that the public will pay to hear, because Americans are always glad to pay a hundred cents where they can get a dollar's worth, and not generally otherwise."

SCIENCE AND INVENTION.

THOSE STORIES ABOUT PROFESSOR ELISHA GRAY.

FROM Professor Gray himself comes a justly indignant denial of the stories which the press have lately published about him and which we reproduced in our issue of February 19, under the title "The Inventor of the Telephone in Want." Professor Gray writes us from Highland Park, Ill., as follows:

Editor of THE LITERARY DIGEST:

I enclose an article from *The Electrical Engineer* and ask you to peruse the latter part of it. Your article in reference to me is accredited to *The Times-Herald*, of Chicago. I am a daily reader and contributor to that paper, and I never saw the article

you refer to. There was an article published in the *New York Herald* about six weeks ago from which all this stuff comes. So far as it relates to my private affairs—with which the public has no business—it is a tissue of lies.

I have denied this in several quarters, but no one publishes it. A lie has greater facilities for traveling than the truth. Everybody gives the lie a free pass, while truth has to pay its fare and overcome all sorts of obstacles.

You are at liberty to use this letter and enclosure if you see fit.

Yours truly,

ELISHA GRAY.

The article which the professor encloses is from *The Electrical Engineer* (New York, March 3). After referring to unfounded newspaper stories about Edison, it says:

"An equally flagrant case is that of Dr. Elisha Gray, so well known for his many electrical inventions and the organizing president of the International Electrical Congress of 1893. It has been given out with the fullest circumstantial detail that this distinguished man had gone all to pieces financially, and was in the sorest straits. The public was invited to gloat over his agonizing struggles to keep the wolf from the door. Then as a fine touch it was added that he was dying of it all. The whole thing is a most outrageous lie. It is true that Dr. Gray suffered from the panic of 1893 and the prolonged depression, but that has not been an unusual or exceptional experience, and the Doctor is not

'stripped of everything,' nor has he been cheated and swindled of every dollar; nor is he living in abject poverty, nor has he had to sell his art treasures, nor is he now taking boarders for a living. Dr. Gray occupies the same house that he has been living in for twenty-six years at Highland Park, Ill.; he is still surrounded by all his 'art treasures,' and his library is intact and just as sacred to his own use as it ever was. We believe the 'boarders' are his own daughter, her husband, and a grandchild, in whose company and sunshine the Doctor takes natural delight.

"The whole miserable story appears to have sprung out of a wish to boom some literary work that Dr. Gray had done upon invitation, for the newspapers, dealing with electrical questions in a serious of articles. The 'scare-head' way to interest the public was to write up, or rather 'write down,' the author, in a sensational and vulgar style, no matter how indignant he might be or how severely his friends' feelings might be hurt. We have no doubt Dr. Gray has protested vigorously against such abominable methods in the proper quarter; and we now venture to offer our own comments, merely adding in conclusion that one benefit of such annoying episodes must be to help prove to a man that if he is really undergoing trials there are some who will hasten to stand by him."

QUEER ELECTRIC ROADS FOR THE KLONDIKE.

THE unusual difficulties attending the transportation of passengers and freight to the newly discovered Klondike gold-fields have already brought out a swarm of inventors who propose to circumvent these difficulties in all sorts of ways, more or less curious and generally decidedly impracticable. Some propositions, however, tho novel, have a degree of possibility, and it is asserted that attempts will be made to carry them out. *Electricity*, New York, describes a few of the plans as follows:

"If all the reports we hear are true, the coming summer should see the Klondike well equipped with transportation facilities. Several companies have already been organized and others are about to be formed for the purpose of constructing electric railways into that country. . . . Some time ago we suggested as the most suitable form of railway a single-rail electric road with the rail some distance above the surface of the ground. A company is now being formed in Seattle, so we understand, and plans have been prepared for an electric road which it proposes to build over the Skaguay trail, and which is to be erected after the manner we suggested. The track is to consist of 12-by-12-inch posts 6 feet high and 14 feet apart, on top of which will be strung two timbers 6 by 12 inches, and 28 feet long, on which a 30-pound steel rail is to be placed. The cars it is proposed to use are to be 15 feet long and 4 feet wide, having but two heavy wheels, each of the latter being equipped with a 15 horse-power motor. When in operation two cars will be joined together by heavy overhead beams and run one on either side of the rail, making practically one car. The bottom of the cars will be two feet above the surface of the ground, which will enable them, so it is thought, to successfully plow their way through any ordinary snow-drift. It is estimated that 1,000 feet of track a day can be built in Alaska at a cost not exceeding \$5,000. Altho this would make a road cost \$26,400 per mile, considerably more than the ordinary trolley, when the rugged nature of the country is taken into consideration this amount does not seem excessive."

"Another company composed of American capitalists propose overcoming the difficulties of the Dyea trail in a rather novel manner, by means of an aerial railway. Steel columns thirteen feet in height will be erected one hundred feet apart, from the top of which wire ropes will be suspended which will constitute the track.

"Specially designed cars will be hung from this track by means of steel bars, each carrying two grooved wheels running on the cable. A lower cable attached to the vertical bar of the car will be used for propulsion, which will be accomplished by means of a stationary motor. The promoters' idea in building this railway, which will be but seven and a half miles long, is to afford a speedy and easy means of transportation over an exceedingly rough part of the route.

"The unusual difficulties attending the construction and main-

tenance of an electric road in that part of Alaska require the adoption of extraordinary methods, and the next few months will therefore probably bring forth a number of unique systems of electrical propulsion."

DOUBLE STARS.

A FASCINATING study for astronomers and indeed for every one who has access to a telescope is the study of what are usually called double stars. These, as is well known, present to the naked eye the appearance of a single star, which the telescope reveals to be two stars, completely separated from each other. Many of the double stars are merely in the same range of vision, and these are termed optical doubles. The components of other double stars, as those who have studied elementary astronomy are aware, revolve one around the other, apparently under the influence of gravitation, forming systems known as binary stars. M. Camille Flammarion, who has done so much to popularize the science to which he has devoted his life, has lately been making a special study of some of these binary stars, and has given the result of his observations in the *Bulletin de la Société Astronomique de France* (Paris, February).

He measured the double star in the constellation Virgo, a star which is one of the brightest in the sky. He finds that it is now precisely in the position in which it was when observed by the famous astronomer, Bradley, in 1718. This proves that it has just completed one sidereal revolution, that is to say, one of its years. A year of this system of two suns is therefore equal to one hundred and eighty of our years. It is difficult, he proceeds to say, to contemplate this superb double star without thinking of the unknown beings which may exist there under conditions so entirely different from those on the earth. The planets which, it can not be doubted, he thinks, belong to this system have two suns instead of one. What singular years and seasons and days and nights these planets must have!

The two suns of the double star in Virgo, we are told by M. Flammarion, are by no means always the same distance from each other. They approach each other considerably nearer at some times than at others. They were so near together in 1836 that it was then claimed that the star is not a double one. They are separated from us, however, by an immense distance which is absolutely unknown. It may very well be, therefore, that even when they are nearest to one another, each may have a system of planets as vast as our solar family. He continues:

"So far there have been discovered about 115,000 double stars, of which the orbits of but twenty-five have been calculated. The length of these orbits varies greatly. One of them takes but a little more than five of our years to complete its sidereal revolution. From this the orbits run up, as has been seen, to nearly two centuries. There is in the constellation Andromeda, however, a star visible to the naked eye which the smallest telescopes show to be double. Seen through a powerful instrument, it is found to be triple. One of these suns turns around another in fifty-four years, and these two turn about the third. This last revolution it has as yet been impossible to calculate, but if it proceeds at the same rate at which it has gone on since 1777, when the third sun was observed for the first time, the revolution must extend to 360 centuries!

"It would be a mistake to classify all double stars under one head and to consider them as a separate class of heavenly bodies. They are of various kinds. Some are two suns of the same mass, the same light, the same temperature, the same relative age, as, for instance, the star in Virgo, which has been described, and most of the stars whose orbit has been calculated. Others show us an enormous sun, around which gravitates a much smaller star, as, for instance, Sirius. In other cases, we have a sun with an obscure star, the existence of which is known only by its eclipsing its companion, thus making the latter a variable star.

"One of the most remarkable characteristics of the double stars is the admirable colors which a number of them disclose through the telescope. It is next to impossible to give any idea of the

beauty of these colors by any process of painting. To do that you would have to dip your brush in the rainbow and have for a canvas the celestial azure itself. It is to be remarked that the stars whose orbits are smallest do not present the same fine complementary colors as those whose orbits are longer. In general, both of the stars of those which make the most rapid revolution are yellow. Astronomers have inferred that in the systems with pale and analogous colors, the masses are the strongest. These have, as a general thing, a light of the same order as that of our sun. In the star in Andromeda to which allusion has been made as being resolved by the most powerful telescopes into three stars, one of these is orange, another green, while the third is blue. What a splendid jewel in the celestial universe, an orange, emerald, and sapphire diamond! another very beautiful colored double star is in the constellation Cygnus or the Swan, a star which the smallest instruments show to be double. The colors here are a golden yellow and lucid sapphire.

"If the worlds of Mars, Venus, Jupiter, or Saturn differ so considerably from the world we inhabit, altho they are enlightened and fertilized by the same sun, how much more must these distant worlds in the depths of the sky differ from anything with which we are acquainted? In regard to these we can repeat, with even more truth than in any other case, the words of Shakespeare:

"There are more things in heaven and earth, Horatio,
Than are dreamed of in your philosophy."

—Translated for THE LITERARY DIGEST.

PHYSICAL EFFECTS OF ATTENDING SCHOOL.

IN what way the bodily development of children is affected by their attendance at school has been closely investigated for years by Dr. Schmidt-Mounard, of Leipsic, who recently gave his results in an address to the Lehrer-Verein of that city. His results are as follows:

1. It is a difficult task to trace with accuracy what effect attending school has on the growth of children and on their increase of weight; but it is a fact demonstrated beyond reasonable doubt that children in the first year of school attendance gain less in weight and height than they do in preceding years, namely, only one kilogram [two and one-fifth pounds] in weight compared with four in earlier years, and five centimeters [two inches] in height compared with seven before; and that the average proportions in this respect are not again attained until in later years; and, further, that children who do not enter school until their seventh year are stronger and better developed physically than those who enter a year earlier.

2. Acute sicknesses are not caused by the fact that children must study, but are produced by defective hygienic schoolrooms. Lack of cleanliness, of fresh air and light, decrease the ability of children to resist the attacks of contagious diseases. This too becomes better in later years.

3. Chronic troubles, such as weakness, headaches, insomnia, and nervous disorders in general, are found to a much greater degree in schools of higher grade than in the elementary. They increase steadily in the case of girls to the age of puberty, frequently troubling as many as fifty per cent., while in the case of boys the highest percentage is thirty-five per cent. After that age, in consequence of the increase of weight, they decrease to twenty-seven per cent. in the case of girls. Eight per cent. of children about this age suffer from insomnia caused chiefly by social excitement at home. In the higher grade of schools for boys, especially when there are no afternoon recitations and the pupils are compelled to take exercise, the percentage of sickness varies from twenty to thirty-nine; while in the case of those schools where there are afternoon recitations and no enforced exercise, the percentage runs up as high as seventy-nine. Eighteen per cent. of boys in such schools complained of insomnia.

4. The cause of these troubles is to be found largely in the extra work assigned to children at home, such as drawing lessons, music lessons, and the like, as also to the fact that in schools physical exercise is not made compulsory as it should be.

The speaker closed his address with these words: "The children are not too weak for our schools, and for that reason should

not cease to attend; but, rather, our schools make too heavy demands on the children, and for that reason these demands should be made lighter."—*Translation made for THE LITERARY DIGEST.*

TRAINING THE SIGHT.

IT is the opinion of Brudenell Carter, the eminent English surgeon, that the average acuteness of human eyesight can be very greatly improved by systematic training. In a paper read before the London Society of Arts on February 23, he urged parents and teachers not to regard sight "as a power or faculty which may be trusted to take care of itself," but to train it systematically by the aid of appropriate objects, and to test its quality from time to time, as is now done in the case of railway employees. In commenting on this address *The Hospital*, London, March 5, says:

"Travelers have told marvelous stories about the sight of many savage tribes, and, altho some of these stories may be received with incredulity, while others are explicable by the greater clearness of the atmosphere in the countries where they occurred, yet there seems no sufficient ground for doubting that the visual function, like every other, is capable of being improved by judicious exercise, and especially by such exercise as is afforded by the necessity of reliance upon its faintest indications. There is no reasonable doubt that the Siberian Tatar, who, when looking at Jupiter, told Arago that he had seen the big star swallow a little one and spit it out again, had really seen, with his unaided eyes, an occultation of the third satellite. Sir H. Truman Wood, in the discussion at the Society of Arts, spoke of an Englishman who could see some of the double stars; but it must be remembered that the Englishman could easily know what stars were double, and could, perhaps, fancy that he saw their peculiarity; while the Tatar could have had no knowledge of the very existence of the satellite if he had not seen it. Mr. Carter maintained that the habit of seeing as much as possible, of earnest visual attention to the details of the environments, would certainly have the effect of increasing the activity of the visual function, and also in all probability of promoting the growth of finer fibers in the retina, by the aid of which smaller images could be appreciated. He gave reasons for believing that the vision of town-bred children is less acute than that of the country-bred; the former seeing chiefly large objects, such as houses and omnibuses, under large visual angles; the latter habitually attending to smaller or more distant objects, and using the eyes under smaller visual angles. The general moral of the discourse was that all school teachers should be instructed to test the vision of new pupils, and to record the facts in a register, at the same time calling the attention of parents to cases of manifest defect, and thus enabling them to obtain timely advice, or to regulate the course of education with reference to the special requirements of each child. It was further suggested that vision should be trained in schools by the use of difficult test-objects set at proper distances; it being only work upon near objects that is ever injurious to the eyes, while work upon distant objects must always be of the kind by which the faculty exercised is likely also to be improved. It was maintained that sight might even be permitted to take its place among the physical qualities that are made the bases of competitions, and that prizes might be awarded for excellence. It seems certain that there are positions in life in which the power to see acutely might be quite as valuable as, or even more valuable than, the power to run swiftly; and there seems no valid reason why the recognition which is daily given to the latter should not be extended also to the former."

Growth of Man.—"Under the title of 'Das Wachstum des Menschen,' Franz Daffnfr has just published in Leipsic," says the *Revue Scientifique*, "an interesting anthropological study—a brochure of 129 pages in which he studies the physical development of man from the earliest stages of life up to the decrepitude of old age, passing all the intermediate periods in review. It is thus a study of the development of the individual in his average and common traits. The facts enumerated by M. Daffnfr consist chiefly of statistics—weight, length, and measurements of divers

kinds. The author mentions a number of considerations on the predetermination of sex, and he adopts the hypothesis according to which the sex of the child is that of the most vigorous parent; the young mother of seventeen to nineteen years has chiefly boys; from twenty to twenty-one she has daughters; and as her strength lessens she gives birth to sons again. The argument seems to us to have little force, like all those that rest solely on statistics, for it is well known that we can twist these to mean just about whatever we want. Speaking of the period of transition from girlhood to womanhood, Daffnfr argues forcibly against the use of the corset. He brings up measurement after measurement in the course of the book—weight, the length of the newborn child, loss of weight, increase in the course of growth, weight of the brain and other organs, the ratios of these weights, the dimensions of all the parts, both external and internal—such are the subjects treated of by the author, and the question in general is presented with a multitude of details and in a very interesting way."—*Translated for THE LITERARY DIGEST.*

DISEASE FROM BEANS.

THE latest article of diet to have its character impeached is the common bean, which Pythagoras so warmly recommended, and which is said to be the favorite food of some communities in our republic. Dr. Cipriani has just published on the subject a book which, notwithstanding his Italian name, is written in German, and of which an analysis is given in *La Nature* (Paris, February 26). His work, we are told, is the result of no slight study and observation, and is therefore entitled to respectful attention. He accuses the bean, which has long been thought so harmless and nourishing, of causing a malady by no means infrequent to which he gives the name of fabismus. According to him, it is not the beans themselves which are poisonous, but microbes which exist in the interior of the bean. In that case we have to deal with an infectious disease.

Fabismus can be contracted in two ways: through the respiratory apparatus and through the digestive apparatus. In the first case the malady appears on inhaling the emanations from bean flowers. In the other cases it is produced by swallowing the beans themselves. The emanations from the flowers received in passing a bean-field are not always poisonous, that depending upon the season and the condition of the persons who inhale them.

Fabismus appears especially when one has eaten raw beans; but even dried and cooked beans may bring on the malady. If some of the beans which have made a person ill are given to a guinea-pig, the animal also becomes ill. Of course, if the cooked beans have been exposed to a heat sufficient to kill the microbes, the danger is eliminated.

Feeble persons—the neurasthenic—especially nervous women, are more disposed than others to be poisoned by bean flowers. Most of all does the poison influence those who have disordered stomachs. A first attack predisposes to a second one.

The progress of the malady is rapid. In the case of respiratory fabismus it culminates at the end of from two to five hours in a violent chill, followed by a fever, a little headache, insomnia, and prostration. In some cases the fever is so high that the patient is obliged to go to bed. Finally—but happily very rarely—the fever brings on a comatose state, which, in twenty-four hours, ends in death. In ordinary cases, the fever disappears at the end of five days, after abundant sweats.

In digestive fabismus, the progress of the malady is the same, with this difference, that the first chill is accompanied by vomiting and violent pain in the stomach. The persons attacked often turn intensely yellow. As in the preceding case, the illness may end in death, but that is the exception. In general, the symptoms disappear one after the other in about four days. In both cases the spleen is enlarged and the sick people are very anemic.

Remedies are prescribed by Dr. Cipriani for this bean disease. His remedies are calomel, antipyrin, and especially chinisol.—*Translated for THE LITERARY DIGEST.*

The Stone Age in the Nineteenth Century.—We are apt to think of "the Stone Age" as necessarily prehistoric, but the term relates to a stage of human development, not to a chronological epoch, and the stage lingers yet in out-of-the-way

places, as we are reminded by Dr. Ehrenreich in *Globus*. Dr. D. G. Brinton, abstracting this article in *Science*, says:

"In a few remote corners of the earth there are yet tribes in the full Stone Age, living under the conditions of early neolithic man in Europe. Von den Steinen found such at the headwaters of the Xingu; the Jesuits not long ago discovered such in the interior of Alaska; and a report has lately been published by the La Plata Museum of the Guayaquis, who dwell in Paraguay, near the head waters of the River Acaray, and who are alleged to be true Stone-Age people. They are not over 500 or 600 in all, and are a timid, harmless set, shunning the whites from whom they have never received anything but brutal treatment. Their arms are the bow, the lance, and the stone tomahawk. They wear tall caps of tapir skin and adorn their necks with strings of bones and teeth. They are somewhat undersized, prognathic, and brachycephalic. Strange to say, their language was not studied, the small vocabulary given, which is Guarani, being probably a blunder. Dr. Ehrenreich inclines to believe them allied to the Botocudos."

NEW LIGHT ON THE RAINBOW.

THE first step of science in explaining natural phenomena is to make apparent confusion yield to a simple law. But the simplicity is generally no more real than the chaos was, for little by little modifications and perturbations are discovered, until the real explanation is complex enough to bewilder the ordinary inquirer. This complexity, however, is apt to be reserved for the study of the advanced investigator; for the layman the planets still revolve in perfect ellipses, the earth is a sphere, and the rainbow is a true solar spectrum. Astronomers know, however, that the planets move in very complex curves that are ellipses only when not regarded too closely; the earth is a sphere only by courtesy; and the rainbow is anything but a simple band of "rainbow" colors. The composition and arrangement of its hues depend, among other things, on the size of the rain- or mist-drops that form it. A French investigator has recently gone a little deeper into the matter than any of his predecessors, and his conclusions are summarized in a note in the *Revue Scientifique*, which we translate below:

"Descartes's theory of the rainbow, which is still given in treatises on optics, can not be admitted, even after a superficial examination. Every observer who gives a little attention to the matter will see, under ordinary circumstances, on the interior edge of the rainbow certain colors that do not correspond to the series of colors of the spectrum demanded by Descartes's theory. These additional colors, formed especially in the red and green, remind one of the colors of Newton's rings at some distance from the center and seem to have a similar origin.

"In a note on 'the intensity of light in the vicinity of a caustic curve' Airy has laid the foundation of an adequate theory of the rainbow, which has since been gradually developed. With a patience worthy of the highest praise, M. Pernier has calculated the tint and the angular deviation of the colors of the rainbow for different sizes of rain-drops, and has made experiments to verify his deductions.

"A beam of solar light, after reflection and refraction in a spherical rain-drop, does not emerge as a parallel beam nor as a group of parallel beams of different colors, but as a series of caustics of a somewhat complicated nature, in which the divergence of the colors and consequently their clearness, their separation, and their coincidence depends on the ratio of the radius of the drop to the wave-length of the light. The influence of the size is very great with small drops—that is, those of 0.1 millimeter [0.004 inch] radius.

"The size of the drops of rain is supposed to vary from 0.1 millimeter [0.004 inch] to 2.6 millimeters [0.1 inch]; but the large drops in tropical rains reach, it appears, 3.4 millimeters in diameter. These diameters may be determined by collecting and weighing a definite number of drops, or by means of the more difficult method of diffraction. The tables prepared by M. Pernier are for drops of twelve different sizes, between 0.005 and 1 milli-

meter radius; to determine the corresponding colors, M. Pernier chose 8 of the 22 color equations of Maxwell. The first series of his tables gives, for a determinate source of light, the series of colors, their composition, in terms of red, green, and violet, their relative intensity, and their position in the color-triangle of each shade for different deviations between $42^{\circ} 20'$ and 36° .

"With drops of 1 millimeter, M. Pernier observes the red, the yellow-orange, the green, the violet, the bluish second violet, and then 24 secondary colors, formed principally of rose-violet, green, and blue; after the twelfth violet comes a white band and then a reversed series of colors. Drops of half a millimeter give 11 bows with 40 shades.

"M. Pernier has also studied the pale bows that are formed around the moon or the sun in time of fog. The general conclusions are as follows:

"The larger the drops of rain are, the more secondary bows there are. A principal bow of intense rose color and bluish-green indicates drops whose diameters vary 1 to 2 millimeters; intense red always corresponds to very large drops. Secondary green and violet bows [the blue is masked by contrast] without yellow, immediately contiguous to the principal bow, correspond to drops of 0.5 millimeter, while five or more secondary bows, without white and without a break in continuity, indicate drops of 0.1 millimeter. A bow partly of white is produced by drops of 0.06 millimeter, and still smaller drops give a white bow with yellow-orange and blue edges."—*Translated for THE LITERARY DIGEST.*

Oil as Locomotive Fuel.—We recently quoted an expert opinion that was very adverse to the employment of petroleum as fuel in locomotives. That all are not of this mind is shown by the conclusions of A. Morton Bell, who writes on the subject in *Cassier's Magazine* (March). At the close of his article he tells us that "as regards the economy of the oil fuel, it has been ascertained by careful trials of all the fuels that at the present prices of the district the use of the 'blue' oil and gas oil is cheaper than coke." The use of oil is rapidly increasing, and recent improvements in the method of burning it have "removed the greatest objection that could be raised against liquid fuel, viz., the necessary alteration for the conversion of an ordinary coal-burning furnace to an oil-fired one. The advantages of oil fuel on a locomotive soon become apparent to those accustomed to the foot-plate, for no matter how long the run—and in these days the tendency is to make long runs without stopping—there is a fire which, if properly adjusted, is always clean, always bright, always at its best; and after careful observation during a long experience of railway engines in various countries of the world the writer ventures to say that there are no locomotives operated more easily by the men than those which are fired with oil fuel."

SCIENCE BREVITIES.

WHILE fully recognizing the merits of Dr. Lion's incubators, recently described in these columns, as a means of preserving the lives of feeble infants, *The Lancet*, London, passes severe strictures on the custom now prevalent in London of making a commercial speculation of incubators, and says, in reference to their exhibition at Barnum and Bailey's show: "What connection is there between the serious matter of saving human life, and the bearded woman, the dog-faced man, the elephants, the performing horses and pigs, and the clowns and acrobats that constitute the chief attraction to Olympia?"

THE following method of turning ordinary photographic blue prints to a rich brown is given by *Anthony's Bulletin*, New York. "A piece of caustic soda about the size of a bean is dissolved in five ounces of water and the blue print immersed in it, on which it will take on an orange-yellow color. When the blue has entirely left the print it should be washed thoroughly and immersed in a bath composed of eight ounces of water in which has been dissolved a heaping teaspoonful of tannic acid. The prints in this bath will assume a brown color that may be carried to almost any tone, after which they must again be thoroughly washed and allowed to dry."

PNEUMONIA, according to an article by Dr. J. W. Moore in *The British Medical Journal*, January 15, is what he calls a "multiple," or "mixed" infection, that is, it is not caused by a single germ, but by any one of several, or by more than one of these at once. Dr. Thompson, of Bellevue Hospital, claims that the onset now is just as sudden as it ever was, yet the date of the crisis has come to be so indefinite and suspicious that the visitation of the severe epidemic of influenza of 1890-91 may have given rise to this mixed infection. Dr. Moore asserts that we are already acquainted with pneumonia caused by several varieties of bacillus, and that it is not improbable that there are many other species which can set up the disease. He adduces evidence to prove that the organisms of erysipelas, influenza, Eberth bacillus, anthrax, etc., may all give rise to a specific pneumonia.

THE RELIGIOUS WORLD.

THE HINDU'S DREAD OF EXISTENCE.

THE holiest place in all Bombay, says Lucy E. Guinness, is the "tank." It is to the natives a sanctuary, and around it little temples rise, to it pilgrims go, near it numbers of fakirs sit, covered with filth and ashes, in the hot sun. Miss Guinness, who is editor of a London paper, *Regions Beyond*, writes in *The Missionary Review* (New York, April), and after a brief description of the appearance of these fakirs, 'looking almost more like beasts than men,' she indulges in the following reflections awakened by the scene:

"What must be the character of the faith whose ideal is before us? We stand bewildered in the sunshine, trying to realize that it is not a dream—that to these men, our brothers, this filth, this degradation, this naked idleness, is the embodiment of sanctity—and our hearts go out to India, the first example of whose greatest faith meets us in such a form. This is Hinduism, hoary Hinduism, three thousand years old, and ruling to-day more than two hundred million men and women. The spectacle before us is the outcome of her teachings. This is the highest life one can lead. To their minds existence is an evil; emancipation from it in this life, and in countless future lives, is the one hope. Detach yourself from earth, go without clothes; have no home, no friends, no people; do no work; take no interest in anything at all; enjoy nothing, feel nothing, hope for nothing. Detach yourself—to do this, suffer pain, sleep on spikes, starve yourself, or eat carrion and nameless abominations; hold your arms up till they wither and the nails grow through the hand; do anything and everything to get rid of your supreme curse—conscious existence.

"This nightmare dread of existence is the natural outcome of the transmigration theory—that saddest and most hopeless of all human explanations of life. Think for one moment of what it would mean to you to believe that every living thing on the face of the earth was the body of some soul—birds, beasts, insects, reptiles, men—all alike soul-houses; and that human souls were ceaselessly shifting through countless lives, and must forever shift among these, according to their merits or demerits? Transmigration we call it, and dismiss the idea with a word. But to believe that idea, to think that the souls you love best, and that death has called

A HINDOO DEVOTEE—LYING ON A BED OF SPIKES.

away, are pent up in some body—a jackal's, a cow's, a serpent's, perhaps—and will be bound there, feeling, suffering, enjoying if they can, until death smites them once again, and once again they change their house and pass into some other form, as coolies, kings, or what not—to believe that idea, what must it mean? Think of the burden of it, the endless, restless, weary round, from which is no escape; the grip of fate that holds you and drives you on and on; the inexorable sentence, from which is no appeal, consigning you to groveling reptile life or loathsome being. You may be born to-morrow a leper, an idiot, a murderer, anything—*Karma*, your fate determines what shall be, and your fate depends entirely on your merits. There

is no pity anywhere, there is no forgiveness. Trouble comes to you to-day? Ah, you earned it yesterday, back in your last body. Then you sinned, now you are punished. This theory apparently explains everything so satisfactorily—all the crookedness and in-

A HOLY MAN OF INDIA.

equalities of life, all the strange chance of destiny. But it is so hard, so hopeless. Eighty-six million times you will be born and reborn, to suffer, live, and die.

"What more natural than to wish to shorten the period? Become a devotee, perhaps even a fakir. By so doing you detach yourself. You gradually escape reincarnation. You stand a faint and far-off chance of sooner finding rest—the oblivion of Nirvana—'not to be.'"

PROPER ATTITUDE OF THE PULPIT ON THE QUESTION OF PEACE OR WAR.

WHETHER the pulpit should take any part in the discussion of political issues is one of the questions that always come to the fore in times of any considerable excitement over national policies. The present excitement furnishes no exception to the rule. Bishop Paret (Prot. Episc.), of Maryland, has deemed it advisable to send out to the clergymen of his diocese the following letter of instructions:

"God having brought us to times of uncertainty, trouble, and danger, he calls our nation and its authorities to use all possible patience and wisdom. And as helping to that, I expect that you keep your sermons free from all questions of war or of national politics, and from unnecessary professions of patriotism. True patriotism does not need to be boastful. Important as these things are, they have no place in the pulpit. Our Savior and His Apostles first are our best models for preaching the Gospel. There were questions of deepest national importance then pressing upon the minds of the people, but they did not make them themes for preaching. They had something still higher to speak of—the spiritual truths of the Gospel, and its great moral principles and duties. These prevailing would bring peace and truth as their results. As citizens you may and must take interest in national affairs; but keep Spain and points of national policy out of your sermons. Ask God's blessing on those who now have the great responsibility. Use at every morning and evening prayer the appointed prayer 'For the President and for all others in authority,' and at every litany service and at all other services the prayer for Congress."

The Outlook (undenom.) reprints the bishop's letter, makes a

fling or two at the denomination he represents, and then takes issue with the position assumed by him, as follows:

"If the bishop means, as he apparently does, that the question of peace or war is not to be discussed in the American pulpit, we wonder what questions he would think appropriate for the pulpit to discuss. The action of this nation can not be determined by President or Congress; in the last analysis it must be determined by the people. And the questions before them are profoundly religious ones: Does this nation owe any duty to the people of Cuba? Ought we to sit silently and see the terrible tragedy go on, with its starvation of non-combatants as a military policy? Ought we to interfere? If so, in what spirit? For humanity? Or for national aggrandizement and addition to national territory? If these are not moral and religious questions, will Bishop Paret tell us what questions are moral and religious? If on these questions the people can not look to the pulpit for guidance, to whom shall they look? Christ did not preach on national themes because the people to whom he preached were a subject people, unable by any act of theirs to affect the nation's policy. But the Old-Testament prophets, who spoke to a free people in a time when public opinion did have influence in determining the policy of the nation, preached habitually upon questions of national policy. We recommend all preachers who are inclined to act on the methods and in accordance with the counsels of the Bishop of Maryland, to study those Old-Testament prophets."

LIFE IN OTHER WORLDS, AND ITS BEARING ON CHRISTIANITY.

DURING the last twenty or thirty years, observes M. de Kirwan, a French scientific man of note, certain persons have endeavored to transform the graceful, poetic, and in itself perfectly inoffensive hypothesis of the habitation of the stars by living beings into an engine of war against spiritual and Christian doctrines. A sort of pantheistic and materialist system founded on an evolution without limits is set up as a substitute for Christianity on the strength of these supposed habitable worlds. A great point has been made of the pettiness of the earth in comparison with other stars, and of the smallness of the human stature. It has been declared to be inadmissible that a universe so infinitely vast should have been made for a little creature like man, and that consequently all that religion and spiritual philosophy affirm about the destinies of man and the part he plays in nature is but a legend which is vanishing in the bright light of science.

M. de Kirwan in *Cosmos* (Paris, February) maintains that nothing which science has yet discovered affords the slightest warrant for these attacks on the Christian religion. He begins by claiming that there is as yet nothing to show that organized life—so far as we have any conception of life—exists on any of the bodies composing our solar system. It certainly can not exist in the sun, a globe of incandescent gases of a temperature in which no possible combination of elements could give birth to and support any organism whatever. Venus, by reason of the great inclination of its axis to its orbit, has summers of intolerable heat succeeded with abrupt transition by winters of excessive cold, at intervals of about fifty-six days each. These violent and frequent changes of temperature must result in storms to which the fiercest cyclones known on the earth would be child's play. In such an abode, how can you conceive of the existence and development of life? The condition of Mercury is still worse. It presents constantly the same face to the sun. One of its hemispheres is constantly calcined by the solar furnace, while in the other hemisphere there is always night and winter. Under such circumstances is life possible?

Mars has an atmosphere, clouds, and seas. It does not, however, receive quite half the light and heat which the sun imparts to the earth, and each season in Mars being double what it is with us, it must have a long continuation of terrible cold. The

red color of Mars seems to come from the nature of its soil in which predominates protoxid of iron. If this soil were covered by vegetation the protoxid would be deuteroxid, which is black. Without vegetation it is impossible to have inhabitants.

As to Jupiter, it is agreed that it is still in a liquid or at least pasty state. As to Saturn it is yet a gassy mass, and Uranus and Neptune are nebulous masses, without speaking of their very small participation in the light and heat of the sun.

The most convincing proof of the weakness of the attack on Christianity, M. de Kirwan finds in the latest scientific view of the moon. This view appears in the *Annuaire du Bureau des Longitudes* for 1898, founded on the recent progress that photography has permitted us to make in the examination of the lunar surface:

"The numerous photographs of the moon, obtained principally at the Lick Observatory in California, with some at Paris, will soon give us an atlas of this star, more minute perhaps and more complete in certain respects than even the atlas of the terrestrial globe. We have acquired about the moon as a whole and about the details of its surface much more profound knowledge than has been possible heretofore. Especially do the photographs offer the very great advantage of showing in a very marked manner the difference of tint between neighboring regions, a matter of high interest for the study of the physical state of the moon, and particularly for the existence or non-existence of air and water at its surface.

"The observation of the orographic relief of the moon, made singularly precise and assured by the photographic representation, proves decisively that there is no valley caused by erosion, and that therefore water has never intervened to bring about this relief. There is nowhere the slightest trace of ice, even at the poles, which, by reason of the obliquity of the solar rays, very little heat reaches. The writers for the *Annuaire*—thoroughly equipped for the science of which they treat—conclude that it is impossible to imagine an environment more unfavorable for life than the lunar surface. They add that, as organized forms, even the most rudimentary, are lacking on the earth at great altitudes, it is impossible to conceive of any organized forms which could adapt themselves to the moon in its present condition. Yet these writers go farther and declare that the present condition of the moon proves that the conditions of humidity and temperature demanded for the development of terrestrial organisms have never existed on the moon.

"To pretend that life is susceptible of adaptation to all imaginable environments is an assertion not only gratuitous but contradicted by facts. The limits of temperature between which life, so far as we know anything about it, can exist are quite narrow. Above 100° C. [212° Fahrenheit], no infusoria, no microbe, no bacteria can exist, and it is not necessary to descend much below zero to kill germs of every sort."

M. de Kirwan dwells specially on the latest views that science has formed in regard to the moon, because he thinks the case of that heavenly body proves it a gratuitous supposition to believe that the organization and manifestation of life are the principal end of the general creation. That the moon was not created for the purpose of organizing and maintaining life seems, so far as our knowledge extends at present, entirely clear. Without doubt the earth was created for man. Its place in the sidereal universe was determined in view of man's existence, and in such a manner that he can utilize for his profit, at least in a certain measure, the other creations which are beyond his reach.

That the stars which are improperly called fixed and which, like our sun, are incandescent masses raised to an extreme temperature, can be the seat of organic life, so far as we know anything about that life, no one is rash enough to affirm. Yet may not these stars have planets gravitating about them? Some of them may. That there are beyond the limits of human observation other earths inhabited by living beings, even by intelligent beings, it is not unreasonable to suppose. Yet, after all, it is but a supposition. It is a matter about which we *know* absolutely nothing whatever. The not improbable supposition leaves a

wide field for the use of the imagination. To pretend, however, to find in the supposed existence of these sidereal humanities arguments against Christianity is absurd.

As to the smallness of the earth in comparison with the other heavenly bodies, and the littleness of human stature, M. de Kirwan considers that such considerations amount to nothing. Is the value of beings in proportion to their mass? If that were so, an elephant or a whale would be of much more value than a Socrates, a Virgil, or a Pascal. Of what consequence is the stature of the human being, if he is able to become acquainted with, more or less, to weigh, and number all those immensities which come under his observation. The greatness of man is not in the dimensions of his body, but in the divine torch of reason which enlightens him and aids him in discovering and determining the most secret and most complicated laws of nature and to carry on his investigations in the most distant regions of space.

If there be in other worlds combinations of body and soul, of organism and mind, like or analogous to the human combination which peoples the terrestrial globe, how is the value of the latter attenuated or diminished by such a fact? And if the Creator has designed to manifest Himself specially to the beings of this earth, how is the destiny of the beings in other worlds injured thereby?—*Translated for THE LITERARY DIGEST.*

THE GOSPEL FOR THE RICH.

IT is the view of Rev. Amory H. Bradford, D.D., that we are in grave danger of neglecting the religious needs of the wealthy classes in the community in our zeal to spread "the light of the Gospel" among the poor and lowly. He speaks of that class of persons in American society who go under the title of the "Four Hundred," and says that they are more difficult to reach and more inaccessible to religious influences of any kind than any other class. As a class, it is said, they are not only self-satisfied, but they are self-conceited, and resent interference, even tho it be only in the way of personal interest. They have an air of superiority which is appalling to the average person, especially if his social position is somewhat lower. They look down from an exalted eminence on all who are really earnest. They despise enthusiasm, especially if it has a moral quality. Moreover, they are largely immoral, and immorality always more or less isolates. This class is composed of the rich, the selfish, the self-satisfied, the conceited—in short, of those who are more or less arrogant and altogether pagan.

After speaking of other difficulties in the way of reaching these people, Dr. Bradford makes some suggestions as to methods for overcoming these obstacles. He says (*North and West, Minneapolis*):

"This work can often be done by laymen better than ministers. At a banquet of the Bar Association of Boston not long ago the presiding officer indulged in some cheap flings at the doctrine of Providence. He was followed by a judge of the State of Massachusetts, who spoke in the same strain. He in turn was followed by one of the most distinguished justices of the Supreme Court of the United States, who very quietly, very modestly, but very firmly, confessed his faith in the constant and beneficent Providence of God. Said my informant: 'The audience was hushed in an instant; and you could have heard a pin drop.' The silence was the involuntary but none the less genuine tribute of the common human heart to the vitality of that truth. If such men would always show their colors in public gatherings and at banquets, they would influence many whose ears are closed against the professionalism of the pulpit. Such witness-bearing is never entirely without a good effect.

"One other way of reaching this class is by parlor and club conferences. The late Prof. Henry Drummond did some of his most efficient work in the parlors and clubs of London, and Mrs. Ballington Booth has had great success in the same kind of service. Many will accept invitations to such conferences who would

never darken the doors of a church. But it must be allowed that these are chiefly women, and of a class predisposed toward religion. One other consideration is worthy of mention. These men are still men; they have hours of dissatisfaction; their souls are hungry, however much their bodies may be pampered; and above all other things, they appreciate and value reality—perhaps because their own lives are so artificial. Those who can get near to them should deal faithfully with them, and not shrink because they are reserved; and then in love, but with perfect distinctness and bravery, without any softening of unpalatable truths, the essential message of Christianity should be presented. Genuineness and reality always make themselves felt. The pastor who never flinches from his duty because of any favoritism, who speaks out as Mr. Beecher sometimes preached in Plymouth church, as Canon Farrar used to preach in Westminster Abbey, will be reported, and the most hardened in the community will learn that a real man—a man with a message—a prophet of God who can be neither bought nor bluffed, is near at hand, and in many ways they will find out what his message is. The churches are not the only places where the heedless are reached with the Gospel. If there is one prophet like Nathan in a city, all the guilty Davids will soon know what he is saying, even if they never hear his voice.

"The neglected rich' can not be reached by more machinery; 'revivals' and 'special services' are useless. Mr. Moody, in his great campaign in England and Scotland, touched only the outer edge of the highest and lowest classes. If impressed at all, it will probably be in the one of two ways—either by their friends who are Christians, or by the influence, direct or indirect, of a real spiritual prophet who is not afraid to tell them that they are sinners, to denounce their miserable vices, and who, in a reasonable and manly fashion, presents the Gospel not as means of escape in some far-off future, but as the only way in which any can complete their manhood and be made fit to live here and now. More than this must be left to time and the Spirit of God."

RELIGIOUS NOTES.

MISS WILLARD requested Miss Gordon to bear to Lady Henry Somerset a picture, Hoffman's "Christ," but to have engraved on it first this: "Only the Golden Rule of Christ can bring the golden age of man."

The Japan Mail, in an editorial on Shintoism and shrines, gives the number of the latter at 193,476, with 14,766 priests, or one to every thirteen shrines. The priests of higher rank are paid \$25 to \$75 a month, and have besides a part of the income of the shrines.

ACCORDING to a newspaper paragraph, Rev. W. H. Morrison, of Manchester, N. H., has voluntarily relinquished \$300 of his \$2,000 annual salary because of the cut of 20 per cent. in the wages paid at the mills and the consequent hard times in the parish and the town.

A CURIOUS spectacle is to be witnessed on Sundays in the pretty little church of Hampden—always associated with the memory of John Hampden. For there are to be seen a peer of the realm, his wife, and the stone-breaker to the parish council, all assisting in divine worship. The Earl of Buckingham reads the lessons, the countess plays the organ, while the stone-breaker plays the useful part of verger.

The Michigan Christian Advocate says: "Of 1,955 Baptist ministers in Great Britain and Ireland, 1,556 are reported to be total abstainers. Out of 2,847 Congregational ministers in England and Wales, 2,364 abstain from strong drink. In some of the Methodist bodies the percentage of total abstainers is still larger. Out of 17,468 ministers in the M. E. Church how many are total abstainers? We think about 17,468."

DR. KENNEDY MOORE, who was prominent in last year's attack on Dr. John Watson (Ian Maclaren), has notified the Presbytery of South London that he will move at its next meeting to transmit to the Synod, which meets at Liverpool on April 25, an overture complaining of the heresy in Dr. Watson's work, "The Mind of the Master," and praying the Synod to take steps to vindicate the honor and faith of the church.

THERE is a movement to organize a guild of Catholic authors and writers of the United States. It is to be a national affair and number among its members some distinguished writers. Archbishop Corrigan approves of it. Its aim will be to place within the reach of young writers the experience of older and successful authors, and chiefly to promote the more thorough cultivation of the Catholic spirit in every department of letters.

PRESIDENT RAYMOND of Wesleyan University is averse to the idea that a short cut to the Christian ministry is well, either for the denomination or the individual. He also holds that the church must get a larger view of the significance of the Gospel than it has had in the past. "We have looked at it," he says, "too much from the standpoint of sin and salvation. There is a body of relationships between men which are apart from those."

THE estate of Phillips Brooks, Bishop of the Protestant Episcopal diocese of Massachusetts, has been closed up by the filing of the executor's account in the Suffolk probate court. It was appraised at \$45,856. Among his bequests which have been satisfied are those of \$2,000 to Trinity Church, Boston, toward the completion of the font; his books, valued at \$4,000, to the rector's library of the church, and \$1,000 to the Boston Home of Incurables.

FOREIGN TOPICS.

THE TROUBLE BETWEEN CHILE AND ARGENTINA.

ACCORDING to latest advices the Chilian Government has declared itself unable to comply with the request of Spain to sell the battle-ship *O'Higgins*, and the Argentine Republic, which is certainly inclined to sympathize with us, will not part with the *25 de Mayo* for our benefit. These two countries are themselves on the eve of war. Argentina, which is much larger, much richer and more populous than Chile, has allowed her newspapers to excite the people to such an extent that they are eager to try conclusions with Chile. The immediate cause of this dangerous state of affairs is sketched by the *Lei*, Santiago de Chile, to the following effect:

An Argentine, Dr. Moreno, recently published a book in which he asserted that the districts in the Andes at present in dispute between the two countries belong undoubtedly to Argentina, and that Chile has no right to demand even the frontier which Argentina is inclined to grant—the *divortium aquarum*. This same Dr. Moreno was appointed one of the boundary commissioners, and the Chilians protested against the appointment of one so strongly prejudiced. To Chile, with her narrow and limited territory, easily overrun by an enemy unless she has a natural, easily defended boundary, the matter is one of life and death. Argentina, on the other hand, being in possession of the rich plains of the East, does not need the bleak mountain region in dispute, and would use it merely to establish garrisons there. Chile, who wants peace in order to develop her not over-rich resources, has already made important concessions by assenting to the *divortium aquarum*, as is shown by Dr. Hans Steffens in a recent treatise, in which he points out that Chile has given up a large part of Patagonia to which she had undoubted rights.

However, the Argentine "yellow journals" are little inclined to listen to argument. The *Prensa*, Buenos Ayres, says:

"It is impossible to allow the Chilians to oppose us in this matter. We have had enough of Chilian arrogance. The dignity of our glorious country demands that we should uphold our national honor at all cost. The Argentine Republic is the paramount power upon this continent, from a military point of view, its people are the most martial, and the reputation of its soldiers for prowess is distinguished above that of its neighbors."

The Chilians, who have done a good deal of fighting during the past twenty years, are very cool. The *Chilian Times*, Valparaiso, commends them for their dignified attitude, and says:

"Have the writers for this section of the Argentine press, we wonder, ever seriously considered what would be the consequences of a war between the two republics? . . . For a nation to consider its own soldiers the best in the world is simply one phase of patriotism. Even the Chinese do so, but that did not prevent their valiant battalions from stampeding the other day before a handful of 'foreign devils.' . . . Foreigners residing in Buenos Ayres and other parts of the Argentine Republic, who visit Chile at this season of the year, are, however, much struck with the difference in the peoples living on this and on the other side of the Andes. They find the Chilians a more virile race than the Argentines, and it is a common remark of the visitors that if Argentines generally could see Chile as she is, with their own eyes, war talk would no longer be indulged in on the other side of the Andes. . . . No people in the world acquire the art of soldiering more readily than the Chilians, and there are probably no people who have a greater contempt for death."

The *Vorwärts*, Buenos Ayres, hopes that the two governments will be able to arrange the matter amicably, and declares that the Argentine Republic is being rushed into a war by a lot of irresponsible jingoes. What makes the matter more difficult for Chile, however, is the attitude of Peru. The Peruvian papers express a most intense hatred for the warrior race from the western slope of the Andes, and assure Argentina that she has the full support of Peru. The *Tiempo*, Lima, says:

"Chile committed a crime when she despoiled us, and, having devastated our territory, kept us in the most humiliating subjection. But turn about is fair play, and our time has come. Chile fears that she will be reduced to an insignificant spot on the map, and tho she still has confidence in her brutal strength, she seeks to propitiate us. Let her humble herself before us as she has humbled us, that is the only way to escape the catastrophe."

The *Lima Nacional* assures Argentina that, beyond all question, Peru will be her ally; but it is generally supposed that Chile would win even against these odds. Her navy is in first-class condition, and very popular with the people. In Argentina the navy is rather under a cloud. The *South American Journal*, London, makes the following suggestions, referring to the hunt for ships at present indulged in by the United States and Spain:

"It appears to us that it would be a good opportunity for both the Argentine and Chilian governments to sell some of their warships, and that they could possibly be secured, if the Government purchasing them would at the same time guarantee to both countries to settle their boundary dispute by experts, in accordance with the existing treaties, which would be, we believe, a very simple matter, since it has been agreed that the boundary between the two countries shall be the Cordilleras, and it only requires the good offices of an independent party to determine, at such points where doubts have arisen, which should be the correct boundary."
—*Translations made for THE LITERARY DIGEST.*

THE SPANISH PRESS ON THE ATTITUDE OF THE UNITED STATES.

THE Spanish press now accuse the United States of utter wantonness in her desire to end the Cuban rebellion by active intervention. They summarize reports of supposed corruption, injustice, lynchings, massacres, poverty, and crime as represented in our own and foreign papers, and ask upon what we base our assumption of superiority. They are, however, chiefly incensed with our intention to intervene at this date, and allege that the great majority of Cubans are well satisfied with autonomy. The rebellion, they assert, is almost stamped out, business is reviving in Havana, and if America would leave Cuba to settle her own affairs, the island would soon recover. The Cuban Radical and Liberal papers, which before the introduction of autonomy were friendly to the United States, now also denounce us.

The *Union Constitutionnel*, Havana, points out that the committee which at present is busy succoring the concentrados does not work very smoothly, and that the work undertaken is more likely to benefit beggars and increase vagrancy than to help the deserving. The paper asserts that the Americans, furious with the success which autonomy has achieved among the people, seek to keep the insurrection alive by promises of intervention. The *Lucha* says:

"We can not understand the sudden fury of the United States, now that everything is beginning to settle down. We can not but attribute it to the influence of certain rings interested in keeping the insurrection alive. Spain certainly has done nothing to cause this new outbreak of hatred. But Spain need not fear the war; it will be seen at its end who is the greatest loser."

The *Pais* asks if the Americans do not know that the authorities in Cuba are themselves engaged in assisting the concentrados. The *Diario del Ejercito* thinks there are "none so blind as those who will not see," and points to the 80,000 Cuban volunteers enrolled on the side of Spain, who do not want intervention, will not tolerate the rule of the rebel *cabecillos*, and certainly do not want annexation. The *Diario de la Marina* says Spain's patience is at an end, and quotes from the *Correo*, Mexico, in which Telesforo Garcia expresses himself to the following effect:

The conduct of the United States in the Cuban question is most hypocritical; the behavior of the yellow journals and jingo repre-

representatives is nothing less than criminal. But it is very likely that they will receive a very severe lesson. Their idea that Spain can be beaten with scarcely any effort will certainly prove to be erroneous. With a view to the good-will of the powers of Europe Spain has acted with prudence and self-command; but this must not be regarded as weakness. At any rate, the Americans should remember that nearly every Spaniard is a soldier.

The *Epoca*, Madrid, still hopes that "McKinley and Sagasta may yet be able to hold their own against the 'yellow' American and 'red' Spanish press and the jingoes of both nations." The *Heraldo* is less optimistic, and says:

"The United States is for all the world like an upstart who thinks he can do what he pleases because he has a few dollars, and fancies all the women are after him. We believe the Americans really think the world admires their conduct. But the Euro-

EMILIO CASTELAR.

pean press on the whole admire the conduct of Spain. We, at least, need not brag of our prowess. Spain's reputation is established."

Widely quoted and commented upon in Spain is an article in the *España Moderna* by Emilio Castelar. This venerable Spanish Republican, who has time and again expressed his admiration for the United States, and has only made his peace with the monarchy because, under its constitutional form, it differs little from a republic, expresses himself to the following effect:

Affairs in Cuba assume daily a more satisfactory aspect. Differences in the new government have easily been settled, if they ever existed. The rebels are surrendering in large numbers, those which still oppose us are held in check by the recent decided successes of the troops. Many who sympathized with the rebels are perfectly satisfied with the new government, desertions from the ranks of the insurgents are frequent, and the barbarous means adopted by the rebel chiefs to prevent desertion show how desperate is their condition.

Castelar then criticizes the attitude of the United States as follows:

"Whenever the insurgent forces decline the Americans strengthen them; when the surrender of the rebels is near, the Americans retard it by their boasts; whenever we are on the point of crushing the rebellion in the dry season, the Americans fan the flickering flame; and when, as a consequence, there are

still some insurgents in the rainy season, they protest against the continuance of the struggle and talk fantastically of an impossible intervention. A 'friendly visit' by a war-ship means that the two governments are on good terms, and strengthens amicable relations; but not when it is preceded by such conduct as that of the jingoes in the American Congress, and such scandalous messages as that delivered by McKinley. Repression of the conduct of the jugglers in New York would do much more to win our gratitude than all the 'friendly visits' in the world."

Still more vigorous is Castelar in an interview which appears in the Paris *Annales Politiques et Littéraires*:

"The Cuban insurrection was inaugurated at a very inopportune time. We had abolished slavery, and the enfranchised who had remained under a mild control had obtained the right of manumission. First in Porto Rico and subsequently in Cuba serfdom had been abolished, and in the negroes fundamental rights and social liberties had been recognized such as the black race had not enjoyed even partially anywhere else. Deputies had been admitted to represent Cuba in the Cortes; liberty of conscience had been decreed for Cuba, as well as liberty of the press, education, and assembly, to the same extent as prevailed in Spain. There had been presented in the Cortes a scheme of self-government for the island, a grand measure for which everybody voted from extreme Republicans to the most uncompromising Carlists. In fine, with regard to Cuba we had placed ourselves unreservedly in the line of progressive evolution.

"Now when a people is thus started upon a progressive career, has it the right to revolt! No, a thousand times no! Spain does not demand military service of the Cubans; she exacts from them the smallest possible contribution toward national expenditures. The Cubans had the same rights as the other subjects of the monarchy, and they were on the point of obtaining a yet grander participation in their own local government; in spite of all this they rebel! Such an insurrection amounts to suicide!

"It is futile to speak to Spain about anything else than war! We shall fight, and fight to the last drop of our blood and the last coin in our possession. Nothing can turn us from this path, nothing can prevent us from reestablishing by force of arms the sovereignty assaulted by force of arms. With any other people the Cubans would forfeit by revolution most of what they had gained by a wise evolution; but the Spaniards are determined to be as liberal and humane after victory as implacable in war.

"I am told we can not avoid a collision with the United States. But in that case it will mean on their part an aggression against us as criminal as was the invasion of Napoleon in 1808. We have done nothing to provoke the United States. Their threats we have treated with the scorn of a tranquil conscience. We shall do our utmost to avoid war, without humiliating ourselves before power or staining our history by the least indignity. But if the United States declare war against us, we shall assert our rights against everybody."

The *Imparcial* also says that, altho the insurrection has lost much strength in spite of the conduct of the Americans, it is extremely difficult to stamp out the rebellion altogether as long as its chiefs are enabled to surround themselves with a few followers, thanks to the liberality of their American supporters.—*Translations made for THE LITERARY DIGEST.*

Direct Cable Communication with Germany.—

The German Secretary of Postal Affairs announces that Germany will shortly begin the laying of a separate cable to the United States, and that this will lead to a comparatively quick extension of a separate German cable net over the world. The *Neuesten Nachrichten*, Munich, says under this heading:

"The beginning has already been made by the laying of the cable from Borkum to Vigo, a distance of some 1,200 miles. The next extension will be to the Azores. The cable to the United States is especially necessary, for the trade relations with that country become more important every year. Our postal service with the United States is already ahead of all others, no other country being able to furnish a line of fast steamers for the delivery of mails such as we have it. But with regard to the cables

we are still dependent upon the British companies. France, tired of the tutelage exercised of late by the British, has at last laid down her own wire, and Spain, too, is about to form a cable connection of her own with the New World. We can not, of course, lay down a net as extensive as that which Great Britain has created within the last fifty years; but we can after some delay furnish connections which will benefit not only our own trade, but that of the Netherlands, Denmark, Sweden, Norway, and Russia as well."

The *Kreuz Zeitung*, Berlin, thinks the laying of separate cables would not be necessary if the English were less jealous. But they "doctor" every scrap of news sent between the Continent and America to suit their own purposes, and it is now certain that they would tie up the lines altogether if it benefited them.—*Translations made for THE LITERARY DIGEST.*

EUROPE ON THE APPROACHING WAR.

THAT war between this country and Spain can hardly be averted has been plain to European observers for some time. England is coming out more and more boldly with expressions of sympathy for us. France continues to show her sympathy with Spain. Germany, Austria, Italy, Russia, and the smaller countries are rather indifferent, altho the general idea seems to be that Spain is forced into the struggle much against her will and without just provocation. The chances are thought to be somewhat in our favor, tho the tenacity of Spain is taken into consideration, and here and there doubts are expressed that we shall retain our enthusiasm if we experience serious reverses.

The Spectator, London, says:

"The Spanish Government know that if they lost Cuba except as the direct result of war waged with a stronger power the present monarchy would cease to exist. It is thus not merely the Ministry of the day, but the whole constitutional fabric in Spain, which is at stake. The dread of complications at home makes it absolutely impossible for the Spanish Government to give up Cuba—which is the logical outcome of America's demands. . . . The Americans expected Spain to say: 'We can not fight both the United States and our own rebels, and therefore we will yield.' The Spaniards have said nothing of the kind, but instead have determined that they would fight not only the Union but the whole world rather than yield. This has gradually brought the American people—we mean by 'the American people' not merely the jingoes and the cranks but the mass of quieter citizens—to see that diplomacy can do nothing, and that they must take one of two courses. Either they must allow Spain to go on in Cuba in the future as she has gone on in the past, or else they must intervene by means of war. There is no third course possible. . . . In our belief, America will not allow Cuban anarchy to continue, and in spite of the very grave reasons which exist for non-intervention, she will before long take naval and military action."

Many English papers nevertheless wonder whether Uncle Sam will know what to do with Cuba when he gets it. That is the attitude of *The Speaker*, which says:

"In the face of a possible deficit, of a banking crisis, and of a suspension of the revival of industry in the United States, that nation has deliberately shown the world that she will not be trifled with. The Spanish patriots will do well to heed her warning.

"We trust they will do so for the sake of the United States as well as of their own country. Before the War of Secession, Cuba, occupied by American slaveholders, would not have been by any means so inconvenient a possession as to-day. The slaveholders would practically have controlled the state and manipulated the Creole vote. Cuba would merely have been a larger Louisiana. But Cuba to-day would be far more embarrassing as a State of the Union than New Mexico, which has been qualified for admission as a State for many years past, but remains a territory because of the large element of Mexican Roman Catholics in its population. What would the 'A.P.A.,' founded to keep native Americans free from the control of a foreign and priest-ridden electorate, say to a measure which would put two Spanish

Roman Catholics into the Senate? . . . As a republic under the United States protectorate, the island would be less dangerous, but the United States could hardly be responsible for preserving it from the fate of other Spanish-American republics."

Similar views are expressed by *The Scotsman*, Edinburgh, which says:

"The people of the United States, if they drove the Spaniards out of Cuba to-morrow, would be at their wits' end to know what to do with the island. If they propose merely to restore order, they are undertaking an experiment for which the Constitution has made no provision, and it is very doubtful if the Cuban insurgents would be a whit more readily amenable to American rule than they are to Spanish. The attitude of the average American toward 'colored' people precludes the idea of Cuba being incorporated as a new State in the Union. The only interest which the United States has in the island is a trading interest. Sensible Americans know that Cuban independence would mean a continuation of Cuban anarchy. The people are not fit for self-government. The question of what is to be done with the island when the Spaniards are driven out is the question Mr. McKinley has to face; and the closer it is looked at the more difficult appears its solution. There is also the knowledge that Spain will not quit without fighting; and her fighting power as compared with that of the States is not insignificant."

Here and there the possibility of an Anglo-American alliance is mentioned, and *The St. James's Gazette* promises us the support of Great Britain against Spain in return for our assistance against Russia, Germany, and France in China. The paper nevertheless acknowledges that it is for us to make the bargain. *The Daily Chronicle* doubts that we are ready to enter into it, and says:

"America does not need more help from us now than at any other time. She is superabundantly capable of meeting any situation that may arise. She will have our friendly sympathy and neutrality in the Cuban question, and at this moment it is difficult for us to offer more. It is quite certain that England would never allow the United States to be crushed by a combination of European powers."

Many of our Canadian contemporaries, too, have begun to express their approval of a war against Spain in the most unmistakable manner. Thus *The Globe*, Toronto, says:

"There has never been the least attempt at disguising the strong sympathy felt in all parts of the United States with the Cubans in their struggle for liberty. With this feeling thousands of Canadians are in absolute accord, and when the methods by which Spain was endeavoring to reduce the Cubans to subjection transpired indignation became the uppermost sentiment in the public mind. . . . If Spain recognizes the inevitable and as gracefully as possible accedes to it, there may be no war, but in any event Cuban independence is a foregone conclusion. It should be said for the executive and the people of the United States that they have shown their best side, the real greatness and calmness of a democracy when put on trial. The nation has nothing to gain, nothing to look for, in a war except the satisfaction of defeating oppression and giving a neighboring people the same measure of freedom that its own people enjoy. In such an enterprise Canadians will not withhold their wishes for the immediate and triumphant success of the arm that sets the bondman free."

On the continent of Europe there are people ill-natured enough to say that British sympathies have become much stronger since the fifty-million-dollar bill was voted, of which she hopes to get a goodly share. *The Weser Zeitung*, Bremen, thinks a war with Spain need not close American ports entirely, and much business would be done via Canada. *The Vossische Zeitung*, Berlin, says it was to be expected that England, who always wants other people to fight, should be pleased with the prospect of a possible setback to American competition. The paper nevertheless thinks there is still a chance for peace. It says:

"The United States is preparing for war with feverish haste, but there is still the possibility that the [Cuban] rebellion will

speedily collapse. The dissension among the rebels themselves will do much to bring this about. That they are fighting each other is a good sign. If the rebels submit, the United States has no longer the shadow of an excuse for its enmity against Spain."

The German Emperor is generally supposed to sympathize with Spain, but there is no possibility of verifying the statement of the New York *World* that the Emperor emphasized his sympathies by banging the table. The *Hamburger Nachrichten*, which voices German conservative opinion, says:

"However bad Spanish administration in Cuba may be—and we would be the last to defend it—Spain can not allow another state to prescribe to her how her colonies should be ruled, nor within what time an insurrection should be crushed. That Cuba geographically belongs to the American continent is no reason for interference. Such intervention must hurt the pride of the Spaniard all the more as Spain sees in the United States an upstart who has injured her a great deal already. Moreover, the United States offends all Europe. It is the first time that a transoceanic power thus boldly arises against a member of the European society of states. And to think that this power is the United States, which owes to Europe its very existence and its civilization."

However, there is as yet no talk of interference between ourselves and Spain. The *Nieuws van den Dag*, Amsterdam, expresses itself to the following effect:

It is generally believed that the European powers have consented to remain neutral in case of war between the United States and Spain. The powers have declared this in answer to a question from the United States. A similar course was pursued by the American Government in 1875, when a conflict with Spain seemed imminent. Then, however, the answers were less favorable, and no war was begun. It is worth while to mention here the opinion of the Pope. Asked whether he would offer his services as arbiter, His Holiness is reported to have said: "That is impossible! Spain is so clearly in the right, and she has made so many sacrifices, that no terms can be suggested to her. It would be unjust to demand further concessions from her!"

That we can whip Spain in short order is rather doubted. Our best chances, according to foreign opinion, lie in putting the war off for a while. Broussart v. Schellendorf, Prussian ex-Minister of War, is reported to have expressed himself to the following effect:

In German army circles the fighting ability of the United States army is not valued very highly. Moreover, it can not be brought into play until the Spanish fleet has been totally destroyed. The American is hardly powerful enough to do that. The faulty organization of the American army does not permit a speedy landing in Cuba and a successful campaign there. The Americans must try to gain time to organize an efficient force. That can not be done in a hurry. Spain must try to prevent it, but she can only do so by declaring war. But Spain does not want war. Every delay is to the advantage of the Americans, yet it will be a long while ere they have an efficient attacking force. That is the fate of all militia organizations.

The *Tageblatt*, Berlin, says:

"The end of such a war can not be doubtful if the American navy does its duty. . . . Spain can have some success only if she takes advantage of the unreadiness of the United States. The Americans know this, and will try to gain time. The period of preparation is always dangerous for a state with militia organizations and enlisted crews. If America can get the necessary time, she need not fear the result of a war despite her militia."

A correspondent of *The Westminster Gazette*, London, thinks the insurgents will have to accept autonomy unless the war comes. Spain is thought to be willing to grant almost complete independence, but will not withdraw her flag. There are now 100,000 Spanish soldiers on the island, and 50,000 volunteers.

The latter drill once a month. The correspondent concludes as follows:

"It has been frequently suggested that the campaign here on the part of the Spaniards is carried on in a very lukewarm manner. Certainly this is borne out by what one sees in the city of Havana. The soldiers do not look in fighting trim, and the officers drink, breakfast, dine in the hotels and cafés in a way that to the casual observer suggests that nothing is farther from their thoughts than actual warfare. I am told, however, that should a war with the States ensue this will be quite changed—that the old Spanish blood is rising to boiling-point owing to what is considered to be the arrogance of the Yankees."—*Translations made for THE LITERARY DIGEST.*

SOME FACTS REGARDING MARINE ARTILLERY.

PECULIAR ideas are at times entertained with regard to the strength of battle-ships, the power of explosives, and the ease with which a ship may be sunk. We take the following on the subject of modern war-ships and their fighting capacity from an article by v. Kirchmayr in the Austrian *Mittheilungen aus dem Gebiete des Seewesens*:

The power of modern guns of heavy caliber is such that every projectile which does not hit a thickly armored part, or strike at a very acute angle, must cause frightful destruction in the interior of a vessel. But as the heavy armor covers hardly more than a third of all parts visible above the water-line, it is more likely that an unarmored part is hit than that armor will be struck. One lucky shot can disable a ship, a few lucky shots may decide a battle. It is this consideration which causes the Germans to be so specially careful in the training of their marine artillery. But it is not very likely that the percentage of hits will increase in future. The increased speed of the vessels prevents that. Ships armed with the heaviest ordnance can begin to fire at a distance of 6,000 to 7,000 meters [$3\frac{1}{2}$ to $4\frac{1}{2}$ miles]; with guns of a somewhat lighter caliber, at 5,000 to 6,000 meters. The heavy guns, indeed, carry much farther; but it would be useless waste of ammunition to fire at a ship more than three or four miles away, and a modern ship can not afford to waste its ammunition any more than its coal. With modern facilities for loading, a battleship could fire away its entire stock of ammunition in less than an hour, and who can say that it will be quickly replenished?

The following will show that, to-day as ever, "many a ball will pass by many a man," and that the number of possible hits is much less than is generally supposed. The statistics are taken from the British Admiralty reports:

Only two of the 101 ships that are considered in the report still carry muzzle-loaders. Of these the *Inflexible* fired eight times with its enormous sixteen-inch caliber guns. The *Dreadnought* fired sixteen times with its fifteen-inch guns. No hit was recorded. The same was the case with thirteen shots fired by the *Benbow* and *Sanspareil* (sister ships of the unfortunate *Victoria*) out of their sixteen-inch breech-loading guns. The *Colossus* made but one hit with seventeen shots out of its breech-loaders of slightly ancient pattern. The *Camperdown*, which has more modern ordnance, recorded six hits in fifteen shots. The average of this increases as the caliber decreases. The armored cruiser *Imperieuse* made twenty-two hits with twenty-nine shots out of its eight-inch breech-loaders, which, however, was rather a phenomenal result. On the other hand, some of the smaller guns produced less satisfactory records. The cruiser *Sybille* did not hit anything with thirteen shots, and the *Lambrian*, *Intrepid*, and *Astrea* made only one hit with eleven, twelve, and fourteen shots respectively.

In the rest of his article the writer defends his impression that the comparatively small but heavily armored ships of the German navy, armed almost exclusively with quick-firing guns from ten-inch caliber down, must be reckoned with in marine warfare as possessing very high fighting value.—*Translated for THE LITERARY DIGEST.*

MISCELLANEOUS.

PICTURESQUE BURMA—THE LAND AND THE PEOPLE.

IN the recent literature of France, it is notable that the two works of most signal interest, inasmuch as they are descriptive of the two Oriental lands and peoples that stand for all that is most significant and fascinating in the passing transformations of the Orient, are by women—Mrs. Bishop's "Korea and Her Neighbors" (see LITERARY DIGEST, March 26), and Mrs. Ernest Hart's "Picturesque Burma."

Sangermano wrote, a hundred years ago, "there is not, in the whole world, a monarch so despotic as the Burmese emperor." History affords no record of a despotism more absolute. The king was lord, not of the soil only, but of the lives, the persons, the property of his subjects. A nobleman of the highest rank could be instantly executed at the whim of his royal master. In Crawford's time, a distinguished minister of state was condemned to be "spread-eagled in the sun," bound fast on his back, in the public way, with a heavy weight on his chest; and King Hpagyidoa beheaded the royal architect of his new palace at Ava because the golden *htee* on the spire was struck by lightning! Even the British-Indian Government, in its earliest relations with the court of Burma, stooped and groveled to address the king in terms of most fulsome adulation:

"Placing above our heads the golden majesty of the mighty lord, the possessor of mines of rubies, amber, gold, silver, and all kinds of metals; of the lord under whose command are innumerable soldiers, generals, and captains; of the lord who is king of many countries and provinces, and emperor over many rulers and princes, who wait round the throne with the badges of his authority; of the lord who is adorned with the greatest power, wisdom, knowledge, prudence, foresight, etc.; of the lord who is rich in the possession of elephants and horses, and in particular is the lord of many white elephants; of the lord who is the greatest of kings, the most just and the most religious. The master of life and death—we, his slaves, the governor of Bengal, the officers and administrators of the company, bowing and lowering our heads unto the sole of the golden foot, do present to him, with the greatest veneration, this our humble petition."

And this was the same governor and company that afterward pounded his stockades about his ears, annexed his great provinces one by one, and yanked the "golden foot" off his throne, shipping him to abject captivity in Madras!

Alompra, the founder of the dynasty, was a man of obscure birth, undaunted courage, unbounded self-assertion, with great ability and force of character. He conquered Pegu, achieved the independence of Burma, and elevated himself to the supreme power; but the kings of his line were homicidal maniacs. It is an almost tedious story of fanaticism, drunkenness, debauchery, incest, insane ferocities, and ingenious cruelties. Mindohn Min was the one pious and illustrious exception in the house of Alompra. He is described as beautifully mild and reasonable; when any member of his council or court annoyed him, he did not rudely impale or burn the objectionable personage; he simply remarked, "I do not wish to see that person any more," and he never did! Even as late as 1858, human victims were buried alive, according to the royal custom, under the walls of Mandalay: "Three under each of the twelve gates of the city; one under each of the four corners of the wall; one under each of the palace gates; one at each corner of the timber stockade of the palace; and four under the throne of the king. The victims were persons of representative rank, and the boys and girls selected were so young that their legs were not tattooed nor their ears bored."

But in November, 1885, the scene was shifted. General Prendergast led his troops, unopposed, into the palace stockade, and presented—booted and spurred, without making obeisance—the

fated ultimatum to the king, requiring Theebaw to surrender his crown and his kingdom within twenty-four hours:

"In the night that followed, Mandalay was given up to terror and lawlessness; soldiers looted, dacoits marauded, prisoners escaped. In the gilded palace, the Queen hastily gathered her jewels together and prepared for flight; but General Prendergast was awakened by the Tyndah, and warned that his royal prisoners would escape in the confusion. . . . The next morning early, King Theebaw was hurried without ceremony into a bullock gharry, and Queen Supayah Lat into another; and thus they were conveyed, through a great crowd of their subjects, awe-stricken and weeping, to one of the steamers of the Irrawaddi Flotilla Company. Here a guard of soldiers was drawn up, and when the royal prisoners came aboard, they drew their swords, and presented arms. As the naked sabers flashed in the sunlight, the craven king fell on his knees and cried in terror, 'They will kill me. Save my life!' But Queen Supayah Lat strode on erect, with her little child clinging to her dress—dauntless and fierce to the last."

It is a relief to turn from the hideous spectacle of a besotted and insane despotism to the later picture that Mrs. Hart throws upon her canvas. The array of a ruthless bloodguiltiness—the heathen in his madness—has been confronted by a corporal's guard of American missionaries, armed with Bibles, and supported by a formidable host of British missionaries, armed with bayonets. Burma, if not evangelized, is at least reformed. One Sunday evening, Mrs. Hart, roaming through the palaces of Mandalay—so lately the scenes of barbaric magnificence and massacre—was startled by the sound of an English hymn, sung in King Theebaw's audience hall. A British chaplain, with a British regiment for a congregation, was holding the evening service. In the heart of the Burmese Empire the conquering race had set up its altar to God, and the despot who styled himself "King of kings" was supplanted by Jehovah.

And now the curious globe-trotter, in pursuit of the picturesque, makes pleasing excursions up and down the Irrawaddi in the steamers of the Flotilla Company, preferring the cargo-boats for the amusement they afford. Such a boat is a traveling bazaar, and carries peripatetic shops to the dwellers on the banks. The races are various that one finds among the passengers: Kachins, with brown, good-humored faces, small eyes, flat noses, huge turbans; Shan merchants, soiled and unsavory, in great flapping sun-hats; prosperous pig-tailed Chinamen, "childlike and bland," counting their gains; Buddhist priests, patient and contemplative, telling their beads. In every village is a monastery, and pagodas crown the hills; contented family groups squat in the open cottages, where the wood-fire dances in the middle of the floor. "There is no grinding poverty in Burma; a bounteous soil, a hot sun, a religion with an excellent moral code, and the absence of intemperance have combined to make a happy race."

There are no disabling restrictions of caste, the women are free, the children are fondled, marriage is respected. "The gay manners, the amiable temperament of the Burmans, are remarked by all travelers." A Burman's house is of one story: no man's or woman's feet must stand above his head. It is a sensible house, simple and commodious, built of the light bamboo, and raised on posts seven or eight feet from the ground, with an eye to river floods and possible earthquakes. It is thatched with the leaves of the toddy-palm, soaked in salt-water to render them insect-proof. But these roofs are inflammable; therefore chatties of water are kept always on the thatch, and, leaning against the wall, there is always a long, hooked bamboo pole and a wooden flapper, the pole to tear off a blazing thatch, and the flapper to beat out the flying fragments.

Within, there are few belongings. A rush mat laid on the floor and protected by mosquito-nets hung from the roof, a joint of bamboo for a pillow, and a few rags when the nights are chilly—these make a good bed for a wise man; and he will be content

with a great circular dish and a few platters and lacquer bowls for his table "service." The Burman at play is seen at his best in the boat-races, in displays of fireworks, in games of football, in the boxing or wrestling matches, in cock-fighting, and even in his picturesque chess, with its king, and general, its war-chariots, and its elephants, its horsemen, and its footmen. The Burman at work is a husbandman in the paddy-fields, or a bell-founder, or a wood-carver, or an artist in lacquer, even a clerk,—tho in this latter capacity he may be reckoned among the "kittle cattle" that are hard to drive, for he will stand no browbeating; not that he will offer armed resistance, but that he will inevitably discharge himself, without warning, without even remonstrance, for he has tasted the rapture of the boat-race, and he knows what it is to dance in the bazar for the pure joy of the sunshine and the flowers.

The "advanced" American woman will hardly be prepared to believe that women in Burma "are probably freer and happier than they are anywhere else in the world." While her neighbors on the one side, the women of China, are held in contempt, and those on the other, the women of India, are confined in strict seclusion, the Burmese woman has achieved for herself a freedom of will and action that has no parallel among Oriental peoples; because she is energetic and industrious, while her brothers are indolent and often recluse. She is the money-getter, the buyer and seller, and the financier of the household. She is a born trader and it is she, rather than her husband, who drives the bargain with the English buyer for the paddy harvest. The business of the Burmese woman is to be pretty, good, amiable, and gay—and to "hold up the market" when she is making a contract with a British trader for timber or forage.

There is no need in Burma for a married woman's property act, for all property belonging to the bride before her marriage remains to her absolutely. All profits arising after marriage from the employment or investment of the separate property of either husband or wife, and all property acquired by their mutual skill and industry, are held as "joint" property. The husband can not sell or alienate it without her consent; even if she is not engaged in business, it is acknowledged that she fulfils her part of the contract by bearing children and faithfully discharging her household duties, and she still retains her control over the "joint" possessions.

In the intervals of business she rocks the cradle and cuddles that blessed baby. Here is one of her cradle-songs, "done into English" by her countryman, Shway Yoe:

"My prince, my sweet gold blood, my son,
 Ordained a regal race to run,
 Listen to your mother's coaxing,
 Listen to the song good folks sing:
 When little boys
 Make such a noise,
 Comes the Brownie
 On wings downie;
 Comes the wood-sprite
 In the dark night,
 Witch and warlock,
 Mere and tor folk,
 Kelpie, nikker,
 Quick and quicker,
 Gobble all bad babies up!"

Now, Burmese orchestras are learning to play "God Save the Queen," "Auld Lang Syne," and "The Girl I Left Behind Me." But still the people are not wholly happy. They remember regretfully the gilded palaces, the gorgeous ceremonials, the reckless squandering of their kings. It is hard for them to become accustomed to the stupidly useful ways of the British policeman; in King Theebaw's time the dacoit was not useful, but neither was he stupid; and everybody knows that he was twice as lively. And to the pious Burman, schooled in a monastery, it is surely a sore offense to behold cantonment widows and dress-parade damsels junketing among gods and nats on the sacred terraces of Shway Dagon—the golden and glorious pagoda.

A Curious Alaskan Lake.—The rich placers of the Klondike are not the only curiosities of the country through which the Yukon runs, according to the *Revue Française de l'Étranger* (Paris), which tells us:

"There is in Alaska, nor far from Dawson City, a truly extraordinary lake, to which has been given the name of Salawik by its discoverer, Father Tosti, a missionary to the Indians of Alaska. This lake, which is sixty miles broad, is perhaps the only one in the extreme North which does not freeze in winter. It is not known to have any communication with the sea, and yet when the tide rises on the shore of the Arctic Ocean, the water rises in the lake, and lowers as soon as the tide in the ocean falls.

This sympathy with the sea, however, does not go so far as to make the water of Lake Salawik salty; on the contrary, its water is excellent for drinking. Another astonishing peculiarity of the lake is that its temperature rises in winter and falls in summer. Thus when all the water-courses in its neighborhood are frozen solid, the water of the lake becomes so warm that it is really pleasant to bathe in it. On the contrary, in summer its water is so cold that it chills you.

"This peculiarity causes the lake to be in winter the Mecca of the tribe of fishes who travel thither from all the water-courses which empty into it. The number of fish is so great that you can catch them with your hands and kill a considerable quantity of them with a stick. Thus there is opened to miners a considerable supply of provisions, on which they had not counted, and which will diminish greatly, without doubt, the cost of living in winter in those inhospitable regions. In an hour, a man can supply himself with fish enough to last him a month, and fish of an excellent kind, too, as, for instance, salmon of the best quality. It will not be astonishing, says *L'Événement*, of Quebec, if some fine day there is built, on the shores of Lake Salawik, one of those fashionable hotels which are the glory of American watering-places."—*Translated for THE LITERARY DIGEST.*

CORRESPONDENTS' CORNER.

The Communion-Cup Controversy—A Case in Point.

Editor of THE LITERARY DIGEST:

Anent the discussion on individual communion-cups, which will not down and ought not to until the matter is settled in accordance with the principles of ordinary cleanliness, let me rise to remark that one observation of a fact such as those detailed by Dr. Sangree, in your issue of March 19, is worth more than a thousand failures to observe or recognize facts, as is the case of those who "do not find disease to result from contact with impure cups."

An incident which came under my personal observation not long ago should be of value to those who are striving to establish the proper relation between cleanliness and godliness.

At a recent communion-service, two or three seats in front of my family pew sat a young person whom I had been treating for specific ulcer of the lip. Physicians will know what I mean by "specific ulcer." Suffice it to say that it is the highly infectious, primary stage of one of the foulest, most dreaded diseases that affect the human organism. This person partook of the wine, and the same cup was passed to the occupants of my pew. Being, fortunately, in possession of the facts, I declined it and succeeded in getting another cup which, at least, had not so clear a record of filth and infection. But how about those in the rear of my pew? M. D.

DUBUQUE, IOWA, March 21.

Lincoln's Unspotted Manhood.

Editor of THE LITERARY DIGEST:

You have, in the issue of March 12, given your readers some interesting items concerning Abraham Lincoln as a lawyer, and given Judge Bergen's and others' verdict "that the most pervading and dominant element of his character was his love of truth, not merely the moral avoidance of falsehood, but truth in its most comprehensive sense, correctness and accuracy in fact, in science, in law, in business, in personal intercourse, and in every field." After reading the above an incident occurred to my mind that may be of interest. I was seated one evening in a room with some twenty gentlemen who belonged to professional and business life. All had personally known Mr. Lincoln well, for he spent much time in the town (Peoria, Ill.), and his quaintness furnished them with many anecdotes. Some of the stories showed Mr. Lincoln's appreciation of jokes and readiness to perpetrate them. After the gentlemen present had concluded their narrations, I said: "You have all known Mr. Lincoln pretty well and said much to indicate his shrewdness as a lawyer. I would like to ask you individually, did any of you ever know Mr. Lincoln to be guilty of a mean act, one that you could say now and here that you would blush to repeat, anything that lowered his manhood or discounted his character?" I put the question to each man and the answer was, "No." I thought at the time it was a splendid testimony to the true nobility of the dead President, and might serve as a stimulus to others to strive and keep themselves "unspotted."

B. B. USSHER.

DEDHAM, MASS.

BUSINESS SITUATION.

Quieter and smaller distribution has been the feature of the week's trade. The quarter just closed, however, has been characterized, says *Bradstreet's*, by eminently satisfactory progress and "productive of an unprecedented business in many favored lines." Distribution at the East and South is reported slower, exports being somewhat checked by increased freight and insurance rates growing out of our unsettled foreign relations. The volume of iron and steel business continues heavy, naval and military armaments demanding large consignments. Heavy shipments of pig iron and steel rails are booked for Klondike and Honolulu. Boat-building is also active in the Pacific Northwest. The price situation shows little change, while failures are less. Stock speculation is active and nervous.

Cereals and Breadstuffs.—"The outgo of breadstuffs continues, Atlantic exports being 2,516,220 bushels, flour included, for the week, against 2,185,378 last year, and Pacific exports, 542,147 bushels, against 138,207 last year, and for the past five weeks from both coasts the exports have been 16,592,917 bushels, against 8,226,256 last year. Meanwhile, corn exports have been for the week 3,767,029 bushels, against 4,291,621 last year. All the speculative movements at the West have been less influential than this heavy and continued buying of grain, and Western receipts begin to fall off, as if supplies were no longer unlimited. Wheat has declined slightly, but corn has advanced one quarter cent for the week, and no one imagines that foreign troubles can check the outgo."—*Dun's Review*, April 2.

Stock Markets and Exchange.—"Speculation at New York has been active and excited, with wide

Registered Trade Mark

Black Dress Cottons

A handsome black gown for church or calling, made of cotton, would have been an impossibility a few years ago. Now the new weaves of Grenadines are reproduced in these fabrics, giving just as rich effect as in the silk or woolen goods, with the added charm of coolness and daintiness which has been so long conceded to the lighter colors in Washable Dress Fabrics.

We show many varieties of these black goods; most of them are so open that they show the foundation color very strongly.

MANY of the "mixtures" branded and sold as Pure White Lead contain little if any White Lead, but are zinc and barytes. Barytes is used because it is cheap, not because it has any value as paint.

Protect yourself by using brands which are genuine and made by the old Dutch process. See list of genuine brands.

National Lead Co., 100 William St., New York.

fluctuations in prices. Marked recoveries have been scored on the reports indicating a diplomatic settlement of the Cuban question, shorts covering extensively and Europe appearing as a large purchaser. The market has, however, been erratic and subject to sharp variations, but at the end of the week displays sensibility to further unsettling reports, tho the floating supply of stocks is decidedly reduced. Bonds have been dull, but governments have had a sharp recovery and show firmness. Foreign exchange rallied to 4.84 for demand sterling, after a break to below 4.83½, on further liquidation of investment holdings of sterling. Large gold-importing arrangements aggregating \$8,900,000 were announced this week."—*Bradstreet's*, April 2.

Iron and Steel.—"The iron and steel market shows no decrease, for with works fully employed and some additional works put into operation for government purposes, pig is not lower anywhere, and at Pittsburg a shade higher for Bessemer, because of agreement by valley producers, while without agreement of Mesaba mines the purchases of ore at Cleveland were over a million tons for the week. Billets are still scarce and sheet bars in demand, tho wire rods are lower, and wire nails are weaker, in spite of the imperfect combination of makers. Other prices for manufactured products are unchanged, altho rails are a shade stronger, with a Russian order pending for 35,000 tons to complete the Pacific Railway, and plates are in very heavy demand, 6,000 tons for cars and 4,000 tons for other use at Pittsburg, with 10,000 more originating at Chicago, and structural orders covering 4,200 tons for buildings at the East, with 1,000 more at Pittsburg and many at Chicago."—*Dun's Review*, April 2.

WEAK LUNGS.

A book by Dr. Robert Hunter, of New York, gives all the latest discoveries of medical science regarding Consumption, Asthma, Bronchitis, and Pulmonary Catarrh, explains their differences, and points out the curative treatment of each form of lung disease.

Dr. Hunter is one of the oldest and most experienced lung specialists of the world, having devoted his professional life, since 1851, to the Special Study and Treatment of Lung Complaints. He was the first to discover Consumption to be a local disease of the lungs, and to show that it destroys life solely by strangling the breathing power of that organ.

He was the father of the local treatment of the lungs by antiseptic medicated air inhalations—the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only known germicide which has power to kill the germs of consumption in the lungs of the patient.

His antiseptic inhalation is the only scientific treatment of lung diseases. It applies the remedies to the very seat of the disease in the only direct and common-sense way. Its success is attested by thousands whom it has saved and restored to health from these dread maladies.

A copy of Dr. Hunter's book will be sent free to all subscribers of THE LITERARY DIGEST who are interested, by addressing him at 117 West 45th Street, New York.

BEACON LIGHTS of HISTORY,

By Dr. JOHN LORD, THE FAMOUS HISTORICAL LECTURER,

Busy Man's Library.

Is a biographical review of civilization, setting forth its great epochs and master minds, the thinkers of great thoughts, and doers of great deeds,—

THE WORLD'S LIFE AND PROGRESS

FOR FIVE THOUSAND YEARS. In Ten Volumes.

- Jewish Heroes and Prophets,
- Old Pagan Civilizations,
- Antiquity,
- Middle Ages,
- Renaissance and Reformation,
- Great Warriors and Statesmen
- Great Women,
- Modern European Statesmen,
- American Statesmen, and
- Nineteenth Century Writers.

"Many owe their enthusiasm in the study of history to Dr. Lord."—Francis L. Patton, Pres. Princeton College.

"He has inspired large numbers of thoughtful young men to historical study."—Andrew D. White, Ex-President Cornell University.

"Graphic, eloquent, wide in range."—Richard S. Storrs, D.D.

"In its department I know of nothing finer. Here epochs are men and history is life. Faultless in style, in subject-matter comprehensive, in the interpretation of events accurate, and in description most charming."—S. D. Faust, D.D., Prof. Church History, Union Biblical Seminary.

Fair, inviting page, clear type, fine paper, tasteful and substantial bindings, befitting a standard work. Complete in Ten Volumes, Demy 8vo, 5,388 pages. Easy Payments. Full Index to each volume and List of Authorities with each Subject.

FORDS, HOWARD & HULBERT, New York.

Canadian Trade.—“While a rather smaller volume of business is reported doing at most Canadian cities, that already done has been so satisfactory as to allow of cheerful views as to the future. The opening of navigation, which occurs this week, has aided to an extent already, and will to a much greater degree in the future improve general demand and distribution. Toronto reports some travelers already starting out with fall samples. Hardware is in better movement than usual on good demand from the Northwest and the mining-camps. Wool is unsettled and lower prices are anticipated for the next Canadian clip, which promises to be fully an average, because of the lack of the American outlet possessed a year ago. Prices of most products are firm at Montreal, and the lowering of freight rates consequent on resumption of water transportation is expected to benefit trade at that city. A fair business is doing in the maritime provinces, where the weather is more favorable. Fish is firm, but there is practically nothing doing in lumber. Reports from the Newfoundland sailing fleet are on the whole favorable. Colder weather on the Northern passes has again stimulated outfitting trade at Vancouver and Victoria. Failures in the Dominion of Canada for the first quarter of 1898 number 516, with liabilities of \$3,800,000, a decrease of 24 per cent. in number and of 20 per cent. in liabilities from one year ago. Bank clearings in the Dominion of Canada for the month of March aggregate \$113,568,000, a gain of 50.6 per cent. over March a year ago, while for the three months the total bank clearings aggregate \$339,829,000, a gain of 44.5 per cent. over a year ago.”—*Bradstreet's*, April 2.

Current Events.

Monday, March 28.

The report of the *Maine Court of Inquiry* is made public with the testimony taken. . . . The Spanish Government announces that it will not object to the sending of relief to the Cuban reconcentrados. . . . Anton Seidl, the Wagnerian musical conductor, dies in this city. . . . Congress—President McKinley sends the report of the *Maine Court of Inquiry*, accompanied by a message to both houses; the documents are referred by the Senate to the foreign relations committee and by the House to the foreign af-

MAY TOUCH YOU.

When you read this article think about yourself and not someone else. The journal “Life and Health” says: “Among the more common evil effects which result from the use of tea or coffee are dyspepsia, nervousness, insomnia, headache, (especially sick headache) biliousness, palpitation of the heart, abnormal action of the liver, and constipation.” Does not common sense appeal to you to leave off the drugs (tea and coffee) and again drink in the Divine sensation of perfect bounding health?

Hard to quit?

Have Postum Food Coffee served in place of the regular, and in 10 days you will find coming back the old feeling of strength and physical peace that makes life worth the living.

This liquid food is made of selected parts of the cereals that go directly to rebuild the broken-down nerve centres in brain and all through the human body, making a strong heart and stomach, steady nerves and clear complexion. Packages at grocers 15 & 25 cents.

fairs committee, without debate. . . . Senator Money, of Mississippi, delivers a speech on the Cuban question, deprecating further efforts to maintain peace. Lieutenant Niblack has purchased conditionally for the United States a protected cruiser building at Kiel for a South American government. . . . Minister Woodford, at Madrid, communicates to the Spanish Government an extract from the report of the American Board of Inquiry into the *Maine* disaster. . . . The navy bill is adopted without division and amid cheers by the German Reichstag. . . . Mr. Gladstone has been informed that he has no chance of recovery. . . . The Russian flag is hoisted at Port Arthur and Talien-Wan.

Tuesday, March 29.

Negotiations between Washington and Madrid for a settlement of the Cuban question continue; members of the House of Representatives who favor radical and immediate action for the independence of Cuba hold a conference and draw up a program. . . . Captain Sigsbee is cordially welcomed at Washington. . . . At a powder-mill in Tennessee three thousand kegs of powder explode, seriously injuring several persons. . . . Congress—Senate: Four Cuban resolutions are introduced, one being a direct declaration of war against Spain and the others favoring independence and forcible intervention. House: Three Cuban resolutions are introduced; the day is spent in consideration of bills on the private calendar.

General Woodford, the United States Minister, holds a conference of an hour's duration with Premier Sagasta and several of his cabinet ministers. . . . The Russian Government has made known to all nations the Chinese concessions it has obtained, and says the port of Talien-Wan will be opened to ships of all friendly nations. . . . The Government of Prussia has been asked to exclude all American apples from that country.

Wednesday, March 30.

President McKinley's latest note to Spain demands absolute independence of Cuba of Spanish control. . . . The sailing of a Spanish flying squadron from Cartagena causes considerable concern to the Navy Department; measures have been taken to guard against a raid on the fleet at Key West. . . . A cable has been laid between Key West and Dry Tortugas. . . . It is announced that S. R. Callaway, president of the Lake Shore railroad, will succeed Chauncey M. Depew as president of the New York Central on April 20, when Mr. Depew will become chairman of the boards of directors of the Vanderbilt lines. . . . Secretary of the Interior Bliss has sent to Congress a deficiency estimate of \$8,070,872 for pensions for the current fiscal year. . . . Congress—Senate: The Cuban question does not come up, the great crowds are present, in expectation of an exciting debate; the Alaska civil government bill is passed. House: A resolution recognizing the independence of Cuba, offered by Mr. Bailey, the Democratic leader, is ruled out of order by Speaker Reed, whose decision was sustained by a vote of 180 to 139.

Two Spanish cruisers and a torpedo gunboat sail from Cartagena, it is presumed, for Cuba. . . . The United States has bought in Sicily the steam yacht *Aegusa* for \$300,000. . . . A carrier-pigeon from the French line steamer *La Bretagne* announces that the steamer would be delayed by assisting an English sailing-vessel in distress. . . . Sir Charles Dilke in the House of Commons attacks Lord Salisbury for holding the two offices of Premier and Foreign Secretary.

Thursday, March 31.

A despatch from Minister Woodford, presumably giving Spain's reply to President McKinley's demands, is received at the White House, but the contents are not made known. . . . The Senate foreign relations committee favorably reports Mr. Lodge's bill for the purchase of the Danish West Indies, which are offered to this Government for \$5,000,000. . . . Captain Sigsbee gives his views on the *Maine* disaster to the Senate foreign relations committee. . . . The New York legislature adjourns finally, after voting the governor \$1,000,000 as a war fund. . . . Congress—Senate: A Cuban debate is started by Mr. Frye's request that the resolution calling on the President for consular reports to be sent back to the foreign relations committee. House: There is an exciting discussion of the Cuban question, in which Representatives Johnson, Grosvenor, and Bailey take the chief parts.

At the conference of the Spanish ministers with General Woodford in Madrid fresh proposals are submitted by the ministers and telegraphed to Washington. . . . General Blanco is-

A WONDERFUL SHRUB.

For the benefit of readers who may be suffering from Bright's Disease, Rheumatism, Kidney or Bladder Disorders, Pain in Back, Gravel, and similar disorders, the Church Kidney Cure Company, No. 399 Fourth Avenue, New York, who are the importers of the Kava-Kava, state that they will gladly send a free treatment thereof by mail, prepaid, to any sufferer who applies for the same. If you suffer from any of the above maladies, send the company your name and address, and you will receive the free treatment by return mail.

The Tartar lithine Club.

In one of the principal towns of the North-west there has been formed one of the most curious clubs in existence at the present time. It is called the “Tartar lithine Club,” and its membership is composed only of persons suffering from gout and rheumatism.

The club was started by one of the leading pharmacists in the North-west, who was cured of rheumatism by taking Tartar lithine. The members meet at his store every day for the purpose of taking the mid-day dose. Each member has his own bottle, labeled with his own name, and these are arranged on a shelf in a corner of the store. At last accounts the membership was gradually decreasing, owing to the fact that the patients were no longer able to comply with the requirements for membership.

Pamphlet on Tartar lithine sent free by MCKESSON & ROBBINS, 98 Fulton St., N. Y., SOLE AGENTS FOR The Tartar lithine Co.

Baker, Tiffin, Ohio; The Rev. S. T. Thompson, Tarpon Springs, Fla.; T. C. Kierulff, San Francisco.

Comments: "Short, pretty, and easy"—M. W. H. "Shows skill in construction"—H. W. B. "A clever device"—I. W. B. "Good. I think I have seen something like this, some antique curiosity that gave Mr. Loyd his cue"—F. H. J. "Very

beautiful in conception"—C. Q. De F. "A little beauty"—G. P. "Short and sharp"—C. F. P. "Clever"—N. C.

No. 269.

This problem, altho it was awarded first prize, has two solutions: Kt—B 6, the key-move of the author's solution, and Q—Q B 8.

Both solutions received from M. W. H. and Courtenay Lemon, New York City.

First solution received from H. W. Barry, C. Q. De France, George Patterson, C. F. Putney, Dr. Humpert, Dr. B. M. C.; Mark Stivers, T. H. Vanner, Des Moines.

Comments: "I do not think I have ever seen a finer 3-mover but for the other solution"—M. W. H. "Variations exceedingly ingenious"—H. W. B. "An exceedingly hard problem"—C. Q. De F. "A fair, average 3-mover"—G. P. "One of the best you have published"—C. F. P. "Good"—Dr. H. "Quite intricate"—T. H. V.

Second solution received from the Rev. I. W. Bieber, Dr. Moore, Mrs. Wright, F. H. Johnston, C. W. C., E. L. Antony, C. R. Oldham, C. J. M. Grönlid, "Ramus," J. C. Eppens, Dr. Frick, Dr. Mueller, F. B. Zay, J. Jewell, C. Porter, F. S. Ferguson, D. W. Wilcox, New Orleans; C. J. Morrison, Chicago.

Comments: "Elusive and delusive as a fairy queen"—I. W. B. "I confess to disappointment in this 1st prize problem"—F. H. J. "Very confusing"—C. W. C. "Very good, but don't see why it should take first prize"—E. L. A. "Well conceived"—C. R. O. "The most complicated problem I have solved"—R. "A weak problem"—F. S. F.

R. J. Campbell, Danville, Va., and J. S. Smith, Linneus, Mo., were successful with 267.

The Rev. S. T. Thompson sends solution of 266.

The Problem Tournament.

Several problems have been received for the Tournament, but not enough to make it a success. You have until the 1st of May to study and plan, and we do hope that you will send us very many compositions. The four prize-problems will be published. We have not attempted anything in the Chess-Department of THE LITERARY DIGEST which has not proved successful. Whether or not the proposed Problem Tourney accomplishes the purpose for which it was started—to bring out the talent of our Chess friends—depends entirely upon you. Send in your problems, and send them as soon as possible.

The United States Championship Match.

Pillsbury won the twelfth game in the match with Showalter, on Friday, April 1, the victory giving him the match and the Championship, with the stakes of \$2,000. The following is the summary:

Game.	Date.	Opening.	Won by.
1	Feb. 25	French Defense	Showalter
2	" 28	Ruy Lopez	Pillsbury
3	March 4	French Defense	Pillsbury
4	" 7	P—Q 4	Drawn
5	" 9	Q's Gamb. Declin'd	Pillsbury
6	" 14	P—Q 4	Drawn
7	" 16	French Defense	Pillsbury
8	" 21	Ruy Lopez	Showalter
9	" 23	Q's Gamb. Declin'd	Pillsbury
10	" 25	Ruy Lopez	Pillsbury
11	" 30	French Defense	Showalter
12	April 1	Ruy Lopez	Pillsbury
Total—Pillsbury, 7; Showalter, 3; drawn, 2.			

The Cable Chess-Match.

That something must be done, and done effectually, to strengthen the American Team is admitted on all sides. We have just one more chance; if we lose in 1899 the Newnes Trophy goes to England, and the fact that England beat America three times out of four goes into Chess-history. The Brooklyn *Standard-Union* finds some consolation in calling attention to the relative strength of the players in the teams arranged "according to their known or computed strength." By this arrangement we find that the Americans were at the top by a score of 4 to 1, or 3 wins and 2 draws, the Englishmen not winning a game. Therefore, the match was lost by the tail-enders of the American Team. The problem is to select four players strong enough to hold up their end of the match. The general impression is that Pillsbury, Showalter, Barry, Hodges, Hymes, and Baird will be retained. To get the other four players *The Stan-*

dard-Union suggests a "preliminary tournament on a large scale, a public competition arranged by rounds, the team to be selected on the principle of the survival of the fittest." The "funny" man of *The Times*, Philadelphia, would reverse the order, the American tail-enders playing the British leaders; "then," he says, "while Blackburne is boring Young full of holes, Pillsy might get a game."

The Correspondence Tourney.

FIFTY-FIFTH GAME.

Notes by Three of the Judges.

(a) Here we have a Queen's Gambit offered by the second player.

(b) Hardly to be commended. Kt—K B 3 is better.

(c) We prefer Kt—Q B 3 or B—B 4. He blocks in his Q B and gives White an opportunity to attack on the K side.

(d) This is a lost move. The B should not leave the diagonal which he commands when posted on Q 3.

(e) B—Q 3 or K 2 is better. The exchange of the long-range B for the Kt that is very limited in its scope, is a mistake at this stage of the game. Furthermore, Black gets his Q B into play.

(f) Castles is best.

(g) Bold, and—see 13th move.

(h) Followed up in fine style. Quite cunning, but the average player looks twice before he accepts such presents.

(i) The 16th and 17th moves are both forced. The contest here is close and hot, requiring great circumspection.

(j) R x Q Kt P, dis. ch., is a crusher, followed by Kt—B 4, etc.

(k) R x Kt P, dis. ch., is still best.

(l) B—Q 4 is better.

(m) He should start his 40th move here.

(n) White plays skilfully, and fights gallantly a "lost cause."

(o) At this stage the game was abandoned as a Draw, as the players had agreed to call it such if Black could not mate in fifty moves. This was submitted to the Judges, and as there was not an unanimity of opinion, the game could not be awarded to Black. One of the Judges says that this game is very interesting, has more spice in it than any of the others.

Chess-Nuts.

Janowski, the French Champion, and Amos Burn, the Englishman, are going to play a match about the 1st of April.

Franklyn K. Young, of Boston, has given to the world his "Grand Tactics of Chess" (Roberts Brothers, Boston). The first general principle laid down by Mr. Young is to the effect that the occupation of that great central diagonal of the Chess-board which extends toward that side on which the opposing King has Castled or must ultimately Castle, is the chief essential for the winning of a game, and to establish his Pawns upon this diagonal, and particularly to occupy this diagonal by Pawns which extend by one and two squares into the hostile lines, should be the primary object of each player.

The Literary Digest

VOL. XVI., No. 16

NEW YORK, APRIL 16, 1898.

WHOLE NUMBER, 417

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

PUBLISHERS' NOTE.—Owing to trouble that has arisen in New York City between the printers' and electrotypers' unions, on the one hand, and the employers' associations, on the other, this issue of THE LITERARY DIGEST is likely to reach its readers a day or two late. We hope the difficulty will be adjusted in time to prevent delay in subsequent issues.

TOPICS OF THE DAY.

ARMY AND NAVY VIEW OF THE CUBAN CRISIS.

TO *The Army and Navy Register*, "the message of President McKinley transmitting to Congress the report and testimony on the disaster at Havana is a disappointment." The views of "the services" are expressed by that paper (April 2):

"It must be confessed by the most loyal supporter of the Administration—even at a time when the people of the country should sustain the President—that the disposition of the *Maine* incident, as it is somewhat complacently termed in the parlance of diplomacy, has been lamentably inadequate.

"We have cherished the notion that the President would regard the destruction of a ship under such circumstances as surrounded the Havana disaster and the loss of 266 lives of American officers and men as something more than a 'minor incident.' We confess to the belief that that affair, interjected into the controversy over reconcentrados and insurgent rebellion, would take precedence over matters which at least concern us remotely, if at all, and for interference with which we have really only the justification of humanity. The *Maine* incident is not a minor incident even should attempt be made to subordinate it to a charitable intercession in behalf of starving Cuba or to a military and naval intervention in behalf of belligerent Cuba. The *Maine* incident is vital to this country; it concerns the government directly; it calls for something more than indefinite and evasive terms.

"No sensible man believes the President was justified in asking a declaration of war on Monday, but he was in a position to be dignified and firm. The Court of Inquiry held sessions for a period of twenty-three days and produced a report which permits no doubt as to the cause of the disaster. The testimony sustains

the findings of the court abundantly; some of it would have justified the President in a position less amiable toward Spain. Moreover, the Administration knew the causes of the disaster within three days after the event. There should be on file in the Navy Department a cipher despatch sent from Key West which furnishes this information most conclusively. The testimony of naval experts who examined the wreck and the photographs which accompanied the report show that a submarine mine must have wrought the fatality and the havoc. The question of personal culpability was abandoned, naturally, but the question of responsibility can not be avoided.

"That testimony [of Captain Sigsbee and his associates] shows four features which should have moved the President to a sterner disposition of the incident. One was the opposition of the Spanish authorities in Havana to the visit of the *Maine*. Another was the unfriendly reception of the ship, the scarcity of visitors, and the confinement of social intercourse between the Spanish and *Maine* officers to merest formalities. A third was the circumstance of mooring, forming a significant passage in Captain Sigsbee's testimony, which more than intimates that the position of the *Maine* was an unusual one. A fourth feature was the condition of the wreck.

"With this information to sustain and inspire him, how can the President make the *Maine* incident one in which Spain may apply, leisurely, her curious methods of diplomacy; how can he say it is a minor incident? Why was he not justified in saying to Congress he had made a demand and tell what that demand was? His position gives the navy no assurance of executive protection. It is a disastrous and discouraging policy and justly meets with dissatisfaction.

"It should not be said that the *Maine* incident was the occasion of war, without preliminary negotiation, but it must be said that it is a subject which warrants prompt and unwavering demands upon Spain and that it concerns us more intimately than, and previous to, the relief of the Cuban sufferers or the freedom of the insurgents. It should be settled before those latter subjects are made the cause of war; it should be presented to the Madrid authorities in such language as will bring them to speedy terms. There should be no further delay. If the *Maine* incident calls for revenge, there should be war on that account; the facts do not permit of any arbitration or very much diplomatic negotiation.

"We go out of our way when we talk of the Cuban incident; we do our duty to our country and our countrymen—buried in the Havana cemetery and dead in the wreck at Havana harbor—when we meet the *Maine* incident directly in time and tenor."

The Army and Navy Journal under the caption "How to Deal with Spain," suggests that Mr. Phelps (quoted in THE LITERARY DIGEST last week) would have done well to limit himself to matters of law as to which he is well instructed; "unfortunately for his credit he goes outside of his province and makes a melancholy display of ignorance in his attempt to plead the cause of Spain against Cuba and against the American people." Causes of frequent quarrel with Spain are cited. John Quincy Adams is quoted as writing, in 1818, during the controversy over cession of Spanish territory, that Spain, like "Harlequin Roi," says "'Let there be peace,' but will agree to nothing which is necessary to secure peace." *The Journal* continues

"As Mr. Adams shows, there is but one course to follow with Spain; that is to determine what our interests and rights demand and to insist upon an immediate decision of the question as to whether they will or will not be conceded. It is further necessary that we should make it perfectly clear that we will yield nothing of what we have decided upon as right through fear of Spanish displeasure, or because of our dread of war and the losses that may consequently accrue to what is known as the 'conservative element,' that is to say, those to whose perverted

vision a dollar seems larger and more important than a man; whose creed was declared in the frank message to Washington from a Wall Street operator, asking 'What is the loss of 250 lives to a universal depreciation of values?'

"Shall the blood of our brothers cry out from the ground in vain against this mercenary and sordid view of national honor and national duty?"

"It is not for us to determine what we may rightfully demand of Spain, but the question as to what that is should be decided at Washington and the Spaniard should be no party to the discussion. Our course once clearly mapped out, let us follow it to the end, whatever be the consequences. The rights of Spain and the obligations of international comity should be considered, but not as concessions to Spanish demands, for we may be quite sure that if there are any concessions to argument, to reason, to right feeling, they will be all on our side. Such at least is the teaching of all previous negotiations with Spain.

"Recall the history of the *Virginius* affair which in 1873 so nearly resulted in war. It is thus told in brief in Andrew's 'History of the Last Quarter of a Century in the United States': 'When the news of the outrage reached this country, innumerable meetings were held. President Grant convoked his Cabinet to deliberate upon the case and the navy yards were set working night and day. The Spanish minister of state at first haughtily rejected our protest, saying that Spain would decide the question according to law and her dignity. Madrid mobs violently demonstrated against the American minister, General Sickles. November 4, Secretary Fish cabled Sickles: "In case of refusal of satisfactory reparation within twelve days from this date, you will at the expiration of that time, close your legation and will, together with your secretary, leave Madrid." On the 15th, hearing that fifty-seven men had been executed, he sent word, "If Spain can not redress these outrages the United States will!" And on November 25: "If no accommodation is reached by the close of to-morrow, leave." Next day, Spain became tractable and Sickles remained and war was happily averted. Spain released the *Virginius* and all the surviving prisoners. Having been, on December 16, delivered to officers of our navy, the ship, flying the Stars and Stripes, proudly sailed for New York, but foundered in an ocean storm. The prisoners reached New York in safety. Spain solemnly disclaimed all thought of indignity to our flag and undertook to prosecute any of her subjects guilty in this affair of violating our treaty rights.'

"It is evident that Mr. Phelps's professorship at Yale does not include the study of American history. Great mischief is done by those like him whose nervous anxiety lest their selfish ease shall be disturbed leads them into perversions of fact and history. It is not with the Spanish nation but with the American people that our Government has to deal and they will not suffer the *Maine* incident to sink into oblivion. They can not be persuaded to dismiss it as Mr. Phelps does so flippantly and as one with which the Spanish Government has no concern.

"We have never advocated war with Spain, but we can establish no lasting peace with her which is not founded in an unflinching assertion of our just rights as well as the recognition of what is due to her. As usual with those who appeal to prejudice rather than reason, Mr. Phelps has something to say about 'the best class of American people,' meaning the class for whom he speaks. It was thus that the Puritan fathers 'resolved that the saints shall possess the earth; resolved that we are the saints.'

"A reasonable and judicial statement about matters he is supposed to understand would have been welcome from Mr. Phelps. He discredits himself when he seeks, in opposition to the facts of history, to show that it is the Cubans, who seek liberty, and the Americans who sympathize with their just aspirations who are

responsible for the woes brought upon Spain by her unwise, corrupt, and cruel administration of the affairs of her provinces."

GERMAN-AMERICAN OPPOSITION TO WAR.

IF the German-American papers voice the opinions of their readers, then the overwhelming majority of the latter think war with Spain would be frivolous and unjustifiable. The German-American editors express no doubt that, in the long run, the United States must win; but they fear that it will be at a tremendous cost, and think the game is hardly worth the candle. Moreover, they are extremely skeptical with regard to some of the popular ideas regarding our ability to carry on a war. They expect the army to meet with serious reverses, have their doubts about the readiness of the navy, do not believe that our ports are properly fortified, and even think that Uncle Sam, tho richer than the Spaniard, is not quite so wealthy as he is said to be, and that he can ill afford to waste money on a war. The *Staats-Zeitung*, New York, says that "people who have no patriotism drive us into a war whose end no one can foretell, altho it is quite probable that the American dollar will in the long run be mightier than all the bravery of the Spaniard." But it discusses the financial features of the situation to the following effect:

"When the \$50,000,000 appropriation was made, people were very proud of it, and hardly asked how it came about that the money was ready. The cash was there, and the nation thought that the funds necessary for actual warfare could be obtained as easily. The awakening from this dream is a little rude. Another fifty or even hundred millions do not end the business; the real expense will come when the war has begun. It is no exaggeration to say that the army and navy will cost us \$1,000,000 a day, not counting repairs, which will of course be necessary. How about pensions? We pay to-day, thirty years after the war, \$150,000,000, and do not seem to have reached the highest figure. Extensive loans will be necessary, and the interest on them must be paid if the credit of the Government is to be up-

held. The running expenses will have to be defrayed out of war taxes. Beer, sugar, coffee, and tea will first be taxed because the masses of the people need them. Hence the poorer people will have to pay the piper. It is nonsense to say that this war will be a mere military parade. It will cost enormously in blood and treasure, and we can only hope that the American people may not be dissatisfied with their gains at the end of the struggle."

The Cincinnati *Volksblatt* is under the impression that most Americans wish for the war "because it will boom business," a view which that paper does not share. The conditions, it thinks, are not the same as thirty years ago. It utters the following warning:

"Those proud gentlemen who demand war for the preservation of our national honor, forget altogether that it may bring us deep national disgrace. According to modern ideas there is no disgrace so great as when a nation is unable to meet its financial liabilities. That may very easily happen to us. War swallows up gold in enormous quantities. The European governments know this well enough, hence they have provided great quantities of gold to be used only in case of war. If our expenses are doubled, which would undoubtedly happen in case of war, our gold reserve would vanish in a very short time, and the United States Government would be forced to declare its inability to make gold payments. Talk about disgrace—that would be worse than if the Spaniards licked us!"

COMMODORE WINFIELD S. SCHLEY,
Commanding the "Flying Squadron."

The *Seebote*, Milwaukee, prints the following advertisement:

UNCLE SAM'S STORE,
WASHINGTON, D. C.

We buy for cash, at highest prices, second-hand men-o'-war, steam-boats, herring boats, brick barges, apple barges, etc. If called up by telephone we will send man to fetch goods. Foreign dealers preferred.

WM. MCKINLEY, Manager.

and says:

"How much of the \$50,000,000 appropriation goes into certain bottomless pockets? How many of our own starving people could be fed, to make up for the 'prosperity' we enjoy, with the money which is thrown away on Cuba? Will the heroic Republican Senators and Representatives form a volunteer corps among themselves and lead Uncle Sam's forces in the fight they have begun 'for the sake of humanity'?"

The *Freie Presse*, Chicago, wants to know if, "in Washington folks have gone crazy," and asks if "that gang of politicians think hard-working people 'make money' as easily as they," or whether they fancy that "money is to be found in the streets and may be played with like pebbles." The *Westliche Post*, St. Louis, which certainly admires McKinley, remarks that "eight persons were found almost starved to death on one single day in New York, yet these were not 'reconcentrados.'" In another place this paper says:

"At no time in our history was peace more needed, the country is only just reviving from the effects of the business crisis. A war must necessarily close many factories which have only just been opened. Many more people will be thrown out of work, yet the necessities of life will be enhanced in price. However glorious the war may be, it must leave us with a great national debt, to be paid by the poorer people, whose living will be rendered more expensive. . . . What are we to do with Cuba? The island has a debt of \$600,000,000, which we will have to pay. Very few people seem to realize that."

The *Wächter und Anzeiger*, Cleveland, says, in effect:

There are actually to be found people who think war is an economic blessing! They forget that you can not deduct something from naught, and that every cent spent by the Government must be provided by the people. The \$50,000,000 were not taken out of a surplus, but from the money obtained by the sale of gold bonds, which enhanced our national debt about \$500,000,000. The money has to be paid back in gold, unless we want to be called "repudiators" by the usurers. Those \$50,000,000 are only a drop in the bucket, hundreds of millions must be spent ere we can finish Spain, weak as she is. And who pays the piper? *The man who has to work for a living!* If only the war could be paid for by an income tax, and if we had universal military service, so that every man called upon to serve would have to fight himself! As it is, the war is brought about by speculators whose pockets and persons are safe. They yell for war because *others* must pay and *others* must die to please them!

The Socialist *Volks-Zeitung*, New York, explains that our export trade, which has only just begun to make itself felt, will be ruined. After the war it will be resumed, but at the expense of the workingmen, whose wages will be reduced to make competi-

tion possible. *During* the war the poorer classes will have to pay the expenses by a tax on beer, tea, coffee, and sugar. This paper, moreover, says:

"Some people fancy that a war would bring about a better understanding among the different classes, but that would only be temporary. But the old differences would make themselves felt directly after the war. We Socialists must remember this: Not 'the Spaniards' are our enemies, nor are 'the Americans' our friends. We have friends and enemies on both sides. Our comrade in arms is the Spanish workingman, our enemy the American capitalist as well as the Spanish capitalist. Let the capitalists fight if they choose, workingmen must and will protest against this war."—*Translations made for THE LITERARY DIGEST.*

THE COMPROMISE CURRENCY-REFORM BILL.

VARIOUS plans of monetary reform favored by Republican Congressmen belonging to the House Committee on Banking and Currency, have been combined in a bill reported from a subcommittee and introduced in the House of Representatives on April 5. An important portion of the daily press which urges the paramount necessity of currency reform, while taking exception to certain features of the proposed bill, inclines to accept it as the basis for the best measure obtainable at this time. Financial journals, as a rule, condemn one or more of the proposals in the bill. We quote two views of the scope and value of the measure. The first is from the *New York Evening Post* (Ind.):

"Two or three weeks ago a subcommittee of three members of the general committee, consisting of Messrs. McCleary of Minnesota, Prince of Illinois, and Mitchell of New York, was appointed to consider the various bills and report one for the consideration of the whole committee. This task has been done,

and an outline of the work has been given to the press. It embraces features of Secretary Gage's plan, of the plan of Mr. Walker of Massachusetts, the committee's chairman, and of the monetary commission's bill, and has some new features not found in previous bills. It begins with that part of Secretary Gage's plan which contemplates the separation of the banking functions of the Treasury from its other functions. It provides for a division of issue and redemption in the Treasury, for which the Secretary is authorized to set aside the general cash balances in excess of \$50,000,000. This excess, on March 17, 1898, was \$176,139,532. United States notes received by this division for redemption in gold are to be canceled and retired in proportion as certain substitute currency is issued. No note redeemed in gold is to be again paid out except under exceptional conditions.

"The bill proceeds upon the idea that gold is the basis of our monetary system. Everything which looks to redemption of paper-money by either banks or Government looks to gold redemption. This is a capital point. It makes an issue, from

SEÑOR POLO Y BERNABÉ,
Spanish Minister to the United States.

which it is not possible to escape, between the gold standard and the silver standard.

"Under the bill the banks are required to assume the current redemption of United States demand notes in order to obtain circulation based upon their commercial assets. A new class of notes, called national reserve notes, is to be issued in lieu of legal-tender notes deposited by the banks with the Treasury, and these reserve notes are to be redeemed upon demand by the banks out of the redemption fund, which they are required to maintain in gold. These reserve notes are not treated in any respect as bank-notes, because the banks are not liable for their ultimate redemption. The Government is liable for their ultimate redemption, but meanwhile they are available as bank reserves, and are legal tender exactly like the greenbacks which are deposited in the Treasury against them. The reserve notes can be identified as having been issued to particular banks, while the greenbacks can not. Hence the need of the substitution of the one for the other under the plan. After the expiration of one year the banks will be allowed to issue their own notes against their commercial assets to an amount equal to the reserve notes issued to them in exchange for greenbacks deposited by them in the Treasury; but they must deposit a guaranty fund equal to 5 per cent. of all bank-notes outstanding, applicable to the redemption of the notes of failed banks, and this guaranty fund must be kept good, but no greater tax than 1 per cent. on circulation can be levied in any one year for this purpose.

"This is the crucial feature of the bill, and the question arises. Will the banks consent to assume the current redemption of the greenbacks in return for the privileges offered to them? As the bill stands, they are required to do so, willy nilly, if they remain in the national system, but they can resign their national charters and return to the state system, relinquishing the privilege of issuing notes. We think that the first impulse of the banks will be to reject the plan, but that upon further reflection they will accept it.

"The monetary commission's plan is the ideal one, but it is pretty plain that Congress will not accept it as a whole. The bill under consideration embraces that part of it which looks to the issue of bank-notes against commercial assets under governmental regulation, with a guaranty fund of 5 per cent. and a first lien upon assets. So much, at all events, will go to the credit of the Indianapolis movement, besides the credit of having stirred up the country to demand currency reform. Our judgment upon the bill of the subcommittee as a whole is that it is well worth fighting for, and that it has a good prospect of passing the House, and that it will meet with favor the more it is studied. We say this while expressing our preference for the monetary commission bill."

A different view is expressed by the *New York Sun* (Rep.):

"The committee proposes to add to our already sufficiently diversified currency a new variety, to be called 'national reserve notes.' These notes are to be issued to the banks, dollar for dollar, in exchange for legal-tender notes, to be deposited by the banks in the Treasury, and payment of them in gold is to be assumed by the banks receiving them. As compensation for the service thus assumed, the banks are to be allowed to issue their own notes without security, other than their own assets, to an amount equal to the amount of the legal-tender notes they deposit.

"The banks are also to be allowed to issue notes up to the par of the government bonds deposited as security for them, but upon such issues in excess of 60 per cent. of their capitals they are to pay a tax of 2 per cent., and upon an excess of 80 per cent. a tax of 6 per cent.

"For the redemption of the present legal-tender notes all the cash in the Treasury, in excess of \$50,000,000, is to be set aside as a redemption fund, and the notes redeemed from it are to be cancelled.

"To secure the redemption in gold of the notes assumed by them, as well as for those directly issued by them, the banks are to provide a gold fund, consisting of 5 per cent. of the entire circulation of each bank.

"The mental caliber and equipment of the concocters of this scheme are best exhibited by this innocent remark:

"The form of the proposition submitted by your committee makes that portion of the demand debt which is not now covered by gold in the Treasury a loan by the banks to the Government. This loan is made without inter-

est and without any compensation to the banks *except what is afforded them* by the power to issue a banking currency which is granted in other sections of the bill. *There is no profit* or return to the banks in thus carrying the nation's debt, and they are required by the bill to assume the entire obligation as compensation for the franchise and provisions granted the national banking corporations.'

"Considering that the banks are to receive back for every dollar of old legal-tender notes deposited by them new legal-tender notes, which they can lend out on interest, they can not be said to make any loan to the Government; and since they are, in addition, to be allowed to issue, upon the security of their own assets alone, their own notes to an equal amount, which they can also lend on interest, the compensation they are to get for their services would seem to be pretty large.

"The committee further exhibit their innocence of practical knowledge in this:

"The purpose and effect of the proposed bill is to throw upon the national banks the entire burden of finding gold for the notes of the country. *There is no doubt of their ability to do this* if it is required by law. They have the power to regulate the rates, within the narrow limits marked out by economic law in such a manner as to attract gold to the country *by restricting their circulation when necessity arises*. The system proposed by your committee provides an easy and adequate method *of obtaining gold for export from the banks without exposing the country or the United States Treasury to the alarm and convulsion which have attended gold exports during the last five years.*'

"Begging the committee's pardon, there is grave doubt of the ability of the banks 'to find gold for the notes of the country.' They have depositors to pay, as well as note-holders, and, four times within eleven years, they have defaulted in their obligations to their depositors. Nor will any restriction of circulation which they can produce draw gold to this country. That result can be effected only by a contraction of discounts, and our readers can judge whether such a contraction following a withdrawal of gold from the banks would or would not expose the country to the alarm and convulsions which have attended the gold exports of the last five years. It is more likely that the banks would, in case of a run on them, suspend payment in gold, as they have heretofore suspended payment in legal tenders.

"Of the other details of the proposed bill it is unnecessary to speak. It is foolish and impracticable, and there is no chance of its ever becoming a law."

INTERNATIONAL ISOLATION OF THE UNITED STATES.

RICHARD OLNEY, ex-Secretary of State, is of the opinion that Washington's rule of isolation has outlived its usefulness to the United States. Apparently he has come to believe with Captain Mahan that we can no longer pose as one of the foremost nations of the earth without assuming the international responsibilities of such a position. Mr. Olney recently spoke on the subject quoted above at Harvard saying, according to press reports:

"The rule of international isolation of the United States was originally expressed in the farewell address of Washington. It could not have been more faithfully observed if it had been a part of the Constitution. But we have extended it beyond its original intent. Now, what is it that Washington enjoined us not to do? It was that we should not permanently ally ourselves with any European power, nor enter into alliances on this side. What we are to avoid are the ordinary vicissitudes of European politics. This does not mean that the United States must not protect its citizens and commercial life. But suppose that American missionaries are injured. Then if only by alliance we can get reparation we are bound to make that alliance. Doubtless we could not assert some just rights against all Europe, but if by an alliance we could assert those rights we should be bound to do so. Take, for example, the international conference on Africa, held in Berlin some time ago. The United States was invited to send a representative and did so. The then Minister to Germany was our representative, and he was largely responsible for the declaration of that conference. Yet his name could not be signed to the document with the names of the other foreign representatives.

"The whole theory of Washington's rule of isolation was that the country should have time to grow, and until it was grown that we should not be disturbed by foreign entanglements. But at that time three great foreign countries had possessions on this Continent. Now conditions have changed. Washington never intended that his rule of isolation should be maintained when the country was in its maturity. The time is past when we should hold aloof from the councils of the nations.

"But if we should not retain the Washington rule we should not have to expose ourselves to needless hazards. We should still be governed by principles of international law. It is a misfortune to be governed by a rule of action that has outlived its usefulness to apply to one set of conditions a rule that was meant for an entirely different set of conditions. But even Washington's rule of isolation was limited to politics. It did not apply to commerce. Nevertheless, the evils of the protective system were largely due to the influence of that rule.

"Political isolation may not be inconsistent with commercial freedom, where a country is weak and small. But when a country becomes a great power, covering a vast continent, political isolation is sure to be a serious impediment to commercial development. The two evils go together. The result is such an inconsistency as is illustrated by our position in the Berlin conference, when we accepted with alacrity the privileges of the declaration, while we firmly declined to take any responsibility for it. If we stand without a friend in the world it is because of this attitude. The evils incident to the political and commercial isolation are further illustrated in our extravagant protection of both capital and labor, as shown in the subsidizing of our farmers and the exclusion of immigrants. The decay of our shipping is another illustration.

"And now, when our ship-building trade has gone as a result of this policy, our shipping is crushed by restrictions which forbid registry of foreign-built ships. The fact is that in all our protective restriction legislation we are on the wrong track. This country should recognize the changed conditions and accept its present situation with all its burdens and all its advantages. The mission of this country, while looking after its own interests, is to further the cause of civilization throughout the world. . . .

"We are no longer isolated; we are members of an international society; we can not shut ourselves off altogether. No foreign question arises nowadays, but as soon as it is hinted that the United States should interfere and play its part in a manly fashion then the cry of 'jingo' goes up, and all we do is somewhat tardily to tender our 'moral support.' Is that the position for a great nation to take? It is not enough for us to pose and to call upon the world to look upon us and admire us; we must do something to justify our claims to be worthy of notice."

Washington's Rule Still Good.—"But even Washington's rule of isolation was, he [Mr. Olney] said, limited to politics. About the correctness of this latter contention there can be no question. Washington's own words in his farewell address sustain Mr. Olney. He said: 'The great rule of conduct for us in regard to foreign nations is, in extending our commercial relations, to have with them as little political connection as possible.' It would seem to follow, therefore, that there is no rule to change, so far as the commercial issue is concerned. Aside from this, however, we can not trace the relations between political and commercial isolation Mr. Olney aimed to point out. We can not see that the one necessarily involves the other. Taking the history of our commerce, we find that whatever of commercial isolation we have suffered has been due in the main to such a policy as is represented in Dingleyism. We see no reason why we should not have trade relations with other nations without mixing up in their squabbles and jealousies, and we think Washington's own utterances show that he saw no reason why this should not be the case.

"No. As Mr. Olney admits, Washington's rule was distinctly a political rule. Consequently, in seeking for a vindication of its wisdom, and for its application to the present, we must differentiate it from the question of our commercial relations. It was the genesis of the Monroe doctrine that has served us such good stead, and in attacking it we attack that doctrine. Departure from the Washington historic rule means departure from the historic policy Mr. Adams and Mr. Monroe elaborated, and which was crystallized in Mr. Monroe's celebrated declaration, since become immortally associated with his name. For one of the strongest vindications of the Monroe doctrine we need not go back farther than the time during which Mr. Olney held the portfolio of Secretary of State. But for that doctrine and the consistent adherence to it on our part, which has led to its recognition by foreign nations, we might have become entangled in a serious complication. To act on Mr. Olney's theory and accept 'the responsibilities of our position as a great nation,' as he would have us accept them, would, to say the least, be to run the risk of affording foreign nations an excuse for violating the Monroe doctrine. On the

whole, history and experience and the teachings of many of the ablest statesmen the country has produced, antagonize Mr. Olney's position, and emphasize the fact that the Washington rule of isolation in its true intent has not outlived its usefulness, and is as much our sheet-anchor of safety to-day as it was in the days of the infancy of the republic."—*The Dispatch (Dem.)*, *Richmond*.

Vague Longings, Fiat, Problems.—"His [Mr. Olney's] remarks on the folly of supposing that there can be, in this age of the world, such a thing as commercial isolation and self-sufficiency, and on the disastrous results of the protective legislation based on that theory, commend themselves; and his profession of a great love for England, which it now appears he was only successfully dissembling in 1895, and his devout hope that our 'closer friendship' with her may prove 'a power for good that will be felt by all mankind,' are certainly gratifying. But his apparent belief that, because the United States is now a big nation, it is absolved from obligations resting upon it when it was a feeble power, is more dubious. 'The United States is one of the great nations of the world, yet it does not accept all the responsibilities of that position.' This is an idea in many heads besides Mr. Olney's. We have 'grown up'; Washington's warning against foreign entanglements is outgrown; we can no longer hold aloof from 'the councils of the nations.' One hears that said in many quarters. It is partly a reflex of our physical bigness, our 70,000,000; we feel our own muscle, like a stout youth, and we want others to feel it, too, and wonder at it. Then there is no doubt a vague longing in many excellent bosoms to make our great power tell, as Mr. Olney expresses it, 'for the betterment of the whole human race.' But we fear there is here a dangerous mixing up of force and moral influences. Converting the heathen by Martini-Henry instead of Henry Martyn, to quote *Punch's* joke, thinking that other nations will find all we do reasonable because we are so big and have such a tremendous 'fiat,' in Secretary Olney's famous phrase, may not prove a happy substitute for the policy marked out by Washington. If any country has reason to congratulate itself on a 'splendid isolation,' it is this one; and we certainly do not need to go abroad to find interesting 'problems' to solve. In the matter of problems on our hands we can defy the world."—*The Evening Post (Ind.)*, *New York*.

Anti-Protection Fallacy.—"Mr. Olney proceeds to assert that political isolation is sure to be a serious impediment to commercial development. How much of jingoism is meant by this does not appear in the abstract of the address, but there is in it at least the intimation of commercial expansion through territorial annexation, and that certainly does not commend itself to the American people, and the one is not necessarily the corollary of the other. But Mr. Olney does mean, for he distinctly so states, that political isolation, which he strangely interprets as tantamount to a protective policy, is hostile to commercial growth. This is the fallacy in an otherwise admirable address, but we suppose Mr. Olney could not help this interpolation. It is in accordance with the trend of his mind and with that of those who hold his economic theories. And yet he as strangely admits his fallacy when he says: 'The mission of this country, while looking after its own interests, is to further the cause of civilization throughout the world.' Yes, 'while looking after its own interests.' First, regard your own and then help others. There is no inconsistency in this. The one is a sequence of the other. Legislation may be proper to remove certain restrictions upon our commercial expansion—restrictions not, however, dependent upon our tariff policy—but it is nonsense to say that such a policy, including even the subsidizing of our farmers and the exclusion of immigrants, as Mr. Olney puts it, bars either the extension of our commerce or the consummation of alliances which shall serve the cause of human progress."—*The Post-Express (Ind.)*, *Rochester, N. Y.*

"In fine, Mr. Olney insists that we ought to recognize the changed aspect of things and assume our burdens while exercising our rights. We should cooperate with England, for our closer friendship with that nation will be a power for good that all mankind will feel. We must use our influence for the betterment of the whole human race. Certainly this is attractive and alluring doctrine, and the nation will not dismiss it with either sneer or smile. It deserves to be pondered, for there is much that is true and significant in it, tho few statesmen are prepared to go the full length of Mr. Olney, and tho there is a vital distinction between political isolation, which may be wholesome and 'splendid,' and commercial isolation."—*The Evening Post (McKinley Ind.)*, *Chicago*.

CURRENT CARTOONS.

HENRY GEORGE'S "SCIENCE OF POLITICAL ECONOMY."

HENRY GEORGE devoted the last seven years of his life (with the exception of the brief campaign for mayor of New York City, during which he died) to the preparation of the book now published under the title "The Science of Political Economy." It is, in substance, an elaboration of principles stated in the author's "Progress and Poverty," the later work undertaking to apply those principles to the whole field of political economy. The work will be severely criticized, for the author takes issue with almost every economic authority recognized by the schools, their doctrines, according to Mr. George's analysis, amounting to endless contradiction and the deliberate mystification of the student in search of truth.

The volume contains about 550 pages. The first "book" deals at length with the history of economics, and the philosophical basis of the science, under the title, "The Meaning of Political Economy." Three "books" treat of "The Nature of Wealth," "The Production of Wealth," and "The Distribution of Wealth." A fifth "book," less complete than the others by reason of the author's premature death, is devoted to "Money—the Medium of Exchange and Measure of Value."

Since Mr. George's fundamental criticism of other economists is that they fail to define terms accurately or clearly, his own definitions of the terms employed in his "reconstruction of political economy" are of the first importance in understanding the nature of his work. We reproduce a number of these definitions as they appear throughout the volume.

Wealth, in the economic sense, is "natural products so secured, moved, combined, or altered by human labor as to fit them for human satisfaction."

Value, as an economic term, is "value in exchange," or exchangeability alone, in distinction from "value in use." Value is "worth in exertion." "It is a quality attaching to the ownership of things, of dispensing with the exertion necessary to secure the satisfaction of desire, by inducing others to take it." "The value of a thing in any given time and place is the largest amount of exertion that any one will render in exchange for it. But as men always seek to gratify their desires with the least exertion, this is the lowest amount for which a similar thing can otherwise be obtained."

"All articles of wealth have value. If they lose value they cease to be wealth. But all things having value are not wealth, as is erroneously taught in current economic works."

Again, wealth is "labor which is raised to a higher or second power by being stored in concrete forms which give it a certain measure of permanence, and thus permit of its utilization to satisfy desire in other times or other places. Capital is stored labor, raised to a still higher or third power, by being used to aid labor in the production of fresh wealth or of larger direct satisfactions of desire."

Production and distribution of wealth, in the economic sense, are parts of a continuous process, and interference with distribution in accordance with natural laws is unjust interference with the producer. In production, land is the natural or passive factor; labor the human or active factor, and by nature spiritual; capital is a resultant form or use of wealth, in itself helpless. Distribution is the continuation and end of what begins in production, and thus the final division of political economy, the true meaning of the term "distribution" being the division into categories corresponding to the categories or factors of production. Transportation and exchange properly are included in production; taxation is excluded as a matter of human law, natural law being the proper subject of the science of political economy. "Nor does the science of political economy concern itself with consumption. It is finished and done . . . the purpose for which production began is concluded, when it reaches distribution."

Money: "Whatever in any time and place is used as the common medium of exchange is money in that time and place."

Mr. George defines political economy as "the science which treats of the nature of wealth and the laws of its production and distribution; that is to say of matters which absorb the larger part of the thought in the efforts of the majority—the getting of a living." Consequently he insists that every man has a right to think about these things and to discover, if possible, the natural laws according to which society develops. "When we shall have discovered as related the natural laws which govern the production and distribution of wealth, we shall then be in a position to see the effect of human laws and customs."

Not unselfishness, but the disposition of men to seek the satisfaction of their desires with the minimum of exertion, is the law of nature and the fundamental law of political economy. "It holds the same place in the sphere of political economy that the law of gravitation does in physics," says Mr. George. "It is no more affected by the selfishness or unselfishness of our desires than is the law of gravitation. It is simply a fact."

From the chapter on "The Meaning of Wealth in Political Economy" we make the following extracts as best showing the author's thesis and method:

"Commencing with Adam Smith and inquiring what was meant by value, I found that in value were incurred two absolutely different things, namely, the quality of value from production, and the quality of value from obligation, one of which kinds of value resulted in wealth, and the other of which did not. Now, value from production—which is the only kind of value which gives wealth—consists in application of labor in the production of wealth, which adds to the common stock of wealth. Wealth, therefore, in political economy, consists in natural products so secured, moved, combined, and altered by human labor as to fit them for human satisfaction. Value from obligation, on the other hand, tho a most important element of value, does not result in increase in the common stock or in the production of wealth. It has nothing whatever to do with the production of wealth, but only with the distribution of wealth, and its proper place is under that heading.

"Thus, in the way I have in this work adopted, that of proceeding analytically from value, we come to precisely the same conclusion as that reached in 'Progress and Poverty,' where we proceeded directly, and by deduction—we come to the result that wealth in the politico-economic sense consists in natural substances that have been so secured, moved, combined, or altered by human labor as to fit them for human satisfaction. Such substances are wealth, and always have value. When they cease to have value they of course cease to be wealth.

"Thus, proceeding by the way adopted in this work, we reach precisely the same conclusion as to wealth as by the way adopted in my previous work. The advantages of adopting this mode here are that a conclusion reached by the methods familiar to the students of the scholastic political economy can with difficulty be ignored by them, and that, in going in this way over the subject of value, much has been seen both for the present and the future that was necessary to a full treatise on the science of political economy and that may elsewhere be dispensed with.

"As there is a reason for everything, in the mental world as well as in the physical world, so there is a reason for this disposition to include in the term wealth everything that has value, without regard to the origin of that value. It springs at bottom from the desire on the part of those who dominate the accredited organs of education and opinion (who, wherever there is inequality in the distribution of wealth, are necessarily the wealthy class) to give to the mere legal right of property the same moral sanction that justly attaches to the natural right of property, or, at the very least, to ignore anything that would show that the recognition of a legal right may involve the denial of moral right. As the defenders of chattel slavery, and those who did not wish to offend the slave power, not long since dominant in the United States, were obliged to stop the examination of ownership with purchase, assuming that the purchase of a slave carried with it the same right of ownership as did the purchase of a mule or of a bale of cotton, so those who would defend the industrial slavery of to-day, or at least not offend the wealth power, are obliged to

stop their examination of the nature of wealth with value assuming that everything that has value is therefore wealth, thus involving themselves and leaving their students in a fog of confusion as to the nature of the thing whose laws they profess to examine.

"But to whomsoever wishes really to understand political economy there is now no difficulty in coming to a clear and precise determination of the nature of wealth, whichever way he may elect to begin."

"Many things are commonly spoken of as wealth which we all know, in the true and fundamental meaning of the word, are not wealth at all. If you take an ordinarily intelligent man whose powers of analysis have not been muddled by what the colleges call the teaching of political economy, and ask him what he understands at bottom by wealth, it will be found at last, tho it may require repeated questioning to eliminate metaphor and representation, that the kernel of his idea of wealth is that of natural substances or products so changed in place, form, and combination by the exertion of human labor as to fit them or fit them better for the satisfaction of human desire.

"This, indeed, is the true meaning of wealth, the meaning of what I have called 'value from production.' It is the meaning to which in political economy the word wealth must be carefully restricted. For political economy is the economy of communities or nations. In the economy of individuals, to which our ordinary speech usually refers, the word wealth is commonly applied to anything having an exchange value as between individuals. But when used as a term of political economy the word wealth must be limited to a much more definite meaning. Many things are commonly spoken of as wealth in the hands of the individual which in taking account of collective or general wealth can not be included. Such things having exchange value are commonly spoken of as wealth, since as between individuals or between sets of individuals they represent the power of obtaining wealth. But they are not really wealth, inasmuch as their increase or decrease does not affect the sum of wealth. Such are bonds, mortgages, promissory notes, bank-bills, or other stipulations for the transfer of wealth. Such are franchises, which represent special privileges, accorded to some and denied to others. Such were slaves, whose value represented merely the power of one class to appropriate the earnings of another class. Such are lands or other natural opportunities the value of which results from the acknowledgment in favor of certain persons of an exclusive legal right to their use, and the profit of their use, and which represents only the power thus given to the mere owner to demand a share of the wealth produced by use. Increase in the value of bonds, mortgages, notes, or bank-bills can not increase the wealth of a community that includes as well those who promise to pay to those who are entitled to receive. Increase in the value of franchises can not increase the wealth of a community that includes those who are denied special privileges as well as those who are accorded them. The enslavement of a part of their number could not increase the wealth of a people, for more than the enslavers gained, the enslaved would lose. Increase in land values does not represent increase in the common wealth, for what land-owners gain by higher prices, the tenants or ultimate users, who must pay them, are deprived of. And all this value, which in common thought and speech, in legislation and law, is undistinguished from wealth, could, without the destruction or consumption of anything more than a few drops of ink and a piece of paper, be utterly annihilated. By enactment of the sovereign political power debts might be canceled, franchises abolished or taken by the State, slaves emancipated, and land returned to the general usufructuary ownership of the whole people, without the aggregate wealth being diminished by the value of a pinch of snuff, for what some would lose, others would gain. There would be no more destruction of wealth than there was creation of wealth when Elizabeth Tudor enriched her favorite courtiers by the grant of monopolies, or when Boris Godonof made Russian peasants merchantable property."

"Thus wealth, as alone the term can be used in political economy, consists of natural products that have been secured, moved, or combined so as to fit them for the gratification of human desires. It is, in other words, labor impressed upon matter in such a way as to store up, as the heat of the sun is stored up in coal, its power to minister to human desires. Nothing that nature supplies to man without the expenditure of labor is wealth; nor yet does the expenditure of labor result in wealth unless there is a

tangible product which retains the power of ministering to desire; nor yet again can man himself, nor any of his powers, capabilities, or acquirements, nor any obligation to bestow labor or yield up the products of labor from one to another, constitute any part of wealth. Nature and man—or, in economic terminology, land and labor—are the two necessary factors in the production of wealth. Wealth is the resultant of their joint action."

TOPICS IN BRIEF.

MR. MASON is a senatorial gun of the reappearing type.—*The Free Press, Detroit.*

IF the Cubans are unfit for independence, we might give them Tom Reed.—*The Tribune, Detroit.*

BRYAN will have to get a war-record if he expects to be in the fight next time.—*The Dispatch, St. Paul.*

IF Spain keeps on getting poorer we may have to feed her as well as Cuba.—*The Herald, Baltimore.*

SPAIN may have no coal, but she has plenty of mines—in Havana harbor.—*The Age-Herald, Birmingham, Ala.*

ACCORDING to international law, it is wrong to undertake anything that you can't accomplish.—*The Tribune, Detroit.*

IF Spain would take a census of our available fighting correspondents she would be less eager for war.—*The Journal, Detroit.*

DESPITE rumors of Spain's intentions, it is probable that privateering will continue to be confined to the trusts.—*The News, Detroit.*

WITHOUT giving the remark any particular application, financiers may steal away without actually leaving the city.—*The Times, Philadelphia.*

CONSIDERING the danger of accident in Havana harbor, it is surprising that Spain should risk sending warships there.—*The Star, Washington.*

FIRST CITIZEN: "He's a strong Republican, isn't he?" Second Citizen: "Decidedly! He even indorses the Dingley deficit."—*Puck, New York.*

YOUNG Mr. Garfield's effort to introduce civil-service reform in Ohio has reached that stage where it needs a relief expedition.—*The Star, Washington.*

WHILE Great Britain is sympathizing with our humane policy toward Cuba it might make a few rational concessions to Ireland.—*The Herald, Baltimore.*

IT must make Spain particularly angry when she reflects that she had to borrow the money to meet the expense of discovering this country.—*The Journal, New York.*

"WHILE the Government is preparing to manufacture smokeless powder, the military advantages of a noiseless Congressman should not be lost sight of."—*The Tribune, Detroit.*

THE total population of Spain is 18,000,000. The United States has 10,000,000 men available as soldiers. In this there is both a distinction and a difference.—*The Herald, Baltimore.*

BEFORE a murderer is caught everybody thinks he ought to be hanged at once, but as soon as he is convicted everybody begins to sympathize with the efforts to have him acquitted. It's very curious.—*The Ledger, Philadelphia.*

STRANGER.—"So you lynched that negro without his being charged with any crime at all?" Prominent Citizen.—"Yes, sah: but we're expecting to heah of the crime every minute. You see, sah, the fellah was a total strangah heah, sah."—*Judge, New York.*

MR. POLO, the Spanish Minister, wants to know, on behalf of Spain, why the United States are buying war-ships. Spain is woefully ignorant. Any one else would know that what we want with war-ships is to prevent anybody from stealing our reindeer, which we went to so much trouble to obtain.—*The Courier-Journal, Louisville.*

A PUZZLING LETTER.—"I don't know whether this new man is a very astute diplomat," said the railway attaché, "or a very bad speller."

"Have you heard from your letter asking what he has done with reference to those hostile members of the legislature?"

"Yes. He says he is doing his best to passify them."—*The Star, Washington.*

"WHAT," asks the Blairville *Courier*, "has become of the initiative and the referendum? Have our Populistic friends permitted them to escape?"

We think not. Down here Mr. David Martin is the initiative and the courts are the referendum. And meanwhile the people get left. For particulars see the U. G. I. gas deal.—*The Inquirer, Philadelphia.*

DOUBTLESS others have noticed these historical facts and coincidences:

April 19, 1775, Battle of Lexington.

April 24, 1846, first engagement of Mexican War.

April 12, 1861, Sumpter fired on.

April 13, 1861, Sumpter surrendered.

April 14, 1861, Lincoln's first call for troops.

April 9, 1865, Lee's surrender.

April 14, 1865, Lincoln assassinated.

That is quite a record for April in the United States. Some people are wondering if April, 1898, will add to the list another memorable date.—*The American, Waterbury, Conn.*

LETTERS AND ART.

LONGFELLOW THROUGH BLISS CARMAN'S EYES.

IT is not easy, Mr. Carman finds, to think critically of a writer under whose magic you have ever fallen; and of all American poets, Longfellow is the one whose name carries with it invariable associations of the gentlest human nature; he is "the most loved, if not the best loved, of American poets." But if the fact of having once fallen under the magic of a writer hampers the critic, still more hopelessly hampered is the critic who has never been moved at all by the writer's creations of beauty. Taking courage from this thought, Mr. Carman proceeds, after a long semi-apology to himself and his readers, to write of "Longfellow Through Modern Eyes" (*Chap-Book*, April 1). And this is, in part, what he says:

"His range was not wide, his power was not varied, his insight was not deep; he had no passion and little force; yet, in spite of these almost incalculable defects, he had one of the chief traits of genius—he had the charm of benignity, the serene composure of an untarnished mind. All sunshine, he wanders through our fancy, this poet of the quiet Charles, with a gracious and winning smile like Virgil's own, a rare classic purity of mien, the influence of a personality undisturbed by vicissitude or doubt. In his pages there is something of that grace—that unfailing grace and gentleness of nature, that urbanity of tone—not always found in our greatest English poets, which so marks the Greek and Latin writers, the very quality that has led us to speak of our study of their work as a study of the humanities. The sense of proportion, the scrupulous reverence for art, the untiring winsomeness of manner which only an unswerving allegiance to beauty can bestow—these characteristics are Longfellow's own. The stress and strain, the hopeless vagaries of whim, the floundering, incoherent, experimental atrocities so terribly prevalent in English letters, these are never his.

"In the conclusion of that noble preface to his poems, Arnold says: 'If we can not attain to the mastery of the great artists, let us, at least, have so much respect for our art as to prefer it to ourselves. Let us not bewilder our successors; let us transmit to them the practise of poetry, with its boundaries and wholesome regulative laws, under which excellent works may again, perhaps, at some future time be produced, not yet fallen into oblivion through our neglect, not yet condemned and canceled by the influence of their eternal enemy, caprice.'

"In that sentence we have the true estimate of Longfellow's worth. He was not an original thinker, like Emerson; he was not a powerful political pamphleteer, like Lowell; he was not a prophet, like Whitman; he was a thorough, modest, conscientious craftsman, who had so much respect for his art as to prefer it to himself, and who, tho he produced no work of the first order, nevertheless transmitted to us the practise of poetry, unimpaired by any neglect of his, and uninjured by its eternal enemy, caprice. This is Longfellow's honor; this justifies his reward. And when we are inclined to think harshly of his mediocrity—his forceless mediocrity of thought, his depressing mediocrity of sentiment, we may well recall his high service to letters in maintaining their traditions, and importing their treasures into a new world. For, while Longfellow was the Psalmist of Philistia, he was also, by his sheer devotion to art, an example to the Children of Light. So that, with all his shortcomings, with all the disabilities of his own endowments, there still was left him an ample accomplishment; for there was left to him a large field of activity, the whole realm of intellectual experience in which the mass of mankind habitually dwells—the realm of the familiar. He is the laureate of placidity, the poet of the commonplace. He was not, I mean, a master of thought like Browning or Goethe, solacing our disquietude with ever new helps toward a solution of the riddle; nor a stimulator of valorous spirit in the front of doubt, like Shelley or Heine, those brave soldiers in the holy warfare of humanity; nor did he voice, like Burns, the lyrical, stormy cry of the soul in the very ecstasy of daily joys and sorrows. No, he lived in that happy region where all of us average men and women in the world are prone, if not content, to dwell, the region of domestic sentiment and popular thought. And his gravest sin is that he

would make us more content, rather than less content to dwell there."

The severest arraignment of the popular artist, says Mr. Carman farther on, carrying out the thought of the last sentence quoted above, is that he make us satisfied with what we are rather than ambitious of what we may become.

The signal defect of Longfellow as a poet, we are further told, is his lack of passion. This is the great fault of his most popular poem—"Evangeline." It calls up the tender and idyllic phases of love, none of its passionate phases. Nor is there present passion of any other sort. We quote Mr. Carman again:

"Consider the incident of the deportation, tho. As I am persuaded, that execrable act was the scheme of the dastardly governor, Laurence, unauthorized by his home government. But

BLISS CARMAN.

that fact does not lessen the dramatic horror of the deed; while the peacefulness of the French neutrals engages our sympathy the more. Here surely was the theme to raise the passion of righteousness in the veriest dough-faced caitiff that ever trod upon grass. Longfellow is utterly unmoved before it. He goes on with the tale in that mild tone, as if not a heart were breaking. Not a quaver of indignation in his voice, not an accent of wrath on his lips. 'The hate of hate, the scorn of scorn' are not in him."

As a sonneteer Longfellow wrought most successfully:

"That strict form of verse seems to have supplied just the support and restraint his prolixity required. In those large, calm interludes to his translation of the 'Divine Comedy,' in the sonnet on Chaucer, and in the sonnet on nature, he is at his best, and he is among the masters of the sonnet, with Wordsworth and Milton. His delicate taste and instinctive breeding found their fitting habit in that aristocratic regularity of expression."

Of all his more extended poems there is but one that seems to Mr. Carman to retain its charm over the reader after he has reached the critical age, and that is "Hiawatha." In conclusion:

"He was never the priest of nature; he was always the gentle sacristan of art. And it is his great labors in this field that have so endeared him to his countrymen. He gave us an air, an at-

mosphere which we did not before possess, an air in which art could grow. He made us partakers of the amenities of an unobtrusive culture, and brought home treasures of the ages to our doors, as the clipper-built ships of Salem used to bring those rare bales of outlandish merchandise and handicraft from China or the Indies long ago."

ANTON SEIDL.

MR. SEIDL'S sudden and unexpected death in this city Monday, March 28, brought a feeling akin to dismay to musical circles in and around New York as well as keen disappointment in many other centers. He had arranged a long concert tour with his company throughout the country, and was to direct the coming Wagner Festival in London.

The tributes to his orchestral genius have been many, but it is hardly time as yet to look for a comprehensive critical analysis

of his powers. While awaiting fuller treatment of the theme, we present here an extract from an article by E. Irenæus Stevenson in *Harper's Weekly*:

"Mr. Seidl was Hungarian by actual birth, but he has been identified with Germany and the United States during a brief and splendid career. Born at Budapest in 1850, after early studies at Leipsic, he soon became a most confidential member of that intimate circle around Wagner and Wagner's family—with it, indeed, often associated by a floating legend more closely than as merely by his long musical secretaryship to Wagner and by Liszt's affectionate interest. After rapidly rising in fame as Wagner's assistant conductor and as a general conductor at Leipsic (1878), as the leader of the Angelo Neumann tour with the Nibelungen dramas (1878), and at Bremen's notable city opera (1883-85), Mr. Seidl was engaged for the [old] Metropolitan Opera-House by Mr. Edmund C. Stanton, to succeed Dr. Damrosch. In September, 1885, Mr. Seidl came to us. From that time the bright history of the Metropolitan's years of—exclusively—opera in German, the tale of its magnificent and now historic productions of Wagner's works (including the complete Tetralogy, and 'The Mastersingers,' and 'Tristan'), of successes that have made its history one brilliant forever in musical annals—it has almost all been closely the story of Mr. Seidl's efficiency

and recognition. He can hardly be separated from its chapters. The changes and shiftings of musical policy at the Opera-House gradually, but firmly, worked only for Mr. Seidl's more permanent authority and honor there. Under Mr. Grau, too, his career and fame had lately widened, and his name was impressing itself on a public foreign to us as it had not done in the past.

"Last season's London and Baireuth performances were doubtless but the beginning of a larger international reputation than ever before. The fair splendors of a quite new career were apparently before Mr. Seidl. And since, with all his specialistic charges, as an operatic director, he had identified himself as the conductor of such orchestral societies and concert series as the Philharmonic, the Brighton Beach seasons, the Seidl Society, the Astoria, the Chickering Hall, the various concerts and tours of his own band, his life was of exceptional concert industry. It need not be said that so abrupt a conclusion of all its varied concerns means grave and tangled complications in our city's immediate future, as well as a dolorous hour to all who esteemed and admired the musician and the unassuming, amiable, sincere man.

"Mr. Seidl was, in fact, an unusual musician—a conductor in his field with no superior whomsoever—and in many traits he was an unusual man. He was educated in much besides his profession. His general culture was wide. As a conductor he was among the first in the world, particularly and peculiarly as concerned the interpretation of Wagner's scores. By inheritance, by tradition, by genius, by training, Seidl was a lord and a master in the delivery of Wagner, as have been only half a dozen Wagner leaders, since Wagnerism first uttered its messages to the operatic stage."

As a composer, Mr. Stevenson adds, Mr. Seidl made no pretensions, tho he was said to have been engaged lately on an opera.

A THRILLING WAR BETWEEN MARS AND THE EARTH.

WHEN communications are really established with the inhabitants of Mars, they will find here at least two books with some personal claim upon their interest, both being romances issued during the last year—Du Maurier's "The Martians" and Mr. H. G. Wells's "The War of the Worlds." The critical journals of England have been especially strong in their praise of the latter of these two books. It has not attracted so much attention on this side, due in part, perhaps, to the fact that it was (so the author indignantly charges) published in a much garbled form as a serial in two American periodicals.

The London *Saturday Review* calls the story an "extraordinary romance." *The New Century* (London) calls it "a brilliant work of imagination which is equal to anything that Jules Verne has done." *The Athenæum* admits that the idea of the invasion from Mars is "magnificent," but thinks the author has failed to make the most of his opportunities. *The Academy* pays tribute to his accurate and "extraordinarily detailed" knowledge of scientific truth as well as to the vigor of his imagination. *The Spectator* says: "As a writer of scientific romances he has never been surpassed," and compares him with Poe to the disadvantage of the latter.

The plot of the book is briefly outlined by *The Speaker* as follows:

"Mr. Wells tells us how on a certain day, which has not yet, happily, been reached, the inhabitants of Mars invaded this world, and what came of their presence among us. They selected as the spot at which they aimed the immense canisters in which they had lodged themselves for the expedition, the neighborhood of Guildford. London, apparently, is big enough to make its existence known to the inhabitants of another planet. Ten cylinders of colossal size fell on ten successive days to the southwest of the capital. Their appearance at first excited prodigious curiosity, unminged with alarm; but when from the interior of these huge vessels there crawled forth certain terrible-looking creatures with nothing human in their appearance, apparently all brains and hands, a deadly panic fell upon those who witnessed the phenom-

enon. The terror was increased when it was seen that these awful beings commanded mechanical forces unknown to the human race, and were as much superior to the inhabitants of the earth in fighting power as well-armed men are to a herd of sheep. The Martians did not leave us long in ignorance of the fact that their mission was to conquer the world, beginning with London. The story of the combat which they waged against our ineffectual resistance, of the ruin and destruction which they wrought, and of the frightful panic which emptied London in a few hours, is certainly one of the most thrilling narratives in fiction. Mr. Wells has, in fact, surpassed himself in depicting these scenes, and in painting the helplessness of man in presence of beings of a superior intelligence to his own. It was not by any efforts of the soldiers and sailors, who died bravely in resisting the invaders, that the earth was at last freed from their presence. They fell victims to the noxious microbes to which the human race has long been inured, but of which the Martians know nothing. Thus, according to Mr. Wells, humanity was saved from destruction by one of those provisions of nature against which it rebels most constantly."

The two weapons with which the Martians effect their victories over our armies are a gun that discharges canisters which emit a vapor suffocating to all who breathe it, and a powerful heat ray that explodes every gun and magazine against which it is directed. Before these weapons our own armies are powerless. Of our unexpected allies, the microorganisms, Mr. Wells speaks as follows:

"These germs of disease have taken toll of humanity since the beginning of things—taken toll of our prehuman ancestors since life began here. But by virtue of this natural selection of our kind we have developed resisting power; to no germs do we succumb without a struggle, and to many—those that cause putrefaction in dead matter, for instance—our living frames are altogether immune. But there are no bacteria in Mars, and directly these invaders arrived, directly they drank and fed, our microscopic allies began to work their overthrow. Already when I watched them they were irrevocably doomed, dying and rotting even as they went to and fro. It was inevitable. By the toll of a billion deaths, man has bought his birthright of the earth, and it is his against all comers; it would still be his were the Martians ten times as mighty as they are. For neither do men live nor die in vain."

"The picture of the last Martian," says *The Saturday Review*, "in its bewildered agony, howling in the twilight from the summit of Primrose Hill over a silent and devastated London, is one of the most effective with which we have met for years. We shall long hear 'Ulla! ulla!' echoing in our dreams."

JOAQUIN MILLER AFTER FORTY YEARS.

THE first time Joaquin Miller appeared in print was in 1859, when a valedictory class poem by him was published in Oregon. Now, after a lapse of nearly forty years, he has gathered together in a volume entitled "Complete Poetical Works of Joaquin Miller" all his output which he cares to save, the implication being that nothing can be expected from him hereafter. In addition to his poems, there are many reminiscences in the form of foot-notes, a biographical preface, an appendix containing several prose articles about his home in California, and two pages of portraits of the poet. The book is dedicated "to Collis P. Huntington, who was first to lead the steel-clad cavalry of conquest through the Sierras to the Sea of Seas, and who has done the greater West and South more enduring good than any other living man." "Fault may be found," says the author in his preface, "as with Hawthorne when he gathered up his tales, that all I have written is not here. Let me answer with him that all I wish to answer for is here. The author must be the sole judge as to what belongs to the poet and what to the flames . . . that which the world let drop out of sight as the years surged by I have, as a rule, not cared to introduce a second time."

The following extract we also take from the preface (the author is speaking "to the young in letters"):

"And now think it not intrusion if one no longer young should ask the coming poet to not waste his forces in discovering this truth: The sweetest flowers grow closest to the ground. We are all too ready to choose some lurid battle theme or exalted subject. Exalt your theme rather than ask your theme to exalt you. Braver and better to celebrate the lowly and forgiving grasses under foot than the stately cedars and sequoia overhead. They can speak for themselves. It has been scornfully said that all of my subjects are of the low or savage. It might have been as truly said that some of my heroes and heroines, as Reil and

J. Miller.
Joaquin Miller.
July 1897

Sophia Petrowska, died on the scaffold. But believe me, the people of heart are the unfortunate. How unfortunate that man who never knew misfortune! And, thank God! the heart of the world is with the unfortunate! There never has yet been a great poem written of a rich man or gross. And I glory in the fact that I never celebrated war or warriors. Thrilling as are war themes, you will not find one, purposely, in all my books. If you would have the heart of the world with you, put heart in your work, taking care that you do not try to pass brass for gold. They are much alike to look upon, but only the ignorant can be deceived. And what is poetry without heart! In truth, were I asked to define poetry, I would answer in a single word, *Heart*.

"Let me again invoke you, be loyal to your craft, not only to your craft but to your fellow scribes. To let envy lure you to leer at even the humblest of them is to admit yourself beaten; to admit yourself to be one of the thousand failures betraying the one success. Braver it were to knife in the back a holy man at prayer. I plead for something more than the individual here. I plead for the entire republic. To not have a glorious literature of our own is to be another Nineveh, Babylon, Turkey. Nothing ever has paid, nothing ever will pay a nation like poetry. How many millions have we paid, are still paying, bleak and rocky little Scotland, to behold the land of Burns? Byron led the world

to scatter its gold through the ruins of Italy, where he had mused and sang, and Italy was rebuilt. Greece survived a thousand years on the deathless melodies of her mighty dead, and now once again is the heart of the globe.

"Finally, use the briefest little bits of baby Saxon words at hand. The world is waiting for ideas, not for words. Remember Shakespeare's scorn of 'words, words, words.' Remember always that it was the short Roman sword that went to the heart and conquered the world, not the long tasseled and bannered lance of the barbarian. Write this down in red and remember.

"Will we ever have an American literature? Yes, when we leave sound and words to the winds. American science has swept time and space aside. American science dashes along at fifty, sixty miles an hour; but American literature still lumbers along in the old-fashioned English stage-coach at ten miles an hour; and sometimes with a red-coated outrider blowing a horn. We must leave all this behind us. We have not time for words. A man who uses a great big sounding word when a short one will do is to that extent a robber of time. A jewel that depends greatly on its setting is not a great jewel. When the Messiah of American literature comes he will come singing, so far as may be, in words of a single syllable."

The long poem "With Walker in Nicaragua," we are told in one of the foot-notes, was first intended for John Brown of Harper's Ferry. The poet was teaching school in Washington Territory when he heard of Brown's raid and death, and at once wrote a number of verses in his memory. Afterward the poem was changed so as to refer to General Walker.

"The Isles of the Amazons," tales in verse of South American life, was written at the suggestion of Dom Pedro, Emperor of Brazil, who translated it into Portuguese and warmly praised it.

"The Ship in the Desert," first published in *The Atlantic Monthly*, gives some striking pictures of the great arid plains of the West, crossed by the poet with his father when they traveled overland to Oregon in 1852. These lines from the poem will serve to show its author's descriptive powers and beauty:

A wild, wide land of mysteries,
Of sea-salt lakes and dried up-seas,
And lonely wells and pools; a land
That seems so like dead Palestine,
Save that its wastes have no confine
Till pushed against the level skies.
A land from out whose depths shall rise
The new-time prophets. Yea, the land
From out whose awful depths shall come,
A lowly man, with dusty feet,
A man fresh from his Maker's hand,
A singer singing oversweet,
A charmer charming ever wise;
And then all men shall not be dumb.
Nay, not be dumb; for he shall say,
"Take heed, for I prepare the way
For weary feet." Lo, from this land
Of Jordan streams and dead sea sand,
The Christ shall come when next the race
Of man shall look upon His face.

Of other poems of the great West, one of the finest we reproduce in full:

THE HEROES OF AMERICA.

O perfect heroes of the earth,
That conquer'd forests, harvest set!
O sires, mothers of my West!
How shall we count your proud bequest?
But yesterday ye gave us birth;
We eat your hard-earn'd bread to-day,
Nor toil nor spin nor make regret,
But praise our pretty selves and say
How great we are. We all forget
The still endurance of the rude
Unpolished sons of solitude.

What strong, uncommon men were these,
These settlers hewing to the seas!
Great horny-handed men and tan;
Men blown from many a barren land
Beyond the sea; men red of hand,
And men in love, and men in debt,
Like David's men in battle set:
And men whose very hearts had died,
Who only sought these woods to hide
Their wretchedness, held in the van;
Yet every man among them stood
Alone, along that sounding wood,

And every man somehow a man.
They pushed the mailed wood aside,
They tossed the forest like a toy,
That grand, forgotten race of men—
The boldest band that yet has been
Together since the siege of Troy.

Among the later poems is that written on the death of President Garfield, in connection with which this interesting reminiscence of Walt Whitman is given:

"It was on this occasion that a pall of black suddenly fell upon the republic. Garfield lay dead at Elberon!

"A publisher solicited from each of the several authors then in and about Boston some tribute of sorrow for the dead. The generous sum of \$100 was checked as an earnest. I remember how John Boyle O'Riley and I went to big-hearted Walt Whitman and wrestled with him in a vain effort to make him earn and accept his \$100.

"Yes, I'm sorry as the sorriest; sympathize with the great broken heart of the world over this dead sovereign citizen. But I've nothing to say."

"And so, persuade as we might, even past midnight, Walt Whitman would not touch the money or try to write a line. He was poor; but bear it forever in testimony that he was honest, and would not promise to sell that which he felt that God had not at that moment given him to sell. And hereafter, whenever any of you are disposed to speak, or even think unkindly of Walt Whitman, remember this refusal of his to touch a whole heap of money when he might have had it for ten lines, and may be less than ten minutes' employment. I love him for it. There is not a butcher, nor a baker, nor a merchant, nor a banker in America, perhaps, who would have been under the circumstances so stubbornly, savagely honest with the world and himself."

Among the "Later Poems" is one on

CUBA LIBRE.

Comes a cry from Cuban water—
From the warm, dusk Antilles—
From the lost Atlanta's daughter,
Drowned in blood as drowned in seas;
Comes a cry of purpled anguish—
See her struggles, hear her cries!
Shall she live, or shall she languish?
Shall she sink, or shall she rise?
She shall rise, by all that's holy!
She shall live and she shall last;
Rise as we, when crushed and lowly
From the blackness of the past.
Bid her strike! Lo, it is written
Blood for blood and life for life.
Bid her smite, as she is smitten;
Stars and stripes were born of strife.
Once we flashed our lights of freedom,
Lights that dazzled her dark eyes
Till she could but yearning heed them,
Reach her hands and try to rise.
Then they stabbed her, choked her, drowned her,
Till we scarce could hear a note.
Ah! these rustling chains that bound her!
Oh! these robbers at her throat!
And the kind who forged these fetters?
Ask five hundred years for news.
Stake and thumbscrew for their betters?
Inquisitions! Banished Jews!
Chains of slavery! What reminder
Of one red man in that land?
Why, these very chains that bound her
Bound Columbus, foot and hand!
She shall rise as rose Columbus,
From his chains, from shame and wrong—
Rise as Morning, matchless, wondrous,
Rise as some rich morning song—
Rise a ringing song and story,
Valor, love personified.
Stars and stripes espouse her glory,
Love and Liberty allied.

That the poet has been touched by the altruistic spirit of the times is shown in the poem "Sappho and Phaon," with its story of the finding of the long-lost Eden. In his notes on this poem the author gives this further counsel to the American poets of the future:

"One final word to the coming poets of the Sierras and the great Sea and the Universal Heart. For I would have them, not like the very many cedars, but like the very few sequoias. I

would have them not fear the elements, or seek station or office from any one; to owe no man; only God. Yes, I know—who should better know?—how long and lonely and terribly dark the night is when not well nourished and encouraged by earnest friends; but I have seen some, better, abler than I, halt, falter, fall, from very excess of kindly praise and patronage. My coming poets, there are offices, favors, high honors within the gift of good men, and good men are many; but the gift of song is from God only. Choose, and adhere to the end; for we can not serve two masters. A good citizen you may be, have love, peace, plenty to the end; but you shall not even so much as ascend the mountain that looks down upon the Promised Land, however much you may be made to believe you have attained it, if you follow Mammon. On the other hand, plain, simple, apart, alone, God only at your side, you must toil by day and meditate by night, remembering always that the only true dignity is true humility; remembering always that the only true humility is true dignity. Poverty, pain, persecution, ingratitude, scorn, and maybe obscurity at the end. But always and through all, and over and above all, Faith, Hope, and Charity. The greatest and the humblest that has been, your one exemplar. And so, following Him, shall you never answer back except and only by some white banner set on your own splendid and inaccessible summits; the flag of forgiveness and good-will.

"If then, thus informed by one whose feet are worn, the starry steeps of song be still your aspiration, don your Capuchin garb and with staff and sandal shoon go forth alone to find your lofty acre, to plant and water your tree, to take your eternal lessons from Him, through the toil of bee and the song of bird. Nor shall you, in your lofty seclusion and security from the friction and roar of trade, for one day escape or seek to escape your duties to man. The poets are God's sentries set on the high watch-towers of the world. You must see with the true foresight of the seer of old the coming invasions, the internal evils, the follies of your age, and not only give warning but bravely lead to triumph or perish, as the prophets of old, if need be.

"Perhaps the greatest source of sorrow, sin, in this our commercial age is the periodical 'hard times.' There should be nothing of that sort. True, this age of gold and of getting will pass as the age of stone and man-eating passed, but our work is with our own age. Then can the seer, the prophet, priest, poet, sing, and so teach a way to avert this tidal wave of calamity that every few years submerges the entire Christian world?

"What, this is not the poet's work! Sir, truth is the poet's sword, and his battle is for mankind. I like the story of that Orpheus piping on a hillside till people sat at his feet to hear him play; and so built a city there. Beautiful, divinely beautiful, the poet's story of the old shepherd king who had his strength restored each time the giant threw him down to earth. The people came crowding to the cities then as now. These themes, or such themes, are crying out continuously. The deaf do not hear; the blind can not see. The seer only can see. 'Let me sing the songs and I care not who make the laws.'

"Clearly, then, you are not to go apart in consecration for your own ease, least of all for your own glory. The only glory that can long attend you or at all survive you is the glory of doing good; defending the weak, guiding the strong, making the blind see; finding your reward entirely in the fact that you loyally love the true, the good, and beautiful, this trinity in one."

William Watson's Criticism of Stephen Phillips.

—The new poet who has swum into our ken, Stephen Phillips, is ardently admired by Mr. Watson for his work on classic themes, such as "Christ in Hades" and "Marpessa." But when Mr. Phillips treats of London life in a realistic way, Mr. Watson makes protest and does so with a scorn for the critics who have described these poems as tragic. Here is what Mr. Watson (*The Outlook*, New York) has to say, after expressing his admiration as aforesaid in generous terms:

"Now, in reading these criticisms I ask myself, 'Have these critics lost all sense of what "tragedy" means, all perception of wherein "tragedy" consists?' I had ever supposed that the very essence of tragedy was the *overthrow of something great*.

"Shakespeare has painted the mental ruin of a Lear, the moral

ruin of a Macbeth, the material ruin of an Antony. This was tragedy, inasmuch as the things ruined were at heart noble and splendid. There were kingly spirits whom we tracked to the sources of their fall. But when our young modern poet takes one of the nameless aggregated millions, who, in the words of Milton,

Grow up and perish as the summer fly,

and describes her gradual descent into the vulgarest vice, from a level of what appears to have been hardly a less vulgar sort of virtue, and when we are bidden by his indiscriminating critics to acquiesce in this as tragedy, I, for one, must protest with whatever emphasis I can command. In these insignificant and immemorable human lives no material of tragedy exists; these trivial and microscopical individualities do not provide the theater in which alone may tragedy be enacted. Tragedy demands, as the prime condition of its presentment, a moral stage of some grandeur and amplitude. A great or splendid spirit is wrecked, or overborne, or gradually disintegrated, and in the terror of such a spectacle there is sublimity and awe. If a palace or a fortress fall, we tremble; we do not stand aghast at the collapse of a mud hut.

"Of course I hear some one telling me that manhood and womanhood are in themselves so eternally and supremely interesting that every human soul is the potential arena of the grandest tragic action; to which I reply that it is merely what one may call the collective egotism of mankind that thus speaks. Every human being is, indeed, interesting; so is everything else in that nature which includes him; but there are degrees of interest. When, in Marlowe's play, the soul of Faustus is entailed beyond redemption, and the powers of evil demand their costly prize, it is an immense spectacle that we witness; but the final extinction of a soul originally so immomentous as the soul described by Mr. Stephen Phillips is a small spectacle at best. A solar eclipse and the snuffing of a candle are really two different matters."

NOTES.

THE endowment of a bed in the hospital for sick children in Great Ormond Street, London, to be known as the "Alice in Wonderland" cot, is the fitting monument projected by English churchmen and men of letters to the memory of "Lewis Carroll."

The Chap Book takes a pessimistic view of the public's appreciation of poetry. It says: "We are almost prepared to risk the statement that never before in the world's history was so much poetry written and so little read as now, and that shortly it will be actually true that there are more makers of verse than there are readers."

THE English press has unanimously printed praises of the statement that "Mark Twain" has paid the last of his Webster and Company debts. Dr. McAlister, writing to *The Times*, London, on the subject, says: "With the exception of the historical case of Sir Walter Scott, I do not think there is to be found in the records of literature anything quite equal to Mark Twain's conduct."

"A CURIOUS paragraph appeared in *Le Journal*, of Paris, the other day," says the *New York Times*. "*Le Journal*, it will be remembered, has been publishing 'Paris' as a serial; it has also attacked M. Zola fiercely for his position in regard to the Dreyfus case. 'Here is some information on the sales of Emile Zola's books,' says the paper; 'it shows better than a longer commentary, not the value, but the comparative success of the author's novels: "La Fortune des Rougons" has sold beyond 33,000; "La Curée," 43,000; "Le Ventre de Paris," 40,000; "La Conquête de Plassans," 33,000; "La Faute de l'Abbé Mouret," 49,000; "Son Excellence Eugène Rougon," 30,000; "L'Assommoir," 139,000; "Une Page d'Amour," 88,000; "Nana," 128,000; "Pot-Bouille," 88,000; "Au Bonheur des Dames," 68,000; "La Joie de Vivre," 51,000; "Germinal," 99,000; "L'Œuvre," 59,000; "La Terre," 123,000; "Le Rêve," 99,000; "La Bête Humaine," 94,000; "L'Argent," 86,000; "La Débâcle," 190,000; "Docteur Pascal," 88,000; "Lourdes," 143,000; "Rome," 100,000.'

The Transcript, Boston, says of the death of Aubrey Beardsley: "The young man who with much originality brought the art of Cheret into popular Anglo-Saxon knowledge had long been out of health. His art is the art of the abnormal, apart from the sanities, simplicities, and sweetnesses of nature, feverish but of a beauty in color and an insistence upon the lure of strangeness of line which made its influence widespread and of extraordinary fascination to all who came under its spell. Beardsley had a fine gift, and with the will (and better health) might have come in his maturity to rank with men whose work and fame will live. But his genius flickered like a flame with queer lights in an often unwholesome atmosphere, and now the flame has died out. But it has left much more than the ephemeral and evanescent sputtering of posters which seemed to be its immediate result. Thousands of artists have felt its influence moving toward the day when nationality in art will be less thought of than ever before in the world's history, as cosmopolitan habits and knowledge make artists more and more citizens of their one land of art—the purest, indeed, the only democracy in existence. It would be difficult for anybody to decide from his pictures whether Beardsley was a Parisian, a Londoner, a New Yorker, or a San Franciscan of Spanish and St. Louisian parentage."

SCIENCE AND INVENTION.

SOME MODERN HIGH EXPLOSIVES.

THE suggestion was made, just after the explosion that destroyed the *Maine* in Havana harbor, that the disaster might have been caused by some form of high explosive about whose action little is known, that might have been contained in the magazine. A general discussion of the nature and qualities of such explosives followed in the daily press, but the result was scarcely illuminating, as few of those who took part in it spoke as experts. This being the case, a brief statement of the character, power, and degree of safety of several of the principal kinds of high explosives used in naval warfare will be welcome, and we quote below such a statement from the columns of *The Engineering News* (New York). Says that paper:

"Since the introduction of the French melinite, in 1885, as a substitute for black powder in the bursting charge of shells, other nations have been experimenting in the same direction, and now England, Germany, and the United States claim to have found explosives equally powerful and much safer than the melinite originally invented by M. Turpin. The secret of the French composition was very carefully guarded for a number of years, and even now the exact method of manufacture has to be guessed at. But competent authorities say that there is very little doubt that it is essentially a mixture of fused picric acid and trinitrocellulose or guncotton, dissolved in a mixture of ether and alcohol. The ether-alcohol mixture evaporates and the resulting cake is granulated. Melinite has the characteristic yellow color of picric acid, has a bitter taste, and is practically without crystals. When ignited by a flame or by a heated wire in an unconfined state, it gives off a reddish-yellow flame and copious volumes of black smoke."

Lyddite, used by the English, and Joveite, by our own Government, are practically identical with the French explosive, which seems to be the only type that can be used safely with high-power guns. Wet guncotton is safer still, but can not be used in shells owing to the difficulty of packing it into them, altho, as noted below, it is the favorite explosive in torpedoes. To quote further:

"The conditions to be filled by a satisfactory explosive of this nature are severe. The compound must be safe to manufacture, store, and transport; and, above all, it must be stable in its composition under all conditions of climate, position in the ship, and actual service. It must also withstand the shock of discharge from high-power guns, delivering a projectile with a muzzle velocity of 2,000 feet per second or more; it must not explode when accidentally struck by other shells; yet it must detonate violently when it strikes the decks or lightly armored parts of an enemy and do this without the intervention of any dangerous fulminates."

"Guncotton, used for the 'war-heads' of automobile torpedoes, is . . . molded into blocks and then compressed, under a hydraulic pressure of over 6,000 pounds to the square inch, into disks. As these disks come from the press they contain from 12 to 16 per cent. of water; but before being sent away for storage, they are soaked in fresh water until they contain about 30 to 35 per cent."

"The wet guncotton alone is not affected by shock; it will not explode when penetrated by rifle bullets; is comparatively insensible to sympathetic explosion, and is not exploded by heat. To test this last-named quality the British Government, some years ago, burned up in bonfires two lots of guncotton, of one ton each, but containing 30 per cent. of water. In one case the disks were in a closed tank, and in the other in 80 closed packages. But in both cases the guncotton burned away without explosion. Under shock from the proper kind and weight of detonation, the explosive properties of guncotton are unaffected by water; but when dry it is more liable to detonation from influences. On board ship this guncotton is stored in a separate and special magazine, isolated from all other powders and detonators.

"The smokeless powder, developed at the United States Naval

Torpedo Station and intended for use in guns of all calibers in the United States navy, is essentially a nitrocellulose powder. It is made of a mixture of soluble and insoluble nitrocellulose, to which is added about 19 per cent. of nitrates of barium and potassium and a very small percentage of calcium carbonate. As yet it is made only for the rapid-fire guns up to six-inch calibre, and the resultant powder takes the form of compressed scored sheets or ribbons; in thickness equaling 0.015 of the caliber of the gun and of a length made to fit the powder-chamber of the gun. These sheets have a yellowish-gray color, with a smooth surface and glue-like consistence. Nitrocellulose is the resultant of the treatment of cotton fiber with nitric acid, and is only another form of guncotton.

"The brown prismatic, or cocoa powder, used in our navy for the heavier guns, is an explosive of the old type, inasmuch as it is made of a compound of niter, charcoal, and sulfur. But the method of manufacture is very different and imparts to it qualities not possessed by the old black powder. This new powder is in the form of perforated hexagonal prisms, weighing about eleven to the pound for large guns, of the color of cocoa, and the velocity of combustion is so low that a grain may be ignited when held in the hand and then placed on the ground before the burning part reaches the fingers. Its advantages are, the ability to impart a high initial velocity to the projectile without exerting an undue pressure upon the gun, and the form, size, and great density of the grains."

WILL ELECTRICAL TRACTION KILL THE STREET RAILWAY?

SUCH a question as this would seem at first sight almost absurd. Electricity certainly appears just now to have given the street-railway a new lease of life, even enabling it to compete on favorable terms, in some cases, with the steam lines. But we are reminded by *The Electrical Review* that even better results may be attained by discarding the rails altogether and using superior forms of motor-carriage on asphalt. This paper is editorially of the opinion, therefore, that with a proper combination of asphalted streets and electric motors we shall have no further need of the street-car. It says:

"In the recent inaugural address of the president of the English Society of Engineers there were brought out some important points concerning the *raison d'être* of street-railways or tramways. If in the old days of the horse-car there had been no considerable difference between the tractive effort on pavements and rails there would have been no cause for street-railways. The use of vehicles riding freely over the pavement is in all respects superior to that of vehicles running on rails, with the single exception of the lower traction coefficient of the latter. Omnibuses require no special roadbed, are not confined to fixed routes on which such a roadbed is provided, are not blocked by an accident at any one point and are greatly superior to tramcars on these accounts. But the immensely greater tractive effort on the poorly constructed roads of the past necessitated the tramways. The speaker referred to above classed tramways as 'metallic admission by engineers and the public of the badness of ordinary roads.'

"Now that the horse has been superseded by the electric motor for street-railway work, this change necessitating the constant connection of the vehicle with either an overhead or an underground conductor, the reduction of the traction coefficient on pavements to a value equal to that on rails would not necessarily eliminate the use of the latter, as the vehicles would be necessarily confined by the necessities of the conducting system to fixed routes. If, however, in future the storage-battery or any other mechanical means of propulsion, whereby the car is rendered independent of the conducting system, is developed to such an extent that it can compete with the trolley, the perfection of pavements would do away with the necessity for rails.

"That our roadways will be enormously improved over their present crude condition there is not the slightest doubt. The horse is a very poor dynamometer and gives but a crude indication of the work he is doing. The development of motor vehicles, especially electrical vehicles, with which an ammeter shows immediately the great difference between a good and a bad pavement, is opening the eyes of road-users to the advantages of

better pavements. Belgian block pavements, especially with steel-tired wheels, involve a most deplorable waste of power in the pounding, rattling, and shaking of the vehicles running over them. Macadam roads are non-resilient. Asphalt pavements are better than either, except in hot weather, when their resilience often falls far below that of macadam. A rigid, flat pavement would be ideal for motor vehicles, but is out of the question while horses are used. With the passing of the horse, however, the pavements can and will be improved and may reach such a state of perfection that there will be no advantage in rails. In this case if light automobile vehicles are perfected, the street-railway may become a thing of the past."

WONDERFUL PROPERTIES OF LIQUEFIED AIR.

THE liquefaction of air in great quantities, as now effected in New York by Mr. Charles E. Tripler, has already been described in these columns. We are now enabled to reproduce from *The Scientific American* (April 2) illustrations showing some of the remarkable experiments that can be performed with

particles of carbonic acid and possibly ice. These may be filtered out through filter paper, and the liquid is seen to be of a delicate shade of blue, clear as water.

"Since the boiling-point of nitrogen is 13° C. below that of oxygen, it follows that, in the first boiling, nitrogen is distilled from the oxygen as alcohol may be distilled from a mixture of alcohol and water through the difference between their boiling-points. By this means the liquid air becomes very much richer in oxygen. The liquid air would at first contain only 20 per cent. of oxygen, but after boiling for a while the proportion of oxygen increases to 75 per cent. If the liquid be poured upon a block of ice, it bounds off like water from a hot stove. The ice at the freezing-point is 344° F. hotter than the liquid air—a distance of 132° greater than separates boiling water from ice. We can not comprehend it any better than we can comprehend the space which separates us from the sun. Altho so cold, the hand may be dipped into the liquid or the liquid may be poured into the hand without producing much sensation, since the heat of the hand evaporates the liquid so quickly that a layer of vapor is formed around the hand; in other words, the liquid is thrown into a spheroidal state with reference to the hand. If, however, contact does take place between the skin and the liquid air, a most serious burn results. One day, when Pictet had a burn

EXPERIMENTS SHOWING PROPERTIES OF LIQUID AIR.

Double walled vacuum bulb. 9. Boiling liquid air. 10. Frozen mercury. 11. Liquid oxygen in water, 12. Frozen whisky. 13. Carbonic acid snow. 14. Burning carbon in liquid oxygen.

the liquid. As will be remembered, air was formerly liquefied in very small amounts, but Mr. Tripler obtains it literally by the gallon, using an apparatus whose feature is a specially constructed valve that allows a part of the already compressed air to expand into a jacket surrounding the tube through which the remainder is flowing, thus cooling it below the point of liquefaction. Says the writer of the article from which we quote :

"The possession of a large quantity of a liquid at so low a temperature makes it possible to perform many experiments of a very startling and marvelous character. When a dishful of the liquid air is dipped from the can, it boils so violently that drops of it are projected to quite a distance. This continues until the dish is cooled to the temperature of the liquid, when it becomes quiet, simmering gently. In this condition it is turbid, containing solid

upon his hand from fire, he also produced one accidentally by liquid air; the ordinary burn healed in ten or twelve days, but the other was open for six months."

The writer goes on to explain some of the experiments shown in the illustration. In Fig. 4 the enormous force generated by the rapid evaporation of the liquid is shown. To quote again :

"On pouring a couple of fluid ounces of liquid air into the tube, and driving a wooden plug firmly in with a hammer, it is driven out almost immediately, and with such violence that boards overhead are indented by it.

"Fig. 3 shows the effect produced upon iron by reducing its temperature to that of liquid air. An ordinary tin dipper placed in the liquid and allowed to cool till boiling ceases becomes brittle and breaks like glass.

'Fig. 7 shows a dish of liquid air in which a rubber ball is floating. It will be noticed that the vapor flows over the edge of the dish, not rising in a cloud from it, as does steam, since it is much heavier than gaseous air at ordinary pressures. This vapor presents the appearance of a cloud of steam and would be easily mistaken for it. . . . Whisky and alcohol are frozen with little difficulty by means of this liquid. It is a curious experiment (see Fig. 12) to hold a tube in which is liquid air in a glass of whisky, which in a few minutes becomes frozen solid. On warming the outside of the glass the solid whisky may be removed, and we have a whisky tumbler composed of whisky itself, but the whisky is in a condition suitable only for consumption in the Klondike.

"A jet of carbonic acid directed into a dish floating in a glass of liquid air (see Fig. 13) is immediately frozen and forms carbonic-acid snow, in the open air, which, on being placed upon a table, passes into the gaseous state without melting."

The condensation of the air of the room—not the moisture, but the actual air itself—on the outside of a tube containing liquid air boiling in a vacuum is another curious experiment, as is also the freezing of mercury into a mass that will support a heavy weight (Fig. 10). A still more striking feat is the following:

"A quantity of liquid air is poured into a tea-kettle, and the kettle is set over a hot fire of coals; the liquid air evaporates and shoots in streams from the spout of the kettle in a straight column to the height of three to four feet—a sight which Watt never dreamed of. While this is going on, if a glass of water is poured into the kettle, it will be found to be frozen in a very short time; and if the kettle is removed from the fire, its under surface is found to be covered with the carbon dioxide of the fire frozen solid within a couple of inches of the red-hot coals."

A considerable number of the illustrations show experiments that depend simply on the fact that the liquid air, after the nitrogen has boiled away, becomes richer in oxygen, as explained above. Thus a sponge saturated with it explodes when lighted (Fig. 6), paper soaked in it burns vividly (Fig. 5), a rod of carbon burns under the liquid (Fig. 14), and a steel pen or a watch-spring can be lighted with a match after being dipped into it. A few more experiments are described in our closing quotation, as follows:

"Fig. 11 shows a very brilliant experiment. A large flask, 10 or 12 inches in diameter, is filled to the neck with water. Into the top of the flask liquid air is poured. This at first floats, since the specific gravity of liquid nitrogen is 0.885; but as the nitrogen boils away, leaving the oxygen behind, the drops of oxygen begin to sink into the water since its specific gravity is 1.124. As these drops sink, they are partially turned into vapor, which of course tends to rise through the water. This action communicates a rapid whirling motion to the oxygen, and drives it back again. This may be many times repeated, giving a very beautiful exhibition, since the drops of oxygen may be as large as an inch in diameter.

"The magnetic character of liquid oxygen can be exhibited on a large scale in the manner shown in Fig. 1. A test-tube with a side tube is filled with liquid oxygen, and a cork inserted. The side tube allows free evaporation to take place. This is then suspended, as shown by a sling. If an electromagnet be brought near the end of the tube, the tube swings toward and adheres to the pole of the magnet just as if it were a piece of iron. This is, perhaps, the first adaptation of this experiment for exhibition on a large scale."

Colors without Coloring-Matter.—"This apparent paradox," says *The National Druggist*, March, "has been solved by M. Henry, professor of physiology at the Sorbonne, in a manner as ingenious as it is original. All have admired at times the beautiful and rich play of colors flashed back when a drop of oil is allowed to fall in water. By a long study of this phenomenon Professor Henry has been enabled to catch and perpetuate these hitherto evanescent colors, and to mount them so that they can be examined at leisure. The following is the outline of his process as described in the *Repertoire de Pharmacie*: The object which he wishes to color—say a sheet of waterproof paper, a plate

of glass, or a smooth board—is placed in a tank, or basin, large enough to permit the object to lie flat and level. Water is then let in, through numerous little jets, from the bottom of the tank until the object is covered to a slight depth. A drop or two of a volatile solution of some gum, or resin, insoluble in water, is let fall on the water, and at once spreads itself in a thin layer over the surface. When a portion of the volatile solvent has evaporated, leaving an exceedingly thin film of the resin (bitumen, asphalt, resin, etc.) lying on the surface of the water, the Professor whistles a tune over it, and the water and the film are thus thrown into rhythmical undulations, each of which represents a certain tone. In a short time the solvent vanishes entirely, and the film of resin is left floating on the water. The latter is now very gently and slowly withdrawn from the basin, and the film is thus gradually lowered to the surface of the paper, glass, or wood object, as the case may be. When it comes into actual contact, the object carrying the film is removed and allowed to dry, preserving all the time the marvelous display of colors that it presented while on the water. The December number of the *Repertoire de Pharmacie* had as an insert a little sheet of paper thus prepared—*moiré*, as it is called. As is usual in such inventions, this is probably but the beginning of a process that will prove of great value in the arts."

SCIENCE AND THE BORDERLAND OF THE SUPERNATURAL.

THERE is great difference of opinion regarding the duty of scientific men to investigate a whole class of doubtful phenomena, such as rappings, table-turnings, "levitation," thought-transference, etc. Probably the consensus of scientific opinion is against it. A recent book published in Paris by a Roman Catholic priest, Father Lescœur, considers this attitude a reproach to science, and in a review of the work in *Cosmos* (Paris, March 5) M. Albert de Rochas lays down a distinction between the parts of such phenomena that science should investigate and those that it has no business to meddle with. In brief, his opinion is that science should find out all it can about the physical basis of such phenomena, but should not investigate their supernatural origin or connections, if they should have any such. The review is interesting as explaining the point of view of a certain class of orthodox French Catholics, altho the author's views are scarcely expressed in the accepted language of modern science. Says M. de Rochas:

"The author invites scientists to direct their investigations toward the subject of miracles, and he reproaches them with not having done so heretofore.

"Their abstention is easily explained.

"When a man is accustomed to the rigorous methods of the experimental sciences, he likes to study only facts that are capable of being reproduced at will or observed frequently enough so that we may hope to arrive at their laws.

"Such is not the condition of miracles, whose peculiarity is that they obey no natural law and belong exclusively to the domain of history.

"But scientists can try in good faith to show that facts observed by them, of whose reality they have proofs, are analogous to other facts narrated in the annals of religion; to conclude that these latter ought not to be rejected *à priori* as absurd; and to obtain some idea of how known forces, controlled by hands more powerful than their own, could produce them.

"I will take as an example the levitation of the human body.

"Suppose a scientist, in the course of his experiments on psychic force, finds a 'medium' who can rise from the earth like a balloon. The fact being uncommon and not reproducible at will, his first care should be to note the chief circumstances of the phenomenon and find out whether it has ever been observed by others.

"He then finds that analogous facts have been proved in all countries, at all epochs, as well among saints as among sorcerers, among Hindu ascetics as among persons living normally but presenting a peculiar sensibility of the nervous system.

"He is led in the first place to see in most of these phenomena only a particular case of the displacement of inert objects under

the influence of special effluvia emitted by 'mediums' and to attribute it to a force analogous to that which produces electric attractions and repulsions.

"Later, in much rarer cases, he recognizes the intervention of an intelligent force that acts like a living being, seizing and carrying the subject.

"Finally, if he has been able to study a certain number of observations, he will find phases intermediate to these two orders of phenomena; for example, when the subject is simply raised, but with the sensation of hands that seize him under the arms.

"From all this we conclude that:

"1. The phenomenon of levitation can not be considered in itself as a miracle.

"2. It is often the simple result of a natural force, probably developed by a peculiar state of the nervous system, from which result, perhaps, currents of electricity that act in a direction contrary to that of weight.

"3. This peculiar state of the nervous system provokes the emission of effluvia that sometimes act on the bodies of intelligent beings, good or bad, that are ordinarily invisible.

"What can the physicist do here?

"He can seek to define these emanations, these manifestations, this hypothetical physical force, by studying their action on the other forces that we already know. But it is not his business to find out what the intelligences may be that intervene in the phenomena; these are outside of the domain of science."

M. de Rochas now proceeds to quote from ecclesiastical history and tradition, and he reproduces several old pictures to show that the phenomenon of "levitation" was known in ancient times. Many scientific men agree with M. de Rochas that the investigation of such phenomena comes within the province of science; but there are many others who deny this, and who deprecate all such efforts as those of the Society for Psychical Research to unravel what they regard as a tissue of superstition and deceit.—
Translated for THE LITERARY DIGEST.

MODERN IMPROVEMENTS IN THE TELEPHONE.

IT is apt to be the case with a useful invention that while in its earlier and cruder stages of development it attracts great public attention, its later improvements, altho perhaps they are the very ones that make it commercially and practically valuable, pass unnoticed. This is notably the case with the telephone, and an article on "The Modern Telephone Instrument," by Francis G. Hall, Jr., in *The Yale Scientific Monthly* (New Haven, March) contains much that is of interest. We quote the following paragraphs:

STANDARD LONG-DISTANCE TELEPHONE INSTRUMENTS.

"Some form of Hunnings transmitter is always employed, as this type has been found to give by far the most satisfactory results in practical use. The original Hunnings transmitter consisted of a thin platinum diaphragm secured at its periphery to the open end of a cylindrical wood box. A circular disk of carbon was glued inside the box against the closed end and at a distance of about one eighth of an inch from the inner surface of the diaphragm. Into the intermediate space, carbon dust or granules, sufficient to fill it about two thirds full, were placed. Connecting wires were fastened in contact with the metallic diaphragm and the carbon back. This crude instrument was found to transmit speech

with wonderful clearness and power, but it could not be practically used, owing to the liability of the finely divided carbon to cake, thereby destroying entirely its efficiency.

"Since the Berliner patent in its broad form covered the Hunnings patent as granted in America, Berliner, acting for the

American Bell Telephone Company, perfected the Hunnings transmitter and it was until a few years ago called the 'Berliner Universal Transmitter' and used by the Bell Company exclusively for long-distance transmission.

"Several comparatively recent patents, owned by the Bell Company, cover the new features in the present Berliner transmitter.

SECTION OF AN EARLY HUNNINGS TRANSMITTER.

These will not be open to the public for some time. Fortunately, ingenuity has circumvented these patents, and transmitters, which any one is at liberty to make, possessing qualities equal in every respect to these, have been devised.

"All of the types of transmitters, with the exception of the Blake and one or two other out-of-date ones, now offered for sale by the leading manufacturers are simply modifications of the Hunnings in which the defect of caking is more or less overcome.

"Generally carbon diaphragms are made use of as against metallic, its surface being less liable to produce a crackling noise when making contact with the granular intermediate carbon. To increase the number of points of contact, corrugations are often made upon the diaphragm; and that portion of it which is allowed to come into contact with the carbon grains is restricted, by means of a ring of light felt or carbon, to a space about three fourths of an inch in diameter, in the center of the diaphragm where the amplitude of vibration is greatest.

"Receivers of the watch-case form or of the regular form, with hard-rubber cases, differing only slightly in mechanical or electrical detail from the original Bell invention, are used universally. Some of the most important improvements on the old type are: means for keeping the adjustment uniform under varying conditions of temperature and use; the substitution of strong compound permanent magnets, having two or more poles next the diaphragm, for the old bar permanent magnet; differential winding of magnet bobbins; pneumatic ear-pieces, designed to keep the sound from escaping; special binding-posts and methods of connection whereby there is less liability of poor contact between the terminals and the flexible cord."

Mr. Hall regards the magneto-bell, which is the modern form of signaling-bell, as one of the improvements that has done most to popularize the telephone. He says of it:

"A magneto is a small alternating current dynamo using a compound permanent magnet for its field, instead of soft iron and wire for its excitation. The armature is of soft iron and shuttle-shaped, the groove being wound with fine wire to a resistance commensurable with the maximum length of line to be rung through.

"Polarized cells, similar to the polarized relays used in telegraphy, summon the subscriber to the 'phone. Two bobbins, wound with fine wire to a resistance proportionate to that of the generator-armature, are mounted on a permanent magnet in such a manner that their soft iron cores will always be of opposite polarity. When an alternating current is passed through the magnets, a pivoted armature with a hammer attached is repelled and attracted alternately by each pole. Bells are placed on both sides so as to be in line with the swing of the hammer, which strikes first one and then the other with a speed dependent upon the rapidity of the current alternations."

Of other important improvements the author speaks as follows:

"The lightning arrester, commonly placed at the top of the

DIAGRAM OF INTERIOR CONNECTIONS IN LONG-DISTANCE INSTRUMENTS.

magneto-box, consists of three metal strips, with straight or serrated edges, placed so as to have a spark gap or space of about of an one-sixteenth inch between each pair of adjoining plates. Two of the plates are connected to the line and the third to the earth. In case of an overcharge of static electricity it jumps to the earth-plate instead of going through and damaging the instrument. This action is assisted by a metallic plug between the line and earth-plates, which is put in during a storm.

"In addition to the lightning arrester, a further protection is derived from the use of fused wire, melting at about .4 ampere, which is placed between each line terminal and the instrument. This affords a protection against a cross with electric light on other heavy current wires.

"The automatic switch is operated by a spring acting against the weight of the receiver. A long metal lever, permanently connected to one line terminal and pivoted at one end inside the magneto-box, and extending through an aperture in the side of the box with a hook at its extremity, constitutes the switch-arm. When the receiver is hung on the hook it is down and makes contact with a German-silver spring, completing the ringing circuit through the bells. As soon as the receiver is taken down, the lever is drawn up by a spring, breaking contact with the lower spring and making contact with three others. One of these springs is connected through the receiver and secondary of induction-coil with the other line terminal; another contact spring connects through the transmitter and primary of induction-coil with zinc of battery, the third connects with the carbon of battery."

GOLD FROM SEA-WATER AGAIN.

FROM time to time the public is informed that there is gold in sea-water—a fact known to all scientific men; and now comes the assertion that it has been extracted therefrom in paying quantities—a statement much more open to doubt. *The Engineering and Mining Journal* (New York, March 26) goes over the evidence and concludes that somebody is being swindled. It says:

"We are informed by a number of correspondents that certain parties are offering for sale in the East the stock of a company which claims to be obtaining gold from sea-water on a commercial scale. Simultaneously, we find an announcement in some of the New York papers of the receipt at the New York Assay Office of a quantity of bullion weighing 92 ounces in all, said to be about one third gold and two thirds silver, which the company in question claims was actually recovered from sea-water by the process which it owns and is using.

"Going a little farther back, we find that these incidents are apparently part of a carefully prepared program, which began some months ago by the publication of paragraphs, and in some cases longer articles, in local New England papers concerning the operations of the company."

After going over the names of those connected with the scheme and asserting that they are none of them experts in metallurgy, tho some are good business men, it goes on to say:

"The company has established its works at Lubec, an old Maine seaport, where the water which forms the raw material of its operations is drawn from a tidal pond or bay. At high tide this contains about 50,000 tons of water, which is shut in by tide-gates and drawn off as needed to the works, which are established on an old wharf near by. A description in a local paper—*The Journal of Leviston, Me.*—says that 'a long room beneath the wharf, 80 by 30 feet, was securely planked in on all sides, divided into 100 little rooms, each lined with galvanized iron, and in each was placed a single machine, with a 3-inch pipe leading into it from a common flume.' The operation of these machines is directed or regulated from a small laboratory. The nature of the machines used is kept a profound secret—as is usual in such enterprises—and the process through which the material taken from them is passed is also kept a strict secret. The writer of the description above quoted is assured, however, that gold buttons of 7 to 7.5 pennyweights have been obtained from 60 hours' run of one of the machines.

"With the facts concerning the existence of gold in sea-water, our readers have from time to time been informed. In *The Engineering and Mining Journal* of November 21, 1896, Dr. Henry

Wurtz, the well-known chemist, presented the facts already known. That gold does exist Dr. Wurtz has ascertained, and the fact is confirmed by Sonstadt, in Germany, and by Dr. Liveridge, in New South Wales. None of these eminent chemists, however, has been able to suggest any method of recovering the gold. Quite recently Mr. John R. Don, of Otago, New Zealand, has made a very elaborate series of experiments, the results of which were embodied in a paper presented by him to the American Institute of Mining Engineers at the Chicago meeting in February, 1897. Without entering into the details, it is sufficient to say that Mr. Don made most careful examinations of sea-water, of marine sediments and deposits, and of wood which had been under water for years. He tried, also, many methods of precipitation; but all these experiments signally failed to show any precipitation whatever of gold, tho its presence was recognized in the analyses, and was determined to be an average of 0.71 grain per ton."

In view of all the facts, *The Engineering and Mining Journal* considers the whole story "simply another attempt to impose on the credulous," adding cynically that those who do not take its advice will "deserve no sympathy."

Suspended Electric Railways.—"An ingenious Russian engineer has suggested to one of the scientific associations of St. Petersburg a plan of construction of aerial lines that has attracted considerable attention," says *The Western Electrician*, Chicago, March 5. "He proposes a suspended electric railway which will be constructed at an elevation of 10 to 21 feet above the level of the earth. The carriages will move on rails fixed to brackets on columns or pillars. As there will be double tracks, trains moving in opposite directions can not interfere with each other. The speed at which such a road could be operated with safety has been estimated at 200 miles per hour. The inventor suggests three applications or distinct types of his system, the first being for small parcels and postal packages, the second for merchandise of bulkier character and medium weight, and the third for packages of greater dimensions and for passenger service. The construction of the first-named type would be inexpensive and without difficulty, and the low cost of operation would also recommend the system. Of course for longer routes the expense of construction and operation would increase because of the greater demand for current. The second type would be for general freight traffic, and the third form, which would serve for freight and passenger service, is more interesting than either of the others. The weight of the cars loaded is estimated at 600 pounds, and the speed to be maintained 200 miles an hour. The passenger coaches will contain 20 persons. The windows in these are to be placed at the ends of the coaches only, to prevent nervousness on the part of the passengers."

SCIENCE BREVITIES.

"THE danger to which flying-machines would be exposed in aerial navigation can be readily comprehended by an observer on the Atlantic sea-coast when a heavy storm sweeps across the sea," says *Our Animal Friends*, New York. "The most sanguine Darius Green does not expect the future airship to be as strong and perfect as the powerful-winged birds of the air, and if the latter are tossed about by a strong gale, the fate of the flying-machine would be disastrous. A 'lost' bird in a gale may drift a thousand miles out of its course, and even the petrels have fallen under the dominion of the wind so that they have been cast upon unknown and inhospitable shores."

"A CURIOUS illustration of the power of light matter to perforate more substantial substances when driven at a high velocity is stated by the *Engineer*," as quoted by *Nature*, "to have occurred in the royal arsenal a few days ago. In the course of experiments on firing gas in mines, conducted by Captain Cooper Key, R. A., under the Home office, a special gun is employed to do duty for a borehole with a charge of high explosive, and pressed cylinders of raw dry clay 3 inches long and $1\frac{1}{8}$ inches in diameter are used to represent tamping. These 'shots' are made to act in various mixtures of air, coal-dust, gas, etc., and to stop the course of plug, etc. eventually, a cast-iron target-plate, one inch thick, was placed 25 feet in front, at an angle of 45°, in order to break up everything into dust and throw it upward. After three or four shots with this arrangement the clay plug, weighing 7½ ounces, perforated the inch iron plate, and the hole thus made has been steadily extended since. The familiar tallow candle passing through a door must hide its head before a 7½ ounce plug of clay perforating an iron plate an inch thick at an angle of 45°. Doubtless the velocity must be tremendous. It is pointed out that the velocity for a hard cylinder of this weight and size to cut through an inch of wrought iron at 45° would be over 1,800 foot-seconds. With cast iron and clay and the three or four repeated blows, everything is so greatly altered that there is little more to be said than that the effect is remarkable and unexpected."

THE RELIGIOUS WORLD.

MOHAMMED AS A CHAMPION OF WOMAN'S RIGHTS.

THE great prophet of Islam, if we are to believe his latest defender, Prof. Ali Osman, was not only not an oppressor of woman, but he was farther ahead of his times in the matter of woman's rights than the most advanced reformer of our day. He found polygamy already prevailing; he did not institute it. In the early stages of the world it was, indeed, unavoidable, says Professor Osman, if nations were not to die out. Among the Hindus both polygamy and polyandry prevailed. Among the Medes and Persians there was no bar to a plurality of wives. Polygamy flourished among the Hebrew patriarchs, was practised among the Greeks and glorified by Demosthenes; and in Rome, tho it was never legalized, it acquired all the force of a privileged institution. The influence of Christianity did little at first to check it, and St. Augustine declared (lib. ii., ceret Faust, ch. xvii.) that it was not a crime in a country where it was the legal custom. After bringing out these facts, Professor Osman, who writes for *The Humanitarian* (London, April), edited by Victoria Woodhull Martin, proceeds as follows:

"It is a vulgar error on the part of many Christian writers to suppose that Mohammed either adopted or legalized polygamy. As we have seen, it prevailed in the ancient world, especially in Eastern countries; the prophet found it practised not only among his own people, but among the people of other countries, where it had attained the gravest abuses. Women, except the first wife, suffered under cruel disabilities. The corruptness of morals, especially in Persia, was something appalling, while among the Arabs and the Jews, woman was degraded to a mere chattel. Polyandry, too, was practised by the half-Jewish, half-Sabæan tribes of Yemen.

"Nor was Christianity free from the reproach of degrading women. St. Paul's repugnance to the female sex stands on record to this day. The Fathers of the church vied with one another in dilating on the enormities of women, and denounced them with inconceivable malignity. Tertullian describes woman 'as the devil's gateway, the unsealer of the forbidden tree, the deserter of the divine law, the destroyer of God's image—man.' Chrysostom 'interpreted the general opinion of the Fathers,' says Lecky, 'when he pronounced woman to be a necessary evil, a natural temptation, a desirable calamity, a domestic peril, a deadly fascination, a painted ill.' 'Jesus,' says Ameer Ali, 'had treated women with humanity; his followers excluded her from justice.'

"Such was the depravity of morals, such the condition of women in the East when Mohammed arose. He was the man of the moment, the man of destiny. The social fabric was breaking in pieces; he saved it by drastic reforms. His first care was to raise the position of women. 'Respect for women' was an essential article in his creed. His famous daughter 'Our Lady of Light' is the embodiment of all that is holiest and noblest in her sex.

"In the third year of the Hegira, Mohammed strictly forbade conditional and temporary marriages. Under his system the prophet secured to women rights they had not hitherto possessed. He placed women on a footing of perfect equality with men in the exercise of all legal powers and functions. He restrained polygamy by limiting the number of contemporaneous marriages and by making equity toward all wives obligatory on the man. The passage in the Koran runs thus: 'You may marry two, three, or four wives, but not more.' And immediately follows the sentence, 'but if you can not deal equitably and justly with all, you shall marry only one.'"

As for the harem, says the professor, instead of being a prison it was instituted as a sanctuary. It was an evidence not of the distrust of women, but of the sacredness with which she was invested in the East, and he quotes Von Hamner to this effect. He concludes with the following statement of the rights of women under the Moslem code:

"As soon as a woman is of age, the Moslem law vests in her all the rights which belong to her as an independent human being. She is entitled to share in the inheritance of her parents along with her brothers. A woman who is *sui juris* can under no circumstances be married without her own express consent, 'not even by the Sultan.' On her marriage she does not cease to be a separate member of society. A Moslem marriage is a civil act, needing no priest or ceremonial. The contract gives the man no power over the woman's person beyond what the law defines, and none whatever over her property. Her rights as a mother do not depend upon the idiosyncrasies of individual judges. Her earnings, acquired by her own labors, can not be squandered by her husband, nor can she be ill-treated with impunity. She continues to exercise, after she has passed from her father's house into her husband's, all the rights which the law gives to men. An ante-nuptial settlement by the husband in favor of the wife is a necessary condition, and if he does not make such a settlement the law presumes one in accordance with the social position of the wife. Briefly, all the privileges which belong to her as wife or mother are secured to her not by courtesy, but by the book of the law. Thus it will be seen that the Moslem woman's status equals that of many European women, and, in some respects, is superior. By the process of development, her social position is growing better still, as the true spirit of the prophet's teachings are becoming understood.

"And this I count as a glory to Islam."

DR. FAUNCE ON "CHRISTIAN SCIENCE."

THE claims of Christian Science are the subject of a careful and discriminating article by Rev. Dr. W. H. P. Faunce, pastor of the Fifth Avenue Baptist church of New York. Dr. Faunce passes in brief review the facts in regard to the history of the movement and the life and work of its founder, Dr. Mary Eddy. He speaks of the "First Church of Christ, Scientist," Boston, founded in 1879, with twenty-six members, and now having 10,000 names on its rolls, many of this number, however, being scattered throughout the country. In 1887 the church raised \$4,000 for a building, but the money was mysteriously lost. In 1892 the church was reorganized by Mrs. Eddy. In January, 1895, its house of worship was dedicated, a building seating 1,400 persons, and costing, apart from the land, over \$200,000. In January, 1898, it was stated in the papers that 2,400 persons joined this church. In November, 1897, a Christian Science church was dedicated in Chicago in the presence of 8,000 people. The building cost \$225,000 and was dedicated free of debt. There are four churches in New York city and 319 altogether in the United States. The literature of Christian Science is said to be of "amazing extent." Mrs. Eddy's "Science and Health, With Key to the Scriptures," the chief text-book of the denomination, first published in 1875, has recently attained its 146th edition. Its price is \$3 in the cheapest form. Mrs. Eddy has written many other books, tracts, and papers, all of which have an enormous sale.

As for Mrs. Eddy herself, she is described as being slender and graceful in spite of her eighty years, with "a complexion as fair as that of a child, with a magnetic, inspiring personality, and a smile that captivates all who meet her." She is living with her third husband, the first having died, and the second being divorced. Her present home is at Concord, N. H., where she has built a fine hall and home for Scientists, her own residence being a remodeled farmhouse in a retired spot. She is venerated and adored by her followers as few women have ever been. Says Dr. Faunce (*The Examiner*, New York):

"Her control is far more nearly absolute than that of General Booth. No Christian Scientist would dream of resisting her will in the management of a church. The extent to which some—not all—of her pupils would go is revealed by a conversation I recently had with a lady who stands high in a New York Science church. After discussing the faith for a little time, she told me that Mrs. Eddy was the way to God. I answered, 'Is not Christ

the way?' 'Yes,' she said, 'of course we would not put any one in the place of Christ, but Christ is dead and Mrs. Eddy is still living.' 'But,' I answered, 'will she not die, and what then? Who then will be the way?' 'Well,' she replied, 'we do not expect that she will—what you call die; she will—dissolve—into the life of the universe!'

As to the philosophy underlying Christian Science, Dr. Faunce says that it is "a strange compound indeed." It is defined as "extreme idealistic monism, couched in a phraseology never heard of before." It lays down four fundamental principles as follows:

1. God is all in all.
2. God is good. God is mind.
3. God, Spirit, being all, nothing is matter.
4. Life, God, omnipotent Good, deny death, evil, sin, disease. Disease, sin, evil, death, deny omnipotent Good, God, Life.

A number of passages are quoted from "Science and Health" illustrative of the teachings of Mrs. Eddy. Among these are the following: "The central fact of the Bible is the superiority of spiritual over physical power." "The so-called miracles of Jesus did not specially belong to a dispensation now ended, but they illustrate an ever-operative divine principle." "The same power which heals sin, heals also sickness." "Christians are under as direct orders now as then to be Christ-like, to possess His spirit, to follow His example, to heal the sick as well as the sinful." "Anciently the followers of Christ or Truth measured Christianity by its power over sickness, sin, and death; but modern religionists omit all but one of these claims—the power over sin. We must seek the undivided garment, the whole of Christianity." "Evil is neither person, place, nor thing, but is simply a belief, an illusion, of material sense." "Asking God to be God is a vain repetition—He who is immutably right will do right without being reminded of His province." "If exposed to a draft of air, your mind remedy is safe and sure." "When the fear subsides and the conviction abides that you have broken no law, neither rheumatism, consumption, nor any other disease will result from exposure to the weather." "Whatever it is your duty to do can be done without pain to yourself. Meet the incipient stages of disease with such powerful eloquence as a legislator would employ to defeat the passage of an inhuman law."

From his study and investigation of the whole matter, Dr. Faunce draws the following conclusions:

"1. This new doctrine, if it be new, must have some truth in it, because of its fruits. Jesus gave His disciples power to heal, and that power has never been revoked. It will not do for theologian or historian quietly to assume that Jesus meant such power to fade with the lapse of years or to vanish at the end of the third century. Men will believe either that miracles are continuous throughout the history of Christianity, or that they never occurred in the Christian Church. No middle ground is logically or theologically possible. It is absolutely certain that hundreds of men and women in this country have received in the healing of their diseases a demonstration that there is a fundamental truth in Christian Science. Beholding the men who are healed, we must beware how we declare ourselves against it. Even tho many have died while hoping to be healed, even tho many have forsaken the faith they once held, a marvelous number of cures are being daily performed. It is easy to pronounce this Satan's work; but Satan's work is to bind men, not to loose them.

"2. Christian Science has recalled many from agnosticism to a living faith in God. The majority of the believers do not come from the churches. When I asked one man where they did come from, he answered, 'Out of their graves.' Ninety per cent., he averred, had come into the faith through the healing of apparently hopeless disease. Many of them have come out of atheism into radiant religious faith.

"3. The average Christian Scientist does have a victory over fear and care and sin that is not achieved by the average orthodox Christian. To the average church-member, Christianity is the acceptance of a series of doctrines and historical facts, and the acceptance of a forensic transaction of eighteen hundred years

ago, in consequence of which acceptance he hopes for heaven beyond. But he is a worried and fretted and fearful man; afraid of himself and his propensities, afraid of colds and fevers, afraid of treading on serpents or drinking deadly things, as the apostles of Christ were not. The average Christian Scientist—and in this respect he is like the Keswick disciples—has put all anxiety and fretting under his feet. Christ is to him no distant historic figure, but the incarnation of the divine Idea. God is no mere 'first cause,' but a very present help.

"4. We may then say to Christian Scientists: 'Your attachment to Mrs. Eddy is a species of idolatry, is bad taste, bad theology, bad morals. Your exegesis of the Scriptures is childish and fanciful. Your whole system of allegorical interpretation is in defiance of modern scholarship. Your denial of some Christian truths is dangerous and deplorable. But the truth which you possess is our truth also. If we have neglected it, we will do so no longer. We will preach it with joy and power. The immanence of God in His world, the spirituality of the universe, the power of mind over matter, of good over evil, the progressive victory of truth until God shall be all-in-all—this is our creed, and no man need leave our churches to hear such truth or live such life.'

THE MORAL VALUE OF SILENCE.

THE golden qualities of silence considered from a moral point of view was the subject of a recent address by Prof. Felix Adler, delivered before the New York Society of Ethical Culture and printed in the *The International Journal of Ethics* (April). We are reminded at the outset of the condition imposed by Pythagoras upon all who desired to join his Order, that before admission they should preserve silence for the space of five years. Only those who passed this test were considered worthy to become the followers of the philosopher. There was a degree of wisdom in this rule, says Professor Adler, altho it would be manifestly impossible to make it one of general application in any school of modern thought. It may be maintained, however, that "some of the holiest, loveliest things in modern life are best preserved when kept in the casket of reticence, when the seal of silence upon them remains unbroken."

Among the feelings or emotions which find no adequate expression in human language is that of gratitude for services rendered us that involve great sacrifices on the part of the benefactor. In times of great sorrow also we are often made to stand speechless, inasmuch as any words that human lips can utter seem like an impertinence. And the very essence of true charity is found in quietness, in unostentation. "The violet of charity blooms in hidden nooks, and its charm is inseparable from its secretiveness."

But higher than all else is the moral value belonging to those ellipses or intervals during which is being revolved and matured in the mind the right utterance that is to come afterward. Says Professor Adler:

"The enemy of morality is impulse. Only to a very limited extent do we ever succeed in rationalizing our impulses—that is, in training them to move along the grooves which reason prescribes. Even when we applaud impulse, we do so only when, by consummate training, it has ceased to be wayward. The really moral person is one who keeps perpetually before his eyes the outspread world of the moral relationships—that is to say, who sees what his relations ought to be as in an ideal landscape; who sees especially the striking differences that distinguish the duties which he owes to different persons; sees how differently he ought to act toward a superior and toward an equal, toward a person of the same sex and a person of the other sex; toward a person of the same age and a person of tender age; toward members of the same social class and members of a different social class. The moral man, I say, is one who sees before his eyes the chart of his relationship to others, and especially the differences of the duties which he owes to others, and who tries to conform his speech and his action to the directions of this chart. And it is evident that a man who tries to do this often must allow intervals of silence to elapse before he acts or speaks, during which he considers the actual situation in the light of his ideal chart. So

that it is not too much to say that the morality of a person can be gaged by his reflectiveness, by the degree to which he has acquired the habit of seeing the invisible moral entities, and deriving thence his bearings."

In another and less material aspect of the subject, Professor Adler says:

"There is a decisive change that separates those who may be called 'spiritually-minded' from those who are not. Among Christians this is known as the 'change of heart.' I believe that in the moral field, too, leaving entirely out of account theological ideas, there is such a change. Those may be called 'spiritually-minded,' in the moral sense, who do not suffer themselves merely to rebound from the occasions of speech and action, as a ball rebounds from a wall, but who, under the blessed ministry of silence and of the meditation that accompanies it, consider the scheme of moral relationship; consider what their place in it is; consider what the place in it is of the person to whom they are to speak, or toward whom they are to act; and consider the choice of means by which they can restore the right relation between themselves and others. Any one who has undergone that change, from reacting impulsively to acting and speaking *medicinally*, has experienced the decisive change of heart, has become, in the moral sense, regenerate."

RELIGIOUS PRESS ON THE PROSPECTS OF WAR.

SINCE the speech made by Senator Proctor on the conditions in Cuba the religious journals of the country have, as a rule, with few if any exceptions, become insistent on intervention by the United States Government. They express an earnest hope that the desired change in Cuba may be effected without war, but the general tone is that the change must be brought about even if war be found necessary.

The Friends Intelligencer, even, tho it stands fast for its Quaker principles of peace at all times, puts the case in such a way as to indicate a strong sympathy in favor of intervention. It says:

"The rule of Spain in Cuba has always been oppressive and harsh. The people of the island have suffered, in times of peace, until they have been 'driven'—to use the ordinary expression—to revolt. And now the question is asked by many in this country whether, *in the interest of peace*, the United States should not demand that the war stop. The answer to this is that Spain would then assail us. But it is demanded whether the United States, whose strength is doubtless quite equal to the task, can be justified, by fears for itself, in not ending a war which causes so much cruelty and misery at our very door. Such an intervention, it is said, would be an exercise of police authority among nations, as among individuals a uniformed 'guardian of the peace' would stop an affray or assault upon the street.

"These questions, however, are not addressed to the Friends. We are no way responsible for Spanish oppression in Cuba, or for the Cuban revolt. The principles which our society has endeavored to maintain, and which in a notable degree it has been faithful to, would effectually prevent any such condition as now prevails in Cuba. And the duty is laid upon us of maintaining these principles—not merely in times when it is easy to do so, but in the time when they are put to trial. We do not hold the testimonies which they represent as a formality, but in truth, and for real use."

The Watchman (Baptist, Boston) thinks intervention entirely justifiable:

"Our right to intervene in Cuba, on the ground of self-interest and humanity, is, to our way of thinking, indisputable. Such intervention would be supported by the generally received principles of international law, and by the general acquiescence of civilized nations. But we must intervene to establish peace, not to fight the battles of the insurgents, or to do what Senator Gallinger in his speech this week advised, namely, to annex Cuba to the United States. Such a motive would taint all our action, and, in view of what we have said about our action as controlled by the dictates of humanity, it would put us in the position of

using humane sentiments as a cloak for land-grabbing. The United States can not afford to take any such position. Armed intervention does not involve the necessity of turning the island over to the insurgents. They have not conquered it, and probably can not do so. If self-government is to be established, it should be set up by the Cubans as a whole. The President's course clearly shows that this is his view of the situation. If Cuba can not be pacified without our engaging in war with Spain, he proposes to have that war thoroughly justified to the moral consciousness of all Christendom."

The Observer (New York, Evangelist) thinks intervention is needed and that it must be forcible:

"An island as large as Ireland, lying almost within sight of our shores, is being ravaged as provinces were in the Middle Ages, and there is no hope of anything better so long as Spain reigns there. The problem before thoughtful men, who simply seek to know American duty in the premises, is, then, what form of intervention can be adopted which will be at once effective and tend least to precipitate an armed conflict.

"It comes to this, then, that intervention is limited to one form, that is, force. And under the peculiar conditions existing, the force must necessarily be employed in favor of the insurgents. It is the more inevitable because armed intervention is the only thing to which the Spanish Government can yield. It is easy enough to say to the Sagasta Ministry that it must end the insurrection or abandon Cuba. But it can do neither unless compelled by superior force. Neither its military campaign nor its policy of conciliation through the grant of home rule have any chance of success. Yet it must go on, for the loss of Cuba, either as the result of military failure or of compromise with the insurgents, would mean the handing of Spain over to Don Carlos."

The Christian Work (New York, undenom.) argues to about the same conclusion, but with greater display of feeling:

"Presumably—and thank God for it!—we are about doing something. It is time! For the whole year in which Weyler carried on his butchery, our Government virtually did nothing but write diplomatic notes. By every consideration of humanity we ought to have stopped this infamy the instant it was begun. But we did nothing; and even now, while death is busily doing his work, there are those—we should not like to say how many—who calmly read at the breakfast table of the preparations to put an end to all this misery, and exclaim over their coffee—'Gentlemen, go slow!—gentlemen, surely you will not resort to force!—gentlemen, at least you will not disturb the money market and depreciate values; gentlemen, let us by all means send food to Cuba to relieve any possible want, but surely we shall not interfere in the affairs of Spain, which are none of our concern!'

"How can we account for this drying up of the fountains of human feeling, this deadening of all sympathy for the oppressed, this serene content in the face of such appalling suffering? Is it heredity? Or is it that a latter-day Midas has not only turned possessions but human hearts as well into gold, until, with only enough blood in their veins to support a low order of life, many have come to regard no calamity so great as a disturbance of values involving a falling-off of quotations in the market for debentures?—

"At the Devil's booth are all things sold;
Each ounce of dross counts its ounce of gold."

"But now, as we rejoice to know, a brighter day is dawning. We shall not arbitrate—we may not arbitrate the cruel work of death—but we shall suppress. The bow can be seen in the Cuban sky. A few more days—surely it can not be longer—a little more patience, yet a little more endurance of misery, and the end is at hand."

The Christian Advocate (New York, Meth. Episc.) expresses itself as follows:

"While it is hard for any sensitive nature to endure the knowledge of the sufferings of the Cuban people, it might be harder to endure the knowledge of the slaughter, the wounded, the terrible climatic influences, and the contagious diseases of Cuba, as experienced in a war with Spain by our own fellow citizens. Hence we have no sympathy with any war that is not forced upon us by Spain's resistance to such efforts by the United States to mitigate the situation as humanity and international law will allow. When

such a war comes, and only then, can we unite our own people and the civilized world in sympathy."

The Ram's Horn (Chicago, undenom.) asks and answers the question, What would Jesus do?

"We have no hesitation in giving expression to our own opinion. It is that Jesus would look with favor upon immediate intervention of this government, not with a view of making war on Spain, but with a view of stopping Spain's awful war in Cuba. It is true that we might suffer by reason of the intervention. It is true that many a brave boy might fall in prosecuting such a policy of his government, but we believe that death would be sweet to such a one, in comparison to living in the presence of the sickening horror which lifts its face to heaven daily in that beautiful Southern island. There are things which are far more precious than life. They are honor, duty, service, and sacrifice. No life is too precious and no treasure too costly to give up, if it crosses the line of duty. 'Greater love hath no man than this, that a man lay down his life for a friend.'"

The American Hebrew (New York) recalls the expulsion of the Jews by Spain and pledges the assistance of Jews to America if war comes:

"The Jew is popularly presumed to be a non-combatant, but the recent events that gave rise to war talk have brought out the fact that there are numbers of them who, if the need existed, would shoulder the musket and fight for the defense of the flag that has spread over them the mantle of its protection. Let us pray that the occasion to make the test may never come, for we all prefer peace; but if come it must, the Jew will be found in the vanguard."

The Independent (New York, undenom.) has the following:

"What is it we are entitled to ask of Spain? We are entitled to ask that the state of war in Cuba shall be brought to a close. We have suffered very materially by the prolongation of this war in our material interests, in our sympathies, and in the burden which neutrality has involved. The continuance of the war is a source of irritation to our people. The appeal to their humanity is such that they can not disregard it. It is bound to have voice. And so long as the warfare in Cuba continues this sympathy will be active, and it will be a source of trouble and perhaps danger to us as a nation.

"The history of the past thirty years has shown clearly enough that the cause of insurrection in Cuba is the oppressive and shamefully inefficient character of the government; and if this history teaches us anything it shows us that Spain's promises of reform are as empty as the wind and as uncertain; to-day it blows from this point, to-morrow it blows from that point. The spectacle of inhumanity to which we have been treated in the island close to our shores is not only shocking to us but it is shocking to the nations of the world, and in the interests of peace it must end and end in independence."

We might multiply quotations, but they would all indicate about the same spirit as the above.

EFFECTS OF POLITICAL FREEDOM ON CATHOLICISM.

A DISCUSSION involving this subject took place a few days ago before the French Academy. The occasion was the reception into the fold of the "Immortals" of the Count de Mun to occupy the place left vacant by the death of Jules Simon. The count is a representative, the leader in fact, of those social reformers among the French Catholics who call for state intervention in moral and social questions, and, as is customary, he delivered an address in eulogy of his predecessor, giving expression at the same time to his own views.

The director of the Academy, M. de Haussonville, made the address of welcome, and as de Haussonville is a representative of that wing of French Catholics who reject all intervention of the state in church affairs, and who would reduce to a minimum state action in social reform, he took occasion to express his reasons

for dissenting from the views expressed by the Count de Mun. The discourses are reported in *L'Univers* (Paris, March 15):

Count de Mun explained that it was to Jules Simon's study of social conditions that he owed his conversion from extreme individualism to the principle, "do not confound liberty with inhumanity." That principle, he said, contains in germ all social reform. "By it, man will henceforth appear in labor, not as a mechanical instrument whose force is sold as merchandise, but as a divine creature whose rights and dignity are higher than all contracts, and the inevitable result of that principle will be that the law will intervene in the name of justice to prevent the abuse of absolute liberty of contract."

M. de Haussonville agreed with the count in the right of labor to the fullest liberty of association, but on the subject of the state's intervention in behalf of justice to the laborer, he differed, placing his confidence rather in the social influence of the church and in the charity and peace which she brings to society. Philanthropy, altruism, and solidarity, he maintained, have been tried in vain; charity alone can temper the harshness of economic laws and prevent the sacrifice of humanity to liberty. To the brutal consequences of the law of supply and demand it opposes the moral obligation of just recompense, which takes into account the legitimate needs of the laborer. It proclaims loudly that if labor is a commodity, the laborer is not. It recalls to those who possess the goods of this world the fact that they are responsible before the eyes of the Master for their use and that they must give to those in need.

Referring to the count's attitude toward the church, he said:

"You wish for her, political authority—not indeed directly exercised, but an influence openly felt. You have always declared your desire that France have a government which would willingly be . . . the sergeant of Christ.

"In regard to the close alliance of church and state, let it be a monarchy or any other form of government. . . I have never wanted it and I never shall. Assuredly I forget neither, theoretically, the grandeur of the thesis, nor, practically, the prestige which France acquired and which she must preserve by protecting everywhere the Catholic cause. But in our time, in the questions of domestic politics, that alliance is equally injurious to the government making and the church accepting it. . . Is it not better for the church to hold exactly to the concordat made at the beginning of this century and preserve toward public powers, whatever their bearing, an attitude of just deference, never failing to show all due respect to them, demanding all rights due to her, neglecting no duty imposed by the concordat, permitting the violation of no right there conferred.

"Liberty has enabled Catholics to win and wield power in Belgium now for fifteen years without any attack on the rights of which modern society is justly jealous. Thanks to liberty, the Catholics of England have won a position where once the cry of hatred of the papacy was national. . . Thanks to liberty, the Catholics of the United States have seen, in one century, their number increase from 40,000 to 11,000,000, their bishops increase from 1 to 84, their priests from 30 to 11,000; they have covered the country with churches, schools, and charitable institutions, and to-day in that great democracy where their ministers play such an important rôle, they are the most united, most powerful, and most numerous of all Christian denominations. It would be an injury to the Catholics of France to doubt that they are capable of equal devotion, effort, and generosity."—*Translated for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

THE rabbis of Baltimore, Md., have united in an effort to secure a better attendance at synagog and temple by agreeing not to solemnize marriages between Jews and Jewesses who do not attend divine service at some Jewish house of worship, and not to officiate at funerals of those who fail to go to synagog.

THE society of the Separatists of Zoar, more commonly known as the "Zoarites," has decided to disband after nearly a century of communistic life. The society is not, it is said, in such financial difficulties as has been reported. It owns 7,000 acres of the best land in Ohio and a valuable lot of blooded live stock. Out of the original colony of nearly five hundred members there remain but ninety-two.

FOREIGN TOPICS.

FRANCE'S NEW CAUSE CELEBRE: IS THEFT LEGAL?

PARIS has a new judicial sensation to excite animated controversy, a new issue upon which all the radicals are on one side and the upholders of the present order on the other. A recent judicial decision by the tribunal of correction at Chateau-Thierry laid down certain principles which the conservatives attack as antisocial and revolutionary. The case was a peculiar one. A poor girl who has an old mother and an illegitimate child to support was tried for stealing some loaves of bread from a baker. She admitted the theft, but pleaded that hunger and despair had driven her into the commission of the crime. She had been unable to find work, and begging was prohibited by law. For thirty-six hours previous to the theft she and her old mother had gone without food, and only a few drops of milk had remained for the child. She passed the baker's shop, saw the bread in the window, and, obeying an irresistible instinct, she stole some loaves. The tribunal acquitted her on this defense, the presiding judge, M. Magnaud, delivering a charge in which he maintained that under the circumstances stated (and proved by evidence) the theft was not only morally justifiable, but legally free from the essential properties of crime.

The radical and socialist press applauded the decision and its logic, but such papers as the *Figaro*, the *Journal des Débats*, and the *République Française* (the organ of the ministry) assailed it as pernicious and unsound. The *Journal des Débats* declared that the acquittal was "contrary to the essential interests of civilization and humanity," and demanded an appeal from the decision by the Government. The outcry has compelled the Government to order an appeal. The presiding judge, in an interview in *L'Aurore*, has thus explained his position:

"You know the sixty-fourth article of the Code, which says: 'There is no crime nor misdemeanor where the accused was in a demented condition at the time of the act, or where he was constrained by a force he could not resist? Well, hunger, after thirty-six hours of fasting, appeared to us [the judges of the tribunal] to be a force which a woman could not resist. There was the bread in the window, attracting her, and at the other end there was the old mother and the child dying of inanition. Talk about freedom of will, or the power of discrimination, under such mental conditions!

"Don't we acquit every day, as having acted under the dominion of an invincible force, nervous, hysterical, or pregnant women guilty of having appropriated this or that trifle of which they had absolutely no need? The question, then, is simply how to apply the same principle to a person suffering from hunger. All there is to determine in such a case is whether the hunger was merely a pretext or a real, absolute, imperious necessity at the time of the theft. If the latter, then the wrongful taking was merely an instinctive and mechanical act."

The judge claimed to have received scores of messages from princes, bankers, lawyers, and authors praising his humanitarian decision. Contributions have been sent to him from all quarters for the benefit of the girl, and he was moved to say to his interviewer: "Ah, the French are the best people in the world. It suffices, in the midst of our differences and quarrels, in the midst of scandal and excitement, to mention the need of relief for some one in misery, and straightway there is general accord in a spontaneous exhibition of generosity." However, some conservative journals went so far as to accuse the judge of weakness, sentimentality, and ignorance of legal principles, and his defense was declared to be fit for a demagog.

Clemenceau, in taking up the cudgels for the judge, wrote as follows in *L'Aurore*:

"I should have thought that it was antisocial to show us, amid our bourgeois luxury, two women and an infant dying of hunger.

But no! *This* is social; this conforms to the 'essential interests of civilization and humanity.' For failing to recognize this, for disregarding the great principle of the economists who would have those without bread and work die of hunger, it is necessary that the girl Ménard should be punished in the name of the society she outraged. I am not simple enough to be surprised at these things. The implacable logic of *laissez-faire* economists admits of no other solution of the problem of hunger. Find work, if you can; if not, find succor—without begging, however; and if you have neither, there are but two ways open: be rich or die. Not all can be rich. The example of Mlle. Ménard teaches us that there are women who are not resigned to letting their infants perish of hunger. And this is the crime for which exemplary punishment is demanded. It is true that had she, with her child on her back, thrown herself into the river, the same organs would have mercilessly denounced the suicide coupled with murder, and the church would have refused its prayers to the dead. One can not imagine how difficult it is to please everybody and the government of Felix Faure, not to mention Providence."

It may be recalled that Cardinal Manning once declared that morally stealing is not criminal if necessitated by hunger, and the press of England and America severely criticized his dictum as anti-social and revolutionary.—*Translated for THE LITERARY DIGEST.*

OUR APPROACHING STRUGGLE AS FOREIGNERS SEE IT.

IN expectation of the speedy outbreak of hostilities between the United States and Spain, the European papers discuss the cause of the conflict and its possible outcome pretty freely. Generally speaking, we meet with rather less approval than did the Greeks in their attack upon Turkey. England is an exception to this rule; here the great majority of papers think the attitude of the United States justifiable, and hope for our success. In Canada, however, there is less friendliness as the certainty of hostilities draws nearer. *The Witness*, Montreal, commends President McKinley for his late opposition to the war party, and says:

"Those idle people who burned President McKinley in effigy at Richmond, Va., and at Newport, R. I., are like the crowd that mobbed George Washington in the streets of Philadelphia. . . . It was a pitiful demonstration against the President, whose effigy has been hung, along with that of Mr. Hanna, bound with stock brokers' ticker tape, in testimony that they are accused of being governed by Wall Street, if not of gambling, like some of the other Senators, on the issue of peace or war. The bitter feeling of the army of unsuccess toward the wealthy gives a greedy ear to all such degrading suspicions. Sir John Macdonald once said that the next war in the United States would be between the Haves and the Have-nots. The ticker-tape in this effigy-hanging business is in keeping with this prophecy."

The *Manitoba Free Press*, Winnipeg, professes to be highly entertained by what it regards as our search for a pretext to attack Spain. It says:

"The latter situation is one of the most singular in history. The people of the United States are determined to go to war with Spain, but are at a loss how to proceed. The majority believe that the *Maine* disaster will afford a pretext. . . .

"If there is to be war at all it must be on account of the conditions in Cuba. A large majority of Americans will sympathize with the Ohio Congressman who went into the War Office the other day and demanded in a loud voice to know when they were going to declare war. 'Against whom?' was asked. 'Spain, of course,' was the reply. 'For what?' 'I don't give a d—; on general principles; any old thing will do.' . . . Advocates of provincial rights in Canada used to contend, and probably do yet, that the Provinces have a right to do wrong if they wish. If so, even more has Spain a right to misgovern her own colony. What right has the United States to interfere with the government of Cuba, any more than with the government of Canada or Siam? . . . Events are so shaping that war is wellnigh inevitable; but if by any possibility the President can avert it without sacrificing his duty to humanity, he is bound to use every effort to that end.

This he is doing, to the unstinted admiration of the whole civilized world. He may succeed. He has a powerful ally in Spain's disinclination for war, but there does not seem any way of accomplishing his purpose which Spain's sense of honor will permit her to accept."

Saturday Night, Toronto, goes a little further, and declares that if the United States is searching for an ostensible reason for war, the world in general is well aware of its true cause. We condense its editorial as follows:

There is very little doubt that the sugar trust instigated the Cuban rebellion as it did the insurrection in the Hawaiian Islands. It also seems certain that the trust is determined to bring about annexation. The sugar trust, indeed, has been the double distilled curse of Cuba. Congress may bluster and the President may send provisions, but the battle-fields and cemeteries of Cuba will always bear evidence to the cupidity and insincerity of the United States. Spanish America desires the independence of Cuba, but is also anxious that the island shall not become a portion of the United States. If Cuba is annexed as a result of the machinations of a corporation, then Mexico, the Central States, and South America also must fear that they will become a prey of those yowling jingoes who, tho anxious for war, will neither work nor fight themselves. The whole business is unutterably sad from the point of view of men who have been trying to retain some faith in humanity. It was started by speculators and has been manipulated by them, and neither the pyramid of human bones nor the groaning dungeons have deterred them from continuing an arrangement which is to result in their financial gain.

The Catholic Register, Toronto, advises Americans to heed Michael Davitt's warning that England would not sympathize with the United States if she did not hope to use her for her own purposes in China. "This," says the paper, "is why the ministerial organs of London are now busily abusing the Spaniards even in more wholesale fashion than the *New York Journal*, telling them they must pay up smartly and apologize fervently and fully to the United States for the blowing up of the *Maine*." The editorial ends as follows:

"The sympathy of all reasonable men is on the side of England's policy in China, if that policy is to keep an open door for trade and not allow France, Germany, and Russia to seize what they can for themselves and shut out the rest of the world. But England will lose this sympathy with every weak concession on her part to her opponents in the game of diplomacy; nor can she win America for an ally by taking a hand in the humiliation of Spain as an assassin nation."

The Daily Chronicle, London, nevertheless denounces Michael Davitt, and declares that England is in full sympathy with the United States. *The Clarion*, London, says:

"Here, as always, the true answer lies in distinction between the masses and the classes. The brokers and gamblers and grabbers, of course, are bitterly opposed to the Transatlantic rivals who check their plunder. The masses, whose near kindred make up a great part of America's population, are animated, on the contrary, by the friendliest sentiments toward the United States."

The Scotsman, Edinburgh, adheres to the popular view that Spain can not defend herself because she has no money. *The Pall Mall Gazette* says the United States expects sympathy just now, and ought to get it. *The Speaker*, London, says:

"It has been quite possible for a careless reader of the New York telegrams to regard the whole demand for intervention as a movement got up by the 'yellow press' and financial syndicates for the exploitation of Cuba, swelled by unthinking sentimentalists and made to ebb and flow in the interests of speculators in stocks. Whatever element of truth there may ever have been in that view, the movement has certainly now got out of jingo hands. . . . Senator Gallinger, of New Hampshire, has, no doubt, committed an impropriety—a Senator being in some degree part of the executive—in accepting the invitation of the *New York Journal* to go and see for himself how things stand in Cuba. But this does not absolutely invalidate his evidence. . . . Senator Money, of Mississippi, a decided jingo, is an ex-Confed-

erate soldier; so is Senator Bacon, of Georgia, who has just stood sponsor to a peace resolution in the Senate. These are all very different from the popular conception of the blatant jingo of the South or West, brought up on Fourth-of-July spread-eagleism, ignorant of everything outside his own country, and confident that the United States can whip any of the effete monarchies of Europe. Their respective experience enables them to judge of the situation and estimate its risks. . . . Undoubtedly the first results of the war may prove a shock to popular American ideas. But there can be no doubt of the ultimate result. . . . But while we deprecate war and hope for that delay which can alone bring about a pacific solution of the question, we deprecate still more earnestly that intervention of other European powers of which there has been some talk in the continental press. We can imagine nothing more certain to provoke hostilities, nor to bring the United States permanently into the politics of Europe."

On the Continent of Europe there is little diversity of opinion. The *Novosti*, St. Petersburg, says the people of the United States unjustly provoke a war, and they know it. The *Journal des Débats*, Paris, says the civilized world holds the United States responsible for this conflict. The Dutch papers hold similar views; the *Nieuws van den Dag*, in a lengthy article, expresses itself to the following effect:

The European press is beginning to judge the hateful intrigues to which Spain has been subjected. Let us endeavor to judge of the case fairly:

Spain administers Cuba badly. Well, she administers her provinces at home no better. But during the struggle which has now lasted for three years the Spaniards have proved themselves a nation of men capable of any sacrifice for their national honor, and who can refuse to respect them for it? What has the United States to do with the matter, anyhow? Their republic is just the opposite of a good, honest, and justly administered country. It is a case of the pot calling the kettle black; indeed, the corruption of the Spanish officials will have to become a great deal worse ere it can rival in rottenness the administration of Tammany-ridden New York or of Porkopolis. The whole thing has been started to prove that the crazy publisher of the *New York Journal* is at the head of the demagogues who rule the country. That members of Congress could dare to make a trip to Cuba in Hearst's yacht in order to fan the dying embers of the rebellion is sufficient in itself to prove that the Americans have no right to judge a people like the Spaniards. The meanest thing of all is that the Americans try to get out of the responsibility of declaring war, and seek to insult Spain to such an extent that the proud Spaniard loses patience.

"But there is danger [we quote here direct], in this war, danger for the rich pork butchers of Chicago and the corrupt debauchees of New York who speculate *à la baisse* in this war. Spain is poor, yes, so poor that the material pleasures of life no longer possess attractions to the Spaniards. Hence they do not fear death if they can by death defend an ideal. And this ideal is to-day for every Spaniard his national honor."

The *Echo*, Berlin, says:

"A great deal of noise is made about the fifty million dollars voted for warlike preparations, but this sum does not mean much, as the armament of the nation was at zero. Moreover, one can't tell how much of those fifty millions will stick in dirty hands. In short, public opinion in Europe generally indorses the view that the United States people yell most for war and are least prepared, while the Spaniards are more anxious for peace, but better armed."

The *Kieler Zeitung* does not think that Europe will interfere. If Uncle Sam wants to fight, he can go ahead, nobody will hold him back. Spain is probably quite able to take care of herself. The *Vossische Zeitung* is certain that the "yellow journals" will not be happy until they get their war. The *Hamburger Nachrichten* says Prince Bismarck will not be interviewed on the subject, hence all such interviews are pure inventions.

In Cuba the insurgents as well as the autonomists object to American rule. The tone of the Havana journals continues to be very bitter, while the Spanish papers speak chiefly of the neces-

sity of defense, and for this purpose \$200,000 were subscribed at a single meeting in the Madrid Opera House. The Queen Regent has placed her own very considerable private fortune at the disposal of the Government. The Barcelona *Diario*, referring to the destruction of Spanish flags in the United States, remarks that Spain has no time for such puerilities. The *Epoca*, one of the most conservatively edited Spanish papers, fears the time for talk is past. The Americans want the war, and the responsibility rests with them.—*Translations made for THE LITERARY DIGEST.*

BRITISH REVERSES AND THE HUNT FOR ALLIANCES.

“WE challenged Russia in the Chinese question, and ran away. The attitude of our Government is deplorable; it is a triumph of diplomatic incompetence. The authorities seem completely to have lost their head.”

Thus *The Saturday Review*, London, an ably edited but strongly jingoistic weekly. Its opinion is indorsed by *The Times*, *The Globe*, *The Telegraph*, *The Mail*, and many others. Careful scrutiny leads to the conclusion that the warlike press has less influence at the present time than the more peaceful journals; but there is no doubt that Great Britain deeply feels the loss of prestige connected with Russia's and France's complete ignoring of British opinion, and the jingoes may force England into a struggle. The *Handelsblad*, Amsterdam, would deplore this. Our Dutch contemporary thinks the English have only themselves to blame for their reverses. We summarize its long article on the subject as follows:

Having refused to join the great powers in their opposition to Japan, England did what? Attend to business in the far East? Not at all. She acted as if everything were settled there, and tried to make an all-British possession of Africa and to extend her Indian frontier. Now *The Times* sums up the mistakes of the past, and is astonished to find that twice two makes four!—the very *Times* which is most guilty by advocating attacks upon French interests in Egypt, raids into Dutch republics, and the annexation of enough territory to make ten United Kingdoms. The result is that Great Britain stands now completely isolated, and that at a moment when she is opposing Russia. Meanwhile a French Jameson with a French Rhodes to back him has entered British West-African territory in times of peace. As if all this were not enough, not to speak of the attack upon the Indian mountain tribes, England must needs enter upon a campaign in Egypt, only to discover at this late date that the expedition is very dangerous.

We admire the English people, and could not think of any thing worse for civilization than to see them crushed, but we can not close our eyes to the fact that England is in a very precarious position. She can not make good all her threats, and must withdraw some of them, or be crushed.

The Independance Belge, Brussels, says:

“It is much more likely that the people of Great Britain will force the hand of the Government than that they will permit it to retreat. A feeling of bitterness, mixed with a sense of insecurity and danger, has begun to be noticeable. Russia is openly accused of treachery. Lord Salisbury, so argue the English, has trusted Russia, and if that power does not observe the Treaty of Tientsin, which provide that Chinese ports must be open to all, then England must meet defiance with defiance.”

The Russian papers point out that Russia has only taken what she needed so long—an outlet for her trade. The *Novoye Vremya*, St. Petersburg, is in favor of an international conference to settle the affairs of China. But this the English object to, as it would include Germany, whose prestige they regard as already too great for British trading policy. The *Journal des Débats*, Paris, says:

“It is really impossible to discover a sound reason for all this

fuss. For a long time Russian influence has been predominant in Northern China, and Russia is only realizing practically what in theory has all along been her due. Perhaps the English papers only want their Government to make another grab in China, the Chusan Isles probably, otherwise their attitude is inexplicable—and very dangerous. It is bad policy to draw your sword and wave it in defense of rights which nobody has violated. The English would do well to remember that the present state of India renders a war with Russia out of the question. Do they want to stake their actual possessions against shadowy rights in China?”

The isolation of Great Britain is, however, recognized by many of her sons, especially in the colonies. The tone of the papers published in outlying British possessions is anything but warlike. *The Celestial Empire*, Shanghai, thinks all nations should join in approving the Russians and Germans. It says:

“Surely freedom and free trade in China must be acceptable to France and Japan, as well as to the United States of America and to Italy, and to the smaller states of Europe! Surely those who love freedom will approve of this. It may be said that China is not free—her people are under the tyranny of the mandarins. But, after all, the mandarins are from and are of the people, for the son of any coolie may become a mandarin.”

The Overland China Mail is also against an aggressive policy in China. But many Englishmen think England could get the better of Russia if she were now to obtain alliances. Sir William des Voeux, ex-governor of Hongkong, whose opinion is very largely quoted in these days, suggests Germany. In an interview he expresses himself as follows:

“Above all things we must ally ourselves with Germany. I regard the occupation of Kiau-Chou by the Germans as a good thing for us. Without our help she could not maintain herself a week there, if attacked by France or Russia. If Russia gets to the great Chinese wall, Germany will lose not only Shantung, but the ‘open door’ into China. But if Germany and England join hands, Russia will not be long mistress of the Chinese army. Moreover, we would have the support of Austria and could assist our only true friend, Italy.”

But the Germans are not anxious to enter into a compact for the defense of British interests, and many English papers, fearing German competition in trade worse than Russian guns, object seriously to such an alliance. Japan is regarded as the natural ally of Great Britain. But the most effective helper would be, in the opinion of many journals, the United States. *The St. James's Gazette*, London, says:

“A transaction with Russia, an arrangement for common action with Germany, are both possible. Yet neither of them could well be what a league with the United States could easily be made, supposing the people of America were disposed to enter into one, and practical considerations induced the Government at Washington to contract such a bond. . . . In no part of the world do England and the United States stand opposed to one another as the British Empire is opposed to the dual alliance, and might be by Germany. Meanwhile they have occasion to act together in at least two regions. In the Antilles the interests of the Union are superior and ours subordinate. In China the relations of the two are reversed. We are mainly concerned, and America only in a secondary degree. But there is no real antagonism between us in either region. . . . The United States have interests beyond their own border to which they must attend, and which must needs draw them into relations of amity or rivalry with other powers. The time for alliances has come for them, and they can no longer afford to look upon the conflicts of European powers as something remote and as being no concern of theirs. It may be a fortunate thing for both that this should be the case just when it is so very possible for England and the States to act together. We say ‘may be,’ because everything depends on the willingness of the people of the United States to form relations of amity, and to cooperate with us for a common purpose. On our side there is every disposition, and we can claim to have shown it in our acts. It is for them to take the next step. They can now by speaking

a word in regard to China make it clear to the world that the two 'Anglo-Saxon communities' are prepared to act together."

The Speaker, London, says:

"We have no wish to ask the Americans to fight our battles, just as we feel convinced that they are far too proud to desire that we should fight theirs. But what we do wish, and what the wise men on both sides must most earnestly desire, is that each nation shall feel that it has in the other a friend, a brother, on whose sympathy it can rely in its time of need. It was well said by an American newspaper last week that there are at least two contingencies in which we may count upon the creation of an Anglo-American alliance. One would be a joint attack upon the United States by the great Continental powers, and the other an attempt by the same powers to isolate and humiliate Great Britain. In that sentiment we believe that there is nobody in this country who will not heartily concur."—*Translations made for THE LITERARY DIGEST.*

FRANCE, RUSSIA, AND THE ZOLA TRIAL.

THE after-effects of the Zola trial are beginning to make themselves felt by a decided coolness against France in the rest of Europe. Meanwhile the friends of France endeavor to explain why it was impossible for the French Government to reopen the Dreyfus case. Thus the Vienna *Politischen Nachrichten*, usually a well-advised paper, claims to have reliable information to the effect that Russia was concerned. If not true, its story is certainly *ben trovato*. We summarize it as follows:

In 1892 the French Government became convinced that spies divulged its plans for mobilization and defense to a foreign power. Among the persons entrusted with the search for the "leak" was Captain Esterhazy, who was acquainted with many persons connected with foreign embassies. He discovered that Dreyfus seemed to be on uncommonly good terms with the Russian Embassy. Esterhazy informed the Minister of War, who, however, did not believe that Russia had anything to do with the matter, as the negotiations for an alliance were already progressing favorably. Esterhazy did not like his word being doubted, and he succeeded in obtaining the original "bordereau," which he stole himself in the Russian Embassy, or caused it to be stolen. It certainly had been written by Dreyfus.

The discovery created much excitement in military and administrative circles. It was, of course, kept secret, but secrets will out. Mohrenheim, the Russian Ambassador, heard of it. He was naturally anxious to turn suspicion from his own country. He found that the Dreyfus bordereau had been abstracted! The Ambassador immediately saw how matters stood, and he acted in the most energetic manner. He threatened to leave Paris within twenty-four hours unless the original bordereau was restored to him. No one can blame the French Government for complying with this request. It is, however, only natural that a copy was retained, and it is just as natural that Dreyfus was prosecuted. In order to procure his conviction, the bordereau had to be shown to the judges, and Esterhazy, who knew the document best, reproduced it, imitating Dreyfus's handwriting.

The above explains why the document was not shown to Dreyfus or his advocate; it also explains the undoubtedly sincere protestations on the part of the highest military authorities that Dreyfus was guilty. Casimir-Perrier's resignation as President of the French Republic was also due to his conviction that the matter would cause much excitement.

If the above account is correct, the Russian Government has certainly succeeded in preserving the secret even from its own people. The Russian press is as outspoken in its censure of the Zola trial as any other, and the sacrifice supposed to have been made to the susceptibilities of Russia have not strengthened the alliance. In the *Juridetscheskaja Gaseta*, St. Petersburg, Senator Sakrewsky, an eminent Russian lawyer, protests against the violation of justice which, in his opinion, has been committed in both the Esterhazy and the Zola trials.

The *Syn Otetchestwa*, St. Petersburg, says: "This is the end of France. She has sunk to the level of barbarous nations. . . . The Dreyfus case is an apt illustration of France as she is, sunk

from her once high pinnacle, ruined by the fear of truth." The *Ruskiya Viedomosti*, Moscow, a paper largely patronized by the professors, says:

"Has France still a right to call herself enlightened? It would seem that Paris is situated somewhere in a distant corner of Asia or Africa, which has not yet been reached by civilization. . . . But the matter will not end here. So much has been revealed by the Zola trial that agitation for a reopening of the Dreyfus case is perfectly justifiable."

The *Novosti*, St. Petersburg, deplors the fact that the "yellow journals" of France should have been able to influence so strongly the hysterical multitude, and says:

"This parody of justice, in which unauthorized attacks were made upon the defendant by men supposed to appear as witnesses, could not end differently. The mob of noisy rowdies bent upon creating sensational excitement was too strong for the eminent writer, who must now suffer for his heroic attempt to get at the truth. . . . The pressure which General Boisdeffre exercised upon the jury stands unprecedented in the history of legal proceedings in France, excepting, of course, the time of the revolution and the Commune."

The *Novoye Vremya*, which is rather inclined to antisemitism and often expresses official opinion, acknowledges that "the jury was certainly subjected to a strong pressure by General Boisdeffre and General Pellieux, whose conduct appears abnormal when we remember that the impartiality of a jury should be above suspicion."

On the whole, it would seem that France has gained very little so far as the friendship of Russia is concerned. Her democratic institutions have not become more popular with the subjects of the Czar, and the hope that Russia would countenance an attack upon Germany seems further from realization than ever. The Liberal *Vestnik Eurofy*, St. Petersburg, expresses itself, on the whole, as follows:

The idea of a Franco-Russian alliance was first expressed in France by men who hoped to use it for a war of revenge against Germany. But this view was not likely to find favor with us. Russia is not *naïve* enough to enter upon a struggle of such magnitude merely to please France. Hence the Alliance hung fire a long time. Not until the idea of revenge had been quietly dropped, and an alliance upon more practical grounds had been proposed was it possible to negotiate successfully.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE Swiss referendum on the proposed purchase of all railroads by the state has resulted in a majority of 348,146 ayes as against 177,130 noes for the project. The advocates of the scheme point out that the private companies are often very arbitrary, and that the Prussian state railroads are earning good money for the country at large.

ACCORDING to the latest statistics the number of foreigners is larger in Germany than in any country of Europe except France. The Hungarians and Austrians number 223,000, the Dutch 51,000, the Swiss 45,000. There are also 28,000 Danes, 26,000 Russians, 23,000 Italians, 19,000 French, 15,000 English, 9,000 Belgians, 9,000 Swedes, and 2,000 Norwegians who have not become German citizens. Of countries outside of Europe the United States is represented strongest, her contingent being 16,000 strong. More than 2,000 of these are immatriculated students.

THE anti-emigrant agitation at present carried on in this country is rather incomprehensible to many people abroad, who seem to think that the descendants of the first ship-load of immigrants to this continent have no right to exclude the last. "As soon as there is no longer spare room," says the Berlin *National Zeitung*, "Europeans will cease to go to the United States. Those born on American soil will then be under the necessity to prove that they really can maintain a position among civilized nations without the help of men who were educated for the battle of life in the older countries."

THE salaries of German editors, as described in a recent review of the condition of the press, show that journalists do not exactly starve in the Fatherland. They receive between \$1,000 and \$5,000 a year. Reliable correspondents are also paid well. The Berlin correspondent of the *Frankfurter Zeitung* has a fixed salary of \$3,000, the *Kölnische Zeitung* has two Berlin correspondents at \$3,000 and \$4,500 respectively, the *Münchener Allgemeine Zeitung* pays its representative \$3,750, the *Magdeburger Zeitung* and the *Weser Zeitung* \$2,500 each, even the Hanover *Courier* and the *Volks-Zeitung*, Cologne, pay \$2,000 a year to get reliable news; the *Kölnische Zeitung* offered \$5,000 a year to the late Professor Loehner in Munich as its special correspondent.

BUSINESS SITUATION.

Quiet steady business has marked the past week. New ventures have been practically nil, owing to the unsettled state of our foreign relations, and unseasonably cold weather has checked the usual Easter demand to a considerable extent. Frost is reported to have done some damage to the peach and other fruit crops of the South and to the early planted tobacco. On the other hand, despite the decreased railroad earnings due almost exclusively to rate cutting and the low class of freight, the volume of business reported by railroads in tonnage has not lessened. In five weeks Chicago east-bound tonnage has been 779,217 tons, more than double that of last year, and 77 per cent. larger than in 1892. Lake navigation is now open, and trade in the Northwest is reported as very satisfactory. Gold is still coming in from abroad, \$28,700,000 having been received since the tide turned.

Failures.—"Disasters in trade shown this week by separate branches of business for the month of March, and also the first quarter of 1898, make the best report that has been possible for five years. It is interesting to note that nearly all branches of business show surprising improvement. Meanwhile banks are extremely cautious, and commercial loans are but 10 per cent. of their aggregate. The belief that quick expansion in all branches would follow greater liberality and patriotism by the banks is not wholly unfounded, and the heavy receipts of gold from Europe count but little, compared with the greater or less liberality in loans by banks. Disturbance does not yet appear, however, and failures for the week have been 232 in the United States against 252 last year, and 32 in Canada against 36 last year."—*Dun's Review, April 9.*

Wheat, Corn, and Cotton.—"The wheat outgo counts for much and continues, Atlantic exports having been 2,240,172 for the week, against 1,521,122 last year, and Pacific 1,226,574 bushels against 447,385 last year. Since corn exports continue, 3,483,650 bushels against 3,323,277 last year, the strength of the demand is not to be attributed to speculative agencies. It is fortunate that western receipts of wheat do not fall short of the extraordinary gain, but are still 1,901,305 bushels against 1,789,110 last year, so that the stories of nearly exhausted supplies of wheat are fables for children. The price rose steadily, and closed 2 cents higher for wheat, with corn 1 cent higher. At the same time the exports of cotton are extraordinary, tho just now deferred by the caution which causes larger shipments by rail to New York instead of outside from Gulf ports. For four weeks it has averaged nearly \$2,500,000 per week greater than in 1895 from the largest crop ever grown, in spite of the fall in price, which has not changed during the week, in spite of many reports of decreased production."—*Dun's Review, April 9.*

Decreased Railroad Earnings.—"Railroad earnings have been reduced beyond all reason by rate cutting, and yet have been for March 16.3 per cent. over last year, and 6.6 per cent. over 1892, all classes showing gain over both years. Even speculators who are crazy about foreign affairs have

Brown Bros.'s Copper Range Boilers never leak.
Randolph & Clowes, Box 19, Waterbury, Conn.

found enough good sense to raise the average price of railway stocks about 30 cts. per share for the week, and of Trust stocks 65 cts. per share, but the daily panic of bulls and bears proves nothing. The substantial forces are not distrustful of American investments, though willing to buy as cheaply as anybody will sell."—*Dun's Review, April 9.*

Bank Clearings.—"It is probable that usual monthly and quarterly settlements account for the considerable gain shown in bank clearings this week over last, but the very much better showing made this year as compared with previous years is proof of the more favorable situation in which general trade and business finds itself. The total clearings at 85 cities for the week aggregate \$1,281,000,000, a gain of 16 per cent. over last week, an increase of 20 per cent. over the corresponding week of 1897, of 38 per cent. over this week in 1896, and of 44 per cent. over 1894. Compared with the week in 1892, the gain shown is 3 per cent. The gain shown, as compared with last year, is, of course, largest at New York, the increase being 38 per cent., but nearly all the leading cities, with the exception of Boston and two or three other cities in the West and South, show increases over a year ago, varying from 10 per cent. to 40 per cent."—*Bradstreet's, April 9.*

Canadian Trade.—"Cold weather and uncertainty as to tariff changes checked business early in the week in Canada. Most important of the tariff changes appears to be the extension of preference duties to West India raw sugars. This is expected to help Canadian refiners in giving them a considerable advantage over foreign refined sugar. A fair trade is reported in dry goods by Toronto, and buyers from that city have bought large quantities of printed cottons at New York. Much is hoped for from the demand, alike from the new agricultural territories settled up, and from the new mining-camps in the northwest. Halifax reports a fair trade and that the sealing-season is likely to be a profitable one. Montreal reports Easter purchases good and orders from the interior satisfactory. Business failures this week in the Dominion of Canada number 39, against 38 last week, 32 in the corresponding week of 1897, 30 in 1896, 26 in 1895, and 38 in 1894. Bank clearings at six Canadian cities for the week aggregate \$24,741,000, 12 per cent. over last week and 8 per cent. over the corresponding week of last year."—*Bradstreet's, April 9.*

SARGENT'S NEW ROTARY BOOK CASES

SARGENT

THEIR ADOPTION IN THE NEW BUILDING FOR THE LIBRARY FOR CONGRESS IS THE HIGHEST ENDORSEMENT OF THEIR MERITS.

They revolve on a metal roller-bearing turn-table, which is not only perfect in principle but is everlasting. They are a brain-worker's best tool, a labor economizer and a time saver. All kinds for all needs. We make, also, all sorts of appliances for the convenience of book men, such as book and Dictionary stands, adjustable reading desks, etc. Write for catalogue D, postage 2c. Current Events.

Monday, April 4.

The Cabinet holds a long meeting. . . . The Navy Department orders the immediate purchase of ten auxiliary cruisers. . . . Great loss of life attends a flood which overwhelms Shawneetown, Ill. . . . Ten merchant vessels for equipment and use as auxiliary cruisers are acquired by the naval auxiliary board under instructions from Washington. . . . It is announced that the Rev. Dr. Charles A. Briggs has left the Presbyterian church, and will take orders in the Episcopal church. . . . Congress—Senate: Messrs. Perkins, Clay, Mantle, and Rawlins speak in favor of intervention in Cuba.

The Pope offers to mediate between Spain and the insurgents in Cuba, and urges the Spanish Government to suspend hostilities. . . . The *Mangrove* and the *Bache* are sent from Key West to Havana to bring home such Americans as wish to come. . . . The flag is removed from the wreck of the *Maine*, and the wrecking-tugs sail for the United States. . . . The naval attaché of the American embassy in London has reported to Washington that Spain bought submarine mines in England for use in Havana harbor. . . . Thousands of Spaniards are enlisting in the volunteers at Havana and they are reported as generally desiring war with the United States. . . . England confirms the report that she has arranged with China and Japan to take possession of Wei-Hai-Wei after the indemnity to Japan has been paid. . . . The surveying parties in Nicaragua are making substantial progress on the canal route.

Tuesday, April 5.

Consul-General Lee is ordered home from Havana. . . . Assistant Secretary Vanderlip, of the Treasury Department, talks of the measures which might be taken to raise additional revenue in case of war. . . . The Spanish minister in Washington expresses himself as still hopeful for peace between his country and the United States. . . . The treasurer of the Cuban revolutionary party, in replying to statements as to the circulation of Cuban bonds, says that every one issued had been honestly sold, and he is prepared to account under oath for them. . . . The American Wire Company, with headquarters at Chicago, is incorporated, with a capital stock of

Pamphlet containing sample shades, and giving directions for mixing and applying, sent free upon application.

National Lead Co., 100 William St., New York.

\$24,000,000. . . . The Navy Department completes the purchase of the steamships *El Rio*, *El Norte*, *El Sol*, and *El Sud*, which will immediately be fitted up as auxiliary cruisers. . . . Congress—Senate: Messrs. Chandler, Turpie, Turner, Harris, and Kenney speak in favor of an immediate declaration of war against Spain. House: Several private bills are passed.

The Vatican is trying to propose terms of an armistice in Cuba; the attempt of the powers to arrange a joint mediation between the United States and Spain fails on account of England's refusal to join in it; the *Bache* and the *Blake* arrive in Havana to bring Americans home. . . . Arthur J. Balfour explains in the House of Commons England's policy in China and what it has accomplished; the Japanese press and people resent England's taking Wei-Hai-Wei; China has yielded to the demands of France.

Wednesday, April 6.

President McKinley decides not to send his Cuban message to Congress until Monday, on account of representations from Consul-General Lee that the lives of Americans in Cuba would be imperiled by its appearance. . . . The Ambassadors and Ministers in Washington of the European powers have agreed on a joint note tendering their good offices to maintain peace between the United States and Spain. . . . The Cuban Junta, in New York, issues a formal statement purporting to be from the Cuban Provisional Government, declaring that Cuba will reject absolutely intervention by the United States unless it be preceded by a recognition of the independence of the Cuban Republic; that if the United States intervene in Cuba without recognizing independence the Cuban army will refuse to co-operate and will in the last resort turn its arms against the United States. . . . Congress—Great crowds assemble in both houses in expectation of hearing the President's Cuban message read, and much disappointment is shown when it was learned that it had been withheld. Senate: A brief executive session is held and debate on the Sundry Civil bill is continued. House: The army reorganization bill is considered. Rumors of dissensions in the Spanish cabinet are denied by Premier Sagasta. . . . The

Electropoise
TRADE MARK
(Price Greatly Reduced.)
PLAINFIELD, N. J., Feb. 1, 1897.
DYSPEPSIA I have invariably declined giving indoors ment to medicines or agencies for curative purposes. But after a faithful use of the Electropoise in my family I have had such signal proof of its remedial value that I herein voluntarily testify to its healing virtues. It is my immediate duty to make known its curative properties for the sake of those who suffer. The Electropoise has very materially benefited myself in dissipating the agonies of chronic nervous dyspepsia. I regret that an unjust prejudice founded on misrepresentation kept me from its beneficent help until recently.
CURED
Yours, GEO. C. NEEDHAM,
The Anglo-American Evangelist.
The Electropoise is cheaper than medicine—does not wear out—can be used on every member of the family, and costs only \$10.00. A new edition of our 112-page booklet free.

S. 503 FIFTH AVE., NEW YORK CITY.

A New Cure for Kidney and Bladder Diseases, Rheumatism, etc.—Free to our Readers.

DISORDERS of the Kidneys and Bladder cause BRIGHT'S DISEASE, RHEUMATISM, GRAVEL, PAIN IN THE BACK, FEMALE COMPLAINTS, URINARY DISORDERS, DROPSY, etc. For these diseases a POSITIVE SPECIFIC CURE is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the *piper methyolicum*, from the Ganges river, East India. It has the extraordinary record of

1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. A. C. Darling, of North Constantia, New York, testifies in the *Christian Witness* that it cured him of Kidney disease after sixteen years' suffering. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlet, Vt., gives similar testimony. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this *Great Specific* for yourself, we will send you one Large Case by Mail FREE, only asking that when cured yourself you will recommend it to others. It is a *Sure Specific and cannot fail.* Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

A NEW STRONG BOOK.

The Twentieth Century City

16mo, paper, 25c.; cloth, 50c.

Century City

By Rev. JOSIAH STRONG, D.D.

Author of "Our Country" and "The New Era."

With the same fascinating presentation of facts and figures which made "Our Country" one of the great books of the century, Dr. Strong discusses the danger arising from the vast movement of population towards the Cities and the growth of their preponderating influence in the Nation, points out the principles which may be applied successfully to the solution of the great problems of modern society, and makes a ringing appeal for action.

Sent, postpaid, on receipt of the price, by

THE BAKER & TAYLOR CO., Publishers, 5 & 7 East Sixteenth Street, New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

family of Minister Woodford start for France. . . . Several steamers sail for Cuba to bring away Americans before a conflict occurs; the steamer *Mascotte* carries from Havana to Key West ninety-six people, including many Americans. . . . The Hamburg-American Steamship Company will establish a fortnightly service between New York and Eastern China.

Thursday, April 7.

The diplomatic representatives in Washington of the six great European powers present a joint note to President McKinley expressing a hope that peace with Spain may be preserved; the President, in reply, announces his determination that the war in Cuba must cease. . . . The Southern Pacific Railroad Company elects directors. . . . The total output of coal in the United States for 1897 was 198,250,000 short tons, the largest ever known. . . . Margaret Mather, actress, dies, Congress—Senate: The sundry civil bill is under consideration. . . . House: Mr. Lentz, of Ohio, makes a bitter attack on President McKinley, to which Mr. Grosvenor replies. . . . Both houses adjourn until Monday.

In reply to a joint note from the European Powers in the interest of peace, Señor Guilon, the Spanish Foreign Minister, says the Spanish Cabinet are unanimous in considering that Spain has reached "the limit of international policy in the direction of conceding the demands and allowing the pretensions of the United States." . . . Advices from Hong Kong say that the revolt in the Philippines is assuming large proportions. . . . It is reported at Shanghai that the American Consul has demanded indemnity for an attack on a mission in Chung-King-Kindu Province. . . . Great excitement prevails among Hawaiian natives from fear of an eruption of Mauna Loa. . . . More than 1,000 houses, a theatre, hospital, and medical college are destroyed by fire in Tokio, Japan.

Friday, April 8.

Congress is not in session, but the members discuss the plan of action to be followed when President McKinley's message is received. . . . The Cabinet discusses the crisis. . . . Deputy Treasurer Guerra of the Cuban Republic explains to the House Committee on Foreign Affairs the facts concerning Cuban bonds. . . . The Anglo-Egyptian forces rout the Dervishes with heavy loss on the upper Nile, killing their general, Mahmoud. . . . Members of the Esterhazy court-martial will sue M. Zola and ask for his expulsion from the Legion of Honor. . . . Queen Victoria presents to President Faure of France an oil portrait of herself.

Saturday, April 9.

Progress is made toward securing harmony between the President and Congress on the plan for intervention in Cuba. . . . The *Massachusetts* joins the Flying Squadron, which is ready for sea.

A visit of the foreign ambassadors to the Spanish Minister of Foreign Affairs results in a meeting of the Spanish Cabinet, at which a decision is reached to grant an armistice to the insurgents in Cuba. . . . The Spanish armored cruisers *Cristobal Colon* and *Infanta Maria Teresa* have sailed from Cadiz to join the torpedo flotilla at the Cape Verd Islands. . . . The British losses at the battle of Athara were slight; the Dervishes lost 2,000 men killed and 4,000 captured.

Sunday, April 10.

Señor Polo, the Spanish Minister, presents to the State Department a note explaining the proclaimed armistice in Cuba and asking the United States to support it. . . . Mr. Quesada, of the Cuban delegation, issues a statement telling what the civil Government of Cuba is and what it has done. . . . Consul-General Lee leaves Key West for Washington. . . . There are several street demonstrations in Madrid, but no serious outbreak over the Ministry's concession of an armistice to the Cuban insurgents. . . . In Havana many Cubans have been arrested, ostensibly for plotting to kill General Lee.

CHILTON PAINT.

Be fair to yourself and to us. We believe we manufacture the best paint in the world. A recent visitor to our factory asked if we didn't "make it too good."

We believe that we can save you money, time and annoyance, and furnish you helpful suggestions for painting your buildings either inside or out. You do not need an expert to mix our paints—we do that for you, employing the best experience and machinery; we do it better than is possible by hand with a paddle.

If you are going to paint anything from a house to a carriage, let us send you our paint literature and suggestions.

CHESS.

All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."

Problem 274.

BY JACOB ELSON.

From The Times, Philadelphia.

(Reichelm calls this a "Subtlety.")

Black—Seven Pieces.

White—Ten Pieces.

White mates in two moves.

Problem 275.

BY P. F. BLAKE.

Black—Eight Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

No. 270.

- Chess solutions for No. 270, including moves like K-Kt sq, Q x Q Kt P, B-Q 5, mate, etc.

These are the principal variations, but, as M. W. H. says, "there seems to be no end to sub-variations."

Correct solutions received from M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. Q. De France, Lincoln, Neb.; F. H. Johnston, Elizabeth City, N. C.; C. R. Oldham, Moundsville, W. Va.; J. S. Smith, Linneus, Mo.; R. M. Campbell, Cameron, Tex.; "Ramus," Car-

bondale, Ill.; C. W. C., Pittsburg; Dr. W. S. Frick Philadelphia.

Comments: "A very ingenious problem of its kind; the question is how to get the K out of the way without getting him in the way"—M. W. H. "A Kingly beauty"—I. W. B. "Mr. Svejda's composition is about as hard to solve as his name is to pronounce"—C. Q. De F. "Unequaled, in my opinion, for difficulty, variety, and beauty"—F. H. J. "A neat conception"—C. R. O. "Remarkable for the sacrifice of pieces"—J. S. S. "Easy to solve, but very interesting"—R. M. C. "It made my back ache"—R. "A fine composition, that improves on acquaintance."—C. W. C.

The names of many of our solvers are conspicuous by their absence. The reason for this is that Herr Svejda set a trap by R-B 8. This move seems so very apparent that altho the problem is a first-prizer. Several of our old solvers condemned it as a poor, weak composition. But R-B 8 will not do. Kt-B 5 stops it. The two replies to Kt-B 5, which have been sent, are not correct. For instance:

- Chess moves: R-B 8, Q-Q B 2 ch, mate; Kt-B 5, K-B 6 must?

Oh! no! P-Q 6, and there is no mate next move.

The other try is

- Chess moves: R-B 8, R-K 8 ch, R x Kt, mate?; Kt-B 5, Kt-K 4 must?

It would be mate if the Black K did not have a place to escape on B 5.

E. E. B., Fort Worth, Tex.; B. H. Allen, Olympia, Wis.; J. H. Pengelly, Darango City, Mex.; W. R. Coumbe, Lakeland, Fla.; S. B. Daboll, St. John's, Mich., were successful with 268. E. E. B. sent second solution of 269.

The United States Championship Match.

FIFTH GAME.

Queen's Gambit Declined.

Table of chess moves for Pillsbury vs Showalter, White vs Black, moves 1-54.

Notes (abridged) by Emil Kemeny, in The Ledger, Philadelphia.

(a) This capture is usually delayed until Black plays P-Q Kt 3 and B-Kt 2. The text-move is hardly as good as R-Q B sq.

(b) Black, it seems, anticipated the P-K 4 continuation, which, however, was hardly threatening.

(c) Black, it seems, underrates the value of White's maneuver on the Queen's wing.

(d) P-Q R 3 or P-Q R 4 would have neutralized White's attack.

(e) Which weakens White's K P, but White will be enabled to make considerable headway on the Queen's wing.

(f) He could not play R x P, followed by Q x Q P and B x B, for R x R, K R-K sq and R K 2 would follow, White finally winning the Bishop. Instead of Q-Kt 3, Black might have played B-K 5, followed eventually by Q-K 3 and P-K B 4.

(g) A powerful move, which forces an exchange of R P and Kt P against Kt P and B P. Black's answer, P x Kt P, is hardly the best; Q-Q 2 was superior.

(h) Well calculated. If Black now plays Q-Q 2, then P x P is the continuation, and Black can not capture the Kt on account of R-Q Kt sq, followed by P-Kt 8 (Q). Nor can Black capture the Kt P, for Kt-Q 6 would win the exchange. Had Black on his 22d turn played Q-Q 2 this continuation could not be selected by White.

(i) Which guards White's weak K P and enables White to attack Black's isolated Q P and Q R P. The game is now decidedly in favor of White.

(k) Better, perhaps, was Kt-Q 2, followed eventually by Kt-Kt 3 and Kt-B 5, or by Kt-B 3 and Kt-K 5.

(l) Black might have played R-Q B 2, or finally R-Q 2, each leading to a satisfactory defense.

(m) Q x R, followed by R-Q 2 or Kt-B 2, was much better.

(n) He could not now guard the Q P. If R-Q 2, then Kt-B 3 would be the continuation.

(o) Overlooking the ingenious Q-K 5 ch and Q x P ch continuation White had on hand. The game, however, was compromised. The move selected hastens defeat.

(p) A final effort to escape defeat. Black, by sacrificing the Kt, will get three Pawns.

(r) R x P, followed by Kt x Kt, would not have saved the game. The move selected loses at once.

The Correspondence Tourney.

FIFTY-SIXTH GAME.

Ruy Lopez.

Table of chess moves for The Rev. A. Taylor vs E. E. Armstrong, White vs Black, moves 1-34.

Notes by One of the Judges.

(a) Lasker's general rule is, "It is not good policy to exchange, in the early stage of the game, the long-reaching Bishop for the Knight."

(b) We prefer Kt P x B, for two reasons: first, it is always better to double Pawns toward the center; second, Black needs his Q P for offensive, as well as defensive, purposes.

(c) Should play Castles, followed by P-Q 4.

(d) B-K Kt 5 should be played first.

(e) B-K Kt 5 still the move, if 7 P x P, B x Kt, etc. The next move gives White a powerful center attack.

(f) Forced, and Black has a bad game.

(g) Of very questionable value. P-Q Kt 3, followed by B-Kt 2, is probably a better continuation.

(h) Very risky, as it is apparent that White intends to Castle on Q side, and force the attack on K side. B-K 3, followed by Q-Q 2, is best.

(i) There is hardly anything good. Black has a lost game. The B is White's tower of strength, and the weakness of Black's 9th move is now apparent.

(j) Why not P-Kt 5? 'Tis his only chance.

(k) P-K 6 wins, hands down.

(l) K-R sq is the move.

(m) He can't keep this going much longer, and there is no need for further comment. White does not play the ending well, and does not force a mate which he could have done by advancing his Pawns. He simply catches Black in the simplest kind of a trap.

FIFTY-SEVENTH GAME.

Evans Gambit.

Table of chess moves for E. E. Armstrong vs W. K. Van de Grift, White vs Black, moves 1-25.

Notes by One of the Judges.

(a) P-Q 3 is considered best.

(b) Altogether too conservative for the Evans. He should prosecute the attack as speedily as possible, or he soon loses all he secured by giving the P. Probably P x P is the move.

(c) The Evans part of this game entirely disappears.

(d) B-B 4 is certainly indicated.

(e) B-Kt 2 is better, so that he can get his Q Kt into action. The threatening Kt x P is not sound, for P x Kt, R x R ch; Kt x R; B x R; Q x B, and Black is a piece behind.

(f) Simply a lost move. Why not Q-Q 3, followed by Q Kt-Q 2?

(g) Entirely overlooking Black's reply.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscriber is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE PRESIDENT'S MESSAGE ON INTERVENTION IN CUBA.

PRESIDENT MCKINLEY'S message, sent to Congress April 11, presents an exhaustive review of Cuban complications, disclaims a policy of annexation, deprecates the recognition of the Cuban republic, and presents arguments for a policy of neutral intervention to enforce peace and a stable government in the island. He asks Congress to authorize and empower him to accomplish this purpose, and to make an appropriation to continue the work of relief for the starving. In the opening paragraphs of the message Mr. McKinley calls attention to the fact that—

"the present revolution is but the successor of other similar insurrections which have occurred in Cuba against the dominion of Spain, extending over a period of nearly half a century, each of which during its progress has subjected the United States to great effort and expense in enforcing its neutrality laws, caused enormous losses to American trade and commerce, caused irritation, annoyance, and disturbance among our citizens, and by the exercise of cruel, barbarous, and uncivilized practices of warfare shocked the sensibilities and offended the humane sympathies of our people."

More than half of the message, which contains in all about sixty-five hundred words, is devoted to a statement of the conditions existing in Cuba, the policy which produced these conditions, and the duty of intervention, as distinguished from a recognition of belligerency or independence, in the light of precedents in our history. He characterizes the policy of devastation and concentration inaugurated by Captain-General Weyler as not civilized warfare, but extermination. "The only peace it could beget was that of the wilderness and the grave." Over 50 per cent. of the reconcentrados, three hundred thousand or more in number, had perished from starvation and the diseases thereto incident, by March, 1897. Relief work has saved thousands of lives, says the President, and the Spanish Government within a

few days has recognized the necessity for a change of policy by revoking General Weyler's orders, ordering public work to give employment, and appropriating \$600,000 for relief.

Since the war in Cuba is of such a nature that, short of physical exhaustion of one or both sides, or extermination, its termination seems impossible, the President states that he has sought to bring about an immediate cessation of hostilities. He proposed, on March 27, an armistice until October 1, for the negotiation of peace with his good offices, asked for immediate revocation of the order of reconcentration, and for the cooperation of the Spanish authorities in affording full relief to the needy. Spain's reply, three days later, offered to confide the preparation of means to bring about peace in Cuba to the insular parliament, with the reservation that the constitutional powers of the central government should not be lessened or diminished. As the Cuban parliament does not meet until May 4, Spain would not object to a suspension of hostilities if asked for by the insurgents from the general-in-chief, to whom it would pertain in such case to determine the duration and conditions of the armistice. "With this last overture in the direction of immediate peace, and its disappointing reception by Spain, the executive was brought to the end of his effort."

The President then refers to the position taken in his message of December last, declining to recognize the insurgents as belligerents, or to recognize the independence of Cuba, or to undertake forcible annexation. He has not changed his views in these matters, and for a precedent against recognition of the independence of the insurgent government, he quotes from President Jackson's message to Congress in 1836 on the subject of the recognition of the independence of Texas. In the case of Texas recognition was left to the discretion of the executive, provision being made merely for the sending of a diplomatic agent when the President should be satisfied that the republic of Texas had become an independent state.

President McKinley proceeds:

"I said in my message of December last: 'It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood, which alone can demand the recognition of belligerency in its favor.' The same requirement must certainly be no less seriously considered when the graver issue of recognizing independence is in question, for no less positive test can be applied to the greater act than to the lesser; while, on the other hand, the influences and consequences of the struggle upon the internal policy of the recognizing state, which form important factors when the recognition of belligerency is concerned, are secondary, if not rightly eliminable factors when the real question is whether the community claiming recognition is or is not independent beyond peradventure.

"Nor from the standpoint of expediency do I think it would be wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic.

"Such recognition is not necessary in order to enable the United States to intervene and pacify the island. To commit this country now to the recognition of any particular government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention, our conduct would be subject to the approval or disapproval of such government; we would be required to submit to its direction, and to assume to it the mere relation of a friendly ally. When it shall appear hereafter that there is within the island a government capable of performing the duties and discharging the functions of a separate nation, and having, as a

matter of fact, the proper forms and attributes of nationality, such government can be promptly and readily recognized, and the relations and interests of the United States with such nation adjusted."

Intervention to end the war, says the President, may be undertaken in either of two ways, as an impartial neutral by imposing a rational compromise between the contestants, or as the active ally of the one party or the other. Of these two ways he recommends the first, saying that "it is not to be forgotten that during the last few months the relation of the United States has been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of a potential influence toward an ultimate pacific result just and honorable to all interests concerned."

Of the justification for the form of "forcible intervention" recommended, the President says:

"The forcible intervention of the United States as a neutral, to stop the war, according to the large dictates of humanity and following many historical precedents where neighboring states have interfered to check the hopeless sacrifice of life by internecine conflicts beyond their borders, is justifiable on rational grounds. It involves, however, hostile constraint upon both the parties to the contest, as well to enforce a truce as to guide the eventual settlement.

"The grounds for such intervention may be briefly summarized as follows:

"First, in the cause of humanity and to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is therefore none of our business. It is especially our duty, for it is right at our door.

"Second, we owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection.

"Third, the right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people, and by the wanton destruction of property and devastation of the island.

"Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us, and with which our people have such trade and business relations, when the lives and liberty of our citizens are in constant danger, and their property destroyed, and themselves ruined, when our trading-vessels are liable to seizure, and are seized at our very door, by war-ships of a foreign nation, the expeditions of filibustering that we are powerless altogether to prevent, and the irritating questions and entanglements thus arising, all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace and compel us to keep on a semi-war footing with a war nation with which we are at peace."

These grounds for intervention are illustrated by the lesson of the *Maine* disaster, of which the President speaks as follows:

"These elements of danger and disorder already pointed out have been strikingly illustrated by a tragic event which has deeply and justly moved the American people. I have already transmitted to Congress the report of the Naval Court of Inquiry on the destruction of the battle-ship *Maine* in the harbor of Havana during the night of February 15. The destruction of that noble vessel has filled the national heart with inexpressible horror. Two hundred and fifty-eight brave sailors and marines and two officers of our navy, reposing in the fancied security of a friendly harbor, have been hurled to death, grief, and want brought to their homes, and sorrow to the nation.

"The Naval Court of Inquiry, which, it is needless to say, commands the unqualified confidence of the Government, was unanimous in its conclusion that the destruction of the *Maine* was caused by an exterior explosion, that of a submarine mine. It did not assume to place the responsibility. That remains to be fixed.

"In any event, the destruction of the *Maine*, by whatever exterior cause, is a patent and impressive proof of a state of things in Cuba that is intolerable. That condition is thus shown to be such that the Spanish Government can not assure safety and security to a vessel of the American navy in the harbor of Havana on a mission of peace and rightfully there. Further, referring in this connection to recent diplomatic correspondence, a despatch from our Minister to Spain, of the 26th ultimo, contained the statement that the Spanish Minister for Foreign Affairs assured him positively that Spain will do all that the highest honor and justice require in the matter of the *Maine*. The reply above referred to of the 31st ultimo also contained an expression of the readiness of Spain to submit to an arbitration all the differences which can arise in this matter, which is subsequently explained by the note of the Spanish Minister at Washington of the 10th inst. as follows:

"As to the question of fact which springs from the diversity of views between the report of the American and Spanish boards, Spain proposes that the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance."

"To this I have made no reply."

Having referred again to President Grant's contention in 1875 that mediation or intervention must sooner or later be invoked to terminate strife in Cuba, to President Cleveland's declaration during the present struggle that a time when our obligations to the sovereignty of Spain might be superseded by higher obligations, and to his own message last December foreshadowing forcible intervention if peaceful agencies should prove inadequate, President McKinley states his conclusion and his recommendations in the following words:

"The long trial has proved that the object for which Spain has waged the war can not be attained. The fire of insurrection may flame or may smolder with varying seasons, but it has not been, and it is plain that it can not be, extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests, which give us the right and the duty to speak and to act, the war in Cuba must stop.

MARIA CHRISTINA, QUEEN REGENT OF SPAIN.

"In view of these facts and of these considerations I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes.

"And in the interest of humanity and to aid in preserving the lives of the starving people of the island I recommend that the distribution of food and supplies be continued, and that an appropriation be made out of the public treasury to supplement the charity of our citizens.

"The issue is now with the Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action."

In a postscript, President McKinley informs Congress of a decree made by the Queen Regent of Spain after the writing of the message, which directs General Blanco to proclaim a suspension of hostilities. The President adds: "If this measure attains a successful result, then our aspiration as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action."

AMERICAN NEWSPAPER COMMENT.

THE newspapers of this country express wide differences of opinion concerning President McKinley's Cuban message. Neither party lines nor sectional feeling appear to be considered to any great extent by the press.

President Must be Confided In.—"At the bar of the nations Spain can not meet or reply to this cogent presentation of facts. She can only stand dumb before such a recital, or else she must plead guilty. As for Congress, it must support the President and give him the powers he asks. He is so clear in his policy and so fortified by precedent and logic that it would be an act of treason to the people for Congress to attempt to take the direction of the affair out of his hands.

"By this message the President justifies every act he has thus far performed in the conduct of this most difficult and delicate subject. It is a profound and weighty state paper that can not but convince Congress and the people that to the President, and to the President alone, must be confided the final disposition of the Cuban question."—*The Times-Herald (McKinley Ind.)*, Chicago.

Confession Rather than Action.—"The President seems to have in mind a hazy, ill-defined idea that possibly the Government of the United States can go to Cuba, grasp Spain in one hand and the insurgents in the other, knock their heads together, and continue the process of chastisement until each promises to be good. But what then? Mr. McKinley does not say, and probably he does not know. Even granting that we scared Spain into submission and then trounced the insurgents, the problem would be no nearer a solution.

"Considered as a whole, the important passages in the President's message embody a confession rather than a plan of action. The executive inferentially admits that his policy or policies have proved worthless; that in

spite of the assurances and promises of the Administration press agents he has found himself unable to deal with the situation, and now he is prepared to leave the issue with Congress."—*The News (Ind.)*, Detroit.

McKinley Knows Diplomatic Possibilities.—"The truth is that the President knows more about the diplomatic possibilities of securing the pacification and freedom of Cuba without war than the rest of us do, and, while handing the whole affair over to Congress, he was abundantly justified in so stating the case as not to destroy the last glimmering hope of peace. It was his duty, moreover, to justify intervention by reasons which could not be criticized abroad as squinting straight at conquest and annexation. Intervention, to be justified on high grounds alone which all nations must accept, needs to be impartial on its face, altho we very well know that the result of intervention would necessarily be the withdrawal of one of the parties.

"In this message the President has set Congress an admirable example of diplomatic reserve which to the last does not entirely abandon the hope of a peaceful emancipation from these troubles. It is neither conservative nor radical, but what is better than either—the safe blending of both."—*The Republican (Ind.)*, Springfield.

Not a Credit to the Nation.—"The President see-saws. He throws the responsibility of dealing with the entire matter upon Congress. Then he makes an argument against the recognition of Cuban independence. Through this runs a vague plea for armed intervention, and next he asks Congress to give him the option of intervening—the option of declaring war. In the body of the message he virtually comes out of the same hole he went in. But to cap the climax, he amends the whole thing by intimating that the armistice Blanco has been instructed to declare may lead to a peaceful settlement of the question and the concession of everything we have demanded. This is a hedge that is calculated to please Spain. Further, it is calculated at this particular juncture to encourage her to attempt further temporizing, and to stimulate extreme congressional jingoism.

Even were it to be expected that Congress would relinquish its constitutional power to declare war and place it in the hands of one man, the message is not such as to demonstrate that President McKinley is the one man in whose hands it would be advisable to place that power. From beginning to end the document bears evidence of indecision of character on the part of its author. Such a document in such a crisis as this is not a credit to the chief magistrate of the nation. It is not a credit to the nation."—*The Dispatch (Dem.)*, Richmond.

A Surprise.—"On one point, the subject-matter of the recent negotiations, the message is a distinct surprise. The people have been given to understand that the Administration had sent Spain an ultimatum of some sort, or had at any rate taken the stand that Spain must give up Cuba. But the message shows nothing of the sort. All the President refers to is a proposition looking to an armistice until October 1, for the negotiation of peace with the good offices of the President; and the immediate revocation of the order of reconcentration. If this be all our Government has demanded, it would seem that Spain has gone far toward meeting it. If not, why doesn't the President say precisely what he has demanded? On the face of it, it looks as tho the Administration has been rather fooling the people."—*The Argus (Dem.)*, Portland, Me.

ALFONSO XIII., KING OF SPAIN.

Danger of Moral Debauch.—"In the case of the *Maine*, which is looked upon both at Washington and elsewhere as our strongest issue, what have we to fight for? Our adversary comes to us and says: 'I will make any reparation for my responsibility in this matter that any impartial tribunal shall consider adequate.' What more can Spain do than this? One feels as if one were addressing a tribe of wild Indians in assuming that such a proposition would not be accepted. What does its repudiation and a declaration of war on the basis of 'remember the *Maine*' imply? Neither more nor less than that the boasted humanity and civilization of the American people is simply a thin veneer; that, in spite of education and religious training, we still cherish the savage instincts of our prehistoric forefathers; that with us a bloody feud is to be cherished and developed, no matter how contrite and submissive our adversary may be, until each life that we have lost has been paid for and avenged by the destruction of ten, twenty, or one hundred of the lives of innocent men, who to our frenzied imagination represent the enemy. This is maintaining national honor; this is exhibiting to the world an heroic determination, and this is what it is proposed to substitute for the policy which President McKinley has laid down. If this murderous method is adopted, it will imply a moral debauch on the part of the American people which will leave its stain upon their national record through the lives of all of those who are now numbered as American citizens."—*The Herald (Ind.), Boston.*

"The President's message may be strong in the achievements that will flow from it hereafter, but it is disappointing in its initiative. The policy of the President in dealing with Spain and Cuba is likely to go into history as wise and discreet, and perhaps the best that could have been adopted, but it lacks in that virility which inspires popular enthusiasm. Hero worship is a potent incentive in human conduct; the people like, and demand, strong leadership. Under our form of government the President is that leader—if he will be. Even a narrow-minded man, like Andrew Jackson, could sway the masses by his impetuosity and strong will power, and a truly great leader, like President Grant, could fall into disfavor because of his love of peace and his refusal to intervene in behalf of the Cubans in their former struggle for independence."—*The Hawkeye (Rep.), Burlington, Iowa.*

"He has done his utmost within the constitutional limits of his office. Beyond those limits he can not go until Congress opens the door. He does not shrink from such opening. He invites and even urges it. And he stands ready, as he says, to execute every obligation imposed upon him by the Constitution and the law, whether, as he and all true men hope, it lie within the paths of honorable peace, or, as may by Spain's intolerance be forced, upon the dreadful field of civil war. Of such readiness the message is an ample token. It is the more impressive and the more potent for every hour's delay. It abundantly justifies the nation's past waiting for it. It powerfully bespeaks the nation's continued and unwavering confidence in its chosen head."—*The Tribune (Rep.), New York.*

"It is earnest, thoughtful, and at times quite strong. It carries too much freight for a war document, and its effectiveness is handicapped by the recital of long details that are familiar to everybody. The real gum of the message is lost in the fog of discussion over the different phases of intervention and belligerency; and the jingoes who were looking for a hot document had their ardor chilled by the air of uncertainty and indecision that seems to pervade it. There is too much talk of pacification to please the war party, and too many suggestions of further efforts at peace. These destroy the effect of the business end of the message."—*The Chronicle (Dem.), Augusta, Ga.*

"The message is an ultimatum to Spain, all the more ominous because it demonstrates that force is appealed to only because nothing else would suffice, altho every honorable opportunity has been offered Spain to end the intolerable situation that has prevailed in Cuba."—*The Times (Rep.), Pittsburg.*

INTERVENTION AND INDEPENDENCE.

INTERVENTION in Cuba without recognizing the independence of "the republic of Cuba" is the chief feature of the President's policy upon which lines of approval and disapproval appear to have been drawn.

A Bold Distinction between Intervention and Recognition.—"We happen to know that some of the President's learned and able advisers have held that as by our Monroe doctrine we can not allow European nations to intervene, it devolves upon the United States to stop the notorious and enormous crimes committed in Cuba, and to restore order there. Hence they argue

that neglect to do so would make us responsible for their continuance, after we have exhausted every peaceful recourse to attain that end.

"Intervention would devolve on us the responsibility for restoring order and keeping down lawlessness and cruelty by the strong hand, whether the offenders claimed to be Spanish volunteers or Cuban patriots. This duty would be inseparable from our intervention in the interests of humanity. Therefore the only fact which needs to be established to warrant our action, in the view of President McKinley and his Cabinet, is the fact of lawlessness and cruelty, by whomsoever committed. This fact is so notorious as to require no comment.

"When the present 'intolerable condition' is suppressed a new duty will devolve on us—that of deciding how the island shall be governed, and to whom and under what supervision the task of government shall be entrusted by us. This decision will depend upon facts distinct from the facts for intervention, inasmuch as they are not yet fully established. They include the following:

"First, Have the Cuban insurgents, in actual operation, a responsible government calculated, in our opinion, to assure to the Cubans and residents life and property, and the varied rights for the protection of which governments are organized?

"Second, Is the so-called Cuban republic such a *de facto* government? And are the majority of the inhabitants of Cuba in favor of being governed by it?

"Third, Are the purposes of such government fair and honorable toward those who have not taken arms against Spain?

"The satisfactory answers to the above questions will constitute the substantial facts upon which we must decide to recognize the so-called Cuban republic. These questions are vital to the full performance of the duties assumed by the United States by intervening with force and compelling the removal of the Spanish military and civil powers from Cuba, thereby making ourselves responsible for what thereafter occurs. No greater stain upon our national honor could come to pass than that the Government which we may put in power in Cuba should proceed, as left to itself it would undoubtedly, to proscription, confiscation, and murder against their political opponents, or the Spanish Tories that might remain.

"Hence intervention is based upon facts now known to us, viz.: The 'intolerable' disorder and the anachronistic cruelties committed by the Spanish officials. But recognition must wait upon conditions yet to be established, as to the character and purposes of the insurgent government and its acceptableness to the majority of the inhabitants. Because of this very difference of basis, one depending on things already known and the other upon things yet to be established, these two questions are distinct issues and impossible to be united as a single issue.

"The statesmanship which is so discriminating and acute in treating intervention for the sake of humanity as a question distinct from the recognition of Cuban independence, is as boldly unconventional and frankly common-sense and American as it is astute—and may be trusted to see us safely through this newspaper-made and politician-waged war by midsummer, still a nation dictating peace to the world, not exactly now 'from ports without a gun,' perhaps, but with guns guiltless of human sacrifice."—*The Transcript (Ind. Rep.), Boston.*

Neutral Intervention Impossible.—"The prominence which the President's message gives to the discussion of intervention 'as an impartial neutral by imposing a rational compromise between the contestants' indicates a preference on the part of Mr. McKinley for that method of dealing with the situation in Cuba.

"A very little consideration will suffice to show that neutral intervention of the kind thus proposed is simply impossible.

"It would involve, as the President himself concedes, 'hostile constraint upon both the parties to the contest, as well to enforce a truce as to guide the eventual settlement.'

"Are we prepared to send an armed force into Cuba which shall assume an attitude of hostility toward the insurgents as well as toward their Spanish oppressors? Do we desire to assume the functions of a military police standing indifferent between the conflicting parties on the island? If we undertook to play such a part, is it not plain that we should incur the deadly hatred of both combatants and be unable to impose our will upon either, without an enormous sacrifice of blood and treasure? An American army in Cuba, standing between Spanish foes on the one hand and Cuban foes on the other would not be in a pleasant position.

"No; we are without reason for interfering in Cuba at all, unless we go there as friendly to Cuba and correspondingly unfriendly to her Spanish oppressors. It is as the active ally of the insurgents that we should intervene, and with their cooperation sweep the Spaniards out of the island, which they possess only to wrong. Once do away with Spanish misrule and the future of Cuba will take care of itself.

"The dominion of Spain over Cuba is an evil thing—a thing so evil that neutrality of sentiment in regard to it would be a national disgrace. The American people do not feel neutral about it. They are not impartial. In a contest between that which is right and that which is wrong, impartiality is not what is needed for the welfare of the world. It is the victory of the right. There are some subjects in regard to which a man ought to be ashamed not to be prejudiced. He should be prejudiced against lying and stealing and against villainy of every sort. He should hate such a government as that of Spain in Cuba, and, hating it, should desire its destruction.

"We regret the atmosphere of gray neutrality about the President's message."—*The Sun (Rep.), New York.*

"Independence Means Annexation."—"If Cuba can not win autonomy she can not maintain it. Senator Hoar on Thursday looked with hope and favor upon a proposed negro republic in the West Indies—Cuba, Haiti, Santo Domingo, and perhaps Porto Rico becoming a federation showing negro capacity for self-government. This aspiration, however commendable, would be deemed a justifiable cause of war.

"We might throw over Cuba the protection of the Monroe doctrine. What is the Monroe doctrine but a theme for senatorial debate or the evasions of diplomatic rhetoric? If it were a serious dogma we should have challenged the dominion of other nations than Spain in the West Indian seas, and made it impossible for these adjacent islands to become bases of supplies against us in time of war, as they have been to our loss. The Monroe doctrine has ever been an illogical factor of our national policy. Its violation might become a pretext but never a real cause for war.

"Recognition of independence means the acceptance of a fact. Any other policy is a menace to order, an incitement to rebellion. We were taught this lesson in our own war.

"The republic of Cuba is a name—the geographical expression of political aspirations. Its soul is in New York; at home it is but a roving band of insurgents, without body or authority. It has never even won the platonic recognition of belligerent rights. Without an army other than the roving bands, without a navy, a treasury, or courts of law, without credit or the means of revenue, it is a phantom, not the form of a nation. The most notable military achievements of its supporters have been the destruction of sugar and tobacco plantations, the desolation of the fairest of islands. The arrest of Spanish arms has been the work of the elements, whose tropical forces were as fatal to the temperate soldiers of temperate Spain as the hyperborean forces of Russia to the armies of Napoleon.

"It is to our honor and dignity that the proposed war be kept to its avowed aims. It is not a welcome war, but a serious, solemn undertaking which we would if possible put aside. Humanity to the oppressed, reparation for a gigantic wrong—these impose upon us the sad duty. The safety of American interests, the safeguarding our people's property, the suppression of an insufferable condition of affairs at our very gates might be added causes; but, grievous as they are, we should not appeal to the dread arbitrament for their redress.

"Any other policy, even under the sympathetic name of Cuban independence, would be aggrandizement. A war dictated by honor would end in dishonor. A war for humanity would degenerate into a struggle for greed. It would justify the alienation, if not the antagonism, of the good opinion of mankind."—*The Herald (Ind.), New York.*

"Intervention—for What?"—"The long-delayed message is in. When reduced to its last analysis, it can be accepted as nothing else than a plea for more time in which to deal with the Cuban question.

"Worse than this, and worst of all, the President has put the country on notice that the policy of the Administration is to intervene in behalf of the continuation of Spanish domination of the island of Cuba.

"The President wants peace so earnestly that he is evidently willing to force it at any price. He asks for the privilege of

making forcible intervention, and in doing so serves distinct notice that 'it involves hostile constraint upon both the parties to the contest, as well as to enforce a truce to guide the eventual settlement.'

"In other words, the President asks the right to turn the guns of the United States not only upon the Spanish butchers, but also upon the helpless and innocent victims of the dastardly warfare which has been waged under the Spanish flag in Cuba for the past three years.

"What is the secret of the attempt to make Cuban independence a secondary question in the American program? It is very simple. Should Cuba be declared independent by the United States, or should she win it as the result of her patriotic struggles, the Cuban bonds issued by Spain would be invalidated. This is the brake on the wheel. The holders of these bonds, acting on their financial agents in this country, have brought a tremendous pressure to bear on the Administration, and that this pressure has borne fruits is to be witnessed, first, in the delay that has been insisted on, and, at last, in the suggestions of Mr. McKinley's message.

"The Democrats in House and Senate can well afford to insist on Cuban independence as the price of their cooperation.

"The whole question is wrapped up in this."—*The Constitution (Dem.), Atlanta.*

RECOGNITION OF THE INDEPENDENCE OF THE PEOPLE OF CUBA.

WHILE the majority of the Senate committee on foreign relations (Cushman K. Davis, chairman) did not propose recognition of a "Cuban republic," their exhaustive report, submitted April 13, set forth reasons for recognizing "the independence of the people of Cuba." We quote from the report as follows:

"We can not consent upon any conditions that the depopulated portions of Cuba shall be recolonized by Spain any more than she should be allowed to found a new colony in any other part of this hemisphere or island thereof. Either act is regarded by the United States as dangerous to our peace and safety.

"That Government has violated the laws of civilized warfare in the conduct of her military operations. Her troops have slaughtered prisoners after their surrender and have massacred the sick and wounded insurgent soldiers and their physicians and nurses in their captured hospitals.

"When publicists and jurists speak of the right of sovereignty of a parent state over a people or a colony, they mean that divinely delegated supremacy in the exercise of which man should show 'likest God.' They never mean that a usurpation of diabolism shall be sanctified upon the plea that it is sovereignty none the less than that of a well-ordered and humane government. Against such reasoning the

Moral laws
Of nature and of nations speak aloud,

"RECONCENTRADO."—*The Inter Ocean, Chicago.*

and declare that the state which thus perverts and abuses its power thereby forfeits its sovereignty. And this principle has been the foundation of the repeated interventions by the states of Europe in the affairs of Turkey, who, abominable and atrocious as her cruelty has been toward her subjects in Greece and in the northern part of her dominions in Europe and in Armenia, has not approached the eminence at which Spain stands, in solitary and unapproachable infamy.

"The recognition of the independence of the people of Cuba would not be a justifiable cause of war by Spain against the United States. Upon this principle the best esteemed authorities are agreed. Among their opinions the following declaration of Mr. Webster in his letter to Mr. Hulzmann stands preeminent:

"If, therefore, the United States had gone so far as formally to acknowledge the independence of Hungary, altho, as the result has proved, it would have been a precipitate step and one from which no benefit would have resulted to either party, it would not, nevertheless, have been an act against the law of nations, provided they took no part in her contest with Austria."

"If not an act against the law of nations it, of course, could not be a justifiable ground for war.

"The recognition of the independence of the people of Cuba entitles the United States to insist that the war should be conducted in accordance with those humane laws which have been ordained by the common consent of the civilized world, and which have done so much to mitigate the horrors of warfare. So long as this Government abstains from such recognition Spain is entitled to insist that we agree with her that the insurrection is merely a treasonable riot and not a formal and organized rebellion, and that she is therefore entitled to execute upon the insurgents and upon American citizens and all persons upon the island the penalties of a domestic code which is an affront to civilization.

"The United States has been in this attitude of concurrence ever since the beginning of the war. It has, as a consequence, in a spirit of forbearance, submitted to many atrocities perpetrated by Spain upon our own citizens, which, under recognition, would have had no warrant in international law, and would have afforded just grounds of procedure by the Government under its acknowledged principles. Citizens of the United States have been condemned to death by military tribunals in violation of their treaty rights. The expostulations of this Government have been in effect merely petitions for royal clemency. The *Competitor* prisoners, captured under our flag, were imprisoned nearly seventeen months and were never brought to trial, tho they were subjected to many harsh, illegal, and degrading preliminary examinations. The entire proceeding against them was unlawful and in derogation of their rights and of our honor. But as they were technically in the attitude which the United States had assumed and had placed them in refusing recognition of belligerency or independence, merely ordinary criminals prosecuted by Spain under her domestic penal code, this Government, it was logically insisted by Spain, had no right to make the question one of international obligation. It accepted royal clemency, and in the person of its citizens received a pardon for a crime instead of demanding reparation for a violated right.

"The United States had been compelled by its attitude of non-recognition to assist Spain by its execution of our neutrality statutes. If there is no war, and the insurgents are merely an unlawful confederacy of common insurrectionists, they can have no legitimate commercial dealings with the citizens of the United States.

"Nor can the insurgents object to Spain having such dealings

of every character, including the purchase of supplies, which, had recognition been accorded, would be contraband of war, and, therefore, not to be furnished except through breach of neutrality. The United States has, therefore, been an assistant of Spain. The supplies for that power have been largely purchased in this country. The unrecognized insurgents have had no right to complain. On the other hand, they and their adherents have been prohibited from making such purchases and from exporting any supplies, however acquired.

"There has, therefore, been no real neutrality by this Government throughout the entire business. To the contrary, Spain has been the customer of the people of the United States who have sold her, with technical lawfulness, everything that she has required to repress by such processes as we have indicated, a people struggling against tyranny for their liberties. To prevent the insurgents from buying or exporting at all while Spain has bought and exported to the extent of her requirements, the navy

and revenue vessels of the United States have been diligently and successfully employed. It has been stated, and we believe with entire correctness, that this vigilance and policing of the seas by the United States in favor of Spain and against the insurgents, has cost this Government more than \$2,000,000."

VALERIANO WEYLER.
Ex-Captain-General of Cuba

CONSULAR REPORTS ON CONDITIONS IN CUBA.

IN response to resolutions by both branches of Congress, asking for the correspondence from United States consuls regarding the situation of affairs in Cuba, the President transmitted about sixty thousand words of such correspondence to Congress along with his Cuban message. The Associated Press summary of this correspondence contains nearly twelve thousand words. The greater part of the communications consists of detailed statements of the misery, starvation, and death

in different parts of the island. The consuls substantially corroborate newspaper reports and the statements of Senators Proctor, Gallinger, Thurston, and Money, which are familiar to the reading public. The correspondence covers the period from about the middle of November, 1897, to April 1, 1898, and comes from five different consuls.

Consul-General Fitz-Hugh Lee's letter from Havana, dated November 23, represented a condition of affairs which does not appear to have been materially changed. It reads as follows:

"The insurgents will not accept autonomy.

"A large majority of the Spanish subjects, who have commercial and business interests and own property here, will not accept autonomy, but prefer annexation to the United States, rather than an independent republic or genuine autonomy under the Spanish flag.

"The Spanish authorities are sincere in doing all in their power to encourage, protect, and promote the grinding of sugar. The grinding season commences in December.

"The insurgent leaders have given instructions to prevent grinding, wherever it can be done, because by diminishing the export of sugar the Spanish Government revenues are decreased. It will be very difficult for the Spanish authorities to prevent cane-burning, because one man can start a fire at night which will burn hundreds of acres, just as a single individual can light a prairie by throwing a single match into the dry grass.

"I am confident that Generals Blanco and Pando, his chief-of-staff, as well as Dr. Congosto, the secretary-general, with all of whom I have had conversation, are perfectly conscientious in their desire to relieve the distress of those suffering from the effects of Weyler's reconcentration order, but unfortunately they have not the means to carry out such benevolent purposes.

"In this city matters are assuming better shape under charitable committees, etc.; large numbers are now cared for and fed by private subscriptions. I witnessed many terrible scenes, and saw some die while I was present. I am told General Blanco will give \$100,000 to the relief fund."

In a letter of January 8 General Lee estimates the effects of a starvation policy:

"I have the honor to state, as a matter of public interest, that the 'reconcentrado order' of General Weyler, formerly governor-general of this island, transformed about 400,000 self-supporting people, principally women and children, into a multitude to be sustained by the contributions of others, or die of starvation, or of fevers resulting from a low physical condition and being massed in large bodies, without change of clothing and without food. Their homes were burned, their fields and plant-beds destroyed, and their live stock driven away or killed.

"I estimate that probably 200,000 of the rural population in the province of Pinar del Rio, Havana, Matanzas, and Santa Clara have died of starvation or from resultant causes; and the deaths of whole families almost simultaneously, or within a few days of each other, and of mothers praying for their children to be relieved of their horrible sufferings by death, are not the least of the many pitiable scenes which were ever present. In the provinces of Puerto Principe and Santiago de Cuba, where the 'reconcentrado order' could not be enforced, the great mass of the people are self-sustaining.

"A daily average of ten cents' worth of food to 200,000 people would be an expenditure of \$20,000 per day, and, of course, the most humane efforts upon the part of our citizens can not hope to accomplish such a gigantic relief, and a great portion of these people will have to be abandoned to their fate."

Some terrible instances of suffering are described in a communication to Consul-General Lee from two reliable gentlemen (whose names are suppressed) relative to the condition in Los Fosos (the ditches) in Havana. We quote from the press summary:

"Four hundred and sixty women and children thrown on the ground, heaped pell-mell as animals, some in a dying condition, others sick, others dead, without the slightest cleanliness or the least help, not even able to give water to the thirsty, without either religious or social help, each one dying wherever chance laid him."

"The communication goes on to state that the deaths among these reconcentrados averaged forty or fifty daily, and that on an average there were but ten days of life for each person. It says that these unhappy creatures received food only after having been eight days in the *fosos*, during which time they were obliged to subsist upon the bad food which the dying had refused. Some horrible instances of the distress witnessed are given.

"Among the many deaths we saw," says the communication, "there was seen one impossible to forget. There is still alive the only witness, a young girl of eighteen, whom we found seemingly lifeless on the ground. On her right side was the body of a young mother, cold and rigid, but with her young child still alive,

clinging to her breast. On her left side was the corpse of a dead woman, holding her son in a dead embrace. A little further on a dying woman, having in her arms a daughter of fourteen, crazy with pain, who, after twelve or fourteen days, died in spite of the care she received.' Further along the communication says that if any young girl came in who was nice-looking, she was infallibly condemned to the most abominable of traffics. The communication says that 1,700 persons had entered the *fosos* since August, and of these but 243 were then living. It places the number of deaths among the reconcentrados at 77 per cent."

General Lee reports the failure of Spanish relief measures, being informed that only \$12,500 in Spanish silver, out of \$100,000 said to have been set aside, has been dedicated to the purpose of relieving 150,000 reconcentrados in Havana province, among whom the death-rate from starvation alone would be over 50 per cent. He reports that Spanish authorities lately refused to give out facts about the reconcentrados, except through the civil government of Havana, and he transmits the complaint of the consul at Sagua, which states that the military officers positively refuse to allow reconcentrados to whom food is given in its raw state to procure fuel with which to cook it, and that in addition this class of people is prohibited from gathering vegetables cultivated within the protection of the forts.

Of the failure of autonomy, Consul-General Lee says in two separate letters:

"I have the honor to make the following report: The contest for and against autonomy is most unequal. For it there are five or six of the head officers at the palace and twenty or thirty other persons here in the city. Against it, first, are the insurgents, with or without arms, and the Cuban non-combatants; second, the great mass of the Spaniards bearing or not bearing arms—the latter desiring, if there must be a change, annexation to the United States. Indeed, there is the greatest apathy concerning autonomy in any form. No one asks what it will be, or when, or how it will come. I do not see how it could be even put into operation by force, because as long as the insurgents decline to accept it, so long, the Spanish authorities say, the war must continue."

"I send to-day an analysis of the autonomistic plan. The intense opposition to it on the part of the Spaniards arises from the fact that the first appointments of the officers to put into form its provisions were made generally outside of their party, in order to show the Cubans in arms that autonomy was instituted for their benefit and protection. . . . The intelligent Spaniards . . . see no prosperity in the future, but rather other wars and more confusion, in the same old attempts to make the waters of commerce flow in unnatural channels. The lower Spanish classes have nothing in mind when autonomy is mentioned, except Cuban local rule, hence their opposition."

On February 10 General Lee telegraphed the State Department as follows:

"Captain-general returned yesterday, met with non-success of any sort. Spaniards everywhere unfriendly, rumors of coming demonstration against him here. I think him an excellent man, but in an unfortunate position. Three serious combats reported within a week, in each insurgents victorious."

Consul Alexander C. Brice, at Matanzas [the consul and other Americans left Matanzas under cover April 12, owing to conditions threatening personal violence] reported 90,000 people in actual starving condition, and requiring food, clothing, and medicine. Among the instances of distress he mentions that "in a family of seventeen living in an old lime-kiln, all were found dead except three, and they barely alive." He says, again, that General Blanco's orders allowing reconcentrados to return and

RAYMON BLANCO,
Captain-General of Cuba.

cultivate their crops is inoperative and of no avail. Neither the Spaniards nor Cubans of that section were in sympathy with the proposed autonomy and reform :

"The people are shut up in the cities and towns like rats, to starve. We have fifteen or eighteen families of American reconcentrados who own property in the country, and were they allowed to go to their homes could make a good living. All these have begged and pleaded with the authorities under Blanco's order to go, and were in every case refused."

In the communications of Consul Walter B. Barker from Santa Clara province, reasons why General Blanco's orders relieving the reconcentrados must prove of no avail are given :

"He says that while the first article of the order grants permission to the starving class to return to the country, the third article abrogates this permission in exacting that the places to which they go must be garrisoned. This condition alone, he says, will preclude over one half of these poor unfortunates, for their homes are in ruin, and the sugar estates able to maintain a guard can care for but a small percentage of the whole. Mr. Barker says that while he does not question the good intention of those now in power, yet 'it is a self-evident fact that the authorities are utterly helpless to extend any relief to those who have thus far survived the pangs of hunger.' Mr. Barker says that his observation does not bear out the statement made by the captain-general through a letter to the Spanish Minister that 'extensive zones of cultivation have been organized, the daily rations are provided by the state, and that work is furnished.' Mr. Barker also points out the impracticability of grinding cane under the present conditions. He says in his letter of November 20 that he had interviewed most of the large planters in his consular district, and that they had stated that unless assured of immunity from the insurgent chief, Gomez, they would not attempt to grind, as by doing so they would jeopardize their property. He adds that it is 'an unquestioned fact that the military are powerless to give this necessary protection.'"

The report of Consul Pulaski F. Hyatt, from Santiago, contains noteworthy statements concerning Spain's impotency regarding sickness among Spanish soldiers, and the local opposition to autonomy. To quote again from the press summary :

"I give it as my opinion, an opinion that is not biased in favor of Cuba, that Spain will be compelled to prosecute a far more vigorous war than has yet been done if she conquers peace in Cuba. I think I speak advisedly when I say that in this end of the island at least there are many thousand square miles where the foot of the Spanish soldier has never trod. Within this zone the insurgents have their families, corral their horses and cattle, and raise their crops. Why Spain, with a large body of as obedient and brave soldiers as ever shouldered a gun, has not penetrated these grounds, and scattered to the four winds the comparatively small body of men who are there is a question I will not attempt to answer. As I write, a man is dying in the street in front of my door, the third in a comparatively small time."

"M. Hyatt's letter of December 21 deals largely with the sickness and the death-rate on the island, which he characterizes as appalling. Statistics, he says, make a grievous showing, but come far short of the truth. The disease is generally brought on by insufficient food. He mentions some who are attacked who have plenty, but these recover quickly, while others die or make very slow recovery. The prevailing disease is sometimes called paludal fever, and at other times la grippe, and it is epidemic rather than contagious. At the date of this letter, from 30 to 40 per cent. of the people were afflicted with it. He also reported smallpox and yellow fever as prevailing, and said that out of a total of 16,000 soldiers recently sent to Manzanillo, nearly 5,000 were in hospitals or quartered on the people. He says that Dr. Caminero, United States Sanitary Inspector, reported at that time that there were more than 12,000 people sick in bed, not counting those in military hospitals. This is at least 35 per cent. of the present population. Mr. Hyatt adds that quinin, the only remedy of avail, is sold ten times higher than in the United States. He says that steamers coming into the port give out soup once a day to the waiting throngs, and that fresh meat sells at from 50 cents to \$1 per pound."

"In the last communication of the series from Mr. Hyatt, dated March 24 last, he says :

"Property-holders, without distinction of nationality and with few exceptions, strongly desire annexation, having but little hope of a stable government under either of the contending forces, and they view with regret the indifference, nay repugnance, of the American people to such a union, and still hope that a combination of circumstances will yet bring it about; but such a move would not be popular among the masses."

"Referring to the primary election held on the previous Sunday to elect officers to hold an election on the 27th of the same month, Mr. Hyatt says that no one seemed to know anything about it until it was over, and the autonomists won the election. 'A

member of that party,' he says, 'told me that they met quietly and did their voting. There is no evidence that the people in general intend to take part in the coming election. Circulars are now out urging the people to turn out and sustain the Government, to the end that peace and prosperity may speedily come.' Mr. Hyatt also states in this communication that some of the sugar estates are now making sugar on a small scale, but that there was no ground for faith in their ability to go ahead."

Vice-Consul John F. Jova, at Sagua la Grande, declares that :

"No history in the world, ancient or modern, saw an instance of this frightful, dreadful suffering. Perhaps civilization has not seen its like. In conclusion I beg to state, in my humble judgment, the efforts toward the enforcement of the reform of autonomy will prove altogether futile."

HOUSE AND SENATE RESOLUTIONS.

THE President's message on the Cuban question was referred to the committees on foreign affairs in both Houses. The majority of the House committee reported the following resolution, which was adopted (April 13) by a vote of 322 to 19 :

"Whereas, The Government of Spain for three years past has been making war on the island of Cuba against a revolution by the inhabitants thereof without making any substantial progress toward the suppression of said revolution, and has conducted the warfare in a manner contrary to the laws of nations by methods inhuman and uncivilized, causing the death by starvation of more than 200,000 innocent non-combatants, the victims being for the most part helpless women and children, inflicting intolerable injury to the commercial interests of the United States, involving the destruction of the lives and property of many of our citizens, entailing the expenditure of millions of money in patrolling our coasts and policing the high seas in order to maintain our neutrality; and,

"Whereas, This long series of losses, injuries, and murders for which Spain is responsible has culminated in the destruction of the United States battle-ship *Maine* in the harbor of Havana and in the death of 260 of our seamen :

"Resolved, By the Senate and House of Representatives of the United States of America in Congress assembled, that the President is hereby authorized and directed to intervene at once to stop the war in Cuba, to the end and for the purpose of securing permanent peace and order there and establishing by the free action of the people thereof a stable and independent government of their own in the island of Cuba; and the President is hereby authorized and empowered to use the land and naval forces of the United States to execute the purpose of this resolution."

[The minority report recognized the independence of the "republic of Cuba" first; it declared that the *Maine* was deliberately moored over a submarine mine, directed that the President employ the army and navy in the aid of Cuba, and provided for relief for starving Cubans.]

The majority of the Senate committee reported resolutions declaring for the independence of the people of Cuba, together with an elaborate review of the Cuban controversy, in which Spain is held to be responsible for the destruction of the *Maine*, and intervention on humane, legal, and political grounds is declared to be justifiable. The minority report, signed by Senators Turpie, Mills, Daniel, and Foraker, called for the immediate recognition of the republic of Cuba as an independent sovereign power, and the Senate voted for such recognition. The resolutions, as passed (April 16) by a vote of 67 to 21 in the Senate, read [changes from the majority report in italics] :

Whereas, The abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle-ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and can not longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited; therefore

"Resolved, By the Senate and House of Representatives of the United States of America in Congress assembled :

"First—That the people of the island of Cuba are, and of right ought to be, free and independent, and that the Government of the United States hereby recognizes the republic of Cuba as the true and lawful government of that island.

"Second—That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

Third—That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States to such extent as may be necessary to carry these resolutions into effect.

"Fourth—That the United States hereby disclaims any disposition to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof; and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

LETTERS AND ART.

ORIGIN OF THE LEGENDS USED BY WAGNER.

IT is well known that Richard Wagner was of opinion that the only proper subjects for operas such as he composed—operas in which the music is closely united with the poem—were the traditional myths in the old popular legends. In music suited to these legends he thought he saw a great opportunity of interpreting the mystery of human destiny. Therefore he went to the Middle Ages for his subjects, and he believed that those which he used belonged wholly to the Middle Ages of Germany. A German to the bottom of his soul, he considered the German legends of those times vastly superior to the contemporaneous legends of other countries. M. Gaston Paris, however, in *La Revue de Paris* (Paris, March 15) maintains that Wagner was under a misconception as to the German source of his legends. He says:

"Many of the subjects which Wagner has treated because he believed them wholly and thoroughly German, are not so. He found them, no doubt, in German poems of the Middle Ages, but these poems were translated or imitated from the French. Such is the case in 'Tristan and Iseul,' in 'Perceval,' and beyond question in 'Lohengrin.' To be exact, behind the French form copied in the German poems, there was a primitive form much older, but that form was not German. It was Celtic, due to that race, poetic by nature, to which belonged the Gauls, the ancestors of the French, and to which belongs now the Gaelic race of Scotland, the Welsh of England, and the Bretons of France. It was in the dreamy, melancholy, and passionate imagination of the Celtic race that were elaborated, if not formed—for many of them go back to a past still more distant—the most beautiful fictions of the Middle Ages. In their original language they are lost; but in the twelfth century, having had a great fascination for the French, they took a French form, in which they were notably altered, and passed thus, thanks to the extraordinary influence of French poetry, into all the countries of Europe and especially into Germany.

"The legend of 'Tannhäuser' has an analogous history, altho in this case the French intermediary has not been found. The direct source from which Wagner took it was not a German poem of the thirteenth century, but a popular song a great deal more recent. He found it in a compilation of old German songs by Heinrich Heine, to whom he already owed the theme of the 'Phantom Ship.' Heine praised highly the old song, calling it an admirable poem, and when writing later a parody of it compared it to Solomon's 'Song of Songs.' Wagner, when he found this legend in Heine's book, was as much taken with it as Heine himself, and thought it a theme eminently dramatic. The problem which Wagner thought was formulated by the legend was a contest in the human heart between passionate love and pure, ideal love. This contest, however, is not in the legend. What that depicts is the adventure of a mortal who, thanks to the love of a goddess, enters, while still alive, the supernatural regions where spring reigns eternally and where there is constant felicity. In the course of time this mortal has a fit of nostalgia and desires to revisit the earth, which he does, but returns after a while to his former abode. Later on this nostalgia was replaced in the legend by a sense of sin, and he desires to come back to the earth to see the Pope and get absolution. This absolution the Pope refuses, and the mortal returns in despair to the place where he had sinned. Wagner has modified this last version of the legend, making an edifying conclusion, in which religion, love, and purity of soul triumph over the forces of hell, and the opera ends with a celestial harmony in which the voices of the angels silence the last appeal of the demons.

"It can not be doubted that the substance of the legend of Tannhäuser is of a date anterior to Christianity. It contains a psychological problem much higher than the struggle between pure and sensual love, a problem which Wagner hints at in passing, when he shows us Tannhäuser, in the midst of the delights of the land where Venus lives, sighing for human strife and suffering. It is even the problem of happiness, which humanity,

since it was able to think, feel, and dream, has always been putting and has never been able to resolve.

"The hero of our legend is received in a place where all the evils of earth are unknown, where time flies on without its flight being perceived, without bringing nearer each day the degradation of old age and the threat of death, where all the precarious and fugitive enjoyments here laboriously attained and disputed by suffering are given without alloy and obtained without labor, where love, 'the only good here below,' is at the same time eternal and always new. In this paradise, however, in this land of joy, this country of eternal youth, the hero, after some time, feels a satiety of pleasures without a struggle, of a life without activity and without labor; he is seized with a nostalgia for the true human life with its desires rarely satisfied, with its pains that season its joys, with its efforts which give value to attained results. Thus, this perfect happiness of which the human soul is always dreaming, it feels that it would not know how to enjoy."

—Translated for THE LITERARY DIGEST.

THE HEROINE OF GOETHE'S FAVORITE DRAMA.

WHEN Goethe began to write "The Natural Daughter" ("Die Natürliche Tochter"), he fully intended to write a dramatic trilogy that should be the crowning work of his life. The inspiration for the work was the memoirs of Stephanie-Louise, Princess of Conti. "Keep well," he wrote to Schiller in

GOETHE.

a postscript, October 18, 1799, "and send me the second part of the 'Princess of Conti' when you have read it." For four years he brooded over the story and then produced the first (and last) part of his trilogy.

Writing in the *Revue de Paris*, Michel Breal, of the Institute, tells us the story of the Princess and of Goethe's work founded upon her career. M. Breal is not an enthusiastic admirer of Goethe. "It is the common opinion at present," he says, "that his heart was cold, and that the sufferings of others did not penetrate to his soul, . . . but no one would pretend to deny that he possessed that special sensibility which is brought into play by the imagination. To feel compassion for real suffering, and to

weep over a pathetic tale, are phenomena of an altogether different character."

The story of the Princess, M. Breal goes on to say, was indeed well calculated alike to arouse Goethe's sympathies and kindle his imagination. He was by nature and principle a worshiper of the great people of the world—rank and wealth had for him an irresistible attraction; while at the same time his genius impelled him to seek everywhere, in all classes, for the spontaneous emotions and acts that belong to human nature. In the memoirs of Stephanie-Louise, the picture is presented of a young girl of royal blood, the daughter of the Prince Louis François de Conti, one of the great figures of the eighteenth century, and of the beautiful and cultivated Duchess de Mazarin, tenderly reared by her devoted father, and endowed by nature with the rarest gifts, both mental and physical. While she was still a mere child, just as she was about to be legitimized by the King, the little Countess de Mont-Cair-Tain, as she was called (an anagram of the name of her parents), was torn by traitors from her splendid home and brilliant destiny, and plunged into a terrible position. The Prince de Conti, persuaded of her sudden death, died himself without discovering the treachery of which he had been the victim, while the young girl supported the most cruel trials with astonishing courage, proving by the magnanimity of her conduct that she was worthy of the high rank from which she had been forced to descend.

Such a heroine would seem to have been formed expressly to please and entice the German poet, with all his prejudices and proclivities. He took no one into his confidence, not even Schiller, but determined without hesitation to develop the theme in a dramatic trilogy. After an incubation of four years, the first part was completed, but it has remained a fragment. The two concluding dramas were never written, and M. Breal brings forward many ingenious suppositions to explain the poet's failure to carry out his cherished project.

Goethe was the manager of a theater, and when the first part of his great trilogy was finished, he made the mistake of putting it before the stage without regard to the subsequent parts, which had not yet been produced; forgetting that, "in opening the door of his drama to the public, the charm would be broken."

The new drama had a *succès d'estime* merely, and opinion was divided as to its merit. Schiller admired its symbolism, by which the subject was completely absorbed and transplanted into the ideal world. Fichte considered it the master's *chef d'œuvre*. Teltel found that the personages move according to predetermined laws, like the celestial bodies. Koener, on the contrary, declared that the idea was repulsive; while Knebel, going still further, wrote to the wife of Herder that Goethe in this drama revealed the perversity of his real nature. "It is," he said, "a work of the most refined talent, and—dare I say it?—the most complete baseness of soul. Oh, how corrupt, even to the marrow, must he be who could compose such a work! The almost inexplicable character of Goethe has for me no longer any secrets."

There were many who complained of the immorality of "The Natural Daughter." Others declared that the memoirs upon which it was founded were apocryphal; while a third party maintained that Stephanie-Louise had paid a visit to Weimar, and made herself known personally to the poet.

One of the results of all this cackle of discordant voices was that the trilogy was abandoned. Goethe himself indicates this very gracefully. "Fairy stories tell us," he says, "that when we are upon the track of a treasure, we should go forward without looking either to the right or the left; and without allowing ourselves to be stopped either by dangerous encounters or the temptations of the route. I forgot this wise rule, and suffered for my imprudence. The beloved scenes that had haunted my imagination came to visit me henceforth only from time to time, like souls in pain, seeking for deliverance."

In point of fact, "the beloved scenes" took their flight never to return. In this very drama, "The Natural Daughter," Goethe repeats the warning which he neglected to follow. "Secrecy," he says, "is essential to the production of writers of the imagination. A design that has been communicated to others is no longer our own."

It is curious to note how closely Goethe follows his model in this his favorite work. On this point his critic writes as follows:

"As for his subject, it is almost a literal reproduction of the memoirs. Goethe treated Stephanie-Louise as he treated the memoirs of Goetz de Berlichingen and the pamphlets of Beaumarchais. He follows his author step by step; is visibly preoccupied with not losing anything of her experience. Persons and facts that he can not bring forward prominently he alludes to and sketches incidentally. Even the most trivial matters that have no real bearing upon the narrative are seized upon and made to do duty in the drama. This realistic tendency is one of the distinguishing features of Goethe's genius. He is so enamored with facts that he regrets losing a single one that is offered to him."

"Stephanie herself scarcely admitted of being idealized, since she was already young, beautiful, and noble; but the simple and touching prose in which she tells her own story is transformed into the chaste and noble poetry of which Goethe had such perfect command; and he imparts a dignity and decorum to his sad experiences and sufferings, when she is dragged from her home, on the eve of her presentation at court, which they were far from possessing. As for the villains who were employed to accomplish her ruin, they were all advanced several degrees, for they reason out their atrocities and give a philosophical explanation of their treasons.

"This it is, probably, that so greatly shocked several of Goethe's friends. The subject of 'The Natural Daughter' was already sufficiently delicate; but he rendered it odious by making his characters altogether too self-conscious and reasonable. The piece was declared to be, and with great truth, 'polished as marble, and cold as marble.' The pretension of a certain contemporaneous philosopher, Nietzsche, of placing himself beyond the limits of good and evil, Goethe, at certain moments, seems to have realized in advance."

There have been endless regrets that the trilogy planned by Goethe was not completed according to his original design; but from the point of view of his French critic the loss to literature was less than has been supposed. Among the poet's papers a sketch was found of the second piece, but no account at all of the third. Nevertheless, according to M. Breal's ingenious theory, plenty of indications render it certain that it would have been a poetical version of the French Revolution; and he declares that he was at this period incapable of grappling with so great a theme.

"I am by no means sure [he writes] that the loss of the 'loved scenes' which the inspiration of the poet could no longer recall, is to be regretted. The subject was violent, and too immense for the Goethe of 1802. Through a natural illusion, he supposed that he was still the man of 'Goetz de Berlichingen,' and he was not even the poet of 'Torquato Tasso.' Folly to suppose that he could have presented living types of the common people, the workmen and soldiers, with whom the drama must have dealt! He would have made them moralize! They would have summed up the situation in aphorisms full of good sense, or developed it in well-considered descriptions; but they would not have felt, they would not have acted. No! The age of dramatic poetry had passed—the age of gnomic poetry had come. Witness the second part of 'Faust.'"

"We should not then deplore that this trilogy remained a fragment. The great name of Goethe ought not to prevent us from speaking the truth. German literature has still the right to count certain scenes of 'The Natural Daughter' among the most beautiful of its theater. The figure of Eugenie with her triple aureole of beauty, poesie, and misfortune, lives in the imagination like one of the pure figures created by Racine."

The misfortunes of Stephanie-Louise did not terminate even

with her death. She had many enemies, and during her last days a most infamous and injurious article appeared in one of the Parisian papers, branding her as an adventuress and declaring that the memoirs by which Goethe had been so profoundly impressed were a mere fabrication. It is from this source that all subsequent accounts of the cousin and friend of Louis XVI. and Mme. Elizabeth, to whose care the condemned monarch committed his family, and who made a supreme tho vain effort to be allowed to share the captivity of the Dauphin, have been taken. M. Breal states that, accepting the general verdict, he had always considered the Princess de Conti as one of the impostors of that troubled period, until his study of Goethe led him to make researches into the life of one whom the great German poet had selected for the heroine of his favorite drama. To his amazement, he discovered that the strange adventures of Stephanie-Louise, as related in her memoirs, were verified by the most authentic documents; while every page testified to her brilliant endowments and rare nobility and generosity of character.

He concludes as follows:

"Strange and unlooked-for compensation! While she, broken-hearted, was wasting her strength in claiming admission into the princely family by whom she had been rejected, she had taken rank in another family, grander and still more illustrious, where she is sure of keeping her place forever uncontested by the side of Iphigenie, of Marguerite, of Leonora. Her soul was capable of appreciating such a recompense. Even for a princess of Conti this was—to mount."

FREDERICK TENNYSON'S POETRY.

READERS of Hallam Tennyson's recent biography of his father know that the poetic talent of the Tennyson family was by no means monopolized by Alfred. The poet laureate's brother Frederick published several volumes of verse, late in life, tho he seems to have been singularly indifferent to public applause. In a recent issue of *The Interior* (Chicago) H. T. Suduth tells us something about these volumes and their author:

"If one were asked to give in as brief space as possible the keynote and explanation of Frederick Tennyson's life it is probable that he could do no better than quote this fine sonnet from 'Poems of the Day and Year':

'Tis not for golden eloquence I pray,
A god-like tongue to move a stony heart;
Full fain am I to dwell with thee apart
In solitary uplands far away,
And through the blossoms of a bloomy spray
To gaze upon the wonderful sweet face
Of Nature in a wild and pathless place;
And if it were that I should once array
In words of magic woven curiously,
All the deep gladness of a summer morn,
Or rays of evening that light up the lea
On dewy days of spring, or shadows borne
Athwart the forehead of an autumn noon—
Then I would die and ask no better boon.

"As one reads these lines, and their beauty, like that 'born of murmuring waters in a shady place,' attunes the heart to the deep peace and beauty of fields that know the odor of the hawthorn and the violet and the music of the lark's song at sunrise singing at heaven's gate, he can begin to understand why Frederick Tennyson, poet as he was, should have been content to be overshadowed by the fame of his great brother and scarcely to have made an attempt to win fame for himself. Like Fitzgerald, the translator of Omar Khayyâm, the greater part of whose famous collection of letters were addressed to Frederick Tennyson, the brother of the laureate seems to have been careless of literary fame. The 'Isles of Greece' was not published until 1890, after its author had passed fourscore, and 'Daphne and Other Poems,' its continuation, first saw the light in 1891, tho both volumes had been written many years before. The latest and last volume, 'Poems of the Day and Year,' published two years ago, was mainly a reprint of the author's first volume of verse, printed in 1854, after the 'Poems Chiefly Lyrical,' 1830, the memorable volumes of 1842, 'The Princess,' 1847, and the stately 'In Memo-
